THE
MEDICAL AND SURGICAL HISTORY

OF THE

WAR OF THE REBELLION.
(1861-65.)

PREPARED, IN ACCORDANCE WITH ACTS OF CONGRESS, UNDER THE DIRECTION OF

Surgeon General JOSEPH K. BARNES, United States Army.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1870.

WAR DEPARTMENT,

SURGEON GENERAL'S OFFICE,

November 12, 1870.

In the first year of the War it became evident that the form of Returns of Sick and Wounded, then in use, were insufficient and defective; and, on May 21, 1862, measures were taken by the then Surgeon General of the Army, Wm. A. Hammond, to secure more detailed and exact reports of sick and wounded, by important modifications in the returns from medical officers. On June 9, 1862, the intention to prepare for publication a Medical and Surgical History of the Rebellion was announced to the Medical Staff, in a Circular from the Surgeon General's Office. On July 1, 1863, a Consolidated Statement of Gunshot Wounds, by Surgeon J. H. Brinton, U. S. Volunteers, then in charge of the Surgical Records, and Curator of the Army Medical Museum; and on September 8, 1863, a Report on Sickness and Mortality of the Army during the first year of the War, prepared by Assistant Surgeon J. J. Woodward, U. S. Army, in charge of the Medical Records, were published by this Office.

The necessity for a thorough revision of the Returns of Sick and Wounded becoming apparent, a Medical Board was assembled for this purpose, in July, 1862, and subsequently the following order was promulgated:

[CIRCULAR No. 25.]

GENERAL ORDERS }
No. 355. }

WAR DEPARTMENT,

ADJUTANT GENERAL'S OFFICE.

Washington, November, 4, 1863.

Medical Directors of Armies in the field will forward, direct to the Surgeon General, at Washington, duplicates of their reports to their several Commanding Generals, of the killed and wounded, after every engagement.

By order of the Secretary of War:

(Signed:)

E. D. TOWNSEND,

Assistant Adjutant General.

SURGEON GENERAL'S OFFICE,

Washington, D. C., Nov. 11, 1863.

To carry out the intentions of the above order, Medical Directors of Armies in the field will detail suitable officers, who will, under their instructions, collate and prepare for transmission to this office, all obtainable statistics and data in connection with past and

future operations of those armies, which may be essential or useful in the accurate compilation of the Medical and Surgical History of the War.

Particular attention is called to the following points: The morale and sanitary condition of the troops; condition and amount of medical and hospital supplies, tents, ambulances, etc.; the points at or near the field where the wounded were attended to; degree of exposure of wounded to wet, cold, or heat; adequacy of supplies of water, food, stimulants, etc.; mode of removal of wounded from field to field hospitals; to what general hospitals the wounded were transferred, by what means and where; the character and duration of the action, nature of wounds received, etc. When practicable, separate casualty lists will be made of commissioned officers, non-commissioned officers, and privates. The attention of all medical officers is earnestly directed to the importance of this subject; without their cooperation no reliable record can be preserved—the vast experience of the past will remain with individuals, and be lost to the service and the country.

J. K. BARNES,
*Medical Inspector General,
Acting Surgeon General.*

To facilitate the collection and preservation of all important information, medical officers serving with regiments in the field were furnished, in January, 1864, with a compact and portable Register of Sick and Wounded, and the following instructions were issued:

[CIRCULAR LETTER.]

SURGEON GENERAL'S OFFICE,
Washington, D. C., January 20, 1864.

The Register of Sick and Wounded hitherto in use in the U. S. A. General Hospitals is hereby discontinued. In lieu thereof will be substituted two Registers for each General Hospital, viz.:

1. A Register of Sick and Wounded.
2. A Register of Surgical Operations.

In the former the appropriate entries will be made whenever a patient is admitted into hospital, and during his subsequent stay therein; and, to assist in the preparation of this Register, a new form of Bed-Cards has been adopted.

In the "Register of Surgical Operations," will be entered, minutely and in detail, the particulars of all operations performed, or treated in hospital. These entries should be made by the medical officers in charge of wards.

The above Registers and Bed-Cards are now in the hands of the Medical Purveyors, ready for issue, and you are directed to make immediate requisition for the same, adopting them as soon as received.

J. K. BARNES,
Acting Surgeon General.

To the Surgeon-in-charge of _____
U. S. A. General Hospital.

In February, 1864, separate Reports were ordered to be made for Sick and Wounded Rebel Prisoners of War, and for White and Colored Troops, in order to obtain with greater facility the sickness and mortality rates of each.

A Classified Return of Wounds and Injuries received in Action, a Report of Wounded, and a Report of Surgical Operations, were adopted in March, 1864, and distributed with the following circulars:

[CIRCULAR LETTER.]

SURGEON GENERAL'S OFFICE,
Washington, D. C., March 23, 1864.

Medical Directors of Armies in the field will issue the "Classified Return of Wounds and Injuries received in Action," to the Chief Medical Officers of Corps and Divisions, who will see that they are properly distributed.

This form, correctly filled up by the Senior Medical Officer of the command engaged, will be transmitted, in duplicate, through the proper channel, to the Medical Director of the Army within three days after every action.

The Medical Director of the Army will, as soon as possible, forward to the Surgeon General a Consolidated Return of all Casualties, according to the same form. He will, at the same time, transmit one copy of all Duplicate Returns received from his subordinate Medical Officers.

J. K. BARNES,
Acting Surgeon General.

[CIRCULAR LETTER.]

SURGEON GENERAL'S OFFICE,
Washington, D. C., March 28, 1864.

SIR:

You are hereby directed to fill up the accompanying "Report of Wounded" and "Report of Surgical Operations" for the months of January, February, and March, 1864.

The Report of Wounded will consist of an accurate and legible copy of all cases of wounded entered on the Hospital Register during the quarter.

The Report of Surgical Operations will consist of a correct copy of the Register of Surgical Operations for the same period.

A list of wounded remaining under treatment on the 31st December, 1863, in the hospital under your charge, and on furlough, is enclosed; you are directed to fill up the column "Result and Date," opposite the respective names.

Additional details for the present quarter, of "Surgical Operations remaining under treatment December 31, 1863," you will report on appended slips of paper.

Blank sets of Reports on Secondary Hæmorrhage, Tetanus, and Pyæmia, are also enclosed. These you will fill up in the usual manner. Should no such cases have occurred in the hospital under your charge during the time specified, you will so state in your letter of transmission.

All of the reports above alluded to will, when compiled, be forwarded directly to the Acting Surgeon General.

By order of the Acting Surgeon General :

Medical Officer in charge of ———
U. S. A. General Hospital.

C. H. CRANE,
Surgeon U. S. Army.

Contemporaneously with the establishment of a more accurate system of Medical and Surgical reports, a pathological collection was commenced, which, under the charge of Surgeon J. H. Brinton, U. S. Volunteers, and Assistant Surgeon J. J. Woodward, U. S. Army, became the basis of the Army Medical Museum, itself, as it now exists, an eloquent and instructive history of the Medicine and Surgery of the War, and without which no history could have been completely illustrated.

The announcement of this project was cordially responded to by Medical Officers throughout the service ; and the list of contributors comprises the names of many most eminent for zeal and ability in the discharge of their duties under the Government, whose honorable records are identified with this work.

The following Circular was published more to secure a certain class of specimens, than to stimulate the liberality with which most valuable pathological material was being forwarded :

[CIRCULAR LETTER.]

SURGEON GENERAL'S OFFICE,
Washington, D. C., June 24, 1864.

Medical Officers in charge of Hospitals are directed to diligently collect and preserve for the Army Medical Museum, all pathological surgical specimens which may occur in the hospitals under their charge.

The objects which it is desired to collect for the Museum may be thus enumerated :

Fractures, compound and simple ; fractures of the cranium.

Excised portions of bone.

Diseased bones and joints.

Exfoliations ; especially those occurring in stumps.

Specimens illustrative of the structure of stumps, (obliterated arteries, bulbous nerves, rounded bones, etc.)

Integumental wounds of entrance and of exit, from both the round and conoidal ball.

Wounds of vessels and nerves.

Vessels obtained subsequent to ligation. and to secondary hæmorrhage.

Wounded viscera.

Photographic representations of extraordinary injuries, portraying the results of wounds, operations, or peculiar amputations.

Models of novel surgical appliances, and photographic views of new plans of dressing. Plaster casts of stumps and amputations, and models of limbs upon which excisions may have been performed.

It is not intended to impose on Medical Officers the labor of dissecting and preparing the specimens they may contribute to the Museum. This will be done under the superintendence of the Curator.

In forwarding such pathological objects as compound fractures, bony specimens, and wet preparations generally, obtained after amputation, operation, or cadaveric examination, all unnecessary soft parts should first be roughly removed. Every specimen should then be wrapped separately in a cloth, so as to preserve all spiculæ and fragments. A small block of wood should be attached, with the name of the patient, the number of the specimen, and the name of the medical officer sending it, inscribed in lead pencil. The inscription will be uninjured by the contact of fluids. The preparation should be then immersed in diluted alcohol or whiskey, contained in a keg or small cask. When a sufficient number of objects shall have accumulated, the cask should be forwarded directly to the Surgeon General's Office. The expenses of expressage will be defrayed in Washington. The receipt of the keg or package will be duly acknowledged by the Curator of the Museum.

In every instance, a corresponding list or history of the cases should, at the same time, be forwarded to this office. In this list the number and nature of every specimen should be clearly specified, and, when possible, its history should be given. The numbers attached to the specimens themselves, and the numbers on the list forwarded should always correspond, and should be accompanied by the name and rank of the medical officer by whom sent. Every specimen will be duly credited in the Catalogue to the medical officer contributing it.

J. K. BARNES,
Acting Surgeon General.

In order to perfect the returns under examination, as far as possible, the following Circular was issued:

[CIRCULAR LETTER.]

SURGEON GENERAL'S OFFICE,
Washington, D. C., February 2, 1865.

Medical Directors of Armies in the field or of detached commands are instructed to transmit to this Office copies of all reports in their possession from the Recorders of Division or other Field Hospitals, and in future, copies of such reports will be forwarded to the Surgeon General within twenty days after every engagement.

Medical Directors of Departments will forward to this Office copies of all reports of individual cases of gunshot injury antecedent to the adoption of the present system of registration of wounds, (October 1, 1863,) which are on file in their offices.

By order of the Surgeon General:

C. H. CRANE,
Surgeon U. S. Army.

On April 6, 1866, a letter was addressed to each Medical Director, requiring that all Registers of Hospitals, Consolidated Registers of Soldiers treated, and all information in their possession pertaining to the Sick, Wounded, Discharged, and Dead during the war, should be transferred to this Office. Careful revision of the material accumulated up to that date, had established its immense value to the civilized world, and it seemed to be demanded that, in justice to humanity, and to the national credit, it should, at once, be made available by publication.

By authority of the Secretary of War, Hon. Edwin M. Stanton, Circular No. 6, A Report upon the Extent and Nature of the Materials available for the preparation of a Medical and Surgical History of the War, was published, and an edition of seven thousand five hundred copies distributed.

Encouraged by the approbation of Secretary Stanton, who took the deepest interest in its success, and aided by his powerful influence, an application was made to Congress, and an appropriation was granted June 8, 1868, for the purpose of preparing for publication, under the direction of the Secretary of War, five thousand copies of the First Part of the Medical and Surgical History of the Rebellion, compiled by the Surgeon General, and on March 3, 1869, by a Joint Resolution of Congress, the number of copies mentioned above was authorized to be printed at the Government Printing Office.

Assistant Surgeon J. J. Woodward, U. S. Army, who had been in charge of the Medical Records since June 9, 1862, and Assistant Surgeon George A. Otis, U. S. Army, who was assigned to the charge of the Surgical Records, October 3, 1864, were directed to prepare the work for publication; the zeal and intelligence of these Officers having been already fully established.

No work of this character, of equal magnitude, had ever been undertaken; the Medical and Surgical History of the British Army which served in Turkey and the Crimea during the war against Russia in 1854, 1855, and 1856, and the Medico-Chirurgical Report of Doctor J. C. Chenu upon the Crimean Campaign, published by the French Government in 1865, being the only national publications on military medicine and surgery.

It was not considered advisable to follow the classification of either of these works, and a plan was determined on which it is believed will be found adapted to the preservation of the great mass of facts collected, in a form for convenient study. Through the liberality of the Government, in its beneficent pension laws, it has been found practicable to obtain accurate histories of many thousand wounded or mutilated men for years subsequent to their discharge from service.

The success which has attended this effort to ascertain the ultimate results of operations or conservative measures, employed in the treatment of the wounded in the late war, is largely owing to the cordial cooperation of the Surgeons General and Adjutants General of States, the Examining Surgeons of the Pension Bureau, and very many private Physicians throughout the country. As in the official returns of the casualties of the French and English Armies in the Crimean War, the cases were dropped when the men were invalided, pensioned, or discharged from service, this information was considered peculiarly desirable.

In carrying out the intentions of Congress, it has been my earnest endeavor to make this Medical and Surgical History of the War, not only a contribution to science, but an enduring monument to the self-sacrificing zeal and professional ability of the Volunteer and Regular Medical Staff, and the unparalleled liberality of our Government, which provided so amply for the care of its sick and wounded soldiers. To the Medical Officers connected more immediately with this work, for most cordial assistance and unceasing industry; to those who, at the close of the war, returned to civil life; to the members of the Medical Staff of the Army and Officers of the various Bureaux of the War Department, for the courtesy and promptness with which requests for information have invariably been responded to, I am deeply indebted. My thanks, and those of every possessor of these volumes, are especially due to the Superintendents of the Government Printing Office, and their skilled assistants, who have spared no pains in making the typography and execution of this publication worthy of the Government and the Nation it represents.

JOSEPH K. BARNES,
Surgeon General U. S. Army.

THE
MEDICAL AND SURGICAL HISTORY
OF THE
WAR OF THE REBELLION.
PART I.
VOLUME I.
MEDICAL HISTORY.

Prepared, under the direction of JOSEPH K. BARNES, Surgeon General United States Army.

By J. J. WOODWARD, ASSISTANT SURGEON UNITED STATES ARMY.

INTRODUCTION.

The Medical Volume of the First Part of the Medical and Surgical History of the War of the Rebellion consists of a series of statistical tables presenting a summary view of the facts embodied in the monthly reports made to the Surgeon General with regard to the Sickness of the Army, the Deaths, and the Discharges from service on surgeon's certificate of disability.

