- direct the Secretary of State to determine whether consular shopping is a problem, to take any necessary corrective action, and to report the action taken, section 418
- express the sense of the Congress that the Administration should implement the integrated entry and exit data system called for by the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (8 U.S.C. 1365a), section 414
- add the White House Office of Homeland Security to the Integrated Entry and Exit Data System Task Force (8 U.S.C. 1365a note), section 415
- call for the implementation and expansion of the foreign student visa monitoring program (8 U.S.C. 1372), section 416
- limit countries eligible to participate in the visa waiver program to those with machine-readable passports as of October 1, 2003 (8 U.S.C. 1187(c)), section 417
- instruct the Attorney General to report on the feasibility of using biometric scanners to help prevent terrorists and other foreign criminals from entering the country, section 1008[3433]
- authorize appropriations of $250,000 for the FBI to determine the feasibility of providing airlines with computer access to the names of suspected terrorists, section 1009
- authorize reciprocal sharing of the State Department's visa lookout data and related information with other nations in order to prevent terrorism, drug trafficking, slave marketing, and gun running, section 413

Detention and Removal

Foreign nationals (aliens) are deportable from the United States, among other grounds, if they were inadmissible at the time they entered the country or if they have subsequently engaged in terrorist activity, 8 U.S.C. 1227 (a)(1)(A), (a)(4)(B), 1182(a)(3)(B)(iv). Aliens may be inadmissible for any number of terrorism-related reasons, 8 U.S.C. 1182 (a)(3)(B). Section 411 of the Act adds to the terrorism-related grounds upon which an alien may be denied admission into the United States and consequently upon which he or she may be deported.

Prior law recognized five terrorism-related categories of inadmissibility. Section 411 redefines two of these – engaging in terrorist activity and representing a terrorist organization (8 U.S.C. 1182(a)(3)(B)(iv), (a)(3)(B)(i)(IV)) – and it adds

---

[3433] As the House Judiciary Committee explained, "A biometric fingerprint scanning system is a sophisticated computer scanning technology that analyzes a person's fingerprint and compares the measurement with a verified sample digitally stored in the system. The accuracy of these systems is claimed to be above 99.9%. The biometric identifier system contemplated by this section would have access to the database of the Federal Bureau of Investigation Integrated Automated Fingerprint Identification System," H.R. Rep. No. 107-236, at 78 (2001).

three more – espousing terrorist activity, being the spouse or child of an inadmissible alien associated with a terrorist organization, and intending to engage in activities that could endanger the welfare, safety or security fo the United States (8 U.S.C. 1182(a)(3)(B)(i)(VI), (a)(3)(B)(i)(VII), 1182(a)(3)(F). It defined engaging in terrorist activity, which is grounds for both inadmissibility and deportation, to encompass soliciting on behalf of a terrorist organization or providing material support to a terrorist organization, 8 U.S.C. 1182(a)(3)(B)(iii)(2000 ed.). It did not explain in so many words, however, what constituted a "terrorist organization," but it presumably included groups designated as terrorist organizations under section 219 of the Immigration and Nationality Act, 8 U.S.C. 1189.

Section 411 defines "terrorist organization" to include not only organizations designated under section 219 but also organizations which the Secretary of State has identified in the Federal Register as having provided material support for, committed, incited, planned, or gathered information on potential targets of, terrorist acts of violence, 8 U.S.C. 1182(a)(3)(B)(vi), (a)(3)(B)(iv). It then recasts the definition of engaging in terrorist activities to include solicitation on behalf of such organizations, or recruiting on their behalf, or providing them with material support, 8 U.S.C. 1182(a)(3)(B)(iv). Nevertheless, section 411 permits the Secretary of State or Attorney General to conclude that the material support prohibition does not apply to particular aliens, 8 U.S.C. 1182(a)(3)(B)(vi).

Prior law made representatives of terrorist organizations designated by the Secretary under section 219 (8 U.S.C. 1189) inadmissible, 8 U.S.C. 1182(a)(3)(B)(i) (IV)(2000 ed.). And so they remain. Section 411 makes representatives of political, social or similar groups, whose public endorsements of terrorist activities undermines U.S. efforts to reduce or eliminate terrorism, inadmissible as well, 8 U.S.C. 1882(a)(3) (B)(i)(IV).

An individual who uses his or her place of prominence to endorse, espouse, or advocate support for terrorist activities or terrorist organizations in a manner which the Secretary of State concludes undermines our efforts to reduce or eliminate terrorism becomes inadmissible under section 411, 8 U.S.C. 1182(a)(3)(B)(i)(VI).

The spouse or child of an alien, who is inadmissible on terrorist grounds for activity occurring within the last 5 years, is likewise inadmissible, unless the child or spouse was reasonably unaware of the disqualifying conduct or has repudiated the disqualifying conduct, 8 U.S.C. 1182(a)(3)(B)(i)(VII), 1182(a)(3)(B)(ii).

Finally, any alien, whom the Secretary of State or the Attorney General conclude has associated with a terrorist organization and intends to engage in conduct dangerous to the welfare, safety, security of the United States while in this country, is inadmissible, 8 U.S.C. 1182(a)(3)(F).

Section 219 of the Immigration and Nationality Act (8 U.S.C. 1189) permits the Secretary to designate as terrorist organizations any foreign group which he finds to have engaged in terrorist activities. A second subsection 411(c) permits him to designate groups which as subnational groups or clandestine agents, engage in "premeditated, politically motivated violence perpetrated against noncombatant targets," or groups which retain the capacity and intent to engage in terrorism or terrorist activity, 8 U.S.C. 1189(a)(1)(B).

Section 412 permits the Attorney General to detain alien terrorist suspects for up to seven days, 8 U.S.C. 1226a. He must certify that he has reasonable grounds to believe that the suspects either are engaged in conduct which threatens the national security of the United States or are inadmissible or deportable on grounds of terrorism, espionage, sabotage, or sedition. Within seven days, the Attorney General must initiate removal or criminal proceedings or release the alien. If the alien is held, the determination must be reexamined every six months to confirm that the alien's release would threaten national security or endanger some individual or the general public. The Attorney General's determinations are subject to review only under writs of habeas corpus issued out of any federal district court but appealable only to the United States Court of Appeals for the District Columbia. The Attorney General must report to the Judiciary Committee on the details of the operation of section 412.

Uncertain is the relationship between section 412 and the President's Military Order of November 13, 2001, which allows the Secretary of Defense to detain designated alien terrorist suspects, within the United States or elsewhere, without express limitation or condition except with regard to food, water, shelter, clothing, medical treatment, religious exercise, and a proscription on invidious discrimination, 66 Fed.Reg. 57833, 57834 (Nov. 16, 2001).

Victims

The Act contains a number of provisions designed to provide immigration relief for foreign nationals, victimized by the attacks of September 11. It provides for:

- permanent resident alien status for eligible aliens and members of their family who but for the events of September 11 would have been eligible for employer-sponsored permanent resident alien status, section 421[3434]

[3434] "The Act provides permanent resident status through the special immigrant program to an alien who was the beneficiary of a petition filed (on or before September 11) to grant the alien permanent residence as an employer-sponsored immigrant or of an application for labor certification (filed on or before September 11), if the petition or application was rendered null because of the disability of the beneficiary or loss of employment of the beneficiary due to physical damage to, or destruction of, the business of the petitioner or applicant as a direct result of the terrorist attacks on September 11, or because of the death of the petitioner or applicant as a direct result of the terrorist attacks. Permanent residence would be granted to an alien who was the spouse or child of an alien who was the beneficiary of a petition filed on or before September

- extended filing deadlines for aliens prevented from taking timely action because of immigration office closures, airline schedule disruptions or other similar impediments, section 422[3435]
- preservation of certain immigration benefits available to alien family members that would be otherwise lost as a consequence of the death of a victim of September 11, section 423[3436]

---

11 to grant the beneficiary permanent residence as a family-sponsored immigrant (as long as the spouse or child follows to join not later than September 11, 2003). Permanent residence would be granted to the beneficiary of a petition for a nonimmigrant visa as the spouse or the fiancé (and their children) of a U.S. citizen where the petitioning citizen died as a direct result of the terrorist attack. The section also provides permanent resident status to the grandparents of a child both of whose parents died as a result of the terrorist attacks, if either of such deceased parents was a citizen of the U.S. or a permanent resident," H.R.Rep.No. 107-236, at 66-7 (2001).

[3435] "The Act provides that an alien who was legally in a nonimmigrant status and was disabled as a direct result of the terrorist attacks on September 11 (and his or her spouse and children) may remain lawfully in the U.S. (and receive work authorization) until the later of the date that his or her status normally terminates or September 11, 2002. Such status is also provided to the nonimmigrant spouse and children of an alien who died as a direct result of the terrorist attacks. "The Act provides that an alien who was lawfully present as a nonimmigrant at the time of the terrorist attacks will be granted 60 additional days to file an application for extension or change of status if the alien was prevented from so filing as a direct result of the terrorist attacks. Also, an alien who was lawfully present as a nonimmigrant at the time of the attacks but was then unable to timely depart the U.S. as a direct result of the attacks will be considered to have departed legally if doing so before November 11. An alien who was in lawful nonimmigrant status at the time of the attacks (and his or her spouse and children) but not in the U.S. at that time and was then prevented from returning to the U.S. in order to file a timely application for an extension of status as a direct result of the terrorist attacks will be given 60 additional days to file an application and will have his or her status extended 60 days beyond the original due date of the application. "Under current law, winners of the fiscal year 2001 diversity visa lottery must enter the U.S. or adjust status by September 30, 2001. The Act provides that such an alien may enter the U.S. or adjust status until April 1, 2002, if the alien was prevented from doing so by September 30, 2001 as a direct result of the terrorist attacks. If the visa quota for the 2001 diversity visa program has already been exceeded, the alien shall be counted under the 2002 program. Also, if a winner of the 2001 lottery died as a direct result of the terrorist attacks, the spouse and children of the alien shall still be eligible for permanent residence under the program. The ceiling placed on the number of diversity immigrants shall not be exceeded in any case. "Under the Act, in the case of an alien who was issued an immigrant visa that expires before December 31, 2001, if the alien was unable to timely enter the U.S. as a direct result of the terrorist attacks, the validity shall be extended until December 31. "Under the Act, in the case of an alien who was granted parole that expired on or after September 11, if the alien was unable to enter the U.S. prior to the expiration date as a direct result of the terrorist attacks, the parole is extended an additional 90 days. "Under the Act, in the case of an alien granted voluntary departure that expired between September 11 and October 11, 2001, voluntary departure is extended an additional 30 days," H.R.Rep.No. 107-236, at 67-8 (2001).

[3436] "Current law provides that an alien who was the spouse of a U.S. citizen for at least 2 years before the citizen died shall remain eligible for immigrant status as an immediate relative. This also applies to the children of the alien. The Act provides that if the citizen died as a direct result of the terrorist attacks, the 2 year requirement is waived. "The Act provides that if an alien spouse, child, or unmarried adult son or daughter had been the beneficiary of an immigrant visa petition filed by a permanent resident who died as a direct result of the terrorist attacks, the alien

---

- limited easing of age restrictions on visas available to aliens under 21 years of age for those whose 21st birthday occurred immediately before or soon after September 11, section 424[3437]
- temporary administrative relief for alien family members of a victim of September 11 who are not otherwise entitled to relief under the Act, section 425
- a denial of benefits of the Act to terrorists and their families, section 427
- authority for the Attorney General to establish evidentiary standards to implement the alien victim provisions of the Act, section 426.

OTHER CRIMES, PENALTIES, & PROCEDURES

New Crimes

The Act creates new federal crimes for terrorist attacks on mass transportation facilities, for biological weapons offenses, for harboring terrorists, for affording terrorists material support, for misconduct associated with money laundering already mentioned, for conducting the affairs of an enterprise which affects interstate or foreign commerce through patterned commission of terrorist offenses, and for fraudulent charitable solicitation. Although strictly speaking these are new federal crimes, they generally supplement existing law filling gaps and increasing penalties.

Pre-existing federal law criminalized, among other things, wrecking trains, 18 U.S.C. 1992, damaging commercial motor vehicles or their facilities, 18 U.S.C. 33, or threatening to do so, 18 U.S.C. 35, destroying vessels within the navigable waters of the United States, 18 U.S.C. 2273, destruction of vehicles or other property used in or used in activities affecting interstate or foreign commerce by fire or explosives, 18 U.S.C. 844(i), possession of a biological agent or toxin as a weapon or a threat, attempt, or conspiracy to do so, 18 U.S.C. 175, use of a weapon of mass destruction affecting interstate or foreign commerce or a threat, attempt, or conspiracy to do so, 18 U.S.C. 2332a, commission of a federal crime of

---

will still be eligible for permanent residence. In addition, if an alien spouse, child, or unmarried adult son or daughter of a permanent resident who died as a direct result of the terrorist attacks was present in the U.S. on September 11 but had not yet been petitioned for permanent residence, the alien can self-petition for permanent residence. "The Act provides that an alien spouse or child of an alien who 1) died as a direct result of the terrorist attacks and 2) was a permanent resident (petitioned-for by an employer) or an applicant for adjustment of status for an employment-based immigrant visa, may have his or her application for adjustment adjudicated despite the death (if the application was filed prior to the death)," H.R.Rep.No. 107-236, at 68 (2001).

[3437] "Under current law, certain visas are only available to an alien until the alien's 21st birthday. The Act provides that an alien whose 21st birthday occurs this September and who is a beneficiary for a petition or application filed on or before September 11 shall be considered to remain a child for 90 days after the alien's 21st birthday. For an alien whose 21st birthday occurs after this September, (and who had a petition for application filed on his or her behalf on or before September 11) the alien shall be considered to remain a child for 45 days after the alien's 21st birthday," H.R.Rep.No. 107-236, at 68 (2001).

violence while armed with a firearm, or of federal felony while in possession of an explosive, 18 U.S.C. 924(c), 844(h), conspiracy to commit a federal crime, 18 U.S.C. 371.

The Act outlaws terrorist attacks and other actions of violence against mass transportation systems. Offenders may be imprisoned for life or any term of years, if the conveyance is occupied at the time of the offense, or imprisoned for not more than twenty years in other cases, section 801. Under its provisions, it is a crime to willfully:

- wreck, derail, burn, or disable mass transit;
- place a biological agent or destructive device on mass transit recklessly or with the intent to endanger;
- burn or place a biological agent or destructive device in or near a mass transit facility knowing a conveyance is likely to be disabled;
- impair a mass transit signal system;
- interfere with a mass transit dispatcher, operator, or maintenance personnel in the performance of their duties recklessly or with the intent to endanger;
- act with the intent to kill or seriously injure someone on mass transit property;
- convey a false alarm concerning violations of the section;
- attempt to violate the section;
- threaten or conspire to violate the section

when the violation involves interstate travel, communication, or transportation of materials or that involves a carrier engaged in or affecting interstate or foreign commerce, 18 U.S.C. 1993.

Prior to enactment of the Act, federal law proscribed the use of biological agents or toxins as weapons, 18 U.S.C. 175. As suggested by the Justice Department,[3438] the Act, in section 817, makes two substantial changes. It makes it a federal offense, punishable by imprisonment for not more than ten years and/or a fine of

---

[3438] "Current law prohibits the possession, development, acquisition, etc. of biological agents or toxins for use as a weapon. 18 U.S.C. §175. This section amends the definition of 'for use as a weapon' to include all situations in which it can be proven that the defendant had a purpose other than a prophylactic, protective, or peaceful purpose. This will enhance the government's ability to prosecute suspected terrorists in possession of biological agents or toxins, and conform the scope of the criminal offense in 18 U.S.C. §175 more closely to the related forfeiture provision in 18 U.S.C. §176 [which permits confiscations in cases where the amounts possessed exceed the quantities justifiable for peaceful purposes]. Moreover, the section adds a subsection to 18 U.S.C. §175 which defines an additional offense of possessing a biological agent or toxin of a type or in a quantity that, under the circumstances, is not reasonably justified by a prophylactic, protective or other peaceful purpose. This section also enacts a new statute, 18 U.S.C. 175b, which generally makes it an offense for a person to possess a listed biological agent or toxin if the person is disqualified from firearms possession under 18 U.S.C. §922(g). . . ." DoJ at §305.

not more than $250,000, to possess a type or quantity of biological material that cannot be justified for peaceful purposes, 18 U.S.C. 175(b). Second, consistent with federal prohibitions on the possession of firearms, 18 U.S.C. 922(g), and explosives, 18 U.S.C. 842(i), it makes it a federal offenses for certain individuals – such as convicted felons, illegal aliens, and fugitives – to possess biological toxins or agents, 18 U.S.C. 175b.[3439] Offenders face the same sanctions, imprisonment for not more than ten years and/or a fine of not more than $250,000.

It is a federal crime to harbor aliens, 8 U.S.C. 1324, or those engaged in espionage, 18 U.S.C. 792; or to commit misprision of a felony (which may take the form of harboring the felon), 18 U.S.C. 4; or to act as an accessory after the fact to a federal crime (including by harboring the offender), 18 U.S.C. 3. The Justice Department had asked that a terrorist harboring offense be added to the espionage section. It also recommended venue and extraterritorial auxiliaries.[3440]

The Act, in section 803, instead establishes a separate offense which punishes harboring terrorists by imprisonment for not more than ten years and/or a fine of not more than $250,000, 18 U.S.C. 2339. The predicate offense list consists of:

- destruction of aircraft or their facilities, 18 U.S.C. 32;
- biological weapons offenses, 18 U.S.C. 175;
- chemical weapons offenses, 18 U.S.C. 229;
- nuclear weapons offenses, 18 U.S.C. 831;
- bombing federal buildings, 18 U.S.C. 844(f);
- destruction of an energy facility, 18 U.S.C. 1366;
- violence committed against maritime navigational facilities, 18 U.S.C. 2280; • offenses involving weapons of mass destruction, 18 U.S.C. 2232a;
- international terrorism, 18 U.S.C. 2232b;
- sabotage of a nuclear facility, 42 U.S.C. 2284;
- air piracy, 49 U.S.C. 46502.

It grants the Justice Department request to permit prosecution either in the place where the harboring occurred or where the underlying act of terrorism

---

[3439] The section covers those under felony indictment, those convicted of a felony, fugitives, drug addicts, illegal aliens, mental defectives, aliens from countries which support terrorism, and those dishonorably discharged from the U.S. armed forces, 18 U.S.C. 175b(b)(2).

[3440] "18 U.S.C. §792 makes it an offense to harbor or conceal persons engaged in espionage. There is no comparable provision for terrorism, though the harboring of terrorists creates a risk to the nation readily comparable to that posed by harboring spies. This section accordingly amends 18 U.S.C. §792 to make the same prohibition apply to harboring or concealing persons engaged in federal terrorism offenses as defined in section 309 of the bill," DoJ at §307; Draft at §307(2)("There is extraterritorial Federal jurisdiction over any violation (including, without limitation, conspiracy or attempt) of this section. A violation of this section may be prosecuted in any Federal judicial district in which the underlying offense was committed, or in Federal judicial district as provided by law").

committed by the sheltered terrorist might be prosecuted. The Constitution, however, may insist that prosecution take place where the crime of harboring occurred.[3441]

Sections 2339A and 2339B of the title 18 of the United States Code ban providing material support to individuals and to organizations that commit various crimes of terrorism. The Act amends the sections in several ways in section 805. Section 2339B (support of a terrorist organization) joins section 2339A (support of a terrorist) as a money laundering predicate offense, 18 U.S.C. 1956(c)(7)(D) The predicate offense list of 18 U.S.C. 2339A (support to terrorists) grows to include:

- chemical weapons offenses, 18 U.S.C. 229;
- terrorist attacks on mass transportation, 18 U.S.C. 1993 ;
- sabotage of a nuclear facility, 42 U.S.C. 2284; and
- sabotage of interstate pipelines, 49 U.S.C. 60123(b).

And it adds expert advice or assistance to the types of assistance that may not be provided under section 2339A. This last addition may encounter the same First Amendment vagueness problems some courts have found in assistance which takes the form of "training" and "personnel," Humanitarian Law Project v. Reno, 205 F.3d 1130, 1137-136 (9th Cir. 2000).[3442] Finally, the section announces that a

---

[3441] U.S. Const. Art. III, §2, cl.3 ("The trial of all crimes . . . shall be held in the state where the said crimes shall have been committed . . . ."); Amend. IV ("In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the state and district wherein the crime shall have been committed. . . ."); United States v. Cabrales, 524 U.S. 1 (1998)(a defendant charged with one count of conspiracy to launder the proceeds of a Missouri drug operation and two counts of laundering in Florida could not be prosecuted in Missouri on the laundering counts). The Court might be thought to have retreated somewhat from Cabrales when it later approved prosecution for carrying a firearm in relation to a crime of violence in federal court in New Jersey (where the underlying kidnaping occurred) notwithstanding the fact that the firearm had been acquired in Maryland after the defendants left New Jersey with their victim in tow, United States v. Rodriguez-Moreno, 526 U.S. 275, 280-81 n.4 (1999)("By way of comparison, last Term in [Cabrales] we considered whether venue for money laundering, in violation of 18 U.S.C. 1956(a)(1)(B) (ii) and 1957, was proper in Missouri, where the laundered proceeds were unlawfully generated, or rather, only in Florida, where the prohibited laundering transactions occurred. As we interpreted the laundering statutes at issue, they did not proscribe the anterior criminal conduct that yielded the funds allegedly laundered. The existence of criminally generated proceeds was a circumstance element of the offense but the proscribed conduct – defendant's money laundering activity – occurred after the fact of an offense begun and completed by others. Here, by contrast, given the 'during and in relation to' language [of section 924], the underlying crime of violence is a critical part of the §924(c)(1) offense").

[3442] The Justice Department sought the expansion along with the enlargement of the predicate offense list, "18 U.S.C. §2339A prohibits providing material support or resources to terrorists. The existing definition of `material support or resources' is generally not broad enough to encompass expert services and assistance – for example, advice provided by a person with expertise in aviation matters to facilitate an aircraft hijacking, or advice provided by an accountant to facilitate the concealment of funds used to support terrorist activities. This section accordingly amends 18

prosecution for violation of section 2339A (support of terrorists) may be brought where the support is provided or where the predicate act of terrorism occurs. There may be some question whether the Constitution permits prosecution where the predicate act occurs.[3443]

Section 813 of the Act also accepts the Justice Department's suggestion that various terrorism offenses be added to the predicate offense list for RICO (racketeer influenced and corrupt organizations) which proscribes acquiring or operating, through the patterned commission of any of a series of predicate offenses, an enterprise whose activities affect interstate or foreign commerce, 18 U.S.C. 1961.[3444]

Prior law, 18 U.S.C. 2325-2327, outlawed violation of Federal Trade Commission (FTC) telemarketing regulations promulgated under 15 U.S.C. 6101 et seq. Section 1011 of the Act brings fraudulent charitable solicitations within the FTC's regulatory authority.[3445]

New Penalties

The Act increases the penalties for acts of terrorism and for crimes which terrorists might commit. More specifically it establishes an alternative maximum penalty for acts of terrorism, raises the penalties for conspiracy to commit certain terrorist offenses, envisions sentencing some terrorists to life-long parole, and increases the penalties for counterfeiting, cybercrime, and charity fraud.

The Justice Department suggested an alternative term of imprisonment up to life imprisonment for anyone convicted of an offense designated a terrorist crime. It characterized its proposal as analogous to the standard fine provisions of 18 U.S.C. 3571(b),(c). Section 3571 sets a basic maximum fine of $250,000 for any

---

U.S.C. §2339A to include expert services and assistance, making the offense applicable to experts who provide services or assistance knowing or intending that the services or assistance is to be used in preparing for or carrying out terrorism crimes. This section also amends 18 U.S.C. §2339A to conform its coverage of terrorism crimes to the more complete list specified in section 309 of the bill ('Federal terrorism offenses')," DoJ at 306.

[3443] U.S.Const. Art.III, §2, cl.3; Amend. IV; United States v. Cabrales, 524 U.S. 1 (1998); United States v. Rodriguez-Moreno, 526 U.S. 275 (1999).

[3444] "The list of predicate federal offenses for RICO, appearing in 18 U.S.C. §1961(1), includes none of the offenses which are most likely to be committed by terrorists. This section adds terrorism crimes to the list of RICO predicates, so that RICO can be used more frequently in the prosecution of terrorist organizations. As in various other provisions, the list of offenses in section 309 of the bill ('Federal terrorism offenses') is used in identifying the relevant crimes," DoJ, at §304.

[3445] For a general discussion, see, Wellborn, Combating Charitable Fraud: An Overview of State and Federal Law, CRS REP.NO. RS21058 (Nov. 7, 2001).

individual who convicted of a federal felony notwithstanding any lower maximum fine called for in the statute that outlaws the offense.[3446]

The proposal, however, failed to identify the critical elements that would trigger the alternative.[3447] Both practical and constitutional challenges might be thought to attend this failure to distinguish between those convicted of some "garden variety" crime of terrorism and the more serious offender meriting the alternative, supplementary penalty. Perhaps for this reason, the Act opted to simply increase the maximum penalties for various crimes of terrorism, particularly those which involve the taking of a human life and are not already capital offenses, section 810. Thus, it increases the maximum terms imprisonment for:

- for life-threatening arson or arson of a dwelling committed within a federal enclave, from 20 years to any term of years or life, 18 U.S.C. 81;
- for causing more than $100,000 in damage to, or significantly impairing the operation of an energy facility, from 10 to 20 years (or any term of years or life, if death results), 18 U.S.C. 1366;
- for providing material support to a terrorist or a terrorist organization, from 10 to 15 years (or any term of years or life, if death results), 18 U.S.C. 2339A, 2339B;
- for destruction of national defense materials, from 10 to 20 years (or any term of years or life, if death results), 18 U.S.C. 2155;
- for sabotage of a nuclear facility, from 10 to 20 years (or any term of years or life, if death results), 42 U.S.C. 2284;
- for carrying a weapon or explosive abroad an aircraft with U.S. special aircraft jurisdiction, from 15 to 20 years (or any term of years or life, if death results), 49 U.S.C. 46505; and

---

[3446] "Under existing law, the maximum prison terms for federal offenses are normally determined by specifications in the provisions which define them. These provisions can provide inadequate maxima in cases where the offense is aggravated by its terrorist character or motivation. This section accordingly adds a new subsection (e) to 18 U.S.C. §3559 which provides alternative maximum prison terms, including imprisonment for any term of years or for life, for crimes likely to be committed by terrorists. This is analogous to the maximum fine provisions of 18 U.S.C. §3571(b)-(c) – which supersede lower fine amounts specified in the statutes defining particular offenses – and will more consistently ensure the availability of sufficiently high maximum penalties in terrorism cases. As in several other provisions of this bill, the list of the serious crimes most frequently committed by terrorists set forth in section 309 of the bill ('Federal terrorism offenses' is used in defining the scope of the provision,"DoJ, at §302.

[3447] "A person convicted of any Federal terrorism offense may be sentenced to imprisonment for any term of years or for life, notwithstanding any maximum term of imprisonment specified in the law describing the offense. The authorization of imprisonment under this subsection is supplementary to, and does not limit, the availability of any other penalty authorized by the law describing the offense, including the death penalty, and does not limit the applicability of any mandatory minimum term of imprisonment, including any mandatory life term, provided by the law describing the offense," Draft at §302.

- for sabotage of interstate gas pipeline facilities, from 15 to 20 years (or any term of years or life, if death results), 49 U.S.C. 60123.

It is a separate federal offense punishable by imprisonment for not more than five years to conspire to commit any federal felony, 18 U.S.C. 371. Co-conspirators are likewise subject to punishment for the underlying offense and for any other crimes committed in furtherance of the conspiracy. Nevertheless, some federal criminal statutes impose the same penalties for both the crimes they proscribe and any conspiracy to commit them. The Justice Department urged similar treatment for crimes of terrorism.[3448] Again, the Act, in section 811, opts for a less sweeping approach and establishes equivalent sanctions for conspiracy and the underlying offense in cases of:

- arson committed within a federal enclave, 18 U.S.C. 81;
- killing committed while armed with a firearm in a federal building, 18 U.S.C. 930(c);
- destruction of communications facilities, 18 U.S.C. 1362;
- destruction of property within a federal enclave, 18 U.S.C. 1363;
- causing a train wreck, 18 U.S.C. 1922;
- providing material support to a terrorist, 18 U.S.C. 2339A;
- torture committed overseas under color of law, 18 U.S.C. 2340A;
- sabotage of a nuclear facility, 42 U.S.C. 2284;
- interfering with a flight crew within U.S. special aircraft jurisdiction, 49 U.S.C. 46504;
- carrying a weapon or explosive abroad an aircraft within U.S. special aircraft jurisdiction, 49 U.S.C. 46505; and
- sabotage of interstate gas pipeline facilities, 49 U.S.C. 60123.

When federal courts impose a sentence of a year or more upon a convicted defendant, they must also impose a term of supervised release, 18 U.S.C. 3583; U.S.S.G. §5D1.1. Supervised release is not unlike parole, except that it is ordinarily imposed in addition to (rather than in lieu of) a term, or portion of a term, of imprisonment. The term may be no longer than 5 years for most crimes and violations of the conditions of release may result in imprisonment for up to

---

[3448] "The maximum penalty under the general conspiracy provision of federal criminal law (18 U.S.C. §371) is five years, even if the object of the conspiracy is a serious crime carrying a far higher maximum penalty. For some individual offenses and types of offense, special provisions authorize conspiracy penalties equal to the penalties for the object offense – see e.g., 21 U.S.C. §846 (drug crimes) – but there is no consistently applicable provision of this type for the crimes that are likely to be committed by terrorists. "This section accordingly adds a new §2332c to the terrorism chapter of the criminal code – parallel to the drug crime conspiracy provision in 21 U.S.C. §846 – which provides maximum penalties for conspiracies to commit terrorism crimes that are equal to the maximum penalties authorized for the objects of such conspiracies. This will more consistently provide adequate penalties for terrorist conspiracies. As in various other provisions of this bill, the relevant class of offenses is specified by the notion of 'Federal terrorism offense,' which is defined in section 309 of the bill," DoJ at §303.

an additional 5 years, 18 U.S.C. 3583(e). The terms of supervisory release for drug dealers, however, are often cast as mandatory minimums with no statutory ceiling. Thus, for example, a dealer convicted of distributing more than a kilogram of heroin must receive a term of supervised release of "at least 5 years" in addition to a term of imprisonment imposed for the offense, 21 U.S.C. 841(b). Although a majority feel that the more specific drug provisions of 21 U.S.C. 841 trump the more general limitations of 18 U.S.C. 3583, some of the federal appellate courts believe the two should be read in concert where possible (e.g., at least but not more than 5 years).[3449] The Justice Department recommended a maximum supervisory term of life for those convicted of acts of terrorism (subject to the calibrations of the Sentencing Commission),[3450] a recommendation which the Act accepted in section 812 but only in the case of terrorists whose crimes resulted in death or were marked by a foreseeable risk of death or serious bodily injury, 18 U.S.C. 3583(j).

Sometime ago, Congress outlawed computer fraud and abuse (cybercrime) involving "federal protected computers" (i.e., those owned or used by the federal government or by a financial institution or used in interstate or foreign commerce), 18 U.S.C. 1030. Section 814 of the Act increases the penalty for intentionally damaging a protected computer from imprisonment for not more than 5 years to imprisonment for not more than 10 years (from not more than 10 to not more than 20 years for repeat offenders).[3451]

[3449] Compare, United States v. Barragan, 263 F.3d 919, 925-26 (9th Cir. 2001); United States v. Pratt, 239 F.3d 640, 646-48 (4th Cir. 2001); United States v. Heckard, 238 F.3d 1222, 1237 (10th Cir. 2001); and United States v. Aguayo-Delgado, 220 F.3d 926, 933 (8th Cir. 2000); with, United States v. Meshack, 225 F.3d 556, 578 (5th Cir. 2001); and United States v. Samour, 199 F.3d 821, 824-25 (6th Cir. 2001).

[3450] "Existing federal law (18 U.S.C. 3583(b)) generally caps the maximum period of post-imprisonment supervision for released felons at 3 or 5 years. Thus, in relation to a released but still unreformed terrorist, there is no means of tracking the person or imposing conditions to prevent renewed involvement in terrorist activities beyond a period of a few years. The drug laws (21 U.S.C. §841) mandate longer supervision periods for persons convicted of certain drug trafficking crimes, and specify no upper limit on the duration of supervision, but there is nothing comparable for terrorism offenses. "This section accordingly adds a new subsection to 18 U.S.C. 3583 to authorize longer supervision periods, including potentially lifetime supervision, for persons convicted of terrorism crimes. This would permit appropriate tracking and oversight following release of offenders whose involvement with terrorism may reflect lifelong ideological commitments. As in other provisions in this bill, the covered class of crimes is federal terrorism offenses, which are specified in section 390 of the bill. "This section affects only the maximum periods of post-release supervision allowed by statute. It does not limit the authority of the Sentencing Commission and the courts to tailor the supervision periods imposed in particular cases to offense and offender characteristics, and the courts will retain their normal authority under 18 U.S.C. §3583(e)(1) to terminate supervision if it is no longer warranted," DoJ at §308.

[3451] It provides a comparable increase to not more than 20 years (from not more than 10 years) for those who recklessly damage a protected computer following a prior computer abuse conviction. Civil and criminal liability for simply causing protected computer damage (as opposed to

Finally, section 1011 increases the penalty for fraudulently impersonating a Red Cross member or agent (18 U.S.C. 917) from imprisonment for not more than 1 year to imprisonment for not more than 5 years.

Other Procedural Adjustments

In other procedural adjustments designed to facilitate criminal investigations, the Act:

- increases the rewards for information in terrorism cases
- expands the Posse Comitatus Act exceptions
- authorizes "sneak and peek" search warrants
- permits nationwide and perhaps worldwide execution of warrants in terrorism cases
- eases government access to confidential information
- allows the Attorney General to collect DNA samples from prisoners convicted of any crime of violence or terrorism
- lengthens the statute of limitations applicable to crimes of terrorism
- clarifies the application of federal criminal law on American installations and in residences of U.S. government personnel overseas
- adjusts federal victims' compensation and assistance programs

A section found in the Senate bill, but ultimately dropped, would have changed the provision of law that required Justice Department prosecutors to adhere to the ethical standards of the legal profession where they conduct their activities (the McDade-Murtha Amendment), 28 U.S.C. 530B.[3452]

Rewards

The Attorney General already enjoys the power to pay rewards in criminal cases, but his powers under other authorities is often subject to caps on the amount he might pay. Thus as a general rule, he may award amounts up to $25,000 for the capture of federal offenders, 18 U.S.C. 3059, and may pay rewards in any amount in recognition of assistance to the Department of Justice as long as the Appropriations and Judiciary Committees are notified of any rewards in excess of

---

intentionally or reckless causing the damage) is limited to special circumstances, e.g., damage in excess of $5000, damage causing physical injury, etc.; section 814 adds to the list of circumstances upon which liability may be predicated. To the list of predicate circumstances, it adds causing damage to a computer used by the government for the administration of justice, national defense, or national security.

[3452] When presenting the final bill to the House, the Chairman of the Judiciary Committee noted, "the Senate bill contained revisions of the so-called McDade law. This compromise version does not contain those changes, and I agreed to review this subject in a different context," 147 Cong.Rec. H7196 (daily ed. Oct. 23, 2001)(remarks of Rep. Sensenbrenner); for general background, see, Doyle, McDade-Murtha Amendment: Ethical Standards for Justice Department Attorneys, CRS REP.NO. RL30060 (Dec. 14, 2001).

$100,000, 18 U.S.C. 3059B. Although he has special reward authority in terrorism cases, individual awards were capped at $500,000, the ceiling for the total amount paid in such rewards was $5 million, and rewards of $100,000 or more required his personal approval or that of the President, 18 U.S.C. 3071-3077. Over the last several years, annual appropriation acts have raised the $500,000 cap to $2 million and the $5 million ceiling to $10 million, e.g., P.L. 106-553, 114 Stat. 2762-67 (2000); P.L. 106-113, 113 Stat. 1501A-19 (1999); P.L.105-277, 112 Stat. 2681-66 (1998).

The Act supplies the Attorney General with the power to pay rewards to combat terrorism in any amount and without an aggregate limitation, but for rewards of $250,000 or more it insists on personal approval of the Attorney General or the President and on notification of the Appropriations and Judiciary Committees, section 501 (18 U.S.C. 3071). In addition, the counterterrorism fund of section 101 can be used "without limitation" to pay rewards to prevent, investigate, or prosecute terrorism.[3453]

The Secretary of State's reward authority was already somewhat more generous than that of the Attorney General. He may pay rewards of up to $5 million for information in international terrorism cases as long as he personally approves payments in excess $100,000, 22 U.S.C. 2708. The Act removes the $5 million cap and allows rewards to be paid for information concerning the whereabouts of terrorist leaders and facilitating the dissolution of terrorist organizations, section 502.

Posse Comitatus

The Posse Comitatus Act and its administrative auxiliaries, 18 U.S.C. 1385, 10 U.S.C. 375, ban use of the armed forces to execute civilian law, absent explicit statutory permission. One existing statutory exception covers Department of Justice requests for technical assistance in connection with emergencies involving biological, chemical or nuclear weapons, 18 U.S.C. 2332e, 10 U.S.C. 382. The Act enlarges the exception to include emergencies involving other weapons of mass destruction, section 104.[3454]

Delayed notification of a search (sneak and peek)

Rule 41 of the Federal Rules of Criminal Procedure seemed to preclude "sneak and peek" warrants before passage of the Act. A sneak and peek warrant is one that authorizes officers to secretly enter, either physically or virtually; conduct a

---

[3453] The fund is otherwise available to reestablish capacity lost in terrorist attacks, to conduct threat assessments for federal agencies, and to reimburse federal agencies for the costs of detaining terrorist suspects overseas.

[3454] For a general discussion of the Posse Comitatus Act, see, Doyle, The Posse Comitatus Act & Related Matters: The Use of the Military to Execute Civilian Law, CRS REP.NO. 95-964 (June 1, 2000).

search, observe, take measurements, conduct examinations, smell, take pictures, copy documents, download or transmit computer files, and the like; and depart without taking any tangible evidence or leaving notice of their presence. The Rule required that after the execution of a federal search warrant officers leave a copy of the warrant and an inventory of what they have seized (tangible or intangible), and they were to advise the issuing court what they had done, F.R. Crim. P. 41(d). To what extent did Rule 41 portray the standards for a reasonable search and seizure for purposes of the Fourth Amendment?

The Fourth Amendment clearly requires officers to knock and announce their purpose before entering to execute a warrant, Richards v. Wisconsin, 520 U.S. 385 (1997), but with equal clarity recognizes exceptions for exigent circumstances such as where compliance will lead to the destruction of evidence, flight of a suspect, or endanger the officers, Wilson v. Arkansas, 514 U.S. 927 (1995). It is undisputed that Title III (the federal wiretap statute) is not constitutionally invalid because it permits delayed notice of the installation of an interception device, Dalia v. United States, 441 U.S. 238 (1979). Finally, there is no doubt that the Fourth Amendment imposes no demands where it does not apply. Thus, chapter 121 (court authorization for disclosure of the contents of e-mail stored with third party service providers) may permit delayed notification of the search of e-mail in remote storage with a third party for more than 180 days without offending the Fourth Amendment, because there is no Fourth Amendment justifiable expectation of privacy under such circumstances, cf., United States v. Miller, 425 U.S. 435 (1976).

The lower federal courts are divided over the extent to which the Rule reflects Fourth Amendment requirements. The Ninth Circuit saw the Fourth Amendment reflected in Rule 41, United States v. Freitas, 800 F.2d 1451, 1453 (9th Cir. 1986).[3455] The Second Circuit was less convinced and preferred to hold

---

[3455] "The district court held that a search warrant permitting agents to observe, but not seize tangible property was impermissible under Rule 41. That holding conflicts with language in United States v. New York Telephone Co., 434 U.S. 159, 169 (1977): Although Rule 41(h) defines property to include documents, books, papers, and any other tangible objects, it does not restrict or purport to exhaustively enumerate all the items which may be seized pursuant to Rule 41. . . . Rule 41 is not limited to tangible items. That case held seizures of intangibles were not precluded by the definition of property appearing in Rule 41(b). Without doubt there was a search in this case. Its purpose, we hold, was to seize intangible, not tangible, property. The intangible property to be seized was information regarding the status of the suspected clandestine methamphetamine laboratory. The search was authorized by a warrant supported by what the district court concluded was probable cause. . . . The question remains, however, whether a warrant lacking both a description of the property to be seized and a notice requirement conforms to Rule 41. . . . we hold that there was no compliance with Rule 41 under the facts of this case. . . . While it is clear that the Fourth Amendment does not prohibit all surreptitious entries, it is also clear that the absence of any notice requirement in the warrant casts strong doubt on its constitutional adequacy. We resolve those doubts by holding that in this case the warrant was constitutionally defective in failing to provide explicitly for notice within a reasonable, but short, time subsequent to the surreptitious entry. Such time should not exceed seven days except upon a strong showing

sneak and peek searches to the demands of Rule 41, United States v. Pangburn, 983 F.2d 449 (2d Cir. 1993).[3456] The Fourth Circuit was, if anything, less convinced. Moreover, the facts in the case demonstrate the potential impact of the issue on computer privacy, United States v. Simons, 206 F.3d 392 (4th Cir. 2000).[3457]

---

of necessity. We take this position because surreptitious searches and seizures of intangibles strike at the very heart of the interests protected by the Fourth Amendment. The mere thought of strangers walking through and visually examining the center of our privacy interests, our home, arouses our passion for freedom as does nothing else. That passion, the true source of the Fourth Amendment, demands that surreptitious entries be closely circumscribed," United States v. Freitas (Freitas I), 800 F.2d 1451, 1455-456 (9th Cir. 1986). The court remanded the case for a determination of whether grounds existed for a good faith exception to application of the exclusionary rule. It subsequently declined to exclude the evidence on those grounds, United States v. Freitas (Freitas II), 856 F.2d 1425 (9th Cir. 1988).

[3456] "No provision specifically requiring notice of the execution of a search warrant is included in the Fourth Amendment. Accordingly, in Dalia v. United States, 441 U.S. 238, 247 (1979), the Supreme Court found no basis for a constitutional rule proscribing all covert entries. Resolving the particular issue raised in Dalia, the Court determined that the Fourth Amendment does not prohibit per se a covert entry performed for the purpose of installing otherwise legal electronic bugging equipment. Rule 41 of the Federal Rules of Criminal Procedure does require notice of the execution of a search warrant but does not prescribe when the notice must be given. Rule 41 by its terms provides for notice only in the case of seizures of physical property. . . . The Supreme Court also has held that the authority conferred by Rule 41 is not limited to the seizure of tangible items. See United States v. New York Telephone Co., 434 U.S. 159, 169 (1977). Despite the absence of notice requirements in the Constitution and Rule 41, it stands to reason that notice of a surreptitious search must be given at some point after the covert entry. . . .Although the Freitas I court specifically determined that the warrant was constitutionally defective for failure to include a notice requirement, we made no such determination in United States v. Villegas, 899 F.2d 1324 (1999). Although the Freitas I court found that covert entry searches without physical seizure strike at the very heart of the Fourth Amendment-protected interests, we used no such language in Villegas. Indeed, it was our perception that a covert entry search for intangibles is less intrusive than a conventional search with physical seizure because the latter deprives the owner not only of privacy but also of the use of his property. . . . We prefer to root out notice requirement in the provisions of Rule 41 rather than in the somewhat amorphous Fourth Amendment interests concept developed by the Freitas I court. The Fourth Amendment does not deal with notice of any kind, but Rule 41 does. It is from the Rule's requirements for service of a copy of the warrant and for provision of an inventory that we derive the requirements of notice in cases where a search warrant authorizes covert entry to search and to seize intangibles," United States v. Pangburn, 983 F.2d 449, 453-55 (2d Cir. 1993).

[3457] In Simons, a search team entered Simons' office at night in his absence and "copied the contents of Simons' computer; computer diskettes found in Simons' desk drawer; computer files stored on the zip drive or on zip drives diskettes; videotapes; and various documents, including personal correspondence. No original evidence was removed from the office. Neither a copy of the warrant nor a receipt for the property seized was left in the office or otherwise given to Simons at that time, and Simons did not learn of the search for approximately 45 days." A property list, however, was returned to the magistrate. In the view of the Fourth Circuit, "[t]here are two categories of Rule 41 violations; those involving constitutional violations and all others. The violations termed 'ministerial' in our prior cases obviously fall into the latter category. Nonconstitutional violations of Rule 41 warrant suppression only when the defendant is prejudiced by the violation, or when there is evidence of intentional and deliberate disregard of a provision in the Rule. First, we conclude that the failure of the team executing the warrant to

The Justice Department urged that the conflict be resolved with a uniform rule which permitted sneak and peek warrants under the same circumstances that excused delayed notification of government access to e-mail to longer-term, remote, third party storage.[3458]

The Act, in section 213, stops short of the Justice Department proposal. Characterized as a codification of the Second Circuit decision, 147 Cong. Rec. H7197 (daily ed. Oct. 23, 2001), the Act extends the delayed notification procedure of chapter 121, which operates in an area to which the Fourth Amendment is inapplicable, to cases to which the Fourth Amendment applies, 18 U.S.C. 3103a. Its sneak and peek authorization reaches all federal search and seizure warrants where the court finds reasonable cause to believe that notification would have the kind of adverse results depicted in 18 U.S.C. 2705. Section 2705 describes both exigent circumstances (e.g., risk of destruction of evidence or bodily injury) and circumstances that are not likely to excuse notification when it is required by the Fourth Amendment (e.g., jeopardizing an investigation; delaying a trial). The sneak and peek authorization, however, does not reach tangible evidence, or wire or electronic communication unless the court finds the seizure "reasonably necessary." It is not clear whether reasonable necessity means a seizure necessary to the investigation that is also reasonable in a Fourth Amendment sense, i.e., in the presence of exigent circumstances, or whether it means a seizure which a reasonable judge might find necessary for the

---

leave either a copy of the warrant or a receipt for the items taken did not render the search unreasonable under the Fourth Amendment. The Fourth Amendment does not mention notice, and the Supreme Court has stated that the constitution does not categorically proscribe covert entries, which necessarily involve a delay in notice. And insofar as the August search satisfied the requirements of the Fourth Amendment, i.e., it was conducted pursuant to a warrant based on probable cause issued by a neutral and detached magistrate, we perceive no basis for concluding that the 45-day delay in notice rendered the search unconstitutional. Having concluded that the Rule 41(d) violation at issue here did not infringe on Simons' constitutional rights, we must now evaluate his argument that the violation was deliberate. . . . The district court did not address the intent issue when it ruled on Simons' motion to suppress. . . . We therefore remand for the district court to consider whether the Government intentionally and deliberately disregarded the notice provision of Rule 41(d) when it carried out the August 6, 1998 search," 206 F.3d at 403.

[3458] "The law that currently governs notice to subjects of warrants where there is a showing to the court that immediate notice would jeopardize an ongoing investigation or otherwise interfere with lawful law enforcement activities, is a mix of inconsistent rules, practices, and court decisions varying widely from jurisdiction to jurisdiction across the country. This greatly hinders the investigation of many terrorism cases and other cases. This section resolves this problem by establishing a statutory, uniform standard for all such circumstances. It incorporates by reference the familiar, court-enforced standards currently applicable to stored communications under 18 U.S.C. §2705, and applies them to all instances where the court is satisfied that immediate notice of execution of a search warrant would jeopardize an ongoing investigation or otherwise interfere with lawful law-enforcement activities," DoJ at §353.

investigation.[3459] The doctrine of constitutional avoidance argues against the latter interpretation. By the same token, when the Act permits delay for a reasonable period, it should probably be understood to mean constitutionally "reasonable," that is, a brief period reasonable in light of the exigent circumstances which allow the delay or their like.

Nationwide terrorism search warrants

The Fourth Amendment demands that warrants be issued by a neutral magistrate, Coolidge v. New Hampshire, 403 U.S. 443 (1971); the Sixth Amendment, that crimes be prosecuted in the districts where they occur, United States v. Cabrales, 524 U.S. 1 (1998). The Federal Rules direct magistrates to issue warrants only for property within their judicial district, although they permit execution outside the district for property located in the district when the warrant is sought but removed before execution can be had, F.R. Crim. P. 41(a).

The Act, in section 219, allows a magistrate in the district in which a crime of terrorism has occurred to issue a search warrant to be executed either "within or outside the district," (F.R.Crim.P. 41(a)(3)) in domestic and international terrorism cases.[3460] The provision may anticipate execution both in this country and overseas.[3461] The Fourth Amendment does not apply to the overseas searches

---

[3459] Since neither the restriction nor its reasonable necessity exception appeared in the Justice Department's initial proposal, the Department's justification does not address the question.

[3460] The amended rule uses the definitions of domestic and international terrorism found in 18 U.S.C. 2331, as modified by section 802 of the Act: "(1) the term 'international terrorism' means activities that – (A) involve violent acts or acts dangerous to human life that are a violation of the criminal laws of the United States or of any State, or that would be a criminal violation if committed within the jurisdiction of the United States or of any State; (B) appear to be intended – (i) to intimidate or coerce a civilian population; (ii) to influence the policy of a government by intimidation or coercion; or (iii) to affect the conduct of a government by mass destruction, assassination or kidnapping; and (C) occur primarily outside the territorial jurisdiction of the United States, or transcend national boundaries in terms of the means by which they are accomplished, the persons they appear intended to intimidate or coerce, or the locale in which their perpetrators operate or seek asylum . . . (5) the term 'domestic terrorism' means activities that – (A) involve acts dangerous to human life that are a violation of the criminal laws of the United States or of any State; (B) appear to be intended – (i) to intimidate or coerce a civilian population; (ii) to influence the policy of a government by intimidation or coercion; or (iii) to affect the conduct of a government by mass destruction, assassination or kidnapping; and (C) occur primarily within the territorial jurisdiction of the United States," 18 U.S.C. 2331(1),(5).

[3461] The Justice Department, with whom the proposal originated, was somewhat cryptic on this point. Its analysis suggests execution in one of the several judicial districts of the United States, but not so precisely as to negate any other construction. "The restrictiveness of the existing rule creates unnecessary delays and burdens for the government in the investigation of terrorist activities and networks that span a number of districts, since warrants must be separately obtained in each district. This section resolves that problem by providing that warrants can be obtained in any district in which activities related to the terrorism may have occurred, regardless of where the warrants will be executed," DoJ at §351.

of the property of foreign nationals, United States v. Verdugo-Urquidez, 494 U.S. 259 (1990). It does apply to the search of American property overseas involving American authorities, although the lower federal courts are divided over the exact level of participation required to trigger coverage.[3462] Neither Rule 41 nor any other provision of federal law apparently contemplated extraterritorial execution, cf., F.R. Crim. P. 41, Advisory Committee Notes: 1990 Amendment (discussing a proposal for extraterritorial execution that the Supreme Court rejected).[3463]

If the Act anticipates overseas execution there may be some question whether it creates a procedure to be used in lieu of extradition when the person for whom the search warrant has been issued is located outside the United States. The section refers to warrants for "search of property or for a person within or outside the district," §219 (emphasis added). The Judicial Conference in 1990 recommended an amendment to Rule 41, which the Supreme Court rejected, that would have permitted the overseas execution of federal search warrants. In doing so, the Conference suggested extraterritorial execution be limited to warrants to search for property and not reach warrants to search for persons, "lest the rule be read as a substitute for extradition proceedings," F.R. Crim. P. 41, Advisory Committee Notes: 1990 Amendment. There is no indication, however, that the section is at odds with either the Fourth or Sixth Amendment.

[3462] United States v. Barona, 56 F.3d 1087, 1092 (9th Cir. 1995)("United States agents' participation in the investigation is so substantial that the action is a joint venture between United States and foreign officials"); United States v. Behety, 32 F.3d 503, 510 (11th Cir. 1994)("if American law enforcement officials substantially participated in the search or if the foreign officials conducting the search were actually acting as agents for their American counterparts"); United States v. Maturo, 982 F.2d 57, 61 (2d Cir. 1992)("where the conduct of foreign law enforcement officials rendered them agents, or virtual agents, of United States law enforcement officials" or "where the cooperation between the United States and foreign law enforcement agencies is designed to evade constitutional requirements applicable to American officials"); United States v. Mitro, 880 F.2d 1480, 1482 (1st Cir. 1989)("where American agents participated in the foreign search or the foreign officers acted as agents for their American counterparts"); United States v. Mount, 757 F.2d 1315, 1318 (D.C.Cir. 1985)("if American officials or officers participated in some significant way"); United States v. Marzano, 537 F.2d 257, 270 (7th Cir. 1976)(declining to adopt the "joint venture" standards, but finding level of American participation in the case before it insignificant); United States v. Morrow, 537 F.2d 120, 139 (5th Cir. 1976)("if American law enforcement officials participated in the foreign search, or if the foreign authorities actually conducting the search were acting as agents for their American counterparts"); each of the decisions also suggests that evidence secured in a manner which shocked the conscience of the court would be excluded.

[3463] The Code still carries remnants of the consular courts which speak of the overseas execution of arrest warrants in places where the United States has "extraterritorial jurisdiction," 18 U.S.C. 3042. The history of the provisions makes it clear that the phrase "extraterritorial jurisdiction" was intended to coincide with those places in which the U.S. had consular courts, see, S.Rep. 217, 73d Cong., 2d Sess. 3 (1934), reprinted, 78 Cong.Rec. 4982-983 (1934)("The countries to which the proposed bill, if enacted into law, would relate are the following, in which the United States exercises extraterritorial jurisdiction: China, Egypt, Ethiopia, Muscat, and Morocco"); 22 U.S.C. 141 (1926 ed.)(conferring judicial powers on consular courts there identified as those located in China, Egypt, Ethiopia, Muscat, Morocco, Siam and Turkey).

Terrorists' DNA

The courts have generally concluded that the collection of DNA information from convicted prisoners does not offend constitutional standards per se.[3464] Existing federal law allowed the Attorney General to collect samples from federal prisoners convicted of a variety of violent crimes, 42 U.S.C. 14135a. The Act enlarges the predicate offense list to include any crime of violence or any terrorism offense, section 503.[3465]

Access to Educational Records

Finally, the Act calls for an ex parte court order procedure under which senior Justice Department officials may seek authorization to collect educational records relevant to an investigation or prosecution of a crime of terrorism, section 507 (as an exception to the confidentiality requirements of the General Education Provisions Act, 20 U.S.C. 1232g), section 508 (as an exception to the confidentiality requirements of the National Education Statistics Act, 20 U.S.C. 9007).

Statute of Limitations

Prosecution for murder in violation of federal law may be initiated at any time, 18 U.S.C. 3281. A five year statute of limitations applied for most other federal crimes before passage of the Act, with a few exceptions. Among the relevant exceptions were an eight year statute of limitations for several terrorist offenses, 18 U.S.C. 3286,[3466] and a ten year statute of limitations for a few arson and

---

[3464] Roe v. Marcotte, 193 F.3d 72 (2d Cir. 1999); Shaffer v. Saffle, 148 F.3d 1180 (10th Cir. 1998); Rise v. Oregon, 59 F.3d 1556 (9th Cir. 1995); Jones v. Murray, 962 F.2d 302 (4th Cir. 1992).

[3465] Summarizing the law in place at the time, the Department of Justice argued that, "The statutory provisions governing the collection of DNA samples form convicted federal offenders (42 U.S.C. §14135a(d)) are restrictive, and do not include persons convicted for the crimes that are most likely to be committed by terrorists. DNA samples cannot now be collected even from persons federally convicted of terrorist murders in most circumstances. For example, 49 U.S.C. §46502, which applies to terrorists who murder people by hijacking aircraft, 18 U.S.C. §844(i), which applies to terrorists who murder people by blowing up buildings, and 18 U.S.C. 2332, which applies to terrorists who murder U.S. nationals abroad, are not included in the qualifying federal offenses for purposes of DNA sample collection under existing law. This section addresses the deficiency of the current law in relation to terrorists by extending DNA sample collection to all persons convicted of terrorism crimes," DoJ at §353. For a general discussion, see, Fischer, DNA Identification: Applications and Issues, CRS REP.NO. RL30717 (Jan. 12, 2001).

[3466] 18 U.S.C. 32 (destruction of aircraft or aircraft facilities), 37 (violence at international airports), 112 (assaults on foreign dignitaries), 351 (crimes of violence against Members of Congress), 1116 (killing foreign dignitaries), 1203 (hostage taking), 1361 (destruction of federal property), 1751 (crimes of violence against the President), 2280 (violence against maritime navigation), 2281 (violence on maritime platforms), 2332 (terrorist violence against Americans overseas), 2332a (use of weapons of mass destruction), 2332b (acts of terrorism transcending national boundaries), 2340A (torture); 49 U.S.C. 46502 (air piracy), 46504 (interference with a

explosives offenses, 18 U.S.C. 3295. The Justice Department recommended the elimination of a statute of limitations in terrorism cases.[3467]

The Act takes less dramatic action in section 809. It eliminates the statute of limitations for any crime of terrorism[3468] that risks or results in a death or serious bodily injury, 18 U.S.C. 3286. In the absence of such a risk or result, all other terrorism offenses become subject to the eight year statute of limitations unless already covered by the ten year statute for explosives and arson offenses, 18 U.S.C. 3286.

---

flight crew), 46505 (carrying a weapon aboard an aircraft), and 46506 (assault, theft, robbery, sexual abuse, murder, manslaughter or attempted murder or manslaughter in the special aircraft jurisdiction of the United States).

[3467] "This section amends 18 U.S.C. §3286 to provide that terrorism of offenses may be prosecuted without limitation of time. This will make it possible to prosecute the perpetrators of terrorist acts whenever they are identified and apprehended. "This section expressly provides that it is applicable to offenses committed before the date of enactment of the statute, as well as those committed thereafter. This retroactivity provision ensures that no limitation period will bar the prosecution of crimes committed in connection with the September 11, 2001 terrorist attacks. The constitutionality of such retroactive applications of changes in statutes of limitations is well-settled, See, e.g., United States v. Grimes, 142 F.3d 1342, 1350-51 (11th Cir. 1998); People v. Frazer, 982 P.2d 180 (Cal. 1999). "Existing federal law (18 U.S.C. §3282) bars prosecuting most offenses after five years. 18 U.S.C. §3286, as currently formulated, extends the limitation period for prosecution for certain offenses that may be committed by terrorists – but only to eight years. While this is a limited improvement over the five-year limitation period for most federal offenses, it is patently inadequate in relation to the catastrophic human and social costs that frequently follow from such crimes as destruction of aircraft (18 U.S.C. §32), aircraft hijackings ([49] U.S.C. §§46502, 46504-06, attempted political assassinations (18 U.S.C. §§351, 1116, 1751), or hostage taking (18 U.S.C. §1203). These are not minor acts of misconduct which can properly be forgiven or forgotten merely because the perpetrator has avoided apprehension for some period of time. Anomalously, existing law provides longer limitation periods for such offenses as bank frauds and certain artwork thefts (18 U.S.C.§§3293-94) than it does for crimes characteristically committed by terrorists. "In many American jurisdictions, the limitation periods for prosecution for serious offenses are more permissible than those found in federal law, including a number of states which have no limitation period for the prosecution of felonies generally. While this section does not go so far, it does eliminate the limitation period for prosecution of the major crimes that are most likely to be committed by terrorists ('Federal terrorism offenses'), as specified in section 309 of this bill," DoJ at 301.

[3468] As defined by 18 U.S.C. 2332b(g)(5)(B), with the amendments of §808, this includes, in addition to the offenses already listed in 18 U.S.C. 3296 – 18 U.S.C. 81 (arson within U.S. special maritime and territorial jurisdiction); 175 & 175b (biological weapons); 229 (chemical weapons); 831 (nuclear weapons); 842(m) & (n) (plastic explosives); 844(f)(bombing federal property where death results); 844(i)(bombing property used in interstate commerce); 930(c)(possession of a firearm in a federal building where death results), 956(a)(conspiracy within the U.S. to commit murder, kidnapping, or to maim overseas); 1030(a) (1), (5)(A)(i), (5)(B)(ii)-(v)(computer abuse); 1114 (killing federal officers or employees); 1362 (destruction of communications facilities); 1363 (malicious mischief within the U.S. special maritime and territorial jurisdiction); 1366(a)(destruction of an energy facility); 1992 (train wrecking); 1993 (terrorist attack on mass transit); 2155 (destruction of national defense materials); 2339 (harboring terrorists); 2339A (material support to terrorists), 2339B (material support to terrorist organizations); 42 U.S.C. 2284 (sabotage of nuclear facilities); and 49 U.S.C. 60123(b)(destruction of pipeline facilities).

Application of the statute of limitations rarely provokes a constitutional inquiry. Nevertheless, due process precludes prosecution when it can be shown that pre-indictment delay "caused substantial prejudice to [a defendant's] rights to a fair trial and that the delay was an intentional device to gain tactical advantage over the accused."[3469] Moreover, a judicial difference of opinion has appeared in those cases when an existing period of limitation is enlarged legislatively and the new period made applicable to past offenses. The lower federal courts have long noted that the Constitution poses no impediment to enlarging a period of limitation as long as it does not revive an expired period.[3470] Recently, however, the California Supreme Court held that retroactive revival of an expired statute of limitations offended neither the California nor the United States Constitution.[3471]

Section 809 applies "to the prosecution of any offense committed before, on, or after the date of enactment of this section," the very words used in the Justice Department proposal. The Justice Department, in describing its proposal, cited both federal law (Grimes, where the court held that extensions may be applied where the earlier period of limitations has not expired) and California law (Frazer, where the court held that extensions may revive an expired period of limitations). The implication is that the Justice Department understood its proposal to apply to past offenses whether the earlier statute of limitations had expired or not. Other than its use of identical terminology, Congress gave no hint of whether it intended to adopt this view for section 809. Whether the federal courts could be persuaded to overcome their previously expressed constitutional reservations is equally uncertain.

Extraterritoriality

Crime is usually outlawed, prosecuted and punished where it is committed. In the case of the United States, this is ordinarily a matter of practical and diplomatic preference rather than constitutional necessity. Consequently, although prosecutions are somewhat uncommon, a surprising number of federal criminal laws have extraterritorial application. In some instances, the statute proscribing the misconduct expressly permits the exercise of extraterritorial jurisdiction, 18 U.S.C. 2381 (treason) ("Whoever, owing allegiance to the United States . . . within the United States or elsewhere. . ."). In others, such as those banning assassination of Members of Congress, 18 U.S.C. 351, or the murder of federal law

---

[3469] United States v. Marion, 404 U.S. 307, 325 (1971); United States v. Lovasco, 431 U.S. 783,790 (1977).

[3470] United States v. De La Matta, 266 F.3d 1275, 1286 (11th Cir. 2001); United States v. Grimes, 142 F.3d 1342, 1351 (11th Cir. 1998); United States v. Morrow, 177 F.3d 272, 294 (5th Cir. 1999); Falter v. United States, 23 F.2d 420, 425-26 (2d Cir. 1928).

[3471] People v. Frazer, 24 Cal.4th 737, 759, 982 P.2d 180, 1294, 88 Cal.Rptr.2d 312, 327 (1999).

enforcement officers, 18 U.S.C. 1114, the courts have assumed Congress intended the prohibitions to have extraterritorial reach.[3472]

The Act touches upon extraterritoriality only to a limited extent and in somewhat unusual ways. Congress has made most common law crimes – murder, sexual abuse, kidnaping, assault, robbery, theft and the like – federal crimes when committed within the special maritime and territorial jurisdiction of the United States. The special maritime and territorial jurisdiction of the United States represents two variations of extraterritorial jurisdiction.

The special maritime jurisdiction of the United States extends to the vessels of United States registry. Historically, the territorial jurisdiction of the United States was thought to reach those areas over which Congress enjoyed state-like legislative jurisdiction. For some time, those territories were located exclusively within the confines of the United States, but over the years they came to include at least temporarily, Hawaii, the Philippines, and several other American overseas territories and possessions. Recently, the lower federal courts have become divided over the question of whether laws, enacted to apply on federal enclaves within the United States and within American territories overseas, might also apply to areas in foreign countries over which the United States has proprietary control.[3473]

The Act resolves the conflict by declaring within the territory of the United States those overseas areas used by American governmental entities for their activities or residences for their personnel, at least to the extent that crimes are committed by or against an American, section 804 (18 U.S.C. 7 (9)). The section is inapplicable where it would otherwise conflict with a treaty obligation or where the offender is covered by the Military Extraterritorial Jurisdiction Act, 18 U.S.C. 3261.

Victims

Federal law has provided for crime victim compensation and assistance programs for some time. Moreover, Congress enacted September 11th Victim Compensation Fund legislation before it passed the Act. Consequently, the Act's victim provisions focus on adjustments to existing programs, primarily to those

---

[3472] United States v. Layton, 855 F.2d 1388 (9th Cir. 1988)(at the time of the overseas murder of Congressman Ryan for which Layton was convicted the statute was silent as to its extraterritorial application; several years later Congress added an explicit extraterritorial provision, 18 U.S.C. 351(i)); United States v. Benitez, 741 F.2d 1312 (11th Cir. 1984)(18 U.S.C. 1114 has since expanded to protect all federal officers and employees, including members of the armed forces and those assisting them).

[3473] Compare, United States v. Gatlin, 216 F.3d 207 (2d Cir. 2000); United States v. Laden, 92 F.Supp.2d 189 (S.D.N.Y. 2000); with, United States v. Corey, 232 F.3d 1166 (9th Cir. 2000); United States v. Erdos, 474 F.2d 157 (4th Cir. 1973).

of the Victims of Crime Act of 1984, 42 U.S.C. 10601 et seq., and to those maintained for the benefit of public safety officers and their survivors, 42 U.S.C. 3796 et seq.

Public safety officers - police officers, firefighters, ambulance and rescue personnel -killed or disabled in the line of duty (and their heirs) are entitled to federal benefits. Prior to the Act, death benefits were set at $100,000 and the total amount available for disability benefits in a given year was capped at $5 million, 42 U.S.C. 3796 (2000 ed.). No benefits could be paid for suicides, if the officer was drunk or grossly negligent, if the beneficiary contributed to the officer's death or injury, or if the officer were employed other than in a civilian capacity, 42 U.S.C. 3796 (2000 ed.). The Act increases the death benefit to $250,000 (retroactive to January 1, 2001), section 613; and for deaths and disability connected with acts of terrorism waives the $5 million disability cap and the disqualifications for gross negligence, contributing cause, or employment in a noncivilian capacity, section 611.

Most of fines collected for violation of federal criminal laws are deposited in the Crime Victims Fund which is available for child abuse prevention and treatment grants, victim services within the federal criminal justice system, and grants to state victim compensation and victim assistance programs, 42 U.S.C. 10601 to 10608. The Act:

- authorizes private contributions to the fund (42 U.S.C. 10601(b)), section 621(a)
- instructs the Department of Justice, which administers the fund, to distribute in every fiscal year (if amounts in the Fund are sufficient) amounts equal to between 90% and 110% of the amount distributed in the previous fiscal year (120% in any year when the amount on hand is twice the amount distributed the previous year)(42 U.S.C. 10601(c)), section 621(b)
- reduces by 1% the amounts available for compensation and assistance grants (from 48.5% to 47.5% after child abuse and federal victim priorities have been met), and increases from 3% to 5% the amount available for Justice Department discretionary spending for demonstration projects and services to assist the victims of federal crimes (42 U.S.C. 10601(d), 10603(c)), section 621(c)
- converts the general reserve fund to an antiterrorism reserve fund and reduces the cap on the reserve from $100 million to $50 million (42 U.S.C. 10601(d) (5)), section 621(d)
- waives the Fund's availability caps with respect to funds transferred to it in response to the terrorist attacks of September 11 (42 U.S.C. 10601 note)), section 621(e)
- lowers the annual reduction rate on individual compensation program grants; beginning in 2003 individual grants are limited to 60% (rather than 40%) of the amount of awarded in the previous year (42 U.S.C. 10602(a)), section 622(a)

- eliminates the requirement that state compensation programs permit compensation for state residents who are the victims of terrorism overseas (42 U.S.C. 10602(b)(6)(B)), section 622(b)
- provides that compensation under the September 11th Victim Compensation Fund should be counted as income in considering eligibility for any federal indigent benefit program (42 U.S.C. 10602(c)), section 622(c)
- drops "crimes involving terrorism" from the definition of "compensable crime"; it is unclear whether the phrase was removed as redundant or pursuant to a determination to compensate victims other than through the Crime Victims Fund (42 U.S.C. 10602(d)), section 622(d)(1)
- makes it clear that the Virgin Islands is eligible to receive grants (42 U.S.C. 10602(d)), section 622(d)(2)
- adds the September 11th Victim Compensation Fund to the "double dipping" restriction that applies to the victim compensation programs and confirms that state compensation programs will not be rendered ineligible for grants by virtue of a refusal to pay dual compensation to September 11th Fund victims (42 U.S.C. 10602(e)), section 622(e)
- makes federal agencies performing law enforcement functions in the District of Columbia, Puerto Rico, the Virgin Islands, and other U.S. territories and possessions eligible for victim assistance grants (42 U.S.C. 10603(a)(6)), section 623(a)
- prohibits program discrimination against crime victims based on their disagreement with the manner in which the state is prosecuting the underlying offense (42 U.S.C. 10603(b)(1)(F)), section 623(b)
- allows Justice Department discretionary grants for purposes of program evaluation and compliance and for fellowships, clinical internships and training programs (42 U.S.C. 10603(c)(1)(A), (3)(E)), section 623(c),(e)
- reverses the preference for victim service grants over demonstration projects and training grants, so that not more than 50% of the amounts available for crime victim assistance grants shall be used for victim service grants and not less than 50% for demonstration projects and training grants (42 U.S.C. 10603(c)(2)), section 623(d)
- makes federal and local agencies and private entities eligible for supplemental grants for services relating to victims of terrorism committed within the U.S. (42 U.S.C. 10603b(b)), section 624(a)
- allows supplemental grants for services relating to victims of terrorism committed overseas regardless of whether the victims are eligible for compensation under Title VIII of the Omnibus Diplomatic Security and Antiterrorism Act (100 Stat. 879 (1986))(Title VIII victims were previously ineligible) (42 U.S.C. 10603b(a)(1)), section 624(b)
- establishes a "double dipping" restriction under which compensation to the victims of overseas terrorism is reduced by the amount received under Title VIII of the Omnibus Act (42 U.S.C. 10603c(b)), section 624(c)

Increasing Institutional Capacity

A major portion of the Act is devoted to bolstering the institutional capacity of federal law enforcement agencies to combat terrorism and other criminal threats. In addition to the counterterrorism discussed above in the context of the Attorney General's reward prerogatives, it increases funding authorization for an FBI technical support center, section 103, and allows the FBI to hire translators without regard to otherwise applicable employment restrictions such as citizenship, section 205.

In the area of cybercrime, the Attorney General is instructed to establish regional forensic laboratories, section 817, and the Secret Service, to establish a national network of electronic crime task forces, modeled after its New York Electronic Crimes Task Force, section 105. The Act likewise clarifies the Secret Service's investigative jurisdiction with respect to computer crime (18 U.S.C. 1030) and to crimes involving credit cards, PIN numbers, computer passwords, or any frauds against financial institutions (18 U.S.C. 3056), section 506.

For a period of up to 180 days after the end of Operation Enduring Freedom, section 1010 allows the Department of Defense (DoD) to contract with state and local law enforcement authorities to perform various security functions on its military installations and facilities, 10 U.S.C. 2465.

The Act also authorizes appropriations for wide range anti-terrorism purposes including:

- $25 million a year for FY 2003 through FY 2007 for state and local terrorism prevention and antiterrorism training grants for first responders, section 1005 (28 U.S.C. 509 note)
- necessary sums (FY 2002 through FY 2007) for Office of Justice Programs (OJP) grants to state and local governments to enhance their capacity to respond to terrorist attacks, section 1014 (42 U.S.C. 3711)
- $250 million a year (FY 2002 through FY 2007) for OJP grants to state and local governments integrated information and identification systems, section 1015 (42 U.S.C. 14601)
- $50 million per fiscal year for the Attorney General to develop and support regional computer forensic laboratories (28 U.S.C. 509 note), section 816
- $50 million (FY 2002) and $100 million (FY 2003) for Bureau of Justice Assistance grants (42 U.S.C. 3796h) for federal-state-local law enforcement information sharing systems, section 701
- $20 million (FY 2002) for the activities of National Infrastructure Simulation and Analysis Center in DoD's Defense Threat Reduction Agency, section 1016 (42 U.S.C. 5195c)
- $5 million for DEA police training in South and Central Asia, section 1007.

Miscellaneous

Finally, the Act addresses the issuance of licenses for the drivers of vehicles carrying hazardous materials and the use of trade sanctions against countries that support terrorism.

The Act requires background checks for criminal records and immigration status of applicants for licenses to operate vehicles carrying hazardous materials including chemical and biological materials (49 U.S.C. 5101a), section 1012.

The Trade Sanctions Reform and Export Enhancement Act, 22 U.S.C. 7201 to 7209, limits the President's authority to unilaterally impose export restrictions on food and medical supplies. The limitations do not apply to restrictions on products that might be used for the development or production of chemical or biological weapons or of weapons of mass destruction, 22 U.S.C. 7203(2)(c). The Act expands the exception to include products that might to used for the design of chemical or biological weapons or of weapons of mass destruction as well, section 221(a)(1).

Only one year licenses may be issued for trade with countries that sponsor terrorism, 22 U.S.C. 7205. The Act brings areas of Afghanistan controlled by the Taliban within the same restriction, section 221(a)(2).

Neither of these changes or anything else in the trade sanctions legislation precludes the assessment of civil or criminal liability for violations of 18 U.S.C. 2339A (providing support to terrorists), of 18 U.S.C. 2339B (providing support to terrorist organizations), or of various presidential orders under the International Emergency Economic Powers Act,[3474] or of restrictions on foreign involvement in weapons of mass destruction or missile proliferation, sections 221(b), 807.[3475]

[3474] I.e., Executive Order No. 12947, 50 U.S.C. 1701 note (prohibiting transactions with terrorists); Executive Order No. 13224, 50 U.S.C. 1701 note (blocking property of persons who support terrorism); Executive Order No. 12978, 50 U.S.C. 1701 note (blocking assets of significant narcotics traffickers).

Summary

Several sections of the USA PATRIOT Act and one section of the Intelligence Reform and Terrorism Prevention Act of 2004 were originally scheduled to expire on December 31, 2005. In July 2005, both Houses approved USA PATRIOT reauthorization acts, H.R. 3199 and S. 1389, and the conference committee filed a report, H.Rept. 109-333. A separate bill, the USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006 (S. 2271), provided civil liberties safeguards not included in the conference report. Both H.R. 3199 and S. 2271 were signed into law (P.L. 109-177 and P.L. 109-178) by the President on March 9, 2006.

This report describes the USA PATRIOT Improvement and Reauthorization Act of 2005 (the Act) and, where appropriate, discusses the modifications to law made by the USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006. Consisting of seven titles, the Act, among other things:

- Makes permanent 14 of the 16 expiring USA PATRIOT Act sections as well as the material support of terrorism amendments scheduled to expire on December 31, 2006.
- Creates a new sunset of December 31, 2009, for USA PATRIOT Act sections 206 and 215 ("roving" FISA wiretaps and FISA orders for business records), and for the "lone wolf" amendment to FISA.
- Provides for greater congressional and judicial oversight of section 215 orders, section 206 roving wiretaps, and national security letters.

- Requires high-level approval for section 215 FISA orders for library, bookstore, firearm sale, medical, tax return, and educational records.
- Enhances procedural protections and oversight concerning delayed notice, or "sneak and peek" search warrants.
- Expands the list of predicate offenses in which law enforcement may obtain wiretap orders to include more than 20 federal crimes.
- Revises criminal penalties and procedures concerning criminal and terrorist activities committed at seaports or aboard vessels.
- Reenforces federal money laundering and forfeiture authority, particularly in connection with terrorist offenses.
- Allows the Attorney General to determine whether a state qualifies for expedited habeas corpus procedures for state death row inmates.
- Establishes a new National Security Division within the Department of Justice (DOJ), supervised by a new Assistant Attorney General.
- Creates a new federal crime relating to misconduct at an event designated as a "special event of national significance," whether or not a Secret Service protectee is in attendance.
- Intensifies federal regulation of foreign and domestic commerce in methamphetamine precursors.

Much of the information contained in this report may also be found under a different arrangement in CRS Report RL33239, *USA PATRIOT Improvement and Reauthorization Act of 2005: Section-by-Section Analysis of the Conference Bill*.

Introduction

By operation of section 224 of the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act (USA PATRIOT Act) of 2001,[3476] several of the USA PATRIOT Act's amendments to the Foreign Intelligence Surveillance Act (FISA)[3477] and the Electronic Communications Privacy Act (ECPA)[3478] concerning law enforcement and intelligence investigative tools, were originally scheduled to expire on December 31, 2005.[3479] Section 6001(a) of the Intelligence Reform and Terrorism Prevention Act (IRTPA) of 2004 (concerning "lone wolf" terrorists) was also scheduled to sunset on that date. Without any legislative action, these provisions as well as amendments to them would have ceased to exist after the sunset date, and most of the pre-existing provisions of law would have been revived automatically.

[3476] P.L. 107-56, 115 Stat. 272 (2001).

[3477] 50 U.S.C. 1801-1862.

[3478] 18 U.S.C. 2510-2522, 2701-2712, 3121-3127.

[3479] 115 Stat. 295 (2001).

During the 109th Congress, the House and Senate each passed USA PATRIOT Reauthorization Acts, H.R. 3199 and S. 1389 respectively,[3480] which made permanent 14 of the 16 expiring USA PATRIOT Act sections and extended the sunset on section 206 (regarding FISA court orders for multipoint, or "roving," wiretaps) and section 215 (access to business records requested under FISA), as well as the sunset on section 6001(a) of IRTPA. The two bills differed in several respects, including the new sunset date (under S. 1389, December 31, 2009, while H.R. 3199 offered a ten-year extension to December 31, 2015). On December 8, 2005, House and Senate conference committee members filed a report representing a compromise between the Senate version and the version passed by the House, H.Rept. 109-333 (2005).

The House agreed to the conference report accompanying H.R. 3199 on December 14, 2005. However, with several Members of the Senate raising concerns about the sufficiency of the conference report's safeguards for civil liberties, the Senate voted to reject a motion to invoke cloture on the conference report, thus taking no action before the end of 2005. To provide the Senate with additional time to consider the conference report, Congress enacted legislation to postpone the expiration of the USA PATRIOT Act provisions and of IRTPA's "lone wolf" amendment,[3481] until February 3, 2006,[3482] and thereafter further extended the sunset until March 10, 2006.[3483]

On March 1, 2006, the Senate passed a separate bill, the USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006 (S. 2271), that provides three civil liberties safeguards not included in the conference report.[3484] Passage of S. 2271 helped to pave the way for the Senate to invoke cloture on the conference report upon reconsideration, and the Senate agreed to the conference report on

---

[3480] H.R. 3199 was introduced by Representative Sensenbrenner; S. 1389 by Senator Specter for himself and Senators Feinstein and Kyl. H.R. 3199 was reported by committee, H.Rept. 109-174, and initially passed the House on July 21, 2005, 151 CONG. REC.H6308-309 (daily ed. July 21, 2005). The Senate by unanimous consent substituted the text of S. 1389, as reported by the Judiciary Committee, after striking all but the enacting clause from H.R. 3199, 151 CONG. REC. S9559, S9562 (daily ed. July 29, 2005). The Record, however, reprints the House-passed bill and identifies it as H.R. 3199 as passed by the Senate, 151 CONG. REC. S9562-9579 (daily ed. July 29, 2005). For purposes of convenience, we assume that the Senate-passed version of H.R. 3199 is S. 1389 as reported and will refer to it as S. 1389.

[3481] P.L. 108-458, 118 Stat. 3742 (2004).

[3482] P.L. 109-160, 119 Stat. 2957 (2005).

[3483] P.L. 109-170, 120 Stat. 3 (2006).

[3484] Technically, these provisions were not amendments to the conference report itself, but rather the bill amended specified sections of FISA and the national security letter statutes *after* they have been amended by H.R. 3199.

March 2. Under suspension of the rules, the House passed S. 2271 on March 7, and both H.R. 3199 and S. 2271 were signed into law by the President on March 9.

This report provides a summary and legal analysis of the USA PATRIOT Improvement and Reauthorization Act of 2005 (the "Act" or the "Reauthorization Act"), P.L. 109-177, 120 Stat. 192 (2006), and, where appropriate, discusses the modifications to law made by the USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006, P.L. 109-178, 120 Stat. 278 (2006). For organizational purposes, the report is divided according to the seven titles of the Act and, within those titles, arranged by topic headings.

Title I: USA PATRIOT Improvement and Reauthorization Act

Title I is in many ways the heart of the Act. It makes permanent most of the USA PATRIOT Act sections that were scheduled to expire. To several, like section 215, it adds substantive changes such as civil liberties safeguards. It addresses issues raised by USA PATRIOT Act sections other than those for which the sun was setting. It more clearly states the "National Security Letter" provisions of law, in ways perhaps necessary to make them constitutionally viable. Elsewhere, it looks at the issues faced in the USA PATRIOT Act four years after the fact. In some instances it adds to the tools available; in others it adds further checks against abuse.

Temporary USA PATRIOT Act Sections Made Permanent

Section 102(a) of the Act repeals section 224 of the USA PATRIOT Act that had mandated 16 of its sections to expire initially on December 31, 2005, and later extended to March 10, 2006 by P.L. 109-170, 120 Stat. 3 (2006). Although the Act adopts a new sunset date on two of the sections, as discussed below, it makes permanent the following 14 sections:

(1) Sec. 201 (ECPA wiretapping in certain terrorism investigations)
(2) Sec. 202 (ECPA wiretapping in computer fraud and abuse investigations)
(3) Sec. 203(b) (law enforcement sharing of court-ordered wiretap-generated foreign intelligence information wiretap information)
(4) Sec. 203(d) (law enforcement sharing of foreign intelligence information notwithstanding any other legal restriction)
(5) Sec. 204 (technical exception for foreign intelligence pen register/trap & trace device use)
(6) Sec. 207 (duration of FISA wiretap and search orders involving agents of a foreign power)
(7) Sec. 209 (seizure of stored voice mail by warrant rather than ECPA order)
(8) Sec. 212 (communications providers emergency disclosures of communications content or related records to authorities)

(9) Sec. 214 (FISA pen register order amendments including extension to electronic communications, e.g., Internet use)
(10) Sec. 217 (law enforcement access to computer trespassers' communications within the intruded system)
(11) Sec. 218 (FISA wiretap or search orders with an accompanying law enforcement purpose [removal of "the wall" of separation between criminal catchers and spy catchers])
(12) Sec. 220 (nationwide service of court orders directed to communication providers)
(13) Sec. 223 (civil liability and disciplinary action for certain ECPA or FISA violations)
(14) Sec. 225 (civil immunity for assistance in executing a FISA order)

USA PATRIOT Act Sections Still Subject to Sunset

The Act adopts a sunset of December 31, 2009, for USA PATRIOT Act sections 206 (regarding FISA court orders for multipoint, or "roving," wiretaps) and 215 (access to business records requested under FISA).[3485]

Extension of the "Lone Wolf" Amendment, and the Material Support of Terrorism Amendments Made Permanent

The Act makes two changes to the Intelligence Reform and Terrorism Prevention Act (IRTPA) of 2004, P.L. 108-458, 118 Stat. 3638 (2004). First, it postpones the expiration of section 6001(a) of IRTPA, 118 Stat. 3742 (2004), until December 31, 2009.[3486] Section 6001(a) defines an "agent of a foreign power" to include any person, other than a United States person, who "engages in international terrorism or activities in preparation therefore."[3487] Thus, so-called "lone wolf" terrorists may be subjected to foreign intelligence surveillance despite not being an agent of a foreign power or an international terrorist organization.[3488]

Second, the Act makes permanent section 6603 of IRTPA by repealing the sunset provision (section 6603(g)) that would have caused the section to be ineffective on December 31, 2006.[3489] Section 6603 of IRTPA amends federal law regarding material support of terrorists and terrorist organizations, primarily in 18 U.S.C.

[3485] § 102(b), P.L. 109-177, 120 Stat. 195 (2006).

[3486] § 103, P.L. 109-177, 120 Stat. 195 (2006).

[3487] 50 U.S.C. 1801(b)(1)(C).

[3488] For more information on the "lone wolf" amendment, see CRS Report RS22011, *Intelligence Reform and Terrorism Prevention Act of 2004: "Lone Wolf" Amendment to the Foreign Intelligence Surveillance Act*, by Elizabeth B. Bazan and Brian T. Yeh.

[3489] § 104, P.L. 109-177, 120 Stat. 195 (2006).

2339A[3490] and 2339B.[3491] Briefly, section 6603: (1) amends the definitions of "material support or resources," "training," and "expert advice or assistance" as those terms are used in 18 U.S.C. 2339A and 2339B, and of "personnel" as used in section 2339B; (2) adds a more explicit knowledge requirement to section 2339B; (3) expands the extraterritorial jurisdiction reach of section 2339B; (4) enlarges the list of federal crimes of terrorism, 18 U.S.C. 2332b(g)(5); (5) adds the enlarged list to the inventory of predicate offenses for 18 U.S.C. 2339A (material support for the commission of certain terrorist crimes) and consequently for 18 U.S.C. 2339B (material support for designated terrorist organizations); and (6) precludes prosecution for certain violations committed with the approval of the Secretary of State and concurrence of the Attorney General.[3492]

Section 215 FISA Orders for "Business Records"

Section 215 of the USA PATRIOT Act amended the business record sections of FISA to authorize the Director of the Federal Bureau of Investigation (FBI) or a designee of the Director, to apply to the FISA court to issue orders granting the government access to any tangible item (including books, records, papers, and other documents), no matter who holds it, in foreign intelligence, international terrorism, and clandestine intelligence cases.[3493] The Act contains several

---

[3490] Section 2339A outlaws providing, attempting to provide, or conspiring to provide, material support or resources for the commission of any of several designated federal crimes that a terrorist might commit.

[3491] Section 2339B outlaws providing, attempting to provide, or conspiring to provide, material support or resources to a designated foreign terrorist organization.

[3492] For more information regarding section 6603 of IRTPA, see CRS Report RL33035, *Material Support of Terrorists and Foreign Terrorist Organizations: Sunset Amendments*, by Charles Doyle.

[3493] Section 215 authority appears to have been relatively little used. In April 2005, Justice Department officials testified to the House Judiciary Committee that, as of March 31, 2005, only 35 orders have been issued under section 215 authority, none of which involved library, book store, medical, or gun sale records. Oversight Hearing on the "Implementation of the USA PATRIOT Act: Foreign Surveillance Intelligence Act (FISA)": Hearings Before the Subcomm. on Crime, Terrorism, and Homeland Security of the House Comm. on the Judiciary, 109th Cong., 1st Sess. (2005) (statement of Kenneth L. Wainstein, U.S. Attorney for the District of Columbia), at 8, available on Jan. 13, 2006 at [http://judiciary.house.gov/media/pdfs/wainstein042805.pdf]. At the same time, the Justice Department argues against the creation of a safe haven in public services that terrorists have been known to use. Oversight Hearing on the "Implementation of the USA PATRIOT Act: Foreign Surveillance Intelligence Act (FISA)": Hearings Before the Subcomm. on Crime, Terrorism, and Homeland Security of the House Comm. on the Judiciary, 109th Cong., 1st Sess. (2005) (statement of James A. Baker, Counsel for Intelligence Policy, Office of Intelligence Policy and Review, U.S. Dep't of Justice), at 3, available on Jan. 13, 2006 at [http://judiciary.house.gov/media/pdfs/baker042805.pdf] ("While section 215 has never been used to obtain such records, last year, a member of a terrorist group closely affiliated with al

provisions to guard against abuses of section 215 authority, including greater congressional oversight, enhanced procedural protections, more elaborate application requirements, and a judicial review process.

Greater Congressional Oversight

Section 106(h) of the Act directs the Attorney General to submit to Congress an annual report regarding the use of section 215 authority. This report is to be filed with the House and Senate Committees on the Judiciary, the House Permanent Select Committee on Intelligence, and the Senate Select Committee on Intelligence. The annual report, due every April, must contain the following information regarding the preceding year:

- the total number of applications made for section 215 production orders ("215 orders") approving requests for the production of tangible things,
- the total number of such orders granted as requested, granted as modified, or denied, and
- the number of 215 orders either granted, modified, or denied for the production of each of the following: library circulation records, library patron lists, book sales records, or book customer lists; firearms sales records; tax return records; educational records; and medical records containing information that would identify a person.[3494]

Prior to the Act, the law had required public disclosure of only the first two items listed above; by adding the third reporting requirement, the Act provides for a more detailed account of whether and when section 215 authority has been used to request these categories of sensitive information.

Section 106A of the Act provides for the Inspector General of the Department of Justice to conduct a comprehensive audit to determine the effectiveness, and identify any abuses, concerning the use of section 215 authority, for calendar years 2002-2006. The audit is to be performed in accordance with the detailed requirements set forth in this section. The results of the audit are to be submitted in an unclassified report to the House and Senate Committees on the Judiciary and Intelligence; for calendar years 2002, 2003, and 2004, the report is due not later than March 9, 2007; for calendar years 2005 and 2006, the report is due not later than December 31, 2007.

Enhanced Procedural Protections

Qaeda used Internet service provided by a public library to communicate with his confederates. Furthermore, we know that spies have used public library computers to do research to further their espionage and to communicate with their co-conspirators ... . A terrorist using a computer in a library should not be afforded greater privacy protection that a terrorist using a computer in his home.").

[3494] §106(h)(2), P.L. 109-177, 120 Stat. 200 (2006), adding new 50 U.S.C. 1862(b)(3).

Section 106(a)(2) of the Act adds 50 U.S.C. 1861(a)(3), requiring that an application for a 215 order for the production of certain sensitive categories of records, such as library, bookstore, firearm sales, tax return, educational, and medical records, must be personally approved by one of the following three high-level officials: the FBI Director, the FBI Deputy Director, or the Executive Assistant Director for National Security. This provision was included as an attempt to allay concerns over federal authorities abusing section 215 authority to obtain sensitive types of records.[3495]

The Act also instructs the Attorney General to promulgate specific minimization standards that apply to the collection and dissemination of information obtained through the use of the section 215 authority.[3496] These procedures are intended to limit the retention, and regulate the dissemination, of nonpublicly available information concerning unconsenting U.S. persons, consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information. Federal authorities are required to observe these minimization procedures regarding the use or disclosure of information received under a 215 order; furthermore, they may not use or disclose such information except for lawful purposes. Finally, the Act clarifies that otherwise privileged information does not lose its privileged character simply because it was acquired through a 215 order.

Application Requirements and Orders

Prior to the Act's enactment, an application for a 215 order to be submitted to the FISA court for approval only needed to state that the requested records were sought for an authorized investigation. The Act amends 50 U.S.C. 1861(b)(2) to require that such an application must include a "statement of facts" demonstrating that there are reasonable grounds to believe that the tangible things sought are "relevant" to an authorized or preliminary investigation to protect against international terrorism or espionage, or to obtain foreign intelligence information not concerning a U.S. person.[3497] Section 106(b)(2)(A)

[3495] 50 U.S.C. 1861(a)(2)(B) already prohibits the government from seeking a section 215 order in an investigation of a U.S. person solely upon the basis of activities protected by the First Amendment to the U.S. Constitution. For more information about section 215 under existing law and its potential use against libraries or their patrons, see CRS Report RS21441, Libraries and the USA PATRIOT Act, by Charles Doyle and Brian T. Yeh.

[3496] §106(g), P.L. 109-177, 120 Stat. 198, 199 (2006), adding new 50 U.S.C. 1861(g).

[3497] The "relevancy" standard set forth in the Act was criticized by several Members of Congress during the floor debate on the conference report. See, e.g., 152 CONG. REC. S1382 (daily ed. Feb. 16, 2006) (statement of Sen. Feingold) ("Relevance is a very broad standard that could arguably justify the collection of all kinds of information about law-abiding Americans."). The Senate-passed version of the USA PATRIOT Improvement and Reauthorization Act, S. 1389, required that the statement of facts show that the records or things sought are relevant to an authorized investigation and that the things sought pertain to, or are relevant to the activities of, a foreign

of the Act also provides that certain tangible items are "presumptively relevant" to an investigation if the application's statement of facts shows that the items sought pertain to:

- a foreign power or an agent of a foreign power,
- the activities of a suspected agent of a foreign power who is the subject of such authorized investigation, or
- an individual in contact with, or known to, a suspected agent of a foreign power who is the subject of such authorized investigation.

Finally, the application for a 215 order must include an enumeration of the minimization procedures applicable to the retention and dissemination of the tangible items sought.[3498]

The FISA court judge shall approve an application for a 215 order as requested or as modified, upon a finding that the application complies with statutory requirements. The order must contain a particularized description of the items sought, provide for a reasonable time to assemble them, notify recipients of nondisclosure requirements, and be limited to things subject to a grand jury subpoena or order of a U.S. court for production.[3499] The ex parte order shall also direct that the retention and dissemination of the tangible things obtained under the order must adhere to the minimization procedures.

Judicial Review and Enforcement

Section 106(f) of the Act establishes a detailed judicial review process for recipients of 215 orders to challenge their legality before a judge selected from a pool of FISA court judges. If the judge determines that the petition is not frivolous after an initial review, the judge has discretion to modify or set aside a FISA order upon a finding that it does not comply with the statute or is otherwise unlawful.[3500] However, if the judge does not modify or rescind the 215 order, then the judge must immediately affirm the order and direct the recipient to comply with it.

---

power or agent of foreign power, or pertain to an individual in contact with or known to a suspected agent of a foreign power. The Act does not require such a connection. For more information about the Senate-passed version of the Act, see CRS Report RL33027, USA PATRIOT Act: Background and Comparison of House- and Senate-Approved Reauthorization and Related Legislative Action, by Charles Doyle.

[3498] §106(b), P.L. 109-177, 120 Stat. 196 (2006), adding new 50 U.S.C. 1861(b)(2)(B).

[3499] §106(d), P.L. 109-177, 120 Stat. 197 (2006), amending 50 U.S.C. 1861(c)(2).

[3500] §106(f)(2), P.L. 109-177, 120 Stat. 198 (2006), adding new 50 U.S.C. 1861(f)(1). The review of a petition challenging a 215 order shall be conducted in camera, new 50 U.S.C. 1803(e)(2).

The FISA Court of Review and the U.S. Supreme Court are granted jurisdiction to consider appeals of the FISA court judge's decision to affirm, modify, or set aside a 215 order. The Chief Justice of the United States, in consultation with the Attorney General and the Director of National Intelligence, is directed to establish security measures for maintaining the record of the 215 order judicial review proceedings.

Nondisclosure Requirement for 215 Orders

A section 215 order is accompanied by a nondisclosure requirement that prohibits the recipient from disclosing to any other person that the FBI has sought the tangible things described in the order. Prior to the Act's enactment, the only exception to this "gag order" was for disclosure to those persons necessary for compliance with the production order.[3501] The Act expands the list of exceptions, expressly permitting a recipient of a 215 order to disclose its existence to an attorney to obtain legal advice, as well as to other persons approved by the FBI.[3502]

Under the Act, the recipient is not required to inform the FBI or the authorized government agency of the intent to consult with an attorney to obtain legal assistance; however, upon the request of the FBI Director (or his designee), the recipient must disclose to the FBI the identity of the person to whom the disclosure will be or was made, which could include the name of the attorney.[3503] During the Senate debate over the conference report, some Members of Congress raised concerns that this provision of the Act might have an unintended "chilling effect" on the individual's right to seek legal counsel regarding the Section 215 order.[3504] Thus, section 4 of the USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006, P.L. 109-178, 120 Stat. 280 (2006), amends FISA to exempt explicitly from the identification disclosure requirement the name of the attorney sought to obtain legal advice with respect to the Section 215 production order.[3505]

[3501] 50 U.S.C. 1861(d).

[3502] §106(e), P.L. 109-177, 120 Stat. 197 (2006), adding new 50 U.S.C. 1861(d)(1)(B), (C).

[3503] §106(e), P.L. 109-177, 120 Stat. 197 (2006), adding new 50 U.S.C. 1861(d)(2)(C).

[3504] See, e.g., 152 CONG. REC. S1326 (daily ed. Feb. 15, 2006) (statement of Sen. Sununu) ("[W]e feel the provision in the conference report that required the recipient ... to disclose the name of their attorney to the FBI was punitive and might have the result of discouraging an individual from seeking legal advice.").

[3505] Under the Act, the recipient of a Section 215 order is prohibited from disclosing to any other person that the FBI has sought the tangible things described in the order, except to the following individuals: (A) those persons necessary for compliance with the order, (B) an attorney to obtain legal advice with respect to the order, or (C) other persons as permitted by the FBI Director or his designee. The USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006 amends

While the Act provided a judicial review process for recipients of 215 orders to challenge their legality, the Act does not expressly grant the right to petition the FISA court to modify or quash the nondisclosure requirement imposed in connection with the production order. The Act was criticized for its lack of an express right to challenge the nondisclosure order during the Senate debate over the conference report.[3506]

Section 3 of the USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006, P.L. 109-178, 120 Stat. 278 (2006), addresses this omission by establishing a judicial review procedure for a section 215 nondisclosure orders. For one year after the date of the issuance of a 215 production order, the nondisclosure requirement remains in full effect and may not be challenged.[3507] During the floor debates over S. 2271, this one-year mandatory moratorium and automatic gag order had been criticized and defended by Members of Congress.[3508]

After the one-year waiting period has expired, the recipient of the production order may petition the FISA court to modify or set aside the nondisclosure requirement. Within 72 hours, if the judge assigned to consider the petition determines after an initial review that the petition is frivolous, the judge shall immediately deny the petition and affirm the nondisclosure order. If, after the initial review, the judge determines that the petition is not frivolous, the judge shall promptly consider the petition under procedural measures that the FISA court has established to protect national security, including conducting the review in camera.[3509]

FISA to provide that the FBI Director or his designee may require anyone to disclose the identity of persons falling within categories A and C only. It notably omits B, which effectively removes from the identity disclosure requirement attorneys sought for legal assistance.

[3506] See, e.g., 152 CONG. REC. S1326 (daily ed. Feb. 15, 2006) (statement of Sen. Sununu) ("I think it is important that we stand for the principle that a restriction on free speech such as a gag order can be objected to in a court of law before a judge. You can at least have your case heard. That does not mean you will win, necessarily, but you can at least have your case heard.").

[3507] By contrast, the Act does not impose a one-year moratorium on challenging the nondisclosure order accompanying a NSL, § 115, P.L. 109-177, 120 Stat. 211 (2006), adding new 18 U.S.C. 3511(b)(1).

[3508] Compare 152 CONG. REC. S1496 (daily ed. Feb. 27, 2006) (statement of Sen. Specter) ("My own view is it is preferable there not be a waiting period at all, that the court have the discretion to enter the orders [modifying or quashing a gag order] immediately if it finds cause to do so.") with 152 CONG. REC. S1559 (daily ed. Mar. 1, 2006) (statement of Sen. Kyl) ("The delay is perfectly appropriate and necessary to preserve valuable personnel resources — these orders are approved by judges before issuance, so it makes little sense to allow recipients to challenge the non-disclosure requirement only a week or even a day after the court issues them.").

[3509] § 3, P.L. 109-178, 120 Stat. 178 (2006), amending new 50 U.S.C. 1861(f)(2)(A)(ii).

The FISA court judge has discretion to modify or set aside a nondisclosure order upon a finding that there is no reason to believe that disclosure may endanger the national security of the United States; interfere with a criminal, counterterrorism, or counterintelligence investigation; interfere with diplomatic relations; or endanger the life or physical safety of any person. If, at the time the individual files the petition for judicial review of a nondisclosure order, the Attorney General, Deputy Attorney General, an Assistant Attorney General, or the Director of the FBI certifies that disclosure may endanger the national security of the United States or interfere with diplomatic relations, then the FISA judge must treat such government certification as conclusive unless the judge finds that the certification was made in bad faith.[3510]

If the judge grants a petition to quash the nondisclosure requirement, upon the request of the government, such order is stayed pending review of the decision to the FISA Court of Review. If the judge denies the petition to modify or set aside the nondisclosure requirement, the recipient of the 215 order is precluded from filing another such petition for one year.[3511] The FISA Court of Review has jurisdiction to consider a petition by the government or by the recipient of a 215 order and to review a FISA judge's decision to affirm, modify, or set aside such production order or the nondisclosure order imposed in connection with it. The U.S. Supreme Court has jurisdiction to review a decision of the FISA Court of Review concerning this matter.

National Security Letters

Five federal statutes, in roughly the same terms, authorize federal intelligence investigators (generally the FBI) to request that communications providers, financial institutions and credit bureaus provide certain types of customer business records, including subscriber and transactional information related to Internet and telephone usage, credit reports, and financial records.[3512] Unlike a section 215 production order for tangible items, a national security letter (NSL) need not receive prior approval of a judge. However, NSLs are more limited in scope compared to a section 215 order, in terms of the types of information that can be obtained. For example, NSLs cannot be used to receive "content information" — the content of a telephone communication or e-mail message is unavailable through a NSL, but a NSL could request the phone number dialed or the e-mail addresses used.

[3511] Id., amending new 50 U.S.C. 1861(f)(2)(C)(iii).

[3512] 12 U.S.C. 3414; 15 U.S.C.1681u, 1681v; 18 U.S.C. 2709; 50 U.S.C. 436. For more information concerning national security letters, see CRS Report RL33320, National Security Letters in Foreign Intelligence Investigations: Legal Background and Recent Amendments, by Charles Doyle.

A federal court in the Southern District of New York has held that the FBI's practices and procedure surrounding the exercise of its authority under one of these NSL statutes, 18 U.S.C. 2709, violate the Fourth and First Amendments.[3513] In the opinion of the court, the constitutional problem stems from the effective absence of judicial review before or after the issuance of a NSL under section 2709 and from the facially absolute, permanent confidentiality restrictions ("gag order") that the statute places on NSL recipients.[3514] Another federal court in the District of Connecticut enjoined enforcement of a NSL gag order on First Amendment grounds.[3515]

Section 115 of the Act attempts to address these potential constitutional deficiencies by authorizing judicial review of a NSL.[3516] In addition to providing the right to challenge the validity of the NSL request, section 115 expressly grants NSL recipients the power to petition a federal district court to modify or quash a nondisclosure requirement that may be imposed in connection with the request.

Judicial Review and Enforcement of NSL requests

Under the Act, the recipient of a NSL request may petition a U.S. district court for an order modifying or setting aside the request. The federal court may modify or quash the NSL request if compliance would be unreasonable, oppressive, or otherwise unlawful.

[3513] Doe v. Ashcroft, 334 F.Supp.2d 471 (S.D.N.Y. 2004), vacated by sub nom. Doe I v. Gonzales, 449 F. 3d 415 (2d Cir. 2006)(The U.S. Court of Appeals for the Second Circuit noted that the Reauthorization Act, passed during the pendency of the appeal of this case, "dramatically altered § 2709" and "substantially shifted the legal footing" on which John Doe I stood. Because the Reauthorization Act added 18 U.S.C. 3511(a), permitting NSL recipients to challenge the legality of the NSL in federal court, John Doe I no longer pursued the Fourth Amendment claim. Thus, the appellate court vacated as moot the Fourth Amendment portion of the Southern District of New York opinion. The plaintiffs argued, however, that the revised § 2709(c), as amended by the Reauthorization Act, still violates John Doe I's First Amendment rights. The appellate court remanded the case for the district court to consider whether the revised version of 18 U.S.C. 2709(c) violates the First Amendment either on its face or as applied to John Doe I. Doe I, 449 F. 3d at 418-19.).

[3514] Ashcroft, 334 F.Supp.2d at 526-27.

[3515] Doe v. Gonzalez, 386 F.Supp.2d 66 (D.Conn. 2005), dismissed as moot by Doe II v. Gonzales, 449 F. 3d 415 (2d Cir. 2006) (On appeal, the Government conceded that John Doe II may reveal its identity under new procedures established by the Reauthorization Act, set forth in 18 U.S.C. 3511(b), and the Government informed the appellate court that it would no longer oppose the preliminary injunction issued by the district court. The U.S. Court of Appeals for the Second Circuit thus concluded that "the Government has effectively rendered this appeal moot by its own voluntary actions." Doe II, 449 F. 3d at 420.).

[3516] § 115, P.L. 109-177, 120 Stat. 211 (2006), adding new 18 U.S.C. 3511.

Section 115 also provides the government with the means to enforce the NSL through court action. If a NSL recipient fails to respond to the request for information, the Attorney General may seek a federal district court order to compel compliance with the request.[3517] Disobedience of the U.S. district court's order to respond to a NSL is punishable as contempt of court.

Section 115 directs that any court proceedings concerning NSL matters must be closed, subject to any right to an open hearing in a contempt proceeding, to prevent unauthorized disclosure of the NSL request. In addition, all petitions, filings, records, orders, and subpoenas must be kept under seal to prevent unauthorized disclosure. Finally, the government may request that its evidence be considered ex parte and in camera.

Nondisclosure Orders for NSLs

Section 116 of the Act amends all five NSL statutes to prohibit service providers from disclosing to any person that the FBI has sought or obtained access to the information sought through the NSL, only if the investigative agency has certified that disclosure may endanger any individual or the national security of the United States, interfere with diplomatic relations, or interfere with a criminal or intelligence investigation. Thus, a nondisclosure order does not automatically attach to the NSL, as it does in the case of a Section 215 order under FISA.

Assuming that this certification occurs and the gag order is in place, disclosure by the NSL recipient is permitted to any person whose assistance is needed to comply with the NSL request or to an attorney to obtain legal advice or legal assistance concerning the NSL.[3518] Although the individual is not required to inform the FBI or the authorized government agency of the intent to consult with an attorney to obtain legal assistance, upon the request of the FBI Director (or his designee), or upon the request of the government agency authorized to issue the NSL, the recipient must disclose to the FBI or the government agency the identity of the person to whom the disclosure will be or was made.[3519] According to the sponsor of H.R. 3199, "without this safeguard, a recipient could disclose the

---

[3517] § 115, P.L. 109-177, 120 Stat. 212 (2006), adding new 18 U.S.C. 3511(c). Critics of this new provision claim that it effectively transforms NSLs into national security subpoenas. See ACLU, ACLU Letter to Congress Urging A "No" Vote On the USA PATRIOT Improvement and Reauthorization Act Conference Report (Dec. 12, 2005), available on Jan. 13, 2006 at [http://www.aclu.org/safefree/general/22394leg20051207.html].

[3518] § 116, P.L. 109-177, 120 Stat. 213-217 (2006), amending 18 U.S.C. 2709(c)(1); 15 U.S.C. 1681u(d)(1); 15 U.S.C. 1681v(c)(1); 12 U.S.C. 3414(a)(3)(A); 12 U.S.C. 3414(a)(5)(D)(I); and 50 U.S.C. 436(b)(1).

[3519] § 116, P.L. 109-177, 120 Stat. 213-217 (2006), amending 18 U.S.C. 2709(c)(4); 15 U.S.C. 1681u(d)(4); 15 U.S.C. 1681v(c)(4); 12 U.S.C. 3414(a)(3)(D); 12 U.S.C. 3414(a)(5)(D)(iv); and 50 U.S.C. 436(b)(4).

government's investigative efforts to a person with ties to hostile foreign governments or entities."[3520]

However, the potential that this identity disclosure requirement may chill the right to seek legal counsel was reduced by Section 4 of the USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006, P.L. 109-178, 120 Stat. 280 (2006). (Section 4 also had removed a similar disclosure requirement concerning a Section 215 production order under FISA.) Section 4 amends the five NSL statutes by adding language expressly exempting the identity of attorneys from the disclosure requirement established by the Act:

> *At the request of the Director of the Federal Bureau of Investigation or the designee of the Director, any person making or intending to make a disclosure under this section shall identify to the Director or such designee the person to whom such disclosure will be made or to whom such disclosure was made prior to the request, except that nothing in this section shall require a person to inform the Director or such designee of the identity of an attorney to whom disclosure was made or will be made to obtain legal advice or legal assistance with respect to the [NSL] request...*[3521]

Section 117 of the Act punishes a person who was notified of a NSL nondisclosure requirement but nevertheless knowingly and willfully violates that directive, with imprisonment of not more than one year, or not more than five years if committed with the intent to obstruct an investigation or judicial proceeding.[3522] The law prior to the Act's enactment did not provide a felony charge for such disclosure to an unauthorized person.

Section 115 of the Act grants a NSL recipient with an explicit statutory right to challenge in court the gag order that may attach to the NSL request — a right that a recipient of a section 215 FISA production order lacks under the Act but which was subsequently provided by the USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006. Section 115 creates a bifurcated procedure for handling petitions for judicial review of the nondisclosure requirement accompanying a NSL:

[3520] 152 Cong. Rec. H583 (daily ed. Mar. 7, 2006) (statement of Rep. Sensenbrenner).

[3521] § 4, P.L. 109-178, 120 Stat. 280 (2006), amending 18 U.S.C. 2709(c)(4) (emphasis added). The language used to describe this exception in 18 U.S.C. 2709(c)(4) is substantially similar to that used in the amendments to the other NSL statutes.

[3522] § 117, P.L. 109-177, 120 Stat. 217 (2006), adding new 18 U.S.C. 1510(e).

(1) If the petition is filed within one year of the NSL request, the U.S. district court may modify or set aside the gag order if it finds no reason to believe that disclosure may:

- endanger the national security of the United States,
- interfere with a criminal, counterterrorism, or counterintelligence investigation,
- interfere with diplomatic relations, or
- endanger the life or physical safety of any person.

If, at the time of the petition, a high-ranking government official[3523] certifies that disclosure may:

- endanger the national security of the United States, or
- interfere with diplomatic relations,

then the court must treat the government certification as conclusive unless the court finds that the certification was made in bad faith.

(2) If the petition challenging the gag order is filed one year or more after the NSL issuance, a high-ranking government official must, within 90 days of the petition, either terminate the gag order or re-certify that disclosure may:

- endanger the national security of the United States,
- interfere with a criminal, counterterrorism, or counterintelligence investigation,
- interfere with diplomatic relations, or
- endanger the life or physical safety of any person.

If such recertification occurs, then a court may modify or quash the gag order if it finds no reason to believe that disclosure may:

- endanger the national security of the United States,
- interfere with a criminal, counterterrorism, or counterintelligence investigation,
- interfere with diplomatic relations, or
- endanger the life or physical safety of any person.

[3523] If the NSL is issued by the Department of Justice, this person must be the Attorney General, Deputy AG, or the Director of the FBI; if the NSL information is requested by any agency, department, or instrumentality other than the Justice Department, then the individual must be its head or deputy. New 18 U.S.C. 3511(b)(2).

However, if the recertification was made by the Attorney General, Deputy Attorney General, an Assistant Attorney General, or the Director of the FBI, and if such recertification stated that disclosure may:

- endanger the national security of the United States, or
- interfere with diplomatic relations

then such certification is to be treated by the court as conclusive unless it was made in bad faith.

If court denies the petition for an order to modify the nondisclosure requirement, the NSL recipient is precluded from filing another such petition for one year.

Although the Act provides a process to challenge the nondisclosure requirement, critics believe that this judicial review is not meaningful, in light of the "conclusive presumption" provision: "A recipient would technically be given a right to challenge the gag order but if the government asserted national security, diplomatic relations or an ongoing criminal investigation the court would be required to treat that assertion as conclusive, making the 'right' an illusion."[3524] In addition, some Members of Congress have raised First Amendment and due process concerns over the indefinite gag order and the conclusive presumption.[3525] However, others have defended the conclusive presumption as necessary to ensure that sensitive information is not publicly disclosed:

> *Only the FBI, the people who are investigating the matter, not individual district judges, are in a position to determine when the disclosure of classified information would harm national security. Obviously, that is not something that a Federal district judge has any expertise on. ... It is also important that the FBI make the final determination whether the disclosure would harm national security. And only the agents in charge of these counterterrorism investigations will be able to evaluate how the disclosure of a particular piece of information could potentially, for example, reveal sources and methods of intelligence and who, therefore, might be tipped off as a result of the disclosure.*[3526]

NSLs Not Applicable to Libraries

Section 5 of the USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006, P.L. 109-178, 120 Stat. 281 (2006), entitled "Privacy Protections for Library Patrons," addresses the concern that a library could potentially be subject to an NSL issued under 18 U.S.C. 2709 to obtain certain transactional and subscriber records pertaining to its patrons.[3527] Because libraries often offer patrons the ability to access the Internet, the law prior to the Act was unclear as to whether libraries might be considered "electronic communication service providers" for purposes of 18 U.S.C. 2709. Section 5 amends 18 U.S.C. 2709 by adding the following section:

> *"A library ..., the services of which include access to the Internet ..., is not a wire or electronic communication service provider for purposes of this section, unless the library is providing the services defined in section 2510(15) of this title..."*[3528]

This provision "makes very clear that libraries operating in their traditional role, including the lending of books, including making books available in digital form, including providing basic Internet access, are not subject to National Security Letters."[3529] However, if the library "provides" the services described in 18 U.S.C. 2510(15), which are "electronic communication services," then such library would still be subject to NSLs. 18 U.S.C. 2510(15) defines "electronic communication service" to mean any service that provides to users the ability to send or receive wire or electronic communications. A reasonable interpretation of this definition suggests that to be considered an electronic communication service provider under 18 U.S.C. 2510(15), a library must independently operate the means by which transmission, routing, and connection of digital communication occurs.[3530] In contrast, a local county library likely has a service contract with an Internet Service Provider (ISP) to furnish the library with the electronic communication service, as many businesses and individuals do; the fact that the library has set up a computer with Internet access for the use of its patrons probably does not, by itself, turn the library into a communications service "provider." Under this

---

[3527] However, a library could still be subject to a Section 215 order under FISA for the production of tangible items such as loan records. S. 2271 does not carve out any exception for libraries under Section 215. For more information on this issue, see CRS Report RS21441, Libraries and the USA PATRIOT Act, by Charles Doyle and Brian T. Yeh.

[3528] 18 U.S.C. 2709(f) as amended by P.L. 109-178, 120 Stat. 281 (emphasis added).

[3529] 152 CONG. REC. S1326 (daily ed. Feb. 15, 2006) (statement of Sen. Sununu).

[3530] See 152 CONG. REC. S1558 (daily ed. Mar. 1, 2006) (statement of Sen. Leahy) ("[A] library may be served with an NSL only if it functions as a true internet service provider, as by providing services to persons located outside the premises of the library. I expect that this will occur rarely or never and that in most if not all cases, the Government will need a court order to seize library records for foreign intelligence purposes.").

characterization, the actual "provider" of Internet access is the ISP, not the library.[3531] Therefore, a public library offering "basic" Internet access would likely not be considered an electronic communication service provider, at least for purposes of being an entity subject to the NSL provisions in 18 U.S.C. 2709.[3532]

Congressional Oversight of NSLs

Section 118 of the Act requires that any reports to a Congressional committee regarding NSLs shall also be provided to the House and Senate Judiciary Committees. In addition, the Attorney General must submit a report semiannually on all NSL requests made under the Fair Credit Reporting Act, to the House and Senate Judiciary Committees, the House and Senate Intelligence Committees, and the House Committee on Financial Services and the Senate Committee on Banking, Housing, and Urban Affairs.[3533]

The Attorney General is also instructed to submit to Congress an annual report describing the total number of requests made by the Department of Justice under the NSL statutes. This report is to be unclassified, in order to permit public scrutiny.

Section 119 of the Act directs the Inspector General of the Department of Justice to perform a comprehensive audit of the effectiveness and use of NSLs, including any improper or illegal use, for submission to the House and Senate Judiciary and Intelligence Committees for calendar years 2003-2006. This report is to be unclassified. Section 119 also requires the Attorney General and Director of National Intelligence to analyze the feasibility of applying minimization procedures to NSL to ensure the protection of the constitutional rights of U.S. persons. This feasibility study is to be submitted to the House and Senate Judiciary and Intelligence Committees by February 1, 2007, or upon completion of the audit of the use of NSLs for calendar years 2003 and 2004, whichever is earlier.

[3531] See 152 CONG. REC. S1390 (daily ed. Feb. 16, 2006) (statement of Sen. Sununu) ("Some have noted or may note that basic Internet access gives library patrons the ability to send and receive e-mail by, for example, accessing an Internet-based e-mail service. But in that case, it is the website operator who is providing the communication service — the Internet communication service provider itself — and not the library, which is simply making available a computer with access to the Internet."). Thus, the NSL request could be served on the ISP rather than the library.

[3532] See 152 CONG. REC. S1390 (daily ed. Feb. 16, 2006) (statement of Sen. Durbin) ("By way of comparison, a gas station that has a pay phone isn't a telephone company. So a library that has Internet access, where a person can find an Internet e-mail service, is not a communications service provider; therefore, it would not fall under the purview of the NSL provision in 18 U.S.C. 2709. It is a critically important distinction.").

[3533] § 118(b), P.L. 109-177, 120 Stat. 217, 218 (2006), adding new 15 U.S.C. 1681v(f).

Section 206 FISA "Roving" Wiretaps

Unlike a criminal wiretap order issued under Title III of the Omnibus Crime Control and Safe Streets Act of 1968,[3534] which may be approved if a judge finds probable cause for believing that an individual is committing, has committed, or is about to commit a particular enumerated offense,[3535] a FISA wiretap may be issued upon a finding of probable cause to believe that the target of the electronic surveillance is a foreign power or agent of a foreign power.[3536] Section 206 of the USA PATRIOT Act amended FISA to authorize the installation and use of multipoint, or "roving," wiretaps, for foreign intelligence investigations.[3537] A roving wiretap order applies to the suspect rather than a particular phone or computer that the target might use, and thus allows law enforcement officials to use a single wiretap order to cover any communications device that the target uses or may use.[3538] Without this authority, investigators must seek a new FISA court order each time they need to change the name of the location to be monitored, as well as the specified person or entity that is needed to assist in facilitating the wiretap.[3539]

Section 206 of the USA PATRIOT Act permits a general command for the assistance of third parties (for example, common carriers and Internet service providers) for the installation and use of these multipoint wiretaps, where the target of the surveillance has taken steps to thwart the identification of a communications company or other person whose assistance may be needed to carry out the surveillance. Thus, if the FISA court finds that the target's actions may have the effect of thwarting specific identification, section 206 temporarily authorizes FISA orders that need not specifically identify the communications carriers, landlords or others whose assistance the order commands.[3540]

[3534] 18 U.S.C. 2510 et seq.

[3535] See list of predicate offenses at 18 U.S.C. 2516(1)(a)-(r).

[3536] 50 U.S.C. 1805(a).

[3537] 50 U.S.C. 1805(c)(2)(B).

[3538] According to the Department of Justice, "This new authority has put investigators in a better position to avoid unnecessary cat-and- mouse games with terrorists, who are trained to thwart surveillance." U.S. Dep't of Justice, Report from the Field, The USA PATRIOT Act at Work , 22 (July 2004), available on Jan. 13, 2006 at [http://www.lifeandliberty.gov/docs/071304_report_from_the_field.pdf].

[3539] Oversight Hearing on "Reauthorization of the USA PATRIOT Act": Hearings Before the House Comm. on the Judiciary, 109th Cong., 1st Sess. (2005) (statement of James B. Comey, Deputy Attorney General, U.S. Dep't of Justice), at 9-10, available on Jan. 13, 2006 at [http://judiciary.house.gov/media/pdfs/comey060805.pdf].

[3540] 50 U.S.C. 1805(c)(2)(B).

Prior to the enactment of the Act, a FISA roving surveillance order had to specify the identity of the target only if it was known; otherwise, it was sufficient for the order to describe the target.[3541] Section 108 of the Act amends the FISA roving surveillance authority to require that an application for an order, as well as the wiretap order itself, describe the specific target of the electronic surveillance if the target's identity is not known.[3542] It also clarifies that the FISA court must find that the prospect of a target thwarting surveillance is based on specific facts in the application. Furthermore, if the government begins to direct surveillance at a new facility or place, the nature and location of which were unknown at the time the original surveillance order was issued, the government must notify the FISA court within 10 days[3543] after such change, of the following information:[3544]

- the nature and location of each new facility or place at which the surveillance is directed,
- the facts and circumstances relied upon by the applicant to justify the applicant's belief that each new facility or place is or was being used, or is about to be used, by the target of the surveillance,
- an explanation of any proposed minimization procedures that differ from those contained in the original application or order, if such change is necessitated by the new facility or place, and
- the total number of electronic surveillances that have been or are being conducted under the roving surveillance order.

The Act also enhances congressional oversight over the use of all foreign intelligence electronic surveillance authority, by adding the Senate Judiciary Committee as a recipient of the semi-annual FISA reports that the Attorney General currently must submit to the House and Senate Intelligence committees,[3545] and by modifying the FISA report requirements to include a description of the total number of applications made for orders approving roving electronic surveillance.[3546]

[3541] 50 U.S.C. 1805(c)(1)(A). Furthermore, a roving wiretap order need not identify the nature and location of the places or facilities targeted for surveillance if they are unknown. 50 U.S.C. 1805(c)(1)(B). This provision remains unchanged after enactment of the Act.

[3542] § 108(a), P.L. 109-177, 120 Stat. 203 (2006), amending 50 U.S.C. 1804(a)(3) and 50 U.S.C. 1805(c)(1)(A).

[3543] The 10 day period may be extended up to 60 days if the court finds good cause to justify the longer period.

[3544] § 108(b)(4), P.L. 109-177, 120 Stat. 203 (2006), adding new 50 U.S.C. 1805(c)(3).

[3546] § 108(c)(2), P.L. 109-177, 120 Stat. 204 (2006), amending 50 U.S.C. 1808(a)(2).

Delayed Notice Search Warrants

A delayed notice search warrant, or "sneak and peek" warrant, is one that authorizes law enforcement officers to secretly enter a home or business, either physically or virtually, conduct a search, and depart without taking any tangible evidence or leaving notice of their presence. The Department of Justice has defended the necessity and legality of delayed notification search warrants:

> *This tool can be used only with a court order, in extremely narrow circumstances when immediate notification may result in death or physical harm to an individual, flight from prosecution, evidence tampering, witness intimidation, or serious jeopardy to an investigation. The reasonable delay gives law enforcement time to identify the criminal's associates, eliminate immediate threats to our communities, and coordinate the arrests of multiple individuals without tipping them off beforehand. In all cases, law enforcement must give notice that property has been searched or seized.*[3547]

Until the USA PATRIOT Act was enacted, the Federal Rules of Criminal Procedure required contemporaneous notice in most instances.[3548] At the time, the courts were divided over whether the failure to provide contemporaneous notice, in the absence of exigent circumstances, constituted a constitutional violation or a violation of the Rule, and over the extent of permissible delay in cases presenting exigent circumstances.[3549] Section 213 of the USA PATRIOT Act created an express statutory authority for delayed notice search warrants in any criminal investigation, not just those involving suspected terrorist activity.[3550]

[3547] U.S. Dep't of Justice, Dispelling Some of the Major Myths about the USA PATRIOT Act, available on Jan. 13,2006 at [http://www.lifeandliberty.gov/subs/u_myths.htm].

[3548] FED. R. CRIM. P. 41(d), 18 U.S.C. App. (2000 ed.).

[3549] See United States v. Pangburn, 983 F.2d 449 (2d Cir. 1993); United States v. Freitas, 800 F.2d 1451 (9th Cir. 1986); United States v. Simmons, 206 F.3d 392 (4th Cir. 2000).

[3550] 18 U.S.C. 3103a. Critics have expressed concerns about the constitutionality of delayed notice search warrants as well as potential abuse of the power. See, e.g., EPIC Report ("The expansion of this extraordinary authority to all searches constitutes a radical departure from Fourth Amendment standards and could result in routine surreptitious entries by law enforcement agents."); American Civil Liberties Union (ACLU), Surveillance Under the USA PATRIOT Act (April 3, 2003), available on Jan. 13, 2006 at [http://www.aclu.org/safefree/general/17326res20030403.html] ("Notice is a crucial check on the government's power because it forces the authorities to operate in the open, and allows the subjects of searches to protect their Fourth Amendment rights. For example, it allows them to point out irregularities in a warrant. ... Search warrants often contain limits on what may be

Delayed notification of the execution of a sneak and peek search warrant is permissible for a reasonable period of time (with the possibility of court-approved extensions for good cause shown), if:

- the court that issued the warrant finds reasonable cause to believe that contemporaneous notice of the search may result in adverse consequences (flight, destruction of evidence, intimidation of a witness, danger to an individual, serious jeopardy to an investigation, or undue trial delay), and
- the warrant prohibits the seizure of any tangible property, any wire or electronic communication, and any stored wire or electronic information, except where the court finds reasonable necessity for the seizure.

Responding to concerns that the "reasonable period" for delaying notification of a search warrant is an undefined and indefinite standard under current law, section 114 of the Act establishes a specific limitation on the length of the delay, requiring notice to be given no more than 30 days after the date of the warrant's execution, with the possibility for 90 day extensions if the facts of a case justify.[3551] Several Members of Congress have criticized this 30-day delayed notice provision, arguing instead for notice to be given to the target of the search warrant within 7 days.[3552] However, it should be noted that the Act's 30-day delay period was itself a compromise between the House and Senate-passed versions of the Reauthorization Act; the House bill allowed 180 days, while the Senate limited the delay to 7 days.

In addition, section 114 removes "unduly delaying a trial" as one of the "adverse consequences" that justifies delayed notification. Some commentators have noted that "seriously jeopardizing an investigation," which is retained by the Act as a ground for permitting delayed notice, is an overly broad "catch-all" provision that law enforcement officials could abuse.[3553] There may also be some question of whether it qualifies as a constitutionally acceptable exigent circumstance.

---

searched, but when the searching officers have complete and unsupervised discretion over a search, a property owner cannot defend his or her rights.").

[3551] § 114, 109-177, 120 Stat. 210 (2006), amending 18 U.S.C. 3103a(b)(3).

[3552] See, e.g., 152 CONG. REC. S1384 (daily ed. Feb. 16, 2006) (statement of Sen. Feingold) (asserting that seven days is what courts have previously approved), and 152 CONG. REC. S1495 (daily ed. Feb. 27, 2006) (statement of Sen. Specter) (stating that, in his view, seven days is "the best requirement"). However, other Members of Congress have challenged the argument that seven days is the constitutionally-permissible limit. See 152 CONG. REC. S1397 (daily ed. Feb. 16, 2006) (statement of Sen. Sessions) (claiming that the Court of Appeals for the Fourth Circuit has previously allowed a 45-day period for delayed notice of a search warrant, although the court did not suggest that this was necessarily a constitutional upper limit).

[3553] See ACLU, ACLU Letter to Congress Urging A "No" Vote On the USA PATRIOT Improvement and Reauthorization Act Conference Report (Dec. 12, 2005), available on Jan. 13, 2006 at [http://www.aclu.org/safefree/general/22394leg20051207.html].

However, Justice Department officials defend this provision, observing that before the delayed notice can be approved, a federal judge must agree with the government's evaluation of the circumstances that indicate that contemporaneous notice of a search might seriously jeopardize an ongoing investigation.[3554]

Finally, section 114 enhances oversight of delayed notice search warrants, by requiring that no later than 30 days after the expiration or denial of such a warrant, the issuing or denying judge must notify the Administrative Office of the U.S. Courts of:

- the fact that the delayed notice search warrant was applied for,
- the fact that the warrant was either granted, modified, or denied,
- the length of time of the delay in giving notice, and
- the offense specified in the warrant or the application.[3555]

Beginning with the fiscal year ending September 30, 2007, the Director of the Administrative Office is required to transmit a detailed, annual report to Congress that summarizes the use and number of warrants authorizing delayed notice.

Emergency Disclosures by Service Providers

Section 212 of the USA PATRIOT Act permits electronic communications service providers to disclose voluntarily the contents of stored electronic communications to a Federal, State, or local governmental entity in emergency situations involving a risk or danger of death or serious physical injury to any person.[3556] Service providers are also permitted to disclose customer records to governmental entities in emergencies involving an immediate risk of serious physical injury or danger of death to any person.[3557]

[3554] Oversight Hearing on the "Implementation of the USA PATRIOT Act: Sections 201, 202, 223 of the Act that Address Criminal Wiretaps, and Section 213 of the Act that Addresses Delayed Notice": Hearings Before the Subcomm. on Crime, Terrorism, and Homeland Security of the House Comm. on the Judiciary, 109th Cong., 1st Sess. (2005) (statement of Chuck Rosenberg , Chief of Staff to Deputy Attorney General, U.S. Dep't of Justice), at 3-4, available Jan. 13, 2006 at [http://judiciary.house.gov/media/pdfs/rosenberg050305.pdf] (stating that "[t]here are a variety of ways in which investigators and prosecutors should not be precluded from obtaining a delayed notice search warrant simply because their request does not fall into one of the other four circumstances listed in the statute").

[3555] § 114, 109-177, 120 Stat. 210, 211 (2006), amending 18 U.S.C. 3103a(d)(1).

[3556] 18 U.S.C. 2702(b)(8).

[3557] 18 U.S.C. 2702(c)(4).

To provide congressional oversight over the use of this authority, section 107(a) of the Act requires the Attorney General annually to report to the Judiciary Committees of the House and Senate concerning the number of service providers' voluntary emergency disclosures of the contents of electronic communications to the Department of Justice. The report must also summarize the basis for the voluntary disclosure in circumstances where the investigation pertaining to the disclosure was closed without the filing of criminal charges. In addition, section 107(b) of the Act removes the immediacy requirement from the customer records provision and defines "governmental entity" to mean a department or agency of the United States or any State or political subdivision thereof.

Duration of FISA Surveillance and Physical Search Orders and Congressional Oversight Of Their Usage

The Act extends the maximum duration of FISA electronic surveillance and physical search orders against any agent of a foreign power who is not a U.S. person (e.g., a lone wolf terrorist), by amending section 105(e) of FISA.[3558] Initial orders authorizing such searches may be for a period of up to 120 days, with renewal orders permitted to extend the period for up to one year.

In addition, the Act extends the life time for both initial and extension orders authorizing installation and use of FISA pen registers, and trap and trace surveillance devices[3559] from a period of 90 days to one year, in cases where the government has certified that the information likely to be obtained is foreign intelligence information not concerning a U.S. person.[3560]

Section 109(a) of the Act enhances congressional oversight over the use of physical searches under FISA, by requiring, on a semi-annual basis, the Attorney General:

- to make full reports concerning all physical searches to the Senate Judiciary Committee in addition to the House and Senate Intelligence committees, and

---

[3558] § 105, P.L. 109-177, 120 Stat. 195 (2006), amending 50 U.S.C. 1805(e) and 50 U.S.C. 1824(d).

[3559] These surveillance devices are used to intercept non-content transactional information which reveals the source and destination of wire and electronic communications, such as telephone dialing information, Internet IP addresses, and e-mail routing and addressing. See definitions of these terms, 18 U.S.C. 3127(3), 18 U.S.C. 3127(4).

[3560] § 105(c), P.L. 109-177, 120 Stat. 195, 196 (2006), adding new 50 U.S.C. 1842(e)(2).

- to submit to the House Judiciary Committee a report with statistical information concerning the number of emergency physical search orders authorized or denied by the Attorney General.[3561]

Section 109(b) requires that the report the Attorney General submits to the House and Senate Judiciary Committees semi-annually concerning the number of applications and orders for the FISA use of pen registers or trap and trace devices, must include statistical information regarding the emergency use of such devices.[3562]

Information Related to FISA Pen Register and Trap & Trace Devices

Law enforcement officials may secure an order authorizing the installation and use of a pen register or trap and trace device to obtain information relevant to a criminal investigation, 18 U.S.C. 3122, 3123. They are also entitled to a court order directing a communications provider to supply certain customer information when relevant to a criminal investigation, 18 U.S.C. 2703.[3563] Foreign intelligence officials are entitled to secure a FISA order for installation and use of a pen register or trap and trace device in connection with certain foreign intelligence investigations, 50 U.S.C. 1841-1846. Under its national security letter authority the FBI may request communications providers to supply customer name, address, length of service and local and long distance toll billing records, 18 U.S.C. 2709. Under section 215 of the USA PATRIOT Act, the FBI may obtain a FISA tangible item order for customer records held by a communications provider, 50 U.S.C. 1861.

Section 128(a) of the Act provides that the FISA court may, in its pen register/trap and trace order, direct a service provider to supply customer information relating to use of the device.[3564] The information to be made available is more extensive than what is available under 18 U.S.C. 2709, or to law enforcement officials, but it is not as extensive as the scope of information under a FISA section 215 "tangible item" order; that is —

[3561] § 109(a), P.L. 109-177, 120 Stat. 204 (2006), amending 50 U.S.C. 1826.

[3562] § 109(b), P.L. 109-177, 120 Stat. 204, 205 (2006), amending 50 U.S.C. 1846.

[3563] The information available under section 2703 includes "the — (A) name; (B) address; (C) local and long distance telephone connection records, or records of session times and durations; (D) length of service (including start date) and types of service utilized; (E) telephone or instrument number or other subscriber number or identity, including any temporarily assigned network address; and (F) means and source of payment for such service (including any credit card or bank account number), of a subscriber to or customer of such service)," 18 U.S.C. 2703(c)(2).

[3564] § 128(a), P.L. 109-177, 120 Stat. 228 (2006), adding new 50 U.S.C. 1842(d)(2)(C).

(I) in the case of the customer or subscriber using the service covered by the order (for the period specified by the order) —
(I) the name of the customer or subscriber;
(II) the address of the customer or subscriber;
(III) the telephone or instrument number, or other subscriber number or identifier, of the customer or subscriber, including any temporarily assigned network address or associated routing or transmission information;
(IV) the length of the provision of service by such provider to the customer or subscriber and the types of services utilized by the customer or subscriber;
(V) in the case of a provider of local or long distance telephone service, any local or long distance telephone records of the customer or subscriber;
(VI) if applicable, any records reflecting period of usage (or sessions) by the customer or subscriber; and
(VII) any mechanisms and sources of payment for such service, including the number of any credit card or bank account utilized for payment for such service; and
(I) if available, with respect to any customer or subscriber of incoming or outgoing communications to or from the service covered by the order —
(I) the name of such customer or subscriber;
(II) the address of such customer or subscriber;
(III) the telephone or instrument number, or other subscriber number or identifier, of the customer or subscriber, including any temporarily assigned network address or associated routing or transmission information;
(IV) the length of the provision of service by such provider to the customer or subscriber and the types of services utilized by the customer or subscriber.

The Senate Select Committee on Intelligence observed with respect to an identically worded section in S. 1266, "the FISA audit staff was informed that when a federal court issues an order for criminal pen register or trap and trace device, the court has the authority under 18 U.S.C. 2703(d) to routinely require the service provider to supply subscriber information in its possession for the numbers or e-mail addresses captured by the devices. The FISA pen register/trap and trace provision has no comparable authority. Section 215 of this bill addresses this discrepancy."[3565]

The amendment would likely simplify the process, but critics might ask why it is necessary since information already seems to be available through use of the

[3565] S.Rept. 109-85, at 8 (2005).

national security letter authority under 18 U.S.C. 2709 or the FISA business records "tangible item" authority when used in conjunction with the FISA pen register/trap and trace authority.

Section 128(b) of the Act amends the FISA oversight reporting requirements so that Judiciary Committees receive full reports on the use of the FISA's pen register and trap and trace authority every six months.[3566]

Additions to the Definition of Federal Crime of Terrorism

Crimes designated as federal crimes of terrorism under 18 U.S.C. 2332b(g)(5) trigger the application of other federal laws, for example, 18 U.S.C. 1961(1)(g) (RICO predicates), 18 U.S.C. 3142 (bail), 18 U.S.C. 3286 (statute of limitations), and 18 U.S.C. 3583 (supervised release). Section 112 of the Act adds two additional offenses to the definition of federal crimes of terrorism: receiving military-type training from a foreign terrorist organization,[3567] and drug trafficking in support of terrorism (the "narco-terrorism" provisions of Section 1010A of the Controlled Substances Import and Export Act).[3568]

Expanded List of Predicate Offenses For Wiretaps

Generally, federal law requires the government to obtain a court order authorizing the interception of wire, oral or electronic communications in the investigation of certain crimes ("predicate offenses") specifically enumerated in 18 U.S.C. 2516(1). Section 113 of the Act expands the list of predicate offenses in which law enforcement may seek wiretap orders to include crimes relating to biological weapons, violence at international airports, nuclear and weapons of mass destruction threats, explosive materials, receiving terrorist military training, terrorist attacks against mass transit, arson within U.S. special maritime and territorial jurisdiction, torture, firearm attacks in federal facilities, killing federal employees, killing certain foreign officials, conspiracy to commit violence overseas, harboring terrorists, assault on a flight crew member with a dangerous weapon, certain weapons offenses aboard an aircraft, aggravated identity theft, "smurfing" (a money laundering technique whereby a large monetary transaction is separated into smaller transactions to evade federal reporting requirements on large transactions), and criminal violations of certain provisions of the Sherman Antitrust Act.

[3566] § 128(b), P.L. 109-177, 120 Stat. 229 (2006), amending 50 U.S.C. 1846(a).

[3567] 18 U.S.C. 2339D.

[3568] § 122, P.L. 109-177, 120 Stat. 225 (2006) adds new 21 U.S.C. 960A concerning "narco-terrorism."

Attacks Against Railroad Carriers and Mass Transportation Systems

Section 110 of the Act merges 18 U.S.C. 1992 (outlawing train wrecking) and 18 U.S.C. 1993 (outlawing attacks on mass transportation system) into a new 18 U.S.C. 1992 intended to provide uniform offense elements and penalties for attacks on all transportation systems on land, on water, or through the air. In addition, the Act explicitly provides criminal punishment for the planning of terrorist attacks and other acts of violence against railroads and mass transportation systems;[3569] previous law had only criminalized committing such attacks or attempting, threatening, or conspiring to do so.

Punishment under this new criminal statute is imprisonment for not more than 20 years, but if the offense results in the death of any person, then imprisonment of any years or for life or the death penalty, although the death penalty is not available for inchoate forms of the offense (planning, conveying false information, attempting, threatening, or conspiring). Furthermore, the new 18 U.S.C. 1992 enhances the penalties for committing these criminal acts in circumstances that constitute an aggravated offense, by authorizing imprisonment for any term of years or life, or where death results, the death penalty. Finally, the new 18 U.S.C. 1992 defines covered conveyances and their systems to include passenger vessels.[3570]

Asset Forfeiture

Federal law permits U.S. confiscation of property derived from certain drug offenses committed in violation of foreign law,[3571] and also permits U.S. confiscation of all assets, foreign or domestic, associated with certain terrorist offenses.[3572] Section 111 of the Act amends the general civil forfeiture statute to authorize seizure of property within U.S. jurisdiction constituting, derived from, or traceable to, any proceeds obtained in (or any property used to facilitate) an offense that involves trafficking in nuclear, chemical, biological, or radiological weapons technology or material, if such offense is punishable under foreign law by death or imprisonment for a term exceeding one year or would be so punishable if committed within U.S. jurisdiction.[3573]

[3569] § 110(a), P.L. 109-177, 120 Stat. 206 (2006), adding new 18 U.S.C. 1992(a)(8) (making it a crime to surveil, photograph, videotape, diagram, or otherwise collect information with the intent to plan or assist in planning, an attack against mass transportation systems).

[3570] § 110(a), P.L. 109-177, 120 Stat. 207, 208 (2006), adding new 18 U.S.C. 1992(d)(7).

[3571] 18 U.S.C. 981(a)(1)(B).

[3572] 18 U.S.C. 981(a)(1)(G).

[3573] §111, P.L. 109-177, 120 Stat. 209 (2006), amending 18 U.S.C. 981(a)(1)(B)(I).

In addition, the Act changes the reference for the definition of terrorism as used in the asset forfeiture provision under section 806 of the USA PATRIOT Act. Prior to the Act, 18 U.S.C. 981(a)(1)(G) called for the confiscation of property of those planning or engaged in acts of domestic or international terrorism (as defined in 18 U.S.C. 2331) against the United States or its citizens. Domestic terrorism is defined in 18 U.S.C. 2331 (section 802 of the USA PATRIOT Act), and includes acts dangerous to human life in violation of state or federal law committed to influence the policy of a government or civilian population by intimidation or coercion, 18 U.S.C. 2331(5). Critics might suggest that the juxtaposition of the definition and the confiscation provisions of section 981(a)(1)(G) could result in the confiscation of the property of political action organizations whose members became involved in a picket sign swinging melee with counter-demonstrators.[3574] In contrast, 18 U.S.C. 2332b(g)(5)(B) seems less susceptible to such challenges since it defines terrorism by reference to violations of specific federal terrorist offenses rather than the generic, violation of state or federal law found in section 2331.

Thus, section 120 of the Act replaces terrorism defined in 18 U.S.C. 2331 with terrorism defined in 18 U.S.C. 2332b(g)(5)(B) as the ground for confiscation under section 981(a)(1)(G). It does so by amending 18 U.S.C. 981(a)(1)(G) so that it calls for the confiscation of property of those planning or engaged acts of domestic or international terrorism (as defined in 18 U.S.C. 2332b(g)(5)(B)) against the United States or its citizens.

Victims Access Forfeiture Fund

Section 981 of title 18 of the United States Code describes various forms of property that are subject to confiscation by the United States because of their proximity to various federal crimes. The proceeds from the confiscation of crime-related property are generally available for law enforcement purposes to the law enforcement agencies that participate in the investigation and prosecution that results in the forfeiture, e.g., 18 U.S.C. 981(e). The funds realized from the collection of criminal fines are generally available for victim compensation and victim assistance purposes, 42 U.S.C. 10601. Victims of violent federal crimes are

---

[3574] 151 CONG. REC. H6262 (daily ed. July 21, 2005)(statement of Rep. Delahunt) ("This is about domestic terrorism and the definition of domestic terrorism. And while it does not create a new crime under the PATRIOT Act, the definition triggers an array of expanded governmental authorities, including enhanced civil asset seizure powers. It is so broadly defined that it could include acts of civil disobedience because they may involve acts that endanger human life..."); 151 CONG. REC. H6262-263 (daily ed. July 21, 2005) (statement of Rep. Sensenbrenner)("There are various definitions of terrorism under Federal law. In title XVIII there has been a confusion over a new definition created in the USA PATRIOT Act for domestic terrorism. That provision is supposed to be used for administrative procedures such as nationwide searches, but another part of the PATRIOT Act, section 806, uses the reference for asset forfeiture, which is more of a penalty. This has raised concerns about those who exercise their first amendment rights. As a result, groups from both sides of the political spectrum have wanted to change the definition for domestic terrorism. This amendment fixes the problem...").

entitled to restitution, 18 U.S.C. 3663A, and victims of other federal crimes are eligible for restitution, 18 U.S.C. 3663.

Section 127 of the Act expresses the sense of Congress that under section 981 victims of terrorist attacks should have access to the assets of terrorists that have been forfeited.

Miscellanea

This section of the report discusses miscellaneous provisions of Title I of the Act which are not easily classifiable within the subheadings above.

FISA Court Rules and Procedures

Section 109(d) of the Act requires the FISA court to publish its rules and procedures and transmit them in unclassified form to all judges on the FISA court, the FISA Court of Review, the Chief Justice of the United States, and the House and Senate Judiciary and Intelligence Committees.

The U.S. Citizenship and Immigration Services

The Act directs the Secretary of Homeland Security to report to the House and Senate Judiciary Committees semi-annually regarding the internal affairs operations and investigations of the U.S. Citizenship and Immigration Services. The first such written report is to be submitted no later than April 1, 2006.[3575]

Cigarette Smuggling

Federal law proscribes trafficking in contraband cigarettes.[3576] Violations are punishable by imprisonment for up to five years,[3577] and constitute racketeering predicate offenses.[3578] During debate on the House floor, several Members pointed to the fact that in at least one instance terrorists had resorted to cigarette smuggling as a financing mechanism.[3579]

[3575] § 109(c), P.L. 109-177, 120 Stat. 205 (2006).

[3576] 18 U.S.C. 2341-2346

[3577] 18 U.S.C. 2344.

[3578] 18 U.S.C. 1961(1). Federal racketeer influenced and corrupt organization laws (RICO) proscribe the acquisition or operation of an enterprise, whose activities affected interstate or foreign commerce, through the patterned commission of other specifically designated crimes (predicate offenses); offenders face imprisonment for up to 20 years and confiscation of offense related property, 18 U.S.C. 1961-1963.

[3579] 151 CONG. REC. H6284 (daily ed. July 21, 2005) (statements of Reps. Coble, Sensenbrenner, Cantor, and Kildee).

Section 121 amends federal law by lowering the threshold definition of contraband cigarettes, from "a quantity in excess of 60,000 cigarettes" to 10,000 cigarettes, and adds a new provision for contraband smokeless tobacco, defined as a quantity in excess of 500 cans or packages of smokeless tobacco. Additionally, the Act creates a federal cause action against violators (other than Indian tribes or Indians in Indian country) for manufacturers, exporters, and state and local authorities.[3580]

Narco-Terrorism

The federal Controlled Substances Act prohibits drug trafficking with severe penalties calibrated according to the kind and volume of drugs and the circumstances involved[3581] (e.g., trafficking in 50 grams or more of crack cocaine is punishable by imprisonment for not less than 10 years and for not more than life; distributing a small amount of marijuana for no remuneration is punishable by imprisonment for not more than one year).[3582] Drug offenses that involved additional egregious circumstances are often subject to multiples of the sanctions for the underlying offense.[3583] Providing material support for the commission of a terrorist crime or to a designated foreign terrorist organization is likewise a federal crime, punishable by imprisonment for not more than 15 years.[3584]

Section 122 of the Act outlaws drug trafficking — for the benefit of a foreign terrorist organization as defined in the immigration laws, 8 U.S.C. 1182(a)(3)(B), or of a person who has or is engaged in terrorism as defined in 22 U.S.C. 2656f(d)(2) (politically motivated violence against civilian targets) — under a wide range of jurisdictional circumstances.[3585] The offense can only be committed

---

[3580] § 121(f), P.L. 109-177, 120 Stat. 223, 224 (2006), adding new 18 U.S.C. 2346(b).

[3581] 21 U.S.C. 841-971.

[3582] 21 U.S.C. 841, 844.

[3583] See, e.g., 21 U.S.C. 859 (sale of drugs to a child: twice the normal penalty); 861 (use a child in drug trafficking: twice the normal penalty); 861(f) (sale of drugs to a pregnant woman: twice the normal penalty).

[3584] 18 U.S.C. 2339A, 2339B.

[3585] § 122, P.L. 109-177, 120 Stat. 225 (2006), adding new 21 U.S.C. 960A(b) ("There is jurisdiction over an offense under this section if — (1) the prohibited drug activity or the terrorist offense is in violation of the criminal laws of the United States; (2) the offense, the prohibited drug activity, or the terrorist offense occurs in or affects interstate for foreign commerce; (3) an offender provides anything of pecuniary value for a terrorist offense that causes or is designed to cause death or serious bodily injury to a national of the United States while that national is outside the United States, or substantial damage to the property of a legal entity organized under the laws of the United States (including any of its States, districts, commonwealths, territories, or possessions) while that property outside of the United States; (4) the offense or the prohibited drug activity occurs in whole or in part outside of the United States including on the high seas),

with the knowledge of the terrorist misconduct of its beneficiaries. Violators face imprisonment for not less than twice the minimum penalty for drug trafficking under 21 U.S.C. 841(b)(1) nor more than life, and period of supervised release of not less than five years.[3586] The Act also expressly prohibits attempts and conspiracies to violate the new section. It may be that 21 U.S.C. 963 would have produced the same result in the absence of an express provision, since it punishes attempts and conspiracies to commit any offense defined in the Controlled Substances Act. It may also be that in conjunction, section 963 and the new section outlaw conspiracies to attempt a substantive violation of the new section.

Interference With the Operation of an Aircraft

It is a federal crime to destroy an aircraft or its facilities under various circumstances giving rise to federal jurisdiction or to attempt, or conspire to do so, 18 U.S.C. 32. Violations are punishable by imprisonment for not more than 20 years. It is likewise a federal crime to interfere with a member of a flight crew in the performance of their duties; this too is punishable by imprisonment for not more than 20 years (or imprisonment for any term of years or for life in the case of assault with a dangerous weapon), 49 U.S.C. 46504.

Section 123 of the Act amends 18 U.S.C. 32 to make it a federal crime to interfere or disable the operator of an aircraft or aircraft facility with reckless disregard for human safety or with the intent to endanger, subject to the same sanctions that apply to other violations of the section. By operation of section 32, the new prohibition extends to attempts and conspiracies to engage in such conduct, 18 U.S.C. 32(a)(7)(redesignated 18 U.S.C. 32(a)(8)).

Investigation of Political Activities

FISA bars the use of various information collection techniques in the course of a foreign intelligence investigation, if the investigation is based solely on the exercise of First Amendment protected rights, 50 U.S.C. 1805(a)(3)(A), 1824(a)(1)(A), 1942(a)(1).

Section 124 of the Act expresses the sense of Congress that the federal government should not conduct criminal investigations of Americans based solely on their membership in non-violent political organizations or their participation in other lawful political activity.

---

and a perpetrator of the offense or the prohibited drug activity is a national of the United States or a legal entity organized under the laws of the United States (including any of its States, districts, commonwealths, territories, or possessions); or (5) after the conduct required for the offense occurs an offender is brought into or found in the United States, even if the conduct required for the offense occurs outside the United States.") In cases where neither the support, the drug offense, nor the terrorism have any connection to the U.S. other than the later presences of the offender here, paragraph 960A(b)(5) may exceed Congress's legislative reach unless the benefit of a treaty obligation can be claimed.

[3586] § 122, P.L. 109-177, 120 Stat. 225 (2006), adding new 21 U.S.C. 960A.

Immunity for Fire Equipment Donors

Section 125 grants immunity from civil liability to the donors (other than manufacturers) of fire equipment to volunteer fire organizations.

Federal Data Mining Report

Section 126 directs the Attorney General to submit a report to Congress within a year after the date of the Act's enactment, concerning the Department of Justice's use or development of "pattern-based" data mining technologies. While the Act provides a definition of "data-mining,"[3587] it does not define "pattern-based."[3588]

Title II: Terrorist Death Penalty Enhancement Act of 2005

Title II of the Act makes several adjustments in federal death penalty law, which concern air piracy cases arising before 1994, a redundant procedural mechanism in federal capital drug cases, supervised release for terrorism offenses, and a transfer of the law governing the appointment of counsel in capital cases.

Pre-1994 Capital Air Piracy Cases

In the late 1960s and early 1970s, the U.S. Supreme Court held unconstitutional the imposition of capital punishment under the procedures then employed by the

---

[3587] § 126, P.L. 109-177, 120 Stat. 228 (2006).

[3588] The want of definition may be significant because the terms are not hermetically sealed legal concepts, see, e.g., Safeguarding Privacy in the Fight Against Terrorism, Report of the Technology and Privacy Advisory Committee, 45 (March 2004)("data mining includes 'pattern-based' searches . . . These [might] involve developing models of what terrorist behavior might look like and then examining databases for similar patterns. This is similar to commercial data mining techniques — businesses develop a pattern of attributes or behaviors that their good customers have in common, and then search databases to find people meeting those patterns — but potentially far more powerful given the range of data to which the government has access and the capacity of data mining to eliminate the need to aggregate data before searching them. As we use the term, data mining may also include 'subject-based' searches, which look for information about a specific individual or links to known terrorist suspects. This has long been a basic tool of criminal investigators everywhere: start with known suspects and, with proper authorization (in many cases, a warrant or a subpoena), look for information about them and the people with whom they interact. However, the power of data mining technology and the range of data to which the government has access have contributed to blurring the line between subject- and pattern-based searches. The broader the search criteria, and the more people other than actual terrorist who will be identified by those criteria, the more pattern-like these searches become. Even when a subject-based search starts with a known suspect, it can be transformed into a pattern-based search as investigators target individuals for investigation solely because of their connection with the suspect. The more tenuous the connection, the more like a pattern-based search it becomes. Searches that lack specific focus on identified suspects do pose greater risk for U.S. persons and should be subject to greater scrutiny and accountability").

federal government and most of the states.[3589] In 1974, Congress established a revised procedure for imposition of the death penalty in certain air piracy cases.[3590] In 1994, when Congress made the procedural adjustments necessary to revive the death penalty as a sentencing option for other federal capital offenses, it replaced the air piracy procedures with those of the new regime.[3591] At least one court, however, held that the new procedures could not be applied retroactively to air piracy cases occurring after the 1974 fix but before the 1994 legislation, in the absence of an explicit statutory provision.[3592]

Section 211 of the Act adds an explicit provision to the end of the 1994 legislation.[3593] The amendment provides for the application of the existing federal capital punishment procedures, 18 U.S.C. ch.228, in addition to consideration of the mitigating and aggravating factors in place prior to the 1994 revival.[3594] Section 211 also provides for severance should any of the 1994 factors be found constitutionally invalid, and includes a definition of "especially heinous, cruel, or depraved" used as an aggravating factor in section 46503, to avoid the vagueness problems that might otherwise attend the use of such an aggravating factor.[3595]

The conference report accompanying H.R. 3199 notes that the changes apply to a relative small group of individuals responsible for murders committed during the course of hijackings in the mid 1980's who would otherwise be eligible for parole within 10 years of sentencing and could not be effectively sentenced to more than 30 years in prison.[3596]

[3589] Furman v. Georgia, 408 U.S. 238 (1972).

[3590] P.L. 93-366, 88 Stat. 409 (1974), 49 U.S.C. 1473 (1976 ed.)

[3591] P.L. 103-322, 108 Stat. 1796, 1970 (1994), 18 U.S.C. 3591-3598.

[3592] United States v. Safarini, 257 F.Supp.2d 191, 202-3 (D.D.C. 2003).

[3593] § 211(a), P.L. 109-177, 120 Stat. 230 (2006), adding subsection 60003(c) to P.L. 103-322, 108 Stat.1970 (1994).

[3594] P.L. 103-272, 108 Stat. 1242 (1994). Because the 1994 legislation was enacted almost immediately after recodification of title 49, 49 U.S.C. 46503 never appeared in the official United States Code or any of its supplements. The predecessor to 49 U.S.C. 46503 as repealed in the 1994 capital punishment revival statute appears in 49 U.S.C. App. 1473 (1988 ed.).

[3595] See, e.g., Maynard v. Cartwright, 486 U.S. 356, 359-61 (1988).

[3596] H.Rept. 109-333, at 101 (2005) ("This provision is particularly important for several reasons. In the absence of a death penalty that could be implemented for pre-FDPA hijacking offenses resulting in death that also occurred before the effective date of the Sentencing Guidelines on November 1, 1987, the maximum penalty available would be life imprisonment. Under the pre-Sentencing Guidelines structure, even prisoners sentenced to life imprisonment were eligible for a parole hearing after serving only ten years. While there is a split in the Circuit Courts of Appeals as to whether a sentencing judge can impose a sentence that could avert the 10-year parole

Life Time Supervised Release Regardless of Risks

Prior to the Act, a federal court could have imposed a sentence of supervised release, to be served upon release from prison, of any term of years or life if the defendant has been convicted of a federal crime of terrorism (18 U.S.C. 2332b(g)(5)(B)) involving the foreseeable risk of physical injury of another, 18 U.S.C. 3583(j).[3597] Section 212 of the Act amends section 3583(j) to eliminate the

---

hearing requirement, the current position of the Bureau of Prisons is that a prisoner is eligible for a parole hearing after serving ten years of a life sentence. Even if parole is denied on that first occasion, such prisoners are eligible to have regularly scheduled parole hearings every two years thereafter. Moreover, in addition to parole eligibility after ten years, the old sentencing and parole laws incorporated a presumption that even persons sentenced to life imprisonment would be released after no more than 30 years. In the context of the individuals responsible for the hijacking incidents described above, most of the perpetrators were no older than in their twenties when they committed their crimes. The imposition of a pre-Guidelines sentence of life imprisonment for these defendants means that many, if not all of them, could be expect to be released from prison well within their lifetime. Given the gravity of these offenses, coupled with the longstanding Congressional intent to have a death penalty available for the offense of air piracy resulting in death, such a result would be at odds with the clear directive of Congress.")

[3597] The federal crimes of terrorism are violations of: 18 U.S.C. 32 (destruction of aircraft or aircraft facilities), 37 (violence at international airports), 81 (arson within special maritime and territorial jurisdiction), 175 or 175b (biological weapons), 175c (variola virus), 229 (chemical weapons), subsection (a), (b), (c), or (d) of section 351 (congressional, cabinet, and Supreme Court assassination and kidnaping), 831 (nuclear materials), 842(m) or (n) (plastic explosives), 844(f)(2) or (3) (arson and bombing of Government property risking or causing death), 844(I) (arson and bombing of property used in interstate commerce), 930(c) (killing or attempted killing during an attack on a Federal facility with a dangerous weapon), 956(a)(1) (conspiracy to murder, kidnap, or maim persons abroad), 1030(a)(1) (protection of computers), 1030(a)(5)(A)(I) resulting in damage as defined in 1030(a)(5)(B) (ii) through (v) (protection of computers), 1114 (killing or attempted killing of officers and employees of the United States), 1116 (murder or manslaughter of foreign officials, official guests, or internationally protected persons), 1203 (hostage taking), 1361 (government property or contracts), 1362 (destruction of communication lines, stations, or systems), 1366(a) (destruction of an energy facility), 1751(a), (b), (c), or (d) (Presidential and Presidential staff assassination and kidnaping), 1992 (train wrecking), 1993 (terrorist attacks and other acts of violence against mass transportation systems), 2155 (destruction of national defense materials, premises, or utilities), 2156 (national defense material, premises, or utilities), 2280 (violence against maritime navigation), 2281 (violence against maritime fixed platforms), 2332 (certain homicides and other violence against United States nationals occurring outside of the United States), 2332a (use of weapons of mass destruction), 2332b (acts of terrorism transcending national boundaries), 2332f (bombing of public places and facilities), 2332g (missile systems designed to destroy aircraft), 2332h (radiological dispersal devices), 2339 (harboring terrorists), 2339A (providing material support to terrorists), 2339B (providing material support to terrorist organizations), 2339C (financing of terrorism), 2340A (torture); 42 U.S.C. 2122 (prohibitions governing atomic weapons), 2284 (sabotage of nuclear facilities or fuel); 49 U.S.C. 46502 (aircraft piracy), the second sentence of 46504 (assault on a flight crew with a dangerous weapon), 46505(b)(3) or (c) (explosive or incendiary devices, or endangerment of human life by means of weapons, on aircraft), 46506 if homicide or attempted homicide is involved (application of certain criminal laws to acts on aircraft), and 60123 (b) (destruction of interstate gas or hazardous liquid pipeline facility). Section 112 of the Act adds 18

requirement that the defendant be convicted of a crime involving a foreseeable risk of injury; conviction of any federal crime of terrorism is sufficient.

Capital Procedures in Drug Cases

Prior to the Act, federal law provided two sets of death penalty procedures for capital drug cases, the procedures applicable in federal capital cases generally, 18 U.S.C. 3591-3598, and the procedures specifically applicable in federal capital drug cases, 21 U.S.C. 848. The two procedures are virtually identical according to United States v. Matthews, 246 F.Supp.2d 137, 141 (N.D.N.Y. 2002). Section 221 of the Act eliminates the specific drug case procedures so that only the general procedures apply in such cases. According to the conference report accompanying H.R. 3199, this "eliminates duplicative death procedures under title 21 of the United States code, and consolidates procedures governing all Federal death penalty prosecutions in existing title 18 of the United States Code, thereby eliminating confusing requirements that trial courts provide two separate sets of jury instructions."[3598]

Appointment of Counsel in Capital Cases

Prior to the Act, the federal capital drug provisions housed provisions for the appointment of counsel to assist indigents facing federal capital charges and indigent federal and state death row inmates during federal habeas proceedings, 21 U.S.C. 848(q)(4)-(10). Section 222 of the Act transfers these provisions to title 18.[3599]

Title III: Reducing Crime and Terrorism at America's Seaports Act of 2005

Title III of the Act, among other things, creates more severe criminal penalties concerning criminal and terrorist activities committed at U.S. seaports or aboard vessels.

Seaport Entry by False Pretenses

The Maritime Transportation Security Act requires the submission to the Department of Homeland Security of vessel and facility security plans that include provisions for establishing and controlling secure areas, 46 U.S.C. 70103(c). It also calls for issuance of transportation security cards in order to regulate access to secure areas, 46 U.S.C. 70105. It contains no specific provisions regarding trespassing upon security areas, but the Coast Guard and Maritime

---

U.S.C. 2339D(foreign military training) and 21 U.S.C. 1010A (narco-terrorism) to the list, 18 U.S.C. 2332b(g)(5)(B) as amended by the Act.

[3598] H.Rept. 109-333, at 102 (2005).

[3599] § 222, P.L. 109-177, 120 Stat. 231 (2006), adding new 18 U.S.C. 3599.

Transportation Act amended its provisions in a manner that suggests the application of state criminal laws as well as criminal sanctions found in the Deepwater Port Act, 33 U.S.C. 1514 (imprisonment for not more than one year); the Ports and Waterways Safety Act, 33 U.S.C. 1232 (imprisonment for not more than 10 years); and the act of June 15, 1917, 50 U.S.C. 192 (imprisonment for not more than 10 years).[3600]

As a general matter, it is a federal crime to use fraud or false pretenses to enter federal property, a vessel or aircraft of the United States, or the secured area in an airport, 18 U.S.C. 1036. The offense is punishable by imprisonment for not more than five years if committed with the intent to commit a felony and imprisonment for not more six months in other cases. The same maximum penalty applies to making a false statement to federal officials or in any matter within the jurisdiction of a federal agency or department, 18 U.S.C. 1001. Possession of phony government identification to defraud the U.S. is a one-year felony, absent further aggravating circumstances under which the sanctions are increased, 18 U.S.C. 1028 (a)(4), (b)(6). Moreover, except to the extent covered by 18 U.S.C. 1036 or 18 U.S.C. 1863 (trespassing in the national forests), unlawful entry to property (federal or otherwise) with the intent to commit a second crime is punishable under the laws of the state in which it occurs, cf., 18 U.S.C. 13.

Section 302 of the Act expands 18 U.S.C. 1036 to cover seaports and increases the penalty for violations with respect to any of the protected areas committed with the intent to commit a felony, from imprisonment for not more than five years to imprisonment for not more than 10 years, amended 18 U.S.C. 1036.[3601] The section also provides a definition of "seaport."[3602]

[3600] 46 U.S.C. 70119 expressly authorizes state and local law enforcement officers to make arrests for violations of these Acts, and notes that the authority is in addition and should not be construed to limit any other authority they may possess.

[3601] "(a)Whoever, by any fraud or false pretense, enters or attempts to enter — (1) any real property belonging in whole or in part to, or leased by, the United States; (2) any vessel or aircraft belonging in whole or in part to, or leased by, the United States; (3) any secured or restricted area of any seaport, designated as secure in an approved security plan, as required under section 70103 of title 46, United States Code, and the rules and regulations promulgated under that section; or (4) any secure area of any airport, shall be punished as provided in subsection (b) of this section. "(b) The punishment for an offense under subsection (a) of this section is — (1) a fine under this title or imprisonment for not more than [5 years] 10 years, or both, if the offense is committed with the intent to commit a felony; or (2) a fine under this title or imprisonment for not more than 6 months, or both, in any other case," 18 U.S.C. 1036(a),(b) as amended by the Act (changes are in italics - deletions in bold).

