Preface

This free course book contains useful background reports on topics relevant to the subject matter of *Course II: U.S. Intelligence Law for American Journalists*. Each report was produced originally for members of Congress by legislative attorneys and subject matter experts at the Congressional Research Service (CRS). I compiled some of the most useful background reports into this free course book for use by United States persons completing this home study course or any of the other law school courses available on IntelligenceLaw.com.

IntelligenceLaw.com is an independent, nonpartisan legal publisher unaffiliated with the United States Government. The Congressional Research Service played no role in the compilation of this course book. IntelligenceLaw.com is responsible for any errors or omissions made while formatting the original government documents into this free consolidated course book.

Neither this course book nor the original reports contained herein are copyrighted; therefore, there are no restrictions on your use of these materials. Please feel free to distribute this text to others or use its contents in any way you feel might be beneficial to your personal projects.

Summary
The U.S. Constitution makes no specific allowance for any one of the three branches of the federal government to have access to information held by the others. No provision in the U.S. Constitution expressly establishes a procedure for public access to government information.

Congress has legislated various public access laws. Among these laws are two records access statutes,

- the Freedom of Information Act (FOI Act or FOIA; 5 U.S.C. § 552), and
- the Privacy Act (5 U.S.C. § 552a),

and two meetings access statutes,

- the Federal Advisory Committee Act (FACA; 5 U.S.C. App.), and
- the Government in the Sunshine Act (5 U.S.C. § 552b).

The American separation of powers model of government may inherently prompt interbranch conflicts over the accessibility of information. These conflicts are neither unexpected nor necessarily destructive. Although there is considerable interbranch cooperation in the sharing of information and records, such conflicts over access may continue on occasion.

This report offers an overview of the four information access laws noted above, and provides citations to additional resources related to these tools.

History and Background

Throughout the first 150 years of the federal government, access to government information does not appear to have been a major issue for the federal branches or the public. There were a few instances during this period when the President, for reasons of maintaining the constitutional independence and equality of his branch, vigorously resisted attempts by Congress and the courts to obtain executive records.[1] Furthermore, during this same era, an active federal public printing program was established and effectively developed, making government documents more accessible.[2]

Following World War II, some information was available from certain federal departments and agencies.[3] The public availability of records held by the

---

[1] The powers of Congress to access executive-branch records dates back to as early as 1790, when the House established a select congressional committee to investigate the actions of former Superintendent of Finance Robert Morris. For more information see 1 Annals of Cong. 1168 (February 8, 1790). See also United States v. Nixon, 418 U.S. 683, 711 (1974). In U.S. v. Nixon, the court said that if the extent of the President's interest in withholding information for the purpose of confidentiality "relates to the effective discharge of a President's powers, it is constitutionally based." See also House Committee on the Judiciary, "House Judiciary Committee Releases Rove and Miers Interview Transcripts and Over 5,400 Pages of Bush White House Documents," at http://judiciary.house.gov/news/090811.html.

[2] Harold C. Relyea, American Federal Government Printing and Publication Reform: A Special Issue of Government Publications, Part A; Research Articles (Oxford, England: Pergamon Press, 1982).

[3] See U.S. Congress, Senate Committee on the Judiciary, Bills to Amend the Administrative Procedure Act, and for Other Purposes, hearing on S. 1160, S. 1336, S. 1758, and S. 1879, May 12-14 and 21, 1965, 89th Cong., 1st sess. (Washington: GPO, 1965). At the hearing, Chairman James O. Eastland stated the following:

executive branch was limited by narrow interpretation of the housekeeping statute of 1789 (5 U.S.C. § 301), which authorized the heads of departments to prescribe regulations regarding the custody, use, and preservation of the records, papers, and property of their entity. Prevailing law tolerated this state of affairs, offering citizens no clear avenue of access to agency information. Moreover, a provision of the Administrative Procedure Act of 1946 (5 U.S.C. § 551) indicated that matters of official record should be available to the public, but added that an agency could restrict access to its documents "for good cause found" or "in the public interest." These discretionary authorities were relied upon to restrict the accessibility of unpublished agency records and documents.

In response, some congressional panels began examining information access issues and seeking responsive legislative solutions. Among these legislative responses was the creation of the four following statutes:

- the Freedom of Information Act (1966),
- the Federal Advisory Committee Act (1972),
- the Privacy Act (1974), and
- the Sunshine in Government Act (1976).

This report offers an overview of each of these statutes, including the boundaries of their authority. This report then provides citations to additional resources, including additional Congressional Research Service reports, on each of the laws.

Public Access Laws

In 1966, Congress enacted the first law requiring public access to executive branch information. Legislative records were not included in the bill because Congress believed it made its deliberations and proceedings adequately subject to public observation, largely published its records, and otherwise was constitutionally authorized to engage in information restriction in certain circumstances.[4] For example, the Constitution explicitly permitted each house of Congress a discretion to keep portions of its journal of proceedings secret and

---

Access to information about the activities of Government is crucial to the citizen's ability to cope with the bigness and complexity of Government today.... There is no validity therefore, to the frequently heard argument that these [access to executive-branch information] proposals impinge on executive privilege for they would not affect the proper exercise of authority of the President and department heads. (p. 4).

[4] By explicit exclusion, Congress and the courts are not subject to FOIA. The committees that developed FOIA—the House Committee on Government Operations and the Senate Committee on the Judiciary—were responding to perceived secrecy problems in the executive branch. Furthermore, these panels had no jurisdiction over legislation concerning congressional operations. Thus, FOIA was created, approved, and implemented with an executive branch focus. For more information on the limitations of FOIA applicability see Harold C. Relyea, "Congress and Freedom of Information: A Retrospective and a Look at the Current Issue," Government Information Quarterly, vol. 26 (2009), pp. 437-440.

disallowed the questioning of Members of Congress "in any other Place" regarding official speech or debate. Legislators also were satisfied with the openness of federal court files and hearing rooms. Thus, the departments and agencies were the principal object of government information access reform laws. Executive branch officials, however, were not supportive of these measures and, initially, did not always promote or pursue their faithful administration. The current major federal laws facilitating public access to government information are briefly described below; the full text of each statute may be consulted by using the United States Code references provided.

Freedom of Information Act (5 U.S.C. § 552)

Initially enacted in 1966 and subsequently amended, the Freedom of Information Act (FOIA) establishes for any person—corporate or individual, regardless of nationality—presumptive access to existing, unpublished agency records on any topic. The law specifies nine categories of information that may be permissibly exempted from the rule of disclosure. Agencies within the federal intelligence community are prohibited from making any record available to a foreign government or a representative of same pursuant to a FOIA request. Disputes over the accessibility of requested records may be settled, according to the provisions of the act, in federal court.[5] Pursuant to the statute, FOIA does not apply to the legislative or executive branches of the federal government or to lower levels of government.

Fees for search, review, or copying of materials may be imposed, while certain types of requesters may be granted fee waivers or reductions.[6] FOIA was amended in 1996 to provide for public access to information in an electronic form or format. These amendments are often referred to as e-FOIA.[7] In 2007, FOIA was further amended to

- redefine qualifications for fee waivers for those seeking records,
- require the National Archives and Records Administration to create an Office of Government Information Services to act as a centralized FOIA oversight office, and

[5] 5 U.S.C. § 552(4)(B). See U.S. Congress, House Committee on Government Reform, A Citizen's Guide on Using the Freedom of Information Act and the Privacy Act of 1974 to Request Government Records, H.Rept. 109-226, 109th Cong., 1st sess. (Washington: GPO, 2005).

[6] 5 U.S.C. § 552(h)(3).

[7] 5 U.S.C. § 552 note.

- require agencies to create tracking systems that allow requesters to determine the status of their information requests, among other modifications.[8]

Federal Advisory Committee Act (5 U.S.C. App.)

A 1972 statute, the Federal Advisory Committee Act (FACA), in part, requires that the meetings of all federal advisory committees serving executive branch entities be open to public observation and that all committee records be accessible to the public. The statute specifies certain categories of records and debate—identical to the record exemptions in FOIA—that could permit a committee to hold meetings that were not accessible to the public or could prohibit the release of certain committee records.[9] Disputes over the proper public notice for a committee meeting or the closing of a session may be pursued in federal court.

Committees that fit certain FACA criteria are governed by FACA's guidelines.[10] FACA was designed to eliminate duplication of committee expertise and make advisory bodies in the executive branch more transparent. Congress may decide, however, to place some or all FACA requirements on a body that it statutorily created.[11]

Privacy Act (5 U.S.C. § 552a)

Legislated in 1974, the Privacy Act, in part, established for individuals who are United States citizens or permanent resident aliens, presumptive access to personally identifiable files on themselves held by most federal agencies—generally, however, not law enforcement and intelligence entities. The statute specifies seven types of information that may permissively be exempted from the rule of access.[12] Where a file subject contends that a record contains inaccurate information about that individual, the act allows correction through a request to the agency that possesses the record. Disputes over the accessibility or accuracy of personally identifiable files may be pursued in federal court.

[12] 5 U.S.C. § 552a(j) and 5 U.S.C. § 552a(k).

Government in the Sunshine Act (5 U.S.C. § 552b)

Enacted in 1976, the Sunshine Act presumptively opens the policymaking deliberations of collegially headed federal agencies—such as boards, commissions, or councils—to public scrutiny. Pursuant to the statute, agencies are required to publish advance notice of impending meetings and make those meetings publicly accessible.[13] The act includes ten conditions under which agency meetings would be exempted from the act.[14] Disputes over proper public notice of such meetings or the propriety of closing a deliberation may be pursued in federal court.

Interbranch Access

Both Congress and the judiciary have subpoena powers that can be exercised to compel the production of materials by another branch, but even these demands have sometimes been resisted.[15] In 1974, for example, a Special Prosecutor sought certain tape recordings that President Richard Nixon, on a claim of constitutional privilege, initially refused to provide. The Supreme Court, in United States v. Nixon (418 U.S. 683), disallowed the President's claim of privilege, finding it too general and overbroad and the needs of the Special Prosecutor to pursue criminal prosecutions more compelling. These tape recordings would become known as the Watergate Tapes.

Language within FOIA explicitly states that the statute does not permit agencies to withhold information from Congress. In general, interbranch disputes over access to information are often resolved through negotiation—reduction of the quantity of records initially sought, substitution of other information, alternative delivery mechanisms, or limitation of the number of individuals who will examine materials provided by another branch. Congress could use its "power of the purse" and the Senate could use its advice and consent power to leverage its information access demands. Federal courts rely upon a spirit of justice and fair play to sustain their orders for the production of information by another branch. In view of the American separation of powers model of government, such conflicts are neither unexpected nor necessarily destructive. Furthermore, they probably will continue to occur.

[14] 5 U.S.C. § 552b(c).

[15] For example, on March 31, 2004, Senator Jim Jeffords, the then-Senate Committee on Environment and Public Works minority ranking member, said at a hearing that he was having difficulty acquiring documents from the Environmental Protection Agency even though he and the committee chairman had drafted a letter to the agency requesting that it respond to requests from either member. U.S. Congress, Senate Committee on Environment and Public Works, Nominations of the 108th Congress, 2nd Session, 108th Cong., 2nd sess., March 31, 2004, S.Hrg. 108-500 (Washington: GPO, 2004), pp. 3-4.

Statistics on Usage

FOIA

The Freedom of Information Act requires each federal agency to submit a report on or before February 1 each year to the Attorney General describing the agency's freedom of information workload. Annual reports from all of the departments and agencies are posted on the Internet by the U.S. Department of Justice at http://www.usdoj.gov/04foia/04_6.html.[16] In FY2008, The Department of Veterans Affairs reported that it received 99,333 new FOIA requests and processed 98,455 requests.[17] The Department of Justice reported receiving 59,615 requests in FY2008 and processed 61,272 requests.[18]

FACA

According to the FACA Database, which is hosted by the General Services Administration, 914 federal advisory bodies have been active in FY2009,[19] costing $357,371,463.[20]

Litigation

A certain number of requests for information under the access to information acts result in judicial action. The Administrative Office of the U.S. Courts provides statistical information on the number of FOIA cases filed in U.S. District Courts in its compendium, Judicial Business of the United States Courts, which is available on the Internet at http://www.uscourts.gov/judbus2008/appendices/C02Sep08.pdf. According to that report, 280 cases related to FOIA commenced in U.S. District Courts in 2008. According to the

[16] Data from the individual annual reports, which are posted on the Department of Justice website, are summarized in tables on the website of Public Citizen, a public interest group. Public Citizen's tables for FY2000 through FY2005 can be found at http://www.citizen.org/litigation/free_info/foic_rep/statistics/index.cfm.

[17] See http://www.va.gov/foia/report/FY2006/InitialRequests.html.

[18] U.S. Department of Justice, U.S. Department of Justice, Freedom of Information Act Annual Report, Fiscal Year 2008, Washington, DC, February 6, 2009, p. 2, http://www.usdoj.gov/oip/annual_report/2008/foiapg5.pdf.

[19] U.S. General Services Administration, Federal Advisory Committees Database, Government Statistics, FY2009, at http://fido.gov/facadatabase/rptgovtstats.asp.

[20] U.S. General Services Administration, Federal Advisory Committees Database, FY2009 Government Totals, at http://fido.gov/facadatabase/rptgovttotals.asp.

report on appellate courts,[21] 60 cases related to FOIA commenced between January 1, 2008, and September 30, 2008.

The Freedom of Information Case List, produced by the Department of Justice Office of Information and Privacy, has compiled lists of cases decided pursuant to FOIA, FACA, the Privacy Act, and the Government in the Sunshine Act. Its principal section, an alphabetical list of judicial decisions addressing access issues under FOIA and the Privacy Act, numbers nearly 5,000 entries. It was last updated in May 2002 and is available on the Internet at http://www.usdoj.gov/04foia/cl-tofc.html. Judicial Watch, a public interest group that seeks to promote transparency in government, has posted information about its own lawsuits under "Our Litigation" at http://www.judicialwatch.org/litigation.shtml. Citizens for Responsibility and Ethics in Washington (CREW), a nonprofit organization that seeks to promote government accountability, has a webpage devoted to lawsuits in which it is involved at http://www.citizensforethics.org/actions/lawsuits. EPIC, a public interest nonprofit that focuses on civil liberties and privacy issues, also has a webpage devoted to FOIA-related litigation at http://epic.org/privacy/litigation/.

Guides to Using the Information Acts

Individuals, groups, and organizations all possess a right to access some government information. Both government and private groups publish guides to the information acts in paper and on the Internet as well.

The U.S. House of Representatives Committee on Government Reform published several editions of its report, A Citizen's Guide on Using the Freedom of Information Act and the Privacy Act of 1974 to Request Government Records (H.Rept. 109-226). In addition to the text of the acts, the Citizen's Guide contains descriptions and explanations, sample document request forms, and bibliographies of related congressional and non-congressional material. The report is available at http://www.access.gpo.gov/congress/house/house07cr109.html. The General Services Administration's Federal Citizen Information Center publishes Your Right To Federal Records: Questions and Answers on the Freedom of Information Act and Privacy Act. Like the Citizen's Guide, this publication contains explanations, samples, and texts, although in less detail than found in the Citizen's Guide. Your Right to Federal Records is available on the Internet at http://www.pueblo.gsa.gov/cic_text/fed_prog/foia/foia.pdf.

The Justice Department is the agency responsible for overseeing and coordinating administration of the Freedom of Information Act. Its website at http://www.usdoj.gov/04foia/index.html includes extensive material about the

[21] At http://www.uscourts.gov/judbus2008/appendices/B01ASep08.pdf.

act, statistics on its usage, guidelines for making requests, and freedom of information contacts at other federal agencies.

Among many non-governmental groups that publish information about freedom of information are Public Citizen and National Security Archive. Public Citizen maintains the "Freedom of Information Clearinghouse" on its website at http://www.citizen.org/litigation/free_info/. The National Security Archive website contains a number of FOIA guides, including, "Effective FOIA Requesting for Everyone: A National Security Archive Guide" published in January 2009 at http://www.gwu.edu/~nsarchiv/nsa/foia/foia_guide.html.

Records on each of the active federal advisory bodies is available on the General Services Administration's FACA Database at http://fido.gov/facadatabase/. The website includes each committee's charter, information on the members of each committee and their contact information, and cumulative data on the cost of federal advisory bodes.

R40766

Summary

Enacted in 1966 after 11 years of investigation and legislative development in the House—and nearly 6 years of such consideration in the Senate—the Freedom of Information Act (FOIA; 5 U.S.C. §552) replaced the public information section of the Administrative Procedure Act. FOIA was designed to enable any person to request, without explanation or justification, access to existing, identifiable, unpublished, executive branch agency records. The statute specified nine categories of information that may be exempted from the rule of disclosure. Pursuant to FOIA, disputes over the accessibility of requested records could be settled ultimately in court.

The statute has become a widely used tool of inquiry and information gathering for various sectors of American society—particularly the press, businesses, scholars, attorneys, consumers, and activists—as well as some foreign interests. The response to a request may ultimately involve a few sheets of paper, several linear feet of records, or information in an electronic format. Assembling responses requires staff time, search and duplication efforts, and other resource commitments. Agency information management professionals are responsible for efficiently and economically responding to FOIA requests, doing so in the sensitized homeland security milieu. Agencies may negotiate with a requester to

narrow a request's scope, or the agency may explain and justify why certain records cannot be supplied. Simultaneously, agency FOIA response costs need to be kept reasonable. The perception that FOIA standards are not properly met may result in proposed new corrective amendments to the statute.

FOIA has been refined with direct amendments in 1974, 1976, 1986, and 1996. In addition, the 110th Congress enacted the OPEN Government Act of 2007 (P.L. 110-175), which modified FOIA and prompted disagreements with the executive branch. Among the statute's modifications was the creation of both a more inclusive definition for a member of the news media and a more inclusive policy on waiving request processing fees. The legislation more clearly defined the time limits for agencies to respond to requests for information and required the creation of an Office of Government Information Services (OGIS) within the National Archives and Records Administration (NARA). After conflict in 2008 with the George W. Bush Administration over whether the OGIS should be placed in NARA or the Department of Justice, President Barack Obama's FY2010 budget requested $1.4 million and six full-time employees for OGIS implementation within NARA.

In his first full day in office, President Obama issued a memorandum to federal departments and agencies encouraging more collaboration, participation, and transparency in the federal government. As a follow-up to the January 21, 2009, memorandum, the Attorney General drafted new guidelines for agency and department heads on use and implementation of FOIA. The Obama Administration also conducted a three-phase online information-gathering effort linked to its OPEN Government Directive. The directive sought public input on ways to make FOIA and other policies and operations of federal government more effective and efficient.

In the 111th Congress, several bills that directly address FOIA have been introduced, including legislation that would exempt photographs of the treatment of detainees held by the Armed Forces from public disclosure pursuant to FOIA, and a bill that would require the archivist to issue more detailed regulations on the classification of government records.

This report will offer a history of FOIA, discuss current implementation of FOIA statutes, and outline pending FOIA legislation. The report will be updated as events warrant.

Introduction

The Freedom of Information Act (FOIA; 5 U.S.C. § 552), often referred to as the embodiment of "the people's right to know" about the activities and operations of government, statutorily established a presumption of public access to information held by federal departments and agencies. Enacted in 1966 to replace the public information section of the Administrative Procedure Act (APA; 5 U.S.C. Subchapter II), FOIA allows any person—individual or corporate,

regardless of citizenship—to request, without explanation or justification, existing, identifiable, unpublished agency records on any topic.[22]

At the time of its enactment, FOIA was regarded as a somewhat revolutionary law. Only two other nations—Sweden and Finland—had comparable laws, and in neither case was the law as sweeping as the new American model. The law's premise reversed the burden of proof that had existed under the public information section of the APA. Under the APA, requesters had to establish a justification or a need for the information being sought. Under FOIA, in contrast, access was presumed. Instead, agencies had to justify denying a requester access to information. FOIA provided clear exceptions to access, protecting certain types of information from disclosure.

FOIA was also revolutionary in another regard. The product of 11 years of investigation, legislative development, and deliberation in the House and nearly 6 years of such consideration in the Senate, the statute was almost exclusively a congressional creation. No executive branch department or agency head had supported the legislation, and President Lyndon B. Johnson was reported to be reluctant to sign the measure.[23] Because the law was not enthusiastically received by the executive branch, supporters maintained that FOIA implementation and use sometimes required close attention from congressional overseers. The statute has been subsequently refined with direct amendments in 1974, 1976, 1986, and 1996. Other substantial modifications were enacted in 2007.

Congress, at times, has encountered executive-branch resistance to its FOIA designs. The George W. Bush Administration, for example, disregarded Congress's statutory provision creating an Office of Government Information Services (OGIS) within the National Archives and Records Administration (NARA). In his FY2009 budget request, former President Bush did not seek funding for the office and suggested it be moved from NARA to the Department of Justice.[24] The 111th Congress responded by including $1 million in the

See also "NOW With Bill Moyers – Politics and Economy: Bill Moyers on the Freedom of Information Act," at http://www.pbs.org/now/commentary/moyers4.html. According to Moyers, Johnson "had to be dragged kicking and screaming to the signing ceremony. He hated the very idea of the Freedom of Information Act; hated the thought of journalists rummaging in government closets; hated them challenging the official view of reality." See also Harold C. Relyea, "Federal Freedom of Information Policy: Highlights of Recent Developments," Government Information Quarterly, vol. 26 (January 12, 2009), p. 314.

[24] The proposal appears in a provision (Section 519) in the President's budget submission for the FY2009 appropriations for the Department of Commerce. U.S. Office of Management and Budget, Budget of the United States Government, Fiscal Year 2009, Appendix (Washington:

explanatory statement that accompanies the FY2009 Omnibus Appropriation Act (P.L. 111-8) for the OGIS to be established within NARA.[25] The Barack Obama Administration's FY2010 budget request included $1.4 million and six full-time employees for OGIS implementation within NARA. Both House and Senate appropriators supported the President's request.[26]

The Government Accountability Office (GAO) found in March 2008, that the volume of FOIA requests in the federal government was increasing, but not as rapidly as it had been increasing in previous years.[27] Moreover, the report found that the backlog of FOIA requests continued to grow between 2005 and 2006. Among the agencies in which the FOIA backlog increased was the Department of Homeland Security's (DHS's) Citizenship and Immigration Services, which handled 89% of DHS's total FOIA requests.

Each new presidential administration has applied FOIA's statutes differently. As recent examples, the George W. Bush Administration, supported "full and deliberate consideration of the institutional, commercial, and personal privacy interests" that surround any requests,[28] while the current Administration of Barack Obama encouraged agencies "to adopt a presumption in favor of disclosure."[29]

[29] Memorandum from President Barack Obama For Heads of Executive Departments and Agencies, January 21, 2009, http://www.whitehouse.gov/the_press_office/FreedomofInformationAct/.

Several bills have been introduced in the 111th Congress that directly address FOIA. On March 3, 2009, Representative Stephen Driehaus introduced the Reducing Information Control Designations Act (H.R. 1323). Although the bill concentrates its efforts on streamlining agency classification standards, it also requires agencies to ensure that their internal classification system does not hinder the disclosure of information. The act passed the House and was referred to the Senate Committee on Homeland Security and Governmental Affairs. On March 17, 2009, Senator Patrick Leahy introduced the OPEN FOIAAct of 2009 (S. 612), which would require agencies to explicitly state which exemption they are claiming when they deny a FOIA request. The bill was referred to the Senate Committee on the Judiciary. In addition, six bills—three in the House and three in the Senate (H.R. 2712; H.R. 2875; H.R. 3015; S. 1100; S. 1260; and S. 1285)—have been introduced that would exempt photographs of the treatment of detainees held by the Armed Forces from public disclosure pursuant to FOIA. Another bill (H.R. 2450) would require private, state, and local incarceration and detention facilities to comply with FOIA requirements. On May 15, 2009, Representative Sheila Jackson-Lee introduced a bill that would require all private, state, and locally run incarceration and detention facilities be subject to FOIA. The bill has been referred to the House Committee on the Judiciary, Subcommittee on Crime, Terrorism, and Homeland Security.

This report includes a brief history of FOIA, discusses subsequent modifications of FOIA, addresses statutory changes to FOIA that have not yet been implemented, examines Obama Administration efforts to modify the act, and outlines possible legislative issues related to the act.

FOIA History[30]

FOIA applies only to the departments and agencies of the federal executive branch. This scope has been shaped by both historical and constitutional factors. During the latter half of the 1950s, when congressional subcommittees began examining government information availability, the practices of the federal departments and agencies were a primary focus. The public, the press, and even some congressional committees and subcommittees were sometimes rebuffed when seeking information from executive branch entities.

Although presidential records might have been of interest to Congress and the public, the exercise of so-called "executive privilege"—the withholding of information based upon his authority as the head of the executive branch—was a matter of some constitutional complexity and uncertainty, and had not resulted

[30] For a more in-depth legislative history of FOIA, see CRS Report RL32780, Freedom of Information Act (FOIA) Amendments: 110th Congress, by Harold C. Relyea.

in widespread public concern.[31] The President's records were, therefore, exempted from the forthcoming FOIA legislation.[32] The accessibility of federal court records was also not an issue. Access to congressional records were not closely scrutinized, since the subcommittees probing the executive branch in this regard lacked jurisdiction over the whole legislative branch.[33] In a 1955 hearing, Representative John E. Moss, chairman of the newly created Special Subcommittee on Government Information, delineated the scope of the investigation, saying,

> *We are not studying the availability of information from Congress, although many comments have been made by the press in that field, but we are taking a long, hard look at the amount of information available from the executive and independent agencies for both the public and its elected representatives.*[34]

Eleven years after that hearing, FOIA was enacted, and was applicable only to federal, executive-branch departments and agencies. Some Members and academics have asserted that, in the case of Congress, the secret journal clause or

---

[31] See U.S. Congress, Senate Committee on the Judiciary, The Power of the President to Withhold Information from Congress, committee print, 85th Cong., 2nd sess. (Washington: GPO, 1958-1959), 2 parts. Legislative-branch agencies, like the Government Accountability Office, the Congressional Research Service, and the Congressional Budget Office are not subject to FOIA.

[32] For more information on presidential records and vice presidential records see CRS Report R40238, Presidential Records: Issues for the 111th Congress, by Wendy R. Ginsberg.

[33] At present, the definition of agency for FOIA (found at 5 U.S.C. § 551) makes the requirements of the statute applicable only to an "agency," which "means each authority of the Government of the United States, whether or not it is within or subject to review by another agency, but does not include
(A) the Congress; or

(B) the courts of the United States[.]" By explicit exclusion, Congress and the courts are not subject to FOIA. The committees that developed FOIA—the House Committee on Government Operations and the Senate Committee on the Judiciary—were responding to perceived secrecy problems in the executive branch. Furthermore, these panels had no jurisdiction over legislation concerning congressional operations. Thus, FOIA was created, approved, and implemented with an executive branch focus. For more information on the limitations of FOIA applicability see Harold C. Relyea, "Congress and Freedom of Information: A Retrospective and a Look at the Current Issue," Government Information Quarterly, vol. 26 (2009), pp. 437-440.

[34] U.S. Congress, House Committee on Government Operations, Availability of Information from Federal Departments and Agencies, hearing, 84th Cong., 1st sess., November 7, 1955 (Washington: GPO, 1956), p. 3.

the speech or debate clause of the Constitution[35] could be impediments to the effective application of FOIA to Congress.[36]

FOIA Exemptions

FOIA exempts nine categories of records from the statute's rule of disclosure. These exceptions detail certain restrictions. The exemptions are as follows:

1. Information properly classified for national defense or foreign policy purposes as secret under criteria established by an executive order
2. Information relating solely to agency internal personnel rules and practices
3. Data specifically excepted from disclosure by a statute which either requires that matters be withheld in a non-discretionary manner or which establishes particular criteria for withholding or refers to particular types of matters to be withheld
4. Trade secrets and commercial or financial information obtained from a person that is privileged or confidential
5. Inter- or intra-agency memoranda or letters that would not be available by law except to an agency in litigation
6. Personnel, medical, or similar files the disclosure of which would constitute an unwarranted invasion of personal privacy
7. Certain kinds of investigatory records compiled for law enforcement purposes
8. Certain information relating to the regulation of financial institutions
9. Geological and geophysical information and data. (5 U.S.C. § 552(b)) Some of these exemptions, such as the one concerning trade secrets and commercial or financial information, have been litigated and undergone considerable judicial interpretation.[37]

---

[35] Art. I, Sec. 5, which directs each house of Congress to keep a journal of its proceedings and publish the same, except such parts as may be judged to require secrecy, has been interpreted to authorize the House and the Senate to keep other records secret. Art. 1, Sec. 6, which specifies that Members of Congress, "for any Speech or Debate in either House ... shall not be questioned in any other Place," might be regarded as a bar to requests to Members for records concerning their floor, committee, subcommittee, or legislative activity.

[36] See U.S. Congress, Senate Committee on Governmental Affairs, To Eliminate Congressional and Federal Double Standards, hearing, 96th Cong., 1st sess., September 20, 1979 (Washington: GPO, 1979); Harold C. Relyea, "Public Access to Congressional Records: Present Policy and Reform Considerations," Government Information Quarterly, vol. 2, 1985, pp. 235-256.

Zaid, eds., Litigation Under the Federal Open Government Laws: 2008 (Washington: EPIC Publications and The James Madison Project, 2008); James T. O'Reilly, Federal Information Disclosure, third edition (Eagan, MN: West Group, first published in 2000, with supplements); U.S. Department of Justice, Freedom of Information Act Guide, March 2007 ed. (Washington, DC: GPO, 2007).

A person denied access to requested information, in whole or in part, may make an administrative appeal to the head of the agency for reconsideration. After this step, an appeal for further consideration of access to denied information may be made in federal district court.[38] The newly created Office of Government Information Services (OGIS) may also provide "mediation services to resolve disputes between persons making requests under this section and administrative agencies as a non-exclusive alternative to litigation."[39] The OGIS services are advisory only and are non-binding.

Fees for Service

Agencies responding to FOIA requests are permitted by statute to charge fees for certain administrative activities, such as records searching, reviewing, and duplicating. The amount of the fee will depend upon the type of requester, specifically whether the request is made by a commercial user, an educational or noncommercial scientific institution whose purpose is scholarly or scientific research, a news media representative, or the general public. Moreover, certain requestors may be exempted from FOIA-related fees.[40] Requested records may be furnished by an agency without any charge or at a reduced cost, pursuant to FOIA, "if disclosure of the information is in the public interest because it is likely to contribute significantly to public understanding of the operations or activities of the government and is not primarily in the commercial interest of the requester."[41] Requesters seeking a fee exemption must explicitly request it, and the agency then determines whether they qualify.

The George W. Bush Administration

Executive Order 13392, "Improving Agency Disclosure of Information"

On December 19, 2005, George W. Bush issued E.O. 13392 to ensure appropriate agency disclosure of information.[42] Executive Order 13392 directed all federal agencies subject to FOIA to, among other things,

[41] 5 U.S.C. § 552(a)(4)(A)(iii). Additional information about the OGIS is provided later in this report.

[42] Executive Order 13392, 70 Fed. Reg. 75,373 (Dec. 14, 2005), http://edocket.access.gpo.gov/2005/pdf/05-24255.pdf.

(1) Designate a senior agency official at each agency (at the Assistant Secretary or equivalent level), to serve as the Chief FOIA Officer of that agency.
(2) Establish one or more FOIA Requester Service Centers (Center) to serve as the first place that FOIA requesters can contact to seek both information concerning the status of their FOIA requests and appropriate information about the agency's FOIA responses. The Center was required to include appropriate staff to receive and respond to inquiries from FOIA requesters.
(3) Designate one or more agency officials as FOIA Public Liaisons. FOIA Public Liaisons were required to serve as supervisory officials to whom a FOIA requester could raise concerns about the service the FOIA requester received from the Center, following an initial response from the Center staff.
(4) Conduct a review of the agency's FOIA operations to determine whether agency practices are consistent with the policies set forth in the Executive Order.
(5) Develop, in consultation as appropriate with the staff of the agency (including FOIA Public Liaisons), the Attorney General, and the OMB Director, an agency-specific plan to ensure that the agency's administration of FOIA is in accordance with applicable law and the policies set forth in the Executive Order.
(6) Submit a report to the Attorney General and the OMB Director that summarized the results of the agency's review and included a copy of the agency's FOIA Improvement Plan under the Executive Order.
(7) Include in the agency's annual FOIA reports for fiscal years 2006 and 2007 a report on the agency's development and implementation of its FOIA Improvement Plan and on the agency's performance in meeting the milestones set forth in that plan, consistent with Department of Justice guidance.

110th Congress Legislative Reform Efforts

Building on legislation from previous Congresses, Members in the 110th Congress introduced several pieces of FOIA-related legislation. One bill, the Freedom of Information Act Amendments of 2007, was enacted.[43] Among other changes, the bill codified the requirement that all agencies have a chief FOIA officer. After the bill's enactment, however, controversy erupted between the legislative and executive branch over implementation of certain requirements in the bill. This section includes the bill's legislative history and describes the implementation controversy that ensued.

OPEN Government Act of 2007

[43] P.L. 110-175.

On March 5, 2007, Representative Lamar Smith introduced the House version of the OPEN Government Act of 2007 (H.R. 1326).[44] The bill was referred to the House Committee on Oversight and Government Reform, Subcommittee on Information Policy, Census, and National Archives. No further action was taken on that version of the OPEN Government Act. Senator Patrick Leahy then introduced Senate version of the act (S. 849) on March 13. A hearing on the Senate bill was held by the Committee on the Judiciary on March 14. The committee ordered the bill to be reported favorably on April 12, and the report was printed on April 30.[45] The bill was not brought to the Senate floor for consideration or a final vote because of concerns arising from Department of Justice objections, which were resolved just before the Senate adjourned for the August recess. The bill came before the Senate by unanimous consent on August 3, was amended, and passed by unanimous consent. Among other changes, the bill sought to do the following:

- redefine "a representative of the news media";[46]
- modify the conditions for when a complainant has substantially prevailed relative to the recovery of attorney fees and litigation costs;[47]
- create new language concerning the time limits for agencies to act on requests;[48]
- modify the requirements for request tracking arrangements;[49]

---

[44] For more information on the origins of the OPEN Government Act of 2007 and a legislative history of its origins, see CRS Report RL32780, Freedom of Information Act (FOIA) Amendments: 110th Congress, by Harold C. Relyea.

[45] Ibid., March 13, 2007, p. S3066; U.S. Congress, Senate Committee on the Judiciary, Open Government Act of 2007, report to accompany S. 849, 110th Cong., 1st sess., S.Rept. 110-59 (Washington: GPO, 2007).

[46] The bill stated that independent journalists are not barred from obtaining fee waivers solely because they lack an institutional affiliation with a recognized news media organization.

[47] This provision responded to the ruling in Buckhannon Board and Care Home, Inc. v. West Virginia Dep't of Health and Human Services, 532 U.S. 598 (2001), in which the Supreme Court eliminated the so-called "catalyst theory" of attorney fee recovery under certain federal civil rights laws, and which prompted concern that the holding could be extended to FOIA cases. The new definition required the government to pay the complainant's attorney fees if the records were required to be released by court or other administrative order as well as if the complainant's lawsuit prompted the agency to change its decision to release the records even without such an order.

[48] If an agency failed to comply with the new 20-day limit, which was defined as beginning when the agency first received the request, the agency would not be permitted to assert an exemption for the record sought (pursuant to 5 U.S.C. § 552(b)) unless such disclosure would endanger national security or disclose personal information protected by The Privacy Act (5 U.S.C. § 552a).

[49] Pursuant to the bill, agencies would have been required to establish tracking systems and assign requests tracking numbers within 10 days of the agency's receipt of the request. Requesters could

- modify the provision amending the third exemption of the act concerning statutory protections of information;[50] and
- recharter of the proposed Office of Government Information Services as an entity within the National Archives and Records Administration.[51]

The bill was received in the House on September 4, 2007, but was held at the desk. No further action was taken on the bill.

Freedom of Information Act Amendments of 2007

On March 5, 2007—four months prior to S. 849's receipt in the House—Representative William Clay introduced a modified House version of the OPEN Act (H.R. 1309), entitled the Freedom of Information Act Amendments of 2007. H.R. 1309 included explicit language stating the "policy of the Federal Government is to release information to the public in response to a request under" FOIA "if such release is required by law; or if such release is allowed by law and the agency concerned does not reasonably foresee that disclosure would be harmful to an interest protected by an applicable exemption."

When H.R. 1309 came under consideration by the Committee on Oversight and Government Reform during a March 8, 2007, markup, an amendment to the bill was approved. The added provision would require agencies to indicate, for each redaction made in a record, which specific FOIA exemption was involved. The amended legislation was then approved for House floor consideration.

Negotiations to resolve differences between H.R. 1309 and S. 849 continued through the fall. One of the more contentious issues concerned who would be entitled to payments if an agency changed its position concerning the release of records after a requester challenged an agency denial in court but prior to any court determination. While the House bill provided that such payments would come from annually appropriated agency funds, the lack of such specificity in the

---

then track the progress of their request via the number. Agencies would have also had to establish a telephone or Internet system to allow requesters to obtain information on the status of their individual requests, including an estimated date on which action on the request will be completed.

[50] The third exemption to the rule of disclosure exempts matters that are "specifically exempted from disclosure by statute [other than the Privacy Act], provided that such statute (A) requires that the matters be withheld from the public in such a manner as to leave no discretion on the issue, or (B) establishes particular criteria for withholding or refers to particular types of matters to be withheld." 5 U.S.C. § 552(b)(3). The amendment would have affected any FOIA exemption that was adopted by Congress after enactment of S. 849. This provision was later offered in separate legislation as well as in future congressional sessions, including the 111th Congress.

[51] The OGIS would review agency policies and procedures, audit agency performance, recommend policy changes, and mediate disputes between FOIA requesters and agencies with a view to alleviate the need for litigation, while not limiting the ability of requester to litigate FOIA claims.

Senate bill posed the strong possibility that it would trigger "pay-as-you-go" objections in the House.[52] On December 6, Senator Leahy, with Senator Cornyn as a cosponsor, introduced S. 2427, a revised version of S. 849 that contained the language of the House bill concerning the source of attorney fees payments.[53] On December 14, a slightly revised version of this bill, addressing other House concerns, was introduced by Senator Leahy, with 17 bipartisan cosponsors, as S. 2488. That same day, the Senate considered the bill, and approved it without amendment by unanimous consent.[54] As adopted by the Senate, the bill amended FOIA as follows:

- redefined "representative of the news media" and "news" for purposes of request processing fees, and specified a freelance journalist as working for a news media entity if the journalist can demonstrate a solid basis for expecting publication through that entity;
- provided that, for purposes of awarding attorney fees and litigation costs, a FOIA complainant has substantially prevailed in a legal proceeding to compel disclosure if such complainant obtained relief through either (1) a judicial order or an enforceable written agreement or consent decree, or (2) a voluntary or unilateral change in position by the agency if the complainant's claim is not substantial;
- prohibited the Treasury Claims and Judgment Fund from being used to pay reasonable attorney fees in cases where the complainant has substantially prevailed, and required fees to be paid only from funds annually appropriated for authorized purposes for the federal agency against which a claim or judgment has been rendered;
- directed the Attorney General to (1) notify the Special Counsel of civil actions taken for arbitrary and capricious rejections of requests for agency records, and (2) submit annual reports to Congress on such civil actions, while also directing the Special Counsel to submit an annual report on investigations of agency rejections of FOIA requests;
- required the 20-day period during which an agency must determine whether to comply with a FOIA request to begin on the date the request is received by the appropriate component of the agency, but no later than 10 days after the request is received by any component that is designated to receive FOIA requests in the agency's FOIA regulations; and prohibited the agency from halting the count of the 20-day period by the agency, except (1) that the agency may make one request to the requester for clarifying information and halt the 20-day period while awaiting such information, or (2) if necessary to clarify with the requester issues

[52] For more information on Pay-As-You-Go procedures, see CRS Report RL32835, PAYGO Rules for Budget Enforcement in the House and Senate, by Robert Keith and Bill Heniff Jr.

[53] Congressional Record, daily edition, vol. 153, Dec. 6, 2007, pp. S14853-S14855.

[54] Ibid., Dec. 14, 2007, pp. S15701-S15704.

regarding fee assessment, the agency may halt the 20-day period while negotiating the fee.

- prohibited an agency from assessing search or duplication fees if it failed to comply with time limits, provided that no unusual or exceptional circumstances apply to the processing of the request, and requires each agency to make available its FOIA Public Liaison (see below), who shall assist in the resolution of any disputes between the agency and the requester;
- required agencies to establish (1) a system to assign an individualized tracking number for each FOIA request received that will take longer than 10 days to process, and (2) a telephone line or Internet service that provides information on the status of a request;
- revised annual reporting requirements on agency compliance with FOIA to require information on (1) FOIA denials based upon particular statutory provisions, (2) response times, and (3) compliance by the agency and by each principal component thereof; and requires agencies to make the raw statistical data used in reports electronically available to the public upon request;
- redefined "record" under FOIA to include any information maintained by an agency contractor;
- required establishment within the National Archives and Records Administration an Office of Government Information Services (OGIS) to (1) review compliance with FOIA policies, (2) recommend policy changes to Congress and the President, and (3) offer mediation services between FOIA requesters and agencies as a non-exclusive alternative to litigation; and authorizes the OGIS to issue advisory opinions if mediation fails to resolve a dispute;
- required each agency to designate a chief FOIA officer, who shall (1) have responsibility for FOIA compliance, (2) monitor FOIA implementation, (3) recommend to the agency head adjustments to agency practices, policies, personnel, and funding to improve implementation of FOIA, and (4) facilitate public understanding of the purposes of FOIA's statutory exemptions; and requires agencies to designate at least one FOIA public liaison, who shall be appointed by the chief FOIA officer to (1) serve as an official to whom a FOIA requester can raise concerns about service from the FOIA Requester Center, and (2) be responsible for assisting in reducing delays, increasing transparency and understanding of the status of requests, and assisting in the resolution of disputes;
- required the Office of Personnel Management to report to Congress on personnel policies related to FOIA; and
- required the identification of the FOIA exemption(s) relied upon to redact information from records provided in response to a FOIA request.

The Senate-approved bill was received in the House on December 17, and it was referred to the Committee on Oversight and Government Reform. The following day, the measure was considered by the House under a suspension of the rules,

agreed to by voice vote, and cleared for the President.[55] The legislation was signed into law by then-President George W. Bush on December 31, 2007.[56]

FOIA Amendment Implementation

Less than a month after passage of the Freedom of Information Act Amendments of 2007, Senator Patrick Leahy, the principal Senate proponent of the FOIA-reform legislation, noted to his colleagues that OMB officials had indicated that they intended to place in the Department of Justice budget for FY2009 all of the funding Congress had authorized by the new law for the OGIS within NARA. Some Members and open government organizations were concerned that OMB's desired arrangement could give DOJ control over the OGIS, perhaps to the point of eradicating it. DOJ, could, for example, allocate OGIS funds to its own Office of Information and Privacy, which oversees FOIA compliance by federal agencies.[57] In creating the OGIS, legislators had consciously placed it outside of the Department of Justice, which represents agencies sued by FOIA requesters.

Calling the OMB's attempt to place the OGIS within DOJ "not only contrary to the express intent of the Congress, but ... also contrary to the very purpose of this legislation," Senator Leahy expressed hope "that the administration will reconsider this unsound decision and enforce this law as the Congress intended."[58] OMB declined to comment on the matter prior to the formal presentation of the President's budget to Congress on February 4, 2008.

President George W. Bush requested the following as part of Title V, General Provisions, of the Commerce, Justice, Science, and Related Agencies Appropriations legislation for FY2009:

> *Sec. 519. The Department of Justice shall carry out the responsibilities of the office established in 5 U.S.C. 552(h), from amounts made available in the Department of Justice appropriation for "General Administration Salaries and*

[58] Congressional Record, daily edition, vol. 154, Jan. 23, 2008, pp. S201-S202; Dan Friedman, "Senators Say White House Plans to Eliminate Special FOIA Office," CongressDaily, Jan. 25, 2008, available at http://www.govexec.com/ story_page_pf.cfm?articleid=39120&dcn=e_gvet.

> *Expenses." In addition, subsection (h) of section 552 of title 5, United States Code, is hereby repealed, and subsections (i) through (l) are redesignated as (h) through (k).*[59]

The office established in 5 U.S.C. §552(h) is the OGIS. The Department of Justice, which would have been vested with carrying out the responsibilities of that office, would have been authorized to utilize funds from its general administration appropriation to do so. House appropriators subsequently rejected this language. Both House and Senate appropriators recommended $1 million go to OGIS. The Omnibus Appropriations Act, 2009 (P.L. 111-8) did not explicitly mention OGIS.[60] President Barack Obama's FY2010 budget requested $1.4 million and six full-time employees for OGIS implementation within NARA. In the report to accompany the FY2010 Financial Services and General Government appropriations bill, the Senate Committee on Appropriations recommended $1.4 million for OGIS.[61] The House report does not explicitly mention OGIS, but it does recommend funding NARA at the same levels requested by the President.

The Obama Administration

On January 21, 2009, President Barack Obama issued a "Memorandum for the Heads of Executive Departments and Agencies" on FOIA. In the memorandum, Obama stated that FOIA "should be administered with a clear presumption: In the face of doubt, openness prevails."[62] The memorandum stated that under the new administration:

> *All agencies should adopt a presumption in favor of disclosure, in order to renew their commitment to the principles embodied in FOIA, and to usher in a new era of open Government. The presumption of disclosure should be applied to all decisions involving FOIA.*[63]

[63] Ibid.

The memorandum then directed the attorney general to "issue new guidelines governing the FOIA to the heads of executive departments and agencies, reaffirming the commitment to accountability and transparency, and to publish such guidelines in the Federal Register."[64]

On March 19, 2009, Attorney General Eric Holder issued the memorandum in which he required "A Presumption of Openness." The memorandum explicitly rescinded former Attorney General John Ashcroft's October 12, 2001, memorandum.[65] Holder's memorandum read as follows:

> *First, an agency should not withhold information simply because it may do so legally.... An agency should not withhold records merely because it can demonstrate, as a technical matter, that the records fall within the scope of a FOIA exemption.*
>
> *Second, whenever an agency determines that it cannot make full disclosure of a requested record, it must consider whether it can make partial disclosure. Agencies should always be mindful that the FOIA requires them to take reasonable steps to segregate and release nonexempt information. Even if some parts of a record must be withheld, other parts either may not be covered by a statutory exemption, or may be covered only in a technical sense unrelated to the actual impact of disclosure.*
>
> *At the same time, the disclosure obligation under the FOIA is not absolute....*
>
> *[T]he Department of Justice will defend a denial of a FOIA request only if (1) the agency reasonably foresees that disclosure would harm an interest protected by one of the statutory exemptions, or (2) disclosure is prohibited by law.*[66]

Some newspapers and open government advocates argued that the Obama and Holder memorandums on FOIA marked a significant break with the policies of

[65] This memorandum is described in more detail below.

[66] Attorney General Eric Holder, Memorandum For the Heads of Executive Departments and Agencies, U.S. Department of Justice, Washington, DC, March 19, 2009, pp. 1-2, http://www.usdoj.gov/ag/foia-memo-march2009.pdf.

the previous administration.[67] In a memorandum written by former Attorney General John Ashcroft shortly after the 9/11 terrorist attacks, the Bush Administration required agency and department heads to release documents "only after full and deliberate consideration of the institutional, commercial, and personal privacy interests that could be implicated by disclosure of the information."[68] The memorandum continued:

> *When you carefully consider FOIA requests and decide to withhold records, in whole or in part, you can be assured that the Department of Justice will defend your decisions unless they lack a sound legal basis or present an unwarranted risk of adverse impact on the ability of other agencies to protect other important records.*[69]

The Obama Administration also sought to solicit information and ideas from the public on how to make FOIA a more useful tool. In May, the administration announced a three-phase Open Government Initiative aimed at collecting ideas from the public on how to make government more collaborative, transparent, and participatory. From May 21 through June 3, 2009, the Obama Administration's Office of Science & Technology Policy (OSTP) entered the first phase of the directive by tapping the National Academy of Public Administration (NAPA) to host an online "brainstorming session,"[70] seeking public comment on "innovative approaches to policy, specific project suggestions, government-wide or agency-specific instructions, and any relevant examples and stories relating to law, policy, technology, culture, or practice."[71] The brainstorming session garnered 4,205 suggestions and comments, some of which addressed FOIA. One suggestion, for example, said that agencies should be required to post documents online that are released in relation to a FOIA request. The suggestion stated that

On May 23, NAPA changed that policy and required all participants to log into the website before their comments could be posted.

[71] Ibid.

such action could reduce the number of duplicative requests to which agencies and departments must respond.

From June 3 through June 26, 2009, OSTP began the second phase of its Open Government Initiative, which focused in greater depth on some of the ideas that emerged in the brainstorming session forums. On June 10, 2009, Michael Fitzpatrick, associate administrator for the Office of Information and Regulatory Affairs, posted a question on OSTP's blog asking for "recommendations … for agencies to pro-actively post information on their websites to avoid a FOIA request from even occurring" and "recommendations to make FOIA reading rooms more useful and information more easily searchable, as they are meant to be a mechanism for information dissemination to the public."[72] The request prompted 58 responses, including one response that suggested documents released as part of a FOIA request not only be published online, but also be text searchable.[73]

From June 22 through July 6, 2009, OSTP conducted the third phase of the initiative: drafting. Using an online program, members of the public created online documents that included policy recommendations. Participants critiqued, endorsed, and rated the policy recommendations.[74] OSTP said that the "recommendations will inform the drafting of an 'Open Government Directive' to Executive branch agencies."[75] Among the policy recommendations posted was a suggestion to "rebuild technical capacity for information dissemination in the agencies (and government-wide)" so historical agency information can be stored electronically and accessed more efficiently when it is requested by the public.[76]

FOIA and the 111th Congress

The administration's new guidelines on how agencies are to apply FOIA could prompt Congress to reevaluate certain FOIA practices and policies. An issue potentially subject to reevaluation is whether Secret Service records should be considered "presidential records," administered according to the Presidential

Records Act of 1978 (PRA). Making Secret Service records subject to PRA could protect certain records from disclosure for up to 20 years more than protections afforded under FOIA. In addition, several pieces of legislation have been introduced in the 111th Congress that directly or tangentially address FOIA.

Secret Service or Presidential Records

Debate and litigation surrounding the Secret Service records began in 2006, when Citizens for Responsibility and Ethics in Washington (CREW) filed a FOIA request with the Secret Service seeking access to sign-in logs maintained at the White House and the Vice Presidential Residence. The logs track who attends meetings at the two locations. CREW filed suit in federal district court in 2007, after the Secret Service failed to respond to the FOIA request. The suit also challenged the service's policy of deleting certain White House visitor records, claiming such action violated the Federal Records Act[77] and the Administrative Procedure Act.[78]

The district court found that the sign-in logs at the White House and the Vice Presidential Residence are created and controlled by the Secret Service, and, therefore, are "agency records."[79] The court also rejected the Secret Service's claim that disclosure of the records would prompt separation of powers concerns because they could "impede the ability of the President and Vice President to receive full and frank submissions of facts and opinions and to seek confidential information from many sources, both inside and outside the government."[80] The opinion of the district court is currently on appeal to the D.C. Circuit.

Congress may opt to enact legislation that would explicitly state whether the Secret Service logs should be treated as "presidential records."[81] If the records were designated as "presidential records" the logs would be afforded additional protections that could delay their release by up to 20 years.[82] If the records were

[77] 44 U.S. C. § 3101 et seq. (2006).

[78] 5 U.S.C. § 551 et seq. (2006).

[79] CREW, 527 F.Supp.2d at 98 (citing Tax Analysts, 492 U.S. at 147).

[80] Ibid. at 98 (citing Def. Mot. S.J. at 30). The court's opinion questioned whether releasing the log books would "impede the President's ability to perform his constitutional duty," saying the threat is not "great enough to justify curtailing the public disclosure aims of FOIA."

[81] If Congress opted to create such legislation, it could do so by amending FOIA (5 U.S.C. § 552), PRA (44 U.S.C. § 2201), or the Secret Service Statute (18 U.S.C. § 3056) to explicitly state the status of the Secret Service logs.

[82] Pursuant to the PRA, an outgoing President can restrict access to certain records for up to 12 years (44 U.S.C. § 2204(a). After 12 years, the President's records are then subject to release pursuant to FOIA's provisions. The 20-year protection assumes a record was created in January

determined not to be "presidential records," they would be subject to public release unless a FOIA exemption applied. Congress may also consider whether the legislation should be applied retroactively to the records of the Bush Administration or if the policy should apply only to current and future Secret Service logs. Congress could opt to take no action and wait for a determination of the records' status by the D.C. Circuit Court of Appeals. If the court does not overturn the district court's findings, the logs would be subject to FOIA, and would not receive any additional protections.

On May 19, 2009, the U.S. Court of Appeals decided that the Office of Administration (OA) within the Executive Office of the President (EOP) was not subject to FOIA.[83] CREW was again the appellant in the case, and sought information related to e-mails that went missing from the OA. The court stated the test to determine if an EOP entity was subject to FOIA was to ask whether the entity "wielded substantial authority independently of the President."[84] Finding that the OA was "directly related to the operational and administrative support of the work of the President and his EOP staff,"[85] the court decided that OA did not qualify as an executive branch agency.

FOIA Legislation in the 111th Congress

H.R. 1323

Introduced by Representative Steve Driehaus on March 5, 2009, the Reducing Information Control Designs Act would require federal agencies to streamline their internal classification designations. The bill would not affect classification standards that are codified or established by executive order. Pursuant to the legislation, the archivist of the United States would promulgate regulations aiming to standardize agencies' classification designations to "maximize public access to information," among making other reforms. Any modifications of classification designations "should have no relationship to determinations of public disclosure pursuant to the Freedom of Information Act (FOIA)."[86] The House agreed to the bill by voice vote on March 17, 2009. The next day, the

[86] U.S. Congress, House Committee on Oversight and Government Reform, Reducing Information Control Designations Act, report to accompany H.R. 1323, 111th Cong., 1st sess., March 16, 2009, H.Rept. 111-38 (Washington: GPO, 2009), pp. 3-4.

Senate received the bill and referred it to the Senate Committee on Homeland Security and Governmental Affairs.

H.R. 2450

Introduced by Representative Sheila Jackson-Lee on May 15, 2009, the Private Prison Information Act of 2009 would require all private, state, and locally run incarceration and detention facilities to comply with FOIA. Pursuant to the act, non-federal prisons and correctional facilities would be required "to release information about the operation of the non-Federal prison or correctional facility" unless the information was exempted from release by one of FOIA's nine exemptions.

H.R. 2712 (Representative Conaway); H.R. 2875 (Representative Conaway); H.R. 3015 (Representative Conaway); S. 1100 (Senator Joseph Lieberman); S. 1260 (Senator Joseph Lieberman); and S. 1285 (Senator Joseph Lieberman)

These six bills address the public release of photographs of the treatment of individuals engaged, captured, or detained by the U.S. Armed Forces from September 11, 2001 through January 22, 2009. Pursuant to the bills, these photographs would exempted from disclosure under FOIA. S. 1285 was introduced on March 17, 2009 and passed by unanimous consent that same day. On March 18, the bill was sent to the House, where it was referred both the House Committee on Oversight and Government Reform and the House Committee on Armed Services. The House bills have all been concurrently reported to the House Committee on Oversight and Government Reform and the House Committee on Armed Services. The Senate bills (other than S. 1285) have been referred to the Senate Committee on the Judiciary.

S. 612

Introduced by Senator Patrick J. Leahy on March 17, 2009, the OPEN FOIAAct of 2009 would require Congress to be detailed and explicit when creating any future statutory exemptions to the public release of records within FOIA. Any exemptions made subsequent to the enactment of S. 612 pursuant to the third exemption of FOIA, must cite directly to the third exemption. This bill is similar to legislation introduced in both the 109th and 110th Congresses. On March 17, the bill was referred to the Senate Committee on the Judiciary. The language of this bill was placed in S. 1285, which—as noted earlier—has passed the Senate and has been referred to two committees in the House.

Summary

The Privacy Act of 1974 represents an attempt by Congress to legislate several aspects of personal privacy protection as it relates to federal agency operations and practices. First, it sustains some traditional major privacy principles. Second, it provides an individual who is a citizen of the United States, or an alien lawfully admitted for permanent residence, with access and emendation arrangements for records maintained on him or her by most, but not all, federal agencies. Third, the statute embodies a number of principles of fair information practice: it sets certain conditions concerning the disclosure of personally identifiable information; prescribes requirements for the accounting of certain disclosures of such information; requires agencies to collect information, to the greatest extent practicable, directly from the subject individual when the information may result in adverse determinations about an individual's rights, benefits, and privileges under federal programs; requires agencies to specify their authority and purposes for collecting personally identifiable information from an individual; requires agencies to maintain all records which are used by the agency in making any determination about any individual with such accuracy, relevance, timeliness, and completeness as is reasonably necessary to assure fairness to the individual in the determination; and provides civil and criminal enforcement arrangements.

Since its enactment, the Privacy Act has been amended on six occasions; actions in 1988 and 1990 establishing new procedures and data protection boards for computer matching are generally seen as being the most significant. Of late, new issues have arisen concerning these matters and some long-prevailing concerns. This report reviews the background and development of the statute, its current provisions, and emerging issues pertaining to it. As legislative and other relevant developments occur, this report will be updated.

Introduction

The Privacy Act of 1974 represents an attempt by Congress to legislate several aspects of personal privacy protection as it relates to federal agency operations and practices.[87] Its eclectic provisions can be traced to several contemporaneous events prompting congressional interest in securing personal privacy.

Since the years of the late 19th century, various developments—not the least of which have been new, intrusive technologies—have contributed to more disparate understandings of the concept of privacy and infringements upon it.[88] Congress made an initial effort at legislating a new kind of privacy protection in 1970 when enacting the Fair Credit Reporting Act regulating the collection and dissemination of personal information by consumer reporting entities.[89]

With the Crime Control Act of 1973, Congress prohibited federal personnel and state agencies receiving law enforcement assistance funds pursuant to the statute from making unauthorized disclosures of personally identifiable criminal history research or statistical information. It also permitted "an individual who believes that criminal history information concerning him contained in an automated system is inaccurate, incomplete, or maintained in violation of this [law] ... to review such information and to obtain a copy of it for the purpose of challenge or correction."[90]

That same year, the Advisory Committee on Automated Personal Data Systems, established by Secretary of Health, Education, and Welfare Elliot L. Richardson in early 1972, offered an important proposal. The panel's July 1973 final report recommended "the enactment of legislation establishing a Code of Fair Information Practice for all automated personal data systems." Such a code would: punish unfair information practice with civil and criminal penalties; provide injunctive relief to prevent violations of safeguard requirements; empower individuals to bring suits for unfair information practices to recover actual, liquidated, and punitive damages, in individual or class actions; and allow

the recovery of reasonable attorneys' fees and other costs of litigation incurred by individuals who bring successful suits.[91]

Congressional efforts to legislate notice, access, and emendation arrangements for individuals concerning personally identifiable records maintained on them by federal departments and agencies began in the House in June 1972, but did not extend beyond the subcommittee hearing stage during the 92nd Congress. However, a few days before these inaugural House hearings on legislation that would evolve into the Privacy Act, a burglary occurred at Democratic National Committee headquarters. It was the beginning of the Watergate incident, which would significantly affect attitudes toward privacy protection legislation and the leadership for such legislation.

Legislation leading to the enactment of the Privacy Act began in the House largely as an effort to create a procedure whereby individuals could learn if federal agencies maintained files on them, could review the contents of the records in those files, could correct inaccuracies they contained, and could know how this information was being used and by whom. In the Senate, a privacy protection bill sponsored by Senator Sam Ervin, Jr., initially sought largely to establish a Federal Privacy Board and to create standards and management systems for handling personally identifiable information in federal agencies, state and local governments, and other organizations. Other aspects of privacy policy were added to these bills as they moved through their respective houses of Congress, and then were reconciled in a somewhat unusual manner to create an amalgamated bill acceptable to the House, the Senate, and the President.

House hearings began in mid-February 1974 under Representative William S. Moorhead, chairman of the Subcommittee on Foreign Operations and Government Information of the Committee on Government Operations (now Government Reform), and a principal manager of the legislation. The subcommittee held markup discussions in May, June, and July. These deliberations resulted in a clean bill (H.R. 16373), which was introduced by Representative Moorhead with 13 bipartisan cosponsors in mid-August and favorably reported by the Subcommittee without a dissenting vote. The Committee on Government Operations considered the legislation in mid-September, substituted revised text for the original language, and favorably reported it. President Gerald Ford, who had recently succeeded to the Oval Office after President Richard Nixon's early August resignation, endorsed the House bill

---

in an October 9 statement.[92] The measure was considered by the House on November 20 and 21, and approved, with amendments, on a 353-1 yea-and-nay vote.[93]

A somewhat different counterpart privacy proposal emerged in the Senate. Senator Ervin introduced his bill (S. 3418) on May 1, 1974, with bipartisan cosponsorship. Hearings on this and related legislation occurred in June. During June, July, and August, staff of the Senate Committee on Government Operations, its Ad Hoc Subcommittee on Privacy and Information Systems, and the Subcommittee on Constitutional Rights of the Committee on the Judiciary—all panels chaired by Senator Ervin—further refined the language of the bill. In a mid-August committee mark-up, a staff-developed version of the measure was amended and favorably reported to the Senate.

The new text of the bill would have established the Privacy Protection Commission, composed of five members appointed by the President from private life and subject to Senate approval. It would have been responsible for compiling and publishing an annual directory of information systems subject to the provisions of the bill, enforcing the legislation, and developing model guidelines for its implementation, including the conduct of research in this regard. The bill also would have established federal agency standards and management systems for handling information relating to individuals. These included fair information practice principles, disclosure standards, mailing list restrictions, and civil and criminal penalties.

On November 21, 1974, the Senate considered the Ervin legislation; amendments developed by committee staff and the Office of Management and Budget (OMB) were adopted, and the resulting version of the legislation was approved.[94] The following day, the Senate took up the House counterpart bill, struck its language and substituted in lieu there of the language of the Ervin bill, and approved the amended version of the House bill.[95]

With only a few weeks remaining before the 93rd Congress would adjourn sine die, House and Senate managers found they had very little time to reconcile the two differing bills. There was, however, strong desire for the passage of such

legislation, not only as a so-called Watergate reform, but also as a tribute and memorial to Senator Ervin, who was retiring from congressional service. Consequently, Representative Moorhead and Senator Ervin, with the concurrence of their respective committees, agreed to the rare arrangement of having their committee staffs negotiate a mutually agreeable legislative measure. After this effort reduced 108 substantive differences to eight, the leaders of the respective House and Senate committees brought those to resolution.[96] In lieu of a conference committee report, a staff analysis of the compromise legislation was produced.[97] The major concession was the relegation of the enforcement commission to the status of a temporary national study commission. Its oversight responsibilities were vested in OMB, but without enforcement authority.

On December 11, the House adopted the Senate bill as amended with the language of its own bill.[98] The Senate concurred with the House amendment by passing its own amendment on a 77-8 vote on December 17, clearing the measure for further House action.[99] The following day, the House agreed to the Senate amendments with an amendment of its own,[100] and the Senate concurred with the House amendments the same day, clearing the measure for the President's signature.[101] The Privacy Act was signed into law by President Ford on December 31, 1974.[102] In his signing statement, the President said the new law "signified an historic beginning by codifying fundamental principles to safeguard personal privacy in the collection and handling of recorded personal information by federal agencies."[103]

Major Provisions

The Privacy Act provides privacy protection in several ways. First, it sustains some traditional major privacy principles. For example, an agency shall "maintain no record describing how any individual exercises rights guaranteed by the First Amendment unless expressly authorized by statute or by the individual

about whom the record is maintained or unless pertinent to and within the scope of an authorized law enforcement activity."[104]

Second, similar to the Fair Credit Reporting Act, the Privacy Act provides an individual who is a citizen of the United States, or an alien lawfully admitted for permanent residence, with access and emendation arrangements for records maintained on him or her by most, but not all, federal agencies. General exemptions in this regard are provided for systems of records maintained by the Central Intelligence Agency and federal criminal law enforcement agencies.

Third, the statute embodies a number of principles of fair information practice. For example, it sets certain conditions concerning the disclosure of personally identifiable information; prescribes requirements for the accounting of certain disclosures of such information; requires agencies to "collect information to the greatest extent practicable directly from the subject individual when the information may result in adverse determinations about an individual's rights, benefits, and privileges under Federal programs"; requires agencies to specify their authority and purposes for collecting personally identifiable information from an individual; requires agencies to "maintain all records which are used by the agency in making any determination about any individual with such accuracy, relevance, timeliness, and completeness as is reasonably necessary to assure fairness to the individual in the determination"; and provides civil and criminal enforcement arrangements.

Since its enactment, the Privacy Act has been amended on six occasions. In 1982, the Debt Collection Act added a new exception to the disclosure prohibition for disclosures made to consumer credit reporting agencies.[105] That same year, the Congressional Reports Elimination Act changed the annual report requirement of the Privacy Act and modified the provision for publication of agency systems of records.[106] In 1984, the Central Intelligence Agency Information Act resolved a long-standing controversy by specifying that the Privacy Act is not authority "to withhold from an individual any record which is otherwise accessible to the individual under the provisions of" the Freedom of Information Act.[107] Amendments in 1988[108] and 1990[109] established new procedures and data

protection boards to ensure privacy, integrity, and verification of data disclosed for computer matching. Recently, the Federal Reports Elimination and Sunset Act of 1995, as amended by the Miscellaneous Appropriations Act for FY 2000, repealed the requirement for a biennial Privacy Act report to Congress.[110]

Emerging Issues

Better Enforcement or Overhaul. Several issues are before the 107th Congress regarding the Privacy Act. A September 2000 General Accounting Office (GAO) report on a survey of online privacy protections at federal Web sites found that 23 of 70 agencies had disclosed personal information gathered from their Web sites to third parties, mostly other agencies. However, at least four agencies were discovered to be sharing such information with private entities—trade organizations, bilateral development banks, product manufacturers, distributors, and retailers. The offending agencies were not identified by GAO. Responding to these findings, some privacy advocates called for updating the Privacy Act to specify privacy protections for Internet visitors to agency Web sites, while others urged better oversight and enforcement of the statute.[111]

Managing "Cookies"

Federal agencies obtained personal information about visitors to their Web sites through the use of computer software known as "cookies." In June 2000, press disclosures revealed that the National Drug Control Policy Office, an agency within the Executive Office of the President, was secretly tracking visitors to its Web site through the use of "cookies."[112] In response, OMB issued a June 22, 2000, memorandum to the heads of all executive departments and agencies indicating that "'cookies' should not be used at Federal web sites, or by contractors when operating web sites on behalf of agencies, unless, in addition to clear and conspicuous notice, [certain specified] ... conditions are met."[113]

In October 2000, press disclosures revealed that a GAO followup study contended that 13 federal agencies had ignored the OMB June 22 memorandum prohibiting the tracking of visitors to government Web sites. An appended letter

from the OMB deputy director for management defended agency use of so-called "session cookies," which, the letter said, facilitated transactions at the website and were not banned by OMB. Session cookies last only as long as one is visiting the website. Clearly prohibited are "persistent cookies," which may track web habits for long periods of time, and the dissemination of a person's information to a private company. GAO found seven agencies engaging in one or both of these activities.[114]

In mid-April 2001, Senator Fred Thompson, chairman of the Senate Committee on Governmental Affairs, released the preliminary findings of agency Inspectors General who were required by a provision of the Treasury-Postal title of the Consolidated Appropriations Act of 2001 to report on how their agencies collect and review personal information on their Web sites.[115] Reports on 16 agencies found 64 Web sites making use of "persistent cookies."[116] Shortly thereafter, a GAO senior attorney criticized OMB's contradictory guidelines about federal agency use of "cookies." OMB, it was observed, had encouraged agencies to comply with the fair information practice principles of the Federal Trade Commission, which are not statutorily mandated, and also adhere to the requirements of the Privacy Act.[117] The Privacy Act might be amended to eliminate any such contradiction, to prescribe conditions when "sessions cookies" may be used, and to outlaw the use of "persistent cookies."

Oversight and Enforcement Responsibility

Another issue concerns continued vestment of Privacy Act oversight and enforcement in the director of OMB or, alternatively, in another entity. Options for consideration in this regard include a small privacy agency having no regulatory authority over the private sector[118] or a Chief Information Officer of the United States (CIOUS). Such an official had been proposed in 1995 Senate legislation underlying the Clinger-Cohen Act governing information technology

acquisition and management. A Progressive Policy Institute report recommended such a position in March 2000,[119] and legislation in support of the concept was offered in the House during the 106th Congress.[120] Texas Governor George W. Bush, the anticipated Republican presidential nominee, endorsed the CIOUS idea in a June 9, 2000, government reform speech in Philadelphia. During a September 2000 House subcommittee hearing on the proffered CIOUS bills[121] and in related published views, proponents of the new position contended that many aspects of information technology (IT) management would benefit from having a IT expert in charge of this area, that such an official would better facilitate OMB oversight of IT applications and use, and that efficiencies and economies could well result if this official could prevent federal agencies from purchasing computer systems that did not work or otherwise performed poorly in, or failed, security tests. Critics maintained that the CIOUS would unnecessarily perform a subset of duties currently vested in the OMB deputy director for management, would seemingly have few immediate enforcement powers, and, in some versions, might be controlling funds outside the traditional appropriations process. Members of the CIO Council reportedly are at odds over the need for the CIOUS.[122] In the early weeks of the new administration, President Bush vacated his earlier endorsement of a CIOUS.

Broader Application

A third issue concerns inclusion of the White House Office and the Office of the Vice President within the scope of the Privacy Act, and to what extent, if any, the legislative branch should be subject to the statute or parallel requirements set by rule or standing order. Disclosures of personally identifiable information by the White House during the Clinton Administration has fueled this issue. Similarly, although Congress and the legislative support agencies are not currently subject to the Privacy Act, the issue of legislatively requiring their inclusion is fueled by

Petrillo, "David Bill Would Give IT Czar Carrots, but No Stick," Government Computer News, vol. 19, Sept. 11, 2000, p. 24.

considerations of executive and legislative branch parity in this regard, as well as by the perceived need for more explicit privacy protections within the legislative branch.[123]

Military Exclusion

A fourth issue arises from a September 2000 federal district court ruling that the Feres doctrine, which prohibits military personnel from suing the government for injuries,[124] applies equally to lawsuits brought under the Privacy Act, resulting in a prohibition on suing not only for damages, but also even for the correction of records.[125] In this case, a U.S. Navy fighter pilot sought damages for the leaking of her confidential flight evaluation to Robert L. Gandt, an author researching a book on navy fighter pilots. The evaluation's recommendation that Cummings be stripped of her flight status was rejected by the commander of the Naval Air Force for the Atlantic Fleet. Gandt's 1997 book, Bogey's and Bandits: The Making of a Fighter Pilot, quoted from the evaluation, but assigned Cummings a pseudonym. A 1988 graduate of the U.S. Naval Academy, Cummings left the navy in 1999 and is currently an assistant professor of engineering at Virginia Polytechnic Institute and Statute University.[126]

On August 2, 2001, Representative Rick Boucher, with bipartisan cosponsorship, introduced H.R. 2738 to amend Title 5, United States Code, to clarify that all of the protections of the Freedom of Information Act and the Privacy Act apply to members of the armed forces to the same extent and in the same manner as to any other individual. The bill was referred to the Committee on Government Reform.

On February 15, 2002, the U.S. Court of Appeals for the District of Columbia reversed the trial court in the navy fighter pilot case seeking Privacy Act relief. The 2-1 ruling said that members of the military can sue the government for invading their privacy, indicating that the Feres doctrine does not take

precedence over the Privacy Act.[127] Because the decision is binding only on the courts of the circuit, a legislative clarification may still be sought.

Routine Use Reconsidered

Still another issue concerns the possible modification of the "routine use" clause of the Privacy Act to improve citizen awareness of the routine uses that agencies have indicated they will make of personally identifiable information and to limit the discretion of agency officials to share personally identifiable information with other agencies. The Privacy Act requires each agency in possession of systems of records to publish for each system the routine uses to which the information might be put. Such notices are published in the Federal Register. Most citizens are unaware of these notices and their implications, with the result that they have little understanding of how information supplied by or about them to government agencies might be used. Furthermore, in the view of one policy analyst examining the situation, "agency officials have interpreted the routine use clause broadly and have created almost unlimited ability to move data among Federal agencies."[128]

However, from another perspective, the routine use clause may not be quite as broadly interpreted as has been asserted. A May 1998 report, prepared by a benefit eligibility verification study committee of the President's Council on Integrity and Efficiency, for example, considered it doubtful that, given prevailing judicial interpretation, "disclosure of information collected by one agency for a specific program, to another agency for eligibility verification in an unrelated program, would be considered a routine use."[129]

Matching and Sharing

Finally, an issue has arisen regarding the circumstances, if any, when computer matching of personally identifiable information in systems of records across government programs and agencies should be permitted. Agency officials responsible for combating waste, fraud, and abuse in federal benefits programs urge a reconsideration of the Privacy Act's strict matching requirements, while privacy advocates would retain the status quo.[130] The case for reconsideration began to emerge a few years ago, the May 1998 benefit eligibility verification

Summary

Almost all assessments of the attacks of September 11, 2001, have concluded that U.S. intelligence and law enforcement agencies had failed to share information that might have provided advance warning of the plot. This realization led Congress to approve provisions in the USA PATRIOT Act (P.L. 107-56) and subsequent legislation that removed barriers to information sharing between intelligence and law enforcement agencies, and mandated exchanges of information relating to terrorist threats. Most experts agreed that statutory changes, albeit difficult to enact, were essential to change the approaches taken by executive branch agencies.

The barriers that existed prior to September 2001 had a long history based on a determination to prevent government spying on U.S. persons. This had led to the establishment of high statutory barriers to the sharing of law enforcement and intelligence information. The statutes laid the foundation of the so-called "wall" between intelligence and law enforcement that was buttressed by regulations, Justice Department policies, and guidance from the judicial branch.

Despite the widespread acceptance of a barrier between law enforcement and intelligence, by the early 1990s it had become apparent to some that the two communities could mutually support efforts to combat international criminal activities including narcotics smuggling. Later in the decade dangerous threats to the U.S. posed by international terrorists came into sharper focus. Nevertheless, efforts to adjust laws, regulations, and practices did not succeed, drawing strong opposition from civil libertarians. Only the tragedy of the 9/11 attacks overcame earlier concerns and led Congress and the executive branch to remove most statutory barriers to information sharing.

Laws and regulations have changed significantly since September 2001 and an Information Sharing Executive (ISE) has been established within the Office of the Director of National Intelligence to design and implement information sharing procedures. It is clear, however, that sustaining the exchange of law enforcement and intelligence information remains a challenge. In particular, there is continued concern about sharing of information that might in some way jeopardize the rights of free speech or association of U.S. persons. This opposition has contributed to the difficulty Congress has had in addressing legislation in this area and can be expected to continue. Some argue that, given the extent of legislation enacted in recent years, extensive oversight of information sharing efforts may be an appropriate way to ensure that the balance between ensuring domestic security and protecting civil liberties can be maintained.

This report will be updated as additional information becomes available.

Introduction

The failure of the U.S. Intelligence Community to provide better warning of the September 11, 2001, attacks has been widely attributed to the existence of "walls" between intelligence and law enforcement agencies. The walls arguably kept analysts from talking to each other and from sharing pieces of information that, if they had been viewed in close relationship, might have yielded a coherent picture of the emerging plot. This theory cannot of course be fully proven — the overall plot might not have been discerned even if the best analysts had had access to all available information in every agency. Nevertheless, the fact that available data had not in fact been shared focused public and congressional attention on the real or perceived walls that inhibited the exchange of information among agencies.

A consensus emerged that the walls should be torn down. In December 2002, the Joint Inquiry into Intelligence Community Activities Before and After the Terrorist Attacks of September 11, 2001, established by the two congressional intelligence committees, made a factual finding that the "important point is that the Intelligence Community, for a variety of reasons, did not bring together and fully appreciate a range of information that could have greatly enhanced its chances of uncovering and preventing Usama Bin Ladin's plan to attack the United States on September 11, 2001."[132] The Inquiry also made a systemic finding that:

> *Within the Intelligence Community, agencies did not adequately share relevant counterterrorism information, prior to September 11. This breakdown in communications was the result of a number of factors, including differences in the agencies' missions, legal authorities and cultures. Information was not sufficiently shared, not only between different Intelligence Community agencies, but also within individual agencies, and between the intelligence and law enforcement agencies.*[133]

Similar conclusions were reached in July2004 by the 9/11 Commission (the National Commission on Terrorist Attacks Upon the United States) carefully documented the failures of pre-9/11 information sharing among agencies and within different offices of the Justice Department and recommended a number of initiatives to encourage unity of effort in sharing information.[134]

The Legacy of FISA

The failure to share information prior to 9/11 had not occurred by happenstance. Law enforcement and intelligence information was not routinely shared and collectors and analysts were walled off from one another through a complex arrangement of constitutional principles, statutes, policies, and practices. These regulations had their origin in longstanding divisions of labor that reached back far into pre-World War II practices and in the provision of the National Security Act of 1947 requiring that the Central Intelligence Agency (CIA) "have no police, subpoena, or law enforcement powers or internal security functions."[135] The regulations were significantly strengthened in the 1970s when, in reaction to domestic intelligence gathering activities during the Vietnam War era, Congress undertook extensive investigations of intelligence activities and enacted legislation regulating domestic surveillance activities. Ultimately, in response to recommendations derived from this investigation, in 1978 Congress passed and President Jimmy Carter signed the Foreign Intelligence Surveillance Act (FISA),

---

[133] Ibid., p. xvii. Intelligence agencies focus on concerns outside U.S. territory (and are sometimes known as "foreign intelligence" agencies). They include the Central Intelligence Agency (CIA), the National Security Agency (NSA), the Defense Intelligence Agency (DIA), the National Reconnaissance Office (NRO), the National Geospatial-Intelligence Agency (NGA), the Bureau of Intelligence and Research of the State Department, the intelligence components of the military services and the Department of Homeland Security. Law enforcement agencies include the Federal Bureau of Investigation (FBI), the Drug Enforcement Administration, the Secret Service, and the Customs Service. The FBI is considered both a foreign intelligence agency and a law enforcement agency; this is also the case with the Coast Guard.

[134] U.S., National Commission on Terrorist Attacks upon the United States, The 9/11 Commission Report (Washington: Government Printing Office, 2004); see pp. 416-419.

[135] 50 U.S.C. 403-3(d)(1); on FISA generally, see CRS Report RL30465, The Foreign Intelligence Surveillance Act: An Overview of the Statutory Framework and Recent Judicial Decisions, by Elizabeth B. Bazan.

P.L. 95-511.[136] FISA provides a statutory framework for electronic surveillance in foreign intelligence investigations while electronic surveillance in criminal investigations continues to be governed by Title III of the Omnibus Crime Control Act of 1968 (usually referred to as Title III).[137] The implementation of FISA came to have an important influence on the relationship between law enforcement and intelligence.

FISA required that "the purpose" of domestic electronic surveillance (or a physical search) had to be the gathering of foreign intelligence information.[138] FISA permitted the dissemination to the law enforcement community of information relating to criminal activity incidentally acquired during a FISA electronic surveillance or physical search. When such dissemination was challenged by defense attorneys as running afoul of the Fourth Amendment,[139] a number of federal courts of appeals had upheld the government's contention in several cases that the "primary purpose" of an electronic surveillance or physical search had been the collection of foreign intelligence information. Thus, this use of FISA was held to be not inconsistent with Fourth Amendment requirements for criminal cases.[140]

Before 9/11 a considerable body of government practice and Justice Department policy increasingly reflected an understanding that adhering to the primary purpose standard effectively precluded Fourth Amendment challenges. The concern was to avoid letting aggressive criminal investigators obtain FISA court

---

[136] In 1994 FISA was modified to include physical searches (section 807 of the Intelligence Authorization Act for FY1995, P.L. 103-359).

[137] Title III prohibits all interception of wire or electronic communications unless that interception falls within one of the exceptions to Title III; electronic surveillance under FISA is one of the exceptions (18 U.S.C. 2511(2)(f). It is to be noted that "foreign intelligence" may not involve actual or potential violations of U.S. laws, e.g. intelligence could be acquired, in the U.S., regarding a plot involving parties outside the U.S. that would not involve activities prohibited by U.S. law. Such intelligence could be of great interest to national policymakers but there would be no justification for relying on Title III surveillance authorities in trying to obtain it. As will be noted below, there is, however, a significant potential for overlap when intelligence provides evidence of activities that are illegal under U.S. law.

[138] 50 U.S.C. 1804(a)(7)(B), 50 U.S.C. 1823(a)(7)(B). Sec. 218 of the USA PATRIOT Act (P.L. 107-56) had amended these sections to replace "the purpose" with "a significant purpose."

[139] The Fourth Amendment to the Constitution states: "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized."

[140] A detailed assessment of the various judicial views and rulings on this question lies beyond the scope of this Report; see, however, David S. Kris, "The Rise and Fall of the FISA Wall," Stanford Law and Policy Review, Spring 2006, pp. 487-529.

orders when they were interested in obtaining evidence of criminal activities. There was a pervasive concern within the Justice Department that a court in a criminal trial would suppress information obtained through a FISA investigation on the grounds that it was primarily being used, not to collect foreign intelligence, but to gather criminal evidence or even that FISA itself would be overturned. In practice, information collected by intelligence agencies (including the parts of the Federal Bureau of Investigation (FBI) dealing with counterterrorism and counterintelligence) was kept apart from information collected for the use of prosecutors.

Recognizing the Need to Share Information

FISA's requirements appear not to have posed major problems until the mid1990s,[141] but law enforcement and intelligence agencies tended to function in separate worlds. Concern about these divisions did exist and there had been major initiatives largely as a result of concerns about the development of barriers between law enforcement and intelligence agencies in the aftermath of the controversy surrounding the illegal activities of the Banca Nazionale del Lavoro (BNL) and the Bank of Credit and Commerce International (BCCI) in the early 1990s. The controversy involved complex banking fraud and other criminal activities undertaken by the two foreign banks. Congressional investigators developed information that the CIA had obtained information indicating suspicious activities by the two banks that had not been passed to prosecutors in large measure because channels of communications had not been established between intelligence and law enforcement agencies. The Senate Intelligence Committee investigators concluded that:

> *The fundamental policy governing the relationship between law enforcement and intelligence needs to be addressed by the Attorney General and the DCI [Director of Central Intelligence], in conjunction with the congressional oversight committees. Confusion is apparent on both sides as to what the proper role (and authority) of intelligence agencies is in circumstances like those presented in the BNL case.*[142]

The reaction to the BNL/BCCI affairs reflected a shift away from emphasis on a strict separation of law enforcement and intelligence efforts to an appreciation by Congress of the need for closer cooperation. As a result of congressional concerns, the DCI and the Attorney General directed that a review of the

[142] U.S. Congress, 103d Congress, 1st session, Senate, Select Committee on Intelligence, The Intelligence Community's Involvement in the Banca Nazionale del Lavoro (BNL) Affair, S. Prt. 103-12, February 1993, p. 27.

intelligence-law enforcement relationship be conducted. The review, undertaken by a group of senior executive branch officials known as the Joint Task Force on Intelligence and Law Enforcement, submitted a report in August 1994. The Task Force described the failure by intelligence and law enforcement agencies to make use of all available information on the activities of the two foreign banks. It called for a number of bureaucratic mechanisms to ensure greater information exchanges in the future, but argued that no statutory changes were called for:

> *What is required is not new legislation radically altering the relationship [between intelligence and law enforcement agencies], but rather a different approach to the existing relationship — one that is more interactive on a number of fronts, yet maintains the important distinctions between these two communities based on law, culture, and mission.*[143]

The Joint Task Force Report led to the establishment of a series of interagency coordinative mechanisms — the Intelligence-Law Enforcement Policy Board, the Joint Intelligence-Law Enforcement Working Group (JICLE) — at various levels to encourage information exchanges and resolve difficulties.[144] Although the Task Force provided a perceptive analysis of the difficulties that then existed and officials assigned to the resultant interagency bodies worked diligently at overcoming obstacles, progress was limited.[145]

By the 1990s, the threat of new forms of international terrorism was becoming apparent. Middle Eastern terrorists were operating against U.S. forces overseas

---

[143] U.S., Joint Task Force on Intelligence and Law Enforcement, Report to the Attorney General and Director of Central Intelligence, August, 1994, p. 4. The absence of a need for legislation was also the position of the then-DCI James Woolsey: "Rather, we can accomplish our goal of enhanced cooperation through a series of initiatives — such as joint training of law enforcement and intelligence officers." Address by R. James Woolsey, Director of Central Intelligence, before the American Bar Association, Washington, DC, April 29, 1994. In 2001, however, Woolsey would write in regard to the 1993 World Trade Center bombing, "No one other than the prosecutors, the Clinton Justice Department, and the FBI had access to the materials surrounding the case until they were presented in court, because they were virtually all obtained by a federal grand jury and hence kept not only from the public but from the rest of the government under the extreme secrecy requirements of Rule 6(e) of the Federal Rules of Criminal Procedure." R. James Woolsey, "Blood Baath: the Iraq Connection," New Republic, September 24, 2001, p. 21. Rule 6(e) established requirements for the secrecy of grand jury proceedings.

[144] See CRS Report RL30252, Intelligence and Law Enforcement: Countering Transnational Threats to the U.S., by Richard A. Best Jr.

[145] A key factor appears to have been the potential that litigation over important espionage cases could jeopardize existing practices; see, for instance, the testimony of John Gannon, former head of the National Intelligence Council and other senior government positions, to the Senate Judiciary Committee, May 2, 2006; Gannon claimed that the "early post-war determination to share information and push the 'wall' on information sharing between intelligence and law enforcement was set back by the sensational Ames, Nicholson, and Hanson espionage cases."

and, occasionally, within the U.S. (as in the 1993 World Trade Center attacks). Observers believed that both intelligence and law enforcement agencies were collecting relevant information on international terrorism. Members of Congress began to seek administrative and statutory changes that could facilitate information sharing in this area.

Pursuant to P.L. 105-277, a supplemental appropriations act passed in 1998, the National Commission on Terrorism, headed by former Ambassador L. Paul Bremer, was established to review the laws, regulations, directives, policies and practices for preventing and punishing international terrorism. The Bremer Commission's June 2000 report highlighted concerns about the inadequate sharing of terrorism-related information. It recommended the elimination of barriers to the aggressive collection of information on terrorists and suggested that the FBI suffered from bureaucratic and cultural obstacles to gathering terrorism information. It found that the "Department of Justice applies the statute governing electronic surveillance and physical searches of international terrorists in a cumbersome and overly cautious manner."[146] Although it noted that the FISA application process had been recently streamlined, it recommended that the Justice Department's Office of Intelligence Policy Review (OIPR) should not require the inclusion of information in excess of that which was actually mandated by FISA. It also recommended that OIPR be substantially expanded and that it be directed to cooperate with the FBI.[147]

The Commission further concluded:

> *Law enforcement agencies are traditionally reluctant to share information outside of their circles so as not to jeopardize any potential prosecution. The FBI does promptly share information warning about specific terrorist threats with the CIA and other agencies. But the FBI is far less likely to disseminate terrorist information that may not relate to an immediate threat even though this could be of immense long-term or cumulative value to the intelligence community. . . . Moreover, certain laws limit the sharing of law enforcement information, such as grand jury or criminal wiretap information, with the intelligence community. These laws are subject to different interpretations, so that in some cases it is unclear whether the restrictions apply."*[148]

[148] Ibid., pp. 15-16.

The Commission did not indicate a need for immediate statutory changes, but recommended that the "Attorney General should clarify what information can be shared and direct maximum dissemination of terrorist-related information to policymakers and intelligence analysts consistent with the law."[149]

Initial Efforts to Legislate

Members of Congress did propose various approaches to address the lack of information sharing. S. 2089 as introduced in February 2000 by Senator Specter, would have required that the Attorney General prescribe in regulations the circumstances under which information acquired pursuant to FISA "shall be disclosed for law enforcement purposes." The bill would also have required two reports addressing issues of information sharing. First, it would have tasked the Director of the FBI to submit a report on "the feasibility of establishing within the Bureau a comprehensive intelligence reporting function having the responsibility for disseminating among the elements of the intelligence community information collected and assembled by the Bureau on international terrorism and other national security matters." Secondly, the bill would have required the President to submit a report on the legal authorities that govern the sharing of criminal wiretap information with intelligence agencies and with recommendations to improve the capability of the Justice Department to share "foreign intelligence information or counterintelligence information with elements of the United States intelligence community on matters such as counterterrorism."

In its report on the bill, the Senate Intelligence Committee argued:

> *For the intelligence mission of the United States to be successful, there must be a cooperative and concerted effort among intelligence agencies. Any information collected by one agency under foreign intelligence authorities that could assist another agency in executing its lawful mission should be shared fully and promptly....*
>
> *The Committee has been briefed on the recent efforts by the Federal Bureau of Investigation and the Central Intelligence Agency to enhance their ability to share valuable information collected under FISA orders. The Committee commends these efforts and expects them to continue and to be broadened to include all areas of the foreign intelligence mission.*[150]

[150] U.S. Congress, 106th Congress, 2d session, Senate, Select Committee on Intelligence, The Counterintelligence Reform Act of 2000, S.Rept. 106-352, July 20, 2000, p. 6.

As reported to the Senate in July 2000, S. 2089 was modified to include only a request for reports from the Attorney General on mechanisms for determinations of disclosure of FISA-derived information for law enforcement purposes and on actions taken by the Department of Justice (DOJ) to coordinate the dissemination of intelligence information within DOJ.

Congressional concern about the growing threat of terrorism was also demonstrated in S. 3205, introduced in October 2000 and known as the Kyl-Feinstein Counterterrorism Act of 2000, which was based directly on recommendations of the Bremer Commission that had been released in August. The bill took notice of the attack on the U.S.S. Cole, which had occurred on October 12, 2000, and aimed to discourage financial support of terrorist organizations. This bill also addressed information sharing issues; section 9 would have required a report on the feasibility of assigning the FBI responsibility for disseminating among the elements of the Intelligence Community information collected and assembled by the FBI on international terrorism and other national security matters. Section 10 of the bill would have required a report on the legal authorities that govern the sharing of criminal wiretap information with various law enforcement agencies and intelligence agencies and "recommendations, if any," for legislative language that would improve the Justice Department's capabilities to share information on matters such as counterterrorism with intelligence agencies "with elements of the United States intelligence community on matters such as counterterrorism."

Consideration of the legislation reflected many of the same privacy and civil liberties concerns that had influenced existing procedures in the Justice Department. Criticisms of the approach taken by the legislation were voiced by some civil libertarians. One group opposed the sharing of information obtained by electronic surveillance conducted under Title III authorities with intelligence agencies. Such an effort, it was argued, "breaches the well-established and constitutionally vital line between law enforcement and intelligence activities."[151] Concern was also expressed about the potential use of such information by the CIA and other intelligence agencies: "The secretive data gathering, storage and retention practices of the intelligence agencies are appropriate only when conducted overseas for national defense and foreign policy purposes and only when directed against people who are not U.S. citizens or permanent residents."[152] Further concern was directed at the potential use of information gathered under counterintelligence authorities (presumably FISA) in criminal proceedings:

[151] Letter from Laura W. Murphy, Director, American Civil Liberties Union, Washington National Office, James X. Dempsey, Senior Staff Counsel, Center for Democracy and Technology, and Kate Martin, Executive Director, Center for National Security Studies, reprinted in Congressional Record, October 26, 2000, p. S11118.

[152] Ibid.

> *Since the period of ... the Church committee, it has been recognized that the rights of Americans are better protected (and the FBI may be more effective) when international terrorism and national security investigations are conducted under the rules for criminal investigations.*[153]

Such views reflected a continuing distrust of intelligence agencies and a fear that past practices might be revived. In floor debate, Senator Leahy noted that initial drafts of S. 3205 had posed "serious constitutional problems and risks to important civil liberties we hold dear." After modifications, however, "no longer does the bill require a change in the wiretap statute allowing the permissive disclosure of information obtained in a Title III wiretap to the intelligence agencies."[154]

The Clinton Administration Justice Department took a different approach, arguing that then-current statutes and regulations provided law enforcement agencies with "authority under current law to share Title III information regarding terrorism with intelligence agencies when the information is of over-riding importance to the national security." Any change "must accommodate legal constraints such as Criminal Rule 6(e) and the need to protect equities relating to ongoing criminal investigations."[155] Accordingly, the Justice Department specifically opposed the provision in the bill that would permit the sharing of foreign intelligence or counterintelligence information collected under Title III by investigative or law enforcement officer with intelligence agencies.[156]

The Kyl-Feinstein bill would not have changed statutory language, but only asked for reports on the issue of information. Even so, according to Senator Leahy, the initial proposal to mandate such changes "prompted a firestorm of controversy

---

[153] Ibid., p. S11119.

[154] Congressional Record, November 14, 2000, p. S11540. Almost a year later during consideration of the USA PATRIOT Act, Senator Leahy would note that the Justice Department had opposed the original Kyl legislation because it might have opened sensitive materials to the discovery process and it raised issues about sharing information about U.S. persons. Congressional Record, October 25, 2001, p. S 11001.

[155] Letter from Robert Raben, Assistant Attorney General, Department of Justice, reprinted in Congressional Record, October 26, 2000, pp. S11119. The letter did not elaborate on how Rule 6(e) and the need to protect equities could be balanced against the need to share information. Apparently, precise details of a planned assassination plot would meet the "overriding importance" standard, but Raben gave no recognition that intelligence agencies should have access to ambiguous data that might yield evidence of a plot only when combined with other information; in other words, dots that are innocuous in themselves but which, when connected to other information, reveal a dangerous threat.

[156] Ibid., p. S11119.

from civil liberties and human rights organizations, as well as the Department of Justice."[157] Even though the House took no action on this bill, passage of the legislation by the Senate reflected concerns at the end of 2000 regarding the possible need to adjust information sharing mechanisms, coupled with a determination to move cautiously before implementing changes that could affect civil liberties. Ultimately, the legislation was adopted by the Senate on November 14, 2000, but it was not sent to the House before the adjournment of the 106th Congress.

The FY2001 Intelligence Authorization Act, P.L. 106-567, signed on December 27, 2000, reflected the concerns that had inspired both S. 2089 and S. 3205. It included a requirement for a report from the Attorney General on "the authorities and procedures utilized by the Department of Justice for determining whether or not to disclose information acquired under the Foreign Intelligence Surveillance Act of 1978 (50 U.S.C. 1801 et seq.) for law enforcement purposes."[158] This Act also formalized procedures for authorizing FISA surveillance, expanded grounds for establishing probable cause, established new procedures for physical searches within FISA, and specified mechanisms to facilitate the use of intelligence in counterintelligence investigations. It provided increased funding for OIPR subsequent to the submission of a report indicating efforts taken to streamline and improve the FISA application process. It included a provision (in section 606) derived from S. 2089 requiring a report from the Attorney General on actions taken to "coordinate the dissemination of intelligence information within the appropriate components of the [Justice] Department and the formulation of policy on national security issues." It did not, however, address the question of making information from law enforcement sources available to the Intelligence Community.

Clearly, the problems created by the existence of the "wall" had not been unrecognized prior to 9/11. The Justice Department's opposition in 2000 to legislative proposals to remove barriers has been noted. On the other hand, some argue that the primary factor in preventing statutory changes was, as one observer has claimed, that "in most instances both the Department of Justice and The White House turned down the requests because it was firmly believed by senior members of the Executive Branch that the United States Congress would

---

[157] Congressional Record, November 14, 2000, p. S11540; Leahy himself, however, had earlier that year indicated support for legislation that would promote information sharing and consultation between intelligence agencies in regard to counterintelligence. "In an area of such national importance, it is critical that our law enforcement and intelligence agencies work together as efficiently and cooperatively as possible." Prepared Statement of Hon. Patrick Leahy printed in U.S. Congress, 106th Congress, 2d session, Senate, Committee on the Judiciary, Subcommittee on Administrative Oversight and the Courts, Counterintelligence Reform Act of 2000, S.Hrg. 106-993, March 7, 2000, p. 12.

[158] Section 604(b), P.L. 106-567.

not allow the IC [Intelligence Community] to have broader surveillance powers."[159] This view would be expressed by former Attorney General William Barr in testimony to the 9/11 Commission:

> *For three decades leading up to 9/11, Congress was at the fore of a steady campaign to curtail the Bureau's domestic intelligence activities and impose on all its activities the standards and process of the criminal justice system. These concerns made it extremely difficult for the Bureau to pursue domestic security matters outside the strictures of the criminal justice process. Prohibitions on sharing grand jury information with intelligence agencies and with using intelligence information in criminal investigations created a 'wall of separation.'*[160]

It is clear in retrospect that there were those in both the Executive Branch and Congress who realized the need to lower barriers to sharing law enforcement and intelligence information, but their views did not, prior to 9/11, reflect a consensus in either branch. Those opposed to greater information sharing did so in large measure because of their awareness of the past history of domestic surveillance and a distrust of intelligence organizations. The result was a number of very tentative steps that, in the event, proved wholly inadequate to task of gathering information about al Qaeda's plot. The FY2001 Intelligence Authorization Act included some minimalist provisions, but the wall was left in place. Neither the Clinton Administration or the Bush Administration, in the first eight months of 2001, sought to amend the relevant laws.[161] The problem was recognized but proposed solutions faced strong opposition.

After 9/11, Congress Tears Down the Wall

The attacks of September 11, 2001, destroyed the World Trade Center and a portion of the Pentagon; they also demolished the wall between U.S. law enforcement and intelligence. After 9/11, it was almost immediately accepted that

[159] Robert M. Blitzer (a former FBI official), "Domestic Intelligence Challenges in the 21st Century," (Arlington, VA: Lexington Institute, 2002), p. 10; available at [http://www.lexingtoninstitute.org/docs/497.pdf].

[160] Statement of William P. Barr to the 9/11 Commission, December 8, 2003; available at [http://www.9-11commission.gov/hearings/hearing6/witness_barr.htm].

[161] The incoming Bush Administration was reviewing procedures relating to the wall, but as late as August 2001, Larry D. Thompson, the Deputy Attorney General, reiterated that departmental guidelines regarding the wall were still in effect; Larry D. Thompson Memorandum to Criminal Division, Office of Intelligence Policy and Review, and FBI, August 6, 2001 available at [http://www.cnss.org/9.11commissionintelligence.htm]; see also, John Ashcroft, Never Again: Securing America and Restoring Justice (New York: Center Street, 2006), p. 147; Thomas H. Kean and Lee H. Hamilton, Without Precedent: the Inside Story of the 9/11 Commission (New York: Knopf, 2006), p. 195.

counterterrorism would have to involve all parts of the U.S. Government, including law enforcement agencies and the Intelligence Community. It was agreed that the counterterrorism effort must be based on sharing information from whatever source. The problem for both Congress and the executive branch was to establish appropriate mechanisms for information sharing with adequate safeguards for using the information in future criminal trials.

Congress immediately set about to consider the most appropriate legislative response that could be quickly enacted. Former Attorney General John Ashcroft writes, "The 9/11 attacks occurred on a Tuesday. By Saturday, we had a full-blown legislative proposal. Part of the reasons we were able to move so quickly was that a number of the provisions had been proposed to Congress in 1996, and Congress had rejected them."[162] Attention focused on various proposals and recommendations of commissions that had looked at international terrorism and related issues and to earlier legislative proposals that had not been adopted.[163] A wide number of proposals came together as the USA PATRIOT Act (P.L. 107-56) that would be debated in the final weeks of September and early October 2001.[164] The USA PATRIOT Act changed the requirement that "the purpose" of a FISA surveillance be to collect foreign intelligence information, to require that collecting such information be "a significant purpose" of FISA electronic surveillance or physical search. This provided latitude to use FISA authority for electronic surveillance or physical searches where the primary purpose was criminal investigation, as long as a significant foreign intelligence purpose was also present.

The USA PATRIOT Act also addressed concerns about sharing intelligence and law enforcement information. Although a discussion of all the complex provisions that were included in the USA PATRIOT Act lies beyond the scope of this Report,[165] several provisions address the sharing of law enforcement and intelligence information. Section 203 of the Act removed some of the restrictions on federal government attorneys sharing grand jury information. Subsection

[162] Ashcroft, Never Again, p. 154.

[163] One skeptical observer noted that the "great majority of the new surveillance provisions had been discussed within the executive branch or Congress in previous years and had not been adopted. After the September 11 attacks, professional staff in the agencies simply went into their files and pulled out provisions they had been advocating previously. In the super-charged climate of the fall of 2001 many of these provisions received remarkablylittle scrutiny or debate." Peter P. Swire, "The System of Foreign Intelligence Surveillance Law," George Washington Law Review, August 2004, p. 1349.

[164] Unitingand Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism (USA PATRIOT Act) Act of 2001 (P.L. 107-56; signed October 26, 2001). The legislation was adopted by a 357-66 vote in the House and a 98-1 vote in the Senate.

[165] See CRS Report RL31377, The USA PATRIOT Act: A Legal Analysis, by Charles Doyle.

203(a) authorized federal government attorneys to share matters occurring before the grand jury involving foreign intelligence, counterintelligence, or foreign intelligence information with a federal law enforcement, intelligence, protective, immigration, national defense, or national security official to assist that official in the performance of his or her duties. Subsection (a) authorized the sharing of grand jury information "when the matters involve foreign intelligence or counterintelligence."[166]

Subsection 203(b) permitted investigative and law enforcement officers and Government attorneys to share information acquired under or derived from the interception of a wire, oral, or electronic communication under Title III with any other federal law enforcement, intelligence, protective, immigration, national defense or national security official for use in his or her official duties to the extent that the contents of that communication include foreign intelligence or counterintelligence information.

Subsection (c) provides authority for the Attorney General to establish implementing procedures.

Subsection 203(d) permitted the disclosure of foreign intelligence, counterintelligence, or foreign intelligence information obtained as part of a federal criminal investigation, notwithstanding any other provision of law, to any federal law enforcement, intelligence, protective, immigrations, national defense, or national security official in order to assist that official in carrying out his or her official duties, subject to any limitations on the unauthorized disclosure of that information.

Section 504 permitted federal officers conducting electronic surveillance or physical searches under FISA to consult with federal law enforcement officers or state or local law enforcement personnel to coordinate against actual or potential attacks or other grave hostile acts of a foreign power or its agent; sabotage or international terrorism by a foreign power or its agent, or clandestine intelligence activities by an intelligence service or network of a foreign power or its agent.

Section 905 requires the Attorney General or heads of other Federal agencies with law enforcement responsibilities to disclose expeditiously to the DCI (later replaced by the Director of National Intelligence (DNI)), under relevant guidelines, foreign intelligence acquired in the course of a criminal investigation. Exceptions could be made where the disclosure of such foreign intelligence would jeopardize an ongoing law enforcement investigation or impair other significant

---

[166] Section 203(a)(1) provides that any Federal official to whom such information is made available may use it only in the conduct of that person's official duties. Further: "Within a reasonable time after such disclosure, an attorney for the government shall file under seal a notice with the court stating the fact that such information was disclosed and the departments, agencies, or entities to which the disclosure was made."

law enforcement interests. In addition, Section 905 required the Attorney General, in consultation with the DCI (now the DNI), to develop procedures to give the Director timely notice of the Attorney General's decision to begin or decline to begin a criminal investigation based on information from an element of the intelligence community regarding possible criminal activity of a foreign intelligence source or potential source.[167]

The provisions included in the USA PATRIOT Act and DOJ's effort to implement them were far-reaching and to some extent were not welcomed by the FISA Court. In particular, the FISA Court in In re all Matters Submitted to the Foreign Intelligence Court found that proposed 2002 procedures issued by the Attorney General "eliminate[d] the bright line in the 1995 procedures prohibiting direction and control by prosecutors on which the Court has relied to moderate the broad acquisition[,] retention, and dissemination of FISA information in overlapping intelligence and criminal investigations."[168] The FISA Court thus attempted to "reinstate the bright line used in the 1995 procedures, on which the Court has relied."[169]

Concerned that its proposed procedures were rejected, the Justice Department appealed the Foreign Intelligence Surveillance Court's granting of a request modified in accordance with its earlier ruling in In re All Matters Submitted to the Foreign Intelligence Surveillance Court. The appeal went to the Foreign Intelligence Surveillance Court of Review and was the first appeal to that court. In a sweeping decision, the Court of Review overruled the limitations imposed by the FISA Court, along with a considerable amount of customary FISA practice. The Court of Review expressed concern that the FISA Court had overstepped its role by prescribing the internal procedures for handling surveillances within the Justice Department. The Court of Review maintained that the FISA Court "determined an investigation became primarily criminal when the Criminal Division played a lead role. This approach has led, over time, to the quite

---

[167] The Act provided that some, but not all, of its provisions would expire (or "sunset") at the end of 2005, giving Congress the opportunity to assess their effects in the intervening months. Subsections 203(b) and 203(d) (but not (a) and (c)) were among those that were scheduled to sunset; section 905 was not scheduled to sunset. As noted by Charles Doyle, CRS Report RL32186, USA PATRIOT Act Sunset Provisions That Were to Expire on December 31, 2005, these provisions are similar to and may duplicate other statutory provisions in the USA PATRIOT Act and other legislation that were not scheduled to sunset; the legal issue regarding the extent to which these provisions are in fact duplicative lies beyond the scope of this Report. In any event, P.L.109-177, signed on March 9, 2006, made subsections 203(b), 203(d) and 905 permanent. See also CRS Report RL33332, USA PATRIOT Improvement and Reauthorization Act of 2005: A Legal Analysis, by Brian T. Yeh and Charles Doyle.

[168] In re all matters submitted to the Foreign Intelligence Surveillance Court, 218 F. Supp.2d, pp. 621-622 (May 17, 2002).

[169] Ibid., p. 625.

intrusive organizational and personnel tasking the FISA [C]ourt adopted. Putting aside the impropriety of an Article III court imposing such organizational strictures ... [the wall] was unstable because it generates dangerous confusion and creates perverse organizational incentives."[170] The Court of Review thereby gave the final blow to the legal structure supporting the wall between law enforcement and intelligence information.

Implementation of the information-sharing provisions of the USA PATRIOT Act and other legislation is underway. The Homeland Security Act of 2002 (P.L. 107-296) and the Intelligence Reform and Terrorism Prevention Act of 2004 (P.L. 108-458) required that procedures be established under which federal agencies can share intelligence and law enforcement information about international terrorism. The Intelligence Reform Act mandated the creation of an Information Sharing Environment (ISE) that combines policies, procedures, and technologies to link information collections and users. In November 2006 the Administration released a lengthy implementation plan for the ISE. The plan sets forth procedures for sharing information among agencies at federal, state, and local levels and seeks to promote a culture of information sharing. It also provides procedures for protecting information privacy and civil liberties.[171] Congress may choose to review the implementation of the ISE during coming months.

Conclusion

A fundamental issue that faces both Congress and the U.S. public remains the need to balance the advantages to be gained by sharing information from all sources with the possibility that the availability of data accumulations could be used to undermine lawful political or religious activities. An unstable balance between these two separate goals — often portrayed as competing — greatly complicated the counterterrorism and counterintelligence effort prior to 9/11. The fact that public opinion appeared deeply ambivalent made procedural changes difficult and contributed to the luxuriant growth of complex regulations adopted by DOJ and endorsed by the FISA Court. After 9/11, public opinion shifted dramatically, resulting in the rapid passage of the USA PATRIOT Act and other legislation. The need to encourage the sharing of information and the connection of dots is now unquestioned, but there are lingering concerns about the risks that widespread information sharing may jeopardize civil liberties. Congress will undoubtedly seek to determine whether the new statutes,

---

[170] In re Sealed Case, 310 F.3d, p. 743 (November 18, 2002).

[171] The implementation plan is available at [http://www.ise.gov/docs/ISE-impplan200611.pdf]. For additional background see U.S. Government Accountability Office, Information Sharing: the Federal Government Needs to Establish Policies and Processes for Sharing Terrorism-Related and Sensitive but Unclassified Information, GAO-06-385, March 17, 2006. Many of the initiatives in regard to the ISE have been widely criticized; see Ellen Nakashima, "Civil Libertarians Protest Privacy Policy; New Guidelines Do Little to Protect Established Rights, White House Board Told," Washington Post, Dec. 6, 2006, p. A11.

regulations, and procedures that have been adopted will prove both effective and sensitive to individual rights.

The importance of sharing intelligence and law enforcement information is not limited to issues relating to international terrorism but extends to banking fraud, narcotics smuggling, and a variety of international concerns. Narcotics smuggling, for instance, can be addressed by encouraging other countries to halt the cultivation of opium poppies or coca, as well as by law enforcement in the U.S. Terrorism, of course, is uniquely threatening and in combating terrorists more vigorous non-law enforcement approaches are considered more legitimate than is the case with drug smugglers or embezzlers. What is advantageous in all cases is assembling the full range of information about the activity and subjecting it to rigorous analysis.

There is, however, the possibility that the current consensus may unravel. The political controversy surrounding NSA's electronic surveillance efforts and other data mining programs may come to focus on the sharing of information that some argue was not lawfully obtained, and this concern could lead to efforts to restrict information sharing across the boards. There is also a possibility that the use of information obtained by surveillance in accordance with FISA might ultimately not be allowed in court cases out of concern that the Fourth Amendment has been bypassed.[172] Despite the widespread acceptance of the need for information sharing, concerns that sharing information could lead to governmental abuses persists across the political spectrum. These concerns are tenaciously held, and have in the past made legislating very controversial. There is no reason to believe that they will not resurface should the threat from international terrorism seem less menacing.

The potential threat to civil liberties does not, of course, represent the full extent of the issues raised by increased information sharing. Sharing sensitive information inevitably raises the danger that intelligence sources and methods may be compromised either accidentally or purposefully. For intelligence professionals, in particular, the danger to valuable sources that may have taken years to develop is a fundamental concern. Moreover, when a human source is compromised there is not only a danger to a particular individual, but also a potential loss of confidence in U.S. intelligence agencies by other actual or potential sources.

---

[172] This possibility was even alluded to by the November 2002 Foreign Intelligence Court of Review that maintained that "…a FISA order may not be a 'warrant' contemplated by the Fourth Amendment. The government does not actually claim that it is, instead noting only that there is authority for the proposition that a FISA order is a warrant in the constitutional sense." The Court of Review added: "We do not decide the issue but note that to the extent a FISA order comes close to meeting Title III, that certainly bears on its reasonableness under the Fourth Amendment." In re: Sealed Case, 310 F.3d, p. 742.

The role of Congress in dealing with information sharing issues is especially important. There are delicate questions of liberty and security involved and a sensitive balance is crucial. Air Force General Michael V. Hayden, who now serves as CIA Director, in the past argued that Members of Congress are in close touch with their constituents and "What I really need you to do is talk to your constituents and find out where the American people want that line between security and liberty to be."[173] Congress also can provide the ongoing oversight to ensure that the sorts of abuses that occurred in the 1960s and 1970s do not recur. Ultimately, an information sharing policy that is largely consistent with public opinion and is held to account by rigorous oversight should enhance the chances that the dots can be connected without jeopardizing the rights of Americans. Observers see a danger, however, that gridlock in both the Executive and Legislative Branches might inhibit the government's ability to find effective and sensible ways to acquire and analyze information on new threats to the national security.

Summary

This report describes the Total Information Awareness (TIA) programs in the Defense Research Projects Agency (DARPA) of the Department of Defense, and related information access, collection, and protection laws. TIA is a new technology under development that plans to use data mining technologies to sift through personal transactions in electronic data to find patterns and associations connected to terrorist threats and activities. Data mining technologies are currently used by federal agencies for various purposes. DARPA has underway a five year research project to develop and integrate information technologies into prototype systems to identify foreign terrorists for use by the intelligence, counterintelligence, law enforcement, and homeland security communities. Recent increased awareness about the existence of the TIA project provoked expressions of concern about the potential for the invasion of privacy of law-abiding citizens by the Government, and about the direction of the project by John Poindexter, a central figure in the Iran-Contra affair. While the law enforcement and intelligence communities argue that more sophisticated information gathering techniques are essential to combat today's sophisticated terrorists, civil libertarians worry that the Government's increased capability to assemble information will result in increased and unchecked government power, and the erosion of individual privacy. A coalition of public interest groups has asked Congress to intervene.

Significant policy and legal issues are raised by the government's TIA plans. Chief among them are privacy issues involving questions of access to, and use and disclosure of personal information by the federal government. This report

describes current laws and safeguards to protect the privacy of personal information, the required legal process for officials who seek access to information, and the provisions currently in place that permit access and dissemination of information for law enforcement, intelligence, and terrorism purposes. Federal laws currently protect government, credit, communications, education, bank, cable, video, motor vehicle, health, telecommunications, children's, and financial information; generally carve out exceptions for disclosure of personal information; and authorize use of warrants, subpoenas, and court orders to obtain information.

Some Members of Congress seek additional Congressional oversight of TIA programs. Legislation has been introduced in the 108th Congress regulating TIA programs. On January 23, 2003, the Senate passed amendment S.Amdt. 59 to H.J.Res. 2, the Omnibus Appropriations Act for Fiscal Year 2003, imposing limitations on the unfolding Total Information Awareness programs, and requiring a detailed report to Congress. On February 13, 2003, both the House and Senate approved the Fiscal Year 2003 omnibus spending bill (P.L. 108-7) including, with slight modifications, the language from S.Amdt. 59. For more information, see CRS Report RL31786, Total Information Awareness Programs: Funding, Oversight and Composition Issues by Amy Belasco; and CRS Report RL31798, Data Mining: An Overview, by Jeffrey Seifert. This report will be updated as warranted.

Total Information Awareness Programs

The September 11th terrorist attacks increased government awareness of the inadequacies of its information gathering techniques, its information technology, and its information holdings. To remedy this situation various federal agencies are addressing issues that may possibly have a direct bearing on the balance between the government's need for information and an individual's expectation of privacy in their information. This report describes the Total Information Awareness (TIA) programs underway in the Department of Defense (DOD) which may develop prototype research and development technologies for information gathering and analysis capabilities that could be used by DOD and other agencies. It will then discuss current laws and safeguards to protect the privacy of personal information, the provisions currently in place that permit access and dissemination of information for law enforcement, intelligence, and terrorism purposes, and the required legal process for officials who seek access to information.

The TIA program is being developed by the Defense Advanced Research Projects Agency (DARPA) of the Department of Defense in the Information Awareness Office (IAO)[174] as an experimental prototype system that integrates three types of

[174] The Total Information Awareness program will integrate some or all of the R&D efforts that are managed by the Information Awareness Office, including Project Genoa, Project Genoa II,

technologies — machine translation of languages; data search and pattern recognition; and advanced collaborative and decision support.[175] DARPA "aspires to create the tools that would permit analysts to data-mine an indefinitely expandable universe of databases" "to analyze, detect, classify and identify foreign terrorists – and decipher their plans – and thereby enable the U.S. to take timely action to successfully preempt and defeat terrorist acts."[176] The TIA system is designed to be a tool in the war against terrorism that "would, among other things, help analysts search randomly for indications of travel to risky areas, suspicious emails, odd fund transfers and improbable medical activity, such as the treatments of anthrax sores."[177] The goal of the TIA program is "to create a counter-terrorism information system that: (i) increases the information coverage . . . ; (ii) provides focused warnings within an hour after a triggering event occurs or an evidence threshold is passed; [and] (iii) can automatically cue analysts based on partial pattern matches and analytical reasoning, and information sharing . . . ."[178] DARPA's five year research project to develop and integrate information technologies into a prototype system for use by the intelligence, counterintelligence and law enforcement communities intends to exploit R&D efforts that have been underway for several years in DARPA and elsewhere, as well as private sector data mining technology.[179]

DARPA envisions a database "of an unprecedented scale, [that] will most likely be distributed, must be capable of being continuously updated, and must support both autonomous and semi-automated analysis."[180] Extensive existing databases from both private and public sector information holdings will be used to obtain transactional and biometric data.[181] Transactional data for the TIA database could include financial (e.g., banks, credit cards, and money transmitters, casinos and brokerage firms), educational, travel (e.g., airlines, rail, rental car), medical,

veterinary, country entry, place/event entry, transportation, housing, critical resources, government, and communications (e.g., cell, landline, Internet) data. Biometric data for the database could include face, finger prints, gait, and iris data.[182] The TIA system could seek access to databases to discover connections between "passports; visas; work permits; driver's license; credit card; airline tickets; rental cars; gun purchases; chemical purchases – and events – such as arrest or suspicious activities and so forth."[183]

Data Mining

A key component of the TIA program is the deployment of data mining technologies to sift through data and transactions to find patterns and associations to discover and track terrorists.[184] The idea is that "if terrorist organizations are going to plan and execute attacks against the United States, their people must engage in transactions and they will leave signatures in this information space. . . ."[185] TIA plans to mine transaction data for terrorism-related indicators to uncover terrorists plans or attacks. Data mining is the search for significant patterns and trends in large databases using sophisticated statistical techniques and software.[186] The widespread use of computers, and the large amount of information maintained in databases means that there exists a vast repository of information useful for antiterrorism purposes. Today, "it is a rare person in the modern world who can avoid being listed in numerous databases."[187] Data mining technologies facilitate the use of information.

Data mining technologies are currently used by federal agencies for various purposes, and plans exist for considerable expansion of this technology. For example, the Department of Justice is engaged in data mining projects that utilize computer technology to analyze information to reveal patterns of behavior consistent with terrorist activities. Utilizing law enforcement and intelligence information as well as public source data, the Foreign Terrorist Tracking Task Force employs risk modeling algorithms, link analysis, historic review of past patterns of behavior, and other factors to distinguish persons who may pose a

risk of terrorism from those who do not.[188] The Transportation Security Administration's Computer- Assisted Passenger Profiling System is widely employed by the airlines.[189] The National Strategy for Homeland Security includes several initiatives to integrate terrorist-related information from the databases of all government agencies responsible for homeland security. Under this initiative, the Department of Homeland Security, Department of Justice, FBI, and numerous state and local law enforcement agencies would have access to information analysis, using advanced data-mining techniques to reveal patterns of criminal behavior and detain suspected terrorists before they act.[190] Additionally, on January 28, 2003 President Bush proposed to establish a new Terrorism Threat and Integration Center to merge and analyze terrorist-related information collected domestically and abroad.[191]

DOD recently announced plans to form an internal TIA oversight board to establish policies and procedures for use of TIA within and outside of DoD, and to establish an external federal advisory committee to advise the secretary of Defense on policy and legal issues raised by TIA technologies.[192]

Legal Issues

Government access to and mining of information on individuals held in a multiplicity of databases, public and private, raises a plethora of issues – both legal and policy. To what extent should the government be able to gather and mine information about individuals to aid the war against terrorism?[193] Should unrestricted access to personal information be permitted? Should limitations, if any, be imposed on the government's access to information? In resolving these issues, the current state of the law in this area may be consulted. The rest of this report describes current laws and safeguards to protect the privacy of personal

information, the required legal process for officials who seek access to information, and the provisions currently in place that permit access and dissemination of information for law enforcement and intelligence gathering purposes. Following is a description of selected information access, collection, and disclosure laws and regulations.

Federal Laws Governing Federal Government Access to Information

Generally there are no blanket prohibitions on federal government access to publicly available information (e.g., real property records, liens, mortgages, etc.). Occasionally a statute will specifically authorize access to such data. The USA PATRIOT Act, for example, in transforming the Treasury Department's Financial Crimes Enforcement Network (FinCEN) from an administratively established bureau to one established by statute, specified that it was to provide government-wide access to information collected under the anti-money laundering laws, records maintained by other government offices, as well as privately and publicly held information. Other government agencies have also availed themselves of computer software products that provide access to a range of personal information. The FBI reportedly purchases personal information from ChoicePoint Inc, a provider of identification and credential verification services, for data analysis.[194]

As previously discussed the federal government seeks access to publicly and privately held databases in order to build a centralized database to detect and deter against terrorist threats and attacks. This section of the report describes existing legal safeguards for the protection of personal information. It covers applicable federal laws; a discussion of state laws is beyond its scope. In the United States there is no omnibus statute or constitutional provision that provides comprehensive legal protection for the privacy of personal information, but rather an assortment of laws regulate information deemed to be of sufficient importance to be afforded some level of protection. The U.S. Constitution, federal statutes and regulations, and state law combine to govern the collection, use, and disclosure of information. The Constitution provides certain privacy protections, but does not explicitly protect information privacy.[195] Its protections extend only to the protection of the individual against government intrusions, and its guarantees are not applicable unless "state action" has taken place. In other words its guarantees extend to government intrusions rather than private sector abuses. The Fourth Amendment search-andseizure provision protects a right of

[194] Glenn R. Simpson, "Big Brother-in-Law: If the FBI Hopes to Get The Goods on You, It May Ask ChoicePoint — U.S. Agencies' Growing Use Of Outside Data Suppliers Raises Privacy Concerns" Wall Street Journal, April 13, 2001 (The company "specialize[s] in doing what the law discourages the government from doing on its own– culling, sorting and packaging data on individuals from scores of sources, including credit bureaus, marketers and regulatory agencies.").

[195] Whalen v. Roe, 429 U.S. 589 (1977).

privacy by requiring warrants before government may invade one's internal space or by requiring that warrantless invasions be reasonable.[196] That amendment protects individual privacy against certain kinds of governmental intrusion. The Supreme Court has interpreted this language as imposing a warrant requirement on all searches and seizures predicated upon governmental authority, and has ruled that violations of this standard will result in the suppression in any criminal proceeding of any material or information derived therefrom. The Court has also recognized exceptions to the warrant requirement. Finally, an individual has no Fourth Amendment rights with respect to information held by third parties.[197]

There is no comprehensive federal statute that protects the privacy of personal information held by the public sector and the private sector. Instead federal law tends to employ a sectoral approach to the regulation of personal information. Historically, the individual's privacy interests have been balanced with the government's information needs.[198] Examples of this balancing of personal and governmental interests can be found in the numerous privacy-related enactments of the past twenty-five years. Federal laws protect government, credit, communications, education, bank, cable, video, motor vehicle, health, telecommunications, children's, and financial information. These laws generally carve out exceptions for the disclosure of personally identifiable information to law enforcement officials, and authorize access to personal information through use of search warrants, subpoenas, and court orders. Notice requirements vary according to statute.

Federal Government Information

The Privacy Act

The Privacy Act of 1974, 5 U.S.C. § 552a, was implemented to protect the privacy of individuals identified in information systems maintained by federal executive branch agencies, and to control the collection, use, and sharing of information. The Act restricts disclosure of personally identifiable records maintained by agencies; grants individuals increased rights of access to agency records maintained on themselves; grants individuals the right to seek amendment of agency records maintained on themselves upon a showing that the records are not accurate, relevant, timely or complete; and establishes a code of "fair information practices" which requires agencies to comply with statutory norms for collection, maintenance, and dissemination of records.

---

[196] "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized." U.S. Const. Amend. IV.

[197] United States v. Miller, 425 U.S. 435 (1976).

[198] Privacy Protection Study Commission, Personal Privacy in an Information Society (1977).

The general exemptions of the Privacy Act, which are agency and function-oriented, permit the Central Intelligence Agency[199] and federal criminal law enforcement agencies to exempt certain systems of records from some of the Act's requirements.[200] The general exemption for the CIA covers all of its files. The general exemption for federal criminal law enforcement agencies covers identification information, criminal investigative materials, and reports compiled between the stages of arrest and release from criminal agency supervision. An agency which has law enforcement, prosecution, or probation activities can use this general exemption. In addition specific exemptions permit an agency to exempt a system of records from specified Privacy Act requirements if the system of records is: national security information which would be protected from mandatory disclosure by FOIA;[201] law enforcement material which falls outside the criminal law enforcement general exemption; Secret Service files; Census material and other matter required by law to be kept only as a statistical record; confidential sources of government background investigation information; test materials of the civil service selection and promotion process; and confidential evaluations of military and naval personnel.[202]

The general disclosure rule under the Privacy Act is that unless a statutory exception applies, no federal executive branch agency shall disclose any record which is contained in a system of records to any person or to another agency except pursuant to a written request by, or with prior written consent of the individual to whom the record pertains.[203] Disclosure includes dissemination within the executive branch from one agency to another or from one large segment of an agency to another segment.[204] This rule would appear to prohibit the sharing of personal information collected by one agency with other agencies for purposes other than for which it was originally collected. In reality, though, the Act's many exemptions and exceptions ease this prohibition. Many of the

exceptions – as well as specific laws authorizing sharing of records – permit an agency to disclose or share personal information with other agencies.[205]

Several of the statutory exemptions are relevant to the information collection and sharing activities of the Total Information Awareness system, and would appear to authorize the disclosure of personal information in federal records systems without the individual's consent.[206] The routine use exemption allows an agency to share, without consent, an individual's personal information with other agencies if that sharing is listed as a routine use for that agency in the Federal Register and is compatible with the purpose of the initial information gathering.[207] The January 2003 publication by the Transportation Security Administration of a notice to amend the "Aviation Security Screening Records" system of records illustrates how broadly records can be disclosed pursuant to the routine use exemption, without the consent of the subject of the record, for agency purposes.[208] The exemption for civil and criminal law enforcement

[206] See Sean Fogarty and Daniel R. Ortiz, "Limitations Upon Interagency Information Sharing: The Privacy Act of 1974" in The Markle Foundation Task Force Report, National Security in the Information Age at 127 - 132 (October 2002).

[207] 5 U.S.C. § 552a(b)(3). The OMB guidelines state that the "compatibility" concept encompasses functionality equivalent uses, and other uses that are necessary and proper.

[208] Records in the system include passenger name records (PNRs) and associated data; reservation and manifest information of passenger carriers and, in the case of individuals who are deemed to pose a possible risk to transportation security, record categories may include: risk assessment reports; financial and transactional data; public source information; proprietary data; and information from law enforcement and intelligence sources. Data are retrievable by the name or other identifying information of the individual, such as flight information. Information may be disclosed from this system as follows (routine uses of records): (1) to appropriate Federal, State, territorial, tribal, local, international, or foreign agencies responsible for investigating or prosecuting the violations of, or for enforcing or implementing, a statute, rule, regulation, order, or license, ... (2) to contractors, grantees, experts, consultants, agents and other non-Federal employees performing or working on a contract, service, grant, cooperative agreement, or other assignment from the Federal government for the purpose of providing consulting, data processing, clerical, or other functions to assist TSA . . . . (3) to Federal, State, territorial, tribal, and local law enforcement and regulatory agencies–foreign, international, and domestic–in response to queries regarding persons who may pose a risk to transportation or national security; a risk of air piracy or terrorism or a threat to airline or passenger safety; or a threat to aviation safety, civil aviation, or national security. (4) to individuals and organizations, in the course of enforcement efforts, to the extent necessary to elicit information pertinent to the investigation, prosecution, or enforcement of civil or criminal statutes, rules, regulations or orders regarding persons who may pose a risk to transportation or national security; a risk of air piracy or terrorism or a threat to airline or passenger safety; or a threat to aviation safety, civil aviation, or national security. (5) to a Federal, State, or local agency, where such agency has requested information relevant or necessary for the hiring or retention of an individual, or issuance of a security clearance, license, contract, grant, or other benefit. (6) to the news media . . . . (7) to the Department of State, or other Federal agencies concerned with visas and immigration, and to

activities permits the disclosure of personal information for legally authorized activities.[209] This exemption would allow the disclosure of information to an intelligence agency for the prevention of terrorist acts. The exemption for foreign counterintelligence in the Computer Matching and Privacy Protection Act of 1988,[210] which amended the Privacy Act, legitimizes information sharing through data matching among agencies for national security purposes.[211]

Agencies are required to make reasonable efforts to serve notice on an individual when any record on such individual is made available to any person under compulsory legal process when such process becomes a matter of public record.

Education Information

The Family Educational Rights and Privacy Act of 1974

FERPA governs access to and disclosure of personally identifiable information in educational records held by federally funded educational institutions and agencies.[212] Disclosure requires prior consent of the student's parents unless done pursuant to federal grand jury subpoena, administrative subpoena, or court order for law enforcement purposes. Upon good cause shown, the court shall order that the existence or contents of a subpoena or the information furnished not be disclosed. The USA PATRIOT Act of 2001 amended FERPA to authorize the Justice Department to obtain a court order to collect education records relevant to a terrorism-related offense or an act of domestic or international terrorism.[213] The order can only be issued if a court finds that the records are relevant to a terrorism investigation. The amendment also protects educational institutions from liability for complying with such order.

---

agencies in the Intelligence Community, to further those agencies' efforts with respect to persons who may pose a risk to transportation or national security; a risk of air piracy or terrorism or a threat to airline or passenger safety; or a threat to aviation safety, civil aviation, or national security. (8) to international and foreign governmental authorities in accordance with law and . . international agreements. (9) in proceedings before any court, administrative, adjudicative, or tribunal body before which TSA appears, . . . provided, however, that in each case, TSA determines that disclosure of the records in the proceeding is a use of the information contained in the records that is compatible with the purpose for which the records were collected. (10) to airports and aircraft operators . . .. (11) to the National Archives and Records Administration . . . . 68 Fed. Reg. 2101 (Jan. 15, 2003).

[209] 5 U.S.C. § 552a(b)(7).

[210] P.L. 100-503, 5 U.S.C. § 552a note.

[211] 5 U.S.C. 552a(a)(8)(B)(vi).

[212] 20 U.S.C. § 1232g. See CRS Report RL31482, The Family Educational Rights and Privacy Act of 1974: Recent Developments in the Law.

[213] P.L. 107-56, 20 U.S.C. § 1232g(j). See CRS Report RL31377: The USA PATRIOT Act: A Legal Analysis.

The Cable Communications Policy Act of 1984

Limits the disclosure of cable television subscriber names, addresses, and utilization information.[214] Cable companies are prohibited from disclosing personally identifiable information concerning a cable subscriber to the government except pursuant to a court order. The order can only be issued if a court finds clear and convincing evidence that the customer was suspected of engaging in a crime and that the information sought was material evidence in the case; and the subject was afforded the opportunity to appear and contest the government's claim. The USA PATRIOT Act of 2001 amended the Cable Act's privacy provision to clarify that it applies only to information about a customer's cable TV service, but not to information about a customer who receives Internet or telephone service from a cable provider. When the government is requesting information about a customer receiving Internet or telephone service from a cable provider, the federal electronic surveillance statutes apply.

The Video Privacy Protection Act of 1988

Regulates the treatment of personally identifiable information collected in connection with video sales and rentals.[215] The Act prohibits videotape service providers from disclosing their customers' names, addresses, and specific videotapes rented or purchased except pursuant to customer consent, or pursuant to a federal or state search warrant, grand jury subpoena, or court order issued to a law enforcement agency. The order can only be issued if a court finds that there is probable cause to believe that the records or other information sought are relevant to a legitimate law enforcement inquiry. Issuance of court orders requires prior notice to the customer. A court may quash or modify such order if the information or records requested are unreasonably voluminous or if compliance would cause an unreasonable burden on the provider.

Telecommunications Act of 1996

Limits the use and disclosure of customer proprietary network information (CPNI) by telecommunications service providers.[216] The statute does not include specific provisions for the disclosure of CPNI to law enforcement or government officials. Except as required by law or with customer consent, a telecommunications carrier must only use, disclose, or permit access to

---

[214] 47 U.S.C. § 551.

[215] 18 U.S.C. § 2710.

[216] 47 U.S.C. § 222. See CRS Report RL30671, Personal Privacy Protection: The Legislative Response.

individually identifiable customer proprietary network information in providing the telecommunications service. Upon customer request, a telecommunications carrier may disclose that customer's proprietary network information to any person designated by the customer. Customer proprietary network information is information that relates to the quantity, technical configuration, type, destination, and amount of use of a telecommunications service subscribed to by any customer of a telecommunications carrier, and that is made available to the carrier by the customer solely by virtue of the carrier-customer relationship, and includes information contained in the bills pertaining to telephone exchange service or telephone toll service, but does not include subscriber list information.

Health Information

The Health Insurance Portability and Accountability Act of 1996

HIPAA required publication of a medical privacy rule by the Department of Health and Human Services (HHS) in the absence of a congressional enactment.[217] The final privacy rule, "Standards for the Privacy of Individually Identifiable Health Information," was published in December 2000 and modified in August 2002.[218] Enforcement of the rule goes into effect for the majority of covered entities April 2003. The rule establishes privacy protections for individually identifiable health information held by health care providers, health care plans, and health care clearinghouses. It establishes a series of regulatory permissions for uses and disclosures of individually identifiable health information.[219] Individually identifiable health information is health information created or received by a covered entity (health care provider, health plan, or health care clearinghouse) that relates to past, present, or future physical or mental health or a condition of an individual; the provision of health care to an individual; or the past, present, or future payment for the provision of health care to an individual; and identifies the individual or there is a reasonable basis to believe that the information can be used to identify the individual. The rule excludes education records covered by FERPA, and employment records held by a covered entity in its role as employer.

The medical privacy rule establishes new procedures and safeguards to restrict the circumstances under which a covered entity may give such information to law enforcement officers. For example, the rule limits the type of information that covered entities may disclose to law enforcement, absent a warrant or other prior process, when law enforcement is seeking to identify or locate a suspect. It specifically prohibits disclosure of DNA information for this purpose, absent

---

[217] P.L. 104-191 § 264, 42 U.S.C. 1320d note.

[218] Standards for the Privacy of Individually Identifiable Health Inforamtion,45 CFR Parts 160 and 164 at [http://www.hhs.gov/ocr/combinedregtext.pdf].

[219] See CRS Report RS20934, A Brief Summary of the Medical Privacy Rule.

some other legal requirements such as a warrant. Where state law imposes additional restrictions on disclosure of health information to law enforcement, those state laws continue to apply. This rule sets a national floor of legal protections. In those circumstances when disclosure to law enforcement is permitted by the rule, the privacy rule does not require covered entities to disclose any information. In the event that some other federal or state law requires a disclosure, the privacy rule does not interfere with the operation of those other laws. However, unless the disclosure is required by some other law, covered entities are to use their professional judgment to decide whether to disclose information.

For law enforcement purposes the rule permits disclosure without consent or authorization pursuant to process, and as otherwise required by law.[220] A covered entity may disclose protected health information as required by law;[221] or in compliance with the requirements of (i) a court order or court-ordered warrant, a judicial subpoena or summons, (ii) a grand jury subpoena, or (iii) an administrative request, including an administrative subpoena or summons, a civil or authorized investigative demand, or similar process authorized under law, provided that the information sought is relevant and material to a legitimate law enforcement inquiry; the request is specific and limited in scope; and de-identified information could not reasonably be used. Covered entities are also permitted to disclose protected health information in the course of judicial and administrative proceedings, and limited information for identification purposes. They are also permitted to disclose information to a law enforcement official about an individual who has died if there is reason to believe the death may have resulted form criminal conduct. A covered entity may disclose protected health information to authorized federal officials for the conduct of lawful intelligence, counter-intelligence, and other national security activities authorized by the National Security Act and implementing authority.[222]

Motor Vehicle Information

Driver's Privacy Protection Act of 1994

Regulates the use and disclosure of personal information from state motor vehicle records.[223] Personal information is defined as information that identifies an individual, including an individual's photograph, Social Security number, driver identification number, name, address, telephone number, and medical or

[223] 18 U.S.C. § 2721.

disability information, but does not include information on vehicular accidents, driving violations, and driver's status. Personal information contained in a motor vehicle record may be disclosed for use by any government agency, including any court or law enforcement agency, in carrying out its functions, or to any private person or entity acting on behalf of a Federal, State, or local agency; and for use in connection with any civil, criminal, administrative, or arbitral proceeding in any Federal, State, or local court or agency or before any self-regulatory body, or pursuant to a Federal, State, or local court order.

Communications and Communications Records

Title III of the Omnibus Crime Control and Safe Streets Act of 1968

The federal wiretapping and electronic eavesdropping statute permits federal and state law enforcement officers to use wiretapping and electronic eavesdropping under strict limitations.[224] 18 U.S.C. 2510 et seq. The federal and state courts may issue interception orders upon applications approved by senior Justice Department or state prosecutors. The applications must demonstrate probable cause to believe that the proposed interceptions will result in the capture of evidence of one or more of statutorily designated crimes. The orders are crafted to minimize the capture of innocent conversations. Officers may share information secured under the orders with other law enforcement or with intelligence officials in connection with the performance of their official duties. Senior Justice Department and state prosecutors may authorize emergency interceptions for 48 hours while an application for a court order is being prepared and presented. Unless postponed by the court for cause, the targets and anyone whose conversations have been captured are entitled to notification within 90 days of the expiration of the order. There are criminal, civil, and administrative sanctions for illegal interception, and evidence secured through an unlawful interception may be declared inadmissible in subsequent judicial or administrative proceedings. See table on "Laws Relating to Federal Government Access to Information Pursuant to the Fourth Amendment, the Federal Wiretap Statute, and the Foreign Intelligence Surveillance Act."

The Foreign Intelligence Surveillance Act of 1978

FISA governs the use of wiretapping to collect "foreign intelligence" which is defined as "information relating to the capabilities, intentions, or activities of foreign governments or elements thereof, foreign organizations, or foreign persons, or international terrorist activities."[225] 50 U.S.C. §§ 1861 et seq. The eleven judges of a special court, whose members are assigned from the federal

[224] See CRS Report 98-326, Privacy: An Overview of Federal Statutes Governing Wiretapping and Electronic Eavesdropping.

[225] See CRS Report RL30465, The Foreign Intelligence Surveillance Act: An Overview of the Statutory Framework.

bench, may authorize surveillance upon applications approved by the Attorney General asserting probable cause to belief that the effort will yield foreign intelligence. FISA court surveillance orders are crafted to minimize the capture of conversations not related to foreign intelligence. Officers may share the results with law enforcement officials for the performance of their duties. The Attorney General may authorize emergency surveillance for 72 hours while a FISA order is being secured. The President may authorize surveillance without a court order during time of war or for communications between or among foreign powers. If the government intends to use the results as evidence in judicial proceedings it must inform the parties to the intercepted conversations. Challenges to the legality of the surveillance may be considered ex parte upon petition of the Attorney General. Unlawful surveillance is subject to criminal, civil, and administrative sanctions, and evidence illegally secured may be suppressed.

FISA also empowered judges of the FISA court to issue physical search orders under limitations similar to FISA surveillance orders. In foreign intelligence cases, FISA likewise tracks the procedure used in criminal cases for the installation and use of pen register and trap and trace devices under court order. Finally, it called for FISA orders for the production of tangible items in foreign intelligence and international terrorism investigations. See table on "Laws Relating to Federal Government Access to Information Pursuant to the Fourth Amendment, the Federal Wiretap Statute, and the Foreign Intelligence Surveillance Act."

The Electronic Communications Privacy Act of 1986

ECPA amended and augmented Title III. It regulates government access to ongoing and stored wire and electronic communications (such as voice mail or electronic mail), transactional records access, and the use of pen registers, and trap and trace devices.[226] After its modifications the surreptitious capture of e-mails and other electronic communications in transit enjoy the coverage of Title III and may be accomplished under a Title III court order. When voice mail, e-mails and other electronic communications have been in storage for less than 180 days, they can be seized under a search warrant based on probable cause. Those in storage for 180 days or more can be secured under a court order upon a showing of relevancy and materiality, under a subpoena, or under a search warrant.

ECPA also authorized court orders for the installation and use of pen registers as well as trap and trace devices, which identify source and address of communications, but not the contents of the conversation. These orders may be issued on the basis of relevancy to a criminal investigation and their results need

[226] 18 U.S.C. §§ 2510 et seq. See CRS Report 98-326, Privacy: An Overview of Federal Statutes Governing Wiretapping and Electronic Eavesdropping.

not be disclosed to the individuals whose communications are their targets. Perhaps because in the case of Internet communications header information is more revealing than the mere identification of source and addressee telephone numbers, results of such orders must be reported to the issuing court under seal.

Finally, ECPA established a procedure for government access to the customer records of telephone company or other communications service providers. Here too, access may be had by search warrant, subpoena, or court order (on a showing of relevancy). See "Laws Relating to Federal Government Access to Information Pursuant to the Fourth Amendment, the Federal Wiretap Statute, and the Foreign Intelligence Surveillance Act."

The USA PATRIOT Act of 2001

The Act substantively amended Title III of the Omnibus Crime Control and Safe Streets Act, the Electronic Communications Privacy Act, and the Foreign Intelligence Surveillance Act of 1978.[227] The USA PATRIOT Act authorized the disclosure of wiretap and grand jury information to "any federal, law enforcement, intelligence, protective, immigration, national defense, or national security official" for the performance of his duties.[228] It permitted use of FISA surveillance orders when foreign intelligence gathering is "a significant" reason for the order rather than "the" reason. It brought e-mail and other forms of electronic communications within the pen register and trap and trace procedures under both ECPA and FISA. Finally, it authorized FISA orders for access to any tangible item rather than only business records held by lodging, car rental, and locker rental businesses. See table on "Laws Relating to Federal Government Access to Information Pursuant to the Fourth Amendment, the Federal Wiretap Statute, and the Foreign Intelligence Surveillance Act."

The Homeland Security Act of 2002

The Act amended Title III of the Omnibus Crime Control and Safe Streets Act, the Electronic Communications Privacy Act, and the Foreign Intelligence Surveillance Act of 1978[229] to authorize sharing the results of the federal government's information gathering efforts under those statutes with relevant foreign, state and local officials. See table on "Laws Relating to Federal Government Access to Information Pursuant to the Fourth Amendment, the Federal Wiretap Statute, and the Foreign Intelligence Surveillance Act."

Financial Information

This section provides a description of the Fair Credit Reporting Act, the Right to Financial Privacy Act, and the Gramm-Leach-Bliley Act. The table appended to this report on "Laws Relating to Federal Government Access to Personal Financial Information" also includes the Bank Secrecy Act of 1970, the U.S.A. Patriot Act provisions related to the Financial Crimes Enforcement Network (FinCEN), and relevant provisions of the Tax Reform Act of 1976.

The Fair Credit Reporting Act of 1970

FCRA sets forth rights for individuals and responsibilities for consumer "credit reporting agencies" in connection with the preparation and dissemination of personal information in a consumer report. Under the FCRA, consumer reporting agencies are prohibited from disclosing consumer reports to anyone who does not have a permissible purpose.[230] FCRA covers information gathered by consumer reporting agencies on consumers to evaluate qualifications for credit, employment, insurance, and other transactions; covered information may include identifying (name, address, employer and former address and employer), credit (transactions, etc.), and public record information as well as information on entities seeking credit reports on the consumer. A limited amount of identifying information from a credit bureau's file on a consumer (i.e., "header information" – name, address, employment and previous address) may be disclosed upon request. No notice is required. Consumer reports and any other information in a consumer's file can be disclosed pursuant to a court order or grand jury subpoena; or in connection with the application for a license or for determining eligibility for a government benefit or license. The FBI, for foreign counterintelligence investigative purposes, may obtain names and addresses of financial institutions at which consumers maintain or have maintained accounts, provided the request is signed by an appropriate official who has certified that the investigation is not conducted solely on the basis of activity protected under the First Amendment. The USA PATRIOT Act amended the FCRA to authorize the disclosure of consumer reports and any other information in a consumer's file upon request in writing from any government agency authorized to conduct international terrorism investigations, or intelligence or counterintelligence activities related thereto, stating that such information is necessary for the agency's conduct of that activity and signed by an appropriate supervisor. No notice is required. See table on "Laws Relating to Federal Government Access to Personal Financial Information."

The Right to Financial Privacy Act of 1978

---

[230] 15 U.S.C. § 1681 et seq. See CRS Report RL31666, Fair Credit Reporting Act: Rights and Responsibilities.

The RFPA was enacted in response to the 1976 decision of the Supreme Court in United States v. Miller,[231] which ruled that individuals have no Fourth Amendment "expectation of privacy" in records maintained by their banks. The RFPA sets forth procedures for the federal government's access to financial institution customer records.[232] RFPA covers the records of individuals who are customers of banks, thrifts, credit unions, credit card issuers, and consumer finance companies. The Act requires the government to present administrative subpoenas or summons based upon reason to believe the information is relevant to a legitimate law enforcement inquiry. In criminal investigations, judicial search warrants based on probable cause must be obtained. Notice to the customer is required except upon issuance of a court order finding the existence of certain exigent circumstances. However, these restrictions do not apply to foreign intelligence activities and investigations related to international terrorism.[233] See "Laws Relating to Federal Government Access to Personal Financial Information."

The Gramm-Leach-Bliley Act of 1999

Requires financial institutions to disclose their privacy policies to their customers.[234] Title V of the Act regulates nonpublically available personally identifiable customer (or applicant) information held by "financial institutions," a term that is broadly defined to include anyone in the business of providing services that are financial in nature, including banking, securities, insurance, accounting, tax preparation, asset management, real estate leasing and settlement services. GLBA provides exceptions for law enforcement to the law's general prohibition against "financial institution" sharing of personally identifiable customer information with non-affiliated third parties. Exceptions permit sharing of such information in response to judicial process; as permitted or required under other provisions of law, and in accordance with the Right to Financial Privacy Act; and to provide information to law enforcement agencies, or for an investigation on a matter of public safety. No notice of disclosure to the customer is necessary, except as required pursuant to other law. See table on "Laws Relating to Federal Government Access to Personal Financial Information."

Other Information

Children's Online Privacy Protection Act of 1998

Requires website operators and online service providers to obtain parental consent to collect a child's personal information, and requires sites collecting information from children to disclose how they plan to use the data.[235] Parental consent is not required for the operator of such a website or online service to collect, use, or disclose such information to respond to judicial process; or to provide information, to the extent permitted under other laws, to law enforcement agencies or for an investigation on a matter related to public safety.[236]

Attorney General's Guidelines on General Crimes, Racketeering Enterprise and Domestic Security/Terrorism Investigations

Revised guidelines were issued by Attorney General Ashcroft in May 2002 which removed prohibitions on the Federal Bureau of Investigation's use of publicly-available sources of information – e.g., libraries or the Internet– except as part of an investigation. The 2002 guidelines authorize the FBI to engage in general topical research, which includes conducting online searches and accessing online sites and forums on the same terms and conditions as members of the public. This will allow the FBI to examine public records, monitor the Internet, survey periodicals and newspapers and commercial databases (like Google or Experian) – not incident to a criminal investigation.[237]

Miscellaneous Provisions

Numerous federal statutes include provisions that regulate the use and disclosure of certain types of information held by the government. For example, the confidentiality and disclosure of tax returns and return information is governed by section 6103 of the Internal Revenue Code,[238] the disclosure of Census data is governed, in part, by 13 U.S.C. § 9 which prohibits the use, publication, or examination of any information collected by the Census Bureau, other than for the statistical purpose for which the information was supplied; records pertaining to the issuance or refusal of visas to enter the United States are governed by 8

Legal Requirements for Warrants, Subpoenas, Court Orders, and Requests

Federal statutes that limit access to records held by third parties often specify the process that the federal government must use to gain access to these records. While the TIA program appears to envision real-time access, if not concurrent access, none of the means currently available to the government for accessing data appear to afford such an open-ended virtual appropriation of databases, either public or private. Leaving aside the question of whether there is sufficient authority for TIA's continuous monitoring of databases, what follows is a description of common tools available to the government to gain access to information.

Law enforcement officials who seek access to information in records held by third-party custodians have several procedural alternatives that include warrants, grand jury subpoenas, administrative subpoenas, court orders, written requests and oral requests. The complexity of the legal requirements for obtaining warrants, subpoenas, and court orders may be such that TIA would opt for other more expedient avenues of access.[239]

The term "**warrant**" ordinarily refers to a court document, issued by a judge or magistrate pursuant to the demands of the Fourth Amendment, upon the request of a law enforcement officer and without affording other parties an opportunity to object to the issuance or execution of the warrant. A search warrant authorizes a search for evidence in connection with a criminal investigation. Officers seeking a warrant must present sworn statements establishing probable cause to believe that the requested search will result in the discovery of evidence of a crime.[240] After the fact, a property owner is entitled to notice that a search has occurred and to an inventory of any property seized.[241] Notice is limited to those who have a reasonable expectation of privacy and under some circumstances this will not include records concerning an individual in a third party's computerized records

[240] "Probable cause" means "a fair probability that contraband or evidence of a crime will be found in a particular place," Illinois v. Gates, 462 U.S. 213, 238 (1983).

[241] United States v. Ramirez, 523 U.S. 65 (1998).

whose claim to confidentiality has been weakened by making them available to others.[242]

Grand jury subpoena

In the context of its investigation of potential corruption or crime, usually at the request of the prosecuting attorney, the grand jury will issue a subpoena duces tecum – if documents are requested – requiring the record custodian's appearance with the requested documents or records. When subpoena duces tecum are served on record custodians, the government is usually under no obligation to bring the subpoena to the attention of the subject, but the custodian is usually free to do so.

Administrative subpoena

In the context of a civil investigation, an agency pursuant to its statutory authority and in accordance with its rules, may issue a request for information or production of documents, reasonably related to a matter within the jurisdiction of the agency. Generally the subpoena may be challenged in court based on lack of relevance, breadth, or lack of particularity. Often there is no requirement that the subject of the records be notified of the government's request.

Court orders

Generally, parties to litigation have the prerogative of seeking the assistance of the court, through the issuance of an order to produce documents or records or information, to facilitate the discovery process in litigation. In the context of government access to the kinds of information that might be desired for TIA programs two types pf specific court orders, the standards for which are outlined in statutes, are particularly relevant: (1) a court ordered electronic surveillance order under the federal wiretap statute, and (2) a surveillance order under the Foreign Intelligence Surveillance Act (FISA). The first may be issued by any federal court, provided the statutory procedures are complied with, including approval by senior federal officials. The second may only be issued by the FISA court. The suspicion threshold varies according to the situation. For example, the federal wiretap statute uses a "probable cause plus" standard,[243] while the court

[242] Cf., United States v. Miller, 425 U.S. 435 (1976)(no customer expectation of privacy in bank records).

[243] 18 U.S.C. 2518(3)(the order may be issued "if the judge determines on the basis of the facts submitted by the application that—(a) there is probable cause for belief that an individual is committing, has committed, or is about to commit a particular offense enumerated in [18 U.S.C. 2516]; (b) there is probable cause for belief that particular communications concerning that offense will be obtained . . . (c) normal investigative procedures have been tried and have failed or reasonably appear to be unlike to succeed if tried or to be too dangerous; [and] (d) . . . there is probable cause for belief that the facilities from which, or the place where the . . . communications

order authorizing installation of a pen register and trap and trace device calls for a finding that the "investigative officer has certified to the court that the information likely to be obtained by such installation and use is relevant to an ongoing criminal investigation."[244] The breadth of access varies from statute to statute as well. Often, the standard of suspicion required for issuance of the order coupled with the type of information sought will define the range of access. In some instances, however, Congress has imposed further limitations. Under the federal wiretap statute, for instance, the authority under the court order terminates as soon as the objectives for which the order was sought have been realized.[245] As noted above, "court order" statutes sometimes limit the manner in which officers may use or disclose such evidence. A few statutes expect court orders to be issued following an adversarial hearing;[246] in others the subject of the records receives notice only after the fact;[247] and in still others there are special provisions for extended postponement of notice under some circumstances.[248] The statute that creates the special court order procedure may indicate the grounds and procedure, if any, under which the subject of a record may seek to bar law enforcement access or use. Some may require prior notice.[249] Where the order is issued and access granted prior to notice, the subject may be limited to the exclusion of evidence or civil remedies to the extent that the application, order, execution of the order, or use of the information fail to meet the requirements of the statute.[250]

An **oral or written request** may procure access based on the consent of the third party information custodian. Issuance of such a request would depend upon

the rules and procedures governing the operations of the agent making the request.

Congressional Response

The 108th Congress is likely to reexamine existing federal law in terms of barriers to government access to information necessary to prevent and respond to acts of terrorism; while at the same time insuring that information is maintained in a manner that insures its most effective use, protects against its loss, against inappropriate use or disclosure; ensures public and Congressional scrutiny as a form of checks and balances; and otherwise guarantees individual privacy consistent with the Constitution.

According to Senator Shelby of the Senate Intelligence Committee, "[h]ow broadly it [TIA] will ultimately be used is a matter for policymakers to decide if and when the program bears fruit."[251] On January 13, 2003 Senator Harkin requested that the Defense Appropriations Subcommittee hold hearings on the Total Information Awareness (TIA) project. On January 16, 2003, Senator Russ Feingold introduced S. 188, the Data-mining Moratorium Act, which would limit the use of data mining technology by the Defense Department and by the new Department of Homeland Security without Congressional approval and appropriate civil liberties protections. On January 23, 2003 the Senate passed amendment S.Amdt. 59 (introduced by Senator Wyden) to H.J.Res. 2, the Omnibus Appropriations Act for Fiscal Year 2003, imposing limitations on implementation of Total Information Awareness programs, and requiring a detailed report to Congress. Both the House and Senate approved the FY03 omnibus spending bill, H.J.Res. 2, on February 13, 2003 (P.L. 108-7). It includes in section 111, with slight modifications, the language from S.Amdt 59 regarding the Department of Defense's Total Information Awareness (TIA) program. The bill allows the Administration, 90 days after the bill is enacted to submit a report to Congress on the TIA program, instead of 60 days as proposed by the Senate. The provision has also been modified to clarify that the TIA program may be deployed in the United States to assist in the conduct of lawful U.S. foreign intelligence activities against non-United States persons.

Section 111, Limitation on Use of Funds for Research and Development on Total Information Awareness Program, of H. J. Res. 2 imposes limitations on the use of funds for Total Information Awareness programs. It expresses the sense of Congress that the program should not be used to develop technologies for use in conducting intelligence activities or law enforcement activities against United States persons without appropriate consultation with Congress, or without clear adherence to principles to protect civil liberties and privacy. It reiterates the

---

[251] September 11 and the Imperative of Reform in the U.S. Intelligence Community: Additional Views of Senator Richard C. Shelby Vice Chairman, Senate Select Committee on Intelligence at 42 (December 10, 2002), [http://intelligence.senate.gov/shelby.pdf].

primary DOD focus of the Defense Advanced Research Projects Agency. The amendment provides that no funds appropriated or otherwise made available to the Department of Defense, Defense Advanced Research Projects Agency, or to any other department, agency, or element of the Federal Government may be obligated or expended on research and development on the Total Information Awareness program unless a written report, prepared by the Secretary of Defense, the Attorney General, and the Director of Central Intelligence, is submitted to Congress within 90 days after passage of the omnibus spending bill; or the President certifies to Congress in writing that submission of the report to Congress within 90 days is not practicable, and that the cessation of research and development on the Total Information Awareness program would endanger the national security of the United States.

The report to Congress must include a detailed explanation for each project and activity of the Total Information Awareness program – the actual and intended use of funds; the schedule for proposed research and development; and target dates for deployment. It must assess the likely efficacy of systems such as the Total Information Awareness program; the likely impact of the implementation of the Total Information Awareness program on privacy and civil liberties; and provide a list of the laws and regulations that govern the information to be collected by the Total Information Awareness program, and a description of any modifications required to use the information in the manner proposed. The report must include the Attorney General's recommendations for practices, procedures, regulations, or legislation on the deployment, implementation, or use of the Total Information Awareness program to eliminate or minimize adverse affects on privacy and civil liberties.

The amendment prohibits the deployment, implementation, or transfer of the TIA program or a component thereof to any department, agency, or element of the federal government until the Secretary of Defense notifies Congress; and receives from Congress specific authorization for the deployment and a specific appropriation of funds. This limitation does not apply with respect to the deployment or implementation of the Total Information Awareness program, or a component of such program, in support of the lawful military operations of the United States conducted outside the United States, and in support of lawful foreign intelligence activities conducted wholly against non-United States persons.

Another issue that has arisen is whether the Homeland Security Act of 2002 authorizes TIA programs in the newly created Department of Homeland Security (DHS). Although the Homeland Security Act does not expressly authorize Total Information Awareness programs, Congress authorized $500 million for a DHS entity with a name similar to DARPA, Homeland Security Advanced Research Projects Agency(HSARPA). The new law also includes languagethatauthorizes the

utilization of data mining and other advanced analytical tools by the new department.[252]

Data Mining and Homeland Security: An Overview, RL31798 (August 27, 2008).

JEFFREY W. SEIFERT, CONGRESSIONAL RESEARCH SERV., DATA MINING AND HOMELAND SECURITY: AN OVERVIEW (2008), *available at* http://www.intelligencelaw.com/library/secondary/crs/pdf/RL31798_8-27-2008.pdf.

Order Code RL31798
Updated August 27, 2008

Jeffrey W. Seifert
Specialist in Information Policy and Technology
Resources, Science, and Industry Division

Summary

Data mining has become one of the key features of many homeland security initiatives. Often used as a means for detecting fraud, assessing risk, and product retailing, data mining involves the use of data analysis tools to discover previously unknown, valid patterns and relationships in large data sets. In the context of homeland security, data mining can be a potential means to identify terrorist activities, such as money transfers and communications, and to identify and track individual terrorists themselves, such as through travel and immigration records.

While data mining represents a significant advance in the type of analytical tools currently available, there are limitations to its capability. One limitation is that although data mining can help reveal patterns and relationships, it does not tell the user the value or significance of these patterns. These types of determinations must be made by the user. A second limitation is that while data mining can identify connections between behaviors and/or variables, it does not necessarily identify a causal relationship. Successful data mining still requires skilled technical and analytical specialists who can structure the analysis and interpret the output.

Data mining is becoming increasingly common in both the private and public sectors. Industries such as banking, insurance, medicine, and retailing commonly use data mining to reduce costs, enhance research, and increase sales. In the public sector, data mining applications initially were used as a means to detect fraud and waste, but have grown to also be used for purposes such as measuring and improving program performance. However, some of the homeland security data mining applications represent a significant expansion in the quantity and scope of data to be analyzed. Some efforts that have attracted a higher level of congressional interest include the Terrorism Information Awareness (TIA) project (now-discontinued) and the Computer-Assisted Passenger Prescreening

System II (CAPPS II) project (nowcanceled and replaced by Secure Flight). Other initiatives that have been the subject of congressional interest include the Multi-State Anti-Terrorism Information Exchange (MATRIX), the Able Danger program, the Automated Targeting System (ATS), and data collection and analysis projects being conducted by the National Security Agency (NSA).

As with other aspects of data mining, while technological capabilities are important, there are other implementation and oversight issues that can influence the success of a project's outcome. One issue is data quality, which refers to the accuracy and completeness of the data being analyzed. A second issue is the interoperability of the data mining software and databases being used by different agencies. A third issue is mission creep, or the use of data for purposes other than for which the data were originally collected. A fourth issue is privacy. Questions that may be considered include the degree to which government agencies should use and mix commercial data with government data, whether data sources are being used for purposes other than those for which they were originally designed, and possible application of the Privacy Act to these initiatives. It is anticipated that congressional oversight of data mining projects will grow as data mining efforts continue to evolve. This report will be updated as events warrant.

What Is Data Mining?

Data mining involves the use of sophisticated data analysis tools to discover previously unknown, valid patterns and relationships in large data sets.[253] These tools can include statistical models, mathematical algorithms, and machine learning methods (algorithms that improve their performance automatically through experience, such as neural networks or decision trees). Consequently, data mining consists of more than collecting and managing data, it also includes analysis and prediction.

Data mining can be performed on data represented in quantitative, textual, or multimedia forms. Data mining applications can use a variety of parameters to examine the data. They include association (patterns where one event is connected to another event, such as purchasing a pen and purchasing paper), sequence or path analysis (patterns where one event leads to another event, such as the birth of a child and purchasing diapers), classification (identification of new patterns, such as coincidences between duct tape purchases and plastic sheeting purchases), clustering (finding and visually documenting groups of previously unknown facts, such as geographic location and brand preferences), and forecasting (discovering patterns from which one can make reasonable

[253] Two Crows Corporation, Introduction to Data Mining and Knowledge Discovery, Third Edition (Potomac, MD: Two Crows Corporation, 1999); Pieter Adriaans and Dolf Zantinge, Data Mining (New York: Addison Wesley, 1996).

predictions regarding future activities, such as the prediction that people who join an athletic club may take exercise classes).[254]

As an application, compared to other data analysis applications, such as structured queries (used in many commercial databases) or statistical analysis software, data mining represents a difference of kind rather than degree. Many simpler analytical tools utilize a verification-based approach, where the user develops a hypothesis and then tests the data to prove or disprove the hypothesis. For example, a user might hypothesize that a customer who buys a hammer, will also buy a box of nails. The effectiveness of this approach can be limited by the creativity of the user to develop various hypotheses, as well as the structure of the software being used. In contrast, data mining utilizes a discovery approach, in which algorithms can be used to examine several multidimensional data relationships simultaneously, identifying those that are unique or frequently represented. For example, a hardware store may compare their customers' tool purchases with home ownership, type of automobile driven, age, occupation, income, and/or distance between residence and the store. As a result of its complex capabilities, two precursors are important for a successful data mining exercise; a clear formulation of the problem to be solved, and access to the relevant data.[255]

Reflecting this conceptualization of data mining, some observers consider data mining to be just one step in a larger process known as knowledge discovery in databases (KDD). Other steps in the KDD process, in progressive order, include data cleaning, data integration, data selection, data transformation, (data mining), pattern evaluation, and knowledge presentation.[256]

A number of advances in technology and business processes have contributed to a growing interest in data mining in both the public and private sectors. Some of these changes include the growth of computer networks, which can be used to connect databases; the development of enhanced search-related techniques such as neural networks and advanced algorithms; the spread of the client/server computing model, allowing users to access centralized data resources from the

---

[256] Jiawei Han and Micheline Kamber, Data Mining: Concepts and Techniques (New York: Morgan Kaufmann Publishers, 2001), p. 7.

desktop; and an increased ability to combine data from disparate sources into a single searchable source.[257]

In addition to these improved data management tools, the increased availability of information and the decreasing costs of storing it have also played a role. Over the past several years there has been a rapid increase in the volume of information collected and stored, with some observers suggesting that the quantity of the world's data approximately doubles every year.[258] At the same time, the costs of data storage have decreased significantly from dollars per megabyte to pennies per megabyte. Similarly, computing power has continued to double every 18-24 months, while the relative cost of computing power has continued to decrease.[259]

Data mining has become increasingly common in both the public and private sectors. Organizations use data mining as a tool to survey customer information, reduce fraud and waste, and assist in medical research. However, the proliferation of data mining has raised some implementation and oversight issues as well. These include concerns about the quality of the data being analyzed, the interoperability of the databases and software between agencies, and potential infringements on privacy. Also, there are some concerns that the limitations of data mining are being overlooked as agencies work to emphasize their homeland security initiatives.

Limitations of Data Mining as a Terrorist Detection Tool

While data mining products can be very powerful tools, they are not self-sufficient applications. To be successful, data mining requires skilled technical and analytical specialists who can structure the analysis and interpret the output that is created. Consequently, the limitations of data mining are primarily data or personnel-related, rather than technology-related.[260]

Although data mining can help reveal patterns and relationships, it does not tell the user the value or significance of these patterns. These types of determinations must be made by the user. Similarly, the validity of the patterns discovered is dependent on how they compare to "real world" circumstances. For example, to assess the validity of a data mining application designed to identify potential terrorist suspects in a large pool of individuals, the user may test the model using data that includes information about known terrorists. However, while possibly

re-affirming a particular profile, it does not necessarily mean that the application will identify a suspect whose behavior significantly deviates from the original model.