These tables have been arranged in two groups; Part I referring to White Troops, Part II to Colored Troops. Each of these parts again, is subdivided into two sections; the first referring to Sickness and Mortality, the second to Discharges on surgeon's certificate of disability.

The propriety of endeavoring to present separately such facts as it has been possible to collect, with regard to the sickness and mortality of Colored Soldiers, would appear too obvious to require extended remark in this place. Aside from all considerations of a scientific or historical nature, motives of humanity would seem to dictate that the statistics should be presented in the form most likely to render them serviceable as a contribution to our knowledge of the influence of race-peculiarities on disease. These motives acquire, if possible, additional importance from the fact that several thousand Colored Men still continue to form a part of the United States Army. In order that this object might be attained the statistical tables of Part II have been made to embrace only the Enlisted Men of colored regiments, the cases and deaths among their white officers being carefully excluded. The enlisted men of these regiments, however, included, besides persons of African descent, many of mixed African and European blood, and the returns afforded no available means for discrimination.

The tables for both White and Colored troops have been constructed by a careful consolidation of the sick reports made to the Surgeon General. The army regulations in force at the commencement of the war required the senior medical officer of each hospital, post, regiment, or detachment, to make monthly, to the Medical Director, and quarterly to the Surgeon General, a report of Sick and Wounded, of Deaths and of Discharges on surgeon's certificate of disability.* The Medical Director, by whom the monthly reports were received, was required to consolidate them and forward the consolidated return to the Surgeon General.† Printed forms for these purposes were issued by the Surgeon General's Office.

* Revised Regulations for the Army of the United States, 1861. Par. 1264.

† Ibid. Par. 1267.

The form for the quarterly report to the Surgeon General was as follows:

REPORT OF THE SICK AND WOUNDED AT FOR THE QUARTER
ENDING, 18.....

Classes of Diseases.		TAKEN SICK OR RECEIVED INTO HOSPITAL DURING THE QUARTER.										
		MONTH	FIRST.		SECOND.		THIRD.		TOTAL BY EACH DISEASE.		TOTAL BY EACH CLASS.	
			Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
FEVERS.	Febris Congestiva											
	Febris Continua Communis											
	Febris Intermittens Quotidiana											
	Febris Intermittens Tertiana											
	Febris Intermittens Quartana											
	Febris Remittens											
	Febris Typhoides											
	Febris Typhus											
	Febris Typhus Icterodes											
	All other Diseases of this Class											
ERUPTIVE FEVERS.	Erysipelas											
	Rubeola											
	Etc.											
	Etc.

REMARKS.

One hundred and forty-three diseases were specified on this blank, and classified as follows: Fevers, Eruptive Fevers, Diseases of the organs connected with the Digestive System, Diseases of the Respiratory System, Diseases of the Circulatory System, Diseases of the Brain and Nervous System, Diseases of the Urinary and Genital Organs and Venereal Affections, Diseases of the Serous Exhalent Vessels, Diseases of the Fibrous and Muscular Structures, Abscesses and Ulcers, Wounds and Injuries, Diseases of the Eye, Diseases of the Ear, and All Other Diseases.

The form issued for the monthly reports differed from the foregoing only in the omission of the columns intended to receive the cases and deaths of the second and third months, while for the Medical Directors' monthly consolidated reports large sheets were issued on which the names of the diseases were printed across the top of the page, and columns ruled below each, so that twenty regimental reports might be entered in full on a single sheet.

This plan of reporting sickness and mortality had been used in the army, with trifling modifications, for a number of years, and had been found to work well in times of peace, but certain embarrassments were encountered when it was attempted to apply it to the large and suddenly created armies brought into the field at the commencement of the War of the Rebellion.

On the 23d of July, 1862, therefore, the subject of the monthly reports of sick and wounded was referred to an Army Board composed of Surgeon Lewis A. Edwards, U. S. Army, Surgeon J. H. Brinton, U. S. Volunteers, and Assistant Surgeons J. J. Woodward and M. J. Asch, U. S. Army. On the recommendation of this Board it was ordered that the quarterly sick reports to the Surgeon General should be discontinued, and that the monthly reports should be forwarded to the Surgeon General, by the Medical Director, in company with his consolidated monthly report. Not long after, the Medical Directors were authorized by the Surgeon General to discontinue the consolidated monthly reports, and, instead, instructed simply to collect the sick reports of the several regiments and detachments under their supervision and forward them to the Surgeon General at the close of each month. On the whole, these modifications were found to work satisfactorily, and discipline improving as the war progressed, greater care was bestowed on the preparation of the reports, which were forwarded with as much regularity as could have been expected during active operations.

From these Monthly Sick Reports, mainly, the tables in this volume have been prepared. They cannot be regarded as complete. There is probably no one month during which all the regiments and detachments, actually in service, are represented. Nevertheless, even during the first year, for which they are most imperfect, they embrace so large a proportion of the troops concerned that they cannot fail to serve fairly as a reliable basis for deductions with regard to the health of the whole army. Some brief considerations with regard to the actual degree of completeness attained will be offered in the course of these introductory remarks.

The Army Board, of which mention has just been made, felt called upon to recommend a change in the Classification of Diseases which had formerly been employed in the monthly sick reports. They advised the adoption of a classification based upon that devised by Dr. William Farr of London, which had, for some time, been employed in the statistical reports of the English army. This classification had been generally adopted in England for civil, as well as for military medical statistics, and its advocates were sanguine that it would be extensively, if not universally, employed in the official medical publications of civilized nations. It was thought by the Board that the medical statistics of the war in progress would possess the most general utility if they were collected and published in such a form as would permit them to be compared readily with similar publications issued by other nations; and this motive had greater weight in determining the adoption of Dr. Farr's Nomenclature and Classification than any consideration of its intrinsic merits. These, indeed, were not discussed by the Board at any very great length; they felt convinced that in the present state of pathological knowledge any classification which might be adopted must necessarily be conventional, and they were merely desirous of selecting from the conflicting systems at their disposal that which seemed most likely to facilitate the comparison of our own results with those of other countries. After they had determined to adopt this plan of classification quite a number of proposed changes in its details were pressed upon them for consideration. The same motives which had led to their adoption of Dr. Farr's general plan caused them, however, to reject the majority of these propositions, and they permitted only a few innovations, the reasons for which, as they conceived, were strong enough to outweigh the obvious objections against admitting any alterations whatever in the plan adopted.

In its general outlines the classification of Dr. Farr was as follows: All diseases were divided into five classes. I. Zymotic diseases. II. Constitutional diseases. III. Local diseases. IV. Developmental diseases. V. Violent diseases or deaths. These classes were subdivided into orders, viz.:

CLASS I.—*Zymotic Diseases.*

- Order 1.—Miasmatic Diseases.
- Order 2.—Ethetic Diseases.
- Order 3.—Dietic Diseases.
- Order 4.—Parasitic Diseases

CLASS II.—*Constitutional Diseases.*

- Order 1.—Diathetic Diseases.
- Order 2.—Tubercular Diseases.

CLASS III.—*Local Diseases.*

- Order 1.—Diseases of the Nervous System.
- Order 2.—Diseases of the Organs of Circulation.
- Order 3.—Diseases of the Respiratory Organs.
- Order 4.—Diseases of the Digestive Organs

CLASS III.—*Local Diseases*.—Continued.

- Order 5.—Diseases of the Urinary Organs.
- Order 6.—Diseases of the Organs of Generation.
- Order 7.—Diseases of Organs of Locomotion.
- Order 8.—Diseases of Integumentary System.

CLASS IV.—*Developmental Diseases*.

- Order 1.—Of Children.
- Order 2.—Of Women.
- Order 3.—Of Old People.
- Order 4.—Diseases of Nutrition.

CLASS V.—*Violent Diseases and Deaths*.

- Order 1.—Accident.
- Order 2.—Battle.
- Order 3.—Homicide.
- Order 4.—Suicide.
- Order 5.—Execution.
- Order 6.—Corporal Punishment.

The plan of Dr. Farr was originally drawn up as a report to the Congress of European Statisticians which met at Paris, September 10, 1855. It was discussed in that meeting, in the meeting at Brussels in 1856, and in that at Vienna in 1857. During the meeting at Vienna a nomenclature was adopted which was substantially that of Dr. Farr; but the Congress failed to agree upon his classification, and subsequent experience has shown that the hopes of general recognition entertained by its advocates were ill-founded. Nevertheless, as it has been employed in the medical reports of the British army, in the reports of the Registrar General of England, and in many other statistical publications during the years represented in this work, there appears to be no reason to regret its adoption for the sick reports of the army during the war.

The classification recommended by the Board, and adopted by the Surgeon General in the preparation of the new blanks which were issued shortly after, differed from that of Dr. Farr chiefly in the omission of such details as were judged unlikely to be of importance for army use. Thus, for example, the class of Developmental Diseases was omitted, because these diseases pertain chiefly to children, women, and old men, and were not expected to be encountered to any very great extent as new cases, or as causes of death among soldiers. In the class of Violent Diseases and Deaths, while Homicide, Suicide, and Execution of Sentence were kept separate from other Accidents and Injuries, it was not thought necessary to duplicate each of the headings in the latter order with the view of keeping the injuries and wounds received in battle separate from those which might occur accidentally during military operations. In selecting the names of individual diseases to be printed on the blank in connection with each class and order, the attempt was made to embrace those of most frequent occurrence and of greatest importance, leaving rarer affections to be included under the head of All Others of the class or order to which they belonged.

But in addition to these mere omissions, considered necessary to adapt the classification of Dr. Farr to use in our army, the Board felt called upon to recommend a few other modifications, of which the following were the most important:

They recommended that Parasitic diseases, Class I, Order 4, should be separated from Zymotic affections and erected into a separate class; that diseases of the Eye and Ear, included by Dr. Farr under the general head of diseases of the Nervous System, Class III, Order 1, should be made separate orders of the same class, and that Rheumatism should be placed alongside of Gout in the Diathetic order of Constitutional diseases, and Tonsilitis among diseases of the Digestive Organs, instead of including both, as Dr. Farr had done in the Miasmatic order of Zymotic affections.

It may be remarked, in this connection, that seven years later the Royal College of Physicians of London adopted all these alterations, among the other modifications of Dr. Farr's original plan which they thought best to make in preparing the Nomenclature of Diseases* they have recently published, and which is hereafter to be employed in England for both civil and military medical statistics.

The classification recommended by the Board, and adopted for army use, was therefore as follows:

CLASS I.—*Zymotic Diseases.*

- Order 1.—Miasmatic
- Order 2.—Enthetic.
- Order 3.—Dietic.

CLASS II.—*Constitutional Diseases*

- Order 1.—Diathetic.
- Order 2.—Tubercular.

CLASS III.—*Parasitic Diseases.*

CLASS IV.—*Local Diseases.*

- Order 1.—Of the Nervous System.
- Order 2.—Of the Eye.
- Order 3.—Of the Ear.
- Order 4.—Of the Organs of Circulation.
- Order 5.—Of the Respiratory Organs.
- Order 6.—Of the Digestive Organs.
- Order 7.—Of the Urinary and Genital Organs.
- Order 8.—Of the Bones and Joints.
- Order 9.—Of the Integumentary System.

CLASS V.—*Wounds, Accidents, and Injuries.*

- Order 1.—Wounds, Accidents, and Injuries.
- Order 2.—Homicide.
- Order 3.—Suicide.
- Order 4.—Execution of Sentence.

*The Nomenclature of Diseases, drawn up by a joint committee appointed by the Royal College of Physicians of London, subject to Decennial Revision. London, 1869.

The following definition of such of the above terms as appeared to require explanation were offered at the time.

The class Zymotic diseases is intended to embrace epidemic, endemic, or contagious affections, supposed to be induced by some specific body, or by anomalies in the quantity or quality of the food. The order Miasmatic diseases includes affections believed to be due to various atmospheric influences, such as the products of vegetable and animal decomposition, specific emanations from the human body in a state of disease, and the so-called marsh miasms. The order Enthetic diseases includes those disorders which are transmitted by the inoculation of morbid matters. The order Dietic diseases includes those which are caused by errors in the quantity and quality of the food.

The class Constitutional diseases includes sporadic affection often hereditary and generally involving several organs, in which morbid products or new formations frequently make their appearance in the parts involved. From the general mass of these diseases which are embraced in Order 1 under the designation Diathetic diseases, the Tubercular diseases, such as Scrofula and Consumption, are separated in Order 2.

After some deliberation the Board agreed in recommending to the Surgeon General that in the nomenclature of the new blanks, the most generally accepted English designations of diseases should be employed instead of the Latin terms previously used in our army reports. Some of these were at best modern barbarisms; some of them were not generally understood. The difficulties recently experienced by the Committee of the Royal College of Physicians and Surgeons in making their Latin Version,* will serve to illustrate the questions involved. The English names selected agree so closely with those of the old nomenclature of Dr. Farr and the more recent scheme of the College of Physicians and Surgeons, that no further explanation of them appears to be needed, and they have been employed in the following tables under the impression that this course would render the work more generally useful than any Latin nosology which could have been determined upon.

The old blanks were employed for the monthly reports of sick and wounded of the whole army until the close of the first fiscal year. Subsequently the new form came rapidly into use. In preparing the tables of this volume the results obtained by consolidating the sick reports made on the old blanks have been recast in the form of the new classification, in order that they might be more readily compared. As the new blanks, however, contained the names of some diseases separately which were not separately given in the old, while the old blanks contained several names which it was not thought necessary to present separately in the new, a comparison of the figures for these affections cannot be made for the whole period. An examination of Table C, page 636 to 641, will show at a glance all the few points of difference arising from this source. They will be discussed in detail in the Second Volume of the Medical History of the War in connection with the diseases to which they belong. A single example will serve for illustration in this place.

* Loc. cit. p. XXIV.

On the old blanks there was a heading for Skin diseases but no separate place for reporting Itch, all the cases of which were included under the head of Skin diseases. On the new blank, however, Itch was separated from other Skin diseases and placed as an independent item in the class of Parasitic diseases. The extent to which this troublesome disorder was prevailing among the troops was thought to justify this course. Accordingly in table C it will be seen that no cases of Itch are separately represented until after the close of the first fiscal year of the war, and even for the second year, although six thousand two hundred and sixty-three cases of Itch are reported, yet as the old form of blanks was quite extensively used during the earlier months of this year a considerable number of other cases are still included with Skin diseases. For subsequent years, however, as the new blank was used almost exclusively, it is probable that the number of cases of Itch reported in the table for these years is a close approximation to the whole number of cases which actually occurred in the mean strength represented. This example will serve to illustrate the principle involved in other apparent discrepancies of this kind.