[3602] "As used in this title, the term 'seaport' means all piers, wharves, docks, and similar structures, adjacent to any waters subject to the jurisdiction of the United States, to which a vessel may be secured, including areas of land, water, or land and water under and in immediate proximity to such structures, buildings on or contiguous to such structures, and the equipment and materials on such structures or in such buildings," new 18 U.S.C. 26 as added by the Act. The

The conference report accompanying H.R. 3199 quotes the Interagency Commission report and describes the problems the amendments are designed to address:

> *According to the Report of the Interagency Commission … '[c]ontrol of access to the seaport or sensitive areas within the seaport is often lacking.' Such unauthorized access is especially problematic, because inappropriate controls may result in the theft of cargo and more dangerously, undetected admission of terrorists. In addition to establishing appropriate physical, procedural, and personnel security for seaports, it is important that U.S. criminal law adequately reflect the seriousness of the offense.*[3603]

However, critics might point out that the section does not deal with all "unauthorized access," only access accomplished by fraud. And, they argue, even if the seriousness of such unauthorized access to seaport restricted areas with criminal intent might warrant imprisonment for up to 10 years, there is nothing in conference or Commission reports to explain the necessity for the comparable penalty increase for the other forms of trespassing upon the other areas covered under section 1036.

Obstructing Maritime Inspections

Various federal laws prohibit the failure to heave to or otherwise obstruct specific maritime inspections under various circumstances.[3604]

Section 303 of the Act establishes a new, general federal crime that outlaws, in the case of vessel subject to the jurisdiction of the United States, the failure to heave to, or to forcibly interfere with the boarding of the vessel by federal law enforcement or resist arrest, or to provide boarding federal law enforcement officers with false information concerning the vessel's cargo, origin, destination, registration, ownership, nationality or crew.[3605] The crime is punishable by imprisonment for not more than five years.

---

term "seaport" does not appear to have been used in any other section of title 18; elsewhere in federal law the term "port" is more commonly used, see, e.g., 6 U.S.C. 468 (Coast Guard's homeland security mission), 18 U.S.C. 2199(stowaways), perhaps to make clear that ports such as those on Great Lakes are covered notwithstanding the fact they may not ordinarily be thought of as "seaports."

[3603] H.Rept. 109-333, at 103 (2005).

[3604] See, e.g., 16 U.S.C. 2435, 2438 (enforcement of the Antarctic Marine Living Resources Convention); 16 U.S.C. 5505, 5508 (high seas fishing compliance).

[3605] § 303(a), P.L. 109-177, 120 Stat. 233, 234, adding new 18 U.S.C. 2237.

Interference with Maritime Commerce

Federal law prohibits violence against maritime navigation, 18 U.S.C. 2280, burning or bombing vessels, 18 U.S.C. 2275, burning or bombing property used in or whose use affects interstate or foreign commerce, 18 U.S.C. 844(I), destruction of property within the special maritime and territorial jurisdiction of the United States, 18 U.S.C. 1363. None of them are punishable by life imprisonment unless death results from their commission.[3606]

Section 304 of the Act creates two new federal crimes. The first makes it a federal crime punishable by imprisonment for any term of years or for life (or the death penalty if death results) to place a dangerous substance or device in the navigable waters of the United States with the intent to damage a vessel or its cargo or to interfere with maritime commerce.[3607]

The second of section 304's provisions makes it a federal crime punishable by imprisonment for not more than 20 years to tamper with any navigational aid maintained by the Coast Guard or St. Lawrence Seaway Development Corporation in manner likely to endanger navigation, new 18 U.S.C. 2282B as added by the Act. Opponents may find the sanctions a bit stiff, but in the words of the conference report, "the Coast Guard maintains over 50,000 navigational aids on more than 25,000 miles of waterways. These aids ... are inviting targets for terrorists."[3608] There may also be some question why the new section is necessary given that section 306 of the Act provides, "Whoever knowingly ... damages, destroys, or disables ... any aid to navigation ... shall be ... imprisoned not more than 20 years," new 18 U.S.C. 2291(a)(3) as added by the Act; see also, new 18 U.S.C. 2291(a)(4) as added by section 306 of the Act ("Whoever knowingly interferes by force or violence with the operation of ... any aid to navigation ..., if such action is likely to endanger the safety of any vessel in navigation").

Transporting Dangerous Materials or Terrorists

Section 305 of the Act establishes two other federal terrorism-related transportation offenses, one for transporting dangerous materials and the other for transporting terrorists.

[3606] For example, section 2280, which among other things, "prohibits destroy[ing] a ship or caus[ing] damage to a ship or to its cargo which is likely to endanger the safe navigation of that ship" or attempting or conspiring to do so is punishable by imprisonment for not more than 20 years or if death results by death or imprisonment for life or any term of years, 18 U.S.C. 2280(a)(1)(C),(H).

[3607] § 304, P.L. 109-177, 120 Stat. 235, adding new 18 U.S.C. 2282A

[3608] H.Rept. 109-333, at 103 (2005).

Transporting Dangerous Materials

It is a federal crime to possess biological agents, chemical weapons, atomic weapons, and nuclear material, each punishable by imprisonment for any term of years or for life.[3609] And although the penalties vary, it is likewise a federal crime to commit any federal crime of terrorism.[3610] Morever, it is a federal crime to provide material support, including transportation, for commission of various terrorist crimes or for the benefit of a designated terrorist organization, 18 U.S.C. 2339A, 2339B, or to transport explosives in interstate or foreign commerce with the knowledge they are intended to be used in injure an individual or damage property, 18 U.S.C. 844(d). Most of these offenses condemn attempts and conspiracies to commit them, and accomplices and coconspirators incur comparable liability in any event.[3611]

Section 305 of the Act establishes a new federal offense which prohibits transporting explosives, biological agents, chemical weapons, radioactive or nuclear material knowing it is intended for use to commit a federal crime of terrorism — aboard a vessel in the United States, in waters subject to U.S. jurisdiction, on the high seas, or aboard a vessel of the United States.[3612] The crime is punishable by imprisonment for any term of years or for life and may be punishable by death if death results from commission of the offense.

Transporting Terrorists

While it is a crime to harbor a terrorist, 18 U.S.C. 2339, or to provide material support, including transportation, for the commission of a terrorist offense or for the benefit of a foreign designated terrorist organization, 18 U.S.C. 2339A, 2339B, such offenses are only punishable by imprisonment for not more than 15 years. The same perceived defect may appear to some in the penalties for aiding and abetting commission of the various federal crimes of terrorism and in the penalties available for committing many of them.[3613]

[3609] 18 U.S.C. 175, 229, 831; 42 U.S.C. 2272.

[3610] Each crime designated in 18 U.S.C. 2332b(g)(5)(B) carries its own penalty.

[3611] 18 U.S.C. 2; United States v. Pinkerton, 328 U.S. 640, 647-48 (1946).

[3612] §305(a), P.L. 109-177, 120 Stat. 236 (2006), adding new 18 U.S.C. 2283.

[3613] For example, destruction of aircraft or violence at international airports in violation of 18 U.S.C. 32 and 73 respectively are punishable by imprisonment for not more than 20 years, unless a death results; and the same penalties apply to computer fraud and abuse violations considered federal crimes of terrorism, 18 U.S.C. 1030(a)(5), (c)(4). Aiding and abetting carries the same penalties as the underlying offense, 18 U.S.C. 2.

Section 305 creates a new federal offense, 18 U.S.C. 2284, punishable by imprisonment for any term of years or for life for transporting an individual knowing he intends to commit, or is fleeing from the commission of, a federal crime of terrorism. Unlike the new 18 U.S.C. 2282A(c), created in section 304, neither of the section 305 offenses have an explicit exception for official activities. Of course, even though facially the new section 2284 forbids transporting terrorists for purposes of extradition or prisoner transfer, it would never likely be read or applied to prevent or punish such activity.

Interference With Maritime Navigation

Chapter 111 of title 18 of the United States Code relates to shipping and by and large outlaws violence in various forms committed against vessels within U.S. jurisdiction.[3614] Other sections of the Code proscribe the use of fire, explosives or violence with sufficient breath of protect shipping under some circumstances. For example, one section condemns the use fire or explosives against property used in (or used in an activity affecting) interstate or foreign commerce, 18 U.S.C. 844(I). Another prohibits destruction of property within the maritime jurisdiction of the Untied States, 18 U.S.C. 1363, and a third, arson within the maritime jurisdiction, 18 U.S.C. 81. Hoaxes relating to violations of chapter 111 are punishable by imprisonment for not more than five years (not more than 20 years if serious injury results and if death results, by imprisonment for any term of years or for life or by death), 18 U.S.C. 1038.

Section 306 of the Act enacts a new chapter 111A supplementing chapter 111 as well as section 1038 and consists of four sections. Of the four sections, two are substantive, proscribing hoaxes and the destruction of vessels or maritime facilities, new 18 U.S.C. 2291, 2292; and two procedural, one providing the jurisdictional base for the substantive offenses, new 18 U.S.C. 2290, and the other barring prosecution of certain misdemeanor or labor violations, new 18 U.S.C. 2993.

According to the conference report accompanying H.R. 3199, "this section harmonizes the somewhat outdated maritime provisions with the existing criminal sanctions for destruction or interference with an aircraft or aircraft facilities in 18 U.S.C. 32, 34, and 35."[3615] It is not surprising, therefore, that the new destruction offense mirrors the substantive provisions for the destruction of

---

[3614] The offenses include 18 U.S.C. 2271 (conspiracy to destroy vessels), 2272 (destruction of vessel by owner); 2273 (destruction of vessel by nonowner); 2274 (destruction or misuse of vessel by person in charge); 2275 (firing or tampering with vessel), 2276 (breaking and entering a vessel); 2277 (explosives or dangerous weapons aboard vessels); 2278 (explosives on vessels carrying steerage passengers); 2279 (boarding vessels before arrival); 2280 (violence against maritime navigation); and 2281 (violence against maritime fixed platforms).

[3615] H.Rept. 109-333, at 104 (2005).

aircraft and their facilities, 18 U.S.C. 32,[3616] although it differs from the aircraft prohibition in several respects. First, it has exceptions for lawful repair and salvage operations and for the lawful transportation of hazardous waste, new 18 U.S.C. 2291(b). Second, in the manner of 18 U.S.C. 1993 (attacks on mass transit), it increases the penalty for violations involving attacks on conveyances carrying certain hazardous materials to life imprisonment, new 18 U.S.C. 2291(c). Third, it tightens the "death results" sentencing escalator so that a sentence of death or imprisonment for life or any term of years is only warranted if the offender intended to cause the resulting death, new 18 U.S.C. 2291(d).

In addition to these, the substantive prohibitions of the new section 2291 differ from the otherwise comparable prohibitions of 18 U.S.C. 2280 (concerning violence against maritime navigation) in two major respects. The proscriptions in section 2280 and those of section 32 generally require that the prohibited damage adversely impact on safe operation;[3617] new section 2291 is less likely to feature a comparable demand.

[3616] "Whoever knowingly — (1) sets fire to, damages, destroys, disables, or wrecks any vessel; (2) places or causes to be placed a destructive device or substance, as defined in section 31(a)(3), or explosive, as defined in section 844(j) in, upon, or near, or otherwise makes or causes to be made unworkable or unusable or hazardous to work or use, any vessel, or any part or other materials used or intended to be used in connection with the operation of a vessel; (3) sets fire to, damages, destroys, disables or places a destructive device or substance in, upon, or near, any maritime facility, including any aid to navigation, lock, canal, or vessel traffic service facility or equipment; (4) interferes by force or violence with the operation of any maritime facility, including any aid to navigation, lock, canal, or vessel traffic service facility or equipment, if such action is likely to endanger the safety of any vessel in navigation; (5) sets fire to, damages, destroys, or disables or places a destructive device or substance in, upon, or near, any appliance, structure, property, machine, or apparatus, or any facility or other material used, or intended to be used, in connection with the operation, maintenance, loading, unloading or storage of any vessel or any cargo carried or intended to be carried on any vessel; (6) performs an act of violence against or incapacitates any individual on any vessel, if such act of violence or incapacitation is likely to endanger the safety of the vessel or those on board; (7) performs an act of violence against a person that causes or is likely to cause serious bodily injury, as defined in section 1365(h)(3), in, upon, or near, any appliance, structure, property, machine, or apparatus, or any facility or other material used, or intended to be used, in connection with the operation, maintenance, loading, unloading or storage of any vessel or any cargo carried or intended to be carried on any vessel; (8) communicates information, knowing the information to be false and under circumstances in which such information may reasonably be believed, thereby endangering the safety of any vessel in navigation; or (9) attempts or conspires to do anything prohibited under paragraphs (1) through (8) of this subsection, shall be fined under this title or imprisoned not more than 20 years, or both," 18 U.S.C. 2291(a) as added by the Act. Section 2291 carries a 20 year maximum sanction for violations. The other sections cited in the report refer to the death penalty (18 U.S.C. 34) and hoax (18 U.S.C. 35) provisions relating to violations of 18 U.S.C. 32.

[3617] "A person who unlawfully and intentionally — (A) seizes or exercises control over a ship by force or threat thereof or any other form of intimidation; (B) performs an act of violence against a person on board a ship if that act is likely to endanger the safe navigation of that ship; (C) destroys a ship or causes damage to a ship or to its cargo which is likely to endanger the safe navigation of that ship; (D) places or causes to be placed on a ship, by any means whatsoever, a

On the other hand, because it is treaty-based, section 2280 enjoys a broader jurisdictional base than new section 2290 is able to provide for new section 2291. By virtue of new section 2290, a violation of new section 2291 is only a federal crime if it is committed within the United States, or the offender or victim is a U.S. national, or the vessel is a U.S. vessel, or a U.S. national is aboard the vessel involved. In the case of subsection 32(b) or section 2280, there need be no more connection to the United States than that the offender is subsequently found or brought here, 18 U.S.C. 32(b), 2280(b)(1)(c). Like section 2280, however, new section 2291 is subject to exceptions for misdemeanor offenses and labor disputes.[3618]

New section 2292 creates a hoax offense in the image of 18 U.S.C. 35 which relates to hoaxes in an aircraft context. It sets a basic civil penalty of not more than $5000 for hoaxes involving violations of the new section 2291 or of chapter 111, the existing shipping chapter.[3619] If the misconduct is committed "knowingly, intentionally, maliciously, or with reckless disregard for the safety of human life," it is punishable by imprisonment for not more than five years.[3620] The Act also requires that in both instances, jurisdiction over the offense is governed by the jurisdiction of the offense that is the subject to the hoax.[3621]

---

device or substance which is likely to destroy that ship, or cause damage to that ship or its cargo which endangers or is likely to endanger the safe navigation of that ship; (E) destroys or seriously damages maritime navigational facilities or seriously interferes with their operation, if such act is likely to endanger the safe navigation of a ship; (F) communicates information, knowing the information to be false and under circumstances in which such information may reasonably be believed, thereby endangering the safe navigation of a ship; (G) injures or kills any person in connection with the commission or the attempted commission of any of the offenses set forth in subparagraphs (A) through (F); or (H) attempts or conspires to do any act prohibited under subparagraphs (A) through (G), shall be fined under this title, imprisoned not more than 20 years, or both; and if the death of any person results from conduct prohibited by this paragraph, shall be punished by death or imprisoned for any term of years or for life,"18 U.S.C. 2280(a)(1).

[3618] "It is a bar to prosecution under this chapter if — (1) if the conduct in question occurred within the United States in relation to a labor dispute, and such conduct is prohibited as a felony under the law of the State in which it was committed; or (2) such conduct is prohibited as a misdemeanor, and not a felony, under the law of the State in which it was committed," new 18 U.S.C. 2293(a) as added by § 306 of the Act, 120 Stat. 239 (2006).

[3619] "Whoever imparts or conveys or causes to be imparted or conveyed false information, knowing the information to be false, concerning an attempt or alleged attempt being made or to be made , to do any act that would be a crime prohibited by this chapter or by chapter 111 of this title, shall be subject to a civil penalty of not more than $5,000, which shall be recoverable in a civil action brought in the name of the United States," new 18 U.S.C. 2292(a) as added by § 306 of the Act, 120 Stat. 239 (2006).

[3620] § 306, P.L. 109-177, 120 Stat. 239 (2006), adding new 18 U.S.C. 2292(b).

[3621] § 306, P.L. 109-177, 120 Stat. 239 (2006), adding new 18 U.S.C. 2292(c).

In the case of hoaxes involving violations of chapter 111, the new section affords the government an alternative ground for prosecution to that offered by 18 U.S.C. 1038.

Theft From Maritime Commerce

Section 307 of the Act expands or clarifies the application of various criminal provisions particularly in the case of maritime commerce.

Theft From Interstate Commerce

Federal law prohibits theft from shipments traveling in interstate or foreign commerce; violations are punishable by imprisonment for not more than 10 years (not more than one year if the value of the property stolen is $1000 or less), 18 U.S.C. 659.

Section 307 increases the penalty for theft of property valued at $1000 or less to imprisonment for not more than three years, 18 U.S.C. 659 as amended by the Act. It also makes it clear that theft from trailers, cargo containers, freight stations, and warehouses are covered, and that the theft of goods awaiting transshipment is also covered, 18 U.S.C. 659 as amended by the Act.

Interstate or Foreign Transportation of Stolen Vessels

Interstate or foreign transportation of a stolen vehicle or aircraft is punishable by imprisonment for not more than 10 years, 18 U.S.C. 2312; receipt of a stolen vehicle or aircraft that has been transported in interstate or foreign commerce carries the same penalty, 18 U.S.C. 2313.

Section 307 expands the coverage of federal law to cover the interstate or foreign transportation of a stolen vessel and receipt of a stolen vessel that has been transported in interstate or overseas, 18 U.S.C. 2311 as amended by the Act. The United States Sentencing Commission is to review the sentencing guidelines application to violations of 18 U.S.C. 659 and 2311. The Attorney General is to see that cargo theft information is included in the Uniform Crime Reports and to report annually to Congress on law enforcement activities relating to theft from interstate or foreign shipments in violations of 18 U.S.C. 659.

Stowaways

Stowing away on a vessel or an aircraft is a federal crime; offenders are subject to imprisonment for not more than one year, 18 U.S.C. 2199. Section 308 of the Act increases the penalty for stowing away from imprisonment for not more than one year to not more than five years (not more than 20 years if the offense is committed with the intent to inflict serious injury upon another or if serious injury to another results; or if death results, by death or imprisonment for any term of years or for life), 18 U.S.C. 2199 as amended by the Act. The "death

results" capital punishment provision of the Act is only triggered if the offender intended to cause a death, 18 U.S.C. 2199(3) as amended by the Act.

Port Security Bribery

Bribery of a federal official is punishable by imprisonment for not more than 15 years, 18 U.S.C. 201; many federal crimes of terrorism carry maximum penalties of imprisonment for not more than 20 years or more.[3622] Those who aid and abet or conspire for the commission of such crimes are subject to sanctions.[3623]

Section 309 of the Act makes it a federal crime to bribe any individual (private or public) with respect to various activities within any secure or restricted area or seaport — with the intent to commit international or domestic terrorism (as defined in 18 U.S.C. 2331). Offenders face imprisonment for not more than 15 years, new 18 U.S.C. 226 as added by the Act.

Smuggling Goods Into the United States

Section 310 increases the sentence of imprisonment for smuggling into the United States from not more than five years to not more than 20 years, 18 U.S.C. 545 as amended by the Act.

Smuggling Goods From the United States

The penalty for smuggling goods into a foreign country by the owners, operators, or crew of a U.S. vessel is imprisonment for not more than five years, 18 U.S.C. 546. Other penalties apply for smuggling or unlawfully exporting specific goods or materials out of the U.S. or into other countries.[3624]

Section 311 of the Act creates a new federal crime which outlaws smuggling goods out of the United States; offenders face imprisonment for not more than 10 years, new 18 U.S.C. 554 as added by the Act. Once smuggling from the U.S. is made a federal offense, corresponding changes in federal forfeiture and custom laws become a possibility.

Federal law proscribes laundering the proceeds of various federal crimes (predicate offenses), 18 U.S.C. 1956, 1957. Smuggling goods into the U.S. in violation of 18 U.S.C. 545 is a money laundering predicate offense, 18 U.S.C.

[3622] See, e.g., 18 U.S.C. 32 (destruction of aircraft, 20 years), 81 (arson, 25 years), 2332a (weapons of mass destruction, life imprisonment).

[3623] 18 U.S.C. 2; United States v. Pinkerton, 340 U.S. 640 (1946).

[3624] See, e.g., 31 U.S.C. 5332 (bulk cash), 21 U.S.C. 953 (controlled substances), 18 U.S.C. 553 (stolen motor vehicles).

1956(c)(7)(D). The proceeds involved in financial transactions in violation of the money laundering statutes are generally subject to confiscation, 18 U.S.C. 981(a)(1)(A). Section 311 adds the new overseas smuggling crime, 18 U.S.C. 554, to the money laundering predicate offense list, 18 U.S.C. 1956(c)(7)(D) as amended by the Act.

Federal law calls for the confiscation of goods smuggled into the United States and of the conveyances used to smuggle them in, 19 U.S.C. 1595a. Section 311 calls for the confiscation of goods smuggled out of the U.S. and of any property used to facilitate the smuggling, new 19 U.S.C. 1595a(d) as added by the Act.

It is a federal crime to remove property from the custody of the Customs Service. Section 311 increases the penalty for violation of this crime to imprisonment for not more than 10 years, 18 U.S.C. 549 as amended by the Act.

Title IV: Combating Terrorism Financing Act of 2005

Title IV of the Act strengthens penalties for money laundering, particularly related to financing terrorism, and makes changes to forfeiture authority. There is also a provision that might be construed to permit pre-trial asset freezes in certain civil forfeiture cases made part of the property owner's criminal trial.

International Emergency Economic Powers Act Penalties

The International Emergency Economic Powers Act (IEEPA), 50 U.S.C. 1701-1707, grants the President the power to impose economic restrictions "to deal with unusual and extraordinary [external] threats to the national security, foreign policy, or economy of the United States," 50 U.S.C. 1701(a). The authority has been invoked among other instances to block Iranian assets, Exec. Order No. 12170, 44 Fed.Reg. 65729 (Nov. 1979); to prohibit trade and certain other transactions with Libya, Exec. Order No. 12543, 51 Fed.Reg. 875 (Jan. 7, 1986); to impose economic sanctions on countries found to be contributing to the proliferation of weapons of mass destruction, Exec. Order No. 12938, 59 Fed. Reg. 59099 (Nov. 14, 1994); to block the assets and prohibit financial transactions with significant narcotics traffickers, 60 Fed.Reg. 54579 (Oct. 21, 1995); and to block the property and prohibit transactions with persons who commit, threaten to commit, or support terrorism, Exec. Order No. 13224, 66 Fed.Reg. 49079 (Sept. 23, 2001).

The Act increases the imprisonment and civil penalty for violations of presidential orders or related regulations issued under IEEPA, including but not limited to those that bar financial dealings with designated terrorists and terrorist groups. Violations are now punishable by a civil penalty of not more

than $50,000 (previously $10,000) and by imprisonment for not more than 20 years (previously 10 years).[3625]

Terrorist Money Laundering

RICO

The federal Racketeer Influenced and Corrupt Organizations (RICO) law imposes severe penalties (up to 20 years imprisonment) for acquiring or operating an enterprise through the commission of a pattern of other crimes (predicate offenses), 18 U.S.C. 1961-1965. One federal money laundering statute prohibits, among other things, using the funds generated by the commission of a predicate offense in a financial transaction designed to conceal the origin of the funds or promote further predicate offenses, 18 U.S.C. 1956. A second statute condemns financial transactions involving more than $10,000 derived from a predicate offense, 18 U.S.C. 1957. Crimes designated RICO predicate offenses automatically qualify as money laundering predicate offenses, 18 U.S.C. 1956(c)(7)(A), 1957(f)(3). Property associated with either a RICO or money laundering violation is subject to confiscation, but RICO forfeiture requires conviction of the property owner, 18 U.S.C. 1963, money laundering forfeiture does not, 18 U.S.C. 1956, 1957, 981.

It is a federal crime to operate a business that transmits money overseas either directly or indirectly, without a license, or for a licensed business to either fail to comply with applicable Treasury Department regulations or to transmit funds that it knows will be used for, or were generated by, criminal activities, 18 U.S.C. 1960.

The Act adds 18 U.S.C. 1960 (illegal money transmissions) to the RICO predicate offense list and consequently to the money laundering predicate offense list, 18 U.S.C. 1961(1) as amended by the Act. The House-passed version of the Reauthorization Act also added 8 U.S.C. 1324a (employing aliens) to the RICO list; however, this provision was not included in the conference bill and consequently is not part of the Act as enacted.

Direct Money Laundering Predicates

Section 403(b) of the Act states, "Section 1956(c)(7)(D) of title 18, United States Code, is amended by striking 'or any felony violation of the Foreign Corrupt Practices Act' and inserting 'any felony violation of the Foreign Corrupt Practices Act.'" However, this grammatical change relating to the Foreign Corrupt Practices Act (dropping the "or" before the reference) is redundant. The Intelligence Reform and Terrorism Prevention Act already made this grammatical fix, 118 Stat. 3774 (2004).

[3625] §402, P.L. 109-177, 120 Stat. 243 (2006), amending 50 U.S.C. 1705.

Investigative Jurisdiction

The Act makes conforming amendments to 18 U.S.C. 1956(e), 1957(e) concerning the money laundering investigative jurisdiction of various components of the Department of Homeland Security.[3626] Procedures for coordination, to avoid duplication of efforts, and because investigative agencies share in the distribution of forfeited property to the extent of their participation in the investigation that led to confiscation, may prove necessary in implementing these provisions, 18 U.S.C. 981(d), (e); 19 U.S.C. 1616a.

Forfeiture for Foreign Crimes

The property of individuals and entities that prepare for or commit acts of international terrorism against the United States or against Americans is subject to federal confiscation, 18 U.S.C. 981(a)(1)(G). Criminal forfeiture is confiscation that occurs upon conviction for a crime for which forfeiture is a consequence, e.g., 18 U.S.C. 1963 (RICO). Civil forfeiture is confiscation accomplished through a civil proceeding conducted against the "offending" property based on its relation to a crime for which forfeiture is a consequence, e.g., 18 U.S.C. 981. Criminal forfeiture is punitive; civil forfeiture is remedial, Calderon-Toledo v. Pearson Yacht Leasing, 416 U.S. 663, 683-88 (1974). A convicted defendant may be required to surrender substitute assets if the property subject to criminal forfeiture is located overseas or otherwise beyond the reach of the court, 18 U.S.C. 853(p). Civil forfeiture ordinarily requires court jurisdiction over the property, but when forfeitable property is held overseas in a financial institution that has a correspondent account in this country the federal government may institute and maintain civil forfeiture proceedings against the funds in the interbank account here, 18 U.S.C. 9871(k).

Article III, section 2 of the United States Constitution declares in part that, "no attainder of treason shall work corruption of blood, or forfeiture of estate except during the life of the person attainted," U.S.Const. Art.III, §3, cl.2. Forfeiture of estate is the confiscation of property simply because it is the property of the

---

[3626] "Violations of this section may be investigated by such components of the Department of Justice as the Attorney General may direct, and by such components of the Department of the Treasury as the Secretary of the Treasury may direct, as appropriate and, with respect to offenses over which the Department of Homeland Security has jurisdiction, by such components of the Department of Homeland Security as the Secretary of Homeland Security may direct, and, with respect to offenses over which the United States Postal Service has jurisdiction, by the Postal Service. Such authority of the Secretary of the Treasury, the Secretary of Homeland Security, and the Postal Service shall be exercised in accordance with an agreement which shall be entered into by the Secretary of the Treasury, the Secretary of Homeland Security, the Postal Service, and the Attorney General. Violations of this section involving offenses described in paragraph (c)(7)(E) may be investigated by such components of the Department of Justice as the Attorney General may direct, and the National Enforcement Investigations Center of the Environmental Protection Agency,"18 U.S.C. 1956(e) as amended by the Act (language added by the Act in italics); the Act amends 18 U.S.C. 1957(e) with similar language.

defendant, without any other connection to the crime for which gives rise to the forfeiture. The constitutional provision applies only in cases of treason, but due process would seem likely to carry the ban to forfeiture of estate incurred as a result of other crimes, particularly lesser crimes.[3627] The assumption may be hypothetical because with a single Civil War exception, until very recently federal law only called for the forfeiture of property that had some nexus to the confiscation-triggering crime beyond mere ownership by the defendant.[3628] Subparagraph 981(a)(1)(G) calls for the confiscation the property of individuals and entities that engage in acts of terrorism against the United States or Americans, 18 U.S.C. 981(a)(1)(G)(i), and under separate clauses any property derived from or used to facilitate such misconduct, 18 U.S.C. 981(a)(1)(G)(ii),(iii). As yet, there no reported cases involving 18 U.S.C. 981(a)(1)(G)(i).

Section 404 of the Act authorizes the federal government to confiscate under civil forfeiture procedures all property of any individual or entity planning or committing an act of international terrorism against a foreign nation or international organization without any further required connection of the property to the terrorist activity other than ownership. The section contemplates forfeiture of property located both here and abroad, since it refers to "all assets, foreign or domestic," but with respect to property located outside of the United States, it requires an act in furtherance of the terrorism to have "occurred within the jurisdiction of the United States."[3629] It is unclear whether the jurisdiction referred to is the subject matter jurisdiction or territorial jurisdiction of the United States or either or both. The due process shadow of Article III, section 3, clause 2 may limit the reach of the proposal to property with some nexus other than ownership to the terrorist act.

Money Laundering Through "Hawalas"

Money laundering in violation of 18 U.S.C. 1956 may take either of two forms (1) engaging in a prohibited financial transaction involving the proceeds of a

---

[3627] United States v. Grande, 620 F.2d 1026,1038 (4th Cir. 1980)("We would agree. . . that if §1963 revives forfeiture of estate as that concept was expressed in the Constitution it is almost certainly invalid because of the irrationality of a ruling that forfeiture of estate cannot be imposed for treason but can be imposed for a pattern of lesser crimes").

[3628] Under the Confiscation Act all the property of Confederate army and naval officers was forfeited, 12 Stat. 589 (1862), but owing to the constitutional reservations of President Lincoln, the forfeiture statute was followed by another declaring that confiscation would only apply during the life time of a member of the Confederate armed forces, 12 Stat. 627 (1862). The Supreme Court read the two together and as a matter statutory construction held that a life estate in the property of the former Confederate naval officer at issue was all that was subject to confiscation, Bigelow v. Forest, 76 U.S. 339, 350 (1869).

[3629] § 404(3), P.L. 109-177, 120 Stat. 244 (2006), adding new subsection 18 U.S.C. 981(a)(1)(G)(iv).

predicate offense, 18 U.S.C. 1956(a)(1), or (2) internationally transporting, transmitting, or transferring the proceeds of a predicate offense, 18 U.S.C. 1956(a)(2). Section 405 of the Act extends the financial transaction offense to include related, parallel transactions and transmissions.[3630]

As the conference report accompanying H.R. 3199 explains, the amendment addresses a feature of the often informal networks called "hawalas," for transfer money overseas:

> *Alternative remittance systems are utilized by terrorists to move and launder large amounts of money around the globe quickly and secretly. These remittance systems, also referred to as "hawala" networks, are used throughout the world, including the Middle East, Europe, North American and South Asia. These systems are desirable to criminals and non-criminals alike because of the anonymity, low cost, efficiency, and access to underdeveloped regions. The United States has taken steps to combat the "hawala" networks by requiring all money transmitters, informal or form, to register as money service businesses.*
>
> *Under current Federal law, a financial transaction constitutes a money laundering offense only if the funds involved in the transaction represent the proceeds of some criminal offense. . . There is some uncertainty, however, as to whether the "proceeds element" is satisfied with regard to each transaction in a money laundering scheme that involves two or more transactions conducted in parallel, only one of which directly makes use of the proceeds from unlawful activity. For example, consider the following transaction: A sends drug proceeds to B, who deposits the money in Bank Account 1. Simultaneously or subsequently, B takes an equal amount of money from Bank Account 2 and sends it to A, or to a person designated by A. The first transaction from A to B clearly satisfies the proceeds element of the money laundering statute, but there is some question as to whether the second transaction — the one that involves only funds withdrawn form Bank Account 2 does so as well. The question has become increasingly important because such parallel transactions are the*

[3630] "For purposes of this paragraph, a financial transaction shall be considered to be one involving the proceeds of specified unlawful activity if it is party of a set of parallel or dependent transactions, any one of which involves the proceeds of specified unlawful activity, and all of which are part of a single plan or arrangement," 18 U.S.C. 1956(a)(1) as amended by § 405, P.L. 109-177, 120 Stat. 244 (2006).

technique used to launder money through the Black Market Peso Exchange and "hawala" network.[3631]

Technical Amendments

Section 406 of the Act corrects a number of typographical and grammatical errors in existing law including changing the reference in section 322 of the USA PATRIOT Act, 115 Stat. 315 (2001), from 18 U.S.C. 2466(b) to 28 U.S.C. 2466(b); changing the phrase "foreign bank" to "foreign financial institution" in 18 U.S.C. 981(k)(relating to forfeiture and interbank accounts); correcting a reference to the Intelligence Reform and Terrorism Prevention Act in 31 U.S.C. 5318(n)(4)(A); capitalizing a reference in the Intelligence Reform and Terrorism Prevention Act (amending 18 U.S.C. 2339C rather than 18 U.S.C. 2339c); and codifying the forfeiture procedure passed as section 316 of the USA PATRIOT Act, 115 Stat. 309 (2001), new 18 U.S.C. 987.

Civil Forfeiture Pre-trial Freezes and Restraining Orders

Federal law permits pre-trial restraining orders to freeze property sought in criminal forfeiture cases, 21 U.S.C. 853(e), and pre-trial restraining orders or the appointment of receivers or conservators in civil forfeiture cases, 18 U.S.C. 983(j). In money laundering civil penalty and forfeiture cases, federal law also permits restraining orders and the appointment of receivers under somewhat different, less demanding procedures with respect to the property of foreign parties held in this country, 18 U.S.C. 1956(b). Section 406 of the Act removes the requirement that the property be that of a foreign party, by amending 18 U.S.C. 1956(b)(3),(4).

Conspiracy Penalties

It is a federal crime to destroy or attempt to destroy commercial motor vehicles or their facilities, 18 U.S.C. 33. Offenders face imprisonment for not more than 20 years. It is also a federal crime to cause or to attempt to cause more than $100,000 worth of damage to an energy facility, 18 U.S.C. 1366. Again, offenders face imprisonment for not more than 20 years. As a general rule, conspiracy to commit these or any other federal crime is punishable by imprisonment for not more than five years, 18 U.S.C. 371, and conspirators are liable for the underlying offense and any other offense committed by any of co-conspirators in the foreseeable furtherance of the criminal scheme, United States v. Pinkerton, 340 U.S. 640 (1946).

For several federal crimes, instead of the general five-year penalty for conspiracy, section 811 of the USA PATRIOT Act used the maximum penalty for the

---

[3631] H.Rept. 109-333, at 107 (2005).

underlying offense as the maximum penalty for conspiracy to commit the underlying offense, 115 Stat. 381-82 (2001). Section 406(c) of the Act allows for the same penalty scheme for conspiracies to violate 18 U.S.C. 33 (destruction of motor vehicles) and 18 U.S.C. 1366 (damage an energy facility).

Laundering the Proceeds of Foreign Terrorist Training

Federal law prohibits laundering the proceeds of various predicate offenses, 18 U.S.C. 1956; in addition to other criminal penalties, property associated with such laundering is subject to confiscation, 18 U.S.C. 981(a)(1)(A). Receipt of military training from a foreign terrorist organization is also a federal crime, 18 U.S.C. 2339D. Section 112 of the Act makes 18 U.S.C. 2339D a federal crime of terrorism under 18 U.S.C. 2332b(g)(5)(B). Federal crimes of terrorism are RICO predicate offenses by definition, 18 U.S.C. 1961(1)(G). RICO predicate offenses are by definition money laundering predicate offenses, 18 U.S.C. 1956(c)(7)(A). Section 409 of the Act makes 18 U.S.C. 2339D a money laundering predicate offense directly, 18 U.S.C. 1956(c)(7)(D). It is not clear why the duplication was thought necessary.

Uniform Procedures for Criminal Forfeitures

The Act contains an amendment to 28 U.S.C. 2461(c), for which there is no explanation in the conference report accompanying H.R. 3199. Nor does the amendment appear in either of the two versions of H.R. 3199 sent to conference. Nor does the amendment appear to have been included in other legislative proposals and thus has not heretofore been the beneficiary of examination in committee or on the floor. The change is captioned "uniform procedures for criminal forfeitures," but it is not facially apparent precisely how the procedures for various criminal forfeitures are disparate or how the amendment makes them more uniform. Part of the difficulty flows from the fact that both section 2461(c) and the Act's amendment are somewhat cryptic. Nevertheless, it seems crafted to make a default procedure into an exclusive procedure.

In its original form, 28 U.S.C. 2461(c) states:

> *If a forfeiture of property is authorized in connection with a violation of an Act of Congress, and any person is charged in an indictment or information with such violation but no specific statutory provision is made for criminal forfeiture upon conviction, the Government may include the forfeiture in the indictment or information in accordance with the Federal Rules of Criminal Procedure, and upon conviction, the court shall order the forfeiture of the property in accordance with the procedures set forth in section 413 of the Controlled Substances Act (21 U.S.C. 853), other than subsection (d) of that section.*

The Act amends section 2461(c) to read:

> *If a person is charged in a criminal case with a violation of an Act of Congress for which the civil or criminal forfeiture of property is authorized, the Government may include notice of the forfeiture in the indictment or information pursuant to the Federal Rules of Criminal Procedure. If the defendant is convicted of the offense giving rise to the forfeiture, the court shall order the forfeiture of the property as part of the sentence in the criminal case pursuant to the Federal Rules of Criminal Procedure and section 3554 of title 18, United States Code. The procedures in section 413 of the Controlled Substances Act (21 U.S.C. 853) apply to all stages of a criminal forfeiture proceeding, except that subsection (d) of such section applies only in cases in which the defendant is convicted of a violation of such Act.*

A casual reading of the original section 2461(c) might suggest that it only applies in the case of a criminal forfeiture statute which fails to indicate what procedure should be used to accomplish confiscation. In fact, section 2461(c) originally allowed confiscation under its criminal forfeiture procedures where civil forfeiture was authorized by statute but criminal forfeiture otherwise was not.[3632] On its face, however, it did not allow the government to merge every civil forfeiture with the criminal prosecution of the property owner. In its original form, section 2461(c) was only available if there was no other criminal forfeiture counterpart for the civil forfeiture.[3633] Under the Act, the distinction no longer exists.

Moreover, since section 2461(c) speaks of treating civil forfeitures as criminal forfeitures after conviction, some courts have held that pre-trial freeze orders available in other criminal forfeiture cases may not be invoked in the case of a

---

[3632] United States v. Razmilovic, 419 F.3d 134,136 (2d Cir. 2005)("Section 2461(c) thus authorizes criminal forfeiture as a punishment for any act for which civil forfeiture is authorized, and allows the government to combine criminal conviction and criminal forfeiture as a consolidated proceeding").

[3633] 18 U.S.C. 2461(c)("If a forfeiture of property is authorized in connection with a violation of an act of Congress, ..an act. but no specific statutory provision is made for criminal forfeiture upon conviction . . ."); United States v. Causey, 309 F.Supp.2d 917, 920 (S.D. Tex. 2004)("Section 981 [relating to civil forfeiture] forms the basis for criminal forfeiture through the application of 28 U.S.C. 2461(c), which allows criminal forfeiture to be sought anytime there is a civil forfeiture provision but no corresponding criminal forfeiture statute"); United States v. Schlesinger, 396 F.Supp.2d 267, 275 (E.D.N.Y. 2005) ("Constructing the statute in this manner makes §2461(c) a broad 'gap filler' that applies whenever civil forfeiture is permitted. In sum, when there is no provision for criminal forfeiture, the government may use a civil forfeiture provision if it includes such allegation in the indictment. In instances where there is a specific criminal forfeiture provision — that specific provision and the procedures that it sets forth — and not the civil forfeiture provision will apply").

section 2461(c) "gap filler."[3634] It is unclear whether the Act is intended to change this result as well. On the one hand, the language of conviction still remains. On the other hand, the description of the role of 21 U.S.C. 853 (which authorizes pre-trial restraining orders) may signal a different result. The statutory language prior to amendment is fairly clear, the procedures of section 853 come into play after conviction: "upon conviction, the court shall order the forfeiture of the property in accordance with the procedures set forth in section 413 of the Controlled Substances Act (21 U.S.C. 853)," 28 U.S.C. 2461(c). The statement in the Act is less conclusive: "The procedures in section 413 of the Controlled Substances Act (21 U.S.C. 853) apply to all stages of a criminal forfeiture proceeding." This change in language suggests that a change in construction may have been intended.

Title V: Miscellaneous Provisions

Title V of the Act contains miscellaneous provisions added in conference and not previously included in either the House or Senate version of H.R. 3199, some of which — like the habeas amendments in the case of state death row inmates, or the adjustments in the role of the Office of Intelligence Policy and Review in the FISA process — may be of special interest.

Justice Department Residency Requirements

United States Attorneys and Assistant United States Attorneys must live within the district for which they are appointed, except in the case of the District of Columbia and the Southern and Eastern Districts of New York, 28 U.S.C. 545. The Attorney supervises and directs litigation in which the United States has an interest, 28 U.S.C. 516-519. He enjoys the authority to marshal, move, and direct the officers, employees, or agencies of the Department of Justice to this end, 28 U.S.C. 509, 510, 547. Section 501 of the Act allows the Attorney General to waive the residency requirement with respect to U.S. Attorneys or Assistant U.S. Attorneys who have been assigned additional duties outside the districts for which they were appointed.[3635] The conference report accompanying H.R. 3199 notes that the amendment will allow Justice Department personnel to be assigned to Iraq, but does not explain why the authority is made retroactive to February 1, 2005.[3636]

Appointment of U.S. Attorneys

[3634] United States v. Razmilovic, 419 F.3d 134,137 (2d Cir. 2005). Note that in some civil forfeiture cases, the government is entitled to a pre-trial freeze order, 18 U.S.C. 983(j).

[3635] § 501, P.L. 109-177, 120 Stat. 246 (2006), amending 28 U.S.C. 545(a).

[3636] H.Rept. 109-333 at 109 (2005).

The Attorney General has the authority to temporarily fill vacancies in the office of United States Attorney, 28 U.S.C. 546. Prior to the Act, if a replacement had not been confirmed and appointed within 120 days, the district court was authorized to make a temporary appointment. The Act repeals the authority of the court and permits the Attorney General's temporary designee to serve until the vacancy is filled by confirmation and appointment.[3637]

Presidential Succession: Homeland Security Secretary

The heads of the various federal departments come within the line of presidential succession, 3 U.S.C. 19(d)(1). Section 503 of the Act adds the Secretary of the Department of Homeland Security to the list following the Secretary of Veterans Affairs.

Confirmation of the Director of BATFE

Prior to the Act, the Attorney General had the responsibility of appointing the Director the Bureau of Alcohol, Tobacco, Firearms and Explosives (BATFE). Section 504 of the Act removes this power from the Attorney General, and vests the appointment in the President with the advice and consent of the Senate, amending section 1111(a)(2) of the Homeland Security Act of 2002, P. L. 107-296, 116 Stat. 2135 (2002).

Qualifications for U.S. Marshals

The President appoints the marshal in each federal judicial district with the advice and consent of the Senate, 28 U.S.C. 561. There are no statutory qualifications. The Act describes a fairly demanding set of minimum qualifications that each marshal "should have,"[3638] which the conference report characterizes as clarifications.[3639] Some may consider this an intrusion upon the constitutional prerogatives of the President. The Constitution does confer upon him the power to nominate and, with the advice and consent of the Senate, to appoint officers of the United States, U.S. Const. art. II, §2. It might be thought

---

[3637] § 502, P.L. 109-177, 120 Stat. 246 (2006), amending 28 U.S.C. 546(c).

[3638] "Each marshal appointed under this section should have — (1) a minimum of 4 years of command-level law enforcement management duties, including personnel, budget, and accountable property issues, in a police department, sheriff's office or Federal law enforcement agency; (2) experience in coordinating with other law enforcement agencies, particularly at the State and local level; (3) college-level academic experience; and (4) experience in or with county, State, and Federal court systems or experience with protection of court personnel, jurors, and witnesses," 28 U.S.C. 561(I) as amended by the Act.

[3639] H.Rept. 109-333 at 109 (2005)("Section 505 of the conference report is a new section. This section clarifies the qualifications individuals should have before joining the United States Marshals").

that to impose minimum qualifications for appointment impermissibly limits the President's power to nominate. But with few exceptions, the offices in question are creatures of statute. They exist by exercise of Congress's constitutional authority "to make all laws necessary and proper for carrying into execution" the constitutional powers of the Congress, the President or Government of the United States, U.S. Const. art. I, §8, cl. 18. The imposition of minimum qualifications is consistent with long practice as to which the Supreme Court has observed:

> *Article II expressly and by implication withholds from Congress power to determine who shall appoint and who shall remove except as to inferior offices. To Congress under its legislative power is given the establishment of offices, the determination of their functions and jurisdiction, the prescribing of reasonable and relevant qualifications and rules of eligibility of appointees, and the fixing of the term for which they are to be appointed, and their compensation — all except as otherwise provided by the Constitution.*[3640]

The terminology used in section 505 of the Act leaves some doubt whether it is intended to require or merely encourage the nomination of candidates exhibiting the statutory qualifications ("each marshal appointed under this section should have ..."). Perhaps more intriguing is why the conferees deemed this particular office and not others appropriate for such treatment. The office has existed since the dawn of the Republic, 1 Stat. 87 (1789), without a statement of required or preferred qualifications. Arguably comparable or more significant offices within the Department of Justice face no similar provisions. No such provisions attend the appointment of U.S. Attorneys, 28 U.S.C. 541; the Director the Federal Bureau of Investigation, 28 U.S.C. 532; the Director of the Marshals Service, 28 U.S.C. 561; or even the Attorney General himself, 28 U.S.C. 503. Even when the Act puts its hand anew to the appointment of an arguably comparable position — the appointment of the Director of BATFE, supra — it says nothing of minimum

[3640] Myers v. United States, 272 U.S. 52, 129 (1926)(emphasis added). See also, Corwin, Tenure of Office and the Removal Power Under the Constitution, 27 COLUMBIA LAW REVIEW 353, 391 (1927)("From the first Congress has exercised its power under the 'necessary and proper' clause to fix the qualifications of officers, not only in respect to inferior offices but also in respect to superior offices, and this notwithstanding that in so doing it has obviously restricted the President's power of nomination"); 2 ROTUNDA & NOWAK, TREATISE ON CONSTITUTIONAL LAW: SUBSTANCE AND PROCEDURE 35 (3d ed. 1999)("Congress can limit the President's power to nominate by imposing qualifications that the appointee for the office must possess"); Eldred v. Ashcroft, 537 U.S. 186, 213 (2003)("This Court has repeatedly laid down the principle that a contemporaneous legislative exposition of the Constitution when the founders of our Government and framers of our Constitution were actively participating in public affairs, acquiesced in for a long term of years, fixes the construction to be given the Constitution's provisions"). Justice Brandeis in Myers footnotes literally hundreds of instances dating from the First Congress wherein Congress set minimum qualifications for various public office holders, 272 U.S. at 265 n.35 -274 n.56.

qualifications. Of course, the requirements seem relevant and it is difficult to argue that any federal office should not be filled with the most highly qualified individual possible.

New National Security Division of the DOJ and new Assistant Attorney General

Section 506 of the Act creates a new National Security Division within the Department of Justice (DOJ), headed by a new Assistant Attorney General, comprising prosecutors from the DOJ's Criminal Division's Counterespionage and Counterterrorism sections and attorneys from the DOJ's Office of Intelligence Policy and Review, the office that is responsible for reviewing wiretapping operations under FISA.

Background

The presidential Commission on the Intelligence Capabilities of the United States Regarding Weapons of Mass Destruction recommended that "[t]he Department of Justice's primary national security elements — the Office of Intelligence Policy and Review, and the Counterterrorism and Counterespionage sections [of the Criminal Division] — should be placed under a new Assistant Attorney General for National Security."[3641] The Commission felt the then-existing organizational scheme might be awkward and that perhaps the system would benefit from a check on Office of Intelligence Policy and Review's rejection of FISA applications as insufficient.[3642]

[3641] The Commission on the Intelligence Capabilities of the United States Regarding Weapons of Mass Destruction, Report to the President of the United States, 471-73 (Mar. 31, 2005), available on Jan. 6, 2006 at, [http://www.wmd.gov/report/wmd_report.pdf].

[3642] "The Justice Department's three primary national security components are located in different divisions, with no individual below the Deputy Attorney General who can supervise all three. The Office of Intelligence Policy and Review (OIPR) is responsible for FISA requests, representing the Department of Justice on intelligence-related committees, and advising the Attorney General on 'all matters relating to the national security activities.' It is independent of any division and reports directly to the Deputy Attorney General. In contrast, both the Counterterrorism and Counterespionage sections are located in the Criminal Division, but they each report to two different Deputy Assistant Attorney Generals. If there is method to this madness, neither we, nor any other official with whom we spoke, could identify it. "There is reason to believe that the this awkward (and outdated) organizational scheme has created problems between the Justice Department and the Intelligence Community. In our classified report we describe one such problem that cannot be discussed in our unclassified report. "We believe that bringing the Office of Intelligence Policy and Review closer to its operational counterparts like the Counterespionage and Counterterrorism sections would give the office better insight into actual intelligence practices and make it better attuned to operational needs. Attorneys in the Counterterrorism and Counterespionage sections routinely work alongside FBI agents and other intelligence officers. By contrast, OIPR is largely viewed within the Department as an 'assembly line operation not requiring any special grounding in the facts of a particular matter.' OIPR's job is to process and adjudicate FISA requests — not to follow a case from start to completion. One of the advantages of placing all three national security components under a single Assistant Attorney General is that they will see themselves as acting in concert to serve a

Critics might suggest that curtailing the independence of the Office of Intelligence Policy and Review (OIPR) with an eye to less rigorous examination of FISA applications is likely to have an adverse impact. They might argue that adding another layer of review to the FISA application process can only bring further delays to a process the Administration has continuously sought to streamline. In the same vein, should the judges of the FISA Court conclude that the OIPR has been shackled and ceased to function as an independent gatekeeper for the Court, they might examine applications more closely and feel compelled to modify or reject a greater number; further contributing to delay, or so it might be said. On the other hand, both the Act and the USA PATRIOT Act vest oversight on the exercise of sensitive investigative authority in senior officials in order to guard against abuse.

Be that as it may, the President notified various administration officials that he concurred in the Commission's recommendation.[3643] Section 441 of the Intelligence Authorization Act for Fiscal Year 2006, S. 1803, as reported by the Senate Select Committee on Intelligence, contained similar provisions.[3644]

The Act makes the following provisions for the new Assistant Attorney General:

- Assistant Attorney General (AAG) is to be designated by the President and presented to the Senate for its advice and consent, adding new section 28 U.S.C. 507A(a); cf., H.Rept. 109-142 at 31;
- AAG serves as head of the DOJ National Security Division, as primary DOJ liaison with DNI, and performs other duties as assigned, new 28 U.S.C. 507A(b);
- the Attorney General is to consult with the DNI before recommending a nominee to be AAG, adding new subsection 50 U.S.C. 403-6(c)(2)(C);
- the Attorney General may authorize the AAG to perform the Attorney General's FISA-related duties, amending 50 U.S.C. 1801(g);

---

common mission. "The Bellows Report [Final Report of the Attorney General's Review Team on the Handling of the Los Alamos National Laboratory Investigation] identifies a further reason to have a single individual below the Deputy Attorney General to supervise the OIRP: the need to have a single individual who is knowledgeable about FISA to review FISA applications that are rejected by OIPR. Id. at pp.767-768. The lack of such an individual in the Wen Ho Lee investigation caused serious problems. An Assistant Attorney General for National Security would fit the bill perfectly,"Id. at 472, 482 n.94 (the last paragraph quoted above appears as footnote 94 in the Report).

[3643] S.Rept. 109-142, at 31 (2005)("The President endorsed this recommendation in a June 29, 2005, memorandum for the Vice President, Secretary of State, Secretary of Defense, Attorney General, Secretary of Homeland Security, Director of OMB, DNI, Assistant to the President for National Security Affairs, and Assistant to the President for Homeland Security and Counterterrorism").

[3644] See generally, H.Rept. 109-333, at 109 (2005); H.Rept. 109-142, at 31-33 (2005).

- AAG may approve application for a communications interception (wiretap) order under the Electronic Communications Privacy Act (Title III), amending 18 U.S.C. 2516(1);
- the Attorney General may authorize the AAG to approve admission into the witness protection program, amending 18 U.S.C. 3521(d)(3);
- AAG must provide briefings for the DOJ officials or their designee of Division cases involving classified information, amending 18 U.S.C. App. III 9A(a);
- AAG replaces OIPR for purposes of advising the Attorney General on the development of espionage charging documents and related matters, amending 28 U.S.C. 519 note;
- the Attorney General may authorize the AAG to approve certain undercover operations, amending 28 U.S.C. 533 note;
- AAG joins those whom the Attorney General consult concerning a state application of emergency law enforcement assistance, amending 42 U.S.C. 10502(2)(L);
- the National Security Division headed by the AAG consists of the OIPR, the counterterrorism and counterespionage sections, and any other entities the Attorney General designates, adding new section 28 U.S.C. 509A;
- Division employees are barred from engaging in political management or political campaigns, amending 5 U.S.C. 7323(b)(3);
- subject to a rule change by the Senate, the Senate Select Committee on Intelligence enjoys 20 day sequential referral of AAG nominees, amending section 17 of S.Res. 94-400 of the Standing Rules of the Senate, Senate Manual §94 (2002).

Habeas Corpus in State Capital Cases

Federal law provides expedited habeas corpus procedures in the case of state death row inmates in those states that qualify for application of the procedures and have opted to take advantage of them, 28 U.S.C. ch. 154. As the Supreme Court stated, "Chapter 154 will apply in capital cases only if the State meets certain conditions. A state must establish 'a mechanism for the appointment, compensation, and payment of reasonable litigation expenses of competent counsel' in state postconviction proceedings, and 'must provide standards of competency for the appointment of such counsel,'" Calderon v. Ashmus, 523 U.S. 740, 743 (1998). Thus far apparently, few if any states have sought and been found qualified to opt in.[3645]

[3645] At least for a short period of time Arizona was qualified to opt in, cf., Spears v. Stewart, 283 F.3d 992, 996 (9th Cir. 2002)(denying rehearing en banc)("The three judge panel . . . determined that although (a) the question whether Arizona had opted-in to the short-fuse habeas scheme provided in Chapter 154. . . was entirely irrelevant to the outcome of the case before it; (b) the linchpin provision for the procedures by which Arizona had once sought to opt-in under Chapter 154 had already been repealed by the state; (c) the state did not even comply with its own

Critics implied that the states have been unable to take advantage of the expedited capital procedures only because the courts have a personal stake in the outcome. The solution, they contend, is the amendment found in section 507 of the Act,[3646] which allows the Attorney General to determine whether a state qualifies, permits the determination to have retroactive effect, and allows review by the federal appellate court least likely to have an interest in the outcome, the U.S. Court of Appeals for the D.C. Circuit.[3647] Opponents of the proposal raised separation of powers issues and questioned whether the chief federal prosecutor or the courts are more likely to make an even handed determination of whether the procedures for providing capital defendants with qualified defense counsel are adequate.[3648]

---

procedures in the case before the panel; (d) Arizona was unquestionably not in compliance with Chapter 154 at the time the appeal was heard; (e) in fact, the state had never at any time effectively complied with its short-lived procedures; and (f) no other state in the nation has ever been held to have successfully opted-in under Chapter 154, the panel would seize this opportunity to issue an advisory opinion stating that the no-longer-existent Arizona procedures were in compliance with Chapter 154's requirements")(citing, Ashmus v. Woodford, 202 F.3d 1160, 1160 (9th Cir. 2000)(California has not opted-in); Harris v. Bowersox, 184 F.3d 744, 7848 (8th Cir. 1999)(Missouri has not opted-in); Duvall v. Reynolds, 139 F.3d 768, 776 (10th Cir. 1998)(Oklahoma has not opted-in); Hill v. Butterworth, 941 F.Supp. 1129, 1146-147 (N.D.Fla. 1996), vac'd on other grounds, 147 F.3d 1333 (11th Cir. 1998)(Florida has not opted-in); Mata v. Johnson, 99 F.3d 1261, 1267 (5th Cir. 1996), vac'd on other grounds, 105 F.3d 209 (5th Cir. 1997)(Texas has not opted-in); Austin v. Bell, 126 F.3d 843, 846 n.3 (6th Cir. 1997)(Tennessee has not opted-in); Holloway v. Horn, 161 F.Supp.2d 452, 478 n.11 (E.D.Pa. 2001), rev'd on other grounds, 355 f.3d 707 (3d Cir. 2004)(Pennsylvania has not opted- in); Smith v. Anderson, 104 F.Supp. 2d 773, 786 (S.D.Ohio 2000)(Ohio has not opted-in); Oken v. Nuth, 30 F.Supp.2d 877, 879 (D.Md. 1998)(Maryland has not opted-in); Tillman v. Cook, 25 F.Supp.2d 1245, 1253 (D.Utah 1998)(Utah has not opted-in); Weeks v. Angelone,4 F.Suppl2d 467, 506 n.4 (E.D.Va. 1998)(Virginia has not opted-in); Ryan v. Hopkins, 1996 WL 539220, at *3-4 (D.Neb. 1969)(Nebraska has not opted-in)). Related cases include, Grayson v. Epps, 338 F.Supp.2d 699, 700-704 (S.D. Miss. 2004)(Mississippi has not opted-in); Keel v. French, 162 F.3d 263, 267 n.1 (4th Cir. 1998)(North Carolina has not opted-in); High v. Head, 209 F.3d 1257, 1262 n.4 (11th Cir. 2000)(Georgia does not claim to have opted-in); Allen v. Lee, 366 F.3d 319, 353 (4th Cir. 2004)(Luttig, J. dissenting)(noting that the Fourth Circuit has adopted by rule the section 2266 time lines).

[3646] § 507, P.L. 109-177, 120 Stat. 250 (2006), amending 28 U.S.C. 2261(b), 2265.

[3647] See 151 CONG. REC. S5540, 5541 (daily ed. May 19, 2005) (statement of Sen. Kyl)("The SPA [Streamlined Procedures Act] also expands and improves the special expedited habeas procedures authorized in chapter 154 of the United States Code. The procedures are available to States that establish a system for providing high-quality legal representation to capital defendants. Chapter 154 sets strict time limits on Federal court action and places limits claims. Currently, however, the court that decides whether a State is eligible for chapter 154 is the same court that would be subject to its time limits. Unsurprisingly, these courts have proven resistant to chapter 154. The SPA would place the eligibility decision in the hands of a neutral party — the U.S. Attorney General, with review of his decision in the D.C. Circuit, which does not hear habeas appeals.")

[3648] "[T]he SPA intimates that courts can't objectively evaluate whether states meet the 'opt-in' provisions detailed in the AEDPA because their dockets are implicated in the timelines created by

Under the Act, states would opt-in or would have opted-in as of the date, past or present, upon which the Attorney General determines they established or have established qualifying assistance of counsel mechanism. Opting-in to the expedited procedures of chapter 154 only applies, however, to instances in which "counsel was appointed pursuant to that mechanism [for the death row habeas petitioner], petitioner validly waived counsel, petitioner retained counsel, or petitioner was found not to be indigent."[3649] The standards of qualifying mechanism remain the same except that the Act drops that portion of subsection 2261(d) which bars an attorney from serving as habeas counsel if he represented the prisoner during the state appellate process, amending 28 U.S.C. 2261(d).

The Act establishes a de novo standard of review for the Attorney General's determination before the D.C. Circuit, new 28 U.S.C. 2265(c)(3). It also extends the expedited time deadline for U.S. district court action on a habeas petition from a state death row inmate from 6 to 15 months (180 days to 450 days)(although the 60 days permitted the court for decision following completion of all pleadings, hearings, and submission of briefs remains the same), new 28 U.S.C. 2266(b).

In *McFarland v. Scott*, 512 U.S. 849, 859 (1994), the Supreme Court held that federal district courts might stay the execution of a state death row inmate upon the filing of a petition for the appointment of counsel but prior to the filing of a federal habeas petition in order to allow for the assistance of counsel in the filing the petition.

In an amendment described as overruling McFarland, H.Rept. 109-333, at 109 (2005), the Act amends federal law to permit a stay in such cases of no longer than 90 days after the appointment of counsel or the withdrawal or denial of a request for the appointment of counsel, new 28 U.S.C. 2251(b) as added by section 507(f) of the Act.

---

opt-in status. The legislation attempts to resolve this by empowering the chief prosecutor in the United States, the Attorney General, to make these decisions. Giving federal prosecutors control over even part of the federal judiciary's docket and decisionmaking authority would have serious implications for the separation of powers necessary for fair administration of criminal justice," Habeas Corpus Proceedings and Issues of Actual Innocence: Hearings Before the Senate Comm. on the Judiciary, 109th Cong., 1st sess. (2005) (testimony of Bryan Stevenson, Executive Director of Equal Justice Initiative of Alabama, available on Jan. 6, 2006, at [http://judiciary.senate.gov/print_ testimony.cfm?id=1569&wit_id=4458].

[3649] 28 U.S.C. 2261(b)(2) as amended by the Act.

Title VI: Secret Service Authorization and Technical Modification Act of 2005

The Secret Service provisions of the Act were added to H.R. 3199 during conference. They have several intriguing aspects although the constitutional reach of two provisions may be somewhat limited.

Protection of the President and Certain Other Federal Officials

Under 18 U.S.C. 1752, it is a federal crime:

(1) to willfully and knowingly trespass in areas designated as temporary offices or residences for (or as restricted areas in places visited by or to be visited by) those under Secret Service protection, 18 U.S.C. 1752(a)(1);
(2) to engage in disorderly conduct in or near such areas or places with the intent to and result of impeding or disrupting the orderly conduct of governmental business or functions there, 18 U.S.C. 1752(a)(2);
(3) to willfully and knowingly block passage to and from such areas or places, 18 U.S.C. 1752(a)(3);
(4) to willfully and knowingly commit an act of violence in such area or place, 18 U.S.C. 1752(a)(4); or
(5) to attempt of conspire to do so, 18 U.S.C. 1752(a),(b).

Obstructing Secret Service officers in the performance of their protective duties is also a federal crime and is punishable by imprisonment for not more than one year and/or a fine of not more than $1,000, 18 U.S.C. 3056(d).

Section 602 of the Act increases the penalties for violation of 18 U.S.C. 1752 from imprisonment for not more than six months to imprisonment for not more than one year; unless the offense results in significant bodily injury[3650] or the offender uses or carries a deadly or dangerous weapon during and in relation to the offense, in which case the offense is punishable by imprisonment for not more than 10 years, 18 U.S.C. 1752(b) as amended by the Act. As a general rule applicable here, crimes punishable by imprisonment for not more than six months are subject as an alternative to a fine of not more than $5,000; crimes punishable by imprisonment for not more than one year by a fine of not more than $100,000 as an alternative; crimes punishable by imprisonment for more than one year by a fine of not more than $250,000; and in each case organizations are subject to maximum fines that are twice the amount to which an individual might be fined, 18 U.S.C. 3571, 3559.

[3650] "'Significant bodily injury' means bodily injury which involves a risk of death, significant physical pain, protracted and obvious disfigurement, or a protracted loss or impairment of the function of a bodily member, organ, or mental or sensory faculty," 18 U.S.C. 2118(e)(3), 1752(b)(1)(B) as amended by the Act.

The Act also amends section 1752 to provide a uniform scienter element (willfully and knowingly) for each of the offenses prescribed there.

Special Events of National Significance

Section 602 of the Act also creates a new federal crime relating to misconduct concerning "special events of national significance." It amends 18 U.S.C. 1752 to make it a federal crime "willfully and knowingly to enter or remain in any posted, cordoned off, or otherwise restricted area of a building or grounds so restricted in conjunction with an event designated as a special event of national significance," 18 U.S.C. 1752(a)(2) as amended. The Act provides no definition of "special event of national significance." Nor is the term defined elsewhere in federal law, although it is used in 18 U.S.C. 3056, which authorizes the Secret Service to participate in the coordination of security arrangements for such activities.[3651] The conference report accompanying H.R. 3199 explains that the provisions relate to misconduct at events at which individuals under Secret Service protection are not attendees and by implication are not anticipated to be attendees.[3652] This may raise questions about the constitutional basis upon which the other criminal prohibitions in section 1752 rely.

Congress and the federal government enjoy only those powers which the Constitution provides; all other powers are reserved to the states and to the people, U.S. Const. Amends. X, IX. The Constitution does not vest primary authority to enact and enforce criminal law in the federal government. The Constitution does grant Congress explicit legislative authority in three instances — treason, piracy and offenses against the law of nations, U.S.Const. Art.III, §3; Art.I, §8, cl.10. And it vests Congress with other more general powers which may be exercised through the enactment of related criminal laws, such as the power to regulate commerce or to enact laws for the District of Columbia, U.S.Const. Art.I, §8, cls.3, 17. Nevertheless, "[e]very law enacted by Congress must be based on

---

[3651] "(1) When directed by the President, the United States Secret Service is authorized to participate, under the direction of the Secretary of Homeland Security, in the planning, coordination, and implementation of security operations at special events of national significance, as determined by the President. "(2) At the end of each fiscal year, the President through such agency or office as the President may designate, shall report to the Congress — (A) what events, if any, were designated special events of national significance for security purposes under paragraph (1); and (B) the criteria and information used in making each designation," 18 U.S.C. 3056(e).

[3652] H.Rept. 109-333, at 110 (2005)("Section 602 of the conference report is a new section. 18 U.S.C. 1752 authorizes the Secret Service to charge individuals who breach established security perimeters or engage in other disruptive or potentially dangerous conduct at National Special Security Events (NSSEs) if a Secret Service protectee is attending [or will be attending] the designated event. Section 602 of the conference report expands 18 U.S.C. 1752 to criminalize such security breaches at NSSEs that occur when the Secret Service protectee is not in attendance [and will not be in attendance]")(language in brackets added to demonstrate the reach of section 1752 prior to the Act, and the breadth of the Act's amendment).

one or more of its powers enumerated in the Constitution," United States v. Morrison, 529 U.S. 598, 607 (2000). It is not clear which of Congress's enumerated powers individually or in concert supports under all circumstances the creation of a trespassing offense relating to "restricted areas" temporarily cordoned off or established for a "special event of national significance."

Of course, the protection of such events under many circumstances may fall within one or more of Congress's enumerated powers. For instance, Congress may enact a trespassing law protecting special events held in the District of Columbia by virtue of its power to enact laws for the District, U.S. Const. Art.I, §8, cl.17. Even here, however, the First Amendment may impose impediments when in a particular case the governmental interest in the special event is minimal and significant access restrictions are imposed on use of the streets or other public areas to prevent peaceful protest demonstrations.[3653] Subject to some considerations, events which have an impact on interstate or foreign commerce seem to fall within Congress's power to regulate such commerce, U.S. Const. Art.I, §8, cl. 3.

Interpretative regulations that limit the amendment's application to areas within the scope of Congress's legislative authority and consistent with the demands of the First Amendment offer the prospect of passing constitutional muster. Although the bill repeals the subsection of 1752 which in amended form might authorize curative implementing regulations, such regulatory authority is likely implicit.[3654]

Use of False Credentials to National Special Security Events

Questions as to the breadth of the exercise of Congress's legislative authority might also be raised about section 603 of the Act, which brings special event tickets and credentials within the folds of the statute that outlaws misuse of governmentally issued identification documents, 18 U.S.C. 1028. The structure

[3653] Boos v. Barry, 485 U.S. 312, 318 (1988)("public streets and sidewalk" are "traditional public fora that time out of mind, have been used for purposes of assembly, communicating thoughts between citizens, and discussing public questions. In such places, which occupy a special position in terms of First Amendment protection, the government's ability to restrict expressive activity is very limited")(internal quotation marks and citations omitted).

[3654] "The Secretary of the Treasury is authorized — (1) to designate by regulations the buildings and grounds which constitute the temporary residences of the President or other person protected by the Secret Service and the temporary offices of the President and his staff or of any other person protected by the Secret Service, and (2) to prescribe regulations governing ingress or egress to such buildings and grounds and to posted, cordoned off, or otherwise restricted areas where the President or other person protected by the Secret Service is or will be temporarily visiting," 18 U.S.C. 1752(d). The authority vested in the Secretary of the Treasury passed to the Secretary of Homeland Security when the Secret Service was transferred to that Department, 6 U.S.C. 381. Of course, a conforming amendment to subsection 1752(d) would be required to implement the expanded "special event" area coverage.

of section 1028 makes the point more obviously than might otherwise be the case. In its form prior to the Act, section 1028 prohibited eight particular varieties of unauthorized possession or trafficking in identification documents[3655] when committed under one of three jurisdictional circumstances: the documents are issued or purport to be issued by a federal entity, the documents are used to defraud the United States, or the offense involves transportation in, or affects, interstate or foreign commerce, 18 U.S.C. 1028(a), (c).

The Act makes three changes in the scheme. First, it amends one of the eight prohibition subsections, that which outlaws unlawful possession of U.S. documents or facsimiles thereof, when committed under one of three jurisdictional circumstances. The change adds the documents of special event sponsors to the protected class, if the one jurisdictional predicates is satisfied.[3656] Second, it amends the definition of "identification document" to include special events documents,[3657] so that each of the other eight prohibition subsections

---

[3655] "Whoever, in a circumstance described in subsection (c) of this section — (1) knowingly and without lawful authority produces an identification document, authentication feature, or a false identification document; (2) knowingly transfers an identification document, authentication feature, or a false identification document knowing that such document was stolen or produced without lawful authority; (3) knowingly possesses with intent to use unlawfully or transfer unlawfully five or more identification documents (other than those issued lawfully for the use of the possessor), authentication feature, or false identification documents; (4) knowingly possesses an identification document (other than one issued lawfully for the use of the possessor), authentication feature, or a false identification document, with the intent such document or feature be used to defraud the United States; (5) knowingly produces, transfers, or possesses a document-making implement or authentication feature with the intent such document-making implement or authentication feature will be used in the production of a false identification document or another document-making implement or authentication feature which will be so used; (6) knowingly possesses an identification document or authentication feature that is or appears to be an identification document or authentication feature of the United States which is stolen or produced without lawful authority knowing that such document or feature was stolen or produced without such authority; (7) knowingly transfers or uses, without lawful authority, a means of identification of another person with the intent to commit, or to aid or abet, any unlawful activity that constitutes a violation of Federal law, or that constitutes a felony under any applicable State or local law; or (8) knowingly traffics in false authentication features for use in false identification documents, document-making implements, or means of identification; shall be punished as provided in subsection (b) of this section " 18 U.S.C. 1028(a).

[3656] "Whoever, in a circumstance described in subsection (c) of this section. . . knowingly possesses an identification document or authentication feature that is or appears to be an identification document or authentication feature of the United States or a sponsoring entity of an event designated as a special event of national significance which is stolen or produced without lawful authority knowing that such document was stolen or produced without such authority. . shall be punished as provided in subsection (b) of this section," 18 U.S.C. 1028(a)(6)(amendment in italics).

[3657] "In this section . . . the term 'identification document' means a document made or issued by or under the authority of the United States Government, a State, political subdivision of a State, a sponsoring entity of an event designated as a special event of national significance a foreign government, political subdivision of a foreign government, an international governmental or an

applies as long as one of the three jurisdictional predicates is satisfied. Third, it amends one of the jurisdictional predicates, that which is based on issuance by a federal agency. It treats sponsors of special events as federal agencies within the jurisdictional subsection of section 1028(c).[3658]

It is this third amendment that raises the issue. There is no doubt that Congress has the constitutional power to enact legislation prohibiting possession or trafficking in special event identification documents, if the third jurisdictional predicate is satisfied, i.e., the offense involves transportation in, or affects, interstate or foreign commerce.[3659] Nor is there any dispute Congress enjoys such authority, if the second jurisdiction predicate is satisfied, i.e., the offense involves defrauding the United States.[3660] There may be some question, however, as to the extent to which Congress may prohibit unlawful possession or trafficking in special event identification documents predicated solely upon the fact they were issued by a special event sponsor. "National significance" is not a term that by itself conjures up reference to any of Congress's constitutionally enumerated powers, although the commerce clause might provide an arguably adequate foundation, particularly if regulations confined enforcement to events with an obvious impact on interstate or foreign commerce. Of course, legislation that cannot be traced to one or more of Congress's enumerated powers lies beyond its reach, United States v. Morrison, 529 U.S. 598, 607 (2000).

---

international quasi-governmental organization which, when completed with information concerning a particular individual, is of a type intended or commonly accepted for the purpose of identification of individuals," 18 U.S.C. 1028(d)(3)(amendment in italics).

[3658] "The circumstance referred to in subsection (a) of this section is that — (1) the identification document, authentication feature, or false identification document is or appears to be issued by or under the authority of the United States or a sponsoring entity of an event designated as a special event of national significance or the document-making implement is designed or suited for making such an identification document, authentication feature, or false identification document," 18 U.S.C. 1028(c)(1)(amendment in italics)

[3659] "[M]odern Commerce Clause jurisprudence has identified three broad categories of activity that Congress may regulate under its commerce power. First, Congress may regulate the use of the channels of interstate commerce. Second, Congress is empowered to regulate and protect the instrumentalities of interstate commerce, or persons or things in interstate commerce, even though the threat may come only from intrastate activities. Finally, Congress' commerce authority includes the power to regulate those activities having a substantial relation to interstate commerce, i.e., those activities that substantially affect interstate commerce," United States v. Morrison, 529 U.S. 598, 608-609 (2000)(internal quotation marks and citations omitted); United States v. Lopez, 514 U.S. 549, 558-59 (1995).

[3660] "Congress has authority under the Spending Clause to appropriate federal moneys to promote the general welfare, and it has corresponding authority under the Necessary and Proper Clause, to see to it that taxpayer dollars appropriated under that power are in fact spent for the general welfare, and not frittered away in graft or on projects undermined when funds are siphoned off or corrupt public officers are derelict about demanding value for dollars," Sabri v. United States, 541 U.S. 600, 605 (2004).

Forensic and Investigative Support of Missing and Exploited Children Cases

The PROTECT Act[3661] authorizes "officers and agents of the Secret Service" to provide state and local authorities and the National Center for Missing Exploited Children with investigative and forensic services in missing and exploited children cases, 18 U.S.C. 3056(f). Within the Secret Service, officers and agents conduct investigations, but employees provide forensic services. Section 604 of the Act changes "officers and agents of the Secret Service" to simply "the Secret Service" to reflect this reality.

Secret Service Uniformed Division

The Act amends and transfers the organic authority for the Secret Service Uniformed Division. The conference report's explanation is terse:

> *Section 605 of the conference report is a new section. This section places all authorities of the Uniformed Division, which are currently authorized under title 3, in a newly created 18 U.S.C. §3056A, following the core authorizing statute of the Secret Service (18 U.S.C. §3056), thereby organizing the Uniformed Division under title 18 of the United States Code with other Federal law enforcement agencies.*[3662]

What makes the statement interesting is that the organic authority for most federal law enforcement agencies is not found in title 18. For example, the FBI and the Marshals Service provisions appear not in title 18 but in title 28, 28 U.S.C. 531-540, 561-569; the Inspectors General Offices in appendices to title 5, 5 U.S.C. App. III; the Coast Guard in title 14, 14 U.S.C. chs.1-25; the Customs Service in title 19, 19 U.S.C. 2071-2083.

What is also somewhat intriguing is what is not said. There is no further explanation of the additions, modifications, deletions or apparent duplications associated with the transfer. Existing law lists a series of protective duties the Uniformed Division is authorized to perform, 3 U.S.C. 202. Although it is more geographically specific, it essentially reflects a similar list of some of the duties of the Secret Service as a whole found in 18 U.S.C. 3056.[3663] The Act adds four protective duties to the list: protection of former presidents and their spouses, protection of presidential and vice presidential candidates, protection of visiting

---

[3661] P.L. 108-21, 117 Stat. 650 (2003).

[3662] H.Rept. 109-333, at 111 (2005).

[3663] For example, while both 3 U.S.C. 202 and 18 U.S.C. 3056 authorize protection of the President, Vice President and their families, section 202 authorizes the Uniformed Division to protect the White House, any building housing presidential offices, the Treasury building and certain foreign diplomatic missions located outside of the District of Columbia, 3 U.S.C. 202.

heads of state, and security for special events of nation significance, new 18 U.S.C. 3056A(a)(10)-(13) as added by the Act. All but the special event provisions are already part of the general Secret Service authority under section 3056 (18 U.S.C. 3056(a)(3),(7), (5)). The Act also explicitly authorizes members of the Division to carry firearms, make arrests under certain situations, and perform other duties authorized by law, 18 U.S.C. 3056A(b)(1) as added by the Act — authority they are likely to already enjoy by operation of section 3056, 18 U.S.C. 3056(c)(1)(B), (C), (F), or by virtue of the fact they are vested with "powers similar to those of members of the Metropolitan Police of the District of Columbia," 3 U.S.C. 202.

Section 605(b) of the Act specifically permits the Secretary of Homeland Security to contract out protection of foreign missions and foreign officials outside of the District of Columbia, amending 18 U.S.C. 3056(d).

The Act also repeals 3 U.S.C. 203 (relating to personnel, appointment and vacancies), 204 (relating to grades, salaries, and transfers), 206 (relating to privileges of civil-service appointees), 207 (relating to participation in police and firemen's relief fund),[3664] and 208(b)(relating to authorization of appropriations).

Secret Service as a Distinct Entity

Section 607 of the Act statutorily declares the Secret Service a distinct entity within the Department of Homeland Security, reporting directly to the Secretary, adding new subsection 18 U.S.C. 3056(g).

Exemptions from the Federal Advisory Committee Act

Major presidential and vice presidential candidates are entitled to Secret Service protection, 18 U.S.C. 3056(a)(7). The Secretary of Homeland Security identifies who qualifies as a "major" candidate and therefore is entitled to protection after consulting with an advisory committee consisting of House Speaker and minority leader, the Senate majority and minority leader and fifth member whom they select, id. The Secret Service's electronic crime task forces consist of federal and state law enforcement members as well as representatives from academia and industry who share information concerning computer security and abuse, 18 U.S.C. 3056 note.

The Federal Advisory Commission Act imposes notice, open meeting, record keeping, and reporting requirements on groups classified as federal advisory committees, 5 U.S.C. App. II. Advisory committees are committees, task forces,

[3664] However, section 606 of the Act, 120 Stat. 256 (2006), states that the changes do "not affect the retirement benefits of current employees or annuitants that existed on the day before the effective date of this Act."

and other groups established by the statute, the President, or an executive agency "in the interest of obtaining advice and recommendations for" the President or federal agencies, 5 U.S.C. App. II 3(2). No group consisting entirely of officers or employees of the United States is considered an advisory committee for purposes of the act, id.

It is not clear that either the candidates protection committee or the electronic crimes task forces would be considered advisory committees for purposes of the advisory act. Even if the committee were not exempt because it consists entirely of federal "officers or employees," it seems highly unlikely that it is the type of committee envisioned by Congress when it enacted the act.[3665] As for the task forces, it is not clear that their function is to provide advice and recommendations for agency action. In any event, section 608 of the Act exempts electronic crimes task forces and the candidates protection advisory committee from provisions of the Federal Advisory Committee Act, amending 18 U.S.C. 3056 note, 3056(a)(7).

Title VII: Combat Methamphetamine Epidemic Act of 2005

Title VII of the Act contains subtitles concerning regulation of domestic and international commerce in three methamphetamine (meth) precursor chemicals: ephedrine, pseudoephedrine, and phenylpropanolamine (EPP); increased penalties for methamphetamine offenses; expanded environmentally-related regulations; and adjusted grant programs.[3666] In many of its particulars, Title VII resembles H.R. 3889, the Methamphetamine Epidemic Elimination Act, as amended by the House Committees on Energy and Commerce and on the Judiciary, H.Rept. 109-299 (pts. 1 & 2)(2005).[3667]

Domestic Regulation of Precursor Chemicals

Sales Regulation of "Scheduled Listed Chemicals"

The first part of Title VII addresses the fact that certain cold and allergy medicines — widely and lawfully used for medicinal purposes and readily available in news stands, convenience stores, grocery stores, and drugstores — when collected in bulk can be used to manufacture methamphetamine. At the

---

[3665] Public Citizen v. Department of Justice, 491 U.S. 440, 451-67(1989)(holding the act inapplicable to American Bar Association committee whose advice the Department sought regarding the qualifications of candidates for judicial appointment).

[3666] Related CRS Reports include CRS Report RS22325, Methamphetamine: Legislation and Issues in the 109th Congress, by Celinda Franco, and CRS Report RS22177, The Legal Regulation of Sales of Over-the-Counter Cold Medication, by Jody Feder.

[3667] In many respects, it is also compatible with S. 103 as reported by the Senate Committee on the Judiciary without written report.

federal level, the Food and Drug Administration (FDA) regulates the commercial drug market to ensure the public of safe and effective medicinal products pursuant to the Federal Food Drug and Cosmetic Act, 21 U.S.C. 301-397. The Attorney General through the Drug Enforcement Administration regulates the commercial drug market with respect to drugs with a potential for addiction and abuse, pursuant to the Controlled Substances Act, 21 U.S.C. 801- 904, and the Controlled Substances Import and Export Act, 21 U.S.C. 951-971.

The degree of regulatory scrutiny afforded a particular drug classified as a controlled substance and sometimes certain of the chemicals essential for its production (precursor chemicals, also known as "list chemicals") depends upon the drug's potential for abuse weighed against its possible beneficial uses.[3668] Those who lawfully import, export, produce, prescribe, sell or otherwise dispense drugs classified as controlled substances must be registered, 21 U.S.C. 958, 822. In the case of controlled substances susceptible to abuse and therefore criminal diversion and for certain of their precursor chemicals, the Attorney General may impose production and import/export quotas, security demands, inventory control measures, and extensive registration, record keeping and inspection requirements, 21 U.S.C. 821-830, 954-71. A wide range of civil and criminal sanctions, some of them quite severe, may be imposed for violation of the Controlled Substances Act, the Controlled Substances Import and Export Act, or of the regulations promulgated for their implementation, 21 U.S.C. 841-863, 959-967.[3669]

Prior to the Act, the Controlled Substances Act, in a dizzying array of criss-crossing exceptions and definitions, permitted the over-the-counter sale, without regulatory complications, of cold remedies containing ephedrine, pseudoephedrine or phenylpropanolamine (EPP) — methamphetamine precursors — in packages containing less than 3 grams of EPP base (and in amounts not in excess of 9 grams of pseudoephedrine or phenylpropanolamine base per transaction).[3670] Title VII eliminates the criss-crossing[3671] and replaces it

---

[3668] For example, the so-called "schedule I controlled substances" are those drugs that have "high potential for abuse," that have "no currently accepted medical use in treatment in the United States," and for which there are no "accepted safety for use . . . under medical supervision," 21 U.S.C. 812(b)(1).

[3669] See generally, CRS Report 97-141, Drug Smuggling, Drug Dealing and Drug Abuse: Background and Overview of the Sanctions Under the Federal Controlled Substances Act and Related Statutes, by Charles Doyle.

[3670] All three chemicals are defined as "list I chemicals," 21 U.S.C. 802(34)(C),(I),(K). List I and List II chemicals are defined as "listed chemicals," 21 U.S.C. 802(33). Several of the act's regulatory provisions apply to "regulated transactions" described as including the distribution, receipt, sale, import or export of listed chemicals, 21 U.S.C. 802(39)(A). Regulated transactions, however, do not include transactions involving FDA approved drugs, 21 U.S.C. 802(39)(A)(iv), unless the drug contains EPP (except "ordinary over-the-counter products" defined as products

with a new regulatory scheme for "scheduled listed chemical products," i.e., EPP products,[3672] which:

- limits drugstore, convenience store, grocery store, news stand, lunch wagon (mobile retailer), and other retail sales of EPP products to 3.6 grams of EEP base per customer per day (down from 9 grams per transaction), 21 U.S.C. 830(d), 802(46), 802(47);
- limits mobile retail sales to 7.5 grams of EPP base per customer per month, 21 U.S.C. 830(e)(1)(A);
- insists that EPP products be displayed "behind the counter" (locked up in the case of mobile retailers), 21 U.S.C. 830(e)(1)(A);
- (other than for sales involving 60 milligrams or less of pseudoephedrine) requires sellers to maintain a logbook (for at least two years) recording for every purchase, the time and date of sale, the name and quantity of the product sold, and name and address of the purchaser, 21 U.S.C. 830(e)(1)(A);
- (other than for sales involving 60 milligrams or less of pseudoephedrine) demands that purchasers present a government-issued photo identification, sign the logbook for the sale noting their name and address, and the date and time of the sale, 21 U.S.C. 830(e)(1)(A);
- provides that the logbook must include a warning that false statements are punishable under 18 U.S.C. 1001 with a term of imprisonment of not more than five years and/or a fine of not more than $250,000 (not more than $500,000 for organizations), 21 U.S.C. 830(e)(1)(A), 830(e)(1)(D);
- states that sellers must provide, document, and certify training of their employees on the EPP product statutory and regulatory requirements, 21 U.S.C. 830(e)(1)(A), (B);
- directs the Attorney General to promulgate regulations to protect the privacy of the logbook entries (except for access for federal, state and local law enforcement officials), 21 U.S.C. 830(e)(1)(C);
- affords sellers civil immunity for good faith disclosure of logbook information to law enforcement officials (unless the disclosure constitutes

---

containing not more than 3 grams of an EPP base and unless in liquid form are packaged in blister packs where feasible, 21 U.S.C. 802(45)), 21 U.S.C. 802(39)(iv)(I)(aa), or unless the drug is one the Attorney General has determined is subject to diversion, 21 U.S.C. 802(39)(iv)(I)(bb), and the drug is one with a EPP base in amounts in excess of a threshold established by the Attorney General (except that the threshold for pseudoephedrine and phenylpropanolamine products may be no more than 9 grams of base per transaction and in packages containing no more than 3 grams of base), 21 U.S.C. 802(39)(iv)(II).

[3671] Section 711 of the Act replaces 20 U.S.C. 802(45); section 712 replaces 20 U.S.C. 802(39)(iv).

[3672] The bill defines a "scheduled listed chemicals product" as one "that contains ephedrine, pseudoephedrine, or phenylpropanolamine" and "may be marketed or distributed lawfully in the United States under the Federal, Food Drug, and Cosmetic Act as a nonprescription drug," new 21 U.S.C. 802(45) as added by the Act.

gross negligence or intentional, wanton, or willful misconduct), 21 U.S.C. 830(e)(1)(E);
- requires sellers take measures against possible employee theft or diversion and preempts any state law which precludes them asking prospective employees about past EPP or controlled substance convictions, 21 U.S.C. 830(e)(1)(G);
- sets September 30, 2006 as the effective date for the regulatory scheme (but the 3.6 gram limit on sales would become effective 30 days after enactment).

Federal law imposes monthly reporting requirements on mail order sales of EPP products, 21 U.S.C. 830(b)(3). Under the Act, those subject to the reporting requirement must confirm the identity of their customers under procedures established by the Attorney General, and sales are limited to 7.5 grams of EPP base per customer per month.[3673] If the Attorney General determines that an EPP product cannot be used to produce methamphetamine, he may waive the 3.6 gram limit on retail sales and 7.5 gram limits on mail order and mobile retail sales.[3674]

Sellers who knowingly violate the mail order regulations, or knowingly or recklessly violate the sales regulations, or unlawfully disclose or refuse to disclose EPP logbook sales information, or continue to sell after being prohibited from doing so as a result of past violations, are subject to imprisonment for not more than one year, and/or a fine of not more than $100,000 (not more than $200,000 for organizations), and to a civil penalty of not more than $25,000, 21 U.S.C. 842 as amended by section 711(f) of the Act. During the 30 days after enactment but before the new purchase limits become effective, knowing or intentional retail purchases more than 9 grams of EPP base (7.5 grams in the case of mail order purchases) are punishable by imprisonment for not more than one year and/or a fine of not less than $1,000 nor more than $100,000 (not more than $200,000 for an organization), 21 U.S.C. 844(a) as amended by section 711(e)(1) of the Act.

Authority to Establish Production Quotas

The Controlled Substances Act allows the Attorney General to assess the total annual requirements for various controlled substances and to impose manufacturing quotas accordingly, 21 U.S.C. 826. Section 713 of the Act extends that authority to reach EPP production. For violations, manufacturers face imprisonment for not more than one year, and/or a fine of not more than $100,000 (not more than $200,000 for organizations), and to a civil penalty of not more than $25,000.

[3673] § 711(c)(1), P.L. 109-177, 120 Stat. 261 (2006), adding 21 U.S.C. 830(e)(2).

[3674] § 711(d), P.L. 109-177, 120 Stat. 261, 262 (2006), adding 21 U.S.C. 830(e)(3).

Imports/Exports

The Attorney General enjoys broad general authority to regulate controlled substances imported and exported for legitimate purposes, 21 U.S.C. 952, 953 (neither section mentions listed chemicals). Importers and exporters of list I chemicals (which includes EPP), however, must register with the Attorney General, 21 U.S.C. 958. And they must notify the Attorney General 15 days in advance of any anticipated shipment of listed chemicals to or from the U.S. involving anyone other than a regular source or customer, 21 U.S.C. 971.

Section 715 of the Act expands the statutory statement of the Attorney General's authority to regulate controlled substance imports to include EPP, amending 21 U.S.C. 952. Moreover, it provides implicit statutory confirmation of the Attorney General's authority to set import quotas for EPP by authorizing him to increase the quantity of chemicals importer's registration permits him to bring into the country, new subsection 21 U.S.C. 952(d) as added by the Act. Here and its other adjustments concerning imports and exports, the Act instructs the Attorney General to confer with the U.S. Trade Representative in order to ensure continued compliance with our international trade obligations.

International Regulation of Precursors

Foreign Distribution Chains

The Act also affords the Attorney General renewed notification when the listed chemical transaction, for which approval was initially sought and granted, "falls through," and the importer or exporter substitutes a new subsequent purchaser, 21 U.S.C. 971 as amended.[3675] The Attorney General may require EPP importers to include "chain of distribution" information in their notices that traces the distribution trial from foreign manufacturers to the importer, new subsection 21 U.S.C. 971(h) as added by section 721 of the Act. The Attorney General may seek further information from foreign participants in the chain and refuse to approve transactions involving uncooperative participants, 21 U.S.C. 971(h)(2), (h)(3). Failure to comply with these expanded notice requirements or the bills' EPP import registration and quota provisions is punishable by imprisonment for not more than 10 years and /or a fine of not more than $250,000 (not more than $500,000 for organizations), 21 U.S.C. 960(d)(6) as amended by section 717 of the Act.

[3675] H.Rept. 109-333 (2005)("A problem can arise, however, when the sale that the importer or exporter originally planned falls through. When this happens the importer or exporter must quickly find a new buyer for the chemicals on what is called the "spot marker" — wholesale market. Sellers are often under pressure to find a buyer in a short amount of time, meaning that they may be tempted to entertain bids from companies without a strong record of preventing diversion. More importantly, the Department of Justice has no opportunity to review such transactions in advance and suspend them if there is a danger of diversion to illegal drug production").

Foreign Assistance to Source Countries

The Foreign Assistance Act calls for an annual report on the drug trafficking and related money laundering activities taking place in countries receiving assistance, 22 U.S.C. 2291h. Major illicit drug-producing and drug-transit countries are subject to a procedure featuring presidential certification of cooperative corrective efforts, 22 U.S.C. 2291j. The Act amends the reporting and certification requirements to cover the five largest EPP exporting and the five largest EPP importing countries with the highest rates of diversion, 22 U.S.C. 2291h, 2291j as amended by section 722 of the Act.[3676] It also directs the Secretary of State in consultation with the Attorney General to report to Congress on a plan to deal with the diversion. Section 723 of the Act further instructs the Secretary to take diplomatic action to prevent methamphetamine smuggling from Mexico into the United States and to report to Congress on results of the efforts; the first such report is due not later than one year after the Act's enactment, and every year thereafter.

Enhanced Criminal Penalties for Meth Production and Trafficking

Smuggling Using Commuter Lanes

Unlawful possession of methamphetamine is punishable by imprisonment for terms ranging from not more than 20 years to imprisonment for life depending upon the amount involved and the offender's criminal record, 21 U.S.C. 841(b), 848. Unlawful possession of EPP is punishable by imprisonment for terms ranging from not more than five years to imprisonment for life depending upon the amount involved and the offender's criminal record, 21 U.S.C. 841(c), 848. Similar penalties follow smuggling methamphetamine or EPP, 21 U.S.C. 960, 848. Section 731 of the Act establishes a consecutive term of imprisonment of not more than 15 years to be added to the otherwise applicable sentence when the methamphetamine or EPP offense is committed in connection with quick entry border procedures.

Manufacturing Controlled Substances on Federal Property

The fines for controlled substance offenses that involve cultivation of a controlled substance on federal property are not more than $500,000 individuals and $1 million for organizations, 21 U.S.C. 841(b)(5). The Act establishes the same fine levels for manufacturing a controlled substance on federal property, 21 U.S.C. 841(b)(5) as amended by section 732 of the Act.[3677]

[3676] Similar provisions appear in the House-passed Foreign Relations Authorization Act, Fiscal Years 2006 and 2007 (H.R. 2601)(§1007).

[3677] The change confirms existing law since for purposes of the Controlled Substances Act, "manufacturing" includes "cultivating," 21 U.S.C. 802(15), (22).

Increased Penalties for Drug Kingpins

The Controlled Substances Act punishes major drug traffickers (those guilty of continuing criminal enterprise offenses sometimes known as "drug kingpins"), 21 U.S.C. 848. Drug kingpins, whose offenses involve 300 or more times the amount of controlled substance necessary to trigger the sentencing provisions of 21 U.S.C. 841(b)(1)(B) or whose offenses generate more than $10 million in gross receipts a year, face sentences of mandatory life imprisonment. In the case of a drug kingpin trafficking in methamphetamine, section 733 of the Act lowers the thresholds to 200 or more times the trigger amounts or $5 million in gross receipts a year, new subsection 21 U.S.C. 848(s) as added by the Act.

Cooking or Dealing Near Children

The Controlled Substances Act doubles the otherwise applicable penalties for the distribution or manufacture of controlled substances near schools, playgrounds, video arcades and other similarly designated places likely to be frequented by children, 21 U.S.C. 860. Section 734 of the Act adds a penalty of imprisonment for not more than 20 years to the otherwise applicable penalties for distributing, possessing with the intent to distribute, or manufacturing methamphetamine anywhere where a child under 18 years of age is in fact present or resides, new section 21 U.S.C. 860a as added by the Act.

Reports to the Sentencing Commission

The United States Sentencing Commission establishes and amends federal sentencing guidelines, which must be considered when federal courts impose sentence in a criminal case, 28 U.S.C. 994; 18 U.S.C. 3553; United States v. Booker, 543 U.S. 220, 245 (2005). Every federal judicial district must provide the Commission with detailed reports on each criminal sentence imposed by the district's judges, 28 U.S.C. 994(w). Section 735 of the Act authorizes the Commission to establish the format for such reports and emphasizes the need for a written statement of reasons for the sentence imposed including the reasons for any departure from the sentence advised the by the guidelines, 28 U.S.C. 994(w) as amended by the Act.

Reports to Congress

Section 736 of the Act requires the Attorney General to report twice a year — to the Judiciary Committees; the House Energy and Commerce Committee; the Senate Commerce, Science and Transportation Committee; the House Government Reform Committee; and the Senate Caucus on International Narcotics Control — on the Drug Enforcement Administration's and the Federal Bureau of Investigation's allocation of resources to the investigation and prosecution of methamphetamine offenses.

<u>Enhanced Environmental Regulation of Methamphetamine Byproducts</u>

Transportation of Hazardous Materials

Under the Hazardous Material Transportation Act, the Secretary of Transportation enjoys regulatory authority over the transportation of certain explosive, toxic or otherwise hazardous material, 49 U.S.C. 5103. Section 741 of the Act instructs the Secretary to report every two years to the House Committee on Transportation and Infrastructure and to the Senate Committee on Commerce, Science, and Transportation on whether he has designated as hazardous materials for purposes of the act, all methamphetamine production by-products, 49 U.S.C. 5103(d) as added by the Act.

Solid Waste Disposal

Under the Solid Waste Disposal Act, the Administrator of the Environmental Protection Agency identifies and lists toxic, flammable, corrosive and otherwise hazardous waste, 42 U.S.C. 6921. Section 742 of the Act requires the EPA Administrator to report within two years of enactment, to the House Committee on Energy and Commerce and the Senate Committee on Environment and Public Works, on the information received from law enforcement agencies and others identifying the by-products of illicit methamphetamine product and on which of such by-products the Administrator considers hazardous waste for purposes of the act, new subsection 42 U.S.C. 6921(j) as added by the Act.

Restitution for Methamphetamine Possession

The Act amends the provision under which offenders convicted of violations of the Controlled Substances Act or the Controlled Substances Import and Export Act involving the manufacture of amphetamine or methamphetamine may be ordered to pay restitution and to reimburse governmental entities for cleanup costs, to specifically include restitution and reimbursement in the case of offenses involving simple possession or possession with intent to distribute, 21 U.S.C. 853(q) as amended by section 743 of the Act.[3678] This change was prompted by United States v. Lachowski, 405 F.3d 696, 700 (8th Cir. 2005), which had held that the "offenses involving the manufacture of amphetamine or methamphetamine" upon which a restitution or reimbursement order might be based did not include unlawful possession with intent to distribute methamphetamine. The conferees felt that Lachowski "undermined the ability of the Federal government to seek cleanup costs from methamphetamine traffickers

---

[3678] "The court, when sentencing a defendant convicted of an offense under this subchapter or subchapter II of this chapter involving the manufacture, the possession, or the possession with the intent to distribute, of amphetamine or methamphetamine, shall — (1) order restitution as provided in sections 3612 and 3664 of Title 18; (2) order the defendant to reimburse the United States, the State or local government concerned, or both the United States and the State or local government concerned for the costs incurred by the United States or the State or local government concerned, as the case may be, for the cleanup associated with the manufacture of amphetamine or methamphetamine by the defendant, or on premises or in property that the defendant owns, resides, or does business in; and (3) order restitution to any person injured as a result of the offense as provided in section 3663A of Title 18," 21 U.S.C. 853(q)(amendments in italics).

who are convicted only of methamphetamine possession — even when the methamphetamine lab in question was on the defendant's own property."[3679]

Drug Courts and Grant Programs

Improvements to the DOJ Drug Court Program

The Attorney General may make grants to state, local and tribal governments for the operation of drug courts, 42 U.S.C. 3797u. The Act instructs the Attorney General to prescribe guidelines or regulations to ensure that such programs feature mandatory drug testing and mandatory graduated sanctions for test failures, new subsection 42 U.S.C. 3797u(c) as added by section 751 of the Act, and authorizes appropriations for FY2006 of $70 million, new subsection 42 U.S.C. 3793(25)(A)(v)[inadvertently cited in the Act as 42 U.S.C. 2591(25)(A)(v)] as added by section 752 of the Act. The Attorney General is also directed to study the feasibility of a drug court program for low-level, non-violent federal offenders and to report on the results by June 30, 2006.

Grant Programs

The Act also creates three methamphetamine-related grant programs. One, provided by section 754 of the Act, addresses public safety as well as methamphetamine manufacturing, trafficking and use in "hot spots." Appropriations of $99 million for each of the next five fiscal years (2006-2010) are authorized for grants to the states under the program. The second, section 755 of the Act, authorizes appropriations of $20 million for fiscal years 2006 and 2007 in order to provide grants to the states for programs for drug-endangered children. The third program (services relating to methamphetamine use by pregnant and parenting women offenders), section 756 of the Act, is available to state, local, and tribal governments and supported an authorization of such appropriations as are necessary.

Order Code RL30465

Updated February 15, 2007

Elizabeth B. Bazan
Legislative Attorney
American Law Division

Summary

The Foreign Intelligence Surveillance Act (FISA), 50 U.S.C. § 1801 et seq., as passed in 1978, provided a statutory framework for the use of electronic surveillance in the context of foreign intelligence gathering. In so doing, Congress sought to strike a delicate balance between national security interests and personal privacy rights. Subsequent legislation expanded federal laws dealing with foreign intelligence gathering to address physical searches, pen registers and trap and trace devices, and access to certain business records. The USA PATRIOT Act of 2001, P.L. 107-56, made significant changes to some of these provisions. Further amendments were included in the Intelligence Authorization Act for Fiscal Year 2002, P.L. 107-108, and the Homeland Security Act of 2002, P.L. 107-296, the Intelligence Reform and Terrorism Prevention Act, P.L. 108-458, the

USA PATRIOT Improvement and Reauthorization Act of 2005, P.L. 109-177, and the USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006, P.L. 109178. In addressing international terrorism or espionage, the same factual situation may be the focus of both criminal investigations and foreign intelligence collection efforts. Some of the changes in FISA under these public laws are intended, in part, to facilitate information sharing between law enforcement and intelligence elements. In its Final Report, the 9/11 Commission noted that the removal of the pre-9/11 "wall" between intelligence and law enforcement "has opened up new opportunities for cooperative action within the FBI."

On May 17, 2002, the U.S. Foreign Intelligence Surveillance Court (FISC) issued a memorandum opinion and order written by the then Presiding Judge of the court, and concurred in by all of the other judges then on the court. The unclassified opinion and order were provided to the Senate Judiciary Committee in response to a letter from Senator Leahy, Senator Grassley, and Senator Specter, who released them to the public on August 22, 2002. In its decision, the FISC considered a motion by the U.S. Department of Justice "to vacate the minimization and 'wall' procedures in all cases now or ever before the Court, including this Court's adoption of the Attorney General's July 1995 intelligence sharing procedures, which are not consistent with new intelligence sharing procedures submitted for approval with this motion." The FISC granted the Department's motion, but modified part of what it saw as proposed minimization procedures. This decision was not appealed directly, but the Department of Justice did seek review of an FISC order granting as modified an application for electronic surveillance of an agent of a foreign power and for an FISC order renewing that surveillance, both subject to restrictions based on the May 17 memorandum opinion and order by the FISC. The U.S. Foreign Intelligence Surveillance Court of Review reversed and remanded the FISC orders on November 18, 2002. This report will examine the detailed statutory structure provided by FISA and related provisions of E.O. 12333, and will discuss the decisions of the U.S. Foreign Intelligence Surveillance Court and the U.S. Foreign Intelligence Surveillance Court of Review. It will be updated as subsequent changes require.

Introduction

On October 26, 2001, President George W. Bush signed P.L. 107-56, the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act or the USA PATRIOT Act. Among its provisions are a number which impacted or amended the Foreign Intelligence Surveillance Act (FISA), 50 U.S.C. § 1801 *et seq*., an act which provides a statutory structure for the use of electronic surveillance, physical searches, pen registers, trap and trace devices, and orders requiring production of tangible things within the United States to gather foreign intelligence information or to assist in specified types of investigations.

The changes made to FISA by P.L. 107-56 were far reaching. For example, the law expanded the number of United States district court judges on the Foreign Intelligence Surveillance Court and provided for roving or multipoint electronic surveillance authority under FISA. It amended FISA provisions with respect to pen registers and trap and trace devices, and substantially expanded the reach of the business records provisions to provide a mechanism for production of any tangible thing pursuant to a FISA court order. The amended language changed the certification demanded of a federal officer applying for a FISA order for electronic surveillance or a physical search from requiring a certification that the purpose of the surveillance or physical search is to obtain foreign intelligence information to requiring certification that *a significant purpose* of the surveillance or search is to obtain foreign intelligence information. As implemented, this has made it possible for FISA to be used where the primary purpose of the investigation is criminal investigation, so long as a significant foreign intelligence purpose is also present. FISA, as amended, also affords a private right of action to persons aggrieved by inappropriate use or disclosure of information gathered in or derived from a FISA surveillance or physical search or through the use of a pen register or trap and trace device. Of the amendments made by the USA PATRIOT Act, all but the section which increased the number of judges on the Foreign Intelligence Surveillance Court were set by that Act to sunset on December 31, 2005. P.L. 109-160 and P.L. 109-170 extended the sunset of certain FISA provisions, among others, to February 3, 2006, and March 10, 2006, respectively. The USA PATRIOT Improvement and Reauthorization Act of 2005, P.L. 109-177, replaced the sunset provisions of P.L. 107-56, as amended, with new provisions extending the application of the affected amendments to December 31, 2009. Amendments to FISA were also made by the Intelligence Authorization Act for Fiscal Year 2003, P.L. 107-108; the Homeland Security Act of 2002, P.L. 107-296; and the Intelligence Reform and Terrorism Protection Act of 2004, P.L. 108-458.

In the 109th Congress, two measures, the USA PATRIOT Improvement and Reauthorization Act of 2005, P.L. 109-177, and the USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006, P.L. 109-178, made significant changes to FISA. P.L. 109-177 extended the duration of FISA electronic surveillance, physical searches, and pen register and trap and trace devices. It also added requirements to applications for production of certain sensitive types of records, and expanded the requirements for applications for FISA orders for production of tangible things and for orders authorizing such production. This Act created a new petition review pool within the U.S. Foreign Intelligence Surveillance Court (FISC) to address challenges to such production orders or to related nondisclosure orders, and established a detailed procedure for review of such orders. Further, it directed the Inspector General of the U.S. Department of Justice to perform a comprehensive audit of the effectiveness and use, including improper or illegal use, of the investigative authority under title V of FISA, 50 U.S.C. § 1861 et seq., for fiscal years 2002-2006. The measure modified the requirements for multipoint electronic surveillance under FISA. It also expanded congressional oversight of FISA electronic surveillance, physical searches, and

use of pen registers and trap and trace devices. P.L. 109-178 amends the procedures for judicial review of production and nondisclosure orders under 50 U.S.C. § 1861.

On May 17, 2002, the U.S. Foreign Intelligence Surveillance Court issued an opinion and order[3680] written by the then Presiding Judge of the court, U.S. District Judge Royce C. Lamberth. All of the other judges then on the FISC concurred in the order. The opinion was provided by the current Presiding Judge of the FISC, U.S. District Judge Colleen Kollar-Kotelly, to the Senate Judiciary Committee in response to a July 31 letter from Senator Leahy, Senator Grassley and Senator Specter.[3681] On August 22, 2002, the unclassified opinion was released to the public by Senator Leahy, Senator Grassley and Senator Specter.

In the memorandum opinion and order, the FISC considered a motion by the U.S. Department of Justice "to vacate the minimization and 'wall' procedures in all cases now or ever before the Court, including this Court's adoption of the Attorney General's July 1995 intelligence sharing procedures, which are not consistent with new intelligence sharing procedures submitted for approval with this motion."[3682] In its memorandum and accompanying order, the FISC granted the Department of Justice's motion, but modified the second and third paragraphs of section II.B of the proposed minimization procedures.[3683]

The FISC's May 17th memorandum opinion and order were not appealed directly. However, the Justice Department sought review in the U.S. Foreign Intelligence Court of Review (Court of Review) of an FISC order authorizing electronic surveillance of an agent of a foreign power, subject to restrictions flowing from the May 17th decision, and of an FISC order renewing that surveillance subject to the same restrictions. The Court of Review reversed and remanded the FISC orders.[3684] This opinion, the first issued by the U.S. Foreign Intelligence

[3684] In re Sealed Case, 310 F.3d 717 (U.S. Foreign Intell. Surveil. Ct. Rev. 2002) (hereinafter Court of Review op.). The Foreign Intelligence Surveillance Act, P.L. 95-511, as amended (hereinafter FISA), Title I, § 103, 50 U.S.C. § 1803, created both the U.S. Foreign Intelligence Surveillance Court and the U.S. Foreign Intelligence Surveillance Court of Review. As originally constituted the FISC was made up of 7 U.S. district court judges publicly designated by the Chief Justice of the

SurveillanceCourt of Review since its creation in 1978, was also released to the public. This report will provide background on the Foreign Intelligence Surveillance Act, discuss its statutory framework, and review these two decisions.

Background

Investigations for the purpose of gathering foreign intelligence give rise to a tension between the Government's legitimate national security interests and the protection of privacy interests.[3685] The stage was set for legislation to address these competing concerns in part by Supreme Court decisions on related issues. In Katz v. United States, 389 U.S. 347 (1967), the Court held that the protections of the Fourth Amendment extended to circumstances involving electronic surveillance of oral communications without physical intrusion.[3686] The Katz Court stated, however, that its holding did not extend to cases involving national security.[3687] In United States v. United States District Court, 407 U.S. 297 (1972) (the Keith case), the Court regarded Katz as "implicitly recogniz[ing] that the broad and unsuspected governmental incursions into conversational privacy which electronic surveillance entails necessitate the application of Fourth Amendment safeguards."[3688] Mr. Justice Powell, writing for the Keith Court, framed the matter before the Court as follows:

> *The issue before us is an important one for the people of our country and their Government. It involves the delicate question of the President's power, acting through the Attorney General, to authorize electronic surveillance in internal security matters without prior judicial approval. Successive Presidents for more than one-quarter of a century have authorized such surveillance in varying degrees, without guidance from the Congress or a definitive decision of this Court. This case brings the issue here for the first time. Its resolution is a matter of national concern,*

United States. As amended by the USAPATRIOT Act, P.L. 107-56, § 208, the membership in the FISC was expanded to 11 members, at least 3 of whom must live within a 20 mile radius of the District of Columbia. The U.S. Foreign Intelligence Surveillance Court of Review is made up of 3 U.S. district court or U.S. court of appeals judges publicly designated by the Chief Justice. Subsection 1803(e)(1), as added by Sec. 106(f)(1) of the USA PATRIOT Improvement and Reauthorization Act of 2005, P.L. 109-177, creates a petition review pool of FISC judges to address petitions filed under § 501(f) of FISA, 50 U.S.C. § 1861(f), to challenge production orders or related nondisclosure orders.

[3685] The Fourth Amendment to the United States Constitution states:
The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

[3686] Katz v. United States, 389 U.S. 347, 353 (1967).

[3687] *Id.*, at 359, n. 23.

[3688] United States v. United States District Court, 407 U.S. 297, 313-14 (1972).

> *requiring sensitivity both to the Government's right to protect itself from unlawful subversion and attack and to the citizen's right to be secure in his privacy against unreasonable Government intrusion.*[3689]

The Court held that, in the case of intelligence gathering involving domestic security surveillance, prior judicial approval was required to satisfy the Fourth Amendment.[3690] Justice Powell emphasized that the case before it "require[d] no judgment on the scope of the President's surveillance power with respect to the activities of foreign powers, within or without the country."[3691] The Court expressed no opinion as to "the issues which may be involved with respect to activities of foreign powers or their agents."[3692] However, the guidance which the Court provided in Keith with respect to national security surveillance in a domestic context to some degree presaged the approach Congress was to take in foreign intelligence surveillance. The *Keith* Court observed in part:

> *...We recognize that domestic surveillance may involve different policy and practical considerations from the surveillance of "ordinary crime." The gathering of security intelligence is often long range and involves the interrelation of various sources and types of information. The exact targets of such surveillance may be more difficult to identify than in surveillance operations against many types of crime specified in Title III [of the Omnibus Crime Control and Safe Streets Act, 18 U.S.C. § 2510 et seq.]. Often, too, the emphasis of domestic intelligence gathering is on the prevention of unlawful activity or the enhancement of the Government's preparedness for some possible future crisis or emergency. Thus, the focus of domestic surveillance may be less precise than that directed against more conventional types of*

[3689] 407 U.S. at 299.

[3690] *Id.*, at 391-321. Justice Powell also observed that,

> National security cases ... often reflect a convergence of First and Fourth Amendment values not present in cases of "ordinary" crime. Though the investigative duty of the executive may be stronger in such cases, so also is there greater jeopardy to constitutionally protected speech. "Historically the struggle for freedom of speech and press in England was bound up with the issue of the scope of the search and seizure power," Marcus v. Search Warrant, 367 U.S. 717, 724 (1961).... Fourth Amendment protections become the more necessary when the targets of official surveillance may be those suspected of unorthodoxy in their political beliefs. The danger to political dissent is acute where the Government attempts to act under so vague a concept as the power to protect "domestic security." ....

[3691] *Id.*, at 308.

[3692] *Id.*, at 321-22.

> *crimes. Given these potential distinctions between Title III criminal surveillances and those involving domestic security, Congress may wish to consider protective standards for the latter which differ from those already prescribed for specified crimes in Title III. Different standards may be compatible with the Fourth Amendment if they are reasonable both in relation to the legitimate need of Government for intelligence information and the protected rights of our citizens. For the warrant application may vary according to the governmental interest to be enforced and the nature of citizen rights deserving protection.... It may be that Congress, for example, would judge that the application and affidavit showing probable cause need not follow the exact requirements of § 2518 but should allege other circumstances more appropriate to domestic security cases; that the request for prior court authorization could, in sensitive cases, be made to any member of a specially designated court...; and that the time and reporting requirements need not be so strict as those in § 2518. The above paragraph does not, of course, attempt to guide the congressional judgment but rather to delineate the present scope of our own opinion. We do not attempt to detail the precise standards for domestic security warrants any more than our decision in Katz sought to set the refined requirements for the specified criminal surveillances which now constitute Title III. We do hold, however, that prior judicial approval is required for the type of domestic surveillance involved in this case and that such approval may be made in accordance with such reasonable standards as the Congress may prescribe.*[3693]

Court of appeals decisions following *Keith* met more squarely the issue of warrantless electronic surveillance in the context of foreign intelligence gathering. In *United States v. Brown*, 484 F.2d 418 (5th Cir. 1973), *cert. denied*, 415 U.S. 960 (1974), the Fifth Circuit upheld the legality of a warrantless wiretap authorized by the Attorney General for foreign intelligence purposes where the conversation of Brown, an American citizen, was incidentally overheard. The Third Circuit in *United States v. Butenko*, 494 F.2d 593 (3rd Cir. 1974), *cert. denied sub nom*, *Ivanov v. United States*, 419 U.S. 881 (1974), concluded that warrantless electronic surveillance was lawful, violating neither Section 605 of the Communications Act nor the Fourth Amendment, if its primary purpose was to gather foreign intelligence information. In its plurality decision in *Zweibon v. Mitchell*, 516 F.2d 594, 613-14 (D.C. Cir. 1975), *cert. denied*, 425 U.S. 944 (1976), the District of Columbia Circuit took a somewhat different view in a case involving a warrantless wiretap of a domestic organization that was not an agent of a foreign power or working in collaboration with a foreign power. Finding that

---

[3693] 407 U.S. at 323-24.

a warrant was required in such circumstances, the plurality also noted that "an analysis of the policies implicated by foreign security surveillance indicates that, absent exigent circumstances, all warrantless electronic surveillance is unreasonable and therefore unconstitutional."

With the passage of the Foreign Intelligence Surveillance Act (FISA), P.L. 95511, Title I, October 25, 1978, 92 Stat. 1796, codified as amended at 50 U.S.C. § 1801 et seq., Congress sought to strike a delicate balance between these interests when the gathering of foreign intelligence involved the use of electronic surveillance.[3694] Collection of foreign intelligence information through electronic surveillance is now governed by FISA and E.O. 12333.[3695] This report will examine the provisions of FISA which deal with electronic surveillance in the foreign intelligence context, as well as those applicable to physical searches, the use of pen registers and trap and trace devices under FISA, and access to business records and other tangible things for foreign intelligence purposes. As the provisions of E.O. 12333 to some extent set the broader context within which FISA operates, we will briefly examine its pertinent provisions first.

Executive Order 12333

Executive Order 12333, 46 Fed. Reg. 59,941 (December 4, 1981), as amended,[3696] 50 U.S.C. § 401 note, deals with "United States Intelligence Activities." Under Section 2.3 of E.O. 12333, the agencies within the Intelligence Community are to "collect, retain or disseminate information concerning United States persons only in accordance with procedures established by the head of the agency concerned and approved by the Attorney General, consistent with the authorities provided by Part 1 of this Order...." Among the types of information that can be collected, retained or disseminated under this section are:

(a) Information that is publicly available or collected with the consent of the person concerned;

[3694] For an examination of the legislative history of P.L. 95-511, see S.Rept. 95-604, Senate Committee on the Judiciary, Parts I and II (Nov. 15, 22, 1977); S.Rept. 95-701, Senate Select Committee on Intelligence (March 14, 1978); H.Rept. 95-1283, House Permanent Select Committee on Intelligence (June 8, 1978); H. Conf. Rept. 95-1720 (Oct. 5, 1978); Senate Reports and House Conference Report are reprinted in 1978 U.S. Code Cong. & Admin. News 3904.

[3695] Physical searches for foreign intelligence information are governed by 50 U.S.C. § 1821 et seq., while the use of pen registers and trap and trace devices in connection with foreign intelligence investigations is addressed in 50 U.S.C. § 1841 et seq. Access to certain business records and other tangible things for foreign intelligence or international terrorism investigative purposes is covered by 50 U.S.C. § 1861 et seq.

[3696] E.O. 12333 was amended by E.O. 13284, 68 Fed. Reg. 4,075 (Jan. 23, 2003), entitled "Amendment of Executive Orders, and Other Actions, in Connection with the Establishment of the Department of Homeland Security" ; and E.O. 13355, 69 Fed. Reg. 53,593 (Aug. 27, 2004), entitled "Strengthened Management of the Intelligence Community".

(b) Information constituting foreign intelligence or counterintelligence, including such information concerning corporations or other commercial organizations. Collection within the United States of foreign intelligence not otherwise obtainable shall be undertaken by the FBI or, when significant foreign intelligence is sought, by other authorized agencies of the Intelligence Community, provided that no foreign intelligence collection by such agencies may be undertaken for the purpose of acquiring information concerning the domestic activities of United States persons;
(c) Information obtained in the course of a lawful foreign intelligence, counterintelligence, international narcotics or international terrorism investigation;
(d) Information needed to protect the safety of any persons or organizations, including those who are targets, victims or hostages of international terrorist organizations;
(e) Information needed to protect foreign intelligence or counterintelligence sources or methods from unauthorized disclosure. Collection within the United States shall be undertaken by the FBI except that other agencies of the Intelligence Community may also collect such information concerning present or former employees, present or former intelligence agency contractors or their present or former employees, or applicants for any such employment or contracting;
(f) Information concerning persons who are reasonably believed to be potential sources or contacts for the purpose of determining their suitability or credibility;
(g) Information arising out of a lawful personnel, physical or communications security investigation;
(h) ...
(i) Incidentally obtained information that may indicate involvement in activities that may violate federal, state, local or foreign laws; and
(j) Information necessary for administrative purposes.

In addition, agencies within the Intelligence Community may disseminate information, other than information derived from signals intelligence, to each appropriate agency within the Intelligence Community for purposes of allowing the recipient agency to determine whether the information is relevant to its responsibilities and can be retained by it.

In discussing collections techniques, Section 2.4 of E.O. 12333 indicates that agencies within the Intelligence Community are to use

> *the least intrusive collection techniques feasible within the United States or directed against United States persons abroad. Agencies are not authorized to use such techniques as electronic surveillance, unconsented physical search, mail surveillance, physical surveillance, or monitoring devices unless they are in accordance with procedures established by the head of the agency*

concerned and approved by the Attorney General. Such procedures shall protect constitutional and other legal rights and limit use of such information to lawful governmental purposes....

Section 2.5 of the Executive Order 12333 states that:

The Attorney General hereby is delegated the power to approve the use for intelligence purposes, within the United States or against a United States person abroad, of any technique for which a warrant would be required if undertaken for law enforcement purposes, provided that such techniques shall not be undertaken unless the Attorney General has determined in each case that there is probable cause to believe that the technique is directed against a foreign power or an agent of a foreign power. Electronic surveillance, as defined in the Foreign Intelligence Surveillance Act of 1978 [section 1801 et seq. of this title], shall be conducted in accordance with that Act, as well as this Order.

The Foreign Intelligence Surveillance Act

The Statutory Framework

The Foreign Intelligence Surveillance Act (FISA), P.L. 95-511, Title I, October 25, 1978, 92 Stat. 1796, codified at 50 U.S.C. § 1801 et seq., as amended, provides a framework for the use of electronic surveillance[3697] and physical searches[3698] to

---

[3697] 50 U.S.C. § 1801(f)(2) defines "electronic surveillance" to mean:
(1) the acquisition by an electronic, mechanical, or other surveillance device of the contents of any wire or radio communication sent by or intended to be received by a particular, known United States person who is in the United States, if the contents are acquired by intentionally targeting that United States person, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes;
(2) the acquisition by an electronic, mechanical, or other surveillance device of the contents of any wire communication to or from a person in the United States, without the consent of any person thereto, if such acquisition occurs in the United States, but does not include the acquisition of those communications of computer trespassers that would be permissible under section 2511(2)(i) of Title 18;
(3) the intentional acquisition by an electronic, mechanical, or other surveillance device of the contents of any radio communication, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes, and if both the sender and all intended recipients are located within the United States; or
(4) the installation or use of an electronic, mechanical, or other surveillance device in the United States for monitoring to acquire information, other than from a wire or radio communication, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes. The italicized portion of Subsection 1801(f)(2) was added by Sec. 1003 of P.L. 107-56.

[3698] A "physical search" is defined under section 301(5) of FISA, 50 U.S.C. § 1821(5), to mean: any physical intrusion within the United States into premises or property (including examination of the interior of property by technical means) that is intended to result in seizure, reproduction, inspection, or alteration of information, material, or property, under circumstances in which a

obtain foreign intelligence information.[3699] It also provides a statutory structure for the installation and use of pen registers and trap and trace devices[3700] and for

---

person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes, but does not include (A) "electronic surveillance", as defined in section 1801(f) of this title [50 U.S.C.], or (B) the acquisition by the United States Government of foreign intelligence information from international or foreign communications, or foreign intelligence activities conducted in accordance with otherwise applicable Federal law involving a foreign electronic communications system, utilizing a means other than electronic surveillance as defined in [50 U.S.C. § 1801(f)].

[3699] "Foreign intelligence information" is defined in 50 U.S.C. § 1801(e) to mean:
(1) information that relates to, and if concerning a United States person is necessary to, the ability of the United States to protect against —
(A) actual or potential attack or other grave hostile acts of a foreign power or an agent of a foreign power;
(B) sabotage or international terrorism by a foreign power or an agent of a foreign power;
(C) clandestine intelligence activities by an intelligence service or network of a foreign power or by an agent of a foreign power; or
(2) information with respect to a foreign power or foreign territory that relates to, and if concerning a United States person is necessary to —
(A) the national defense or the security of the United States; or
(B) the conduct of the foreign affairs of the United States.

"International terrorism" is defined in 50 U.S.C. § 1801(c) to mean activities that:
(1) involve violent acts or acts dangerous to human life that are a violation of the criminal laws of the United States or of any State, or that would be a criminal violation if committed within the jurisdiction of the United States or any State;
(2) appear to be intended —
(A) to intimidate or coerce a civilian population;
(B) to influence the policy of a government by intimidation or coercion; or
(C) to affect the conduct of a government by assassination or kidnapping; and
(3) occur totally outside the United States, or transcend national boundaries in terms of the means by which they are accomplished, the persons they appear intended to coerce or intimidate, or the locale in which their perpetrators operate or seek asylum.

"Sabotage" is defined in 50 U.S.C. § 1801(d) to mean "activities that involve a violation of chapter 105 of Title 18, or that would involve such a violation if committed against the United States."

[3700] Pen registers and trap and trace devices are addressed in title IV of FISA, 50 U.S.C. § 1841 et seq. Subsection 401(2) of FISA, 50 U.S.C. § 1841(2) defines "pen register" and "trap and trace device" by cross-reference to 18 U.S.C. § 3127. Under 18 U.S.C. § 3127(3), "pen register" is defined to mean: a device or process which records or decodes dialing, routing, addressing, or signaling information transmitted by an instrument or facility from which a wire or electronic communication is transmitted, provided, however, that such information shall not include the contents of any communication, but such term does not include any device or process used by a provider or customer of a wire or electronic communication service for billing, or recording as an incident to billing, for communications services provided by such provider or any device or process used by a provider or customer of a wire communication service for cost accounting or other like purposes in the ordinary course of its business.

The term "trap and trace device" is defined under 18 U.S.C. § 3127(4) to mean: "a device or process which captures the incoming electronic or other impulses which identify the originating number or other dialing, routing, addressing, and signaling information reasonably likely to identify the source of a wire or electronic communication, provided, however, that such information shall not include the contents of any communication."

---

orders requiring production of tangible things for use in federal investigations to obtain foreign intelligence information not concerning a United States person or to protect against international terrorism or clandestine intelligence activities.[3701] Such an investigation of a United States person may not be conducted solely on the basis of activities protected by the First Amendment to the Constitution.[3702] This measure seeks to strike a balance between national security needs in the context of foreign intelligence gathering and privacy rights.

Creation of the U.S. Foreign Intelligence Surveillance Court and the U.S. Foreign Intelligence Court of Review.

FISA establishes two special courts, the U.S. Foreign Intelligence Surveillance Court (FISC) and the U.S. Foreign Intelligence Surveillance Court of Review (Court of Review), comprised of federal judges to address applications for court orders authorizing such electronic surveillance, physical searches, installation

---

[3701] 50 U.S.C. § 1861. In addition to the provisions dealing with electronic surveillance, physical searches and pen registers and trap and trace devices, FISA includes a section which, subject to subsection 1861(a)(3), permits the Director of the FBI or his designee (whose rank may be no lower than an Assistant Special Agent in Charge) to apply for an order requiring "production of any tangible things (including books, records, papers, documents, and other items) for an investigation to obtain foreign intelligence information not concerning a United States person or to protect against international terrorism or clandestine intelligence activities...." 50 U.S.C. § 1861(a)(1). Where such an investigation is of a United States person, it may not be conducted "solely upon the basis of activities protected by the first amendment to the Constitution." *Id.* Subsection 1861(a)(3) was added by P.L. 109-177. It provides that, in the case of an application for an order requiring the production of library circulation records, library patron lists, book sales records, book customer lists, firearms sales records, tax return records, educational records, or medical records containing information that would identify a person, the Director of the Federal Bureau of Investigation may delegate the authority to make such application to either the Deputy Director of the Federal Bureau of Investigation or the Executive Assistant Director for National Security (or any successor position). The Deputy Director or the Executive Assistant Director are prohibited from further delegation of such authority. Although this section is entitled "access to certain business records for foreign intelligence and international terrorism investigations," it encompasses substantially more than just business records. The current language of 50 U.S.C. §§ 1861 and 1862 (which deals with congressional oversight of all such requests for production of tangible things under § 1861) was added by the USA PATRIOT Act, and amended by P.L. 107-108. It replaced former 50 U.S.C. §§ 1861-1863, added by P.L. 105-272, title VI, § 602, 112 Stat. 2411 (Oct. 20, 1998), which defined various terms, provided for applications for orders for access to certain limited types of business records (relating to records in the possession of common carriers, physical storage facilities, public accommodation facilities, and vehicle rental facilities) for foreign intelligence and international terrorism investigations, and provided for congressional oversight of such records requests. For more information on title V of FISA, 50 U.S.C. §§ 1861-1862, see the section of this report entitled "Access to certain business records and other tangible things for foreign intelligence purposes," *infra*.

[3702] Section 402(a)(1) of FISA, 50 U.S.C. § 1842(a)(1); Section 501(a)(1) and (a)(2)(B) of FISA, 50 U.S.C. § 1861(a)(1) and (a)(2)(B).

and use of pen registers and trap and trace devices, and production of tangible things.[3703]

Under 50 U.S.C. § 1803(a),[3704] the Chief Justice of the United States must publicly designate eleven U.S. district court judges from seven of the United States judicial circuits, of whom no fewer than three must reside within 20 miles of the District of Columbia. These eleven judges constitute the U.S. Foreign Intelligence Surveillance Court (FISC), which has jurisdiction over applications for and orders approving electronic surveillance,[3705] physical searches,[3706] pen registers or trap and trace devices[3707] or orders for production of tangible things[3708] anywhere within the United States under FISA. If an application for electronic surveillance[3709] or a physical search[3710] under this Act is denied by one judge of this court, it may not then be considered by another judge on the court. If a judge denies such an application, he or she must immediately provide a written statement for the record of the reason(s) for this decision.[3711]

The Chief Justice also publicly designates the three U.S. district court or U.S. court of appeals judges who together make up the U.S. Foreign Intelligence Surveillance Court of Review (Court of Review).[3712] This court has jurisdiction to review any denial of an order under FISA.[3713] If the United States appeals an FISC denial of an application, the record from the FISC must be transmitted under seal to the Court of Review established.

[3703] For a more detailed discussion of the FISC and the Court of Review, see CRS Report RL33833, The U.S. Foreign Intelligence Surveillance Court and the U.S. Foreign Intelligence Surveillance Court of Review: An Overview, by Elizabeth B. Bazan.

[3704] When FISA was enacted in 1978, the FISC was made up of seven judges; Section 208 of P.L. 107-56 increased that number to eleven.

[3705] Cf., 50 U.S.C. § 1802(b).

[3706] 50 U.S.C. § 1822(c).

[3707] 50 U.S.C. § 1842(b) and (d).

[3708] 50 U.S.C. § 1861(b) and (c).

[3709] 50 U.S.C. § 1803(a).

[3710] 50 U.S.C. § 1822(c).

[3711] 50 U.S.C. §§ 1803(a), 1822(c).

[3712] 50 U.S.C. § 1803(b).

[3713] 50 U.S.C. §§ 1803(b); see also, 50 U.S.C. §§ 1822(d), 1861(f)(3).

If the Court of Review determines that an application was properly denied, again a written statement of the reason(s) for the court's decision must be provided for the record. The United States may petition for a writ of certiorari to the United States Supreme Court for review of that decision.[3714] All proceedings under FISA must be conducted expeditiously, and the record of all proceedings including applications and orders granted, must be maintained under security measures established by the Chief Justice in consultation with the Attorney General and the Director of National Intelligence.[3715]

Three FISC judges who reside within 20 miles of the District of Columbia, or, if all of such judges are unavailable, other judges of the FISC designated by the presiding judge of such court, comprise a petition review pool which has jurisdiction to review petitions filed pursuant to 50 U.S.C. § 1861(f)(1) challenging production orders and non-disclosure orders.[3716]

The judges of the FISC and the Court of Review serve for seven year terms and may not be redesignated.[3717] The FISC and the Court of Review may establish rules and procedures, and may take such actions, as are reasonably necessary to administer their responsibilities under FISA.[3718] The FISC has established the FOREIGN INTELLIGENCE SURVEILLANCE COURT RULES OF PROCEDURE, and PROCEDURES FOR REVIEW OF PETITIONS FILED PURSUANT TO SECTION 501(F) OF THE FOREIGN INTELLIGENCE SURVEILLANCE ACT OF 1978, AS AMENDED have also been adopted.[3719]

[3714] 50 U.S.C. § 1803(b); see also, 50 U.S.C. §§ 1822(d), 1861(f)(3).

[3715] 50 U.S.C. § 1803(c).

[3716] 50 U.S.C. § 1803(e), added by Subsection 106(f)(1) of P.L. 109-177. Under 50 U.S.C. § 1803(e)(2), the FISC was required to adopt and, consistent with the protection of national security, to publish procedures for the review of petitions filed pursuant to 50 U.S.C. § 1861(f)(1) by the panel established under Subsection 1803(e)(1). Subsection 1803(e)(2) further directed that such procedures provide that review of a petition shall be conducted in camera and also provide for the designation of an acting presiding judge. Under Rule 8(a) of the PROCEDURES FOR REVIEW OF PETITIONS FILED PURSUANT TO SECTION 501(F) OF THE FOREIGN INTELLIGENCE SURVEILLANCE ACT OF 1978, AS AMENDED, Clerk of the Court notifies the Presiding Judge of the FISC when a petition is received. If the Presiding Judge is unavailable, the local FISC judge, other than the Presiding Judge, who has the greatest seniority on the FISC is notified by the Clerk of the Court. If no local judge is available, the Clerk of the Court notifies the most senior FISC judge reasonably available. The judge notified is the Acting Presiding Judge for that case.

[3717] 50 U.S.C. § 1803(d).

[3718] 50 U.S.C. § 1803(f)(1), added by P.L. 109-177, Subsection 109(d).

[3719] Both are available at [http://www.uscourts.gov/rules/fisa.html].

Rules of procedure for the Court of Review have not been identified. Any such rules and procedures, and any modifications thereto, must be recorded and transmitted in an unclassified form (although they may include a classified annex) to all of the judges on the FISC; all of the judges on the Court of Review; the Chief Justice of the United States; the Committee on the Judiciary of the Senate and of the House of Representatives; and the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence.[3720]

Electronic surveillance under FISA.

Electronic surveillance under title I of FISA, 50 U.S.C. § 1801 et seq., is generally conducted under an FISC order, unless the surveillance fits within one of three statutory exceptions.[3721]

50 U.S.C. § 1802 — Electronic Surveillance of Certain Foreign Powers Without a Court Order.

The first of these exceptions is electronic surveillance of certain foreign powers without a court order upon Attorney General certification that specific criteria have been met. Under section 101(g) of FISA, 50 U.S.C. § 1801(g), as amended by Subsection 506(a)(5) of P.L. 109-177, the term "Attorney General" is defined to mean "the Attorney General of the United States (or Acting Attorney General), the Deputy Attorney General, or, upon the designation of the Attorney General, the Assistant Attorney General designated as the Assistant Attorney General for National Security under section 507A of title 28, United States Code."[3722]

[3720] 50 U.S.C. § 1803(f)(2), as added by P.L. 109-177, Subsection 109(d).

[3721] These three exceptions are: 50 U.S.C. § 1802 (electronic surveillance of three categories of foreign powers for up to one year without a court order upon Attorney General certification; the three categories, as defined in 50 U.S.C. §§ 1801(a)(1), (2), or (3), cover (1) a foreign government or any component thereof, whether or not recognized by the United States; (2) a faction of a foreign nation or nations, not substantially composed of United States persons; or (3) an entity that is openly acknowledged by a foreign government or governments to be directed and controlled by such foreign government or governments); 50 U.S.C. § 1805(f) (emergency electronic surveillance upon Attorney General certification for up to 72 hours while an FISC order is being sought); and 50 U.S.C. § 1811 (electronic surveillance for 15 calendar days after a congressional declaration of war).

[3722] Section 507A was added to title 28, U.S.C., by P.L. 109-177, Section 506(a)(1). It provides:
§ 507A. Assistant Attorney General for National Security
(a) Of the Assistant Attorneys General appointed under section 506, one shall serve, upon the designation of the President, as the Assistant Attorney General for National Security.
(b) The Assistant Attorney General for National Security shall —
(1) serve as the head of the National Security Division of the Department of Justice under section 509A of this title;
(2) serve as primary liaison to the Director of National Intelligence for the Department of Justice; and

(3) perform such other duties as the Attorney General may prescribe.

Under 50 U.S.C. § 1802, the President, through the Attorney General, may authorize electronic surveillance to acquire foreign intelligence information for up to one year without a court order if two criteria are satisfied. First, to utilize this authority, the Attorney General must certify in writing under oath that:
(A) the electronic surveillance is solely directed at —
(i) the acquisition of the contents of communications transmitted by means of communications used exclusively between or among foreign powers, as defined in [50 U.S.C. § 1801(a)(1), (2), or (3)]; or
(ii) the acquisition of technical intelligence, other than the spoken communications of individuals, from property or premises under the open and exclusive control of a foreign power, as defined in [50 U.S.C. § 1801(a)(1), (2) or (3)];
(B) there is no substantial likelihood that the surveillance will acquire the contents of any communication to which a United States person is a party; and
(C) the proposed minimization procedures with respect to such surveillance meet the definition of minimization procedures under [50 U.S.C. § 1801(h)];[3723]

[3723] Minimization procedures with respect to electronic surveillance are defined in 50 U.S.C. § 1801(h) to mean:
(1) specific procedures, which shall be adopted by the Attorney General, that are reasonably designed in light of the purpose and technique of the particular surveillance, to minimize the acquisition and retention, and prohibit the dissemination, of nonpublicly available information concerning unconsenting United States persons consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information;
(2) procedures that require that nonpublicly available information, which is not foreign intelligence information, as defined in subsection (e)(1) of this section, shall not be disseminated in a manner that identifies any United States person, without such person's consent, unless such person's identity is necessary to understand foreign intelligence information or assess its importance;
(3) notwithstanding paragraphs (1) and (2), procedures that allow for the retention and dissemination of information that is evidence of a crime which has been, is being, or is about to be committed and that is to be retained or disseminated for law enforcement purposes; and
(4) notwithstanding paragraphs (1), (2), and (3), with respect to any electronic surveillance approved pursuant to section 1802(a) of this title, procedures that require that no contents of any communication to which a United States person is a party shall be disclosed, disseminated, or used for any purpose or retained for longer than 72 hours unless a court order under section 1805 of this title is obtained or unless the Attorney General determines that the information indicates a threat of death or serious bodily harm to any person.

Sec. 314(a)(1) of H.Rept. 107-328, the conference report on the Intelligence Authorization Act for Fiscal Year 2002 to accompany H.R. 2883, amended 50 U.S.C. § 1801(h)(4) to change to 72 hours what was previously a 24 hour period beyond which the contents of any communication to which a U.S. person is a party may not be retained absent a court order under 50 U.S.C. § 1805 or a finding by the Attorney General that the information indicates a threat of death or serious bodily injury. The conference version of H.R. 2883 received the approbation of both houses of Congress, and was forwarded to the President on December 18, 2001, for his signature. Signed by the President ten days later, it became P.L. 107-108.

"United States person" is defined in 50 U.S.C. § 1801(i) to mean a citizen of the United States, an alien lawfully admitted for permanent residence (as defined in section 1101(a)(20) of Title 8), an

unincorporated association a substantial number of members of which are citizens of the United States or aliens lawfully admitted for permanent residence, or a corporation which is incorporated in the United States, but does not include a corporation or an association which is a foreign power, as defined in subsection (a)(1), (2), or (3) of this section.

"Foreign power" is defined in 50 U.S.C. § 1801(a) to mean:
(1) a foreign government or any component thereof, whether or not recognized by the United States;
(2) a faction of a foreign nation or nations, not substantially composed of United States persons;
(3) an entity that is openly acknowledged by a foreign government or governments to be directed and controlled by such foreign government or governments;
(4) a group engaged in international terrorism or activities in preparation therefor;
(5) a foreign-based political organization, not substantially composed of United States persons; or
(6) an entity that is directed and controlled by a foreign government or governments.

"Agent of a foreign power" is defined in 50 U.S.C. § 1801(b) to mean:
(1) any person other than a United States person, who —
(A) acts in the United States as an officer or employee of a foreign power, or as a member of a foreign power as defined in subsection (a)(4) of this section;
(B) acts for or on behalf of a foreign power which engages in clandestine intelligence activities in the United States contrary to the interests of the United States, when the circumstances of such person's presence in the United States indicate that such person may engage in such activities in the United States, or when such person knowingly aids or abets any person in the conduct of such activities or knowingly conspires with any person to engage in such activities; or
(C) engages in international terrorism or activities in preparation therefore [sic]; or
(2) any person who —
(A) knowingly engages in clandestine intelligence gathering activities for or on behalf of a foreign power, which activities involve or may involve a violation of the criminal statutes of the United States;
(B) pursuant to the direction of an intelligence service or network of a foreign power, knowingly engages in any other clandestine intelligence activities for or on behalf of such foreign power, which activities involve or are about to involve a violation of the criminal statutes of the United States;
(C) knowingly engages in sabotage or international terrorism, or activities that are in preparation therefor, or on behalf of a foreign power; or
(D) knowingly enters the United States under a false or fraudulent identity for or on behalf of a foreign power or, while in the United States, knowingly assumes a false or fraudulent identity for or on behalf of a foreign power; or
(E) knowingly aids or abets any person in the conduct of activities described in subparagraph (A), (B), or (C) or knowingly conspires with any person to engage in activities described in subparagraph (A), (B), or (C).
The italicized language in 50 U.S.C. § 1801(b)(1)(C) was added to the definition of "agent of a foreign power" in Section 6001 of the Intelligence Reform and Terrorism Prevention Act of 2004, P.L. 108-458. This provision would be "subject to the sunset provision in section 224 of the USA PATRIOT Act of 2001 (Public Law 107-56, 115 Stat. 295), including the exception provided in subsection (b) of such section 224." As amended by P.L. 109-177, Section 103, the sunset provision in Section 224 of P.L. 107-56, would take effect on December 31, 2009, except for any foreign intelligence investigation begun before that date or any criminal offense or potential offense that began or occurred before that date. For a more in depth discussion of this so-called "lone wolf" provision, see CRS Report RS22011, Intelligence Reform and Terrorism Prevention Act of 2004: "Lone Wolf" Amendment to the Foreign Intelligence Surveillance Act, by Elizabeth B. Bazan and Brian T. Yeh.

....

Second, in order for the President, through the Attorney General, to use this authority

> *... the Attorney General [must report] such minimization procedures and any changes thereto to the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence at least thirty days prior to their effective date, unless the Attorney General determines immediate action is required and notifies the committees immediately of such minimization and the reason for their becoming effective immediately.*

Such electronic surveillance must be conducted only in accordance with the Attorney General's certification and minimization procedures adopted by him. A copy of his certification must be transmitted by the Attorney General to the FISC. This certification remains under seal unless an application for a court order for surveillance authority is made under 50 U.S.C. §§ 1801(h)(4) and 1804,[3724] or the certification is necessary to determine the legality of the surveillance under 50 U.S.C. § 1806(f).[3725]

Several other provisions of Intelligence Reform and Terrorism Prevention Act also impacted FISA. Section 1011 of the measure amended Title I of the National Security Act of 1947, 50 U.S.C. § 402 et seq., to strike the previous Sections 102 through 104 of the Act 50 U.S.C. §§ 403, 403-1, 403-3, and 403-4, and insert new Sections 102 through 104A. The new Section 102 created the position of Director of National Intelligence (DNI). Section 102A outlined authorities and responsibilities of the position. Under the new Section 102A(f)(6) of the National Security Act, the DNI was given responsibility "to establish requirements and priorities for foreign intelligence information to be collected under [FISA], and provide assistance to the Attorney General to ensure that information derived from electronic surveillance or physical searches under that act is disseminated so that it may be used efficiently and effectively for foreign intelligence purposes, except that the Director shall have no authority to direct, manage, or undertake electronic surveillance or physical search operations pursuant to that act unless otherwise authorized by statute or Executive order." New Section 102A(f)(8) of the National Security Act, as enacted by P.L. 108-458, Section 1011, provided that, "Nothing in this act shall be construed as affecting the role of the Department of Justice or the Attorney General with respect to applications under the Foreign Intelligence Surveillance Act."

Section 1071(e) of P.L. 108-458, amended FISA to insert "Director of National Intelligence" in lieu of "Director of Central Intelligence" in each place in which it appeared.

Section 6002 created additional semiannual reporting requirements under FISA, which are codified at 50 U.S.C. § 1871. For a more detailed discussion of these reporting requirements, see fn. 165, infra, and accompanying text.

[3724] 50 U.S.C. § 1804 is discussed at pages 17-22 of this report, *infra*.

[3725] 50 U.S.C. § 1802(a)(2) and (a)(3). 50 U.S.C. § 1806 is discussed at fn. 68 and accompanying text, *infra*.

In connection with electronic surveillance so authorized, the Attorney General may direct a specified communications common carrier to furnish all information, facilities, or technical assistance needed for the electronic surveillance to be accomplished in a way that would protect its secrecy and minimize interference with the services provided by the carrier to its customers. 50 U.S.C. § 1802(a)(4)(A). In addition, the Attorney General may direct the specified communications common carrier to maintain any records, under security procedures approved by the Attorney General and the Director of National Intelligence, concerning the surveillance or the assistance provided which the carrier wishes to retain. 50 U.S.C. § 1802(a)(4)(B). Compensation at the prevailing rate must be made to the carrier by the Government for providing such aid.

If the President, by written authorization, empowers the Attorney General to approve applications to the FISC, an application for a court order may be made pursuant to 50 U.S.C. § 1802(b). A judge receiving such an application may grant an order under 50 U.S.C. § 1805 approving electronic surveillance of a foreign power or an agent of a foreign power to obtain foreign intelligence information. There is an exception to this, however. Under 50 U.S.C. § 1802(b), a court does not have jurisdiction to grant an order approving electronic surveillance directed solely as described in 50 U.S.C. § 1802(a)(1)(A) (that is, at acquisition of the contents of communications transmitted bymeans of communications used exclusively between or among foreign powers, or acquisition of technical intelligence, other than the spoken communications of individuals, from property or premises under the open and exclusive control of a foreign power), unless the surveillance may involve the acquisition of communications of a United States person. 50 U.S.C. § 1802(b).

50 U.S.C. § 1804 — Applications for FISC Orders Authorizing Electronic Surveillance.

An application for a court order authorizing electronic surveillance for foreign intelligence purposes may be sought under 50 U.S.C. § 1804. An application for such a court order must be made by a federal officer in writing on oath or affirmation to an FISC judge. The application must be approved by the Attorney General based upon his finding that the criteria and requirements set forth in 50 U.S.C. § 1801 et seq. have been met. Section 1804(a) sets out what must be included in the application:

(1) the identity of the Federal officer making the application;
(2) the authority conferred on the Attorney General by the President of the United States and the approval of the Attorney General to make the application;

(3) the identity, if known, or a description of the specific target of the electronic surveillance;[3726]
(4) a statement of the facts and circumstances relied upon by the applicant to justify his belief that —
(A) the target of the electronic surveillance is a foreign power or an agent of a foreign power; and
(B) each of the facilities or places at which the electronic surveillance is directed is being used, or is about to be used, by a foreign power or an agent of a foreign power;
(5) a statement of the proposed minimization procedures;
(6) a detailed description of the nature of the information sought and the type of communications or activities to be subjected to the surveillance;
(7) a certification or certifications by the Assistant to the President for National Security Affairs or an executive branch official or officials designated by the President from among those executive officers employed in the area of national security or defense and appointed by the President with the advice and consent of the Senate[3727] —
(A) that the certifying official deems the information sought to be foreign intelligence information;
(B) that a significant[3728] purpose of the surveillance is to obtain foreign intelligence information;

[3726] Section 108(a)(1) of P.L. 109-177, added the word "specific" to this subsection.

[3727] Under Section 1-103 of Executive Order 12139, 55 Fed. Reg. 30,311 (May 23, 1979),as amended by Section 1 of E.O. 13383, 70 Fed. Reg. 41,933 (July 15, 2005), the Secretary of State, the Secretary of Defense, the Director of National Intelligence, the Director of the FBI, the Deputy Secretary of State, the Deputy Secretary of Defense, the Director of the Central Intelligence Agency, and the Principal Deputy Director of National Intelligence were designated to make such certifications in support of applications to engage in electronic surveillance for foreign intelligence purposes. Neither these officials nor anyone acting in those capacities may make such certifications unless they are appointed by the President with the advice and consent of the Senate.

[3728] Section 218 of P.L. 107-56 amended the requisite certifications to be made by the Assistant to the President for National Security Affairs, or other designated official (see footnote 25). Heretofore, the certifying official had to certify, among other things, that the purpose of the electronic surveillance under FISA was to obtain foreign intelligence information. Under the new language, the certifying official must certify that a significant purpose of such electronic surveillance is to obtain foreign intelligence information. As interpreted by the Court of Review in In re Sealed Case, 310 F.3d 717, 728-38 (U.S. Foreign Intell. Surveil. Ct. Rev. 2002), this language appears to exclude FISA as a vehicle for authorizing electronic surveillance where the sole purpose of an investigation is criminal prosecution. The government must have a measurable foreign intelligence purpose other than criminal prosecution, even of foreign intelligence crimes, in order to satisfy the "significant purpose" standard. The Court's analysis appears to suggest that the primary purpose of the investigation under FISA may be criminal prosecution, so long as collection of foreign intelligence information is also a significant purpose of the electronic surveillance. This issue was not addressed directly in the opinion of the U.S. Foreign Intelligence Surveillance Court in In re All Matters Submitted to the Foreign Intelligence Surveillance Court, 218 F. Supp. 2d 611(U.S. Foreign Intell. Surveil. Ct. 2002). *Id.*, at 615 n.2. Both opinions are

addressed later in this report in the section entitled "Published Decisions of the FISC and the U.S. Foreign Intelligence Surveillance Court of Review." Past cases considering the constitutional sufficiency of FISA in the context of electronic surveillance have rejected Fourth Amendment challenges and due process challenges under the Fifth Amendment to the use of information gleaned from a FISA electronic surveillance in a subsequent criminal prosecution, because the purpose of the FISA electronic surveillance, both initially and throughout the surveillance, was to secure foreign intelligence information and not primarily oriented towards criminal investigation or prosecution, United States v. Megahey, 553 F. Supp. 1180, 1185-1193 (D.N.Y.), aff'd 729 F.2d 1444 (2d Cir. 1982); United States v. Ott, 827 F.2d 473, 475 (9th Cir. 1987); United States. v Badia, 827 F. 2d 1458, 1464 (11th Cir. 1987). See also, United States v. Johnson, 952 F.2d 565, 572 (1st Cir. 1991), rehearing and cert. denied, 506 U.S. 816 (1991) (holding that, although evidence obtained in FISA electronic surveillance may later be used in a criminal prosecution, criminal investigation may not be the primary purpose of the surveillance, and FISA may not be used as an end-run around the 4th Amendment); United States v. Pelton, 835 F.2d 1067, 1074-76 (4th Cir. 1987), cert. denied, 486 U.S.1010 (1987) (holding that electronic surveillance under FISA passed constitutional muster where primary purpose of surveillance, initially and throughout surveillance, was gathering of foreign intelligence information; also held that an otherwise valid FISA surveillance was not invalidated because later use of the fruits of the surveillance in criminal prosecution could be anticipated. In addition, the court rejected Pelton's challenge to FISA on the ground that allowing any electronic surveillance on less than the traditional probable cause standard — i.e. probable cause to believe the suspect has committed, is committing, or is about to commit a crime for which electronic surveillance is permitted, and that the interception will obtain communications concerning that offense — for issuance of a search warrant was violative of the 4th Amendment, finding FISA's provisions to be reasonable both in relation to the legitimate need of Government for foreign intelligence information and the protected rights of U.S. citizens); United States v. Rahman, 861 F. Supp. 247, 251 (S.D. N.Y. 1994). Cf., United States v. Bin Laden, 2001 U.S. Dist. LEXIS 15484 (S.D. N.Y., October 2, 2001); United States v. Bin Laden, 126 F. Supp. 264, 277-78 (S.D. N.Y. 2000) (adopting foreign intelligence exception to the warrant requirement for searches targeting foreign powers or agents of foreign powers abroad; noting that this "exception to the warrant requirement applies until and unless the primary purpose of the searches stops being foreign intelligence collection.... If foreign intelligence collection is merely a purpose and not the primary purpose of a search, the exception does not apply.") Cf., United States v. Sarkissian, 841 F.2d 959, 964-65 (9th Cir. 1988) (FISA court order authorizing electronic surveillance, which resulted in the discovery of plan to bomb the Honorary Turkish Consulate in Philadelphia, and of the fact that bomb components were being transported by plane from Los Angeles. The FBI identified the likely airlines, flight plans, anticipated time of arrival, and suspected courier. Shortly before the arrival of one of those flights, the investigation focused upon an individual anticipated to be a passenger on a particular flight meeting all of the previously identified criteria. An undercover police officer spotted a man matching the suspected courier's description on that flight. The luggage from that flight was sniffed by a trained dog and x-rayed. A warrantless search was conducted of a suitcase that had been shown by x-ray to contain an unassembled bomb. Defendants unsuccessfully moved to suppress the evidence from the FISA wiretap and the warrantless search. On appeal the court upheld the warrantless suitcase search as supported by exigent circumstances. Defendants contended that the FBI's primary purpose for the surveillance had shifted at the time of the wiretap from an intelligence investigation to a criminal investigation and that court approval for the wiretap therefore should have been sought under Title III of the Omnibus Crime Control and Safe Streets Act, 18 U.S.C. § 2510 et seq., rather than FISA. The court, while noting that in other cases it had stated that "the purpose of [electronic] surveillance" under FISA "must be to secure foreign intelligence information", "not to ferret out criminal activity," declined to decide the issue of whether the standard under FISA required "the purpose" or "the primary purpose" of the surveillance to be gathering of foreign intelligence information. The court stated, "Regardless of whether the test is one of purpose or primary purpose, our review of the government's FISA materials convinces us that it is met in this case.... We refuse to draw too fine a distinction between criminal and

(C) that such information cannot reasonably be obtained by normal investigative techniques;
(D) that designates the type of foreign intelligence information being sought according to the categories described in 1801(e) of this title; and
(E) including a statement of the basis for the certification that —
(i) the information sought is the type of foreign intelligence information designated; and

---

intelligence investigations. "International terrorism ," by definition, requires the investigation of activities that constitute crimes. 50 U.S.C. § 1806(f). That the government may later choose to prosecute is irrelevant. FISA contemplates prosecution based on evidence gathered through surveillance. ... "Surveillances ... need not stop once conclusive evidence of a crime is obtained, but instead may be extended longer where protective measures other than arrest and prosecution are more appropriate." S. Rep. No. 701, 95th Cong., 1st Sess. 11 ....[(1978)]....FISA is meant to take into account "the differences between ordinary criminal investigations to gather evidence of specific crimes and foreign counterintelligence investigations to uncover and monitor clandestine activities ..." *Id.* .... At no point was this case an ordinary criminal investigation."). Cf., United States v. Falvey, 540 F. Supp. 1306 (E.D.N.Y. 1982) (distinguishing United States v. Truong Dinh Hung, 629 F.2d 908, 912-13 (4th Cir. 1980); and United States v. Butenko, 494 F.2d 593, 606 (3d Cir.) (en banc), cert. denied sub nom, Ivanov v. United States, 419 U.S. 881 (1974), which held that, while warrantless electronic surveillance for foreign intelligence purposes was permissible, when the purpose or primary purpose of the surveillance is to obtain evidence of criminal activity, evidence obtained by warrantless electronic surveillance is inadmissible at trial, 540 F. Supp. at 1313; on the theory that the evidence in the case before it was obtained pursuant to a warrant — a lawfully obtained court order under FISA, id. at 1314. The court noted that the "bottom line of Truong is that evidence derived from warrantless foreign intelligence searches will be admissible in a criminal proceeding only so long as the primary purpose of the surveillance is to obtain foreign intelligence information." *Id.* at 1313-14. After noting that Congress, in enacting FISA, "expected that evidence derived from FISA surveillances could then be used in a criminal proceeding," the court concluded that "it was proper for the FISA judge to issue the order in this case because of the on-going nature of the foreign intelligence investigation.... The fact that evidence of criminal activity was thereafter uncovered during the investigation does not render the evidence inadmissible. There is no question in [the court's] mind that the purpose of the surveillance, pursuant to the order, was the acquisition of foreign intelligence information. Accordingly, [the court found] that the FISA procedures on their face satisfy the Fourth Amendment warrant requirement, and that FISA was properly implemented in this case." *Id.* at 1314.). It is worthy of note that none of these decisions were handed down by the U.S. Foreign Intelligence Surveillance Court or the U.S. Foreign Intelligence Surveillance Court of Review. For a discussion of the recent decisions of those two courts regarding the Attorney General's 2002 minimization procedures, please see the discussion in the portion of this report regarding "Recent Decisions of the FISC and the U.S. Foreign Intelligence Surveillance Court of Review," infra. Nor do these decisions of the U.S. district courts and U.S. courts of appeal reflect recent legislative amendments to the FISA statute. However, the FISC, in its decision, did not address potential Fourth Amendment implications, and the U.S. Foreign Intelligence Court of Review, in its decision, appears to imply that some Fourth Amendment issues in the FISA context may be non-justiciable. Alternatively, the language in the Court of Review opinion might mean that the issue has not yet been considered by the courts. Using a balancing test it derived from Keith between foreign intelligence crimes and ordinary crimes, the Court of Review found surveillances under FISA, as amended by the USA PATRIOT Act, to be reasonable and therefore constitutional, while at the same time acknowledging that the constitutional question presented by the case before it — "whether Congress' disapproval of the primary purpose test is consistent with the Fourth Amendment — has no definitive jurisprudential answer." Court of Review op., 301 F.3d at 746.

(ii) such information cannot reasonably be obtained by normal investigative techniques;
(8) a statement of the means by which the surveillance will be effected and a statement whether physical entry is required to effect the surveillance;
(9) a statement of the facts concerning all previous applications that have been made to any judge under this subchapter involving any of the persons, facilities, or places specified in the application, and the action taken on each previous application;
(10) a statement of the period of time for which the electronic surveillance is required to be maintained, and if the nature of the intelligence gathering is such that the approval of the use of electronic surveillance under this subchapter should not automatically terminate when the described type of information has first been obtained, a description of facts supporting the belief that additional information of the same type will be obtained thereafter; and
(11) whenever more that one electronic, mechanical or other surveillance device is to be used with respect to a particular proposed electronic surveillance, the coverage of the devices involved and what minimization procedures apply to information acquired by each device. The application for a court order need not contain the information required in Subsections 1804(6), (7)(E), (8), and (11) above if the target of the electronic surveillance is a foreign power and each of the facilities or places at which surveillance is directed is owned, leased, or exclusively used by that foreign power. However, in those circumstances, the application must indicate whether physical entry is needed to effect the surveillance, and must also contain such information about the surveillance techniques and communications or other information regarding United States persons likely to be obtained as may be necessary to assess the proposed minimization procedures. 50 U.S.C. § 1804(b).

Where an application for electronic surveillance under 50 U.S.C. § 1804(a) involves a target described in 50 U.S.C. § 1801(b)(2),[3729] the Attorney General must personally review the application if requested to do so, in writing, by the Director of the Federal Bureau of Investigation, the Secretary of Defense, the Secretary of State, or the Director of National Intelligence.[3730] The authority to make such a request may not be delegated unless the official involved is disabled or otherwise unavailable.[3731] Each such official must make appropriate arrangements, in advance, to ensure that such a delegation of authority is clearly established in case of disability or other unavailability.[3732] If the Attorney General determines that an application should not be approved, he must give the official

---

[3729] For a list of those covered in 50 U.S.C. § 1801(b)(2), see fn. 44, supra.

[3730] 50 U.S.C. § 1804(e)(1)(A).

[3731] 50 U.S.C. § 1804(e)(1)(B).

[3732] 50 U.S.C. § 1804(e)(1)(C).

requesting the Attorney General's personal review of the application written notice of the determination. Except in cases where the Attorney General is disabled or otherwise unavailable, the responsibility for such a determination may not be delegated. The Attorney General must make advance plans to ensure that the delegation of such responsibility where the Attorney General is disabled or otherwise unavailable is clearly established.[3733] Notice of the Attorney General's determination that an application should not be approved must indicate what modifications, if any, should be made in the application needed to make it meet with the Attorney General's approval.[3734] The official receiving the Attorney General's notice of modifications which would make the application acceptable must modify the application if the official deems such modifications warranted. Except in cases of disability or other unavailability, the responsibility to supervise any such modifications is also a non-delegable responsibility.[3735]

50 U.S.C. § 1805 — Issuance of FISC Order Authorizing Electronic Surveillance.

If a judge makes the findings required under 50 U.S.C. § 1805(a), then he or she must enter an ex parte order as requested or as modified approving the electronic surveillance. The necessary findings must include that:

(1) the President has authorized the Attorney General to approve applications for electronic surveillance for foreign intelligence information;
(2) the application has been made by a Federal officer and approved by the Attorney General;
(3) on the basis of the facts submitted by the applicant there is probable cause to believe that —
(A) the target of the electronic surveillance is a foreign power or an agent of a foreign power: Provided, That no United States person may be considered a foreign power or an agent of a foreign power solely upon the basis of activities protected by the first amendment to the Constitution of the United States; and
(B) each of the facilities or places at which the electronic surveillance is directed is being used, or is about to be used, by a foreign power or an agent of a foreign power;
(4) the proposed minimization procedures meet the definition of minimization procedures under section 1801(h) of this title; and
(5) the application which has been filed contains all statements and certifications required by section 1804 of this title and, if the target is a United States person, the certification or certifications are not clearly erroneous on the basis of the statement made under section 1804(a)(7)(E) of this title and any other information furnished under section 1804(d) of this title. In making a probable

cause determination under 50 U.S.C. § 1805(a)(3), the judge may consider past activities of the target as well as facts and circumstances relating to the target's current or future activities.[3736]

Section 1805(c) sets out particular specifications and directions which must be included in an order approving a FISA electronic surveillance:

(1) Specifications. — An order approving an electronic surveillance under this section shall specify
(A) the identity, if known, or a description of the specific target of the electronic surveillance identified or described in the application pursuant to [50 U.S.C. § 1804(a)(3)];
(B) the nature and location of each of the facilities or places at which the electronic surveillance will be directed, if known;[3737]
(C) the type of information sought to be acquired and the type of communications or activities to be subjected to the surveillance;
(D) the means by which the electronic surveillance will be effected and whether physical entry will be used to effect the surveillance;
(E) the period of time during which the electronic surveillance is approved; and
(F) whenever more than one electronic, mechanical, or other surveillance device is to be used under the order, the authorized coverage of the device involved and what minimization procedures shall apply to information subject to acquisition by each device.
(2) Directions. — An order approving an electronic surveillance under this section shall direct
(A) that the minimization procedures be followed;
(B) that, upon the request of the applicant a specified communication or other common carrier, landlord, custodian, or other specified person, *or in circumstances where the Court finds, based upon specific facts provided in the application, that the actions of the target of the application may have the effect of thwarting the identification of a specified person*, such other persons, furnish the applicant forthwith all information, facilities, or technical assistance necessary to accomplish the electronic surveillance in such a manner as will protect its secrecy and produce a minimum of interference with the services that such carrier, landlord, custodian, or other person is providing that target of electronic surveillance;
(C) that such carrier, landlord, custodian, or other person maintain under security procedures approved by the Attorney General and the Director of

[3736] 50 U.S.C. § 1805(b).

[3737] Section 314(a)(2)(A) of H.Rept. 107-328, the conference report on the Intelligence Authorization Act for Fiscal Year 2002, to accompany H.R. 2883, added "if known" to the end of Section 1805(c)(1)(B) before the semi-colon. The conference version of the bill passed both the House and the Senate, and was signed by the President on December 28, 2001, as P.L. 107-108.