Another limitation of data mining is that while it can identify connections between behaviors and/or variables, it does not necessarily identify a causal relationship. For example, an application may identify that a pattern of behavior, such as the propensity to purchase airline tickets just shortly before the flight is scheduled to depart, is related to characteristics such as income, level of education, and Internet use. However, that does not necessarily indicate that the ticket purchasing behavior is caused by one or more of these variables. In fact, the individual's behavior could be affected by some additional variable(s) such as occupation (the need to make trips on short notice), family status (a sick relative needing care), or a hobby (taking advantage of last minute discounts to visit new destinations).[261]

Beyond these specific limitations, some researchers suggest that the circumstances surrounding our knowledge of terrorism make data mining an ill-suited tool for identifying (predicting) potential terrorists before an activity occurs. Successful "predictive data mining" requires a significant number of known instances of a particular behavior in order to develop valid predictive models. For example, data mining used to predict types of consumer behavior (i.e., the likelihood of someone shopping at a particular store, the potential of a credit card usage being fraudulent) may be based on as many as millions of previous instances of the same particular behavior. Moreover, such a robust data set can still lead to false positives. In contrast, as a CATO Institute report suggests that the relatively small number of terrorist incidents or attempts each year are too few and individually unique "to enable the creation of valid predictive models."[262]

Data Mining Uses

Data mining is used for a variety of purposes in both the private and public sectors. Industries such as banking, insurance, medicine, and retailing commonly use data mining to reduce costs, enhance research, and increase sales. For example, the insurance and banking industries use data mining applications to detect fraud and assist in risk assessment (e.g., credit scoring). Using customer data collected over several years, companies can develop models that predict whether a customer is a good credit risk, or whether an accident claim may be fraudulent and should be investigated more closely. The medical community

[262] Jeff Jonas and Jim Harper, *Effective Counterterrorism and the Limited Role of Predictive Data Mining*, CATO Institute Policy Analysis No. 584, December 11, 2006 p. 8, [http://www.cato.org/pubs/pas/pa584.pdf].

sometimes uses data mining to help predict the effectiveness of a procedure or medicine. Pharmaceutical firms use data mining of chemical compounds and genetic material to help guide research on new treatments for diseases. Retailers can use information collected through affinity programs (e.g., shoppers' club cards, frequent flyer points, contests) to assess the effectiveness of product selection and placement decisions, coupon offers, and which products are often purchased together. Companies such as telephone service providers and music clubs can use data mining to create a "churn analysis," to assess which customers are likely to remain as subscribers and which ones are likely to switch to a competitor.[263]

In the public sector, data mining applications were initially used as a means to detect fraud and waste, but they have grown also to be used for purposes such as measuring and improving program performance. It has been reported that data mining has helped the federal government recover millions of dollars in fraudulent Medicare payments.[264] The Justice Department has been able to use data mining to assess crime patterns and adjust resource allotments accordingly. Similarly, the Department of Veterans Affairs has used data mining to help predict demographic changes in the constituency it serves so that it can better estimate its budgetary needs. Another example is the Federal Aviation Administration, which uses data mining to review plane crash data to recognize common defects and recommend precautionary measures.[265]

In addition, data mining has been increasingly cited as an important tool for homeland security efforts. Some observers suggest that data mining should be used as a means to identify terrorist activities, such as money transfers and communications, and to identify and track individual terrorists themselves, such as through travel and immigration records. Initiatives that have attracted significant attention include the now-discontinued Terrorism Information Awareness (TIA) project[266] conducted by the Defense Advanced Research

[266] This project was originally identified as the Total Information Awareness project until DARPA publicly renamed it the Terrorism Information Awareness project in May 2003. Section 8131 of the FY2004 Department of Defense Appropriations Act (P.L. 108-87) prohibited further funding of TIA as a whole, while allowing unspecified subcomponents of the TIA initiative to be funded as

Projects Agency (DARPA), and the now-canceled Computer-Assisted Passenger Prescreening System II (CAPPS II) that was being developed by the Transportation Security Administration (TSA). CAPPS II is being replaced by a new program called Secure Flight. Other initiatives that have been the subject of congressional interest include the Able Danger program and data collection and analysis projects being conducted by the National Security Agency (NSA).

Terrorism Information Awareness (TIA) Program

In the immediate aftermath of the September 11, 2001, terrorist attacks, many questions were raised about the country's intelligence tools and capabilities, as well as the government's ability to detect other so-called "sleeper cells," if, indeed, they existed. One response to these concerns was the creation of the Information Awareness Office (IAO) at the Defense Advanced Research Projects Agency (DARPA)[267] in January 2002. The role of IAO was "in part to bring together, under the leadership of one technical office director, several existing DARPA programs focused on applying information technology to combat terrorist threats."[268] The mission statement for IAO suggested that the emphasis on these technology programs was to "counter asymmetric threats by achieving total information awareness useful for preemption, national security warning, and national security decision making."[269] To that end, the TIA project was to focus on three specific areas of research, anticipated to be conducted over five years, to devlop technologies that would assist in the detection of terrorist groups planning attacks against American interests, both inside and outside the country. The three areas of research and their purposes were described in a DOD Inspector General report as:

> *... language translation, data search with pattern recognition and privacy protection, and advanced collaborative and decision support tools. Language translation technology would enable the rapid analysis of foreign languages, both spoken and written, and allow analysts to quickly search the translated materials for clues about emerging threats. The data search, pattern recognition, and*

part of DOD's classified budget, subject to the provisions of the National Foreign Intelligence Program, which restricts the processing and analysis of information on U.S. citizens. For further details regarding this provision, see CRS Report RL31805, Authorization and Appropriations for FY2004: Defense, by Amy Belasco and Stephen Daggett.

[267] DARPA "is the central research and development organization for the Department of Defense (DOD)" that engages in basic and applied research, with a specific focus on "research and technology where risk and payoff are both very high and where success may provide dramatic advances for traditional military roles and missions." [http://www.darpa.mil/].

[268] Department of Defense. May 20, 2003. Report to Congress Regarding the Terrorism Information Awareness Program, Executive Summary, p. 2.

[269] Department of Defense. May 20, 2003. Report to Congress Regarding the Terrorism Information Awareness Program, Detailed Information, p. 1 (emphasis added).

> *privacy protection technologies would permit analysts to search vast quantities of data for patterns that suggest terrorist activity while at the same time controlling access to the data, enforcing laws and policies, and ensuring detection of misuse of the information obtained. The collaborative reasoning and decision support technologies would allow analysts from different agencies to share data.*[270]

Each part had the potential to improve the data mining capabilities of agencies that adopt the technology.[271] Automated rapid language translation could allow analysts to search and monitor foreign language documents and transmissions more quickly than currently possible. Improved search and pattern recognition technologies may enable more comprehensive and thorough mining of transactional data, such as passport and visa applications, car rentals, driver license renewals, criminal records, and airline ticket purchases. Improved collaboration and decision support tools might facilitate the search and coordination activities being conducted by different agencies and levels of government.[272]

In public statements DARPA frequently referred to the TIA program as a research and development project designed to create experimental prototype tools, and that the research agency would only use "data that is legally available and obtainable by the U.S. Government."[273] DARPA further emphasized that these tools could be adopted and used by other agencies, and that DARPA itself would not be engaging in any actual-use data mining applications, although it could "support production of a scalable leave-behind system prototype."[274] In addition, some of the technology projects being carried out in association with the TIA

[274] Ibid., p. 2.

program did not involve data mining.[275] However, the TIA program's overall emphasis on collecting, tracking, and analyzing data trails left by individuals served to generate significant and vocal opposition soon after John Poindexter made a presentation on TIA at the DARPATech 2002 Conference in August 2002.[276]

Critics of the TIA program were further incensed by two administrative aspects of the project. The first involved the Director of IAO, Dr. John M. Poindexter. Poindexter, a retired Admiral, was, until that time, perhaps most well-known for his alleged role in the Iran-contra scandal during the Reagan Administration. His involvement with the program caused many in the civil liberties community to question the true motives behind TIA.[277] The second source of contention involved TIA's original logo, which depicted an "all-seeing" eye atop of a pyramid looking down over the globe, accompanied by the Latin phrase scientia est potentia (knowledge is power).[278] Although DARPA eventually removed the logo from its website, it left a lasting impression.

The continued negative publicity surrounding the TIA program contributed to the introduction of a number of bills in Congress that eventually led to the program's dissolution. Among these bills was S. 188, the Data-Mining Moratorium Act of 2003, which, if passed, would have imposed a moratorium on the implementation of data mining under the TIA program by the Department of Defense, as well as any similar program by the Department of Homeland Security. An amendment included in the Omnibus Appropriations Act for Fiscal Year 2003 (P.L. 108-7) required the Director of Central Intelligence, the Secretary of Defense, and the Attorney General to submit a joint report to Congress within 90 days providing details about the TIA program.[279] Funding for

---

[275] Although most of the TIA-related projects did involve some form of data collection, the primary purposes of some of these projects, such as war gaming, language translation, and biological agent detection, were less connected to data mining activities. For a description of these projects, see [http://www.fas.org/irp/agency/dod/poindexter.html].

[279] The report is available at [http://www.eff.org/Privacy/TIA/TIA-report.pdf]. Some of the information required includes spending schedules, likely effectiveness of the program, likely impact on privacy and civil liberties, and any laws and regulations that may need to be changed to fully deploy TIA. If the report was not submitted within 90 days, funding for the TIA program

TIA as a whole was prohibited with the passage of the FY2004 Department of Defense Appropriations Act (P.L. 108-87) in September 2003. However, Section 8131 of the law allowed unspecified subcomponents of the TIA initiative to be funded as part of DOD's classified budget, subject to the provisions of the National Foreign Intelligence Program, which restricts the processing and analysis of information on U.S. citizens.[280]

Computer-Assisted Passenger Prescreening System (CAPPS II)

Similar to TIA, the CAPPS II project represented a direct response to the September 11, 2001, terrorist attacks. With the images of airliners flying into buildings fresh in people's minds, air travel was now widely viewed not only as a critically vulnerable terrorist target, but also as a weapon for inflicting larger harm. The CAPPS II initiative was intended to replace the original CAPPS, currently being used. Spurred, in part, by the growing number of airplane bombings, the existing CAPPS (originally called CAPS) was developed through a grant provided by the Federal Aviation Administration (FAA) to Northwest Airlines, with a prototype system tested in 1996. In 1997, other major carriers also began work on screening systems, and, by 1998, most of the U.S.-based airlines had voluntarily implemented CAPS, with the remaining few working toward implementation.[281] Also, during this time, the White House Commission on Aviation Safety and Security (sometimes referred to as the Gore Commission) released its final report in February 1997.[282] Included in the commission's report was a recommendation that the United States implement automated passenger profiling for its airports.[283] On April 19, 1999, the FAA issued a notice of proposed rulemaking (NPRM) regarding the security of checked baggage on flights within the United States (docket no. FAA-1999-5536).[284] As part of this still-pending rule, domestic flights would be required to utilize "the FAA-approved computer-assisted passenger screening (CAPS) system to select

passengers whose checked baggage must be subjected to additional security measures."[285]

The current CAPPS system is a rule-based system that uses the information provided by the passenger when purchasing the ticket to determine if the passenger fits into one of two categories; "selectees" requiring additional security screening, and those who do not. CAPPS also compares the passenger name to those on a list of known or suspected terrorists.[286] CAPPS II was described by TSA as "an enhanced system to confirm the identities of passengers and to identify foreign terrorists or persons with terrorist connections before they can board U.S. aircraft."[287] CAPPS II would have sent information provided by the passenger in the passengers name record (PNR), including full name, address, phone number, and date of birth, to commercial data providers for comparison to authenticate the identity of the passenger. The commercial data provider would have then transmitted a numerical score back to TSA indicating a particular risk level.[288] Passengers with a "green" score would have undergone "normal screening," while passengers with a "yellow" score would have undergone additional screening. Passengers with a "red" score would not have been allowed to board the flight, and would have received "the attention of law enforcement."[289] While drawing on information from commercial databases, TSA had stated that it would not see the actual information used to calculate the scores, and that it would not retain the traveler's information.

TSA had planned to test the system at selected airports during spring 2004.[290] However, CAPPS II encountered a number of obstacles to implementation. One obstacle involved obtaining the required data to test the system. Several high-profile debacles resulting in class-action lawsuits have made the U.S.-based airlines very wary of voluntarily providing passenger information. In early 2003,

[290] Sara Kehaulani Goo, "U.S. to Push Airlines for Passenger Records," Washington Post, January 12, 2004, p. A1.

Delta Airlines was to begin testing CAPPS II using its customers' passenger data at three airports across the country. However, Delta became the target of a vociferous boycott campaign, raising further concerns about CAPPS II generally.[291] In September 2003, it was revealed that JetBlue shared private passenger information in September 2002 with Torch Concepts, a defense contractor, which was testing a data mining application for the U.S. Army. The information shared reportedly included itineraries, names, addresses, and phone numbers for 1.5 million passengers.[292] In January 2004, it was reported that Northwest Airlines provided personal information on millions of its passengers to the National Aeronautics and Space Administration (NASA) from October to December 2001 for an airline security-related data mining experiment.[293] In April 2004, it was revealed that American Airlines agreed to provide private passenger data on 1.2 million of its customers to TSA in June 2002, although the information was sent instead to four companies competing to win a contract with TSA.[294] Further instances of data being provided for the purpose of testing CAPPS II were brought to light during a Senate Committee on Government Affairs confirmation hearing on June 23, 2004. In his answers to the committee, the acting director of TSA, David M. Stone, stated that during 2002 and 2003 four airlines; Delta, Continental, America West, and Frontier, and two travel reservation companies; Galileo International and Sabre Holdings, provided passenger records to TSA and/or its contractors.[295]

Concerns about privacy protections had also dissuaded the European Union (EU) from providing any data to TSA to test CAPPS II. However, in May 2004, the EU signed an agreement with the United States that would have allowed PNR data for flights originating from the EU to be used in testing CAPPS II, but only after TSA was authorized to use domestic data as well. As part of the agreement, the EU data was to be retained for only three-and-a-half years (unless it is part of a law enforcement action), only 34 of the 39 elements of the PNR were to be

accessed by authorities,[296] and there were to be yearly joint DHS-EU reviews of the implementation of the agreement.[297]

Another obstacle was the perception of mission creep. CAPPS II was originally intended to just screen for high-risk passengers who may pose a threat to safe air travel. However, in an August 1, 2003, Federal Register notice, TSA stated that CAPPS II could also be used to identify individuals with outstanding state or federal arrest warrants, as well as identify both foreign and domestic terrorists (not just foreign terrorists). The notice also states that CAPPS II could be "linked with the

U.S. Visitor and Immigrant Status Indicator Technology (US-VISIT) program" to identify individuals who are in the country illegally (e.g., individuals with expired visas, illegal aliens, etc.).[298] In response to critics who cited these possible uses as examples of mission creep, TSA claimed that the suggested uses were consistent with the goals of improving aviation security.[299]

Several other concerns had also been raised, including the length of time passenger information was to be retained, who would have access to the information, the accuracy of the commercial data being used to authenticate a passenger's identity, the creation of procedures to allow passengers the opportunity to correct data errors in their records, and the ability of the system to detect attempts by individuals to use identity theft to board a plane undetected.

Secure Flight

In August 2004, TSA announced that the CAPPS II program was being canceled and would be replaced with a new system called Secure Flight. In the Department of Homeland Security Appropriations Act, 2005 (P.L. 108-334), Congress included a provision (Sec. 522) prohibiting the use of appropriated funds for "deployment or implementation, on other than a test basis," of CAPPS II, Secure Flight, "or other follow on/successor programs," until GAO has certified that such

a system has met all of the privacy requirements enumerated in a February 2004 GAO report,[300] can accommodate any unique air transportation needs as it relates to interstate transportation, and that "appropriate life-cycle cost estimates, and expenditure and program plans exist." GAO's certification report[301] was delivered to Congress in March 2005. In its report, GAO found that while "TSA is making progress in addressing key areas of congressional interest ... TSA has not yet completed these efforts or fully addressed these areas, due largely to the current stage of the program's development."[302] In follow-up reports in February 2006[303] and June 2006,[304] GAO reiterated that while TSA continued to make progress, the Secure Flight program still suffered from systems development and program management problems, preventing it from meeting its congressionally mandated privacy requirements. In early 2006 TSA suspended development of Secure Flight in order to "rebaseline" or reassess the program.

In December 2006, the DHS Privacy Office released a report comparing TSA's published privacy notices with its actual practices regarding Secure Flight. The DHS Privacy Office found that there were discrepancies related to data testing and retention, due in part because the privacy notices "were drafted before the testing program had been designed fully." However, the report also points out that

> *material changes in a federal program's design that have an impact on the collection, use, and maintenance of personally identifiable information of American citizens are required to be*

announced in Privacy Act system notices and privacy impact assessments.[305]

In a February 2007 interview, it was reported that TSA Administrator Kip Hawley stated that while TSA has developed a means to improve the accuracy, privacy, and reliability of Secure Flight, it would take approximately one-and-a-half years to complete. This would be followed by an additional year of testing, leading to an anticipated implementation in 2010.[306]

On August 23, 2007, TSA published a notice of proposed rulemaking (NPRM) for implementing Secure Flight, as well as an NPRM proposing Privacy Act exemptions for Secure Flight,[307] in the Federal Register. A Privacy Act System of Records Notice (SORN)[308] was also published in the same edition of the Federal Register. In addition, a Privacy Impact Assessment (PIA) for Secure Flight was posted on the TSA website.[309]

Along with the Secure Flight NPRM, on August 23, 2007, TSA published a related but separate final rule regarding the Advance Passenger Information System (APIS) administered by U.S. Customs and Border Protection (CBP) for screening passengers of international flights departing from or arriving to the United States.[310] TSA states

We propose that, when the Secure Flight rule becomes final, aircraft operators would submit passenger information to DHS through a single DHS portal for both the Secure Flight and APIS programs. This would allow DHS to integrate the watch list matching component of APIS into Secure Flight, resulting in one

> *DHS system responsible for watch list matching for all aviation passengers.*[311]

According to the August 23, 2007 Secure Flight NPRM, in accordance with the Intelligence Reform and Terrorism Prevention Act (IRTPA), "TSA would receive passenger and certain non-traveler information, conduct watch list matching against the No Fly and Selectee portions of the Federal Government's consolidated terrorist watch list, and transmit boarding pass printing instructions back to aircraft operators."[312] Currently, air carriers are responsible for comparing passenger information to that on government watch lists.

The NPRM states that TSA would collect Secure Flight Passenger Data that includes a combination of required and optional information. Passengers would be required to provide their full names, "as it appears on a verifying identity document held by that individual."[313] In addition, passengers would be asked, but not required, to provide their date of birth, gender, Redress Number or known traveler number. However, the NPRM does propose circumstances in which aircraft operators would be required to provide the optional information to TSA if it already has obtained that information "in the ordinary course of business." The NPRM states

> *If a covered aircraft operator were to input data required to be requested from individuals into the system where it stores SFPD — such as data from a passenger profile stored by the aircraft operator in the ordinary course of business — the aircraft operator would be required to include that data as part of the SFPD transmitted to TSA, even though the individual did not provide that information at the time of reservation.*[314]

In addition, aircraft operations would be required to provide TSA, if available, a passenger's passport information, and "certain non-personally identifiable data fields" including itinerary information, reservation control number, record sequence number, record type, passenger update indicator, and traveler reference

number.[315] Secure Flight would not utilize commercial data to verify identities, nor would it use algorithms to assign risk scores to individuals.[316]

In the NPRM TSA proposes a tiered data retention schedule. The purpose for retaining the records would be to facilitate a redress process, expedite future travel, and investigate and document terrorist events. Under this schedule, the records for "individuals not identified as potential matches by the automated matching tool would be retained for seven days" after the completion of directional travel. The records for individuals identified as "potential matches" would be retained for seven years following the completion of directional travel. The records of individuals identified as "confirmed matches" would be retained for 99 years.[317]

This original NPRM included a 60-day comment period, ending on October 22, 2007. However, in response to deadline extension requests received, on October 24, 2007, TSA published a notice in the Federal Register extending the public comment period an additional 30 days, ending November 21, 2007.[318]

On November 9, 2007, TSA published a final SORN[319] and a final rule regarding Privacy Act exemptions for Secure Flight.[320]

Multistate Anti-Terrorism Information Exchange (MATRIX) Pilot Project

Similar to TIA and CAPPS II, which were born out of an initial reaction to concerns about terrorism, the impetus and initial work on MATRIX grew out of the September 11, 2001 terrorist attacks. MATRIX was initially developed by Seisint, a Florida-based information products company, in an effort to facilitate collaborative information sharing and factual data analysis. At the outset of the project, MATRIX included a component Seisint called the High Terrorist Factor (HTF). Within days of the terrorist attacks, based on an analysis of information

that included "age and gender, what they did with their drivers license, either pilots or associations to pilots, proximity to 'dirty' addresses/phone numbers, investigational data, how they shipped; how they received, social security number anomalies, credit history, and ethnicity," Seisint generated a list of 120,000 names with high HTF scores, or so called terrorism quotients. Seisint provided this list to the Federal Bureau of Investigation (FBI), the Immigration and Naturalization Service (INS), the United States Secret Service (USSS), and the Florida Department of Law Enforcement (FDLE), which, according to a January 2003 presentation, made by the company, led to "several arrests within one week" and "scores of other arrests."[321] Although the HTF scoring system appeared to attract the interest of officials, this feature was reportedly dropped from MATRIX because it relied on intelligence data not normally available to the law enforcement community and concerns about privacy abuses. However, some critics of MATRIX continued to raise questions about HTF, citing the lack of any publicly available official documentation verifying such a decision.[322]

As a pilot project, MATRIX was administered through a collaborative effort between Seisint, the FDLE,[323] and the Institute for Intergovernmental Research (IIR), a "Florida-based nonprofit research and training organization, [that] specializes in law enforcement, juvenile justice, and criminal justice issues."[324] The Florida Department of Law Enforcement (FDLE) served as the "Security Agent" for MATRIX, administering control over which agencies and individuals had access to the system. FDLE was also a participant state in MATRIX. IIR was responsible for administrative support, and was the grantee for federal funds received for MATRIX.[325]

The analytical core of the MATRIX pilot project was an application called Factual Analysis Criminal Threat Solution (FACTS). FACTS was described as a "technological, investigative tool allowing query-based searches of available state and public records in the data reference repository."[326] The FACTS application allowed an authorized user to search "dynamically combined records from

disparate datasets" based on partial information, and will "assemble" the results.[327] The data reference repository used with FACTS represented the amalgamation of over 3.9 billion public records collected from thousands of sources.[328] Some of the data contained in FACTS included FAA pilot licenses and aircraft ownership records, property ownership records, information on vessels registered with the Coast Guard, state sexual offenders lists, federal terrorist watch lists, corporation filings, Uniform Commercial Code filings, bankruptcy filings, state-issued professional licenses, criminal history information, department of corrections information and photo images, driver's license information and photo images, motor vehicle registration information, and information from commercial sources that "are generally available to the public or legally permissible under federal law."[329] The data reference repository purportedly excluded data such as telemarketing call lists, direct mail mailing lists, airline reservations or travel records, frequent flyer/hotel stay program membership or activity, magazine subscriptions, information about purchases made at retailers or over the Internet, telephone calling logs or records, credit or debit card numbers, mortgage or car payment information, bank account numbers or balance information, birth certificates, marriage licenses, divorce decrees, or utility bill payment information.

Participating law enforcement agencies utilized this information sharing and data mining resource over the Regional Information Sharing Systems (RISS) secure intranet (RISSNET). The RISS Program is an established system of six regional centers that are used to "share intelligence and coordinate efforts against criminal networks that operate in many locations across jurisdictional lines."[330] The RISS Program is used to combat traditional law enforcement targets, such as drug trafficking and violent crime, as well as other activities, such as terrorism and cybercrime. According to its website, RISS has been in operation for nearly 25 years, and has "member agencies in all 50 states, the District of Columbia, U.S. territories, Australia, Canada, and England."[331]

[331] [http://www.rissinfo.com/overview2.htm].

Some critics of MATRIX suggested that the original intentions and design of the pilot project echoed those of DARPA's highly criticized TIA program.[332] However, while it is difficult to ascribe intention, an ongoing series of problems did appear to have affected the trajectory of the project. In August 2003, Hank Asher, the founder of Seisint, resigned from the company's board of directors after questions about his criminal history were raised during contract negotiations between Seisint and the Florida Department of Law Enforcement. In the 1980s, Asher was allegedly a pilot in several drug smuggling cases. However, he was reportedly never charged in the cases in exchange for his testimony at state and federal trials. Similar concerns had surfaced in 1999 when the FBI and the U.S. Drug Enforcement Agency (DEA) reportedly cancelled contracts with an earlier company Asher founded, DBT Online, Inc.[333]

Some civil liberties organizations also raised concerns about law enforcement actions being taken based on algorithms and analytical criteria developed by a private corporation, in this case Seisint, without any public or legislative input.[334] Questions also were raised about the level of involvement of the federal government, particularly the Department of Homeland Security and the Department of Justice, in a project that is ostensibly focused on supporting state-based information sharing.[335] It has been reported that the MATRIX pilot project has received a total of $12 million in federal funding — $8 million from the Office of Domestic Preparedness (ODP) at the Department of Homeland Security (DHS), and $4 million from the Bureau of Justice Assistance (BJA) at the Department of Justice (DOJ).[336]

The MATRIX pilot project also suffered some setbacks in recruiting states to participate. The lack of participation can be especially troubling for a networked information sharing project such as MATRIX because, as Metcalfe's Law

[336] John Schwartz, "Privacy Fears Erode Support for a Network to Fight Crime," New York Times, March 15, 2004, [http://www.nytimes.com/2004/03/15/technology/15matrix.html].

suggests, "the power of the network increases exponentially by the number of computers connected to it."[337] While as many as 16 states were reported to have either participated or seriously considered participating in MATRIX, several chose to withdraw, leaving a total of four states (Connecticut, Florida, Ohio, and Pennsylvania) at the conclusion of the pilot on April 15, 2005. State officials cited a variety of reasons for not participating in MATRIX, including costs, concerns about violating state privacy laws, and duplication of existing resources.[338]

In its news release announcing the conclusion of the pilot, the FDLE stated that as a proof-of-concept pilot study from July 2003 to April 2005, MATRIX had achieved many "operational successes." Among the statistics cited, the news release stated that

- Between July 2003 and April 2005, there have been 1,866,202 queries to the FACTS application.
- As of April 8, 2005, there were 963 law enforcement users accessing FACTS.
- FACTS assisted a variety of investigations. On average, cases pertained to the following:
    - Fraud — 22.6%
    - Robbery — 18.8%
    - Sex Crime Investigations — 8.6%
    - Larceny and Theft — 8.3%
    - Extortion/Blackmail — 7.0%
    - Burglary/Breaking and Entering — 6.8%
    - Stolen Property — 6.2%
    - Terrorism/National Security — 2.6%
    - Other — 19.1% (e.g., assault, arson, narcotics, homicide)

It was also announced that while the pilot study would not be continued, due to a lack of additional federal funding, that Florida and other participating states were

"independently negotiating the continued use of the FACTS application for use within their individual state[s]."[339]

Other Data Mining Initiatives

Able Danger

In summer 2005, news reports began to appear regarding a data mining initiative that had been carried out by the U.S. Army's Land Information Warfare Agency (LIWA) in 1999-2000. The initiative, referred to as Able Danger, had reportedly been requested by the U.S. Special Operations Command (SOCOM) as part of larger effort to develop a plan to combat transnational terrorism. Because the details of Able Danger remain classified, little is known about the program. However, in a briefing to reporters, the Department of Defense characterized Able Danger as a demonstration project to test analytical methods and technology on very large amounts of data.[340] The project involved using link analysis to identify underlying connections and associations between individuals who otherwise appear to have no outward connection with one another. The link analysis used both classified and open source data, totaling a reported 2.5 terabytes.[341] All of this data, which included information on U.S. persons, was reportedly deleted in April 2000 due to U.S. Army regulations requiring information on U.S. persons be destroyed after a project ends or becomes inactive.[342]

Interest in Able Danger was largely driven by controversy over allegations that the data mining analysis had resulted in the identification of Mohammed Atta, one of the 9/11 hijackers, as a terrorist suspect before the attacks took place. While some individuals who had been involved in Able Danger were reportedly prepared to testify that they had seen either his name and/or picture on a chart prior to the attacks, the identification claim was strongly disputed by others.

On September 21, 2005, the Senate Committee on the Judiciary held a hearing on Able Danger to consider how the data could or should have been shared with other agencies, and whether the destruction of the data was in fact required by

the relevant regulations. While the Department of Defense directed the individuals involved in Able Danger not to testify at the hearing, testimony was taken from the attorney of one of the individuals, as well as others not directly involved with the project.

On February 15, 2006, the House Committee on Armed Services Subcommittee on Strategic Forces and Subcommittee on Terrorism, Unconventional Threats and Capabilities held a joint hearing on Able Danger. The first half of the hearing was held in open session while the second half of the hearing was held in closed session to allow for the discussion of classified information. Witnesses testifying during the open session included Stephen Cambone, Undersecretary of Defense for Intelligence; Erik Kleinsmith; Anthony Shaffer, and J.D. Smith.

In September 2006, a Department of Defense Inspector General report regarding Able Danger was released. The investigation examined allegations of mismanagement of the Able Danger program and reprisals against Lieutenant Colonel (LTC) Anthony Shaffer, a member of the U.S. Army Reserve and civilian employee of the Defense Intelligence Agency (DIA). The DoD Inspector General "found some procedural oversights concerning the DIA handling of LTC Shaffer's office contents and his Officer Evaluation Reports." However, the investigation found that

> *The evidence did not support assertions that Able Danger identified the September 11, 2001, terrorists nearly a year before the attack, that Able Danger team members were prohibited from sharing information with law enforcement authorities, or that DoD officials reprised against LTC Shaffer for his disclosures regarding Able Danger.* [343]

In December 2006, the then-Chairman and then-Vice Chairman of the Senate Select Committee on Intelligence, Senator Roberts and Senator Rockefeller respectively, released a letter summarizing the findings of a review of Able Danger conducted by Committee staff.[344] According to the letter, the results of the review, begun in August 2005, "were confirmed in all respects by the DoD Inspector General investigation of the Able Danger program (Case Number H05L9790521)." The letter further stated that the review "revealed no evidence to support the underlying Able Danger allegations" and that the Committee considered the matter "closed."

[344] A copy of the letter is available at [http://www.intelligence.senate.gov/abledanger.pdf].

Automated Targeting System (ATS)

On November 2, 2006, DHS posted a System of Records Notice (SORN) in the Federal Register regarding the deployment of the Automated Targeting System (ATS), to screen travelers entering the United States by car, plane, ship, or rail.[345] Originally developed to help identify potential cargo threats, ATS is a module of the Treasury Enforcement Communications System (TECS). TECS is described as an "overarching law enforcement information collection, targeting, and sharing environment." ATS is run by the Bureau of Customs and Border Protection (CPB). The Federal Register notice states that "ATS builds a risk assessment for cargo, conveyances, and travelers based on criteria and rules developed by CPB." The notice further states that "ATS both collects information directly, and derives other information from various systems." Information collected may be retained for up to forty years "to cover the potentially active lifespan of individuals associated with terrorism or other criminal activities."

According to a November 22, 2006 privacy impact assessment, ATS itself is composed of six modules:

- ATS-Inbound — inbound cargo and conveyances (rail, truck, ship, and air)
- ATS-Outbound — outbound cargo and conveyances (rail, truck, ship, and air)
- ATS-Passenger (ATS-P) — travelers and conveyances (air, ship, and rail)
- ATS-Land (ATS-L) — private vehicles arriving by land
- ATS-International (ATS-I) — cargo targeting for CPB's collaboration with foreign customs authorities
- ATS-Trend Analysis and Analytical Selectivity Program (ATS-TAP) (analytical module)[346]

According to DHS, "ATS historically was covered by the SORN for TECS." The November 2, 2006 SORN was "solely to provide increased noticed and transparency to the public about ATS" and "did not describe any new collection of information."[347] However, the disclosure raised a number of issues about various facets of the program, including proposed exemptions from the Privacy Act; opportunities for citizens to correct errors in the records; how the risk assessments are created; if any previous testing has been conducted; and the effectiveness of the system.

---

[345] Department of Homeland Security, Office of the Secretary, "Privacy Act of 1974; System of Records," 71 Federal Register 64543, November 2, 2006.

[346] Department of Homeland Security, Privacy Impact Assessment for the Automated Targeting System, November 22, 2006, p.3, [http://www.dhs.gov/xlibrary/assets/privacy/privacy_pia_cbp_ats.pdf].

[347] Department of Homeland Security, Office of the Secretary, "Privacy Act of 1974; U.S. Customs and Border Protection, Automated Targeting System, System of Records," 72 Federal Register 43650, August 6, 2007.

In its July 6, 2007 report to Congress, the DHS Privacy Office stated that of the six modules that compose ATS, only two — ATS Inbound and ATS Outbound (which became operational in 1997) — "engage in data mining to provide decision support analysis for targeting of cargo for suspicious activity."[348] In contrast, the DHS Privacy Office report states that the ATS Passenger module does not meet the definition of data mining referred to in H.Rept. 109-699 (this definition is discussed in more detail in "Legislation in the 109th Congress," below). Whereas the ATS Passenger module calls for a search or examination of a traveler based on the traveler's personally identifying travel documents, the data mining definition in H.Rept. 109-699 only includes a search that "does not use a specific individual's personal identifiers to acquire information concerning that individual."[349]

On August 6, 2007, the Privacy Office of the Department of Homeland Security published a notice of proposed rulemaking (NPRM) proposing Privacy Act exemptions for the Automated Targeting System,[350] in the Federal Register. A Privacy Act System of Records Notice (SORN)[351] was also published in the same edition of the Federal Register. In addition, a revised Privacy Impact Assessment (PIA) for ATS was posted on the DHS website.[352]

According to the NPRM, ATS-P module records exempt from the Privacy Act would include "the risk assessment analyses and business confidential information received in the PNR from the air and vessel carriers." Records or information obtained from other systems of records that are exempt from certain provisions of the Privacy Act would retain their exemption in ATS.[353] In the NPRM, DHS states that the exemptions are needed "to protect information relating to law enforcement investigations from disclosures to subjects of

---

investigations and others who could interfere with investigatory and law enforcement activities."

The August 6, 2007 SORN is a revised version of the November 2, 2006 SORN "which responds to those comments [received in response to the November 2006 SORN], makes certain amendments with regard to the retention period and access provisions of the prior notice, and provides further notice and transparency to the public about the functionality of ATS."[354] The changes include

- Reducing the "general retention period for data maintained in ATS" from 40 to 15 years, and adding a requirement that users obtain supervisory approval to access archived data in the last eight years of the retention period.
- Allowing "persons whose PNR data has been collected and maintained in ATS-P [to] have administrative access to that data under the Privacy Act." Individuals will also be able to "seek to correct factual inaccuracies contained in their PNR data, as it is maintained by CBP."
- Adding booking agents as a category of people from whom information is obtained, in acknowledgment that booking agents' identities are included in itinerary information.
- Amending the categories of people covered by ATS "to include persons whose international itineraries cause their flight to stop in the United States, either to refuel or permit a transfer, and crewmembers on flights that overfly or transit through U.S. airspace."
- Clarifying "the categories of PNR data collected and maintained in ATS-P to more accurately reflect the type of data collected from air carriers."
- Removing "two of the routine uses included in the earlier version of the SORN — those pertaining to using ATS in background checks."

This revised SORN became effective on September 5, 2007.

National Security Agency (NSA) and the Terrorist Surveillance Program

In December 2005 news reports appeared for the first time revealing the existence of a classified NSA terrorist surveillance program, dating back to at least 2002, involving the domestic collection, analysis, and sharing of telephone call information.[355] Controversy over the program raised congressional concerns about both the prevalence of homeland security data mining and the capacity of

---

[354] Department of Homeland Security, Office of the Secretary, "Privacy Act of 1974; U.S. Customs and Border Protection, Automated Targeting System, System of Records," 72 Federal Register 43650, August 6, 2007.

[355] Peter Baker, "President Says He Ordered NSA Domestic Spying," The Washington Post, 18 December 2005, p. A1; Walter Pincus, "NSA Gave Other U.S. Agencies Information From Surveillance," The Washington Post, January 1, 2006, p. A8.

the country's intelligence and law enforcement agencies to adequately analyze and share counterterrorism information. The Senate Committee on the Judiciary held two hearings regarding the issue on February 6 and February 28, 2006.

Although details about the program are classified, statements by President Bush and Administration officials following the initial revelation of the program suggested that the NSA terrorist surveillance program focused only on international calls, with a specific goal of targeting the communications of al Qaeda and related terrorist groups, and affiliated individuals. It was also suggested that the program was reviewed and reauthorized on a regular basis and that key Members of Congress had been briefed about the program.

In his weekly radio address on December 17, 2005, President Bush stated:

> *In the weeks following the terrorist attacks on our nation, I authorized the National Security Agency, consistent with U.S. law and the Constitution, to intercept the international communications of people with known links to al Qaeda and related terrorist organizations. Before we intercept these communications, the government must have information that establishes a clear link to these terrorist networks.*[356]

President Bush also stated during his radio address:

> *The activities I authorized are reviewed approximately every 45 days. Each review is based on a fresh intelligence assessment of terrorist threats to the continuity of our government and the threat of catastrophic damage to our homeland. During each assessment, previous activities under the authorization are reviewed. The review includes approval by our nation's top legal officials, including the Attorney General and the Counsel to the President. I have reauthorized this program more than 30 times since the September the 11th attacks, and I intend to do so for as long as our nation faces a continuing threat from al Qaeda and related groups.*[357]

In a January 27, 2006, public release statement, the Department of Justice stated:

---

[356] President George W. Bush, "President's Radio Address," December 17, 2005, [http://www.whitehouse.gov/news/releases/2005/12/20051217.html].

[357] Ibid.

The NSA program is narrowly focused, aimed only at international calls and targeted at al Qaeda and related groups. Safeguards are in place to protect the civil liberties of ordinary Americans.

- The program only applies to communications where one party is located outside of the United States.
- The NSA terrorist surveillance program described by the President is only focused on members of Al Qaeda and affiliated groups. Communications are only intercepted if there is a reasonable basis to believe that one party to the communication is a member of al Qaeda, affiliated with al Qaeda, or a member of an organization affiliated with al Qaeda.
- The program is designed to target a key tactic of al Qaeda: infiltrating foreign agents into the United States and controlling their movements through electronic communications, just as it did leading up to the September 11 attacks.
- The NSA activities are reviewed and reauthorized approximately every 45 days. In addition, the General Counsel and Inspector General of the NSA monitor the program to ensure that it is operating properly and that civil liberties are protected, and the intelligence agents involved receive extensive training.[358]

On February 6, 2006, in his written statement for a Senate Committee on the Judiciary hearing, U.S. Attorney General Gonzalez stated:

> *The terrorist surveillance program targets communications where one party to the communication is outside the U.S. and the government has "reasonable grounds to believe" that at least one party to the communication is a member or agent of al Qaeda, or an affiliated terrorist organization. This program is reviewed and reauthorized by the President approximately every 45 days. The Congressional leadership, including the leaders of the Intelligence Committees of both Houses of Congress, has been briefed about this program more than a dozen times since 2001. The program provides the United States with the early warning system we so desperately needed on September 10th.*[359]

In May 2006 news reports alleged additional details regarding the NSA terrorist surveillance program, renewing concerns about the possible existence of inappropriately authorized domestic surveillance. According to these reports,

---

[358] U.S. Department of Justice, "The NSA Program to Detect and Prevent Terrorist Attacks Myth v. Reality," January 27, 2006, [http://www.usdoj.gov/opa/documents/nsa_myth_v_ reality.pdf].

[359] The Honorable Alberto Gonzalez, Testimony before the Senate Committee on the Judiciary, Wartime Executive Power and the NSA's Surveillance Authority, February 6, 2006, [http://judiciary.senate.gov/testimony.cfm?id=1727&wit_id=3936].

following the September 11, 2001 attacks, the NSA contracted with AT&T, Verizon, and BellSouth to collect information about domestic telephone calls handled by these companies. The NSA, in turn, reportedly used this information to conduct "social network analysis" to map relationships between people based on their communications.[360]

It remains unclear precisely what information, if any, was collected and provided to the NSA. Some reports suggest that personally identifiable information (i.e., names, addresses, etc.) were not included. It also has been reported that the content of the calls (what was spoken) was not collected. Since the emergence of these news reports, BellSouth has issued a public statement saying that according to an internal review conducted by the company, "no such [alleged] contract exists" and that the company has "not provided bulk customer calling records to the NSA."[361] Similarly, Verizon has issued a public statement saying that due to the classified nature of the NSA program, "Verizon cannot and will not confirm or deny whether it has any relationship to the classified NSA program," but that "Verizon's wireless and wireline companies did not provide to NSA customer records or call data, local or otherwise."[362] Together, AT&T, Verizon, and BellSouth are the three largest telecommunications companies in the United States, serving more than 200 million customers, accounting for hundreds of billions of calls each year.[363]

In a January 17, 2007 letter to the Senate Committee on the Judiciary, then-Attorney General Gonzalez wrote that:

> *a Judge of the Foreign Intelligence Surveillance Court issued orders authorizing the Government to target for collection international communications into or out of the United States where there is probable cause to believe that one of the communicants is a member or agent of al Qaeda or an associated terrorist organization. As a result of these orders, any electronic surveillance that was occurring as part of the Terrorist*

Surveillance Program will now be conducted subject to the approval of the Foreign Intelligence Surveillance Court.[364]

The letter further stated that "the President has determined not to reauthorize the Terrorist Surveillance Program when the current authorization expires."

The program and the alleged involvement of telecommunications companies has been the subject of several lawsuits. For a discussion of these legal issues, see CRS Report RL33424, Government Access to Phone Calling Activity and Related Records: Legal Authorities, by Elizabeth B. Bazan, Gina Marie Stevens, and Brian T. Yeh. In July 2008, Congress passed and the President signed into law H.R. 6304, the FISA Amendments Act of 2008 (P.L. 110-261). Among its provisions, Title VIII of the act provides a measure of protection from civil actions to telecommunications companies that provided assistance to government counterterrorism surveillance activities between September 11, 2001, and January 17, 2007. For a discussion of this legislation, see CRS Report RL34279, The Foreign Intelligence Surveillance Act: An Overview of Selected Issues, by Elizabeth B. Bazan, and CRS Report RL33539, Intelligence Issues for Congress, by Richard A. Best, Jr.

Novel Intelligence from Massive Data (NIDM) Program

As part of its efforts to better utilize the overwhelming flow of information it collects, NSA has reportedly been supporting the development of new technology and data management techniques by funding grants given by the Advanced Research Development Activity (ARDA). ARDA is an intelligence community (IC) organization whose mission is described as "to sponsor high-risk, high-payoff research designed to leverage leading edge technology to solve some of the most critical problems facing the Intelligence Community (IC)."[365] ARDA's research support is organized into various technology "thrusts" representing the most critical areas of development. Some of ARDA's research thrusts include Information Exploitation, Quantum Information Science, Global Infosystems Access, Novel Intelligence from Massive Data, and Advanced Information Assurance.

The Novel Intelligence from Massive Data (NIMD) program focuses on the development of data mining and analysis tools to be used in working with

[365] [https://rrc.mitre.org/cfp06.pdf].

massive data.[366] Novel intelligence refers to "actionable information not previously known." Massive data refers to data that has characteristics that are especially challenging to common data analysis tools and methods. These characteristics can include unusual volume, breadth (heterogeneity), and complexity. Data sets that are one petabyte (one quadrillion bytes) or larger are considered to be "massive." Smaller data sets that contain items in a wide variety of formats, or are very heterogeneous (i.e., unstructured text, spoken text, audio, video, graphs, diagrams, images, maps, equations, chemical formulas, tables, etc.) can also be considered "massive." According to ARDA's website (no longer available)[367] "some intelligence data sources grow at a rate of four petabytes per month now, and the rate of growth is increasing." With the continued proliferation of both the means and volume of electronic communications, it is expected that the need for more sophisticated tools will intensify. Whereas some observers once predicted that the NSA was in danger of becoming proverbially deaf due to the spreading use of encrypted communications, it appears that NSA may now be at greater risk of being "drowned" in information.

Data Mining Issues

As data mining initiatives continue to evolve, there are several issues Congress may decide to consider related to implementation and oversight. These issues include, but are not limited to, data quality, interoperability, mission creep, and privacy. As with other aspects of data mining, while technological capabilities are important, other factors also influence the success of a project's outcome.

Data Quality

Data quality is a multifaceted issue that represents one of the biggest challenges for data mining. Data quality refers to the accuracy and completeness of the data. Data quality can also be affected by the structure and consistency of the data being analyzed. The presence of duplicate records, the lack of data standards, the timeliness of updates, and human error can significantly impact the effectiveness of the more complex data mining techniques, which are sensitive to subtle differences that may exist in the data. To improve data quality, it is sometimes necessary to "clean" the data, which can involve the removal of duplicate records, normalizing the values used to represent information in the database (e.g., ensuring that "no" is represented as a 0 throughout the database, and not sometimes as a 0, sometimes as an N, etc.), accounting for missing data points, removing unneeded data fields, identifying anomalous data points (e.g., an

Dizard III, "NSA Searches for Novel Intel Answers in the Glass Box," Government Computer News, June 20, 2005, [http://www.gcn.com/24_15/news/ 36139-1.html].

[367] ARDA's website was previously available at [http://www.ic-arda.org].

individual whose age is shown as 142 years), and standardizing data formats (e.g., changing dates so they all include MM/DD/YYYY).

Interoperability

Related to data quality, is the issue of interoperability of different databases and data mining software. Interoperability refers to the ability of a computer system and/or data to work with other systems or data using common standards or processes. Interoperability is a critical part of the larger efforts to improve interagency collaboration and information sharing through e-government and homeland security initiatives. For data mining, interoperability of databases and software is important to enable the search and analysis of multiple databases simultaneously, and to help ensure the compatibility of data mining activities of different agencies. Data mining projects that are trying to take advantage of existing legacy databases or that are initiating first-time collaborative efforts with other agencies or levels of government (e.g., police departments in different states) may experience interoperability problems. Similarly, as agencies move forward with the creation of new databases and information sharing efforts, they will need to address interoperability issues during their planning stages to better ensure the effectiveness of their data mining projects.

Mission Creep

Mission creep is one of the leading risks of data mining cited by civil libertarians, and represents how control over one's information can be a tenuous proposition. Mission creep refers to the use of data for purposes other than that for which the data was originally collected. This can occur regardless of whether the data was provided voluntarily by the individual or was collected through other means.

Efforts to fight terrorism can, at times, take on an acute sense of urgency. This urgency can create pressure on both data holders and officials who access the data. To leave an available resource unused may appear to some as being negligent. Data holders may feel obligated to make any information available that could be used to prevent a future attack or track a known terrorist. Similarly, government officials responsible for ensuring the safety of others may be pressured to use and/or combine existing databases to identify potential threats. Unlike physical searches, or the detention of individuals, accessing information for purposes other than originally intended may appear to be a victimless or harmless exercise. However, such information use can lead to unintended outcomes and produce misleading results.

One of the primary reasons for misleading results is inaccurate data. All data collection efforts suffer accuracy concerns to some degree. Ensuring the accuracy of information can require costly protocols that may not be cost effective if the data is not of inherently high economic value. In well-managed data mining projects, the original data collecting organization is likely to be aware of the data's limitations and account for these limitations accordingly. However, such awareness may not be communicated or heeded when data is used for other

purposes. For example, the accuracy of information collected through a shopper's club card may suffer for a variety of reasons, including the lack of identity authentication when a card is issued, cashiers using their own cards for customers who do not have one, and/or customers who use multiple cards. [368] For the purposes of marketing to consumers, the impact of these inaccuracies is negligible to the individual. If a government agency were to use that information to target individuals based on food purchases associated with particular religious observances though, an outcome based on inaccurate information could be, at the least, a waste of resources by the government agency, and an unpleasant experience for the misidentified individual. As the March 2004 TAPAC report observes, the potential wide reuse of data suggests that concerns about mission creep can extend beyond privacy to the protection of civil rights in the event that information is used for "targeting an individual solely on the basis of religion or expression, or using information in a way that would violate the constitutional guarantee against self-incrimination."[369]

Privacy

As additional information sharing and data mining initiatives have been announced, increased attention has focused on the implications for privacy. Concerns about privacy focus both on actual projects proposed, as well as concerns about the potential for data mining applications to be expanded beyond their original purposes (mission creep). For example, some experts suggest that anti-terrorism data mining applications might also be useful for combating other types of crime as well.[370] So far there has been little consensus about how data mining should be carried out, with several competing points of view being debated. Some observers contend that tradeoffs may need to be made regarding privacy to ensure security. Other observers suggest that existing laws and regulations regarding privacy protections are adequate, and that these initiatives do not pose any threats to privacy.

Still other observers argue that not enough is known about how data mining projects will be carried out, and that greater oversight is needed. There is also some disagreement over how privacy concerns should be addressed. Some observers suggest that technical solutions are adequate. In contrast, some privacy advocates argue in favor of creating clearer policies and exercising stronger oversight. As data mining efforts move forward, Congress may consider a variety of questions including, the degree to which government agencies should use and

[370] Drew Clark, "Privacy Experts Differ on Merits of Passenger-Screening Program," Government Executive Magazine, November 21, 2003, [http://www.govexec.com/dailyfed/1103/112103td2.htm].

mix commercial data with government data, whether data sources are being used for purposes other than those for which they were originally designed, and the possible application of the Privacy Act to these initiatives.

Legislation in the 108th Congress

During the 108th Congress, a number of legislative proposals were introduced that would restrict data mining activities by some parts of the federal government, and/or increase the reporting requirements of such projects to Congress. For example, on January 16, 2003, Senator Feingold introduced S. 188 the Data-Mining Moratorium Act of 2003, which would have imposed a moratorium on the implementation of data mining under the Total Information Awareness program (now referred to as the Terrorism Information Awareness project) by the Department of Defense, as well as any similar program by the Department of Homeland Security. S. 188 was referred to the Committee on the Judiciary.

On January 23, 2003, Senator Wyden introduced S.Amdt. 59, an amendment to H.J.Res. 2, the Omnibus Appropriations Act for Fiscal Year 2003. As passed in its final form as part of the omnibus spending bill (P.L. 108-7) on February 13, 2003, and signed by the President on February 20, 2003, the amendment requires the Director of Central Intelligence, the Secretary of Defense, and the Attorney General to submit a joint report to Congress within 90 days providing details about the TIA program.[371] Some of the information required includes spending schedules, likely effectiveness of the program, likely impact on privacy and civil liberties, and any laws and regulations that may need to be changed to fully deploy TIA. If the report was not submitted within 90 days, funding for the TIA program could have been discontinued.[372] Funding for TIA was later discontinued in Section 8131 of the FY2004 Department of Defense Appropriations Act (P.L. 108-87), signed into law on September 30, 2003.[373]

On March 13, 2003, Senator Wyden introduced an amendment to S. 165, the Air Cargo Security Act, requiring the Secretary of Homeland Security to submit a report to Congress within 90 days providing information about the impact of CAPPS II on privacy and civil liberties. The amendment was passed by the Committee on Commerce, Science, and Transportation, and the bill was forwarded for consideration by the full Senate (S.Rept. 108-38). In May 2003, S. 165 was passed by the Senate with the Wyden amendment included and was sent

[371] The report is available at [http://www.eff.org/Privacy/TIA/TIA-report.pdf].

[372] For more details regarding this amendment, see CRS Report RL31786, Total Information Awareness Programs: Funding, Composition, and Oversight Issues, by Amy Belasco.

[373] For further details regarding this provision, see CRS Report RL31805, Authorization and Appropriations for FY2004: Defense, by Amy Belasco and Stephen Daggett.

to the House where it was referred to the Committee on Transportation and Infrastructure.

Funding restrictions on CAPPS II were included in section 519 of the FY2004 Department of Homeland Security Appropriations Act (P.L. 108-90), signed into law October 1, 2003. This provision included restrictions on the "deployment or implementation, on other than a test basis, of the Computer-Assisted Passenger Prescreening System (CAPPSII)," pending the completion of a GAO report regarding the efficacy, accuracy, and security of CAPPS II, as well as the existence of a system of an appeals process for individuals identified as a potential threat by the system.[374] In its report delivered to Congress in February 2004, GAO reported that "As of January 1, 2004, TSA has not fully addressed seven of the eight CAPPS II issues identified by the Congress as key areas of interest."[375] The one issue GAO determined that TSA had addressed is the establishment of an internal oversight board. GAO attributed the incomplete progress on these issues partly to the "early stage of the system's development."[376]

On March 25, 2003, the House Committee on Government Reform Subcommittee on Technology, Information Policy, Intergovernmental Relations, and the Census held a hearing on the current and future possibilities of data mining. The witnesses, drawn from federal and state government, industry, and academia, highlighted a number of perceived strengths and weaknesses of data mining, as well as the still-evolving nature of the technology and practices behind data mining.[377] While data mining was alternatively described by some witnesses as a process, and by other witnesses as a productivity tool, there appeared to be a general consensus that the challenges facing the future development and success of government data mining applications were related less to technological concerns than to other issues such as data integrity, security, and privacy. On May 6 and May 20, 2003 the Subcommittee also held hearings on the potential

---

[374] Section 519 of P.L. 108-90 specifically identifies eight issues that TSA must address before it can spend funds to deploy or implement CAPPS II on other than a test basis. These include 1. establishing a system of due process for passengers to correct erroneous information; 2. assess the accuracy of the databases being used; 3. stress test the system and demonstrate the efficiency and accuracy of the search tools; 4. establish and internal oversight board; 5. install operational safeguards to prevent abuse; 6. install security measures to protect against unauthorized access by hackers or other intruders; 7. establish policies for effective oversight of system use and operation; and 8. address any privacy concerns related to the system.

[375] General Accounting Office, Aviation Security: Computer-Assisted Passenger Prescreening System Faces Significant Implementation Challenges, GAO-04-385, February 2004, p. 4.

[377] Witnesses testifying at the hearing included Florida State Senator Paula Dockery, Dr. Jen Que Louie representing Nautilus Systems, Inc., Mark Forman representing OMB, Gregory Kutz representing GAO, and Jeffrey Rosen, an Associate Professor at George Washington University Law School.

opportunities and challenges for using factual data analysis for national security purposes.

On July 29, 2003, Senator Wyden introduced S. 1484, The Citizens' Protection in Federal Databases Act, which was referred to the Committee on the Judiciary. Among its provisions, S. 1484 would have required the Attorney General, the Secretary of Defense, the Secretary of Homeland Security, the Secretary of the Treasury, the Director of Central Intelligence, and the Director of the Federal Bureau of Investigation to submit to Congress a report containing information regarding the purposes, type of data, costs, contract durations, research methodologies, and other details before obligating or spending any funds on commercially available databases. S. 1484 would also have set restrictions on the conduct of searches or analysis of databases "based solely on a hypothetical scenario or hypothetical supposition of who may commit a crime or pose a threat to national security."

On July 31, 2003, Senator Feingold introduced S. 1544, the Data-Mining Reporting Act of 2003, which was referred to the Committee on the Judiciary. Among its provisions, S. 1544 would have required any department or agency engaged in data mining to submit a public report to Congress regarding these activities. These reports would have been required to include a variety of details about the data mining project, including a description of the technology and data to be used, a discussion of how the technology will be used and when it will be deployed, an assessment of the expected efficacy of the data mining project, a privacy impact assessment, an analysis of the relevant laws and regulations that would govern the project, and a discussion of procedures for informing individuals their personal information will be used and allowing them to opt out, or an explanation of why such procedures are not in place.

Also on July 31, 2003, Senator Murkowski introduced S. 1552, the Protecting the Rights of Individuals Act, which was referred to the Committee on the Judiciary. Among its provisions, section 7 of S. 1552 would have imposed a moratorium on data mining by any federal department or agency "except pursuant to a law specifically authorizing such data-mining program or activity by such department or agency." It also would have required

> *The head of each department or agency of the Federal Government that engages or plans to engage in any activities relating to the development or use of a data-mining program or activity shall submit to Congress, and make available to the public, a report on such activities.*

On May 5, 2004, Representative McDermott introduced H.R. 4290, the Data-Mining Reporting Act of 2004, which was referred to the House Committee on Government Reform Subcommittee on Technology, Information Policy, Intergovernmental Relations, and the Census. H.R. 4290 would have required

> *each department or agency of the Federal Government that is engaged in any activity or use or develop data-mining technology shall each submit a public report to Congress on all such activities of the department or agency under the jurisdiction of that official.*

A similar provision was included in H.R. 4591/S. 2528, the Civil Liberties Restoration Act of 2004. S. 2528 was introduced by Senator Kennedy on June 16, 2004 and referred to the Committee on the Judiciary. H.R. 4591 was introduced by Representative Berman on June 16, 2004 and referred to the Committee on the Judiciary and the Permanent Select Committee on Intelligence.

Legislation in the 109th Congress

Data mining continued to be a subject of interest to Congress in the 109th Congress. On April 6, 2005, H.R. 1502, the Civil Liberties Restoration Act of 2005 was introduced by Representative Berman and was referred to the Committee on the Judiciary[378], the Permanent Select Committee on Intelligence, and the Committee on Homeland Security. Section 402, Data-Mining Report, of H.R. 1502 would have required that

> *The Head of each department or agency of the Federal Government that is engaged in any activity to use or develop data-mining technology shall each submit a public report to Congress on all such activities of the department or agency under the jurisdiction of that official.*

As part of their content, these reports would have been required to provide, for each data mining activity covered by H.R. 1502, information regarding the technology and data being used; information on how the technology would be used and the target dates for deployment; an assessment of the likely efficacy of the data mining technology; an assessment of the likely impact of the activity on privacy and civil liberties; a list and analysis of the laws and regulations that would apply to the data mining activity and whether these laws and regulations would need to be modified to allow the data mining activity to be implemented; information on the policies, procedures, and guidelines that would be developed and applied to protect the privacy and due process rights of individuals, and ensure that only accurate information is collected and used; and information on how individuals whose information is being used in the data mining activity will be notified of the use of their information, and, if applicable, what options will be available for individual to opt-out of the activity. These reports would have been due to Congress no later than 90 days after the enactment of H.R. 1502, and would have been required to be updated annually to include "any new data-mining technologies."

---

[378] H.R. 1502 was referred to the Subcommittee on Immigration, Border Security, and Claims on May 10, 2005, and later discharged by the subcommittee on July 8, 2005.

On June 6, 2005, S. 1169, the Federal Agency Data-Mining Reporting Act of 2005 was introduced by Senator Feingold, and was referred to the Senate Committee on the Judiciary. Among its provisions, S. 1169 would have required any department or agency engaged in data mining to submit a public report to Congress regarding these activities. These reports would have been required to include a variety of details about the data mining project, including a description of the technology and data to be used, a discussion of the plans and goals for using the technology when it will be deployed, an assessment of the expected efficacy of the data mining project, a privacy impact assessment, an analysis of the relevant laws and regulations that would govern the project, and a discussion of procedures for informing individuals their personal information will be used and allowing them to opt out, or an explanation of why such procedures are not in place.

On July 11, 2005, H.R. 3199, the USA PATRIOT Improvement and Reauthorization Act of 2005 was introduced. On July 21, 2005, Representative Berman introduced H.Amdt. 497 to H.R. 3199, which would required the Attorney General to submit a report to Congress on the data mining initiatives of the Department of Justice and other departments and agencies as well. The provision stated, in part;

> *The Attorney General shall collect the information described in paragraph (2) from the head of each department or agency of the Federal Government that is engaged in any activity to use or develop data-mining technology and shall report to Congress on all such activities.*

H.Amdt. 497 was passed on July 21, 2005 by a 261-165 recorded vote and appeared as Section 132 of H.R. 3199. Also on this day, H.R. 3199 was passed by the House and sent to the Senate. On July 29, 2005, the Senate passed an amended version of H.R. 3199. The Senate version did not contain a comparable provision on data mining. The bill went to a House-Senate conference in November 2005. Section 126 of the conference report (H.Rept. 109-333) filed on December 8, 2005 included a provision for a report on data mining by the Department of Justice alone, rather than other departments and agencies as well. The provision stated, in part:

> *Not later than one year after the date of enactment of this Act, the Attorney General shall submit to Congress a report on any initiative of the Department of Justice that uses or is intended to develop pattern-based data mining technology…*

The bill was signed into law as P.L. 109-177 on March 9, 2006.

On October 6, 2005, H.R. 4009, the Department of Homeland Security Reform Act of 2005, was introduced by Representative Thompson, and was referred to

the Committee on Homeland Security, the Permanent Select Committee on Intelligence, and the Committee on Transportation and Infrastructure. Section 203(c)(16) would have directed the Chief Intelligence Officer, as established in Section 203(a):

> *To establish and utilize, in conjunction with the Chief Information Officer of the Department, a secure communications and information technology infrastructure, including data-mining and other advanced analytical tools, in order to access, receive, and analyze data and information in furtherance of the responsibilities under this section, and to disseminate information acquired and analyzed by the Department, as appropriate.*

On December 6, 2005, H.R. 4437, the Border Protection, Antiterrorism, and Illegal Immigration Control Act of 2005 was introduced by Representative Sensenbrenner and was referred to the Committee on the Judiciary and the Committee on Homeland Security. On December 8, 2005, the Committee on the Judiciary held a markup session and ordered an amended version of H.R. 4437 to be reported. On December 13, 2005, the Committee on Homeland Security discharged the bill, which was subsequently referred to and discharged from the Committee on Education and the Workforce and the Committee on Ways and Means. On December 16, 2005, H.R. 4437 was passed by the House and sent to the Senate, where it was referred to the Committee on the Judiciary.

Section 1305, Authority of the Office of Security and Investigations to Detect and Investigate Immigration Benefits Fraud, of H.R. 4437 would have granted the Office of Security and Investigations of the United States Citizenship and Immigration Services at the Department of Homeland Security the authority to:

> *(1) to conduct fraud detection operations, including data mining and analysis;*
> *(2) to investigate any criminal or noncriminal allegations of violations of the Immigration and Nationality Act or title 18, United States Code, that Immigration and Customs Enforcement declines to investigate;*
> *(3) to turn over to a United States Attorney for prosecution evidence that tends to establish such violations; and*
> *(4) to engage in information sharing, partnerships, and other collaborative efforts with any —*
> *(A) Federal, State, or local law enforcement entity;*
> *(B) foreign partners; or*
> *(C) entity within the intelligence community (as defined in section 3(4) of the National Security Act of 1947 (50 U.S.C. 401a(4)).*

On July 12, 2006, Senator Feingold introduced S.Amdt 4562 to H.R. 5441, the Homeland Security Department FY2007 appropriations bill. S.Amdt. 4562 is substantively similar to S. 1169, although only applies to departments and

agencies within the Department of Homeland Security, rather than the entire federal government. S.Amdt. 4562 was agreed to by unanimous consent and was included in the Senate-passed version of H.R. 5441 as Section 549. According to the conference report (H.Rept. 109-699) Section 549 was deleted from the final bill that was passed into law (P.L. 109-295).[379] However, the conference report also included a statement on data mining by the conference managers expressing concern about the development and use of data mining technology and;

> *"direct[s] the DHS Privacy Officer to submit a report consistent with the terms and conditions listed in section 549 of the Senate bill. The conferees expect the report to include information on how it has implemented the recommendation laid out in the Department's data mining report received July 18, 2006."*[380]

Legislation and Hearings in the 110th Congress

Data mining has been the subject of some of the earliest proposed bills and hearings of the 110th Congress. On January 10, 2007, S. 236, the Federal Agency Data-Mining Reporting Act of 2007 was introduced by Senator Feingold and Senator Sununu, and was referred to the Senate Committee on the Judiciary. Among its provisions, S. 236 would require any department or agency engaged in data mining to submit a public report to Congress regarding these activities. These reports would be required to include a variety of details about the data mining project, including a description of the technology and data to be used, a discussion of the plans and goals for using the technology when it will be deployed, an assessment of the expected efficacy of the data mining project, a privacy impact assessment, an analysis of the relevant laws and regulations that would govern the project, and a discussion of procedures for informing individuals their personal information will be used and allowing them to opt out, or an explanation of why such procedures are not in place.[381]

Also in the Senate, the Committee on the Judiciary held a hearing on January 10, 2007 entitled "Balancing Privacy and Security: The Privacy Implications of Government Data Mining Programs." The witnesses included a former Member of Congress and several individuals from research centers and think tanks. Collectively, they highlighted a number of perceived strengths and weaknesses of data mining, as well as the continually evolving nature of the technology and

---

[379] See p. 180.

[380] Ibid., p. 117. The DHS Privacy Office delivered the requested report to Congress on July 6, 2007. A copy of the report is available at [http://www.dhs.gov/xlibrary/assets/privacy/privacy_rpt_datamining_2007.pdf].

[381] On April 12, 2007, the Committee voted to approve a revised version of S. 236, which was sent to the full Senate. A description of this version of the bill is discussed later in the chronology of this section of the report.

practices behind data mining.[382] The witnesses also addressed the inherent challenge of simultaneously protecting the nation from terrorism while also protecting civil liberties.

On February 28, 2007, Senator Reid introduced S.Amdt. 275 to S. 4 the Improving America's Security by Implementing Unfinished Recommendations of the 9/11 Commission Act of 2007. Section 504 of this amendment, entitled the Federal Agency Data Mining Report Act of 2007, was identical to S. 236, as introduced. During the Senate floor debates held on S. 4 in early March 2007, several amendments to the data mining section of S. 4 were introduced.

On March 6, 2007, Senator Kyl introduced S.Amdt. 357 to S.Amdt. 275 of S. 4. The purpose of S.Amdt. 357 was described as "to amend the data-mining reporting requirement to protect existing patents, trade secrets, and confidential business processes, and to adopt a narrower definition of data mining in order to exclude routine computer searches."[383] Later on March 6, 2007, Senator Kyl offered a modification to S.Amdt. 357 that used definitions of data mining and database very similar to those that appear in P.L. 109-177 the USA PATRIOT Improvement and Reauthorization Act of 2005, and that slightly changed the original language of S.Amdt. 357 regarding protection of patents and other proprietary business information.

On March 8, 2007, Senator Feingold introduced S.Amdt. 429 to S.Amdt. 275. S.Amdt. 429 is very similar to S. 236, as introduced, with a few differences. One difference is that the initial description used to partially define data mining is changed to include "a program involving pattern-based queries, searches, or other analyses of 1 or more electronic databases...." Another difference is that the data mining reporting requirement excludes data mining initiatives that are solely for "the detection of fraud, waste, or abuse in a Government agency or program; or the security of a Government computer system."[384] Another difference is the inclusion of language requiring that the data mining reports be "produced in coordination with the privacy officer of that department or agency."[385] S.Amdt. 429 also includes language detailing the types of information that should be included in the classified annexes of the data mining reports (i.e.,

---

[382] Witnesses testifying at the hearing included former Representative Robert Barr of Liberty Strategies, LLC; James Carafano of the Heritage Foundation; Jim Harper of the CATO Institute; Leslie Harris of the Center for Democracy and Technology; and Kim Taipale of the Center for Advanced Studies in Science and Technology.

[383] Congressional Record, vol. 153, March 6, 2007, p. S2670.

[384] Congressional Record, vol. 153, March 8, 2007, p. S2949.

[385] Ibid.

classified information, law enforcement sensitive information, proprietary business information, and trade secrets), and states that such classified annexes should not be made available to the public.

Later on March 8, 2007, Senator Feingold introduced S.Amdt. 441 to S.Amdt.

357. S.Amdt. 441 is substantively the same as S.Amdt. 429, but with a technical modification.

On March 13, 2007, S.Amdt. 441 was agreed to by unanimous consent, and S.Amdt. 357, as modified, and as amended by S.Amdt. 441 was agreed to by unanimous consent. Also on March 13, 2007, S. 4 passed the Senate by a 60-38 vote. The data mining provision appears as Section 604 in S. 4. As originally passed by the House in January 2007, the House version of S. 4, H.R. 1, did not contain a comparable provision on data mining.

On March 21, 2007, the House Committee on Appropriations Subcommittee on Homeland Security held a hearing entitled "Privacy and Civil Rights in Homeland Security." The witnesses included Hugo Teufel III, the Chief Privacy Officer at DHS; Daniel Sutherland of the Office of Civil Rights and Civil Liberties at DHS; and the Government Accountability Office (GAO). Collectively they addressed some of the data mining activities being carried out by DHS, in particular the use of the Analysis, Dissemination, Visualization, Insight, and Semantic Enhancement (ADVISE) data mining tool, and the precautions taken by DHS to protect citizens' privacy and civil liberties.

On April 12, 2007, the Senate Committee on the Judiciary voted to approve a revised version of S. 236, the Data Mining Act of 2007. On June 4, 2007, the Committee reported the bill. With one exception, this revised version of S. 236 is substantively identical to data mining provision passed as Section 604 in S. 4, and later as Section 804 of P.L. 110-53 in July 2007 (discussed below). As passed by the Committee, S. 236 includes a provision regarding penalties for the unauthorized disclosure of classified information contained in the annex of any reports submitted to Congress.

On June 15, 2007, the House of Representatives passed H.R. 2638, concerning FY2008 appropriations for the Department of Homeland Security. The accompanying House Report (H.Rept. 110-181) includes language prohibiting funding for the Analysis, Dissemination, Visualization, Insight, and Semantic Enhancement (ADVISE) data mining program until DHS has completed a privacy impact assessment for the program. ADVISE is alternatively described as a technology framework, or a tool, for analyzing and visually representing large amounts of data. ADVISE is being developed by the Directorate for Science and Technology at DHS. The accompanying Senate Report (S.Rept. 110-84) for S. 1644, concerning FY2008 DHS appropriations, also includes similar language recommending that no funding be allocated for ADVISE until a program plan and privacy impact assessment is completed.

On July 9, 2007, the Senate took up H.R. 1, struck all language following the enacting clause, substituted the language of S. 4 as amended, and passed the bill by unanimous consent. Differences between H.R. 1 and S. 4 were resolved in conference later that month. The data mining provision that appeared as Section 604 in S. 4 was retained as Section 804 in the agreed upon bill. On July 26, 2007, the Senate agreed to the conference report (H.Rept. 110-259) in a 85-8 vote. On July 27, 2007, the House agreed to the conference report in a 371-40 vote. On August 3, 2007, the bill was signed into law by the President as P.L. 110-53.

Order Code RL31786
Report for Congress
Updated March 21, 2003

Amy Belasco
Specialist in National Defense
Foreign Affairs, Defense, and Trade Division

Summary

Late last year controversy erupted about a Department of Defense (DOD) R&D effort called Total Information Awareness (TIA) under an office headed by retired Admiral John D. Poindexter within the Defense Advanced Research Projects Agency (DARPA). By integrating various new tools designed to detect, anticipate, train for, and provide warnings about potential terrorist attacks, DARPA hopes to develop a prototype Total Information Awareness system. This system would integrate a number of ongoing R&D efforts, referred to in this paper as Total Information Awareness programs. While concern has centered primarily on privacy issues, accounts of the program's funding have also differed. This report covers the funding, composition, oversight, and technical feasibility of TIA programs. The privacy implications are addressed in CRS Report RL31730, Privacy: Total Information Awareness Programs and Related Information Access, Collection, and Protection Laws, by Gina Marie Stevens.

In a press interview, Under Secretary of Defense for Acquisition, Technology and Logistics, Edward C. "Pete" Aldridge, stated that the Total Information Awareness project is funded at $10 million in FY2003 and $20 million in FY2004. Other reports indicated higher funding levels of over $100 million in FY2003 and over $200 million for the three-year period, FY2001 - FY2003.

Different accounts of funding levels reflect the fact that DARPA is funding both an integrative effort called the TIA system, as well as 16 individual R&D efforts or TIA programs that could be combined to create that system. In FY2003, DARPA is dedicating $10 million to integrate various R&D efforts into a prototype TIA system, and $137.5 million for the various R&D programs that could make up that system and that are managed by the Information Awareness Office (IAO) headed by Poindexter. Funding for these programs total $137.5 million in

FY2003 and $317.0 million for FY2001-FY2003. DOD is requesting $169.2 million for TIA programs in FY2004 and $170.3 in FY2005, and $20 million in FY2004 and $24.5 million in FY2005 for the TIA system integration. These TIA programs are ongoing.

In response to concerns about TIA programs, Congress included special oversight provisions – known as the Wyden amendment – in the FY2003 Consolidated Appropriations Resolution (P.L. 108-7) requiring that the Secretary of Defense, the Director of Central Intelligence and the Attorney General submit a detailed joint report on TIA programs within ninety days or face a cutoff in funding. Senator Feingold, Senator Grassley and other Members also proposed restrictions on data mining in the DOD and the new Department of Homeland Security.

In light of the report required by P.L. 108-7, hearings on TIA programs are likely in the 108th Congress. In addition to privacy concerns, Congress may also address several oversight issues for TIA programs including monitoring collaboration between DARPA and potential users in the law enforcement and intelligence communities and assessing the technical feasibility of the project. This report will be updated as necessary.

Current Controversy over Total Information Awareness Programs

Established in January 2002 under retired Admiral John Poindexter, USN, the mission of the Information Awareness Office (IAO) in the Defense Advanced Research Project Agency (DARPA) is to develop new tools to detect, anticipate, train for, and provide warnings about potential terrorist attacks.[386] Within three to five years, DARPA envisions that these tools would be integrated into a prototype Total Information Awareness (TIA) system to provide better intelligence support to senior government officials. If proven effective, Under Secretary of Defense for Acquisition, Technology and Logistics Edward C. "Pete" Aldridge has suggested that the TIA technology prototypes will be turned over to "intelligence, counterintelligence and law enforcement communities as a tool to help them in their battle against domestic terrorism."[387]

In a press conference on November 20, 2002, Under Secretary Aldridge stated that funding for the Total Information Awareness System (TIA) is $10 million in

---

[386] The larger issue of the types of intelligence tools needed to combat terrorism is extensively discussed in Report of the Markle Foundation Task Force, Protecting America's Freedom in the Information Age, October 2002; see especially, pp. 25ff, 37ff, 53ff, and 81ff.

[387] Under Secretary of Defense Aldridge as quoted in Defense Department Briefing Transcript, November 20, 2002, p. 10; see [http://www. defenselink.mil].

FY2003.[388] On February 7, 2003, he reiterated that funding for the TIA project is $10 million in FY2003 and $20 million in FY2004. The Electronic Privacy Information Center (EPIC), a non-profit organization specializing in privacy issues, calculated that TIA-related programs totaled $112 million in FY2003 and $240 million for the three-year period, FY2001-FY2003.[389] Press reports also cited funding of over $200 million over three years.[390]

These alternative funding levels reflect the difference between the $10 million in funding for the R&D specifically labeled the "Total Information Awareness System" that would integrate various R&D technology efforts, and the $137.5 million in funding for various R&D efforts managed by the Information Awareness Office that could become part of that system. Funding for TIA programs that are managed by the Information Awareness Office includes R&D efforts to develop technologies to improve data mining so as to allow DOD to sift through and analyze patterns in vast amounts of information, to translate large volumes of foreign language materials electronically, to strengthen DOD's information infrastructure, and to devise new tools for high-level decision makers trying to anticipate, train, and respond to terrorist attacks. (See Appendix below for descriptions of individual projects).[391]

To proponents, TIA R&D holds out the promise of developing a sophisticated system that would develop new technologies to find patterns from multiple sources of information in order to give decision makers new tools to use to detect, pre-empt and react to potential terrorist attacks. To opponents, TIA has the potential to violate the privacy of individuals by giving the government access to vast amounts of information about individuals as well as possibly mis-identifying individuals as potential terrorists.

Reflecting both these viewpoints, P.L. 108-7 (H.J.Res. 2) the FY2003 Consolidated Appropriations Resolution requires that the Secretary of Defense, the Director of Central Intelligence (DCI), and the Attorney General submit to Congress a detailed report on TIA by May 21, 2003 or face a cutoff in funding (see Restrictions on TIA in FY2003 Consolidated Appropriations Resolution later in

---

[391] See description of TIA in DARPA, RDT&E Descriptive Summaries for FY2003 (or the R-2), available at the DARPA web site: [http://www.dtic.mil/comptroller/fy2003budget/budget_justification/pdfs/rdtande/darpa_vol1.pdf].

this report for more details). In the meantime, TIA programs are continuing.[392] DARPA has, for example, obligated $7.4 million of the $10 million available in FY2003 for TIA system integration.[393]

On March 13, 2003, Paul McHale, the new Assistant Secretary of Defense for Homeland Security, testified that although he considered it appropriate for DARPA to develop TIA technologies, once completed, DOD did not anticipate using the technology because of the desire that " this kind of intrusive but perhaps essential capability" be operated by civilian rather than military personnel.[394] Instead, he anticipated that the TIA system would be transferred to civilian law enforcement agencies and be subject to the judicial and congressional oversight.[395]

FY2001-FY2003 Funding Levels

According to DARPA, technology developed in some or all of the sixteen R&D efforts managed by the Information Awareness Office may be integrated into the TIA system.[396] DARPA's FY2003 request for the R&D efforts managed by the Information Awareness Office totaled $137.5 million in FY2003 (see Table 1 below), including $10 million for the integrative efforts specifically labeled the Total Information Awareness System, a new start in FY2003.

Technology Currently Linked to the TIA System

DARPA's FY2003 budget materials state that TIA will integrate technology and components from at least 8 of the 16 R&D efforts (including the integration itself) that are managed by the Information Awareness Office.[397] According to DARPA, TIA is "the assured transition of a system-level prototype that integrates technology and components developed in other DARPA programs including [italics added] Genoa and Genoa II ... TIDES ..., Genisys, EELD, WAE, HID, and

---

[392] Press reports indicating that TIA programs have been terminated are inaccurate.

[393] Information provided to CRS by DARPA, February 2003.

[394] Testimony of Paul McHale before the Subcommittee on Special Oversight Panel on Terrorism, Unconventional Threats and Capabilities, House Armed Services Committee, Hearing on Force Protection, March 13, 2003.

[395] Ibid.

[396] See table and appendix for how R&D linked to TIA is shown in DARPA's budget justification materials. DARPA provided CRS with the list of 16 R&D efforts that are managed by the Information Awareness Office.

[397] Eight counts Genoa and Genoa II as one project, and includes TIA integration as one of the components.

Bio-Surveillance ..."[398] (See Table 2 and the Appendix for funding and description of these R&D efforts).

Funding for these eight R&D efforts totals $110.6 million in FY2003, $83.8 million in FY2002, and $65.0 million in FY2001 (see Table 1). Three follow-on machine translation efforts under the Information Awareness Office will probably also be incorporated into the TIA system.

Information Awareness Office-Managed R&D

According to DARPA, the TIA system may also exploit the results of other R&D efforts that are under the Information Awareness office, other DARPA efforts, or R&D conducted outside of DARPA.[399] Several DARPA R&D efforts under other offices appear to have similar purposes to those specifically linked to TIA.[400] DARPA also hopes to exploit commercial data mining technology and R&D developed by other agencies like the National Security Agency. According to the Director of DARPA, all funding managed by the Information Awareness Office is considered to be Total Information Awareness programs.[401]

Funding for projects managed by the Information Awareness Office totals $137.5 million in FY2003, $99.5 million in FY2002, and $80 million in FY2001. Over the three-year period, FY2001- FY2003, funding totals $317.0 million. The increase in FY2003 reflects several new starts in FY2003 for Genisys, a comprehensive data mining effort, MIDGET, a system designed to prevent contamination of open databases, Rapid Analytic Wargaming, a tool for decision makers, and the TIA integration effort (see Table 2 below and Appendix).

Although the TIA system was first proposed as an integrated entity in the FY2003 budget shortly after establishment of the Information Awareness Office, some of

---

[398] See description of TIA in DARPA, RDT&E Descriptive Summaries for FY2003; see [http://www.dtic.mil/comptroller/fy2003budget/budget_justification/pdfs/rdtande/darpa_vol1.pdf].

[399] See Briefing by John Poindexter, Director, Information Awareness Office, to Congressional Authorizing Committees Staff, February 26, 2002. For example, DARPA spokesman suggested that TIDES system could be combined with OASIS, a system designed to protect DOD's information systems from cyber attack; see 23rd DARPA System and Technology Symposium July 29-August 2, 2002 on web site shown below. [http://www.darpa.mil/DARPATech2002/presentation.html].

[400] For example, other DARPA offices manage Software for Situational Analysis and Rapid Knowledge Foundation, two programs designed to find ways to exploit multiple data bases, in this case to identify biowarfare threats, just as Genisys and EELD, two TIA-linked efforts, analyze and mine data to identify potential terrorists.

[401] Statement during briefing to congressional staff by Dr. Tony Tether, Director of DARPA, "DARPA's Information Technology Initiative on Countering Terrorism, January 27, 2003. on January 27, 2003.

the R&D efforts that could become part of that system have been underway for a number of years. In fact, several of the R& D efforts, e.g. Project Genoa and machine translation of languages, first received funds in 1996 and 1997 respectively. For comparative purposes, Table 1 above and the more detailed Table 2 below show funding from FY2001 through FY2003 for all the elements now managed by the Information Awareness Office that could become part of the Total Information Awareness system.

Authorization and Appropriation of DOD RDT&E Programs

Funding for DARPA, as for the Research, Development, Test & Evaluation (RDT&E) programs of the services, is authorized and appropriated annually at the account level. In the case of DARPA, funding is included within the RDT&E, Defensewide account.[402] The TIA system, like other R&D efforts, is not specifically identified in statutory language in the FY2003 DOD authorization or appropriation acts.

Congressional intent about the funding levels for individual R&D efforts, however, may be included in committee reports, and is considered binding. The FY2003 DOD authorization and appropriation conference reports did not include any specific language about the TIA system, and the House and Senate appropriators voiced different views about various Total Information Awareness components.[403]

FY2001-FY2003 Funding for Individual R&D Efforts

Based on their primary purpose, the sixteen R&D efforts managed by the Information Awareness Office have been grouped into the four categories below. Table 2 below shows the funding for FY2001-FY2003 for the individual R&D efforts managed by the Information Awareness Office, including those R&D

---

[402] DARPA provides detailed descriptions of its programs and projects in budget justification materials submitted to Congress annually.

[403] The FY2003 appropriation conference report mentions only one TIA component, Genisys, suggesting that delays might justify lower funding; see Committee of Conference on Appropriations, Making Appropriations for the Department of Defense for the Fiscal Year Ending September 30, 2003, and for other purposes, H.Rept. 107-732, p. 305. The House and Senate versions of the FY2003 DOD Authorization Act made different recommendations about Program Element 0602301E, which funds some of the R&D managed by IAO. The House recommended no reductions and commended DARPA's overall information awareness programs, and the Senate recommended cuts in two R&D efforts under IAO, the Bio-Surveillance and Genisys R&D efforts. For House action, see House Armed Services Committee, Bob Stump National Defense Authorization Act for Fiscal Year 2003, May 3, 2002, H.Rept. 107-436, p. 239 and p. 241. For Senate action, see Senate Armed Services Committee, National Defense Authorization Act for Fiscal Year 2003, May 14, 2002, S.Rept. 107-151, p. 230.

efforts currently designated as part of the TIA system.[404] The Appendix briefly describes each R&D efforts.

New Data Mining and Analysis Technologies

These R&D efforts are designed to develop technologies that would be capable of sifting through large data bases, e.g. financial, communications, travel, to detect patterns associated with terrorists' activities. Total funding for these efforts was $29.2 million in FY2001, $38.2 million in FY2003 and $53.0 million in FY2003. Increases reflect initiation of the Bio-surveillance effort in FY2002 and the Genisys program in FY2003, both of which have raised privacy concerns.

New Machine Translation Technologies

These R&D efforts are intended to develop new software technology to translate large volumes of foreign language material, both written and oral, that would be collected from sources ranging from electronic sources to battlefield transmissions. At $36 million annually, funding for these efforts was stable between FY2001 and FY2003.

Protection of Critical Information Infrastructure

These R&D efforts are intended to protect DOD's information infrastructure and detect mis-information in open-source data that DOD may collect. Funding in this area grew from zero in FY2001 to $2.0 million in FY2002 with the initiation of DefenseNet, and jumped to $9.5 million with the new Mis-Information Detection and Generation effort.

Tools for High-Level Decision Makers

These R&D efforts are intended to develop tools, ranging from war-gaming simulations to collaborative reasoning processes, designed to help high-level decision makers anticipate, train for, pre-empt, or react to terrorist acts. Funding for these efforts increased from $14.4 million to $23.5 million in FY2002 with the doubling in the funding level for Wargaming the Asymmetric Environment. That funding jumped to $39.5 million with the initiation of Total Information Awareness System, the integrative effort.

---

[404] The 16 R&D efforts have been grouped into categories based on Department of Defense, FY2003 Budget Estimate, Research, Development, Test and Evaluation, Defense-wide, Volume 1, Defense Advanced Research projects Agency, and briefings by project managers to the 23rd DARPA System and Technology Symposium, July 29 - August 2, 2002; see [http://www.dtic.mil/comptroller/fy2003budget/budget_justification/pdfs/rdtande/darpa_vol1.pdf] and [http://www.darpa.mil/DARPATech2002/presentation.html]. Table 2 in this report shows how the various TIA components are included in program elements and projects in DARPA's FY2003 Budget Estimate.

Future Funding for Information Awareness Office Programs

For FY2004, DARPA is requesting $169.2 million for TIA programs and $170.3 million in FY2005.[405] If DARPA funds the R&D efforts that are managed by the Information Awareness Office comparably to funding in previous years, annual funding for TIA programs would average about $145 million annually.[406] The higher levels requested by DOD in the FY2004 budget suggest additional emphases by DARPA on this program. If past funding trends hold, DARPA could spend about $600 million for TIA-related R&D in the next four years, at which point the project is slated to be complete. This funding would be in addition to the $317 million spent from FY2001-FY2003.

Ongoing DARPA Collaboration

DARPA's goals for TIA programs call for sharing of information and analysis among DOD, the intelligence community, counter-intelligence, law enforcement and high-level policy and operational decision makers who could exploit both commercial data mining and analysis systems and new tools being developed in TIA programs. DARPA has also consulted with other DOD offices, such as Strategic Command.[407] Thus far, DARPA's collaboration with agencies outside DOD has been informal, including an unsigned memorandum of understanding developed with the FBI and meetings with Office of Homeland Security officials.[408]

Within DOD, DARPA has established a site at the Army's Information Dominance Center at Fort Belvoir to test potential elements of the TIA system, such as Genoa, by applying various tools in an operational environment using data about U.S. persons that is available to the intelligence community under existing laws and policies. That information includes 13 categories of

---

[405] DARPA, "Paper in response to questions from CRS," February 2003. DOD submits a two-year budget but Congress appropriates only one year of funding.

[406] DARPA's FY2003 budget justification material includes funding estimates for FY2004 -FY2007 at the project level. The average share of TIA-related R&D in the relevant projects for FY2001-FY2003 can be used to project funding levels for future years. For example, all funding in DARPA for Project ST-28, Asymmetric Threat in Program Element 0602301E, which is solely dedicated to TIA-related projects, can be included. In addition, about half of the funding in Project ST-11, Intelligent Systems and Software, and about 15% of the total for Project CCC-01, Command & Control Information Systems in PE 0603760E, may also be dedicated to TIA based on their shares in earlier years.

[407] Briefing by Dr. Tony Tether, Director, DARPA to Congressional staffers, "DARPA's Information Technology Initiative on Countering Terrorism, January 27, 2003.

[408] DARPA's Director, Dr. Tony Tether, stated that DARPA has a draft unsigned MOU with the FBI during the January 27, 2003 briefing to Congressional staffers.

information ranging from publicly available data to information about potential intelligence sources.[409]

DARPA is also testing other potential TIA components, like Genisys, by using fictitious data and mock "Red" or terrorist teams who create potential terrorist scenarios, as well as experimenting with linking its intelligence information with a variety of commercially available data mining systems as and systems developed by other government agencies like the National Security Agency.[410] Through these various experiments, DARPA hopes to test the utility of various data mining tools in identifying potential terrorists. In addition, DARPA has tried out some of its tools on information obtained from prisoners at the U.S. naval base at Guantanamo, Cuba.

Restrictions on TIA in FY2003 Consolidated Appropriations Resolution and Other Legislative Proposals

The FY2003 Consolidated Appropriations Resolution, P.L. 108-7 (H.J.Res. 2) includes a provision requiring that the Secretary of Defense, the Attorney General and the Director of Central Intelligence submit a joint, detailed report to Congress within ninety days or face a cutoff of funding. These restrictions on TIA were originally proposed by Senator Wyden. The required report on TIA programs is to:

- explain and show planned spending and schedules for each TIA project and activity;
- identify target dates for deployment of each component;
- evaluate the system's likely effectiveness in predicting terrorist activities;
- assess the likely impact of implementation on privacy and civil liberties;
- list laws and regulations governing collection efforts and identify any changes that would be needed with deployment of TIA; and

[409] DOD Regulation 5241.1-R, Procedure 2 lists 13 types of information about U.S. persons that DOD intelligence components are permitted to collect: information obtained with consent, that is publicly available, foreign intelligence, counterintelligence, sources that could assist intelligence, sources that could help identify or protect intelligence information, information about potential suspects threatening DOD security, personnel security investigations, communications security investigations, narcotics suspects, threats to safety, information available from general overhead reconnaissance, and collected for administrative purposes. See following web site for this and related regulations: [http://www.dtic.mil/whs/directives/corres/pdf/d52401_042588/d52401p.pdf].

[410] DOD Briefing Transcript, November 20, 2002; [http://www.defenselink.mil].

- include recommendations from the Attorney General about procedures, regulations or legislation that would eliminate or minimize adverse effects of any TIA programs on privacy and civil liberties.[411]

If no report is submitted, the funding cutoff can be avoided if the President certifies in writing to Congress that submitting the report is not practicable and that ending R& D on Total Information Awareness programs would endanger national security.

In addition, the provision requires that DOD notify Congress and receive specific appropriations and authorization for any deployment or transfer to another federal agency of any TIA component unless the component is to be used for overseas military operations or for foreign intelligence activities conducted against non-U.S. persons.[412]

Other Members of Congress have also signaled concerns about the TIA system. On January 16, 2003, Senator Feingold and others introduced S. 188, the Data Mining Moratorium Act of 2003 that would place restrictions on data mining activities in DOD and other agencies. In November 2002, Senator Grassley asked the DOD Inspector General to conduct an audit of TIA programs and asked Attorney General Ashcroft to provide by February 10, 2003 information about any involvement that the Department of Justice or the FBI have had with the TIA program. Senator Grassley has not yet received a reply.[413]

Issues for Congress

In addition to concerns raised by members of Congress and public interest groups about protecting the privacy of U.S. citizens, Congress may continue to address oversight issues, including:

- developing monitoring mechanisms for TIA programs; and
- assessing the technical feasibility of the program.

---

[411] See Division M, Section 111 of H.J.Res. 2 in Congressional Record, February 12, 2003, Part Two.

[412] The final version changes the original Wyden amendment (SA59) by extending the amount of time for submission of the report from sixty to ninety days and by clarifying that TIA components could be used in the U.S. if they were applied to non-U.S. persons. See Congressional Record, January 17, 2003, p. S1165 for original version of the Wyden amendment; compare to H.Rept. 108-10 on H.J.Res. 2, FY2003 Consolidated Appropriations Resolution in Congressional Record, February 12, 2003, Book Two. For the changes to the Wyden amendment, compare Division M, Section 111 (a) (1) and (c) (2) (B).

Monitoring TIA Programs

DARPA suggests that its role in developing prototype technologies for a TIA system is consistent with both its mission and history of sponsoring basic research for the mid and long-term that crosses service lines, and has multiple potential users, both inside and outside DOD. Previous examples of DARPA-developed technology with wide-ranging implications include stealth technology, Global Positioning System (GPS), and development of the Internet.[414] Based on recent testimony by Assistant Secretary of Defense Paul McHale emphasizing that DOD did not expect to use a TIA system but would turn the system over to civilian law enforcement agencies, TIA may not have a defense mission.[415] In describing plans for the TIA system, DARPA's Director, Dr. Tony Tether, cited collaboration with potential users in other federal agencies as a key part of their approach.[416]

Yet that collaboration – between the law enforcement community and the intelligence community, for example – has raised concerns among some observers about the roles of different agencies in gathering and sharing intelligence on potential threats from terrorists located in the United States. Those concerns reflect the experiences of the 1960s and 1970s when the FBI's counterintelligence program targeted civil rights and anti-war organizations as part of its efforts to pursue domestic terrorists.[417]

DARPA's efforts at collaboration reflect the fact that there are potentially many users of any tools that DARPA develops to predict terrorist threats. Currently, several agencies are or will be collecting or analyzing intelligence on potential terrorist threats, including the Counterterrorist Center under the CIA, the FBI's Joint Terrorist Task Forces, the new Department of Homeland Security. Another new user would be President Bush's proposed new Terrorist Threat Integration Center to be established May 1, 2003 with the mission of integrating all of U.S. government information and analysis about potential terrorist threats.[418] DARPA envisions working with potential users in the design of its tools for decision

makers, a practice, that could be difficult with restrictions on transfer of TIA components.

Sharing information among several users makes it more difficult to protect both intelligence sources and the privacy of individuals. For that reason, DARPA is sponsoring some research on developing 'fire walls' that would protect the sources of intelligence gatherers and prevent potential leakage among users. The distributed type of system that DARPA envisions could make those challenges greater. Early collaboration with potential users, for which DARPA has been praised, could also create problems with ensuring privacy and preventing misuse of intelligence sources and data on individuals, particularly if DARPA tries to exploit multiple data bases and to share data across agencies.[419]

Developing tools to ensure that the privacy of both sources and individuals is both a technical challenge and a policy issue. DARPA's Genisys program, a TIA component intended to integrate and query large data bases that has raised privacy concerns, also includes R&D on tools to ensure privacy. These tools may include "partitioning," which segregates transactions from the identity of the individual, filters to limit access to information and software agents that would delete unrelated information. According to a technical group tasked by DARPA to look into technological solutions to privacy issues, the Information Science and Technology panel (ISAT), there are significant difficulties in developing tools and protocols to protect privacy. This group called on DARPA to devote significant research resources in this area, and to establish a citizen advisory board to privacy policy standards.[420]

On February 7, 2003, the Department of Defense established two boards to monitor TIA programs.[421] Made up of high-level DOD officials, the internal TIA oversight board is tasked with setting policies and procedures for use of TIA tools within DOD and establishing protocols for transferring TIA capabilities outside of DOD to ensure consistency with privacy laws and policies. DOD also established an outside advisory board including experts in privacy issues, to advise the Secretary of Defense on policy and legal issues raised by using advanced technology to identify and predict terrorists threats.[422] In separate statements to

reporters, Senator Wyden and a spokesman for the American Civil Liberties Union each suggested that the new boards proposed by the Pentagon did not eliminate the need for Congressional oversight."[423]

P.L. 108-7, passed by both houses the following week, requires that DOD inform and get Congressional authorization for any transfers between agencies or for deployment of any TIA components. Under P.L. 108-7, testing outside of DOD may also be subject to rigorous oversight. In its current research, DARPA has been careful to use 'dummy' or fictitious data on individuals to test the effectiveness of various models for detecting potential terrorists, or to use only data that is currently legally permissible for intelligence gathering purposes (see discussion of ongoing DARPA collaboration above). If DARPA's technology efforts - in data mining or model development - are to be fully tested, however, real data, with all its flaws, may need to be used, and using real data may raise privacy issues. To decrease the potential for significant errors in the prototype models and systems under development, extensive testing efforts could be desirable.

Assessing Technical Feasibility

While some observers see great potential in DARPA's TIA proposals to exploit a wide range of data bases and develop models to identify terrorists, other observers are skeptical even models with sophisticated algorithms could pick terrorists out from large data bases, the proverbial problem of finding a needle in a haystack. DARPA's description suggests that the TIA system will be developed using a variety of data mining techniques coupled with models developed by analysts. Although there does not appear to be any simple definition, data mining has been defined as exploiting a variety of tools to extract predictive information from large data bases.[424]

Several major technical problems are inherent in data mining and model development that would need to be solved to develop an effective TIA system including:

- identifying and getting access to appropriate data bases;
- cleaning up "dirty" or inaccurate data in data bases;
- integrating disparate data bases;
- developing models or algorithms to identify likely terrorists;

- mis-identifying suspects because of large numbers of false leads; and
- dealing with timing and cost dilemmas.

Data Base Problems

Getting access, 'cleaning up,' and integrating large data bases may pose significant challenges in developing a TIA system. While DARPA is currently looking at links between military intelligence data and other sources at its Army testing site, there could be complications in linking to other data bases and ensuring that only permissible data is included.[425] In addition, any data base includes a significant number of errors – a problem routinely discussed by data mining experts – and it is not clear that there are adequate methods for catching errors. Linking large and disparate data bases is not only a challenging task in itself but could compound the number of errors.

Searching large data bases with large numbers of errors could both reduce the likelihood that terrorists would be identified and magnify the possibility that individuals who are not terrorists would be tagged. Erroneous data may be included either inadvertently by those entering the data or intentionally by "identity threat" where individuals deliberately impersonate others, worrisome problems to technical and privacy experts alike. The quality of the data could be diluted further if disparate data bases are linked.

Developing Ways To Identify Terrorists

DARPA plans to use both quantitative and qualitative data mining techniques to develop tools to identify terrorists. Data mining techniques are currently widely used for commercial purposes, ranging from targeted marketing to detecting credit card fraud, as well as for law-enforcement (e.g., to catch drug smugglers). In these cases, however, analysts and statisticians develop, test and re-test algorithms or quantitative relationships in order to hone formulas and improve their accuracy in detecting patterns. In the case of credit card fraud, for example, statistical algorithms or pattern identifying techniques can be refined with follow-up checks of billing records.

According to DARPA's descriptions, TIA components would develop technologies using both statistically-based algorithms to detect patterns in multiple data sources from a wide range of sources – financial, telephonic, foreign messages, intelligence traffic – and models of terrorist behavior based on analysis of historical experiences and scenarios developed by analysts. DARPA anticipates that by speculating, analysts will develop scenarios of particular terrorist attacks and then back into the types of activities that would be necessary to carry out those attacks. Some observers have suggested that it could be difficult to

---

[425] Letter from Barbara Simons, Ph.D., and Eugene H. Spafford, Ph.D, Co-Chairs, U.S. Association for Computing Machinery to Senators John Warner and Carl Levin, Senate Armed Services Committee, January 23, 2003. See [http://www.acm.org/usacm].

anticipate terrorist acts, and our success in anticipating previous terrorist attacks has been limited. With the enormous increases in the speed of processing information and the proliferation of data mining techniques, DARPA sees new opportunities for exploiting a variety of information sources using quantitative techniques like data mining.

Technology experts and others, however, have questioned whether the problem of detecting potential terrorists is susceptible to the data mining techniques routinely done by commercial companies in light of the difficulty in predicting terrorist behavior. The problem is made all the more difficult by the likelihood that the number of Al Qaeda members in the U.S. is small; a widely-quoted FBI estimate of 5,000 was later dismissed as too high, a small number compared to the large number of transactions that are analyzed in commercial data mining applications.[426]

In response, DARPA suggests that its research would not simply search data bases for potential terrorists but instead would develop templates, based on studies of past attacks and captured terrorists documents, that would be used to focus searches of databases more narrowly. In addition, the process would be iterative, in other words, analysts would use a variety of techniques, sequentially, to identify potential terrorists.[427]

The Problem of False Leads

A key element in assessing the viability of the TIA system is whether the technologies developed will be sufficiently accurate to limit the number of potential suspects and minimize the number of false leads so as to avoid misidentifying individuals as suspects.[428] If the number of potential suspects or false leads proves to be large, the timeliness of warnings, as well as the cost of conducting followup checks, could also make a TIA system problematic. Some observers are also concerned that if DOD or intelligence agencies identified significant numbers of false leads, the pressures of time and urgency could lead to violations of the rights of individuals.

DARPA contends that concerns about false leads (called false alarms or "false positives" by statisticians) are exaggerated. In credit card fraud, for example, a false alarm or false positive would mistakenly identify a transaction as fraudulent. To avoid false alarms, DARPA argues that a TIA system would use multiple means to identify suspects, ranging from models developed by "Red

Teams" envisioning terrorist scenarios to patterns detected by linking intelligence data with commercially developed data mining techniques. Using such a tiered approach, DARPA contends that suspects would only be tagged after multiple checks.

Some observers have questioned whether these techniques could successfully cull the number of suspects. But assuming that DARPA's approach could reduce the number, capturing a certain number of false leads is inherent in statistical techniques. For example, consider the extensive work of the credit card industry in developing techniques to identify credit card fraud. In a controlled trial, researchers tested the effectiveness of combining several statistical tools to identify credit card fraud using a large, real testing sample of 500,000 transactions, deliberately seeded with 100,000 fraudulent transactions in order to refine statistical algorithms.[429] (See Table 3).

The researchers found that by combining several statistical tools, they could catch about 50% of the actual fraudulent transactions with a false alarm rate of about 20%. In other words, while 50,000 of the fraudulent cases were identified, (50% of 100,000), another 80,000 cases were mistakenly tagged as fraudulent (20% of 400,000 legitimate transactions) at the same time. Investigators therefore would need to investigate 130,000 cases to catch 50,000 wrongdoers, or about 2.6 cases for every 1 wrongdoer. In the case of credit card fraud, algorithms have been extensively refined using large amounts of real data, and followup checks on leads are routine as anyone who has received a phone call after making an unusually large charge knows.

Even in the case of credit card fraud, however, the incidence of wrongdoers is likely to be below 20%. (The actual fraud rate is a closely-guarded industry secret.) When the incidence of fraud is lower, the chances of identifying wrongdoers decrease.[430] Press reports last summer cited an FBI estimate of 5,000 Al Qaeda operatives in the U.S., but that estimate was later dismissed by the government, and experts suggested that hundreds rather than thousands was the more likely number.[431] In light of the relatively small number of terrorists, the likelihood of catching them, even with targeted data bases, could be far lower.

---

[429] Researchers have to know the composition of the data in order to test the effectiveness of their tools. These examples were developed by CRS with the help of a member of the Association for Computing Machinery using the article, Stolfo, Fan, Prodromidia, and Chan, "Credit Card Fraud Detection Using Meta-Learning: Issues and Initial Results; " see paper on following web site: [http://www.cs.fit.edu/~pkc/papers/].

[430] Ibid. In this research case, the fraud catching rate drops from 80% to 50% when the incidence of fraud decreases from 50% to 20%.

[431] New York Times, "5,000 Al Qaeda Operatives in The U.S," February 15, 2003, and Washington Times, "5,000 in U.S. Suspected of Ties to Al Qaeda," July 11, 2002.

The chance, as well as the cost to individuals of mis-identifying suspects, could also be far greater.

An illustrative case using statistical algorithms to identify terrorists that would increase the chances that a TIA system would work could be based on the following assumptions:

- the data base would be limited to 1,000,000 transactions because DARPA had successfully culled the number of suspects; and
- there are 5,000 terrorists in the data base, an incidence rate of 1/2 %.

The number of terrorists to be identified would then be 5,000 (1/2% of 1,000,000).

At the same time, assume optimistically that a combination of data mining and modeling tools could identify 30% or 1,500 of the 5,000 terrorists but that the false alarm rate was 30% because the difficulty of identifying terrorists is greater than detecting credit card fraud. In this case, investigators would need to check a total of 300,000 cases to catch the 1,500 terrorists (30% of 5,000 terrorists + 30% of 995,000 other suspects). For every terrorist identified, some 200 other suspects would have to be investigated.

Some computer experts think that even this case is optimistic. If DARPA's data base was larger, the number of false alarms could be far greater, even with a high accuracy rate. In examples proposed by computer experts that assumed a highly accurate TIA system was applied to the entire U.S. population, the number of false alarms could be 3 million people annually.[432] Either case would pose considerable challenges to investigators, particularly in cases where a threat was considered imminent. If the number of potential suspects identified was significant, the cost of implementing the system could also grow, as substantial personnel would be needed to investigate potential leads and ensure that false leads were eliminated.

Appendix: Description of R&D Efforts Managed by the Information Awareness Office By Category

(* = R&D efforts specifically linked to the TIA system by DARPA)

Data Mining Technologies

- **Human Identification at a Distance (HumanID).*** This project aims to use information from sensors about human characteristics such as

---

[432] See Letter from Barbara Simons, Ph.D., and Eugene H. Spafford, Ph.D, Co-Chairs, U.S. Association for Computing Machinery to Senators John Warner and Carl Levin, Senate Armed Services Committee, January 23, 2003; see [www.acm.org/usacm/].

gait or face, to identify individuals at any time of the day or night and in all weather conditions, for instance, within a large crowd.

- **Evidence Extraction and Link Discovery (EELD).*** This project is an effort to identify terrorist groups by developing a suite of technologies to detect patterns between people, organizations, places and things from intelligence messages and law enforcement records, and then use those patterns or links to gather additional information from vast amounts of textual or transactional data including web sites, sensor data, and news reports.
- **Genisys.*** This project is a new effort in 2003 to put together old and new databases so that they can be readily queried. This "ultra-large all-source information repository" could include information about potential terrorists and possible supporters, purchase of terrorist types of material, training and rehearsal activities, potential targets, and status of defenses, as well as research into methods of protecting privacy.[433]
- **Bio-surveillance (re-named Bio-ALIRT IN FY2004):*** This project is an effort to collect and analyze information from non-traditional human, agricultural and animal health data bases in order to develop indicators and models, and set up a prototype bio-surveillance system for a citywide area like Norfolk, Virginia to increase DOD's ability to detect a clandestine biological warfare attack.

Machine Translation Projects

- **Translingual Information Detection, Extraction and Summarization (TIDES).*** TIDES is designed to get critical information quickly for intelligence analysts and operators by developing tools that can rapidly find, summarize, and translate key information in foreign languages.
- **Effective Affordable Reusable Speech-to-Text (EARS)**: Anticipated to increase the speed of translation from oral sources by ten to 100-fold (including broadcasts and telephone), as well as extract clues about the identity of speakers, EARS is intended to serve the military, intelligence and law enforcement communities.
- **Multispeaker Environments (MUSE) and Global Autonomous Language Exploitation (GALE)**: MUSE and GALE are successor programs to EARS. MUSE is to produce transcripts from command centers and meeting rooms and GALE is to develop techniques for detecting key intelligence in massive amounts of foreign language transmissions.

---

[433] Department of Defense, FY2003 Budget Estimate, Research, Development, Test and Evaluation, Defense-wide, Volume 1, Defense Advanced Research projects Agency, February 2002; web site address above.

- **Communicator**: Designed to enable military personnel to get logistical support and tactical information when in the field, prototypes of this "smart phone" have already been deployed on Navy ships.
- **Babylon**: Another battlefield system likely to be deployed in Afghanistan in the next few months, Babylon is intended to aid those in the field by translating foreign phrases for the service member.[434]

Protection of Critical Information Infrastructure

- **DefenseNet (DNET)**: This effort is intended to increase the security and performance of DOD's information infrastructure in handling large volumes of information.
- **Mis-Information Detection and Generation (MIDGET)**: A new project in 2003, this effort is designed to detect and reduce DOD's vulnerability to mis-information about adversaries that appears in open-source data.

Tools for High-Level Decision Makers

- **Rapid Analytic Wargaming (RAW)**: This project is intended to develop gaming technologies that simulate asymmetric threats to be used by the major commands in training and operational settings.
- **War Gaming the Asymmetric Environment (WAE).*** This effort is an initiative to develop tools and models to help analysts and decision makers predict the behavior and the reactions of terrorists to U.S. actions.
- **GENOA/GENOA II:*** Project Genoa attempts to improve collaborative reasoning, estimate plausible futures, and create actionable options among intelligence analysts in various organizations. Genoa II seeks to enhance collaboration between people and machines in order to improve support provided by intelligence analysts to policymakers at the military command level, to high level DOD civilian officials, NSA and the Joint Chiefs of Staff for dealing with terrorist threats.
- **Total Information Awareness.*** TIA is to integrate some or all of the efforts above into a prototype system or systems that would create and exploit large-scale, counter-terrorist data bases, develop new analytical techniques and models for mining those data bases so as to improve our ability to detect, anticipate, pre-empt, and respond to terrorist attacks. R&D efforts specifically linked to the TIA system in FY2003 are Human ID at a Distance, EELD, Genisys, Bio-surveillance, TIDES, WAE, Project Genoa and Genoa II, and the TIA integrative effort.

---

[434] Although Communicator and Babylon are primarily battlefield systems, some elements may be incorporated into the TIA system.

Terrorist Identification, Screening, and Tracking Under Homeland Security Presidential Directive 6, RL32366 (April 21, 2004).

WILLIAM J. KROUSE, CONGRESSIONAL RESEARCH SERV., TERRORIST IDENTIFICATION, SCREENING, AND TRACKING UNDER HOMELAND SECURITY PRESIDENTIAL DIRECTIVE 6 (2004), *available at* http://www.intelligencelaw.com/library/secondary/crs/pdf/RL32366_4-21-2004.pdf.

Order Code RL32366
April 21, 2004

William J. Krouse
Analyst in Social Legislation
Domestic Social Policy Division

Summary

In Homeland Security Presidential Directive 6 (HSPD-6), the Administration announced plans to establish a Terrorist Screening Center (TSC), as a multi-agency effort to be administered by the Federal Bureau of Investigation (FBI), where several watch lists are being consolidated into a single terrorist screening database (TSDB). The TSC is the latest of three multi-agency efforts undertaken by the Administration to better identify, screen, and track known terrorists, suspected terrorists, and their supporters. The other two are the Foreign Terrorist Tracking Task Force (FTTTF) and the Terrorist Threat Integration Center (TTIC). According to the Administration, the TSC complements the FBI-led FTTTF's efforts to prevent terrorists from entering the United States, and to track and remove them if they manage to enter the country. The TTIC serves as a single locale where terrorism-threat data from all sources are further analyzed to more critically focus on terrorism.

Certain terrorist identification and watch list functions previously performed by the Department of State's Bureau of Intelligence and Research (INR) have been transferred to the TTIC and TSC under HSPD-6. At the TTIC, intelligence analysts are building a Terrorist Identities Database (TID) based on TIPOFF — the U.S. government's principal terrorist watch list database prior to HSPD-6. From TID records, TSC analysts are building a consolidated TSDB. The Administration plans to widen access to, and use of, lookout records by making them available in a "sensitive but unclassified" format to authorized federal, state, local, territorial and tribal authorities; to certain private sector entities; and to certain foreign governments.

Merging watch lists will not likely require integrating entire systems, but there are likely to be technological impediments to merging watch list records. From

system to system, and watch list to watch list, there remains no standardization of data elements, such as, name, date of birth, place of birth, nationality, or biometric identifiers. While elevating and expanding the terrorist identification and watch list function is an important step in the wider war on terrorism, additional work will remain to upgrade and integrate other consular and border management systems, criminal history record systems, and biometric systems.

HSPD-6 presents significant opportunities to more effectively share data and increase security, but there are risks as well, not the least of which is the potential loss of privacy and the erosion of civil liberties. In recent hearings, Members of Congress have raised several related issues. For example, is the TSDB fast, accurate, comprehensive, and accessible? Have procedures been established to allow persons, who may be misidentified as terrorists or terrorist supporters, some form of redress and remedy if they are denied civil rights or unduly inconvenienced by a screening agency? Does the establishment of the TSDB require new guidelines and oversight mechanisms to protect privacy and other civil liberties? Or, are existing agency policies under which such data is collected sufficient? Is the FBI the best agency to administer the TSDB? Are the TSC and TSDB, and by extension the TTIC, temporary or permanent solutions? This report will be updated as needed.

Introduction

This report analyzes Homeland Security Presidential Directive 6 (HSPD-6) and issues relating to (1) the establishment of a Terrorist Screening Center (TSC), (2) the transfer of certain terrorist identification and lookout record distribution functions from the Department of State to the Terrorist Threat Integration Center (TTIC) and the TSC, and (3) the consolidation of terrorist watch lists into a single, stand-alone, terrorist screening database (TSDB) under the direction of the Federal Bureau of Investigation (FBI) at the TSC. In recent hearings, Members of Congress have raised several issues regarding the establishment of the TSDB. For example,

- Has the Administration committed enough resources to ensure the timely establishment of an integrated terrorism watch list (the TSDB)?
- Is the TSDB fast, accurate, comprehensive, and accessible?
- Have procedures been established to allow persons, who may be misidentified as terrorists or terrorist supporters, some form of redress and remedy if they are denied civil rights or unduly inconvenienced by a screening agency?
- Does the establishment of the TSDB require new guidelines and oversight mechanisms to protect privacy and other civil liberties? Or, are existing agency policies under which such data is collected sufficient?
- Is the FBI the best agency to administer the TSDB?
- Are the TSC and TSDB, and by extension the TTIC, temporary or permanent solutions?

While this report identifies some privacy issues associated with the establishment of a consolidated terrorist screening database, it is not intended to serve as an in-depth legal analysis of the issues related to national security, privacy, and the government's need for information to combat terrorism. Rather, it is a systematic examination of the mission and functions of the TSC in relation to other entities like the TTIC. It also identifies and describes key watch lists, residing in several computerized systems and databases,[435] that likely will be consolidated at the TSC.

HSPD-6 and Terrorist Watch List Consolidation

In HSPD-6[436] and an accompanying memorandum of understanding (MOU),[437] the Administration announced plans to establish the TSC, as a multi-agency effort to be administered by the FBI, where several watch lists will be consolidated into a single terrorist screening database (TSDB).[438] The *MOU on the Integration and Use of Screening Information to Protect Against Terrorism* was signed by Secretary of State Colin Powell, Attorney General John Ashcroft, Secretary of Homeland Security Thomas Ridge, and Director of Central Intelligence (DCI) George Tenet on September 16, 2003. The measures outlined in HSPD-6 and the MOU can be viewed as an outgrowth of the Administration's National Strategy for Homeland Security, which reported in July 2002 that the

---

[435] A computer system is composed of computer(s), peripheral equipment such as disks, printers and terminals, and the software necessary to make them operate together (according to the American National Standards Institute/Institute of Electrical and Electronic Engineers (ANSI/IEEE) Standard 729-1983). A database is an organized body of machine readable data that can be cross-referenced, updated, retrieved, and searched by computer.

[437] The Terrorist Screening Memorandum of Understanding accompanying HSPD-6 is available at [http://www.fas.org/irp/news/2003/09/tscmou.pdf].

[438] Presidents may exercise executive authority by issuing various kinds of directives. Among the oldest of these are executive orders and proclamations, both of which today are usually published in the Federal Register. For example, President George W. Bush established the Office of Homeland Security and the initial Homeland Security Council with E.O. 13228 of Oct. 8, 2001. With the establishment of the National Security Council in 1947, there have emerged a series of variously denominated national security directives, but these are not published. Recently, President Bush inaugurated a similar series of Homeland Security Presidential Directives, the first such being issued on Oct. 29, 2001. While these homeland security directives are not published in the Federal Register, they are available from the White House Website and appear in the Weekly Compilation of Presidential Documents. For further information see CRS Report 98-61, Presidential Directives: Background and Overview, by Harold C. Relyea.

FBI would be establishing a consolidated terrorism watch list that would be "fully accessible to all law enforcement officers and the intelligence community."[439]

According to the Administration's timetable, the TSC was to be operational on December 1, 2003.[440] According to press accounts, however, the Administration informed Representative Jim Turner, the ranking member of the Select Committee on Homeland Security, that the TSC was not "fully" operational as of the end of December 2003 and that the Nation's multiple terrorist watch lists have yet to be consolidated.[441] On March 25, 2004, the TSC Director — Donna Bucella — testified that the TSC had established an unclassified, but law enforcement sensitive TSDB. In addition, the TSC was assisting federal screening agencies in identifying terrorists and their supporters with greater certainty, and TSDB lookout records had been made available to nearly 750,000 state and local law enforcement officers.[442]

The TSC is the latest of three multi-agency efforts undertaken by the Administration to better identify, screen, and track known terrorists, suspected terrorists, and their supporters. The other two are the FTTTF and the TTIC. According to the Administration, the TSC complements the FBI-led FTTTF's efforts to prevent terrorists from entering the United States, and to track and remove them if they manage to enter the country. Under the oversight of the DCI, the TTIC serves as a single locale where terrorism-threat data from all sources, foreign and domestic, are further analyzed to more critically focus on terrorism. As part of that function, under HSPD-6, the TTIC will assume a greater role in identifying individuals who are known, or suspected, to be terrorists, or their supporters.

The Administration has transferred certain terrorist identification and watch list functions previously performed by the Department of State's (DOS's) INR to the TTIC and TSC. Through a system known as TIPOFF, the DOS's INR identified known and suspected terrorists, produced lookout records, and distributed those records for inclusion in consular and border inspection systems. Prior to HSPD-

[440] The White House, Fact Sheet: New Terrorist Screening Center Established (Washington, Sept. 16, 2003), at [http://www.whitehouse.gov/news/releases/2003/09/20030916-8.html].

[441] Chris Strohm, "Congressman Blasts Bush on Terrorist Screening Efforts," Government Executive Magazine, Jan. 13, 2004, at [http://www.govexec.com/dailyfed/0104/011304c1.htm].

[442] This testimony was given by TSC Director Donna Bucella on Mar. 25, 2004, before a joint hearing held by the House Judiciary Subcommittee on Crime, Terrorism, and Homeland Security and the Select Homeland Security Subcommittee on Intelligence and Counterterrorism.

6, TIPOFF was the Nation's principal terrorist watch list.[443] Based in part on TIPOFF, the member agencies of TTIC have built a TID into which all international terrorist-related data available to the U.S. government will be stored in a single repository.[444] With TID records, the TSC is building a consolidated international terrorist watch list, which will be merged with domestic terrorist watch list records, in the TSDB.

Under HSPD-6 the Administration plans to widen access to, and use of, watch list records by making them available in a "sensitive but unclassified"[445] format to authorized federal, state, local, territorial and tribal authorities; to certain private sector entities; and to certain foreign governments.

Hence, HSPD-6 has elevated and expanded the terrorist identification and watch-list functions, which were previously performed by the DOS's INR for immigration-screening purposes. Moreover, under HSPD-6, the use of watch lists will be expanded to include data taken from on-going criminal and national security investigations that are related to terrorism. The purpose of these measures is to better identify, watch-list, and screen known and suspected terrorists at U.S. consulates abroad and international ports of entry. Such measures could also better enable the

U.S. government to track terrorists within the United States if they manage to enter the country. Yet, at the same time, there are significant risks as well, not the least of which is the potential loss of individual privacy and an erosion of civil liberties. In the Intelligence Authorization Act for Fiscal Year 2004,[446] Congress

---

[443] Watch lists are just that, lists of persons who are of interest to visa issuance and border inspection agencies or law enforcement. Persons may be on watch lists to prevent them from acquiring a visa or to prevent them from entering the country, or both. Persons can be excludable from entry for reasons ranging from public health concerns to tax-motivated citizen renunciates, in addition to being known and suspected terrorists, or their supporters. They may also be wanted by law enforcement agencies for questioning or arrest.

[444] The TID is nearly identical to the system that section 343 of the Intelligence Authorization Act for Fiscal Year 2003 (P.L. 107-306, 116 Stat. 2399) required the DCI to establish.

[445] There is no governmentwide definition of "sensitive but unclassified (SBU)." Within certain limits set out in statutes and presidential directives, agencies have discretion to define SBU in ways that serve their needs to safeguard information that is unclassified but should be withheld from the public for a variety of reasons. The reasons for safeguarding such information, are likely to include maintaining the privacy rights of individuals and the integrity of ongoing inquiries and investigations. A provision in the Homeland Security Act of 2002 (§892 of P.L. 107-296, 116 Stat. 2253) requires the President to implement procedures to safeguard SBU information that is homeland security-related. For further information, see CRS Report RL31845, "Sensitive But Unclassified" and Other Federal Security Controls on Scientific and Technical Information: History and Current Controversy, by Genevieve J. Kneso.

[446] P.L. 108-177, Stat. 2622-2625.

has required the President to report back to Congress on the operations of both the TTIC and TSC.

Terrorist Watch-Listing Prior to HSPD-6

A primary goal of lookout systems and watch lists has been to prevent terrorist attacks, by excluding known or suspected terrorists and their supporters from entry into the United States. Under HSPD-6, the use of watch lists would be expanded to better screen such persons at consular offices and international ports of entry, and to better track them both abroad and, if they manage to enter the United States, at home.

Watch Lists and Lookout Books

The DOS's Bureau of Consular Affairs (CA) and the federal border inspection services, until recently the U.S. Customs Service and the Immigration and Naturalization Service (INS), have long maintained watch lists (or lookout books) for the purpose of excluding "undesirable" persons from the United States. Customs and immigration inspection activities are now carried out by the Bureau of Customs and Border Protection (CBP) at the Department of Homeland Security (DHS).[447] While these watch lists/lookout books were just that— bound paper volumes — the development of computers, computer software, and computer connectivity/networking, allowed these agencies to develop and more efficiently search watch list records during the 1970s and 1980s. Beginning in 1987, the DOS began keeping watch list (lookout) records on known and suspected terrorists through a system known as TIPOFF. While the DOS had maintained computerized visa records since 1965, including watch lists, the events surrounding the first World Trade Center bombing in 1993 prompted the CA to accelerate the development of the Consular Lookout and Security System (CLASS), so that, among other records, TIPOFF-generated terrorist watch list records could be more easily and efficiently searched by computer at U.S. consular posts and embassies abroad. Consular, intelligence, immigration, and law enforcement officers nominate individuals for inclusion in TIPOFF.

The INS, meanwhile, maintained its own watch list database known as the National Automated Immigration Lookout System II (NAILS II) — a system that is currently maintained by the DHS's Bureau of Immigration and Customs

---

[447] Until the establishment of DHS, federal border inspection services included the Department of the Treasury's Customs Service, the Department of Justice's INS, the Department of Agriculture's Animal and Plant Health Inspection Service (APHIS), and the Department of Health and Human Service's Public Health Service. The Homeland Security Act dismantled INS and transferred its constituent parts, along with Customs and elements of APHIS, to DHS. The border inspection programs of these agencies have been consolidated in DHS's Border and Transportation Security Directorate, as the CBP.

Enforcement (ICE).[448] While the bulk of NAILS II records are related to aliens who have either been removed, failed to depart, or failed to show up for removal hearings, NAILS II includes terrorism-related lookouts as well.

In 1988, Congress mandated the development of the Interagency Border Inspection System (IBIS). This system, previously maintained by the Customs Service, allowed the DOS, INS, and Customs to share watch lists, including terrorist lookout records, at international ports of entry. This system is currently maintained by the DHS's CBP.

Prior to HSPD-6, DOS's INR culled through terrorism-related reports produced by the Intelligence Community[449] to identify individuals as known or suspected terrorists, or their supporters. INR also processed cables — known as Visa Vipers — from consular officers abroad when they learn of individuals associated with terrorism. And, INR processed similar data provided by federal law enforcement agencies to produce terrorism-related lookout records. These records were stored in TIPOFF — a classified system. Declassified TIPOFF records were then exported into CLASS, IBIS, and NAILS II. Also, lookout records produced by immigration officers were exported from NAILS II into TIPOFF. See Figure 1 below.

As underscored in recent public testimony, however, watch lists were only as good as the information contained in them, and the agencies responsible for producing these lookout records — principally DOS's INR and DOJ's INS — were dependent upon the information they received from the Intelligence Community and federal law enforcement.[450]

---

[448] Following the establishment of the DHS, pursuant to P.L. 107-296 (116 Stat. 2135), the Administration merged the investigation branches of the former INS and Customs Service into ICE, along with the immigration detention and removal program, Customs Air and Marine Interdiction program, and the Federal Protective Service. More recently, the Air Marshals program was transferred from the Transportation Security Administration (TSA) to ICE.

[449] The Intelligence Community includes the Central Intelligence Agency (CIA); the National Security Agency (NSA); the Defense Intelligence Agency (DIA); the National Geospatial-Intelligence Agency (GIA); the National Reconnaissance Office (NRO); the other DOD offices that specialize in national intelligence through reconnaissance programs; the intelligence components of the Army, Navy, Air Force, Marine Corps, and Air Force, the FBI, the Department of Energy, and the Coast Guard; the INR at the DOS, the Office of Intelligence and Analysis at Department of the Treasury, and elements of the DHS that are concerned with the analyses of foreign intelligence information (50 U.S.C. §401a(4)).

[450] See testimony of Mary Ryan, former Assistant Secretary of State for Consular Affairs, Department of State, and Doris Meissner, former Commissioner, Immigration and Naturalization Service, Department of Justice, before the National Commission on Terrorist Attacks upon the United States, Jan. 26, 2004. At [http://www.9-11commission.gov/hearings/hearing7.htm].

Terrorism-Related Ground for Inadmissability

According to the U.S. government, the term "terrorism" means "the premeditated, politically motivated violence perpetrated against noncombatant targets by subnational groups or clandestine agents, usually intended to influence an audience."[451] Prompted by the assassination of President William McKinley in 1901, Congress passed legislation in 1903 to exclude from entry into the United States noncitizens who were anarchists, or who advocated the violent overthrow of the U.S. government.[452] As a security measure during the First World War, the DOS and Department of Labor (DOL)[453] jointly issued an order in 1917, which required noncitizens to acquire visas from U.S. Consuls abroad and present their visas and passports to U.S. inspectors upon arrival in the United States. This wartime requirement was codified in 1918,[454] and was made a permanent feature of U.S. immigration law in 1924.[455] This requirement was continued by the Immigration and Nationality Act (INA) of 1952.[456]

Visa issuance has long been viewed as a means of preventing undesirable persons, including suspected spies, saboteurs and subversives, from entering the United States. In the Immigration Act of 1990, Congress amended and substantially revised the grounds for exclusion in the INA, including new provisions related to the exclusion of terrorists from the United States.[457] These terrorist exclusion provisions were subsequently amended and widened by the

---

[451] This definition of "terrorism" is taken from 22 U.S.C. §2656f(d). U.S. Department of State, Patterns of Global Terrorism 2002 (Washington, Apr. 2003), p. xiii.

[452] P.L. 57-162, 32 Stat. 1213.

[453] In 1891, Congress established the office of Superintendent of Immigration in the Department of the Treasury. The immigration functions remained at Treasury until 1903, when they were transferred by Congress to the Department of Commerce and Labor. In 1906, the immigration and naturalization functions were consolidated in the Bureau of Immigration and Naturalization. In 1913, Congress transferred the Bureau to the newly established DOL, splitting the immigration functions between a Bureau of Immigration and a Bureau of Naturalization. The immigration and naturalization functions were combined again in 1933, as the Immigration and Naturalization Service (INS). In 1940, President Franklin Delano Roosevelt transferred INS to the Department of Justice. The Homeland Security Act of 2002 (P.L. 107-296) abolished INS, transferring its immigration functions to the DHS.

[454] Act of May 22, 1918, 40 Stat. 559.

[455] Act of May 26, 1924, 43 Stat. 153, 156, 161.

[456] INA §§211, 212(a)(7), 221, 8 U.S.C §§1181, 1182(a)(7), 1201.

[457] INA §212(a)(3)(B)(i), 8 U.S.C. §1182(a)(3)(B)(i), as amended by the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism (USA PATRIOT Act) Act of 2001 (P.L. 107-56).

Antiterrorism and Effective Death Penalty Act[458] and the Illegal Immigration and Immigrant Responsibility Act in 1996,[459] and by the USA PATRIOT Act in 2001.[460]

Under the INA, an alien is inadmissible if there is reasonable ground to believe the alien (1) has engaged in terrorist activity; (2) is engaged or is likely to engage in terrorist activity; (3) has, under certain circumstances, indicated an intention to cause death or serious bodily harm, or incited terrorist activity; (4) is a representative of a foreign terrorist organization designated by the Secretary of State, or a political, social, or other similar group whose public endorsement of acts or terrorist activity the Secretary of State has determined undermines U.S. efforts to reduce or eliminate terrorist activities; (5) is a member of a foreign terrorist organization designated by the Secretary of State; or (6) has used his/her position of prominence within any country to endorse or espouse terrorist activity, in a way that the Secretary of State has determined undermines United States activity to reduce or eliminate terrorism activities.[461]

Diplomatic Considerations

More than 2½ years following the September 11, 2001 attacks, there is considerable momentum to watch-list additional persons as known or suspected terrorists, or their supporters. Nevertheless, the exclusion or watch-listing of persons for ideological or political beliefs has long been a source of controversy. While it is clearly within the U.S. government's mandate to screen and track persons who are intent on inciting or engaging in terrorist activities, the determination of who may be a member or supporter of a foreign terrorist organization and, therefore, be prevented from entering the United States or be subject to police surveillance is ultimately a subjective consideration made by intelligence analysts and special agents based on the best information available.[462]

---

[458] P.L. 104-132, 110 Stat. 1214.

[459] P.L. 104-208, 110 Stat. 3009-546.

[460] P.L. 107-56, 115 Stat. 272.

[461] P.L. 101-649, 104 Stat. 4978. For more information on the process of designation of foreign terrorist organizations and other related foreign terrorist lists, see CRS Report RL32120, The "FTO List" and Congress: Sanctioning Designated Foreign Terrorist Organizations; and CRS Report RL32223, Foreign Terrorist Organizations, both by Audrey Cronin.

[462] Section 212(d) of the INA provides the Secretary of Homeland Security with authority to waive the inadmissibility of members and supporters of foreign terrorist organizations, if it is in the national interest to do so. Under current law, such visa denial waivers would be granted at the request of the Secretary of State.

Failures to Identify, Watch-List, and Screen 9/11 Hijackers

Despite measures following the first World Trade Center bombing to more effectively identify and screen known and suspected terrorists, all 19 hijackers who participated in the September 11, 2001 attacks had been issued visas by the DOS in accordance with statutorily required watch-list name checks and other visa issuance requirements, and had entered the country legally. While watch lists will never contain the names of all terrorists, it is generally agreed that members of the Intelligence Community possessed sufficient information to watch-list at least two, possibly three, of the al Qaeda hijackers. Better use of watch lists may have at least disrupted the activities of the September 11, 2001 hijackers.

According to the congressional 9/11 Joint Inquiry, the Intelligence Community missed repeated opportunities to watch-list two of the hijackers, Khalid al-Mihdhar and Nawaf al-Hazmi.[463] By January 2001, the CIA had identified al-Mihdhar and al-Hazmi from surveillance photos of a major meeting of known al Qaeda operatives in Kuala Lumpur, Malaysia on January 5 and 8, 2000. In the same month, the CIA obtained a copy of al-Mihdhar's Saudi passport. It was also known that al-Mihdhar had been issued a U.S. visa in Jeddah, Saudi Arabia, in April 1999, which was valid through April 2000. Nevertheless, the CIA did not watch-list him.[464]

On January 15, 2000, al-Mihdhar and al-Hazmi entered the United States at Los Angeles International Airport (LAX). By March 2000, the CIA had learned that al-Hazmi — an experienced Mujahadeen[465] — had entered the United States through LAX. For about five months, al-Mihdhar and al-Hazmi stayed in San Diego, taking flight lessons. In addition to being in contact with an FBI confidential informant in San Diego, they were also in contact with another September 11, 2001 coconspirator — Hani Hanjour, who subsequently piloted American Airlines Flight 77 into the Pentagon. On June 10, 2000, al-Mihdhar departed the United States; on July 12, al-Hazmi applied to the INS for a visa

---

[463] U.S. Congress, U.S. Senate Select Committee on Intelligence and U.S. House Permanent Select Committee on Intelligence, Joint Inquiry Into Intelligence Community Activities Before and After The Terrorist Attacks of September 11, 2001, 107th Congress, 2nd sess., S.Rept. 107-351, H.Rept. 107-792 (Washington: GPO, 2002), p. 12.

[464] Ibid., p. 145.

[465] Mujahadeen, in the sense used here, are fighters trained in insurgent and terrorist techniques, often in training camps sponsored by or associated with al Qaeda. In the context of the 1979-1989 war in Afghanistan, the Mujahadeen were often Muslim men from other countries who fought with the indigenous Afghan guerillas against the Soviets. Some of these Mujahadeen later formed the core of the al Qaeda movement.

extension. Al-Hazmi moved to Phoenix, AZ, linked up with Hanjour, and subsequently overstayed his visa.[466]

By late May 2001, the CIA transferred to the FBI the surveillance photos of the January 2000 Kuala Lumpur meeting. While al-Mihdhar and al-Hazmi were identified, along with Khallad bin-Atash, a leading al Qaeda operative and planner of the USS Cole bombing, neither the CIA nor the FBI watch-listed them. On June 13, 2001, with a new passport, al-Mihdhar obtained another U.S. visa in Jeddah. He falsely stated on the visa application that he had never been to the United States. He reentered the United States at John F. Kennedy (JFK) airport in New York City on July 4, 2001.

On the request of the CIA, al-Mihdhar and al-Hazmi were watch-listed on August 23, 2001 — less than three weeks before the September 11, 2001 terrorist attacks.[467] While FBI agents in Phoenix and Minneapolis were following up other leads that may have led them to the September 11, 2001 conspirators, the repeated failures by the Intelligence Community — principally the CIA and FBI — to watch-list al-Mihdhar and al-Hazmi were crucial lost opportunities associated with the September 11, 2001 attacks, according to the 9/11 Joint Inquiry.[468]

More recently, the National Commission on the Terrorist Attacks Upon the United States, known as the Kean Commission for its Chair — Thomas H. Kean, characterized these lost opportunities to watch-list al-Mihdhar and al-Hazmi as "failures." The Commission purports that there was evidence to watch-list Salem al-Hazmi — Nawaf al-Hazmi's brother as well. Despite the efforts of key INR officials who developed TIPOFF, the Kean Commission found that within the Intelligence Community "watchlisting" was not viewed as integral to intelligence work; rather it was viewed as "a chore off to the side...."[469]

Elevating and Expanding Terrorist Identification, Screening, and Tracking under HSPD-6

On September 16, 2003, the White House issued HSPD-6, which set in motion several measures to improve intelligence gathering and analysis on terrorists and their activities by establishing additional mechanisms to ensure secure, effective, and timely interagency information sharing. In other words, getting the right information to the right people, securely and at the right time. The centerpiece of

[466] U.S. Congress, Joint Inquiry Into Intelligence Community Activities Before and After The Terrorist Attacks of September 11, 2001, p. 148.

[467] Ibid., p. 152.

[468] Ibid., p. 81.

[469] National Commission on Terrorist Attacks upon the United States, "Three 9/11 Hijackers: Identification, Watchlisting, and Tracking," Staff Statement no. 2, (Washington, 2004), p. 1.

HSPD-6 is the establishment of the TSC — the latest of three multi-agency efforts undertaken by the Administration to better identify, screen, and track known terrorists, suspected terrorists, and their supporters. The other two are the FTTTF and the TTIC, both of which are described in greater detail below.[470]

Besides establishing the TSC, HSPD-6 transferred the terrorist identification and watch list functions previously performed by the DOS's INR to the TTIC and TSC. The TIPOFF system was developed by the DOS's INR to identify, watch-list, and screen terrorists and their supporters. Consular, immigration, and customs officers used TIPOFF-generated lookout records to exclude terrorists from entry into the United States and, if they managed to enter, to remove them from the United States. As part of its larger mission to assess terrorist threats, under HSPD-6, TTIC's member elements are now charged with identifying foreign terrorists as well. The TSC is charged with consolidating terrorist watch lists and making that data available in a useful format to screening agencies, and the FTTTF, with assisting federal law enforcement agencies with tracking foreign terrorists at home and abroad.

Foreign Terrorist Tracking Task Force (FTTTF)

On October 30, 2001, President George W. Bush directed that the FTTTF be established as part of Homeland Security Presidential Directive 2 (HSPD-2).[471] On August 6, 2002, the Attorney General placed the FTTTF administratively within the FBI. As a multi-agency effort, the mission of the FTTTF is to provide federal law enforcement agencies with the best possible information to: (1) prevent foreign terrorists and their supporters from entering the United States; and (2) locate, detain, prosecute, or remove them if they manage to enter the United States. Since the issuance of HSPD2, the mission of the FTTTF has evolved. While the FTTTF continues to assist federal investigators in locating terrorism-related suspects, much of its original mission to screen terrorists at ports of entry has been passed on to the TSC, as is more fully described below.

In many areas, the FTTTF has facilitated and coordinated information sharing agreements among participating agencies and commercial data providers. By accessing and analyzing this data, the FTTTF assists counterterrorism investigations being conducted by the FBI's National Joint Terrorism Task Force

---

[470] Other examples of interagency groups include the Secret Service's Document Security Alliance Groups, the Migrant Smuggling and Trafficking in Persons Coordination Center, and the Data Management Improvement Act Task Force. For further information on interagency efforts, see CRS Report RL31357, Federal Interagency Coordinative Mechanisms: Varied Types and Numerous Devices, by Frederick M. Kaiser.

[471] The White House, Homeland Security Presidential Directive-2, Subject: Combatting Terrorism Through Immigration Policies, Oct. 29, 2001. Click on [http://www.whitehouse.gov/news/releases/2001/10/20011030-2.html].

(National JTTF)[472] and 84 regional Joint Terrorism Task Forces (JTTFs).[473] By data-mining public and proprietary data systems, the FTTTF can track the "electronic footprints" of known and suspected terrorists.[474] In so doing, the FTTTF assists the 85 JTTFs nationwide, the 56 FBI field offices, the 46 FBI legal attaches[475] abroad, and the DHS in locating suspected terrorists and their supporters.

Besides the FBI, key FTTTF players include the DOD, the DHS CBP and ICE, the DOS, the Social Security Administration, the Office of Personnel Management, the Department of Energy, and the CIA. The FTTTF has also established liaisons with Canada, Australia, and the United Kingdom. The FTTTF was funded for FY2004 as a stand alone line item in the FY2004 Consolidated Appropriations Act in the amount of nearly $62 million.[476] Congress provided the same amount in FY2003 as well.[477]

Terrorist Threat Integration Center (TTIC)

In the State of the Union Address, on January 28, 2003, President George W. Bush announced the establishment of the TTIC. On the same date, the While House issued a *Fact Sheet: Strengthening Intelligence to Better Protect America*, which outlined the Center's mission and functions.[478] They include

- to optimize the use of terrorist threat-related information, expertise, and capabilities to conduct threat analysis and inform collection strategies;

---

[472] The FBI established the National JTTF in 2002 at the Bureau's Washington command center. The mission of the National JTTF is to collect terrorism-related intelligence and funnel it to the JTTFs, other FBI terrorism units, and partner agencies. Representatives from nearly 30 different agencies are detailed to the National JTTF, bringing outside expertise that includes intelligence, public safety, and state and local law enforcement.

[473] Several JTTFs were first formed in the early 1980s as teams of state and local law enforcement officers, FBI Special Agents, and other federal law enforcement officers. According to the FBI, by combining the assets of different agencies, the JTTFs act as "force multipliers" that allow for greater coverage in the war on terror. There are currently 84 JTTFs.

[474] For further information on issues related to data mining, see CRS Report RL31798, Data Mining: An Overview, by Jeffrey W. Seifert.

[475] As part of the Foreign Attache Program, the FBI has established 46 foreign legation offices overseas to establish cooperative efforts with foreign police partners as part of the FBI's domestic law enforcement mission.

[477] P.L. 108-7, 117 Stat. 56.

[478] This fact sheet is available on the White House website, at [http://www.whitehouse.gov/news/releases/2003/01/20030128-12.html].

- to create a structure that ensures information sharing across agency lines;
- to integrate domestic and foreign terrorist-related information and form the most comprehensive possible threat picture; and
- be responsible and accountable for providing terrorist threat assessments for our national leadership.

TTIC became operational on May 1, 2003. John Brennan, a career CIA official, was appointed by the Administration to be the Director of TTIC. An FBI special agent serves as the Center's Deputy Director. Funding for TTIC is provided by participating agencies, including the DHS, DOS, DOJ, DOD, and the Intelligence Community. While TTIC is under the DCI, the Administration emphasizes that it is a "multi-agency joint venture," and is not part of the CIA. TTIC's mission is to form the most comprehensive threat picture possible by serving as a central hub for the fusion and analysis of all-source information collected from foreign and domestic sources on international terrorist threats.

TTIC's operations will encompass elements of both the FBI's Counterterrorism Division (CTD)[479] and the DCI's Counterterrorism Center (CTC).[480] In September 2003, there were about 100 analysts on board at TTIC, and the Administration plans to have about 300 analysts total on board in May 2004, when the Center is scheduled to be moved to a location outside of the CIA.[481] Collocating the DCI's CTC and the FBI's CTD at TTIC is designed to encourage greater cooperation and information sharing between the wider Intelligence Community and the FBI.[482]

In the past, information sharing between the CIA and FBI has been hampered by differing priorities and methods. The CIA is banned from having any role in domestic law enforcement or internal security functions by the National Security Act of 1947,[483] and the DCI is mandated to protect "sources and methods from unauthorized disclosure."[484] Like the CIA, the FBI also protects its sources and

---

[479] The mission of the FBI's CTD is to detect and deter terrorist acts within the United States, and to investigate terrorist attacks against U.S. interests and the American people at home and abroad.

[480] The mission of the DCI's CTC is to exploit all-source intelligence to produce in-depth strategic and tactical analyses of terrorist groups. The CTC also coordinates the Intelligence Community's counterterrorism activities and operations.

[484] 50 U.S.C. §403-3(c)(7).

methods — particularly the identities of confidential informants, so as not to jeopardize on-going investigations.

The FBI, however, is also bound by other criminal laws and guidelines related to protecting grand jury information and limiting criminal investigations, undercover operations, and covert surveillance that are, in large part, designed to protect privacy and civil liberties. Consequently, the CIA takes a long-term strategic view of intelligence gathering and analysis, while the FBI takes a short-term tactical view that is geared towards resolving investigations.[485]

Nevertheless, according to the Administration, TTIC will not collect intelligence; instead, as the primary consumer of terrorism-related intelligence, one of the Center's core functions is to ensure information-sharing across agency lines. TTIC is also responsible for setting requirements and tasking other federal agencies in the area of shared databases. The Attorney General is responsible for ensuring that the FBI's information technology modernization programs are configured to share information easily with TTIC.

In terms of more broadly disseminating intelligence reports, an administration official has recently testified that TTIC's Information Sharing Program Office has worked to reduce the number of terrorism-related documents and records that are not under "originator control," meaning the information contained in those records could compromise sources and methods. Consequently, before another agency uses that document or record, it must gain the permission of the originating agency.

Other methods being employed more frequently at TTIC are "writing for release" and "tear lines."[486] Writing for release means producing useful, but less sensitive intelligence reports. Tear lines are employed to divide reports. The substance of the information appears above the tear line, and the sources and methods by which the information was acquired appears below the tear line.

To effect rapid interagency information-sharing, TTIC has established a classified web-accessible service — TTIC Online. TTIC is developing less sensitive mirror

images of TTIC Online to more broadly disseminate information and analysis to appropriate entities.[487] See Figure 2 below.

TTIC will also establish and maintain the TID, which will be a repository for all-source information on known and suspected terrorists.[488] The TID is envisioned as becoming the primary source for international terrorist data provided by TTIC to the TSC. Such information will include names, aliases, dates and places of birth, identification and travel documents, unique and distinguishing physical features, biometric data, and individuals' past affiliation with terrorist acts or groups. In the past, much of this information was stored in disparate databases maintained by several agencies. Consolidating and expanding this data could remedy systemic weaknesses that in the past prevented intelligence analysts and investigators from positively identifying known and suspected terrorists.

To build the TID and prevent duplication of effort, functions of the DOS Bureau of Intelligence and Research's TIPOFF system — particularly those aspects related to the identification of foreign terrorists — have been transferred to TTIC. The entire TIPOFF database of about 120,000 names is now the core of the TID. TIPOFF staff have been split, with part going to the TTIC and part going to the TSC. Under HSPD-6, the President directed all heads of executive departments and agencies to provide to TTIC on a continual basis all appropriate data regarding terrorists and related activities to the extent that the law allows. In turn, TTIC is to provide the TSC with all appropriate information. See Figure 2 below.

TTIC and IAIP Reporting Requirements

Unlike the FTTTF, the establishment of TTIC has generated some controversy.[489] Some Members of Congress have questioned whether the functions currently assigned to TTIC, like intelligence fusion and threat assessment, would not be better housed in DHS's Directorate for Information Analysis and Infrastructure Protection (IAIP), as the Homeland Security Act gave responsibility for all-source

---

[487] Testimony of John Brennan, Terrorist Threat Integration Center Director, in U.S. Congress, Senate Judiciary Subcommittee on Immigration and Border Security (Washington, Sept. 23, 2003), p. 2.

[488] The TID is nearly identical to a system required under section 343 of the Intelligence Authorization Act for Fiscal Year 2003 (P.L. 107-306, 116 Stat. 2399), which requires the DCI to establish a "terrorist identification classification system" that would be a list of individuals who are known or suspected terrorists, and organizations that are known or suspected terrorist organizations.

[489] For further information, see CRS Report RS21283, Homeland Security: Intelligence Support, by Richard A. Best, Jr.

terrorist threat analysis to the new department.[490] In September 2003, William Parrish — the former DHS Acting Assistant Secretary for Information Analysis — testified that DHS will overlay TTIC-generated threat assessments on IAIP-identified vulnerabilities, so that protective measures can be developed and implemented.[491] In other words, with TTIC-generated threat information, IAIP could be better equipped to identify and prioritize the nation's critical infrastructure that needs to be more closely guarded so that security resources can be more efficiently deployed.

Regarding the respective roles of the DHS's IAIP and the DCI's TTIC, Section 359 in Intelligence Authorization Act for Fiscal Year 2004[492] requires the President to submit a report to the appropriate committees of Congress[493] by May 1, 2004, on the operations on both the IAIP Directorate and TTIC. This provision sets out that this report should include the following elements:

- an assessment of the operations of the IAIP and TTIC;
- an assessment of the ability of TTIC to carry out the responsibilities assigned to it by the President;
- an assessment of the ability of IAIP to carry out the responsibilities assigned to it under section 201 of the Homeland Security Act;[494]
- an action plan to bring TTIC to full operational capacity as outlined in the President's State of the Union address, including milestones, funding, and sources of funding;
- a delineation of responsibilities and duties for the IAIP and TTIC;
- a delineation and summary of overlapping areas of responsibilities and duties carried out by IAIP, TTIC, and any other element of the federal government;
- an assessment of where these areas of overlap, if any, represent an inefficient use of resources;

---

[490] The House Select Committee on Homeland Security and the Committee on the Judiciary held a hearing on TTIC on July 22, 2003. The Senate Judiciary Subcommittee on Immigration and Border Security held a hearing on HSPD-6, in which the role of TTIC was questioned, on Sept. 23, 2003.

[491] Testimony of William Parrish, Acting Assistant Secretary for Information Analysis, in U.S. Congress, Senate Judiciary Subcommittee on Immigration and Border Security (Washington, Sept. 23, 2003), p. 2.

[492] P.L. 108-177, 117 Stat. 2622.

[493] For purposes of this provision the appropriate committees of Congress include the Senate committees on Intelligence, Governmental Affairs, the Judiciary, and Appropriations; and in the House, the committees on Intelligence, Homeland Security, the Judiciary, and Appropriations.

[494] P.L. 107-296, 116 Stat. 2145.

- a description of the policies and procedures adopted by IAIP and TTIC to ensure compliance with the Constitution, any applicable statues, executive orders, and regulations of the United States;
- an assessment of the practical impact that TTIC operations, if any, may have on individual liberties and privacy; and
- any other information the President deems appropriate that provides a fuller explanation as to why TTIC should be established as a "joint venture" of participating agencies rather than as an element of IAIP.

This provision sets out further that the report be presented in an unclassified format, which may include a classified annex if necessary.

Terrorist Screening Center (TSC)

According to the Administration, the primary mission of the TSC is to consolidate all federal terrorist watch lists into a consolidated terrorist screening database, so that all federal agencies would have access to the best and most complete information. A TSA official, Donna Bucella, has been detailed to the FBI and appointed head of the TSC. A DHS official, Richard Kopel, has been appointed second-in-command at the TSC. As a multi-agency effort, the Center's staff will include designees from the DOS, DOJ, and DHS, as well as other intelligence community entities. TSC personnel are to be given access to TTIC databases, including the TID, as well as any relevant intelligence that advances terrorist screening.

Under HSPD-6, the Administration envisions that terrorist watch lists will be used much more frequently in the future. In the past, terrorism-related watch lists were used principally for purposes of screening noncitizens applying for visas abroad at consular offices and at the border when applying for admission at international ports of entry. Today, as described more fully below, state and local law enforcement officers are able to screen persons stopped for routine traffic violations against terrorist TSDB lookout records. See Figure 2 above.

The TTIC Director, the TSC Director, the heads of federal departments or agencies, or their designees "nominate" persons for inclusion in the TSDB by notifying either the TTIC or the FBI. The TSC Director is responsible for establishing procedures to review these records when new information is developed concerning the persons about whom the records are maintained. According to the Administration, TTIC is providing international terrorism data, and the FBI is providing domestic terrorism data for inclusion in the TSDB. Both sets of data are merged in the TSC-maintained TSDB.

According to the FBI, international terrorists include those persons who carry out terrorist activities under foreign direction. For this purpose, they may include citizens or noncitizens, under the rationale that citizens could be recruited by foreign terrorist groups. Or, noncitizens (aliens) could immigrate to the United States and naturalize (become citizens), having been unidentified terrorists

before entry, or having been recruited as terrorists sometime after their entry into the United States. By comparison, domestic terrorists are not under foreign direction, and operate entirely within the United States. According to the Administration, when appropriate, both sets of data will include information on "United States persons."[495] Criteria for the inclusion of U.S. persons in the database will be developed by an interagency working group. The term "United States persons" includes U.S. citizens and legal permanent residents (immigrants).

For agencies responsible for screening terrorists, the TSC Director and agency designees will determine the "screening processes" that will be supported and the amount and type of data that will be provided, depending on an agency's mission. Based on recent congressional testimony, it is clear that the TSC is supporting the screening missions of the DOS's CA and DHS's CBP. It is less clear how much support the TSC is providing the DHS's TSA and ICE. To determine whether to allow screening agencies access to certain records, the TSC is to consider, but not be limited to, the following elements:

- the nature of the person's association with terrorism;
- the quality of data, including credibility, reliability, and extent of corroboration;
- the extent of uniquely identifying personal data;
- the authority or authorities under which the data were obtained, and any restrictions on how these data may be shared or used;
- the authority or authorities of the screening entity;
- the circumstances, including changes in the Homeland Security Alert Level, under which screening will occur; and
- the action the screening agency will take if a person is identified as a person in the TSC's terrorist screening database.

These elements serve as a rough guide to what should be included in lookout records. Nevertheless, HSPD-6 does not speak to the issue that the FBI-administered TSC will need to fully assess the missions of many different agencies in order to provide the appropriate amount of information and handling codes in the lookout records, which will then be disseminated from the consolidated TSDB. While departmental and agency designees will have a voice at the table, and each agency will determine which known or suspected terrorists are placed in the respective lookout systems under HSPD-6, the FBI will be the lead agency and likely play an important role in the final decision.

---

[495] The definition of "United States person" is found at 50 U.S.C. §1801(i): a citizen of the United States, an alien lawfully admitted for permanent residence (as defined §1101(a)(2) of Title 8), an unincorporated association a substantial number of members of which are citizens of the United States or aliens lawfully admitted for permanent residence, or a corporation which is incorporated in the United States, but does not include a corporation or an association which is a foreign power, as defined in subsection (a)(1), (2), or (3) of this section.

Expanding Use of Terrorist Watch Lists

Prior to September 11, 2001, watch lists were used principally for federal border and transportation security, and law enforcement. In HSPD-6, the Administration has clearly signaled that the use of watch lists will be expanded beyond those purposes traditionally associated with border and transportation security, and federal law enforcement. Under HSPD-6, to the extent permitted by law, the consolidated TSDB will be made available to:

- state, local, territorial, and tribal law enforcement agencies;
- other appropriate state, local, territorial, and tribal authorities;
- private sector entities charged with managing critical infrastructure or organizers of large events (e.g., the Salt Lake City Winter Olympics); and
- foreign governments that have entered into immigration agreements with the United States or that are engaged in the global war on terrorism as partners with the United States.

As described below, the Administration has made such records available to state and local law enforcement, and plans to make such records available in limited cases with foreign governments through the FBI's National Crime Information Center (NCIC) in a sensitive but unclassified format. NCIC is an FBI-administered telecommunications system that allows authorized law enforcement officers, including state and local officers, to access and search several automated databases pertaining to fugitives, missing persons, stolen property, and criminal histories.

In regard to noncitizens, the Attorney General, in consultation with the Secretary of Homeland Security, or their designees at the TSC, is to determine which records are entered into NCIC. For all other persons, the Attorney General is to determine which records relating to alleged terrorists are entered into NCIC. The Secretary of Homeland Security, or his TSC designee, is to determine whether such records should be available to other non-law enforcement authorities at the state, local, territorial, and tribal levels for other purposes. Such purposes may include screening persons when they apply for driver's licenses or licenses to transfer hazardous material. The Secretary of State, in consultation with the Attorney General, Secretary of DHS, and the DCI, will determine which records will be made available to foreign governments.

TSC Level of Operations

According to the Administration's timetable, TSC operations were to be phased in rapidly, and the center was to be operational by December 1, 2003.[496] According to press accounts, however, the Administration informed Representative Jim Turner, the ranking Member of the Select Committee on Homeland Security, that the TSC was not "fully" operational as of the end of December and that the Nation's multiple terrorist watch lists had yet to be consolidated.[497] Director Bucella publically testified that the TSC was operational on December 1, 2003.[498] According to that testimony, as part of phase one, the TSC has had the ability to

- provide the names and identifying information of known or suspected terrorists to federal, state, and local law enforcement;
- review whether a known or suspected terrorist should be included in the agency watch lists or should be deleted from such lists;
- ensure that persons, who may share a name with a known or suspected terrorist, are not unduly inconvenienced by screening processes conducted by the U.S. government; and
- adjust or delete outdated or incorrect information to prevent problems arising from misidentifications.[499]

On March 25, 2004, Director Bucella testified before a joint hearing of the House Judiciary Committee's Crime, Terrorism and Homeland Security Subcommittee and the Select Homeland Security Committee's Intelligence and Counterterrorism Subcommittee.[500] In that testimony, Director Bucella reported that phase two of the TSC's implementation had been completed and an unclassified but law enforcement sensitive TSDB had been established. As of April 1, 2004, the TSDB contained about 79,289 lookout records.

Through March, the TSC had provided DOS's CA with 54,000 security advisory opinions, of which 90 were related to terrorism, and 56 resulted in visa revocations. In addition, the CBP's National Targeting Center Director, Charles Bartoldus, testified that CBP officers were routinely working with the TSC to evaluate and assess potential matches between terrorist lookout records and individuals applying for admission into the United States. With TSC's assistance, CBP inspectors are currently able to resolve potential matches more

expeditiously, resulting in the more timely release of individuals who have been misidentified. Members also asked Director Bucella about the TSC's interactions with the DHS's TSA, but it was less clear from her responses whether TSA was consulting with the TSC about terrorism-related hits in the Computer Assisted Passenger Profiling System.

Furthermore, TSDB-generated lookout records are currently being disseminated to state and local law enforcement officers through the NCIC. The unclassified portion of TSDB-generated lookout records (name, date of birth, passport number, and country of origin) have been loaded into the NCIC's Violent Gang and Terrorist Organizations File (VGTOF). According to Director Bucella, the TSC has set up a protocol for when NCIC queries by state or local law enforcement officers result in a terrorism-related hit.

When NCIC terrorism-related hits occur, the state and local officers stand by, while their dispatchers contact the TSC. Through the dispatchers, the TSC operators will elicit certain information from the state or local officers to determine whether there is a match. Such information could include identifiers, like height, weight, eye color, hair color, tattoos, or scars, which may be classified. If the TSC deems that a match has been made, the TSC will contact the FBICounterterrorism Watch unit (CT Watch unit) at FBI headquarters.

If needed, the CT Watch unit will contact and consult the appropriate JTTF and designated case officer. Following such consultations, the TSC operators will provide the state and local officers with the most appropriate course of action. Such actions include four possible scenarios: arrest, detain and question, question and release, or proceed with normal police procedure. According to Director Bucella, the TSC is able to process most state and local NCIC terrorism-related hits within 20 to 30 minutes.

The TSC is presently engaged in a large-scale outreach program to inform state and local law enforcement agencies about the TSC. Some Members at the hearing, however, questioned whether most state and local agencies were aware of the TSC or the changes to NCIC's VGTOF. They also questioned whether some federal law enforcement units, like the Border Patrol, had access to NCIC, and whether such queries were routinely made on aliens attempting to enter the country between ports of entry.

As part of this outreach process, the TSC is also working with those agencies to determine if the TSDB could be incorporated into screening processes conducted by those agencies. In addition, the TSC is contacting other federal agencies to determine whether they have terrorism-related records that would be of use to the TSC. In this regard, several members raised concerns that the Department of Defense had not done enough to transfer terrorism-related data to the TSC, and possibly the TTIC, concerning al Qaeda and Taliban combatants who had been previously detained at Guantanamo, but who had subsequently been released.

Director Bucella indicated that some data regarding these persons had been transferred to the TSC.

Director Bucella outlined phase three of the TSC implementation. By December 2004, the TSC is scheduled to use the TSDB as a single, integrated system for entering known and suspected terrorist identities. At that point, the TSDB will be integrated ("dynamically linked") into all appropriate screening processes. In addition, selected private sector entities, such as operators of critical infrastructure facilities or organizers of large events, will be allowed to submit lists of persons associated with those events to the U.S. government to be screened for any connection with terrorism. Meanwhile, the DOS is working to establish mechanisms by which terrorist screening information can be shared with foreign countries cooperating with the United States in global efforts to counter terrorism.

Legal Safeguards

The TSC Director is responsible for developing policies and procedures related to criteria for inclusion into the database; and measures to be taken in regard to misidentifications, erroneous entries, outdated data, and privacy concerns. As described above, according to TSC Director Bucella, procedures have been developed regarding the inclusion of persons in the TSDB, the correction of erroneous data, the purging of outdated data, and the incorporation of new data to prevent further misidentifications of persons who share the same or similar names as persons for whom terrorism-related lookout records exist.

The Administration maintains that since the TSC does not collect intelligence, and has no authority to do so, that all intelligence or data entered into the TSDB has been collected in accordance with the preexisting authorities of the collecting agencies. Nonetheless, these existing agency policy and procedures probably do not address information sharing with private entities for security purposes. Members of Congress and other outside observers have questioned whether there should be new policy and procedures at different levels (such as, visa issuance, border inspections, commercial aviation security, domestic law enforcement, and security of public events) for the inclusion of persons in the TSDB.[501]

Also, Members have asked how a person would find out if they were in the TSDB, and if so, how did they get there? In congressional testimony, Director Bucella surmised that a person would learn of being in the TSDB when a screening agency encountered them and, perhaps, denied them a visa or entry into the United States, or arrested them. Director Bucella also suggested that the TSC

[501] For further information, see CRS Report RL31730, Privacy: Total Information Awareness Programs and Related Information Access, Collection, and Protection Laws, by Gina Marie Stevens.

would probably be unable to confirm or deny whether the person was in the TSDB under current law.

Consequently, persons who have been identified or misidentified as terrorists or their supporters by the TSC would have to pursue such matters through the screening agency. However, the screening agency might not have been the source of the record in which case, a lengthy process of referrals may have to be initiated. Under such conditions, persons identified as terrorists or their supporters may turn to the Freedom of Information Act (FOIA) or the Privacy Act as a last alternative.

Under FOIA,[502] any person, including a noncitizen or nonpermanent resident, may file a request with any executive branch agency or department, such as the DOS or DHS, for records indicating they are on a watch list. Under national security and law enforcement FOIA exemptions, the Departments may withhold records on whether an individual is on a watch list.[503]

In addition to a FOIA request, a citizen or legal permanent resident may file a Privacy Act[504] request with DHS and/or Justice to discern whether the TSA or the FBI has records on them. However, the law enforcement exemption under the Privacy Act may permit the Departments to withhold such records. Under the Privacy Act, a citizen or legal permanent resident may request an amendment of their record if information in the record is inaccurate, untimely, irrelevant, or incomplete. Under both FOIA and the Privacy Act, there are provisions for administrative and judicial appeal. If a request is denied, the citizen or legal permanent resident is required to exhaust their administrative remedies prior to bringing an action in U.S. District Court to challenge the agency's action.

The Administration has pledged that terrorist screening information will be gathered and employed within constitutional and other legal parameters. While the Privacy Act generally does not restrict information-sharing related to known and suspected terrorists who are not U.S. persons for the purposes of visa issuance and border inspections, it does restrict the sharing of information on U.S. persons (citizens and legal permanent residents) for purely intelligence purposes, who are not the subject of on-going foreign intelligence or criminal investigations.[505]

[502] 5 U.S.C. §522.

[503] 5 U.S.C. §§522(b), (c), 522a(j).

[504] 5 U.S.C. § 522a.

[505] Department of State, Testimony to the Joint Congressional Intelligence Committee, p. 5.

Consequently, legal questions concerning the inclusion of U.S. persons in these systems under criminal or national security predicates may arise. Protocols have been established for state and local law enforcement to cover the eventuality that a positive NCIC VGTOF hit indicates that they have encountered a known or suspected terrorist. However, it is unclear whether protocols have been established for false positives if a person is misidentified. In addition, questions of compensation for persons mistakenly damaged by inclusion in these databases will likely be an issue.

TSC Reporting Requirements

Section 360 of the Intelligence Authorization Act for Fiscal Year 2004[506] requires the President to submit a report to Congress by September 16, 2004 on the operations of the TSC, as established under HSPD-6. This provision sets out that this report should include the following elements:

- an analysis of TSC operations to ensure that the TSC does not violate the Constitution, or any statute, executive order, or regulation of the United States;
- a description of the TSC database architecture, including the number of databases operated or maintained by the TSC, and an assessment of the extent to which these databases have been integrated;
- a determination of whether the data from all the watch lists, enumerated in the GAO report entitled Information Technology: Terrorist Watch Lists Should be Consolidated to Promote Better Integration and Sharing (described below), have been incorporated into the consolidated terrorist screening database system;
- a determination of whether any other databases ought to be integrated into the consolidated terrorist screening database;
- a schedule setting out the dates by which identified databases, which are not yet integrated into the consolidated terrorist screening database system, would be integrated into that system;
- a description of the protocols that have been established to ensure the protection of classified and sensitive information that is contained within the consolidated terrorist screening database;
- a description of processes that have been established to ensure that the information in the consolidated terrorist screening database is systematically and frequently reviewed for timeliness and accuracy;
- a description of the mechanism that has been established to ensure that the information in the consolidated terrorist screening database is synchronized and replicated throughout that database;

[506] P.L. 108-177, 117 Stat. 2623.

- a description of the extent to which, and the criteria under which, the TSC makes the information in the consolidated terrorist screening database available to the private sector and critical infrastructure components;
- the number of individuals listed in the consolidated terrorist screening database;
- the estimated budget of, and sources of funding for, the TSC for each of the fiscal years 2004, 2005, and 2006;
- an assessment of the impact of the TSC and the consolidated terrorist screening database on current law enforcement systems;
- the practical impact, if any, of TSC operations on individual liberties and privacy; and
- such recommendations as the President deems appropriate for modifications to law or policy to ensure the continued operations of the TSC.

This provision requires further that the report be presented in an unclassified format, which may include a classified annex if necessary.