In preparing the tables it was thought best that they should be made to correspond with the Congressional fiscal years which, as is well known, terminate annually on the 30th of June. The period represented embraces May and June 1861; the first fiscal year of the war terminating June 30, 1862; the second fiscal year of the war terminating June 30, 1863; the third fiscal year of the war terminating June 30, 1864; the fourth fiscal year of the war terminating June 30, 1865, and the fiscal year following the war terminating June 30, 1866. This last year was included because, although after the close of the war the great volunteer army was disbanded with unprecedented rapidity, the unsettled state of the country rendered it necessary to keep a certain number of volunteer troops in service for some time after the cessation of actual hostilities, and it was thought that tables showing the sickness and mortality from disease during the year of peace following the war would be valuable for comparison with the diseases and deaths of similar bodies of troops in the same regions during the period of active operations.

With the view of collecting data for the study of the special influences of the several Geographical Regions of our country on the health of armies operating in them, the tables for each year are arranged in separate groups for the Atlantic, Central, and Pacific Regions.

The Atlantic Region embraces the garrisons and stations in the New England and Middle States, and the field of operations on the slope between the Appalachian range of Mountains and the Atlantic Ocean, from Maryland southward to Key West, Florida. It includes therefore the Army of the Potomac and other troops engaged in the campaigns against Richmond, as well as the several Coast Expeditions, with the exception of that which resulted in the capture of New Orleans. This last on account of the region which became the scene of operations and the general subsequent history of the Department of the Gulf, is embraced in the Central Region.

The Central Region is the great basin watered by the Mississippi River and its tributaries. It includes the area between the Appalachian range and the Rocky Mountains. The tables embrace the reports received from garrisons and stations in Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota and Iowa, the statistics of the Armies of the Ohio, Cumberland, and Tennessee, and those of the troops in Missouri, Arkansas and the Department of the Gulf.

The Pacific Region includes the stations in Colorado, New Mexico and the slope between the Rocky Mountains and the Pacific Ocean.

The same motive which led to this general grouping made it desirable that the several regions should be subdivided geographically in constructing the tables embraced in each. At first sight it might be supposed that this would be best effected by following the boundaries of the Military Departments as announced in General Orders; and had these remained fixed, or been modified only in consequence of the movements of large bodies of troops, this would have undoubtedly been the case. In the course of events, however, it was found that so many other circumstances concurred in determining temporary changes in the boundaries of Departments that it was believed no scientific purpose would be answered by following these alterations with any degree of strictness.

In the arrangement actually adopted in compiling the tables two chief considerations were kept constantly in view. On the one hand it was wished that so far as possible they should represent the sickness and mortality of troops within certain definite Geographical Boundaries; on the other hand it was thought desirable that the medical statistics of those Great Armies which, it might fairly be anticipated, would possess historical interest should be separately presented. When, after a survey of all the documents, a detailed plan was finally determined upon, the boundaries selected as guides in the preparation of the several tables were found to approximate those of the Military Departments so nearly that it was thought advisable to use their designations as the Titles of the Tables, and explanatory remarks have been prefixed to the tables of each region for each year, which briefly set forth the boundaries of the Departments as described in Orders, together with such alterations as it was deemed necessary to adopt, in order that Geographical considerations might have due influence. In these explanatory remarks the descriptive language of the General Orders has been employed, and while such dates and memoranda of events have been added as seemed required for the comprehension of the tables, it was deemed advisable to avoid any attempt at a detailed narrative of events. Such a narrative to be worthy of official publication must needs occupy much more space than could be given in the present work, and is so far foreign to its purpose that it seems much preferable to refer the reader to other works for all historical details except those of a strictly medical or surgical character.

The limits of the several tables having been determined upon it was no small labor to assign correctly all the individual reports of regiments and detachments. The record of stations and other internal evidences afforded by the reports themselves were not always

adequate, and to avoid errors the most pains-taking comparisons were instituted between the returns to the Surgeon General and those filed in the office of the Adjutant General. It is believed that by these labors a high degree of accuracy has been attained. Many thanks are due to the Adjutant General and the officers under his direction for the facilities afforded by them. The Monthly and Tri-monthly Military Returns of the several departmental and subordinate commanders were all carefully compared and every exertion was made to avoid possible sources of error.

It has already been stated that separate tables are presented for White and Colored troops. Many other interesting subdivisions suggested themselves, such as the comparison between the Regular and Volunteer troops, between Officers and Men, between Infantry, Artillery, and Cavalry, and between soldiers of American and those of Foreign birth. All attempts at such subdivision were, however, reluctantly abandoned, as involving a degree of labor for which there was no adequate clerical force and which would have required a system of returns entirely different from those in use at the breaking out of the war or those which it was afterwards thought practicable to adopt. For the same reason it was deemed inadvisable to attempt to prepare for publication the separate regimental returns which have served as a basis for the present tables. In extent and costliness such a publication would have exceeded all reasonable limits.

The tables representing the several Departments and Armies are so arranged as to present the sickness and mortality of each year by Months. This was done with a view to the study of the question of the influence of Season on the diseases of the several Regions.

Briefly, then, the tables for White troops embrace the diseases and deaths of Officers and Men of all arms, both Regulars and Volunteers in the several Departments and Regions, for each Month during the progress of the war, and are arranged with special reference to the study of the influence of Season and Region on the health of armies engaged in active operations in the United States. In the case of the Colored troops similar tables are presented, which, however, represent Enlisted Men only.

The next point in the tables requiring remark is the Mean Strength which appears at the top of the column for each month. This figure was invariably obtained by adding together the mean strengths given in the individual reports consolidated for the month. It is simply to be understood as representing the number of men among whom the diseases and deaths reported in the column beneath occurred. No other plan would have served as the basis for the deduction of correct ratios from the tables. Of course the numbers will not be found to agree with the departmental returns in the office of the Adjutant General. Some discrepancies will be due to the fact that the boundaries of departments have, in many instances, been modified as already explained, others to the absence of military or of medical returns from individual regiments or detachments, while yet others are due to the circumstance that the medical reports represent the mean strength for the month, while the returns to the Adjutant General represent the strength on the day

of their date. This last consideration must not be overlooked by those who may desire to make use of the mean strengths given in this volume for the ordinary purposes of history. During a part of the war the medical officer of each regiment or detachment was ordered to obtain the mean strength of the command represented in his report by adding together the strength present, as obtained from the consolidated morning report of the command, for each day of the month and dividing by the number of days. To diminish the labor involved in this process it was subsequently directed that the mean strength of commands should be obtained for the monthly reports by adding together the total strength present on the 10th, 20th, and last day of the month as received from the commanding officer, and dividing by three. This method would give, it was thought, results closely approximating those obtained by the former more troublesome plan. If the mean strength obtained for any command by either of these methods be compared with the strength reported on the last day of the month on the military returns a considerable discrepancy may be expected in two cases: First, if the command has experienced any increase during the month, the mean strength will be less than the strength on the last day; second, if the command has experienced any decrease during the month, the mean strength will be greater than the strength present on the last day, so that an exact coincidence can seldom be anticipated. It would seem, however, to require no argument in this place to show that the mean strength should be employed in medical statistical tables rather than the strength on any given day. The mean strength given in the tables for White troops embraces officers as well as enlisted men, and the cases and deaths of both are included. In the tables for Colored troops, however, the mean strength does not include the white officers, nor are their diseases and deaths embraced in the tables.

The mean strength entered in the column of each table headed Total, is the arithmetical mean of the several monthly strengths given in the table, and in all the complete tables represents the annual average mean strength. In the partial tables it represents the average mean strength for the number of months exhibited in the table. The number of cases and deaths in the same column is the sum of the figures in the previous column.

In the Annual Consolidated tables for Regions the mean strength for each month is obtained by adding together the mean strengths of the several Departments embraced in the region as given for the month in previous tables. The strength entered in the column headed Total, in these regional tables is, however, not obtained by adding together the totals of the departmental tables, but is the arithmetical mean of the sums of the monthly strengths of the regional tables. It thus represents the annual average mean strength of the region. It will readily be understood that by merely adding together the strength given in the departmental tables in the column headed Total, the figure obtained for the regional tables would not fairly represent the annual average mean strength of the region in those cases in which any of the departmental tables represented fractions of a year.

The several departmental tables in the Atlantic and Central Regions for each year are followed by a table presenting an abstract of the Mortality in the General Hospitals of the region during the year. This table, it will be observed, contains Deaths only, the column for Cases being left blank. Some explanation of the reason of this circumstance is required.

In the first place it is to be remarked that the departmental tables, being made up of the reports from regiments and detachments in the field and in garrison, contain not merely those cases which were treated in Quarters and in the Regimental and Post Hospitals but also those which were subsequently sent for treatment to the General Hospitals at the base of operations or in the Northern States. It was the custom to send the majority of the serious cases to these General Hospitals and, as a consequence, it will be observed that the mortality represented in the Departmental Tables is extremely light. As a rule the patient did not remain stationary until recovery or death, an inmate of the General Hospital into which he was at first received. Military necessity continually required the hospitals nearest the base of operations to be cleared, and the patients to be sent to more distant establishments in order to make room for the sick of armies about to move or for the thousands of wounded requiring care after great battles. It was usual when an army was about to commence active operations to disembarrass the Field Hospitals of patients that the medical staff and hospital establishment might accompany the moving columns. It was also the usage after engagements to transport the greater portion of the wounded to the nearest General Hospital. Some noteworthy exceptions to the latter rule occurred, the particulars of which will be found in the Surgical History of the War, but these exceptions were not sufficiently frequent to militate with the correctness of the general statement. In transfers of this kind it was with great propriety made the rule to move the sick to make room for the wounded, but the wounded also were often necessarily removed in great numbers so that it frequently happened that patients of both classes passed through several hospitals before the final termination of their cases. Under these circumstances it will be readily understood that a consolidation of the monthly reports of sick and wounded of the General Hospitals, made with the view of ascertaining the number of Cases of each disease or injury treated, would lead only to duplication of Cases and inextricable confusion. Nothing short of a pains-taking tracing out of each one of the cases through the hospital books now preserved at the Surgeon General's Office, could lead to any useful results in this direction, and such an undertaking would require, for years, the labor of a clerical force much larger than has ever been at the disposal of the bureau. On the other hand it was comparatively an easy matter to avoid any duplication of Deaths.

It is proposed that, among other matters, the Third Volume of the Medical History of the War shall contain a somewhat detailed account of the General Hospital System. To this the reader must be referred for particulars; but some brief allusion to the facts of the case appears indispensable to the comprehension of the statistical questions involved.

Before the war, the troops composing the United States Army were chiefly distributed as garrisons of the various permanent or temporary works constructed for Sea Coast Defence or for the protection of the Indian Frontier. Each of these stations was provided with a small Post Hospital in which the serious cases of sickness were treated by the medical officer attached to the post. Mild cases were usually prescribed for and allowed to remain in Quarters. When troops began to go into camp at the commencement of the war, each regiment established a Regimental Hospital on the same general plan. Hospital tents, or some building temporarily occupied, afforded shelter for the more serious cases who were there treated by the regimental surgeon or his assistants, while milder cases were prescribed for and excused from duty, but continued to occupy their ordinary tents or such other shelter as was provided for the rest of the command. When several regiments were grouped together as Brigades, it was often found convenient to establish all the Regimental Hospitals of the brigade at one point, and this speedily led to their consolidation in many instances as Brigade Hospitals. At a later period the same tendency to consolidation led to the union of the several Brigade Hospitals of a Division, forming thus a Division Hospital. The Division Hospital was sometimes a mere aggregation of Regimental or Brigade Field Hospitals, but in its highest development in connection with large Armies in which the troops were maneuvered by Divisions, it formed a single unit, bearing the same relation to the Division that the Regimental Hospital did to the Regiment. An interesting account of the workings of the Division system of Field Hospitals will be found in the Appended Documents of this volume, especially in the reports of Medical Director McParlin, p. 148 *et seq.* to which the reader is referred.

But very shortly after the organization of troops was commenced in 1861, it was found that the system of Post and Regimental Hospitals was not adequate to provide for all the sick. Difficulty was especially experienced when a regiment received marching orders. It was then desirable of course that the Regimental Surgeon, with his assistants and hospital tents, should accompany the command, while, on the other hand, there was very generally a certain number of sick or wounded under treatment who could not with propriety be carried along. Moreover the maximum hospital accommodation which it was practicable to allow each regiment, proved insufficient to provide for all the patients on occasions of emergency, as during the prevalence of epidemics, or after the occurrence of general engagements. It became necessary, therefore, to organize near the base of operations independent hospitals which should receive and care for the sick necessarily left behind when troops moved, as well as those for whom the Regimental Hospitals could afford no accommodation, and the wounded after battles. Such establishments, known as General Hospitals, being of a more or less permanent character, it was possible to provide more conveniences and comforts for the care of the sick and wounded than could be furnished in the field, and hence it early became the custom to send the more serious cases, especially those likely to require protracted treatment, to General Hospital. When in the course of events the General Hospitals, near the several bases of operation, became

encumbered with sick and wounded, others were established at various points throughout the Northern States, and the hospitals near the base of operations were evacuated from time to time upon the more distant establishments, to make room for the continual stream of diseased and disabled which constantly flowed from the scene of active operations.

It will be the task of the medical historian in the Third Volume to trace these operations in detail. He will have to show how it happened, that after a period of transition, in which hotels, factories, and other existing buildings, many of them ill suited for hospital purposes, were temporarily occupied, wooden barracks came to be constructed for hospital purposes, which were improved from time to time, as experience suggested modifications in the original plans, until a unique system of Barrack Hospitals, each capable of accommodating from one to three thousand patients, resulted, which is well worthy of the serious attention of military surgeons. He will have to detail the events which ultimately led to the recognition of the General Hospitals as independent military posts, of which the Surgeon-in-charge was the Commanding Officer, subject only to the jurisdiction of the Medical Director and of the General Commanding the Department. He will have to show how the principle, that the Surgeon-in-charge is the proper person to command a General Hospital, was speedily pushed to its logical results; how the Line Officers commanding the guard of the hospital, or acting as its quartermaster or commissary, were placed under the authority of the Surgeon-in-charge and ordered to report to him, and how the results attained so fully justified the course pursued, that the Medical Department may confidently appeal to the precedent thus established as its warrant for asking the like enlarged jurisdiction and powers in any future war.