National Intelligence any records concerning the surveillance or the aid furnished that such person wishes to retain; and
(D) that the applicant compensate, at the prevailing rate, such carrier, landlord, custodian, or other person for furnishing such aid.[3738]
(3) Special directions for certain orders
An order approving an electronic surveillance under this section in circumstances where the nature and location of each of the facilities or places at which the surveillance will be directed is unknown shall direct the applicant to provide notice to the court within ten days after the date on which surveillance begins to be directed at any new facility or place, unless the court finds good cause to justify a longer period of up to 60 days, of —
(A) the nature and location of each new facility or place at which the electronic surveillance is directed;
(B) the facts and circumstances relied upon by the applicant to justify the applicant's belief that each new facility or place at which the electronic surveillance is directed is or was being used, or is about to be used, by the target of the surveillance;
(C) a statement of any proposed minimization procedures that differ from those contained in the original application or order, that may be necessitated by a change in the facility or place at which the electronic surveillance is directed; and
(D) the total number of electronic surveillances that have been or are being conducted under the authority of the order.

The italicized portions of Section 1805(c)(1)(B) and Section 1805(c)(2)(B) reflect changes, added by P.L. 107-108 and P.L. 107-56 respectively, intended to provide authority for "multipoint" or "roving" electronic surveillance where the actions of the target of the surveillance, such as switching phones and locations repeatedly, may thwart that surveillance. The Conference Report on H.R. 2338, the Intelligence Authorization Act for Fiscal Year 2002 (which became P.L. 107-108), H.Rept. 107-328, at page 24, provided the following explanation of these changes:

> *The multipoint wiretap amendment to FISA in the USA PATRIOT Act (section 206) allows the FISA court to issue generic orders of assistance to any communications provider or similar person, instead of to a particular communications provider. This change*

[3738] 50 U.S.C. § 1805(c). The italics in 50 U.S.C. § 1805(c)(2)(B), above, indicate new language added by Section 206 of P.L. 107-56. Where circumstances suggest that a target's actions may prevent identification of a specified person, this new language appears to permit the Foreign Intelligence Surveillance Court to require a service provider, other common carrier, landlord, custodian or other persons to provide necessary assistance to the applicant for a FISA order for electronic surveillance. The heading to Section 6 of P.L. 107-56 refers to this as "roving surveillance authority." H.Rept. 107-328 calls this a "multipoint" wiretap. Intelligence Authorization Act for Fiscal Year 2002, 107th Cong., 1st Sess., H.Rept. 107-328, Conference Report, at 24 (Dec. 6, 2001).

permits the Government to implement new surveillance immediately if the FISA target changes providers in an effort to thwart surveillance. The amendment was directed at persons who, for example, attempt to defeat surveillance by changing wireless telephone providers or using pay phones.

Currently, FISA requires the court to "specify" the "nature and location of each of the facilities or places at which the electronic surveillance will be directed." 50 U.S.C. § 105(c)(1)(B). Obviously, in certain situations under current law, such a specification is limited. For example, a wireless phone has no fixed location and electronic mail may be accessed from any number of locations.

To avoid any ambiguity and clarify Congress' intent, the conferees agreed to a provision which adds the phrase, "if known," to the end of 50 U.S.C. § 1805(c)(1)(B). The "if known" language, which follows the model of 50 U.S.C. § 1805(c)(1)(A), is designed to avoid any uncertainty about the kind of specification required in a multipoint wiretap case, where the facility to be monitored is typically not known in advance.

The underlined portions of subsection 1805(c) reflect changes made by P.L. 109-177, Section 108.

If the target of the electronic surveillance is a foreign power and each of the facilities or places at which the surveillance is directed is owned, leased, or exclusively used by that foreign power, the order does not need to include the information covered by Section 1805(c)(1)(C), (D), and (F), but must generally describe the information sought, the communications or activities subject to surveillance, the type of electronic surveillance used, and whether physical entry is needed. 50 U.S.C. § 1805(d).

Such an order may approve an electronic surveillance for the period of time necessary to achieve its purpose or for ninety days, whichever is less, unless the order is targeted against a foreign power as defined in 50 U.S.C. § 1801(a)(1), (2), or (3),[3739] or against an agent of a foreign power who is not a United States person. In the case of an order targeted against a such a foreign power, the order shall approve an electronic surveillance for the period specified in the order or for one year, whichever is less. An order under FISA for surveillance targeted against

---

[3739] A "foreign power" as defined in 50 U.S.C. § 1801(a)(1), (2), or (3) includes "a foreign government or any component thereof, whether or not recognized by the United States;" "a faction of a foreign nation or nations, not substantially composed of United States persons;" or "an entity that is openly acknowledged by a foreign government or governments to be directed and controlled by such foreign government or governments."

an agent of a foreign power who is not a U.S. person may be for the period specified in the order or 120 days, whichever is less.[3740]

Generally, upon application for an extension, a court may grant an extension of an order on the same basis as an original order. An extension must include new findings made in the same manner as that required for the original order. However, an extension of an order for a surveillance targeted against a foreign power as defined in 50 U.S.C. § 1801(a)(5) (a foreign-based political organization, not substantially composed of United States persons) or (6) (an entity that is directed and controlled by a foreign government or governments), or against a foreign power as defined in 50 U.S.C. § 1801(a)(4) (a group engaged in international terrorism or activities in preparation therefor) that is not a United States person, may be for a period of up to one year if the judge finds probable cause to believe that no communication of any individual United States person will be acquired during the period involved. In addition, an extension of an order for surveillance targeted at an agent of a foreign power who is not a U.S. person may be extended to a period not exceeding one year.[3741]

Certifications made by the Attorney General pursuant to 50 U.S.C. § 1802(a) and applications made and orders granted for electronic surveillance under title I of FISA, must be retained for a period of at least ten years from the date of the certification or application.[3742]

Emergency Authorization of Electronic Surveillance upon Attorney General Certification while an FISC Order Is Pursued.

Emergency situations are addressed in 50 U.S.C. § 1805(f). Notwithstanding other provisions of this subchapter, if the Attorney General reasonably determines that an emergency situation exists with respect to the employment of electronic surveillance to obtain foreign intelligence information before an order authorizing such surveillance can with due diligence be obtained and that the factual basis for issuance of an order under this subchapter to approve such surveillance exists, he may authorize electronic surveillance if specified steps are taken. At the time of the Attorney General's emergency authorization, he or his designee must inform an FISC judge that the decision to employ emergency

---

[3740] 50 U.S.C. § 1805(e)(1)(B), as added by Section 207 of P.L. 107-56, and amended by Section 105 of P.L. 109-177.

[3741] 50 U.S.C. § 1805(e)(2)(A) and (B). Section 207 of P.L. 107-56 appears to have included a mistaken citation here, referring to 50 U.S.C. § 1805(d)(2) instead of 50 U.S.C. § 1805(e)(2) (emphasis added). Section 314(c)(1) of P.L. 107-108 corrected the apparent error from P.L. 107-56, Section 207, so that the reference is now to 50 U.S.C. § 1805(e)(2). Subsection 105(e)(2)(B) of FISA, 50 U.S.C. § 1805(e)(2)(B), was amended by Section 105 of P.L. 109-177.

[3742] 50 U.S.C. § 1805(h).

electronic surveillance has been made. An application for a court order under Section 1804 must be made to that judge as soon as practicable, but not more than 72 hours after the Attorney General authorizes such surveillance. If the Attorney General authorizes emergency electronic surveillance, he must require compliance with the minimization procedures required for the issuance of a judicial order under this subchapter. Absent a judicial order approving the emergency electronic surveillance, the surveillance must terminate when the information sought is obtained, when the application for the order is denied, or after 72 hours from the time of the Attorney General's authorization, whichever is earliest.[3743] If no judicial order approving the surveillance is issued, the information garnered may not be received in evidence or otherwise disclosed in any court proceeding, or proceeding in or before any grand jury, department, office, agency, regulatory body, legislative committee, or other authority of the United States, a State, or political subdivision thereof. No information concerning any United States person acquired through such surveillance may be disclosed by any Federal officer or employee without the consent of that person, unless the Attorney General approves of such disclosure or use where the information indicates a threat of death or serious bodily harm to any person.[3744]

[3743] Section 314(a)(2)(B) of P.L. 107-108, the Intelligence Authorization Act for Fiscal Year 2002, H.Rept. 107-328, replaced 24 hours with 72 hours in each place that it appears in 50 U.S.C. § 1805(f).

[3744] Some of the provisions dealing with interception of wire, oral, or electronic communications in the context of criminal law investigations, 18 U.S.C. §§ 2510 et seq., may also be worthy of note. With certain exceptions, these provisions, among other things, prohibit any person from engaging in intentional interception; attempted interception; or procuring others to intercept or endeavor to intercept wire, oral, or electronic communication; or intentional disclosure; attempting to disclose; using or endeavoring to use the contents of a wire, oral or electronic communication, knowing or having reason to know that the information was obtained by such an unlawful interception. 18 U.S.C. § 2511. "Person" is defined in 18 U.S.C. § 2510(6) to include "any employee, or agent of the United States or any State or political subdivision thereof, and any individual, partnership, association, joint stock company, trust, or corporation." Among the exceptions to Section 2511 are two of particular note: (2)(e) Notwithstanding any other provision of this title or section 705 or 706 of the Communications Act of 1934, it shall not be unlawful for an officer, employee, or agent of the United States in the normal course of his official duty to conduct electronic surveillance, as defined in section 101 of the Foreign Intelligence Surveillance Act of 1978, as authorized by that Act.

(2)(f) Nothing contained in this chapter or chapter 121, or section 705 of the Communications Act of 1934, shall be deemed to affect the acquisition by the United States Government of foreign intelligence information from international or foreign communications, or foreign intelligence activities conducted in accordance with otherwise applicable Federal law involving a foreign electronic communications system, utilizing a means other than electronic surveillance as defined in section 101 of the Foreign Intelligence Surveillance Act of 1978, and procedures in this chapter and the Foreign Intelligence Surveillance Act of 1978 shall be the exclusive means by which electronic surveillance, as defined in section 101 of such Act, and the interception of domestic wire and oral communications may be conducted.

Among other things, Section 2512 prohibits any person from intentionally manufacturing, assembling, possessing, or selling any electronic, mechanical, or other device, knowing that its

design renders it primarily useful for the purpose of the surreptitious interception of wire, oral, or electronic communications and that such device or any component thereof has been or will be sent through the mail or transported in interstate or foreign commerce. It also prohibits any person from intentionally sending such a device through the mail or sending or carrying such a device in interstate or foreign commerce, knowing that such surreptitious interception is its primary purpose. Similarly, intentionally advertising such a device, knowing or having reason to know that the advertisement will be sent through the mail or transported in interstate or foreign commerce is foreclosed. Again an exception to these general prohibitions in Section 2512 may be of particular interest:

(2) It shall not be unlawful under this section for —
(a) ...
(b) an officer, agent, or employee of, or a person under contract with, the United States ... in the normal course of the activities of the United States ..., to send through the mail, send or carry in interstate or foreign commerce, or manufacture, assemble, possess, or sell any electronic, mechanical, or other device knowing or having reason to know that the design of such device renders it primarily useful for the purpose of the surreptitious interception of wire, oral, or electronic communications.

In addition, Section 107 of the Electronic Communications Privacy Act of 1986, P.L. 99-508, 100 Stat. 1858, October 21, 1986, [which enacted 18 U.S.C. §§ 1367, 2621, 2701 to 2711, 3117, and 3121 to 3126; and amended 18 U.S.C. §§ 2232, 2511-2513, and 25162520], provided generally that, "[n]othing in this act or the amendments made by this act constitutes authority for the conduct of any intelligence activity." It also stated:

(b) Certain Activities Under Procedures Approved by the Attorney General. — Nothing in chapter 119 [interception of wire, oral or electronic communications] or chapter 121 [stored wire and electronic communications and transactional records access] of title 18, United States Code, shall affect the conduct, by officers or employees of the United States Government in accordance with other applicable Federal law, under procedures approved by the Attorney General of activities intended to —
(1) intercept encrypted or other official communications of United States executive branch entities or United States Government contractors for communications security purposes;
(2) intercept radio communications transmitted between or among foreign powers or agents of a foreign power as defined by the Foreign Intelligence Surveillance Act of 1978 [50 U.S.C. § 1801 et seq.]; or
(3) access an electronic communication system used exclusively by a foreign power or agent of a foreign power as defined by the Foreign Intelligence Surveillance Act of 1978 [50 U.S.C. § 1801 et seq.].

In addition, Chapter 121 of title 18 of the United States Code deals with stored wire and electronic communications and transactional records. Under 18 U.S.C. § 2701, intentionally accessing without authorization a facility through which an electronic communication service is provided, or intentionally exceeding an authorization to access such a facility and thereby obtaining, altering, or preventing authorized access to a wire or electronic communication while it is in electronic storage in such system is prohibited. Upon compliance with statutory requirements in 18 U.S.C. § 2709, the Director of the FBI or his designee in a position not lower than Deputy Assistant Director may seek access to telephone toll and transactional records for foreign counterintelligence purposes. The FBI may disseminate information and records obtained under this section only as provided in guidelines approved by the Attorney General for foreign intelligence collection and foreign counterintelligence investigations conducted by the FBI, and, "with respect to dissemination to an agency of the United States, only if such information is clearly relevant to the authorized responsibilities of such agency." 18 U.S.C. § 2709(d).

50 U.S.C. § 1805(g) — Authority for Electronic Surveillance for Testing of Electronic Equipment; Discovering Unauthorized Electronic Surveillance; or Training of Intelligence Personnel in Use of Electronic Equipment.

Notwithstanding any other provision of title I of FISA, under Section 1805(g), federal officers, employees, or agents are authorized in the normal course of their official duties to conduct electronic surveillance not targeted against the communications of any particular person or persons, under procedures approved by the Attorney General, solely to:

(1) test the capability of electronic equipment, if —
(A) it is not reasonable to obtain the consent of the persons incidentally subjected to the surveillance;
(B) the test is limited in extent and duration to that necessary to determine the capability of the equipment;
(C) the contents of any communication acquired are retained and used only for the purpose of determining the capability of the equipment, are disclosed only to test personnel, and are destroyed before or immediately upon completion of the test; and:
(D) Provided, That the test may exceed ninety days only with the prior approval of the Attorney General;
(2) determine the existence and capability of electronic surveillance equipment being used by persons not authorized to conduct electronic surveillance, if —
(A) it is not reasonable to obtain the consent of persons incidentally subjected to the surveillance;
(B) such electronic surveillance is limited in extent and duration to that necessary to determine the existence and capability of such equipment; and
(C) any information acquired by such surveillance is used only to enforce chapter 119 of Title 18, or section 605 of Title 47, or to protect information from unauthorized surveillance; or
(3) train intelligence personnel in the use of electronic surveillance equipment, if —
(A) it is not reasonable to —
(i) obtain the consent of the persons incidentally subjected to the surveillance;
(ii) train persons in the course of surveillances otherwise authorized by this subchapter; or
(iii) train persons in the use of such equipment without engaging in electronic surveillance;
(B) such electronic surveillance is limited in extent and duration to that necessary to train the personnel in the use of the equipment; and
(C) no contents of any communication acquired are retained or disseminated for any purpose, but are destroyed as soon as reasonably possible.

50 U.S.C. § 1805(i) — Limitation on Liability for Compliance with FISC Order Authorizing Electronic Surveillance or Physical Search.

Section 1805(i) bars any cause of action in any court against any provider of a wire or electronic communication service, landlord, custodian, or other person (including any officer, employee, agent, or other specified person thereof) that furnishes any information, facilities, or technical assistance in accordance with a court order or request for emergency assistance under FISA for electronic surveillance or a physical search.[3745]

50 U.S.C. § 1806 — Use of Information Obtained from FISA Electronic Surveillance.

The uses to which information gathered pursuant to electronic surveillance under FISA may be put are addressed under 50 U.S.C. § 1806.[3746]

[3745] Section 225 of P.L. 107-56 appeared to create a second subsection 1805(h), which precluded any cause of action in any court "against any provider of a wire or electronic communication service, landlord, custodian, or other person (including any officer, employee, agent, or other specified person thereof) that furnishes any information, facilities, or technical assistance in accordance with a court order or request for emergency assistance" under FISA. This immunity provision was included in 50 U.S.C. § 1805, and was denominated "Immunity for Compliance with FISA Wiretap" in Section 225 of the USA PATRIOT Act, both facts which might lead one to conclude that it applied only to electronic surveillance under FISA, but this does not appear to be the view of expressed in H.Rept. 107-328, the conference report accompanying H.R. 2883, which became P.L. 107-108. P.L. 107-108 redesignated 50 U.S.C. § 1805(h) as 50 U.S.C. § 1805(i). In H.Rept. 107-328, the conferees expressed the view that "the text of section 225 refers to court orders and requests for emergency assistance 'under this act,' which makes clear that it applies to physical searches (and pen-trap requests — for which there already exists an immunity provision, 50 U.S.C. § 1842(f) — and subpoenas) as well as electronic surveillance." *Id.* at 25. Section 314(a)(2)(C) of P.L. 107-108 changed subsection (h), which was added to 50 U.S.C. § 1805 by Section 225 of P.L. 107-56, to subsection (i). In addition, Section 314(a)(2)(D) of P.L. 107-108 added "for electronic surveillance or physical search" to the end of the newly designated 50 U.S.C. § 1805(i) before the final period.

[3746] The provisions of Section 1806 are as follows:

(a) Compliance with minimization procedures; privileged communications; lawful purposes

Information acquired from an electronic surveillance conducted pursuant to this subchapter concerning any United States person may be used and disclosed by Federal officers and employees without the consent of the United States person only in accordance with the minimization procedures required by this subchapter. No otherwise privileged communication obtained in accordance with or in violation of this subchapter shall lose its privileged character. No information acquired from an electronic surveillance pursuant to this subchapter may be used or disclosed by Federal officers or employees except for lawful purposes.

(b) Statement for disclosure

No information acquired pursuant to this subchapter shall be disclosed for law enforcement purposes unless such disclosure is accompanied by a statement that such information, or any information derived therefrom, may only be used in a criminal proceeding with the advance authorization of the Attorney General.

(c)

Notification by United States

Whenever the Government intends to enter into evidence or otherwise use or disclose in any trial, hearing, or other proceeding in or before any court, department, officer, agency, regulatory body, or other authority of the United States, against an aggrieved person, any information obtained or derived from an electronic surveillance of that aggrieved person pursuant to the authority of this subchapter, the Government shall, prior to the trial, hearing, or other proceeding or at a reasonable time prior to an effort to so disclose or so use that information or submit it in evidence, notify the aggrieved person and the court or other authority in which the information is to be disclosed or used that the Government intends to so disclose or so use such information.

(d) Notification by States or political subdivisions
Whenever any State or political subdivision thereof intends to enter into evidence or otherwise use or disclose in any trial, hearing, or other proceeding in or before any court, department, officer, agency, regulatory body, or other authority of a State or a political subdivision thereof, against an aggrieved person any information obtained or derived from an electronic surveillance of that aggrieved person pursuant to the authority of this subchapter, the State or political subdivision thereof shall notify the aggrieved person, the court or other authority in which the information is to be disclosed or used, and the Attorney General that the State or political subdivision thereof intends to so disclose or so use such information.

(e) Motion to suppress
Any person against whom evidence obtained or derived from an electronic surveillance to which he is an aggrieved person is to be, or has been, introduced or otherwise used or disclosed in any trial, hearing, or other proceeding in or before any court, department, officer, agency, regulatory body, or other authority of the United States, a State, or a political subdivision thereof, may move to suppress the evidence obtained or derived from such electronic surveillance on the grounds that —
(1) the information was unlawfully acquired; or
(2) the surveillance was not made in conformity with an order of authorization or approval. Such a motion shall be made before the trial, hearing, or other proceeding unless there was no opportunity to make such a motion or the person was not aware of the grounds of the motion.

(f) In camera and ex parte review by district court
Whenever a court or other authority is notified pursuant to subsection (c) or (d) of this section, or whenever a motion is made pursuant to subsection (e) of this section, or whenever any motion or request is made by an aggrieved person pursuant to any other statute or rule of the United States or any State before any court or other authority of the United States or any State to discover or obtain applications or orders or other materials relating to electronic surveillance or to discover, obtain, or suppress evidence or information obtained or derived from electronic surveillance under this chapter, the United States district court or, where the motion is made before another authority, the United States district court in the same district as the authority, shall, notwithstanding any other law, if the Attorney General files an affidavit under oath that disclosure or an adversary hearing would harm the national security of the United States, review in camera and ex parte the application, order, and such other materials relating to the surveillance as may be necessary to determine whether the surveillance of the aggrieved person was lawfully authorized and conducted. In making this determination, the court may disclose to the aggrieved person, under appropriate security procedures and protective orders, portions of the application, order, or other materials relating to the surveillance only where such disclosure is necessary to make an accurate determination of the legality of the surveillance.

(g) Suppression of evidence; denial of motion
If the United States district court pursuant to subsection (f) of this section determines that the surveillance was not lawfully authorized or conducted, it shall, in accordance with the requirements of law, suppress the evidence which was unlawfully obtained or derived from electronic surveillance of the aggrieved person or otherwise grant the motion of the aggrieved

person. If the court determines that the surveillance was lawfully authorized and conducted, it shall deny the motion of the aggrieved person except to the extent that due process requires discovery or disclosure.

(h) Finality of orders
Orders granting motions or requests under subsection (g) of this section, decisions under this section that electronic surveillance was not lawfully authorized or conducted, and orders of the United States district court requiring review or granting disclosure of applications, orders, or other materials relating to a surveillance shall be final orders and binding upon all courts of the United States and the several States except a United States court of appeals and the Supreme Court.

(i) Destruction of unintentionally acquired information
In circumstances involving the unintentional acquisition by an electronic, mechanical, or other surveillance device of the contents of any radio communication, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes, and if both the sender and all intended recipients are located within the United States, unless the Attorney General determines that the contents indicate a threat of death or serious bodily harm to any person.

(j) Notification of emergency employment of electronic surveillance; contents; postponement, suspension or elimination
If an emergency employment of electronic surveillance is authorized under section 1805(e) of this title and a subsequent order approving the surveillance is not obtained, the judge shall cause to be served on any United States person named in the application or on such other United States persons subject to electronic surveillance as the judge may determine in his discretion it is in the interest of justice to serve, notice of —
(1) the fact of the application;
(2) the period of the surveillance; and
(3) the fact that during the period information was or was not obtained.

On an ex parte showing of good cause to the judge the serving of the notice required by this subsection may be postponed or suspended for a period not to exceed ninety days. Thereafter, on a further ex parte showing of good cause, the court shall forgo ordering the serving of the notice required under this subsection.

(k) Consultation with Federal law enforcement officer
(1) Federal officers who conduct electronic surveillance to acquire foreign intelligence information under this title may consult with Federal law enforcement officers or law enforcement personnel of a State or political subdivision of a State (including the chief executive officer of that State or political subdivision who has the authority to appoint or direct the chief law enforcement officer of that State or political subdivision) to coordinate efforts to investigate or protect against —

(A) actual or potential attack or other grave hostile acts of a foreign power or an agent of a foreign power;
(B) sabotage or international terrorism by a foreign power or an agent of a foreign power; or
(C) clandestine intelligence activities by an intelligence service or network of a foreign power or by an agent of a foreign power.

(2) Coordination authorized under paragraph (1) shall not preclude the certification required by section 104(a)(7)(B) [50 U.S.C. § 1804(a)(7)(B) (referring to a certification by the Assistant to the President for National Security Affairs or other designated certifying authority "that a significant purpose of the surveillance is to obtain foreign intelligence information")] or the entry of an order

Under this section, disclosure, without the consent of the person involved, of information lawfully acquired under FISA electronic surveillance which concerns a United States person must be in compliance with the statutorily mandated minimization procedures. Communications which were privileged when intercepted remain privileged. Where information acquired under FISA electronic surveillance is disclosed for law enforcement purposes, neither that information nor any information derived therefrom may be used in a criminal proceeding without prior authorization of the Attorney General. If the United States Government intends to disclose information acquired under FISA electronic surveillance or derived therefrom in any proceeding before a court, department, officer regulatory body or other authority of the United States against an aggrieved person,[3747] then the Government must give prior notice of its intent to disclose to the aggrieved person and to the court or other authority involved. Similarly, a State or political subdivision of a State that intends to disclose such information against an aggrieved person in a proceeding before a State or local authority must give prior notice of its intent to the aggrieved person, the court or other authority, and the Attorney General.[3748]

---

under section 105 [50 U.S.C. § 1805]. (Emphasis added.) Subsection 1806(k) was added by Section 504 of P.L. 107-56. The italicized portion of subsection 1806(k)(1), above, was added by Section 898 of the Homeland Security Act of 2002, P.L. 107-296. The term "aggrieved person," as used in connection with electronic surveillance under FISA, is defined under 50 U.S.C. § 1801(k) to mean "a person who is the target of an electronic surveillance or any other person whose communications or activities were subject to electronic surveillance."

[3747] For the definition of "aggrieved person" as that term is used with respect to targets of electronic surveillance under FISA, see fn. 42, *supra*.

[3748] It is worthy of note that Section 892 of the Homeland Security Act of 2002, P.L. 107-296, while not expressly amending FISA, addressed procedures for the sharing of homeland security information. It required the President to prescribe and implement procedures under which relevant federal agencies, including those in the intelligence community, would share relevant and appropriate homeland security information with other federal agencies and, where appropriate, with State and local personnel. Section 892 provided, in part:

Sec. 892. Facilitating Homeland Security Information Sharing Procedures.

(a) Procedures for Determining Extent of Sharing of Homeland Security Information. —

(1) The President shall prescribe and implement procedures under which relevant Federal agencies —

(A) share relevant and appropriate homeland security information with other Federal agencies, including the Department, and appropriate State and local personnel;

(B) identify and safeguard homeland security information that is sensitive but unclassified; and

(C) to the extent that such information is in classified form, determine whether, how, and to what extent to remove classified information, as appropriate, and with which such personnel it may be shared after such information is removed.

(2) The President shall ensure that such procedures apply to all agencies of the Federal Government.

(3) Such procedures shall not change the substantive requirements for the classification and safeguarding of classified information.

(4) Such procedures shall not change the requirements and authorities to protect sources and methods.

(b) Procedures for Sharing of Homeland Security Information. —

50 U.S.C. § 1806(c)-(f) — U.S. District Court Consideration of Notices, Motions to Suppress or Discovery Motions.

(1) Under procedures prescribed by the President, all appropriate agencies, including the intelligence community, shall, through information sharing systems, share homeland security information with Federal agencies and appropriate State and local personnel to the extent such information may be shared, as determined in accordance with subsection
(a), together with assessments of the credibility of such information.
(2) Each information sharing system through which information is shared under paragraph (1) shall —
(A) have the capability to transmit unclassified or classified information, though the procedures and recipients for each capability may differ;
(B) have the capability to restrict delivery of information to specified subgroups by geographic location, type of organization, position of a recipient within an organization, or a recipient's need to know such information;
(C) be configured to allow the efficient and effective sharing of information; and
(D) be accessible to appropriate State and local personnel.
(3) The procedures prescribed in paragraph (1) shall establish conditions on the use of information shared under paragraph (1) —
(A) to limit the redissemination of such information to ensure that such information is not used for an unauthorized purpose;
(B) to ensure the security and confidentiality of such information;
(C) to protect the constitutional and statutory rights of any individuals who are subjects of such information; and
(D) to provide data integrity through the timely removal and destruction of obsolete or erroneous names and information.
(4) ....
(5) Each appropriate Federal agency, as determined by the President, shall have access to each information sharing system through which information is shared under paragraph (1), and shall therefore have access to all information, as appropriate, shared under such paragraph.
(6) The procedures prescribed under paragraph (1) shall ensure that appropriate State and local personnel are authorized to use such information systems —
(A) to access information shared with such personnel; and
(B) to share, with others who have access to such information sharing systems, the homeland security information of their own jurisdictions, which shall be marked appropriately as pertaining to potential terrorist activity.
(7) Under procedures prescribed jointly by the Director of National Intelligence and the Attorney General, each appropriate Federal agency, as determined by the President, shall review and assess the information shared under paragraph (6) and integrate such information with existing intelligence. ....

Subsection (f)(1) of Section 892 of P.L. 107-296, defined "homeland security information" to mean "information possessed by a Federal, State, or local agency" that "relates to the threat of terrorist activity;" "relates to the ability to prevent, interdict, or disrupt terrorist activity;" "would improve the identification or investigation of a suspected terrorist or terrorist organization;" "or would improve the response to a terrorist act." "State and local personnel" is defined to mean persons involved in prevention, preparation, or response for terrorist attack who fall within the following categories: "State Governors, mayors, and other locally elected officials;" "State and local law enforcement personnel and firefighters;" "public health and medical professionals;" "regional, State, and local emergency management agency personnel, including State adjutant generals;" "other appropriate emergency response agency personnel;" and "employees of private-sector entities that affect critical infrastructure, cyber, economic, or public health security, as designated by the Federal Government in procedures developed pursuant to this section."

Section 1806 also sets out in camera and ex parte U.S. district court review procedures to be followed where such notification is received, or where the aggrieved person seeks to discover or obtain orders or applications relating to FISA electronic surveillance, or to discover, obtain, or suppress evidence or information obtained or derived from the electronic surveillance, and the Attorney General files an affidavit under oath that such disclosure would harm U.S. national security. The focus of this review would be to determine whether the surveillance was lawfully conducted and authorized. Only where it is needed to make an accurate determination of these issues does the section permit the court to disclose to the aggrieved person, under appropriate security measures and protective orders, parts of the application, order, or other materials related to the surveillance. If, as a result of its review, the district court determines that the surveillance was unlawful, the resulting evidence must be suppressed.[3749] If the surveillance was lawfully authorized and conducted, the motion of the aggrieved person must be denied except to the extent that due process requires discovery or disclosure. Resultant court orders granting motions or requests of the aggrieved person for a determination that the surveillance was not lawfully conducted or authorized and court orders requiring review or granting disclosure are final orders binding on all Federal and State courts except a U.S. Court of Appeals and the U.S. Supreme Court.

[3749] *But see*, United States v. Thomson, 752 F. Supp. 75, 77 (W.D. N.Y. 1990), stating that,

If the Court determines that the surveillance was unlawfully authorized or conducted, it must order disclosure of the FISA material. 50 U.S.C. § 1806(g) .... In United States v. Belfield, 692 F.2d 141 (D.C. Cir. 1982), the court stated that "even when the government has purported not to be offering any evidence obtained or derived from the electronic surveillance, a criminal defendant may claim that he has been the victim of an illegal surveillance and seek discovery of the FISA surveillance material to ensure that no fruits thereof are being used against him." *Id.* at 146.

It may be noted that the Section 1806(g) does not state that a court must order disclosure of the FISA material if the court finds that the FISA electronic surveillance was unlawfully authorized or conducted. Rather, the provision in question states in pertinent part that, "If the United States district court pursuant to subsection (f) of this section determines that the surveillance was not lawfully authorized or conducted, it shall, in accordance with the requirements of law, suppress the evidence which was unlawfully obtained or derived from electronic surveillance of the aggrieved person or otherwise grant the motion of the aggrieved person...." While a district court will normally consider in camera and ex parte a motion to suppress under Subsection 1806(e) or other statute or rule to discover, disclose, or suppress information relating to a FISA electronic surveillance, Subsection 1806(f) does permit a district court, in determining the legality of a FISA electronic surveillance, to disclose to the aggrieved person, under appropriate security procedures and protective orders, portions of the application, order or other materials relating to the surveillance only to the extent necessary to make an accurate determination of the legality of the surveillance. Belfield indicated that a criminal defendant may seek to discover FISA surveillance material to ensure that no fruits of an illegal surveillance are being used against him, but it appears to stop short of saying that in every instance where the court finds an illegal surveillance disclosure must be forthcoming. "The language of section 1806(f) clearly anticipates that an ex parte, in camera determination is to be the rule. Disclosure and an adversary hearing are the exception, occurring only when necessary." Belfield, supra, 692 F.2d at 147. See also, United States v. Squillacote, 221 F.3d 542, 552554 (4th Cir. 2000), cert. denied, 532 U.S. 971 (2001).

If the contents of any radio communication are unintentionally acquired by an electronic, mechanical, or other surveillance device in circumstances where there is a reasonable expectation of privacy and where a warrant would be required if the surveillance were to be pursued for law enforcement purposes, then the contents must be destroyed when recognized, unless the Attorney General finds that the contents indicate a threat of death or serious bodily harm to any person.

As noted above, Section 1805 provides for emergency electronic surveillance in limited circumstances, and requires the subsequent prompt filing of an application for court authorization to the FISC in such a situation. Under Section 1806, if the application is unsuccessful in obtaining court approval for the surveillance, notice must be served upon any United States person named in the application and such other U.S. persons subject to electronic surveillance as the judge determines, in the exercise of his discretion, is in the interests of justice. This notice includes the fact of the application, the period of surveillance, and the fact that information was or was not obtained during this period. Section 1806 permits postponement or suspension of service of notice for up to ninety days upon ex parte good cause shown. Upon a further ex parte showing of good cause thereafter, the court will forego ordering such service of notice.

50 U.S.C. § 1806(k) — Consultation by Federal Officers Conducting FISA Electronic Surveillance with Federal Law Enforcement Officers.

P.L. 107-56, Section 504, added a new subsection 1806(k)(1). Under this subsection, federal officers who conduct electronic surveillance to acquire foreign intelligence under FISA are permitted to consult with Federal law enforcement officers to coordinate investigative efforts or to protect against —

(A) actual or potential attack or other grave hostile acts of a foreign power or an agent of a foreign power;
(B) sabotage or international terrorism by a foreign power or an agent of a foreign power; or
(C) clandestine intelligence activities by an intelligence service or network of a foreign power or by an agent of a foreign power.

This subsection indicates further that such coordination would not preclude certification as required by 50 U.S.C. § 1804(a)(7)(B) or entry of a court order under 50 U.S.C. § 1805.

50 U.S.C. §§ 1807 and 1808 — Congressional Oversight.

Reporting requirements are included in Sections 1807 and 1808. Under Section 1807, each year in April, the Attorney General is directed to transmit to the Administrative Office of the United States Courts and to the Congress a report covering the total number of applications made for orders and extensions of orders approving electronic surveillance under FISA during the previous year,

and the total number of orders and extensions granted, modified, or denied during that time period.

Section 1808(a) requires the Attorney General to fully inform the House Permanent Select Committee on Intelligence, the Senate Select Committee on Intelligence, and the Senate Judiciary Committee semiannually about all electronic surveillance under FISA.[3750] Each such report must contain a description of the total number of applications made for orders and extensions of orders approving electronic surveillance under this subchapter where the nature and location of each facility or place at which the electronic surveillance will be directed is unknown; each criminal case in which information acquired by electronic surveillance under FISA has been authorized for use at trial during the period covered by the report; and the total number of emergency employments of electronic surveillance under section 1805(f) of this title and the total number of subsequent orders approving or denying such electronic surveillance.[3751]

50 U.S.C. § 1809 — Criminal Sanctions.

Section 1809 provides criminal sanctions for intentionally engaging in electronic surveillance under color of law except as authorized by statute; or for disclosing or using information obtained under color of law by electronic surveillance, knowing or having reason to know that surveillance was not authorized by statute. The provision makes it a defense to prosecution under this subsection if the defendant is a law enforcement officer or investigative officer in the course of his official duties and the electronic surveillance was authorized by and conducted under a search warrant or court order of a court of competent jurisdiction. Section 1809 provides for Federal jurisdiction over such an offense if the defendant is a Federal officer or employee at the time of the offense.

50 U.S.C. § 1810 — Civil Liability.

Civil liability is also provided for under Section 1810, where an aggrieved person, who is neither a foreign power nor an agent of a foreign power, has been subjected to electronic surveillance, or where information gathered by electronic

---

[3750] 50 U.S.C. § 1808(a)(1), as amended by P.L. 109-177, Section 108(c)(1). Subsection 1808(b) directed the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence to report annually for five years after the date of enactment to the House and the Senate respectively concerning implementation of FISA, including any recommendations for amendment, repeal, or continuation without amendment. P.L. 106567, Title VI, Sec. 604(b) (Dec. 27, 2000), 114 Stat. 2853, required the Attorney General to submit to the Senate Select Committee on Intelligence, the Senate Judiciary Committee, the House Permanent Select Committee on Intelligence, and the House Judiciary Committee a report on the authorities and procedures utilized by the Department of Justice to determine whether or not to disclose information acquired under FISA for law enforcement purposes. 50 U.S.C. § 1806 note.

[3751] 50 U.S.C. § 1808(a)(2), as amended by P.L. 109-177, Section 108(c)(2).

surveillance about an aggrieved person has been disclosed or used in violation of Section 1809.

50 U.S.C. § 1811 — Electronic Surveillance without FISC Order after Congressional Declaration of War.

Finally, Section 1811 provides that, notwithstanding any other law, the President, through the Attorney General, may authorize electronic surveillance without a court order to acquire foreign intelligence information for up to 15 calendar days following a declaration of war by Congress.

Physical searches for foreign intelligence gathering purposes.

Physical searches for foreign intelligence purposes are addressed in 50 U.S.C. § 1821 *et seq*.[3752] While tailored for physical searches, the provisions in many respects follow a pattern similar to that created for electronic surveillance. The definitions from 50 U.S.C. § 1801 for the terms "foreign power," "agent of a foreign power," "international terrorism," "sabotage," "foreign intelligence information," "Attorney General," "United States person," "United States," "person," and "State" also apply to foreign intelligence physical searches except where specifically provided otherwise.

Minimization procedures also apply to physical searches for foreign intelligence purposes. Those defined under 50 U.S.C. § 1821(4) are tailored to such physical searches and, like those applicable to electronic surveillance under 50 U.S.C. § 1801(h), these procedures are designed to minimize acquisition and retention, and to prohibit dissemination, of nonpublicly available information concerning unconsenting U.S. persons, consistent with the needs of the United States to obtain, produce and disseminate foreign intelligence.[3753]

[3752] The physical search provisions of FISA were added as Title III of that Act by P.L. 103359, Title VIII, on October 14, 1994, 108 Stat. 3443. Some of these provisions were subsequently amended by P.L. 106-567, Title VI, on December 27, 2000, 114 Stat. 2852-53; and by P.L. 107-56.

[3753] Specifically, 50 U.S.C. § 1821(4) defines "minimization procedures" with respect to physical search to mean:

(A) specific procedures, which shall be adopted by the Attorney General, that are reasonably designed in light of the purposes and technique of the particular physical search, to minimize the acquisition and retention, and prohibit the dissemination, of nonpublicly available information concerning unconsenting United States persons consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information;

(B) procedures that require that nonpublicly available information, which is not foreign intelligence information, as defined in section 1801(e)(1) of this title, shall not be disseminated in a manner that identifies any United States person, without such person's consent, unless such person's identity is necessary to understand such foreign intelligence information or assess its importance;

(C) notwithstanding subparagraphs (A) and (B), procedures that allow for the retention and dissemination of information that is evidence of a crime which has been, is being, or is about to be committed and that is to be retained or disseminated for law enforcement purposes; and

50 U.S.C. § 1822 — Physical Searches without FISC Order of Premises Owned or Controlled by Certain Foreign Powers.

Under 50 U.S.C. § 1822, the President, acting through the Attorney General, may authorize physical searches to acquire foreign intelligence information without a court order for up to one year if the Attorney General certifies under oath that the search is solely directed at premises, property, information or materials owned by or under the open and exclusive control of certain foreign power or powers.[3754] For these purposes, "foreign power or powers" means a foreign government or component of a foreign government, whether or not recognized by the United States, a faction of a foreign nation or nations, not substantially composed of U.S. persons; or an entity that is openly acknowledged by a foreign government or governments to be directed and controlled by such foreign government or governments.[3755] In addition, the Attorney General must certify that there is no substantial likelihood that the physical search will involve the premises, information, material or property of a U.S. person, and that the proposed minimization procedures with respect to the physical search are consistent with 50 U.S.C. § 1821(4)(1)-(4).[3756] Under normal circumstances, these minimization procedures and any changes to them are reported to the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence by the Attorney General at least 30 days before their effective date. However, if the Attorney General determines that immediate action is required, the statute mandates that he advise these committees immediately of the minimization procedures and the need for them to become effective immediately. In addition, the Attorney General must assess compliance with these minimization procedures and report such assessments to these congressional committees.

(D) notwithstanding subparagraphs (A), (B), and (C), with respect to any physical search approved pursuant to section 1822(a) of this title, procedures that require that no information, material, or property of a United States person shall be disclosed, disseminated, or used for any purpose or retained for longer than 72 hours, unless a court order under section 1824 of this title is obtained or unless the Attorney General determines that the information indicates a threat of death or serious bodily harm to any person.

Section 314(a)(3) of P.L. 107-108, the Intelligence Authorization Act of 2002, changed the previous 24 hour period in the minimization procedures under 50 U.S.C. § 1821(4)(D) to a 72 hour period.

[3754] The President provided such authority to the Attorney General by Executive Order 12949, Section 1, 60 Fed. Reg. 8169 (February 9, 1995), if the Attorney General makes the certifications necessary under 50 U.S.C. § 1822(a)(1).

[3755] See 50 U.S.C. § 1801(a)(1), (2), or (3).

[3756] While this is the citation cross-referenced in Section 1822, it appears that the cross-reference should read 50 U.S.C. § 1821(4)(A)-(D).

The certification of the Attorney General for a search under 50 U.S.C. § 1822 is immediately transmitted under seal to the Foreign Intelligence Surveillance Court, and maintained there under security measures established by the Chief Justice of the United States with the Attorney General's concurrence, in consultation with the Director of National Intelligence. Such a certification remains under seal unless one of two circumstances arise: (1) either an application for a court order with respect to the physical search is made to the Foreign Intelligence Surveillance Court under 50 U.S.C. § 1821(4) (dealing with minimization procedures) and § 1823 (dealing with the process by which a federal officer, with the approval of the Attorney General, may apply for an order from the FISC approving a physical search for foreign intelligence gathering purposes); or (2) the certification is needed to determine the legality of a physical search under 50 U.S.C. § 1825 (dealing with use of the information so gathered).

In connection with physical searches under 50 U.S.C. § 1822, the Attorney General may direct a landlord, custodian or other specified person to furnish all necessary assistance needed to accomplish the physical search in a way that would both protect its secrecy and minimize interference with the services such person provides the target of the search. Such person may also be directed to maintain any records regarding the search or the aid provided under security procedures approved by the Attorney General and the Director of National Intelligence. The provision of any such aid must be compensated by the Government.[3757]

As in the case of applications for electronic surveillance under FISA, the Foreign Intelligence Surveillance Court (FISC) has jurisdiction to hear applications and grant applications with respect to physical searches under 50 U.S.C. § 1821 et seq. No FISC judge may hear an application already denied by another FISC judge. If an application for an order authorizing a physical search under FISA is denied, the judge denying the application must immediately provide a written statement of reasons for the denial. If the United States so moves, the record is then transmitted under seal to the court of review established under 50 U.S.C. § 1803(b). If the court of review determines that the application was properly denied, it, in turn, must provide a written statement of the reasons for its decision, which must be transmitted under seal to the Supreme Court upon petition for certiorari by the United States.[3758] Any of the proceedings with respect to an application for a physical search under FISA must be conducted expeditiously, and the record of such proceedings must be kept under appropriate security measures.

50 U.S.C. § 1823 — Application for an FISC Order Authorizing a Physical Search.

[3757] 50 U.S.C. § 1822(a)(4).

[3758] 50 U.S.C. § 1822(c), (d).

The requirements for application for an order for a physical search under FISA are included in 50 U.S.C. § 1823. While tailored to a physical search, the requirements strongly parallel those applicable to electronic surveillance under 50 U.S.C. § 1804(a)(1)-(9).[3759] Like Section 1804(a)(7)(B) with respect to required certifications for an application for electronic surveillance under FISA, Section 1823(a)(7)(B) was amended by P.L. 107-56, Section 218, to require that the

---

[3759] Each application for an order approving such a physical search, having been approved by the Attorney General based upon his understanding that the application satisfies the criteria and requirements of 50 U.S.C. § 1821 et seq., must be made by a Federal officer in writing upon oath or affirmation to an FISC judge. Under subsection (a) of Section 1823, the application must include:
(1) the identity of the Federal officer making the application;
(2) the authority conferred on the Attorney General by the President and the approval of the Attorney General to make the application;
(3) the identity, if known, or a description of the search, and a detailed description of the premises or property to be searched and of the information, material, or property to be seized, reproduced, or altered;
(4) a statement of the facts and circumstances relied upon by the applicant to justify the applicant's belief that —
(A) the target of the physical search is a foreign power or an agent of a foreign power;
(B) the premises or property to be searched contains foreign intelligence information; and
(C) the premises or property to be searched is owned, used, possessed by, or is in transit to or from a foreign power or an agent of a foreign power;
(5) a statement of the proposed minimization procedures;
(6) a statement of the nature of the foreign intelligence sought and the manner in which the physical search is to be conducted;
(7) a certification or certifications by the Assistant to the President for National Security Affairs or an executive branch official or officials designated by the President from among those executive branch officers employed in the area of national security or defense and appointed by the President, by and with the advice and consent of the Senate —
(A) that the certifying official deems the information sought to be foreign intelligence information;
(B) that a significant purpose of the search is to obtain foreign intelligence information;
(C) that such information cannot reasonably be obtained by normal investigative techniques; 80 (...continued)
(D) that designates the type of foreign intelligence information being sought according to the categories described in section 1801(e) of this title; and
(E) includes a statement explaining the basis for the certifications required by subparagraphs (C) and (D);
(8) where the physical search involves a search of the residence of a United States person, the Attorney General shall state what investigative techniques have previously been utilized to obtain the foreign intelligence information concerned and the degree to which these techniques resulted in acquiring such information; and

(9) a statement of the facts concerning all previous applications that have been made to any judge under this subchapter involving any of the persons, premises, or property specified in the application, and the action taken on each previous application. (Emphasis added.) Under Section 1823(b), the Attorney General may require any other affidavit or certification from any other officer in connection with an application for a physical search that he deems appropriate. Under Section 1823(c), the FISC judge to whom the application is submitted may also require that the applicant provide other information as needed to make the determinations necessary under 50 U.S.C. § 1824.

Assistant to the President for National Security Affairs or designated Executive Branch official[3760] certify, among other things, that a significant purpose (rather than "that the purpose") of the physical search is to obtain foreign intelligence information.[3761] Section 1823(d) also parallels Section 1804(e) (dealing with requirements for some applications for electronic surveillance under FISA), in that, if requested in writing by the Director of the FBI, the Secretary of Defense, the Secretary of State, or the Director of National Intelligence,[3762] the Attorney General must personally review an application for a FISA physical search if the target is one described by Section 1801(b)(2). 50 U.S.C. § 1801(b)(2) deals with targets who knowingly engage in clandestine intelligence gathering activities involving or possibly involving violations of federal criminal laws by or on behalf of a foreign power; targets who, at the direction of an intelligence service or network of a foreign power, engage in other clandestine intelligence activities involving or potentially involving federal crimes by or on behalf of a foreign power; targets who knowingly engage in sabotage or international terrorism, activities in preparation for sabotage or international terrorism, or activities on behalf of a foreign power; targets who knowingly aid, abet, or conspire with anyone to engage in any of the previously listed categories of activities; or targets who knowingly enter the United States under false identification by or on behalf

---

[3760] In Section 2 of E.O. 12949, 60 Fed. Reg. 8169 (February 9, 1995), as amended by Section 2 of E.O. 13383, 70 Fed. Reg. 41,933 (July 15, 2005), the President authorized the Attorney General to approve applications to the Foreign Intelligence Surveillance Court under 50 U.S.C. § 1823, to obtain court orders for physical searches for the purpose of collecting foreign intelligence information. In Section 3 of that executive order, the President designated the Secretary of State, the Secretary of Defense, the Director of National Intelligence, the Director of the Federal Bureau of Investigation, the Deputy Secretary of State, the Deputy Secretary of Defense, the Director of the Central Intelligence Agency, and the Principal Deputy Director of National Intelligence to make the certifications required by 50 U.S.C. § 1823(a)(7), in support of an application for a court order for a physical search for foreign intelligence purposes. None of these officials may exercise this authority to make the appropriate certifications unless he or she is appointed by the President, with the advice and consent of the Senate.

[3761] Section 303(a)(7)(B) of FISA, 50 U.S.C. § 1823(a)(7)(B) (see italicized language in the quote of the statutory section in fn. 57, supra). Extrapolating from the U.S. Foreign Intelligence Surveillance Court of Review's interpretation of the "significant purpose" language as applied to electronic surveillance under FISA in In re Sealed Case, 310 F.3d 717, 728-38 (U.S. Foreign Intell. Surveil. Ct. Rev. 2002), this language appears to exclude FISA as authority for a physical search where the sole purpose of an investigation is criminal prosecution. The government must have a measurable foreign intelligence purpose other than criminal prosecution, even of foreign intelligence crimes, in order to satisfy the "significant purpose" standard. This reasoning suggests that the primary purpose of the investigation may be criminal prosecution, so long as collection of foreign intelligence information is also a significant purpose of the search.

[3762] The authority of these officials to make such a written request is non-delegable except where such official is disabled or unavailable. Each must make provision in advance for delegation of this authority should he or she become disabled or unavailable. 50 U.S.C. § 1823(d)(1)(B) and (C).

or a foreign power or who assume a false identity on behalf of a foreign power while present in the United States.[3763]

Should the Attorney General, after reviewing an application, decide not to approve it, he must provide written notice of his determination to the official requesting the review of the application, setting forth any modifications needed for the Attorney General to approve it. The official so notified must supervise the making of the suggested modifications if the official deems them warranted. Unless the Attorney General or the official involved is disabled or otherwise unable to carry out his or her respective responsibilities under Section 1823, those responsibilities are non-delegable.

50 U.S.C. § 1824 — Issuance of an FISC Order Authorizing a Physical Search.

As in the case of the issuance of an order approving electronic surveillance under 50 U.S.C. § 1805(a), certain findings by the FISC judge are required before an order may be forthcoming authorizing a physical search for foreign intelligence information under 50 U.S.C. § 1824(a). Once an application under Section 1823 has been filed, an FISC judge must enter an ex parte order, either as requested or as modified, approving the physical search if the requisite findings are made. These include findings that:

(1) the President has authorized the Attorney General to approve applications for physical searches for foreign intelligence purposes;
(2) the application has been made by a Federal officer and approved by the Attorney General;
(3) on the basis of the facts submitted by the applicant there is probable cause to believe that —
(A) the target of the physical search is a foreign power or an agent of a foreign power, except that no United States person may be considered an agent of a foreign power solely on the basis of activities protected by the first amendment to the Constitution of the United States; and
(B) the premises or property to be searched is owned, used, possessed by, or is in transit to or from an agent of a foreign power or a foreign power;
(4) the proposed minimization procedures meet the definition of minimization contained in this subchapter; and
(5) the application which has been filed contains all statements and certifications required by section 1823 of this title, and, if the target is a United States person, the certification or certifications are not clearly erroneous on the basis of the statement made under section 1823(a)(7)(E) of this title and any other information furnished under section 1823(c) of this title.

[3763] *See* fn. 44, *supra*.

Like Section 1805(b) regarding electronic surveillance under FISA, an FISC judge making a probable cause determination under Section 1824 may consider the target's past activities, plus facts and circumstances pertinent to the target's present or future activities.[3764]

As in the case of an order under 50 U.S.C. § 1805(c) with respect to electronic surveillance, an order granting an application for a physical search under FISA must meet statutory requirements in 50 U.S.C. § 1824(c) as to specifications and directions. An order approving a physical search must specify:

(A) the identity, if known, or a description of the target of the physical search;
(B) the nature and location of each of the premises of property to be searched;
(C) the type of information, material, or property to be seized, altered, or reproduced;
(D) a statement of the manner in which the physical search is to be conducted and, whenever more than one physical search is authorized under the order, the authorized scope of each search and what minimization procedures shall apply to the information acquired by each search; and
(E) the period of time during which the physical searches are approved; ....
In addition, the order must direct:
(A) that the minimization procedures be followed;
(B) that, upon the request of the applicant, a specified landlord, custodian, or other specified person furnish the applicant forthwith all information, facilities, or assistance necessary to accomplish the physical search in such a manner as will protect its secrecy and produce a minimum of interference with the services that such landlord, custodian, or other person is providing to the target of the physical search;
(C) that such landlord, custodian, or other person maintain under security procedures approved by the Attorney General and the Director of National

Intelligence[3765] any records concerning the search or the aid furnished that such person wishes to retain;

(D) that the applicant compensate, at the prevailing rate, such landlord, custodian, or other person for furnishing such aid; and
(E) that the federal officer conducting the physical search promptly report to the court the circumstances and results of the physical search.[3766] Subsection 1824(d)

[3764] 50 U.S.C. § 1824(b).

[3765] Section 1071(e) replaced "Director of Central Intelligence" with "Director of National Intelligence" in each place where it appeared in FISA. This was one of those locations.

[3766] 50 U.S.C. § 1824(c)(1), (2).

sets the limits on the duration of orders under this section and makes provision for extensions of such orders if certain criteria are met.[3767]

50 U.S.C. § 1824(e) — Emergency Authorization of a Physical Search upon Attorney General Certification while FISC Order Is Pursued.

Subsection 1824(e) deals with emergency orders for physical searches. It permits the Attorney General, under certain circumstances, to authorize execution of a physical search if the Attorney General or his designee informs an FISC judge that the decision to execute an emergency search has been made, and an application under 50 U.S.C. § 1821 et seq. is made to that judge as soon as possible, within 72 hours[3768] after the Attorney General authorizes the search. The Attorney General's decision to authorize such a search must be premised upon a determination that "an emergency situation exists with respect to the execution of a physical search to obtain foreign intelligence information before an

---

[3767] P.L. 107-56, Section 207(a)(2), amended 50 U.S.C. § 1824(d)(1) so that it provided:
(1) An order under this section may approve a physical search for the period necessary to achieve its purpose, or for 90 days, whichever is less, except that (A) an order under this section shall approve a physical search targeted against a foreign power, as defined in paragraph (1), (2), or (3) of section 101(a) [50 U.S.C. § 1801(b)(1)(A)], for the period specified in the application or for one year, whichever is less, and (B) an order under this section for a physical search against an agent of a foreign power as defined in section 101(b)(1)(A) [50 U.S.C. § 1801(b)(1)(A)] may be for the period specified in the application or for 120 days, whichever is less. The language in italics reflects the changes made by P.L. 107-56. The 90 day time period reflected in the first sentence replaced earlier language which provided for 45 days.

Section 207(b)(2) of P.L. 107-56 amended 50 U.S.C. § 1824(d)(2) to provide:
(2) Extensions of an order issued under this title [50 U.S.C. §§ 1821 et seq.] may be granted on the same basis as the original order upon an application for an extension and new findings made in the same manner as required for the original order, except that an extension of an order under this Act for a physical search targeted against a foreign power, as defined in section 101(a)(5) or (6) [50 U.S.C. § 1801(a)(5) or (6)], or against a foreign power, as defined in section 101(a)(4) [50 U.S.C. § 1801(a)(4)] , that is not a United States person, or against an agent of a foreign power as defined in section 101(b)(1)(A) [50 U.S.C. § 1801(b)(1)(A)], may be for a period not to exceed one year if the judge finds probable cause to believe that no property of any individual United States person will be acquired during the period. (Emphasis added.) Section 105(b) of P.L. 109-177, amended subsection 1824(d)(2) to replace "as defined in section 101(b)(1)(A)," with "who is not a United States person." Thus, as amended, provides in pertinent part that an extension of a FISA order for a physical search targeted against an agent of a foreign power who is not a United States person may be for a period not to exceed one year if the judge finds probable cause to believe that no property of any individual United States person will be acquired during the period.

Under subsection 1824(d)(3), the judge, at or before the end of the time approved for a physical search or for an extension, or at any time after the physical search is carried out, may review circumstances under which information regarding U.S. persons was acquired, retained, or disseminated to assess compliance with minimization techniques.

[3768] Section 314(a)(4) of the Intelligence Authorization Act for Fiscal Year 2002, P.L. 107108, amended 50 U.S.C. § 1824(e) by striking "24 hours" where it occurred and replacing it with "72 hours."

order authorizing such search can with due diligence be obtained," and "the factual basis for issuance of an order under this title [50 U.S.C. § 1821 et seq.] to approve such a search exists."[3769] If such an emergency search is authorized by the Attorney General, he must require that the minimization procedures required forissuance of a judicial order for a physical search under 18 U.S.C. § 1821 et seq. be followed.[3770] If there is no judicial order for a such a physical search, then the search must terminate on the earliest of the date on which the information sought is obtained, the date on which the application for the order is denied, or the expiration of the 72 hour period from the Attorney General's authorization of the emergency search.[3771] If an application for approval is denied or if the search is terminated and no order approving the search is issued, then neither information obtained from the search nor evidence derived from the search may be used in evidence or disclosed in any

> *... trial, hearing, or other proceeding in or before any court, grand jury, department, office, agency, regulatory body, legislative committee, or other authority of the United States, a State, or political subdivision thereof, and no information concerning any United States person acquired from such search shall subsequently be used or disclosed in any other manner by Federal officers or employees without the consent of such person, except with the approval of the Attorney General, if the information indicates a threat of death or serious bodily harm to any person. A denial of the application made under this subsection may be reviewed as provided in section 302 [50 U.S.C. § 1822].*[3772]

Subsection 1824(f) requires retention of applications made and orders granted under 50 U.S.C. § 1821 *et seq*., for a minimum of ten years from the date of the application.

<u>50 U.S.C. § 1825 — Use of Information Obtained from a FISA Physical Search.</u>

Like 50 U.S.C. § 1806 with respect to electronic surveillance under FISA, 50 U.S.C. § 1825 restricts and regulates the uses of information secured under a FISA physical search. Such information may only be used or disclosed by Federal officers or employees for lawful purposes. Federal officers and employees must comply with minimization procedures if they use or disclose information

---

[3769] 50 U.S.C. § 1824(e)(1)(A)(i) and (ii). See fn. 89, supra, regarding substitution of "72 hours" for "24 hours" in Subsection 50 U.S.C. § 1824(e)(3)(C) by P.L. 107-108, Sec. 314(a)(4).

[3770] 50 U.S.C. § 1824(e)(2).

[3771] 50 U.S.C. § 1824(e)(3).

[3772] 50 U.S.C. § 1824(e)(4).

gathered from a physical search under FISA concerning a United States person.[3773] If a physical search involving the residence of a United States person is authorized and conducted under 50 U.S.C. § 1824, and at any time thereafter the Attorney General determines that there is no national security interest in continuing to maintain the search's secrecy, the Attorney General must provide notice to the United States person whose residence was searched. This notice must include both the fact that the search pursuant to FISA was conducted and the identification of any property of that person which was seized, altered, or reproduced during the search.[3774] Disclosure for law enforcement purposes of information acquired under 50 U.S.C. § 1821 et seq., must be accompanied by a statement that such information and any derivative information may only be used in a criminal proceeding with advance authorization from the Attorney General.[3775]

The notice requirements relevant to intended use or disclosure of information gleaned from a FISA physical search or derivative information, are similar to those applicable where disclosure or use of information garnered from electronic surveillance is intended. If the United States intends to use or disclose information gathered during or derived from a FISA physical search in a trial, hearing, or other proceeding before a court, department, officer, agency, regulatory body or other authority of the United States against an aggrieved person, the United States must first give notice to the aggrieved person, and the court or other authority.[3776] Similarly, if a State or political subdivision of a state intends to use or disclose any information obtained or derived from a FISA physical search in any trial, hearing, or other proceeding before a court, department, officer, agency, regulatory body, or other State or political subdivision against an aggrieved person, the State or locality must notify the aggrieved person, the pertinent court or other authority where the information is to be used, and the Attorney General of the United States of its intention to use or disclose the information.[3777]

<u>50 U.S.C. §§ 1825(d)-(g) — U.S. District Court Consideration of Notices, Motions to Suppress, or Discovery Motions.</u>

[3773] 50 U.S.C. § 1825(a).

[3774] 50 U.S.C. § 1825(b).

[3775] 50 U.S.C. § 1825(c).

[3776] 50 U.S.C. § 1825(d). "Aggrieved person," as defined in 50 U.S.C. § 1821(2), "means a person whose premises, property, information, or material is the target of a physical search or any other person whose premises, property, information, or material was subject to physical search."

[3777] 50 U.S.C. § 1825(e).

An aggrieved person may move to suppress evidence obtained or derived from a FISA physical search on one of two grounds: that the information was unlawfully acquired; or that the physical search was not made in conformity with an order of authorization or approval. Such a motion to suppress must be made before the trial, hearing or other proceeding involved unless the aggrieved person had no opportunity to make the motion or was not aware of the grounds of the motion.[3778]

In camera, ex parte review by a United States district court may be triggered by receipt of notice under Subsections 1825(d) or (e) by a court or other authority; the making of a motion to suppress by an aggrieved person under Subsection 1825(f); or the making of a motion or request by an aggrieved person under any other federal or state law or rule before any federal or state court or authority to discover or obtain applications, orders, or other materials pertaining to a physical search authorized under FISA or to discover, obtain, or suppress evidence or information obtained or derived from a FISA physical search. If the Attorney General files an affidavit under oath that disclosure of any adversary hearing would harm U.S. national security, the U.S. district court receiving notice or before whom a motion or request is pending, or, if the motion is made to another authority, the U.S. district court in the same district as that authority, shall review in camera and ex parte the application, order, and such other materials relating to the physical search at issue needed to determine whether the physical search of the aggrieved person was lawfully authorized and conducted. If the court finds it necessary to make an accurate determination of the legality of the search, the court may disclose portions of the application, order, or other pertinent materials to the aggrieved person under appropriate security procedures and protective orders, or may require the Attorney General to provide a summary of such materials to the aggrieved person.[3779]

If the U.S. district court makes a determination that the physical search was not lawfully authorized or conducted, then it must "suppress the evidence which was unlawfully obtained or derived from the physical search of the aggrieved person or otherwise grant the motion of the aggrieved person." If, on the other hand, the court finds that the physical search was lawfully authorized or conducted, the motion of the aggrieved person will be denied except to the extent that due process requires discovery or disclosure.[3780]

If the U.S. district court grants a motion to suppress under 50 U.S.C. § 1825(h); deems a FISA physical search unlawfully authorized or conducted; or orders review or grants disclosure of applications, orders or other materials pertinent to

---

[3778] 50 U.S.C. § 1825(f).

[3779] 50 U.S.C. § 1825(g).

[3780] 50 U.S.C. § 1825(h).

a FISA physical search, that court order is final and binding on all federal and state courts except a U.S. Court of Appeals or the U.S. Supreme Court.[3781]

As a general matter, where an emergency physical search is authorized under 50 U.S.C. § 1824(d), and a subsequent order approving the resulting search is not obtained, any U.S. person named in the application and any other U.S. persons subject to the search that the FISC judge deems appropriate in the interests of justice must be served with notice of the fact of the application and the period of the search, and must be advised as to whether information was or was not obtained during that period.[3782] However, such notice may be postponed or suspended for a period not to exceed 90 days upon an ex parte showing of good cause to the judge, and, upon further good cause shown, the court must forego such notice altogether.[3783]

50 U.S.C. § 1825(k) — Consultation by Federal Officers Doing FISA Searches with Federal Law Enforcement Officers.

Section 504(b) of P.L. 10756, added a new 50 U.S.C. § 1825(k) to the statute, which deals with consultation by federal officers doing FISA searches with federal law enforcement officers. Section 899 of the Homeland Security Act of 2002, P.L. 107-296 expanded this authority to also permit consultation with "law enforcement personnel of a State or political subdivision of a State (including the chief executive officer of that State or political subdivision who has the authority to appoint or direct the chief law enforcement officer of that State or political subdivision)." Under this new language, as amended, federal officers "who conduct physical searches to acquire foreign intelligence information" under 50 U.S.C. § 1821 et seq., may consult with federal law enforcement officers or state or local law enforcement personnel:

> *... to coordinate efforts to investigate or protect against*
> *(A) actual or potential attack or other grave hostile acts of a foreign power or an agent of a foreign power;*
> *(B) sabotage or international terrorism by a foreign power or an agent of a foreign power; or*
> *(C) clandestine intelligence activities by an intelligence service or network of a foreign power or by an agent of a foreign power.*[3784]

[3781] 50 U.S.C. § 1825(i).

[3782] 50 U.S.C. § 1825(j)(1).

[3783] 50 U.S.C. § 1825(j)(2).

[3784] 50 U.S.C. § 1825(k)(1).

Such coordination does not preclude certification required under 50 U.S.C. § 1823(a)(7) or entry of an order under 50 U.S.C. § 1824.[3785]

50 U.S.C. § 1826 — Congressional Oversight.

50 U.S.C. § 1826 provides for semiannual congressional oversight of physical searches under FISA.[3786] The Attorney General is directed to "fully inform" the Permanent Select Committee on Intelligence of the House of Representatives, the Select Committee on Intelligence of the Senate, and the Senate Judiciary Committee[3787] with respect to all physical searches conducted under 50 U.S.C. § 1821 *et seq*. Also on a semiannual basis, the Attorney General is required to provide a report to "those committees" and to the House Judiciary Committee[3788]

[3785] 50 U.S.C. § 1825(k)(2).

[3786] See also the discussion of new reporting requirements added by Section 6002 of P.L. 108-458, the Intelligence Reform and Terrorism Prevention Act of 2004, 50 U.S.C. § 1871, discussed at fn. 165, infra, and accompanying text.

[3787] P.L. 109-177, Section 109(a) added the Senate Judiciary Committee to the committees to be fully informed by the Attorney General as to FISA physical searches.

[3788] The term "those committees" in the second sentence of 50 U.S.C. § 1826 appears to be subject to at three possible interpretations. Section 109(a)(1) of P.L. 109-177 amends the first sentence of Section 1826 "in the first sentence, by inserting ", and the Committee on the Judiciary of the Senate," after "Senate." The amending language in Subsection 109(a)(2) or P.L. 109-177, amends 50 U.S.C. § 1826 "in the second sentence, by striking "and the Committees on the Judiciary of the House of Representatives and the Senate" and inserting "and the Committee on the Judiciary of the House of Representatives." In light of this sequence of amendments, the phrase "those committees" in the second paragraph might to refer to the Intelligence Committees alone, rather than to the Intelligence Committees and the Senate Judiciary Committee referred to in the previous sentence. If this is the case, then the semiannual report referred to in this sentence would be submitted only to the Intelligence Committees and the House Judiciary Committee. Under this view, the replacement of "and the Committees on the Judiciary of the House of Representatives and the Senate" with "and the Committee on the Judiciary of the House of Representatives" would reflect an intent to eliminate access to the report for the Senate Judiciary Committee, while leaving the access of the House Judiciary Committee extant. Alternatively, if "those committees" refers to all three committees listed in the first sentence, then replacing a reference to both Senate and House Judiciary Committees with a reference only to the House Judiciary Committee would eliminate a redundancy in the language, while giving both Intelligence Committees and both Judiciary Committees access to the report. The Conference Report to P.L. 109-177, H.Rept. 109-333, USA PATRIOT Improvement and Reauthorization Act of 2005, 109th Cong., 1st Sess. 93 (December 8, 2005), appears to give the provision a third reading which does include both House and Senate Judiciary Committees as recipients of the report on emergency employment of physical searches under FISA, as well as electronic surveillance and pen registers, but makes no mention of the Intelligence Committees. It states:
Section 109. Enhanced congressional oversight
Section 109 of the conference report is similar to section 10 of the Senate amendment, bu with an additional new provision. Section 109 of the conference report is identical to section 10 of the Senate amendment and requires: (1) the FISA court to publish its rules; and (2) reporting to the House and Senate Judiciary Committees of the use of the emergency employments of electronic surveillance, physical searches, and pen register and trap and trace devices. Section 109(c) of the

setting forth: the total number of applications for orders approving FISA physical searches during the preceding six month period; the total number of those orders granted, modified, or denied; the number of such physical searches involving the residences, offices, or personal property of United States persons; the number of occasions, if any, the Attorney General gave notice under 50 U.S.C. § 1825(b);[3789] and the total number of emergency physical searches authorized by the Attorney General under section 1824(e) of this title and the total number of subsequent orders approving or denying such physical searches.[3790]

50 U.S.C. § 1827 — Criminal Sanctions.

Section 1827 imposes criminal sanctions for intentionally executing a physical search for foreign intelligence gathering purposes under color of law within the United States except as authorized by statute. In addition, criminal penalties attach to a conviction for intentionally disclosing or using information obtained by a physical search under color of law within the United States for the purpose of gathering intelligence information, where the offender knows or has reason to know that the information was obtained by a physical search not authorized by statute. In either case, this section provides that a person convicted of such an offense faces a fine of not more than $10,000,[3791] imprisonment for not more

---

conference report also requires that the Secretary of the Department of Homeland Security submit a written report providing a description of internal affairs operations at U.S. Citizenship & Immigration Services to the Judiciary Committees of the House and the Senate.

The language of 50 U.S.C. § 1826, as so amended, provides: On a semiannual basis the Attorney General shall fully inform the Permanent Select Committee on Intelligence of the House of Representatives and the Select Committee on Intelligence of the Senate, and the Committee on the Judiciary of the Senate, concerning all physical searches conducted pursuant to this subchapter. On a semiannual basis the Attorney General shall also provide to those committees and the Committee on the Judiciary of the House of Representatives a report setting forth with respect to the preceding six-month period —
(1) the total number of applications made for orders approving physical searches under this subchapter;
(2) the total number of such orders either granted, modified, or denied;
(3) the number of physical searches which involved searches of the residences, offices, or personal property of United States persons, and the number of occasions, if any, where the Attorney General provided notice pursuant to section 1825(b) of this title; and

(4) the total number of emergency physical searches authorized by the Attorney General under section 1824(e) of this title and the total number of subsequent orders approving or denying such physical searches.

[3789] See fn. 86, supra, and accompanying text.

[3790] The reporting requirement regarding the total number of emergency physical searches authorized under 50 U.S.C. § 1824(e) was added by Section 109(a)(5) of P.L. 109-177.

[3791] This section was added in 1994 as Title III, Section 307 of P.L. 95-511, by P.L. 103-359, Title VIII, § 807(a)(3), 108 Stat. 3452. If a fine were to be imposed under the general fine provisions 18

than five years or both. Federal jurisdiction attaches where the offense is committed by an officer or employee of the United States. It is a defense to such a prosecution if the defendant was a law enforcement or investigative officer engaged in official duties and the physical search was authorized and conducted pursuant to a search warrant or court order by a court of competent jurisdiction.

50 U.S.C. § 1828 — Civil Action.

In addition, an aggrieved person other than a foreign power or an agent of a foreign power as defined under section 1801(a) or 1801(b)(1)(A),[3792] whose premises, property, information, or material within the United States was physically searched under FISA; or about whom information obtained by such a search was disclosed or used in violation of 50 U.S.C. § 1827, may bring a civil action for actual damages, punitive damages, and reasonable attorney's fees and other investigative and litigation costs reasonably incurred.[3793]

50 U.S.C. § 1829 — Physical Searches without FISC Order after Congressional Declaration of War.

In times of war, the President, through the Attorney General, may authorize physical searches under FISA without a court order to obtain foreign intelligence information for up to 15 days following a declaration of war by Congress.[3794]

Pen registers or trap and trace devices[3795] used for foreign intelligence gathering purposes.

U.S.C. § 3571, rather than under the offense provision, the maximum fine would be $250,000 for an individual.

[3792] For definitions, see fn. 44, *supra*.

[3793] 50 U.S.C. § 1828. Actual damages are defined to be "not less than liquidated damages of $1,000 or $100 per day for each violation, whichever is greater." 50 U.S.C. § 1828(1).

[3794] 50 U.S.C. § 1829.

[3795] Under 50 U.S.C. § 1841(2), the terms "pen register" and "trap and trace device" are given the meanings in 18 U.S.C. § 3127. Under Section 3127, "pen register" ...

means a device which records or decodes electronic or other impulses which identify the numbers dialed or otherwise transmitted on the telephone line to which such device is attached, but such term does not include any device used by a provider or customer of a wire or electronic communication service for billing, or recording as an incident to billing, for communications services provided by such provider or any device used by a provider or customer of a wire communication service for cost accounting or other like purposes in the ordinary course of its business; ....

As defined by 18 U.S.C. § 3127(4), "trap and trace device" "means a device which captures the incoming electronic or other impulses which identify the originating number of an instrument or device from which a wire or electronic communication was transmitted." 50 U.S.C. § 1841 is the

Title IV of FISA, 50 U.S.C. § 1841 et seq., was added in 1998, amended by P.L. 107-56,[3796] and amended further by Section 314(5) of P.L. 107-108.

50 U.S.C. § 1842(a)-(c) — Application for an FISC Order Authorizing Installation and Use of Pen Register or Trap and Trace Device.

Under 50 U.S.C. § 1842(a)(1), notwithstanding any other provision of law, the Attorney General or a designated attorney for the Government may apply for an order or extension of an order authorizing or approving the installation and use of a pen register or trap and trace device "*for any investigation to protect against international terrorism or clandestine intelligence activities, provided such investigation of a United States person is not conducted solely upon the basis of activities protected by the first amendment to the Constitution*" conducted by the Federal Bureau of Investigation (FBI) under guidelines approved by the Attorney General pursuant to E.O. 12333 or a successor order.[3797] This authority is separate from the authority to conduct electronic surveillance under 50 U.S.C. § 1801 et seq.[3798]

Each such application is made in writing upon oath or affirmation to an FISC judge or to a U.S. magistrate judge publicly designated by the Chief Justice of the United States to hear such applications and grant orders approving installation of pen registers or trap and trace devices on behalf of an FISC judge. The application must be approved by the Attorney General or a designated attorney for the Government. Each application must identify the federal officer seeking to use the pen register or trap and trace device covered by the application. It must also include a certification by the applicant "that the information likely to be obtained is relevant to an ongoing investigation to protect against international terrorism or clandestine intelligence activities, provided that such investigation of a United States person is not conducted solely upon the basis of activities protected by the first amendment to the Constitution."[3799] Under 50 U.S.C. §

---

section that defines terms applicable to the pen register and trap and trace device portions of FISA.

[3796] Title IV of FISA was added by Title VI, Sec. 601(2) of P.L. 105-272, on October 20, 1998, 112 Stat. 2405-2410, and amended by P.L. 107-56 and by P.L. 107-108.

[3797] The italicized language was added by P.L. 107-56, Section 214(a)(1), replacing language which had read "for any investigation to gather foreign intelligence information or information concerning international terrorism."

[3798] 50 U.S.C. § 1842(a)(2).

[3799] This language, added by P.L. 107-56, Section 214(a)(2), replaced stricken language which read:

(2) a certification by the applicant that the information to be obtained is relevant to an ongoing foreign intelligence or international terrorism investigation being conducted by the Federal Bureau of Investigation under guidelines approved by the Attorney General; and

(3) information which demonstrates that there is reason to believe that the telephone line to which the pen register or trap and trace device is to be attached, or the communication

1842, as amended by P.L. 107-56, pen registers and trap and trace devices may now be installed and used not only to track telephone calls, but also other forms of electronic communication such as e-mail.

50 U.S.C. § 1842(d) — Issuance of FISC Order for Installation and Use of Pen Register or Trap and Trace Device.

Once an application is made under Section 1842, the judge[3800] must enter an ex parte order[3801] as requested or as modified approving the installation and use of a

---

instrument or device to be covered by the pen register or trap and trace device, has been or is about to be used in communication with —
(A) an individual who is engaging or has engaged in international terrorism or clandestine intelligence activities that involve or may involve a violation of the criminal laws of the United States; or

(B) a foreign power or agent of a foreign power under circumstances giving reason to believe that the communication concerns or concerned international terrorism or clandestine intelligence activities that involve or may involve a violation of the criminal laws of the United States.

[3800] This section refers simply to "judge." In light of 50 U.S.C. § 1842(b), it would appear that this may refer to either an FISC judge or a U.S. magistrate judge designated by the Chief Justice under Section 1842(b)(2) to hear applications for and grant orders approving installation and use of pen registers or trap and trace devices on behalf of an FISC judge. The legislative history on this provision does not appear to clarify this point. The language was included in the bill reported out as an original measure by the Senate Select Committee on Intelligence, S. 2052, as Sec. 601. The Committee's report, S.Rept. 105-185, indicates that magistrate judges were included in the legislation to parallel their use in connection with receipt of applications and approval of pen registers and trap and trace devices in the context of criminal investigations, but reflected the Committee's understanding that the authority provided in the legislation to designate magistrate judges to consider applications for pen registers and trap and trace devices in the foreign intelligence gathering context would be closely monitored by the Department of Justice and this designation authority would not be exercised until the Committee was briefed on the compelling need for such designations, as reflected, for example, through statistical information on the frequency of applications to the FISC under the new procedure. S.Rept. 105-185, at 28 (May 7, 1998). The provision authorizing the use of pen registers and trap and trace devices in foreign intelligence and international terrorism investigations, Sec. 601 of the bill as passed, was among those included in the conference version of H.R. 3694 which was passed in lieu of S. 2052. H.Rept. 105-80, at 32 (October 5, 1998).
[3801] Under 50 U.S.C. § 1842(d)(2)(A), such an order
(A) shall specify —
(i) the identity, if known, of the person who is the subject of the investigation;
(ii) the identity, if known, of the person to whom is leased or in whose name is listed the telephone line or other facility to which the pen register or trap and trace device is to be attached or applied; and
(iii) the attributes of the communications to which the order applies, such as the number or other identifier, and, if known, the location of the telephone line or other facility to which the pen register or trap and trace device is to be attached or applied and, in the case of a trap and trace device, the geographic limits of the trap and trace order;
(B) shall direct that —
(i) upon request of the applicant, the provider of a wire or electronic communication service, landlord, custodian, or other person shall furnish any information, facilities, or technical assistance necessary to accomplish the installation and operation of the pen register or trap and

trace device in such a manner as will protect its secrecy and produce a minimum amount of interference with the services that such provider, landlord, custodian, or other person is providing the person concerned;
(ii) such provider, landlord, custodian, or other person —
(I) shall not disclose the existence of the investigation or of the pen register or trap and trace device to any person unless or until ordered by the court; and
(II) shall maintain, under security procedures approved by the Attorney General and the Director of National Intelligence pursuant to section 1805(b)(2)(C) of this title, any records concerning the pen register or trap and trace device or the aid furnished; and
(iii) the applicant shall compensate such provider, landlord, custodian, or other person for reasonable expenses incurred by such provider, landlord, custodian, or other person in providing such information, facilities, or technical assistance; and
(C) shall direct that, upon the request of the applicant, the provider of a wire or electronic communication service shall disclose to the Federal officer using the pen register or trap and trace device covered by the order —
(i) in the case of the customer or subscriber using the service covered by the order (for the period specified by the order) —
(I) the name of the customer or subscriber;
(II) the address of the customer or subscriber;
(III) the telephone or instrument number, or other subscriber number or identifier, of the customer or subscriber, including any temporarily assigned network address or associated routing or transmission information;
(IV) the length of the provision of service by such provider to the customer or subscriber and the types of services utilized by the customer or subscriber;
(V) in the case of a provider of local or long distance telephone service, any local or long distance telephone records of the customer or subscriber;
(VI) if applicable, any records reflecting period of usage (or sessions) by the customer or subscriber; and
(VII) any mechanisms and sources of payment for such service, including the number of any credit card or bank account utilized for payment for such service; and
(ii) if available, with respect to any customer or subscriber of incoming or outgoing communications to or from the service covered by the order —
(I) the name of such customer or subscriber;
(II) the address of such customer or subscriber;
(III) the telephone or instrument number, or other subscriber number or identifier, of such customer or subscriber, including any temporarily assigned network address or associated routing or transmission information; and
(IV) the length of the provision of service by such provider to such customer or subscriber and the types of services utilized by such customer or subscriber.

The italicized portions of this section reflect amended language from P.L. 107-56, Section 214 (a)(4). In 50 U.S.C. § 1842(d)(2)(B)(ii)(II), the reference to the "Director of National Intelligence" replaced a reference to the "Director of Central Intelligence" pursuant to Section 1071(e) of P.L. 108-458. Subsection 128(a)(3) added 50 U.S.C. § 1842(d)(2)(C).

P.L. 107-108, Section 314(a)(5)(B), replaced "of a court" at the end of 50 U.S.C. § 1842(f) with "of an order issued," so that the language now reads: (f) No cause of action shall lie in any court against any provider of a wire or electronic communication service, landlord, custodian, or other person (including any officer, employee, agent, or other specified person thereof) that furnishes any information, facilities, or technical assistance under subsection (d) in accordance with the terms of an order issued under this section. (Emphasis added.) Cf., 50 U.S.C. § 1805(i), which contains an immunity grant which, at first blush would appear to apply only to electronic surveillance under FISA, but which has been interpreted at page 25 of H.Rept. 107-328, the

pen register or trap and trace device if the application meets the requirements of that section. Generally, an order issued under 50 U.S.C. § 1842 may authorize the installation and use of a pen register or trap and trace device for a period not to exceed 90 days. Extensions of such an order may also be granted for up to 90 days. However, in the case of an application under subsection 1842(c) where the applicant has certified that the information likely to be obtained is foreign intelligence information not concerning a United States person, an order, or an extension of an order for a FISA pen register or trap and trace device may be up to one year.[3802]

50 U.S.C. § 1842(f) — Limitation of Liability.

Section 1842(f) bars any cause of action in any court against any provider of a wire or electronic communication service, landlord, custodian, or other person (including any officer, employee, agent, or other specified person thereof) that furnishes any information, facilities, or technical assistance under subsection 1842(d) in accordance with the terms of an order issued under this section.

50 U.S.C. § 1843 — Emergency Attorney General Authorization of Pen Register or Trap and Trace Device while FISC Order Is Pursued.

Section 1843 of Title 18 of the United States Code focuses upon authorization for installation and use of a pen register or trap and trace device under FISA during specified types of emergencies. This provision applies when the Attorney General makes a reasonable determination that:
(1) an emergency requires the installation and use of a pen register or trap and trace device to obtain foreign intelligence information not concerning a United States person or information to protect against international terrorism or clandestine intelligence activities, provided that such investigation of a United States person is not conducted solely upon the basis of activities protected by the first amendment to the Constitution before an order authorizing the installation and use of the pen register or trap and trace device, as the case may be, can with due diligence be obtained under section 1842 of this title; and

---

conference report accompanying H.R. 2883 (the conference version of which became P.L. 107-108) to apply to electronic surveillance, physical searches and pen register and trap and trace devices. This subsection was added as 50 U.S.C. § 1805(h) by Section 225 of P.L. 107-56, and redesignated 50 U.S.C. § 1805(i) by Section 314(a)(2)(C) of P.L. 107-108. See discussion at fn. 66, supra.

[3802] 50 U.S.C. § 1842(e), as amended by Section 105(c) of P.L. 109-177. Under 50 U.S.C. § 1842(g), unless otherwise ordered by the judge, the results of a pen register or trap and trace device are furnished at reasonable intervals during regular business hours for the duration of the order to the authorized Government official or officials.

(2) the factual basis for issuance of an order under section 1842(c) of this title to approve the installation and use of the pen register or trap and trace device, as the case may be, exists.[3803]

Upon making such a determination, the Attorney General may authorize the installation and use of a pen register or trap and trace device for this purpose if two criteria are met. First, the Attorney General or his designee must inform a judge referred to in Section 1842(b)[3804] at the time of the emergency authorization that the decision to install and use the pen register or trap and trace device has been made. Second, an application for a court order authorizing a pen register or trap and trace device under 50 U.S.C. § 1842(a)(1) must be made to the judge as soon as practicable, but no later that 48 hours after the emergency authorization.[3805] If no order approving the installation and use of a pen register or trap and trace device is forthcoming, then the installation and use of such pen register or trap and trace device must terminate at the earlier of the time when the information sought is obtained, the time when the application for the order is denied under 50 U.S.C. § 1842, or the expiration of 48 hours from the time the Attorney General made his emergency authorization.[3806]

If an application for an order sought under Section 1843(a)(2) is denied, or if the installation and use of the pen register or trap and trace device is terminated, and no order approving it is issued under 50 U.S.C. § 1842(b)(2), then no information obtained or evidence derived from the use of the pen register or trap and trace device may be received in evidence or disclosed in any trial, hearing or other proceeding in any court, grand jury, department, office, agency, regulatory body, legislative committee or other federal state or local authority. Furthermore, in such circumstances, no information concerning a United States person acquired from the use of the pen register or trap and trace device may later be used or disclosed in any other way by federal officers or employees without consent of the U.S. person involved, with one exception. If the Attorney General approves the disclosure because the information indicates a threat of death or serious bodily harm to anyone, then disclosure without consent of the U.S. person involved is permitted.[3807]

[3803] 50 U.S.C. § 1843(b) (italics reflect language added by P.L. 107-56, § 214(b)(2), in place of language which read "foreign intelligence information or information concerning international terrorism.") Similar language was inserted in 50 U.S.C. § 1843(a) by P.L. 10756, § 214(b)(1), in place of language that paralleled that stricken from subsection 1843(b).

[3804] See discussion of the term "judge" as used in Section 1842(b) in fn. 121, supra.

[3805] 50 U.S.C. § 1843(a).

[3806] 50 U.S.C. § 1843(c)(1).

[3807] 50 U.S.C. § 1843(c)(2).

50 U.S.C. § 1844 — Use of Pen Register or Trap and Trace Device without FISC Order after Congressional Declaration of War.

If Congress declares war, then, notwithstanding any other provision of law, the President, through the Attorney General, may authorize use of a pen register or trap and trace device without a court order to acquire foreign intelligence information for up to 15 calendar days after the declaration of war.[3808]

50 U.S.C. § 1845 — Use of Information Obtained from FISA Pen Register or Trap and Trace Device.

50 U.S.C. § 1845 sets parameters with respect to the use of information obtained through the use of a pen register or trap and trace device under 50 U.S.C. § 1841 et seq. Federal officers and employees may only use or disclose such information with respect to a U.S. person without the consent of that person in accordance with Section 1845.[3809] Any disclosure by a Federal officer or employee of information acquired pursuant to FISA from a pen register or trap and trace device must be for a lawful purpose.[3810] Disclosure for law enforcement purposes of information acquired under 50 U.S.C. § 1841 et seq. is only permitted where the disclosure is accompanied by a statement that the information and any derivative information may only be used in a criminal proceeding with the advance authorization of the Attorney General.[3811]

Under 50 U.S.C. § 1845(c), when the United States intends to enter into evidence, use, or disclose information obtained by or derived from a FISA pen register or trap and trace device against an aggrieved person[3812] in any federal trial, hearing, or proceeding, notice requirements must be satisfied. The Government, before the trial, hearing, or proceeding or a reasonable time before the information is to be proffered, used or disclosed, must give notice of its intent both to the

---

[3808] 50 U.S.C. § 1844.

[3809] 50 U.S.C. § 1845(a)(1).

[3810] 50 U.S.C. § 1845(a)(2).

[3811] 50 U.S.C. § 1845(b).

[3812] "Aggrieved person" is defined in 50 U.S.C. § 1841(3) for purposes of 50 U.S.C. § 1841 et seq. as any person:
(A) whose telephone line was subject to the installation or use of a pen register or trap and trace device authorized by subchapter IV [50 U.S.C. § 1841 et seq.]; or

(B) whose communication instrument or device was subject to the use of a pen register or trap and trace device authorized by subchapter IV to capture incoming electronic or other communications impulses.

aggrieved person involved[3813] and to the court or other authority in which the information is to be disclosed or used.

If a state or local government intends to enter into evidence, use, or disclose information obtained or derived from such a trap and trace device against an aggrieved person in a state or local trial, hearing or proceeding, it must give notice to the aggrieved person and to the Attorney General of the United States of the state or local government's intent to disclose or use the information.[3814]

50 U.S.C. §1845(c)-(f) — U.S. District Court Consideration of Notices, Motions to Suppress, or Discovery Motions.

The aggrieved person in either case may move to suppress the evidence obtained or derived from a FISA pen register or trap and trace device on one of two grounds: that the information was unlawfully acquired; or that the use of the pen register or trap and trace device was not made in conformity with an order of authorization or approval under 50 U.S.C. § 1841 *et seq*.[3815]

If notice is given under 50 U.S.C. §§ 1845(c) or (d), or a motion or request is made to suppress or to discover or obtain any applications, orders, or other materials relating to use of a FISA pen register or trap and trace device or information obtained by or derived from such use, the Attorney General may have national security concerns with respect to the effect of such disclosure or of an adversary hearing. If he files an affidavit under oath that disclosure or any adversary hearing would harm the national security of the United States, the United States district court in which the motion or request is made, or where the motion or request is made before another authority, the U.S. district court in the same district, shall review in camera and ex parte the application, order, and other relevant materials to determine whether the use of the pen register or trap and trace device was lawfully authorized and conducted.[3816] In so doing, the court may only disclose portions of the application, order or materials to the aggrieved person or order the Attorney General to provide the aggrieved person with a summary of these materials if that disclosure is necessary to making an accurate

---

[3813] The statute refers to notice to the "aggrieved person." Here it is using this term in the context of a pen register or trap and trace device under FISA (see fn. 90 for the applicable definition of "pen register" and "trap and trace device" in 50 U.S.C. § 1841(2) and fn. 106 for the applicable definition of "aggrieved person" in 50 U.S.C.§ 1841(3), supra). The term "aggrieved person" is also defined in both 50 U.S.C. §§ 1801(k) (in the context of electronic surveillance, see fn. 67, supra) and 1825(d) (in the context of a physical search, see fn. 97, supra).

[3814] 50 U.S.C. § 1845(d).

[3815] 50 U.S.C. § 1845(e).

[3816] 50 U.S.C. § 1845(f)(1).

determination of the legality of the use of the pen register or trap and trace device.[3817]

Should the court find that the pen register or trap and trace device was not lawfully authorized or conducted, it may suppress the unlawfully obtained or derived evidence or "otherwise grant the motion of the aggrieved person."[3818] On the other hand, if the court finds the pen register or trap and trace device lawfully authorized and conducted, it may deny the aggrieved person's motion except to the extent discovery or disclosure is required by due process.[3819] Any U.S. district court orders granting motions or request under Section 1845(g), finding unlawfully authorized or conducted the use of a pen register or trap and trace device, or requiring review or granting disclosure of applications, orders or other materials regarding installation and use of a pen register or trap and trace device are deemed final orders. They are binding on all federal and state courts except U.S. courts of appeals and the U.S. Supreme Court.[3820]

50 U.S.C. § 1846 — Congressional Oversight.

Section 1846 deals with congressional oversight of the use of FISA pen registers and trap and trace devices.[3821] It requires the Attorney General semiannually to fully inform the House Permanent Select Committee on Intelligence, the Senate Select Committee on Intelligence, and the House and Senate Judiciary Committees[3822] regarding all FISA uses of pen registers and trap and trace devices. In addition, the Attorney General, on a semi-annual basis, must report to the House Permanent Select Committee on Intelligence, the Senate Select Committee on Intelligence, the House Judiciary Committee and the Senate Judiciary Committee on the total number of applications made for orders approving the use of such pen registers and trap and trace devices; the total number of such orders granted, modified, or denied during the previous six month period; the total number of pen registers and trap and trace devices whose installation and use was authorized by the Attorney General on an emergency basis under section 1843 of this title, and the total number of subsequent orders

[3821] See also Section 6002 of P.L. 108-458, the Intelligence Reform and Terrorism Prevention Act of 2004, which amended FISA to add additional reporting requirements codified at 50 U.S.C. § 1871. These new reporting requirements are discussed at fn. 165, infra, and accompanying text.

[3822] 50 U.S.C. § 1846(a). P.L. 109-177, Section 128(b), added the House and Senate Judiciary Committees to the list of committees to be kept fully informed by the Attorney General regarding all use of FISA pen registers and trap and trace devices.

approving or denying the installation and use of such pen registers and trap and trace devices.[3823]

Access to certain business records or other tangible things for foreign intelligence purposes.

Added in 1998, Title V of FISA, 50 U.S.C. § 1861 et seq., was substantially changed by P.L. 107-56, and modified further by P.L. 107-108, P.L. 109-177, and P.L. 109-178.[3824] Although denominated "access to certain business records for

---

[3823] 50 U.S.C. § 1846(b). P.L. 109-177, Section 109(b)(3), added the reporting requirements with respect to the total number of emergency pen registers and trap and trace devices authorized by the Attorney General under 50 U.S.C. § 1843, and the total number of subsequent orders approving or denying such installation and use.

[3824] Title V of FISA was added by Title VI, Sec. 602, of P.L. 105-272, on October 20, 1998, 112 Stat. 2411-12, and significantly amended by P.L. 107-56 and P.L. 107-108. The prior version of 50 U.S.C. § 1861 provided definitions for "foreign power," "agent of a foreign power," "foreign intelligence information," "international terrorism," and "Attorney General," "common carrier," "physical storage facility," "public accommodation facility," and "vehicle rental facility" for purposes of 50 U.S.C. § 1861 et seq. The prior version of Section 1862 was much more narrowly drawn than the new version added in P.L. 107-56 and amended by P.L. 107-108. The earlier version read:

(a) The Director of the Federal Bureau of Investigation or a designee of the Director (whose rank shall be no lower than Assistant Special Agent in Charge) may make an application for an order authorizing a common carrier, public accommodation facility, physical storage facility, or vehicle rental facility to release records in its possession for an investigation to gather foreign intelligence information or an investigation concerning international terrorism which investigation is being conducted by the Federal Bureau of Investigation under such guidelines as the Attorney General approves pursuant to Executive Order No. 12333, or a successor order.

(b) Each application under this section —

(1) shall be made to —

(A) a judge of the court established by section 1803(a) of this title; or

(B) a United States Magistrate Judge under chapter 43 of Title 28 [28 U.S.C. § 631 et seq.], who is publicly designated by the Chief Justice of the United States to have the power to hear applications and grant orders for the release of records under this section on behalf of a judge of that court; and

(2) shall specify that —

(A) the records concerned are sought for an investigation described in subsection (a); and

(B) there are specific and articulable facts giving reason to believe that the person to whom the records pertain is a foreign power or an agent of a foreign power.

(c) (1) Upon application made pursuant to this section, the judge shall enter an ex parte order as requested, or as modified, approving the release of records if the judge finds that the application satisfied the requirements of this section.

(2) An order under this subsection shall not disclose that it is issued for purposes of an investigation described in subsection (a).

(d) (1) Any common carrier, public accommodation facility, physical storage facility, or vehicle rental facility shall comply with an order under subsection (c).

(2) No common carrier, public accommodation facility, physical storage facility, or vehicle rental facility, or officer, employee, or agent thereof, shall disclose to any person (other than those officers, agents, or employees of such common carrier, public accommodation facility , physical storage facility, or vehicle rental facility necessary to fulfill the requirement to disclose information to the Federal Bureau of Investigation under this section) that the Federal Bureau of

foreign intelligence and international terrorism investigations," the reach of Section 1861, as amended by the USA PATRIOT Act, P.L. 107-108, P.L. 109-177, and P.L. 109-178, is now substantially broader than business records alone.

50 U.S.C. § 1861(a)(1) — Applications for FISC Order for Production of any Tangible Thing.

Under 50 U.S.C. § 1861(a)(1), subject to Subsection 1861(a)(3), the Director of the FBI, or his designee (who must be at the Assistant Special Agent in Charge level or higher in rank) may apply for an order requiring

> *... the production of any tangible things (including books, records, papers, documents, and other items) for an investigation to obtain foreign intelligence information not concerning a United States person or to protect against international terrorism or clandestine intelligence activities, provided that such investigation of a United States person is not conducted solely upon the basis of activities protected by the first amendment to the Constitution.*[3825]

Investigation has sought or obtained records pursuant to an order under this section. Congressional oversight was covered under the prior provisions by 50 U.S.C. §1863, which was similar, but not identical to the new Section 1862. The former Section 1863 stated:
(a) On a semiannual basis, the Attorney General shall fully inform the Permanent Select Committee on Intelligence of the House of Representatives and the Select Committee on Intelligence of the Senate concerning all request for records under this subchapter [50 U.S.C. § 1861 et seq.].
(b) On a semiannual basis, the Attorney General shall provide to the Committees on the Judiciary of the House of Representatives and the Senate a report setting forth with respect to the preceding 6-month period —
(1) the total number of applications made for orders approving requests for records under this subchapter [50 U.S.C. § 1861 et seq.]; and

(2) the total number of such orders either granted, modified, or denied.

[3825] The italicized portion of Section 1861(a)(1) was added by Section 314(a)(6) of P.L. 107-108. H.Rept. 107-328, the conference report to accompany H.R. 2883, the Intelligence Authorization Act for Fiscal Year 2002 (which became P.L. 107-108), at page 24, describes the purpose of this addition as follows: Section 215 of the USA PATRIOT Act of 2001 amended title V of the FISA, adding a new section 501 [50 U.S.C. § 1861]. Section 501(a) now authorizes the director of the FBI to apply for a court order to produce certain records "for an investigation to protect against international terrorism or clandestine intelligence activities." Section 501(b)(2) directs that the application for such records specify that the purpose of the investigation is to "obtain foreign intelligence information not concerning a United States person." However, section 501(a)(1), which generally authorizes the applications, does not contain equivalent language. Thus, subsections (a)(1) and (b)(2) now appear inconsistent.

The conferees agreed to a provision which adds the phrase "to obtain foreign intelligence information not concerning a United States person or" to section 501(a)(1). This would make the language of section 501(a)(1) consistent with the legislative history of section 215 of the USA PATRIOT Act (see 147 Cong. Rec. S11006 (daily ed. Oct. 25, 2001) (sectional analysis)) and with the language of section 214 of the USA PATRIOT Act (authorizing an application for an order to

Subsection 1861(a)(2) requires that such an investigation must be conducted under guidelines approved by the Attorney General under E.O. 12333 or a successor order and prohibits such an investigation of a United States person based solely upon First Amendment protected activities.

Under Subsection 1861(a)(3), which was added by Section 106(a)(2) of P.L. 109-177, if the application is for an order requiring production of library circulation records, library patron lists, book sales records, book customer lists, firearms sales records, tax return records, educational records, or medical records containing information that would identify a person, the Director of the Federal Bureau of Investigation may delegate the authority to make such application to either the Deputy Director of the Federal Bureau of Investigation or the Executive Assistant Director for National Security (or any successor position). The Deputy Director or the Executive Assistant Director may not further delegate such authority.

An application for an order under Section 1861 must be made to an FISC judge or to a U.S. magistrate judge publicly designated by the Chief Justice of the United States to hear such applications and grant such orders for the production of tangible things on behalf of an FISC judge.[3826] The application must contain a statement of facts showing that there are reasonable grounds to believe that the tangible things sought are relevant to an authorized investigation (other than a threat assessment) conducted in accordance with 50 U.S.C. § 1861(a)(2) to obtain foreign intelligence information not concerning a United States person or to protect against international terrorism or clandestine intelligence activities.[3827]

50 U.S.C. § 1861(c) — Issuance of FISC Production Order.

When such an application is made, if the judge finds that the application meets the requirements of subsections 1861(a) and (b), he or she must enter an ex parte

---

use pen registers and trap and trace devices to "obtain foreign intelligence information not concerning a United States person.").

[3826] 50 U.S.C. § 1861(b)(1).

[3827] 50 U.S.C. § 1861(b)(2), as amended by Section 106(b) of P.L. 109-177. As so amended, the tangible things sought are presumed to be relevant to an authorized investigation if the applicant shows, in the statement of facts, that they pertain to a foreign power or an agent of a foreign power; the activities of a suspected agent of a foreign power who is the subject of such authorized investigation; or an individual in contact with, or known to, a suspected agent of a foreign power who is the subject of such authorized investigation. 50 U.S.C. § 1861(b)(2)(A)(i)-(iii). The application must also include an enumeration of the minimization procedures adopted by the Attorney General under Subsection 1861(g) that are applicable to the retention and dissemination by the Federal Bureau of Investigation of any tangible things to be made available to the Federal Bureau of Investigation based on the order requested in such application. 50 U.S.C. § 1861(b)(2)(B).

order as requested, or as modified, approving the release of tangible things. The order must direct that minimization procedures adopted pursuant to subsection 1861(g) be followed.[3828]

An order issued under 50 U.S.C. § 1861(c) must: describe the tangible things that are ordered to be produced with sufficient particularity to permit them to be fairly identified; include the date on which the tangible things must be provided, which must allow a reasonable period of time within which the tangible things can be assembled and made available; and provide recipients with clear and conspicuous notice of nondisclosure requirements under Subsection 1861(d). The order may only require the production of a tangible thing which may be subject to a subpoena duces tecum issued by a court of the United States in aid of a grand jury investigation or to any other order issued by a court of the United States directing the production of records or tangible things. An order issued under 50 U.S.C. § 1861(c) shall not disclose that it is issued for purposes of an investigation described in Subsection 1861(a).[3829]

50 U.S.C. § 1861(d) — Prohibition on Disclosure.

Subsection 1861(d) prohibits any person to disclose that the FBI has sought or obtained tangible things under Section 1861, except where the disclosure is made to persons necessary to the production of tangible things involved, to an attorney to obtain legal advice or assistance with respect to the production of things in response to the order, or to other persons as permitted by the Director of the FBI or his designee.[3830] A person to whom such disclosure is made is also subject to these nondisclosure requirements, and must be put on notice of the nondisclosure requirements by the person making such disclosures to him or her. At the request of the Director of the FBI or his designee, anyone making or intending to make such a disclosure must identify to the Director or his designee the person to whom the disclosure was or is to be made.[3831]

50 U.S.C. § 1861(e) — Limitation on Liability for Good Faith Compliance with Production Order.

[3828] 50 U.S.C. § 1861(c)(1), as amended by Subsection 106(c) of P.L. 109-177.

[3829] 50 U.S.C. § 1861(c)(2), as amended by Subsection 106(d) of P.L. 109-177.

[3830] 50 U.S.C. § 1861(d)(1)(A)-(C), as amended by Subsection 106(e) of P.L. 109-177.

[3831] 50 U.S.C. § 1861(d)(2), as amended by Subsection 106(e) of P.L. 109-177, and further amended by Section 4 of P.L. 109-178. As amended by Subsection 106(e) of P.L. 109-177, subsection 1861(d)(2)(C) included an exception to the notification requirement in that a person was not required to notify the Director or his designee that he or she intended to consult an attorney to obtain legal advice or assistance. This exception was deleted by Section 4 of P.L. 109-178.

Subsection 1861(e) precludes liability for persons who, in good faith, produce tangible things under such a Section 1861 order. It further indicates that production does not constitute a waiver of any privilege in any other proceeding or context.

50 U.S.C. § 1861(f) — Petitions for Review of Production Orders and Related Nondisclosure Orders before FISC Petition Review Pool.

Subsection 1861(f), which was added by Subsection 106(f) of P.L. 109-177 and amended by Section 3 of P.L. 109-178, gives a person in receipt of a production order[3832] under 50 U.S.C. § 1861 a means by which to challenge the legality of such order by filing a petition before the petition review pool of the FISC established by 50 U.S.C. § 1803(e)(1). The recipient of a production order must wait at least one year after issuance of that order to challenge the nondisclosure order[3833] imposed in connection with the production order by filing a petition to modify or set aside the nondisclosure order before the petition review pool.[3834] The presiding judge must assign a petition filed with the pool under subsection 1861(f)(2)(A)(i) to one of the FISC judges in the pool immediately, and the judge receiving such petition must conduct an initial review of it within 72 hours. If the petition is deemed frivolous, the assigned judge must immediately deny it and affirm the production order or nondisclosure order at issue. If the assigned judge does not find the petition frivolous, he or she must promptly consider it under the PROCEDURES FOR REVIEW OF PETITIONS FILED PURSUANT TO SECTION 501(F) OF THE FOREIGN INTELLIGENCE SURVEILLANCE ACT OF 1978, AS AMENDED, established under 50 U.S.C. § 1803(e)(2), and provide a written statement for the record of the reasons for any determination made. An order setting aside a nondisclosure order may be stayed, upon request of the Government, pending review by the Court of Review.[3835]

A petition to modify or set aside a production order may only be granted if the judge finds the order does not meet the requirements of 50 U.S.C. § 1861 or is otherwise unlawful. If the judge does not modify or set aside the production order, he or she must immediately affirm the order and order the recipient to comply with it.[3836] A petition to modify or set aside a nondisclosure order may only be granted if the judge finds that there is no reason to believe that disclosure

---

[3832] The term "production order" is defined under 50 U.S.C. § 1861(f)(1)(A) to mean "an order to produce any tangible thing" under 50 U.S.C. § 1861.

[3833] The term "nondisclosure order" is defined under 50 U.S.C. § 1861(f)(1)(B) to mean "an order imposed under subsection [1861](d)."

[3834] 50 U.S.C. § 1861(f)(2)(A)(i).

[3835] 50 U.S.C. §1861(f)(2)(A)(ii) and (iii).

[3836] 50 U.S.C. § 1861(f)(2)(B).

may endanger U.S. national security; interfere with a criminal, counterterrorism, or counterintelligence investigation; interfere with diplomatic relations; or endanger the life or physical safety of any person. If, upon the filing of a petition to modify or set aside a nondisclosure order, the Attorney General, Deputy Attorney General, an Assistant Attorney General, or the Director of the FBI certifies that disclosure may endanger the national security of the United States or interfere with diplomatic relations, that certification will be treated as conclusive unless the judge finds that the certification was made in bad faith. If a petition to modify or set aside a nondisclosure order is denied, the recipient may not file another petition to modify or set aside that nondisclosure order for one year.[3837] A production order or nondisclosure order that is not explicitly modified or set aside under Section 1861 remains in full effect.[3838]

The Government or any person receiving a production or nondisclosure order may file a petition before the Court of Review to review a decision by a petition review pool judge to affirm, modify, or set aside such order. The Court of Review must provide a written statement of the reasons for its decision for the record. The record will be transmitted under seal to the U.S. Supreme Court for review on a petition for certiorari by the Government or any person receiving such order.[3839]

Judicial proceedings under 50 U.S.C. § 1861(f) are to be concluded as expeditiously as possible, and the record of such proceedings is to be maintained under security measures established by the Chief Justice of the United States, in consultation with the Attorney General and the Director of National Intelligence. Petitions are to be filed under seal. Upon the request of the Government, the court in proceedings under Subsection 1861(f) shall review ex parte and in camera any Government submissions, or portions thereof, which may contain classified information.[3840]

50 U.S.C. § 1861(h) — Use of Information Acquired from Tangible Things Received Under Production Order.

Subsection 1861(g), as added by Subsection 106(g) of P.L. 109-177, requires the Attorney General to adopt specific minimization procedures[3841] governing

[3837] 50 U.S.C. § 1861(f)(2)(C)(i), (ii), and (iii).

[3838] 50 U.S.C. § 1861(f)(2)(D).

[3839] 50 U.S.C. § 1861(f)(3).

[3840] 50 U.S.C. § 1861(f)(4) and (5).

[3841] Subsection 50 U.S.C. § 1861(g)(2) defines the term "minimization procedures" to mean:
(A) specific procedures that are reasonably designed in light of the purpose and technique of an order for the production of tangible things, to minimize the retention, and prohibit the dissemination, of nonpublicly available information concerning unconsenting United States

retention and dissemination by the FBI or any tangible things, or information in those things, received by the FBI in response to an order under 50 U.S.C. § 1861. Subsection 1861(h), also added by Subsection 106(g) of P.L. 109-177, provides that information acquired from tangible things received by the FBI pursuant to an order under 50 U.S.C. § 1861 concerning any U.S. person may be used and disclosed by federal officers and employees without that U.S. person's consent only in accordance with these minimization procedures. Otherwise privileged information acquired from tangible things received by the FBI title V of FISA, 50 U.S.C. §§ 1861-1862, retains its privileged character. Information acquired by the FBI under Section 1861 orders may only be used or disclosed by federal officers or employees for lawful purposes.

50 U.S.C. § 1862 — Congressional Oversight.

50 U.S.C. § 1862 deals with congressional oversight.[3842] Subsection 1862(a), as amended by Subsection 106(h) of P.L. 109-177, requires the Attorney General annually to fully inform the House Permanent Select Committee on Intelligence, the Senate Select Committee on Intelligence, and the House and Senate Committees on the Judiciary regarding all request for production of tangible things under Section 1861.[3843] Subsection 1862(b) requires the Attorney General, in April of each year, to report to the House and Senate Judiciary Committees with respect to the previous calendar year on the total number of applications for Section 1861 orders for production of tangible things; the total number of such orders granted, modified, or denied; and the number of such orders either granted, modified, or denied for the production of each of the following: library circulation records, library patron lists, book sales records, or book customer lists; firearms sales records; tax return records; educational records; and medical records containing information that would identify a person. Under Subsection 1862(c), in April of each year, the Attorney General is required to submit an

---

persons consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information;
(B) procedures that require that nonpublicly available information, which is not foreign intelligence information as defined in section 101(e)(1) [of FISA, 50 U.S.C. § 1801(e)(1)], shall not be disseminated in a manner that identifies any United States person, without such person's consent, unless such person's identity is necessary to understand foreign intelligence information or assess its importance; and

(C) notwithstanding subparagraphs (A) and (B), procedures that allow the retention and dissemination of information that is evidence of a crime which has been, is being, or is about to be committed and that is to be retained and disseminated for law enforcement purposes.

[3842] See also Section 6002 of P.L. 108-458, the Intelligence Reform and Terrorism Prevention Act of 2004, which added new reporting requirements codified at 50 U.S.C. § 1871. For a discussion of these additional reporting requirements, see fn. 165, infra, and accompanying text.

[3843] Section 314(a)(7) of P.L. 107-108 corrected two references in 50 U.S.C. § 1862 as passed in the USA PATRIOT Act. P.L. 107-108 replaced "section 1842 of this title" with "section 1861 of this title," in both places in 50 U.S.C. § 1862 where it appeared.

unclassified report to Congress with respect to the preceding year setting forth the total number of applications made for orders approving requests for the production of tangible things under 50 U.S.C. § 1861; and the total number of such orders either granted, modified, or denied.

Section 106A of P.L. 109-177 directs the Inspector General of the U.S. Department of Justice to perform a comprehensive audit of the effectiveness and use, including improper or illegal use, of the investigative authority under title V of FISA, 50 U.S.C. § 1861 et seq., for fiscal years 2002-2006, and sets out detailed requirements for the audit. The results of the audit are to be submitted in two unclassified reports (one for 2002-2004 and one for 2005-2006) to the House and Senate Judiciary Committees, the House Permanent Select Committee on Intelligence, and the Senate Select Committee on Intelligence.

50 U.S.C. § 1871 — Additional Reporting Requirements.

Section 6002 of P.L. 108-458, the Intelligence Reform and Terrorism Prevention Act of 2004, created additional semiannual reporting requirements under FISA. Under the new language, the Attorney General, on a semiannual basis, must submit to the House Permanent Select Committee on Intelligence, the Senate Select Committee on Intelligence, the House Judiciary Committee and the Senate Judiciary Committee, in a manner consistent with protection of national security, reports setting forth with respect to the preceding six month period:

(1) the aggregate number of persons targeted for orders issued under this Act, including a breakdown of those targeted for —
(A) electronic surveillance under section 105 [50 U.S.C. § 1805];
(B) physical searches under section 304 [50 U.S.C. § 1824];
(C) pen registers under section 402 [50 U.S.C. § 1842]; and
(D) access to records under section 501 [50 U.S.C. § 1861];
(2) the number of individuals covered by an order issued pursuant to section 101(b)(1)(C) [50 U.S.C. § 1801(b)(1)(C)];
(3) the number of times that the Attorney General has authorized that information obtained under this Act may be used in a criminal proceeding or any information derived therefrom may be used in a criminal proceeding;
(4) a summary of significant legal interpretations of this Act involving matters before the Foreign Intelligence Surveillance Court or the Foreign Intelligence Surveillance Court of Review, including interpretations presented in applications or pleadings filed with the Foreign Intelligence Surveillance Court or the Foreign Intelligence Court of Review by the Department of Justice; and
(5) copies of all decisions (not including orders) or opinions of the Foreign Intelligence Surveillance Court or Foreign Intelligence Surveillance Court of

Review that include significant construction or interpretation of the provisions of this Act.[3844]

Private Right of Action in U.S. District Court for Those Aggrieved by Willful Violations of 50 U.S.C. §§ 1806(a), 1825(a), or 1845(a) of FISA

In addition to provisions which amended FISA explicitly, other provisions of the USA PATRIOT Act, P.L. 107-56, touched upon FISA, at least tangentially. For example, Section 223 of P.L. 107-56, among other things, created a new 18 U.S.C. § 2712. This new section, in part, created an exclusive private right of action for any person aggrieved by any willful violation of sections 106(a), 305(a), or 405(a) of FISA (50 U.S.C. §§ 1806(a), 1825(a), 1845(a), respectively) to be brought against the United States in U.S. district court to recover money damages. Such monetary relief would amount to either actual damages or $10,000, whichever is greater; and reasonably incurred litigation costs. It also set forth applicable procedures.[3845]

[3844] These new reporting requirements were added to the Foreign Intelligence Surveillance Act, as amended, as a new Title VI of the Act, 50 U.S.C. § 1871.

[3845] Another provision, Section 901 of the USA PATRIOT Act, amended 50 U.S.C. § 4033(c) (Section 103(c) of the National Security Act of 1947) regarding the responsibilities of the Director of Central Intelligence (DCI). The amendment added to those authorities and responsibilities, placing upon the DCI the responsibility to establish

... requirements and priorities for foreign intelligence information to be collected under the Foreign Intelligence Surveillance Act of 1978 (50 U.S.C. § 1801 et seq.), and provide assistance to the Attorney General to ensure that information derived from electronic surveillance or physical searches under that Act is disseminated so it may be used efficiently and effectively for foreign intelligence purposes, except that the Director shall have no authority to direct, manage, or undertake electronic surveillance or physical search operations pursuant to that Act unless otherwise authorized by statute or Executive order.

Section 1011 of the Intelligence Reform and Terrorism Prevention Act of 2004, P.L.108-458, amended Title I of the National Security Act of 1947, 50 U.S.C. § 402 et seq., to strike the previous Sections 102 through 104 of the Act 50 U.S.C. §§ 403, 403-1, 403-3, and 403-4, and insert new Sections 102 through 104A. The new Section 102 created the position of Director of National Intelligence (DNI). Section 102A outlined authorities and responsibilities of the position. Under the new Section 102A(f)(6) of the National Security Act, the DNI was given responsibility:

to establish requirements and priorities for foreign intelligence information to be collected under [FISA], and provide assistance to the Attorney General to ensure that information derived from electronic surveillance or physical searches under that act is disseminated so that it may be used efficiently and effectively for foreign intelligence purposes, except that the Director shall have no authority to direct, manage, or undertake electronic surveillance or physical search operations pursuant to that act unless otherwise authorized by statute or Executive order.

New Section 102A(f)(8) of the National Security Act, as enacted by P.L. 108-458, Section 1011, provided that, "Nothing in this act shall be construed as affecting the role of the Department of Justice or the Attorney General with respect to applications under the Foreign Intelligence

Sunset Provisions

Section 224 of the USA PATRIOT Act set a sunset for many of the provisions in P.L. 107-56 of December 31, 2005, including all of the FISA amendments except that in Section 208 of P.L. 107-56, which increased the number of FISC judges from 7 to 11. Section 224 was repealed by the USA PATRIOT Improvement and Reauthorization Act of 2005, P.L. 109-177, Subsection 102(a). Subsection 102(b) of P.L. 109-177 provided that Sections 105(c)(2) of FISA, 50 U.S.C. § 1805(c)(2) (dealing with multipoint or roving wiretaps under FISA), 501 of FISA, 50 U.S.C. § 1861 (dealing with production of any tangible thing under FISA), and 502 of FISA, 50 U.S.C. § 1862 (dealing with congressional oversight of such production under FISA) will sunset on December 31, 2009. However, Subsection 102(b) of P.L. 109177 excepts from the application of the sunset provision any particular foreign intelligence investigations that began before December 31, 2009, or any criminal offenses or potential offenses which began or occurred before December 31, 2009. As to those particular investigations or offenses, applicable provisions would continue in effect after December 31, 2009.

Section 6001(a) of the Intelligence Reform and Terrorism Prevention Act of 2004, P.L. 108-458, expanded the definition of "agent of a foreign power" in 50 U.S.C. § 1801(b)(1)(C) to include any person other than a U.S. person who engages in international terrorism or activities in preparation for international terrorism.[3846] Under Section 103 of P.L. 109-177, this so-called "lone wolf" terrorist provision will also sunset on December 31, 2009, except with respect to any particular foreign intelligence investigation that began before that date, or with respect to any particular offense or potential offense that began or occurred before that date.

Published Decisions of the FISC and the U.S. Foreign Intelligence Surveillance Court of Review

The FISC Decision

Summary

In its May 17, 2002, decision, the FISC considered a government motion for the court "to vacate the minimization and 'wall' procedures in all cases now or ever before the Court, including this Court's adoption of the Attorney General's July 1995 intelligence sharing procedures, which are not consistent with new

---

Surveillance Act." Section 1071(e) of P.L. 108-458, amended FISA to insert "Director of National Intelligence" in lieu of "Director of Central Intelligence" in each place in which it appeared.

[3846] Before the repeal of Section 224 of P.L.107-56,, the sunset provision in Section 224 and the exceptions thereto, as amended, also applied to "lone wolf" terrorist provision added to the definition of "agent of a foreign power"" in 50 U.S.C. § 1801(b)(1)(C) by Section 6001(a) of P.L. 108-458.

intelligence sharing procedures submitted for approval with this motion."[3847] The court viewed the new intelligence sharing procedures under review as proposed new Attorney General minimization procedures. In a memorandum and order written by the then Presiding Judge, U.S. District Court Judge Royce Lamberth, issued on the last day of his tenure on the FISC, and concurred in by all of the judges then sitting on the FISC, the FISC granted the Department of Justice (DOJ) motion with significant modifications to section II.B. of what the FISC characterized as the proposed minimization procedures. The court required a continuation of the Attorney General's 1995 minimization procedures, as subsequently modified by the Attorney General and the Deputy Attorney General, and preservation of a "wall" procedure to maintain separation between FBI criminal investigators and DOJ prosecutors and raw FISA investigation data regarding the same facts or individuals, so as to prevent these law enforcement personnel from becoming "de facto partners in FISA surveillances and searches,"[3848] while permitting extensive sharing of information between such investigations.

The FISC was particularly concerned with those aspects of section II.B. of the proposed procedures which would permit criminal prosecutors and law enforcement officers to initiate, direct or control electronic surveillance or physical searches under FISA, with an eye towards law enforcement objectives, rather than foreign intelligence information gathering. The FISC set the stage for its analysis by recounting a significant number of past instances where FISA applications had included false, inaccurate or misleading information regarding information sharing or compliance with "wall" procedures in FBI affidavits or, in one case, in a statutorily required certification by the FBI Director; and past occasions where the FISC's orders had been violated in regard to information sharing and unauthorized dissemination of FISA information to criminal investigators and prosecutors. While both the FBI's and DOJ's Offices of Professional Responsibility had been investigating these incidents for over a year

[3847] In re All Matters Submitted to the Foreign Intelligence Surveillance Court, 218 F. Supp. 2d 611, 613 (U.S. Foreign Intell. Surveil. Ct. 2002). A copy of a March 6, 2002, Memorandum from the Attorney General to the Director, FBI; Assistant Attorney General, Criminal Division; Counsel for Intelligence Policy; and United States Attorneys entitled "Intelligence Sharing Procedures for Foreign Intelligence and Foreign Counterintelligence Investigations Conducted by the FBI " may be found at [http://fas.org/irp/agency/doj/fisa/ag030602.html].

[3848] *Id.* at 620. In Chapter 3 of The 9/11 Commission Report, Final Report of the National Commission on Terrorist Attacks Upon the United States 78-80 (W.W. Norton & Co. 2004) (Final Report), the Commission perceived the evolution of the "wall" as a result of statutory language, court interpretation, DOJ interpretation of the legislative language and court decisions, DOJ procedures to manage information sharing between Justice Department prosecutors and the FBI, misunderstanding and misapplication of those procedures, DOJ's Office of Intelligence Policy and Review's (OIPR) stringent exercise of its gate-keeping role, and inaccurate perceptions of field agents. In Chapter 8 of the Final Report, at 269-72, the Commission recounted some of the effects of what it saw as the confusion surrounding the rules governing the use and sharing of information gathered through intelligence channels.

at the time of the writing of the opinion, the court had not been advised of any explanations as to how such misrepresentations had occurred. The court's dissatisfaction with these irregularities formed a backdrop for its analysis of the motion and applications before it.

Discussion of the Memorandum Opinion and Order.

Its analysis was based upon its reading of the statutory language and premised, in part, on the fact that the USA PATRIOT Act had not amended the provisions of FISA dealing with minimization requirements, although other FISA provisions had been modified. The minimization provisions with respect to both electronic surveillance and physical searches under FISA continue to be designed to "minimize the acquisition and retention, and prohibit the dissemination, of non-publicly available information concerning unconsenting United States persons, consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information."[3849] The court regarded the standard it applied to the proposed procedures before it as "mandated in [50 U.S.C.] § 1805(a)(4) and § 1824(a)(4), which state that 'the proposed minimization procedures meet the definition of minimization procedures under § 101(h), [§ 1801(h) and §1824(4)] of the act.'"

In its memorandum opinion, the FISC first discussed the court's jurisdiction, noting that the text of the statute "leaves little doubt that the collection of foreign intelligence information is the raison d'etre for the FISA."[3850] The court found support for this conclusion in a review of pertinent provisions of the act. It found further support in E.O. 12139 and E.O. 12949, which give the Attorney General

---

[3849] 50 U.S.C. §§ 1802(h), 1821(4)(A) (emphasis added).

[3850] FISC op., 218 F. Supp. 2d at 613. "Foreign intelligence information" is a term of art in FISA, defined in 50 U.S.C. § 1801(e) to mean:

(e) (1) information that relates to, and if concerning a United States person is necessary to, the ability of the United States to protect against —

(A) actual or potential attack or other grave hostile acts of a foreign power or an agent of a foreign power;

(B) sabotage or international terrorism by a foreign power or an agent of a foreign power; or

(C) clandestine intelligence activities by an intelligence service or network of a foreign power or by an agent of a foreign power; or

(2) information with respect to a foreign power or foreign territory that relates to, and if concerning a U.S. person is necessary to —

(A) the national defense or the security of the United States; or

(B) the conduct of the foreign affairs of the United States.

In reaching its decision, the FISC indicated that it was not addressing directly the Department of Justice argument that, so long as a significant purpose of a FISA surveillance or physical search was to gather foreign intelligence information, the primary purpose of such an investigation could be criminal investigation or prosecution. FISC op., 218 F. Supp. 2d at 615 n.2. The FISC was not receptive to the DOJ theory that a "wall" procedure separating a foreign intelligence investigation under FISA from a criminal investigation involving the same target or factual underpinnings was an artificial separation which was not compelled by FISA.

authority to approve the filing of applications for orders for electronic surveillances and physical searches and authorize the Director of the FBI and other senior executives to make required certifications under FISA for the "purpose of obtaining foreign intelligence information." The FISC therefore concluded that its jurisdiction was limited to granting FISA orders for electronic surveillance and physical searches for the collection of foreign intelligence information under the standards and procedures prescribed in the act.[3851] In reaching this conclusion, the FISC, in a footnote, characterized the issue before it as "whether the FISA authorizes electronic surveillance and physical searches primarily for law enforcement purposes so long as the Government also has 'a significant' foreign intelligence purpose." Rejecting the approach taken by the Government in its supplemental brief in the case, the Court stated that "its decision is not based on the issue of its jurisdiction but on the interpretation of minimization procedures."[3852] Maintaining its focus upon the minimization procedures, the FISC also declined to reach the question raised by the Attorney General "whether FISA may be used primarily for law enforcement purposes."[3853]

The court also regarded the scope of its findings regarding minimization[3854] as applicable "only to communications concerning U.S. persons as defined in §

[3851] FISC op., 218 F. Supp. 2d at 614.

[3852] *Id.* at 614 n.1(emphasis added).

[3853] *Id.* at 615 n.2.

[3854] FISA defines "minimization procedures" with respect to electronic surveillance in 50 U.S.C. § 1801(h). The term is defined under FISA with respect to physical searches in 50 U.S.C. § 1821(4). As the two definitions are similar, the definition from Section 1801(h) is included for illustrative purposes.

(h) "Minimization procedures", with respect to electronic surveillance, means —

(1) specific procedures, which shall be adopted by the Attorney General, that are reasonably designed in light of the purpose and technique of the particular surveillance, to minimize the acquisition and retention, and prohibit the dissemination, of nonpublicly available information concerning unconsenting United States persons consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information;

(2) procedures that require that nonpublicly available information, which is not foreign intelligence information, as defined in subsection (e)(1) of this section, shall not be disseminated in a manner that identifies any United States person, without such person's consent, unless such person's identity is necessary to understand foreign intelligence information or assess its importance;

(3) notwithstanding paragraphs (1) and (2), procedures that allow for the retention and dissemination of information that is evidence of a crime which has been, is being, or is about to be committed and that is to be retained or disseminated for law enforcement purposes; and

(4) notwithstanding paragraphs (1), (2), and (3), with respect to any electronic surveillance approved pursuant to section (1802(a) of this title, procedures that require that no contents of any communication to which a United States person is a party shall be disclosed, disseminated, or used for any purpose or retained for longer than 72 hours unless a court order under section 1805 of this title is obtained or unless the Attorney General determines that the information indicates a threat of death or serious bodily harm to any person.

1801(i) of the act: U.S. citizens and permanent resident aliens whether or not they are named targets in the electronic surveillance and physical searches."[3855] It emphasized that its opinion was not applicable to communications of foreign powers as defined under 50 U.S.C. § 1801(a), or to non-U.S. persons.[3856]

After stating its continued approval of the "Standard Minimization Procedures for a U.S. Person Agent of a Foreign Power," the court turned its attention to two sections of supplementary minimization procedures adopted by the Attorney General on March 6, 2002, regarding "II. Intelligence sharing procedures concerning the Criminal Division," and "III. Intelligence sharing procedures concerning a USAO [U.S. Attorney's Office]." The FISC regarded these procedures as minimization procedures as that term is defined under FISA by virtue of the fact that they were adopted by the Attorney General and were "designed to minimize the acquisition and retention, and prohibit the dissemination, of nonpublicly available information concerning unconsenting United States persons."[3857] Therefore, these procedures were measured against the standard for minimization procedures set forth in 50 U.S.C. §§ 1805(a)(4) and 1824(a)(4):

> *... The operative language of each section to be applied by the Court provides that minimization procedures must be reasonably designed in light of their purpose and technique, and mean —*
>
> *specific procedures, which shall be adopted by the Attorney General, that are reasonably designed in light of the purpose and technique of the particular surveillance, [search] to minimize the acquisition and retention, and prohibit the dissemination, of nonpublicly available information concerning unconsenting United States persons consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information. §1801(h)(1) and §1821(4)(A).*[3858]

The court then reviewed the minimization procedures upon which it had been relying prior to the application before it, to wit, the Attorney General's 1995

[3855] FISC op., 218 F. Supp. 2d at 614. This provision defines a "United States person" as follows:

... a citizen of the United States, an alien lawfully admitted for permanent residence (as defined in section 1101(a)(20) of Title 8), an unincorporated association a substantial number of members of which are citizens of the United States or aliens lawfully admitted for permanent residence, or a corporation which is incorporated in the United States, but does not include a corporation or an association which is a foreign power, as defined in subsection (a)(1), (2), or (3) of this section.

[3856] *Id.*

[3857] *Id.* at 616.

[3858] *Id.*

"Procedures for Contacts between the FBI and Criminal Division Concerning FI [Foreign Intelligence] and Foreign Counterintelligence Investigations," as augmented by the Attorney General in January 2000 and expanded further by the Deputy Attorney General in August 2001. The FISC indicated that these procedures permitted the following "substantial consultation and coordination":

a. reasonable indications of significant federal crimes in FISA cases are to be reported to the Criminal Division of the Department of Justice;
b. [t]he Criminal Division may then consult with the FBI and give guidance to the FBI aimed at preserving the option of criminal prosecution, but may not direct or control the FISA investigation toward law enforcement objectives;
c. the Criminal Division may consult further with the appropriate U.S. Attorney's Office about such FISA cases;
d. on a monthly basis senior officials of the FBI provide briefings to senior officials of the Justice Department, including OIPR [Office of Intelligence Policy and Review] and the Criminal Division, about intelligence cases, including those in which FISA is or may be used;
e. all FBI 90-day interim reports and annual reports of counterintelligence investigations, including FISA cases, are being provided to the Criminal Division, and must now contain a section explicitly identifying any possible federal criminal violations;
f. all requests for initiation or renewal of FISA authority must now contain a section devoted explicitly to identifying any possible federal criminal violations;
g. the FBI is to provide monthly briefings directly to the Criminal Division concerning all counterintelligence investigations in which there is a reasonable indication of a significant federal crime;
h. prior to each briefing the Criminal Division is to identify (from FBI reports) those intelligence investigations about which it requires additional information and the FBI is to provide the information requested; and
i. since September 11, 2001, the requirement that OIPR be present at all meetings and discussions between the FBI and Criminal Division involving certain FISA cases has been suspended; instead, OIPR reviews a daily briefing book to inform itself and this Court about those discussions.[3859]

The FISC indicated further that it "routinely approved the use of information screening 'walls' proposed by the government in its applications" to maintain both the appearance and the fact that FISA surveillances and searches were not being used "sub rosa for criminal investigations."[3860] In March 2000, September

---

[3859] *Id.* at 619-20 (emphasis supplied.)

[3860] *Id.* at 620.

2000, and March 2001, the FISC was advised by the Department of Justice of a significant number of erroneous statements or omissions of material facts in FISA applications, almost all of which involved misstatements or omissions as to information sharing and unauthorized disseminations to criminal investigators and prosecutors.[3861] Although the FBI and the Department of Justice Office of Professional Responsibility had been investigating the circumstances involved in these misstatements and omissions for over a year, as of the date of the opinion, the court had not been advised of the reasons for these erroneous statements. The court responded to these concerns in 2001 by instituting supervisory measures to assess compliance with "wall" procedures.

In the case before the FISC, the government moved that all "wall" procedures be eliminated in international terrorism surveillances and physical searches under FISA. The FISC indicated that the new 2002 procedures proposed by the Attorney General would apply to two types of cases in which "*FISA is the only effective tool available* to both counterintelligence and criminal investigators" (emphasis supplied) — those involving overlapping investigations (which the court described as cases, usually international terrorism cases, in which separate intelligence and criminal investigations of the same FISA target who is a U.S. person are conducted by different FBI agents, where separation can easily be maintained) and those involving overlapping interests (i.e., cases in which one investigation of a U.S. person FISA target is conducted by a team of FBI agents with both intelligence and criminal interests "usually involving espionage and similar cases in which separation is impractical").[3862] In both types of investigations, the FISC indicated that the 2002 proposed minimization procedures provided authority for "extensive consultations between the FBI and criminal prosecutors 'to coordinate efforts to investigate or protect against actual or potential attack, sabotage, international terrorism and clandestine intelligence activities by foreign powers and their agents....'" Such consultation is expressly provided for in 50 U.S.C. §§ 1806(k)(1) and 1825(k)(1).

Under the proposed minimization procedures, those consultations would include providing prosecutors with access to "all information" developed in FBI counterintelligence investigations, including through FISA, among other information. Section II.B. of the proposed minimization techniques would authorize criminal prosecutors to "consult extensively and provide advice and recommendations to intelligence officials about 'all issues necessary to the ability of the United States to investigate or protect against foreign attack, sabotage, terrorism, and clandestine intelligence activities.'" The FISC was particularly

---

[3861] The September 2000 notification to the FISC from the Department of Justice identified 75 cases of cases involving misstatements or omissions in FISA applications. The court does not indicate the specific number of FISA applications involved in the notifications on the other dates mentioned in the opinion. See FISC op., 218 F. Supp. 2d at 620-21.

[3862] FISC op., 218 F. Supp. 2d at 622.

concerned about the authority given criminal prosecutors under Section II.B. "to advise *FBI intelligence officials concerning 'the initiation, operation, continuation, or expansion of FISA searches or surveillance*.'"[3863] The court regarded this provision as "designed to use this Court's orders to enhance criminal investigation and prosecution, consistent with the government's interpretation of the recent amendments that FISA may now be 'used *primarily* for a law enforcement purpose.'"[3864] Under section III of the proposed procedures, U.S. attorneys are given the authority to engage in consultations to the same extent as the Criminal Division of DOJ under parts II.A. and II.B. in cases involving international terrorism. The FISC interpreted these procedures as giving criminal prosecutors "a significant role directing FISA surveillances and searches from start to finish in counterintelligence cases involving overlapping intelligence and criminal investigations or interests, guiding them to criminal prosecution."[3865]

In light of the court's past experience with FISA searches and surveillances, the FISC found the proposed procedures to be "designed to enhance the acquisition, retention and dissemination of *evidence for law enforcement purposes, instead* of being consistent with the need of the United States to 'obtain, produce, and disseminate *foreign intelligence information*' (emphasis added [by the FISC]) as mandated in § 1801(h) and § 1821(4)."[3866] The court regarded the procedures as, in effect, an effort by the government to amend FISA's definition of minimization procedures in ways that Congress had not and to substitute FISA for the electronic surveillance requirements of Title III of the Omnibus Crime Control and Safe Streets Act, 18 U.S.C. § 2510 et seq., and for the search warrant requirements in Rule 41 of the Federal Rules of Criminal Procedure. The court found this unacceptable. Nor was the court persuaded by the government's contention that the 1995 procedures' prohibition against criminal prosecutors "directing or controlling" FISA cases should be revoked. "If criminal prosecutors direct both the intelligence and criminal investigations, or a single investigation having combined interests, *coordination becomes subordination* of both investigations or interests to law enforcement objectives."[3867]

The FISC stated:

[3863] *Id.* at 623.

[3864] *Id.* (Emphasis added).

[3865] *Id.*

[3866] *Id.*

[3867] *Id.* at 623-24 (emphasis in original).

> *Advising FBI intelligence officials on the initiation, operation, continuation or expansion of FISA surveillances and searches of U.S. persons means that criminal prosecutors will tell the FBI when to use FISA (perhaps when they lack probable cause for a Title III electronic surveillance), what techniques to use, what information to look for, what information to keep as evidence and when use of FISA can cease because there is enough evidence to arrest and prosecute. The 2002 minimization procedures give the Department's criminal prosecutors every legal advantage conceived by Congress to be used by U.S. intelligence agencies to collect foreign intelligence information, ... based on a standard that the U.S. person is only using or about to use the places to be surveilled or searched, without any notice to the target unless arrested and prosecuted, and, if prosecuted, no adversarial discovery of the FISA applications and warrants. All of this may be done by use of procedures intended to minimize collection of U.S. person information, consistent with the need of the United States to obtain and produce foreign intelligence information. If direction of counterintelligence cases involving the use of highly intrusive FISA surveillances and searches by criminal prosecutors is necessary to obtain and produce foreign intelligence information, it is yet to be explained to the Court.*[3868]

Having found section II.B. of the proposed minimization procedures inconsistent with the statutory standard for minimization procedures under 50 U.S.C. §§ 1801(h) and 1821(4), the court substituted its own language in place of the second and third paragraphs of II.B. as submitted by the Attorney General. The substitute language permitted consultation between the FBI, the Criminal Division of DOJ, and the Office of Intelligence Policy and Review of DOJ (OIPR) "to coordinate their efforts to investigate or protect against foreign attack or other grave hostile acts, sabotage, international terrorism, or clandestine intelligence activities by foreign powers or [agents of foreign powers]," so that the goals and objectives of both the intelligence and law enforcement investigations or interests may be achieved. However, it prohibited law enforcement officials from making recommendations to intelligence officials regarding initiation, operation, continuation, or expansion of FISA surveillances and searches. In addition, the substitute language foreclosed law enforcement officials from directing or controlling the use of FISA procedures to enhance criminal prosecution; nor was advice intended to preserve the option of criminal prosecution to be permitted to inadvertently result in the Criminal Division directing or controlling an investigation involving FISA surveillance or physical searches to achieve law

---

[3868] *Id.* at 624.

enforcement objectives.[3869] While direct consultation and coordination were permitted, the substitute language required OIPR to be invited to all such consultations and, where OIPR was unable to attend, the language required OIPR to be apprized forthwith in writing of the substance of the consultations, so that the FISC could be notified at the earliest opportunity.[3870]

In its order accompanying the FISC memorandum opinion, the court held that the proposed minimization procedures, so modified, would be applicable to all future electronic surveillances and physical searches under FISA, subject to the approval of the court in each instance.[3871] In this order, the court also adopted a new administrative rule to monitor compliance. The new Rule 11 regarding criminal investigations in FISA cases provided:

> *All FISA applications shall include informative descriptions of any ongoing criminal investigations of FISA targets, as well as the substance of any consultations between the FBI and criminal prosecutors at the Department of Justice or a United States Attorney's Office.*[3872]

The Decision of the U.S. Foreign Intelligence Surveillance Court of Review

Summary

The FISC memorandum opinion and order discussed above were not appealed directly. Rather, the Department of Justice sought review in the U.S. Foreign Intelligence Surveillance Court of Review (Court of Review) of an FISC order which authorized electronic surveillance of an agent of a foreign power, but imposed restrictions on the government flowing from the FISC's May 17th decision, and of an order renewing that surveillance subject to the same restrictions. Because of the electronic surveillance context of these orders, the Court of Review's analysis was cast primarily in terms of such surveillance, although some aspects of its analysis may have broader application to other aspects of FISA. In its first decision ever, the Court of Review, in a lengthy per curiam opinion issued on November 18, 2002, reversed and remanded the FISC orders. In so doing the Court of Review emphasized that the May 17th decision, although never appealed, was "the basic decision before us and it [was] its

[3870] *Id.*

[3871] *Id.* at 627.

[3872] *Id.*

rationale that the government challenge[d]."[3873] After reviewing the briefs of the government and two amici curiae, the American Civil Liberties Union (joined on the brief by the Center for Democracy and Technology, the Center for National Security Studies, the Electronic Privacy Information Center, and the Electronic Frontier Foundation) and the National Association of Criminal Defense Lawyers, the Court of Review concluded that "FISA, as amended by the Patriot Act, supports the government's position, and that the restrictions imposed by the FISA court are not required by FISA or the Constitution."[3874]

Discussion of the Opinion

The Court of Review began its analysis by articulating its view of the May 17th FISC decision. The Court of Review stated that the FISC appeared to proceed in its opinion from the assumption that FISA constructed a barrier between counterintelligence/intelligence officials and law enforcement officers in the Executive Branch, but did not support that assumption with any relevant language from the statute.[3875] The Court of Review opined that this "wall" was implicit in the FISC's "apparent" belief that "it can approve applications for electronic surveillance only if the government's objective is not primarily directed toward criminal prosecution of the foreign agents for their foreign intelligence activity," while referencing neither statutory language in FISA nor USA PATRIOT Act amendments, which the government argued altered FISA to permit an application even if criminal prosecution was the primary goal.[3876] Instead, the Court of Review noted that the FISC relied upon its statutory authority to approve "minimization procedures" in imposing the restrictions at issue.

The Court of Review stated that the government raised two main arguments:
First, DOJ contended that the restriction, recognized by several courts of appeals[3877] prior to the enactment of the USA PATRIOT Act, that FISA could only

[3873] In re Sealed Case, 310 F.3d 717, 721 (U.S. Foreign Intell. Surveil. Ct. Rev. 2002) (hereinafter Court of Review op.).

[3874] *Id.* at 719-20.

[3875] *Id.* at 721.

[3876] *Id.*

[3877] The cases to which this appears to refer include decisions by both U.S. courts of appeals and U.S. district courts. Past cases considering the constitutional sufficiency of FISA in the context of electronic surveillance have rejected Fourth Amendment challenges and due process challenges under the Fifth Amendment to the use of information gleaned from a FISA electronic surveillance in a subsequent criminal prosecution, because the purpose of the FISA electronic surveillance, both initially and throughout the surveillance, was to secure foreign intelligence information and not primarily oriented towards criminal investigation or prosecution, United States v. Megahey, 553 F. Supp. 1180, 1185-1193 (D.N.Y.), aff'd without opinion, 729 F.2d 1444 (2d Cir. 1982), re-aff'd post-trial sub nom United States v. Duggan, 743 F.2d 59 (2d Cir. 1984); United States v. Ott, 827 F.2d 473, 475 (9th Cir. 1987); United States. v Badia, 827 F. 2d 1458, 1464 (11th Cir. 1987). See also, United States v. Johnson, 952 F.2d 565, 572 (1st Cir. 1991), rehearing and cert. denied,

506 U.S. 816 (1991) (holding that, although evidence obtained in FISA electronic surveillance may later be used in a criminal prosecution, criminal investigation may not be the primary purpose of the surveillance, and FISA may not be used as an end-run around the 4th Amendment); United States v. Pelton, 835 F.2d 1067, 1074-76 (4th Cir. 1987), cert. denied, 486 U.S.1010 (1987) (holding that electronic surveillance under FISA passed constitutional muster where the primary purpose of surveillance, initially and throughout surveillance, was gathering of foreign intelligence information; also held that an otherwise valid FISA surveillance was not invalidated because later use of the fruits of the surveillance in criminal prosecution could be anticipated. In addition, the court rejected Pelton's challenge to FISA on the ground that allowing any electronic surveillance on less than the traditional probable cause standard — i.e. probable cause to believe the suspect has committed, is committing, or is about to commit a crime for which electronic surveillance is permitted, and that the interception will obtain communications concerning that offense — for issuance of a search warrant was violative of the Fourth Amendment, finding FISA's provisions to be reasonable both in relation to the legitimate need of Government for foreign intelligence information and the protected rights of U.S. citizens); United States v. Cavanaugh, 807 F.2d 787, 790-91 (9th Cir. 1987) (defendant, convicted of espionage, appealed district court's refusal to suppress fruits of FISA electronic surveillance which intercepted defendant offering to sell defense secrets to representatives of Soviet Union. In affirming conviction, appellate court found FISA procedures had been followed, and upheld FISA against constitutional challenges. Court found, in part, that FISA probable cause requirement was reasonable under Fourth Amendment standard. "The application must state that the target of the electronic surveillance is a foreign power or an agent of a foreign power, and must certify that the purpose of the surveillance is to obtain foreign intelligence information and that the information cannot reasonably be obtained by normal investigative techniques. 50 U.S.C. § 1804(a). It is true, as appellant points out in his brief, that the application need not state that the surveillance is likely to uncover evidence of a crime; but as the purpose of the surveillance is not to ferret out criminal activity but rather to gather intelligence, such a requirement would be illogical. See United States District Court, 407 U.S. at 322 (recognizing distinction between surveillance for national security purposes and surveillance of 'ordinary crime'); ... And ... there is no merit to the contention that he is entitled to suppression simply because evidence of his criminal conduct was discovered incidentally as the result of an intelligence surveillance not supported by probable cause of criminal activity. See Duggan, 743 F.2d at 73n.5.") United States v. Rahman, 861 F. Supp. 247, 251 (S.D. N.Y. 1994). Cf., United States v. Bin Laden, 2001 U.S. Dist. LEXIS 15484 (S.D. N.Y., October 2, 2001); United States v. Bin Laden, 126 F. Supp. 264, 277-78 (S.D. N.Y. 2000) (adopting foreign intelligence exception to the warrant requirement for searches targeting foreign powers or agents of foreign powers abroad; noting that this "exception to the warrant requirement applies until and unless the primary purpose of the searches stops being foreign intelligence collection.... If foreign intelligence collection is merely a purpose and not the primary purpose of a search, the exception does not apply.")

Cf., United States v. Sarkissian, 841 F.2d 959, 964-65 (9th Cir. 1988) (FISA court order authorized electronic surveillance, which resulted in the discovery of plan to bomb the Honorary Turkish Consulate in Philadelphia, and of the fact that bomb components were being transported by plane from Los Angeles. The FBI identified likely airlines, flight plans, anticipated time of arrival, and suspected courier. Shortly before the arrival of a flight fitting these parameters, the investigation focused upon an individual anticipated to be a passenger on that flight. An undercover police officer spotted a man matching the suspected courier's description on that flight. The luggage from that flight was sniffed by a trained dog and x-rayed. A warrantless search was conducted of a suitcase that had been shown by x-ray to contain an unassembled bomb. Defendants unsuccessfully moved to suppress the evidence from the FISA wiretap and the warrantless search. On appeal the court upheld the warrantless suitcase search as supported by exigent circumstances. Defendants contended that the FBI's primary purpose for the surveillance had shifted at the time of the wiretap from an intelligence investigation to a criminal investigation

be used if the government's primary purpose in gathering foreign intelligence information was not criminal prosecution, was not supported by the statutory language or the legislative history of FISA. This argument was not presented to the FISC, but the Court of Review indicated that it could entertain the argument, because proceedings before the FISC and before the Court of Review were *ex parte*.[3878] Second, the government argued that, even if the primary purpose test was appropriate prior to the passage of the USA PATRIOT Act, the amendments made by that act eliminated that concept. The government also argued that the FISC's interpretation of the minimization procedures provisions misconstrued those provisions and amounted to "an end run" around the USA PATRIOT Act amendments. DOJ argued further that the FISC minimization procedures so intruded into the Department's operations as to be beyond the constitutional

---

and that court approval for the wiretap therefore should have been sought under Title III of the Omnibus Crime Control and Safe Streets Act, 18 U.S.C. § 2510 et seq., rather than FISA. The court, while noting that in other cases it had state that "the purpose of [electronic] surveillance" under FISA "must be to secure foreign intelligence information," "not to ferret out criminal activity;" declined to decide the issue of whether the applicable standard was that "the purpose" or that "the primary purpose" of a FISA surveillance must be gathering of foreign intelligence information. The court stated, "Regardless of whether the test is one of purpose or primary purpose, our review of the government's FISA materials convinces us that it is met in this case.... We refuse to draw too fine a distinction between criminal and intelligence investigations. "International terrorism," by definition, requires the investigation of activities that constitute crimes. 50 U.S.C. § 1806(f). That the government may later choose to prosecute is irrelevant. FISA contemplates prosecution based on evidence gathered through surveillance.... "Surveillances ... need not stop once conclusive evidence of a crime is obtained, but instead may be extended longer where protective measures other than arrest and prosecution are more appropriate." S. Rep. No. 701, 95th Cong., 1st Sess. 11 ... [(1978)].... FISA is meant to take into account "the differences between ordinary criminal investigations to gather evidence of specific crimes and foreign counterintelligence investigations to uncover and monitor clandestine activities ..." *Id.* .... At no point was this case an ordinary criminal investigation."). Cf., United States v. Falvey, 540 F. Supp. 1306 (E.D.N.Y. 1982) (distinguishing United States v. Truong Dinh Hung, 629 F.2d 908, 912-13 (4th Cir. 1980); and United States v. Butenko, 494 F.2d 593, 606 (3d Cir.) (en banc), cert. denied sub nom, Ivanov v. United States, 419 U.S. 881 (1974), which held that, while warrantless electronic surveillance for foreign intelligence purposes was permissible, when the purpose or primary purpose of the surveillance is to obtain evidence of criminal activity, evidence obtained by warrantless electronic surveillance is inadmissible at trial, 540 F. Supp. at 1313. In addressing the theory that the evidence in the case before it was obtained pursuant to a warrant, a lawfully obtained court order under FISA, id. at 1314, the court observed that the "bottom line of Truong is that evidence derived from warrantless foreign intelligence searches will be admissible in a criminal proceeding only so long as the primary purpose of the surveillance is to obtain foreign intelligence information." *Id.* at 1313-14. After noting that Congress, in enacting FISA, "expected that evidence derived from FISA surveillances could then be used in a criminal proceeding," the court concluded that "it was proper for the FISA judge to issue the order in this case because of the on-going nature of the foreign intelligence investigation.... The fact that evidence of criminal activity was thereafter uncovered during the investigation does not render the evidence inadmissible. There is no question in [the court's] mind that the purpose of the surveillance, pursuant to the order, was the acquisition of foreign intelligence information. Accordingly, [the court found] that the FISA procedures on their face satisfy the Fourth Amendment warrant requirement, and that FISA was properly implemented in this case." *Id.* at 1314.).

[3878] Court of Review op., 310 F.3d at 722 n.6.

authority of Article III judges. Finally, DOJ contended that application of the primary purpose test in a FISA case was not constitutionally compelled under the Fourth Amendment.

The Court of Review noted that, as enacted in 1978, FISA authorized the grant of an application for electronic surveillance to obtain foreign intelligence information if there is probable cause to believe that "the target of the electronic surveillance is a foreign power or an agent of a foreign power,"[3879] and that "each of the facilities or places at which the surveillance is directed is being used, or is about to be used by a foreign power or an agent of a foreign power."[3880] The reviewing court focused upon the close connection between criminal activity and the definitions of "agent of a foreign power" applicable to United States persons contained in 50 U.S.C. §§ 1801(b)(2)(A) and (C), to wit: "any person who 'knowingly engages in clandestine intelligence activities ... which activities involve or may involve a violation of the *criminal statutes* of the United States,' or 'knowingly engages in sabotage or international terrorism, or activities that are in preparation therefor.'"[3881] The court noted further that FISA defined "international terrorism" to mean "activities that 'involve violent acts or acts dangerous to human life that are a violation of the *criminal laws* of the United States or of any State, or that would be a *criminal violation* if committed within

---

[3879] The Court of Review did not include in its quotation of 50 U.S.C. § 1805(a)(3)(A) the proviso that follows the quoted language: "Provided, That no United States person may be considered a foreign power or an agent of a foreign power solely upon the basis of activities protected by the first amendment to the Constitution of the United States."

[3880] Court of Review op., 310 F.3d at 722, quoting portions of 50 U.S.C. § 1805(a)(3).

[3881] *Id.* at 723 (emphasis added by the Court of Review). The definitions of "agent of a foreign power" which apply to "any person" (including, by implication, United States persons) are set forth in 50 U.S.C. § 1801(b)(2). This subsection now contains five subparagraphs:

(b)
"Agent of a foreign power" means — ...
(2) any person who —
(A) knowingly engages in clandestine intelligence gathering activities for or on behalf of a foreign power, which activities involve or may involve a violation of the criminal statutes of the United States;
(B) pursuant to the direction of an intelligence service or network of a foreign power, knowingly engages in any other clandestine intelligence activities for or on behalf of such foreign power, which activities involve or are about to involve a violation of the criminal statutes of the United States;
(C) knowingly engages in sabotage or international terrorism, or activities that are in preparation therefor, for or on behalf of a foreign power;
(D) knowingly enters the United States under a false or fraudulent identity for or on behalf of a foreign power, or, while in the United States, knowingly assumes a false or fraudulent identity for or on behalf of a foreign power; or

(E) knowingly aids or abets any person in the conduct of activities described in subparagraph (A), (B), or (C) or knowingly conspires with any person to engage in activities described in subparagraph (A), (B), or (C). The current subparagraph (D) was added in 1999, and the former subparagraph (D) was redesignated subparagraph (E).

the jurisdiction of the United States or any State.'"[3882] "Sabotage," as defined by FISA, covers activities that "'involve a violation of chapter 105 of [the criminal code] [18 U.S.C. §§ 2151-2156], or that would involve such a violation if committed against the United States.'"[3883] For purposes of its opinion, the Court of Review described these types of crimes as "foreign intelligence crimes."[3884]

[3882] *Id.* at 723, quoting 50 U.S.C. § 1801(c)(1) (emphasis added by the Court of Review). The remainder of the definition of "international terrorism" under 50 U.S.C. § 1801(c)(2) and (3) adds two more criteria for activities to be considered to be within this definition: (c) "International terrorism" means activities that — ...
(2) appear to be intended —
(A) to intimidate or coerce a civilian population;
(B) to influence the policy of a government by intimidation or coercion; or
(C) to affect the conduct of a government by assassination or kidnapping; and

(3) occur totally outside the United States, or transcend national boundaries in terms of the means by which they are accomplished, the persons they appear to coerce or intimidate, or the locale in which their perpetrators operate or seek asylum.

[3883] Court of Review slip op. at 10, quoting 50 U.S.C. § 1801(d).

[3884] Although later acknowledging the possibility that the Justice Department had accepted the dichotomy between foreign intelligence gathering and law enforcement purposes "in an effort to conform to district court holdings," Court of Review op., 310 F.3d at 727, (most of the published decisions were court of appeals decisions rather than district court decisions) the Court of Review expressed puzzlement that "the Justice Department, at some point during the 1980's, began to read the statute as limiting the Department's ability to obtain FISA orders if it intended to prosecute the targeted agents — even for foreign intelligence crimes," while noting that 50 U.S.C. § 1804 at the time required that "a national security official in the Executive Branch — typically the Director of the FBI — ... certify that 'the purpose' of the surveillance was to obtain foreign intelligence information (amended by the Patriot Act to read 'a significant purpose.')" *Id.* at 723. The court did, however, discuss a series of 1982-1991 cases upholding the constitutional sufficiency of electronic surveillance under FISA as long as "the primary purpose" of the surveillance was gathering foreign intelligence information, rather than criminal prosecution. If foreign intelligence gathering was the primary purpose of a FISA electronic surveillance, initially and throughout the surveillance, and FISA was not being used as "an end run around the 4th Amendment," the courts permitted use of the fruits of the surveillance in subsequent criminal prosecutions. See the discussion of these cases at fn. 156, supra, of this report. This "primary purpose" approach to these FISA cases appears consistent with the "primary purpose" approach taken in a number of pre-FISA cases involving Fourth Amendment challenges to warrantless foreign intelligence surveillances. See constitutional analyses in United States v. Brown, 484 F.2d 418 (5th Cir. 1973), cert. denied, 415 U.S. 960 (5th Cir. 1974); United States v. Butenko, 494 F.2d 593 (3rd Cir. 1974) , cert. denied sub nom, Ivanov v. United States, 419 U.S. 881 (1974), and Zweibon v. Mitchell, 516 F.2d 594 (D.C. Cir. 1975), cert. denied, 425 U.S. 944 (1976); along with the Supreme Court's analysis, in a domestic surveillance context, in the Keith case, United States v. United States District Court, 407 U.S. 297 (1972), discussed in the "Background" section of this report, supra. The Court of Review appears to discount the significance of these decisions because the courts involved upheld lower court decisions permitting admission of information gathered under FISA in criminal trials. The Court of Review stated, "It may well be that the government itself, in an effort to conform to district court holdings, accepted the dichotomy it now contends is false. Be that as it may, since the cases that "adopt" the dichotomy do affirm district court opinions permitting the introduction of evidence gathered under a FISA order, there was not much need for the courts to focus on the opinion with which we are confronted." Court of Review op., 310 F.3d at 727.

The court observed that, as passed in 1978, 50 U.S.C. §1804 required a national security official of the Executive Branch, usually the FBI Director,[3885] to certify that "the purpose" of the electronic surveillance under FISA was to obtain foreign intelligence information, and opined that "it is virtually impossible to read the 1978 FISA to exclude from its purpose the prosecution of foreign intelligence crimes, most importantly because, as we have noted, the definition of an agent of a foreign power — if he or she is a U.S. person — is grounded on criminal conduct."[3886] It found further support for its view that "foreign intelligence information" included evidence of "foreign intelligence crimes" from the legislative history as reflected in H.Rept. 95-1283 and S.Rept. 95-701,[3887] while acknowledging that the House report also stated that FISA surveillances "are not primarily for the purpose of gathering evidence of a crime. They are to obtain foreign intelligence information, which when it concerns United States persons must be necessary to important national concerns."[3888] The Court of Review regarded the latter statement as an observation rather than a proscription.[3889]

The Court of Review saw the U.S. Court of Appeals for the Fourth Circuit's decision in *United States v. Truong Dinh Hung*, 629 F.2d 908 (4th Cir. 1980), a decision based upon constitutional analysis rather than FISA provisions, as the springboard for the "primary purpose" test cases interpreting FISA and

---

[3885] The pertinent language of 50 U.S.C. § 1804(a)(7) as passed in 1978 provided that each application for an order authorizing electronic surveillance under FISA shall include:
(7) a certification or certifications by the Assistant to the President for National Security Affairs or an executive branch official or officials designated by the President from those executive officers employed in the area of national security or defense and appointed by the President with the advice and consent of the Senate —
(A) that the certifying official deems the information sought to be foreign intelligence information;
(B) that the purpose of the surveillance is to obtain foreign intelligence information;
(C) that such information cannot reasonably be obtained by normal investigative techniques;
(D) that designates the type of foreign intelligence information being sought according to the categories described in section 1801(e) of this title; and
(E) including a statement of the basis for the certification that —
(i) the information sought is the type of foreign intelligence information designated; and

(ii) such information cannot reasonably be obtained by normal investigative techniques[.] Under 50 U.S.C. § 1804(d) as passed in 1978 and under current law, "The judge may require the applicant to furnish such other information as may be necessary to make the determinations required by section 1805 of this title."

[3889] Court of Review op., 310 F.3d at 725.

upholding FISA surveillances against Fourth Amendment challenges.[3890] After reviewing a number of the FISA cases applying the primary purpose test, the Court of Review concluded that a dichotomy between foreign intelligence gathering and criminal investigations implicit in the application of the primary purpose test was not statutorily compelled. The court found that FISA, as originally passed, did not "preclude or limit the government's use or proposed use of foreign intelligence information, which included evidence of certain kinds of criminal activity, in a criminal prosecution."[3891] In addition, the Court of Review, relying on arguments of the Department of Justice and the language of subsection 1805(a)(5), interpreted 50 U.S.C. §§ 1805 of FISA as originally enacted as not contemplating that the [FISC] would inquire into the government's purpose in seeking foreign intelligence information.[3892]

Further, the court rejected the FISC's characterization of the AttorneyGeneral's 1995 procedures, as modified and augmented in January 2000 and August 2001, as minimization procedures. These procedures were formally adopted by the FISC as minimization procedures defined in 50 U.S.C. §§ 1801(h) and 1821(4) in November 2001, after passage of the USA PATRIOT Act, and were incorporated in all applicable orders and warrants granted since their adoption by the FISC. On March 6, 2002, the Attorney General adopted new "Intelligence Sharing

---

[3890] Although Truong Dinh Hung was among the cases cited by some of the subsequent FISA cases, a "primary purpose" test had been previously applied in the 1974 Third Circuit decision in Butenko, supra, upholding a warrantless electronic surveillance in the face of challenges based upon the Fourth Amendment and Section 605 of the Communications Act where the primary purpose of the investigation was gathering foreign intelligence information. See discussion in the "Background" section of this report, supra, as well as the summary of this and other cases at fns. 156 and 163, *supra*.

[3891] Court of Review op., 310 F.3d at 727.

[3892] *Id.* at 723-24, 728. Section 1805(a), as enacted in 1978, set forth the necessary findings that a judge of the FISC had to make in order to enter an ex parte order as requested or as modified approving electronic surveillance under FISA:

(1) the President has authorized the Attorney General to approve applications for electronic surveillance for foreign intelligence information;

(2) the application has been made by a Federal officer and approved by the Attorney General;

(3) on the basis of the facts submitted by the applicant there is probable cause to believe that —

(A) the target of the electronic surveillance is a foreign power or an agent of a foreign power: Provided, That no United States person may be considered a foreign power or an agent of a foreign power solely upon the basis of activities protected by the first amendment to the Constitution of the United States; and

(B) each of the facilities or places at which the electronic surveillance is directed is being used, or is about to be used, by a foreign power or an agent of a foreign power;

(4) the proposed minimization procedures meet the definition of minimization procedures under section 1801(h) of this title;

(5) the application which has been filed contains all statements and certifications required by section 1804 of this title and, if the target is a United States person, the certification or certifications are not clearly erroneous on the basis of the statement made under section 1804(a)(7)(E) of this title and any other information furnished under section 1804(d) of this title.

Procedures," intended to supercede prior procedures, to "allow complete exchange of information and advice between intelligence and law enforcement officials," to "eliminate the 'direction and control' test," and to permit "exchange of advice between the FBI, OIPR, and the Criminal Division regarding 'the initiation, operation, continuation, or expansion of FISA searches or surveillance."[3893] The following day, the government filed a motion with the FISC advising the court of the Attorney General's adoption of the 2002 procedures, seeking to have that court adopt the new procedures in all matters before the FISC and asking the court to vacate its orders adopting the prior procedures as minimization procedures and imposing "wall" procedures in certain types of cases. That motion led to the FISC decision to adopt the 2002 procedures with modifications that was, by reference, before the Court of Review in its November 18, 2002, decision.

The Court of Review characterized the FISC's adoption of the Justice Department's 1995 procedures, as modified and augmented, as minimization procedures as follows:

> *Essentially, the FISA court took portions of the Attorney General's augmented 1995 Procedures — adopted to deal with the primary purpose standard — and imposed them generically as minimization procedures. In doing so, the FISA court erred. It did not provide any constitutional basis for its action — we think there is none — and misconstrued the main statutory provision on which it relied. The court mistakenly categorized the augmented 1995 Procedures as FISA minimization procedures and then compelled the government to utilize a modified version of those procedures in a way that is clearly inconsistent with the statutory purpose.*[3894]

The Court of Review interpreted "minimization procedures" under 50 U.S.C. § 1801(h) to be designed to protect, as far as reasonable, against the acquisition, retention, and dissemination of nonpublic information which is not foreign intelligence information. In light of the Court of Review's interpretation of "minimization procedures" under 50 U.S.C. § 1801(h), the court found no basis for the FISC's reliance upon that section "to limit criminal prosecutors' ability to advise FBI intelligence officials on the initiation, operation, continuation, or expansion of FISA surveillances to obtain foreign intelligence information, even if such information includes evidence of a foreign intelligence crime."[3895]

[3893] Court of Review op., 310 F.3d at 729.

[3894] *Id.* at 730.

[3895] *Id.* at 731.

In addition, the Court of Review found that the FISC had misconstrued its authority under 50 U.S.C. § 1805 and misinterpreted the definition of minimization procedures under 50 U.S.C. § 1801(h). The Court of Review expressed approbation for the Government's argument that the FISC, in imposing the modified 1995 procedures upon the Department of Justice as minimization procedures, "may well have exceeded the constitutional bounds that restrict an Article III court. The FISA court asserted authority to govern the internal organization and investigative procedures of the Department of Justice which are the province of the Executive Branch (Article II) and the Congress (Article I)."[3896]

The Court of Review deemed the FISC's "refusal ... to consider the legal significance of the Patriot Act's crucial amendments [to be] error."[3897] The appellate court noted that, as amended by the USA PATRIOT Act, the requirement in 50 U.S.C. § 1804(a)(7)(B) that the Executive Branch officer certify that "the purpose" of the FISA surveillance or physical search was to gather foreign intelligence information had been changed to "a significant purpose."[3898] The court noted that floor statements indicated that this would break down traditional barriers between law enforcement and foreign intelligence gathering,[3899] making it easier for law enforcement to obtain FISA court orders for surveillance or physical searches where the subject of the surveillance "is both a potential source of valuable intelligence and the potential target of a criminal prosecution."[3900] The court noted that some Members raised concerns about the Fourth Amendment implications of this language change which permitted the Government to obtain a court order under FISA "even if the primary purpose is a criminal investigation."[3901] Interestingly, although the Court of Review did not regard a dichotomy between foreign intelligence gathering and law enforcement

[3899] *Id.* at 732, quoting Sen. Leahy, 147 Cong. Rec. S10992 (Oct. 25, 2001).