Selected Watch List, Criminal, and Biometric Systems

To provide border and transportation security, a number of federal agencies have long maintained watch lists, or lookout books, for the purposes of excluding certain "undesirable" aliens, including known and suspected terrorists, from travel to, and entry into, the United States. These watch lists reside on consular and border management computer systems, as well as on criminal history record computer systems. In addition, to identify individuals with greater certainty, several biometric systems have been developed in parallel with these systems. It is notable that most of these systems were developed separately and for different purposes that reflect agency-specific missions and legal authorities.

The U.S. government's principal terrorist watch list system has been the DOS's TIPOFF system, which is classified. While the other members of the Intelligence Community have begun culling through their intelligence reports and producing additional lookout records, prior to September 11, 2001, the staff of INR's TIPOFF produced by far the lion's share of terrorist lookout records. For the purposes of visa issuance and border inspections, TIPOFF lookout records are loaded into two unclassified systems: CA's CLASS and DHS's IBIS.

CLASS is a computerized system used to manage visa applications, among other consular-related activities. Border inspectors use the IBIS system to process travelers entering the United States at international ports of entry.[507] Many

[507] In most cases, the U.S. Border Patrol — formerly part of the INS — does not have access to IBIS, since Border Patrol agents were and are responsible principally for monitoring territory between land border ports of entry, rather than screening travelers at ports of entry, as customs and immigration inspectors do. As a consequence, some apprehended aliens who are paroled, or

agencies compile watch lists for law enforcement and other purposes, which are also loaded into IBIS. Hence, inspectors act as agents of these agencies when processing travelers. As an integrated system, IBIS allows inspectors to seamlessly and simultaneously search several law enforcement and border management databases.

While data sharing between some of these systems is routine, with others it is not. For example, declassified lookout records are downloaded from TIPOFF and uploaded into the DOS CLASS system and the NAILS II, a legacy INS system that is currently maintained by DHS's ICE. Prior to TIPOFF's transfer, this was done weekly, but priority cases could be uploaded into IBIS within minutes if needed. At the TSC, it will be done daily, if not more often. In turn, NAILS II records are uploaded into TIPOFF, since immigration officers produce terrorist-related lookout records as well. It is likely that these practices will be continued at the TSC, but it is unknown how frequently or in what manner they will be accomplished. Until required to by the USA PATRIOT Act, the DOJ was unwilling to share criminal history records with the DOS, including terrorist lookout records contained in NCIC.

Merging watch lists will not likely require integrating entire systems. Nonetheless, there are likely to be other technological impediments. For example, from system to system, and watch list to watch list, there remains no standardization of data elements, such as, name, date of birth, place of birth, or nationality. In the past decade, digitized biometrics (principally fingerprints) have been used increasingly to identify individuals with greater certainty, but most biometric systems have been developed separately from other systems. Integrating data from biometric systems, such as IAFIS and IDENT, into either the TID or the TSDB could be technologically difficult and costly. Under HSPD-6, the TTIC director has been charged with the responsibility for setting uniform system standards for watch list records.

At the same time, while elevating and expanding the terrorist watch list function under HSPD-6 is an important step in the wider war on terrorism, specialists in the area of national security have observed that homeland (border) security could be improved by upgrading and integrating existing consular/immigration and border management systems, criminal record history systems, and biometric systems.[508]

---

released on their own recognizance, into the United States, are not checked against watch lists or criminal history record systems. Initiatives are underway to provide agents with lap top computers, which include access watch lists and other data in a SBU format, but most Border Patrol stations do not have access to IBIS for reasons of cost and logistics.

[508] Lee S. Strickland, J.D., and Jennifer Willard, M.L.S., "Reengineering the Immigration System: As Case for Data Mining and Information Assurance to Enhance Homeland Security," Homeland Security Journal, Oct. 2002, p. 9.

GAO Watch List Recommendations

In April 2003, the General Accounting Office (GAO) issued a report that included findings and several recommendations regarding terrorist watch lists. GAO found that at least nine agencies maintained 12 terrorist and criminal watch lists that were used principally for border security or law enforcement purposes. GAO reported that data sharing was hampered by incompatible system architectures — computer hardware, software, and networking. Therefore, GAO recommended that a central authority (leadership), spanning several departments and agencies, be made responsible for standardizing and consolidating watch lists. According to GAO, the new system should be developed to allow agencies to effectively carry out their missions by enforcing all relevant laws in their unique operational environments.[509] At a minimum, lookout records from at least some of these systems (described below) would likely be incorporated into the TSDB.

Of the 12 systems listed by GAO that include watch lists, nine are described below. Table 1 below lists these nine systems and the departments and agencies responsible for maintaining them. The systems that GAO listed, which are not described below, include the U.S. Marshals' "wants and warrants" file, the U.S. Air Force Office of Special Investigations' Top 10 Fugitive List, and U.S. Central Bureau for Interpol's terrorism watch list. These lists were not included in the treatment below because: the Marshals' wants and warrants file is incorporated into NCIC; the Air Force list is small by comparison to the rest; and Interpol records were reviewed by the FBI and INR for inclusion in NCIC and TIPOFF. At the TTIC, it is likely that Interpol records will continue to be reviewed for inclusion in the TID and, by extension, in the TSDB.

While not included in the GAO study, the Regional Information Sharing System/Law Enforcement Online (RISS/LEO) is described below, because state and local investigators support this system. Not only could RISS/LEO be used to share lookout records with state and local law enforcement, but investigative files could also be shared in some cases. In terms of biometric technology, two systems figure prominently, IAFIS and IDENT. Furthermore, Justice has recently built a biometric capability into NCIC. Brief mention is also given to State's Consolidated Consular Database, which serves as a central repository for all visa applications, including digitized visa photos and, in some cases, fingerprints.

TIPOFF[510]

---

[509] For further information, see GAO Report GAO-03-322, Information Technology: Terrorist Watch Lists Should Be Consolidated to Promote Better Integration and Sharing (Washington, Apr. 2003), p. 28.

[510] Briefing with DOS's Bureau of Intelligence and Research, Oct. 23, 2003.

TIPOFF is a classified computer lookout system, which was maintained by the DOS's INR to identify and watch-list known and suspected terrorists.[511] Created in 1987, it originally consisted of 3x5 index cards in a shoe box. TIPOFF staff used specialized computer search engines to systematically cull through all-source data, from highly classified central intelligence reports to intelligence products based on open sources, to identify known and suspected terrorists. These classified records are scrubbed to protect intelligence sources and methods, and biographic identifiers are declassified, and exported into lookout systems (CLASS and IBIS). Consular officers can query these records electronically in CLASS to deny visas to terrorists and their supporters. Immigration and customs inspectors query these records in IBIS to deny terrorists entry into the United States at international ports of entry.

Following the 1993 World Trade Center bombing, the Visa Viper process was established, as a dedicated/secure telegraphic channel that allows consular and intelligence officers to report known and suspected terrorists to INR for inclusion in TIPOFF. There are more than 120,000 records of terrorists and other criminals in TIPOFF, nearly double the number on September 11, 2001. Due to the use of aliases among terrorists, some of these records involve the same individuals. There are nearly 81,000 distinct individual terrorist names in TIPOFF.

Until recently, all subjects of TIPOFF records were non-U.S. persons — roughly speaking those persons who are not legal permanent residents (immigrants) or citizens of the United States. Under HSPD-6, the terrorist identification process currently performed by INR will be expanded and transferred to TTIC. A mirror image of INR's TIPOFF system has been built at TTIC to feed terrorist lookout records into a terrorist identities database (TID). Since September 11, 2001, other members of the Intelligence Community have combed through their products and case files to identify additional terrorists who should be excluded from entering the United States. As part of these efforts, records on U.S. persons (citizens and legal permanent residents) who are the subject of ongoing criminal or national security investigations will be entered into the TID as well. The process performed by INR of declassifying lookout records and exporting them to the appropriate consular, border security, and law enforcement agencies has been transferred to TSC.

Consular Lookout and Support System (CLASS)[512]

---

[511] For several years past, the INR was expanding TIPOFF to include records on known and suspected international criminals and drug traffickers as well. Under HSPD-6, this function will remain at INR.

[512] Briefing with DOS's Bureau of Consular Affairs, Oct. 23, 2003.

The CLASS system is the DOS's principal unclassified lookout database that is used by consular officers abroad to check the names of visa and passport applicants against several watch lists that are maintained for various purposes, including screening known and suspected terrorists. While the DOS has maintained an automated visa lookout system since 1970, the development of CLASS was accelerated after the first World Trade Center bombing and the conspiracy to blow up the Holland and Lincoln Tunnels, and the United Nations Headquarters, in New York City.[513]

In terms of name recognition, the CLASS system is the most advanced lookout system currently maintained by the federal government. It includes a compressed name search capability, as well as sophisticated Arabic, Russian/Slavic, East Asian, Hispanic, date of birth, and country of birth algorithms. The language algorithms, for example, search for variations in name spelling based on the phonetic transliteration of names from other languages into the Roman alphabet. The algorithm scores the searches to arrange them in order of likelihood of a match. All consular posts can directly access CLASS online. There are about 15.4 million records in CLASS, including 90,000 records on suspected or known terrorists and their supporters.[514]

National Automated Immigration Lookout System II (NAILS II)[515]

The NAILS II system is the lookout system formerly maintained by INS, until that agency was dismantled and its constituent parts were transferred to DHS. Today, NAILS II is maintained by the DHS's ICE. NAILS II contains about 3.8 million files, including biographical and case data on persons who may be inadmissible or are being sought by immigration officers for other reasons related to immigration enforcement. Of these files, 58,000 files concern suspected or known terrorists and their supporters. The NAILS II system can be searched by name, variations on the name, alien registration number, and date of birth. The name recognition technology in NAILS II is Soundex, a technology that

[513] The case of Sheikh Omar Abdel Rahman is illustrative. He had been implicated in the assassination of Egyptian President Anwar Sadat in 1981 and watch-listed, yet he was issued a visa in Khartoum, Sudan. At the time, the Khartoum consulate lookout records were on microfiche and there were several variations of Rahman's name. He was convicted for his part in the conspiracy to blow up the Holland and Lincoln Tunnels, and the United Nations Headquarters, in New York City.

[514] CLASS data on immigrant and nonimmigrant visa holders are downloaded several times daily into IBIS through NAILS II and the Treasury Enforcement Communications System II (TECS II), which are both maintained currently by DHS.

[515] Mark T. Kenmore, "Update on U.S. Ports of Entry," Immigration & Nationality Law Handbook, 2002-2003 Edition, vol. 1 (Washington, 2002), p. 257.

was patented some 100 years ago.[516] Lookout records are downloaded from TIPOFF and uploaded into NAILS II on an hourly basis, and from NAILS II into CLASS on a weekly basis, or as needed. At the TSC, this process will be performed daily.

Interagency Border Inspection System (IBIS)[517]

The IBIS system, an unclassified system, was maintained by the Department of the Treasury's U.S. Customs Service, until Customs was transferred to DHS. INS was also a major stakeholder in this system, since both Customs and Immigration inspectors screen aliens for admission into the United States at ports of entry.

The IBIS system was congressionally mandated by the Omnibus Drug Initiative Act of 1988[518] in order to share lookout records maintained separately by INS, State, and Customs. The Customs Service supported about 17 different watch lists by downloading lookout records from other agencies into the IBIS. IBIS provides inspectors with the ability to perform a single, all purpose query in the primary inspection lanes.[519] If the system generates a hit, the inspector diverts the traveler to secondary inspection for additional clearance procedures. Developed by the Customs Service, IBIS utilizes the pre-existing TECS II. Today, TECS II and IBIS are maintained by the CBP at DHS.[520]

IBIS exchanges data with CLASS and several immigration systems, including the NAILS II (described above) and the Deportable Alien Control System (DACS), among others. It also allows inspectors to access the FBI's NCIC and National Law Enforcement Telecommunications System (NLETS), as well as the Drug Enforcement Administration's Narcotics and Dangerous Drugs Identification System (NADDIS). The Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), U.S. Secret Service, Internal Revenue Service, and the Royal Canadian Mounted Police (RCMP) also provide lookout records for inclusion in IBIS. Law enforcement and regulatory personnel from 20 other federal agencies use IBIS.

---

[516] Dr. John C. Hermansen, Name-Recognition Technology Aids the Fight Against Terrorism, Journal of Counterterrorism & Homeland Security International (winter 2003), p. 2.

[517] Briefing with the U.S. Customs Service, Nov. 16, 2001.

[518] §4604 of P.L. 100-690, 102 Stat. 4289.

[519] In is notable that at land border ports of entry during primary inspections, the border inspectors do not enter the names and other pertinent biographic identifiers of border crossers who arrive in private conveyance into IBIS. Instead, the inspectors enter vehicle license plate numbers into IBIS and visually scan the border crossers' travel documents.

[520] Under an administrative reorganization within the DHS, INS enforcement programs were merged with Customs, and reconstituted as the CBP and the ICE. Both Customs and Immigration Inspectors are now part of CBP.

In addition, the Advanced Passenger Inspection System (APIS) was grafted onto IBIS to establish alien entry/exit control in the airport environment (as opposed to land border and sea ports). As required by the Border Security Act (P.L. 107-173), the DHS has rolled out the U.S. VISIT program, a newly developed automated entry/exit control system that includes scanners and readers to verify and collect biometric information on foreign travelers.[521] Under the U.S. VISIT program, IBIS and the APIS interface with two systems with biometric capabilities, IDENT and the Consular Consolidated Database.

As in NAILS II, the name search capability in IBIS is Soundex. While IBIS is considered superior to NAILS II in terms of systems performance and name recognition, it is not considered as robust as the CLASS system in terms of certain search functions. There are about 16 million records in IBIS, including nearly 80,000 records on known and suspected terrorists. In regard to IBIS another key issue for Congress is systems availability. There have been press accounts that IBIS has been inaccessible at certain ports of entry for extended periods of time, during which allegedly foreign travelers were not screened against watch lists.[522]

Computer Assisted Passenger Profiling System (CAPPS)[523]

TSA administers the CAPPS system, a classified system, which includes a "selectee" process and a "no fly" list. The operational concept underlying CAPPS is to select "high-risk" travelers based on ticket purchasing patterns, among other things, for greater scrutiny in terms of body and baggage searches, while expediting processing for "low-risk" travelers. The "selectee" process is the core of CAPPS. It was authorized in the 1996 Federal Aviation Administration Act.[524] The system was mandated in 1999 by the Federal Aviation Administration, prior to the establishment of TSA, to promote aviation security following several aircraft bombings. In addition, the Aviation and Transportation Security Act[525] authorized the development of a "no fly" list, which is essentially a list of persons who are prohibited from boarding a commercial aircraft for a host of reasons. The actual system, however, was developed and is managed by the airline industry.

---

[522] Alfonso Chardy, "Airport Terrorist Database Often Offline; Official Says Backups Are In Place to Prevent Disaster," Miami Herald, Mar. 8, 2002, p. B1.

[523] Federal Register, Aug. 1, 2003, p. 45265.

[524] P.L. 104-848.

[525] See 49 U.S.C. §114(h)(3), or §101 of P.L. 107-71, 115 Stat. 597.

More recently, TSA has been testing a second generation system, CAPPS-II, that, among other things, uses sophisticated algorithms to data mine (search) government and proprietary (commercial) databases to acquire limited background information on air travelers to authenticate their identity. Critics point out that terrorists could "beat" the system by adopting another person's identity. They point to the increasing frequency and ease with which criminals engage in identity fraud. In addition, the system will assign travelers a color coded categorical risk assessment.[526]

- Green-coded passengers would not be considered a risk and would only be subject to basic screening procedures — metal detectors and baggage x-rays.
- Yellow-coded passengers would be deemed either unknown or possible risk, and would be subject to extra screening procedures — bag and body searches.
- Red-coded passengers would be considered high risk and would not be allowed to travel, and law enforcement officials would be notified of their attempts to board commercial aircraft.

Critics, however, decry the cloak of secrecy under which TSA is developing CAPPS II. They assert that identity-based profiling under CAPPS II would result in a loss of privacy that would not be counterbalanced by a corresponding increase in security. Because of these fears, others maintain that transparency is vital to the system's further development and success.[527] Some legal scholars also question whether it would be permissible to prevent a person from boarding an aircraft on a mere suspicion of organizational affiliation.[528]

Congress, meanwhile, included Section 519 in the FY2004 Homeland Security Appropriations Act,[529] which prohibits the expenditure of any funding provided under that act to deploy or implement this new system until it has been evaluated by GAO. Since then, GAO has reported that the development of this system is behind schedule, and TSA has encountered major impediments in testing CAPPS II. In particular, the European Union and commercial airlines have been reluctant to hand over crucial data because of privacy concerns. Moreover, GAO underscored that the CAPPS II, as designed, would be vulnerable to terrorists

who adopted (stole) another person's identity.[530] TSA anticipates that CAPPS-II will be integrated with USVISIT, DHS's newly developed automated entry/exit control program.[531] Such a measure would introduce a biometric component into the CAPPS-II process for noncitizens, so that their identities could be confirmed with greater certainty.

National Crime Information Center (NCIC)[532]

The FBI maintains the NCIC, a national computer database for criminal justice records. NCIC is linked to an index system — the Interstate Identification Index (III), which points authorized law enforcement authorities to federal, state, and local criminal records. In 1999, NCIC 2000 was brought online by the FBI. Major improvements built into NCIC 2000 include an improved name search capability, digitized right index finger prints and mug shots, other digitized images (tatoos, scars, or stolen vehicles), a sexual offenders file, an incarcerated persons file, a convicted person on supervised release (probation or parole) file, user manuals on line, information linking capabilities, online system support, and other improvements.

Another major enhancement associated with NCIC 2000 is the ability for patrol officers to receive and send data to the system from their patrol cars or other temporary locations with laptop computers, hand-held fingerprint scanners, or digital cameras. The total budget to develop NCIC 2000 was about $183 million.[533] For FY2003, about $36 million was allocated by the FBI to administer and maintain NCIC 2000.

NCIC 2000 gives law enforcement officers access to over 43 million records: 41 million criminal history records and 2.5 million hot files. Hot files would include lookouts on suspected and known terrorists, which are included in the Violent Gang and Terrorist Organization File (VGTOF). As in IBIS and NAILS II, however, the name recognition technology in NCIC 2000 is Soundex, which is not nearly as robust as the name recognition technologies built into CLASS. For example, the length of the name field in NCIC is only 28 characters, while it is over 80 in CLASS.[534]

[534] Briefing with DOS's Bureau of Intelligence and Research, Oct. 23, 2003.

For years, Justice denied the DOS access to NCIC on the grounds that CA was not a law enforcement agency, but State was given authority to access NCIC in the USA PATRIOT Act.[535]

As of August 2002, between 7 to 8 million files on non-U.S. persons with FBI criminal records were added to CLASS from NCIC.[536] When Customs and Immigration inspectors query IBIS in the primary inspection lanes, the system queries NCIC's hot files like the U.S. Marshal Service's want and warrants file and the VGTOF, but full criminal background history checks are only performed when travelers are diverted into secondary inspections for certain irregularities or suspicious behavior. Under HSPD-6, NCIC is the platform on which additional terrorist screening records from the TSC's TSDB have been disseminated to duly authorized state, local, territorial, and tribal law enforcement agencies.[537]

Regional Information Sharing System/Law Enforcement Online[538]

The Regional Information Sharing System (RISS) is an unclassified, but secured web-accessible system of six regional computer networks that were established to share state and local investigative data involving criminal gangs and drug trafficking.[539] RISS is funded through the DOJ Office of Justice Programs, but is administered and operated jointly by several state agencies.

Section 701 of the USA PATRIOT Act[540] amends the Omnibus Crime Control and Safe Streets Act of 1968 to authorize the use of RISS to share investigative data that might involve potential terrorist conspiracies and activities. As required by law, criminal files included in RISS must be based on "probable cause" that the subjects of the file have committed, or are about to commit, a crime.[541] While a

cigarette bootlegging conspiracy, for example, may appear to have no terrorism nexus, by analyzing investigative data in RISS, other patterns of criminal or terrorist activity may emerge.

Law Enforcement Online (LEO) is a secured web-accessible portfolio of applications and information sources made available by the FBI to state and local law enforcement agencies. More recently, RISS has been merged with the FBI's LEO system. The RISS/LEO merger will facilitate federal/state communications on a secured/web accessible system, as opposed to older teletype systems like the NLETS.[542]

Through RISS/LEO, the FBI will distribute to state and local law enforcement agencies selected open source (unclassified) reports, as well as sensitive but unclassified law enforcement reports. RISS/LEO enjoys considerable support among state and local law enforcement agencies as a user-friendly and web-accessible system.

Biometric Systems for Identity Verification

"Biometrics" are physical characteristics or personal traits of an individual used to identify him, or verify his claim to a certain identity. Examples of biometrics include fingerprints, facial and hand geometry, iris and retina scans, voice recognition, and handwritten signatures. While most biometric technologies have only been developed in the past 10 to 15 years, fingerprints have been used by law enforcement to verify identity for the past century. For these purposes, the FBI maintains the Integrated Automated Fingerprint Identification System (IAFIS), an automated 10-fingerprint matching system that captures rolled prints. All 50 states are connected to IAFIS. With over 47 million sets of fingerprints, it is the largest biometric database in the world.[543]

In 1995, the INS piloted the Automated Biometric Fingerprint Identification System (IDENT) in California. In the following year, IDENT was deployed to over 34 sites on the Southwest border, and over 3,000 criminal aliens were identified attempting to enter the United States. IDENT is a two flat fingerprint system that includes prints of 4.5 million aliens who have been (1) apprehended while attempting to enter the United States illegally between ports of entry or allowed to withdraw their application for admission at a port of entry (4 million records), (2) previously apprehended (300,000 records), or (3) convicted of aggravated felonies (240,000).

---

activity engaged in by an individual who or organization which is reasonably suspected of involvement in criminal activity."

[542] Dizard, "All-Points Bulletin: FBI and Justice Link," p. 1.

[543] U.S. General Accounting Office, Technology Assessment: Using Biometrics for Border Security, GAO-03-174, Nov. 2002, p. 149.

Some Members of Congress, particularly those serving on the Appropriations Committees, were concerned that two incompatible fingerprint identification systems were being developed within the DOJ. This issue became heated following revelations that the INS had apprehended a suspected murderer, Rafael Resendez-Ramirez, but allowed him to voluntarily return to Mexico. Resendez-Ramirez subsequently reentered the United States and committed four additional murders. Language in the FY2000 Commerce-Justice-State appropriations act expressed dismay that other federal, state and local law enforcement officers did not have access to IDENT data. In response, the Attorney General put the IDENT/IAFIS migration project under the supervision of Justice Management Division (JMD).

JMD conducted several pilot programs, which examined the feasibility of interchanging data between the two systems.[544] For example, IAFIS data for individuals in the "wants and warrants" file was downloaded into IDENT. JMD also developed an IDENT/IAFIS workstation that allowed Border Patrol agents and immigration inspectors to run IDENT prints against IAFIS. This system had a 10 minute response time and required agents to process each apprehended person twice, once under IDENT and again through the IDENT/IAFIS work station.

In addition, JMD conducted a criminality study, which examined IDENT records from the 1998 through mid-2000 time frame and found that about 8.5 % of those individuals had some notable charge placed against them.[545] The transfer of the components of the former INS to the DHS, however, has hampered this project. According to the DOJ Office of the Inspector General, despite a delay of two years, a partially integrated version of the IDENT/IAFIS system was available for deployment in December 2003. Full integration and deployment of the system,

---

[544] IDENT is instrumental in identifying how many times an alien has been apprehended. According to the DOJ, however, there are legal concerns, about entering such data into criminal databases like IAFIS for aliens who may have attempted to enter the United States illegally, but were not convicted of a criminal violation. Indeed, most aliens attempting to enter the United States illegally between ports of entry are apprehended up to five to seven times before they are charged with misdemeanor illegal entry. If they are subsequently apprehended, they are charged with felony reentry.

[545] U.S. Department of Justice, Federal Bureau of Investigation, Criminal Justice Information Services (CJIS) Division, "DOJ Agencies Team Up To Improve The Security At U.S. Borders," The CJIS Link (Clarksburg, WV, spring 2002), p. 2.

however, may extend past FY2008.[546] Meanwhile, about 4,500 FBI fingerprint files of known or suspected terrorists have been entered into IDENT.[547]

The DOS, meanwhile, has established the capacity at consular posts abroad to capture electronic records of nonimmigrant visas, including digitized visa photos, which are transmitted and replicated in State's Consolidated Consular Database. In FY2001, DOS and INS conducted a pilot nonimmigrant visa data-sharing program at the Newark International Airport. As part of this program, nonimmigrant visa records were transmitted to IBIS, including digitized photos. These visa photos are useful for identity verification, and reportedly this capability has been deployed at all air ports of entry.

In addition, the DOS has begun testing facial recognition (biometric) technologies with nonimmigrant visa photos as a means to verify identity as well, but these technologies are less mature than those using fingerprint. As a biometric measurement for nonimmigrant visa applicants, however, the DOS strongly favors facial recognition to fingerprints, because it does not require the applicant to submit to an active measurement procedure. In addition, facial recognition biometric measurements can be derived from photos and videotape gathered by the intelligence community in order to identify known terrorists and other persons who may be excludable from the United States for national security reasons.

HSPD-6 directs that the TTIC's TID and the FBI domestic terrorist database incorporate all available biometric data, to the extent permitted by law, including data on persons yet to be identified (e.g., latent prints gathered at a crime scene or the caves of Afghanistan). In addition, these systems are to be designed so that new advancements in biometrics technology can be incorporated into them.

Possible Issues for Congress

While watch lists have long been maintained by law enforcement and border security agencies, the Administration's plans to expand these lists and widen their dissemination raises issues related to individual privacy and the security of the nation. For Congress, several immediate issues have emerged or may emerge, including the following:

- Has the transfer of the TIPOFF terrorist identification function to TTIC and TIPOFF terrorist watch list function to the TSC been accomplished without degrading the capabilities of other governmental entities charged

---

[546] U.S. Department of Justice, Office of the Inspector General, Report No. 1-2003-005, Status of IDENT/IAFIS Integration, (Washington, Feb. 2004), p. 11.

[547] Ibid., 18.

with identifying, screening, and tracking known and suspected terrorists? If not, how and in what way has the system been improved?

- How operational is the TSC at this time? Will the TSDB be fully integrated ("dynamically linked") with the visa issuance, border inspection, commercial aviation security systems by the end of CY2004? Has the Administration committed enough resources to create a single, fully integrated TSDB?
- With the bulk of the Nation's terrorism-related lookout records in a single, integrated TSDB, what measures have and will be taken to insure the security of the TSDB?
- Will the TSC Director have a role in evaluating the security and adequacy of the systems used by screening agencies?
- What measures have been or will be taken to improve the name search capabilities of NCIC and IBIS?
- How expeditiously will the TSC be able to respond to terrorist-related NCIC hits made by state and local law enforcement officers? Is there a bench mark for how long such persons can be stopped for questioning?
- If persons identified as known or suspected terrorists, or their supporters, are not arrested or detained, what governmental entities will be notified of their presence in the United States? What measures will be taken to monitor their whereabouts and activities while in the United States? What other actions might be taken by those to whom the information is disseminated?
- What is the criteria for including persons in the TSDB as suspected or known terrorists, or their supporters? Will sufficient safeguards be put in place to protect constitutional rights? Should policies and guidelines regarding the inclusion of such persons in the TSDB be made public?
- What redress is or will be available to an individual wrongly placed on a watch list? Will there be a formal appeals process? If so, what agency will handle this process?
- What mechanisms will be put in place to audit system users to determine whether they are abusing the system? Should there be associated civil or criminal penalties for such abuse?
- Should Congress consider requiring a statutory authorization for the TSC, the consolidated TSDB, and related activities as a means of assuring greater accountability?
- Are there cultural or tradecraft issues related to information sharing that the FBI and other agencies will need to overcome in order to more effectively share information and properly manage lookout records for other agencies?
- Would the database and watch list functions be better located and consolidated in a single Executive Branch agency with clearer lines of authority and responsibility?
- Finally, are the TSC and TSDB, and by extension the TTIC, temporary or permanent solutions?

Conclusion

There is an emerging consensus that the U.S. intelligence and law enforcement community missed several vital opportunities to watch-list and screen several conspirators involved in the September 11, 2001 terrorist attacks. Under HSPD-6, the Bush Administration has taken steps to elevate and expand terrorist identification and watch-list functions. These measures, if effectively implemented, will better equip the U.S. government to screen and monitor the whereabouts of known and suspected terrorists, and their supporters. Furthermore, working from common terrorist identities and watch list databases could be an effective mechanism to break down institutional and cultural firewalls and promote greater interagency cooperation and data sharing.

Conversely, as the U.S. government pursues a more aggressive policy in identifying and watch-listing known and suspected terrorists, and their supporters, there is significant potential for a corresponding loss of privacy and an erosion of civil liberties. While the Administration asserts that such information will be collected according to preexisting authorities and individual agency policies and procedures, it is inevitable that individuals will be misidentified. In such cases, most would agree that it will be incumbent upon the U.S. government to act swiftly to correct such mistakes, and perhaps compensate those individuals for their inconveniences or possible damages.

Establishing a TSDB by merging watch lists will not likely require integrating entire systems. Nonetheless, there are likely to be technological impediments to merging watch list records. From system to system, and watch list to watch list, there remains no standardization of data elements, such as, name, date of birth, place of birth, or nationality. In the past decade, moreover, digitized biometrics (principally fingerprints) have been developed to identify individuals with greater certainty, but most biometric systems have been developed separately from other systems. Integrating data from biometric systems into either the TID or the TSDB could be technologically difficult and costly.

Under HSPD-6, the Administration has established the TSC as a "multi-agency effort." At the same time, establishing a consolidated TSDB and effectively disseminating lookout records to screening agencies, including state and local law enforcement, is not likely to be a small or short-term endeavor. At this time, congressional input into this process is confined to oversight by several congressional committees and appropriating funding to several participating agencies.

Appendix A. Frequently Used Abbreviations

To aid the reader, the following list of abbreviations is provided.

APIS - Advanced Passenger Information System
CA - Bureau of Consular Affairs
CAPPS - Computer Assisted Passenger Profiling System

CIA - Central Intelligence Agency

Summary

Considerable controversy continues to surround U.S. air passenger prescreening and terrorist watchlist checks. In the past, such controversy centered around diverted international flights and misidentified passengers. Another issue surfaced on Christmas Day 2009, when an air passenger attempted to ignite an explosive device on a Detroit-bound flight from Amsterdam. Although U.S. counterterrorism officials reportedly had created a record on the air passenger in the Terrorist Identities Datamart Environment (TIDE), which is maintained at the National Counterterrorism Center (NCTC), it does not appear that the NCTC ever nominated him for entry into the U.S. government's consolidated Terrorist Screening Database, which is maintained at the Terrorist Screening Center. Therefore, he would not have been placed on watchlists used by front-line, air passenger prescreening agencies, principally the Department of Homeland Security (DHS), Transportation Security Administration (TSA), and Customs and Border Protection (CBP).

Under Homeland Security Presidential Directive 6, the Terrorist Screening Center (TSC) was established as a multiagency collaborative effort administered by the Federal Bureau of Investigation (FBI). The TSC maintains a consolidated Terrorist Screening Database (TSDB). The TSC distributes TSDB-generated

terrorist watch lists to frontline screening agencies that conform with the missions and legal authorities under which those agencies operate. In addition, the TSC has developed comprehensive procedures for handling encounters with known and suspected terrorists and their supporters, and provides terrorist screening agencies with aroundthe-clock operational support in the event of possible terrorist encounters.

CBP uses the Advanced Passenger Information System (APIS) to capture personal identity and travel information on international travelers (both citizens and noncitizens) from passenger manifests provided by air carriers and vessel operators. For the purposes of both border and transportation security, CBP vets that information in most cases prior to departure against several terrorist watchlists that are subsets of the TSDB. More recently, TSA has positioned itself through the Secure Flight program to receive similar data through the DHS APIS portal to vet domestic aircraft and vessel passengers against terrorist watch lists, also prior to departure. In time, TSA will assume from CBP transportation security-related terrorist watch list vetting for international aircraft and vessel passengers as well.

In addition, both CBP and TSA capture selected elements of passenger name record (PNR) information that is used to focus inspection and screening resources more efficiently on high-risk individuals at either international ports of entries upon arrival at a U.S. port of entry or at airport security checkpoints prior U.S. air carrier flights. For these purposes, CBP administers the Automated Targeting System-Passenger and TSA administers the Computer-Assisted Passenger Prescreening System. Furthermore, to handle and resolve the complaints of passengers and meet these statutory requirements, the DHS has established the DHS Traveler Redress Inquiry Program (TRIP) as a mechanism for addressing watchlist misidentification issues and other situations where passengers feel that they have been unfairly or incorrectly delayed or denied boarding.

Congress addressed related terrorist watch-listing and screening issues in the Implementing Recommendations of the 9/11 Commission Act of 2007 (P.L. 110-53) and the Intelligence Reform and Terrorism Prevention Act (P.L. 108-458). In the 111th Congress, the House passed the FAST Redress Act of 2009 (H.R. 559), a bill that addresses air passenger watch list misidentifications.

Introduction

Considerable controversy surrounds U.S. air passenger prescreening processes and terrorist watchlist checks. On Christmas Day 2009, an air passenger, Umar Farouk Abdulmutallab, allegedly attempted to ignite an explosive device while traveling from Amsterdam on board a Detroit-bound commercial airliner (Northwest Airlines Flight 253). Based on a tip provided by Abdulmutallab's father, U.S. counterterrorism officials reportedly had created a record on Abdulmutallab in mid-November in the Terrorist Identities Datamart

Enviornment (TIDE), which is maintained at the National Counterterrorism Center (NCTC).[548] It does not appear, however, that the NCTC ever nominated Abdulmutallab for entry into the U.S. government's consolidated Terrorist Screening Database, which is maintained by the Federal Bureau of Investigation (FBI) at the Terrorist Screening Center. Therefore, he would not have been placed on the Transportation Security Administration (TSA) "No Fly" list or any other watchlist used by other front-line screening agencies. Consequently, this incident has generated questions about "watch-list" procedures. Although those procedures are largely classified, this report provides an overview of recent efforts to improve terrorist watchlist checks and air passenger prescreening.

The incident also raises a new policy issues regarding the interaction between these broader terrorist databases and systems and the "No-Fly" and selectee lists maintained by the Transportation Security Administration (TSA) for prescreening airline passengers, as well as the relationship between passenger prescreening processes and screening procedures to detect explosives and other threat items at airport checkpoints.[549]

Background: HSPD-6 and Terrorist Screening

In September 2003, then-President George W. Bush issued Homeland Security Presidential Directive 6 (HSPD-6), establishing a Terrorist Screening Center to consolidate the U.S. government's approach to terrorist watch-listing and screening.[550] To this end, certain terrorist identification and watchlist functions, which were previously performed by the Department of State's (DOS's) Bureau of Intelligence and Research (INR), were transferred to the newly established Terrorist Screening Center and the Terrorist Threat Integration Center (TTIC)—today the National Counterterrorism Center (NCTC).

NCTC and Terrorist Identification

The NCTC serves as the central hub for the fusion and analysis of information collected from all foreign and domestic sources on international terrorist threats. Under the Intelligence Reform and Terrorism Prevention Act of 2004 (P.L. 108-458), the NCTC was placed under the newly created Office of the Director of National Intelligence (ODNI). Prior to this legislation and HSPD-6, however, the nation's principal international terrorist watchlist, known as TIPOFF, was

[550] The White House, Homeland Security Presidential Directive/HSPD-6, Subject: Integration and Use of Screening Information (Washington, September 16, 2003).

maintained by DOS's INR.[551] Under HSPD-6, TIPOFF was officially transferred to the TTIC on September 16, 2003. Nearly a year later, the President established the NCTC by executive order on the foundations of the TTIC.[552] The NCTC continued TTIC's efforts to establish a much more expansive database on international terrorists.

Based partly on TIPOFF, the NCTC currently maintains a Terrorist Identities Datamart Environment (TIDE)—designated under HSPD-6 to be the single repository into which all international terrorist-related data available to the U.S. government are stored. In February 2006, TIDE included over 325,000 terrorist-related records.[553] By August 2008, TIDE had grown to "more than 540,000 names, but only 450,000 separate identities because of the use of aliases and name variants."[554] Less than 5% of those records purportedly pertain to U.S. persons (i.e., citizens or legal permanent residents of the United States).[555]

An effective watchlist process is contingent on Intelligence Community[556] agencies sharing information on known and suspected international terrorists and their supporters with NCTC and, in turn, the NCTC nominating those persons for inclusion in the U.S. government's consolidated terrorist screening database (see Figure 1 above).

---

[551] Prior to HSPD-6, INR-generated TIPOFF records were distributed to DOS's Bureau of Consular Affairs (CA), as well as to border screening agencies, for inclusion in the Consular Lookout and Support System (CLASS), the Interagency Border Inspection System (IBIS), and the National Automated Immigration Lookout System (NAILS). For further information, see CRS Report RL31019, Terrorism: Automated Lookout Systems and Border Security Options and Issues, by William J. Krouse and Raphael Perl. [556] The Intelligence Community includes the Central Intelligence Agency (CIA); the National Security Agency (NSA); the Defense Intelligence Agency (DIA); the National Geospatial-Intelligence Agency (GIA); the National Reconnaissance Office (NRO); the other DOD offices that specialize in national intelligence through reconnaissance programs; the intelligence components of the Army, Navy, Air Force, and Marine Corps, the FBI, the Department of Energy, and the Coast Guard; the INR at the DOS, the Office of Intelligence and Analysis at Department of the Treasury, and elements of the DHS that are concerned with the analyses of foreign intelligence information (50 U.S.C. §401a(4)).

TSC and Terrorist Watch-Listing and Screening

For the purposes of watch-listing, the FBI-administered Terrorist Screening Center (TSC) maintains the consolidated Terrorist Screening Database (TSDB). The NCTC provides international terrorism data and the FBI provides domestic terrorism data for inclusion in the TSDB. Both sets of data are merged in the consolidated TSDB maintained by the TSC. According to the FBI, international terrorists include those persons who carry out terrorist activities under foreign direction. For this purpose, they may include citizens or noncitizens, under the rationale that citizens could be recruited by foreign terrorist groups. Or noncitizens (aliens) could immigrate to the United States and naturalize (become citizens), having been unidentified terrorists before entry, or having been recruited as terrorists sometime after their entry into the United States.

By comparison, domestic terrorists are not under foreign direction and operate entirely within the United States. According to the Administration, both sets of data (on international and domestic terrorists) will include, when appropriate, information on "United States persons."[557] Criteria for the inclusion of U.S. persons in the database was developed by an interagency working group. The term "United States persons" includes U.S. citizens and legal permanent residents (immigrants). In June 2005, DOJ OIG issued an audit, reporting that the TSC had established a single consolidated TSDB, as recommended by GAO,[558] but with some difficulties.[559] Among other things, the TSDB had not been completely audited to ensure that its records were complete and accurate.

As of September 2008, the TSDB contained 400,000 individual identities, of which 3% are U.S. persons.[560] Due to aliases and name variants, however, the TSDB includes over one million records on those individuals.[561] The TSC

---

[557] The definition of "United States person" is found at 50 U.S.C. §1801(i): a citizen of the United States, an alien lawfully admitted for permanent residence (as defined §1101(a)(2) of Title 8), an unincorporated association a substantial number of members of which are citizens of the United States or aliens lawfully admitted for permanent residence, or a corporation that is incorporated in the United States, but does not include a corporation or an association that is a foreign power, as defined in subsection (a)(1), (2), or (3) of this section.

[561] Ibid.

distributes TSDB-generated terrorist watchlists to frontline screening agencies that conform with the missions and legal authorities under which those agencies operate. Consequently, these watchlists (e.g., the TSA's No Fly and Automatic Selectee lists) are in some cases only subsets of the TSDB.

In addition, the TSC has developed comprehensive procedures for handling encounters with known and suspected terrorists and their supporters, and provides terrorist screening agencies with around-the-clock operational support in the event of possible terrorist encounters. For example, TSDB-generated lookout records were and are currently being disseminated to state, local and tribal law enforcement officers through the National Crime Information Center (NCIC, see Figure 1 above). The unclassified portion of some, but not all, TSDB-generated lookout records (name, date of birth, passport number, and country of origin) are loaded into the NCIC's Violent Gang and Terrorist Offender File (VGTOF). Similar look out records are also shared with the Department of Defense and selected foreign governments. In addition, the TSC supports the terrorist screening activities of TSA and U.S. Customs and Border Protection (CBP), as well as the Department of State's Bureau of Consular Affairs (CA).

9/11 Commission and Integrated Terrorist Travel Strategy

In July 2004, the National Commission on Terrorist Attacks upon the United States (9/11 Commission) made air passenger prescreening- and terrorist travel-related findings and recommendations in its final report. Shortly thereafter, the TSA unveiled the "Secure Flight" domestic air passenger prescreening program (described below),[562] and the Administration issued Homeland Security Presidential Directive 11 (HSPD-11), calling for "comprehensive terrorist-related screening procedures."[563]

Among other things, the 9/11 Commission concluded that disrupting terrorist travel was as powerful a weapon as targeting their money.[564] The 9/11 Commission found, however, that prior to the 9/11 attacks, the intelligence community did not view watch-listing as integral to intelligence work.[565] To prevent future terrorist attacks, the 9/11 Commission recommended that the

United States expand terrorist travel intelligence and countermeasures,[566] and that the U.S. border security systems be integrated with other systems to expand the network of screening points to include the nation's transportation systems and access to vital facilities.[567]

To increase aviation security, the 9/11 Commission recommended that Congress and TSA give priority to screening passengers for explosives.[568] At a minimum, the 9/11 Commission recommended that all passengers referred to secondary screening be thoroughly checked for explosives.[569] Arguably, this necessitates a robust process to carefully select only those passengers believed to pose the greatest risk to aviation security, while minimizing false positives. To improve air passenger prescreening, the 9/11 Commission recommended that

- the "no-fly" and "automatic selectee" watchlists used to screen air passengers be improved without delay;
- the actual screening process be transferred from U.S. air carriers to TSA;
- air passengers be screened against the larger set of U.S. government watchlists (principally the TSDB); and
- air carriers be required to supply the needed information to test and implement air passenger prescreening.[570]

As described below, both the Administration and Congress acted to implement the 9/11 Commission's recommendations and establish an integrated strategy to disrupt terrorist travel, but the results to date have been mixed.[571]

CBP and TSA and International Air Passenger Prescreening

At air and sea ports of entry, CBP uses the Advanced Passenger Information System (APIS) to capture personal identity and travel information on international travelers (both citizens and noncitizens) from passenger manifests provided by air carriers and vessel operators. For the purposes of both border and transportation security, CBP vets that information in most cases prior to

departure against several terrorist watchlists that are subsets of the TSDB. In addition, both CBP and TSA capture selected elements of passenger name record (PNR) information that is used to focus inspection and screening resources more efficiently on high-risk individuals at either international ports of entries upon arrival at a U.S. port of entry or at airport security checkpoints prior U.S. air carrier flights. For these purposes, CBP administers the Automated Targeting System-Passenger and TSA administers the Computer-Assisted Passenger Prescreening System.

Under current practice, airlines transfer manifest data through CBP's APIS several times prior to departure as it becomes available; however, final advanced passenger information (API) data were sometimes not transferred until after the flight has departed (wheels up). In several cases, known and suspected terrorists have been allowed to board aircraft at airports abroad and, subsequently, this led to costly diversions when air carriers were prevented from entering U.S. airspace or continuing to their destinations. Several of these incidents generated significant press coverage in 2004.[572] As described below, CBP issued new regulations (effective February 18, 2008) that require all international air carriers and vessel operators to provide CBP with API data in advance of an aircraft's departure.

More recently, TSA has positioned itself through the Secure Flight program to receive similar data through the DHS APIS portal to vet domestic aircraft and vessel passengers against terrorist and other watchlists, also prior to departure. As originally conceived, the Secure Flight program included an element to select passengers for greater screening at passenger checkpoints based on certain characteristics gleaned from API and PNR data. This element of Secure Flight was modeled to some extent on a controversial program known as the Computer-Assisted Passenger Prescreening System (CAPPS), but is similar to CBP's Automated Targeting System (ATS). Both systems are described below. Although TSA has scrapped this element from its Secure Flight plan, there are no plans to discontinue CAPPS. In addition, under the Secure Flight program, TSA will assume from CBP in time transportation security-related terrorist watchlist vetting for international aircraft and vessel passengers as well.

CBP's National Targeting Center (NTC) confers with TSC representatives to resolve potential watchlist matches. Despite close cooperation between CBP's NTC and the FBI-administered TSC, as has been the case for TSA and domestic flights, CBP misidentifications on international flights have also generated some

A10; and "US-Bound Air France Flight Diverted Due to Passenger," Agence France Presse, November 21, 2004.

controversy.[573] Despite these difficulties, the 9/11 Commission made several recommendations to increase such data sharing and strengthen air passenger prescreening against TSC-maintained watchlists. Some of these were reflected in provisions that Congress included in the Intelligence Reform and Terrorism Prevention Act (P.L. 108-458). The air passenger prescreening provisions in this law are discussed generally below.

CBP and Advanced Passenger Information System (APIS)

CBP administers APIS to allow international air carriers and vessel operators to transmit data collected from aircraft and ship manifests on passengers and crew members in an electronic format to the CBP Data Center. API data includes both personal identity information and other travel information. Personal identity information is usually collected electronically by air carriers and vessel operators, as well as travel agents, from the Machine Readable Zone (MRZ) on a person's passport or other travel document. It includes, but is not limited to, a person's full name, date of birth, gender, country of residence, and country of citizenship. Additional travel data elements are also collected from passenger and crew manifests. Those travel data elements include carrier code, port of first arrival, status on board an aircraft or vessel, data and time of arrival, and foreign port code. For a complete list of API data elements, see Appendix A.

Through the Treasury Enforcement Communications System (TECS),[574] CBP cross-references API data against law enforcement, customs, and immigration screening systems/databases, as well as terrorist watchlists that have been exported from the U.S. government's consolidated TSDB.

Terrorist Watchlist Checks and Post 9/11 Statutory Mandates

Prior to the 9/11 attacks, API data were collected voluntarily to streamline and expedite the clearance process for law-abiding passengers at international ports of entry.[575] Following those attacks, however, the collection and transmission of API data was mandated under both the Aviation Transportation Security Act of

[574] In the APIS System of Records Notification (SORN), DHS described TECS as an "Information Technology platform." See U.S. Department of Homeland Security, Privacy Office, "Privacy Act of 1974; Customs and Border Protection Advanced Passenger Information System Systems of Record," 73 Federal Register, pp. 68435-68439, November 18, 2008.

[575] In 1988, the legacy U.S. Customs Service developed APIS as a module of TECS, in cooperation with the legacy Immigration and Naturalization Service.

2001 (ATSA)[576] for commercial passenger flights arriving in the United States and the Enhanced Border Security and Visa Entry Reform Act of 2002 (EBSVERA) for flights and vessels arriving in and departing from the United States.[577] In line with the recommendations of the 9/11 Commission, Congress included in the Intelligence Reform and Terrorism Prevention Act of 2004 (IRTPA) several provisions related to terrorist watchlist screening. Those provisions require

- DHS to perform preflight terrorist watchlist screening for all passengers and crew onboard aircraft bound for or departing from the United States (Section 4012(a)(6));
- TSA to screen preflight all passengers and crew on domestic flights (Section 4012(a)(1)); and
- DHS to conduct watchlist screening for passengers and crew on cruise ships and other ocean-going vessels (Section 4071).[578]

APIS Pre-departure/Pre-arrival Final Rule

Effective on February 18, 2008, all international air carriers and vessel operators are required to provide CBP with API data in advance of an aircraft's departure or vessel's departure/arrival, depending on the vessel's port of origin (U.S. or foreign).[579] Air carriers have two methods for providing this information: (1) "APIS 30" allows operators to submit passenger and crew manifests in batch form by an interactive or non-interactive method no later than 30 minutes prior to securing aircraft doors for departure; (2) "APIS Interactive Quick Query" allows transmission of manifest information as each passenger checks in, up to, but no later than, the time aircraft doors are secured. In line with best practices, air carriers are also encouraged to transmit available APIS data 72 hours prior to a flight. For sea-and ocean-going vessels departing the United States, vessel operators are required to transmit API data 60 minutes prior to departure. For vessels departing foreign ports that are destined for U.S. ports, vessel operators are required to transmit API data no less than 24 hours before arrival and no greater than 96 hours before arrival.

DHS issued a privacy impact assessment for APIS on August 8, 2007.[580] API data for all persons are copied to the Border Crossing Information System (BCIS). For noncitizens, API data are copied to the Arrival and Departure Information System (ADIS) as part of the US-VISIT requirements.[581] Both systems are modules that reside on TECS.

CBP and the Automated Targeting System (ATS)

Given the volume of people and goods seeking entry into the United States every year, it is impractical to physically inspect every person or shipment that arrives at a U.S. port or entry.[582] Therefore, in the mid-1990s, the legacy U.S. Customs Service developed a decision support tool known as the Automated Targeting System (ATS) to assist border inspectors with interdicting illegal drugs and other contraband.[583] Prior to the 9/11 attacks, the scope of ATS was reportedly limited to parties (custom brokers, freight forwarders, and trucking/shipping companies) and cargoes that were associated with past criminality that raised the suspicions of customs authorities.[584] After the 9/11 attacks, ATS was reconfigured and its scope widened to target known and suspected terrorists and terrorist activities as well, by assigning risk assessments to conveyances and cargo, and selecting passengers for enhanced screening.[585]

ATS Modules

[580] U.S. Department of Homeland Security, Privacy Impact Assessment for the Advance Passenger Information System (APIS), August 8, 2007, 23 pp.

[581] DHS has developed the US-VISIT program to more accurately identify and screen non-citizen border-crossers. Congress first mandated that the former Immigration and Naturalization Service (INS) implement an automated entry and exit data system that would track the arrival and departure of every alien in §110 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA; P.L. 104-208). The objective for an automated entry and exit data system was, in part, to develop a mechanism that would be able to track nonimmigrants who overstayed their visas as part of a broader emphasis on immigration control. Following the September 11, 2001 terrorist attacks, however, there was a marked shift in priority for implementing an automated entry and exit data system. While the tracking of nonimmigrants who overstayed their visas remained an important goal of the system, border security and the identification of potential terrorists have become the paramount concerns with respect to implementing the system.

[582] In FY2008, at 327 ports of entry, CBP processed 409 million pedestrians and passengers, 121 million conveyances, and 29 trade entries. CBP also collected approximately $34.5 billion in revenue, apprehended 723,825 aliens attempting to enter the United States illegally, and seized nearly 3.1 million pounds of illegal narcotics. Source: CBP, Performance and Accountability Report, FY2008, December 4, 2008, p. 6.

[583] CBP briefing provided to CRS on November 24, 2008.

[584] Ibid.

[585] Ibid.

Today, CBP's NTC uses ATS to analyze trade data and cargo, crew, and passenger manifest information to "target" its inspection resources toward persons and cargo shipments that potentially pose the highest risk. The NTC was established in November 2001 with the primary mission of providing "round-the-clock tactical targeting and analytical support for CBP's counterterrorism efforts."[586] At the NTC, intelligence from other federal agencies, in the form of "lookouts," and other law enforcement and intelligence reporting are also reviewed. ATS consists of six modules that include

- ATS-Inbound for importers, cargoes, and conveyances (rail, truck, ship, and air);
- ATS-Outbound for exporters, cargoes, and conveyances (rail, truck, ship, and air);
- ATS-Passenger for passengers and crew entering and departing the United States (air, ship, and rail);
- ATS-Land for vehicles and persons entering the United States at land border ports of entry;
- ATS-International for information sharing and cargo targeting with foreign customs authorities; and
- ATS-Trend Analysis and Analytical Selectivity for selective targeting based on trend analysis.[587]

With the exception of ATS-Passenger, these modules employ weighted rule sets to assign scores, identifying high-risk conveyances and cargo shipments.[588] Above a certain threshold risk score, conveyances and cargo are subject to further inspection at international ports of entry.[589]

Passenger Name Records and ATS-P

In the air and sea passenger environment, CBP requires international air carriers and vessel operators to transmit passenger name record (PNR) data to the NTC. Like API data, PNR data are collected by air carriers and vessel operators in their automated reservation or departure control systems. Although there is some overlap between the API and PNR data, most PNR data would not be included typically on a passenger or crew manifest. While PNR data have been submitted

[586] National Counterterrorism Center, National Strategy to Combat Terrorist Travel, May 2, 2006, p. 28.

[587] U.S. Department of Homeland Security, Privacy Impact Assessment for the Automated Targeting System, August 3, 2007, p. 7.

[588] Ibid.

[589] National targeting thresholds are set by the NTC and are constantly evaluated and adjusted in response to intelligence and analysis.

voluntarily by air carriers since 1997, CBP reports that it collects these data currently as part of its border enforcement mission and pursuant to the Aviation and Transportation Security Act of 2001 (P.L. 107-71).[590] PNR data includes, but is not limited to, date of reservation/ticket issuance, dates of intended travel, payment and billing information, travel agency/travel agent, baggage information, and PNR specific travel itinerary. On July 26, 2007, after considerable negotiations, the European Union and the United States reached a permanent agreement, under which 19 types of PNR data are being collected.[591] PNR data is to be maintained by CBP for seven years in an active file and eight years thereafter in a dormant file.[592] According to then-Secretary Michael Chertoff, DHS has agreed to data protections that meet the privacy standards of both the European Union and United States.[593] For a complete list of PNR data elements under the EU-U.S. agreement, see Appendix B. For an overview of the events leading up to this agreement, see Appendix C.

Through the ATS-Passenger, CBP compares and analyzes PNR data by comparing it to several law enforcement, customs, and immigration systems/databases that include, but are not limited, to the following:

- Advanced Passenger Information System (APIS),
- Nonimmigrant Information System (NIIS),
- Suspect and Violater Indices (SAVI),
- Border Crossing Information System (BCIS),
- Department of State visa databases,
- TECS seizure data, and
- terrorist watchlists that are subsets of the U.S. government's Terrorist Screening Database.[594]

In DHS's ATS Privacy Impact Assessment, the department underscored that ATS-Passenger uses the same methodology for all individuals, a practice that arguably precludes the possibility of disparate treatment of individuals or

groups.[595] ATS-Passenger, moreover, does not assign a score to determine an individual's risk. Rather, it compares PNR data for all travelers against the systems/databases listed above to identify matches with law enforcement lookouts as well as patterns of suspicious activity that have been discerned through past investigations and intelligence.[596]

In conclusion, ATS-Passenger enables DHS to distinguish those passengers who may pose a risk earlier and in ways that would be impossible during primary inspection at a port of entry.[597] DHS claims that these efforts have had measurable success, resulting in the identification of known and suspected terrorists in addition to other criminals such as narcotics smugglers, travelers with fraudulent documents, and lost/stolen passports, all of whom would have otherwise gone undetected.[598] As described below, the FAA also developed a similar decision support tool in the mid-1990s known as CAPPS, which has been inherited by TSA.

TSA "No Fly" and "Automatic Selectee" Watchlists

The TSA provides the airlines with the "No Fly" and "Automatic Selectee" watchlists for use in identifying passengers who are to be denied boarding or who require additional scrutiny prior to boarding. The "No Fly" watchlist is a list of persons who are considered a direct threat to U.S. civil aviation. Aircraft bombings in the late 1980s prompted the U.S. government to adopt this list in 1990. It was initially administered jointly by the FBI and Federal Aviation Administration (FAA), but the FAA assumed sole administrative responsibility for this list in November 2001. At that time, the FAA instituted the "Automatic Selectee" list as well. As the names of these lists imply, prospective passengers found to be on the "No Fly" list are denied boarding and referred to law enforcement, whereas those on the "Automatic Selectee" list are selected for secondary security screening before being cleared to board.

Under the Aviation Transportation Security Act,[599] TSA was established and assumed the administrative responsibility for these lists. As the FAA did before it, the TSA distributes these watchlists to U.S. air carriers. In turn, the air carriers screen passengers against these watchlists before boarding. In general, these lists are downloaded into a handful of computer reservations systems used by most

[597] CBP briefing provided to CRS on November 14, 2008.

[598] Ibid.

[599] Public 107-71, Nov. 19, 2001, 115 Stat. 597.

U.S. air carriers; however, a few smaller carriers still manually compare passenger data against these lists. As intelligence and law enforcement officials were concerned about the security of the "No Fly" list, only a handful of names were listed prior to the 9/11 attacks (fewer than 20).[600] Since then, the lists have been expanded almost daily.[601] Within TSA, the Office of Intelligence is responsible for resolving potential watchlist matches.

According to the FBI, the "No Fly" and "Automatic Selectee" lists were consolidated into the TSC's TSDB sometime in the latter half of FY2004.[602] While much larger, these watchlists still appear to be a relatively small subset of the TSDB. It has been reported that by the end of FY2004, there were more than 20,000 names on the "No Fly" list and TSA was being contacted by air carriers as often as 30 times per day with potential name matches.[603] During 2004, the "No Fly" and "Automatic Selectee" lists were the subject of increased media scrutiny for misidentifications. In some cases, these misidentifications included Members of Congress (e.g., Senator Edward Kennedy and Representatives John Lewis and Don Young).[604]

It is notable that because not all known and suspected terrorists are considered "threats to civil aviation," there could be legal and investigative policy considerations that would bear upon placing all such persons, who are included in the TSDB, on the "No Fly" list and possibly the "Automatic Selectee" list. The TSC, moreover, may be reluctant to release the full list of known and suspected terrorists to the airlines because of data security concerns. Although data security remains a concern, a much larger terrorist watchlist is provided by the TSC to CBP. This watchlist, however, remains under government control.

The Intelligence Reform and Terrorism Prevention Act of 2004 (P.L. 108-458) included two reporting requirements related to air passenger prescreening and

terrorist watchlists. Section 4012(b) required the DHS Privacy Officer to report to Congress,[605] within 180 days of enactment (June 15, 2005), on the impact of the "No Fly" and "Automatic Selectee" lists on privacy and civil liberties. Section 4012(c) required the National Intelligence Director, in consultation with the Secretary of Homeland Security, the Secretary of State, and the Attorney General, to report to Congress, within a 180 days of enactment, on the criteria for placing individuals in the consolidated TSDB watchlists maintained by the TSC, including minimum standards for reliability and accuracy of identifying information, the threat levels posed by listed persons, and the appropriate responses to be taken if those persons were encountered.

In April 2006, the DHS Privacy Office issued its report assessing the impact of the "No Fly" and "Automatic Selectee" lists on privacy and civil liberties.[606] The report cited concerns about the quality of the information of those lists, as well as the underlying intelligence.[607] The report also noted allegations about profiling on the basis of race, religion, or national origin, but reported that it could not substantiate those allegations.[608] Furthermore, the report assessed existing DHS redress mechanisms, which are described briefly below.

In regard to the criteria used to place individuals on terrorist watchlists consolidated in the TSDB, it is unknown whether the National Intelligence Director reported to Congress on this matter. Nevertheless, the Privacy Office report stressed that those criteria could not be made public without (1) compromising intelligence and security or (2) allowing persons wishing to avoid detection to subvert those lists.[609] In October 2007, the GAO reported that the FBI and Intelligence Community were using reasonable standards for watchlisting persons who are suspected of having possible links to terrorism.[610]

---

[605] Section 4012(b) of P.L. 108-458 required that the report be submitted to the Committee on the Judiciary, the Committee on Governmental Affairs and Homeland Security, and the Committee on Commerce, Science, and Transportation in the Senate; and to the Committee on the Judiciary, the Committee on Government Reform, the Committee on Transportation and Infrastructure, and the Committee on Homeland Security in the House of Representatives.

On January 17, 2007, the head of TSA, Assistant Secretary Edmund "Kip" Hawley, testified before the Senate Committee on Commerce, Science and Transportation about aviation security and related recommendations made by the National Commission on Terrorist Attacks upon the United States (9/11 Commission).[611] With regard to terrorist watchlist screening of air passengers, Assistant Secretary Hawley informed the committee that TSA and the Terrorist Screening Center were reviewing the "No Fly" list in an effort to reduce the number of individuals on that list by as much as 50%.[612] According to a press account, the "No Fly" list includes 4,000 names of individual persons and the "Selectee" lists includes about 14,000 names.[613]

Computer-Assisted Passenger Prescreening System (CAPPS)

The 1996 Federal Aviation Reauthorization Act authorized the development of the Computer-Assisted Aviation Prescreening System (CAPS) system.[614] At the time this bill was enacted, however, the Federal Aviation Administration (FAA) had already begun to develop the system that became CAPS.[615] The FAA, together with Northwest Airlines, developed the CAPS interface with the airline's computer reservation system in 1996 and 1997. Additional field testing continued through 1997 and 1998. The FAA issued a proposed rule directing all major U.S. air carriers to maintain CAPS on their computer reservation systems in April 1999.[616] However, this rule was never made final, reflecting in part the controversy generated by this system.

CAPS and Checked Baggage Screening

[612] Ibid.

[613] Carrie Johnson, "Explosive Could Have Blown Hole in Plane: President Orders Review of Watch Lists as Criticism Intensifies," Washington Post, December 29, 2009, p. A4.

[614] P.L. 104-264; 110 Stat. 3253. Section 307 of the act reads: "The Administrator of the Federal Aviation Administration, the Secretary of Transportation, the intelligence community, and the law enforcement community should continue to assist air carriers in developing computer-assisted passenger profiling programs and other appropriate passenger profiling programs which should be used in conjunction with other security measures and technologies."

[615] Also, during this time, the White House Commission on Aviation Safety and Security (Gore Commission) recommended that an automated profiling system for commercial aviation be developed. See White House Commission on Aviation Safety and Security: Final Report to President Clinton, February 12, 1997.

[616] 64 Federal Register, pp. 19219-19240, April 19, 1999.

The operational concept behind the CAPS system is to select "high-risk" travelers based on certain characteristics found in passenger name record (PNR) data elements—like ticket purchasing patterns and the details of their travel itineraries for greater scrutiny in terms of baggage screening, while expediting baggage screening for "low-risk"passengers. In other words, the CAPS system was designed to determine which passengers were unlikely to have an explosive device in their checked baggage, so that limited explosive detection capabilities could be focused on a smaller number of passengers and bags.[617] The CAPS system was reviewed by the Department of Justice's Civil Rights and Criminal Divisions, along with the FBI, and was found not to be based on characteristics related to ethnicity, gender, or religious faith.[618] The CAPS system was later renamed CAPPS (Computer-Assisted Passenger Presceening System). Like the "No Fly" and "Automatic Selectee" watchlists, the CAPPS system is largely invisible to the public as the system itself resides on airline reservations systems (for example, Sabre and Amadeus).[619] The federal government, moreover, does not control or collect data utilized by CAPPS.

CAPPS and Passenger Screening at Airport Security Checkpoints

It is significant to note that, on September 11, 2001, nine of the 19 hijackers were selected by CAPPS for additional baggage screening; however, CAPPS was not used to select passengers for greater screening at passenger checkpoints.[620] Since the 9/11 attacks, CAPPS has been expanded, and TSA uses the system to identify persons based on certain characteristics gleaned from the PNR data who are selected for not only additional passenger-checked baggage screening, but additional passenger checkpoint screening as well.

9/11 Commission Recommendations and CAPPS II

The 9/11 Commission formally recommended that the "no fly" and "automatic selectee" lists should be improved, and that air passengers should be screened not only against these lists, but the "larger set of watchlists maintained by the federal government."[621] Moreover, the TSA should perform this function, as

opposed to the air carriers, and the air carriers should be required to supply the information needed to test a new air passenger prescreening system.[622]

When the 9/11 Commission report was released in July 2004, the TSA had already been working for almost two years on a new passenger prescreening system called CAPPS II. This system was intended to replace the airline-operated systems for checking passenger names against the government-issued "no-fly" watchlist (those individuals to be denied boarding) and the "automatic selectee" watchlist (those individuals designated for additional or secondary screening at airport security checkpoints). In addition, in lieu of a biometric, CAPPS II was designed to include sophisticated algorithms that would query both government and commercial databases to authenticate the identity of passengers and crew, as well as assess their risk.

Critics argued, however, that the TSA's ever-expanding vision for prescreening constituted an unprecedented government-sponsored invasion of privacy. This and other controversies ultimately led TSA to scrap CAPPS II in August 2004, soon after the release of the 9/11 Commission final report, and pursue enhanced prescreening capabilities under a new system called Secure Flight. As described below, TSA planned to begin implementing Secure Flight in December 2008, but actual implementation did not begin until March 2009. Although, the original scope of the Secure Flight has also been scaled back so that it no longer includes an identity authentication component or a rule for more intensive searching, TSA has not announced any plans to discontinue the use of CAPPS.

TSA Secure Flight Program

Reflecting the recommendations of the 9/11 Commission, Congress included several provisions related to preflight screening of airline passengers against terrorist watchlists in the Intelligence Reform and Terrorism Prevention Act of 2004 (P.L. 108-458). In particular, section 4012 of that act requires the TSA to assume from U.S. air carriers the passenger watchlist screening function after it establishes an advanced (pre-departure) air passenger prescreening system that utilizes the greater set of watchlists integrated and consolidated in the FBI-administered Terrorist Screening Database (TSDB). It also required the DHS to screen passengers on international flights against the TSDB prior to departure, a requirement currently met by CBP through its APIS pre-departure process (described above). Following the demise of CAPPS II (described above), TSA has sought to address the mandate for domestic passenger prescreening though the development of the Secure Flight system and plans to eventually incorporate international passenger prescreening under this system as well, following its successful implementation domestically.

---

[622] Ibid.

Initial Program Design, Development, and Related Legislation

As initially conceived by TSA, the Secure Flight program was designed to improve passenger prescreening and deter, detect, and prevent known or suspected terrorists from boarding commercial flights. The TSA endeavored to meet this objective by using Secure Flight as a means to focus its limited screening resources on individuals and their baggage who are perceived to pose an elevated or unknown risk to commercial aviation, while reducing the number of passengers screened and wait times at passenger screening checkpoints. According to TSA, Secure Flight consisted of four elements:

- a streamlined rule for more intensive screening,
- a scaled-back identity authentication process,
- a passenger name check against the Terrorist Screening Database, and
- an appeals process for passengers who may have been misidentified.

In addition to the appeals process, the Secure Flight program is an amalgam of features taken from existing screening systems, CAPPS II, and the 9/11 Commission's recommendations that passengers be screened against the wider set of terrorist watchlists maintained by the U.S. government. Within TSA, the Office of National Risk Assessment had responsibility for establishing policy for the Secure Flight program.

To reduce redundant or overlapping passenger processing systems, TSA initially planned to design Secure Flight so that the system would be used only for prescreening passengers on domestic flights. As described above, DHS's CBP would continue to be responsible for checking passenger identities against watchlists and prescreening passengers on inbound and outbound international flights. It was unclear, however, whether responsibility for screening domestic and international flights could clearly be divided between TSA and CBP, because many international flights have domestic legs and international passengers sometimes make connections to domestic flights.

It was also unclear, moreover, whether the development of Secure Flight for domestic flight would impair TSA's responsibility for screening international air passengers who may be threats to civil aviation. At issue is TSA's authority and responsibility over all aspects of aviation security versus CBP's authority and responsibility for border management and security. It remained an open policy question whether the CBP pre-departure screening of air passengers on all in-bound international flights through APIS would be sufficient. In the case of international air travel, the distinction between aviation and border security functions has become increasingly blurred.

Problems Developing Secure Flight

Like its predecessor, CAPPS II, the Secure Flight program initially proved controversial. In March 2005, the DHS OIG reported that TSA had mishandled

some passenger data while testing CAPPS II, but since that time, the agency's approach to privacy issues had improved markedly.[623] In the same month, the GAO reported that TSA had begun developing and testing Secure Flight; however, TSA had not determined fully "data needs and system functions," despite ambitious timelines for program implementation.[624] Consequently, the GAO reported that it was uncertain whether TSA would meet its August 2005 Secure Flight operational deployment date.[625] The TSA, in fact, did not meet the deadline and in February 2006 announced that it was restructuring ("rebaselining") the Secure Flight program.

In addition, in July 2005, GAO reported that TSA had not fully disclosed its use of passenger data during the testing for Secure Flight.[626] In August 2005, the DOJ OIG reported that there were numerous problems coordinating the development of the Secure Flight program with the efforts of the FBI-administered TSC.[627] In September 2005, the identity authentication element of the Secure Flight program, under which TSA planned to compare PNR data (for domestic flights) with databases maintained by commercial data aggregators to verify passenger identities, was reportedly dropped.[628] In December 2006, moreover, the DHS's Privacy Office issued a report, finding that the TSA had not accurately described its use of personal data as part of the Secure Flight program in notifications required under the Privacy Act.[629]

Furthermore, in the FY2005 DHS Appropriations Act (P.L. 108-334), Congress prohibited TSA (or any other component of DHS) from spending any

appropriated funds on the deployment of Secure Flight, or any successor system used to screen aviation passengers, until the GAO reports that certain conditions have been met, including the establishment of an appeals process.[630] Similar provisions have been included in subsequent departmental appropriations, including the FY2009 DHS Appropriations Act (P.L. 111-5).[631] As noted above, TSA began implementing Secure Flight domestically in March 2009. In the FY2010 DHS Appropriations Act (P.L. 111-83), Congress did not include a similar spending prohibition; however, report language requires TSA to report within 90 days on its progress in addressing GAO's Secure Flight-related recommendations.

Secure Flight Final Rule

On October 28, 2008, TSA published a final rule detailing the operational implementation of Secure Flight, effective December 29, 2008.[632] TSA is implementing Secure Flight in two phases. The first phase encompasses only *domestic* flights, while the second phase will include *international* departures and arrivals as well as commercial international flights overflying any of the 48 contiguous states. TSA began operational testing in May 2009 to test the reliability of data transmission connections to receive passenger data from the airlines and transmit screening results back to the airlines, and to assess the performance of the watch list screening process under operational conditions. Operational testing and phased-in implementation of Secure Flight for vetting domestic passengers is currently underway. Effective August 15, 2009, airlines were required to begin collecting full name, date of birth, gender, and redress number (if available) for domestic passengers. The airlines were required to begin collecting such information for international passengers effective October 31, 2009. The TSA has stated that its goal is to fully implement Secure Flight for domestic flights by early 2010, and for all international flights by the end of 2010.[633]

During the time operational testing of Secure Flight is ongoing, airlines will be required to continue the process of checking passengers against the "no fly" and "automatic selectee" lists provided by TSA. As a result, TSA will continue to distribute these lists to airlines until all airlines have completed operational testing of the domestic portion of Secure Flight and TSA assumes full responsibility for comparing passenger data against the terrorist watch list.

---

[630] Sec. 522, 118 Stat. 1319.

[631] Sec. 513, 121 Stat. 2072.

[632] U.S. Department of Homeland Security, Transportation Security Administration, "Secure Flight Program; Final Rule," 72 Federal Register, pp. 64018-64066, October 28, 2008.

[633] Transportation Security Administration, "TSA's Secure Flight Enters First Public Phase," May 12, 2009.

For international flights, CBP will continue to check passenger names against terrorist watch lists under the APIS pre-departure protocols until Secure Flight in fully implemented for international flights. However, airlines will transmit data using a single transmission DHS portal, although the two systems have slightly different data requirements and different timetables for the delivery of data, as explained in the Secure Flight final rule.

Overflights[634] represent a new category of covered operations that will require transmission of passenger data for screening against the terrorist watch list and will encompass operators that may not operate flights to and from the United States. According to the final rule, the phase in of overflights in the Secure Flight system will coincide with the phase in of international flights.

Secure Flight and Terrorist Watchlist Checks

Initially, the TSA will begin implementing the use of Secure Flight to compare passenger data (Secure Flight Passenger Data) provided by the airlines against the TSDB. This will replace the process of providing these "automatic selectee" and "no fly" lists to the airlines. The program will apply to passenger airlines offering scheduled passenger service and public charter flights that operate to and from about 450 commercial passenger airports throughout the United States. These airlines will be required to submit passenger data to the TSA beginning 72 hours prior to the flight and thereafter continue to provide passenger data as soon as it becomes available. The airlines must also submit this required information for any non-employee seeking access to the sterile area beyond the security screening checkpoint, such as an individual assisting a special needs traveler or escorting an unaccompanied minor to or from an aircraft. The airlines will be required to collect from all passengers and individuals seeking access to the airport sterile area their full name, date of birth, and gender data. The airline must also request from travelers any known traveler[635] or passenger redress number provided by the TSA and, if these numbers are provided by the passengers, then the airline must transmit them to the TSA. The airline must also

---

[634] Overflights refer to flights that transit through the airspace above a geographic area but do not originate or land at a destination in that area. As noted previously, Secure Flight requirements will only be applied to those overflights transiting through airspace over the contiguous 48 states and will not include aircraft overflying Alaska or Hawaii.

[635] The TSA Secure Flight final rule explains that this Known Traveler Number would be a unique number assigned to a traveler for whom the federal government has already conducted a threat assessment and was found to not pose a security threat. Since the TSA eliminated the requirement for security threat assessments for passengers participating in the voluntary Registered Traveler (RT) program effective July 30, 2008, it does not appear that the Known Traveler Number field will be propagated with RT number data at this point, and it is not believed that RT participation will, at present, have any impact on the name based threat assessment process to be conducted under the Secure Flight program.

transmit passport numbers, itinerary information, record locator data, and various other reference numbers if these data are available. For a complete list of Secure Flight Passenger Data (SFPD), see Appendix D.

Once received, the TSA will use an automated process to compare this passenger data against the consolidated TSDB. The TSA does not maintain its own watch list, but rather the TSA is a customer of the TSC. In consultation with the TSA, the TSC compiles the "no fly" and "automatic selectee" lists from the consolidated TSDB. Under the Secure Flight system, TSA will similarly continue to rely on the TSDB to determine whether to deny a passenger boarding or subject the passenger and his or her property to additional physical screening.

When the Secure Flight process returns an indication of an exact or reasonably similar match, a TSA intelligence analyst will review additional available information in an effort to reduce the number of false positive matches. If the TSA determines that a probable match exists, it will forward these results along with the passenger information to the TSC to provide confirmation of the match. According to the procedures set forth in the Secure Flight final rule, if the TSA or the TSC cannot make a definitive determination, notification would be sent to the airline to require the passenger to present a verifying identity document (VID), such as an unexpired driver's license or a passport, when checking in at the airport. If the TSA determines that the passenger data provided is a match to the Secure Flight selectee list, it will inform the airline which, in turn, will be required to identify the passenger and his or her baggage for enhanced screening. The TSA may also inform an airline that a passenger is to be placed in "inhibited status," meaning that he or she may not be issued a boarding pass or enter the sterile area of an airport.

Passengers who believe that they have been wrongly delayed, denied boarding, or subject to additional screening as a result of the Secure Flight system and the process it applies to screening passenger data against terrorist watch list information may seek redress from the DHS. The procedures for redress apply to all DHS-operated systems for screening individuals against terrorist watch list data and are described in further detail below.

Misidentifications and Related Procedures

Misidentifications have been a recurring issue for Congress. Initially, such problems were frequently associated with TSA's administration of the "No Fly" and "Automatic Selectee" lists. More recently, however, this may be an emerging problem for CBP as well in light of the American Civil Liberties Union (ACLU) class-action suit against that agency.[636]

---

[636] According to the ACLU, U.S. citizens have been subjected to repeated and lengthy stops, questioning, body searches, handcuffing, excessive force, and separation from family while being detained by CBP officers because of possible watchlist matches. Nine of these U.S. citizens have

Under HSPD-6, the TSC Director has been made responsible for developing policies and procedures related to the criteria for including terrorist identities data in the consolidated TSDB and for measures to be taken in regard to misidentifications, erroneous entries, outdated data, and privacy concerns. The Bush Administration maintained further that because the TSC does not collect intelligence, and has no authority to do so, all intelligence or data entered into the TSDB are actually being collected by other agencies in accordance with applicable, pre-existing authorities.

At the same time, however, the TSC is limited in its ability to address certain issues related to misidentifications because it is restricted from divulging classified or law enforcement-sensitive information to the public under certain circumstances (discussed below). The same could be said for many frontline-screening agencies as well (e.g., TSA and CBP), because many terrorist lookout records, while possibly declassified, are based on classified intelligence collected by other agencies. Such records would probably be considered security sensitive information. Hence, questions could arise as to which agencies, if any, are in a position to handle matters pertaining to misidentifications.

Moreover, if procedures are not properly coordinated, inconvenienced travelers who have been misidentified as terrorists or their supporters could face a bureaucratic maze if they attempt to seek redress and remedy. The DOJ OIG audit on TSC operations (described above) included a recommendation that the TSC strengthen procedures for handling misidentifications and articulate those procedures formally in written documents (operational guidelines).[637] Congress later required reports from the Administration and GAO regarding the use of terrorist watchlists.

Disclosure Under FOIA and Privacy Act

In regard to TSC, Members of Congress and other outside observers have questioned whether there should be new policy and procedures at different levels (such as visa issuance, border inspections, commercial aviation security, domestic law enforcement, and security of public events) for the inclusion of persons in the TSDB.[638] Also, Members have asked how a person could find out if they were in the Terrorist Screening Database and, if so, how they got there. In congressional testimony, then-TSC Director Bucella surmised that a person would learn of being in the TSDB when a screening agency encountered them

---

filed a class action suit against DHS. See Rahman v. Chertoff, Case No. 05 C 3761 (E.D. Ill. filed June 19, 2006).

[637] Ibid., p. 76.

[638] For further information, see CRS Report RL31730, Privacy: Total Information Awareness Programs and Related Information Access, Collection, and Protection Laws, by Gina Stevens.

and, perhaps, denied them a visa or entry into the United States, or arrested them. Bucella suggested that the TSC would probably be unable to confirm or deny whether the person was in the TSDB under current law.[639]

Consequently, persons who have been identified or misidentified as terrorists or their supporters would have to pursue such matters through the screening agency. The screening agency, however, might not have been the originating source of the record, in which case a lengthy process of referrals may have to be initiated. Under such conditions, persons identified as terrorists or their supporters may turn to the Freedom of Information Act (FOIA) or the Privacy Act as a last alternative. Under FOIA,[640] any person, including a noncitizen or nonpermanent resident, may file a request with any executive branch agency or department, such as the State Department or DHS, for records indicating he or she is on a watchlist. However, under national security and law enforcement FOIA exemptions, the departments may withhold records on whether an individual is on a watchlist.[641] Consequently, a FOIA inquiry is unlikely to shed any light on these areas.

In addition, a citizen or legal permanent resident may file a Privacy Act[642] request with DHS and/or DOJ to discern whether a screening agency or the FBI has records on them. However, the law enforcement exemption under the Privacy Act may permit the departments to withhold such records. Under the Privacy Act, a citizen or legal permanent resident may request an amendment of their record if information in the record is inaccurate, untimely, irrelevant, or incomplete. Under both FOIA and the Privacy Act, there are provisions for administrative and judicial appeal. If a request is denied, the citizen or legal permanent resident is required to exhaust his or her administrative remedies prior to bringing an action in U.S. District Court to challenge the agency's action.[643]

Other Possible Legal Questions

---

[639] Donna Bucella, Terrorist Screening Center Director, Testimony Before the National Commission on Terrorist Attacks upon the United States, January 26, 2004, p. 1.

[640] 5 U.S.C. §522.

[641] 5 U.S.C. §§522(b), (c), 522a(j).

[642] 5 U.S.C. §522a.

[643] One recent legal analysis examined several U.S. court decisions addressing the use of terrorist watchlists for aviation security purposes. According to that analysis, it appears that the presiding judges in those cases were willing to defer to TSA regarding determinations that watchlist records were security sensitive information, even though those records were essential to the maintenance of the plaintiffs' claims. See Linda L. Lane, "The Discoverability of Sensitive Security Information in Aviation Litigation," Journal of Air Law and Commerce, vol. 71, Summer 2006, p. 434.

The Bush Administration pledged that terrorist screening information would be gathered and employed within constitutional and other legal parameters. CRS is unaware of any official statement by the Obama Administration regarding these matters. Nevertheless, although the Privacy Act generally does not restrict information sharing related to known and suspected terrorists who are not U.S. persons for the purposes of visa issuance and border inspections, it does restrict the sharing of information on U.S. persons (citizens and legal permanent residents) for purely intelligence purposes, who are not the subject of ongoing foreign intelligence or criminal investigations.[644] Consequently, legal questions concerning the inclusion of U.S. persons on various watchlists under criminal or national security predicates may arise. In addition, questions of compensation for persons damaged by mistaken inclusion in these databases will likely be an issue.

DHS Redress Mechanisms

Both the DHS Privacy Office and GAO reported to Congress on existing DHS redress mechanisms, by which an individual who felt he or she had been unfairly denied boarding on a commercial aircraft or singled out for screening could contact several DHS offices and initiate a redress inquiry.

Early Mechanisms

According to the DHS Privacy Office, individuals who believed they had been misidentified as a terrorist while being screened by TSA could have contacted either the TSA Ombudsman's Contact Center or Office of Civil Rights.[645] Information was also available on the TSA website regarding the redress process.[646] Individuals seeking redress were issued a Privacy Act Notice and Passenger Identity Verification Form, which was processed by the TSA Office for Transportation Security Redress (OSTR).[647] If OSTR concluded an individual had been misidentified, it would place him or her on a "cleared" list.[648] However, GAO reported that individuals who had been placed on the cleared lists could have continued to encounter inconveniences. For example, "they may be forced to obtain a boarding pass at the ticket counter as opposed to the using the Internet, curbside, or airport kiosk check-in options."[649]

[647] Ibid.

[648] Ibid.

[649] U.S. Government Accountability Office, Terrorist Watch List Screening, GAO-06-1031, Sept. 2006, p. 34.

Meanwhile, individuals who believe they have been misidentified while being screened by CBP could contact that agency's Customer Service Satisfaction Unit.[650] In addition to contacting either TSA or CBP, individuals who had possibly been misidentified could have also contacted either the DHS Privacy Office or Office of Civil Rights and Civil Liberties.[651] As described above, frontline-screening agencies referred matters concerning individuals who believe they have been mistakenly watchlisted to the TSC, as is the case today.

At a Senate hearing, the former head of TSA, Assistant Secretary Hawley, conceded that the redress processes at TSA had been "too cumbersome and expensive," prompting the agency to introduce a new streamlined process and automated redress management system.[652] Hawley also testified that then-DHS Secretary Chertoff had developed a program envisioned by then-Secretary of State Condoleezza Rice that is designed to provide travelers with a single, simple process for addressing watchlist-related complaints.[653] Hawley also testified that the advance air passenger prescreening program known as Secure Flight would reduce misidentifications—the largest source of complaints.[654] He reported that TSA had processed more than 20,000 redress requests in 2006, and the average processing times of those requests had been reduced from two months to 10 days.[655]

Traveler Redress and Inquiry Program (TRIP)

The Intelligence Reform and Terrorism Prevention Act of 2004 (P.L. 108-458) required the TSA and DHS to establish appeals procedures by which persons who are identified as security threats based on records in the TSDB may appeal such determinations and have such records, if warranted, modified to alleviate such occurrences in the future. Also, provisions in the Implementing Recommendations of the 9/11 Commission Act of 2007 (P.L. 110-53) required the DHS to establish an Office of Appeals and Redress to establish a timely and fair process for individuals who believe they have been delayed or prohibited from

[655] Ibid.

boarding a commercial aircraft because they were wrongly identified as a threat. The provisions further establish a requirement to maintain records of those passengers and individuals who have been misidentified and have corrected erroneous information.

To handle and resolve the complaints of passengers and meet these statutory requirements, the DHS has established the DHS Traveler Redress Inquiry Program (DHS TRIP) as a mechanism for addressing watchlist misidentification issues and other situations where passengers feel that they have been unfairly or incorrectly delayed or denied boarding or identified for additional security screening at airport screening checkpoints, ports of entry or border checkpoints, or when seeking to access other modes of transportation.

The DHS TRIP program allows passengers seeking redress, or their lawyers or other representatives, to file complaints either by using an online system or by completing and mailing a complaint form.[656] After completing the online questionnaire or mailing the complaint form, the DHS will request supporting information within 30 days. Filers are given a control number that allows them to track the status of their inquiry using the Internet. The DHS will make a final determination and respond to the filer. If the investigation finds that the traveler has been delayed due to a misidentification or similar name-matching issue, the response will describe the steps required to resolve this issue. Often, the traveler may be required to retain a copy of the DHS response letter and present it during the check-in process when traveling on airline flights. The DHS cautions, however, that the steps taken may not resolve all future travel-related concerns. For example, the traveler may be selected for additional screening based on a variety of factors or at random. If a passenger disagrees with the resolution decision made by the DHS, he or she may take further steps to appeal the decision.

Fair, Accurate, Secure, and Timely (FAST) Redress Act of 2009 (H.R. 559)

In the 111th Congress, the House passed the FAST Redress Act (H.R. 559) under suspension of the rules on February 3, 2009, a bill introduced by Representative Yvette D. Clarke. This bill is similar to a proposal (H.R. 4179) passed in the 110th Congress, also introduced by Representative Clarke. The House Committee on the Judiciary reported H.R. 4179 (H.Rept. 110-686) on June 5, 2008. The House passed H.R. 4179 on June 18, 2008. Senator Amy Klobuchar introduced an identical proposal (S. 3392). The FAST Redress Act would amend the Homeland Security Act of 2002 (P.L. 107-296) to direct the Secretary of Homeland Security to establish a timely and fair process for individuals who believe they were delayed or prohibited from boarding a commercial aircraft because they were

[656] Complete instructions for filing complaints under the DHS TRIP program can be found at: http://www.dhs.gov/files/programs/gc_1169676919316.shtm.

wrongly identified as a threat when screened against any terrorist watchlist or database used by TSA or any component of DHS. It would also authorize an Office of Appeals and Redress within DHS to implement, coordinate, and execute this process.

Possible Issues for Congress

Three issues loom large in terms of the U.S. government's capabilities to identify, screen, and track terrorists and their supporters. For example, how reliable is the intelligence that is the basis for lookout records? When will the TSA and CBP be able to prescreen effectively air passengers prior to departure? Will the TSC in cooperation with screening agencies be able to establish viable redress and remedy processes for persons misidentified as terrorists or their supporters given certain limitations placed on those agencies in regard to the public divulgence of national security and law enforcement sensitive information?

Reliability of Intelligence Underlying Lookout Records

Because the Terrorist Identities Datamart Environment (TIDE) maintained by the National Counterterrorism Center (NCTC) is the principal source of lookout records on international terrorists placed in the TSC's consolidated terrorist screening database, a key oversight issue for Congress is ensuring that intelligence community agencies are sharing the appropriate information necessary to identify terrorists and their supporters with the NCTC. Is the TSC receiving timely terrorist identities data updates that reflect the best and most reliable intelligence available to intelligence and law enforcement agencies?

Preflight Passenger Screening by TSA and CBP

While largely related to implementation, a number of unresolved questions remain with regard to prescreening air passengers prior to departure (wheels up). How quickly can TSA develop and deploy an advanced air passenger prescreening system that, among other things, will assume the day-to-day administration of the "No Fly" and "Automatic Selectee" watchlists from the airlines?

Viable Processes of Redress and Remedy for Misidentifications

Concerning misidentifications, under HSPD-6, the TSC Director is responsible for developing policies and procedures related to the criteria for inclusion into the consolidated TSDB, and for taking measures to address misidentifications, erroneous entries, outdated data, and privacy concerns. An issue for Congress may be the extent to which the TSC is working with screening agencies to develop appropriate and effective redress and remedy processes for persons misidentified as terrorists or their supporters. Given certain limitations placed on the TSC and screening agencies with regard to releasing national security and law enforcement sensitive information, will sufficient information channels be available and remedial processes established to provide for accurate and expeditious determinations in misidentification cases?

Appendix A. APIS Data Elements

APIS data elements include the following:

- Full Name.
- Date of Birth.
- Gender.
- Passport Number.
- Passport Country of Issuance.
- Passport Expiration Date.
- Passenger Name Record Locator.
- Foreign Airport Code—place of origination.
- Port of First Arrival.
- Final Foreign Port for In-transit Passengers.
- Airline Carrier Code.
- Flight Number.
- Date of Aircraft Departure.
- Time of Aircraft Departure.
- Date of Aircraft Arrival.
- Scheduled time of Aircraft Arrival.
- Citizenship.
- Country of Residence.
- Status on Board Aircraft.
- Travel Document Type.
- Alien Registration Number.
- Address in the United States (except for outbound flights, U.S. citizens, lawful permanent residents, and crew and in-transit passengers).[657]

Appendix B. PNR Data Elements

PNR data elements include the following:

- PNR record locator code.
- Date of reservation/issue of ticket.
- Date(s) on intended travel.
- Name(s).
- Available frequent flier and benefit information (i.e., free tickets, upgrades, etc.).
- Other names on PNR, including number of travelers on PNR.
- All available contact information (including originator of reservation).
- All available payment/bill information.
- Travel itinerary for specific PNR.
- Travel agency/travel agent.
- Code share information.

---

[657] 73 Federal Register, pp. 64023-64024, October 28, 2008.

- Split/divided information.
- Travel status of passenger (including confirmations and check-in status) and relevant travel history.
- Ticketing information, including ticket number, one way tickets, and Automated Fare Quote (ATFQ) fields.
- Baggage information.
- Seat information.
- Open text fields.
- Any collected APIS information.
- All historical changes to the PNR listed above.[658]

Appendix C. EU-U.S. Data Sharing

In Summer 2006, the issue of PNR data sharing emerged as a problem for the United States. Although the European Court of Justice had ruled an EU-U.S. PNR data sharing agreement to be illegal and ordered a cessation of such data sharing on September 30, 2006, then-DHS Secretary Chertoff proposed that the United States should acquire greater amounts of PNR data to improve passenger prescreening for known and suspected terrorists following the foiled plot to bomb airliners flying from the UK to the United States in August 2006.[659] An interim EU-U.S. agreement was reached on October 19, 2006, and a permanent agreement in late July 2007.

European Court of Justice Ruling

In May 2006, the European Court of Justice ruled in favor of an "action of annulment" requested by the European Parliament with regard to the legality of an agreement made by the European Commission and CBP to exchange PNR data to improve passenger prescreening for terrorists, attempting to board transatlantic flights.[660] The court ordered the cessation of PNR data sharing on September 30, 2006.[661] If it had not been resolved, this impasse between the U.S. and EU authorities with regard to PNR data sharing might have significantly affected travel from EU countries to the United States. While the European Commission and CBP renegotiated an interim agreement in terms that were not objectionable to the European Court of Justice, that agreement was temporary.

[661] "EU, US Officials: New Agreement Will Be Reached on Passenger Data," Agence France Presse, May 30, 2006.

Some European authorities, including Members of the European Parliament, continued to express concern about adequate data protections under the agreement.

CBP Proposed Rule Requires Additional PNR Data Preflight

In July 2006, CBP published a notice of proposed rulemaking, in which the agency sought to acquire PNR data (complete manifests) 60 minutes prior to departure, with a mechanism that would allow for individual, real-time transactions up to 15 minutes prior to a flight's departure for last-minute ticket buyers and other manifest changes.[662] In part, U.S. authorities maintain that such advanced information is necessary for prescreening noncitizens traveling to the United States under the visa waiver program, as well as long-term, multiple-entry visa holders, because they are not screened at a U.S. consulate abroad as part of a visa issuance process.[663]

Following the foiled conspiracy to bomb several airliners flying from Britain to the United States in August 2006, observers noted that the suspected conspirators could have boarded the aircraft bound for the United States without having been screened against the international terrorist watchlists maintained by the TSC in the TSDB prior to a flight's departure, because the UK is a participant in the visa waiver program. In response to the plot, DHS reportedly issued a temporary order requiring that passenger name records be provided preflight to CBP for transatlantic flights originating in the UK,[664] as opposed to 15 minutes after a flight's departure as normally required under current CBP regulations (for arrival manifests).[665] Furthermore, CBP reportedly announced that it would seek to obtain greater amounts of air passenger data preflight from all air carriers and retain that data longer.[666] Reportedly, some Europeans strongly opposed such

---

[662] Federal Register, vol. 71, no. 135, July 14, 2006, pp. 40035-40048.

[663] It is noteworthy that in the Enhanced Border Security and Visa Entry Reform Act of 2002 (P.L. 107-173), Congress included a requirement that countries participating in the visa waiver program issue their nationals machine-readable, tamper-resistant, biometric passports by October 26, 2004. In a subsequent law (P.L. 108-299), the machine-readable and tamper-resistant requirements were extended to October 26, 2005, and the biometric requirement was modified so that it only applied to passports issued after that date. In the Intelligence Reform and Terrorism Prevention Act of 2004 (P.L. 108-458), Congress required that visa waiver countries certify that they are developing a machine-readable, tamper-resistant, biometric passport by October 26, 2006. For further information, see CRS Report RL32221, Visa Waiver Program, by Alison Siskin.

[666] Ellen Nakashima, "U.S. Seeks to Expand Data Sharing: Retention of Airline Passenger Details Raises Privacy Concerns in E.U.," Washington Post, August 23, 2006, p. A5.

data sharing and see U.S. demands for such data, without stronger data privacy safeguards, as an infringement on their national and collective sovereignties.[667]

EU-U.S. Interim Agreement

Despite lingering concerns about data protection and privacy, on October 19, 2006, the EU and U.S. concluded an interim agreement on PNR that allows PNR data in air carrier reservations systems to continue to be transferred to CBP in the same manner as previously. It also reportedly addressed other privacy issues. For example, the agreement anticipated the development of a new screening system, under which air carriers would send (push) PNR data to CBP, rather than the air carriers allowing CBP access (pull) the data from their reservations systems, as is the case today.[668] This issue is often referred to as the "push/pull issue" and involves systems access and data control. There were additional data protection/privacy issues for the European Union and the United States to resolve in regard to TSA's Secure Flight program and CBP's Automated Targeting System. Particularly troubling for some Europeans and privacy advocates were the following proposed elements of the agreement: (1) retention of PNR data for up to 40 years; (2) collection of increased amounts and types of data; and (3) distribution of that data, along with risk assessments and possibly other analyses, to other law enforcement agencies, where control of those data would be beyond the reach of the agencies whose missions necessitated that such data be collected. The interim agreement would have expired on July 31, 2007.

EU-U.S. Permanent Agreement

On July 26, 2007, then-DHS Secretary Michael Chertoff announced a new agreement between the European Union and the United States on PNR data sharing.[669] Chertoff underscored that PNR data were an essential screening transatlantic travelers against watchlists. Under the permanent agreement, DHS would collect 19 types of PNR data, which would be maintained for seven years in an active file and eight years in a dormant file. On August 23, 2007, DHS issued a final rule that requires all international air carriers and vessel operators to provide CBP with advanced passenger information, including PNR data, in advance of an aircraft's departure or vessel's departure/arrival, depending on the

vessel's port of origin (U.S. or foreign).[670] This rule became effective on February 18, 2008.

Appendix D. Secure Flight Data Elements

Secure Flight Passenger Data (SFPD) elements include the following:

- Full Name.
- Date of Birth.
- Gender.
- Redress Number or Known Traveler Number (if available).
- Passport Number (if available).
- Passport Country of Issuance (if available).
- Passport Expiration Data (if available).
- Foreign Airport Code—place of origination.
- Port of First Arrival.
- Flight Number.
- Date of Aircraft Departure.
- Time of Aircraft Departure.
- Date of Aircraft Arrival.
- Scheduled time of Aircraft Arrival.[671]

General Management Laws: A Compendium

CONGRESSIONAL RESEARCH SERV., GENERAL MANAGEMENT LAWS: A COMPENDIUM, RL30795 (MAY 19, 2004), *available at* http://www.intelligencelaw.com/library/secondary/crs/pdf/RL30795_5-19-2004.pdf.

Order Code RL30795

Updated May 19, 2004

Clinton T. Brass
Coordinator Analyst in American National Government
Government and Finance Division

Summary

This report (hereafter "compendium") is a companion to CRS Report RL32388, General Management Laws: Major Themes and Management Policy Options. In combination, these reports have three main objectives: (1) to identify and describe the major management laws under which the executive branch of the federal government is required to operate, including their rationale, design, and scope; (2) to assist Members of Congress and their staff in oversight of executive branch management; and (3) to help Congress when considering potential changes to the management laws themselves, as well as other legislation, including authorization statutes and appropriations.

The compendium contains profiles of selected "general management laws" — broad statutes designed to regulate the activities, procedures, and administration of all or most executive branch agencies. The quality of the general management laws, as well as their implementation, are considered crucial to maintaining the accountability of the executive branch to Congress, the President, and the public. Moreover, these laws influence the effectiveness of federal agencies when they implement, evaluate, and help formulate public policies.

The compendium includes more than 90 separate entries that describe general management laws for the executive branch of the federal government. The entries in the compendium are organized into the following seven functional categories: (1) Information and Regulatory Management; (2) Strategic Planning, Performance Measurement, and Program Evaluation; (3) Financial Management, Budget, and Accounting; (4) Organization; (5) Procurement and Real Property Management; (6) Intergovernmental Relations Management; and (7) Human Resources Management and Ethics. These categories include many laws and

topics, including the Freedom of Information Act (FOIA, section I.E.), Privacy Act (I.F.), Federal Advisory Committee Act (FACA, I.G.), National Environmental Policy Act (NEPA, I.L.), Data Quality Act (I.O.; increasingly known as the Information Quality Act (IQA)), Inspector General Act (II.A.), Government Performance and Results Act (II.B.), Balanced Budget and Emergency Deficit Control Act (III.D.), Budget Enforcement Act (III.E.), Government Corporation Control Act (IV.A.), Davis-Bacon Act (V.F.), Unfunded Mandates Reform Act (UMRA, VI.C.), Hatch Act (VII.A.(5) and VII.A.(29)), Ethics in Government Act (VII.B.), Federal Tort Claims Act (VII.E.), and issues like information security (section I), improper payments (section III), services acquisition and contracting (section V), and federal employees and civil service laws (e.g., the National Security Personnel System at the Department of Defense, and the Department of Homeland Security personnel system (section VII.A)).

For each entry in the compendium, one or more CRS analysts present a brief history of the general management law, describe the law's major provisions, discuss key developments and issues, and provide source readings for readers who want more information. The compendium reflects the status of general management laws at the end of the first session of the 108th Congress, and will be updated along with the companion report to reflect actions taken through the close of the 108th Congress.

Introduction

Purposes

This report, General Management Laws: A Compendium (hereafter "compendium"), is a companion to CRS Report RL32388, General Management Laws: Major Themes and Management Policy Options, by Clinton T. Brass. In combination, these reports have three main objectives:

- to identify and describe the major general management laws under which the executive branch is required to operate, including their rationale, design, and scope;
- to assist Members of Congress and their staff in overseeing management of the executive branch; and
- to help Congress when considering potential changes to the management laws, as well as other legislation, including authorizing statutes and appropriations.[672]

[672] A related report, CRS Report RL30240, Congressional Oversight Manual, describes the major purposes, processes, techniques, and information sources for congressional oversight of the executive branch.

The compendium contains profiles of selected "general management laws" — broad statutes designed to regulate the activities, procedures, and administration of all or most executive branch agencies.[673] The quality of the general management laws, as well as their implementation, are considered crucial to maintaining the accountability of the executive branch to Congress, the President, and the public. Moreover, these laws influence the effectiveness of federal agencies when they implement, evaluate, and help formulate public policies.

As a complement to this compendium, the General Management Laws: Major Themes and Management Policy Options report ("companion report") focuses on major themes and possible management policy options for Congress that emerge when the general management laws are viewed together, as a whole. The compendium reflects the status of general management laws at the end of the first session of the 108th Congress, and will be updated along with the companion report to reflect actions taken through the close of the 108th Congress.[674]

How the Compendium and Companion Report Are Organized

Compendium

This compendium includes more than 90 separate entries that describe general management laws for the executive branch. The entries are organized into the following seven functional categories:[675]

- Information and Regulatory Management;
- Strategic Planning, Performance Measurement, and Program
- Evaluation;
- Financial Management, Budget, and Accounting;
- Organization;
- Procurement and Real Property Management;
- Intergovernmental Relations Management; and
- Human Resources Management and Ethics.

---

[673] Agencies are sometimes exempted from the coverage of specific general management laws due to a category into which they fall (e.g., department, government corporation, etc.), specific provisions in an agency's authorizing statute or appropriations, or provisions in the general management law itself.

[674] Previous versions of this compendium, coordinated by Ronald C. Moe, reflected the status of general management laws at the close of the 104th, 105th, and 106th Congresses, respectively. This compendium stands on the shoulders of these efforts.

[675] The listed functions are not necessarily the only way to categorize the report's entries into sections, which could have been aggregated differently or further broken down.

Within the management field, functions typically refer to "business areas that require related bundles of skill" or "groups of people with similar skills and performing similar tasks."[676] (In the private sector, by way of comparison, functions often include marketing, finance, production, and human resources.) This functional orientation is a major theme that the companion report addresses.

Most of the compendium's entries discuss a specific law, or in some cases, several related laws. The "Human Resources Management and Ethics" section, however, presents most civil service laws according to their codification in Title 5 of the United States Code — the way that practitioners and specialists typically discuss these laws. For each entry in this compendium, one or more CRS analysts present a brief history of the general management law in a section entitled Statutory Intent and History, describe the law itself in a section entitled Major Provisions, and close with a summary of key developments and issues in a Discussion section. Finally, for readers interested in more detail, each entry cites Selected Source Reading.

All the entries in the compendium conform to the overall structure described above; but because the laws have different audiences, levels of complexity, and histories, the entries sometimes differ in extent, level of detail, or emphasis.

Companion Report

In turn, as a complement to this compendium, the companion report identifies potential management policy options for Congress.[677] First, the companion report

[676] For more discussion of functional structures and perspectives within a management context, see John R. Schermerhorn Jr., Core Concepts of Management (Hoboken, NJ: John Wiley & Sons, 2004), pp. 119-120, and Peter F. Drucker, Management (New York: Harper & Row, 1974), pp. 558-563. This usage of the term function differs from usages found in Title 5 of the United States Code and in budgetary accounting. In Title 5, the term function is used in several contexts, including agency strategic plans (5 U.S.C. § 306, requiring agencies to specify goals and objectives for major functions and operations of the agency), transfer of functions (5 U.S.C. § 3503), and reductions in force (5 U.S.C. § 3502). Title 5 does not define the term, but the implementing regulations for transfer of functions and reductions in force define function as "all or a clearly identifiable segment of an agency's mission (including all integral parts of that mission), regardless of how it is performed" (5 C.F.R. § 351.203). With regard to budgetary accounting, the term function refers to categories of federal spending, organized according to the purpose or mission of government (e.g., income security, energy, and international affairs). The Congressional Budget and Impoundment Control Act of 1974 established the first statutory foundation for budget function classifications (see 2 U.S.C. § 632(a)(4) and 31 U.S.C. § 1104(c)). For background on budget function classifications, see CRS Report 98-280, Functional Categories of the Federal Budget, by Bill Heniff Jr.; and U.S. General Accounting Office, Budget Function Classifications: Origins, Trends, and Implications for Current Uses, GAO/AIMD-98-67, Feb. 1998.

[677] CRS Report RL32388, General Management Laws: Major Themes and Management Policy Options, by Clinton T. Brass.

provides historical context on the roles that Congress and the President play in managing the executive branch. Next, the companion report briefly discusses the extent to which management in the public and private sectors can be compared. Finally, the largest share of the companion report analyzes major themes that run through the general management laws and identifies potential management policy options for Congress. The themes include:

- Discretion for the Executive Branch. Congress frequently faces the issue of how much discretion to give the executive branch. Congress has several management policy options to address delegation situations and help balance agency flexibility with accountability.
- Standardization vs. Customization. Should the management laws under which agencies operate be standardized, with rules that apply uniformly to many different agencies? Or should some agencies have agency-specific laws that are customized to each agency's internal and external environments? Or should there be a mix of the two approaches? The report discusses advantages and disadvantages of the different approaches and analyzes two options for Congress when making these decisions.
- Functional Silos vs. Integrated General Management. A functional perspective (e.g., looking at agency operations from the perspective of a budget officer or human resources officer) is important, because it can boost efficiency through specialization and ensure centralized control over strategic decisions. However, if functional orientations become inward-looking, various functions can operate as "silos" — in isolation from one another — resulting in coordination problems or missed opportunities. The report analyzes policy options for Congress to bring an integrated general management perspective to solve agency management problems.
- Making and Measuring Progress. For over two decades, many executive branch agencies have suffered from persistent, major management problems. Often these problems relate to areas the general management laws were intended to address. The report analyzes potential options for measuring and motivating agency progress in improving management practices.
- Agency "Chief Officers" and Interagency Councils. Statutorily created "chief officers" (e.g., chief financial officers and chief acquisition officers) have increased in number and importance in federal agencies, as in the private sector. Congress also established interagency councils of these officers. The report analyzes options for Congress in considering whether additional chief officers and councils should be established, and how Congress might make the councils more accountable.

I. Information and Regulatory Management

A. Federal Register Act

Statutory Intent and History

The Federal Register Act was originally legislated in 1935 (49 Stat. 500) to establish accountability and publication arrangements for presidential proclamations and executive orders and for federal agency rules and regulations. The centerpiece of the resulting system is the Federal Register, an executive gazette produced by the Office of the Federal Register of the National Archives and Records Administration. It is printed by the Government Printing Office and lately has been available, as well, in electronic formats (online and via CD-ROM).[678]

In many respects, the Federal Register Act of 1935 was a response to the increasing number of regulations, rules, and related administrative actions of the New Deal era, and the fugitive status of these instruments. The expansion of the federal government during World War I had resulted in the presidential and agency issuance of a growing quantity of administrative requirements. Brief experience with a gazette — The Official Bulletin — had been beneficial, but of temporary, wartime, duration.[679] Its disappearance made a difficult situation worse. A contemporary observer characterized the operative situation in 1920 as one of "confusion,"[680] and another described the deteriorating conditions in 1934 as "chaos."[681] During the early days of the New Deal, administrative law pronouncements were in such disarray that, on one occasion, government attorneys arguing a lawsuit before the Supreme Court were embarrassed to find their case was based upon a nonexistent regulation,[682] and on another occasion, discovered they were pursuing litigation under a revoked executive order.

The response was the mandating of the Federal Register. Produced in a magazine format, it is now published each business day. Soon after enacting the Federal Register Act, Congress, in 1937, amended it and inaugurated the Code of Federal Regulations, a useful supplement to the Register (50 Stat. 304). This cumulation of the instruments and authorities appearing in the gazette contains almost all operative agency regulations, and is now updated annually.

---

[678] Commercially produced electronic versions of the Federal Register are available for purchase from private sector vendors who have introduced value-added features, such as search capability or annotations, to the basic GPO text.

[680] John A. Fairlie, "Administrative Legislation," Michigan Law Review, vol. 18 (Jan. 1920), p. 199.

[681] Erwin N. Griswold, "Government in Ignorance of the Law — A Plea for Better Publication of Executive Legislation," Harvard Law Review, vol. 48 (Dec. 1934), p. 199.

[682] United States v. Smith, 292 U.S. 633 (1934), appeal dismissed on the motion of the appellant without consideration by the Court.

Later, the general statutory authority underlying the Federal Register was relied upon for the creation of other series of publications — the United States Government Manual, which has been available for public purchase since 1939; the Public Papers of the Presidents, which were first published in 1960; and the Weekly Compilation of Presidential Documents, which was begun in the summer of 1965.

Major Provisions

The cumulative and operative authority of the Federal Register Act may be found in Chapter 15 of Title 44, United States Code. The Office of the Federal Register (OFR) is mandated and the appointment of its director by the Archivist of the United States is authorized. Responsibility for the production of the Federal Register and the preservation of the original copies of documents published in it are vested in the Archivist.

The original and two duplicate originals or certified copies of a document required or authorized to be published in the Federal Register must be filed with the OFR. Materials so filed are marked with a notation as to the date and hour of receipt. One copy of filed materials is immediately available for public inspection at the OFR.

Filed materials are transmitted to the Government Printing Office (GPO), which is responsible for the production and distribution of the Federal Register. The GPO also prepares, produces, and distributes periodic cumulative indices of the daily issues of the Register.

Documents which must be published in the Federal Register include:

- presidential proclamations and executive orders, except those not having general applicability and legal effect or effective only against federal agencies or persons in their capacity as officers, agents, or employees thereof;[683]
- documents or classes of documents that the President may determine from time to time have general applicability and legal effect;
- documents or classes of documents that may be required to be so published by act of Congress; and
- other documents or classes of documents authorized to be published by regulations prescribed with the approval of the President.

Conversely, the act declares that "comments or news items of any character may not be published in the Federal Register" (44 U.S.C. § 1505(b)).

---

[683] The Federal Register Act states that "every document or order which prescribes a penalty has general applicability and legal effect" (44 U.S.C. § 1505).

The requirements for filing documents for publication in the Federal Register may be suspended by the President during "an attack or threatened attack upon the continental United States." Such a suspension remains in effect "until revoked by the President, or by concurrent resolution of the Congress" (44 U.S.C. § 1505(c)).

Federal Register operations are supervised by the Administrative Committee of the Federal Register, which is chaired by the Archivist of the United States and includes a Department of Justice officer designated by the Attorney General, and the Public Printer. The director of the Office of the Federal Register serves as committee secretary. This panel, with the approval of the President, prescribes the regulations governing the Federal Register, including such matters as the documents to be authorized by regulation for publication in the gazette, the manner and form in which the Register is produced, and certain distribution matters and charges concerning it.

The Administrative Committee, with the approval of the President, also supervises and manages the production of the Code of Federal Regulations. The Code is a "complete codification of the documents of each agency of the Government having general applicability and legal effect, issued or promulgated by the agency by publication in the Federal Register or by filing with the Administrative Committee, and are relied upon by the agency as authority for, or are invoked or used by it in the discharge of, its activities or functions" (44 U.S.C. § 1510(a)). The Office of the Federal Register prepares and publishes the codifications appearing in the Code.

The Federal Register, the Code of Federal Regulations, and other series of publications produced pursuant to the general authority of the Federal Register Act are available to the public through sales, OFR and other websites ([http://www.archives.gov/federal_register/index.htm]), and distribution to federal depository libraries.

Discussion

While most major federal administrative law instruments — such as executive orders, presidential proclamations, and agency rules and regulations — are published in the Federal Register and Code of Federal Regulations, not all such authorities are so produced. During the past few years, concern has been expressed from time to time in Congress about certain national security directives of the President not being subject to accountability or publication under the Federal Register Act. They have been variously denominated as National Security Decision Memoranda during the Nixon-Ford Administrations, as Presidential Directives during the Carter Administration, as National Security Decision Directives during the Reagan Administration, as National Security Directives during the George H. W. Bush Administration, and as Presidential Decision Directives by the Clinton Administration. In 1988, a House

subcommittee held hearings on a proposal to amend the Federal Register Act to provide accountability in the use of these presidential directives. A complication in so legislating is that these instruments are usually all security classified. Another type — Homeland Security Presidential Directives — was launched by President George W. Bush in late October 2002. This development sparked renewed congressional concern about accountability for these presidential directives.

B. Administrative Procedure Act

Statutory Intent and History

With the advent of the New Deal, greater expectations and reliance were placed upon the federal government for the achievement of certain political and social objectives. This required the development of both an expanded administrative law process and new regulatory agencies. Unlike a number of European states at that time, the United States did not have in place a sophisticated administrative system and had to build one. The first step was the passage of the Federal Register Act (described elsewhere in this compendium) in 1935, which required all federal agencies to publish notice of their rules, proposed rules, and legal notices in a single, readily available source, later to be known as the Federal Register.

Although substantial progress was made in uniform public notice and publication processes for regulation making by the agencies, a single general management law covering all the agencies was not passed until after World War II. The Administrative Procedure Act (APA; 60 Stat. 237; 5 U.S.C. § 551 et seq.), enacted in 1946, is considered the seminal federal administrative legislation of the modern era. The major contribution of the act was to establish for the first time minimum procedural requirements for certain types of agency decision making processes. Its general purposes were to (1) require agencies to keep the public currently informed of agency organization, procedures, and rules; (2) provide for public participation in the rulemaking process; (3) prescribe uniform standards for the conduct of formal rulemaking and adjudicatory proceedings (i.e., proceedings required by statute to be made on the record after opportunity for agency hearing); and (4) restate the law of judicial review of agency action.

The act imposes on agencies certain requirements for two modes of agency decision making: rulemaking and adjudication. In general, the term agency refers to any authority of the government of the United States, whether or not it is within, or subject to review by, another agency. Congress, the courts, and the governments of territories, possessions, and the District of Columbia are excluded.

Major Provisions

The APA has two major subdivisions: Sections 551-559, dealing with general agency procedures, and Sections 701-706, dealing with judicial review. In addition, several sections dealing with administrative law judges are scattered throughout Title 5 (Sections 1305, 3105, 3344, 5372, and 7521).

The structure of the APA is shaped around the distinction between rulemaking and adjudication, with different schemes of procedural requirements prescribed for each. Rulemaking is agency action that formulates the future conduct of persons, through the development and issuance of an agency statement designed to implement, interpret, or prescribe law or policy. It is essentially legislative in

nature because of its future general applicability and its concern for policy considerations. Adjudication, on the other hand, is concerned with determination of past and present rights and liabilities. The result of an adjudicative proceeding is the issuance of an order.

Beyond the distinction between rulemaking and adjudication, the APA subdivides each of these categories of agency action into formal and informal proceedings. Whether a particular rulemaking or adjudicatory proceeding is considered to be "formal" depends on whether the proceeding is required by statute to be "on the record after opportunity for an agency hearing" (5 U.S.C. § 553(c), § 554(a)). The act prescribes elaborate procedures for both formal rulemaking and formal adjudication, and relatively minimal procedures for informal rulemaking. Virtually no procedures are prescribed by the APA for the remaining category of informal adjudication, which is by far the most prevalent form of governmental action.

Rulemaking

Section 553 sets the requirements for informal rulemaking (also known as notice and comment rulemaking). An agency must publish a notice of proposed rulemaking in the Federal Register, afford interested persons an opportunity to participate in the proceeding through the submission of written comments or, at the discretion of the agency, by oral presentation, and when consideration of the matter is completed, incorporate in the rules adopted "a concise general statement of their basis and purpose" (5 U.S.C. § 553(c)). A final rule must be published in the Federal Register "not less than 30 days before its effective date" (5 U.S.C. § 553(d)). Interested persons have a right to petition for the issuance, amendment or repeal of a rule (5 U.S.C. § 553(e)). Although the APA does not specify a minimum period for public comment, at least 30 days have been traditionally allotted. More recently, Executive Order 12866[684] has prescribed that covered agencies allow at least 60 days. Agencies are free to grant additional procedural rights, and Congress has at times particularized requirements for certain agencies or programs.

The APA also provides for formal rulemaking, a procedure employed when rules are required by statute to be made on the record after an opportunity for agency hearing. Essentially, this procedure requires that the agency issue its rule after the kind of trial-type hearings procedures normally reserved for adjudicatory orders (discussed below).

Adjudication

[684] 3 C.F.R., 1993 Comp., pp. 638-649.

Sections 554, 556, and 557 apply to formal adjudications (i.e., cases for which an adjudicatory proceeding is required by statute to be determined on the record after an agency proceeding). Sections 556 and 557 spell out the specific procedures to be utilized in formal adjudication. In brief, a trial type hearing must be held, presided over by members of the agency or an administrative law judge (ALJ). Section 556 prescribes the duties of ALJs, the allocation of burden of proof, and parties' rights to cross-examination. Section 557 provides that an ALJ must issue an initial decision, which becomes the agency's final decision if not appealed. The record must show the ruling on each finding, conclusion, or exception raised. Ex parte communications relevant to the merits of a pending formal agency proceeding are prohibited.

Judicial Review of Agency Action

Sections 701-706 constitute a general restatement of the principles of judicial review embodied in many statutes and judicial decisions; however, they leave the mechanics regarding judicial review to be governed by other statutes or court rules.

Section 701 establishes a presumption of reviewability of agency actions by providing that the action "of each authority of the Government of the United States" is subject to judicial review except where "statutes preclude judicial review," or "where agency action is committed to agency discretion by law" (Section 701(a)(1),(2)). The Supreme Court has consistently supported the strong presumption of reviewability, requiring a "showing of 'clear and convincing' evidence of a ... legislative intent to restrict access to judicial review." (Citizens to Protect Overton Park v. Volpe, 401 U.S. 402, 410 (1971); Abbott Laboratories v. Gardner, 387 U.S. 136, 141 (1967); Bowen v. Michigan Academy of Family Physicians, 476 U.S. 667, 681 (1986)). Moreover, the exception for actions "committed to agency discretion" is narrowly construed and is applicable only in "rare instances where statutes are drawn in such broad terms that in a given case, there is no law to apply" (Volpe, supra, 401 U.S. at 410).

A challenge may be brought by any person who is "adversely affected or aggrieved" by the action "within the meaning of the relevant statute" (5 U.S.C. § 702). Courts deciding the standing of a person challenging a rule also must comply with the limitations on federal court jurisdiction imposed by the "case or controversy" requirement of Article III of the Constitution, which has been interpreted to require that a party bringing an action in federal court demonstrate an "injury in fact," caused by the violation of a legally protected interest, that is concrete and particularized, and actual or imminent, as opposed to conjectural or hypothetical (see Valley Forge Christian College v. Americans United for Separation of Church and State, 454 U.S. 473 (1982); see also Lujan v. Defenders of Wildlife, 504 U.S. 555 (1992)). In addition, parties seeking to establish constitutional standing are required to show that their injury "fairly can be traced to the challenged action" and that the injury is likely to be redressed by a favorable judicial decision (Allen v. Wright, 468 U.S. 737 (1984); Valley Forge,

supra, at 472). A person challenging an agency rule who satisfies Section 702*s test is also likely to satisfy the injury requirement for constitutional standing. Indeed, courts typically merge their discussions of Section 702*s "adversely affected or aggrieved" language with the constitutional injury requirement (see, e.g., Wilderness Society v. Griles, 824 F.2d 4, 11 (D.C. Cir. 1987)).

In addition to constitutional requirements, the judiciary has developed prudential rules to constrain the instances in which review may be obtained. Like their constitutional counterparts, these judicially imposed limits on the exercise of federal jurisdiction are "founded in concern about the proper — and properly limited — role of the courts in a democratic society" (see Warth v. Seldin, 422 U.S. 490, 498 (1974)). However, unlike their constitutional counterparts, they may be modified or abrogated by Congress. The prudential components of the standing doctrine require that (1) a plaintiff assert his own legal rights and interests rather than those of third parties; (2) a plaintiff's complaint be encompassed by the "zone of interests" protected or regulated by the constitutional or statutory guarantee at issue; and (3) courts decline to adjudicate "'abstract questions of wide public significance' which amount to 'generalized grievances' pervasively shared and most appropriately addressed in the representative branches" (Valley Forge, supra, at 472).

Any standing inquiry is further complicated in instances when an organization seeks to challenge agency action. An organization may have standing to sue if it has been injured as an entity, and may likewise possess standing to sue on behalf of its members, so long as the members would otherwise have standing to sue in their own right; the interests the organization seeks to protect are germane to its purpose; and neither the claim asserted nor the relief requested requires the participation of individual members (see Hunt v. Washington State Apple Advertising Commission, 432 U.S. 333, 343 (1977)).

The forum for judicial review of agency rules is determined by statute. Statutes containing judicial review provisions applicable to rulemaking generally call for direct, pre-enforcement review in the courts of appeals, and usually specify requirements as to venue, timing of review, and scope of review. If there is no specifically applicable judicial review provision governing the agency's rule, a challenge to the rule will normally be through an action for an injunction or declaratory relief in a district court. Jurisdiction must be obtained through one of the general jurisdictional statutes, the most frequently asserted being 28 U.S.C. § 1331, the so-called "federal question" provision, which gives district courts "original jurisdiction of all civil actions wherever the matter in controversy ... arises under the Constitution, laws, or treaties of the United States." Other jurisdictional provisions that may be used are 28 U.S.C. § 1337 (actions arising under commerce-related statutes) and 28 U.S.C. § 1361 (mandamus jurisdiction).

Section 706 sets forth the scope of review of agency actions. In general, the scope of review depends on the nature of the agency determination under challenge. Agency conclusions on questions of law are reviewed de novo. When a court

reviews an agency's construction of a statute it administers, the court is required to uphold Congress's intent where Congress has directly spoken to the precise statutory question at issue. If the statute is silent or ambiguous with respect to the specific issue, however, the agency's interpretation of the statute must be upheld if the agency's construction of the statute is permissible (see Chevron U.S.A. v. NRDC, 467 U.S. 837 (1984)). The Supreme Court has clarified the limits of this standard, ruling that Chevron deference applies only in instances when Congress has delegated authority to an agency to make rules carrying the force of law, and when the agency interpretation claiming deference was promulgated pursuant to that authority (see United States v. Mead Corp., 533 U.S. 218, 229 (2001)).

Agency exercises of judgment or discretion, such as in informal rulemaking or informal adjudication, are reviewed under the "arbitrary, capricious, abuse of discretion" standard. Under this standard, an agency determination will be upheld if it is rational, based on a consideration of the relevant factors, and within the scope of the authority delegated to the agency by Congress. The agency must examine the relevant data and articulate a satisfactory explanation for its action, including a rational connection between the facts found and the choices made. A court is not to substitute its judgment for that of the agency (see Motor Vehicle Mfr's Assoc. v. State Farm Mut. Auto Ins. Co., 463, U.S. 29, 42-43 (1983)).

Agency determinations of fact, typically in challenges of agency adjudications, are reviewed under the "substantial evidence" test when the agency determination is reviewed on the record of an agency proceeding required by statute (see Consolo v. FMC, 383 U.S. 607, 618-21 (1966)), citing (Universal Camera v. NLRB, 340 U.S. 474 (1951)).

Discussion

The APA retains its preeminence as the general management law governing agency decisionmaking by means of rulemaking and adjudication. Essentially unamended by Congress since 1946, it has maintained its vitality in the face of vast and fundamental changes in the nature and scope of federal government responsibilities. In great measure this accommodation has come about because of judicial rulings that have effected important transformations of the meaning and scope of its otherwise neutral and spare terminology. The hallmark of our modern administrative state — agency rulemaking through the process of informal rulemaking — is a creative judicial cultivation. With the encouragement of the courts, rulemaking replaced adjudication as the dominant formal decision making process. Administrative lawmaking was "democratized" in a series of decisions between 1965 and 1983 that expanded both the obligations of agencies and the role of reviewing courts. The result has been the transformation, without benefit of legislative amendment, of informal rulemaking into a new, on-the-record proceeding that has fostered widespread public participation in the process.

To be sure, Congress has not simply silently acquiesced in this revolutionary transformation. Although Congress has never undertaken a comprehensive revision of the APA, it has always recognized that it could do so, and with increasing frequency, it has supplanted the APA's requirements with more explicit directives for particular agencies and programs mirroring the above-described judicial innovations. Often this legislation has been aimed at formalizing the procedural protections ensuring effective and meaningful public participation in agency policymaking. Thus, certain health, environmental, and consumer protection statutes, for example, contain detailed "hybrid-rulemaking" requirements and procedural as well as substantive changes.[685]

Moreover, the deregulation movement of the 1970s and 1980s successfully focused attention on the economic consequences of regulation and the need for a broader analytic approach to regulatory decision making that assessed the impacts of costs and new technologies. The executive branch took the lead by adding new layers of clearances for rules by executive order that included requirements for consideration and evaluation of their costs and benefits. (See Executive Orders 12291, 12498, and 12866).[686] Proposed regulatory reform legislation in recent Congresses has included bills that not only would have codified the judicially created procedural requirements of the last two decades, but also would have required all agencies engaged in rulemaking to utilize methodologies requiring detailed risk assessment and cost benefit analysis for major regulations which would have been subjected to intense judicial review. While these particular reform efforts have been unsuccessful, Congress has passed several notable measures, including a mechanism that subjects all agency rules to congressional review and possible veto; a procedure to require the General Accounting Office to conduct an independent evaluation of an agency's cost-benefit analysis of a proposed or final rule when requested by a chair or ranking member of a committee of jurisdiction; a process designed to restrict regulations imposing unfunded costs on state and local governments and the private sector; and a process designed to ensure that federal agencies use and disseminate accurate information. There is also an emerging and controversial trend on the part of agencies to attempt to enhance public participation in the administrative process by accepting electronically submitted comments.

---

[685] See, e.g., 42 U.S.C. § 300g-1(d) (requiring public hearing prior to the promulgation of regulations pursuant to the Safe Drinking Water Act); 15 U.S.C. § 2605 (providing for public hearing and opportunity for cross-examination of witnesses prior to promulgation of regulations under the Toxic Substances Control Act); and 15 U.S.C. § 2058 (providing for a public hearing before promulgation of rules under the Consumer Product Safety Act).

[686] See 3 C.F.R., 1981 Comp., pp. 127-134; 3 C.F.R., 1985 Comp., pp. 323-325; and 3 C.F.R., 1993 Comp., pp. 638-649, respectively.

While the APA's basic rulemaking model is relatively straightforward, it has been argued that the additional requirements that have been imposed by Congress, the executive branch, and the courts have made the rulemaking process rigid and burdensome upon agencies. In turn, this has led to the argument that rulemaking has become "ossified," with agencies either undertaking resource and time intensive steps to ensure that a rule will withstand increased scrutiny, or simply circumventing the traditional rulemaking process by issuing policy statements and interpretive rules to effectuate compliance with a regulatory agenda. Ultimately, however, it would appear that the current APA scheme is likely to continue to be the key vehicle for formulating and implementing agency policy directives.

C. Federal Records Act and Related Chapters of Title 44

Statutory Intent and History

Proper maintenance of federal records within the departments and agencies has been legislatively addressed by Congress since the earliest days of the republic. When chartering the initial departments, for example, Congress authorized the heads of these entities to issue regulations for, among other matters, the custody, use, and preservation of the records, papers, and property.[687] It was also the responsibility of these officials to ensure that these regulations were observed in practice.

Through the years, Congress from time to time legislated additional requirements and administrative arrangements concerning federal records. In 1934, for instance, a major step was taken with the mandating of the National Archives (48 Stat. 1122).[688] The head of this entity, the Archivist of the United States, has subsequently become a major policy leader regarding the entire life cycle of federal records, including their (1) creation or collection; (2) processing; (3) transmittal, including access and dissemination; (4) use; (5) active storage; (6) inactive storage; and (7) final disposition.[689]

The Federal Records Act of 1950 (64 Stat. 583) was another milestone. While it is most often remembered for its placement of the Archivist and the National Archives under the authority of the Administrator of the General Services Administration,[690] among the statute's important innovations were:

- creation of the National Historical Publications Commission to "make plans, estimates, and recommendations for such historical works and collections of sources as it deems appropriate for printing or otherwise recording at the public expense ... [and to] cooperate with and encourage both governmental and nongovernmental institutions, societies, and individuals in collecting and preserving and, when it deems such action to be desirable, in editing and publishing the papers of outstanding citizens of the United States and such other documents as may be important for an

---

[687] See, for example, 1 Stat. 28, 49, and 65; these and similar provisions were consolidated in the Revised Statutes of the United States (1878) at Section 161, which is presently located in the United States Code at 5 U.S.C. § 301.

[688] The National Archives was rechartered in the National Archives and Records Administration Act of 1984 (98 Stat. 2280), which largely constitutes Chapter 21 of Title 44 of the United States Code.

[689] Peter Hernon, "Information Life Cycle: Its Place in the Management of U.S. Government Information Resources," Government Information Quarterly, vol. 11, 1994, pp. 143-170.

[690] This relationship ended in 1984 when the National Archives was restored to the status of an independent agency within the executive branch.

understanding and appreciation of the history of the United States" (44 U.S.C. §§ 2501-2506);
- authorizing the analysis, development, promotion, and coordination of standards, procedures, and techniques "designed to improve the management of records, to insure the maintenance and security of records deemed appropriate for preservation, and to facilitate the segregation and disposal of records of temporary value," and other related actions (44 U.S.C. §§ 2904-2906);
- authorizing the establishment, maintenance, and operation of records centers "for the storage, processing, and servicing of records for Federal agencies pending their deposit with the National Archives of the United States or their disposition in any other manner authorized by law" (44 U.S.C. § 2907);
- prescribing the records management responsibilities of agency heads (44 U.S.C. §§ 3101-3107); and
- prescribing archival administration responsibilities for the deposit of federal agency and congressional records "determined by the Archivist to have sufficient historical or other value to warrant their continued preservation by the United States Government" in the National Archives, and other related actions (44 U.S.C. §§ 21072111).

The provisions of the Federal Records Act and those of subsequent records management statutes are largely codified in chapters of Title 44 of the United States Code.

Major Provisions

Within Title 44 of the United States Code, Chapters 21, 22, 29, 31, and 33 contain major provisions of records management law. The first of these, Chapter 21, after prescribing the establishment, organization, and principal leadership of the National Archives and Records Administration, specifies certain general authority, duties, and responsibilities of the Archivist. These include procedures and conditions for the acceptance of records for historical preservation; responsibility for the custody, use, and withdrawal of records transferred to the Archives; responsibilities for the preservation, arrangement, duplication, and exhibition of records by the Archivist; and the procedures and conditions governing the establishment of a presidential archival depository or presidential library to be accepted and maintained by the Archivist.[691]

Chapter 22 contains the provisions of the Presidential Records Act of 1978 (92 Stat. 2523), which marked a major change in federal policy on the custody and

[691] Concerning the acceptance and maintenance of presidential archival depositories by the Archivist, see CRS Report RS20825, Presidential Libraries: The Federal System and Related Legislation, by Harold C. Relyea.

preservation of presidential records. As a consequence of the Watergate incident and related matters, the official papers and records of President Richard Nixon were placed under federal custody by specially legislated arrangements — the Presidential Recordings and Materials Preservation Act of 1974 (88 Stat. 1695). This statute requires that these materials remain in Washington, DC, where they are maintained under the supervision of the Archivist. Thus, Nixon neither could take his presidential records and documents with him when he left office, nor could place them in a presidential library outside the nation's capital.

This 1974 statute also created the temporary National Study Commission on Records and Documents of Federal Officials (88 Stat. 1698). The panel was tasked "to study problems and questions with respect to the control, disposition, and preservation of records and documents produced by on behalf of Federal officials, with a view toward the development of appropriate legislative recommendations and other recommendations regarding appropriate rules and procedures with respect to such control, disposition, and preservation." Its final report was issued in March 1977.[692]

Responding partly to some of the commission's recommendations, Congress legislated the Presidential Records Act in 1978. After defining "presidential records," the statute specifies that all such materials created on or after January 20, 1981, are subject to its provisions. It effectively made presidential records federal property, to remain under the custody and control of the Archivist when each incumbent President left the White House. Jimmy Carter was the last occupant of the Oval Office who could freely take away his records and papers.

Chapter 29, setting out the records management authority and responsibilities of the Archivist and the Administrator of General Services, contains core provisions from the Federal Records Act of 1950. Specified here are the objectives of federal records management, the two officials' general responsibilities for records management, and the Archivist's authority to establish standards for the selective retention of records, inspect agency records, and establish, maintain, and operate records centers.

Chapter 31, also containing core provisions from the Federal Records Act, prescribes the records management responsibilities of the federal agencies, including the general duties of agency heads, the requirement to establish and maintain "an active, continuing program for the economical and efficient management of the records of the agency," and certain related procedural matters.

[692] U.S. National Study Commission on Records and Documents of Federal Officials, Final Report of the National Study Commission on Records and Documents of Federal Officials (Washington: GPO, 1977). Also see Anna Kasten Nelson, "The Public Documents Commission: Politics and Presidential Records," Government Publications Review, vol. 9, Sept./Oct. 1982, pp. 431-451.

Chapter 33 is devoted to the disposal of federal records. It authorizes the Archivist to issue regulations and utilize a system of records lists and disposition schedules to eliminate non-current agency records lacking preservation value.

Discussion

Most of the existing statutory law concerning records management was developed when paper formats dominated federal recordkeeping and production. During the past few decades, the adequacy of this authority has come into question as electronic forms and formats have become more prevalent. The many challenges of the electronic record phenomenon continue to be discussed and evaluated. General Records Schedule (GRS) 20, a primary, government-wide, records management directive, has been revised recently, and efforts are underway to develop an electronic records archive at the National Archives.

D. Congressional Review of Regulations Act

Statutory Intent and History

The Supreme Court's acceptance in 1937 of the New Deal's rejection of passive, minimalist governance, and its replacement by a more activist governmental philosophy, signaled the beginning of the era of the administrative state that has seen the emergence of a pattern of pervasive governmental economic and social regulation. Since 1937, an unbroken line of Supreme Court and lower court decisions has provided legitimacy for broad delegations of congressional power to the executive, and has fostered and nurtured the hallmark of the modern administrative state, agency lawmaking through the process of informal rulemaking. With the encouragement of the courts, rulemaking has replaced adjudication as the dominant formal administrative decision making process.

The necessity to delegate increasing amounts of legislative power to administrative agencies to accomplish the expanded objective of government, while at the same time maintaining congressional control and responsibility over the exercise of the delegated authority, created a constitutional tension, however. This tension has been manifested over the years by a variety of legislative attempts to develop a review mechanism that would allow Congress to exercise its oversight responsibility to assure agency accountability in the exercise of delegated authority. Initially, Congress increasingly relied on the legislative veto, a device that allowed it to delegate power conditionally and to retrieve it, or block agency exercise of its delegated authority, by the action of both houses, one house, a committee, or, at times, by a committee chairman alone. In 1983, in INS v. Chadha (462 U.S. 919 (1983)), the Supreme Court found all such veto mechanisms to be an unconstitutional exercise of legislative power because of their failure to follow the Constitution's exclusive prescription for lawmaking: bicameral passage and presentment to the President for his signature or veto.

The immediate consequence of the Supreme Court's ruling was to force Congress to rely more heavily on its traditional mechanisms of control of administrative action, such as the authorization and appropriations process, committee oversight and investigations, and the confirmation process as means of restraining perceived regulatory excesses. In addition, regulatory reform proposals throughout the 1980s and 1990s consistently contained requirements that agencies perform cost-benefit, cost-effectiveness and risk assessment analyses as integral parts of their rulemaking processes.

None of these government-wide reforms succeeded until the enactment of the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA; 110 Stat. 857-874). Subtitle E of the act for the first time established a mechanism by which Congress can disapprove, on a fast-track, virtually all federal agency rules. Failure to report a covered rule for congressional review will prevent the rule from becoming effective. The effectiveness of major rules is stayed for 60 days to allow for congressional scrutiny. A rule vetoed by the passage of a joint resolution of disapproval is deemed never to have been effective and an agency

may not propose to issue a substantially similar rule without further congressional authorization.

However, a number of unresolved interpretive issues, as well as certain structural problems, have limited the effectiveness of this review mechanism.

Major Provisions

The congressional review mechanism, codified at 5 U.S.C. §§ 801-808, requires that all agencies promulgating a covered rule must submit a report to each house of Congress and to the Comptroller General (CG) that contains a copy of the rule, a concise general statement describing the rule (including whether it is deemed to be a major rule), and the proposed effective date of the rule. A rule cannot take effect if the report is not submitted (Section 801(a)(1)(A)). Each house must send a copy of the report to the chairman and ranking minority member of each jurisdictional committee (Section 801(a)(1)(C)). In addition, the promulgating agency must submit to the CG (1) a complete copy of any cost-benefit analysis; (2) a description of the agency*s actions pursuant to the requirements of the Regulatory Flexibility Act and the Unfunded Mandates Reform Act of 1995; and (3) any other relevant information required under any other act or executive order. Such information must also be made "available" to each house (Section 801(a)(1)(B)).

Section 804(3) adopts the definition of rule found at 5 U.S.C. § 551(4) which provides that the term "means the whole or part of an agency statement of general ... applicability and future effect designed to implement, interpret, or prescribe law or policy."[693] The legislative history of Section 551 (4) indicates that the term is to be broadly construed: "The definition of rule is not limited to substantive rules, but embraces interpretive, organizational and procedural rules as well."[694] The courts have recognized the breadth of the term, indicating that it encompasses "virtually every statement an agency may make,"[695] including interpretive and substantive rules, guidelines, formal and informal statements, policy proclamations, and memoranda of understanding, among other types of

[693] Section 804(3) excludes from the definition "(A) any rule of particular applicability, including a rule that approves or prescribes for the future rates, wages, prices, services, or allowance therefore, corporate or financial structures, reorganizations, mergers, or acquisitions thereof, or accounting practices or disclosures bearing on any of the foregoing; (B) any rule relating to agency management or personnel; or (C) any rule of agency organization, or practice that does not substantially affect the rights or obligations of non-agency parties."

[694] U.S. Attorney General, Manual on the Administrative Procedure Act, 13 (1948).

[695] Avoyelles Sportsmen's League, Inc., v. Marsh, 715 F.2d 897 (5th Cir. 1983).

actions.[696] Thus a broad range of agency action is potentially subject to congressional review.

The Comptroller General and the administrator of the Office of Information and Regulatory Affairs (OIRA) of the Office of Management and Budget have particular responsibilities with respect to a "major rule," defined as a rule that will likely have an annual effect on the economy of $100 million or more, increase costs of processing for consumers, industries, or state and governments, or have significant adverse effects on the economy. The determination of whether a rule is major is assigned exclusively to the OIRA administrator (Section 804(2)). If a rule is deemed major by the OIRA administrator, the CG must prepare a report for each jurisdictional committee within 15 calendar days of the submission of the agency report required by Section 801 (a)(1) or its publication in the Federal Register, whichever is later. The statute requires that the CG's report "shall include an assessment of the agency's compliance with the procedural steps required by Section 801(a)(1)(B)." However, the CG has interpreted his duty under this provision narrowly as requiring that he simply determine whether the prescribed action has been taken, i.e., whether a required cost-benefit analysis has been provided, and whether the required actions under the Regulatory Flexibility Act, the Unfunded Mandates Reform Act of 1995, and any other relevant requirements under any other legislation or executive orders were taken, not whether the action was properly done or was in accord with congressional intent.

The designation of a rule as major also affects its effective date. A major rule may become effective on the latest of the following scenarios: (1) 60 days after Congress receives the report submitted pursuant to Section 801(a)(1) or after the rule is published in the Federal Register; (2) if Congress passes a joint resolution of disapproval and the President vetoes it, the earlier of when one house votes and fails to override the veto, or 30 days after Congress receives the message; or (3) the date the rules would otherwise have taken effect (unless a joint resolution is enacted) (Section 801(a)(3)).

Thus, the earliest a major rule can become effective is 60 days after the submission of the report required by Section 801(a)(1) or its publication in the Federal Register, unless some other provision of the law provides an exception for an earlier date. Three possibilities exist. Under Section 808(2) an agency may determine that a rule should become effective notwithstanding Section 801(a)(3) where it finds "good cause in that notice and public procedure thereon

---

[696] See, for example, Chem Service, Inc. v. EPA, 12 F.3d 1256 (3rd Cir. 1993)(memorandum of understanding); Caudill v. La 1988)(federal personnel manual letter issued by the Office of Personnel Management); New York City Employment Retirement Board v. SEC, 45 F.3d 7 (2nd Cir. 1995)(affirming lower court's ruling that SEC "no action" letter was a rule within Section 551(4)).

are impracticable, unnecessary, or contrary to the public interest." Second, the President may determine that a rule should take effect earlier because of an imminent threat to health or safety or other emergency; to insure the enforcement of the criminal laws; for national security purposes; or to implement an international trade agreement (Section 801(c)). Finally, a third route is available under Section 801(a)(5), which provides that "the effective date of a rule shall not be delayed by operation of this chapter beyond the date on which either House of Congress votes to reject a joint resolution of disapproval under Section 802." All other rules take effect "as otherwise allowed by law," after having been submitted to Congress under Section 801(a)(1) (Section 801(a)(4)).

All covered rules are subject to disapproval even if they have gone into effect. Congress has reserved to itself a review period of at least 60 days. Moreover, if a rule is reported within 60 session days of the Senate or 60 legislative days of the House prior to the date Congress adjourns a session of Congress, the period during which Congress may consider and pass a joint resolution of disapproval is extended to the next succeeding session of Congress (Section 801(d)(1)). Such held-over rules are treated as if they were published on the 15th session day of the Senate and the 15th legislative day of the House in the succeeding session, and as though a report under Section 801(a)(1) was submitted on that date (Section 801(d)(2)(A), (e)(2)). But a held-over rule takes effect as otherwise provided (Section 801(d)(3)). Only the opportunity to consider and disapprove is extended.

If a joint resolution of disapproval is enacted into law, the rule is deemed not to have had any effect at any time (Section 801(f)). If a rule that is subject to any statutory, regulatory, or judicial deadline for its promulgation is not allowed to take effect, or is terminated by the passage of a joint resolution, any deadline is extended for one year after the date of enactment of the joint resolution (Section 803). A rule that does not take effect, or is not continued because of passage of a disapproval resolution, may not be reissued in substantially the same form. Indeed, any reissued or new rule that is "substantially the same" as a disapproved rule cannot be issued unless it is specifically authorized by a law enacted subsequent to the disapproval of the original rule (Section 801(b)(2)).

Section 802(a) provides a process for an up-or-down vote on a joint resolution of disapproval within a 60-day period (excluding days when either house is adjourned for more than three days). The period begins running either on the date on which the Section 801(a)(1) report is submitted, or when the rule is published in the Federal Register, whichever is later.

The law spells out an expedited consideration procedure for the Senate. If the committee to which a joint resolution is referred has not reported it out within 20 calendar days, it may be discharged from further consideration by a written petition of 30 Members of the Senate, at which point the measure is placed on the calendar. After committee report or discharge, it is in order at any time for a motion to proceed to consideration. All points of order against the joint

resolution (and against consideration of the measure) are waived, and the motion is not subject to amendment or postponement, or to a motion to proceed to other business. If the motion to consider is agreed to, it remains as unfinished business of the Senate until disposed of (Section 802(d)(1)). Debate on the floor is limited to 10 hours. Amendments to the resolution and motions to postpone or to proceed to other business are not in order (Section 802(d)(2)). At the conclusion of debate, an up-ordown vote on the joint resolution is to be taken (Section 802(d)(3)).

There is no special procedure for expedited consideration and processing of joint resolutions in the House. But if one house passes a joint resolution before the other house acts, the measure of the other house is not referred to a committee. The procedure of the house receiving a joint resolution "shall be the same as if no joint resolution had been received from the other house, but the vote on final passage shall be on the joint resolution of the other house" (Section 802(f)(1)(2)).

Section 805 precludes judicial review of any "determination, finding, action or omission under this chapter." This would insulate from court review, for example, a determination by the OIRA administration that a rule is major or not, a presidential determination that a rule should become effective immediately, an agency determination that "good cause" requires a rule to go into effect at once, or a question as to the adequacy of a Comptroller General's assessment of an agency's report.

Discussion

As of January 14, 2004, the Comptroller General had submitted reports pursuant to Section 801(a)(2)(A) to Congress on 488 major rules.[697] In addition, GAO has cataloged the submission of 32,865 non-major rules as required by Section 801(a)(1)(A). To date, 29 joint resolutions of disapproval have been introduced relating to 21 rules. One rule has been disapproved: the Occupational Safety and Health Administration's (OSHA's) ergonomics standard in March 2001. A second rule, the Federal Communication Commission's (FCC's) rule relating to broadcast media ownership, was disapproved by the Senate on September 16, 2003 but was not acted upon by the House.

After eight years, the limited use to which the rulemaking review mechanism has been put does not appear to be attributable to a lack of familiarity with the law, but rather to a number of other factors. Some have argued that agencies are more carefully assessing their regulations to avoid possible congressional disapproval resolutions. Others maintain that the current review process discourages utilization of the act. These critics point to a number of interpretive

[697] U.S. General Accounting Office, Reports on Federal Agency Major Rules, available at [http://www.gao.gov/decisions/majrule/majrule.htm], visited Jan. 22, 2004.

issues concerning the scope of the law's coverage, the judicial enforceability of its key requirements, and whether a disapproval resolution may be directed at part of a rule as factors which introduce uncertainties into the use of the disapproval resolution process.

Specific problems identified by critics of the current process include (1) the lack of a screening mechanism to identify rules that require congressional review; (2) the absence of an expedited review procedure in the House of Representatives; (3) the deterrent effect of the ultimate need for a supermajority of both houses to veto a rule;
(4) the reluctance to disapprove an omnibus rule where only a part of the rule raises objections; (5) the uncertainty of which rules are covered by the act; (6) the uncertainty whether the failure to report a covered rule to Congress can be reviewed and sanctioned by a court; and (7) the scope of the limitation that precludes an agency from promulgating a "substantially similar rule" after the disapproval of a rule. Perceived agency failures to report rules covered by the CRA for review and the lack of any basis to timely challenge the substantiality of agency cost-benefit analyses were the subject of oversight hearings in both houses during the 106th Congress. A product of those inquiries was the passage of the Truth in Regulating Act of 2000, which required the Comptroller General to conduct an independent evaluation of an agency's cost-benefit assessment accompanying a proposed or final economically significant rule when requested by a chair or ranking minority member of a committee of jurisdiction. The CG's evaluations were to be completed within 180 days of the request. Although the CG's evaluations were not integrated to coincide with time requirements of the CRA, they could have provided a basis for prompting review action under this mechanism. However, no monies were ever appropriated for the pilot program, and its authorization expired in January 2004.

Two bills have been introduced in the 108th Congress to address some of the deficiencies cited by critics of the review mechanism. H.R. 110 would require that all rules encompassed by the definition of rule in 5 U.S.C. § 551(4) cannot "have the force and effect of law" unless they are enacted into law by means of expedited consideration procedures established for each house by the proposal. The bill would apparently displace the current CRA mechanism. H.R. 3356 would amend the CRA by establishing a Joint Administrative Procedures Committee (JAPC) composed of 24 Members, 12 from each house, which would act as an oversight and screening body for Congress with respect to existing and proposed major rules. The bill also would provide for expedited consideration procedures for joint resolutions of disapproval for the House of Representatives comparable to those of the Senate; authorize the JACP, within 30 days after the required report to Congress was received, to report a committee resolution recommending that each standing committee with jurisdiction to which such report was provided report a joint resolution of disapproval; and would allow an agency to reissue or promulgate a new rule to replace a disapproved rule if it carried out the recommendation, if any, of the JACP in the report submitted by

the joint committee to the committees of jurisdiction recommending disapproval action. Neither of the bills has as yet received committee action.

E. Freedom of Information Act

Statutory Intent and History

The Freedom of Information (FOI) Act was originally adopted by Congress in 1966 (80 Stat. 250) and was codified in 1967 (81 Stat. 54; 5 U.S.C. § 552), when it also became operative law. As enacted, the FOI Act replaced the public information section of the Administrative Procedure Act (APA) (60 Stat. 237), which was found to be ineffective in providing the public with a means of access to unpublished records of federal departments and agencies. Subsection (a) of the FOI Act reiterated the requirements of the APA public information section that certain operational information — e.g., organization descriptions, delegations of final authority, and substantive rules of general policy — be published in the Federal Register.

Subsection (b) statutorily established a presumptive right of access by any person — individual or corporate, regardless of nationality — to identifiable, existing, unpublished records of federal departments and agencies without having to demonstrate a need or even a reason for such a request. Subsection (b)(1)-(9) lists nine categories of information that may be exempted from the rule of disclosure. The burden of proof for withholding material sought by the public was placed upon the government. Denials of requests could be appealed to the head of the agency holding the sought records, and ultimately pursued in federal district court. The law specifies the direct costs which agencies may recover when responding to requests for records.

The product of 11 years of investigation and deliberation in the House of Representatives and half as many years of consideration in the Senate, the FOI Act was legislated by Congress in the face of considerable opposition by the executive departments and agencies. This opposition produced a hostile environment for the development, passage, and early administration of the statute. As a result, portions of the law have been subjected to a high judicial gloss for reasons of both clarification and interpretation. To maintain faithful administration of the FOI Act and to preserve its purpose, Congress has found it necessary to conduct vigorous oversight of its implementation and, on four occasions, to amend its provisions.

Reporting in 1972 on the initial implementation of the statute, a House oversight committee concluded that the "efficient operation of the Freedom of Information Act has been hindered by 5 years of foot-dragging by the Federal bureaucracy ... of two administrations."[698] To remedy the situation, the following amendments to the FOI Act were approved in 1974 (88 Stat. 1561): (1) a request need only "reasonably describe" the material being sought; (2) only the direct costs of

[698] U.S. Congress, House Committee on Government Operations, Administration of the Freedom of Information Act, H.Rept. 92-1419, 92nd Cong., 2nd sess. (Washington: GPO, 1972), p. 8.

search for and duplication of requested records could be recovered by agencies; (3) documents could be furnished without charge or at reduced cost if doing so would be in the public interest; (4) a court might inspect records in camera when making a determination concerning their exemption from disclosure; (5) response to an initial request must be made within 10 working days, and to an administrative appeal request, within 20 working days; (6) responsive pleading to an FOI Act lawsuit must be made within 20 days; (7) complainants who substantially prevail in FOI Act lawsuits may be awarded court costs and attorney fees; and (8) any segregable portion of a requested record shall be disclosed after exempt parts are deleted. The amendments also expanded the definition of agency for FOI Act matters, required agencies to report annually on FOI Act administration and operations, and clarified two of the statute's exemptions.

In 1976, an FOI Act amendment clarifying the language of the third exemption to the rule of disclosure was attached to the Government in the Sunshine Act, another open government law (90 Stat. 1241, at 1247).

Additional amendments to the FOI Act were enacted in 1986 as a rider to an omnibus anti-drug abuse law (100 Stat. 3207-48). These modifications strengthened protections concerning law enforcement records and revised the fee and fee waiver provisions of the FOI Act. In this latter regard, separate fee arrangements were prescribed when records are requested (1) for commercial use; (2) by an educational or noncommercial scientific institution or a news media representative; and (3) by all others besides these types of requesters. The Office of Management and Budget was mandated to issue government-wide fee and fee waiver guidelines.[699]

The most recent amendment of the FOI Act occurred in 1996 during the closing weeks of the 104th Congress. These amendments (110 Stat. 3048), addressing shortcomings in administration as well as the new challenges posed by electronic forms and formats, inclusively defined covered records, required materials to be provided in the form or format requested, increased the initial response period from 10 to 20 days, encouraged agencies to maintain multitrack processing systems based upon the complexity of requests received, established expedited processing in cases where a "compelling need" is demonstrated, and modified agency reporting requirements, among other changes.

Major Provisions

Subsection (a) of the FOI Act requires that certain operational information — e.g., organization descriptions, delegations of final authority, and substantive rules of general policy — be published in the Federal Register.

[699] These guidelines are found in the Federal Register, vol. 52, Mar. 27, 1987, pp. 1001210020.

Subsection (b) prescribes a procedure whereby any person may request access to identifiable, existing, unpublished records of the federal departments and agencies. No need, 'or even a reason', for such a request must be demonstrated. The burden of proof for withholding material sought by the public is placed upon the government.

Although the statute specifies nine categories of information which may be protected from disclosure, these exemptions do not require agencies to withhold records, but merely permit access restriction. Allowance is made in the law for the exemption of (1) information properly classified for national defense or foreign policy purposes as secret under criteria established by an executive order; (2) information relating solely to agency internal personnel rules and practices; (3) data specifically excepted from disclosure by a statute which either requires that matters be withheld in a non-discretionary manner, or establishes particular criteria for withholding, or refers to particular types of matters to be withheld; (4) trade secrets and commercial or financial information obtained from a person and privileged or confidential; (5) inter- or intra-agency memoranda or letters which would not be available by law except to an agency in litigation; (6) personnel, medical, and similar files the disclosure of which would constitute an unwarranted invasion of personal privacy; (7) certain kinds of investigatory records compiled for law enforcement purposes; (8) certain information relating to the regulation of financial institutions; and (9) geological and geophysical information and data, including maps, concerning oil and gas wells. Disputes over the availability of agency records may ultimately be settled in court.

Agencies responding to FOI Act requests are permitted by the statute to charge fees for certain activities — document search, duplication, and review — depending on the type of requester: a commercial user; an educational or noncommercial scientific institution, whose purpose is scholarly or scientific research; a news media representative; or the general public. However, requested records may be furnished by an agency without any charge or at a reduced cost, according to the law, "if disclosure of the information is in the public interest because it is likely to contribute significantly to public understanding of the operations or activities of the government and is not primarily in the commercial interest of the requester." Both the Office of Management and Budget and the Department of Justice coordinate FOI Act policy and activities within the executive branch.

Discussion

The effective operation of the FOI Act owes much to diligent congressional oversight and corrective amendment of the statute. Initial agency hostility to the statute has subsided over the subsequent 35 years, but some agency administrative practices adverse to the effective operation of the law continue to be problematic. Ongoing judicial scrutiny and interpretation is closely watched by Congress for departures from congressional intent. Apart from these continuing challenges, information developments, such as more widespread government use

of e-mail, could prompt congressional review of whether additional FOI Act adjustments may be needed.

F. Privacy Act

Statutory Intent and History

In the Privacy Act of 1974 (5 U.S.C. § 552a) Congress mandated personal privacy protection in several regards concerning federal agency operations and practices. Its eclectic provisions can be traced to several contemporaneous events prompting congressional interest in securing personal privacy.

Since the years of the late 19th century, various developments — not the least of which the introduction of new, intrusive technologies — have contributed to more disparate understandings of the concept of privacy and infringements upon it. Congress made an initial effort at legislating a new kind of privacy protection in 1970 when enacting the Fair Credit Reporting Act regulating the collection and dissemination of personal information by consumer reporting entities (84 Stat. 1128; 15 U.S.C. § 1681 et seq.).

With the Crime Control Act of 1973, Congress prohibited federal personnel and state agencies receiving law enforcement assistance funds pursuant to the statute from making unauthorized disclosures of personally identifiable criminal history research or statistical information. It also permitted "an individual who believes that criminal history information concerning him contained in an automated system is inaccurate, incomplete, or maintained in violation of this [law] ... to review such information and to obtain a copy of it for the purpose of challenge or correction" (87 Stat. 197, at 215-216; 42 U.S.C. § 3789g).

That same year, the Advisory Committee on Automated Personal Data Systems, established by Secretary of Health, Education, and Welfare Elliot L. Richardson in early 1972, offered an important consideration. The panel's July 1973 final report recommended "the enactment of legislation establishing a Code of Fair Information Practice for all automated personal data systems." Such a code would: punish unfair information practice with civil and criminal penalties; provide injunctive relief to prevent violations of safeguard requirements; empower individuals to bring suits for unfair information practices to recover actual, liquidated, and punitive damages, in individual or class actions; and allow the recovery of reasonable attorneys' fees and other costs of litigation incurred by individuals who bring successful suits.[700]

Congressional efforts to legislate notice, access, and emendation arrangements for individuals concerning personally identifiable records maintained on these individuals by federal departments and agencies began in the House in June 1972, but did not extend beyond the subcommittee hearing stage during the 92nd

---

Congress. However, a few days before these inaugural House hearings on legislation that would evolve into the Privacy Act, a burglary occurred at Democratic National Committee headquarters. It was the beginning of the Watergate incident, which would significantly affect attitudes toward privacy protection legislation and the leadership for such legislation.

Legislation leading to the enactment of the Privacy Act began in the House largely to create a procedure whereby individuals could learn if federal agencies maintained files on them, review the contents of the records in these files, correct inaccuracies they contained, and know how this information was being used and by whom. In the Senate, a privacy protection bill sponsored by Senator Sam Ervin Jr., initially sought largely to establish a Federal Privacy Board and to create standards and management systems for handling personally identifiable information in federal agencies, state and local governments, and other organizations. Other aspects of privacy policy were added to these bills as they moved through their respective houses of Congress, and then were reconciled in a somewhat unusual manner to create an amalgamated bill acceptable to the House, the Senate, and the President.

House hearings began in mid-February 1974 under Representative William S. Moorhead, chairman of the Subcommittee on Foreign Operations and Government Information of the Committee on Government Operations, and a principal manager of the legislation. The subcommittee held markup discussions in May, June, and July. These deliberations resulted in a clean bill (H.R. 16373), which was introduced by Representative Moorhead with 13 bipartisan co-sponsors in mid-August and favorably reported by the subcommittee without a dissenting vote. The Committee on Government Operations considered the legislation in mid-September, substituted revised text for the original language, and favorably reported it. President Gerald Ford, who had recently succeeded to the Oval Office after President Richard Nixon's early August resignation, endorsed the House bill in an October 9 statement.[701] The measure was considered by the House on November 20 and 21, and approved, with amendments, on a 353-1 yea-and-nay vote.[702]

A somewhat different counterpart privacy proposal emerged in the Senate. Senator Ervin introduced his bill (S. 3418) on May 1, 1974, with bipartisan cosponsorship. Hearings on this and related legislation occurred in June. During June, July, and August, staff of the Senate Committee on Government Operations, its Ad Hoc Subcommittee on Privacy and Information Systems, and the Subcommittee on Constitutional Rights of the Committee on the Judiciary —

[701] U.S. Office of the President, Public Papers of the Presidents of the United States: Gerald R. Ford, 1974, Book I (Washington: GPO, 1976), pp. 243-244.

[702] Congressional Record, vol. 120, Nov. 20, 1974, pp. 36643-36660; ibid., Nov. 21, 1974, pp. 36955-36977.

all panels chaired by Senator Ervin — further refined the language of the bill. In a mid-August committee markup, a staff-developed version of the measure was amended and favorably reported to the Senate.

The new text of the bill would have established the Privacy Protection Commission, composed of five members appointed by the President from private life and subject to Senate approval. The commission would have been responsible for compiling and publishing an annual directory of information systems subject to the provisions of the bill, enforcing the legislation, and developing model guidelines for its implementation, including the conduct of research in this regard. The bill also would have established federal agency standards and management systems for handling information relating to individuals. These included fair information practice principles, disclosure standards, mailing list restrictions, and civil and criminal penalties.

On November 21, the Senate considered the Ervin legislation; amendments developed by committee staff and the Office of Management and Budget (OMB) were adopted, and the resulting version of the legislation was approved.[703] The following day, the Senate took up the House counterpart bill, struck its language and substituted in lieu thereof the language of the Ervin bill, and approved the amended version of the House bill.[704]

With only a few weeks remaining before the 93rd Congress would adjourn sine die, House and Senate managers found they had very little time to reconcile the two differing bills. There was, however, strong desire for the passage of such legislation, not only as a so-called Watergate reform, but also as a tribute and memorial to Senator Ervin, who was retiring from congressional service. Consequently, Representative Moorhead and Senator Ervin, with the concurrence of their respective committees, agreed to the rare arrangement of having their committee staffs negotiate a mutually agreeable legislative measure. After this effort reduced 108 substantive differences to eight, the leaders of the respective House and Senate committees brought those to resolution.[705] In lieu of a conference committee report, a staff analysis of the compromise legislation was produced.[706] The major concession was the relegation of the enforcement commission to the status of a temporary national study commission. Its oversight responsibilities were vested in OMB, but without enforcement authority.

On December 11, the House adopted the Senate bill after striking its original language and inserting in lieu thereof provisions of its own bill.[707] The Senate concurred in the House amendment by passing its own amendment on a 77-8 vote on December 17, clearing the measure for further House action.[708] The following day, the House agreed to the Senate amendments with an amendment of its own,[709] and the Senate concurred with the House amendments the same day, clearing the measure for the President's signature.[710] The Privacy Act was signed into law by President Ford on December 31, 1974 (88 Stat. 1896; 5 U.S.C. § 552a). In his signing statement, the President said the new law "signified an historic beginning by codifying fundamental principles to safeguard personal privacy in the collection and handling of recorded personal information by federal agencies."[711]

Major Provisions

The Privacy Act provides privacy protection in several ways. First, it sustains some traditional major privacy principles. For example, an agency shall "maintain no record describing how any individual exercises rights guaranteed by the First Amendment unless expressly authorized by statute or by the individual about whom the record is maintained or unless pertinent to and within the scope of an authorized law enforcement activity" (5 U.S.C. § 552(e)(7)).

Second, similar to the Fair Credit Reporting Act, the Privacy Act provides an individual who is a citizen of the United States, or an alien lawfully admitted for permanent residence, with access and emendation arrangements for records maintained on him or her by most, but not all, federal agencies. General exemptions in this regard are provided for systems of records maintained by the Central Intelligence Agency and federal criminal law enforcement agencies.

Third, the statute embodies a number of principles of fair information practice. For example, it sets certain conditions concerning the disclosure of personally identifiable information; prescribes requirements for the accounting of certain disclosures of such information; requires agencies to "collect information to the greatest extent practicable directly from the subject individual when the information may result in adverse determinations about an individual's rights, benefits, and privileges under Federal programs"; requires agencies to specify

their authority and purposes for collecting personally identifiable information from an individual; requires agencies to "maintain all records which are used by the agency in making any determination about any individual with such accuracy, relevance, timeliness, and completeness as is reasonably necessary to assure fairness to the individual in the determination"; and provides civil and criminal enforcement arrangements.

Discussion

Since its enactment, the Privacy Act has been amended on five occasions. In 1982, the Debt Collection Act added a new exception to the disclosure prohibition for disclosures made to consumer credit reporting agencies (96 Stat. 1749, adding 5 U.S.C. § 552a(b)(12)). That same year, the Congressional Reports Elimination Act changed the annual report requirement of the Privacy Act and modified the provision for publication of agency systems of records (96 Stat. 1819, at 1821-1822, modifying 5 U.S.C. § 552a(e)(4) and (p)). In 1984, the Central Intelligence Agency Information Act resolved a long-standing controversy by specifying that the Privacy Act is not authority "to withhold from an individual any record which is otherwise accessible to the individual under the provisions of" the Freedom of Information Act (96 Stat. 2209, at 2211-2212, adding 5 U.S.C. § 552a(q)(2)). Amendments in 1988 (102 Stat. 2507, adding 5 U.S.C. § 552a(o),(p),(q), and (u), and amending 5 U.S.C. § 552a(a), (e), and (v)) and 1990 (104 Stat. 1388-334, modifying 5 U.S.C. § 552a(p)) established new procedures and data protection boards to ensure privacy, integrity, and verification of data disclosed for computer matching.

Perhaps the facet of the Privacy Act that has been the most successful is its access procedure. The volume of access requests by record subjects has grown steadily, for the most part, since the Privacy Act was first implemented. It is, however, about a third of the access request volume of the Freedom of Information Act. Moreover, it appears that the total denial caseload is small in proportion to request volume.

Similarly, the volume of requests to amend personal records is also steadily growing, though it is not nearly so great as the volume of access requests, and the total denial caseload is small in proportion to the amendment request volume.

In a June 2003 report, the General Accounting Office urged improved leadership and guidance by the Office of Management and Budget to improve agency compliance with the Privacy Act. Around this same time, as public revelations about the efforts of some agencies to engage in data mining for homeland security purposes — searching private sector databases for personal information — became known, some urged amendment of the Privacy Act to clarify its scope regarding such practices.

G. Federal Advisory Committee Act

Statutory Intent and History

Congress formally acknowledged the merits of using advisory committees to obtain expert views drawn from business, academic, government, and other interests when it enacted the Federal Advisory Committee Act (FACA) in 1972 (5 U.S.C. Appendix; 86 Stat. 700).

The legislative history pertaining to FACA reveals that Congress had two major concerns about advisory committees before 1972. The first concern was that the public perceived many advisory committees as duplicative and inefficient, and otherwise lacking adequate controls or oversight. The second concern was the widespread belief that advisory committees did not adequately represent the public interest, and that committee meetings were too often closed to the public.