An examination of the monthly reports of sick and wounded from these General Hospitals shows that their population was constantly fluctuating. Thousands of patients were often received and sent away in a single month. Events at the front, and the consequent condition of the hospitals near the base of operations, more frequently than the nature of the disease or injury, determined the stay of the patient in any individual hospital. Of course when a number of cases were sent from a hospital in anticipation of fresh arrivals, the less serious cases of both wounds and disease were, so far as possible, selected for transportation, a fact which is not to be overlooked in interpreting the greater mortality which distinguished the hospitals near the base of operations; but it was not always practicable to adhere strictly to this rule. Moreover, no inconsiderable movement of individual patients was determined by the efforts made from time to time by the State authorities to have the sick and wounded transferred for treatment to hospitals within their own State boundaries.

A review of all these facts, and of others of similar character, which need not now be specified, compelled the compiler of this volume reluctantly to abandon the hope of presenting in tabular form the number of cases of each disease treated in General Hospitals. The plan adopted with regard to the matter may be briefly summed up as follows:

The Departmental tables embrace the Cases and Deaths obtained by the consolidation

of the monthly sick reports of troops in the Field and in Garrison. They represent the number of men taken sick each month out of the mean strength given, and the nature of their complaints so far as could be ascertained by the medical officers who attended them. They set forth also the number who died with their commands, and in the several Post, Regimental, Brigade, and Division Hospitals attached.

The Hospital tables exhibit the number who died in the General Hospitals of each region, arranged by months and causes of death.

The Consolidated tables for Regions embrace, then, the total number of new Cases occurring from month to month in the strength given, arranged by diseases, and the total number of Deaths, also arranged by months and diseases, and including deaths in General Hospital as well as those occurring in the field and in garrison.

It will then be understood, that in computing the ratio of Cases to strength for any disease, the number of cases may be compared with the strength given in the departmental tables, or with their sum in the regional or army tables. But in computing the ratio of Deaths to strength, the hospital population, as exhibited in the several hospital tables, must be taken into account.

A comparison of the number of cases with the number of deaths for any disease will, however, require the consideration of some additional circumstances. For since it has been impossible to prepare tables showing the number of Cases of each disease received into the General Hospitals, and since every effort has been made to secure the distribution of the Deaths among the real causes of death, the number of deaths exhibited by the Regional and Army tables cannot always be regarded as bearing a direct relationship to the number of cases. The figures are to be regarded rather as independent facts, often intimately connected, and here offered for future reasonable discussion. No attempt has been made to reconcile the apparent discrepancies in the tables arising from this source. It was thought important that both classes of facts should be presented in the most complete manner, and that all attempt to bring them into accord should be postponed to become a subject of discussion in connection with individual diseases of importance in the Second Volume.

An examination of the tables, therefore, will show many instances in which the number of Deaths is disproportionally large as compared with the number of Cases, and even some instances in which more Deaths than Cases are reported. These examples are not to be looked upon as oversights or errors on the part of those to whom the preparation of the tables was entrusted. They are the necessary consequence of the fidelity with which the facts, as reported, were consolidated. A single example will serve as an illustration.

In table LXVII, which is an abstract of the Sickness and Mortality of the Central Region for the year ending June 30, 1864, it will be observed on page 429 that the number of Cases of Inflammation of the Brain reported is 215, with 271 Deaths, which might be supposed to involve an impossibility. But an examination of the previous table shows,

page 423, that 128 of these deaths occurred in General Hospital. It would appear, therefore, simply that 215 Cases and 143 Deaths of Inflammation of the Brain were reported among the garrisons and troops in the Central Region during the year, and that besides 128 Deaths of the same disease occurred in the General Hospitals of the Region. Some of the Deaths in hospital were doubtless patients included among the Cases of the garrison and field reports; but the greater part of them were probably men who had entered hospital with other complaints. The detailed facts would be interesting and valuable, but cannot be ascertained. We can, however, learn from the tables the number of New Cases of the disease which originated in the reported strength in field and in garrison during the time specified. We can also learn the whole number of Deaths attributed to this cause, including those which occurred in the given hospital population. Each of these facts has its own independent value, and each requires separate consideration. The two classes of facts can only be brought into relationship with a view to studying the relative mortality per thousand cases in connection with those affections of which a very large number of cases has been reported, and even in these instances the results attained will often require modification in accordance with considerations peculiar to each disease.

The writer is perfectly aware of the inconvenience of the circumstances just recounted, and has also fully considered many other objections to the plan which he has adopted for dealing with the monthly reports of the General Hospital. He also regrets greatly the impossibility of compiling tables giving general statistical information with regard to the number of cases of each disease which arose *de novo* in the hospital population, or of secondary diseases and complications. He is firmly convinced, however, that a more ambitious course than he has adopted would have led merely to less reliable result.

It must further be explained in this place that the tables in this volume do not embrace those Killed in Action, those dead of Wounds or Disease while Prisoners of War, or those who died while on Furlough, Leave of Absence, Absence Without Leave, or after Discharge from service on surgeon's certificate of disability. In the case of those Killed in Action, the monthly sick reports could not always be expected to attain accuracy, the Surgeon usually obtaining his information with regard to them indirectly and at second hand. The names of such of the killed as could be learned by him with reasonable certainty were entered in the sick report among the names of the dead, but the printed blanks directed that they should not be included in the statistical portion of the report, and a careful examination of the reports received shows that this rule was advisable.

The number of deaths from Gunshot and other Wounds given in the tables, therefore, excludes the Killed in Battle, but the number of Wounded was intended to embrace all the Wounded among the mean strength given, and when this intention was not carried out, as was sometimes probably the case, especially after certain general engagements, it was in consequence of circumstances which interfered with the efforts of the Medical Officer to obtain full details with regard to the Wounded of the commands to which they belonged.

Instances in which this took place are known, and it seems reasonable to suppose that many others must have occurred, so that the figures in the tables representing the number of Wounded, and especially the number of Gunshot Wounds, must be regarded as probably less than the real number occurring in the mean strength represented. For the full discussion of this part of the subject, however, the reader must be referred to the Surgical Volumes of this work.

In addition to the foregoing explanations, which it has been thought advisable to offer as aids to the appreciation of the tables contained in this volume, it seems proper to make next some general remarks with regard to the Total Losses of our armies during the war by Death, and by Discharge on surgeon's certificate of disability. These remarks will be founded upon estimates derived from other sources of information than the reports of sick and wounded employed in the construction of the tables, and will therefore be of service as indicating the degree of completeness which these may fairly be considered to possess.

The first source of information which would appear to require consideration is the Adjutant General's Office, in which are preserved the military records of the army. Here are to be found the Returns of posts, armies, and departments, the monthly Muster and Pay Rolls of individual companies, and the Final Statements of deceased soldiers. The last-named of these reports have served as the basis for a most pains-taking investigation with regard to the subject of our present inquiry. It was the duty of company and other officers to furnish such a record of each death occurring within their jurisdiction, and hence the fact and date of death was thus reported in a large part of the whole number of the dead. These returns give, in each case, the name, rank, company, and regiment of the deceased, and state also, whenever the officer making the return was acquainted with the circumstances, whether he was Killed in Battle, or Died of Wounds or of Disease.

Of course many men were killed or died for whom no such final statements were made at the time. After engagements men were often missing concerning whom it was not known whether they were killed or taken prisoners; deaths not unfrequently occurred among men absent from their commands of which no responsible officer had knowledge; reports were captured by the enemy, lost or mislaid, and the duty of making them out was not invariably performed. At the close of the war, therefore, these files were far from complete.

It happened, however, immediately after the war was over, that vast numbers of applications began to be made to the Adjutant General by officers of the Pay Department, by the Second Auditor, and by the Commissioner of Pensions, for official evidence of the service and death of individual soldiers, to enable these officials to adjust the claims of the heirs of the deceased against the government. These applications not merely rendered it necessary to make a most laborious examination of the muster rolls to extract the deaths recorded in them, but in the case of those claimed to be dead, for whom there was no final statement, and who were not entered as dead on the muster rolls, it became

necessary to hear evidence in order to arrive at the actual facts, and the result in each case being duly recorded, the files representing the dead were daily rendered more nearly complete.

In view of these circumstances it would be anticipated that the Adjutant General's Office would now be able to furnish the most complete and reliable information extant with regard to the number and names of the dead. It might also be presumed that the number of men actually Killed in Battle could be most nearly approximated from the same source, while it would seem probable that a large proportion of those who died of wounds or of disease would appear simply as Dead, without any cause of death having been recorded. Each of these expectations is fully realized on an examination of the information derivable from this source.

In reply to an inquiry from the Surgeon General, the Adjutant General has furnished the following statement dated October 25, 1870:

“The total number of deaths, so far as known at the office, from the commencement to the close of the Rebellion, is as follows :

Regular Army, Commissioned Officers	267
Regular Army, Enlisted Men	4, 592
Volunteer Army, Commissioned Officers	8, 553
Volunteer Army, Enlisted Men	256, 427
Colored Troops, Commissioned Officers	285
Colored Troops, Enlisted Men.....	33, 380
Total number of deaths	<u>303, 504”</u>

The commissioned officers of the Colored troops being almost without exception white, the above figures may be classified as follows:

Total mortality among White Officers and Men.....	270, 124
Total mortality among Colored Men.....	33, 380
Total number of deaths.....	<u>303, 504</u>

These numbers are to be understood as embracing the deaths from all causes, including the slain in battle and those who died while prisoners of war, or while absent on furlough or otherwise, so far as it has been possible to collect information with regard to them at the Adjutant General's Office up to the 25th of October, 1870.

The period represented by the words “from the commencement to the close of the Rebellion” in the above statement, was found, on inquiry at the Adjutant General's Office, to have been used in the case of the Regular Army with a somewhat different significance from that with which it was employed in the case of the Volunteer Forces.

For the Regular Army the figures represent the number of officers and men who are known to have died between the 15th of April, 1861, and the 1st of June, 1865.

For the Volunteer Forces, both White and Colored, however, the figures embrace all the deaths known to have occurred in the volunteer organizations called out during the progress of the war up to the date of their muster out of the service. This date may be approximately fixed for the White troops at about the close of the last fiscal year represented in this volume, though a few scattered Companies remained in service subsequently, the last of which, a Battalion of New Mexico Volunteer Cavalry, was not mustered out until November 18, 1867.

In the cases of the Colored Volunteers, the process went on more slowly, the last Regiment having been mustered out December 20, 1867.

In both cases it is to be understood that the number of dead given is derived from an actual count of the names of the individuals recorded as dead, and not from the consolidation of numerical returns of any kind. This circumstance renders it quite clear that the real number of deaths cannot be supposed to be less than the statement above given by the Adjutant General, and a consideration of the facts with regard to the additions made to the death files since the war, will give weight to the opinion that it cannot be materially greater.

It is true that, as has been already indicated, the death records of the Adjutant General's Office were quite incomplete at the close of the war; but the liberal policy pursued by the government in the matter of bounty, back pay and pensions, has undoubtedly resulted in ascertaining the facts with regard to the greater portion of those of the dead who were not properly included in the original files. Some notion of the extent of the work thus done, can be formed by comparing the statement now made by the Adjutant General, with former published statements based upon the records of his office at different intervals after the war.

Thus, for example, in Part VI of the Final Report of the Provost Marshal General to the Secretary of War, dated March 17, 1866, there will be found under the head of "Casualties in the Military Forces" an official statement of the mortality of the Army as deduced from the muster rolls and returns of the Adjutant General's Office. This statement, which is given in tabular form on page 78 of the report, embraces a considerable number of items, the consolidation of which gives the following results:

Number of deaths among White Officers and Men	250, 651
Number of deaths among Colored Men.....	29, 038
Total.....	<u>279, 689</u>

February 27, 1869, a report on the same subject was made by the Adjutant General to the Secretary of War, for the information of a Committee of the House of Representatives. This report, a copy of which was furnished to the Surgeon General, contained a "Consolidated Statement of the number of Federal Soldiers who died in the Service of the United States during the Rebellion." A consolidation of the items of this table furnishes the following results:

Number of deaths among White Officers and Men	261, 036
Number of deaths among Colored Men.....	33, 380
Total.....	<u>294, 416</u>

A comparison between these three sets of figures which show the number of deaths known to the office of the Adjutant General, in March 1866, February 1869, and October 1870, respectively, will afford some notion of the laborious and conscientious manner in which that officer and his assistants have endeavored to perfect the Official Record of Deaths.

The figures offered at the last date will probably receive still further accretions in the future; yet, as the number of new names added to the list during the three months immediately preceding October 25, 1870, was only one hundred, it cannot be presumed that the whole number finally recorded will be very much greater than that now presented.

In appreciating the evidence derived from this source, the possibility that a few deaths may have been erroneously recorded by mistake, or in consequence of fraudulent evidence, must, of course, receive consideration. It must also be confessed, that, notwithstanding all the pains taken, a certain number of deaths must eventually escape record. Nevertheless, when all the circumstances are taken into consideration, and especially the pecuniary interests involved, the scrutiny which this circumstance has compelled, the large number of names added to the list annually for several years after the close of the war, and the small number added recently, it may well be believed that a close approximation to the actual facts has now been attained.

The next source of information for consideration is the office of the Quartermaster General.

According to the Army Regulations in force at the commencement of the war, it was the duty of the Quartermaster's Department to provide for the Burial of deceased soldiers. The great increase of the national forces caused by the war, and the large number of dead, suggested, early in the course of the struggle, the idea of National Cemeteries especially designed for this purpose.

By an act of Congress approved July 17, 1862, the President of the United States was authorized to purchase cemetery grounds and cause them to be enclosed for the burial of "the soldiers who shall die in the service of the Country."

After the close of the war it was deemed necessary to legislate still further on the subject, and it was provided by Public Resolution No. 21, approved April 13, 1866, "that the Secretary of War be, and he is hereby, authorized and required to take immediate measures to preserve from desecration the graves of the soldiers of the United States, who fell in battle or died of disease in the field and in hospital during the War of the Rebellion; to secure suitable burial places in which they may be properly interred, and to have the grounds enclosed, so that the resting places of the honored dead may be kept sacred forever."