[3900] *Id.* at 733, quoting Sen. Feinstein, 147 Cong. Rec. S10591 (Oct. 11, 2001). In Section 13.5 of Chapter 13 of its Final Report, at 424, the 9/11 Commission, in discussing the future role of the FBI, observes in part: Counterterrorism investigations in the United States very quickly become matters that involve violations of criminal law and possible law enforcement action. Because the FBI can have agents working criminal matters and agents working intelligence investigations concerning the same international terrorism target, the full range of investigative tools against a suspected terrorist can be considered within one agency. The removal of the "wall" that existed before 9/11 between intelligence and law enforcement has opened up new opportunities for cooperative action within the FBI.

[3901] Court of Review op., 310 F.3d at 733, quoting Sen. Feingold, 147 Cong. Rec. S11021 (Oct. 25, 2001).

purposes as necessarily implied by the 1978 version of 50 U.S.C. § 1804(a)(7)(B), the court viewed the statutory change from "the purpose" to "a significant purpose" in the USA PATRIOT Act as recognizing such a dichotomy.[3902] The Court of Review disagreed with the FISC interpretation of the consultation authority under 50 U.S.C. § 1806(k).[3903] The Court of Review saw this provision as one which reflected the elimination of barriers between law enforcement and intelligence or counterintelligence gathering, without a limitation on law enforcement officers directing or controlling FISA surveillances. "[W]hen Congress explicitly authorizes consultation and coordination between different offices in the government, without even suggesting a limitation on who is to direct and control, it necessarily implies that either could take the lead."[3904]

In analyzing the "significant purpose" amendment to 50 U.S.C. § 1804(a)(7)(B), the Court of Review deemed this a clear rejection of the primary purpose test. If gathering foreign intelligence information is a significant purpose, another purpose such as criminal prosecution could be primary.[3905] Further, the court found that the term "significant" "imposed a requirement that the government have a measurable foreign intelligence purpose, other than just criminal prosecution of even foreign intelligence crimes.... Although section 1805(a)(5) ... may well have been intended to authorize the FISA court to review only the question whether the information sought was a type of foreign intelligence information, in light of the significant purpose amendment of section 1804, it seems section 1805 must be interpreted as giving the FISA court the authority to review the government's purpose in seeking the information."[3906] The Court of Review saw the "significant purpose" language as "excluding from the purpose of gaining foreign intelligence information a sole objective of criminal prosecution."[3907] If the government, at the commencement of a FISA surveillance has not yet determined whether to prosecute the target, "[s]o long as the government entertains a realistic option of dealing with the agent other than through criminal prosecution, it satisfies the significant purpose test."[3908] Under the Court of Review's analysis:

[3902] *Id.* at 734-35.

[3903] *Id.* at 733-34.

[3904] *Id.* at 734.

[3905] *Id.* at 734.

[3906] *Id.* at 735.

[3907] *Id.*

[3908] *Id.*

> *If the certification of the application's purpose articulates a broader objective than criminal prosecution — such as stopping an ongoing conspiracy — and includes other potential non-prosecutorial responses, the government meets the statutory test. Of course, if the court concluded that the government's sole objective was merely to gain evidence of past criminal conduct — even foreign intelligence crimes — to punish the agent rather than halt ongoing espionage or terrorist activity, the application should be denied.*[3909]

The court stated further that, while ordinary crimes may be intertwined with foreign intelligence crimes, the FISA process may not be utilized to investigate wholly unrelated ordinary crimes.[3910] The Court of Review emphasized that the government's purpose as reflected in the Section 1804(a)(7)(B) certification is to be judged by the FISC on the basis of

> *...the national security officer's articulation and not by a FISA court inquiry into the origins of an investigation nor an examination of the personnel involved. It is up to the Director of the FBI, who typically certifies, to determine the government's national security purpose, as approved by the Attorney General or Deputy Attorney General.... That means, perforce, if the FISA court has reason to doubt that the government has any real non-prosecutorial purpose in seeking foreign intelligence information it can demand further inquiry into the certifying officer's purpose — or perhaps even the Attorney General's or Deputy Attorney General's reasons for approval. The important point is that the relevant purpose is that of those senior officials in the Executive Branch who have the responsibility of appraising the government's national security needs."*[3911]

Turning from its statutory analysis to its examination of whether the statute, as amended, satisfied Fourth Amendment parameters, the Court of Review compared the FISA procedures with those applicable to criminal investigations of "ordinary crimes" under Supreme Court jurisprudence and under the wiretap provisions of Title III of the Omnibus Crime Control and Safe Streets Act. Relying upon *Dalia v. United States*, 441 U.S. 238, 255 (1979), the court indicated that in criminal investigations, beyond requiring that searches and seizures be reasonable, the Supreme Court has interpreted the Fourth Amendment's warrant requirement to demand satisfaction of three criteria: a warrant must be issued by

---

[3909] *Id.*

[3910] *Id.* at 736.

[3911] *Id.*

a neutral, detached magistrate; those seeking the warrant must demonstrate to the magistrate that there is probable cause to believe that the evidence sought will assist in a particular apprehension or conviction for a particular offense; and the warrant must describe with particularity the things to be seized and the place to be searched.[3912]

The Court of Review compared the procedures in Title III with those in FISA, finding in some respects that Title III had higher standards, while in others FISA included additional safeguards. In both, there was provision for a detached, neutral magistrate. The probable cause standard in Title III for criminal investigations was deemed more demanding than that in FISA. Title III requires a showing of probable cause that a specific individual has committed, is committing, or is about to commit a particular criminal offense. FISA requires a showing of probable cause that the target of the FISA investigative technique is a foreign power or an agent of a foreign power. A foreign power is not defined solely in terms of criminal activity. In the case of a target who is a U.S. person, the definition of "agent of a foreign power" contemplates, in part, the involvement of or, in the case of clandestine intelligence activities for a foreign power, the possibility of criminal conduct. The court regarded the lesser requirement with respect to criminal activity in the context of clandestine intelligence activities as to some extent balanced by the safeguard provided by FISA's requirement that there be probable cause to believe that the target is acting "for or on behalf of a foreign power."[3913]

With regard to the particularity requirement, as to the first element, Title III requires a finding of probable cause to believe that the interception will obtain particular communications regarding a specified crime. In contrast, FISA requires an official to designate the type of foreign intelligence information being sought and to certify that the information being sought is foreign intelligence information. When the target of the FISA investigation is a U.S. person, the standard of review applied by the FISC is whether there is clear error in the certification, a lower standard that a judicial finding of probable cause. While the FISC can demand that the government provide further information needed for the court to make its determination as to whether the certification is clearly erroneous, the statute relies also upon internal checks on Executive Branch decisions through the requirement that the certification must be made by a national security officer and approved by the Attorney General or Deputy Attorney General.

In connection with the second particularity element, Title III

[3912] *Id.* at 738.

[3913] *Id.* at 738-39.

> *... requires probable cause to believe that the facilities subject to surveillance are being used or are about to be used in connection with commission of a crime or are leased to, listed in the name of, or used by the individual committing the crime, 18 U.S.C. § 2518(3)(d), [while] FISA requires probable cause to believe that each of the facilities or places at which the surveillance is directed is being used, or is about to be used by a foreign power or agent [of a foreign power]. 50 U.S.C. § 1805(a)(3)(B). ... Simply put, FISA requires less of a nexus between the facility and the pertinent communications that Title III, but more of a nexus between the target and the pertinent communications."*[3914]

The Court of Review also compared Title III to FISA with respect to necessity (both statutes require that the information sought is not available through normal investigative procedures, although the standards differ somewhat),[3915] duration of surveillance (30 days under Title III, 18 U.S.C. § 2518(3)(c), as opposed to 90 days under FISA for U.S. persons, 50 U.S.C. § 1805(e)(1)),[3916] minimization and notice.

With respect to minimization, the Court of Review noted that Title III, under 18 U.S.C. § 2518(5), required minimization of what was acquired, directing that surveillance be carried out "in such a way as to minimize the interception of communications not otherwise subject to interception under this chapter." FISA, on the other hand, "requires minimization of what is acquired, retained, and

---

[3914] *Id.* at 740.

[3915] For electronic surveillance to be approved, Title III requires a judicial finding that normal investigative procedures have been tried and have failed or reasonably appear to be unlikely to succeed if tried or to be too dangerous. 18 U.S.C. § 2518(3)(c). FISA requires certification by the national security officer involved that the foreign intelligence information sought cannot reasonably be obtained by normal investigative means. 50 U.S.C. § 1804(a)(7)(C). The certification must include a statement of the basis for the certification that the information sought is the type of foreign intelligence information designated; and that such information cannot reasonably be obtained by normal investigative techniques. 50 U.S.C. § 1804(a)(7)(E)(i) and (ii). In issuing an ex parte order granting an application for electronic surveillance, the FISC judge must find that, in the case of a target who is a U.S. person, the certifications are not clearly erroneous on the basis of the statement made under 50 U.S.C. § 1804(a)(7)(e) and any other information furnished under Section 1804(d). Thus, the relevant findings to be made by the courts under the two statutes differ.

[3916] Court of Review op., 310 F.3d at 740. The difference, in the court's view, was "based on the nature of national security surveillance, which is 'often long range and involves the interrelation of various sources and types of information.' Keith, 407 U.S. at 322; see also S. Rep. at 16, 56." The court also noted that in FISA the "longer surveillance period is balanced by continuing FISA court oversight of minimization procedures during that period. 50 U.S.C. § 1805(e)(3); see also S. Rep. at 56."

disseminated."[3917] Observing that the FISC had found "in practice FISA surveillance devices are normally left on continuously, and the minimization occurs in the process of indexing and logging the pertinent communications," the Court of Review deemed the reasonableness of such an approach to be dependent upon the facts and circumstances of each case:[3918]

> *Less minimization in the acquisition stage may well be justified to the extent the intercepted communications are "ambiguous in nature or apparently involve[] guarded or coded language," or "the investigation is focusing on what is thought to be a widespread conspiracy [where] more extensive surveillance may be justified in an attempt to determine the precise scope of the enterprise." ... Given the targets of FISA surveillance, it will often be the case that intercepted communications will be in code or a foreign language for which there is no contemporaneously available translator, and the activities of foreign agents will involve multiple actors and complex plots....*[3919]

With respect to notice, the Court of Review observed that under 18 U.S.C. § 2518(8)(d), Title III mandated notice to the target of the surveillance and, in the judge's discretion, to other persons whose communications were intercepted, after the surveillance has expired. In contrast, under 50 U.S.C. § 1806(c) and (d), FISA does not require notice to a person whose communications were intercepted unless the government intends to use, disclose, or enter into evidence those communications or derivative information in a trial, hearing, or other proceeding in or before any court, department, officer, agency, regulatory body, or other federal, state or local authority against that person. The Court of Review noted that where such information was to be used against a criminal defendant, he or she would be given notice, and stated that "where such evidence is not ultimately going to be used for law enforcement," Congress had observed that "[t]he need to preserve secrecy for sensitive counterintelligence sources and methods justifies elimination of the notice requirement."[3920] In a footnote, the court noted that the Amici had drawn attention to the difference in the nature of the notice given the defendant or aggrieved person under Title III as opposed to FISA. Under Title III, a defendant is generally entitled under 18 U.S.C. § 2518(9) to obtain the application and order to challenge the legality of the surveillance. However, under FISA, the government must give the aggrieved person and the court or other authority (or in the case of a state or local use, the state or political

subdivision must give notice to the aggrieved person, the court or other authority, and the Attorney General) of their intent to so disclose or use communications obtained from the surveillance or derivative information. In addition, under 50 U.S.C. §§ 1806(f) and (g), if the Attorney General files an affidavit under oath that disclosure or an adversary hearing would harm national security, the U.S. district court may review in camera and ex parte the application, order, and other materials related to the surveillance, to determine whether the surveillance was lawfully authorized and conducted, whether disclosure or discovery is necessary, and whether to grant a motion to suppress. The Court of Review noted that these determinations are to be made by the U.S. district judge on a case by case basis, and stated that "whether such a decision protects a defendant's constitutional rights in a given case is not before us."[3921]

Based on this comparison of Title III and FISA, the Court of Review found that "to the extent that the two statutes diverge in constitutionally relevant areas — in particular, in their probable cause and particularity showings — a FISA order may not be a 'warrant' contemplated by the Fourth Amendment.... Ultimately, the question becomes whether FISA, as amended by the Patriot Act, is a reasonable response based on a balance of the legitimate need of the government for foreign intelligence information to protect against national security threats with the protected rights of citizens."[3922]

The court framed the question as follows: "does FISA amplify the President's power by providing a mechanism that at least approaches a classic warrant and which therefore supports the government's contention that FISA searches are constitutionally reasonable." In its analysis, the court first considered whether the *Truong* case articulated the correct standard. *Truong* held that the President had inherent authority to conduct warrantless searches to obtain foreign intelligence information, but did not squarely address FISA. Starting from the perspective that *Truong* deemed the primary purpose test to be constitutionally compelled as an application of the *Keith* case balancing standard, the Court of Review found that the *Truong* determination that "once surveillance becomes primarily a criminal investigation, the courts are entirely competent to make the usual probable cause determination, and ... individual privacy interests come to the fore and government foreign policy concerns recede when the government is primarily attempting to form the basis of a criminal investigation."[3923] The Court of Review found that this analysis was based upon a faulty premise that in the context of criminal prosecution "foreign policy concerns recede," and found further that the line the *Truong* court "sought to draw was inherently unstable,

---

[3921] *Id.*

[3922] *Id.* at 741-42.

[3923] *Id.* at 742-43, citing Truong, supra, 629 F.2d at 914-15.

unrealistic, and confusing."[3924] The Court of Review opined that in the context of counterintelligence, foreign policy concerns did not recede when the government moved to prosecute. Rather "the government's primary purpose is to halt the espionage or terrorism efforts, and criminal prosecutions can be, and usually are, interrelated with other techniques used to frustrate a foreign power's efforts."[3925]

In addition, the court found that the method of determining when an investigation became primarily criminal by looking to when the Criminal Division of the Department of Justice assumed the lead role, had led over time to the "quite intrusive organizational and personnel tasking the FISA court [had] adopted."[3926] The court found the "wall" procedure to generate dangerous confusion and create perverse organizational incentives that discouraged wholehearted cooperation of "all the government's personnel who can be brought to the task."[3927] This the court suggested could be thought to be dangerous to national security and could be thought to discourage desirable initiatives.

In addition, the court saw the primary purpose test as administered by the FISC, "by focusing on the subjective motivation of those who initiate investigations … was at odds with the Supreme Court's Fourth Amendment cases which regard subjective motivation of an officer conducting a search or seizure as irrelevant."[3928]

Assuming *arguendo* that FISA orders were not warrants within the scope of the Fourth Amendment, the Court of Review returned to the question of whether searches under FISA are constitutionally reasonable. While the Supreme Court has not considered directly the constitutionality of warrantless government searches for foreign intelligence purposes, the balance between the government's interest and personal privacy interests is key to an examination of this question. The Court of Review viewed *Keith* as suggesting that a somewhat relaxed

---

[3924] *Id.* at 743.

[3925] *Id.*

[3926] *Id.*

[3927] *Id.*

[3928] *Id.*, citing Whren v. United States, 517 U.S. 806, 13 (1996). See also, Arkansas v. Sullivan, 532 U.S. 769, 770-72 (2001); Scott v. United States, 438 U.S. 128, 135-138 (1978). In these cases, the Court has held that, in a Fourth Amendment probable cause analysis of a warrantless search or seizure, the fact that an otherwise lawful search or seizure may have been made as a pretext for searching for evidence of other criminal behavior does not render that search or seizure unconstitutional. One might note that the probable cause standard applicable to a search or seizure in a criminal investigation is different from that under FISA, so that the pretextual search criminal cases may not be directly analogous to the FISA situation.

standard might be appropriate in foreign intelligence crimes as opposed to ordinary crimes.[3929]

The Court of Review then briefly touched upon the Supreme Court's "special needs" cases, where the Court upheld searches not based on a warrant or individualized suspicion in extraordinary circumstances involving "special needs, beyond the normal need for law enforcement." In *City of Indianapolis v. Edmond*, 531 U.S. 32, 42 (2000), the U.S. Supreme Court held that a highway check point program designed to catch drug dealers was not within the "special needs" exception to the requirement that a search be based upon individualized suspicion, because "the government's 'primary purpose' was merely 'to uncover evidence of ordinary criminal wrongdoing.'" The Court stated that "the gravity of the threat alone cannot be dispositive of questions concerning what means law enforcement officers may employ to pursue a given purpose."[3930] The Court relied upon an examination of the primary purpose of the program, but not the motivations of individual officers, to determine whether the "special needs" standard had been met. The Supreme Court noted that an appropriately tailored road block could be used "to thwart an imminent terrorist attack."[3931]

After summarizing *Edmond*, the Court of Review emphasized that it is the nature of the threat or emergency that took the matter beyond the realm of ordinary crime control.[3932] It concluded that, while the gravity of the threat alone cannot be dispositive of the reasonableness of a search under the Fourth Amendment standard, it is a critical factor in the analysis. In its view, the "programmatic purpose" of FISA, "to protect the nation against terrorists and espionage threats directed by foreign powers," was one which, from FISA's inception, was distinguishable from "ordinary crime control."[3933] The Court of Review also concluded that, "[e]ven without taking into account the President's inherent constitutional authority to conduct warrantless foreign intelligence surveillance, we think the procedures and government showings required under FISA, if they do not meet the minimum Fourth Amendment warrant standards, certainly come close."[3934] Applying the balancing test that it had drawn from Keith between foreign intelligence crimes and ordinary crimes, the Court of Review held

[3934] *Id.*

surveillances under FISA, as amended by the USA PATRIOT Act, were reasonable and therefore constitutional. In so doing, however, the Court of Review

> *acknowledged] … that the constitutional question presented by this case — whether Congress' disapproval of the primary purpose test is consistent with the Fourth Amendment — has no definitive jurisprudential answer. The Supreme Court's special needs cases involve random stops (seizures) not electronic searches. In one sense, they can be thought of as a greater encroachment into personal privacy because they are not based on any particular suspicion. On the other hand, wiretapping is a good deal more intrusive than an automobile stop accompanied by questioning.*[3935]

The Court of Review reversed the FISC's orders before it for electronic surveillance "to the extent they imposed conditions on the grant of the government's applications, vacate[d] the FISA court's Rule 11, and remand[ed] with instructions to grant the applications as submitted and proceed henceforth in accordance with this opinion."[3936]

50 U.S.C. § 1803(b) provides that, where the Court of Review upholds a denial by the FISC of a FISA application, the United States may file a petition for certiorari to the United States Supreme Court. Since consideration of applications for FISA orders is ex parte, there is no provision in FISA for an appeal to the United States Supreme Court from a decision of the Court of Review by anyone other than the United States. Nevertheless, on February 18, 2003, a petition for leave to intervene and a petition for writ of certiorari to the U.S. Foreign Intelligence Surveillance Court of Review was filed in this case in the U.S. Supreme Court by the American Civil Liberties Union, National Association of Criminal Defense Lawyers, American-Arab Anti-Discrimination Committee, and the Arab Community Center for Economic and Social Services. On March 14, 2003, the Bar Association of San Francisco filed a motion to file an amicus curiae brief in support of the motion to intervene and petition for certiorari. On March 24, 2003, the Supreme Court denied the motion for leave to intervene in order to file a petition for a writ of certiorari and denied the motion for leave to file an amicus curiae brief.[3937]

[3935] *Id.*

[3936] *Id.*

[3937] American Civil Liberties Union v. United States, Docket No. 02M69, 538 U.S. 920 (March 24, 2003). The disposition of the case appears on the Supreme Court's Order List for that date. It is interesting to note that both the Petition for Leave to Intervene and Petition for a Writ of Certiorari filed by the American Civil Liberties Union, et al., and the motion to file an amicus curiae brief of the Bar Association of San Francisco were filed under the name In re: Sealed Case of the Foreign Intelligence Surveillance Court of Review No. 02-001.

Conclusion

The Foreign Intelligence Surveillance Act, as amended, provides a statutory structure to be followed where electronic surveillance, 50 U.S.C. § 1801 et seq., physical searches, 50 U.S.C. § 1821 *et seq*., or pen registers or trap and trace devices, 50 U.S.C. § 1841 *et seq*., for foreign intelligence gathering purposes are contemplated. In addition, it provides a statutory mechanism for the FBI to seek production of "any tangible things" for an investigation seeking foreign intelligence information not involving a U.S. person or to protect against international terrorism or clandestine intelligence with respect to any person under 50 U.S.C. § 1861. FISA creates enhanced procedural protections where a United States person is involved, while setting somewhat less stringent standards where the surveillance involves foreign powers or agents of foreign powers. With its detailed statutory structure, it appears intended to protect personal liberties safeguarded by the First and Fourth Amendments while providing a means to ensure national security interests.

The USA PATRIOT Act, P.L. 107-56, increased the number of FISC judges from 7 to 11, while expanding the availability of FISA electronic surveillance, physical searches and pen registers and trap and trace devices. For example, under P.L. 107-56, an application for a court order permitting electronic surveillance or a physical search under FISA is now permissible where "a significant purpose" of the surveillance or physical search, rather than "the purpose" or, as interpreted by some courts, "the primary purpose" of the surveillance or physical search, is to gather foreign intelligence information. While the previous language withstood constitutional challenge, the Supreme Court has not yet determined the constitutional sufficiency of the change in the FISA procedures under the Fourth Amendment. On the other hand, the U.S. Foreign Intelligence Court of Review has examined a number of constitutional issues in *In re Sealed Case*, finding that FISA orders, if not satisfying the constitutional warrant requirement, are close to doing so; and finding that, even if a FISA order does not qualify as a warrant for Fourth Amendment purposes, electronic surveillance under FISA as amended by the USA PATRIOT Act is reasonable and therefore constitutional. At the same time, however, the Court of Review acknowledged that the constitutional question of whether Congress' disapproval of the primary purpose test is consistent with the Fourth Amendment "has no definitive jurisprudential answer."[3938]

The USA PATRIOT Act also amended FISA to allow court orders permitting so-called multipoint or "roving" electronic surveillance, where the orders do not require particularity with respect to the identification of the instrument, place, or facility to be intercepted, upon a finding by the court that the actions of the target

---

[3938] *Court of Review op*., 310 F.3d at 746.

of the surveillance are likely to thwart such identification. P.L. 107-108 further clarified this authority.

Under P.L. 107-56, pen registers and trap and trace devices may now be authorized for e-mails as well as telephone conversations. In addition, the act expanded the previous FBI access to business records, permitting court ordered access in connection with a foreign intelligence or international terrorism investigation not just to business records held by common carriers, public accommodation facilities, physical storage facilities, and vehicle rental facilities, but to any tangible things.

While expanding the authorities available for foreign intelligence investigations, FISA, as amended by the USA PATRIOT Act and the Intelligence Authorization Act for FY2002, also contains broader protections for those who may be the target of the various investigative techniques involved. For example, whether the circumstances involve electronic surveillance, physical searches, pen registers or trap and trace devices or access to business records and other tangible items, FISA, as amended by the USA PATRIOT Act, does not permit the court to grant orders based solely upon a United States person's exercise of First Amendment rights.[3939]

In addition, P.L. 107-56 created a new private right of action for persons aggrieved by inappropriate disclosure or use of information gleaned or derived from electronic surveillance, physical searches or the use of pen registers or trap and trace devices. These claims can be brought against the United States for certain willful violations by government personnel.

Finally, the inclusion of a sunset provision for the FISA changes made in the USA PATRIOT Act, with the exception of the increase in the number of FISC judges, provides an opportunity for the new authorities to be utilized and considered, and an opportunity for the Congress to revisit them in light of that experience.

Sections 898 and 899 of the Homeland Security Act of 2002, P.L. 107-296, amended FISA, 50 U.S.C. §§1806(k)(1) and 1825(k)(1) respectively, to permit federal officers conducting electronic surveillance or physical searches to acquire foreign intelligence information under FISA to consult with federal law enforcement officers "or law enforcement personnel of a state or political subdivision of a State (including the chief executive officer of that State or political subdivision who has the authority to appoint or direct the chief law enforcement officer of that State or political subdivision)." Such consultations are to coordinate efforts to investigate or protect against actual or potential attacks or other grave hostile acts of a foreign power or an agent of a foreign power;

[3939] *See, e.g.*,50 U.S.C. §§ 1805(a)(3)(A), 1824(a)(3)(A), 1842(a)(1), 1843(b), 1861(a)(1), and 1861(a)(2).

sabotage or international terrorism by a foreign power or an agent of a foreign power; or clandestine intelligence activities by an intelligence service or network of a foreign power or an agent of a foreign power. These sections also state that such consultations do not preclude the Assistant to the President for National Security Affairs or other designated Executive Branch officials from making the necessary certifications as part of the application process for a FISA court order under 50 U.S.C. §§ 1804(a)(7) or 1823(a)(7), nor are these consultations to preclude entry of an order under 50 U.S.C. §§ 1805 or 1824.[3940]

Section 6001 of Title VI of FISA, as added by the Intelligence Reform and Terrorism Prevention Act of 2004, P.L. 108-458, expanded the definition of "agent of a foreign power" in the context of non-U.S. persons to encompass those who engage in international terrorism or in activities in preparation for international terrorism, regardless of whether they have any connection or affiliation with a foreign government or other foreign organization or entity. This new definition is included among those FISA provisions subject to the sunset provisions in Section 224 of the USA PATRIOT Act, as amended. Section of the new Title VI of FISA also imposed new, detailed semiannual reporting requirements to facilitate congressional oversight of the implementation of the Act, which are codified at 50 U.S.C. § 1871.

[3940] Section 897 of the Homeland Security Act of 2002, which dealt with "Foreign Intelligence Information," amended Section 203(d)(1) of the USA PATRIOT Act, 50 U.S.C. § 403-5d(1), to provide authority, consistent with the responsibility of the DCI to protect intelligence sources and methods and that of the Attorney General to protect sensitive law enforcement information,

for information revealing a threat of an actual or potential attack or other grave hostile acts of a foreign power or an agent of a foreign power, domestic or international sabotage, domestic or international terrorism, or clandestine intelligence gathering activities by an intelligence service or network of an foreign power or by an agent of a foreign power, within the United States or elsewhere, obtained as part of a criminal investigation to be disclosed to any appropriate Federal, State, local, or foreign government official for the purpose of preventing or responding to such a threat. Any official who receives information pursuant to this provision may use that information only as necessary in the conduct of that person's official duties subject to any limitations on the unauthorized disclosure of such information, and any State, local, or foreign official who receives information pursuant to this provision may use that information only consistent with such guidelines as the Attorney General and the Director of Central Intelligence shall jointly issue.

In light of the Court of Review's interpretation of "foreign intelligence information" under FISA as including investigations of what the Court of Review termed "foreign intelligence crimes," it is not clear whether this section might be interpreted as applicable to sharing of information gleaned from FISA surveillances, searches, pen registers, trap and trace devices, or business record requests, particularly where criminal prosecution is a goal of the investigation.

P.L. 108-458, after creating the new position of Director of National Intelligence in Section 1101 of the Act, included conforming amendments, which replaced references to the "Director of Central Intelligence" with "Director of National Intelligence" in a broad range of provisions. However, P.L. 108-458 does not appear to have replaced "Director of Central Intelligence"with "Director of National Intelligence" in 50 U.S.C. § 403-5d.

The USA PATRIOT Improvement and Reauthorization Act of 2005, P.L. 109177 (Reauthorization Act), Section 102, adopted a sunset of December 31, 2009, for FISC orders for multipoint or "roving" wiretaps under Section 105(a) of FISA, 50 U.S.C. § 1805(a), for FISC orders for production of tangible things under Section 501 of FISA, 50 U.S.C. § 1861, and congressional oversight requirements in Section 502 of FISA, 50 U.S.C. § 1862. Section 103 of P.L. 109-177 extended the sunset relating to "lone wolf" agents of foreign powers to December 31, 2009.

Section 105 of P.L. 109-177 extended the maximum duration initial orders authorizing of electronic surveillances and physical searches under Sections 105(e) and 304 of FISA to 120 days, while extensions of such electronic surveillances and physical searches could be for up to one year. The duration of both initial orders and extensions to orders authorizing installation and use of FISa pen registers or trap and trace devices is extended from 90 days to one year in cases where the Government has certified that the information likely to be obtained is foreign intelligence information not concerning a U.S. person.

Section 106(a) of P.L. 109-177permits the FBI Director to delegate his authority to make an application for a production order regarding library circulation records, library patron lists, book sales records, book customer lists, firearms sales records, tax return records, educational records, or medical records containing information that would identify a person, to either the Deputy Director of the Federal Bureau of Investigation or the Executive Assistant Director for National Security (or any successor position). Neither the Deputy Director nor the Executive Assistant Director may not further delegate such authority.

Section 106(b) of P.L.109-177 requires an application for a FISA production order to include statement of the facts supporting a reasonable belief that the tangible things sought are relevant to an authorized investigation (other than a threat assessment) to obtain foreign intelligence information not concerning a United States person or to protect against international terrorism or clandestine intelligence activities. It provides that certain tangible things are "presumptively relevant" to such an investigation if the statement of facts shows that they pertain to a foreign power or agent of a foreign power, the activities of a suspected agent of a foreign power who is the subject of the authorized investigation, or an individual in contact with or known to a suspected agent of a foreign power who is the subject of the investigation.

Section 106(c) of P.L. 109-177 provides that an FISC judge must approve a FISA production order if he or she finds that the application meets the statutory requirements. Under Section 106(d) of P.L. 109-177, such an ex parte order must include a particularized description of the tangible things sought, must allow a reasonable time for such things to be assembled, must notify the recipients of the production order of applicable nondisclosure requirements, and must be limited to things which may be subject to a grand jury subpoena or any other federal

court order directing production of records or tangible things. The order must not disclose that such order is issued for purposes of such an authorized investigation.

Section 106(d) of the Reauthorization Act prohibits the recipient of a production order from disclosing to anyone except those persons to whom disclosure is necessary to comply with such order; an attorney to obtain legal advice or assistance with respect to the production of things in response to the order; or other persons as permitted by the FBI Director or his designee. Subsection 106(e) of the measure requires the production order recipient, upon the request of the FBI Director or his designee, to identify to the FBI those to whom such disclosure has been or will be made, unless the disclosure has been or is to be made to an attorney from whom legal advice or assistance is sought.[3941]

Section 106(f) of P.L. 109-177 amends 50 U.S.C. § 1803 to establish a petition review pool of FISC judges to hear challenges to FISA production or related nondisclosure orders, and sets forth a detailed judicial review process for consideration of such petitions.

Section 106A of the Reauthorization Act directs the Inspector General of the U.S. Department of Justice to conduct a comprehensive audit of the effectiveness and use, including any improper or illegal use, of the investigative authority provided to the FBI under 50 U.S.C. 1861 for calendar years 2002-2006, and requires the results to be filed in two unclassified reports to the House and Senate Intelligence and Judiciary Committees.

Section 108(a) and (b) amend the requirements for an application and for an FISC order authorizing multipoint electronic surveillance under FISA. Subsection 108(c) expands the list of committees to whom the Attorney General's semiannual reports on FISA electronic surveillance to include not only the Intelligence Committees but also the Senate Judiciary Committee; and requires the report to include an additional category of information, that is, a description of the total number of applications made for orders approving such multipoint electronic surveillance.

Section 109(a) of P.L. 109-177 modifies the list of congressional committees receiving two semiannual reports from the Attorney General on physical searches under FISA pursuant to 50 U.S.C. § 1826, and requires the second of these reports to include, among other things, the total number of emergency physical searches authorized by the Attorney General under 50 U.S.C. § 1824(e) and the total number of subsequent orders approving or denying such physical searches.

[3941] *But see* the amendment in Section 4 of P.L. 109-178 deleting that exception, discussed *infra*.

Section 109(b) of P.L. 109-177 requires the Attorney General, in his semiannual statistical report submitted to the House and Senate Judiciary Committees on FISA pen registers and trap and trace devices, to include, among other things, the total number of pen registers and trap and trace devices whose installation and use was authorized by the Attorney General on an emergency basis under 50 U.S.C. §1843, and the total number of subsequent orders approving or denying the installation and use of such pen registers and trap and trace devices.

Section 109(d) of P.L. 109-177 amends 50 U.S.C. § 1803 to permit the FISC and Court of Review to establish such rules and procedures, and take such actions, as are reasonably necessary to administer their responsibilities under this chapter. Any such rules and procedures are to be recorded and transmitted to all of the judges on the FISC and on the Court of Review, the Chief Justice of the United States, the House and Senate Judiciary Committees, the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence.

Section 128(a)(3) of P.L. 109-177 added 50 U.S.C. § 1842(d)(2)(C), which permits the FISC, in an order authorizing use of a pen register or trap and trace device, to direct a wire or communication service provider to provide the federal officer using the device specific subscriber or customer information upon request. That information may include, with respect to a customer or subscriber using the service during the period of the order, the name of the customer or subscriber; the address of the customer or subscriber; the telephone or instrument number, or other subscriber number or identifier, of the customer or subscriber, including any temporarily assigned network address or associated routing or transmission information; the length of the provision of service by such provider to the customer or subscriber and the types of services utilized by the customer or subscriber. In the case of a provider of local or long distance telephone service, the information provided may include any local or long distance telephone records of the customer or subscriber; if applicable, any records reflecting period of usage (or sessions) by the customer or subscriber; any mechanisms and sources of payment for such service, including the number of any credit card or bank account utilized for payment for such service; and, if available, with respect to any customer or subscriber of incoming or outgoing communications to or from the service covered by the order, the name of such customer or subscriber; the address of such customer or subscriber; the telephone or instrument number, or other subscriber number or identifier, of such customer or subscriber, including any temporarily assigned network address or associated routing or transmission information; and the length of the provision of service by such provider to such customer or subscriber and the types of services utilized by such customer or subscriber.

Section 128(b) of P.L. 109-177 added the House and Senate Judiciary Committees to the list of committees to be kept fully informed by the Attorney General regarding all use of FISA pen registers and trap and trace devices.

Section 506 of P.L. 109-177 amends the definition of "Attorney General" under 50 U.S.C. § 1801(g) to include the Assistant Attorney General for National Security, so that the term includes "the Attorney General of the United States (or Acting Attorney General), the Deputy Attorney General, or, upon the designation of the Attorney General, the Assistant Attorney General designated as the Assistant Attorney General for National Security under section 507A of title 28, United States Code."

Section 3 of P.L. 109-178 amends the provisions in 50 U.S.C. § 1861(f) regarding judicial review of production orders and related nondisclosure orders. In addition, Section 4 of the measure amends 50 U.S.C. § 1861(d)(2) to provide that, at the request of the FBI Director or his designee, any person disclosing or intending to disclose that the FBI has sought or obtained tangible things under a FISA production order to someone in one of the three categories of individuals to whom such disclosure is permitted, shall identify to the Director or his designee the person to whom the disclosure will be or has been made. In so doing, the measure in effect deletes an exception to this identification requirement where the person to whom the disclosure is made is an attorney from whom the person making the disclosure is seeking legal advice or assistance.

In addition to examining the statutory structure in FISA, as amended, this report has explored two published decisions, one from the FISC in *In re All Matters Submitted to the Foreign Intelligence Surveillance Court* and one from the U.S. Foreign Intelligence Court of Review in *In re Sealed Case*. Because historically the decisions of the FISC have not been made public, and because the opinion of the U.S. Foreign Intelligence Surveillance Court of Review discussed in this report was the first decision ever made by that court, the recent decisions of the FISC and the Court of Review provided a unique opportunity to observe the decision-making processes and differing perspectives of the two courts created by FISA.

The FISC's decision was set against a backdrop of a significant number of instances in which the Department of Justice had failed to maintain a "wall" between foreign intelligence gathering and criminal investigations. All seven of the then sitting members of the FISC concurred in the May 17, 2002, order of the court, written by the then presiding judge of the court. The FISC, in its May 17th opinion and order, treated the Attorney General's proposed 2002 "Intelligence Sharing Procedures for Foreign Intelligence and Foreign Counterintelligence Investigations Conducted by the FBI" as minimization procedures, and approved them as modified. The modifications made by the Court permitted the FBI, the Criminal Division, and OIPR to consult with one another "to coordinate their efforts to investigate or protect against foreign attack or other grave hostile acts, sabotage, international terrorism, or clandestine intelligence activities by foreign powers or their agents." In so doing, the FISC permitted such cooperation and coordination to address, among other things, the exchange of information already acquired, identification of categories of information needed and being sought, prevention of either foreign intelligence gathering or criminal law

enforcement investigation or interest from obstructing or hindering the other; compromise of either investigation, and long term objectives and overall strategy of both investigations to insure that overlapping intelligence and criminal interests of the United States are both achieved.[3942] While permitting direct consultation and coordination between components, the FISC required that OIPR be invited to all consultations and, if OIPR was unable to attend, the modified procedures required that OIPR be "forthwith" informed in writing of the substance of the meeting so that the FISC could be notified promptly.[3943] In addition, under the procedures as modified by the FISC, law enforcement officials were prohibited from making recommendations to intelligence officials regarding the initiation, operation, continuation or expansion of FISA searches or surveillances. Nor could law enforcement officials direct or control the use of FISA procedures to enhance criminal prosecution. The FBI and the Criminal Division were given the responsibility to ensure that this did not occur, and were also required to make certain that advice intended to preserve the criminal prosecution option did not inadvertently result in the Criminal Division directing or controlling the investigation using FISA tools to further law enforcement objectives.[3944] In addition, the FISC adopted a new Rule 11, dealing with criminal investigations in FISA cases, to facilitate monitoring of compliance with its May 17, 2002 order. This rule required all FISA applications to include informative descriptions of ongoing criminal investigations of FISA targets, as well as the substance of consultations between the FBI and criminal prosecutors at the Department of Justice or a U.S. Attorney's office.

In its November 18, 2002 opinion, the Court of Review took a starkly different view of the Attorney General's proposed procedures and firmly rejected the FISC analysis and conclusions. The issue came before the Court of Review as an appeal of two FISC orders, one granting an application to authorize electronic surveillance of an agent of a foreign power subject to restrictions stemming from the FISC May 17th opinion and order and the other renewing the authorization for electronic surveillance subject to the same conditions.

The Court of Review held that the FISC's interpretation of the augmented 1995 procedures and the proposed 2002 procedures as minimization procedures under 50 U.S.C. § 1801(h) was in error. The Court of Review found that the FISC had misconstrued 50 U.S.C. §§ 1801(h) and 1805 and may have overstepped its constitutional authority by asserting authority to govern the internal organization and investigative procedures of the Justice Department.

[3942] *FISC op.*, 218 F. Supp. 2d at 626.

[3943] *Id.*

[3944] *Id.*

It found that FISA, as originally enacted, did not create a dichotomy between foreign intelligence information gathering and law enforcement investigations, nor did it require maintenance of a "wall" between such investigations. While FISA as enacted in 1978 required that a national security official certify that "the purpose" of the investigation was to gather foreign intelligence information, the court regarded the definition of "foreign intelligence information" as including evidence of criminal wrongdoing where a U.S. person is the target of the FISA investigation. In light of the fact that the definition of "agent of a foreign power" applicable to U.S. persons involved criminal conduct, or, in the context of clandestine intelligence operations, the possibility of criminal conduct, the court distinguished "foreign intelligence crimes" from "ordinary crimes." In foreign intelligence crimes, intelligence gathering and criminal investigations may become intertwined.

The Court of Review reviewed past court decisions requiring that, in seeking a FISA order authorizing electronic surveillance, the government must demonstrate that the "primary purpose" of the surveillance was to gather foreign intelligence information and not to further law enforcement purposes. Rejecting the "primary purpose test" as applied by the FISC and the courts of appeals of several circuits, the Court of Review did not find it to be compelled by the statutory language of FISA as originally enacted or by the Fourth Amendment.

The Court of Review also held the FISC to have been in error in its refusal "to consider the legal significance of the Patriot Act's crucial amendments...." In particular, the court focused upon the change of the required certification by the national security official from a certification that "the purpose" of the surveillance was to obtain foreign intelligence information to a certification that "a significant purpose" of the surveillance was to obtain foreign intelligence information in 50 U.S.C. § 1804(a)(7)(B); and the enactment of 50 U.S.C. § 1806(k), authorizing consultation and coordination by federal officers engaged in electronic surveillance to acquire foreign intelligence information with federal law enforcement officers.

Finding that the "significant purpose" amendment recognized the existence of a dichotomy between intelligence gathering and law enforcement purposes, the Court of Review concluded that this test was satisfied if the government had "a measurable foreign intelligence purpose, other than just criminal prosecution of even foreign intelligence crimes."[3945] While the gathering of foreign intelligence information for the sole objective of criminal prosecution would be precluded by the "significant purpose" language, if "the government entertains a realistic option of dealing with the agent [of a foreign power] other than through criminal

---

[3945] *Id.* at 735.

prosecution," the court found the "significant purpose" test satisfied.[3946] Although the court was of the view that, prior to passage of the USA PATRIOT Act, the FISC may well not have had authority under 50 U.S.C. § 1805(a)(5) to inquire into anything other than the issue of "whether the information sought was a type of foreign intelligence information, in light of the significant purpose amendment of section 1804" the Court of Review concluded that "it seems section 1805 must be interpreted as giving the FISA court the authority to review the government's purpose in seeking the information."[3947] The court held that the government's purpose under 50 U.S.C. § 1804(a)(7)(B) was "to be judged by the national security official's articulation and not by a FISA court inquiry into the origins of an investigation nor an examination of the personnel involved.... [I]f the FISA court has reason to doubt that the government has any real non-prosecutorial purpose in seeking foreign intelligence information it can demand further inquiry into the certifying officer's purpose — or perhaps even the Attorney General's or Deputy Attorney General's reasons for approval."[3948]

The Court of Review also considered whether FISA, as amended, passed constitutional muster under the Fourth Amendment. It deemed the procedures and government showings required under FISA to come close to the minimum requirements for a warrant under the Fourth Amendment, if not meeting such requirements. Assuming arguendo that a FISA order was not a warrant for Fourth Amendment purposes, the Court of Review found FISA constitutional because the surveillances authorized thereunder were reasonable.

Probable Cause, Reasonable Suspicion, and Reasonableness Standards in the Context of the Fourth Amendment and the Foreign Intelligence Surveillance Act (Memorandum January 30, 2006)

AMERICAN LAW DIVISION, CONGRESSIONAL RESEARCH SERV., PROBABLE CAUSE, REASONABLE SUSPICION, AND REASONABLENESS STANDARDS IN THE CONTEXT OF THE FOURTH AMENDMENT AND THE FOREIGN INTELLIGENCE SURVEILLANCE ACT (2006), *available at* http://www.intelligencelaw.com/library/secondary/crs/pdf/memo_1-30-2006.pdf.

Memorandum January 30, 2006

TO: Senate Select Committee on Intelligence
Attention: Mike Davidson

FROM: American Law Division

SUBJECT: Probable Cause, Reasonable Suspicion, and Reasonableness Standards in the Context of the Fourth Amendment and the Foreign Intelligence Surveillance Act

This is in response to your request for a brief description of the Fourth Amendment's probable cause, reasonable suspicion, and reasonableness standards. In over simplified terms, probable cause "exist[s] where the known facts and circumstances are sufficient to warrant a man of reasonable prudence in the belief that contraband or evidence of a crime will be found," *Ornelas v. United States*, 517 U.S. 690, 696 (1996); *Illinois v. Gates*, 462 U.S. 213, 238 (1983).

Under a similar gloss, reasonable suspicion is a standard, more than a hunch but considerably below preponderance of the evidence, which justifies an officer's investigative stop of an individual upon the articulable and particularized belief that criminal activity is afoot, *Ornelas v. United States*, 517 U.S. at 695; *Illinois v. Gates*, 462 U.S. at 235.

And Fourth Amendment reasonableness is that point at which the government's interest advanced by a particular search or seizure outweighs the loss of individual privacy or freedom of movement that attends the government's action, *Illinois v. Lidster*, 540 U.S. 419, 427 (2004)("in judging reasonableness, we look to the gravity of the public concerns served by the seizure, the degree to which the seizure advances the public interest, and the severity of the interference with individual liberty").

Again in summary and to add further complication, the Supreme Court has speculated that in national security cases the "probable cause" may be less demanding or at least different than it is in the context of a traditional criminal investigation, *United States v. United States District Court*, 407 U.S. 297, 322 (1972)("the gathering of security intelligence is often long range and involves the interrelation of various sources and types of information. . . . Thus, the focus of domestic surveillance may be less precise than that directed against more conventional types of crime"). FISA permits recourse to this reduced application of the probable cause standard in spy cases but not in terrorism cases, *In re Sealed Case*, 310 F.3d 717, 739 (F.I.S.Ct.Rev. 2002)("Congress allowed this lesser showing for clandestine intelligence activities – but not, notably, for other activities, including terrorism . . ."). Yet it is focus and not the standard that is different in FISA cases. The standard is the same; the certainty of the predicate is different: probable cause to believe that evidence of a crime *will be* found versus probable cause to believe that spying *may* occur.

Each of the standards is a means of judging official conduct against the demands of the Fourth Amendment which provides that, "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized," U.S. Const. Amend. IV. The question of which standard applies and whether a particular search passes muster is fact driven.

On a number occasions, the Court has pointed out that probable cause is the description of a degree of probability that cannot be easily defined out of context:

> *The probable-cause standard is incapable of precise definition or quantification into percentages because it deals with probabilities and depends on the totality of the circumstances. We have stated, however, that the substance of all the definitions of probable cause is a reasonable ground for belief of guilt, and that the belief of guilt must be particularized with respect to the person to be searched or seized. Maryland v. Pringle, 540 U.S. 366, 371 (2003)(citations omitted).*

An earlier case had made the same point for both the probable cause and reasonable suspicion standards:

> *Articulating precisely what "reasonable suspicion" and "probable cause" mean is not possible. They are commonsense, nontechnical conceptions that deal with the factual and practical considerations of everyday life on which reasonable and prudent men, not legal technicians act. As such, the standards are not really, or even usefully, reduced to a neat set of legal rules. We have described reasonable suspicion simply as a particularized and objective*

> *basis for suspecting the person stopped of criminal activity, and probable cause to search as existing where the known facts and circumstances are sufficient to warrant a man of reasonable prudence in the belief that contraband or evidence of a crime will be found. We have cautioned that these two legal principles are not "finely-tuned standards" comparable to the standards of proof beyond a reasonable doubt or of proof by a preponderance of the evidence. They are instead fluid concepts that take their substantive content from the particular contexts in which the standards are being assessed. The principal components of a determination of reasonable suspicion or probable cause will be the events which occurred leading up to the stop or search, and then the decision whether these historical facts, viewed from the standpoint of an objectively reasonable police officer amount to reasonable suspicion or to probable cause. Ornelas v. United States, 517 U.S. at 695-96 (citations omitted).*

While *Ornelas* finds "probable cause where the known facts and circumstances are sufficient to warrant a man of reasonable prudence in the belief that contraband or evidence of a crime will be found," id. at 695, *Pringle*, 540 U.S. at 371, 372 n,2, refers to the comparable but more detailed earlier treatment in *Brinegar v. United States*. *Brinegar* begins with Chief Justice Marshall's observation that probable cause "means less than evidence which would justify condemnation or conviction," *Brinegar v. United States*, 338 U.S. 160, 175 (1949), quoting, *Locke v. United States*, 7 Cranch (11 U.S.) 339, 348 (1813). *Brinegar* then adds, "[s]ince, Marshall's time, at any rate, it has come to mean more than bare suspicion: Probable cause exists where the facts and circumstances within . . . the officers' knowledge and of which they had reasonably trustworthy information are sufficient in themselves to warrant a man of reasonable caution in the belief that an offense has been or is being committed," 338 U.S. at 175-76 (citations omitted).

The Court has supplied illustrations of what constitutes probable cause and what does not. *Pringle* found probable cause to arrest the passenger in a small car on a charge of possessing the five "baggies" of cocaine found in the back seat of the car, 540 U.S. at 372. An officer had stopped the car for speeding at 3 in the morning. *Id*. at 371. Pringle was the front seat passenger and the officer saw a large roll of cash in the glove compartment when it was opened to retrieve the car's registration. *Id*. at 371-72. To these the Court added the inference that a trained, experienced officer might draw: "Here we think it was reasonable for the officer to infer a common enterprise among the three men [in the car]. The quantity of drugs and cash in the car indicated the likelihood of drug dealing, an enterprise to which a dealer would be unlikely to admit an innocent person with the potential to furnish evidence against him," *id*. at 373.

Ybarra, in contrast, found no probable cause for officers to search a bar patron present when they executed a warrant authorizing the search of the bartender

based upon probable cause to believe the bartender would be selling heroin at the time, *Ybarra v. Illinois*, 444 U.S. 85, 91 (1979). *Ybarra* listed a series of factors that might have but did not contribute to a finding of probable cause: "[T]he police did not recognize Ybarra and had no reason to believe that he had committed, was committing, or was about to commit any offense under state or federal law. Ybarra made no gestures indicative of criminal conduct, made no movements that might suggest an attempt to conceal contraband, and said nothing of a suspicious nature to the police officers. In short, the agents knew nothing in particular about Ybarra, except that he was present, along with several other customers in a public tavern at a time when the police had reason to believe that the bartender would have heroin for sale. It is true that the police possessed a warrant based on probable cause to search the tavern in which Ybarra happened to be at the time the warrant was executed. But, a person's mere propinquity to others independently suspected of criminal activity does not, without more, give rise to probable cause to search that person," *id.*

Some years later, the *Royer* plurality opinion noted a list of arguably suspicious factors that nevertheless did not add up to probable cause: "[A] nervous young man with two American Tourister bags paid cash for an airline ticket to a 'target' city. These facts led to inquiry, which in turn revealed that the ticket had been bought under an assumed name. The proffered explanation did not satisfy the officers," *Florida v. Royer*, 460 U.S. 491, 507 (1983).

The reasonable suspicion standard is of relatively recent origins. Although never expressly mentioned there, it comes from *Terry*, which recognized that under certain exigencies of time and place police officers may conduct a limited seizure and search with less than probable cause, *Terry v. Ohio*, 392 U.S. 1 (1968).[3949] Reasonable suspicion has been described as "something more than an inchoate and unparticularized suspicion or hunch. . . . [as a] level of suspicion . . . considerable less than proof of wrongdoing by a preponderance of the evidence. .

[3949] "At the time he seized petitioner and searched him for weapons, Officer McFadden had reasonable grounds to believe that petitioner was armed and dangerous, and it was necessary for the protection of himself and others to take swift measures to discover the true facts and neutralize the threat of harm if it materialized. The policeman carefully restricted his search to what was appropriate to the discovery of the particular items which he sought. Each case of this sort will, of course, have to be decided on its own facts. We merely hold today that where a police officer observes unusual conduct which leads him reasonably to conclude in light of his experience that criminal activity may be afoot and that the persons with whom he is dealing may be armed and presently dangerous, where in the course of investigating this behavior he identifies himself as a policeman and makes reasonable inquiries, and where nothing in the initial stages of the encounter serves to dispel his reasonable fear for his own or others' safety, he is entitled for the protection of himself and others in the area to conduct a carefully limited search of the outer clothing of such persons in an attempt to discover weapons which might be used to assault him. Such a search is a reasonable search under the Fourth Amendment, and any weapons seized may properly be introduced in evidence against the person from whom they were taken," 392 U.S. at 30-31.

. . [as a] . . . level of suspicion . . . obviously less demanding than that for probable cause. . . [but a level of] suspicion supported by articulable facts that criminal activity "may be afoot," even if the officer lacks probable cause," *United States v. Sokolow*, 490 U.S. 1, 7 (1989); as "a particularized and objective basis for suspecting legal wrongdoing," *United States v. Arvizu*, 534 U.S. 266, 273 (2002); and as "a particularized and objective basis for suspecting the person stopped of criminal activity," *Ornelas v. United States*, 517 U.S. at 690, citing, *United States v. Cortez*, 449 U.S. 411, 417-18 (1981).

It is a standard that may be invoked for a warrantless search or seizure at less than probable cause when in the totality of the circumstances at hand substantial public interests outweigh the minimal loss of personal freedom of movement and privacy imposed in a manner limited in time and nature. For example, *Brignoni-Ponce* acknowledged the substantial public interest in preventing foreign nationals from entering this country illegally, yet it refused approve even a limited detention by roving patrols near but not at the border when officers' suspicions were aroused solely by the Mexican ancestry of the detainees, *United States v. Brignoni-Ponce*, 422 U.S. 873, 883-84 (1975). *Brignoni-Ponce* explained, however, that

> *"[a]ny number of factors may be taken into account in deciding whether there is reasonable suspicion to stop a car in the border area. Officers may consider the characteristics of the area in which they encounter a vehicle. Its proximity to the border, the usual patterns of traffic on the particular road, and previous experience with alien traffic are all relevant. They also may consider information about recent illegal border crossings in the area. The driver's behavior may be relevant, as erratic driving or obvious attempts to evade officers can support a reasonable suspicion. Aspects of the vehicle itself may justify suspicion. For instance, officers say that certain station wagons, with large compartments for fold-down seats or spare tires are frequently used for transporting concealed aliens. The vehicle may appear to be heavily loaded, it may have an extraordinary number of passengers, or the officers may observe persons trying to hide," Id. at 884-85.*

Arvizu found reasonable suspicion in a border patrol case involving such circumstances:

It was reasonable for [Agent] Stoddard to infer from his observations, his registration check [of the minivan registered to an address in an area of the border town of Douglas, notorious for smuggling], and his experience as a border patrol agent that respondent had set out from Douglas along a little-traveled route used by smugglers to avoid the [route] 191 checkpoint. Stoddard's knowledge further supported a commonsense inference that respondent intended to pass through the area at a time when officers would be leaving their backroads

patrols to change shifts. The likelihood that respondent and his family were on a picnic outing was diminished by the fact that the minivan had turned away from the known recreational areas . . . . Corroborating this inference is the fact that recreational areas farther to the north would have been easier to reach by taking 191, as opposed to the 40-to-50 mile trip on unpaved and primitive roads [the minivan had taken]. The children's elevated knees [as they rode in the backs at of the van] suggested the existence of concealed cargo in the passenger compartment. Finally, for the reason we have given, Stoddard's assessment of respondent's reactions upon seeing him [slowing down dramatically, stiffening behind the wheel, and pretending to ignore the officer], and the children's mechanical-like waving [as if under instructions to allay suspicions], which continued for a full four to five minutes, were entitled to some weight. *United States v. Arvizu*, 534 U.S. 266, 277 (2002).

Sokolow and *Reid* illustrate the dividing line between facts that reflect reasonable suspicion and those that do not. *Sokolow* declared that

> *Paying $2,100 in cash for two airplane tickets is out of the ordinary, and it is even more out of the ordinary to pay that sum from a roll of $20 bills containing nearly twice that amount of cash. We also think the agents had a reasonable ground to believe that respondent was traveling under an alias. . . . While a trip from Honolulu to Miami, standing alone, is not a cause for any sort of suspicion, here there was more: surely few residents of Honolulu travel from that city for 20 hours to spend 48 hours in Miami during the month of July. Any one of these factors is not by itself proof of any illegal conduct and is quite consistent with innocent travel. But we think taken together they amount to reasonable suspicion. United States v. Sokolow, 490 U.S. 1, 8-9 (1989).*

This, *Sokolow* contrasted with the *Reid* conclusion under similar circumstances that no reasonable suspicion existed:

> *In Reid [v. Georgia, 448 U.S. 438, 441 (1980)], the Court held that a DEA agent stopped the defendant without reasonable suspicion. At the time of the stop, the agent knew that (1) the defendant flew into Atlanta from Fort Lauderdale, a source city for cocaine; (2) he arrived early in the morning, when police activity was believed to be at a low ebb; (3) he did not check his luggage; and (4) the defendant and his companion appeared to be attempting to hide the fact that they were together. 490 U.S. at 9-10 n.5.*

The Supreme Court's reasonable suspicion cases have generally involved situations like those in *Terry, Brignoni-Ponce, Ornelas, Arvizu, Sokolow*, and *Reid*, essentially stop and frisk or stop and question cases. *Knights* indicates that

the classification is coincidental not required. Citing *Terry* and *Brignoni-Ponce*, *Knights* reasoned that

> *Although the Fourth Amendment ordinarily requires the degree of probability embodied in the term probable cause, a lesser degree satisfies the Constitution when the balance of governmental and private interest makes such a standard reasonable. . . . When an officer has reasonable suspicion that a probationer subject to a search condition is engaged in criminal activity, there is enough likelihood that criminal conduct is occurring that an intrusion on the probationer's significantly diminished privacy interest is reasonable. United States v. Knights, 534 U.S. 112, 121 (2001).*

The utility company with whom Knights had a running dispute had experienced a rash of vandalism, *id*. at 114-15. The incidents occurred in close proximity to Knights' judicial appearances to answer company charges, *id*. at 115. In one instance, brass locks had been pried from a telecommunications vault and the contents burned using gasoline and ignited by a pipe bomb, *id*. Prior to the arson, officers had stopped Knights and an associate and observed pipes and gasoline in the truck in which they were riding, *id*. After the arson, officers approached the parked truck and saw a Molotov cocktail, gas can, and brass locks similar to those pried from the vandalized vault in the truck, *id*. Moreover, Knights was on probation hence might more reasonably be suspected of criminal involvement than an unconvicted individual, *id*. at 120. He had also agreed to warrantless, suspicionless searches as a condition of his probation thus supporting a reasonable inference that he would more readily and more quickly destroy incriminating evidence than might other offenders, *id*. This created a reasonable suspicion that Knights had engaged in criminal activity and justified the warrantless search of his apartment, *id*. at 121.

As to the third standard, the Supreme Court has found certain "special needs" may render a search reasonable for Fourth Amendment purposes notwithstanding the want of a warrant or probable cause. The special needs standard has been invoked in drug testing cases and a comparable standard applied in highway check point cases. In such instances, "[w]hen special needs, beyond the normal need for law enforcement, make the warrant and probable cause requirement impractical. . . the reasonableness of a search [is determined] by balancing the nature of the intrusion on the individual's privacy against the promotion of legitimate governmental interests," *Board of Education v. Earls*, 536 U.S. 822, 829 (2002). *Earls* found the testing of high school participants in extracurricular activities a reasonable means of protecting school children from drug use given the children's reduced privacy interests as students and the negligible intrusion associated with the search procedures, id. at 830-38. *Acton* came to the same conclusion after applying the same standard to assess the reasonableness of a drug testing program for student athletes, *Vernonia School District v. Acton*, 515 U.S. 646, 653-65 (1995). Using the same standard – "balanc[ing] the governmental and privacy interests to assess the practicality of

the warrant and probable cause requirements in the particular context" – *Skinner* found reasonable by Fourth Amendment standards the drug testing program for railroad employees given the public interest in railway safety, the reduced privacy interests reflected in the extensive safety regulation under which the railroad industry operates, and the minimally intrusive manner in which the searches were conducted, *Skinner v. Railway Labor Executives' Assoc.*, 489 U.S. 602, 619-33 (1989). Under the same standard, a drug testing program for Customs Service employees met Fourth Amendment reasonableness standards, given the public interest in the integrity as well as the unimpaired perception and judgment of those armed to enforce our drug laws balanced against the reduced privacy expectations of public employees occupying such positions and the minimally intrusive methods of search, *Treasury Employees v. Von Raab*, 489 U.S. 656, 670-72 (1989). The availability of the special needs reasonableness standard is not boundless. *Chandler* rejected a drug testing program imposed as a qualification to run for elective state office on the grounds that the need was symbolic not special, *Chandler v. Miller*, 520 U.S. 305, 322 (1997). The state had failed to show a public interest sufficient to outweigh the privacy interests at issue or to justify departure from ordinarily applicable Fourth Amendment warrant and probable cause requirements, *id.* at 318-22. There was no evidence of drug use among the state's elected officials, *id.* at 318-19. Nor was the candidate arranged and controlled testing procedure likely to address the problem if any existed, *id.* at 319-20.

Chandler makes it clear that the reasonableness standard, available "when special needs, beyond the normal need for law enforcement, make the warrant and probable cause requirement impractical" is inappropriate when the government's needs are not "special." Ferguson suggests that the reasonableness standard is inappropriate when the need is not beyond the normal need for law enforcement, *Ferguson v. City of Charleston*, 532 U.S. 67, (2001). The standard is inappropriate when the purpose for the challenged search is one not "divorced from the state's general interest in law enforcement. . . [but] ultimately indistinguishable from the general interest in crime control," that is, when "the immediate objective of the searches was to generate evidence for law enforcement purposes," *id.* at 80-81, 83.[3950]

In highway checkpoint cases, *Martinez-Fuerte* and *Sitz* apply a Fourth Amendment reasonable balancing test similar to that used in special needs cases. *Martinez-Fuerte* balanced the substantial public interest served in terms of smuggling and illegal entry by permanent highway checkpoints located

---

[3950] Ferguson involved a law enforcement initiated hospital drug testing program for pregnant patients under which those who tested positive were given the option of drug treatment or prosecution, id. at 71-73. It may appear from Lidster, discussed infra, which applies a special needs analysis to a highway checkpoint designed to secure evidence for law enforcement purposes, that Ferguson should be to understood to apply only when the evidence is to be used against the person searched.

proximate to the border against the reduced expectation of privacy associated with automobile use and the "quite limited" and "minimal" intrusion upon private interests, *United States v. Martinez-Fuerte*, 428 U.S. 543, 556-62 (1976). *Sitz* uses a similar standard for highway drunk-driving checkpoints – "balanc[ing] the state's interest in preventing drunken driving, the extent to which this system [of highway checkpoints] can reasonably be said to advance that interest, [against] the degree of intrusion upon individual motorists who are briefly stopped," *Michigan Department of State Police v. Sitz*, 496 U.S. 444, 455 (1990).

Faced with a drug interdiction highway checkpoint in which motorists were stopped while drug sniffing dogs circled their vehicles, *Edmond* distinguished *Martinez-Fuerte* as a "border" case and refused to abandon the probable cause or reasonable suspicion standards in favor of a reasonableness test:

> *[T]he Indianapolis checkpoints are far removed from the border context that was crucial in Martinez-Fuerte . . . . The primary purpose of the Indianapolis narcotics checkpoint is in the end to advance the general interest in crime control. We decline to suspend the usual requirement of individualized suspicion where the police seek to employ a checkpoint primarily for the ordinary enterprise of investigating crime. Indianapolis v. Edmond, 531 U.S. 32, 45-46 (2000).*

Lidster appears to limit the force of *Edmond* and perhaps of *Ferguson*. *Lidster* applied a balancing test to a highway checkpoint maintained for ordinary law enforcement, evidence gathering purposes, albeit probably not in anticipation that the evidence would be used against any of the motorists stopped:

> *[A]n Edmond-type presumptive rule of unconstitutionality does not apply here. That does not mean the stop is automatically, or even presumptively, constitutional. It simply means that we must judge its reasonableness, hence, its constitutionality, on the basis of individual circumstances. . . . [I]n judging reasonableness, we look to the gravity of the public concerns served by the seizure, the degree to which the seizure advances the public interest, and the severity of the interference with individual liberty.*
>
> *We now consider the reasonableness of the checkpoint stop before us in light of the factors just mentioned . . . . We hold that the stop was constitutional. The relevant public concern was grave. Police were investigating a crime that had resulted in a human death. . . .And the stop's objective was to help find the perpetrator of a specific and known crime, not of unknown crimes of a general sort. The stop advanced this grave public concern to a significant degree [by asking motorist if they had any relevant information and distributing a flyer]. . . . The stop took place about one week*

> *after the hit-and-run accident, on the same highway near the location of the accident, and at about the same time of night. And the police used the stops to obtain information from drivers, some of whom might well have been in the vicinity of the crime at the time it occurred. Most importantly, the stops interfered only minimally with the liberty of the sort the Fourth Amendment seeks to protect. Illinois v. Lidster, 540 U.S. 419, 426-27 (2004) (citations and accompanying parentheticals omitted).*

Probable cause is bit different under FISA. Ordinarily, probable cause speaks to the probability of the existence of a certain fact, *e.g.*, probable cause to believe a crime has been, is, or is about to be committed and that the search will result in the discovery of evidence or contraband. FISA authorizes issuance of a surveillance or search order predicated upon the probability of a possibility; the probability to believe that the foreign target of the order may engage in spying, or the probability to believe that the American target of the order may engage in criminal spying activities, 50 U.S.C. 1805(a)(3)(A), 1824(a)(3)(A), 1801(b)(1)(B), (b)(2)(A).[3951] But it is the predicate not the standard that is changed. The probable cause *standard* is the same in FISA as in a criminal context: would a prudent individual believe that a fact is probably true. It is the focus that is different. Would a prudent individual believe that spying may occur.

Legislative Attorney
American Law Division

Summary

The national debate regarding the National Security Agency's Terrorist Surveillance Program (TSP) focused congressional attention on the U.S. Foreign Intelligence Surveillance Court and the U.S. Foreign Intelligence Surveillance Court of Review created by the Foreign Intelligence Surveillance Act. Congressional interest in these courts has been heightened by the January 17, 2007, letter from Attorney General Gonzales to Chairman Leahy and Senator Specter advising them that a Foreign Intelligence Surveillance Court judge had "issued orders authorizing the Government to target for collection international communications into or out of the United States where there is probable cause to believe that one of the communicants is a member or agent of al Qaeda or an associated terrorist organization," stating that all surveillance previously occurring under the TSP will now be conducted subject to the approval of the Foreign Intelligence Surveillance Court, and noting that the President has determined not to reauthorize the TSP when the current authorization expires. This report examines the creation, membership, structure, and jurisdiction of these courts. It will be updated as subsequent events may require.

Introduction

The Foreign Intelligence Surveillance Act of 1978 (FISA), P.L. 95-511, 50 U.S.C. § 1801 et seq., as amended, provides a statutory framework for the U.S. government to engage in electronic surveillance[3952] and physical searches[3953] to

---

[3952] Under subsection 101(f) of FISA, 50 U.S.C. § 1801(f), the term "electronic surveillance" means:

obtain foreign intelligence information.[3954] It also provides a statutory structure for the installation and use of pen registers and trap and trace devices[3955] for use

---

(1) the acquisition by an electronic, mechanical, or other surveillance device of the contents of any wire or radio communication sent by or intended to be received by a particular, known United States person who is in the United States, if the contents are acquired by intentionally targeting that United States person, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes;

(2) the acquisition by an electronic, mechanical, or other surveillance device of the contents of any wire communication to or from a person in the United States, without the consent of any party thereto, if such acquisition occurs in the United States, but does not include the acquisition of those communications of computer trespassers that would be permissible under section 2511(2)(i) of Title 18;

(3) the intentional acquisition by an electronic, mechanical, or other surveillance device of the contents of any radio communication, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes, and if both the sender and all intended recipients are located within the United States; or

(4) the installation or use of an electronic, mechanical, or other surveillance device in the United States for monitoring to acquire information, other than from a wire or radio communication, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes.

The provisions dealing with such electronic surveillance are found in title I of FISA, 50 U.S.C. § 1801 et seq., while the provisions addressing physical searches are located in title III of FISA, 50 U.S.C. § 1821 et seq.

[3953] Subsection 301(5) of FISA, 50 U.S.C. § 1821(5) defines the term "physical search" to mean: any physical intrusion within the United States into premises or property (including examination of the interior of property by technical means) that is intended to result in a seizure, reproduction, inspection, or alteration of information, material, or property, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes, but does not include (A) "electronic surveillance", as defined in section 1801(f) of this title, or (B) the acquisition by the United States Government of foreign intelligence information from international or foreign communications, or foreign intelligence activities conducted in accordance with otherwise applicable Federal law involving a foreign electronic communications system, utilizing a means other than electronic surveillance as defined in section 1801(f) of this title.

[3954] Subsection 101(e) of FISA, 50 U.S.C. § 1801(e), defines "foreign intelligence information" to mean:

(1) information that relates to, and if concerning a United States person is necessary to, the ability of the United States to protect against —

(A) actual or potential attack or other grave hostile acts of a foreign power or an agent of a foreign power;

(B) sabotage or international terrorism by a foreign power or an agent of a foreign power; or

in federal investigations to obtain foreign intelligence information not concerning a U.S. person or to protect against international terrorism or clandestine intelligence activities. Such an investigation of a U.S. person may not be conducted solely on the basis of activities protected by the First Amendment to the Constitution.[3956]

In addition, FISA provides statutory authority for the Director of the Federal Bureau of Investigation (FBI) or his designee to seek a U.S. Foreign Intelligence Surveillance Court (FISC) order authorizing the production of any tangible things (including books, records, papers, documents, and other items) for an investigation to obtain foreign intelligence information not concerning a U.S. person or to protect against international terrorism or clandestine intelligence activities. Again, such an investigation of a U.S. person may not conducted solely on the basis of First Amendment-protected activities.[3957] A production order for tangible things may be accompanied by a nondisclosure order. Under Section 501(d) of FISA, 50 U.S.C. § 1861(d), no person shall disclose to any other person that the FBI has sought or obtained tangible things pursuant to an order under this section, other than to those persons to whom disclosure is necessary to

---

(C) clandestine intelligence activities by an intelligence service or network of a foreign power or by an agent of a foreign power; or

(2) information with respect to a foreign power or foreign territory that relates to, and if concerning a United States person is necessary to —

(A) the national defense or the security of the United States; or

(B) the conduct of the foreign affairs of the United States.

[3955] Pen registers and trap and trace devices are addressed in title IV of FISA, 50 U.S.C. § 1841 et seq. Subsection 401(2) of FISA, 50 U.S.C. § 1841(2) defines "pen register" and "trap and trace device" by cross-reference to 18 U.S.C. § 3127. Under 18 U.S.C. § 3127(3), "pen register" is defined to mean: a device or process which records or decodes dialing, routing, addressing, or signaling information transmitted by an instrument or facility from which a wire or electronic communication is transmitted, provided, however, that such information shall not include the contents of any communication, but such term does not include any device or process used by a provider or customer of a wire or electronic communication service for billing, or recording as an incident to billing, for communications services provided by such provider or any device or process used by a provider or customer of a wire communication service for cost accounting or other like purposes in the ordinary course of its business.

The term "trap and trace device" is defined under 18 U.S.C. § 3127(4) to mean: a device or process which captures the incoming electronic or other impulses which identify the originating number or other dialing, routing, addressing, and signaling information reasonably likely to identify the source of a wire or electronic communication, provided, however, that such information shall not include the contents of any communication.

[3956] Section 402 of FISA, 50 U.S.C. § 1842.

[3957] Section 501 of FISA, 50 U.S.C. § 1861.

comply with such order, an attorney to obtain legal advice or assistance with respect to the production of things in response to the order, or other persons as permitted by the Director of the FBI or the designee of the Director. A person to whom a disclosure is made is also subject to the nondisclosure requirements. Any person making or intending to make a disclosure to a person to whom disclosure is necessary to comply with the order or to whom disclosure is permitted by the Director of the FBI or his designee must, at the request of the Director or his designee, identify the person to whom disclosure is to be or has been made.

With limited exceptions,[3958] electronic surveillance and physical searches may be conducted under FISA pursuant to court orders issued by a judge of the FISC, and pen registers and trap and trace devices may be installed and used pursuant to the order of a FISC judge or a U.S. Magistrate Judge authorized to act in that judge's behalf. In all instances in which the production of any tangible thing is required under FISA, an order from a FISC judge or a U.S. Magistrate Judge authorized to act in the judge's behalf must be obtained. Appeals from the denial of applications for FISC orders approving electronic surveillance, physical search, or production of tangible things may be made by the U.S. government to the U.S. Foreign Intelligence Court of Review (Court of Review). If the denial of an application is upheld by the Court of Review, a petition for certiorari may be filed to the U.S. Supreme Court.

[3958] In the case of FISA electronic surveillance, those exceptions may be found in sections 102 (electronic surveillance for foreign intelligence purposes of certain types of foreign powers, as defined under section 101(a)(1), (2), and (3), 50 U.S.C. §§ 1801(a)(1), (2), and (3), upon Attorney General certification), 105(f) (emergency authorization by the Attorney General for up to 72 hours, if specified criteria are met, while an application for a FISC order is pursued), and 111 of FISA (authority electronic surveillance without a court order for up to 15 calendar days following a congressional declaration of war), 50 U.S.C. §§ 1802, 1805(f) and 1811, respectively. The exceptions to the requirement for a court order for FISA physical searches may be found at sections 302 (physical searches for foreign intelligence purposes with respect to certain types of foreign powers, as defined under section 101(a)(1), (2), and (3), 50 U.S.C. §§ 1801(a)(1), (2), and (3), upon Attorney General certification), 304(e) (emergency authorization by the Attorney General for up to 72 hours, if specified criteria are met, while an application for a FISC order is pursued) and 309 (authority for physical searches for up to 15 calendar days following a congressional declaration of war) of FISA, 50 U.S.C. §§ 1822, 1824(e), and 1829, respectively. The exceptions with respect to FISA pen registers and trap and trace devices may be found at sections 403 (emergency authorization by the Attorney General for up to 48 hours, if specified criteria are met, while an application for a FISC order is pursued) and 404 (authority for installation and use of pen registers and trap and trace devices for up to 15 calendar days following a congressional declaration of war) of FISA, 50 U.S.C. §§ 1843 and 1844, respectively.

A "foreign power," as defined in subsection (a)(1), (2), or (3), 50 U.S.C. §§ 1801(a)(1), (2), or (3), means "(1) a foreign government or any component thereof, whether or not recognized by the United States;" "(2) a faction of a foreign nation or nations, not substantially composed of United States persons;" or "(3) an entity that is openly acknowledged by a foreign government or governments to be directed and controlled by such foreign government or governments."

This report discusses the creation and structure of the Foreign Intelligence Surveillance Court and the Foreign Intelligence Court of Review and their respective jurisdictions.

Membership and Structure of the U.S. Foreign Intelligence Surveillance Court and the U.S. Foreign Intelligence Surveillance Court of Review

Section 103 of the Foreign Intelligence Surveillance Act, as amended, 50 U.S.C. § 1803, establishes the U.S. Foreign Intelligence Surveillance Court and the U.S. Foreign Intelligence Surveillance Court of Review. The FISC is composed of 11 U.S. district court judges publicly designated by the Chief Justice of the United States from seven circuits, at least three of whom must reside within 20 miles of the District of Columbia.[3959] The Chief Justice publicly designates one of the FISC judges to be presiding judge.

Although there is a procedure for the publication of FISC opinions, such publication is extremely rare. Only one opinion has been published since the court's inception in 1978*, In re All Matters Submitted to the Foreign Intelligence Surveillance Court*, 218 F. Supp. 2d 611 (U.S. Foreign Intell. Surveil. Ct. 2002). Under Foreign Intelligence Surveillance Court Rule 5(c),

> *[o]n request by a Judge, the Presiding Judge, after consulting with other Judges of the Court, may direct that an Opinion be published. Before publications, the Opinion must be reviewed by the Executive Branch and redacted, as necessary, to ensure that properly classified information is appropriately protected pursuant to Executive Order 12958 as amended by Executive Order 13292 (or its successor).*

Three of the FISC judges who reside within 20 miles of the District of Columbia, or, if all of those judges are unavailable, other FISC judges designated by the presiding judge of the FISC, comprise a petition review pool that has jurisdiction to review petitions filed pursuant to subsection 501(f)(1) of FISA, 50 U.S.C. § 1861(f)(1), to challenge a production order for tangible things in a foreign intelligence, international terrorism, or clandestine intelligence activities investigation under section 501 of FISA, or a nondisclosure order imposed in connection with such a production order.[3960]

[3959] Subsection 103(a) of FISA, 50 U.S.C. § 1803(a).

[3960] Subsection 103(e)(1) of FISA, 50 U.S.C. § 1803(e)(1). Under subsection 103(f)(2) of FISA, 50 U.S.C. § 1803(f)(2), within sixty days after March 9, 2006, the FISC was directed to adopt and, consistent with the protection of national security, publish procedures for the review of petitions filed pursuant to subsection 501(f)(1) of FISA, 50 U.S.C. § 1861(f)(1) the petition review pool. Subsection 501(f)(2) requires that such procedures provide that review of a petition shall be

The Court of Review is composed of three judges publicly designated by the Chief Justice from the United States district courts or courts of appeals. The Chief Justice also publicly designates one of the three judges as the presiding judge of the court.[3961] Only one opinion has been published by the Court of Review, *In re Sealed Case*, 310 F.3d 717 (U.S. Foreign Intell. Surveil. Ct. Rev. 2002), which is the first opinion the court has issued.

Each FISC and Court of Review judge serves for a maximum of seven years and is not eligible for redesignation.[3962]

Jurisdiction of the U.S. Foreign Intelligence Surveillance Court

Electronic Surveillance and Physical Searches

The FISC has jurisdiction to hear applications[3963] for and to grant court orders approving electronic surveillance or physical searches anywhere in the United States to obtain foreign intelligence information under FISA.[3964] No FISC judge may hear an application for electronic surveillance or a physical search under FISA that has been denied previously by another FISC judge.[3965] In general, such applications are either granted, granted as modified, or denied.[3966] If a FISC

---

conducted in camera and also provide for the designation of an acting presiding judge of the panel.

[3961] Subsection 103(b) of FISA, 50 U.S.C. § 1803(b).

[3962] Subsection 103(d) of FISA, 50 U.S.C. § 1803(d).

[3963] The requirements for an application for a court order authorizing electronic surveillance under FISA are set out in section 104 of FISA, 50 U.S.C. § 104. The requirements for an application authorizing a physical search under FISA are set out in section 303 of FISA, 50 U.S.C. § 1823.

[3964] Subsection 103(a) of FISA, 50 U.S.C. § 1803(a) (electronic surveillance); subsection 302(c) of FISA, 50 U.S.C. § 1822(c) (physical searches).

[3965] *Id.*

[3966] The number of applications for electronic surveillance and physical searches under FISA granted, modified, and denied each year are reported to the Congress and to the Administrative Office in reports which are publicly available at [http://www.usdoj.gov/ag/readingroom/ag_foia1.htm], listed under "Annual Foreign Intelligence Surveillance Act Reports." Annual reporting of electronic surveillance information is required by the congressional oversight requirements of sections 107 of FISA, 50 U.S.C. § 1807. There is no precisely parallel reporting requirement in FISA regarding physical searches, pen registers and trap and trace devices, or production of tangible things. Section 306 of FISA, 50 U.S.C. § 1826, requires such reports to on a semi-annual rather than an annual basis on physical searches. There are more detailed semi-annual congressional reporting requirements placed upon the Attorney General with respect to electronic surveillances, section 108 of FISA, 50 U.S.C. §

judge denies an application for an order authorizing electronic surveillance under FISA,[3967] such judge shall provide immediately for the record a written statement of each reason for his or her decision and, on motion of the United States, the record shall be transmitted, under seal, to the Court of Review. Proceedings in the FISC, conducted pursuant to procedures adopted under subsection 103(f)(1) of FISA, 50 U.S.C. § 1803(f)(1),[3968] and proceedings of the Court of Review, are to be conducted as expeditiously as possible. The record of such proceedings, including applications made and orders granted, must be maintained under security measures established by the Chief Justice in consultation with the Attorney General and the Director of National Intelligence.[3969]

Pen Registers and Trap and Trace Devices

Either a FISC judge or a U.S. Magistrate Judge publicly designated by the Chief Justice to act on behalf of such judge may hear applications[3970] for and grant orders[3971] approving installation and use of pen registers and trap and trace

---

1808; physical searches, section 306 of FISA, 50 U.S.C. § 1826; and pen registers and trap and trace devices, section 406 of FISA, 50 U.S.C. § 1846; and annual reporting requirements with respect to production of tangible things, section 502 of FISA, 50 U.S.C. § 1862. Additional reporting requirements were added by the Intelligence Reform and Terrorism Prevention Act, P.L. 108-458, and codified as a new section 601 of FISA, 50 U.S.C. § 1871.

[3967] The requirements for issuance of a FISC order granting an application for electronic surveillance under FISA are set out in section 105 of FISA, 50 U.S.C. § 1805, while the requirements for issuance of a FISC order granting an application for a physical search under FISA are set out in section 304 of FISA, 50 U.S.C. § 1824.

[3968] *Id.* Under subsection 103(f)(1), 50 U.S.C. § 1803(f)(1), the FISC and the Court of Review may establish such rules and procedures, and take such actions, as are reasonably necessary to administer their responsibilities under FISA. Subsection 103(f)(2), 50 U.S.C. § 1803(f)(2), requires that rules and procedures so established, and any modifications thereto, must be recorded and must be transmitted to all of the judges on the FISC, all of the judges on the Court of Review, the Chief Justice of the United States, the House and Senate Judiciary Committees, the Senate Select Committee on Intelligence, and the House Permanent Select Committee on Intelligence. Such transmissions are to be submitted in unclassified form, but may include a classified annex. The FOREIGN INTELLIGENCE SURVEILLANCE COURT RULES OF PROCEDURE and the PROCEDURES FOR REVIEW OF PETITIONS FILED PURSUANT TO SECTION 501(F) OF THE FOREIGN INTELLIGENCE SURVEILLANCE ACT OF 1978, AS AMENDED are available at [http://www.uscourts.gov/rules/fisa.html]. No rules of procedure for the Court of Review have been identified, although section 103(f)(1)t also provides that court with authority to establish such rules.

[3969] Subsection 103(c) of FISA , 50 U.S.C. § 1803(c) (electronic surveillance); subsection 302(e), 50 U.S.C. § 1822(e) (physical searches).

[3970] The requirements for an application for a pen register or trap and trace device under FISA are set forth in subsection 402(a)-(c) of FISA, 50 U.S.C. § 1842(a)-(c).

[3971] The requirements for issuance of a FISC order authorizing a pen register or trap and trace device under FISA are set forth in subsection 402(d) of FISA, 50 U.S.C. § 1842(d).

devices[3972] for an investigation to obtain foreign intelligence information not concerning a U.S. person[3973] or to protect against international terrorism[3974] or clandestine intelligence activities, provided that such investigation of a U.S. person is not conducted solely on the basis of activities protected by the First Amendment to the Constitution.

Production of Tangible Things

As in the case of pen registers and trap and trace devices, either a FISC judge or a U.S. Magistrate Judge publicly designated by the Chief Justice to act on behalf of such judge may hear applications[3975] for and grant orders[3976] approving production of any tangible thing[3977] for an investigation to obtain foreign intelligence information not concerning a U.S. person or to protect against international terrorism or clandestine intelligence activities, provided that such investigation of a U.S. person is not conducted solely upon the basis of activities protected by the First Amendment to the Constitution.

[3972] Subsections 402(b) or (d), 50 U.S.C. §§ 1842(b) or (d).

[3973] Under subsection 101(i) of FISA, 50 U.S.C. § 1801(i), a "United States person" is defined to mean "a citizen of the United States, an alien lawfully admitted for permanent residence (as defined in section 1101(a)(20) of Title 8), an unincorporated association a substantial number of members of which are citizens of the United States or aliens lawfully admitted for permanent residence, or a corporation which is incorporated in the United States, but does not include a corporation or an association which is a foreign power, as defined in subsection (a)(1), (2), or (3) of this section." As noted above, a "foreign power," as defined in subsection (a)(1), (2), or (3), 50 U.S.C. §§ 1801(a)(1), (2), or (3), means "(1) a foreign government or any component thereof, whether or not recognized by the United States;" "(2) a faction of a foreign nation or nations, not substantially composed of United States persons;" or "(3) an entity that is openly acknowledged by a foreign government or governments to be directed and controlled by such foreign government or governments."

[3974] Under subsection 101(c) of FISA, 50 U.S.C. § 1801(c), "international terrorism" means activities that "(1) involve violent acts or acts dangerous to human life that are a violation of the criminal laws of the United States or of any State, or that would be a criminal violation if committed within the jurisdiction of the United States or any State;" "(2) appear to be intended — (A) to intimidate or coerce a civilian population; (B) to influence the policy of a government by intimidation or coercion; or (C) to affect the conduct of a government by assassination or kidnapping;" and "(3) occur totally outside the United States, or transcend national boundaries in terms of the means by which they are accomplished, the persons they appear intended to coerce or intimidate, or the locale in which their perpetrators operate or seek asylum."

[3975] The requirements for an application for a FISC order for production of tangible things under FISA are set forth in subsection 501(a) and (b) of FISA, 50 U.S.C. § 1861(a) and (b).

[3976] The requirements for issuance of a FISC order for production of tangible things under FISA are set forth in subsection 501(c) of FISA, 50 U.S.C. § 1861(c).

[3977] Subsections 501(b)(1) and (c), 50 U.S.C. §§ 1861(b)(1) and (c).

Review of Petitions Challenging Production Orders for Tangible Things or Related Nondisclosure Orders

A person who receives a production order may challenge that order by filing a petition with the petition review pool created by section 103(e) of FISA, 50 U.S.C. § 1803(e). The recipient of a production order must wait at least a year before challenging the nondisclosure order imposed in connection with that production order by filing a petition with the petition review pool to modify or set aside the nondisclosure order.[3978] If the judge denies a petition to modify or set aside a nondisclosure order, the recipient of such order must wait at least another year before filing another such petition with respect to such nondisclosure order. Any production or nondisclosure order not explicitly modified or set aside remains in full effect.[3979]

Judicial proceedings under this subsection are conducted under the PROCEDURES FOR REVIEW OF PETITIONS FILED PURSUANT TO SECTION 501(F) OF THE FOREIGN INTELLIGENCE SURVEILLANCE ACT OF 1978, AS AMENDED, and are to be concluded as expeditiously as possible. The record of proceedings, including petitions filed, orders granted, and statements of reasons for decision, are maintained under security measures established by the Chief Justice of the United States, in consultation with the Attorney General and the Director of National Intelligence.[3980] All petitions under this subsection are filed under seal. In any proceedings under this subsection, the court shall, upon request of the government, review ex parte and in camera any government submission, or portions thereof, that may include classified information.[3981]

Motions to suppress information obtained by or derived from electronic surveillance, physical search, or pen registers or trap and trace devices under FISA are heard by U.S. district courts.

The procedure for challenging production or nondisclosure orders before the petition review pool of the FISC contrasts with that applicable to motions to suppress information obtained through or derived from electronic surveillance, physical search, or the installation and use of a pen register or trap and trace device under FISA, which a federal, state, or local government intends to use or disclose in a trial or other official proceeding. If a federal, state, or local government intends to use or disclose information obtained by or derived from a FISC order authorizing electronic surveillance, a physical search, or the use of a

---

[3978] Subsection 501(f)(2)(A)(i), 50 U.S.C. § 1861(f)(2)(A)(i).

[3979] Subsection 501(f)(2)(C) and (D), 50 U.S.C. § 1861(f)(2)(C) and (D).

[3980] Subsection 501(f)(4), 50 U.S.C. § 1861(f)(4).

[3981] Subsection 501(f)(5), 50 U.S.C. § 1861(f)(5).

pen register or trap and trace device, any challenges to the use or disclosure of that information must be made in the U.S. district court in which the motion or request is made, or, if the motion or request is made before another federal, state, or local authority, in the United States district court in the same district as that authority. Such challenges may include motions to suppress made under FISA by an "aggrieved person"[3982] against whom such information is intended to be used or disclosed; and any motion or request made by an aggrieved person pursuant to any other statute or rule of the United States or any state before any court or other authority of the United States or any state to discover or obtain applications or orders or other materials relating to FISA electronic surveillance, physical search, or use of a pen register or trap and trace device or to discover, obtain, or suppress evidence or information obtained or derived from the use of such investigative techniques under FISA.[3983]

Similar, but not identical, to the proceedings before the petition review panel regarding production orders or nondisclosure orders, the U.S. district court proceedings addressing motions to suppress information obtained by or derived from a FISA electronic surveillance, physical search, or pen register or trap and trace device, or seeking to discover or obtain related materials may be considered ex parte and in camera if the Attorney General files an affidavit under oath that disclosure or any adversary hearing would harm the national security of the United States.

If the United States district court determines that the electronic surveillance, physical search, or installation and use of the pen register or trap and trace device in regard to the aggrieved person was not lawfully authorized or conducted, it shall, in accordance with the requirements of law, suppress the evidence that was unlawfully obtained or derived therefrom or otherwise grant the motion of the aggrieved person. If the court determines that the electronic surveillance, physical search, or installation and use of a pen register or trap and trace device

---

[3982] The term "aggrieved person" is defined with respect to the use of electronic surveillance under FISA in subsection 101(k), 50 U.S.C. § 1801(k) to mean "a person who is the target of an electronic surveillance or any other person whose communications or activities were subject to electronic surveillance." When defined with respect to the use of physical searches under FISA, the term is defined by subsection 301(2) of FISA, 50 U.S.C. § 1821(2), to mean "a person whose premises, property, information, or material is the target of physical search or any other person whose premises, property, information, or material was subject to physical search." In connection with the use of a pen register or trap and trace device pursuant to FISA, the term is defined under subsection 401(3) of FISA, 50 U.S.C. § 1841(3) to mean any person "whose telephone line was subject to the installation or use of a pen register or trap and trace device authorized by this subchapter;" or "whose communication instrument or device was subject to the use of a pen register or trap and trace device authorized [under title IV of FISA] to capture incoming electronic or other communications impulses." The term is not used in connection with production of tangible things under title V of FISA, 50 U.S.C. § 1861-1862.

[3983] *See* subsection 106(c)-(h) of FISA, 50 U.S.C. § 1806(c)-(h) (electronic surveillance); subsection 305(d)-(i), 50 U.S.C. § 1825(d)-(i) (physical searches); 406(c)-(h) of FISA, 50 U.S.C. § 1846(c)-(h) (pen registers or trap and trace devices).

was lawfully authorized or conducted, it shall deny the motion of the aggrieved person except to the extent that due process requires discovery or disclosure.

Orders granting such motions or requests, decisions that a FISA electronic surveillance, physical search, or installation and use of a pen register or trap and trace device was not lawfully authorized or conducted, and orders of the United States district court requiring review or granting disclosure of applications, orders, or other materials relating thereto shall be final orders and binding upon all courts of the United States and the several states except a United States Court of Appeals or the Supreme Court.

Jurisdiction of the Court of Review

The government may seek review of a denial of an application for a court order under FISA authorizing electronic surveillance, physical search, or production of any tangible thing before the Court of Review.[3984] If the denial is upheld by the Court of Review, the government may seek U.S. Supreme Court review of the decision by a petition for certiorari.[3985]

In addition, the Court of Review has jurisdiction over petitions for review of a decision under section 501(f)(2) of FISA, 50 U.S.C. § 1861(f)(2), to affirm, modify, or set aside a production order or nondisclosure order filed by the government or any person receiving such an order.[3986] Upon the request of the government, any order setting aside a nondisclosure order shall be stayed pending such review.[3987]

The Court of Review shall provide for the record a written statement of the reasons for its decision and, on petition by the government or any person receiving such order for writ of certiorari, the record shall be transmitted under seal to the Supreme Court of the United States, which shall have jurisdiction to review such decision.

U.S. Supreme Court Jurisdiction

The U.S. Supreme Court has jurisdiction, on a petition for certiorari, to review decisions of the Court of Review affirming a denial of an application for an order authorizing electronic surveillance, physical searches, production orders, or nondisclosure orders under FISA.

[3984] The Foreign Intelligence Surveillance Court of Review is established under subsection 103(b), 50 U.S.C. § 1803(b). The Chief Justice publicly designates one of the Court of Review judges to be the presiding judge.

[3985] The U.S. Supreme Court is given jurisdiction over denials of applications which have been upheld by the Court of Review in subsection 103(b), 50 U.S.C. § 1803(b).

[3986] Subsection 501(f)(3) of FISA, 50 U.S.C. § 1861(f)(3).

[3987] Subsection 501(f)(2)(C)(iii), 50 U.S.C. § 1861(f)(2)(C)(iii).

Intelligence Reform and Terrorism Prevention Act of 2004: "Lone Wolf" Amendment to the Foreign Intelligence Surveillance Act, RS22011 (December 29, 2004)

ELIZABETH B. BAZAN, CONGRESSIONAL RESEARCH SERV., INTELLIGENCE REFORM AND TERRORISM PREVENTION ACT OF 2004: "LONE WOLF" AMENDMENT TO THE FOREIGN INTELLIGENCE SURVEILLANCE ACT (2004), *available at* http://www.intelligencelaw.com/library/secondary/crs/pdf/RS22011_12-29-2004.pdf.

Order Code RS22011

CRS Report for Congress

Elizabeth B. Bazan
Legislative Attorney
American Law Division

Summary

Section 6001 of the Intelligence Reform and Terrorism Prevention Act of 2004, P.L. 108-458, amended the definition of "agent of a foreign power" in the Foreign Intelligence Surveillance Act (FISA), 50 U.S.C. § 1801(b)(1), to add a new category of covered individuals. Under the new "lone wolf" provision, a non-United States person who engages in international terrorism or activities in preparation for international terrorism is deemed to be an "agent of a foreign power" under FISA. The new provision does not change the procedures to be used to apply for a court order authorizing electronic surveillance or a physical search under FISA. If an order is sought under this definition of an "agent of a foreign power," however, the applicant is not required to demonstrate a connection between the target of the electronic surveillance or the physical search and a foreign nation, foreign group, or international terrorist group. Nor does the Foreign Intelligence Surveillance Court (FISC), in approving such an order, haveto find probable cause to believe that such a connection existed. Rather, if the court authorizes such a surveillance or physical search using this new definition of "agent of a foreign power," the FISC judge has to find, in pertinent part, that, based upon the information provided by the applicant for the order, the target had engaged in or was engaging in international terrorism or activities in preparation therefor.

Introduction

The Foreign Intelligence Surveillance Act of 1978 (FISA), as amended, 50 U.S.C. §§ 1801-1862, provides a statutory framework for the use of electronic surveillance or physical searches to acquire foreign intelligence information.[3988] It also provides a vehicle for the use of pen registers or trap and trace devices in investigations conducted by the FBI under guidelines approved by the Attorney General under E.O. 12333 or a successor order to acquire foreign intelligence information not concerning a United States person or to protect against international terrorism or clandestine intelligence activities. In permitting the use of pen registers and trap and trace devices, FISA provides that such an investigation of a United States person may not be conducted solely on the basis of activities protected under the First Amendment of the U.S. Constitution. In addition, FISA provides a means for the government to obtain access to certain business records or other tangible things for an investigation to obtain foreign intelligence information not concerning a United States person or to protect against international terrorism or clandestine intelligence activities, again provided that such investigation of a United States person may not be conducted solely based upon First Amendment protected activities.

An applicant for a court order under FISA authorizing electronic surveillance or a physical search must include in the application, among other information, a statement of the facts or circumstances relied upon by the applicant to justify his or her belief that the target of the electronic surveillance or the physical search is a "foreign power" or an "agent of a foreign power" as those terms are defined in Section 101 of the act, 50 U.S.C. § 1801. Section 6001 of the Intelligence Reform and Terrorism Prevention Act of 2004,

P.L. 108-458, amended the definition of "agent of a foreign power" under Section 101(b)(1) of FISA, 50 U.S.C. § 1801(b)(1), to add a new category of non-United States persons covered under this definition. The amendment added a new subparagraph 101(b)(1)(C), 50 U.S.C. § 1801(b)(1)(C) (as reflected in italics below). As amended by Section 6001, "agent of a foreign power" under FISA means:

(1) any person other than a United States person, who–

[3988] As part of the application process for a Foreign Intelligence Surveillance Court order authorizing electronic surveillance or a physical search, the Assistant to the President for National Security Affairs or an executive branch national security or defense official or officials designated by the President must certify, among other things, that the he or she deems the information sought to be foreign intelligence information, that a significant purpose of the electronic surveillance or physical search is to obtain foreign intelligence information, and that such information cannot reasonably be obtained by normal investigative techniques. The certification that "a significant purpose" of the electronic surveillance or physical search is obtaining foreign intelligence information has been interpreted to provide latitude for such investigative techniques to be used for law enforcement purposes as well, so long as a significant foreign intelligence purpose also exists. *See* In re Sealed Case, 310 F.3d 717, 732-736 (U.S. Foreign Intell. Surveil. Ct. Rev. 2002).

(A) acts in the United States as an officer or employee of a foreign power, or as a member of a foreign power as defined in subsection (a)(4) of this section;[3989]
(B) acts for or on behalf of a foreign power which engages in clandestine intelligence activities in the United States contrary to the interests of the United States, when the circumstances of such person's presence in the United States indicate that such person may engage in such activities in the United States, or when such person knowingly aids or abets any person in the conduct of such activities or knowingly conspires with any person to engage in such activities;
(C) engages in international terrorism or activities in preparation therefore [sic]; or[3990]
(2) any person who–
(A) knowingly engages in clandestine intelligence gathering activities for or on behalf of a foreign power, which activities involve or may involve a violation of the criminal statutes of the United States;
(B) pursuant to the direction of an intelligence service or network of a foreign power, knowingly engages in any other clandestine intelligence activities for or on behalf of such foreign power, which activities involve or are about to involve a violation of the criminal statutes of the United States;

[3989] "Foreign power" is defined for purposes of FISA in Section 101(a) of the act, 50 U.S.C. § 1801(a), to mean: (1) a foreign government or any component thereof, whether or not recognized by the United States; (2) a faction of a foreign nation or nations, not substantially composed of United States persons; (3) an entity that is openly acknowledged by a foreign government or governments to be directed or controlled by such foreign government or governments; (4) a group engaged in international terrorism or activities in preparation therefor; (5) a foreign-based political organization, not substantially composed of United States persons; or (6) an entity that is directed and controlled by a foreign government or governments.

[3990] In light of the phrasing in the definition of "foreign power" in 50 U.S.C. § 1801(a)(4) and of the definition of "agent of a foreign power" in 50 U.S.C. § 1801(b)(2)(C), "therefore" as it appears in the new subsection (C) added to 50 U.S.C. § 1801(b)(1) seems likely to have been intended to read "therefor." "International terrorism" is defined in 50 U.S.C. § 1801(c) to mean activities that:

(1) involve violent acts or acts dangerous to human life that are a violation of the criminal laws of the United States or of any State, or that would be a criminal violation if committed within the jurisdiction of the United States or any State;

(2) appear to be intended–

(A) to intimidate or coerce a civilian population;

(B) to influence the policy of a government by intimidation or coercion; or

(C) to affect the conduct of a government by assassination or kidnaping; and

(3) occur totally outside the United States, or transcend national boundaries in terms of the means by which they are accomplished, the persons they appear intended to coerce or intimidate, or the locale in which their perpetrators operate or seek asylum.

(C) knowingly engages in sabotage or international terrorism, or activities that are in preparation therefor, for or on behalf of a foreign power;
(D) knowingly enters the United States under a false or fraudulent identity for or on behalf of a foreign power or, while in the United States, knowingly assumes a false or fraudulent identity for or on behalf of a foreign power; or
(E) knowingly aids or abets any person in the conduct of activities described in subparagraph (A), (B), or (C) or knowingly conspires with any person to engage in activities described in subparagraph (A), (B), or (C).

The term "United States person" in FISA is used to describe a citizen of the United States, a permanent resident alien, an unincorporated association a substantial number of the members of which are U.S. citizens or permanent resident aliens, or a corporation which is incorporated in the United States. This term does not include a corporation or association which is a foreign power as that term is defined in Section 101(a)(1), (2), or (3) of FISA, 50 U.S.C. § 1801(a)(1), (2), or (3).[3991] Thus, under the new subsection added by Section 6001 of P.L. 108-458, a non-U.S. person who engages in international terrorism or in activities in preparation for international terrorism may be considered an "agent of a foreign power" for purposes of FISA. An applicant for a FISA court order using this definition of "agent of a foreign power" need not provide facts and circumstances justifying a belief that the target of the electronic surveillance or physical search is connected to a foreign nation, foreign group, or international terrorist organization. Nor does the Foreign Intelligence Surveillance Court (FISC), in granting such an application, have to find probable cause, based on the facts submitted by the applicant, to believe that such a connection to a foreign nation, foreign group, or international terrorist group exists in order to find probable cause to believe that the target of the electronic surveillance or physical search is a foreign power or an agent of a foreign power.[3992]

[3991] 50 U.S.C. § 1801(i).
[3992] If a FISC judge is to enter an ex parte order granting an application for electronic surveillance under 50 U.S.C. § 1805, he or she must find that:

(1) the President has authorized the Attorney General to approve applications for electronic surveillance for foreign intelligence information;
(2) the application has been made by a Federal officer and approved by the Attorney General;
(3) on the basis of the facts submitted by the applicant there is probable cause to believe that–
(A) the target of the electronic surveillance is a foreign power or an agent of a foreign power; Provided, That no United States person may be considered a foreign power or an agent of a foreign power solely upon the basis of activities protected by the first amendment to the Constitution of the United States; and
(B) each of the facilities or places at which the electronic surveillance is directed is being used, or is about to be used by a foreign power or an agent of a foreign power;
(4) the proposed minimization procedures meet the definition of minimization procedures under section 1801(h) of this title; and
(5) the application which has been filed contains all statements and certifications required by section 1804 of this title and, if the target is a United States person, the certification or

This amendment does not change the procedures to be followed by an applicant seeking a FISA order for electronic surveillance or for a physical search. However, the facts and circumstances used by the applicant to demonstrate the basis of his or her belief that the target of the electronic surveillance or physical search is a "foreign power or an agent of a foreign power" will vary depending upon the definition of "foreign power" or "agent of a foreign power" relied upon in the application. Nor does the amendment alter the requirements for such a court order except to the extent that the factual underpinnings for the probable cause determination will also vary depending upon definition of "foreign power" or "agent of a foreign power" relied upon in a given case.

The amendment to the definition of "agent of a foreign power" in Section 6001 of P.L. 108-458 is made subject to the sunset provisions of Section 224 of the USA PATRIOT Act, P.L. 107-56, including the exception provided in subsection (b) of Sec. 224. Therefore, the new Section 101(b)(1)(C) of FISA, 50 U.S.C. § 1801(b)(1)(C), would sunset on December 31, 2005, except with respect to any foreign intelligence investigation begun before that date or any criminal offense or potential offense that began or occurred before that date. Thus, where a foreign intelligence investigation was underway before December 31, 2005, or a criminal offense or potential offense began or was committed[3993] before that date, the definition of "agent of a foreign power" added by Section 6001 of P.L. 108-458 would still be available. Under those circumstances, an application for a FISA court order for electronic surveillance or a physical search involving a "lone wolf" target could still be pursued after December 31, 2005, and a court order issued authorizing such surveillance or search. Section 6002 of P.L. 108-458 expanded the semi-annual reporting requirements under FISA.[3994] As part of these

---

certifications are not clearly erroneous on the basis of statements made under section 1804(a)(7)(E) of this title and any other information furnished under section 1804(d) of this title.

50 U.S.C. § 1805(a). In making a determination of probable cause under Section 1805(a)(3), the FISC judge may consider past activities of the target as well as facts and circumstances relating to current or future activities of the target. 50 U.S.C. § 1805(b). Similar findings must be made by a FISC judge issuing an order granting an application for a physical search under FISA, 50 U.S.C. § 1824(a), (b). Each provision also requires that a judge approving electronic surveillance or a physical search, respectively, under FISA must include certain specifications and directions in the orders issued. 50 U.S.C. §§ 1805(c), 1824(c).

[3993] As discussed in greater depth in footnote 1, supra, FISA may be used for law enforcement purposes so long as "a significant purpose" of the investigation is to obtain foreign intelligence information.

[3994] Section 6002 of P.L. 108-458 redesignated the existing Title VI of FISA as Title VII and former Section 601 as Section 701. A new Section 601 of FISA was added, which required the Attorney General, on a semiannual basis, to submit to the House Permanent Select Committee on Intelligence, the Senate Select Committee on Intelligence and the House and Senate Judiciary Committees, in a manner consistent with the protection of the national security, reports setting forth with respect to the preceding six month period:

requirements, starting within six months of the date of enactment of P.L. 108-458, the Attorney General must submit semiannual reports, each covering the previous six month period, to the House Permanent Select Committee on Intelligence, the Senate Select Committee on Intelligence, the House Judiciary Committee, and the Senate Judiciary Committee, in a manner consistent with protection of national security, including, among other things, the number of individuals covered by an order issued pursuant to the new definition of "agent of a foreign power" in Section 101(b)(1)(C), 50 U.S.C. § 1801(b)(1)(C).

---

(1) the aggregate number of persons targeted for orders issued under this Act, including a breakdown of those targeted for–

(A) electronic surveillance under section 105 [50 U.S.C. § 1805];

(B) physical searches under section 304 [50 U.S.C. § 1824];

(C) pen registers under section 402 [50 U.S.C. § 1842]; and

(D) access to records under section 501 [50 U.S.C. § 1861];

(2) the number of individuals covered by an order issued pursuant to section 101(b)(1)(C) [50 U.S.C. § 1801(b)(1)(C)];

(3) the number of times that the Attorney General has authorized that information obtained under this Act may be used in a criminal proceeding or any information derived therefrom may be used in a criminal proceeding;

(4) a summary of significant legal interpretations of this Act involving matters before the Foreign Intelligence Surveillance Court or the Foreign Intelligence Surveillance Court of Review, including interpretations presented in applications or pleadings filed with the Foreign Intelligence Surveillance Court or the Foreign Intelligence Court of Review by the Department of Justice; and

(5) copies of all decisions (not including orders) or opinions of the Foreign Intelligence Surveillance Court or Foreign Intelligence Surveillance Court of Review that include significant construction or interpretation of the provisions of this Act.

Amendments to the Foreign Intelligence Surveillance Act Set to Expire in 2009, R40138 (March 16, 2009).

R40138

Summary

Several recent amendments to the Foreign Intelligence Surveillance Act (FISA) will sunset on December 31, 2009. H.R. 1467, introduced in the 111th Congress, would extend these three provisions until December 31, 2019.

Section 6001(a) of the Intelligence Reform and Terrorism Protection Act (IRTPA), also known as the "lone wolf" provision, changed the rules regarding the types of individuals that could be targets of FISA-authorized searches. It permits surveillance of non-U.S. persons engaged in international terrorism, without requiring evidence linking those persons to an identifiable foreign power or terrorist organization.

Section 206 of the USA PATRIOT ACT amended FISA to permit multipoint, or "roving," wiretaps by adding flexibility to the degree of specificity with which the location or facility subject to electronic surveillance under FISA must be identified.

Section 215 of the USA PATRIOT ACT enlarged the scope of documents that could be sought under FISA, and lowered the standard required before issuance of a court order compelling the production of documents.

While these provisions will cease to be prospectively effective on December 31, 2009, a grandfather clause permits them to remain effective with respect to investigations that began, or potential offenses that took place, before the sunset date.

Overview

The Foreign Intelligence Surveillance Act (FISA) provides a statutory framework for government agencies to seek a court order from a specialized Foreign Intelligence Surveillance Court (FISC) authorizing the collection of foreign intelligence information via electronic surveillance[3995] or physical searches.[3996] FISA also provides procedures governing the use of pen registers and trap and trace devices,[3997] and access to certain business records for foreign intelligence collection.[3998] The extent to which the Fourth Amendment's warrant requirement is applicable to the government's collection of foreign intelligence is unclear.[3999] But, FISA's statutory requirements arguably provide a minimum standard that must be met before foreign intelligence searches or surveillance may be conducted by the government.[4000]

A substantial purpose of a FISA court order must be the collection of foreign intelligence information.[4001] Therefore, the procedures for obtaining a court

[3995] 50 U.S.C. §§ 1801-1808 (2008).

[3996] 50 U.S.C. §§ 1822-1826 (2008).

[3997] 50 U.S.C. §§ 1841-1846 (2008). Pen registers capture the numbers dialed on a telephone line; trap and trace devices identify the originating number of a call on a particular phone line. See 18 U.S.C. § 3127(3)-(4) (2008).

[3998] 50 U.S.C. §§ 1861-1862 (2008).

[3999] The Supreme Court has held that the Fourth Amendment's warrant requirement applies in instances of domestic security surveillance. U.S. v. U.S. District Court, 407 U.S. 297, 323-4 (1972) (also referred to as the Keith case, so named for the District Court judge that initially ordered disclosure of unlawful warrantless electronic surveillance to the defendants). But, see In re Directives, 2008 U.S. App. LEXIS 27417 (U.S. Foreign Intell. Survellance Ct. Rev. 2008) (holding that the foreign intelligence surveillance of targets reasonably believed to be outside of the U.S. qualifies for the "special needs" exception to the warrant requirement). See, also, CRS Report WD00002, Presidential Authority to Conduct Warrantless Electronic Surveillance to Gather Foreign Intelligence Information, by Elizabeth B. Bazan and Jennifer K. Elsea, at 9-12 (discussing courts' differing application of the Fourth Amendment to searches for the purpose of foreign intelligence collection).

[4000] *But, see* CRS Report WD00002, Presidential Authority to Conduct Warrantless Electronic Surveillance to Gather Foreign Intelligence Information, by Elizabeth B. Bazan and Jennifer K. Elsea, at 29-33 ("While the congressional intent to cabin the President's exercise of any inherent constitutional authority to engage in foreign intelligence electronic surveillance may be clear from the exclusivity provision in FISA and from the legislative history of the measure, some support may be drawn from the [Foreign Intelligence Surveillance] Court of Review's decision in In re Sealed Case for the position that the President continues to have the power to authorize warrantless electronic surveillance to gather foreign intelligence outside the FISA framework").

[4001] See, e.g., 50 U.S.C. § 1804(a)(7)(B) (2008). Prior to 2001, the statute had required that "the purpose" of a FISA warrant be foreign intelligence collection.

order under FISA differ from the procedures used in the criminal law enforcement context. While both FISA orders and criminal warrants incorporate impartial judicial review to determine if probable cause exists, the propositions that must be supported by probable cause are substantially different in either case. In the case of a FISA court order, the FISC must find probable cause to believe both (1) that the person targeted by the order is a foreign power or its agent, and (2) that the subject of the search (i.e., the telecommunications or place to be searched) will be used by the target.[4002]

Three relatively recent amendments to FISA will expire on December 31, 2009. These provisions are:

- Section 6001(a) of the Intelligence Reform and Terrorism Protection Act (IRTPA), also known as the "lone wolf" provision, which simplified the evidentiary showing needed to obtain a FISA court order to target individuals, other than U.S. citizens or permanent residents, engaged in international terrorism;[4003]
- Section 206 of the USA PATRIOT Act, which permitted multipoint, or "roving," wiretaps in certain circumstances by adding flexibility to the manner in which the subject of a FISA court order is specified;[4004] and
- Section 215 of the PATRIOT Act, which broadened the types of records that could be made accessible to the government under FISA.[4005]

This report will discuss the state of the law prior to enactment of these provisions, the changes wrought by each of these provisions, and the expected state of the law after the pending sunset date.

"Lone Wolf" Terrorists

Commonly referred to as the "lone wolf" provision, § 6001(a) of IRTPA simplified the evidentiary standard used to determine whether an individual, other than a citizen or a permanent resident of the U.S., who was engaged in international terrorism, could be the target of a FISA court order. This amendment did not modify other standards used to determine the secondary question of whether the

---

[4002] 50 U.S.C. § 1805(a)(3) (2008). In contrast, federal criminal search warrants require probable cause to believe that instrumentalities, evidence, or fruits of a crime will be found in the place to be searched. See Fed. R. Crim. P. 41(c). Criminal warrants authorizing electronic surveillance additionally require probable cause to believe that the target is engaged in criminal activities, that normal investigative techniques are insufficient, and that the facilities that are the subject of surveillance will be used by the target. 18 U.S.C. § 2518(3) (2008).

[4003] P.L. 108-458, § 6001(a).

[4004] P.L. 107-56, § 206, codified at 50 U.S.C. § 1805(c)(2)(B) (2008).

[4005] P.L. 107-56, § 215, codified at 50 U.S.C. §§ 1861-2 (2008).

electronic surveillance or a physical search of the subject of a court order is justified in a specific situation.

Historical Context

The historical impetus behind enactment of the "lone wolf" provision came to light shortly after the terrorist attacks of September 11, 2001. During the examination of the events leading up to those attacks, it was reported that investigations into one of the individuals believed to be responsible for those attacks had been potentially hampered by the legal requirements governing FISA.[4006] Specifically, Federal Bureau of Investigations (FBI) agents investigating Zacarias Moussaoui suspected him of planning a terrorist attack involving piloting commercial airliners, and had detained him in October of 2001 based on a violation of immigration law.[4007] The FBI agents had then sought a court order under FISA to examine the contents of Moussaoui's laptop computer.[4008] But, the agency apparently concluded that it had insufficient information at that time to demonstrate that Moussaoui was an agent of a foreign power, as required by FISA.[4009]

FISA, as it then existed, would have authorized, among other things, physical searches of a laptop if probable cause existed to believe the laptop was owned or used by a foreign power or its agent.[4010] The definition of a "foreign power" included "groups engaged in international terrorism or activities in preparation therefor."[4011] Individuals involved in international terrorism for or on behalf of those groups were considered "agents of a foreign power."[4012] In the weeks leading up to the attacks, it appears that the FBI encountered an actual or perceived insufficiency of information demonstrating probable cause to believe

[4007] Id. at 273. Moussaoui, a French national, was present in the United States with an expired visa.

[4008] Id. at 273-274.

[4009] Id. at 274. Based upon this conclusion, the FBI "declined to submit a FISA application" to the FISC.

[4010] 50 U.S.C. § 1821-1824 (2001).

[4011] 50 U.S.C. § 1801(a)(4) (2001). At the time, foreign powers also included foreign governments, entities controlled by those governments, and factions of foreign nations and foreign-based political organizations that are not substantially composed of United States persons. Id. at § (a)(1-6).

[4012] 50 U.S.C. § 1801(b)(2)(C) (2001).

that Moussaoui was acting for or on behalf of an identifiable group engaged in international terrorism.[4013]

Legislative Responses

Following these revelations, a number of legislative proposals were put forth to amend the definition of "agents of a foreign power" under FISA so that individuals engaged in international terrorism did not need to be linked to a specific foreign power.[4014] One such amendment was ultimately enacted with passage of the Intelligence Reform and Terrorism Prevention Act of 2004 (IRTPA).[4015] This "lone wolf" provision provides that persons, other than citizens or permanent residents of the U.S., that are engaged in international terrorism are presumptively considered to be agents of a foreign power.[4016] Enactment of this provision obviated any need to provide an evidentiary connection between that individual and a foreign government or terrorist group.

Critics of the "lone wolf" provision argued that the laptop in the Moussaoui case could have been lawfully searched under FISA or the laws governing generic criminal warrants.[4017] Critics also expressed concern that the simplified "lone wolf" standard would lead to "FISA serving as a substitute for some of our most important criminal laws."[4018]

On the other hand, proponents of the "lone wolf" provision note that the increased self-organization among terror networks has made proving connections to identifiable groups more difficult, and that a "lone wolf" provision is necessary to combat terrorists who use a modern organizational structure.[4019]

Sunset

[4013] See 9/11 Comm'n Rep. at 274. It is unclear whether a search of Moussaoui's laptop before September 11, 2001, would have provided enough information to prevent or minimize those attacks.

[4017] See S.Rept. 108-40 at 33-41 (additional views of Sen. Leahy and Sen. Feingold on a similar "lone wolf" provision in S. 113).

[4018] Id. at 73 (additional views of Sen. Feingold).

[4019] S.Rept. 108-40 at 4-6.

The "lone wolf" provision was originally scheduled to sunset on December 31, 2005.[4020] However, § 103 of the USA PATRIOT Improvement and Reauthorization Act of 2005 extended the sunset date of the "lone wolf" provision until December 31, 2009.[4021] The original sunset provision also included a grandfather clause which allowed it to continue to be effective with respect to investigations that began, or potential offenses that took place, before the provision's sunset date.[4022] For example, if an individual is engaged in international terrorism on December 30, 2009, he may still be considered a "lone wolf" for FISA court orders sought after the provision has expired. This grandfather clause is unaffected by the extension of the sunset date to December 31, 2009.

Roving Wiretaps

Section 206 of the USA PATRIOT ACT amended FISA to permit multipoint, or "roving," wiretaps by adding flexibility to the degree of specificity with which the location or facility subject to electronic surveillance under FISA must be identified.[4023] It is often colloquially described as allowing FISA wiretaps to target persons rather than places.

Background

Prior to enactment of § 206, the scope of electronic surveillance authorized by a court order was limited in two ways. First, the location or facility that was the subject of surveillance had to be identified.[4024] Second, only identifiable third-parties could be directed to facilitate electronic surveillance by the government.[4025] Conducting electronic surveillance frequently requires the assistance of telecommunications providers, landlords, or other third-parties. Furthermore, telecommunications providers are generally prohibited from assisting in electronic surveillance for foreign intelligence purposes, except as authorized by FISA.[4026] In cases where the location or facility was unknown, the identity of the person who would need to assist the government could not be specified in the order. Therefore, limiting the class of persons who could be

[4024] See 50 U.S.C. § 1805(c)(1)(B) (2001) (requiring FISA warrants to specify the "nature and location of each of the facilities or places at which electronic surveillance will be directed").

[4025] See 50 U.S.C. § 1805(c)(2)(B) (2001).

[4026] See 50 U.S.C. §§ 1809(a) and 1810 (2008).

directed to assist the government by a FISA court order effectively limited the reach of FISA court orders to known and identifiable locations.

Section 206 and "Other Persons"

Section 206 of the USA PATRIOT ACT amended § 105(c)(2)(B) of FISA to provide that "in circumstances where the Court finds, based on specific facts provided in the application, that the actions of the target of the application may have the effect of thwarting the identification of a specified person" a FISA order may direct "other persons" to assist with the electronic surveillance.[4027] In a technical amendment later that year, the requirement that the order specify the location of the surveillance was also changed so that this requirement only applied if the facilities or places were known.[4028] These modifications had the effect of permitting FISA orders to direct unspecified individuals to assist the government in performing electronic surveillance, thus permitting court orders to authorize surveillance of places or locations that were unknown at the time the order was issued.

This section was further amended by the USA PATRIOT Improvement and Reauthorization Act of 2005 to require that the FISC be notified within 10 days after "surveillance begins to be directed at any new facility or place."[4029] In addition, the FISC must be told the nature and location of each new facility or place, the facts and circumstances relied upon to justify the new surveillance, a statement of any proposed minimization procedures that differ from those contained in the original application or order, and the total number of facilities or places subject to surveillance under the authority of the present order.[4030]

Particularity Requirement of the Fourth Amendment

The Fourth Amendment imposes specific requirements upon the issuance of warrants authorizing searches of "persons, houses, papers, and effects."[4031] One of the requirements, referred to as the particularity requirement, states that warrants shall "particularly describ[e] the place to be searched."[4032] Under FISA,

roving wiretaps are not required to identify the location that may be subject to surveillance. Therefore, some may argue that roving wiretaps do not comport with the particularity requirement of the Fourth Amendment. Initially, it is not clear that the Fourth Amendment would require that searches for foreign intelligence information be supported by a warrant,[4033] but prior legal challenges to similar provisions of Title III of the Omnibus Crime Control and Safe Streets Act (Title III) may be instructive in the event that challenges to § 206 are brought alleging violations of the particularity requirement of the Fourth Amendment.

Similar roving wiretaps have been permitted under Title III since 1986, in cases where the target of the surveillance takes actions to thwart such surveillance.[4034] The procedures under Title III are similar to those currently used under FISA, but two significant differences exist. First, a roving wiretap under Title III must definitively identify the target of the surveillance.[4035] Fixed wiretaps under Title III and all wiretaps under FISA need only identify the target if the target's identity is known. FISA permits roving wiretaps via court orders that only provide a specific description of the target.[4036] Second, Title III requires that the surveilled individuals be notified of the surveillance, generally 90 days after surveillance terminates.[4037] FISA contains no similar notification provision.

In *United States v. Petti*, the Ninth Circuit was presented with a challenge to a roving wiretap under Title III alleging that roving wiretaps do not satisfy the particularity requirement of the Fourth Amendment.[4038] The Ninth Circuit initially noted that

> *the test for determining the sufficiency of the warrant description is whether the place to be searched is described with sufficient particularity to enable the executing officer to locate and identify the premises with reasonable effort, and whether there is any reasonable probability that another premise might be mistakenly searched.*[4039]

[4033] See supra footnote 5.

[4034] Electronic Communications Privacy Act of 1986, P.L. 99-508, § 106(d)(3), codified at 18 U.S.C. § 2518(11) (2008).

[4035] 18 U.S.C. § 2518(11)(b)(ii) (2008).

[4036] See 50 U.S.C. §§ 1804(a)(3), 1805(c)(1)(A) (2008).

[4037] 18 U.S.C. § 2518(8)(d) (2008). This notification may be postponed upon an ex parte showing of good cause.

[4038] U.S. v. Petti, 973 F.2d 1441, 1443-5 (9th Cir. 1992).

[4039] Id. at 1444 (internal quotation marks omitted).

Applying this test, the Ninth Circuit held that roving wiretaps under Title III satisfied the particularity clause of the Fourth Amendment.[4040] The court in this case relied upon the fact that targets of roving wiretaps had to be identified and that they were only available where the target's actions indicated an intent to thwart electronic surveillance.[4041]

Critics of roving wiretaps under FISA may argue that § 206 increases the likelihood that innocent conversations will be the subject of electronic surveillance. They may further argue that the threat of these accidental searches of innocent persons is precisely the type of injury sought to be prevented by the particularity clause of the Fourth Amendment. Such a threat may be particularly acute in this case given the fact that there is no requirement under FISA that the target of a roving wiretap be identified, although the target must be specifically described.[4042]

Sunset

Section 206 of the USA PATRIOT ACT was initially set to sunset on December 31, 2005.[4043] But, it was extended by the USA PATRIOT Improvement and Reauthorization Act of 2005 until December 31, 2009. After this date, § 105(c)(2) of FISA will read as it read on October 25, 2001,[4044] eliminating the authority for FISA court orders to direct other unspecified persons to assist with electronic surveillance.[4045]

The original sunset provision also provided a grandfather clause for investigations that began, or potential offenses that took place, before the date of

---

[4040] Id. at 1445.

[4041] Id. See also, United States v. Bianco, 998 F.2d 1112, 1124 (2nd Cir. 1993) (similarly holding that a similar provision authorizing roving bugs under Title III was constitutional).

[4042] 50 U.S.C. §§ 1804(a)(3), 1805(c)(1)(B) (2008).

[4043] P.L. 107-56, § 224(a).

[4044] P.L. 109-177, § 102(b). The relevant section of FISA will then provide that, upon the request of the applicant, a specified communication or other common carrier, landlord, custodian, or other specified person furnish the applicant forthwith all information, facilities, or technical assistance necessary to accomplish the electronic surveillance in such a manner as will protect its secrecy and produce a minimum of interference with the services that such carrier, landlord, custodian, or other person is providing that target of electronic surveillance. 50 U.S.C. § 1805(c)(2) (2001).

[4045] The sunset will not repeal the provision of FISA that permits a FISA warrant to fail to identify facilities or places that will be subject to electronic surveillance. However, the authority for most new roving wiretaps may be effectively repealed because new orders may not direct unspecified persons to assist with surveillance.

the provision's expiration.[4046] For example, if an individual is engaged in international terrorism on December 30, 2009, he may be the target of a roving wiretap under FISA even after authority for new roving wiretaps has expired. This grandfather clause is unaffected by the extension of the sunset date to December 31, 2009.

Access to Business Records Under FISA

Section 215 of the USA PATRIOT ACT enlarged the scope of documents that could be sought under FISA, as well as lowered the standard required before a court order could be issued compelling the production of documents.

Background

In 1976, the Supreme Court held that an individual's bank account records did not fall within the protection of the Fourth Amendment's prohibition on unreasonable searches and seizures.[4047] Subsequently, Congress passed laws protecting various types of transactional information, but built in exceptions providing some access to statutorily protected records for counter intelligence purposes.[4048] Similar statutory protections were also enacted for electronic communications records and credit bureau records.[4049] As with financial records, these later statutes also included exceptions for access to records relevant to counter intelligence investigations. These exceptions comprise the authority for so-called national security letters (NSL), which can be used to compel the production of certain types of records.

In 1998, Congress amended FISA to provide access to certain records that were not available through NSL's.[4050] Specifically, it created a mechanism for federal investigators to compel the production of records from common carriers, public accommodation facilities, storage facilities, and vehicle rental facilities.[4051] Applications for orders under this section had to be made by FBI agents with a rank of Assistant Special Agent in Charge or higher and investigations could not be conducted solely on the basis of activities protected by the First

Amendment.[4052] Under these procedures the FISC would issue an order if, inter alia, the application contained "specific and articulable facts giving reason to believe that the person to whom the records pertain is a foreign power or an agent of a foreign power."[4053] Recipients of an order under this section were required to comply with it, and were also prohibited from disclosing to others that an order had been issued.[4054]

Expansion of Scope of Documents Subject to FISA

In 2001, § 215 of the USA PATRIOT ACT made several changes to the procedures under FISA for obtaining business records.[4055] Among these was an expansion of the scope of records that were subject to compulsory production. Whereas, prior to enactment of the USA PATRIOT ACT, only records from four explicit categories of businesses could be obtained, § 215 applied to "any tangible things."[4056]

This expanded scope drew strong opposition from the library community, so much so that § 215 came to be known as the "library provision" despite the fact that the original text of the provision did not mention libraries.[4057] Opposition from this group appears to have been primarily based upon the chilling effect such access could have on the exercise of First Amendment rights and purported intrusions into areas protected by the Fourth Amendment.[4058] Opposition from library advocates may have also been a residual response to prior attempts by the FBI to gather foreign intelligence information from library staff and records during the Cold War.[4059]

[4052] 50 U.S.C. § 1862(a)(1) (2001).

[4053] 50 U.S.C. § 1862(b)(2)(B) (2001).

[4056] 50 U.S.C. § 1861(a)(1) (2008).

[4057] E.g. Richard B. Schmitt, House Weakens Patriot Act's 'Library Provision', L.A. TIMES, June 16, 2005, at A-1.

[4058] See, e.g., AMERICAN LIBRARY ASSOCIATION, Resolution on the USA Patriot Act and Related Measures That Infringe on the Rights of Library Users, Jan. 29, 2003, available at http://www.ala.org; Judith King, Director ALA Office for Intellectual Freedom, Letter to the Editor, FBI 'Fishing Expeditions' Librarians' Biggest Worry, WALL ST. J., May 24, 2004, at A15; David Mehegan, Reading Over Your Shoulder: The Push Is On To Shelve Part Of The Patriot Act, BOSTON GLOBE, Mar. 9, 2004, at E5.

[4059] See Ulrika Ekman Ault, The FBI's Library Awareness Program: Is Big Brother Reading Over Your Shoulder?, 65 N.Y.U. L. REV. 1532 (1990).

In response to these concerns, a library-specific amendment was made to the § 215 procedures by the USA PATRIOT Improvement and Reauthorization Act of 2005. Under this amendment, if the records sought were "library circulation records, library patron lists, book sales records, book customer lists, firearms sales records, tax return records, educational records, or medical records containing information that would identify a person," the application has to be approved by one of three high-ranking FBI officers.[4060]

Changes to the Standard of Review

Section 215 of the USA PATRIOT ACT also modified the standard that had to be met before an order compelling production of documents could issue from the FISC. Prior to enactment of § 215, an applicant had to have "specific and articulable facts giving reason to believe that the person to whom the records pertain is a foreign power or an agent of a foreign power."[4061] In contrast, under § 215 as originally enacted, the applicant only needed to "specify that the records concerned [were] sought for a [foreign intelligence investigation.]"[4062]

Subsequently, in 2005, Congress further amended FISA procedures for obtaining business records as part of the USA PATRIOT Improvement and Reauthorization Act of 2005. The applicable standard was again changed to require "a statement of facts showing that there are reasonable grounds to believe that the tangible things sought are relevant to a [foreign intelligence investigation.]"[4063] Records are presumptively relevant if they pertain to

- a foreign power or an agent of a foreign power;
- the activities of a suspected agent of a foreign power who is the subject of such authorized investigation; or
- an individual in contact with, or known to, a suspected agent of a foreign power who is the subject of such authorized investigation;

Nondisclosure and Judicial Review

Orders issued under § 215 are accompanied by nondisclosure orders prohibiting the recipients from disclosing that the FBI has sought or obtained any tangible

---

[4060] Applications for these records could be made only by the Director of the Federal Bureau of Investigation, the Deputy Director of the Federal Bureau of Investigation, or the Executive Assistant Director for National Security. This authority cannot be further delegated. 50 U.S.C. § 1861(a)(3) (2008).

[4061] 50 U.S.C. § 1862(b)(2)(B) (2001).

[4062] P.L. 107-56, § 215.

[4063] P.L. 109-177, § 106(b).

things pursuant to a FISA order. However, the recipient may discuss the order with other persons as necessary to comply with the order, with an attorney to obtain legal advice or assistance, or with other persons as permitted by the FBI.[4064] The recipient must identify persons to whom disclosure has been made, or is intended to be made, if the FBI requests, except that attorneys with whom the recipient has consulted do not need to be identified.[4065]

The USA PATRIOT Improvement and Reauthorization Act of 2005 also provided procedures for recipients of § 215 orders to challenge the judicial review of orders compelling the production of business records.[4066] Once a petition for review is submitted by a recipient, a FISC judge must determine whether the petition is frivolous within 72 hours.[4067] If the petition is frivolous, it must be denied and the order affirmed.[4068] Otherwise the order may be modified or set aside if it does not meet the requirements of FISA or is otherwise unlawful.[4069] Appeals by either party may be heard by the Foreign Intelligence Court of Review and the Supreme Court.[4070]

Judicial review of nondisclosure orders operates under a similar procedure,[4071] but such orders are not reviewable for one year after they are initially issued.[4072] If the petition is not determined to be frivolous, a nondisclosure order may be set aside if there is no reason to believe that disclosure may endanger the national security of the United States, interfere with a criminal, counterterrorism, or counterintelligence investigation, interfere with diplomatic relations, or endanger the life or physical safety of any person.[4073]

A petition to set aside a nondisclosure order may be defeated if the government certifies that disclosure would endanger the national security or interfere with

[4068] Id.

[4069] 50 U.S.C. § 1861(f)(2)(B) (2008).

[4070] 50 U.S.C. § 1861(f)(3) (2008).

[4071] Judicial review of nondisclosure orders was added by P.L. 109-178, § 3.

[4072] 50 U.S.C. § 1861(f)(2)(A)(i) (2008).

[4073] 50 U.S.C. § 1861(f)(2)(C)(i) (2008).

diplomatic relations.[4074] Absent any finding of bad faith, such a certification is to be treated as conclusive by the FISC. If a petition is denied, either due to a certification described above, frivolity, or otherwise, the petitioner may not challenge the nondisclosure order for another year.[4075] Appeals by either party may be heard by the Foreign Intelligence Court of Review and the Supreme Court.[4076]

DOJ OIG Report

The USA PATRIOT Improvement and Reauthorization Act of 2005 directed the Inspector General of the Department of Justice (OIG) to audit the FBI's use of § 215 authority and report its findings to Congress.[4077] The OIG's most recent audit for calendar year 2006 was released in March of 2008.[4078] According to that report, 21 applications for § 215 orders were made in 2006, of which six were withdrawn and 15 granted. The report also indicates that one of the six applications was withdrawn because the FISC indicated that it would not sign the order due to First Amendment concerns.[4079]

Sunset

Section 215 of the USA PATRIOT ACT was initially set to sunset on December 31, 2005.[4080] But, it was extended by the USA PATRIOT Improvement and Reauthorization Act of 2005 until December 31, 2009. After this date, § 501 and 502 of FISA will read as they read on October 25, 2001,[4081] restricting the types of business records that are subject to FISA and reinstating the requirement for

---

[4074] Such certifications must be made by the Attorney General, Deputy Attorney General, an Assistant Attorney General, or the Director of the Federal Bureau of Investigation. 50 U.S.C. § 1861(f)(2)(C)(ii) (2008).

[4075] 50 U.S.C. § 1861(f)(2)(C)(iii) (2008).

[4076] 50 U.S.C. § 1861(f)(3) (2008).

[4077] P.L. 109-177, § 106A.

[4078] OFFICE OF THE INSPECTOR GENERAL, DEP'T OF JUSTICE, A Review of the FBI's Use of Section 215 Orders for Business Records in 2006, Mar. 2008, available at http://www.usdoj.gov/oig/special/s0803a/final.pdf.

[4079] Id. at 33. In indicating that it would deny the application, the FISC appears to have decided that "the facts were too 'thin' and that this request implicated the target's First Amendment rights." Id. at 68.

[4080] P.L. 107-56, § 224(a).

[4081] P.L. 109-177, § 102(b). Access will then be limited to records held by common carriers, public accommodation facilities, physical storage facilities, and vehicle rental facilities. 50 U.S.C. § 1862(c)(2) (2001).

"specific and articulable facts giving reason to believe that the person to whom the records pertain is a foreign power or an agent of a foreign power."[4082]

The original sunset provision also provided a grandfather clause for investigations that began, or potential offenses that took place, before the date of the provision's expiration.[4083] For example, in the case of investigations that had already begun before December 30, 2009, a broader scope of records could be made accessible to the government under FISA even after the expiration date. This grandfather clause is unaffected by the extension of the sunset date to December 31, 2009.

Proposed Legislation in the 111th Congress

H.R. 1467, the Safe and Secure America Act of 2009, would extend all three provisions for ten years, creating a new sunset date of December 31, 2019. This bill would not otherwise change any of the procedures or legal standards relevant to these three provisions.

[4082] 50 U.S.C. § 1862(b)(2)(B) (2001).

[4083] P.L. 107-56, § 224(b).

The Foreign Intelligence Surveillance Act: A Sketch of Selected Issues, RL34566 (July 7, 2008)

American Law Division

Summary

The current legislative and oversight activity with respect to electronic surveillance under the Foreign Intelligence Surveillance Act (FISA) has drawn national attention to several overarching issues. This report briefly outlines three such issues and touches upon some of the perspectives reflected in the ongoing debate. These issues include the inherent and often dynamic tension between national security and civil liberties, particularly rights of privacy and free speech; the need for the intelligence community to be able to efficiently and effectively collect foreig intelligence information from the communications of foreign persons located outside the United States in a changing, fast-paced, and technologically sophisticated international environment or from United States persons abroad, and the differing approaches suggested to meet this need; and limitations of liability for those electronic communication service providers who furnish aid to the federal government in its foreign intelligence collection. Two constitutional provisions, in particular, are implicated in this debate — the Fourth and First Amendments. This report briefly examines these issues and sets them in context.

The 110th Congress has been very active in developing and considering measures to amend FISA to address these issues. On August 5, 2007, the Protect America Act, P.L. 110-55, was enacted into law. It expired on February 16, 2008, after passage of a fifteen-day extension to its original sunset date. See P.L. 110-182. On November 15, 2007, the House of Representatives passed H.R. 3773, the RESTORE Act of 2007. On February 12, 2008, the Senate passed S. 2248, as amended, then struck all but the enacting clause of H.R. 3773, and inserted the text of S. 2248, as amended, in its stead. On March 14, 2008, the House passed an amendment to the Senate amendment to H.R. 3773. After months of intensive negotiations, on June 19, 2008, a compromise bill, H.R. 6304, was introduced in the House. It was passed by the House the following day. On June 26, 2008, a cloture motion on the measure was presented in the Senate. Further activity on

H.R. 6304 is anticipated after the Senate returns from the July 4th recess. Each of these bills differ somewhat in content and approach from one another.

This report consists of the text of CRS Report RL34279, The Foreign Intelligence Surveillance Act: An Overview of Selected Issues, by Elizabeth B. Bazan, without the accompanying footnotes. It will be updated as needed.

Introduction

The Foreign Intelligence Surveillance Act of 1978, P.L. 95-511, 92 Stat. 1783 (October 25, 1978), 50 U.S.C. §§ 1801 et seq. (hereinafter FISA), was enacted in response both to the Committee to Study Government Operations with Respect to Intelligence Activities (otherwise known as the Church Committee) revelations regarding past abuses of electronic surveillance for national security purposes and to the somewhat uncertain state of the law on the subject. While FISA now provides a statutory framework for gathering foreign intelligence information through the use of electronic surveillance, physical searches, and pen registers or trap and trace devices, and access to business records and other tangible things, the 1978 Act dealt only with electronic surveillance. The provisions passed almost 30 years ago became Title I of FISA. As originally enacted, the measure provided a statutory framework for collection of foreign intelligence information through the use of electronic surveillance of communications of foreign powers or agents of foreign powers, as those terms were defined in the act. The act has been amended repeatedly in the intervening years in an effort to address changing circumstances. Then, as now, the Congress sought to strike a balance between national security interests and civil liberties.

A number of FISA bills have received recent attention in the 110th Congress. On August, 5, 2007, the Protect America Act, P.L. 110-55 was enacted into law. This measure, in part, construed the term "electronic surveillance" under FISA not to include surveillance directed at a person reasonably believed to be located outside of the United States, and provided authority for warrantless acquisition of foreign intelligence information concerning persons reasonably believed to be located outside the United States where certain criteria were satisfied. As originally enacted, the measure was to sunset on February 1, 2008. On January 29, 2008, both the House and the Senate passed H.R. 5104, a 15-day extension to the sunset for the Protect America Act, to allow further time to consider, pass, and go to conference on proposed legislation to amend FISA, while ensuring that the intelligence community would have the authority it needed in the intervening period. It was enacted into law as P.L. 110-182.

The House of Representatives passed H.R. 3773, the Responsible Electronic Surveillance That is Overseen, Reviewed, and Effective Act of 2007 or the RESTORE Act of 2007 on November 15, 2007, while S. 2248 was reported out of the Senate Select Committee on Intelligence on October 26, 2007, and an amendment in the nature of a substitute to S. 2248, the Foreign Intelligence

Surveillance Amendments Act of 2007 or the FISA Amendments Act of 2007, was reported out of the Senate Judiciary Committee on November 16, 2007. A modified version of the Senate Judiciary Committee's amendment in the nature of a substitute to S. 2248 was tabled.

The Senate passed S. 2248, the FISA Amendments Act of 2008, as amended, on February 12, 2008. After striking all but the enacting clause of H.R. 3773 and inserting the text of S. 2248 as amended, the Senate then passed H.R. 3773, the FISA Amendments Act of 2008.

On March 14, 2008, the House passed an amendment to the Senate amendment to H.R. 3773. After intensive negotiations, a compromise bill, H.R. 6304, was introduced in the House on June 19, 2008. The measure passed the House the following day. A cloture motion on the measure was presented in the Senate on June 26, 2008. Further activity on H.R. 6304 is anticipated after the Senate returns from the July 4th recess.

The current legislative and oversight activity with respect to electronic surveillance under FISA has drawn national attention to several overarching issues. This report briefly outlines three such issues and touches upon some of the perspectives reflected in the ongoing debate. These issues include the inherent and often dynamic tension between national security and civil liberties, particularly rights of privacy and free speech; the need identified by the Director of National Intelligence (DNI), Admiral Mike McConnell, for the intelligence community to be able to efficiently and effectively collect foreign intelligence information from the communications of foreign persons located outside the United States in a changing, fast-paced, and technologically sophisticated international environment, and the differing approaches suggested to meet this need; and limitations of liabilityfor those electronic communication service providers who furnish aid to the federal government in its foreign intelligence collection. This report briefly examines these issues and sets them in context.

Tension Between National Security and Civil Liberties

Two constitutional provisions, in particular, are implicated in this debate — the Fourth and First Amendments. The Fourth Amendment to the U.S. Constitution provides:

> *The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrant shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.*

The First Amendment to the U.S. Constitution provides:

> *Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.*

As the Fourth Amendment protects the people's privacy rights, so the First Amendment reflects a recognition of the value of free expression of ideas and lawful political dissent to the preservation of a free society.

In introducing S. 1566, the bill that became the Foreign Intelligence Surveillance Act of 1978, P.L. 95-511, Senator Edward Kennedy addressed the challenge of striking an appropriate balance between the legitimate government need to safeguard the nation against the intelligence activities of foreign agents and the concomitant need to protect civil liberties, stating:

> *The complexity of the problem must not be underestimated. Electronic surveillance can be a useful tool for the Government's gathering of certain kinds of information; yet, if abused, it can also constitute a particularly indiscriminate and penetrating invasion of the privacy of our citizens. My objective over the past six years has been to reach some kind of fair balance that will protect the security of the United States without infringing on our citizens' human liberties and rights.*

This sentiment was echoed in a hearing before the Senate Judiciary Committee on S. 1566 when Attorney General Griffin Bell testified for the Carter Administration in favor of the measure:

> *I believe this bill is remarkable not only in the way it has been developed, but also in the fact that for the first time in our society the clandestine intelligence activities of our government shall be subject to the regulation and receive the positive authority of a public law for all to inspect. President Carter stated it very well in announcing this bill when he said that "one of the most difficult tasks in a free society like our own is the correlation between adequate intelligence to guarantee our nation's security on the one hand, and the preservation of basic human rights on the other." It is a very delicate balance to strike, but one which is necessary in our society, and a balance which cannot be achieved by sacrificing either our nation's security or our civil liberties. . . .*

In providing background for its report on H.R. 7308, the House FISA bill then under consideration, the House Permanent Select Committee on Intelligence noted:

The history and law relating to electronic surveillance for "national security" purposes have revolved around the competing demands of the President's constitutional powers to gather intelligence deemed necessary to the security of the nation and the requirements of the fourth amendment. The U.S. Supreme Court has never expressly decided the issue of whether the President has the constitutional authority to authorize warrantless electronic surveillance for foreign intelligence purposes. Whether or not the President has an "inherent power" to engage in or authorize warrantless electronic surveillance and, if such power exists, what limitations, if any, restrict the scope of that power, are issues that have troubled constitutional scholars for decades.

Electronic surveillance can provide vital information needed to identify those who are acting or preparing to act against U.S. interests for the benefit of foreign powers, including those engaged in espionage, sabotage, or terrorist acts or who otherwise pose a threat to the nation or its citizens, and to uncover their plans or activities. This information may not be readily uncovered by other investigative means. Thus, surveillance can provide a valuable tool for protecting the security of the nation and its citizens. However, this investigative technique, by its nature, can intrude into the privacy of both the target of the surveillance and those with whom the target communicates. It also has the potential of chilling political discussion and lawful dissent.

The framing of the current debate on this issue flows, in part, from questions arising with respect to the Terrorist Surveillance Program (TSP), first revealed in press accounts in December 2005. While little information regarding the details of this NSA program is publicly available, the President has indicated that, "since shortly after September 11, 2001, he had authorized the National Security Agency (NSA) to intercept international communications into and out of the United States of persons linked to al Queda or related terrorist organizations. The purpose of the intercepts is to establish an early warning system to detect and prevent another catastrophic terrorist attack on the United States." Concerns surrounding the TSP have led to continuing congressional oversight and a number of legislative proposals focused upon providing the intelligence community with the tools it needs for foreign intelligence collection to protect the United States and its citizens, while also protecting the civil liberties of those impacted by such collection.

The current level of complexity and sophistication of global communications technology can provide both increased opportunities for lawful private communications and public debate, and increased means for communications between those engaged in criminal wrongdoing or plans or actions which pose a threat to U.S. national security. While this presents challenges to intelligence collection for foreign intelligence purposes, the government has moved to utilize these new technologies for both law enforcement and intelligence purposes. The balance between these important governmental needs and protections of

constitutionally protected privacy interests and First Amendment protected activities is dynamic, and there can be differences of opinion as to where the appropriate balance point between them may be found.

Collection of Foreign Intelligence Information from Foreign Persons and United States Persons Located Abroad

A second, related issue in the current debate concerns the appropriate circumstances or standards for collection of foreign intelligence information from foreign persons and United States persons abroad. This issue can best be understood when set in the context of recent developments, to the extent that pertinent information is publicly available.

In July 2007, an unclassified summary of the National Intelligence Estimate (NIE) on "The Terrorist Threat to the US Homeland" was released. The NIE expressed the judgement, in part, that the U.S. Homeland will face a persistent and evolving threat over the next three years, the main threat coming from Islamic terrorist groups and cells, particularly al Qaeda.

In a January 17, 2007, letter to Chairman Leahy and Ranking Member Specter of the Senate Judiciary Committee, then Attorney General Gonzales advised them that, on January 10, 2007, a Foreign Intelligence Surveillance Court judge "issued orders authorizing the Government to target for collection international communications into or out of the United States where there is probable cause to believe that one of the communicants is a member or agent of al Qaeda or an associated terrorist organization." The Attorney General stated that, in light of these orders, which "will allow the necessary speed and agility," all surveillance previously occurring under the Terrorist Surveillance Program (TSP) would now be conducted subject to the approval of the FISC. He indicated further that, under these circumstances, the President had determined not to reauthorize the TSP when the then current authorization expired. The Attorney General also noted that the Intelligence Committees had been briefed on the highly classified details of the FISC orders and advised Chairman Leahy and Senator Specter that he had directed the Acting Assistant Attorney General for the Office of Legal Counsel and the Assistant Attorney General for National Security to provide them a classified briefing on the details of the orders. Because the contents of these orders remain classified, the scope of or limitations with respect to any authority that may have been provided remain unknown.

On April 13, 2007, the Administration announced that it had submitted draft legislation to the Congress regarding modernization of FISA. This draft legislation included a proposed new section 102A of FISA which would authorize the President, acting through the Attorney General, to permit acquisition of foreign intelligence information for up to one year concerning persons reasonably

believed to be outside the United States if the Attorney General certifies in writing under oath that he has made four specific determinations.

On August 2, 2007, the DNI released a statement on "Modernization of the Foreign Intelligence Surveillance Act." In his statement, Admiral McConnell regarded such modernization as necessary to respond to technological changes and to meet the Nation's current intelligence collection needs. He viewed it as essential for the intelligence community to provide warning of threats to the United States. One of two critically needed changes perceived by the DNI was his view that a court order should not be required for gathering foreign intelligence from foreign targets located overseas. Admiral McConnell did, however, indicate that he would be willing to agree to court review, after commencement of needed collection, of the procedures by which foreign intelligence is gathered through classified methods directed at foreigners outside the United States.

Some news accounts suggest that a FISC court ruling this Spring may have limited the authority of the United States, in certain circumstances, to engage in surveillance of foreign conversations taking place outside the United States. Admiral McConnell stated in remarks included in the transcript of an interview published in the El Paso Times on August 22, 2007, that on or about May of this year, when another judge of the FISC considered an application for renewal or extension of the surveillance approved under the January 10 orders, that judge interpreted the requirements of FISA differently from the judge who had issued the January 10 orders, and deemed a FISA warrant necessary for surveillance of wire communications of a foreign person in a foreign country.

Views differ as to the scope of the need and the means by which this need may be met. Can this concern be addressed by solutions directed solely at electronic surveillance or acquisitions without a court order from the FISC of communications between foreign persons in communication with other foreign persons all located outside the United States, whether or not those communications are routed through the United States at some point in their transmission? Or must the solution be crafted in such a way as to permit such surveillance or acquisitions of the communications of foreign persons located abroad, whether they may be in communication only with other non-U.S. persons, or both non-U.S. persons and U.S. persons, located outside the United States? What is required if some of the communications of the foreign person targeted in the surveillance or acquisition are with U.S. persons or non-U.S. persons located in the United States? May such foreign intelligence be collected from U.S. persons abroad without a Foreign Intelligence Surveillance Court order pursuant to a certification by the Attorney General or the Attorney General and the DNI jointly or whether a court order is required prudentially or constitutionally under the Fourth Amendment?

<u>Legislative Response: Foreign Intelligence Surveillance of Foreign Persons Abroad</u>

On August 5, 2007, the Protect America Act of 2007 was enacted into law, P.L. 110-55, which provided that "[n]othing in the definition of electronic surveillance under section 101(f) [of FISA] shall be construed to encompass surveillance directed at a person reasonably believed to be located outside of the United States." It also created a new procedure under section 105B(a) of FISA under which the Attorney General and the DNI, for periods of up to one year, may authorize acquisition of foreign intelligence information concerning persons reasonably believed to be outside the United States, if the Attorney General and the DNI determine, based on the information provided to them, that five criteria have been met. This authority was similar, but not identical to, the proposed section 102A of FISA in the Administration's draft bill. P.L. 110-55 expired on February 16, 2008, after passage of a fifteen-day extension to its original sunset date. Under the transitional provisions in Section 6 of the Protect America Act, the acquisitions authorized while the act was in force may continue until their expiration.

H.R. 3773 as originally passed by the House provides that no court order is needed for electronic surveillance directed at acquisition of the contents of communications between persons not known to be U.S. persons who are reasonably believed to be located outside the United States, without regard to whether the communication is transmitted through the United States or the surveillance device is located in the United States. If the communications of a U.S. person are inadvertently intercepted, stringent constraints upon retention, disclosure, dissemination, or use would apply. However, the bill provides for a FISC order for acquisitions for up to one year of communications of non-U.S. persons reasonably believed to be outside the U.S. to collect most types of foreign intelligence information by targeting those persons, where those persons may be communicating with persons inside the United States. It also establishes requirements for such acquisitions.

The Senate amendment to H.R. 3773 would permit the Attorney General and the DNI to jointly authorize, for up to one year, targeting of persons reasonably believed to be outside the U.S. to acquire foreign intelligence information if certain statutory criteria are met. The Senate bill does not require prior approval by the FISC of applicable certifications, targeting procedures and minimization procedures in connection with the acquisition of communications of non-U.S. persons abroad, nor does it require adoption and submission of compliance guidelines. Rather, it requires submission of a certification or a targeting or minimization procedure, or an amendment thereto, to the Foreign Intelligence Surveillance Court (FISC) within five days of making or amending the certification or adopting or amending the procedure. Where the Attorney General and the DNI determine that immediate action is required and time does not permit preparation of a certification prior to initiation of an acquisition, the Senate bill requires the Attorney General and the DNI to prepare the certification, including such determination, within seven days after the determination is made. If the FISC finds that a certification meets statutory

requirements and targeting and minimization procedures are consistent with statutory requirements and meet constitutional standards under the Fourth Amendment, the FISC would enter an order approving continued use of the procedures involved. If the court finds that the required standards are not met, then the FISC would enter an order directing the government, at the government's election and to the extent required by the FISC order, to correct any deficiencies within 30 days or cease the acquisition.

In the absence of an emergency authorization, the House amendment to the Senate amendment to H.R. 3773 requires prior approval by the FISC of the applicable targeting procedures, minimization procedures, and certification before the Attorney General and the Director of National Intelligence (DNI) may authorize acquisition of the contents of communications of non-U.S. persons reasonably believed to be located outside the United States. The FISC would have 30 days after a certification is submitted to review the certification and the targeting and minimization procedures and to approve or deny an order regarding such an acquisition.

The House amendment also requires the Attorney General, in consultation with the DNI, to adopt guidelines to ensure compliance with limitations imposed by the bill on such acquisitions and to ensure that an application is filed under section 104 or 303 of FISA, if required by that act. The guidelines are to be submitted to the FISC, the congressional intelligence committees, and the House and Senate Judiciary Committees.

H.R. 6304 would amend FISA to permit the Attorney General and the DNI to jointly authorize targeting of persons reasonably believed to be non-U.S. persons located outside the United States for periods of up to one year. Proposed section 702 of FISA contains explicit limitations, including protections against reverse targeting in connection with the acquisition of the communications of such persons. A certification by the Attorney General and the DNI that certain statutory criteria have been met, applicable targeting procedures, and minimization procedures would be subject to judicial review by the FISC. The certification would attest, in part, that procedures are in place that have been approved, have been submitted for approval, or will be submitted with the certification for approval by the FISC that are reasonably designed to ensure that an acquisition is limited to targeting persons reasonably believed to be located outside the United States, and to prevent the intentional acquisition of any communication where the sender and all intended recipients are known at the time of the acquisition to be located in the United States. Generally, if the certification and targeting and minimization procedures meet the statutory requirements and are consistent with the Fourth Amendment, a FISC order approving them would be issued prior to implementation of the acquisition of the communications at issue. If the FISC finds deficiencies in the certification, targeting procedures, or minimization procedures, the court would issue an order directing the government to, at the government's election and to the extent required by the court's order, correct any such deficiency within 30 days or cease,

or not begin, the implementation of the authorization for which the certification was submitted.

Legislative Response: Foreign Intelligence Surveillance of U.S. Persons Outside the United States

Generally, the full extent of Fourth Amendment protections attach to the privacy interests of U.S. persons within the United States. Fourth Amendment protections also attach to U.S. citizens abroad. However, the operation of its protections outside the United States may differ from that in the United States due to the fact that a citizen abroad may not have the same expectation of privacy. In addition, the Warrant Clause of the Fourth Amendment may not apply outside the United States where U.S. magistrates have no jurisdiction. A determination whether interception of a communication abroad is lawful turns upon the law of the country where the interception occurs, so, depending upon location, the rights available may differ significantly. In addition, the availability of Fourth Amendment protections are affected by whom the search was executed, and the extent of any U.S. role. If the U.S. plays no role, then the Fourth Amendment does not attach, and the exclusionary rule does not apply to evidence obtained by or derived from such a search unless the foreign conduct "shocks the conscience." On the other hand, if warrantless electronic surveillance targeted at a U.S. citizen's communications is conducted abroad for the purpose of gathering foreign intelligence by U.S. officials, the U.S. district court in *United States v. Bin Laden*, 126 F. Supp. 2d 264, 277 (S.D.N.Y. 2000), has held that it will be deemed reasonable if it is authorized by the President, or the Attorney General pursuant to the President's delegation, and the surveillance was conducted "primarily for foreign intelligence purposes and . . . targets foreign powers or their agents."

In addition to considering the scope of constitutional privacy protections available to U.S. citizens or U.S. persons abroad, the 110th Congress, in FISA legislation before it, is also considering what it deems the appropriate level of privacy protection to be afforded such persons while outside the United States. In addition to the Protect America Act of 2007, P.L. 110-55 (August 5, 2007), the Senate-passed amendment to H.R. 3773, the House-passed amendment to the Senate amendment to H.R. 3773, and H.R. 6304 each addresses procedures for targeting U.S. persons reasonably believed to be located outside the United States to collect foreign intelligence information.

The Senate amendment to H.R. 3773, the House amendment to the Senate amendment to H.R. 3773, and H.R. 6304 each provide for targeting of U.S. persons reasonably believed to be located outside the United States for up to 90 days pursuant to a FISC order if statutory criteria are met. Such an order could be renewed for additional 90-day periods upon submission of renewal applications meeting the same standards. In the case of an emergency authorization by the Attorney General of an acquisition, each bill requires notice to a FISC judge by the Attorney General or his designee at the time the decision is made to conduct such an acquisition and requires the filing of an application for a FISC order

within seven days of the Attorney General's authorization of the emergency acquisition. Minimization procedures would apply to such an acquisition.

Under each of these bills, in the absence of a judicial order approving an acquisition originally authorized by the Attorney General on an emergency basis, the acquisition would terminate when the information sought is obtained, when an application for the order is denied, or when seven days have elapsed, whichever is earliest. Without a FISC order, no information acquired or evidence derived from an emergency acquisition, except under circumstances where the target of the acquisition is determined not to be a U.S. person, may be received in evidence or disclosed in federal, state, or local proceedings; nor could any information concerning a U.S. person acquired from such acquisition subsequently be used or disclosed in any other manner by federal officers or employees without the consent of such person, except with the approval of the Attorney General if the information indicates a threat of death or serious bodily harm to any person.

Limitations on Liability for Telecommunications Providers Furnishing Aid to the Government

The second of the two critical needs identified by the DNI in his August 2nd statement was a need for liability protection for those who furnish aid to the Government in carrying out its foreign intelligence collection efforts. He sought both retrospective relief from liability for those who are alleged to have aided the Government from September 11, 2001 to the present in connection with electronic surveillance or collection of other communications related information, and prospective liability protection for those telecommunications providers who furnish aid to the government in the future whether pursuant to a court order or a certification by the Attorney General or the Attorney General and the DNI that the acquisition or electronic surveillance involved is lawful and that all statutory requirements have been met.

Under current law, there are a number of statutory sections which provide some limitation on liability for telecommunication providers who furnish aid to the government in connection with electronic surveillance or a physical search, or the installation of a pen register or trap and trace device pursuant to a court order under FISA. In addition, 18 U.S.C. § 2511(2)(a) bars suit in any court against any provider of wire or electronic communication service, its officers, employees, or agents, landlord, custodian, or other specified person for providing information, facilities, or assistance in accordance with the terms of a court order, statutory authorization, or a certification in writing by the Attorney General or a person specified under 18 U.S.C. § 2518(7) that no warrant or court order is required by law, that all statutory requirements have been met, and that the specified assistance is required.

Prospective relief from liability for those furnishing aid to the government pursuant to a court order or certification or a directive pursuant to statute

requiring compliance with government demands for assistance is contemplated in a number of bills, including H.R. 3773 as originally passed, the Senate Amendment to H.R. 3773, the House amendment to the Senate amendment to H.R. 3773, and H.R. 6304. All three versions of H.R. 3773, and H.R. 6304 authorize the FISC to compel compliance through the contempt power, as did P.L. 110-55 while it was in force.

Retroactive immunity presents more difficult issues. There are currently pending a substantial number of law suits against the telecommunications providers who are alleged to have furnished aid to the government in connection with its warrantless surveillance programs since September 11, 2001, and other programs. Approximately 40 of these suits are currently pending in the Northern District of California under an order of the Judicial Panel on Multidistrict Litigation. On August 9, 2006, pursuant to 28 U.S.C. § 1407, the Judicial Panel on Multidistrict Litigation transferred 17 civil actions that were pending throughout the country to the Northern District of California, and assigned them to Judge Vaughn Walker for coordinated or consolidated pretrial proceedings in *In Re: National Security Agency Telecommunications Records Litigation*, MDL-1791. Another 26 cases were treated as potential tag-along actions under the multidistrict litigation rules. The panel of five federal trial and appellate court judges found that all these class actions share "factual and legal questions regarding alleged Government surveillance of telecommunications activity and the participation in (or cooperation with) that surveillance by individual telecommunications companies," and thus centralization of the cases "is necessary in order to eliminate duplicative discovery, prevent inconsistent pretrial rulings (particularly with respect to matters involving national security), and conserve the resources of the parties, their counsel and the judiciary."

Arguments may be made on both sides with respect to whether retroactive immunity should be granted telecommunications providers who are alleged to have assisted the government in such programs. For example, the cooperation of such providers is critical to the government's capacity to pursue electronic surveillance to gather foreign intelligence information, and is also essential for collection of communications records for pattern analysis. If the telecommunication providers who responded to the government's requests or demands for assistance did so in good faith reliance upon assertions by the government that the demand was lawful and that a court order was not required, it may be argued that the providers should be immunized from ill effects flowing from such good faith reliance. Some have argued that the unique factual context militates in favor of such relief from liability, to the extent those who responded to the government's requests for assistance in the wake of 9/11 did so in response to government assertions that their cooperation was necessary to protect against further attacks.

In many of the suits filed, the government has asserted states secrets privilege with respect to the programs involved and the role of any of the telecommunications carriers with respect thereto. This is a common law

evidentiary privilege, which may only be asserted by the government, that protects information from discovery when its disclosure would be inimical to the national security. The privilege can come into play in three ways. If the very subject matter of the case is a state secret, an assertion of the privilege can cause the case to be immediately dismissed and the action barred. If, however, this prong of the state secrets privilege does not apply, the privilege may operate to bar admission into evidence of information which will damage the security of the United States. The plaintiff then goes forward on the basis of evidence not covered. If the plaintiff cannot prove a prima facie case with nonprivileged evidence, then the case may be dismissed. On the other hand, if the privilege deprives a defendant of information that would otherwise give the defendant a valid defense to the claim, then the court may grant summary judgment to the defendant. In the current context, to the extent that a defendant telecommunications providers may have a valid claim of immunity under 18 U.S.C. § 2511(2)(a), but for the application of the state secrets privilege to the identities of any providers who may have furnished aid to the government, an argument may be made that the telecommunications providers so impacted should be afforded immunity from suit.

On the other hand, such suits may be the only means by which those who may have been adversely impacted by such government activities may obtain any remedy for any injuries incurred. These injuries may have impacted First and Fourth Amendment protected interests, and there may be no other means of vindicating those rights. In addition, the telecommunications providers provide the front line of defense of those rights against governmental abuse if the government demand or request is unlawful. In some instances, it may be argued that a telecommunications provider has a statutory obligation to protect customer records from unlawful access. Such arguments militate against affording relief from liability to any providers who may have permitted unlawful access.

In addition to these arguments, some have argued that, because the Administration has not shared information repeatedly sought by some committees of jurisdiction with respect to the role of the telecommunications providers in the TSP or other pertinent intelligence activities, the Congress does not have adequate information to determine whether relief for the telecommunications carriers is warranted.

Legislative Response

Under proposed section 802(a) of FISA in Title II of H.R. 6304, a civil action may not lie or be maintained in a federal or state court against any person for providing assistance to an element of the intelligence community, and must be dismissed promptly, if the Attorney General certifies to the U.S. district court in which the action is pending that:

(1) any assistance by that person was provided pursuant to an order of the court established under section 103(a) directing such assistance;
(2) any assistance by that person was provided pursuant to a certification in writing under section 2511(2)(a)(ii)(B) or 2709(b) of title 18, United States Code;
(3) any assistance by that person was provided pursuant to a directive under section 102(a)(4), 105B(e), as added by section 2 of the Protect America Act of 2007 (Public Law 110-55), or 702(h) directing such assistance;
(4) in the case of a covered civil action, the assistance alleged to have been provided by the electronic communication service provider was —
    (A) in connection with an intelligence activity involving communications that was —
        (i) authorized by the President during the period beginning on September 11, 2001, and ending on January 17, 2007; and
        (ii) designed to detect or prevent a terrorist attack, or activities in preparation for a terrorist attack, against the United States; and
    (B) the subject of a written request or directive, or a series of written requests or directives, from the Attorney General or the head of an element of the intelligence community (or the deputy of such person) to the electronic communication service provider indicating that the activity was —
        (i) authorized by the President; and
        (ii) determined to be lawful; or
(5) the person did not provide the alleged assistance.

Under proposed subsection 802(b) of FISA, such a certification shall be given effect unless the court finds that it is not supported by substantial evidence provided to the court under that section. In the course of its judicial review, the U.S. district court may examine the court order, certification, written request, or directive described in proposed subsection 802(a) and any relevant court order, certification, written request, or directive submitted to the court by the parties under proposed subsection 802(d). Any such party would be permitted to participate in briefing or argument of any legal issue in a judicial proceeding under this section to the extent that such participation does not require disclosure of classified information to that party. Any relevant classified information would be reviewed in camera and ex parte. Any portion of the court's written order that would reveal classified information would be issued in camera and ex parte and maintain it under seal. Upon filing of a declaration by the Attorney General under 28 U.S.C. § 1746 that disclosure of such a certification or of the supplemental materials provided pursuant to proposed subsections 802 (b) or (d) would harm the national security of the United States, the U.S. district court would be required to review such certification and the supplemental materials in camera and ex parte. Any public disclosure of such certification and supplemental materials would be limited to a statement as to whether the case is dismissed and a description of the legal standards that govern the order, without

disclosing the paragraph of subsection (a) that is the basis for the certification. If H.R. 6304 were to be enacted into law, proposed Section 802 of FISA would apply to a civil action pending on or filed after the date of the enactment.