Congressional enactment of FACA established the first requirements for the management and oversight of federal advisory committees to ensure impartial and relevant expertise. As required by FACA, the General Services Administration (GSA) administers and provides management guidelines for advisory committees. GSA also submits an annual report to the President and Congress, based on the information provided by the federal agencies concerning the meetings, costs, and membership of advisory committees. During FY2003, GSA reported a total of 953 advisory committees, with 31,385 individuals serving as members during the year. Related expenditures of $282.5 million were used in FY2003 to provide member compensation, travel and per diem expenses, and other administrative costs associated with advisory committees. On March 14, 2000, GSA announced the elimination of its annual report on advisory committees, relying instead on its website to make available the detailed reports covering each committee's activities during the fiscal year.[712] GSA also issues an annual summary report for Congress pertaining to advisory committee management and performance.

Major Provisions

FACA requires that the advice provided by advisory committees be objective and accessible to the public. Each advisory committee meeting is presumptively open to the public, with certain exceptions. Adequate notice of meetings must be published in advance in the Federal Register. Subject to the requirements of the Freedom of Information Act, all papers, records, and minutes of meetings must be made available for public inspection.

FACA contains guidelines for membership, mandating that any legislation establishing an advisory committee be "fairly balanced in terms of the points of

[712] The GSA website is available at [http://fido.gov/facadatabase], visited Dec. 11, 2003.

view represented and the functions to be performed," and that the committee's recommendations not be inappropriately influenced by the appointing authorityor by any special interest.

Each advisory committee must file a charter containing its mandate and duties, frequency of meetings, membership, and the agency to which, or official to whom, the committee reports. The act requires the Library of Congress to maintain a depository of committee reports, papers, and charters. Pursuant to FACA, each advisory committee goes out of existence after two years unless its charter is renewed or is otherwise prescribed by statute.

Discussion

Since the enactment of FACA in 1972, congressional oversight hearings have revealed that, while the goals of FACA are still relevant, some of its provisions have occasionally needed clarification. From 1983 through 1989, legislation was introduced in the Senate to strengthen FACA's management controls, as well as to establish new ethical, financial, and conflict of interest disclosure requirements for committee members.[713] These proposed amendments were never enacted, in part due to the stringent disclosure requirements required of potential committee members. In 1997, FACA was amended to provide for increased public participation in activities by committees created by the National Academy of Sciences and the National Academy of Public Administration in support of executive branch decision making processes.[714]

Because federal agencies needed clarification of FACA's statutory requirements, GSA began issuing administrative and interpretive guidelines in 1983 pertaining to the implementation of FACA. These final rules provide guidance to agency committee management officers (CMOs) for the establishment and management of advisory committees. On January 14, 2000, GSA issued a proposed rule for revised management guidelines in the Federal Register.[715] The following year, on July 19, 2001, GSA issued its final rule providing additional guidance to CMOs based on statutory provisions and internal agency procedures.[716]

In order to curtail the proliferation of advisory committees, President William Clinton issued E.O. 12838 in 1993, requiring the elimination of one-third of the

advisory committees not created by statute.[717] In addition, executive branch departments and agencies were proscribed from administratively creating new advisory committees without the approval of the Director of the Office and Management and Budget (OMB). The following year, as part of the National Performance Review, Vice President Albert Gore issued a memorandum indicating each agency should reduce advisory committee costs by 5%. The memorandum also stated that President Clinton would not support legislation establishing new advisory committees or exemptions from FACA.[718] On October 5, 1994, OMB issued Circular No. A-135, entitled "Management of Federal Advisory Committees." This circular requires OMB and GSA to monitor agency compliance with E.O. 12838 to reduce the number of advisory committees.

H. Government in the Sunshine Act

Statutory Intent and History

The Government in the Sunshine Act (90 Stat. 1241; 5 U.S.C. § 552b) was initially enacted in 1976. It requires collegially headed federal executive agencies whose members are appointed by the President with the advice and consent of the Senate to hold certain meetings in public. The act applies to meetings during which deliberations determine, or result in the joint conduct or disposition of, official agency business. The act applies to more than 45 federal collegial bodies, consisting primarily of independent regulatory boards and commissions having from three to seven members. The statute specifies 10 exceptions to its rule of openness that may be invoked by the agencies. Any doubt as to whether a meeting should be open or closed, however, is to be resolved in favor of an open meeting, according to the act's legislative history. Decisions to close a meeting are subject to judicial review.

Major Provisions

The major provisions of the Sunshine Act include (1) a presumption of open meetings; (2) public notice of an agency meeting, indicating the time, location, subject of the meeting, whether the meeting is open or closed, and the name and telephone number of the official designated to respond to requests for information about the meeting; (3) 10 exemptions by which an agency may close a portion or all of a meeting and withhold information; (4) procedures an agency is to follow when closing a meeting, which include a majority vote of the members and certification by the general counsel that the meeting may properly be closed; and (5) judicial review of an agency's action to close a meeting.

A meeting may be closed if it involves: (1) national security matters that are specifically authorized by an executive order to be protected and are properly classified; (2) internal personnel rules and practices; (3) matters specifically exempted from disclosure by statute; (4) trade secrets and commercial or financial information obtained from a person and privileged or confidential; (5) formal censure or accusation of a crime; (6) clearly unwarranted invasion of personal privacy; (7) law enforcement investigatory records or information; (8) information contained in, or related to, reports used by agencies responsible for the regulation or supervision of financial institutions; (9) information whose premature disclosure would: (a) lead to financial speculation or significantly endanger a financial institution; or (b) significantly frustrate a proposed agency action; or (10) issuance of a subpoena or other related judicial matter.

Discussion

The consensus of observers is that the act has been only partially successful in opening bureaucratic decision making processes to public scrutiny. Although federal agencies now routinely follow the Sunshine Act's requirements, empirical research suggests that, after the law was passed, agency practices changed in

ways that may have served to circumvent openness. The number of meetings, as well as the number of open meetings or partly open meetings, declined steadily from 1979 to 1984 as agencies resorted to wider use of the exemption provisions. In addition, some agencies used notation voting, which permitted members to vote sequentially on paper on the basis of circulated written materials, thereby making formal meetings unnecessary.[719]

The implementation of the Sunshine Act has been characterized by difficulties in finding the proper balance between the value of unfettered public access, on one hand, and candid agency deliberations, on the other.[720] The resulting tension is evident in the disagreements over two issues: (1) the definition of what constitutes a "meeting," for purposes of the act; and (2) whether the act has diminished the collegial nature of decision making, thereby affecting the quality of agency decisions.

Under the act, a meeting is defined as "the deliberations of at least the number of individual agency members required to take action on behalf of the agency where such deliberations determine or result in the joint conduct or disposition of official agency business."[721] Deciding when a deliberation determines or results in agency action, however, has proven to be difficult.

Two opposing views have dominated the discussion regarding the definition of a meeting. Adherents of a broad definition hold that a meeting encompasses every stage of the decision making process, including the early collective inquiry stage when members hold informal discussions and explore various positions. Supporters of a narrower view, in contrast, hold that a meeting encompasses only the more advanced stage of the decision making process, when members focus on a specific proposal or proposals.[722]

The Supreme Court supported the narrower definition in 1984, when it held that under the act, a meeting did not include preliminary discussions among agency

---

[721] 5 U.S.C. § 552b(a)(2).

[722] For a further development of these views, see David A. Barrett, "Facilitating Government Decision Making: Distinguishing Between Meetings and Nonmeetings Under the Federal Sunshine Act," Texas Law Review, vol. 66, May 1988, pp. 1195-1228.

officials.[723] The Court ruled that consultative process sessions need not be public, because the "statutory language contemplates discussions that 'effectively predetermine official actions.'" It held that, in order to fall under the meeting definition, such discussions must be "'sufficiently focused on discrete proposals or issues as to cause or be likely to cause the individual participating members to form reasonably firm positions regarding matters pending or likely to arise before the agency.'"

In the second area of contention, some research has suggested that open meeting requirements may have suppressed the spirit of candor in meeting discussions and thereby reduced collegiality in organizations subject to the act's provisions. A study of this issue involving multi-member agency officials revealed that many are reluctant to discuss substantive issues at open meetings.[724] Those seeking to amend the act believe that collegial decisions should lead to better, more informed decision making. This goal, they argue, is defeated by the need to open most meetings to the public, which they believe prevents the type of extensive and consequential interaction among members that should be the end product of collegial decision making. To support this view, they cite data consisting of members' recollections of how decisions were made before the act was implemented. Their proposed solution is to amend the act to provide for a limited pilot project that would give agencies greater leeway to close a meeting, provided that within five days of the meeting, a "detailed summary" would be made available to the public. If such a project proved successful, Congress could then make permanent changes in the statute.[725]

Several arguments against amending the act have also been advanced. Some researchers question the view that collegial decision making prior to the implementation of the act was more deliberative and meaningful than it has been since then. They assert that the earlier collegial decision making model was only partially realized. They maintain that decisions from this era "frequently reflected more the influence of staff or of chairpersons in association with staff than a true amalgamation of member views informed by staff expertise."[726] Furthermore, the evidence suggests that "members are inclined to prepare more

thoroughly for open meetings than for closed ones."[727] Consequently, it could be argued that members are better informed in their decision making than they were prior to the act. Finally, opponents of amending the Sunshine Act have sometimes suggested that it is incumbent upon members of the multi-member agencies to shed their reluctance to deliberate more meaningfully in public meetings.[728]

I. Paperwork Reduction Act of 1995

Statutory Intent and History

Replacing the ineffective Federal Reports Act of 1942 (56 Stat. 1078), the Paperwork Reduction Act of 1980 (94 Stat. 2812; 44 U.S.C. § 3501) was enacted largely to relieve the public of the mounting information collection and reporting requirements of the federal government. It also promoted coordinated information management activities on a government-wide basis by the director of the Office of Management and Budget (OMB), and prescribed information management responsibilities for the executive agencies. Realizing that the provisions of the Federal Reports Act were inadequate to control the proliferation of required paperwork, Congress had established the Commission on Federal Paperwork, a temporary national study panel, in 1974 (88 Stat. 1789). The 1980 statute implemented many of the commission's recommendations and reflected a congressional desire to define more clearly the oversight responsibilities of OMB regarding federal information collection and reporting requirements. To assist the OMB Director, the statute established the Office of Information and Regulatory Affairs (OIRA) within OMB, and authorized its administrator to develop and administer uniform information policies in order to ensure the availability and accuracy of agency data collection.

Although OIRA's original authorization expired in 1983, the office was funded on an annual basis from OMB's general appropriations until passage of the Paperwork Reduction Reauthorization Act in 1986 (100 Stat. 3341). This legislation approved funding for OIRA through FY1989, and strengthened congressional oversight of OIRA by requiring Senate confirmation of its administrator. Also, the management focus of the act was sharpened with the 1986 amendments, which refined the concept of "information resources management" (IRM), which is "the planning, budgeting, organizing, directing, training, promoting, controlling, and management activities associated with the burden, collection, creation, use, and dissemination of information by agencies, and includes the management of information and related resources such as automatic data processing equipment." This key term and its subset concepts would receive further definition and explanation in 1995, making IRM a tool for managing the contribution of information activities to program performance, and for managing related resources, such as personnel, equipment, funds, and technology.

Largely due to continued failure to reach an agreement concerning OIRA's regulatory review role, legislative attempts to reauthorize OIRA during the 101st and the 102nd Congresses were unsuccessful. During the 103rd Congress, a reauthorization measure was passed by the Senate by unanimous vote, but the House did not have time to complete action on such legislation. In 1995, as part of the House Republican Contract with America, a revised Paperwork Reduction Act (PRA) was enacted to reauthorize OIRA for six years (109 Stat. 163; 44 U.S.C. § 3501).

Major Provisions

The PRA of 1995 reaffirms the principles of the original 1980 act by reducing the information collection burden on the public, and providing more efficient management of information resources by federal agencies. The statute set 10% paperwork reduction goals for the first two years of OIRA's authorization, and a 5% reduction for the remaining four years. OIRA is required to develop and implement government-wide guidelines for the collection, dissemination, and processing of federal information. The objective of minimizing the paperwork burden for individuals and small businesses is extended explicitly to educational and nonprofit institutions, federal contractors, and tribal governments. The authority and functions of OIRA are revised, specifying information dissemination and related agency oversight responsibilities. Another provision strengthens the public's rights if an agency should require information requests that are not in compliance with the provisions of the PRA.

The federal agencies are required to evaluate proposed collections of information, manage information resources to reduce information collection burdens on the public, and ensure that the public has timely and equitable access to information products and services. Except where specifically authorized by statute, the agencies are prohibited from establishing exclusive, restricted, or other distribution arrangements that interfere with timely and equitable public availability of public information; restricting or regulating the use, resale, or redissemination of public information by the public; charging fees or royalties for resale or redissemination of public information; or establishing user fees that exceed the cost of dissemination. Actions that the agencies must take with respect to information technology are specified, and the Federal Information Locator System is replaced with an agency-based electronic Government Information Locator Service to identify the major information systems, holdings, and dissemination products of each agency.

Discussion

Since 1980, OIRA's implementation of the PRA has been criticized by Congress, the General Accounting Office (GAO), and the business community. An early controversy surrounded OMB's decision to assign OIRA primary responsibility for regulatory reforms and other regulatory functions not associated with OIRA's paperwork responsibilities. In 1983, GAO concluded that only limited progress had been made by OMB in information resources management, and recommended that Congress amend the statute to prohibit OIRA from performing nonrelated duties such as regulatory review.[729]

[729] See U.S. General Accounting Office, Implementing the Paperwork Reduction Act: Some Progress, But Many Problems Remain, GAO/GGD-83-35, Apr. 20, 1983.

The PRA gives OMB significant authority to conduct reviews of federal agency paperwork requirements in proposed rules. Critics of OMB's paperwork clearance powers maintain that OMB has too much discretion in determining agency record-keeping requirements, and has used its authority in a selective and political manner to control the government's information collection activities. Many also believe that its review of rules and reports provides OMB with excessive control of the entire regulatory process.

Even though the PRA stresses the importance of a government-wide information policy, congressional hearings and GAO studies have consistently faulted OMB for neglecting this important issue, while concentrating on paperwork control and regulatory review functions. As federal agencies have made greater use of electronic information technology, criticism has arisen that OIRA focuses on the collection and dissemination of paper documents, while failing to develop policies concerning the use of electronic formats.

In response to the statutory requirement of the PRA that OMB develop and implement uniform and consistent information resources management policy, OMB issued Circular No. A-130, Management of Federal Information Resources, in 1985. The circular set forth government-wide guidelines for the collection, dissemination, and processing of federal information systems and technology. Subsequently, OMB published a series of notices in the Federal Register inviting public comment on proposed revisions of the circular. In July 1994, OMB issued a final revision of A130 to address agencies' internal management practices for information systems and information technology.[730]

Two major segments of the National Defense Authorization Act for FY1996 (110 Stat. 186) contained provisions either amending or glossing the PRA. Subsequently denominated the Clinger-Cohen Act (110 Stat. 3009-393), these segments transfer the authority for information technology acquisitions from the General Services Administration to OMB. The Director of OMB is assigned new duties for coordinating the purchase of information systems with OIRA and the Office of Federal Procurement Policy. As part of the budget process, OMB is required to analyze the costs and risks associated with capital investments for the purchase of federal information acquisitions. The position of Chief Information Officer (CIO) is established within each agency to coordinate and monitor the implementation of information technology programs.

More recent amendments to the PRA were made by the Government Paperwork Elimination Act of 1998 (112 Stat. 2681-749). This statute makes the Director of OMB responsible for providing government-wide direction and oversight regarding "the acquisition and use of information technology, including

---

[730] U.S. Office of Management and Budget, "Management of Federal Information Resources, OMB Circular No. A-130, July 25, 1994," Federal Register, vol. 59, July 25, 1994, pp. 37906-37928.

alternative information technologies that provide for electronic submission, maintenance, or disclosure of information as a substitute for paper and for the use and acceptance of electronic signatures." In fulfilling this responsibility, the director, in consultation with the National Telecommunications and Information Administration (NTIA) of the Department of Commerce, is tasked with developing, in accordance with prescribed requirements, procedures for the use and acceptance of electronic signatures by the executive departments and agencies. A five-year deadline is prescribed for the agencies to implement these procedures.

The Director of OMB is also tasked by the statute to "develop procedures to permit private employers to store and file electronically with Executive agencies forms containing information pertaining to the employees of such employers." In addition, the director, in cooperation with NTIA, is to conduct an ongoing study of the use of electronic signatures under the new law, with attention to paperwork reduction and electronic commerce, individual privacy, and the security and authenticity of transactions. The results of this study are to be reported periodically to Congress.

Finally, electronic records submitted or maintained in accordance with the statute's procedures, "or electronic signatures or other forms of electronic authentication used in accordance with such procedures, shall not be denied legal effect, validity, or enforceability because such records are in electronic form." The act further specifies: "Except as provided by law, information collected in the provision of electronic signature services for communications with an executive agency ... shall only be used or disclosed by persons who obtain, collect, or maintain such information as a business or government practice, for the purpose of facilitating such communications, or with the prior affirmative consent of the person about whom the information pertains."

The PRA authorization of appropriations for OIRA expired at the end of FY2001. When Congress returns to the PRA to reauthorize OIRA appropriations, it will have an opportunity to consider several prevailing issues which may be addressed through amendment or extension of the statute. For instance, critics continue to assert that the act's current provisions do not go far enough to minimize costly reporting burdens for small businesses, educational institutions, and state and local governments. Other issues of concern to some are agency website management and accountability, as well as various aspects of government e-mail management.

J. Regulatory Flexibility Act of 1980

Statutory Intent and History

The Regulatory Flexibility Act (RFA) of 1980 (94 Stat. 1164; 5 U.S.C. §§ 601612) was enacted in response to concerns raised during a White House conference on small business about the differential impact of federal regulations on small business. The RFA requires federal agencies to assess the impact of their forthcoming regulations on small entities, which the act defines as including small businesses, small governmental jurisdictions, and certain small not-for-profit organizations. Under the RFA, federal agencies must prepare a regulatory flexibility analysis at the time that either proposed or certain final rules are issued. The act requires the analysis to describe (1) the reasons why the regulatory action is being considered; (2) the small entities to which the proposed rule will apply and, where feasible, an estimate of their number; (3) the projected reporting, recordkeeping, and other compliance requirements of the proposed rule; and (4) any significant alternatives to the rule that would accomplish the statutory objectives while minimizing the impact on small entities.

A regulatory flexibility analysis is not, however, required if the head of the agency issuing the rule certifies that it will not have a "significant economic impact on a substantial number of small entities." The RFA does not define the terms significant economic impact or substantial number of small entities, thereby giving federal agencies substantial discretion regarding when the act's analytical requirements are triggered. Also, the RFA's analytical requirements do not apply to any final rule for which the agency is not required to publish a proposed rule. Although the original RFA did not permit judicial review of agencies' actions under the act, amendments to the act in 1996, as part of the Small Business Regulatory Enforcement Fairness Act (SBREFA; 110 Stat. 857), permitted judicial review regarding, among other things, agencies' regulatory flexibility analyses for final rules and any certifications that their rules will not have a significant impact on small entities.

In addition, the RFA requires agencies to publish a "regulatory flexibility agenda" in the Federal Register each October and April listing regulations that the agency expects to propose or promulgate and which are likely to have a significant economic impact on a substantial number of small entities. The act also requires agencies to review final rules with a significant impact within 10 years of their promulgation to determine whether they should be amended or rescinded. Another section of the statute requires the chief counsel of the Small Business Administration's (SBA's) Office of Advocacy to monitor and report at least annually on agencies' compliance with the act.

The RFA also requires agencies to ensure that small entities have an opportunity to participate in the rulemaking process, and the 1996 amendments to the act in SBREFA put in place special requirements for proposed rules issued by the Environmental Protection Agency (EPA) and the Occupational Safety and Health Administration (OSHA). EPA and OSHA are required to convene "advocacy

review panels" before publishing a regulatory flexibility analysis for a proposed rule. The review panel must consist of full-time federal employees from the rulemaking agency, the Office of Management and Budget, and SBA's chief counsel for advocacy, and the panel must collect advice and recommendations from representatives of affected small entities about the potential impact of the draft rule.

Major Provisions

The major provisions of the RFA, as amended: (1) require federal agencies to publish in the Federal Register each October and April a list of forthcoming rules that are likely to have a significant economic impact on a substantial number of small entities; (2) require federal agencies to prepare a regulatory flexibility analysis for any covered proposed or final rule that the agency concludes is likely to have a significant economic impact on a substantial number of small entities; (3) require the regulatory flexibility analyses to have certain elements; (4) require EPA and OSHA to convene an advocacy review panel before publishing any proposed rule likely to have a significant economic impact on a substantial number of small entities; (5) require the chief counsel in the Advocacy Office in SBA to monitor agencies' compliance with the act and prepare an annual report; (6) require agencies to review their final rules with a significant impact within 10 years of their promulgation to determine whether they should be amended or rescinded; and (7) permit judicial review of agencies' regulatory flexibility analyses and determinations that their rules do not have a significant economic impact on a substantial number of small entities.

Discussion

The SBA chief counsel for advocacy's reports on the RFA generally indicate that compliance with the act has been uneven. GAO has also repeatedly examined the implementation of the act, and a recurring theme in GAO's reports is the varying interpretation of the RFA's requirements by federal agencies. Agencies differ dramatically regarding what constitutes a "significant" economic impact and a "substantial" number of small entities. They also differ on what rules they are required to review within 10 years of their issuance — those that had a significant impact at the time they were issued or those that currently have that impact. In 2001, GAO testified that the promise of the RFA may never be realized until Congress or some other entity defines what a significant economic impact and a substantial number of small entities mean in a rulemaking setting.

The 1996 amendments to the act providing for judicial review and advocacy review panels for EPA and OSHA rules have proven effective. The SBA chief counsel for Advocacy's annual report on the RFA for FY2003 said that judicial review "has encouraged agencies to increase their compliance with the requirements of the RFA." Advocacy review panels have permitted small entities to participate early in the rulemaking process — before proposed rules are written and agencies positions become more fixed.

K. Negotiated Rulemaking Act

Statutory Intent and History

The Negotiated Rulemaking Act of 1990, as amended and permanently authorized in 1996 (110 Stat. 3870; 5 U.S.C. §§ 561-570a), seeks to overcome what some observers describe as an adversarial relationship between agencies and affected interest groups that often accompanies the federal rulemaking process. The concept of negotiated rulemaking (sometimes referred to as "regulatory negotiation" or "regneg") emerged in the 1980s as a supplement to the traditional procedure for developing regulations. The act largely codified the practices of those agencies that had previously used the negotiated rulemaking procedure and incorporated relevant recommendations of the now defunct Administrative Conference of the United States (ACUS). The act encourages (but does not require) agencies to consider convening a negotiated rulemaking committee before developing and issuing a proposed regulation under the Administrative Procedure Act (APA), described elsewhere in this compendium. The committee, composed of representatives of the agency and the various interest groups that would be affected by the proposed regulation, addresses areas of concern in the hope that it can reach agreement on a proposed regulation. The agency can (but, again, is not required to) then issue the agreed-upon proposal as a proposed rule, and, if appropriate after public comment, as a final rule under the APA. Since committee agreement is normally by unanimous consent, the expectation is that any rule drafted through negotiated rulemaking would be easier to implement and less likely to be the subject of subsequent litigation. In establishing negotiating committees, agencies must comply with the Federal Advisory Committee Act (described elsewhere in this compendium). Agency actions related to establishing, ending, or supporting the committees are not judicially reviewable.

Following passage of the Negotiated Rulemaking Act, ACUS served as a clearinghouse on regulatory negotiation matters and assisted agencies in establishing procedures for the conduct of regulatory negotiations and the training of personnel. When ACUS was abolished in 1995, some of its resources and responsibilities in the area were assumed by the Federal Mediation and Conciliation Service (FMCS). The Clinton Administration's National Performance Review recommended increased use of negotiated rulemaking, and Executive Order 12866 (September 1993) directed agencies to consider the use of consensual mechanisms, such as negotiated rulemaking, when developing regulations. Congress has sometimes required agencies to use negotiated rulemaking in developing rules in certain areas.

Major Provisions

The major provisions of the act require that (1) a negotiated rulemaking committee consist of at least one member of the agency and no more than 25 members, unless the head of the agency determines that more are needed; (2) the agency select an impartial "facilitator" to chair meetings, subject to the approval

of the committee by consensus; (3) an agreement on any negotiated rulemaking must be unanimous, unless the negotiated rulemaking committee agrees to other conditions; (4) any proposal agreed to by the negotiated rulemaking committee is not binding on the agency or other parties; and (5) the head of an agency, when deciding whether to establish a negotiated rulemaking committee, assure that (a) there are a limited number of identifiable interests that will be significantly affected by the rule; (b) there is a reasonable likelihood that a committee can be convened with a balanced representation of interested parties who are willing to negotiate in good faith; and (c) there is a reasonable likelihood that a committee will reach a consensus on the proposed rule within a fixed period of time. The act also allows agencies to pay reasonable travel and per diem expenses, and reasonable compensation, to committee members under certain conditions.

Discussion

Negotiated rulemaking is a possible supplement to, but not a replacement of, the normal rulemaking procedures that agencies are required to follow under the APA. For any proposal agreed to by a negotiated rulemaking committee to take effect, the agency must still develop and issue it as a regulation under the provisions of the APA. The use of negotiated rulemaking by federal agencies is strictly voluntary. Also, negotiated rulemaking does not impair any rights otherwise retained by agencies or private parties. Even if agreement is reached on a proposal by a negotiated rulemaking committee, neither the agency nor the other members of the committee are bound by the agreement. An agency need not issue the proposed regulation drafted by the committee. If an agreed-upon proposal is issued by the agency as a regulation under the APA, it may still be challenged in court by parties who previously agreed to it in committee.

Agencies are encouraged to convene and use a negotiated rulemaking committee only when certain conditions are expected to produce a successful or favorable result (e.g., easy identification of those likely to be affected by the rule and, where differences exist, the parties' willingness to consider each others' points of view). Since agreement by the parties generally must be by unanimous consent, it is essential that the parties involved be willing to compromise in order to reach agreement. The fact that participants may change their minds and later challenge a regulation they initially supported can increase their willingness to participate in the process.

These factors can, however, also serve to limit the instances when agencies see negotiated rulemaking as a viable option. In addition, agency experience with the technique indicates that negotiated rulemaking can be more costly than conventional rulemaking methods, particularly at the front end of the process. Finally, research indicates that negotiated rulemaking does not appear to reduce the overall time taken to issue a rule or to make rules more likely to avoid litigation. These findings are particularly notable given that agencies are instructed to use negotiated rulemaking only when they expect success. Other

research, however, indicates that negotiated rulemaking can increase satisfaction with the substance of the final rule and with the overall process.

L. National Environmental Policy Act

Statutory Intent and History

The National Environmental Policy Act of 1969 (NEPA) was enacted on January 1, 1970 (83 Stat. 852; P.L. 91-190; 42 U.S.C. § 4321). The act is considered to be landmark legislation which "set the Nation on a new course of environmental management" (H.Rept. 92-316). The Preamble to the law states:

To declare a national policy which will encourage productive and enjoyable harmony between man and his environment; to promote efforts which will prevent or eliminate damage to the environment and biosphere and stimulate the health and welfare of man; to enrich the understanding of the ecological systems and natural resources important to the Nation; and to establish a Council on Environmental Quality.

Its "action-forcing" directives are meant to ensure that environmental values are given appropriate consideration in all programs of the federal government. Its policy declaration and its procedures for environmental impact assessment have been adopted in many similar state laws, and also by other nations.

The preparation of environmental impact statements (EISs) has heightened awareness of, and attention to, the environmental effects of actions by federal agencies while also increasing public participation. The requirements of the law have played a limited role in what decisions are ultimately made because the law is procedural, and does not establish environmental standards. It has spawned an enormous amount of information-gathering and analysis activities, which have been criticized by supporters as (substantively or scientifically) inadequate and by critics as too burdensome.

The National Environmental Policy Act should be distinguished from the substantive body of environmental protection laws, which attempt to correct pollution and resource problems ranging from air and water quality and noise and toxic substances control to the various statutes related to resource development, such as surface mining regulation, coastal zone and offshore management, or various public land programs. In contrast, NEPA is a relatively short policy declaration and impact assessment law designed to avoid or prevent such problems by informing the public about environmental consequences before a project is begun, and has been more associated with "administrative reforms" within federal agencies than with any particular aspect of (physical) environmental protection. NEPA compliance is required in connection with many other laws, if the action is one that triggers the EIS preparation criterion of "significantly affecting the quality of the human environment."

Government-wide rules of the Council on Environmental Quality (CEQ) require impact statement preparation to be integrated as much as possible with studies, surveys, and analyses under other federal environmental review laws — such as the Endangered Species Act, the Fish and Wildlife Coordination Act, the National

Historic Preservation Act, and, for example, water quality permits, as well as executive orders on floodplain management and wetlands protection. However, once an agency complies with NEPA's information-based procedures, the act's effect on ultimate decisions is limited by the agency's other mandates.

While there now seems to be agreement about the utility of assessing the environmental consequences of major federal actions, the long-term compliance trends depend on whether individual agencies will continue to adapt their practices to the streamlined, but rigorous, process in CEQ regulations for more fully integrating the impact analyses with agency plans and programs. Otherwise, lessened compliance could evolve and lead to new legal challenges.

Enforcing requirements for preparation of environmental impact statements is partially achieved through public participation and judicial reviews. The role of the courts in interpreting and enforcing compliance has been perhaps the most controversial aspect of NEPA's previous implementation. Some NEPA compliance issues have been raised anew in court challenges — especially during a period when program changes affect federal resource management of public lands. Typical of the effects on NEPA compliance are the EIS "categorical exclusions," issued by federal agencies which permit additional activities on public lands that would now be excluded from the NEPA process, unless considered as part of overall assessments in broad, "areawide EISs." An evaluation of the cumulative results of these excluded actions is often not feasible. (See reference for 2003 NEPA Task Force, as well as specific legislative provisions for streamlining compliance for grazing, P.L. 108-7 and 108-11; forest health, P.L. 108-148; and aviation projects, P.L. 168-176.)

Major Provisions

Title I.
Section 101: Policies and Goals. (a) Congress declared: "it is the continuing policy of the federal government ... to create and maintain conditions under which man and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations of Americans. (b) In order to carry out the policy ... it is the continuing responsibility of the federal government ... to improve and coordinate federal plans, functions, programs, and resources" to achieve six broadly stated goals that address future environmental quality objectives, with the paramount concerns including "responsibilities ... as trustee of the environment for succeeding generations," attaining "beneficial uses of the environment without degradation, or risk to health or safety"; preserving "diversity" of natural, historic, and cultural heritages; achieving a "balance between population and resource use"; and enhancing the "quality of renewable resources and ... maximum attainable recycling."

Section 102: Administration. Congress directed that, to the fullest extent possible, the laws of the United States shall be administered in accordance with

these policies, and further directed all federal agencies to incorporate the policies and goals through information and methods for appropriate consideration of environmental values by using "a systematic, interdisciplinary approach," and by considering "presently unquantified environmental amenities and values."

Section 102(2)(C): Environmental Impact Statements. As an "actionforcing" mechanism to carry out those policies and procedures, agency officials are required to include a "detailed statement" of environmental impacts as part of "every recommendation or report on proposals for legislation and other major federal actions significantly affecting the quality of the human environment." This statement of environmental impact is to assess any "adverse environmental effects," and alternatives to the proposed action, local short-term uses of the environment in relation to "long-term productivity," and "any irreversible and irretrievable commitments of resources" involved.

Prior to taking action, the responsible federal official is to consult any federal agency with jurisdiction or special expertise on any environmental impacts and to make the "statement and the comments and views of the appropriate Federal, State, and local agencies...available to the President, the Council on Environmental Quality, and to the public."

Other provisions of Section 102 require federal agencies to (1) separately develop alternative courses of actions for unresolved resource conflicts; (2) "support ... international cooperation in ... preventing ... a decline in the quality of mankind's world environment"; (3) provide advice and information to other units of governments, institutions, and individuals; (4) develop ecological information on resource-oriented projects; and (5) assist the CEQ.

Section 103: Review. Section 103 requires agencies to "review their present statutory authority ... for ... any deficiencies ... which prohibit full compliance," while Sections 104 and 105 affirm existing environmental authorities, and supplement them with NEPA.

Title II.
Title II created in the Executive Office of the President a three-member Council on Environmental Quality to oversee the administration of national environmental policy and to assist in the President's annual Environmental Quality Report to Congress. This report is to examine (1) the status and condition of the natural environment; (2) trends in the quality, management, and utilization of the environment, and their effects; (3) the adequacy of natural resources; (4) a review of environmental programs and activities; and (5) a program for remedying deficiencies, along with legislative recommendations.

Another major duty of the council is to advise and recommend policies to the President. (The council's authority to guide the NEPA process — including its new regulations — has been supplemented by Executive Orders 11514, 11991, and 12114.)

Highlights of Judicial Interpretation of NEPA. Major court decisions involving the National Environmental Policy Act have:

- held it to be a "full disclosure" law — pertaining to federal agencies administrative records and information concerning impacts — for actions subject to the act;
- required "strict compliance" with the procedures — entailing a unique balancing analysis of the environmental costs and benefits of a proposed action;
- ruled that the consideration of alternatives to the proposed action must be of a broad nature and not necessarily confined to an agency area of statutory authority;
- further ruled that the alternatives and environmental consequences must be given full consideration in decision making (and subject to Administrative Procedure Act compliance);
- affirmed the long-standing practice of preparing regional or programmatic impact statements for related federal actions (i.e., "comprehensive impact statements");
- supplemented the public participation afforded through EIS comment procedures by liberally construing standing requirements applicable to persons seeking judicial review of agency NEPA compliance; and
- upheld the provisions for obtaining access to relevant information through the Freedom of Information Act.

The Council on Environmental Quality's authority to issue its implementing regulations — binding upon the federal agencies — has been broadly endorsed by the Supreme Court, whose reviews of lower court opinions have held procedural compliance with NEPA to be sufficient.

Discussion

A continuing issue for future NEPA implementation is its effect on the policy level of decision making, given its early application — and some say its overemphasis on procedural matters — at the project level. This "level of assessment" issue, and its potential for "trivialization" of the act's basic policy purposes, seems to be of less concern as greater experience is gained in applying the law, since site-specific, project level assessments generally serve real purposes in the government's decision making processes — i.e., public accountability for agency actions; a framework for citizen participation in resolving controversies; and a more systematic approach for generating environmental information. Furthermore, numerous, but "properly scoped," impact statements that are prepared efficiently can conceivably minimize "on the ground" impacts at the present time, given the limitations in the methodologies for assessing the broader scope and longer-term environmental effects.

Another recurring question is whether NEPA's clear requirement for environmental assessments of agencies' legislative proposals is being adequately implemented or enforced — under the regulations' new flexible criteria — to address environmental concerns at the earliest stages of program initiatives originating in the executive branch. While the impact assessment and interagency review process has increasingly been used as an integral framework for structuring some decision making activities — i.e., relating the NEPA analysis to project feasibility or federal or state coordination activities — the longer-term question is whether these advantages outweigh the procedural uncertainties that would be associated with analyzing environmental impacts of more fundamental policy choices. For example, in the 1990s, the President's authority to negotiate new international trade agreements (without the most formal level of NEPA compliance) was upheld.

The most basic policy issue regarding the viability of the overall NEPA process is in maintaining a sufficiently neutral and flexible environmental information, assessment, and review procedure to accommodate actions and decisions of the utmost variety, complexity, and controversy to which the law applies — without the mechanics of the procedures themselves becoming a part of the controversy. In part, this is a matter of efficiency — of how usefully the process serves public decision making by holding agencies accountable without undue regulatory-type burdens — and partly a matter of equity, so that all reasonable alternatives, points of view, and parties to a decision can (over time) benefit from informed debate about environmental effects.

M. E-Government Act of 2002

Statutory Intent and History

The E-Government Act of 2002 (116 Stat. 2899; P.L. 107-347) was enacted to enhance access to government information and the delivery of information and services to citizens, employees, and other agencies and entities. To meet this goal, the statute authorizes $345 million over four years for e-government initiatives. It also assigns considerable influence to the Office of Management and Budget (OMB) to ensure that information technology (IT) investments throughout the federal government embrace a citizen-centered, cross-agency, and performance-based strategy.

As defined in the statute, e-government refers to "the use by Government of web-based Internet applications and other information technologies, combined with processes that implement these technologies, to (A) enhance the access to and delivery of Government information and services to the public, other agencies, and other Government entities; or (B) bring about improvements in Government operations that may include effectiveness, efficiency, service quality, or transformation" (116 Stat. 2902). Both the term and the concept of e-government are relatively new in government parlance. The phrase appeared, without explanation, in the initial September 7, 1993 report of the National Performance Review (NPR).[731] A joint report of the NPR and the Government Information Technology Services Board, issued on February 3, 1997, gave the term more prominence and substance.[732] Almost three years later, in a December 17, 1999 memorandum to the heads of executive departments and agencies, President William Clinton directed these officials to take certain actions in furtherance of "electronic government."[733]

President George W. Bush indicated his support for e-government initiatives early in his Administration when he proposed the creation of an e-government fund. In advance of his proposed budget for FY2002, the President released, on February 28, 2001, A Blueprint for New Beginnings: A Responsible Budget for America's Priorities. Introduced as a 10-year budget plan, the Blueprint, among other innovations, proposed the establishment of an electronic government account, seeded with "$10 million in 2002 as the first installment of a fund that

will grow to a total of $100 million over three years to support interagency electronic Government (egov) initiatives." Managed by OMB, the fund was foreseen as supporting "projects that operate across agency boundaries," facilitating "the development of a Public Key Infrastructure to implement digital signatures that are accepted across agencies for secure online communications," and furthering "the Administration's ability to implement the Government Paperwork Elimination Act of 1998, which calls upon agencies to provide the public with optional use and acceptance of electronic information, services and signatures, when practicable, by October 2003."[734] About one month later, on March 22, OMB announced that the Bush Administration recommended doubling the amount to be allocated to the e-government fund, bringing it to $20 million. House appropriators, however, were particularly reluctant to provide more than a quarter of the amount sought by the President. While expressing general support for the purposes of the fund, they also recommended that the Administration work with the House Committee on Government Reform and the Senate Committee on Governmental Affairs to clarify the status of its authorization. The E-Government Act establishes an E-Government Fund in the Treasury of the United States with specific levels of appropriations authorized through FY2006 and "such sums as are necessary for fiscal year 2007" (116 Stat. 2908).

Pursuant to an OMB Memorandum of July 18, 2001, an E-Government Task Force was established to create a strategy for achieving the e-government goals of the Bush Administration. It subsequently identified 23 interagency initiatives designed to better integrate agency operations and IT investments. These initiatives, sometimes referred to as the Quicksilver projects, were grouped into five categories: government to citizen, government to government, government to business, internal efficiency and effectiveness, and addressing cross-cutting barriers to e-government success. Examples of these initiatives included an E-Authentication project, led by the General Services Administration to increase the use of digital signatures; the eligibility assistance online project (also referred to as GovBenefits.gov), led by the Department of Labor to create a common access point for information regarding government benefits available to citizens; and the Small Business Administration's One-Stop Business Compliance project (later renamed Business Gateway), designed to help businesses navigate legal and regulatory requirements. An additional initiative, a government-wide payroll process project, was subsequently added by the President's Management Council. In 2002, the E-Clearance initiative, originally included as part of the Enterprise Human Resources Integration project, was established as a separate project, for a total of 25 initiatives. These projects became part of the President's Management Agenda — FY2002, submitted to Congress in August 2001 and featuring five

---

interrelated government-wide initiatives: Strategic Management of Human Capital, Competitive Sourcing, Improved Financial Performance, Expanded Electronic Government, and Budget and Performance Integration.[735]

After the Clinger-Cohen Act of 1996, the E-Government Act takes the next step to improve IT investment and management, requiring OMB to provide a report to Congress annually on the status of e-government. Rather than simply identifying and reporting IT investment at each agency, the statute appears to have engendered a cultural change in IT procurement, from consolidating and integrating IT investments to encouraging performance-based, citizen-centered, cross-agency planning. The statute designates OMB as the lead organization for all federal executive branch IT purchasing and planning, and all federal executive branch agencies must comply with OMB guidance to ensure implementation of e-government.

Major Provisions

The E-Government Act is organized in five titles containing sections which amend various titles of the United States Code. Title I of the statute, denominated Office of Management and Budget Electronic Government Services, amends Title 44, United States Code, with a new Chapter 36 on Management and Promotion of Electronic Government Services. In addition to defining key terms, Title I establishes an Office of Electronic Government within OMB, headed by an administrator, who is appointed by the President without Senate confirmation. The administrator assists the Director of OMB with all functions assigned in Chapter 36, as well as those assigned to the director by Title II of the statute, and "other electronic government initiatives." The administrator is also responsible for assisting the OMB Director, deputy director for management, and administrator of the Office of Information and Regulatory Affairs "in setting strategic direction for implementing electronic Government" relevant to certain specified statutory authorities.

Title I of the statute also establishes a Chief Information Officers Council, chaired by the OMB deputy director for management and composed largely of department and agency chief information officers. The council plays an advisory and coordination role. Other features of Title I are creation of the E-Government Fund to support e-government projects; establishment of a government-wide program "to encourage contractor innovation and excellence in facilitating the development and enhancement of electronic Government services and processes"; and mandating an annual e-government status report by the OMB Director to Congress.

---

[735] U.S. Executive Office of the President, Office of Management and Budget, The President's Management Agenda — FY2002 (Washington: GPO, 2001).

Title II of the statute, pertaining to Federal Management and Promotion of Electronic Government Services, specifies the responsibilities of agency heads regarding electronic government; mandates interoperable implementation of electronic signatures for appropriately secure electronic transactions with government; prescribes criteria for maintaining and promoting an integrated federal Internet portal; promotes individual federal court websites and agency use of IT to increase access, accountability, transparency, and public participation in the development and issuance of regulations; fosters improvements in the methods by which government information, including information on the Internet, is organized, preserved, and made accessible to the public; establishes privacy impact assessments for agencies when developing or procuring IT that collects, maintains, or disseminates personally identifiable information or when initiating a new collection of such information; and creates a federal workforce skills development program for using IT to deliver government information and services.

Title II also amends Subpart B of Part III of Title 5, United States Code, with a new Chapter 37 mandating an Information Technology Exchange Program, facilitating temporary assignments of federal employees to private sector organizations and of private sector employees to federal agencies to enhance IT skills. Other provisions mandate studies and evaluations of (1) community technology centers, public libraries, and other institutions providing computer and Internet access to the public; (2) the use of IT to enhance crisis preparedness, response, and consequence management of natural and man-made disasters; and (3) disparities in Internet access for online government services. Another provision tasks the Administrator of General Services with making a coordinated effort to "facilitate the development of common protocols for the development, acquisition, maintenance, distribution, and application of geographic information."

Title III of the statute, denominated the Federal Information Security Management Act of 2002 (discussed elsewhere in this compendium), amends Chapter 35 of Title 44, United States Code, with a new Subchapter III on information security. It supersedes similar provisions found in Subtitle C of Title II of the Homeland Security Act of 2002 (116 Stat. 2135, at 2155). Excepting national security systems, Subchapter III prescribes a comprehensive program, under the direction of the OMB Director, for ensuring the effectiveness of information security controls over information resources that support federal operations and assets. Covered agencies are required to have performed annually an evaluation of the effectiveness of their information security program and practices.

Title IV authorizes generally, unless otherwise specified elsewhere in the act, "such sums as are necessary" to carry out Titles I and II for FY2003-FY2007.

Title V of the statute, denominated the Confidential Information Protection and Statistical Efficiency Act of 2002, vests the OMB Director with responsibility for

coordinating and overseeing the confidentiality and disclosure policies established by the title. Subtitle A prescribes limitations on the use and disclosure of statistical data or information, and sets fines and penalties for violations of these limitations. Subtitle B, after identifying the Bureau of the Census, Bureau of Economic Analysis, and Bureau of Labor Statistics, as "designated statistical agencies," prescribes the responsibilities, as well as the business data sharing ground rules and limitations, of these agencies.

Discussion

Building upon the Clinger-Cohen Act (described elsewhere in this compendium), the E-Government Act serves as the primary legislative vehicle to guide evolving federal information technology management practices and to promote initiatives to make government information and services available online. In doing so, it also represents a continuation of efforts to realize greater efficiencies and reduce redundancies through improved intergovernmental coordination, and by aligning information technology investments. In addition, while the Bush Administration's Quicksilver initiatives are separate from the E-Government Act, someof thegoals of the Quicksilver initiatives are reinforced by the act's provisions. For example, Section 216 addresses the development of common protocols for geographic information systems, which is also one of the objectives of the Geospatial One-Stop project ([http://www.geo-one-stop.gov/]). Section 203 directs agencies to adopt electronic signature methods. Likewise, the E-Authentication initiative strives to develop a government-wide approach to electronic identity systems ([http://www.cio.gov/eauthentication/]). In addition, some of the act's broader provisions, such as those related to the development of privacy guidelines, information security standards, and the identification of means to bridge disparities in Internet access among citizens, contribute to the technological and regulatory infrastructure needed to support e-government generally.

However, while the law is still relatively new, the rapid pace of technological change and the drive to implement initiatives in a timely manner have raised a number of implementation issues that mayarise duringcongressional oversight. One of these issues involves the recruitment and retention of IT managers, at both the chief information officer (CIO) and project manager levels. As IT projects have become more integrated into the function of a department or agency, the role of CIOs has evolved as well. CIOs are reportedly being called upon not only for their technological expertise, but also to provide strategic leadership in the areas of policy, budget, and contract oversight.[736] The CIO's relationship with top-level department decision makers can also be critical to

[736] Cynthia L. Webb, "Providing the Technology Vision," Washington Post, Mar. 6, 2003, available at [http://www.washingtonpost.com/wp-dyn/articles/A47136-2003Mar5.html], visited Dec. 3, 2003.

successfully implementing e-government initiatives. This suggests that in selecting a department-level CIO, one needs to consider the strengths and weaknesses of choosing a career employee, who may have a deeper contextual understanding of the mission and functions of an organization, and recruiting a candidate from the private sector who may bring a wider range of experiences and perspectives to the position.[737] Similarly, the increased size and complexity of IT projects has further underscored the need for strong project managers to carry out these initiatives. While it is not uncommon for IT project management to be just one of several duties assigned to an individual, some observers have suggested that IT projects with budgets of $5 million or larger should have dedicated, full-time managers. The possibility of requiring federal IT project managers to obtain some form of professional certification has also been raised.[738]

Another issue is information security. In a series of evaluations published since 1997, the General Accounting Office (GAO) has repeatedly reported that the largest federal agencies have made only limited progress in addressing computer security vulnerabilities, citing information security as a government-wide high risk issue. Specifically, GAO has identified six areas of weaknesses: lack of senior management attention to information security; inadequate accountability for job and program performance related to IT security; limited security training for general users, IT professionals, and security professionals; inadequate integration of security into the capital planning and investment control process; poor security for contractor-provided services; and limited capability to detect, report, and share information on vulnerabilities or to detect intrusions, suspected intrusions, or virus infections.[739] For e-government activities, service continuity is considered critical not only for the availability and delivery of services, but also to build citizen confidence and trust. The risks of fraud and misuse of sensitive data are concerns as well. Heightened concerns about homeland security and critical infrastructure protection have also drawn attention to the role of information security. The inclusion of Title III of the E-Government Act (referred to as the Federal Information Security Management Act) permanently re-authorizes and amends the Government Information Security Reform Act (GISRA), providing additional means for congressional overseers to assess this issue.

[739] U.S. General Accounting Office, Information Security: Continued Efforts Needed to Fully Implement Statutory Requirements, GAO-03-852T, June 24, 2003, p. 8.

A third issue is the interoperability of technology. Interoperability refers to the ability of a computer system or data to work with other systems or data using common standards or processes. Interoperability is an important part of the larger efforts to improve interagency collaboration and information sharing through e-government and homeland security initiatives. It also represents a significant challenge as the federal government implements cross-agency initiatives, such as the E-Payroll and GovBenefits.gov projects, to eliminate redundant systems and facilitate a "one-stop service delivery" approach to e-government.[740] One means being used to address this issue is the development of a federal enterprise architecture, at the website [http://www.feapmo.gov/]. An enterprise architecture serves as a blueprint of the business functions of an organization, and the technology used to carry out these functions. While this blueprint is still in its early stages, federal agencies are being required to justify their IT investments based partly on their ability to make a strong business case to support each request, and based on how closely the project aligns with the federal enterprise architecture. Decisions made early in the development of the federal enterprise architecture can have significant implications for future IT projects, suggesting that regular assessments of this process may be necessary to help minimize any potential complications.

Other issues include, but are not limited to, balancing the sometimes competing demands of e-government and homeland security, measuring e-government performance, assessing and monitoring the quality of agency IT project "business cases," and balancing cross-agency funding approaches with oversight interests.

N. Federal Information Security Management Act of 2002

Statutory Intent and History

The Federal Information Security Management Act of 2002 (FISMA) replaced what has been commonly referred to as the Government Information Security Reform Act (GISRA),[741] which expired at the end of the 107th Congress. Congress passed two versions of FISMA at the end of the 107th Congress. The first version passed as part of the Homeland Security Act of 2002 (P.L. 107-296, Title X; 116 Stat. 2135, at 2259). The second version passed as part of the E-Government Act of 2002 (P.L. 107-347, Title III; 116 Stat. 2946). The two versions differ slightly. The E-Government Act version takes precedence.[742] The act applies government-wide, including to small and independent agencies of the federal government.

Both GISRA and FISMA represent an effort by Congress to improve federal agency compliance with information security standards and guidelines. Congress put into statute certain requirements, including the requirement that federal agencies submit their information security programs to an annual independent review, and a requirement that the Director of the Office of Management and Budget (OMB) shall report the results of these reviews to Congress.

Congress has long been concerned with securing federal information systems. This concern has grown as the federal government has increased the amount of information it collects and maintains and as the information systems upon which that information is kept become increasingly interconnected and vulnerable to unauthorized access. Both GISRA and FISMA build upon the Computer Security Act of 1987 (P.L.100-235) and the Paperwork Reduction Act of 1995 (P.L. 104-13). The Computer Security Act required agencies to inventory their computer systems and to develop computer security plans for each. The Paperwork Reduction Act authorized the Director of OMB to oversee the development of information resource management policies, including those related to information security. While FISMA repeals or supercedes various provisions of the Computer Security Act from the United States Code, it maintains many of the same roles and responsibilities. Likewise, FISMA expands upon the roles and requirements originally cited in the Paperwork Reduction Act.

---

[741] GISRA was passed as part of the Floyd D. Spence National Defense Authorization Act for FY2001 (P.L. 106-398, Title X, Subtitle G).

[742] In its FY2002 Report to Congress on Federal Government Information Security Reform (May 16, 2003), the Office of Management and Budget cites the E-Government Act version as being applicable (see pp. 6 and 16). Also, the E-Government version contains language that states that while its amendments to Chapter 35, Title 44 of the United States Code stay in effect, the amendments made to Chapter 35, Title 44 by the Homeland Security Act version do not apply. See 44 U.S.C. § 3549, as enacted by the E-Government Act.

Major Provisions

The Federal Information Security Management Act of 2002 has five major provisions. Section 301 of the act amends Chapter 35 of Title 44 of the United States Code by adding a new Subchapter III on Information Security. Section 302 amends 40 U.S.C. § 11331, which relates to the prescription of information security standards. Section 303 of the act amends the National Institute of Standards and Technology Act (NIST; 15 U.S.C. § 278g-3), which assigns to NIST the mission of developing standards for information technology, including security standards for federal information systems. Section 304 amends the National Institute of Standards and Technology Act (15 U.S.C. § 278g-4), which establishes the Information Security and Privacy Advisory Board. Section 305 makes technical changes and conforming amendments, two of which are of some significance.

Chapter 35 of Title 44, United State Code, Subchapter III, on Information Security expands upon the authorities and responsibilities for the development, implementation, review, and oversight of policies and practices associated with securing federal information systems. Specifically, it authorizes the Director of OMB to oversee the development and implementation of information security policies, standards, and guidelines across the federal government. The director's authority includes overseeing the development of policies, principles, standards and guidelines; reviewing and approving or disapproving agency security programs; and, taking actions as authorized by 40 U.S.C. §11303,[743] including budgetary actions, to ensure compliance with policies, standards, and guidelines. However, only the director's authorities under 40 U.S.C. § 11303 extend to national security systems.[744] Development and oversight of standards and guidelines for national security systems are prescribed by law or the President. In addition, FISMA grants to the Secretary of Defense and the Director of Central Intelligence, the authority to oversee the development of information security policies, principles, standards, and guidelines for information systems operated by or for the Department of Defense and the Central Intelligence Agency, if the compromise of information on these systems would have a debilitating impact on

[743] 40 U.S.C. § 11303 details the director's authority to evaluate agency performance-based programs in acquiring information technology.

[744] FISMA defines a national security system as "any information system (including telecommunications system), the function or operation of which: involves intelligence activities; involves cryptologic activities related to national security; involves command and control of military forces; involves equipment that is an integral part of a weapon or weapon system or is critical to the direct fulfillment of military or intelligence missions; or is protected at all times by procedures established for information that have been specifically authorized under criteria established by Executive Order or an Act of Congress to be kept classified in the interest of nation security." The definition notes that a system used for routine administrative and business applications (e.g. payroll) shall not be considered a national security system. President Reagan laid out the roles and responsibilities of federal agencies for the protection of national security systems in National Security Decision Directive 145 (NSDD-145). NSDD-145 remains in effect.

the mission of these two agencies. It is not clear if this provision includes systems that do not meet the definition of national security systems.

In addition to assigning the authorities discussed above, Subchapter III also requires each agency to develop and implement an information security program. It prescribes what this program should include. It assigns each agency head the responsibility for developing and ensuring the implementation of the program, including designating a senior agency information security officer whose responsibility is to ensure compliance with the agency's program. It also requires that agencies evaluate their security programs annually and include the results of these reviews in a number of reports required by Congress, including performance reports and financial reports.

Subchapter III also requires that each agency submit its information security program to an annual independent review. The reviews are to be conducted by the agency's inspector general, if it has one, or an outside evaluator. The subchapter requires that the results be submitted to the Director of OMB who is to summarize them in a report to Congress. This perhaps is the major element of FISMA (and GISRA before it) by which Congress intended to ensure adequate oversight and compliance with federal information security requirements.

FISMA amends 40 U.S.C. § 11331 which authorizes the Secretary of Commerce to prescribe standards and guidelines (developed by NIST, see below) pertaining to federal information systems. Those pertaining to information security are to be made mandatory. This section also authorizes the President to disapprove or modify the Secretary's prescriptions and also allows agencies to follow more strict standards, as long as they contain the mandatory standards prescribed by the Secretary.

FISMA also amends 15 U.S.C. § 278g-3, which gives NIST the mission of developing standards, guidelines, and associated methods and techniques for information systems. These standards and guidelines include those for securing federal information systems, except national security systems.[745] FISMA primarily amends this section by specifying that NIST shall, at the least, develop standards for categorizing all agency information and information systems, recommending what type of information or system should be included in each category, and developing minimum security requirements for each category. FISMA also instructs NIST that these standards should, to the most practicable extent possible, be technology neutral and allow for the use of commercial-off-the-shelf products.

The amendments to 15 U.S.C. § 278g-4 rename the Computer System Security and Privacy Advisory Board the Information Security and Privacy Advisory

[745] NSDD-145 assigns this authority to the National Security Agency.

Board. The board, which was originally established by the Computer Security Act, advises the Secretary of Commerce and the Director of OMB on information security and privacy issues and reports to the Secretary, the Director of OMB, the Director of the National Security Agency, and Congress.

Finally, FISMA repeals 40 U.S.C. §11332, which included language originally enacted as part of the Computer Security Act. This language required agencies to develop security plans for their computer systems and to provide personnel training in security awareness and practices. These requirements have been subsumed in agency security program requirements mentioned above. FISMA also amends 44 U.S.C. § 3505 to include a requirement that agencies inventory their major information systems and identify where these systems interface with other systems and networks.

Discussion

Throughout the 1990s, the General Accounting Office (GAO) reported on fundamental problems associated with agency information security plans. In some cases, GAO found that agencies did not have written policies and procedures. In other cases, GAO found that policies and procedures were not enforced. In addition to problems internal to the agencies, GAO cited a lack of oversight to ensure that agencies met their obligations. GISRA addressed these problems by tightening agency requirements in statute (essentially taking OMB's guidelines and putting them in statute). GISRA also addressed the oversight issue by requiring annual independent evaluations of agency security programs, and requiring that the results be reported directly to Congress. OMB's FY2001 Report to Congress on Federal Government Information Security Reform formed the baseline by which to better measure agencies' progress in securing their information systems.

In the FY2002 report, OMB cited both progress and remaining issues within the federal government. For example, out of 7,957 federal systems evaluated, the number of systems for which risk assessments have been done increased from 43% to 65%. OMB cited similar increases for the number of systems with updated security plans, and the number of systems with contingency plans. However, OMB identified six areas in which problems persist: lack of management attention; nonexistent security performance measures; poor security education and awareness; failure to fully fund and integrate security into capital planning; failure to ensure contractors are secure; and lack of detecting, reporting, and sharing information on vulnerabilities.

GAO's evaluation of the FY2002 results[746] was more critical of the progress made. For example, while OMB noted that 11 of 24 agencies had assessed risk for 90% to 100% of their systems, GAO noted that 8 reported that they had assessed fewer than 50%. The House Technology, Information Policy, Intergovernmental Relations and the Census Subcommittee of the House Government Reform Committee, which maintains a computer security report card, noted that while 14 agencies improved their grades, based on the subcommittee's scoring, 14 agencies remain with grades below C, and 8 have failed (again, according to the subcommittee scoring).[747]

Also, there remains some tension over the roles and responsibilities for national security systems versus non-national security systems. Part of the reason Congress passed the Computer Security Act was to ensure that the national security community would not have too great a role in setting computer security standards for civilian federal computer systems.[748] There was a similar debate over the definition of sensitive information which the act sought to protect. While Congress recognized that, in addition to classified information, the government holds sensitive information, the compromise of which could adversely affect the national interest or conduct of federal programs, or the privacy of individuals, Congress did not intend the term to constitute a formal new category of information.[749] The act stipulated that the designation of sensitive implies no determination as to whether it is subject to public disclosure. However, as individual information systems become increasingly interconnected, including the connection of national security systems to civilian and public systems, some in the national security community are concerned about the level of security of these non-national security systems. FISMA maintains the distinction between roles and responsibilities for national security systems and all other systems. Still, it does require NIST to develop guidelines by which agencies can identify national security systems over which they may have control.

John D. Moteff

O. Data Quality Act (Information Quality Act (IQA))

Statutory Intent and History

The Data Quality Act of 2001 (DQA) was enacted as Section 515 of the FY2001 Treasury and General Government Appropriations Act (P.L. 106-554, 44 U.S.C. § 3516 note; 114 Stat. 2763A-153). The DQA, enacted in December 2000 as a two-paragraph last-minute addition to the consolidated appropriations bill, took effect on October 1, 2002. There is no specific or explicit language on statutory intent or legislative history.

Major Provisions

The DQA required the Office of Management and Budget (OMB) to issue guidelines ensuring the "quality, objectivity, utility, and integrity" of information disseminated by the government. In turn, the law instructed most federal agencies to issue their own guidelines, following OMB's, by October 1, 2002. The act also required agencies to create an administrative process through which interested groups could challenge agency information and seek corrections. OMB, in its guidelines, further defined information quality, and required agencies to follow certain procedures depending on the use, category, and significance of the information. The resulting agency guidelines have varied depending on the area of agency responsibility. The DQA also required each agency to report periodically to the Director of OMB the number and nature of complaints received by the agency regarding the accuracy of its information, and how such complaints were handled.

Discussion

While there is no specific or explicit documentation of statutory intent or legislative history, the DQA amends the Paperwork Reduction Act (PRA) of 1995, and can be seen as related to other government documents and general management laws as well, such as OMB Circular No. A-110, OMB Circular No. A-130, the Freedom of Information Act, the Privacy Act, and the Government in the Sunshine Act. (The laws are described in detail elsewhere in this compendium.)

Under the PRA, the Office of Information and Regulatory Affairs (OIRA) was created within OMB with oversight responsibilities for other federal agencies regarding paperwork (44 U.S.C. § 3503(a) and (b)). OIRA, among other things, is responsible for developing uniform policies for efficient processing, storage, and transmission of information, within and among agencies. The PRA directed the Director of OMB to foster greater sharing of, dissemination of, and access to public information.

Agencies' data acquisition and publishing rights were stated in OMB Circular No. A-110, Subpart C. Unless specifically waived, federal agencies "have the right … to obtain, reproduce, publish, or use the data first produced under an award."

OMB Circular No. A-130 stated a federal policy of "maximizing the usefulness of information disseminated to the public," but did not provide details about or definitions of quality, integrity, accuracy, or objectivity of information.

The Freedom of Information Act, the Privacy Act, and the Government in the Sunshine Act all contain provisions regulating or generally relating to public access to governmental information, and/or procedures to challenge or correct such information.

The DQA provides more explicitly quality standards for information across the federal government, and procedures to challenge or correct such information.

The DQA applies to all federal agencies that are subject to the PRA. Data quality challenges have been filed with several agencies. Four agencies place all their DQA challenges on their Web pages: the Environmental Protection Agency (EPA); the Commodity Futures Trading Commission (CFTC); the Department of Transportation; and the Forest Service. Discerning other agencies' DQA challenges is a more involved process.

DQA challenges have covered a wide range of complexity. A DQA challenge to the CFTC in September 2003, for example, involved certain data fields missing from a document; the data fields were determined to have resulted from a programming error, and the error was corrected. On the other hand, a lawsuit brought against the White House Office of Science and Technology Policy (OSTP), challenging the data underlying the interagency "National Assessment of the Potential Consequences of Climate Variability and Change" (NACC), was settled out of court on November 6, 2003, with the OSTP posting a notice stating that the NACC was not "subjected to OSTP's Information Quality Act Guidelines."

Proponents contend the law and guidelines will improve the quality of agency science and regulations, and force agencies to regulate based on the best science available. Some of these proponents maintain that the Data Quality Act will help agencies defend their regulations against lawsuits, and reduce the number of lawsuits filed. The U.S. Chamber of Commerce's Vice President, William Kovacs, has praised the act as fair to all groups; under it, the Chamber has challenged information on the EPA website. Some opponents of the law and OMB's guidelines contend the act may have a chilling effect on agency distribution and use of scientific information. These opponents foresee a flood of data quality challenges on a wide range of scientific issues, which, they contend, may tie up agency resources and significantly delay regulations. There is no evidence yet, however, that these concerns have materialized.

Critics also argue that the DQA, and the implementing guidelines, strengthen the position of industrial opponents to federal health and environmental policies and regulations by allowing them an additional method to challenge the science on which the regulations are based. Scientific groups sought to have the draft OMB guidance revised to prevent "harassment" (through repeated data quality

challenges) of scientists working on controversial research, and to avoid imposing new obstacles to the publication of research results. The final OMB guidelines address some of these issues, but still allow challenges to the quality of research underlying official agency policies or research results published on agency websites. The guidelines allow challenges to peer-reviewed findings on a case-by-case basis.

The DQA lacks a judicial review provision allowing for a party to take a data quality dispute to court.

II. Strategic Planning, Performance Measurement, and Program Evaluation

A. Inspector General Act of 1978

Statutory Intent and History

Statutory offices of inspector general (OIGs) consolidate responsibility for auditing and investigations within a federal department, agency, or other organization. Established by law as permanent, independent, nonpartisan, and objective units, the OIGs are designed to combat waste, fraud, and abuse (5 U.S.C. Appendix). The early establishments occurred in the wake of major financial and management scandals, first in 1976 in the Department of Health, Education and Welfare — now Health and Human Services (90 Stat. 2429) — and in 1978 in the General Services Administration (GSA). This later episode paved the way for OIGs in GSA and 11 other departments and agencies (92 Stat. 1101). Such offices now exist in nearly 60 federal establishments and entities, including all cabinet departments and the largest federal agencies, as well as many boards, commissions, government corporations, and foundations.[750]

Statutory Underpinnings. Under two major enactments — the Inspector General Act of 1978 (92 Stat. 1101-1109) and the Inspector General Act Amendments of 1988 (102 Stat. 2515-2530) — IGs have been granted a substantial amount of independence and authority to carry out their basic mandate. Each office is headed by an inspector general who is appointed and removable in one of two ways: (1) presidential appointment, subject to the advice and consent of the Senate, and presidential removal in specified federal establishments, including all cabinet departments and larger federal agencies; and (2) agency head appointment and removal in designated federal entities (DFEs), usually smaller boards, foundations, commissions, and corporations.

Coordination and Control. Statutory OIGs have also been affected by several presidential orders designed to improve coordination among the offices and to provide a means for investigating charges of wrongdoing among the IGs themselves and other top echelon officers.

---

[750] Separate from the 56 offices directly under the Inspector General Act of 1978, as amended, are three others, which, for the most part, are modeled after the provisions of the basic IG Act. P.L. 101-193 (103 Stat. 1711-1715) created an OIG in the Central Intelligence Agency, whose IG is appointed by the President by and with the consent of the Senate. P.L. 100-504 (102 Stat. 2530) established an office in the Government Printing Office, the only legislative branch entity with such a statutory IG; in this case, the inspector general is appointed by the head of the agency, the Public Printer. In addition, P.L. 108-106 established an office in the new Coalition Provisional Authority (in Iraq), whose IG is appointed by the Secretary of State. For background information on the offices and their evolution, see the citations in the "Selected Source Reading" at the end of this section.

In 1981, President Ronald Reagan established the President's Council on Integrity and Efficiency (PCIE) as a mechanism to coordinate and enhance efforts to promote integrity and efficiency in government programs and to detect and prevent waste, fraud, and abuse.[751] Chaired by the Deputy Director of the Office of Management and Budget (OMB), PCIE was composed of the statutory IGs at the time plus other appropriate officials from the Office of Personnel Management, Federal Bureau of Investigation, and the Departments of Defense, Justice, and the Treasury, among others. The membership has since been expanded to include the Comptroller of the Office of Federal Financial Management (an officer in OMB), the Director of the Office of Government Ethics, and the Special Counsel in the Office of Special Counsel. In 1992, following the expansion of IGs to designated federal entities, a parallel Executive Council on Integrity and Efficiency (ECIE) was created for IGs in these entities along with other appropriate officials.[752]

Concerns about allegations of wrongdoing by IGs or other high-ranking OIG officials themselves prompted the creation of a new mechanism to investigate such charges. In 1996, President William Clinton established an Integrity Committee, composed of PCIE and ECIE members and chaired by the FBI representative, to receive such allegations; if deemed warranted, these would be referred for investigation to an executive agency with appropriate jurisdiction, including the FBI, or to a special investigative unit consisting of council members.[753]

Major Provisions

Purposes. Three principal purposes or missions guide the OIGs:

- conduct and supervise audits and investigations relating to the programs and operations of the establishment;
- provide leadership and coordination and recommend policies for activities designed to: (a) promote economy, efficiency, and effectiveness in the

[751] Executive Order 12301, issued Mar. 26, 1981.

[752] Both PCIE and ECIE now operate under Executive Order 12805, issued by President George H.W. Bush on May 11, 1992. A proposal to codify the two councils has arisen in the 108th Congress. H.R. 3457 would combine them in statute, creating a new Council of the Inspectors General on Integrity and Efficiency. The General Accounting Office (GAO) surveyed the IGs in 2002, about codification of the IG councils and other matters, and found that a majority of IGs interviewed (34 of 53) "indicated that it was important for the PCIE and ECIE to be established in statute." See U.S. General Accounting Office, Inspectors General: Office Consolidation and Related Issues, GAO-02-575, Aug. 2002, p. 44.

[753] Executive Order 12993, issued by President William Clinton on Mar. 21, 1996.

administration of such programs and operations; and (b) prevent and detect fraud and abuse in such programs and operations; and
- provide a means for keeping the head of the establishment and Congress fully and currently informed about problems and deficiencies relating to the administration of such programs and operations, as well as the necessity for and progress of corrective action.

Appointment, Removal, and General Supervision. Differences in the appointment and removal procedures for IGs exist between those in federal establishments versus those in designated federal entities (see the following section for definitions), although with only a few exceptions, all IGs serve only under the "general supervision" of the agency head.

IGs in Federal Establishments. The President appoints IGs in federal establishments (i.e., cabinet departments and larger federal agencies) by and with the advice and consent of the Senate. The statute also provides that the selection be done without regard to political affiliation and solely on the basis of integrity and demonstrated ability in accounting, auditing, financial analysis, law, management analysis, public administration, or investigations.

The IG Act, as amended, provides that an inspector general may be removed from office only by the President, who then must communicate the reasons for removal to both houses of Congress. There are no explicit restrictions on the President's authority; removal may be with or without cause.

Each inspector general "must report to and be under the general supervision of" the establishment head or, to the extent this authority is delegated, to the officer next in rank below the head, and shall not report to, or be subject to supervision by, any other officer. The restriction on supervision is reinforced by another provision: "Neither the head of the establishment nor any other officer shall prevent or prohibit the Inspector General from initiating, carrying out, or completing any audit or investigation, or from issuing any subpoena."

Exceptions to this prohibition are few and are spelled out with regard just to certain departments and for specified reasons. Only the heads of the Departments of Defense, Homeland Security, Justice, and the Treasury, along with the U.S. Postal Service, are authorized to prohibit an IG audit, investigation, or issuance of a subpoena which requires access to information concerning ongoing criminal investigations, sensitive operational plans, intelligence matters, counterintelligence matters, and other matters the disclosure of which would constitute a serious threat to national security. (Under separate statutory authority, the Director of Central Intelligence has similar power over the Central Intelligence Agency's (CIA's) Inspector General.) Should the agency head exercise this power limiting the IG's discretion and activities, the reasons must be communicated to the IG and then by the inspector general to specified committees of Congress.

The IG Act also provides for two assistant inspectors general within each IG office in the specified federal establishments: i.e., an Assistant Inspector General for Audits and an Assistant Inspector General for Investigations.

IGs in Designated Federal Entities. The 1988 Amendments to the IG Act provide for appointment, removal, and supervision of inspectors general in "Designated Federal Entities," such as the Consumer Product Safety Commission, Federal Communications Commission, Federal Labor Relations Authority, Securities and Exchange Commission, and other usually smaller boards, commissions, corporations, and foundations. The U.S. Postal Service, a public corporation and the government's largest civilian employer, is also a designated federal entity.

The appointment and removal powers over IGs in designated federal entities differ from those governing their counterparts in federal establishments. The IGs in designated entities are appointed by the agency head, who also may remove or transfer the IG; when removing or transferring the IG, the head must promptly communicate in writing the reasons for such action to both houses of Congress. Several caveats to these usual procedures apply to the inspector general in the U.S. Postal Service. This officer is appointed by the Board of Governors and is the only IG with a specified term of office (i.e., seven years). He or she may be removed by the written concurrence of at least seven governors and then only for cause, another distinguishing characteristic from all other statutory inspectors general.

As with the presidentially appointed inspectors general, IGs in the designated federal entities are required to report to and be under the "general supervision" of the agency head. But neither the head nor any other officer is permitted to interfere with an IG audit, investigation, or issuance of a subpoena.

Appropriations and Resources. The 1988 Amendments to the IG Act granted each office of inspector general in a federal establishment a separate appropriation account (31 U.S.C. § 1105(a)(25)), in order to protect its funding level once it had been established by Congress. The OIGs in designated federal entities lack the same appropriations protection.

All IGs have authority to call on other governmental entities for assistance and to hire their own staff. Adequate facilities, equipment, supplies, and other basic resources are to be provided by the host agency. In addition, IGs have access to a Criminal Investigator Academy to train their personnel and an Inspector General Forensic Laboratory (P.L. 106-422).

Duties. Following the act's broad mandates, each inspector general is required to perform specific duties in order to achieve the goals of detecting and preventing waste, fraud, and abuse. These duties illustrate the IG's unique role within the agency and the broad grant of authority delegated by Congress. The IGs are expected to:

- provide policy direction for, and conduct, supervise, and coordinate audits and investigations;
- review existing and proposed legislation and regulations relating to programs and operations;
- make recommendations in the reports concerning the impact of the laws;
- recommend policies for, and conduct, supervise, or coordinate other relevant activities of the establishment;
- recommend policies for, and conduct, supervise, or coordinate relationships with federal agencies, with state and local agencies, and with nongovernmental entities with regard to identifying and prosecuting participants in fraud or abuse; and
- report expeditiously to the Attorney General whenever an inspector general has reasonable grounds to believe that there has been a violation of federal criminal law.

Reporting and Notification Requirements. Complementing the obligation to keep the agency head and Congress "fully and currently informed," IGs are required to make two basic types of reports to the agency head and Congress and to keep them informed through other means.

Semiannual Reports. Inspectors general are required to make semiannual reports, summarizing the OIG's activities for the previous six months, itemizing waste, fraud, and abuse problems, and identifying proposals for corrective action. The 1988 amendments refined and enhanced several of the semiannual reports' ingredients. For example, reports must contain certain entries, some of which include:

- a description of significant problems, abuses, and deficiencies relating to programs and operations;
- a description of recommendations for corrective action;
- an identification of each significant recommendation contained in the previous reports on which corrective action has not been completed; and,
- statistical information relating to costs, management of funds, and related matters.

The IG reports go directly to the agency head, who must transmit them unaltered to appropriate congressional committees within 30 days. After another 60 days, such reports are made available to the public. The agency head is authorized to append comments and specific data and information to the IG reports; this additional information includes statistical tables showing audit reports and dollar value of recommendations of disallowed costs and projected savings of recommendations for funds which could be put to a better use.

This periodic reporting requirement is affected by the Reports Consolidation Act (RCA) of 2000 (P.L. 106-531), approved at the end of the 106th Congress. The enactment encourages the consolidation of financial and performance

management reports within departments and agencies into a single annual report, in order to enhance coordination and efficiency within them; improve the quality of relevant information; and provide it in a more meaningful and useful format for Congress, the President, and the public. As part of this overall plan, RCA provides that the consolidated annual report include a statement from the agency's inspector general; it is to describe the agency's most serious management and performance challenges — the so-called "top 10" challenges that IGs have been identifying over the previous three years — and briefly assess the agency's progress in addressing them. The IG's statement must be submitted to the agency head at least 30 days before it is due; he or she may comment upon it but not change it.

Seven-Day Letter Reports. The Inspector General Act also requires the IG to report immediately to the agency head whenever the inspector general becomes aware of "particularly serious or flagrant problems, abuses, or deficiencies relating to the administration of programs and operations." Such communications must be transmitted — unaltered but allowing for comments the head deems appropriate — by the agency head to the appropriate congressional committees within seven days.

The Intelligence Community Whistleblower Protection Act, as amended, reinforces such notifications.[754] It covers all employees in the intelligence community who want to bring an "urgent concern" based on classified information to the attention of Congress. The process to accomplish this is elaborate and complex — with the inspector general playing a key role in reviewing and transmitting the information to the House and Senate Select Committees on Intelligence, the exclusive recipients — to protect the material from unauthorized disclosure while recognizing the right of Congress (and the agency head) to be notified of such urgent concerns.

Other Notification Provisions. Additionally, the act requires an inspector general to keep the agency head and Congress "fully and currently informed by means of the reports [described above] and otherwise." This concept of keeping the head and Congress informed "otherwise" includes a variety of mechanisms: testifying at congressional hearings, meeting with lawmakers and staff, and responding to requests for information or reports from Congress or its committees.

Authority. In order to carry out the purposes of the law, Congress has granted the inspectors general broad authority. Section 6 of the codified legislation authorizes the IGs, among other things:

---

[754] Codified at 5 U.S.C. Appendix 8H for all agencies directly under the Inspector General Act of 1978 and at 50 U.S.C. § 403q(d)(5) for the CIA.

- to conduct audits and investigations and make reports relating to the administration of programs and operations;
- to have access to all records, reports, audits, reviews, documents, papers, recommendations, or other materials which relate to programs and operations with respect to which the IG has responsibilities under the enactment;
- to request assistance from other federal, state, and local government agencies;
- to issue subpoenas for the production of all information, documents, reports, answers, records, accounts, papers, and other data and documentary evidence necessary to perform the IG's functions;[755]
- to administer to or take from any person an oath, affirmation, or affidavit;
- to have direct and prompt access to the agency head;
- to select, appoint, and employ officers and employees in order to carry out the functions, powers, and duties of the office of the inspector general;
- to obtain the services of experts and consultants on a temporary or intermittent basis, as authorized by 5 U.S.C. § 3109; and
- to enter into contracts and other arrangements for audits, studies, and other services with public agencies as well as private persons, and to make such payments as may be necessary to carry out the law.

The scope of the IGs' investigative authority is seen further in the range of matters the IG may investigate stemming from an employee complaint or disclosure of information. The inspector general is authorized to receive and investigate complaints or information from an employee concerning the possible existence of an activity constituting a violation of law, rules, or regulations, or mismanagement, gross waste of funds, abuse of authority, or a substantial and specific danger to the public health and safety. In such instances, the inspector general shall not disclose the identity of the employee without the employee's consent, unless the IG determines that such disclosure is unavoidable during the course of the investigation. The law also prohibits any reprisals against employees who properly make complaints or disclose information to the IG.

Inspectors general in the federal establishments now have independent law enforcement authority in law (P.L. 107-296). Previously, the criminal investigators in these OIGs had acquired such powers in several different ways: through existing offices that have been transferred to the OIG; through statutory grants affecting specific agencies and jurisdictions; and through special deputation by the U.S. Marshals Service in the Department of Justice. These grants and the attendant processes, however, were seen as cumbersome and time-consuming as well as being limited in scope and duration; the result was an unequal set of powers among OIGs.

---

[755] This section does not permit the IG to use the subpoena power to obtain documents and information from other federal agencies (5 U.S.C. App. 3, § 6).

Notwithstanding these broad powers, inspectors general are not authorized to take corrective action or institute changes themselves. Indeed, the 1978 act specifically prohibits the transfer "of program operating responsibilities" to an inspector general.

Discussion

Statutory inspectors general have been granted a substantial amount of independence, authority, and resources to combat waste, fraud, and abuse in federal programs and operations. The IGs' broad mandate allows them flexibility for the responsibilities they emphasize and the roles they adopt. Their activities can focus on investigations or audits, and increasingly inspections (or program evaluation), depending upon their job orientation, their expertise and experience, the types of programs and operations within the agency, and the problems they perceive. Their roles, moreover, can cross a wide spectrum of possibilities. These can range from a proactive, preventive role, in which the IG functions as an "insider," working closely with management to upgrade agency operations, to an ad hoc reactive, detection role, in which the IG functions as an "outsider," investigating and uncovering illegalities and other misconduct.

Inquiries and concerns have existed about the IGs and their operations: whether certain individual offices and particular IGs are effective, and how this effectiveness is measured and compared. Calls for additional statutory authority — such as testimonial subpoena power — and other enhancements have also been expressed. Proposals relating to the IG community include prescribing a term of office (e.g., seven or 10 years) for IGs in designated federal entities, to help reduce their high turnover rate; changing IG budget submission procedures; making the PCIE and ECIE statutory or combining the two; extending offices to certain agencies which lack one now; transforming some posts in which the IG is appointed by the agency head to one appointed by the President (with Senate advice and consent); placing offices in several designated federal entities under one inspector general or placing one or more of the designated federal entities under the jurisdiction of an IG in a federal establishment; and merging the two statutory offices in the Treasury Department (the Treasury Inspector General for Tax Administration, who covers the Internal Revenue Service, and the Treasury IG who handles the remainder of the department).[756]

Selected Source Reading

---

[756] H.R. 3457, 108th Congress, for instance, would set a term of office for the IGs; allow their removal "for cause", provide for the submission of the IG budget requested amount to OMB and Congress, for comparative purposes; set up a combined Council of the Inspector Generals on Integrity and Efficiency; and provide for personnel flexibilities in office of the inspector general (OIG) hirings, pay, promotion, and reductions in force.

B. Government Performance and Results Act of 1993

Statutory Intent and History

Congress's stated intent in enacting the Government Performance and Results Act of 1993 (GPRA or the "Results Act"; P.L. 103-62; 107 Stat. 285),[757] was to direct agencies to (1) clarify their program responsibilities and become more cost efficient; (2) account for the performance and outcomes of their activities and programs; and (3) improve management. The legislation reflected Congress's desire to reduce budget deficits and improve congressional decision making by using information about whether statutory objectives are achieved, and about the effectiveness and efficiency of federal programs and spending. The law requires agencies to move from defining budgets in terms of inputs and program outputs, to focus on outcomes and results.[758] Agencies are required to set goals, generate information and reports needed to measure program performance, and move toward performance budgeting. The National Performance Review, state government experiences with performance budgeting, and the "total quality management" (TQM) movement contributed to congressional interest in performance management and budgeting.

The "Results Act" was one of several major pieces of legislation enacted in the 1990s that were intended to improve management and accountability in federal agencies. The others, detailed elsewhere in this compendium, included the Chief Financial Officers Act of 1990 (104 Stat. 2838) that provided for the establishment of chief financial officers (CFOs) in the 24 largest federal departments and agencies, which together control about 98% of the government's gross budget authority. The Government Management Reform Act of 1994 (110 Stat. 3410) required all CFO agencies to prepare and have audited financial statements for their operations beginning with FY1996. The Information Technology Management Reform Act of 1996 (110 Stat. 679, later renamed the Clinger-Cohen Act of 1996, 110 Stat. 3009393) requires agencies to establish performance measures to evaluate how their information technology activities support agency program efforts.

Major Provisions

---

[757] Codified at 5 U.S.C. prec. § 301, § 306; 31 U.S.C. § 1101 & nt, § 1105, §§ 1115-1119, prec. § 9701, §§ 9703-9704; 39 U.S.C. prec. § 2001, §§ 2801-2805.

[758] The statute defines output measure as "the tabulation, calculation, or recording of activity or effort and can be expressed in a quantitative or qualitative manner." Outcome measure means "assessment of the results of a program activity compared to its intended purpose" (Sec. 4(f)).

GPRA directs agencies with budgets over $20 million[759] to develop, in consultation with Congress and other stakeholders, long-term goals and six-year strategic plans to be revised every three years; to set annual performance goals and develop annual performance plans based on the strategic goals; and to report annually on actual performance compared to the targets. Federal agencies started to submit annual performance plans to Congress beginning with the FY1999 budget cycle. The Office of Management and Budget (OMB) submitted the first annual government-wide performance plan with the President's FY1999 budget. The performance report cycle began in 2000 with reports covering FY1999. Quantitative measures are required except when OMB approves non-quantitative alternatives (as outlined in the statute) for programs that cannot be expressed "in an objective, quantifiable, and measurable form ...."

Anticipating bureaucratic obstacles and the need to alter traditional procedures, budget, and reporting systems, Congress recognized that successful implementation of GPRA would require major changes in agencies' cultures and procedures. Thus, Congress phased in GPRA over a seven-year period and authorized pilot projects. Congress attempted to avoid top-down OMB control, and allowed each agency to develop a performance measurement process that conforms to its unique functions. Only federal employees may prepare strategic plans, performance plans, and reports, since these activities are "inherently governmental functions." In addition, guidance issued by OMB admonishes agencies to keep costs down and not increase paperwork.

In statutorily required reports that used the results of the pilot projects, OMB did not recommend changes to the law, and GAO reported that agency implementation varied in quality, utility, and responsiveness, but that improvements could be made.[760] In a letter to Congress, January 18, 2001, reporting as mandated by P.L. 103-62, OMB declined to recommend to Congress that performance budgeting be required statutorily.[761]

---

[759] Except for the Central Intelligence Agency, General Accounting Office, Panama Canal Commission, and the U.S. Postal Service (which is governed by separate, but similar, provisions of the same law).

[760] U.S. Office of Management and Budget, The Government Performance and Results Act, Report to the President and the Congress, May 1997; and U.S. General Accounting Office, The Government Performance and Results Act,1997 Government-wide Implementation Will Be Uneven, GGD-97-109, June 1997.

[761] U.S. Office of Management and Budget, Report to the Hon. J. Dennis Hastert, from Jacob J. Lew, Jan. 18, 2001, and CRS Report RL32164, Performance Management and Budgeting in the Federal Government: Brief History and Recent Developments, by Virginia A. McMurtry.

Major changes to GPRA have been accomplished both by statute and by administrative directive. The Reports Consolidation Act of 2000[762] authorized agencies to combine annual performance reports with financial reports required under the CFO Act. The following year OMB made the consolidation mandatory and set forth a schedule of accelerated deadlines.[763] The performance and accountability reports covering FY2003 were due by January 30, 2004, and beginning with FY2004, the consolidated reports are due by November 15, 2004. The Federal Financial Assistance Management Improvement Act of 1999[764] requires federal agencies and non-federal entities that are recipients of federal financial assistance to set annual goals and to measure compliance relating to efficiency and coordination, delivery of services, and simplification of processing as part of the agency's compliance with GPRA. Most recently, GPRA was amended by the Homeland Security Act of 2002.[765] Agencies are required to augment desciptions in their annual performance plans regarding how they will achieve their performance goals and objectives[766] by also describing the "strategies" and "training" that are required to meet those goals and objectives. In addition, the agency chief human capital officers (CHCOs) established by the Homeland Security Act are required to prepare this portion of agency annual performance plans.[767] The amendment to GPRA also requires agencies to review, in their annual program performance reports, their performance relative to their strategic human capital management.[768]

Significant changes relating to GPRA have also occurred through the annual revisions to OMB Circular No. A-11, "The Preparation, Submission, and Execution of the Budget."[769] In 1995 OMB for the first time issued Part 2, "Preparation and Submission of Strategic Plans," to OMB Circular No. A-11. By 1999, Part 2 covered "Preparation and Submission of Strategic Plans, Annual Performance Plans, and Annual Program Performance Reports." Among the

changes made in June 2002 (now found in A-11, Part 6) were requirements that agency annual performance plans include performance goals used in assessments of program effectiveness, that agencies restructure their budget accounts and substitute outputs and outcomes for the current lists of program activities in program and financing schedules, and that agencies integrate performance and budget in performance plans. The revision of A11 in July 2003 requires agencies to prepare performance budgets for FY2005 and to incorporate their GPRA performance plans into their budget requests.

Discussion

A number of congressional hearings and reports overseeing implementation of the law have been produced since 1993.[770] For instance, a committee report on FY1999 performance plans concluded that the plans were "disappointing." It noted that the strategic plans did not lay a good foundation for performance plans; that agencies did not deal with major management problems, lacked reliable data to verify and validate performance, and often did not give results-oriented performance measures; and that many performance measures were not linked to day-to-day activities. The report found that a "culture change" was required to ensure implementation.[771] A report by former Chairman Thompson of the Senate Governmental Affairs Committee critiqued FY1999 performance reports and observed that most do not "inform Congress and the public about what agencies are doing and how well they are doing it."[772]

GAO has published assessments of individual agency GPRA performance plans and reports and has summarized its assessments in a variety of reports and testimony.[773] The House Subcommittee on Government Efficiency, Financial

Management and Intergovernmental Relations held a hearing on "The Results Act: Has It Met Congressional Expectations?" (June 19, 2001). Compliance with GPRA was identified as a major management challenge in Government at the Brink, Urgent Federal Government Management Problems Facing the Bush Administration, released by Senator Fred Thompson.[774]

To mark the 10-year anniversary of enactment of the law, hearings were held by the Subcommittee on Government Efficiency and Financial Management of the House Committee on Government Reform in April 2003,[775] and by the full House Committee on Government Reform in September 2003.[776] Many of the themes enunciated in the earlier reports have continued to resonate throughout the 10 years since enactment. For instance, reporting on GPRA in the FY2004 budget request, OMB said:

Unfortunately, the implementation of this law has fallen far short of its authors' hopes. Agency plans are plagued by performance measures that are meaningless, vague, too numerous, and often compiled by people who have no direct connection with budget decisions. Today, agencies produce over 13,000 pages of performance plans every year that are largely ignored in the budget process.[777]

There is also criticism that Congress does not use performance and results information in authorizing programs or appropriating funding for them.[778] A January 2002 GAO report, Managing for Results: Agency Progress in Linking Performance Plans with Budgets and Financial Statements, said that three-fourths of federal agencies were connecting performance planning, budgeting and financial reporting at aggregated goal levels, but that more links were required at

specific program levels to assist in internal management and congressional decision making.

President George W. Bush's report, The President's Management Agenda (August 2001), stressed results-oriented management and included budget and performance integration as one of five government-wide initiatives.[779] Performance was an important theme in the FY2003 budget request when the Administration said it used performance analyses to make funding decisions for over 100 federal programs across all agencies. This represented the first time a President's budget submission formally attempted to link budget requests with program performance.[780]

The Bush Administration has developed a formal program assessment rating tool (PART) that agencies must use to evaluate program performance. This is intended to "...inform and improve agency GPRA plans and reports, and establish a meaningful, systematic link between GPRA and the budget process."[781] Programs are rated by agency managers and OMB staff according to questionnaires developed by OMB. Circular No. A-11 now requires that agencies' performance budgets include information from the PART assessments. The President's FY2004 budget included a separate volume, Performance and Management Assessments, which arrayed PART evaluations for 234 programs. Other parts of the budget contained information on "Rating the Performance of Federal Programs" and "Budget and Performance Integration." OMB's PART instructions for FY2005 subject an additional 20% of all programs to PART evaluations, with 100% of federal programs to be evaluated this way by FY2008. Critics of PART argue that the "subjectiveness" used in determining performance measures may lead to poor budget decision making practices.[782]

Some agencies have not yet adequately defined their goals, program objectives, expected outcomes, and results, and have not developed appropriate measures for them. It is difficult to develop quantitative or alternative measures for some program areas, for example, programs designed to support basic research or certain diffuse policy objectives. Concerns have been stated about the costs and benefits of developing new results-oriented performance measurement systems,

about the lack of interagency coordination to use similar measures for similar programs, and about the need to link "Results Act" implementation to the everyday work of program mangers. Some critics recommend that Congress set clear performance goals in authorizing legislation,[783] set clear performance standards in appropriations legislation, and use PART to grade programs and help with funding decisions.

Other issues relate to the plausibility of achieving the intent of the statute, and to its fundamental assumptions and purposes. Some say that GPRA is a wasteful paperwork exercise since, typically, executive and legislative decisions about funding priorities and program continuation are based more on political debate and objectives and less on the kind of performance data that are intended to be generated from the GPRA mandates. Others believe performance management and budgeting are feasible, and assert that accountability and congressional control over the budget will increase as Congress uses objective, results-oriented information to oversee agencies and develop budget priorities.

C. Clinger-Cohen Act of 1996

Statutory Intent and History

The Information Technology Management Reform Act (ITMRA; 110 Stat. 679;[784] 40 U.S.C. § 759) was incorporated as an amendment into the National Defense Authorization Act for Fiscal Year 1996 (110 Stat. 186). In October 1996, the name of this act was formally changed to the Clinger-Cohen Act (110 Stat. 3009; 31 U.S.C. § 3512) in recognition of its two principal sponsors. The law provides that each federal agency buy the best and most cost effective information technology available. Under the law, the General Services Administration's (GSA's) role as the central agency for information technology acquisition policy is repealed. Each federal agency is given responsibility for information technology acquisition and management with a Chief Information Officer (CIO) to help achieve this goal. Financial accounting and management responsibilities also are given to each federal agency. The purpose of the law is to streamline and improve information technology procurement policies at federal agencies, as well as give each federal agency the flexibility to make information technology purchases relevant to its mission.

The Clinger-Cohen Act replaced the Automatic Data Processing Act (79 Stat. 1127), the Brooks Act.[785] The Brooks Act, passed in 1965, was intended to address problems of "[p]assive, partial, or informal types of leadership" in the purchase, lease, maintenance, operation, and utilization of automatic data processing (ADP) by federal agencies. At that time ADP technology and its applications were still relatively new although their use was becoming more widespread; however, federal agencies were reporting that they were having greater difficulty complying with Bureau of the Budget regulations for annual agency-wide budget reviews.[786] The Brooks Act centralized and coordinated this process by giving the General Services Administration "operational responsibility" for ADP management, utilization and acquisition through a "revolving fund." (79 Stat. 1126).

In the years following its passage, however, advances in information technology and applications created problems for agencies operating under the Brooks Act. Policymakers, in turn, sought to redress problems that had arisen from a centralized federal acquisition, procurement, and financial accounting system. Increasingly, many viewed the Brooks Act as causing procurement delays, imposing standardized technology and application solutions, and mismatching technology solutions with agency missions. The Information Technology

[785] Named after its principal sponsor, former Rep. Jack Brooks.

[786] The Bureau of the Budget was the predecessor agency to the Office of Management and Budget (OMB), before OMB was established via Reorganization Plan No. 2 in 1970.

Management Reform Act (S. 946), introduced by Senator William S. Cohen, was considered bypolicymakers during the 104th Congress. S. 946 was intended to provide the executive branch with the flexibility to acquire technologies and services incrementally, enter into modular contracts with vendors rather than more costly longer-term contracts, and obtain information technologies and services that fit agency needs. A companion bill, identical to the Senate legislation, was introduced by Representative William Clinger (H.R. 830) in the House of Representatives. H.R. 830 was passed by the House of Representatives on February 22, 1995. After H.R. 830 was referred to the Senate, S.946 was substituted for the House legislation.

Many congressional policymakers sought to implement information technology acquisition and procurement management reform during the 104th Congress. Advocates saw an opportunity for implementing the reforms in S. 946 by incorporating the bill into the National Defense Authorization Act for Fiscal Year 1996 (S. 1124), as Division E of the legislation. Congressional policymakers had been interested in reforming and streamlining all Department Defense (DOD) acquisition and procurement processes. By incorporating S. 946 into the FY1996 DOD authorization bill, policymakers brought this reform to all federal agency information technology acquisition and procurement management. The final version of S. 1124 passed the House of Representatives on January 24, 1996, and the Senate on January 26, 1996. It was approved by President Clinton on February 10, 1996. (110 Stat. 679).

Major Provisions

The Clinger-Cohen Act contains extensive procedural, technical, and policy revisions of federal information technology acquisition and procurement management. These provisions can be summarized as (1) repeal of GSA's primary role in setting policy and regulations for federal information technology acquisition, while giving most of this responsibility to individual federal agencies; (2) creation of Chief Information Officers (CIOs) in federal agencies to provide advice to heads of agencies on policies to develop, maintain and facilitate information systems as well as help evaluate, assess, and report on these policies; (3) creation of a simplified, clear, and understandable process of information technology acquisition by federal agencies; and (4) initiation of two specific pilot programs which authorize federal agencies to enter into competitive contracts with the private sector.

The provisions creating the CIOs and establishing the pilot programs have received much attention. The creation of CIOs in federal agencies was based on a perceived need to decentralize federal procurement, application, and evaluation of information technologies, benefit overall government performance, and bring expertise to the federal agencies. The two pilot programs are intended to reward cost savings and performance. The first type of program is the Share-in-Savings pilot program. This program provides acquisition and procurement incentives to the private sector, in which a federal agency can pay private sector contractors an

amount equal to a portion of savings (the share-in-savings) achieved by the government. The second pilot program was the Solutions-Based Contracting pilot program. Under this program, executive branch acquisition of information technology must include criteria that incorporate objectives defined by the federal government as well as a streamlined contractor process. The private sector is allowed to provide solutions to effectively achieve agency objectives. The law also requires that simple and clear selection factors, communication, proposals, evaluation, and system implementation be used by the executive branch.

Discussion

Early oversight of the implementation of the Clinger-Cohen Act immediately following its passage and the departure of its sponsors from Congress was relatively limited.[787] However, as Congress has become increasingly interested in Internet, information technology, and e-government issues, some provisions of the Clinger-Cohen Act have received additional attention in the 107th and 108th Congresses.

One concern has been the recruitment and retention of CIOs. A shortage of qualified CIOs, and regular turnover of personnel, compounded by salary and compensation disparities between government and private sector opportunities, have raised concerns about the government's ability to maintain the momentum and continuity of major e-government and IT initiatives.[788] As IT projects have become more integrated into the function of a department or agency, the role of CIOs has evolved as well. CIOs are being called upon not only for their technological expertise, but also to provide strategic leadership in certain areas of policy, budget, and contract oversight.[789] The CIO's relationship with top-level department decisionmakers can also be critical to successfully implementing e-government initiatives. This suggests that in selecting a department-level CIO, one needs to consider the strengths and weaknesses of choosing a career employee, who may have a deeper contextual understanding of the mission and functions of an organization, and recruiting a candidate from the private sector, who may bring a wider range of experiences and perspectives to the position.[790]

---

[787] Some observers suggest this may have been partly the result of the act's principal sponsors' departure from Congress; in 1997, Senator William Cohen left Congress to become the Secretary of Defense, and Representative William Clinger retired.

[788] Diane Frank, "CIOs Find Crowded Agenda Wearing," Federal Computer Week, June 30, 2003, p. 8.

[790] Sara Michael, "Insider Information," Federal Computer Week, Apr. 14, 2003, p. 26.

Concerns have also been raised about organizational and budgetary obstacles possibly hindering CIO performance. The Clinger-Cohen Act requires that the CIO report directly to the agency head, and have information resource management as a primary function. However, in many cases, these requirements have not been met. Results from GAO studies of government CIOs within the first few years of the enactment of the Clinger-Cohen Act showed that it was not uncommon for CIOs to report to the Deputy Secretary or other agency head subordinates rather than directly to the Secretary. In addition, CIOs frequently wore several hats within their agencies.[791] Due to the apparent lack of more current studies, it is unclear how this situation has evolved in recent years.

The results of the two pilot programs have been mixed. In late 2002, the Solutions-Based Contracting program was repealed by Section 825 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 (P.L. 107-314). The reason cited in the conference report (H.Rept. 107-772) was that the legislative authority for the program "has never been used and is not likely to be needed." Similar concerns have been raised regarding the relative lack of use of the "share-in-savings" pilot program.[792] In a January 2003 report, GAO observed that "there are few documented examples of SIS contracting in the federal government."[793] One such example is the Department of Education's Office of Student Financial Assistance (OFSA), which has entered into a series of "share-in-savings" contracts with Accenture to modernize its computer systems.[794] While "share-in-savings" programs are considered by many to be forward-thinking policies with the potential to reduce spending and improve the quality of services, some experts contend that there are a number of obstacles to successfully instituting such programs. These include being able to determine baseline costs and an agency's willingness to give the contractor more control over the details (so the contractor will feel it has a chance to achieve the cost savings). Some observers have asserted that agencies believe Congress will reduce their

[792] Similar concerns were not a significant focus of attention regarding the Solutions-Based Contracting pilot program.

[793] U.S. General Accounting Office, Contract Management: Commercial Use of Sharing-in-Savings Contracting, GAO-03-327, Jan. 2003, p. 3.

[794] Diane Frank, "Education Expands Share-in-Savings," Federal Computer Week, May 14, 2001, p. 44; Tanya N. Ballard, "Acquisition Officials Push Share-in-Savings IT Contracting," GovExec.com , Oct. 3, 2003, available at [http://www.govexec.com/dailyfed/1003/100303t1.htm], visited Oct. 4, 2003.

appropriations once the cost-savings is verified which, while saving the federal government money, will not provide any direct benefits to them (i.e., a reward). Hence, they believe the agencies have limited incentive to actively pursue such contracts. To help address some of these issues, Section 210 of the E-Government Act, signed into law in December 2002, includes provisions that temporarily allow an expanded use of "share-in-savings" contracts. The provision also provides incentives for agencies, such as the ability to retain a portion of the savings realized from the contract. However, at the time of this writing, implementing guidance from OMB is still forthcoming, and the provision expires in 2005.

While the Clinger-Cohen Act remains in effect and its provisions are still relevant to current agency IT management issues, the passage of the E-Government Act (discussed elsewhere in this compendium) represents a shift in the primary legislative vehicle being used to guide evolving federal information technology management practices and to promote initiatives to make government information and services available online. In doing so, it also represents a continuation of efforts to realize greater efficiencies and reduce redundancies through improved intergovernmental coordination, and by aligning information technology investments. As Congress continues to exercise its oversight role over e-government initiatives, it is anticipated that issues related to the intersection of these laws will also be raised.

III. Financial Management, Budget, and Accounting

A. Antideficiency Act

Statutory Intent and History

The so-called Antideficiency Act (33 Stat. 1214, and 34 Stat. 27; 31 U.S.C. §§ 1341-42) actually consists of a series of provisions and revisions incorporated into appropriations laws over the years relating to matters such as prohibited activities, the apportionment system, and budgetary reserves. These provisions, now codified in two locations in Title 31 of the United States Code, continue to play a pivotal role in the execution phase of the federal budget process, when the agencies actually spend the funds provided in appropriations laws.

The origins of the Antideficiency Act date back to the 19th century. The initial portion, enacted in 1870 as Section 7 of the General Appropriations Act for Fiscal Year 1871 (16 Stat. 251), provided:

... that it shall not be lawful for any department of the government to expend in any one fiscal year any sum in excess of appropriations made by Congress for that fiscal year, or to involve the government in any contract for the future payment of money in excess of such appropriations.

The intent was to prevent expenditures in excess of appropriations. Section 5 of the 1870 law also addressed the issue of congressional controls over budget execution, though not the question of preventing deficiencies. Instead, it provided that unexpended balances of appropriations accounts could only be applied to payment of expenses or contracts incurred during that year.

Major legislative provisions, often referred to as the Antideficiency Acts of 1905 and 1906, sought to strengthen the prohibitions of the 1870 law by expanding its provisions, adding restrictions on voluntary services for the government, and imposing criminal penalties for violations. Most importantly, the laws established a new administrative process for budget execution. This process, which remains in use today, is termed "apportionment" and results in the distribution of the budget authority provided in appropriations law to the agencies in installments, rather than all at once.

In order to provide against disproportionate spending rates by agencies, the 1905 legislation mandated that appropriations be "so apportioned by monthly or other allotments as to prevent undue expenditures in one portion of the year that may require deficiency or additional appropriations to complete the service of the fiscal year...." However, the fiscal discipline of this provision was weakened by language allowing apportionments to be "waived or modified in specific cases by the written order of the head of the Executive Department or other Government establishment having control of the expenditure...." (33 Stat. 1257-1258).

This exemption from apportionments by written order provided a broad loophole, widely used by department heads. The 1906 revision sought to tighten the waiver language by stipulating that apportionments could not be waived or modified "except upon the happening of some extraordinary emergency or unusual circumstance which could not be anticipated at the time of making such apportionment" (34 Stat. 48-49). Moreover, any waiver or modification of apportionment was to be justified in writing and communicated to Congress "in connection with estimates for any additional appropriations required on account thereof."

In 1933, with Executive Order 6166 issued pursuant to the Economy Act of 1933 (48 Stat. 16), authority for "making, waiving, and modifying apportionments of appropriations" was transferred from agency heads to the Director of the Bureau of the Budget (BOB).[795] However, BOB had earlier exerted control byadministrative means, such as a circular directing each agency to estimate an indispensable level of funding to carry out its activities. Following review by the Bureau and approval by the President, the remainder of the appropriation, or estimated savings, was to be designated a "General Reserve." So, the apportionment process came to have two objectives: to prevent deficiencies and to effect savings.

The continuing growth and complexity of the federal budget strained the existing system of administrative controls over funds. Eventually, another substantial revision of Antideficiency Act provisions occurred in 1950 (64 Stat. 595), largely based on recommendations in a report to Congress from the Bureau of the Budget and the General Accounting Office (GAO).[796]

The BOB/GAO report suggested that changing conditions during the fiscal year would always require some readjustments, but such changes could be expected to result in surpluses as well as deficiencies. The 1950 amendments incorporated this view and, for the first time, provided a statutory basis for budgetary reserves. The amendments also expanded upon the provisions of earlier regulations by stipulating four justifications for establishing reserves: (1) to provide for

---

[795] Dating to the Budget and Accounting Act of 1921, the Bureau of the Budget was originally located within the Department of the Treasury. The law authorized the President to appoint the director and assistant director of the bureau, however, signifying that it was essentially a presidential entity. When the Executive Office of the President was established in 1939, BOB was the first unit designated as a component. In 1970, BOB was reconstituted as the Office of Management and Budget (OMB).

[796] Report and Recommendations by the Director of the Bureau of the Budget and the Comptroller General of the United States with Respect to the Antideficiency Act and Related Legislation and Procedures. Submitted to Senator Styles Bridges, Chairman of Appropriations Committee, June 5, 1947. Typed manuscript. Cited by Louis Fisher in Presidential Spending Power (Princeton, NJ: Princeton University Press, 1975), p. 155. The provisions were enacted as a part of the general appropriations act for the fiscal year ending June 30, 1951.

contingencies; and to effect savings whenever savings are made possible by or through: (2) changes in requirements; (3) greater efficiency of operations; or (4) other developments subsequent to the date on which such appropriation was made available. The 1950 amendments further spelled out more detailed instructions for the operations of the apportionment process beyond the establishment of reserves, and for subdivision of apportionments at the agency level.

In the mid-1950s, Congress enacted a provision relating to the administration of the apportionment system by the agencies. This 1956 amendment simplified agency systems for subdividing funds by eliminating multiple pockets of funding authority, known as "allowances," so that administrative controls in the apportionment system would consist solely of allotments (P.L. 84-863, 70 Stat. 782). The following year, provisions relating to the apportionment system were further revised. The effect of the changes was to prohibit the request for apportionments or reapportionments necessitating a deficiency or supplemental estimate unless the agency head determined that such action fell within the exceptions expressly set out in the law (71 Stat. 440).

Major Provisions

Four main types of prohibitions are contained in the Antideficiency Act, as amended: (1) making expenditures in excess of the appropriation; (2) making expenditures in advance of the appropriation; (3) accepting voluntary service for the United States, except in cases of emergency; and (4) making obligations or expenditures in excess of an apportionment or reapportionment, or in excess of the amount permitted by agency regulation.

The limitations on expending and obligating amounts (31 U.S.C. § 1341) prohibit an officer or employee of the United States government or of the District of Columbia government from:

- making or authorizing an expenditure from, or creating or authorizing an obligation under, any appropriation or fund in excess of the amount available in the appropriation or fund unless authorized by law; and
- involving the government in any contract or other obligation for the payment of money for any purpose in advance of appropriations made for such purpose, unless the contract or obligation is authorized by law.

The limitations on voluntary services (31 U.S.C. § 1342) prohibit an officer or employee of the United States government or of the District of Columbia government from accepting voluntary services for the United States, or employing personal services in excess of those authorized by law, except in cases of emergency involving the safety of human life or the protection of property.

An entire subchapter (31 U.S.C. §§ 1511-1519) deals with the apportionment system. It contains provisions for definitions and application, for apportionment

and establishment of reserves, for officials controlling apportionments, for the administrative division of apportionments, and for authorized apportionments necessitating deficiency or supplemental appropriations. The subchapter further provides for exemptions, prohibited obligations and expenditures, and sanctions entailing adverse personnel actions and criminal penalties. The subchapter does not apply to Congress (the Senate; the House of Representatives; congressional committees; or a Member, officer, employee, or office of either house of Congress, or of the Office of the Architect of the Capitol) (31 U.S.C. § 1511(b)(3)).

The central enforcement provision is found in Section 1517. An officer or employee of an agency subject to apportionment is prohibited from making obligations or expenditures in excess of an apportionment or reapportionment, or in excess of the amount permitted by agency regulation. Violations are punishable by appropriate administrative discipline, including possible suspension from duty without pay or removal from office (Section 1518), and/or by criminal penalties, including a fine of not more than $5,000, imprisonment for not more than two years, or both (Section 1519).

Discussion

The framework for the apportionment process, as refined in the 1950 amendments, remains the basis for federal budget execution. However, evolution of the process continues, occasionally being modified by statute or executive order, but more frequently affected as a result of agency regulations, decisions of the Comptroller General, and other legal opinions.

The Impoundment Control Act (Title X of the 1974 Congressional Budget and Impoundment Control Act, 88 Stat. 297) amended the 1950 language regarding budgetary reserves in an effort to tighten control over executive branch discretion. The 1974 legislation served to delete the "other developments" justification contained in the 1950 amendments. Henceforth, reserves were to be established "solely to provide for contingencies, or to effect savings whenever savings are made possible by or through changes in requirements or greater efficiency of operations" (88 Stat. 332). Under the 1974 law, reserves were to be considered as a type of deferral, or temporary postponement of spending, in contrast to a rescission, or permanent cancellation.[797]

The prohibitions in the Antideficiency Act against spending monies in advance or in excess of appropriations sometimes lead to "funding gap" situations — when action on appropriations measures is not completed before the start of the new fiscal year and interim continuing resolutions lapse or are themselves delayed. For many years, agency officials generally maintained operations during periods

[797] A restatement of deferral authority was provided in the Balanced Budget and Emergency Deficit Reduction Reaffirmation Act of 1987 (101 Stat. 785-786).

of expired funding, while attempting to cut or postpone all non-essential obligations. Such action, while in technical violation of the Antideficiency Act prohibition on incurring obligations from Congress, was usually redressed by passing continuing resolutions effective retroactively to the beginning of the fiscal year.

The situation changed in the early 1980s with the issuance of two opinions by Attorney General Benjamin Civiletti concerning implications of the Antideficiency Act in instances of funding gaps.[798] According to these opinions, when appropriations lapse, federal managers are to act immediately to terminate the agency's normal operations in an orderly way; however, various exceptions in the Antideficiency Act allow some functions to continue. The Attorney General also stated that the Department of Justice would strictly enforce the criminal provisions of the act in cases of future violations.[799]

B. Budget and Accounting Act of 1921

Statutory Intent and History

The Budget and Accounting Act of 1921 (42 Stat. 20) grew out of Progressive Era views that saw legislatures as inherently corrupt, and sought to place more trust and more authority in executive and administrative institutions. The most important of several studies made on budgeting was that of President Taft's Commission on Economy and Efficiency (1910-1912). The commission's report, however, was virtually silent on the role of the legislature in the executive budget system it recommended, and its proposal languished in Congress. In spite of this, it remained on the national agenda, strongly supported by the Institute for Government Research (later the Brookings Institution), and support for an executive budget was included in presidential platforms by both Republicans and Democrats.[800]

During World War I, the administrative machinery of the federal government was severely taxed, giving new impetus to administrative reform in its aftermath. In 1919, Congress took up the issue of a national budget system, establishing select committees in both the House and Senate to hold hearings and make recommendations. The House Select Committee held 11 days of hearings in September and October 1919. The Senate Committee held four additional days of hearings in December 1919 and January 1920. Legislation embodying these recommendations was passed overwhelmingly in both chambers in 1920, but was vetoed by President Wilson, who questioned the constitutionality of a provision involving his removal power over the proposed office of Comptroller General. After the election of Warren G. Harding to the presidency in 1920, the bill was passed with only minor changes in the removal power provision, and signed into law as the Budget and Accounting Act of 1921.

Characterized as "probably the greatest landmark of our administrative history except for the Constitution itself,"[801] the Budget and Accounting Act established in law the duty of the President to submit each year a single, consolidated budget proposal for congressional consideration. The act stands as the foundation of the modern presidency because it made the President the administrative, as well as political, head of the executive branch. It meant that the President alone was responsible for making budget requests, so that each department and agency would no longer be able to act independently of presidential direction. The act also established the Bureau of the Budget (predecessor of the current Office of

---

[800] It was included in the Republican platform in 1916 and 1920, and the Democratic platform in 1920. In 1916 the Democrats had endorsed a return to consolidated control of appropriations in Congress, but not a presidential budget. See Donald Bruce Johnson, ed. National Party Platforms (rev. ed.), vol. 1, 1840-1956 (Urbana, IL: University of Illinois Press, 1978).

[801] Herbert Emmerich, Federal Organization and Administrative Management (Tuscaloosa, AL: University of Alabama Press, 1971), p. 40.

Management and Budget) to provide the President with the resources necessary to produce such a proposal, and the General Accounting Office, to provide Congress with the resources to ensure accountability.

Major Provisions

The Budget. Sections 201-206 of Title II of the Budget and Accounting Act establishes the requirements for the President to submit a budget proposal to Congress each year. Section 201 originally required the President to submit his budget on "the first day of each regular session [of Congress]." This requirement has been amended on several occasions (see below). Section 201 also lists requirements for the budget's contents, including estimates of expenditures "necessary in his judgment for the support of the Government for the ensuing fiscal year," except that estimates prepared by the legislative branch and the Supreme Court for their own expenditures should be included without revision. Other requirements include estimates of receipts for the ensuing fiscal year; estimates of expenditures and receipts for the fiscal year in progress, and expenditures and receipts of the last completed fiscal year; all essential facts regarding federal debt; and "such other financial statements and data as in his opinion are necessary or desirable." Sections 202-204 establish other requirements for the budget submission — requiring that the President make recommendations on managing any surplus or deficit (Section 202); providing for the transmittal of necessary supplemental estimates (Section 203); and specifying generally the form that estimates take (Section 204). Section 205 dealt with the submission of the FY1923 budget, the first under the act. Finally, Section 206 prohibits departments and agencies from submitting independent budget requests to Congress, as they had in the past, thus affirming the authority of the President as the head of the executive branch.

There has been no fundamental change in this part of the act, although there have been numerous modifications and additions. For example, the requirement in Section 201 that the President's budget be submitted "on the first day of each regular session" was amended by the Budget and Accounting Procedures Act of 1950 (64 Stat. 2317) to read "during the first fifteen days of each regular session." This was subsequently amended to "on or before the first Monday after January 3 of each year (or on or before February 5 in 1986)" by the Balanced Budget and Emergency Deficit Control Act of 1985 (99 Stat. 1037), and finally to "on or after the first Monday in January but not later than the first Monday in February of each year" by the Budget Enforcement Act of 1990 (104 Stat. 1388).

Likewise, the requirements of Section 201 concerning contents of the budget submission have been amended on several occasions, most notably by the Budget and Accounting Procedures Act of 1950, the Legislative Reorganization Act of 1970, the Congressional Budget and Impoundment Control Act of 1974, and the

Balanced Budget and Emergency Deficit Control Act of 1985. These are currently codified in Section 1105 of Title 31, U.S.C.[802]

The general authority of the President over the preparation and submission of the budget was reiterated and clarified in the Budget and Accounting Procedures Act of 1950.

Section 201 was amended by Section 221 of the Legislative Reorganization Act of 1970 to require a supplemental summary of the budget for the ensuing fiscal year to be submitted by June 1 of each year. This was further amended by the Congressional Budget Act to read "on or before July 15."

Section 201 was amended by Section 603 of the Congressional Budget Act of 1974 to require that budget projections be extended from the ensuing fiscal year to "the four fiscal years following the ensuing fiscal year."

Section 201 was amended by Section 605 of the Congressional Budget Act of 1974 to require the President to submit to Congress by November 11 of each year an estimate of budget outlays and proposed budget authority that would be included in the budget for the following year "if programs and activities of the United States Government were carried on during that year at the same level as the current fiscal year without a change in policy."

The Bureau of the Budget. Sections 207-217 of the Budget and Accounting Act established the Bureau of the Budget and delineated its powers and duties. Section 201 formally created the Bureau within the Treasury Department, provided for a director and assistant director, and stated that the Bureau, "under such rules and regulations as the President may prescribe, shall prepare for him the Budget, the alternative Budget, and any supplemental or deficiency estimates, and to this end shall have the authority to assemble, correlate, revise, reduce, or increase the estimates of the several departments or establishments." The newly created Bureau of the Budget went beyond these limited duties under the activist vision of its first director, Charles Dawes. In particular, it used the pre-existing apportionment process as a mechanism to extend its control over agency spending levels by means of administrative regulation.[803] By taking a hand in overseeing the execution of spending actions, as well as in the preparation of budget requests, the Bureau of the Budget exercised management functions from the beginning, and gave the President a strengthened capacity to administer the executive branch.

---

[802] For a listing of the requirements see U.S. General Accounting Office. The President's Budget Submission, AFMD-90-35, 1990, pp. 13-18 (Appendix II: Budget Information Required by Statute).

[803] The apportionment process was mandated under the Antideficiency Act of 1905 (P.L. 58217; 33 Stat. 1257-1258) to prevent deficiencies caused by disproportionate spending rates.

In 1939, the Bureau was made part of the newly created Executive Office of the President,[804] and in 1970 was reconstituted as the Office of Management and Budget.[805] The Chief Financial Officers Act of 1990 (104 Stat. 2838) initiated additional organizational changes within OMB. In particular, it created a new structure within OMB for federal financial management, headed by a new deputy director for management to serve as the federal government's chief financial officer. In addition, it included provisions intended to improve financial management practices generally.

The General Accounting Office. The third major provision of the Budget and Accounting Act was the establishment of the General Accounting Office.[806] The Treasury Act of 1789 established the Treasury Department with a Secretary, comptroller, auditor, treasurer, and register. Among his other duties, the comptroller was responsible for examining the accounts settled by the auditor. As part of the Budget and Accounting Act, Congress sought to establish an office to perform this examination function independent of the Department of the Treasury or the President. Title III abolished the office of comptroller of the Treasury and established the positions of Comptroller General and assistant comptroller general in its place. These new officers would be appointed by the President, with the advice and consent of the Senate, for 15-year terms, and could be removed from office only by joint resolution of Congress. The law transferred from the Treasury not only all powers and duties of the comptroller, but also the auditors, and the Division of Bookkeeping and Warrants, as well as their personnel, offices, and furniture.

In addition to independence, the act also granted substantial authority and responsibility to the Comptroller General. Section 312 provided that he shall investigate "all matters relating to the receipt, disbursement, and application of public funds, and shall make ... recommendations concerning the legislation he may deem necessary to facilitate the prompt and accurate rendition and settlement of accounts and concerning such other matters relating to the receipt, disbursement, and application of public funds as he may think advisable." The Comptroller General was further required to make such investigations and reports as ordered by either chamber of Congress or any committee, and to report

to Congress on expenditures or contracts made in violation of law, and the adequacy and effectiveness of executive department fiscal practices.

Significant additions were made to the duties and authority of the General Accounting Office by the Legislative Reorganization Act of 1970 (84 Stat. 1140). Section 204 provided that the Comptroller General's responsibilities would include review and analysis of the results of government programs "including the making of cost benefit studies." Section 231 requires the General Accounting Office to provide any necessary assistance to congressional committees. Sections 232, 233, and 234 provide for the dissemination of reports to congressional committees and required notice that reports have been prepared. Section 235 limits the availability of General Accounting Office personnel to congressional committees. Section 236 requires that whenever the General Accounting Office makes a report which contains recommendations to the head of federal agency, the agency must respond to Congress with respect to the recommendations.

Discussion

There has been a continuous stream of interest in reforming the budget process in recent years, but the basic framework established by the Budget and Accounting Act of 1921 has been largely excluded from this deliberation. The role of the President and OMB in preparing budget requests, and the role of GAO in auditing expenditures, have not been seriously questioned, although there have been incremental changes and additions over the years. Rather, it has been in relation to financial management and administration that the act has been part of debates about reform. Notwithstanding the fact that the Chief Financial Officers Act of 1990 created a deputy director for management within OMB, the conflict between management and budgeting responsibilities has given rise to further proposals to divide these duties by creating an entirely new agency.

C. Budget and Accounting Procedures Act of 1950

Statutory Intent and History

The Budget and Accounting Procedures Act of 1950 (64 Stat. 2317) made significant changes to budget procedures within the executive branch and to government accounting and auditing processes. Presidential authority over budget preparation and presentation was expanded (Part I of Title I), principally to allow for performance-type budgeting, and both agency accounting systems and an integrated system for the government as a whole were reformed (Part II of Title I). These provisions are summarized below. The act also made various conforming amendments and provided for the redistribution of appropriations in cases where reorganization of the executive branch transferred authority between departments or agencies (Titles II and III).

The act's budget provisions amended the Budget and Accounting Act of 1921 (42 Stat. 20) and are consistent with the earlier law's purpose. Some provisions were then subsequently amended or otherwise affected by the Legislative Reorganization Act of 1970 (84 Stat. 1140), the Congressional Budget and Impoundment Control Act of 1974 (88 Stat. 297), and the Balanced Budget and Emergency Deficit Control Act of 1985 (99 Stat. 1037).

The act's accounting and audit provisions were enacted as new legislative authority, the Accounting and Auditing Act of 1950. They began with policy declarations that identified the purposes of government accounting — disclosing results of financial operations, informing managers and budget processes, and improving financial controls — in light of the needs and responsibilities of the executive and legislative branches. General Accounting Office audits were to determine the extent to which accounting and financial reporting fulfilled specified purposes, financial transactions complied with legal requirements, and internal control was adequate. Emphasis was placed on the importance of making continual improvements.

The accounting and auditing provisions have been amended numerous times. The most important changes required agencies to maintain accounts on an accrual basis (70 Stat. 782), establish internal accounting and administrative controls (96 Stat. 2467), and perform or undertake audits of the financial statements as required by the Chief Financial Officers Act (104 Stat. 2838). The Federal Financial Management Improvement Act of 1996 (enacted as part of the Omnibus Consolidated Appropriations for Fiscal Year 1997; P.L. 104-208; 110 Stat. 3009389) strengthened reporting and compliance requirements for financial management systems.

In 1982, both the budget and the accounting and auditing provisions were recodified in Title 31 of the United States Code (96 Stat. 877).

Major Provisions

Part I of Title I of the Budget and Accounting Procedures Act expanded the President's authority over budget preparation and presentation. It provided that the budget must conform to requirements and contain estimates in the form and detail that the President determines. When there is a basic change in budget format, the President is to transmit to Congress explanatory notes and tables needed to show where items included in prior budgets are contained in the current budget. The Bureau of the Budget (since 1970, the Office of Management and Budget (OMB)) prepares the budget according to these rules and regulations. Department heads prepare budget requests and submit them to the President. In addition, the President develops programs and regulations for improving statistical information in the executive branch and improved plans for the administration of executive branch agencies. For the Department of Homeland Security, separate detailed analyses by budget function, agency, and initiative area are required beginning with the FY2005 budget submission (Homeland Security Act of 2002, P.L. 107-296, Section 889).

Part II of Title I, the Accounting and Auditing Act, reformed government accounting and auditing processes. Its provisions applygenerallyto departments and independent establishments in the executive branch, with some exceptions.

The Accounting and Auditing Act specified new responsibilities for the Comptroller General, the Secretary of the Treasury, and agency heads. The Comptroller General prescribes accounting principles, standards, and related requirements for each executive agency. They must enable agencies to meet their responsibilities under the act while providing for (1) integration of agency and Treasury Department accounting processes; (2) full disclosure of the results of agency operations; and (3) financial information and controls needed by Congress and the President. In addition, the Comptroller General helps agencies develop their accounting systems. He approves systems that are adequate and conform to his prescriptions, while continuing to review them from time to time.

The Secretary of the Treasury develops coordinated financial accounting and reporting systems that enable integration of accounting results within the Treasury Department and consolidation with the accounting results of other executive agencies. To accomplish these ends, the Secretary is authorized to establish facilities, reorganize accounting functions, and install, revise, or eliminate accounting procedures and reporting. In addition, the Secretary prepares reports on the results of financial operations of the government. The reports include financial data required by OMB for budget preparation and other purposes.

Together, the Comptroller General and the Secretary of the Treasury may issue regulations waiving requirements for warrants pertaining to public moneys and trust funds and for the requisition and advancement of funds. Joint regulations may also allow authorized disbursing agents to pay vouchers by means of checks issued against the general account of the Treasury.

The head of each executive agency establishes and maintains accounting and internal control systems designed to provide (1) full disclosure of financial results of the agency's activities; (2) adequate financial information for agency management; (3) effective control over and accountability for all funds, property, and other assets; (4) reliable accounting results to serve as the basis for agency budget requests and execution; and (5) integration with the Department of the Treasury's central accounting and reporting system.

In addition, the Accounting and Auditing Act states that the General Accounting Office (except as specifically provided by law) shall audit financial transactions of each executive, legislative, and judicial agency in accordance with principles and procedures prescribed by the Comptroller General. In determining these auditing procedures, the Comptroller General must give due regard to generally accepted principles of auditing, including consideration of the effectiveness of agencies' accounting organizations and systems, internal audit and control, and related administrative practices.

Discussion

The Budget and Accounting Procedures Act of 1950 formally increased centralization of the budget process in the executive branch. It strengthened the authority of the President to determine the methods for preparing budget estimates and the way the budget would be presented to Congress. The principal goal was to allow for the development of performance-type budgets, as had been recommended by the Commission on Organization of the Executive Branch of the Government (the first Hoover Commission). However, the legislation probably had greater effect in furthering the development of budgets that are vehicles for expressing policy priorities and influencing the economy.

The Accounting and Auditing Act also increased centralization in the executive branch by directing that the results of agency accounting systems be integrated with a consolidated system within the Department of the Treasury. Perhaps more important, the act also required agency accounting systems to use standards that served broader ends than simply tracking expenditures, such as providing better information to Congress and the President. A further step was taken in this direction in 1956 with the requirement that agencies maintain their accounts on an accrual basis.

The most important legacy of the act may have been congressional encouragement that the government's top three financial managers — the Comptroller General, the Secretary of the Treasury, and the Director of OMB — work together in continually improving government accounting systems. Cooperative steps toward accounting reform eventually led to enactment of the Federal Managers' Financial Integrity Act of 1982, the Chief Financial Officers (CFO) Act, and the Federal Financial Management Improvement Act, all of which are summarized elsewhere in this compendium.

In 1990, the Comptroller General, the Secretary of the Treasury, and the Director of OMB jointly established the Federal Accounting Standards Advisory Board (FASAB) to recommend comprehensive accounting principles specifically for the federal government. A new memorandum of understanding was signed in May, 2003. By the end of 2003, the FASAB had issued 4 financial accounting concepts (concerning the objectives of federal financial reporting, entity and display issues, management discussion and analysis, and the intended audience and qualitative characteristics of the government's consolidated financial report) and 25 financial accounting standards (concerning the treatment of particular assets and liabilities, inventory, direct loans, etc.). In October 1999, the American Institute of Certified Public Accountants (AICPA) recognized the FASAB as the designated entity for establishing generally accepted accounting principles for the federal government. The AICPA action raised the status of FASAB statements and other pronouncements, though it has been criticized by some who question whether the FASAB is sufficiently independent of the federal agencies for which it is developing standards.

Improvements in federal accounting have occurred, but more work remains. GAO found that material weaknesses related to financial systems, fundamental record-keeping and financial reporting, and incomplete documentation have prevented it from expressing an opinion on the government's consolidated financial statements.[807] While 21 of the 24 CFO Act agencies received unqualified opinions for FY2002, GAO noted that most obtained clean audits only after extraordinary, labor-intensive efforts. Major problems included the government's inability to properly account for and report property, plant, and equipment; reasonably estimate and support amounts reported for environmental and other liabilities; support major portions of determinations for the net cost of government operations; fully account for and reconcile intragovernmental activities and balances; and properly prepare all aspects of financial statements. The most notable of these problems were in the Department of Defense. GAO also found material weaknesses in internal control, including problems relating to loans and receivables, improper payments, tax collection, and information security management.

Improved federal accounting systems likely result in savings from better cash management, more effective control of property, and a wider recognition of future obligations. However, improvements are not without cost. Continual progress in the future will depend upon adequate funding and managerial initiative, both of which could be diverted to other priorities. Greater use of expense budgeting, instead of (or in addition to) the obligation accounting now used in the appropriations process, might also help, though this would change

long-standing practice.[808] The extent to which financial accounting reforms should be continued is an issue for Congress to consider.

D. Balanced Budget and Emergency Deficit Control Act

Statutory Intent and History

After a decade of experience with the Congressional Budget Act of 1974, Congress and the President faced persistent high deficits and increasing budgetary deadlock. In 1985, legislation aimed at bringing the federal budget into balance by the early 1990s was enacted. That legislation, the Balanced Budget and Emergency Deficit Control Act of 1985, was included as Title II in a measure raising the public debt limit.[810] President Reagan signed the measure into law on December 12 as P.L. 99-177 (2 U.S.C. § 901; 99 Stat. 1037-1101). It is commonly referred to as the 1985 Balanced Budget Act or as the Gramm-Rudman-Hollings (GRH) Act, after its three primary sponsors in the Senate — Senators Phil Gramm, Warren Rudman, and Ernest Hollings.

The 1985 Balanced Budget Act was the first of several major laws intended to ensure that the deficit is reduced and spending is controlled, even if Congress and the President fail to achieve these goals through the regular legislative process (see the entry on the Budget Enforcement Acts of 1990 and 1997, elsewhere in this compendium). The act established new procedures involving deficit targets and sequestration to further these purposes. Under sequestration, across-the-board spending cuts would be made automatically early in the fiscal year if needed to keep the estimated deficit within allowed limits. Because implementation of a required sequester was automatic under these procedures, and perceived to be drastic action, many regarded it as providing a strong incentive for Congress and the President to reach agreement through the regular process of legislation meeting the established budgetary goals.

Specifically, the 1985 Balanced Budget Act required the federal budget to be in balance by FY1991. In addition, the act also made extensive changes in the 1974 Congressional Budget Act, largely to incorporate informal changes in practice made in prior years.

Several lawsuits contesting the constitutionality of the 1985 Balanced Budget Act were filed immediately. On February 7, 1986, a special three-judge panel of the U.S. District Court declared that the procedure for triggering sequestration under the act was unconstitutional on the ground that it vested executive power in an officer removable by Congress. (Sequestration would have been triggered pursuant to a report prepared by the Comptroller General, head of the General Accounting Office.) Further, the Court declared that a sequestration order for

(These reports are archived and available from the author of this entry in the compendium.)

FY1986, issued on February 1, 1986, was "without legal force and effect," but stayed its judgment (as required by Section 274(e) of the act) pending appeal to the Supreme Court.

The Supreme Court heard arguments in the case, Bowsher v. Synar (478 U.S. 714), on April 23, 1986, and issued its ruling later that year on July 7. Affirming the ruling of the District Court by a vote of 7 to 2, the Supreme Court noted:

To permit an officer controlled by Congress to execute the laws would be, in essence, to permit a congressional veto. Congress could simply remove, or threaten to remove, an officer for executing the laws in any fashion found to be unsatisfactory to Congress. This kind of congressional control over the execution of the laws, Chadha makes clear, is constitutionally impermissible.... It is clear that Congress has consistently viewed the Comptroller General as an officer of the Legislative Branch.

Anticipating the possibilityof invalidation bythe courts, Congress had included "fallback procedures" in the act, under which a presidential sequestration order could be triggered upon the enactment of a joint resolution, reported by a Temporary Joint Committee on Deficit Reduction, setting forth the contents of a joint report of the directors of the Office of Management and Budget (OMB) and the Congressional Budget Office (CBO). The Supreme Court stayed its judgment for 60 days in order to allow Congress time to implement sequestration for FY1986 under the fallback procedures, which Congress did.

Invalidation by the courts of the automatic triggering mechanism for sequestration and the size of the estimated deficit excess for FY1988 (more than $50 billion above the deficit target of $108 billion, according to CBO) prompted calls in 1987 for revision of the 1985 Balanced Budget Act. Major revisions to the act were enacted in 1987, again as a title in a measure raising the public debt limit. President Reagan signed the measure into law on September 29 as P.L. 100-119 (101 Stat. 754-788). Title I of this law is referred to as the Balanced Budget and Emergency Deficit Control Reaffirmation Act of 1987.[811] The main purposes of the 1987 Balanced Budget Reaffirmation Act were to restore the automatic triggering feature of sequestration in a constitutionally acceptable manner (which it did by vesting that authority in the OMB Director) and to extend the time frame for achieving a balanced budget by two years, until FY1993.

[811] For a more detailed explanation of the 1987 Balanced Budget Reaffirmation Act, see CRS Rept. 87-865 GOV, Debt-Limit Increase and 1985 Balanced Budget Act Reaffirmation: Summary of Public Law 100-119 (H.J.Res. 324), by Edward Davis and Robert Keith (1987). (This report is archived and is available from the author of this entry in the compendium.)

During the interim between the enactment of the 1985 Balanced Budget Act and its significant revision in 1987, Congress enacted several measures that modified the sequestration process, for the most part exempting programs from the reductions. Most notably, the Omnibus Budget Reconciliation Act of 1986 (100 Stat. 1874) exempted from sequestration the cost-of-living adjustments (COLAs) of all federal civilian and military retirement and disability programs so that they would be treated in the same manner as Social Security.

Following enactment of the 1987 Balanced Budget Reaffirmation Act (and before significant changes made in 1990), Congress enacted several measures that further modified the sequestration process. In particular, the Omnibus Budget Reconciliation Act of 1987 (101 Stat. 1330) made several technical changes in the 1985 Balanced Budget Act, and the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (103 Stat. 183) exempted certain federal financial entities from sequestration.

Major Provisions

Deficit Targets and Sequestration Procedures. In order to accomplish the goal of balancing the budget, the act established a series of declining deficit targets, referred to in the act as "maximum deficit amounts."[812] The series began with a deficit target of $171.9 billion for FY1986, which declined after the first year by increments of $36 billion until reaching zero in FY1991.

The deficit targets were enforced by a new set of procedures, referred to as "sequestration." As originally framed, sequestration involved the issuance of a presidential order to permanently cancel annual appropriations and other budgetary resources (except for special funds and trust funds) for the purpose of achieving a required amount of outlay savings in order to reduce the deficit. Any required sequestration reductions would occur toward the beginning of the fiscal year, based upon budget estimates made at that time.

As mentioned above, the Comptroller General was charged with responsibility under the act for determining whether a sequester was necessary each year and, if so, the amount of reductions that would have to be made in individual accounts and programs. His findings regarding the estimated deficit, the amount of any required sequester, the base levels for accounts from which reductions would be made, and the reduction amounts to be presented in annual sequestration reports issued twice each year. An interval of less than two months between the issuance of the two reports in late August and early October provided Congress and the President an opportunity to enact legislation preventing or minimizing a

[812] Although they were used chiefly for purposes of sequestration, the deficit targets also affected the budget resolution process, and therefore were made part of the 1974 Congressional Budget Act.

sequester. The Comptroller General was required to take into consideration sequestration reports issued jointly in August and October by the OMB and CBO directors.

If the Comptroller General found a sequester necessary, the President was required to issue a sequestration order putting into effect the reductions determined by the Comptroller General in his sequestration report. The President did not have discretion under the act to alter the Comptroller General's determinations.

In any year in which a deficit sequester occurred, the entire amount of the deficit excess (the amount by which the estimated deficit exceeded the applicable deficit target) would have to be eliminated. Sequestration could occur for FY1987-FY1990 only if the deficit excess for the year were greater than $10 billion. The $10 billion margin-of-error amount did not apply to FY1986, in which sequestration was capped at $11.7 billion, nor to FY1991, when the budget was required to be balanced.

A formula set forth in the act mandated that half the required outlay reductions be made in defense programs, programs in the National Defense (050) functional category, and half in non-defense programs. In general, sequestration reductions were made uniformly across the range of accounts covered by the process, and were applied uniformly to programs, projects, and activities within these accounts.

Many accounts, involving roughly two-thirds of federal outlays, were exempt from sequestration. For certain programs, the reductions were made under special rules. Medicare, for example, could not be cut more than 2%.

The act provided that the sequestration procedures would not apply during time of war and set forth a means to suspend them in the event of a recession. Finally, the act included procedures by which the President could propose, or Congress could initiate, modifications in a sequestration order.

The 1987 Balanced Budget Reaffirmation Act extended the timetable for achieving a balanced budget by two fiscal years to FY1993, restored the automatic triggering mechanism for sequestration, and made numerous adjustments to the sequestration procedures.

The deficit targets, as revised in 1987, maintained the $36 billion year-to-year decrease, except for FY1989 (when the target was reduced by $8 billion from the prior year) and FY1993 (when the target was reduced by $28 billion from the prior year). The $10 billion margin-of-error amount was retained for this period, except that sequestration reductions were capped at $23 billion for FY1988 and $36 billion for FY1989; no margin-of-error amount was allowed for FY1993, when the budget was expected to be balanced.

The automatic procedure for triggering sequestration was restored by placing it in the hands of the OMB Director. However, the director's authority to estimate and calculate sequestration amounts was carefully circumscribed by various provisions in the act. In particular, the procedures for making baseline estimates were delineated in the act. The new baseline-construction rules approximated more closely the concepts used by OMB in making "current services estimates" and by CBO in making "baseline budget projections." The new rules had the effect of minimizing differences in the estimates and projections of the two agencies, compared to earlier years.

Under the restored automatic procedure, an initial or final sequestration order would be triggered by an initial or revised sequestration report from the OMB Director. The OMB Director was required to give due regard in his report to an advisory sequestration report issued earlier by the CBO director. The Comptroller General was not assigned a role in the triggering process.

The 1987 Balanced Budget Reaffirmation Act retained the basic formula for determining sequestration reductions, but modified the procedures for crediting reductions in programs covered by special rules, such as student loans, foster care, and specified health programs. Additionally, the act authorized the President to exempt all or some military personnel accounts from sequestration, provided timely notice was given to Congress. (This authority previously had been given to the President only for FY1986.)

With regard to the modification of a sequestration order, the 1987 Balanced Budget Reaffirmation Act established two new mechanisms involving the enactment of a joint resolution under expedited procedures. Under the first, the President was authorized to submit to Congress a report proposing changes in the reductions in defense programs so that some programs could be spared cuts if others were cut more deeply (in order to retain the overall level of required reductions). Second, the majority leaders of the House or Senate could initiate legislation that would modify a sequestration order (even effectively canceling it). Both mechanisms would require the enactment of legislation in order to be effective.

Other Budget Process Changes. In addition to establishing the sequestration procedures, the 1985 Balanced Budget Act made other changes in the federal budget process. These other changes mainly involved modifications of the congressional budget process under the 1974 Congressional Budget Act (discussed more fully elsewhere in this compendium).

First, the timetable for congressional budget actions was accelerated. Most notably, the deadline for adoption of the annual budget resolution was advanced one month to April 15. Second, certain practices used by Congress for several years were formally incorporated into the 1974 Congressional Budget Act, including the expansion of budget resolutions to cover three fiscal years and authority to initiate reconciliation procedures in the April budget resolution.

Third, enforcement procedures were tightened, including new restrictions on legislation linked to committee spending allocations under the budget resolution and a requirement that the recommended deficit in the budget resolution not exceed the applicable deficit target. Fourth, the reconciliation process was modified in several ways, including a ban against using reconciliation to make changes in the Social Security program and requirements in the House and Senate that amendments to reconciliation measures be deficit neutral.

In addition to these and many other changes in congressional budgeting made by the act, it also required the President to submit an annual budget consistent with the deficit targets, placed existing off-budget entities on the budget, and placed the Social Security program off budget (except for calculating the deficit for purposes of sequestration).

The law which contained the 1987 Balanced Budget Reaffirmation Act (101 Stat. 754) also included related provisions (in Title II) that affected the congressional budget process, the impoundment control process, and other matters. With respect to the congressional budget process, the 1974 Congressional Budget Act was amended to clarify the application of time limits for the consideration of conference reports on budget resolutions and reconciliation measures, to require the House and Senate to use common economic and technical assumptions, to extend CBO duties under the State and Local Government Cost Estimate Act of 1981 indefinitely, and for other purposes.

The Impoundment Control Act of 1974 was amended to codify the Appeals Court decision in City of New Haven v. United States regarding restrictions on the President's deferral authority and to prohibit the resubmittal of rescission proposals that had been previously rejected by Congress.
Finally, the 1987 Balanced Budget Reaffirmation Act encouraged Congress to experiment with biennial budgeting and required CBO to prepare a report on federal credit programs.

Discussion

The 1985 Balanced Budget Act, as amended, was critically viewed by some for its failure to achieve its principal objective, deficit reduction. During the period covering FY1986 through FY1990, the actual deficit exceeded the deficit target every year. The overage ranged from about $5 billion to $205 billion and was greatest in the later years, despite the revision of the targets in 1987. Further, the manner in which the sequestration process operated and the stringency of the goals generally were perceived as fostering budgetary gimmickry and disruption in the legislative process.

As a result of these concerns, the sequestration process was fundamentally restructured by the Budget Enforcement Act of 1990 (discussed elsewhere in this compendium).

E. Budget Enforcement Acts of 1990 and 1997

Statutory Intent and History

The Budget Enforcement Act (BEA) of 1990 made numerous and significant changes in the federal budget process by amending several laws, primarily the Balanced Budget and Emergency Deficit Control Act of 1985 (described elsewhere in this compendium).[813] (The BEA of 1990 also amended the 1974 Congressional Budget Act; changes in the 1974 act are discussed in another section of this compendium.) The chief focus of these changes was to revise fundamentally the sequestration process established by the 1985 act, but other important facets of the budget process were affected as well. With respect to sequestration, the BEA changed the focus from deficit targets to limits on discretionary spending (i.e., spending controlled through the annual appropriations process) and a "pay-as-yougo" (PAYGO) requirement on new legislative initiatives affecting revenues and direct spending (i.e., spending controlled outside the annual appropriations process). The main purpose of these changes was to ensure that the substantial deficit savings of several measures enacted in 1990, particularly the Omnibus Budget Reconciliation Act (OBRA) of 1990, were maintained over the five-year time frame of the legislation (covering FY1991-FY1995).

The BEA was enacted as Title XIII of OBRA of 1990 (104 Stat. 1388, 1-630). Although the BEA was formally developed as part of the 1990 reconciliation law, it can be traced to the budget summit negotiations between congressional and administration negotiators that began in early May of 1990 and concluded on September 30 of that year. On June 26, 1990, President George H.W. Bush issued a statement that he and congressional negotiators concurred that any bipartisan budget agreement should include budget process reform "to assure that any Bipartisan agreement is enforceable and that the deficit problem is brought under responsible control."

The sequestration procedures established under the 1985 act, as modified by the BEA of 1990, have been further modified and extended by several other laws, mainly to preserve budget savings made under agreements reached by Congress and the President in 1993 and 1997 and to establish new program categories for enforcement. In 1993, Congress and the President extended the procedures for three more fiscal years, through FY1998. The extension was included as Title XIV of the Omnibus Budget Reconciliation Act of 1993 (107 Stat. 312). In 1994, separate sequestration procedures for programs funded by the Violent Crime Reduction Trust Fund were added to the 1985 act by Title XXXI of the Violent Crime Control and Law Enforcement Act of 1994 (108 Stat. 3009).

---

[813] For a more detailed discussion of the BEA of 1990 and other budget process laws, see CRS Report 98-720 GOV, Manual on the Federal Budget Process, by Robert Keith and Allen Schick (1998).

Significant modifications to the sequestration process were made by the Budget Enforcement Act (BEA) of 1997, which was included as Title X of one of two reconciliation measures enacted into law that year, the Balanced Budget Act of 1997 (111 Stat. 251). The BEA of 1997 extended the discretionary spending limits and pay-as-you-go requirement through FY2002, modified their application, and made various "housekeeping" and technical changes. In 1998, the discretionary spending limits and associated sequestration procedures were changed again, in this instance by the Transportation Equity Act for the 21st Century (TEA-21; P.L. 105-178), in order to establish separate discretionary spending limits for highway and mass transit programs. In 2000, the Interior Appropriations Act for FY2001 (P.L. 106-291), established separate discretionary spending limits for conservation spending.

Finally, in the last few years under the BEA, Congress and the President modified the enforcement mechanisms in order to avoid a sequestration.[814] In 2000 and 2001, the Foreign Operations Appropriations Act for FY2001, P.L. 106-429, raised the FY2001 discretionary spending limits, and the Defense Appropriations Act for FY2002, P.L. 107-117, raised the FY2002 discretionary spending limits. In 1999, 2000, 2001, and 2002, legislation enacted into law required the OMB Director to change the balance on the PAYGO scorecard for certain years to zero. In particular, in 2002, the PAYGO scorecard was set at zero for FY2003 and each year thereafter through FY2006, thereby preventing any future PAYGO sequestration due to legislation enacted before October 1, 2002.

In the absence of any action by Congress and the President to extend the discretionary spending limits and the PAYGO requirement by the end of FY2002, budget legislation is no longer subject to these budget mechanisms.

Major Provisions

Revised Sequestration Procedures. The BEA of 1990, and later laws, changed the sequestration process substantially. While the BEA of 1990 extended the deficit targets in the 1985 Balanced Budget Act through FY1995 (although the budget was not expected to be in balance by this time), it made them adjustable rather than fixed. More importantly, the BEA of 1990 effectively replaced the deficit targets with two new budget enforcement procedures. First, adjustable limits were established for separate categories of discretionary spending. Second, "pay-as-yougo" (PAYGO) procedures were created to require that increases in direct spending or decreases in revenues due to legislative action be offset so that there would be no net increase in the deficit (or reduction of the surplus). Further, the BEA of 1990 retained the exemption of Social Security from cuts under

[814] For more detailed information on these modifications, see CRS Report RL31155, Techniques for Preventing a Budget Sequester, by Robert Keith.

sequestration, but removed the trust fund surpluses from the deficit estimates and other calculations as well.

The revised deficit targets, as initially set by the BEA of 1990, were substantially larger than earlier targets because they excluded the surpluses of the Social Security trust funds and reflected revised economic and technical assumptions. For example, the deficit target for FY1991 was set at $327 billion, and the deficit target for FY1995 was set at $83 billion. The President was required to adjust the deficit targets for FY1991-FY1995, to reflect updated economic and technical assumptions and changes in budgetary concepts and definitions, as applicable, in his annual budget for FY1992 and FY1993. Further, he was authorized to adjust the deficit targets for FY1994 and FY1995, to reflect updated economic and technical assumptions, when he submitted his budget for these fiscal years. (President Clinton chose to use this authority, and made such adjustments in the deficit targets.)

The BEA kept the procedures for a deficit sequester. As under the earlier procedures, half of the required outlays savings would be from defense programs and half from nondefense programs. The margin-of-error amount was set at zero for FY1992 and FY1993 and at $15 billion for FY1994 and FY1995. Sequestration tied to enforcement of the deficit targets would have occurred only if a deficit excess had remained after the other two types of sequestration had been implemented. However, the operation of the other two types of sequestration, together with the adjustability of the deficit targets, effectively made a deficit sequester impossible.

The BEA of 1990 retained sequestration as the means of enforcing the discretionary spending limits and the PAYGO requirement. Like the earlier deficit sequestration procedures, the new sequestration procedures were automatic and were triggered by a report from the OMB Director. For sequestration purposes generally, only one triggering report was issued each year (just after the end of the congressional session). However, OMB reports triggering a sequester in one or more categories of discretionary spending might have been issued during the following session if legislative developments so warranted (i.e., the enactment of a supplemental appropriations measure that violated the limit for one or more discretionary spending categories). The CBO director was required to provide advisory sequestration reports several days before the OMB Director's reports were due.

The discretionary spending limits established by the BEA of 1990 varied in type over the period covered. For FY1991 through FY1993, separate limits were set for new budget authority and outlays for three different categories — defense, international, and domestic. For FY1994-FY1995, the limits on new budget authority and outlays were established for a single category — total discretionary spending. The Omnibus Budget Reconciliation Act of 1993 retained the existing limits for FY1994 and FY1995 without change, and added new limits on total discretionary spending for FY1996-FY1998. In 1994, the Violent Crime Control

Act established separate sequestration procedures for spending from the Violent Crime Reduction Trust Fund through FY2000.

The BEA of 1997 revised the discretionary spending limits again and extended them through FY2002. New categories were established for defense and nondefense spending for FY1998 and FY1999; for FY2000-FY2002, all discretionary spending was merged into a single, general purpose category (except for the separate Violent Crime Reduction category in effect through FY2000). In 1998, TEA-21 established separate outlay limits for two new categories, highways and mass transit, through FY2003. Finally, in 2000, Section 801(a) of the Interior Appropriations Act for FY2001 established separate discretionary spending limits for FY2002-FY2006 under a new category for conservation spending and six related subcategories.

The discretionary spending limits were adjusted periodically — when the President submitted his annual budget and when OMB issued sequestration reports — for various factors, including changes in budgetary concepts and definitions, emergency requirements, and special allowances. Factors upon which adjustments were based changed from time to time. For example, the BEA of 1990 provided for an adjustment due to changes in inflation, but this adjustment was removed by the BEA of 1997.

A sequester under the discretionary spending limits would occur only within the category in which a breach occurred, except that a breach of the highway or mass transit limits would trigger a sequester in the nondefense or total discretionary spending category, as appropriate. If a sequester under this process was required at the end of a session, it was required to occur on the same day as any sequestration tied to enforcement of the PAYGO procedures. During the following session, the enactment of legislation causing a breach in the spending limits would trigger sequestration after 15 days. However, any such enactment occurring during the last quarter of the fiscal year (i.e., between July 1 and September 30) would instead cause the appropriate discretionary spending limits for the next fiscal year to be reduced by the amount of the breach.

Under the PAYGO process created by the BEA of 1990, the multi-year budget effects of legislation proposing new direct spending, or legislation decreasing revenues, were recorded on a rolling PAYGO "scorecard." After the end of each congressional session, any balance on the PAYGO scorecard for the new fiscal year was required to be eliminated through a special sequestration procedure. If a sequester under this process was required, it was required to occur within 15 calendar days after Congress adjourned at the end of a session and on the same day as any sequestration tied to enforcement of the discretionary spending limits (or, in earlier years, the deficit targets). Emergency direct spending and revenue legislation, so designated by the President and in statute, was not covered by the PAYGO sequestration process.

The enforcement procedures for the PAYGO requirement, on the one hand, and the discretionary spending limits, on the other, were separated by a "firewall." Savings made on one side of the firewall could not be used to the advantage of programs on the other side. For example, the cost of tax-cut legislation could not be offset by reductions in annual appropriations acts in order to avoid a PAYGO sequester.

OMB and CBO were each required to prepare annually three different types of sequestration reports, as discussed below. The CBO reports (which are advisory only) preceded the OMB reports by several days, as was the case under prior sequestration procedures. In all three types of reports, OMB was required to explain any differences between its estimates and those of CBO.

If the President was required to issue a sequestration order in any year, the order was to be issued on the same day that the final OMB sequestration report was issued and the order was required to implement without change all of the reductions identified in the OMB report. There was no initial order, unlike under earlier procedures.

Early in the session, OMB and CBO issued sequestration preview reports. The reports provided estimates of the discretionary spending limits, with the adjustments prescribed by law. Also, the reports provided estimates of any net change in the balances on the PAYGO scorecard caused by the enactment of direct spending or revenue legislation subject to the PAYGO process. The OMB preview report contained the same information as the CBO preview report and explained any differences between its estimates and those of CBO.

In August, OMB and CBO issued sequestration update reports to reflect the impact of legislation enacted in the interim. Finally, OMB and CBO issued final sequestration reports shortly after Congress adjourned to end the session. Both reports were required to reflect any pertinent legislation enacted since the update reports were issued. The final reports were required to indicate the baseline amount of budgetary resources and the amount and percentage of the reduction for each account subject to sequestration.

In preparing its update and final sequestration reports, OMB was required to use the economic and technical assumptions that were used in the earlier preview report. (Previously, OMB could determine in late summer the economic and technical assumptions that it would use for sequestration in October.)

During the course of the session, OMB was required to provide Congress with cost estimates of budgetary legislation within seven days of its enactment, so that compliance with the discretionary spending limits and PAYGO requirements could be monitored. The cost estimates were required to be based on the economic and technical assumptions used in the President's most recent budget.

Several other special reports were associated with the sequestration process.

Other Budget Process Changes. The BEA of 1990 and 1997 made other changes in the federal budget process, including (1) moving the deadline for submission of the President's annual budget from the first Monday after January 3 to the first Monday in February; (2) excluding Social Security trust funds from deficit calculations made under the 1985 Balanced Budget Act (and reaffirming of their off-budget status), coupled with establishing separate House and Senate procedures to protect the trust fund balances; (3) enacting the Federal Credit Reform Act of 1990, as a new Title V in the 1974 Congressional Budget Act; and (4) requiring that budget resolutions cover, and be enforced for, at least five fiscal years. Additionally, the BEA included provisions requiring studies and legislative recommendations regarding government-sponsored enterprises, revising the Senate's "Byrd Rule" prohibiting extraneous matter in reconciliation legislation and incorporating it into the 1974 Congressional Budget Act as Section 313, and dealing with various other issues.

Discussion

The BEA of 1990, and the related laws that followed it, generally are regarded as having been more successful than the 1985 Balanced Budget Act (as amended by the 1987 Balanced Budget Reaffirmation Act) in controlling aggregate budget levels. During the period that the discretionary spending limits and PAYGO requirement were in effect, the status of the federal budget changed from the largest deficit recorded in history ($290 billion in FY1992) to unprecedented surpluses ($237 billion in FY2000). Although this dramatic change was due to many factors, the procedures under the BEA were regarded by many as important contributing factors to this accomplishment.

During the 106th Congress, criticisms of the BEA procedures began to mount. While the threat of sequestration was viewed initially as giving the President and Congress a strong incentive to reach agreement on their budgetary goals, thereby avoiding the legislative deadlock that characterized the early 1980s, some Members began to regard the BEA procedures as an impediment to implementing desired budget policy in an era of large surpluses. These Members argued that the BEA procedures should be eliminated, or at least substantially modified, so that Congress and the President could "use" part of the surplus for tax cuts and other actions that otherwise would have been prohibited. Further, some Members asserted that discretionary spending limits for FY2000-FY2002 were unrealistically low, thereby promoting the use of budget "gimmicks," such as the excessive designation of emergency spending, to evade their constraints. More recently, during the 107th Congress, the procedures under the BEA were set aside to respond to the terrorist attacks on September 11, 2001, and the 2001 recession. Subsequently, as noted above, the BEA procedures were allowed to expire on September 30, 2002.

For the foreseeable future, Congress faces an unfavorable budget outlook, exacerbated by an uncertain economic and geopolitical environment. According

to OMB and CBO, current budget projections under existing law, without any legislative changes, show annual deficits in the unified budget (i.e., including federal funds and trust funds) in each of the next few fiscal years.[815] When various proposed spending increases and tax cuts are taken into account, the projections indicate annual deficits for the foreseeable future. For example, OMB projects that if President Bush's FY2004 budget policy proposals are enacted into law, annual unified budget deficits, ranging from $178 billion to $307 billion, will continue through FY2008.

In addition, the economy continues to put a damper on federal revenues. Also, the spending for the war on terrorism and homeland security, and for military and reconstruction operations in Iraq and Afghanistan, could increase the scarcity of current and future federal government resources. Such factors potentially could worsen the already unfavorable budget outlook.[816] Accordingly, the 108th Congress is faced with the issue of whether the expired BEA procedures should be restored, new budget constraints should be enacted, or the existing budget procedures associated with the Congressional Budget Act are sufficient.

F. Congressional Budget and Impoundment Control Act

Statutory Intent and History

The Congressional Budget and Impoundment Control Act of 1974 (88 Stat. 302) established the basic framework which is used today for congressional consideration of budget and fiscal policy. The concurrent resolution on the budget, the House and Senate Budget Committees, and the Congressional Budget Office are all provided for in this legislation. In addition, the President's impoundment authority was codified for the first time in Title X, also known as the Impoundment Control Act.

The Congressional Budget Act built upon the knowledge gained in earlier attempts to create a legislative budget, but it chiefly grew out of the combination of several separate movements for congressional reform in the 1960s and 1970s and a series of confrontations with the President over the budget. There were various calls for structural reforms within Congress, and concurrently a desire to make Congress, as a whole, better able to assert its budget priorities more effectively vis-à-vis the President's.

The issue of federal spending approached a crisis in the late 1960s and early 1970s. Increased spending for programs initiated or expanded under the banner of President Lyndon Johnson's "Great Society," combined with that to support military efforts in Vietnam, accelerated concern over budget deficits. A series of spending ceilings were enacted by Congress between 1967 and 1970, but these proved to be largely ineffective. Even so, President Richard Nixon kept the controversy over such ceilings alive during the 1972 presidential campaign by asking for authority to cut federal spending at his own discretion to stay under a proposed $250 billion ceiling in FY1973. Congress declined to approve such an open-ended grant of authority, and while no further spending ceilings were enacted, the crisis over presidential authority to withhold funds escalated.

In response to this battle with President Nixon, Congress established a Joint Study Committee on Budget Control in 1973 which recommended a legislative process to "improve the opportunity for the Congress to examine the budget from an overall point of view, together with a congressional system of deciding priorities." These recommendations were reviewed by committees with legislative jurisdiction in the House and Senate,[817] and eventually enacted as the Congressional Budget and Impoundment Control Act of 1974 (88 Stat. 302).

The intent behind the 1974 Budget Act is still a subject for debate. The act made a number of changes in the way Congress operated, but one thing it did not do was

[817] In the House, H.R. 7130 was referred to the Rules Committee; in the Senate, S. 1541 was referred to the Government Operations Committee and subsequently to the Rules and Administration Committee.

to centralize budget decision making. The budget resolution was a mechanism for deciding the broad outlines of budgetary decision making, but the details about the composition of revenue and spending remained within the jurisdiction of the same committees that had exercised jurisdiction prior to the act. The new budget process built on existing congressional procedures, but did not supersede them. To some, this indicated that the purpose of the Budget Act was merely to create a mechanism for coordinating congressional decision making and for providing budgetary information. Others, however, feel that the Budget Act was created to deal with the problem of structural deficits that arose in the 1970s. One result was that the Budget Act has been the focus of numerous reform proposals over the years, a number of which have been enacted. The most extensive changes occurred as a consequence of the Balanced Budget and Emergency Deficit Control Act of 1985, and the Budget Enforcement Act of 1990 (discussed elsewhere in this compendium).

Major Provisions

Titles I through IX of the Budget Act are collectively known as the Congressional Budget Act of 1974, and Title X is known as the Impoundment Control Act of 1974. Title V, as amended in 1990, is now known as the Federal Credit Reform Act of 1990.

The most salient aspect of the Congressional Budget Act is that it established a congressional budget process. As originally enacted, the Budget Act provided for two budget resolutions, the first to provide planning levels and to be adopted by May 15, and a second to provide binding levels (that is, subjecting legislation that breached these totals to points of order) to be adopted by September 15. This division proved to be impracticable, and for fiscal years 1983-1986, Congress did not adopt a second budget resolution. Instead, the first budget resolution for each of these years included a provision that made the spending and revenue totals in the first resolution binding as of the beginning of the fiscal year (October 1). In 1985, Congress amended the Budget Act to provide that, beginning with FY1987, the spending and revenue totals in a single budget resolution (to be adopted by April 15) would be immediately binding.

As enacted, the Budget Act also required that committees report all authorizing legislation prior to May 15. This requirement tended to create a bottleneck of legislation that made it difficult to complete floor action on authorizing measures prior to consideration of appropriation bills, and was eliminated in 1985.

Currently, Title III requires that Congress approve a concurrent resolution on the budget by April 15 (Section 300), that must be adopted before other budgetary legislation can be considered (although the House may consider appropriation bills after May 15 regardless of the status of the budget resolution) (Section 303). Amounts agreed to in the budget resolution are “cross walked” to each committee with jurisdiction over spending under Section 302.

Title III also contains provisions concerning special procedures for consideration of budget resolutions and reconciliation bills. Debate in the Senate on budget resolutions is limited to 50 hours (Section 305) and on reconciliation bills to 20 hours (Section 310). The amending process is also limited. A germaneness requirement is imposed in the Senate for amendments to both budget resolutions (Section 305) and reconciliation bills (Section 310); amendments to reconciliation bills in either chamber must be deficit neutral (Section 310); and amendments in the Senate to reconciliations must not be extraneous (Section 313).

Section 306 specifically protects the jurisdiction of the Budget Committees. It prohibits floor action on any bill or amendment dealing with matters within the jurisdiction of the Budget Committee not reported by the Budget Committee (or an amendment to a bill reported by the Budget Committee). In addition to jurisdiction over budget resolutions and reconciliation bills, House Rule X, clauses (e)(1)(2) and (3) grant the House Budget Committee jurisdiction over "the congressional budget process, generally" and the "establishment, extension, and enforcement of special controls over the Federal budget, including the budgetary treatment of off-budget Federal agencies and measures providing exemption from reduction under any [sequester order]." In the Senate, a standing order of August 4, 1977, provides that jurisdiction over legislation concerning the budget process be jointly referred to the Senate Budget and Governmental Affairs Committees.

Title IV establishes additional limits on the consideration of certain measures.

For example, although changes can be made in the formulae for entitlement programs which can increase the projected level of expenditures, Section 401(b) of the Congressional Budget Act is designed to limit such increases. Section 401(b)(1) requires that increases in entitlement spending not become effective during the current fiscal year. Section 401(b)(2) further provides that increases that will become effective during a fiscal year be limited to the level allocated under Section 302(b) in connection with the most recent budget resolution or be subject to referral to the Appropriations Committee (for a period not to exceed 15 days).

Title IV also provides that contract authority and debt authority do not exist outside the budget process as a means of financing federal programs. Section 401(a) of the Congressional Budget Act requires that bills that provide authority "to enter into contracts under which the United States is obligated to make outlays" or "to incur indebtedness ... for the repayment of which the United States or new credit authority be effective for any fiscal year only to the extent provided in appropriation Acts."

Finally, the Unfunded Mandates Reform Act of 1995 (discussed elsewhere in this compendium) added Sections 421-428 to the Congressional Budget Act. These sections limit the consideration of unfunded federal mandates to the states.

In addition to establishing the congressional budget process, the Budget Act contains provisions dealing with numerous other aspects of federal fiscal management. Title I established the House and Senate Budget Committees.

Title V, also known as the Federal Credit Reform Act of 1990 (discussed elsewhere in this compendium), was added as a part of the Budget Enforcement Act.[818] The Federal Credit Reform Act specifies the budgetary treatment of federal credit programs, and provides that only the cost to the government of such programs should be on budget, other associated outlays being treated as a means of financing the programs.

Title II created a new congressional agency and outlined its responsibilities. The Congressional Budget Office (CBO) was charged with providing information to Congress. This basic function has not changed, but the nature of the information required by Congress has expanded over time.

These duties are further specified in Section 308 of the Budget Act, which requires that reports for bills providing new spending authority, new budget authority, new credit authority, or changing revenues or tax expenditures include a cost estimate prepared "after consultation with the Director of the Congressional Budget Office." In addition, Section 403 of the act requires the Director of the Congressional Budget Office "to the extent practicable, [to] prepare [a cost estimate] for each bill or resolution of a public character reported by any committee".

Section 424, added by the Unfunded Mandates Reform Act of 1995, placed additional responsibilities on CBO by requiring that it prepare and submit an estimate of the direct cost of all federal intergovernmental mandates contained in each bill reported in the House and Senate.

Title X, the Impoundment Control Act, codifies presidential authority to withhold federal funds which have been appropriated. The act defines such authority as rescissions and deferrals.

Rescission authority established under the Impoundment Control Act allows the President to propose cancellation of funds and to withhold those funds for a 45 day period pending congressional action. If Congress does not approve the

---

[818] As originally enacted, Title V provided for a change in the fiscal year of the federal government. Prior to the Congressional Budget Act, the fiscal year began on July 1 of the preceding calendar year. Since FY1976, the fiscal year has begun on October 1 of the preceding calendar year. This provision and several others in Titles V, VI, VII, and VIII were repealed in 1982 by P.L. 97-258 (96 Stat. 877), An Act to Revise, Codify, and Enact Without Substantive Change Certain General and Permanent Laws, Related to Money and Finance, as Title 31, United States Code, "Money and Finance."

rescission request (or takes no action), the funds must be released at the end of that period. Section 207 of the Balanced Budget and Emergency Deficit Reaffirmation Act of 1987 further codified this authority to allow the President to submit a rescission request only once.

Deferral authority allows the President to withhold funds temporarily, but deferrals may not extend beyond the end of the fiscal year. The Impoundment Control Act originally provided for a one-house veto of any proposed deferral, but this power was negated by the Supreme Court in I.N.S. v. Chadha (103 S.Ct. 715, (1983)). Subsequently, the U.S. Court of Appeals ruled in City of New Haven, Conn. v. United States (809 F.2d 900 (D.C. Cir. 1987)) that the one-house veto provision was not severable from the President's expanded authority in the 1974 law for policy based deferrals. Language clarifying this narrowed base for deferrals was incorporated into the Impoundment Control Act by the Balanced Budget and Emergency Deficit Reaffirmation Act of 1987.