In the following year an act "to establish and protect National Cemeteries" was approved February 22, 1867, which provided in detail for the purchase of grounds, the management and inspection of cemeteries, and the punishment of any person who should mutilate monuments or injure the trees and plants.

In obedience to the regulations in force at the commencement of the war, and to orders issued by the War Department, from time to time, in accordance with the spirit of these acts, every effort would appear to have been made to collect the remains of the dead, to inter them decently, and to record all the facts known in connection with each grave. The thorough character of the work may be inferred from the circumstance that it has

already cost upwards of three millions of dollars. After no other war, whether of ancient or modern times, have any such systematic exertions been made to secure the collection of the dead and their interment in permanent resting places. It is proper, therefore, that the statistician should give the fullest consideration to the information derivable from this source.

The Quartermaster General, in his annual report for the fiscal year ending June 30, 1865, dated November 8, 1865, makes the following statement: "Under General Orders No. 40, of July 3, 1865, which, on the conclusion of the war, called upon the officers of this department for special reports of the number of interments registered during the war, reports have been received from officers in seventeen States, including the District of Columbia. They report the interments registered in their offices at 116,148. Of these there were whites, 95,803; colored, 20,345; loyal, 98,827; disloyal, 12,596; refugees, 600; contrabands, 4,125."

In his annual report for the following fiscal year, dated October, 1866, the same officer furnishes an elaborate account of the efforts being made under his supervision, to collect the remains of the dead and to establish National Cemeteries. Forty-one National Cemeteries had been established at the close of the fiscal year terminating June 30, 1866, and ten more had been determined upon. Four hundred and twelve cemeteries, not the property of the Nation, were known to contain the remains of soldiers. Up to the date mentioned 87,664 had been removed and reinterred; the National Cemeteries already contained "the remains of 104,528 loyal soldiers." It was believed that 135,881 bodies would yet have to be moved and reinterred, and the total number of the remains "of loyal soldiers" was estimated at 341,670.

As the work of collecting the remains of the deceased soldiers from battle-fields, way sides, and private cemeteries progressed, it was found that these estimates were not exact. The number of bodies which it seemed desirable to move and reinter, was found to be somewhat larger than had been anticipated, and the total number of remains proved considerably less than the estimate.

Inquiries made at the office of the Quartermaster General in November, 1870, showed that about two hundred and forty thousand bodies had been moved and reinterred, and a few hundred more still required the same care. At that time there were seventy-three National Cemeteries devoted exclusively to the burial of the dead who had fallen during the rebellion in the service of their country. Bodies of "deceased Union soldiers" were also known to be buried in three hundred and sixteen local, private, or post cemeteries. The total number of graves, so far as known, was 315,555. These were all believed to contain the bodies of Union soldiers who had died or been killed during the rebellion, but of the whole number 172,109 only, or rather more than one-half, had been identified by name.

It appears, therefore, that while, as it has been shown, the names of 303,504 dead officers and soldiers are recorded in the office of the Adjutant General with every reasonable

probability that the list does not embrace quite the whole number, the records of the Quartermaster General show the existence of 315,555 graves, believed to contain the remains of officers and soldiers dead during the Rebellion. The question, therefore, at once arises, what statistical value can be attached to the latter figures as indicating the real number of the dead? There can be no doubt that the officers to whom the task of collecting the bodies of the dead was entrusted, performed their work with zeal and care. Yet from the very nature of the case, the greater portion of the labor was done after the war had closed, and most of the bodies collected from their temporary resting places on battle-fields, or elsewhere throughout the Southern States, had been several years in the ground. The whole country was divided into districts and the most careful inquiries were made by the officer in charge of the Cemeterial work of each, so that it is not likely that any considerable number of soldiers' graves could have escaped observation. But, on the other hand, is there no probability that in disinterring the nameless dead, the bodies of teamsters, camp followers, refugees, fugitive slaves, or even Confederate soldiers may have been mistaken at times for those of our own men? There appears to be little doubt that those engaged upon the work took every reasonable precaution to avoid mistakes, and that every available source of information was freely consulted. Yet the extent to which clothing and arms captured from the United States were used by the Confederates, must have interfered considerably with the certainty of such identifications. Taking all the circumstances into consideration, it would hardly be possible therefore to regard the number of graves as affording any very precise indication of the mortality of our armies, if no other fact than this number existed for our guidance. Yet when the close agreement between the number of graves and the number actually known to be dead as shown by the evidence in the Adjutant General's Office is taken into consideration, there would appear to be no great difficulty in arriving at an approximative judgment. The real number is assuredly greater than the number of names recorded up to the present date at the office of the Adjutant General. It cannot reasonably be supposed to exceed the total number of graves. The truth must probably be between three hundred and four and three hundred and sixteen thousand deaths.

A comparison must now be made between the foregoing figures and the testimony to be derived from the office of the Surgeon General. About the date of the close of the war a series of alphabetical registers of the dead were commenced in that office. In these books the names of the dead, as given on the monthly sick reports, were entered, and subsequently all the additional names found in the Registers of the closed hospitals and other records turned in to the office after the war, were carefully added, every pains being taken to avoid duplicating names. The Commissioner of Pensions soon adopted the practice of referring to the Surgeon General for information as to the Cause of Death of those soldiers whose widows or heirs applied for pension. The Adjutant General, in order to complete his death records, in the manner already described, applied for information as to the fate of many thousands of soldiers reported on the muster rolls as absent from their Regiments ;

the Paymaster General and Second Auditor made continual applications for similar information to enable them to settle claims for back pay or bounty, and all these demands have compelled a most pains-taking and thorough examination of the records.

A consideration of the sources from which the Surgeon General's records are derived would render it probable, even before examining the results, that while they would excel those of the Adjutant General in the presentation of details with regard to the nature of the Disease or Injury which was the Cause of Death, they would contain a much smaller number of dead men's names. These records are, in fact, principally derived from the reports and record books of the Medical Officers of the Army. They could not be expected to contain complete lists of those Killed in Battle, of those who died while Prisoners of War, or of the deaths in detachments unprovided with Medical Officers, and this has, in fact, proved to be the case. Yet although the number of dead recorded in the alphabetical death registers of the Surgeon General's Office is less than the total number reported by the Adjutant General, the figures differ much less than might have been anticipated.

A careful count of these death registers made in October 1870, for the purposes of this work, gives the following results.

The total number of deaths recorded, embracing officers and men of the Regular Army from April 15, 1861, to June 30, 1865, inclusive, and officers and men of the Volunteer forces, both white and colored, while in service, from the date of their muster-in to the date of their muster-out, is 282,955, being 20,549 less than the corresponding figures of the Adjutant General, or about nine-tenths of what may be safely regarded as the whole number of deaths within the limits specified. The deaths contained in these registers are distributed as follows :

Regular Army, Officers and Enlisted Men.....	5,200
Volunteer Army, Officers and Enlisted Men including Officers of Colored Troops.....	245,690
Enlisted men of Colored Troops.....	32,065
Total.....	<u>282,955</u>

A detailed examination into the discrepancies existing between these figures and those of the Adjutant General shows that the chief difference exists in the case of the enlisted men of the Volunteer Army; the total number of dead among the enlisted men of the Volunteer Army as recorded in the office of the Adjutant General being 256,427, while the total number recorded in the office of the Surgeon General is but 237,150. The difference is 19,277, which is by far the greater portion of the total discrepancy. This discrepancy is mainly due to the opportunities enjoyed by the Adjutant General's Office for accumulating evidence of the fact of death in individual cases since the war. In the case of the Colored troops, also, the Adjutant General has a greater number of names, while, on the other hand, in the case of the Regular Army the records of the Surgeon General contain several hundred more names than are reported by the Adjutant General.

A further examination into the alphabetical registers of the Surgeon General's Office fully bears out the presumption that while they would contain a somewhat smaller number of names than have been recorded as dead by the Adjutant General, they might be

expected to afford particulars as to the Cause of Death in a much greater number of instances, the principal exception being in the case of those who were Killed in Battle.

A comparison of the two sets of records would seem likely, therefore, to afford the means of arriving at some general conclusions with regard to the proportion of the whole number of the dead who were Killed in Battle, Died of Wounds, or Died of Disease.

The latest report by the Adjutant General which makes any discrimination between the several Causes of Death, is the report of February 27, 1869, to which allusion has already been made. Of the 294,416 deaths included in the report, 55,297 are given as dead of Unknown Causes. The rest are classified as Killed in Battle, Died of Wounds, Died of Disease, and died of Other Known Causes.

This report gives the number of Killed in Battle as 44,238 distributed as follows :

Regular Army, Officers and Men.....	1,355
White Volunteers, Officers and Men.....	41,369
Colored Volunteers, Enlisted Men.....	1,514
Total killed in battle.....	<u>44,238</u>

The alphabetical registers of the Surgeon General's Office contain, as already indicated, a much smaller number of deaths of this class. They sum up 35,408, distributed as follows :

Regular Army, Officers and Men.....	831
White Volunteers, Officers and Men.....	33,805
Colored Volunteers, Enlisted Men.....	772
Total killed in battle.....	<u>35,408</u>

For the Killed in Battle, therefore, it is clear that the figures of the Adjutant General's report must be preferred; yet in view of the 55,297 men borne on the same report as dead from Unknown Causes, it cannot be believed that even these figures represent the whole number Killed in Battle. They are simply to be regarded as the least numbers which can safely be employed to represent this category, and an additional estimated number should be added, to be determined after a consideration of the numbers which will be shown to have died from other causes.

Next, with regard to the number of those who Died of Wounds. The report of the Adjutant General represents the total number of this class as 33,993, distributed as follows :

Regular Army, Officers and Men.....	850
White Volunteers, Officers and Men.....	32,106
Colored Volunteers, Enlisted Men.....	1,037
Total died of wounds.....	<u>33,993</u>

The alphabetical registers of the Surgeon General's Office, however, permit us very materially to increase these figures. The total number of deaths from wounds and injuries recorded by name on them is 49,205, which are distributed as follows :

Regular Army, Officers and Men.....	1,174
White Volunteers, Officers and Men.....	46,271
Colored Volunteers, Enlisted Men.....	1,760
Total deaths from wounds and injuries.....	<u>49,205</u>

The same reasons which rendered it proper to regard the figures of the Adjutant General's report as the least number which can be believed to represent the Killed in Battle, compel the recognition of the above count from the Surgeon General's registers as the least number that can be believed to have Died from Wounds and Injuries.

There are besides on the registers the names of 302 officers and men reported to have committed Suicide, 103 Homicides, and 121 Executions, making a total of 526 deaths from these causes, distributed as follows:

Regular Army	27
White Volunteers.....	442
Colored Volunteers.....	57
Total suicides, homicides and executions	<u>526</u>

Next, with regard to the number who Died of Disease. The report of the Adjutant General gives the number of this class as 149,043 distributed as follows:

Regular Army, Officers and Men.....	2,428
White Volunteers, Officers and Men.....	120,404
Colored Volunteers, Enlisted Men.....	26,211
Total	<u>149,043</u>

Here again the death registers of the Surgeon General's Office record a much larger number of names. The total number of deaths of this class entered on the books being 186,216, distributed as follows:

Regular Army, Officers and Men.....	3,009
White Volunteers, Officers and Men.....	153,995
Colored Volunteers, Enlisted Men	29,212
Total number of deaths from disease	<u>186,216</u>

Of course, in forming an estimate of the total number of Deaths from Disease, preference is to be given to these figures.

Seeing then that the report of the Adjutant General affords the nearest approximation to the Whole Number of Deaths, and to the number Killed in Battle, while the registers of the Surgeon General's Office afford the nearest approximation to the number of deaths from Wounds and from Disease, we will find that of the whole number of deaths the causes of but 24,184 remain Unknown, and the following table presents a synoptical view of the conclusions indicated in the course of the foregoing remarks:

	Regulars.	White Volunteers.	Colored Volunteers.	Total.
Killed in battle.....	1,355	41,369	1,511	44,238
Died of wounds and injuries.....	1,174	46,271	1,760	49,205
Suicide, homicide, and execution.....	27	442	57	526
Died of disease.....	3,009	153,995	29,212	186,216
Unknown causes.....	159	23,188	837	24,184
Total.....	5,724	265,265	33,380	304,369

The total in this table foots up a few hundred deaths more than are reported by the Adjutant General, and this on account of the mortality of the Regular Army being

estimated here as rather greater than is shown in his report. This greater estimate results partly from accepting as the number of Killed in Battle among the Regular troops the number of names so reported to the Adjutant General, partly from the fact that the Surgeon General's Death Registers contain a larger number of names of regular soldiers dead of Wounds and Disease, and partly from the circumstance that the count of the latter has been made to go up to the close of the fiscal year terminating June 30, 1865, representing thus the deaths of one month more than is embraced in the Adjutant General's reports.

By consolidating the deaths from violent causes in the foregoing table we obtain the following general view:

	Regulars.	White Volunteers.	Colored Volunteers.	Total.
Violent deaths	2,556	88,082	3,331	93,969
Deaths from disease	3,009	153,995	29,212	186,216
Unknown causes	159	23,188	837	24,184
Total	5,724	265,265	33,380	304,369

From this view it will be seen that of 280,185 deaths from known causes, the proportion of violent deaths to the whole number was one out of every three deaths. A very great difference, however, existed between the White and Colored troops in these respects. In the case of the White troops, out of 247,642 deaths from known causes, the proportion of violent deaths to the whole number of deaths was one out of every two and seven-tenths. In the case of the Colored troops out of 32,543 deaths from known causes the proportion of violent deaths to the whole number of deaths was one out of every nine and eight-tenths. Some difference also appears to exist in this respect between the Regular and Volunteer troops; the proportion of violent deaths to the whole number of deaths from known causes being one to two and two-tenths for the first, and one to two and seven-tenths for the second of these classes. It is true that these figures do not represent the whole number of deaths, nevertheless the deaths from unknown causes bear so small a proportion to the whole number, and the probability that these also are distributed in nearly the same manner among the several causes is so great that it cannot be supposed the general result would be materially modified had it been possible to ascertain the cause of death in every case.