The Senate amendment to H.R. 3773 bars covered civil actions in a federal or state court and requires that such an action must be dismissed promptly if the Attorney General or above certifies to the court that the assistance alleged to have been provided by the electronic communication service provider was in connection with an intelligence activity involving communications that was authorized by the President during the period beginning on September 11, 2001, and ending on January 17, 2007; and designed to detect or prevent a terrorist attack, or activities in preparation for a terrorist attack, against the United States; and described in a written request or directive from the Attorney General or the head of an element of the intelligence community (or the deputy of such person) to the electronic communication service provider indicating that the activity was authorized by the President and determined to be lawful. A covered civil action in federal or state court would also be barred and should be dismissed promptly if the Attorney General certifies to the court that the electronic communication service provider did not provide the alleged assistance. The Attorney General's certification would be subject to judicial review under an abuse of discretion standard. If the Attorney General files a declaration under 28 U.S.C. § 1746 that disclosure of a certification made under subsection 202(a) of the bill would harm United States national security, the court shall review the certification in camera and ex parte, and limit public disclosure concerning such certification, including any public order following such ex parte review, to a statement that the conditions of subsection 202(a) of the bill have been met, without disclosing the subparagraph of subsection 202(a)(1) that is the basis for the certification. The authorities of the Attorney General under section 202 are to be performed by the Attorney General, or the Acting Attorney General, or a designee in a position not lower than the Deputy Attorney General.

The House-passed amendment to the Senate Amendment took a different approach. Proposed section 802, in part, provides authority for the government to intervene in any covered civil action. Any party may submit to the court evidence, briefs, arguments, or other information on any matter with respect to which a state secrets privilege has been asserted. The section also authorizes the court to review any such submissions in accordance with procedures set forth in section 106(f) of FISA; and permits the court, on motion of the Attorney General, to take additional steps to protect classified information. The court, to the extent practicable and consistent with national security would be permitted to request any party to present briefs and arguments on any legal question the court finds raised by such submission, regardless of whether that party has access to the submission. Under new subsection 802(e) of FISA, for any covered civil action alleging that a person provided assistance to an element of the intelligence community pursuant to a request or directive during the period from September 11, 2001 through January 17, 2007, the Attorney General would be required to

provide to the court any request or directive related to the allegations under the procedures set forth in new subsection 802(b).

H.R. 6304, therefore, differs from prior House and Senate amendments to H.R. 3773 in a number of respects, while having similarities to them in others. Both H.R. 6304 and the Senate amendment would bar civil actions in federal or state court against persons providing assistance to an element of the intelligence community if the Attorney General certifies that certain statutory criteria are met. They differ to some degree as to the criteria involved.

H.R. 6304 provides for judicial review of the Attorney General's certification under a substantial evidence standard, while the Senate amendment to H.R. 3773 provides for review of the Attorney General's certification using an abuse of discretion standard. The House amendment to the Senate amendment to H.R. 3773 provides for judicial review of any submissions by any party relating any matter as to which state secrets privilege has been asserted, but does not specify the standard of review.

H.R. 6304 expressly permits the district court, in its review, to examine any court order, certification, written request, or directive described in proposed subsection 802(a) or submitted to the court by the parties, and, permits party participation in briefs and arguments on any legal issue in the judicial proceeding to the extent that such participation does not require disclosure of classified information to that party. This does not have a parallel in the Senate amendment. However, it has some points of similarity with the House amendment, which permits submissions by the parties of evidence, briefs, arguments, or other information relating to any matter with respect to which state secrets privilege has been asserted, while providing protections for classified information. For any covered civil action alleging that a person provided assistance to an element of the intelligence community pursuant to a request or directive during the September 11, 2001 to January 17, 2007 period, the House amendment requires the Attorney General to provide the court with any request or directive related to the allegations.

All three bills make provision for ex parte, in camera review of classified information. H.R. 6304 and the Senate amendment both place restrictions on public disclosure of information regarding the certification and the court's order.

The Foreign Intelligence Surveillance Act: An Overview of Selected Issues, RL34279 (July 7, 2008)

ELIZABETH B. BAZAN, CONGRESSIONAL RESEARCH SERV., THE FOREIGN INTELLIGENCE SURVEILLANCE ACT: AN OVERVIEW OF SELECTED ISSUES (2008), *available at* http://www.intelligencelaw.com/library/secondary/crs/pdf/RL34279_7-7-2008.pdf.

Order Code RL34279
Updated July 7, 2008

Elizabeth B. Bazan
Legislative Attorney
American Law Division

Summary

The current legislative and oversight activity with respect to electronic surveillance under the Foreign Intelligence Surveillance Act (FISA) has drawn national attention to several overarching issues. This report briefly outlines three such issues and touches upon some of the perspectives reflected in the ongoing debate. These issues include the inherent and often dynamic tension between national security and civil liberties, particularly rights of privacy and free speech; the need for the intelligence community to be able to efficiently and effectively collect foreign intelligence information from the communications of foreign persons located outside the United States in a changing, fast-paced, and technologically sophisticated international environment or from United States persons abroad, and the differing approaches suggested to meet this need; and limitations of liability for those electronic communication service providers who furnish aid to the federal government in its foreign intelligence collection. Two constitutional provisions, in particular, are implicated in this debate — the Fourth and First Amendments. This report briefly examines these issues and sets them in context.

The 110th Congress has been very active in developing and considering measures to amend FISA to address these issues. On August 5, 2007, the Protect America Act, P.L. 110-55, was enacted into law. It expired on February 16, 2008, after passage of a 15-day extension to its original sunset date, P.L. 110-182. On November 15, 2007, the House of Representatives passed H.R. 3773, the RESTORE Act of 2007. On February 12, 2008, the Senate passed S. 2248, as amended, then struck all but the enacting clause of H.R. 3773, and inserted the text of S. 2248, as amended, in its stead. On March 14, 2008, the House passed an amendment to theSenate amendment to H.R. 3773. After months of intensive negotiations, on June 19, 2008, a compromise bill, H.R. 6304, was introduced in the House. It was passed by the House the following day. On June 26, 2008, a cloture motion on the measure was presented in the Senate. Further activity on

H.R. 6304 is anticipated after the Senate returns from the July 4th recess. Each of these bills differs somewhat in content and approach from one another. This report also briefly explores legislative responses to the issues addressed. It will be updated as needed.

Introduction

The Foreign Intelligence Surveillance Act of 1978, P.L. 95-511, 92 Stat. 1783 (October 25, 1978), 50 U.S.C. §§ 1801 *et seq*. (hereinafter FISA), was enacted in response both to the Committee to Study Government Operations with Respect to Intelligence Activities (otherwise known as the Church Committee) revelations regarding past abuses of electronic surveillance for national security purposes and to the somewhat uncertain state of the law on the subject.[4084] While FISA now provides

---

[4084] The U.S. Supreme Court originally held that the Fourth Amendment only applied to tangible things, Olmstead v. United States, 277 U.S. 438 (1928). but later held that intangible things, such as conversations, were also protected. In its 1967 decision in Katz v. United States, 389 U.S. 347, 353, 359 n. 23 (1967), the Court, overturning its previous holding in Olmstead v. United States, held that the Fourth Amendment covered electronic surveillance of oral communications without physical intrusion. The *Katz* Court stated, however, that its holding did not extend to cases involving national security. In United States v. United States District Court, 407 U.S. 297, 313-14 (1972) (the Keith case), the Court regarded Katz as "implicitly recogniz[ing] that the broad and unsuspected governmental incursions into conversational privacy which electronic surveillance entails necessitate the application of Fourth Amendment safeguards." Mr. Justice Powell, writing for the *Keith* Court, framed the matter before the Court as follows:

The issue before us is an important one for the people of our country and their Government. It involves the delicate question of the President's power, acting through the Attorney General, to authorize electronic surveillance in internal security matters without prior judicial approval. Successive Presidents for more than one-quarter of a century have authorized such surveillance in varying degrees, without guidance from the Congress or a definitive decision of this Court. This case brings the issue here for the first time. Its resolution is a matter of national concern, requiring sensitivity both to the Government's right to protect itself from unlawful subversion and attack and to the citizen's right to be secure in his privacy against unreasonable Government intrusion.

407 U.S. at 299. The Court held that, in the case of intelligence gathering involving domestic security surveillance, prior judicial approval was required to satisfy the Fourth Amendment. Justice Powell emphasized that the case before it "require[d] no judgment on the scope of the President's surveillance power with respect to the activities of foreign powers, within or without the country." *Id*., at 308 The Court expressed no opinion as to "the issues which may be involved with respect to activities of foreign powers or their agents." *Id*., at 321-22. However, the guidance which the Court provided in Keith with respect to national security surveillance in a domestic context to some degree presaged the approach Congress was to take in foreign intelligence surveillance. *Id*. at 323-24.

Court of appeals decisions following *Keith* met more squarely the issue of warrantless electronic surveillance in the context of foreign intelligence gathering. In United States v. Brown, 484 F.2d

a statutory framework for gathering foreign intelligence information through the use of electronic surveillance, physical searches, and pen registers or trap and trace devices, and access to business records and other tangible things, the 1978 Act dealt only with electronic surveillance. The provisions passed almost 30 years ago became Title I of FISA. As originally enacted, the measure provided a statutory framework for collection of foreign intelligence information through the use of electronic surveillance of communications of foreign powers or agents of foreign powers, as those terms were defined in the act. The act has been amended repeatedly in the intervening years in an effort to address changing circumstances. Then, as now, the Congress sought to strike a balance between national security interests and civil liberties.

A number of FISA bills have received recent attention in the 110th Congress. On August, 5, 2007, the Protect America Act, P.L. 110-55 was enacted into law. This measure, in part, construed the term "electronic surveillance" under FISA not to include surveillance directed at a person reasonably believed to be located outside of the United States, and provided authority for warrantless acquisition of foreign intelligence information concerning persons reasonably believed to be located outside the United States where certain criteria were satisfied. As originally enacted, the measure was to sunset on February 1, 2008.[4085] On January 29, 2008, both the House and the Senate passed H.R. 5104, a 15-day extension to the sunset for the Protect America Act, to allow further time to consider, pass, and go to conference on proposed legislation to amend FISA, while ensuring that the intelligence community would have the authority it needed in the intervening period. It was enacted into law as P.L. 110-182.

---

418 (5th Cir. 1973), *cert. denied*, 415 U.S. 960 (1974), the Fifth Circuit upheld the legality of a warrantless wiretap authorized by the Attorney General for foreign intelligence purposes where the conversation of Brown, an American citizen, was incidentally overheard. The Third Circuit in United States v. Butenko, 494 F.2d 593 (3rd Cir. 1974), *cert. denied sub nom*, Ivanov v. United States, 419 U.S. 881 (1974), concluded that warrantless electronic surveillance was lawful, violating neither Section 605 of the Communications Act nor the Fourth Amendment, if its primary purpose was to gather foreign intelligence information. In its plurality decision in Zweibon v. Mitchell, 516 F.2d 594, 613-14 (D.C. Cir. 1975), *cert. denied*, 425 U.S. 944 (1976), the District of Columbia Circuit took a somewhat different view in a case involving a warrantless wiretap of a domestic organization that was not an agent of a foreign power or working in collaboration with a foreign power. Finding that a warrant was required in such circumstances, the plurality also noted that "an analysis of the policies implicated by foreign security surveillance indicates that, absent exigent circumstances, all warrantless electronic surveillance is unreasonable and therefore unconstitutional." For more information on the background of FISA, see CRS Report RL30465, *The Foreign Intelligence Surveillance Act: An Overview of the Statutory Framework and U.S. Foreign Intelligence Surveillance Court and U.S. Foreign Intelligence Surveillance Court of Review Decisions*, by Elizabeth B. Bazan (February 15, 2007).

[4085] For more information on the Protect America Act of 2007, see CRS Report RL34143, *P.L. 110-55, the Protect America Act of 2007: Modifications to the Foreign Intelligence Surveillance Act*, by Elizabeth B. Bazan.

The House of Representatives passed H.R. 3773, the Responsible Electronic Surveillance That is Overseen, Reviewed, and Effective Act of 2007, or the RESTORE Act of 2007, on November 15, 2007,[4086] while S. 2248 was reported out of the Senate Select Committee on Intelligence on October 26, 2007, and an amendment in the nature of a substitute to S. 2248, the Foreign Intelligence Surveillance Amendments Act of 2007, or the FISA Amendments Act of 2007, was reported out of the Senate Judiciary Committee on November 16, 2007. A modified version of the Senate Judiciary Committee's amendment in the nature of a substitute to S. 2248 was tabled.

The Senate passed S. 2248, the FISA Amendments Act of 2008, as amended, on February 12, 2008.[4087] After striking all but the enacting clause of H.R. 3773 and inserting the text of S. 2248 as amended, the Senate then passed H.R. 3773, the FISA Amendments Act of 2008.

On March 14, 2008, the House passed an amendment to the Senate amendment to H.R. 3773.[4088] After intensive negotiations, a compromise bill, H.R. 6304, was introduced in the House on June 19, 2008. The measure passed the House the following day.[4089] A cloture motion on the measure was presented in the Senate on June 26, 2008. Further activity on H.R. 6304 is anticipated after the Senate returns from the July 4th recess.

The current legislative and oversight activity with respect to electronic surveillance under FISA has drawn national attention to several overarching issues. This report briefly outlines three such issues and touches upon some of the perspectives reflected in the ongoing debate. These issues include the inherent and often dynamic tension between national security and civil liberties, particularly rights of privacy and free speech; the need identified by the Director of National Intelligence (DNI), Admiral Mike McConnell, for the intelligence community to be able to efficiently and effectively collect foreign intelligence information from the communications of foreign persons located outside the United States in a changing, fast-paced, and technologically sophisticated international environment,[4090] and the differing approaches suggested to meet

this need; and limitations of liability for those electronic communication service providers who furnish aid to the federal government in its foreign intelligence collection. This report briefly examine these issues and sets them in context.

Tension Between National Security and Civil Liberties

Two constitutional provisions, in particular, are implicated in this debate — the Fourth and First Amendments. The Fourth Amendment to the U.S. Constitution provides:

> *The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrant shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.*

The First Amendment to the U.S. Constitution provides:

> *Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.*

As the Fourth Amendment protects the people's privacy rights, so the First Amendment reflects a recognition of the value of free expression of ideas and lawful political dissent to the preservation of a free society.

In introducing S. 1566, the bill that became the Foreign Intelligence Surveillance Act of 1978, P.L. 95-511, Senator Edward Kennedy addressed the challenge of

---

First, the Intelligence Community should not be required to obtain court orders to effectively collect foreign intelligence from foreign targets located overseas. Simply due to technology changes since 1978, court approval should not now be required for gathering intelligence from foreigners located overseas. This was not deemed appropriate in 1978 and it is not appropriate today. . . .

The Intelligence Community should not be restricted to effective collection of only certain categories of foreign intelligence when the targets are located overseas. We must ensure that the Intelligence Community can be effective against all who seek to do us harm. The bill must not require court approval before urgently needed intelligence collection can begin against a foreign target located overseas. The delays of a court process that requires judicial determinations in advance to gather vital intelligence from foreign targets overseas can in some cases prevent the rapid gathering of intelligence necessary to provide warning of threats to the country. This process would also require in practice that we continue to divert scarce intelligence experts to compiling these court submissions. Similarly, critical intelligence gathering on foreign targets should not be halted while court review is pending. . . . .

This statement may be found at [http://www.odni.gov/press_releases/20070802_release.pdf].

striking an appropriate balance between the legitimate government need to safeguard the nation against the intelligence activities of foreign agents and the concomitant need to protect civil liberties, stating:

> *The complexity of the problem must not be underestimated. Electronic surveillance can be a useful tool for the Government's gathering of certain kinds of information; yet, if abused, it can also constitute a particularly indiscriminate and penetrating invasion of the privacy of our citizens. My objective over the past six years has been to reach some kind of fair balance that will protect the security of the United States without infringing on our citizens' human liberties and rights.*[4091]

This sentiment was echoed in a hearing before the Senate Judiciary Committee on S. 1566 when Attorney General Griffin Bell testified for the Carter Administration in favor of the measure:

> *I believe this bill is remarkable not only in the way it has been developed, but also in the fact that for the first time in our society the clandestine intelligence activities of our government shall be subject to the regulation and receive the positive authority of a public law for all to inspect. President Carter stated it very well in announcing this bill when he said that "one of the most difficult tasks in a free society like our own is the correlation between adequate intelligence to guarantee our nation's security on the one hand, and the preservation of basic human rights on the other." It is a very delicate balance to strike, but one which is necessary in our society, and a balance which cannot be achieved by sacrificing either our nation's security or our civil liberties. . . .*[4092]

In providing background for its report on H.R. 7308, the House FISA bill then under consideration, the House Permanent Select Committee on Intelligence noted:

> *The history and law relating to electronic surveillance for "national security" purposes have revolved around the competing*

[4091] Report of the Senate Committee on the Judiciary to accompany S. 1566, S.Rept. 95-604, Part I, 95th Cong., 1st Sess. 8 (1977); 1978 U.S.C.C.A.N. 3904, 3910. FISA was enacted in the wake of revelations of abuses of warrantless surveillance in the name of national security revealed in the 1973 investigation of the Watergate break-ins and later explored in greater detail by Church Committee. *Id.* at 7, 1978 U.S.C.C.A.N. at 3908. See also, Foreign Intelligence Surveillance Act of 1978, H.Rept. 95-1283, Part I, 95th Cong., 2d Sess. 14 (1978).

[4092] Hearing before the Subcommittee on Criminal Laws and Procedures of the Senate Committee on the Judiciary, Foreign Intelligence Surveillance Act of 1977, 95th Cong., 1st Sess. 23 (1977).

demands of the President's constitutional powers to gather intelligence deemed necessary to the security of the nation and the requirements of the fourth amendment. The U.S. Supreme Court has never expressly decided the issue of whether the President has the constitutional authority to authorize warrantless electronic surveillance for foreign intelligence purposes. Whether or not the President has an "inherent power" to engage in or authorize warrantless electronic surveillance and, if such power exists, what limitations, if any, restrict the scope of that power, are issues that have troubled constitutional scholars for decades.[4093]

Electronic surveillance can provide vital information needed to identify those who are acting or preparing to act against U.S. interests for the benefit of foreign powers, including those engaged in espionage, sabotage, or terrorist acts or who otherwise pose a threat to the nation or its citizens, and to uncover their plans or activities. This information may not be readily uncovered by other investigative means. Thus, surveillance can provide a valuable tool for protecting the security of the nation and its citizens. However, this investigative technique, by its nature, can intrude into the privacy of both the target of the surveillance and those with whom the target communicates. It also has the potential of chilling political discussion and lawful dissent.[4094]

[4093] Report of the House Permanent Select Committee on Intelligence to accompany H.R. 7308, the Foreign Intelligence Surveillance Act of 1978, H.Rept. 95-1283, Part I, 95th Cong., 2d Sess. 15 (1978).

[4094] *See*, S.Rept. 95-604, at 8, 1978 U.S.C.C.A.N. 3909-3910. The Senate Judiciary Committee noted that "[i]n summarizing its conclusion that surveillance was "often conducted by illegal or improper means," the Church committee wrote:

Since the 1930's, intelligence agencies have frequently wiretapped and bugged American citizens without the benefit of judicial warrant. . . . [P]ast subjects of these surveillances have included a United States Congressman, Congressional staff member, journalists and newsmen, and numerous individuals and groups who engaged in no criminal activity and who posed no genuine threat to the national security, such as two White House domestic affairs advisers and an anti-Vietnam War protest group. (vol 2, p. 12)

* * * *

The application of vague and elastic standards for wiretapping and bugging has resulted in electronic surveillances which, by any objective measure, were improper and seriously infringed the Fourth Amendment Rights of both the targets and those with whom the targets communicated. The inherently intrusive nature of electronic surveillance, moreover, has enabled the Government to generate vast amounts of information — unrelated to any legitimate government interest — about the personal and political lives of American citizens. The collection of this type of information has, in turn, raised the danger of its use for partisan political and other improper ends by senior administration officials. (vol. 3, p. 32)

The Senate Judiciary Committee observed further:

The framing of the current debate on this issue flows, in part, from questions arising with respect to the Terrorist Surveillance Program (TSP), first revealed in press accounts in December 2005.[4095] While little information regarding the details of this NSA program is publicly available, the President has indicated that, "since shortly after September 11, 2001, he had authorized the National Security Agency (NSA) to intercept international communications into and out of the United States of persons linked to al Queda or related terrorist organizations. The purpose of the intercepts is to establish an early warning system to detect and prevent another catastrophic terrorist attack on the United States."[4096] Concerns surrounding the TSP have led to continuing congressional oversight and a number of legislative proposals focused upon providing the intelligence community with the tools it needs for foreign intelligence collection to protect the United States and its citizens, while also protecting the civil liberties of those impacted by such collection.

Also formidable — although incalculable — is the "chilling effect" which warrantless electronic surveillance may have on the constitutional rights of those who were not targets of the surveillance, but who perceived themselves, whether reasonably or unreasonably, as potential targets. Our Bill of Rights is concerned not only with direct infringements on constitutional rights, but also with government activities which effectively inhibit the exercise of these rights. The exercise of political freedom depends in large measure on citizens' understanding that they will be able to be publicly active and dissent from official policy, within lawful limits, without having to sacrifice the expectation of privacy that they rightfully hold. Arbitrary or uncontrolled use of warrantless electronic surveillance can violate that understanding and impair that public confidence so necessary to an uninhibited political life.

See also, *Keith*, 407 U.S. at 391-321, where Justice Powell observed that,

National security cases . . . often reflect a convergence of First and Fourth Amendment values not present in cases of "ordinary" crime. Though the investigative duty of the executive may be stronger in such cases, so also is there greater jeopardy to constitutionally protected speech. "Historically the struggle for freedom of speech and press in England was bound up with the issue of the scope of the search and seizure power," *Marcus v. Search Warrant*, 367 U.S. 717, 724 (1961). . . . Fourth Amendment protections become the more necessary when the targets of official surveillance may be those suspected of unorthodoxy in their political beliefs. The danger to political dissent is acute where the Government attempts to act under so vague a concept as the power to protect "domestic security." . . . .

[4095] See, e.g., James Risen and Eric Lichtblau, *Bush Lets U.S. Spy on Callers Without Courts*, N.Y. TIMES, December 16, 2005, at 1, 22 (citing anonymous government officials to report that the executive order, which allows some warrantless eavesdropping on persons inside the United States, "is based on classified legal opinions that assert that the president has broad powers to order such searches, derived in part from the September 2001 Congressional resolution authorizing him to wage war on Al Qaeda and other terrorist groups").

[4096] "Legal Authorities Supporting the Activities of the National Security Agency Described by the President," U.S. Department of Justice (January 19, 2006). This may be found at [http://www.usdoj.gov/ag/readingroom/surveillance9.pdf].

The current level of complexity and sophistication of global communications technology can provide both increased opportunities for lawful private communications and public debate, and increased means for communications between those engaged in criminal wrongdoing or plans or actions which pose a threat to U.S. national security. While this presents challenges to intelligence collection for foreign intelligence purposes, the government has moved to utilize these new technologies for both law enforcement and intelligence purposes. The balance between these important governmental needs and protections of constitutionally protected privacy interests and First Amendment protected activities is dynamic, and there can be differences of opinion as to where the appropriate balance point between them may be found.

Collection of Foreign Intelligence Information from Foreign Persons and United States Persons Located Abroad

A second, related issue in the current debate concerns the appropriate circumstances or standards for collection of foreign intelligence information from foreign persons and United States persons abroad. This issue can best be understood when set in the context of recent developments, to the extent that pertinent information is publicly available.

In July 2007, an unclassified summary of the National Intelligence Estimate (NIE) on "The Terrorist Threat to the US Homeland" was released. The NIE expressed the judgement, in part, that the U.S. Homeland will face a persistent and evolving threat over the next three years, the main threat coming from Islamic terrorist groups and cells, particularly al Qaeda.[4097]

In a January 17, 2007, letter to Chairman Leahy and Ranking Member Specter of the Senate Judiciary Committee, then Attorney General Gonzales advised them that, on January 10, 2007, a Foreign Intelligence Surveillance Court judge "issued orders authorizing the Government to target for collection international communications into or out of the United States where there is probable cause to believe that one of the communicants is a member or agent of al Qaeda or an associated terrorist organization." The Attorney General stated that, in light of these orders, which "will allow the necessary speed and agility," all surveillance previously occurring under the Terrorist Surveillance Program (TSP) would now be conducted subject to the approval of the FISC. He indicated further that, under these circumstances, the President had determined not to reauthorize the TSP when the then current authorization expired. The Attorney General also noted that the Intelligence Committees had been briefed on the highly classified details of the FISC orders and advised Chairman Leahy and Senator Specter that he had directed the Acting Assistant Attorney General for the Office of Legal

[4097] National Intelligence Estimate on "The Terrorist Threat to the US Homeland," at 6-7 (July 2007). This may be found at [http://www.odni.gov/press_releases/20070717_release.pdf].

Counsel and the Assistant Attorney General for National Security to provide them a classified briefing on the details of the orders. Because the contents of these orders remain classified, the scope of or limitations with respect to any authority that may have been provided remain unknown.

On April 13, 2007, the Administration announced that it had submitted draft legislation to the Congress regarding modernization of FISA. This draft legislation included a proposed new section 102A of FISA which would authorize the President, acting through the Attorney General, to permit acquisition of foreign intelligence information for up to one year concerning persons reasonably believed to be outside the United States if the Attorney General certifies in writing under oath that he has made four specific determinations.[4098]

On August 2, 2007, the DNI released a statement on "Modernization of the Foreign Intelligence Surveillance Act." In his statement, Admiral McConnell regarded such modernization as necessary to respond to technological changes and to meet the Nation's current intelligence collection needs. He viewed it as essential for the intelligence community to provide warning of threats to the United States. One of two critically needed changes perceived by the DNI was his view that a court order should not be required for gathering foreign intelligence from foreign targets located overseas. Admiral McConnell did, however, indicate that he would be willing to agree to court review, after commencement of needed collection, of the procedures by which foreign intelligence is gathered through classified methods directed at foreigners outside the United States.

Some news accounts suggest that a FISC court ruling this Spring may have limited the authority of the United States, in certain circumstances, to engage in surveillance of foreign conversations taking place outside the United States. Admiral McConnell stated in remarks included in the transcript of an interview published in the *El Paso Times* on August 22, 2007, that on or about May of this year, when another judge of the FISC considered an application for renewal or

---

[4098] These include: that "the acquisition does not constitute electronic surveillance; that the acquisition involves obtaining foreign intelligence information from or with the assistance of a communications service provider, custodian, or other person (including any officer, employee, agent, or other specified person of such service provider, custodian, or other person) who has access to communications, either as they are transmitted or while they are stored, or equipment that is being or may be used to transmit or store such communications;" that "a significant purpose of the acquisition is to obtain foreign intelligence information;" and that "the minimization procedures to be used with respect to the acquisition activity meet the definition of minimization procedures under section 101(h)" of FISA. The Fact Sheet on the draft legislation may be found at [http://www.usdoj.gov/opa/pr/2007/April/07_nsd_247.html]. The text of the draft bill may be found at [http://www.lifeandliberty.gov/docs/text-of-dni-proposed.pdf]. For further information about the proposed draft legislation regarding modernization of FISA, see the April 23, 2007, CRS Congressional Distribution Memorandum entitled, "Overview of 'FISA Modernization Provisions of the Proposed Fiscal Year 2008 Intelligence Authorization,'" by Elizabeth B. Bazan.

extension of the surveillance approved under the January 10 orders, that judge interpreted the requirements of FISA differently from the judge who had issued the January 10 orders, and deemed a FISA warrant necessary for surveillance of wire communications of a foreign person in a foreign country.[4099]

Views differ as to the scope of the need and the means by which this need may be met. Can this concern be addressed by solutions directed solely at electronic surveillance or acquisitions without a court order from the FISC of communications between foreign persons in communication with other foreign persons all located outside the United States, whether or not those communications are routed through the United States at some point in their transmission? Or must the solution be crafted in such a way as to permit such surveillance or acquisitions of the communications of foreign persons located abroad, whether they may be in communication only with other non-U.S. persons, or both non-U.S. persons and U.S. persons,[4100] located outside the United States? What is required if some of the communications of the foreign person targeted in the surveillance or acquisition are with U.S. persons or non-U.S. persons located in the United States? May such foreign intelligence be collected from U.S. persons abroad without a Foreign Intelligence Surveillance Court[4101] order pursuant to a certification by the Attorney General or the Attorney General and the DNI jointly or whether a court order is required prudentially or constitutionally under the Fourth Amendment.[4102]

Legislative Response: Foreign Intelligence Surveillance of Foreign Persons Abroad

---

[4099] The transcript of the interview with the DNI may be found at [http://www.elpasotimes.com/news/ci_6685679]. *See also*, "Greg Miller, Court Puts Limits on Surveillance Abroad: The ruling raises concerns that U.S. anti-terrorism efforts might be impaired at a time of heightened risk," *L.A. Times*, August 2, 2007, quoting a Member of Congress that "[t]here's been a ruling, over the last four or five months, that prohibits the ability of our intelligence services and our counterintelligence people from listening in to two terrorists in other parts of the world where the communication could come through the United States."

[4100] "United States person" is defined in section 101(I) of FISA to mean:
a citizen of the United States, an alien lawfully admitted for permanent residence (as defined in section 1101(a)(20) of Title 8), an unincorporated association a substantial number of members of which are citizens of the United States or aliens lawfully admitted for permanent residence, or a corporation which is incorporated in the United States, but does not include a corporation or an association which is a foreign power, as defined in subsection (a)(1), (2), or (3) of this section.

[4101] As a general matter, the proposals contemplate that any such court order would be issued by the Foreign Intelligence Surveillance Court, created under section 103(a) of FISA, 50 U.S.C. § 1803(a).

[4102] For a more in depth discussion of the application of the Fourth Amendment to U.S. citizens abroad, see CRS Congressional Distribution Memorandum entitled "U.S. Citizens' Fourth Amendment Rights Abroad and the Interception of Electronic Communications," by Jennifer K. Elsea (November 13, 2007).

On August 5, 2007, the Protect America Act of 2007 was enacted into law, P.L. 110-55, which provided that "[n]othing in the definition of electronic surveillance under section 101(f) [of FISA] shall be construed to encompass surveillance directed at a person reasonably believed to be located outside of the United States." It also created a new procedure under section 105B(a) of FISA under which the Attorney General and the DNI, for periods of up to one year, may authorize acquisition of foreign intelligence information concerning persons reasonably believed to be outside the United States, if the Attorney General and the DNI determine, based on the information provided to them, that five criteria have been met. This authority was similar, but not identical to, the proposed section 102A of FISA in the Administration's draft bill. P.L. 110-55 expired on February 16, 2008, after passage of a 15-day extension to its original sunset date.[4103] Under the transitional provisions in Section 6 of the Protect America Act, the acquisitions authorized while the act was in force may continue until their expiration.

H.R. 3773 as originally passed by the House provides that no court order is needed for electronic surveillance directed at acquisition of the contents of communications between persons not known to be U.S. persons who are reasonably believed to be located outside the United States, without regard to whether the communication is transmitted through the United States or the surveillance device is located in the United States. If the communications of a U.S. person are inadvertently intercepted, stringent constraints upon retention, disclosure, dissemination, or use would apply. However, the bill provides for a FISC order for acquisitions for up to one year of communications of non-U.S. persons reasonably believed to be outside the U.S. to collect most types of foreign intelligence information by targeting those persons, where those persons may be communicating with persons inside the United States. It also establishes requirements for such acquisitions.

The Senate amendment to H.R. 3773 would permit the Attorney General and the DNI to jointly authorize, for up to one year, targeting of persons reasonably believed to be outside the U.S. to acquire foreign intelligence information if certain statutory criteria are met. The Senate bill does not require prior approval by the FISC of applicable certifications, targeting procedures and minimization procedures in connection with the acquisition of communications of non-U.S. persons abroad, nor does it require adoption and submission of compliance guidelines. Rather, it requires submission of a certification or a targeting or minimization procedure, or an amendment thereto, to the Foreign Intelligence Surveillance Court (FISC) within five days of making or amending the certification or adopting or amending the procedure. Where the Attorney General and the DNI determine that immediate action is required and time does not permit preparation of a certification prior to initiation of an acquisition, the

[4103] P.L. 110-182.

Senate bill requires the Attorney General and the DNI to prepare the certification, including such determination, within seven days after the determination is made. If the FISC finds that a certification meets statutory requirements and targeting and minimization procedures are consistent with statutory requirements and meet constitutional standards under the Fourth Amendment, the FISC would enter an order approving continued use of the procedures involved. If the court finds that the required standards are not met, then the FISC would enter an order directing the government, at the government's election and to the extent required by the FISC order, to correct any deficiencies within 30 days or cease the acquisition.

In the absence of an emergency authorization, the House amendment to the Senate amendment to H.R. 3773 requires prior approval by the FISC of the applicable targeting procedures, minimization procedures, and certification before the Attorney General and the Director of National Intelligence (DNI) may authorize acquisition of the contents of communications of non-U.S. persons reasonably believed to be located outside the United States. The FISC would have 30 days after a certification is submitted to review the certification and the targeting and minimization procedures and to approve or deny an order regarding such an acquisition.

The House amendment also requires the Attorney General, in consultation with the DNI, to adopt guidelines to ensure compliance with limitations imposed by the bill on such acquisitions and to ensure that an application is filed under section 104 or 303 of FISA, if required by that act. The guidelines are to be submitted to the FISC, the congressional intelligence committees, and the House and Senate Judiciary Committees.

H.R. 6304 would amend FISA to permit the Attorney General and the DNI to jointly authorize targeting of persons reasonably believed to be non-U.S. persons located outside the United States for periods of up to one year. Proposed section 702 of FISA contains explicit limitations, including protections against reverse targeting[4104] in connection with the acquisition of the communications of such persons. A certification by the Attorney General and the DNI that certain statutory criteria have been met, applicable targeting procedures, and

---

[4104] Under proposed subsection 702(b) of FISA, such an acquisition is subject to several limitations, including those designed to protect against reverse targeting. Under these limitations, an acquisition may not intentionally target any person known at the time of acquisition to be located in the United States; may not intentionally target a person reasonably believed to be located outside the United States if the purpose of such acquisition is to target a particular, known person reasonably believed to be in the United States; may not intentionally target a United States person reasonably believed to be located outside the United States; and may not intentionally acquire any communication as to which the sender and all intended recipients are known at the time of the acquisition to be located in the United States. The acquisition must be conducted in a manner consistent with the Fourth Amendment to the Constitution of the United States.

minimization procedures would be subject to judicial review by the FISC. The certification would attest, in part, that procedures are in place that have been approved, have been submitted for approval, or will be submitted with the certification for approval by the FISC that are reasonably designed to ensure that an acquisition is limited to targeting persons reasonably believed to be located outside the United States, and to prevent the intentional acquisition of any communication where the sender and all intended recipients are known at the time of the acquisition to be located in the United States. Generally, if the certification and targeting and minimization procedures meet the statutory requirements and are consistent with the Fourth Amendment, a FISC order approving them would be issued prior to implementation of the acquisition of the communications at issue. If the FISC finds deficiencies in the certification, targeting procedures, or minimization procedures, the court would issue an order directing the government to, at the government's election and to the extent required by the court's order, correct any such deficiency within 30 days or cease, or not begin, the implementation of the authorization for which the certification was submitted.

Legislative Response: Foreign Intelligence Surveillance of U.S. Persons Outside the United States

Generally, the full extent of Fourth Amendment protections attach to the privacy interests of U.S. persons within the United States. Fourth Amendment protections also attach to U.S. citizens abroad.[4105] However, the operation of its protections outside the United States may differ from that in the United States due to the fact that a citizen abroad may not have the same expectation of privacy. In addition, the Warrant Clause of the Fourth Amendment may not apply outside the United States where U.S. magistrates have no jurisdiction.[4106] A determination whether interception of a communication abroad is lawful turns upon the law of the country where the interception occurs, so, depending upon

[4105] United States v. Verdugo-Urquidez, 494 U.S. 259 (1990), suggests that the Fourth Amendment may have some applicability to aliens, such as permanent resident aliens, who have accepted societal obligations and made a significant voluntary commitment to the United States.

[4106] United States v. Verdugo-Urquidez, 494 U.S. 259, 278 (Kennedy, J., concurring)("The absence of local judges or magistrates available to issue warrants, the differing and perhaps unascertainable conceptions of reasonableness and privacy that prevail abroad, and the need to cooperate with foreign officials all indicate that the Fourth Amendment's warrant requirement should not apply in Mexico as it does in this country"); *id.* at 279 (Stevens, J., concurring in the judgment)("I do agree, however, with the Government's submission that the search conducted by the United States agents with the approval and cooperation of the Mexican authorities was not 'unreasonable' as that term is used in the first Clause of the Amendment. I do not believe the Warrant Clause has any application to searches of noncitizens' homes in foreign jurisdictions because American magistrates have no power to authorize such searches").

location, the rights available may differ significantly.[4107] In addition, the availability of Fourth Amendment protections are affected by whom the search was executed, and the extent of any U.S. role.[4108] If the U.S. plays no role, then the Fourth Amendment does not attach, and the exclusionary rule does not apply to evidence obtained by or derived from such a search unless the foreign conduct "shocks the conscience."[4109] On the other hand, if warrantless electronic surveillance targeted at a U.S. citizen's communications is conducted abroad for the purpose of gathering foreign intelligence by U.S. officials, the U.S. district court in *United States v. Bin Laden*, 126 F. Supp. 2d 264, 277 (S.D.N.Y. 2000), has held that it will be deemed reasonable if it is authorized by the President, or the Attorney General pursuant to the President's delegation, and the surveillance was conducted "primarily for foreign intelligence purposes and . . . targets foreign powers or their agents."[4110]

In addition to considering the scope of constitutional privacy protections available to U.S. citizens or U.S. persons abroad, the 110th Congress, in FISA legislation before it, is also considering what it deems the appropriate level of privacy protection to be afforded such persons while outside the United States. In addition to the Protect America Act of 2007, P.L. 110-55 (August 5, 2007), the Senate-passed amendment to H.R. 3773, the House-passed amendment to the Senate amendment to H.R. 3773, and H.R. 6304 each addresses procedures for targeting U.S. persons reasonably believed to be located outside the United States to collect foreign intelligence information.

The Senate amendment to H.R. 3773, the House amendment to the Senate amendment to H.R. 3773, and H.R. 6304 each provide for targeting of U.S. persons reasonably believed to be located outside the United States for up to 90 days pursuant to a FISC order if statutory criteria are met. Such an order could be renewed for additional 90-day periods upon submission of renewal applications meeting the same standards. In the case of an emergency authorization by the

Rose, 570 F.2d 1358, 1362 (9th Cir. 1978); United States v. Hensel, 699 F.2d 18, 25 (1st Cir. 1983); United States v. Delaplane, 778 F.2d 570, 573-74 (10th Cir. 1985); United States v. Rosenthal, 793 F.2d 1214, 1231-232 (11th Cir. 1986).

[4110] See CRS Congressional Distribution Memorandum entitled "U.S. Citizens' Fourth Amendment Rights Abroad and the Interception of Electronic Communications," by Jennifer K. Elsea (November 13, 2007).

Attorney General of an acquisition, each bill requires notice to a FISC judge by the Attorney General or his designee at the time the decision is made to conduct such an acquisition and requires the filing of an application for a FISC order within seven days of the Attorney General's authorization of the emergency acquisition. Minimization procedures would apply to such an acquisition. Under each of these bills, in the absence of a judicial order approving an acquisition originally authorized by the Attorney General on an emergency basis, the acquisition would terminate when the information sought is obtained, when an application for the order is denied, or when seven days have elapsed, whichever is earliest. Without a FISC order, no information acquired or evidence derived from an emergency acquisition, except under circumstances where the target of the acquisition is determined not to be a U.S. person, may be received in evidence or disclosed in federal, state, or local proceedings; nor could any information concerning a U.S. person acquired from such acquisition subsequently be used or disclosed in any other manner by federal officers or employees without the consent of such person, except with the approval of the Attorney General if the information indicates a threat of death or serious bodily harm to any person.

Limitations on Liability for Telecommunications Providers Furnishing Aid to the Government

The second of the two critical needs identified by the DNI in his August 2nd statement was a need for liability protection for those who furnish aid to the Government in carrying out its foreign intelligence collection efforts. He sought both retrospective relief from liability for those who are alleged to have aided the Government from September 11, 2001 to the present in connection with electronic surveillance or collection of other communications related information, and prospective liability protection for those telecommunications providers who furnish aid to the government in the future whether pursuant to a court order or a certification by the Attorney General or the Attorney General and the DNI that the acquisition or electronic surveillance involved is lawful and that all statutory requirements have been met.

Under current law, there are a number of statutory sections which provide some limitation on liability for telecommunication providers who furnish aid to the government in connection with electronic surveillance or a physical search,[4111] or the installation of a pen register or trap and trace device[4112] pursuant to a court order under FISA.[4113] In addition, 18 U.S.C. § 2511(2)(a) bars suit in any court against any provider of wire or electronic communication service, its officers,

---

[4111] 50 U.S.C. § 1805(I).

[4112] 50 U.S.C. § 1842(f).

[4113] Section 105B(1) of FISA as added by the Protect America Act, P.L. 110-55, barred causes of action in any court against any person for providing any information, facilities, or assistance in accordance with a directive under that section.

employees, or agents, landlord, custodian, or other specified person for providing information, facilities, or assistance in accordance with the terms of a court order, statutory authorization, or a certification in writing by the Attorney General or a person specified under 18 U.S.C. § 2518(7) that no warrant or court order is required by law, that all statutory requirements have been met, and that the specified assistance is required.[4114]

Prospective relief from liability for those furnishing aid to the government pursuant to a court order or certification or a directive pursuant to statute requiring compliance with government demands for assistance is contemplated in a number of bills, including H.R. 3773 as originally passed, the Senate Amendment to H.R. 3773, the House amendment to the Senate amendment to H.R. 3773, and H.R. 6304. All three versions of H.R. 3773, and H.R. 6304 authorize the FISC to compel compliance through the contempt power, as did P.L. 110-55 while it was in force.

Retroactive immunity presents more difficult issues. There are currently pending a substantial number of law suits against the telecommunications providers who are alleged to have furnished aid to the government in connection with its warrantless surveillance programs since September 11, 2001, and other programs.[4115] Approximately 40 of these suits are currently pending in the Northern District of California under an order of the Judicial Panel on Multidistrict Litigation. On August 9, 2006, pursuant to 28 U.S.C. § 1407, the Judicial Panel on Multidistrict Litigation transferred 17 civil actions that were pending throughout the country to the Northern District of California, and assigned them to Judge Vaughn Walker for coordinated or consolidated pretrial proceedings in *In Re: National Security Agency Telecommunications Records Litigation*, MDL-1791. Another 26 cases were treated as potential tag-along actions under the multidistrict litigation rules. The panel of five federal trial and appellate court judges found that all these class actions share "factual and legal questions regarding alleged Government surveillance of telecommunications activity and the participation in (or cooperation with) that surveillance by individual telecommunications companies," and thus centralization of the cases "is necessary in order to eliminate duplicative discovery, prevent inconsistent

[4115] *Cf.*, CRS Report RL33424, *Government Access to Phone Calling Activity and Related Records: Legal Authorities*, by Elizabeth B. Bazan, Gina Marie Stevens, Brian T. Yeh (August 20, 2007). *Cf.*, American Civil Liberties Union v. National Security Agency, 438 F. Supp. 2d 754 (E.D. Mich. 2007), *vacated and remanded on other grounds*, 493 F.3d 644 (6th Cir. 2007), *cert. denied*, ___ U.S. ___, 128 S. Ct. 1334 (2008). The district court, in pertinent part, held the plaintiffs' "datamining" claim barred by application of the state secrets privilege, 438 F. Supp. 2d at 759, 763, 782. This case was brought against government agencies and officers rather than against the telecommunications providers who may have assisted the government in its efforts.

pretrial rulings (particularly with respect to matters involving national security), and conserve the resources of the parties, their counsel and the judiciary."[4116]

Arguments may be made on both sides with respect to whether retroactive immunity should be granted telecommunications providers who are alleged to have assisted the government in such programs. For example, the cooperation of such providers is critical to the government's capacity to pursue electronic surveillance to gather foreign intelligence information, and is also essential for collection of communications records for pattern analysis. If the telecommunication providers who responded to the government's requests or demands for assistance did so in good faith reliance upon assertions by the government that the demand was lawful and that a court order was not required, it may be argued that the providers should be immunized from ill effects flowing from such good faith reliance. Some have argued that the unique factual context militates in favor of such relief from liability, to the extent those who responded to the government's requests for assistance in the wake of 9/11 did so in response to government assertions that their cooperation was necessary to protect against further attacks.

In many of the suits filed, the government has asserted states secrets privilege with respect to the programs involved and the role of any of the telecommunications carriers with respect thereto. This is a common law evidentiary privilege, which may only be asserted by the government, that protects information from discovery when its disclosure would be inimical to the national security. The privilege can come into play in three ways. If the very subject matter of the case is a state secret, an assertion of the privilege can cause

---

[4116] Transfer Order, MDL Docket No. 1791, In Re: National Security Agency Telecommunications Records Litigation. In one of the consolidated suits, Al-Haramain Islamic Foundation, Inc. v. Bush, 507 F.3d 1190, 1206 (9th Cir. 2007), the appellate court remanded the case to the U.S. District Court for the Northern District of California "to consider whether FISA preempts the state secrets privilege and for any proceedings collateral to that determination." On July 2, 2008, in In re: National Security Agency Telecommunications Records Litigation, MDL Docket No. 06-1791 VRW, slip op. at 2, 28 (N.D. Cal. July 2, 2008) (pertaining to Al-Haramain Islamic Foundation v. Bush, C-07-0109 VRW), Judge Walker, having reviewed the pertinent statutory language and the related legislative history, *id*., slip op. at 10-28, held, in part, that FISA preempts the state secrets privilege in connection with electronic surveillance for intelligence purposes in connection with cases within its purview. The court stated the case before it was such a case, and that FISA therefore appeared "to displace the state secrets privilege for purposes of plaintiffs' claims." *Id.* However, the court observed that FISA's statutory structure does not appear to provide the plaintiffs with a viable remedy unless they are able to show that they are "aggrieved persons" within the meaning of FISA. *Id.*

Other actions have been initiated against telecommunications providers by a public utility commission to seek information from or impose sanctions upon those providers. *See, e.g*., State of Maine Public Utilities Commission, Request for Commission Investigation into Whether Verizon is Cooperating in Maine with the National Security Agency's Warrantless Surveillance Program, Docket No.2006-274.

the case to be immediately dismissed and the action barred. If, however, this prong of the state secrets privilege does not apply, the privilege may operate to bar admission into evidence of information which will damage the security of the United States. The plaintiff then goes forward on the basis of evidence not covered. If the plaintiff cannot prove a prima facie case with nonprivileged evidence, then the case may be dismissed.[4117] On the other hand, if the privilege deprives a defendant of information that would otherwise give the defendant a valid defense to the claim, then the court may grant summary judgment to the defendant.[4118] In the current context, to the extent that a defendant telecommunications providers may have a valid claim of immunity under 18 U.S.C. § 2511(2)(a), but for the application of the state secrets privilege to the identities of any providers who may have furnished aid to the government, an argument may be made that the telecommunications providers so impacted should be afforded immunity from suit.

On the other hand, such suits may be the only means by which those who may have been adversely impacted by such government activities may obtain any remedy for any injuries incurred. These injuries may have impacted First and Fourth Amendment protected interests, and there may be no other means of vindicating those rights. In addition, the telecommunications providers provide the front line of defense of those rights against governmental abuse if the government demand or request is unlawful. In some instances, it may be argued that a telecommunications provider has a statutory obligation to protect customer records from unlawful access.[4119] Such arguments militate against affording relief from liability to any providers who may have permitted unlawful access.

In addition to these arguments, some have argued that, because the Administration has not shared information repeatedly sought by some committees of jurisdiction with respect to the role of the telecommunications

---

[4117] This is the basis upon which the Sixth Circuit dismissed ACLU v. NSA, *supra*, on appeal, finding that the plaintiffs would be unable to demonstrate standing from nonprivileged evidence.

[4118] *See*, Hepting v. AT&T, 439 F. Supp. 2d 974, 984 (N.D. Cal. 2006), *citing* Kasza v. Browner, 133 F.3d 1159, 1166 (9th Cir. 1998). The *Hepting* court held that the case was not barred on the basis that its very nature was a state secret, but that there was insufficient information to determine whether the other two prongs applied. The other consolidated cases have been stayed pending the interlocutory appeal of the *Hepting* decision to the U.S. Court of Appeals for the Ninth Circuit, Hepting v. AT&T Corporation, Docket # 06-17132 consolidated with Docket # 06-17137. On appeal, the *Hepting* case was consolidated with Al-Haramain Islamic Foundation v. Bush, Docket # 06-36083. After argument, the court of appeals determined that the claimed facts and circumstances in the two cases were distinct and entered an order stating that the two cases were no longer consolidated for any purpose, Al-Haramain Islamic Foundation, Inc. v. Bush, 507 F.3d 1190, 1196 n. 3 (9th Cir. 2007).

[4119] *See, e.g.*, 47 U.S.C. § 222 (protection of customer proprietary network information).

providers in the TSP or other pertinent intelligence activities, the Congress does not have adequate information to determine whether relief for the telecommunications carriers is warranted.

Legislative Response

Under proposed section 802(a) of FISA in Title II of H.R. 6304, a civil action[4120] may not lie or be maintained in a federal or state court[4121] against any person[4122] for providing assistance[4123] to an element of the intelligence community, and must be dismissed promptly, if the Attorney General certifies to the U.S. district court in which the action is pending that:

> (1) any assistance by that person was provided pursuant to an order of the court established under section 103(a) directing such assistance;
> (2) any assistance by that person was provided pursuant to a certification in writing under section 2511(2)(a)(ii)(B) or 2709(b) of title 18, United States Code;
> (3) any assistance by that person was provided pursuant to a directive under section 102(a)(4), 105B(e), as added by section 2 of the Protect America Act of 2007 (Public Law 110-55), or 702(h) directing such assistance;
> (4) in the case of a covered civil action, the assistance alleged to have been provided by the electronic communication service provider was —
>
> > (A) in connection with an intelligence activity involving communications that was—

[4120] "Civil action" is defined in proposed subsection 801(2), to include a "covered civil action." The term "covered civil action" is defined under section 801(5) to mean a civil action filed in a federal or state court that "alleges that an electronic communication service provider furnished assistance to an element of the intelligence community;" and "seeks monetary or other relief from the electronic communication service provider related to the provision of such assistance."

[4121] Under proposed subsection 802(g), a civil action against a person for providing assistance to an element of the intelligence community that is brought in a state court shall be deemed to arise under the Constitution and laws of the United States and shall be removable under 28 U.S.C. § 1441.

[4122] "Person" is defined in proposed subsection 801(8) to mean an electronic communication service provider, as defined in proposed subsection 801(6); or a landlord, custodian, or other person who may be authorized or required to furnish assistance pursuant to an order of the court established under section 103(a) of FISA directing such assistance; a certification in writing under 18 U.S.C. §§ 2511(2)(a)(ii)(B) or 2709(b); or a directive under section 102(a)(4) of FISA, 105B(e) of FISA, as added by section 2 of the Protect America Act of 2007 (Public Law 110-55), or 702(h) of FISA.

[4123] "Assistance" is defined under proposed subsection 801(1) to mean "the provision of, or the provision of access to, information (including communication contents, communications records, or other information relating to a customer or communication), facilities, or another form of assistance."

(i) authorized by the President during the period beginning on September 11, 2001, and ending on January 17, 2007; and
(ii) designed to detect or prevent a terrorist attack, or activities in preparation for a terrorist attack, against the United States; and

(B) the subject of a written request or directive, or a series of written requests or directives, from the Attorney General or the head of an element of the intelligence community (or the deputy of such person) to the electronic communication service provider indicating that the activity was —

(i) authorized by the President; and
(ii) determined to be lawful; or

(5) the person did not provide the alleged assistance.

Under proposed subsection 802(b) of FISA, such a certification shall be given effect unless the court finds that it is not supported by substantial evidence provided to the court under that section. In the course of its judicial review, the U.S. district court may examine the court order, certification, written request, or directive described in proposed subsection 802(a) and any relevant court order, certification, written request, or directive submitted to the court by the parties under proposed subsection 802(d). Any such party would be permitted to participate in briefing or argument of any legal issue in a judicial proceeding under this section to the extent that such participation does not require disclosure of classified information to that party. Any relevant classified information would be reviewed in camera and exparte. Any portion of the court's written order that would reveal classified information would be issued in camera and ex parte and maintain it under seal. Upon filing of a declaration by the Attorney General under 28 U.S.C. § 1746 that disclosure of such a certification or of the supplemental materials provided pursuant to proposed subsections 802 (b) or (d) would harm the national security of the United States, the U.S. district court would be required to review such certification and the supplemental materials in camera and ex parte. Any public disclosure of such certification and supplemental materials would be limited to a statement as to whether the case is dismissed and a description of the legal standards that govern the order, without disclosing the paragraph of subsection (a) that is the basis for the certification. If H.R. 6304 were to be enacted into law, proposed Section 802 of FISA would apply to a civil action pending on or filed after the date of the enactment.

The Senate amendment to H.R. 3773 bars covered civil actions in a federal or state court and requires that such an action must be dismissed promptly if the Attorney General or above certifies to the court that the assistance alleged to have been provided by the electronic communication service provider was in connection with an intelligence activity involving communications that was authorized by the President during the period beginning on September 11, 2001, and ending on January 17, 2007; and designed to detect or prevent a terrorist attack, or activities in preparation for a terrorist attack, against the United States; and described in a written request or directive from the Attorney General or the

head of an element of the intelligence community (or the deputy of such person) to the electronic communication service provider indicating that the activity was authorized by the President and determined to be lawful. A covered civil action in federal or state court would also be barred and should be dismissed promptly if the Attorney General certifies to the court that the electronic communication service provider did not provide the alleged assistance. The Attorney General's certification would be subject to judicial review under an abuse of discretion standard. If the Attorney General files a declaration under 28 U.S.C. § 1746 that disclosure of a certification made under subsection 202(a) of the bill would harm United States national security, the court shall review the certification in camera and ex parte, and limit public disclosure concerning such certification, including any public order following such ex parte review, to a statement that the conditions of subsection 202(a) of the bill have been met, without disclosing the subparagraph of subsection 202(a)(1) that is the basis for the certification. The authorities of the Attorney General under section 202 are to be performed by the Attorney General, or the Acting Attorney General, or a designee in a position not lower than the Deputy Attorney General.

The House-passed amendment to the Senate Amendment took a different approach. Proposed section 802, in part, provides authority for the government to intervene in any covered civil action. Any party may submit to the court evidence, briefs, arguments, or other information on any matter with respect to which a state secrets privilege has been asserted. The section also authorizes the court to review any such submissions in accordance with procedures set forth in section 106(f) of FISA; and permits the court, on motion of the Attorney General, to take additional steps to protect classified information. The court, to the extent practicable and consistent with national security would be permitted to request any party to present briefs and arguments on any legal question the court finds raised by such submission, regardless of whether that party has access to the submission. Under new subsection 802(e) of FISA, for any covered civil action alleging that a person provided assistance to an element of the intelligence community pursuant to a request or directive during the period from September 11, 2001 through January 17, 2007, the Attorney General would be required to provide to the court any request or directive related to the allegations under the procedures set forth in new subsection 802(b).

H.R. 6304, therefore, differs from prior House and Senate amendments to H.R. 3773 in a number of respects, while having similarities to them in others. Both H.R. 6304 and the Senate amendment would bar civil actions in federal or state court against persons providing assistance to an element of the intelligence community if the Attorney General certifies that certain statutory criteria are met. They differ to some degree as to the criteria involved.

H.R. 6304 provides for judicial review of the Attorney General's certification under a substantial evidence standard, while the Senate amendment to H.R. 3773 provides for review of the Attorney General's certification using an abuse of discretion standard. The House amendment to the Senate amendment to H.R.

3773 provides for judicial review of any submissions by any party relating any matter as to which state secrets privilege has been asserted, but does not specify the standard of review.

H.R. 6304 expressly permits the district court, in its review, to examine any court order, certification, written request, or directive described in proposed subsection 802(a) or submitted to the court by the parties, and, permits party participation in briefs and arguments on any legal issue in the judicial proceeding to the extent that such participation does not require disclosure of classified information to that party. This does not have a parallel in the Senate amendment. However, it has some points of similarity with the House amendment, which permits submissions by the parties of evidence, briefs, arguments, or other information relating to any matter with respect to which state secrets privilege has been asserted, while providing protections for classified information. For any covered civil action alleging that a person provided assistance to an element of the intelligence community pursuant to a request or directive during the September 11, 2001 to January 17, 2007 period, the House amendment requires the Attorney General to provide the court with any request or directive related to the allegations.

All three bills make provision for ex parte, in camera review of classified information. H.R. 6304 and the Senate amendment both place restrictions on public disclosure of information regarding the certification and the court's order.

Presidential Authority to Conduct Warrantless Electronic Surveillance to Gather Foreign Intelligence Information, Memorandum (January 5, 2006).

ELIZABETH B. BAZAN & JENNIFER K. ELSEA, CONGRESSIONAL RESEARCH SERV., PRESIDENTIAL AUTHORITY TO CONDUCT WARRANTLESS ELECTRONIC SURVEILLANCE TO GATHER FOREIGN INTELLIGENCE INFORMATION, MEMORANDUM (2006), *available at* http://www.intelligencelaw.com/library/secondary/crs/pdf/memo_1-5-2006.pdf.

SUBJECT:
Presidential Authority to Conduct Warrantless Electronic Surveillance to Gather Foreign Intelligence Information

FROM:
Elizabeth B. Bazan and Jennifer K. Elsea
Legislative Attorneys
American Law Division

Introduction

Recent media revelations that the President authorized the National Security Agency (NSA) to collect signals intelligence[4124] from communications involving U.S. persons within the United States, without obtaining a warrant or court

---

[4124] "Signals intelligence" is defined in the DEPARTMENT OF DEFENSE DICTIONARY OF MILITARY AND ASSOCIATED TERMS, Joint Publication 1-02 (April 12, 2001), as follows:

1. A category of intelligence comprising either individually or in combination all communications intelligence, electronic intelligence, and foreign instrumentation signals intelligence, however transmitted. 2. Intelligence derived from communications, electronic, and foreign instrumentation signals. Also called SIGINT. . . . Id. at 390 (cross-references omitted). "Communications intelligence" is defined as "Technical information and intelligence derived from foreign communications by other than the intended recipients. Also called COMINT." Id. at 84. "Electronic intelligence" is defined as "Technical and geolocation intelligence derived from foreign non-communications electromagnetic radiations emanating from other than nuclear detonations or radioactive sources. Also called ELINT. . . ." Id. at 140 (cross-references omitted). "Foreign instrumentation signals intelligence" is defined as:

Technical information and intelligence derived from the intercept of foreign electromagnetic emissions associated with the testing and operational deployment of non-US aerospace, surface, and subsurface systems. Foreign instrumentation signals intelligence is a subcategory of signals intelligence. Foreign instrumentation signals include but are not limited to telemetry, beaconry, electronic interrogators, and video data links. Also called FISINT. . . .

Id. at 167 (cross-references omitted).

order,[4125] raise numerous questions regarding the President's authority to order warrantless electronic surveillance. Little information is currently known about the full extent of the NSA domestic surveillance, which was revealed by the New York Times in December, 2005, but allegedly began after the President issued a secret order in 2002. Attorney General Alberto Gonzales laid out some of its parameters, telling reporters that it involves "intercepts of contents of communications where one . . . party to the communication is outside the United States" and the government has "a reasonable basis to conclude that one party to the communication is a member of al Qaeda, affiliated with al Qaeda, or a member of an organization affiliated with al Qaeda, or working in support of al Qaeda."[4126] The aim of the program, according to Principal Deputy Director for National Intelligence General Michael Hayden, is not "to collect reams of intelligence, but to detect and warn and prevent [terrorist] attacks."[4127]

The President has stated that he believes his order to be fully supported by the Constitution and the laws of the United States,[4128] and the Attorney General clarified that the Administration bases its authority both on inherent presidential powers and the joint resolution authorizing the use of "all necessary and appropriate force" to engage militarily those responsible for the terrorist attacks of September 11, 2001 ("AUMF").[4129] Although the resolution does not expressly

TIMES, Dec. 16, 2005, at 1, 22 (citing anonymous government officials to report that the executive order, which allows some warrantless eavesdropping on persons inside the United States, "is based on classified legal opinions that assert that the president has broad powers to order such searches, derived in part from the September 2001 Congressional resolution authorizing him to wage war on Al Qaeda and other terrorist groups").

[4126] See Press Release, White House, Press Briefing by Attorney General Alberto Gonzales and General Michael Hayden, Principal Deputy Director for National Intelligence (Dec. 19, 2005) (hereinafter Gonzales Press Conference), available at [http://www.whitehouse.gov/news/releases/2005/12/20051219-1.html]. The Attorney General emphasized that his discussion addressed the legal underpinnings only for those operational aspects that have already been disclosed by the President, explaining that "the program remains highly classified; there are many operational aspects of the program that have still not been disclosed and we want to protect that because those aspects of the program are very, very important to protect the national security of this country." Id.

[4127] Id.(describing the program as more "aggressive" than traditional electronic surveillance under FISA, but also as "less intrusive").

[4128] President Bush's Radio Address of December 17, 2005, excerpted in 'A Vital Tool,' USA TODAY, December 19, 2005, at A12.

[4129] Authorization for Use of Military Force ("the AUMF"), Pub. L. 107-40, 115 Stat. 224 (2001). Attorney General Gonzales explained

Justice O'Connor . . . said, it was clear and unmistakable that the Congress had authorized the detention of an American citizen captured on the battlefield as an enemy combatant for the

specify what it authorizes as "necessary and appropriate force," the Administration discerns the intent of Congress to provide the statutory authority necessary take virtually any action reasonably calculated to prevent a terrorist attack, including by overriding at least some statutory prohibitions that contain exceptions for conduct that is "otherwise authorized by statute." Specifically, the Administration asserts that a part of the Foreign Intelligence Surveillance Act (FISA)[4130] that punishes those who conduct "electronic surveillance under color of law except as authorized by statute"[4131] does not bar the NSA surveillance at issue because the AUMF is just such a statute.[4132] On December 22, 2005, the Department of Justice Office of Legislative Affairs released a letter to certain members of the House and Senate intelligence committees setting forth in somewhat greater detail the Administration's position with regard to the legal authority supporting the NSA activities described by the President.[4133]

The Administration's views have been the subject of debate. Critics challenge the notion that federal statutes regarding government eavesdropping may be bypassed by executive order, or that such laws were implicitly superceded by Congress's authorization to use military force. Others, however, have expressed the view that established wiretap procedures are too cumbersome and slow to be effective in the war against terrorism, and that the threat of terrorism justifies extraordinary measures the President deems appropriate, and some agree that Congress authorized the measures when it authorized the use of military force.

---

remainder — the duration of the hostilities. So even though the authorization to use force did not mention the word, 'detention,' she felt that detention of enemy soldiers captured on the battlefield was a fundamental incident of waging war, and therefore, had been authorized by Congress when they used the words, 'authorize the President to use all necessary and appropriate force.'

For the same reason, we believe signals intelligence is even more a fundamental incident of war, and we believe has been authorized by the Congress. And even though signals intelligence is not mentioned in the authorization to use force, we believe that the Court would apply the same reasoning to recognize the authorization by Congress to engage in this kind of electronic surveillance.

[4133] Letter from Assistant Attorney General William E. Moschella to Chairman Roberts and Vice Chairman Rockefeller of the Senate Select Committee on Intelligence and Chairman Hoekstra and Ranking Minority Member Harman of the House Permanent Select Committee on Intelligence (Dec. 22, 2005) (hereinafter "OLA Letter").

This memorandum lays out a general framework for analyzing the constitutional and statutory issues raised by the NSA electronic surveillance activity. It then outlines the legal framework regulating electronic surveillance by the government, explores ambiguities in those statutes that could provide exceptions for the NSA intelligence-gathering operation at issue, and addresses the arguments that the President possesses inherent authority to order the operations or that Congress has provided such authority.

Constitutional Separation of Powers

Foreign intelligence collection is not among Congress's powers enumerated in Article I of the Constitution, nor is it expressly mentioned in Article II as a responsibility of the President. Yet it is difficult to imagine that the Framers intended to reserve foreign intelligence collection to the states or to deny the authority to the federal government altogether. It is more likely that the power to collect intelligence resides somewhere within the domain of foreign affairs and war powers, both of which areas are inhabited to some degree by the President together with the Congress.[4134]

The *Steel Seizure Case*[4135] is frequently cited as providing a framework for the courts to decide the extent of the President's authority, particularly in matters involving national security. In that Korean War-era case, the Supreme Court declared unconstitutional a presidential order seizing control of steel mills that had ceased production due to a labor dispute, an action justified by President Truman on the basis of wartime exigencies and his role as Commander-in-Chief,[4136] despite the fact that Congress had considered but rejected earlier

---

[4134] The Constitution specifically gives to Congress the power to "provide for the common Defence," U.S.CONST. Art. I, § 8, cl. 1; to "declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water," id. § 8, cl. 11; "To raise and support Armies," and "To provide and maintain a Navy," id. § 8, cls. 12-13; "To make Rules for the Government and Regulation of the land and naval Forces," id. § 8, cl. 14, "To declare War," id. § 8, cl. 1; and to "make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof," id. § 8, cl. 18. The President is responsible for "tak[ing] Care that the Laws [are] faithfully executed," Art. II, § 3, and serves as the Commander-in-Chief of the Army and Navy, id. § 2, cl. 1.

[4135] Youngstown Sheet and Tube Co. v. Sawyer, 343 U.S. 579 (1952).

[4136] Id. at 582 (explaining the government's position that the order to seize the steel mills "was made on findings of the President that his action was necessary to avert a national catastrophe which would inevitably result from a stoppage of steel production, and that in meeting this grave emergency the President was acting within the aggregate of his constitutional powers as the Nation's Chief Executive and the Commander in Chief of the Armed Forces of the United States.").

legislation that would have authorized the measure,[4137] and that other statutory means were available to address the steel shortage.[4138] The Court remarked that

> *It is clear that if the President had authority to issue the order he did, it must be found in some provision of the Constitution. And it is not claimed that express constitutional language grants this power to the President. The contention is that presidential power should be implied from the aggregate of his powers under the Constitution. Particular reliance is placed on provisions in Article II which say that 'The executive Power shall be vested in a President . . .'; that 'he shall take Care that the Laws be faithfully executed'; and that he 'shall be Commander in Chief of the Army and Navy of the United States.'*
>
> *The order cannot properly be sustained as an exercise of the President's military power as Commander in Chief of the Armed Forces. The Government attempts to do so by citing a number of cases upholding broad powers in military commanders engaged in day-to-day fighting in a theater of war. Such cases need not concern us here. Even though 'theater of war' be an expanding concept, we cannot with faithfulness to our constitutional system hold that the Commander in Chief of the Armed Forces has the ultimate power as such to take possession of private property in order to keep labor disputes from stopping production. This is a job for the Nation's lawmakers, not for its military authorities.[4139]*

The Court also rejected the argument that past similar assertions of authority by presidents bolstered the executive claims of constitutional power:

> *It is said that other Presidents without congressional authority have taken possession of private business enterprises in order to settle labor disputes. But even if this be true, Congress has not thereby lost its exclusive constitutional authority to make laws necessary and proper to carry out the powers vested by the*

[4137] Id. at 586 (noting that "[w]hen the Taft-Hartley Act was under consideration in 1947, Congress rejected an amendment which would have authorized such governmental seizures in cases of emergency").

[4138] Id. at 585. The Court took notice of two statutes that would have allowed for the seizure of personal and real property under certain circumstances, but noted that they had not been relied upon and the relevant conditions had not been met. In particular, the Court dismissed the government's reference to the seizure provisions of § 201 (b) of the Defense Production Act, which the government had apparently not invoked because it was "'much too cumbersome, involved, and time-consuming for the crisis which was at hand.'" Id. at 586.

[4139] Id. at 587.

> *Constitution 'in the Government of the United States, or any Department or Officer thereof.'*[4140]

The *Steel Seizure Case* is not remembered as much for the majority opinion as it is for the concurring opinion of Justice Robert Jackson, who took a more nuanced view and laid out what is commonly regarded as the seminal explication of separation-of-powers matters between Congress and the President. Justice Jackson set forth the following oft-cited formula:

> *1. When the President acts pursuant to an express or implied authorization of Congress, his authority is at its maximum, for it includes all that he possesses in his own right plus all that Congress can delegate. . . . A seizure executed by the President pursuant to an Act of Congress would be supported by the strongest of presumptions and the widest latitude of judicial interpretation, and the burden of persuasion would rest heavily upon any who might attack it.*
> *2. When the President acts in absence of either a congressional grant or denial of authority, he can only rely upon his own independent powers, but there is a zone of twilight in which he and Congress may have concurrent authority, or in which its distribution is uncertain. Therefore, congressional inertia, indifference or quiescence may sometimes, at least as a practical matter, enable, if not invite, measures on independent presidential responsibility. In this area, any actual test of power is likely to depend on the imperatives of events and contemporary imponderables rather than on abstract theories of law.*
> *3. When the President takes measures incompatible with the expressed or implied will of Congress, his power is at its lowest ebb, for then he can rely only upon his own constitutional powers minus any constitutional powers of Congress over the matter. Courts can sustain exclusive Presidential control in such a case only by disabling the Congress from acting upon the subject. Presidential claim to a power at once so conclusive and preclusive must be scrutinized with caution, for what is at stake is the equilibrium established by our constitutional system.*[4141]

To ascertain where in this framework the President's claimed authority might fall appears to require a determination of the Congress's will and an assessment of how the Constitution allocates the asserted power between the President and Congress, if at all. If the Constitution forbids the conduct, then the court has a

---

[4140] Id. at 589.

[4141] Id. at 637-38 (Jackson, J., concurring) (footnotes and citations omitted).

duty to find the conduct invalid, even if the President and Congress have acted in concert. In the absence of a constitutional bar, Congress's support matters, except in the rare case where the President alone is entrusted with the specific power in question. In other words, under this view, the President may sometimes have the effective power to take unilateral action in the absence of any action on the part of Congress to indicate its will, but this should not be taken to mean that the President possesses the inherent authority to exercise full authority in a particular field without Congress's ability to encroach.

William Rehnquist, at the time an Associate Justice of the Supreme Court, took the opportunity in *Dames & Moore v. Regan*[4142] to refine Justice Jackson's formula with respect to the cases falling within the second classification, the "zone of twilight in which he and Congress may have concurrent authority, or in which its distribution is uncertain."[4143]

> *In such a case the analysis becomes more complicated, and the validity of the President's action, at least so far as separation-of-powers principles are concerned, hinges on a consideration of all the circumstances which might shed light on the views of the Legislative Branch toward such action, including "congressional inertia, indifference or quiescence."*[4144]
>
> *[I]t is doubtless the case that executive action in any particular instance falls, not neatly in one of three pigeonholes, but rather at some point along a spectrum running from explicit congressional authorization to explicit congressional prohibition. This is particularly true as respects cases such as the one before us, involving responses to international crises the nature of which Congress can hardly have been expected to anticipate in any detail.*[4145]

In *Dames & Moore*, petitioners had challenged President Carter's executive order establishing regulations to further compliance with the terms of an executive agreement he had entered into for the purpose of ending the hostage crisis with Iran. The orders, among other things, directed that legal recourse for breaches of contract with Iran and other causes of action must be pursued before a special tribunal established by the Algiers Accords. President Carter relied largely on the

[4144] Id.

[4145] Id. at 669.

International Economic Emergency Powers Act (IEEPA),[4146] which provided explicit support for most of the measures taken, but could not be read to authorize actions affecting the suspension of claims in U.S. courts. The Carter Administration also cited the broad language of the Hostage Act, which states that "the President shall use such means, not amounting to acts of war, as he may think necessary and proper to obtain or effectuate the release" of the hostages.[4147] Justice Rehnquist wrote for the majority

> *Although we have declined to conclude that the IEEPA or the Hostage Act directly authorizes the President's suspension of claims for the reasons noted, we cannot ignore the general tenor of Congress' legislation in this area in trying to determine whether the President is acting alone or at least with the acceptance of Congress. As we have noted, Congress cannot anticipate and legislate with regard to every possible action the President may find it necessary to take or every possible situation in which he might act. Such failure of Congress specifically to delegate authority does not, "especially . . . in the areas of foreign policy and national security," imply "congressional disapproval" of action taken by the Executive. On the contrary, the enactment of legislation closely related to the question of the President's authority in a particular case which evinces legislative intent to accord the President broad discretion may be considered to "invite" "measures on independent presidential responsibility." At least this is so where there is no contrary indication of legislative intent and when, as here, there is a history of congressional acquiescence in conduct of the sort engaged in by the President.*[4148]

The Court remarked that Congress's implicit approval of the longstanding presidential practice of settling international claims by executive agreement was critical to its holding that the challenged actions were not in conflict with acts of Congress.[4149] The Court cited Justice Frankfurter's concurrence in Youngstown stating that "a systematic, unbroken, executive practice, long pursued to the knowledge of the Congress and never before questioned . . . may be treated as a

gloss on 'Executive Power' vested in the President by § 1 of Art. II."[4150] Finally, the Court stressed that its holding was narrow:

> *We do not decide that the President possesses plenary power to settle claims, even as against foreign governmental entities. . . . But where, as here, the settlement of claims has been determined to be a necessary incident to the resolution of a major foreign policy dispute between our country and another, and where, as here, we can conclude that Congress acquiesced in the President's action, we are not prepared to say that the President lacks the power to settle such claims.*[4151]

A review of the history of intelligence collection and its regulation by Congress suggests that the two political branches have never quite achieved a meeting of the minds regarding their respective powers. Presidents have long contended that the ability to conduct surveillance for intelligence purposes is a purely executive function, and have tended to make broad assertions of authority while resisting efforts on the part of Congress or the courts to impose restrictions. Congress has asserted itself with respect to domestic surveillance, but has largely left matters involving overseas surveillance to executive self-regulation, subject to congressional oversight and willingness to provide funds.[4152]

Background: Government Surveillance

Investigations for the purpose of gathering foreign intelligence give rise to a tension between the Government's legitimate national security interests and the protection of privacy interests and First Amendment rights.

The Fourth Amendment

The Fourth Amendment to the Constitution provides:

> *The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.*

[4150] Id at 686 (citing Youngstown at 610-611(Frankfurter, J., concurring)).

[4151] Id. at 688.

[4152] For background on the evolution of U.S. intelligence operations, see CRS Report RL32500, Proposals for Intelligence Reorganization, 1949-2004, by Richard A. Best, Jr.

While the right against unreasonable searches and seizures was originally applied only to tangible things, Supreme Court jurisprudence eventually expanded the contours of the Fourth Amendment to cover intangible items such as conversations. As communications technology has advanced, the technology for intrusion into private conversations has kept pace, as have government efforts to exploit such technology for law enforcement and intelligence purposes. At the same time, the Court has expanded its interpretation of the scope of the Fourth Amendment with respect to such techniques, and Congress has legislated both to protect privacy and to enable the government to pursue its legitimate interests in enforcing the law and gathering foreign intelligence information. Yet the precise boundaries of what the Constitution allows, as well as what it requires, are not fully demarcated, and the relevant statutes are not entirely free from ambiguity.

The Origin of Wiretap Warrants

In *Katz v. United States*,[4153] the Court held for the first time that the protections of the Fourth Amendment extend to circumstances involving electronic surveillance of oral communications without physical intrusion.[4154] In response, Congress enacted Title III of the Omnibus Crime Control and Safe Streets Act of 1968 ("Title III")[4155] to provide for search warrants to authorize electronic surveillance for law enforcement purposes, but prohibiting such surveillance in other instances not authorized by law. The *Katz* Court noted that its holding did not extend to cases involving national security, and Congress did not then attempt to regulate national security surveillance. Title III, as originally enacted, contained an exception. It stated that

> *Nothing contained in this chapter or in section 605 of the Communications Act . . . shall limit the constitutional power of the President to take such measures as he deems necessary to protect the Nation against actual or potential attack or other hostile acts of a foreign power, to obtain foreign intelligence information deemed essential to the security of the United States, or to protect national security information against foreign intelligence activities. . . .*[4156]

[4153] Katz v. United States, 389 U.S. 347, 353 (1967), overruling Olmstead v. United States, 277 U.S. 438 (1928).

[4154] Id. at 359 n.23.

[4155] Pub. L. 90-351, 82 Stat. 211, codified as amended at 18 U.S.C. §§ 2510 et seq. For more background see CRS Report 98-326: Privacy: An Overview of Federal Statutes Governing Wiretapping and Electronic Eavesdropping, by Charles Doyle and Gina Stevens.

[4156] 82 Stat. 214, formerly codified at 18 U.S.C. § 2511(3). The Supreme Court interpreted this provision not as a conferral or recognition of executive authority, but rather, an indication that Congress had "left presidential powers where it found them." United States v. United States

Intelligence Surveillance

Several years later, the Supreme Court addressed electronic surveillance for domestic intelligence purposes. In *United States v. United States District Court*, 407 U.S. 297 (1972) (the *Keith* case), the United States sought a writ of mandamus to compel a district judge to vacate an order directing the United States to fully disclose electronically monitored conversations. The Sixth Circuit refused to grant the writ,[4157] and the Supreme Court granted certiorari and affirmed the lower court decision. The Supreme Court regarded *Katz* as "implicitly recogniz[ing] that the broad and unsuspected governmental incursions into conversational privacy which electronic surveillance entails necessitate the application of Fourth Amendment safeguards."[4158] Mr. Justice Powell, writing for the *Keith* Court, framed the matter before the Court as follows:

> *The issue before us is an important one for the people of our country and their Government. It involves the delicate question of the President's power, acting through the Attorney General, to authorize electronic surveillance in internal security matters without prior judicial approval. Successive Presidents for more than one-quarter of a century have authorized such surveillance in varying degrees, without guidance from the Congress or a definitive decision of this Court. This case brings the issue here for the first time. Its resolution is a matter of national concern, requiring sensitivity both to the Government's right to protect itself from unlawful subversion and attack and to the citizen's right to be secure in his privacy against unreasonable Government intrusion.*[4159]

The Court held that, in the case of intelligence gathering involving domestic security surveillance, prior judicial approval was required to satisfythe Fourth Amendment.[4160] Justice Powell emphasized that the case before it "require[d] no

---

District Court, 407 U.S. 297, 303 (1972). The Senate Judiciary Committee noted, however, that the "highly controversial disclaimer has often been cited as evidence of a congressional ratification of the president's inherent constitutional power to engage in electronic surveillance in order to obtain foreign intelligence information essential to the national security." S. REP. NO. 95-604(I), at 6-7 (1978).

[4157] 444 F. 2d 651.

[4158] United States v. United States District Court, 407 U.S. 297, 313-14 (1972).

[4159] 407 U.S. at 299.

[4160] Id. at 313-14, 317, 319-20. Thus, the Court stated, "These Fourth Amendment freedoms cannot properly be guaranteed if domestic security surveillances may be conducted solely within

judgment on the scope of the President's surveillance power with respect to the activities of foreign powers, within or without the country."[4161] The Court expressed no opinion as to "the issues which may be involved with respect to activities of foreign powers or their agents,"[4162] but invited Congress to establish statutory guidelines.[4163] Thus, at least insofar as domestic surveillance is

---

the discretion of the Executive Branch. . . . The Government argues the special circumstances applicable to domestic security surveillances necessitate a further exception to the warrant requirement. It is urged that the requirement of prior judicial review would obstruct the President in the discharge of his constitutional duty to protect domestic security. . . ." Id. at 317-18. The Government also argued that such surveillances were for intelligence gathering purposes; that the courts "as a practical matter would have neither the knowledge nor the techniques to determine whether there was probable cause to believe that surveillance was necessary to protect national security;" and that disclosure to a magistrate and court personnel of information involved in the domestic security surveillances "would create serious potential dangers to the national security and to the lives of informants and agents" due to the increased risk of leaks. Id. at 318-19. The Court found that "these contentions on behalf of a complete exemption from the warrant requirement, when urged on behalf of the President and the national security in its domestic implications, merit the most careful consideration," but concluded that a case had not been made for a departure from Fourth Amendment standards. Id. at 319-20. Justice Powell also observed that,

National security cases . . . often reflect a convergence of First and Fourth Amendment values not present in cases of "ordinary" crime. Though the investigative duty of the executive may be stronger in such cases, so also is there greater jeopardy to constitutionally protected speech. "Historically the struggle for freedom of speech and press in England was bound up with the issue of the scope of the search and seizure power," Marcus v. Search Warrant, 367 U.S. 717, 724 (1961). . . . Fourth Amendment protections become the more necessary when the targets of official surveillance may be those suspected of unorthodoxy in their political beliefs. The danger to political dissent is acute where the Government attempts to act under so vague a concept as the power to protect "domestic security." . . . Id. at 313-14.

[4161] Id. at 308.

[4162] Id. at 321-22. The Keith Court also stated, "Further, the instant case requires no judgment on the scope of the President's surveillance power with respect to the activities of foreign powers within or without this country." Id. at 308.

[4163] We recognize that domestic surveillance may involve different policy and practical considerations from the surveillance of "ordinary crime." The gathering of security intelligence is often long range and involves the interrelation of various sources and types of information. The exact targets of such surveillance may be more difficult to identify than in surveillance operations against many types of crime specified in Title III [of the Omnibus Crime Control and Safe Streets Act, 18 U.S.C. § 2510 et seq.]. Often, too, the emphasis of domestic intelligence gathering is on the prevention of unlawful activity or the enhancement of the Government's preparedness for some possible future crisis or emergency. Thus, the focus of domestic surveillance may be less precise than that directed against more conventional types of crimes. Given these potential distinctions between Title III criminal surveillances and those involving domestic security, Congress may wish to consider protective standards for the latter which differ from those already prescribed for specified crimes in Title III. Different standards may be compatible with the Fourth Amendment if they are reasonable both in relation to the legitimate need of Government for intelligence information and the protected rights of our citizens. For the warrant application may vary according to the governmental interest to be enforced and the nature of citizen rights deserving

concerned, the Court has recognized that Congress has a role in establishing rules in matters that touch on national security.

Court of appeals decisions following *Keith* met more squarely the issue of warrantless electronic surveillance in the context of foreign intelligence gathering. In *United States v. Brown*,[4164] while affirming Brown's conviction for a firearm violation, the Fifth Circuit upheld the legality of a warrantless wiretap authorized by the Attorney General for foreign intelligence purposes where the conversation of *Brown*, an American citizen, was incidentally overheard.[4165] The Third Circuit, in *United States v. Butenko*,[4166] in affirming the district court's denial of an espionage defendant's application for disclosure of wiretap records, concluded that warrantless electronic surveillance was lawful, violating neither Section 605 of the Communications Act[4167] nor the Fourth Amendment, if its primary purpose was to gather foreign intelligence information.[4168]

The Ninth Circuit, in *United States v. Buck*,[4169] affirmed the conviction of a defendant found guilty of furnishing false information in connection with the

---

protection. . . . It may be that Congress, for example, would judge that the application and affidavit showing probable cause need not follow the exact requirements of § 2518 but should allege other circumstances more appropriate to domestic security cases; that the request for prior court authorization could, in sensitive cases, be made to any member of a specially designated court . . .; and that the time and reporting requirements need not be so strict as those in § 2518. The above paragraph does not, of course, attempt to guide the congressional judgment but rather to delineate the present scope of our own opinion. We do not attempt to detail the precise standards for domestic security warrants any more than our decision in Katz sought to set the refined requirements for the specified criminal surveillances which now constitute Title III. We do hold, however, that prior judicial approval is required for the type of domestic surveillance involved in this case and that such approval may be made in accordance with such reasonable standards as the Congress may prescribe.

407 U.S. at 323-24 (emphasis added). Some of the structural elements mentioned here appear to foreshadow the structure Congress chose to establish for electronic surveillance to gather foreign intelligence information in FISA.

acquisition of ammunition and making a false statement with respect to information required to be kept by a licensed firearm dealer. In responding to Buck's contention on appeal that it was reversible error for the district court to fail to articulate the test it applied in ruling, after an in camera inspection, that the contents of one wiretap did not have to be disclosed to the appellant because it was expressly authorized by the Attorney General and lawful for purposes of gathering foreign intelligence, the Ninth Circuit stated that "[f]oreign security wiretaps" were "a recognized exception to the general warrant requirement and disclosure of wiretaps not involving illegal surveillance was within the trial court's discretion." The court found a determination that the surveillance was reasonable was implicit in the lower court's conclusion.[4170]

In its plurality decision in *Zweibon v. Mitchell*,[4171] a case involving a suit for damages brought by 16 members of the Jewish Defense League against Attorney General John Mitchell and nine FBI special agents and employees for electronic surveillance of their telephone calls without a warrant, the District of Columbia Circuit took a somewhat different view. The surveillance was authorized by the President, acting through the Attorney General, as an exercise of his authority relating to the nation's foreign affairs and was asserted to be essential to protect the nation and its citizens against hostile acts of a foreign power and to obtain foreign intelligence information deemed essential to the security of the United States. The D.C. Circuit, in a plurality decision, held that a warrant was constitutionally required in such a case involving a wiretap of a domestic organization that was not an agent of a foreign power or working in collaboration with a foreign power posing a national security threat.[4172] The court further held that the appellants were entitled to the liquidated damages recovery provided in Title III unless appellees on remand establish an affirmative defense of good faith.[4173] While its holding was limited to the facts before it, the plurality also noted that "an analysis of the policies implicated by foreign security surveillance indicates that, absent exigent circumstances, all warrantless electronic surveillance is unreasonable and therefore unconstitutional."[4174]

[4170] Id. at 875-76.

[4171] 516 F.2d 594 (D.C. Cir. 1975), cert. denied, 425 U.S. 944 (1976).

[4172] 516 F.2d at 650-55.

[4173] Id. at 659-73.

[4174] Id. at 613-14. In the context of the its broad dictum, the court did not clarify what "exigent circumstances" might entail. The court explained its understanding of the distinction between "domestic" and "foreign" as follows:

Throughout this opinion, "internal security" and "domestic security" will refer to threats to the structure or existence of the Government which originate directly from domestic organizations which are neither agents of nor acting in collaboration with foreign powers, and "internal

Surveillance for Foreign Intelligence Purposes

The Foreign Intelligence Surveillance Act of 1978 (FISA)[4175] sought to strike a balance between national security interests and civil liberties. The legislation was a response both to the Senate Select Committee to Study Government Operations with Respect to Intelligence Activities (hereinafter the Church Committee) revelations of past abuses of electronic surveillance for national security purposes and to the somewhat uncertain state of the law on the issue. The Church Committee found that every President since Franklin D. Roosevelt had both asserted the authority to authorize warrantless electronic surveillance and had utilized that authority.[4176] Concerns over abuses of such authority provided impetus to the passage of the legislation. As the Senate Judiciary Committee noted in its statement of the need for legislation:

The need for such statutory safeguards has become apparent in recent years. This legislation is in large measure a response to the revelations that warrantless electronic surveillance in the name of national security has been seriously abused. . . . While the number of illegal or improper national security taps and bugs conducted during the Nixon administration may have exceeded those in previous administrations, the surveillances were regrettably by no means atypical. In summarizing its conclusion that surveillance was "often conducted by illegal or improper means," the Church committee wrote:

---

security" or "domestic security" surveillance will refer to surveillance which is predicated on such threats. "Foreign security" will refer to threats to the structure or existence of the Government which emanate either directly or indirectly from a foreign power, and a "foreign security" surveillance will refer to surveillance which is predicated on such threats. A surveillance is a foreign security surveillance regardless of the stimulus that provoked the foreign power; thus the surveillance in this case will be treated as a foreign security surveillance even though the Soviet threats were provoked by actions of a hostile domestic organization. We believe such treatment is required by the limited holding of the Supreme Court in Keith. "National security" will generally be used interchangeably with "foreign security," except where the context makes it clear that it refers to both "foreign security" and "internal security."

Id. at 614 n.42 (internal citations omitted).

[4175] Pub. L. 95-511, Title I, 92 Stat. 1796 (Oct. 25, 1978), codified as amended at 50 U.S.C. §§ 1801 et seq.

[4176] See S.REP.NO. 95-604(I), at 7, 1978U.S.C.C.A.N. 3904, 3908. The Senate Judiciary Committee report's "Background" section traces in some detail the history of Executive Branch wiretap practice from the 1930's (after the Supreme Court in Olmstead held that the Fourth Amendment did not apply to "intangible" conversations and therefore no warrant was necessary) to the time of the consideration of FISA. See id. at 9-15, 1978 U.S.C.C.A.N. at 3911-16. Olmstead was overruled by Katz, see supra note 30 and accompanying text. The report of the House Permanent Select Committee on Intelligence, in its "Background" section, also provides a detailed recitation on the subject in H. REP. NO. 95-1283 at 15-21.

> *Since the 1930's, intelligence agencies have frequently wiretapped and bugged American citizens without the benefit of judicial warrant . . . . . past subjects of these surveillances have included a United States Congressman, Congressional staff member, journalists and newsmen, and numerous individuals and groups who engaged in no criminal activity and who posed no genuine threat to the national security, such as two White House domestic affairs advisers and an anti-Vietnam War protest group. (Vol. 2, p.12)*
>
> * * * *
>
> *The application of vague and elastic standards for wiretapping and bugging has resulted in electronic surveillances which, by any objective measure, were improper and seriously infringed the Fourth Amendment rights of both the targets and those with whom the targets communicated. The inherently intrusive nature of electronic surveillance, moreover, has enabled the Government to generate vast amounts of information — unrelated to any legitimate government interest — about the personal and political lives of American citizens. The collection of this type of information has, in turn, raised the danger of its use for partisan political and other improper ends by senior administration officials. (Vol. 3, p. 32.)*[4177]

The Senate Judiciary Committee also focused on the potentially chilling effect of warrantless electronic surveillance upon the exercise of First Amendment rights:

> *Also formidable — although incalculable — is the "chilling effect" which warrantless electronic surveillance may have on the constitutional rights of those who were not targets of the surveillance, but who perceived themselves, whether reasonably or unreasonably, as potential targets. Our Bill of Rights is concerned not only with direct infringements on constitutional rights, but also with government activities which effectively inhibit the exercise of these rights. The exercise of political freedom depends in large measure on citizens' understanding that they will be able to be publicly active and dissent from official policy, within lawful limits, without having to sacrifice the expectation of privacy that they rightfully hold. Arbitrary or uncontrolled use of warrantless electronic surveillance can violate that understanding and impair*

[4177] Id. at 7-8, 1978 U.S.C.C.A.N. at 3909.

> *that public confidence so necessary to an uninhibited political life.*[4178]

The Senate Judiciary Committee stated that the bill was "designed . . . to curb the practice by which the Executive Branch may conduct warrantless electronic surveillance on its own unilateral determination that national security justifies it," while permitting the legitimate use of electronic surveillance to obtain foreign intelligence information. Echoing the Church Committee, the Senate Judiciary Committee recognized that electronic surveillance has enabled intelligence agencies to obtain valuable and vital information relevant to their legitimate intelligence missions which would have been difficult to acquire by other means.[4179]

Electronic Surveillance: The Current Statutory Framework

The interception of wire, oral, or electronic communications[4180] is regulated by Title III of the Omnibus Crime Control and Safe Streets Act of 1968 ("Title III"), as amended.[4181] Government surveillance for criminal law enforcement is permitted under certain circumstances and in accordance with the procedures set forth in Title III. Government surveillance for the gathering of foreign intelligence information is covered by FISA. These statutes are relevant to the analysis of the legality of the reported NSA surveillance to the extent that their provisions are meant to cover such surveillance, prohibit it, or explicitly exempt it from requirements therein. If Congress meant for FISA to occupy the entire field of electronic surveillance of the type that is being conducted pursuant to the President's executive order, then the operation may fall under the third tier of Justice Jackson's formula, in which the President's "power is at its lowest ebb" and a court could sustain it only by "disabling the Congress from acting upon the subject."[4182] In other words, if FISA, together with Title III, were found to occupy the field, then for a court to sustain the President's authorization of electronic surveillance to acquire foreign intelligence information outside the FISA framework, FISA would have to be considered an unconstitutional encroachment

[4178] Id. at 8, 1978 U.S.C.C.A.N. at 3909-10.

[4179] Id. at 8-9, 1978 U.S.C.C.A.N. at 3910.

[4180] For definitions of "wire communications," "oral communications," and "electronic communications," see 18 U.S.C. § 2510(1), (2), and (12). The latter includes, with certain exceptions, the transfer of any signs, signals, writing, images, sounds, data, or intelligence of any nature transmitted in whole or in part by wire, radio, electromagnetic, photoelectronic or photooptical system affecting interstate or foreign commerce.

[4181] Pub. L. 90-351, 82 Stat. 211, codified as amended at 18 U.S.C. §§ 2510 et seq.

[4182] Youngstown Sheet and Tube Co. v. Sawyer, 343 U.S. 579, 637-38 (1952) (Jackson, J., concurring). See supra notes 10 et seq., and accompanying text.

on inherent presidential authority. If, on the other hand, FISA leaves room for the NSA surveillance outside its strictures, then the claimed power might fall into the first or second categories, as either condoned by Congress (expressly or implicitly), or simply left untouched.

Title III

Title III provides the means for the Attorney General and designated assistants to seek a court order authorizing a wiretap or similar electronic surveillance to investigate certain crimes (18 U.S.C. § 2516). Most other interceptions of electronic communications are prohibited unless the activity falls under an explicit exception. Under 18 U.S.C. § 2511, any person who "intentionally intercepts . . . any wire, oral, or electronic communication" or "intentionally uses . . . any electronic, mechanical, or other device [that transmits a signal over wire or radio frequencies, or is connected with interstate or foreign commerce] to intercept any oral communication," without the consent of at least one party to the conversation, is subject to punishment or liability for civil damages. The statute also prohibits the intentional disclosure of the contents of an intercepted communication. It prohibits attempts to engage in the prohibited conduct as well as solicitation of other persons to carry out such activity.

Certain exceptions in Title III apply to federal employees and other persons "acting under color of law,"[4183] including exceptions for foreign intelligence acquisition. Section 2511 excepts officers, employees, and agents of the United States who, in the normal course of their official duty, conduct electronic surveillance pursuant to FISA (18 U.S.C. § 2511(2)(e)). Furthermore, Congress emphasized in § 1511(2)(f) that

> *Nothing contained in [chapters 119 (Title III), 121 (stored wire or electronic surveillance or access to transactional records) or 206 (pen registers and trap and trace devices) of title 18, U.S. Code], or section 705 of the Communications Act of 1934,[4184] shall be deemed to affect the acquisition by the United States Government of foreign intelligence information from international or foreign communications, or foreign intelligence activities conducted in*

[4183] Title III also contains some exceptions for private parties, including communications service providers with respect to activity incident to the provision of such service (§ 2511(2)(a)), and for activity related to equipment maintenance and repair, prevention of fraud or unauthorized access, and protection from unlawful interference (§ 2511(2)(g)-(h)). Listening to broadcasts and electronic communications that are available to the general public and not encrypted, such as police band radio, is not prohibited (§ 2511(2)(g)).

[4184] 47 U.S.C. § 605 ("[N]o person receiving, assisting in receiving, transmitting, or assisting in transmitting, any interstate or foreign communication by wire or radio shall divulge or publish the existence, contents, substance, purport, effect, or meaning thereof, except through authorized channels of transmission or reception. . . .").

> *accordance with otherwise applicable Federal law involving a foreign electronic communications system, utilizing a means other than electronic surveillance as defined in section 101 of the Foreign Intelligence Surveillance Act of 1978, and procedures in this chapter [119] or chapter 121 and the Foreign Intelligence Surveillance Act of 1978 shall be the exclusive means by which electronic surveillance, as defined in section 101 of such Act, and the interception of domestic wire, oral, and electronic communications may be conducted.*[4185]

Title III does not define "international or foreign communications" or "domestic." It is unclear under the language of this section whether communications that originate outside the United States but are received within U.S. territory, or vice versa, were intended to be treated as foreign, international or domestic. Recourse to the plain meaning of the words provides some illumination. Webster's New Collegiate Dictionary (1977), in pertinent part, defines "international" to mean "affecting or involving two or more nations" or "of or relating to one whose activities extend across national boundaries." Therefore, "international communications" might be viewed as referring to communications which extend across national boundaries or which involve two or more nations. "Foreign" is defined therein, in pertinent part, as "situated outside a place or country; esp situated outside one's own country." Thus, "foreign communications" might be interpreted as referring to communications taking place wholly outside the United States. "Domestic" is defined, in pertinent part, in Webster's to mean "of, relating to, or carried on within one and esp. one's own country." Therefore, "domestic communications" may be defined as communications carried on within the United States.

[4185] 18 U.S.C. § 2511(2)(f), added by the Foreign Intelligence Surveillance Act of 1978 (FISA), § 201(b), Pub. L. 95-511, 92 Stat. 1783. Prior to this amendment, the section read:

> Nothing contained in this chapter, or section 605 [now 705] of the Communications Act of 1934, shall be deemed to affect the acquisition by the United States Government of foreign intelligence information from international or foreign communications by means other than electronic surveillance as defined in section 101 of the Foreign Intelligence Surveillance Act of 1978, and procedures in this chapter and the Foreign Intelligence Surveillance Act of 1978 shall be the exclusive means by which electronic surveillance, as defined in section 101 of such Act, and the interception of wire and oral communications may be conducted.

The Electronic Communications Privacy Act, Pub. L. 99-508, § 101(c)(1)(A), substituted "wire, oral, or electronic communication" for "wire or oral communications." Pub. L. 99-508, § 101(b)(3), added the references to "chapter 121," which deals with stored wire and electronic communications and access to transactional records. That subsection also substituted "foreign communications, or foreign intelligence activities conducted in accordance with otherwise applicable Federal law involving a foreign electronic communications system, utilizing a means" for "foreign communications by a means."

The phrase "utilizing a means other than electronic surveillance [under FISA]" could be interpreted as modifying only the clause immediately before it or as modifying the previous clause as well. If it is read not to pertain to the clause regarding acquisition of intelligence from foreign or international communications, then Title III and the other named statutes would not affect the interception of foreign and international communications, whether they are acquired through electronic surveillance within the meaning of FISA or through other means. The legislative history does not support such a reading, however, for two reasons. First, the second clause, relating to intelligence activities involving foreign electronic communications systems,[4186] was inserted into the law in 1986 between the first clause and the modifying phrase.[4187] It is thus clear that the modifier initially applied to the first clause, and nothing in the legislative history suggests that Congress intended to effect such a radical change as exempting any electronic surveillance involving communications covered by FISA from the procedures required therein. Second, this conclusion is bolstered by the last sentence of the subsection, which specifies that the methods authorized in FISA and the other statutes are to be the exclusive methods by which the federal government is authorized to intercept electronic communications. Whether given communications are covered by the exclusivity language would require an examination of the definitions of covered communications in Title III and in FISA.[4188]

As originally enacted, § 2511 contained what appeared to be a much broader exception for national security intercepts. It excluded from the coverage of Title III surveillance carried out pursuant to the "constitutional power of the President to take such measures as he deems necessary to protect the Nation against actual

---

[4186] The statute does not explain whether "involving a foreign electronic communications system" encompasses only communications that are transmitted and received without ever traversing U.S. wires, cables, or broadcasting equipment, or whether a communication carried primarily by a U.S. carrier that is at any point routed through a non-U.S. communication system "involves" the foreign system. Either way, the interception would have to be carried out pursuant to "otherwise applicable Federal law."

According to the Senate Judiciary Committee, the language was meant

to clarify that nothing in chapter 119 as amended or in proposed chapter 121 affects existing legal authority for U.S. Government foreign intelligence activities involving foreign electronic communications systems. The provision neither enhances nor diminishes existing authority for such activities; it simply preserves the status quo. It does not provide authority for the conduct of any intelligence activity.

S. REP. NO. 99-541, at 18 (1986). "Proposed chapter 121" refers to FISA.

[4187] Electronic Communications Privacy Act of 1986 § 101(b)(3), Pub. L. 99-508, 100 Stat. 1848 (1986).

[4188] See infra section defining "electronic surveillance."

or potential attack . . ., [and] to obtain foreign intelligence information deemed essential to the security of the United States. . . .[4189] Congress repealed this language when it enacted FISA, and inserted § 2511(2)(f), supra, to make the requirements of Title III or FISA the exclusive means to authorize electronic surveillance within the United States, and to "put[] to rest the notion that Congress recognizes an inherent Presidential power to conduct such surveillances in the United States outside of the procedures contained in chapters 119 and 120 [of title 18, U.S. Code]."[4190] Subsection (2)(f) was intended to clarify that the prohibition does not cover NSA operations (as they were then being conducted) and other surveillance overseas, including that which targets U.S. persons.[4191]

FISA

The Foreign Intelligence Surveillance Act (FISA) provides a framework for the use of "electronic surveillance," as defined in the Act,[4192] and other investigative

---

[4189] 82 Stat. 214, formerly codified at 18 U.S.C. § 2511(3). The Supreme Court interpreted this provision not as a conferral or recognition of executive authority, but rather, as an indication that Congress had "left presidential powers where it found them." United States v. United States District Court, 407 U.S. 297, 303 (1972). The Senate Judiciary Committee noted, however, that the "highly controversial disclaimer has often been cited as evidence of a congressional ratification of the president's inherent constitutional power to engage in electronic surveillance in order to obtain foreign intelligence information essential to the national security." S. REP. NO. 95-604(I), at 6-7 (1978).

[4190] S.REP.NO. 95-604(I), at 64 (1978). Further, the Committee stated, "[a]s to methods of acquisition which come within the definition of 'electronic surveillance' in this bill, the Congress has declared that this statute, not any claimed presidential power, controls." Id. (emphasis added). The reference to chapter 120 of Title 18, U.S.C., in the report language quoted in the text above is to the foreign intelligence provisions in S. 1566, which became FISA. The Senate version of the measure would have included the foreign intelligence surveillance provisions as a new chapter 120 of Title 18, U.S. Code.

[4191] The Senate Judiciary Committee explained that the provision was designed "to make clear the legislation does not deal with international signals intelligence activities as currently engaged in by the National Security Agency and electronic surveillance conducted outside the United States." S. REP. NO. 95-604(I), at 64 (1978). The Senate Select Committee on Intelligence echoed this understanding. S. REP. NO. 95-701, at 71 (1978). While legislation then pending that would have regulated these types of operations was not enacted (S. 2525, 95th Cong.), Congress established oversight over such intelligence activities through a review of relevant executive branch procedures and regulations by the House and Senate Intelligence Committees. See S. REP. NO. 99-541, at 18 (1986) ("As in the past, the Senate expects that any relevant changes in these procedures and regulations will be provided to the Senate and House Intelligence Committees prior to their taking effect."). The President is also required to report "illegal intelligence activity" to the intelligence committees, 50 U.S.C. § 413(b). "Illegal intelligence activity" is undefined, but legislative history suggests it includes activities that violate the Constitution, statutes, or Executive orders. See S. REP. NO. 102-85, at 31 (1991) (explaining that the definition of "illegal intelligence activity" was not changed from the previous version of § 413).

[4192] See discussion of the scope of "electronic surveillance" under FISA in the next section of this memorandum, infra.

methods[4193] to acquire foreign intelligence information.[4194] In pertinent part, FISA provides a means by which the government can obtain approval to conduct electronic surveillance of a foreign power or its agents without first meeting the more stringent standard in Title III that applies to criminal investigations. While Title III requires a showing of probable cause that a proposed target has committed, is committing, or is about to commit a crime, FISA requires a showing of probable cause to believe that the target is a foreign power or an agent of a foreign power.

In the aftermath of the September 11, 2001, terrorist attacks on the United States, Congress amended FISA so that it no longer requires a certification that the (primary) purpose of a search or surveillance is to gather foreign intelligence information.[4195] As amended by the USA PATRIOT Act,[4196] FISA requires that a

---

[4193] FISA also authorizes the use for foreign intelligence purposes of physical searches, 50 U.S.C. § 1821 et seq.; pen registers and trap and trace devices, 50 U.S.C. § 1842 et seq.; and orders for production of business records or any tangible thing "for an investigation to obtain foreign intelligence information not concerning a United States person or to protect against international terrorism or clandestine intelligence activities, provided that such investigation of a United States person is not conducted solely upon the basis of activities protected by the first amendment to the Constitution."

[4194] "Foreign intelligence information" is defined in FISA, 50 U.S.C. § 1801(e), to mean:

(1) information that relates to, and if concerning a United States person is necessary to, the ability of the United States to protect against —

(A) actual or potential attack or other grave hostile acts of a foreign power or an agent of a foreign power;

(B) sabotage or international terrorism by a foreign power or an agent of a foreign power; or

(C) clandestine intelligence activities by an intelligence service or network of a foreign power or by an agent of a foreign power; or

(2) information with respect to a foreign power or foreign territory that relates to, and if concerning a United States person is necessary to —

(A) the national defense or the security of the United States; or

(B) the conduct of the foreign affairs of the United States.

[4195] See CRS Report RL30465, The Foreign Intelligence Surveillance Act: An Overview of the Statutory Framework for Electronic Surveillance. "Foreign intelligence information" is defined in 50 U.S.C. § 1801(e) to mean:

(1) information that relates to, and if concerning a United States person is necessary to, the ability of the United States to protect against —

"significant purpose" of the investigation be the collection of foreign intelligence information, which has been interpreted to expand the types of investigations that may be permitted to include those in which the primary purpose may be to investigate criminal activity, as long as there is at least a measurable purpose related to foreign intelligence gathering.[4197] Congress later enacted a measure that removed, for a time,[4198] the requirement for the government to show that the intended target, if a non-U.S. person, is associated with a foreign power.[4199]

Electronic Surveillance Under FISA

Whether FISA applies to the electronic surveillances at issue turns in large part on the definition of "electronic surveillance" under FISA. To constitute "electronic surveillance" under FISA, the surveillance must fall within one of four categories set forth in 50 U.S.C. § 1801(f), FISA. These include:

> *(1) the acquisition by an electronic, mechanical, or other surveillance device of the contents of any wire or radio communication sent by or intended to be received by a particular,*

(A) actual or potential attack or other grave hostile acts of a foreign power or an agent of a foreign power;

(B) sabotage or international terrorism by a foreign power or an agent of a foreign power; or

(C) clandestine intelligence activities by an intelligence service or network of a foreign power or by an agent of a foreign power; or

(2) information with respect to a foreign power or foreign territory that relates to, and if concerning a United States person is necessary to —

(A) the national defense or the security of the United States; or

(B) the conduct of the foreign affairs of the United States.

[4196] P.L. 107-56 § 218.

[4197] See In re Sealed Case, 310 F.3d 717, 735 (U.S. Foreign Intell. Surveillance Ct. Rev. 2002) ("The addition of the word 'significant' to section 1804(a)(7)(B) imposed a requirement that the government have a measurable foreign intelligence purpose, other than just criminal prosecution of even foreign intelligence crimes.").

[4198] This amendment, added by section 6001 of the Intelligence Reform and Terrorism Prevention Act, Pub. L. 108-458, 118 Stat. 3742 (2004), is subject to the sunset provision of the USA PATRIOT Act. See CRS Report RL32186, USA PATRIOT Act Sunset: Provisions That Expire on December 31, 2005, by Charles Doyle.

[4199] See CRS Report RS22011, Intelligence Reform and Terrorism Prevention Act of 2004: 'Lone Wolf' Amendment to the Foreign Intelligence Surveillance Act, by Elizabeth B. Bazan.

known United States person[4200] who is in the United States, if the contents are acquired by intentionally targeting that United States person, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes;

(2) the acquisition by an electronic, mechanical, or other surveillance device of the contents of any wire communication to or from a person in the United States, without the consent of any party thereto, if such acquisition occurs in the United States, but does not include the acquisition of those communications of computer trespassers that would be permissible under section 2511(2)(i) of Title 18;

(3) the intentional acquisition by an electronic, mechanical, or other surveillance device of the contents of any radio communication, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes, and if both the sender and all intended recipients are located within the United States; or

(4) the installation or use of an electronic, mechanical, or other surveillance device in the United States for monitoring to acquire information, other than from a wire or radio communication, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes.[4201]

[4200] "United States person" is defined in 50 U.S.C. § 1801(i) to mean:

(i) "United States person" means a citizen of the United States, an alien lawfully admitted for permanent residence (as defined in section 1101(a)(20) of Title 8), an unincorporated association a substantial number of members of which are citizens of the United States or aliens lawfully admitted for permanent residence, or a corporation which is incorporated in the United States, but does not include a corporation or an association which is a foreign power, as defined in subsection (a)(1), (2), or (3) of this section.

Under the definition of "foreign power" in 50 U.S.C. § 1801(a), the foreign powers defined in subsections 1801(a)(1), (2), or (3) are either foreign governments or components thereof, factions of a foreign nation or foreign nations which are not substantially composed of U.S. persons, or entities openly acknowledged by a foreign government or governments to be directed and controlled by that government or those governments. These three subsections of the "foreign power" definition do not include international terrorist organizations. See infra note 87 for the full definition of "foreign power" under 50 U.S.C. § 1801(a).

[4201] With respect to the ability of FISA to keep pace with the rapidly changing level of communications technology, it is possible that 50 U.S.C. § 1801(f)(3) and (4) may provide some or all of the needed statutory flexibility. See, e.g., S. REP. NO. 95-604(I) at 34-35, 1978 U.S.C.C.A.N. at 3936, discussing the congressional intent that subsection 1801(f)(4) was intended to be "broadly inclusive, because the effect of including a particular means of surveillance is not to prohibit it but to subject it to judicial oversight." Thus, it was intended to include "the installation of beepers and 'transponders,' if a warrant would be required in the ordinary criminal context. . . .

The legislative history of the Act suggests that some electronic surveillance by the National Security Agency involving communications taking place entirely overseas, even involving U.S. persons, was not intended to be covered.[4202] At the same time, FISA was clearly meant to cover some communications even if one party to the communication is overseas. The interception of wire or radio communications sent by or intended to be received by a targeted United States person[4203] in the United States is covered under 50 U.S.C. § 1801(f)(1). The

---

It could also include miniaturized television cameras and other sophisticated devices not aimed merely at communications." Id. See United States v. Andonian, 735 F. Supp. 1469, 1473 (C.D. Cal. 1990), aff'd and remanded on other grounds, 29 F.3d 634 (9th Cir. 1994), cert. denied, 513 U.S. 1128 (1995).

[4202] For example, in discussing the definition of "electronic surveillance," in H.R. 7308, the House Permanent Select Committee on Intelligence stated,

Therefore, this bill does not afford protections to U.S. persons who are abroad, nor does it regulate the acquisition of the contents of international communications of U.S. persons who are in the United States, where the contents are acquired unintentionally. The committee does not believe that this bill is the appropriate vehicle for addressing this area. The standards and procedures for overseas surveillance may have to be different than those provided in this bill for electronic surveillance within the United States or targeted against U.S. persons who are in the United States.

The fact that this bill does not bring the overseas surveillance and activities of the U.S. intelligence community within its purview, however, should not be viewed as congressional authorization of such activities as they affect the privacy interests of Americans. The committee merely recognizes at this point that such overseas surveillance activities are not covered by this bill. In any case, the requirements of the fourth amendment would, of course, continue to apply to this type of communications intelligence activity.

H. REP.NO.95-1283(I), at 50-51 (June 5, 1978). The House passedH.R.7308, amended (Roll No. 737), 124 Cong. Rec. 28427 (Sept. 7, 1978). Then the House passed S. 1566, having stricken all but the enacting clause of S. 1566 and having inserted in lieu thereof the text of S. 7308. H.R. 7308 was laid on the table, 124 Cong. Rec. 28427-28432 (Sept. 7, 1978).

[4203] The House Permanent Select Committee on Intelligence described the import of "intentionally

targeting" in the context of subsection (1) of the definition of "electronic surveillance" as follows:

Paragraph (1) protects U.S. persons who are located in the United States from being targeted in their domestic or international communications without a court order no matter where the surveillance is being carried out. The paragraph covers the acquisition of the contents of a wire or radio communication of a U.S. person by intentionally targeting that particular, known U.S. person, provided that the person is located within the United States. Thus, for example, any watchlisting activities of the National Security Agency conducted in the future, directed against the international communications of particular U.S. persons who are in the United States, would require a court order under this provision.

Only acquisition of the contents of those wire or radio communications made with a reasonable expectation of privacy where a warrant would be required for law enforcement purposes is

---

interception of international wire[4204] communications to or from any person (whether or not a U.S. person) within the United States without the consent of at least one party is covered under § 1801(f)(2), where the communications are acquired within the United States. The interception of a radio communication is covered under § 1801(f)(3) if all parties to it are located within the United States, unless there is no reasonable expectation of privacy and a warrant would not be required under Title III, even if the interception is acquired by using a device located outside of the United States. The interception of wire, oral, or electronic communications that is not included within the definition of "electronic surveillance" for the purposes of FISA may nevertheless be prohibited by or subject to a warrant requirement pursuant to 18 U.S.C. § 2511 (Title III).

In discussing the repeal in the conforming amendments to FISA of the "national security disclaimer" in former 18 U.S.C. § 2511(3), and the addition of 18 U.S.C. § 2511(f) in the conforming amendments in S. 1566, the Senate Judiciary Committee observed:

> *Specifically, this provision is designed to make clear that the legislation does not deal with international signals intelligence activities as currently engaged in by the National Security Agency[4205] and electronic surveillance conducted outside the*

---

covered by paragraph (1). It is the committee's intent that acquisition of the contents of a wire communication, without the consent of any party thereto, would clearly be included.

The term "intentionally targeting" a particular, known U.S. person who is in the United States includes the deliberate use of a surveillance device to monitor a specific channel of communication which would not be surveilled but for the purpose of acquiring information about a party who is a particular, named U.S. person located within the United States. It also includes the deliberate use of surveillance techniques which can monitor numerous channels of communication among numerous parties, where the techniques are designed to select out from among those communications the communications to which a particular U.S. person located in the United States is a party, and where the communications are selected either by name or by other information which would identify the particular person and would select out his communications.

This paragraph does not apply to the acquisition of the contents of international or foreign communications, where the contents are not acquired by intentionally targeting a particular known U.S. person who is in the United States. . . .

H. REP. NO. 95-1283(I), at 50-51 (June 8, 1978) (emphasis in original).

[4204] "Wire communication" means "any communication while it is being carried by a wire, cable, or other like connection furnished or operated by any person engaged as a common carrier in providing or operating such facilities for the transmission of interstate or foreign communications." 50 U.S.C. § 1801(l).

[4205] The legislative history of FISA reflects serious concerns about the past NSA abuses reflected in the Church Committee reports. See, e.g., SUPPLEMENTARY DETAILED STAFF REPORTS ON INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS,BOOK III,FINAL REPORT

> *United States. As to methods of acquisition which come within the definition of 'electronic surveillance' in this bill, the Congress has declared that this statute, not any claimed presidential power, controls.*[4206]

At the same time, the Committee signaled its intent to reserve its option to regulate U.S. electronic surveillance operations that did not fall within the ambit of FISA:

OF THE SELECT COMMITTEE TO STUDY GOVERNMENTAL OPERATIONS WITH RESPECT TO INTELLIGENCE ACTIVITIES, UNITED STATES SENATE, S. REP.NO. 94-755, 94 Cong., 2d Sess., at 733-86 (1976), cited in S. REP. NO. 95-604(I) at 34 n. 39, 1978 U.S.C.C.A.N. at 3936. Some actions had been taken to address some of these concerns by the President and the Attorney General near the time that FISA was being considered. The decision not to cover NSA activities "as they were then being conducted" in FISA may, in part, have been an acknowledgment of constraints that had been imposed upon some of these practices in E.O. 11905 (Feb. 18, 1976), cited in S. REP. NO. 95-604(I) at 34 n. 40, 1978 U.S.C.C.A.N. at 3936; and in the "substantial safeguards [then] currently embodied in classified Attorney General procedures, " H. REP. NO. 95-1283 at 21. In addition, S. 2525 (95th Cong.) was then pending, which, had it passed, would have addressed those areas excluded from FISA in separate legislation. The House Permanent Select Committee also noted the value of congressional oversight in adding an additional safeguard. Nevertheless, the Committee deemed these protections insufficient without the statutory structure in FISA:

In the past several years, abuses of domestic national security surveillances have been disclosed. This evidence alone should demonstrate the inappropriateness of relying solely on executive branch discretion to safeguard civil liberties. This committee is well aware of the substantial safeguards respecting foreign intelligence electronic surveillance currently embodied in classified Attorney General procedures, but this committee is also aware that over the past thirty years there have been significant changes in internal executive branch procedures, ant there is ample precedent for later administrations or even the same administration loosening previous standards. Even the creation of intelligence oversight committee should not be considered a sufficient safeguard, for in overseeing classified procedures the committees respect their classification, and the result is that the standards for and limitations on foreign intelligence surveillances may be hidden from public view. In such a situation, the rest of the Congress and the American people need to be assured that the oversight is having its intended consequences– the safeguarding of civil liberties consistent with the needs of national security. While oversight can be, and the committee intends it to be, an important adjunct to control of intelligence activities, it cannot substitute for public laws, publicly debated and adopted, which specify under what circumstances and under what restrictions electronic surveillance for foreign intelligence purposes can be conducted.

Finally, the decision as to the standards governing when and how foreign intelligence electronic surveillance should be conducted is and should be a political decision, in the best sense of the term, because it involves the weighing of important public policy concerns–civil liberties and national security. Such a political decision is one properly made by the political branches of Government together, not adopted by one branch on its own and with no regard for the other. Under our Constitution legislation is the embodiment of just such political decisions.

H. REP. NO. 95-1283, at 21-22.

[4206] S. REP. NO. 95-604(I) at 62-65, 1978 U.S.C.C.A.N. at 3964-66. See also S. REP. NO. 95-701 at 71-72, 1978 U.S.C.C.A.N. at 4040-41.

> *The activities of the National Security Agency pose particularly difficult conceptual and technical problems which are not dealt with in this legislation. Although many on the committee are of the opinion that it is desirable to enact legislative safeguards for such activity, the committee adopts the view expressed by the attorney general during the hearings that enacting statutory controls to regulate the National Security Agency and the surveillance of Americans abroad raises problems best left to separate legislation. This language insures that certain electronic surveillance activities targeted against international communications for foreign intelligence purposes will not be prohibited absolutely during the interim period when these activities are not regulated by chapter 120 and charters for intelligence agencies and legislation regulating international electronic surveillance have not yet been developed.*[4207]

FISA Exceptions to Requirement for Court Order

Three current provisions of FISA provide for some measure of electronic surveillance without a court order to gather foreign intelligence information in specified circumstances, 50 U.S.C. §§ 1802 (electronic surveillance of certain foreign powers without a court order upon Attorney General certification);[4208]

[4207] Id.

[4208] 50 U.S.C. § 1802 provides:

(a)

(1) Notwithstanding any other law, the President, through the Attorney General, may authorize electronic surveillance without a court order under this subchapter to acquire foreign intelligence information for periods of up to one year if the Attorney General certifies in writing under oath that —

(A) the electronic surveillance is solely directed at —

(i) the acquisition of the contents of communications transmitted by means of communications used exclusively between or among foreign powers, as defined in section 1801(a)(1), (2), or (3) of this title; or

(ii) the acquisition of technical intelligence, other than the spoken communications of individuals, from property or premises under the open and exclusive control of a foreign power, as defined in section 1801(a)(1), (2), or (3) of this title;

(B) there is no substantial likelihood that the surveillance will acquire the contents of any communication to which a United States person is a party; and

1805(f) (emergency authorization of electronic surveillance for up to 72 hours, while an order approving such surveillance is sought from a judge of the Foreign

---

(C) the proposed minimization procedures with respect to such surveillance meet the definition of minimization procedures under section 1801(h) of this title; and if the Attorney General reports such minimization procedures and any changes thereto to the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence at least thirty days prior to their effective date, unless the Attorney General determines immediate action is required and notifies the committees immediately of such minimization procedures and the reason for their becoming effective immediately.

(2) An electronic surveillance authorized by this subsection may be conducted only in accordance with the Attorney General's certification and the minimization procedures adopted by him. The Attorney General shall assess compliance with such procedures and shall report such assessments to the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence under the provisions of section 1808(a) of this title.

(3) The Attorney General shall immediately transmit under seal to the court established under section 1803(a) of this title a copy of his certification. Such certification shall be maintained under security measures established by the Chief Justice with the concurrence of the Attorney General, in consultation with the Director of National Intelligence, and shall remain sealed unless —

(A) an application for a court order with respect to the surveillance is made under sections 1801(h)(4) and 1804 of this title; or

(B) the certification is necessary to determine the legality of the surveillance under section 1806(f) of this title.

(4) With respect to electronic surveillance authorized by this subsection, the Attorney General may direct a specified communication common carrier to —

(A) furnish all information, facilities, or technical assistance necessary to accomplish the electronic surveillance in such a manner as will protect its secrecy and produce a minimum of interference with the services that such carrier is providing its customers; and

(B) maintain under security procedures approved by the Attorney General and the Director of National Intelligence any records concerning the surveillance or the aid furnished which such carrier wishes to retain.

The Government shall compensate, at the prevailing rate, such carrier for furnishing

such aid.

(b) Applications for a court order under this subchapter are authorized if the President has, by written authorization, empowered the Attorney General to approve applications to the court having jurisdiction under section 1803 of this title, and a judge to whom an application is made may, notwithstanding any other law, grant an order, in conformity with section 1805 of this title, approving electronic surveillance of a foreign power or an agent of a foreign power for the purpose of obtaining foreign intelligence information, except that the court shall not have jurisdiction to grant any order approving electronic surveillance directed solely as described in paragraph (1)(A) of subsection (a) of this section unless such surveillance may involve the acquisition of communications of any United States person.

Intelligence Surveillance Court (FISC));[4209] and 1811 (electronic surveillance without a court order for 15 days following a declaration of war by the Congress).

In particular, 50 U.S.C. § 1802 permits the Attorney General to order electronic surveillance without a court order for up to one year to acquire foreign intelligence information for periods of up to one year if the Attorney General certifies in writing under oath that the electronic surveillance is solely directed at means of communications used exclusively between or among foreign powers or on property or premises under the open and exclusive control of a foreign power (the definition here does not include international terrorist organizations)[4210]

[4209] The emergency authorization provision in 50 U.S.C. § 1805(f) states:

(f) Emergency orders

Notwithstanding any other provision of this subchapter, when the Attorney General reasonably determines that —

(1) an emergency situation exists with respect to the employment of electronic surveillance to obtain foreign intelligence information before an order authorizing such surveillance can with due diligence be obtained; and

(2) the factual basis for issuance of an order under this subchapter to approve such surveillance exists;

he may authorize the emergency employment of electronic surveillance if a judge having jurisdiction under section 1803 of this title is informed by the Attorney General or his designee at the time of such authorization that the decision has been made to employ emergency electronic surveillance and if an application in accordance with this subchapter is made to that judge as soon as practicable, but not more than 72 hours after the Attorney General authorizes such surveillance. If the Attorney General authorizes such emergency employment of electronic surveillance, he shall require that the minimization procedures required by this subchapter for the issuance of a judicial order be followed. In the absence of a judicial order approving such electronic surveillance, the surveillance shall terminate when the information sought is obtained, when the application for the order is denied, or after the expiration of 72 hours from the time of authorization by the Attorney General, whichever is earliest. In the event that such application for approval is denied, or in any other case where the electronic surveillance is terminated and no order is issued approving the surveillance, no information obtained or evidence derived from such surveillance shall be received in evidence or otherwise disclosed in any trial, hearing, or other proceeding in or before any court, grand jury, department, office, agency, regulatory body, legislative committee, or other authority of the United States, a State, or political subdivision thereof, and no information concerning any United States person acquired from such surveillance shall subsequently be used or disclosed in any other manner by Federal officers or employees without the consent of such person, except with the approval of the Attorney General if the information indicates a threat of death or serious bodily harm to any person. A denial of the application made under this subsection may be reviewed as provided in section 1803 of this title.

[4210] "Foreign power" for purposes of electronic surveillance under FISA is defined in 50 U.S.C. § 1801(a)(1) through (6) as:

where "there is no substantial likelihood that the surveillance will acquire the contents of any communication to which a United States person is a party;" and minimization procedures are put in place.[4211] The Attorney General is also required to report minimization procedures to the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence 30 days in advance. The 30-day requirement can be waived if the Attorney General determines immediate action is required, in which case he is to notify the committees immediately of the minimization procedures and the reason for the urgency. The FISA court is to receive a copy of the certifications under seal.

The emergency authorization provision in 50 U.S.C. § 1805(f) authorizes the Attorney General to issue emergency orders to permit electronic surveillance prior to obtaining a court order if the Attorney General determines that emergency conditions make it impossible to obtain an order with due diligence before the surveillance is begun. The Attorney General or his designee must immediately inform a FISA judge and submit a proper application to that judge as soon as practicable, but not more than 72 hours[4212] after the Attorney General authorizes such surveillance. Minimization procedures must be followed. In the absence of a judicial order, the surveillance must terminate when the information sought is obtained, when the application for the order is denied, or after the expiration of 72 hours from the time the surveillance was authorized. No information obtained or evidence derived from such surveillance may be used as evidence or otherwise disclosed in any trial, hearing, or other government

---

(1) a foreign government or any component thereof, whether or not recognized by the United States;

(2) a faction of a foreign nation or nations, not substantially composed of United States persons;

(3) an entity that is openly acknowledged by a foreign government or governments to be directed and controlled by such foreign government or governments;

(4) a group engaged in international terrorism or activities in preparation therefor;

(5) a foreign-based political organization, not substantially composed of United States persons; or

(6) an entity that is directed and controlled by a foreign government or governments.

However, for the purpose of § 1802, only subsections 1801(a)(1) through (3) are included.

[4211] "Minimization procedures" are specific procedures implemented with respect to a particular surveillance in order to minimize the acquisition and retention, and prohibit the dissemination, of information concerning unconsenting U.S. persons required to be protected. See 50 U.S.C. § 1801(h).

[4212] Section 314(a)(2)(B) of P.L. 107-108, the Intelligence Authorization Act for Fiscal Year 2002, 115 Stat. 1402 (Dec. 28, 2001), H.Rept. 107-328, replaced 24 hours with 72 hours in each place that it appears in 50 U.S.C. § 1805(f).

proceeding, and no information concerning any U.S. person may be disclosed at all without that person's consent except with the Attorney General's approval where the information indicates a threat of disaster or serious bodily harm to any person.

Where Congress has passed a declaration of war, 50 U.S.C. § 1811 authorizes the Attorney General to conduct electronic surveillance without a court order for fifteen calendar days following a declaration of war by Congress. This provision does not appear to apply to the AUMF, as that does not constitute a congressional declaration of war.[4213] Indeed, even if the authorization were regarded as a declaration of war, the authority to conduct warrantless electronic surveillance under 50 U.S.C. § 1811 would only extend to a maximum of 15 days following its passage.[4214]

The Administration's Position

The Administration's position, as set forth in the Office of Legislative Affairs letter to the leaders of the House and Senate intelligence Committees, is that the President has the constitutional authority to direct the NSA to conduct the activities he described, and that this inherent authority is supplemented by statutory authority under the AUMF.[4215] The Administration interprets the AUMF, based on its reading of the Supreme Court opinion in Hamdi,[4216] as authorizing the President to conduct anywhere in the world, including within the United States, any activity that can be characterized as a fundamental incident of waging war. It includes communications intelligence among the fundamental incidents of waging war. The following sections analyze the extent to which the President's authority to conduct warrantless electronic surveillance is inherent,

---

[4213] For a discussion of declarations of war and authorizations for the use of military force, see CRS Report for Congress RL31133, Declarations of War and Authorizations for the Use of Military Force: Historical Background and Legal Implications, by David M. Ackerman and Richard F. Grimmett.

[4214] This provision originated in the House version of the bill, which would have allowed the President to authorize electronic surveillance for periods up to a year during time of war declared by Congress. The conference substituted a compromise provision authorizing electronic surveillance without a court order to acquire foreign intelligence information for 15 days following a declaration of war. H.R. CONF. REP. NO. 95-1720, at 34 (1978). The 15-day period was intended to "allow time for consideration of any amendment to [FISA] that may be appropriate during a wartime emergency." Id. The conferees also expressed their intent that "all other provisions of this act not pertaining to the court order requirement shall remain in effect during this period." Id.

[4215] OLA Letter, supra note 10, at 2.

[4216] Hamdi v. Rumsfeld, 542 U.S. 507 (2004).

whether the AUMF authorizes the operations,[4217] and whether the NSA operations are consistent with FISA and Title III.[4218]

The President's Inherent Authority to Conduct Intelligence Surveillance

The statutory language in FISA and the legislative history of the bill that became FISA, S. 1566 (95th Cong.), reflect the Congress's stated intention to circumscribe any claim of inherent presidential authority to conduct electronic surveillance, as defined by the Act, to collect foreign intelligence information, so that FISA would be the exclusive mechanism for the conduct of such electronic surveillance. Thus, in the conforming amendments section of the legislation, the previous language explicitly recognizing the President's inherent authority was deleted from 18 U.S.C. § 2511(3), and the language of 18 U.S.C. § 2511(f) was added to Title III of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, which states, in part, that "procedures in this chapter or chapter 121 and the Foreign Intelligence Surveillance Act of 1978 shall be the exclusive means by which electronic surveillance, as defined in section 101 of that Act, and the interception of domestic wire, oral, and electronic communications may be conducted."[4219] The House amendments to the bill provided that the procedures in the bill and in 18 U.S.C., Chapter 119 (Title III), were to be the exclusive "statutory" means by which electronic surveillance as defined in the bill and the interception of domestic wire and oral communications may be conducted, while the Senate bill did not include the word "statutory." The House Conference Report, in accepting the Senate approach, stated, in part, that

The conferees agree that the establishment by this act of exclusive means by which the President may conduct electronic surveillance does not foreclose a different decision by the Supreme Court. The intent of the conferees is to apply the standard set forth in Justice Jackson's concurring opinion in the Steel Seizure case: "When a President takes measures incompatible with the express or implied will of Congress, his power is at the lowest ebb, for then he can rely only upon his

---

[4217] See OLA Letter, supra note 10, at 3 ("Because communications intelligence activities constitute, to use the language of Hamdi, a fundamental incident of waging war, the AUMF clearly and unmistakably authorizes such activities directed against the communications of our enemy.").

[4218] We do not address the Administration's argument that the NSA electronic surveillance at issue is compatible with the Fourth Amendment. For analysis pertinent to that issue, see supra section on the Background of Government Surveillance.

[4219] For further discussion of the pertinent provisions of Title III, see the discussion at notes 54 et seq. and accompanying text.

own constitutional power minus any constitutional power of Congress over the matter." Youngstown Sheet and Tube Co. v. Sawyer, 343 U.S. 579, 637 (1952).[4220]

In this language, the conferees acknowledge that the U.S. Supreme Court, as the final arbiter of constitutional power, might reach a different conclusion. The Court has yet to rule on the matter.[4221]

[4220] H. CONF. REP. NO. 95-1720, at 35, 1978 U.S.C.C.A.N. at 4064 (Oct. 5, 1978); see also S. REP. NO. 95-604(I) at 62-65, 1978 U.S.C.C.A.N. at 3964-66; S. REP. NO. 95-701 at 71-72, 1978 U.S.C.C.A.N. at 4040-41.

[4221] However, some lower court decisions provide significant support for the argument that the exclusivity provision circumscribes the President's use of inherent authority to engage in electronic surveillance to collect foreign intelligence information outside the FISA structure. See, e.g., United States v. Andonian, 735 F. Supp. 1469 (C.D. Cal. 1990), aff'd and remanded on other grounds, 29 F.3d 634 (9th Cir. 1994), cert. denied, 513 U.S. 1128 (1995). The Andonian court found that the exclusivity language in FISA reveals that Congress intended to sew up the perceived loopholes through which the President had been able to avoid the warrant requirement. The exclusivity clause makes it impossible for the President to 'opt-out' of the legislative scheme by retreating to his 'inherent' Executive sovereignty over foreign affairs. At the time of the drafting of FISA, such a retreat would have meant completely unfettered use of electronic surveillance in the foreign affairs arena, as the Supreme Court had twice declined to hold such Executive action captive to the warrant requirement [citing Keith, 407 U.S. 297, Katz, 389 U.S. at 358, n. 23, and S. REP.NO. 95-604[(I)] at 12-14, 1978 U.S.C.C.A.N. at 3913-16]. . . . The exclusivity clause in 18 U.S.C. section 2511(2)(f) assures that the President cannot avoid Congress' limitations by resort to 'inherent' powers as had President Truman at the time of the 'Steel Seizure Case.' Youngstown Sheet and Tube v. Sawyer, 343 U.S. 579 (1952). . . . The difficulty in the case was due to Congressional silence. . . . When the President acts in absence of either a congressional grant or denial of authority, he can only rely upon his own independent powers, but there is a zone of twilight in which he and Congress may have concurrent authority, or in which its distribution is uncertain. Therefore, congressional inertia, indifference or acquiescence may sometimes, at least as a practical matter, enable, if not invite, measures on independent presidential responsibility. In this area, any actual test of power is likely to depend on the imperatives and events and contemporary imponderables rather than on abstract theories of law. . . . To foreclose the arguments which piqued the Court in Youngstown, Congress denied the President his inherent powers outright. Tethering executive reign, Congress deemed that the provisions for gathering intelligence in FISA and Title III were 'exclusive.'

Id. at 1474-76. Cf., United States v. Falvey, 540 F. Supp. 1306 (E.D.N.Y. 1982). The court stated that

FISA is the fifth legislative attempt since the Watergate era to bridle the Executive's 'inherent' power. Congress believes that FISA has provided a 'secure framework by which the Executive Branch may conduct legitimate electronic surveillance for foreign intelligence purposes within the context of this Nation's commitment to privacy and individual rights.' . . . The Act received broad support in Congress and from the then Attorney General Griffin Bell and President Carter. . . . When, therefore, the President has, as his primary purpose, the accumulation of foreign intelligence information, his exercise of Article II power to conduct foreign affairs is not constitutionally hamstrung by the need to obtain prior judicial approval before engaging in wiretapping. While the executive power to conduct foreign affairs exempts the President from the warrant requirement when foreign surveillance is conducted, the President is not entirely free of the constraints of the Fourth Amendment. The search and seizure resulting from the surveillance

The passage of FISA and the inclusion of such exclusivity language reflects Congress's view of its authority to cabin the President's use of any inherent constitutional authority with respect to warrantless electronic surveillance to gather foreign intelligence. The Senate Judiciary Committee articulated its view with respect to congressional power to tailor the President's use of an inherent constitutional power:

The basis for this legislation is the understanding — concurred in by the Attorney General — that even if the President has an "inherent" constitutional power to authorize warrantless surveillance for foreign intelligence purposes, Congress has the power to regulate the exercise of this authority by legislating a reasonable warrant procedure governing foreign intelligence surveillance.[4222]

On the other hand, the Administration asserts constitutional authority under Article II of the Constitution, including his Commander-in-Chief authority, to order warrantless foreign intelligence surveillance within the United States:

> *This constitutional authority to order warrantless foreign intelligence surveillance within the United States, as all federal appellate courts, including at least four circuits, to have addressed*

---

must still be reasonable. With the enactment of FISA, . . . Congress has fashioned a statute for foreign surveillance that fully comports with the Fourth Amendment.

Id. at 1311-12. See United States v. Bin Laden, 126 F. Supp. 2d 264 (S.D.N.Y. 2000). The court noted that

All of the circuit cases finding a foreign intelligence exception [to the warrant requirement] arose before the enactment of FISA (which sets forth procedures for foreign intelligence collection, see 50 U.S.C. § 1801 et seq.) and are probably now governed by that legislation. FISA only governs foreign intelligence searches conducted within the United States. See 50 U.S.C. §§ 1801(f)(1-4), 1803(a), 1821(5), 1822(c).

Id. at 272 n. 8.

[4222] S. REP. NO. 95-604(I), at 16, 1978 U.S.C.C.A.N. at 3917. See also Attorney General Bell's testimony with respect to the Administration's position, id. at 4, 1978 U.S.C.C.A.N. at 3905-06; S. REP. NO. 95-701, at 6-7, 1978 U.S.C.C.A.N. at 3975. The need to comply with FISA for the collection of foreign intelligence information through electronic surveillance is reiterated in E.O. 12333 ("United States Intelligence Activities" (December 4, 1981), as amended), Section 2.5, dealing with Attorney General approval required for certain collection techniques: 2.5 Attorney General Approval. The Attorney General hereby is delegated the power to approve the use for intelligence purposes, within the United States or against a United States person abroad, of any technique for which a warrant would be required if undertaken for law enforcement purposes, provided that such techniques shall not be undertaken unless the Attorney General has determined in each case that there is probable cause to believe that the technique is directed against a foreign power or an agent of a foreign power. Electronic surveillance, as defined in the Foreign Intelligence Surveillance Act of 1978, shall be conducted in accordance with that Act, as well as this Order.

> *the issue have concluded. See, e.g., In re Sealed Case, 310 F.3d 717, 742 (FISA Ct. of Review 2002) ("[A]ll the other courts to have decided the issue [have] held that the President did have inherent authority to conduct warrantless searches to obtain foreign intelligence information . . . . We take for granted that the President does have that authority . . . .").*[4223]

The U.S. Foreign Intelligence Surveillance Court of Review (Court of Review) was created by FISA, 50 U.S.C. § 1803, and has appellate review over denials of FISA applications by the Foreign Intelligence Surveillance Court which was also established under that section. Denials of such applications by the Court of Review may be appealed to the U.S. Supreme Court. The Court of Review has decided only one published case, which is cited by the Administration above. The case was not appealed to the U.S. Supreme Court. As the Court of Review is a court of appeals and is the highest court with express authority over FISA to address the issue, its reference to inherent constitutional authority for the President to conduct warrantless foreign intelligence surveillance might be interpreted to carry considerable weight.

The Court of Review, in its opinion, make two references which appear pertinent to the Administration's position. The first statement, which is cited by the Administration, was made by the Court of Review, in In re Sealed Case,[4224] in its discussion of the constitutionality of FISA and its exploration of the underlying rationale of the "primary purpose" test as articulated in United States v. Truong Dinh Hung,[4225] (which dealt with a pre-FISA surveillance). The Court of Review, in this portion of its constitutional analysis, was considering whether the primary purpose of a FISA electronic surveillance must be to gather foreign intelligence information in order for it to pass constitutional muster. Truong saw such a standard as a constitutional minimum. In assessing and rejecting the Truong approach, the Court of Review stated:

> *It will be recalled that the case that set forth the primary purpose test as constitutionally required was Truong. The Fourth Circuit thought that Keith's balancing standard implied the adoption of the primary purpose test. We reiterate that Truong dealt with a pre-FISA surveillance based on the President's constitutional responsibility to conduct the foreign affairs of the United States. 629 F.2d at 914. Although Truong suggested the line it drew was a constitutional minimum that would apply to a FISA surveillance, see id. at 914 n. 4, it had no occasion to consider the application of*

[4223] OLA Letter, supra note 10, at 2.

[4224] 310 F.3d 717 (U.S. Foreign Intell. Surveillance Ct. Rev. 2002).

[4225] 629 F.2d 908 (4th Cir. 1980).

> *the statute carefully. The Truong court, as did all the other courts to have decided the issue, held that the President did have inherent authority to conduct warrantless searches to obtain foreign intelligence information. It was incumbent upon the court, therefore, to determine the boundaries of that constitutional authority in the case before it. We take for granted that the President does have that authority, and, assuming that is so, FISA could not encroach on the President's constitutional power. The question before us is the reverse, does FISA amplify the President's power by providing a mechanism that at least approaches a classic warrant and which therefore supports the government's contention that FISA searches are constitutionally reasonable.*[4226]

While the Court of Review does not cite to the cases to which it is referring, its allusion to the holdings of "all the other courts to have considered the issue," appears to have been to cases which pre-date FISA's passage or which address pre-FISA surveillances.[4227] Such cases dealt with a presidential assertion of

---

[4226] 310 F.3d at 742 (emphasis added).

[4227] Id. at 742, n. 26; cf., United States v. Duggan, 743 F.2d 59, 71 (2d Cir. 1984) ("Prior to the enactment of FISA, virtually every court that had addressed the issue had concluded that the President had the inherent power to conduct warrantless electronic surveillance to collect foreign intelligence information, and that such surveillances constituted an exception to the warrant requirement of the Fourth Amendment. See United States v. Truong Dinh Hung, 629 F.2d 908, 912-14 (4th Cir.1980), cert. denied,454 U.S. 1144 (1982); United States v. Buck, 548 F.2d 871, 875 (9th Cir.), cert. denied, 434 U.S. 890 (1977); United States v. Butenko, 494 F.2d 593, 605 (3d Cir.) (en banc), cert. denied,419 U.S. 88 (1974); United States v. Brown, 484 F.2d 418, 426 (5th Cir. 1973), cert. denied, 415 U.S. 960 (1974). But see Zweibon v. Mitchell, 516 F.2d 594, 633-51 (D.C. Cir. 1975) (dictum), cert. denied, 425 U.S. 944 (1976). The Supreme Court specifically declined to address this issue in United States v. United States District Court, 407 U.S. 297, 308, 321-22 (1972) (hereinafter referred to as "Keith"), but it had made clear that the requirements of the Fourth Amendment may change when differing governmental interests are at stake, see Camara v. Municipal Court, 387 U.S. 523 (1967), and it observed in Keith that the governmental interests presented in national security investigations differ substantially from those presented in traditional criminal investigations. 407 U.S. at 321-24, 92 S.Ct. at 2138-40."); Truong Dinh Hung, 629 F.2d at 914 ("Perhaps most crucially, the executive branch not only has superior expertise in the area of foreign intelligence, it is also constitutionally designated as the pre-eminent authority in foreign affairs. See First National Bank v. Banco Nacional de Cuba, 406 U.S. 759, 765-68, 92 S.Ct. 1808, 1812-1814, 32 L.Ed.2d 466 (1972); Oetjen v. Central Leather Co., 246 U.S. 297, 302, 38 S.Ct. 309, 310, 62 L.Ed. 726 (1918). The President and his deputies are charged by the constitution with the conduct of the foreign policy of the United States in times of war and peace. See United States v. Curtiss-Wright Corp., 299 U.S. 304, 57 S.Ct. 216, 81 L.Ed. 255 (1936). Just as the separation of powers in Keith forced the executive to recognize a judicial role when the President conducts domestic security surveillance, 407 U.S. at 316-18, 92 S.Ct. at 2136-2137, so the separation of powers requires us to acknowledge the principal responsibility of the President for foreign affairs and concomitantly for foreign intelligence surveillance. In sum, because of the need of the executive branch for flexibility, its practical experience, and its constitutional competence, the courts should not require the executive to secure a warrant each time it conducts foreign intelligence surveillance. Accord, United States v. Butenko, 494 F.2d 593 (3 Cir.), cert.

inherent authority in the absence of congressional action to circumscribe that authority. Where the Congress has exercised its constitutional authority in the areas of foreign affairs and thereby has withdrawn electronic surveillance, as defined by FISA, from the "zone of twilight," between Executive and Legislative constitutional authorities, it might be argued that the President's asserted inherent authority to engage in warrantless electronic surveillance was thereby limited. In the wake of FISA's passage, the Court of Review's reliance on these pre-FISA cases or cases dealing with pre-FISA surveillances as a basis for its assumption of the continued vitality of the President's inherent constitutional authority to authorize warrantless electronic surveillance for the purpose of gathering foreign intelligence information might be viewed as somewhat undercutting the persuasive force of the Court of Review's statement.

The second reference to the "President's inherent constitutional authority" in *In re Sealed Case* is in the conclusion to the opinion. Here the Court of Review makes an oblique reference to the President's inherent authority:

> *Even without taking into account the President's inherent constitutional authority to conduct warrantless foreign intelligence surveillance, we think the procedures and government showings required under FISA, if they do not meet the minimum Fourth Amendment warrant standards, certainly come close. We, therefore, believe firmly, applying the balancing test drawn from Keith, that FISA as amended is constitutional because the surveillances it authorizes are reasonable.*[4228]

The latter statement was made in support of the Court of Review's conclusion that the procedures for electronic surveillance to gather foreign intelligence information under FISA, as amended by the USA PATRIOT Act, Pub. L. 107-56, were constitutionally sufficient under Fourth Amendment standards, whether the court orders under FISA were viewed as warrants for Fourth Amendment purposes or not. While not an explicit recognition of presidential inherent constitutional authority, it might be argued that, when viewed in light of the earlier statement, some level of recognition of that authority might also be inferred from this reference.

---

denied sub nom. Ivanov v. United States, 419 U.S. 881, 95 S.Ct. 147, 42 L.Ed.2d 121 (1974); United States v. Brown, 484 F.2d 418 (5 Cir. 1973), cert. denied, 415 U.S. 960, 94 S.Ct. 1490, 39 L.Ed.2d 575 (1974); United States v. Clay, 430 F.2d 165 (5 Cir. 1970), rev'd on other grounds, 403 U.S. 698, 91 S.Ct. 2068, 29 L.Ed.2d 810 (1971). Contra, Zweibon v. Mitchell, 516 F.2d 594 (D.C.Cir.1975) (dictum in plurality opinion in case involving surveillance of domestic organization having an effect on foreign relations but acting neither as the agent of nor in collaboration with a foreign power).").

[4228] 310 F.3d at 746.

Both statements were made in a case in which the Court of Review upheld the constitutionality of FISA, an act which, in express legislative language in its conforming amendments to Title III and in its legislative history, was clearly intended to cabin any inherent presidential authority over electronic surveillance within its sweep, and to provide an exclusive structure for the conduct of such electronic surveillance. It might be argued that the adoption of one of two possible interpretations of the statement would avoid internal inconsistency within the court's decision. One approach would be to interpret these statements by the Court of Review as referring to the President's inherent authority to conduct such surveillances outside the scope of "electronic surveillance" under FISA. In essence, the court's statements would then be seen as a reference to presidential authority over those areas of NSA activities which were intentionally excluded from FISA when it was enacted. Alternatively, it might be argued that the court's statements may refer to continuing exercise of inherent presidential authority within the FISA structure, which the Court of Review found to be constitutional.

In light of the exclusivity language in Title III, 18 U.S.C. § 2511(2)(f) and the legislative history of FISA, it might be argued that electronic surveillance pursuant to FISA is subject to the statutory framework, and does not rely upon an assertion of Presidential inherent authority to support it. Alternatively, it might be contended that, in enacting FISA, the Congress circumscribed the manner in which the President might exercise his inherent constitutional authority with respect to foreign intelligence electronic surveillance, rather than eliminating the President's authority.

As this discussion suggests, while the congressional intent to cabin the President's exercise of any inherent constitutional authority to engage in foreign intelligence electronic surveillance may be clear from the exclusivity provision in FISA and from the legislative history of the measure, some support may be drawn from the Court of Review's decision in *In re Sealed Case* for the position that the President continues to have the power to authorize warrantless electronic surveillance to gather foreign intelligence outside the FISA framework. Whether such authority may exist only as to those areas which were not addressed by FISA in its definition of "electronic surveillance" or is of broader sweep appears to be a matter with respect to which there are differing views.

The Authorization to Use Military Force

In the aftermath of the September 11, 2001, attacks, Congress passed a joint resolution authorizing the President to

> *use all necessary and appropriate force against those nations, organizations, or persons he determines planned, authorized, committed, or aided the terrorist attacks that occurred on September 11, 2001, or harbored such organizations or persons, in*

order to prevent any future acts of international terrorism against the United States by such nations, organizations or persons.[4229]

Pursuant to that authority, the President ordered U.S. armed forces to invade Afghanistan for the purpose of rooting out Al Qaeda terrorists and toppling the Taliban government that had provided them safe harbor.

The Administration regards the AUMF as providing the authority to conduct electronic surveillance of the type reported in the press.[4230] This conclusion, it argues, is supported by the 2004 Supreme Court decision in Hamdi v. Rumsfeld,[4231] in which the Supreme Court issued its most thorough interpretation of the AUMF to date.[4232] In Hamdi, a plurality of the Court affirmed the President's power to detain a U.S. citizen as an "enemy combatant" as part of the necessary force authorized by Congress in the AUMF, despite an earlier statute which provides that no U.S. citizen may be detained except pursuant to an act of Congress.[4233] However, the Court appears to have relied on a more limited interpretation of the scope of the AUMF than that which the Administration had asserted in its briefs, and, declaring that a "state of war is not a blank check for the President when it comes to the rights of the Nation's citizens,"[4234] the Court clarified that notwithstanding the authorization, such detainees have some due process rights under the U.S. Constitution.[4235]

The Administration's position would seem to rely on at least two assumptions. First, it appears to require that the power to conduct electronic surveillance for intelligence purposes is an essential aspect of the use of military force in the same way that the capture of enemy combatants on the battlefield is a necessary incident to the conduct of military operations. Second, it appears to consider the "battlefield" in the war on terrorism to extend beyond the area of traditional

[4235] Id. at 517 (2004).

military operations to include U.S. territory. Both assumptions have been the subject of debate.

The Use of Force

The government finds support in the Hamdi decision for its assertion that the AUMF implies authority to conduct electronic surveillance operations as a necessary incident to the use of force. This implied authority, it is urged, provides the statutory authority required to dispense with FISA requirements in the same way the Hamdi court found the requirement in the Non-Detention Act (18 U.S.C. § 4001(a)), which prohibits the detention of U.S. citizens except pursuant to an act of Congress, to be satisfied by the AUMF.

There is reason, however, to limit Hamdi to actual military operations on the battlefield as that concept is traditionally understood. Justice O'Connor wrote for the plurality that

> *we understand Congress' grant of authority for the use of 'necessary and appropriate force' to include the authority to detain for the duration of the relevant conflict, and our understanding is based on longstanding law-of-war principles. If the practical circumstances of a given conflict are entirely unlike those of the conflicts that informed the development of the law of war, that understanding may unravel.*[4236]

Hamdi may be limited to a confirmation that the authorization to employ military force against an enemy army necessarily encompasses the authority to capture battlefield enemies, because such captures are an essential aspect of fighting a battle.[4237] International law does not permit the intentional killing of civilians or soldiers who are hors de combat, preferring capture as the method of neutralizing enemies on the battlefield.[4238] The capture of an enemy combatant is arguably as much a use of force as killing or wounding one. Justice O'Connor wrote for the plurality

---

[4236] Hamdi at 520.

[4237] Padilla v. Hanft, another case involving an American citizen detained by the military as an "enemy combatant," could be read as an expansion of the detention authority to encompass persons arrested in the United States, far from any battlefield. 423 F.3d 386 (4th Cir. 2005), petition for cert. filed, 74 USLW 3275 (Oct 25, 2005)(NO. 05-533). The Fourth Circuit reversed a lower court's finding that the detention was unlawful, but the appellate finding was based on an understanding that the petitioner had taken up arms against American forces in Afghanistan prior to traveling to the United States with the intent of carrying out acts of terrorism. Whether Hamdi would also extend to a person detained as an enemy combatant based wholly on activity carried out within the United States has not been addressed by any court.

[4238] See generally Department of the Army, FM 27-10, The Law of Land Warfare (1956).

> *There can be no doubt that individuals who fought against the United States in Afghanistan as part of the Taliban, an organization known to have supported the al Qaeda terrorist network responsible for those attacks, are individuals Congress sought to target in passing the AUMF. We conclude that detention of individuals falling into the limited category we are considering, for the duration of the particular conflict in which they were captured, is so fundamental and accepted an incident to war as to be an exercise of the "necessary and appropriate force" Congress has authorized the President to use.*[4239]

While the collection of intelligence is also an important facet of fighting a battle, it is not clear that the collection of intelligence constitutes a use of force. The Hamdi plurality cited the Geneva Conventions and multiple authorities on the law of war to reach its conclusion that the capture of combatants is an essential part of warfare.[4240] The Administration has not pointed to any authority similar to those cited by the Hamdi plurality to support its proposition that signals intelligence is a fundamental aspect of combat. To be sure, there can be little doubt that Congress, in enacting the AUMF, contemplated that the armed forces would deploy their military intelligence assets in Afghanistan or wherever else the conventional aspect of the conflict might spread, but a presumption that the authorization extends to less conventional aspects of the conflict could unravel the fabric of Hamdi, especially where measures are taken within the United States. While five Justices were willing to accept the government's argument that the detention of enemy combatants captured on the battlefield[4241] is a vital aspect of war-fighting, Justice Thomas alone indicated his agreement with the government's argument that wartime detention is also necessary for intelligence purposes.[4242] Justice O'Connor agreed that the law of war supports detention of

---

[4239] Hamdi at 518. Justice Thomas agreed with this proposition, supplying the fifth vote. Id. at 587 ("Although the President very well may have inherent authority to detain those arrayed against our troops, I agree with the plurality that we need not decide that question because Congress has authorized the President to do so.").

[4240] Hamdi at 518-19.

[4241] The Hamdi plurality limited its decision to "enemy combatants" as defined to mean "an individual who, it alleges, was 'part of or supporting forces hostile to the United States or coalition partners' in Afghanistan and who 'engaged in an armed conflict against the United States' there." Hamdi at 516.

[4242] Id. at 595 (Thomas, J., dissenting) ("The Government seeks to further [its security] interest by detaining an enemy soldier not only to prevent him from rejoining the ongoing fight. Rather, as the Government explains, detention can serve to gather critical intelligence regarding the intentions and capabilities of our adversaries, a function that the Government avers has become

enemy combatants to prevent their return to the battlefield, but agreed with the petitioner that "indefinite detention for the purpose of interrogation is not authorized."[4243]

The boundaries of the authority available under this argument are difficult to discern. May any statutory prohibition arguably touching on national security that applies "unless otherwise authorized by statute" be set aside based on the AUMF? Presidential assertions of wartime power have faltered for lack of express congressional approval, especially where civil liberties are implicated.[4244] A less expansive interpretation of the AUMF might dictate that "necessary and appropriate force" must be read, if possible, to conform to the Constitution and Congress's understanding of what activity constitutes a use of force as opposed to an exercise of authority within the domestic sphere.

---

all the more important in the war on terrorism."). Justice Scalia, with Justice Stevens, recognized that the government's security needs include the "need to obtain intelligence through interrogation," but declined to evaluate whether the need could be met within the criminal justice system, noting that such determinations are "beyond . . . the Court's competence . . . but . . . not beyond Congress's." Id. at 577-78 (Scalia, J., dissenting).

[4243] Hamdi at 521. Justices Souter and Ginsberg, while accepting the government's position that the AUMF could be read to authorize actions consonant with the usages of war, rejected the assertion that such usages could be invoked to justify the detention of a captive where the military's actions are incompatible with the law of war. Id. at 549-50 (Souter, J., concurring in part and dissenting in part). Justices Scalia and Stevens would have found that a U.S. citizen enjoys the full range of due process rights, the AUMF notwithstanding. Id. at 556 (Scalia, J., dissenting).

[4244] Compare Youngstown Sheet and Tube Co. v. Sawyer, 343 U.S. 579 (1952), Ex parte Endo, 323 U.S. 214 (1944) (authority to detain U.S. citizen during war not authorized by implication), Ex parte Milligan, 71 U.S. (4 Wall.) 2 (1866) (civilian accused of violating the law of war in non-hostile territory could not be tried by military commission), and Little v. Barreme, 6 U.S. (2 Cr.) 170 (1804) (where Congress had authorized as part of a limited war the seizure of vessels bound to French ports, the President could not authorize the seizure of vessels coming from French ports) with Ex parte Quirin, 317 U.S. 1, 26-27 (1942) (President's order establishing military commissions to try enemy combatants for violating the law of war was valid where Congress had recognized military commissions in statute), Hirabayashi v. United States, 320 U.S. 81, 89-90 (1943) (discriminatory wartime curfew implemented by the executive branch could be enforced against U.S. citizen where Congress had expressly provided for such enforcement) and Korematsu v. United States, 323 U.S. 214 (1944) (same). The Administration cites the Prize Cases, 67 U.S. (2 Black) 635, 668 (1863), for the proposition that "the President has the responsibility to protect the Nation from further attacks, and the Constitution gives him all necessary authority to fulfill that duty." OLA Letter, supra note 10, at 2. The Prize Cases have generally been interpreted as supporting an assertion of inherent presidential power to thwart an attack. See CONSTITUTION ANNOTATED, S.REP.NO. 108-17, at 328-29. It may, however, be significant that the naval blockade there at issue was instituted prior to Congress's having had the opportunity to take action rather than in the face of a statutory prohibition against such action, and was quickly ratified by Congress. See id. at 461-62. Given the Court's tendency to treat the latter question as one calling for judicial avoidance based on the "political question" doctrine, id. at 329, it is possible that the question may never reach a fuller exegesis. However, the area has been characterized by concessions between the President and Congress with respect to the scope of authority of each. See id., id. at 473-75.

The Domestic Sphere versus Military Operations

Although the lack of a formal declaration of war is not relevant to the existence of an armed conflict and is arguably unnecessary for the President to invoke some war powers, it may be argued that a formal declaration makes a difference in determining what law applies within the United States, whether to aliens or citizens.[4245] For example, the Alien Enemy Act and the Trading with the Enemy Act (TWEA),[4246] both of which regulate the domestic conduct of persons during a war, expressly require a declared war and are not triggered simply by an authorization to use force.[4247] The Supreme Court long ago held that the President has no implied authority to promulgate regulations permitting the capture of enemy property located in the United States during hostilities short of a declared war, even where Congress had authorized a "limited" war.[4248] More pertinently, FISA contains an exception to its requirements for 15 days after a congressional declaration of war.[4249] The inclusion of this exception strongly suggests that Congress intended for FISA to apply even during wartime, unless Congress were to pass new legislation. The fact that Congress amended FISA subsequent to September 11, 2001, in order to maximize its effectiveness against the terrorist threat further bolsters the notion that FISA is intended to remain fully applicable. To conclude otherwise would appear to require an assumption that Congress intended the AUMF to authorize the President to conduct electronic surveillance, even against American citizens not involved in combat, under fewer restrictions than would apply during a declared war, notwithstanding FISA provisions strengthened to take such circumstances into account. Even assuming, for argument's sake, that the NSA operations are necessary to prevent another terrorist attack, a presumption that Congress intended to authorize them does not necessarily follow.

[4245] See Youngstown, 343 U.S. at 645 (Jackson, J., concurring) (noting that separation-of-powers concerns are "heightened when the Commander-in-Chief's powers are exercised in the domestic sphere").

[4246] 50 U.S. App. § 1 et seq.

[4247] See generally CRS Report RL31133, Declarations of War and Authorizations for the Use of Military Force: Background and Legal Implications, by David M. Ackerman and Richard F. Grimmett (identifying statutes effective only during declared wars or during hostilities).

[4248] See Brown v. United States, 12 U.S. (8 Cranch) 110 (1814); Little v. Barreme, 6 U.S. (2 Cr.) 170 (1804).

[4249] 50 U.S.C. § 1811. The legislative history indicates that the 15-day period was intended to "allow time for consideration of any amendment to this act that may be appropriate during a wartime emergency." H.R. CONF. REP. NO. 95-1720, at 34 (1978).

It might be argued that the United States is part of the battlefield in the war against terrorism in more than just a metaphorical sense. Proponents of this point of view would argue that the AUMF to authorizes the use of force anywhere in the world,[4250] including the territory of the United States, against any persons determined by the President to have "planned, authorized, committed, or aided the terrorist attacks" or "harbored such organizations or persons." Under this view, the United States is under actual and continuing enemy attack, and the President has the authority to conduct electronic surveillance in the same way the armed forces gather intelligence about the military operations of enemy forces, even if no actual combat is taking place. After all, intelligence efforts are aimed at identifying an attack before it occurs. If electronic surveillance is considered to be a use of force, the AUMF would seem to limit it to those who "planned, authorized, committed, aided" the Sept. 11 attacks or who "harbored such . . . persons." To the extent that the President's executive order authorizes surveillance of persons who are suspected of merely supporting Al Qaeda or affiliated terrorist organizations, it may be seen as being overly broad.

Are the NSA electronic surveillances consistent with FISA and Title III?

Having concluded that the AUMF authorizes the NSA activity, the Administration finds that the activity meets FISA requirements as well. Although the Administration appears to accept the premise that the surveillance is "electronic surveillance" within the meaning of FISA, it argues that it is excused from following the required procedures because section 109 of FISA[4251] exempts from criminal liability those who conduct electronic surveillance without following the FISA procedures where such surveillance is "authorized by statute."

Subsection (a) of section 109 of FISA provides criminal sanctions[4252] for a person who intentionally "engages in electronic surveillance under color of law except as authorized by statute;" or who "discloses or uses information obtained under color of law by electronic surveillance, knowing or having reason to know that the information was obtained through electronic surveillance not authorized by statute." Under subsection (b), it is a defense to a prosecution under subsection (a) that the defendant was a law enforcement or investigative officer engaged in the course of his official duties and the electronic surveillance was authorized by and conducted pursuant to a search warrant or court order of a court of

[4250] See Khalid v. Bush, 355 F.Supp.2d 311, 320 (D. D.C. 2005) (noting that "the AUMF does not place geographic parameters on the President's authority to wage this war against terrorists").

[4251] 50 U.S.C. § 1809(a)(1).

[4252] Subsection (c) provides, "An offense described in this section is punishable by a fine of not more than $10,000 or imprisonment for not more than five years, or both." In light of the general fines provision in 18 U.S.C. § 3571, the maximum fine would appear to be $250,000 for an individual defendant, and $500,000 for an institutional defendant."

competent jurisdiction. Under subsection (d), there is federal jurisdiction over an offense under this section if the person committing the offense was an officer or employee of the United States at the time the offense was committed.[4253]

The language of this section was drawn by the conferees from the House version of the measure, with modifications taken from the Senate version.[4254] The House Conference Report, H. CONF. REP. 95-1720, at 33, 1978 U.S.C.C.A.N. at 4062, adopted the House version of these provisions, with amendments to include the Senate provision regarding disclosure or use of information obtained under color of law by electronic surveillance, knowing or having reason to know that the information was obtained through electronic surveillance not authorized by statute. The House Conference Committee described its actions as follows:

[4253] Under 50 U.S.C. § 1810, an aggrieved person, other than a foreign power or an agent of a foreign power, as defined in 50 U.S.C. § 1801(a) or (b)(1)(A), who has been subjected to electronic surveillance or about whom information obtained by electronic surveillance of that person has been disclosed or used in violation of 50 U.S.C. § 1809 may bring an action against any person who committed that violation for actual and punitive damages, plus reasonable attorney's fees and other reasonably incurred investigation and litigation costs. Actual damages may not be less than liquidated damages of $1,000 or $100 per day for each day of the violation, whichever is greater.