In 1996, Congress enacted provisions to grant the President enhanced rescission authority. Known as the Line Item Veto Act of 1996 (110 Stat. 1200; Sections 10211027 of the Impoundment Control Act; 2 U.S.C. §621), these provisions inverted the existing relationship between Congress and the President regarding proposals for rescissions. Rather than requiring congressional support for a resolution approving the President's proposal, the new law required the enactment of a bill or joint resolution of disapproval to prevent a proposed rescission from becoming effective. A resolution of disapproval would be subject to a presidential veto, so a two-thirds vote in each House would be necessary to override and prevent a rescission. The Line Item Veto Act also expanded the scope of rescission authority. The act provided that in addition to discretionary spending, whenever the President signs a bill into law, he may cancel any item of new direct spending (i.e. entitlements), or certain limited tax benefits.[819]

In 1998, the Supreme Court struck down the act as unconstitutional (Clinton v. City of New York, 524 U.S. 417). It ruled that the Item Veto Act effectively allowed the President to repeal parts of a statute in violation of Article I of the Constitution.

Discussion

The Congressional Budget Act has been judged harshly by its critics despite achieving a significant measure of success. Its enactment resulted in greater control of impoundments, led to a resurgence of Congress's role in setting budget

[819] Defined as any revenue-losing provision that provides a federal tax deduction, credit, exclusion, or preference to 100 or fewer beneficiaries and any federal tax provision to provide temporary or permanent transitional relief for 10 or fewer beneficiaries.

priorities, and increased the attention of Congress to the whole budget. It has not, however, resulted in the orderly process that some had hoped for. Deadlines for adopting budget resolutions and for enacting spending legislation have routinely been missed; the Budget Committees have sometimes been the source of conflict, in part because authority was not significantly redistributed by the act; there is also a perceived redundancy in debating the outlines of budget priorities on the budget resolution and then later debating the details in authorizations and appropriations.

Perhaps because of these shortcomings, Congress has continued to debate the budget process and possible reforms virtually since the Budget Act was signed into law. Reform proposals have generally focused on one of two areas: (1) spending or deficit control mechanisms, as in the Balanced Budget and Emergency Deficit Control Act of 1985, and the Budget Enforcement Act of 1990; and (2) streamlining the decision making process, usually by eliminating one group of decision makers from the process or reducing the frequency of decisions (as with biennial budgeting).

G. Chief Financial Officers Act of 1990

Statutory Intent and History

The Chief Financial Officers (CFO) Act of 1990 (104 Stat. 2838)[820] constitutes a significant legislative effort to improve financial management in the federal government. Its passage shortly before the adjournment of the 101st Congress reflected a bipartisan effort stretching over a period of five years. The new CFO Act was heralded by many persons as the most important financial management legislation since the Budget and Accounting Procedures Act of 1950 (64 Stat. 832).

Title I of the CFO Act, "General Provisions," offers congressional findings regarding federal financial management, including identification of some existing weaknesses. Three purposes of the act are set forth:

- improvement of financial management practices by creating a new leadership structure for federal financial management (consisting of two new positions within the Office of Management and Budget (OMB)), and CFOs for the major executive departments and agencies;
- improvement of agency systems of accounting, financial management, and internal controls to assure the issuance of reliable financial information and to deter fraud, waste, and abuse of government resources; and
- production of complete, reliable, timely, and consistent financial information for use by both the executive branch and Congress in the financing, management, and evaluation of federal programs.

When the Social Security Independence and Program Improvements Act of 1994 (108 Stat. 1467) established the Social Security Administration (SSA) as an independent agency and created a new CFO position, the original number of 23 CFO agencies was increased to the current total of 24.[821]

Major Provisions

---

[820] Codified as amended at 31 U.S.C., Chapters 5, 9, 11, and 35; also 5 U.S.C. §§ 5313-5315, 38 U.S.C. § 201 nt, and 42 U.S.C. § 3533.

[821] Of the 24 CFO positions, those in the 14 cabinet-level departments (the Department of Homeland Security is not covered by the CFO Act), the Environmental Protection Agency, and the National Aeronautics and Space Administration are filled by presidential appointees confirmed by the Senate. The remaining eight CFO positions (for the Agency for International Development, Federal Emergency Management Agency, General Services Administration, National Science Foundation, Nuclear Regulatory Commission, Office of Personnel Management, Small Business Administration, and Social Security Administration), along with all 24 deputy CFO positions, are career slots, filled by agency head appointment. See following "Discussion" section for more on creation of additional CFO positions.

Title II, "Establishment of Chief Financial Officers," creates a new leadership structure for federal financial management. A new deputy director for management within OMB, appointed by the President and confirmed by the Senate, serves as the federal government's chief financial officer. His functions with respect to financial management include leadership, policy setting, implementation, and operations, as well as responsibility to carry out the full range of general management duties.

The deputy director for management also performs important coordinating functions within the federal financial management structure, including links to both agency personnel and operations in this area.

Title II also establishes an Office of Federal Financial Management (OFFM) within OMB, funded by a separate line item in OMB's budget and headed by a controller appointed by the President, subject to Senate confirmation. The incumbent, who must have "demonstrated ability" and "extensive practical experience" in financial management, serves as the principal advisor on financial management to the deputy director for management.

The act stipulates qualifications for both the agency CFOs and deputy CFOs. Each of the 24 agency CFOs reports directly to the agency head and is responsible for all agency financial management operations, activities, and personnel. Financial management is broadly defined, with agency CFOs assigned a variety of functions, including producing financial information, establishing an integrated financial management system, developing cost information, and developing systems that provide for systematic performance measurement. The Government Performance and Results Act of 1993 (107 Stat. 285) augmented performance measurement requirements, extending the initial language in the CFO Act regarding "systematic measurement of performance" for selected activities.

The 24 CFOs also are responsible for preparing annual management reports for their agencies, addressed to the agency head and to the OMB Director, within 60 days after the audit report (described below). The OMB Director then transmits the reports to the Senate Committee on Governmental Affairs and the House Committee on Government Reform. Each report contains an analysis of the financial management status of the agency, its financial statements and audit report, and a summary of material weaknesses pursuant to the Federal Managers' Financial Integrity Act of 1982 (96 Stat. 814), as well as other information.[822]

[822] In 2001 the OMB Director, pursuant to authority provided in the Reports Consolidation Act of 2000 (P.L. 106-531), required that agencies combine their annual performance reports with the financial statements and other materials required by the CFO Act, into a consolidated Performance and Accountability Report.

Title III, "Enhancement of Federal Financial Management Activities," covers a variety of subjects. One section requires the Director of OMB to prepare and submit a financial management status report and a government-wide five-year financial management plan to the appropriate committees of Congress. The report details the activities the Director, the controller, and agency CFOs plan to undertake, over the next five years, to improve financial management.[823] Another section establishes the Chief Financial Officers Council, chaired by OMB's deputy director for management; other members include the controller, the Fiscal Assistant Secretary of Treasury, and the 24 agency CFOs.[824] The Council meets periodically and serves as an interagency coordinating body.

The original requirements in the CFO Act for audited financial statements were substantially expanded by provisions in the Government Management Reform Act of 1994 (GMRA; 108 Stat. 3410). Initially, Sections 303 and 304 of the CFO Act provided that all covered agency heads would prepare and submit to OMB audited financial statements for each revolving and trust fund and for accounts that performed substantial commercial functions. In addition, a three-year pilot project (eventually involving 10 of the original 23 agencies) commenced, requiring preparation of audited financial statements for all agency accounts.

GMRA extended the requirement for audited financial statements covering all accounts to include all 24 CFO agencies. Beginning on March 1, 1997, and in each year thereafter, the agency head submits to the OMB Director "an audited financial statement for the preceding fiscal year, covering all accounts and associated activities of each office, bureau, and activity of the agency." Further, not later than March 31, 1998, and in each succeeding year, the Secretary of the Treasury, in coordination with OMB, is to submit to the President and Congress an audited financial statement covering all federal executive branch agencies for the preceding fiscal year. Finally, Sections 305 and 306 revised the mandate and general procedures for financial audits and management reports of government corporations.

The Federal Financial Management Improvement Act (FFMIA) of 1996[825] established a general requirement for CFO agencies to "implement and maintain financial management systems that comply substantially with federal financial management system requirements, applicable federal accounting standards, and

---

[823] The 2003 financial managemnt status report and five-year plan was issued in August 2003. See Office of Management and Budget, 2003 Federal Financial Management Report, Washington, Aug. 2003, available at: [http://www.whitehouse.gov/omb/financial/2003_report_final.pdf], visited Jan. 22, 2004.

[824] The CFO Council charter also includes the statutory deputy CFOs as members.

[825] The FFMIA was enacted as Title VIII in the Omnibus Consolidated Appropriations Act for FY1997; 110 Stat. 3009-389; 31 U.S.C. § 3512 note.

the United States Government Standard General Ledger at the transaction level" (FFMIA is further discussed elsewhere in the compendium). The Accountability of Tax Dollars Act of 2002[826] further amended the CFO Act and extended the coverage of the requirements for preparation of audited financial statements to most executive branch agencies (see further discussion of this law elsewhere in this compendium).

Discussion

The CFO Act provided a new framework for financial management in the executive branch. However, implementation of the various requirements in the act is an ongoing process. For example, the legislation requires that the 24 covered agencies have two financial statements prepared and audited each year: a statement of financial position, and a statement of results of operations. Described simply, the statement of financial position is a balance sheet that shows assets, liabilities, and the aggregate difference (or net position). The statement of results of operations shows revenues and other financing sources, expenses, and the resulting change in net position.

The financial statements are different from agency reports that are used to monitor and control budgetary resources; thus, they provide supplementary information that may be useful to the President, Congress, the Department of the Treasury, GAO, agency managers, and other interested parties. The additional information, however, may not be as important as the discipline that agencies must develop in order to produce it. In order to obtain unqualified audit opinions, agencies not only must improve and integrate their accounting systems, but must also strengthen their managerial control over resources and activities at all levels.

The OMB Director prescribes the form and content of the financial statements. In 2001, the OMB Director required that agencies combine annual performance reports pursuant to the Government Performance and Results Act with the CFO Act financial statements into a consolidated Performance and Accountability Report.[827] At the same time, a schedule of accelerated deadlines was established, with the reports covering FY2002 due February 1, 2003, and FY2003 due January 30, 2004; and beginning with FY2004, the performance and accountability reports are due November 15th.[828]

---

[826] P.L. 107-289, 116 Stat. 2049.

[827] Pursuant to authority provided in the Reports Consolidation Act of 2000 (P. L.106-531; 114 Stat. 2537).

[828] U.S. Office of Management and Budget, Form and Content of Agency Financial Statements, Bulletin No. 01-09, Sept. 25, 2001.

Evidence indicates steady improvement in compliance with the audited financial statements requirements, as more agencies receive clean, or unqualified, opinions. By FY2001,18 CFO Act agencies had received a clean opinion, but OMB noted that agencies have achieved this record of unqualified opinions despite major problems with their financial systems, "by expending significant resources and making extensive manual adjustments after the end of the fiscal year."[829] Some, including GAO, have expressed concern about agencies' capabilities to meet the accelerated deadlines.[830] In August 2003, OMB offered a decidedly upbeat assessment of experiences with the FY2002 financial statements, which were due February 1, 2003, nearly a month earlier than previously:

Not only did all 24 agencies subject to the CFO Act meet this new, shorter deadline, but a record 21 of 24 major departments and agencies received unqualified, or clean, opinions on their 2002 audits. In addition, the agencies combined their financial statements with their performance reports to provide information about agency finances and program performance in one document. Just two weeks later, all agencies met the February 15 deadline for producing for the first time quarterly financial statements.[831]

The growing number of agency financial statements receiving clean opinions may partially reflect increased attention in the executive branch. The Bush Administration in 2001 designated improving financial performance as one of five government-wide initiatives in the President's Management Agenda. In 2002, OMB devised a management scorecard to grade agencies on their progress; one of the core criteria for financial performance is achieving unqualified and timely opinions of the annual financial statements.[832] Obtaining an unqualified opinion on the government-wide financial statements has yet to be achieved, however. In March 2003, the General Accounting Office, for the sixth straight

year, issued a disclaimer of opinion following its audit of the government-wide consolidated statements for FY2002.[833]

Three new CFO positions have been created. These additions, however, are not identical to the other 24 CFO positions previously established.[834] In 1993, the law creating the Corporation for National and Community Service (CNCS) provided for a chief financial officer, to be appointed by the President, with advice and consent of the Senate; the listing of duties for the CFO includes some language identical to that found in 31 USC § 902, but other provisions are not the same.[835] Another CFO position came into being early in 2001. A provision in the Treasury and General Government Appropriations Act, 2000, established a new CFO position within the Executive Office of the President (EOP).[836] The CFO for the EOP generally is to "have the same authority and perform the same functions" as other agency CFOs. However, the President may determine that certain statutory provisions applicable to other agency CFOs shall not apply to the new position; Congress must be notified of any such exemptions.

The Homeland Security Act of 2002 provided for a third new CFO position.[837] The law makes no reference to the CFO Act or to Chapter 9 of Title 31. The CFO in the Department of Homeland Security (DHS) is appointed by the President with no Senate confirmation requirement. In addition, unlike all the other CFOs, who report directly to the agency head, the CFO for DHS may report to the Secretary, or to "another official of the Department, as the Secretary may direct."[838] Measures received action in the first session of the 108th Congress to bring the CFO in DHS directly under the CFO Act.[839]

[839] On Nov. 21, 2003, S. 1567, as amended, passed the Senate by unanimous consent, and on Nov. 25, 2003, S. 1567 was held at the desk in the House, in preparation for floor action. Previously, two House committees ordered reported a companion measure, H.R. 2886. The legislation also deletes the Federal Emergency Management Agency from the listing of CFO agencies, so that

Careful oversight of ongoing activities in the executive branch to improve financial management in the federal government, particularly developments relating to consolidated financial statements, remains an important concern for Congress. With enactment of the Accountability of Tax Dollars Act of 2002, 78 more agencies are required to prepare annual audited financial statements. The ultimate issue may be whether or not the availability of such statements eventually contributes to different and better decisions.

H. Government Management Reform Act of 1994

Statutory Intent and History

The Government Management Reform Act (GMRA) of 1994 (108 Stat. 3410)[840] incorporated "reinventing government" principles from the National Performance Review (NPR)[841] to pursue needed reforms, particularly with regard to federal personnel and general and financial management. Based upon a six-month study, the NPR Final Report offered over 380 major recommendations for creating "a government that works better and costs less."[842] Several of the NPR recommendations were implemented by executive action, but others required statutory change. The Clinton Administration forwarded a wide-ranging draft measure incorporating the needed legislative provisions, which was introduced in the House on October 28, 1993, as the "Government Reform and Savings Act" (H.R. 3400). An amended version passed the House on November 23, 1993.

Although H.R. 3400 had been jointly referred to 17 House committees having jurisdiction over particular provisions in the measure (11 of which took some action on the measure and six of which were discharged of it), the situation was different in the Senate. Under Senate rules, bill referral goes to the committee that has jurisdiction over the subject matter that predominates in the text; multiple referrals are less common than in the House, since they require unanimous consent of the Senate. So, when the House-passed version of H.R. 3400 was submitted to the Senate, it was referred only to the Governmental Affairs Committee because of its scope as an omnibus government reform bill. Following action by this committee, it was expected that other Senate committees would consider those sections falling within their jurisdictions. Eventually, the Governmental Affairs Committee reported a new bill, S. 2170, much narrower in scope than the original H.R. 3400, and containing only those provisions falling under the committee's jurisdiction, since no other committee took up the House-passed measure.[843] During floor consideration in the Senate, additional provisions were dropped, including enhanced federal debt collection procedures.

[841] On March 3, 1993, President Bill Clinton announced a six-month performance review of the federal government, under the leadership of Vice President Al Gore. The NPR focused primarily on process, how to make the government function more efficiently and effectively.

[842] U.S. Executive Office of the President, From Red Tape to Results: Creating a Government That Works Better & Costs Less, National Performance Review (Washington: GPO, 1993), pp. 134-153, 160-168.

[843] See U.S. Congress, Senate Committee on Governmental Affairs, Government Management Reform Act of 1994, S.Rept. 103-281, 103rd Cong., 2nd sess. (Washington: GPO, 1993).

On October 13, 1994, President Clinton signed S. 2170 into law, "An Act to provide a more effective, efficient, and responsive Government." In his signing statement, the President noted that, in passing the measure, "[T]he Congress has helped ensure that the Federal Government's managers will have the financial information and flexibility they need to make sound policy decisions and manage resources." He also praised provisions in the GMRA contributing to improved federal financial accountability as well as cutting costs.[844]

Major Provisions

Title I of the Government Management Reform Act of 1994, "Limitation on Pay," requires that automatic cost of living raises for Members of Congress, the Executive Schedule, and the judiciary not exceed those given to General Schedule (GS) federal employees. Title II, "Human Resource Management," limits the number of annual leave days that Senior Executive Service (SES) employees may accrue.

Title III, "Streamlining Management Control," strives to improve the efficiency of federal agencies in meeting statutory requirements for reports to Congress. It allows the Director of the Office of Management and Budget, in his annual budget submission, to publish recommendations to eliminate or consolidate duplicative or obsolete reporting requirements and to adjust deadlines to achieve a more efficient workload distribution or improve the quality of reports.

Title IV contains the "Federal Financial Management Act of 1994," covering a variety of issues, including electronic funds transfer, franchise funds, reporting requirements, and audited financial statements.

Section 402 aids federal agencies in the conversion to electronic delivery of government payments. The section states that all federal wage, salary, and retirement payments shall be paid to recipients by electronic funds transfer, starting on January 1, 1995, for new employees or recipients. Recipients may have the requirement waived by written request. The Secretary of the Treasury may waive the requirement for a group of recipients upon request by the head of an agency, based on standards prescribed by Treasury.

Section 403 authorizes the establishment of franchise funds in six executive agencies on a pilot program basis for five years. The franchising concept draws from the reinventing government principles of competition and the injection of market mechanisms into government operations. Franchise programs would offer administrative support services, such as payroll operations and accounting services, to the participating agency and to other federal agencies on a

---

[844] U.S. Executive Office of the President, Weekly Compilation of Presidential Documents, vol. 30 (Oct. 17, 1994), pp. 2006-2007.

reimbursable basis. The monopoly of internal service providers within federal agencies would be eliminated because office managers would be free to buy from the best provider. Franchise programs will expand or decline with the demand for their services.

Section 404 provided flexibility for the OMB Director in the timing and presentation of statutorily required financial management reports from executive branch agencies to OMB or the President, and from agencies or OMB to Congress.

Flexibility was provided to improve the efficiency of executive branch performance in financial management reporting. This authority initially was limited, however, to reports required by statute to be submitted between January 1, 1995, and September 30, 1997. Adjustments in reporting were made only after consultation with the chairman of the Senate Committee on Governmental Affairs and the chairman of the House Committee on Government Reform and Oversight; written notification to Congress must follow.

Section 405 expands requirements for executive branch agency financial statements contained in Section 303(a) of the Chief Financial Officers Act of 1990 (see discussion elsewhere in this compendium). Section 405(a) requires all 24 agencies covered under the CFO Act to have agency-wide audited financial statements, beginning with FY1996. The annual statements, initially due February 28, 1997, must cover all accounts and associated activities. The requirement is intended to contribute to cost-effective improvements in government operations. The OMB Director is authorized to require additional audited financial statements for components of CFO Act agencies. The OMB Director is also given authority to prescribe the form and content of financial statements.

Section 405(b) provides that for each audited financial statement required from the agency, the person who audits the statement (the inspector general or an independent external auditor) must submit a report on the audit to the head of the agency. This report is to be prepared in accordance with generally accepted government auditing standards.

Section 405(c) of the GMRA further requires that a consolidated audited financial statement for all accounts and associated activities in the executive branch be prepared by the Secretary of the Treasury, in coordination with the OMB Director, and be audited by the Comptroller General.[845] The first such statement,

---

[845] Although all accounts and activities of the executive branch were included in the government-wide financial statement, only CFO Act-covered accounts were audited. Because accounts not covered by the CFO Act constitute only a small portion of executive branch activities, these accounts did not have a significant effect on the government-wide financial statement.

covering FY1997, was submitted to the President and Congress on March 31, 1998. This financial statement is intended to reflect the overall financial position of the executive branch, including assets, liabilities, and results of operations of the executive branch. The specific form and contents of the financial statement are determined by the OMB Director. This financial statement is intended to provide Congress, the President, and the American public with more accurate and useful financial information on the workings of the government.

Discussion

As mentioned previously, most of the provisions in the GMRA reflect recommendations contained in the report of the National Performance Review. For example, the NPR report endorsed the idea of "franchising" internal services; the GMRA provides for a pilot program embracing the approach. Originally, it was anticipated that the pilots would be designated in the spring of 1995, operate for four years and terminate on October 1, 1999. However, delays occurred, with the six pilots not fully in operation until FY1997. In September of 1996, a provision was included in P. L. 104-208, the Omnibus Consolidated Appropriations Act of 1997, extending the pilot program through FY2001. The GMRA required that a report evaluating the franchise funds in the pilot program was due to Congress "within 6 months after the end of fiscal year 1997." A report, addressing the elements specified in the law, was submitted on schedule in March 1998, but as an interim progress report, rather than a final evaluation of the experiences with the six franchise funds included in the pilot program.[846]

The NPR report also called for eliminating unnecessary reports and simplifying the reporting process. The GMRA encouraged weeding out where possible and otherwise consolidating existing reports in an ongoing effort to simplify reporting requirements and to maximize the usefulness of executive branch reports to Congress. Provisions in the Reports Consolidation Act of 2000 (P. L. 106-531; 114 Stat. 2537) restored and enhanced the consolidation authority for financial and performance management reports initially given to the OMB Director in GMRA and, moreover, made the authority permanent. In 2001, the OMB Director required that agencies combine annual performance reports pursuant to the Government Performance and Results Act with the CFO Act financial statements into a consolidated Performance and Accountability Report. At the same time, a schedule of accelerated deadlines was established, with the reports covering FY2003 due by January 30, 2004; beginning with FY2004, the performance and accountability reports are due by November 15th.[847]

[846] See The Franchise Fund Pilot Program: An Interim Progress Report. Report to Congress [Washington, 1998]. This interim report was prepared jointly by the Office of Management and Budget, the Entrepreneurial Government Committee of the Chief Financial Officers Council, and the six franchise fund pilots.

[847] OMB, Form and Content of Agency Financial Statements, Bulletin No. 01-09, Sept. 25, 2001.

Another major recommendation in the NPR report was to use the Chief Financial Officers Act of 1990 to improve financial services. The provisions in GMRA relating to annual audited financial statements for federal agencies embody this approach, as discussed.[848]

I. Accountability of Tax Dollars Act of 2002

Statutory Intent and History

The Accountability of Tax Dollars Act (ATDA) of 2002 (P.L. 107-289; 116 Stat. 2049) was intended "to expand the types of Federal agencies that are required to prepare audited financial statements to all executive branch agencies in the federal government."[849]

Testifying in support of the legislation, Representative Pat Toomey stated that he first introduced the measure in the 106th Congress (H.R. 5521) "as a good government measure to combat waste, fraud, and abuse at Federal agencies.... I decided to introduce legislation when I learned, to my surprise, that many Federal agencies are simply not required by law to prepare audited financial statements, even though this is a fundamental part of good management and oversight."[850]

In the 107th Congress, H.R. 4685 was introduced on May 8, 2002, by Representative Toomey, with bipartisan cosponsors, and referred to the House Committee on Government Reform. On May 14, 2002, the Subcommittee on Government Efficiency, Financial Management, and Intergovernmental Relations held a hearing, and on June 18, 2002, approved the bill, as amended, by unanimous consent. On October 7, 2002, H.R. 4685 was considered in the House under suspension of the rules and passed, as amended, by voice vote.

A companion bill, S. 2644, was introduced in the Senate on June 19, 2002, and referred to the Committee on Governmental Affairs. Markup was held on October 16, 2002, and S. 2644, with a substitute amendment, was reported favorably by a vote of 9-0. On the following day, the Senate passed H.R. 4685 by unanimous consent. The measure was signed into law on November 7, 2002, with the first audited statements pursuant to the act due on March 1, 2003.

Major Provisions

The Accountability of Tax Dollars Act amends Title 31, United States Code, to bring almost all executive branch agencies under the requirement for preparation of annual audited financial statements that previously applied only to the 24 major departments and agencies covered by the Chief Financial Officers (CFO)

---

[849] U.S. Congress, Senate Committee on Governmental Affairs, Accountability of Tax Dollars Act of 2002, S.Rept. 107-331, 107th Cong., 2nd sess. (Washington: GPO, 2002), p. 1.

[850] U.S. Congress, House Committee on Government Reform, Subcommittee on Government Efficiency, Financial Management, and Intergovernmental Relations, H.R. 4865, the Accountability of Tax Dollars Act of 2002, hearing, 107th Cong., 2nd sess. (Washington: GPO, 2003), p. 8.

Act.[851] Specifically, Section 2(a) changes the list of agencies covered by the audited annual financial statements requirement in 31 U.S.C. § 3515 by deleting the cross-reference to CFO Act agencies and inserting "each covered executive agency." In addition, the new law changed the initial due date for the audited financial statements from March 1, 1997, to March 1, 2003.

The new law further amends Section 3515 by adding two new subsections. Subsection 3515(e) allows the Director of OMB to exempt an agency from the requirement to prepare an annual audited financial statement in a fiscal year under certain circumstances. OMB discretion is possible when the agency budget does not exceed $25 million, and the OMB Director determines the exercise is unwarranted due to the absence of risks associated with the agency's operations, the agency's demonstrated performance, or other relevant factors. If OMB grants such exemptions, the director is to notify the House Committee on Government Reform and the Senate Committee on Governmental Affairs annually of the agencies involved and the reasons for each exemption. Subsection 3515(f) defines the term "covered executive agency" to mean any other executive agency not required by another provision of law to prepare and submit annually to Congress and OMB an audited financial statement. Specifically excluded are bodies subject to Chapter 91 of Title 31 (mainly government corporations).

Section 2(b) of ADTA provides waiver authority for the OMB Director during a transition period under the new law. Specifically, the OMB Director may waive the application of the new law to any non-CFO Act agency for two years following enactment.

Discussion

The Accountability of Tax Dollars Act amends Title 31, United States Code, to expand the types of federal agencies that are required to prepare audited financial statements each year. Prior to its enactment, the 24 major departments and agencies covered by the CFO Act were required to prepare annual financial statements to be audited by their Offices of Inspector General (IG) or outside contractors designated by the IGs. A few agencies, such as the U.S. Postal Service, were required by agency-specific legislation to prepare audited financial statements. Over 20 entities were also previously required to prepare annual financial statements and have them audited pursuant to the Government Corporation Control Act (Chapter 91 of Title 31, described elsewhere in this compendium). Several independent agencies, such as the Federal

[851] 104 Stat. 2838. See discussion of the CFO Act elsewhere in this compendium.

Communications Commission and the Federal Trade Commission, voluntarily prepared audited financial statements.[852]

As noted, the ATDA was passed with virtually no opposition in the 107th Congress, both in committee and during House and Senate floor consideration. The language relating to coverage did evolve during the legislative process, however. Both the House and Senate bills, as introduced, provided a blanket exemption for agencies with budget authority for the fiscal year of less than $25 million. Testimony received during a hearing on H.R. 4685 may have proved important in this regard, when an official from the Federal Elections Commission suggested:

Agency operations and the types of programs administered by an agency should be more important than the size of budget in determining the need for audited financial statements. For example, an agency with a budget less than $25 million that has fiduciary responsibility for a trust fund, administers a grant program, or operates revenue-generating programs may be the type of agency that should prepare audited financial statements ...[853]

As enacted, the ATDA allows the OMB Director to exempt agencies with budgets under $25 million from the audited statements requirement under certain circumstances, but the exemption is not automatic.

With respect to agencies subject to the new law, it is interesting to note that 49 agencies were included as coming under the expanded requirements (before any possible OMB exemptions) in the Senate report accompanying S. 2644.[854] A month later, after the bill was signed into law, a memorandum from the OMB Director listed 78 agencies affected by ATDA.[855]

The OMB Director also exercised the provision in the law to waive the requirement during an initial transition period, allowing agencies not having prepared audited financial statements in the past to have an exemption for FY2002 for the annual financial statements. In the same December 2002

[853] Hearing on H.R. 4685, p. 85.

[854] S. Rept. 107-331, pp. 3-4.

[855] U.S. Office of Management and Budget, "Requirements of the Accountability of Tax Dollars Act of 2002," Memorandum for Heads of Selected Executive Agencies from Mitchell E. Daniels Jr., Dec. 6, 2002. There may be further modifications to the list of agencies coming under ATDA's expanded requirement for financial statements, because of possible uncertainty with the statutory definition of covered agency, as described above.

memorandum, the director noted that the newly covered agencies, along with the 24 CFO agencies, are all subject to the provisions of OMB Bulletin 01-09, Form and Content of Agency Financial Statements, beginning with FY2003.[856] This bulletin requires agencies to consolidate their audited financial statements and other financial and performance reports into combined Performance and Accountability Reports and accelerates the deadlines for submission.[857] OMB subsequently waived the requirement in Bulletin 01-09 for preparation and submission to OMB of quarterly unaudited financial statements for FY2003 for the agencies covered by ATDA.[858]

An issue that may be revisited is whether the ATDA agencies should be subject to the additional requirements of the Federal Financial Management Act (FFMIA), as are the 24 CFO Act agencies. The FFMIA requires covered agencies to implement and maintain financial management systems that comply substantially with federal financial management system requirements, applicable federal accounting standards, and the United States General Ledger at the transaction level.[859] H.R. 4685, as reported out of subcommittee, apparently contained language bringing ATDA agencies under the accounting standards provisions of FFMIA.[860] Opposition from the Bush Administration resulted in deletion of the FFMIA provisions prior to floor consideration. As Representative Janice Schakowsky commented during House floor debate:

> *Unfortunately, the bill we have on the floor today is not the bill we have passed out of our subcommittee [House Subcommittee Government Efficiency, Financial Management and Intergovernmental Relations]. The bill we have passed included a section that required the agencies covered under this bill to conform to the accounting standards set out in the Federal Financial Management Improvement Act of 1996. The*

[859] 110 Stat. 3009-389; 31 U.S.C. § 3512 note. For further background on FFMIA, see discussion elsewhere in this compendium.

[860] There was no written report to accompany H.R. 4685.

> *administration insisted that those [FFMIA] provisions be stripped from the bill, or it would block the bill from coming before the House today.... I am afraid that the administration's opposition to the accounting standards that were in this bill is just one more attempt to make sure that OMB, and not Congress, sets the standards by which agencies are judged.*[861]

As one of five government-wide initiatives under the rubric of the President's Management Agenda,[862] improved financial performance in executive branch agencies has received considerable attention and emphasis from OMB recently. Improving financial management in the federal government remains an important concern for Congress as well. With enactment of ATDA, 78 more agencies are required to prepare annual audited financial statements. Congressional scrutiny of the initial round of audited financial statements prepared by agencies subject to ATDA might prove an informative focus for oversight. The ultimate question may be whether the availability of audited financial statements improves the quality of decisionmaking in the federal government and furthers accountability to the American taxpayers, as envisaged in the ATDA.

J. Federal Managers' Financial Integrity Act of 1982

Statutory Intent and History

The Federal Managers' Financial Integrity Act (FMFIA) of 1982,[863] which amended the Accounting and Auditing Act of 1950, was designed to improve the government's ability to manage its programs. It emerged in the early 1980s and is often seen as the opening to other attempts along this line, including the Chief Financial Officers Act of 1990, the Federal Financial Management Improvement Act of 1996, and the Accountability of Tax Dollars Act of 2002.[864] Adoption of FMFIA followed the conclusions of a number of studies — from congressional committees, the General Accounting Office (GAO), inspectors general, and the executive agencies themselves — that documented significant weaknesses in internal financial and management controls, including inadequate and inaccurate accounting systems and financial reports. These weaknesses, in turn, were seen as contributing to wasteful spending, poor management, ineffective programs, fraud, and billions of dollars in losses.

FMFIA recognized that strong internal controls and accounting systems would help to ensure the proper use of funds and resources, compliance with statutes and regulations, and preparation of reliable financial reports for oversight and policymaking. The enactment, consequently, provides for ongoing evaluations of the internal control and accounting systems that protect federal programs against fraud, waste, abuse, and mismanagement. FMFIA further mandates that the heads of federal agencies report annually to the President and Congress on the condition of these systems and on their actions to correct any material weaknesses which the reports identified. Regulations implementing FMFIA's requirements for financial management systems are contained in Office of Management and Budget (OMB) Circular No. A-127, dealing with management accountability and control.

Major Provisions

Purposes and Objectives. The act requires the head of each executive agency to establish internal accounting and administrative controls, consistent with standards the Comptroller General prescribes, that reasonably ensure three principal objectives:

- that obligations and costs comply with applicable law;

---

[863] P.L. 97-255, 96 Stat. 814-815; codified at 31 U.S.C. § 3512.

[864] For an overview of these and related efforts, see CRS Report RL31965, Financial Management in the Federal Government: Efforts to Improve Performance, by Virginia A. McMurtry.

- that all assets are safeguarded against waste, loss, unauthorized use, and misappropriation; and
- that revenues and expenditures applicable to agency operations are recorded and accounted for properly, so that accounts and reliable financial and statistical reports can be prepared and accountability of the assets maintained.

The standards prescribed by the Comptroller General specifically include those designed to ensure the prompt resolution of all audit findings.

Guidelines. To meet these requirements, FMFIA instructed the Director of OMB, in consultation with the Comptroller General, to establish guidelines that the head of each agency must follow in evaluating the internal accounting and administrative control system of the agency. The OMB Director, however, is authorized to change a guideline when considered necessary.

Required Statements and Reports. By December 31 of each year (beginning in 1983), the head of each executive agency, based on such evaluations, prepares a statement on whether or not the systems of the agency comply with the criteria cited above. If the systems do not comply, then the head issues a report identifying any material weaknesses in the systems and describing the plans and schedule for correcting the weaknesses. Section 4 of the act provides that a separate report state whether the accounting system of the agency conforms to the principles, standards, and requirements of the Comptroller General.

The reports and statements are signed by the head of the agency and submitted to the President and Congress. These products in their entirety are also made available to the public, with an exception, however, for certain sensitive or classified information: i.e., information is deleted if it is specifically prohibited by law or required by executive order to be kept secret in the interest of national security.

The Reports Consolidation Act (RCA) of 2000 (P.L. 106-531; 114 Stat. 2537), approved at the end of the 106th Congress, has implications for FMFIA reports. The new statute is intended to overcome the duplication of effort and lack of coordination among the multiple financial and performance management reporting requirements within an agency. To do so, RCA authorizes the consolidation of such reports into a single annual report from each agency to achieve several purposes: enhance efficiency and coordination among the reporting entities; improve the quality of the information; and provide it in a more meaningful and useful format for Congress, the President, and the public.

Provisions Affecting Offices of Inspectors General. FMFIA also affects offices of inspector general (OIGs), created earlier by the Inspector General Act of 1978 (92 Stat. 1101). Section 3 of the act requires that the President include in the supporting detail of his budget submission the amounts of appropriations he requested for each OIG. Congressional committees are authorized to solicit from

the IG additional information concerning the amount of appropriations he or she requested when the request was originally submitted to agency management or OMB. This provision was designed to help protect the independence of IG offices and ensure their adequate funding. Along these same lines, the Inspector General Act Amendments of 1988 (102 Stat. 2529) provided for a separate appropriations account for each office of inspector general in a federal establishment (i.e., all the cabinet departments and the larger agencies).

Reference in the Chief Financial Officers Act. The Chief Financial Officers (CFO) Act of 1990 (104 Stat. 2847) is connected to the Federal Managers' Financial Integrity Act requirements. The CFO Act calls upon the Director of OMB to submit a financial management status report to appropriate committees of Congress. Part of this report is to be a summary of reports on internal accounting and administrative control systems submitted to the President and Congress as required by FMFIA.

Discussion

Passage of the Federal Managers' Financial Integrity Act in 1982 built upon some of the same concerns that had prompted enactment of the Inspector General Act four years before. FMFIA was boosted at the time by its incorporation as a top priority in Reform '88; these were the Reagan Administration initiatives begun in 1982, which were intended to strengthen management controls in the federal government. The statute was later enhanced by provisions in the Chief Financial Officers Act of 1990 and now plays a role in the President's Management Agenda, initiated by President George W. Bush in 2001.[865] FMFIA continues to provide a framework for strengthening, standardizing, and evaluating internal control and accounting systems as well as for reporting on relevant findings and corrective action. These developments paved the way for high expectations for ferreting out the root causes of waste, fraud, and mismanagement; providing federal managers with specifics about what is wrong and how to correct it; and informing Congress and the public about the underlying problems and their remedies.

FMFIA has received mixed reviews over the years. Initially, it was seen as not reaching its high expectations, according to some commentators who asserted that the law had been ignored or improperly and too narrowly implemented. This occurred, critics contended, because of an over-concern with the process rather than a focus on the objectives of the legislation, confusion or misunderstanding over the law's terminology, and restrictive interpretations of some of its provisions. FMFIA's failure to produce the results intended by

[865] U.S. Office of Management and Budget, The President's Management Agenda — FY2002 (Washington: OMB, 2001); and Fiscal Year 2004 Budget of the U.S. Government, Performance and Management Assessments (Washington: GPO, 2003), pp. 1-7. For an overview and other citations, see CRS Report RS21416, The President's Management Agenda: A Brief Introduction, by Virginia A. McMurtry.

Congress, in part, led to the later passage of other laws (discussed elsewhere in this compendium) designed to improve the general and financial management of the government. These included the Chief Financial Officers Act of 1990, the Government Management Reform Act of 1994, and the Federal Financial Management Improvement Act of 1996.

Since then, however, FMFIA and the related statutes have received more favorable reviews and, evidently, have had a more beneficial impact on federal agencies. According to an OMB study, for instance, "from 2001 to 2002, the number of FMFIA material weaknesses and nonconformances [found] dropped by 22 percent …."[866] Nonetheless, FMFIA and its statutory partners have significant challenges to meet in developing a healthy financial system for the U.S. government across the board.[867]

K. Federal Financial Management Improvement Act of 1996

Statutory Intent and History

The Federal Financial Management Improvement Act of 1996 (110 Stat. 3009389; 31 U.S.C. § 3512 note) incorporates in statute certain financial management system requirements already established as executive branch policy. The law also requires auditors to report on agency compliance with these requirements, and agency heads and management to correct deficiencies within certain time periods.

The act has seven purposes:

- provide for consistency in agency accounting from year to year, and for uniform accounting standards throughout the federal government;
- require federal financial management systems to support full disclosure of financial data so that programs and activities can be considered on their full costs and merit;
- increase accountability and credibility of federal financial management;
- improve performance, productivity, and efficiency of federal financial management;
- establish financial management systems that support controlling the cost of the federal government;
- build upon and complement the Chief Financial Officers Act, the Government Performance and Results Act, and the Government Management Reform Act; and
- increase the capability of agencies to monitor budget execution through reports that compare spending of resources to results of activities.

Enactment of the Federal Financial Management Improvement Act of 1996 (FFMIA) reflects an ongoing effort to reform financial management in the federal government. The 1996 law builds upon prior legislation, including the Chief Financial Officers Act of 1990, the Government Performance and Results Act of 1993, and the Government Management Reform Act of 1994. (See separate entries in this compendium for overviews of these laws.)

The FFMIA also follows up on the work of the Federal Accounting Standards Advisory Board (FASAB). Created pursuant to a 1990 Memorandum of Understanding among the Comptroller General of the United States (who heads the General Accounting office, or GAO), the Director of the Office of Management and Budget (OMB), and the Secretary of the Treasury, FASAB was charged with developing and recommending accounting standards for the federal government.

Once reviewed and adopted by the three principals, the standards are published by OMB and GAO and go into effect. According to the Senate report which accompanied the measure, FFMIA seeks to shift the focus of reform efforts to

implementation of the agreed-upon federal accounting standards. The report further noted: "While development of the accounting standards is an enormous accomplishment, however, the Committee wishes to emphasize that the benefits of good financial management will flow from the implementation of these standards and not simply their promulgation."[868]

After a rather complicated legislative history, the Federal Financial Management Improvement Act was enacted as a part of the Omnibus Consolidated Appropriations Act for FY1997 (P.L. 104-208; 110 Stat. 3009, at 3009-389). Originally introduced as S. 1130 in the summer of 1995 by Senator Hank Brown, the bill was the subject of a Senate Governmental Affairs Committee hearing in December of 1995; the committee then favorably reported a substitute version offered by Senator Brown the following May, and filed a written report on July 30, 1996 (S.Rept. 104-339). The Senate passed S. 1130, as amended by the committee substitute, by unanimous consent on August 2, 1996. Companion measures to S. 1130 were introduced in the House in September (H.R. 4061 and H.R. 4319), but no further action occurred on these bills. Ultimately, both the House and the Senate agreed to the FFMIA provisions under the rubric of the conference agreement.[869] President Clinton signed H.R. 3610 into law on September 30, 1996.

Major Provisions

The Federal Financial Management Improvement Act requires federal agencies to implement and maintain financial management systems that comply substantially with federal financial management system requirements, applicable federal accounting standards, and the United States Government Standard General Ledger (SGL) at the transaction level.

The act requires auditors to report on compliance with these requirements in their financial statement audits. When noncompliance is discovered, auditors

---

[868] U.S. Congress, Senate Committee on Governmental Affairs, Federal Financial Management Improvement Act of 1996, S.Rept. 104-339, 104th Cong., 2nd sess. (Washington: GPO, 1996), p. 6.

[869] Specifically, the text of S. 1130 was approved as Amendment No. 5255 to H.R 3756, the Treasury Postal Service Appropriations, 1997, bill by the Senate on September 11, 1996. In offering the floor amendment, Senator Brown explained that, given the shortness of time left in the session, attaching the measure previously approved by the Senate (S. 1130) to the appropriations measure provided the "best hope for enacting these important reforms into law this year." The following day, however, Senate Majority Leader Trent Lott pulled the Treasury Postal Service bill from the Senate floor when it appeared hopelessly bogged down with other add-ons. Subsequently, the conference report accompanying H.R. 3610, providing for 1997 omnibus consolidated appropriations (H.Rept. 104-863), included the text of the Federal Financial Management Improvement Act as a part of the Treasury Postal Service Appropriations (as added during Senate floor consideration of H.R.3756).

shall include in their report: (1) the entity or organization responsible for the financial management systems; (2) facts pertaining to the failure to comply (including the nature and extent of noncompliance, the primary reason or cause of noncompliance, the entity or organization responsible for the noncompliance, and relevant comments from responsible officers and employees); and (3) a statement of recommended remedial actions and time frames for implementing them.

The head of each agency is also required to determine whether agency financial management systems are in compliance. The determination is based on the report on the agency-wide audited financial statements and other information the head considers relevant and appropriate. If the head agrees that the systems are not in compliance, the head (in consultation with the Director of OMB) establishes a remedial plan that includes resources, remedies, and intermediate target dates necessary to bring about substantial compliance within three years after the auditor's determination. If the agency (with concurrence of the director) determines that more than three years are needed, the remedial plan specifies the most feasible date and designates an official responsible for bringing the systems into compliance. If the head disagrees with the auditor's findings, the Director of OMB shall review the determinations and report on the findings to the appropriate committees of Congress.

The act also requires the Director of OMB and the Comptroller General to make annual reports to Congress. The latter reports on compliance with the financial management system requirements and on the adequacy of applicable accounting standards for the federal government. In addition, inspectors general report to Congress instances and reasons when an agency has not met the intermediate target dates specified in remedial plans.

The act became effective for FY1997.

Discussion

The Federal Financial Management Improvement Act put into statutory law financial management requirements that the executive branch by and large had already established. Thus, its immediate effects were likely minimal, though the requirements for expanded auditor reports and agency remedial plans, including target dates, in cases of noncompliance ought not be underestimated. Supporters of the legislation hoped that an explicit statutory basis for financial management requirements might give them greater visibility and importance, and increase the likelihood that remedial plans would receive higher priority within the agencies and OMB, as well as in annual appropriations.

In its review of FFMIA for FY1997, GAO observed that "it will take time and concerted effort to raise government financial management systems to the level

of quality and reliability envisioned in FFMIA."[870] Two years later, in commenting on the draft of the GAO report for FY1999, the Office of Management and Budget agreed with the assessment of FFMIA's compliance requirements, but contended that the report "does not give credit for progress made or improvement efforts underway by agencies." It also expressed concern that "as currently written in OMB guidance, compliance requirements were black and white — meaning an agency was either compliant or non compliant." GAO agreed that it is important to measure progress and acknowledged that "the agencies are moving in the right direction."[871]

The number of CFO agencies receiving unqualified audit opinions on their financial statements increased steadily, from 11 in FY1997 to 21 in FY2002. Nonetheless, in reviewing the annual audit reports, GAO continued to find that most of the 24 CFO agencies did not comply substantially with FFMIA requirements. In FY2002, auditors reported that 17 agencies were noncompliant with FFMIA systems requirements, 13 were noncompliant with applicable federal accounting standards, and 9 were noncompliant with the Standard General Ledger. After six years of reporting years under FFMIA, only 3 of the 24 CFO agencies complied substantially with all FFMIA requirements, while 8 agencies were reported still not to be in substantial compliance with any of the requirements.[872]

The matter of addressing fundamental problems with agency financial systems has received increased attention in the executive branch. The Bush Administration in 2001 designated improving financial performance as one of five government-wide initiatives in the President's Management Agenda (PMA). In 2002, OMB devised a management scorecard to grade agencies on their progress; one of the core criteria in the financial performance initiative is for agencies to have financial management systems meeting federal financial systems requirements and applicable federal accounting and transaction standards as reported by the agency head (i.e., be in compliance with the FFMIA requirements).[873]

[873] See CRS Report RS21416, The President's Management Agenda: A Brief Introduction, by Virginia A. McMurtry; and U.S. Office of Management and Budget, Fiscal Year 2004 Budget of the U.S. Government, Performance and Management Assessments (Washington: GPO, 2003), pp. 1-7. As of Sept. 30, 2003, three agencies have received a green mark on the scorecard, indicating that they have met all the core criteria for success on the financial management initiative.

Despite steady agency improvement with the audited financial statements requirements, serious problems remain. While praising the accomplishment of agencies in earning unqualified audit opinions on their financial statements, OMB offered this qualification in a 2002 report: agencies have achieved this record of unqualified opinions despite major problems with their financial systems "only by expending significant resources and making extensive manual adjustments after the end of the fiscal year."[874] As a reflection of the depth of agency difficulties with FFMIA, as of September 30, 2002, 17 of the 24 agencies reported to GAO[875] that they were planning to or were in the process of implementing new core financial systems.[876]

In its report on FFMIA compliance in 2003, GAO cautioned about an "expectation gap," given the improvements on the financial statements coupled with the relative lack of success in achieving compliance with FFMIA: "When more agencies receive clean opinions, expectations are raised that the government has sound financial management and can produce reliable, useful, and timely information on demand throughout the year, whereas FFMIA assessments offer a different perspective."[877] On the other hand, the PMA, along with efforts of the Joint Financial Management Improvement Program (JFMIP) Principals,[878] provide impetus for addressing the challenges of FFMIA. According to GAO, during FY2002, the JFMIP Principals "continued the series of regular, deliberative meetings that focused on key financial management reform issues."[879]

Congressional oversight also remains an important prod for agencies to focus on financial management reform. In his opening statement at an oversight hearing

[876] JFMIP defines "core financial systems" to include managing general ledger, funding, payments, receivables, and certain basic cost functions. See Joint Financial Management Improvement Program (JFMIP), Core Financial Systems Requirements, SR-02-01 (Washington: JFMIP, 2001).

[877] U.S. General Accounting Office, GAO-03-1062, p. 16.

[878] The JFMIP Principals are the Secretary of the Treasury, the Directors of OMB and the Office of Personnel Management, and the Comptroller General of the United States. Officially recognized in 1948, JFMIP is a cooperative effort of the principals, working with federal agencies, to improve financial management practices throughout the government.

[879] U.S. General Accounting Office, GAO-03-1062, p. 7.

on FFMIA in 2002, Subcommittee Chairman Stephen Horn observed, "We recognize that there are long-standing problems with agency financial management systems. We also recognize that correcting these deficiencies will take time. However, the requirements of this Act must be taken seriously."[880] Since FFMIA does not impose penalties for agencies that are noncompliant, as an early version of the legislation would have authorized, its effectiveness may ultimately depend upon congressional oversight and OMB insistence that agencies comply with relevant standards.

Bob Lyke
Virginia McMurtry

L. Federal Credit Reform Act of 1990

Statutory Intent and History

In March 1967, the President's Commission on Budget Concepts was created and instructed to make "a thorough and objective review of budgetary concepts."[881] In October 1967, the commission produced a comprehensive report with detailed recommendations on implementing a unified budget. In its report, the commission stated that the two basic functions of the federal budget are resource allocation and macroeconomic stabilization. For resource allocation, the commission believed that the budget should "provide the integrated framework for information and analyses from which the best possible choices can be made in allocating the public's money among competing claims."[882] This function of resource allocation should include comparisons among government programs and between the public and private sectors. For macroeconomic stabilization, the commission maintained that the budget should contain detailed and accurate information in order to evaluate the effects of federal fiscal activities. Furthermore, the budget should include data necessary to undertake discretionary countercyclical fiscal policy. Thus, the commission recommended a unified budget that would include all federal activities.

In the FY1969 budget, the Johnson Administration adopted the unified budget concept, but with some structural differences from the proposal of the commission. From FY1969 until the implementation of credit reform in FY1992, the federal budget recorded federal credit activity on a cash flow basis. Federal credit consists of federal direct loans and federal loan guarantees. In a given fiscal year, the budgetary cost of a particular loan program was net cash flow, which equaled new loans made plus any administrative expenses associated with these loans (rarely recognized in the loan accounts) less any loan fees, repayments of principal, and payments of interest. The federal acceptance of a contingent liability when a loan guarantee was provided was not included in the federal budget, because no cash flow occurred. Some guarantee programs charge fees to the recipient, and these fees were considered offsetting collections. Federal outlays were necessary to compensate lenders for any federal guaranteed loan defaults, but these outlays were not shown in the budget until they were actually paid.

On November 5, 1990, the Omnibus Budget Reconciliation Act of 1990 (OBRA90; 88 Stat. 304) was signed into law. It added a new title, Title V, to the Congressional Budget Act. Title V is also called "the Federal Credit Reform Act of 1990" (FCRA; 101 Stat. 1388; 2 U.S.C. § 621 note). Beginning with FY1992 (October 1, 1991), FCRA changed the budgetary treatment of federal direct loans

[881] U.S. President's Commission on Budget Concepts, Report (Washington: GPO, 1967), p. 105.

[882] Ibid., p.16.

and federal loan guarantees by requiring that the budgetary cost of a credit program be the subsidy cost at the time the credit is provided.

Major Provisions

The four stated purposes of FCRA are to:

- measure more accurately the costs of federal programs;
- place the cost of credit programs on a budgetary basis equivalent to other federal spending;
- encourage the delivery of benefits in the form most appropriate to the needs of beneficiaries; and
- improve the allocation of resources among credit programs and other spending (Section 501 of FCRA).

FCRA never uses the word subsidy; nevertheless, the true budgetary and economic cost of a federal credit program is the subsidy value at the time the credit is provided. FCRA defines the [subsidy] cost as "the estimated long-term cost to the government of a direct loan or loan guarantee, calculated on net present value basis, excluding administrative costs and any incidental effects on governmental receipts or outlays" [Section 502(5A)]. The discount rate used to calculate subsidy costs in terms of present value is the "average interest rate on marketable Treasury securities of similar maturity" [Section 502(5E)].[883] Hence, the subsidy cost of a program is determined by the amount of credit provided and the discount rate used to calculate the net present value of this credit.

Any government action that changes the estimated present value of an outstanding federal credit program is counted in the budget in the year in which the change occurs as a change in the subsidy cost of this program (Section 502(5D)). For example, the federal government could partially forgive the repayment of principal for low income borrowers from a particular credit program which would increase the subsidy cost of the program.

The Director of the Office of Management and Budget (OMB) is responsible for coordinating the estimation of subsidy costs. "The Director may delegate to agencies authority to make estimates of costs" (Section 503(a)). But these agencies must use written guidelines from the Director, which are developed after consultation with the Director of the Congressional Budget Office (CBO). The Director of OMB and the Director of CBO are responsible for developing more accurate historical data on credit programs which are used to estimate subsidy costs (Section 503). The President's budget includes "the planned level of new direct loan obligations and new loan guarantee commitments associated with each appropriations request" (Section 504).

---

[883] The derivation of the discount rate was revised by the Balanced Budget Act of 1997.

Beginning in the FY1992 budget cycle, discretionary programs providing new direct loan obligations and new loan guarantee commitments required appropriations of budget authority equal to their estimated subsidy costs. Credit entitlements (for example, guaranteed student loans) and existing credit programs of the Commodity Credit Corporation have indefinite budget authority (Section 505(a-c)) and do not need an annual appropriation.

Appropriations for the annual subsidy cost of each credit program go to a budget account called a credit program account. Funding for the subsidy costs of discretionary credit programs is provided in appropriations acts and must compete with other discretionary programs for funding available under the constraints of the budget resolution. Most mandatory credit programs receive automatic funding for the amount of credit needed to meet the demand by beneficiaries. Mandatory programs are generally entitlement programs for which the amount of funding depends on eligibility and benefits rules contained in substantive law. The subsidy cost of federal credit for both direct loans and guaranteed loans is scored as an outlay in the fiscal year in which the credit is disbursed by either the federal government or a private lender (504d). For mandatory credit programs, any additional cost from the annual reestimates of subsidies for a credit program is covered by permanent indefinite budget authority. This additional cost is displayed in a subaccount in the credit program account.

Also, beginning in FY1992, a nonbudget financing account was created for each credit program. These financing accounts receive an outlay at the time loans are made in the amount of the subsidy value of new direct or guaranteed loans from their associated credit programs. These accounts also record the government's loan programs' actual cash transactions, both disbursements and receipts, to and from the public. Each loan program gets funds for disbursement to the public by borrowing from the Treasury (Section 502(5E6-7)). Because they are nonbudget, the cash flows into and out of these accounts are not reflected in total outlay, receipts, or surplus/deficit. The budget authority of a credit program provides the means for the credit program account to pay to the financing account an amount equal to that program's estimated subsidy costs.

Another special account, the liquidating account, includes all ongoing cash flows of each credit program resulting from credit advanced prior to October 1, 1991 (Section 502(5E8)). However, the new budgetary procedures under FCRA would apply to modifications made by the U.S. government to credit terms on credit provided before FY1992.[884]

---

[884] U.S. Executive Office of the President, Office of Management and Budget, The Budget System and Concepts, Budget of the United States Government, Fiscal Year 2003 (Washington: GPO, 2002), p. 15.

FCRA does not apply to the credit activities of the Federal Deposit Insurance Corporation, the National Credit Union Administration, the Resolution Trust Corporation, national flood insurance, the National Insurance Development Fund, crop insurance, or the Tennessee Valley Authority (Section 506).

Discussion

The Federal Credit Reform Act of 1990 was brief; it covered only five and one-half pages of the U.S. Code and Administrative News.[885] Numerous details necessary to make the act completely operational were absent. Furthermore, many federal agencies had inadequate financial and accounting systems to implement credit reform.[886]

On July 2, 1992, OMB issued a revised circular which improved and clarified instructions for credit budget formulation.[887] Furthermore, OMB simplified its credit subsidy model to make it easier for agencies to estimate direct loan and loan guarantee subsidies.[888] On January 11, 1993, OMB updated Circular No. A-129 concerning the budgetary treatment of federal credit programs.[889] OMB also revised Circular No. A-11 to include federal credit reform procedures. In Circular No. A-11, OMB explains to agencies how they should fill out credit schedules in preparing their budget requests.[890] Federal agencies working with OMB have steadily improved their compliance with credit reform standards.

Since the passage of the FCRA, OMB has continued to assist agencies in upgrading the quality of subsidy estimates. Beginning with the FY1993 budget, agencies have recorded reestimates of the cost of their credit programs. Aggregate subsidy estimates were adjusted downward for FY1994, upward for FY1995 and FY1996, downward for FY1997, upward for FY1998 and FY1999, and

downward for FY2000, FY2001, FY2002, and FY2003.[891] In the aggregate, downward subsidy reestimates of $13.8 billion were largely offset by upward subsidy reestimates of $11.9 billion.[892]

The trend for the subsidy reestimates has been for the magnitude, either up or down, to increase. In May 2001, CBO stated that it lacked any methodology to forecast the direction or size of future reestimates.[893] FCRA provided for permanent indefinite authority so that new appropriations are not needed to cover the cost of reestimates. Agencies are required to incorporate improved knowledge into their subsidy estimates for future direct loan obligations and loan guarantee commitments.[894]

The General Accounting Office (GAO) examined subsidy estimates for 10 credit programs in five agencies for the period of fiscal years 1992 through 1998. GAO found problems with supporting documentation for subsidy estimates and the reliability of subsidy rate estimates and reestimates in each agency.[895] But GAO concluded that agencies showed improvement over the period in documenting estimates in each agency.[896]

CBO examined credit subsidy reestimates for the period of FY1993 through FY1999. CBO concluded that

Projecting the losses and costs from federal credit assistance is difficult, and errors are inevitable. Although various incentives may exist for agencies to underestimate credit subsidies, the Congressional Budget Office's analysis of corrected reestimates does not reveal any pattern of bias in initial subsidy estimates. However, another problem was uncovered: the reestimates reported in the president's budget are in such disorder that analysts cannot rely on them.

A few modest changes in current practice could reduce agencies' errors in preparing, reporting, and accounting for estimates and reestimates.[897]

OMB established on-budget credit program receipt accounts to receive payments of earnings from the financing accounts in those unusual cases when federal credit programs are estimated to produce net income, that is, have negative subsidies.[898] Usually payments into a program's receipt account are recorded in the Treasury's general fund as offsetting receipts.[899] "In a few cases, the receipts are earmarked in a special fund established for the program and are available for appropriation for the program."[900]

In October 1990, the Secretary of the Treasury, the Director of OMB, and the Comptroller General established the Federal Accounting Standards Advisory Board (FASAB) to consider and recommend accounting principles for the federal government. On September 15, 1992, the board issued an exposure draft recommending accounting standards for federal credit programs on a basis consistent with credit reform. The board received numerous substantive comments that were considered in revising its exposure draft, and on August 23, 1993, OMB issued the board's revised report titled Accounting for Direct Loans and Loan Guarantees.[901] This report provided extensive detail, including numerous arithmetic examples, clarifying credit reform practices.[902] It further required that federal agencies' use of present value accounting for federal credit programs be consistent with the Federal Credit Reform Act of 1990.[903] Thus, for

their credit programs, agencies' accounting procedures are now required to be consistent with their budgetary procedures.

On August 5, 1997, the Balanced Budget Act of 1997 (P.L. 105-33) was enacted.[904] This law (BBA97) amended the Federal Credit Reform Act of 1990 to make some technical changes, including codifying several OMB guidelines. Important changes were:

First, agencies are required to use the same discount rate to calculate the subsidy when they obligate budget authority for direct loans and loan guarantees and when submitting the agency's budget justification for the President's budget.[905] Thus, the dollar value of loans for a specific credit program is known when Congress considers subsidy appropriations for that program. Prior to this change, agencies had used interest rates from the preceding calendar quarter to calculate the subsidy at the time a direct loan was advanced or a loan guarantee was obligated.[906]

Second, agencies are required to use the same forecast assumptions (for example, default and recovery rates) to calculate subsidy rates when they obligate credit and when preparing the President's budget.[907]

Third, agencies are required to transfer end-of-year unobligated balances in liquidating accounts (revolving funds for direct loans and loan guarantees made prior to the effective date of FCRA) to the general fund as soon as practicable after the close of the fiscal year.[908]

Fourth, the same interest rate must be used on financing account debt (which generates interest payments to the Treasury), financing account balances, and the discount rate used to calculate subsidy costs.[909]

Fifth, the definition of the term cost is modified so that the discount rate is based on the timing of cash flows instead of on the term of the loan. Under this new

[909] Ibid.

approach, in the President's budget, a series of different rates would be used to calculate the present value of cost flows over a multi-year period. For example, for a 10-year direct loan (or loan guarantee), costs in the first year would be discounted using the interest rate on a one-year Treasury bill, costs in the second year would be discounted using the interest rate on a two-year Treasury note, etc. Under the prior approach, the interest rate of a 10-year Treasury note would have been used as the discount rate. This prior method proved to be inferior because the flow of semiannual interest payments and the repayment of full principal on the last payment date did not match up well with yearly cost flows.[910]

M. Federal Claims Collection Act of 1966

Statutory Intent and History

The Federal Claims Collection Act of 1966 (P.L. 89-508; 80 Stat. 308; 31 § 3711(a)-(c)(1)) originated agency authority to collect claims. It was intended to authorize agency heads to attempt collection of all claims of the United States, to compromise certain claims, or to terminate collection action in certain circumstances. Formerly, only a few agencies had been granted these authorities.

Major Provisions

The act defines agency as any department, office, commission, board, service, government corporation, instrumentality, or other establishment in either the executive or legislative branch of the federal government. It defines head of an agency to include, where applicable, commission, board, or other group of individuals having the decisionmaking responsibility of an agency.

The act directs the head of an agency or designee, pursuant to regulations prescribed and in conformity with such standards as may be promulgated jointly by the Attorney General and the Comptroller General, to attempt collection of all claims of the United States for money or property arising out of the activities of, or referred to, the agency.

For such claims of the United States that have not been referred to another agency, including the General Accounting Office (GAO), for further collection action that do not exceed $20,000, exclusive of interest, the head of an agency or designee, pursuant to regulations prescribed by him and in conformity with such standards as may be promulgated jointly by the Attorney General and the Comptroller General, may (1) compromise any such claim, or (2) terminate or suspend collection action on any such claim where it appears that no person liable on the claim has the present or prospective financial ability to pay any significant sum thereon or that the cost of collecting the claim is likely to exceed the amount of recovery.

The Comptroller General or his designee has the same authority for claims referred to GAO by another agency for further collection action. The head of an agency or designee shall not exercise authority over claims as to which there is an indication of fraud. The presentation of a false claim, or misrepresentation on the part of the debtor or any other party having an interest in the claim, shall be considered a violation of the antitrust laws. The head of an agency, other than the Comptroller General, does not have authority to compromise a claim that arises from an exception made by GAO in the account of an accountable officer.

A compromise effected under the act is final and conclusive on the debtor and on all officials, agencies, and courts of the United States, unless procured by fraud, misrepresentation, the presentation of a false claim, or mutual mistake of fact. No accountable officer is liable for any amount paid or for the value of property

lost, damaged, or destroyed, where the recovery of such amount or value may not be had because of a compromise with a person primarily responsible under the act.

Nothing in the act increases or diminishes existing authority of the head of an agency to litigate claims or diminish existing authority to settle, compromise, or close claims.

Discussion

When Congress enacted the Federal Claims Collection Act of 1966, it removed inflexibility in the law and responded to recurrent agency appeals to Congress for relief. If they could not collect amounts they believed due the federal government, agencies that formerly did not have authorities that the act granted had to refer claims to the General Accounting Office for collection. Only a few agencies had authority to compromise claims, i.e., accept a lesser amount in full settlement. Similarly, few agencies could terminate or suspend efforts to collect a claim even when the effort was futile. A compromise settlement was not possible until the matter was referred to the Department of Justice. The $20,000 limit on the amount of a claim that the Federal Claims Collection Act of 1966 granted agency heads to compromise and to terminate collecting subsequently was raised to $100,000. Authority of the Comptroller General to exercise the same authority as an agency head for claims referred to the General Accounting Office subsequently was repealed.

In 1997, GAO published the results of an evaluation of debt collection in some agencies with programs covering about two-thirds of the federal government's delinquent debt. GAO found that each agency it reviewed had a high percentage of debt in bankruptcy, foreclosure, or adjudication, and did not have a uniform method of documenting debt collection. GAO recommended, among other things, improved and standardized reporting requirements to collect debt. A subcommittee of the House Committee on Government Reform (the Subcommittee on Government Management, Information, and Technology, now renamed as the Subcommittee on Government Efficiency and Financial Management) held several oversight hearings on implementing improved debt collection practices. (See the entry for the Debt Collection Improvement Act of 1996, elsewhere in this compendium, which amended the Federal Claims Collection Act of 1966, for subsequent developments and selected source readings relating to collection of claims.)

N. Debt Collection Act of 1982

Statutory Intent and History

The Debt Collection Act of 1982 (P.L. 97-365; 96 Stat. 1749; 31 § 3711 et seq.) amended the Federal Claims Collection Act of 1966. The intent was to enable agencies to disclose information to consumer reporting agencies, authorize administrative offsets, charge minimum annual rates of interest and penalties on indebtedness to the United States, require annual agency reports summarizing the status of loans and accounts receivable, and permit contracts for collection services.

In addition, the act amended the Privacy Act (described elsewhere in this compendium) to clarify the status of consumer collection agencies. It also amended the Internal Revenue Code to authorize certain disclosures of information, Title 5 of the United States Code to authorize salary offsets, Title 18 of the United States Code to protect federal debt collectors, and Title 28 of the United States Code to change the statute of limitations for administrative offsets.

Major Provisions

Amendments to the Federal Claims Collection Act of 1966.
Disclosure of Information. The act authorizes the head of an agency, whenever attempting to collect a claim, to disclose to a consumer reporting agency information from a system of records under certain circumstances. It defines consumer reporting agency, system of records, and head of an agency.

Administrative Offset. The act authorizes the head of an agency, after attempting to collect a claim, to collect it by means of administrative offset, i.e., withholding money payable to or held bythe United States, except that such authority may not be exercised against claims that have been outstanding for more than 10 years. It describes claims eligible for administrative offset and prescribes procedures for it.

Interest and Penalty on Indebtedness. The act requires the head of an agency or designee to charge a minimum annual interest rate on outstanding debts that is equal to the average investment rate for the Department of the Treasury tax and loan accounts for the 12-month period ending on September 30 of each year. The Secretary or designee is required to publish the rate annually by October 31 and may revise it quarterly if the average investment for the 12-month period ending that quarter is greater or less than the existing published rate by 2%.

With some exceptions, the act requires the head of an agency or designee to assess charges to cover costs of processing and handling delinquent claims and to assess a penalty charge, not to exceed 6%, for failure to pay any portion of a debt more than 90 days past due.

Report on Agency Debt Collection Activities. The Director of the Office of Management and Budget, in consultation with the Secretary of the Treasury and Comptroller General of the United States, is directed to establish regulations requiring each agency with outstanding debts annually to prepare and transmit to the Director and the Secretary a report summarizing the status of loans and accounts receivable managed by each agency. The act specifies information that the report must contain. The Director is required to analyze the reports received and report annually to Congress on the management of agency debt collection activities.

Contracts for Collection Services. The act authorizes the head of an agency or designee to enter into a contract with any person or organization, under terms considered appropriate for collection services, to recover indebtedness owed the United States. Any such contract must include provisions specifying that the agency head or designee retains authority to resolve disputes, compromise claims, terminate collection action, and refer the matter to the Attorney General to initiate legal action, and that the contractor is subject to the Privacy Act (5 U.S.C. § 552a), to the extent provided in Subsection (m) of the act, and subject to federal and state laws that pertain to debt collection practices.

Claim for purposes of the Debt Collection Act is defined to include amounts owing on account of loans insured or guaranteed by the United States and all other amounts due the United States from such things as fees, leases, rents, royalties, sales of real or personal property, fines, penalties, taxes, and other sources.

Amendments to Title 5 of the United States Code.
Privacy Act. The act permits disclosure of any record in an agency system of records to a consumer reporting agency without consent of the individual to whom the record pertains, thereby exempting such disclosure from the Privacy Act requirement of prior consent. It exempts a consumer reporting agency from the Privacy Act provision that directs an agency to apply the Debt Collection Act's requirements to a system of records operated by contractors on behalf of an agency.

Salary Offset. The act authorizes the head of an agency or designee to deduct from the current pay account of an employee, member of the Armed Services or Reserve of the Armed Forces the amount of indebtedness owed to the United States, not to exceed 15% of disposable pay. The deductions may be made in monthly installments, or at established intervals, when the agency head or designee determines that the individual is indebted to the United States for debts to which the United States is entitled to be repaid or is notified by the head of another or designee. It grants an individual procedural protections, such as at least 30 days written notice, and opportunities to establish a repayment schedule and receive a hearing if timely requested.

The collection of any amount must be in accordance with standards in the Federal Claims Collection Act of 1966 or with any other statutory authority for collection of claims under any other statutory authority.

Amendments to the Internal Revenue Code.
Requirement That Applicant Furnish Taxpayer Identification Number.
The act directs each agency administering an included loan program to require any person applying for a loan under such program to furnish the person's taxpayer identification number.

Screening Potential Debtors. The Secretary of the Treasury is authorized, upon written request, to disclose to the head of any included federal loan program whether an applicant for a loan under such program has a tax delinquent account. The disclosure shall be made only for the purpose of, and to the extent necessary in, determining the creditworthiness of the applicant.

Included federal program for purposes of the paragraph means any program for which the United States makes, guarantees, or insures loans, and with respect to which there is in effect a determination made by the Director of the Office of Management and Budget (which has been published in the Federal Register) that applying this requirement to such program substantially would prevent or reduce future delinquencies in it.

Disclosure of Mailing Address to Third Parties for Purposes of Collecting Federal Claims. The act generally authorizes the Secretary of the Treasury, upon written request, to disclose the mailing address of a taxpayer for use by officers, employees, or agents of a federal agency for purposes of locating such taxpayer to collect or compromise a claim against the taxpayer.

In the case of an agent of a federal agency which is a consumer reporting agency (within the meaning of the Fair Credit Reporting Act), the mailing address may be disclosed only for the purpose of allowing the agent to prepare a commercial credit report. Statutory safeguards apply to these disclosures.

Protection of Federal Debt Collectors. The Debt Collection Act includes any officer or employee of the United States or any agency thereof designated to collect or compromise a federal claim in accordance with the act in the statute that prescribes punishments for killing or attempting to kill certain officials.

Discussion

Authorities granted by the Debt Collection Act of 1982 enhanced the ability of the government to collect delinquent debts by providing some tools that were available to the private sector.

In June 1997, the General Accounting Office (GAO) published results of an evaluation of debt collection at some agencies whose programs accounted for

about two-thirds of delinquent debt owed to the federal government. GAO found that each agency had a high percentage of bankruptcy, foreclosure, or adjudication and did not have a standard method of documenting debt collection. (See the entry for the Debt Collection Improvement Act of 1966, elsewhere in this compendium, which amended the Federal Debt Collection Act of 1982, for subsequent developments and selected source reading on debt collection.)

O. Federal Debt Collection Procedures Act of 1990

Statutory Intent and History

The Federal Debt Collection Procedures Act, (P.L. 101-647; 104 Stat. 4789; 28 U.S.C. § 3001), Title XXXVI of the Crime Control Act of 1990, amends Title 28 of the United States Code to provide general civil procedures for collecting debts. The intent is to provide the exclusive civil procedures to recover a judgment on a debt or to obtain, before judgment on a claim for a debt, a remedy in connection with the claim, except where other federal law specifies procedures for recovering on a claim. Subchapters include general provisions, prejudgment and postjudgment remedies, fraudulent transfers involving debt, and amendments to other provisions of law.

Major Provisions

General Provisions. The act prescribes procedures for service of process, enforcement, and notice to the debtor and any person whom the United States, after due diligence, believes has possession, custody, or control of property. The act does not apply with respect to a judgment on a debt if the judgment was entered more than 10 years before the effective date of the act.

Remedies available to the United States may be enforced against property which is co-owned by a debtor and any other person only to the extent allowed by the law of the state where the property is located. Any right or interest of a debt or co-owner in a retirement for federal military or civilian personnel established by the United States or any agency thereof or in a qualified retirement arrangement, however, is not so limited.

A court may modify enforcement procedures. In an action or proceeding under the act, an individual debtor may elect to exempt certain property. The United States or a debtor may request a hearing on the applicability of any exemption claimed by the debtor. Asserting an exemption prevents the United States from selling or otherwise disposing of the property for which the exemption is claimed until a court determines that the debtor has a substantial nonexempt interest in the property.

Prejudgment Remedies. The act authorizes prejudgment remedies of attachment of property (except earnings), appointment of a receiver, garnishment against property (excluding earnings), and sequestration of income from property. It specifies procedures for the United States to apply for such a remedy, the grounds on which one may be sought, the content of an affidavit supporting the application and notice to the debtor, and hearing requirements.

A court may grant a prejudgment remedy if the United States shows reasonable cause to believe, among other things, that a debtor, with the effect of hindering the United States in its effort to recover a debt (1) is about to leave the jurisdiction of the United States; (2) has or is about to assign, dispose of, remove,

conceal, ill treat, waste, or destroy property; (3) has or is about to convert the debtor's property into money, securities, or evidence of debt in a manner prejudicial to the United States; or (4) has evaded service of process by concealing himself, or has temporarily withdrawn from the jurisdiction of the United States. A prejudgment remedy also may be granted if required to obtain jurisdiction within the United States and the remedy would result in obtaining such jurisdiction.

Any property in the possession, custody, or control of a debtor and in which a debtor has a substantial nonexempt interest, except earnings, may be attached pursuant to a writ of attachment. The act authorizes a court to appoint a receiver for property in which a debtor has a substantial interest if procedural requirements are met and the United States shows reasonable cause to believe that there is a substantial danger that property will be removed from the jurisdiction of the court, lost, concealed, materially injured or damaged, or mismanaged. The act specifies the duration, reporting requirements, priority, and compensation of receivers.

The act describes procedures for issuing a writ of garnishment against property (excluding earnings) in which a debtor has a substantial nonexempt interest and which is in the possession, custody, or control of a person other than the debtor to satisfy a claim for a debt. Co-owned property is subject to garnishment to the same extent as it is subject to garnishment under the law of the state where the property is located.

The act provides procedures for issuing a writ of sequestration of income from property in which the debtor has a nonexempt interest as security (and interest and costs) as the United States may recover on a claim for a debt. Such a writ may be issued in an action on a contract in certain circumstances, in an action against the debtor for damages in tort, if the debtor resides outside the jurisdiction of the United States, or in an action to recover a fine, penalty, or tax.

Postjudgment Remedies. The act also addresses postjudgment remedies including judgment lien, enforcement of judgment, execution, installation payment order, garnishment, and discharge.

A judgment in a civil action creates a lien on all real property of a judgment debtor on filing a certified copy of an abstract of a judgment in the manner in which a notice of tax lien would be filed under paragraphs (1) and (2) of Section 6323(f) of the Internal Revenue Code of 1986. A lien is effective, unless satisfied, for a period of 20 years, but, if a renewal request is filed before that period expires, may be renewed for an additional 20 years with court approval.

A debtor who has a judgment lien against his property is not eligible to receive any grant or loan which is made, insured, guaranteed, or financed directly or indirectly by the United States government. Such a debtor also is not eligible to

receive funds directly from the federal government in any program, except funds to which the debtor is entitled as beneficiary, until the judgment is paid in full. The agencyresponsible for such grants and loans may promulgate regulations to allow for a waiver of eligibility.

On proper application, a court may order the United States to sell, in accordance with sections 2001 and 2002 of Title 28 of the United States Code, any real property subject to a judgment lien. This authorization, however, does not preclude the United States from using an execution sale pursuant to Section 3203(g) to sell real property subject to a judgment lien.

A judgment may be enforced by any remedy set forth in the subchapter relating to postjudgment remedies, as well as any other writ pursuant to Section 1651 of Title 28, as necessary to support such remedies, subject to rule 81(b) of the Federal Rules of Civil Procedure.

The act prescribes procedures for execution. All property in which a judgment debtor has a substantial nonexempt interest is subject to levy pursuant to a writ of execution. A debtor's earnings are not subject to execution while in the possession, custody, or control of the debtor's employer. Co-owned property is subject to execution to the same extent that it is so subject under the law of the state where the property is located.

The act authorizes a court to order a judgment debtor to make specified installment payments to the United States if it is shown that he is receiving or will receive substantial nonexempt disposable earnings from self employment that are not subject to garnishment or is diverting or concealing substantial earnings from any source or property received in lieu of earnings.

A court may issue a writ of garnishment against property (including nonexempt disposable earnings) in which a debtor has a substantial nonexempt interest and which is in the possession, custody, or control of a person other than the debtor to satisfy a judgment against a debtor. Co-owned property is subject to garnishment under the law of the state where the property is located. The act also prescribes the general requirements for a writ of garnishment and procedures applicable to it.

Fraudulent Transfers Involving Debts and Miscellaneous. The act defines various terms including asset, creditor, and lien, and describes insolvency, value for transfer or obligation, and fraudulent transfers. It also sets out remedies of the United States and defenses, liability, and protection of transfers.

Discussion

By creating a uniform federal framework for collecting federal debts in the federal courts, the act improved efficiency and expedited collections. The uniform framework overcame obstacles presented by differences and conflicts in various

provisions of state law which formerly determined the nature, availability, and timing of executing various collection remedies.

P. Debt Collection Improvement Act of 1996

Statutory Intent and History

The Debt Collection Improvement Act of 1996 (DCIA; P.L. 104-134; 110 Stat. 1321-358; 31 U.S.C. §§ 3711 et seq.), Section 31001 of the Omnibus Appropriations Act, FY1996, amends several sections of Title 31 that were enacted in the Federal Claims Collection Act of 1966 and the Federal Debt Collection Act of 1982, as well as some sections of Titles 5, 26, 28, and 42 of the United States Code.[911] It is intended to enhance authorities for administrative, salary, and tax refund offsets and collections, as well as to increase delinquent debt collections, limit costs of collecting debts, and reduce losses from debt management activities.

Major Provisions

Coverage. The act extends authorities relating to claims of the United States and claims against the United States to judicial agencies and instrumentalities, to make the judicial branch consistent with the executive and legislative branches. It also adds administrative offset authority and requirements for charging interest and penalties to debts owed to the United States by states and units of local governments.

Administrative Offset Authority. The act enhances administrative offset authority by requiring its use except when a statute explicitly prohibits using it. With some exceptions, a disbursing official of the Department of the Treasury, Department of Defense, the United States Postal Service, or any other government corporation, or any disbursing official of the United States designated by the Secretary of the Treasury, is required to offset at least annually the amount of a payment that a that certifying agency has certified to an official for disbursement, by an amount equal to the amount of a claim which a creditor agency has certified to the Secretary.

The act gives the Secretary of the Treasury discretion to apply administrative offset authority to any past-due, legally enforceable debt owed to a state if the appropriate state disbursing official requests an offset and there is a reciprocal agreement with a state that meets certain requirements.

Salary Offset Authority. The act requires agencies to which debts are owed and which have outstanding delinquent debts to participate at least annually in a

---

[911] The act was originally introduced in H.R. 2234 in 1995. An earlier version passed the House in the Seven Year Balanced Budget Reconciliation Act of 1995, H.R. 2491, as amended by the substitute of the House Committee on the Budget, H.R. 2517. (Congressional Record, daily edition, vol. 141 (Oct. 26, 1995), part II, pp. H10995, H11031H11040). The act did not appear in the conference report on the Reconciliation Act, H.Rept. 347, 104th Cong., 1st sess., 1995 (Congressional Record, daily edition, vol. 141 (Nov. 15, 1995), part II, p. 12509.

computer match of their delinquent debt records with records of federal employees to identify those employees who are delinquent in repaying these debts. The computer match requirement does not apply to debts under the Internal Revenue Code.

Taxpayer Identifying Numbers. The act directs the head of each federal agency to require each person doing business with the agency to furnish it with the person's taxpayer identifying number. It defines doing business with a federal agency and requires each agency to disclose its intent to use the identifying number for purposes of collecting and reporting on any delinquent amounts arising out of the person's relationship with the government. Creditor agencies are authorized to match their debtor records with records of the Department of Health and Human Services and Department of Labor records. Taxpayer identifying records may be disclosed only if disclosure is not otherwise prohibited by the Internal Revenue Code. It amends the definition of included federal program in the Internal Revenue Code.

Barring Delinquent Federal Debtors from Federal Loans, Loan Insurance, or Loan Guarantees. Unless the head of an agency or delegatee, i.e. the chief financial officer or deputy chief financial officer, waives this authority, a person who has an outstanding debt (other than a debt under the Internal Revenue Code) in delinquent status with any federal agency may not obtain a loan (other than a disaster loan) or loan insurance or loan guarantee administered by the agency. Such person may obtain additional loans or loan guarantees only after the delinquency is resolved. At the request of an agency, the Secretary of the Treasury may exempt any class of claims. An amendment excludes, in addition to disaster loans, a marketing assistance loan or loan deficiency payment under Subtitle C of the Agricultural Market Transition Act (7 U.S.C. §§ 7231 et seq.).

Disclosures to Consumer Reporting Agencies and Commercial Reporting Agencies. The head of an agency must require, as a condition for insuring or guaranteeing any loan, financing, or other extension of credit under any law to a person, that the lender provide information relating to the extension of credit to consumer reporting agencies and commercial reporting agencies, as appropriate. Under certain circumstances, the head of an agency may provide information that a claim is current in payment, i.e., not delinquent, to a consumer reporting agency or a commercial reporting agency.

Contracts for Collection Service. Under appropriate conditions, an agency head may enter into a contract with a person for collection service to recover indebtedness owed, or to locate or recover assets, of the United States government. This authority may not be used to locate or recover assets of the United States held by a state government or financial institution unless an agency has established procedures approved by the Secretary of the Treasury to identify and recover such assets.

Cross-Servicing Agreements and Centralization of Debt Collection Activities in the Department of the Treasury. If a nontax debt or claim owed to the United States has been delinquent for 180 days, the head of the agency that administers the program giving rise to the debt or claim is required to transfer it to the Secretary of the Treasury. Upon such transfer, the Secretary is required to take appropriate action to collect or terminate collection actions on the debt or claim. These authorities do not apply to certain categories of debts or claims. The Secretary may designate and withdraw designations of debt collection centers operated by other federal agencies.

Garnishment. The act authorizes the head of an agency, notwithstanding any provision of state law, to garnish the disposable pay of an individual to collect the amount owed, if the individual is not currently making required payment in accordance with an agreement between the agency head and the individual.

Adjustment of Administrative Debt and Dissemination of Information Regarding Identity of Delinquent Debtors. The head of any agency is authorized to increase an administrative claim by a cost of living adjustment instead of charging interest and penalties.

The act authorizes any agency head, with the review of the Secretary of the Treasury, for the purpose of collecting any delinquent nontax debt owed by any person, to publish or otherwise disseminate information regarding the identity of the person and the existence of the nontax debt.

Federal Civil Monetary Penalties Inflation Adjustments and Electronic Funds Transfer. The act amends the Federal Civil Penalties Inflation Adjustment Act of 1990 (P.L. 101-410; 104 Stat. 890; 28 U.S.C. § 2461 nt) to direct the head of each agency, not later than 180 days after the enactment of the Debt Collection Improvement Act, and at least once every four years thereafter, to adjust by regulation each monetary civil penalty provided by law within the jurisdiction of the agency (with some exceptions). The initial increase could not exceed 10%.

The Federal Financial Management Act of 1994 (P.L. 103-356; 108 Stat. 3410, 3412; 31 U.S.C. § 3301 nt) is amended to mandate electronic funds transfer for all payments to a recipient who becomes eligible to receive them more than 90 days after enactment of the Debt Collection Improvement Act of 1996. This requirement may be waived for any individual who does not have an account with a financial institution. All payments made after January 1, 1999, must be made by electronic funds transfer.

Expanding Use of Private Attorneys. The act expands use of private attorneys by amending requirements relating to the number of contracts in each district and repealing termination dates for the pilot program.

Discussion

The Debt Collection Improvement Act of 1996 is intended to improve federal debt collection by, among other things, adding a new administrative offset authority, revising salary offset authority, permitting non-delinquent consumer debt to be reported to credit bureaus, allowing agencies to retain a portion of annual collections of delinquent debts, expanding tax refund offset authority, and requiring electronic disbursements.

Two bills to amend federal debt collection procedures passed the House and one was introduced in the Senate in the 105th Congress. No further action occurred on any of the bills. Among other provisions, H.R. 4243 and H.R. 4857 would have (1) permitted a private collection contractor to verify information about an individual's employer and compensation; (2) denied to individuals with delinquent debt eligibility for the award or renewal of a federal benefit, including access to federal loans; required agency heads to establish programs to sell nontax debt; and (3) authorized agency heads to accept electronic payments, including debit and credit cards, to satisfy nontax debts. S. 2571 would have permitted agencies administering benefit programs to verify the information provided to them by applicants for these benefits and would have authorized the Secretary of Health and Human Services to disclose information to another agency from the National Directory of New Hires. (Similar provisions were in H.R. 2347 and H.R. 2063 and were discussed during the consideration of H.R. 4243.) Additionally, S. 2571 would have authorized the administrator of the General Services Administration, on behalf of federal agencies, to acquire commercial services to accept electronic payments for grants or loans and electronic claims submissions from the general public.

In the 106th Congress, H.R. 436 and H.R. 1441 passed the House and were referred to the Senate Committee on Governmental Affairs, but no further action occurred. H.R. 436 was identical to H.R. 4857 (105th Congress) and H.R. 1441 was similar to it. During the 106th Congress, H.R. 4181, a bill to prohibit delinquent federal debtors from being able to enter into federal contracts and to amend the Internal Revenue Code to provide for disclosure to federal agencies of certain information to relating to delinquent taxpayers, was considered in committee.

A subcommittee of the House Committee on Government Reform (the Subcommittee on Government Management, Information, and Technology, now renamed the Subcommittee on Government Efficiency and Financial Management) has conducted regular oversight hearings on DCIA since its enactment. Generally, those hearings have found that the DCIA provisions (especially those on administrative offset and cross-servicing) have not been fully implemented in executive agencies, that the amounts of delinquent nontax debts and debts written off remain significant, and that agencies have experienced difficulties in identifying and referring eligible debt to the Department of the Treasury's Financial Management Service (FMS) and in identifying debt that is collectible. Agencies were encouraged to include debt collection as a

performance goal for purposes of the Government Performance and Results Act of 1993 (P.L. 103-62; 107 Stat. 285).

General Accounting Office (GAO) evaluations of the implementation of DCIA have focused on many of the issues stated above and have frequently been featured at the House hearings. In its October 2003 evaluation of the cross-servicing program, GAO recommended that the Department of the Treasury help to ensure that debts returned from private collection agencies be examined to make sure that all appropriate collection action has been taken and that the Office of Management and Budget work to improve agency compliance with the standards and policies for writing off and closing out debts. In a December 2001 evaluation, GAO found that the Department of Agriculture (USDA) had not yet fullyimplemented keyprovisions of DCIA. An increased commitment by USDA to implement DCIA was reported by GAO in November 2002, but GAO cautioned that a sustained commitment would be necessary to address problems, including those relating to identifying and referring eligible debts to FMS.

The FMS' Fiscal Year 2003 Report to Congress showed that $70.061 billion of nontax debt was delinquent as of September 30, 2003. Of this total, $7.780 billion was debt written off, $55.273 billion was delinquent debt greater than 180 days old and $14.916 billion was delinquent debt determined to be currently not collectible. The report also showed that $18.2 billion of nontax debt has been collected through the Treasury Offset Program and Cross-Servicing Program since the enactment of DCIA; $3.1 billion was collected through these programs in FY2003. The Departments of Education ($32.166 billion) and Agriculture ($6.613 billion) have the most delinquent debt. As of September 30, 2003, private collection agencies under contract with the Departments of Education, Health and Human Services, and Treasury had been referred $14.375 billion in debt and collected $546.8 million.

Q. Improper Payments Information Act of 2002

Statutory Intent and History

Toward the end of the 107th Congress, the Improper Payments Information Act (IPIA) of 2002 was enacted as P.L. 107-300.[912] The intent of the law is to increase financial accountability in the federal government, and thereby reduce wasteful spending, thus augmenting previous financial management reform laws. The law requires agencies each year to identify programs that are vulnerable to improper payments and to estimate the amount of overpayments or underpayments. As explained in the next section, improper payments generally include any payments by the federal government that should not have been made or were made in an incorrect amount.

Previously, there was no government-wide requirement for agencies to estimate or report in any systematic way on improper payments, although it is generally acknowledged that billions of dollars are involved. For example, after reviewing audited financial statements for the 24 Chief Financial Officers (CFO) Act agencies, GAO concluded that improper payments voluntarily reported by the agencies declined slightly, from $ 20.7 billion in FY1999 to $19.6 billion in FY2001.[913] In 2003, the Office of Management and Budget (OMB) testified that overpayments for major benefit programs alone were approaching $35 billion each year.[914]

H.R. 4878, to provide for estimates and reports of improper payments by federal agencies, was introduced on June 6, 2002, by Representative Stephen Horn, with a group of bipartisan cosponsors, and referred to the House Committee on Government Reform. The Subcommittee on Government Efficiency, Financial Management, and Intergovernmental Relations held markup on the measure on June 18, 2002, and approved the bill, as amended, by unanimous voice vote. On July 9, 2002, H.R. 4878 was considered under suspension of the rules and passed the House, as amended, by voice vote. On October 9, 2002, the Senate Committee on Governmental Affairs ordered H.R. 4878 to be reported favorably, with a substitute amendment. On October 17, 2002, the bill, as amended, passed the Senate by unanimous consent, and on November 12, under suspension of the rules, the House agreed to the Senate amendment byvoice vote. The President signed H.R. 4868 into law on November 26, 2002 (P.L. 107-300).

[912] 116 Stat. 2350; 31 U.S.C. § 3321 note.

[913] U.S. General Accounting Office, Financial Management: Coordinated Approach Needed to Address the Government's Improper Payments Problems, GAO-02-749, Aug. 2002, p. 11.

[914] Cited in U.S. General Accounting Office, Financial Management: Challenges Remain in Addressing the Government's Improper Payments, GAO-03-750T, May 13, 2003, p. 1.

The problem of improper payments received attention in previous Congresses. During House floor debate on H.R. 4878, Representative Horn noted that hearings held in the past "clearly demonstrated the need" for such legislation:

Since the 104th Congress, the subcommittees I have chaired have held approximately 100 hearings on wasteful spending within the Federal Government. Time and again witnesses from the General Accounting Office and agency inspectors general have told the subcommittee that poor accounting systems and procedures have contributed to the government's serious and long-term problems involving improper payments.[915]

In the written report of the Senate Committee on Governmental Affairs to accompany H.R. 4878, the measure was also specifically linked to GAO recommendations offered in a best practices guide for agencies in managing improper payments, prepared at the request of the committee chairman, Senator Joseph Lieberman. The guide suggested that determining the nature and extent of risks for improper payments was a key step in the process, and H.R. 4868 would address this by requiring agencies to estimate total improper payments made each year in their programs and also to consider ways to reduce these amounts.[916] In August 2002 GAO also provided an update of previous reports on improper payments at the request of the ranking minority member, Senator Fred Thompson.[917]

Major Provisions

The act directs each executive branch agency, in accordance with OMB guidance, to review all of its programs and activities each year, identify those that may be susceptible to significant improper payments, estimate the amount of improper payments, and report this information to Congress by March 31 of the following applicable year. OMB determines the method of reporting, which is to be used by all agencies.

With respect to any program or activity with estimated annual improper payments exceeding $10 million, the agency is required to provide along with the estimate a report on agency actions to reduce such improper payments. The report is to discuss the causes of the improper payments and the results of the

Cited in U.S. Congress, Senate Committee on Governmental Affairs, Improper Payments Information Act of 2002, report to accompany H.R. 4878, 107th Cong., 2nd sess., S.Rept. 107-333 (Washington: GPO, 2002), p. 2.

[917] See GAO Report GAO-02-749, Aug. 2002.

actions taken to address them, to state whether the agency has information systems and other necessary infrastructure to reduce such payments to minimal cost-effective levels, to describe budgetary resources requested by the agency to accomplish any needed changes in information systems and infrastructure, and to identify steps the agency has taken to ensure that managers are held accountable for reducing improper payments.

Improper payment is defined as any payment that should not have been made or that was made in an incorrect amount. The definition includes payments to ineligible recipients or for ineligible services, duplicate payments, and payments for services not received or that do not reflect applicable discounts. The act covers payments made by a federal agency, a federal contractor, or a governmental or other organization administering a federal program.

Discussion

IPIA. The IPIA codified and expanded efforts underway in the executive branch to reduce improper payments. The Bush Administration in 2001 designated improving financial performance as one of five government-wide initiatives in the President's Management Agenda.[918] The establishment of a baseline on the extent of erroneous (improper) payments in major federal benefit programs was a key component of the financial management initiative.[919] Agencies were to include available information on erroneous payment rates for benefit and assistance programs over $2 billion as a part of their FY2003 budget submissions. In July 2001, revisions to OMB Circular No. A-11 in Section 57, implemented this objective, requiring 15 federal agencies to include improper payment information, covering nearly 50 programs, with initial FY2003 budget materials to OMB.[920] Enactment of the IPIA extended and augmented the erroneous payment reporting requirements, originally contained in OMB Circular No. A-11 for the 15 agencies designated therein, to all executive branch departments and agencies.

In May of 2003, OMB distributed a guide to instruct agencies on the implementation of the IPIA.[921] The guide provides a detailed definition of

[921] OMB, "Improper Payments Information Act of 2002 (Public Law No: 107-300)," Memorandum for Heads of Executive Departments and Agencies from Mitchell E. Daniels Jr., May 21, 2003, M-03-13., available at: [http://www.whitehouse.gov/omb/memoranda/print/m03-13.html], visited Jan. 22, 2004.

improper or erroneous payments and of program and activity and then outlines four action steps to be followed by the agencies. First, agencies must systematically review all their programs and activities and identify those which are susceptible to significant erroneous payments, defined as "annual erroneous payments in the program exceeding both 2.5 percent of the program payments and $10 million." Second, agencies shall determine an annual estimated amount of erroneous payments made in those programs and activities found susceptible to significant errors; this calculation is based on a statistical random sample sufficiently large "to yield an estimate with a 90 percent confidence interval" within 5% precision. The third step is to determine why the particular programs are at risk, and then put in place a plan to reduce the erroneous payments. The last step in implementation for the agency is reporting to the President (via OMB) and Congress on the estimates of the annual amount of erroneous payments in its programs and activities and on progress in reducing them.

The House Subcommittee on Government Efficiency and Financial Management held oversight hearings on improper payments in May and July 2003.[922] A GAO report to the subcommittee on the initial implementation under the IPIA followed in October 2003.[923] There has been some criticism about the OMB guidance to the agencies in implementing the IPIA, particularly about defining "significant [emphasis added] improper payments" to include at least 2.5 % of payments, in addition to the estimated improper spending over $10 million. According to a recent news article, the chairman and ranking minority member of the Senate Finance Committee, in a January 9, 2004, letter to OMB Director Joshua Bolten, stated:

> *...OMB should not have established the 2.5 percent threshold and should have simply required agencies to report all programs generating estimated improper payments of more than $10 million. Because of the 2.5 percent threshold, some programs wasting more than $10 million could slip through the cracks, the senators explained. 'The improper payments figures that will*

eventually be reported to the public will look better and feel better than they really are…' Grassley and Baucus said.[924]

Likewise, the chairman and ranking minority member of the House Subcommittee on Government Efficiency and Financial Management, Representative Todd Platts, and Representative Marsha Blackburn, sent a letter to OMB in August 2003, questioning the 2.5 % minimum threshold. OMB's Controller of the Office of Federal Financial Management, Linda Springer, has defended the guidelines as stringent enough, noting, "We're [at OMB] certainly not trying to take any steam out of the effort."[925]

New estimates from the agencies of improper payments, and of possible ways to reduce them, are due to Congress each year, providing useful oversight information. If dissatisfaction with OMB's guidelines should linger or increase, language in the IPIA might be revisited. Meanwhile, the control of improper payments remains a priority for OMB as a part of the President's Management Agenda.

Recovery Auditing. Another provision related to improper payments, enacted in the 107th Congress as Section 831 of the National Defense Authorization Act for FY2002,[926] provides a statutory mandate for agencies to identify and recover contract overpayments (one type of improper payments) by using recovery auditing. Recovery auditing is designed to identify and then recoup inadvertent overpayments by reviewing large volumes of purchase and contract records using ongoing, systematic procedures. Originating in the private sector around 1970, recovery auditing came to the federal government via a demonstration program first mandated in the National Defense Authorization Act for FY1996 (P.L. 104-106). The FY1998 Defense Authorization Act (P.L. 105-85) provided for continuation and expansion of the pilot program, and also called for a review of its results by the General Accounting Office (GAO). The GAO report reviewing the demonstration program in recovery auditing undertaken by the Department of Defense at the Defense Supply Center in Philadelphia was issued at the end of 1998[927] and provided an impetus for additional legislative attention to recovery auditing in the 106th Congress.

H. R. 1827 (106th Congress) was introduced by Representative Dan Burton on May 17, 1999, and was referred to the Committee on Government Reform. On

[927] U.S. General Accounting Office, Contract Management: Recovery Auditing Offers Potential to Identify Overpayments, GAO/NSIAD-99-12, Dec. 1998.

June 29, 1999, hearings were held by the Subcommittee on Government Management, Information, and Technology.[928] On July 21, 1999, subcommittee consideration and markup of the measure occurred, with approval by voice vote, after which the bill, with an amendment in the nature of a substitute, was forwarded to the full committee. On November 10, 1999, the Government Reform Committee considered the measure and, by voice vote, approved the amendment in the nature of a substitute from the subcommittee, as further amended, and ordered that H.R. 1827 be favorably reported. It was reported on November 17, 1999, and placed on the House Calendar.[929] On March 8, 2000, H.R. 1827 passed the House by a vote of 375-0. On September 12, 2000, Senator Fred Thompson introduced S. 3030 (106th Congress) as a companion measure to H.R. 1827; the bill was referred to the Committee on Governmental Affairs. On September 27, 2000, the committee, by voice vote ordered S. 3030 reported favorably to the Senate, and the report was filed on October 12, 2000.[930] The Senate took no further action on S. 3030 or H.R. 1827 before the 106th Congress ended.

In the 107th Congress, Representative Burton introduced H.R. 2547, the Erroneous Payments Recovery Act, "To require certain executive agencies to carry out a cost-effective program for identifying any errors made in paying contractors and for recovering any amounts paid to contractors." This measure, similar to H.R. 1827 in the 106th Congress, was referred to the House Committee on Government Reform, but no further action occurred on the bill. Provisions relating to recovery auditing, however, were included in H.R. 2586, the National Defense Authorization Act for FY2002, as reported and passed by the House.[931] There were no similar provisions in the Senate bill, but the conference version contained the recovery auditing provisions from the House version, with modifications,[932] as Section 831. The measure was signed into law on December 28, 2001, becoming P.L. 107-107.

[928] U.S. Congress, House Committee on Government Reform, Subcommittee on Government Management, Information, and Technology, H.R. 1827, the Government Waste Corrections Act of 1999, hearing, 106th Cong., 1st sess., June 29, 1999 (Washington: GPO, 2000).

[929] U.S. Congress, House Committee on Government Reform, Government Waste Corrections Act of 1999, report to accompany H.R. 1827, 106th Cong., 1st sess., H.Rept. 106474 (Washington: GPO, 1999).

[930] U.S. Congress, Senate Committee on Governmental Affairs, To Amend Title 31, United States Code, to Provide for Executive Agencies to Conduct Annual Recovery Audits and Recovery Activities, and for Other Purposes, report to accompany S. 3030, 106th Cong., 2nd sess., S.Rept. 106-502 (Washington: GPO, 2000).

[931] U.S. Congress, House Committee on Armed Services, National Defense Authorization Act for Fiscal Year 2002, H.Rept. 107-195, 107th Cong., 1st sess. (Washington: GPO, 2001), pp. 342-343.

[932] See U.S. Congress, Conference Committee, National Defense Authorization Act for Fiscal Year 2002, H.Rept. 107-333, report to accompany S. 1438, 107th Cong., 1st sess. (Washington: GPO, 2001), p. 691.

Section 831 of P.L. 107-107 amends Chapter 35 of Title 31, United States Code, by adding a new Subchapter VI, "Recovery Audits." Section 3561 directs the head of each executive agency that enters into contracts in excess of $500 million in a fiscal year to carry out a cost-effective program for identifying any errors made in paying contractors and for recovering amounts erroneously paid. The OMB Director is required to issue guidelines for conducting the recovery audit programs, with specified protections and policies. Section 3562 provides for the disposition of recovered funds. Funds collected under the program may be used to reimburse the actual expenses incurred by the agency in administering the program or to pay contractors for recovery auditing services. Beyond funds needed for these purposes, amounts recovered may be credited to the appropriations from which the erroneous payments were made, or otherwise be deposited in the Treasury as miscellaneous receipts. Section 3563, sources of recovery services, requires each agency head to consider all available resources to carry out the program, including the agency itself, other departments and agencies, or private sector contractors. Section 3564 authorizes each agency head to carry out a program for improving contract payment management processes aimed at reducing payment errors and improving recovery of overpayments. Section 3565 clarifies the relationship of the subchapter to authority of inspectors general. Section 3566 deals with privacy protections. Section 3567 requires the OMB Director to report to the House Committee on Government Reform and the Senate Governmental Affairs Committee on implementation of the recovery auditing program.

In January 2003, OMB issued guidance to the agencies intended to assist them "to successfully implement recovery auditing and recovery activity as part of an overall program of effective internal control over contract payments." The guidance reiterates that the agencies required by statute to undertake recovery audit programs must report to OMB by December 31, 2004, on their activities during FY2003 and, likewise, for FY2004 and FY2005.[933]

R. Cash Management Improvement Act (CMIA) of 1990

Statutory Intent and History

The Cash Management Improvement Act of 1990 (CMIA; 104 Stat. 1058; 31 U.S.C. § 3335) is intended to ensure greater efficiency, effectiveness, and equity in the exchange of funds between the federal government and the states. Its objective is to minimize the ability of the federal or a state government to engage in cash management practices that allow it to earn interest on cash reserves at the expense of the other.

Passage of the act was preceded by seven years of joint study by federal and state management officials of how federally funded programs were being managed in terms of the actual receipt and expenditure of program funds. The early deliberations of this group resulted in a June 1983 Memorandum of Understanding that stated the intention of each group to find an equitable approach to intergovernmental cash management. Pilot tests of new procedures were conducted in 1984-1985.

Major Provisions

The major provisions of the act mandate (1) that each head of a federal executive agency implement procedures designed to disburse federal funds in a timely manner through cash, checks, electronic funds transfer, or any other means identified by the agency head and that each state establish procedures for minimizing the elapsed time between transfer of funds from the United States Treasury and state expenditure of these funds for the intended federal purpose; (2) a method to calculate the interest owed — to a state when the federal government fails to disburse federal funds in a timely manner, and to the federal government when a state fails to spend federal funds in a timely manner; (3) procedures to net the interest charges each level of government owes to the other and to transfer the net interest owed; and (4) the source of the interest payment when a federal agency must pay interest to a state.

Discussion

This act is a response to both levels of government experiencing instances in which one level of government was perceived to be manipulating cash management practices in a manner designed to hold on to money for a longer period of time than necessary. Such behavior earns interest income on the cash being held, but in effect this interest income is being paid by the other level of government.

The issue is illustrated here with an example about Medicaid payments. A delayed federal Medicaid payment might require a state to utilize its own funds to pay the vendor, thereby causing the state to lose the interest income it could have earned had it been able to hold on to its own cash. The state perceives that the federal government's delay in making the cash payment is motivated by the

federal government's desire to earn interest income on its cash (or, equivalently, to delay borrowing the money to make the Medicaid payment, thereby avoiding interest expenses).

A state's drawing cash from a federal account prior to the date the state pays a Medicaid vendor's bill has the effect of reducing the interest income the federal government can earn on this cash. The federal government perceives that the state's early drawdown is motivated by the state's desire to earn interest income on this cash between the date of the drawdown and the date the Medicaid vendor must be paid (or, equivalently, to delay borrowing money for other state expenses, thereby avoiding interest expenses).

In May 2002, the Financial Management Service (FMS), the Bureau within the Department of the Treasury charged with implementing the CMIA, issued new clarifying regulations in the Federal Register (31 C.F.R. § 205). The regulations define the federal assistance programs covered by the CMIA and provide guidance on the mechanics of CMIA implementation.[934]

S. User Fee Act of 1951

Statutory Intent and History

User fees — charges to recipients of goods and services provided by the government — have existed since the earliest days of the republic and, indeed, extend to the colonial period. Payment for mail delivery, use of toll roads, and certain customs services were among the first fees. In the contemporary era, there are several hundred such charges at the federal level, amassing nearly $158 billion in revenue in FY2002 alone.[935] These are authorized under a general user fee statute or, in most cases, agency-specific legislation. Such fees are usually defended as serving one or more purposes: (1) to help make a service or good self-sustaining; (2) to shift the burden of payment from the general taxpayer to an identifiable beneficiary; (3) to enhance revenue for the government; and (4) to regulate access to or determine availability of a good or service.[936]

Congressional Action. Despite the long heritage of such charges, a general user fee statute was not enacted until August 31, 1951: i.e., Title V of the Independent Offices Appropriations Act (IOAA) for Fiscal Year 1952.[937] This short provision, which was slightly modified in its 1982 codification, grants federal agencies the authority to levy charges on identifiable beneficiaries for government-provided goods and services. The law also establishes criteria to be followed in its implementation. Prior to this, an agency could impose fees only if it had specific statutory authority to do so.

In the early 1950s, several congressional panels advanced user fees on a broad scale. In 1950, the Senate Committee on Expenditures in the Executive Departments endorsed user charges for agencies under its jurisdiction and called for the "equitable transfer of many financial burdens from the shoulders of the

[936] For background on the general user fee statute and a detailed survey of user charges under various public laws, see U.S. Congressional Budget Office, The Growth of Federal User Charges: An Update (Washington: CBO, 1995), along with the initial CBO study: The Growth of Federal User Charges (Washington: CBO, 1993). This effort was reinforced by a recommendation from the Representatives on the Joint Committee on the Organization of the Congress, calling upon CBO "to conduct a study of all Federal user fees and the effects of inflation on any user fees since such fees were last adjusted." U.S. Joint Committee on the Organization of the Congress, Organization of the Congress: Final Report of the House Members, H.Rept. 103-413, 103rd Cong., 1st sess. (Washington: GPO, 1993), p. 19. [937] 65 Stat. 290. The original language and format of the statute were modified in 1982, when the authority was codified at 31 U.S.C. § 9701, by 96 Stat. 1051-1052.

taxpaying general public to the direct and special beneficiaries."[938] The next year, the House Appropriations Subcommittee on Independent Offices followed suit. Representative Yates, a member of the subcommittee, introduced its new legislation:

For the first time, our subcommittee went into a new question, the question as to whether or not there should be charges and fees made by regulatory agencies of the Government for many of the services which they render to those who come within their jurisdiction.[939]

The subcommittee emphasized that regulatory agencies, such as the Interstate Commerce Commission (ICC) and the Federal Communications Commission (FCC), must meet the expense of hearings, inspections, and other activities related to granting franchises, construction and other permits, and licenses. Continuing, Representative Yates stated:

The taxpayers pay every dollar of the charges and costs that go into that hearing. The companies pay nothing, other than taxes, and I think it is only fair that in exchange for the franchise that the Government gives the broadcasting company and the protection which the Government affords to such broadcasting company to assure its freedom from interference in the operation of its broadcasting facilities ... that it should pay some of the costs of the hearings.[940]

The subcommittee agreed and extended the doctrine to all federal agencies, not just the ones under its jurisdiction. To do this, the panel added an amendment to the appropriations bill that would permit each federal agency "to appraise its own operations to see whether or not it would be possible to recapture for the Government some of the costs that the Government incurs in connection with this regulation through the establishment of a schedule of fees."[941] In addition to this goal, Representative Yates noted that one agency official "expressed the viewpoint that such a practice would not only be feasible, but would deter and do away with superfluous applications."[942]

Executive Guidance. In 1959, the Bureau of the Budget, predecessor to the Office of Management and Budget (OMB), issued guidelines for implementing the user

[942] Ibid.

fee statute.[943] Circular No. A-25 emphasized that such charges should be assessed only for special benefits provided to identifiable recipients. The circular has been revised in the interim, most recently in 1993.[944] The newest version, which rescinded the original, extended guidance to agencies operating under other statutory authority, not just the 1951 user fee statute, and made more explicit the factors that agencies should consider when assessing the government's costs in providing the good or service.

Judicial Interpretation. Federal courts have been involved in interpreting user fee legislation, both the general user fee statute as well as agency-specific authorizations.[945] The Supreme Court has determined that such charges are constitutional when they impose a true fee, which must meet certain criteria and standards for fairness and equity, among other things, and when they are an appropriate legislative delegation of authority to the executive (i.e., levying a fee for services rendered, rather than imposing a tax).

According to several Supreme Court decisions,[946] user fees are allowable under the 1951 IOAA if they recoup appropriate costs for goods or services rendered to individual beneficiaries; the charges must be based only on the costs of services or goods provided to the individual recipient, as opposed to being based on all costs of goods or services that also benefit the general public. IOAA-authorized user fees must also meet the standards of fairness and equity under the law and must not be arbitrary. Finally, such charges are acceptable if they are consistent with congressional policy and if the agency has not exceeded its authority and has not disregarded the statute's guidelines.

[946] See, especially, Aeronautical Radio, Inc. v. United States, 379 U.S. 933 (1965). This ruling upheld the FCC fees as a constitutional delegation of authority to the executive. The Court found that they were fair and equitable; they were not arbitrary; they were consistent with congressional policy; and the agency had not exceeded its authority or disregarded the statutory guidelines. A later ruling, National Cable Television Association v. United States, 415 U.S. 336 (1974), however, struck down new and higher FCC fees; these charges were based on all costs, both direct and indirect, and were for services that benefitted the general public, not just recipients of certain services. A similar ruling resulted from a companion case, based on annual charges that the Federal Power Commission levied on natural gas companies and electric utilities. Here, the Supreme Court held that the IOAA authorized only specific charges for specific services to identifiable recipients. Federal Power Commission v. New England Power Company, 415 U.S. 345 (1974).

Major Provisions

Purposes. Current general user fee legislation directs that "each service or thing of value provided by an agency ... shall be self-sustaining to the extent possible." By comparison, the original 1951 version had provided an elaborate list of goods and services for which charges could be levied — "any work, service, publication, document, benefit, privilege, authority, use, franchise, license, permit, certificate, registration or similar thing of value or utility" — while the 1982 codification reduced it to the generic concept of "each service or thing of value."

Also, the original enactment called for such services to be "self-sustaining to the full extent possible," while the codified version omitted the word full. No other purpose — such as redirecting costs away from the general taxpayer and to the beneficiary — is specified in the legislation.

Eligible Agencies. The original 1951 enactment, when granting user fee authority to federal agencies, specifically included "wholly owned government corporations as defined in the Government Corporation Control Act of 1945." By comparison, the 1982 codification struck this language and instead specifically excluded mixed-ownership government corporations from federal agencies having authority to impose user fees.

Authority. The general user fee statute grants powers to both the head of the agency as well as to the President with regard to "executive agencies." The head of each eligible agency is authorized to issue regulations establishing the charge for a service or thing of value. The law adds that regulations issued "by the heads of executive agencies are subject to policies prescribed by the President and shall be as uniform as practicable."

Criteria and Standards. The law requires user fees to meet certain criteria and standards. Each charge, importantly, is to be "fair." The original language read "fair and equitable," but "equitable" was omitted in the codified version as being redundant and otherwise included in "fair." In addition to this requirement, the charges are to be based on:

- the costs to the government (with the original version specifying "direct and indirect" costs);
- the value of the service or thing to the recipient;
- public policy or interest served; and
- other relevant facts (with the original version reading "pertinent" facts).

Disposition of the Revenue. Revenue collected under the general user fee statute is paid into the U.S. Treasury as miscellaneous receipts. This is in contrast to some agency-specific user fee statutes, in which the revenue is deposited in dedicated accounts and earmarked to reimburse the collecting agency for certain expenses and activities.

Effect on Other Statutes. The 1951 general user fee statute and its codified current version leave intact other legislation that either proscribes or prescribes user charges. The law insists that nothing contained in it repeals or modifies other statutes prohibiting the collection or fixing of any fee, charge, or price. The enactment also states that the user fee legislation does not affect any law "prescribing bases for determining charges, but a charge may be redetermined under this section consistent with its prescribed bases."

Discussion

The general user fee statute, enacted in 1951 and modified in 1982, provides a means for standardizing user charges and specifying the basic criteria which should be met. The statute delegates broad authority and substantial discretion and flexibility to agencies to establish fees for goods and services, in order to make them self-sustaining. This legislative initiative, in turn, has been endorsed and supported by the Bureau of the Budget and its successor, the Office of Management and Budget, through regulations, most recently in 1993. Contributing to the 1993 revision of OMB Circular No. A-25, moreover, was an earlier recommendation from the Administrative Conference on the United States (ACUS). Based on a major study of user fees that it had commissioned, in 1987, ACUS recommended general principles to guide the setting and implementation of user fees.[947]

The general user fee statute, however, has failed to standardize user fees and most of these charges result from specialized grants of authority to particular agencies. Several reasons explain this situation.

One is that the language of the general user fee law is vague, and its provisions have been viewed as inconsistent. Most open-ended, for instance, is the allowance that "other relevant facts" be considered when establishing a charge. In addition, charges that are set to make a service "self-sustaining" may not be "fair" to the parties who must pay. Furthermore, the requirement to consider public policy or other interests might result in costs that differ from the actual costs of providing a good or service. Regulating or reducing the volume of traffic at congested national parks, if that were a public policy goal, for instance, might require higher prices for parking and admission than would otherwise be justified in terms of the actual costs to the government and the value of the service to the recipient.

Other reasons help to explain a reluctance to use the across-the-board authority and instead rely on specific legislation to establish particular charges for goods or services. Operating under the general user fee statute requires an agency to act

---

[947] U.S. Administrative Conference of the United States, "User Fees," Recommendation 874, adopted June 12, 1987.

alone, without the immediate support of Congress for the specific charge. This means that the agency incurs the objections directly and solely from adversely affected parties, that is, the individuals and industries who must pay a new or higher price (for a good or service that they had received previously for free or at a lower price). This development may result in public criticism of the agency's planned charges, intense opposition to them before Congress as well as other parts of the executive, or in potentially costly court challenges to the fees.[948]

Besides these disincentives to using the general user fee statute, agencies lack a financial or budgetary incentive to impose fees under the IOAA: its revenue is deposited in the general treasury and is not dedicated for use by the agency itself. In short, the agency would have to do the work (e.g., argue on behalf of a charge, establish the proper fee amount, and collect the revenue) but receive no direct budget benefit. In contrast, some agency-specific user fee statutes establish special accounts in the treasury and earmark the revenue for the agency's own use, for instance, to reimburse it for collection expenses and/or to support certain operations and activities. In addition to determining the disposition of the revenue, specialized user fee statutes, by comparison to the general authority, allow Congress to control virtually all other aspects of such charges. Legislation can be used to erect a fee structure, set the fees themselves, identify and charge particular beneficiaries or recipients of a service, and provide for exemptions among specific recipients and exceptions to certain fees.

IV. Organization

A. Government Corporation Control Act

Statutory Intent and History

In 1945, partly in response to the proliferation of corporate bodies created during the Depression and World War II, Congress enacted the Government Corporation Control Act (59 Stat. 841; 31 U.S.C. §§ 9101-9110).[949] The intent of the act was (1) to establish consistent treatment and appropriate accountability and control of revenue producing business enterprises organized as corporate bodies; and (2) to assure reasonable financial autonomy and flexibility in carrying out authorized programs.[950]

The Control Act does not define what constitutes a government corporation or how corporations may or may not differ from other categories of agencies. The charter for each federal government corporation is the separate enabling legislation passed by Congress. The Control Act simply lists corporate organizations covered by the act, a list that is subject to occasional additions and deletions.[951] The act provides for two types of government corporations: "wholly owned government corporations," and "mixed-ownership government corporations." In the absence of a criteria-based definition, the number of government corporations may differ from one source to another. The most commonly used estimates suggest a figure between 22 and 44, both figures derived from General Accounting Office (GAO) reports.[952]

Despite the Control Act's silence on the matter, a working definition of government corporation has emerged.[953] The distinguishing characteristics of a federal government corporation are that it is an agency of government, established by Congress to perform a public purpose, which provides a market-

---

[949] Hereafter, "the Control Act."

[950] In 1982, P.L. 97-258 codified the 1945 act's provisions as 31 U.S.C. §§ 9101-9110 and technically repealed the 1945 act. These sections of the United States Code constitute the basic corporate control law.

[951] For example, in 1945 the Control Act listed the Reconstruction Finance Corporation. After this corporation was abolished in 1957, it was removed from the list.

[952] In a 1988 report, GAO profiled some 44 government corporations. See U.S. General Accounting Office, Profiles in Existing Government Corporations, GAO/AFMD-89-43FS, Dec. 1988. In 1995, using a more precise and narrow definition, GAO concluded that there were actually 22 government corporations. U.S. General Accounting Office, Government Corporations: Profiles of Existing Corporations, GAO/GGD-96-14, Dec. 1995.

[953] National Academy of Public Administration, Report on Government Corporations (Washington: NAPA, 1981).

oriented service that produces revenue that meets or approximates its expenditures. Corporations cover the spectrum in size and function from large, well-known corporations, such as the Federal Deposit Insurance Corporation, to small, low-visibility corporate bodies, such as the Federal Prison Industries in the Department of Justice. The absence of a statutory definition has led to some agencies being designated "corporations" although they perform no commercial function (e.g., Legal Services Corporation), and to confusion with "government-sponsored enterprises" (e.g., Federal National Mortgage Association, "Fannie Mae") that are instrumentalities, not agencies of the United States.

The courts have deemed government corporations to be agencies of the United States (Cherry Cotton Mills v. United States, 327 U.S. 536 (1946)) and, therefore, subject to laws generally applicable to agencies, unless otherwise exempted by a general statute or a statute applicable to the individual corporation. In practice, application of government-wide statutes tends to vary widely among the corporations, and it is necessary to review the status of each corporation to appreciate the full scope of the exceptions.

Major Provisions

The major provisions of the Control Act provide for (1) establishing and acquiring of corporations; (2) business type budgeting; (3) audits and management reports; and (4) accounts and obligations, and standards for depository institutions holding government corporation securities.

Some agencies (such as the Department of Agriculture, the National Credit Union Administration, and the Department of Housing and Urban Development, to name a few) have established or acquired government corporations.[954] However, under the Control Act an agency may only do so if specifically authorized by Congress.

Once established, a government corporation annually must prepare and submit to the President a business-type budget. The budget, which contains estimates and statements of financial condition, income, and expenses, is then submitted to Congress in the President's budget proposal. Although government corporations are usually expected to earn sufficient revenues to cover costs, Congress may supplement the government corporation's budget and provide for its debts.

The inspector general of every government corporation must annually audit the corporation's financial statements and submit audit reports to the head of the corporation, the Chairman of the House Committee on Government Reform and

[954] Most government corporations, though, are established independent of federal departments.

the Chairman of the Senate Committee on Governmental Affairs.[955] The Comptroller General of the United States may review the audit and report his findings to the Director of the Office of Management and Budget (OMB) and the head of the corporation. The Control Act also requires a government corporation to provide management reports each year to the President, the Director of OMB, the Comptroller General, and Congress. Management reports must include statements of financial position, operations, cash flows, the results of the inspector general's audit, and other items as required in the corporation's charter.

Government corporations, unlike most government agencies, are permitted to issue obligations. However, a corporation must first seek the approval of Secretary of the Treasury, who may decide many particulars of the obligation (e.g., interest rate, maturity). The Control Act also empowers a government corporation to consolidate its cash into an account kept by the Secretary of the Treasury at a Federal Reserve bank or other bank or fiscal agent as designated by the Secretary.

Discussion

The government corporation is an attractive option to policymakers for three reasons. First, government corporations possess significant revenue streams not available to other government agencies: commercial activities and government obligation issuance. Second, government corporations are largely exempted from government management laws (including personnel and compensation ceilings). Finally, government corporations can be used as transition organizations toward eventual privatization of some government agency or program (e.g., U.S. Enrichment Corporation). On the whole, then, the government corporation option offers policymakers some of the attractions of a private entity without sacrificing governmental control.[956]

---

[955] The inspector general may also assign this responsibility to an independent external auditor or the head of the corporation.

[956] Government corporations, no matter what function they perform or how "private" they may appear to the public or to themselves, are agents of the state subject to constitutional limitations. As the Supreme Court concluded in the 1995 Lebron case involving the status of AMTRAK, a government corporation has certain inherent legal characteristics that cannot be shed simply by legislative language or by corporate fiat. In the Lebron case, the Supreme Court decided that, while Congress can determine AMTRAK's governmental status for purposes within Congress's control (e.g., whether it is subject to general management laws, such as the Administrative Procedure Act), Congress cannot make the final determination of AMTRAK's status as a governmental entity for purposes of determining constitutional rights of citizens affected by its actions. To do so, in the Court's view, would mean that the government could evade its most solemn constitutional obligations by simply resorting to the corporate form of organization. (Michael A. Lebron v. National Railroad Passenger Corporation, 513 U.S. 374 (1995).)

B. Reorganization Act of 1977, as Amended

Statutory Intent and History

Although reorganization authority expired in 1984 and has not been renewed since, it is still part of the United States Code.[957] The authority to reorganize federal agencies has been delegated by Congress to the President from time to time since 1932. In 1949, the President submitted to Congress the reorganization bill that would form the basis of reorganization authority through 1977. The Reorganization Act of 1949 provided that the President could submit a reorganization plan involving any agency. This plan would go into effect as law after 60 days unless a resolution of disapproval was passed by a majority in either House (a one-house veto). Over time, Congress periodically renewed the President's reorganization authority, although the length of extensions varied and on occasion the authority was allowed to lapse.

As renewals were sought and debated, amendments were adopted altering the original law. For the most part, these amendments limited the President's authority. In most instances, specific incidents led to the limitations on presidential authority. For example, after failing to obtain a Department of Housing and Urban Development through legislation, President Kennedy employed the reorganization plan process. The plan was approved and the department established. Congress, however, found fault with the reorganization authority, and when it came up for renewal in 1963, Congress let the authority lapse. In 1965, when President Johnson once more requested the authority, Congress granted it but inserted a provision prohibiting the use of the reorganization authority to create new executive departments.

One of President Carter's first legislative proposals was a request that Congress renew the President's authority to submit reorganization plans. The Reorganization Act of 1977, as finally enacted, represented a procedural compromise. The approval process remained the same as in the 1949 Reorganization Act, except that a resolution of disapproval, subject to certain expedited procedures, was automatically introduced in both chambers. This ensured a congressional up-or-down vote. In addition, the President was permitted to amend a plan within 30 days after its submission, thus allowing for modifications in response to congressional concerns.

A major blow was struck against the reorganization plan procedure in 1983, when the Supreme Court ruled in INS v. Chadha that the legislative veto process was unconstitutional.[958] The Court held that exercises of legislative power must fulfill the constitutional requirement of consideration by both houses of Congress and

---

[957] 5 U.S.C. §§ 901-912.

[958] 462 U.S. 919 (1983).

"presentment" to the President. Inasmuch as legislative vetoes frequently provided for consideration by only one house and, by definition, did not involve the President, the mechanism was found to be constitutionally deficient. One consequence of the Chadha ruling was that Congress passed legislation in 1984 that had the effect of ratifying reorganization plans previously approved (P.L. 98-532; 98 Stat. 2705).

Congress approved the Reorganization Act Amendments of 1984, which extended the reorganization plan authority from November 1984 to December 31, 1984. Although it was never used and has expired, this version of reorganization authority remains "on the books," and maybe found in Chapter 9 of Title 5 of the United States Code. The 1984 amendments, an effort to address the constitutional issues raised by the Chadha decision, required that a joint, rather than concurrent, resolution be introduced in both the House and Senate upon receipt of a reorganization plan. Another significant innovation in the 1984 amendments was the requirement that an implementation section be included in the President's message accompanying the reorganization plan.

In the absence of presidential reorganization authority, reorganizations of federal agencies are accomplished through the regular legislative process.[959] Prominent examples of such reorganizations include the creation of the Department of Veterans Affairs[960] in 1988 and the creation of the Department of Homeland Security in 2002.[961]

Major Provisions

Under provisions of the Reorganization Act of 1977, as amended through 1984, the President could submit to Congress a reorganization plan providing for the transfer, in whole or in part, of an agency or its functions to another agency, "except that no enforcement or statutory program shall be abolished by the plan."[962] A plan could not "create a new department," continue an agency or function beyond the period authorized by law, or authorize an agency to perform a function not expressly provided in law.[963]

---

[959] Certain agency heads are statutorily vested with the authority to conduct limited reorganizations within their own organizations. For example, such authority is vested in the Secretary of Defense in Title 10, Section 125, of the United States Code.

[960] P.L. 100-527, 102 Stat. 2635.

[961] P.L. 107-296, 116 Stat. 2135.

[962] 5 U.S.C. § 903(a)(2).

[963] 5 U.S.C. § 905(a). The statute includes several other limitations on what can be achieved by a reorganization plan.

Once the President submitted a reorganization plan, Congress had 90 days to act upon the following joint resolution: "That the Congress approves the reorganization plan numbered _____ transmitted to the Congress by the President on _____, 19___."[964] The President had to provide an "implementation plan" meeting the requirements of the law when submitting a plan. As a joint resolution, this vehicle had to be approved by the President to have the force of law.

Discussion

The original rationale for delegating to the President broad authority to propose executive reorganization plans was the widely held view that the President, as chief manager of the executive branch, ought to have powers to make organizational and management changes without having them subject to so-called "political pressures" from Congress. Reorganization was viewed in large measure as a technical exercise best left to the experts in the executive branch.

Reorganization is now not usually regarded as merely a technical exercise. Reorganizations may lead to increased organizational efficiency, economy, and effectiveness, but they also often have significant institutional and political consequences. From the early 1960s on, questions were raised in congressional deliberations as to both the constitutional bases for reorganization authority and processes and the political wisdom of assigning this broad authority to the White House. The successive reorganization acts were founded upon the concept of permitting the President to submit to Congress what were, in fact, laws that would go into effect unless either house prevented activation by passing a motion of disapproval. Despite modifications of the process, this "legislative veto" was increasingly criticized as the years passed.

The reorganization process began to be questioned in terms of both its utility and its potential for increasing conflict and distrust between the branches. Congress, in successive reorganization acts, gave the President authority to circumvent the regular legislative process. Yet, when Presidents invoked the authority, they opened themselves to the accusation of violating the established system. Plans were sometimes submitted that probably would not have been accepted using the regular legislative process, thus increasing tension between the branches. After each presidential "misuse," Congress responded by adding restrictions and exemptions, gradually circumscribing the power until the reorganization plan process (provided in the 1977 act, as amended) was a mere shadow of the original Reorganization Act of 1949. With the 1983 Chadha decision striking down the legislative veto, the utility and desirability of using the reorganization act, compared to following the regular legislative process, came into question.

[964] The quotation is taken from the statute, which has not been updated to reflect the new century.

Nonetheless, the drawbacks of reorganization authority might be outweighed, for some, by the perceived difficulty of reforming government organization through the conventional legislative process. It could be argued that the need for modernization of the federal bureaucracy warrants the renewal of the President's reorganization authority, with appropriate modifications and safeguards for congressional prerogatives.

C. Federal Vacancies Reform Act of 1998

Statutory Intent and History

The Federal Vacancies Reform Act of 1998[965] (Vacancies Reform Act) replaces the Vacancies Act of 1868,[966] as amended (5 U.S.C. §§ 3345-3349d). The purpose of the 1868 act and the 1998 act is the same: to provide for the temporary filling of certain positions in the executive branch to which the President makes appointments, subject to the advice and consent of the Senate.

The 1868 act, which applied only to executive departments — no independent agencies existed at the time — provided that when an incumbent in an advice and consent position died or resigned, or was absent or sick, the first assistant thereof was to perform the duties of the office, unless the President designated someone else who was occupying a position for which he or she had been confirmed by the Senate. Whoever assumed the duties of the position could do so for no longer than 10 days when the vacancy was caused by death or resignation. An 1891 amendment extended the time period to no more than 30 days.[967] In 1988, the act was amended once again, extending the time period to no more than 120 days. In addition, several new provisions were added to the act. The 120-day time period was suspended if a first or second nomination to fill the vacancy was before the Senate, but would begin to run again if the nomination was rejected or withdrawn. For the first time, the heads of executive agencies were brought under the act. Finally, a temporary appointment or designation could be made only under provisions of the act, except for recess appointments.[968]

The Vacancies Reform Act addresses a number of issues raised in the administration of the prior act. These include, but are not limited to, (1) extending the act's coverage to all advice and consent positions in single-headed executive independent agencies; (2) extending the President's authority to make temporary appointments to include officials who are not in positions for which they were confirmed by the Senate; (3) lengthening the time a first assistant or acting or designated officer may serve; (4) stipulating that the act is the exclusive means for temporarily filling vacant positions, except for recess appointments and instances in which express statutory authority provides otherwise; (4) providing for the Comptroller General to report to Congress regarding agency adherence to the act; (5) temporarily suspending the now 210-day time period during a presidential inaugural transition; and (6) specifying that positions in

---

[965] The act is found in P.L. 105-277 (Omnibus Consolidated and Emergency Supplemental Appropriations for FY1999) under Division C, Title 1, Sec. 151.

[966] Act of July 23, 1868, Ch. 227, 15 Stat. 168.

[967] Act of Feb. 6, 1891, Ch. 113, 26 Stat. 733.

[968] P.L. 100-398, Sec. 7; 102 Stat. 988.

independent multi-headed regulatory boards and commissions, as well as certain other positions, are not covered by the act.

Major Provisions

Section 3345. Acting Officer. Provides that if an officer in an advice and consent position dies, resigns, or is unable to perform his or her duties, the office may be filled temporarily in one of two ways: (1) the first assistant to the office assumes the duties of the office, unless he or she has been nominated for the vacant position and has served as first assistant for fewer than 90 of the preceding 365 days; or (2) the President selects either (a) an official from another position to which he or she has been confirmed, or (b) an official from the affected agency, whose pay rate is at least equal to GS-15, and who has been at the agency for at least 90 of the preceding 365 days.

Section 3346. Time Limitation. Establishes a 210-day time period after a vacancy occurs during which an acting officer may serve. If the vacancy occurs during an adjournment sine die, the time period begins when the Senate first reconvenes. If on the last day of the 210-day period the Senate is not in session, the second day the Senate is next in session shall be deemed to be the last day of such period (Section 3348). The 210-day restriction is suspended if a nomination is pending, but begins anew if the nomination is rejected, returned, or withdrawn. A second nomination again suspends the time restriction, which does not begin again unless the second nomination is rejected, returned, or withdrawn. (See also Section 3349a for additional time limitation provisions.)

Section 3347. Exclusivity. Provides that Sections 3345 and 3346 are the exclusive means for temporarily filling a vacant advice and consent position in an executive department or agency, unless (1) a statutory provision specifically authorizes the President, a court, or the head of an executive department to temporarily fill a specific position, or designates an officer or employee to temporarily fill a specific position; or (2) the President makes a recess appointment. The section specifically nullifies the previously held position of the Justice Department that the statutory vesting of general agency authority in the head of an agency, and allowing this authority to be delegated, provides an alternative way to fill vacant advice and consent positions.

Section 3348. Vacant Office. Provides that a vacant advice and consent position may not be filled temporarily except in conformity with the Vacancies Reform Act, and that an action taken by any person who is not acting under the provisions of the act shall have no force or effect and may not be ratified. Provides further that the head of a department or agency may perform the functions and duties of a vacant, subordinate, advice and consent position. The head of the agency may not perform these functions and duties, however, for the following positions: General Counsel of the National Labor Relations Board, General Counsel of the Federal Labor Relations Authority, any inspector general or chief financial officer in an advice and consent position, or any executive

agency position, if a statutory provision expressly prohibits the head of the agency from performing the functions and duties of such office.

Section 3349. Reporting of Vacancies. Directs each agency head to notify the Comptroller General and each house of Congress when a covered vacancy occurs, including the name of the acting officer, the name of the nominee for the position, and the date a nomination is rejected, withdrawn, or returned. If the Comptroller General determines that an acting officer is serving longer than the 210-day period, including the applicable exceptions, he is to report this fact to specified committees of Congress, to the President, and to the Office of Personnel Management.

Section 3349a. Presidential Inaugural Transitions. Provides that for any vacancy that exists during the first 60 days after a new President assumes office, the 210-day time period does not begin until 90 days after the inauguration date, or 90 days after the vacancy occurs, whichever is later.

Section 3349b. Holdover Provision. The act does not affect any statute that authorizes a person to continue serving in a fixed-term position after a term expires, until a successor is appointed or a specified period of time has expired.

Section 3349c. Exclusion of Certain Officers. The act does not cover any advice and consent officer on a board, commission, or similar entity that is composed of multiple members and governs an independent establishment or government corporation; or any member of the Federal Energy Regulatory Commission or the Surface Transportation Board; or any judge on an Article I court.

Section 3349d. Notification of Intent to Nominate. Provides that if, during a recess or adjournment of the Senate of at least 15 days, the President sends a written notification of intent to nominate a specific individual to a specific office, this notice shall be considered a nomination for purposes of the act. If the President does not submit the nomination within two days after the end of the recess or adjournment, the nomination shall be treated as a withdrawn nomination for purposes of the act.

The Vacancies Reform Act became effective on November 20, 1998, and applies to any vacancy occurring after that date. The 210-day limitation applies to any office that was vacant on the effective day as if the vacancy had occurred on that date.

Discussion

The Vacancies Reform Act was largely inspired by evidence that, by early 1998, as many as 25% of the 320 advice and consent positions in executive departments were being filled by temporary designees, most of whom had served beyond the 120day limitation period of the old act and had not been nominated by the President. In addition, it was found that this evasion of the Senate's

constitutional confirmation prerogative was being supported by the Department of Justice (DOJ). The department had developed a legal construction of the enabling legislation of the 14 departments that effectively superceded the requirements of the old act. The Attorney General was interpreting general housekeeping provisions found in the enabling statutes of all the departments as authority for the head of the department to designate an acting official to occupy, for an indefinite term, a vacant position requiring Senate confirmation. These provisions[969] vest department heads with the powers and functions of their agencies, and with authority to delegate some of their authority to their subordinates.[970] The Comptroller General had rejected Justice's interpretation and issued a series of opinions on the matter.[971] The Vacancies Reform Act makes clear that its requirements are exclusive and specifically rejects the DOJ position. To assure that the executive branch will comply with the act, the Comptroller General is now required to report to Congress if any acting officer is serving longer than the 210-day period (including the applicable extensions). In addition, the statute now stipulates that the acts of any person who is not acting under its provisions have no force or effect and may not be ratified.

The Vacancies Reform Act also addresses some of the President's concerns, particularly regarding the amount of time taken to fill positions through the regular advice and consent appointment process. Aware of the problem, Congress extended the time limit for a temporary appointment from 120 to 210 days. In addition, the 210-day time limit is suspended for a specific period during the inaugural transition period of a new President. Finally, the President now has wider choice when designating an acting official.

The Vacancies Reform Act vests the Comptroller General with the task of monitoring agency compliance, by establishing requirements for reporting, to the Congress and the Comptroller General, action related to vacancies in advice and consent positions, as well as setting standards for who can be named to act in these positions when they are vacant and how long they can remain. In performance of this duty, since 1999, the General Accounting Office (GAO) has issued a series of reports that examined agencies' performance in implementing the act. It found substantial lags between the time a reportable event, such as the

---

[969] See, e.g., such provisions for DOJ at 28 U.S.C. §§ 509-510.

[970] The assertion of DOJ's position at that time is found in two letters to Senator Strom Thurmond from Andrew Fois, Assistant Attorney General, Office of Legislative Affairs, dated May 2, and July 10, 1997.

[971] See, e.g., 65 Comp. Gen. 626-635, issued on June 9, 1986. An analysis of the issue, which supports the Comptroller General's position, is found in CRS Congressional Distribution Memorandum, Validity of Bill Lann Lee as Acting Assistant Attorney General for Civil Rights, by Morton Rosenberg, in U.S. Congress, Senate Committee on Governmental Affairs, Oversight of the Implementation of the Vacancies Act, hearing on S. 1764, 105th Cong., 2nd sess., Mar. 18, 1998, S.Hrg. 105-495 (Washington: GPO, 1998), pp. 62-100.

naming of an acting officer, occurred and the time it was reported, as well as instances that were not reported at all. It also identified instances in which an acting officer exceeded the legally allowed maximum period for service in this capacity.[972] In 2003, GAO issued a report identifying approaches that would facilitate prompt and accurate compliance with the act's provisions that could be applied throughout the executive branch. The report identified five critical elements essential to agency compliance with the act:

(1) clear identification of the agency components responsible for each requirement under the act; (2) frequent communication between the responsible agency components; (3) maintaining up-to-date lists of the first assistants to each covered advice and consent position; (4) documentation of an agency's Vacancy Reform Act procedures to guide responsible persons when a triggering vacancy occurs; and (5) assigning Vacancy Reform Act responsibilities to career employees so as to assure continuity of an agency's compliance activities. (See the GAO report listed under "Selected Source Reading" below.)

V. Procurement and Real Property Management

A. Public Buildings Act of 1959

Statutory Intent and History

Until 1926, each federal building was approved and funded in separate legislation. With exceptions, this remained the practice until enactment of the Public Buildings Act of 1926 (44 Stat. 630). This act provided the basic authority for construction of federal buildings by congressional authorizations and appropriations. Congress later enacted the Public Buildings Act of 1949 (63 Stat. 176) to authorize the acquisition of sites and design plans for federal buildings located outside Washington, DC, and for improvement to existing federal buildings. The same year, Congress enacted the Federal Property and Administrative Services Act of 1949 (63 Stat. 377). This act established the General Services Administration (GSA) and gave the GSA Administrator responsibility for administering federal real property. In 1954, Congress amended the Public Buildings Act of 1949 to authorize the GSA Administrator to acquire titles to real property and to construct federal buildings through lease-purchase contracts (68 Stat. 518). Under this procedure, a building was financed by private capital, and the federal government made installment payments on the purchase price in lieu of rent payments. Title to the property vested in the federal government at the end of the contract period, generally between 10 and not more than 30 years. When authority for lease-purchase contracts expired in 1957, Congress approved a successor statute, the Public Buildings Act of 1959 (40 U.S.C. § 3301 et seq.). The 1959 act re-established earlier requirements to provide for direct federal construction of public buildings through the congressional appropriations and authorizations process. This act, as amended and re-codified over the years, remains the basic statute authorizing the construction and renovation of federal civilian facilities.

The Public Buildings Act Amendments (86 Stat. 216) were enacted in 1972 to address a backlog of congressionally authorized building projects which had not received appropriations since 1959. The legislation authorized the GSA Administrator to use lease-purchase contracts for a three-year period to construct 68 federal buildings in an attempt to reconcile the urgent need for new federal facilities with budgetary constraints. The Federal Buildings Fund (FBF) was also established within GSA to be used for acquisition and maintenance of real property. Revenue to the FBF was supplied from rent payments charged to federal agencies occupying GSA's office space.

The Public Buildings Act Amendments of 1988 (102 Stat. 4049) were enacted to permit the GSA Administrator to enter into five-year contracts to realize greater savings in the operations and maintenance of federal facilities. The 1988 act increased to $1.5 million the threshold for projects not requiring approval of the congressional authorizing committees.

Major Provisions

The Public Buildings Act, as amended, codifies existing law and establishes a uniform method for meeting the building needs of the federal government. The act vests with the Administrator of General Services sole authority to acquire, construct, alter, repair, remodel, improve, or extend most federal buildings, and to acquire the sites or additions to sites for such buildings It also requires GSA to submit to the congressional authorizing committees a detailed prospectus of all proposed building projects costing over $1.5 million prior to the appropriation of funds, and requires GSA to submit an annual report to Congress on all projects and conduct an ongoing survey of federal building needs.

Discussion

Since 1972, the FBF has financed GSA's real property activities through reimbursements for purchases of goods and services or as rent paid for space in GSA-owned and leased buildings. While revenue to the FBF is the principal source of funding, Congress annually authorizes how GSA may allocate its FBF revenues as new obligational authority in appropriations funding. In its early years, the revenues from the FBF proved inadequate to provide operating capital for federal buildings. As a result of insufficient revenues, GSA turned increasingly to the leasing of space to meet federal agency needs, which totaled nearly $1.2 billion in FY1988.

In response, Congress authorized a total of $2.8 billion in new appropriations to the FBF for construction of new federal facilities between 1990 and 1997. The following year, Congress authorized $450 million to be deposited into the FBF from GSA's rent revenues, and also authorized a new appropriation of $492 million for the acquisition and construction of new federal facilities. Since that time, Congress has generally remained supportive in its funding of new construction projects, while requiring GSA to justify and monitor all proposed building costs.

Most recently, the December 2003 conference report (H.Rept. 108-401) to accompany the FY2004 omnibus appropriations bill (H.R. 2673) recommended that an additional $446 million be deposited into the FBF, for a total of $6,758 million. Of this total, $708 million is to be used for new construction, and an additional $991 million is to remain available until expended for repairs and alterations.

GSA's Public Buildings Service (PBS) provides property and asset management, as well as acquisition and property disposal services. GSA has constructed nearly 1,800 buildings, and leases space in approximately 6,500 privately-owned buildings. Adequate funding for repairs and alterations continues to be of major concern for the PBS, so that it can maintain and improve these properties that are in the government's inventory. A June 2003 General Accounting Office report

noted that more than $10 billion would be needed for repairs and renovations to the federal facilities constructed over 50 years ago.[973]

In both the 106th and 107th Congresses, legislation was introduced to reform property management by providing greater flexibility to GSA and executive branch agencies to manage their personal property assets more effectively. Past legislative proposals included the transfer and exchange of property with other agencies and qualifying private-sector entities, the use of subleases on unexpired portions of government leases, and the leasing of certain federal assets to the private sector. In the 108th Congress, two bills have been introduced in the House to revise federal property management policies (H.R. 2548 and H.R. 2573). If enacted, the proposed legislation would authorize the GSA Administrator to enter into agreements with non-federal entities to sell or sublease real property that is no longer needed by the federal government. These proposed changes to existing law are intended to give greater flexibility to GSA and federal agencies to manage more effectively and oversee federal property assets based on changing mission requirements.

B. Federal Acquisition Streamlining Act of 1994

Statutory Intent and History

The 103rd Congress enacted the Federal Acquisition Streamlining Act of 1994 (FASA; 108 Stat. 3243), a comprehensive procurement reform effort designed to streamline the civilian and military acquisition process, which totaled $234.9 billion in FY2002. The new law was based in large part on recommendations contained in the 1993 National Performance Review (NPR) report.[974] These reforms included the revision and consolidation of existing procurement statutes, increased use of commercially available items, and adoption of a simplified acquisition purchase threshold of $100,000. Immediately after signing FASA into law, President William Clinton issued E.O. 12931, requiring executive branch agencies to make their administrative procurement procedures more effective and innovative "over and above those required by statute."[975]

By way of background, the Federal Property and Administrative Services Act of 1949 (41 U.S.C. § 251 et seq.) established a statutory basis for the postwar procurement procedures of civilian agencies. The legislation created the General Services Administration (GSA) to procure supplies and services, including federal buildings as well as their management, and to set records management standards. Since 1949, the enabling law's original provisions have been frequently and substantially amended. Enactment of FASA was a comprehensive attempt to revise and consolidate duplicative federal regulations that often hindered an agency's ability to procure the highest quality goods at the lowest cost. Potential vendors also complained of the frustrating complexity of federal specifications that controlled the design and production of goods.

The Federal Acquisition Regulation (FAR) is the codification of uniform policies and procedures for executive branch acquisitions, and is the primary regulation used in the acquisition of supplies and services. The FAR is maintained and revised by the Federal Acquisition Regulatory Council, which is composed of the GSA Administrator, the Secretary of Defense, and the Administrator of the National Aeronautics and Space Administration. The FAR is published as Chapter One of Title 48 of the Code of Federal Regulations. It can also be accessed online at [http://www.arnet.gov/far]. The Office of Federal Procurement Policy (OFPP), established within the Office of Management and Budget (OMB) in 1974, provides oversight of federal procurement policies for executive branch agencies (41 U.S.C. § 404). The OFPP Administrator is responsible for oversight of the council, and provides the final approval on

[975] 3 C.F.R., 1995 Comp., pp. 925-926.

revisions to the FAR, in the event the three member agencies fail to agree in a timely manner.

Until 1996, GSA also had responsibility for technology procurement. The Information Technology Management Reform Act (110 Stat. 679), which was incorporated as an amendment into the National Defense Authorization Act for FY1996, transferred authority for information technology acquisitions from GSA to OMB (40 U.S.C. § 1401). Later retitled the Clinger-Cohen Act (110 Stat. 3009-393), this comprehensive legislation provided federal agency procurement officials greater flexibility to acquire information technology systems through the use of multi-agency contracts.

Major Provisions

Enactment of FASA revised existing procurement law in an effort to simplify the government's 55-year-old acquisition system that had become cumbersome and duplicative. New FASA requirements authorize the use of multiple award contracts for goods and services, thus minimizing the burden on contracting officials to negotiate and administer contracts. Encouraging a more active relationship between the federal government and suppliers, FASA authorizes procurement officials to buy goods quickly and economically through the simplified acquisition purchase threshold of $100,000, and through greater reliance on commercially available items. Micro-purchases, under $2,500, are authorized by FASA to be made with the use of purchase cards. Procurement officials are also encouraged to conduct bid requests, quote specifications, and award contracts electronically, whenever possible.

Generally, federal agencies acquire their goods and services through contracts that mandate specific requirements. An agency can now consider a contractor's past performance, management skills, and workmanship in its decision to award supply and services contracts based on best-value procurement, instead of lowest price. In addition, the use of fixed-price performance-based contracting is also encouraged to eliminate audits and cost overruns often associated with cost-reimbursement contracts.

Discussion

FASA contained 204 sections that amended procurement law, and established September 1995 as the deadline for final implementing regulations. Two years later, the General Accounting Office (GAO) reported that the actual implementation of FASA requirements was a "complex process," involving major revisions of the FAR, as well as individual agency directives and FAR

supplements.[976] The Federal Acquisition Regulatory Council, in conjunction with 11 interagency drafting groups, initially proposed 29 FAR revisions to implement the act. While only 13 regulations were published in final form by the FASA deadline, an additional 11 regulations were published the following month. GAO found that the FAR drafting groups emphasized crafting language that would be useful to contracting officers, and addressing public comments on the more complex or controversial regulations.[977]

In the decade following enactment of FASA, federal procurement officials have been able to emphasize performance-based requirements in proposed contracts, and to allow greater flexibility to potential vendors on the methods used to accomplish their work more effectively. Agency procurement officials have also been authorized to negotiate procurements with the use of time-and-materials contracts. In this type of contract, the vendor assumes the full burden of performing and completing the entire scope of work, within the contract's maximum not-to-exceed price for wages and materials. Title XIV of the FY2004 National Defense Authorization Act (P.L. 108-136), the Services Acquisition Reform Act of 2003 (described in more detail elsewhere in this compendium), amends FASA to provide that contracts may be used by federal agencies for the acquisition of commercial services. Agency procurement officials are required to make a determination that a time-and-materials contract is more appropriate than a traditional fixed-price contract, and include in the proposed contract a maximum, not-to-exceed price that the contractor exceeds at his own risk. Procurement officials also have the flexibility to authorize any subsequent change in the cost of the contract, if it is determined to be in the best interest of the procuring agency.

The significance of procurement in the federal government is reflected in the $234.9 billion that civilian and defense agencies spent on goods and services in FY2002. Growth in procurement spending is likely to continue as the President and Congress address homeland security and defense issues, as well as the need to acquire updated information and technology systems within the federal government.

C. Federal Activities Inventory Reform (FAIR) Act of 1998

Statutory Intent and History

Office of Management and Budget (OMB) Circular No. A-76, which was first issued in 1966, provides guidance for federal agencies to use in determining who — a government agency or a private business — will perform commercial activities.[978] A commercial activity is defined as "a recurring service that could be performed by the private sector."[979] The circular does not require agencies in the executive branch to conduct cost comparison studies. The voluntary nature of the A-76 program is manifested by varying levels of participation by executive agencies.

Concerned that civilian executive agencies infrequently consulted Circular No. A-76,[980] and supportive of the federal government's stated policy of relying on the private sector for commercial activities,[981] the 105th Congress responded with new legislation. As introduced in the Senate, S. 314 would have required executive agencies to procure "from sources in the private sector all goods and services that are necessary for or beneficial to the accomplishment of authorized functions of the agency," except for inherently governmental goods and services.[982] The version of the bill passed by Congress and signed by the President differed substantially from the original bill. The Federal Activities Inventory Reform Act of 1998 (FAIR; P.L. 105-270)[983] requires agencies to compile and submit lists of their commercial activities to OMB, but does not require them to conduct cost comparison studies.

[981] In acknowledgment of the Administration's emphasis on public-private competition, the 2003 revision to the circular restated the policy: "The longstanding policy of the federal government has been to rely on the private sector for needed commercial services. To ensure that the American people receive maximum value for their tax dollars, commercial activities should be subject to the forces of competition" (U.S. Office of Management and Budget, Circular No. A-76 (Revised), p. 1).

[982] This version of S. 314, and all other versions, are available at the Legislative Information System website, [http://www.congress.gov], visited Dec. 18, 2003.

[983] 112 Stat. 2382, 31 U.S.C. § 501 note.

Major Provisions

This statute requires the compilation of lists of commercial activities performed by executive agencies, establishes an appeals process, and defines what is an inherently governmental function. FAIR requires executive agencies to compile an inventory of commercial activities and submit the list to OMB annually. After OMB review and consultation, the agency head sends a copy of the list to Congress and makes the list available to the public. Interested parties, such as a contractor or federal employee labor union, may appeal the omission or inclusion of certain activities. If appeals or challenges occur, they are handled by the agency. In lieu of defining commercial activity, the legislation defines inherently governmental function(s). An inherently governmental function is one "that is so intimately related to the public interest as to require performance by Federal Government employees." Because this definition is included in the FAIR Act, an inherently governmental function now is statutorily defined.[984]

Discussion

Agencies first compiled FAIR inventories and submitted them to OMB in 1999. Agencies identified approximately 850,000 full-time equivalents (FTEs)[985] as commercial on the 2000 inventories. Figures have changed only slightly since then.

Competitive sourcing is a component of the President's Management Agenda (PMA), and OMB has led the effort to promote competitive sourcing among federal agencies. The agency released a revision to Circular No. A-76 in May 2003 and has issued guidance on inventories and related competitive sourcing activities. The definition of inherently governmental included in the circular differs from the definition found in FAIR. It is unclear whether the differences possibly could lead to different results when agencies classify activities as inherently governmental. Since 2001, OMB has required agencies to submit inventories of their inherently governmental activities. The 2003 revision of Circular No. A-76 permits interested parties to challenge the classification of an activity as inherently governmental and the application of reason codes to commercial activities.[986] Neither type of inventory challenge is included in FAIR.

---

[984] Beginning with the 2003 revision of the circular, Circular No. A-76 includes criteria for an inherently governmental function (U.S. Office of Management and Budget, Circular No. A-76 (Revised), pp. A-2-A-3).

[985] A full-time equivalent represents the "staffing of Federal civilian employee positions, expressed in terms of annual productive work hours (1,776) rather than annual available hours that includes non-productive hours (2,080 hours)" (U.S. Office of Management and Budget, Circular No. A-76 (Revised), p. D-5).

[986] Reason codes apply only to commercial activities. Each function listed in a FAIR inventory is assigned a reason code, which indicates whether the function is eligible for public-private

Beginning in 2001, OMB issued competitive sourcing targets for agencies. For example, agencies were required to compete 5% of their commercial activities by the end of FY2002.[987] However, in July 2003, OMB abandoned government-wide targets in favor of goals tailored to each agency.[988]

D. Services Acquisition Reform Act (SARA) of 2003

Statutory Intent and History

The Services Acquisition Reform Act of 2003 (SARA),[989] enacted as Title XIV of the National Defense Authorization Act for Fiscal Year 2004, joins two other major pieces of legislation enacted within the past 20 years aimed at reforming the federal government's procurement policies and processes — the Competition in Contracting Act of 1984 and the Federal Acquisition Streamlining Act of 1994 — which are discussed in this compendium.

Major Provisions

SARA focuses on the federal government's acquisition workforce; the use of business acquisition practices by the federal government; the procurement of commercial items; measures related to the American occupation of Iraq; and preparing for, or responding to, terrorist attacks.

A provision in SARA directs the Administrator of General Services to establish, and manage through the Federal Acquisition Institute, an acquisition workforce training fund. Five percent of the fees collected by federal agencies under certain contracts (e.g., government-wide contracts for the acquisition of information technology, popularly known as "GWACs") is to be credited to the training fund.

Among the business management practices instituted by SARA are the requirement for agency heads to appoint or designate chief acquisition officers (CAOs) and the creation of a chief acquisition officers council. This step follows the establishment of agency-level chief financial officers by the Chief Financial Officers Act of 1990,[990] and agency-level chief information officers by the Information Technology Reform Act of 1996 (National Defense Authorization Act for Fiscal Year 1996).[991] Other major provisions require the administrator of the Office of Federal Procurement Policy (OFPP), an official in the office of Management and Budget, to establish an advisory panel to review all acquisition laws and regulations, which is to report, no later than one year after its creation, on findings, conclusions, and recommendations; extend the authority for franchise funds from October 1, 2003, to December 31, 2004; and authorize telecommuting for employees of federal contractors.

---

[989] 117 Stat. 1663; P.L. 108-136; H.R. 1588. The initial version of the Services Acquisition Reform Act in the 108th Congress was a separate piece of legislation, H.R. 1837.

[990] 31 U.S.C. §§ 901-903; P.L. 101-576, §§ 205-207; 104 Stat. 2838.

[991] 40 U.S.C. § 1425; P.L. 104-106, Div. E, § 5125; 110 Stat. 186, at 679. This law was later renamed the Clinger-Cohen Act of 1996 by P.L. 104-208 (110 Stat. 3009-393).

With regard to the acquisition of commercial items, a provision in SARA permits federal agencies to treat the procurement of services under a performance-based contract as a procurement of commercial items. Certain conditions apply; for example, the value of the contract cannot exceed $25 million. This provision also allows agencies to use, under certain conditions, a time-and-materials contract or a labor-hour contract for the purchase of commercial services.

The final portion of SARA responds to circumstances in the aftermath of the September 11, 2001, terrorist attacks. The heads of civilian agencies may exercise the same authority, under the same conditions and limitations, that the Secretary of Defense has to enter into certain transactions (popularly referred to as "other transactions" because they do not involve, for example, contracts or grants) for research and development projects.[992] In civilian agencies, eligible projects are those related to helping defend against, or recover from, biological, nuclear, chemical, or radiological attack. Congressional interest in the use of other than full and open competition procedures by federal agencies awarding contracts for the reconstruction of Iraq led to a disclosure provision on these contracts. Information about noncompetitive contracts must be published in the Federal Register. For procurements in support of a contingency operation, or used to facilitate preparation for, or recovery from, nuclear, biological, chemical, radiological attack, the simplified acquisition threshold was increased; the threshold for simplified acquisition procedures was increased; and agencies may treat such items or services as commercial items.

Discussion

This statute represents an effort to continue streamlining federal procurement processes. As such, it is consistent with efforts over the past 20 years to enhance the efficiency of procurement activities while giving agency personnel greater flexibility in making procurements. However, some parties are concerned that greater flexibility could lead to problems. It is too early to tell how agency personnel will use procurement flexibilities, whether these statutory changes will enhance procurement of goods and services, and whether unintended consequences will occur.

E. Competition in Contracting Act

Statutory Intent and History

The last full-scale statutory changes made to the competitive contracting procedures concerning federal procurement occurred in 1984. The Competition in Contracting Act of 1984 (CICA or the Competition Act; 98 Stat. 1175; 41 U.S.C. § 251 et seq.), enacted as Title VII of the Deficit Reduction Act of 1984 (98 Stat. 494), made broad changes in the two major procurement statutes that had served as basic authority for federal government purchases of supplies and services since the late 1940s. Specifically, CICA changed the Federal Property and Administrative Services Act (40 U.S.C. § 475 et seq.), the major civilian agency procurement statute, and the Armed Services Procurement Act (10 U.S.C.§ 2301 et seq.), the major military procurement statute. Additional statutory provisions to increase competition were included in the Small Business and Federal Procurement Competition Enhancement Act of 1984 (41 U.S.C. § 251 note), which is applicable to civilian agencies, and the Defense Procurement Reform Act of 1984 (98 Stat. 2588), which is applicable to the Defense Department.

Major Provisions

Before CICA, the procedures involving federal contracting were based on "formal advertising" or "competitive negotiation." After passage of CICA, competitive procedures became defined as "procedures under which an executive agency enters into a contract pursuant to full and open competition."[993] The Office of Federal Procurement Policy Act states that "full and open competition means that all responsible sources are permitted to submit sealed bids or competitive proposals."[994] The two most important competitive procedures set forth in CICA are sealed bids, corresponding to the former competitive procedure of formal advertising, and competitive proposals,[995] corresponding to the former competitive procedure of negotiation. CICA also states that "competitive procedures means procedures under which an executive agency enters into a contract pursuant to full and open competition" and defines what the term includes.[996]

When selecting a competitive procedure, the major question concerns whether to use sealed bids or competitive proposals. Before CICA, all contracts over $10,000 required formal advertising unless one of the exemptions allowed negotiation and advertising was not feasible and practicable. Under CICA,

[993] 41 U.S.C. § 259(b) and 10 U.S.C. § 2302(2).

[994] 41 U.S.C. § 403(6).

[995] 41 U.S.C. § 253(a)(2)(B) and 10 U.S.C. § 2304(a)(2)(B).

[996] 41 U.S.C. § 259(b) and 10 U.S.C. § 2302(2).

however, an executive agency which is conducting a procurement for property or services is required to "use the competitive procedure or combination of competitive procedures that is best suited under the circumstances of the procurement."[997]

"Procedures other than competitive," known as "sole-source" or "limited competition," depending upon the circumstances, may be used only if meeting one of the enumerated seven exceptions. These exceptions are as follow: (1) when "the property or services needed by the executive agency are available from only one responsible source and no other type of property or services will satisfy the needs of the executive agency"; (2) when "the executive agency's need for the property or services is of such an unusual and compelling urgency that the government would be seriously injured unless the executive agency is permitted to limit the number of sources from which it solicits bids or proposals"; (3) when "it is necessary to award the contract to a particular source or sources in order (A) to maintain a facility, producer, manufacturer, or other supplier available for furnishing property or services in case of a national emergency or to achieve industrial mobilization, or (B) to establish or maintain an essential engineering, research, or development capability to be provided by an educational or other nonprofit institution or a federally funded research and development center"; (4) when "the terms of an international agreement or treaty between the United States Government and a foreign government or international organization, or the written directions of a foreign government reimbursing the executive agency for the cost of the procurement of the property or services for such government have the effect of requiring the use of procedures other than competitive procedures";[998] (5) when "a statute expressly authorizes or requires that the procurement be made through another executive agency or from a specified source, or the agency's need is for a brand-name commercial item for authorized resale"; (6) when "the disclosure of the executive agency's needs would compromise the national security unless the agency is permitted to limit the number of sources from which it solicits bids or proposals"; and (7) when "the head of the executive agency — (A) determines that it is necessary in the public interest to use procedures other than competitive procedures in the particular procurement concerned, and (B) notifies the Congress in writing of such determination not less than 30 days before the award of the contract."

Discussion

Since passage of the Competition in Contracting Act, Congress has continued to examine the procurement process. Perhaps the most significant changes since

[998] 41 U.S.C. § 253(c)(4) and 10 U.S.C. § 2304(c)(4).

1984 occurred in the Federal Acquisition Reform Act of 1996.[999] Although the provisions are not a full-scale revamping of the procurement requirements, the changes are significant. The general effect of the act is to eliminate or to simplify certain of the contracting procedures. It is likely that Congress will continue to examine whether additional changes to the procurement laws are warranted.

F. Federal Contract Labor Standards Statutes

Statutory Intent and History

Through the early decades of the 20th century, federal procurement law required the government to accept the lowest responsible bid for federal contract work. Since contracts normally specified the type, style, and quality of the construction or goods to be purchased, economies were often achieved through reduced labor costs as firms engaged in competitive bidding. The result, many policymakers believed, was a system that undercut the local market to the disadvantage of contractors and workers alike. It was argued that the system also disadvantaged the government. Low-wage workers often lacked first-rate skills and allegedly produced substandard work which resulted in increased cost to the taxpayer over the long term. And, it made government, at least indirectly, a party to adverse (and often sweatshop) working conditions.

After several tentative proposals during the late 1920s, Congress adopted the Davis-Bacon Act (40 U.S.C. §§ 3141-3148) in 1931. Enacted at the urging of the Hoover Administration, in part as an effort to bring stability to the construction industry and to cope with the collapsing national economy, the act required that persons employed on federal contract work must be paid not less than the locally prevailing wage for comparable work in the locality of the project. In 1935, the scope of the act was broadened to include both public buildings and public works, together with painting and decorating. In 1964, Congress expanded the concept of prevailing wage to include the value of fringe benefits (other than those mandated by law) paid to workers employed in comparable work in the locality. Through the years, Davis-Bacon provisions have been added to more than 50 federal program statutes.

In 1936, following roughly the pattern set by the Davis-Bacon Act, Congress adopted the Walsh-Healey Act (41 U.S.C. §§ 35-45), which set basic standards with respect to goods produced under contract for the federal government. Nearly three decades later, in 1965, Congress adopted the McNamara-O'Hara (Service Contract) Act (41 U.S.C. §§ 351-358), similarly setting basic labor standards for services provided, under contract, to the federal government. These three primary federal contract labor standards statutes are supplemented, inter alia, by the Fair Labor Standards Act of 1938 (FLSA, 29 U.S.C. §§ 201-219), the Contract Work Hours and Safety Standards Act of 1969 (40 U.S.C. §§ 327-333), and the Occupational Safety and Health Act of 1970 (29 U.S.C. §§ 651-678), among others.

Major Provisions

The three statutes deal only with federal contract procurement: respectively, construction (Davis-Bacon), goods (Walsh-Healey), and services (McNamaraO'Hara). Although similar in purpose, they differ in certain details. For Davis-Bacon, the coverage threshold is $2,000; for Walsh-Healey, $10,000; and for McNamara-O'Hara, $2,500. For Davis-Bacon and McNamara-O'Hara,

the basic wage rate is that prevailing for the same type of work in the locality. For Walsh-Healey, the wage floor is, in practice, the minimum wage under the FLSA. Work under each of the contract labor standards statutes is subject to the overtime pay requirements of the FLSA (or reflects a comparable standard): that is, 1½ times a worker's regular rate of pay for hours worked in excess of 40 per week. Child labor is restricted under Walsh-Healey — but also restricted in many forms under the more comprehensive FLSA. Through not addressed in Davis-Bacon, industrial homework is restricted under Walsh-Healey, McNamara-O'Hara and the FLSA — as is convict labor under Walsh-Healey. For Davis-Bacon and McNamara-O'Hara, wage rate calculations are locality based. For Walsh-Healey, in practice, they are the same national rates as those of the FLSA.