It is desirable next to endeavor to form an estimate of the ratio existing between the number of deaths and the the number of troops engaged. This has already been done in various quarters, on entirely dissimilar principles. In the first place, the number of deaths has been compared with the total number of enlistments; but it will at once be seen that on this plan we shall get no results which can be fairly compared with the death rates of civil populations; for the term of service for which the troops were enlisted during the war was shorter than the duration of the war itself; some were enlisted for three months, some for one hundred days, some for one year, some for three years or more; and since the same man, in vast numbers of cases, was re-enlisted, often several times during the

war, the total number of enlistments does not bear any such relationship to the men engaged as would indicate their actual number.

Another method employed has been to compare the number of deaths with the number of enlistments reduced to terms of service of three years. This has been done by counting three enlistments for one year, or twelve for three months, as one three year's enlistment. The number of three year's enlistments thus obtained is stated in the report of the Adjutant General of February, 1869, as 2,073,112 white enlisted men. The total number of commissions issued to white officers was 83,935, and the total number of colored enlistments 178,895. It is remarked in the report that the number of officers and colored enlistments are "all considered three years; most were recruited for that period, and those for shorter periods cannot be classed without a laborious examination of numerous muster rolls."

It is obvious, however, that these figures could not be used for our present purpose, even were they all reduced to terms of service of three years, for immense numbers of men enlisted or were commissioned more than once in three-year organizations, hence appearing twice or oftener in the above enumeration, and without such an investigation of the rolls as is not at present practicable, it would not be possible to ascertain the number of such cases. Moreover, there are no means, short of following out the history of each man on the rolls, of ascertaining the time which those who enlisted for three years actually served. Besides those who died or were discharged for disability at various periods of their term of service, it is well known that the large local bounties induced many men to desert at an early period, who speedily enlisted again in some other organization in order to secure a double bounty; in short, it would appear impossible, at the present time, to arrive at such definite results with regard to this subject as would serve as a sound basis for the calculation of instructive ratios.

Another plan remains which, though it cannot be hoped to be made perfectly accurate, would seem to offer the greatest probability of arriving at valuable results.

The actual strength of the army, as ascertained at certain dates during the progress of the war, may be made use of to calculate the mean strength constantly in service, and this result may be compared with the number of deaths known to have occurred during the period represented.

In the case of the Colored troops, the Adjutant General has furnished to the Surgeon General a complete statement showing separately the number of commissioned officers and enlisted men of these organizations, present and absent, from September, 1862, till December, 1867, when the last colored regiment was mustered out of service, being a period of five years and four months. From this statement the following average mean strength for the period has been computed for enlisted men only. Average strength present, 35,640: absent, 6,699; aggregate, 42,339. The total number of deaths for the same period among the colored enlisted men was 33,380, being at the rate of 6,259 deaths for each year, or an annual death-rate of 148 per 1000 of average aggregate mean strength. Subdividing this death-rate, in accordance with the ratio of violent to other deaths already indicated

for this class, we shall have an annual ratio of 15 violent deaths and 133 deaths from disease per 1,000 of strength.

In the case of the Regular Army, the Adjutant General has published reports of the strength present and absent at various dates, from which those representing the strength on the first of each year have been selected. The figures, as here presented, include both officers and men.

	Present.	Absent.	Aggregate.
January 1, 1861	14,663	1,704	16,367
" 1, 1862	19,871	2,554	22,425
" 1, 1863	19,169	6,294	25,463
" 1, 1864	17,237	7,399	24,636
" 1, 1865	14,661	7,358	22,019
Average mean strength*	17,735	5,194	22,929

The total number of deaths in the Regular Army being 5,724 between the 15th of April, 1861, and 30th of June, 1865, a period of four years two months and a half, would give an annual average of 1,360 deaths, or an annual death-rate of 59 per 1,000 of strength, which, divided between violent deaths and those from disease, would give an annual ratio of 27 violent deaths and 32 deaths from disease per 1,000 of strength.

The strength of the White Volunteers on certain dates may be obtained by subtracting from statements made by the Adjutant General giving the strength of the total Volunteer force at certain dates during the war, the known strength of the Colored enlisted men for the same month, and using the resulting figures as data for computing the mean. The following table, in which both officers and men are included, was obtained in this manner :

	Present.	Absent.	Aggregate
July 1, 1861	169,480	849	170,329
January 1, 1862	507,333	46,159	553,492
" 1, 1863	676,175	212,859	889,034
" 1, 1864	540,643	237,650	778,293
" 1, 1865	523,536	309,395	832,931
March 31, 1865	554,720	294,351	849,071
Average mean strength†	544,704	196,803	741,507

The total number of deaths of this class has been stated above at 265,265. Of this number, however, the death registers of the Surgeon General's Office show that 4,553 died subsequently to June 30, 1865, which would leave a total of 260,712 deaths from the outbreak of the War to that time, being at the rate of 65,178 deaths annually, or 88

* Calculated by the formula given in the "English Life Table." London, 1864. Page XV.

† Calculated by the formula just cited, with the modifications required by the irregular dates of the enumerations at the beginning and end of the series. The count of March 31, 1865, is assumed as the mean of the six months in the middle of which it was made. The number in service increased up to May 1, 1865. (see the Report of the Secretary of War for the year ending June 30, 1866, page 78.) and decreased rapidly during the two following months.

per 1,000 of average aggregate mean strength. Subdividing this ratio between violent deaths and deaths from disease in accordance to the proportion of these classes already indicated, we shall have an annual ratio of 33 violent deaths and 55 deaths from disease per 1,000 of average aggregate strength.

Having thus, from independent sources, arrived at a general view of the total mortality of our forces during the War, we are now prepared to make use of the conclusions thus obtained as affording the means of forming a judgment with regard to the completeness of the tables contained in this volume.

The total number of deaths embraced in the tables for White troops, which include the officers as well as the men of both Regular and Volunteer organizations, is shown in Table C, page 641, to be 166,623. The total number of deaths of Colored enlisted men contained in the tables for Colored troops is shown in Table CXI, page 710, to be 29,004, making an aggregate of 195,627 deaths. But, as has been fully explained already, these tables do not include the Killed in Battle, those who died while Prisoners of War, or any of those who died while absent from their commands, excepting only the deaths in hospital.

Now, of the whole number of 304,369 deaths known to have occurred during the War, we have already seen that at least 44,238 were Killed in Battle. The report of the Adjutant General of February, 1869, sets forth also 26,168 deaths, included in the whole number as having occurred among those of our men who were prisoners in the hands of the enemy. There are no means of ascertaining, with precision, the number of deaths among others absent from their commands; but if the two items just given, neither of which can be regarded as representing all the deaths of the categories specified, be deducted from the whole number, we shall have 233,963 deaths remaining, the greater portion of which ought to appear upon the tables if these were absolutely complete. But the number the tables actually contain is 195,627, or eighty-three hundredths of the whole number of deaths which remain, after deducting the Killed in Battle and the deaths among Prisoners of War. So that, in a general way, it may fairly be concluded that the tables cover about nine-tenths of the class of facts they are intended to embrace. This proportion is certainly large enough to give great weight to their indications with regard to the comparative frequency and mortality of different diseases, of the same disease at various times and in different regions, and some other important questions with regard to the sickness and mortality of our armies during the War.

Besides the sickness and mortality tables this volume contains synoptical tables showing the causes of Discharge of enlisted men from the service on surgeon's certificate of disability, for White and Colored troops separately. These tables were made up from the lists of discharges accompanying reports of medical officers to the Surgeon General. These lists specified the discharged soldiers by name, and were intended to set forth the cause and date of discharge in each case. A count of the discharged soldiers thus reported shows a total of 215,312 white and 8,223 colored troops, which are the numbers represented in the tables.

The Adjutant General, in his letter to the Surgeon General of October 25, 1870, states the number borne on the rolls filed in his office as discharged for disability, as follows :

Enlisted Men of the Regular Army.....	6,541
Enlisted Men of the Volunteer Army.....	269,197
Enlisted Men of Colored Troops.....	9,807
Total.....	<u>285,545</u>

This number may safely be taken as a close approximation to the actual number of cases.

Unfortunately the reports made to the Surgeon General did not always specify distinctly the cause of discharge, as was required by the regulations on the subject, and hence it will be seen by an examination of Tables CI and CXII that of the whole number reported there were 25,915 discharges of white and 1,226 of colored enlisted men, the causes of which cannot be stated. There still remain, however, 189,397 discharges of white, and 6,997 of colored soldiers, which are distributed among the several causes of discharge, and this is a sufficiently large proportion to enable valuable deductions to be made from the facts presented.

In the preparation of Tables CI and CXII it was deemed advisable to depart somewhat from the list of diseases used in the tabular form of sick report, which served for the construction of the tables of Sickness and Mortality, in order that the tables might correspond, as closely as possible, with the reports made. Moreover, on account of the number of men reported as discharged from service on account of Old Age, Deformities, and other conditions belonging to Dr. Farr's class of Developmental Diseases, it was thought best to represent this class also, on these two tables. Almost without exception the causes of discharge reported under this head existed prior to the enlistment of the soldier, and ought to have prevented him from being received into the service.

With the foregoing considerations, the tables embraced in this volume are now submitted to the consideration of medical statisticians, as the first installment of the Medical History of the War. The writer regrets greatly the necessity of publishing first these dry and severe details, in which it can hardly be expected the general medical reader will be able to take much interest. This course was rendered imperative, however, by the fact that in the subsequent volumes it will frequently be necessary to refer to statistical considerations, which could not be accurately done until the tabulations of the present volume were complete; and the tabulations having been completed, it appeared a duty to place them as soon as possible at the disposal of the other students of this subject, throughout the world.

In the Second Volume of this work it is proposed to discuss in detail, the Diseases which were the chief causes of the sickness, the mortality, and the discharges for disability recorded in this. Histories of cases, accounts of pathological investigations, records of the work done in the Army Medical Museum, and extracts from reports with regard to particular diseases made from time to time to the Surgeon General, will be published, so far as seems desirable to represent the more important facts in connection with these subjects; and

an attempt will be made to offer such commentaries on the evidence recorded as may seem likely to facilitate the examination of the topics discussed, by those who are engaged in the study of the sickness and mortality of armies.

An examination of Tables C and CXI will show at a glance the subjects which must necessarily receive chief attention.

Foremost will be Camp Diarrhœa, and Dysentery, and Camp Fevers. Table C exhibits 129,386 deaths from disease among White troops, distributed among their several causes. Table CXI contains 27,499 deaths from disease among Colored troops, distributed in like manner. It will be seen that of these numbers 37,794 deaths of white and 6,764 of Colored troops were due to the several forms of Diarrhœa and Dysentery, which must, therefore, be regarded as the most important causes of the mortality from disease in our armies. Next come the several forms of Camp Fever reported under such heads as Typhoid, Typhus, Common Continued, Remittent, and Typho-Malarial Fevers. To these the tables attribute 35,965 deaths of White, and 4,691 of Colored troops.

The next most important cause of death among the troops was Pneumonia, of which 14,738 deaths of White, and 5,233 of Colored troops are reported.

Among the other leading causes of mortality are Small Pox and Varioloid, Measles, Consumption, and Intermittent Fevers.

In the matter of discharges for disability other affections assume prominence. Thus, from Tables CI and CXII, it will be seen that the affections which caused the largest number of discharges among White troops were: Consumption, 20,403; Diarrhœa and Dysentery, 17,389; Debility, 14,500; Rheumatism, 11,779; Heart Diseases, 10,636. Among the Colored troops the chief causes of discharge were: Rheumatism, 874; Consumption, 592; Debility, 540, and Diarrhœa and Dysentery, 359.

This brief enumeration, which can readily be extended by the reader on an examination of the tables, will serve to indicate some of the more important subjects which must receive consideration in the next volume, for the completion of which, however, considerable labor will yet be required.

J. J. WOODWARD

PART I.—WHITE TROOPS.

SICKNESS AND MORTALITY OF WHITE TROOPS.

SICKNESS AND MORTALITY OF WHITE TROOPS PRIOR TO JULY 1, 1861.

The reports received, chiefly from the three months' volunteers, prior to July 1, 1861, or the commencement of the first fiscal year of the war, have been consolidated into three tables.

1. Atlantic Region, Table I.
2. Central Region, Table II.
3. Consolidated table including both regions, Table III.

1. *Atlantic Region*—Table I.

The reports embraced in this table were received from regiments of the column under General Robert Patterson for May and June, 1861, from regiments in and around Washington, D. C., under General I. McDowell and Colonel J. K. F. Mansfield, for the same months, and from regiments in the vicinity of Fortress Monroe, under General B. F. Butler, for the month of June only.

2. *Central Region*—Table II.

This table is made up from reports received from the Department of the Ohio, commanded by General George B. McClellan, for the month of June, 1861, and chiefly from regiments in Western Virginia, or the adjoining portion of Ohio.

TABLE I.

Abstract of the Sickness and Mortality of Troops in the Atlantic Region prior to July 1, 1861.

SICKNESS AND MORTALITY OF WHITE TROOPS DURING THE FIRST FISCAL YEAR OF THE WAR.

(FROM JULY 1, 1861, TO JUNE 30, 1862.)

ATLANTIC REGION.

The reports of sick and wounded from this region are here presented consolidated into statistical tables for seven armies or departments, as follows:

1. The Middle Department - - - - - Table IV.
2. The Department of the Shenandoah - - - - - Table V.
3. The Army of the Potomac - - - - - Table VI.
4. The Department of the Rappahannock - - - - - Table VII.
5. The Department of Virginia - - - - - Table VIII.
6. The Department of North Carolina - - - - - Table IX.
7. The Department of the South - - - - - Table X.

To these tables are added—

8. A table showing the mortality in the general hospitals of the
Atlantic Region - - - - - Table XI.
9. A consolidated table for the Atlantic Region - - - - - Table XII.

The reports from stations in the New England and Middle States are too incomplete to render it advisable to undertake the construction of a statistical table for that region.

The following remarks will indicate what portions of the troops operating in the Atlantic Region are embraced in each of the above divisions.

1. THE MIDDLE DEPARTMENT—TABLE IV.

The Middle Department was created March 22, 1862, by General Orders, No. 28, but for convenience the name is here applied for the whole year to the region including Baltimore and the portions of Maryland indicated in the following paragraph.