[4254] The Senate Judiciary Committee, in S. REP. NO. 95-604(I), at 61, 1978 U.S.C.C.A.N. at 39623963; see also, pertinent portion of the Senate Select Committee on Intelligence's S. REP. NO. 95701, at 68-69, 1978 U.S.C.C.A.N. at 4037-4038, described the Senate version of this provision, which would have provided conforming amendments to Title 18 of the U.S. Code:

[Section 4(a)(1) and (2) are]. . . designed to establish the same criminal penalties for violations of [FISA, conceived in the Senate bill as a new chapter 120 of Title 18, U.S. Code] as apply to violations of chapter 119 [of Title 18, U.S.C.]. As amended, these sections will make it a criminal offense to engage in electronic surveillance except as otherwise specifically provided in chapters 119 and 120. This amendment also provides, however, that "with respect to techniques used by law enforcement officers" which do not involve the actual interception of wire or oral communications, yet do fall within the literal definition of electronic surveillance in Chapter 120 [FISA] — such as the use of a pen register — the procedures of chapter 120 do not apply. In such cases criminal penalties will not attach simply because the government fails to follow the procedures in chapter 120 (such penalties may, of course, attach if the surveillance is commenced without a search warrant or in violation of a court order.) In all cases involving electronic surveillance for the purpose of obtaining foreign intelligence information, however, the prohibitions of 18 U.S.C. 2511 would apply.

(a)(3), (4), (5), and (6). These amendments make clear that the prohibitions in chapter 119 concerning disclosure and use of information, obtained through the interception of wire or oral communications in sections 2511(1)(c) and (d), also apply to disclosure and use of information obtained through electronic surveillance as defined in chapter 120.

The statute calls for a fine of not more than $10,000 or imprisonment for not more than five years, or both, for each violation.

The Senate bill provided, by conforming amendment to title 18, United States Code, for criminal penalties for any person who, under color of law, willfully engages in electronic surveillance except as provided in this bill; for any person who willfully discloses, or endeavors to disclose to any other person information obtained under color of law by electronic surveillance, knowing or having reason to know that the information was obtained through unlawful electronic surveillance; and for any person who willfully uses, or endeavors to use, information obtained through unlawful electronic surveillance.

The House amendments provided for separate criminal penalties in this act, rather than by conforming amendment to title 18, for any person who intentionally engages in electronic surveillance under color of law except as authorized by statute. A defense was provided for a defendant who was a law enforcement or investigative officer engaged in the course of his official duties and the electronic surveillance was authorized by and conducted pursuant to a search warrant or court order of a court of competent jurisdiction.

The conference substitute adopts the House provision modified to add the Senate criminal penalty for any person who discloses or uses information obtained under color of law by electronic surveillance, knowing or having reason to know that the information was obtained through electronic surveillance not authorized by statute. The conferees agree that the criminal penalties for intelligence agents under this Act should be essentially the same as for law enforcement officers under title 18.[4255]

The Administration appears to rely upon the Authorization to Use Military Force (AUMF), Pub. L. 107-40, 115 Stat. 224 (2001), in arguing that the NSA electronic surveillances at issue are "authorized by statute," as that phrase is used in 50 U.S.C. § 1809(a). The FISA bill as passed included the House version of Section 109(a)(1) of the measure, while Section 109(a)(2) was drawn from the Senate

---

[4255] The House Intelligence Committee discussed the meaning of "intentionally" in the context of Section 109(a)(2) of the House bill, which was replaced by the Senate language. However, as the legislative language was written, the word "intentionally" applied to both Section 109(a)(1) and Section 109(a)(2). The House Report, H. REP. NO. 95-1283, at 97, emphasized that "intentionally" as used in this section was "intended to reflect the most strict standard for criminal culpability. What is proscribed is an intentional violation of an order or one of the specified provisions, not just intentional conduct. The Government would have to provide beyond a reasonable doubt both that the conduct engaged in was in fact a violation, and that it was engaged in with a conscious objective or desire to commit a violation. . . ."

passed bill. The House Permanent Select Committee's Report, H. Rep. No. 95-1283(I), at 96 (June 8, 1978), sheds some light on the intended meaning of Section 109(a)(1) of H.R. 7308 (95th Cong.) which became 50 U.S.C. § 1809(a)(1):

> *Section 109(a)(1) carries forward the criminal provisions of chapter 119 [of Title 18, U.S.C.] and makes it a criminal offense for officers or employees of the United States to intentionally engage in electronic surveillance under color of law except as specifically authorized in chapter 119 of title III [of the Omnibus Crime Control and Safe Streets Act of 1968] and this title. Since certain technical activities — such as the use of a pen register — fall within the definition of electronic surveillance under this title, but not within the definition of wire or oral communications under chapter 119 [of Title 18, U.S.C.], the bill provides an affirmative defense to a law enforcement or investigative officer who engages in such an activity for law enforcement purposes in the course of his official duties, pursuant to a search warrant or court order.*

The House Permanent Select Committee on Intelligence also noted that, "[o]ne of the important purposes of the bill is to afford security to intelligence personnel so that if they act in accordance with the statute and the court order, they will be insulated from liability; it is not to afford them immunity when they intentionally violate the law."

Thus, the legislative history appears to reflect an intention that the phrase "authorized by statute" was a reference to chapter 119 of Title 18 of the U.S. Code (Title III) and to FISA itself, rather than having a broader meaning, in which case a clear indication of Congress's intent to amend or repeal it might be necessary before a court would interpret a later statute as superceding it. Nevertheless, without taking into account the legislative history, the phrase might be seen as having a more expansive application. This broader view appears to have been taken by the Administration in its position regarding the authority provided by the AUMF.

Next, the Administration turns to the wiretap prohibition contained in Title III, which contains an exception for surveillance carried out pursuant to FISA. Pointing out that the exception in section 109 is broad in comparison to the exception in 18 U.S.C. § 2511, whose prohibition applies "except as otherwise specifically provided in this chapter," the Administration appears to conclude that the broader FISA exception subsumes the narrower exception in Title III, at least with respect to national security wiretaps. It cites two of the specific exceptions in Title III. First, 18 U.S.C. 2511(2)(e) provides a defense to criminal liability to government agents who "conduct electronic surveillance, as defined in section 101 of [FISA], as authorized by that Act." The Administration appears to interpret "as authorized by [FISA]" to include activity exempt from the FISA prohibition by virtue of its being authorized by other statute. Under this

interpretation, subsection 2511(2)(e) should be read to exempt electronic surveillance "as authorized by FISA or any other statute."

Similar analysis leads the Administration to conclude that the Title III exclusivity provision in 18 U.S.C. § 2511(2)(f) poses no impediment. Section 2511(2)(f), which exempts

U.S. foreign intelligence activities not covered by FISA, also provides that the procedures in Title III and FISA "shall be the exclusive means by which electronic surveillance, as defined in section 101 of [FISA], and the interception of domestic wire, oral, and electronic communications may be conducted." The Administration argues that

> *By expressly and broadly excepting from its prohibition electronic surveillance undertaken "as authorized by statute," section 109 of FISA permits an exception to the "procedures" of FISA referred to in 18 U.S.C. § 2511(2)(f) where authorized by another statute, even if the other authorizing statute does not specifically amend section 2511(2)(f).*[4256]

In other words, it appears, the FISA "procedures" described in Title III (in 18 U.S.C. § 2511(2)(f)) can include any other procedures authorized, expressly or implicitly, by any other statute, because these would not be prohibited by FISA section 109. This reading would seem to make the exclusivity provision meaningless, a construction not ordinarily favored by courts. It may be questioned whether Congress actually intended for the exception to the criminal prohibition in FISA to negate the more specific requirements in Title III and its exclusivity provision.

The Administration continues

> *Some might suggest that FISA could be read to require that a subsequent statutory authorization must come in the form of an amendment to FISA itself. But under established principles of statutory construction, the AUMF and FISA must be construed in harmony to avoid any potential conflict between FISA and the President's Article II authority as Commander in Chief. Accordingly, any ambiguity as to whether the AUMF is a statute that satisfies the requirements of FISA and allows electronic surveillance in the conflict with al Qaeda without complying with FISA procedures must be resolved in favor of an interpretation*

[4256] OLA Letter, supra note 10, at 3.

> *that is consistent with the President's long-recognized authority.*[4257]

It is unclear how FISA and the AUMF are seen to collide. Principles of statutory construction generally provide guidance for interpreting Congress's intent with respect to a statute where the text is ambiguous or a plain reading leads to anomalous results; and where possible, a statute that might be read in such a way as to violate the Constitution is to be construed to avoid the violation. However, such principles are only to be applied where there is a genuine ambiguity or conflict between two statutes,[4258] and where there is some possible reading that might avoid a conflict. While the Court has been known to read into a statute language that does not appear, it would be unusual for the Court to read express statutory language out of a statute, except by declaring at least that portion of the statute to be unconstitutional. It would not ordinarily be presumed that Congress meant the opposite of what it said, merely because its words are constitutionally problematic.

It appears that the Administration's views regarding the statutory authorization supporting the NSA activity also rely on an assumption that FISA, at least to the extent that its provisions apply to activity conducted in the war against terrorism, may be an unconstitutional encroachment into presidential powers. Its argument, partly based on the exigencies of the post-9/11 period, seems to imply such a view of FISA:

> *As explained above. the President determined that it was necessary following September 11 to create an early warning detection system. FISA could not have provided the speed and agility required for the early warning detection system. In addition, any legislative change, other than the AUMF, that the President might have sought specifically to create such an early warning system would have been public and would have tipped off our enemies concerning our intelligence limitations and capabilities.*

[4257] *Id.* at 4 (citing INS v. Cyr, 533 U.S. 289, 300 v. (2001) (holding that "if an otherwise acceptable construction of a statute would raise serious constitutional problems, and where an alternative interpretation of the statute is 'fairly possible,' we are obligated to construe the statute to avoid such problems") (internal citation omitted); *Zadvydas v. Davis*, 533 U.S. 678, 689 (2001) (noting that a "'cardinal principle' of statutory interpretation [is] that when an Act of Congress raises 'a serious doubt' as to its constitutionality, 'this Court will first ascertain whether a construction of the statute is fairly possible by which the question may be avoided'") (citations omitted)). Both cited cases involved due process implications rather than whether a statute violated the principle of separation of powers by encroaching on presidential powers.

[4258] *See, e.g*, Ruckelshaus v. Monsanto Co., 467 U.S. 986, 1018 (1984) ("Where two statutes are capable of co-existence, it is the duty of the courts, absent a clearly expressed congressional intention to the contrary, to regard each as effective" (internal quotation marks omitted)).

Insofar as the Administration's position is founded upon a concern that FISA was not adequate to the needs of the moment, it might be considered whether 50 U.S.C. §§ 1802 (Attorney General certification that certain conditions are met) and 1805(f) (72-hour emergency order), where applicable, may have provided some of the flexibility that the President considered warranted under the circumstances. To the extent that a lack of speed and agility is a function of internal Department of Justice procedures and practices under FISA, it may be argued that the President and the Attorney General could review those procedures and practices in order to introduce more streamlined procedures to address such needs. Where FISA's current statutory framework proved inadequate to the task, legislative changes might be pursued.

The Administration argues that, "any legislative change, other than the AUMF, that the President might have sought specifically to create such an early warning system would have been public and would have tipped off our enemies concerning our intelligence limitations and capabilities."[4259] However, some of these concerns may be minimized or addressed by virtue of the fact that, where appropriate, oversight may be conducted in executive session; and access to classified information, including information relating to sensitive intelligence sources and methods, may be limited by statute, by House and Senate procedures, or both. Nevertheless, to some degree, the federal legislative process is, by its very nature, public. Depending upon how such legislation was structured, an argument may be made that it might give rise to some inferences as to present or future intelligence practices or capabilities. On the other hand, the legislative vehicle chosen and the legislative language used might minimize some of those concerns. In addition, no legal precedent appears to have been presented that would support the President's authority to bypass the statutory route when legislation is required, based an asserted need for secrecy.[4260]

Conclusion

Whether an NSA activity is permissible under the Fourth Amendment and the statutory scheme outlined above is impossible to determine without an understanding of the specific facts involved and the nature of the President's authorization, which are for the most part classified. If the NSA operations at

---

[4259] See OLA Letter, supra note 10, at 5.

[4260] *C.f.* Youngstown Sheet and Tube Co. v. Sawyer, 343 U.S. 579, 603-04 (Frankfurter, J., concurring):

The utmost that the Korean conflict may imply is that it may have been desirable to have given the President further authority, a freer hand in these matters. Absence of authority in the President to deal with a crisis does not imply want of power in the Government. Conversely the fact that power exists in the Government does not vest it in the President. The need for new legislation does not enact it. Nor does it repeal or amend existing law.

issue are encompassed in the definition of "electronic surveillance" set forth under FISA, it would seem consistent with Congress's intent that such surveillance must be carried out in accordance with FISA procedures. Although section 109(a) of FISA does not explicitly limit the language "as authorized by statute" to refer only to Title III and to FISA, the legislative history suggests that such a result was intended. The exceptions to the criminal prohibition under Title III, however, are specifically limited to those mentioned within Title III. Even if the AUMF is read to provide the statutory authorization necessary to avoid criminal culpability under FISA, it does not necessarily follow that the AUMF provides a substitute authority under FISA to satisfy the more specific language in Title III. To the extent that any of the electronic surveillance at issue may be outside the sweep of FISA or Title III, Congress does not appear to have legislated specifically on the subject, nor, by the absence of legislation, to have authorized or acquiesced in such surveillance.

Whether such electronic surveillances are contemplated by the term "all necessary and appropriate force" as authorized by the AUMF turns on whether they are, under the Hamdi analysis, an essential element of waging war. Even assuming that the President's role as Commander in Chief of the Armed Forces is implicated in the field of electronic surveillance for the collection of foreign intelligence information within the United States, it should not be accepted as a foregone conclusion that Congress has no role to play.[4261] By including the emergency authorization for electronic surveillance without a court order for fifteen days following a declaration of war, Congress seems clearly to have contemplated that FISA would continue to operate during war, although such conditions might necessitate amendments. Amendments to FISA in the USA PATRIOT Act and subsequent legislation further demonstrate Congress's willingness to make adjustments. The history of Congress's active involvement in regulating electronic surveillance within the United States leaves little room for arguing that Congress has accepted by acquiescence the NSA operations here at issue.

To the extent that the Administration seems to base its interpretation of the AUMF and FISA on the assumption that a reading contrary to the one they rely upon would be an unconstitutional violation of separation-of-powers principles, it appears to regard the matter as deserving the highest level of deference under

---

[4261] Id. at 643-44 (Jackson, J., concurring).

There are indications that the Constitution did not contemplate that the title Commander in Chief of the Army and Navy will constitute him also Commander in Chief of the country, its industries and its inhabitants. He has no monopoly of 'war powers,' whatever they are. While Congress cannot deprive the President of the command of the army and navy, only Congress can provide him an army or navy to command. It is also empowered to make rules for the 'Government and Regulation of land and naval Forces,' by which it may to some unknown extent impinge upon even command functions.

Youngstown's first category[4262] simply by virtue of the assumption that it would survive scrutiny under the third category. To conclude that Congress's enactments are unconstitutional and therefore could not reflect Congress's intent seems to beg the question.

Court cases evaluating the legality of warrantless wiretaps for foreign intelligence purposes provide some support for the assertion that the President possesses inherent authority to conduct such surveillance. The Court of Review, the only appellate court to have addressed the issue since the passage of FISA, "took for granted" that the President has inherent authority to conduct foreign intelligence electronic surveillance under his Article II powers, stating that, "assuming that was so, FISA could not encroach on that authority."[4263] However, much of the other lower courts' discussions of inherent presidential authority occurred prior to the enactment of FISA, and no court has ruled on the question of Congress's authority to regulate the collection of foreign intelligence information.

From the foregoing analysis, it appears unlikely that a court would hold that Congress has expressly or impliedly authorized the NSA electronic surveillance operations here under discussion, and it would likewise appear that, to the extent that those surveillances fall within the definition of "electronic surveillance" within the meaning of FISA or any activity regulated under Title III, Congress intended to cover the entire field with these statutes. To the extent that the NSA activity is not permitted by some reading of Title III or FISA, it may represent an exercise of presidential power at its lowest ebb, in which case exclusive presidential control is sustainable only by "disabling Congress from acting upon the subject."[4264] While courts have generally accepted that the President has the power to conduct domestic electronic surveillance within the United States inside the constraints of the Fourth Amendment, no court has held squarely that the Constitution disables the Congress from endeavoring to set limits on that power. To the contrary, the Supreme Court has stated that Congress does indeed have power to regulate domestic surveillance,[4265] and has not ruled on the extent to which Congress can act with respect to electronic surveillance to collect foreign intelligence information. Given such uncertainty, the Administration's legal

Summary

Public interest in the means by which the government may collect telephone call records has been raised by ongoing revelations regarding alleged intelligence activity by the National Security Agency (NSA) and the Federal Bureau of Investigation (FBI). According to a USA Today article from May 11, 2006, the NSA allegedly sought and obtained records of telephone numbers called and received from millions of telephones within the United States from three telephone service providers; a fourth reportedly refused to provide such records. Additionally, a series of reports issued by the Department of Justice's Office of the Inspector General (DOJ OIG), most recently in January of 2010, indicate that, between 2002 and 2006, consumer records held by telephone companies had been provided to the FBI through the use of "exigent letters" and other informal methods that fell outside of the national security letter (NSL) process embodied in statute and internal FBI policies.

The Supreme Court has held that there is no Fourth Amendment protection of telephone calling records held in the hands of third party providers, where the content of any call is not intercepted. However, this report summarizes existing statutory authorities regarding access by the government, for either foreign intelligence or law enforcement purposes, to information related to telephone calling patterns or practices. Where pertinent, it also discusses statutory prohibitions against accessing or disclosing such information, along with relevant exceptions to those prohibitions.

Statutory provisions authorizing, pursuant to court order, the use of pen registers and trap and trace devices exist in both the Foreign Intelligence Surveillance Act (FISA), 50 U.S.C. § 1841 et seq., and, for law enforcement purposes, in 18 U.S.C. § 3121 et *seq*.

FISA's "business records" provision, 50 U.S.C. § 1861, provides authority, pursuant to court order, for requests for production of "any tangible thing" relevant to collection of foreign intelligence information not concerning a U.S. person, or relevant to an investigation into international terrorism or clandestine intelligence activities. Under 50 U.S.C. § 1861, an investigation concerning a U.S. person may not be based solely on activities protected by the First Amendment.

Access to stored electronic communications is addressed in 18 U.S.C. § 2701 et seq. 18 U.S.C. § 2702 prohibits voluntary disclosure of customer communications records by a service provider unless it falls within one of several exceptions. Required disclosure of customer records to the government under certain circumstances is addressed under 18 U.S.C. § 2703, including, among others, disclosure pursuant to a warrant or grand jury or trial subpoena. 18 U.S.C. § 2709 is a national security letter provision, under which a wire or electronic service provider may be compelled to provide subscriber information and toll billing records information, or electronic communication transactional records in its custody or possession.

Finally, § 222 of the Communications Act of 1934, as amended, protects customer proprietary network information, and violations of pertinent provisions of law or regulation may expose service providers to criminal sanctions, civil penalties, and forfeiture provisions.

Introduction

Public interest in the means by which the government may collect telephone call records has been raised by ongoing revelations regarding alleged intelligence activity by the National Security Agency (NSA) and the Federal Bureau of Investigation (FBI). According to a *USA Today* article from May 11, 2006, the NSA allegedly sought and obtained records of telephone numbers called and received from millions of telephones within the United States from three telephone service providers; a fourth reportedly refused to provide such records.[4266] Additionally, a series of reports issued by the Department of Justice's Office of the Inspector General (DOJ OIG), most recently in January of 2010, indicate that, between 2002 and 2006, consumer records held by telephone companies had been provided to the FBI through the use of "exigent letters" and other informal methods that fell outside of the national security letter (NSL) process embodied in statute and internal FBI policies.[4267] These reports also indicate that records may have been sought without demonstrating a relationship to an active investigation.[4268]

This report summarizes legal authorities regarding access by the government, for either foreign intelligence or law enforcement purposes, to information related to telephone calling patterns or practices. Where pertinent, it also discusses statutory prohibitions against accessing or disclosing such information, along with relevant exceptions to those prohibitions.

[4266] Leslie Cauley, NSA Has Massive Database of Americans' Phone Calls; 3 Telecoms Help Government Collect Billions of Domestic Records, USA TODAY, May 11, 2006, at 1A. The story alleged that Verizon, BellSouth, and AT&T provided calling records in response to the NSA's inquiry or production demand, while Qwest did not. In December of 2008, more revelations regarding an alleged NSA program, given the codename "Stellar Wind," were reported in the December 22, 2008, issue of Newsweek. See Michael Isikoff, The Fed Who Blew the Whistle, NEWSWEEK, Dec. 22, 2008, at 40, 44.

[4268] Id. at 92-93.

Telephone Records and the Fourth Amendment

The Supreme Court, in *Smith v. Maryland*, 442 U.S. 735 (1979), in a pen register case,[4269] has held that there is no Fourth Amendment protected reasonable expectation of privacy in records of telephone calls held in the hands of third party providers, where the content of any call is not intercepted. The Fourth Amendment to the United States Constitution guarantees:

> *The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.*[4270]

Whether the use of a pen register is a "search and seizure" within the meaning of the Fourth Amendment determines if the government, in compliance with the Constitution, must secure a warrant or court order prior to its installation. In 1979, the United States Supreme Court decided this question in Smith v. Maryland,[4271] holding that the Fourth Amendment does not prohibit the use of pen registers without a warrant. Writing the majority opinion joined by four other justices, Justice Harry Blackmun drew a distinction between the acquisition of contents of telephone communications using electronic listening devices, which the Court in Katz v. United States[4272] had deemed to be a "search" under the Fourth Amendment, and the capture of electronic impulses that identify the numbers dialed on a telephone using a pen register device. According to the majority in Smith, it is a constitutionally significant difference that pen registers do not record the contents of communications, in contrast to the listening devices employed in Katz.[4273] The Court explained that the Fourth Amendment does not apply to the use of pen registers because individuals do not have a legitimate expectation of privacy against invasion by government action, that protects the numbers dialed into a telephone system:

All telephone users realize that they must "convey" phone numbers to the telephone company, since it is through telephone company switching equipment

---

[4269] A pen register is a device or process which records the dialing, routing, addressing, or signaling information transmitted in conjunction with an electronic communication, but does not record the contents of that communication. See 18 U.S.C. § 3127(3).

[4270] U.S. CONST. amend. IV.

[4271] 442 U.S. 735 (1979).

[4272] 389 U.S. 347 (1967).

[4273] Smith, 442 U.S. at 741 (emphasis in original).

that their calls are completed. All subscribers realize, moreover, that the phone company has facilities for making permanent records of the numbers they dial, for they see a list of their long-distance (toll) calls on their monthly bills. In fact, pen registers and similar devices are routinely used by telephone companies "for the purposes of checking billing operations, detecting fraud, and preventing violations of law."[4274]

The Court stated that telephone customers, by voluntarily conveying phone numbers to the telephone company and "expos[ing] that information to its equipment in the ordinary course of business," assume the risk that the company may disclose such information to law enforcement.[4275] Because there is no actual or legitimate expectation of privacy in the numbers dialed from a telephone, the installation and use of a pen register is not a "search" requiring a warrant under the Fourth Amendment, the Court ruled.[4276]

In contrast, the dissenting opinions in Smith concluded that telephone numbers dialed from a phone are entitled to the same constitutional protection that telephone conversations receive under Katz because such numbers are not without "content" - they "reveal the identities of the persons and the places called, and thus reveal the most intimate details of a person's life."[4277] Furthermore, the dissenters objected to the majority's characterization that the use of a telephone involves an assumption of risk on the part of the customer that telephone dialing information might be disclosed to the government; assumption of risk generally requires there to have been a choice to engage in the activity, and "as a practical matter, individuals have no realistic alternative" to the use of a telephone.[4278]

Although the protections of the Fourth Amendment may not reach records of telephone calls held by third parties, Congress has enacted a number of statutes since the Smith decision that both permit access by the government for foreign intelligence or law enforcement purposes to information relating to telephone numbers dialed from or received by a particular telephone number, as well as duration and usage, while simultaneously imposing limitations as to how such information may be accessed and under what circumstances it may be used.

[4278] Id. at 749 (Marshall, J., dissenting).

Statutory Provisions

Information regarding telephone calling patterns, duration, usage, and length of service may be sought by the government directly through the use of pen registers[4279] or trap and trace devices.[4280] Statutory provisions authorizing, pursuant to court order, the use of pen registers and trap and trace devices exist in both the Foreign Intelligence Surveillance Act (FISA), 50 U.S.C. § 1841 et seq., and, for law enforcement purposes, in 18 U.S.C. § 3121 et seq.

Telephone calling activity may also be collected indirectly by seeking telephone toll or transactional records from third party providers. For example, FISA's "business records" provision, 50 U.S.C. § 1861, authorizes court orders to compel the production of "any tangible thing" relevant to collection of foreign intelligence information not concerning a U.S. person, or relevant to an investigation into international terrorism or clandestine intelligence activities.[4281]

Access to stored electronic communications is also addressed in 18 U.S.C. § 2701 *et seq*. 18 U.S.C. § 2702 prohibits voluntary disclosure of customer communications records by a service provider unless it falls within one of several exceptions. Required disclosure of customer records to the government under certain circumstances is addressed under 18 U.S.C. § 2703, including, among others, disclosure pursuant to a warrant or grand jury or trial subpoena. 18 U.S.C. § 2709 is a national security letter provision,[4282] under which a wire or electronic service provider[4283] may be compelled to provide subscriber information and toll

---

[4279] Under 50 U.S.C. § 1841(2), which cross references the definition in 18 U.S.C. § 3127(3), the term "pen register" "means a device or process which records or decodes dialing, routing, addressing, or signaling information transmitted by an instrument or facility from which a wire or electronic communication is transmitted, provided, however, that such information shall not include the contents of any communication, but such term does not include any device or process used by a provider or customer of a wire or electronic communication service for billing, or recording as an incident to billing, for communications services provided by such provider or any device or process used by a provider or customer of a wire communication service for cost accounting or other like purposes in the ordinary course of its business."

[4280] Under 50 U.S.C. § 1841(2), which cross references the definition in 18 U.S.C. § 3127(4), the term "trap and trace device" "means a device or process which captures the incoming electronic or other impulses which identify the originating number or other dialing, routing, addressing, and signaling information reasonably likely to identify the source of a wire or electronic communication, provided, however, that such information shall not include the contents of any communication."

[4281] Under 50 U.S.C. § 1861, an investigation concerning a U.S. person may not be based solely on First Amendment protected activities.

[4282] See CRS Report RL33320, National Security Letters in Foreign Intelligence Investigations: Legal Background and Recent Amendments, by Charles Doyle.

[4283] Under 18 U.S.C. § 2709(f), "A library (as that term is defined in section 213(1) of the Library Services and Technology Act (20 U.S.C. 9122(1)), the services of which include access to the

billing records information, or electronic communication transactional records in its custody or possession in response to a request by the Director of the Federal Bureau of Investigation (FBI) if the Director of the FBI, or his designee in a position not lower than Deputy Assistant Director at Bureau headquarters or a Special Agent in Charge designated by the FBI Director in a field office, certifies that the records or information sought is relevant to an authorized investigation to protect against international terrorism or clandestine intelligence activities, provided that such an investigation of a U.S. person is not conducted solely on the basis of First Amendment protected activities.

Finally, § 222 of the Communications Act of 1934, as amended, 47 U.S.C. § 222, restricts the voluntary disclosure of customer proprietary network information by telecommunications service providers. Violations of the pertinent provisions of law or regulation may expose service providers to criminal sanctions, civil penalties and forfeiture provisions, 47 U.S.C. §§ 501-503.[4284]

Each of these statutory schemes is described in more detail below.

Pen Registers and Trap and Trace Devices for Foreign Intelligence and International Terrorism Investigations Under FISA

Under 50 U.S.C. § 1842,[4285] the Attorney General or a designated attorney for the government may apply for an ex parte court order authorizing the use of a pen register or trap and trace device to a Foreign Intelligence Surveillance Court (FISC) judge or to a U.S. magistrate judge designated by the Chief Justice of the United States to have the power to hear applications or grant orders approving installation and use of a pen register or trap and trace device on behalf of an FISC judge. The application must be approved by the Attorney General or a designated government attorney; must identify the federal officer seeking to use the pen register or trap and trace device; and must include a certification that the information likely to be obtained is foreign intelligence information[4286] not

---

Internet, books, journals, magazines, newspapers, or other similar forms of communication in print or digitally by patrons for their use, review, examination, or circulation, is not a wire or electronic communication service provider for purposes of this section, unless the library is providing the services defined in section 2510(15) ("electronic communication service") of this title." Subsection (f) was added by P.L. 109-178, § 5.

[4284] See CRS Report RL34409, Selected Laws Governing the Disclosure of Customer Phone Records by Telecommunications Carriers, by Kathleen Ann Ruane.

[4285] Other provisions of this chapter deal with authorization for pen registers or trap and trace devices during emergencies, 50 U.S.C. § 1843, authorization during time of war, 50 U.S.C. 1844, use of information gathered under a FISA pen register or trap and trace device, 50 U.S.C. § 1845, and congressional oversight, 50 U.S.C. § 1846.

[4286] Under 18 U.S.C. § 1801(e), "foreign intelligence information" is defined to mean information that relates to, and if concerning a United States person is necessary to, the ability of the United

concerning a U.S. person[4287] or that the information is relevant to an ongoing investigation to protect against international terrorism or clandestine intelligence activities. An investigation of a U.S. person may not be conducted solely on the basis of First Amendment protected activities.

The order must specify the identity of the person who is the subject of the investigation, if known. If known, the order must identify the person to whom the telephone line or other facility to which the pen register or trap and trace device is to be attached is leased or in whose name it is listed. In addition, the order must list the attributes of the communications to which it applies, such as the number or other identifier and, if known, the location of the telephone line or other facility involved. In the case of a trap and trace device, the order must also identify the geographic limits of the trap and trace order.

Such an order, at the request of the applicant, also directs the provider of the wire or electronic service, landlord, custodian, or other person, to furnish any information, facilities, or technical assistance needed to accomplish the installation and operation of the pen register or trap and trace device in a manner that will protect its secrecy and minimize interference with the services provided. In addition, the order directs the provider, landlord, custodian, or other person not to disclose the existence of the investigation or the pen register or trap and trace device to anyone unless or until ordered to do so by the court. Records concerning the pen register or trap and trace device or the aid furnished are to be kept under security procedures approved by the Attorney General and the Director of National Security under 50 U.S.C. § 1805(b)(2)(C). The order also directs the applicant for the order to provide compensation for reasonable expenses incurred by the provider, landlord, custodian, or other person in providing information, facilities, or technical assistance.

States to protect against actual or potential attack or other grave hostile acts of a foreign power or an agent of a foreign power, sabotage or international terrorism by a foreign power or an agent of a foreign power, or clandestine intelligence activities by an intelligence service or network of a foreign power or by an agent of a foreign power; or information with respect to a foreign power or foreign territory that relates to, and if concerning a United States person is necessary to the national defense or the security of the United States or the conduct of the foreign affairs of the United States. The phrase "agents of a foreign power" currently includes, among others, non-U.S. persons that are engaged in international terrorism, but are not linked to an identifiable terrorist organization or foreign government. For a more detailed discussion of treatment of so-called "lone wolf" terrorists under FISA, see CRS Report R40138, Amendments to the Foreign Intelligence Surveillance Act (FISA) Set to Expire February 28, 2010, by Anna C. Henning and Edward C. Liu, at 2-4.

[4287] Under 50 U.S.C. § 1801(i), "United States person" means a citizen of the United States, an alien lawfully admitted for permanent residence (as defined in section 1101(a)(20) of Title 8), an unincorporated association a substantial number of members of which are citizens of the United States or aliens lawfully admitted for permanent residence, or a corporation which is incorporated in the United States, but does not include a corporation or an association which is a foreign power, as defined in subsection (a)(1), (2), or (3) of this section.

Under 50 U.S.C. § 1842(d)(2)(C)(i), upon the request of the applicant for the court order, the court shall direct the wire or electronic service provider to provide the federal officer using the pen register or trap and trace device with the name; address; and the telephone number, instrument number or subscriber number or identifier of the customer or subscriber using the service covered by the order for the period specified by the order, including temporarily assigned network address or associated routing or transmission information. The service provider must also provide, if so ordered by the court upon the applicant's request, information on length of service of the customer or subscriber, as well as local or long distance telephone records of the subscriber or customer, and, if applicable, any records on periods of usage by the customer or subscriber. Further, the court, at the applicant's request, may order disclosure by the service provider of any mechanisms and sources of payment for the service (i.e., credit card, bank account).

Similarly, under 50 U.S.C. § 1842(d)(2)(C)(ii), if the information is available with respect to any customer or subscriber of incoming or outgoing communications to or from the service covered by the order, the court, upon the request of the applicant for the order, is to direct the wire or electronic service provider to provide the name; address; telephone number, instrument number or other subscriber number or identifier, of such customer or subscriber, as well as length of service provided to and types of serviced utilized by the subscriber or customer.

In general, the duration of an order issued under this section is not to exceed 90 days, with the possibility of extension for periods of not more than 90 days. However, if the applicant for the order certifies that the information likely to be obtained is foreign intelligence information not concerning a United States person, then an extension may be for up to a year. No cause of action may be brought against any wire or electronic service provider, landlord, custodian, or other person that furnishes information, facilities, or technical assistance pursuant to an order issued under this provision. Unless otherwise ordered by the judge, the results of the pen register or trap and trace device are to be provided to the authorized government official or officials at reasonable intervals.

Under 50 U.S.C. § 1805(i), as added by the FISA Amendments Act of 2008,[4288] if an FISC judge grants an application by the government to conduct electronic surveillance under FISA, then, upon the request of the applicant, the FISC judge shall also authorize the installation and use of pen registers and trap and trace devices. In such circumstances, the provisions of 50 U.S.C. § 1842(d)(2) regarding disclosure of customer or subscriber information to the government would apply.

[4288] P.L. 110-261, § 105.

Pen Registers or Trap and Trace Devices Generally, and for Use in an Ongoing Criminal Investigation

18 U.S.C. § 3121 prohibits the installation and use of a pen register or trap and trace device without first obtaining a court order under FISA or under 18 U.S.C. § 3123. This prohibition does not apply to use by an electronic or wire service provider relating to:

- the operation, maintenance and testing of a service or protection of the rights or property of the service provider;
- the protection of users of the service from abuse or unlawful use of the service;
- to recording of the fact that a wire or electronic communication was initiated or completed to protect the service provider, another provider furnishing service toward completion of the wire communication, or a user of the service from fraudulent, unlawful or abusive use of the service; or
- to use where the consent of the user of the service has been obtained.

A government agency authorized to install and use a pen register or trap and trace device under the provisions of this chapter of Title 18, U.S.C., or under state law must use technology reasonably available to it that restricts the recording or decoding of electronic or other impulses to the dialing, routing, addressing, and signaling information utilized in the processing and transmitting of wire or electronic communications in a manner that does not include the contents of that communication.

An application for a court order authorizing a pen register or trap and trace device under this chapter must be made pursuant to 18 U.S.C. § 3122 in writing under oath or affirmation to a court of competent jurisdiction. Such an application must include the identity of the attorney for the government or the state law enforcement or investigative officer making the application and the identity of the law enforcement agency conducting the investigation, as well as a certification by the applicant that the information likely to be obtained is relevant to an ongoing criminal investigation being conducted by that agency.

Under 18 U.S.C. § 3123, the court shall enter an ex parte order authorization installation and use of a pen register or trap and trace device anywhere in the United States if the court finds that the applicant for the order has made such a certification. An order may authorize installation and use of a pen register or trap and trace device for a period of up to 60 days, which can be extended by court order for additional periods of no more than 60 days. The order must also direct that the order be sealed until otherwise ordered by the court, and must prohibit the person owning or leasing the line or other facility to which the pen register or trap and trace device is attached or applied, or who is obligated by the order to assist the applicant, from disclosing the existence of the pen register or trap and

trace device or of the investigation to the listed subscriber or to any other person unless or until the court orders otherwise.[4289]

Access to Business Records for Foreign Intelligence and International Terrorism Investigations

Under 50 U.S.C. § 1861, the Director of the Federal Bureau of Investigation (FBI) or a designee of the Director, whose rank shall not be lower than Assistant Special Agent in Charge, may apply to the FISA court for an order granting the government access to any tangible item (including books, records, papers, documents, and other items) for an investigation to obtain foreign intelligence information not concerning a United States person, or to protect against international terrorism or clandestine intelligence activities. Such an investigation of a United States person may not be conducted solely upon the basis of activities protected by the first amendment to the Constitution.

The application for such an order must include a statement of facts demonstrating that there are reasonable grounds to believe that the tangible things sought are relevant to an authorized or preliminary investigation to protect against international terrorism or espionage, or to obtain foreign intelligence information not concerning a U.S. person.[4290] However, certain tangible items are deemed presumptively relevant to an investigation if the application's statement of facts shows that the items sought pertain to a foreign power or an agent of a foreign power, the activities of a suspected agent of a foreign power who is the subject of such authorized investigation, or an individual in contact with, or known to, a suspected agent of a foreign power who is the subject of such authorized investigation.[4291]

The FISA court judge shall approve an application for an order under 50 U.S.C. § 1861, as requested or as modified, upon a finding that the application complies with statutory requirements. The order must contain a particularized description

---

[4289] 18 U.S.C. § 3124 addresses assistance in installation and use of the pen register or trap and trace device; while 18 U.S.C. § 3125 deals with emergency installation of a pen register and trap or trap and trace device. 18 U.S.C. § 2136 provides for annual reports to Congress by the Attorney General on the number of applications by law enforcement agencies of the Department of Justice for pen registers or trap and trace devices orders, as well as certain details with respect to court orders issued in response to such applications.

[4290] 50 U.S.C. § 1861(b)(2)(A).

[4291] The phrase "agents of a foreign power" currently includes, among others, non-U.S. persons that are engaged in international terrorism, but are not linked to an identifiable terrorist organization or foreign government. For a more detailed discussion of treatment of so-called "lone wolf" terrorists under FISA, see CRS Report R40138, Amendments to the Foreign Intelligence Surveillance Act (FISA) Set to Expire February 28, 2010, by Anna C. Henning and Edward C. Liu, at 2-4.

of the items sought, provide for a reasonable time to assemble them, and be limited to things which may be obtained under a grand jury subpoena or an order of a U.S. court for production of records or tangible things.[4292] The order to produce the tangible things (production order) is also accompanied by a nondisclosure requirement (nondisclosure order) that prohibits the recipient from disclosing to any other person that the FBI has sought the tangible things described in the order, with limited exceptions.[4293]

The recipient may immediately challenge the legality of the production order by filing a petition with the FISA court; however, the recipient must wait one year before challenging the nondisclosure order.[4294] A FISA court judge considering the recipient's petition to modify or set aside the production order may do so only if the judge finds that the order does not meet statutory requirements or is otherwise unlawful.[4295] A nondisclosure order may be modified or set aside if the judge finds that there is no reason to believe that disclosure may endanger the national security of the United States; interfere with a criminal, counterterrorism, or counterintelligence investigation; interfere with diplomatic relations; or endanger the life or physical safety of any person.[4296] If, at the time the individual files the petition for judicial review of a nondisclosure order, the Attorney General, Deputy Attorney General, an Assistant Attorney General, or the Director of the FBI certifies that disclosure may endanger the national security of the United States or interfere with diplomatic relations, then the FISA judge must treat such government certification as conclusive unless the judge finds that the certification was made in bad faith.[4297]

Authority to collect communications records under FISA is currently set to expire on December 31, 2009. After this date, and absent congressional extension, only records from common carriers, public accommodation facilities, storage facilities, and vehicle rental facilities may be sought under FISA.[4298]

[4292] 50 U.S.C. § 1861(c).

[4293] A recipient of a FISA order under this section may disclose its existence to persons to whom disclosure is necessary to comply with the order, to an attorney to obtain legal advice with respect to the production of things in response to the order, as well as to other persons approved by the FBI. 50 U.S.C. § 1861(d)(1).

[4294] 50 U.S.C. § 1861(f)(2)(A).

[4295] 50 U.S.C. § 1861(f)(2)(B).

[4296] 50 U.S.C. § 1861(f)(2)(C)(i).

[4297] 50 U.S.C. § 1861(f)(2)(C)(ii).

[4298] See CRS Report R40138, Amendments to the Foreign Intelligence Surveillance Act (FISA) Set to Expire February 28, 2010, by Anna C. Henning and Edward C. Liu, at 7-11.

Access to Stored Electronic Communications and Transactional Records

Access to stored electronic communications and transactional records is addressed in 18 U.S.C. § 2701 et seq. Under 18 U.S.C. § 2702, voluntary disclosure of customer communications records by a service provider is prohibited unless it falls within one of several exceptions, including

- disclosure as authorized in 18 U.S.C. § 2703;
- disclosure with the lawful consent of the customer or subscriber; or
- disclosure to a governmental entity, if the provider, in good faith, believes that an emergency involving danger of death or serious physical injury to any person requires disclosure without delay of information relating to the emergency.[4299]

In various reports regarding the use of "exigent letters," the DOJ OIG noted that one of the justifications for the use of exigent letters and other informal governmental requests for telephone records had been based upon this voluntary emergency disclosure provision.[4300] However, these reports also concluded that many of the situations in which these tools were used did not appear to meet the emergency standard provided by this exception.[4301]

Under 18 U.S.C. § 2703, a provider of electronic communication service or remote computing service shall disclose to a government entity the name, address, local and long distance telephone connection records, or records of session times and durations, length of service and types of service utilized, telephone instrument number or other subscriber number or identity, including temporarily assigned network address, and means and source of payment for such service pursuant to

- a warrant;

[4299] This language was added by P.L. 109-177, Title I, § 107(b)(1)(B). It replaced an exception which covered "disclosure to a governmental entity if the provider reasonably believes that an emergency involving immediate danger of death or serious physical injury to any person justifies disclosure of the information."

[4300] U.S. DEPARTMENT OF JUSTICE OFFICE OF THE INSPECTOR GENERAL, A Review of the Federal Bureau of Investigation's Use of Exigent Letters and Other Informal Requests for Telephone Records, at 260-263, 269 (Jan. 2010), available at http://www.justice.gov/oig/special/s1001r.pdf; U.S. DEPARTMENT OF JUSTICE, OFFICE OF THE INSPECTOR GENERAL, A Review of the Federal Bureau of Investigation's Use of National Security Letters, at 96 (March 2007), available at http://www.usdoj.gov/oig/special/s0703b/final.pdf.

[4301] Id.

- a court order based upon specific and articulable facts showing that there are reasonable grounds to believe that the contents of a wire or electronic communication or the records or other information sought are relevant and material to an ongoing criminal investigation;
- customer or subscriber consent;
- a written request from the governmental entity relevant to a law enforcement investigation regarding telemarketing fraud;
- an administrative subpoena authorized by federal or state statute, or
- a federal or state grand jury subpoena or trial subpoena.

A governmental entity receiving such records or information is not required to provide notice to a subscriber or customer. Nor does any cause of action lie against any service provider of wire or electronic communication service, its officers, employees, agents, or other specified persons for providing information, facilities, or assistance in accordance with the terms of a court order, warrant, subpoena, statutory authorization or certification under this chapter.

18 U.S.C. § 2706 requires a government entity obtaining records or other information under §§ 2702 or 2703 to reimburse the costs reasonably necessary and directly incurred in searching for, assembling, reproducing or otherwise providing such information. The amount of payment is to be mutually agreed upon by the government entity and the person or entity providing the information, or, in the absence of an agreement, determined by the court issuing the production order. The reimbursement requirement does not apply to records or other information maintained by a communications common carrier that relate to telephone records and telephone listings obtained under 18 U.S.C. § 2703 unless a court orders payment upon a determination that the information required is unusually voluminous in nature or otherwise caused an undue burden upon the provider.

National Security Letters

Under 18 U.S.C. § 2709, a national security letter provision,[4302] wire or electronic service providers[4303] must provide subscriber information and toll billing records information, or electronic communication transactional records in its custody or possession in response to a request by the Director of the Federal Bureau of

---

[4302] See CRS Report RL33320, National Security Letters in Foreign Intelligence Investigations: Legal Background and Recent Amendments, by Charles Doyle.

[4303] Under 18 U.S.C. § 2709(f), "A library (as that term is defined in section 213(1) of the Library Services and Technology Act (20 U.S.C. 9122(1)), the services of which include access to the Internet, books, journals, magazines, newspapers, or other similar forms of communication in print or digitally by patrons for their use, review, examination, or circulation, is not a wire or electronic communication service provider for purposes of this section, unless the library is providing the services defined in section 2510(15) ("electronic communication service") of this title." Subsection (f) was added by P.L. 109-178, § 5.

Investigation (FBI) if the Director of the FBI, or his designee in a position not lower than Deputy Assistant Director at Bureau headquarters or a Special Agent in Charge designated by the FBI Director in a field office, certifies that the records or information sought is relevant to an authorized investigation to protect against international terrorism or clandestine intelligence activities, provided that such an investigation of a U.S. person is not conducted solely on the basis of First Amendment protected activities.

Under 18 U.S.C. § 2709(b), if the Director of the Federal Bureau of Investigation, or his designee, certifies that disclosure of the request may result in a danger to the national security of the United States, interference with a criminal, counterterrorism, or counterintelligence investigation, interference with diplomatic relations, or danger to the life or physical safety of any person, no wire or electronic communications service provider, or officer, employee, or agent thereof, shall disclose to any person (other than those to whom such disclosure is necessary to comply with the request or an attorney to obtain legal advice or legal assistance with respect to the request) that the Federal Bureau of Investigation has sought or obtained access to information or records under this section.[4304] The FBI must notify the person or entity to whom a §2709(b) request is made where such a nondisclosure requirement is applicable. A recipient of such a request who notifies those to whom notice is necessary for compliance with the request or who notifies an attorney to obtain legal advice or legal assistance with respect to the request must also advise them of the nondisclosure requirement.

At the request of the Director of the Federal Bureau of Investigation or the designee of the Director, any person making or intending to make a disclosure under this section shall identify to the Director or such designee the person to whom such disclosure will be made or to whom such disclosure was made prior to the request, except that nothing in this section shall require a person to inform the Director or such designee of the identity of an attorney to whom disclosure was made or will be made to obtain legal advice or legal assistance with respect to the request.

The FBI may only disseminate records obtained under this section as provided in guidelines approved by the Attorney General for foreign intelligence collection

---

[4304] P.L. 109-177, § 116(a), rewrote subsection (c) of 18 U.S.C. § 2709, which formerly read, "No wire or electronic communication service provider, or officer, employee, or agent thereof, shall disclose to any person that the Federal Bureau of Investigation has sought or obtained access to information or records under this section." P.L. 109-178, § 4(b), rewrote subsection (c)(4), as amended by P.L. 109-177, § 116(a), which formerly read, "At the request of the Director of the Federal Bureau of Investigation or the designee of the Director, any person making or intending to make a disclosure under this section shall identify to the Director or such designee the person to whom such disclosure will be made or to whom such disclosure was made prior to the request, but in no circumstance shall a person be required to inform the Director or such designee that the person intends to consult an attorney to obtain legal advice or legal assistance."

and foreign counterintelligence investigations conducted by the Federal Bureau of Investigation, and, with respect to dissemination to an agency of the United States, only if such information is clearly relevant to the authorized responsibilities of such agency. On a semiannual basis, the Director of the Federal Bureau of Investigation is required to fully inform the Permanent Select Committee on Intelligence of the House of Representatives and the Select Committee on Intelligence of the Senate, and the Committee on the Judiciary of the House of Representatives and the Committee on the Judiciary of the Senate, concerning all requests made under subsection (b) of this section.

Penalties

Except as provided in 18 U.S.C. § 2703(e), 18 U.S.C. § 2707 provides a civil cause of action for any provider of electronic communication service, subscriber, or other person aggrieved by a knowing or intentional violation of this chapter. The aggrieved party may receive equitable relief and damages. The damages which may be assessed by the court are actual damages suffered by the plaintiff plus any profits made by the violator as a result of the violation. At a minimum, a person entitled to recover damages must receive no less than $1,000. If a court or appropriate department or agency determines that the United States has violated this chapter and that the circumstances surrounding the violation raise questions as to whether a federal officer or employee acted willfully or intentionally with respect to the violation, disciplinary action against that officer or employee may also be initiated.

A person aggrieved by a willful violation of this chapter or a willful violation of 50 U.S.C. § 1845(a), which deals with the use of information gathered through a pen register and trap and trace under FISA, may commence a civil action against the United States in a U.S. district court to receive money damages under 18 U.S.C. § 2712. If the claim is successful in establishing such a violation, the court may assess actual damages, but not less than $10,000, whichever is greater, plus reasonably incurred litigation costs. There is a two year statute of limitations applicable to this provision, and this section states that this is the exclusive remedy against the United States for claims within the purview of the section. The agency or department must reimburse any award under this section to the U.S. treasury. Administrative discipline may also be pursued. A proceeding under 18 U.S.C. § 2712 shall be stayed by the court, upon motion by the United States, if the court determines that civil discovery will adversely affect the government's ability to conduct a related investigation or prosecution of a related criminal case. Such a stay also tolls the statute of limitations.

Communications Act of 1934

Telecommunications carriers are also subject to obligations to guard the confidentiality of customer proprietary network information (CPNI) and to ensure that it is not disclosed to third parties without customer approval or as required by law. Section 222 of the Communication Act of 1934, as amended, establishes a duty of every telecommunications carrier to protect the

confidentiality of its customers' customer proprietary network information.[4305] Section 222 attempts to achieve a balance between marketing and customer privacy.

CPNI includes personally identifiable information derived from a customer's relationship with a telephone company, irrespective of whether the customer purchases landline or wireless telephone service. CPNI is defined as

> *(A) information that relates to the quantity, technical configuration, type, destination, location, and amount of use of a telecommunications service subscribed to by any customer of a telecommunications carrier, and that is made available to the carrier by the customer solely by virtue of the carrier-customer relationship; and (B) information contained in the bills pertaining to telephone exchange service or telephone toll service received by a customer of a carrier.*[4306]

CPNI includes customers' calling activities and history (e.g., phone numbers called, frequency, duration, and time), and billing records.[4307] It does not include subscriber list information, such as name, address, and phone number.[4308]

In section 222, Congress created a framework to govern telecommunications carriers' use of information obtained through provision of a telecommunications service. Section 222 of the act provides that telecommunications carriers must protect the confidentiality of customer proprietary network information. The act limits carriers' abilities to use customer phone records, including for their own marketing purposes, without customer approval and appropriate safeguards. The act also prohibits carriers from using, disclosing, or permitting access to this information without the approval of the customer, or as otherwise required by law, if the use or disclosure is not in connection with the provided service.

Section 222(a) imposes a general duty on telecommunications carriers to protect the confidentiality of proprietary information of other carriers, equipment manufacturers, and customers.[4309] Section 222(b) states that a carrier that

---

[4305] 47 U.S.C. § 222. Section 222 was added to the Communications Act by the Telecommunications Act of 1996. Telecommunications Act of 1996, P.L. 104-104, 110 Stat. 56 (codified at 47 U.S.C. §§ 151 et seq.).

[4306] 47 U.S.C. § 222(h)(1).

[4307] See FED. COMM. COMM'N, Protecting Your Telephone Calling Records (Oct. 20, 2008) available at http://www.fcc.gov/cgb/consumerfacts/phoneaboutyou.html.

[4308] 47 U.S.C. § 222(h)(3).

[4309] 47 U.S.C.§ 222(a).

receives or obtains proprietary information from other carriers in order to provide a telecommunications service may use such information only for that purpose and may not use that information for its own marketing efforts.[4310]

The confidentiality protections applicable to customer proprietary network information are established in section 222(c). Subsection (c)(1) constitutes the core privacy requirement for telecommunications carriers.

> *Except as required by law or with the approval of the customer, a telecommunications carrier that receives or obtains customer proprietary network information by virtue of its provision of a telecommunications service shall only use, disclose, or permit access to individually identifiable customer proprietary network information in its provision of (A) the telecommunications service from which such information is derived, or (B) services necessary to, or used in, the provision of such telecommunications service, including the publishing of directories.*[4311]

Section 222(c)(2) provides that a carrier must disclose CPNI "upon affirmative written request by the customer, to any person designated by the customer."[4312] Section 222(c)(3) provides that a carrier may use, disclose, or permit access to aggregate customer information other than for the purposes described in subsection (1).[4313] Thus, the general principle of confidentiality for customer information is that a carrier may only use, disclose, or permit access to customers' individually identifiable CPNI in limited circumstances: (1) as required by law;[4314] (2) with the customer's approval; or (3) in its provision of the telecommunications service from which such information is derived, or services necessary to or used in the provision of such telecommunications service.

Exceptions to the general principle of confidentiality permit carriers to use, disclose, or permit access to customer proprietary network information to (1) initiate, render, bill, and collect for telecommunications services; (2) protect the rights or property of the carrier, the customers, and other carriers from fraudulent, abusive, or unlawful use of, or subscription to, such services; (3)

[4310] 47 U.S.C. § 222(b).

[4311] 47 U.S.C. § 222(c)(1).

[4312] 47 U.S.C. § 222(c)(2).

[4313] 47 U.S.C. § 222(c)(3). The term "aggregate customer information" means collective data that relates to a group or category of services or customers, from which individual customer identities and characteristics have been removed. 47 U.S.C. § 222(h)(2).

[4314] Whether the statutory provisions discussed in this report would fall within this exception is uncertain.

provide any inbound telemarketing, referral, or administrative services to the customer for the duration of the call; and (4) provide call location information concerning the user of a commercial mobile service for emergency.[4315]

Section 222(e) addresses the disclosure of subscriber list information, and permits carriers to provide subscriber list information to any person upon request for the purpose of publishing directories. The term "subscriber list information" means any information identifying the listed names of subscribers of a carrier and such subscribers' telephone numbers, addresses, or primary advertising classifications, or any combination of such listed names, numbers, addresses, or classifications; that the carrier or an affiliate has published, caused to be published, or accepted for publication in any directory format.[4316]

Customer Proprietary Network Information (CPNI) Regulations

In 1998, the Federal Communications Commission issued its *CPNI Order* to implement section 222.[4317] The CPNI Order and subsequent orders issued by the Commission govern the use and disclosure of customer proprietary network information by telecommunications carriers. When the FCC implemented Section 222, telecommunications carriers were required to obtain express consent from their customers (i.e., "opt-in consent") before a carrier could use customer phone records to market services outside of the customer's relationship with the carrier. The United States Court of Appeals for the Tenth Circuit struck down those rules, finding that they violated the First and Fifth Amendments of the Constitution.[4318]

Subsequently, the FCC amended its CPNI regulations to require telecommunications carriers to receive opt-in (affirmative) consent before disclosing CPNI to third parties or affiliates that do not provide communications-related services.[4319] However, carriers are permitted to disclose CPNI to affiliated parties after obtaining a customer's "opt-out" consent.[4320] "Opt-Out" consent

means that the telephone company sends the customer a notice saying it will consider the customer to have given approval to use the customer's information for marketing unless the customer tells it not to do so (usually within 30 days.)[4321] Carriers are required, prior to soliciting the customer's approval, to provide notice to the customer of the customer's right to restrict use, disclosure, and access to the customer's CPNI.[4322] Carriers are also required to establish safeguards to protect against the unauthorized disclosure of CPNI, including requirements that carriers maintain records that track access to customer CPNI records.[4323] Each carrier is also required to certify annually its compliance with the CPNI requirements and to make this certification publicly available.[4324] The FCC recently proposed $100,000 fines on telephone companies with inadequate certifications regarding compliance with FCC rules protecting customer information from disclosure.[4325] A suit challenging the opt-in requirement is currently pending before the D.C. Circuit.[4326]

Penalties

Carriers in violation of the CPNI requirements are subject to a variety of penalties under the act. Under the criminal penalty provision in section 501 of the act, 47 U.S.C. § 501, any person who willfully and knowingly does, causes or allows to be done, any act, matter, or thing prohibited by the act or declared unlawful, or who willfully and knowingly omits or fails to do what is required by the act, or who willfully or knowingly causes or allows such omission or failure, shall be punished for any such offense for which no penalty (other than a forfeiture) is provided by the act by a fine up to $10,000, imprisonment up to one year, or both, and in the case of a person previously convicted of violating the act, a fine up to $10,000, imprisonment up to two years, or both.

Section 502 of the act, 47 U.S.C. § 502, punishes willful and knowing violations of Federal Communication Commission regulations. Any person who willfully and knowingly violates any rule, regulation, restriction, or condition made or imposed

by the Commission is, in addition to other penalties provided by law, subject to a maximum fine of $500 for each day on which a violation occurs.[4327]

Under section 503(b)(1) of the act, 47 U.S.C. § 503(b)(1), any person who is determined by the Commission to have willfully or repeatedly failed to comply with any provision of the act or any rule, regulation, or order issued by the Commission shall be liable to the United States for a civil money "forfeiture" penalty.[4328] Section 312(f)(1) of the act, 47 U.S.C. § 312(f)(1), defines "willful" as "the conscious and deliberate commission or omission of [any] act, irrespective of any intent to violate" the law. "Repeated" means that the act was committed or omitted more than once, or lasts more than one day. If the violator is a common carrier, section 503(b) authorizes the Commission to assess a forfeiture penalty of up to $130,000 for each violation or for each day of a continuing violation, except that the amount assessed for any continuing violation shall not exceed a total of $1,325,000 for any single act or failure to act.[4329] To impose such a forfeiture penalty, the Commission must issue a notice of apparent liability, and the person against whom the notice has been issued must have an opportunity to show, in writing, why no such forfeiture penalty should be imposed. The Commission will then issue a forfeiture if it finds by a preponderance of the evidence that the person has violated the act or a Commission rule.

Order Code RL34143

August 23, 2007

Elizabeth B. Bazan
Legislative Attorney
American Law Division

Summary

On August 5, 2007, P.L. 110-55, the Protect America Act of 2007, was signed into law by President Bush, after having been passed by the Senate on August 3 and the House of Representatives on August 4. The measure, introduced by Senator McConnell as S. 1927 on August 1, makes a number of additions and modifications to the Foreign Intelligence Surveillance Act of 1978 (FISA), as amended, 50 U.S.C. §§ 1801 *et seq*., adds additional reporting requirements, and sunsets in 180 days. This report describes the provisions of P.L. 110-55, discusses its possible impact on and parallels to existing law, and summarizes the legislative activity with respect to S. 1927, H.R. 3356, and S. 2011.

The Foreign Intelligence Surveillance Act of 1978 was enacted in response both to the Committee to Study Government Operations with Respect to Intelligence Activities (Church Committee) revelations with regard to past abuses of electronic surveillance for national security purposes and to the somewhat uncertain state of the law on the subject. In creating a statutory framework for the use of electronic surveillance to obtain foreign intelligence information, the Congress sought to strike a balance between national security interests and civil liberties. Critical to an understanding of the FISA structure are its definitions of terms such as "electronic surveillance" and "foreign intelligence information." P.L. 110-55 limits the construction of the term "electronic surveillance" so that it does not cover surveillance directed at a person reasonably believed to be located

outside the United States. It also creates a mechanism for acquisition, without a court order under a certification by the Director of National Intelligence (DNI) and the Attorney General, of foreign intelligence information concerning a person reasonably believed to be outside the United States. The Protect America Act provides for review by the Foreign Intelligence Surveillance Court (FISC) of the procedures by which the DNI and the Attorney General determine that such acquisitions do not constitute electronic surveillance. In addition, P.L. 110-55 authorizes the Attorney General and the DNI to direct a person with access to the communications involved to furnish aid to the government to facilitate such acquisitions, and provides a means by which the legality of such a directive may be reviewed by the FISC petition review pool. A decision by a judge of the FISC petition review pool may be appealed to the Foreign Intelligence Surveillance Court of Review, and review by the U.S. Supreme Court may be sought by petition for writ of certiorari.

The report will be updated should subsequent developments require it.

Introduction

In response to concerns raised by the Director of National Intelligence, Admiral Mike McConnell, that the Foreign Intelligence Surveillance Act (FISA), 50 U.S.C. §§ 1801 *et seq*., required modernization to meet the current intelligence needs of the nation, a number of bills were introduced in the Senate and the House of Representatives. Intense legislative activity with respect to proposed amendments to FISA in both bodies resulted in the enactment of the Protect America Act of 2007, P.L. 110-55 on August 5, 2007. The measure was introduced as S. 1927 by Senator McConnell, for himself and Senator Bond, on August 1, 2007. The bill was considered in the Senate on August 3, in conjunction with S. 2011, entitled The Protect America Act of 2007, introduced by Senator Levin, for himself and Senator Rockefeller. The Senate agreed by unanimous consent to an amendment to S. 1927 offered by Senator McConnell, for himself and Senator Bond, providing that sections 2, 3, 4, and 5 of the bill would sunset 180 days after its enactment.[4330] As amended, S. 1927 passed the Senate the same day.[4331] S. 2011 did not receive the requisite 60 votes, and was placed on the Senate calendar under general orders.[4332]

That evening, the House considered H.R. 3356, the Improving Foreign Intelligence Surveillance to Defend the Nation and the Constitution Act of 2007, introduced by Representative Reyes for himself, Representative Conyers, Representative Schiff, and Representative Flake. After a motion to suspend the

rules and pass H.R. 3356 fell short of the required two-thirds vote of the Members[4333] on Friday night, the House took up S. 1927 the following day. At 10:19 p.m. Saturday night, August 4, the House passed S. 1927.[4334] It was signed by the President on August 5, 2007.

This report discusses the provisions of P.L. 110-55 and their impact on or relationship with the prior provisions of FISA.

Sec. 1. Short Title

Sec. 1 of S. 1927 states that the short title of the law is the Protect America Act of 2007.

Sec. 2. Additional Procedures for Authorizing Certain Acquisitions of Foreign Intelligence Information

Section 2 of the law contains its first substantive provisions. They are summarized in order below.

New Section 105A of FISA, "Clarification of Electronic Surveillance of Persons Outside the United States"

New Section 105A of FISA, as added by Section 2 of P.L. 110-55, states:

> *Nothing in the definition of electronic surveillance under section 101(f) shall be construed to encompass surveillance directed at a person reasonably believed to be located outside of the United States.*

Section 101(f) of FISA, 50 U.S.C. § 1801(f), sets forth the definition of "electronic surveillance" under the statute. It provides:

> *(f) "Electronic surveillance" means —*
> *(1) the acquisition by an electronic, mechanical, or other surveillance device of the contents of any wire or radio communication sent by or intended to be received by a particular, known United States person[4335] who is in the United States, if the*

[4333] The August 3, 2007, vote on the motion to suspend the rules and pass H.R. 3356 was 218 - 207 (Roll no. 821).

[4334] The bill was passed by the Yeas and Nays: 227 - 183 (Roll no. 836).

[4335] As defined in section 101(i) of FISA, 50 U.S.C. § 1801(i), "United States person" means a citizen of the United States, an alien lawfully admitted for permanent residence (as defined in section 1101(a)(20) of Title 8), an unincorporated association a substantial number of members of which are citizens of the United States or aliens lawfully admitted for permanent residence, or a

contents are acquired by intentionally targeting that United States person, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes;
(2) the acquisition by an electronic, mechanical, or other surveillance device of the contents of any wire communication to or from a person in the United States, without the consent of any party thereto, if such acquisition occurs in the United States, but does not include the acquisition of those communications of computer trespassers that would be permissible under section 2511(2)(i) of Title 18;
(3) the intentional acquisition by an electronic, mechanical, or other surveillance device of the contents of any radio communication, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes, and if both the sender and all intended recipients are located within the United States; or
(4) the installation or use of an electronic, mechanical, or other surveillance device in the United States for monitoring to acquire information, other than from a wire or radio communication, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes.

To what extent would the new section 105A affect the scope of "electronic surveillance" as defined in section 101(f) of FISA?

Absent the interpretation required by section 105A, two of the four definitions of "electronic surveillance" under section 101(f) of FISA, by their terms, appear to be broad enough to encompass electronic surveillance directed at a person abroad where the communications involved transcend U.S. borders.[4336] Subsections

---

corporation which is incorporated in the United States, but does not include a corporation or an association which is a foreign power, as defined in subsection (a)(1), (2), or (3) of this section.

"Foreign power," as defined in section 101(a)(1), (2), or (3), 50 U.S.C. § 1801(a)(1), (2), or (3), means:

(1) a foreign government or any component thereof, whether or not recognized by the United States;
(2) a faction of a foreign nation or nations, not substantially composed of United States persons;
(3) an entity that is openly acknowledged by a foreign government or governments to be directed and controlled by such foreign government or governments[.]

[4336] Because new section 105A of FISA explicitly addresses electronic surveillance "directed at a person reasonably believed to be located outside the United States," it would not appear to affect subsection 101(f)(1), which deals with electronic surveillance of the contents of wire or radio communications acquired from an intentionally targeted U.S. person within the United States under specified circumstances. "Electronic surveillance" as defined in subsection 101(f)(3) of FISA

101(f)(2) and (f)(4) of FISA, on their face, appear to have the potential of reaching electronic surveillance of such communications targeted at a person outside the United States. In addition, it might be argued that the language of subsection 101(f)(4) might encompass the possibility of reaching some foreign to foreign communications in limited circumstances. This would suggest that, under FISA prior to the passage of section 105A of P.L. 110-55, some interceptions directed at a person abroad covered by the language of these subsections might have been regarded by the FISC as requiring court authorization.[4337]

In pertinent part, "electronic surveillance," as defined by subsection 101(f)(2), covers acquisition of the contents of wire communications to or from a person in the United States where the acquisition occurs within the United States and no party to the communication has consented to the interception. Unlike subsection 101(f)(1), there is no express requirement that the person in the United States be known, that he or she be United States person, or that he or she be intentionally targeted by the electronic surveillance.

To the extent that an electronic surveillance under subsection 101(f)(2) intercepts communications between persons in the United States, it would not be impacted by section 105A of FISA, as added by P.L. 110-55, nor would section 105A affect electronic surveillance targeted at a person within the United States. However, to the extent that the language in subsection 101(f)(2) might encompass interception of communications between a person in the United States and one or more parties outside the United States, where the surveillance is targeted at a person outside the United States, section 105A would seem to restrict the previous reach of the definition of "electronic surveillance" in section 101(f)(2).

Subsection 101(f)(4) defines "electronic surveillance" under FISA to include "the installation or use of an electronic, mechanical, or other surveillance device in the United States for monitoring to acquire information, other than from a wire or radio communication,[4338] under circumstances in which a person has a

---

involves the intentional acquisition of the contents of radio communications in specified circumstances where the sender and all the intended recipients to the communication are in the United States, so it would not seem to be impacted by new section 105A.

[4337] *See*, Greg Miller, Spy chief reveals details of operations, L.A. Times, August 23, 2007, *available at* [http://www.latimes.com/news/nationworld/nation/la-na-intel23aug23,0,6229712.story?coll=la-home-center].

[4338] Section 101(l) of FISA, 50 U.S.C. § 1801(l), defines "wire communication" to mean:

(l) "Wire communication" means any communication while it is being carried by a wire, cable, or other like connection furnished or operated by any person engaged as a common carrier in providing or operating such facilities for the transmission of interstate or foreign communications.

It does not have a separate definition of "radio communication." However, subsection 101(f)(4) of FISA appears to contemplate that communications can be transmitted using technologies other

reasonable expectation of privacy and a warrant would be required for law enforcement purposes." This subsection does not explicitly address the location of the parties to the communication or the location of the acquisition of the information involved. Thus, by its terms, it could conceivably be interpreted to cover some communications between parties in the United States, between a party in the United States and a party outside the United States, or between parties abroad, if the other requirements of the subsection were satisfied. The restrictions in this section are two-fold: the information must be acquired other than from a wire or radio communication; and the circumstances of the acquisition must be such that a person would have a reasonable expectation of privacy and a warrant would be required for law enforcement purposes. To the extent that "electronic surveillance" under subsection 101(f)(4) of FISA could have been or has been directed at a person or persons abroad, prior to the enactment of P.L. 110-55, new section 105A may also have the effect of limiting the scope of this subsection of the definition of "electronic surveillance" as it was previously interpreted.

New Section 105B of FISA, "Additional Procedure for Authorizing Certain Acquisitions Concerning Persons Located Outside the United States"

New section 105B(a) of FISA permits the Attorney General and the Director of National Intelligence, for periods of up to one year, to authorize acquisition of foreign intelligence information concerning persons reasonably believed to be outside the United States, if the Attorney General and the DNI determine, based on the information provided to them, that five criteria have been met. Under these criteria, the Attorney General and the DNI must certify that:

> *(1) there are reasonable procedures in place for determining that the acquisition of foreign intelligence information under this section concerns persons reasonably believed to be located outside*

---

wire or radio. For example, in Title III of the Omnibus Crime Control and Safe Streets Act, as amended, 18 U.S.C. § 2510(12), "electronic communication" includes other technologies. Under § 2510(12), this term is defined to mean:

any transfer of signs, signals, writing, images, sounds, data, or intelligence of any nature transmitted in whole or in part by a wire, radio, electromagnetic, photoelectronic or photooptical system that affects interstate or foreign commerce, but does not include —

(A) any wire or oral communication;
(B) any communication made through a tone-only paging device;
(c) any communication from a tracking device (as defined in [18 U.S.C. § 3117]); or

(D) electronic funds transfer information stored by a financial institution in a communications system used for the electronic storage and transfer of funds[.]

the United States,[4339] and such procedures will be subject to review of the Court pursuant to section 105C of this Act;[4340]
(2) the acquisition does not constitute electronic surveillance;
(3) the acquisition involves obtaining the foreign intelligence information from or with the assistance of a communications service provider, custodian, or other person (including any officer, employee, agent, or other specified person of such service provider, custodian, or other person) who has access to communications, either as they are transmitted or while they are stored, or equipment that is being or may be used to transmit or store such communications;

[4339] The reporting requirements in Sec. 4 of the P.L. 110-55 require, in part, that the Attorney General report to the House Permanent Select Committee on Intelligence, the Senate Select Committee on Intelligence, and the House and Senate Judiciary Committees regarding incidents of non-compliance by an element of the Intelligence Community with guidelines or procedures for determining that the acquisition of foreign intelligence authorized by the DNI and the Attorney General under section 105B "concerns persons reasonably [sic?] to be outside the United States."

[4340] Section 105B(a)(1) states that the "procedures for determining that the acquisition of foreign intelligence information under this section concerns persons reasonably believed to be located outside the United States" are to be submitted to the FISC for review pursuant to section 105C of FISA. There appears to be some ambiguity in the language of section 105B, particularly as compared with section 105C, as to what the procedures cover and what procedures are to be submitted to the FISC. The phrasing of section 105B(a)(1) on its face, seems to require submission to the FISC only of "reasonable procedures . . . for determining that the acquisition of foreign intelligence information under this section concerns persons reasonably believed to be located outside the United States." This is the only mention in section 105B of procedures being submitted to the FISC. Thus, there is no mention in section 105B of creation of, or submission to the FISC of, procedures upon which the government bases its determination that the acquisition does not constitute electronic surveillance.
However, section 105C, by its terms, addresses only the submission by the Attorney General to the FISC of the procedures by which the government determines that acquisitions conducted pursuant to section 105B do not constitute electronic surveillance, making no mention of the procedures referred to in section 105B(a)(1). In light of this apparent inconsistency, it is unclear what review, if any, the FISC is intended to give the procedures for determining that the acquisition of foreign intelligence information under section 105B "concerns persons reasonably believed to be located outside the United States." It is also not made clear in the language of either section by whom the procedures to be reviewed by the FISC under section 105C are to be promulgated.

On the other hand, section 105A provides that the definition of "electronic surveillance" shall not be "construed to encompass surveillance directed at a person reasonably believed to be located outside of the United States." In light of this, it might be argued that the procedures by which the DNI and the Attorney General determine whether an acquisition of foreign intelligence information under section 105B concerns persons reasonably believed to be located outside the United States could be regarded as part of the FISC's analysis as to whether the procedures to determine that the acquisitions under 105B constitute electronic surveillance are clearly erroneous.

---

(4) a significant purpose of the acquisition is to obtain foreign intelligence information; and
(5) the minimization procedures to be used with respect to such acquisition activity meet the definition of minimization procedures under section 101(h).[4341]

Except in circumstances where immediate government action is required and there is not sufficient time to prepare a certification, the determination by the Attorney General and the DNI that these criteria have been satisfied must be in the form of a certification, under oath, supported by affidavit of appropriate officials in the national security field appointed by the President, by and with the advice and consent of the Senate, or the Head of any agency of the Intelligence Community. Where imminent government action is required, the determination must be reduced to a certification as soon as possible within 72 hours after the

---

[4341] Section 101(h) of FISA, 50 U.S.C. § 1801(h), defines "minimization procedures" for purposes of title I of FISA, dealing with electronic surveillance, to mean:

(h) "Minimization procedures", with respect to electronic surveillance, means —
(1) specific procedures, which shall be adopted by the Attorney General, that are reasonably designed in light of the purpose and technique of the particular surveillance, to minimize the acquisition and retention, and prohibit the dissemination, of nonpublicly available information concerning unconsenting United States persons consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information;
(2) procedures that require that nonpublicly available information, which is not foreign intelligence information, as defined in subsection (e)(1) of this section, shall not be disseminated in a manner that identifies any United States person, without such person's consent, unless such person's identity is necessary to understand foreign intelligence information or assess its importance;
(3) notwithstanding paragraphs (1) and (2), procedures that allow for the retention and dissemination of information that is evidence of a crime which has been, is being, or is about to be committed and that is to be retained or disseminated for law enforcement purposes; and
(4) notwithstanding paragraphs (1), (2), and (3), with respect to any electronic surveillance approved pursuant to section 1802(a) of this title, procedures that require that no contents of any communication to which a United States person is a party shall be disclosed, disseminated, or used for any purpose or retained for longer than 72 hours unless a court order under section 1805 of this title is obtained or unless the Attorney General determines that the information indicates a threat of death or serious bodily harm to any person.

It may be noted that, while section 105B of FISA appears to be located in title I of FISA, which deals with electronic surveillance, the DNI and the Attorney General, under section 105B(a)(2) of FISA, are expressly required to certify that the acquisitions under section 105B do not constitute electronic surveillance. Similarly, the minimization procedures in section 101(h) of FISA, 50 U.S.C. § 1801(h), deal explicitly with minimization in the context of electronic surveillance, while, under subsection 105B(a)(5) of FISA, the DNI and the Attorney General must certify that "the minimization procedures to be used with respect to such acquisition[s] meet the definition of minimization procedures under section 101(h)." This seems likely to be intended to mean that the minimization procedures applicable to such acquisitions must set parallel standards to those applicable to electronic surveillance under the minimization procedures in section 101(h) of FISA, 50 U.S.C. § 1801(h).

determination is made.[4342] The certification need not identify specific facilities, places, premises, or property at which the acquisition will be directed.[4343]

A copy of a certification made under section 105B(a) must be transmitted under seal to the FISC as soon as practicable, there to be maintained under security measures established by the Chief Justice of the United States and the Attorney General, in consultation with the DNI. The copy of the certification must remain sealed unless needed to determine the legality of the acquisition involved.[4344]

Where a certification has been prepared, an acquisition under section 105B of FISA must be conducted in accordance with that certification and minimization procedures adopted by the Attorney General. If a certification has not yet been prepared because of inadequate time, the acquisition must comply with the oral instructions of the DNI and the Attorney General and the applicable minimization procedures.[4345] Section 105B(d) requires the DNI and the Attorney General must report their assessments of compliance with "such procedures"[4346] to the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence under section 108(a) of FISA, 50 U.S.C. § 1808(a).[4347]

[4342] Protect America Act of 2007, P.L. 110-55, Sec. 105B(a), 121 Stat. 552 (August 5, 2007) (hereinafter P.L. 110-55).

[4343] P.L. 110-55, Sec. 105B(b).

[4344] P.L. 110-55, Sec. 105B(c).

[4345] P.L. 110-55, Sec. 105B(d).

[4346] In the context of the subsection 105B(d), the reference to "such procedures" might be seen to be susceptible of two possible interpretations. Perhaps the more likely and more limited interpretation would be that this may be a reference to the applicable minimization procedures referenced earlier in the subsection. Alternatively, a more expansive view might interpret this as a reference to the applicable minimization procedures plus the relevant certification, including the "reasonable procedures in place for determining that the acquisition of foreign intelligence information under this section concerns persons reasonably believed to be located outside the United States," or oral instructions regarding the acquisition at issue.

[4347] Section 108 of FISA, 50 U.S.C. § 1808, provides:

§ 1808. Report of Attorney General to Congressional committees; limitation on authority or responsibility of information gathering activities of Congressional committees; report of Congressional committees to Congress

(a)

(1) On a semiannual basis the Attorney General shall fully inform the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence, and the Committee on the Judiciary of the Senate, concerning all electronic surveillance under this subchapter [title I of FISA, 50 U.S.C. §§ 1801 et seq.]. Nothing in this subchapter [title I of FISA] shall be deemed to limit the authority and responsibility of the appropriate committees of each House of Congress to obtain such information as they may need to carry out their respective functions and duties.

(2)

Each report under the first sentence of paragraph (1) shall include a description of —

In connection with an acquisition authorized under section 105B, the DNI and the Attorney General may issue a directive to a person to immediately provide the government with all information, facilities, and assistance needed to accomplish the acquisition in a manner which will protect the secrecy of the acquisition and minimize interference with the services provided by that person to the target of the acquisition.[4348] The government must compensate the person furnishing such aid at the prevailing rate.[4349] Any records that person wishes to keep relating to the acquisition or the aid provided must be maintained under security procedures approved by the DNI and the Attorney General.[4350] P.L. 110-55 bars any cause of action in any court against any person for providing information, facilities or assistance in accordance with a directive under this section.[4351] If a person receiving such a directive fails to comply therewith, the FISC, at the Attorney General's request, shall issue an order to compel such compliance if the

---

(A) the total number of applications made for orders and extensions of orders approving electronic surveillance under this subchapter where the nature and location of each facility or place at which the electronic surveillance will be directed is unknown;
(B) each criminal case in which information acquired under this chapter has been authorized for use at trial during the period covered by such report; and
(C) the total number of emergency employments of electronic surveillance under section 1805(f) of this title and the total number of subsequent orders approving or denying such electronic surveillance.
(b) On or before one year after October 25, 1978, and on the same day each year for four years thereafter, the Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence shall report respectively to the House of Representatives and the Senate, concerning the implementation of this chapter. Said reports shall include but not be limited to an analysis and recommendations concerning whether this chapter should be (1) amended, (2) repealed, or (3) permitted to continue in effect without amendment.

It may be noted that the reporting requirements under subsection 108(a) of FISA deal explicitly with electronic surveillance under FISA, and impose responsibility only upon the Attorney General. While section 105B has been added to title I of FISA, which deals with electronic surveillance, the DNI and the Attorney General, under subsection 105B(a)(2) are required to certify, with respect to each acquisition under section 105B, that such acquisition "does not constitute electronic surveillance." The reporting requirement in section 105B(d) may be intended to direct the DNI and the Attorney General to include their assessments with respect to the procedures involved in the semiannual report of the Attorney General required by section 108(a), or it may be intended to require that the DNI and the Attorney General fully inform the House and Senate Intelligence Committees of their assessments on a semi-annual basis.

[4348] P.L. 110-55, Sec. 105B(e)(1).

[4349] P.L. 110-55, Sec. 105B(f).

[4350] P.L. 110-55, Sec. 105B(e)(2).

court finds that the directive was issued in accordance with section 105B(e) and is otherwise lawful.[4352]

A person receiving a directive under section 105B(e) may challenge its legality by filing a petition before the petition review pool of the FISC.[4353] Under subsection 105B(h)(1)(B) as written, the presiding judge of the Foreign Intelligence Surveillance Court of Review (Court of Review)[4354] shall assign a petition filed

---

[4352] P.L. 110-55, Sec. 105B(g). Service of process may be made upon such person in any judicial district in which he or she is found.

[4353] Section 103(e)(1) of FISA, 50 U.S.C. § 1803(e)(1), established this pool. As amended by Sec. 5 of P.L. 110-55, section 103(e) provides:

(e)
(1) Three judges designated under subsection (a) of this section who reside within 20 miles of the District of Columbia, or, if all of such judges are unavailable, other judges of the court established under subsection (a) of this section as may be designated by the presiding judge of such court, shall comprise a petition review pool which shall have jurisdiction to review petitions filed pursuant to section 105B(h) or 501(f)(1) of [FISA].

(2) Not later than 60 days after March 9, 2006, the court established under subsection (a) of this section shall adopt and, consistent with the protection of national security, publish procedures for the review of petitions filed pursuant to section 105B(h) or 501(f)(1) of [FISA] by the panel established under paragraph (1). Such procedures shall provide that review of a petition shall be conducted in camera and shall also provide for the designation of an acting presiding judge. [Emphasis added.]

Subsection 103(a) requires the Chief Justice of the United States to publicly designate 11 U.S. district court judges from seven of the United States judicial circuits to become the FISC judges. The reference to section 501(f)(1) of FISA, 50 U.S.C. § 1861(f)(1), may be intended to be a reference to section 501(f), 50 U.S.C. § 1861(f). Section 501(f), as added to FISA by P.L. 109-177, § 106(f), was rewritten by P.L. 109-178, § 3. Current section 501(f)(1) of FISA contains two subsections, defining the terms "production order" and "nondisclosure order," respectively, for purposes of section 501.

[4354] Section 105B(h)(1)(B) states that the "presiding judge designated pursuant to section 103(b) shall assign a petition filed under subparagraph (a) to one of the judge serving in the pool established by section 103(e)(1)." This may be intended to refer to the presiding judge of the FISC designated pursuant to section 103(a), rather than the presiding judge of the Foreign Intelligence Surveillance Court of Review designated pursuant to section 103(b). The petition review pool established by section 103(e)(1) is made up of FISC judges. See footnote 24, supra. Section 501(f)(2)(A)(ii) provides that, when a petition under that section is filed with the petition review pool of the FISC, "the presiding judge" shall immediately assign it to one of the judges in the pool. The rules, effective May 5, 2006, promulgated by the FISC under section 103(e)(2) of FISA are more explicit. Under title III, sections 8 and 9, of the "Procedures for review of Petitions filed pursuant to Section 501(f) of the Foreign Intelligence Surveillance Act of 1978, As Amended," the "Presiding Judge of the Foreign Intelligence Surveillance Court," where available, assigns petitions received under section 501(f) of FISA to one of the FISC judges in the petition review pool. If the Presiding Judge of the FISC is unavailable, the local FISC judge with the most seniority, other than the Presiding Judge, becomes Acting Presiding Judge, and assigns the petition to an FISC judge in the petition review pool. If no local judge is available, the most senior

with the petition review pool to one of the FISC judges in the pool. The assigned judge must conduct an initial review of the directive within 48 hours after the assignment. If he or she determines that the petition is frivolous, the petition is immediately denied and the directive or that portion of the directive that is the subject of the petition is affirmed. If the judge does not find the petition frivolous, he or she has 72 hours in which to consider the petition and provide a written statement for the record of the reasons for any determination made. A petition to modify or set aside a directive may only be granted if the judge finds that the directive does not meet the requirements of section 105B or is otherwise unlawful. Otherwise the judge must immediately affirm the directive and order its recipient to comply with it. A directive not explicitly modified or set aside remains in full effect.[4355] Within seven days of the assigned judge's decision, the government or a recipient of the directive may petition the Foreign Intelligence Surveillance Court of Review for review of that decision. The Court of Review must provide a written statement on the record of the reasons for its decision. The government or any recipient of the directive may seek review of the decision of the Court of Review by petition for a writ of certiorari to the U.S. Supreme Court.[4356] All judicial proceedings under this section are to be concluded as expeditiously as possible.[4357]

All petitions under this section are filed under seal. Upon request of the government in any proceeding under this section, the court shall review ex parte and in camera any government submission or portion of a submission which may contain classified information.[4358] The record of all proceedings, including petitions filed, orders granted, and statements of reasons for decision, must be maintained under security measures established by the Chief Justice of the United States in consultation with the Attorney General and the DNI.[4359] A directive made or an order granted under this section must be retained for at least ten years.[4360]

Effect on or parallels to existing law.

FISC judge who is reasonably available becomes the Acting Presiding Judge, and makes the assignment of the petition.

[4355] P.L. 110-55, Sec. 105B(h).

[4356] P.L. 110-55, Sec. 105B(i).

[4357] P.L. 110-55, Sec. 105B(j).

[4358] P.L. 110-55, Sec. 105B(k).

[4359] P.L. 110-55, Sec. 105B(j).

[4360] P.L. 110-55, Sec. 105B(m).

Section 105B is a new section added to title I of FISA, 50 U.S.C. §§ 1801 *et seq*. It differs from the other provisions of title I of FISA in that it does not deal with electronic surveillance, but rather with acquisitions that do not constitute electronic surveillance. Because section 105B does not specify where such acquisitions may occur or from whom, it appears that such foreign intelligence information concerning persons reasonably believed to be outside the United States may be acquired, at least in part, from persons, including U.S. persons, who are located within the United States.[4361]

Similar to electronic surveillance under section 102 of FISA, 50 U.S.C. § 1802, which may be authorized for up to one year by the President, through the Attorney General, without a court order if the Attorney General certifies in writing under oath that certain requirements are satisfied,[4362] acquisitions under section 105B of FISA, may be authorized by the DNI and the Attorney General without a court order if they certify in writing under oath that certain criteria are met. However, section 105B has no parallel to section 102(a)(1)(B)'s requirement

---

[4361] It may be noted that the description of an acquisition under section 105B of FISA appears broad enough to encompass future collection of phone calling records for pattern analysis, but does not appear intended to address any past use of such investigative techniques. Cf., Hepting v. AT&T Corp., 439 F. Supp. 2d. 974 (N.D. Cal. 2006); In re: National Security Agency Telecommunications Records Litigation, MDL No. 06-1791-VRW (March 13, 2007) (stipulation and order staying all cases except Hepting against AT&T Defendants); Hepting v. United States, Nos. 06-80109, 06-80110 (9th Cir. 2006) (order granting appeal).

[4362] Section 102(a), 50 U.S.C. § 1802(a) provides:

(a)(1) Notwithstanding any other law, the President, through the Attorney General, may authorize electronic surveillance without a court order under this subchapter to acquire foreign intelligence information for periods of up to one year if the Attorney General certifies in writing under oath that —

(A) the electronic surveillance is solely directed at —
(i) the acquisition of the contents of communications transmitted by means of communications used exclusively between or among foreign powers, as defined in section 1801(a)(1), (2), or (3) of this title; or
(ii) the acquisition of technical intelligence, other than the spoken communications of individuals, from property or premises under the open and exclusive control of a foreign power, as defined in section 1801(a)(1), (2), or (3) of this title;

(B) there is no substantial likelihood that the surveillance will acquire the contents of any communication to which a United States person is a party; and

(C) the proposed minimization procedures with respect to such surveillance meet the definition of minimization procedures under section 1801(h) of this title; and if the Attorney General reports such minimization procedures and any changes thereto to the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence at least thirty days prior to their effective date, unless the Attorney General determines immediate action is required and notifies the committees immediately of such minimization procedures and the reason for their becoming effective immediately.

that "there is no substantial likelihood that the surveillance will acquire the contents of any communication to which a United States person is a party."

Similar to section 105B(d)'s reporting requirements, section 102(a)(2) requires electronic surveillance under that section to be carried out in accordance with the Attorney General's certification and applicable minimization requirements, and directs the Attorney General to assess compliance with "such procedures" and report his assessments to the House and Senate intelligence committees under the provisions of section 108(a) of FISA.

Section 102(a)(4), which permits the Attorney General to direct a specified communication common carrier to provide information, facilities, or technical assistance to the government needed to carry out the electronic surveillance involved and to compensate that communication common carrier at the prevailing rate for its aid, is structurally similar to section 105B(e) and (f). However, subsections 105B(e) and (g)-(i) permit the Attorney General and the DNI to direct "a person," rather than a "specified communication common carrier," to "immediately" furnish such aid; provide authority for the Attorney General to seek the aid of the FISC to compel compliance with such a directive; give the recipient of the directive a right to challenge the legality of the directive before the petition review pool of the same court; and permit both the government and the recipient of the directive to appeal that court's decision. The authority to challenge the legality of such a directive and to appeal the decision appears modeled, to some degree, after the process set forth in section 501(f) of FISA, 50 U.S.C. § 1861(f), dealing with challenges to the legality of production and nondisclosure orders.

Unlike electronic surveillance pursuant to a court order sought under section 104 of FISA, 50 U.S.C. § 1804, and authorized under section 105 of FISA, 50 U.S.C. § 1805, where the government provides the FISC with specific categories of substantive information about the electronic surveillance involved upon which the court can base its determinations; the government submits certain procedures[4363] for review to the FISC, but does not provide the court with substantive information about the acquisitions themselves.

Sec. 3. Submission to Court Review and Assessment of Procedures

Section 3 of the act creates a new section 105C of FISA, creating a review process for the procedures under which the government determines that acquisitions of foreign intelligence information from persons reasonably believed to be located outside the United States do not constitute electronic surveillance.

[4363] Compare section 105B(a)(1) with section 105C.

New Section 105C of FISA. "Submission to Court Review of Procedures"

Subsection 105C(a) requires the Attorney General, within 120 days of enactment of the act,[4364] to submit to the FISC the procedures by which the government determines that acquisitions conducted pursuant to section 105B of the act do not constitute electronic surveillance.[4365] The procedures are to be updated and submitted to the FISC annually. Within 180 days after enactment, the FISC must assess whether the government's determination under section 105B(1) of FISA that the procedures are "reasonably designed to ensure that acquisitions conducted pursuant to section 105B do not constitute electronic surveillance"[4366] is clearly erroneous.[4367]

If the FISC deems the government's determination not clearly erroneous, the court must enter an order approving the continued use of the procedures. On the other hand, if the government's determination is found to be clearly erroneous, new procedures must be submitted with 30 days or any acquisitions under section 105B implicated by the FISC order must cease.[4368] Any order issued by the FISC under subsection 105C(c) may be appealed by the government to the Foreign Intelligence Surveillance Court of Review. If the Court of Review finds the FISC order was properly entered, the government may seek U.S. Supreme

---

[4364] Under Sec. 6(a) of the act, except as otherwise provided, the amendments made by the act are to take effect immediately after the date of enactment of the act. Sec. 105C(a) states that it will take effect within 120 days of the effective date of the act. For purposes of Sec. 105C(a), that would be 120 days after enactment.

[4365] Section 105B(1) on its face refers only to "reasonable procedures in place for determining that the acquisition of foreign intelligence information under this section concerns persons reasonably believed to be located outside the United States," and requires "such procedures [to be] subject to review of the [FISC] pursuant to section 105C of this Act." See footnote 11, supra, for further discussion of the seeming ambiguities in the statutory language of sections 105B and 105C with respect to the procedures to be reviewed by the FISC.

[4366] There appears to be some ambiguity regarding the procedures referenced in section 105B(a) and section 105C of FISA. Section 105B permits the DNI and the Attorney General to authorize acquisition of foreign intelligence information concerning persons reasonably believed to be outside the United States if the DNI and the Attorney General determine, based upon information provided to them, "that — (a)(1) there are reasonable procedures in place for determining that the acquisition of foreign intelligence information under this section concerns persons reasonably believed to be located outside the United States, and such procedures will be subject to review of the Court pursuant to section 105C of this Act[.]" However, section 105C requires the Attorney General to submit to the FISC "the procedures by which the Government determines that acquisitions conducted pursuant to section 105B do not constitute electronic surveillance." For further discussion, see 15, supra.

[4367] Section 105C(b) of FISA, as added by P.L. 110-55, Sec. 3.

[4368] Section 105C(c) of FISA, as added by P.L. 110-55, Sec. 3.

Court review through a petition for a writ of certiorari.[4369] Any acquisitions affected by the FISC order at issue may continue throughout the review process.

Comparison of this provision with court review.

The section 105C procedure review process is new and does not appear to have a parallel in the other provisions of FISA.

Other possible effects of new sections 105A, 105B, and 105C.

The Terrorist Surveillance Program has been characterized as involving "intercepts of contents of communications where one . . . party to the communication is outside the United States" and the government has "a reasonable basis to conclude that one party to the communication is a member of al Qaeda, affiliated with al Qaeda, or a member of an organization affiliated with al Qaeda, or working in support of al Qaeda."[4370] In a letter from the Attorney General to Senator Leahy and Senator Specter on January 17, 2007, the Attorney General indicated that, based upon classified orders issued by a judge of the Foreign Intelligence Surveillance Court (FISC), electronic surveillances previously carried out under the Terrorist Surveillance Program would thereafter be under the court's supervision. His letter stated, in part:

> *I am writing to inform you that on January 10, 2007, a Judge of the Foreign Intelligence Surveillance Court issued orders authorizing the Government to target for collection international communications into or out of the United States where there is probable cause to believe that one of the communicants is a member or agent of al Qaeda or an associated terrorist organization. As a result of these orders, any electronic surveillance that was occurring as part of the Terrorist Surveillance Program will now be conducted subject to the approval of the Foreign Intelligence Surveillance Court. . .* [4371]

[4369] Section 105C(d) of FISA, as added by P.L. 110-55, Sec. 3. If the Court of Review affirms the FISC order, the Court of Review must immediately prepare a written statement of each of the reasons for its decision. Should the government file a certiorari petition, that written record would be transmitted under seal to the U.S. Supreme Court.

[4370] See Press Release, White House, Press Briefing by Attorney General Alberto Gonzales and General Michael Hayden, Principal Deputy Director for National Intelligence (December 19, 2005).

[4371] 153 *Cong. Rec.* S646-S647 (January 17, 2007) (Letter of Attorney General Alberto Gonzales to the Chairman and Ranking Member of the Senate Judiciary Committee ordered printed, without objection, in the *Record* during Senator Leahy's remarks on the FISA Program).

A question may arise as to whether new section 105A's interpretation of the definition of "electronic surveillance" under FISA, might impact the FISC's jurisdiction over some or all of the interceptions to which the Attorney General referred. Under section 103(a) of FISA, 50 U.S.C. § 1803(a):

> *The Chief Justice of the United States shall publicly designate 11 district court judges from seven of the United States judicial circuits of whom no fewer than 3 shall reside within 20 miles of the District of Columbia who shall constitute a court which shall have jurisdiction to hear applications for and grant orders approving electronic surveillance anywhere within the United States under the procedures set forth in this chapter, except that no judge designated under this subsection shall hear the same application for electronic surveillance under this chapter which has been denied previously by another judge designated under this subsection. . . .*

Section 102(b) of FISA, 50 U.S.C. § 1802(b), provides that:

> *Applications for a court order under [title I of FISA, 50 U.S.C. §§ 1801 et seq.] are authorized if the President has, by written authorization, empowered the Attorney General to approve applications to the court having jurisdiction under section 1803 of this title, and a judge to whom an application is made may, notwithstanding any other law, grant an order, in conformity with section 1805 of this title, approving electronic surveillance of a foreign power or an agent of foreign power for the purpose of obtaining foreign intelligence information, except that the court shall not have jurisdiction to grant any order approving electronic surveillance directed solely as described in paragraph (1)(A) of subsection (a) of this section unless such surveillance may involve the acquisition of communications of any United States person.*

The answer to the jurisdictional question raised above would seem to depend on whether those interceptions were directed at the communications of a person reasonably believed to be located outside the United States. If so, then, by virtue of section 105A, such interceptions would not be construed to fall within the definition of "electronic surveillance" under FISA, and therefore a review of the underpinnings of such interceptions would not be within the FISC's jurisdiction in connection with an application to authorize electronic surveillance. If treated instead as acquisitions under new section 105B of FISA, then the FISC would seem to be limited to reviewing, under a clearly erroneous standard, the general procedures under which the Director of National Intelligence (DNI) and the Attorney General would make determinations that acquisitions did not constitute

electronic surveillance;[4372] and judges of the FISC petition review pool would have jurisdiction to consider petitions challenging the legality of directives to persons to furnish aid to the government to accomplish those acquisitions.[4373]

Implicit in the previous discussion is the question what impact, if any, any possible narrowing of the interpretation of the definition of "electronic surveillance" under FISA might have upon the scope of "acquisitions" under new section 105B of FISA. In other words, if an interception of communications directed toward a person reasonably believed to be located outside the United States does not constitute "electronic surveillance" for purposes of FISA, regardless of where the other parties to the communication may be located or whether some or all of those other parties may be U.S. persons, could some or all such interceptions be deemed "acquisitions" under the provisions of section 105B?

For this to be the case, it would appear that the interception would have to be authorized by the DNI and the Attorney General under section 105B of FISA to acquire foreign intelligence information concerning persons reasonably believed to be outside the United States, and would have to satisfy the five criteria set forth in section 105B(a), including the use of minimization procedures.[4374] If these requirements are met, then it appears that some communications to which U.S. persons located within the United States might be parties could be intercepted for periods of up to one year without a court order under section 105B.

This contrasts markedly with the detailed information to be provided by the government to the FISC in an application for a court order for electronic surveillance under section 104 of FISA, 50 U.S.C. § 1804,[4375] and the level of FISC

[4372] Section 105C(a) of FISA, as added by P.L. 110-55, Sec. 3.

[4373] Section 105B(h) of FISA, as added by P.L. 110-55, Sec. 2.

[4374] Section 105B(a)(5) of FISA, as added by Sec. 2 of P.L. 110-55. For further discussion of minimization procedures in section 105B(a)(5), see footnote 12, supra, and accompanying text. Under section 105(f) of FISA, 50 U.S.C. § 1805(f), in approving an application for electronic surveillance under FISA, an FISC judge must find, in part, that the proposed minimization procedures applicable to that surveillance meet the definition of minimization procedures under section 101(h) of FISA, 50 U.S.C. § 1801(h). In authorizing an acquisition under section 105B, the DNI and the Attorney General must certify in writing under oath, in part, that "the minimization procedures to be used with respect to such acquisition activity meet the definition of minimization procedures under section 101(h)."

[4375] Section 104 of FISA, 50 U.S.C. § 1804, which deals with application for FISC court orders authorizing electronic surveillance, requires eleven categories of detailed information to be submitted by a federal office in writing under oath or affirmation to an FISC judge. Each application must be approved by the Attorney General based upon his finding that the application satisfies the criteria and requirements set forth in title I of FISA. Section 105 of FISA, 50 U.S.C. § 1805, sets out the findings that a FISC judge must make in approving such an application.

review provided for such applications. To the extent that new section 105A circumscribes the previous interpretation of "electronic surveillance" as defined under section 101(f) of FISA, 50 U.S.C. § 1801(f), it could be argued that this might significantly diminish the degree of judicial review to which such interceptions might have heretofore been entitled. On the other hand, if the interpretation of the definition of "electronic surveillance" contemplated in new section 105A of FISA is consistent with prior practice, then this concern with respect to section 105A's impact would appear to be eliminated.

A somewhat closer parallel might be drawn between the statutory structure for acquisitions contemplated in section 105B and that for electronic surveillance under section 102 of FISA, 50 U.S.C. § 1802. The latter section permits the President, through the Attorney General, to authorize electronic surveillance for up to one year without a court order, if the Attorney General certifies in writing under oath that the electronic surveillance is solely directed at the acquisition of the contents of communications transmitted by means of communications used exclusively between or among foreign powers, as defined in section 1801(a)(1), (2), or (3) of this title;[4376] or the acquisition of technical intelligence, other than the spoken communications of individuals, from property or premises under the open and exclusive control of such a foreign power. In addition, the Attorney General must certify that there is no substantial likelihood that the surveillance will acquire the contents of any communication to which a United States person is a party; and that the proposed minimization procedures with respect to such surveillance meet the definition of minimization procedures under section 1801(h) of this title; and he must comply with reporting requirements regarding those minimization procedures.

Subsection 102(b) of FISA denies the FISC jurisdiction to grant any order approving electronic surveillance directed solely at the acquisition of communications used exclusively between or among such foreign powers or the acquisition of such technical intelligence from property or premises under the exclusive and open control of such foreign powers, *unless such surveillance may involve the acquisition of communications of any United States person*. Section 105B provides the FISC no similar jurisdiction if an acquisition involves the communications of a United States person. Again, if the interpretation of the definition of "electronic surveillance" contemplated in new section 105A of FISA is consistent with prior practice, then this concern regarding section 105A's effect would appear to be eliminated.

To the extent that any intentional interceptions of communications which were previously deemed to be covered by the definition of "electronic surveillance" under FISA are now excluded from that definition, another question which may

---

[4376] *See* footnote 6, supra, for the definition of "foreign power" under section 101(a)(1), (2), or (3) of FISA.

arise is whether any of those interceptions may now be found to fall within the general prohibition against intentional interception of wire, oral, or electronic communications under Title III of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, 18 U.S.C. § 2511. Under 18 U.S.C. § 2511(2)(f), "electronic surveillance," as defined in section 101 of the Foreign Intelligence Surveillance Act, is an exception to this general prohibition.[4377] If such interceptions were deemed to violate 18 U.S.C. § 2511, then the intentional use or disclosure of the contents of such communications, knowing that the information was obtained through the interception of a wire, oral, or electronic communication in violation of 18 U.S.C. § 2511 would also be prohibited under that section.

Sec. 4. Reporting to Congress

Section 4 of P.L. 110-55 requires the Attorney General to inform the Senate Select Committee on Intelligence, the House Permanent Select Committee on Intelligence, the Senate Judiciary Committee and the House Judiciary Committee semi-annually concerning acquisitions "under this section"[4378] during the previous six-month period. Each report is to include descriptions of any incidents of noncompliance with a directive issued by the DNI and the Attorney General under section 105B, including noncompliance by an element of the Intelligence Community with guidelines or procedures for determining that "the acquisition of foreign intelligence authorized by the Attorney General and the [DNI] concerns persons reasonably to be outside the United States,"[4379] and incidents of noncompliance by a specified person to whom a directive is issued under section 105B. The report is also required to include the number of certifications and directives issued during the reporting period.

Sec. 5. Technical Amendment and Conforming Amendments

Section 5(a)(1) and (a)(2) make technical amendments to section 103(e)(1) and (2) of FISA, 50 U.S.C. § 1803(e)(1) and (2), to reflect the jurisdiction of the FISC

[4377] If there are any types of intentional interceptions of communications previously covered by FISA's definition of electronic surveillance, which may now be prohibited under 18

U.S.C. § 2511, this, in turn, might give rise to the question whether, if the President were to carry out such interceptions under an assertion of his constitutional authority under Article II, the application of Title III's prohibition to those interceptions would be found by a court to be unconstitutional, or whether the application of this prohibition to such interceptions would withstand constitutional scrutiny. Cf., In re Sealed Case, 310 F. 3d 717, 742, 746 (U.S. Foreign Intell. Surveillance Ct. Rev. 2002).

[4378] This appears to be a reference to section 105Bof FISA, as added by P.L.110-55, Sec. 2.

[4379] This may be intended to read "the acquisition of foreign intelligence information authorized by the Attorney General and Director of National Intelligence concerns persons reasonably believed to be outside the United States." (Emphasis added.)

petition review pool over petitions under section 105B(h) of FISA, dealing with challenges to the legality of directives issued under section 105B(e) of FISA to a person by the Attorney General and the DNI, and over petitions under section 501(f)[4380] of FISA, 50 U.S.C. § 1861, dealing with challenges to production orders or nondisclosure orders issued by the FISC under section 501(c) of FISA, 50 U.S.C. § 1861(c).

Section 5(b) makes conforming amendments to the table of contents of the first "section"[4381] of FISA, 50 U.S.C. § 1801 et seq., to reflect the additions of new sections 105A, 105B, and 105C of FISA.

Sec. 6. Effective Date; Transition Procedures

Effective Date

Under Section 6(a) of P.L. 110-55, the amendments to FISA made in the act are to take effect immediately after its enactment except as otherwise provided.

Transition Procedures

Section 6(b) of P.L. 110-55 provides that any order issued under FISA in effect on the date of enactment of P.L. 110-55 (August 5, 2007) shall remain in effect until the date of expiration of the order, and, at the request of the applicant for the order, the FISC shall reauthorize the order as long as the facts and circumstances continue to justify its issuance under FISA as in effect the day before the applicable effective date of P.L.110-55. This appears to refer to orders and applications for orders under FISA authorizing electronic surveillance,[4382] physical searches,[4383] pen registers or trap and trace devices,[4384] or production of tangible things and related nondisclosure orders.[4385]

[4380] Sec. 5(a)(1) and (2) of the act refer here to section "501(f)(1)," rather than to section "501(f)," of FISA. The reference to section 501(f)(1) of FISA, 50 U.S.C. § 1861(f)(1), may be intended to be a reference to section 501(f), 50 U.S.C. § 1861(f). Section 501(f), as added to FISA by P.L. 109-177, § 106(f), was rewritten by P.L. 109-178, § 3. Current section 501(f)(1) of FISA contains two subsections, defining the terms "production order" and "nondisclosure order," respectively, for purposes of section 501. For further discussion, see footnote 24, *supra*.

[4381] This appears to be intended to refer to the title I of FISA, dealing with electronic surveillance.

[4382] Applications for electronic surveillance are covered by section 104 of FISA, 50 U.S.C. § 1804, while orders authorizing such surveillance are addressed in section 105 of FISA, 50 U.S.C. § 1805. These sections were not amended by P.L.110-55.

[4383] Applications for physical searches are addressed in sections 302(b) and 303 of FISA, 50 U.S.C. §§ 1822(b) and 1823, while orders authorizing such physical searches are addressed in section 304 of FISA, 50 U.S.C. § 1824. These sections were not amended by P.L.110-55.

[4384] Applications for installation and use of pen registers and trap and trace devices are addressed in subsections 402(a), (b), and (c) of FISA, 50 U.S.C. § 1842(a), (b), and (c); while orders

Section 6(b) provides further that the government may also file new applications and the FISC shall enter orders granting such applications pursuant to FISA, as long as the application meets the requirements set forth in FISA as in effect on the day before the applicable effective date of P.L. 110-55. This seems to indicate that preexisting authorities under FISA remain available in the wake of P.L. 110-55's enactment. At the applicant's request, the FISC shall extinguish any extant authorizations to conduct electronic surveillance or physical searches pursuant to FISA. Any surveillance conducted pursuant to an order entered under subsection 6(b) of P.L. 110-55 is to be subject to the provisions of FISA as in effect before the effective date of P.L. 110-55.

Under Section 6(c) of P.L. 110-55, sections 2, 3, 4, and 5 of that act sunset 180 days after the date of enactment of the act, except as provided in section 6(d). Under section 6(d), any authorizations for acquisition of foreign intelligence information or directives issued pursuant to those authorizations issued under section 105B shall remain in effect until their expiration. Section 6(d) also provides that such acquisitions shall be governed by the applicable amendments made to FISA by P.L. 110-55, and shall not be deemed to constitute electronic surveillance as that term is defined in section 101(f) of FISA.[4386]

---

authorizing installation and use of such pen registers and trap and trace devices are covered by subsection 402(d), 50 U.S.C. § 1842(d). No amendments to these subsections were made in P.L. 110-55.

[4385] Applications for orders "requiring the production of any tangible things (including books, records, papers, documents, and other items) for an investigation to obtain foreign intelligence information not concerning a United States person or to protect against international terrorism or clandestine intelligence activities, provided that such investigation of a United States person is not conducted solely upon the basis of activities protected by the first amendment to the Constitution" are addressed in subsections 501(a) and (b) of FISA, 50 U.S.C. § 1861(a) and (b). Production orders are covered in subsection 501(c) of FISA, 50 U.S.C. § 1861(c), while related nondisclosure orders are addressed in subsection 501(d) of FISA, 50 U.S.C. § 1861(d). These subsections were not amended by P.L. 110-55.

[4386] The provisions in section 6(c) and (d) were added by Senate amendment 2649 to S. 1927, proposed by Senator McConnell, for himself and Senator Bond. It was agreed to by unanimous consent on August 3, 2007. As amended, the bill passed the Senate by Yea-Nay vote, 60-28 (Record Vote Number 309), 153 *Cong. Rec.* S10861-S10872 (August 3, 2007).

Subchapter VII: Protection of Persons Assisting the Government (50 U.S.C. §§ 1885-1885c)

Retroactive Immunity Provided by the FISA Amendments Act of 2008, RL34600 (July 25, 2008).

EDWARD C. LIU, CONG. RESEARCH SERV., RETROACTIVE IMMUNITY PROVIDED BY THE FISA AMENDMENTS ACT OF 2008 (2008), *available at* http://www.intelligencelaw.com/library/secondary/crs/pdf/RL34600_7-25-2008.pdf.

Order Code RL34600
July 25, 2008

Edward C. Liu
Legislative Attorney
American Law Division

Summary

On July 10, 2008, P.L. 110-261, entitled the FISA Amendments Act of 2008, was signed into law. Although many of the changes enacted by the FISA Amendments Act were controversial, one particularly contentious issue was whether to grant retroactive immunity to telecommunications providers that may have facilitated warrantless surveillance by the federal government under a Terrorist Surveillance Program between 2001 and 2007. Proponents of retroactive immunity argued that it was necessary to assure private cooperation with critical intelligence investigations. On the other hand, opponents of retroactive immunity argued that its inclusion undermined the statutory penalties that were designed to deter unlawful intrusions into individual liberties. This report discusses the various retroactive immunity mechanisms that were proposed to be included in the FISA Amendments Act, one of which was ultimately adopted, and their likely effect on lawsuits facing telecommunications providers.

Retroactive immunity is more than simply protection from liability; it can also act as protection from the cost of litigation. Without retroactive immunity, many legal issues would need to be addressed, possibly at great expense, in order to resolve these lawsuits. The plaintiffs would need to show that the actions of the defendants were not lawful. The Bush Administration's theory of inherent wiretapping ability might need to be litigated. Additionally, the applicability of the state secrets privilege to these cases might be the subject of litigation.

As enacted, the FISA Amendments Act lays out a procedure for the Attorney General to bring about the dismissal of lawsuits alleging unlawful participation in the Terrorist Surveillance Program (TSP). In order for a suit to be dismissed by a court, the Attorney General must certify that the defendant provided assistance

in connection with the TSP and was given written assurances that the program was authorized by the President and determined to be lawful. The Attorney General could also certify that the alleged assistance was not in fact provided by the defendant. All parties are permitted to submit documents and arguments relevant to dismissal which the court may consider. Dismissal is only proper if the court finds, based upon its review, that the Attorney General's certification is supported by "substantial evidence."

Introduction

In November of 2007, the House of Representatives passed H.R. 3773, the RESTORE Act, which would have amended several provisions of the Foreign Intelligence Surveillance Act (FISA). In February of 2008, the Senate passed an amendment in the nature of a substitute to H.R. 3773. The Senate amendment included, among other things, a provision allowing the Attorney General to seek the dismissal of civil lawsuits brought by private citizens against telecommunications providers that may have assisted the federal government in carrying out warrantless electronic surveillance. In March of 2008, the House responded by passing a third version of H.R. 3773 removing the retroactive immunity provisions, but later passed a compromise bill, H.R. 6304, in June. H.R. 6304 included a variation on the retroactive immunity provisions of the Senate's version of H.R. 3773. In July of 2008, the Senate passed H.R. 6304, also titled the FISA Amendments Act of 2008 (FISA Amendments Act), without modification, and the President subsequently signed it into law.[4387] This report discusses the effect of the retroactive immunity provided by the FISA Amendments Act on lawsuits alleging unlawful electronic surveillance by telecommunications providers under a Terrorist Surveillance Program (TSP) between 2001 and 2007.

The Terrorist Surveillance Program

In late 2005, the New York Times reported that the federal government had "monitored the international telephone calls and international e-mail messages of hundreds, perhaps thousands, of people in the United States without warrants."[4388] Subsequently, President Bush acknowledged that, after the attacks of September 11, 2001, he had authorized the National Security Agency to "intercept international communications into and out of the United States" by "persons linked to al Qaeda or related terrorist organizations" based upon "his constitutional authority to conduct warrantless wartime electronic surveillance of

[4388] James Risen and Eric Lichtblau, Bush Lets U.S. Spy on Callers Without Courts, NEW YORK TIMES, Dec. 16, 2005, at 1.

the enemy."[4389] The revelation of the existence of the TSP aroused controversy because it appeared to run afoul of the general rule[4390] that electronic surveillance by the federal government is unlawful unless conducted pursuant to the Foreign Intelligence Surveillance Act (FISA)[4391] or Title III of the Omnibus Crime Control and Safe Streets Act (Title III).[4392] In contrast, the Bush Administration's position has been that such warrantless surveillance is lawful under the President's constitutionally granted authority and the Authorization for Use of Military Force (AUMF) enacted by Congress in 2001.[4393]

On Jan 17, 2007, a letter from the Attorney General to Congress indicated that "any electronic surveillance that was occurring as part of the Terrorist Surveillance Program [would] be conducted subject to the approval of the Foreign Intelligence Surveillance Court." Now discontinued, the TSP appears to have been active from shortly after September 11, 2001, to sometime in January of 2007.[4394]

Dozens of lawsuits have been filed by private citizens and interest groups alleging various statutory and constitutional violations by the telecommunications companies that participated in the TSP.[4395] The debate over retroactive immunity is of central importance to these cases, as it would likely render any litigation of the underlying legal issues moot.[4396] On August 2, 2007, the Director of National Intelligence (DNI) stated that "those who assist the Government in protecting us from harm must be protected from liability," specifically "those who are alleged

to have assisted the Government after September 11, 2001 and have helped keep the country safe."[4397] Proponents of retroactive immunity also argued that without "the [telecommunications providers'] voluntary cooperation it [foreign intelligence gathering] is much harder and we get much less [information]."[4398] On the other hand, opponents of retroactive immunity pointed out that retroactive immunity "strips [unlawfully surveilled] individuals of the ability to vindicate their rights in court regarding wiretapping abuses of the past,"[4399] and that "if we want [telecommunications providers] to follow the law in the future, it sends a terrible message, and sets a terrible precedent, to give them a 'get out of jail free' card for allegedly ignoring the law in the past."[4400]

Issues Raised by Civil Actions Against Telecommunications Providers

Retroactive immunity is more than simply protection from liability; it can also act as protection from the cost of litigation. Therefore, before discussing the effects of any retroactive immunity provisions, it may be helpful to examine how a covered lawsuit might proceed in the absence of retroactive immunity. Without retroactive immunity, many legal issues would need to be addressed, possibly at great expense, in order to resolve these cases. The plaintiffs would need to show that the actions of the defendants were not lawful under the laws in effect when the TSP was active. The Bush Administration's theory of inherent wiretapping ability might be litigated. Additionally, the applicability of the state secrets privilege could also be the subject of litigation. Each of these issues is discussed below.

Lawfulness Under the FISA and Title III

As a general principle, if electronic surveillance is likely to result in the acquisition of communications to or from someone in the United States such surveillance may not be conducted unless sanctioned by a court order.[4401] Federal

[4397] Admiral Michael McConnell, Director of Nat'l Intelligence, Modernization of the Foreign Intelligence Surveillance Act (FISA), Aug. 2, 2007, available at [http://www.odni.gov/press_releases/20070802_release.pdf].

[4398] 154 CONG. REC. S6454 (daily ed. July 9, 2008) (statement of Sen. Bond).

[4399] ACLU, Letter to the Senate Urging No Votes On Any Bill That Would Authorize Warrantless Wiretapping or Grant Immunity to Telecoms, Feb. 2, 2008, available at [http://www.aclu.org/safefree/general/33909leg20080204.html].

[4400] 154 CONG. REC. S6381 (daily ed. July 8, 2008) (statement of Sen. Feingold).

[4401] But, 50 U.S.C. § 1802 authorizes electronic surveillance without a court order for up to one year, if the targets are means of communications, property, or premises used exclusively by foreign governments, and there is no substantial likelihood that the surveillance will acquire the contents of any communication to which a United States person is a party. Exceptions also apply

law provides two statutory frameworks for obtaining warrants to conduct electronic surveillance: Title III of the Omnibus Crime Control and Safe Streets Act and FISA. Title III authorizes electronic surveillance in the context of law enforcement, while FISA authorizes electronic surveillance in the context of gathering foreign intelligence. Both Title III and FISA also provide prospective civil immunity for individuals that assist or conduct electronic surveillance under the auspices of either statutory framework.[4402]

Plaintiffs suing telecommunications providers, and others, argue that the TSP was not lawful under either Title III or FISA. Many of the details of the TSP remain classified, but it apparently authorized the surveillance of international communications without a judicially issued warrant if there was a "reasonable basis to conclude that one party to the conversation [was] a member of al Qaeda."[4403] That determination appears to have been made by intelligence officials, and was reported to have been reviewed every 45 days.[4404] In contrast, Title III and FISA only allow warrantless surveillance for shorter periods of time in most circumstances.[4405] Statements by officials in the Bush Administration appear to acknowledge that the TSP was conceived and operated outside of the procedures authorized by either Title III or FISA.[4406]

---

during emergency situations or after congressional declarations of war. Infra, note 19. For a thorough description and analysis of federal wiretapping laws, see, CRS Report 98-326, Privacy: An Overview of Federal Statutes Governing Wiretapping and Electronic Eavesdropping, by Gina Stevens and Charles Doyle.

[4402] 18 U.S.C. § 2511(2)(a)(ii) bars civil actions against telecommunications providers that give assistance pursuant to a court order or certification issued under Title III. FISA bars civil actions against the same type of defendants for assistance given pursuant to surveillance authorized by that statute. 50 U.S.C. § 1805(h).

[4403] Press Briefing, infra note 20.

[4404] President George W. Bush, Press Conference, Dec. 19, 2005, available at [http://www.whitehouse.gov/news/releases/2005/12/20051219-2.html].

[4405] See, 18 U.S.C. § 2518(7) (authorizing warrantless electronic surveillance for 48 hours in situations involving immediate danger to persons, threats to national security, or organized crime); 50 U.S.C. § 1805(e) (authorizing emergency warrantless electronic surveillance for up to 72 hours while a court order is sought); and 50 U.S.C. § 1811 (authorizing warrantless electronic surveillance for 15 days following a Congressional declaration of war). But, see, discussion of authority to conduct warrantless electronic surveillance for up to one year, supra, note 15.

[4406] For example, Attorney General Alberto Gonzales made the following statement: [FISA] is a very important tool that we continue to utilize. Our position is that we are not legally required to do [sic], in this particular case, because the law requires that we — FISA requires that we get a court order, unless authorized by a statute, and we believe that authorization has occurred. General Michael Hayden, Principal Deputy Director for National Intelligence, elaborated further on that statement: [B]ecause of the speed, because of the procedures, because of the processes and requirements set up in the FISA process, I can say unequivocally that we have used this program [the TSP] in lieu of that [FISA] and this program has been successful. Attorney General

Executive Authority and the Authorization for Use of Military Force

Nonetheless, the Bush Administration has argued, in support of the TSP, that the Constitution grants the executive the inherent power to conduct electronic surveillance to gather foreign intelligence and the AUMF reflects a congressional intent to give the executive the authority to take all measures necessary to combat terrorism. A full exposition of the support for these propositions is beyond the scope of this report.[4407] However, one should note that the question would require reconciling the assertions of the Bush Administration with the legislative history and statutory text of FISA and Title III which identify those statutes as the exclusive means of conducting electronic surveillance.[4408] Here, it is sufficient to note that it is an issue that would likely require extensive litigation in order to be resolved.

The State Secrets Privilege

In some cases, the confidential subject matter of a suit may prevent a court from hearing it. Under the judicially created state secrets privilege, "public policy forbids the maintenance of any suit ... the trial of which would inevitably lead to the disclosure of matters which the law itself regards as confidential."[4409] Insofar as many of the details of the TSP remain classified, it is likely that the state secrets privilege would be central to the disposition of the suits against telecommunications providers discussed above.

The state secrets privilege is held by the government, meaning that only the government can assert it to preclude litigation.[4410] If claimed by the federal government, the effect of the state secrets privilege can range from the exclusion of certain information from discovery or admission at trial to the complete dismissal of a civil action.[4411] For example, in *Totten v. United States*, a former spy brought suit to enforce a secret contract with the federal government for

espionage services. Ultimately, in that case, the Supreme Court held that the subject of litigation, namely the contract for espionage, was itself a secret and any litigation on that subject was barred.[4412]

In other circumstances, the state secrets privilege applies only to certain items of evidence, rather than to the subject of litigation at large. In *Halkin v. Helms*, the D.C. Circuit was confronted with a claim of privilege regarding the NSA's alleged interception of international communications to and from persons who had been targeted by the CIA.[4413] After deciding that the claim of privilege was valid, the court of appeals affirmed the protection of that information from discovery, while permitting other evidence that the plaintiffs were targeted by the CIA.[4414] In the end, however, the court dismissed the suit after deciding that without the privileged information, the plaintiffs would not be able to make a prima facie case.

A similar result may occur if the state secrets privilege requires the exclusion of evidence central to a defendant's case. In *Molerio v. Federal Bureau of Investigation*, a job seeker alleged that the FBI had disqualified him based upon his father's political ties to socialist organizations in violation of his father's First Amendment rights.[4415] In response, the FBI asserted that it had a lawful reason to disqualify the plaintiff, but claimed that its reason was protected by the state secrets privilege. After reviewing the FBI's claim in camera, the D.C. Circuit agreed that the evidence of a nondiscriminatory reason was protected and that its exclusion would deprive the FBI of a valid defense. Therefore, the dismissal of that action was required.[4416]

Although it is not possible to accurately determine whether the state secrets privilege would necessitate dismissal of the telecommunications cases discussed above, several courts presented with lawsuits regarding the TSP have issued preliminary rulings regarding the applicability of the state secrets privilege.

In *Hepting v. AT&T*, the district court was presented with an assertion of the state secrets privilege.[4417] The court first examined whether the information requested was actually secret, given the amount of media publicity regarding the

TSP and public statements made by the Bush Administration and the defendant.[4418] While the specifics of the TSP may remain classified, the court noted that the general subject of the litigation, specifically that such a program existed at all, was no longer a secret given the admissions made by the government and the defendant. Therefore, this case was distinguishable from *Totten*, and dismissal of the case at the outset of litigation was inappropriate.[4419] While the privilege may limit the plaintiffs' discovery efforts or the defendant's assertion of a defense at a later date, the court declined to rule on whether that would ultimately necessitate dismissal.[4420]

FISA may preempt the state secrets privilege. In *In re National Security Agency Telecommunications Records Litigation*, the court considered 50 U.S.C. § 1806(f), which mandates a legislatively created procedure for courts to consider sensitive material, the disclosure of which might damage the national security of the United States.[4421] Section 1806(f), which was left unmodified by the FISA Amendments Act, requires sensitive information to be reviewed by courts ex parte and in camera with adequate procedures to safeguard against inadvertent disclosure.[4422] The court found that this legislative framework trumped the judicially created state secrets privilege, despite arguments that the privilege was of constitutional origin.[4423] The court did not preclude assertion of the privilege where FISA did not apply.[4424] In the case before it, the plaintiffs had yet to show standing as "aggrieved persons" under FISA. Therefore, the court continued to bar the privileged information, but only until the plaintiffs had the opportunity to show, through other evidence, whether they are "aggrieved persons."[4425]

Retroactive Immunity Under the FISA Amendments Act of 2008

Title II of the FISA Amendments Act lays out a procedure for the Attorney General to seek the dismissal of lawsuits alleging unlawful participation in the TSP by telecommunications providers. The process begins when the Attorney General certifies, to the court where the lawsuit is pending, two fundamental facts regarding the defendant's alleged assistance. First, the assistance must have been given in connection with the TSP between September 11, 2001, and January 17, 2007. Second, the defendant must have been given written assurances that the TSP was authorized by the President and determined to be lawful. Alternatively, the Attorney General can certify that the alleged assistance was not in fact provided by the defendant. All parties are permitted to submit documents and arguments which the court may consider, and dismissal is required if the court finds, based upon its review, that the certification was supported by "substantial evidence." What constitutes substantial evidence is discussed in the section below regarding standards of review.

Alternative Retroactive Immunity Proposals

Before the passage of H.R. 6304 by the Senate, that body had previously included retroactive immunity for telecommunications providers in its amendment to H.R. 3773. Additionally, three amendments were proposed to H.R. 6304 that would have modified the retroactive immunity provisions. This section examines the different approaches to retroactive immunity in that bill and the proposed amendments.

Senate Amendment to H.R. 3773

In February of 2008, the Senate passed an amendment in the nature of a substitute to H.R. 3773. Like H.R. 6304, this Senate amendment would have required courts to dismiss lawsuits against telecommunications providers if sufficient grounds for dismissal were certified to the court by the Attorney General.[4426] With respect to the lawsuits alleging assistance provided under the TSP, the grounds for dismissal were identical to those required under H.R. 6304. But, H.R. 3773 did not provide a means for others to submit arguments or documents in opposition to dismissal, and certifications would only be subject to review for an abuse of discretion.[4427] What qualifies as an abuse of discretion is discussed in the section below regarding standards of review.

Proposed Amendments to H.R. 6304

[4426] H.R. 6304, § 201, 110th Cong.

[4427] H.R. 3773, § 202(a) as amended by the Senate, 110th Cong.

Three amendments offering variations on the retroactive immunity mechanism were introduced in the Senate during the debate over H.R. 6304, but were not adopted.

S.Amdt. 5059

Introduced by Senator Specter, S.Amdt. 5059 would have added a second component to a court's review of a certification by the Attorney General. Under this amendment, dismissal would not be appropriate if the court determined that the underlying intelligence activity that the defendant had participated in was unconstitutional. Because this would have been a legal determination, the court would have been permitted to address this question *de novo* without relying upon or giving deference to any interpretations of the Constitution made by the Attorney General in the certification or elsewhere.

S.Amdt. 5060

Introduced by Senator Whitehouse, S.Amdt. 5060 would have required that the Attorney General additionally certify that the defendant had provided assistance based on a "good faith and reasonable belief" that its conduct was lawful. Like the rest of the certification, this finding would have needed to be supported by "substantial evidence" in order to result in a dismissal.

S.Amdt. 5066

Introduced by Senator Bingaman, S.Amdt. 5066 would have left the certification mechanism of H.R. 6304 in place, but would have delayed certification by the Attorney General in cases involving the TSP until 90 days after the inspectors general of various intelligence and national security agencies had reviewed the TSP and submitted a comprehensive report to Congress detailing their findings. Additionally, all TSP lawsuits would have been stayed during this time. The review and report are still mandated by a separate provision of H.R. 6304, § 301, and are required to be completed within one year of the date of enactment, but does not require any TSP lawsuits to be stayed.

Comparison of Retroactive Immunity Provisions

Timing of Certifications

Although alternative proposals to retroactive immunity followed the same general procedure as the FISA Amendments Act with respect to how and by whom a certification is made, the question of when a certification is made may vary substantially. Generally, the certification would appear to be permissible at any stage of litigation before final judgment. Note, however, that the act requires certifications to be made to the court in which the action is pending. That clause could possibly be read to disallow certifications in anticipation of any litigation. In contrast, the Senate amendment to H.R. 3773 did not appear to contain such language. The import of this difference may be magnified as a change in Administration is imminent. This may create the possibility that, under the law as passed, a potential plaintiff could forestall filing suit in the hope that a new

Administration, opposed to retroactive immunity, would take office. If anticipatory certifications are not permitted because no action is pending, suits filed after the Administration changes could still be dismissed, but only at the discretion of a newly appointed Attorney General.

Similarly, the delay proposed by S.Amdt. 5066 also raised the possibility that a change in Administration could have affected the certification of a lawsuit alleging that participation in the TSP was unlawful. S.Amdt. 5066 would have disallowed certifications until 90 days after a report detailing the specifics of the TSP is received by Congress. Depending upon how long it actually took for that report to be completed, certifications might not have been permissible until some time after the current Administration had left office.

Standards of Review

The Senate amendment to H.R. 3773 would have instructed the court to review certifications using an "abuse of discretion standard." In contrast, the enacted FISA Amendments Act requires certifications to be supported by "substantial evidence." Two important characteristics of any standard of review are the level of scrutiny given and the scope of the universe in which such review takes place. An analysis of each standard of review and its potential effect on the pending litigation at issue is discussed below.

Abuse of Discretion

In the judicial context, appellate courts commonly review discretionary rulings of lower courts under an abuse of discretion standard. For example, a federal trial judge's decision to exclude evidence because it is unfairly prejudicial is reversible error only if the trial court made an error of law or acted in an unprincipled, arbitrary, or irrational manner.[4428] In the words of the Supreme Court, it is "deference that is the hallmark of abuse of discretion review."[4429]

But, the Senate amendment to H.R. 3773 deals with judicial review of the actions of an executive branch official, namely the Attorney General. Therefore, an examination of the standards for judicial review of administrative action under the Administrative Procedure Act (APA) may be more illustrative than comparisons to review of actions by lower courts. Unless specifically excluded from review by statute, the APA authorizes courts to set aside agency actions that are "arbitrary, capricious, or an abuse of discretion."[4430] The Supreme Court of

[4428] See, e.g., Republic of the Phil. v. Pimentel, 128 S. Ct. 2180, 2189 (2008); United States v. York, 933 F.2d 1343 (7th Cir. 1991); United States v. Coiro, 922 F.2d 1008 (2nd Cir. 1991).

[4429] G.E. v. Joiner, 522 U.S. 136, 143 (1997) (addressing whether appellate court properly evaluated trial court's actions using an abuse of discretion standard).

[4430] 5 U.S.C. § 706(2)(A).

the United States had the opportunity to expound upon the meaning of this standard in Citizens to Preserve Overton Park, Inc. v. Volpe, a case involving a challenge to the construction of a highway through a public park.[4431] The Court held that this standard of review required the reviewing court to

> *consider whether the decision was based upon a consideration of the relevant factors and whether there has been a clear error of judgment. Although this inquiry into the facts is to be searching and careful, the ultimate standard of review is a narrow one. The court is not empowered to substitute its judgment for that of the agency.*[4432]

Therefore, in the case of certifications by the Attorney General, a court reviewing for an abuse of discretion would have likely examined the Attorney General's consideration of the assistance provided by the defendants, the types of representations made by intelligence officials concurrently with requests for assistance, and the facts surrounding any other findings required by the certification.

Note that the Senate amendment to H.R. 3773 did not indicate what record, if any, the court would be able to review in gauging the propriety of the Attorney General's certification. The only documentation the Attorney General would have been required to present is the certification itself, and no other provision would have allowed opposing parties to present contradictory evidence or arguments. Because of these limitations, it is not clear on what basis, if any, a court could have found a certification under H.R. 3773 to be an abuse of discretion.

Substantial Evidence

In contrast, "substantial evidence" is a standard of review frequently used by courts to review formal findings of fact by federal agencies.[4433] It is less stringent than de novo review, which would allow a court to look at the evidence anew and come to its own conclusions. Nevertheless, the Supreme Court has described "substantial evidence" as requiring "more than a mere scintilla" of support and comparable to the standard a trial judge must meet to sustain a jury's verdict.[4434]

[4431] Citizens to Preserve Overton Park, Inc. v. Volpe, 401 U.S. 402 (1971) (overruled on other grounds by Califano v. Sanders, 430 U.S. 99, 105 (1977)).

[4432] Id. at 416.

[4433] In Overton Park, the Supreme Court remarked that substantial evidence review was not appropriate because the agency had not taken undertaken formal rulemaking or an adjudicatory hearing. Overton Park, 401 U.S. at 414.

[4434] Consolidated Edison Co. v. NLRB, 305 U.S. 197, 229 (1938); NLRB v. Columbian Enameling & Stamping Co., 306 U.S. 292, 300 (1939).

In the federal courts, a jury verdict will not be disturbed if "reasonable and fair-minded persons in exercise of impartial judgment" might have come to the same conclusion as the jury.[4435] Therefore, under the "substantial evidence" test, if a court reviewing an Attorney General's certification under the FISA Amendments Act found that an objectively reasonable person could conclude that the facts in the certification were true, the court would be required to dismiss the suit.

In the administrative context, substantial evidence review and abuse of discretion review occur in factually distinct circumstances. Substantial evidence is required when an agency engages in either formal rulemaking or an adjudicatory hearing. In contrast, abuse of discretion applies in cases of informal rulemaking and decisions. Therefore, it may be difficult to directly compare the two standards in terms of stringency. Although some courts appear to consider substantial evidence a more demanding standard than abuse of discretion, the consistent theme of both standards is that the court is not free to substitute its judgment in place of the agency's.[4436] However, any apparent similarity between the level of deference afforded by a reviewing court under either standard should not overshadow important differences in the scope of the record available to the court.

The scope of the record viewed by the court is a critical factor affecting the search for "substantial evidence." In *Universal Camera v. National Labor Relations Board*, the Supreme Court interpreted the Taft-Hartley Act's use of the phrase "substantial evidence on the record considered as a whole."[4437] A previous version of the act stated only that findings by the National Labor Relations Board be "supported by evidence" and had been read by some courts to mean that if any evidence exists to support the agency's findings, then they are valid, regardless of what contradictory evidence also exists. But, in Universal Camera, the Supreme Court found that the addition of the phrase "on the record considered as a whole" indicated that Congress intended courts to review agency findings of fact based upon a holistic view of the record, evaluating supporting evidence in light of available contradictory information.[4438]

[4435] E.g., Kosmynka v. Polaris Industries, Inc., 462 F.3d 74, 79-82 (2nd Cir. 2006) (upholding jury's finding that a manufacturer was negligent for failing to warn that its all-terrain vehicle might upend itself despite uncontested evidence that the manufacturer had received no reports of such incidents).

[4436] See, e.g., Frontier Fishing Corp. v. Evans, 429 F. Supp. 2d 316, n.7 (citing Indus. Union Dep't v. API, 448 U.S. 607, 705 (1980) (Marshall, J., dissenting, asserting that substantial evidence is more stringent, but is ultimately a deferential standard)).

[4437] Universal Camera v. NLRB, 340 U.S. 474 (1951) (emphasis added).

[4438] Id. at 490.

The FISA Amendments Act requires that certifications be supported by "substantial evidence provided to the court pursuant to this section." The act goes on to permit a reviewing court to examine documentation, certifications, briefs and arguments submitted by all parties when determining if substantial evidence supports the certification. One could reasonably conclude that the availability of contradictory evidence would indicate the intent to apply the more stringent Universal Camera definition of substantial evidence. On the other hand, the text of the act may not require the court to consider extraneous material.[4439]

Therefore, as compared with the Senate amendment to H.R. 3773, the FISA Amendments Act provides the possibility of a broader factual record in which to conduct judicial review of a certification by the Attorney General, but may leave much of the discretion to view that record to the court itself. Under the FISA Amendments Act, it seems possible that a court could lawfully dismiss a case upon certification by the Attorney General, if the court finds the substantial evidence standard is satisfied after looking only at the information provided by the Attorney General.

[4439] Compare, 50 U.S.C. § 1885a(b)(2) ("the court may examine [supplemental materials]") (emphasis added) with 50 U.S.C. § 1185a(c) ("the court shall review such certification and the supplemental materials in camera and ex parte") (emphasis added).

Cyber-Espionage and Cyber-Warfare by U.S. Intelligence Agencies: Still a Largely Unregulated Area of Operations

Internet Privacy: Overview and Legislation in the 109th Congress, 1st Session, RL31408 (January 26, 2006).

Resources, Science, and Industry Division
Congressional Research Service
The Library of Congress

Summary

Internet privacy issues encompass several types of concerns. One is the collection of personally identifiable information (PII) by website operators from visitors to government and commercial websites, or by software that is surreptitiously installed on a user's computer ("spyware") and transmits the information to someone else. Another is the monitoring of electronic mail and Web usage by the government or law enforcement officials, employers, or email service providers.

The September 11, 2001 terrorist attacks intensified debate over the issue of monitoring by the government and law enforcement officials, with some advocating increased tools to help them track down terrorists, and others cautioning that fundamental tenets of democracy, such as privacy, not be endangered in that pursuit. Congress passed the 2001 USA PATRIOT Act (P.L. 107-56) that, inter alia, makes it easier for law enforcement officials to monitor Internet activities. That act was amended by the Homeland Security Act (P.L. 107-296), loosening restrictions as to when, and to whom, Internet Service Providers may voluntarily release the content of communications if they believe there is a danger of death or injury. Some provisions of the USA PATRIOT Act, including two that relate to Internet use, would have expired on December 31, 2005. Congress passed a brief extension (to February 3, 2006) in P.L. 109-160.

Debate over whether civil liberties protections need to be added if the provisions are to be made permanent is expected to continue in the second session of the 109th Congress. Revelations that President Bush directed the National Security Agency to monitor some communications, including e-mails, in the United States without warrants may affect those deliberations.

The debate over website information policies concerns whether industry self regulation or legislation is the best approach to protecting consumer privacy. Congress has considered legislation that would require commercial website operators to follow certain fair information practices, but the only law that has been enacted (COPPA, P.L. 105-277) concerns the privacy of children under 13, not the general public. Legislation has passed regarding information practices for federal government websites, including the E-Government Act (P.L. 107-347).

The growing controversy about how to protect computer users from "spyware" without creating unintended consequences is discussed briefly in this report, but in more detail in CRS Report RL32706. Another issue, identity theft, is not an Internet privacy issue per se, but is often debated in the context of whether the Internet makes identity theft more prevalent. For example, Internet-based practices called "phishing" and "pharming" may contribute to identity theft. Identity theft is briefly discussed in this report; more information is available in CRS Report RS22082, CRS Report RL31919, and CRS Report RL32535. Wireless privacy issues are discussed in CRS Report RL31636.

This is the final edition of this report. It provides an overview of Internet privacy issues and related laws passed in previous Congresses, and discusses legislative activity in the first session of the 109th Congress.

Introduction

Internet privacy issues encompass several concerns. One is the collection of personally identifiable information (PII) by website operators from visitors to government and commercial websites, or by software that is surreptitiously installed on a user's computer ("spyware") and transmits the information to someone else. Another is the monitoring of electronic mail and Web usage by the government or law enforcement officials, employers, or e-mail service providers. Another issue, identity theft, is not an Internet privacy issue per se, but is often debated in the context of whether the Internet makes identity theft more prevalent. For example, Internet-based practices called "phishing" and "pharming" may contribute to identity theft.

This report provides an overview of Internet privacy-related issues and related laws passed in previous Congresses, and discusses legislative activity in the first session of the 109th Congress. Background information on Internet privacy issues is available in an archived CRS Report RL30784, Internet Privacy: An Analysis of Technology and Policy Issues, by Marcia Smith (available from author); and CRS Report RL31289, The Internet and the USA PATRIOT Act:

Potential Implications for Electronic Privacy, Security, Commerce, and Government, by Marcia Smith, et al.

Internet: Commercial Website Practices

One aspect of the Internet ("online") privacy debate focuses on whether industry self regulation or legislation is the best route to assure consumer privacy protection. In particular, consumers appear concerned about the extent to which website operators collect "personally identifiable information" (PII) and share that data with third parties without their knowledge. Although many in Congress and the Clinton Administration preferred industry self regulation, the 105th Congress passed legislation (COPPA, see below) to protect the privacy of children under 13 as they use commercial websites. Many bills have been introduced since that time regarding protection of those not covered by COPPA, but the only legislation that has passed concerns federal government, not commercial, websites.

Children's Online Privacy Protection Act (COPPA), P.L. 105-277

Congress, the Clinton Administration, and the Federal Trade Commission (FTC) initially focused their attention on protecting the privacy of children under 13 as they visit commercial websites. Not only are there concerns about information children might divulge about themselves, but also about their parents. The result was the Children's Online Privacy Protection Act (COPPA), Title XIII of Division C of the FY1999 Omnibus Consolidated and Emergency Supplemental Appropriations Act, P.L. 105-277.[4440] The FTC's final rule implementing the law became effective April 21, 2000 [http://www.ftc.gov/os/1999/10/64fr59888.htm]. Commercial websites and online services directed to children under 13, or that knowingly collect information from them, must inform parents of their information practices and obtain verifiable parental consent before collecting, using, or disclosing personal information from children. The Commission adopted a "sliding scale" for complying with the verifiable consent requirement depending on how the data would be used. That is, if the information was for internal use only, the verifiable consent could be obtained from the parent by e-mail, plus an additional step to ensure the person giving consent is, in fact, the parent. If the website operator planned to disclose the information publicly or to third parties, a higher standard was set. This sliding scale was set to expire in 2002 with the expectation that better verification technologies would become available. However, in 2002, the FTC determined that such technologies still were not available, and the sliding scale was extended to April 12, 2005. In 2005, the Commission extended it

[4440] COPPA should not be confused with COPA — the Child Online Protection Act — which addresses protecting children from unsuitable material, such as pornography, on the Internet. COPA is discussed in CRS Report RS21328, Internet: Status of Legislative Attempts to Protect Children from Unsuitable Material on the Web, by Marcia S. Smith.

again, and is seeking public comment on how to proceed, as part of its overall review of the COPPA rule.[4441]

The law also provides for industry groups or others to develop self-regulatory "safe harbor" guidelines that, if approved by the FTC, can be used by websites to comply with the law. The FTC approved self-regulatory guidelines proposed by the Better Business Bureau on January 26, 2001. On June 11, 2003, then-FTC Chairman Timothy Muris stated in testimony to the Senate Commerce Committee that the FTC had brought eight COPPA cases, and obtained agreements requiring payment of civil penalties totaling more than $350,000.[4442]

As required by COPPA, on April 21, 2005, the Commission issued a request for public comment on its final rule, five years after the rule's effective date.[4443] Comments were requested on the costs and benefits of the rule; whether it should be retained, eliminated, or modified; and its effect on practices relating to the collection of information relating to children, children's ability to access information of their choice online, and the availability of websites directed to children.

FTC Activities and Fair Information Practices

The FTC conducted or sponsored several surveys between 1997 and 2000 to determine the extent to which commercial website operators abided by four fair information practices — providing notice to users of their information practices before collecting personal information, allowing users choice as to whether and how personal information is used, allowing users access to data collected and the ability to contest its accuracy, and ensuring security of the information from unauthorized use. Some include enforcement as a fifth fair information practice. Regarding choice, the term "opt-in" refers to a requirement that a consumer give affirmative consent to an information practice, while "opt-out" means that permission is assumed unless the consumer indicates otherwise. See archived CRS Report RL30784, Internet Privacy: An Analysis of Technology and Policy Issues, by Marcia Smith (available from author), for more information on the FTC surveys and fair information practices. The FTC's reports are available on its website [http://www.ftc.gov].

[4441] "FTC Seeks Public Comment on Children's Online Privacy Rule." FTC press release, April 21, 2005. See [http://www.ftc.gov/opa/2005/04/coppacomments.htm]. (Hereafter cited as FTC Seeks Public Comment on Children's Online Privacy Rule).

[4442] Prepared statement of Timothy Muris, Chairman, Federal Trade Commission, p. 10, available at [http://commerce.senate.gov/hearings/witnesslist.cfm?id=807].

[4443] FTC Seeks Public Comment on Children's Online Privacy Rule.

Briefly, the first two FTC surveys (December 1997 and June 1998) created concern about the information practices of websites directed at children and led to the enactment of COPPA (see above). The FTC continued monitoring websites to determine if legislation was needed for those not covered by COPPA. In 1999, the FTC concluded that more legislation was not needed at that time because of indications of progress by industry at self-regulation, including creation of "seal" programs (see below) and by two surveys conducted by Georgetown University. However, in May 2000, the FTC changed its mind following another survey that found only 20% of randomly visited websites and 42% of the 100 most popular websites had implemented all four fair information practices. The FTC voted to recommend that Congress pass legislation requiring websites to adhere to the four fair information practices, but the 3-2 vote indicated division within the Commission. On October 4, 2001, Timothy Muris, who had recently become FTC Chairman, stated that he did not see a need for additional legislation at that time. (Mr. Muris was succeeded as FTC Chairman on August 16, 2004 by Deborah Platt Majoras.)

Advocates of Self Regulation

In 1998, members of the online industry formed the Online Privacy Alliance (OPA) to encourage industry self regulation. OPA developed a set of privacy guidelines, and its members are required to adopt and implement posted privacy policies. The Better Business Bureau (BBB), TRUSTe, and WebTrust have established "seals" for websites. To display a seal from one of those organizations, a website operator must agree to abide by certain privacy principles (some of which are based on the OPA guidelines), a complaint resolution process, and to being monitored for compliance. Advocates of self regulation argue that these seal programs demonstrate industry's ability to police itself.

Technological solutions also are being offered. P3P (Platform for Privacy Preferences) is one such technology. It essentially creates machine-readable privacy policies through which users can match their privacy preferences with the privacy policies of the websites they visit. One concern is that P3P requires companies to produce shortened versions of their privacy policies, which could raise issues of whether the shortened policies are legally binding, since they may omit nuances and "sacrifice accuracy for brevity."[4444] For more information on P3P, see [http://www.w3.org/P3P/].

Advocates of Legislation

Consumer, privacy rights and other interest groups believe self regulation is insufficient. They argue that the seal programs do not carry the weight of law,

and that while a site may disclose its privacy policy, that does not necessarily equate to having a policy that protects privacy. The Center for Democracy and Technology (CDT, at [http://www.cdt.org]) and the Electronic Privacy Information Center (EPIC, at [http://www.epic.org]) each released reports on this topic. EPIC's most recent report, Privacy Self Regulation: A Decade of Disappointment, argues that the National Do Not Call list, which restricts telemarketing phone calls, demonstrates that government regulation can be more effective than industry self regulation. Calling telemarketing a 20th century problem, the report concludes that the FTC has given self regulation a decade to work in the Internet privacy arena, and it is time for the agency "to apply the lessons from telemarketing and other efforts to address the 21st century [sic] problem of Internet privacy."[4445]

Some privacy interest groups, such as EPIC, also feel that P3P is insufficient, arguing that it is too complex and confusing and fails to address many privacy issues. An EPIC report from June 2000 further explains its findings [http://www.epic.org/reports/prettypoorprivacy.html].

Privacy advocates have been particularly concerned about online profiling, where companies collect data about what websites are visited by a particular user and develop profiles of that user's preferences and interests for targeted advertising. Following a one-day workshop on online profiling, FTC issued a two-part report in the summer of 2000 that also heralded the announcement by a group of companies that collect such data, the Network Advertising Initiative (NAI), of self-regulatory principles. At that time, the FTC nonetheless called on Congress to enact legislation to ensure consumer privacy vis a vis online profiling because of concern that "bad actors" and others might not follow the self-regulatory guidelines.

Congressional Action

Many Internet privacy bills were considered by the 107th and 108th Congresses. Other than extending an existing prohibition regarding federal websites (see next section), none cleared Congress. Several bills were introduced in the first session of the 109th Congress (see table at end of report).

Internet: Federal Government Website Information Practices

Under a May 1998 directive from President Clinton and a June 1999 Office of Management and Budget (OMB) memorandum, federal agencies must ensure that their information practices adhere to the 1974 Privacy Act. In June 2000, however, the Clinton White House revealed that contractors for the Office of

[4445] EPIC. "Privacy Self Regulation: A Decade of Disappointment," by Chris Jay Hoofnagle. March 4, 2005. [http://www.epic.org/reports/decadedisappoint.pdf], p. 5.

National Drug Control Policy (ONDCP) had been using "cookies" (small text files placed on users' computers when they access a particular website) to collect information about those using an ONDCP site during an anti-drug campaign. ONDCP was directed to cease using cookies, and OMB issued another memorandum reminding agencies to post and comply with privacy policies, and detailing the limited circumstances under which agencies should collect personal information. A September 5, 2000 letter from OMB to the Department of Commerce further clarified that "persistent"cookies, which remain on a user's computer for varying lengths of time (from hours to years), are not allowed unless four specific conditions are met. "Session" cookies, which expire when the user exits the browser, are permitted.

At the time, Congress was considering whether commercial websites should be required to abide by FTC's four fair information practices. The incident sparked interest in whether federal websites should adhere to the same requirements. In the FY2001 Transportation Appropriations Act (P.L. 106-346), Congress prohibited funds in the FY2001 Treasury-Postal Appropriations Act from being used to collect, review, or create aggregate lists that include PII about an individual's access to or use of a federal website or enter into agreements with third parties to do so, with exceptions. Similar language has been included in subsequent appropriations bills. For FY2006, it is Section 832 of the Transportation-Treasury Appropriations Act (P.L. 109-115).

Nonetheless, in December 2005, the Associated Press (AP) reported that a privacy advocate, Daniel Brandt, had discovered that the National Security Agency (NSA) was using permanent cookies on its website.[4446] The AP quoted an NSA spokesman as saying that it resulted from a recent software upgrade and the agency was not aware that permanent cookies were being set. C|NET News.Com reported a week later that, based on its own investigation, "dozens" of agencies were setting permanent cookies or "web bugs."[4447] The article identified the White House, the Air Force, and the Treasury Department as examples, and reported that some of the agencies changed their practices after being contacted, and many seemed to have no idea that their software was setting cookies.

Section 646 of the FY2001 Treasury-Postal Appropriations Act (P.L. 106-554) required Inspectors General (IGs) to report to Congress on activities by those agencies or departments relating to their own collection of PII, or entering into

[4447] McCullagh, Declan. Government Web Sites Are Keeping an Eye On You. C|NET News.com, January 5, 2006. Available on the news.com.com website at [http://news.com.com/Government+Web+sites+are+keeping+an+eye+on+you/2100-102 8_3-6018702.html]. Web bugs are very small (i.e., not visible) graphic images placed on HTML pages or in e-mails that allow third parties to track user behavior.

agreements with third parties to obtain PII about use of websites. Then-Senator Fred Thompson released two reports in April and June 2001 based on the findings of agency IGs who discovered unauthorized persistent cookies and other violations of government privacy guidelines on several agency websites. An April 2001 GAO report (GAO-01-424) concluded that most of the 65 sites it reviewed were following OMB's guidance.

The E-Government Act (P.L. 107-347) sets requirements on government agencies regarding how they assure the privacy of personal information in government information systems and establish guidelines for privacy policies for federal websites. The law requires federal websites to include a privacy notice that addresses what information is to be collected, why, its intended use, what notice or opportunities for consent are available to individuals regarding what is collected and how it is shared, how the information will be secured, and the rights of individuals under the 1974 Privacy Act and other relevant laws. It also requires federal agencies to translate their website privacy policies into a standardized machine-readable format, enabling P3P to work (see above discussion of P3P), for example.

Monitoring of E-mail and Web Usage

By Government and Law Enforcement Officials

Another concern is the extent to which electronic mail (e-mail) exchanges or visits to websites may be monitored by law enforcement agencies or employers. In the wake of the September 11 terrorist attacks, the debate over law enforcement monitoring has intensified. Previously, the issue had focused on the extent to which the Federal Bureau of Investigation (FBI), with legal authorization, used a software program, called Carnivore (later renamed DCS 1000), to intercept e-mail and monitor Web activities of certain suspects. The FBI would install the software on the equipment of Internet Service Providers (ISPs). Privacy advocates were concerned about whether Carnivore-like systems can differentiate between e-mail and Internet usage by a subject of an investigation and similar usage by other people. Technical details of the system were not publicly available, meaning that privacy groups were unable to independently determine exactly what the system could or could not do, leading to their concerns. Section 305 of the 21st Century Department of Justice Appropriations Authorization Act (P.L. 107-273) required the Justice Department to report to Congress at the end of FY2002 and FY2003 on its use of Carnivore/DCS 1000 or any similar system. EPIC obtained the reports in January 2005 under the Freedom of Information Act and placed them on its website.[4448] The reports indicate that the Justice Department no longer uses Carnivore/DCS 1000, using commercially available software instead. The Justice Department

[4448] See [http://www.epic.org/privacy/carnivore/2002_report.pdf], and [http://www.epic.org/privacy/carnivore/2003_report.pdf].

reported that it used commercial software to conduct court-ordered electronic surveillance five times in FY2002 and eight times in FY2003.

The USA PATRIOT Act

Following the terrorist attacks, Congress passed the Uniting and Strengthening America by Providing Appropriate Tools to Intercept and Obstruct Terrorism (USA PATRIOT) Act, P.L. 107-56, which expands law enforcement's ability to monitor Internet activities. Inter alia, the law modifies the definitions of "pen registers" and "trap and trace devices" to include devices that monitor addressing and routing information for Internet communications. Carnivore-like programs may now fit within the new definitions. The Internet privacy-related provisions of the USA PATRIOT Act, included as part of Title II, are as follows:

- Section 210, which expands the scope of subpoenas for records of electronic communications to include records commonly associated with Internet usage, such as session times and duration.
- Section 212, which allows ISPs to divulge records or other information (but not the contents of communications) pertaining to a subscriber if they believe there is immediate danger of death or serious physical injury or as otherwise authorized, and requires them to divulge such records or information (excluding contents of communications) to a governmental entity under certain conditions. It also allows an ISP to divulge the contents of communications to a law enforcement agency if it reasonably believes that an emergency involving immediate danger of death or serious physical injury requires disclosure of the information without delay. This section was amended by the Cyber Security Enhancement Act — see below.
- Section 216, which adds routing and addressing information (used in Internet communications) to dialing information, expanding what information a government agency may capture using pen registers and trap and trace devices as authorized by a court order, while excluding the content of any wire or electronic communications. The section also requires law enforcement officials to keep certain records when they use their own pen registers or trap and trace devices and to provide those records to the court that issued the order within 30 days of expiration of the order. To the extent that Carnivore-like systems fall with the new definition of pen registers or trap and

trace devices provided in the act, that language would increase judicial oversight of the use of such systems.

- Section 217, which allows a person acting under color of law to intercept the wire or electronic communications of a computer trespasser transmitted to, through, or from a protected computer under certain circumstances, and
- Section 224, which sets a four-year sunset period for many of the Title II provisions. Sections 210 and 216 are excluded from the sunset. Sections 212 and 217 are not, and therefore will expire on December 31, 2005. As discussed below, Congress is considering legislation that would amend this sunset clause, making either more or fewer sections subject to it.

The Cyber Security Enhancement Act, section 225 of the 2002 Homeland Security Act (P.L. 107-296), amends section 212 of the USA PATRIOT Act. It lowers the threshold for when ISPs may voluntarily divulge the content of communications. Now ISPs need only a "good faith" (instead of a "reasonable") belief that there is an emergency involving danger (instead of "immediate" danger) of death or serious physical injury. The contents can be disclosed to "a Federal, state, or local governmental entity" (instead of a "law enforcement agency").

Privacy advocates are especially concerned about the language added by the Cyber Security Enhancement Act. EPIC notes, for example, that allowing the contents of Internet communications to be disclosed voluntarily to any governmental entity not only poses increased risk to personal privacy, but also is a poor security strategy. Another concern is that the law does not provide for judicial oversight of the use of these procedures.[4449] A Senate Judiciary Committee hearing on September 23, 2004 explored some of these concerns.

Several House and Senate committees held hearings in the first session of the 109th Congress on various provisions of the USA PATRIOT Act, and more are expected in the second session, as Congress debates whether to extend the "sunset date," or expiration date, of several provisions of that act. Under Section 224, a number of sections would have expired on December 31, 2005, including Section 212 and 217. Section 210 and Section 216 are not subject to the sunset clause (i.e., they are permanent).

[4449] [http://www.epic.org/alert/EPIC_Alert_9.23.html]. See entry under "[3] Homeland Security Bill Limits Open Government, and click on hyperlink to EPIC's February 26, 2002 letter to the House Judiciary Committee.

Several bills were introduced to modify the sunset clause by making temporary provisions permanent, by making permanent provisions temporary, or by modifying reporting requirements or otherwise enhancing oversight of how the provisions are implemented. As December 31, 2005 approached, the issue became very contentious. The House passed a permanent extension (i.e., it repealed the sunset clause) in H.R. 3199. The Senate, however, passed only a six-month extension (S. 2167) to allow time for further consideration of concerns by some Senators that more civil liberties protections are needed. The House did not agree with the Senate action, and amended S. 2167 so that the extension was only for five weeks (through February 3, 2006) to ensure that the Congress dealt with the issue early in the second session. Debate may be influenced by revelations in December 2005 that President George W. Bush directed the National Security Agency to monitor phone calls and e-mails in the United States without warrants. (For further information on the debate over warrantless searches, see the CRS general distribution memorandum at this CRS website: [http://www.crs.gov/products/browse/documents/WD00002.pdf].

The 9/11 Commission Report, and Creation of the Privacy and Civil Liberties Oversight Board

On July 22, 2004, the "9/11 Commission" released its report on the terrorist attacks.[4450] The Commission concluded (pp. 394-395) that many of the USA PATRIOT Act provisions appear beneficial, but that "Because of concerns regarding the shifting balance of power to the government, we think that a full and informed debate on the Patriot Act would be healthy." The Commission recommended that "The burden of proof for retaining a particular governmental power should be on the executive, to explain (a) that the power actually materially enhances security and (b) that there is adequate supervision of the executive's use of the powers to ensure protection of civil liberties. If the power is granted, there must be adequate guidelines and oversight to properly confine its use." The Commission also called for creation of a board within the executive branch "to oversee adherence to the guidelines we recommend and the commitment the government makes to defend our civil liberties." The commissioners went on to say that "We must find ways of reconciling security with liberty, since the success of one helps protect the other. The choice between security and liberty is a false choice, as nothing is more likely to endanger America's liberties than the success of a terrorist attack at home. Our history has shown us that insecurity threatens liberty. Yet, if our liberties are curtailed, we lose the values that we are struggling to defend."

The 108th Congress passed legislation implementing many of the Commission's recommendations. Called the Intelligence Reform and Terrorism Prevention Act (S. 2845, P.L. 108-458), Section 1061 creates a Privacy and Civil Liberties

---

[4450] National Commission on Terrorist Attacks Upon the United States. The 9/11 Commission Report. 585 p. [http://www.9-11commission.gov/report/911Report.pdf].

Oversight Board as part of the Executive Office of the President. According to the bill's sponsor, Senator Collins, the Board's purpose is to "ensure that privacy and civil liberties concerns are appropriately considered in the implementation of all laws, regulations, and policies that are related to efforts to protect the Nation against terrorism."[4451] It must report to Congress annually on an unclassified basis to the greatest extent possible. It will be composed of five members, two of which (the chairman and vice-chairman) must be confirmed by the Senate. All must come from outside the government to help ensure their independence.

National Journal reported on January 13, 2006 that although the five members of the Board have been appointed, the chairman and vice chairman have not yet been confirmed by the Senate.[4452] An August 2005 Reuters report cited critics (including a former 9/11 Commissioner, Members of the House and Senate, and others) as concluding that the panel is a "toothless, underfunded shell with inadequate support" from the President.[4453]

H.R. 1310 (Maloney) was introduced in the first session of the 109th Congress to make a number of changes, including establishing the Board as an independent agency in the executive branch, instead of part of the Executive Office of the President; setting out certain qualifications for Board members; and requiring that all of the Board members be confirmed by the Senate, not just the chairman and vice-chairman. There was no legislative action on the bill during the first session. As with debate over the USA PATRIOT Act, this discussion may be influenced by the controversy over warrantless searches (see above).

Government Access to Search Engine Data (e.g. Google)

In January 2006, Internet search engine company Google indicated that it was resisting a Justice Department subpoena requiring the company to provide the government with data on searches made by users.[4454] The Justice Department reportedly is seeking the data to help it in a court case to uphold the Child Online Protection Act (COPA), which was enacted to protect children using the Internet

from objectionable material such as pornography.[4455] According to various media reports, other search engine companies, including Yahoo!, MSN, and America Online, did comply with the government's request. Although much of the publicity focused on the extent to which the privacy of Internet users would be undermined if the government could access such data, some observers pointed out that the data are anonymous, and Google's response might be stimulated more by business concerns (e.g., revealing proprietary information) than privacy concerns.[4456] Nevertheless, public response suggests that some consumers now worry about what search terms they use, lest the government track their activities and draw erroneous conclusions.[4457]

By Employers

There also is concern about the extent to which employers monitor the e-mail and other computer activities of employees. The public policy concern appears to be not whether companies should be able to monitor activity, but whether they should notify their employees of that monitoring. A 2005 survey of 526 companies by the American Management Association and the ePolicy Institute found that 76% monitor Web usage, and 55% retain and review e-mail messages.[4458] The survey found that 26% of the companies had fired employees for misusing the Internet, and 25% had fired workers for e-mail misuse. Regarding notice, the survey reported that 80% of the companies inform workers that they are monitoring content, keystrokes, and time spent at the keyboard; 82% inform workers that computer files are stored and reviewed; 86% inform workers that e-mail is monitored; and 89% inform workers that Web usage is tracked. One criticism is that top level employees may not be subject to the same monitoring as rank and file workers.[4459]

By E-Mail Service Providers: The "Councilman Case"

In what is widely-regarded as a landmark ruling concerning Internet privacy, the U.S. Court of Appeals for the First Circuit in Massachusetts ruled (2-1) on June

[4459] Sandberg, Jared. "Monitoring of Workers is Boss's Right But Why Not Include Top Brass?," Wall Street Journal, May 18, 2005, p. B1 (via Factiva).

29, 2004 that an e-mail service provider did not violate federal wiretapping statutes when it intercepted and read subscribers' e-mails to obtain a competitive business advantage. The ruling upheld the decision of a lower court to dismiss the case.

The case involved an e-mail service provider, Interloc, Inc., that sold out-of-print books. According to press accounts[4460] and the text of the court's ruling,[4461] Interloc used software code to intercept and copy e-mail messages sent to its subscribers (who were dealers looking for buyers of rare and out-of-print books) by competitor Amazon.com. The e-mail was intercepted and copied prior to its delivery to the recipient so that Interloc officials could read the e-mails and obtain a competitive advantage over Amazon.com. Interloc Vice President Bradford Councilman was charged with violating the Wiretap Act.[4462] The court's majority opinion noted that the parties stipulated that, at all times that the Interloc software was performing operations on the e-mails, they existed in the random access memory or in hard drives within Interloc's computer system.

The case turned on the distinction between the e-mail being in transit, or in storage (and therefore governed by a different law).[4463] The government argued that the e-mails were copied contemporaneously with their transmission, and therefore were intercepted under the meaning of the Wiretap Act. Judges Torruella and Cyr concluded, however, that they were in temporary storage in Interloc's computer system, and therefore were not subject to the provisions of the Wiretap Act. They further stated that "We believe that the language of the statute makes clear that Congress meant to give lesser protection to electronic communications than wire and oral communication. Moreover, at this juncture, much of the protection may have been eviscerated by the realities of modern technology.... However, it is not the province of this court to graft meaning onto the statute where Congress has spoken plainly." (p. 14-15). In his dissent, Judge Lipez stated, conversely, that he did not believe Congress intended for e-mail that is temporarily stored as part of the transmission process to have less privacy than messages as they are in transit. He agreed with the government's contention that

(3) Krim, Jonathan. "Court Limits Privacy of E-Mail Messages; Providers Free to Monitor Communications." Washington Post, July 1, 2004, E1 (via Factiva).

[4461] U.S. v. Bradford C. Councilman. U.S. Court of Appeals for the First Circuit. No. 03-1383. [http://www.ca1.uscourts.gov/pdf.opinions/03-1383-01A.pdf].

[4462] The Wiretap Act,18 U.S.C. §§ 2510-2522, is Title I of the Electronic Communications Privacy Act (ECPA), P.L. 99-508. According to Jewell, op. cit., two other defendants — Alibris, which bought Interloc in 1998, and Interloc's systems administrator — pleaded guilty.