Discussion

Of the contract labor standards statutes, the Davis-Bacon Act has been the most visible — and the most controversial. Some view the act as a vital protection for contractors, workers and the public alike — as important now as when it was originally enacted. They assert that the act ensures fairness and equity for workers, that it encourages higher standards in construction, saving the government money in the long run, and that it encourages the training of construction industry professionals through recognized apprenticeship programs. Others argue that the act inflates the cost of public construction, that it is difficult and cumbersome to enforce and perhaps impossible equitably to enforce, and that its complexity works to the disadvantage of small contractors. The Davis-Bacon literature appears to be inconclusive with respect to the act's impact.

Concerning the McNamara-O'Hara Act, proponents hold that it protects workers from what would otherwise be a cycle of wage/benefit reductions as one service provider after another sought government contracts based upon the lowest possible labor costs. It also provides stability for industry and for government (as a consumer), it is argued, preventing a revolving movement of contractors as an award is made first to a low bidder and then to a still lower bidder — each competing upon the basis of ever lower wages and, often, with nonunion labor. Conversely, critics argue that the market, unrestrained, would produce a less expensive service bill for government. The statute is, they argue, difficult to administer, cumbersome, and needlessly inflates wages above market levels. The Walsh-Healey Act, perhaps because its standards are largely the same as those of the national FLSA, has been, at least through recent decades, less subject to controversy.

Historically, each of these statutes was adopted as a means of dealing with specific abuses that had arisen in the workplace and in federal procurement. There is nothing to suggest, some argue, that these abuses would not reappear were the statutes substantially modified or repealed. Conversely, others question whether, at a minimum, some consolidation of the federal contract labor standards statutes and the more general FLSA might not be appropriate.

G. Prompt Payment Act

Statutory Intent and History

The Prompt Payment Act (PPA) was originally enacted in 1982 (96 Stat. 85; 31 U.S.C. § 3901) in response to what was perceived as a pervasive problem of federal agencies not paying their bills on time.[1000] While this act did lead to improvement in the timeliness of government bill paying, the 100th Congress saw the need for amendment, revision, and general tightening up of the PPA to bring about more uniform compliance with its purposes. Congress responded by enacting the PPA amendments of 1988 (102 Stat. 2455). The basic structure of the PPA is relatively simple and straightforward. If a bill is not paid on time, interest must be paid on the delinquency. The funds for the interest must come from funds already appropriated for the program which has incurred the interest.

Major Provisions

The PPA applies to all types of federal contracts, including leases (31 U.S.C. § 3901(a)(6)) for the procurement of property or services by agencies covered by the act (OMB Circular No. A-125, § 2(a); see also: 48 C.F.R. § 32.901). Agency is defined to include each authority of the government of the United States, whether or not it is within or subject to review by another agency, but it does not include Congress, the United States courts, governments of territories or possessions, the government of the District of Columbia, courts martial, military commissions, and military authority exercised in the field in time of war or in occupied territory (31 U.S.C. § 3901(a)(1) which incorporates by reference 5 U.S.C. § 551(1)). Agency also includes any entity that is operated exclusively as an instrumentality of such an agency for the purpose of administering one or more programs of that agency, and that is so identified for this purpose by the head of such agency (OMB Cir. A-125, § 1(b)). The PPA specifically applies to the Tennessee Valley Authority and the United States Postal Service.[1001] The head of an agency acquiring property or service from a business concern, who does not pay the concern for such complete delivered item of property or service by the required payment date, shall pay an interest penalty to the concern on the amount of the payment due. The interest rate to be used is the interest rate established by the Secretary of the Treasury under the Contracts Disputes Act (41 U.S.C. § 611), which is in effect when the obligation to pay PPA interest arises (31 U.S.C. § 3902(d)). The temporary unavailability of funds to make timely payment does

---

[1000] U.S. Congress, House, H.Rept. 97-461, 97th Cong., 2nd sess. (Washington: GPO, 1982). See also U.S. General Accounting Office, "The Federal Government's Bill Paying Performance Is Good but Should Be Better," FGMSD-78-16, 1978, in which GAO found that 30% of the federal government's bills, covering 18% of the dollar total, were paid late.

[1001] 31 U.S.C. § 3901(b) and (c). The United States Postal Service was not included under the 1982 PPA. Coverage was added by the 1988 amendment, P.L. 100-496, § 2(c)(1), and is applicable to all obligations incurred on or after Jan. 1, 1989.

not relieve the agency of the obligation to pay such penalty (31 U.S.C. § 3902(d)). The PPA interest penalty is to be paid automatically, whether or not it has been requested by the contractor. Failure to pay such interest may result in an additional penalty. This additional penalty is equal to 100% of the original penalty and is limited to $5,000, but cannot be less than $25. These limitations apply to each invoice (OMB Circular No. A-125, § 8(b) and (c)). In the case of construction contracts, the regulations shall provide for the payment of interest on late progress payments and retainages (31 U.S.C. § 3903(a)(6)(A)).[1002] The regulations are also required to include provision for prompt review of invoices submitted to agencies. Agencies are to have seven days to return invoices found to be not proper.[1003]

Every construction contract awarded by an agency must include a clause which requires the contractor to include two clauses, a payment clause and an interest penalty clause, in each of its subcontracts. The payment clause must specify that the prime contractor is obligated to pay the subcontractor for satisfactory performance under its subcontract out of payments received from the agency, within seven days of such receipt. The interest penalty clause is to require that the contractor will pay an interest penalty, computed at the same rate as applied to the government under the PPA, to the subcontractor if the seven day deadline is not met (31 U.S.C. § 3905(b)). These protections are extended to all tiers of subcontractors by requiring the prime contractor to require all subcontractors to include these same two clauses in their sub-subcontracts (31 U.S.C. § 3905(c)). A contractor's obligation to pay an interest penalty to a subcontractor under any of these required clauses may not be passed along to the federal government by any means, including contract modifications or cost reimbursement claims (31 U.S.C. § 3905(k)).

Discussion

The PPA greatly reduced the problem of federal agencies not paying their bills in a timely fashion. While the problem has not been entirely eradicated, the PPA has not generally been the subject of proposed legislation since its amendment in 1988.

VI. Intergovernmental Relations Management

A. Intergovernmental Cooperation Act

Statutory Intent and History

Congress approved the Intergovernmental Cooperation Act of 1968 (ICA)[1004] to improve administrative relationships among federal, state, and local governments, particularly with regard to the grant-in-aid system. The legislation, as enacted, was a composite of government reform proposals that had been considered over a number of years. Recommendations from a variety of organizations, including the Kestnbaum Commission of 1955, the Advisory Commission on Intergovernmental Relations (ACIR),[1005] as well as public interest groups representative of state and local governments, were incorporated in the legislation.

Proponents argued for the legislation out of concern with the duplication of effort and lack of coordination in the federal domestic assistance system, in part because of the rapid expansion of categorical grant-in-aid programs in the 1960s.[1006] While few, if any, spoke against the intent of the legislation, some debate occurred over the proposed inclusion of a uniform relocation assistance provision in the legislation (the language was ultimately deleted from the bill) and the proposed "sunset" language (also ultimately not included).[1007]

Major Provisions

As originally enacted, the Intergovernmental Cooperation Act consisted of six titles. Title I set out definitions. Title II established administrative requirements for grants-in-aid, and Title III authorized federal agency heads to provide technical assistance to state or local governments. Title IV required that the President issue program regulations to help state and local governments attain urban and rural community development objectives regarding land use, transportation systems, environmental protection, and other related areas. Also,

---

[1004] P.L. 90-577, 82 Stat. 1098, et seq.

[1005] The Advisory Commission on Intergovernmental Relations (ACIR) was established by Congress in 1959 (5 U.S.C. § 2372) for continuing study of the American federal system. The commission ceased operations when Congress no longer appropriated funds after FY1996.

[1006] Categorical grants provide aid for specified activities and generally require adherence to rigorous guidelines and regulations.

[1007] Sunset provisions specify that program authority must terminate by a date certain. Advocates of sunset provisions argued that the inclusion of such language in legislation would ensure that committees of jurisdiction would conduct oversight hearings on programs and evaluate their usefulness on a regular basis. Instead of sunset language, Congress required quadrennial review by committees of jurisdiction of program administration and implementation.

Title IV required that federal aid be consistent "to the maximum extent possible" with non-federal comprehensive planning, and that units of general local government be favored to received federal aid over special purpose governments. Title V amended the Federal Property and Administrative Services Act[1008] to ensure that federal acquisition, use, or disposal of land in urban areas did not conflict with local zoning, land use, and planning practices. Finally, Title VI required that congressional committees with jurisdiction evaluate programs not scheduled to terminate every four years. Also, Title VI required that the Comptroller General and the ACIR conduct studies of grant-in-aid programs.

The ICA has been amended several times, most notably in 1982, when it was recodified.[1009] In its current form, the act sets out definitions[1010] and enables state officials to obtain information on the purpose and amount of grants received in the states.[1011] Concerning fund transfers and associated requirements, the act requires that federal officials make funds available to the states in an expedited fashion; establishes requirements concerning interest payments received on deposited federal funds; and requires state officials to make reports on the funds.[1012] Provisions have been retained from the original statute that authorize federal agency heads to waive statutory requirements concerning designation of a single state contact[1013] and to make specialized or technical services available to state and local governments.[1014] Also, the provisions of Title IV that require coordination between federal expenditures and state and local community development objectives remain in force,[1015] as do those concerning quadrennial congressional committee review.[1016]

Discussion

[1008] 63 Stat. 377; 40 U.S.C. § 475 et seq.

[1009] In 1982, the ICA was technically repealed, reenacted, and recodified at 31 U.S.C. § 6501 et seq. (see P.L. 97-258, 96 Stat. 1005-1010). Previously, it had been codified at 42 U.S.C. § 4201-4243.

[1010] 31 U.S.C. § 6501.

[1011] 31 U.S.C. § 6502.

[1012] 31 U.S.C. § 6503.

[1013] 31 U.S.C. § 6504.

[1014] 31 U.S.C. § 6505.

[1015] 31 U.S.C. § 6506. E.O. 12372, signed by President Reagan July 14, 1982, and amended by E.O. 12416 on April 8, 1983, allowed states to design their own procedures for reviewing federal financial assistance and directing federal development.

[1016] 31 U.S.C. § 6507.

Intergovernmental relations have undergone considerable change in recent years. Some of these changes resulted from actions required by the ICA. For example, the authority of federal agency heads to waive federal requirements concerning a single state contact, at the request of state officials, first appeared in the ICA. In recent years, such waivers have been used in a number of policy areas to improve intergovernmental relations as well as the administration of federal grant-in-aid funding. Another significant effect of the ICA was the assignment of increased responsibilities to the Office of Management and Budget (OMB). Implementation of the ICA was included in OMB's Federal Assistance Review efforts during the Nixon Administration.

During the Reagan Administration, officials sought to modify past patterns of federal involvement in domestic assistance programs. Although provisions of the ICA were modified, the act was not repealed. At present, though most provisions of the 1968 act remain in effect, they are largely dormant.

B. Intergovernmental Personnel Act of 1970

Statutory Intent and History

The Intergovernmental Personnel Act of 1970 (IPA)[1017] authorized programs to improve state and local government personnel management operations and procedures. Congress approved the IPA at the urging of federal managers, Members of Congress, and others who voiced concern over a perceived need to strengthen the core management capabilities of state and local general purpose governments. In the late 1960s, when Congress first debated the legislation, federal agencies were expanding to meet new federal policy objectives, and agency heads were competing with state and local governments to attract employees at upper management levels. Congress viewed enactment of the IPA has a means of improving the pool of public management candidates in the nation.

Two types of management needs figured in the enactment of the IPA:[1018]
Policy Management — identification of needs, analysis of options, and selection of programs throughout non-federal units of government.

Resource Management — establishment of basic administrative support systems such as budgeting, financial management, procurement and supply, and personnel administration.

Major Provisions

The congressional declaration of findings and policy in the act notes that the effective management of federal funds by state and local governments is in the national interest. The IPA identified state and local manpower issues that required attention and additional resources. The issues include the interchange and retention of government employees, training, quality of public service, merit system requirements, and personnel management. Sponsors of the act sought to address these issues by authorizing the following types of assistance:

- grants-in-aid to help states and localities meet the costs of strengthening such personnel management activities as recruitment, selection, pay administration, training and employee development, and labor-management relations;
- invitations to state and local government employees to participate in federal training courses;

[1017] P.L. 91-648, 84 Stat. 1909, et seq.

[1018] U.S. Executive Office of the President, Strengthening Public Management in the Intergovernmental System (Washington: GPO, 1975), p. vii.

- technical assistance in personnel management on a reimbursable, non-reimbursable, or partly reimbursable basis;
- cooperative recruiting efforts;
- temporary exchange of personnel between different levels of governments and institutions of higher education (the "mobility program"); and
- transfer of responsibility for prescribing and maintaining merit system standards required under various federal assistance programs to a single agency.

The mobility program and the merit systems administration program were amended by Section 602 of the Civil Service Reform Act of 1978 (92 Stat. 11881189). In 1996, the 104th Congress approved technical amendments to the provision authorizing reimbursement for employees and families in transit (110 Stat. 2758). Since 1996, Congress has taken no further action on the IPA.

Discussion

The statutory authority for IPA remains on the books. Most of the IPA programs, however, have not been implemented for years. Funding for the grant program ended in FY1981. Currently, the only IPA program in existence is the Intergovernmental Mobility Program, discussed below.[1019]

Congressional approval of the IPA was based on three assumptions: effective state and local governments are essential in the federal system of governance; a national interest in state and local management practices exists, since federal funds are involved; and public service at all levels of governance can be improved through better personnel administration.[1020] These assumptions remained unchallenged until 1981, when the Reagan Administration proposed termination of the grant program and all the act's other provisions, except for its merit system principles, declarations of policy concerning public service, and provisions on interstate compacts.[1021] To support this proposal, the Administration contended that the IPA had achieved its objectives as a demonstration program and could be eliminated. The proposed abolition of much of the IPA statutory authority paralleled other Reagan Administration efforts to reduce federal involvement in "what should be primarily a state and local government responsibility."[1022]

[1019] The mobility program is codified at 5 U.S.C. §§ 3371-3376.

[1020] U.S. Advisory Council on Intergovernmental Personnel Policy, More Effective Public Service (Washington: GPO, 1973), p. 1.

[1021] U.S.Congress, Senate Committee on Governmental Affairs, Amending the Intergovernmental Personnel Act of 1970, hearings, 97th Cong., 1st sess. (Washington: GPO, 1981), p. 136.

[1022] Donald J. Devine, Letter Transmitting Legislation to Abolish the Intergovernmental Personnel Act, Congressional Record, daily edition, vol. 127, Apr. 29, 1981, p. S 4141.

The administration proposal came at a time when many domestic assistance programs were being cut or eliminated. General management assistance usually does not have a large or effective constituency, and federal programs with such a focus were largely repealed or allowed to lapse during this period. In FY1981, the IPA grant assistance program was terminated.[1023] In November 1981, the Office of Intergovernmental Personnel Programs in OPM, which had administered the programs, was abolished. The merit system provisions, which had been administered by this office, no longer received budgetary support from OPM, thus bringing the IPA grant assistance program to an end.

As noted above, the Intergovernmental Mobility Program is the only statutory provision that continues to be implemented, largely to facilitate temporary details of scientific and technical staff. The program allows federal, state, and local government employees to be voluntarily assigned to a public agency or to an organization oriented toward public service for no more than two years. Federal employees may be assigned to state, local, or tribal agencies, public or private institutions of higher education, or nonprofit or professional government associations. The reverse holds as well: employees of these entities may volunteer to be temporarily assigned to federal agencies. Through such assignments, scarce or technical expertise may be shared; program operational experience may be gained, or the management of federal grant programs improved. Assignments generally cannot exceed two years, although extensions might be approved. Assignment costs, including the salary of the employee, may be shared by the agencies or borne entirely by one entity, subject to agreement between the organizations. Since 1981, the IPA authority and the mobility program have been given little attention or publicity.

C. Unfunded Mandates Reform Act of 1995

Statutory Intent and History

After considerable debate and some legislative action in the 103rd Congress, the Unfunded Mandates Reform Act (P.L. 104-4; 109 Stat. 48-71; 2 U.S.C. §§ 15011571) was enacted early in the 104th Congress. Generally, unfunded intergovernmental mandates include responsibilities or duties that federal programs, standards, or requirements impose on governments at other levels without providing for the payment of the costs of carrying out these responsibilities or duties. The intent of the mandate legislation was to limit the ability of the federal government to impose costs on state and local governments through unfunded mandates.

Legislation to restrain unfunded mandates was proposed regularly from 1984 through 1990 (98th-101st Congresses), but none of the proposals received action. During the 102nd and 103rd Congresses (1991-1994), increased pressure developed as state and local interest groups united in an effort to bring about mandate reform. Although some of this effort was concentrated on specific laws considered to impose mandates (e.g., safe drinking water, motorcycle helmet requirements, national education standards), much attention focused on overall unfunded mandate reform legislation. The Clinton Administration supported the concept of mandate reform, though not necessarily the specifics of all reform legislation.

Thirty-four mandate reform bills were introduced in the 103rd Congress, and a bipartisan compromise bill (S. 993/H.R. 5128) came close to floor action. Unfunded mandate reform was a component of the House Republican "Contract with America" in the 1994 election, and election of a Republican majority in both houses ensured early action in the 104th Congress. Mandate reform legislation was introduced as S. 1 and H.R 5 on January 4, 1995, and the Unfunded Mandates Reform Act was signed into law on March 22, 1995.

Major Provisions

The Unfunded Mandates Reform Act has three components: revised congressional procedures regarding future mandates; new requirements for federal agency regulatory actions; and authorization for a study of existing mandates to evaluate their current usefulness. The primary objective was to create procedures that would retard and spotlight, if not stop, congressional authorization of new unfunded mandates on state and local governments.

Point of Order in Congress. The act amended Title IV of the Congressional Budget and Impoundment Control Act of 1974 (P.L. 93-344; 88 Stat. 297-339), as amended, to require the Congressional Budget Office (CBO) to estimate the costs to state, local, and tribal governments and the private sector of the unfunded intergovernmental mandates established by each reported bill exceeding $58 million (in calendar year 2002, the latest year available; the threshold is adjusted

for inflation). The act requires that the cost information be printed and available before a vote is taken. If the information is not available, or if the bill does not provide that all mandates it establishes will be funded, a point of order may be raised against considering the bill. For this purpose, a mandate is considered unfunded unless the bill establishes a mechanism to ensure that, if in any year funding is not provided, the mandate will be reviewed or abolished. An affirmative vote by a majority of those present is necessary to override the point of order.

These requirements do not apply to provisions that are a condition of federal assistance or a duty arising from voluntary participation in a federal program (except that certain large entitlement programs are subject to the special procedures). Other provisions exempt from the requirements are:

- provisions affecting constitutional rights of individuals;
- statutory rights that prohibit discrimination;
- accounting and auditing requirements attached to federal assistance; and
- emergency assistance, national security, and emergency legislation.

Federal Agency Regulations. The second component affects federal agencies. The act requires agencies to develop a process through which state, local, and tribal governments and the private sector can participate in the development of regulations. In addition, agencies must identify the federal law that authorizes the regulation; estimate the costs and benefits, including whether federal assistance is available to pay the costs; and describe consultation with state, local, or tribal officials. Finally, the agencies must establish plans to involve local governments in the development of regulations affecting them, as well as pilot programs on local government flexibility.

Study of Existing Mandates. While the first two components of the act address proposed new mandates, the third relates to those that existed before its enactment. The act required the Advisory Commission on Intergovernmental Relations (ACIR) to study a number of things, including existing unfunded mandates. ACIR was directed to make recommendations reflecting flexibility in compliance; reconciling conflicting mandates; terminating duplicative, obsolete, or impractical mandates; suspending certain mandates not vital to public health and safety; consolidating and simplifying reporting and planning requirements; and establishing common federal definitions and standards.

Discussion

Origins. The term unfunded federal mandates refers to a host of flaws in the operation of the federal system perceived by some observers from the late 1970s into the 1990s. It summarized the concerns of those who asserted that there was excessive federal intrusion into state and local affairs, too much regulation, too many direct orders, too little respect for the role of state and local governments, and too little control by states and localities of their own affairs. Federal demands

on state and local resources were sometimes established as conditions of federal aid, but increasingly took the form of direct requirements, although no federal funds were made available to help carry out these directives. All of this came at a time when federal funds to state and local governments were being cut back.

The Unfunded Mandates Reform Act represented a response to a coordinated campaign by state and local officials and their supporters who had protested for years against these perceived federal demands at a time when federal assistance was diminishing. The exact magnitude of the costs to state and local governments of complying with federal mandates is not clear. Various estimates were made during debate on the legislation, ranging from a high of $500 billion to a low of $8.9 billion.

Use of Congressional Procedures. To some extent, the focus on unfunded mandates diminished after the legislation was enacted. Many of the individual grievances and criticisms that had fueled the mandate issue were separately addressed by the 104th Congress, which enacted the Unfunded Mandates Reform Act. Many Members of the new majorities had been elected with an agenda paralleling that of the mandate opponents; consequently, a number of issues were addressed directly and, in some cases, favorably. For example, the National Highway System Designation Act of 1995 (P.L. 104-59; 109 Stat. 568-634) repealed several items that regularly appeared on mandate reform agendas, including the national speed limit, the requirement that motorcyclists wear helmets, and requirements that crumb rubber be used in highway construction.

Since the point-of-order procedures took effect, the record on their usefulness as an anti-mandate tool could be described as mixed. On the one hand, state and local organizations used the process successfully to promote or secure changes in telecommunications legislation mandates, but on the other, the new procedures were not successful in preventing enactment of immigration legislation containing a number of provisions described as unfunded mandates. From 1996 through 2003, 13 points of order under the Unfunded Mandates Reform Act were raised in the House, and none in the Senate. The first time the procedure was invoked, the House voted against considering a proposal to amend a bill to include an increase in the minimum wage. Otherwise, the House has always voted to consider the measures against which the points of order were raised, dealing with the minimum wage as well as bankruptcy, nuclear waste, internet taxation, prescription drugs, and several welfare issues.

Advisory Commission Report. In January 1996, ACIR released a preliminary version of the report on federal mandates directed by the act. After considerable opposition was expressed to these preliminary findings, a revised report was presented to the commission for final action. This final version of the report included recommendations for modifying each of 13 mandates studied in detail and six recommendations common to all mandates. On July 23, 1996, a majority of the ACIR rejected these revised recommendations on the grounds that they

proposed too great a reduction in the federal role. Congress terminated funding for the ACIR in FY1996.

Private Sector Mandates. As attention to federal intergovernmental mandates grew in the 1980s and 1990s, supporters of regulatory reform began to assert a parallel between these mandates and federal laws regulating the private sector, on grounds that such laws also impose enforceable duties that entail costs of compliance. As a result, the Unfunded Mandates Reform Act includes a requirement that CBO provide information on the costs of these private sector mandates in proposed legislation, where the costs exceed $116 million (adjusted for inflation in calendar year 2002). The act does not, however, extend the points of order against consideration to private sector mandates. Subsequently, in both the 105th and 106th Congresses, legislation to apply to private sector mandates procedural protections similar to those now in effect for unfunded intergovernmental mandates passed the House, but it received only committee consideration in the Senate. In some versions, this Mandates Information Act would have established points of order against consideration of all private sector mandates, whether funded or not, including taxes.

D. Single Audit Act

Statutory Intent and History

The Single Audit Act of 1984 (98 Stat. 2327; 31 U.S.C. §§ 7501-7507) established uniform audit requirements for state and local governments receiving federal financial assistance. It generally requires entity-wide audits instead of the previous program-by-program audits that had been criticized as an inefficient use of audit resources and an ineffective means of assuring accountability for federal funds.

The Single Audit Act Amendments of 1996 (110 Stat. 1391) extended the act's coverage to nonprofit agencies.[1024] The amendments also raised the thresholds that require compliance under the act, focused audits on riskier programs, improved audit reporting, and allowed more administrative flexibility. The only other amendments have been technical in nature (108 Stat. 1363 and 111 Stat. 2634).

As amended, the Single Audit Act has five purposes:

- to promote sound financial management (including effective internal controls) with respect to federal awards administered by non-federal entities;
- to establish uniform requirements for audits of federal awards administered by these entities;
- to promote the efficient and effective use of audit resources;
- to reduce burdens on state and local governments, Indian tribes, and nonprofit organizations; and
- to ensure that federal departments and agencies, to the maximum extent practicable, rely upon and use the audit work.

Regulatory guidance on single audits is contained in Office of Management and Budget (OMB) Circular No. A-133, Audits of States, Local Governments, and Non-Profit Organizations.

Major Provisions

The Single Audit Act generally requires each non-federal entity that expends $300,000 or more in federal awards during a fiscal year to have a single audit made for that year. A "single audit" covers both the entity's financial statements and a schedule of its federal awards. An entity subject to this provision may elect to have a program-specific audit if it has only one federal program and is not

---

[1024] Nonprofit organizations receiving federal financial assistance were previously subject to similar single-audit requirements in earlier versions of OMB Circular No. A-133, at that time named Audits of Institutions of Higher Education and Other Non-Profit Organizations.

otherwise required to have a financial statement audit. An entity with federal award expenditures less than the threshold is exempt from the act's audit requirements as well as from financial audit requirements of other federal laws, but must comply with federal requirements to maintain and allow access to records. These provisions do not preclude federal agencies from conducting or arranging for other audits as needed. Every two years, the Director of OMB may adjust the threshold amount, though not below $300,000. (For fiscal years ending after December 31, 2003, the Director has determined that the threshold should be raised to $500,000.)

Prior to the 1996 amendments, the act required single audits for state and local governmental entities that received (rather than expended) $100,000 or more of federal assistance a year; entities that received $25,000 or more but less than $100,000 could choose to have either a single audit or the financial and compliance audit required for particular programs. Only if entities received less than $25,000 in federal assistance were they exempt from the act. The 1996 amendments extended coverage to federal awards, which include cost-reimbursement contracts as well as financial assistance.

Entities subject to the act generally must conduct annual audits, although in some cases biennial audits are allowed. Audits must be conducted by independent auditors in accord with generally accepted government auditing standards, except that performance audits need not be included unless authorized by the Director of OMB. (Prior to the 1996 amendments, performance audits were expressly excluded.) Auditors must determine whether the financial statements are fairly presented in all material aspects in conformity with generally accepted accounting principles and whether the schedule of expenditures for federal awards is fairly presented in all material respects in relation to these statements.[1025]

For each major program, the act requires auditors to obtain an understanding of internal controls relating to compliance requirements, assess control risk, and perform tests of controls (unless they are deemed ineffective). The auditors must also determine whether the entity has complied with provisions of laws, regulations, and other requirements that have a direct and material effect on the program. Selection of major programs is based upon risk-based selection criteria developed by the Director of OMB. (Prior to the 1996 amendments, the act defined major programs simply by dollar thresholds.) The number of programs selected for audit testing using risk-based criteria is generally limited to the number of programs that exceed certain dollar thresholds for the non-federal entity; however, auditors must test programs that represent at least 50% of the

[1025] In auditing, materiality is determined by whether the magnitude of an omission or misstatement is such that a reasonable person relying on the assertion would be influenced by its inclusion or correction.

entity's federal expenditures, or whatever lower percentage the Director determines.

The Single Audit Act specifies various responsibilities for the Director of OMB, including (1) designating a clearinghouse to receive copies of audit reports, identifying recipients that failed to have audits required by the act, and undertaking analyses that assist the Director; (2) developing criteria to determine appropriate charges to federal awards for audit costs; (3) developing implementation guidance; and (4) developing criteria to determine which federal agency is to provide technical and other assistance for a given non-federal entity. The Director may also authorize pilot projects to test alternative methods of achieving the purposes of the act.

Under OMB Circular No. A-133, recipients expending more than $25 million a year ($50 million for fiscal years ending after December 31, 2003) shall have a "cognizant agency for audit responsibilities" that shall provide technical advice and liaison to auditees and auditors, consider requests for extensions, obtain or conduct quality control reviews, inform other federal agencies and law enforcement officials of irregularities and illegal acts, advise auditors and auditees of audit deficiencies requiring corrective action, coordinate other audits or reviews made by or for federal agencies, coordinate management decisions for audit findings, coordinate audit work and reporting responsibilities among auditors to achieve cost-effective audits, and consider auditee requests to qualify as low-risk. The cognizant agency for audit shall be the federal awarding agency that provides the predominant amount of direct funding for a recipient, determined every fifth year. Recipients that do not expend more than the threshold amounts just identified shall instead have an "oversight agency for audit responsibilities" that shall provide technical assistance and may, at its option, assume some of the other responsibilities of the cognizant agencies.

In addition, the act assigns monitoring responsibilities to the Comptroller General and establishes reporting and other requirements for federal agencies that provide financial assistance, for non-federal entities that receive the assistance (or pass it through to other entities), and for auditors. For example, if there are audit findings or reports of internal control weaknesses, the non-federal entity must submit plans for corrective action or describe why they are not needed.

Discussion

The Single Audit Act has improved the amount and quality of information that is available about federal financial assistance to state and local governments. By requiring entity-wide audits conducted in accordance with generally accepted government auditing standards and employing generally accepted accounting principles, the act has led to more comprehensive and reliable audit reports. More important, it has encouraged financial management reforms: new accounting systems have been installed; new ways of tracking federal funds have

been devised; and stronger administrative controls have been adopted. Federal agency oversight has improved.

The 1996 amendments were aimed at making the Single Audit Act more effective and less burdensome. Their most important change may be increased attention to federal award programs that pose the greatest financial risk — not only those with the largest expenditures but also those with ill-defined objectives, complicated administrative procedures, and minimal political review and oversight.

As is true of any audit, the effectiveness of single audits depends on timely completion and on the ability and willingness of decision makers to act on information made available. One study has shown that single audit reports have not always been received in accordance with OMB's reporting requirements and that the agency in question did not effectively use the reports to oversee and monitor program recipients.[1026] Another study showed that some agencies did not issue required written management decisions or have documentary evidence of their evaluations and conclusions on recipient actions to correct audit findings.[1027] For some issues, the effectiveness of single audits may also be limited because they do not as a rule include performance measures.

VII. Human Resources Management and Ethics

A. Title 5: The Federal Civil Service

Title 5 of the United States Code is the codification of laws on government organization and employees.[1028] It is divided into three parts. Part I, entitled "The Agencies Generally," includes seven chapters that cover the organization of departments, agencies, independent establishments, and government corporations; the powers of departments and agencies; administrative procedure; regulatory functions; judicial review; congressional review of agency rulemaking; and executive reorganization. "Civil Service Functions and Responsibilities" are the subject of Title 5's Part II, which includes four chapters on the Office of Personnel Management; the Merit Systems Protection Board, and the Office of Special Counsel; special authorities (rules, regulations, and investigations); and political activities of certain state and local employees.

Part III, entitled "Employees," presents the various policies related to management of the federal workforce. It is divided into nine subparts: Subpart A, "General Provisions," includes chapters on definitions for terms used in Title 5 and merit system principles; Subpart B, "Employment and Retention," includes chapters on examination, selection, and placement and retention and reemployment; Subpart C, "Employee Performance," includes chapters on training and performance appraisal; Subpart D, "Pay and Allowances," includes chapters on classification and pay rates and systems; Subpart E, "Attendance and Leave," includes chapters on hours of work and leave; Subpart F, "Labor-Management and Employee Relations," includes chapters on labor-management relations and adverse actions; Subpart G, "Insurance and Annuities," includes chapters on retirement and health insurance; Subpart H, "Access to Criminal History Record Information," covers access to criminal history records for national security and other purposes; and Subpart I, "Miscellaneous," includes chapters on personnel flexibilities for the Internal Revenue Service, a human resources management system for the Department of Homeland Security, and the National Security Personnel System for the Department of Defense.

The laws codified in Title 5 encompass policies related to how the federal government manages the executive branch workforce. Over the last several years, that process has been referred to as the management of human capital. Other terms that have frequently been used to describe the process are personnel administration and personnel management and human resources management. Each of these terms is discussed briefly below.

[1028] This compendium does not address personnel laws in other titles of the United States Code, including the United States military (Title 10), the Foreign Service (Title 22), the Veterans Health Administration (Title 38), and the Postal Service (Title 39).

The terms personnel administration and personnel management relate to "that aspect of management concerned with the recruitment, selection, development, utilization, and compensation of the members of an organization…. The former is mainly concerned with the technical aspects of maintaining a full complement of employees within an organization, while the latter concerns itself as well with the larger problems of the viability of an organization's human resources."[1029] Personnel management evolved from personnel administration. Human resources management (HRM) is a term that "although often used synonymously with personnel management … transcends traditional personnel concerns, taking the most expansive view of the personnel department's mandate. Instead of viewing the personnel function as simply that collection of disparate duties necessary to recruit, pay, and discharge employees, a[n] HRM approach assumes that personnel's appropriate mission is the maximum utilization of its organization's human resources."[1030] In the late 1970s and early 1980s, textbooks on the federal workforce began to emphasize HRM. The term has been especially used in discussing federal workforce management since the publication in September 1993 of the reports prepared under Vice President Albert Gore's National Performance Review (NPR).

The term human capital management refers to "a concept that views employees as assets in the same sense as financial capital. It presupposes that an investment in human potential will yield significant returns for the organization."[1031] Human capital also "describe[s] what an organization gains from the loyalty, creativity, effort, accomplishments, and productivity of its employees."[1032] The economist Lester C. Thurow further defined human capital as:

> *an individual's productive skills, talents, and knowledge. It is measured in terms of the value (price multiplied by quantity) of goods and services produced. Since consumption is the ultimate goal of our economic system, the value of a man's capital is the same as the value of the consumption goods and services which he directly or indirectly produces. When the value of goods and*

[1029] Facts on File Dictionary of Personnel Management and Labor Relations (New York: Facts on File, Inc., 2nd ed., 1985).

[1030] Ibid.

[1031] Ibid.

[1032] The Human Resources Glossary (New York: American Management Association, 1991).

services rises, the value of human capital rises. When the value of goods and services falls, the value of human capital falls.[1033]

On September 6, 1966, Title 5 was recodified with the enactment of P.L. 89-554 (80 Stat. 378). Information on the derivation of laws in the title is provided in the United States Code Annotated under the "Historical and Revision Notes" accompanying each section. Among the laws codified in the title are the Pendleton Act of 1883; the Retirement Acts of 1920, 1930, and 1956; the Classification Acts of 1923 and 1949; the Hatch Acts of 1939 and 1940; the Ramspeck Act of 1940; the Veterans' Preference Acts of 1944 and 1953; the Federal Employees' Pay Acts of 1945 and 1946; the Annual and Sick Leave Act of 1951; the Federal Employees' Group Life Insurance Act of 1954; the Fringe Benefits Act of 1954; the Federal Employees Salary Increase Act of 1958; the Government Employees Training Act of 1958; the Federal Employees Health Benefits Act of 1959; and the Federal Salary Reform Act of 1962.

Other laws codified in Title 5 include the Intergovernmental Personnel Act of 1970; the Job Evaluation Policy Act of 1970; the Federal Pay Comparability Act of 1970; the Equal Employment Opportunity Act of 1972; the Federal Wage System Act of 1972; the Civil Service Reform Act of 1978; the Alternative Work Schedule Act of 1978; the Spouse Equity Act of 1984; the Federal Employees' Retirement System Act of 1987; the Federal Employees Leave Sharing Acts of 1988 and 1993; the Whistleblower Protection Act of 1989; the Federal Employees Pay Comparability Act (FEPCA) of 1990; the Hatch Act Reform Amendments of 1993; and the Federal Workforce Restructuring Act (FWRA) of 1994.

This compendium's treatment of civil service issues is organized by chapters as they appear in Title 5. The chapter entries include discussion of selected laws on managing the federal executive branch workforce and their major amendments.[1034]

Twenty years of effort to establish a civil service for the executive branch of the federal government that was based on law and featured competitive examinations, relative security of tenure, and political neutrality culminated with

---

[1033] Lester C. Thurow, Investment in Human Capital (Belmont, CA: Wadsworth Publishing Co., Inc., 1970).

[1034] Several chapters of in Parts II and III of Title 5 are not included in this edition of the compendium. The omitted chapters include Chapter 29 ("Commissions, Oaths, Records, and Reports"); Chapter 81 ("Compensation for Work Injuries"); Chapter 85 ("Unemployment Compensation"); and Chapter 91 ("Access to Criminal History Records for National Security and Other Purposes").

enactment of the Pendleton Act of 1883.[1035] The act established the Civil Service Commission, which continued with largely the same mandate until 1978, when the Office of Personnel Management (OPM) was created in its stead. Although over the years many statutes (including those listed above) have been enacted to, among other things, expand the civil service, regulate political activities, classify and grade federal jobs, and set pay rates or establish mechanisms for pay setting, none so changed the original character of the civil service as did the Civil Service Reform Act (CSRA) of 1978 (92 Stat. 1111).[1036]

In addition to creating OPM, the CSRA of 1978 established the Office of Special Counsel (OSC), the Merit Systems Protection Board (MSPB), and the Federal Labor Relations Authority (FLRA) as independent organizations charged with protecting the merit system and adjudicating disputes between agencies and employees. The law also created a Senior Executive Service (SES) to enable department and agency heads to be assisted by experienced managers, some of whom were career civil servants and others of whom were political appointees, who could be moved to fill positions as assignments required. For the first time, authority for labor-management relations within the federal government was established in statute. Finally, personnel research programs and demonstration projects were authorized as a means for experimenting with various HRM policies, including pay and classification of jobs.

Implementation of the provisions of the CSRA of 1978 (particularly those on pay for performance and personnel research programs and demonstration projects) and FEPCA of 1990 were among the issues focused on during the Administrations of Presidents Ronald Reagan and George H.W. Bush. Among the concerns of President William J. Clinton's Administration was implementation of the recommendations presented by the NPR of 1993[1037] (particularly those on creating a family-friendly workplace) and the FWRA of 1994, which sought to reduce the size and scope of government. During the 1990s, OPM downsized considerably and contracted out traditionally centralized functions such as training and investigations. Executive branch agencies used voluntary separation incentives (commonly referred to as buyouts) instead of reductions-in-force to reduce their workforces. Departments and agencies developed in-house HRM capacities or contracted with OPM or other vendors for administrative services

such as review and rating of job applications, classification of federal jobs, training, payroll administration, implementation of affirmative action policies, and counseling services. During this period as well, OPM publicized the various HRM flexibilities provided government-wide under Title 5 and encouraged departments and agencies to use them. Congress authorized separate authorities for personnel management at the Federal Aviation Administration and the Internal Revenue Service that provide for greater HRM flexibilities than Title 5 generally permits.[1038]

Policies on federal workforce management in the Administration of President George W. Bush have been influenced significantly by the September 11, 2001 terrorist attacks on the World Trade Center and the Pentagon, and the discovery of anthrax in Washington, DC, and other cities. The President's term began with OPM's continued emphasis on the full use of already existing government-wide personnel flexibilities by departments and agencies and the incorporation of the management of human capital into agency strategic plans and processes (currently being implemented through the establishment of agency chief human capital officers (CHCOs) and a CHCO Council). In the wake of 9-11, however, new requirements for the federal government's HRM system have been stated by the White House and OPM. According to the President, the nation's efforts to fight terrorism require a system that is modern and flexible and puts the right people in the right place at the right time. In practice, this has been translated into law as authority for separate HRM systems for the Transportation Security Administration and the Departments of Homeland Security (DHS) and Defense (DOD) that provide the respective department heads with considerable discretion to establish their particular systems outside of many of the current Title 5 policies.[1039] Depending on how they are implemented, the DHS and DOD changes arguably could rival the CSRA of 1978 for impact on the civil service.

Both of the newly created systems at DHS and DOD have been described by the White House and some Members of Congress as demonstration projects whose various features could ultimately be applied to executive branch employees government-wide. Currently, the systems are authorized in separate chapters of Title 5 (Chapter 97 covers DHS and Chapter 99 covers DOD), and their implementation is expected to occur over several years. Whether the features of

[1038] For the Federal Aviation Administration (FAA), see P.L. 104-50, 109 Stat. 436 and subsequent amendments in P.L. 104-122, 110 Stat. 876; P.L. 104-264, 110 Stat. 3213; P.L. 105-339, 112 Stat. 3182; and P.L. 106-181, 114 Stat. 61. For the Internal Revenue Service (IRS), see P.L. 105-206, 112 Stat. 711. The FAA authority is codified in Title 49 of the United States Code. The IRS authority is codified in Title 5 of the United States Code as Chapter 95.

[1039] For the Transportation Security Administration (TSA), see P.L. 107-71, 115 Stat. 597; for the Department of Homeland Security (DHS), see P.L. 107-296, 116 Stat. 2229; and for the Department of Defense (DOD), see P.L. 108-136, 117 Stat. 1621. The TSA authority is codified in Title 49 of the United States Code. The DHS authority is codified as Chapter 97, and the DOD authority is codified as Chapter 99 in Title 5 of the United States Code.

one or both of the new systems are determined to be applicable to other federal agencies, or whether individual agencies continue to seek congressional approval for their own personnel flexibilities (a National Aeronautics and Space Administration proposal is currently pending in the 108th Congress), it seems likely that Congress will need to reconsider Title 5 (and the accompanying Title 5 Code of Federal Regulations that compiles the implementing regulations) as the Chapters 97 and 99 provisions are fully implemented.

Approaches that might be examined include recodification of the title into chapters that reflect HRM policies that apply government-wide; recodification of the title into chapters arranged by the general principles governing a particular policy, followed by all the exceptions to the policy; or continuation of the current amendment process that establishes separate chapters in Title 5 or other titles of the United States Code for individual departments granted separate authority. Issues that could be considered include which approach would provide for the administration of policies on government organization and employees in an efficient, understandable, coordinated, and fair manner; which approach would facilitate ongoing oversight of agency systems to ensure conformance with merit system principles and avoidance of prohibited personnel practices; and whether OPM or another organization or organizations would centrally administer HRM policies and exercise the authority for overseeing these policies.

Barbara L. Schwemle

(1) Office of Personnel Management (Chapter 11; in Part II).

Statutory Intent and History

The Office of Personnel Management (OPM), established pursuant to the Civil Service Reform Act of 1978 (92 Stat. 1119) succeeded the Civil Service Commission (CSC) established in 1883. The original objective in creating the CSC was to remove the selection and management of federal personnel from partisan political influence. With the passage of time, the leadership provided by the CSC, a multi-headed agency, was judged critically by some in the executive branch and in Congress. It was hoped that a new single-headed agencywould provide more effective leadership. By giving OPM the leadership role in federal personnel management, it was believed that the agency would be able to concentrate on planning and administering an effective government-wide program of personnel management. "Without the demands generated by a heavy day-to-day workload of individual personnel actions, OPM should provide the President, the civil service, and the Nation with imaginative public personnel administration."[1040]

In a 1993 assessment of the agency, the Clinton Administration's National Performance Review (NPR) identified OPM as a leader and source of expert advice concerning a broad range of human resources management matters. For the immediate future, the NPR envisioned OPM advising the President on issues affecting the management of federal employees; demonstrating commitment to diversity; planning for development of the workforce of the future; identifying strategies for providing the training essential to achieve a cultural shift toward more entrepreneurial management; conducting research, providing consulting services, and advising agencies on best practices; coordinating and sponsoring interagency cooperation on common issues; influencing government-wide change; and leading by example. The NPR indicated that achievement of this role would require OPM to overhaul its structure and change its internal culture. OPM privatized its investigations function, while training programs were transferred to the U.S. Department of Agriculture Graduate School. The OPM Director assured Congress that the agency would retain government-wide training policy and leadership responsibilities.

Significant reorganization of the agency, based on OPM's strategic plan, occurred in December 2002 when OPM's 12 departments were combined into 4 central divisions: Strategic Human Resources Policy, Human Resources Products and Services, Management and Chief Financial Officer, and Human Capital Leadership and Merit Systems Accountability. In the Homeland Security Act of 2002 (116 Stat. 1229) and the National Defense Authorization Act for FY2004

[1040] U.S. Congress, House Committee on Post Office and Civil Service, Legislative History of the Civil Service Reform Act of 1978, committee print, 96th Cong., 1st sess., Committee Print 96-2 (Washington: GPO, 1979), vol. II, p. 1470.

(P.L. 108-136; 117 Stat. 1621), Congress authorized the OPM Director, along with the Secretaries of the Departments of Homeland Security (DHS) and Defense (DOD), respectively, to jointly prescribe regulations to establish new human resources management (HRM) systems at DHS and DOD. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Major Provisions

Established as an independent agency in the executive branch, OPM's management structure comprises a director, deputy director, and the four associate directors mentioned above. The director executes, administers, and enforces civil service laws, rules, and regulations and oversees other OPM activities, including retirement and classification, except functions for which the Merit Systems Protection Board or the Special Counsel (the agency head for the Office of Special Counsel) are primarily responsible. The director aids the President as requested in preparing civil service rules, and otherwise advises the President on actions which may be taken to promote an efficient civil service and a systematic application of the merit system principles, including recommending policies relating to the selection, promotion, transfer, performance, pay, conditions of service, tenure, and separation of employees. The director also conducts or provides studies and research on improvements in personnel management. The director's duties may be delegated, except those regarding competitive examinations for positions with requirements common to all federal agencies. OPM maintains an oversight program to ensure that delegated authorities are in accordance with merit system principles and standards.

The Homeland Security Act of 2002 (116 Stat. 2289) at Section 1304 amended the director's functions to mandate that OPM design a set of systems, including appropriate metrics, for assessing the management of human capital by federal agencies. The systems must be defined in OPM regulations and include standards for (A) aligning agency human capital strategies with their missions, goals, and organizational objectives and integrating those strategies into agency budget and strategic plans; (B) closing skill gaps in mission critical occupations; (C) ensuring continuity of effective leadership through implementation of recruitment, development, and succession plans; (D) sustaining a culture that cultivates and develops a high-performing workforce; (E) developing and implementing a knowledge management strategy supported by appropriate investment in training and technology; and (F) holding managers and human resources officers accountable for efficient and effective human resources management in support of agency missions in accordance with merit system principles. The provision became effective on May 24, 2003.

In January 1999, the director was designated as the Chair of the President's Task Force on Federal Training Technology, established to encourage the use of technology in training. The director also chairs the Chief Human Capital Officers Council. (See the discussion of the 5 U.S.C. Chapter 14 provision in this compendium.)

Discussion

In the 104th Congress, legislation (H.R. 3483) was considered, but not enacted, which would have substantially altered the OPM Director's responsibilities. The thrust of the legislation, and the recent internal management activities of OPM, supported by the NPR, have been to delegate to the departments and agencies as many personnel functions as possible. OPM has been envisioned as a catalytic and overseer agency, not as an agency performing personnel functions of an executive branch-wide nature. Concerns have been raised by a number of organizations, such as the Senior Executives Association, that the downsizing of OPM and dispersal of its authorities and operations have placed OPM's capacity to carry out its statutory responsibilities at risk.

OPM's human resources management initiatives for 1998 and 1999 emphasized its expertise and leadership and sought to amend the agency's authorization to reorganize and clarify the responsibilities of the OPM Director. Vice President Gore announced in January 1999 that OPM would be proposing new hiring options to permit alternative selection procedures, to authorize agencies to make direct job offers in critical areas like information technology, to establish additional means for recruiting a diverse workforce, and to use non-permanent employees, with appropriate benefits, but a legislative proposal was not submitted to the 106th Congress.

Since enactment of P.L. 103-62, the Government Performance and Results Act (GPRA), oversight of OPM's role has especially focused on its administration of the civil service merit system and its human resources management leadership. The President's budget during the last three fiscal years of the Clinton Administration emphasized OPM's role as the administrator of the merit systems and designated it as a high impact agency. OPM announced an ambitious plan in its GPRA-mandated strategic plan for FY2000-FY2005. The strategic plan was revised in December 2002 and now covers the period 2002-2007. The plan has three strategic goals: (1) to have federal agencies adopt human resources management systems that improve their ability to build successful, high performance organizations; (2) to have federal agencies use effective merit-based human capital strategies to create a rewarding work environment that accomplishes the mission; and (3) to meet the needs of federal agencies, employees, and annuitants through the delivery of efficient and effective products and services. Various objectives accompany each goal. An annual performance plan accompanies the strategic plan. GAO concerns surrounding the agency's performance plans have been the inclusion of cost-based performance measures to provide an indication of how efficiently OPM is performing various activities and the credibility of agency performance information. OPM's FY2004 performance plan includes various instruments intended to permit program evaluation.

As part of the President's Management Agenda, OPM is leading the federal government's Strategic Management of Human Capital Initiative. (See [http://www.opm.gov], and choose "Strategic Management of Human Capital" on the home page menu.) OPM staff have been engaged in a joint effort with DHS and DOD to write the regulations creating new HRM systems at these departments since late 2002.

Significant workforce reductions have occurred at the agency. Especially troubling to some practitioners was the downsizing of the agency's library, which resulted in the loss of much of its well-regarded collection of materials on the Civil Service and all aspects of HRM. Questions about the agency's ability to carry out its statutory responsibilities despite the loss of staff persist. The Merit Systems Protection Board's (MSPB's) statutorily mandated evaluation of OPM's administration of the merit system found much improvement, but recommended increased leadership and coordination with the agencies. MSPB's December 2001 report included recommendations that OPM actively influence "broad-based regulatory or statutory changes where feasible" and "be an active participant in decisionmaking regarding HR [human resources] policies and programs." In a January 2003 report on OPM, GAO identified OPM's management challenges as: (1) leading strategic human capital management government-wide; (2) overseeing agency human capital management systems; (3) transforming OPM and managing its internal operations; and (4) administering the retirement and health insurance programs. A May 2003 GAO report suggested that OPM compile, analyze, and share information about personnel flexibilities that are being and should be used and "more vigorously identify new flexibilities that would help agencies better manage their human capital and then work to build consensus for the legislative action needed."

(2) Merit Systems Protection Board; Office of Special Counsel; and Employee Right of Action (Chapter 12; in Part II).

Statutory Intent and History

The underlying statute for the Merit Systems Protection Board (MSPB) is the Civil Service Reform Act (CSRA) of 1978 (92 Stat. 1121). This same statute and the Whistleblower Protection Act of 1989 (103 Stat. 17) also established the Office of Special Counsel (OSC) and Employee Right of Action. These laws sought to create separate entities to perform personnel appellate and adjudicatory functions. The OSC, initially part of MSPB, became an independent agency with enactment of the whistleblower law, an action largely prompted by disputes over budget resources. In stating the need for reform, the CSRA legislative history noted that, "There is little doubt that a vigorous protector of the merit system is needed. The lack of adequate protection was painfully obvious during the civil service abuses only a few years ago. Establishment of a strong and independent Board and Special Counsel will discourage subversions of merit principles." MSPB and OSC were reauthorized through 2007 in P.L. 107-304 (116 Stat. 2364), enacted on November 27, 2002.

Major Provisions

The Merit Systems Protection Board was established with three members. The functions of the board are to (1) hear, adjudicate, or provide for the hearing or adjudication of personnel matters and take final action on such matters; (2) order any federal agency or employee to comply with any decision of the board and enforce compliance; (3) conduct special studies on the civil service and executive branch merit systems, and report to the President on protection of the merit system; and (4) review OPM rules and regulations.

The Office of Special Counsel was established to (1) protect employees, former employees, and applicants for employment from prohibited personnel practices; (2) receive and investigate allegations of prohibited personnel practices and bring petitions for stays and corrective actions, and file complaints or recommend disciplinary actions; (3) receive, review, and forward to the Attorney General (where necessary) disclosures of violations of any law, rule, or regulation, or gross mismanagement, a gross waste of funds, an abuse of authority, or a substantial and specific danger to public health or safety; (4) review OPM rules and regulations; and (5) investigate and bring actions concerning allegations of violations of laws.

An employee may seek corrective action from MSPB for a prohibited personnel action taken against him or her; MSPB may issue a stay of the personnel action involved.

If the Special Counsel does not transmit the information to the agency head, the Special Counsel shall inform the individual of the reasons why the disclosure may not be further acted on and other offices available for receiving disclosures, should the individual wish to pursue the matter further (added by P.L. 107-304, 116 Stat. 2364).

Discussion

As originally established by Congress, MSPB was granted a permanent authorization. Seeking "to maintain close scrutiny" of the agency, Congress changed this to a term authorization in 1989. Among the issues which have arisen in discussions of MSPB's mission are these: the agency's role in enforcing the Whistleblower Protection Act provisions; whether it has a bias toward management; the board's use, or lack thereof, of employee stays; its actions to hold agencies accountable; and the agency's interpretation of concepts such as burden of proof, reasonable belief, and eligibility.

An issue that has concerned both the authorizing and the appropriating committees is the process by which an employee appeals a personnel action. In a September 1995 issue paper, the Vice President's National Performance Review and MSPB recommended streamlining of the process. A draft version of H.R. 3841, an original bill offered during the 104th Congress, included language that would have provided for employee appeal rights to either MSPB or the Equal Employment Opportunity Commission, but not both. Lacking bipartisan agreement, this provision was removed during subcommittee markup of H.R. 3841. A similar provision, but one providing that MSPB would have the jurisdiction, was included in draft legislation, prepared but not introduced, in the 105th Congress, by the House Civil Service Subcommittee chair, Representative Mica. A National Academy of Public Administration study of the issue found that "MSPB is generally viewed in a positive light due to its timely and consistent decisions." A January 1999 symposium marking the 20th anniversary of MSPB heard renewed calls for improvement to the appeals process.

Other issues involving MSPB concern caseload, use of alternative dispute resolution procedures, and administrative judge pay. With regard to the latter, an agreement between the MSPB chair and the MSPB professional association would have amended Title 5 to establish an administrative judge pay system with four levels of pay referenced to Senior Executive Service pay and the application of locality pay. In the 106th Congress, Representative George Gekas introduced H.R. 2946, which included the provisions found in the agreement, but no further action was taken. Similar legislation (H.R. 1965) was introduced in the 107th Congress.

Congress changed the Office of Special Counsel from a permanent to a term authorization for the same reason as MSPB's authorization was changed. Much of the discussion about the OSC has focused on its alleged ineffectiveness and employee bypassing of the agency to seek relief in other forums. H.R. 5512,

introduced in the 106th Congress, would have provided that "except as provided in Section 518 of Title 28, relating to litigation before the Supreme Court, attorneys designated by the Special Counsel may appear for the Special Counsel and represent the Special Counsel in any civil action brought in connection with Section 2302(b)(8) [relating to prohibited personnel practices] or Subchapter III of Chapter 73 [relating to prohibitions on political activity], or as otherwise authorized by law." The bill also would have authorized the Special Counsel to obtain review of any final order or decision of the Merit Systems Protection Board by filing a petition for judicial review in the United State Court of Appeals for the Federal Circuit under certain circumstances. No further action occurred on H.R. 5512.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136; 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws amend appellate procedures for these employees. (See the discussions of the 5 U.S.C. Chapter 77, Chapter 97, and Chapter 99 provisions in this compendium.)

In a December 5, 2003 memorandum to employees, MSPB announced that as part of a consolidation of agency operations, its Boston and Seattle field offices would be closed by March 31, 2004. The agency anticipates closing the Denver field office in 2005 and may close the New York City field office no earlier than 2005. Changes to the appellate procedures made by the Homeland Security and DOD Authorization Acts are reportedly part of the impetus for consolidation.

(3) Special Authority (Chapter 13; in Part II).

Statutory Intent and History

The system of special authority i.e., drafting and issuing personnel rules and regulations, and controlling, supervising, and retaining records of and examinations for the competitive service, as well as investigating personnel security matters and issuing reports generally, was established by the Civil Service Act of 1883 (Pendleton Act; 22 Stat. 404) and the Veterans Preference Act of 1944 (P.L. 78-359; 58 Stat. 387). The intent was to remove partisan political influences from the selection and retention of civil servants, protect veterans' preference with respect to employment and retention, and authorize security investigations.

Major Provisions

The Office of Personnel Management (OPM), formerly the Civil Service Commission, is directed to aid the President, at his request, in preparing the rules he prescribes under Title 5 of the United States Code for administering the competitive service. OPM is required to prescribe regulations, control, supervise, and preserve records of and examinations for the competitive service. The agency is charged also with issuing and enforcing regulations to implement provisions of Title 5 of the United States Code and relevant executive orders that set forth the policy giving preference to eligibles (i.e., certain veterans) in the competitive service and the excepted service in the executive agencies and the government of the District of Columbia.

OPM is authorized to investigate and report on matters concerning enforcement and the effect of rules the President and the OPM prescribe under Title 5 of the United States Code for administering the competitive service.

OPM is directed to conduct investigations and issue reports required by cited sections of Titles 22 and 42 of the United States Code relating to security status of United States representatives appointed to some international organizations and individuals involved with the National Science Foundation. This investigative authority may be exercised by the Federal Bureau of Investigation (FBI), rather than OPM, under certain circumstances. A revolving fund is available to OPM without fiscal year limitation for financing investigations, training, and other functions the office is authorized or required to perform on a reimbursable basis. An agency may use available appropriations to reimburse OPM or the FBI for the cost of investigations, training, and functions performed for the agency or to make advances for their cost.

For the purposes of certain sections of Title 5 of the United States Code that relate to administrative law judges, OPM may and, for purposes of 5 U.S.C. § 7521 relating to administrative law judges, the Merit Systems Protection Board may investigate, require reports of agencies, prescribe regulations, appoint advisory

committees as necessary, recommend legislation, subpoena witnesses and records, and pay witness fees as established for the courts of the United States.

OPM is required to keep minutes of its proceedings and to publish annual reports on Chapter 83 (retirement), including the status of the Civil Service Retirement and Disability Fund, and to report annually to Congress on the operation of Chapters 87 (life insurance) and 89 (health insurance) of Title 5 of the United States Code.

Discussion

This chapter, which generally originated in the Civil Service Act of 1883, centralizes federal personnel functions in OPM. Some have argued that some functions granted herein should be exercised by agencies to permit them to design regulations and procedures suitable to their individual needs, while others believe that continuing the current centralized system is more effective.

(4) Agency Chief Human Capital Officers (Chapter 14, in Part II).

Statutory Intent and History

Title XIII, Subtitle A of The Homeland Security Act of 2002 (116 Stat. 2287; P.L. 107-296) authorizes the establishment of chief human capital officer (CHCO) positions in federal executive branch agencies. The purpose of the provision is to raise the institutional profile of strategic human capital management within federal agencies.

Major Provisions

Section 1301 of the Homeland Security Act is entitled the Chief Human Capital Officers Act of 2002. Section 1302, amends Part II of Title 5 United States Code by adding a new Chapter 14 — Agency Chief Human Capital Officers. The new Section 1401 of Title 5 United States Code provides that the agency head must appoint or designate a CHCO who must advise and assist the agency head and other agency officials in carrying out the agency's responsibilities for selecting, developing, training, and managing a high-quality, productive workforce in accordance with merit system principles; implement the rules and regulations of the President and OPM and the laws governing the civil service within the agency; and carry out such functions as his or her primary duty.

The agencies covered by the CHCO provision are enumerated at 31 U.S.C. § 901(b)(1) and (2), which lists agencies subject to the Chief Financial Officers (CFO) Act, and include the Departments of Agriculture, Commerce, Defense, Education, Energy, Health and Human Services, Housing and Urban Development, the Interior, Justice, Labor, State, Transportation, the Treasury, Veterans Affairs, the Environmental Protection Agency, and the National Aeronautics and Space Administration. Other agencies covered are the Agency for International Development, the Federal Emergency Management Agency, the General Services Administration, the National Science Foundation, the Nuclear Regulatory Commission, the Office of Personnel Management, the Small Business Administration, and the Social Security Administration.

The Department of Homeland Security (DHS) is not covered by Chapter 14, although Section 103 of the Homeland Security Act (116 Stat. 2145) established a CHCO for DHS with responsibilities enumerated in Section 704 (116 Stat. 2219). The 108th Congress is considering legislation (H.R. 2886, S. 1567) that would, if enacted, include DHS among the CFO Act agencies and therefore make DHS subject to Chapter 14.

Under the new Section 1402, CHCOs have six functions, including (1) setting the workforce development strategy of the agency; (2) assessing workforce characteristics and future needs based on the agency's mission and strategic plan; (3) aligning the agency's human resources policies and programs with organization mission, strategic goals, and performance outcomes; (4) developing

and advocating a culture of continuous learning to attract and retain employees with superior abilities; (5) identifying best practices and benchmarking studies; and (6) applying methods for measuring intellectual capital and identifying links of this capital to organizational performance and growth. CHCOs must have access to all records, reports, audits, reviews, documents, papers, recommendations, or other materials that are the property of the agency or are available to the agency; and relate to programs and operations with respect to which the CHCO has responsibilities. The CHCO may request such information or assistance as may be necessary for carrying out the duties and responsibilities provided by Chapter 14 from any federal, state, or local governmental entity.

Section 1303 of the law establishes a CHCO Council consisting of the OPM Director who acts as chairperson; the OMB deputy director for management who acts as vice chairperson; and CHCOs of executive departments and any other members designated by the OPM Director. The council must meet periodically to advise and coordinate the activities of the member agencies on such matters as modernization of human resources systems, improved quality of human resources information, and legislation affecting human resources operations and organizations. The CHCO Council must ensure that representatives of federal employee labor organizations are present at a minimum of one meeting of the council each year. The representatives are not members of the council. Each year the CHCO Council must submit a report to Congress on its activities.

Section 1304 of the law amends 5 U.S.C. § 1103 by adding a subsection (c) which provides that OPM must design a set of systems, including appropriate metrics, for assessing the management of human capital by federal agencies. (See the discussion under 5 U.S.C. Chapter 11 in this compendium.) The CHCO provisions became effective on May 24, 2003, under Section 1305 of the law.

Discussion

The provisions on CHCOs are intended to facilitate communication among executive branch departments and agencies and enhance the coordination of human resources management in the federal government. At two days of hearings in March 2002 on the federal workforce, conducted by the Senate Subcommittee on International Security, Proliferation, and Federal Services, Members took testimony on the positive role that councils play in developing and implementing initiatives to address federal management issues and serving as communities of interest that share best practices. They also received testimony as to the intent of the provisions that CHCOs be senior managers who are charged with deploying human resources management authorities efficiently and strategically.

On May 24, 2003, OPM Director Kay Coles James announced the names of those who will serve on the CHCO Council. The Council conducted its first meeting on June 11, 2003. Council meetings have included, among other issues, discussions on encouraging federal agencies to use the personnel flexibilities that have

already been authorized, career development in the federal government, and emergency procedures for federal agencies.

(5) Political Activity of Certain State and Local Employees (Chapter 15; in Part II).

Statutory Intent and History

Chapter 15, commonly referred to as the Hatch Act covering state or local government officers and employees, addresses the extent to which such workers can be politically active. The underlying statutes for the Chapter 15 provisions are the Federal Election Campaign Act Amendments of 1974 (88 Stat. 1290) and the Civil Service Reform Act of 1978 (92 Stat. 1225). The 1974 law removed all but three of the prohibitions on political activities of certain state and local employees. Enforcement provisions that provide penalties for violations were added in 1978.

Major Provisions

Chapter 15 covers state or local government officers or employees who are "employed by a State or local agency [and] whose principal employment is in connection with an activity which is financed in whole or in part by loans or grants made by the United States or a Federal agency." An individual who exercises no functions in connection with such activity is not covered. District of Columbia (DC) government officers or employees, other than the mayor, members of the City Council, or the Recorder of Deeds, are covered by Chapter 73 provisions of the Hatch Act Reform Amendments of 1993 (107 Stat. 1001).

A covered state or local officer or employee may not:

- use official authority or influence for the purpose of interfering with or affecting the result of an election or a nomination for office;
- directly or indirectly coerce, attempt to coerce, command, or advise a state or local officer or employee to pay, lend, or contribute anything of value to a party, committee, organization, agency, or person for political purposes; or
- be a candidate for elective office.

A state or local officer or employee retains the right to vote and express opinions on political subjects and candidates. The prohibition on candidacy for elective office applies to only a limited number of state and local elections. A state or local officer or employee is not prohibited from being a candidate in any election if none of the candidates being nominated or elected represents a party whose candidates for presidential elector received votes in the last preceding election at which presidential electors were selected. Office of Personnel Management (OPM) regulations define this as a nonpartisan election.

Any federal agency making a loan or grant of U.S. funds to a state or local officer or employee for an activity must report to the Special Counsel (who heads the Office of Special Counsel, a federal agency) if it reasonably believes that the individual has violated the prohibitions against influencing elections or taking

part in political campaigns. If warranted, the Special Counsel then investigates and presents its findings and any resulting charges to the Merit Systems Protection Board (MSPB). MSPB fixes the time and place for a hearing and notifies the officer or employee being charged and the employing agency of the alleged violation. The hearing may not be held earlier than 10 days after the notice is mailed.

The state or local officer or employee and the agency may appear with counsel at the hearing. After the hearing, MSPB determines whether a violation has occurred; if so, the board determines whether the violation warrants removal from the office or job and notifies the individual and the agency by mail. MSPB imposes a penalty when it finds that (1) a state or local officer or employee has not been removed from office or employment within 30 days of receiving its notice that the individual has violated the law and must be removed; or (2) a removed state or local officer or employee has been appointed within 18 months to an office or employment in the same state in a state or local agency which does not receive loans or grants from a federal agency. In such cases, MSPB orders the federal agency to withhold from its loans or grants to the state or local agency an amount equal to two years' pay at the rate the individual was receiving when the violation occurred. If the appointment has been made within 18 months to a state or local agency that receives federal loans or grants, MSPB directs that the withholding be made from the agency. The order becomes effective 30 days after it has been mailed to the agency. MSPB may not require an amount to be withheld from a loan or grant pledged by a state or local agency as security for its bonds or notes if such withholding jeopardizes payment of the principal or interest.

MSPB may subpena witnesses to attend and testify and produce documentary evidence relating to any matter concerning political activity of covered state and local employees. When a subpena is disobeyed, a U.S. court may require the attendance and testimony of witnesses and the production of documentary evidence. In case of contumacy or refusal to obey a subpena, the United States District Court within whose jurisdiction the inquiry is proceeding may order the person to appear before MSPB, or to produce documentary evidence if so ordered, or to give evidence concerning the matter in question. Any failure to obey the court order may be punished as contempt. MSPB may order testimony to be taken by deposition at any stage of its proceeding or investigation. A person subpoenaed by MSPB may not be excused from attending, testifying, or producing documentary evidence because to do so could incriminate or subject him to a penalty or forfeiture. A person who falsely testifies may be prosecuted for perjury.

A party aggrieved by an MSPB action may, within 30 days, petition for a review in the United States District Court for the district in which he or she resides. The start of proceedings does not stay the order or determination unless the court so orders, and the officer or employee is suspended from his office or employment while proceedings are pending. The court reviews the entire record, including

questions of fact and law. It may direct that additional evidence be taken. MSPB may modify its findings or determination or order because of additional evidence. The modification is filed with the court if conclusive. The court affirms the determination or order, or the modified action if it is in accord with law. If it is not, the court remands the proceeding to MSPB with directions to comply with the law. The court's actions are final, subject to review by the appropriate United States Court of Appeals, as are those of the court of appeals subject to review by the United States Supreme Court on certiorari or certification.

Discussion

Legislation (H.R. 308) which sought to repeal the prohibition on state or local government officers or employees seeking elected office was introduced in the 105th Congress, but no further action occurred. Similar legislation had been introduced in both the 103rd and 104th Congresses. Also in the 104th Congress, legislation (H.R. 3918) which would have treated DC government employees the same as state and local government employees for purposes of 5 U.S.C. Chapter 15 was introduced, but no further action occurred. Similar legislation also was introduced in the 107th Congress (H.R. 4617).

Discussions to amend the Hatch Act covering state or local government officers and employees might focus on issues including these: whether the availability of federal funds mandates political activity restrictions; whether coercion and patronage would result from a liberalized political activity law; and whether state laws, known as the "little" Hatch Acts, are sufficiently strong to prevent the misuse of government authority.

(6) Definitions (Chapter 21; in Part III, Subpart A — General Provisions).

Statutory Intent and History

The Pendleton Act of 1883 (22 Stat. 403-407) provides the basis for the definitions of the civil and competitive service terminology still in use today. The act provided that the civil service would be comprised of individuals who had successfully passed competitive examinations. It also provided for specific exceptions and established the President as the officer with the authority to regulate admissions to the civil service. The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108136; 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 21 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Major Provisions

Sections 2101 through 2109 provide definitions for civil service, armed forces, uniformed services, Senior Executive Service, competitive and excepted services, officer, employee, Member of Congress, congressional employee, veteran, preference eligible, and air traffic controller.

Discussion

Throughout Title 5 there are sections that provide definitions of some of these same categories, particularly of employee and agency. The definitions specifically associated with provisions would govern. However, throughout Title 5, there are cross references to definitions elsewhere in the title. The definition of employee (Section 2105) is probably the most common reference. At other points in Title 5 different definitions are used, and in some instances, it is necessary to follow several references until the specific definition, and its exceptions, become clear. For example, Section 5302 defines employee for the paycomparabilitysystem. Statutory pay system is defined, in part, as a pay system under "Subchapter III, relating to the General Schedule." Section 5331 (definitions under Subchapter III) leads the reader to a cross-reference to the definitions under Section 5102, which is the definitional section for the position classification system. Section 5102 defines employee as "an individual employed in or under an agency," defines agency, and provides a substantial listing of exceptions.

(7) Merit System Principles (Chapter 23; in Part III, Subpart A — General Provisions).

Statutory Intent and History

The Civil Service Reform Act (CSRA) of 1978 (92 Stat. 1113) is the underlying statute for Chapter 23. The law codifies merit principles and prohibits personnel practices that had previously been expressed in rules, regulations, and executive orders. The legislative history of the CSRA indicates that the statute codified merit system principles for the first time, and required agencies and employees to adhere to them.

Major Provisions

Each agency head is responsible for preventing prohibited personnel practices, for complying with, and enforcing, applicable civil service laws, rules, and regulations, and other aspects of personnel management, and for ensuring that agency employees are informed of the rights and remedies available to them. The law defines personnel actions as: appointments; promotions; adverse actions or other disciplinary or corrective actions; details, transfers, or reassignments; reinstatements; restorations; reemployment; performance evaluations; decisions concerning pay, benefits, or awards, concerning education or training, if such may reasonably be expected to lead to a personnel action; decisions to order psychiatric testing or examination; and any other significant changes in duties, responsibilities, or working conditions. Nine merit system principles and 12 prohibited personnel practices are codified in law and summarized below.

Merit System Principles.

- recruit from qualified individuals to achieve a workforce from all segments of society; selection and advancement solely on the basis of relative ability, knowledge, and skills; assure equal opportunity through fair and open competition;
- fair and equitable treatment of employees and applicants for employment in all aspects of personnel management without regard to political affiliation, race, color, religion, national origin, sex, marital status, age, or handicapping condition, and with proper regard for their privacy and constitutional rights;
- equal pay for work of equal value, with appropriate consideration of both national and local rates paid by employers in the private sector, and appropriate incentives and recognition for excellence in performance;
- employee adherence to high standards of integrity, conduct, and concern for the public interest;
- efficient and effective use of the federal workforce;
- retain employees on the basis of the adequacy of their performance; correct inadequate performance; and separate those who cannot or will not improve performance to meet required standards;

- provide employees effective education and training to improve organizational and individual performance;
- protect employees against arbitrary action, personal favoritism, or coercion for partisan political purposes, and prohibit the use of official authority or influence to interfere with or affect the result of an election or a nomination for election;
- protect employees against reprisal for the lawful disclosure of information reasonably believed to evidence a violation of any law, rule, or regulation, or mismanagement, a gross waste of funds, an abuse of authority, or a substantial and specific danger to public health or safety.

Prohibited Personnel Practices.

- discriminating for or against any employee or applicant for employment on the basis of race, color, religion, sex, national origin, age, handicapping condition, marital status, or political affiliation;
- soliciting or considering any recommendation or statement, oral or written, with respect to any individual who requests, or is under consideration for, any personnel action unless such recommendation or statement is based on the personal knowledge or records of the person furnishing it, and consists of an evaluation of the work performance, ability, aptitude, or general qualifications of such individual, or an evaluation of the character, loyalty, or suitability of such individual;
- coercing the political activity of any person (including the providing of any political contribution or service) or taking any action against any employee or applicant for employment as a reprisal for the refusal of any person to engage in such political activity;
- deceiving or willfully obstructing any person with respect to such person's right to compete for employment;
- influencing any person to withdraw from competition for any position for the purpose of improving or injuring the prospects of any other person for employment;
- granting any preference or advantage not authorized by law, rule, or regulation to any employee or applicant for employment (including defining the scope or manner of competition or the requirements for any position) for the purpose of improving or injuring the prospects of any particular person for employment;
- appointing, employing, promoting, advancing — or advocating such – in or to a civilian position any individual who is a relative of such employee if such position is in the agency in which such employee is serving as a public official or over which such employee exercises jurisdiction or control as an official;
- taking or failing to take, or threatening such, a personnel action with respect to any employee or applicant for employment because of any

disclosure of information, including to the Special Counsel[1041] or an agency Inspector General, by the individual which he or she reasonably believes evidences a violation of any law, rule, or regulation, or gross mismanagement, a gross waste of funds, an abuse of authority, or a substantial and specific danger to public health or safety; provided the disclosure is not specifically prohibited by law and if such information is not specifically required by executive order to be kept secret in the interest of national defense or the conduct of foreign affairs;

- taking or failing to take, or threatening such, any personnel action against any employee or applicant for employment because of the exercise of any appeal, complaint, or grievance right granted by any law, rule, or regulation; testifying for, or otherwise lawfully assisting, any individual in the exercise of any right referred to above; cooperating with or disclosing information to, the Inspector General of an agency, or the Special Counsel, in accordance with the law; or for refusing to obey an order that would require the individual to violate a law;
- discriminating for or against any employee or applicant for employment on the basis of conduct which does not adversely affect the performance of the individual or the performance of others; except this shall not prohibit an agency from taking into account, in determining suitability or fitness, any conviction of the employee or applicant for any crime under federal, state, or District of Columbia law;
- knowingly taking, recommending, or approving, or failing to do such, any personnel action if the taking of, or failing to take, such action would violate a veterans' preference requirement;
- taking or failing to take any other personnel action if such would violate any law, rule, or regulation implementing, or directly concerning, the merit system principles.

Discussion

No substantive amendments have been made to the merit system principles since their codification in 1978. Concerning the prohibited personnel practices, however, significant amendments have been made. In 1993, the Hatch Act Reform Amendments (107 Stat. 1001) expressly prohibited a Member of Congress from making a recommendation on behalf of an applicant for federal employment, except as to character and the residence of the individual. In 1996, this prohibition was ended by restoring the language first enacted in 1978 (110 Stat. 2395). There is currently no specific prohibition on Members' recommending or referring applicants for federal positions or federal personnel actions. In 1998, the prohibition relating to violation of the veterans' preference

[1041] The Special Counsel heads the Office of Special Counsel (OSC), a federal agency. See the discussion of 5 U.S.C. Chapter 12 for more information on the OSC.

requirement was added in the Veterans Employment Opportunities Act of 1998 (112 Stat. 3187).

H.R. 5512, introduced in the 106th Congress, would have added a 13th prohibited personnel practice related to the implementation or enforcement of any nondisclosure policy, form, or agreement. The bill also would have amended the eighth prohibited personnel practice to clarify the disclosures covered. No further action occurred on the bill. Similar legislation (H.R. 2588 and S. 995) was introduced in the 107th Congress and is pending in the 108th Congress (H.R. 3281, Whistleblower Protection Enforcement Act; and S. 1229 and S. 1358, Federal Employee Protection of Disclosures Act).

At the request of the Administration, legislation (S. 1495) was introduced in the 105th Congress to require the federal appeals court to hear every appeal from a Merit Systems Protection Board (MSPB) decision brought by OPM (currently the court has discretion to decide whether or not to hear OPM petitions). Additionally, the legislation would have granted OPM 60 days to file a petition for review rather than the current 30 days. In a hearing on the bill, OPM justified its request for the amendments by saying that it was in a better position than the court to judge the impact of erroneous MSPB and arbitration decisions and that the 60-day time frame was the same as that for government appeals from the Federal Labor Relations Authority. The Justice Department and the National Academy of Public Administration supported OPM's views. Representatives of the National Treasury Employees Union, the American Federation of Government Employees, and the National Federation of Federal Employees opposed the amendments. Among their comments were these: that the federal circuit should retain its discretion (a system of checks and balances) as appeals were only to be granted in exceptional circumstances; that the other parties to a case have only 30 days to appeal; that arbitration decisions are nonprecedential cases; and that courts make and are qualified to make decisions about whether an appeal should be heard in every case. No further action occurred on the bill.

In the 108th Congress, legislation (H.R. 2867 and S. 1440, Federal Bureau of Investigation (FBI) Reform Act of 2003) is pending to amend 5 U.S.C. § 2303 to increase the protection for FBI whistleblowers. Similar legislation (S. 1974) was introduced in the 107th Congress.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136; 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 23 merit system principles and prohibited personnel practices cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

By law, the Office of Personnel Management is to execute, administer, and enforce the civil service laws and rules and regulations and conduct oversight of any personnel management authorities which it delegates to agency heads. Under its strategic plan, mandated by P.L. 103-62, the Government Performance and Results Act, one of OPM's FY2004 goals is to "monitor and assess agencies' effectiveness in implementing merit-based strategies that support their mission." OPM's FY2004 budget request allocated $16,070,000 (out of a total of $120,246,000) and 136 (out of a total of 796) full-time equivalent employees to carrying out this goal.

MSPB, by law, is required to submit an annual report to the President and Congress which includes an analysis of "whether the actions of OPM are in accord with merit system principles and free from prohibited practices." Its July 1998 report found that OPM's reorganized oversight program had improved; it enjoyed a high degree of top-management support within OPM and was seen as having value to the agencies. Among MSPB's recommendations for further improvement were that evaluation needs to be more consistent in the field divisions, information obtained through oversight needs to be better used and disseminated, and oversight of line managers needs to occur. Recommendations focused on OPM's leadership and coordination in developing human resource management evaluation standards. MSPB's December 2001 report found that OPM's oversight program "seems to have been given the appropriate amount of attention and support," is funded entirely by appropriated funds, and "is sound." The report included recommendations that OPM actively influence "broad-based regulatory or statutory changes where feasible" and "be an active participant in decisionmaking regarding HR [human resources] policies and programs."

(8) Authority for Employment (Chapter 31; in Part III, Subpart B — Employment and Retention).

Statutory Intent and History

In addition to the 1966 Title 5 codification statute (P.L. 89-554; 80 Stat. 378), the basic statutes for Chapter 31, "Authority for Employment," include the Postal Revenue and Federal Salary Act of 1967 (P.L. 90-206; 81 Stat. 613), the Civil Service Reform Act of 1978 (P.L. 95-454; 92 Stat. 1111), the Federal Employees Pay Comparability Act (FEPCA) of 1990 (P.L. 101-509; 104 Stat. 1427), and a 1988 amendment to Title 5 authorizing the establishment of the Federal Bureau of Investigation (FBI) and the Drug Enforcement Administration (DEA) Senior Executive Service (P.L. 100-325; 102 Stat. 579). The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136; 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 31 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions elsewhere in this compendium.)

Most recently, Congress amended Chapter 31 to streamline the hiring process for the Securities and Exchange Commission (SEC) with the Accountant, Compliance, and Enforcement Staffing Act of 2003 (P.L. 108-44; 117 Stat. 842) in the wake of unfolding financial market scandals. Following a series of corporate accounting scandals that began with Enron in late 2001, Congress moved to increase the size and budget of the SEC, the federal agency that regulates corporate securities markets. From $438 million in FY2002, the SEC's annual appropriation was increased to $716.3 million for FY2003, and then to $811.5 million for FY2004. The increases were to fund about 900 new professional staff positions, including a substantial number of accountants, examiners, and economists, in addition to the hiring made necessary by staff turnover. The SEC estimated that the FY2003 budget would result in the hiring of 200 lawyers, 250 accountants, 300 examiners, 10 economists, and some other specialists. As FY2003 came to a close, however, the SEC reported that it had been unable to fill many of these jobs and, as a result, $103 million of its appropriation was unspent. Time-consuming hiring procedures and rules that apply to the federal competitive service were considered a major reason for the delay.

Major Provisions

The chapter generally mandates agency hiring of personnel, and also enumerates specific hiring authorizations, restrictions, and prohibitions affecting federal employment. For instance, there are provisions to assist blind and deaf federal employees in the performance of their duties, as well as restrictions on hiring and using attorneys; hiring publicity experts; accepting student volunteers; and using experts and consultants. The employment of private detectives and the appointment of relatives by public officials are prohibited.

The Accountant, Compliance, and Enforcement Staffing Act of 2003 added a new Section 3114 to Subchapter I of Chapter 31. The SEC is authorized to appoint accountants, economists, and securities compliance examiners to competitive service positions by following the procedures that apply to the excepted service. Positions thus filled are not to be considered excepted service positions. The statute directs the SEC to submit two reports to congressional committees describing its exercise of this authority. The initial report is due 90 days after the end of FY2003; the second, 90 days after the end of FY2005.

The purpose and composition of the Senior Executive Service (SES) is specified. Creation of the SES was a key component of the Civil Service Reform Act of 1978. The SES is a corps of top managers and administrators in the federal service encompassing approximately 7,000 positions formerly in General Schedule grades 16-18 and certain positions formerly in Executive Schedule levels IV and V. The SES includes career and political civil servants, with a limit of 10% on noncareer members. It emphasizes mobility, managerial discretion in assignments, accountability and performance of a very high order, and a reward system based on managerial excellence, risk-taking, and initiative.

The chapter also authorizes a separate Senior Executive Service for the FBI and the DEA within the Department of Justice, independent of the government-wide SES, but closely paralleling its pay, performance, and removal provisions. Requirements for an annual report to Congress on the FBI-DEA Senior Executive Service are also set forth.

Discussion

The chapter reflects both evolving trends in the federal workforce and enduring precepts. Provisions concerning work station access for the disabled as well as assistance for handicapped federal employees are recent chapter additions intended to prevent discrimination based on employee disability, and closely parallel similar protections found in the Americans with Disabilities Act (104 Stat. 327, as amended, 105 Stat. 1077, at 1095) applying to the private sector. In both instances, unencumbered entrances, walkways, ramps, and the like are required, along with specially adapted office machinery to assist employees in fulfilling their work potential.

The specified employment prohibitions, on the other hand, are long-standing. The anti-nepotism provision, together with prohibitions on employment of publicity experts and private detectives, reflect rather permanent attitudes about certain public proprieties in federal employment not necessarily paramount in the private sector.

With regard to the SEC provisions, the persistence of corporate and financial scandals in the headlines created a sense of urgency in Congress for reinforcing federal securities regulation. The bill that became P.L. 108-44 (H.R. 658) passed

the House by a vote of 423-0 on June 17, 2003, and was approved without amendment by unanimous consent in the Senate two days later. The legislative history contains no arguments against the concept of streamlined appointment authority for the SEC. However, in the report accompanying H.R. 658 (H.Rept. 108-63), 24 minority members of the House Financial Services Committee expressed the view that the authority should be temporary and supported a sunset date at the end of FY2008. The final version of the legislation makes the expedited hiring authority permanent. The Office of Personnel Management (OPM) did not comment on similar language in hearings on H.R. 1836 in May 2003 before the House Committee on Government Reform. On June 20, 2003, one day after the Senate passed H.R. 658, OPM Director Kay Coles James issued a memorandum stating, among other things, that direct-hire authority[1042] would be available to the SEC for two years to appoint accountants, economists, and securities compliance examiners "to respond to Congressional interest and to help the agency meet its mandate to fill in excess of 800 positions."[1043]

The Senior Executive Service provisions of the Civil Service Reform Act of 1978 were, originally, the most important contribution of this landmark legislation. Since its creation, the SES has continued to be challenged by several major issues. The National Commission on the Public Service took note, in its 2003 report, of problems affecting the SES, such as the inclusion of scientists, other professionals, and technical specialists in the SES, and a compensation and reward system that has failed to function properly. The commission recommended dividing the SES into a Professional and Technical Corps (PTC) and an Executive Management Corps (EMC), and advised that more attention should be paid to developing strong management talent within the federal government. Another issue is the lack of diversity found within the senior executive ranks. A comprehensive report by the General Accounting Office (GAO) documenting the extent of diversity within the SES noted that workforce planning, notably succession planning, could be used by agencies to enhance diversity. In 2003, OPM launched an SES candidate development program, which was presented as an initiative to aid in the development of a high-quality SES that reflects the diversity of America.

The 20th anniversary of the SES in 1998 prompted an examination of the service by OPM and other interested parties. OPM issued, in April 1998, "An Outline of OPM's Proposed Framework for Improving the Senior Executive Service." The Senior Executives Association (SEA) responded to this document in June 1998, and an OPM- and SEA-sponsored survey of SES members was completed in

1999. These efforts sought to reinforce the concept of a senior executive corps and improve the recruitment and retention of senior executives. Major problems and issues currently facing the Senior Executive Service are pay compression, retirement and succession planning, the proliferation of separate cadres of senior executives at selected agencies, mobility, restructuring, and performance management.

(9) Examination, Selection, and Placement (Chapter 33; in Part III, Subpart B — Employment and Retention).

Statutory Intent and History

The basic statutory authorities contributing to the provisions of Chapter 33, "Examination, Selection, and Placement," are the 1966 Title 5 codification statute (80 Stat. 378) and the Civil Service Reform Act of 1978 (92 Stat. 1111). Additional provisions derive from a 1967 law providing for the acquisition of career status by certain temporary federal employees (81 Stat. 273); the Intergovernmental Personnel Act of 1970 (84 Stat. 1920); a 1972 amendment to Title 5 providing a career program for and greater flexibility in the management of air traffic controllers (86 Stat. 141 at 142); the Department of Defense Authorization Act, 1986 (99 Stat. 777); the Whistleblower Protection Act of 1989 (103 Stat. 32); the Ethics Reform Act of 1989 (103 Stat. 1756); and the Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229). In recent years, there have been statutes which removed groups of employees from hiring processes managed by the Office of Personnel Management. Policymakers in the Internal Revenue Service, Federal Aviation Administration, and Federal Bureau of Investigation have been granted specific authority to design and implement new systems for selected groups of staff. The Homeland Security Act of 2002 and the National Defense Authorization Act for FY2004 (P.L. 108-136; 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 33 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

The chapter provides certain general conditions for federal employment and also outlines the basic elements of a merit-based civil service system. It includes provisions dealing with competitive and noncompetitive examinations; probationary employment periods; and prohibitions on political influence and offering any recommendation regarding merit system employment, advocacy of the overthrow of the government, and participating in a strike or asserting the right to strike.

Major Provisions

Chapter 33 provides general authority to the President for examination, certification, and appointment in the federal civil service. The President is mandated to prescribe rules for entry into competitive service, for competitive and noncompetitive examinations, and for the probationary period before the appointment becomes final. Political recommendations from Members of Congress and others are prohibited, although competitive appointment based on service in the legislative and judicial branches is allowed under certain conditions.

In addition to general conditions of federal employment, specific conditions of employment governing certain classes of federal employees are given, including those for air traffic controllers, law-enforcement officers, public safety personnel, reemployed annuitants, retired military personnel, and members of the Senior Executive Service (SES). Aspects of employment affecting these classes, such as age limits, veterans' preference, credit for prior military service, promotion policy, and disability credits and preference, are enumerated.

The responsibilities of the Office of Personnel Management (OPM), as the central personnel agency, are detailed, including conducting examinations for the competitive service, maintaining and certifying from a competitive service register of eligibles, prescribing rules governing appointment to positions classified above GS-15, and keeping and making public a government-wide list of vacant positions in the competitive service.

Key provisions of the chapter relate to the inter- and intra-agency detailing of federal employees, as well as detailing to state and local government entities, including limitations on length of details; responsibilities and obligations of detailees accruing special benefits from certain assignments; protection of pay, benefits, and seniority while on detail; and provisions governing injury and death while on detail. On September 9, 2003, OPM published proposed regulations relating to the detail of executive branch employees to the legislative branch (68 FR 53054). The regulations propose to limit such details to 180 days with one additional period of up to 180 days and to limit the activities in which executive branch employees could engage. During consideration of the Transportation and Treasury Appropriation Bill FY2004 (H.R. 2989), the Senate agreed by voice vote to an amendment (No. 1949) offered by Senator Charles Grassley that would prohibit any funds appropriated or made available under the act from being used to implement the regulations. In a March 12, 2003, memorandum to human resources directors, OPM's Associate Director for Human Capital Leadership and Merit Systems Accountability requested that executive branch agencies provide OPM with information about the use of interagency details as part of their workforce strategies.[1044]

Provisions governing the SES are elaborated, including the creation and mission of executive resource, qualification review, and performance review boards within the SES. Specific attention is devoted to aspects of SES employment such as assignment and reassignments and appropriate notice pertaining thereto, career development, and sabbaticals. S. 2651, introduced in the 107th Congress, would have amended 5 U.S.C. § 3132 to establish a new appointment in the SES, simply known as "limited," which would have replaced limited term and limited emergency appointments and to allow limited appointees who meet certain

[1044] U.S. Office of Personnel Management, Memorandum for Human Resources Directors, "Number of Agency Details," Mar. 12, 2003.

conditions to fill career-reserved positions. Sections 3394 and 3395 would have been amended to vary the duration of appointments, extensions, and reassignments and transfers for limited appointees according to the type of SES position a limited appointee filled. Any limited appointee would not have been allowed to serve more than seven consecutive years in any combination of limited appointments. No further action occurred on the bill. In the 108th Congress, the NASA Flexibility Act of 2003, as passed by the Senate (S. 610) and as reported to the House of Representatives (H.R. 1085), includes similar provisions.

Section 1321 of the Homeland Security Act of 2002 repealed the Title 5, United States Code, recertification requirement for senior executives (for agencies that are subject to this chapter of the title; i.e., much of the executive branch) and struck from 5 U.S.C. § 3393 the reference to a senior executive being removed for failure to be recertified.

The Homeland Security Act also amended the Title 5, United States Code, process for hiring in the competitive service (again, for much of the executive branch). Section 1312 of the law amended 5 U.S.C. § 3304(a) by adding a new paragraph (3) providing authority for agencies to appoint, without regard to 5 U.S.C. §§ 3309-3318, candidates directlyto positions for which public notice has been given and OPM has determined that there exists a severe shortage of candidates or there is a critical hiring need. (This authority is often called "direct-hire" authority.) OPM regulations must prescribe criteria for identifying such positions and may delegate authority to make determinations under such criteria.[1045] Section 1312 of the law also added a new Section 3319 — Alternative Ranking and Selection Procedures to Title 5, United States Code. OPM, or an agency which has been delegated examining authority, may establish category rating systems for evaluating applicants for positions in the competitive service. Applicants may be evaluated under two or more quality categories based on merit, consistent with OPM regulations, rather than be assigned individual numerical ratings. Within each quality category, applicants who are eligible for veterans' preference must be listed ahead of applicants who are not eligible for preference. Except for applicants for scientific and professional positions at GS-9 (equivalent or higher), each applicant who is a veteran with a compensable service-connected disability of 10% or more must be listed in the highest quality category.

An appointing official may select any applicant in the highest quality category, or, if fewer than three candidates have been assigned to the highest quality category, in a merged category consisting of the highest and the second highest quality categories. The appointing official may not pass over a preference eligible in the

---

[1045] U.S. Office of Personnel Management, Memorandum for Heads of Executive Departments and Agencies, and Chief Human Capital Officers, "New Human Resources Flexibilities — Direct Hire Authority," June 20, 2003.

same category from which selection is made, unless the requirements of 5 U.S.C. § 3317(b) or § 3318(b), as applicable, are satisfied. Each agency that establishes a category rating system must submit, in each of the three years following this establishment, a report to Congress on the system that must include information on the number of employees hired under the system; the system's impact on the hiring of veterans and minorities, including those who are American Indian or Alaska Native, Asian, Black or African American, and native Hawaiian or other Pacific Islander; and the way in which managers were trained in the administration of the system. OPM published regulations to implement the provisions on June 13, 2003 (68 FR 35265).

Discussion

Examination, selection, and placement provisions in federal civil service law illuminate many key elements and potentially critical stress points in the operation of the personnel system. These include probation, anti-politicization, age limits for certain classes of employment, temporary duty assignments, detailing of employees, veterans preference, loyalty provisions, and prohibitions on the right to strike.

The one-year probationary period for new federal employees has engendered controversy over the years, as have legislative proposals to modify it. Proposals to grant appellate rights to those denied tenure after one year, raise probationary employee benefits, and increase the probationary time from one to three years have all been proposed, but not accepted into law.

Although the statutory limitation on temporary service is three years, abuses of this provision have long been reported, with many instances of individuals complaining of far longer periods of service in temporary status.

The practice of detailing federal employees, notably those from executive branch agencies to the White House, has been a recurring problem for many years. Critics allege that detailed employees have been used to enhance the President's political agenda, and that the number of detailees at work in the White House at any given time is difficult to ascertain because of incomplete or inaccurate reporting.[1046]

Maximum age requirements for federal law enforcement officers and air traffic controllers have raised questions regarding the utility, equity, and possible adverse effects of these limits. The arbitrary loss of highly skilled professionals,

[1046] See, for example, U.S. General Accounting Office, Personnel Practices: Federal Employees Detailed from DOD to the White House, GAO/GGD-88-33, 1988; U.S. General Accounting Office, Personnel Practices: Schedule C and Other Details to the Executive Office of the President, GAO/GGD-93-14, Nov. 1992.

for instance, may be more costly to the agency than any benefits resulting from a reduced workforce.

Appointment, reassignment, transfer, and development in the SES have been repeatedly criticized over the years. Entry into the SES has long been viewed as unduly restricted and haphazard by many career SES candidates. Reassignment, transfer, and mobility programs, regarded as key elements in the reform legislation creating the SES, have been considered a signal failure, since the overwhelming proportion of career SES begin and end their careers in the same agency. Performance appraisal programs have also been found wanting, since only a small number of SES members have ever been faulted for inadequate performance. SES members themselves have long criticized the service for perceived deficiencies in compensation and management, political interference, and low morale.

(10) Part-Time Career Employment Opportunities (Chapter 34; in Part III, Subpart B — Employment and Retention).

Statutory Intent and History

The Federal Employees Part-Time Career Employment Act of 1978 (92 Stat. 1055; 5 U.S.C. §§ 3401-3408) is intended to encourage the use of part-time career employment by requiring all agencies to establish programs for increased part-time career employment opportunities. Proponents of the legislation argued that it would benefit the federal government, and therefore the country at large, as well as a substantial segment of the potential workforce. The federal government would benefit from a system of permanent part-time employment that could tap the talents of many citizens who were not seeking employment because they were either unwilling or unable to work full-time schedules. It was also contended that part-time schedules would benefit several pools of potential employees. These would include women whose family commitments made them unable to work full time; handicapped individuals with the potential for making considerable contributions but who were physically unable to work a 40-hour week; and senior citizens who could bring broad experience to the workplace during a transitional period leading to retirement.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136; 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 34 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Major Provisions

Part-time career employment is defined as part-time employment of 16 to 32 hours a week under a schedule consisting of an equal or varied number of hours per day, whether in a position which would be part-time without regard to the statute or one established to allow job-sharing or comparable arrangements. The provisions of the statute do not apply to persons paid at rates equal to the minimum rate of pay for senior-level personnel (5 U.S.C. § 3405(b)). The provisions do not include employment on a temporary or intermittent basis. Federal agencies and the Office of Personnel Management (OPM) are required to establish, maintain, and periodically review the part-time employment program. Representation by employee organizations is allowed.

Discussion

For a period of at least one year prior to enactment of the 1978 statute, federal agencies had been actively exploring the possibilities of increased part-time employment programs. President Carter, in 1977, had instructed the agencies to

establish innovative programs for the purpose of expanding part-time opportunities. During the year before enactment, the number of part-time permanent workers in the federal system increased by about 20%, from 43,000 to 51,000. At the time of enactment, permanent part-time employment constituted over 2.7% of the permanent federal workforce. According to OPM, as of March 2003, permanent part-time employees made up 5.74% of the federal civilian workforce.

(11) Retention Preference, Voluntary Separation Incentive Payments, Restoration, and Reemployment (Chapter 35; in Part III, Subpart B — Employment and Retention).

Statutory Intent and History

The Veterans' Preference Act of 1944 (58 Stat. 388) and the Civil Service Reform Act of 1978 (92 Stat. 1149) are the underlying statutes for employee retention during reduction in force (RIF). Senior Executive Service (SES) provisions are authorized by the Civil Service Reform Act of 1978 (92 Stat. 1165), except for those on RIFs in the SES, which are authorized by provisions of the Omnibus Budget Reconciliation Act of 1981 (95 Stat. 756); furloughs in the SES, which are authorized by the Civil Service Retirement Spouse Equity Act of 1984 (98 Stat. 3220); and repeal of the SES recertification process, which is provided by the Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229). Voluntary separation incentive payments also are authorized for executive branch agencies by the Homeland Security Act of 2002, and for the Smithsonian Institution by the Smithsonian Facilities Authorization Act (117 Stat. 889). The authority for reemployment after service with an international organization derives from the Foreign Assistance Act of 1969 (83 Stat. 825). Reemployment following limited appointment in the Foreign Service is authorized by the Foreign Service Act of 1980 (94 Stat. 2164). The intent of the laws, with regard to reduction in force, was to codify retention practices. The laws confirmed the regulations and practices in effect at the time.

Major Provisions

Retention during reduction in force is based on tenure, military preference, length of service, and efficiency or performance ratings. Sixty days notice of impending RIF action must be given to the affected employee and his or her labor representative.

Chapter 35 includes several provisions relating to the SES. A career appointee to the SES can be removed during the one-year probationary period or at any time for less than fully successful executive performance. A former career appointee may be reinstated in the SES if the probationary period has been successfully completed, and if the appointee left the SES for reasons other than misconduct, neglect of duty, malfeasance, or less than fullysuccessful executive performance. A career appointee who was appointed from a civil service position to the SES and who is removed from the SES during the probationary period for reasons other than misconduct, neglect of duty, or malfeasance may be placed in a civil service position in any agency. Agencies provide competitive procedures for removing employees from the SES during a RIF of career appointees. Determinations are based primarily on performance. Employees in the SES may be furloughed for reasons of insufficient work, or funds or for other nondisciplinary reasons. Final Office of Personnel Management (OPM)

regulations, which became effective on November 13, 2000, detail the SES performance appraisal process (5 CFR Part 430, Subpart C).

The Homeland Security Act of 2002 delegated to OPM authority to review and approve requests from federal executive branch agencies (as defined at 5 U.S.C. § 105) to offer voluntary separation incentive payments of up to $25,000 to employees in particular occupational groups, organizational units, or geographic locations who retire or resign. OPM is to do this in consultation with the Office of Management and Budget (OMB). The authority to offer separation payments ("buyouts") applies across all executive agencies. Buyouts can be used by agencies seeking to reduce their total employment or to reshape their workforce to meet critical agency needs. Agencies seeking approval from OPM must submit a plan that describes the intended use of the buyouts. Payments are to be made from the agencies' regular appropriations for salaries and are subject to all applicable federal, state, and local income taxes. They are not included in the employee's basic pay for purposes of calculating the amount of his or her retirement annuity.

The Smithsonian Facilities Authorization Act allows the Secretary of the Smithsonian Institution to establish a program "substantially similar" to the program established by the Homeland Security Act. However, the law leaves unclear what approval role, if any, OPM or OMB have under this authority.

Provisions on transfer of functions, waiver of physical qualifications for veterans' preference employees, reinstatement or restoration of individuals suspended or removed for national security, and reemployment after service with an international organization or following limited appointment in the foreign service are also included in Chapter 35.

Discussion

In the 104th Congress, H.R. 3841 would have amended the RIF regulations to increase the weight given to performance appraisal in a RIF. The bill would have codified language on granting additional years of service credit. The additional service credit an employee received for performance would have consisted of the sum of the employee's three most recent annual performance ratings — those received during the four-year period prior to the issuance of RIF notices, or the four-year period prior to the agency-established cutoff date. This would have been an important change. Under the current RIF regulations, the additional years of service credit are totaled, averaged, and then added to seniority to determine retention standing. Under H.R. 3841, employees were to receive five, seven, or 10 additional years of service depending on the number of rating levels in their performance appraisal system. H.R. 3841 passed the House of Representatives after the RIF language was struck, but no further action occurred in the 104th Congress. However, during subcommittee hearings on the measure, federal manager and employee organizations testified that the RIF changes would adversely affect employees who were outstanding performers and politicize the

retention system by allowing managers to give high performance ratings to favored employees.

Draft legislation, prepared but not introduced in the 105th Congress, by the House Civil Service Subcommittee chair, Representative Mica, would have authorized employees in agencies facing workforce reductions to volunteer for RIFs. Additionally, the legislation proposed a separate retention register for federal employees with less than "fully successful" performance ratings. According to the draft, this was to ensure that the poor performers would receive less retention consideration in a RIF than good performers with less seniority.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136; 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 35 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.) Section 1321 of the Homeland Security Act repealed the recertification requirement for senior executives. A September 1998 OPM report assessing recertification found that more than 99% of executives were recertified; the average cost of recertifying one executive ranged from $34 to $3,400; and 50 reporting agencies spent about 12,600 work hours on recertification, costing them almost $750,000. The Homeland Security Act delegated to OPM authority to review and approve requests from federal agencies to offer voluntary separation incentive payments of up to $25,000 to employees in particular occupational groups, organizational units, or geographic locations who retire or resign.

In an August 1998 report on downsizing in the federal government during the years 1994 to 1996, OPM found that agencies reduced their workforces without massive reductions in force by using such tools as buyouts (79% of the time) and early retirement (72% of the time). RIFs in all executive branch agencies totaled 2,092 (FY2000), 1,586 (FY2001), 1,360 (FY2002), and 286 (1st quarter of FY2003).

OPM published final revised regulations on the use of performance appraisal ratings to determine retention during a RIF in November 1997 (5 CFR § 351.504). The regulations provide for additional years of service credit ranging from 12 to 20 years and specify that only actual performance ratings can be used to determine retention credit. (Under the previous regulations, an employee received 12, 16, or 20 additional years of service credit for "fully successful," "exceeds fully successful," or "outstanding" performance, and a rating of "fully successful" could have been assumed for missing ratings.) Interim regulations, effective on October 20, 2000 clarified the "longstanding policy that an agency determines the grade or grade-interval range of a released employee's potential retreat rights [to another position] solely on the basis of the official position of

record held by the employee on the effective date of the reduction in force" (5 CFR § 351.701(f)).

(12) Information Technology Exchange Program (Chapter 37; in Part III, Subpart B — Employment and Retention).

Statutory Intent and History

Chapter 37, which was established by the E-Government Act of 2002 (P.L. 107347), provides for the exchange of information technology (IT) professionals between the public and private sectors.[1047]

The Intergovernmental Personnel Act, P.L. 91-648 (5 U.S.C. §§ 3371-3375), gives agencies authority to exchange personnel with state and local governments, as well as certain nongovernmental organizations, such as institutions of higher education.[1048] The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136; 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 37 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Major Provisions

This chapter authorizes the exchange of information technology personnel between federal government agencies and private sector organizations. Chapter provisions outline eligibility criteria for federal employees and private sector employees, establish the duration of assignments, require an agency to provide a written agreement between the agency and an employee who participates in an exchange, address the employment and benefits status of federal employees and private sector employees who participate in an exchange assignment, and establish the terms and conditions under which an employee of a private sector organization would be employed by a federal agency. This chapter also authorizes the chief technology officer of the District of Columbia to arrange for public-private exchanges of information technology personnel between his or her office and private sector organizations. Any references in Chapter 37 to federal law or regulations are deemed to be a reference to applicable provisions of the District's laws and regulations.

The Office of Personnel Management (OPM) is responsible for prescribing regulations for administering this chapter, and is required to prepare and submit semiannual reports to the Senate Committee on Governmental Affairs and the

House Committee on Government Reform. OPM also is required to provide a report on all existing public-private exchange programs. Additionally, the General Accounting Office (GAO) is required to prepare and submit a report on information technology training programs.

Discussion

This chapter reflects an interest in recruiting and retaining federal government information technology personnel. In a 2001 report, GAO estimated that the demand for IT workers was high in all sectors, and concluded that the federal government and other employers were having trouble getting enough "highly skilled IT workers" to meet the demand.[1049] Additionally, a comparison of federal compensation with compensation offered by state and local governments, non-profit organizations, private business, and academic institutions showed that the federal government was low on salary levels, rewards and recognition, advancement and training, and the use of recruiting tools.[1050] It is anticipated that the exchange program will help meet the training needs of government employees, while offering private sector employees the opportunity for public service.

It is too early to tell the extent to which federal agencies and their employees, as well as private sector organizations and their personnel, will make use of Chapter 37. OPM issued proposed regulations early in 2004 for implementation of this chapter.[1051]

(13) Training (Chapter 41; in Part III, Subpart C — Employee Performance).

Statutory Intent and History

The 1966 Title 5 codification statute (80 Stat. 378) and the Civil Service Reform Act of 1978 (92 Stat. 1111) are the basic authorities for Chapter 41. Additional authority is provided by a 1982 amendment to Title 5 providing training opportunities for employees under the Office of the Architect of the Capitol and the Botanic Garden (96 Stat. 1647). The Federal Workforce Restructuring Act of 1994 (108 Stat. 1111) added language which served to emphasize the need for training so that it benefits not only the individual, but also the organization and assists in achieving agency mission and goals. The Homeland Security Act of 2002 (P.L. 107296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136; 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 41 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Federal employee training programs are designed to insure that federal employees maintain and improve their basic job skills and knowledge in order to render maximum service to their agency's mission and to the public at large. To attain this goal, both government-wide and agency-specific instruction programs are offered to keep federal personnel informed and up to date on professional, scientific, and technical developments related to their fields of expertise. Off-site training programs at colleges and universities are also available, provided that the instruction received relates to and enhances employees' performance in their respective occupations. The ultimate objective of government training is to build and retain a workforce of skilled and efficient employees.

Major Provisions

Chapter 41 consists of provisions governing the availability and use of federal training options for federal employees in both government and nongovernment facilities. The costs of training, employee agreements, and federal assistance to defray costs are also addressed.

Federal training is defined as providing for instruction or education options for federal employees or the placement of employees in instruction or education programs to assist in achieving agency mission and performance goals. Certain agencies are excepted from the provisions of the chapter, and the President is authorized to delete or add exceptions, but may not alter the role of the Office of Personnel Management (OPM) in administering training programs.

Agency heads also are granted authority to establish training programs for their employees. They also may contract-out training programs where considered

appropriate and cost-effective. According to OPM, information on the extent of government-wide training programs is not available because of the widespread dispersal of individual in-house and off-site training programs. Government facilities under agency control are to be used for training when practicable, but other government facilities may be utilized on a cost-reimbursable basis.

Section 1331 of the Homeland Security Act (P.L. 107-296) amended Chapter 41 to permit agencies to select and assign employees to academic training and pay or reimburse the costs thereof. Consistent with the merit system principles at 5 U.S.C. §§ 2301 (b)(2) and (7), an agency that exercises this authority must "provide employees effective education and training to improve organizational performance" while taking into consideration "the need to maintain a balanced and integrated federal workforce." Furthermore, 5 U.S.C. § 4107(b)(2) requires agencies to assure that "the training is not for the sole purpose of providing an employee an opportunity to obtain an academic degree or qualify for appointment to a particular position for which the academic degree is a basic requirement." This training may not be made available to members of or those seeking a position in the Senior Executive Service. Agencies are encouraged, "to the greatest extent practicable, [to] facilitate the use of online degree training."

Federal employees availing themselves of training incur certain obligations, including a requirement to serve an appropriate time with the agency after training, and reimburse the cost of training if there is failure to comply. The government is entitled to pursue costs of training as a debt owed to the United States. Specific costs of training payable by the agency are enumerated, including the cost of the training program, travel and per diem costs, transportation of family and household goods, library and laboratory services, and other services.

Discussion

Allegations of waste and mismanagement have appeared in the media against the government-wide federal employee training system. In past years, the system, costing an estimated $25 billion annually, has been criticized for fragmentation, duplication, confusing eligibility criteria, and inadequate reporting. OPM retains an administrative role in training policy development. However, since 1995, the U.S. Department of Agriculture Graduate School has operated several of the training offices and programs that were formerly the responsibility of OPM.

(14) Performance Appraisal (Chapter 43; in Part III, Subpart C — Employee Performance).

Statutory Intent and History

The underlying statute for Chapter 43, "Performance Appraisal," is the Civil Service Reform Act of 1978 (92 Stat. 1131). The law's intent was to mandate agency establishment of performance appraisal systems so that appraisals of employee performance would be made within a single, interrelated system.

Major Provisions

Agency performance appraisal systems are required to (1) provide for periodic appraisals of job performance; (2) encourage employee participation in establishing performance standards; and (3) use performance appraisal results as the basis for training, rewarding, reassigning, promoting, reducing in grade, retaining, and removing employees. Each agency performance appraisal system must include performance standards permitting the accurate evaluation of job performance on the basis of objective criteria. An employee may be reduced in grade or removed because of unacceptable performance. The law provides 30 days' advance written notice to the employee of the proposed action, a "reasonable" time for the employee to answer orally and in writing, and a written decision of the action recommended. The decision to retain, reduce in grade, or remove an employee must be made within 30 days of the notice period's expiration.

Chapter 43 also authorizes agencies to establish performance appraisal systems for the Senior Executive Service (SES). The systems are designed to permit the accurate evaluation of performance, provide for systematic appraisals, encourage excellence in performance, and provide a basis for making eligibility determinations for retention and performance awards. Appraisals in the SES are based on individual and organizational performance. Performance factors include improvements in efficiency, productivity, and quality of work or service, including any significant reduction in paperwork; cost efficiency; timeliness of performance; other indications of the effectiveness, productivity, and performance quality of the employees for whom the senior executive is responsible; and meeting affirmative action goals, achievement of equal employment opportunity requirements, and compliance with merit system principles. SES performance appraisal systems provide annual summary ratings of performance with one or more fully successful levels, a minimally satisfactory level, and an unsatisfactory level.

Discussion

H.R. 3841, proposed in the 104th Congress, but not enacted, would have required that performance appraisal systems assist employees in improving unacceptable performance and provide for reassignment, reduction in grade, removal, or other appropriate action against employees whose performance was unacceptable.

Upon notification of unacceptable performance, an employee would have been afforded a one-time opportunity to demonstrate acceptable performance before a reduction in grade or removal. H.R. 3841 passed the House of Representatives, but no further action occurred. Another measure, H.R. 3483, would have authorized an agency to remove or take other appropriate action against employees whose performance was unacceptable. It also sought to repeal the procedures on reducing the grade of or removing an employee for unacceptable performance. If this latter provision had been enacted, agencies would have had to use the Chapter 75 adverse action procedures to remove poor performers. H.R. 3483 was referred to committee, but no further action occurred.

Draft legislation, prepared but not introduced in the 105th Congress, by the House Civil Service Subcommittee chair, Representative Mica, would have prohibited the appeal of a denied within grade increase to the Merit Systems Protection Board, delayed the establishment of any new "pass/fail" performance management systems until the Office of Personnel Management (OPM) provided an evaluation of the current ones, and allowed for the removal of a problem employee after one performance improvement plan.

Among the comments expressed about performance appraisal during House hearings conducted in the 104th and 105th Congresses were statements that employees should have an opportunity to improve their performance before being separated; that a fundamental problem is the inability to identify sub-par performance in terms of expected contributions; and that the administrative process surrounding performance appraisal is litigious, complex, time-consuming, and provides excessive due process. Differing opinions were expressed on whether pass/fail performance appraisal systems strengthen or degrade performance, whether the weight of performance ratings should be increased in reduction in force, and whether strong enforcement of the current performance appraisal system is required, rather than amendments to the current system.

OPM's human resource management initiatives for 1998 and 1999 included a recommendation that payand performance systems be aligned with agency missions. Vice President Gore, in an address before a January 1999 international conference on reinventing government, said that the Administration would begin drafting civil service legislation that would establish a set of standards providing for flexible payfor-performance systems which each agency could use to create its own system. He said the legislation would also allow agencies to evaluate their managers, including those in the SES, on a balanced set of results, including the GPRA [Government Performance and Results Act] goals, customer satisfaction rates, and the outcome of employee satisfaction surveys, and that these evaluations would guide in setting salaries and paying bonuses for these

managers.[1052] The president of the National Treasury Employees union, in a news release on the Vice President's announcement, stated that fair performance evaluations mandate federal employee involvement in setting and implementing performance measures, while a news release from the Senior Executives Association president expressed concern about evaluating and paying managers on the basis of surveys "address[ing] issues over which career managers and executives have little impact." A legislative proposal was not submitted to the 106th Congress.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security (DHS) and Defense (DOD). Both laws permit changes to the Chapter 43 provisions and specify requirements for performance management systems at DHS and DOD. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.) The National Defense Authorization Act for FY2004 also creates a Human Capital Performance Fund to reward the highest performing and most valuable employees in an agency and offer federal managers a new tool for recognizing employee performance that is critical to an agency's achieving its mission. (See the discussion of the 5 U.S.C. Chapter 54 provision in this compendium.)

A September 1995 MSPB issue paper recommended that Chapter 43 authority on performance-based actions be repealed and that RIF laws be amended to permit RIF procedures to be used to remove poor performers. The same month, OPM published regulations providing agencies with increased flexibility to develop their performance appraisal systems. Eight patterns of summary levels of performance may be used. These patterns range from a pass/fail system with two summary levels (unacceptable and fully successful) to a system with five summary levels (unacceptable, less than fully successful, fully successful, exceeds fully successful, and outstanding).

In a draft framework for the Senior Executive Service (SES) published in April 1998, OPM proposed a three-year performance agreement with annual progress reviews. OPM published a status report on the draft framework in December 1998 and proposed administrative rule changes in July 1999 (64 FR 41334). Final OPM regulations on managing senior executive performance, which became effective on November 13, 2000, "will help agencies hold senior executives accountable by: Reinforcing the link between performance management and strategic planning; requiring agencies to use balanced measures in evaluating

---

executive performance; and giving agencies more flexibility to tailor performance management systems to their unique mission requirements and organizational climates"[1053] [5 CFR Part 430, Subpart C]. Some agency performance appraisal systems might change as a result of provisions at Section 1125 of the National Defense Authorization Act for FY2004. This statute shifted the cap on basic pay for the SES from Level IV of the Executive Schedule to Level III. However, the cap will be Level II for any agency that is certified as having a performance appraisal system which makes meaningful distinctions based on relative performance. Agencies might have to modify their performance appraisal systems to achieve certification.

(15) Incentive Awards (Chapter 45; in Part III, Subpart C — Employee Performance).

Statutory Intent and History

The basic statutory authorities contributing to the provisions of Chapter 45, "Incentive Awards," are the 1966 Title 5 codification statute (P.L. 89-554; 80 Stat. 378) and the Civil Service Reform Act of 1978 (P.L. 95-454; 92 Stat. 1111). Additional provisions derive from the Omnibus Budget Reconciliation Act of 1981 (P.L. 97-35, Title XVII, Subchapter II; 95 Stat. 755); Treasury, Postal Service, and General Government Appropriations Act of 1991 (P.L. 101-509, § 529; 104 Stat. 1427); the Treasury, Postal Service, General Government appropriation as found in the Omnibus Consolidated and Emergency Supplemental Appropriations for FY1999 (P.L. 105-277, Division A, § 101(h), § 631); and the Treasury and General Government Appropriations Act of 2002 (P.L. 107-67, Title VI, § 641(d); 115 Stat. 554). The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 45 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Major Provisions

The chapter sets forth provisions governing the range and scope of contributions and services for which federal employees are eligible to receive monetary and non-monetary awards, including suggestions, inventions, performance, and acts of heroism.

Cash incentive awards are available to federal employees, except for those paid under the Executive Schedule, for suggestions, inventions, superior performance, heroism, or ideas to reduce paperwork. Awards are limited to $10,000, except in cases where accomplishment is unusually outstanding, when awards not to exceed $25,000 are authorized with the approval of the Office of Personnel Management (OPM). Cash awards are in addition to regular pay, and acceptance by the employee absolves the government of any further claims involving use of ideas or devices, etc. The President may grant an incentive award, which may be in addition to an agency award. Subject to limitations, the President may grant rank awards to members of the Senior Executive Service (SES) and individuals serving in certain senior-level positions.[1054] Meritorious Executive awards are to equal 20% of annual basic pay, and Distinguished Executive awards are to equal

[1054] Senior-level positions include positions classified above GS-15 pursuant to 5 U.S.C. § 5108 and scientific or professional positions established under 5 U.S.C. § 3104.

35% of annual basic pay. Cash awards of up to 5% of basic pay are authorized for selected federal law enforcement officers, including those of the U.S. Park Police, the Diplomatic Security Service, and probation officers who possess and make use of one or more foreign languages in the performance of official duties.

Federal employees may receive awards for cost savings disclosures, including those to combat fraud, waste, or mismanagement. The amount of these awards may be $10,000 or an amount that equals 1% of agency cost savings attributable to the award, whichever amount is less. Presidential awards of $20,000 for cost savings disclosures are also allowed, but are limited to 50 in a fiscal year.

Discussion

The federal awards program has recognized many outstanding federal employees by granting monetary and non-monetary awards. Each year, OPM publishes an awards brochure providing statistics on the distribution of the awards, as well as their scope and extent.

Over the years, this program, when compared with awards programs in the private sector, has generally been found to be inadequate. Although legislation has been introduced from time to time to expand the scope of the federal awards program, it actually has changed very little.

Probably the greatest criticisms have been that the amounts of the monetary awards are too small; too few awards are given; and they are too concentrated in certain agencies — notably the defense establishment. Cost-savings awards, for instance, are said to be so small in proportion to cost savings generated for agencies that they are minuscule vis-à-vis those considered appropriate in the private sector. The SES rank awards had remained for 20 years at the same established dollar rates until the 1998 legislation, which keyed the awards to a percentage of basic pay. The minimum award increased from $10,000 to $20,460 in 1999.

Certain agency abuses in the granting of awards have also occurred, with some agencies granting none, others granting too many. In addition, questions have arisen periodically about whether agencies have granted awards in lieu of pay raises, particularly during times of pay freezes or budget austerity, thereby circumventing the rationale of the awards program itself.

(16) Personnel Research Programs and Demonstration Projects (Chapter 47; in Part III, Subpart C — Employee Performance).

Statutory Intent and History

The underlying statute for Chapter 47, "Personnel Research Programs and Demonstration Projects," is the Civil Service Reform Act of 1978 (92 Stat. 1185). The law's intent was to provide agencies with authority to experiment with different personnel management methods through demonstration projects.

Major Provisions

The Office of Personnel Management (OPM) is authorized to:

- establish and maintain (and assist in the establishment and maintenance of) research programs to study improved methods and technologies in federal personnel management;
- evaluate the research programs and establish and maintain a program to collect and disseminate to the public information relating to personnel management research and to facilitate the exchange of information among interested persons and entities; and
- provide for an evaluation of demonstration project results and their impact on improving public management.

Prior to OPM's establishment of a personnel management experiment, a project plan must be developed. Contained within this plan are the project's purpose, the types and numbers of employees to be covered, methodology, duration, training program, anticipated costs, and the evaluation methodology and criteria. Aspects of the project which lack specific authority and current laws, rules, or regulations which must be waived in order for the project to be conducted must be specifically described in the plan as well. Once the demonstration project plan is finalized by OPM, it is published in the Federal Register and is the subject of a public hearing. Employees likely to be affected by the experiment, and both the Senate and the House of Representatives, are notified about the proposed project 180 days in advance of its implementation date. Each agency involved must approve the final version of the plan which must also be submitted by OPM to both houses of Congress at least 90 days in advance of the project's effective date.

By statute, the number of active demonstration projects that can be operating simultaneously is limited to 10, and the total number of employees covered is capped at 50,000. An individual demonstration project cannot cover more than 5,000 workers. Each demonstration project runs for five years and terminates before the end of this period. A project may, however, continue beyond this date to the extent necessary to validate the project results.

If OPM or the agency determine that a project imposes substantial hardship on, or is not in the best interests of, the public, federal government, employees, or eligibles, either or both may terminate it.

OPM's annual report to Congress includes a summary of research programs and demonstration projects conducted during the year, the effect of the programs and projects on improving public management and increasing government efficiency, and recommendations of policies and procedures which will improve management and efficiency.

Discussion

In the 104th Congress, H.R. 3841 sought to amend Chapter 47 to make several changes: coverage of a government corporation under a demonstration project; OPM development or approval of a demonstration project plan; solicitation of comments on the project plan, 30-days' notice to affected employees; projects lasting five years; project extensions for up to two years, up to 15 projects; up to five projects covering 5,000 or more individuals, including collective bargaining unit employees in a project, evaluation of the projects, terminating a project, and obtaining congressional approval for making a project permanent. Another bill, H.R. 3483, was similar to H.R. 3841, but would have deleted the requirement for a public hearing, provided 150 days' notice, and included expedited congressional procedures for making a project permanent. H.R. 3841 passed the House of Representatives and H.R. 3483 was referred to committee, but no further action occurred on either bill.

Among the comments on the demonstration project proposals expressed during House hearings were the following views:

- demonstrations projects should help determine whether one system should apply to all employees or each agency should have a system tailored to its needs;
- the number of individuals covered by a demonstration project and the number of demonstration projects should be limited, because they place some federal employees in the precarious position of being test subjects for untried personnel practices;
- consultations should include both managers and supervisors; and
- public hearings on proposed demonstration projects, independent evaluations of demonstration projects and their impact on public management, and OPM annual reports on research and demonstration projects and their effect on improving public management and increasing government effectiveness should be continued.

Discussions about the issue continued in the 105th Congress. Draft legislation, prepared but not introduced by the House Civil Service Subcommittee chair, Representative Mica, would have amended the demonstration project authority to increase the number of demonstration projects authorized at any time from 10

to 15, and to eliminate the restriction of 5,000 employees per demonstration. Additionally, bargaining over wages and benefits would have been prohibited, and "impact and implementation" bargaining would have been limited. During a June 1998 hearing on the draft bill, OPM testified in favor of making demonstration projects permanent after testing and evaluation. (OPM's 1998 and 1999 human resources management initiatives proposed that it be granted this authority.) Two federal employee unions opposed limiting the subjects that could be negotiated between labor and management. The Senior Executives Association supported such bargaining limits and favored limiting to 25,000 the number of employees in an agency who could participate in a demonstration project. The General Accounting Office noted that use of the demonstration project authority has been limited.

Vice President Gore, in an address before a January 1999 international conference on reinventing government, said that the Administration would begin drafting civil service legislation that would establish a set of standards for flexibility in pay, hiring, and retention which each agency could use to create agency-specific systems. Labor and management would mutually agree upon any plan before its implementation. A legislative proposal was not submitted to the 106th Congress.

In the 108th Congress, S. 129, the Federal Workforce Flexibility Act of 2003, as introduced, included amendments to several major features of current law on demonstration projects. The requirements that a public hearing be conducted, that a demonstration project be limited to 5,000 employees, that the number of projects in effect at any one time be limited to 10, and that Congress receive a report on a project's final plan 90 days before a project's effective date would have been removed. The time period required for advance notification of affected employees would have been shortened, and the requirement for advance notification of Congress would have been removed. The provisions were removed from S. 129 during markup by the Senate Committee on Governmental Affairs. (Similar provisions were included in S. 2651 introduced in the 107th Congress.)

In the 108th Congress as well, H.R. 1085, the NASA Flexibility Act of 2003, would amend current law to allow a demonstration project at NASA to cover 8,000 employees rather than 5,000 employees.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 47 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Three demonstration projects have been made permanent, and four have been completed. One at the Department of Commerce, testing pay-for-performance

using broad pay bands, was implemented in March 1998 and modified in September 1999. Another one, covering the civilian acquisition workforce at the Department of Defense and testing streamlined hiring processes and broad pay bands, among other features, had a phased implementation which was completed in October 1999. Demonstration projects are in progress at eight DOD laboratories. Congress authorized a demonstration project for the Internal Revenue Service in the Internal Revenue Service Restructuring and Reform Act of 1998 (112 Stat. 715).

In a 2001 report on lessons learned from the demonstration projects, OPM determined, among other findings, that successfully tested alternative systems and flexibilities should be able to be converted to permanent programs without separate legislation; that agencies need to have an executive champion who will promote, defend, and support an alternative system; that if alternative systems are extended government-wide, there should be flexibility to customize programs; and that the effectiveness of alternative systems needs to be continuously evaluated.

(17) Agency Personnel Demonstration Project (Chapter 48; in Part III, Subpart C — Employee Performance).

Statutory Intent and History

The Investor and Capital Markets Fee Relief Act (P.L. 107-123; January 16, 2002; 115 Stat. 2390) included "pay parity" provisions that allowed the Securities and Exchange Commission (SEC) to raise the salaries of certain employees to levels comparable to those of federal bank examiners, whose pay ranges from $180,000 to $250,000, depending on the agency. These provisions appear in Section 8 of the legislation, which created a new Chapter 48 in Subpart C of Part III of Title 5, United States Code.

Congress's intent was to address the SEC's difficulty in attracting qualified employees and unusually high staff turnover. The basic problem was that the skills required by the SEC — mastery of securities law and regulation, or detailed knowledge of financial markets — are in high demand on Wall Street, where some of the highest salaries in the world are offered.

The Office of Personnel Management (OPM) opposed the pay parity provisions because of concerns about the fragmentation of personnel systems and adverse effects on the ability of federal employees to move from one agency to another. In a May 15, 2001 letter to Chairman Dan Burton of the House Government Reform Committee, OPM noted that it had approved special pay rates for SEC lawyers, accountants, and examiners in March 2001. The letter recommended that the pay parity provisions not be enacted until the effectiveness of these special pay rates could be assessed, and also called for more study of the SEC pay situation. Chairman Burton also stated that the SEC pay raises should not be enacted without a broad review of the effects on the civil service system.

Estimates of the cost of granting pay parity raises to SEC employees were in the range of $60-$80 million. The Senate version of the FY2002 Commerce-State-Justice appropriations legislation provided $60 million for this purpose, but this provision was not adopted in conference. (The SEC's FY2002 budget was set at $437.9 million.)

The Administration's FY2003 budget requested $466.9 million for the SEC, still not enough to fund pay parity fully. In the wake of the Enron scandal, Congress passed the Sarbanes-Oxley accounting reform legislation (P.L. 107-204; 116 Stat. 745), which included a provision authorizing appropriations of $775 million for the SEC in FY2003. The FY2003 appropriation was finally set at $716.3 million. For FY2004, the conference report provides $811.5 million for the SEC.

Major Provisions

Chapter 48 authorizes the SEC to appoint and fix the compensation of officers, attorneys, economists, examiners, and other employees "as may be necessary" for carrying out its functions. The SEC may set and adjust basic rates of pay for all

employees without regard to the provisions of Chapter 51 or Subchapter III of Chapter 53 of Title 5, United States Code. The SEC may provide additional compensation or benefits to employees if the same types of compensation or benefits are provided by federal bank regulators (agencies referred to under Section 1206 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (12 U.S.C. § 1833 b)). In setting the total amount of compensation for these employees, the SEC is required to consult with the banking agencies and to maintain comparability of pay and benefits.

The SEC is also directed to implement the pay parity provisions in consultation with OPM and in a manner consistent with merit system principles.

Discussion

After Enron and the succeeding wave of corporate accounting scandals, and the revelations of abuses by stock analysts and others in the securities industry, there was little controversy about the need to increase the size and resources of the SEC. In budget terms, the cost of pay parity was rather small compared to the overall increases in SEC appropriations that were enacted post-Enron. On the other side of the issue, arguments in favor of a uniform civil service pay system remained, as did uneasiness about rank-and-file SEC staffers earning more than the President or Vice President. However, with the scandals still fixed in recent memory (and with new investigations, such as those involving mutual funds, continuing to develop), there has been no move to reverse the SEC's pay parity authority. There has been some interest in extending the pay parity provisions to the Commodity Futures Trading Commission (CFTC), which regulates the futures exchanges, but no authorizing legislation has yet advanced in Congress.

(18) Classification (Chapter 51; in Part III, Subpart D — Pay and Allowances).

Statutory Intent and History

The current system for classifying and grading most positions in the federal civil service was established under the Classification Act of 1923 (42 Stat. 1488). This statute was the initial systematic attempt to achieve a uniform alignment of jobs and salaries among various federal departments and agencies. The act established the following principles:

- positions covered by the act were to be classified and graded according to their duties and responsibilities;
- the same pay scale was to apply to all positions falling into the same class and grade, regardless of agency;
- the different pay scales and the various classes and grades were to be logically associated so that pay was properly related to work; and
- one agency would be responsible for equalizing and coordinating the classification and grading of positions for all agencies.

The Classification Act of 1949 (63 Stat. 954) maintained the principles set out in 1923, adding that there should be equal pay for equal work, and that the positions be grouped, or classified, in such a way that the position classification system could be used in all phases of personnel administration.

The Internal Revenue Service Restructuring and Reform Act of 1998 (112 Stat. 711), the Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229), and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) allow the Internal Revenue Service (IRS), Department of Homeland Security (DHS), and Department of Defense (DOD) to establish classification systems independent of Chapter 51. (See the discussions of the 5 U.S.C. Chapter 95, Chapter 97, and Chapter 99 provisions, respectively, in this compendium.)

Major Provisions

Four services had been established in 1923: Professional and Scientific; Clerical, Administrative, and Fiscal; Subprofessional; and Crafts, Protective, and Custodial. Under the 1949 act, the newly established General Schedule comprised positions classified under the first three of these services. No similar schedule was established for the fourth service. The 1949 act also added the GS-16, -17, and -18 grades, which became known as the "supergrades" and were later the foundation for the Senior Executive Service under provisions of the Civil Service Reform Act of 1978 (P.L. 95-454; 92 Stat. 1111). These grades were abolished by the Federal Employees Pay Comparability Act of 1990 (FEPCA; P.L. 101-509; 104 Stat. 1427, at 1443).

Discussion

Government-wide classification of positions is an issue that has generated substantial controversy over the course of the last several years. Critics point out the problems of managing an enormous system which is both rigid and cumbersome. On the other hand, if the system is administered consistently, the uniformity of position classification, occupational definition, and grading provide a framework within which staff and positions can transfer from one agency to another. The controversy led to the enactment of statutes allowing the Department of Homeland Security, Department of Defense, and Internal Revenue Service to design classification systems outside of Chapter 51, potentially affecting approximately 30% of the federal civilian workforce.

Even before the Office of Personnel Management (OPM) was dramatically downsized in 1994, there was an effort to vest the responsibility for position classification in the agencies. Among the favorable arguments was that each agency has its own culture, and that human resources managers should be allowed to classify and grade positions according to these cultures. The National Academy of Public Administration was a proponent of this philosophy. Soon after the Academy issued a report to this effect, the Director of OPM held extensive discussions with several leading personnel administrators in federal agencies. It was determined that while the classification system has substantial problems, they are not so dire that a complete overhaul should be undertaken.

(19) Pay Rates and Systems (Chapter 53; in Part III, Subpart D — Pay and Allowances).

Chapter 53, "Pay Rates and Systems," provides the statutory basis for several major pay systems within the federal service. This profile of Chapter 53 departs from the compendium's usual format for profiling Title 5 chapters. Rather than present each system's statutory intent, summary of major provisions, and discussion under separate headings, this profile combines these topics under one heading for each pay system. Among the pay systems discussed are the pay comparability system, the General Schedule, the Senior Executive Service, the Executive Schedule, and the prevailing rate (blue collar) system. Systems covered in other titles of the United States Code, but related to the General Schedule, such as those in the foreign service and veterans hospitals, are not discussed.

In addition, the Internal Revenue Service Restructuring and Reform Act of 1998 (112 Stat. 711), the Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229), and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) allow the Internal Revenue Service (IRS), Department of Homeland Security (DHS), and Department of Defense (DOD), respectively, to establish classification and pay systems independent of Chapter 53. (See the discussions of the 5 U.S.C. Chapter 95, Chapter 97, and Chapter 99 provisions, respectively, in this compendium.) The DHS and DOD systems are currently being designed, and it remains to be seen how the pay comparability system and the prevailing rate system will be changed for these agencies.

Pay Comparability System (5 U.S.C. §§ 5301-5307). Prior to 1962, the system of classification of jobs followed the principle of equal pay for equal work within a pay system, but there was no method of equating pay for equal work among the various systems. P.L. 87-793 (76 Stat. 832, at 841), provided that federal salary schedules be based on equal pay for substantially equal work, and on comparability of federal salary rates with those in private industry for the same levels of work. While the comparability principle was in place, Congress continued to legislate the rates of adjustment, perpetuating a salary lag between federal and private sector pay. The Pay Comparability Act of 1970 (84 Stat. 1946) was considered to be the most important pay legislation subsequent to the 1962 statute. The act established a mechanism under which the Bureau of Labor Statistics conducted a survey of private sector salaries, and the President, his agent, and two advisory groups determined the appropriate rate of adjustment for the General Schedule. This rate of adjustment went into effect automatically unless Congress acted to disapprove it, or the President determined that another rate or schedule of implementation was appropriate. The system established under this statute was utilized for almost 20 years. By the time it was amended, the gap between private and federal white collar salaries had widened to over 30%. During the conference on the Treasury, Postal Service, and General Government Appropriations Act for FY1991, a new pay setting mechanism was

crafted. The Federal Employees Pay Comparability Act (FEPCA; 104 Stat. 1429) currently governs the pay policy for most of the federal civilian workforce.

FEPCA continued, with some changes, the mechanism under which rates are to be adjusted for the General Schedule and related systems. The key difference is that the rate of adjustment is to be equal to one-half percent less than the rate of change in the private sector wages and salaries element of the Employment Cost Index for a given period of time. The second principal innovation under FEPCA was the establishment of a system of locality-based payments. Recognizing that the incomparabilities in salaries ranged from a large gap between private and federal salaries in some localities to no gap at all in other localities, Congress determined that there would be an identification of localities and that the rate of adjustment (in addition to the annual national General Schedule adjustment) would be based on salary surveys conducted within these localities. The plan was to bring federal salaries across the country to within 5% of the private sector salaries for comparable occupations in each locality at the end of 10 years.

Because of a wide range of circumstances, the pay setting provisions of FEPCA have never been fully implemented. The mechanisms have been utilized, but policymakers in the executive and legislative branches have determined that the rates of adjustment should be reduced. The result is that there has not been a systematic reduction in the gap between federal and private sector salaries. In a tight job market, and while the government is downsizing, this gap may not have a negative effect on the potential for the government to recruit and retain the personnel needed to reach mission goals. On the other hand, selectively within certain occupations, a hiring crisis could result. The locality pay provisions in FEPCA are written in a manner which requires that if, in any given year, no locality-based payments were allowed, the salary of the individual would fall back to the base rate of the General Schedule. If Congress or the President determined that a locality-based payment were not appropriate, it is assumed that a saved-pay provision would be enacted to protect the current payable rates.

General Schedule (5 U.S.C. §§ 5331-5338). These sections provide the housekeeping elements for the General Schedule. The language relates to defining the scope of positions and agencies to which the pay schedule applies, establishes Office of Personnel Management (OPM) authority for setting minimum pay rates for new appointees and rates of basic pay, and sets out the rules for periodic and special within-grade (or "step") increases. Although these provisions are not controversial in and of themselves, the within-grade provisions could be affected by various proposals to change the pay-for-performance policies within the human resources management arena.

Senior Executive Service (5 U.S.C.§§ 5381-5385). The structure and appointment policies for the Senior Executive Service (SES), established by the Civil Service Reform Act of 1978, are codified in Chapter 33, Subchapter VIII, of Title 5. The National Defense Authorization Act for FY2004 significantly changed the compensation system for the SES. The SES remains essentially a rank-in-person

compensation system, with the general guidelines set forth in the law. SES base compensation ranges from 120% of the minimum pay of a GS-15 to Level II of the Executive Schedule. There is also a system of monetary performance awards which may be accorded to members of the SES. OPM will promulgate regulations under which the range of rates of pay and a rigorous performance management system will be established. Under the new statute, locality pay is no longer available to the SES.

Executive Schedule (5 U.S.C. §§ 5312-5318). The Executive Schedule is a series of five pay levels for officers of the executive branch, most of whom are political appointees subject to the confirmation process. Level Isalaries are primarily for the heads of departments, and Level V salaries apply, generally, to positions such as general counsels and assistant administrators in independent agencies. Generally, when Congress establishes an agency or realigns agency responsibilities, these sections of Title 5 will be amended to reflect the change in salary level for specific positions.

The salary levels are applied to several positions that do not appear on the Executive Schedule. For example, several legislative branch agency officials, such as the Comptroller General and the Librarian of Congress, are paid at rates equal to specified levels of the Executive Schedule.

The Executive Schedule was established under the provisions of the Government Employees Salary Reform Act of 1964 (P.L. 88-426; 78 Stat. 400). Previously, Congress had been setting salaries for positions as they were created. The statute brought salaries into alignment for the various officers of the executive branch. Congress continued to legislate salary increases for these positions. From 1975 until 1990, salaries were adjusted under the Executive Cost of Living Adjustment Act of 1975 (89 Stat. 419). Salaries for Members of Congress and judges were also adjusted under the same provisions. Although the salaries were to be adjusted at the same rate and time as the General Schedule, Congress usually voted to deny the increases. Under the Ethics Reform Act of 1989 (103 Stat. 1716), as amended, there is to be an annual adjustment based on the increase in private sector wages and salaries, minus one-half percent. The adjustment cannot be more than 5%, and it cannot exceed the rate of adjustment for the base pay of General Schedule salaries. Since 1993, there have been five adjustments, with 2.2% scheduled as an adjustment in January 2004.

Under statute (81 Stat. 613, at 642, as amended by 78 Stat. 400), there is to be a quadrennial review of federal officials' salaries, with subsequent recommendations by the President to Congress. However, the Citizens' Commission on Public Service and Compensation has not been activated since the most recent review in FY1988.

Prevailing Rate System (5 U.S.C. §§ 5341-5349). Since the late 19th century, skilled (blue-collar) federal employees have been paid on the basis of the prevailing wage rates for similar occupations in specific geographic areas. While

there existed a general statutory authority for the Civil Service Commission (now Office of Personnel Management) to set blue-collar salaries, there was no specific statutory language covering wage administration. The Federal Wage System was established in 1972 (86 Stat. 564).

A wage survey is conducted in each of the 135 wage areas in the United States by the agency in the area which is the lead federal blue-collar employer, usually the Department of Defense. Adjustments in wage rates are staggered throughout the year, depending on the timing of the surveys. Historically, it was administratively possible to maintain consistent and equitable salary relationships between the federal and private sector skilled labor forces.

However, since 1978, Congress has limited federal blue-collar salaries to a maximum adjustment rate equal to the General Schedule rate of adjustment. The result is that, while federal wages in some areas have kept pace with those in the private sector, federal wages in high cost areas have not done so. One of the reasons Congress found it necessary to place caps on these wages is that many of the supervisors are General Schedule employees. Allowing blue-collar wages to advance while white-collar salaries were limited would result in line employees being paid more than supervisory staff. Most interested parties have long acknowledged that there are significant flaws in the Federal Wage System, but remedial proposals have not been forthcoming.

Miscellaneous. The other sections of this chapter of Title 5 apply to grade retention policy (generally under a reduction in force), pay policy related to student employees, and special occupational pay systems established by OPM. The 1990 FEPCA statute also established pay systems for administrative law judges, contract appeals board members, and senior-level positions (those graded above GS-15, but not in the Senior Executive Service). The act also provided a means of identifying critical positions and of setting salary levels for these positions. Under the Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229), the limitation of total aggregate annual compensation was increased from Level I of the Executive Schedule to the salary of the Vice President. Agencies may apply these provisions only after OPM has certified that the agency has an appropriate appraisal system in place.

(20) Human Capital Performance Fund (Chapter 54; in Part III, Subpart D — Pay and Allowances).

Statutory Intent and History

Title XI, Subtitle C of the National Defense Authorization Act for Fiscal Year 2004 (117 Stat. 1641; P.L. 108-136, Section 1129) amends Part III, Subpart D of Title 5, United States Code by adding a new Chapter 54 entitled "Human Capital Performance Fund." (The provisions were also included in H.R. 1836, 108th Congress, as reported.) The legislation states that the purpose of the provisions is to promote better performance in the federal government. The fund is to reward the highest performing and most valuable employees in an agency and offer federal managers a new tool for recognizing employee performance that is critical to an agency's achieving its mission. A $500 million Human Capital Performance Fund was proposed by President George W. Bush in his FY2004 budget to create and reinforce the value of pay systems based on performance. The Consolidated Appropriations Act, 2004 (P.L. 108-199; 118 Stat. 3, at 339), provided a $1 million appropriation for the fund, with several provisos.

Major Provisions

Organizations eligible for consideration to participate in the fund are executive departments, government corporations, and independent agencies. The General Accounting Office is not covered by the chapter. The fund may be used to reward General Schedule, Foreign Service, and Veterans Health Administration employees; prevailing rate employees; and employees included by OPM following review of plans submitted by agencies seeking to participate in the fund. However, Executive Schedule (or comparable rate) employees; SES members; administrative law judges; contract appeals board members; administrative appeals judges; and individuals in positions which are excepted from the competitive service because of their confidential, policy-determining, policy-making, or policy-advocating character are not eligible to receive payments from the fund.

OPM will administer the fund, which is authorized a $500,000,000 appropriation for FY2004. Such sums as may be necessary to carry out the provision shall be authorized for each subsequent fiscal year. In the first year of implementation, $50,000,000 (up to 10% of the appropriation) is authorized to be available to participating agencies to train supervisors, managers, and other individuals involved in the appraisal process on using performance management systems to make meaningful distinctions in employee performance and on using the fund.

Agencies seeking to participate in the fund must submit plans to OPM for approval. The plans must incorporate the following elements:

- adherence to merit principles under 5 U.S.C. § 2301;
- a fair, credible, and transparent performance appraisal system;

- a link between the pay-for-performance system, the employee performance appraisal system, and the agency's strategic plan;
- a means for ensuring employee involvement in the design and implementation of the pay-for-performance system;
- adequate training and retraining for supervisors, managers, and employees in the implementation and operation of the pay-for-performance system;
- a process for ensuring ongoing performance feedback and dialogue among supervisors, managers, and employees throughout the appraisal period, and setting timetables for review;
- effective safeguards to ensure that the management of the pay-for-performance system is fair and equitable and based on employee performance; and
- a means for ensuring that adequate agency resources are allocated for the design, implementation, and administration of the pay-for performance system.

An agency will receive an allocation of monies from the fund once OPM, in consultation with the Chief Human Capital Officers (CHCO) Council, reviews and approves its plan. (The CHCO Council will include an evaluation of the formulation and implementation of agency performance management systems in its annual report to Congress.) Ninety percent of the remaining amount appropriated to the fund ($405,000,000, monies not yet appropriated) may be allocated to the agencies. An agency's prorated distribution may not exceed its prorated share of executive branch payroll. (Agencies must provide OPM with necessary payroll information.) If OPM were not to allocate an agency's full prorated share, the remaining amount would be available for distribution to other agencies.

Ten percent of the remaining amount appropriated to the fund ($45,000,000, monies not yet appropriated), as well as the amount of an agency's prorated share not distributed because of the agency's failure to submit a satisfactory plan, will be allocated among agencies with exceptionally high-quality plans. Such agencies will be eligible to receive a distribution in addition to their full prorated distribution.

Agencies, in accordance with their approved plans, may make human capital performance payments to employees based on exceptional performance contributing to the achievement of the agency mission. In any year, the number of employees in an agency receiving payments may not be more than the number equal to 15% of the agency's average total civilian full-time and part-time permanent employment for the previous fiscal year. A payment may not exceed 10% of the employee's basic pay rate. The employee's aggregate pay (basic, locality pay, human capital performance pay) may not exceed Executive Level IV ($134,000 in 2003).

A human capital performance payment is in addition to annual pay adjustments and locality-based comparability payments. Such payments are considered basic pay for purposes of Civil Service Retirement System, Federal Employees' Retirement System, life insurance, and for such other purposes (other than adverse actions) which OPM determines by regulation. Information on payments made and the use of monies from the fund must be provided by the agencies to OPM as specified.

Initially, agencies shall use monies from the fund to make the human capital performance payments. In subsequent years, continued financing of previously awarded payments shall be derived from other agency funds available for salaries and expenses. Under current law at 5 U.S.C. § 5335, agencies pay periodic within-grade increases to employees performing at an acceptable level of competence. Presumably, funds currently used to pay within-grade increases could be used to make human capital performance payments instead. Monies from the fund may not be used for new positions, for other performance-related payments, or for recruitment or retention incentives.

OPM shall issue regulations to implement the new Chapter 54 provisions. Those regulations must include criteria governing:

- an agency's plan;
- allocation of monies from the fund to the agencies;
- the nature, extent, duration, and adjustment of, and approval processes for, payments to employees;
- the relationship of agency performance management systems to the Human Capital Performance Fund;
- training of supervisors, managers, and other individuals involved in the process of making performance distinctions; and
- the circumstances under which funds could be allocated by OPM to an agency in amounts below or in excess of the agency's pro rata share.

Discussion

The effectiveness of agency performance management systems and whether the performance ratings would be determined according to preconceived ideas of how the ratings would be arrayed across the particular rating categories are among the concerns expressed by federal employees and their unions and representatives about the fund. Other concerns are that the fund could take monies away from the already reduced locality-based comparability payments and that the performance award amounts would be so small as not to serve as an incentive (this may be of particular concern given the FY2004 appropriation of $1 million).

(21) Pay Administration (Chapter 55; in Part III, Subpart D — Pay and Allowances).

Statutory Intent and History

For the most part, the pay administration provisions in Title 5 reflect practices put in place in the early to mid-20th century through various statutes. The practices authorized in these sections, such as the bi-weekly pay period, enable the federal government to administer the various pay systems. The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 55 provisions cannot be waived, modified, or otherwise affected by the new HRM systems, except that, for the Department of Defense, Subchapter V of the chapter, "Premium Pay," may be waived, modified, or otherwise affected by the new HRM system, apart from Section 5545b ("Pay for firefighters").

Major Provisions

Many of the sections in this chapter focus on the managerial details of pay administration. These include the identification of bi-weekly and monthly pay periods, the various bases for withholding pay, payment for accumulated and accrued leave, payments to missing employees, and settlement of accounts. Also included in this chapter are premium pay provisions and the policy for dual pay and dual employment. Statutes enacted to provide civilian agencies with buyout authority are found as notes to 5 U.S.C. § 5597, "Separation Pay."

Discussion

Chapter 55 comprises provisions that define the "bread and butter" administrative processes through which federal employees are compensated. Recently the overtime cap was raised and flexible spending accounts were established. Dual pay and dual employment provisions set out the rules under which a retired member of the armed forces working as a federal civilian employee receives reduced retirement pay.

Overtime Cap. The National Defense Authorization Act of FY2004 amended 5 U.S.C. § 5542 to provide that an employee whose basic pay rate exceeds GS-10, Step 1, will receive overtime at a rate which is the greater of one-and-one-half times the hourly rate for GS-10, Step 1, or his or her hourly rate of basic pay. Overtime compensation has been limited to GS-10, Step 1, to the disadvantage of personnel whose hourly rate of basic pay exceeded this limit.

Pre-tax Employee Benefits. The federal government, like many other public and private employers, offers its employees a choice of pre-tax benefits through a cafeteria plan (defined in 26 U.S.C. § 125). To provide pre-tax benefits, a

cafeteria plan must offer employees the choice of cash or one or more qualified benefits, and cannot discriminate among employees on the basis of compensation. The benefits are pre-tax in that they reduce income for calculation of income and employment taxes.

Although there is no specific authority for federal agencies to offer a flexible benefits plan to employees, under 5 U.S.C. § 5525, agency heads may make allotments from employee pay as they think appropriate. The Office of Personnel Management operates the federal program, known as FedFlex, and currently offers employees[1055] a choice of one (or more) of three pre-tax benefits: payment of health insurance premiums (premium conversion); a health care flexible spending arrangement; and a dependent care flexible spending arrangement.

Federal retirees are not eligible to participate in the flexible benefit program or to have their health insurance premiums paid on a pre-tax basis. Legislation has been introduced in each session of Congress, since premium conversion began, to permit federal retirees to pay health insurance premiums on a pre-tax basis.

Premium Conversion. Beginning in October 2000, federal employees automatically have health insurance premiums (paid by the employees) taken from their income on a pre-tax basis. That is, for calculation of income and employment taxes, an employee's income is reduced by the value of the insurance premiums. This has been called "premium conversion" because the health insurance premiums were converted from a post-tax to a pre-tax basis, saving the employee the income and employment taxes that previously would have been imposed on the value of the health insurance premium. Employees do have the option of electing out of the premium conversion.

Flexible Spending Arrangements. Beginning in 2003, federal employees are able to set aside funds for health and dependent care expenses on a pre-tax basis through a program of flexible spending arrangements known as FSAFEDS. A flexible spending arrangement for health (or dependent) care reimburses an employee for eligible expenses not covered by health insurance (or for dependent care expenses). Dependent care expenses reimbursed through a flexible spending arrangement are not eligible expenses for the dependent care tax credit, and for tax purposes there is a maximum of $5,000 in dependent care expenses that can be paid through an employer-provided reimbursement arrangement. The limitations on the amount of income an employee can set aside in a health care reimbursement account are determined by the employer. For federal employees, in 2004, the maximum that can be set aside in a health reimbursement account is $4,000. P.L. 108-126 provided that any

[1055] Agencies that are not part of the executive branch may choose to offer the FedFlex program. Therefore, not all federal employees are eligible for participation in FedFlex, and some employees are not eligible for all the FedFlex benefits.

administrative fees associated with the flexible spending arrangements are paid by the federal agency and not the employee. In addition, any unused FSA funds revert to the plan administrator and not to the employee.

(22) Travel, Transportation, and Subsistence (Chapter 57; in Part III, Subpart D — Pay and Allowances).

Statutory Intent and History

Chapter 57, "Travel, Transportation, and Subsistence," provides for the payment of various travel, transportation, and subsistence expenses, including those for new and transferring employees; overseas travel; and transportation of family, household goods, personal effects, and privately owned vehicles. Reiterating policy set by the Travel Expense Act of 1949 (P.L. 81- 92, 81st Congress; 63 Stat. 166) and codified in 1966 (P.L. 89-554; 80 Stat. 378), only actual and necessary travel expenses are allowed. The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 57 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Major Provisions

Provisions of Chapter 57 provide details regarding allowances permitted for travel, transportation, and subsistence expenses. Typical of the provisions are those governing the transportation of an employee's immediate family and household goods and personal effects when the employee is transferred to a post to which the family is not permitted to accompany him or her for military or other reasons. Per diem allowances, travel expenses, and storage allotments are authorized in this chapter as well.

Other policies established by Chapter 57 include provision for the traveling expenses of the President and mileage allowances for Members of Congress. Relocation allowances for employees, including the conditions to be met by agencies entering into contracts with private firms in support of these allowances, and payment of expenses to obtain professional credentials are included.

Discussion

Most of Chapter 57 has not been amended for more than a decade. The Joint Financial Management Improvement Project (JFMIP), in a 1995 report, made a number of recommendations on travel management. One such recommendation was that a government-issued charge card should be used for all travel-related expenses. Cost savings of $62 million were anticipated. P.L. 105-264, enacted on October 19, 1998, address this recommendation by requiring the use of the federal travel charge card for payment of all official government travel expenses to the maximum extent practicable. Other provisions of the law include authorizing the government to collect financial information needed to verify that charges on the card are business related, and providing that employees whose

charge payments are overdue will have the delinquent amounts deducted from their paychecks. Concerns about fraud, waste, and abuse in the use of travel cards by federal employees prompted Congress to act. Two statutes that apply only to Department of Defense (DOD) personnel include provisions dealing with travel card management. Section 1008 of P.L. 107-314[1056] amends 10 U.S.C. § 2784 by inserting a section on the disbursement of travel allowances and offsets for delinquent travel card charges. Provisions in Section 1009 of P.L. 108-136 also address the disbursement of travel allowances, determinations of creditworthiness, and penalties for misusing travel cards.

The JFMIP also recommended improvements in automating and auditing travel data. P.L. 105-264 establishes requirements for prepayment audits of federal agency transportation expenses to verify that charges are correct. The General Services Administration (GSA) estimates that this will save $50 million per year. Efforts to further automate and audit travel will likely continue.

With the passage of P.L. 107-107, [1057] the National Defense Authorization Act for FY2002, federal employees who receive promotional items, such as frequent flier miles, as a result of official government travel may keep and use the promotional items. Section 1116 of P.L. 107-107 applies to any items received before, on, or after the date of enactment (December 28, 2001).

Through the use of contractors, GSA is establishing an online travel system, the eTravel Service (eTS). The Web-based system will include all aspects of travel, including authorizing travel, making reservations, filing travel claims, and reconciling vouchers. A proposed rule requires federal agencies to begin implementing eTS no later than December 31, 2004. GSA's system is separate from DOD's online travel management system, the Defense Travel System (DTS), which began operating in 2003.

GSA annually adjusts per diem rates for payment of lodging and meals during official government travel within the continental United States. Effective October 1, 2000, changes in the per diem rates occur at the start of the fiscal year. Effective January 1, 1999, federal employees are reimbursed for all local taxes on hotel room charges (in the past, taxes were not always reimbursed). Incidental expenses for laundry and dry cleaning will not be reimbursed for short-term travel of less than four days.

Following the Internal Revenue Service's increase in its standard mileage reimbursement rate, from 36 cents to 37.5 cents per mile for 2004, the

(23) Allowances (Chapter 59; in Part III, Subpart D — Pay and Allowances).

Statutory Intent and History

This chapter, with a few subsequent modifications, derives from the statute codifying Title 5 in 1966 (80 Stat. 378). It provides for payment of various allowances to cover the costs of specific expenses outside of those normally expected or to enhance recruitment and retention.

Major Provisions

General allowance provisions include those for living quarters for personnel stationed in foreign countries; differential cost-of-living allowances (COLAs) for personnel living in high-cost areas such as Alaska; "danger pay" to be given to personnel assigned to areas where war conditions or other threatening elements are present; incentive allowances for physicians; and other cost-of-living and uniform allowances.

Discussion

Non-foreign area cost-of-living allowances and physicians' comparability allowances are frequently examined by executive branch administrators, Members of Congress, and federal employees to ensure that the intent of the authorizing statutes is carried out.

The Office of Personnel Management's (OPM) Special COLA Research Announcement (see "Selected Source Reading," below) in July 2000 provided the following information:

The Government pays nonforeign area COLAs to approximately 44,000 Federal white-collar and U.S. Postal Service employees in Alaska, Hawaii, Guam, the Commonwealth of the Northern Mariana Islands, Puerto Rico, and the U.S. Virgin Islands. COLA rates reflect differences in living costs between the allowance areas and the Washington, DC, area. OPM conducts surveys in the COLA areas and in the Washington, DC, area to determine COLA rates. The law limits COLAs to no more than 25 percent of basic pay .... Since 1991, OPM's surveys conducted using the existing methodology have indicated that, using this methodology, COLA rates would have been reduced in several allowance areas. This has raised concerns relating to the COLA methodology. Since 1991, Congress has barred COLA rate reductions. The bar is in effect through December 31, 2000. Congress also required OPM to study and submit a report on the COLA program and the compensation of Federal employees in the COLA areas. Since 1996, the Government and the plaintiffs have engaged in a cooperative effort under [a memorandum of understanding]. This cooperative effort led to a proposed settlement of Caraballo, et al. v. United States, No. 1997-0027 (D.V.I.), a case brought in the District Court of the Virgin Islands.

The settlement, which the court approved on August 17, 2000, formed the basis for new regulations for the COLA program. OPM published proposed regulations to significantly modify the COLA methodology consistent with the court agreement on November 9, 2001 (66 FR 56741). The final regulations were published on May 3, 2002 (67 FR 22339). Current COLA rates are: in Alaska, 25% (Anchorage, Fairbanks, Juneau, and rest of the state); in Hawaii, 25% (Honolulu), 16.5% (Hawaii County), 23.25% (Kauai County), and 23.75% (Kalawao and Maui Counties); in Guam and the Commonwealth of the Northern Mariana Islands, 25%; in Puerto Rico, 11.5%; and in the U.S. Virgin Islands, 22.5%.

Federal physicians may receive up to $30,000 per year as a physicians' comparability allowance (PCA). The allowance had been reauthorized every three years. In the 106th Congress, the Federal Physicians Comparability Allowance Amendments of 2000 (114 Stat. 3054) permanently authorized the comparability allowance and treated it as part of basic pay for retirement purposes. In FY2000 (actual data), 47% of all eligible physicians, or 1,521 physicians, received a PCA and the average PCA paid was $17,889. For FY2001, approximately 1630 physicians (48% of all those eligible) received a PCA.

In the 107th Congress, the National Defense Authorization Act FY2002 (115 Stat. 1238) amended current law to provide hostile fire pay of $150 per month in certain circumstances. During the same Congress, the Foreign Relations Authorization Act FY2003 (116 Stat. 1380) amended current law with regard to the baggage allowance and to provide an allowance to Foreign Service employees who are outside their countries of employment and require medical treatment in specific circumstances.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 59 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Barbara L. Schwemle

(24) Hours of Work (Chapter 61; in Part III, Subpart E — Attendance and Leave).

Statutory Intent and History

The 1966 Title 5 codification statute (80 Stat. 378), the Civil Service Reform Act of 1978 (92 Stat. 1111), and the Federal Employees Flexible and Compressed Work Schedules Act of 1982 (96 Stat. 227) are the basic authorities contributing to the hours of work provisions of Chapter 61. The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 61 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

The impetus for revamping federal employee hours of work into flexible and compressed schedules stems from the reality that variations on the standard eight-hour work day can oftentimes lead to greater efficiency, productivity, and employee morale. Studies in both the federal and private sector appear to support the conclusion that alternative work-hour options benefit both employees and management.

Major Provisions

In general, the hours of work provisions of Chapter 61 establish the basic work week for federal employees, list official federal holidays, and define the availability of flexible and compressed work schedule options. Pursuant to this chapter, agency heads are responsible for establishing the basic 40-hour workweek, hours and days of duty, telecommuting policy, approval of scheduling academic programs for improving job-centered skills, and approval of premium pay provisions.

Provisions governing compensation for 11 federal holidays are set forth. Federal compensable holidays identified in the chapter include New Year's Day, the birthday of Martin Luther King Jr., Washington's Birthday, Memorial Day, Independence Day, Labor Day, Columbus Day, Veterans Day, Thanksgiving Day, Christmas Day, and Inauguration Day (the last reserved for employees in Washington, DC and the immediate vicinity, and observed only quadrennially).

Flexible and compressed work schedules are defined. Consistent with certain mandatory hours of attendance, and provided that agency operations are not disrupted as a result, agencies may authorize employees to vary the length of a workweek or workday and schedule the 80 hours biweekly work requirement in less than 10 workdays, including a four-day workweek and variation in reporting and departure times. Provisions affecting compensatory time, premium pay

provisions, night differential pay, and leave and retirement provisions interactive with flexible and compressed work schedules are described. Collective bargaining is authorized for determining flexible and compressed work schedules.

Federal employees may not coerce fellow employees with respect to participation or non-participation in flexible and compressed work schedules; the Office of Personnel Management (OPM) has responsibility for administering the program.

Discussion

The transformation of the federal workplace in terms of wide-ranging work schedule variation, including flexible sign-in-sign-out and compressed schedules, is a revolutionary change from the generations-old "nine to five/Monday through Friday" workweek pattern. The responsibility of the agency head for determining the efficiency of the system and managing workload accomplishment remains in place, subject to the challenges posed by flexible work schedules. Aside from a few complaints that certain core hours are sometimes inadequately covered, the system appears to work well.

(25) Leave (Chapter 63; in Part III, Subpart E — Attendance and Leave).

Statutory Intent and History

The 1966 Title 5 codification statute (80 Stat. 378) and the Civil Service Reform Act of 1978 (92 Stat. 1111) are the basic authorities underlying Chapter 63. Additional authorities contributing to its provisions include a 1968 statute authorizing federal employee leaves of absence to attend funerals of immediate relatives who died while serving as members of the armed forces in combat zones or for those employees called to duty as members of the National Guard or armed forces reserves (82 Stat. 1151, as amended by P.L. 108-136, Sections 1113 and 1114); the Treasury, Postal Service, and General Government Appropriations Act of 1995 (108 Stat. 2423); the Federal Employees Leave Sharing Act of 1988 (102 Stat. 2834); the Family and Medical Leave Act of 1993 (107 Stat 19); and provisions for leave transfers in major disasters and emergencies (111 Stat. 196). The Homeland Security Act of 2002 (116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 63 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Federal employee annual, sick, holiday, and other leave options are among the most important and expensive elements of the basic federal benefits package. Insofar as total federal compensation comparability is concerned, leave benefits, along with health and retirement, are considered to be key components in comparing federal and private sector employment.

Major Provisions

Federal employee leave benefits are defined as regular workdays, for which employees are compensated, exclusive of holidays. Provisions detail categories of leave, the leave accrual process, and federal leave bank programs.

Federal leave benefits accrue to full-time and part-time employees, and are authorized during any part of the work year, subject to approval of agency heads. Annual leave is accrued on the basis of length of service and ranges from four hours to eight hours per biweekly pay period. Applicable federal service in another agency is creditable for annual leave purposes. Accumulation of annual leave, with certain exceptions, is limited to 30 days in a calendar year. Payment for unused annual leave, upon separation from the federal service, is authorized for up to 30 days, except for members of the Senior Executive Service and Senior Foreign Service, who may accumulate and be compensated for annual leave up to 90 days.

Federal employee sick leave accrues at the rate of four hours per biweekly pay period. There is no limit on sick leave accrual and, under the Civil Service Retirement System (CSRS), but not the Federal Employees Retirement System (FERS), unused sick leave may be credited for retirement purposes upon separation of the employee. Sick leave may be used in connection with child adoption, and up to 30 days of sick leave may be advanced in the case of serious illness. Sick leave is not charged to certain federal law enforcement officers for injury or illness resulting from performance of duty.

The Office of Personnel Management (OPM) is authorized to establish a program by which federal employees may transfer accumulated annual leave, subject to certain limitations, to other employees in cases of medical emergencies. Provisions for restoring unused transferred leave are provided. Federal employees are prohibited from exercising any coercion, intimidation, or promises in connection with receipt or donation of annual leave.

Agencies are authorized to establish their own voluntary leave banks for use by federal employees. Agencies in the excepted service may establish separate leave bank programs. An employee's accrued annual leave, up to 50% of his or her annual entitlement, may be contributed to the leave bank and made available to another employee needing leave for a medical emergency. No coerciveness may be involved in the granting or utilization of annual leave for this purpose. Leave Bank Boards review and administer the leave banks.

Discussion

Federal leave benefits — annual, sick, holiday, and other — at an estimated cost of 15% of the federal payroll, are a prime and costly part of the benefits package to federal employees. One indication of cost is that a prime inducement for entry and retention in the Senior Executive Service was the entitlement to unlimited accrual of annual leave benefits and the subsequent curtailment thereof to a maximum of 90 days. Other federal employees may accrue a maximum annual carryover of 30 days of annual leave. All unused annual leave from the current year is computed, considered compensable income, and granted to the federal employee upon separation from the federal service, either through normal retirement or other means.