It embraces for July the Department of Annapolis, which was created by General Orders, No. 12, April 27, 1861, to include the country for twenty miles on each side of

the railroad from Annapolis to the city of Washington, as far as Bladensburg, Maryland, General B. F. Butler to command; headquarters after the middle of May being fixed in Baltimore. July 25th the Department of Annapolis was merged into the Department of Pennsylvania, which was to consist of the States of Pennsylvania and Delaware and the State of Maryland, with the exception of the counties of Washington, Alleghany, Prince George, Montgomery, and Frederick. Only the troops in the part of Maryland thus defined are here included: General J. A. Dix was in command. August 17, 1861, this portion of Maryland was added to the Department of the Potomac, a part of which it continued to be, though still under the immediate command of General Dix, until March 22, 1862, when the Middle Department was created, to consist of the States of New Jersey, Pennsylvania, and Delaware, the Eastern Shore of Maryland and Virginia, and the counties of Cecil, Hartford, Baltimore, and Anne Arundel, in Maryland. General John A. Dix in command until June 1, 1862, when General John E. Wool was assigned. All of the Middle Department thus defined is included in the table except the States of Pennsylvania and New Jersey.

The statistics include the troops employed in General Lockwood's expedition into the Eastern Shore of Maryland and Virginia which set out in November, 1861, but do not include the regiments of the South Carolina expedition under General Sherman, or of the North Carolina expedition under General Burnside during the period of their organization at Annapolis.

2. THE DEPARTMENT OF THE SHENANDOAH—TABLE V.

This table embraces the reports from the troops under General Patterson, and subsequently under General Banks on the Upper Potomac and in the Shenandoah Valley. General Shields' Division is included for March and April, 1862; for May and June it is embraced in the Department of the Rappahannock.

The Department of the Shenandoah was created July 19, 1861, by General Orders, No. 46, to consist of the Army under General Robert Patterson in the Valley of Virginia, General N. P. Banks assigned to command. July 25, 1861, the counties of Washington and Alleghany, in Maryland, and such other parts of Virginia as may be covered by the Army in its operations, were added. August 17, 1861, it was merged into the Department of the Potomac, remaining, however, as a separate division still under the command of General Banks. This division is here included. April 4, 1862, the command of General Banks was again designated as the Department of the Shenandoah, which was to consist of that portion of Virginia and Maryland lying between the Mountain Department and the Blue Ridge. June 8, 1862, the Department was extended eastward to include the Piedmont District and the Bull Mountain range.

The Army under General Patterson crossed the Potomac early in July, 1861, and moved through Martinsburg, returning after a short time to Harper's Ferry, where General Banks

took command. General Banks withdrew the Army to Sandy Hook, on the north side of the Potomac, and ultimately to Darnestown, Maryland, in the vicinity of which he remained till the latter part of November, when he marched northward and wintered with the larger part of his command in the neighborhood of Frederick, Maryland.

Towards the end of February, 1862, he crossed the Potomac into the Shenandoah Valley, where he operated till the close of the fiscal year. The most important conflict during the year was that at Winchester, March 23, 1862.

3. THE ARMY OF THE POTOMAC—TABLE VI.

This table includes the Army in and around Washington up to the latter part of March, 1862, and, subsequently, that portion of it which operated on the Peninsula between the James and York rivers against Richmond.

At the beginning of the fiscal year most of this Army was in Virginia before Washington and was included in the Department of Northeastern Virginia, under the command of General I. McDowell. The District of Columbia, Fort Washington, and Maryland as far as Bladensburg, constituted the Department of Washington, Colonel J. K. F. Mansfield in command. The reports received from both these departments are here included.

August 17, 1861, the Department of the Potomac was created by General Orders, No. 15, Headquarters of the Army, to consist of the Departments of Washington and Northeastern Virginia, the Valley of the Shenandoah, and the States of Maryland and Delaware, General G. B. McClellan in command. Table VI includes all the reports from this Department, with the exception of those embraced, as already explained, in Tables IV and V, under the designations Middle Department and Department of the Shenandoah, which are presented separately, although they were officially united to the Department of the Potomac, the first until March 22, and the second until April 4, 1862. From the first of April, 1862, to the close of the fiscal year, the table embraces only the reports from troops actually upon the Peninsula.

The force here included lay in and around Washington until July 16, 1861, when the advance to Centreville was made which led to the battle of Bull Run, July 21st. Subsequently the Army occupied the vicinity of Washington until the latter part of March, 1862, when that portion which is embraced in the table descended the Potomac on transports and, landing at Fortress Monroe, advanced up the Peninsula, besieging Yorktown from the 5th of April to the 4th of May, and lying along the Chickahominy, which was reached by the advance May 20th, until June 28th, when the movement to Harrison's Landing was commenced.

The chief engagements during the year, besides the battle of Bull Run and the siege of Yorktown, were the battle of Williamsburg, May 5, 1862, the battles of Fair Oaks and

Seven Pines, May 31st, and the series of battles usually known as the "Seven-days," beginning June 25th and terminating with the battle of Malvern Hill, July 1st.

4. THE DEPARTMENT OF THE RAPPAHANNOCK—TABLE VII.

This Department was created by General Orders, No. 34, April 4, 1862, to consist of that portion of Virginia east of the Blue Ridge and west of the Potomac, and the Fredericksburg and Richmond Railroad, including the District of Columbia and the country between the Potomac and Patuxent rivers, General I. McDowell to command.

The table represents the reports received for April, May, and June, 1862, from the troops within the above limits. Fredericksburg was occupied May 4th by a portion of the command, and May 24th a force was sent from that place to act against General Jackson in the Valley of the Shenandoah. This force had an engagement at Port Republic, June 8th and 9th.

5. THE DEPARTMENT OF VIRGINIA—TABLE VIII.

Under this head are consolidated all reports received from the Division in the vicinity of Fortress Monroe, Virginia, under General B. F. Butler, until August 17, 1861, and, subsequently, under General J. E. Wool. June 1, 1862, this Division was placed under the command of General McClellan, the Department of Virginia being extended to include that part of Virginia south of the Rappahannock and east of the railroad from Fredericksburg to Richmond, Petersburg and Weldon. In compiling the table, however, for the month of June, only the reports from troops at Fortress Monroe and vicinity are included, the Army of the Potomac being kept separate.

With this Department are consolidated the reports received during 1861 from the expedition to Hatteras Inlet; subsequently they are embraced in the Department of North Carolina.

6. THE DEPARTMENT OF NORTH CAROLINA—TABLE IX.

The Department of North Carolina was created by General Orders, No. 2, January 7, 1862, to consist of the State of North Carolina; General A. E. Burnside to command. The troops for the North Carolina expedition were assembled at Annapolis, Maryland, during the latter part of 1861. In January, 1862, the expedition proceeded on transports to Roanoke Island, which was occupied after the engagement of February 7th. March 13th the greater part of the expeditionary force landed near Newbern, in the neighborhood of which it remained until the close of the fiscal year, though several other points were occupied by detachments.

The chief engagements, besides that on Roanoke Island, were the battle of Newbern, March 14th, and the siege of Fort Macon, which surrendered April 25th.

7. THE DEPARTMENT OF THE SOUTH—TABLE X.

Under this head are included the garrisons at Tortugas and Key West for the whole year, and after the first of October, 1861, the expeditionary force under General T. W. Sherman, which sailed from Fortress Monroe towards the close of October and landed at Hilton Head after the surrender of Forts Beauregard and Walker, November 7th. Several of the neighboring islands and various points on the east coast of Florida were subsequently occupied.

The Department of the South was created by General Orders, No. 26, March 15, 1862, to consist of the States of South Carolina, Georgia, and Florida, General D. Hunter to command. West Florida, however, has been throughout consolidated with the Department of the Gulf, although it was not officially connected with it until a later period.

CENTRAL REGION.

The reports from the Central Region are consolidated into statistical tables for six departments, as follows:

1. The Department of Western Virginia - - - - Table XIII.
2. The Department of the Cumberland - - - - Table XIV.
3. The Department of the Tennessee - - - - Table XV.
4. The Department of the Gulf - - - - Table XVI.
5. The Department of the Northwest - - - - Table XVII.
6. The Department of the Missouri - - - - Table XVIII.

To these are added—

7. A table showing the mortality in the general hospitals of the
Central Region - - - - Table XIX.
8. A consolidated table for the Central Region - - - Table XX.

1. THE DEPARTMENT OF WESTERN VIRGINIA—TABLE XIII.

This table includes the reports received from troops in the States of Virginia and Maryland, west of the Department of the Shenandoah. Until September 19, 1861, Western Virginia was embraced in the Department of the Ohio under the command of General G. B. McClellan, who, in the latter part of July, was succeeded by General W. S. Rosecrans. Subsequently the table includes the Department of Western Virginia and the Mountain Department.

September 19th the Department of Western Virginia was created by General Orders, No. 80, to consist of so much of Virginia as lies west of the Blue Ridge Mountains, General Rosecrans to command.

January 23, 1862, the western slope of the Alleghany Mountains was declared to be the eastern boundary. March 3, 1862, the eastern limits were extended to embrace the valleys of the south branch of the Potomac and the Cow Pasture branch of the James river, the Valley of the James river to the Balcony Falls, the Valley of the Roanoke west of the Blue Ridge, and the New River Valley.

March 15, 1862, the Department of Western Virginia was merged into the Mountain Department, which was created by the President's War Order No. 3, March 11, 1862, to consist of the country west of the Department of the Potomac and east of the Department of the Mississippi; General J. C. Frémont to command. The eastern boundary of the Department of the Mississippi was by the same order declared to be a line drawn north and south through Knoxville, Tennessee.

June 8, 1862, the Mountain Department was extended eastward to the road running from Williamsport to Martinsburg, Winchester, Strasburg, Harrisonburg and Staunton,

including that place; thence in the same direction southward until it reaches the Blue Ridge chain of mountains; thence with the line of the Blue Ridge to the southern boundary of the State of Virginia.

May 24th, General Frémont was ordered to cross into the Shenandoah Valley, and did so, with the greater part of his force, which still remained in the valley at the close of the fiscal year.

The most important engagements were those at Rich Mountain, July 11, 1861, at Carnifex Ferry, September 10, 1861, and at Cross-Keys, June 8, 1862.

2. THE DEPARTMENT OF THE CUMBERLAND—TABLE XIV.

This table includes the reports received from troops operating in Kentucky and Tennessee east of the Tennessee river, and from the army under General Buell known as the Army of the Ohio.

The Department of the Cumberland was created by General Orders, No. 57, August 15, 1861, to consist of the States of Kentucky and Tennessee, General R. Anderson to command. November 9th it was discontinued, the region being merged into the Departments of the Missouri and the Ohio. As, however, it was reestablished in October, 1862, and continued throughout the war, the designation, Department of the Cumberland, has been retained for the table. The first reports received are for October, and represent troops in the Department of the Cumberland as above described. November 9, 1861, that portion of the State of Kentucky east of the Cumberland river and the State of Tennessee were added to the Department of the Ohio, General D. C. Buell to command. The Department of the Ohio at this time embraced, besides the State of Ohio, Michigan and Indiana, which, however, are not included in Table XIV. March 11, 1862, the Department of the Ohio was discontinued, and all of it west of a line running north and south of Knoxville, Tennessee, was added to the Department of the Mississippi, created by the President's War Order No. 3, General H. W. Halleck to command; nevertheless, for statistical reasons, the table continues to include the Army of the Ohio and the stations east of the Cumberland river.

The most important movement during the year was that of the Army of the Ohio southward in the spring of 1862. Nashville, Tennessee, was occupied towards the close of February, and the main body reached Pittsburg Landing on April 5th, and participated next day in the battle of Shiloh. The Army of the Ohio was engaged in the subsequent operations which terminated in the surrender of Corinth, May 30th. After this it marched into northern Alabama, whither, after the occupation of Nashville, the division under General Mitchell had already proceeded, and subsequently into southern Tennessee.

3. THE DEPARTMENT OF THE TENNESSEE—TABLE XV.

The Department of the Tennessee was not created until October, 1862; the name, however, has been used in this table to designate the troops within the limits assigned to the Department of the Tennessee in General Orders, No. 159, October 16, 1862, by which the Department was made to include Cairo, Forts Henry and Donelson, northern Mississippi, and the portion of Kentucky and Tennessee lying west of the Tennessee river.

The troops in this region formed a part of the Western Department from July 3 to November 9, 1861. From November 9 to March 11, 1862, they were included in the Department of Missouri, and subsequently in the Department of the Mississippi.

In July, 1861, the principal station was Cairo, Illinois, and its vicinity; subsequently Paducah and Smithland, Kentucky, were occupied. In the beginning of February, 1862, the Army of the Tennessee, under the command of General Grant, ascended the Tennessee river on transports to Fort Henry, Tennessee. After the surrender of Fort Henry, February 6th, and of Fort Donelson, February 16th, the troops were moved on transports up the Tennessee river to Pittsburg Landing, near which the battle of Shiloh was fought April 6th and 7th. On the latter day the Army of the Ohio under General Buell participated in the conflict.

Subsequently to the battle of Shiloh the movement towards Corinth, Mississippi, took place, terminating in the siege of that place and its evacuation by the Rebel army, May 29th. During the operations before Corinth the Army of the Tennessee formed the right, the Army of the Ohio the centre, and the Army of the Mississippi the left of the besieging force; the whole being under the command of General H. W. Halleck. The Army of the Mississippi, under the command of General John Pope, had been organized in Missouri, and made the campaign which resulted in the capture of New Madrid, Missouri, and Island No. 10, in the Mississippi river. After the battle of Shiloh it was brought on transports to join the forces before Corinth, arriving in the latter part of April. The reports from this Army prior to April are consolidated in the Department of the Missouri.

Subsequently to the evacuation of Corinth the Army of the Ohio moved to the east, as already shown. The Army of the Mississippi, however, remained coöperating with the Army of the Tennessee. The reports from the Army of the Mississippi for April, May, and June, are, therefore, included in this table.

The most important engagement in this Department, besides those already mentioned, was that at Belmont, Missouri, November 7, 1861, in which an expeditionary force from Cairo under command of General Grant participated.

4. THE DEPARTMENT OF THE GULF—TABLE XVI.

In this table are included the reports received from Fort Pickens and Santa Rosa Island, Florida, Ship Island, Mississippi, and the expeditionary force under General B. F. Butler, which occupied New Orleans.

The Department of the Gulf was created by General Orders, No. 20, February 23, 1862, to consist of all the coast of the Gulf of Mexico west of Pensacola Harbor, and so much of the Gulf States as should be occupied by the forces under General B. F. Butler.