[4463] Stored communications are covered by the Stored Communications Act, which is Title II of ECPA, 18 U.S.C. §§ 2701-2711.

an "intercept" occurs between the time the author hits the "send" button and the message arrives in the recipient's in-box. He concluded that "Councilman's approach to the Wiretap Act would undo decades of practice and precedent ... and would essentially render the act irrelevant.... Since I find it inconceivable that Congress could have intended such a result merely by omitting the term 'electronic storage' from its definition of 'electronic communication,' I respectfully dissent."[4464]

Privacy advocates expressed deep concern about the ruling. Electronic Frontier Foundation (EFF) attorney Kevin Bankston stated that the court had "effectively given Internet communications providers free rein to invade the privacy of their users for any reason and at any time."[4465] The five major ISPs (AOL, Earthlink, Microsoft, Comcast, and Yahoo) all reportedly have policies governing their terms of service that state that they do not read subscribers' e-mail or disclose personal information unless required to do so by law enforcement agencies.[4466] The U.S. Department of Justice appealed the court's decision; and several civil liberties filed a "friend of the court" brief in support of the government's appeal. In August 2005, the First Circuit Court of Appeals overturned the lower court's decision 5-2.[4467]

Two bills were introduced in the 108th Congress that would have affected this debate by amending either the Wiretap Act or the Stored Communications Act. There was no action on either bill.

In the first session of the 109th Congress, H.R. 3503/S. 936 were introduced to amend the Wiretap Act to clarify that it applies "contemporaneous with transit, or on an ongoing basis during transit, through the use of any electronic, mechanical, or other device or process, notwithstanding that the communication may simultaneously be in electronic storage." There was no action on the bills in 2005.

Spyware

Spyware is discussed in more detail in CRS Report RL32706, *Spyware: Background and Policy Issues for Congress*, by Marcia Smith. The term "spyware" is not well defined. One example of spyware is software products that include, as part of the software itself, a method by which information is collected

[4464] U.S. v. Bradford C. Councilman, p. 53.

[4465] Online Privacy "Eviscerated" by First Circuit Decision. June 29, 2004. [http://www.eff.org/news/archives/2004_06.php#001658].

[4466] Krim, op. cit.

[4467] McCullagh, Declan. "E-mail Wiretap Case Can Proceed, Court Says." c|net News.com, August 11, 2005, 14:30:00 PDT.

about the use of the computer on which the software is installed. Some products may collect personally identifiable information (PII). When the computer is connected to the Internet, the software periodically relays the information back to the software manufacturer or a marketing company. Some software traces a user's Web activity and causes advertisements to suddenly appear on the user's monitor — called "pop-up" ads — in response. Such software is called "adware," and one aspect of the spyware debate is whether adware should be included in the definition of spyware. Software programs that include spyware can be sold or provided for free, on a disk (or other media) or downloaded from the Internet. Typically, users have no knowledge that spyware is on their computers.

A central point of the debate is whether new laws are needed, or if industry self-regulation, coupled with enforcement actions under existing laws such as the Federal Trade Commission Act, is sufficient. The lack of a precise definition for spyware is cited as a fundamental problem in attempting to write new laws. FTC representatives and others caution that new legislation could have unintended consequences, barring current or future technologies that might, in fact, have beneficial uses. They further insist that, if legal action is necessary, existing laws provide sufficient authority. Consumer concern about control of their computers being taken over by spyware leads others to conclude that legislative action is needed.

Utah and California have passed spyware laws, but there is no specific federal law regarding spyware. In the 108th Congress, the House passed two bills (H.R. 2929 and H.R. 4661) and the Senate Commerce Committee reported S. 2145. There was no further action.

Two bills passed the House in the first session of the 109th Congress : H.R. 29 (Bono) and H.R. 744 (Goodlatte). Two bills specific to spyware were introduced in the Senate: S. 687 (Burns-Wyden), and S. 1004 (Allen). A Senate Commerce Committee hearing on S. 687 was held on May 11, 2005. On November 17, 2005, the committee ordered reported S. 687, and defeated S. 1004, with committee Chairman Stevens reportedly saying that he hoped a compromise could be reached before the issue was debated on the floor.[4468] Meanwhile, the FTC endorsed a different bill, S. 1608, at a hearing before a Senate Commerce subcommittee on October 5, 2005. That bill deals not only with spyware, but with other Internet-related fraud, including spam. Its focus is enhancing the FTC's ability to investigate and prosecute perpetrators who are located abroad or who use foreign intermediaries. For more information, see CRS Report RL32706, Spyware: Background and Policy Issues for Congress, by Marcia Smith.

[4468] Stables, Eleanor. Panel Approves Slew of Transportation, Spyware and Other Bills in Markup. CQ.com, November 17, 2005.

Identity Theft (Including Phishing and Pharming)

Identity theft is not an Internet privacy issue, but the perception that the Internet makes identity theft easier means that it is often discussed in the Internet privacy context. The concern is that the widespread use of computers for storing and transmitting information is contributing to the rising rate of identity theft over the past several years, where one individual assumes the identity of another using personal information such as credit card and Social Security numbers (SSNs). The FTC has a toll free number (877-ID-THEFT) to help victims.[4469]

The extent to which the Internet is responsible for the increase in cases is debatable. Some attribute the rise instead to carelessness by businesses in handling personally identifiable information, and by credit issuers that grant credit without proper checks. More traditional methods of acquiring someone's personal information — from lost or stolen wallets, or "dumpster diving" — also are used by identity thieves. Three high profile incidents that became public in early 2005 where the security of consumer PII was compromised reinforced existing fears about identity theft. The companies involved are ChoicePoint, Bank of America, and LexisNexis. These incidents are described in CRS Report RS22082, Identity Theft: The Internet Connection, by Marcia Smith.

Identity Theft Statistics

In a 2003 survey for the FTC, Synovate found that 51% of victims knew how their personal information was obtained by the thief: 14% said their information was obtained from lost or stolen wallets, checkbooks, or credit cards; 13% said the personal information was obtained during a transaction; 4% cited stolen mail; and 14% said the thief used "other" means (e.g. the information was misused by someone who had access to it such as a family member or workplace associate).[4470]

Another survey, conducted by the Council of Better Business Bureaus and Javelin Strategy & Research, was released in January 2005.[4471] The 2005 Identity Fraud Survey is based on data collected in 2004 by Synovate using questions that

[4470] Synovate. " Federal Trade Commission — Identity Theft Survey Report." September 2003. pp. 30-31. [http://www.ftc.gov/opa/2003/09/idtheft.htm]

[4471] An abbreviated "complimentary" version of the report is available at [http://www.javelinstrategy.com/reports/2005IdentityFraudSurveyReport.html]. A Better Business Bureau press release is at [http://www.bbb.org/alerts/article.asp?ID=565]. The survey was sponsored Checkfree, Visa, and Wells Fargo & Company, but the report emphasizes that although those companies were invited to comment on the content of the questionnaire, they were not involved in the tabulation, analysis, or reporting of final results.

closely mirrored those used in the 2003 FTC survey, plus several new questions. The survey found that computer crime accounted for 11.6% of identity theft cases in 2004, compared with 68% from paper sources. It further found that the average loss for online identity theft was $551 compared to $4,543 from paper sources. In cases where the perpetrator could be identified, family members were responsible for 32% of cases; complete strangers outside the workplace for 24%; friends, neighbors, and in-home employees for 18%; someone at a company with access to personal information for 13%; someone at the victim's workplace for 4%; or "someone else" for 8%. The study concluded that, contrary to popular perception, identity theft is not getting worse. For example, it reported that the number of victims declined from 10.1 million in 2003 to 9.3 million in 2004, and the annual dollar volume, adjusted for inflation, is "highly similar" ($52.6 billion) in the 2003 survey and this survey.

On January 25, 2006, the FTC released its most recent data about the top ten consumer fraud complaints.[4472] Identity theft represented 37% of the 686,683 complaints filed with the FTC in 2005. Although the total number of ID theft complaints was higher than in the two previous years (255,565 in 2005 compared with 246,847 in 2004 and 215,177 in 2004), as a percentage of complaints filed with the FTC, the 2005 figure was less (37% in 2005 compared with 38% in 2004 and 40% in 2003). Credit card fraud was identified as the most common form of identity theft (26%), compared with phone or utilities fraud (18%), bank fraud (17%), employment fraud (12%), government documents/benefits fraud (9%), and loan fraud (5%).

"Phishing" and "Pharming"

One method used to obtain PII is called "phishing." It refers to an Internet-based practice in which someone misrepresents their identity or authority in order to induce another person to provide PII. Some common phishing scams involve e-mails that purport to be from financial institutions or ISPs claiming that a person's record has been lost. The e-mail directs the person to a website that mimics the legitimate business' website and asks the person to enter a credit card number and other PII so the record can be restored. In fact, the e-mail or website is controlled by a third party who is attempting to extract information that will be used in identity theft or other crimes. The FTC issued a consumer alert on phishing in June 2004.[4473] An "Anti-Phishing Working Group" industry association has been established to collectively work on solutions to phishing [http://www.antiphishing.org/].

[4472] FTC. Consumer Fraud and Identity Theft Complaint Data: January -December 2005. [http://www.consumer.gov/sentinel/pubs/Top10Fraud2005.pdf].

[4473] FTC. "How Not to Get Hooked by a 'Phishing" Scam." June 2004. [http://www.ftc.gov/bcp/conline/pubs/alerts/phishingalrt.pdf].

A version of phishing, dubbed "pharming," involves fraudulent use of domain names.[4474] In pharming, hackers hijack a legitimate website's domain name, and redirect traffic intended for that website to their own. The computer user sees the intended website's address in the browser's address line, but instead, he or she is connected to the hacker's site and may unknowingly provide PII to the hacker.[4475]

Existing Laws

The FTC enforces three federal laws that restrict disclosure of consumer information and require companies to ensure the security and integrity of the data in certain contexts — Section 5 of the Federal Trade Commission Act, the Fair Credit Reporting Act (FCRA), and Title V of the Gramm-Leach-Bliley Act. FTC Chairwoman Deborah Platt Majoras summarized these laws as they pertain to identity theft at a March 10, 2005 hearing before the Senate Committee on Banking, Housing, and Urban Affairs.[4476] She identified two other laws that are not enforced by the FTC, but which also restrict the disclosure of certain types of information: the Driver's Privacy Protection Act, and the Health Insurance Portability and Accountability Act.

Congress also has passed laws specifically regarding identity theft: the 1998 Identity Theft and Assumption Deterrence Act; the 2003 Fair and Accurate Credit Transactions (FACT) Act; and the 2004 Identity Theft Penalty Enhancement Act. Those laws are summarized in CRS Report RL31919, Remedies Available to Victims of Identity Theft, by Angie Welborn. Briefly, the Identity Theft and Assumption Deterrence Act (P.L.105-318) directed the FTC to establish a central repository for identity theft complaints, and provide victim assistance and consumer education.

The FACT Act (P.L. 108-159) contains perhaps the most comprehensive identity theft provisions in federal law. Implementation of that act is discussed in CRS Report RL32535, Implementation of the Fair and Accurate Credit Transactions (FACT) Act, by Angie Welborn. Among its identity theft-related provisions, the law:

- requires consumer reporting agencies (CRAs) to follow certain procedures concerning when to place, and what to do in response to, fraud alerts on consumers' credit files;

[4474] For more on domain names, and the DNS, see CRS Report 97-868, Internet Domain Names: Background and Policy Issues, by Lennard G. Kruger.

[4475] For more on pharming, see, for example, Delio, Michelle. "Pharming Out-Scams Phishing." March 14, 2005 [http://www.wired.com/news/infostructure/0,1377,66853,00.html].

[4476] Available at [http://banking.senate.gov/_files/majoras.pdf].

- allows consumers one free copy of their consumer report each year from nationwide CRAs as long as the consumer requests it through a centralized source under rules to be established by the FTC;[4477]
- allows consumers one free copy of their consumer report each year from nationwide specialty CRAs (medical records or payments, residential or tenant history, check writing history, employment history, and insurance claims) upon request pursuant to regulations to be established by the FTC;
- requires credit card issuers to follow certain procedures if additional cards are requested within 30 days of a change of address notification for the same account;
- requires the truncation of credit card numbers on electronically printed receipts;
- requires business entities to provide records evidencing transactions alleged to be the result of identity theft to the victim and to law enforcement agencies authorized by the victim to take receipt of the records in question;
- requires CRAs to block the reporting of information in a consumer's file that resulted from identity theft and to notify the furnisher of the information in question that it may be the result of identity theft;
- requires federal banking agencies, the FTC, and the National Credit Union Administration to jointly develop guidelines for use by financial institutions, creditors and other users of consumer reports regarding identity theft; and
- extends the statute of limitations for when identity theft cases can be brought.

The Identity Theft Penalty Enhancement Act (P.L. 108-275) makes aggravated identity theft in conjunction with felonies a crime, and establishes mandatory sentences — two additional years beyond the penalty for the underlying crime, or five additional years for those who steal identities in conjunction with a terrorist act.[4478]

At the March 10, 2005 Senate Banking Committee hearing,[4479] FTC Chairwoman Majoras discussed the"complicated maze" of laws that governs consumer data, noting whether particular legal provisions apply depends on the type of company or institution involved, the type of data collected or sold, and the purpose for which it will be used. She conceded that it is not clear if data brokers like

---

[4477] The FTC rules on free credit reports were issued on June 4, 2004 and are available at [http://www.ftc.gov/opa/2004/06/freeannual.htm].

[4478] "Senate Clears Tougher Penalties for Identity Theft in Conjunction with Felony." CQ Weekly, June 26, 2004, p. 1561.

ChoicePoint come under the FTC's jurisdiction, and concluded that additional legislation may be necessary, particularly regarding notice and security. A witness from the Secret Service also testified about his agency's jurisdiction over identity theft crimes.

Legislation in the 109th Congress, 1st Session

Congress continues to consider ways to reduce the incidence of identity theft. Legislative approaches include strengthening penalties for identity theft or for the misuse of SSNs;[4480] increasing regulation of data brokers, such as by requiring them to notify individuals whose PII has been breached, or to obtain a consumer's consent before selling PII; limiting the use of SSNs or allowing individuals to choose an identifier other than their SSN for Medicare purposes, for example; or making phishing unlawful.

Despite the widespread attention to these issues, and the introduction of many bills, no legislation to further address identity theft or to regulate data brokers passed during the first session of the 109th Congress. Four bills were acted upon in committee or subcommittee, however (H.R. 4127, S. 1326, S. 1408, and S. 1789). According to the Wall Street Journal, legislative action stalled because of differing views among the various stakeholders in the debate.

> *Consumer groups are pushing for credit protections that financial institutions oppose. Small banks are arguing with larger ones about who picks up the 'reissuing costs' when credit or debit cards must be replaced. And everyone with a stake in the issue is debating the 'notification trigger,' specifying what breaches require altering customers.*[4481]

The markup of H.R. 4127 (Stearns) by the House Energy and Commerce Subcommittee on Commerce, Trade, and Consumer Protection was spirited, and the vote split on party lines.[4482] The Senate Judiciary Committee reported S. 1326 (Sessions) without amendment and without written report on October 20, 2005. By contrast, the markup of S. 1789 (Specter) by the same committee on October 27, 2005 involved considerable debate.[4483] The Senate Commerce, Science, and

Summary of Internet Privacy-Related Legislation in the 109th Congress, 1st Session

The following table provides summary information on Internet privacy-related legislation introduced in the first session of the 109th Congress. It should be noted that although some bills have similar titles or intents, the details may vary. For example, some bills seek to protect "personal information," while others protect "personally identifiable information" (PII). Some concern "data," while others concern "electronic data." Definitions may vary, or, in some cases, the FTC is directed to determine a definition.

Congressional Research Service

Issue Definition

To what extent should law enforcement and government officials be permitted to monitor individuals' Internet usage, including electronic mail and website visits, and how have the terrorist attacks of September 11, 2001 affected this debate?

Current Situation

On October 26, 2001, six weeks after the terrorist attacks, President Bush signed into law the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism (USA PATRIOT) Act, P.L _107-56. Among its many provisions, the Act gives law enforcement authorities additional authority to monitor individuals' Internet activity, including e-mail and website visits. Amendments passed the next year as part of the Homeland Security Act (P.L. 107-296) expanded the circumstances under which Internet Service Providers may voluntarily divulge the content of communications, and to whom. The Congress and civil liberties groups are monitoring how the Act is implemented. Some of the Act's provisions, including several related to the Internet, are subject to a December 31, 2005, sunset clause. S. 1695 (Leahy) and S.. ._1709 (Craig) would sunset more of the sections, while S. 2476 (Kyl) would repeal the sunset clause. The July 2004 "9/11 Commission report" called for a full and informed debate about the PATRIOT Act, and concluded that security and liberty must be reconciled.

Policy Analysis

The September 11, 2001, terrorist attacks sharpened the debate over how to strike a balance between law enforcement's need to investigate criminals, and protecting what most citizens believe to be their "right" to privacy. Internet privacy is only one part of this debate, but it was highlighted in the summer of 2000 by the revelation that the FBI was using a software program called Carnivore (later renamed DCS 1000) that it installed on the equipment of Internet Service Providers to monitor electronic mail (e-mail) and website visits of suspects. Privacy advocates worried that the software was not sufficiently sophisticated to distinguish between the e-mail and Web activity of a suspect and that of other ISP subscribers, thereby violating the latter's privacy.

Prior to the terrorist attacks, congressional attention focused on requiring reports from the Department of Justice on its use of Carnivore or similar systems to help assess whether the FBI was exceeding its authority to monitor Internet usage. However, some policymakers had sought expansion, rather than limitation, of law enforcement authority to monitor wire and electronic communications. Following the terrorist attacks, they accelerated efforts to provide law enforcement officials with additional authorities. Many of these were provided in the PATRIOT Act. Some Members of Congress and privacy advocates were concerned that, in an emotionally charged climate, Congress was passing legislation too hurriedly. Groups such as the American Civil Liberties Union (ACLU), Center for Democracy and Technology (CDT), and Electronic Privacy Information Center (EPIC) urged caution, fearful that, in an attempt to track down and punish the terrorists who threaten American democracy, one of the fundamental tenets of that democracy --privacy --may itself be threatened.

On July 13, 2004, Attorney General Ashcroft released Report from the Field: The USA PATRIOT Act At Work providing an overview of "how the Act has been instrumental in the effort to combat terrorism and make Americans safer." The report cites several instances in which Sec. 210, Sec. 212, and Sec. 216 were instrumental in law enforcement actions. Some critics noted that the report did not address all aspects of the PATRIOT Act, particularly a controversial topic that was the subject of House floor debate in July 2004 (specifically, access to library records, which is outside the scope of this briefing book entry).

On July 22, 2004, the 9/11 Commission issued its report on the terrorist attacks (Final Report of the National Commission on Terrorist Attacks Upon the United States) .The Commission concluded (pp. 394-395) that many of the PATRIOT Act provisions appear beneficial, but that "Because of concerns regarding the shifting balance of power to the government, we think that a full and informed debate on the Patriot Act would be healthy." The Commission recommended that "The burden of proof for retaining a particular governmental power should be on the executive, to explain (a) that the power actually materially enhances security and (b) that there is adequate supervision of the executive's use of the powers to ensure protection of civil liberties. If the power is granted, there must be adequate guidelines and oversight to properly confine its use." The Commission also called for creation of a board within the executive branch "to oversee adherence to the guidelines we recommend and the commitment the government makes to defend our civil liberties." The commissioners went on to say that "We must find ways of reconciling security with liberty, since the success of one helps protect the other. The choice between security and liberty is a false choice, as nothing is more likely to endanger America's liberties than the success of a terrorist attack at home. Our history has shown us that insecurity threatens liberty. Yet, if our liberties are curtailed, we lose the values that we are struggling to defend."

Options and Implications for U.S. Policy

Attention is focused on oversight of implementation of the PATRIOT Act's provisions, and whether certain provisions should expire ("sunset") after a specified period of time. Sec. 224 of the law includes a sunset date of December 31, 2005 for certain provisions . Some want to repeal the sunset date, while others want to extend it to other provisions of the law (see below).

Role of Congress/Legislation

As described above, in 2001 Congress passed the USA PATRIOT Act (P .k. 107.-56) that, inter a/ia, makes it easier for law enforcement officials to monitor Internet activities . Relevant provisions of Title II are:

- **Section 210**, which expands the scope of subpoenas for records of electronic communications to include records commonly associated with Internet usage, such as session times and duration.
- **Section 212**, which allows ISPs to divulge records or other information (but not the contents of communications) pertaining to a subscriber if they believe there is immediate danger of death or serious physical injury or as otherwise authorized, and requires them to divulge such records or information (excluding contents of communications) to a governmental entity under certain conditions . It also allows an ISP to divulge the contents of communications to a law enforcement agency if it reasonably believes that an emergency involving immediate danger of death or serious physical injury requires disclosure of the information without delay. [This section was amended by the Cyber Security Enhancement Act, seebelow.]
- **Section 216**, which adds routing and addressing information (used in Internet communications) to dialing information, expanding what information a government agency may capture using pen registers and trap and trace devices as authorized by a court order, while excluding the content of any wire or electronic communications . The section also requires law enforcement officials to keep certain records when they use their own pen registers or trap and trace devices and to provide those records to the court that issued the order within 30 days of expiration of the order. To the extent that Carnivore-like systems fall with the new definition of pen registers or trap and trace devices provided in the Act, that language would increase judicial oversight of the use of such systems.
- **Section 217**, which allows a person acting under color of law to intercept the wire or electronic communications of a computer trespasser transmitted to, through, or from a protected computer under certain circumstances, and
- **Section 224**, which sets a four-year sunset period (December 31, 2005) for many of the Title II provisions. Among the sections excluded from the sunset are Sections 210 and 216.

In 2002, Congress passed the Cyber Security Enhancement Act (H.R.. 348_2_) as part of the Homeland Security Act (P.L. 1 7-226). It amends Section 212,

lowering the threshold for when ISPs may divulge the content of communications, and to whom. Now ISPs need only a "good faith" belief(instead of a "reasonable" belief) that there is an emergency involving danger (instead of "immediate" danger) of death or serious physical injury . The contents can be disclosed to "a Federal, state, or local governmental entity" (instead of a "law enforcement agency"). Privacy advocates are concerned about the language for a number of reasons. For example, EPIC noted that allowing such information to be disclosed to any governmental entity not only poses increased risk to personal privacy but also is a poor security strategy and that the language does not provide for judicial oversight of the use of these procedures.

Under the current law, Sec. 212 and Sec. 217 are subject to the December 31, 2005, sunset date in Sec. 224, while Sec. 210 and Sec. 216 are not. S 1695 (Leahy) would amend the sunset provision such that Sec . 210 and Sec. 216 also would sunset. S,_1709 (Craig) would include Sec . 216 in the sunset clause. By contrast, S. 2476 (Kyl), would repeal Sec. 224 so that none of the provisions sunset.

Summary

Federal agencies report increasing cyber-intrusions into government computer networks, perpetrated by a range of known and unknown actors. In response, the President, legislators, experts, and others have characterized cybersecurity as a pressing national security issue.

Like other national security challenges in the post-9/11 era, the cyber threat is multi-faceted and lacks clearly delineated boundaries. Some cyber attackers operate through foreign nations' military or intelligence-gathering operations, whereas others have connections to terrorist groups or operate as individuals. Some cyber threats might be viewed as international or domestic criminal enterprises.

In January 2008, the Bush Administration established the Comprehensive National Cybersecurity Initiative (the CNCI) by a classified joint presidential directive. The CNCI establishes a multi-pronged approach the federal government is to take in identifying current and emerging cyber threats, shoring up current and future telecommunications and cyber vulnerabilities, and responding to or proactively addressing entities that wish to steal or manipulate protected data on secure federal systems. On February 9, 2009, President Obama initiated a 60-day interagency cybersecurity review to develop a strategic framework to ensure the CNCI is being appropriately integrated, resourced, and coordinated with Congress and the private sector.

In response to the CNCI and other proposals, questions have emerged regarding: (1) the adequacy of existing legal authorities—statutory or constitutional—for responding to cyber threats; and (2) the appropriate roles for the executive and legislative branches in addressing cybersecurity. The new and emerging nature of cyber threats complicates these questions. Although existing statutory provisions might authorize some modest actions, inherent constitutional powers currently provide the most plausible legal basis for many potential executive responses to national security related cyber incidences. Given that cyber threats originate from various sources, it is difficult to determine whether actions to prevent cyber-attacks fit within the traditional scope of executive power to conduct war and foreign affairs. Nonetheless, under the Supreme Court jurisprudence, it appears that the President is not prevented from taking action in the cybersecurity arena, at least until Congress takes further action. Regardless, Congress has a continuing oversight and appropriations role. In addition, potential government responses could be limited by individuals' constitutional rights or international laws of war. This report discusses the legal issues and addresses policy considerations related to the CNCI.

Introduction

Cybersecurity has been called "one of the most urgent national security problems facing the new administration."[4484] Cyber and telecommunications activities are sometimes conflated to indicate the same meaning or capability. One might distinguish the term cyber from that of telecommunications with the former being the data or applications residing on the latter which is the electronic medium in which the activity occurs. Electronic information systems, also termed "information infrastructures," now support a wide range of security and economic assets in the public and private sectors.

Such systems have been successfully infiltrated in recent years by a range of attackers, some of whom are suspected to have been working in coordination with foreign military organizations or (foreign) state intelligence services. Thus, like the changing nature of U.S. enemies in the post9/11 environment, the nature of military and economic vulnerabilities has changed: intelligence-gathering battles in cyberspace now also play a crucial role in national security.

In January 2008, the Bush Administration initiated the Comprehensive National Cybersecurity Initiative (the CNCI) to make the United States more secure against cyber threats. The Homeland Security Presidential Directive 23 and National Security Presidential Directive 54 establishing the CNCI are classified. Some details of the Initiative have been made public in Departmental press releases, speeches by executive branch leaders, and analysis and insight offered by individuals that follow cyber security and terrorism related issues. The CNCI

[4484] Center for Strategic and International Studies, Securing Cyberspace for the 44th Presidency: A Report of the CSIS Commission on Cybersecurity for the 44th Presidency (2008).

"establishes the policy, strategy, and guidelines to secure federal systems."[4485] The CNCI also delineates "an approach that anticipates future cyber threats and technologies, and requires the federal government to integrate many of its technical and organizational capabilities to better address sophisticated threats and vulnerabilities."[4486] Subsequent to the issuance of the classified directives, congressional committees have held hearings regarding the CNCI and heard testimony from a commission established to address necessary cybersecurity reforms.[4487]

In a speech during his presidential campaign, President Obama promised to "make cyber security the top priority that it should be in the 21st century … and appoint a National Cyber Advisor who will report directly" to the President.[4488] Although the Obama Administration might craft a new approach to cybersecurity, some experts have urged the new administration to build on the CNCI, which they note is a "major step toward improving federal cybersecurity."[4489] On February 9, 2009, President Obama directed a 60-day interagency cybersecurity review to develop a strategic framework to ensure the CNCI is being appropriately integrated, resourced, and coordinated with Congress and the private sector.[4490]

The new administration's focus on cybersecurity would continue recent emphasis on the issue by the executive and legislative branches. This recent focus emerged partly in response to events such as attacks by outside hackers against a Pentagon computer network and the CyberWar against Estonia, which garnered significant

media attention. Agency reports of large numbers of attempts to infiltrate government cyberspace have also prompted action. Both the high-profile attacks and more routine infiltrations have shed light on the vulnerability of critical information infrastructures. For example, the Defense Science Board noted that the U.S. military's information infrastructure is the "Achilles' heel of our otherwise overwhelming military might."[4491]

Background on Cyber Threats and Calls for Executive Action

Threats to the U.S. cyber and telecommunications infrastructure are constantly increasing[4492] and evolving as are the entities that show interest in using a cyber-based capability to harm the nation's security interests.[4493] Concerns have been raised since the 1990s regarding the use of the internet and telecommunications components to cause harm to the nation's security interests. Activities producing undesirable results include unauthorized intrusion to gain access and view protected data, stealing or manipulating information contained in various databases, and attacks on telecommunications devices to corrupt data or cause infrastructure components to operate in an irregular manner. Of paramount concern to the national and homeland security communities is the threat of a cyber related attack against the nation's critical government infrastructures – "systems and assets, physical or virtual, so vital to the United States that the incapacity or destruction of such systems and assets would have a debilitating impact on security, national economic security, national public health and safety, or any combination of those matters."[4494] Early concerns noted attacks on components of the energy grid, infrastructure control systems, and military

Based on data reportedly provided to USA Today, the U.S. Computer Emergency Readiness Team (US-CERT), a Department of Homeland Security entity, found that known cyberattacks on U.S. government networks rose 40% in 2008 compared to 2007. While this survey focused on U.S. government computer systems, telecommunications networks are maintained by private industry, and any degradation to these services or components would necessarily have negative implications for both public and private cyber activities.

[4493] For more information on cyberattackers' capabilities, see CRS Report RL33123, Terrorist Capabilities for Cyberattack: Overview and Policy Issues, by John Rollins and Clay Wilson.

equipment as examples of telecommunications based threats to physical infrastructures.[4495]

In response, the Department of Energy conducted an experiment in 2007 in which the control system of an unconnected generator, containing similar components as that of larger generators connected to many power grids in the nation supplying electricity, was damaged and became inoperable.[4496] While data from federal agencies demonstrate that the majority of attempted and successful cyber attacks to date have targeted virtual information resources rather than physical infrastructures,[4497] many security experts are concerned that the natural progression of those wishing to harm U.S. security interests will transition from stealing or manipulating data to undertaking action that temporarily or permanently disables or destroys the telecommunication network or affects infrastructure components. Many security observers agree that the United States currently faces a multi-faceted, technologically based vulnerability in that "our information systems are being exploited on an unprecedented scale by state and non-state actors [resulting in] a dangerous combination of known and unknown vulnerabilities, strong adversary capabilities, and weak situational awareness."[4498] This, coupled with security observers' contention that the United States lacks the capability to definitively ascertain perpetrators who might unlawfully access a database or cause harm to a network, leaves the nation increasingly at risk. It also causes acts or discussions related to deterring cyberattacks to be ignored or negated by entities exploiting known or newly found vulnerabilities.

Prominent national security experts have emphasized the vulnerability of U.S. infrastructures. As recently as January 2009, former Director of National Intelligence (DNI) Mike McConnell equated "cyber weapons" with weapons of mass destruction when he expressed concern about terrorists' use of technology

---

[4495] Of note, many of the cyber-related incidences that were found to have negatively affected control systems connected to physical infrastructure components were resolved as being the work of current or former employees who had access to and knowledge of the architecture of the affected network.

[4496] Jeanne Meserve, Staged Cyber Attack Reveals Vulnerability in Power Grid, CNN online (Sep. 26, 2007), http://www.cnn.com/2007/US/09/26/power.at.risk/index.html#cnnSTCVideo. A video of the experiment, named Project Aurora, and the resulting damage to the generator is available on the CNN website.

[4497] See Center for Strategic and International Studies, Securing Cyberspace for the 44th Presidency: A Report of the CSIS Commission on Cybersecurity for the 44th Presidency 12 (2008) ("we expected damage from cyber attacks to be physical (opened floodgates, crashing airplanes) when it was actually informational").

[4498] House Permanent Select Committee on Intelligence, Cyber Security: Hearing on the Nation's Cyber Security Risks, 110th Cong. (Sept. 18, 2008) (statement of Paul Kurtz, Former Senior Director, Critical Infrastructure Protection, White House Homeland Security Council).

to degrade the nation's infrastructure. In distinguishing between individuals gaining access to U.S. national security systems or corporate data for purposes of exploitation for purposes of competitive advantage, former Director McConnell noted that terrorists aim to damage infrastructure and that the "time is not too far off when the level of sophistication reaches a point that there could be strategic damage to the United States."[4499]

Similarly, in elaborating on the potential consequences of a cyber attack, newly confirmed DNI Dennis Blair offered the following statement during the Annual Threat Assessment of the Intelligence Community for the Senate Select Committee on Intelligence:

> *Growing connectivity between information systems, the Internet, and other infrastructures creates opportunities for attackers to disrupt telecommunications, electrical power, energy pipelines, refineries, financial networks, and other critical infrastructures. Over the past several years we have seen cyber attacks against critical infrastructure abroad, and many of our own infrastructures are as vulnerable as their foreign counterparts. A successful attack against a major financial service provider could severely impact the national economy, while cyber attacks against physical infrastructure computer systems such as this that control power grids or oil refineries have the potential to disrupt services for hours to weeks.*[4500]

Also describing the evolving threat to U.S. security interests from a cyber-facilitated incident, Melissa Hathaway, Senior Advisor to the DNI and Chair of the Nation Cyber Study Group and President Obama's appointee to lead the 60-day interagency strategic cyber review, wrote that "both state and non-state adversaries are targeting our information systems and infrastructure for exploitation and potential disruption or destruction."[4501] During the question and answer period of the most recent DNI Annual Threat Assessment of the Intelligence Community, Director Blair stated that a "cyber capability is not one in which I feel [terrorists] have the skills for the greatest destruction. I think that they have other terrible things they can do to us that they are working on harder, they're better able to do, and they seem to be more motivated to do. So [a cyber terrorist attack is] possible, but I don't think the combination of terror and cyber

is the nexus that we are most worried about."[4502] However, threats could originate from foreign military or intelligence operatives rather than from terrorist groups.

In response to reports of the increasing pace and volume of cyber intrusions and a recognition that recent cyber-based threats have compelled the U.S. government to take security related actions that may negatively affect an agency's ability to perform its national security duties,[4503] legislators and analysts have expressed concerns that the current statutory framework inadequately addresses modern cybersecurity threats. One prominent voice is the Center for Strategic and International Studies' (CSIS) Commission on Cybersecurity for the 44th President, whose members testified before House and Senate committees and released its formal recommendations in fall 2008. The Commission recommended that federal cyber-crime provisions should be reexamined and that the "President should propose legislation that eliminates the current legal distinction between technical standards for national security systems and civilian agency systems and adopt a risk-based approach to federal computer security."[4504] In addition, it characterized the current statutory framework, particularly the Federal Information Security Management Act, enacted in 2002 to establish agency-level defenses against cyber threats, as too weak to effectively prevent cyber intrusions.[4505]

Legislators made some attempts during the 110th Congress to strengthen or "modernize" the existing statutory framework. For instance, a bill introduced by

[4503] In November, 2008, it was reported that the Department of Defense notified all organizations to stop using portable storage devices as it has become "apparent that over time, our posture to protect networks and associated information infrastructure has not kept pace with adversary efforts to penetrate, disrupt, interrupt, exploit or destroy critical elements of the global information grid." Noah Shachtman, Military USB Ban Meant to Stop Adversary Attacks, Wired Blog Network (Nov. 20, 2008), http://blog.wired.com/defense/2008/11/military-usb-ba.html. Also, it has recently been reported that some U.S. military units have resorted to disconnecting computer networks from the internet for fear of cyber related risks and a concern that the affected organization may not be managing its network properly thus "making everyone else vulnerable" to an attack. Noah Shachtman, Air Force Unplugs Bases' Internet Connections, Wired Blog Network (Feb. 18, 2000), http://blog.wired.com/defense/2009/02/air-force-cuts.html.

[4504] See Center for Strategic and International Studies, Securing Cyberspace for the 44th Presidency: A Report of the CSIS Commission on Cybersecurity for the 44th Presidency 12 (2008) at 67.

[4505] See, e.g., Id. at 69 (stating that the Act "has become a paperwork exercise rather than an effective measure of network security"). The Federal Information Security Management Act is Title III of the E-Government Act of 2002, P.L. 107-347, 116 Stat. 2899 (codified at 44 U.S.C. §3541 et. seq.). Among other things, it created a position of Chief Information Officer within each federal agency.

Senator Carper, the Federal Information Security Management Act of 2008,[4506] would have added a "Chief Information Security Officer" position to supplement the Chief Information Officer position required in each federal agency under the Federal Information Security Management Act of 2002 and the Clinger-Cohen Act of 1996.[4507] However, analysts have argued that ultimately, no change to the existing statutory scheme will adequately equip executive agencies to prevent infiltrations into U.S. cyberspace. They argue that "only the White House has the necessary authority and oversight for cybersecurity."[4508]

Comprehensive National Cybersecurity Initiative and Concerns Regarding Transparency and Effectiveness

As of the date of this report, unclassified versions of the January 2008 directives establishing the CNCI have yet to be released. While the Initiative has yet to be legislatively recognized, presidential directives, sometimes considered types of executive orders and visa versa, have the force of law if they are supported by constitutional or statutory authority.[4509] Although much remains unknown about the CNCI due to the classified nature of the presidential directives and supporting implementation documents, federal government agency press releases and statements by government officials provide a bit of insight regarding the program. Some security observers are concerned that because the CNCI is focused on developing and adhering to strategies and policies to secure the federal systems, many of which rely on private sector telecommunications networks for service and support, and identifying current and emerging threats and vulnerabilities, it is incumbent on the federal government to improve its coordination activities with non-federal entities and undertake enhanced sharing of timely and relevant cybersecurity related plans and risk data.

Few details have been publicly released regarding the implementation activities or status of CNCI efforts since the establishment of the initiative. According to one media account, Steven Chabinsky, Deputy Director of the Joint Interagency

(Sept. 16, 2008) (statement of James A. Lewis, Director and Senior Fellow, Center for Strategic and International Studies).

[4509] For more information on presidential directives, see CRS Report 98-611, Presidential Directives: Background and Overview, by Harold C. Relyea.

Cyber Task Force for the Office of the DNI, stated at an information technology security conference that there are 12 objectives supporting the Initiative's goal of comprehensively addressing the nation's cyber security concerns. They are:

1. Move towards managing a single federal enterprise network;
2. Deploy intrinsic detection systems;
3. Develop and deploy intrusion prevention tools;
4. Review and potentially redirect research and funding;
5. Connect current government cyber operations centers;
6. Develop a government-wide cyber intelligence plan;
7. Increase the security of classified networks;
8. Expand cyber education;
9. Define enduring leap-ahead technologies;
10. Define enduring deterrent technologies and programs;
11. Develop multi-pronged approaches to supply chain risk management; and
12. Define the role of cyber security in private sector domains.[4510]

One question often raised is whether the CNCI objectives are being pursued concurrently. Some security observers are concerned that the government's focus to date has been on securing federal security systems at the expense of other networks that have similar vulnerabilities. The disruption, or perceived accessing or manipulating of data in non-federal networks that contain personal financial information or manage the control systems of the nation's critical infrastructure could have significant economic, safety, and confidence-in-government implications. It is often noted that in the homeland security and law enforcement communities, where a great deal of post9/11 emphasis is placed on continuous information exchange and collaboration, efforts to secure the federal technology systems, while relegating state, local, and private sector organizations to lower standards of security, will simply redirect or delay risk that inevitably accompanies increased collaboration. This concern is often expressed by non-federal governmental entities which rely on and routinely coordinate efforts with the U.S. government but have not been apprised of the plans or resources accompanying the CNCI.

Given the secretive nature of the CNCI, one of the common concerns voiced by many security experts is the extent to which non-federal entities should have a role in understanding the threat to the nation's telecommunications and cyber infrastructure and assist with providing advice, assistance, and coordination in preparation and response for ongoing and future intrusions and attacks.[4511] As

---

[4510] Wyatt Kash, Government Computer News, Details Merge About the President's Cyber Plan (Nov. 21, 2008), http://gcn.com/Articles/2008/11/21/Details-emerge-about-Presidents-Cyber-Plan.aspx?Page=4.

[4511] It is unknown whether non-federal entities have been invited to participate in the previously mentioned President's 60-day cyber security review that commenced on February 9, 2009.

telecommunications providers and internet service providers are corporate entities residing in the private sector, and are relied upon heavily to support federal government activities and services, many cyber-security observers suggest that a comprehensive approach to an effective monitoring, defending, and responding regime is not possible without the collaboration and expertise of the nation's cyber sector owners and operators. As evidenced in the twelve objectives of CNCI, it appears the federal government focus is on the prevention aspects of addressing potential threats to the nation's cyber and telecommunications infrastructure. In contrast, the primary response and recovery activities associated with previous network breaches have been addressed by the private sector entity that has been the victim of the attack. In an apparent admission of the need for further transparency and enhanced public-private partnership to better fulfill the goals of the CNCI, former President Bush's Assistant Secretary of Cybersecurity and Telecommunications at the Department of Homeland Security (DHS), Greg Garcia, recently stated that "there was too much classified (about the CNCI) which was not helpful politically and not helpful in getting the word out." Acknowledging the balance between incorporating the view of non-federal entities and the concern of allowing those that wish to use cyber activities to cause harm, Assistant Secretary Garcia went on to further state that the Department had to "walk the line between raised awareness of what was being accomplished and not letting out too much information that could cause us to be targeted. Still, too much was kept secret."[4512]

Based on the number of unknowns concerning the CNCI and the apparent lack of inclusiveness with the private sector telecommunication and internet providers, some analysts are concerned that future opportunities for successfully ascertaining known and future threats and developing a comprehensive set of legal and policy responses may not be achievable. An apparent Obama Administration goal for the current 60-day cyber security review is a more transparent and coordinated approach to the nation's cyber security risks with the perceived end result being that all affected parties are consulted and given the opportunity to provide advice and assistance in proposing changes to existing legislation, policy, and processes.[4513]

Legal Authorities for Executive Branch Responses to Cyber Threats

As discussed, the CSIS report on Securing Cyberspace for the 44th Presidency recommends executive action to protect U.S. cyberspace.[4514] This and other calls for executive action, together with the 60-day review of the CNCI, implicate questions regarding legal authorities and the appropriate roles of the two political branches in the cybersecurity context. Questions concern the adequacy of existing statutes and the potential need for new legislation to address the modern threat. In addition, for actions not authorized by the existing statutory framework, questions arise regarding the extent of inherent authority for executive-branch responses under the U.S. Constitution.

To be legally authorized, the CNCI and any other executive-branch action must have some basis in statutory or constitutional law.[4515] Several disparate legal authorities offer potential bases for executive responses to cyber threats. These include: (1) various provisions in the criminal code that establish federal cybercrime offenses and authorize prosecution; (2) statutes, such as the Federal Information Security Management Act,[4516] which direct executive agencies to establish specific administrative procedures to prevent cyber attacks; (3) more general statutes authorizing executive management of federal agencies; (4) the Authorization for Use of Military Force passed by Congress in 2001,[4517] which empowered the President to use "all necessary and appropriate" force against perpetrators of the 9/11 terrorist attacks or those who harbor them; and (4) executive powers inherent in the Commander-in-Chief clause or other constitutional provisions.

[4514] U.S. Department of Homeland Security, DHS Data Privacy and Integrity Advisory Committee, Letter to the Secretary Regarding Data Privacy and Integrity Recommendations, Executive Summary, Feb. 5, 2009, p. 4.; Center for Strategic and International Studies, Securing Cyberspace for the 44th Presidency: A Report of the CSIS Commission on Cybersecurity for the 44th Presidency.

[4515] Because the federal government is a government of limited powers, executive actions must find support in either: (1) a power enumerated under Article II of the U.S. Constitution; or (2) authority delegated to the executive by Congress pursuant to one or more of Congress' enumerated Article I powers. Within this framework, some actions are impliedly authorized as means to achieve ends authorized by enumerated powers. See McCulloch v. Maryland, 17 U.S. 316 (1819) (upholding Congress' creation of a National Bank as a constitutionally valid means by which to exercise enumerated Article I powers).

[4516] 44 U.S.C. §3541 et. seq.

[4517] Authorization for Use of Military Force, P.L. 107-40, 115 Stat. 224 (2001). For background information on authorizations for use of military force and differences between such authorizations and declarations of war, see CRS Report RL31133, Declarations of War and Authorizations for the Use of Military Force: Historical Background and Legal Implications, by Jennifer K. Elsea and Richard F. Grimmett.

Because the CNCI objectives appear to include broad governmental reforms and enhanced partnerships with the private sector, at least some actions contemplated by the CNCI likely fall outside of the relatively straightforward and narrow delegations of authority granted by statutes that specifically address cybersecurity, such as federal criminal law provisions and the Federal Information Security Management Act. As previously noted, the Federal Information Security Management Act requires federal agencies to take steps, such as establishing a Chief Information Officer position, to protect their computer systems from cyber intrusions.[4518] In the criminal law context, the federal computer fraud and abuse statute outlaws intrusions upon the security of government computer systems, and in some cases upon the security of computers used in interstate commerce, by trespassing, threats, damage, espionage, or corrupt use of government computers as instruments of fraud.[4519] It is likely that some cybersecurity measures envisioned by the CNCI objectives fall outside the scope of both statutory schemes. Most criminal provisions are reactive by nature; they generally do not authorize preventative measures to defend against potential cyber threats, and jurisdictional and practical hurdles could hamper law enforcement's authority over a computer hacker operating abroad. In contrast, the Federal Information Security Management Act and related statutes, like the CNCI, take a preventative approach to stopping cyber intrusions. However, they require federal agencies to take administrative measures that are relatively modest compared with the objectives of the CNCI.

It is possible that some measures contemplated by the CNCI would find authority in statutes that do not explicitly address cyber threats. For example, statutes authorizing executive management of the civil service might authorize some changes to government internet portals or changes in agency personnel.[4520] However, such statutes do not address cybersecurity explicitly, nor do they authorize actions taken outside the realm of administrative measures in federal agencies.

Therefore, the existing statutory framework may not provide adequate authority for at least some responses contemplated by CNCI objectives. To fill that possible gap, or to adopt alternative or supplemental approaches, Congress may determine that new legislation is appropriate. Potential legislative approaches are

---

[4518] 44 U.S.C. §3541 et. seq.

[4519] 18 U.S.C. §1030. For an overview of federal cybercrime provisions, see CRS Report 97-1025, Cybercrime: An Overview of the Federal Computer Fraud and Abuse Statute and Related Federal Criminal Laws, by Charles Doyle.

[4520] Statutes authorizing executive management of the civil service are codified in Title 5 of the U.S. Code.

discussed infra.[4521] However, even if current statutory law is inadequate to protect the country against cyber attacks, it is not necessarily inadequate in the sense of providing insufficient legal authority for the CNCI, because inherent constitutional powers provide an alternative source of legal authority for some executive branch actions. Thus, Congress could decline to act legislatively in some areas, perhaps choosing instead to work with the executive branch in a cooperative or oversight role. If it did so, the executive branch could act in a number of situations by relying on inherent powers under Article II of the U.S. Constitution or, in very limited circumstances, on the 2001 Authorization to Use Military Force.[4522]

The Supreme Court's separation-of-powers jurisprudence makes clear that the President may occasionally act pursuant to his inherent powers under the Constitution without express or implied authorization from Congress.[4523] Powers most relevant to the CNCI include the President's war and foreign affairs powers.

Separation of Powers in National Security Matters

The Constitution divides powers relating to national security between the executive and legislative branches. Article I of the U.S. Constitution empowers Congress to "declare war," "raise and support armies," "provide and maintain a navy," and "make rules for the government and regulation of the land and naval forces."[4524] Article II states that the "President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States."[4525] As a preliminary matter, invocation of war powers begs a question regarding the scope of the Commander in Chief's role in a modern conflict that, not least in the context of cyber warfare, defies traditional military strategies. Many facets of the CNCI – such as components directing planning, development, and education – fall outside of traditional definitions of war. In addition, war powers would likely not apply to actions which mandate private sector security

---

[4521] The extent of any new law would be limited by individual constitutional rights and by international laws of war.

[4522] If the President has authority to act pursuant to powers inherent in the U.S. Constitution, then authority under the Authorization to Use Military Force is unnecessary, and visa versa. Under either source, the scope of executive power might depend upon the intent of and actions taken by Congress.

[4523] The executive and legislative branches typically resolve disputes regarding the extent of executive authority without involving the courts. However, the Supreme Court is the final arbiter in such disputes. See David J. Barron and Martin S. Lederman, The Commander in Chief at the Lowest Ebb – Framing the Problem, Doctrine, and Original Understanding, 121 Harv. L. Rev. 689, 722-237 (2008).

[4524] U.S. Const. Art. I, §8.

[4525] U.S. Const. Art. II, §2, cl.1.

measures. However, many believe the Commander in Chief power extends beyond warfare to encompass a broad conception of national security. In addition, although the phrase "war powers" evokes international conflicts, it seems that the President's war powers authorize at least some domestic action. For example, some have argued that the President's Commander in Chief power authorizes him to create a domestic intelligence agency.[4526]

Alternatively, the President's foreign affairs powers might provide an inherent constitutional authorization for executive action on cybersecurity. Given modern communications technology and the ease of travel, it is increasingly difficult to draw clean lines between foreign and domestic affairs. Congress' attempts to distinguish between foreign and domestic actors in other areas impacted by rapidly changing technological environments serve as examples. For instance, in the context of electronic surveillance, statutory provisions have progressed from drawing definitive distinctions between people located in the United States versus abroad in the original Foreign Intelligence Surveillance Act to a 2007 amendment excluding from the scope of foreign surveillance any person "reasonably believed" to be located abroad.[4527]

Finally, the President might assert that his oath-based obligation to defend the nation from imminent threats, sometimes termed the "emergency theory," provides a constitutional basis for executive action to prevent cyber intrusions or attacks. Presidents have relied on this authority very rarely.[4528]

Assuming that the President's war or foreign affairs powers extend to national security efforts such as the CNCI, the next question is whether, and in what circumstances, the executive branch exercise of such powers might be constrained by congressional action. As discussed, Congress and the President share powers to address matters of national security, and no precise line divides the powers of the two political branches. Some have identified a narrow sphere of

---

[4526] RAND Corp., The Challenge of Domestic Intelligence in a Free Society: A Multidisciplinary Look at the Creation of a U.S. Domestic Counterterrorism Intelligence Agency 108 (2009) (arguing that for establishing a domestic intelligence agency, the Constitution "tilts the balance of power toward the President by virtue of the Commander-in-Chief clause").

[4527] The Foreign Intelligence Surveillance Act of 1978, P.L. 95-511, 92 Stat. 1783 (1978) (codified as amended at 50 U.S.C. §§1801 et seq.); see also Protect America Act, P.L. 110-55 (2007).

[4528] Some attorneys within the Bush Administration relied on the emergency powers argument to assert that President Bush had inherent authority to use military force in the war on terror. See, e.g., Memorandum Opinion for the Deputy Counsel to the President, The President's Constitutional Authority to Conduct Military Operations Against Terrorists and Nations Supporting Them (Sept. 25, 2001), http://www.usdoj.gov/olc/warpowers925.htm.

Article II authority, sometimes called "preclusive" power,[4529] which congressional action cannot limit. For most situations, however, Justice Robert Jackson's concurring opinion in Youngstown Steel & Tube Co.[4530] establishes the leading doctrine governing the executive's inherent constitutional authority vis-a-vis Congress.[4531] Justice Jackson's three-category framework requires courts to evaluate, where possible, the interplay between congressional intent and executive action in the context of the Constitution's allocation of powers. This exercise is made more difficult by the murky nature of a small category of inherent constitutional powers some believe are reserved to the President alone.

During the Korean War, President Truman signed an executive order directing the Commerce Secretary to take control of the nation's steel mills in order to prevent a national steelworkers' strike. In Youngstown, also known as the "Steel Seizure Case," the government claimed that presidential powers inherent in Article II provisions, most notably the Commander-in-Chief power, authorized President Truman's action.[4532] To prove this claim, the government characterized the industry seizure as an action of a Commander in Chief, prompted by exigencies of war: steel production was necessary for military operations in Korea.[4533] The Supreme Court rejected this claim,[4534] but justices reached the conclusion by different analytical routes.

Writing for the majority, Justice Black took the hard-line view that the Commander-in-Chief clause gives the President no substantive authority. He emphasized that controlling private property to affect labor disputes "is a job for the nation's lawmakers."[4535]

[4529] The term "preclusive" appeared in Justice Jackson's concurring opinion in Youngstown Steel and Tube Co., 343 U.S. 579 (1952), when he referred to Article I authorities that, if exercised, would preclude a conflicting action by Congress as "at once so conclusive and preclusive [that they] must be scrutinized with caution." 343 U.S. at 638 (Jackson, J., concurring).

[4530] 343 U.S. 579 (1952).

[4531] See Hamdan v. Rumsfeld, 548 U.S. 557, 638 (2006) ("The proper framework for assessing whether executive actions are authorized is the three-part scheme used by Justice Jackson in his opinion in Youngstown").

[4532] 343 U.S. at 587.

[4533] Id.

[4534] Id. The Court noted that "'theater of war' [is] an expanding concept." Id. Nonetheless, the Court "[could not] with faithfulness to our constitutional system hold that the Commander in Chief of the armed forces has the ultimate power as such to take possession of private property in order to keep labor disputes from stopping production." Id.

[4535] Id.

In contrast, Justice Jackson argued that the President's inherent constitutional powers "fluctuate," from relatively high when authorized by Congress, to their "lowest ebb" when a president "takes measures incompatible with the express or implied will of Congress."[4536] Specifically, Justice Jackson articulated three categories of executive action: (1) action supported by an express or implied grant of authority from Congress; (2) a "zone of twilight" between the other categories, in which "congressional inertia" can occasionally "enable, if not invite, measures on independent presidential responsibility"; and (3) action that conflicts with statutes or congressional intent.[4537] Actions in the first category enjoy congressional support and thus might not need to rely solely on an inherent constitutional powers argument; assuming that Congress acted pursuant to an enumerated Article I power in delegating the authority, these actions are clearly authorized unless they violate another constitutional provision. Actions in the second, "zone of twilight"[4538] category prompt a complicated, totality-of-the circumstances inquiry, in which courts determine congressional intent vis-a-vis executive action. Actions that fall within the third category – that is, actions that conflict with statutory law – generally lack constitutional authority, unless the action is one of the few types of actions over which the President has exclusive authority. In Youngstown, Justice Jackson found that President Truman's actions fit within the third category, because Congress had not left the issue of property seizure during labor disputes to an "open field"; rather, Congress had passed statutes designed to stabilize markets when government required supplies.[4539] On this basis, Justice Jackson joined the majority to strike down President Truman's seizure of the steel industry.[4540]

Given the existing statutory framework, at least some potential responses to cyber threats would likely fall outside of the first of Justice Jackson's categories. Congress has not expressly authorized the cybersecurity reforms proposed by the CNCI, nor do the Federal Information Security Management Act or related statutes appear to impliedly authorize all potential cybersecurity protections. In addition, although the use of cyber force might have congressional authorization

---

[4536] Id. at 635-38 (Jackson, J., concurring).

[4537] Id.

[4538] The phrase "zone of twilight" refers to the mesopelagic region of the ocean – the last region which light reaches, but it also has a non-scientific definition of an indefinite area between two conditions. Under Justice Jackson's framework, the President and Congress might have concurrent authority in this category, such that it is not always clear what, if any, power one branch has to supersede actions of the other.

[4539] Id. at 639 (Jackson, J., concurring).

[4540] Id.

under the 2001 Authorization for Use of Military Force[4541] if directed against an al Qaeda or Taliban operative, the Supreme Court has appeared to foreclose reliance on the Authorization as a basis for any action that is not a "fundamental" incident to the use of force against those responsible for the 9/11 attacks. The 2001 joint resolution authorized the use of "all necessary and appropriate force against those nations, organizations, or persons he determines planned, authorized, committed, or aided" the 9/11 attacks.[4542] In Hamdi v. Rumsfeld, the Supreme Court held that capture and detention of Taliban members constituted "so fundamental and accepted an incident to war as to be an exercise of the 'necessary and appropriate force' Congress has authorized the President to use."[4543] The Court seemed reluctant to interpret the Authorization as extending to detentions beyond this "limited category."[4544] Cyber security efforts that focus on information gathering activities may parallel the role of intelligence collection as a "central component of the war on terrorism."[4545] However, not all cybersecurity threats fit logically within the scope of the so-called War on Terror. Cyber intrusions conducted by individual computer hackers, not supported by or aligned with a nation or terrorist organization, are perhaps best characterized as ordinary criminal activity whereas orchestrated intrusions by foreign security or intelligence entities might belong in a category of routine foreign-intelligence gathering. Neither activity appears to fit the mold of wartime operations. On the other hand, to the extent that the primary aim of the War on Terror is to prevent terrorists from harming U.S. civilians or assets, one might argue that defending the United States against threats to the U.S. cyber and telecommunications infrastructure fits squarely within the War's parameters.[4546] Nonetheless, it seems unlikely that all aspects of the CNCI would fit within the Hamdi interpretation of the 2001 Authorization.

On the other hand, unless Congress takes legislative action that contravenes a proposed executive response, the third category in Justice Jackson's framework is

[4543] 542 U.S. 507, 518 (2004). However, the Hamdi court held that such authority is limited by detainees' rights under the due process clause. Id.

[4544] Id.

[4545] David J. Barron and Martin S. Lederman, The Commander in Chief at the Lowest Ebb – Framing the Problem, Doctrine, and Original Understanding, 121 Harv. L. Rev. 689, 714 (2008) ("a central component of the war against terrorism is, by its nature, the collection of intelligence").

[4546] See Id. (noting that the war on terrorism differs from conventional conflicts, in part, because "the Executive has identified its principal goal in this conflict not as defeating the enemy in battle, but as preventing the enemy from 'fighting' in the first place").

inapplicable. In contrast to intelligence collection efforts through the use of electronic surveillance, which Congress explicitly limited in the Foreign Intelligence Surveillance Act,[4547] Congress has not expressly limited executive action on cybersecurity. Although Congress has not left the cybersecurity arena an entirely "open field," by virtue of its modest actions with regard to the Federal Information Security Management Act and related provisions, it has not occupied the field to the extent that it had occupied the arena of labor regulation at issue in Youngstown.

Therefore, the CNCI and other potential executive actions taken to address cybersecurity likely fall within Justice Jackson's second, "zone of twilight" category, in which the executive and legislative branches have shared authority to act. A 1981 case, Dames & Moore v. Regan, refined the Supreme Court's approach to evaluating actions that lie within this "zone of twilight."[4548] In Dames, then-Justice Renquist, writing for the majority, clarified that in "zone of twilight" cases, the analysis, at least so far as separation-of-powers principles are concerned, "hinges on a consideration of all the circumstances which might shed light on the views of the legislative branch toward [the executive's] action, including 'congressional inertia, indifference or quiescence.'"[4549] Thus, the inquiry in such cases becomes a balancing act, aimed toward ascertaining Congress' relationship to the subject matter at issue. In the context of the CNCI, Congress' actions to date on cybersecurity have been primarily criminal or administrative and do not represent a comprehensive response to the issue. In addition, the CNCI involves intelligence and foreign affairs issues that traditionally lie within the purview of the executive branch. Therefore, at least until Congress takes further action in the cybersecurity area, it appears that the executive branch is not precluded from implementing the CNCI or other cybersecurity responses under Justice Jackson's Youngstown framework.

A final issue is whether responses to cybersecurity intrusions or attacks might be part of the narrow realm of "preclusive" constitutional powers belonging to the President.[4550] Although the scope of, and even the constitutional authority for, such powers has never been fully defined, scholars have noted that a few key rules form a "rarely questioned narrative" regarding arenas in which Congress

[4548] 453 U.S. 654 (1981).

[4549] Id. at 669.

[4550] Scholars have expressed doubts regarding the framers' intent to imbue the President with "preclusive" constitutional powers but nonetheless have argued that long-standing assumptions that such powers exist have solidified their constitutional standing. See, e.g., David J. Barron and Martin S. Lederman, The Commander in Chief at the Lowest Ebb – Framing the Problem, Doctrine, and Original Understanding, 121 Harv. L. Rev. 689, 802 (2008).

traditionally defers to executive action.[4551] For example, traditional notions dictate executive direction of wartime campaigns.[4552] Likewise, the Supreme Court has characterized the President as the "sole organ" of the country in conducting foreign affairs.[4553] In addition, some have suggested a distinction between offensive utilization of cyber weapons versus defensive shield to stop attacks:[4554] whereas the President must obtain congressional authorization before committing

U.S. armed forces in an offensive action, the President's has the exclusive power to repel attacks made against the United States.

Despite this narrative, however, no definitive boundaries have been defined for any such preclusive powers. Perhaps for that reason, Justice Jackson made clear in his Youngstown concurrence that the realm of any such preclusive powers must be carefully scrutinized.[4555] Thus, although many executive actions in the cyber area would likely fall within the scope of Article II powers for ensuring national security, most actions would probably falls outside of the narrow categories of exclusive executive authority to conduct wartime campaigns and international relations. Similarly, even if the President has an exclusive power to lead the military in defensive actions, actions might not be clearly enough a

---

[4551] See, e.g Id. at 698. For more information regarding divisions between Congress' and the President's war powers and an analysis of that division in the context of the President's authority to use commit armed forces in Iraq, see CRS Report RL33837, Congressional Authority to Limit U.S. Military Operations in Iraq, by Jennifer K. Elsea, Michael John Garcia, and Thomas J. Nicola.

[4552] See Hamdan v. Rumsfeld, 548 U.S. 557, 591-92 (2006) (citing Ex Parte Milligan, 71 U.S. 2, 139-40 (1866)). But see War Powers Resolution, 50 U.S.C. §§1541-1548, discussed infra.

[4553] See United States v. Curtiss-Wright Export Co., 299 U.S. 304, 319 (1936) ("'The President is the sole organ of the nation in its external relations, and its sole representative with foreign nations.'" (citing Annals, 6th Cong., col. 613 (statement of John Marshall))). However, the Curtiss-Wright case involved executive action that fell in the first of Justice Jackson's Youngstown categories – i.e., where Congress and the President acted in concert. Thus, although the case has helped to form a narrative regarding executive-branch prerogative in international relations and has occasionally been cited to support the proposition that the President has some preclusive foreign affairs powers under the Constitution, it would misstate the Curtiss-Wright holding to assume that it recognized any broad preclusive foreign relations power.

[4554] Aside from the operational distinction that may be made with respect to the types of cyber activities the U.S. may undertake, the offensive versus defensive distinction may also be worth considering from an organizational perspective. Agencies responsible for protecting the government's websites and launching counter-offensive attacks may not be the same entities responsible for assisting in the recovery phase of an attack of national security significance on a U.S. cyber or telecommunications hosted network.

[4555] 343 U.S. at 638 (Jackson, J., concurring).

defensive response to a military threat to trigger an exclusive presidential power.[4556]

Thus, it appears that the Youngstown framework would apply to a review of the President's authority to implement responses such as the CNCI. Thus, if Congress passed conflicting legislation in the cybersecurity area, some executive actions could be constrained. Alternatively, congressional legislation granting explicit authority for cybersecurity measures would more firmly confirm the executive authority to act in that area.

It is possible that the Supreme Court will address the constitutional authorities for national security in a future case. Youngstown represents one of only a small number of cases in which the Supreme Court has reached questions regarding the political branches' shared powers under the Constitution. Modern threats might necessitate new definitions within the Court's separation-ofpowers jurisprudence. For example, as cyber activities and telecommunication architectures are networked globally, with it often being difficult to ascertain where an attack or intrusion emanates, distinctions based on notions of conventional war may seem increasingly inconsistent with the modern Commander-in-Chief role.

Congressional Constraints on Executive Action

Even if the CNCI or future cybersecurity initiatives are grounded in statutory or constitutional authority, questions will nonetheless arise regarding the degree to which legislative oversight is appropriate. Congress has attempted to obligate the President to report to relevant congressional leaders for actions taken pursuant to war powers or as part of intelligence operations. In 1973, Congress passed the War Powers Resolution to "fulfill the intent of the framers of the Constitution of the United States and insure that the collective judgment of both the Congress and the President will apply to the introduction of United States Armed Forces into hostilities."[4557] Although presidents since the Resolution's passage have maintained that the Resolution unconstitutionally limits presidential authority,

---

[4556] In the context of modern national security threats, the line between offensive and defensive action is not easily deciphered. For example, the United States captured and detained a large number of alleged enemy combatants in the course of post-September 11th military operations. Is the ongoing detention of such persons, often referred to as "preventative detention," an offensive action? The Supreme Court has upheld executive authority for such detentions on statutory rather than constitutional grounds; it has not addressed offensive versus defensive distinction. Hamdi, 542 U.S. 507. Thus, even if some components of the CNCI qualify as war-related activity, perhaps because they target cyber terrorists, little guidance exists regarding which actions might qualify as defensive rather than offensive actions under the traditional war powers analysis.

[4557] War Powers Resolution, P.L. 93-148, 87 Stat. 555 (1973) (codified at 50 U.S.C. §§1541-1548); 50 U.S.C. §1541(a).

presidents have in many cases submitted documents for Congress that are "consistent with" the Resolution's requirements.[4558]

Similarly, after the Iran-Contra affair, Congress passed legislation increasing congressional oversight of intelligence activities, including significant and anticipated intelligence activities, and covert actions.[4559] To the extent consistent with due regard for preventing unauthorized disclosure of classified information regarding sensitive intelligence sources and methods, current law requires that congressional intelligence committees be kept fully informed regarding intelligence activities. If the President determines that it is essential to meet extraordinary circumstances affecting vital U.S. interests, a presidential finding regarding a covert action may be limited to a small number of congressional leaders.[4560]

With respect to the CNCI, a key question is whether ongoing or potential U.S. cyber activities, defensive and offensive, may fall within the sphere of a covert activity or an intelligence activity and thus trigger reporting requirements. The statutory definition of "covert actions" includes "activity or activities of the United States Government to influence political, economic, or military conditions abroad, where it is intended that the role of the United States Government will not be apparent or acknowledged publicly," but excludes activities conducted for the purpose of gathering intelligence and "traditional" diplomatic, military, or law enforcement activities.[4561] The definition of "intelligence activity" is broader; it includes covert actions and "financial intelligence activities."[4562] Because the definitions focus on the influence, rather than the presence, of conditions abroad, it appears that cyber actions targeting or even defending against cyber threats, even if conducted inside the United States, could trigger reporting requirements.

In addition to the potential application of ongoing reporting requirements, Congress could elicit information regarding executive actions by virtue of its enumerated power to control spending. The 110th Congress took several steps to obtain information regarding the CNCI in that manner. A continuing resolution, passed by Congress and signed into law in September 2008, withholds $127 million of a $313.5 million appropriation for cybersecurity until House and

[4561] 50 U.S.C. §413b(e).

[4562] 50 U.S.C. §413(f).

Senate appropriations committees "receive and approve a plan for expenditure for [the CNCI] that describes the strategic context of the program; the specific goals and milestones set for the program; and the funds allocated to achieving each of those goals."[4563] In addition, the Senate Committee on Homeland Security and Governmental Affairs held a closed hearing in March 2008 regarding the CNCI and later obtained answers to some questions regarding the initiative.[4564] Finally, as part of a larger Homeland Security Authorization bill, S. 3623, Senator Lieberman introduced legislation during the 110th Congress that would provide for congressional oversight of the CNCI and establish "a robust National Cyber Security Center with the mission of coordinating and enhancing federal efforts to protect government networks."[4565] As an authorization bill for the DHS has not been passed since the creation of the Department, whether the proposed legislative oversight efforts will be effective remains to be seen. Also, as with many programs associated with intelligence community activities and defense, concerns regarding committee jurisdiction in the areas of oversight, authorization, and appropriations might be raised for the CNCI.

Policy Considerations and Congressional Options

As with executive control over covert actions, foreign affairs, and intelligence gathering, strong justifications support the assertion that the executive branch is best suited to take reasonable and necessary actions to defend the country against cyber-based threats. One such justification stems from the broad diversity of cybersecurity threats: the President is arguably best positioned to take a leadership role or create a uniform response to span the range of cyber vulnerabilities. In addition, the executive branch is likely most able to integrate intelligence-gathering, military, and other vehicles for addressing the cybersecurity challenge. However, in order for Congress to maintain ongoing awareness of CNCI plans and activities and to effectively perform its constitutional duties of oversight based on a thorough understanding of executive branch activities, some security experts suggest a range of legislative activities that might be required. Congress might choose to:

[4563] Consolidated Security, Disaster Assistance, and Continuing Appropriations Act of 2009, P.L. 110-329, (2008).

[4564] NSPD-54/HSPD-23 and the Comprehensive National Cyber Security Initiative: Hearing Before the Sen. Homeland Security and Governmental Affairs Comm., 110th Cong. (March 4, 2008).

[4565] S. 3623, 110th Cong. §§601-08 (2008); 154 Cong. Rec. S9687 (daily ed. Sept. 26, 2008) (statement of Sen. Lieberman).

- determine the most appropriate and effective organizational entity in which the nation's principal cybersecurity prevention, response, and recovery responsibilities should reside;[4566]
- require the senior U.S. government official in charge of all CNCI related activities be a Senate confirmable position to facilitate ongoing information exchange regarding Initiative plans and areas of progress and difficulty;
- enact legislative language recognizing and defining the classified and unclassified aspects of the CNCI and the need for greater transparency and inclusiveness;
- require the new Administration to develop and revise annually a classified and unclassified national cyber security strategy and intelligence community generated National Intelligence Estimate that provides Congress, the telecommunications industry, and the American public information related to the CNCI, the current and strategic cyber threats facing the nation, and programs being implemented to prepare for evolving technological risks;
- define the privacy and civil liberty considerations that should accompany all aspects of the CNCI;
- include legislative language in applicable authorizations bills to establish a programmatic foundation for CNCI related programs and suggest funding for current and future year's activities; or
- identify and codify relevant laws defining a national security related cyber offense against the United States, offensive versus defensive cyber activities, and the situations in which the Congress should be notified prior to the United States undertaking an offensive or counteroffensive cyber act.

Conclusion

As discussed, multiple policy considerations, including the novel and dispersed nature of cyber threats, might justify an executive-led response to cybersecurity. In response to calls for executive action, questions have arisen regarding the adequacy of legal authorities justifying executive responses to cyber threats. Although existing statutes might support some executive actions, the current statutory framework likely does not address all potential actions. Thus, the extent of inherent powers under Article II of the Constitution and the appropriate roles of the two political branches in this emerging national security arena are relevant considerations. Arguably, both the statutory framework and separation of powers

---

[4566] Possible organizational constructs for such an entity range from a single entity placed in charge of all phases of U.S. cyber activity to a coordination office with the authority and responsibility to compel other organizations to adhere to the President's cyber strategy. Entities often noted as having a significant contribution to the U.S. cyber activity, which could add capability and resources to the CNCI's capabilities, include the cyber and telecommunications industries, intelligence and law enforcement communities, and academia.

analyses might need to be modernized to address appropriate roles in protecting the United States against modern cyber threats.

Finally, even if executive branch responses are authorized, Congress retains an oversight role vis-à-vis the CNCI or other presidential initiatives, for several reasons. First, if Congress passed statutes in contravention of the President's efforts, the President's authority to proceed with those efforts would become more questionable under the Youngstown framework. Second, as with covert actions, Congress likely has a legislative oversight role, even if that role merely requires notice of significant actions. Finally, Congress could ultimately withhold funding for the CNCI or specific aspects of the program should it not receive the necessary information to make an assessment of the activities related to each of the twelve objectives.

Summary

This report describes the emerging areas of information operations, electronic warfare, and cyberwar in the context of U.S. national security. It also suggests related policy issues of potential interest to Congress.

For military planners, the control of information is critical to military success, and communications networks and computers are of vital operational importance. The use of technology to both control and disrupt the flow of information has been generally referred to by several names: information warfare, electronic warfare, cyberwar, netwar, and Information Operations (IO). Currently, IO activities are grouped by the Department of Defense (DOD) into five core capabilities: (1) Psychological Operations, (2) Military Deception, (3) Operational Security, (4) Computer Network Operations, and (5) Electronic Warfare.

Current U.S. military doctrine for IO now places increased emphasis on Psychological Operations, Computer Network Operations, and Electronic Warfare, which includes use of non-kinetic electromagnetic pulse (EMP) weapons, and nonlethal weapons for crowd control. However, as high technology is increasingly incorporated into military functions, the boundaries between all five IO core capabilities are becoming blurred.

DOD has noted that military functions involving the electromagnetic spectrum take place in what is now called the cyber domain, similar to air, land, and sea. This cyber domain is the responsibility of the new Air Force Cyber Command and includes cyberwarfare, electronic warfare, and protection of U.S. critical

infrastructure networks that support telecommunications systems, utilities, and transportation.

This report will be updated to accommodate significant changes.

Introduction
Background

Control of information has always been part of military operations, and the U.S. Strategic Command views information operations as a core military competency, with new emphasis on (1) use of electromagnetic energy, (2) cyber operations, and (3) use of psychological operations to manipulate an adversary's perceptions. Department of Defense (DOD) officials now consider cyberspace to be a domain for warfare, similar to air, space, land, and sea.[4567]

The DOD views information itself as both a weapon and a target in warfare. In addition, Psychological Operations (PSYOP) provides the ability to rapidly disseminate persuasive information to directly influence the decisionmaking of diverse audiences, and is seen as a means for deterring aggression, and important for undermining the leadership and popular support for terrorist organizations.[4568]

However, new technologies for military IO also create new national security policy issues, including (1) consideration of psychological operations used to affect friendly nations or domestic audiences; and (2) possible accusations against the U.S. of war crimes if offensive military computer operations or electronic warfare tools severely disrupt critical civilian computer systems, or the systems of non-combatant nations.

This report describes DOD capabilities for conducting military information operations, and gives an overview of related policy issues. This report will be updated as events warrant.

DEFINITIONS

Information

Information is a resource created from two things: phenomena (data) that are observed, plus the instructions (systems) required to analyze and interpret the data to give it meaning. The value of information is enhanced by technology, such as networks and computer databases, which enables the military to (1) create a higher level of shared awareness, (2) better synchronize command, control, and intelligence, and (3) translate information superiority into combat power.

DOD Information Operations

The current DOD term for military information warfare is "Information Operations" (IO). DOD information operations are actions taken during time of crisis or conflict to affect adversary information, while defending one's own information systems, to achieve or promote specific objectives.[4569] The focus of IO is on disrupting or influencing an adversary's decision-making processes.

An IO attack may take many forms, for example: (1) to slow adversary computers, the software may be disrupted by transmitting a virus or other malicious code; (2) to disable sophisticated adversary weapons, the computer circuitry may be overheated with directed high energy pulses; and (3) to misdirect enemy sensors, powerful signals may be broadcast to create false images. Other methods for IO attack may include psychological operations such as initiating TV and radio broadcasts to influence the opinions and actions of a target audience, or seizing control of network communications to disrupt an adversary's unity of command.

Computer Network Defense (CND) is the term used to describe activities that are designed to protect U.S. forces against IO attack from adversaries. Part of CND is information assurance (IA), which requires close attention to procedures for what is traditionally called computer and information security.

DOD places new emphasis on the importance of dominating the entire electromagnetic spectrum with methods for computer network attack and electronic warfare. DOD also emphasizes that because networks are increasingly the operational center of gravity for warfighting, the U.S. military must be prepared to "fight the net".[4570] Because the recently declassified source document containing this phrase has some lines blacked out, it is not clear if "...net"means the Internet. If so, then this phrase may be a recognition by DOD that Psychological Operations, including public affairs work and public diplomacy,

---

[4569] From the DOD Dictionary of Military and Associated Terms, Jan. 2003 [http://www.dtic.mil/doctrine/jel/doddict/data/i/index.html].

[4570] DOD Information Operations Roadmap, October 30, 2003, p.6-7. [http://www.gwu.edu/~nsarchiv/NSAEBB/NSAEBB177/info_ops_roadmap.pdf].

must be employed in new ways to counter the skillful use of the Internet and the global news media by U.S. adversaries.

DOD INFORMATION OPERATIONS CORE CAPABILITIES

DOD identifies five core capabilities for conduct of information operations; (1) Psychological Operations, (2) Military Deception, (3) Operations Security, (4) Computer Network Operations, and (5) Electronic Warfare. These capabilities are interdependent, and increasingly are integrated to achieve desired effects.

Psychological Operations (PSYOP)

DOD defines PSYOP as planned operations to convey selected information to targeted foreign audiences to influence their emotions, motives, objective reasoning, and ultimately the behavior of foreign governments, organizations, groups, and individuals.[4571] For example, during the Operation Iraqi Freedom (OIF), broadcast messages were sent from Air Force EC-130E aircraft, and from Navy ships operating in the Persian Gulf, along with a barrage of e-mail, faxes, and cell phone calls to numerous Iraqi leaders encouraging them to abandon support for Saddam Hussein.

At the same time, the civilian Al Jazeera news network, based in Qatar, beams its messages to well over 35 million viewers in the Middle East, and is considered by many to be a "market competitor" for U.S. PSYOP. Terrorist groups can also use the Internet to quickly place their own messages before an international audience. Some observers have stated that the U.S. will continue to lose ground in the global media wars until it develops a coordinated strategic communications strategy to counter competitive civilian news media, such as Al Jazeera.[4572]

Partly in response to this observation, DOD now emphases that PSYOP must be improved and focused against potential adversary decisionmaking, sometimes well in advance of times of conflict. Products created for PSYOP must be based on in-depth knowledge of the audience's decision-making processes. Using this knowledge, the PSYOPS products then must be produced rapidly, and disseminated directly to targeted audiences throughout the area of operations.[4573]

[4571] DOD Dictionary of Military Terms [http://www.dtic.mil/doctrine/jel/doddict/].

[4572] Air Force, Operation Iraqi Freedom Information Operations Lessons Learned: First Look, AFC2ISRC/CX, July 23, 2003 [http://www.insidedefense.com/secure/data_extra/pdf3/dplus2004_265.pdf].

[4573] DOD Information Operations Roadmap, October 30, 2003, p.6. [http://www.gwu.edu/~nsarchiv/NSAEBB/NSAEBB177/info_ops_roadmap.pdf].

DOD policy prohibits the use of PSYOP for targeting American audiences. However, while military PSYOP products are intended for foreign targeted audiences, DOD also acknowledges that the global media may pick up some of these targeted messages, and replay them back to the U.S. domestic audience. Therefore, a sharp distinction between foreign and domestic audiences cannot be maintained.[4574]

Military Deception (MILDEC)

Deception guides an enemy into making mistakes by presenting false information, images, or statements. MILDEC is defined as actions executed to deliberately mislead adversary military decision makers with regard to friendly military capabilities, thereby causing the adversary to take (or fail to take) specific actions that will contribute to the success of the friendly military operation.

As an example of deception during Operation Iraqi Freedom (OIF), the U.S. Navy deployed the Tactical Air Launched Decoy system to divert Iraqi air defenses away from real combat aircraft.

Operational Security (OPSEC)

OPSEC is defined as a process of identifying information that is critical to friendly operations and which could enable adversaries to attack operational vulnerabilities. For example, during OIF, U.S. forces were warned to remove certain information from DOD public websites, so that Iraqi forces could not exploit sensitive but unclassified information.

Computer Network Operations (CNO)

CNO includes the capability to: (1) attack and disrupt enemy computer networks; (2) defend our own military information systems; and (3) exploit enemy computer networks through intelligence collection, usually done through use of computer code and computer applications. The Joint Information Operations Warfare Command (JIOWC) and the Joint Functional Component Command for Network Warfare (JFCCNW) are responsible for the evolving mission of Computer Network Attack.[4575] The exact capabilities of the JIOWC and JFCCNW are highly classified, and DOD officials have reportedly never admitted to launching a cyber attack against an enemy, however many computer security officials believe the organization can destroy networks and penetrate enemy

[4575] John Lasker, U.S. Military's Elite Hacker Crew, Wired News, April 18, 2005, [http://www.wired.com/news/privacy/0,1848,67223,00.html], U.S. Strategic Command Fact File [http://www.stratcom.mil/fact_sheets/fact _jtf _gno.html] and [http://www.stratcom.mil/fact_sheets/fact_jioc.html].

computers to steal or manipulate data, and take down enemy command-and-control systems. They also believe that the organization consists of personnel from the CIA, National Security Agency, FBI, the four military branches, and civilians and military representatives from allied nations.[4576]

Computer Network Defense (CND)

CND is defined as defensive measures to protect information, computers, and networks from disruption or destruction. CND includes actions taken to monitor, detect, and respond to unauthorized computer activity. Responses to IO attack against U.S. forces may include use of passive information assurance tools, such as firewalls or data encryption, or may include more intrusive actions, such as monitoring adversary computers to determine their capabilities before they can attempt an IO attack against U.S. forces.

Some DOD officials believes that CND may lack sufficient policy and legal analysis for guiding appropriate responses to intrusions or attacks on DOD networks. Therefore, DOD has recommended that a legal review be conducted to determine what level of intrusion or data manipulation constitutes an attack. The distinction is necessary in order to clarify whether an action should be called an attack or an intelligence collection operation, and which aggressive actions can be appropriately taken in self-defense. This legal review should also determine if appropriate authorities permit U.S. forces to retaliate through manipulation of unwitting third party computer hosts. And finally, DOD has recommended structuring a legal regime that applies separately to domestic and to foreign sources of computer attack against DOD or the U.S. critical. infrastructure.[4577]

Computer Network Exploitation (CNE)

CNE is an area of IO that is not yet clearly defined within DOD. Before a crisis develops, DOD seeks to prepare the IO battlespace through intelligence, surveillance, and reconnaissance, and through extensive planning activities. This involves intelligence collection, that in the case of IO, is usually performed through network tools that penetrate adversary systems to gain information about system vulnerabilities, or to make unauthorized copies of important files. Tools used for CNE are similar to those used for computer attack, but configured for intelligence collection rather than system disruption.

Computer Network Attack (CNA)

[4576] John Lasker, U.S. Military's Elite Hacker Crew, April 18, 2005, Wired News, [http://www.wired.com/news/privacy/0,67223-0.html?tw=wn_story_page_prev2].

[4577] DOD Information Operations Roadmap, October 30, 2003, p52. [http://www.gwu.edu/~nsarchiv/NSAEBB/NSAEBB177/info_ops_roadmap.pdf].

CNA is defined as effects intended to disrupt or destroy information resident in computers and computer networks. As a distinguishing feature, CNA normally relies on a data stream used as a weapon to execute an attack. For example, sending a digital signal stream through a network to instruct a controller to shut off the power flow is CNA, while sending a high voltage surge through the electrical power cable to short out the power supply is considered Electronic Warfare (However, a digital stream of computer code or a pulse of electromagnetic power can both be used to also create false images in adversary computers).

During Operation Iraqi Freedom, U.S. and coalition forces reportedly did not execute any computer network attacks against Iraqi systems. Even though comprehensive IO plans were prepared in advance, DOD officials stated that top-level approval for several CNA missions was not granted until it was too late to carry them out to achieve war objectives.[4578] U.S. officials may have rejected launching a planned cyber attack against Iraqi financial computers because Iraq's banking network is connected to a financial communications network also located in Europe. Consequently, according to Pentagon sources, an information operations attack directed at Iraq might also have brought down banks and ATM machines located in parts of Europe as well. Such global network interconnections, plus close network links between Iraqi military computer systems and the civilian infrastructure, reportedly frustrated attempts by U.S. forces to design a cyber attack that would be limited to military targets only in Iraq.[4579]

In a meeting held in January 2003, at the Massachusetts Institute of Technology, White House officials sought input from experts outside government on guidelines for use of cyber-warfare. Officials have stated they are proceeding cautiously, since a cyberattack could have serious cascading effects, perhaps causing major disruption to networked civilian systems.[4580] In February 2003, the Bush Administration announced national-level guidance for determining when and how the United States would launch computer network attacks against foreign adversary computer systems. The classified guidance, known as National Security Presidential Directive 16, is intended to clarify circumstances under which a disabling computer attack would be justified, and who has authority to launch such an attack.

Electronic Warfare (EW)

EW is defined by DOD as any military action involving the direction or control of electromagnetic spectrum energy to deceive or attack the enemy. High power electromagnetic energy can be used as a tool to overload or disrupt the electrical circuitry of almost any equipment that uses transistors, micro-circuits, or metal wiring.[4581] Directed energy weapons amplify, or disrupt, the power of an electromagnetic field by projecting enough energy to overheat and permanently damage circuitry, or jam, overpower, and misdirect the processing in computerized systems. The Electronic Warfare Division of the Army Asymmetric Warfare Office has responsibility for creating electronic warfare policy, and for supporting development of new electromagnetic spectrum concepts that can be translated into equipment and weapons.

Domination of the Electromagnetic Spectrum

DOD now emphasizes maximum control of the entire electromagnetic spectrum, including the capability to disrupt all current and future communication systems, sensors, and weapons systems. This may include: (1) navigation warfare, including methods for offensive space operations where global positioning satellites may be disrupted; or, (2) methods to control adversary radio systems; and, (3) methods to place false images onto radar systems, block directed energy weapons, and misdirect unmanned aerial vehicles (UAVs) or robots operated by adversaries.[4582]

For example, recent military IO testing examined the capability to secretly enter an enemy computer network and monitor what their radar systems could detect. Further experiments tested the capability to take over enemy computers and manipulate their radar to show false images.[4583]

Electromagnetic Non-Kinetic Weapons

Non-kinetic weapons emit directed electromagnetic energy that, in short pulses, may permanently disable enemy computer circuitry. For example, an electromagnetic non-kinetic weapon mounted in an aircraft, or on the ground, might disable an approaching enemy missile by directing a High Power Microwave (HPM) beam that burns out the circuitry, or that sends a false

[4583] These programs were called Suter 1 and Suter 2, and were tested during Joint Expeditionary Forces Experiments held at Nellis Air Force Base in 2000 and 2002. David Fulghum, "Sneak Attack," Aviation Week & Space Technology, June 28, 2004, p. 34.

telemetry signal to misdirect the targeting computer.[4584] Also, at reduced power, electromagnetic non-kinetic weapons can also be used as a non-lethal method for crowd control.

The Active Denial System (ADS), developed by the Air Force, is a vehicle-mounted nonlethal, counter-personnel directed energy weapon. Currently, most non-lethal weapons for crowd control, such as bean-bag rounds, utilize kinetic energy. However, the ADS projects a focused beam of millimeter energy waves to induce an intolerable burning sensation on an adversary's skin, repelling the individual without causing injury. Proponents say the ADS is safe and effective at ranges between 50 and 1,600 feet. The nonlethal capabilities of the ADS are designed to protect the innocent, minimize fatalities, and limit collateral damage.[4585]

The Pentagon reportedly has requested immediate deployment of at least 8 ADS devices to Iraq to assist Marines in guarding posts, countering insurgent snipers and protecting convoys. The ADS system would be the first operationally deployed directed-energy weapon for counter-personnel missions.[4586]

NEW U.S.A.F. CYBER COMMAND

Secretary of the Air Force Michael W. Wynne recently stated that the new mission of the U.S. Air Force is to "fly and fight in air, space, and cyberspace." This means that military action in cyberspace now includes defending against malicious activity on the Internet, and anywhere across the entire electromagnetic spectrum (including the energy spectrum bands for radio, microwaves, infrared, X-ray, and all other options for directed energy), where national security is threatened.[4587] Secretary Wynne stated that cyberwarfare flows naturally from the Air Force's traditional missions, such as downloading data from platforms in space, and that U.S. capabilities should be expanded to also enable the shut down of enemy electronic networks. Consequently, the 8th Air Force, headquartered at Barksdale Air Force Base, La., has been designated as the operational Cyber Command, responsible for organizing, training, and

equipping the Air Force for cyberspace operations.[4588] The new Cyber Command will draw on resources from all Air Force commands to gather needed expert capabilities.

Air Force officials, led by the Air Force Chief of Staff Gen. Michael Mosley, met at the Pentagon in a "cyberwarfare-themed summit" during November 2006, to make plans for the new Air Force Cyber Command.[4589] General Elder stated that the planning session may require approximately four months of work, and will include an assessment of offensive and defensive cyberwarfare requirements, as well as a review of current capabilities and future needs.[4590]

Homeland security reportedly will also be a large part of the Cyber Command's new responsibility, including protection of telecommunications systems, utilities, and transportation. Several issues to be considered may include: (1) what kind of educational skills, technical skills, and training are needed for staff at the Cyber Command; and (2), what kind of career path can be offered to those in the Air Force who want to participate in defending the new cyber domain.

In addition, the Air Force Materiel Command will review the research now ongoing at the 8th Air Force headquarters to identify which work should receive funding as part of the new cyberwarfare function.[4591] Some examples of systems or projects that could be affected by the cyber command mission include (1) the Airborne Laser System at Edwards AFB, (2) the Active Denial System at Moody AFB, (3) the Joint Surveillance Target Attack Radar System at Robins AFB, and (4) efforts to protect against damage to computer systems due to electromagnetic pulse attack.

Officials at the 8th Air Force report that as of January 2007, the new U.S.A.F. cyber command has not yet been officially activated, and the final command structure has not been determined.[4592] Initially, the new organization will operate on an equal footing with other numbered Air Force headquarters. However, eventually the new organization will become a major command that will stand

alongside the Air Force Space Command and the Air Combat Command. Precise future command relationships are still being decided in the ongoing planning effort, and more details will be forthcoming.[4593]

JOINT COMMAND STRUCTURE FOR CYBERWARFARE

Currently, the U.S. Strategic Command (USSTRATCOM), which is a unified combatant command for U.S. strategic forces, controls military information operations, space command, strategic warning and intelligence assessments, global strategic operations planning, and also has overall responsibility for Computer Network Operations (CNO).[4594]

Beneath USSTRATCOM are several Joint Functional Component Commands (JFCCs): (1) space and global strike integration; (2) intelligence, surveillance and reconnaissance; (3) network warfare; (4) integrated missile defense; and (5) combating weapons of mass destruction.[4595]

The JFCC-Network Warfare (JFCC-NW), and the JFCC-Space & Global Strike (JFCC-SGS) have responsibility for overall DOD cyber security. Under the JFCC-NW are the Joint Task Force-Global Network Operations (JTF-GNO) and the Joint information Operations Warfare Center (JIOWC), both of which have direct responsibility for defense against cyber attack.[4596] The JTF-GNO defends the DOD Global Information Grid, while the JIOWC assists combatant commands with an integrated approach to information operations. These include operations security, psychological operations, military deception, and electronic warfare. The JIOWC also coordinates network operations and network warfare with the JTF-GNO and with JFCC-NW.

DOD AND THE US CRITICAL INFRASTRUCTURE

DOD officials have noted that because 80 percent of U.S. commerce goes through the Internet, DOD systems must develop a capability to adequately protect them.[4597] Currently, to assist commercially-owned telecommunications networks, communications satellite systems, and other civilian critical infrastructure

systems, DOD contracts with Carnegie Mellon's Software Engineering Institute to operate the Computer Emergency Response Team (CERT-CC), while DHS in partnership with private industry operates a parallel organization called US-CERT. Both organizations monitor trends in malicious code and cyber crime, send out alerts about threats to computer systems, and provide guidance for recovery after an attack.

INFORMATION OPERATIONS BY ADVERSARIES

The low cost of entry (for example, a laptop connected to the Internet), and the ability to operate anonymously, are factors that makes cyberspace attractive to adversaries who know they cannot challenge the United States in a symmetrical contest. Potential adversaries, such as China, Russia, Cuba, Iran, Iraq, Libya, North Korea, and several non-state terrorist groups are reportedly developing capabilities to attack or degrade U.S. civilian and military networks. "Moonlight Maze" and "Titan Rain" are examples of successful attacks against non-classified military systems which DOD officials claim were directed by other governments.[4598]

According to the Defense Department's annual report to Congress on China's military prowess, the Chinese military is enhancing its information operations capabilities.[4599] The report finds that China is placing specific emphasis on the ability to perform information operations designed to weaken an enemy force's command and control systems.[4600]

Terrorist groups also use wireless electronics to detonate roadside bombs (Improvised Explosive Devices). They also use the Internet to transmit financial transactions, and use free Global Positioning System (GPS) signals and commercial satellite video and images to direct their ground attacks against U.S. and coalition troops.[4601]

[4601] Daniel Helmer, The Poor Man's FBCB2: R U Ready 4 the 3G Celfone?, Armor, Nov/Dec 2006, p.7.

Some observers have stated that terrorist groups, through use of the Internet, are now challenging the monopoly over mass communications that both state-owned and commercial media have long exercised. A strategy of the terrorists is to propagate their messages quickly and repeat them until they have saturated cyberspace. Internet messages by terrorist groups have become increasingly sophisticated through use of a cadre of Internet specialists who operate computer servers worldwide. Other observers have also stated that al-Qaeda now relies on a Global Islamic Media Unit to assist with its public outreach efforts.[4602]

LAW AND PROPORTIONALITY FOR INFORMATION OPERATIONS

The new U.S. Cyber Command reportedly will follow the law of Armed Conflict, meaning a response taken after receiving an electronic or cyber attack will be scaled in proportion to the attack received, and distinctions will be maintained between combatants and civilians.[4603] However, protection against attack through cyberspace is a new task for the military, and the offensive tools and other capabilities used by DOD to stage retaliatory strikes against enemy systems are highly classified. Experience has shown that a reactive defense is not very effective against increasingly powerful and rapid malicious cyber attacks, or against other malicious activity using the electromagnetic spectrum. A more effective defense against these attacks is to incorporate predictive, active, and pre-emptive measures that allow DOD defenders to prevent, deflect, or minimize the efforts of the attacker.

CYBERWARRIOR EDUCATION

As more U.S. military systems become computerized and linked to networks, there is a growing need for qualified Electronic Warfare operators.[4604] Each year, DOD conducts a Cyber Defense Exercise, where teams of students from the nation's military academies advance their cyber skills in practice competition

where they deliberately hack into test networks, and also protect these test networks against intrusions by other teams. However, DOD must attract, train, and retain skilled information technology professionals beyond those enrolled in the military academies.

In an attempt to solve this problem, the Air Force Research Laboratory (AFRL) Cyber Operations Branch offers a 10-week summer program each year for university students, consisting of intensive studies in cyber security. The Advanced Course in Engineering (ACE) Cyber Security Boot Camp has been held at Rome, NY for the past 4 years, and involves between 40 and 60 student applicants from Air Force and Army pre-commissioning programs, some National Science Foundation Cyber Corps Fellows, and some civilian college students. For 2006, the theme was "Cybercraft", described as a non-kinetic weapon platform that seeks dominance in cyberspace, corresponding to the new mission of the Air Force to 'fly and fight in air, space, and cyberspace', according to program director Dr. Kamal Jabbour. Students study legal and policy issues, cryptography, computer network defense and attack, steganography, and analysis of malicious code. ACE students also spend an average of three days per week in internships at the Air Force Research Laboratory, or with local industry partners, and participate in officer development activities. The faculty for ACE is drawn from Syracuse University, West Point, and Norwich University.

DHS and the National Science Foundation (NSF) have recognized the ACE program as an official internship program for Federal Cyber Service Scholarship for Service (SFS) program. The SFS program seeks to increase the number of skilled students entering the fields of information assurance and cyber security by funding universities to award 2-year scholarships in cyber security. Graduates are then required to work for a federal agency for two years. Recent ACE graduates are now working at the Air Force Office of Special Investigations, the AFRL, and the NSA.

Also, as a result of ACE summer program success with college students, in September 2006, Syracuse University developed a special cyber security course to be offered in 12 high schools in New Your State. Currently, Syracuse University offers 29 introductory cyber security courses in 148 high schools throughout New York, New Jersey, Maine, Massachusetts, and Michigan. High school students who successfully complete the cyber security courses can receive Syracuse college credits in computer science and engineering.

POLICY ISSUES

Potential oversight issues for Congress may include the following areas.
Could provocative actions, for example, intelligence gathering by the U.S. military that involves using intrusive cyber or electronic warfare tools to monitor enemy system activity, or copy important data files, be challenged by other nations as a violation of the law of Armed Conflict? Exploratory intrusions by U.S. military computers to gather intelligence may provoke other strong or unexpected

responses from some countries or extremist groups that are targeted for monitoring by DOD.

Several questions also may arise when conducting a retaliatory cyber or electronic warfare counterstrike: (1) if the attacker is a civilian, should the attack be considered a law enforcement problem rather than a military matter?; (2) if a U.S. military cyberattack against a foreign government also disables civilian infrastructure, can it be legally justified?; (3) how can the military be certain that a targeted foreign computer system has not been innocently set up to appear as an attacker by another third party attacker?

Some observers have stated that success in future conflicts will depend less on the will of governments, and more on the perceptions of populations, and that perception control will be achieved and opinions shaped by the warring group that best exploits the global media[4605]. As a result of the increasingly sophisticated use of networks by terrorist groups and the potentially strong influence of messages carried by the global media, does DOD now view the Internet and the mainstream media as a possible threat to the success of U.S. military missions? How strongly will U.S. military PSYOP be used to manipulate public opinion, or reduce opposition to unpopular decisions in the future?

Another emerging issue may be whether DOD is legislatively authorized to engage in PSYOP that may also affect domestic audiences.[4606] DOD Joint Publication 3-13, released February 2006, provides current doctrine for U.S. military Information Operations, and explains the importance of achieving information superiority.[4607] However, the DOD Information Operations Roadmap, published October 2003, states that PSYOP messages intended for foreign audiences increasingly are consumed by the U.S. domestic audience, usually because they can be re-broadcast through the global media. The Roadmap document states that, "...the distinction between foreign and domestic audiences becomes more a question of USG (U.S. Government) intent rather than information dissemination practices (by DOD)."[4608]

[4605] Maj. Gen. Robert Scales (Ret), Clausewitz and World War IV, Armed Forces Journal, July 2006, p.19.

[4606] Psychological Operations are authorized for the military under Title 10, USC, Subtitle A, Part I, Chapter 6, Section 167.

[4607] DOD Joint Publication 3-13, Information Operations, Feb 13, 2006, [http://www.dtic.mil/doctrine/jel/new_pubs/jp3_13.pdf].

[4608] DOD Information Operations Roadmap, October 30, 2003, p.26. [http://www.gwu.edu/~nsarchiv/NSAEBB/NSAEBB177/info_ops_roadmap.pdf].

This may be interpreted to mean that DOD has no control over who consumes PSYOP messages once they are re-transmitted by commercial media.

CURRENT LEGISLATION

Currently, there are no outstanding bills in the 110th Congress linked to Information Operations or Cyberwarfare.

Network Centric Operations: Background and Oversight Issues for Congress, RL32411 (March 15, 2007).

CLAY WILSON, CONGRESSIONAL RESEARCH SERV., NETWORK CENTRIC OPERATIONS: BACKGROUND AND OVERSIGHT ISSUES FOR CONGRESS (2007), *available at* http://www.intelligencelaw.com/library/secondary/crs/pdf/RL32411_3-15-2007.pdf.

Order Code RL32411

Updated March 15, 2007

Clay Wilson
Specialist in Technology and National Security
Foreign Affairs, Defense, and Trade Division

Summary

Network Centric Operations (also known as Network Centric Warfare) is a key component of DOD planning for transformation of the military. Network Centric Operations (NCO) relies on computer equipment and networked communications technology to provide a shared awareness of the battle space for U.S. forces. Proponents say that a shared awareness increases synergy for command and control, resulting in superior decision-making, and the ability to coordinate complex military operations over long distances for an overwhelming war-fighting advantage. NCO technology saw limited deployment in Afghanistan and, more recently, increased deployment in Operation Iraqi Freedom (OIF). Several DOD key programs are now underway for deployment throughout all services.

Congress may be concerned with oversight of the DOD organization and the individual services as they transform through NCO programs that are intended to promote a management style and culture with joint objectives. Oversight may involve a review of service efforts to improve interoperability of computer and communications systems, and may also involve questions from some observers about whether DOD has given adequate attention to possible unintended outcomes resulting from over-reliance on high technology. Updates may also be required on emerging threats that may be directed against increasingly complex military equipment.

This report describes technologies that support NCO, and includes (1) questions about possible vulnerabilities associated with NCO; (2) a description of electronic weapons, and other technologies that could be used as asymmetric countermeasures against NCO systems; (3) descriptions of several key military

programs for implementing NCO; (4) a list of other nations with NCO capabilities; and, (5) a description of experiences using NCO systems in recent operations involving joint and coalition forces. The final section raises policy issues for NCO that involve planning, network interoperability, acquisition strategies, offshore outsourcing, technology transfer, asymmetric threats, coalition operations, and U.S. military doctrine.

Appendices to this report give more information about the global network conversion to Internet Protocol version 6 (IPv6), views on Metcalfe's Law of Networks, and possible perverse consequences of data-dependent systems.

This report will be updated to accommodate significant changes.

Introduction

This report provides background information and discusses possible oversight issues for Congress regarding DOD's strategy for implementing a network centric approach to warfare, otherwise known as Network Centric Operations (NCO). NCO forms a central part of the Administration's plans for defense transformation.

Proponents argue that a Network Centric approach may improve both the efficiency and effectiveness of U.S. combat operations. However, when NCO was originally envisioned, the U.S. military was structured to counter conventional threats, including possibly, two regional war scenarios involving national armies.[4609] Now, partlyfrom recognition that U.S. forces were inadequately prepared for the insurgency in Iraq and the wider hunt for terrorists worldwide, DOD reportedly may be considering new policy that places less emphasis on waging conventional warfare and more on dealing with counterinsurgency, terrorist networks, and other non-traditional threats.[4610]

Some observers now question the effectiveness of Network Centric Operations, and its relevance to different types of conflict, including close urban combat. Others argue that technology may be dictating military strategy, and point out that the military's extreme reliance on high technology may also present a new

[4610] Bradley Graham, Pentagon Prepares to Rethink Focus on Conventional Warfare, Washington Post, Jan. 26, 2005, A2.

vulnerability that adversaries may exploit.[4611] Still others pose questions about (1) the interoperability of information systems for joint and coalition forces, (2) a shortage of available bandwidth to support Net Centric Operations, and (3) possible unexpected outcomes when organizations rely on data-dependent systems.

Background

Defense Transformation

NCO is recognized as the cornerstone of military transformation that is occurring in many countries around the world. Defense transformation for the U.S. military involves large-scale and possibly disruptive changes in military weapon systems, organization, and concepts of operations. These changes are the result of technology advances, or the emergence of new international security challenges.[4612] Many observers believe that a U.S. military transformation is necessary to ensure U.S. forces continue to operate from a position of overwhelming military advantage in support of national objectives.[4613] The Administration has stated that DOD must transform to achieve a fundamentally joint, network centric, distributed force structure capable of rapid decision superiority. To meet this goal, DOD is building doctrine, training, and procurement practices to create a culture of continual transformation that involves people, processes, and systems.

Past experimentation to stimulate wider innovation for military operations and NCO has been coordinated by the DOD Office of Force Transformation (OFT). However, DOD plans to shift many ongoing technology initiatives formerly managed by the OFT into the DOD Research and Engineering Directorate. In addition, a reorganization of the office of the DOD Undersecretary for Policy will lead to establishment of a new Office of Strategic Futures, which will examine technology issues that may affect U.S. defense policies. The reorganization is reportedly planned for early 2007, and will require congressional approval for a new assistant secretary position.[4614]

[4611] Military technology emulates commercial technology in the hope that adapting the latest commercial innovation to war may bring to national security the same benefits that accrued to commercial enterprises. Alfred Kaufman, Caught in the Network: How the Doctrine of Network-Centric Warfare Allows Technology to Dictate Military Strategy, Armed Forces Journal, Feb. 5, 2005, p.20-22.

Definition of Network Centric Operations

NCO is a theory which proposes that the application of information age concepts to speed communications and increase situational awareness through networking improves both the efficiency and effectiveness of military operations. Proponents advocate that this allows combat units to be smaller in size, operate more independently and effectively, and undertake a different range of missions than nonnetworked forces.[4615] Networked sensors are sources of data, and data is processed into information. NCO is intended to increase collaboration through enabling the free flow of information across the battlespace so that acquired data is shared, processed into information, and then provided quickly to the person or system that needs it.[4616]

Proponents argue that a strong and flexible network linking military forces will speed up the pace of warfare, prevent or reduce fratricide, and also provide the means for getting more combat power out of a smaller force.[4617] These proponents also argue that theory and practice have merged through achieving proof of concept in the major operations phase of Operation Iraqi Freedom, and that NCO is now an accepted and enduring part of current and future combat.[4618] Procurement policy to support joint NCO efforts is also intended to improve economic efficiency by eliminating stovepipe systems, parochial interests, redundant and non-interoperable systems, and by optimizing capital planning investments for present and future information technology systems.

Command and control objectives of NCO include the following:

[4615] The Office of Force Transformation (OFT) and the Command and Control Research Program (CCRP) of the Office of the Assistant Secretary of Defense for Command, Control, Communications, and Intelligence (ASD/C3I) have been collaborating to develop metrics to support experiments, studies, and analyses related to Military Transformation and Net Centric Operations. To date the effort has been led by RAND, with support from Evidence Based Research, Inc. (EBR), and participation of the government sponsors. The NCO theory posits that the application of information technologies has a positive impact on military effectiveness. Independent variables include networking, information sharing, collaboration, etc. Dependent variables include speed of command and force effectiveness. Dr. Kimberly Holloman, Evidence Based Research, Inc., "The Network Centric Operations Conceptual Framework," Presentation at the Network Centric Warfare 2004 Conference, Washington, D.C., Jan. 20, 2004, [http://www.oft.osd.mil/library/library.cfm?libcol=2].

Dennis Murphy, Network Enabled Operations in Operation Iraqi Freedom: Initial Impressions, Center for Strategic Leadership, U.S. Army War College, March 2005, vol. 06-05, p. CSL-4.

(1) Self-synchronization, or doing what needs to be done without traditional orders.
(2) Improved understanding of higher command's intent.
(3) Improved understanding of the operational situation at all levels of command.
(4) Increased ability to tap into the collective knowledge of all U.S. (and coalition) forces to reduce the "fog and friction" commonly referred to in descriptions of fighting.[4619]

Some argue that as new concepts and technologies are proven over time, NCO may also become a stabilizing deterrence against extended conflict. For example, if adversary targets are neutralized by NCO systems before they can engage in fighting with U.S. forces, then the battle can be finished before it has really begun.[4620] Others argue that wealthy countries now only have a temporary advantage which may be reduced as NCO technology becomes less expensive and as technical knowledge spreads to other nations, and also to terrorist groups.[4621] Hence, to maintain its advantage, the United States must continue to refine the uses of technology to increase adaptability for both joint and coalition NCO operations.

Other observers have wondered whether proponents of NCO are making claims that create unrealistic expectations. They wonder if the DOD model for network centric operations may underestimate an enemy's ability to deceive high technology sensors, or block the information necessary for NCO to be effective. A possible vulnerability cited by observers may be the fact that DOD has openly published its plans for using NCO technologies in future warfare, thus giving an enemy time to create strategies to avoid strengths and attack weaknesses.[4622]

Advantages of the Net Centric Approach

National security in the "Information Age" involves a complex environment, where U.S. forces are confronted by instantaneous media coverage, insurgencies, terrorist cells, regional instability, and adversaries using commercially available state-of-the-art high technology devices. Therefore, military operations are now

---

[4619] "Fog" is the term that describes the uncertainty about what is going on during a battle, while "Friction" is the term that describes the difficulty translating a commander's intent into battlefield actions.

[4620] Dr. Kimberly Holloman, Evidence Based Research, Inc., The Network Centric Operations Conceptual Framework, Presentation at the Network Centric Warfare 2004 Conference, Washington, DC, Jan. 20, 2004, [http://www.oft.osd.mil/library/library.cfm?libcol=2].

[4621] Scott Renner, C2 Information Manager, MITRE Corporation, Building Information Systems for NCW, 4th Annual Multinational C4ISR Conference, McLean, Virginia, May 6, 2004.

[4622] Alfred Kaufman, "Be Careful What You Wish For: The Dangers of Fighting with a Network Centric Military," Journal of Battlefield Technology, vol 5, no.2. July 2002, and "Networking in an Uncertain World," Journal of Battlefield Technology, vol 5, no.3, Nov. 2002.

characterized by greater complexity. Events involving greater complexity are less effectively controlled through traditional industrial-age methods that de-construct problems into a manageable series of predictable pieces.[4623] However, the command and control objectives of NCO seem to align closely with many of the key properties of complexity – nonlinear interaction, decentralization, and self-organization.

Proponents of NCO support the theory that power is increasingly derived from information sharing, information access, and speed. This view is reportedly also supported by results of recent military operational experiences[4624] showing that when forces are truly joint, with comprehensively integrated capabilities and operating according to the principles of NCO, they can fully exploit the highly path-dependent[4625] nature of information age warfare. Some resulting military advantages that are expected from applying NCO systems to military operations include the following:

(1) Networked forces can consist of smaller-size units that can travel lighter and faster, meaning fewer troops with fewer platforms and carrying fewer supplies may be able to perform a mission effectively, or differently, at a lower cost.
(2) Networked forces can fight using new tactics. During OIF, U.S. Army forces utilized movement that was described by some as "swarm tactics." Because networking allows soldiers to keep track of each other when they are out of one another's sight, forces in Iraq could move forward spread out in smaller independent units, avoiding the need to maintain a tight formation. Using "swarm tactics," unit movements are conducted quickly, without securing the rear. Network technologies enable all units to know each other's location. If one unit gets into trouble, other independent units nearby can quickly come to their aid, by "swarming" to attack the enemy from all directions at once. Benefits may include the following: (1) it is harder for an enemy to effectively attack a widely dispersed formation; (2) combat units can cover much more ground, because they do not have to maintain a formation; (3) knowing the location of all friendly units reduces fratricide during combat operations; and (4) swarming can allow

[4623] Murray Gell-Mann, "What is Complexity?" Complexity, John Wiley and Sons, 1995, Vol. 1, No.1.

[4624] John Garstka, "Network-Centric Warfare Offers Warfighting Advantage," Signal Forum, Signal Magazine, May 2003.

[4625] Path-dependence means that small changes in the initial conditions will result in enormous changes in outcomes. Therefore, a military force must define initial conditions that are favorable to their interests, with the goal of developing high rates of change that an adversary cannot outpace. Dan Caterinicia and Matthew French, "Network-Centric Warfare: Not There Yet," Federal Computer Week, June 9, 2003, [http://www.fcw.com/fcw/articles/2003/0609/cov-netcentric-06-09-03.asp].

an attack to be directed straight into the heart of an enemy command structure, undermining support by operating from the inside, rather than battling only on the periphery.

(3) The way individual soldiers are expected to think and act on the battlefield is also changing. When a unit encounters a difficult problem in the field, they can radio the Tactical Operations Center, which types the problem into an online chat room, using Microsoft Chat commercial software. The problem is then "swarmed" by experts who may be located as far away as the Pentagon.[4626]

(4) The sensor-to-shooter time is reduced. Using NCO systems, soldiers in the field may have the capability to conduct an "on site analysis" of raw intelligence from sensor displays, rather than waiting for "return analysis" reports to arrive back from the continental United States.[4627]

This has led some to question the investment in NCO.

Questions About the Net Centric Approach

DOD officials have stated that it is irregular and unconventional conflicts, rather than confrontations with standing armies, that will dominate U.S. military operations for the foreseeable future.[4628] Accordingly, some observers question the utility of NCO in urban combat operations and for counterinsurgency operations, and ask whether the U. S. military currently places too much emphasis on high-technology. In operations in Afghanistan and in urban warfare in Iraq, NCO has reportedly reduced fratricide among friendly forces.[4629] However, in Afghanistan and Iraq, the insurgents mixin with the population, and are able to get very close to U.S. forces. This tactic alone reportedly may negate

much of the technological and military advantage of superior coalition forces.[4630] Others question whether information itself may be overrated as a useful military asset (See Appendix C, Perverse Consequences of Data-Dependent Systems).

NCO Theory Remains Scientifically Untested

Proponents say that a growing body of evidence highlights a very strong relationship between information advantage, cognitive advantage, and increased lethality and survivability at the tactical level.[4631] DOD has conducted several exercises to demonstrate the effectiveness of network centric strategies to improve success in combat scenarios.[4632] However, some researchers warn that thorough testing of NCO concepts is vital before systems are deployed[4633], and others argue that NCO theory may manifest important and pervasive flaws.[4634] These researchers state that "...the theory of network-centric warfare...cannot substantiate a claim to scientific status, despite its mesmerizing transformational luster". They also state that "...the [NCO] thesis simultaneously overstates the promise of information and communications technology, while being incapable of adequately realizing the great potential the technology does offer."[4635]

Their argument is that NCO theory has several paradoxes, including: (1) no proper definition of NCO yet exists, but proponents claim that experimentation supports the NCO hypothesis, (2) experimental evidence equally supports multiple alternative explanations for potentially improved performance with

[4634] Metcalfe's Law observes that the potential value of a communications network increases (or scales) as a function of the square of the number of nodes that are connected by the network. Critics of NCO argue that Metcalfe's Law breaks down at a sufficiently large number of nodes. The military symptoms are chronic bandwidth deficiency, information overload, and increasing costs for information management solutions, such as "data fusion" centers. Ralph Griffin and Darryn Reid, A Woven Web of Guesses, Proceedings of the 8th International Command and Control Research and Technology Symposium, Washington D.C., June 17-19, 2003. For more information on Metcalfe's Law, see Appendix B.

[4635] Darryn Reid et. al., All that Glitters: Is Network-Centric Warfare Really Scientific?, Defense and Security Analysis, vol.21, No.4, p. 359 and p.360.

networking, and (3) the conclusions of proponents are based on an invalid notion of knowledge development, known as "inductivisim". These researchers maintain that a close examination of the structure of repeated NCO experiments shows that the only hypothesis that has actually been tested is a refutation of the theory that networks cannot yield improvements.

Finally, these researchers have asked how it can be possible for faults to remain unrecognized despite troubling results found through critical review and testing. They warn that contemporary military theory may be encouraging NCO proponents to seek confirmation and ignore refutation of their ideas.

Overconfidence about the Effectiveness of NCO

Proponents of NCO say that shared situational awareness enables collaboration and self-synchronization and enhances speed of command, which increasing mission effectiveness. Critics, however, are concerned that dangerous assumptions are being made by military planners about how future forces will benefit from "information dominance" to such a degree that fewer soldiers will be needed, or that U.S. forces will not require as much protection because they will be able to act ahead of enemy action. They believe that the doctrine of "see first, act first", that underlies NCO, may be flawed because the tempo of operations may outpace the ability of U.S. forces to assess and respond.[4636]

While a network may provide better access to information, usually about the activities of one's own side, that information may not be complete and may not necessarily enable an accurate understanding of the situation. They have indicated that sensor-based situational awareness may not reflect an accurate picture of operational reality.[4637]

Other observers say that the military leadership's commitment to NCO may stifle useful criticism from operational commanders. These observers question whether the U.S. military is constructing it forces to prepare to fight the type of wars they want to fight, and rather than the wars they are likely to fight. For example, if NCO is intended to make wars short in duration, then inferior adversaries may likely try to draw U.S. forces into a protracted conflict of lower intensity, and will seek to win merely by avoiding defeat, while U.S. political will dissolves as

---

[4636] Proponents of NCO say that Information Age technology makes time and distance less relevant, thus increasing the pace of events and the operational tempo of warfare. David Alberts, John Garstka, Frederick Stein, Network Centric Warfare, DOD Command and Control Research Program, Oct. 2003, p. 21. Ted McKenna, Promises, Promises, Journal of Electronic Defense, November 2005, vol. 28, No.11, p. 10.

[4637] Giles Ebbutt, Flaws in the system: modern operations test the theory of network centricity, Jane's International Defence Review, July 2006, Vol 39, p.67.

expenses mount. The inferior opponent may avoid superior U.S. firepower by simply denying a target for our complex and sophisticated weapons.[4638]

Reduced Effectiveness for Urban Counter-Insurgency Operations

Some military researchers say that opponents using guerilla tactics can significantly reduce the value of high-technology security measures, and that the utility of NCO can be less certain in urban counter-insurgency operations.[4639] When NCO is employed against conventional forces, a sensor detects a target, passes information to a decision-making process, the most effective weapon available is selected, and the target is engaged. However, when opponents hide behind walls, in sewers, or inside buildings, they may be difficult for NCO sensors to detect. If the enemy is better at concealment than U.S. forces are at finding them, then our forces may also become more vulnerable.[4640]

Some observers report that during Operation Iraqi Freedom (OIF), in order to understand the enemy, U.S. forces had to "go out and meet them on the ground", meaning that effective reconnaissance often required engaging the enemy in close combat. These observers say that interviews with OIF warfighters suggested that modern surveillance technology did not alter that condition, and in some instances did not "...provide forces in Iraq in Spring 2003 and onwards with very much insight on the opposing forces."[4641] This suggests that DOD should perhaps reexamine several of its basic assumptions about NCO and the power of technology for surveillance and information dominance.

Underestimating our Adversaries

NCO relies heavily on deployment of a network of sensors to detect movement and position of both friendly and enemy forces. However, a study by the Rand Corporation in 2002 concluded that, "...as remote assets become more capable, it is likely that a future [enemy] force will develop counter technologies and become

more sophisticated at cover, concealment, deception, and electronic warfare. Taking all of these into consideration, the net effect may actually be a decrease of knowledge and ultimately of situational awareness on the battlefield."[4642]

Our adversaries in Iraq and Afghanistan have taken actions to directly bypass U.S. NCO sensors, and to negate the usefulness of U.S. high technology NCO weapons. Examples include (1) use of suicide bombings and Improvised Explosive Devices (IEDs); (2) hostile forces intermingling with civilians used as shields; or (3) irregular fighters and close-range snipers that swarm to attack, and then disperse quickly.[4643]

Other possible uses of technology by adversaries of the United States to attack NCO capabilities may include use of (1) powerful directed energy devices to disrupt commercial satellite signals;[4644] (2) smaller directed energy devices to burn out computer circuits at a distance,[4645] and (3) malicious computer code to subvert controls for complex weapon systems.

Overreliance on Information

Some observers state that huge information resources may be overrated as an asset for creating effective military operations, and that important military decisions may not always lend themselves to information based rational analysis.[4646] They argue that discussions of military transformation have been overwhelmingly focused on the rewards of information, and that the military services, national security establishment, and intelligence community have not

thoroughly studied the risks associated with data-dependent military doctrine.[4647] Some issues raised by these observers include:

(1) Reliance on sophisticated information systems may lead to management overconfidence.[4648]
(2) Quantitative changes in information and analysis often lead to qualitative changes in individual and organizational behavior that are sometimes counterproductive; e.g., as information technology reveals more targets, ammunition may be expended faster, leading to greater dependence on logistics support.[4649]
(3) An information-rich, opportunity-rich environment may shift the value of the information, redefine the mission objectives, and possibly increase the chances for perverse consequences. (See Appendix C, Perverse Consequences of Data-Dependent Systems.)

Management of Information Overload

The proliferation of sensors in the battlefield has created what some would call "data overload", where large inflows of real-time data could overwhelm users, and jeopardize the decision-making process. DOD is examining using new "data fusion" centers, which would use special software to filter out battlefield data that is unneeded by warfighters. Also, to make sure that radio frequencies in use don't encounter interference, the US Air Force Electronic Systems Center is working to design a universal tool called the Joint Interface Control Officer (JICO) Support System, which is intended to manage all radio communications traffic in tactical situations.[4650]

Increasing Complexity of Military Systems

Military systems and software are becoming increasingly complex. Software is used to process sensor data, identify friend and foe, set targets, issue alerts,

coordinate actions, and guide decisions for manned and unmanned combat vehicles on land, sea, and in the air. For example, observers estimate that at least 31 million lines of computer code will be required to operate the Army Future Combat System.[4651] Also, many military combat systems which now operate as stand-alone equipment will eventually be tied into network systems.[4652] However, as complexity grows, components of networked systems may sometimes process information received from other systems whose capabilities, intentions, and trustworthiness are not always known.[4653]

A recent article published by the Carnegie Mellon Software Engineering Institute about the growing complexity of military computerized systems argues the following:

> *With modern complex systems of systems, most systems are described as "unbounded" because they involve an unknown number of participants or otherwise require individual participants to act and interact in the absence of needed information.*
>
> *For the complex systems of systems being constructed today and defined for the future, it is no longer possible for any human or automated component to have full knowledge of the system. Each component must depend on information received from other systems whose capabilities, intentions, and trustworthiness are unknown.*
>
> *Unbounded systems of systems are fast becoming the norm in many of the most demanding military and commercial applications. These include command-and-control systems, air traffic control systems, the electric power grid, the Internet, individual aircraft, enterprise database systems, and modern PC operating systems. For example, in net-centric warfare as applied by U.S. troops at the beginning of the current war in Iraq, agility and rapid progress were achieved by direct interactions among ground troops, helicopters, artillery, and bombers using equipment whose designs did not anticipate such usage and the accompanying mission changes.*

[4651] David Talbot, How Technology Failed in Iraq, Technology Review, November 2004, p.1.

[4652] Goodrich Engine Control Systems, [http://www.enginecontrols.goodrich.com/ small/products/ecu.shtml]..

[4653] David Fisher, Dennis Smith, Emergent Issues in Interoperability, Carnegie Mellon Software Engineering Institute, No.3, 2004, [http://www.sei.cmu.edu/news-at-sei/columns/eye-on-integration/2004/3/ eye-on-integration-2004-3.htm].

Most systems of systems use their component systems in ways that were neither intended nor anticipated. Assumptions that were reasonable and appropriate for individual component systems become sources of errors and malfunction within systems of systems. As a result, the individual systems – and the system of systems as a whole -- acquire vulnerabilities that can be triggered accidentally by normal actions of users and automated components, or exploited consciously by intelligent adversaries.

Often when problems of interoperability arise in complex systems, there is a tendency to try to gain greater visibility, to extend central control, and to impose stronger standards. Not only are these actions ineffective in complex systems, they also increase the likelihood of certain kinds of accidents, user errors, and other failures. What are called normal accidents are inherent and occur naturally in complex systems. The frequency of normal accidents increases with the degree of coupling in systems. Coupling is increased by central control, overly restrictive specifications, and broadly imposed interface standards. Developers of systems of systems should strive for loose coupling.[4654]

Vulnerabilities of Military Software and Data

Military computers are continuously threatened by attack from hackers, or others with malicious intent. One example of a hacker attack is the British programmer, Gary McKinnon, who reportedly used commercially-available off-the-shelf software in several attacks through the Internet to successfully penetrate hundreds of military computers, causing measurable damage,[4655] and forcing

[4654] David Fisher and Dennis Smith, Emergent Issues in Interoperability, News@ SEI, 2004, No.3, [http://www.sei.cmu.edu/news-at-sei/columns/eye-on-integration/2004/3/ eye-on-integration-2004-3.htm].

[4655] Gary McKinnon has been indicted for breaking into approximately 100 military networks between 2001 and 2002. He is charged with installing Trojan Horses and back doors, stealing military passwords, and disabling networks at Fort Meyers, Fort McNair, the Pentagon, and other locations belonging to the Army, Navy, and Air Force. However, DOD officials claim that no classified data was taken. In May 2006, the U.S. prosecutors secured his extradition from Britain to the United States, where he could face 70 years in prison, plus fines. Larry Greenmeier, To Catch A Hacker, Information Week, May 15, 2006, p. 31. Maija Palmer, "Hacker Cites Easy Access to U.S. Data", Los Angeles Times, May 8, 2006. Brooke Masters, "Briton Indicted as Hacker," Washington Post, Nov. 13, 2003, p. A11, [http://www.washingtonpost.com/wp-dyn/articles/A45963-2002Nov12.html]. MARADMIN, "Marine Corps Announcement of Website Breach," Inside Defense, Oct. 15, 2003, [http://www.insidedefense.com].

portions of several military network to shut down temporarily.[4656] Also, in Afghanistan, stolen military portable computer drives, some containing classified data and software, were recently discovered for sale in the streets, in public markets, and in local shops.[4657]

There is growing controversy about whether the U.S. military should rely on general purpose "open-source" commercial computer software for the command, control, and communications functions in advanced defense systems for tanks, aircraft and other complex equipment. An example of open-source code is the popular computer operating system known as Linux, which has been developed by a worldwide community of programmers who continuously add new software features by building on each others' openly-shared source code. Subscriptions can be purchased from different commercial vendors who will provide technical support for specific versions of the Linux open-source software. In contrast, proprietary code created by other commercial vendors is called "closed-source", and includes software products such as Microsoft Windows. Both open-source and closed-source products which are supported by commercial software vendors are commonly referred to as commercial-off-the-shelf (COTS). However, open-source software appears much less expensive than proprietary software, and the reputation it has earned for general soundness and reliability is helping open-source software gain acceptance by different government organizations and the global business community.

NSA has researched a secure version of Linux, but it is not clear that all military computer systems that use Linux are restricted by the results of that research.[4658] Some experts believe that open-source software violates many security principles, and may be subverted by adversaries who could secretly insert malicious code to cause complex defense systems to malfunction. Other computer experts disagree, stating that precisely because Linux is openly reviewed by a worldwide community of contributing programmers, it has security that cannot easily be

---

[4656] U.S. Attorney's Office, District of New Jersey, Public Affairs Office, Nov. 11, 2002, [http://www.usdoj.gov/usao/nj/publicaffairs/NJ_Press/files/mc1112_r.htm].

[4657] Stolen portable hard drives from military computers, some containing sensitive and classified military information, were found for sale at a local bazaar in Afghanistan. The drives may have come from the main U.S. air base in Bagram, Afghanistan. In addition to launching an investigation, military officials reportedly coped with the problem by sending staff to buy up all the portable computer drives at the local bazaar. Paul Watson, U.S. Military Secrets for Sale at Afghan Bazaar, Los Angeles Times, April 10, 2006, p.A1. Carlotta Gall, At Afghan Bazaar, Military Offers Dollars for Stolen Data, The New York Times, Asia Pacific, April 15, 2006, [http://www.nytimes.com/

=5087%0A].

[4658] See NSA Security Enhanced Linux, [http://www.nsa.gov/selinux/index.cfm].

compromised by a foreign agency. The open review by many contributors acts as a safeguard against insertion of malicious code.

A recent study by the Defense Information Systems Agency (DISA) states that DOD currently uses a significant variety of open-source computer software programs, and concluded that open-source software is vital to DOD information security. This is partly because many information security tools used by DOD are built using open-source code, and effective counterparts are not available from proprietary COTS products. The study also states that DOD web services and DOD software development would be disrupted without continued use of open-source software. This is because many tools that are basic to web design and software development are based on open-source code.[4659]

Experts at the Naval Post Graduate School reportedly have stated that "software subversion" can only be avoided by using "high-assurance" software that has been proven to be free of any malicious code.[4660] Because of the added development rigor and intensive test procedures required to achieve such proof, high-assurance software would cost considerably more than open-source software.[4661] However, researchers at the Massachusetts Institute of Technology have reportedly found that as the complexity of a system increases, additional testing does not always reduce the number of vulnerabilities that can remain hidden in computer software.[4662]

Vulnerabilities of Military Equipment to Electronic Warfare

U.S. military forces may be vulnerable to electronic warfare attacks, such as Electromagnetic Pulse (EMP), which is an instantaneous, intense energy field that can overload or disrupt at a distance numerous electrical systems and high

[4662] Simson Garfinkel, Battling Bugs: A Digital Quagmire, Wired News, November 9, 2005, [http://www.wired.com/news/technology/bugs/0,2924,69369,00.html].

technology microcircuits, which are especially sensitive to power surges. A single, specially designed low-yield nuclear explosion high above a local battlefield area can produce a large-scale electromagnetic pulse (EMP) effect that could result in widespread disruption of electronic equipment, without any fatalities due to blast or radiation. A similar EMP effect on a more limited scale could also be produced by using a high-power microwave device, triggered by a conventional explosive.[4663]

Commercial electronic equipment is now used extensively to support logistics to support the operation of complex U.S. weapons systems. For example, a large percentage of U.S. military communications during Operation Iraqi Freedom was carried by commercial satellites, and much military administrative information is currently routed through the civilian Internet.[4664] Many commercial communications satellites, particularly those in low earth orbit, reportedly may degrade or cease to function shortly after a high-altitude EMP attack.[4665] Special shielding could reduce this vulnerability in future commercial satellites. However, the current vulnerability of high technology equipment and communications to the effects of EMP could create a new incentive for other countries, or terrorists and extremists, to develop or acquire electronic warfare weapons.

Net Centric Technologies and Related Issues

The following is a list of key technology areas used to implement NCO for U.S. forces, and related issues.

Command, Control, Communications, Computers, and Intelligence

C4I capabilities are the nervous system of the military. DOD is seeking to move from a policy of information "push", where information is labeled and sent by data "owners" only to recipients who are deemed appropriate, to a policy of information "pull", where authenticated users within a given community of interest can request and receive all information available to solve a problem, regardless of the data owner. This shift in policy is intended to promote more widespread information sharing and collaboration.[4666]

[4663] For more on EMP, see CRS Report RL32544, High Altitude Electromagnetic Pulse (HEMP) and High Power Microwave (HPM) Devices: Threat Assessments, April 14, 2006, by Clay Wilson.

[4666] Memorandum by John Stenbit, DoD Net-Centric Data Management Strategy: Metadata Registration, April 3, 2003.

NCO relies on a high-bandwidth communications backbone consisting of fiber optics and satellites, all communicating using Internet Protocol (IP). By 2008, DOD is planning to switch all communications systems from IPV4 to the newer IPV6 to improve communications mobility, create more IP addresses, and reduce system management problems (See Appendix A for more on IPV6).[4667]

Interoperability

NCO is highly dependent on the interoperability of communications equipment, data, and software to enable networking of people, sensors, and manned and unmanned platforms. Parts of NCO technology rely on line-of-sight radio transmission for microwave or infrared signals, or laser beams. Other parts of the technology aggregate information for transmission through larger network trunks for global distribution via fiber optic cables, microwave towers, or both low-altitude and high-altitude satellites. The designs for this technology must enable rapid communications between individuals in all services, and rapid sharing of data and information between mobile platforms and sensors used by all military services.[4668] The architectures must also have the ability to dynamically self-heal and re-form the network when one or more communications nodes are interrupted. DOD officials have noted that the new military Global Information Grid (GIG) must be also designed to interoperate securely with the networks of other organizations outside of DOD, including state and local governments, multinational military commands, and the commercial and research communities.[4669]

Some observers question whether the U.S. military can achieve true network and systems interoperability among all services. DOD reportedly intends to integrate the architectures of network systems used by all branches of the military to create a network centric capability linked to the GIG (see section below). To help accomplish this integration, the DOD Joint Staff has created a new Force Capability Board (FCB) to monitor NCO programs for mismatches in funding, or mismatches in capability. When an issue is detected, the FCB reports to the Joint

Requirements Oversight Council, which then provides guidance during budget deliberations at the Pentagon.[4670]

Space Dominance

Satellites are crucial for enabling mobile communications in remote areas, as well as for providing imagery, navigation, weather information, a missile warning capability, and a capability to "reach back" to the continental United States for added support. For example, the Global Positioning System (GPS), consisting of 28 navigation satellites, helps identify the location of U.S. forces, as well as the locations of targets for guided U.S. weapons, such as cruise missiles. The United States maintains 6 orbital constellations for Intelligence, Surveillance, and Reconnaissance (ISR): one for early warning, two for imagery, and three for signals intelligence. Recently, the Army deployed the Coalition Military Network, a new satellite communications system designed to add bandwidth to support coalition forces in remote areas of Iraq.

However, despite the growing number of military satellites, the Defense Information Systems Agency (DISA) reported that up to 84 percent of the satellite communications bandwidth provided to the Operation Iraqi Freedom (OIF) theater was supplied by commercial satellites.[4671] Some drawbacks using commercial satellite services became apparent during OIF. U.S. Army officials indicated that the high volume of traffic on Iridium communications satellites at times overwhelmed that system, which also had to suspend service periodically for updates. In addition, the military reportedly was unable to get encrypted data transmission services from the Inmarsat satellite system at transmission rates of 128 kilobits per second, and instead had to settle for rates of 64 kilobits per second, which was too slow for the Army's needs.[4672]

[4670] Brigadier General Marc Rogers, Director Joint Requirements and Integration Directorate/ J8, for U.S. Joint Forces Command, in U.S. Congress, House Armed Services Subcommittee on Terrorism, Unconventional Threats and Capabilities, Hearing on Military C4I Systems, Oct. 21, 2003 [http://www.cq.com], and Rich Tuttle, "New Organization to Stress Importance of Network Programs," Aerospace Daily, Jan. 30, 2004,

[4671] DOD satellites could not satisfy the entire military demand for satellite bandwidth, and therefore DOD has become the single largest customer for commercial satellite services. DOD sometimes leases commercial satellite bandwidth through DISA, and at other times bypasses the process to buy directly from industry. Bypassing DISA may reduce interoperability and increase redundancies. Jefferson Morris, "GAO: DOD Needs New Approach to Buying Bandwidth," Aerospace Daily, Dec. 12, 2003; "DISA Chief Outlines Wartime Successes," Federal Computer Week, June 6, 2003.

[4672] Warren Ferster, Military Bandwidth Demand Energizes Market, SpaceNews, September 2, 2003, [http://www.space.com/spacenews/archive03/militaryarch_090203.html].

The Transformational Satellite Communications (TSAT) program, run by the Air Force, is part of a plan to build a satellite-based military Internet. The future TSAT program involves launching 5 military satellites in geosynchronous orbit, with laser communication links and Internet-like routers to provide high-speed, high-capacity communications to U.S. warfighters worldwide.[4673] The first TSAT satellite is scheduled to be launched in 2014, with full operational capacity scheduled for 2018.[4674]

The United States remains highly-dependent on space assets, and has enjoyed space dominance during previous Gulf conflicts largely because its adversaries simply did not exploit space, or act to negate U.S. space systems. However, the United States may not be able to rely on this same advantage in the future. For example, a non-state group could possibly take advantage of commercial space-based technology by leasing satellite bandwidth, or by purchasing high-resolution imagery from suppliers in the Soviet Union, China, or other countries that own and operate space assets. Also, less-technically advanced nations and non-state actors may employ electronic jamming techniques, or launch attacks against satellite ground facilities.[4675] News reports show that over a period of several years China has fired high-power laser weapons at U.S. military optical spy satellites as they fly over Chinese territory. Experts say this may have been testing of a new ability to blind the spacecraft. It is not clear how many times China may have tested their ground-based laser system against U.S. satellites, or whether the tests were successful.[4676]

Networked Weapons

Individual air-to-ground weapons will be integrated into network centric operations. Recent tests under the Weapons Data Link Network (WDLN) Advanced Concept Technology Demonstration have shown that various weapons can use standard methods to report their status after release from an aircraft, and provide information on their impact. When pilots and ground controllers have two-way communications with network-enabled weapons after they are in flight, new information can be continually supplied to shift the weapon as the target changes location, or to shift the attack to a different target, or to abort the attack. Networked weapons with these capabilities are projected to become operational

by 2010.[4677] However, if a large volume of weapons are used concurrently in a conflict, this may add considerably to the demand for network bandwidth.

Bandwidth Limitations

Bandwidth is the transmission capacity for any given channel on a network. Since 1991, there has been an explosive increase in military demand for bandwidth, largely due to efforts to speed up the delivery of digital information. Defense officials remain concerned about whether the bandwidth available through DOD communications systems will grow to keep up with increasing military demand in the future. Some observers question whether enough bandwidth will be available in the future to support DOD plans for major NCO systems, such as the Future Combat System, Warfare Information Network - Tactical, and Joint Tactical Radio System.[4678]

When the supply of bandwidth becomes inadequate during combat, military operations officers have sometimes been forced to subjectively prioritize the transmission of messages. They do this by literally pulling the plug temporarily on some radio or computer switching equipment in order to free up enough bandwidth to allow the highest-priority messages to get through. This can delay messages, or cancel other data transmissions. Latency, or delays in information updates resulting from a bandwidth shortage could leave some units attempting to fight on their computer screens with outdated information, when the enemy changes position faster than the screen image data can be updated. An example of this type of problem occurred in April 2003, when a U.S. Army battalion was surprised by a large force of Iraqi tanks and troops because intelligence systems were unable to update enemy information in databases quickly enough to keep front line units accurately informed.[4679]

By the year 2010, the Congressional Budget Office estimates that the supply of effective bandwidth in the Army is expected to fall short of peak demand by a ratio of approximately 1 to 10.[4680] According to former Assistant Secretary of

[4680] Anticipated hardware improvements by 2010 will shift the existing bandwidth bottleneck from the brigade level to the corps level. If the Joint Tactical Radio System (JTRS) performs as the Army projects, the new radio may provide more than enough bandwidth for the lower tactical

Defense for Networks and Information Integration (ASD/NII), Paul Stenbit, the primary barrier to achieving the NCO Internet paradigm is finding new ways to meet the demand for bandwidth. Communications infrastructure must have enough bandwidth to allow, for example, several people at different locations in the battlefield to pull the same problem-solving data into their computer systems at the same time, without having to take turns sharing and using the same limited local bandwidth.[4681]

Unmanned Robotic Vehicles (UVs)

UVs, also known as Unmanned Aerial Vehicles (UAVs), Ground Vehicles (UGVs), and Underwater Vehicles (UUVs) are primarily used for surveillance. However, their mission is evolving to also include combat, under the title Unmanned Combat Vehicles (UCVs).[4682] During OIF, approximately 16 Predator and 1 Global Hawk UAVs were in operation, and all were controllable remotely via satellite link from command centers in the continental United States. UVs each require a large amount of bandwidth for control and for transmission of reconnaissance images.[4683]

Sensor Technology

Sensors are being developed to remotely detect movement and heat signatures of enemy equipment. However, some observers have warned that it is likely that future foes will develop technologies to counter U.S. weapons, and will become more sophisticated in cover and concealment, with the possible net effect that

---

levels of command, with a margin for growth of demand beyond 2010. However, at the division and corps level, the projected demand is still expected to be much greater than the likely supply. U.S. Congressional Budget Office, "The Army's Bandwidth Bottleneck," Aug. 2003, [http://www.cbo.gov].

[4681] In certain situations, some commanders had access to only one communications channel. If someone else was using it first, the commander had to wait until it was free for him to use. Matthew French, "Bandwidth in Iraq a subject of debate," Federal Computer Week, Oct. 20, 2003, p.43.

[4682] The two key programs for UAV development are the USAF's X-45 and the Navy's carrier-capable X-47. Both projects are under the Joint Unmanned Combat Air System (JUCAS) program, which is led by DARPA. DOD believes that merging these two projects will lead to greater efficiencies and reduced acquisition costs. Adam Herbert, "New Horizons for Combat UAVs," Air Force Magazine, Dec. 2003.

[4683] For more information about UVs, see CRS Report RS21294, Unmanned Vehicles for U.S. Naval Forces: Background and Issues for Congress.

U.S. situational awareness on the battlefield could decrease, depending upon the sophistication of the adversary.[4684]

Software Design

Software is an important component of all complex defense systems used for NCO. GAO has recommended that DOD follow best practices of private sector software developers to avoid the schedule delays and cost overruns that have plagued past DOD programs dependent on development of complicated software.[4685] Many observers of the software industry believe that globalization of the economy dictates a global process for software development. In keeping with the GAO recommendation, contractors for DOD often outsource software development to smaller private firms, and in some cases, programming work is done by offshore companies. This raises questions about the possibility of malicious computer code being inserted to subvert DOD computer systems. However, DOD is currently investigating ways to increase confidence in the security of both foreign and domestic software products, for example, by co-sponsoring with the Department of Homeland Security a series of software assurance forums where government, industry, and academic leaders discuss security methodologies that promote integrity and reliability in software.[4686]

Computer Semiconductors and Moore's Law

Gordon Moore's Law of Integrated Microprocessor Circuits observes that computer semiconductor chips follow an 18-month cycle of evolution where they will become twice as dense and twice as fast for about the same cost. Commercial industries have long relied on the predictability of Moore's Law as a guide for investing in future technology systems. DOD plans for NCO also rely on the predictable growth in computer processing power, but this predictability may be affected by advances in new technologies. New technology developments could be disruptive, for example by reducing circuit size to nanometer units giving rise to extreme miniaturization, or by quickly lowering costs and giving adversaries and

[4686] It is virtually impossible to find unauthorized and malevolent code hidden deep within a sophisticated computer program module that may have originated from a company in one of more than a half-dozen countries commonly used for software outsourcing. Mark Willoughby, "Hidden Malware in offshore products raises concerns," Computerworld, September 15, 2003, [http://www.computerworld.com].

terrorist groups easier access to more sophisticated and powerful commercial high-technology equipment.[4687]

Technology Transfer Threat to U.S. Net Centric Advantages

Electronic technologies are critical to the operation of modern, complex systems for communications and weaponry, and much of the technology for U.S. military data networking reportedly comes from Commercial-Off-The-Shelf (COTS) products.[4688] Much of this same state-of-the-art COTS technology is readily available on the open market, and is also available to our adversaries. Some officials in DOD also say that off-shore outsourcing of critical design and manufacturing capabilities, along with other factors, has contributed to the erosion of the U.S. lead in key defense technologies.[4689] These DOD officials warn that the United States may some day no longer have the asymmetric technology advantage it once had over our existing and potential adversaries.[4690]

Weak Export Controls for High Technology

The Defense Science Board has reported that the 1996 voluntary Wassenaar Arrangement, which replaced the Cold War-era international regime that governed semiconductor exports, is not an effective tool for assuring that potential adversaries do not have access to technology for leading-edge design and fabrication equipment for integrated circuits.[4691] In addition, non-allied foreign acquisition of any U.S. company that manufactures or develops items of

---

[4687] Today's electronic transistors are reaching physical limits where electrical circuits can leak across microscopic insulators, and the manufacturing process is increasingly expensive. Photonic computers will use photons of laser light instead of electrons, will be thousands of times faster than electronic computers, and far less expensive to manufacture. However, the effort to produce the necessary inexpensive nonlinear crystals that switch light beams quickly, and at reasonable power levels, has so far not been successful enough for commercial application. The CoolScience Center, [http://www.rmrc.org/photonics/photon1.htm].

[4690] OSD Memorandum accompanying the March 2006 Joint Report from the U.S. Defense Science Board, U.K. Defence Scientific Advisory Council Task Force on Defense Critical Technologies.

[4691] Defense Science Board Task Force on High Performance Microchip Supply, U.S. Department of Defense, February 2005. [http://www.acq.osd.mil/dsb/reports/2005-02-HPMS_Report_Final.pdf].

defense significance can erode the security of the defense industrial base. China, in particular, has reportedly procured advanced weapons and technology from abroad to make up for deficiencies in its domestic military sector. In doing so, China has reportedly developed an active policy of acquiring foreign industrial and manufacturing production lines, and then seeking U.S. export licenses for advanced semiconductor fabrication instruments and equipment.[4692]

Microchip Manufacturing Moves Offshore

The Defense Science Board has also identified the increasing shift of U.S. semiconductor fabrication and design technology offshore as a critical national security challenge. Past supplies of classified integrated circuits have come from government-owned facilities operated by the National Security Agency (NSA) and Sandia National Laboratory. However, technological evolution, and new methods for mass production, have reportedly raised the cost of low-production-volume custom integrated circuits used by DOD, and made government facilities obsolete. As a result, there is no longer a diverse base of U.S. integrated circuit fabricators capable of meeting DOD needs.[4693] The DSB report calls for DOD and the defense industry to develop a new economic model for profitably producing a limited number of custom circuits and equipment for U.S. military systems.

Increased Offshore Outsourcing of R&D

U.S. corporations are now sending more high-level research and development (R&D) work to off-shore partners. For example, as early as 1998, Intel Corporation, Microsoft Corporation, and other IT vendors opened new R&D facilities in Beijing and other parts of Asia. Microsoft also reportedly has 200 Ph.D. candidates and 170 researchers currently working in its Asia R&D facilities.[4694] The Gartner Group research firm has reported that corporate spending for offshore information technology (IT) services will increase from $1.8 billion in 2003 to more than $26 billion in 2007, with half of the work going to Asian countries such as India and China.[4695]

[4695] Paul McDougall, "Optimizing Through Outsourcing," Information Week, Mar. 1, 2004, p.56. For more information, see CRS Report RL30392: Defense Outsourcing: The OMB Circular A-76 Policy.

Contracting for national defense is reportedly among the most heavily outsourced of activities in the federal government, with the ratio of private sector jobs to civil service jobs within DOD nearly five to one.[4696] However, a 2004 study by DOD concluded that utilizing foreign companies as sources for high-technology equipment does not affect long-term military readiness.[4697]

Operational Experiences

Operation Iraqi Freedom (OIF) might be more accurately characterized as a transitional rather than transformational operation because NCO technology was not fully deployed in all units during OIF, and some systems proved not to be userfriendly.[4698] Nevertheless, some observers feel that OIF proved the effectiveness and potential of network enhanced warfare,[4699] while others believe that it is hard to interpret the NCO experiences objectively, partly because the review process may sometimes be distorted by the internal military bias that favors force transformation. Still others point out that experiences using NCO technology may be misleading because recent U.S. adversaries were relatively weak militaries, including Panama (1990), Iraq (1991), Serbia (1999), and Afghanistan (2001).[4700]

A March 2005 report from the U.S. Army War College asserts that network-enabled operations achieved proof of concept in the major combat operations phase of Operation Iraqi Freedom. The report further states that net centric operations enhanced the ability of U.S. forces to conduct battles and campaigns

[4699] Lt. General William Wallace, Commander Combined Arms Center, in U.S. Congress, House Armed Services Subcommittee on Terrorism, Unconventional Threats and Capabilities, Hearing on Military C4I Systems, Oct. 21, 2003, [http://www.cq.com].

[4700] Some traditional virtues such as air superiority, may be under emphasized. The review process may exaggerate the role of "jointness" and special operations, according to Loren B. Thompson, Analyst at the Lexington Institute, "ISR: Lessons of Iraq, Defense News ISR Integration Conference," Nov. 18, 2003. "The Iraqis made so many mistakes it would be foolish to conclude that defeating them proved the viability of the new strategy," Dan Caterinicia and Matthew French, "Network-Centric Warfare: Not There Yet," Federal Computing Week, June 9, 2003, [http://www.fcw.com/fcw/articles/2003/0609/ cov-netcentric-06-09-03.asp].

by providing a common operating picture and situational awareness never before experienced in combat.[4701] A case study by the Office of Force Transformation concluded that the deployment of some net centric technologies during OIF improved operational effectiveness specifically for planning, command and control agility, tempo, and synchronization.[4702]

Network Communications

Increased networking during OIF reportedly allowed U.S. forces to develop a much improved capability for coordinating quick targeting. In Operation Desert Storm in 1991, coordinating efforts for targeting required an elapsed time of as much as four days. In Operation Iraqi Freedom, U.S. forces reduced that time to about 45 minutes.[4703] During April 2003, the Marine Corps Systems Command compiled comments from some soldiers about their experiences using several new communications systems during combat operations in Iraq. Comments from soldiers and other observers follow:

(1) Several communicators, operations officers, and commanders reportedly stated that they felt generally overloaded with information, and sometimes much of that information had little bearing on their missions. They stated that they received messages and images over too many different networks, requiring them to operate a large number of different models of communications equipment.[4704]
(2) Some troops stated that when on the move, or when challenged by line-of-sight constraints, they often used military email and "chat room"[4705] messages for communications (This usually required linking to a satellite).

Sensors

(1) Force XXI Battle Command, Brigade and Below (FBCB2), with Blue Force Tracker, received widespread praise from troops for helping to reduce the

problem of fratricide. Blue Force Tracker (BFT) is a generic term for a portable computer unit carried by personnel, vehicles, or aircraft that determines its own location via the Global Positioning System, then continuously transmits that data by satellite communications. The position of each individual unit then appears as a blue icon on the display of all other Blue Force Tracker terminals, which were used by commanders on the battlefield, or viewed at remote command centers. Clicking on any blue icon would show its individual direction and speed. A double-click reportedly would enable transmission of a text message directly to that individual unit, via satellite.

(2) Objective Peach involved U.S. forces defending a captured bridge from Iraqi forces on the morning of April 3, 2003. The commander of the U.S. forces reportedly complained that he received no information from sensors to provide warning when his position was attacked by 5,000 Iraqi soldiers approaching under cover of night, backed up by 25 tanks and 70 armored personnel carriers. Subsequent investigation revealed that at division level and above, the sensor information was adequate, but among front-line Army commanders, there was inadequate support to aid situational awareness on the ground.[4706]

(3) During a blinding sandstorm lasting from March 25 to 28, 2003, a U.S. radar plane detected Iraqi forces maneuvering near U.S. troops. U.S. bombers attacked the enemy units using satellite-guided bombs that were unaffected by poor visibility. The Blue Force Tracker system ensured that friendly forces were identified and not harmed during the successful bombing attack.[4707]

Satellites

Satellite communications played a crucial role for transmitting message and imagery data during OIF operations, and also enabled U.S. forces in the field to "reach back" to the continental United States for support. However, a growing dependence on space communications may also become a critical vulnerability for NCO.

(1) Commercial satellites were used to supplement military communications, which lacked capacity despite the fact that a number of military satellites were moved to a better geostationary orbital position for both Afghanistan and Iraq.[4708] DOD satellites cannot satisfy the entire military demand for

---

satellite bandwidth, and therefore DOD has become the single largest customer for commercial or civilian satellite services. DOD sometimes leases commercial satellite bandwidth through DISA, and at other times bypasses the process to buy directly from industry. However, bypassing DISA may reduce interoperability between the services, and may increase redundancies.

(2) During the OIF conflict, communications trunk lines, including satellite transmissions, were often "saturated", with all available digital bandwidth used up. The peak rate of bandwidth consumed during OIF was approximately 3 Gigabits-per-second, which is about 30 times the peak rate consumed during Operation Desert Storm in 1991.[4709]

Bandwidth and Latency

Some problems with delayed arrival of messages during OIF may have occurred due to unresolved questions about managing and allocating bandwidth. Sometimes, when demand for bandwidth was high, NCO messages with lower priority were reportedly dropped deliberately so that other messages with a higher priority could be transmitted.[4710]

(1) The speed with which U.S. forces moved, a shortage of satellite communications, and the inability to string fiber nationwide hampered efforts to provide adequate bandwidth. At times, some commanders were required to share a single communications channel, forcing them to wait to use it whenever it became free.[4711]

(2) Brigade-level command posts could view satellite and detailed UAV images, but battalion-level commanders, and lower command levels, could not view those same images. The lower-level commands are where greater detail is critical.

(3) Although the Army has invested in military-only decision-support systems, some of the planning and collective decision-making during OIF was handled through email and chat-rooms that soldiers were familiar with, that were "user-friendly" and reliable, that were available when

General William Wallace, Commander Combined Arms Center, in U.S. Congress, House Armed Services Subcommittee on Terrorism, Unconventional Threats and Capabilities, Hearing on Military C4I Systems, Oct. 21, 2003, [http://www.cq.com].

[4711] Matthew French, "Bandwidth in Iraq a Subject of Debate," Federal Computer Week, Oct. 20, 2003, [http://www.fcw.com/fcw/articles/2003/1020/tec-iraq-10-20-03.asp].

other systems experienced transmission delays, and that required little or no training.[4712]

Air Dominance

UAVs sometimes carry thermal cameras that can see through darkness or rain. These reportedly gave military planners so much confidence when orchestrating raids, they often skipped the usual time-consuming rehearsals and contingency planning.[4713] However, without early air dominance, UAVs and other Intelligence Surveillance and Reconnaissance (ISR) aircraft could not have been used to provide information needed for NCO systems. UAVs, and other support aircraft, such as refueling support tankers, are nearly defenseless and reportedly cannot operate without early air dominance.

Operations in Iraq with Coalition Forces

Using NCO technology with coalition forces resulted in reduced fratricide during OIF. However, during OIF, coalition assets reportedly operated as separate entities, and were often locked out of

U.S. planning and execution because most information was posted on systems accessible only to U.S. forces. For example, most major air missions, that used NCO technology for coalition operations, involved only U.S. aircraft.[4714] Policy for sharing of classified information requires a separate contract agreement between the United States and each coalition partner. DOD currently maintains 84 separate secure networks for NCO coalition operations: one for each coalition partner. This is because U.S. National Disclosure Policy restricts what information may be released to coalition partners.[4715] In addition, each coalition partner nation has a corresponding policy for release of its own sensitive information. As a result of these policies, operations planning information was distributed to coalition forces using a manual process, and the transfer of data fell

[4713] "In Iraq, Soldiers Wage War Via Computer," Baltimore Sun/A.P., Jan. 4, 2004.

[4714] Lt. General Daniel Leaf, Vice Commander for U.S. Air Force Space Command, in U.S. Congress, House Armed Services Subcommittee on Terrorism, Unconventional Threats and Capabilities, Hearing on Military C4I Systems, Oct. 21, 2003,[http://www.cq.com].

[4715] Each coalition partner must agree to protect classified military information that the United States shares with them. DOD Directive 5230.11, June 16, 1992, implements the Oct. 1, 1988 "National Policy and Procedures for the Disclosure of Classified Military Information to Foreign governments and International Organizations," or the National Disclosure Policy, within the Department of Defense, [http://www.dtic.mil/whs/directives/corres/pdf/d523011_061692/d523011p.pdf].

behind combat operations.[4716] A secure single network is required to efficiently share information among multiple partners, with a capability to dynamically add and subtract coalition partners. DOD has initiated a program called "Network Centric Enterprise Services" (NCES, also known as "Horizontal Fusion") to make information immediately available to coalition partners, while also providing strong security through network encryption technologies and dynamic access controls.[4717] However, this technical solution may not affect the differences in the individual policies that restrict information sharing among coalition partners.

Network Capabilities of Other Nation States

Military operations today generally are generally conducted with coalition partners. A coalition member that is unable to efficiently communicate situational information and other data electronically exert an unacceptable drag on the collective operations of all coalition members. Therefore, militaries of some other countries have developed Network Enabled Capability (NEC) technologies similar to those used by joint U.S. forces.[4718]

NEC is the European equivalent of NCO, and is at the heart of defence transformation ongoing in militaries throughout Europe. NEC is defined as the coherent integration of sensors, decision-makers and weapon systems along with support capabilities to create superior decision-making. This will enable military forces to operate more effectively in the future strategic environment through the more efficient sharing and exploitation of information.[4719]

Some countries also view NEC as a way to reduce their military budgets by gaining efficiency through networking with coalition partners.[4720] Observers note

that European and other coalition partners now deploying NEC equipment are still not yet interoperable with NCO equipment operated by the U.S. military.[4721]

NATO

NATO is currently building a NEC capability for dynamic interoperability with U.S. forces in the future and is developing a framework for high-technology warfare using the combined forces of multiple nations. Called the NATO Network Enabled Capabilities (NNEC), it is similar to the U.S. military's Joint Vision 2020.[4722]

The confidential NATO 2005 Defense Requirements Review reportedly describes newer capabilities needed by allied commanders, including a description of technologies for sensors for sharing intelligence among allied warfighters.[4723] However, problems have been encountered with the U.S. National Disclosure Policy, which restricts release of classified information, and with the International Traffic in Arms rules which govern the export of unclassified technical data, and affect technology transfer (see previous section titled, Technology Transfer Threat to U.S. Net Centric Advantages).[4724]

Initially, the DOD Office of Force Transformation constructed a conceptual model to study net centric operations. However, NATO has since developed another conceptual model to test newer network centric approaches to military command and control (C2).[4725] To resolve differences, and establish open, interoperable standards for NEC and NCO, a new Network Centric Operations Industry Consortium has been created. The consortium consists of about 80 defense and information technology companies, of which 19 are European.[4726]

[4726] Brooks Tigner, Standards Urged To Smooth Allied Network-Centric Ops, Defense News, Jan. 2, 2006, p.10.

Australia

The Australian Defense Force is developing innovative networked sensor technologies, and testing autonomous unmanned vehicles to offset the small size of their military. They are testing network communications that will allow one operator to control a formation of unmanned aerial vehicles that can be programmed to peel off independently for surveillance, or to launch an attack.[4727]

France

The French reportedly are implementing a concept called "Guerre Infocentre", or Infocentric Warfare, which emphasizes the importance of information flows rather than the network itself. The initial program is called the Future Air Land Combat Network System, which will enable different combat platforms to contribute to cooperative engagement of targets.[4728]

Germany

Plans call for development of a future soldier system for the German Army, called "Infanterist der Zuknft", which will introduce new ways of networking between combat units and higher command levels. The system includes optical components, soldier-level computing equipment, and a tactical military internet which links voice and data systems.[4729]

United Kingdom

The UK is reportedly building its own Global Information Infrastructure, which is a single, general purpose network, with a specialized security architecture and a family of joint command battlespace management applications.[4730] The UK system design will expand to allow multinational forces, such as the United State, Canada, Australia, and New Zealand to also reach through each others' protective electronic boundaries to share a common operating picture through Voice Over IP and video teleconferencing.[4731]

[4731] Giles Ebbutt, Flaws in the System: Modern Operations Test the Theory of Network Centricity, Jane's International Defence Review, July 2006, p.61.

Israel

During the brief 2006 conflict with Syrian- and Iranian-supported Hizballah, Israel reportedly combined tactical unmanned aerial vehicles with their new Tzayad digitized command-and-control systems to locate and destroy many of Hizballah's rocket launchers. Experts reported that Israeli brigades that were equipped with the latest digital equipment were able to apply firepower in a very effective manner.[4732]

China

China reportedly has considerable and growing capabilities for developing information technology and networks. Chinese officials have reportedly noted that future military plans call for China to focus on developing new-concept weapons, such as electromagnetic pulse (EMP) systems for jamming adversary networks, and new satellites for establishing a unique GPS network for the Chinese military.[4733] China has also reportedly networked its forces using the European "Galileo" space-based global positioning system[4734]

Recent publications from China on security and national defense policy use terms such as "informationalization" and "Integrated Network-Electronic Warfare" (INEW), while describing how warfare is becoming more information oriented. Chinese military officials have stated that the INEW concept is comparable to U.S. Net Centric Operations. However, while INEW involves acquiring both defensive and offensive information operations capabilities, there is a priority placed on developing active strategies for offensive information operations.[4735]

DOD officials acknowledge that China has been conducting research to develop ground-based laser anti-satellite weapons. Some officials claim that China in recent years may have tested the means to harm or destroy U.S. satellites. However, a recent statement byDOD did not confirm or denythis possibility. The

United States military relies on commercial satellites for up to 80 percent of DOD space-based communications, according to space officials.[4736]

DOD officials also report that hacker attacks directed against U.S. military networks increased approximately fiftypercent between 2003 and 2004. Officials also state that most of these computer intrusions were originating from within China, with one extended attack involving the theft of perhaps 10 to 20 terabytes of data from the DOD Non-Classified IP Router Network. These attacks may indicate that China, and perhaps other countries, are developing or testing skills to defeat U.S. Network Centric Operations.[4737]

Network Capabilities of Extremist Groups

Other non-state groups also watch as the United States and other countries network their forces. In many cases, these groups are able to bypass much of the R&D associated with creating and testing new networked services, and instead are able to purchase Commercial-Off-Shelf (COTS) products and equipment adequate for their purposes. These sophisticated commercial technologies may enable smaller countries, or Al Qaeda or Hamas, to project an advanced and adaptive electronic warfare threat.[4738]

Attacks by Unknown Foreign and Domestic Adversaries

In 2003 the U.S. government launched an investigation code named "Titan Rain" after detecting a series of persistent intelligence-gathering cyberattacks directed at military computer systems. The attackers demonstrated a high level of sophistication, and the investigation led many security experts to believe that the computer intrusions originated from sources in China. The targeted systems included (1) the U.S. Army Information Systems Engineering Command at Fort Huachuca, Arizona, (2) the Defense Information Systems Agency in Arlington, Virginia, (3) the Naval Ocean Systems Center in San Diego, California, (4) the U.S. Army Space and Strategic Defense installation in Huntsville, Alabama, and many other installations. In 2004, the Army base at Fort Campbell, Kentucky initiated a multimillion-dollar program to secure its computer systems after its networks were penetrated for a period of approximately two months, during a

sustained intelligence-gathering cyberattack.[4739] Although these attacks persisted over a long period of time, the U.S. government claims that no classified information was compromised.[4740]

Recently, China was also blamed for cyber intrusions that disabled the computer networks of the Department of Commerce Bureau of Industry and Security, which is responsible for controlling U.S. exports of software and technology for both commercial and military use. The attacks were traced to websites registered with Chinese Internet service providers.[4741]

However, other analysts caution that a sophisticated opponent, such as China, would not leave clues pointing back to itself. Instead, another sophisticated opponent could use China as a platform for third party computer attacks. China's civilian computer networks are very vulnerable to viruses. Some estimates reportedly say that up to 90% of the software used in China is pirated, lacking in the most important security patches, and especially vulnerable to being taken over by malicious code. Therefore, any attack that can be traced back to China may actually demonstrate very little about the true source. Sophisticated hacking tools are widely available on the Internet, and some hackers advertise their cybercrime skills for hire to other organizations, which could include extremists, both domestic and international.[4742]

Hizballah

After the 34-day war with Israel in 2006, Hizballah was described by some Israeli officials as a well-equipped, networked force still capable of commanding its combat units after weeks of high-intensity fighting. Hizballah's units were supported by a well-fortified terrestrial communications network supplemented by satellite telephone and broadcast services, including the Al-Manar television

network. Hizballah units also reportedly had the capability to attempt eavesdropping on Israeli cellular networks.[4743]

Hamas

Hamas was reportedly inspired by the way Hizballah fought against Israel in Lebanon, and the organization continues to receive increasing support from both Iran and Hizballah in the form of weapons, funding, and training. Hizballah is also reportedly sharing with Hamas operatives many of the lessons they learned from the recent military engagement with Israel.[4744]

Al Qaeda

Al Qaeda networks, in addition to technology, often rely on dispersed cells of people that are under central direction, which allows the organization to be highly flexible, elusive, and adaptable. As Al Qaeda evolves to using newer commercially available communication systems, dispersed cells may become more coordinated and self-organizing, with increased situational awareness, with the possible future capability of conducting their own network operations, in ways similar to the network operations of current U.S. military units.[4745]

Key Military Programs

The following are key DOD programs related to NCO.

Global Information Grid (GIG)

The GIG is the communications infrastructure that supports DOD and related intelligence community missions and functions, and enables sharing of information between all military bases, mobile platforms, and deployed sites. The GIG also provides communications interfaces to coalition, allied, and non-DOD users and systems. Key service network architectures for implementing an important NCO capability through the GIG are the Air Force C2 Constellation, Navy and Marine Corps ForceNet, and Army LandWarNet.[4746] The Joint Task

[4746] For more information about the GIG, see CRS Report RS21590, Defense Program Issue: Global Information Grid, Bandwidth Expansion (GIG-BE).

Force Global Network Operations is tasked with operation and defense of the GIG.

DOD is planning that 2008 military communications equipment will use the new Internet Protocol version 6 (IPv6) as the standard for all transmission through the Global Information Grid (GIG), and for all Defense Information System Network systems that will interoperate with the GIG.[4747] The new IPv6 protocol offers greater message security and better tracking of equipment, supplies, and personnel through use of digital tags (See Appendix A, The Transition from Internet Protocol Version 4 (IPv4) to IPv6).

It is noteworthy that in a 2006 study, the Government Accountability Office found that the GIG lacks clearly defined leadership able to cut across organizational lines. GAO warned that without adequate leadership the GIG program could exceed cost and schedule requirements, partly due to development and acquisition methods characterized as "stovepiped" and "uncoordinated". [4748]

Air Force Advanced Tactical Targeting Technology (AT3)

The AT3 system combines information collected by an airborne network of sensors to identify the precise location of enemy air defense systems. The system relies on coordination of information from different systems aboard multiple aircraft.[4749]

Air Force Link 16

Tactical Data Links (TDLs) are used in combat for machine-to-machine exchange of information messages such as radar tracks, target information, platform status, imagery, and command assignments. The purpose of this program is to insure the interoperability of Air Force TDLs. TDLs are used by weapons, platforms, and sensors of all services.

Navy Cooperative Engagement Capability (CEC)

The CEC system links Navy ships and aircraft operating in a particular area into a single, integrated air-defense network in which radar data collected by each

---

[4747] Staff, "DOD Now Preparing for Rapid Move to IPv6, Hi-Tech Chief Says," LookSmart, July 2, 2003, [http://www.findarticles.com/cf_dls/m0PJR/13_1/110307574/p1/article.jhtml].