Federal sick leave, accrued at the rate of 13 days per calendar year for all full-time employees, and proportionally less, according to work schedules, for part-time employees, may be accumulated without limit. Payouts for unused sick leave are not permitted.

The federal leave bank program has been a dramatic new departure in allocating additional annual leave to federal employees requiring it for medical emergencies. Pursuant to the program, federal employees may donate or borrow annual leave. An individual's donation of annual leave may not exceed 50% of his

or her annual entitlement. Intra-agency, a federal employee may designate a co-worker as beneficiary of donated annual leave because of medical emergency.

(26) Labor-Management Relations (Chapter 71; in Part III, Subpart F — Labor-Management and Employee Relations).

Statutory Intent and History

Title VII of the Civil Service Reform Act of 1978 (92 Stat. 1191; P.L. 95-454) gives federal employees the statutory right to form labor unions and bargain collectively over the terms and conditions of employment.[1059] The statute excludes specific agencies and gives the President the authority to exclude other agencies for reasons of national security.

The Civil Service Reform Act of 1883 (commonly called the Pendleton Act, after its sponsor, Senator George Pendleton) established the Civil Service Commission (CSC). The act was an attempt to reform the political patronage system. It provided for merit hiring and promotion of federal employees, but did not give federal workers the right to unionize.

After President John Kennedy issued Executive Order 10988 in January 1962, union membership among federal employees increased significantly. The order gave employees of the executive branch the right to form unions and bargain collectively. Federal employees were allowed to bargain over the conditions of employment but not over work assignments. The authority to set wages and fringe benefits remained with Congress. Agencies could require union representatives to bargain during nonwork hours. Federal workers were not allowed to strike. Collective bargaining agreements could include negotiated procedures for resolving grievances. The CSC and the Department of Labor were required to develop a code of fair labor practices. The executive order did not apply to the Federal Bureau of Investigation (FBI), the Central Intelligence Agency (CIA), or other agencies or subagencies primarily performing investigative, intelligence, or security functions, if the head of the agency determined that union representation was not in the interests of national security.

Executive Order 11491, issued by President Richard Nixon in October 1969, replaced Executive Order 10988. President Nixon's order created a more independent administrative structure for federal labor-management relations. The Federal Labor Relations Council (FLRC) was created to administer and interpret the executive order, and the Federal Services Impasses Panel was created to resolve bargaining impasses. Members of the FLRC included the Chairman of the CSC, the Secretary of Labor, and an appointee from the Executive Office of the President. The Assistant Secretary of Labor for Labor-Management Relations was given responsibility for determining the appropriateness of bargaining units, supervising union elections, and settling

[1059] 5 U.S.C. §§ 7101-7135.

complaints of unfair labor practices. The executive order listed specific actions for both labor and management that would be considered unfair labor practices. Union representatives were required to bargain during nonwork hours. The executive order did not require bargaining unit members to pay dues. The order required unions to make regular financial reports available to members. The order did not cover the FBI, CIA, or the General Accounting Office (GAO). The language giving agency heads the authority to exclude unions was similar to the language in Executive Order 10988.

Executive Order 11491 was amended by other executive orders. Executive Order 11616, issued by President Nixon in August 1971, required collective bargaining agreements to include negotiated procedures for resolving grievances and designated the Director of the Office of Management and Budget as the presidential appointee to the FLRC.

Major Provisions

Executive orders may be amended or withdrawn. Title VII of the Civil Service Reform Act of 1978 (CSRA) established in statute the right of federal employees to organize and bargain collectively. The law applies to executive branch agencies, the Library of Congress, and the Government Printing Office. The CSRA excludes from coverage members of the armed forces, Foreign Service employees, the FBI, CIA, GAO, National Security Agency, Tennessee Valley Authority, the Federal Services Impasses Panel, and the newly created Federal Labor Relations Authority (FLRA). The CSRA also gives the President the authority to exclude, in the interests of national security, any agency or subagency whose primary function involves investigative, intelligence, counterintelligence, or security work.

Under the CSRA, federal employees can bargain over the conditions of employment, but not over wages, benefits, or other matters set in law. Federal employees cannot strike. The CSRA lists both labor and management unfair labor practices. The CSRA requires unions to make regular financial reports available to members. Bargaining agreements must include negotiated procedures for resolving grievances. Grievance procedures must provide for binding arbitration. Union representatives are allowed official time for contract negotiations. Official time for other matters can be negotiated. The CSRA does not require bargaining unit members to pay dues.

The CSRA changed the administrative structure of federal labor-management relations. The CSRA replaced the CSC with the Office of Personnel Management (OPM) to administer and enforce civil service law and the Merit Systems Protection Board to hear and decide employee appeals of adverse personnel actions and other matters. The CSRA created the FLRA and retained the Federal Services Impasses Panel. The FLRA determines appropriate bargaining units, supervises union elections, and resolves complaints of unfair labor practices. To make the agency independent of other federal agencies, the three members of the

FLRA are appointed by the President and confirmed by the Senate. No more than two members of the FLRA may belong to the same political party. The Office of General Counsel of the FLRA investigates and prosecutes charges of unfair labor practices.

Discussion

Recent legislation has given federal agencies greater flexibility in personnel matters. Legislation creating the Transportation Security Administration (TSA) gave the agency head the authority to exclude airport screeners from collective bargaining. Legislation creating the Department of Homeland Security (DHS) gave the President different authority to exclude DHS agencies from collective bargaining. The Secretaries of DHS and the Department of Defense (DOD) have been given the authority to establish personnel systems for all or parts of their departments.

The Aviation and Transportation Security Act of 2001 (P.L. 107-71) created the TSA and shifted the responsibility for airport screening to the federal government. The act gave the head of the TSA, which was later transferred to DHS, the authority to determine the terms and conditions of employment for federally employed airport screeners. In January 2003, the head of the TSA announced that the agency would not bargain with airport screeners.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) gave the Secretary of DHS, in regulations issued jointly with the Director of OPM, the authority to establish a human resources management system for all or parts of the department. Any such system must allow employees to organize and bargain collectively. An agency or subagency transferred to the department can be excluded from collective bargaining if the agency was previously excluded by executive order or, if employees were not previously organized, the agency's primary function involves investigative, intelligence, counterintelligence, or security work, and the President determines that union representation is not in the national interest. An agency or subagency whose employees were previously represented by a union (or unions) can be excluded from collective bargaining if (a) the responsibilities of the agency change and a majority of the employees have as their primary duty intelligence, counterintelligence, or investigative work directly related to terrorism; or (b) the President determines that union representation would have a substantial adverse impact on the ability of the department to protect homeland security and Congress is given a written explanation 10 days before the President takes action. An employee may be excluded from a bargaining unit if the employee's responsibilities change (or the individual is a new employee) and the employee's primary duty consists of intelligence, counterintelligence, or investigative work directly related to terrorism. The act also gave the Secretary of DHS the authority to create an internal process for hearing employee appeals of adverse personnel actions.

The Department of Defense Authorization Act of 2004 (P.L. 108-136, 117 Stat. 1621) gave the Secretary of Defense the authority, in collaboration with the Director of OPM, to create a human resources management system for all or parts of the department. The system must ensure that civilian employees have the right to organize and bargain collectively. The President retains the authority to exclude from collective bargaining any agency whose primary function involves investigative, intelligence, counterintelligence, or security work, if the President determines that union representation is not in the national interest. The act gives DOD the authority to establish, together with OPM, a labor-management relations system. The act allows DOD to bargain at a national level with employee unions (i.e., rather than bargaining with each local). The act gave the Secretary of Defense the authority to create an internal process for hearing employee appeals of adverse personnel actions.

(27) Antidiscrimination in Employment and Employees' Right to Petition Congress (Chapter 72; in Part III, Subpart F — Labor Management and Employee Relations).

Statutory Intent and History

The Civil Service Reform Act of 1978 (CRSA; 92 Stat. 1111), President Carter's plan for revamping the civil service system, included provisions to shift authorities between federal agencies with respect to enforcement of laws to eliminate employment discrimination. The intent of the act was to separate the conflicting roles of the Civil Service Commission (CSC) as both federal personnel manager and protector of employee rights and assign these tasks to two new agencies, the Office for Personnel Management (OPM) and Merit Systems Protection Board (MSPB), respectively. But principal responsibility for implementing equal employment opportunity (EEO) policy in the federal government was placed with the Equal Employment Opportunity Commission (EEOC). The act also created a minority recruitment program to insure that groups previously underrepresented in federal agencies would be actively encouraged to apply.

Historically, the concept of merit selection of employees began with a 19th century statute, the Civil Service Act of 1883 (the Pendleton Act), that required open, competitive examinations for public service jobs in which both men and women were eligible to compete, although categories of work were usually designated by sex. Civil service employment, like employment generally, remained largely sex (and race) segregated for many years. Federal concern with equal employment opportunity for government workers began incrementally in 1941, when President Franklin Roosevelt barred discrimination in federal programs concerned with defense production and set up a Committee on Fair Employment Practice. From this narrow base, in the decades following World War II, additional steps were taken by Congress, the courts, and the executive branch to extend equal employment opportunity more widely in both the public and private sectors.

When Congress enacted Title VII of the Civil Rights Act of 1964, prohibiting employment discrimination on the basis of race, color, religion, sex, or national origin, the federal government was specifically excluded from the definition of employer covered by the act (42 U.S.C. § 2000e et seq.). Section 701 of the act did provide, however, that federal sector employment decisions were to be free from discrimination, and authorized the President to enforce this policy. The CSC was thereafter directed by Executive Orders 11246 and 11478 to protect federal employee rights by establishing comprehensive procedures for investigation and resolution of EEO charges. Doubts as to the efficacy of the CSC regulatory program, however, compounded by lack of a viable judicial remedy, eventually led Congress to adopt the Equal Employment Opportunity Act of 1972, adding section 717 to Title VII (42 U.S.C. § 2000e-16). Section 717 created a private right

of action for executive branch employees to challenge discriminatory practices in federal court. It also strengthened CSC authority to devise "necessary and appropriate" remedies to enforce Title VII, "including reinstatement or hiring of employees with or without back pay." Authority for enforcing Title VII in federal employment was transferred to the EEOC by Reorganization Plan No. 1 of 1978 and the CSRA.

In later years, Congress expanded federal employee rights with passage of the Rehabilitation Act of 1973 (29 U.S.C. § 791), and amendments to the Equal Pay Act (1974; 20 U.S.C. § 206(d)) and the Age Discrimination in Employment Act (1978; 29 U.S.C. §§ 631, 633a), prohibiting, respectively, discrimination based on age, physical or mental impairment, and sex-based wage inequality. These statutes, in turn, define the kinds of discrimination forbidden by the CSRA (5 U.S.C. §§ 72017204). And to assure that equal employment opportunity was extended in fact, as well as in word, to certain groups whose options for federal employment had previously been limited, the CSRA mandated a recruitment program to eliminate underrepresentation of minorities within the various departments and agencies.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 72 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Major Provisions

Section 7201 states that it is the policy of the United States to ensure equal employment opportunities for employees without discrimination because of race, color, religion, sex, or national origin. This section also requires OPM to develop a continuing program for the recruitment of minorities for employment in federal agencies. Under this program, each executive agency is required to administer the antidiscrimination policy in a manner designed to eliminate underrepresentation of minorities in the various categories of civil service employment within the federal service, with special efforts directed at recruiting in minority communities, in educational institutions, and from other sources. OPM is further required to conduct a continuing program of assistance to agencies in carrying out the program, as well as evaluation and oversight to determine the program's effectiveness in eliminating minority underrepresentation. The EEOC is charged with establishing guidelines for carrying out the program. OPM reports to Congress annually with data regarding the minority recruitment program in order to evaluate its effectiveness.

Section 7202 requires that the same benefits be provided in an executive agency or in the competitive service for a married female employee and her spouse and

children as are provided for a married male employee and his spouse and children, and vice versa.

Section 7203 prohibits discrimination because of a handicapping condition in an executive agency or in the competitive service if OPM believes the job can be performed by an individual with such a condition. An exception is made for any employment situation that might endanger the health or safety of the employee or others.

Section 7204 bans discrimination because of race, color, creed, sex, or marital status with respect to general schedule pay rates, prevailing rate systems, or appointments to positions classified above GS-15.

Subchapter II, Section 7211, "Employees' Right to Petition Congress," protects the right of employees, individually or collectively, to petition Congress, or a Member of Congress, or to furnish information to either house of Congress, to a committee or Member.

Discussion

Although the Civil Service Act of 1883 inaugurated the idea of a merit system for appointing federal employees, the principle of equal employment opportunity was expanded considerably by the great social and political changes of the second half of the 20th century. Current protections for federal workers are an amalgam of merit system principles and nondiscrimination requirements administered jointly by employing federal agencies, MSPB, and the EEOC. The first line of defense against federal workplace discrimination is an internal administrative process established by each federal agency to receive, investigate, and adjudicate employee complaints of unlawful discrimination. These internal agency rules have been much criticized both for perpetuating an inherent conflict of interest — by making the agency the judge of its own actions — and for encouraging large numbers of baseless complaints due to lack of substantive standards. The CSRA gave the EEOC exclusive jurisdiction to review agency decisions involving federal employees where only discrimination issues are alleged or no appeal rights to MSPB exist. Complicating the relationship between the MPSB and the EEOC is an election of remedies requirement in the CSRA, designed to avoid duplicative processing of complaints, though the agencies are required to work together. In "mixed cases," involving a discrimination claim stemming from an adverse personnel action appealable to the MSPB, the board has concurrent jurisdiction, subject to EEOC review of the equal employment opportunity portion of the employee's case. Thus, an MSPB decision adverse to the employee may be reviewed by the EEOC. Any difference of opinion between the agencies must be submitted to a statutory special panel for resolution.

A significant incentive for the federal employee EEO claims was provided by the Civil Rights Act of 1991 (42 U.S.C. §1981a(b)). Formerly, remedies for discrimination were limited to back pay, reinstatement, and injunctive relief.

Under the 1991 act, the EEOC (and the federal courts) may award up to $300,000 in compensatorydamages to federal employees who prove "intentional" discrimination by their agencies violative of Title VII or the Rehabilitation Act of 1973. The damage award is meant to compensate for "future pecuniary losses, emotional pain, suffering, inconvenience, mental anguish, loss of enjoyment of life, and other nonpecuniary losses." Jury trials may be had by federal employees seeking judicial relief in damages under the 1991 act.

A new law approved by Congress, effective October 1, 2003, may encourage earlier settlement of employment discrimination claims against federal agencies. Under prior law, agencies were responsible for paying out of their own funds settlements reached during the administrative stage of a discrimination or whistleblowing retaliation complaint. Once the complaint went to court, however, the judgment or settlement was paid from the government-wide judgment fund. Section 201 of the Notification and Federal Employee Anti-Discrimination and Retaliation Act (No FEAR Act; P.L. 107-174) holds the particular agency — rather than the government as a whole — fiscally accountable by requiring that discrimination awards, judgments, and settlements be paid from the budget of the agency wrongdoer. The law also requires that applicants, employees, and former employees be given written notice and training about their rights, and that the information and statistics be posted on the agencies' Internet sites.

(28) Suitability, Security, and Conduct (Chapter 73; in Part III, Subpart F — Labor-Management and Employee Relations).

Statutory Intent and History

The 1966 Title 5 codification statute (80 Stat. 378) is the basic authority for Chapter 73, Suitability, Security, and Conduct. Additional authorities include provisions of a 1967 statute amending Title 5 and codifying recent law (81 Stat. 195 at 208) and the Omnibus Crime Control and Safe Streets Act of 1968 (82 Stat. 197 at 235). The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 73 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

The chapter enumerates basic standards for conduct and behavior of federal employees. As such, its content relates essentially to law enforcement. Prohibitions against disloyalty, strikes against the government, advocating overthrow of the government, and improper gift-giving or acceptance, are admonitions to avoid activities that could lead not only to dismissal, but to prosecution as well.

Major Provisions

The President is authorized to promulgate standards governing federal employee conduct. Included are provisions related to loyalty and striking, security clearance, political activities (for a discussion of the provision relating to employee political activities, see this compendium's discussion of 5 U.S.C. Chapter 73, Subchapter III), and receipt of foreign gifts and decorations. Employee misconduct is also covered, including prohibition on gifts to superiors, drug abuse, and alcohol abuse and alcoholism.

The chapter sets forth employment limitations in the federal service, including prohibitions against those advocating overthrow of the government, participation in or advocacy of striking against the government, or inciting a riot or civil disorder. Regulations concerning those removed for national security reasons, including appointments elsewhere in the government for such individuals, are authorized.

The President, Vice President, Members of Congress, and federal employees are prohibited from accepting foreign gifts and decorations, except those of minimal value, certain travel expenses, an educational scholarship, or medical treatment. Gifts of more than minimal value become the property of the United States, and

violation of these provisions subjects the individual to civil action by the government.

Federal employee misconduct provisions include solicitation of gifts for superiors or acceptance by superiors of gifts from subordinates. Excessive use of intoxicants is a bar to federal employment. The Office of Personnel Management (OPM) is responsible for developing treatment programs for federal employees suffering from drug abuse and alcoholism.

Discussion

Chapter 73 is the major civil enforcement authority insofar as federal employee conduct and behavior are concerned. Its prohibitions on the right to strike or advocate a strike, gift acceptance restrictions, and misconduct proscriptions, ranging from engaging in riots and disorder to alcohol and drug abuse, are accompanied by prescribed penalties — the maximum being removal from the service — and rehabilitation options, such as treatment programs for drug and alcohol abuse. With the exception of national security breaches, little attempt has been made of late to modify this enforcement authority.

(29) Political Activities (Chapter 73, Subchapter III; in Part III, Subpart F — Labor-Management and Employee Relations).

Statutory Intent and History

Chapter 73 political activities provisions derive from the Hatch Act, initially adopted in 1939 (53 Stat. 1147) and subsequently amended several times, the most recent major modifications being the Hatch Act Reform Amendments of 1993 (107 Stat. 1001). The intent of these laws is to regulate the political activities of certain federal employees and to provide penalties for violations.

Major Provisions

The Hatch Act and its amendments cover employees or officeholders in executive agencies or in positions within the competitive service that are not in executive agencies, as well as the U.S. Postal Service and Postal Rate Commission employees. District of Columbia government employees or office holders, other than the mayor, city council members, and the recorder of deeds, are also covered. The President, Vice President, General Accounting Office employees, and members of the uniformed services are not covered by this law.

Subchapter III of Chapter 73 provides that employees may take an active part in political management or in political campaigns, except as prohibited, and retain the right to vote as they choose and express their opinions on political subjects and candidates. Exceptions are noted, such as employees of the Criminal Division of the Department of Justice, Federal Bureau of Investigation, and administrative law judges.

The Office of Personnel Management (OPM) may prescribe regulations permitting employees, with certain exceptions, to take an active part in political management and political campaigns involving the municipality or other political jurisdictions in which they reside. However, employees are prohibited from being candidates for partisan political office. Restrictions are present regarding the solicitation and acceptance of political contributions.

The law provides that, if the Special Counsel (who heads a separate federal agency, the Office of Special Counsel) receives an allegation concerning any matter relating to prohibited political activities, withholding of information, political intrusion into personnel decisionmaking, and discrimination, the Special Counsel can investigate and seek corrective action under 5 U.S.C. § 1214 and disciplinary action under 5 U.S.C. § 1215 in the same way as if a prohibited personnel practice were involved. An employee or individual who violates Section 7323 or 7324, relating to prohibitions on the use of official influence or official information and solicitation, shall be removed from his or her position, and funds appropriated for the position from which the individual was removed thereafter may not be used to pay him or her. However, if the Merit System

Protection Board finds by unanimous vote that the violation does not warrant removal, a penalty of not less than 30 days' suspension without pay shall be imposed by direction of the Board.

Discussion

The modifications effected by the Hatch Act Reform Amendments of 1993 were adjusted slightly by the Legislative Branch Appropriations Act, 1997 (110 Stat. 2416), which modified 5 U.S.C. § 3303 with a provision stating: "An individual concerned in examining an applicant for or appointing him in the competitive service may not receive or consider a recommendation of the applicant by a Senator or Representative, except as to the character or residence of the applicant."

In January 1998, OPM published final regulations on political activities of federal employees residing in designated localities. Spotsylvania County, Virginia, and St. Mary's County, Maryland, were added as designated localities, thereby qualifying federal employees who reside in these counties to a partial exemption from the prohibition at 5 U.S.C. § 7323(a)(2)(3) on political contributions and running for election to a partisan political office.

In the 105th Congress, draft legislation prepared but not introduced by the House Civil Service Subcommittee chair, Representative Mica, would have authorized civil monetary penalties and debarment from employment for former federal employees convicted of Hatch Act violations during their federal employment.

In the 108th Congress, a provision at Section 1109 of H.R. 1588, the National Defense Authorization Act for FY2004, as passed by the House of Representatives, on clarification of the Hatch Act was dropped in conference. (A similar provision also was included in H.R. 1836, which was marked up by the House Committee on Government Reform, but has not seen further action.) It would have exempted a federal employee or individual who was employed by the Department of Defense Inspector General's office before the act's enactment date and transferred to a Special Court sponsored by the United Nations from the provisions of 5 U.S.C. § 7326. Section 7326 authorizes an employee's removal from his or her position or 30 days' suspension without pay for violating the prohibitions on federal employee political activities. The exemption would have no longer applied if the employee or individual subsequently became reemployed in the civil service. The provision would have provided that once employees in this specific category leave government service, they would no longer by covered by the Hatch Act restrictions on political activities by federal employees. H.R. 1509, which would have applied this provision to a broader category of employees, was referred to the House Committee on Government Reform, but has not seen further action as of this writing.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621)

authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 73 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Questions about application of the Hatch Act to campaign activity by executive branch personnel and to soliciting campaign contributions in federal buildings are especially raised during presidential election years. The Office of Special Counsel reiterates the law's provisions in providing guidance to federal employees.[1060]

(30) Adverse Actions (Chapter 75; in Part III, Subpart F — Labor-Management and Employee Relations).

Statutory Intent and History

The current system for adverse actions in the federal civil service generally was established under the Civil Service Reform Act of 1978 (P.L. 95-45; 92 Stat. 1134). The intent was to streamline and codify disciplinary procedures. The subchapter relating to national security was established under P.L. 81-733 (64 Stat. 476).

Major Provisions

This chapter prescribes the cause and procedure for suspension for 14 days or less; removal, suspension for more than 14 days, reduction in grade or pay, or furlough for 30 days or less; actions against administrative law judges; actions involving national security; and actions involving the Senior Executive Service. It authorizes an agency, under regulations promulgated by the Office of Personnel Management (OPM), to take these actions for such cause as will promote the efficiency of the service. An employee against whom an action has been proposed is entitled to certain procedures such as advance written notice, a reasonable time to answer orally or in writing and to furnish affidavits and other documentary evidence, representation by an attorney or other representative, and a written decision and specific reasons therefor.

An agency may remove, suspend, reduce in grade, reduce in pay, or furlough an administrative law judge only for good cause established and determined by the Merit Systems Protection Board on the record after an opportunity for a hearing before the board.

Notwithstanding other statutes, the head of certain defined agencies may suspend without pay an employee when the agency head considers suspension necessary in the interest of national security. Subject to certain procedural requirements, an agency head may remove such a suspended employee when, after such investigation and review as the head considers necessary, the head determines that removal is necessary in the interests of national security. After suspension and before removal, an employee who has a permanent and indefinite appointment, has completed a probationary period, and is a citizen of the United States, is entitled to a written statement of the charges against him; an opportunity to answer the charges and submit affidavits; a hearing, at the request of the employee, by an agency authority duly constituted for this purpose; a review of his case by the agency head or designee, before a decision adverse to the employee is made final; and a written statement of the decision by the agency head.

Under regulations prescribed by OPM, an agency is authorized to remove from the civil service or suspend for more than 14 days certain career appointees of the Senior Executive Service only for misconduct, neglect of duty, malfeasance, or failure to accept a directed reassignment or to accompany a position in a transfer

of function. An employee against whom such an action is proposed is entitled to certain procedures, including advance written notice, a reasonable time to answer orally and in writing and to furnish affidavits and other documentary evidence, representation by an attorney or other representative, and a written decision and specific reasons therefor. An employee against whom an action is taken also is entitled to appeal to the Merit System Protection Board.

Discussion

This chapter establishes the cause and procedural protections for various disciplinary actions in the civil service and specifies the individuals who are entitled to protection. It attempts to strike a balance between management rights and employee protection.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security (DHS) and Defense (DOD). Both laws permit changes from the Chapter 75 provisions for DHS and DOD. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

(31) Appeals (Chapter 77; in Part III, Subpart F — Labor-Management and Employee Relations).

Statutory Intent and History

The current system for appeals in the federal civil service was established under the Veterans Preference Act of 1944 (P.L. 78-359; 58 Stat. 390) and the Civil Service Reform Act of 1978 (P.L. 95-454; 92 Stat. 1138). The intent was to uphold the merit system by ensuring protection of federal employees from arbitrary agency actions.

Major Provisions

An employee or applicant for employment may submit an appeal to the Merit Systems Protection Board (MSPB) from any action appealable to the board under any law, rule, or regulation. An appellant has a right to a hearing for which a transcript will be kept, and to be represented by an attorney or another representative.

MSPB may hear any case appealed to it, or may refer the case to an administrative law judge or other employee of MSPB designated by the board to hear cases. A decision must be made after receipt of written representations of the parties to an appeal and after an opportunity for a hearing. If an employee or applicant prevails in an appeal, the employee or applicant is granted the relief provided in the decision when it is made. The decision remains in effect pending the outcome of any petition for review unless certain circumstances are met.

An agency's decision is sustained only if it is supported by substantial evidence in the case of an action based on unacceptable performance or by a preponderance of evidence in any other case. Nonetheless, an agency's decision may not be sustained if the employee or applicant for employment shows harmful error in applying the agency's procedures, or shows that the decision was based on any prohibited personnel practice, or that the decision was not in accordance with law.

The law provides for procedures to be followed by the Office of Personnel Management (OPM), if it decides to intervene, as well as those conditions whereby the Equal Employment Opportunity Commission (EEOC) becomes involved when discrimination (so-called mixed cases) has been alleged. Procedures to be followed for judicial review of MSPB decisions when they are appealed are prescribed.

Discussion

Jurisdiction by both MSPB and EEOC over mixed cases has been controversial. Critics assert that dual jurisdiction is inefficient, expensive, and time-consuming; supporters argue that it is necessary to ensure adequate review. Proposals to

streamline appeals by authorizing only the board or the commission (but not both), to hear them have been considered.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security (DHS) and Defense (DOD). Both laws permit changes from the Chapter 77 provisions DHS and DOD. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

(32) Services to Employees (Chapter 79; in Part III, Subpart F — Labor-Management and Employee Relations).

Statutory Intent and History

The 1966 Title 5 codification statute (80 Stat. 378) is the basic statutory authority for Chapter 79, "Services to Employees." Additional authorities include the Anti-Drug Abuse Act of 1986 (100 Stat. 3207) and the Federal Employees Clean Air Incentives Act (107 Stat. 1995). The Homeland Security Act of 2002 (P.L. 107296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that Chapter 79 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

The chapter addresses federal employee health, safety, and commuting concerns. In addition to prescribing treatment programs for federal employees with alcohol and drug-related illness, provisions are set forth encouraging and mandating creation of proactive health and safety measures to prevent employee illness and disability.

Major Provisions

The provisions of Chapter 79 govern the establishment of agency health, safety, drug abuse, and alcohol abuse programs. They regulate the issuance of protective clothing and equipment for federal employees, and the creation of programs intended to encourage alternative means of commuting to the workplace, other than "singleoccupancy motor vehicles."

Agency heads are authorized to establish health service programs to promote and maintain the physical and mental fitness of their employees. Programs are limited to treatment of on-the-job illness and dental conditions requiring emergency treatment, pre-employment and other examinations, referral to private physicians and dentists, and preventive health programs.

The Secretary of Labor is responsible for creating safety programs covering federal employees within the agencies. The President may establish a safety council to advise the Secretary in administering the safety programs and to prevent injuries and accidents. Agency heads are responsible for the promotion of organized programs to reduce accidents, illness, and injuries, and to encourage safe practices and eliminate workplace hazards. Available appropriations may be used for purchase and maintenance of special equipment for protection of employees in performing assigned tasks.

Agency heads, in cooperation and consultation with the Office of Personnel Management (OPM) and the Secretary of Health and Human Services, are required to establish prevention, treatment, and rehabilitation programs for drug and alcohol abuse affecting employees within their agencies.

Agency heads are authorized to create programs to encourage employees and student volunteers to commute to and from work by means other than motor vehicles. In furtherance of such programs, options may include public transit passes or reimbursement therefor; furnishing space, facilities, and services to bicyclists; and offering other non-monetary incentives for alternative commuting options by employees. The President is required to designate one or more agencies to prescribe guidelines for alternative commuting programs, and such designees submit to the President and to Congress biannual reports on the number and type of agency programs, the extent of employee participation, and the costs to the government, and an assessment of environmental or other benefits resulting from such programs.

Discussion

Public health and safety programs have assumed increasing importance within the federal service in recognition of rapidly escalating costs of health care and the burdens placed on federal employee health insurance programs. A more proactive approach has long been advocated by federal agencies responsible for health and safety, notably the Department of Labor's Occupational Safety and Health Administration (OSHA), including strong emphasis on workplace safety, prevention of illness, influenza inoculation programs, and the like. Although the chapter cites the need for limited health care facilities within the agencies, emphasis still remains on referral to private sector practitioners, except in cases of medical emergency.

Encouragement of mass transit and other options, other than privately owned motor vehicles, for commuting to and from the workplace has long been advocated, but with modest results. In recent years, Congress has authorized agencies to use appropriated funds to provide monetary subsidies to employees in order to offset, at least partially, the cost of using mass transit for commuting.

(33) Retirement (Chapter 83; in Part III, Subpart G — Insurance and Annuities).

Statutory Intent and History

The Civil Service Retirement System (CSRS) was established in 1920 (42 Stat. 1047). The law had a dual purpose; to provide for an adequate retirement income for individuals who had devoted much of their work lives to government service, and to provide an efficient and humane method to remove from duty older employees whose productivity was diminishing due to age. The original CSRS law included a provision for mandatory retirement at age 70, a requirement eliminated in 1978, except for certain public safety occupations. The CSRS retirement system is a defined benefit system in that employees contribute a defined percentage of their income to the system, and receive in turn a defined percentage of their top three years of compensation annually upon retirement.

From 1920 to 1984, CSRS was the retirement plan covering most civilian federal employees. Coverage was extended to Members of Congress and congressional employees in 1946. In 1935, Congress enacted the Social Security system for private sector workers, and the Social Security Amendments of 1983 (97 Stat. 65) mandated that all workers hired into permanent federal positions on or after January 1, 1984, be covered by Social Security. Since Social Security duplicated some existing CSRS benefits, and because the combined employee contribution rates for Social Security and CSRS would have reached more than 13% of pay, it was necessary to design an entirely new retirement system for federal employment, using Social Security as the base. Congress enacted the Federal Employees' Retirement System Act of 1986 (FERS) (100 Stat. 514). CSRS was closed to new entrants at the end of 1983, and all new federal employees hired since then are covered by FERS. As turnover in the workforce occurs, the number of workers in CSRS will decline, and eventually it will cease to exist. Less than one-third of the federal workforce is currently covered by CSRS.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 83 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Major Provisions

Subchapter II of Chapter 83 requires forfeiture of a civil service or military annuity by individuals convicted of crimes against the national security.

Subchapter III of Chapter 83 provides a CSRS annuity to "vested" employees. Vesting requires five years of federal civilian service. Most CSRS participants must pay 7% of their salary into the retirement system throughout their federal

employment (certain occupational groups pay slightly more and receive higher benefits). An immediate annuity is provided for federal employees retiring at age 55 with 30 years of service, age 60 with 20 years of service, or age 62 with 5 years of service. Vested employees separating before retirement eligibility may draw a deferred annuity at age 62. In certain situations, including job abolishment or reductions-in-force, a reduced early retirement benefit is payable to workers retiring at any age with 25 years of service or at age 50 with 20 years. Different age and service criteria for retirement pertain to certain occupational groups. If the individual retires before age 55, his or her annuity is permanently reduced by 2% for each year of difference between the worker's actual age at retirement and 55.

Chapter 83 sets out the formulas for computing CSRS annuities. Special higher benefit formulas apply to Members of Congress and congressional employees, federal law enforcement officers, firefighters, and air traffic controllers. Regular federal employees retiring with 30 years of service receive an annuity of 56.25% of their average annual pay of their highest-paid 3 consecutive years ("high-3"). Members of Congress receive 75% of high-3 pay after 30 years; federal law enforcement officers, firefighters and air traffic controllers receive 50% of high-3 pay with 20 years of service.

Disabled workers who are unable to perform their federal jobs due to physical or mental impairment are provided disability retirement. Disability retirement benefits are calculated according to the same rules applicable to regular retirement, but there is a minimum benefit of 40% of high-3 pay.

Chapter 83 provides survivor benefits to spouses and dependent children of deceased CSRS workers and retirees. Retirees electing survivor coverage contribute up to 10% of their annuities in order to provide a spouse survivor benefit of up to 55% of the retiree's annuity.

CSRS annuities are adjusted annually by the rate of increase in the Consumer Price Index (CPI) over a one-year period.

Discussion

CSRS came under criticism in the 1970s for a number of reasons. Some argued that the system locked employees in the federal workforce, because the retirement benefits built up by employees were not portable. (The FERS program, by contrast, was designed to be portable.) Another criticism was that the automatic postretirement cost-of-living adjustments (COLAs) were too generous and skewed federal pay benefits towards the retired workforce. Congress first enacted COLAs for CSRS in 1962. The purpose of COLAs is to protect the purchasing power of retirement income from erosion due to inflation. Critics indicated that few private pension plans offered COLAs. Additionally, COLAs are subject to congressional intervention, whereby Congress may eliminate, reduce, or delay COLAs for federal retirees.

(34) Federal Employees' Retirement System (Chapter 84; in Part III, Subpart G — Insurance and Annuities).

Statutory Intent and History

From 1920 to 1984, the Civil Service Retirement System (CSRS) was the retirement plan covering most civilian federal employees. Coverage of CSRS was extended to Members of Congress and congressional employees in 1946. In 1935, Congress enacted the Social Security system for private sector workers, and the 1983 amendments to the Social Security Amendments Act (97 Stat. 65) mandated that all workers hired into permanent federal positions on or after January 1, 1984, be covered by Social Security. Because Social Security duplicated some existing CSRS benefits, and because the combined employee contribution rates for Social Security and CSRS would have reached more than 13% of pay, it was necessary to design an entirely new retirement system for federal employment, using Social Security as the base. Congress enacted the Federal Employees Retirement System (FERS) in 1986 (100 Stat. 514). CSRS was closed to new entrants at the end of 1983, and all new federal employees hired since then are covered by FERS. FERS now covers more than two-thirds of civilian federal employees.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 84 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Major Provisions

Subchapter II of Chapter 84 provides a basic annuity for Federal Employees' Retirement System (FERS) participants. Employees are vested after five years of service. Most FERS participants contribute 0.8% of pay into the pension plan. Federal law-enforcement officers, firefighters, air traffic controllers, and congressional employees contribute 1.3% of pay. FERS participants may retire at age 55 with 30 years of service. The minimum retirement age is increasing to age 57 as the Social Security normal retirement age rises to 67. FERS participants may retire with a reduced annuity at age 55 (rising to 57) with 10 through 29 years of service. The annuity is permanently reduced 5% for each year between the individual's age at retirement and 62. FERS also provides disability retirement and survivor benefits. Post-retirement cost-of-living adjustments are paid to retirees age 62 or over (and to disability and survivor annuitants of any age). If the increase in the Consumer Price Index (CPI) is 3% or more, increases are limited to one percentage point less than the rate of increase in the CPI.

Subchapter III of Chapter 84 provides a Thrift Savings Plan (TSP). The government contributes to the TSP 1% of the pay of all FERS participants and

matches up to 5% of pay voluntarily contributed by FERS workers. The maximum FERS employee contribution in 2004 is 14% of pay up to a maximum of $13,000. The maximum employee salary deferral will increase by $1,000 per year until it reaches $15,000 in 2006, after which it will be indexed to the CPI. At retirement, TSP accounts may be withdrawn as a lifetime annuity, as a lump sum, or in equal payments over a specific time period. Separating employees may withdraw their TSP account balance (subject to possible tax penalties) or roll it over to an individual retirement arrangement or another employer's qualified retirement plan.

Discussion

FERS was designed by Congress in the mid-1980s to be comparable to retirement plans offered by large employers in the private sector. As recently as 1988, 70% of employees in medium and large establishments in the private sector were covered under a defined benefit retirement plan, according to the Department of Labor. By 1997, however, only 50% of employees in medium and large establishments in the private sector were covered by a defined benefit plan. Moreover, in recent years, many large employers have converted their traditional defined benefit plans to "cash balance" plans that mimic the benefit accumulation patterns of a defined contribution plan, and typically pay a smaller benefit to career employees than they would have accumulated under a traditional defined benefit pension. As traditional defined benefit plans become less common in the private sector, Congress may decide to examine the structure of the Federal Employees' Retirement System to determine whether or not the retirement benefits offered to federal employees are still comparable to those offered in the private sector.

The Thrift Savings Plan (TSP) has proven to be a popular plan for savings by FERS participants. About four-fifths of eligible employees make voluntary contributions to the TSP. The FERS plan permits portability of retirement monies from the government to qualifying private plans.

(35) Health Insurance (Chapter 89; in Part III, Subpart G — Insurance and Annuities).

Statutory Intent and History

Before 1959, the federal government did not provide health benefits to its civilian employees or retirees. The need for a government-wide health benefits program was recognized when Congress passed the Federal Employees Health Benefits Act of 1959 (P.L. 86-382; 73 Stat. 708) authorizing the Federal Employees Health Benefit Program (FEHBP). The program went into operation on July 1, 1960. The act and its subsequent amendments established eligibility for benefits and election of coverage by participants; the types of health benefit plans that may be offered; the types of benefits that may be provided; the role of the U.S. Office of Personnel Management (OPM); the level of government contributions; the establishment of an Employees Health Benefits Fund to pay for program expenses; the creation of an advisory committee; and provisions for studies, reports, and audits.

While the law was periodically amended to extend eligibility for coverage to additional employee groups, the basic structure of FEHBP has undergone relatively few changes since the program began operation. However, the Health Benefits Insurance — Federal Contribution Act (P.L. 91-418; 84 Stat. 869) completely altered the way the government contribution toward employees health plan premiums was determined in an effort to "provide automatic indexing of the Government contribution to reflect increases in medical price inflation." Beginning in 1971, the act established the formula for computing the government's premium share as the average premium of the six largest plans. Subsequently, the government's contribution increased from 40% to 50% of the average of the "Big Six" plan premiums in 1974, and to 60% in 1975 and thereafter. In 1997, the Balanced Budget Act (P.L. 105-33; 111 Stat. 251) replaced the Big Six formula with a formula setting the government's share of premiums at 72% of the weighted average premium of all plans in the program, not to exceed 75% of any given plan's premium. The new formula was effective in 1999.

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) and the National Defense Authorization Act for FY2004 (P.L. 108-136, 117 Stat. 1621) authorize the creation of new human resources management (HRM) systems for civilian employees of the Departments of Homeland Security and Defense. Both laws stipulate that the Chapter 89 provisions cannot be waived, modified, or otherwise affected by the new HRM systems. (See the discussions of the 5 U.S.C. Chapter 97 and Chapter 99 provisions in this compendium.)

Major Provisions

Participation in FEHBP is voluntary, and enrollees may change from one plan to another during designated "open season" periods. Active and retired Members of Congress may participate under the same rules as other federal employees. At the time of retirement, enrollees have a one-time election to continue to

participate in FEHBP as retirees, provided they have been enrolled for at least five years immediately before retirement and are eligible for an immediate annuity.

FEHBP offers enrollees a choice of 6 fee-for-service (FFS) plans available government-wide, one consumer-driven option plan[1061] also offered government-wide, another 6 available to employees of certain small federal agencies, and about 240 health maintenance organizations (HMOs) serving limited geographic areas. Some plans are offering a "high" benefit and cost option and a "standard" option.

Although there is no core or standard benefit package required for FEHBP plans, all plans cover basic hospital, surgical, physician, and emergency care. Plans are required to cover certain special benefits including prescription drugs (which may have separate deductibles and coinsurance); mental health care with parity of coverage for mental health and general medical care coverage; child immunizations; and protection of enrollee out-of-pocket costs for "catastrophic" health care costs. Plans must include certain cost containment provisions, such as offering preferred provider organization (PPOs) networks as a component of the FFS plans, and hospital preadmission certification. There are variations in the amounts plans pay for benefits (as reflected in coinsurance provisions and deductibles), the availability of ancillary benefits (such as dental care or coverage of chiropractors), and the catastrophic cost protections.

OPM interprets the health insurance laws, writes regulations, and administers FEHBP. It approves qualified plans for participation in the program, negotiates yearly with plans to determine benefits and premiums for the following year, manages premium payments, and publishes information concerning plan options.

Discussion

FEHBP is the largest employer-sponsored health insurance program in the United States. Total annual cost of the program in FY2002 was about $22.7 billion, including $11.2 billion in enrollee and U.S. Postal Service payments. An issue sometimes raised regarding the design of the program is that the plans are not selected through competitive bidding, and, except for HMOs, most of the FFS plans in the program today have participated in the program for many years. Some plans have participated continuously since the start of the program. One

[1061] Beginning in 2003, a consumer-driven option plan was added to the FEHB program. This option provides beneficiaries with greater flexibility in health care spending through a personal care account (PCA) of $1,000 for a self-only plan and $2,000 for a family plan. Once the PCA has been exhausted, beneficiaries are responsible for paying for their own benefits, up to a prescribed amount. Traditional health care coverage begins after covered eligible expenses (paid out by the PCA and the member) total $1,600 for self-only plans and $3,200 for family plans.

concern about design of the programs is that enrollees must choose among several plans, which may be confusing. Others say choice helps ensure competition among plans, thus keeping premiums down. Still others say choice has no effect on costs, either to increase or decrease them. In recent years, fewer that 3% of enrollees changed plans during the annual open season. Another concern is that FEHBP plans compete for enrollees who are good risks (i.e., those who are less likely to experience health care costs in excess of the plan's premium), potentially causing some plans to enroll a larger proportion of high-cost enrollees. However, OPM monitors enrollment trends and seeks to minimize adverse risk selection.

(36) Long-Term Care Insurance (Chapter 90; in Part III, Subpart G — Insurance and Annuities).

Statutory Intent and History

The Long-Term Care Security Act (114 Stat. 762; P.L. 106-265) authorizes a long-term care insurance program for federal workers and their families. The resulting program, sponsored by the Office of Personnel Management (OPM), is administered by Long Term Care Partners, a joint venture created for this purpose by the John Hancock Life Insurance Company and the Metropolitan Life Insurance Company. Long Term Care Partners offers insurance policies that can be individually modified with respect to amount of coverage (e.g., $100 or $150 a day), years of coverage, length of the elimination period (the period of time before benefits begin to be paid), inflation protection, and other features. Participation is voluntary, with premium costs paid by those who are enrolled, not the government. During an initial open season from July 1 through December 31, 2002, current employees and their spouse could enroll in the program with minimal underwriting (medical screening); retirees and other eligible people had to go through more extensive underwriting.[1062] Since that time, all applicants aside from newly hired employees must complete the more extensive underwriting.

The federal employee long-term care insurance program has several objectives. The first is to encourage federal workers to consider purchasing long-term care insurance by making them aware of the cost of nursing home and community-based services and the limited assistance that most families can expect from Medicare, Medicaid, and private health insurance. Second, the program is designed to help participants choose coverage that is suitable for their needs and interests. Long-term care insurance is a complicated product for which it is useful to have an intermediary select an insurance carrier, choose a reasonable range of policy options, and prepare and distribute educational material. Finally, the federal program is intended to serve as a model for other employers to offer similar coverage. Compared to individual market policies, employment-based plans can have lower premiums due to administrative cost savings. The federal program was one of several proposals President Clinton made in January 1999 to help families with their long-term care needs.

The Long-Term Care Security Act has been amended four times through the end of 2003 to clarify and expand the list of eligible participants. P.L. 107-104 prohibits states from imposing taxes (other than general business taxes) on policy premiums.

[1062] The earliest effective date for people enrolling during the open season was October 1, 2002. A short early-enrollment period was held in the spring of 2002; it was intended for people able to choose coverage without the educational material being prepared for the open season.

Major Provisions

The Long-Term Care Security Act requires OPM to establish a program under which eligible individuals may obtain long-term care insurance. As amended, the act defines eligible individuals to include most federal and U.S. Postal Service employees,[1063] active members of the uniformed services, employees of the Tennessee Valley Authority, District of Columbia government employees who were first employed before October 1, 1987, and employees of the District of Columbia courts. Also eligible are annuitants of those groups and surviving spouses who are receiving a federal survivor annuity. Eligible relatives include current spouses of employees and annuitants, adult children, parents, parents-in-law, and some step-parents.

The long-term care insurance contracts must be tax-qualified (i.e., comply with the conditions specified in Section 7702B of the Internal Revenue Code), fully insured (perhaps through reinsurance), and issued by a carrier that is licensed to issue long-term care insurance in all states. There is no guaranteed issue (i.e., policies do not have to be issued to all who apply), and it is explicitly provided that coverage need not be made available to individuals who would immediately qualify for benefits. As nearly as practicable, underwriting standards for a spouse must be like those for the eligible individual. More stringent underwriting may apply to individuals who declined coverage when they first had an opportunity to enroll. Contracts must be guaranteed renewable so long as premiums are paid. Coverage must be fully portable.

The act authorizes OPM to contract with qualified carriers without competitive bidding. It sets out terms and conditions for this master contract, which normally shall be for seven years. One requirement is that premiums should reasonably and equitably reflect the benefits provided, as determined by OPM, and not be adjusted during the term of the contract unless adjustment is mutually agreed to by OPM and the carrier.

Individuals obtaining coverage are responsible for 100% of the premiums. Withholding from pay or annuities is authorized. Administrative start-up costs may be paid out of the Employees' Life Insurance Fund, with reimbursement from the carriers within the first year. Subsequently, carriers are to make periodic contributions to a Long-Term Care Administrative Account within this fund to defray OPM expenses in administering the program.

[1063] Federal and Postal Service employees generally may participate in the long-term care insurance program if they are eligible to participate in the Federal Employees Health Benefit (FEHB) program, whether or not they actually do.

Contract terms relating to the nature, provision, and extent of coverage or benefits supersede and preempt state or local laws or regulations. Cost accounting standards issued pursuant to Section 26(f) of the Office of Federal Procurement Policy Act do not apply.

The act provides for various reports and record keeping, including evaluations by the General Accounting Office (GAO) before the end of the third and fifth years of the program. Within 180 days after receiving the second GAO report, the President shall submit to Congress written recommendations as to whether the program should be continued without modification, terminated, or restructured.

OPM has authority to prescribe necessary regulations for the program. In consultation with the carriers, it is to provide periodic coordinated enrollment, promotion, and education efforts. In addition, OPM is to ensure that applicants are furnished information needed to evaluate the advantages and disadvantages of obtaining long-term care insurance, including information about costs and benefits, the effects of inflation, circumstances when premiums may be raised, and other matters.

Discussion

Long-term insurance can help protect the income and assets of people who need daily assistance due to frailty or chronic medical conditions. Coverage can also help people gain access to better-quality or additional services, either in nursing homes or in the community or at home. While there has been a steady increase in the number of long-term care policies sold over the last decade, only a small proportion of the generation nearing retirement has obtained coverage. One reason is cost: typically, long-term care insurance is purchased by people in their 50s or 60s, when the annual cost is higher than if bought earlier. Another reason is complexity: long-term care insurance is difficult even for financially astute people to understand. In addition, some people are concerned that premiums will increase at some point in the future and that they will be forced to drop their policies.[1064]

The federal long-term care insurance program is designed to avoid some of these problems. By offering coverage to all federal employees and their families, not just those approaching retirement, the program attempts to enroll participants when annual costs are lower. There are also cost savings from reduced administrative costs, though these might be partially offset by cost increases from different underwriting standards. The program's educational material and clear information about costs are aimed at helping people make prudent choices about

[1064] Long-term care insurance usually is sold for premiums that stay the same in subsequent years (unless the policy-holder later elects to purchase inflation protection); however, this is not guaranteed.

benefits. While there is no guarantee that premiums will not be raised in the future, OPM oversight (and the possibility of congressional review) may make this less likely than for insurance sold in the private market.

As of the end of 2003, a little over 200,000 policies had been obtained through the program.

(37) Personnel Flexibilities Relating to the Internal Revenue Service (Chapter 95; in Part III, Subpart I — Miscellaneous).

Statutory Intent and History

Subtitle C of the Internal Revenue Service (IRS) Restructuring and Reform Act of 1998 (112 Stat. 711) at Section 1201 amended Part III of Title 5, United States Code, by adding a new Subpart I — "Miscellaneous," and Chapter 95 — "Personnel Flexibilities Relating to the IRS." The legislation was based on the report of the National Commission on Restructuring the IRS, which recommended that the IRS and the Department of the Treasury be given more flexibility to hire qualified personnel needed to implement modernization. The intent of the law was to make various personnel rules and procedures on hiring, evaluating, promoting, and firing employees more flexible; to foster creativity, innovation, and quick problem resolution among employees; and to increase the accountability of IRS managers and employees and their focus on the mission, goals, and objectives of the agency. The law also was designed to revitalize the IRS workforce and change the culture of the agency so that it would be an efficient, modern, and responsive organization designed to meet the needs of taxpayers.

Major Provisions

A summary of some of the major provisions follows.

Under Section 9501, the personnel flexibilities are to be exercised in a manner consistent with Title 5, United States Code, provisions on merit system principles; prohibited personnel practices; veterans' preference; and, except as otherwise specifically provided, labor-management relations. Employees within a unit to which a labor organization is accorded exclusive recognition shall not be subject to various flexibilities unless the IRS and the labor organization enter into a written agreement which specifically provides for the exercise of the flexibility. The written agreement may be imposed by the Federal Services Impasses Panel.

When the Secretary of the Treasury seeks a grant of critical pay authority for one or more positions at the IRS, the Office of Management and Budget, under Section 9502, may fix the basic pay rate at any rate up to the Vice President's salary ($198,600 as of January 2003). The Secretary of the Treasury is authorized, under Section 9503, to establish, fix the compensation of, and appoint individuals to, designated critical administrative, technical, and professional positions in the IRS until July 22, 2008 (10 years after enactment of the law). The positions are those that require expertise of an extremely high level in an administrative, technical, or professional field and are critical to the IRS's successful accomplishment of its mission. Exercise of the authority is necessary to recruit or retain an individual exceptionally well qualified for the position. The number of critical positions may not exceed 40 at any one time. The terms of

such appointments may not exceed four years. Total annual compensation for critical positions may not exceed the highest total annual compensation payable to the Vice President.

The Secretary of the Treasury is authorized, under Section 9504, subject to approval by the Office of Personnel Management (OPM), to provide for variations from current law on recruitment, relocation, and retention incentives until July 22, 2008 (10 years after enactment of the law). IRS senior executives with program management responsibility over significant IRS functions may be paid a performance bonus if the Secretary of the Treasury, under Section 9505, finds the award warranted by the executive's performance. This authority continues until July 22, 2008 (10 years after enactment of the law). The bonus is not subject to 5 U.S.C. § 5384(b)(2), which limits Senior Executive Service performance awards to no less than 5% or more than 20% of basic pay. The executive's performance will be evaluated by the Secretary's taking into account contributions toward the successful accomplishment of goals and objectives specified in certain laws and by performance metrics or plans. Any award that exceeds 20% of an executive's basic pay rate must be approved by the Secretary. A performance bonus award may not be paid to an executive in a calendar year if, or to the extent that, the executive's total annual compensation will exceed the maximum amount of total annual compensation payable to the Vice President.

In applying 5 U.S.C. § 3132, career reserved position in the IRS means a position which may be filled only by a career appointee; or a limited emergency appointee or a limited term appointee who, immediately upon entering the career-reserved position, was serving under a career or career-conditional appointment outside the Senior Executive Service (SES); or whose limited emergency or limited term appointment is approved in advance by OPM (Section 9506). The number of positions filled by limited emergency or limited term appointees may not exceed 10% of the total number of SES positions in the IRS. The term of a limited emergency or limited term appointee may not exceed three years.

The exercise of any of the flexibilities under Sections 9502 through 9510 shall not affect the Secretary of the Treasury's authority, under Section 9507, to implement a demonstration project for the IRS, subject to 5 U.S.C. Chapter 47. The law specifies various requirements for a demonstration project.

Under Section 9508, the Secretary of the Treasury established a performance management system for the IRS in lieu of a system established under 5 U.S.C. § 4302. The system will maintain individual accountability by establishing one or more retention standards for each employee related to his or her work and expressed in terms of individual performance. The standards will be communicated to employees. Periodic determinations of whether each employee does or does not meet his or her established retention standards will be made. With respect to any employee whose performance does not meet established retention standards, actions could be taken including denying basic pay increases, promotions, and credit for performance during a reduction in force.

The performance system will establish goals or objectives for individual, group, or organizational performance (or any combination thereof) that are consistent with IRS performance planning procedures and also will provide for communicating goals or objectives to employees and will use such goals and objectives to make performance distinctions among employees or groups of employees. An employee's performance will be considered "unacceptable" if it fails to meet a retention standard.

The Secretary of the Treasury may establish an awards program designed to provide incentives for and recognition of organizational, group, and individual achievements. It will provide for awards to employees who, as individuals or members of a group, contribute to meeting performance goals and objectives by such means as superior individual or group accomplishment, a documented productivity gain, or sustained superior performance.

The notice period for actions based on unacceptable performance or adverse actions is 15 days. An IRS employee may not appeal the denial of a periodic step increase to the Merit Systems Protection Board.

The Secretary of the Treasury, under Section 9509, may, subject to OPM criteria, establish one or more broad-banded systems covering all or any portion of the IRS workforce. Such a system has been established for IRS managers and supervisors. Broad-banded system means a system for grouping positions for pay, job evaluation, and other purposes that differs from the General Schedule classification system as a result of combining grades and related ranges of rates of pay in one or more occupational series. The law specifies requirements for the OPM criteria.

An IRS employee may be selected for a permanent appointment in the competitive service in the IRS through internal competitive promotion procedures, under Section 9510, subject to meeting certain conditions stated in the law. The Secretary of the Treasury may establish category rating systems for evaluating applicants for IRS positions in the competitive service. Qualified candidates will be divided into two or more quality categories on the basis of relative degrees of merit, rather than assigned individual numerical ratings. Each applicant who meets the minimum qualification requirements for the position to be filled shall be assigned to an appropriate category based on an evaluation of his or her knowledge, skills, and abilities relative to those needed for successful performance in the job to be filled. Within each quality category, preference eligibles shall be listed ahead of other individuals. For other than scientific and professional positions at or higher than GS9 (or equivalent), preference eligibles with a compensable service-connected disability of 10% or more, and who meet the minimum qualification standards, will be listed in the highest quality category. An appointing authority may select any applicant from the highest quality category. If fewer than three candidates have been assigned to the highest quality category, the individual may be selected from a merged category consisting of the highest and second highest quality categories. The appointing

authority may not pass over a preference eligible in the same or a higher category from which the selection is made, unless the requirements of 5 U.S.C. § 3317(b) or § 3318(b) are satisfied.

The Secretary of the Treasury may detail employees among IRS offices without regard to current law, which limits details and renewals of details to 120 days. A probationary period of up to three years may be established by the Secretary of the Treasury for IRS positions that require a longer period for the incumbent to demonstrate complete proficiency. The IRS Commissioner was authorized to pay voluntary separation incentive payments (VSIP) up to $25,000 to any employee who voluntarily separated (whether by retirement or resignation) before January 1, 2003 (Section 1202).

Section 1203 of the act authorizes the IRS Commissioner to terminate any IRS employee if there is a final administrative or judicial determination that the employee committed any act or omission in performing his or her official duties. The termination shall be a removal for cause on charges of misconduct. The acts or omissions which could result in termination are the following.

- willful failure to obtain the required approval signatures on documents authorizing the seizure of a taxpayer's home, personal belongings, or business assets;
- providing a false statement under oath with respect to a material matter involving a taxpayer or taxpayer representative;
- with respect to a taxpayer, taxpayer representative, or other employee of the Internal Revenue Service, the violation of — (A) any right under the Constitution of the United States; or (B) any civil right established under — (i) Title VI or VII of the Civil Rights Act of 1964; (ii) Title IX of the Education Amendments of 1972; (iii) the Age Discrimination in Employment Act of 1967; (iv) the Age Discrimination Act of 1975; (v) Section 501 or 504 of the Rehabilitation Act of 1973; or (vi) Title I of the Americans with Disabilities Act of 1990;
- falsifying or destroying documents to conceal mistakes made by any employee with respect to a matter involving a taxpayer or taxpayer representative;
- assault or battery on a taxpayer, taxpayer representative, or other IRS employee, but only if there is a criminal conviction, or a final judgment by a court in a civil case, with respect to the assault or battery;
- violations of the Internal Revenue Code of 1986, Department of the Treasury regulations, or IRS policies (including the Internal Revenue Manual) for the purpose of retaliating against, or harassing, a taxpayer, taxpayer representative, or other IRS employee;
- willful misuse of the provisions of Section 6103 of the Internal Revenue Code of 1986 for the purpose of concealing information from a congressional inquiry;
- willful failure to file any return of tax required under the Internal Revenue Code of 1986 on or before the date prescribed therefor (including any

extensions), unless such failure is due to reasonable cause and not to willful neglect;
- willful understatement of federal tax liability, unless such understatement is due to reasonable cause and not to willful neglect; and
- threatening to audit a taxpayer for the purpose of extracting personal gain or benefit.

The IRS Commissioner, at his or her sole discretion, may take a personnel action other than termination for an act or omission and may establish a procedure which will be used to determine whether an individual should be referred to the Commissioner for a determination on a personnel action. Any determination of the Commissioner may not be appealed in any administrative or judicial proceeding.

Under Section 1204 of the act, the IRS shall not use records of tax enforcement results to evaluate employees or to impose or suggest production quotas or goals with respect to such employees. The IRS shall use the fair and equitable treatment of taxpayers by employees as one of the standards for evaluating employee performance. Each appropriate supervisor shall certify quarterly by letter to the IRS Commissioner whether or not tax enforcement results are being used in a manner prohibited by this section. The IRS Commissioner implemented an employee training program under Section 1205 of the act. The law specified requirements for the training plan.

Discussion

Among issues related to implementation of the law, those on employee misconduct, training, and critical pay authority have been closely followed. Recent audits conducted by the Treasury Inspector General for Tax Administration (TIGTA) found that allegations of employee misconduct were accurately reported; training data are not adequate or reliable enough for the IRS Oversight Board to perform an assessment (costs of training courses and allocation of training resources cannot be determined); and the Secretary of the Treasury and the board need to exercise additional scrutiny to ensure that the critical pay authority is used appropriately. In its 2003 review of the IRS, the Joint Committee on Taxation determined that serious employee misconduct remains at low levels (more than 90% of the Section 1203 violations involve employee tax compliance), and anxiety about Section 1203 contributes to a decline in enforcement activity. The IRS reported to the Joint Committee that the streamlined critical pay authority has resulted in the recruitment of talented executives with wide-ranging skills.

Various bills were introduced in the 106th and 107th Congresses to amend the Section 1203 provisions on termination of employment for misconduct. In the 108th Congress, the following bills are pending: H.R. 1528, Taxpayer Protection and IRS Accountability Act of 2003, as passed by the House, and H.R. 1661, Taxpayer and Fairness Protection Act of 2003, both to amend Section 1203 with

regard to disciplinary actions and to add a reporting requirement that misconduct allegations be summarized by category; S. 1637, Jumpstart Our Business Strength (JOBS) Act, as reported to the Senate, to prohibit an individual who violates Section 1203 from receiving a tax collection contract; S. 882, Tax Administration Good Government Act, to amend Section 1203 and to provide that the use of critical pay authority be approved by the IRS Oversight Board; and H.R. 3625, Department of the Treasury Inspector General Consolidation Act of 2003, to add a requirement that the Inspector General's report include misconduct cases.

(38) Department of Homeland Security (Chapter 97; in Part III, Subpart I — Miscellaneous).

Statutory Intent and History

The Homeland Security Act of 2002 (P.L. 107-296; 116 Stat. 2229) authorized the creation of a new human resources management (HRM) system for employees of the Department of Homeland Security (DHS). In the aftermath of the September 11, 2001 terrorist attacks on the World Trade Center and the Pentagon, and the discovery of anthrax in Washington, DC, and other cities, Congress and the Administration determined that a new Cabinet-level department was needed to coordinate efforts to protect the nation from terrorist attacks. As part of creating that new department, the Administration believed strongly that, to meet the exigencies of national security and emergency situations, a flexible and modern HRM system for DHS was mandated. The President frequently referred to the requirements of that system as putting the right people in the right place at the right time. (See the discussion at 5 U.S.C. Chapter 99 for information on the new HRM system at the Department of Defense.)

Major Provisions

Title VIII, Subtitle E, Section 841 of the Homeland Security Act amends Title 5 United States Code by adding a new Chapter 97 — "Department of Homeland Security" to Part III, Subpart I. The new Section 9701(a) of Title 5 United States Code provides that, notwithstanding any other provision of Part III, the Secretary of Homeland Security may, in regulations prescribed jointly with the Director of the Office of Personnel Management, establish, and from time to time adjust, an HRM system for some or all of the organizational units of DHS.

The HRM system must be flexible and contemporary. It cannot waive, modify, or otherwise affect:

- the public employment principles of merit and fitness at 5 U.S.C. § 2301, including the principles of hiring based on merit, fair treatment without regard to political affiliation or other non-merit considerations, equal pay for equal work, and protection of employees against reprisal for whistleblowing;
- any provision of 5 § 2302 relating to prohibited personnel practices;
- any provision of law referred to in 5 U.S.C. § 2302(b)(1), (8), and (9); or any provision of law implementing any provision of law referred to in 5 U.S.C. § 2302(b)(1), (8), and (9) by providing for equal employment opportunity through affirmative action; or providing any right or remedy available to any employee or applicant for employment in the civil service;
- Subparts A (General Provisions), B (Employment and Retention), E (Attendance and Leave), G (Insurance and Annuities), and H (Access to Criminal History Record Information) of Part III of Title 5, United States Code; and Chapters 41 (Training), 45 (Incentive Awards), 47 (Personnel Research Programs and Demonstration Projects), 55 (Pay

Administration), 57 (Travel, Transportation, and Subsistence), 59 (Allowances), 72 (Antidiscrimination, Right to Petition Congress), 73 (Suitability, Security, and Conduct), and 79 (Services to Employees) of Title 5; or
- any rule or regulation prescribed under any provision of law referred to in any of the statements in bullets immediately above.

The use of a category rating system for evaluating applicants for positions in the competitive service is permitted under the new system.

Nothing in the new Section 9701 constitutes authority to:

- modify the pay of any employee who serves in an Executive Schedule position or a position for which the rate of basic pay is fixed in statute by reference to the Executive Schedule;
- fix pay for any employee or position at an annual rate greater than the maximum amount of cash compensation allowable under 5 U.S.C. § 5307 in a year; or
- exempt any employee from the application of 5 U.S.C. § 5307.

It is the sense of the Congress that employees of DHS are entitled to fair treatment in any appeals that they bring in decisions relating to their employment. In prescribing regulations for any such appeals procedures, the Secretary of Homeland Security and the Director of OPM should ensure that employees of the department are afforded the protections of due process and, toward this end, should be required to consult with the Merit Systems Protection Board (MSPB) before issuing any such regulations. Any regulations which relate to any matters within the purview of Chapter 77 (on appeals) must be issued only after consultation with the MSPB and must ensure the availability of procedures which must be consistent with requirements of due process and provide, to the maximum extent practicable, for the expeditious handling of any matters involving DHS. Any regulations must modify procedures under Chapter 77 only insofar as such modifications are designed to further the fair, efficient, and expeditious resolution of matters involving the employees of DHS.

The law also includes provisions related to labor management relations and collective bargaining. (See 5 U.S.C. Chapter 71 in this compendium.)

Effective five years after the conclusion of the transition period defined under Section 1501 of the act (a 12-month period beginning 60 days after the act's enactment date of November 25, 2002), all authority to issue regulations under the section (including regulations which would modify, supersede, or terminate any regulations previously issued under the section) must cease to be available.

Except as otherwise provided in the Homeland Security Act, the transfer, under this act, of full-time personnel (except special government employees) and part-time personnel holding permanent positions must not cause any such employee

to be separated or reduced in grade or compensation for one year after the date of transfer to DHS. A person who, on the day preceding his or her date of transfer to the new department, held a position compensated on the Executive Schedule, and who, without a break in service, is appointed in DHS to a position having duties comparable to the duties performed immediately preceding such appointment, must continue to be compensated in the new position at not less than the rate provided for the previous position, for the duration of service in the new position. Any exercise of authority under the new Chapter 97, including under any system established under the chapter, must be in conformance with these requirements.

In authorizing the establishment of an HRM system for the new department, Congress stated that —

[I]t is extremely important that employees of the Department be allowed to participate in a meaningful way in the creation of any human resources management system affecting them; [S]uch employees have the most direct knowledge of the demands of their jobs and have a direct interest in ensuring that their human resources management system is conducive to achieving optimal operational efficiencies; [T]he 21st century human resources management system envisioned for the Department should be one that benefits from the input of its employees; and [T]his collaborative effort will help secure our homeland.

Discussion

On April 1, 2003, Secretary of Homeland Security Tom Ridge and OPM Director Kay Coles James announced that they were launching the process for designing a new HRM system for DHS. The following process is being used to create the system:

- A Design Team conducted research and outreach to provide a full range of options for a Senior Review Committee to consider. The team included DHS program managers from all directorates and disciplines, union and employee representatives, and human resource specialists from DHS and OPM. Expert consultants from the private sector also supported the team.
- A Senior Review Committee (SRC) is developing personnel system options to be considered by the Secretary and the Director and their senior staff. The committee included, among others, the Under Secretary for Management, department program leaders, officials from OPM, and major union leaders. A small number of academics and policy experts served as ex officio members who advised the committee on specific issues.

The design team began work on April 1, 2003, and conducted field meetings in several cities, including New York City, Miami, Detroit, El Paso, Atlanta, Seattle, and Salt Lake City, locales with the largest concentrations of DHS employees. Testimony was received from more than 2,000 DHS employees, including 44 employee focus groups and 10 manager focus groups. The field meetings

concluded in late June 2003. On July 25, 2003, the design team reported to the SRC on these field meetings. Pay, performance management, and labor-management relations were among the issues discussed.

On October 3, 2003, the design team presented its final report with 52 options for the new HRM to the SRC.[1065] None of the options represents the consensus of the design team and none covers the Senior Executive Service (SES). Modifications to Title 5 United States Code pay and performance management provisions for the SES will be addressed through a separate process. The options are grouped into two categories: (1) Pay, Performance Management, and Classification and (2) Labor Relations, Adverse Actions, and Appeals. Among the options in the first category are those which would continue or amend the current General Schedule pay system; establish a compensation system based on pay bands; create a system based on longevity, competency, and performance; and continue or amend the existing performance management system. Options under the second category include continuing the current labor relations procedures, providing for national level bargaining, continuing or amending the current adverse actions and appeals procedures, creating an Ombudsman Office, and establishing procedures for alternative dispute resolution. The SRC examined and deliberated the options at a public meeting conducted October 20 through October 22, 2003. A summary of the proceedings was published on December 5, 2003.[1066] The committee will "present a refined range of options to the Secretary and the Director," who will then issue proposed rules. Employee representatives and Congress will be notified, and any differences will be reconciled. The Secretary and the OPM Director jointly issued proposed regulations for the new human resources management system on February 20, 2004.[1067]

While there is consensus on the broad principles that should govern a new HRM system, DHS employees, some Members of Congress, and knowledgeable HRM observers are beginning discussions about the rules that will implement the new system. To this point, discussions have focused only on the design team process.

(39) Department of Defense National Security Personnel System (Chapter 99; in Part III, Subpart I — Miscellaneous).

Statutory Intent and History

The National Defense Authorization Act for FY2004 (P.L. 108-136, Section 1101; 117 Stat. 1621) authorizes the creation of a new human resources management (HRM) system, to be called the National Security Personnel System (NSPS), for civilian employees (some 735,000) of the Department of Defense (DOD). The NSPS provisions were included in a DOD proposal entitled "The Defense Transformation for the 21st Century Act" that was submitted to Congress in April 2003.[1068] According to the proposal, DOD's responsibility to defend the security of the nation requires that the department's HRM system incorporate enhanced flexibilities to recruit, develop, assess, compensate, assign, and separate employees. With the new authority under the NSPS, DOD stated that it will be able to fold innovations from its ongoing demonstration projects as well as best practices from throughout the federal government into its strategic plan for civilian human resources management.

Major Provisions

Section 1101(a)(1) of the National Defense Authorization Act amends Part III, Subpart I, of Title 5, United States Code, by adding a new Chapter 99 entitled "Department of Defense National Security Personnel System." The new Section 9902(a) provides that notwithstanding any other provision of Part III, the Secretary of Defense may, in regulations prescribed jointly with the OPM director, establish, and from time to time adjust, an HRM system for some or all of the organizational or functional units of DOD. The system must be flexible and contemporary and, under the new Section 9902(b), cannot waive, modify, or otherwise affect:

- the public employment principles of merit and fitness at 5 U.S.C. § 2301, including the principles of hiring based on merit, fair treatment without regard to political affiliation or other non-merit considerations, equal pay for equal work, and protection of employees against reprisal for whistleblowing;
- any provision of 5 U.S.C. § 2302, relating to prohibited personnel practices;
- any provision of law referred to in 5 U.S.C. § 2302(b)(1), (8), and (9); or any provision of law implementing any provision of law referred to in 5 U.S.C. § 2302(b)(1), (8), and (9) by providing for equal employment opportunity through affirmative action; or providing any right or remedy

[1068] See [http://www.defenselink.mil/dodgc/lrs/docs/Transformation.pdf], visited Dec. 18, 2003.

available to any employee or applicant for employment in the public service.

The new Section 9902(d) lists various subparts and chapters of Part III of Title 5, United States Code (including applicable rules and regulations) which cannot be waived, modified, or otherwise affected in the new HRM system as follow:

Subpart A — General Provisions, including Chapter 21, Definitions; Chapter 23, Merit System Principles; Chapter 29, Commissions, Oaths, Records, and Reports;

Subpart B — Employment and Retention, including Chapter 31, Authority for Employment; Chapter 33, Examination, Selection, and Placement; Chapter 34, Part-time Career Employment Opportunities; Chapter 35, Retention Preference (RIF), Restoration, and Reemployment;

Subpart E — Attendance and Leave, including Chapter 61, Hours of Work; Chapter 63, Leave;

Subpart G — Insurance and Annuities, including Chapter 81, Compensation for Work Injuries; Chapters 83 and 84, Retirement; Chapter 85, Unemployment Compensation; Chapter 87, Life Insurance; Chapter 89, Health Insurance; Chapter 90, Long Term Care Insurance;

Subpart H — Access to Criminal History Record Information, including
Chapter 91 for individuals under investigation; Chapter 41 — Training; Chapter 45 — Incentive Awards;
Chapter 47 — Personnel Research Programs and Demonstration Projects; Chapter 55 — Pay Administration, including biweekly and monthly pay periods
and computation of pay, advanced pay, and withholding of taxes from pay, except that Subchapter V of Chapter 55 on premium pay (overtime, night, Sunday pay), apart from Section 5545b, may be waived or modified;
Chapter 57 — Travel, Transportation, and Subsistence; Chapter 59 — Allowances, which includes uniforms, quarters, overseas
differentials; Chapter 71 — Labor Management and Employee Relations; Chapter 72 — Antidiscrimination, Right to Petition Congress, including
minority recruitment, antidiscrimination on the basis of marital status and handicapping condition, furnishing information to Congress;

Chapter 73 — Suitability, Security, and Conduct, including security clearance, political activities (Hatch Act), misconduct (gifts, drugs, alcohol); Chapter 79 — Services to Employees, including safety program, protective clothing and equipment; or
Other requirements for the HRM system include that it shall:

- ensure that employees could organize, bargain collectively as provided for in the proposed Chapter 99, and participate through labor organizations of their own choosing in decisions that affect them, subject to the provisions

of the proposed Chapter 99 and any exclusion from coverage or limitation on negotiability established pursuant to law; and
- include a performance management system. Requirements for the system are specified in the law.

The NSPS shall not apply with respect to various DOD laboratories before October 1, 2008, and shall apply on or after October 1, 2008, only to the extent that the Secretary determines that the flexibilities provided by the NSPS are greater than the flexibilities already provided to these laboratories.

Nothing in Section 9902 shall constitute authority to modify the pay of any employee who serves in an Executive Schedule position. Except for this provision, the total amount of allowances, differentials, bonuses, awards, or other similar cash payments paid under Title 5 in a calendar year to various senior executives may not exceed the total annual compensation payable to the Vice President ($198,600 as of January 2003).

To the maximum extent practicable, the rates of compensation for civilian DOD employees shall be adjusted at the same rate, and in the same proportion, as are rates of compensation for members of the uniformed services. In addition, to the maximum extent practicable, for FY2004 through FY2008, the overall amount allocated for compensation of the civilian employees of an organizational or functional unit of DOD that is included in the NSPS shall not be less than the amount of civilian pay that would have been allocated for compensation of such employees for such fiscal year if they had not been converted to the NSPS.

The law requires the Secretary of Defense and the Director of the OPM to provide a written description of the proposed personnel system or any adjustments to such system to the labor organizations representing employees in the department. The measure identifies a collaboration procedure that must be followed by the Secretary, Director, and employee representatives. The Secretary is authorized to engage in any collaboration activities at an organizational level above the level of exclusive recognition. The Secretary is given similar authority to engage in collective bargaining with employee representatives at a level above the level of exclusive recognition. Finally, the Secretary and Director are authorized to establish and adjust a labor relations system for the department. Collaboration with employee representatives on the development of the system is required.

The new Section 9902(h) authorizes the Secretary of Defense to establish an appeals process that provides fair treatment for DOD employees who will be covered by the NSPS. Regulations for the appeals process, applicable to employee misconduct or performance that fails to meet expectations, may not be prescribed until after the Secretary consults with the Merit Systems Protections Board (MSPB) and must afford due process protections and conform to public employment principles of merit and fitness set forth in 5 U.S.C. § 2301. A qualifying employee subject to some severe disciplinary actions shall have a right

to petition the MSPB for review of the record of the department's decision. The board is authorized to dismiss any petition that does not raise a substantial question of fact or law and to order corrective action only if the board finds that the department's personnel decision did not meet some prescribed standards. An employee adversely affected by a final decision or order of the board shall be able to obtain judicial review.

A new Section 9902(i) authorizes the Secretary of Defense, without review by OPM, to offer (1) early retirement to employees who are age 50 or older with 20 years of service or any age with 25 years of service and (2) separation incentive pay of up to $25,000 to DOD employees who retire or resign. The law also includes provisions on re-employment within DOD without loss of annuity.

The Secretary may apply the NSPS (1) to an organizational or functional unit that includes up to 300,000 civilian DOD employees and (2) to more than 300,000 DOD civilian employees, if the Secretary determines that the department has in place a performance management system that meets the criteria specified in the law.

The law also allows the Secretary to appoint personnel from outside the civil service and uniformed services to positions in DOD without regard to any Title 5 provisions governing such. The Secretary may provide allowances and benefits that would be comparable to those provided to members of the Foreign Service or to personnel of the Central Intelligence Agency to certain civilian DOD employees who are engaged in hazardous activities or specialized functions and assigned to activities outside the United States.

Discussion

During testimony before the House Committee on Government Reform and the Senate Committee on Governmental Affairs and their relevant subcommittees, DOD officials discussed the department's Best Practices Initiative and referred Members of Congress to an April 2, 2003, Federal Register notice for additional details on the types of HRM flexibilities the department is implementing at its science and technology reinvention laboratories and would seek to implement under the NSPS. Authority for streamlined recruitment and candidate ranking, universal pay banding for five career groups, merit-based pay, and simplified appointment procedures were among the flexibilities DOD requested.

The General Accounting Office (GAO) testified about the NSPS proposal before the House Committee on Government Reform's Subcommittee on Civil Service and Agency Organization and the Senate Committee on Governmental Affairs' Subcommittee on Oversight of Government Management, the Federal Workforce, and the District of Columbia. GAO emphasized that DOD's performance appraisal system, as currently designed, does not support meaningful performance-based pay; that personnel management flexibilities currently available should be used fully as appropriate; that many of the features of the

NSPS, including pay banding and pay for performance, should be considered for application government-wide; and that DOD should work together with labor representatives and stakeholders in implementing the new HRM system (something that was not done as the NSPS proposal was developed and submitted to Congress).

The conference agreement on H.R. 1588 incorporated some of the provisions of S. 1166, the National Security Personnel System Act, as reported (without written report). These provisions, among others, related to requirements for a performance management system, appellate procedures, and labor management relations and collective bargaining. All of these features were in contention and widely debated before agreement was reached. Another contentious provision that would have authorized the Secretary to waive the requirement that the HRM regulations be jointly prescribed by DOD and OPM for reasons of national security was dropped in conference. (Earlier, provisions included in H.R. 1836, the Civil Service and National Security Personnel Improvement Act, as reported, were added to H.R. 1588 during House Committee on Armed Services markup.) The conference agreement directs the Secretary to implement an evaluation system that better links individual pay to performance and provides an equitable method for appraising and compensating employees. Regulations to implement the system are, among other features, to provide for grouping employees into pay bands and establishing performance factors to be used to evaluate whether performance objectives are accomplished. The conference agreement also states that the provisions on collective bargaining should not be construed as expanding the scope of bargaining under 5 U.S.C. Chapter 71.

In a November 2003 briefing document, DOD announced that the NSPS will be built through coordination with OPM and collaboration with employee representatives. There will be a minimum 90-day period of discussion, mediation, and notification to Congress of differences. Discussions began in January 2004, and they continue. Implementation of the NSPS will begin in FY2005 and will continue for at least a two-year period.[1069]

B. Ethics in Government Act

Statutory Intent and History

Passage of the Ethics in Government Act of 1978 (92 Stat. 1824; 5 U.S.C. App.) culminated years of efforts to provide uniform financial disclosure requirements for key officers of the federal government. These efforts gathered momentum in the 1970s, following the Watergate scandal; revelations of impropriety by a number of government officials; polls showing a lack of confidence in public officials; and publication in 1976 of the recommendations of the President's Commission on Executive, Legislative, and Judicial Salaries, which recommended salary increases for top government officials, as well as ethical reforms, including annual public financial disclosure reports.

Major provisions of the act established (1) annual public financial disclosure requirements, (2) an Office of Special Prosecutor (subsequently called the Independent Counsel) to investigate allegations of wrongdoing by top officials in the executive branch, (3) the Office of Government Ethics to monitor executive branch financial disclosure reports and potential conflicts of interest, and (4) the Office of Senate Legal Counsel.

Major Provisions

Titles I through III of the act contain the financial disclosure requirements for the three branches of government, including which officers and employees are covered, contents of the reports (including provisions for reporting the income from trusts), accessibility of reports, review procedures in each branch of government, and penalties for failure to file.[1070] Though the provisions were almost uniform, their interpretation was left to designated officials in each branch.

Title IV originally established the Office of Government Ethics (OGE) within the Office of Personnel Management. OGE became an independent agency in 1989 (102 Stat. 3031). OGE is charged with enforcement of standards of conduct, assisting in the confirmation of presidential appointees, providing guidance to agencies on procedures for monitoring financial disclosure reports, the issuance of standards of conduct and advisory opinions, and developing ongoing ethics programs to educate employees.

Title V revised 18 U.S.C. § 207 to broaden the major conflict of interest provisions governing restrictions on post-service activities by officers and employees of the executive branch by extending existing prohibitions and establishing additional ones for matters on which former employees worked. The purpose is to prevent

[1070] In the Ethics Reform Act of 1989, discussed elsewhere in this compendium, the disclosure provisions for the three branches of government were combined into one title.

former officers and employees from using information gathered during their government service, or exercising undue influence on former colleagues.

Title VI amended 18 U.S.C. § 28 (now expired) by adding provisions for the appointment and duties of a special prosecutor when the Justice Department had a conflict of interest in investigating wrongdoing by the President, Vice President, Cabinet-level officials, or senior White House or Justice Department officials. This provision was the result of the recommendations of the Senate Watergate Committee, and expired in 1999. It has not been reauthorized by Congress since that time.

Title VII established the Office of Senate Legal Counsel to defend the constitutional powers of the Senate in proceedings before the courts and conferred jurisdiction on the courts to enforce Senate subpoenas.

Discussion

Although the Ethics in Government Act was the product of long-term efforts to reform government ethics laws, and OGE has been an integral part of the executive branch ethics program, several provisions in the act have been problematic over the years. There was continuing debate over the wisdom and efficacy of the special proscecutor/independent counsel provisions. In addition, the financial disclosure provisions of the act, particularly as applied to the executive branch, have been viewed by some as making the presidential appointment process unnecessarily long, burdensome, and complex. A number of studies have shown that, in some cases, the ethics laws have been a deterrent to the recruitment of qualified appointees, and there is concern over the increasing amount of time taken to nominate and confirm high-level executive branch appointees.[1071]

Several bills have been introduced in Congress to streamline the financial disclosure requirements for high-level nominees and employees and to require new appointed officials who have not complied with an ethics agreement within the original specified time to file monthly progress reports until all terms of the agreements have been met. These include S. 1811 in the 107th Congress, and S. 765 and H.R. 1603 in the 108th Congress.

C. Ethics Reform Act of 1989

Statutory Intent and History

The Ethics Reform Act of 1989 (103 Stat. 1716) expanded the coverage of the earlier Ethics in Government Act (1978; 92 Stat. 1824). At the time of passage of the Ethics Reform Act, national attention was directed at what were perceived to be large honoraria earnings by some Members of Congress and the need to clarify existing ethics rules and regulations.

The impetus for the Ethics Reform Act (ERA89) was widely shared. In Congress, task forces in both the Senate and the House offered ethics recommendations. In the 1988 presidential election, candidate George H.W. Bush had promised to make ethics a top priority of his Administration. Soon after his inauguration, President Bush appointed the President's Commission on Federal Ethics Law Reform. Many of its 27 recommendations, including uniformity in ethics regulations in the three branches of government, found their way into the ERA89. Also, a number of recommendations of the private National Commission on the Public Service, established in 1987 and chaired by Paul Volcker, were considered and included. The Volcker Commission was especially concerned about provisions to develop a capable executive talent base in government.

The bill was intended to provide for automatic pay increases for Members of Congress and senior officials in the executive and judicial branches. Previously, annual congressional approval of compensation was often delayed, and compensation was often frozen due to political considerations.

Major Provisions

Major provisions of the ERA89 included:

- pay increases for Members of Congress and senior officials of the other two branches of government and provisions for a 25% adjustment in 1991, as well as annual pay adjustments for these individuals, based on Employment Cost Index (ECI);
- post-employment ("revolving door") lobbying restrictions on Members of Congress, officers, and designated employees of the legislative branch;
- elimination of the so-called "grandfather clause" in federal election law that allowed Members of Congress in office prior to 1980 to convert excess campaign contributions to personal use;
- limitations on outside earned income for Members of Congress and noncareer officers and employees in the three branches of government compensated above a GS-15 level;

- prohibition on honoraria for Members, officers, and employees of the House of Representatives, as well as officers and employees of the executive and judicial branches;[1072] and
- establishment of a Citizen's Committee on Executive, Legislative, and Judicial Salaries to make recommendations to the President for salary rates for top government officials in the three branches.

Discussion

ERA89 is probably best known for its provision on government salaries and its total prohibition on honoraria. The honoraria prohibitions applied to income from speeches and writings, even if unrelated to an official's and employee's government work. Although the provisions applied to all officers and employees in the three branches of government, the initial target was Members of Congress. They were criticized because earning honoraria was viewed as diverting Members' attention from official duties, and was perceived as a way for special interests to gain access to Members.

The automatic annual pay adjustments provided in the act for Members of Congress and other senior officials in the three branches of government were seen as a means for Members to avoid what was considered to be the "painful" act of having to vote on their own salaries. However, Congress has denied itself the annual pay adjustments five times since 1993, denials that also placed a "cap" on top executive branch officials.

Immediately after the ERA89 was enacted, several executive branch employees filed suit against the Justice Department, alleging that the honoraria ban violated the First Amendment right of free speech. In 1995, the Supreme Court overturned the provisions prohibiting honoraria for government employees (National Treasury Employees Union v. United States, 115 S.Ct. 1003 (1995)). The Senate, however, still has an honoraria ban for its officers and employees.

"Are They More Virtuous Today? A Focus On Government Ethics." Federal Bar News and Journal, vol. 37 (September 1990), pp. 378-418.

Biskupic, Joan. "Court Allows Honoraria for Federal Rank and File." The Washington Post, February 23, 1995, p. A1.

[1072] The Senate initially exempted itself from the honoraria and compensation prohibitions. Subsequently, with the enactment of the Legislative Branch Appropriations Act of 1992 (105 Stat. 447), Members, officers, and employees of the Senate could no longer earn honoraria and were subject to the same outside earned income restrictions as the rest of the government. Note: when the House adopted the rules for the 106th Congress, it voted to permit designated employees to earn honoraria for activities not related to their official duties (House Rule XXVI).

D. Lobbying with Appropriated Monies Act

Statutory Intent and History

Many Members of Congress have long been concerned about the practice of federal agencies using appropriated funds to stimulate public support for or opposition to pending legislation. Legislators do not want to be on the receiving end of constituent pressures manufactured by agency telephone calls, telegrams, departmental threats and coercion, and other stimuli originating from within an administration.

To prohibit this practice, Congress passed legislation in 1919, and this statutory restriction (known as the Lobbying with Appropriated Moneys Act) remains part of permanent law. Debate in the House of Representatives reveals that some Members were offended by bureau chiefs and departmental heads "writing letters throughout the country, sending telegrams throughout the country, for this organization, for this man, for that company to write his Congressman, to wire his Congressman, in behalf of this or that legislation." Statutory language was drafted to "absolutely put a stop to that sort of thing."[1073]

Major Provisions

As currently codified (18 U.S.C. § 1913), the Lobbying with Appropriated Moneys Act provides that "No part of the money appropriated by any enactment of Congress shall, in the absence of express authorization by Congress, be used directly or indirectly to pay for any personal service, advertisement, telegram, telephone, letter, printed or written matter, or other device, intended or designed to influence in any manner a Member of Congress, to favor or oppose, by vote or otherwise, any legislation or appropriation by Congress, whether before or after the introduction of any bill or resolution proposing such legislation or appropriation." Section 1913 does not prevent officers or employees from communicating to Members of Congress "on the request of any Member or to Congress, through the proper official channels, requests for legislation or appropriations which they deem necessary for the efficient conduct of the public business." If an officer or employee violates or attempts to violate Section 1913, this person "shall be fined under this title or imprisoned not more than one year, or both; and after notice and hearing by the superior officer vested with the power of removing him, shall be removed from office or employment."

Discussion

The Justice Department has never prosecuted anyone for violating the Lobbying with Appropriated Moneys Act. However, the Justice Department has pointed

---

[1073] Rep. James Good, remarks in the House, Congressional Record, vol. 58 (May 29, 1919), p. 403.

out that the right of citizens to lobby Congress does not mean a right to federal funds for this purpose: "Although private persons and organizations have a right to petition Congress and to disseminate their views freely, they can be expected, within the framework established by the Constitution, to do their lobbying at their own expense. They have no inherent or implicit right to use federal funds for that purpose unless Congress has given them that right." (5 Op. Off. Legal Counsel 180, 185 (1981)).

Statutory sanctions against executive lobbying have had limited effect because of uncertainty about the law and Justice Department interpretations. Due to conflicting statutes, the General Accounting Office (GAO) has at times hesitated to find a violation of agency activity. Former Comptroller General Elmer B. Staats once explained, "The reason for this is that agencies are authorized and, in some cases, specifically directed to keep the public informed concerning their programs. Where such authorized activities involve, incidentally, reference to legislation pending before Congress, it is extremely difficult to draw a dividing line between the permissible and the prohibited."[1074]

Since Section 1913 is a criminal statute, GAO regards its enforcement as "the responsibility of the Department of Justice and the courts. Therefore, GAO will not 'decide' whether a given action constitutes a violation. GAO will, however, determine whether appropriated funds were used in a given instance, and refer matters to the Justice Department in appropriate cases."[1075] Because a violation of Section 1913 constitutes an improper use of appropriated funds, such a violation "could form the basis of a GAO exception or disallowance. However, GAO can take no action unless the Justice Department or the courts first determine that there has been a violation."[1076]

Although the Justice Department has never prosecuted anyone for violating Section 1913, it has indicated the type of executive activity that would be impermissible. A memorandum in 1977 stated that "a campaign to contact a large group of citizens by means of a form letter prepared and signed by a federal official would be improper."[1077] In 1989, the Justice Department restricted

Section 1913 to "a significant expenditure of appropriated funds to solicit pressure on Congress" and a "substantial" grassroots lobbying campaign.[1078]

Judging from the few judicial decisions that have been handed down, it is apparent that the courts are reluctant to adjudicate in the area of executive lobbying. They seem inclined to defer to Congress and the executive branch on actions to be taken against improper lobbying by executive officials.[1079]

E. Federal Tort Claims Act

Statutory Intent and History

Until the Federal Tort Claims Act (FTCA) was enacted in 1946,[1080] a person who suffered personal injury or property damage as the result of a federal employee's negligence or misconduct had no judicial remedy. Such a person's only remedy was to seek to have a private claim bill introduced in Congress. This situation existed because of the common law doctrine of sovereign immunity, under which the United States may not be sued without its consent. Congress alone has the power to give this consent, and, by enacting the FTCA, Congress waived sovereign immunity for some tort suits. With exceptions, it made the United States liable for the torts of its employees committed in the scope of employment, just as private employers are liable for the torts of their employees committed in the scope of employment

The FTCA makes the United States liable for the torts of its employees (but not of government contractors) in accordance with the law of the state where the employee's act or omission occurred. Thus, for example, state laws placing caps on non-economic damages apply in cases brought under the FTCA. However, the FTCA contains exceptions under which the United States may not be held liable even though a private employer could be held liable under state law. And punitive damages are not permitted under the FTCA, regardless of state law.

One of these exceptions is known as the intentional tort exception; it prohibits suits "arising out of assault, battery, false imprisonment, false arrest, malicious prosecution, abuse of process, libel, slander, misrepresentation, deceit, or interference with contract rights." In 1974, in response to controversial "no-knock raids" by federal narcotics agents, Congress amended the FTCA to allow suits against the United States for the first six torts on the list of intentional torts just quoted, if they are committed by an "investigative or law enforcement officer of the United States Government."

In 1950, in Feres v. United States (340 U.S. 135), the Supreme Court held that military personnel may not sue under the FTCA for injuries sustained incident to service. Federal civilian employees also may not sue under the FTCA for on-the-job injuries, because they are covered by the Federal Employees' Compensation Act.

In 1988, the FTCA was amended to make federal employees acting within the scope of their employment immune from suit under state tort law — even in cases in which the United States may not be sued either (28 U.S.C. § 2679(b)(1)).

[1080] 60 Stat. 842; 28 U.S.C. §§ 1346(b), 2671-2680.

The most recent amendments to the FTCA provide that no person convicted of a felony who is incarcerated may sue the United States "for mental or emotional injury suffered while in custody without a prior showing of physical injury" (P.L. 104-134, § 806 (1996)), and that suits may be brought under the FTCA to recover damages to property seized under a federal forfeiture statute if the claimant is not convicted and is entitled to return of the property (P.L. 106-185, § 3 (2000)).

Major Provisions

United States district courts "shall have exclusive jurisdiction of civil actions on claims against the United States...for injury or loss of property, or personal injury or death caused by the negligent or wrongful act or omission of any employee of the government while acting within the scope of his office or employment, under circumstances where the United States, if a private person, would be liable to the claimant in accordance with the law of the place where the act or omission occurred" (28 U.S.C. § 1346).

Prior to filing suit under the FTCA, a claimant must present his claim to the federal agency out of whose activities the claim arises (28 U.S.C. § 2675). This must be done within two years after the claim accrues (28 U.S.C. § 2401). If, within six months after receiving a claim, the agency mails a denial of the claim to the claimant, then the claimant has six months to file suit in federal district court (28 U.S.C. §§ 2401, 2675). No period of limitations applies to a plaintiff if the agency fails to act within six months after receiving his claim. Suits under the FTCA are tried without a jury (28 U.S.C. § 2402).

Attorneys may not charge more than 20% of a settlement agreed to by a federal agency, or more than 25% of the amount of a court judgment or a settlement agreed to by the Attorney General (28 U.S.C. § 2678). The United States shall not be liable under the FTCA, regardless of state law, "for interest prior to judgment or for punitive damages" (28 U.S.C. § 2673).

The United States may not be held liable under the FTCA solely because the statute or regulation under which a federal employee acted was invalid. The United States may not be held liable under the FTCA, even if a federal employee engaged in a negligent or wrongful act or omission in the scope of employment, if the act or omission involved a "discretionary function," which means essentially the exercise of a policy judgment. The United States may not be held liable under the FTCA for claims that arise in a foreign country. The United States also may not be held liable for claims arising out of, among other things, "the loss, miscarriage, or negligent transmission of letters or postal matter"; "the assessment or collection of any tax or customs duty"; "the fiscal operations of the Treasury or ... the regulation of the monetary system"; or "combatant activities of the military or naval forces, or the Coast Guard, during time of war." All the exceptions to the FTCA noted in this paragraph appear at 28 U.S.C. § 2680.

Discussion

One aspect of the FTCA that has been controversial is the application of the Feres doctrine — prohibiting military personnel from suing for injuries sustained incident to service — to medical malpractice cases. One reason for the Feres doctrine is to prevent civilian courts from second-guessing military decisions, and some have argued that this rationale does not apply in medical malpractice cases, as when a military doctor is negligent in delivering a servicewoman's baby. The Supreme Court held, however, in United States v. Johnson (481 U.S. 681 (1987)), that the Feres doctrine applies even to suits brought by military personnel for injuries caused by employees of civilian federal agencies; this suggests that the "secondguessing" rationale is not crucial. More significant may be the potential effects of suits by military personnel on military discipline, and the alternative compensation system available to military personnel. Nevertheless, four dissenting justices in United States v. Johnson favored overturning Feres altogether as not mandated by Congress in the FTCA.

As noted, the FTCA, since 1988, has made federal employees immune from suits under state law for torts committed within the scope of their employment. (They may be sued for violating the Constitution or for violating a federal statute that authorizes suit against an individual.) This immunity has been extended to various volunteers in federal programs; more than fifty statutes, including those establishing VISTA and the Peace Corps, provide that volunteers in programs the statutes establish shall be considered federal employees for purposes of the FTCA.

Stephanie Smith
Analyst in American National Government
Government and Finance Division

Summary

On February 6, 2004, President George W. Bush created the Commission on the Intelligence Capabilities of the United States Regarding Weapons of Mass Destruction to advise and assist him in performing his presidential duties. This report analyzes the establishment and organizational requirements set forth in the presidential mandate, and its relationship to the Federal Advisory Committee Act (FACA). On March 31, 2005, the commission submitted its final report to the President, which contained 74 recommendations for reforming the U.S. intelligence community.

Introduction

The Commission on the Intelligence Capabilities of the United States Regarding Weapons of Mass Destruction was established by Executive Order 13328 of February 6, 2004.[1081] Located within the Executive Office of the President for administrative and organizational purposes, the commission was largely

[1081] E.O. 13328, Federal Register, vol. 69, Feb. 11, 2004, pp. 6901-6903.

governed by the requirements of the Federal Advisory Committee Act, unless otherwise indicated.[1082]

FACA Requirements

FACA established the first requirements for the management and oversight of federal advisory committees to ensure impartial and relevant expertise. As required by FACA, the General Services Administration (GSA) administers and provides management guidelines for advisory committees. GSA also maintains an online database to make available detailed reports covering each committee's activities during the calendar year.[1083]

Advisory committees can be designated as commissions, committees, councils, panels, or other similar groups. An advisory committee can be established by congressional legislation, by presidential executive order or directive, or by an agency head under general agency administrative authority. Excluded from the FACA definition is any commission composed entirely of full-time federal employees, or any committee established to perform primarily operational, as opposed to advisory, functions. In addition, Congress may choose to exempt an advisory committee from FACA's requirements.

FACA contains guidelines for membership in Section 5(b)(2), requiring that any advisory committee be "fairly balanced in terms of the points of view represented and the functions to be performed," and that the commission's recommendations not be inappropriately influenced by the appointing authority, or by any special interest.

Section 10(a) of FACA prescribes that each advisory committee meeting is presumptively open to the public, "except when the President determines otherwise for reasons of national security."[1084] FACA guidelines require that timely notice of each meeting open to the public be published in the Federal Register, and that detailed minutes of each meeting be taken. On May 13, 2004,

---

[1082] 5 U.S.C. Appendix — Federal Advisory Committee Act; 86 Stat. 770, as amended.

[1083] The FACA database can be found at [http://fido.gov/facadatabase].

[1084] Section 10(d) of FACA states that the President, or the head of the agency to which the advisory committee reports, may determine that a portion of a meeting be closed to the public, in accordance with 5 U.S.C. § 552(b), which identifies types of information that may be exempted from the rule of disclosure of the Freedom of Information Act. Any such determination should be written, and must state the reasons for closing the meeting. The advisory committee is also required to issue an annual report summarizing its activities, in accordance with 5 U.S.C. § 552(b).

it was announced in the Federal Register that the commission would meet in closed session on May 26 and May 27 in its offices in Arlington, VA.[1085]

Pursuant to FACA, each commission must file a charter containing its mandate and duties, frequency of meetings, membership, and the agency to which the commission reports. Section 12(a) requires each agencyto document fully the disposition of any funds that may be at the disposal of its advisory committees. With respect to advisory committees created by the President, financial records are to be maintained by GSA or by another agency designated in the authorizing presidential mandate. Each agency is also required to provide support services for each commission that it creates, or that reports to it, unless the establishing authority provides otherwise. Section 12(b) gives GSA the responsibility to provide appropriate support services for presidential advisory committees, unless the authorizing presidential mandate stipulates otherwise.

Commission Mandate

Oftentimes, one of the initial sections of a statute or executive order establishing a major advisory committee provides several statements identifying the conditions justifying the creation of a panel. Section 2(a) of E.O. 13328 stated that the commission was authorized to advise the President:

> *in the discharge of his constitutional authority under Article II of the Constitution to conduct foreign relations, protect national security, and command the Armed Forces of the United States, in order to ensure the most effective counterproliferation capabilities of the United States and response to the September 11, 2001, terrorist attacks and the ongoing threat of terrorist activity.*

Section 6(b) states that the commission is established to "solely advise and assist the President" in performing his duties. Subject to the authority of the President, the commission is authorized to be independent "from any executive department or agency, or of any officer, employee, or agent thereof."

A study commission's objectives and the scope of its activities are best stated in specific terms to guide the panel's members and staff in carrying out their responsibilities. Section 2(a) of E.O. 13328 states that the commission's primary mandate is to assess whether or not the U.S. intelligence community[1086] is adequately prepared to identify and respond to "the development and transfer of knowledge, expertise, technologies, materials, and resources" associated with the

---

[1085] Executive Office of the President, Office of Administration, "Meeting of the Commission on the Intelligence Capabilities of the United States Regarding Weapons of Mass Destruction," Federal Register,vol. 69, no. 93, May 13, 2004, p. 26602.

[1086] Sec. 6(h) of E.O. 13328 defines "intelligence community" the same as 50 U.S.C. § 401a(4).

threats and proliferation of weapons of mass destruction employed by foreign powers.[1087] So that the commission can better accomplish its mission, the presidential mandate prescribes the following duties in Section 2(b-d):

- examine and assess the U.S. intelligence community's body of knowledge and intelligence-gathering capabilities prior to the initiation of Operation Iraqi Freedom;
- compare this intelligence with the findings of the Iraq Survey Group, and other relevant agencies, concerning the capabilities, intentions, and activities of Iraq relating to the design and development, manufacture, acquisition, possession, proliferation, transfer, testing, potential or threatened use of weapons of mass destruction and related means of delivery;
- evaluate the challenges and difficulties of obtaining these categories of information associated with weapons of mass destruction;
- compare the U.S. intelligence community's intelligence-gathering capabilities pertaining to weapons of mass destruction and other related threats in Libya, prior to that nation's recent decision to open its programs to international scrutiny, with the current assessments of organizations examining these programs;
- compare the U.S. intelligence community's intelligence-gathering capabilities pertaining to weapons of mass destruction and other related threats in Afghanistan, prior to the removal of the Taliban government, with the current assessments of organizations examining these programs; and
- prepare a final report based on its findings by March 31, 2005, with specific recommendations.

Membership Requirements

The membership requirements of FACA are broad enough to allow a great deal of discretion in determining the composition of a commission. Therefore, the membership of an advisory committee will depend upon its legislative or presidential mandate. FACA does not provide guidance on the number of members a commission or committee should have or their terms of appointment. The membership generally should be large enough to allow for representation of differing points of view and to facilitate a quorum for commission meetings. Advisory committees of short-term existence usually keep the same members for the committee's duration, with any vacancies filled in the same manner as the original appointments were made. Some advisory panels may have staggered membership terms so that only one portion of the members will be new at any given time, thereby ensuring continuity in the committee's operations. It is also

[1087] Sec. 2(a) of E.O. 13328 defines "foreign powers" to include terrorists, terrorist organizations and private networks, or other entities or individuals.

possible for enabling legislation or a presidential mandate to specify how officers of an advisory panel are to be selected.

Section 3 of E.O. 13328 specifies that the commission was to be composed of no more than nine members, to be appointed by the President. Members were required to be
U.S. citizens, and the President designated two co-chairpersons from the membership. Two-thirds of the commission members constituted a quorum. On February 6, 2004, President George W. Bush announced the appointment of seven members to the commission, including his appointment of two co-chairpersons. Two additional members were appointed on February 12, 2004. The membership was as follows:

- former Senator Charles S. Robb (co-chairperson);
- Laurence H. Silverman, retired judge (co-chairperson);
- Senator John McCain;
- Lloyd M. Cutler, former White House counsel;
- Patricia M. Wald, former federal judge;
- Richard C. Levin, President of Yale University;
- Retired Admiral William O. Studeman, former Deputy Director of Central Intelligence;
- Charles M. Vest, President of the Massachusetts Institute of Technology; and
- Henry S. Rowen, senior fellow at the Hoover Institution.

Member Compensation and Travel Expenses

Advisory panel members who are not federal employees may or may not receive compensation for their work on a commission. Section 6(f) of E.O. 13328 specifies that members of the commission shall serve without compensation for their work. Section 6(f) also authorizes travel expenses and per diem for commission members who are not officers or employees in the executive branch, as authorized by statute.[1088]

Financial Disclosure Requirements

FACA guidelines do not contain financial disclosure requirements for members of an advisory committee. It appears from "federal law and regulation that one appointed to be a member of a federal advisory committee is required to file a financial disclosure form by virtue of his or her being either a regular federal employee or a 'special government employee,' as opposed to requiring a financial disclosure merely by virtue of his or her membership on an advisory

[1088] 5 U.S.C. § 5701-5707.

committee."[1089] Since the "fact of compensation is one of the determinate factors of whether one is or is not a federal employee," an advisory committee member serving without compensation may not be required to file a financial disclosure form. If, however, "a person is appointed on an advisory committee, and is considered a 'special government employee,' then such person must file either a public or a confidential statement, depending on his or her compensation level and the amount of days in which he or she performs the duties of that position."[1090] Even though the members of the Commission on the Intelligence Capabilities of the United States Regarding Weapons of Mass Destruction are serving without compensation, the White House announced on February 15, 2004, that they will file financial disclosure statements. The commission members' statements will, however, remain confidential.[1091]

Commission Staffing and Administrative Support

Section 6(g) of E.O. 13328 specifies that the commission shall have an executive director and staff. The co-chairpersons are authorized to hire and employ staff, or obtain, by assignment or detail, federal agency personnel to head and staff the commission.

The co-chairpersons are authorized by Section 4 to convene and preside at commission meetings, determine the commission's agenda, and assign work responsibilities, after consultation with other commission members. Administrative support is specified in Section 6(e) to be provided by the director of the Office of Administration within the Executive Office of the President.

Commission Funding

Commissions may be directly funded by Congress, or provided with monies indirectlythrough general agency appropriations. Although it happens rarely, an advisory committee may also receive funds from private sources. In the case of the Commission on the Intelligence Capabilities of the United States Regarding Weapons of Mass Destruction, Section 6(e) authorizes funding to be provided by the director of the Executive Office of the President's Office of Administration, with the assistance of the director of the Office of Management and Budget, consistent with applicable law.

Commission Reports

An advisory commission may be required to prepare an interim, or a final, report for transmittal to the President, to Congress, or other department heads. These

---

[1089] CRS Congressional Distribution Memorandum, Advisory Committee Members and Financial Disclosure, by Jack Maskell, Oct. 12, 1999, p. 1.

[1090] Ibid., p. 3.

[1091] Eric Lichtblau, "Panel's Finance's Will Stay Private," New York Times, Feb. 15, 2004, p. 1.

reporting requirements usually can be found under the "duties" or "functions" sections of a panel's statutory or presidential mandate, or in a special section that mandates the production of a final report.[1092] The Commission on the Intelligence Capabilities of the United States Regarding Weapons of Mass Destruction is required in Section 2(d) to make a final report to the President by March 31, 2005, based on its examination of the issues prescribed in Section 2(a-c). The commission's report is authorized to include specific recommendations for ensuring that the U.S. intelligence community is sufficiently organized, equipped, trained, and funded to respond to the proliferation of weapons of mass destruction and other related terrorist threats. On March 31, 2005, the commission transmitted its final report to the President, which included 74 recommendations for improving the U.S. intelligence community. The report also provided a comprehensive review pertaining to its findings on weapons of mass destruction.

Since the recommendations contained in a final report are only advisory, no changes in public policy occur on the authority of a commission. Therefore, the implementation of these recommendations is left to determination by a specific statute, or presidential or agency directive, where appropriate. To ensure greater accountability for, and oversight of, a commission's final report, it is often recommended that the statutory or presidential mandate include specific provisions to require follow-up or implementation of a commission's final report. Section 2(d) of E.O. 13328 authorizes the CIA, as well as the other agencies and departments within the U.S. intelligence community, to utilize the work of the commission and its final report. Within 90 days of receiving the final report, the President is required to consult with Congress on the recommendations of the commission, and propose "any appropriate legislative recommendations" based on the commission's findings.

Commission Termination

Unless statutorily mandated or otherwise extended by the President or agency head, an advisory committee will automatically terminate two years after its establishment. Consequently, most commissions must be rechartered with GSA every two years. The Commission on the Intelligence Capabilities of the United States Regarding Weapons of Mass Destruction was required in Section 8 to terminate within 60 days after submitting its final report on March 31, 2005.

Summary

Statutory offices of inspector general (OIG) consolidate responsibility for audits and investigations within a federal agency. Established by public law as permanent, nonpartisan, independent offices, they now exist in more than 60 establishments and entities, including all departments and largest agencies, along with numerous boards and commissions. Under two major enactments — the Inspector General Act of 1978 and its amendments of 1988 — inspectors general are granted substantial independence and powers to carry out their mandate to combat waste, fraud, and abuse.[1093] Recent initiatives have added offices in the Architect of the Capitol Office (AOC), Government Accountability Office (GAO), and for Afghanistan Reconstruction; funding and assignments for specific operations; and mechanisms to oversee the Gulf Recovery Program. Other proposals in the 110th Congress are designed to strengthen the IGs'

[1093] 5 U.S.C. Appendix covers all but nine of the statutory OIGs. See CRS Report RL34176, Statutory Inspectors General: Legislative Developments and Legal Issues, by Vanessa K. Burrows and Frederick M. Kaiser; U.S. President's Council on Integrity and Efficiency, A Strategic Framework, 2005-2010 [http://www.ignet.gov]; Frederick Kaiser, "The Watchers' Watchdog: The CIA Inspector General," International Journal of Intelligence (1989); Paul Light, Monitoring Government: Inspectors General and the Search for Accountability (1993); U.S. Government Accountability Office, Inspectors General: Office Consolidation and Related Issues, GAO-02-575, Highlights of the Comptroller General's Panel on Federal Oversight and the Inspectors General, GAO-06-931SP, and Inspectors General: Opportunities to Enhance Independence and Accountability, GAO-07-1089T; U.S. House Subcommittee on Government Management and Organization, Inspectors General: Independence and Accountability, hearing (2007); U.S. Senate Committee on Homeland Security and Governmental Affairs, Strengthening the Unique Role of the Nation's Inspectors General, hearing (2007); Project on Government Oversight, Inspectors General: Many Lack Essential Tools for Independence (2008).

independence, add to their reports, and create new posts in the Intelligence Community.

Responsibilities

The IGs' four principal responsibilities are (1) conducting and supervising audits and investigations relating to the programs and operations of the agency; (2) providing leadership and coordination and recommending policies to promote the economy, efficiency, and effectiveness of these; (3) preventing and detecting waste, fraud, and abuse in these; and (4) keeping the agency head and Congress fully and currently informed about problems, deficiencies, and recommended corrective action.

Authority and Duties

To carry out these purposes, IGs have been granted broad authority to: conduct audits and investigations; access directly all records and information of the agency; request assistance from other federal, state, and local government agencies; subpoena information and documents; administer oaths when taking testimony; hire staff and manage their own resources; and receive and respond to complaints from agency employees, whose confidentiality is to be protected. In addition, the Homeland Security Act of 2002 gave law enforcement powers to criminal investigators in offices headed by presidential appointees. IGs, moreover, implement the cash incentive award program in their agencies for employee disclosures of waste, fraud, and abuse (5 U.S.C. 4511).

Reporting Requirements

IGs have reporting obligations regarding their findings, conclusions, and recommendations. These include reporting: (1) suspected violations of federal criminal law directly and expeditiously to the Attorney General; (2) semiannually to the agency head, who must submit the IG report (along with his or her comments) to Congress within 30 days; and (3) "particularly serious or flagrant problems" immediately to the agency head, who must submit the IG report (with comments) to Congress within seven days. The Central Intelligence Agency (CIA) IG must also report to the Intelligence Committees if the Director or Acting Director is the focus of an investigation or audit. By means of these reports and "otherwise" (e.g., testimony at hearings), IGs are to keep the agency head and Congress fully and currently informed.

Independence and Neutrality

In addition to having their own powers (e.g., to hire staff and issue subpoenas), IG independence is reinforced through protection of their budgets (in the larger establishments), qualifications for their appointment, prohibitions on interference with their activities and operations (with a few exceptions), and fixing the priorities and projects for their offices without outside direction. An exception to the IGs' rule occurs when a review is ordered in statute, although inspectors general, at their own discretion, may conduct reviews requested by the President, agency heads, other IGs, or congressional offices.

Other provisions are designed to protect the IGs' independence and ensure their neutrality. For instance, IGs are specifically prohibited from taking corrective action themselves. Along with this, the Inspector General Act prohibits the transfer of "program operating responsibilities" to an IG. The rationale for both is that it would be difficult, if not impossible, for IGs to audit or investigate programs and operations impartially and objectively if they were directly involved in making changes in them or carrying them out.

Supervision

IGs serve under the "general supervision" of the agency head, reporting exclusively to the head or to the officer next in rank if such authority is delegated. With but a few specified exceptions, neither the agency head nor the officer next in line "shall prevent or prohibit the Inspector General from initiating, carrying out, or completing any audit or investigation, or from issuing any subpoena...." Under the IG Act, the heads of only six agencies — the Departments of Defense, Homeland Security, Justice, and the Treasury, plus the U.S. Postal Service (USPS) and Federal Reserve Board — may prevent the IG from initiating, carrying out, or completing an audit or investigation, or issuing a subpoena, and then only for specified reasons: to protect national security interests or ongoing criminal investigations, among others. When exercising this power, the head must explain such action within 30 days to the House Government Oversight and Reform Committee, the Senate Homeland Security and Governmental Affairs Committee, and other appropriate panels. The CIA IG Act similarly allows the director to prohibit or halt an investigation or audit; but he or she must notify the House and Senate intelligence panels of the reasons, within seven days.

Appropriations

Presidentially appointed IGs in the establishments — but not in designated federal entities (DFEs) — are granted a separate appropriations account (a separate budget account in the case of the CIA) for their offices. This restricts agency administrators from transferring or reducing IG funding once it has been specified in law.

Appointment, Removal, and Tenure

Under the Inspector General Act, IGs in the larger establishments are appointed by the President, subject to Senate confirmation, and are to be selected without regard to political affiliation and solely on the basis of integrity and demonstrated ability in relevant fields. Two other IGs appointed by the President operate under similar but distinct requirements. The CIA IG is to be selected under these criteria as well as experience in the field of foreign intelligence. And the Special Inspector General for Afghanistan Reconstruction (SIGAR) is the only IG appointed by the President alone. Presidentially nominated and Senate-confirmed IGs can be removed only by the President; when so doing, he must notify Congress of the reasons.

By comparison, IGs in the DFEs are appointed by and can be removed by the agency head, who must notify Congress in writing when exercising this power. The USPS IG is the only IG with removal "for cause" and then with the written concurrence of at least seven of the nine governors, who also appoint the officer. Terms of office are set for three IGs, but with the possibility of reappointment: in the Postal Service (seven years), AOC (five years), and U.S. Capitol Police (five years), with selection by the Capitol Police Board. Indirectly, the Peace Corps IG faces an effective term limit, because all positions there are restricted to five to 8½ years. With regard to Special Inspector General for Iraq Reconstruction (SIGIR) and SIGAR, each post is to end 180 days after its parent entity's reconstruction funds are less than $250 million.

Coordination and Controls

Several presidential orders govern coordination among the IGs and investigating charges of wrongdoing by high-echelon officers. Two councils, governed by E.O. 12805, issued in 1992, are the President's Council on Integrity and Efficiency (PCIE) and a parallel Executive Council on Integrity and Efficiency (ECIE). Chaired by the Deputy Director of the Office of Management and Budget (OMB), each is composed of the appropriate IGs plus officials from other agencies, such as the Federal Bureau of Investigation (FBI) and Special Counsel. Investigations of alleged wrongdoing by IGs or other top OIG officials (under the IG act) are governed by a special Integrity Committee, composed of PCIE and ECIE members and chaired by the FBI representative (E.O. 12993), with investigations referred to an appropriate executive agency or to an IG unit. Other coordinative devices have been created administratively.

Establishment

Statutory offices of inspector general have been authorized in 67 current federal establishments and entities, including all 15 cabinet departments; major executive branch agencies; independent regulatory commissions; various government corporations and boards; and five legislative branch agencies. All but nine of the OIGs[1094] are directly and explicitly under the 1978 Inspector General Act. Each office is headed by an inspector general, who is appointed in one of three ways:

(1) 30 are nominated by the President and confirmed by the Senate in "establishments," including all departments and the larger agencies under the IG act, plus the CIA (Table 1).
(2) 36 are appointed by the head of the entity in 29 "designated federal entities" — usually smaller boards and commissions — and in seven other units, where the IGs operate under separate authority: SIGIR, ONDI, and five legislative agencies (Table 2).

[1094] AOC, Capitol Police, CIA, GAO, Government Printing Office (GPO), Library of Congress (LOC), Office of the Director of National Intelligence (ODNI), SIGAR, and SIGIR.

(3) One (in SIGAR) is appointed by the President alone (Sec. 1229, P.L. 110-181).

Table 1. Statutes Authorizing IGs Nominated by the President and Confirmed by the Senate, 1976-Present

  - **Homeland Security**[1109]

Recent Initiatives

Initiatives in response to the 2005 Gulf Coast Hurricanes arose to increase OIG capacity and capabilities in overseeing the unprecedented recovery program. These include IGs or deputies from affected agencies on a Homeland Security Roundtable, chaired by the DHS IG; membership on a Hurricane Katrina Contract Fraud Task Force, headed by the Justice Department; an office in the DHS OIG to oversee disaster assistance activities nationwide; and additional funding for the OIG in Homeland Security. In the 110th Congress, the IGs in DOD and in other relevant agencies have been charged with specific duties connected with combating waste, fraud, and abuse in wartime contracting (P.L. 110-181). A new IG has been instituted in the AOC, in the GAO, and in the Afghanistan reconstruction effort, while other legislative action requires that full-agency websites link to the separate OIG "hotline" websites. Separate recommendations have arisen in the recent past, such as consolidating DFE OIGs

---

[1106] CSA, Synfuels Corporation, USIA, ACDA, RTC, CDFIF, and FEMA have been abolished or transferred.

[1107] The OIG for Tax Administration in Treasury is the only case where a separate IG, under the 1978 IG Act, exists within an establishment or entity that is otherwise covered by its own statutory IG.

[1108] P.L. 106-422, which re-designated TVA as an establishment, also created, in the Treasury Department, a Criminal Investigator Academy to train IG staff and an Inspector General Forensic Laboratory.

[1109] P.L. 107-296, which established the Department of Homeland Security, transferred FEMA's functions to it and also granted law enforcement powers to OIG criminal investigators in establishments.

under presidentially appointed IGs or under a related establishment office (GAO-02-575).

Pending proposals in the 110th Congress include the following: requiring IG annual reviews to report on program effectiveness and efficiency (H.R. 6639); and establishing IGs for the Judicial Branch (H.R. 785 and S. 461) and the Washington Metropolitan Area Transit Authority (H.R. 401). The Intelligence Authorization Act for FY2009 (H.R. 5959 and S. 2996) would create an inspector general for the entire Intelligence Community, a provision opposed by the Bush Administration; and would grant statutory recognition to specified OIGs in the Defense Department. Other bills — H.R. 928 and 2324, whose earlier versions incurred objections from OMB — have been reconciled and await chamber action. These proposals are designed to increase the IGs' independence and powers. Different versions have called for providing specifics on initial OIG budget estimates to Congress; removing an IG only for "cause"; setting a term of office for IGs; establishing a Council of Inspectors General for Integrity and Efficiency in statute; revising the pay structure for IGs; allowing for IG subpoena power in any medium; and granting law enforcement powers to qualified IGs in DFEs.

Ethics in Government Act of 1978 (5 U.S.C. Appx. §§ 101-505)

Entering the Executive Branch of Government: Potential Conflicts of Interest With Previous Employments and Affiliations, RL31822 (December 11, 2007).

American Law Division

Summary

Ethics and conflict of interest concerns have been expressed about the impartiality, bias, or fairness of government regulators, administrators, and other executive branch decision makers who, shortly before entering government service, had represented, owned, or were employed by industries, firms, or other entities that they must now regulate and oversee. Federal conflict of interest law and regulation, for the most part, deal with the potential influence of existing and current financial assets, properties, arrangements, and relationships of the federal official. While the laws and regulations focus primarily on current economic and financial interests of a government official and those closely associated with the official, there are some limited conflict of interest regulations and ethics standards which look also to previous employment and past associations of those entering federal service.

The regulatory scheme regarding financial interests encompasses what has colloquially been called the "three-D" method of conflict of interest regulation, that is: disclosure, disqualification and divestiture. Public financial disclosure is required of in-coming federal officials who will be compensated above certain amounts, including those officials nominated by the President who must receive Senate confirmation. Disclosure information will cover not only existing assets, property, debts and income, but also certain information about past clients and employers who during the previous two years compensated the in-coming federal

official over $5,000 in a year, other past income sources, and certain past positions held in private organizations and entities in the preceding two years.

Disqualification or "recusal" is the principal statutory method of dealing with potential conflicts of interest of an executive branch officer or employee, whereby the officer or employee is prohibited from participating in any particular official governmental matter in which that official, or those close to the official whose financial interests may be "imputed" to the official, has any financial interest. While the statutory provision requiring disqualification is a criminal provision of law, and covers only current or existing financial interests of the officer or employee, there is also a "regulatory" recusal requirement that may apply to certain past affiliations and previous economic interests. Such recusals may be required in particular matters involving specific parties when organizations, entities, or clients with which the federal official had been associated during the previous one-year period are or represent parties in those matters. Additionally, executive branch regulations also provide for a two-year recusal requirement barring an official in the executive branch from participating in a particular matter in which a former employer is a party (or represents a party) when that former employer had made an "extraordinary payment" to the official prior to entering government. Aside from the specific regulatory and statutory restrictions and requirements on past associations and employments, there is no general regulation or standard on possible or perceived "philosophical" or "ideological" biases which a federal regulator or administrator may allegedly have on a subject because of the past affiliations or previous employments or professional activities of that official.

Introduction

This report examines the federal laws and regulations relevant to entering into federal government employment from the private sector, with respect particularly to the potential conflicts of interest that may arise because of the past employment, affiliations or financial interests or involvements of a nominee or new officer or employee in the executive branch of government. The report is intended to provide those conducting congressional oversight with an outline of some of the issues, rules, regulations, and oversight tools that may be available regarding this subject.

Background/Issues

There has been expressed ongoing concerns about the impartiality, bias, or fairness of government regulators, administrators and other executive branch decision makers who, shortly before entering government service, had represented, owned or were employed by industries, firms or other entities which they must now regulate and oversee, or concerning whom such officials must otherwise make or advise the government on policies directly and significantly impacting those former clients, employers or firms. Several instances of alleged conflicts of interest, "appearances" of conflicts of interest or bias, or "cozy relationships" between the regulated entities and the government official who

had formerly worked for or represented that regulated entity, have been examined in the press over the last few years.[1110] The allegations and concerns in such instances are that loyalty to private economic and business interests, rather than fealty to the general public interest, is being served by such officials in their actions.

Individuals entering federal service will, of course, bring with them existing financial investments, ownerships, properties, and other economic arrangements typical of anyone similarly placed in American society. Those entering federal service immediately from private industry will also enter with certain former affiliations, employment or other financial, economic or business associations with particular private interests. While federal conflict of interest law and regulation focuses primarily on current economic and financial interests of a government official and those closely associated with the official, there are some limited conflict of interest regulations and ethics standards which look also to previous employment and past associations of those becoming federal officers and employees.

Conflicts of Interest Generally

The term "conflict of interest" may have a broad meaning in general usage. However, under federal law and regulation a "conflict of interest," for the most part, deals with a conflict between a federal employee's official, governmental duties and responsibilities on the one hand, and the personal, financial or economic interests of the employee on the other.[1111] When the official duties of a government employee may impact upon the outside, private business or economic interests of that employee, or the economic interests of those closely associated with the employee, a conflict of interest situation presents itself.

[1110] Washington Post, "Official's Lobbying Ties Decried: Interior's Griles Defends Meetings as Social, Informational," September 25, 2002, p. A1: "Within weeks of taking office, Griles began a series of meetings with former clients and administration officials on regulatory matters important to several of his former clients"; Washington Post, "Pitt's Role in AOL Time Warner Case Uncertain," October 18, 2002, p. E1: "Pitt, who has been criticized for participating in SEC cases involving former law clients, represented [AOL's chairman] and the company on several significant accounting matters in recent years"; Washington Post, "Pentagon Official From Enron in Hot Seat," January 27, 2002, p. A8: "[White's] corporate experience - his role at ... Enron Energy Services (EES) - is raising questions of possible conflicts of interest... In his first major speech as secretary, he vowed to step up privatization of utility services at military bases. EES ... had been seeking to contract with the military."

[1111] Manning, Federal Conflict of Interest Law, at 2-3 (1964); Association of the Bar of the City of New York, Conflict of Interest and Federal Service, at 3 (1960); House Committee on Standards of Official Conduct, House Ethics Manual, 102d Cong., 2d Sess. at 87 (April 1992); see Regulations of the Office of Government Ethics, 5 C.F.R. part 2635. There may be certain so-called "conflict of interest" statutes or regulations which do not expressly deal with financial interests or compensated activities, such as, for example, 18 U.S.C. § 205, which prohibits a federal employee from acting as an agent or attorney for a private party before a federal agency, even if the activity is uncompensated.

The overall scheme of the conflict of interest laws adopted by Congress generally embodies the principle "that a public servant owes undivided loyalty to the Government,"[1112] and that advice and recommendations given to the government by its employees and officials be made in the public interest and not be tainted, even unintentionally, with influence from private or personal financial interests.[1113] The House Judiciary Committee, reporting out major conflict of interest revisions made to federal law in the 1960's found:

The proper operation of a democratic government requires that officials be independent and impartial; that Government decisions and policy be made in the proper channels of the governmental structure; ... and that the public have confidence in the integrity of its government. The attainment of one or more of these ends is impaired whenever there exists, or appears to exist an actual or potential conflict between the private interests of a Government employee and his duties as an official.[1114]

The concern in such regulation "is not only the possibility or appearance of private gain from public office, but the risk that official decisions, whether consciously or otherwise, will be motivated by something other than the public's interest. The ultimate concern is bad government..."[1115] The conflict of interest laws are thus directed not only at conduct which is improper, but rather are often preventative in nature, directed at situations which merely have the potential to tempt or subtly influence an official in the performance of official public duties. As explained by the Supreme Court with regard to a predecessor conflict of interest law requiring disqualification of officials from matters in which they have a personal financial interest:

This broad proscription embodies a recognition of the fact that an impairment of impartial judgment can occur in even the most well-meaning men when their personal economic interests are affected by the business they transact on behalf of the Government.[1116]

Conflict of Interest Regulation

The application of federal conflict of interest laws and regulations, particularly the laws requiring an official's recusal or disqualification from certain matters, or regulations or procedures requiring the divestiture of certain assets, have traditionally been directed at current and existing financial interests and ties of that official, and those closely associated with the official. The regulatory scheme regarding financial interests encompasses what has colloquially been called the "three-D" method of conflict of interest regulation, that is: disclosure, disqualification and divestiture.

Financial Disclosure: Identifying and Deterring Potentially Conflicting Financial Interests

Upon entering the Federal Government, and then annually on May 15 thereafter, high-level government officials must file detailed, public financial disclosure statements. Public financial disclosures were first required by law with the passage of the Ethics in Government Act of 1978 (P.L. 95-521, as amended), and were intended to serve the purpose of identifying "potential conflicts of interest or situations that might present the appearance of a conflict of interest" for government officials in policy making positions.[1117]

In addition to the purpose of merely identifying potential conflicts, and then attempting to resolve such conflicts of interest, the committees considering the ethics legislation adopted in 1978 recognized the fact that there was potentially a "deterrent factor" in requiring public disclosure of a government official's personal and family financial information, — both in deterring the holding of certain assets (and thus deterring certain potential conflicts of interest), but also possibly in deterring the recruitment of certain persons into the government because of such persons' uneasiness with the required details of public financial disclosure. As noted by the Senate Committee, however, this latter deterrent effect was not necessarily a negative consequence of required public disclosures, but could be a positive consideration in the enactment of the financial disclosure requirement:

Public financial disclosure will deter some persons who should not be entering public service from doing so. Individuals whose personal finances would not bear up to public scrutiny ... will very likely be discouraged from entering public office altogether, knowing in advance that their sources of income and financial holdings will be available for public review.[1118]

[1117] S.Rept. 95-170, 95th Cong., 1st Sess. 117 (1977). The fact that the disclosures were to be made public was also seen as serving the purpose of increasing public confidence in the integrity of the institutions of government and in those who serve them.

[1118] S.Rept. 95-170, supra at 22.

Who Must File, Generally

Anyone entering the federal service who is covered by the public financial disclosure laws generally must, within 30 days of appointment, file an entry report.[1119] Thereafter, covered employees must file annual reports by May 15. Whether an employee of the Federal Government is required to file public financial disclosure statements is determined, in the first instance, by the rate of compensation that the employee receives or will receive from the Federal Government, and then, secondly, by the number of days such an employee works for the Federal Government. Any officer or employee of the executive branch of government who "occupies a position classified above GS-15," or, if "not under the General Schedule," is in a position compensated at a "rate of basic pay ... equal to or greater than 120 percent of the minimum rate of basic pay payable for GS-15," is generally subject to the public disclosure provisions.[1120] Those employees compensated at the rate of pay described above will be required to file public disclosure statements if the individual works for the government for more than 60 days in the calendar year.[1121]

This requirement for detailed, public financial disclosure under the Ethics in Government Act of 1978 currently applies to more than 20,000 officials in the Federal Government.[1122] In addition to the statutory mandate for public disclosure based on salary level, the Office of Government Ethics requires by regulation that all "Schedule C" employees, regardless of salary, file public disclosures.[1123]

[1119] 5 U.S.C. app. §§ 101(a), 102(b).

[1120] 5 U.S.C., app. § 101(f)(3). As of this writing in 2003, for example, the threshold rate of pay for 2003 will be $102,168 annually. The definition for legislative employees, it should be noted, differs slightly and covers anyone who is compensated at a rate in excess of 120% of a the base salary of a GS-15, regardless of whether or not that person is on the General Schedule or not, thus covering certain GS-15's in the legislative branch not covered in the executive branch.

[1121] 5 U.S.C., app. § 101(d). Certain exemptions and waivers may be permitted upon particular findings and determinations regarding special Government employees. See 5 U.S.C., app. § 101(i).

[1122] Statement of Amy L. Comstock, Director of the Office of Government Ethics, before the Senate Committee on Governmental Affairs, "OGE Recommendations on Streamlining Public Financial Disclosure and Other Aspects of the Presidential Appointment Process," April 5, 2001, p. 2.

[1123] 5 C.F.R. § 2634.202(e). Exceptions may be provided under some circumstances. There are also confidential reporting requirements which apply generally to certain lower-level "rank and file" employees, that is, those compensated below the threshold rate of pay for public disclosures (GS-15 or below, or less than 120% of the basic rate of pay for a GS-15), and who are determined by the employee's agency to exercise responsibilities regarding government contracting or procurement, government grants, government subsidies or licensing, government auditing, or other governmental duties which may particularly require the employee to avoid financial conflicts of interest. 5 C.F.R. §§ 2634.901-908.

Where Filed

For most incoming federal officials filing their entry report, as well as for current employees filing their annual financial disclosure statements by May 15 of each year, such reports are generally to be filed with the designated agency ethics officer (most commonly in the office of general counsel) in the agency in which the reporting officer or employee serves or is to serve.[1124] The President and the Vice President, however, file their reports with the Director of the Office of Government Ethics. All filed reports by officials are open generally for public inspection upon request made in writing, subject to rules on the impermissible commercial or political use of the information contained in the reports.[1125] The agencies having such reports are instructed to keep them as public records for six years.[1126]

Advice and Consent Positions

All presidential nominees requiring Senate confirmation must file public disclosure statements regardless of salary (but uniformed and foreign service nominees file only if they meet the pay threshold),[1127] and such reports incur other specific procedural steps. Their disclosure statements are not only filed with and reviewed by their department or agency, but are also "transmitted" to the Office of Government Ethics for review, and are "foward[ed]" for review to the Committee of the Senate with jurisdiction over the particular individual's nomination.

Once the President has transmitted to the Senate the nomination of a person required to be confirmed by the Senate, the nominee must within five days of the President's transmittal (or any time after the public announcement of the nomination, but no later than five days after transmittal), file a financial disclosure statement.[1128] This financial disclosure statement is filed with the designated agency ethics officer of the agency in which nominee will serve,[1129] and copies of the report are transmitted by the agency to the Director of the

Office of Government Ethics.[1130] The Director of OGE then forwards a copy to the Senate committee which is considering the nomination of that individual.[1131] A presidential nominee must file an updated report to the Committee reviewing his nomination at or before the commencement of hearings, updating the information through the period "not more than five days prior to the commencement of the hearing," concerning specifically information related to honoraria and outside earned income.[1132]

Information to Be Reported: Current Financial Interests

Most of the information to be filed and publicly disclosed concerns current and existing financial information on assets, property, debts, income and existing associations which may present or potentially involve a conflict of interest with the officer's or employee's official responsibilities for the government. The regular annual financial disclosure reports to be filed in May of each year generally require information concerning eight different categories of financial information. The disclosure statement[1133] requires public listing of the identity and/or the value (generally in "categories of value") of such items as: (1) the official's private income of $200 or more (including earned and unearned income such as dividends, rents, interest and capital gains) and the source of income; (2) gifts received over a certain amount (including reimbursements for travel over threshold amounts); (3) the identification of assets and income-producing property (such as stocks, bonds, other securities, rental property, etc.) of over $1,000 in value (including savings accounts over $5,000); (4) liabilities owed to creditors exceeding $10,000 (but not including one's home mortgage or car loans); (5) financial transactions, including purchases, sales or exchanges exceeding $1,000 in value, of income-producing property, stocks, bonds, or other securities; (6) positions held in outside businesses and organizations; (7) agreements for future employment or leaves of absence with private entities, continuing payments from or participation in benefit plans of former employers; and (8) the cash value of the interests in a qualifying blind trust.[1134]

The incoming reports, including the reports of incoming presidential appointees requiring Senate confirmation, include most of the information required in the annual reports under § 102(a) of the Ethics Act, but does not include the

[1133] In the executive branch, disclosure form SF 278.

[1134] 5 U.S.C. app. § 102(a)(1) - (8). For items to be disclosed in relation to the official's spouse and dependent children, see 5 U.S.C. app. § 102(e)(1)(A) - (F).

information on gifts and travel reimbursements (§ 102(a)(2)), nor does it need to include the information on financial transactions during the previous year (§ 102(a)(5) or the cash value of trusts (§ 102(a)(8)).[1135] The new entrant reports specifically require disclosure of private income received for the filing year and the preceding calendar year; ownership interests in assets and income producing property over $1,000 in value, and liabilities of over $10,000 owed, as of the date specified in the report, but which must be no more than 31 days before the filing date; the identity of positions held in private entities; and any future agreements for employment, leave of absence, continuing payments from or participation in benefit plans of former employers.[1136]

Information to Be Reported: Past Associations, Clients

While most of the financial disclosure requirements are directed at current and existing financial holdings and interests, there are certain provisions which look to past affiliations and interests. Perhaps most significantly for first-time filers, including nominees to Senate-confirmed positions, the public disclosure law requires non-elected reporting individuals to list in public reports the identity of persons, including clients, from whom the reporting official had received more than $5,000 in compensation in any of the two calendar years prior to the year in which the reporting official files his or her first disclosure report.[1137] Such listing of clients and others who paid the reporting individual compensation above the statutory threshold, should also include a statement of "the nature of the duties performed or services rendered" for such client or employer. Furthermore, new entrant reports, including reports of nominees, are to contain the required information concerning all private income received for the filing year, and additionally for the preceding calendar year; and the identity of positions held in private entities must be disclosed not only for positions held during the current calendar year, but also during the two preceding years.[1138]

Executive Branch Review and Ethics Agreements

The ethics officials to whom the annual disclosure reports are made are instructed to review the reports within 60 days to determine if the filer is in compliance with applicable conflicts of interest laws and ethical standards of conduct regulations, and if so, to sign off on such reports.[1139] If there are assets,

ownerships, income or associations which indicate a conflict of interest or ethics problem, that is, that "an individual is not in compliance with applicable laws and regulations," then after consultation with the individual, the reviewing ethics official or office may recommend several steps which may be appropriate to rectify the ethics problems, including "divestiture," "restitution," the establishment of a "blind trust," the request for a personal conflict of interest exemption under 18 U.S.C. § 208(b), or a request for a "transfer, reassignment, limitation on duties or resignation."[1140]

Presidential nominees who are subject to Senate confirmation also file with the agency or department in which they will serve. That agency or department conducts an expedited ("accelerated") review of disclosure report,[1141] and where appropriate the reviewing official is to certify that there are no problems with the private financial interests of the nominee, that is, that there are "no unresolved conflict of interest" issues.[1142] Where there are real or apparent conflict of interest problems revealed in the financial disclosure reports, the reviewing official, consulting with the reporting officer, must determine what "remedial action" is to be taken. "Remedial action" may include divestiture where appropriate, agreements to recuse, and the establishment of a qualified blind trust or a diversified trust.[1143] Subsequently, a letter to the Director of the Office of Government Ethics must be provided setting out the apparent or real conflicts of interest, the remedial measures taken to resolve those issues, and any "ethics agreements" entered into to resolve such conflicts.[1144] Ethics agreements are specific agreements between the nominee or official and the agency, as approved by OGE, as to future conduct that the nominee or official will take, such as divestiture, recusal or resignation from an outside position, to resolve a conflict of interest problem.[1145] If the Director of OGE is satisfied that all conflicts have been resolved, the Director signs and dates the report form, then submits the form and any ethics agreement, with a letter to the appropriate Senate committee expressing the Director's opinion that the nominee has complied with all conflict of interest laws and regulations.[1146]

Committee Requirements for Advice and Consent Positions

As noted, all financial disclosure statements from presidential nominees who require Senate confirmation are forwarded to the committee of jurisdiction from the Office of Government Ethics. The nominee is also required to update the disclosure statement with respect to certain items within five days before nomination hearings. Committees of the Senate, because of the Senate's express constitutional power of approval of presidential nominations of officers of the United States,[1147] are not limited nor restrained by the disclosure forms as to the information that they may request from a nominee to assist in its constitutional "advice and consent" function; and may require any additional information from a nominee that it deems necessary or desirable. Furthermore, a Senate Committee, or the Senate, may require certain ethics agreements from the nominee as to the disposition of certain assets, or the intention to recuse oneself from certain governmental matters, even beyond any "ethics agreement" made between the nominee and agency or OGE officials.[1148]

Disqualification and Prohibited Conflicts of Interest

The principal statutory method of dealing with potential conflicts of interest of an executive branch officer or employee is to require the disqualification (or "recusal") of the officer or employee from participating in any official governmental matter in which that official, or those close to the official whose financial interests may be "imputed" to the official, has any financial interest. The statutory provision requiring disqualification and recusal is a criminal provision of law, and covers only current or existing financial interests of the officer or employee. There is also a "regulatory" recusal requirement that may be broader in some instances than the statutory restriction, and may apply to certain past affiliations and previous economic interests. Current regulations promulgated by the Office of Government Ethics expressly require in certain circumstances that the executive branch official refrain from participating in certain particular matters when businesses, entities, or economic enterprises with which the official had been affiliated in the past one year are parties to or represent parties in that matter; and require as well certain disqualifications for two years in cases where the private entity had made "extraordinary" payments to the government official upon the official's departure.

Statutory Disqualification or Recusal

The federal statutes deal with existing conflicts of interest principally by requiring the disqualification of a federal official from certain governmental

---

[1147] United States Constitution, Article II, Section 2, clause 2.

[1148] 5 U.S.C. app. § 101(b); see 5 C.F.R. § 2634.803(a)(2).

matters in which he may be financially interested, as opposed to specifically requiring the divestiture of conflicting interests. The federal statute at 18 U.S.C. § 208, which is the principal, general conflict of interest provision under federal law, thus requires an official's disqualification (recusal) from a particular governmental matter in which the officer, his or her spouse or dependent "has a financial interest," or where there is affected a financial interest of an outside entity "in which he [the government official] is serving" as an employee, officer or director, or with whom he "is negotiating or has an arrangement" for future employment.[1149] The statutory language is thus stated in the present tense and is directed only to current financial interests and existing arrangements or current understandings for future employment, and the statutory provision does not require disqualification on a matter because of a past affiliation or previous economic interest.[1150]

The statutory provision at 18 U.S.C. § 208 specifically bars a federal officer or employee in the executive branch of the Federal Government from taking official action "personally and substantially" through "decision, approval, disapproval, recommendation, the rendering of advice, investigation or otherwise," in any "particular" governmental matter, such as a proceeding, request for a ruling, claim, or a contract, which affects the financial interests of that officer or employee, that employee's spouse or dependents, or which affects the financial interests of an organization in which the employee is affiliated as an officer, director, trustee, general partner or employee, or "with whom he is negotiating or has any arrangement concerning prospective employment." While there is no de minimis exception expressly stated in the statute, the law does provide that regulations may exempt certain categories of investments and interests which are deemed too remote or inconsequential to affect the performance of an official's governmental duties.[1151] The current Office of Government Ethics regulations exempt several such interests, including all interests in "diversified" mutual funds; interests in sector funds which have some companies affected by a governmental matter but where those companies are outside of the primary sector in which that fund specializes; and other sector funds even specializing in the particular sector but where one's interest in the fund is no more than $50,000; securities, stocks and bonds in a publicly traded company which is a party to and directly affected by a governmental matter if one's ownership value is no more than $15,000; securities, stocks and bonds in such a company which is not a specific party to a matter but is in a class affected by the governmental

There may also be an individual exception for a particular government officer made in writing by the officer's appointing authority that the interest in question is "not so substantial as to … affect the integrity of the services" of that officer. 18 U.S.C. § 208(b)(1).

matter, if the employee's ownership interest is no more than $25,000 (if securities in more than one such company are owned, then the aggregate value can not exceed $50,000 to be exempt from the statute).[1152]

Regulatory Disqualification for Current Conflicts of Interest

In addition to the statutory recusal requirement, there also exists regulatory requirements for disqualification for other financial interests and connections. Although the range of private interests potentially affected by an official's governmental actions are broadened in the regulation, the regulatory recusal provision is more narrowly focused than the statutory provision as to those specific governmental matters covered. The regulations of the Office of Government Ethics provide this regulatory disqualification provision to help assure the avoidance of "an appearance of loss of impartiality in the performance of" official duties by a federal employee.[1153] The regulation, in comparison to the statutory recusal requirement, expands the persons and entities who are deemed to be so connected to the employee that their financial interests may be "imputed" to that employee (and, as such, would constitute cause for recusal or disqualification of the employee from a governmental matter affecting or involving those interests); but, as compared to the statutory disqualification, narrows those particular governmental matters that are included in the disqualification requirement. Even if covered by this particular regulatory provision, there are circumstances in which the employee may still be authorized by his or her agency to participate in the particular matter when warranted.[1154]

The regulation requires a government employee in the executive branch to recuse himself or herself from a "particular matter involving specific parties" when (1) the employee knows that the matter will have a direct and predictable effect on the financial interests of a member of his or her household, or (2) when a person or entity with whom the employee has a "covered relationship" is a party or represents a party to the matter. Such recusal should be done under those circumstances when the employee believes that his or her impartiality may be questioned, unless the employee first advises his or her agency about the matter and receives authorization to participate in the matter.[1155] As to current and existing financial interests, the regulation provides that a "covered relationship" is one with: those persons or entities with whom the employee seeks a business, contractual or other financial relationship; a member of the employee's household, or a relative with whom the employee has a close personal

---

[1152] 5 C.F.R. §§ 2640.201 (mutual funds); 2640.202 (securities in companies).

[1153] 5 C.F.R. § 2635.501(a).

[1154] 5 C.F.R. § 2635.502(c),(d).

[1155] 5 C.F.R. § 2635.502(a).

relationship; a person or entity with whom the employee's spouse, child or parent is serving or seeks to serve as an officer, director, trustee, general partner, agent, attorney, consultant, contractor, or employee; or an organization (other than a political party) in which the employee is an active participant.[1156]

As noted, the regulatory recusal requirement, although broader as to the affected financial interests, applies to a narrower range of governmental matters than the statutory provision. The regulation applies only to particular governmental matters "involving specific parties," and as such would not cover such "particular matters" as general policymaking or drafting regulations affecting an economic or business sector; while the statutory recusal requirement applies to all governmental "particular matters," including even the drafting of such regulations.[1157]

One-Year Regulatory Disqualification for Past Affiliations

In addition to the Office of Government Ethics regulations applying a recusal requirement beyond the interests and relationships set out in the criminal conflict of interest statute concerning other current or existing interests, the regulations also expand and apply a potential recusal and disqualification requirement of a federal executive branch official for certain past business and economic associations. The regulations provide that a federal official should recuse or disqualify himself or herself from working on a particular governmental matter involving specific parties if a "person for whom the employee has, within the last year, served as an officer, director, trustee, general partner, agent, attorney, consultant, contractor or employee ..."[1158] is a party or represents a party in such matter. This one-year recusal requirement as to matters involving an official's former employers, businesses, clients or partners, applies to any officer or employee of the executive branch, but applies narrowly only to "a particular matter involving specific parties" when such former employer or business associate is or represents a party to the matter. As noted above, such matters "involving specific parties" cover generally things such as contracts, investigations, or prosecutions involving specific individuals or parties, as opposed to broader "particular matters" which may involve a number of persons or entities (such as most rule making). Notwithstanding the fact that a past employer, client, or business associate with whom the employee has a "covered

---

[1156] 5 C.F.R. § 2635.502(b)(1).

[1157] The statutory disqualification requirement need not involve specific or identified parties, and therefore may apply to any "discrete and identifiable matter" such as "general rulemaking" or proposed regulations (2 Op.O.L.C. 151, 153-154 (1978); 5 C.F.R. § 2635.402(b)(3)), while the regulatory recusal applies only to particular matters involving specific parties, such as a contract or grant, or a particular investigation.

[1158] 5 C.F.R. § 2635.502(a), (b)(1)(iv).

relationship" may be a party or represent a party to such a matter, an employee may, as with the regulatory restriction on current interests, receive authorization by his or her agency to participate in the matter.[1159]

Two-Year Regulatory Disqualification for Extraordinary Payments From Past Employers

In addition to the one-year recusal requirement for particular matters involving specific parties when a former client, employer, firm, or business is or represents a party in that matter, the regulations of the Office of Government Ethics also provide for a two-year recusal requirement which bars an official in the executive branch from participating in a particular matter in which a "former employer" is or represents a party when that former employer had made an "extraordinary payment" to the official prior to entering government. An "extraordinary payment" is one in excess of $10,000 in value made by an employer after the employer has learned that the employee is to enter government service, and one which is not an ordinary payment, that is, is a payment other than in conformance with the employer's "established compensation, benefits or partnership program."[1160] This disqualification provision may be waived in writing by an agency head, or if the individual involved is the head of an agency, by the President or his designee.

Severance Payments, Generally

There is a criminal provision of federal conflict of interest law, at 18 U.S.C. §209, which prohibits a federal employee from receiving any outside, additional or supplemental compensation from a private source for his or her official government duties as a federal employee. One who has entered federal service may not, therefore, accept a salary supplementation from a business or organization intended to "make up the difference" between private sector and Federal Government salaries or to otherwise reward or compensate the new federal employee for his or her public service. This statutory restriction originated in 1917 from an initial legislative concern over private foundations paying the compensation of persons who were serving under a cooperative agreement in the Bureau of Education within the Department of Interior, and the undue and, to some, "noxious" influence of such foundations on national educational policy.[1161] The law at §209 has been described as a conflict of interest

---

[1159] 5 C.F.R. § 2635.502(c),(d).

[1160] 5 C.F.R. § 2635.503(b)(1).

[1161] Formerly 18 U.S.C. §1914; see discussion in The Association of the Bar of the City of New York, Special Committee on the Federal Conflict of Interest Laws, Conflict of Interest and Federal Service, 53-56 (Harvard University Press 1960), and Bayless Manning, Federal Conflict of Interest Law, 148-149 (Harvard University Press 1964).

statute "in the strictest sense," that is, an "employee does not have to do anything improper in his office to violate the statute," but rather his or her special status as a government employee "makes an unexceptionable act wrongful — wrongful because of the potential dangers in serving two paymasters."[1162] The law thus seeks to assure that a federal employee is compensated for his or her services to the government only by the government, is not placed in a position of "serving two masters," and is not, nor appears to be, beholden or grateful to any outside group or private interest which "could affect the independent judgment of the employee."[1163]

This provision might come into play, therefore, regarding certain "severance" payments, packages, or plans from a former private employer to an individual who has entered federal service if there is evidenced an "intent to compensate" an individual for that person's federal employment.[1164] The provision is not as broad in application to severance payments, however, as it may seem at first glance, since the language of the statute applies expressly only to "an officer or employee of the executive branch of the United States Government," and has been interpreted by the courts as applying only to persons who at the time payments were received were federal employees, that is, the restriction does not apply to severance payments which are made at the time one leaves private employment but before the individual actually becomes an officer or employee of the government.[1165] Even if made to reward the employee for taking a public service job, or is intended to or has the effect of instilling in the about-to-become-official a sense of gratitude or goodwill towards the private employer, there is no violation of this criminal conflict of interest provision for severance payments made before one is a federal official, since federal employment status is an express element of the statute. Of course, as noted above, "extraordinary payments" from a private employer to an incoming federal official, even if made before the person is actually a federal employee (and thus not within §209), may still encounter the two-year disqualification requirement under OGE regulations, requiring the recusal of the employee for two years from any particular governmental matter involving that former employer as a party.

[1162] Conflict of Interest and Federal Service, supra at 55-56. There needs to be no wrongful or "corrupt" intent or motivation in the payment of private compensation to an employee for his or her public duties for a violation of the law.

[1163] Roswell B. Perkins, "The New Federal Conflict of Interest Law," 76 Harvard Law Review 1113, 1137 (1963), discussing 18 U.S.C. §209.

[1164] United States v. Muntain, 610 F.2d 964, 969-970 (D.C.Cir. 1979). "Buyouts" of ownership interests, even those made on an installment basis over a few years after the recipient becomes a federal official, may thus not violate the provision since such buyouts are generally moneys received for past interests and work, and as such would lack the "intent to compensate" an employee for current federal duties for the government.

[1165] Crandon v. United States, 494 U.S. 152, 159 (1990).

Pensions: Past or Present Financial Interest?

One of the issues that arises with respect to current or past associations under the statutory recusal or disqualification requirement is the treatment of pensions from outside entities. Pensions generally involve current payments or vested interests from a fund controlled by an outside entity, but in recognition of or as compensation for past services. There are thus questions raised as to whether an employee's vested interest in a pension is a current financial interest or association with or in the entity making the payment, subject to all of the disqualification restrictions and limitations on current and existing financial interests, or whether pensions are excluded from being a disqualifying interest of an employee. The issue under the statutory recusal requirement is, as stated by the Office of Government Ethics, the concern "about an employee's participation in a Government matter that could have an effect on the sponsoring organization that is responsible for funding or maintaining the Government employee's pension plan."[1166]

In interpreting the law at 18 U.S.C. § 208 and the regulations under it, the Office of Government Ethics has distinguished between two common types of pension plans, the "defined benefit plan," and the "defined contribution plan." In a "defined benefit plan," the employer typically "makes payments to an investment pool which it holds and invests for all participating employees"; and such plans are the "obligation of the employer" which pays the former employee an amount generally based on some percentage of what the employee's compensation had been.[1167] A "defined contribution plan," however, typically involves contributions by the employer and/or the employee to a specific, individual retirement account, and the payout of income or annuity is based on the amounts, earnings, gains or losses generated by such account.

The expressed conflict of interest concerns thus generally arise more typically with a "defined benefit plan" type of pension where the employer itself is obligated to make the pension payments, but not so in a "defined contribution plan" where the pension payments come out of an already established and funded retirement account. For purposes of the statutory disqualification requirement, therefore, the Office of Government Ethics would not consider a "defined contribution plan" as a "disqualifying" financial interest of the employee: "For matters affecting the sponsor of a defined contribution plan, an employee's

[1166] OGE Memorandum, 99 x 6, to Designated Agency Ethics Officials, April 14, 1999.

[1167] Id.

interest is not ordinarily a disqualifying financial interest under section 208 because the sponsor is not obligated to fund the employee's pension plan."[1168]

If the employee's pension is based on a "defined benefits plan," then the Office of Government Ethics would consider such a pension as a current, disqualifying interest under 18 U.S.C. § 208, in some circumstances. A defined benefit plan will be considered a disqualifying interest in governmental matters relating to the sponsor of the employee's pension if the governmental matter involved is so significant to the pension's sponsor that it could actually affect employee's pension plan, that is, that "the matter would have a direct and predictable effect on the sponsor's ability or willingness to pay the employee's pension benefit," such as if the matter could result in "the dissolution of the sponsor organization."[1169] OGE notes that in a practical sense, it is unlikely that a governmental matter will have such an effect on a private pension sponsor, since even large contracts worth, for example, $500,000 to a firm, would not materially affect a sizable corporation's ability to pay its pension obligations to former employees.

In most cases it is therefore unlikely that a current interest in or receipt of payment from a pension plan, either a defined benefit or defined contribution plan, would trigger the broad statutory, criminal recusal or disqualification requirement of 18 U.S.C. §208, for a federal employee as to the sponsor of his or her private pension; and the Office of Government Ethics has advised agencies to no longer "automatically presume that employees have a conflict of interest in matters affecting the sponsor of their defined benefit plans."[1170] The private sponsor of a defined benefit pension plan would, however, for purposes of the regulatory "impartiality" requirement, be one with whom the federal employee has a "covered relationship."[1171] In such a case, absent a disclosure to and authorization from the agency, the employee should therefore disqualify himself or herself concerning any official governmental matter which involves the sponsor of the pension plan as a "specific party."[1172]

[1168] Id. It may be noted that stocks, bonds or other securities being held in an employee benefit plan or other retirement plan, such as an IRA or 401(k), are not disqualifying interests if the plan is "diversified," as long as the plan is administered by an independent trustee and the employee does not choose the specific assets in the plan, and the plan is not a profit sharing or stock bonus plan. 5 C.F.R. § 2640.210(c).

Divestiture

There is no federal statute which expressly implements a general requirement for federal employees to divest particular private assets or holdings to resolve likely or potential conflicts of interest with employees' public duties. Occasionally, a statutory provision, often the organic act establishing an agency, bureau or commission, will provide expressly that the directors or board members of such entities shall have no financial interests in the business or sector which the agency, bureau or commission is to regulate or oversee. Furthermore, an agency may by regulation prohibit or restrict the ownership of certain financial assets or class of assets by its officers and employees where, because of the mission of the agency, such interests would "cause a reasonable person to question the impartiality and objectivitywith which agency programs areadministered."[1173] In such instances, these statutory and regulatory provisions would, in their effect, require the divestiture of particular assets and holdings of certain individuals to be appointed to such positions or who are incumbents in such positions.

While there is no general statutory divestiture requirement, the divestiture of assets, properties or holdings may be required as a conflict of interest avoidance mechanism by administrative provisions and oversight, as well as by a Senate committee or the Senate as a whole as a condition of favorable action on a presidential nominee requiring Senate confirmation. As noted earlier, the principal statutory method of conflict of interest avoidance, with respect to particular assets and holdings of a federal official, is to require the disqualification of that official from a governmental matter affecting those financial interests. However, under current regulations of the Office of Government Ethics, as part of the ethics review process, an agency may require the divestiture of certain assets of an individual employee where those interests would require the employee's disqualification from matters so central to his or her job that it would impair the employee's ability to do perform his or her duties, or where it could adversely affect the agency's mission because another employee could not easily be substituted for the disqualified employee.[1174] When divestiture is required for ethics reasons, a current employee should be afforded a "reasonable amount of time" to effectuate the disposal of the asset; furthermore, it is possible to ameliorate potential unfair tax burdens that may arise because of such required sale of an asset by receiving a certificate of divestiture and postponing capital gains taxes.[1175]

In some instances, the establishment of a "qualified blind trust" may be used as a conflict of interest avoidance device as an alternative "divestiture" of conflicting

[1173] 5 C.F.R. § 2635.403(a).

[1174] 5 C.F.R. § 2635.403(b).

[1175] See 5 C.F.R. §§ 2635.403(d),(e), and 2634.1001 et. seq.

assets. While the underlying assets in a trust in which one has a beneficial interest must normally be disclosed in annual public financial disclosure reports,[1176] and would under conflict of interest law generally be "financial interests" of the employee/beneficiary for disqualification purposes, federal officials may, as a conflict of interest avoidance measure, place certain assets with an independent trustee in what is called a "qualified blind trust."[1177] The nature of a "blind trust," generally, is such that the official will have no control over, will receive no communications about, and will (eventually as existing assets are sold and new ones obtained by the trustee) have no knowledge of the identity of the specific assets held in the trust. As such, an official will not need to identify and disclose the particular assets in the corpus of a "blind trust" in future financial disclosure reports,[1178] and such assets will not be "financial interests" of the employee for disqualification purposes.[1179] The conflict of interest theory under which the blind trust provisions operate is that since the official will not know the identity of the specific assets in the trust, those assets and financial interests could not influence the official decisions and governmental duties of the reporting official, thus avoiding potential conflict of interest problems or appearances.[1180] Assets originally placed into the trust by the official will, of course, be known to that official, and therefore will continue to be "financial interests" of the public official for conflict of interest purposes until the trustee notifies the official "that such asset has been disposed of, or has a value of less than $1,000."[1181]

[1176] 5 U.S.C. app. §102(f)(1).

[1177] See, generally, 5 U.S.C. app. § 102(f). Assets of an official may also be in a qualified "diversified trust" which has been established for the benefit of the official, the official's spouse or children, and may avoid disclosure and conflict of interest disqualification requirements. 5 U.S.C. app. § 102(f)(4)(B). However, in addition to being required to be well-diversified, such a trust may not consist of the assets of entities "having substantial activities in the area of the [official's] primary area of responsibility." 5 U.S.C. app. § 102(f)(4)(B)(i)(II). Such well-diversified portfolios of assets with an independent trustee, with no conflicting assets in the trust portfolio, are not considered "financial interests" of the employee for conflict of interest purposes at any time. 5 C.F.R. § 2634.401(a)(1)(iii).

[1178] 5 U.S.C. app. §102(f)(2)(A).

[1179] 5 U.S.C. app. § 102(f)(4)(A); 5 C.F.R. § 2634.401(ii).

[1180] S.Rept. 95-639, 95th Cong., 2d Sess., Report of the Committee on Governmental Affairs, "Blind Trusts," at 13 (1978).

[1181] 5 U.S.C. app. §102(f)(4)(A); 401(a)(1)(ii). One of the requirements of a blind trust is that there can be no conditions placed on the independent judgment of the trustee to dispose of any assets in the corpus of the trust. 5 U.S.C. app. §102(f)(3)(B).

A Note on General "Impartiality," Alleged "Bias," and Past Affiliations or Activities

The standards of conduct regulations promulgated by the Office of Government Ethics and derived from Executive Order, provide generally that an employee in the executive branch must "act impartially and not give preferential treatment to any organization or individual."[1182] As to past associations, the Office of Government Ethics has noted that "It has long been recognized that former employment with a private organization can raise impartiality concerns. Members of the public, the press, and even the Congress sometimes have questioned whether a particular public official might be subject to continuing influence by a former employer."[1183]

The "general principles" in the OGE regulations regarding financial interests and connections, outside employment or activities, and "impartiality," are fleshed out and covered in the more specific regulations promulgated by OGE.[1184] Although the basic impartiality language is fairly broad on its face, the "impartiality" actually required of a federal employee in a governmental matter by the specific conflict of interest and federal ethics standards, is a disinterestedness in the matter from the point of view of any financial impact that such a matter may have upon the employee personally, or upon certain entities or persons which are closely associated with the employee, that is, those whose financial interests may be fairly "imputed" to the employee.[1185] As noted by the Office of Government Ethics:

Questions regarding impartiality necessarily arise when an employee's official duties impact upon the employee's own financial interests or those of certain other persons, such as the employee's spouse or minor child.[1186]

Thus, while past employment or other past professional affiliations or connections to private entities may implicate conflict of interest concerns and trigger certain restrictions under regulations, the current ethical standards of conduct and conflict of interest rules do not necessarily imply a prohibited "favoritism" or "impartiality" by the mere fact of past employments or past professional associations or positions beyond those past employment

---

[1183] OGE Letter Opinion, 01 x 5, July 9, 2001.

[1184] 5 C.F.R. § 2635.101(b): "Where a situation is not covered by the standards set forth in this part, employees shall apply the principles set forth in this section in determining whether their conduct is proper."

[1185] "Impartiality in Performing Official Duties," 5 C.F.R. part 2635, subpart E, §§ 2635.501 et seq.

[1186] 5 C.F.R. § 2635.501, note.

connections that are specifically covered and dealt with in the regulatory disqualification restrictions.[1187] That is, no matter how philosophically pre-disposed an administrative official may arguably seem towards an issue because of his or her professional or employment background, a specific "bias" or "partiality" in a decision cannot be gleaned, as a matter of federal law, merely by the past associations and /or past employment of a federal regulatory or administrative official beyond the specific regulatory restrictions.

In general, the "impartiality" required of a federal employee in a matter clearly does not mean that every federal employee must be completely "neutral" on an issue or matter before him or her, in the sense that the employee has no opinion, view, position or predilection on a matter based either on past associations of the employee, or based upon current non-economic factors such as the ethical, religious, ideological, or political beliefs in the background or in the current affiliations of the employee. In the specific regulations on "impartiality" and participation in outside organizations, in fact, the Office of Government Ethics notes that "Nothing in this section shall be construed to suggest that an employee should not participate in a matter because of his political, religious or moral views."[1188]

As to the issue of "bias" or "impartiality" generally in decision making of federal officials, federal cases dealing with the alleged bias of a federal official have arisen on occasion in a due process context with respect to rule making of an agency, in that there had been alleged a lack of due process or fairness in the agency proceeding because of some claimed "bias" of a federal agency official. In those cases, the courts have noted that when a federal official is not acting in an adjudicatory capacity, that is, in a similar position as a judge, then judicial standards of impartiality need not apply.[1189] The Court of Appeals for the District of Columbia Circuit has noted: "We must not impose judicial roles upon administrators when they perform functions very different from those of judges."[1190] The disqualification requirement for those who are part of formal

---

[1187] In addition to bias because of past employment affiliations, it should be noted that federal employees are specifically prohibited by ethics regulations from using their public office for the financial gain of themselves, their personal friends or for entities with which they are currently affiliated. 5 C.F.R. § 2635.702.

[1188] 5 C.F.R. § 2635.502(b)(1)(v), note.

[1189] Association of National Advertisers, Inc. v. F.T.C., 627 F.2d 1151 (D.C. Cir. 1979), cert. denied, 447 U.S. 921 (1980). The "judicial standard" cited involves such factors as "would lead a reasonable person with the knowledge of all the facts to conclude that [an official's] impartiality might reasonably be questioned." Halderman, 559 F.2d 31, 132-133 n. 274 (D.C.Cir. 1976); Cinderella Career & Finishing Schools, Inc. v. F.T.C., 425 F.2d 583 (D.C.Cir. 1970).

[1190] Association of National Advertisers, Inc. v. F.T.C., supra at 1168.

adjudications was "never intended ... to apply in a rulemaking procedure," even a formal rulemaking procedure.[1191] In an earlier case in the District of Columbia Circuit, the court had explained:

Agencies are required to consider in good faith, and to objectively evaluate, arguments presented to them; agency officials, however, need not be subjectively impartial.[1192]

Going beyond specific statutory or regulatory restrictions on employees' economic interests and attempting to judicially apply very broad bias or impartiality standards upon regulators and administrators beyond those standards, noted one court, "is to invite challenges to officials based not upon true conflicts of interest but upon their philosophical or ideological leanings ...."[1193] While there could, of course, be legitimate questions raised about general notions of "bias" or partiality in a governmental function based on alleged conflicts or associations of particular employees involved in a certain matter, issues involving the ethics and conflict standards in internal governmental standards of conduct regulations are generally not amenable to legal resolution by private litigants, that is, those regulations do not raise an actionable standard for litigation by outside private parties, but rather are generally considered internal, discretionary or disciplinary matters within the agency.[1194]

TITLE 18: CRIMES AND CRIMINAL PROCEDURE

Introduction

Extraterritorial Application of American Criminal Law, 94-166 (March 26, 2010).

CHARLES DOYLE, CONGRESSIONAL RESEARCH SERV., EXTRATERRITORIAL APPLICATION OF AMERICAN CRIMINAL LAW, (2010), *available at* http://www.intelligencelaw.com/library/secondary/crs/pdf/94-166_3-26-2010.pdf.