[4748] Zachery Peterson, Report Finds DOD Management Style Hindering Development of GIG, Inside the Navy, Feb. 6, 2006.

platform is transmitted in a real-time to the other units in the network. Each unit in the CEC network fuses its own radar data with data received from the other units. As a result, units in the network share a common, composite, real-time air-defense picture. CEC will permit a ship to shoot air-defense missiles at incoming anti-ship missiles that the ship itself cannot see, using radar targeting data gathered by other units in the network. It will also permit air-defense missiles fired by one ship to be guided by other ships or aircraft.[4750]

Army Force XXI Battle Command Brigade and Below (FBCB2)

FBCB2, used with Blue Force Tracker computer equipment, is the U.S. Army's main digital system that uses the Tactical Internet for sending real-time battle data to forces on the battlefield. During Iraq operations, this system was used in some Bradley Fighting Vehicles and M1A1 Abrams tanks, and replaced paper maps and routine reporting by radio voice communication. The computer images and GPS capabilities allowed tank crews to use Blue Force Tracker to pinpoint their locations, even amid Iraqi sand storms, similar to the way pilots use instruments to fly in bad weather. Officials stationed at the Pentagon using Blue Force Tracker receivers were also able to observe the movements of U.S. forces.[4751]

Joint Tactical Radio System (JTRS)

The software-based JTRS Program is intended to bring together separate service-led programs into a joint software defined radio development effort.[4752] JTRS is a family of common, software-defined, programmable radios that are intended to interoperate with existing radio systems and provide the additional capability to access maps and other visual data by allowing the war fighter to communicate directly with battlefield sensors.[4753] DOD has determined that all future military radio systems should be developed in compliance with the architecture for JTRS. JTRS will initially be used by the Army as its primary tactical radio for mobile communications, including satellite communications. Acquisition for the JTRS program is being carried out through a series of five separate but interrelated clusters, with each cluster intended to meet a specific DOD requirement.

[4750] For more information, see CRS Report RS20557, Navy Network-Centric Warfare Concept: Key Programs and Issues for Congress, by Ronald O'Rourke.

[4751] Frank Tiboni and Matthew French, "Blue Force Tracking Gains Ground," Federal Computer Week, vol. 18, no. 7, Mar. 22, 2004, p. 49.

[4752] GAO report to the U.S. House of Representatives Committee on Appropriations, Subcommittee on Defense, Challenges and Risks Associated with the Joint Tactical Radio System Program, Aug. 2003.

[4753] Stephen Trimble, "Pentagon Adds 'Network Router' to List of JTRS Missions," Aerospace Daily, vol. 206, no 13, Apr. 17, 2003.

Army WIN-T and JNN

The Warfighter Information Network (WIN-T) is a high-capacity network system that will allow units and command centers to communicate while on the move. The Joint Network Nodes (JNN) is the bridge between the Cold War legacy 30-year-old Mobile Subscriber Equipment and the WIN-T. JNN currently gives brigade and battalion command posts a "reach-back" capability for direct contact with bases in the continental United States, or other locations. JNN provides a significant increase in capability to Army modular units by providing satellite-based high bandwidth communications down to the battalion level.[4754]

Army FCS

The Future Combat System (FCS) is intended to be the U.S. Army's multi year, multi-billion-dollar program at the heart of the Army's transformation efforts. It is to be the Army's major research, development, and acquisition program consisting of 18 manned and unmanned systems tied together by an extensive communications and information network. FCS is intended to replace such current systems as the M-1 Abrams tank and the M-2 Bradley infantry fighting vehicle with advanced, networked combat systems.[4755]

Oversight Issues for Congress

Potential oversight issues for Congress pertaining to NCO include the following.

Sufficient Information for Effective NCO Oversight

Does Congress have sufficient information on the full scope of the Administration's strategy for implementing NCO to conduct effective oversight? Are programs critical for NCO adequately identified as such in the DOD budget? Does the Administration's plan for defense transformation place too much, too little, or about the right amount of emphasis on NCO? Is the strategy for implementing NCO paced too quickly, too slowly, or at about the right speed? Does the Administration's strategy for implementing NCO programs call for too much, too little, or about the right amount of funding? How are "network centric" items identified separately in the budget line items?

[4754] Lieutenant General Steven Boutelle, U.S. Army, testimony at the Congressional hearing on Information Technology Issues and Defense Transformation, House Armed Services Subcommittee on Terrorism, Unconventional Threats and Capabilities Holds Hearing, April 6, 2006.

[4755] See CRS Report RL32888, The Army's Future Combat System (FCS): Background and Issues for Congress, by Andrew Feickert.

Sufficiently Joint NCO Planning

Is the Administration's strategy for implementing NCO sufficiently joint? Officials at DOD have recently said that when individuals responsible for program management fail to collaborate properly, program offices sometimes move forward working on requirements tailored for their specific service, rather than working on joint requirements.[4756] Is there adequate overall DOD information architecture or enterprise architecture? Do the current service network architectures — Army LandWarNet, Navy ForceNet, Air Force C2 constellation — allow systems to work together through the GIG, or do they function along service boundaries inconsistent with the joint environment?

Has DOD provided industry with sufficiently clear definitions of the architectures for its various desired NCO systems? If not, when does DOD plan to provide industry with such definitions? What are the potential risks of inadequately defined architectures?

What is the role of the Defense Information Systems Agency (DISA) in managing the DOD implementation of NCO? Does DISA have too much, not enough, or about the right amount of policy and funding authority to fulfill its role? Has DISA developed an adequate NCO roadmap to help guide investments, and if not, when does DISA plan to issue such a roadmap?

Future Combat System (FCS)

The FCS concept originally consisted of consisting of 18 manned and unmanned systems to be tied together by a network of advanced offensive, defensive, and communications/information systems, including WIN-T and the JTRS.[4757] The FCS is experiencing a number of program development issues - with some technologies advancing quicker than anticipated, others progressing along predicted lines, while still others are not meeting the Army's expectations.[4758] Is the FCS high technology concept appropriate for the types of conflicts that the U.S. will likely experience in the Global War on Terror?

[4756] John Bennett, C4ISR Programs Need Fewer Milestone Decision-Makers, Myers Says, InsideDefense, January 20, 2006, [http://www.insidedefense.com/secure/defense_docnum.asp?f=defense_2002.ask&docnum=AIRFORCE-17-3-9].

[4757] Lieutenant General Steven Boutelle, U.S. Army, testimony at the Congressional hearing on Information Technology Issues and Defense Transformation, House Armed Services Subcommittee on Terrorism, Unconventional Threats and Capabilities, Hearing, April 6, 2006.

[4758] See CRS Report RL32888, The Army's Future Combat System (FCS), Background and Issues for Congress, by Andrew Feickert.

Satellites

Some additional security features that help protect satellites from electronic attack may consume portions of bandwidth that could otherwise be used for communications. News reports note that DOD may, in some cases, be designing military satellites with reduced security features in order to free more bandwidth to support growing communications needs.[4759]

Unmanned Vehicles

Over 100 different UAVs of 10 different types were used in Operation Iraqi Freedom. Worldwide spending on UAVs will likely increase over the next decade to $4.5 billion annually, according to one defense analyst.[4760] However, officials from the Government Accountability Office recently reported that DOD lacks a "viable and strategic" plan for developing and acquiring unmanned vehicles. This problem has resulted in cost overruns, delivery delays, and duplication of effort. As a result of the Quadrennial Defense Review, the joint structure of the Joint Unmanned Combat Aerial System (J-UCAS) program was ended, and some UAV programs are now being developed separately by the Navy and Air Force.

The J-UCAS program had combined the efforts previously conducted under the DARPA/Air Force Unmanned Combat Air Vehicle (UCAV) program and the DARPA/Navy Naval UCAV (UCAV-N) program, for a common architecture to maximize interoperability. It is uncertain how many crossover benefits can be mutually provided by separate Navy and Air Force efforts because requirements are now very divergent. Other problems reportedly include issues of interoperability of UAVs with ground forces, limited availability of bandwidth, and problems with having both manned and unmanned aerial vehicles share airspace.[4761]

FBCB2 (Blue Force Tracker)

"Blue Force Tracker" describes a technical capability that has received widespread praise from troops for helping to reduce the problem of fratricide. During the 1991 Gulf War, friendly fire accounted for about 24 percent of 148 U.S. combat deaths, however, the rate declined to about 11 percent of 115 U.S.

[4760] Doub Beizer, Network Centric warfare Takes Flight, Washington Technology, July 18, 2005, [http://www.washingtontechnology.com/cgibin/udt/im.display.printable?client.id=wtonline-test&story.id=26588].

[4761] Testimony by Sharon Pickup, Hearing on FY2007 Budget: Unmanned Aerial Vehicles and Intelligence, Surveillance, and Reconnaissance Capabilities, House Armed Services Subcommittee on Tactical Air and Land Forces, April 6, 2006.

deaths during major combat in Iraq in 2003. Many top leaders credit Blue Force Tracker (BFT) technology with saving lives during combat.[4762]

The Blue Force Tracking System reportedly proved so successful in Iraq and Afghanistan that the Army is fielding it to additional units. Observers state that BFT is directly responsible for significant reduction in vehicle-to-vehicle fratricide, and, for example, allowed the Third Infantry Division to fight through darkness and sandstorms on its way to Baghdad.[4763]

Some questions remain that may affect the future development of BFT equipment and capabilities. Will the Blue Force Tracker database be designed with sufficient categories to enable tracking of different weapon types, vehicles, and individual soldiers for future joint, and coalition operations? Is training adequate for military operators to handle complex BFT capabilities? Will the military have sufficient bandwidth available for future needs? As technology evolves, will the supply of bandwidth support the deployment of miniaturized BFT communications equipment for the individual soldier? Is BFT adequately supported when operatingin urban areas and complex terrains, where structures may block radio signals?

Joint Tactical Radio System (JTRS)

The Joint Tactical Radio System (JTRS) is intended to enable faster, more streamlined communications among many different types of forces, but stalled development of this system may have created an obstacle to the full implementation of net-centric operations.[4764] Originally, the JTRS program was intended to replace DOD legacy radios operating between 2 megahertz and 2 gigahertz, and which were not designed to communicate with each other. However, requirements were modified in 2004 so that future JTRS radios would also include frequencies above 2 gigahertz, to allow communication with satellites and to support future access to the military Global Information Grid. To spur development of JTRS, DOD in November 2004, developed a policy that restricted the purchase of non-JTRS radios already on the market. However, this policy was cited by Congress as an impediment to meeting the needs of operational commanders in the field.[4765] JTRS is seen now as a program to

enhance, rather than replace, existing legacy radios, and JTRS systems will eventually replace legacy radios as they wear out.[4766]

Value of NCO Information

Is information overrated as an asset for NCO? How thoroughly has the administration studied the risks associated with data-dependent military doctrine? Several observers have argued that DOD plans stress only the rewards of information without including adequate analysis of the risks associated with possible over-reliance on data-driven systems. Some elite network centric corporations with state-of-the-art systems that offer "information superiority" have experienced perverse results, and sometimes even catastrophic economic losses (See Appendix C, Perverse Consequences of Data-Dependent Systems). Congress could encourage DOD to examine the economics of information in order to avoid similar perverse consequences on the battlefield that may be created by "information abundance."[4767]

Networking Classified Data with Coalition Forces

How well are coalition forces adapting to NCO? How are U.S. forces affected if coalition networks to which we must link are not as secure and robust? What are implications for future NCO operations when there is a need to share classified information with coalition forces and foreign countries? Is it possible to give Allies access to C4ISR information to improve collaboration during high-speed combat operations, while still protecting other information that is sensitive or classified? Will differences in the national disclosure policies for each coalition nation restrict sharing of necessary information among all partners during training operations, and if so, will this threaten the effectiveness of training? Will U.S. analysts or warfighters be overwhelmed by the vast increase in information that will flow if all coalition NCO networks are seamlessly linked to the U.S. NCO network? Will potential enemies probe for weaknesses in the links between the different networks operated by less sophisticated coalition forces, and thus find a way to disrupt the networks of U.S. forces?

The same issues that affect DOD operations with coalition partners may also affect coordination with U.S. first-responders during domestic attacks by terrorists. Should DOD networks also be extended to first-responders who may need support during possible widespread attacks involving nuclear bombs or biological weapons; for example, geo-spatial images from UAVs monitoring domestic areas? Should policy allow domestic first-responders to input, view, or

update important data during such an attack, even though some may not have appropriate security clearances?

NCO Technology Transfer

The global diffusion of technology will lead to the eventual loss of the monopoly position now enjoyed by U.S. forces using sophisticated networks and communications equipment. The United States may eventually face adversaries equipped with COTS technologies that provide many NCO capabilities. Technology transfer and offshore outsourcing may also increase the number of foreign-nationals who are experts in newer Internet technologies and software applications (See Appendix A, The Transition from IPv4 to IPv6). Does the Administration's strategy pay sufficient attention to possible national security issues related to technology transfer? What controls does DOD have in place regarding offshore subcontracting that ensure security?

Several potential adversaries reportedly have a military strategy that focuses on engaging the United States asymmetrically, rather than with conventional forces. China, for example, is reportedly tailoring its military capabilities to directly, or indirectly, undermine U.S. technological advantages.[4768] Does the Administration's strategy for implementing NCO pay sufficient attention to asymmetric threats and growth of technology skills in other countries? How is DOD working with industry to find ways to protect software against cyber threats, including those possibly related to offshore outsourcing of R&D and information technology services? Several policy options that may reduce risk to the effectiveness of NCO due to growth of technology skills in foreign countries may include (1) encourage companies to maintain critical design and manufacturing functions inside the U.S., (2) encourage highly skilled individuals to relocate to areas in the U.S. where industries are in need of technical professionals, or (3) encourage U.S. high technology workers to update and increase their set of job skills.[4769]

Speeding Acquisition for NCO Technologies

Does the Administration's strategy for implementing NCO incorporate the right technologies and strategy for acquisition? Some observers have stated there is not enough coordination between DOD and the private sector officials involved in information technology acquisition.[4770] Others have suggested that the

---

[4768] Vago Muradian, China Tried to Blind U.S. Sats with Laser, Defense News, Sept. 25, 2006, p.6.

[4770] Representatives Kline and Meehan, Congressional Hearing on Information Technology Issues and Defense Transformation, Armed Services Subcommittee on Terrorism, Unconventional Threats and Capabilities, April 6, 2006.

acquisitions community must communicate more directly with the most forward areas of the military, where the business processes deliver value to the war-fighter, so that needs are more clearly understood.[4771]

DOD Directive 5000 requires that acquisition for all equipment and systems must follow a standard process which involves an examination of requirements, safety testing, developmental testing, and operational testing.[4772] However, the acquisition for an information system sometimes requires the same processes as that used for acquiring a major weapons system.

For a critically needed system, an operational needs statement (ONS) can sometimes shorten the debate about requirements, and also shorten the traditional testing process, thereby speeding acquisition and deployment of critical systems to warfighting units. Also, in some circumstances, to reduce delays in deployment of critical equipment and systems, the Secretary of Defense was given rapid acquisition authority to waive all federal acquisition regulations for acquisition of equipment.[4773] Some observers have suggested that another possibility for speeding up the process for acquisition and deployment would be to give Combatant Commanders limited acquisition authority. For example, the United States Special Operations Command (SOCOM) already has been granted acquisition authority, and reportedly they use it efficiently, and find they are able to buy off-the-shelf technologies to meet some requirements.[4774]

Future research into areas such as nanotechnology will likely lead to radically new innovations in material science, fabrication, and computer architecture. However, the basic research to develop new technologies requires high-risk investment, and increasingly involves international collaboration. Maintaining a U.S. military advantage for NCO may require stronger policies that encourage domestic education in science and high-technology, and that nurture long-term

research that is bounded within the United States private sector, universities, and government laboratories.[4775]

(1) Technologies: Is DOD making sufficient investments for R&D in nanotechnology? Nanoscience may fundamentally alter military equipment, weapons, and operations for U.S. forces, and possibly for future U.S. adversaries. Does the Administration's plan pay sufficient attention to creating solutions to meet bandwidth requirements for implementing NCO? Latency, which is often caused by a bandwidth bottleneck, is an important complaint of warfighters. How do messages that are either dropped, lost, or delayed during transmission alter the effectiveness of Network Centric Operations?
(2) Acquisition: All DOD acquisition programs require a key performance parameter for interoperability and for successful exchange of critical information.[4776] Development of some weapons in the past has rendered them obsolete by the time they are finally produced, sometimes 15 to 20 years later. Admiral Arthur Cebrowski, former director of the DOD Office of Force Transformation reportedly proposed that program development cycles be brought in line with those of commercial industry, which are typically measured in months and years, instead of decades.[4777] How does the traditional DOD long acquisition cycle keep up with new commercial developments for high technology?[4778]

NCO Doctrine

NCO enables the military to fight with smaller units, moving rapidly using "swarming tactics". Has DOD developed adequate joint doctrine for NCO? Do training exercises involve coalition partners with complimentary NCO capabilities? How do differences in NCO capabilities of other coalition partners

[4778] The Army Science Board recently completed a study of high-risk technologies that will be developed as part of the Army Future Combat System (FCS) program. The study identifies 7 major technology areas that will be emphasized throughout the FCS incremental acquisition strategy: joint interoperability, network survivability, bandwidth efficiency, smart antennas, software, transparent battle space, and systems reliability, [https://webportal.saalt.army.mil/sard-asb/ASBDownloads/FCS-Exec-Briefing.pdf].

affect U.S. warfighting capabilities? What are the potential risks of inadequately developed doctrine for joint or coalition operations using NCO?

Does doctrine for NCO also stress civilian casualty prevention and protection? What are the changing requirements for finding and recruiting personnel who are qualified to operate high-technology NCO equipment? Finally, if terrorist groups become more local and smaller in size, will law-enforcement activities, coupled with good intelligence, displace military operations as a more effective pre-emptive strategy for the future, partly because it may be seen as less controversial?

Related Legislation

No bills have yet been introduced in the current congress that are directly related to network centric operations. This report will be updated as events warrant.

Appendix A: The Transition from Internet Protocol Version 4 (IPv4) to IPv6

The Internet Protocol version 4 (IPv4) is the name of the digital signal transport protocol that has been used for global communications through the Internet since the 1970s. The U.S. military now uses several transport protocols for digital communications in addition to IPv4. However, DOD planners see a need for more network capabilities to support future NCO operations. By 2008, DOD is planning to convert digital military communications to use the newer Internet Protocol version 6 (IPv6) as the standard for all transmission through the Global Information Grid (GIG), and for all systems that are part of the Defense Information System Network (DISN) that will interoperate with the GIG.

IPv6 technology is considered the next-generation Internet transport protocol, and all commercial network communications equipment (also heavily used by the military) will eventually transition to its use, and gradually reduce support for IPv4. This is because IPv6 offers advantages in speed, capacity, and flexibility over IPv4. For example, IPv6 will enable network users to more easily set up a secure virtual private network (also known as secure tunneling through a network) than with IPv4. Using IPv6, hardware devices can be attached to a network and configured more easily, which will also provide mobile users with easier and faster access to network services.[4779]

However, because use of IPv4 is so firmly embedded in the commercial systems now used in the United States, the transition for the civilian communications infrastructure in other countries may go more smoothly and quickly. This is because new communications infrastructures now being built in other countries will use the newest equipment with IPv6 capability already built in. This may also

---

[4779] Brian Robinson, "IPv6: Built for Speed," Federal Computer Week, Aug. 30, 2004.

mean that much of the talent for managing the new IPv6 technology may eventually belong to technicians and programmers who reside in countries outside the United States. Research has shown that regional agglomeration of technical expertise increases active sharing of tacit knowledge among groups of innovators.[4780] Some of that tacit knowledge may also include sharing of information about newly-discovered vulnerabilities for the IPv6 technology.

What follows is a brief explanation of some technical differences between IPv4 and IPv6, and a discussion of possible economic and security issues related to the coming transition to the new Internet protocol.

Technical differences between IPv4 and IPv6

Information is sent through the Internet using packets (approximately 4000 digital bits per packet), and which include the address of the sender and the intended destination. Internet Protocol version 4 (IPv4) has been used globally since before 1983. However, IPv4 information packets are designed to carry an address in a 32-bit field, which means that IPv4 can only support approximately 4,000,000,000 Internet devices (computers, routers, websites, etc.). With Internet access expanding globally, and with more types of equipment now using Internet addresses (e.g., cell phones, household appliances, and PDAs) the number of Internet addresses needed for connected equipment could soon exceed the addressing capacity of the IPv4 protocol.

For example, slightly more than 3 billion of the 4 billion possible 32-bit IPv4 addresses are now allocated to U.S.-operated ISPs. In contrast, China and South Korea, with a combined population of more than 1.3 billion, are allocated 38.5 million and 23.6 million respectively. Therefore, Asian counties are especially interested in the possibilities that come with adoption of IPv6.

Internet Protocol version 6 (IPv6) quadruples the size of the address field from 32 bits to 128 bits (IPv1-IPv3, and IPv5 reportedly never emerged from testing in the laboratory). IPv6 could theoretically provide each person on the planet with as many as 60 thousand trillion-trillion unique Internet addresses. Theoretically, by switching to IPv6, humanity will never run out of Internet addresses. IPv6 is also believed to be more secure than IPv4 because it offers a feature for encryption at the IP-level.

[4780] Geographic concentration of information technology employment increases labor productivity among IT workers. Research indicates that geographic proximity matters most where tacit knowledge plays an important role in the generation of innovative activity, and tacit knowledge does play an very important role during the early life cycle of an information technology system. Christian Le Bas and Frederic Miribel, "Is the Death of Distance Argument Relevant: The Agglomeration Economies Associated with Information Technology Activities," [http://www.ish-lyon.cnrs.fr/labo/walras/Objets/Membres/Miribelebas_paper.pdf], p. 20.

However, several drawbacks may slow the global adoption of the IPv6 standard. Switching to IPv6 means that software applications that now use Internet addresses need to be changed. Every Web browser, every computer, every email application, and every Web server must be upgraded to handle the 128-bit address for IPv6. The routers that operate the Internet backbone now implement IPv4 via computer hardware, and cannot route IPv6 over the same hardware. By adding software to route IPv6 packets, the routers will operate more slowly, which may cripple the Internet. Alternatively, upgrading and replacing the hardware for millions of Internet routers would be very costly.

IPv4 also uses a technology feature called Natural Address Translation (NAT) which effectively multiplies the number of IP address that may exist behind any single firewall. This technology trick is widely employed within the United States, and its usage also adds an extra layer of security to both commercial networks and home PC networks that have a router. NAT allows a home user to connect multiple PCs to their home network, so they all can share a single IPv4 address behind the router/firewall. By using NAT, it is possible, and certainly much cheaper, to put off or ignore the problem of running out of IPv4 addresses. At least temporarily, in the United States, most technologists prefer sticking with NAT rather than switching over to IPv6.

Also, despite the new feature that allows IP-level encryption, there may be new security problems associated with converting to IPv6. Whenever new code is deployed onto computers, undiscovered bugs are usually soon discovered through study and repeated experimentation by hackers. Therefore, IPv6 may well hold security surprises that the designers have simply not found through extensive testing. And because switching over to IPv6 will be a global undertaking, some of the newly

discovered security problems could possibly become critical, and even threaten the functioning of the Internet itself.

IPv6 also offers other technical advantages over IPv4. For example, IPv6 makes peer-to-peer communication between individual computers much easier than with IPv4. This will make applications like Internet telephony and next generation multimedia groupware work much more smoothly.

Technology Divide

The opportunity to leapfrog past older Internet technology may someday result in increased expertise in newer technology for technicians and engineers who reside outside the United States. For example, countries such as India, North Korea, Iran, Pakistan, and Iraq that are now building new communications infrastructures for Internet commerce, may initially adopt the latest network

switching equipment using the newer IPv6 technology, and thus leapfrog over IPv4.

Meanwhile, industries in the United States, which are already heavily invested in older IPv4 technology, may remain tied to IPv4 using the NAT technology for a longer time. This is because NAT can extend the useful life of older IPv4 applications, and can defer the cost of conversion by transferring that cost to the ISPs, who would then set up gateways to translate between all IPv4 and IPv6 Internet traffic going into and out of the United States. The U.S. could then become divided from the technology used in the rest of the world, at least for a while, by an IPv4/IPv6 difference that is similar to the U.S./metric divide we see today.[4781]

Possible Vulnerabilities

U.S. military forces, to save time and expense, sometimes connect staff at multiple locations to the DOD secure SIPRNET network by using an encryption technique known as tunneling, which lets users traverse a non-secure network to access a top-secret one. For example, Marine Corps staff recently began using tunneling through the non-classified NIPRNET to extend the DOD classified SIPRNET to 47 sites in the Marine Forces Pacific Command.[4782] However, during OIF as much as seventy percent of NIPRNET traffic reportedly was routed through the civilian communications infrastructure. This means that when there is need for a high volume of U.S. military communications, security may be partly dependent on reliability of IPv6 equipment found in the civilian infrastructure and in commercial satellites.[4783]

Countries with emerging communications infrastructures, and purchasing the latest commercial network equipment, may also be the home countries of those best able to exploit IPv6 technical vulnerabilities. If this includes countries where the United States may be involved in military activity, hostile groups with appropriate technical knowledge of IPv6 vulnerabilities may be positioned to attempt to interfere with U.S. military communications.

Appendix B: Changing Views on Metcalfe's Law of Networks

Differing interpretations of what is known as "Metcalfe's Law" may lead to different priorities for acquisition and deployment of NCO technologies, systems, and equipment.

In the past, some observers have stated that according to Metcalfe's Law, "the 'power' of a network is proportional to the square of the number of nodes in the network".[4784] Proponents of NCO in the past have also stated that network centric computing is governed by Metcalfe's Law, which asserts that the "power" or "payoff" of network-centric computing comes from information-intensive interactions between very large numbers of heterogeneous computational nodes on the network.[4785]

However, Metcalfe's Law observes that the potential value of a communications network increases (or scales) as a function of the square of the number of nodes that are connected by the network. After some deliberation, many of the same proponents now argue differently about the applicability of Metcalfe's Law to NCO, saying that it only provides insight into the fact that the "value" of a network to its users depends mainly on the interaction between the following:[4786]

1) content, quality, and timeliness of information interactions enabled by the network;
2) network-enabled, value-creation logic; and
3) user-value functions.

These proponents further state that NCO does not focus on network-centric computing and communications, but rather on information flows and the nature and characteristics of battlespace entities. However, it is also noteworthy that other military observers now propose a corollary to Metcalfe's Law: the complexity of a system is proportional to the cube of the number of nodes, and the reliability of a system is inversely proportional to its complexity.[4787]

[4784] Col. T.X. Hammes, War Isn't A Rational Business, Proceedings, U.S. Naval Institute, July 1998, [http://www.usni.org/Proceedings/Articles98/PROhammes.htm}.

[4785] Vice Admiral Arthur Cebrowski, John Garstka, Network-Centric Warfare: Its Origin and Future, Proceedings U.S. Naval Institute, January 1998, [http://www.usni.org/Proceedings/Articles98/PROcebrowski.htm].

[4786] David Alberts, John Garstka, Frederick Stein, Network Centric Warfare: Developing and Leveraging Information Superiority, 2nd edition, February 2000, pp. 103, 252, 265.

[4787] Col. T.X. Hammes, War Isn't A Rational Business, Proceedings, U.S. Naval Institute, July 1998, [http://www.usni.org/Proceedings/Articles98/PROhammes.htm].

In line with this corollary, some observers propose that different types of networks could have indirect limitations that may begin to appear as those networks reach very large numbers of nodes. Briscoe et. al. (2006) use observations of the rise and fall of Internet companies to propose that use of Metcalfe's Law to predict organizational success can sometimes result in organizational damage, if expectations are set too high.[4788] Other observers agree, stating that, with very large networks, other negative factors begin to emerge. For example, the number of messages increases beyond the capacity of the reader to handle. Many network users may then see a strong need to operate within a "less-noisey" network by using editors, moderators, or automatic filters to limit the number of messages.[4789] These observers agree that more research is need in the area of indirect limitations of networks.

Appendix C: Perverse Consequences of Data-Dependent Systems

The Office of Force Transformation [http://www.oft.osd.mil/] has indicated that DOD must continue to refine the rules and theory of network centric operations through simulation, testing, and experimentation. This section notes that although some experiences have shown that networking may increase certain advantages in warfare, other experiences may also indicate that relying on information systems can sometimes lead to unexpected results.

Information-Age warfare is increasingly path-dependent, meaning that small changes in the initial conditions will result in enormous changes in outcomes. Speed is an important characteristic for NCO because it enables a military force to define initial conditions favorable to their interests, and then pursue a goal of developing high rates of change that an adversary cannot outpace.[4790] To this end, whenever data-links are employed between military units and platforms, digital information can be shared and processed instantaneously, which produces a significant advantage over other military units that must rely on voice-only communications.

Examples that illustrate this advantage are found in several training exercises conducted in the 1990's between Royal Air Force jets equipped with data-links, referred to as Link-16, and U.S. Air Force jets with voice-only communications. A

[4788] Bob Briscoe, Andrew Odiyzko, Benjamin Tilly, Metcalfe's Law is Wrong; Communications Networks Increase in Value as they Add Members – but by How Much? The Devil is in the Details, IEEE Spectrum, July 1, 2006, vol.43, no. 7.

[4790] Dan Caterinicia and Matthew French, "Network-centric Warfare: Not There Yet," Federal Computer Week, June 9, 2003, [http://www.fcw.com/fcw/articles/2003/0609/ cov-netcentric-06-09-03.asp].

series of air-to-air engagements showed that the RAF jets were able to increase their kill ratio over the U.S. jets by approximately 4-to-1. Other training engagements, involving more than 12,000 sorties using 2-versus-2, or 8-versus-16, aircraft showed that jets equipped with Link-16 increased their kill ratio by 150 percent over those aircraft having voice-only communications. Similar results were seen in training exercises involving Navy and Army units equipped with new networking technology.[4791]

However, some observers believe that important military decisions may not always lend themselves to information-based rational analysis.[4792] They argue that the military services, national security establishment, and intelligence community have not thoroughly studied the risks associated with a data-dependent military doctrine.

Issues raised by these observers include the following:

(1) Information flows may be governed by a diminishing marginal utility for added effectiveness. Quantitative changes in information and analysis may lead to qualitative changes in individual and organizational behavior that are sometimes counter-productive.
(2) An information-rich, opportunity-rich environment may shift the value of the information, redefine the mission objectives, and possibly increase the chances for perverse consequences.

In 1999, large-scale army experimentation with better visualization of the battlefield resulted in surprises such as requests for up to five times the normally-expected amounts of ammunition. Instead of concentrating on only critical targets, the experimental army units were overwhelmed with the vast array of potential targets they could now see. The unprecedented requests for larger quantities of ammunition caused logistical failures. More information did not assure better decision-making, but rather it exposed doctrinal flaws.[4793]

A similar effect was observed in later experiments conducted as part of the Network Centric Operations Conceptual Framework. Ammunition was expended at a faster rate, possibly because more information creates a target-rich

[4792] Martin Burke, Information Superiority Is Insufficient To Win In Network Centric Warfare, Joint Systems Branch, Defence Science and Technology Organisation, 2001, [http://www.dodccrp.org/events/2000/5th_ICCRTS/cd/papers/Track4/024.pdf].

[4793] Robert R. Leonhard, "Principles of War for the Information Age," (Novato, CA: Presidio Press, 2000) p. 156, and p.224.

environment. These observations imply a possibly greater demand for logistics support.[4794]

Issues raise by other observers of data-driven systems are:

(3) Reliance on sophisticated information systems may lead to management overconfidence.
(4) Different analytical interpretations of data may lead to disagreements among commanders about who is best situated to interpret events and act on them.

The past economic under-performance of many hedge fund organizations and other technology firms that have employed very sophisticated network centric management techniques may serve as examples to caution DOD against over-reliance on data-driven military information systems. For example, Long-Term Capital Management (LTCM), a highly-leveraged multi-billion dollar hedge fund, and Cisco Systems, a well-respected high-tech firm, both used sophisticated systems to track market conditions and expand their data-driven "situational awareness" to gain and maintain competitive advantage. However, in 1998 a U.S. government-led consortium of banks bailed out LTCM after its trading losses put the entire world's financial system at risk of meltdown. Also, in 2001 Cisco was forced to take a $2.25 billion inventory write-down. While there is yet no professional consensus explaining these poor performance problems, many analysts agree that the presumed excellence of information systems may have invited managerial over-reliance, and that overreliance led to overconfidence. Executives may have ignored unambiguous external signals in favor of their own networked data.[4795]

Finally, some believe that more information imposes a higher degree of accountability on actions. Failure to minimize casualties or protect civilians may be digitally reviewed and used to politicize flawed military decisions.

These observers suggest that modern portfolio theory, Bayesian analysis, and Monte Carlo simulation are three quantitative tools that military decision makers should explore if they want the benefits of information transparency to consistently outweigh its costs. These tools could answer questions, such as: (a) if information were to be managed as a portfolio of investment risks much as asset classes like equities, fixed income, and commodities, how would commanders

Botnets, Cybercrime, and Cyberterrorism: Vulnerabilities and Policy Issues for Congress, RL32114 (January 29, 2008).

CLAY WILSON, CONGRESSIONAL RESEARCH SERV., BOTNETS, CYBERCRIME, AND CYBERTERRORISM: VULNERABILITIES AND POLICY ISSUES FOR CONGRESS (2008), *available at* http://www.intelligencelaw.com/library/secondary/crs/pdf/RL32114_1-29-2008.pdf.

Order Code RL32114
Updated January 29, 2008

Clay Wilson
Specialist in Technology and National Security
Foreign Affairs, Defense, and Trade Division

Summary

Cybercrime is becoming more organized and established as a transnational business. High technology online skills are now available for rent to a variety of customers, possibly including nation states, or individuals and groups that could secretly represent terrorist groups. The increased use of automated attack tools by cybercriminals has overwhelmed some current methodologies used for tracking Internet cyberattacks, and vulnerabilities of the U.S. critical infrastructure, which are acknowledged openly in publications, could possibly attract cyberattacks to extort money, or damage the U.S. economy to affect national security.

In April and May 2007, NATO and the United States sent computer security experts to Estonia to help that nation recover from cyberattacks directed against government computer systems, and to analyze the methods used and determine the source of the attacks.[4797] Some security experts suspect that political protestors may have rented the services of cybercriminals, possibly a large network of infected PCs, called a "botnet," to help disrupt the computer systems of the Estonian government. DOD officials have also indicated that similar

[4797] Larry Greenemeier, "Estonian Attacks Raise Concern Over Cyber 'Nuclear Winter,'" Information Week, May 24, 2007, at [http://www.informationweek.com/news/showArticle.jhtml?articleID=199701774].

cyberattacks from individuals and countries targeting economic, political, and military organizations may increase in the future.[4798]

Cybercriminals have reportedly made alliances with drug traffickers in Afghanistan, the Middle East, and elsewhere where profitable illegal activities are used to support terrorist groups. In addition, designs for cybercrime botnets are becoming more sophisticated, and future botnet architectures may be more resistant to computer security countermeasures.[4799]

This report discusses options now open to nation states, extremists, or terrorist groups for obtaining malicious technical services from cybercriminals to meet political or military objectives, and describes the possible effects of a coordinated cyberattack against the U.S. critical infrastructure. This report will be updated as events warrant.

Introduction

The U.S. military is supported partly by civilian high technology services and products, most often in the form of communications systems and computer software.[4800] In future conflicts that involve cyberwarfare between nations, the distinction between U.S. military and civilian targets may be blurred and civilian computer systems may increasingly be seen as viable targets vulnerable to attack by adversaries.[4801] Computer networking technology has also blurred the boundaries between cyberwarfare, cybercrime, and cyberterrorism. Officials in government and industry now say that cybercrime and cyberattack services available for hire from criminal organizations are a growing threat to national

[4801] Sebastian Sprenger, "Maj. Gen. Lord Is a Groundbreaker," Federal Computer Week, October 15, 2007, vol. 21, no. 34, p. 44.

security as well as to the U.S. economy.[4802] New and sophisticated cybercrime tools could operate to allow a nation state or terrorist group to remain unidentified while they direct cyberattacks through the Internet.[4803] Many experts point out that past incidents of conventional terrorism have already been linked with cybercrime, and that computer vulnerabilities may make government and civilian critical infrastructure systems seem attractive as targets for cyberattack.[4804] Some experts argue that the government of Estonia may have already experienced this type of cyberattack directed against their systems and websites in April, 2007.

This report explores the possible connections between cybercriminals and terrorist groups that want to damage the U.S. economy or national security interests. The report also examines the effects of a coordinated cyberattack against the U.S. critical infrastructure, including use of cybercrime tools that could possibly take advantage of openly-publicized cyber vulnerabilities. Trends in cybercrime are described, showing how malicious Internet websites, and other cybercrimes such as identity theft are linked to conventional terrorist activity.

Congress may wish to explore the possible effects on the U.S. economy and on the U.S. military that could result from a coordinated attack against civilian and military computers and communications systems, whether due to cybercrime or cyberterrorism. Congress may also wish to explore the difficulties associated with establishing doctrine for selecting an appropriate military or law enforcement response after such an attack.

Background

It is clear that terrorist groups are using computers and the Internet to further goals associated with spreading terrorism. This can be seen in the way that extremists are creating and using numerous Internet websites for recruitment and fund raising activities, and for Jihad training purposes. Several criminals who have recently been convicted of cybercrimes used their technical skills to acquire stolen credit card information in order to finance other conventional

terrorist activities.[4805] It is possible that as criminals and terrorist groups explore more ways to work together, a new type of threat may emerge where extremists gain access to the powerful network tools now used by cybercriminals to steal personal information, or to disrupt computer systems that support services through the Internet.

Three Basic Methods for Disrupting Computer Systems

There are several effective methods for disrupting computer systems. This report focuses on the method known as cyberattack, or computer network attack (CNA), which uses malicious computer code to disrupt computer processing, or steal data. A brief description of three different methods are shown here. However, as technology changes, future distinctions between these methods may begin to blur.

An attack against computers may (1) disrupt equipment and hardware reliability, (2) change processing logic, or (3) steal or corrupt data.[4806] The methods discussed here are chosen based on the technology asset against which each attack mode is directed, and the effects each method can produce. The assets affected or effects produced can sometimes overlap for different attack methods.

- Conventional kinetic weapons can be directed against computer equipment, a computer facility, or transmission lines to create a physical attack that disrupts the reliability of equipment.
- The power of electromagnetic energy, most commonly in the form of an electromagnetic pulse (EMP), can be used to create an electronic attack (EA) directed against computer equipment or data transmissions. By overheating circuitry or jamming communications, EA disrupts the reliability of equipment and the integrity of data.[4807]
- Malicious code can be used to create a cyberattack, or computer network attack (CNA), directed against computer processing code, instruction logic, or data. The code can generate a stream of malicious network packets that can disrupt data or logic through exploiting a vulnerability in computer software, or a weakness in the computer security practices of an organization. This type of cyberattack can disrupt the reliability of equipment, the integrity of data, and the confidentiality of communications.

Cyberattack, Cybercrime, and Cyberterrorism

Labeling a "cyberattack" as "cybercrime" or "cyberterrorism" is problematic because of the difficulty determining with certainty the identity, intent, or the political motivations of an attacker.[4808] "Cybercrime" can be very broad in scope, and may sometimes involve more factors than just a computer hack. "Cyberterrorism" is often equated with the use of malicious code. However, a "cyberterrorism" event may also sometimes depend on the presence of other factors beyond just a "cyberattack."

Definitions for Cyberterrorism

Various definitions exist for the term "cyberterrorism", just as various definitions exist for the term "terrorism."[4809] Security expert Dorothy Denning defines cyberterrorism as "... politically motivated hacking operations intended to cause grave harm such as loss of life or severe economic damage."[4810] The Federal Emergency Management Agency (FEMA) defines cyberterrorism as "unlawful attacks and threats of attack against computers, networks, and the information stored therein when done to intimidate or coerce a government or its people in furtherance of political or social objectives."[4811]

Others indicate that a physical attack that destroys computerized nodes for critical infrastructures, such as the Internet, telecommunications, or the electric power grid, without ever touching a keyboard, can also contribute to, or be labeled as cyberterrorism.[4812] Thus, it is possible that if a computer facility were deliberately attacked for political purposes, all three methods described above (physical attack, EA, and cyberattack) might contribute to, or be labeled as "cyberterrorism."

[4808] Serge Krasavin, What is Cyberterrorism? Computer Crime Research Center, April 23, 2004, [http://www.crime-research.org/analytics/Krasavin/].

[4809] Under 22 USC, Section 2656, "terrorism" is defined as premeditated, politically motivated violence perpetrated against noncombatant targets by sub national groups or clandestine agents, usually intended to influence an audience. The United States has employed this definition of terrorism for statistical and analytical purposes since 1983. Definitions for Cybercrime

Cybercrime is crime that is enabled by, or that targets computers. Some argue there is no agreed-upon definition for "cybercrime" because "cyberspace" is just a new specific instrument used to help commit crimes that are not new at all. Cybercrime can involve theft of intellectual property, a violation of patent, trade secret, or copyright laws. However, cybercrime also includes attacks against computers to deliberately disrupt processing, or may include espionage to make unauthorized copies of classified data. If a terrorist group were to launch a cyberattack to cause harm, such an act also fits within the definition of a cybercrime. The primary difference between a cyberattack to commit a crime or to commit terror is found in the intent of the attacker, and it is possible for actions under both labels to overlap.

Botnets

Botnets are becoming a major tool for cybercrime, partly because they can be designed to very effectively disrupt targeted computer systems in different ways, and because a malicious user, without possessing strong technical skills, can initiate these disruptive effects in cyberspace by simply renting botnet services from a cybercriminal.[4813] Botnets, or "Bot Networks," are made up of vast numbers of compromised computers that have been infected with malicious code, and can be remotely-controlled through commands sent via the Internet. Hundreds or thousands of these infected computers can operate in concert to disrupt or block Internet traffic for targeted victims, harvest information, or to distribute spam, viruses, or other malicious code. Botnets have been described as the "Swiss Army knives of the underground economy" because they are so versatile.

Botnet designers, or "botmasters", can reportedly make large sums of money by marketing their technical services. For example, Jeanson Ancheta, a 21-year-old hacker and member of a group called the "Botmaster Underground", reportedly made more than $100,000 from different Internet Advertising companies who paid him to download specially-designed malicious adware code onto more than 400,000 vulnerable PCs he had secretly infected and taken over. He also made tens of thousands more dollars renting his 400,000-unit "botnet herd" to other companies that used them to send out spam, viruses, and other malicious code on the Internet. In 2006, Ancheta was sentenced to five years in prison.[4814]

[4813] Jeanne Meserve, "Official: International Hackers Going After U.S. Networks," CNN.com, October 19, 2007, [http://www.cnn.com/2007/US/10/19/cyber.threats/index.html]. Sebastian Sprenger, "Maj. Gen. Lord Is a Groundbreaker," Federal Computer Week, October 15, 2007, vol. 21, no. 34, p. 44.

[4814] Bob Keefe, "PC Security Still More of a Wish than a Promise," The Atlanta Journal, February 3, 2007, p. 1A.

Botnet code was originally distributed as infected email attachments, but as users have grown more cautious, cybercriminals have turned to other methods. When users click to view a spam message, botnet code can be secretly installed on the users' PC. A website may be unknowingly infected with malicious code in the form of an ordinary-looking advertisement banner, or may include a link to an infected website. Clicking on any of these may install botnet code. Or, botnet code can be silently uploaded, even if the user takes no action while viewing the website, merely through some un-patched vulnerability that may exist in the browser. Firewalls and antivirus software do not necessarily inspect all data that is downloaded through browsers. Some bot software can even disable antivirus security before infecting the PC. Once a PC has been infected, the malicious software establishes a secret communications link to a remote "botmaster" in preparation to receive new commands to attack a specific target. Meanwhile, the malicious code may also automatically probe the infected PC for personal data, or may log keystrokes, and transmit the information to the botmaster.

The Shadowserver Foundation is an organization that monitors the number of command and control servers on the Internet, which indicates the number of bot networks that are being controlled online at a given time. From November 2006 through May 2007, approximately 1,400 command and control servers were found to be active on the Internet. The number of individual infected drones that are controlled by these 1,400 servers reportedly grew from half a million to more than 3 million from March to May 2007. Symantec, another security organization, reported that it detected 6 million bot-infected computers in the second half of 2006.[4815]

Some botnet owners reportedly rent their huge networks for US$200 to $300 an hour, and botnets are becoming the weapon of choice for fraud and extortion.[4816] Newer methods are evolving for distributing "bot" software that may make it even more difficult in the future for law enforcement to identify and locate the originating "botmaster." Some studies show that authors of software for botnets are increasingly using modern, open-source techniques for software development, including the collaboration of multiple authors for the initial design, new releases to fix bugs in the malicious code, and development of software modules that make portions of the code reusable for newer versions of malicious software designed for different purposes. This increase in collaboration among hackers mirrors the professional code development techniques now used to create commercial software products, and is expected to make future botnets

[4815] Julie Bort, "Attack of the Killer Bots," Network World, Jul 2/9, 2007, p. 29.

[4816] Susan MacLean, "Report warns of Organized Cyber Crime," ItWorldCanada, August 26, 2005, [http://www.itworldcanada.com/a/IT-Focus/39c78aa4-df47-4231-a083-ddd1ab8985 fb.html].

even more robust and reliable. This, in turn, is expected to help increase the demand for malware services in future years.[4817]

Traditionally, botnets organize themselves in an hierarchical manner, with a central command and control location (sometimes dynamic) for the botmaster. This central command location is useful to security professionals because it offers a possible central point of failure for the botnet. However, in the near future, security experts believe that attackers may use new botnet architectures that are more sophisticated, and more difficult to detect and trace. One class of botnet architecture that is beginning to emerge uses peer-to-peer protocol,[4818] which, because of its decentralized control design, is expected to be more resistant to strategies for countering its disruptive effects.[4819] For example, some experts reportedly argue that a well-designed peer-to-peer botnet may be nearly impossible to shut down as a whole because it may provide anonymity to the controller, who can appear as just another node in the bot network.[4820]

Estonia, 2007

In the Spring of 2007, government computer systems in Estonia experienced a sustained cyberattack that has been labeled by various observers as cyberwarfare, or cyberterror, or cybercrime. On April 27, officials in Estonia moved a Soviet-era war memorial commemorating an unknown Russian who died fighting the Nazis. The move stirred emotions, and led to rioting by ethnic Russians, and the blockading of the Estonian Embassy in Moscow. The event also marked the beginning of a series of large and sustained Distributed Denial-Of-Service

[4818] Gnutella emerged as the first fully decentralized peer-to-peer protocol in 2000, and was used on the Internet to share and swap music files in MP3 compression format. The music industry was often frustrated in their efforts to counter this peer-to-peer technology because it could not identify a main controlling source. Since then, several other peer-to-peer protocols have been developed.

(DDOS) attacks launched against several Estonian national websites, including government ministries and the prime minister's Reform Party.[4821]

In the early days of the cyberattack, government websites that normally receive around 1,000 visits a day reportedly were receiving 2,000 visits every second. This caused the repeated shut down of some websites for several hours at a time or longer, according to Estonian officials.[4822] The attacks, which flooded computers and servers and blocked legitimate users, were described as crippling, owing to Estonia's high dependence on information technology, but limited resources for managing their infrastructure. Security experts say that the cyberattacks against Estonia were unusual because the rate of the packet attack was very high, and the series of attacks lasted weeks, rather than hour or days, which is more commonly seen for a denial of service attack.[4823] Eventually, NATO and the United States sent computer security experts to Estonia to help recover from the attacks, and to analyze the methods used and attempt to determine the source of the attacks.

This event can serve to illustrate how computer network technology has blurred the boundaries between crime, warfare, and terrorism. A persistent problem during and after any cyberattack is accurate identification of the attacker, by finding out whether it was sponsored by a nation, or was the independent work of a few unconnected individuals, or was initiated by a group to instill frustration and fear by damaging the computerized infrastructure and economy. The uncertainty of not knowing the initiator also affects the decision about whom should ultimately become a target for retaliation, and whether the response should come from law enforcement or the military.

Initially, the Russian government was blamed by Estonian officials for the cyberattacks, and there were charges of cyberwarfare. Other observers argued that the cyberattack involved collusion between the Russian government and transnational cybercriminals who made their large botnets available for short-term rent, either to individuals or to larger groups. They argue that as the rented time expired, the intensity of the persistent cyberattacks against Estonia also began to fall off.[4824] However, not all security experts agree, and it remains

unclear at this time whether the cyberattacks were sanctioned or initiated by the Russian government, or if a criminal botnet was actually involved.

After some investigation, network analysts later concluded that the cyberattacks targeting Estonia were not a concerted attack, but instead were the product of spontaneous anger from a loose federation of separate attackers. Technical data showed that sources of the attack were worldwide rather than concentrated in a few locations. The computer code that caused the DDOS attack was posted and shared in many Russian language chat rooms, where the moving of the war memorial was a very emotional topic for discussion. These analysts state that although access to various Estonian government agencies was blocked by the malicious code, there was no apparent attempt to target national critical infrastructure other than internet resources, and no extortion demands were made. Their analysis thus far concluded that there was no Russian government connection to the attacks against Estonia.[4825] However, investigation into the incident continues, and officials from the United States view some aspects of the event as a possible model for future cyberwarfare or cyberterrorism directed against a nation state.

In January 2008, a court in Estonia convicted and fined a local man for bringing down a government website, as part of the extended cyberattack in 2007. The 20year-old, who is apparently an ethnic Russian Estonian, used his home PC to carry out the attack. The investigation continues, and so far, he is the only person convicted for participating in the cyberattack against Estonia.[4826]

Other Trends in Cybercrime Methods

Cybercrime is usually conducted through a connection to the Internet, but can also involve unauthorized removal of data on small, portable flash drive storage devices. Cybercrime, usually in the form of network hacking, has involved persons with strong technical skills, often motivated by the desire to gain popularity among their technology peers. However, the growing trend is now to profit from these network cyberattacks by targeting specific systems, often through collaboration among criminals and technical experts. The motives that drive these cybercriminal groups now may differ from those of their paying customers, who may possess little or no technical skills.

New technologies continue to outpace policy for law enforcement. Problems of coordination among agencies of different countries, along with conflicting national policies about crime in cyberspace, work to the advantage of

---

[4825] Heise Security, Estonian DDoS — a final analysis, [http://www.heise-security.co.uk/news/print/90461].

[4826] Mike Sachoff, Man Convicted In Estonia Cyber Attack, WebProNews, January 24, 2008, [http://www.webpronews.com/topnews/2008/01/24/man-convicted-in-estonia-cyber-attack].

cybercriminals who can choose to operate from geographic locations where penalties for some forms of cybercrime may not yet exist. Sophisticated tools for cyberattack can now be found for sale or for rent on the Internet, where highly-organized underground cybercrime businesses host websites that advertise a variety of disruptive software products and malicious technical services. High-end cybercrime groups use standard software business development techniques to keep their products updated with the latest anti-security features, and seek to recruit new and talented software engineering students into their organizations.

Where illicit profits are potentially very large, some high-end criminal groups have reportedly adopted standard IT business practices to systematically develop more efficient and effective computer code for cybercrime. Studies also show that organized crime groups now actively recruit college engineering graduates and technical expert members of computer societies, and sponsor them to attend more information technology (IT) courses to further their technical expertise. However, in some cases, targeted students may not realize that a criminal organization is behind the recruitment offer.[4827]

Cyberattacks are increasingly designed to silently steal information without leaving behind any damage that would be noticed by a user. These types of attacks attempt to escape detection in order to remain on host systems for longer periods of time. It is also expected that as mobile communication devices are incorporated more into everyday life, they will be increasingly targeted in the future for attack by cybercriminals.[4828]

Malicious Code Hosted on Websites

Malicious code, such as viruses or Trojan Horses, are used to infect a computer to make it available for takeover and remote control. Malicious code can infect a computer if the user opens an email attachment, or clicks an innocent-looking link on a website. For example, users who visited the popular MySpace and YouTube websites in 2005, and who lacked important software security patches, reportedly may have had their PCs infected if they clicked on a banner advertisement which silently installed malicious code on their computers to log keystrokes or capture sensitive data. During the first half of 2006, the Microsoft Security Team reported that it had removed 10 million pieces of malicious

[4827] McAfee Virtual Criminology Report: Organized Crime and the Internet, December 2006, [http://www.sigma.com.pl/pliki/albums/userpics/10007/Virtual_Criminology_Report_2006.pdf].

[4828] A web crawler (also known as a Web spider or Web robot) is a program or automated script that browses the World Wide Web in a methodical, automated manner. Web crawlers are mainly used to create a copy of all the visited pages for later processing by a search engine that will index the downloaded pages to provide fast searches. Wikipedia, [http://en.wikipedia.org/wiki/Web_crawler].

software from nearly 4 million computers and web servers.[4829] Recently, analysts at Google tested several million web pages for the presence of malicious software, and determined that 4.5 million of the web pages examined were suspicious in nature. After further testing of the 4.5 million web pages, over 1 million were found to launch downloads of malicious software, and more than two thirds of those programs were "bot" software that, among other things, collected data on banking transactions and then emailed the information to a temporary email account.[4830]

Researchers at the San Jose, Calif.-based security firm, Finjan Inc., after reviewing security data from the first quarter of 2007, found that more malware is hosted on servers in countries such as the U.S. and U.K., than in other countries with less developed e-crime law enforcement policies. Findings from the Finjan 2007 Web Security Trends Report are based on an analysis of more than 10 million unique websites from Internet traffic recorded in the UK, and include the following:

- Attacks that involve the use of code obfuscation through diverse randomization techniques are growing more numerous and complex, making them virtually invisible to pattern-matching/signature-based methods in use by traditional antivirus products.
- Criminals are displaying an increasing level of sophistication when embedding malicious code within legitimate content with less dependence on outlaw servers in unregulated countries.

Finjan found that 90% of the websites examined containing malware resided on servers located in the U.S. or U.K. "The results of this study shatter the myth that malicious code is primarily being hosted in countries where e-crime laws are less developed," Finjan CTO Yuval Ben-Itzhak reportedly stated.[4831]

Identity Theft

Botnets and other examples of malicious code can operate to assist cybercriminals with identity theft. Current FBI estimates are that identity theft costs American businesses and consumers $50 billion a year. Individual users are often lured into clicking on tempting links that are found in email or when

visiting websites. Clicking on titles such as "Buy Rolex watches cheap," or "Check out my new Photos," can take advantage of web browser vulnerabilities to place malicious software onto a users system which allows a cybercriminal to gather personal information from the user's computer.

Malicious code can scan a victim's computer for sensitive information, such as name, address, place and date of birth, social security number, mother's maiden name, and telephone number. Full identities obtained this way are bought and sold in online markets. False identity documents can then be created from this information using home equipment such as a digital camera, color printer, and laminating device, to make official-looking driver's licences, birth certificates, reference letters, and bank statements.[4832]

Identity theft involving thousands of victims is also enabled by inadequate computer security practices within organizations.[4833] MasterCard International reported that in 2005 more than 40 million credit card numbers belonging to U.S. consumers were accessed by computer hackers.[4834] Some of these account numbers were reportedly being sold on a Russian website, and some consumers have reported fraudulent charges on their statements. Officials at the UFJ bank in Japan reportedly stated that some of that bank's customers may also have become victims of fraud related to theft of the MasterCard information.[4835] In June 2006, officials from the U.S. Department of Energy acknowledged that names and personal information belonging to more than 1,500 employees of the National Nuclear Security Administration (NNSA) had been stolen in a network

---

[4832] Lou Bobson, "Identity Theft Ruining Lives," The Sunday Mail, May 20, 2007, p. 62.

[4833] On April 12, 2005, personal information, such as Social Security Numbers for 310,000 U.S. citizens, may have been stolen in a data security breach that involved 59 instances of unauthorized access into its corporate databases using stolen passwords. Boston College reported in March 2005 that a hacker had gained unauthorized access to computer database records with personal information for up to 106,000 alumni, and in the same month, Chico State University of California, reported that its databases had been breached containing the names and Social Security numbers for as many as 59,000 current and former students. intrusion that apparently took place starting in 2004. The NNSA did not discover the security breach until one year after it had occurred.[4836]

Some sources report that stolen credit card numbers and bank account information are traded online in a highly structured arrangement, involving buyers, sellers, intermediaries, and service industries. Services include offering to conveniently change the billing address of a theft victim, through manipulation of stolen PINs or passwords. Observers estimated that in 2005 such services for each stolen MasterCard number cost between $42 and $72.[4837] Other news articles report that, in 2007, a stolen credit card number sells online for only $1, and a complete identity, including a U.S. bank account number, credit-card number, date of birth, and a government-issued ID number now sells for just $14 to $18.[4838]

As of January 2007, 35 states have enacted data security laws requiring businesses that have experienced an intrusion involving possible identity theft to notify persons affected, and to improve security for protection of restricted data. However, existing federal and state laws that impose obligations on information owners, may require harmonization to provide protections that are more uniform.[4839]

Cyber Espionage

Cyber espionage involves the unauthorized probing to test a target computer's configuration or evaluate its system defenses, or the unauthorized viewing and copying of data files. However, should a terrorist group, nation, or other organization use computer hacking techniques for political or economic motives, their deliberate intrusions may also qualify them, additionally, as cybercriminals. If there is disagreement about this, it is likely because technology has outpaced policy for labeling actions in cyberspace. In fact, industrial cyber espionage may now be considered a necessary part of global economic competition, and secretly

monitoring the computerized functions and capabilities of potential adversary countries may also be considered essential for national defense.[4840]

U.S. counterintelligence officials reportedly have stated that about 140 different foreign intelligence organizations regularly attempt to hack into the computer systems of U.S. government agencies and U.S. companies. Cyber espionage, which enables the exfiltration of massive amounts of information electronically, has now transformed the nature of counterintelligence, by enabling a reduced reliance on conventional spying operations.[4841] The Internet, including satellite links and wireless local networks, now offers new, low cost and low risk opportunities for espionage. In 2001, a Special Committee of Inquiry established by the European parliament accused the United States of using its Echelon electronic spy network to engage in industrial espionage against European businesses. Echelon was reportedly set up in 1971 as an electronic monitoring system during the Cold War. European-Union member Britain helps operate the system, which includes listening posts in Canada, Australia, and New Zealand. Echelon is described as a global spy system reportedly capable of intercepting wireless phone calls, e-mail, and fax messages made from almost any location around the world.[4842]

Paris station chief for the CIA, because of suspected industrial espionage activities linked to Echelon.[4844]

The State Department denied that the U.S. government was engaged in industrial espionage. However, former director of the U.S. Central Intelligence Agency, James Woolsey, has reportedly justified the possibility of industrial espionage by the United States on the basis of the use of bribery by European companies. Officials of the European parliament reportedly expressed outrage about the justification, while not denying that bribery is sometimes used to make sales.[4845]

Some government officials warn that criminals now sell or rent malicious code tools for cyber espionage, and the risk for damage to U.S. national security due to cyber espionage conducted by other countries is great. One industry official, arguing for stronger government agency computer security practices, stated that, "If gangs of foreigners broke into the State or Commerce Departments and carried off dozens of file cabinets, there would be a crisis. When the same thing happens in cyberspace, we shrug it off as another of those annoying computer glitches we must live with."[4846]

In 2003, a series of cyberattacks designed to copy sensitive data files was launched against DOD systems, and the computers belonging to DOD contractors. The cyber espionage attack apparently went undetected for many months. This series of cyberattacks was labeled "Titan Rain," and was suspected by DOD investigators to have originated in China. The attacks were directed against the U.S. Defense Information Systems Agency (DISA), the U.S. Redstone Arsenal, the Army Space and Strategic Defense Installation, and several computer systems critical to military logistics. Although no classified systems reportedly were breached, many files were copied containing information that is sensitive and subject to U.S. export-control laws.

[4846] James Lewis, testimony before the House Committee on Homeland Security, Subcommittee on Emerging Threats, Cybersecurity, and Science and Technology, April 15, 2007.

In 2006, an extended cyberattack against the U.S. Naval War College in Newport, Rhode Island, prompted officials to disconnect the entire campus from the Internet.[4847] A similar attack against the Pentagon in 2007 led officials to temporarily disconnect part of the unclassified network from the Internet. DOD officials acknowledge that the Global Information Grid, which is the main network for the U.S. military, experiences more than three million daily scans by unknown potential intruders.[4848]

Accurate attribution is important when considering whether to retaliate using military force or police action. Some DOD officials have indicated that the majority of cyber attacks against DOD and U.S. civilian agency systems are suspected to originate in China, and these attacks are consistently more numerous and sophisticated than cyberattacks from other malicious actors. The motives appear to be primarily cyber espionage against civilian agencies, DOD contractors, and DOD systems. The espionage involves unauthorized access to files containing sensitive industrial technology, and unauthorized research into DOD operations. Some attacks included attempts to implant malicious code into computer systems for future use by intruders.[4849]

Security experts warn that all U.S. federal agencies should now be aware that in cyberspace some malicious actors consider that no boundaries exist between military and civilian targets. According to an August 2005 computer security report by IBM, more than 237 million overall security attacks were reported globally during the first half of that year.[4850] Government agencies were targeted the most, reporting more than 54 million attacks, while manufacturing ranked second with 36 million attacks, financial services ranked third with approximately 34 million, and healthcare received more than 17 million attacks. The most frequent targets for these attacks, all occurring in the first half of 2005, were government agencies and industries in the United States (12 million), followed by New Zealand (1.2 million), and China (1 million). These figures likely represent an underestimation, given that most security analysts agree that the

number of incidents reported are only a small fraction of the total number of attacks that actually occur.

Terrorism Linked to Cybercrime

The proportion of cybercrime that can be directly or indirectly attributed to terrorists is difficult to determine. However, linkages do exist between terrorist groups and criminals that allow terror networks to expand internationally through leveraging the computer resources, money laundering activities, or transit routes operated by criminals. For example, the 2005 U.K. subway and bus bombings, and the attempted car bombings in 2007, also in the U.K., provide evidence that groups of terrorists are already secretly active within countries with large communication networks and computerized infrastructures, plus a large, highly skilled IT workforce. London police officials reportedly believe that terrorists obtained high-quality explosives used for the 2005 U.K. bombings through criminal groups based in Eastern Europe.[4851]

A recent trial in the U.K. revealed a significant link between Islamic terrorist groups and cybercrime. In June 2007, three British residents, Tariq al-Daour, Waseem Mughal, and Younes Tsouli, pled guilty, and were sentenced for using the Internet to incite murder. The men had used stolen credit card information at online web stores to purchase items to assist fellow jihadists in the field — items such as night vision goggles, tents, global positioning satellite devices, and hundreds of prepaid cell phones, and more than 250 airline tickets, through using 110 different stolen credit cards. Another 72 stolen credit cards were used to register over 180 Internet web domains at 95 different web hosting companies. The group also laundered money charged to more than 130 stolen credit cards through online gambling websites. In all, the trio made fraudulent charges totaling more than $3.5 million from a database containing 37,000 stolen credit card numbers, including account holders' names and addresses, dates of birth, credit balances, and credit limits.[4852]

Cybercriminals have made alliances with drug traffickers in Afghanistan, the Middle East, and elsewhere where illegal drug funds or other profitable activities such as credit card theft, are used to support terrorist groups.[4853] Drug traffickers

are reportedly among the most widespread users of encryption for Internet messaging, and are able to hire high-level computer specialists to help evade law enforcement, coordinate shipments of drugs, and launder money. Regions with major narcotics markets, such as Western Europe and North America, also possess optimal technology infrastructure and open commercial nodes that increasingly serve the transnational trafficking needs of both criminal and terrorist groups.[4854] Officials of the U.S. Drug Enforcement Agency (DEA), reported in 2003 that 14 of the 36 groups found on the U.S. State Department's list of foreign terrorist organizations were also involved in drug trafficking. A 2002 report by the Federal Research Division at the Library of Congress, revealed a "growing involvement of Islamic terrorist and extremists groups in drug trafficking", and limited evidence of cooperation between different terrorist groups involving both drug trafficking and trafficking in arms.[4855] Consequently, DEA officials reportedly argued that the war on drugs and the war against terrorism are and should be linked.[4856]

State Department officials, at a Senate hearing in March 2002, also indicated that some terrorist groups may be using drug trafficking as a way to gain financing while simultaneously weakening their enemies in the West through exploiting their desire for addictive drugs.[4857] The poppy crop in Afghanistan reportedly supplies resin to produce over 90 percent of the world's heroin, supporting a drug trade estimated at $3.1 billion. Reports indicate that money from drug trafficking in Afghanistan is used to help fund terrorist and insurgent groups that operate in that country. Subsequently, U.S. intelligence reports in 2007 have stated that "al Qaeda in Afghanistan" has been revitalized and restored to its pre-September 11,

2001 operation levels, and may now be in a better position to strike Western countries.[4858]

Drug traffickers have the financial clout to hire computer specialists with skills for using technologies which make Internet messages hard or impossible to decipher, and which allow terrorist organizations to transcend borders and operate internationally with less chance of detection. Many highly trained technical specialists that make themselves available for hire originally come from the countries of the former Soviet Union and the Indian subcontinent. Some of these technical specialists reportedly will not work for criminal or terrorist organizations willingly, but may be misled or unaware of their employers' political objectives. Still, others will agree to provide assistance because other well-paid legitimate employment is scarce in their region.[4859]

Terrorist Groups Linked to Hackers

Links between computer hackers and terrorists, or terrorist-sponsoring nations may be difficult to confirm. Membership in the most highly-skilled computer hacker groups is sometimes very exclusive and limited to individuals who develop, demonstrate, and share only with each other, their most closely-guarded set of sophisticated hacker tools. These exclusive hacker groups do not seek attention because maintaining secrecy allows them to operate more effectively. Some hacker groups may also have political interests that are supra-national, or based on religion, or other socio-political ideologies, while other hacker groups may be motivated by profit, or linked to organized crime, and may be willing to sell their computer services, regardless of the political interests involved.

Information about computer vulnerabilities is now for sale online in a hackers' "black market". For example, a list of 5,000 addresses of computers that have already been infected with spyware and which are waiting to be remotely controlled as part of an automated "bot network" reportedly can be obtained for about $150 to $500. Prices for information about computer vulnerabilities for which no software patch yet exists reportedly range from $1,000 to $5,000.

Purchasers of this information are often organized crime groups, various foreign governments, and companies that deal in spam.[4860]

Terrorist Capabilities for Cyberattack

Some experts estimate that advanced or structured cyberattacks against multiple systems and networks, including target surveillance and testing of sophisticated new hacker tools, might require from two to four years of preparation, while a complex coordinated cyberattack, causing mass disruption against integrated, heterogeneous systems may require 6 to 10 years of preparation.[4861] This characteristic, where hackers devote much time to detailed and extensive planning before launching a cyberattack, has also been described as a "hallmark" of previous physical terrorist attacks and bombings launched by Al Qaeda.

It is difficult to determine the level of interest, or the capabilities of international terrorist groups to launch an effective cyberattack. A 1999 report by The Center for the Study of Terrorism and Irregular Warfare at the Naval Postgraduate School concluded that it is likely that any severe cyberattacks experienced in the near future by industrialized nations will be used by terrorist groups simply to supplement the more traditional physical terrorist attacks.[4862]

Some observers have stated that Al Qaeda does not see cyberattack as important for achieving its goals, preferring attacks which inflict human casualties.[4863] Other observers believe that the groups most likely to consider and employ cyberattack and cyberterrorism are the terrorist groups operating in post-industrial societies (such as Europe and the United States), rather than international terrorist groups that operate in developing regions where there is limited access to high technology.

However, other sources report that Al Qaeda has taken steps to improve organizational secrecy through more active and sophisticated use of technology,

[4862] Report was published in 1999, available at [http://www.nps.navy.mil/ctiw/reports/].

[4863] The Ashland Institute for Strategic Studies has observed that Al Qaeda is more fixated on physical threats than electronic ones. John Swartz, "Cyberterror Impact, Defense Under Scrutiny," USA Today, August 3, 2004, p. 2B.

and evidence suggests that Al Qaeda terrorists used the Internet extensively to plan their operations for September 11, 2001.[4864] In past years, Al Qaeda groups reportedly used new Internet-based telephone services to communicate with other terrorist cells overseas. Khalid Shaikh Mohammed, one of the masterminds of the attack against the World Trade Center, reportedly used special Internet chat software to communicate with at least two airline hijackers. Ramzi Yousef, who was sentenced to life imprisonment for the previous bombing of the World Trade Center, had trained as an electrical engineer, and had planned to use sophisticated electronics to detonate bombs on 12 U.S. airliners departing from Asia for the United States. He also used sophisticated encryption to protect his data and to prevent law enforcement from reading his plans should he be captured.[4865]

Tighter physical security measures now widely in place throughout the United States may encourage terrorist groups in the future to explore cyberattack as way to lower the risk of detection for their operations.[4866] However, other security observers believe that terrorist organizations might be reluctant to launch a cyberattack because it would result in less immediate drama and have a lower psychological impact than a more conventional bombing attack. These observers believe that unless a cyberattack can be made to result in actual physical damage or bloodshed, it will never be considered as serious as a nuclear, biological, or chemical terrorist attack.[4867]

Possible Effects of a Coordinated Cyberattack

In March 2007, researchers at Idaho National Laboratories (INL) conducted an experiment labeled the "Aurora Generator Test" to demonstrate the results of a simulated cyberattack on a power network. In a video released by the Department of Homeland Security, a power generator turbine, similar to many now in use throughout the United States, is forced to overheat and shut down dramatically, after receiving malicious commands from a hacker. The researchers at INL were investigating results of a possible cyberattack directed against a vulnerability that, reportedly, has since been fixed.[4868] The video, however, implied that other

multiple power generators sharing similar cyber vulnerabilities could potentially be disabled the same way.

In July 2002, the U.S. Naval War College hosted a war game called "Digital Pearl Harbor" to develop a scenario for a coordinated cyberterrorism event, where mock attacks by computer security experts against critical infrastructure systems simulated state-sponsored cyberwarfare. The simulated cyberattacks determined that the most vulnerable infrastructure computer systems were the Internet itself, and the computer systems that are part of the financial infrastructure.[4869] It was also determined that attempts to cripple the U.S. telecommunications infrastructure would be unsuccessful because built-in system redundancy would prevent damage from becoming too widespread. The conclusion of the exercise was that a "Digital Pearl Harbor" in the United States was only a slight possibility.[4870]

However, in 2002, a major vulnerability was discovered in switching equipment software that threatened the infrastructure for major portions of the Internet. A flaw in the Simple Network Management Protocol (SNMP) would have enabled attackers to take over Internet routers and cripple network telecommunications equipment globally. Network and equipment vendors worldwide raced quickly to fix their products before the problem could be exploited by hackers, with possible worldwide consequences. U.S. government officials also reportedly made efforts to keep information about this major vulnerability quiet until after the needed repairs were implemented on vulnerable Internet systems.[4871] According to an

---

[4869] At the annual conference of the Center for Conflict Studies, Phil Williams, Director of the Program on Terrorism and Trans-National Crime and the University of Pittsburgh, said an attack on the global financial system would likely focus on key nodes in the U.S. financial infrastructure: Fedwire and Fednet. Fedwire is the financial funds transfer system that exchanges money among U.S. banks, while Fednet is the electronic network that handles the transactions. The system has one primary installation and three backups. "You can find out on the Internet where the backups are. If those could be taken out by a mix of cyber and physical activities, the U.S. economy would basically come to a halt," Williams said. "If the takedown were to include the international funds transfer networks CHIPS and SWIFT then the entire global economy could be thrown into chaos." George Butters, "Expect Terrorist Attacks on Global Financial System," October 10, 2003 at [http://www.theregister. co.uk/content/55/33269.html].

[4870] The simulation involved more than 100 participants. Gartner, Inc., "Cyberattacks: The Results of the Gartner/U.S. Naval War College Simulation," July 2002, at [http://www3.gartner.com/2_events/audioconferences/dph/dph.html.] War game participants were divided into cells, and devised attacks against the electrical power grid, telecommunications infrastructure, the Internet and the financial services sector. It was determined that "peer-to-peer networking," a special method of communicating where every PC used commonly available software to act as both a server and a client, posed a potentially critical threat to the Internet itself. William Jackson, "War College Calls Digital Pearl Harbor Doable," Government Computer News, August 23, 2002, at [http://www.gcn.com/vol1_no1/daily-updates/19792-1.html].

[4871] The vulnerability was found in Abstract Syntax Notation One (ASN.1) encoding, and was extremely widespread. Ellen Messmer, "President's Advisor Predicts Cyber-catastrophes Unless

assessment reportedly written by the FBI, the security flaw could have been exploited to cause many serious problems, such as bringing down widespread telephone networks and also halting control information exchanged between ground and aircraft flight control systems.[4872]

Security experts agree that a coordinated cyberattack could be used to amplify the effects of a conventional terrorist attack, including a nuclear, biological, or chemical (NBC) attack. However, many of these same experts disagree about the damaging effects that might result from an attack directed against control computers that operate the U.S. critical infrastructure. Some observers have stated that because of U.S. dependency on computer technology, such attacks may have the potential to create economic damage on a large scale, while other observers have stated that U.S. infrastructure systems are resilient and would possibly recover easily, thus avoiding any severe or catastrophic effects.

While describing possible offensive tactics for military cyber operations, DOD officials reportedly stated that the U.S. could confuse enemies by using cyberattack to open floodgates, control traffic lights, or scramble the banking systems in other countries.[4873] Likewise, some of China's military journals speculate that cyberattacks could disable American financial markets. China, however, is almost as dependent on these U.S. markets as the United States, and might possibly suffer even more from such a disruption to finances. As to using cyberattack against other U.S. critical infrastructures, the amount of potential damage that could be inflicted might be relatively trivial compared to the costs of discovery, if engaged in by a nation state. However, this constraint does not apply to non-state actors like Al Qaeda, thus making cyberattack a potentially useful tool for those groups who reject the global market economy.[4874]

SCADA Vulnerabilities

Supervisory Control And Data Acquisition (SCADA) systems are the computers that monitor and regulate the operations of most critical infrastructure industries (such as the companies that manage the power grid). These SCADA computers automatically monitor and adjust switching, manufacturing, and other process control activities, based on digitized feedback data gathered by sensors. These

[4874] James Lewis, "Assessing the Risks of Cyber Terrorism, Cyber War and Other Cyber Threats," December 2002, at [http://www.csis.org/tech/0211_lewis.pdf].

control systems are often placed in remote locations, are frequently unmanned, and are accessed only periodically by engineers or technical staff via telecommunications links. However, for more efficiency, these communication links are increasingly connected to corporate administrative local area networks, or directly to the Internet.

Some experts believe that the importance of SCADA systems for controlling the critical infrastructure may make them an attractive target for terrorists.[4875] Many SCADA systems also now operate using Commercial-Off-The-Shelf (COTS) software, which some observers believe are inadequately protected against a cyberattack. These SCADA systems are thought to remain persistently vulnerable to cyberattack because many organizations that operate them have not paid proper attention to these systems' unique computer security needs.[4876]

The following example may serve to illustrate the possible vulnerability of control systems and highlight cybersecurity issues that could arise for infrastructure computers when SCADA controls are interconnected with office networks. In August 2003, the "Slammer"Internet computer worm was able to corrupt for five hours the computer control systems at the Davis-Besse nuclear power plant located in Ohio (fortunately, the power plant was closed and off-line when the cyberattack occurred). The computer worm was able to successfully penetrate systems in the Davis-Besse power plant control room largely because the business network for its corporate offices was found to have multiple connections to the Internet that bypassed the control room firewall.[4877]

[4875] Proprietary systems are unique, custom built software products intended for installation on a few (or a single) computers, and their uniqueness makes them a less attractive target for hackers. They are less attractive because finding a security vulnerability takes time, and a hacker may usually not consider it worth their while to invest the pre-operative surveillance and research needed to attack a proprietary system on a single computer. Widely used Commercial-Off-The-Shelf (COTS) software products, on the other hand, are more attractive to hackers because a single security vulnerability, once discovered in a COTS product, may be embedded in numerous computers that have the same COTS software product installed.

[4876] Industrial computers sometimes have operating requirements that differ from business or office computers. For example, monitoring a chemical process, or a telephone microwave tower may require 24-hour continuous availability for a critical industrial computer. Even though industrial systems may operate using COTS software (see above), it may be economically difficult to justify suspending the operation of an industrial SCADA computer on a regular basis to take time to install every new security software patch. See interview with Michael Vatis, director of the Institute for Security Technology Studies related to counterterrorism and cybersecurity. Sharon Gaudin, "Security Experts: U.S. Companies Unprepared for Cyber Terror," Datamation, July 19, 2002 at [http://itmanagement. earthweb.com/secu/article.php/1429851]. Also, Government Accountability Office, Information Security: Further Efforts Needed to Fully Implement Statutory Requirements in DOD, GAO-03-1037T, July 24, 2003, p. 8.

[4877] Kevin Poulsen, "Slammer Worm Crashed Ohio Nuke Plant Network," Security Focus, August 19, 2003, at [http://www.securityfocus.com/news/6767].

Other observers, however, suggest that SCADA systems and the critical infrastructure are more robust and resilient than early theorists of cyberterror have stated, and that the infrastructure would likely recover rapidly from a cyberterrorism attack. They cite, for example, that water system failures, power outages, air traffic disruptions, and other scenarios resembling possible cyberterrorism often occur as routine events, and rarely affect national security, even marginally. System failures due to storms routinely occur at the regional level, where service may often be denied to customers for hours or days. Technical experts who understand the systems would work to restore functions as quickly as possible. Cyberterrorists would need to attack multiple targets simultaneously for long periods of time to gradually create terror, achieve strategic goals, or to have any noticeable effects on national security.[4878]

For more information about SCADA systems, see CRS Report RL31534, Critical Infrastructure: Control Systems and the Terrorist Threat, by Dana A. Shea.

Unpredictable Interactions Between Infrastructures

An important area that is not fully understood concerns the unpredictable interactions between computer systems that operate the different U.S. infrastructures. The concern is that numerous interdependencies (where downstream systems may rely on receiving good data through stable links with upstream computers) could possibly build to a cascade of effects that are unpredictable in how they might affect national security.[4879] For example, while the "Blaster" worm was disrupting Internet computers over several days in August 2003, some security experts suggest that slowness of communication links, caused by Blaster worm network congestion, may have contributed to the Eastern United States power blackout that occurred simultaneously on August 14. The computer worm could have degraded the performance of several communications links between data centers normally used to send warnings to other utility managers downstream on the power grid.[4880]

[4878] Scott Nance, "Debunking Fears: Exercise Finds 'Digital Pearl Harbor' Risk Small," Defense Week, April 7, 2003 at [http://www.kingpublishing.com/publications/dw/].

[4879] The most expensive natural disaster in U.S. history, Hurricane Andrew, is reported to have caused $25 billion in damage, while the Love Bug virus is estimated to have cost computer users around the world somewhere between $3 billion and $15 billion. However, the Love Bug virus was created and launched by a single university student in the Philippines, relying on inexpensive computer equipment. Christopher Miller, GAO Review of Weapon Systems Software, March 3, 2003, e-mail communication, MillerC@gao.gov.

[4880] Network congestion caused by the Blaster worm reportedly delayed the exchange of critical power grid control data across the public telecommunications network, which could have hampered the operators' ability to prevent the cascading effect of the blackout. Dan Verton, "Blaster Worm Linked to Severity of Blackout," Computerworld, August 29, 2003, [http://www.computerworld.com/printthis/2003/0,4814,84510,00.html.].

Civilian Technology that Supports DOD

DOD uses Commercial-Off-The-Shelf (COTS) hardware and software products in core information technology administrative functions, and also in the combat systems of all services, as for example, in the integrated warfare systems for nuclear aircraft carriers.[4881] DOD favors the use of COTS products in order to take advantage of technological innovation, product flexibility and standardization, and resulting contract cost-effectiveness. Nevertheless, DOD officials and others have stated that COTS products are lacking in security, and that strengthening the security of those products to meet military requirements may be too difficult and costly for most COTS vendors. To improve security, DOD Information Assurance practices require deploying several layers of additional protective measures around COTS military systems to make them more difficult for enemy cyberattackers to penetrate.[4882]

However, on two separate occasions in 2004, viruses reportedly infiltrated two top-secret computer systems at the Army Space and Missile Defense Command. It is not clear how the viruses penetrated the military systems, or what the effects were. Also, contrary to security policy requirements, the compromised computers reportedly lacked basic anti virus software protection.[4883] Security experts have noted that no matter how much protection is given to computers, hackers are always creating new ways to defeat those protective measures.[4884]

Why Cyberattacks Are Successful

Networked computers with exposed vulnerabilities may be disrupted or taken over by a hacker, or by automated malicious code. Botnets opportunistically scan the Internet to find and infect computer systems that are poorly configured, or lack current software security patches. Compromised computers are taken over to become slaves in a "botnet", which can include thousands of compromised

computers that are remotely controlled to collect sensitive information from each victim's PC, or to collectively attack as a swarm against other targeted computers.

Even computers that have updated software and the newest security patches may still be vulnerable to a type of cyberattack known as a "Zero-Day exploit." This may occur if a computer hacker discovers a new software vulnerability and launches a malicious attack to infect computers before a security patch can be created by the software vendor and distributed to protect users. Zero-day vulnerabilities in increasingly complex software are regularly discovered by computer hackers. Recent news articles report that zero-day vulnerabilities are now available at online auctions, where buyers and sellers negotiate with timed bidding periods and minimum starting prices. This allows newly-discovered computer security vulnerabilities to be sold quickly to the highest bidder. Computer security expert Terri Forslof, of Tipping Point, has reportedly said that such practices will "...increase the perceived value of vulnerabilities, and the good guys already have trouble competing with the money you can get on the black market."[4885]

The Insider Threat

A major threat for organizations is the ease with which data can now be copied and carried outside using a variety of portable storage devices, such as small flash drives. Newer high-density memory stick technology reportedly allows installed computer applications to be run entirely from the flash drive. This means that the entire contents of a PC could possibly be copied to and stored on a small, easily portable, and easily concealed media device.[4886]

Employees with access to sensitive information systems can initiate threats in the form of malicious code inserted into software that is being developed either locally, or under offshore contracting arrangements. For example, in January 2003, 20 employees of subcontractors working in the United States at the Sikorsky Aircraft Corporation were arrested for possession of false identification used to obtain security access to facilities containing restricted and sensitive military technology. All of the defendants pleaded guilty and have been sentenced, except for one individual who was convicted at trial on April 19, 2004.[4887]

[4887] U.S. Attorneys Office, District of Connecticut, at [http://www.usdoj.gov/usao/ct/attf. html].

Persistence of Computer System Vulnerabilities

Vulnerabilities in software and computer system configurations provide entry points for a cyberattack. Vulnerabilities persist largely as a result of poor security practices and procedures, inadequate training in computer security, or technical errors in software products.[4888] Inadequate resources devoted to staffing the security function may also contribute to poor security practices. Home PC users often have little or no training in best practices for effectively securing home networks and equipment.

Errors in New Software Products

Vendors for Commercial-Off-The-Shelf software (COTS) are often criticized for releasing new products with errors that create the computer system vulnerabilities.[4889] Richard Clarke, former White House cyberspace advisor until 2003, has reportedly said that many commercial software products have poorly written, or poorly configured security features.[4890] In response to such criticism, the software industry reportedly has made new efforts to design products with architectures that are more secure. For example, Microsoft has created a special Security Response Center and now works with DOD and with industry and government leaders to improve security features in its new products. However, many software industry representatives reportedly agree that no matter what investment is made to improve software security, there will continue to be

[4888] The SANS Institute, in cooperation with the National Infrastructure Protection Center (NIPC), publishes an annual list of the 10 most commonly exploited vulnerabilities for Windows systems and for Unix systems. The SANS/FBI Twenty Most Critical Internet Security Vulnerabilities, 2003, SANS, April 15, 2003 at [http://www.sans.org/top20/].

[4889] In September 2003, Microsoft Corporation announced three new critical flaws in its latest Windows operating systems software. Security experts predicted that computer hackers may possibly exploit these new vulnerabilities by releasing more attack programs, such as the "Blaster worm" that recently targeted other Windows vulnerabilities causing widespread disruption on the Internet. Jaikumar Vijayan, "Attacks on New Windows Flaws Expected Soon," Computerworld, September 15, 2003, vol. 37, no. 37, p. 1.

[4890] Agencies operating national security systems must purchase software products from a list of lab-tested and evaluated products in a program that requires vendors to submit software for review in an accredited lab, a process (known as certification and accreditation under the Common Criteria, a testing program run by the National Information Assurance Partnership) that often takes a year and costs several thousand dollars. The review requirement previously has been limited to military national security software, however, the administration has stated that the government will undertake a review of the program in 2003 to "possibly extend" it as a new requirement for civilian agencies. Ellen Messmer, White House issue "National Strategy to Secure Cyberspace," Network World Fusion, February 14, 2003, [http://www.nwfusion.com/news/2003/0214ntlstrategy.html].

vulnerabilities in future software because products are becoming increasingly more complex.[4891]

Inadequate Resources

Although software vendors periodically release fixes or upgrades to solve newly discovered security problems, an important software security patch might not get scheduled for installation on an organization's computers until several weeks or months after the patch is available.[4892] The job may be too time-consuming, too complex, or too low a priority for the system administration staff. With increased software complexity comes the introduction of more vulnerabilities, so system maintenance is never-ending. Sometimes the security patch itself may disrupt the computer when installed, forcing the system administrator to take additional time to adjust the computer to accept the new patch. To avoid such disruption, a security patch may first require testing on a separate isolated network before it is distributed for installation on all other regular networked computers.

Because of such delays, the computer security patches installed in many organizations may lag considerably behind the current cyberthreat situation. Whenever delays are allowed to persist in private organizations, in government agencies, or among PC users at home, computer vulnerabilities that are widely reported may remain unprotected, leaving networks open to possible attack for long periods of time.

Future Attractiveness of Critical Infrastructure Systems

There has yet been no published evidence showing a widespread focus by cybercriminals on attacking the control systems that operate the U.S. civilian critical infrastructure. Disabling infrastructure controls for communications, electrical distribution or other infrastructure systems, is often described as a likely scenario to amplify the effects of a simultaneous conventional terrorist attack involving explosives.

However, in 2006, at a security discussion in Williamsburg, Virginia, a government analyst reportedly stated that criminal extortion schemes may have already occurred, where cyberattackers have exploited control system vulnerabilities for economic gain. And, in December 2006, malicious software

[4892] A survey of 2000 PC users found that 42% had not downloaded the vendor patch to ward off the recent Blaster worm attack, 23% said they do not regularly download software updates, 21% do not update their anti-virus signatures, and 70% said they were not notified by their companies about the urgent threat due to the Blaster worm. Jaikumar Vijayan, "IT Managers Say They Are Being Worn Down by Wave of Attacks," Computerworld, August 25, 2003, vol. 37, no. 34, p. 1.

that automatically scans for control system vulnerabilities reportedly was made available on the Internet for use by cybercriminals. This scanner software reportedly can enable individuals with little knowledge about infrastructure control systems to locate a SCADA computer connected to the Internet, and quickly identify its security vulnerabilities.

The Idaho National Laboratory is tasked to study and report on technology risks associated with infrastructure control systems. Past studies have shown that many, if not most, automated control systems are connected to the Internet, or connected to corporate administrative systems that are connected to the Internet, and are currently vulnerable to a cyberattack. And, because many of these infrastructure SCADA systems were not originally designed with security as a priority, in many cases, new security controls cannot now be easily implemented to reduce the known security vulnerabilities.[4893] Following past trends, where hackers and cybercriminals have taken advantage of easy vulnerabilities, some analysts now predict that we may gradually see new instances where cybercriminals exploit vulnerabilities in critical infrastructure control systems.[4894]

Measuring Cybercrime

New, automated attack methods have outpaced current methods for tracking the number and severity of cyberattacks and cybercrime intrusions. For example, according to a study by the Cooperative Association for Internet Data Analysis (CAIDA), on January 25, 2003, the SQL Slammer worm (also known as "Sapphire") automatically spread to infect more than 90% of vulnerable computers worldwide within 10 minutes of its release on the Internet, making it the fastest-spreading computer worm in history. As the study reports, the Slammer worm doubled in size every 8.5 seconds and achieved its full scanning rate (55 million scans per second) after about 3 minutes. It caused considerable harm through network outages which led to numerous canceled airline flights and automated teller machine (ATM) failures.[4895]

The use of automated tools for cybercrime has had a dramatic affect on the Computer Emergency Response Team/ Coordinating Center (CERT/CC). In

[4893] Testimony of Aaron Turner, House Committee on Homeland Security, Subcommittee on Emerging Threats, Cybersecurity and Science & Technology, Hearing on "Cyber Insecurity: Hackers are Penetrating Federal Systems and Critical Infrastructure," April 19, 2007, [http://homeland.house.gov/SiteDocuments/20070419153130-95132.pdf].

[4894] Testimony of Aaron Turner, House Committee on Homeland Security, Subcommittee on Emerging Threats, Cybersecurity and Science & Technology, Hearing on "Cyber Insecurity: Hackers are Penetrating Federal Systems and Critical Infrastructure," April 19, 2007, [http://homeland.house.gov/SiteDocuments/20070419153130-95132.pdf].

[4895] "Internet Worm Keeps Striking," January 27, 2003, CBSNews.com at [http://www.cbsnews.com/stories/2003/01/28/tech/main538200.shtml].

2004, CERT/CC announced that it had abandoned its traditional practice of producing an annual report tracking the number of cyber intrusions recorded for each year. For many years prior to 2004, CERT/CC had maintained a database of statistics about security incidents that were reported to it anonymously by businesses and individuals worldwide. The reason given for abandoning its annual tracking report was because the widespread use of new, automated cyberattack tools had escalated the number of network attacks to such a high level, that the CERT/CC organization determined that traditional methods for counting security incidents had become meaningless as a metric for assessing the scope and effects of attacks against Internet-connected systems.[4896] The CERT-CC website currently states, "Given the widespread use of automated attack tools, attacks against Internet-connected systems have become so commonplace that counts of the number of incidents reported provide little information with regard to assessing the scope and impact of attacks. Therefore, beginning in 2004, we stopped publishing the number of incidents reported."[4897]

The FBI estimates that all types of computer crime in the U.S. now costs industry about $400 billion, while officials in the Department of Trade and Industry in Britain say computer crime has risen by 50 percent from 2005 to 2006. As one example of costs associated with a recent computer security breach, TJX, the parent company of TJ Maxx, took a $12 million charge in its fiscal first quarter of 2008 due to the theft of more than 45 million credit and debit card numbers, starting in 2006. The money reportedly went to investigating and containing the intrusion, improving computer security, communicating with customers, and other fees. TJX estimates that, adding damages from future lawsuits, the breach may eventually cost $100 per lost record, or a total of $4.5 billion.[4898]

It is estimated that only five per cent of cybercriminals are ever arrested or convicted because the anonymity associated with web activity makes them hard to catch, and the trail of evidence needed to link them to a cybercrime is hard to unravel. Studies also show that cybercrime incidents are rarely reported, especially by companies that wish to avoid negative publicity leading to possible loss of confidence by its customers. However, law enforcement officials argue that "maintaining a code of silence" won't benefit a company in the long-run. Steven Martinez, deputy assistant director for the FBI's cyber division, reportedly stated at the 2006 RSI Computer Security Conference that partnerships between law

---

enforcement, the academic community, and the private sector are key to understanding and reducing cybercrime.[4899]

Each year, the Computer Security Institute (CSI), with help from the FBI, conducts a survey of thousands of security practitioners from U.S. corporations, government agencies, financial institutions, and universities. The CSI/FBI Computer Crime and Security Survey, published annually, is perhaps the most widely-used source of information about how often computer crime occurs and how expensive these crimes can be. The 2006 survey indicated that the average financial loss reported due to security breaches was $167,713, an 18% decrease from the previous year's average loss of $203,606.

However, some observers argue that the analyses reported in the CSI/FBI survey may be questionable, because the survey methodology is not statistically valid.[4900] This is because the survey is limited only to CSI members, which reduces the likelihood that respondents are a representative sample of all security practitioners, or that their employers are representative of employers in general. In addition, the 2006 CSI/FBI survey points out that most companies are continuing to sweep security incidents under the rug.

With the apparent absence of statistically valid survey results concerning the financial costs of computer crime, and with an accompanying lack of clear data about the number and types of computer security incidents reported, it appears that there may be no valid way to currently understand the real scope and intensity of cybercrime. The growing use of botnets and sophisticated malicious code also suggests that the percentage of unreported cybercrime, plus the percentage undetected, may both be going up.

Problems Tracing Cybercrime

The challenge of identifying the source of attacks is complicated by the unwillingness of commercial enterprises to report attacks, owing to potential liability concerns. CERT/CC estimates that as much as 80% of all actual computer security incidents still remain unreported.[4901] Law enforcement

---

[4899] Marcia Savage, "Companies Still Not Reporting Attacks, FBI Director Says," SearchSecurity.com, February 15, 2006, [http://searchsecurity.techtarget.com/originalContent/0,289142,sid14_gci1166845,00.html?bucket=NEWS&topic=299990].

[4900] Bill Brenner, "Security Blog Log: Has CSI/FBI Survey Jumped the Shark?" SearchSecurity.com, July 21, 2006, [http://searchsecurity.techtarget.com/columnItem/0,294698,sid14_gci1202328,00.html].

[4901] Many cyberattacks are unreported usually because the organization is unable to recognize that it has been attacked, or because the organization is reluctant to reveal publicly that it has experienced a cyberattack, Government Accountability Office, Information Security: Further Efforts Needed to Fully Implement Statutory Requirements in DOD, GAO-031037T, July 24, 2003, p. 6.

officials concede they are making little progress in tracing the profits and finances of cybercriminals. Online payment services, such as PayPal and E-Gold, enable criminals to launder their profits and exploit the shortcomings of international law enforcement. Recently, Intermix Media was fined $7.5 million in penalties for distribution of spyware which silently captures personal information from user's PCs. However, some adware and spyware purveyors reportedly can still make millions of dollars per year in profits. Many companies who distribute spyware are difficult to pursue legally because they typically also offer some legitimate services. In many cases, the finances that back cybercrimes are so distributed they are hard for law enforcement to figure out.[4902]

Organized Cybercrime

Some large cybercriminal groups are transnational, with names like Shadowcrew, Carderplanet, and Darkprofits. Individuals in these groups reportedly operate from locations all over the world, working together to hack into systems, steal credit card information and sell identities, in a very highly structured, organized network.[4903] Organized crime is also recruiting teenagers who indicate they feel safer doing illegal activity online than in the street. A recent report from the McAfee security organization, titled the "Virtual Criminology Report", draws on input from Europe's leading high-tech crime units and the FBI, and suggests that criminal outfits are targeting top students from leading academic institutions and helping them acquire more of the skills needed to commit high-tech crime on a massive scale.[4904]

In the future, we may see new and different modes of criminal organization evolve in cyberspace. Cyberspace frees individuals from many of the constraints that apply to activities in the physical world, and current forms of criminal organization may not transition well to online crime. Cybercrime requires less personal contact, less need for formal organization, and no need for control over a geographical territory. Therefore, some researchers argue that the classical hierarchical structures of organized crime groups may be unsuitable for organized crime on the Internet. Consequently, online criminal activity may emphasize lateral relationships and networks instead of hierarchies.[4905]

[4904] Bill Brenner, "Criminals Find Safety in Cyberspace," SearchSecurity.com, December 18, 2006, [http://searchsecurity.techtarget.com/originalContent/0,289142,sid14_gci1235455,00.html?bucket=NEWS&topic=299990].

[4905] Council of Europe Octopus Programme, Summary of the Organised Crime Situation Report 2004: Focus on the Threat of Cybercrime, Strausbourg, September 6, 2004, p. 48.

Instead of assuming stable personnel configurations that can persist for years, online criminal organization may incorporate the "swarming" model, in which individuals coalesce for a limited period of time in order to conduct a specific task, or set of tasks, and afterwards go their separate ways. The task of law enforcement could therefore become much more difficult. If cybercriminals evolve into the "Mafia of the moment" or the "cartel of the day," police will lose the advantage of identifying a permanent group of participants who engage in a set of routine illicit activities, and this will only contribute to the future success of organized cybercrime.[4906]

Federal Efforts to Protect Computers

The federal government has taken steps to improve its own computer security and to encourage the private sector to also adopt stronger computer security policies and practices to reduce infrastructure vulnerabilities. In 2002, the Federal Information Security Management Act (FISMA) was enacted, giving the Office of Management and Budget (OMB) responsibility for coordinating information security standards and guidelines developed by federal agencies.[4907] In 2003, the National Strategy to Secure Cyberspace was published by the Administration to encourage the private sector to improve computer security for the U.S. critical infrastructure through having federal agencies set an example for best security practices.[4908]

The National Cyber Security Division (NCSD), within the National Protection and Programs Directorate of the Department of Homeland Security (DHS) oversees a Cyber Security Tracking, Analysis and Response Center (CSTARC), tasked with conducting analysis of cyberspace threats and vulnerabilities, issuing alerts and warnings for cyberthreats, improving information sharing, responding to major cybersecurity incidents, and aiding in national-level recovery efforts. In addition, a new Cyber Warning and Information Network (CWIN) has begun operation in 50 locations, and serves as an early warning system for cyberattacks.[4909] The CWIN is engineered to be reliable and survivable, has no dependency on the

[4909] Bara Vaida, "Warning Center for Cyber Attacks is Online, Official Says," Daily Briefing, GovExec.com, June 25, 2003.

Internet or the public switched network (PSN), and reportedly will not be affected if either the Internet or PSN suffer disruptions.[4910]

In January 2004, the NCSD also created the National Cyber Alert System (NCAS), a coordinated national cybersecurity system that distributes information to subscribers to help identify, analyze, and prioritize emerging vulnerabilities and cyberthreats. NCAS is managed by the United States Computer Emergency Readiness Team (US-CERT), a partnership between NCSD and the private sector, and subscribers can sign up to receive notices from this new service by visiting the US-CERT website.[4911]

International Convention on Cybercrime

Cybercrime is also a major international challenge, even though attitudes about what comprises a criminal act of computer wrongdoing still vary from country to country. However, the Convention on Cybercrime was adopted in 2001 by the Council of Europe, a consultative assembly of 43 countries, based in Strasbourg. The Convention, effective July 2004, is the first and only international treaty to deal with breaches of law "over the internet or other information networks." The Convention requires participating countries to update and harmonize their criminal laws against hacking, infringements on copyrights, computer facilitated fraud, child pornography, and other illicit cyber activities.[4912]

Although the United States has signed and ratified the Convention, it did not sign a separate protocol that contained provisions to criminalize xenophobia and racism on the Internet, which would raise Constitutional issues in the United States.[4913] The separate protocol could be interpreted as requiring nations to imprison anyone guilty of "insulting publicly, through a computer system" certain groups of people based on characteristics such as race or ethnic origin, a requirement that could make it a crime to e-mail jokes about ethnic groups or question whether the Holocaust occurred. The Department of Justice has said that it would be unconstitutional for the United States to sign that additional

[4913] The U.S. Senate Committee on Foreign Relations held a hearing on the Convention on June 17, 2004. CRS Report RS21208, Cybercrime: The Council of Europe Convention, by Kristin Archick. Estelle Durnout, Council of Europe Ratifies Cybercrime Treaty, ZDNet, March 22, 2004, at [http://news.zdnet.co.uk/business/legal/0,39020651,39149470,00.htm].

protocol because of the First Amendment's guarantee of freedom of expression. The Electronic Privacy Information Center, in a June 2004 letter to the Foreign Relations Committee, objected to U.S. ratification of the Convention, because it would "create invasive investigative techniques while failing to provide meaningful privacy and civil liberties safeguards."[4914]

On August 3, 2006, the U.S. Senate passed a resolution of ratification for the Convention. The United States will comply with the Convention based on existing

U.S. federal law; and no new implementing legislation is expected to be required. Legal analysts say that U.S. negotiators succeeded in scrapping most objectionable provisions, thereby ensuring that the Convention tracks closely with existing U.S. laws.[4915]

The Need to Improve Cybersecurity

Department of Defense (DOD) officials have stated that, while the threat of cyber attack is "less likely" to appear than conventional physical attack, it could actually prove more damaging because it could involve disruptive technology that might generate unpredictable consequences that give an adversary unexpected advantages.[4916] The Homeland Security Presidential Directive 7 required that the Department of Homeland Security (DHS) coordinate efforts to protect the cybersecurity for the nation's critical infrastructure. This resulted in two reports in 2005, titled "Interim National Infrastructure Protection Plan," and "The National Plan for Research and Development in Support of Critical Infrastructure Protection", where DHS provided a framework for identifying and prioritizing, and protecting each infrastructure sector.

However, some observers question why, in light of the many such reports describing an urgent need to reduce cybersecurity vulnerabilities, there is not an apparent perceived sense of national urgency to close the gap between cybersecurity and the threat of cyberattack. For example, despite Federal Information Security Management Act of 2002 (FISMA), some experts argue that security remains a low priority, or is treated almost as an afterthought at some

[4916] Advantages of EA and CNA might derive from United States reliance on a computer-controlled critical infrastructure, along with unpredictable results depending on severity of the attack. Jason Sherman, "Bracing for Modern Brands of Warfare," Air Force Times, September 27, 2004, [http://www.airforcetimes.com/story.php?f=1-AIRPAPER-358727. php].

domestic federal agencies.[4917] In 2007, the Government Accountability Office issued a report, titled "Critical Infrastructure Protection: Multiple Efforts to Secure Control Systems Are Under Way, but Challenges Remain," which states that cybersecurity risks have actually increased for infrastructure control systems because of the persistence of interconnections with the Internet, and continued open availability of detailed information on the technology and configuration of the control systems. The report states that no overall strategy yet exists to coordinate activities to improve computer security across federal agencies and the private sector, which owns the critical infrastructure.[4918] Some observers argue that, as businesses gradually strengthen their security policies for headquarters and administrative systems, the remote systems that control critical infrastructure and manufacturing may soon be seen as easier targets of opportunity for cybercrime.

Cybercrime is obviously one of the risks of doing business in the age of the internet, but observers argue that many decision-makers may currently view it as a low-probability threat. Some researchers suggest that the numerous past reports describing the need to improve cybersecurity have not been compelling enough to make the case for dramatic and urgent action by decision-makers. Others suggest that even though relevant information is available, future possibilities are still discounted, which reduces the apparent need for present-day action. In addition, the costs of current inaction are not borne by the current decision-makers. These researchers argue that IT vendors must be willing to regard security as a product attribute that is coequal with performance and cost; IT researchers must be willing to value cybersecurity research as much as they value research for high performance or cost-effective computing; and, finally, IT purchasers must be willing to incur present-day costs in order to obtain future benefits.[4919]

Issues for Congress

Policy issues for cybercrime and cyberterrorism include a need for the following:

- increase awareness about changing threats due to the growing technical skills of extremists and terrorist groups;
- develop more accurate methods for measuring the effects of cybercrime;

[4917] Statement of James A. Lewis, Senior Fellow and Director, Technology and Public Policy Program, Center for Strategic and International Studies, Committee on House Oversight and Government Reform Subcommittee on Government Management, Organization, and Procurement, Subcommittee on Information Policy, Census, and National Archives, June 7, 2007.

[4919] Seymour Goodman and Herber Lin, editors, Toward a Safer and More Secure Cyberspace, Committee on Improving Cybersecurity Research in the United States, National Research Council, 2007, pp. 261-267, [http://books.nap.edu/openbook.php?isbn=030910 3959].

- help to determine appropriate responses by DOD to a cyberattack;
- examine the incentives for achieving the goals of the National Strategy to Secure Cyberspace;
- search for ways to improve the security of commercial software products;
- explore ways to increase security education and awareness for businesses and home PC users; and
- find ways for private industry and government to coordinate to protect against cyberattack.

Congress may also wish to consider ways to harmonize existing federal and state laws that require notice to persons when their personal information has been affected by a computer security breach, and that impose obligations on businesses and owners of that restricted information.[4920]

Growth in Technical Capabilities of Terrorists

Seized computers belonging to Al Qaeda indicate its members are becoming more familiar with hacker tools and services that are available over the Internet.[4921] Could terrorist groups find it advantageous to hire a cybercrime botnet tailored to attack specific targets, possibly including the civilian critical infrastructure of Western nations? Could cybercrime botnets, used strategically, provide a useful way for extremists to amplify the effects of a conventional terrorist attack using bombs?

As computer-literate youth increasingly join the ranks of terrorist groups, will cyberterrorism likely become increasingly more mainstream in the future? Will a computer-literate leader bring increased awareness of the advantages of an attack on information systems, or be more receptive to suggestions from other, newer computer-literate members? Once a new tactic has won widespread media attention, will it likely motivate other rival terrorist groups to follow along the new pathway?[4922]

Better Measurement of Cybercrime Trends

Experiences at CERT/CC show that statistical methods for measuring the volume and economic effects of cyberattacks may be questionable. Without sound statistical methods to accurately report the scope and effects of cybercrime,

government and legal authorities will continue to have unreliable measures of the effectiveness of their policies and enforcement actions.

Figures from several computer security reports now used for measuring annual financial losses to U.S. industry due to intrusions and cybercrime are believed by some observers to be limited in scope or possibly contain statistical bias.[4923] Is there a need for a more statistically reliable analysis of trends in computer security vulnerabilities and types of cyberattacks to more accurately show the costs and benefits for improving national cybersecurity? Congress may wish to encourage security experts to find more effective ways to collect data that will enable accurate analysis of trends for cyberattacks and cybercrime. Congress may also wish to encourage security researchers to find better ways to identify the initiators of cyberattacks.

DOD and Cyberattack Response

If a terrorist group were to use a cybercrime botnet to subvert computers in a third party country, such as China, to launch a cyberattack against the United States, the U.S. response to the cyberattack must be carefully considered, in order to avoid retaliating against the wrong entity. Would the resulting effects of cyberweapons used by the United States be difficult to limit or control? Would a cyberattack response that could be attributed to the United States possibly encourage other extremists, or rogue nations, to start launching their own cyberattacks against the United States? Would an attempt by the U.S. to increase surveillance of another entity via use of cyberespionage computer code be labeled as an unprovoked attack, even if directed against the computers belonging to a terrorist group? If a terrorist group should subsequently copy, or reverse-engineer a destructive U.S. military cyberattack program, could it be used against other countries that are U.S. allies, or even turned back to attack civilian computer systems in the United States?[4924] If the effects become widespread and severe, could the U.S. use of cyberweapons exceed the customary rules of military conflict, or violate international laws.[4925]

[4923] A well known source of information about the costs of cyberattacks is the annual computer security survey published by the Computer Security Institute (CSI), which utilizes data collected by the FBI. However, respondents to the CSI/FBI survey of computer security issues are generally limited only to CSI members, which may create statistical bias that affects the survey findings. Recently, CSI has also conceded weaknesses in its analytical approach and has suggested that its survey of computer security vulnerabilities and incidents may be more illustrative than systematic. However, the CSI/FBI survey remains useful despite its imperfect methodology. Bruce Berkowitz and Robert W. Hahn, "Cybersecurity: Who's Watching the Store?" Issues in Science and Technology, spring 2003.

[4924] See CRS Report RL31787, Information Warfare and Cyberwar: Capabilities and Related Policy Issues, by Clay Wilson.

[4925] The laws of war are international rules that have evolved to resolve practical problems relating to military conflict, such as restraints to prevent misbehavior or atrocities, and have not been

Commercial electronics and communications equipment are now used extensively to support complex U.S. weapons systems, and are possibly vulnerable to cyberattack. This situation is known to our potential adversaries.[4926] To what degree are military forces and national security threatened by computer security vulnerabilities that exist in commercial software systems, and how can the computer industry be encouraged to create new COTS products that are less vulnerable to cyberattack?

Incentives for the National Strategy to Secure Cyberspace

Does the National Strategy to Secure Cyberspace present clear incentives for achieving security objectives? Suggestions to increase incentives may include requiring that all software procured for federal agencies be certified under the "Common Criteria" testing program, which is now the requirement for the procurement of military software. However, industry observers point out that the software certification process is lengthy and may interfere with innovation and competitiveness in the global software market.[4927]

Should the National Strategy to Secure Cyberspace rely on voluntary action on the part of private firms, home users, universities, and government agencies to keep their networks secure, or is there a need for possible regulation to ensure best security practices? Has public response to improve computer security been

---

legislated by an overarching central authority. The United States is party to various limiting treaties. Sometimes the introduction of new technology tends to force changes in the understanding of the laws of war. Gary Anderson and Adam Gifford, "Order Out of Anarchy: The International Law of War," The Cato Journal, August 2004, vol. 15, no. 1, pp. 25-36.

[4926] Stanley Jakubiak and Lowell Wood, "DOD Uses Commercial Software and Equipment in Tactical Weapons," Statements before the House Military Research and Development Subcommittee, Hearing on EMP Threats to the U.S. Military and Civilian Infrastructure, October 7, 1999. House Armed Services Committee, Commission to Assess the Threat to the United States from Electromagnetic Pulse Attack, hearing, July 22, 2004.

[4927] Agencies operating national security systems are required to purchase software products from a list of lab-tested and evaluated products in a program run by the National Information Assurance Partnership (NIAP), a joint partnership between the National Security Agency and the National Institute of Standards and Technology. The NIAP is the U.S. government program that works with organizations in a dozen other countries around the world which have endorsed the international security-evaluation regimen known as the "Common Criteria." The program requires vendors to submit software for review in an accredited lab, a process that often takes a year and costs several thousand dollars. The review previously was limited to military national security software and equipment, however, the Administration has stated that the government will undertake a review of the program to "possibly extend" this software certification requirement to civilian agencies. Ellen Messmer, White House issue "National Strategy to Secure Cyberspace," Network World Fusion, February 14, 2003, at [http://www.nwfusion.com/news/2003/0214ntlstrategy.html].

slow partly because there are no regulations currently imposed?[4928] Would regulation to improve computer security interfere with innovation and possibly harm U.S. competitiveness in technology markets? Two of the former cybersecurity advisers to the president have differing views: Howard Schmidt has stated that market forces, rather than the government, should determine how product technology should evolve for better cybersecurity; however, Richard Clarke has stated that the IT industry has done little on its own to improve security of its own systems and products.[4929]

Improving Security of Commercial Software

Some security experts emphasize that if systems administrators received the necessary training for keeping their computer configurations secure, then computer security would greatly improve for the U.S. critical infrastructure. However, should software product vendors be required to create higher quality software products that are more secure and that need fewer patches? Could software vendors possibly increase the level of security for their products by rethinking the design, or by adding more test procedures during product development?

Education and Awareness of Cyberthreats

Ultimately, reducing the threat to national security from cybercrime depends on a strong commitment by government and the private sector to follow best management practices that help improve computer security. Numerous government reports already exist that describe the threat of cybercrime and make recommendations for management practices to improve cybersecurity.

A 2004 survey done by the National Cyber Security Alliance and AOL showed that most home PC users do not have adequate protection against hackers, do not

---

[4928] Business executives may be cautious about spending for large new technology projects, such as placing new emphasis on computer security. Results from a February 2003 survey of business executives indicated that 45% of respondents believed that many large Information Technology (IT) projects are often too expensive to justify. Managers in the survey pointed to the estimated $125.9 billion spent on IT projects between 1977 and 2000 in preparation for the year 2000 (Y2K) changeover, now viewed by some as a non-event. Sources reported that some board-level executives stated that the Y2K problem was overblown and over funded then, and as a result, they are now much more cautious about future spending for any new, massive IT initiatives. Gary H. Anthes and Thomas Hoffman, "Tarnished Image," Computerworld, May 12, 2003, vol. 37, no. 19, p. 37.

[4929] Howard Schmidt points out that major technology firms now promote anti-virus software and encourage better cybersecurity practices. He stresses that market forces are causing private industry to improve security of products. Martin Kady, "Cybersecurity a Weak Link in Homeland's Armor," CQ Weekly, February 14, 2005. Meanwhile, Richard Clarke, who initially opposed regulation during his tenure in the Clinton and Bush administrations, now states that the IT industry only reponds to improve security of its products when regulation is threatened. William Jackson, "To Regulate or Not to Regulate? That Is the Question," Government Computer News, February 26, 2005.

have updated antivirus software protection, and are confused about the protections they are supposed to use and how to use them.[4930] How can computer security training be made available to all computer users that will keep them aware of constantly changing computer security threats, and that will encourage them to follow proper security procedures?

Coordination Between Private Sector and Government

What can be done to improve sharing of information between federal government, local governments, and the private sector to improve computer security? Effective cybersecurity requires sharing of relevant information about threats, vulnerabilities, and exploits.[4931] How can the private sector obtain information from the government on specific threats which the government now considers classified, but which may help the private sector protect against cyberattack? And, how can the government obtain specific information from private industry about the number of successful computer intrusions, when companies resist reporting because they want to avoid publicity and guard their trade secrets?[4932] Should cybercrime information voluntarily shared with the federal government about successful intrusions be shielded from disclosure through Freedom of Information Act requests?

How can the United States better coordinate security policies and international law to gain the cooperation of other nations to better protect against a cyberattack? Pursuit of hackers may involve a trace back through networks requiring the cooperation of many Internet Service Providers located in several different nations.[4933] Pursuit is made increasingly complex if one or more of the nations involved has a legal policy or political ideology that conflicts with that of the United States.[4934]

[4930] A 2004 survey of 329 PC users revealed that most computer users think they are safe but lack basic protections against viruses, spyware, hackers, and other online threats. In addition, large majorities of home computer users have been infected with viruses and spyware and remain highly vulnerable to future infections. AOL and the National Cyber Security Alliance, "Largest In-home Study of Home Computer Users Shows Major Online Threats, Perception Gap," October 2004 at [http://www.staysafeonline.info/news/NCSAAOLIn-HomeStudyRelease.pdf].

[4934] In Argentina, a group calling themselves the X-Team, hacked into the website of that country's Supreme Court in April 2002. The trial judge stated that the law in his country covers crime against people, things, and animals but not websites. The group on trial was declared not guilty of breaking into the website. Paul Hillbeck, "Argentine Judge Rules in Favor of Computer

Thirty-eight countries, including the United States, participate in the Council of Europe's Convention on Cybercrime, which seeks to combat cybercrime by harmonizing national laws, improving investigative abilities, and boosting international cooperation. However, how effective will the Convention without participation of other countries where cybercriminals now operate freely? (For more on the Convention, see CRS Report RS21208, Cybercrime: The Council of Europe Convention, by Kristin Archick.)

Legislative Activity

H.R. 1525 — The Internet Spyware (I-SPY) Prevention Act of 2007, proposes penalties for unauthorized access to computers, or the use of computers to commit crimes. On May 23, 2007, this bill was received in the Senate and referred to the Committee on the Judiciary.

H.R. 1684 — The Department of Homeland Security Authorization Act for Fiscal Year 2008 establishes within the Department of Homeland Security an Office of Cybersecurity and Communications, headed by the Assistant Secretary for Cybersecurity and Communications, with responsibility for overseeing preparation, response, and reconstitution for cybersecurity and to protect communications from terrorist attacks, major disasters, and other emergencies, including large-scale disruptions.

The bill directs the Assistant Secretary to do the following:

- Establish and maintain a capability within the Department for ongoing activities to identify threats to critical information infrastructure to aid in detection of vulnerabilities and warning of potential acts of terrorism and other attacks.
- Conduct risk assessments on critical information infrastructure with respect to acts of terrorism.
- Develop a plan for the continuation of critical information operations in the event of a cyber attack.
- Define what qualifies as a cyber incident of national significance for purposes of the National Response Plan.
- Develop a national cybersecurity awareness, training, and education program that promotes cybersecurity awareness within the Federal Government and throughout the Nation.
- Consult and coordinate with the Under Secretary for Science and Technology on cybersecurity research and development to strengthen critical information infrastructure against acts of terrorism.

On May 11, 2007, this bill was referred to the Senate Committee on Homeland Security and Governmental Affairs.

Hackers," February 5, 2002, at [http://www.siliconvalley.com/mld/siliconvalley/news/editorial/3070194.htm].

H.R. 3221 — The New Direction for Energy Independence, National Security, and Consumer Protection Act proposes establishment of the Grid Modernization Commission to facilitate the adoption of Smart Grid standards, technologies, and practices across the Nation's electricity grid. The bill was passed in the House on August 4, 2007. On October 19, 2007, there was a unanimous consent request to consider H.R. 3221 in the Senate, but objection was heard.

H.R. 3237 — The Smart Grid Facilitation Act of 2007, proposes to modernize the Nation's electricity transmission and distribution system to incorporate digital information and controls technology. "Smart grid" technology functions will include the ability to detect, prevent, respond to, or recover from cyber-security threats and terrorism. The new Grid Modernization Commission is directed to undertake, and update on a biannual basis, an assessment of the progress toward modernizing the electric system including cybersecurity protection for extended grid systems. On August 24, 2007, the bill was referred to House subcommittee on Energy and Environment.

Summary

Modern means of communications, led by the Internet, provide a relatively inexpensive, open, easy-entry means of sharing ideas, information, pictures, and text around the world. In a political and human rights context, in closed societies when the more established, formal news media is denied access to or does not report on specified news events, the Internet has become an alternative source of media, and sometimes a means to organize politically.

The openness and the freedom of expression allowed through blogs, social networks, video sharing sites, and other tools of today's communications technology has proven to be an unprecedented and often disruptive force in some closed societies. Governments that seek to maintain their authority and control

the ideas and information their citizens receive are often caught in a dilemma: they feel that they need access to the Internet to participate in commerce in the global market and for economic growth and technological development, but fear that allowing open access to the Internet potentially weakens their control over their citizens.

Legislation now under consideration in the 111th Congress would mandate that U.S. companies selling Internet technologies and services to repressive countries take actions to combat censorship and protect personally identifiable information. Some believe, however, that technology can offer a complementary and, in some cases, better and more easily implemented solution to some of those issues. They argue that hardware and Internet services, in and of themselves, are neutral elements of the Internet; it is how they are implemented by various countries that is repressive. Also, Internet services are often tailored for deployment to specific countries; however, such tailoring is done to bring the company in line with the laws of that country, not with the intention of allowing the country to repress and censor its citizenry. In many cases, that tailoring would not raise many questions about free speech and political repression.

This report provides information regarding the role of U.S. and other foreign companies in facilitating Internet censorship by repressive regimes overseas. The report is divided into several sections:

- Examination of repressive policies in China and Iran,
- Relevant U.S. laws,
- U.S. policies to promote Internet freedom,
- Private sector initiatives, and
- Congressional action.

Two appendixes describe technologies and mechanisms for censorship and circumvention of government restrictions.

Introduction

In the late 1960s and 1970s, advancements in telecommunications technologies enabled the creation of a large-scale, interconnected network called ARPANET ("Advanced Research Projects Agency Network"). ARPANET was created by the Defense Advanced Research Projects Agency as a government-funded enterprise until the mid-1990s, when it began commercialization. Today's Internet is a direct outgrowth of the technologies developed and lessons learned from ARPANET. During the late 1990s, the Internet began having a significant impact on culture and commerce, including the exponential increase of near instant communication by electronic mail (e-mail), text-based discussion forums, and the graphical World Wide Web.

Today, the Internet has evolved even further and many people are using newer tools, such as blogs, social networks, video sharing sites, and other aspects of

today's communications technology to express their political ideals, many times in conflict with the political opinions and outlook espoused by their governments. In this way, the Internet has proven to be an unprecedented and often disruptive force in some closed societies, as the governments seek to maintain their authority and control the ideas and information their citizens receive. These regimes are often caught in a dilemma: they need the Internet to participate in commerce in the global market and for economic growth and technological development, but they also seek to restrict the Internet in order to maintain the government's control. Figure 3 illustrates an assessment by Freedom House[4935] of the extent to which selected countries restrict freedom on the Internet.

In Burma during the 2007 Saffron Revolution, YouTube footage, often filmed with cell phone cameras, conveyed to the world the human rights violations against the monks and generated international awareness and reaction. Demonstrations in Tehran following the June 12, 2009, presidential elections were often organized through Twitter and text messages over cell phones.

The Iranian government's violent response to the demonstrations was spread around the world through live cell phone pictures, e-mails, and phone calls. The Voice of America (VOA) reported that during the demonstrations, Iranians sent VOA over 300 videos a day, along with thousands of still pictures, e-mails, and telephone calls to the agency.[4936]

A variety of control mechanisms are employed by regimes seeking to limit the ways the Internet is used, ranging from sophisticated surveillance and censorship to threats of retaliation (which foster self-censorship) and actual harassment and arrests of Internet users. Such regimes often require the assistance of foreign Internet companies operating in their countries. These global technology companies find themselves in a dilemma. They often must choose between following the laws and the requests of authorities of the host country, or refusing to do so and risking the loss of business licenses or the ability to sell services in that country. Human rights groups have protested that Yahoo! and Google censor and remove material deemed sensitive by host governments on country-specific search engines.[4937] Microsoft is said to censor Chinese versions of its blog

platforms.[4938] Human rights groups also charge that Yahoo! has provided Chinese authorities personal identifying information about users that has allowed the government to identify and arrest individuals for statements made on the Web.[4939] A representative of Google, Inc. acknowledged the problem of government involvement, noting

> *As our ... Burma experiences indicate, our products are platforms for free expression, transparency, and accountability. Because of this, we often face efforts by governments throughout the world to restrict or deny access to our products.*[4940]

The Global Online Freedom Act of 2009 (GOFA) (H.R. 2271), introduced by Representative Christopher Smith, would mandate that companies selling Internet technologies and services to repressive countries take actions to combat censorship and protect personally identifiable information. Some believe, however, that technology can offer a complementary and, in some cases, better and more easily implemented solution to prevent government censorship. Hardware and Internet services, in and of themselves, are neutral elements of the Internet; it is how they are implemented by various countries that makes Internet access "repressive."

For example, hardware, such as routers, is needed to provide Internet service everywhere. However, hardware features intended for day-to-day Internet traffic management, conducted by Internet service providers (ISPs) and governments for benign purposes, can be misused. Repressive governments are able to use these features to censor traffic and monitor use— sometimes using them to identify specific individuals for prosecution. It is not currently feasible to remove those features from the product, even when sold to countries that use those features to repress political speech.[4941]

On the other hand, Internet services, such as Google, are often tailored for deployment to specific countries. Such tailoring is done to bring the company's products and services in line with the laws of that country, and not with the end goal of allowing the country to repress and censor its citizenry. In many cases, tailoring does not raise many questions about free speech and political repression because the country is not considered to be a repressive regime. Under Canadian

human rights law, for example, it is illegal to promote violence against protected groups; therefore, when reported, Google.ca will remove such links from search results.[4942]

Internet censorship and the prosecution of individuals who attempt to circumvent that censorship are unlikely to be eliminated in some countries. However, while some governments are continually looking for new and more thorough methods to restrict or inhibit Internet use, citizens in these countries are active in developing techniques to circumvent those efforts.

Examples of Countries Charged with Restricting Internet Freedom

The organization Reporters Without Borders has listed 15 countries where Internet freedom is restricted. These countries are China, Cuba, North Korea, Belarus, Myanmar, Egypt, Ethiopia, Iran, Saudi Arabia, Syria, Tunisia, Turkmenistan, Uzbekistan, Vietnam, and Zimbabwe.[4943] This report covers two of these countries, China and Iran, both of which have been in the news during 2009 and 2010.

China[4944]

The People's Republic of China (PRC) has the world's largest number of Internet users, estimated at 330 million people, including 70 million bloggers. It also has one of the most sophisticated and aggressive Internet censorship and control regimes in the world. According to some estimates, between 30 and 40 Chinese citizens are serving prison sentences for writing about politically sensitive topics online.[4945] In November 2009, Huang Qi, a human rights advocate, was sentenced to three years in prison for "possessing state secrets" after posting online appeals and complaints of families whose children had been killed in school buildings during the Sichuan earthquake of May 2008. Some studies show that the vast majority of Internet users in China do not view the medium as a political tool.[4946] Nonetheless, Chinese Internet users are able to access unprecedented amounts of information, despite government attempts to limit the

flow, while political activists and others continue to push back against restrictions and find ways to circumvent censorship.

PRC officials have argued that Internet controls are necessary for social stability and that new restrictions target pornography and other "harmful content."[4947] Chinese official commentary has suggested that the U.S. government has applied a double standard, regulating the Internet at home while calling for other countries to eliminate controls. The PRC government also has referred to

U.S. criticism of Internet restrictions in China as politically motivated and an interference in China's domestic affairs.[4948]

The PRC government employs a variety of methods to control online content and expression, including website blocking and keyword filtering; regulating and monitoring Internet service providers, Internet cafes, and university bulletin board systems; registering websites and blogs; and occasional arrests of high-profile "cyber dissidents" or crackdowns on Internet service providers.[4949] Some analysts argue that even though the PRC government cannot control all Internet content and use, its selective targeting creates an undercurrent of fear and promotes self-censorship. Blocked websites, social networking sites, and file sharing sites include Radio Free Asia, international human rights websites, many Taiwanese newspapers, Facebook, Twitter, and YouTube. The government reportedly has hired thousands of students to express pro-government views on websites, bulletin boards, and chat rooms.[4950] Furthermore, some analysts argue that the Internet has enhanced government propaganda and surveillance capabilities.

Nonetheless, the Internet has made it impossible for the Chinese government to restrict information as fully as before; bulletin boards, comment boards, chat rooms, blogs, and other outlets have allowed for an unprecedented amount of information and public comment on social and other issues. Although the state has the capability to block news of events or to partially shut down the Internet, as it did in Xinjiang following ethnic unrest that erupted there in July 2009, it often cannot do so before such events are publicized, if only fleetingly, online. The threat of public exposure or condemnation through the Internet reportedly

has compelled some government officials to conduct affairs more openly. For Chinese Internet users in search of censored information, circumventing government controls is often made possible by way of "proxy servers" or "virtual private networks" using special software.[4951] Furthermore, English language news sites, such as the New York Times and the Washington Post, are generally available.

U.S. Internet Companies, China, and Human Rights Issues

Some human rights activists and U.S. policy makers have expressed concern that U.S. Internet companies have sold Internet services or technologies to China that have assisted the PRC government in restricting information and communication and in monitoring and identifying Internet users. U.S. congressional committees and commissions have held hearings on the topics of global Internet freedom and the roles of U.S. Internet and technology companies in China's censorship regime. Some media watchdog groups and Members of Congress have maintained that some U.S. information technology companies, including Yahoo!, Microsoft, Google, and Cisco Systems, have provided willing, direct, sustained, or comprehensive support to PRC Internet censorship and political control efforts.[4952]

U.S. information technology companies have responded that they must abide by the laws of the countries in which they operate, and that they are not actively cooperating or collaborating with the PRC government or tailoring their products to suit PRC censorship requirements.[4953] These companies add that despite PRC censorship policies, they nonetheless are enlarging the volume of information

---

[4951] Such software is available internally and through foreign sources, including the U.S. government.

[4953] Cisco's general counsel argued that Cisco does not customize its equipment for China; filtering technologies that are intrinsic to Cisco products cannot feasibly be eliminated; Cisco has a written code of conduct that aims to prevent the modification of its products in foreign countries in such as way as to undermine human rights; and Cisco complies with all U.S. government regulations or export controls that restrict the sale of high tech products and crime detection equipment. See Anne Broache, "Senators Weigh New Laws over China Online Censorship," news.cnet.com, May 20, 2008; Mark Chandler, Cisco Systems, Testimony before the Senate Committee on the Judiciary, Subcommittee on Human Rights and the Law, May 20, 2008; Mark Chandler, Cisco Systems, Testimony before the Subcommittee on Africa, Global Human Rights and International Operations and the Subcommittee on Asia and the Pacific of the Committee on International Relations, February 15, 2006.

available in China and other Internet-restricting countries, and can better press for freedom of expression and protection of privacy while located in these countries. They also claim that Chinese and other Asian and European competitors would fill the void in providing Internet services and technology in their absence. Furthermore, some Chinese experts have suggested that overall, the Internet, including foreign involvement, has created greater political freedom, despite the ongoing battle against growing PRC government attempts to control it.[4954]

Yahoo!

Yahoo! has been blamed for complicity in the arrests of at least four Chinese Internet users by providing their e-mail account information to PRC authorities. In the most high-profile case, in 2004, Yahoo!'s Hong Kong office was accused of having provided information about the identity of a Chinese journalist and Yahoo! e-mail account holder, Shi Tao. Shi reportedly had forwarded information about state policy regarding the 15th anniversary of the Tiananmen demonstrations via his Yahoo! e-mail account to an overseas democracy group.[4955] In March 2005, a PRC court sentenced Shi to 10 years in prison for "leaking state secrets." In August 2005, Yahoo! bought a 39% stake in China's Alibaba Group, a Chinese Internet service provider, and turned over its PRC operations to the Chinese company.

Microsoft

In 2005, Microsoft shut down the MSN Spaces site of Chinese political blogger Zhao Jing (a.k.a. Michael Anti) at the request of the PRC government, after Zhao had expressed support in his blog for a boycott of Beijing News following the firing of one of its editors. Human rights activists also criticized Microsoft for blocking words such as "democracy" from MSN Spaces. Microsoft was China's leading blog service provider at the time and remains one of the most popular. Recently, Microsoft also has been accused of cooperating with China's censorship policies in the development of its new Bing search engine.[4956]

Google

Google's activities in China have reflected an attempt by the company to comply with PRC policies while limiting the company's role in censorship. Google's

[4956] Christine Chiao, "Microsoft Erases Anti-Blog," AsiaMedia, January 17, 2006.

Chinese search engine, Google.cn, reportedly is the second-most widely used information-gathering service in China after that of Baidu, a Chinese company, and is the least censored, according to one study.[4957] Google.cn provides a message stating that a website is unavailable due to "local laws, regulations, and policies," suggesting to the user that additional information exists, but that the government has closed access to that site. In 2006, Google reportedly moved its search records outside of the PRC in order to prevent the government from accessing the data without the company's consent, and does not host Gmail and Blogger services in China as a measure to protect the privacy of Chinese account holders.[4958]

Ever since it entered the China market in 2005, Google and the PRC government have clashed over censorship and other issues, although the company has complied with Chinese laws in principle. In June 2009, China's Foreign Ministry accused the Internet company of violating PRC law and enabling Chinese Internet users to access "vulgar content." Google's Chinese service was disrupted for a few days, which some analysts viewed as the Chinese government response to Google's apparent resistance to abide by new censorship edicts.[4959] Chinese writers accused Google of copyright infringement after the company began publishing their works in its online library, Google Books.[4960] In October 2009, the People's Daily, the state's premier newspaper, accused Google of blocking its stories of the dispute.

Cisco Systems

Cicso Systems, Juniper Networks, Nortel of Canada, and Alcatel of France reportedly were involved in upgrading China's Internet infrastructure, filtering, and surveillance systems earlier this decade. According to some reports, Cisco Systems sold several thousand routers to China, which helped to facilitate the PRC government's censorship of Internet content and monitoring of Internet

---

[4957] Google's Chinese service, with roughly 80 million customers and 30 million Gmail accounts, has captured 20%-30% of the PRC market, compared to Baidu, which has over 60%. users.[4961] According to other reports, Cisco sold technology to China's police force that can be used in the collection and use of data regarding personal background and imaging information, Web browsing history, and e-mail.[4962]

The Continuing Battle Between Censorship and Freedom of Information

The PRC government has displayed a growing nervousness about the Internet's influence on Chinese society and politics, but it has been reluctant to provoke the ire of China's online population or to reduce the attractiveness of China's business environment for foreign investors. In June 2009, the PRC government issued a directive requiring "Green Dam Youth Escort" software, designed to prevent children from accessing "harmful content," such as pornography, on all Chinese computers sold after July 1, 2009, including those imported from abroad. Many Chinese Internet users, international human rights activists, foreign governments, chambers of commerce, and information technology manufacturers openly opposed the policy, arguing that the software would undermine computer operability, that it could be used to expand censorship to include political content, and that it could incorporate pirated software and weaken Internet security.[4963] On June 30, 2009, the PRC government announced that mandatory installation of the software would be delayed for an indefinite period. On August 14, 2009, Minister of Industry and Information Technology Li Yizhong stated that the directive had created misunderstandings and that, "We will listen to the public's views before issuing a new directive on Green Dam."[4964]

Following the aborted launch of "Green Dam," the PRC government has continued to tighten controls over Internet content and use, but in a quieter manner. In September 2009, PRC authorities issued requirements that new users register their true identities. This regulation reportedly has not been well enforced; however, the government can still track down individuals through their IP addresses. In December 2009, new restrictions aimed at cracking down on pornography, media piracy, and threats to national security and stability resulted in the closing of hundreds of websites, many of them entertainment-oriented. Furthermore, the China Internet Network Information Center announced that individuals could no longer apply for ".cn" domain names (China's country code),

[4964] "Green Dam Launch 'Not Handled Well'," http://www.chinaview.cn, August 14, 2009.

which it would now limit to registered business enterprises. Some observers argued that these policies could dampen the richness and vibrancy of Internet content and activity in China, as well as provoke a public backlash.[4965] On October 15, 2009 (Internet Human Rights Day), 15 Chinese intellectuals issued a Declaration of Internet Human Rights calling for freedom of opinion, speech, and publication online.[4966]

Google and Cyber Attacks

In January 2010, Google threatened to cease censoring its Chinese search engine or to pull out of China. The company asserted that, in December 2009, Chinese hackers had attacked its Gmail service and corporate network as well as the computer systems of many other large U.S. corporations in the PRC.[4967] Hackers appeared to have targeted the Gmail accounts of Chinese human rights activists; the intellectual property, including "source codes" or programming languages, of Google and other companies; and information on U.S. weapons systems. In a statement, Google's chief legal officer announced that the company would no longer censor results on Google.cn, even if that meant having to shut down the search engine, and potentially its offices in China.[4968] Yahoo!, which was also hit by Chinese hackers, expressed support for Google's actions, thereby provoking an angry response by its PRC partner, Alibaba.

Chinese discussion boards and micro-blog postings indicated that a small majority of China's online population—and perhaps a large majority of its most active Internet users—wanted Google to stay in China, with some supporting Google's challenge to the PRC government. A significant minority adopted a pro-government stance or interpreted Google's move as profit-oriented.[4969] According

to some analysts, although China has huge potential, the company currently earns an estimated $300 million to $400 million from its China operations, a "tiny fraction" of its $22 billion in sales worldwide.[4970]

While visiting Shanghai during his state visit to China in November 2009, President Barack Obama expressed support of unrestricted Internet access and disapproval of censorship. On January 21, 2010, in a policy speech on Internet freedom, Secretary of State Hillary Clinton urged U.S. Internet companies to oppose censorship in their overseas operations and announced that the Global Internet Freedom Taskforce (GIFT) would be reinvigorated. She also called upon the PRC government to conduct a thorough investigation of the December 2009 cyberattacks upon U.S. companies in China and to make its results transparent. Beijing denied involvement in the attacks and defended its Internet policies. The Foreign Ministry stated that foreign companies, including Google, "should respect the laws and regulations, respect the public interest of Chinese people and China's culture and customs and shoulder due social responsibilities."[4971]

Iran[4972]

The Iranian government has restricted Internet usage since access spread beyond universities and government agencies to the general population in the late 1990s. Today, Iran has an estimated 23 million Internet users,[4973] and watchdog groups and Internet activists claim that Iran's filtering and monitoring of usage is among the most extensive in the world. Additional information about Iran's Internet policies is available from the U.S. Department of State in its annual report, *2008 Country Reports on Human Rights Practices*.

The Iranian government tracks online communication and content through a centralized location in the state's telecommunications monopoly, the Ministry of Communications and Information Technology (MCIT). In addition to its 23 million Internet users, the Persian blogosphere is among the world's most robust. The status of Internet sites and blogs remains contested under Iranian law, but

[4972] Prepared by Casey Addis, Analyst in Middle Eastern Affairs, 7-0846.

[4973] "ITU Internet Indicators 2008," International Telecommunications Union, http://www.itu.int/ITU-D/icteye/Reporting/ShowReportFrame.aspx?ReportName=/WTI/InformationTechnologyPublic&RP_intYear=2008&RP_intLanguageID=1.

the Press Law does require that bloggers obtain licenses, and all content on websites and blogs is subject to approval of the Ministry of Culture and Islamic Guidance (MCIG). The government also regulates access to the Internet by limiting the speed of Internet access that ISPs can provide to households and public access sites (Internet cafes) to 128 kilobytes per second, making it difficult or impossible to download multimedia content. Iran reportedly is the only country to have imposed a cap on Internet access speed for households.[4974] Iran also has arrested numerous activists, bloggers, and journalists on charges of "antigovernment publicity," "propaganda against the Islamic Republic," and "jeopardizing national security."[4975]

The government has disabled the Internet altogether in the past, usually during elections, but some observers argue that improvements in monitoring and filtering technologies have made such measures unnecessary and even enabled the government to use the Internet to disseminate disinformation and pro-government content. Following the disputed 2009 presidential election, the Internet was reportedly slow but accessible. The number of detentions of Internet activists and bloggers increased during the post-election unrest, arguably demonstrating the extent of government filtering and monitoring of usage. The post-election crackdown on Internet freedom raised concerns that Iran's human rights abuses were being aided by Western technology companies. Others said the concerns were being overstated, asserting that Iran also develops its own filtering and monitoring technologies.

The Nokia Siemens Network (NSN)[4976] sold communication monitoring equipment to the Iranian government in 2008.[4977] The monitoring center, installed into the MCIT gateway, was part of a larger contract with Iran that included mobile phone network technology. The Iranian government had reportedly experimented with the monitoring equipment prior to the election, but did not use it extensively until after the election. Some experts have argued that the nature of the content inspection happening in Iran since the election goes beyond the practices of other countries, including China.[4978]

[4974] "Speed Reduced for High Speed Internet in Iran," BBC Persian, October 20, 2006.

[4975] See the U.S. State Department "2008 Human Rights Report: Iran," http://www.state.gov/g/drl/rls/hrrpt/2008/nea/ 119115.htm.

[4976] NSN is a joint venture between the Finnish cell phone maker Nokia and the German company Siemens.

[4978] See Christopher Rhoads and Loretta Chao, "Iran's Web Spying Aided by Western Technology," Wall Street Journal, June 22, 2009.

NSN maintains that it sold the technology for the purpose of "lawful intercept" of information used to track criminals and terrorists.[4979] Critics argue that in a country like Iran, where the population is heavily reliant on Internet communication with the outside world due to censorship of other communication, this technology enables the government to intensify repression.[4980]

U.S. Law and Internet Freedom Abroad[4981]

In response to laws and regulations of foreign countries requiring censorship and disclosure of users' personal information, some U.S. technology firms engage in Internet censoring and filtering. Some examples include China and other Internet-restricting countries such as Iran. In some cases, such as in Iran, Internet censoring and filtering reportedly involve a practice often called deep packet inspection which is under a great deal of scrutiny in the United States.[4982] Doing business in a foreign country subjects the business to the jurisdiction of that country.[4983] Nonetheless, concerns have been raised that China's Internet filtering could run afoul of world trade obligations.[4984]

U.S. Policy for the Promotion of Internet Freedom Abroad[4985]

The importance of Internet freedom to the United States was declared in 2006. During an explanation of that year's State Department 2006 Country Reports on Human Rights Practices, then-Under Secretary of State for Democracy and Global Affairs Paula J. Dobriansky explained that the 2006 reports included new, additional focus on "the extent to which internet access is available to and used

[4982] Deep Packet Inspection ("DPI") is a computer network packet filtering technique that involves the inspection of the contents of data packets as they are transmitted across the network.

[4983] Many foreign countries have privacy laws that may be applicable to Internet Service Providers, websites, etc. See Morrison & Foerster's Privacy Library for the text of privacy laws in other countries, in the U.S., and for multinational organizations, http://www.mofoprivacy.com/default.aspx?tabNum=2.

[4984] See Andrew Noyes, "Chinese Demands for Web Filtering Software Cause a Stir," CongressDailyAM, June 25, 2009; Tim Wu, "The World Trade Law of Censorship and Internet Filtering," Chi. J. Int'l L., vol. 7 (2006-07).

[4985] Prepared by Kennon H. Nakamura, Analyst in Foreign Affairs, 7-9514.

by citizens in each country and … whether governments inappropriately limit or block access to the internet or censor websites."[4986] This was added as an area of concern because the internet is playing a growing role in people's ability to freely express themselves and in the free flow of information. In discussing this new area of focus, then-Under Secretary Dobriansky said,

> *We will continue to defend internet freedom, including by addressing internet repression directly with the foreign governments involved and seeking to persuade foreign officials that restricting internet freedom is contrary to their own interests and that of their countries. The new information in this year's reports will make an important contribution.*[4987]

At this same time, then-Secretary of State Condoleezza Rice also established the Global Internet Freedom Task Force (GIFT) in order to provide a U.S. foreign policy response to violations of Internet freedom by repressive regimes around the world.[4988]

Secretary of State Hillary Rodham Clinton, in a January 21, 2010, speech, stated that Internet freedom is a central part of U.S. foreign policy. She stated that Internet freedom is more than a question of information freedom, it is about the nature of the world we want to inhabit. Clinton further stated: "It's about whether we live on a planet with one Internet, one global community, and a common body of knowledge that benefits and unites us all, or a fragmented planet in which access to information and opportunity is dependent on where you live and the whims of censors."[4989]

In her remarks, Secretary Clinton placed the United States on the side of a single Internet where everyone has equal access to knowledge and ideas. She noted that blogs, e-mails, social networks, and text messages are opening up a new virtual town square where citizens can go to criticize their governments and exchange ideas. U.S. responsibility to support this new "town square" is not new but can be found in the First Amendment of the U.S. Bill of Rights ensuring freedom of speech, assembly, and religion. Secretary Clinton argued that these principles

[4986] Under Secretary of State for Democracy and Global Affairs Paula Dobriansky, AOn-The-Record Briefing on the State Department=s 2006 Country Reports on Human Rights Practices,@ Washington, March 6, 2007, http://www.state.gov/g/ drl/rls/rm/2007/81468.htm.

[4987] Ibid.

[4988] U.S. Mission to the United Nations in Geneva, "Secretary of State Establishes New Global Internet Freedom Task Force," press release, February 14, 2006, http://geneva.usmission.gov/Press2006/02141InternetTaskForce.html.

[4989] Secretary of State Hillary Rodham Clinton, "Remarks on Internet Freedom," January 21, 2010, http://www.state.gov/ secretary/rm/2010/01/135519.htm.

were reaffirmed in President Franklin Roosevelt's "The Four Freedoms" speech,[4990] and in the work of the United States and its support of the Universal Declaration of Human Rights.

Secretary Clinton further explained that U.S. foreign policy is premised on the idea that no country stands to benefit more than the United States when there is cooperation among peoples and states. No country shoulders a heavier burden than the United States when conflict and misunderstanding make the international system unstable, and force people and countries apart. She stated that it is important that the United States seizes the opportunities that come with interconnectivity and work for a world in which access to networks and information brings people closer together and expands the definition of the global community.

Secretary Clinton continued the GIFT and its responsibilities. The Task Force is co-chaired by the Under Secretaries of State for Democracy and Global Affairs and for Economic, Business, and Agricultural Affairs and draws on the State Department's multidisciplinary expertise in its regional and functional bureaus to work on issues such as international communications, human rights, democratization, business advocacy and corporate social responsibility, and country specific concerns. The task force supports Internet freedom by[4991]

- monitoring Internet freedom and reporting in its annual Country Reports on Human Rights Practices the quality of Internet freedom in each country around the world;
- responding in both bilateral and international fora to support Internet freedom; and
- expanding access to the Internet with greater technical and financial support for increasing availability of the Internet in the developing world.

In advancing Internet freedom as an objective of U.S. foreign policy, Secretary Clinton proposed a number of key initiatives:[4992]

- Continue the work of the State Department's GIFT as it oversees U.S. efforts in more than 40 countries to help individuals circumvent politically motivated censorship by developing new tools and providing the training needed to safely access the Internet;

[4990] On January 6, 1941, President Franklin Roosevelt addressed Congress saying that "we look forward to a world founded upon four essential human freedoms." These essential freedoms, which he referred to as the "Four Freedoms" are (1) freedom or speech and expression, (2) freedom of religion, (3) freedom from want, and (4) freedom from fear.

[4991] The GIFT Strategy is available online at http://2001-2009.state.gov/g/drl/rls/78340.htm.

[4992] Hillary Rodham Clinton, "Remarks on Internet Freedom," op. cit.

- Make Internet freedom an issue at the United Nations and the U.N. Human Rights Council in order to enlist world opinion and support for Internet Freedom;
- Work with new partners in industry, academia, and non-governmental organizations to establish a standing effort to advance the power of "connection technologies" that will empower citizens and leverage U.S. traditional diplomacy;
- Provide new, competitive grants for ideas and applications that help break down communications barriers, overcome illiteracy, and connect people to servers and information they need;
- Urge and work with U.S. media companies to take a proactive role in challenging foreign governments' demands for censorship and surveillance; and
- Encourage the voluntary work of the communications-oriented, private sector-led Global Network Initiative (GNI). The GNI brings technology companies, nongovernmental organizations, academic experts, and social investment funds together to develop responses and mechanisms to government requests for censorship.

To fund U.S. efforts in support of Internet freedom, Congress in FY2008 appropriated $15 million, most of which has been spent or is obligated. Another $5 million was appropriated in FY2009. Finally, in Secretary Clinton's January 21 speech, she spoke of an additional $15 million for FY2010 that has been allocated from State Department appropriations to a range of programs that, in full or in part, support Internet freedom. Assistant Secretary for Democracy, Human Rights, and Labor Michael Posner describes these programs as "not just circumvention.... [I]t's a lot about training people.... It's some about technology. It's some about encouraging groups that are in danger. It's a lot about diplomacy, too, for us getting out there and being sure that when groups are in trouble, we provide a lifeline."[4993]

The U.S. Broadcasting Board of Governors' International Broadcasting Bureau also supports counter-censorship technologies and has committed approximately $2 million per year to help enable Internet users in repressive regimes to have access to the VOA and other U.S. governmental and non-governmental websites and to receive VOA e-mail newsletters.

Some observers have expressed concerns that there could be serious negative consequences for U.S. and foreign companies, and U.S. or foreign nationals working or living in countries with repressive regimes, if they follow the expanded U.S. policy supporting Internet freedom. These commenters point out

---

[4993] Assistant Secretary of State for Democracy, Human Rights, and Labor Michael H. Posner, "Briefing on Internet Freedom and 21st Century Statecraft," January 22, 2010, http://www.state.gov/g/drl/rls/rm/2010/134306.htm.

that repressive governments could punish or make an example of an individual or company for not following the dictates of that country. Such actions could include harassment, lifting of business licenses, confiscation of assets, or imprisonment. These observers question what powers, beyond expressing U.S. displeasure through official demarches and public statements or through negotiations, that the United States may have to respond to such actions.[4994]

Congressional Action

In 2010, Congress has taken steps to address ongoing concerns about ensuring the free and secure flow of information over the Internet:

- On March 10, 2010, the House Committee on Foreign Affairs conducted a hearing, "The Google Predicament: Transforming U.S. Cyberspace Policy to Advance Democracy, Security, and Trade," on the December 2009 Chinese cyber attacks on Google and other U.S. companies, to consider policy tools to address Internet freedom, trade, and cyber security issues;
- On March 9, 2010, Representatives David Wu and Christopher Smith announced the formation of the House Global Internet Freedom Caucus; and
- The Senate Judiciary Committee, Subcommittee on Human Rights and the Law, held a hearing on March 2, 2010, entitled "Global Internet Freedom and the Rule of Law, Part II" to examine human rights, corporate responsibility, and other issues related to Internet censorship around the world.

The Global Network Initiative: Private Sector Support of Internet Freedom[4995]

The Global Network Initiative (GNI) was formed in October 2008 to respond to criticism of Internet service providers and computer manufacturers who had sold technology or services to Internet-restricting countries.[4996] GNI was launched by a coalition of human rights organizations, academics, investors and technology leaders. GNI adopts a self-regulatory approach to protect and advance individuals' rights to free expression and privacy on the Internet. A set of principles and supporting mechanisms provide guidance to the information and communications technology (ICT) industry and its stakeholders on how to protect and advance the human rights of freedom of expression and privacy when

[4994] Questions following Secretary of State Hillary Clinton's Remarks on Internet Freedom, January 21, 2010, http://www.state.gov/secretary/rm/2010/01/135519.htm, and questions following Assistant Secretary of State Michael Posner's "Briefing on Internet Freedom and 21st Century Statecraft," January 22, 2010, http://it.tmcnet.com/news/2010/ 01/26/4590599.htm.

[4995] Originally prepared by Gina Stevens, Legislative Attorney, 7-2581.

[4996] See http://www.globalnetworkinitiative.org/.

faced with pressures from governments to take actions that infringe upon these rights.

Governments are not members of the GNI, but are encouraged to support the principles and encourage their adoption. Organizations participating in the GNI include Google Inc., Microsoft Corp., and Yahoo! Inc. Each initial participating company committed $100,000 per year over the two-year start-up period. Organizations not participating in the initiative who where involved in its development include Amnesty International and Reporters Without Borders. Reporters Without Borders remains skeptical about how much change GNI can effect, and pushed for standards that would require all government requests and takedown notices be made in writing.

The GNI's Principles on Freedom of Expression and Privacy ("the Principles") are based on internationally recognized laws and standards for human rights, including the Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR) and the International Covenant on Economic, Social, and Cultural Rights.

The GNI acknowledges that the rights of privacy and of freedom of expression should not be restricted by governments, except in narrowly defined circumstances based on internationally recognized laws or standards. The Implementation Guidelines ("The Guidelines") of the GNI provide guidance to ICT companies on how to implement the Principles, and describe the actions that constitute compliance.

With respect to government demands to remove or limit access to content or restrict communications, participating companies commit to encourage governments to

- be specific, transparent, and consistent in the demands issued to restrict freedom of expression online;
- encourage government demands that are consistent with international laws and standards;
- require governments to follow local legal processes, interpret government demands so as to minimize the negative effect, when required to restrict communications or remove content; and
- interpret the governmental authority's jurisdiction to minimize the negative effect.

Participating companies commit to operate in a transparent manner when required to remove content or restrict access, and must disclose to users the applicable laws and policies requiring such action, the company's policies for responding to government demands, and provide timely notice to users when access to content has been locked or communications limited due to government restrictions. With respect to privacy, participating companies commit to assess

the human rights risks associated with the collection, storage, and retention of personal information and to develop mitigation strategies.

A system of independent third-party assessment of company compliance with the Principles and Implementation Guidelines will be phased in over three stages:

- In Phase One (ends December 2010) each participating company establishes internal policies and procedures to implement the Principles, and the Board approves independence and competence criteria for the selection of independent assessors.
- In Phase Two (2011) independent assessors will conduct process assessments of each participating company to review and evaluate their internal systems for implementing the Principles.
- In Phase Three (January 2012 onwards) the Board will accredit independent assessors to review the internal systems of companies, and company responses to specific government demands implicating freedom of expression or privacy. Each participating company will submit an annual report to the Organization. The assessors will prepare reports explaining each company's responses to government demands, evaluating the effectiveness of the company's responses. Each company will be given the opportunity to respond to the assessor's draft and final report. The Board of the Organization will assess whether the company is in compliance with the Principles and its determination will be made public. The Board of the Organization will publish an annual report assessing each participating company's compliance with the Principles.

Recent Legislative Action[4997]

Public Laws

H.R. 2647, National Defense Authorization Act for Fiscal Year 2010. Introduced by Representative Skelton (by request), referred to the House Armed Services Committee. Enacted October 28, 2009, P.L. 111-84.

Title XII: Matters Relating to Foreign Nations

Subtitle D: VOICE Act -Victims of Iranian Censorship Act or VOICE Act

(Sec. 1242) Expresses the sense of the Senate in support of the universal values of freedom of speech, the press, and expression as it pertains to the people of Iran, and condemns acts of censorship, intimidation, and other restrictions on such freedom in Iran.

[4997] Legislative summaries are taken directly from the Legislative Information Service of the Library of Congress.

(Sec. 1243) States that it shall be the policy of the United States to (1) support freedom of the press, speech, expression, and assembly in Iran; (2) support the Iranian people as they seek, receive, and impart information and promote ideas in writing, print, and through other media; (3) discourage businesses from aiding efforts to interfere with the ability of the Iranian people to access or share information or otherwise infringe upon such freedoms; and (4) encourage the development of technologies that facilitate efforts of the Iranian people to share such information, exercise such freedoms, and engage in Internet-based education programs and other exchanges between U.S. citizens and Iranians.

(Sec. 1244) Authorizes appropriations for the (1) International Broadcasting Operations Fund to expand Farsi language programming and to disseminate accurate and independent information to the Iranian people through radio, television, Internet, cellular telephone, short message service, and other communications; and (2) Broadcasting Capital Improvements Fund to expand transmissions of Farsi language programs to Iran.

(Sec. 1245) Establishes in the Treasury the Iranian Electronic Education, Exchange, and Media Fund to support the development of technologies that will aid the Iranian people in exchanging information and exercising freedom of speech, expression, and assembly. Authorizes appropriations to the Fund.

(Sec. 1246) Directs the President to report annually to Congress on the use of funds authorized under this Subtitle.

(Sec. 1247) Requires the President to (1) direct the appropriate officials to examine claims that non-Iranian companies have provided hardware, software, or other forms of assistance to the government of Iran that has furthered its efforts to filter online political content, disrupt cell phone and Internet communications, and monitor the online activities of Iranian citizens; and (2) report study results to Congress.

(Sec. 1248) Authorizes appropriations to the Secretary of State to document, collect, and disseminate information about human rights in Iran, including abuses since the Iranian presidential election on June 12, 2009.

Bills and Resolutions in the House of Representatives

H.R. 2271, *Global Online Freedom Act of 2009*. Introduced by Representative Christopher Smith and referred to the House Committee on Foreign Affairs; and the House Committee on Energy and Commerce.

Makes it U.S. policy to (1) promote the freedom to seek, receive, and impart information and ideas through any media; (2) use all appropriate instruments of U.S. influence to support the free flow of information without interference or discrimination; and (3) deter U.S. businesses from cooperating with Internet-restricting countries in effecting online censorship.

Expresses the sense of Congress that (1) the President should seek international agreements to protect Internet freedom; and (2) some U.S. businesses, in assisting foreign governments to restrict online access to U.S.-supported websites and government reports and to identify individual Internet users, are working contrary to U.S. foreign policy interests.

Amends the Foreign Assistance Act of 1961 to require assessments of electronic information freedom in each foreign country.

Establishes in the Department of State the Office of Global Internet Freedom (OGIF).

Directs the Secretary of State to annually designate Internet-restricting countries. Prohibits, subject to waiver, U.S. businesses that provide to the public a commercial Internet search engine, communications services, or hosting services from locating, in such countries, any personally identifiable information used to establish or maintain an Internet services account.

Requires U.S. businesses that collect or obtain personally identifiable information through the Internet to notify the OGIF and the Attorney General before responding to a disclosure request from an Internet-restricting country. Authorizes the Attorney General to prohibit a business from complying with the request, except for legitimate foreign law enforcement purposes.

Requires U.S. businesses to report to the OGIF certain Internet censorship information involving Internet-restricting countries.

Prohibits U.S. businesses that maintain Internet content hosting services from jamming U.S.supported websites or U.S.-supported content in Internet-restricting countries.

Authorizes the President to waive provisions of this act: (1) to further the purposes of this act; (2) if a country ceases restrictive activity; or (3) if it is the national interest of the United States.

H.R. 4784,[4998] Internet Freedom Act of 2010. Introduced by Representative Wu and referred to the House Science and Technology Committee, Subcommittee on Research and Science Education.

Directs the National Science Foundation to establish the Internet Freedom Foundation governed by a board of 12 members, with equal representation from

---

[4998] This bill is a substitute for H.R. 4595.

government, academia, and the private sector. The Internet Freedom Foundation shall—

- Award competitive, merit-reviewed grants, cooperative agreements, or contracts to private industry, universities, and other research and development organizations to develop deployable technologies to defeat Internet suppression and censorship; and
- Award incentive prizes to private industry, universities, and other research and development organizations that successfully develop deployable technologies to defeat Internet suppression and censorship.

The Internet Freedom Foundation shall be funded by such sums as may be necessary.

H.Res. 590, *Expressing grave concerns about the sweeping censorship, privacy, and cybersecurity implications of China's Green Dam filtering software, and urging U.S. high-tech companies to promote the Internet as a tool for transparency, freedom of expression, and citizen empowerment around the world*. Introduced by Representative Wu and referred to the House Committee on Foreign Affairs.

Expresses (1) grave concerns about the sweeping censorship, privacy, and cybersecurity implications of China's Green Dam filtering software; and (2) support for the Chinese people in their quest for Internet freedom and free expression.

Calls on (1) the Chinese government to rescind its requirement for Green Dam to be preinstalled on all new computers; and (2) U.S. high-tech companies to promote the Internet as a tool for transparency, freedom of expression, and citizen empowerment around the world.

H.Res. 672, Calling on the Government of the Socialist Republic of Vietnam to release imprisoned bloggers and respect Internet freedom. Introduced by Representative Sanchez and referred to the House Committee on Foreign Affairs. Passed on October 21, 2009.

Supports the right of the citizens of the Socialist Republic of Vietnam to access websites of their choosing and to have the freedom to share and publish information over the Internet.

Calls on Vietnam to (1) repeal Circular 07, Article 88, and similar statutes that restrict the Internet, so as to be in line with the International Covenant on Civil and Political Rights, to which Vietnam is a signatory; (2) become a responsible member state of the international community by respecting individuals' freedom of speech, freedom of press, and freedom of political association; and (3) release all political prisoners, including but not limited to 18 named bloggers and cyber activists.

Appendix A. Technologies Used to Monitor and Censor Web Sites and Web-Based Communications[4999]

Key-Word List Blocking

This is a simple type of filtration where a government drops any Internet packets featuring certain keywords, such as "protest" or "proxy."

Domain Name System (DNS) Poisoning

DNS poisoning intentionally introduces errors into the Internet's directory service to misdirect the original request to another IP address.

IP Blocking

IP Blocking is one of the most basic methods that governments use for censorship, as it simply prevents all packets going to or from targeted IP addresses. This is an easy technology to implement, but it does not address the problem of individual communications between users. This method is used to block banned websites, including news sites and proxy servers that would allow access to banned content, from being viewed.

Bandwidth Throttling

Bandwidth throttling simply limits the amount of traffic that can be sent over the Internet. Keeping data volume low facilitates other methods of monitoring and filtering by limiting the amount of data present.

Traffic Classification

This is a much more sophisticated method of blocking traffic than IP blocking, as governments can halt any file sent through a certain type of protocol, such as FTP. Because the government knows that FTP transfers are most often sent through TCP port 21, they can simply limit the bandwidth available on that port and throttle transfers. This type of traffic-shaping practice is the most common one used by repressive governments today. It is not resource intensive and it is fairly easy to implement.

Shallow Packet Inspection (SPI)

[4999] Prepared by Patricia Moloney Figliola, Specialist in Telecommunication and Internet Policy, 7-2508. Adapted from "The State of Iranian Communication: Manipulation and Circumvention," Morgan Sennhauser, Nedanet, July 2009, http://iranarchive.openmsl.net/SoIC-1.21.pdf; and "Five Technologies Iran is Using to Censor the Web," Brad Reed, Network World, July 2009, http://www.networkworld.com/news/2009/072009-iran-censorship-tools.html.

Shallow packet inspection is a less sophisticated version of the deep packet inspection (DPI) technique (DPI is described below) that is used to block packets based on their content. Unlike DPI, which intercepts packets and inspects their fingerprints (fingerprinting is described below), headers, and payloads, SPI makes broad generalities about traffic based solely on evaluating the packet header. Although shallow packet inspection can't provide the same refined/detailed traffic assessments as DPI, it is much better at handling volume than DPI.

SPI is much less refined than DPI, but it is capable of handling a greater volume of traffic much more quickly. SPI is akin to judging a book by its cover. This method is prone to exploitation by users because they can disguise their packets to look like a different kind of traffic.

Packet Fingerprinting

This is a slightly more refined method of throttling packets than shallow packet inspection, as it looks not only at the packet header but at its length, frequency of transmission, and other characteristics to make a rough determination of its content. In this manner, the government can better classify packets and not throttle traffic sent out by key businesses.

Deep Packet Inspection (DPI) / Packet Content Filtering

DPI is the most refined method that governments have for blocking Internet traffic. As mentioned above, deep packet inspectors examine not only a packet's header but also its payload. For instance, certain keywords can be both monitored and the e-mail containing them can be kept from reaching its intended destination.

This gives governments the ability to filter packets at a more surgical level than any of the other techniques discussed so far. While providing the most targeted traffic monitoring and shaping capabilities, DPI is also more complicated to run and is far more labor-intensive than other traffic-shaping technologies.

Appendix B. Technologies Used to Circumvent Censorship[5000]

Each of the circumvention methods explained below can, in general, be considered an anonymous "proxy server." A proxy server is a computer system or an application program that acts as an intermediary for requests from a user

[5000] Adapted from Reporters Without Borders, "Handbook for Bloggers and Cyber-Dissidents," September 2005, http://www.rsf.org/IMG/pdf/Bloggers_Handbook2.pdf; and The Citizen Lab, "Everyone's Guide to By-Passing Internet Censorship for Citizens Worldwide," University of Toronto, September 2007, http://citizenlab.org/Circ_guide.pdf.

seeking resources from other servers, allowing the user to block access to his or her identity and become anonymous.

Web-Based Circumvention Systems

Web-based circumvention systems are special web pages that allow users to submit a URL and have the web-based circumventor retrieve the requested web page. There is no connection between the user and the requested website as the circumventor transparently proxies the request allowing the user to browse blocked websites seamlessly. Since the web addresses of public circumventors are widely known, most Internet filtering applications already have these services on their block lists, as do many countries that filter at the national level.

Examples: Proxify, StupidCensorhip, CGIProxy, psiphon, Peacefire/Circumventor.

Web and Application Tunneling Software

Tunneling encapsulates one form of traffic inside of other forms of traffic. Typically, insecure, unencrypted traffic is tunneled within an encrypted connection. The normal services on the user's computer are available, but run through the tunnel to the non-filtered computer which forwards the user's requests and their responses transparently. Users with contacts in a non-filtered country can set up private tunneling services while those without contacts can purchase commercial tunneling services. "Web" tunneling software restricts the tunneling to web traffic so that web browsers will function securely, but not other applications. "Application" tunneling software allows the user to tunnel multiple Internet applications, such as e-mail and instant messenger applications.

Examples: Web Tunneling: UltraReach, FreeGate, Anonymizer, Ghost Surf.
Examples: Application Tunneling: GPass, HTTP Tunnel, Relakks, Guardster/SSH.

Anonymous Communications Systems

Anonymous technologies conceal a user's IP address from the server hosting the website visited by the user. Some, but not all, anonymous technologies conceal the user's IP address from the anonymizing service itself and encrypt the traffic between the user and the service. Since users of anonymous technologies make requests for web content through a proxy service, instead of to the server hosting the content directly, anonymous technologies can be a useful way to bypass Internet censorship. However, some anonymous technologies require users to download software and can be easily blocked by authorities.

Examples: Tor, JAP ANON, I2P