Charles Doyle
Senior Specialist in American Public Law

Order Code 94-166
March 26, 2010

Summary

Crime is usually territorial. It is a matter of the law of the place where it occurs. Nevertheless, a surprising number of American criminal laws apply outside of the United States. Application is generally a question of legislative intent, expressed or implied. In either case, it most often involves crimes committed aboard a ship or airplane, crimes condemned by international treaty, crimes committed against government employees or property, or crimes that have an impact in this country even if planned or committed in part elsewhere.

Although the crimes over which the United States has extraterritorial jurisdiction may be many, so are the obstacles to their enforcement. For both practical and diplomatic reasons, criminal investigations within another country require the acquiescence, consent, or preferably the assistance, of the authorities of the host country. The United States has mutual legal assistance treaties with several countries designed to formalize such cooperative law enforcement assistance. Searches and interrogations carried out jointly with foreign officials, certainly if they involve Americans, must be conducted within the confines of the Fourth and Fifth Amendments. And the Sixth Amendment imposes limits upon the use in American criminal trials of depositions taken abroad.

The nation's recently negotiated extradition treaties address some of the features of the nation's earlier agreements which complicate extradition for extraterritorial offenses, i.e., dual criminality requirements, reluctance to recognize extraterritorial jurisdiction, and exemptions on the basis of nationality or political offenses. To further facilitate the prosecution of federal crimes with extraterritorial application Congress has enacted special venue, statute of

limitations, and evidentiary statutes. To further cooperative efforts, it recently enacted the Foreign Evidence Request Efficiency Act, P.L. 111-79 (S. 1289) which authorizes federal courts to issue search warrants, subpoenas and other orders to facilitate criminal investigations in this country on behalf of foreign law enforcement officials.

This report is available in an abridged version, stripped of its attachments, bibliography, footnotes, and most of its citations to authority, as CRS Report RS22497, Extraterritorial Application of American Criminal Law: An Abbreviated Sketch.

Introduction

Crime is ordinarily proscribed, tried, and punished according to the laws of the place where it occurs.[1195] American criminal law applies beyond the geographical confines of the United States, however, under certain limited circumstances. State prosecution for overseas misconduct is limited almost exclusively to multi-jurisdictional crimes, i.e., crimes where some elements of the offense are committed within the state and others are committed beyond its boundaries. A surprising number of federal criminal statutes have extraterritorial application, but prosecutions have been few. This may be because when extraterritorial criminal jurisdiction does exist, practical and legal complications, and sometimes diplomatic considerations, may counsel against its exercise.

Constitutional Considerations

Legislative Powers

The Constitution does not forbid either Congressional or state enactment of laws which apply outside the United States. Nor does it prohibit either the federal government or the states from enforcing American law abroad. Several passages suggest that the Constitution contemplates the application of American law beyond the geographical confines of the United States. It speaks, for example, of "felonies committed on the high seas," "offences against the law of nations," "commerce with foreign nations," and of the impact of treaties.

More specifically, it grants Congress the power "[t]o define and punish Piracies and Felonies committed on the high Seas, and Offences against the Law of Nations."[1196] Although logic might point to international law or some other

---

[1195] "The general and almost universal rule is that the character of an act as lawful or unlawful must be determined wholly by the law of the country where the act is done," American Banana Co v. United Fruit Co., 213 U.S. 347, 356 (1909).

[1196] U.S. Const. Art.I, §8, cl. 10; see generally, The Offences Clause After Sosa v. Alvarez-Machain, 118 HARVARD LAW REV. 2378 (2005); Stephens, Federalism and Foreign Affairs: Congress's Power to "Define and Punish . . . Offenses Against the Law of Nations," 42 WILLIAM & MARY LAW REVIEW 447 (2000).

embodiment of "the law of nations" as a source of the dimensions of Congress's authority to define and punish crimes against the law of nations, in reality the courts have done little to identify such boundaries, and until recently Congress seems to have relied exclusively on the law of nations clause only upon rare occasions.

In instances when the law of nations might have been thought to suffice, Congress has, instead, often relied upon a high seas component which, when coupled with its authority to define the admiralty and maritime jurisdictions of the federal courts, permits the application of federal criminal law even to an American vessel at anchor well within the territory of another nation.[1197]

The enactment of maritime statutes is reinforced by Congress's power "[t]o regulate Commerce with foreign Nations."[1198] The same prerogative supports legislation regulating activities in the air when they involve commerce with foreign nations. The commerce power includes the authority "[t]o regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes." It is a power of exceptional breadth domestically.[1199] Its reach may be even more extraordinary in an international context,[1200] although there is certainly support for a contrary view.[1201] In one of few recent cases to address the

[1197] United States v. Flores, 289 U.S. 137, 159 (1933)(Flores, an American seaman, was convicted of murdering another American aboard an American ship moored 250 miles up the Congo River (well within the territorial jurisdiction of the then Belgian Congo) under the federal statute proscribing murder committed within the special maritime jurisdiction of the United States).

[1198] U.S. Const. Art. I, §8, cl.3.

[1199] See e.g., Perez v. United States, 402 U.S. 146, 156-57 (1971); Heart of Atlanta Motel v. United States, 379 U.S. 241, 255-58 (1964).

[1200] California Bankers Ass'n v. Shultz, 416 U.S. 21, 46 (1974)("the plenary authority of Congress over both interstate and foreign commerce is not open to dispute"); United States v. 12,200-Ft. Reels of Film, 413 U.S. 123, 125 (1973)("The Constitution gives Congress broad, comprehensive powers 'to regulate Commerce with foreign Nations'").

[1201] United States v. Yunis, 681 F.Supp. 896, 907 n.24 (D.D.C. 1988)("Rather than relying on Congress's direct authority under Art. I Section 8 to define and punish offenses against the law of nations, the government contends that Congress has authority to regulate global air commerce under the commerce clause. U.S. Const. art. I, § 8, c. 3. The government's arguments based on the commerce clause are unpersuasive. Certainly Congress has plenary power to regulate the flow of commerce within the boundaries of United States territory. But it is not empowered to regulate foreign commerce which has no connection to the United States. Unlike the states, foreign nations have never submitted to the sovereignty of the United States government nor ceded their regulatory powers to the United States"). See also, Colangelo, Constitutional Limits on Extraterritorial Jurisdiction: Terrorism and the Intersection of National and International Law, 48 HARVARD INTERNATIONAL LAW JOURNAL 121, 149-50 (2007)(emphasis in the original) ("Furthermore, as a matter of original intent, the idea that the Foreign Commerce Clause might license Congress with the broad ability to extend U.S. laws extraterritorially into the jurisdictions

issue directly, the court opted for a middle ground. It found that Congress did indeed have the legislative power to proscribe illicit overseas commercial sexual activity by an American who had traveled from the United States to the scene for the crime.[1202] Confronted with a vigorous dissent, the panel's majority expressly chose to avoid the issue of whether it would have reached the same result if the defendant had not agreed to pay for his sexual misconduct.[1203]

In any event, it does not necessarily mean that every statute enacted in the exercise of Congress' power to regulate commerce with foreign nations is intended to have extraterritorial scope. Some do; [1204] others do not.[1205]

Congress has resorted on countless occasions to its authority to enact extraterritorial legislation not only in reliance on its own enumerated powers but also, through the necessary and proper clause on the powers vested in one of the other branches or on powers it shares with one of the other branches.[1206] It has,

---

of other nations would have been anathema to the founders given their driving belief in the sovereign equality of states and its accompanying rigid concept of territoriality – which to borrow yet again from Chief Justice Marshall held that 'no [state] can rightfully impose a rule on another[,] [each] legislates for itself, but its legislation can operate on itself alone.' Recall the reason why Congress was allowed to legislate extraterritorially over piracy absent a U.S. connection even though the act technically occurred within another state's territory: the conduct was prohibited as a matter of the law of nations, not of U.S. law, and thus the United States was not imposing its own rule on other nations, but merely enforcing (on their behalf) a universal norm when it prosecuted pirates. No such analysis applies to extraterritorial projections of Congress' Foreign Commerce Clause power").

[1202] United States v. Clark, 435 F.3d 1100, 1103 (9th Cir. 2006)("Instead of slavishly marching down the path of grafting the interstate commerce framework onto foreign commerce, we step back and take a global, commonsense approach to the circumstances presented here: The illicit sexual conduct reached by the state expressly includes commercial sex acts performed by a U.S. citizen on foreign soil. This conduct might be immoral and criminal, but it is also commercial. Where, as in this appeal, the defendant travels in foreign commerce to a foreign country and offers to pay a child to engage in sex acts, his conduct falls under the broad umbrella of foreign commerce and consequently within congressional authority under the Foreign Commerce Clause").

[1203] Id. at 1109-110 ("At the outset, we highlight that §2423(c) contemplates two types of 'illicit sexual conduct': noncommercial and commercial. Clark's conduct falls squarely under the second prong of the definition, which criminalizes 'any commercial sex act . . . with a person under 18 years of age.' §2423(f)(2). In view of this factual posture, we abide by the rule that courts have a 'strong duty to avoid constitutional issues that need not be resolved in order to determine the rights of the parties to the case under consideration, and limit our holding to §2423(c)'s regulation of commercial sex acts").

[1204] Steele v. Bulova Watch Co., 344 U.S. 280, 285-87 (1952).

[1205] EEOC v. Arabian American Oil Co., 499 U.S. 244, 259 (1991).

[1206] U.S.Const. Art.I, §8, cl.18 ("The Congress shall have Power . . . To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers

for instance, regularly called upon the authority deposited with the President and the Congress in the fields of foreign affairs and military activities,[1207] powers which the courts have described in particularly sweeping terms.[1208]

Constitutional Limitations

Nevertheless, the powers granted by the Constitution are not without limit. The clauses enumerating Congress's powers carry specific and implicit limits which govern the extent to which the power may be exercised overseas.[1209] Other

---

vested by this Constitution in the Government of the United States, or in any Department or Officer thereof").

[1207] See e.g., "The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States . . . . He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors . . . . He . . . shall receive Ambassadors and other public Ministers; [and] he shall take Care that the Laws be faithfully executed . . . ." U.S. Const. Art.II, §§2, 3.

"The Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises . . . ; To establish an uniform Rule of Naturalization . . . ; To declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water; To raise and support Armies . . .; To provide and maintain a Navy; To make Rules for the Government and Regulation of the land and naval Forces; . . . [and] To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof." U.S. Const. Art.I, §8, cls.1, 4, 11-14, 18.

[1208] United States v. Curtiss-Wright Corp., 299 U.S. 304, 315-18 (1936); Ex parte Quirin, 317 U.S. 1, 28-9 (1942); Parker v. Levy, 417 U.S. 733, 756-57 (1974).Some judicial authorities have suggested that in the area of foreign affairs the Constitution's establishment of the federal government as a sovereign entity vested it with authority, defined by standards recognized by the law of nations, beyond its constitutionally enumerated powers. United States v. Rodriguez, 182 F.Supp. 479, 490-91 (S.D.Cal. 1960), aff'd sub nom., Rocha v. United States, 288 F.2d 545 (9th Cir. 1961)("The powers of the government and the Congress in regard to sovereignty are broader than the powers possessed in relation to internal matters, United States v. Curtiss-Wright Export Corp., 1936, 299 U.S. 304: 'The broad statement that the federal government can exercise no powers except those specifically enumerated in the Constitution, and such implied powers as are necessary and proper to carry into effect the enumerated powers, is categorically true only in respect to our internal affairs.' Id., 299 U.S. at page 315. . . . 'It results that the investment of the federal government with the powers of external sovereignty did not depend upon the affirmative grants of the Constitution. Id. 299 U.S. at page 318.' . . . To put it in more general terms, the concept of essential sovereignty of a free nation clearly requires the existence and recognition of an inherent power in the state to protect itself from destruction. This power exists in the United States government absent express provision in the Constitution and arises from the very nature of the government which was created by the Constitution").

[1209] Toth v. Quarles, 350 U.S. 11, 13-4 (1955) (court martial trial of a civilian for crimes he allegedly committed in Korea while in the military exceeded the authority granted Congress by Art.I, §8, cl.14 and Art.III, §2); Kinsella v. Singleton, 361 U.S. 234, 247-48 (1960)(holding that

limitations appear elsewhere in the Constitution, most notably in the due process clauses of the Fifth and Fourteenth Amendments. Some limitations are a product of the need to harmonize potentially conflicting grants of authority. For example, although the Constitution reserves to the states the residue of governmental powers which it does not vest elsewhere, the primacy it affords the federal government in the area of foreign affairs limits the authority of the states in the field principally to those areas where they are acting with federal authority or acquiescence.[1210]

In the area of extraterritorial jurisdiction, the most often cited limitation resides in the due process clauses of the Fifth and Fourteenth Amendments. While the enumerated powers may carry specific limits which govern the extent to which the power may be exercised overseas, the general restrictions of the due process clauses, particularly the Fifth Amendment due process clause, have traditionally been mentioned as the most likely to define the outer reaches of the power to enact and enforce legislation with extraterritorial application.[1211]

Unfortunately, most of the cases do little more than note that due process restrictions mark the frontier of the authority to enact and enforce American law abroad.[1212] Even the value of this scant illumination is dimmed by the realization that the circumstances most likely to warrant such due process analysis are the

---

Congressional authority under Art.I, §8, cl.14 to make rules and regulations governing the land and naval forces did not include authority for the court martial trial of civilian dependents for offenses committed overseas); consider, Lowenfeld, U.S. Law Enforcement Abroad: The Constitution and International Law, 83 AMERICAN JOURNAL OF INTERNATIONAL LAW 880, 891-92 (1989) (asserting that the creation of subject matter and personal jurisdiction over an alien defendant for an offense committed overseas and not otherwise connected to the United States by forcibly bringing him into the United States is "not clearly within any constitution grant of power to Congress, and in particular, . . . does not, as written, come within the power to define and punish offenses against the law of nations").

[1210] Cf., Skiriotes v. Florida, 313 U.S. 69, 77 (1941)("[W]e see no reason why the State of Florida may not likewise govern the conduct of its citizens upon the high seas with respect to matters in which the State has a legitimate interest and where there is no conflict with acts of Congress"); American Insurance Ass'n v. Garamendi, 539 U.S. 396, 413 (2003)("There is, of course, no question that at some point an exercise of state power that touches on foreign relations must yield to the National Government's policy, given the concern for uniformity in this country's dealing with foreign nations that animated the Constitution's allocation of the foreign relations power to the National Government in the first place").

[1211] "No person shall . . . be deprived of life, liberty, or property, without due process of law. . . ." U.S. Const. Amend.V. ". . . [N]or shall any State deprive any person of life, liberty, or property, without due process of law . . . ." U.S. Const. Amend.XIV, §1.

[1212] See e.g., United States v. Yousef, 327 F.3d 56, 86 (2d Cir. 2003); United States v. Thomas, 893 F.2d 1066, 1068 (9th Cir. 1990); United States v. Quemener, 789 F.2d 145, 156 (2d Cir. 1986); United States v. Henriquez, 731 F.2d 131, 134-35 n.4, 5(2d Cir. 1984); United States v. Pinto-Mejia, 720 F.2d 248, 259 (2d Cir. 1983); United States v. Howard-Arias, 679 F.2d 363, 371 (4th Cir. 1982).

very ones for which the least process is due. Although American courts that try aliens for overseas violations of American law must operate within the confines of due process,[1213] the Supreme Court has observed that the Constitution's due process commands do not protect aliens who lack any "significant voluntary connection[s] with the United States."[1214]

Moreover, the Court's more recent decisions often begin with the assumption that the issues of extraterritorial jurisdiction come without constitutional implications.[1215]

The handful of lower courts to consider due process issues take one of two tracks. Some describe a due process requirement that demands some nexus between the United States and the circumstances of the offense.[1216] In some instances they

---

[1213] United States v. Verdugo-Urquidez, 494 U.S. 259, 278 (1990) (Kennedy, J., concurring) ("I do not mean to imply, and the Court has not decided, that persons in the position of the respondent have no constitutional protection. The United States is prosecuting a foreign national in a court established under Article III, and all of the trial proceedings are governed by the Constitution. All would agree, for instance that the dictates of the Due Process Clause of the Fifth Amendment protect the defendant").

[1214] "The global view . . . of the Constitution is also contrary to this Court's decisions in the Insular Cases, which held that not every constitutional provision applies to governmental activity even where the United States has sovereign power. . . . [I]t is not open to us in light of the Insular Cases to endorse the view that every constitutional provision applies wherever the United States Government exercises its power. Indeed, we have rejected the claim that aliens are entitled to Fifth Amendment rights outside the sovereign territory of the United States." United States v. Verdugo-Urquidez, 494 U.S. at 268-71.

[1215] EEOC v. Arabian American Oil Co., 499 U.S. at 248 ("Both parties concede, as they must that Congress has the authority to enforce its laws beyond the territorial boundaries of the United States. Whether Congress has in fact exercised that authority in this case is a matter of statutory construction").

[1216] United States v. Medjuck, 156 F.3d 916, 918 (9th Cir. 1998)("to satisfy the strictures of due process, the Government [must] demonstrate that there exists a sufficient nexus between the conduct condemned and the United States such that the application of the statute [to the overseas conduct of an alien defendant] would not be arbitrary or fundamentally unfair to the defendant"), citing, United States v. Davis, 905 F.2d at 248-49; see also, United States v. Perlaza, 439 F.3d 1149, 1160-161 (9th Cir. 2006); United States v. Moreno-Morillo, 334 F.3d 819, 828 (9th Cir. 2003); United States v. Klimavicius-Viloria, 144 F.3d 1249, 1256 (9th Cir. 1998); United States v. Greer, 956 F.Supp. 531, 534-36 (D.Vt. 1997); United States v. Aikens, 946 F.2d 608, 613-14 (9th Cir. 1990); United States v. Robinson, 843 F.2d 1, 5-6 (1st Cir. 1988); United States v. Peterson, 812 F.2d 486, 493 (9th Cir. 1987); United States v. Gonzalez, 776 F.2d 931, 938-41 (11th Cir. 1985).

These "subject matter" or "legislative" jurisdiction due process questions have arisen more often from attempts to impose civil liability or regulatory obligations, particularly at the state level, see e.g., Gerling Global Reinsurance Corp. v. Gallagher, 267 F.3d 1228, 1234-238 (11th Cir. 2001)(due process precludes application of Florida's Holocaust Victims Insurance Act to insurance policies issued outside the state, to persons outside the state, and covering individuals outside the state);

look to international law principles to provide a useful measure to determine whether the nexus requirement has been met;[1217] in others they consider principles at work in the minimum contacts test for personal jurisdiction.[1218] At the heart of these cases is the notion that due process expects that a defendant's conduct must have some past, present, or anticipated locus or impact within the United States before he can fairly be held criminal liable for it in an American court. The commentators have greeted this analysis with hesitancy at best,[1219] and other courts have simply rejected it.[1220]

[1220] United States v. Suerte, 291 F.3d 366, 375 (5th Cir. 2002)("[T]o the extent the Due Process Clause may constrain the MDLEA's extraterritorial reach, that clause does not impose a nexus requirement, in that Congress has acted pursuant to the Piracies and Felonies Clause"); United States v. Perez-Oviedo, 281 F.3d 400, 403 (3d Cir. 2002)(internal citations omitted)("[N]o due process violation occurs in an extraterritorial prosecution under MDLEA when there is no nexus between the defendant's conduct and the United States. Since drug trafficking is condemned universally by law-abiding nations . . . there is no reason for us to conclude that it is 'fundamentally unfair' for Congress to provide for the punishment of a person apprehended with narcotics on the high seas. . . Perez-Oviedo's state of facts presents an even stronger case for concluding that no due process violation occurred. The Panamanian government expressly consented to the application of the MDLEA. . . Such consent from the flag nation eliminates a concern that the application of the MDLEA may be arbitrary or fundamentally unfair"); United

The second, less traveled track sees the due process component at issue as one of notice. It is akin to the proscriptions against secret laws and vague statutes, the exception to the maxim that ignorance of the law is no defense.[1221] Under this view, indicia of knowledge, of reason to know, of an obligation to know, or of reasonable ignorance of the law's requirements – some of which are reflected in international standards – seem to be the most relevant factors. Citizens, for instance, might be expected to know the laws of their own nation; seafarers to know the law of the sea and consequently the laws of the nation under which they sail; everyone should be aware of the laws of the land in which they find themselves and of the wrongs condemned by the laws of all nations.[1222] On the other hand, the application of American criminal statute to an alien in a foreign country under whose laws the conduct is lawful would seem to evidence a lack of notice sufficient to raise due process concerns.[1223]

States v. Cardales, 168 F.3d 548, 553 (1st Cir. 1999) ("[D]ue process does not require the government to prove a nexus between a defendant's criminal conduct and the United States in a prosecution under the MDLEA when the flag nation has consented to the application of United States law to the defendants").

[1221] "The rule that ignorance of the law will not excuse is deep in our law, as is the principle that of all the powers of local government, the police power is one of the least limitable. On the other hand, due process places some limits on its exercise. Ingrained in our concept of due process is the requirement of notice. . . . As Holmes wrote in the Common Law, 'A law which punished conduct which would not be blameworthy in the average member of the community would be too severe for that community to bear.' Its severity lies in the absence of an opportunity either to avoid the consequences of the law or to defend any prosecution brought under it. Where [as here] a person did not know of the duty to register and where there was no proof of the probability of such knowledge, he may not be convicted consistently with due process. Were it otherwise, the evil would be as great as it is when the law is written in print too fine to read or in a language foreign to the community." Lambert v. California, 355 U.S. 225, 228-30(1957)(emphasis added)(citations omitted); accord, United States v. Vasarajs, 908 F.2d 443, 448-49 (9th Cir. 1990); Griffin v. Wisconsin, 483 U.S. 868, 875 n.3 (1987); United States v. Shi, 525 F.3d 709, 722 (9th Cir. 2008)("The Due Process Clause requires that a defendant prosecuted in the United States should reasonably anticipate being haled into court in this country").

[1222] United States v. Bin Laden, 92 F.Supp.2d 189, 218 (S.D.N.Y. 2000)("Odeh argues that application of Sections 844(f), (h), and (n); 924(c); 930(c); and 2155 to the extraterritorial conduct he is alleged to have engaged in would violate his due process right to a fair warning. . . .The Government responds that while Odeh may not have known that breadth of the statutory framework that would serve as the basis for the charges against him . . . there is no room for him to suggest that he has suddenly learned that mass murder was illegal in the United States or anywhere else. . . . The Government also argues that Odeh cannot be surprised to learn that his conduct was criminal under the laws of every civilized nation, and thus he has no right to complain about the particular forum in which he is brought to trial. We likewise find this argument persuasive").

[1223] Consider e.g., United States v. Henriquez, 731 F.2d 131, 134 n.5 (2d Cir. 1984) ("It is also argued that 21 U.S.C. §955a(a) as applied [possession of marijuana with intent to distribute by Colombian nationals aboard a non-American vessel in international waters] violates the notice requirement of the due process clause of the Fifth Amendment. See Lambert v. California . . . . The argument is based not only on the claim that the statute is unprecedented in international

Conceding this outer boundary, however, the courts fairly uniformly have held that questions of extraterritoriality are almost exclusively within the discretion of Congress; a determination to grant a statutory provision extraterritorial application – regardless of its policy consequences – introduces no new constitutional infirmities.

Statutory Construction

For this reason, the question of the extent to which a particular statute applies outside the United States has generally been considered a matter of statutory, rather than constitutional, construction.[1224] General rules of statutory construction have emerged which can explain, if not presage, the result in a given case. The first of these holds that a statute will be construed to have only territorial application unless there is a clear indication of some broader intent.[1225]

---

law and the proposition that marijuana trafficking itself is not universally condemned, but also on the alleged vagueness of the definition of 'vessel without nationality' in 21 U.S.C. §955b(d) [upon which federal jurisdiction was based]. On this point, however, we agree with the Eleventh Circuit . . . that the term 'vessel without nationality' clearly encompasses vessels not operating under the authority of any sovereign nation"); United States v. Alvarez-Mena, 765 F.2d 1259, 1267 n.11 (5th Cir. 1985) ("[n]evertheless, we observe that we are not faced with a situation where the interests of the United States are not even arguably potentially implicated. The present case is not remotely comparable to, for example, the case of an unregistered small ship owned and manned by Tanzanians sailing from that nation to Kenya on which a crew member carries a pound of marihuana to give to a relative for his personal consumption in the latter country")(example offered in discussion of presumption of Congressional intent).

[1224] EEOC v. Arabian American Oil Co., 499 U.S. at 248; Foley Brothers v. Filardo, 336 U.S. 281, 284-85 (1949)("The question before us is not the power of Congress to extend the eight hour law to work performed in foreign countries. Petitioners concede that such power exists. The question is rather whether Congress intended to make the law applicable to such work"); United States v. Yousef, 327 F.3d 56, 86 (2d. Cir. 2003)("It is beyond doubt that, as a general proposition, Congress has the authority to enforce its laws beyond the territorial boundaries of the United States"); United States v. Gatlin, 216 F.3d 207, 211 (2d Cir. 2000); United States v. Martinez, 599 F.Supp.2d 784, 79697 (W.D.Tex. 2009).

[1225] "It is a long-standing principle of American law that legislation of Congress, unless a contrary intent appears, is meant to apply only within the territorial jurisdiction of the United States." EEOC. v. Arabian American Oil Co., 499

U.S. at 248 (1991); Argentine Republic v. Amerada Hess Shipping, 488 U.S. 428, 440 (1989); Sale v. Haitian Centers Council, Inc., 509 U.S. 155, 173 (1993); Smith v. United States, 507 U.S. 197, 203 (1993); Small v. United States, 544 U.S. 385, 388-89 (2005); cf., The Antelope, 23 U.S. 30, 53-4 (10 Wheat. 66, 123) (1825)("The courts of no country will execute the penal laws of another"). The principle has a corollary, the so-called revenue rule, which precludes judicial enforcement of a foreign tax laws, Pasquantino v. United States, 544 U.S. 349, 360-61 (2005). The rule, however, does not preclude enforcement of a federal criminal statute which proscribes defrauding a foreign country of its tax revenues, id. at 354-55 ("the common-law revenue rule, rather than barring any recognition of foreign revenue law, simply allow[s] courts to refuse to enforce the tax judgments of foreign nations, and therefore [does] not preclude the Government from prosecuting. . .").

A second rule of construction states that the nature and purpose of a statute may provide an indication of whether Congress intended a statute to apply beyond the confines of the United States. Although hints of it can be found earlier,[1226] the rule was first clearly announced in United States v. Bowman, 260 U.S. 94, 97-98, 102 (1922).[1227]

[1226] See e.g., American Banana Co. v. United Fruit Co., 213 U.S. at 355-56, "It is obvious that, however stated, the plaintiff's case depends on several rather startling propositions. In the first place the acts causing the damage were done so far as appears, outside the jurisdiction of the United States and within that of other states. It is surprising to hear it argued that they were governed by the act of Congress.

"No doubt in regions subject to no sovereign, like the high seas, or to no law that civilized countries would recognize as adequate, such countries may treat some relations between their citizens as governed by their own law, and keep to some extent the old notion of personal sovereignty alive. They go further at times and declare that they will punish any one, subject or not, who shall do certain things, if they can catch him, as in the case of pirates on the high seas. In cases immediately affecting national interests they may go further still and may make, and, if they get the chance, execute similar threat as to acts done within another recognized jurisdiction. An illustration from our statutes is found with regard to criminal correspondence with foreign governments. . ."

[1227] "We have in this case a question of statutory construction. The necessary locus, when not specifically defined, depends upon the purpose of Congress as evinced by the description and nature of the crime and upon the territorial limitations upon the power and jurisdiction of a government to punish crime under the law of nations. Crimes against private individuals or their property, like assaults, murder, burglary, larceny, robbery, arson, embezzlement and frauds of all kinds, which affect the peace and good order of the community, must of course be committed within the territorial jurisdiction of the government where it may properly exercise it. If punishment of them is to be extended to include those committed outside the strict territorial jurisdiction, it is natural for Congress to say so in the statute, and failure to do so will negate the purpose of Congress in this regard. We have an example of this in the attempted application of the prohibitions of the Anti-Trust Law to acts done by citizens of the United States against other such citizens in a foreign country. American Banana Co. v. United Fruit Co., 213 U.S. 347. That was a civil case, but as the statute is criminal as well as civil, it presents an analogy.

"But the same rule of interpretation should not be applied to criminal statutes which are, as a class, not logically dependent on their locality for the government's jurisdiction, but are enacted because of the right of the government to defend itself against obstruction, or fraud wherever perpetrated, especially if committed by its own citizens, officers or agents. Some such offenses can only be committed within the territorial jurisdiction of the Government because of the local acts required to constitute them. Others are such that to limit their locus to the strictly territorial jurisdiction would be greatly to curtail the scope and usefulness of the statute and leave open a large immunity for frauds as easily committed by citizens on the high seas and in foreign countries as at home. In such cases, Congress has not thought it necessary to make specific provision in the law that the locus shall include the high seas and foreign countries, but allows it to be inferred from the nature of the offense. . . . Clearly it is no offense to the dignity or right of sovereignty of Brazil [– where the fraud of which the United States government was the target occurred –] to hold [these American defendants] for this crime against the government to which they owe allegiance." See also, United States v. Delgado-Garcia, 374 F.3d 1337, 1344-350 (D.C.

The final rule declares that unless a contrary intent is clear, Congress is assumed to have acted so as not to invite action inconsistent with international law.[1228] At one time, the cases seemed to imply the existence of another rule, that is that, unless Congress declared that it intended a statute to apply overseas to both aliens and American nationals, it would be presumed to apply only to Americans.[1229] In the eyes of the community of nations, a jurisdictional claim over misconduct based solely on the nationality of the victim continues to be among the more tenuous. Yet as discussed below, the challenge seems less compelling in light of the generous reading of the internationally recognized grounds upon which to stake a claim.[1230]

Cir. 2004); United States v. Villanueva, 408 F.3d 193, 197-98 (5th Cir. 2005); United States v. Lopez-Vanegas, 493 F.3d 1305, 1311-312 (11th Cir. 2007).

[1228] "It has been a maxim of statutory construction since the decision in Murray v. The Charming Betsy, 2 Cranch [6 U.S.] 64, 118 (1804), that an act of Congress ought never to be construed to violate the law of nations, if any other possible construction remains," Weinberger v. Rossi, 456 U.S. 25, 32 (1982); The Apollon, 22 U.S. (9 Wheat.) 362, 370-71 (1824)("It cannot be presumed, that Congress would voluntarily justify . . . a clear violation of the law of nations").

[1229] E.g., The Apollon, 22 U.S. (9 Wheat.) at 370 ("The laws of no nation can justly extend beyond its own territories, except so far as regards its own citizens")(emphasis added); American Banana Co. v. United Fruit Co., 213 U.S. at 355-6 ("No doubt in regions subject to no sovereign, like the high seas, or to no law that civilized countries would recognize as adequate, such countries may treat some relations between their citizens as governed by their own law, and keep to some extent the old notion of personal sovereignty alive. . . . And the notion that English statutes bind British subjects everywhere has found expression in modern times and has had some startling applications"); United States v. Bowman, 260 U.S. at 102 ("Section 41 of the Judicial Code provides that 'the trial of all offenses committed on the high seas, or elsewhere out of the jurisdiction of any particular State or district, shall be in the district where the offender is found, or into which he is first brought.' The three defendants who were found in New York were citizens of the United States and were certainly subject to such laws as it might pass to protect itself and its property. Clearly it is no offense to the dignity or right of sovereignty of Brazil to hold them for this crime against the government to which they owe allegiance. The other defendant is a subject of Great Britain. He has never been apprehended, and it will be time enough to consider what, if any, jurisdiction the District Court below has to punish him when he is brought to trial"); United States v. Columba-Colella, 604 F.2d 356, 360 (5th Cir. 1979) ("Congress [is] not competent to attach criminal sanctions to the murder of an American by a foreign national in a foreign country. . .").

[1230] E.g., United States v. Vasquez-Velasco, 15 F.3d 833, 839-41 (9th Cir. 1994)(prosecution under 18 U.S.C. 1959 for the murder of two American tourists in Mexico by Mexican nationals acting under the mistaken belief that the Americans were DEA agents came within the principle recognized in international law as permitting the exercise of extraterritorial jurisdiction in the name of a nation's security); United States v. Yunis, 924 F.2d 1086, 1091 (D.C.Cir. 1991); United States v. Felix-Gutierrez, 940 F.2d 1200, 1205-206 (9th Cir. 1991)(murder of an American agent overseas); United States v. Benitez, 741 F.2d 1312, 1316-317 (11th Cir. 1986); see also, United States v. Bin Laden, 92 F.Supp.2d 189, 194-95 (S.D.N.Y.2000) (concluding that Bowman applies regardless of the nationality of the offender).

International Law

International law supports rather than dictates decisions in the area of the overseas application of American law. Neither Congress nor the courts are bound to the dictates of international law when enacting or interpreting statutes with extraterritorial application.[1231]

Yet Congress looks to international law when it evaluates the policy considerations associated with legislation that may have international consequences. For this reason, the courts interpret legislation with the presumption that Congress or the state legislature intends its laws to be applied within the bounds of international law, unless it indicates otherwise.

To what extent does international law permit a nation to exercise extraterritorial criminal jurisdiction? The question is essentially one of national interests. What national interest is served by extraterritorial application and what interests of other nations suffer by an extraterritorial application?

The most common classification of these interests dates to a 1935 Harvard Law School study which divided them into five categories or principles corresponding to the circumstances under which the nations of the world had declared their criminal laws applicable: (1) the territorial principle which involves crimes occurring or having an impact within the territory of a country; (2) the nationality principle which involves crimes committed by its nationals; (3) the passive personality principle which involves crimes committed against its nationals; (4) the protection principle which involves the crimes which have an impact on its interests as a nation; and (5) the universal principle which involves crimes which are universally condemned.[1232]

[1231] "Yunis seeks to portray international law as a self-executing code that trumps domestic law whenever the two conflict. That effort misconceives the role of judges as appliers of international law and as participants in the federal system. Our duty is to enforce the Constitution, laws, and treaties of the United States, not to conform the law of the land to norms of customary international law," United States v. Yunis, 924 F.2d 1086, 1091 (D.C.Cir. 1991); United States v. Yousef, 327 F.3d 56, 86 (2d Cir. 2003)("In determining whether Congress intended a federal statute to apply to overseas conduct, an act of Congress ought never to be construed to violate the law of nations if any other possible construction remains. Nonetheless, in fashioning the reach of our criminal law, Congress is not bound by international law. If it chooses to do so, it may legislate with respect to conduct outside the United States in excess of the limits posed by international law"); United States v. Felix-Gutierrez, 940 F.2d 1200, 1203 (9th Cir. 1991); United States v. Henriquez, 731 F.2d 131, 134 (2d Cir. 1984).

[1232] "An analysis . . . discloses five general principles on which a more or less extensive penal jurisdiction is claimed by States at the present time. These five general principles are: first, the territorial principle, determining jurisdiction by reference to the place where the offence is committed; second, the nationality principle, determining jurisdiction by reference to the nationality or national character of the person committing the offence; third, the protective principle, determining jurisdiction by reference to the national interest injured by the offence;

The American Law Institute's Third Restatement of the Foreign Relations Law of the United States contains perhaps the most comprehensive, contemporary statement of international law in the area. It indicates that the latitude international law affords a country to enact, try, and punish violations of its law extraterritorially is a matter of reasonableness, and its assessment of reasonableness mirrors a balancing of the interests represented in the principles.[1233]

---

fourth, the universality principle, determining jurisdiction by reference to the custody of the person committing the offence; and fifth, the passive personality principle, determining jurisdiction by reference to the nationality or national character of the person injured by the offence. Of these five principles, the first is everywhere regarded as of primary importance and of fundamental character. The second is universally accepted, though there are striking differences in the extent to which it is used in different national systems. The third is claimed by most States, regarded with misgivings in a few, and generally ranked as the basis for an auxiliary competence. The fourth is widely though by no means universally accepted as the basis of an auxiliary competence, except for the offence of piracy, with respect to which it is the generally recognized principle of jurisdiction. The fifth, asserted in some form by a considerable number of States and contested by others, is admittedly auxiliary in character and is probably not essential for any State if the ends served are adequately provided for on other principles." Harvard Research in International Law, Jurisdiction with Respect to Crime, 29 AMERICAN JOURNAL OF INTERNATIONAL LAW (Supp.)(Harvard Study) 439, 445 (1935) (emphasis added).

[1233] "The rules in this Restatement governing jurisdiction to prescribe, as well as those governing jurisdiction to adjudicate and to enforce, reflect development in the law as given effect by United States courts. The courts appear to have considered these rules as a blend of international law and domestic law, including international 'comity' as part of that law. Increasingly, however, these rules, notably the principle of reasonableness (§§403, 421, 431), have been followed by other states and their courts and by international tribunals, and have emerged as principles of customary law." American Law Institute, 1 RESTATEMENT OF THE LAW THIRD: THE FOREIGN RELATIONS LAW OF THE UNITED STATES, 231 (1985).

Section 403 of the Restatement provides:

"(2) Whether exercise of jurisdiction over a person or activity is unreasonable is determined by evaluating all relevant factors, including, where appropriate: (a) the link of the activity to the territory of the regulated state, i.e., the extent to which the activity takes place within the territory, or has substantial, direct, and foreseeable effect upon or in the territory; (b) the connections, such as nationality, residence, or economic activity, between the regulating state and the person principally responsible for the activity to be regulated, or between that state and those whom the regulation is designed to protect; (c) the character of the activity to be regulated, the importance of regulation to the regulating state, the extent to which other states regulate such activities, and the degree to which the desirability of such regulation is generally accepted; (d) the existence of justified expectations that might be protected or hurt by the regulation; (e) the importance of the regulation to the international political, legal, or economic system; (f) the extent to which the regulation is consistent with the traditions of the international system; (g) the extent to which another state may have an interest in regulating the activity; and (h) the likelihood of conflict with regulation by another state.

"(3) When it would not be unreasonable for each of two states to exercise jurisdiction over a person or activity, but the prescriptions by the two states are in conflict, each state has an obligation to evaluate its own as well as the other state's interest in exercising jurisdiction, in light

---

While the Restatement's views carry considerable weight with both Congress and the courts,[1234] the courts have traditionally ascertained the extent to which international law would recognize extraterritorial application of a particular law by citing the Harvard study principles, read expansively.[1235]

Even by international standards, however, the territorial principle applies more widely than its title might suggest. It covers conduct within a nation's geographical borders. Yet, it also encompasses laws governing conduct on its territorial waters, conduct on its vessels on the high seas, conduct committed only in part within its geographical boundaries, and conduct elsewhere that has an impact within its territory.[1236] Congress often indicates within the text of a statute when it intends a provision to apply within its territorial waters and upon its vessels.[1237] Although rarely mentioned in the body of a statute, the courts have long and regularly acknowledged the "impact" basis for a claim of extraterritorial application.[1238] This is particularly so, when the facts in a case suggest other principles of international law in addition to the territorial principle.[1239]

---

of all the relevant factors, Subsection (2); a state should defer to the other state if that state's interest is clearly greater." Id. at 244-45. The remainder of section 403 and other portions of the RESTATEMENT appear as an attachment to this report.

[1238] Ford v. United States, 273 U.S. 593, 623 (1927)("a man who outside of a country willfully puts in motion a force to take effect in it is answerable at the place where the evil is done"); United States v. Yousef, 327 F.3d 56, 96-7 (2d Cir. 2003)("Moreover, assertion of jurisdiction is appropriate under the 'objective territorial principle' because the purpose of the attack was to influence United States foreign policy and the defendants intended their actions to have an effect – in this case, a devastating effect – on and within the United States"); United States v. Neil, 312 F.3d 419, 422 (9th Cir. 2002); United States v. MacAllister, 160 F.3d 1304, 1308 (11th Cir. 1998); United States v. Goldberg, 830 F.2d 459, 463-64 (3d Cir. 1987).

[1239] United States v. Felix-Gutierrez, 940 F.2d 1200, 1205 (9th Cir. 1991)("Felix's actions created a significant detrimental effect in the United States and adversely affected the national interest. In helping to prevent the United States from apprehending Caro-Quintero, Felix directly hindered United States efforts to prosecute an alleged murderer of a government agent. Furthermore that agent was a United States citizen. We need not decide whether any one of these facts or

If the territorial principle is more expansive than its caption might imply, the protective principle is less so. It is confined to crimes committed outside a nation's territory against its "security, territorial integrity or political independence."[1240] As construed by the courts, however, it is understood to permit the application abroad of statutes which protect the federal government and its functions.[1241] And so, it covers the overseas murder or attempted murder of federal officers or those thought to be federal officers;[1242] acts of terrorism calculated to influence American foreign policy;[1243] conduct which Congress has characterized as a threat to U.S. national security;[1244] or false statements or forgery designed to frustrate the administration of U.S. our immigration laws.[1245]

The nationality principle rests the exercise of extraterritorial criminal jurisdiction on the citizenship of accused.[1246] It is the principle mirrored in the Supreme Court's statements in Blackmer, following the contempt conviction of an American living in Paris who ignored a federal court subpoena.[1247] As in the case

---

principles, standing alone, would be sufficient. Rather, we hold that cumulatively applied they require the conclusion that giving extraterritorial effect to the accessory after the act statute in Felix's case does not violate international law principles"); United States v. Suerte, 291 F.3d 366, 370 (5th Cir. 2002); United States v. Cardales, 168 F.3d 548, 553 (1st Cir. 1999); United States v. Benitez, 741 F.2d 1312, 1316 (11th Cir. 1984).

[1247] Blackmer v. United States, 284 U.S. 421, 437 (1932)("With respect to such exercise of authority, there is no question of international law, but solely of the purport of municipal law

of Blackmer, which evidenced both the nationality and the protective principles, cases involving the nationality principle often involve other principles as well.[1248]

The passive personality principle recognizes extraterritorial criminal jurisdiction based on the nationality of the victim of the offense.[1249] It, too, has been asserted most often in the presence of facts suggesting other principles.[1250]

The universal principle is based on the premise that offenses against all nations may be punished by any nation where the offender is found.[1251] At a minimum, it applies to piracy and offenses committed on the high seas on "stateless" vessels.[1252]

Current Extent of American Extraterritorial Criminal Jurisdiction

Federal Law

Express

Congress' declaration that a particular statute is to apply outside of the United States is the most obvious evidence of an intent to create extraterritorial jurisdiction.[1253] Congress has expressly provided for the extraterritorial application of federal criminal law most often by outlawing various forms of

---

which establishes the duties of the citizen in relation to his own government. While the legislation of the Congress, unless the contrary intent appears, is construed to apply only within the territorial jurisdiction of the United States, the question of its application so far as citizens of the United States in foreign countries are concerned is one of construction, not of legislative power").

[1253] A list of the citations to such federal statutes is attached.

misconduct when they occur "within the special maritime and territorial jurisdiction of the United States."[1254] The concept of special maritime and territorial jurisdiction, if not the phrase, dates from the First Congress,[1255] and encompasses navigable waters and federal enclaves within the United States as well as areas beyond the territorial confines of the United States. Although the concept of the special maritime and territorial jurisdiction of the United States once embraced little more than places over which the United States enjoyed state-like legislative jurisdiction, U.S. navigable territorial waters, and vessels of the United States, its application has been statutorily expanded. It now supplies an explicit basis for the extraterritorial application of various federal criminal laws relating to:

- air travel (special aircraft jurisdiction of the United States);[1256]
- customs matters (customs waters of the U.S.);[1257]

[1254] The text of 18 U.S.C. 7 which defines the term "special maritime and territorial jurisdiction of the United States" is attached.

[1255] 1 Stat. 113 (1790)(outlawing manslaughter committed in a place "under the sole and exclusive jurisdiction of the United States" and murder committed "upon the high seas").

[1256] "In this chapter –

"(1) 'aircraft in flight' means an aircraft from the moment all external doors are closed following boarding—(A) through the moment when one external door is opened to allow passengers to leave the aircraft; or (B) until, if a forced landing, competent authorities take over responsibility for the aircraft and individuals and property on the aircraft.

"(2) 'special aircraft jurisdiction of the United States' includes any of the following aircraft in flight: (A) a civil aircraft of the United States. (B) an aircraft of the armed forces of the United States. (C) another aircraft in the United States. (D) another aircraft outside the United States—(i) that has its next scheduled destination or last place of departure in the United States, if the aircraft next lands in the United States; (ii) on which an individual commits an offense (as defined in the Convention for the Suppression of Unlawful Seizure of Aircraft) if the aircraft lands in the United States with the individual still on the aircraft; or (iii) against which an individual commits an offense (as defined in subsection (d) or (e) of article I, section I of the Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation) if the aircraft lands in the United States with the individual still on the aircraft. (E) any other aircraft leased without crew to a lessee whose principal place of business is in the United States or, if the lessee does not have a principal place of business, whose permanent residence is in the United States.

"(3) an individual commits an offense (as defined in the Convention for the Suppression of Unlawful Seizure of Aircraft) when the individual, when on an aircraft in flight—(A) by any form of intimidation, unlawfully seizes, exercises control of, or attempts to seize or exercise control of, the aircraft; or (B) is an accomplice of an individual referred to in subclause (A) of this clause," 49 U.S.C. 46501.

[1257] "The term 'customs waters' means, [1] in the case of a foreign vessel subject to a treaty or other arrangement between a foreign government and the United States enabling or permitting the authorities of the United States to board, examine, search, seize, or otherwise to enforce upon such vessel upon the high seas the laws of the United States, the waters within such distance of

- U.S. spacecraft in flight; [1258]
- overseas federal facilities and overseas residences of federal employees;[1259]
- members of U.S. armed forces overseas and those accompanying them;[1260]
- overseas human trafficking and sex offenses by federal employees, U.S. military personnel, or those accompanying them.[1261]

---

the coast of the United States as the said authorities are or may be so enabled or permitted by such treaty or arrangement and, [2] in the case of every other vessel, the waters within four leagues of the coast of the United States," 19 U.S.C. 1709(c).

[1258] 18 U.S.C. 7(6)("Any vehicle used or designed for flight or navigation in space and on the registry of the United States pursuant to the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, Including the Moon and Other Celestial Bodies and the Convention on Registration of Objects Launched into Outer Space, while that vehicle is in flight, which is from the moment when all external doors are closed on Earth following embarkation until the moment when one such door is opened on Earth for disembarkation or in the case of a forced landing, until the competent authorities take over the responsibility for the vehicle and for persons and property aboard").

[1259] "With respect to offenses committed by or against a national of the United States as that term is used in section 101 of the Immigration and Nationality Act – (A) the premises of United States diplomatic, consular, military or other United States Government missions or entities in foreign States, including the buildings, parts of buildings, and land appurtenant or ancillary thereto or used for purposes of those missions or entities, irrespective of ownership; and (B) residences in foreign States and the land appurtenant or ancillary thereto, irrespective of ownership, used for purposes of those missions or entities or used by United States personnel assigned to those missions or entities," 18 U.S.C. 7(9).

[1260] "(a) Whoever engages in conduct outside the United States that would constitute an offense punishable by imprisonment for more than 1 year if the conduct had been engaged in within the special maritime and territorial jurisdiction of the United States – (1) while employed by or accompanying the Armed Forces outside the United States; or (2) while a member of the Armed Forces subject to chapter 47 of title 10 (the Uniform Code of Military Justice), shall be punished as provided for that offense.

"(b) No prosecution may be commenced against a person under this section if a foreign government, in accordance with jurisdiction recognized by the United States, has prosecuted or is prosecuting such person for the conduct constituting such offense, except upon the approval of the Attorney General or the Deputy Attorney General (or a person acting in either such capacity), which function of approval may not be delegated.

"(c) Nothing in this chapter may be construed to deprive a court-martial, military commission, provost court, or other military tribunal of concurrent jurisdiction with respect to offenders or offenses that by statute or by the law of war may be tried by a court-martial, military commission, provost court, or other military tribunal.

"(d) No prosecution may be commenced against a member of the Armed Forces subject to chapter 47 of title 10 (the Uniform Code of Military Justice) under this section unless – (1) such member ceases to be subject to such chapter; or

(2) an indictment or information charges that the member committed the offense with one or more other defendants, at least one of whom is not subject to such chapter," 18 U.S.C. 3261.

The obligations and principles of various international treaties, conventions, or agreements to which the United States is a party supply the theme for a second category of federal criminal statutes with explicit extraterritorial application.[1262] The range of these treaty-based federal crimes differs. Some have extraterritorial application only when the offender is an American.[1263] Some address misconduct so universally condemned that they fall within federal jurisdiction regardless of any other jurisdictional considerations as long as the offender flees to the United States, is brought here for prosecution, or is otherwise "found in the United States" after the commission of the offense.[1264] Some enjoy extraterritorial application under any of a number of these and other explicit jurisdictional circumstances.[1265]

Members of a final category of explicit extraterritorial federal criminal statutes either cryptically declare that their provisions are to apply overseas[1266] or describe a series of jurisdictional circumstances under which their provisions

---

[1261] "(a) Whoever, while employed by or accompanying the Federal Government outside the United States, engages in conduct outside the United States that would constitute an offense under chapter 77 [relating to peonage, slavery and trafficking] or 117 [relating to transportation for illegal sexual activity] of this title if the conduct had been engaged in within the United States or within the special maritime and territorial jurisdiction of the United States shall be punished as provided for that offense.

"(b) No prosecution may be commenced against a person under this section if a foreign government, in accordance with jurisdiction recognized by the United States, has prosecuted or is prosecuting such person for the conduct constituting such offense, except upon the approval of the Attorney General or the Deputy Attorney General (or a person acting in either such capacity), which function of approval may not be delegated," 18 U.S.C. 3271.

[1262] E.g., 18 U.S.C. 1203 (hostage taking); 18 U.S.C. 175 (biological weapons); 18 U.S.C. 1091 (genocide); 18 U.S.C. ch.113C (torture).

[1263] E.g.,18 U.S.C. 1091(d)(2)("the alleged offender is a national of the United States. . .").

[1264] E.g., 18 U.S.C. 2340A(b)(2)("There is jurisdiction over the activity prohibited in subsection(a) if . . .(2) the alleged offender is present in the United States, irrespective of the nationality of the victim or alleged offender").

[1265] E.g., 18 U.S.C. 1203 (It is not an offense under this section [relating to hostage taking] if the conduct required for the offense occurred outside the United States unless – (A) the offender or the person seized or detained is a national of the United States; (B) the offender is found in the United States; or (C) the governmental organization sought to be compelled is the Government of the United States").

[1266] E.g., 18 U.S.C. 351(i)(relating to crimes of violence committed against Members of Congress, Supreme Court justices, and certain senior executive officials) ("There is extraterritorial jurisdiction over the conduct prohibited by this section").

have extraterritorial application, not infrequently involving the foreign commerce of the United States in conjunction with other factors.[1267]

Implied

The natural implications of Bowman[1268] and Ford[1269] are that a substantial number of other federal crimes operate overseas by virtue of the implicit intent of Congress. In fact, the lower federal courts have read Bowman and Ford to suggest that American extraterritorial criminal jurisdiction includes a wide range of statutes designed to protect federal officers, employees and property, to prevent smuggling and to deter the obstruction or corruption of the overseas activities of federal departments and agencies.[1270] They have held, for instance, that the statute outlawing the assassination of Members of Congress may be applied against an American for a murder committed in a foreign country,[1271] and that statutes prohibiting the murder or kidnaping of federal law enforcement officials apply in other countries even if the offenders are not Americans,[1272] and even if the offenders incorrectly believed the victims were federal law enforcement officers.[1273] They have also considered extraterritorial jurisdiction appropriate to (1) cases where aliens have attempted to defraud the United States in order to

---

[1267] E.g., 18 U.S.C. 175c (variola virus)(committed by or against a U.S. national; committed in or affecting interstate or foreign commerce; committed against federal property).

[1268] United States v. Bowman, 260 U.S. 94 (1922)(the nature and purpose of a statute indicate whether Congress intended it to apply outside of the United States).

[1269] Ford v. United States, 273 U.S. 593, 623 (1927)("a man who outside of a country willfully puts in motion a force to take effect in it is answerable at the place where the evil is done").

[1270] United States v. MacAllister, 160 F.3d 1304, 1308 n.8 (11th Cir. 1998)("On authority of Bowman, courts have routinely inferred congressional intent to provide for extraterritorial jurisdiction over foreign offenses that cause domestic harm").

[1271] United States v. Layton, 855 F.2d 1388, 1395-397 (9th Cir. 1988) (At the time of the murder of Congressman Ryan for which Layton was convicted the statute was silent as to its extraterritorial application; several years later Congress added an explicit extraterritorial provision, 18 U.S.C. 351(i)).

[1272] United States v. Felix-Guiterrez, 940 F.2d 1200, 1204-206 (9th Cir. 1991); United States v. Benitez, 741 F.2d 1312, 1316-317 (11th Cir. 1984).

Attached is a list of citations to statutes that condemn acts of violence against officers and officials of the United States, that contain no express provisions concerning their geographical application but that apply overseas, if the same logic evidenced in the cases noted above is followed.

[1273] United States v. Vasquez-Velasco, 15 F.3d 833, 839 (9th Cir. 1994).

gain admission into the United States;[1274] (2) false statements made by Americans overseas;[1275] (3) the theft of federal property by Americans abroad;[1276] and (4) counterfeiting, forging or otherwise misusing federal documents or checks overseas by either Americans or aliens.[1277]

A logical extension would be to conclude that statutes enacted to prevent and punish the theft of federal property apply world-wide. And there seems to be no obvious reason why statutes protecting the United States from intentional deprivation of its property by destruction should be treated differently than those where the loss is attributable to theft.[1278]

Finally, there are the "piggyback statutes" whose provisions are necessarily related to some other crime. An individual may be guilty of conspiracy to violate a federal law within the United States notwithstanding the fact he never enters the United States; it is sufficient that he is a member of a conspiracy to violate the American law.[1279] The rationale should apply with equal force to the case of any accessory to the violation of any federal crime.[1280] Nevertheless, a few recent statutes make the coverage of piggyback offenses explicit.[1281]

[1274] United States v. Pizzarusso, 388 F.2d 8, 9-10 (2d Cir. 1968); Rocha v. United States, 288 F.2d 545, 549 (9th Cir. 1961); United States v. Khale, 658 F.2d 90, 92 (2d Cir. 1981); United States v. Castillo-Felix, 539 F.2d 9, 12-3 (9th Cir. 1976).

[1275] United States v. Walczak, 783 F.2d 852, 854-55 (9th Cir. 1986).

[1276] United States v. Cotten, 471 F.2d. 744, 749 (9th Cir. 1973).

[1277] United States v. Birch, 470 F.2d 808, 810-11 (4th Cir. 1972); United States v. Fernandez, 496 F.2d 1294, 1296 (5th Cir. 1954); United States v. Aguilar, 756 F.2d 1418, 1425 (9th Cir. 1985); United States v. Castillo-Felix, 539 F.2d 9, 12-3 (9th Cir. 1976).

[1278] Attached are lists of the citations to the theft of federal property statutes, the destruction of federal property statutes, the federal false statement statutes, and the federal counterfeiting statutes.

[1279] United States v. MacAllister, 160 F.3d 1304, 1307-308 (11th Cir. 1998); Ford v. United States, 273 U.S. 593, 620-24 (1927); United States v. Inco Bank & Trust Corp., 845 F.2d 919, 920 (11th Cir. 1988); United States v. Manuel, 371 F.Supp.2d 404, 409 (S.D.N.Y. 2005).

[1280] United States v. Felix-Gutierrez, 940 F.2d 1200, 1204-207 (9th Cir. 1991)(accessory after the fact violation committed overseas). A list of citations to the piggyback offense statutes is attached.

[1281] E.g., 18 U.S.C. 2339D(b)(6) (relating to receipt of military training from a foreign terrorist organization)("(b) Extraterritorial jurisdiction – there is extraterritorial federal jurisdiction over an offense under this section. There is jurisdiction over an offense under subsection (a) if . . . (6) an offender aids or abets any person over whom jurisdiction exists under this paragraph in committing an offense under subsection (a) or conspires with any person over whom jurisdiction exist under this paragraph to commit an offense under subjection (a)").

A number of statutes condemn both a substantive offense and the piggy-back crimes (conspiracy or attempt) associated with the substantive offense. A statute which applies overseas carries with it the application of provisions which prohibit attempts or conspiracies to violate the underlying statute.[1282]

Maritime Drug Law Enforcement Act

The Maritime Drug Law Enforcement Act (MDLEA) is somewhat unusual in that it expressly authorizes extraterritorial coverage of federal criminal law predicated on nothing more than the consent of the nation with primary criminal jurisdiction.[1283] MDLEA outlaws the manufacture, distribution, or possession with intent to manufacture or distribute controlled substances aboard vessels within the jurisdiction of the United States.[1284] It defines vessels within the jurisdiction of the United States not only in terms of ordinary U.S. maritime jurisdiction, but envelops the maritime jurisdiction of other countries as long as they have consented to the application of the U.S. law aboard the vessel.[1285] The definition also encompasses "vessels without nationality" sometimes referred to as "stateless" vessels, that is, vessels for which no national registry is effectively claimed.[1286]

[1282] United States v. Davis, 905 F.2d 245, 249 (9th Cir. 1990); United States v. Villanueva, 408 F.3d 193, 197-99 (5th Cir. 2005).

[1283] 46 U.S.C. 70501-70507.

[1284] 46 U.S.C. 70503.

[1285] "In this chapter, the term 'vessel subject to the jurisdiction of the United States' includes – (A) a vessel without nationality; (B) a vessel assimilated to a vessel without nationality, in accordance with paragraph (2) of article 6 of the 1958 Convention on the High Seas; (C) a vessel registered in a foreign nation where the flag nation has consented or waived objection to the enforcement of United States law by the United States; (D) a vessel located within the customs waters of the United States; (E) a vessel located in the territorial waters of another nation, where the nation consents to the enforcement of United States law by the United States; and (F) a vessel located in the contiguous zone of the United States, as defined in Presidential Proclamation 7219 of September 2, 1999, and (i) is entering the United States, (ii) has departed the United States, or (iii) is a hovering vessel as defined in section 491 of the Tariff Act of 1930 (19 U.S.C. 1401)," 46 U.S.C. 70502(c)(1).

[1286] "In this chapter, the term, "vessel without nationality" includes – (A) a vessel aboard which the master or person in charge makes a claim of registry, which claim is denied by the flag nation whose registry is claimed; (B) any vessel aboard which the master or person in charge fails, upon request of an officer of the United States empowered to enforce applicable provisions of United States law, to make a claim of nationality or registry for that vessel; and (C) a vessel aboard which the master or person in charge makes a claim of registry and the claimed nation of registry does not affirmatively and unequivocally assert that the vessel is of its nationality," 46 U.S.C. 70502(d)(1).

MDLEA provides the basis for Coast Guard drug interdiction efforts in the Caribbean and in the eastern Pacific off the coast of Central and South America.[1287] The courts have concluded that MDLEA constitutes a valid exercise of Congress' constitutional authority to define and punish offenses against the law of nations, U.S. Const. Art.I, §8, cl.10.[1288] They are divided over whether the prosecution must show some nexus between the United States and the offense[1289] and over the application of the subsection of the Act that assigns jurisdictional determinations to the court rather than to the jury, 46 U.S.C. 70504(a).[1290]

State Law

State criminal laws are less likely to apply overseas than federal laws.[1291] State law produces fewer instances where a statute was clearly enacted with an eye to its application overseas and fewer examples where frustration of legislative purpose is the logical consequence of purely territorial application. The Constitution seems to have preordained this result when it vested responsibility for protecting

---

[1287] E.g., United States v. Olave-Valencia, 371 F.Supp.2d 1224, 1226 (S.D. Cal. 2005)(Coast Guard interdiction 250 miles from the Honduras/Costa Rica border); United States v. Valencia-Aguirre, 409 F.Supp.2d 1358, 1360 (M.D.Fla. 2006)(Coast Guard interdiction from a Navy frigate off the Coast of Colombia); United States v. Perlaza, 439 F.3d 1149, 1152 (9th Cir. 2006) (Navy and Coast Guard ships engaged in drug interdiction in Pacific off the coasts of Ecuador, Colombia and Peru).

[1288] United States v. Ledesma-Cuesta, 347 F.3d 527, 532 (3d Cir. 2003); United States v. Moreno-Morillo, 334 F.3d 819, 824 (9th Cir. 2003).

[1289] United States v. Suerte, 291 F.3d 366, 375 (5th Cir. 2002); United States v. Cardales, 168 F.3d 548, 552-53 (1st Cir. 1999); United States v. Perez Oviedo, 281 F.3d 400, 402-3 (3d Cir. 2002); contra, United States v. Klimavicius-Viloria, 144 F.3d 1249, 1257 (9th Cir. 1998).

[1290] United States v. Perlaza, 439 F.3d 1149, 1165-166 (9th Cir. 2006)("After hearing all the evidence as to its status at a pretrial hearing, the district court determined that the Go-Fast was a stateless vessel. We find that by not submitting this issue to the jury, the district court erred. The evidence relating to the Go-Fast's statelessness presents precisely the kind of disputed factual question that Smith [United States v. Smith, 282 F.3d 758 (9th Cir. 2002)] requires a jury to resolve"); contra, United States v. Tinoco, 304 F.3d 1088, 1110-111 and n.22 (11th Cir. 2002)("Hence, although fact-bound determinations may be involved, that does not automatically mean that the 46 U.S.C.App. 1903 jurisdictional issue has to be decided by the jury. . . Consequently, even if questions under the 46 U.S.C.App. 1903 jurisdictional requirement may have a factual component, that component does not have to be resolved by the jury, given that, as we have explained, the jurisdictional requirement goes only to the court's subject matter jurisdiction and does not have to be treated as an element of a MDLEA substantive offense. . . We also note that our rejection of the appellant's argument concerning the fact-bound nature of 46 U.S.C.App. 1903 jurisdictional determinations appears to put us in conflict with one of our sister circuits. . . In United States v. Smith . . . [t]he Ninth Circuit concluded that the district court erred by taking the issue of whether the §1903 jurisdictional requirement had been met completely away from the jury").

[1291] The comparable question under state law is the extent to which a state's criminal law applies to activities occurring in another state.

American interests and fulfilling American responsibilities overseas in the federal government.[1292]

The primacy of the federal government in foreign affairs might suggest that the Constitution precludes the application of state law in other countries, but courts and commentators have recognized a limited power of the states to enact law governing conduct outside the United States.[1293] Obviously, Congress may, by preemptive action, extinguish the legislative authority of a state in any area over which Congress has plenary powers. And the Supremacy Clause also renders treaties to which the United States is a party binding upon the states and therefore beyond their legislative reach.[1294] Beyond the constitutional limitations, however, "the question . . . is one of whether the state actually intended to legislate extraterritorially, not whether it has the power to do so."[1295]

[1292] See e.g., U.S. Const. Art.II, §2, cl.2 ("[t]he President . . . shall have power, by and with the advice and consent of the Senate, to make treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the advice and consent of the Senate, shall appoint Ambassadors, [and] other public ministers and consuls . . . ."); U.S. Const. Art.II, §3, cl.3 (". . . he shall receive Ambassadors and other public ministers. . . ."); U.S. Const. Art.II, §2, cl.1 ("[he] shall be commander in chief of the Army and Navy of the United States . . . ."); U.S. Const. Art.I, §8, cl.18 ("[t]he Congress shall have power . . . to make all laws which shall be necessary and proper for carrying into execution [its] powers, and all other powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof"); U.S. Const. Art.I, §8, cl.10 ("[t]he Congress shall have power . . . to define and punish piracies and felonies committed on the high seas, and offences against the law of nations"); U.S. Const. Art.I, §8, cl.3 ("[t]he Congress shall have power . . . to regulate commerce with foreign nations . . . ."); U.S. Const. Art.I, §8, cl.1 ("[t]he Congress shall have power to lay and collect . . . duties, imposts and excises, to pay the debts and provide for the common defence and general welfare . . . ."); U.S. Const. Art.I, §8, cls.11, 12, 13, 14 ("[t]he Congress shall have power . . . to declare war. . . ; to raise and support armies . . . ; to provide and maintain a navy . . . ; [and] to make rules for the government and regulation of the land and naval forces. . . .").

[1293] Skiriotes v. Florida, 313 U.S. 69, 77 (1941)("If the United States may control the conduct of its citizens upon the high seas, we see no reason why the State of Florida may not likewise govern the conduct of its citizens upon the high seas with respect to matters in which the State has a legitimate interest and where there is no conflict with acts of Congress"); State v. Flores, 218 Ariz. 407, 413-16, 188 P.3d 706, 712-15 (Ariz.App. 2009); State v. Jack, 125 P.3d 311, 318-19 (Alaska 2005); Colangelo, Constitutional Limits on Extraterritorial Jurisdiction: Terrorism and the Intersection of National and International Law, 48 HARVARD INTERNATIONAL LAW JOURNAL 121, 128 (2007).

[1294] "This Constitution, and the Laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every state shall be bound thereby; any thing in the constitution or laws of any state to the contrary notwithstanding," U.S. Const. Art.VI, cl.2.

[1295] George, Extraterritorial Application of Penal Legislation, 64 MICHIGAN LAW REVIEW 609, 617 (1966); RESTATEMENT (THIRD) OF FOREIGN RELATIONS LAW §402 comment k, n.5 (1987).

The states have chosen to make their laws applicable beyond their boundaries in only a limited set of circumstances and ordinarily only in cases where there is some clear nexus to the state.[1296] Perhaps the most common state statutory provision claiming state extraterritorial criminal jurisdiction is one which asserts jurisdiction in cases where some of the elements of the offense are committed within the state or others are committed outside it.[1297] Another common claim is where an individual outside the state attempts or conspires to commit a crime within the state;[1298] or one within the state attempts or conspires to commit a crime beyond its boundaries.[1299] Still others define the state's extraterritorial

---

[1296] The Model Penal Code section (attached) exemplifies the standards found in most state extraterritorial criminal jurisdiction provisions. Several states have no general extraterritorial statute, but instead have statutory venue provisions indicating where criminal offenses with extraterritorial components may be tried, e.g., Ala.Code §15-2-3 ("When the commission of an offense commenced in the State of Alabama is consummated without the boundaries of the state, the offender is liable to punishment therefor in Alabama; and venue in such case is in the county in which the offense was commenced, unless otherwise provided by law").

jurisdiction to include instances where the victim of homicide, fatally wounded outside of the state, dies within it;[1300] where property stolen elsewhere is brought into the state;[1301] or where conduct outside the state constitutes the failure to comply with a legal duty imposed by state law.[1302]

Investigation and Prosecution

Although a substantial number of federal criminal statutes have undisputed extraterritorial scope and a great many more have apparent extraterritorial range, prosecutions are few. Investigators and prosecutors face legal, practical, and often diplomatic obstacles that can be daunting. Some of these are depicted in the description that follows of some of procedural aspects of the American investigation and prosecution of a crime committed abroad.

With respect to diplomatic concerns, the Restatement observes:

Del.Code tit.11 §204(a)(3)(attempt and conspiracy); Fla.Stat.Ann. §910.005 (1)(d)(attempt and conspiracy); Ga.Code §17-2-1(b)(3)(attempt); Hawaii Rev.Stat. §701-106(1)(d) (attempt and conspiracy); Ill.Comp.Stat.Ann. ch.720 §5/1-5(1)(d)(attempt and conspiracy); Ind.Code Ann. §35-41-1-1(b)(4)(attempt and conspiracy); Iowa Code Ann. §803.1(1)(e) (attempt and conspiracy); Ky.Rev.Stat. §500.060(1)(d)(attempt and conspiracy); Me.Rev.Stat.Ann. tit.17-A, §7(1)(D) (attempt and conspiracy); Mo.Ann.Stat. §541.191(1)(3)(attempt and conspiracy); Mont.Code Ann. §46-2-101(c)(attempt and conspiracy); N.H.Rev. > *It is universally recognized, as a corollary of state sovereignty, that officials of one state may not exercise their functions in the territory of another state without the latter's consent. Thus, while a state may take certain measures of nonjudicial enforcement against a person in another state, . . . its law enforcement officers cannot arrest him in another state, and can engage in criminal investigation in that state only with that state's consent. RESTATEMENT (THIRD) OF FOREIGN RELATIONS LAW §432 cmt. b (1986).*

Failure to comply can result in strong diplomatic protests, liability for reparations, and other remedial repercussions, to say nothing of the possible criminal prosecution of offending foreign investigators.[1303] Consequently, investigations within another country of extraterritorial federal crimes without the consent or at least acquiescence of the host country are extremely rare.

Mutual Legal Assistance Treaties and Agreements

Congress has endorsed diplomatic efforts to increase multinational cooperative law enforcement activities. The United States has over fifty mutual legal assistance treaties in force.[1304] Their benefits are typically available to state and federal law enforcement investigators though the Department of Justice's Office of International Affairs.[1305] Initially negotiated to overcome impediments posed

---

[1303] RESTATEMENT (THIRD) OF FOREIGN RELATIONS LAW §432 cmt. c and rptrs.' n.1 (1986) ("In a case that received wide attention, two French customs officials traveled to Switzerland on several occasions in 1980 to interrogate a former official of a Swiss bank, with a view to gaining information about French citizens believed to be hiding funds from the French tax and exchange control authorities. The person interrogated informed the Swiss federal prosecutor's office, which caused the Swiss police to arrest the French officials on their next visit. The officials were convicted of committing prohibited acts in favor of a foreign state, as well as of violation of the Swiss banking and economic intelligence laws. Even though the two French defendants were engaged in official business on behalf of the government of a friendly foreign state, they were given substantial sentences").

[1304] See generally, Abbell, OBTAINING EVIDENCE ABROAD IN CRIMINAL CASES, ch.4 (2004 & 2008 Supp.). Jurisdictions with whom the United States has a bilateral mutual legal assistance treaty in force include Antigua and Barbuda, Argentina, Australia, Austria, Bahamas, Barbados, Belize, Belgium, Brazil, Canada, China, Cyprus, the Czech Republic, Dominica, Egypt, Estonia, France, Greece, Grenada, Hong Kong, Hungary, Israel, Italy, India, Jamaica, Japan, Korea, Latvia, Liechtenstein, Lithuania, Luxembourg, Mexico, Morocco, the Netherlands, Nigeria, Panama, the Philippines, Poland, Romania, Russia, St. Kitts & Nevis, St. Lucia, St. Vincent & the Grenadines, South Africa, Spain, Switzerland, Thailand, Trinidad and Tobago, Turkey, the United Kingdom, the Cayman Islands, Anguilla, the British Virgin Islands, Montserrat, the Turks and Caicos Islands, Ukraine, Uruguay, and Venezuela, United States Department of State, TREATIES IN FORCE. (Jan. 1, 2009).

[1305] 28 C.F.R. §0.64-1; Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Egypt, Arts. 1(3), S.Treaty Doc. 106-19 ("Assistance shall be provided in connection with any conduct that is the subject of the investigation, prosecution, or proceeding under the laws of the Requesting

by foreign bank secrecy laws,[1306] the treaties generally offer more than the collection and delivery of documents. They ordinarily provide similar clauses, with some variations, for locating and identifying persons and items;[1307] service of process;[1308] executing search warrants;[1309] taking witness depositions;[1310]

State"); Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Greece, Arts. 1(3), S.Treaty Doc. 106-18; Treaty on Mutual Legal Assistance in Criminal Matters, U.S.Cyprus, Arts. 1(3), S.Treaty Doc. 106-20; Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Cyprus, Arts. 1(3),S.Treaty Doc. 106-35; Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-S.Afr., Arts. 1(3), S.Treaty Doc. 106-36. Under a few agreements, treaty benefits may not be available during preliminary investigations or for want of dual criminality, e.g., Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Fr., Art. 1, S.Treaty Doc. 106-7 (". . . mutual assistance in investigations and proceedings in respect of criminal offenses the punishment of which, at the time of the request for assistance, is a matter for the judicial authorities of the Requesting State"); Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Liech., Arts. 1, S.Treaty Doc. 107-16 ("Assistance shall be provided without regard to whether the conduct that is the subject of the investigation, prosecution, or proceeding in the Requesting State would constitute an offense under the laws of the Requested State, except that the Requested State may refuse to comply in whole or in part with a request for assistance to the extent that the conduct would not constitute an offense under its laws and the execution of the request would require a court order for search and seizure or other coercive measures").

Treaty Doc. 106-17; Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Egypt, Art. 14, S.Treaty Doc. 106-19; Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Rom., Art. 15,

persuading foreign nationals to come to the United States voluntarily to present evidence here;[1311] and forfeiture related seizures.[1312]

Letters Rogatory

Witness depositions may be taken in a foreign country cooperatively using letters rogatory in the case of nations with whom the United States has no MLAT or similar agreement. Letters rogatory involve the formal request from the courts of one country to those of another asking that a witness' statement be taken. The procedure is governed by statute and rule.[1313] It is often a resource of last resort. The process, through diplomatic channels, is time consuming, cumbersome, and lies within the discretion of the foreign court to which it is addressed.[1314]

Cooperative Efforts

American law enforcement officials have historically used other, often less formal, cooperative methods overseas to investigate and prosecute extraterritorial offenses. In the last few decades the United States has taken steps to facilitate cooperative efforts. Federal law enforcement agencies have assigned an increasing number of personnel overseas. For example, the Justice Department's Criminal Division has resident legal advisors in 37 countries abroad;[1315] and the Federal Bureau of Investigation now operates legal attache offices in 75 foreign cities;[1316] the Drug Enforcement Administration has offices in 87;[1317] the U.S. Immigration and Customs Enforcement agency in 54;[1318] the Secret Service in 20.[1319]

A few regulatory agencies with law enforcement responsibilities have working arrangements with their foreign counterparts. The Securities and Exchange Commission, for instance, has bilateral enforcement memoranda of understanding with 20 foreign securities commissions and, with 62 others, is a signatory of the International Organization of Securities Commissions' multilateral memorandum of understanding (IOSCO MMOU).[1320]

December 7, 2009 at http://www.travel.state.gov/ law/info/judicial/judicial_683.html. One commentator has observed that, "parties utilizing letters rogatory must simply cross their fingers and hope that the foreign nation will provide the evidence in a timely fashion and in an admissible form. Historically, the absence of a reliable evidence-gathering mechanism often stymied prosecutorial efforts, making it not unusual for the U.S. government to simply forgo transnational prosecutions," Richardson, Due Process for the Global Crime Age: A Proposal, 41 CORNELL INTERNATIONAL LAW JOURNAL 347 (2008); Intel Corp. v. Advanced Micro Devices, Inc., 542 U.S. 241, 247 (2004).

Congress has enacted several measures to assign foreign law enforcement efforts in this country in anticipation of reciprocal treatment. For instance, the Foreign Evidence Request Efficiency Act of 2009 authorizes Justice Department attorneys to petition federal judges for any of a series of orders to facilitate investigations in this country by foreign law enforcement authorities.[1321] The authorization extends to the issuance of:

- search warrants;
- court orders for access to stored electronic communications and to communications records;
- pen register or trap and trace orders; and
- subpoena authority, both testimonial and for the production of documents and other material.[1322]

Search and Seizure Abroad

Overseas cooperative law enforcement assistance occasionally has either Fourth or Fifth Amendment implications. In the case of the Fourth Amendment, the relatively limited lower federal court case law has remained fairly uniform, although the diversity of views reflected in the Supreme Court's Verdugo-Urquidez decision in 1990[1323] lends an air of uncertainty to the matter. Prior to Verdugo-Urquidez, it seems to have been generally agreed that the Fourth Amendment governed the overseas search and seizure of the person or property of Americans by American law enforcement officials.[1324] On the other hand, neither the Fourth Amendment[1325] nor its exclusionary rule[1326] were considered applicable to overseas searches and seizures conducted by foreign law

Mount, 757 F.2d 1315, 1317-318 (D.C.Cir. 1985); United States v. Delaplane, 778 F.2d 570, 573 (10th Cir. 1985); United States v. Rosenthal, 793 F.2d 1214, 1231 (11th Cir. 1986).

enforcement officials,[1327] except under two circumstances. The first exception covered foreign conduct which "shocked the conscience of the court."[1328] The second reached foreign searches or seizures in which American law enforcement officials were so deeply involved as to constitute "joint ventures" or some equivalent level of participation.[1329] The cases seldom explained whether these exceptions operated under all circumstances or only when searches or seizures involved the person or property of Americans. In the days when MLATs were scarce, however, the courts rarely, if ever, encountered circumstances sufficient to activate either exception.

Verdugo-Urquidez may suggest a more narrow application of the Fourth Amendment than was previously contemplated. It holds that "the Fourth Amendment [does not] appl[y] to the search and seizure by United States agents of property that is owned by a nonresident alien and located in a foreign country," 494 U.S. at 261. The majority opinion is grounded not in the principles previously announced by the lower courts but in its reading of the history of the Amendment and of the Court's earlier treatment of the Constitution's application overseas and to aliens.[1330] Earlier lower court jurisprudence is neither mentioned nor cited. Moreover, one of the Justices in the five member majority and a sixth Justice authored concurrences in which they indicated that Fourth Amendment reasonableness abroad may be very different from the Amendment's demands domestically.[1331]

[1327] Stonehill v. United States, 405 F.2d 738, 743 (9th Cir. 1969)("Neither the Fourth Amendment to the United States Constitution nor the exclusionary rule of evidence, designed to deter federal officers from violating the Fourth Amendment, is applicable to the acts of foreign officials").

Rose, 570 F.2d 1358, 1362 (9th Cir. 1978); United States v. Hensel, 699 F.2d 18, 25 (1st Cir. 1983); United States v. Delaplane, 778 F.2d 570, 573-74 (10th Cir. 1985); United States v. Rosenthal, 793 F.2d 1214, 1231-232 (11th Cir. 1986).

[1329] Stonehill v. United States, 405 F.2d 738, 743 (9th Cir. 1969); United States v. Callaway, 446 F.2d 753, 755 (3d Cir. 1971); United States v. Morrow, 537 F.2d 120, 139 (5th Cir. 1976); United States v. Rose, 570 F.2d 1358, 1362 (9th Cir. 1978); United States v. Hensel, 699 F.2d 18, 25 (1st Cir. 1983); United States v. Mount, 757 F.2d 1315, 1317-318 (D.C.Cir. 1985); United States v. Delaplane, 778 F.2d 570, 573-74 (10th Cir. 1985); United States v. Rosenthal, 793 F.2d 1214, 1231-232 (11th Cir. 1986).

[1330] "We think that the text of the Fourth Amendment, its history, and our cases discussing the application of the Constitution to aliens and extraterritorially require rejection of respondent's claim. At the time of the search, he was a citizen and resident of Mexico with no voluntary attachment to the United States and the place searched was located in Mexico. Under these circumstances, the Fourth Amendment has no application," 494 U.S. 274-75.

[1331] 494 U.S. at 278 (Kennedy, J., concurring)("The absence of local judges or magistrates available to issue warrants, the differing and perhaps unascertainable conceptions of reasonableness and privacy that prevail abroad, and the need to cooperate with foreign officials

One commentator argues that the concurrences should be read as confining rather than expanding the impact of the majority decision:

> *Given Verdugo-Urquidez, it might understandably be thought that the issue discussed herein – when, if ever, a United States connection with a search in a foreign country is substantial enough to make the Fourth Amendment and its exclusionary rule applicable – is of no relevance whenever that search is directed at an alien not then in the United States. But, an examination of the positions of the two concurring and three dissenting Justices suggests otherwise. The dissenters. . . are of the view that if the foreign search is properly characterized as United States activity . . . then the Fourth Amendment applies if the defendant is being subjected to a U.S. criminal prosecution. . . . Thus, the most that can be definitely concluded from Verdugo-Urquidez is that the Fourth Amendment's warrant clause is inapplicable to a search conducted under the circumstances present in that case. Beyond that, much depends upon the exact positions of the two [cryptic] concurring Justices. 1 LaFave, SEARCH AND SEIZURE: A TREATISE ON THE FOURTH AMENDMENT 325-26 (4th ed. 2004)(emphasis in the original).*

Subsequent case law in the lower federal courts acknowledges Verdugo-Urquidez and molds the principles of the opinion for the Court into the body of pre-existing law. Although limited, it indicates that the Fourth Amendment does not apply to a search conducted overseas of the property of a foreign national with no voluntary connection to the United States.[1332] As for overseas searches of the property of Americans or aliens permanently resident in the United States, the Fourth Amendment is said not to apply to a search by foreign officials unless conducted as a "joint venture" with American authorities or unless the conduct of the foreign officials "shocks the conscience of the court."[1333] Nevertheless, "the

---

all indicate that the Fourth Amendment's warrant requirement should not apply in Mexico as it does in this country"); id. at 279 (Stevens, J., concurring in the judgment)("I do agree, however, with the Government's submission that the search conducted by the United States agents with the approval and cooperation of the Mexican authorities was not 'unreasonable' as that term is used in the first Clause of the Amendment. I do not believe the Warrant Clause has any application to searches of noncitizens' homes in foreign jurisdictions because American magistrates have no power to authorize such searches").

[1332] United States v. Valencia-Trujillo, 573 F.3d 1171, 1183 (11th Cir. 2009); United States v. Bravo, 489 U.S. 1, 8-9 (1st Cir. 2007); United States v. Zakharov, 468 F.3d 1171, 1179-180 (9th Cir. 2006); United States v. Inigo, 925 F.3d 641, 656 (3d Cir. 1991); United States v. Suchit, 480 F.Supp. 39, 51 n.18 (D.C.Cir. 2007).

Fourth Amendment's reasonableness standard applies to United States officials conducting a search affecting a United States citizen in a foreign country."[1334] On the other hand, even under such circumstances, "a foreign search is reasonable if it conforms to the requirements of foreign law," and "such a search will be upheld under the good faith exception to the exclusionary rule when United States officials reasonably rely on foreign officials' representations of foreign law."[1335]

Self-Incrimination Overseas

Like the Fourth Amendment protection against unreasonable searches and seizures, the Fifth Amendment self-incrimination clause and its attendant Miranda warning requirements do not apply to statements made overseas to foreign officials[1336] subject to the same "joint venture"[1337] and "shocked conscience" exceptions.[1338] The Fifth Amendment and Miranda requirements do apply to custodial interrogations conducted overseas by American officials regardless of the nationality of the defendant.[1339] Of course as a general rule to be admissible at trial in this country, any confession must have been freely made.[1340]

1994)(the Fourth Amendment does not apply to the search and seizure of alien property abroad by foreign officials subject to conscience shocking and joint venture exceptions); United States v. [1340] Schneckloth v. Bustamonte, 412 U.S. 218, 225-26 (1973)("the ultimate test remains that which has been the only clearly established test in Anglo-American courts for two hundred years: the test of voluntariness. Is the confession the product of an essentially free and unconstrained choice by its maker? If it is, if he has will to confess, it may be used against him. If it is not, if his will has

Statute of Limitations: 18 U.S.C. 3292 and Related Matters

As a general rule, prosecution of federal crimes must begin within 5 years.[1341] Federal capital offenses and certain federal terrorist offenses, however, may be prosecuted at any time,[1342] and prosecution of nonviolent federal terrorism offenses must begin within 8 years.[1343] Moreover, the statute of limitations is suspended or tolled during any period in which the accused is a fugitive.[1344] Whatever the applicable statute of limitations, section 3292 authorizes the federal courts to suspend it in order to await the arrival of evidence requested of a foreign government:

> *Upon application of the United States, filed before return of an indictment, indicating that evidence of an offense is in a foreign country, the district court before which a grand jury is impaneled to investigate the offense shall suspend the running of the statute of limitations for the offense if the court finds by a preponderance of the evidence that an official request has been made for such evidence and that it reasonably appears, or reasonably appeared at the time the request was made, that such evidence is, or was, in such foreign country. 18 U.S.C. 3292(a)(1).*

Section 3292 suspensions may run for no more than six months if the requested foreign assistance is provided before the time the statute of limitations would

---

been overborne and his capacity for self-determination critically impaired, the use of confession offends due process"); United States v. Abu Ali, 528 F.3d 210, 232 (4th Cir. 2008); United States v. Lopez, 437 F.3d 1059, 1063-64 (10th Cir. 2006); United States v. Jacobs, 431 F.3d 99, 108 (3d Cir. 2005); United States v. Thompson, 422 F.3d 1285, 1295-296 (11th Cir. 2005); United States v. Garcia Abrego, 141 F.3d 142, 170-71 (5th Cir. 1998); United States v. Karake, 443 F.Supp.2d 8, 85-6 (D.D.C. 2006); United States v. Marzook, 435 F.Supp.2d 708, 741 (N.D.Ill. 2006)("interrogation accompanied by physical violence is presumptively involuntary").

[1341] 18 U.S.C. 3282.

[1342] 18 U.S.C. 3281 (capital offenses); 18 U.S.C. 3286(b)(prosecution of any of the offenses listed in 18 U.S.C. 2332b(g)(5)(B) whose commission created a foreseeable risk of serious injury or resulted in such injury). Section 2332b(g)(5)(B) lists more than 40 federal criminal offenses including crimes such as violence in international airports (18 U.S.C. 37), assassination of the President (18 U.S.C. 1751), providing material support to terrorist organizations (18 U.S.C. 2339B).

[1343] 18 U.S.C. 3286(a)(violation of an offense listed in 18 U.S.C. 2332b(g)(5)(B) whose commission does not create a foreseeable risk of serious injury or result in such injury).

[1344] 18 U.S.C. 3290. Most courts construe section 3290 to require flight with an intent to avoid prosecution or a departure from the place where the offense occurred with the knowledge that an investigation is pending or being conducted, United States v. Florez, 447 F.3d 145, 150-52 (2d Cir. 2006)(citing authority in accord). Thus, a suspect in the case of an federal extraterritorial offense is not likely to be considered a fugitive if he simply remains in the country were of the offense was committed.

otherwise have expired and for no more than three years in other instances.[1345] The suspension period begins with the filing of the request for foreign assistance and ends with final action by the foreign government upon the request.[1346] Because of the built-in time limits, the government need not show that it acted diligently in its attempts to gather overseas evidence.[1347] The circuits are divided over whether the section may be used to revive a statute of limitations by filing a request after the statute has run,[1348] and over whether the section can be used to extend the statute of limitations with respect to evidence that the government has already received at the time it filed the request.[1349] At least one circuit has held that the statutory reference to "the district court before which a grand jury is impaneled to investigate the offense" is intended to identify the court that may issue the suspension order and does not limit the statute to requests filed in aid of a pending grand jury investigation.[1350]

Extradition

Extradition is perhaps the oldest form of international law enforcement assistance. It is a creature of treaty by which one country surrenders a fugitive to another for prosecution or service of sentence.[1351] The United States has bilateral extradition treaties with roughly two-thirds of the nations of the world.[1352] Treaties negotiated before 1960 and still in effect reflect the view then held by the United States and other common law countries that criminal jurisdiction was territorial and consequently extradition could not be had for extraterritorial

---

[1345] 18 U.S.C. 3292(c)("The total of all periods of suspension under this section with respect to an offense – (1) shall not exceed three years; and (2) shall not extend a period within which a criminal case must be initiated for more than six months if all foreign authorities take final action before such period would expire without regard to this section"); United States v. Baldwin, 414 F.3d 791, 795 (7th Cir. 2005); United States v. Grenoble, 413 F.3d 569, 574-75 (6th Cir. 2005).

[1348] An application for suspension must be filed before the statute has run, United States v. Brody, 621 F.Supp.2d 1196, 1199-1200 (D.Utah 2009); United States v. Kozeny, 541 F.3d 166, 170-71 (2d Cir. 2008), citing to the contrary United States v. Bischel, 61 F.3d 1429 (9th Cir. 1995).

[1349] United States v. Atiyeh, 402 F.3d 354, 362-66 (3d Cir. 2005)(holding that the statute of limitations may not be suspended under section 3292 when the request for foreign assistance is submitted after the evidence has in fact been received); contra, United States v. Miller, 830 F.2d 1073, 1076 (9th Cir. 1987); United States v. DeGeorge, 380 F.3d 1203, 1213 (9th Cir. 2004).

[1350] United States v. DeGeorge, 380 F.3d 1203, 1214 (9th Cir. 2004).

[1351] See generally, CRS Report 98-958, Extradition To and From the United States: Overview of the Law and Recent Treaties, by Charles Doyle.

[1352] 18 U.S.C. 3181 note (list the countries with whom we have extradition treaties).

crimes.[1353] Subsequently negotiated agreements either require extradition regardless of where the offense occurs,[1354] permit extradition regardless of where the offense occurs,[1355] or require extradition where the extraterritorial laws of the two nations are compatible.[1356]

More recent extradition treaties address other traditional features of the nation's earlier agreements that complicate extradition, most notable the nationality exception, the political offense exception, and the practice of limiting extradition to a list of specifically designated offenses.

Federal crimes committed within other countries are more likely to be the work of foreign nationals than is otherwise the case. Yet, the "most common type of treaty provision provides that neither of the contracting parties shall be bound to deliver up its own citizens or subjects."[1357] Most treaties negotiated of late, however, contain either an article declaring that extradition may not be denied on the basis of nationality[1358] or one declaring that if extradition is denied on the basis of nationality the case must be referred to local authorities for prosecution.[1359]

[1353] Abbell, EXTRADITION TO AND FROM THE UNITED STATES, §§3-2(5), 6-2(5) (2004 & 2007 Supp.).

[1354] E.g., Extradition Treaty, U.S.-Jordan, Art.2(4), S.Treaty Doc. 104-3 ("An offense described in this Article shall be an extraditable offense regardless of where the act or acts constituting the offense were committed"); Extradition Treaty, U.S.-Austria, Art.2(6), S.Treaty Doc. 105-50; Extradition Treaty, U.S.-Lux., Art.2(1), S.Treaty Doc. 105-10.

[1355] Extradition Treaty, U.S.-Hung., Art.2(4), S.Treaty Doc. 104-5 ("If the offense has been committed outside the territory of the Requesting State, extradition shall be granted if the laws of the Requested State provide for the punishment of an offense committed outside of its territory in similar circumstances. If the laws of the Requested State do not so provide, the executive authority of the Requested State may, in its discretion grant extradition"); Extradition Treaty, U.S.-Bah., Art.2(4), S.Treaty Doc. 102-17.

[1356] Extradition Treaty, U.S.-Fr., Art.2(4), S.Treaty Doc. 105-13 ("Extradition shall be granted for an extraditable offense committed outside the territory of the Requesting State, when the laws of the Requested State authorize the prosecution or provide the punishment for that offense in similar circumstances").

[1357] Bassiouni, INTERNATIONAL EXTRADITION: UNITED STATES LAW AND PRACTICE 683 (4th ed. 2002).

[1358] E.g., Extradition Treaty, U.S.-Peru, Art. III, S.Treaty Doc. 107-6 ("Extradition shall not be refused on the ground that the person sought is a national of the Requested State"); Extradition Treaty, U.S.-Belize, Art. 3, S.Treaty Doc. 10638; Extradition Treaty, U.S.-Para., Art. III, S.Treaty Doc. 106-4.

[1359] Extradition Treaty, U.S.-Kor., Art. 3, S.Treaty Doc. 106-2 ("1. Neither Contracting State shall be bound to extradite its own nationals, but the Requested State shall have the power to extradite such person if, in its discretion, it be deemed proper to do so. 2. If extradition is refused solely on

"The political offense exception is now a standard clause in almost all extradition treaties of the world."[1360] Originally designed to protect unsuccessful insurgents in flight,[1361] it is often construed to include both the purely political offense such as treason and sedition and related political offenses such as an act of violence committed during the course of, and in furtherance of, a political upheaval.[1362] The exception is somewhat at odds with contemporary desires to prevent, prosecute, and punish acts of terrorism. Consequently, treaties forged over the last several years frequently include some form of limitation on the exception, often accompanied by a discretionary right to refuse politically or otherwise discriminatorily motivated extradition requests.[1363]

---

the basis of the nationality of the person sought, the Requested State shall, at the request of the Requesting State, submit the case to its authorities for prosecution. 3. Nationality shall be determined at the time of the commission of the offense for which extradition is requested"); Extradition Treaty, U.S.-Pol., Art. 4, S.Treaty Doc. 105-14; Extradition Treaty, U.S.-Fr., Art. 3, S.Treaty Doc. 105-13.

[1360] Bassiouni, INTERNATIONAL EXTRADITION: UNITED STATES LAW AND PRACTICE 595 (4th ed. 2002).

[1361] Quinn v. Robinson, 783 F.2d 776, 792-93 (9th Cir. 1986)("The political offense exception is premised on a number of justifications. First, its historical development suggests that it is grounded on the belief that individuals have a right to resort to political activism to foster political change. This justification is consistent with the modern consensus that political crimes have greater legitimacy than common crimes. Second, the exception reflects a concern that individuals – particularly unsuccessful rebels – should not be returned to countries where they may be subjected to unfair trials and punishments because of their political opinions. Third, the exception comports with the notion that governments – and certainly their non-political branches – should not intervene in the internal political struggles of other nations").

[1362] Bassiouni, INTERNATIONAL EXTRADITION: UNITED STATES LAW AND PRACTICE 594-673 (4th ed. 2002).

[1363] E.g., Extradition Treaty, U.S.-S.Afr., Art. 4, S.Treaty Doc. 106-24 ("1. Extradition shall not be granted if the offense for which extradition is requested is a political offence. 2. For the purpose of this Treaty, the following offenses shall not be considered political offenses: (a) a murder or other violent crime against a Head of State or Deputy Head of State of the Requesting or Requested State, or against a member of such person's family; (b) an offence for which both the Requesting and Requested States have the obligation pursuant to a multilateral international agreement to extradite the person sought or to submit the case to their respective competent authorities for decision as to prosecution; (c) murder; (d) an offense involving kidnaping, abduction, or any form of unlawful detention, including the taking of a hostage; and (e) attempting or conspiring to commit, aiding, abetting, inducing, counseling or procuring the commission of, or being an accessory before or after the fact of such offences. 3. Notwithstanding the terms of sub-article 2, extradition shall not be granted if the executive authority of the Requested State determines that there are substantial grounds for believing that the request has been made for the purpose of prosecuting or punishing a person on account of that person's gender, race, religion, nationality, or political opinion"); Extradition Treaty, U.S.-Pol., Art. 5, S.Treaty Doc. 105-14 (motivation clause is limited to politically motivated); Extradition Treaty, U.S.-Sri Lanka, Art. 4, S.Treaty Doc. 106-34 (only Heads of State clause, clauses identifying particular international obligations, and a

Current U.S. extradition treaties signed prior to the 1980's list specific crimes to which the treaty is limited.[1364] In the nation's first extradition treaty the list was limited to murder and forgery;[1365] towards the end of the twentieth century the standard lists had grown to close to or more than thirty crimes.[1366] Treaties agreed to more recently opt for a generic description.[1367]

As an alternative to extradition, particularly if the suspect is not a citizen of the country of refuge, foreign authorities may be willing to expel or deport him under circumstances that allow the United States to take him into custody.[1368] In the absence of a specific treaty provision, the fact that the defendant was abducted overseas and brought to the United States for trial rather than pursuant to a request under the applicable extradition treaty does not deprive the federal court of jurisdiction to try him.[1369]

---

conspiracy-attempt-accessory clause)(motivation clause is limited to politically motivated requests).

Valot, 625 F.2d 308, 309 (9th Cir. 1980)(Thai immigration authorities handed the defendant over to DEA agents in the Bangkok airport who flew him to the United States "over his protest").

[1369] United States v. Alvarez-Machain, 504 U.S. 655, 669-70 (1992)(portions of the footnote 16 of the Court's opinion in brackets)("Mexico has protested the abduction of respondent through diplomatic notes, and the decision of whether respondent should be returned to Mexico, as a matter outside of the Treaty, is a matter for the Executive Branch. [The Mexican Government has also requested from the United States the extradition of two individuals it suspects of having abducted respondent in Mexico on charges of kidnaping. . . .] . . .The fact of respondent's forcible abduction does not therefore prohibit his trial in a court in the United States for violations of the

Venue

Federal crimes committed within the United States must be tried where they occur.[1370] Venue over extraterritorial crimes is a matter of statute, 18 U.S.C. 3238. Section 3238 permits the trial of extraterritorial crimes either (1) in the district into which the offender is "first brought" or in which he is arrested for the offense; or (2) prior to that time, by indictment or information in the district of the offender's last known residence, or if none is known, in the District of Columbia.[1371] The phrase "first brought" as used in section 3238 means "first brought while in custody."[1372] As the language of the section suggests, venue for all joint offenders is proper wherever venue for one of their number is proper.[1373]

Testimony of Overseas Witnesses

A federal court may subpoena a United States resident or national found abroad to appear before it or the grand jury.[1374] Federal courts ordinarily have no

criminal laws of the United States"); see also, United States v. Mejia, 448 F.3d 436, 442-43 (D.C.Cir. 2006); United States v. Arbane, 446 F.3d 1223, 1225 (11th Cir. 2006); United States v. Best, 304 F.3d 308, 311-16 (3d Cir. 2002); Kasi v. Angelone, 300 F.3d 487, 493-98 (4th Cir. 2002); United States v. Torres Gonzalez, 240 F.3d 14, 16 (1st Cir. 2001).

[1370] U.S. Const. Art. III, §2, cl.3; Amend.VI.

[1371] "The trial of all offenses begun or committed upon the high seas, or elsewhere out of the jurisdiction of any particular State or district, shall be in the district in which the offender, or any one of two or more joint offenders, is arrested or is first brought; but if such offender or offenders are not so arrested or brought into any district, an indictment or information may be filed in the district of the last known residence of the offender or of any one of two or more joint offenders, or if no such residence is known the indictment or information may be filed in the District of Columbia," 18 U.S.C. 3238. United States v. Hisin-Yung, 97 F.Supp.2d 24, 28 (D.C.Cir. 2000)("The two clauses provide alternative proper venues. Therefore, if the latter provision is relied on, and defendant is indicted before he is brought into the United States, he may be tried in the district in which he was indicted regardless of whether it is the district in which he is first brought into the United States"); see also, United States v. Gurr, 471 F.3d 144, 155 (D.C. Cir. 2007); United States v. Hilger, 867 F.2d 566, 568 (9th Cir. 1989); United States v. Fraser, 709 F.2d 1556, 1558 (6th Cir. 1983); United States v. McRary, 616 F.2d 181, 185 (5th Cir. 1980).

[1372] United States v. Feng, 277 F.3d 1151, 1155 (9th Cir. 2002)("The word 'brought' under the statute means first brought into a jurisdiction from outside the United States jurisdiction while in custody"); United States v. Catino, 735 F.2d 718, 724 (2d Cir. 1984).

[1373] 18 U.S.C. 3238 (". . . or any one of two or more joint offenders. . .". United States v. Stickle, 454 F.3d 1265, 1272273 (11th Cir. 2006); United States v. Yousef, 327 F.3d. 56, 115 (2d Cir. 2003).

[1374] 28 U.S.C. 1783 ("A court of the United States may order the issuance of a subpoena requiring the appearance as a witness before it, or before a person or body designated by it, of a national or

authority to subpoena foreign nationals located in a foreign country.[1375] Mutual legal assistance treaties and similar agreements generally contain provisions to facilitate a transfer of custody for foreign witnesses who are imprisoned overseas[1376] and in other instances to elicit assistance to encourage foreign nationals to come to this country and testify voluntarily.[1377]

---

resident of the United States who is in a foreign country, or requiring the production of a specified document or other thing by him, if the court finds that particular testimony or the production of the document or other thing by him is necessary in the interest of justice, and, in other than a criminal action or proceeding, if the court finds, in addition, that it is not possible to obtain his testimony in admissible form without his personal appearance or to obtain the production of the document or other thing in any other manner"); Blackmer v. United States, 284 U.S. 421, 436-38 (1932).

[1375] United States v. Abu Ali, 528 F.3d 210, 239 (4th Cir. 2008); United States v. Yates, 345 F.3d 1280, 1283 (11th Cir. 2003); United States v. Olafson, 213 F.3d 435, 441 (9th Cir. 2000); United States v. Groos, 616 F.Supp.2d 777, 791 (N.D.Ill. 2008); United States v. Ozsusamlar, 428 F.Supp.2d 161, 177 (S.D.N.Y. 2006); cf., United States v. Liner, 435 F.3d 920, 924 (8th Cir. 2006). Cases where the witness is in federal custody overseas may prove an exception to the rule, but they may also come with their own special complications, see e.g., United States v. Moussaoui, 382 F.3d 453 (4th Cir. 2004)(foreign nationals held in military custody overseas whom the government, in the interest of national security, declined to make available for depositions or to appear as witnesses in a criminal trial).

[1376] E.g., Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Leich., Art. 11, S.Treaty Doc. 107-16 ("1. A person in the custody of the Requested State whose presence outside of the Requested State is sought for purposes of assistance under this Treaty shall be transferred form the Requested State for that purpose if the person consents and if the Central Authorities of both States agree. . . 3. For purposes of this Article: a) the receiving State shall have the authority and the obligation to keep the person transferred in custody unless otherwise authorized by the sending State; b) the receiving State shall return the person transferred to the custody of the sending State as soon as circumstances permit or as otherwise agreed by both Central Authorities; c) the receiving state shall not require the sending State to initiate extradition proceedings for the return of the person transferred; d) the person transferred shall receive credit for service of the sentence imposed in the sending State for time served in the custody of the receiving State; and e) where the receiving State is a third State the Requesting State shall be responsible for all arrangements necessary to meet the requirements of this paragraph"); see also, Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Ukr., Art. 11, S.Treaty Doc. 106-16; Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Fr., Art. 18, S.Treaty Doc. 10617; Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Greece, Art. 11, S.Treaty Doc. 106-18.

[1377] E.g., Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Belize, Art. 10, S.Treaty Doc. 106-19 ("1. When the Requesting State requests the appearance of a person in that State, the Requested State shall invite the person to appear before the appropriate authority in the Requesting State. The Requesting State shall indicate the extent to which the expenses will be paid. The Central Authority of the Requested State shall promptly inform the Central Authority of the Requesting State of the response of the person. 2. The Central Authority of the Requesting state shall inform the Central Authority of the requested State whether a decision has been made by the competent authorities of the Requesting State that a person appearing in the Requesting State pursuant to this article shall not be subject to service of process, or be detained or subject to any restriction of personal liberty, by reason of any acts or convictions which preceded his departure from the Requested State"); see also, Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Liech., Art. 10, S.Treaty Doc. 107-16 (person may not be served or detained except as stated in the request); Treaty on Mutual Legal Assistance in Criminal Matters, U.S.-Venez.,

Unable to secure the presence of overseas witnesses, federal courts may authorize depositions to be taken abroad, under "exceptional circumstances and in the interests of justice"[1378] under even more limited circumstances, they may admit such depositions into evidence in a criminal trial.

Originally, only a defendant might request that depositions be taken under Rule 15 of the Federal Rules of Criminal Procedure, [1379] but they have been available to prosecutors since the 1970s.[1380] The Rule offers depositions as an alternative to long term incarceration of material witnesses.[1381] Otherwise, depositions may be ordered only under exceptional circumstances. Some courts have said that to "establish exceptional circumstances the moving party must show the witness's unavailability and the materiality of the witness's testimony."[1382] Others would add to these that "the testimony is necessary to prevent a failure of justice" or additional considerations.[1383] In any event, once a deposition has been taken the impediments to its use at trial, especially by the prosecution, are much more formidable.

Arts. X, S.Treaty Doc. 105-38. When a witness is found in a country with whom the United Statesd has no such treaty, officials have used U.S. immigration parole authority in an effort to accomplish the same results, see e.g., Wang v. Reno, 81 F.3d 808, 811-12 (9th Cir. 1996).

[1378] F.R.Crim.P. 15(a)(1)("A party may move that a prospective witness be deposed in order to preserve testimony for trial. The court may grant the motion because of exceptional circumstances and in the interest of justice. If the court orders the deposition to be taken, it may also require the deponent to produce at the deposition any designated material that is not privileged, including any book, paper, document, record, recording, or data").

[1379] F.R.Crim.P. 15(a), 18 U.S.C.App. (1964 ed.). For a history of the evolution of Rule 15 see, 2 WRIGHT, FEDERAL PRACTICE AND PROCEDURE §251 (Crim. 3d 2000).

[1380] F.R.Crim.P. 15(a), 18 U.S.C.App. (1976 ed.); see also 18 U.S.C. 3503 (1970 ed.).

[1381] "A witness who is detained under 18 U.S.C. § 3144 may request to be deposed by filing a written motion and giving notice to the parties. The court may then order that the deposition be taken and may discharge the witness after the witness has signed under oath the deposition transcript," F.R.Crim.P. 15(a)(2).

[1382] United States v. Liner, 435 F.3d 920, 924 (8th Cir. 2006); see also, United States v. Kelley, 36 F.3d 1118, 1125 (D.C. Cir. 1994)(identifying the two as "critical factors"); United States v. Jefferson, 594 F.Supp.2d 655, 664 (E.D.Va. 2009).

[1383] United States v. Cohen, 260 F.3d 68, 78 (2d Cir. 2001); see also, United States v. Ruiz-Castro, 92 F.3d 1519, 1533 (10th Cir. 1996)(identifying the three factors as among those a court should consider before authorizing depositions); United States v. Thomas, 62 F.3d 1332, 1341 (11th Cir. 1995)(listing consideration of unavailability, materiality, and "countervailing factors [that] would make the deposition unjust to the nonmoving party"); United States v. Aggarwal, 17 F.3d 737, 742 (5th Cir. 1994)(denial of the motion may be based entirely upon the fact it is untimely); United States v. Jefferson, 594 F.Supp.2d at 664-65 (failure of justice and all the circumstances).

"Compliance with Rule 15 is a necessary but not sufficient condition for use of a deposition at trial."[1384] Admissibility at trial requires compliance with Rule 15, the Federal Rules of Evidence, and the Constitution's confrontation clause. As general matter, depositions are to be taken in the same manner as depositions in civil cases.[1385] Moreover, the Rule requires that the defendant be afforded an opportunity to attend depositions taken at the government's request.[1386] The requirement reflects the demands of the Constitution's confrontation clause: "In all criminal prosecutions, the accused shall enjoy the right . . . to be confronted with the witnesses against him," U.S. Const. Amend. VI. The right embodies not only the prerogative of a literal face to face confrontation, but also the right to cross examine and to have the witness's testimonial demeanor exposed to the jury.[1387]

[1384] United States v. McKeeve, 131 F.3d 1, 8 (1st Cir. 1997).

[1385] "(e) Unless these rules or a court order provides otherwise, a deposition must be taken and filed in the same manner as a deposition in a civil action, except that (1) A defendant may not be deposed without that defendant's consent. (2) The scope and manner of the deposition examination and cross-examination must be the same as would be allowed during trial. (3) The government must provide to the defendant or the defendant's attorney, for use at the deposition, any statement of the deponent in the government's possession to which the defendant would be entitled at trial.

"(f) A party may use all or part of a deposition as provided by the Federal Rules of Evidence.

"(g) A party objecting to deposition testimony or evidence must state the grounds for the objection during the deposition, F.R.Crim.P. 15(e),(f),(g)(captions omitted).

[1386] "(1) The officer who has custody of the defendant must produce the defendant at the deposition and keep the defendant in the witness's presence during the examination, unless the defendant: (A) waives in writing the right to be present; or (B) persists in disruptive conduct justifying exclusion after being warned by the court that disruptive conduct will result in the defendant's exclusion. (2) A defendant who is not in custody has the right upon request to be present at the deposition, subject to any conditions imposed by the court. If the government tenders the defendant's expenses as provided in Rule 15(d) but the defendant still fails to appear, the defendant – absent good cause – waives both the right to appear and any objection to the taking and use of the deposition based on that right," F.R.Crim.P. 15(c)(captions omitted).

"If the deposition was requested by the government, the court may – or if the defendant is unable to bear the deposition expenses, the court must – order the government to pay: (1) any reasonable travel and subsistence expenses of the defendant and the defendant's attorney to attend the deposition; and (2) the costs of the deposition transcript,"F.R.Crim.P. 15(d)(captions omitted).

[1387] Barber v. Page, 390 U.S. 719, 725 (1968)("The right to confrontation is basically a trial right. It includes both the opportunity to cross-examine and the occasion for the jury to weigh the demeanor of the witness").

In the case of depositions taken overseas, the courts have observed that the right to confrontation is not absolute.[1388] When a deposition is taken abroad, the courts prefer that the defendant be present,[1389] that his counsel be allowed to cross-examine the witness,[1390] that the deposition be taken under oath,[1391] that a verbatim transcript be taken, and that the deposition be captured on videotape;[1392] but they have permitted depositions to be admitted into evidence at

---

[1388] United States v. McKeeve, 131 U.S. 1, 8 (1st Cir. 1997); United States v. Medjuck, 156 F.3d 916, 920 (9th Cir. 1998); United States v. Abu Ali, 528 F.3d 210, 240 (4th Cir. 2008).

[1389] United States v. McKeeve, 131 U.S. 1, 8 (1st Cir. 1997)("the confrontation clause requires, at a minimum, that the government undertake diligent efforts to facilitate the defendant's presence. We caution, however, that although such efforts must be undertaken in good faith, they need not be heroic); United States v. Kelly, 892 F.2d 255, 262 (3d Cir. 1989); United States v. Salim, 855 F.2d 944, 950 (2d Cir. 1988).

[1390] United States v. Johnpoll, 739 F.2d 702, 710 (2d Cir. 1984)("The confrontation clause does not preclude admission of prior testimony of an unavailable witness, provided his unavailability is shown and the defendant had an opportunity to cross-examine. In the present case, Johnpoll had the full opportunity, at government expense, with his attorney to confront and cross-examine the Swiss witness, which he waived when he and his attorney decided not to attend the taking of the depositions").

[1391] United States v. Sines, 761 F.2d 1434, 1441 (9th Cir. 1985)("The Supreme Court has identified the major purposes of the confrontation clause as: (1) ensuring that witnesses will testify under oath; (2) forcing witnesses to undergo cross-examination; and (3) permitting the jury to observe the demeanor of witnesses. All three of these purposes were fulfilled when Steneman's videotaped deposition was taken [in Thailand] with Sine's attorney present").

[1392] United States v. Medjuck, 156 F.3d 916, 920 (9th Cir. 1998)("When the government is unable to secure a witness's presence at trial, Rule 15 is not violated by admission of videotaped testimony so long as the government makes diligent efforts to secure the defendant's physical presence at the deposition, and failing this, employs procedures that are adequate to allow the defendant to take an active role in the deposition proceedings. . . The government was unable to secure Medjuck's presence at the Canadian depositions because there was no mechanism in place to allow United States officials to transfer Medjuck to Canadian authorities. . . and secure his return to the United States in a timely fashion after the depositions. Finally, the government set up an elaborate system to allow Medjuck to witness the depositions live by video feed and to participate with his attorneys by private telephone connection during the depositions taken in Canada. . . .[A]n exception to the confrontation requirements] has been recognized for admission of deposition testimony where a witness is unavailable to testify at trial . . . First, the deposition testimony must fall within an established exception to the hearsay rule. Second the deposition must be taken in compliance with law. Finally, the defendant must have had an opportunity to cross-examine the deposed witness "); United States v. Kelly, 892 F.2d 255, 260-62 (3d Cir. 1980); United States v. Walker, 1 F.3d 423, 429 (6th Cir. 1993); United States v. Mueller, 74 F.3d 1152, 1156-157 (11th Cir. 1996); see also, United States v. Salim, 855 F.2d 944, 950 (2d Cir. 1988)("In the context of the taking of a foreign deposition, we believe that so long as the prosecution makes diligent efforts . . . to attempt to secure the defendant's presence, preferably in person, but if necessary via some form of live broadcast, the refusal of the host government to permit the defendant to be present should not preclude the district court from ordering that the witness' testimony be preserved anyway. However, the district court should satisfy itself that defense counsel will be given an opportunity to cross-examine the witness in order to fulfill the

subsequent criminal trials in this country, notwithstanding the fact that one or more of these optimal conditions are not present.[1393] In some of those nations whose laws might not otherwise require or even permit depositions under conditions considered preferable under U.S. law, a treaty provision addresses the issue.[1394]

The Federal Rules of Evidence govern the admissibility of evidence in federal criminal trials. A deposition taken overseas that has survived Rule 15 and confrontation clause scrutiny is likely to be found admissible. The hearsay rule, Rule 802 which reflects the law's preference for evidence that is exposed to the adversarial process, poses the most obvious obstacle.[1395] The Rules, however, provide an explicit exception for depositions,[1396] one that has been applied to depositions taken overseas under the authority of Rule 15.[1397]

---

mandate of Rule 15(b) to ensure a likelihood that the deposition will not violate the confrontation clause").

[1393] United States v. Sturman, 951 F.2d 1466, 1480-481(6th Cir. 1992)("Swiss law forbids verbatim transcription so the summary method of establishing the record was the most effective legal method. All defense questions, with just one exception, were submitted to the witnesses so that objections and determinations on admissibility could be litigated later. Although the witnesses were not given an oath, defense conceded that each witness was told the penalties for giving false testimony. . . Depositions taken in foreign countries cannot at all times completely emulate the United States methods of obtaining testimony. Here all steps were taken to ensure the defendants' rights while respecting the legal rules established in a different country").

[1394] E.g., Treaty on Mutual Legal Assistance on Criminal Matters, U.S.-Fr., Art. 9(2), S.Treaty Doc. 106-17 ("The procedures specified in this paragraph and outlined in the request shall be carried out insofar as they are not contrary to the fundamental principles of a judicial proceeding in the Requested State. The Requested State, if the Requesting State requests, shall: (a) take the testimony of witnesses or experts under oath . . .; (b) allow a confrontation between a defendant, together with counsel, and a witness or expert whose testimony or evidence is taken for use against the defendant in a criminal prosecution in the Requesting State; (c) ask questions submitted by the Requesting State, including questions proposed by authorities of the Requesting State present at the execution of the request; (d) record or allow to be recorded the testimony, questioning, or confrontation; and (e) produce or allow to be produced a verbatim transcript of the proceeding in which the testimony, questioning, or confrontation occurs").

[1395] "Hearsay is not admissible except as provided by these rules and by other rules prescribed by the Supreme Court pursuant to statutory authority or by Act of Congress," F.R.Evid. Rule 802. "'Hearsay' is a statement, other than one made by the declarant while testifying at the trial or hearing, offered in evidence to prove the truth of the matter asserted," F.R.Evid. Rule 801(c).

[1396] "The following are not excluded by the hearsay rule if the declarant is unavailable as a witness: (1) Testimony given as a witness . . . in a deposition taken in compliance with law in the course of the same or another proceeding, if the party against whom the testimony is now offered. . . had an opportunity and similar motive to develop the testimony by direct, cross, or redirect examination," F.R.Evid. Rule 804(b)(2).

[1397] United States v. Medjuck, 156 F.3d 916, 921 (9th Cir. 1998); United States v. McKeeve, 131 F.3d 1, 10 (1st Cir. 1997); United States v. Kelly, 892 F.2d 255, 261-62 (3d Cir. 1990).

Yet the question of admissibility of overseas depositions rests ultimately upon whether the confrontation clause demands can be satisfied. The cases thus far have relied upon the Supreme Court's decisions either in Ohio v. Roberts[1398] or in Maryland v. Craig.[1399] Faced with the question of whether trial witnesses might testify remotely via a two-way video conference, Craig held that he confrontation clause's requirement of physical face-to-face confrontation between witness and defendant at trial can be excused under limited circumstances in light of "considerations of public policy and necessities of the case."[1400] Roberts dealt with the question of whether the admission of hearsay evidence violated the confrontation clause, and declared that as long as the hearsay evidence came within a "firmly rooted hearsay exception" its admission into evidence in a criminal trial constituted no breach of the clause.[1401]

More recent decisions might be thought to call into question any continued reliance on Roberts and Craig. At a minimum, the Supreme Court's Crawford v. Washington opinion repudiates the suggestion that Roberts permits anything less than actual confrontation in the case of "testimonial" hearsay, e.g., a formal statement to a government official, such as an affidavit or other pretrial statement.[1402] At least one appellate panel has concluded that the prosecution's need for critical evidence does not alone supply the kind of public policy considerations necessary to qualify for a Craig exception;[1403] but another has held that national security interests may suffice.[1404]

Since the pre-Crawford cases required a good faith effort to assure the defendant's attendance at overseas depositions, it might be argued that Crawford requires no adjustment in the area's jurisprudence. Moreover, the Eleventh Circuit en banc Craig analysis implied that it thought the use of overseas

[1399] United States v. Medjuck, 156 F.3d 916, 920-21 (9th Cir. 1998).

[1400] 497 U.S. 836, 848 (1990).

[1401] 448 U.S. 56, 66 (1980).

[1402] 541 U.S. 36, 68 (2004) ("Where nontestimonial hearsay is at issue, it is wholly consistent with the Framers' design to afford the states flexibility in their development of hearsay law – as does Roberts, and as would an approach that exempted such statements from confrontation clause scrutiny altogether. Where testimonial evidence is at issue, however, the Sixth Amendment demands what the common law required: unavailability and a prior opportunity for cross-examination").

[1403] United States v. Yates, 438 F.3d 1307, 1316 (11th Cir. 2006).

[1404] United States v. Abu Ali, 528 F.3d 210, 240-42 (4th Cir. 2008).

depositions at trial more compatible with the confrontation clause than the use of video trial testimony.[1405] In addition, the Fourth Circuit rejected a confrontation clause challenge where the circumstances satisfied the dual demands for a Craig exception: (1) denial of a face to face confrontation made necessary by important policy considerations, and (2) assurance of reliability in the form of an "oath, cross-examination, and observation of the witness' demeanor."[1406]

Admissibility of Foreign Documents

There is a statutory procedure designed to ease the evidentiary admission of foreign business records in federal courts, 18 U.S.C. 3505.[1407] The section covers "foreign record[s] of regularly conducted activity" in virtually any form, i.e., any "memorandum, report, record, or data compilation, in any form, of acts, events, conditions, opinions, or diagnoses, maintained in a foreign country," 18 U.S.C. 3505(c)(1). It exempts qualified business records from the operation of the hearsay rule in federal criminal proceedings[1408] and permits their authentication upon foreign certification.[1409] Finally, it establishes a procedure under which the

---

[1405] United States v. Yates, 438 F.3d 1307, 1316 (11th Cir. 2006) (emphasis added) ("The government's interest in presenting the fact-finding with crucial evidence is, of course, an important public policy. We hold , however, that, under the circumstances of this case (which include the availability of a Rule 15 deposition) , the prosecutor's need for the video conference testimony to make a case and to expeditiously resolve it are not the type of public policies that are important enough to outweigh the defendants' rights to confront their accusers face-to-face").

[1406] United States v. Abu Ali, 528 F.3d at 240-42. The Fourth Circuit distinguished Yates on the grounds that there the lower court had not considered alternative procedures under which face to face confrontation might have been possible and that there the crimes of conviction were different in kind and degree ("Whatever the merits in Yates, the defendants there were charged with mail fraud, conspiracy to commit money laundering, and drug-related offenses, crimes different in both kind and degree from those implicating the national security interests here [(conspiracy commit terrorist attacks on the United States)]," id. at 242 n.12.

[1407] "Under §3505, a foreign certification serves to authenticate the foreign records, and thus dispenses with the necessity of calling a live witness to establish authentication," United States v. Hagege, 437 F.3d 943, 957 (9th Cir. 2006).

[1408] "In a criminal proceeding in a court of the United States, a foreign record of regularly conducted activity, or a copy of such record, shall not be excluded as evidence by the hearsay rule if a foreign certification attests that – (A) such record was made, at or near the time of the occurrence of the matters set forth, by (or from information transmitted by) a person with knowledge of those matters; (B) such record was kept in the course of a regularly conducted business activity; (C) the business activity made such a record as a regular practice; and (D) if such record is not the original, such record is a duplicate of the original [–] unless the source of information or the method or circumstances of preparation indicate [a] lack of trustworthiness," 18 U.S.C. 3505(a)(1).

[1409] "A foreign certification under this section shall authenticate such record or duplicate," 18 U.S.C. 3505(a)(2). "Foreign certification" is "a written declaration made and signed in a foreign country by the custodian of a foreign record of regularly conducted activity or another qualified

reliability of the documents can be challenged in conjunction with other pre-trial motions.[1410] While the prosecution's failure to provide timely notice of its intent to rely upon section 3505 does not necessarily bar admission,[1411] its failure to supply a foreign certification of authenticity precludes admission under the section.[1412]

Early appellate decisions upheld section 3505 in the face of confrontation clause challenges, as in the case of depositions drawing support from Ohio v. Roberts.[1413] As noted above, Crawford cast doubt upon the continued vitality of the Roberts rule (hearsay poses no confrontation problems as long as it falls within a "firmly rooted hearsay exception") when it held that only actual confrontation will suffice in the case of "testimonial" hearsay.[1414] Although it left for another day a more complete definition of testimonial hearsay, Crawford did note in passing that "[m]ost of the hearsay exceptions covered statements that by their nature were not testimonial – for example business records."[1415] At least one later appellate panel has rejected a confrontation clause challenge to section 3505 on the basis of this distinction.[1416]

---

person that, if falsely made, would subject the maker to criminal penalty under the laws of that country," 18 U.S.C. 3505(c)(2).

[1410] "At the arraignment or as soon after the arraignment as practicable, a party intending to offer in evidence under this section a foreign record of regularly conducted activity shall provide written notice of that intention to each other party. A motion opposing admission in evidence of such record shall be made by the opposing party and determined by the court before trial. Failure by a party to file such motion before trial shall constitute a waiver of objection to such record or duplicate, but the court for cause shown may grant relief from the waiver," 18 U.S.C. 3505(b).

[1411] United States v. Newell, 239 F.3d 917, 921 (7th Cir. 2001); United States v. Garcia Abrego, 141 F.3d 142, 176-78 (5th Cir. 1998). The court expressed "no opinion as to whether a showing of prejudice resulting from untimely notice of an intent to offer foreign records could eliminate §3505 as a potential pathway for admissibility of foreign business records," 141 F.3d at 178 n. 26.

[1412] United States v. Doyle, 130 F.3d 523, 546 (2d Cir. 1997).

[1414] 541 U.S. 36, 68 (2004) ("Where nontestimonial hearsay is at issue, it is wholly consistent with the Framers' design to afford the states flexibility in their development of hearsay law – as does Roberts, and as would an approach that exempted such statements from confrontation clause scrutiny altogether. Where testimonial evidence is at issue, however, the Sixth Amendment demands what the common law required: unavailability and a prior opportunity for cross-examination").

[1415] 541 U.S. at 56.

[1416] United States v. Hagege, 437 F.3d 943, 957-58 (9th Cir. 2006); accord United States v. Qualls, 553 F.Supp.2d 241, 244-45 (E.D.N.Y. 2008).

Conclusion

The Constitution grants Congress broad powers to enact laws of extraterritorial scope and imposes few limitations on the exercise of that power. The states enjoy only residual authority, but they too may and have enacted criminal laws which apply beyond the territorial confines of the United States. Prosecutions are relatively few, however, perhaps because of the practical, legal, and diplomatic obstacles that may attend such an endeavor.

Treaty-Related

18 U.S.C. 32(b)
Offenses:
- violence aboard a foreign civil aircraft (likely to endanger the safety of the aircraft) while in flight;
- destruction of or incapacitating or endangering damage to foreign civil aircraft;
- placing a bomb aboard a foreign civil aircraft; or
- attempting or conspiring to do so

Jurisdictional factors:
- a United States national was on board;
- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 37

Offenses:

- violence causing or likely to cause serious bodily injury or death at an international airport;
- destruction of or serious damage to aircraft or facilities at an international airport; or
- attempting or conspiring to do so

Jurisdictional factors:

- a victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 112

Offenses:

- assaulting an internationally protected person;
- threatening an internationally protected person; or
- attempting to threaten an internationally protected person

Jurisdictional factors:

- the victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 175

Offenses:

- develop, produce, stockpile, transfer, acquire, retain, or possess biological weapons or delivery systems, misuse of biological weapons;
- assisting a foreign power to do so; or
- attempting, threatening or conspiring to do so
- Jurisdictional factor:
- "there is extraterritorial Federal jurisdiction over an offense under this section committed by or against a national of the United States," 18 U.S.C. 175(a)

18 U.S.C. 229

Offenses:

- using chemical weapons outside the United States; or
- attempting, or conspiring to do so

Jurisdictional factors:

- the victim or offender was a United States national; or
- the offense was committed against federal property

18 U.S.C. 831

Offenses:

- threats, theft, or unlawful possession of nuclear material; or
- attempting or conspiring to do so

Jurisdictional factors:

- a United States national or an American legal entity was the victim of the offense;
- the offender was a United States national or an American legal entity; or
- the offender is afterwards found in the United States;
- the offense involved a transfer to or from the United States; or
- the offense was a threat directed against the United States

18 U.S.C. 878

Offenses:

- threatening to assault, kill or kidnap an internationally protected person

Jurisdictional factors:

- the victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 1091

Offense: genocide

- killing members of a national, ethnic, racial or religious group
- assaulting members of a national, ethnic, racial or religious group
- imposing reproductive and other group destructive measures on a national, ethnic, racial or religious group
- forcibly transferring children of a national, ethnic, racial or religious group

Jurisdictional factors:

- the offender was a United States national
- the offender is a stateless person habitually residing in the United States
- the offender is present in the United States
- the offense occurred in part in the United States

18 U.S.C. 1116

Offense: killing an internationally protected person

Jurisdictional factors:

- the victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 1117

Offense: conspiracy to kill an internationally protected person

Jurisdictional factors:

- the victim was a United States national;

- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 1201
Offense:
- kidnaping an internationally protected person; or
- attempting or conspiring to do so

Jurisdictional factors:
- the victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 1203
Offense:
- -hostage taking; or
- attempting or conspiring to do so

Jurisdictional factors:
- the victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 2280
Offenses:
- violence committed against maritime navigation; or
- attempting or conspiracy to commit violence against maritime navigation

Jurisdictional factors:
- the victim was a United States national;
- the offender was a United States national;
- the offender is afterwards found in the United States; or
- the offense was intended to compel action or abstention by the United States

18 U.S.C. 2281
Offenses:
- violence committed against a maritime platform; or
- attempting or conspiracy to commit violence against a maritime platform

Jurisdictional factors:
- the victim was a United States national;
- the offender was a United States national;
- the offender is afterwards found in the United States; or
- the offense was intended to compel action or abstention by the United States

18 U.S.C. 2332a

Offenses:

- using a weapon of mass destruction outside the United States; or
- threatening, attempting, or conspiring to do so

Jurisdictional factors:

- the victim was a United States national;
- the offender was a United States national; or
- the offense was committed against federal property

18 U.S.C. 2332f (effective upon the terrorist bombing convention entering into force for the U.S.)

Offenses:

- bombing public places, government facilities, or public utilities outside the United States; or
- threatening, attempting, or conspiring to do so

Jurisdictional factors:

- the victim was a United States national;
- the offender was a United States national;
- the offense was committed against federal property;
- the offender is present in the United States;
- the offense was committed on United States registered vessel or aircraft; or
- the offense was intended to compel action or abstention by the United States

18 U.S.C. 2339C

Offenses:

- financing terrorism outside the U.S.; or
- attempting or conspiring to do so

Jurisdictional factors:

- predicate act of terrorism was directed against
    - United States property,
    - United States nationals or their property, or
    - property of entities organized under United States law;
- offense was committed on United States registered vessel or aircraft operated by the United States.;
- the offense was intended to compel action or abstention by the United States;
- the offender was a United States national; or
- (effective upon the terrorism financing convention entering into force for the U.S.) the offender is present in the United States

18 U.S.C. 2340A

Offenses:

- torture under color of law outside the United States; or
- attempted torture

Jurisdictional factors:

- the offender was a United States national; or
- the offender is present in the United States

18 U.S.C. 2441

Offense:

- war crimes

Jurisdictional factors:

- an American or member of the American armed forces was the victim of the offense; or
- the offender was an American or member of the American armed forces

49 U.S.C. 46502(b)

Offenses:

- air piracy outside the special aircraft jurisdiction of the United States; or
- attempted air piracy outside the special aircraft jurisdiction of the United States

Jurisdictional factors:

- a United States national was aboard;
- the offender was a United States national; or
- the offender is afterwards found in the United States

Others

18 U.S.C. 175c (variola virus (small pox))

Jurisdictional factors:

- the offender or victim was a United States national;
- the offense occurred in or affected interstate or foreign commerce
- the offense was committed against U.S. property; or
- the offender aided or abetted the commission of an offense under the section for which there was extraterritorial jurisdiction

Attempt/conspiracy

- includes attempts and conspiracies

18 U.S.C. 351

Offenses:

- killing, kidnaping, attempting or conspiring to kill or kidnap, or assaulting a Member of Congress, a Supreme Court Justice, or senior executive branch official

- Jurisdictional factors:
- "[t]here is extraterritorial jurisdiction over an offense prohibited by this section," 18 U.S.C. 351(i)

18 U.S.C. 877 (mailing threatening communications to the United States from foreign countries)

18 U.S.C. 956 (conspiracy and overt act within the United States to commit murder, kidnaping, maiming or the destruction of certain property overseas)

18 U.S.C. 1029
Offenses:
- fraud related to access devices; or
- attempting or conspiring to commit the offense

Jurisdictional factors:
- involves a device issued, managed or controlled by an entity within the jurisdiction of the United States and
- item used in the offense or proceeds are transported or transmitted to or through the United States or deposited here, 18 U.S.C. 1029(h)

18 U.S.C. 1119 (killing of American by an American in a foreign country)

18 U.S.C. 1204 (parental kidnaping by retaining a child outside the United States)

18 U.S.C. 1512
Offenses:
- tampering with a federal witness or informant; or
- attempting to tamper with a federal witness or informant

Jurisdictional factors:
- "[t]here is extraterritorial Federal jurisdiction over an offense under this section," 18 U.S.C. 1512(g)

18 U.S.C. 1513
Offenses:
- -retaliating against a federal witness or informant; or
- attempting to retaliate against a federal witness or informant

Jurisdictional factors:
- "[t]here is extraterritorial Federal jurisdiction over an offense under this section," 18 U.S.C. 1513(d)

18 U.S.C. 1585 (service aboard a slave vessel by an American or American resident)

18 U.S.C. 1586 (service aboard a vessel transporting slaves from one foreign country to another by an American or American resident)

18 U.S.C. 1587 (captain of a slave vessel hovering off the coast of the United States)

18 U.S.C. 1651 (piracy upon the high seas where the offender is afterwards brought into or found in the United States)

18 U.S.C. 1652 (Americans acting as privateers against the United States or Americans on the high seas)

18 U.S.C. 1653 (acts of piracy upon the high seas committed against the United States or Americans by aliens)

18 U.S.C. 1654 (Americans arming or serving on privateers outside the United States to be used against the United States or Americans)

18 U.S.C. 1751
Offenses:
- killing, kidnaping, attempting or conspiring to kill or kidnap, or assaulting the President, Vice President, or a senior White House official

Jurisdictional factors:
- "[t]here is extraterritorial jurisdiction over an offense prohibited by this section," 18 U.S.C. 1751(k)

18 U.S.C. 1831-1839
Offenses:
- economic espionage;
- theft of trade secrets

Jurisdictional factors:
- "[t]his chapter also applies to conduct occurring outside the United States if"
    - (1) the offender was a United States national or entity organized under United States law; or
    - (2) an act in furtherance was committed here, 18 U.S.C. 1837

18 U.S.C. 1956
Offense:

- money laundering

Jurisdictional factors:

- "[t]here is extraterritorial jurisdiction over the conduct prohibited by this section if
    - the conduct is by a United States citizen or, in the case of a non-United States citizen, the conduct occurs in part in the United States; and
    - the transaction or series of related transactions involves funds. . . of a value exceeding $10,000," 18 U.S.C. 1956(f)

18 U.S.C. 1957

Offense:

- prohibited monetary transactions

Jurisdictional factors:

- the offense under this section takes place outside the United States, but the defendant is a United States person [other than a federal employee or contractor who is the victim of terrorism]," 18 U.S.C. 1957(d)

18 U.S.C. 1992 (attacks on railroad and mass transit systems engaged in interstate or foreign commerce)

18 U.S.C. 2151 - 2157 (sabotage) (definitions afford protection for armed forces of the United States and "any associate nation" and for things transported "either within the limits of the United States or upon the high seas or elsewhere," 18 U.S.C. 2151)

18 U.S.C. 2260 (production of sexually explicit depictions of children outside the United States with the intent to import into the United States)

18 U.S.C. 2290

Offenses:

- destruction of vessels or maritime facilities (18 U.S.C. 2291);
- attempting or conspiring to do so (18 U.S.C. 2291); or
- imparting or conveying false information (18 U.S.C. 2292)

Jurisdictional factors:

- victim or offender was a U.S. national;
- U.S. national was aboard victim vessel;
- victim vessel was a U.S. vessel

Attempt/conspiracy

- includes attempts and conspiracies

18 U.S.C. 2332 (killing, attempting or conspiring to kill, or assaulting Americans overseas) (prosecution upon Department of Justice certification of terrorist intent)

18 U.S.C. 2332b
Offenses:
- -terrorist acts transcending national boundaries; or
- attempting or conspiring to do so

Jurisdictional factors:
- use of U.S. mail or other facility of United States foreign commerce;
- affects foreign commerce of the United States;
- victim was federal officer or employee or United States government; or
- the offenses was committed within the special maritime or territorial jurisdiction of the United States

18 U.S.C. 2339B
Offenses:
- providing material support or resources to designated terrorist organizations by one "subject to the jurisdiction of the United States;" or
- attempting or conspiring to do so

Jurisdictional factors:
- "[t]here is extraterritorial jurisdiction over an offense under this section," 18 U.S.C. 2339B(d)

18 U.S.C. 2339D (receipt of military training from a foreign terrorist organization)
Jurisdictional factors:
- the offender was a United States national;
- the offender was habitual resident of the United States;
- the offender is present in the United States;
- the offense was committed in part in the United States;
- the offense occurred in or affected interstate or foreign commerce; or
- the offender aided or abetted a violation of the section over which extraterritorial jurisdiction exists

18 U.S.C. 2381 (treason) ("within the United States or elsewhere")

18 U.S.C. 2423 (U.S. citizen or resident alien traveling overseas with the intent to commit illicit sexual activity or traveling overseas and thereafter engaging in illicit sexual activity)

18 U.S.C. 2442 (recruitment or use of child soldiers)
Jurisdictional factors:
- the offender was a United States national

- the offender was a stateless person habitually residing in the United States
- the offender is present in the United States
- the offense occurred in part in the United States

18 U.S.C. 3271 (overseas trafficking in persons by those employed by or accompanying the United States)

21 U.S.C. 959
Offenses:
- manufacture, distribution or possession of illicit drugs for importation into the United States

Jurisdictional factors:
- "this section is intended to reach acts of manufacture or distribution committed outside the territorial
- jurisdiction of the United States. . . ." 21 U.S.C. 959(c)

21 U.S.C. 960A (narco-terrorism)
Jurisdictional factors:
- the offense was a U.S. drug or terrorism offense;
- the offender provided pecuniary value for terrorist offense to injure a U.S. national or damage U.S. property outside the United States;
- the offense was committed in part in the United States and the offender is a U.S. national; or
- the offense occurred in or affected interstate or foreign commerce

46 U.S.C. App. 1903
Offenses:
- manufacture, distribution or possession of controlled substances on various vessels outside United States maritime jurisdiction

Jurisdictional factors:
- the vessel is a "vessel without nationality"; or
- the vessel is of foreign registry or located within foreign territorial waters and the foreign nation has consented to application of the United States law

Federal Crimes Subject to Federal Prosecution When Committed Overseas

Homicide

7 U.S.C. 2146 (killing federal animal transportation inspectors)*

8 U.S.C. 1324 (death resulting from smuggling aliens into the U.S.)*

15 U.S.C. 1825(a)(2)(C) (killing those enforcing the Horse Protection Act)*

18 U.S.C. 32 (death resulting from destruction of aircraft or their facilities)
Jurisdictional factors:
- aircraft was in the special aircraft jurisdiction of the United States;
- the victim or offender was a United States national; or
- the offender is found in the United States

Attempt/Conspiracy
- attempt and conspiracy are included

18 U.S.C. 33 (death resulting from destruction of motor vehicles or their facilities used in United States foreign commerce)

18 U.S.C. 37 (death resulting from violence at international airports)
Jurisdictional factors:
- a victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 38 (death resulting from fraud involving aircraft or space vehicle parts)
Jurisdictional factors:
- the victim or offender was an entity organized under United States law;
- the victim or offender was a United States national; or
- an act in furtherance of the offense was committed in the United States)

18 U.S.C. 43
Offense (where death results):
- travel to disrupt an animal enterprise;
- causing damages of over $10,000 to an animal enterprise; or
- conspiring to cause damages of over $10,000 to an animal enterprise

Jurisdictional factors:
- the offense involved travel in the foreign commerce of the United States; or
- the offense involved use of the mails or other facility in the foreign commerce of the United States

18 U.S.C. 115(a)(1)(A) (murder, attempted murder or conspiracy to murder of a family member of a United States officer, employee or judge with intent to impede or retaliate for performance of federal duties)*

18 U.S.C. 175 (death resulting from biological weapons offenses)
Jurisdictional factors:
- a victim was a United States national; or
- the offender was a United States national

18 U.S.C. 175c (variola virus (small pox))
Jurisdictional factors:
- the offender or victim was a United States national;
- the offense occurred in or affected interstate or foreign commerce;
- the offense was committed against U.S. property; or
- the offender aided or abetted the commission of an offense under the section for which there was extraterritorial jurisdiction

18 U.S.C. 229 (death resulting from chemical weapons offenses)
Jurisdictional factors:
- a victim was a United States national;
- the offender was a United States national; or
- committed against United States property

18 U.S.C. 351 (killing a Member of Congress, cabinet officer, or Supreme Court justice)
Attempt/conspiracy
- attempt and conspiracy are included

18 U.S.C. 794 (death resulting from disclosing the identify of an American agent to foreign powers)

18 U.S.C. 831
Offenses:
- unlawful possession of nuclear material where the offender causes the death of another; or
- attempting or conspiring to do so

Jurisdictional factors:

- the offense is committed within the special aircraft or special maritime and territorial jurisdiction of the United States;
- a United States national or an American legal entity was the victim of the offense;
- the offender was a United States national or an American legal entity;
- the offender is afterwards found in the United States;
- the offense involved a transfer to or from the United States; or
- the offense was a threat directed against the United States

18 U.S.C. 844(d) (death resulting from the unlawful transportation of explosives in United States foreign commerce)
Attempt/conspiracy
- attempt and conspiracy are included

18 U.S.C. 844(f) (death resulting from bombing federal property)*
Attempt/conspiracy
- attempt and conspiracy are included

18 U.S.C. 844(i) (death resulting from bombing property used in or used in an activity which affects United States foreign commerce)
Attempt/conspiracy
- attempt and conspiracy are included

18 U.S.C. 930 (killing or attempting to kill another during the course of possessing, introducing, or attempting to possess or introduce a firearm or other dangerous weapon in a federal facility)*

18 U.S.C. 956 (conspiracy and overt act within the United States to commit murder, kidnaping, maiming or the destruction of certain property overseas)

18 U.S.C. 1091 (genocide)
Jurisdictional factors:
- -the offender was a United States national
- the offender is a stateless person habitually residing in the United States
- the offender is present in the United States
- the offense occurred in part in the United States

18 U.S.C. 1111 (murder within the special maritime jurisdiction of the United States)

18 U.S.C. 1112 (manslaughter within the special maritime jurisdiction of the United States)

18 U.S.C. 1113 (attempted murder or manslaughter within the special maritime jurisdiction of the United States)

18 U.S.C. 1114 (murder of a federal employee, including a member of the United States military, or anyone assisting a federal employee or member of the United States military during the performance of (or on account of the performance of) official duties*

18 U.S.C. 1116 (killing an internationally protected person)
Jurisdictional factors:
- the victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 1117 (conspiracy to kill an internationally protected person)
Jurisdictional factors:
- the victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 1119 (a United States national killing or attempting to kill a United States national outside the United States)

18 U.S.C. 1120 (murder by a person who has previously escaped from a federal prison)*

18 U.S.C. 1121(a) (killing another who is assisting or because of the other's assistance in a federal criminal investigation or killing (because of official status) a state law enforcement officer assisting in a federal criminal investigation)*

18 U.S.C. 1201 (kidnaping where death results)
Jurisdictional factors:
- the victim is removed from the United States;
- the offense occurs within the special aircraft or special maritime and territorial jurisdiction of the United States;
- the victim is a federal officer or employee; or
- the victim is an internationally protected person and
    - the victim was a United States national;

- the offender was a United States national; or
- the offender is afterwards found in the United States

Attempt/conspiracy
- attempt and conspiracy are included

18 U.S.C. 1203 (hostage taking where death results)
Jurisdictional factors:
- the victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States
- Attempt/conspiracy attempt and conspiracy are included

18 U.S.C. 1347 (defrauding U.S. health care program where death results)*

18 U.S.C. 1365 (tampering with consumer products where death results (in the United States))*

18 U.S.C. 1503 (killing another to obstruct federal judicial proceedings)*
Attempt/conspiracy
- attempt is included

18 U.S.C. 1512 (tampering with a federal witness or informant where death results)
Jurisdictional factors:
- "[t]here is extraterritorial Federal jurisdiction over an offense under this section," 18 U.S.C.1512(g)

Attempt/conspiracy
- attempt is included

18 U.S.C. 1513 (retaliating against a federal witness or informant)
Jurisdictional factors:
- "[t]here is extraterritorial Federal jurisdiction over an offense under this section," 18 U.S.C.1513(d))

Attempt/conspiracy
- attempt is included

18 U.S.C. 1652 (murder of an American by an American on the high seas in the name of a foreign state or person)

18 U.S.C. 1751 (killing the President, Vice President, or a senior White House official)
Jurisdictional factors:

- "[t]here is extraterritorial jurisdiction over an offense prohibited by this section," 18 U.S.C.1751(k)

Attempt/conspiracy

- attempt and conspiracy are included

18 U.S.C. 1952 (U.S.-foreign travel or use of the mails or of a facility of U.S. foreign commerce in furtherance of a violation of federal arson laws)

18 U.S.C. 1958 (commission of murder for hire in violation of U.S. law where death results)

Jurisdictional factor

- use U.S. foreign travel facilities, or
- use of mails or U.S. foreign commerce facilities

Attempt/conspiracy

- includes conspiracy

18 U.S.C. 1992 (attacks on railroad and mass transit systems engaged in interstate or foreign commerce)

Attempt/conspiracy

- includes attempts and conspiracy

18 U.S.C. 2118 (killing resulting from a robbery or burglary involving controlled substances)

Jurisdictional factors

- offense involved
- travel in U.S. foreign commerce, or
- use of a facility in U.S. foreign commerce

Attempt/Conspiracy

- attempt and conspiracy prohibitions are included

18 U.S.C. 2119 (death resulting from carjacking)

Jurisdictional factors

- car transported, shipped or received in U.S. foreign commerce in the course of the offense

18 U.S.C. 2241, 2245 (aggravated sexual abuse within the special maritime and territorial jurisdiction of the United States where death results)

18 U.S.C. 2242, 2245 (sexual abuse within the special maritime and territorial jurisdiction of the United States where death results)

18 U.S.C. 2243, 2245 (sexual abuse of a minor or ward within the special maritime and territorial jurisdiction of the United States where death results)

18 U.S.C. 2244, 2245 (abusive sexual contact within the special maritime and territorial jurisdiction of the United States where death results)

18 U.S.C. 2261A (death resulting from interstate stalking violation involving use of the mails or a facility in U.S. foreign commerce)
Jurisdictional factors
- travel in U.S. maritime jurisdiction; or
- travel in U.S. foreign commerce

18 U.S.C. 2280 (a killing resulting from violence against maritime navigation)
Jurisdictional factors
- aboard a ship of American registry;
- committed by an American national aboard a ship of foreign registry or outside the U.S.;
- victim was an American;
- committed in the territorial waters of another country and the offender is subsequently found in the U.S.; or
- committed in an effort to compel federal action or abstention

18 U.S.C. 2281 (resulting from violence against fixed maritime platforms)
Jurisdictional factors
- aboard a platform on the U.S. continental shelf;
- committed by an American national aboard a platform on the continental shelf of another nation
- victim was an American;
- committed aboard a platform on the continental shelf of another nation and the offender is subsequently found in the U.S.; or
- committed in an effort to compel federal action or abstention

18 U.S.C. 2283 (transportation of explosives, biological, chemical, radioactive or nuclear materials for terrorist purposes on the high seas or aboard a U.S. vessel or in U.S. waters)

18 U.S.C. 2290
Offenses:
- destruction of vessels or maritime facilities (18 U.S.C. 2291); or
- attempting or conspiring to do so (18 U.S.C. 2291)

Jurisdictional factors:
- victim or offender was a U.S. national;

- U.S. national was aboard victim vessel; or
- victim vessel was a U.S. vessel

Attempt/conspiracy
- includes attempts and conspiracies

18 U.S.C. 2332 (killing an American overseas)

Jurisdictional factors
- prosecution only on DoJ certification "to coerce, intimidate, or retaliate against a government or civilian population"

Attempt/conspiracy
- includes attempts and conspiracies

18 U.S.C. 2332a (resulting from use of weapons of mass destruction)

Jurisdictional factors
- victim or offender is American; or
- against federal property

Attempt/conspiracy
- includes attempts and conspiracies

18 U.S.C. 2332f (resulting from bombing of public places, government facilities, public transportation systems or infrastructure facilities)(effective when the terrorist bombing treaty enters into force for the U.S.)

Jurisdictional factors
- victim or offender is American;
- aboard aircraft operated by the U.S.;
- aboard vessel of aircraft of U.S. registry;
- offender is found in the U.S.;
- committed to coerce U.S. action; or
- against federal property

Attempt/conspiracy
- includes attempts and conspiracies

18 U.S.C. 2340A (resulting from torture committed outside the U.S. (physical or mental pain inflicted under color of law upon a prisoner))

Jurisdictional factors
- American offender; or
- offender subsequently found within the U.S.

Attempt/conspiracy
- includes attempts

18 U.S.C. 2441 (war crimes)

Jurisdictional factors
- victim or offender is an American; or

- victim or offender is a member of U.S. armed forces

18 U.S.C. 3261 (offenses committed by members of the United States armed forces or individuals accompanying or employed by the United States armed forces overseas)

21 U.S.C. 461(c) (murder of federal poultry inspectors during or because of official duties)*

21 U.S.C. 848(e)(1)(B) (killing a federal or state law enforcement official in furtherance of a federal drug felony)*

21 U.S.C. 1041(c) (murder of an egg inspector during or because of official duties)*

42 U.S.C. 2000e-13 (murder, manslaughter or attempted murder or manslaughter of EEOC personnel)*

42 U.S.C. 2283 (killing federal nuclear inspectors during or because of official duties)*

49 U.S.C. 46502 (air piracy where death results)

49 U.S.C. 46506 (murder, manslaughter, or attempted murder or manslaughter within the special aircraft jurisdiction of the United States)

Kidnaping

18 U.S.C. 115(a)(1)(A) (kidnaping, attempted kidnaping or conspiracy to kidnap a family member of a United States officer, employee or judge with intent to impede or retaliate for performance of federal duties)*

18 U.S.C. 115(a)(1)(B) (kidnaping, attempted kidnaping or conspiracy to kidnap a former United States officer, employee or judge or any member of their families in retaliation for performance of federal duties)*

18 U.S.C. 351 (kidnaping a Member of Congress, a Supreme Court Justice, or senior executive branch official)

Jurisdictional factors:

- "[t]here is extraterritorial jurisdiction over an offense prohibited by this section," 18 U.S.C.351(i)

Attempt/conspiracy

- includes attempts and conspiracies

18 U.S.C. 956 (conspiracy and overt act within the United States to commit murder, kidnaping, maiming or the destruction of certain property overseas)

18 U.S.C. 1091 (genocide)

- forcibly transferring children of a national, ethnic, racial or religious group

Jurisdictional factors:

- -the offender was a United States national
- the offender is a stateless person habitually residing in the United States
- the offender is present in the United States
- the offense occurred in part in the United States

18 U.S.C. 1201 (kidnaping)

Jurisdictional factors:

- the victim is removed from the United States;
- the offense occurs within the special aircraft or special maritime and territorial jurisdiction of the United States;
- the victim is a federal officer or employee; or
- the victim is an internationally protected person and
- the victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States

18 U.S.C. 1203 (hostage taking)

Jurisdictional factors:

- the victim was a United States national;
- the offender was a United States national; or
- the offender is afterwards found in the United States

Attempt/conspiracy

- includes attempts and conspiracies

18 U.S.C. 1204 (international parental kidnaping detaining a child outside of the United States in violation of parental custody rights)

18 U.S.C. 3261 (offenses committed by members of the United States armed forces or individuals accompanying or employed by the United States armed forces overseas)

Assault

7 U.S.C. 60 (assault designed to influence administration of federal cotton standards program)*

7 U.S.C. 87b (assault designed to influence administration of federal grain standards program)*

7 U.S.C. 473c-1 (assaults on cotton samplers to influence administration of federal cotton standards program)*

7 U.S.C. 511i (assaults designed to influence administration of federal tobacco inspection program)*

7 U.S.C. 2146 (assault of United States animal transportation inspectors)*
Jurisdictional factors:

- use of U.S. mail or other facility of United States foreign commerce;
- affects foreign commerce of the United States;
- victim was federal officer or employee or United States government; or
- the offenses was committed within the special maritime or territorial jurisdiction of the United States

15 U.S.C. 1825(a)(2)(C) (assaults on those enforcing the Horse Protection Act))*

16 U.S.C. 773e (assaults on officials responsible for enforcing the Northern Pacific Halibut Act)*

16 U.S.C. 973c (assaults on officials responsible for enforcing the South Pacific tuna conversation provisions)*

16 U.S.C. 1417 (assaults on officials conducting searches or inspections with respect to the global moratorium on tuna harvesting practices)*

16 U.S.C. 1436 (assaults on officials conducting searches or inspections with respect to the marine sanctuaries)*

16 U.S.C. 1857, 1859 (assaults on officials conducting searches or inspections with respect to the federal fisheries management and conservation program)*

18 U.S.C. 1363 (destruction of property within the special maritime and territorial jurisdiction of the United States)

18 U.S.C. 1992 (attacks on railroad and mass transit systems engaged in interstate or foreign commerce)

18 U.S.C. 2071 (destruction of federal records)*

18 U.S.C. 2153 (war-time destruction of defense materials of the United States or its allies)*

18 U.S.C. 2155 (destruction of federal national defense materials)*

18 U.S.C. 2272 (destruction of a vessel within the maritime jurisdiction of the United States by its owner)

18 U.S.C. 2273 (destruction of a vessel within the maritime jurisdiction of the United States by others)

18 U.S.C. 2275 (burning or tampering with a vessel within the maritime jurisdiction of the United States)

18 U.S.C. 2280 (destruction of maritime navigational facilities)
Jurisdictional factors:
- the offender was a United States national;
- the offender is afterwards found in the United States; or
- the offense was intended to compel action or abstention by the United States

18 U.S.C. 2281 (damage to a maritime platform)
Jurisdictional factors:
- the offender was a United States national;
- the offender is afterwards found in the United States; or
- the offense was intended to compel action or abstention by the United States

18 U.S.C. 2290
Offenses:
- destruction of vessels or maritime facilities (18 U.S.C. 2291); or
- attempting or conspiring to do so (18 U.S.C. 2291)

Jurisdictional factors:
- victim or offender was a U.S. national;
- U.S. national was aboard victim vessel;
- victim vessel was a U.S. vessel

18 U.S.C. 2332a (using a weapon of mass destruction)
Jurisdictional factors:
- the victim was a United States national;
- the offender was a United States national; or
- the offense was committed against federal property

18 U.S.C. 2332f (effective upon the terrorist bombing convention entering into force for the U.S.) (bombing public places, government facilities, or public utilities outside the United States)

Jurisdictional factors:

- the victim was a United States national;
- the offender was a United States national;
- the offense was committed against federal property;
- the offender is present in the United States;
- the offense was committed on United States registered vessel or aircraft; or
- the offense was intended to compel action or abstention by the United States

18 U.S.C. 3261 (offenses committed by members of the United States armed forces or individuals accompanying or employed by the United States armed forces overseas)

Threats

18 U.S.C. 32 (threats to destroy foreign civil aircraft, or aircraft in the special aircraft jurisdiction of the United States, or aircraft or aircraft facilities in the special maritime and territorial jurisdiction of the United States)

Model Penal Code

§1.03 Territorial Applicability

(1) Except as otherwise provided in this Section, a person may be convicted under the law of this State of an offense committed by his own conduct or the conduct of another for which he is legally accountable if:

(a) either the conduct that is an element of the offense or the result that is such an element occurs within this State; or

(b) conduct occurring outside the State is sufficient under the law of this State to constitute an attempt to commit an offense within the State; or

(c) conduct occurring outside the State is sufficient under the law of this State to constitute a conspiracy to commit an offense within the state and an overt act in furtherance of such conspiracy occurs within the state; or

(d) conduct occurring within the State establishes complicity in the commission of, or an attempt, solicitation or conspiracy to commit , an offense in another jurisdiction that also is an offense under the law of this State; or

(e) the offense consists of the omission to perform a legal duty imposed by the law of this State with respect to domicile, residence or a relationship to a person, thing or transaction in the State; or

(f) the offense is based on a statute of this State that expressly prohibits conduct outside the State, when the conduct bears a reasonable relation to a legitimate interest of this State and the actor knows or should know that his conduct is likely to affect that interest.

(2) Subsection (1)(a) does not apply when either causing a specified result or a purpose to cause or danger of causing such a result is an element of an offense and the result occurs or is designed or likely to occur only in another jurisdiction where the conduct charged would not constitute an offense, unless a legislative purpose plainly appears to declare the conduct criminal regardless of the place of the result.

(3) Subsection (1)(a) does not apply when causing a particular result is an element of an offense and the result is caused by conduct occurring outside the State that would not constitute an offense if the result had occurred there, unless the actor purposely or knowingly caused the result within the State.

(4) When the offense is homicide, either the death of the victim or the bodily impact causing death constitutes a result within the meaning of Subsection (a)(1), and if the body of a homicide victim is found within the State, it is presumed that such result occurred within the State.

(5) This State includes the land and water and the air space above such land and water with respect to which the State has legislative jurisdiction.

Restatement of the Law Third: Foreign Relations Law of the United States

§401. Categories of Jurisdiction

Under international law, a state is subject to limitations on

(a) jurisdiction to prescribe, i.e., to make its law applicable to the activities, relations, or status of persons, or the interests of persons in things, whether by legislation, by executive act or order, by administrative rule or regulation, or by determination of a court;

(b) jurisdiction to adjudicate, i.e., to subject persons or things to the process of its courts or administrative tribunals, whether in civil or in criminal proceedings, whether or not the state is a party to the proceedings;

(c) jurisdiction to enforce, i.e., to induce or compel compliance or to punish noncompliance with its laws or regulations, whether through the courts or by use of executive, administrative, police, or other nonjudicial action.

§402. Bases of Jurisdiction to Prescribe

Subject to §403, a state has jurisdiction to prescribe law with respect to

(1)

(a) conduct that, wholly or in substantial part, takes place within its territory;

(b) the status of persons, or interests in things, present within its territory;

(c) conduct outside its territory that has or is intended to have substantial effect within its territory;

(2) the activities, interests, status, or relations of its nationals outside as well as within its territory; and

(3) certain conduct outside its territory by persons not its nationals that is directed against the security of the state or against a limited class of other state interests.

§403. Limitations on Jurisdiction to Prescribe

(1) Even when one of the bases for jurisdiction under §402 is present, a state may not exercise jurisdiction to prescribe law with respect to a person or activity having connections with another state when the exercise of such jurisdiction is unreasonable.

(2) Whether exercise of jurisdiction over a person or activity is unreasonable is determined by evaluating all relevant factors, including, where appropriate:

(a) the link of the activity to the territory of the regulating state, i.e., the extent to which the activity takes place within the territory, or has substantial, direct, and foreseeable effect upon or in the territory;

(b) the connections, such as nationality, residence, or economic activity, between the regulating state and the person principally responsible for the

activity to be regulated, or between that state and those whom the regulation is designed to protect;

(c) the character of the activity to be regulated, the importance of regulation to the regulating state, the extent to which other states regulate such activities, and the degree to which the desirability of such regulation is generally accepted;

(d) the existence of justified expectations that might be protected or hurt by the regulation;

(e) the importance of the regulation to the international political, legal, or economic system;

(f) the extent to which the regulation is consistent with the traditions of the international system;

(g) the extent to which another state may have an interest in regulating the activity; and

(h) the likelihood of conflict with regulation by another state.

(3) When it would not be unreasonable for each of two states to exercise jurisdiction over a person or activity, but the prescriptions by the two states are in conflict, each state has an obligation to evaluate its own as well as the other state's interest in exercising jurisdiction, in light of all the relevant factors, Subsection (2); a state should defer to the other state if that state's interest is clearly greater.

§404. Universal Jurisdiction to Define and Punish Certain Offenses

A state has jurisdiction to define and prescribe punishment for certain Offenses recognized by the community of nations as of universal concern, such as piracy, slave trade, attacks on or hijacking of aircraft, genocide, war crimes, and perhaps certain acts of terrorism, even where none of the jurisdiction indicated in §402 is present.

§421. Jurisdiction to Adjudicate

(1) A state may exercise jurisdiction through its courts to adjudicate with respect to a person or thing if the relationship of the state to the person or thing is such as to make the exercise of jurisdiction reasonable.

(2) In general, a state's exercise of jurisdiction to adjudicate with respect to a person or thing is reasonable if, at the time jurisdiction is asserted:

(a) the person or thing is present in the territory of the state, other than transitorily;

(b) the person, if a natural person, is domiciled in the state;

(c) the person, if a natural person, is resident in the state;

(d) the person, if a natural person, is a national of the state;

(e) the person, if a corporation or comparable juridical person, is organized pursuant to the law of the state;

(f) a ship, aircraft, or other vehicle to which the adjudication relates is registered under the laws of the state;

(g) the person, whether natural or juridical, has consented to the exercise of jurisdiction;

(h) the person, whether natural or juridical, regularly carries on business in the state;
(i) the person, whether natural or juridical, had carried on activity in the state, but only in respect to such activity;
(j) the person, whether natural or juridical, had carried on outside the state an activity having a substantial, direct, and foreseeable effect within the state, but only in respect to such activity;
or
(k) the thing that is the subject of adjudication is owned, possessed, or used in the state, but only in respect to a claim reasonably connected with that thing.

(3) A defense of lack of jurisdiction is generally waived by any appearance by or on behalf of a person or thing (whether as plaintiff, defendant, or third party), if the appearance is for a purpose that does not include a challenge to the exercise of jurisdiction.

§431. Jurisdiction to Enforce

(1) A state may employ judicial or nonjudicial measures to induce or compel compliance or punish noncompliance with its laws or regulations, provided it has jurisdiction to prescribe in accordance with §§402 and 403.
(2) Enforcement measures must be reasonably related to the laws or regulations to which they are directed; punishment for noncompliance must be preceded by an appropriate determination of violation and must be proportional to the gravity of the violation.
(3) A state may employ enforcement measures against a person located outside the territory
(a) if the person is given notice of the claims or charges against him that is reasonable in the circumstances;
(b) if the person is given an opportunity to be heard, ordinarily in advance of enforcement, whether in person or by counsel or other representative; and
(c) when enforcement is through the courts, if the state has jurisdiction to adjudicate.

<u>18 U.S.C. 7. Special Maritime and Territorial Jurisdiction of the United States (text)</u>

The term “special maritime and territorial jurisdiction of the United States”, as used in this title, includes:
(1) The high seas, any other waters within the admiralty and maritime jurisdiction of the United States and out of the jurisdiction of any particular State, and any vessel belonging in whole or in part to the United States or any citizen thereof, or to any corporation created by or under the laws of the United States, or of any State, Territory, District, or possession thereof, when such vessel is within the admiralty and maritime

jurisdiction of the United States and out of the jurisdiction of any particular State.
(2) Any vessel registered, licensed, or enrolled under the laws of the United States, and being on a voyage upon the waters of any of the Great Lakes, or any of the waters connecting them, or upon the Saint Lawrence River where the same constitutes the International Boundary Line.
(3) Any lands reserved or acquired for the use of the United States, and under the exclusive or concurrent jurisdiction thereof, or any place purchased or otherwise acquired by the United States by consent of the legislature of the State in which the same shall be, for the erection of a fort, magazine, arsenal, dockyard, or other needful building.
(4) Any island, rock, or key containing deposits of guano, which may, at the discretion of the President, be considered as appertaining to the United States.
(5) Any aircraft belonging in whole or in part to the United States, or any citizen thereof, or to any corporation created by or under the laws of the United States, or any State, Territory, District, or possession thereof, while such aircraft is in flight over the high seas, or over any other waters within the admiralty and maritime jurisdiction of the United States and out of the jurisdiction of any particular State.
(6) Any vehicle used or designed for flight or navigation in space and on the registry of the United States pursuant to the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, Including the Moon and Other Celestial Bodies and the Convention on Registration of Objects Launched into Outer Space, while that vehicle is in flight, which is from the moment when all external doors are closed on Earth following embarkation until the moment when one such door is opened on Earth for disembarkation or in the case of a forced landing, until the competent authorities take over the responsibility for the vehicle and for persons and property aboard.
(7) Any place outside the jurisdiction of any nation with respect to an offense by or against a national of the United States.
(8) To the extent permitted by international law, any foreign vessel during a voyage having a scheduled departure from or arrival in the United States with respect to an offense committed by or against a national of the United States.
(9) With respect to Offenses committed by or against a national of the United States as that term is used in section 101 of the Immigration and Nationality Act—

> (A) the premises of United States diplomatic, consular, military or other United States Government missions or entities in foreign States, including the buildings, parts of buildings, and land appurtenant or ancillary thereto or used for purposes of those missions or entities, irrespective of ownership; and
> (B) residences in foreign States and the land appurtenant or ancillary thereto, irrespective of ownership, used for purposes of

those missions or entities or used by United States personnel assigned to those missions or entities.

Nothing in this paragraph shall be deemed to supersede any treaty or international agreement with which this paragraph conflicts. This paragraph does not apply with respect to an offense committed by a person described in section 3261(a) of this title.

18 U.S.C. 3261. Military Extraterritorial Jurisdiction (text)

(a) Whoever engages in conduct outside the United States that would constitute an offense punishable by imprisonment for more than 1 year if the conduct had been engaged in within the special maritime and territorial jurisdiction of the United States –

(1) while employed by or accompanying the Armed Forces outside the United States; or

(2) while a member of the Armed Forces subject to chapter 47 of title 10 (the Uniform Code of Military Justice), shall be punished as provided for that offense.

(b) No prosecution may be commenced against a person under this section if a foreign government, in accordance with jurisdiction recognized by the United States, has prosecuted or is prosecuting such person for the conduct constituting such offense, except upon the approval of the Attorney General or the Deputy Attorney General (or a person acting in either such capacity), which function of approval may not be delegated.

(c) Nothing in this chapter may be construed to deprive a court-martial, military commission, provost court, or other military tribunal of concurrent jurisdiction with respect to offenders or offenses that by statute or by the law of war may be tried by a court-martial, military commission, provost court, or other military tribunal.

(d) No prosecution may be commenced against a member of the Armed Forces subject to chapter 47 of title 10 (the Uniform Code of Military Justice) under this section unless –

(1) such member ceases to be subject to such chapter; or

(2) an indictment or information charges that the member committed the offense with one or more other defendants, at least one of whom is not subject to such chapter.