March 15, 1862, the State of Florida was transferred to the Department of the South. In these statistical tables, however, the plan has been pursued of including the east coast of Florida, Key West, and Tortugas, with the Department of the South, while Fort Pickens and Santa Rosa Island are embraced in the Department of the Gulf.

The table includes simply the troops at Fort Pickens and Santa Rosa Island until the close of February, 1862. A brigade of General Butler's expedition reached Ship Island in December, 1861, but March is the first month represented in the reports. During March and the early part of April additional troops arrived at Ship Island, and soon after the joint military and naval expedition sailed from that point, which, after the reduction of Forts St. Philip and Jackson, occupied New Orleans, May 1, 1862. A part of the expeditionary force subsequently occupied Baton Rouge and advanced as far as the neighborhood of Vicksburg.

5. THE DEPARTMENT OF THE NORTHWEST—TABLE XVII.

This Department was created by General Orders, No. 128, September 7, 1862, to consist of the States of Wisconsin, Iowa, Minnesota, and the Territories of Nebraska and Dakota. The designation is applied in the table to the same geographical limits, with the exception of the State of Wisconsin. It embraces, therefore, all the region between the Mississippi river and the Rocky Mountains north of Missouri and Kansas. This region formed part of the Western Department until November 9, 1861; then of the Department of the Missouri, until March 11, 1862, after which it became a portion of the Department of the Mississippi.

6. THE DEPARTMENT OF THE MISSOURI—TABLE XVIII.

This table embraces the reports received from troops in Missouri and Kansas, and from the Army of the Southwest under General S. R. Curtis, which during the latter part of the year was operating in Arkansas.

Missouri and Kansas formed part of the Western Department from July 3 to November 9, 1861, when the Department of the Missouri and the Department of Kansas were created by General Orders, No. 97.

The Department of Kansas was to consist of the State of Kansas, the Indian Territory west of Arkansas, and the Territories of Nebraska, Colorado, and Dakota. March 11, 1862, it was merged into the Department of the Mississippi.

The Department of the Missouri consisted of the States of Missouri, Iowa, Minnesota, Wisconsin, Illinois, Arkansas, and that portion of Kentucky west of the Cumberland river. March 11, 1862, it also was merged into the Department of the Mississippi.

The Department of the Missouri was reestablished September 19, 1862, with boundaries essentially the same as were assigned to it in the preparation of the present table.

Among the military movements during the year within these boundaries, that of General Frémont to Springfield in October, 1861, and the campaigns of Generals Curtis and Pope during the first six months of 1862, may be particularly mentioned. General Curtis with the Army of the Southwest moved during the latter part of January to Rolla, and thence to Lebanon. From Lebanon he advanced to Springfield, crossed into Arkansas February 18th, fought the battle of Pea Ridge March 7th and 8th, and subsequently marched through the State to Helena, on the Mississippi river.

General Pope with the Army of the Mississippi moved from Commerce in the latter part of February towards New Madrid, which was evacuated by the enemy March 14th; he next operated against Island No. 10, which was evacuated April 8th. Later in April the greater part of his forces were sent on transports to join in the operations against Corinth. The reports from these troops for April, May, and June, 1862, are consolidated with the Department of the Tennessee, as has been already explained.

Abstract of the Sickness and Mortality

YEAR.....	1861.									
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.	
							17,953.		22,203.	
MONTH.....										
MEAN STRENGTH.....										
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
CLASS I.—ZYMOTIC DISEASES.										
ORDER I.— <i>Miasmatic Diseases.</i>										
1. Typhus Fever							6		3	3
2. Typhoid Fever.....							77	10	216	14
3. Common Continued Fever.....							42		24	
4. Remittent Fever							124	1	657	5
5. Quotidian Intermittent Fever							508		578	
6. Tertian Intermittent Fever							304		325	
7. Quartan Intermittent Fever.....							12		11	
8. Congestive Intermittent Fever							2		15	1
9. Acute Diarrhœa.....							1,337		1,462	2
10. Chronic Diarrhœa.....							63		53	
11. Acute Dysentery.....							398	2	379	
12. Chronic Dysentery.....							21		24	1
13. Erysipelas							11		10	
14. Small-pox and Varioloid.....									4	1
15. Measles.....							140		1,077	
16. Scarlet Fever										
17. Mumps							26		56	
18. Epidemic Catarrh							152		80	
19. Debility							87		61	
20. Other Diseases of this Order.....							7		14	
ORDER II.— <i>Enthetic Diseases.</i>										
21. Syphilis							57		71	
22. Gonorrhœa.....							100		99	
23. Orchitis.....							9		12	
24. Stricture of the Urethra									1	
25. Serpent Bite.....										
26. Other Diseases of this Order.....										
ORDER III.— <i>Dietic Diseases.</i>										
27. Scourvy							2			
28. Delirium Tremens							6		18	
29. Inebriation.....							1		19	1
CLASS II.—CONSTITUTIONAL DISEASES.										
ORDER I.— <i>Diathetic Diseases.</i>										
30. Gout										
31. Acute Rheumatism.....							123		158	
32. Chronic Rheumatism.....							92		65	
33. Anæmia							3		14	
34. General Dropsy							1		1	
35. Cancer.....										
36. Tumors.....							2			
37. Other Diseases of this Order							6		13	
ORDER II.— <i>Tubercular Diseases.</i>										
38. Consumption.....							7		5	
39. Serofula									3	
CLASS III.—FARASITIC DISEASES.										
40. Worms							9		3	
Carried forward.....							3,735	13	5,531	28

Abstract of the Sickness and Mortality

YEAR.....	1861.											
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.			
	6,277.		6,103.		8,323.		14,325.		15,238.			
MONTH.....	MEAN STRENGTH.....		LIST OF DISEASES.									
	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.		
CLASS I.—ZYMOTIC DISEASES.												
ORDER I.— <i>Miasmatic Diseases.</i>												
1. Typhus Fever.....	3	2	3	1	10	4	7	6	6	16		
2. Typhoid Fever.....	33	7	17	6	70	10	140	21	101	16		
3. Common Continued Fever.....	15		17		7		14		16			
4. Remittent Fever.....	176		202		395	2	384	3	239	1		
5. Quotidian Intermittent Fever.....	307		518		640		1,158		982			
6. Tertian Intermittent Fever.....	158		275		368		592		277			
7. Quartan Intermittent Fever.....	7		83		34		152		90			
8. Congestive Intermittent Fever.....	7	1	7		4	2	3	2	4	1		
9. Acute Diarrhœa.....	634		1,122		1,331	3	1,319	5	1,020	2		
10. Chronic Diarrhœa.....	16		49		48		271	2	109	1		
11. Acute Dysentery.....	129	3	116	2	202	1	387	13	262	8		
12. Chronic Dysentery.....	2				12		26	3	21	1		
13. Erysipelas.....	5		5		5		234		26	1		
14. Small-pox and Varioloid.....							42					
15. Measles.....	46		84	1	326	5	561	10	204	6		
16. Scarlet Fever.....					1							
17. Mumps.....	14		27		13		22		55			
18. Epidemic Catarrh.....							1		20			
19. Debility.....	33		130		220	1	99		114			
20. Other Diseases of this Order.....	8		29		165		42		80			
ORDER II.— <i>Enthetic Diseases.</i>												
21. Syphilis.....	21		10		10		18		14			
22. Gonorrhœa.....	25		13		9		26		34			
23. Orchitis.....	8		8		1		7		5			
24. Stricture of the Urethra.....	1		1				1		1			
25. Serpent Bite.....												
26. Other Diseases of this Order.....												
ORDER III.— <i>Dietic Diseases.</i>												
27. Scourvy.....	15		5		1		8					
28. Delirium Tremens.....	3		1				6		7			
29. Inebriation.....			9									
CLASS II.—CONSTITUTIONAL DISEASES.												
ORDER I.— <i>Diathetic Diseases.</i>												
30. Gout.....												
31. Acute Rheumatism.....	42		23		53		101		112			
32. Chronic Rheumatism.....	3		10		30		49		62			
33. Anæmia.....	7		3		5		2		6			
34. General Dropsy.....	1		1		1		3					
35. Cancer.....												
36. Tumors.....									1			
37. Other Diseases of this Order.....	2		3		22				6			
ORDER II.— <i>Tubercular Diseases.</i>												
38. Consumption.....	7		2		9		5	1	12	3		
39. Scrofula.....	1		1		2		1					
CLASS III.—PARASITIC DISEASES.												
40. Worms.....			1				2		9

Abstract of the Sickness and Mortality

YEAR.....	1861.									
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.	
	4,425.		5,426.		6,078.		24,513.		30,398.	
MONTH.....	4,425.		5,426.		6,078.		24,513.		30,398.	
MEAN STRENGTH.....	4,425.		5,426.		6,078.		24,513.		30,398.	
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
CLASS I.—ZYMOTIC DISEASES.										
ORDER I.— <i>Miasmatic Diseases.</i>										
1. Typhus Fever.....			2		19	5	2	1	5	1
2. Typhoid Fever.....	10		10		77	4	135	11	152	31
3. Common Continued Fever.....	7		17		59	4	85		115	4
4. Remittent Fever.....	91		373		336	1	353	2	426	1
5. Quotidian Intermittent Fever.....	253		435		605	1	1,005	1	603	
6. Tertian Intermittent Fever.....	22		42		65		763		510	1
7. Quartan Intermittent Fever.....			8		8		106		110	
8. Congestive Intermittent Fever.....	7		20		18	2	17	2	11	2
9. Acute Diarrhœa.....	349		770		543		1,083	1	1,428	
10. Chronic Diarrhœa.....	2		5		22		360	5	247	2
11. Acute Dysentery.....	153		142		84	1	364	4	249	1
12. Chronic Dysentery.....			4				43		90	1
13. Erysipelas.....	1		3		4		7		21	1
14. Small-pox and Varioloid.....			2		1				1	
15. Measles.....	11		14		37		355	9	1,109	18
16. Scarlet Fever.....							2		1	
17. Mumps.....	5		6		3		20		51	
18. Epidemic Catarrh.....	19						110		212	
19. Debility.....	17		19		17		77	1	69	1
20. Other Diseases of this Order.....	12		6		13		8		10	
ORDER II.— <i>Enthetic Diseases.</i>										
21. Syphilis.....	5		10		18		49		47	
22. Gonorrhœa.....	31		42		36		93		112	
23. Orchitis.....	5		4				13		12	
24. Stricture of the Urethra.....			1							
25. Serpent Bite.....					1					
26. Other Diseases of this Order.....										
ORDER III.— <i>Dietic Diseases.</i>										
27. Scurvy.....	11				1		1			
28. Delirium Tremens.....	3				1		1		6	
29. Inebriation.....	2		2	1	7		3		3	1
CLASS II.—CONSTITUTIONAL DISEASES.										
ORDER I.— <i>Diathetic Diseases.</i>										
30. Gout.....			2						3	
31. Acute Rheumatism.....	49		23		37		81		100	
32. Chronic Rheumatism.....	6		18		20		37		86	
33. Anæmia.....							7		8	
34. General Dropsy.....	1						3		8	
35. Cancer.....										
36. Tumors.....									1	
37. Other Diseases of this Order.....							3		8	
ORDER II.— <i>Tubercular Diseases.</i>										
38. Consumption.....	1		5		1		4	3	12	3
39. Serofula.....	3		3						2	
CLASS III.—PARASITIC DISEASES.

Abstract of the Mortality in the

YEAR.....	1861.									
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.	
	561.		1,638.		1,621.		3,213.		3,761.	
MONTH.....										
UNDER TREATMENT AT CLOSE OF MONTH.....										
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
CLASS I.—ZYMOTIC DISEASES.										
ORDER I.— <i>Miasmatic Diseases.</i>										
1. Typhus Fever.....						1		1		
2. Typhoid Fever.....		2		20		33		110		149
3. Common Continued Fever.....								3		3
4. Remittent Fever.....		1		2		2		8		16
5. Quotidian Intermittent Fever.....				1				3		2
6. Tertian Intermittent Fever.....								2		7
7. Quartan Intermittent Fever.....										
8. Congestive Intermittent Fever.....				2		1				4
9. Acute Diarrhœa.....						3		3		6
10. Chronic Diarrhœa.....				1		1		4		22
11. Acute Dysentery.....		1		1		6		6		17
12. Chronic Dysentery.....				7		5		7		6
13. Erysipelas.....										8
14. Small-pox and Varioloid.....		1						1		2
15. Measles.....		2		1				11		30
16. Scarlet Fever.....										
17. Mumps.....										
18. Epidemic Catarrh.....										
19. Debility.....						2		3		5
20. Other Diseases of this Order.....										
ORDER II.— <i>Enthetic Diseases.</i>										
21. Syphilis.....										
22. Gonorrhœa.....										
23. Orchitis.....										
24. Stricture of the Urethra.....										
25. Serpent Bite.....										
26. Other Diseases of this Order.....										
ORDER III.— <i>Dietic Diseases.</i>										
27. Scurvy.....										
28. Delirium Tremens.....		1				1		2		3
29. Inebriation.....										
CLASS II.—CONSTITUTIONAL DISEASES.										
ORDER I.— <i>Diathetic Diseases.</i>										
30. Gout.....										
31. Acute Rheumatism.....								1		
32. Chronic Rheumatism.....										
33. Anæmia.....										
34. General Dropsy.....						1				
35. Cancer.....										
36. Tumors.....										
37. Other Diseases of this Order.....								1		
ORDER II.— <i>Tubercular Diseases.</i>										
38. Consumption.....				1		4		3		14
39. Scrofula.....										
CLASS III.—PARASITIC DISEASES.										
40. Worms.....										
Carried forward.....		8		36		60		160		294

PACIFIC REGION.

The reports from the Pacific Region have been consolidated into two statistical tables, as follows:

1. The Department of New Mexico - - - - - Table XXI.
2. The Department of the Pacific - - - - - Table XXII.
- To which is added—
3. A consolidated table for the Pacific Region - - - - - Table XXIII.

1. THE DEPARTMENT OF NEW MEXICO—TABLE XXI.

This table embraces all reports received from stations in New Mexico and Colorado Territories. From July 3 to November 9, 1861, this region was embraced in the Western Department. November 9th the Department of New Mexico was created by General Orders No. 97, to consist of the Territory of New Mexico. February 14, 1862, Fort Garland, Colorado Territory, was added. May 2, 1862, Colorado Territory was transferred to the Department of Kansas. These changes have, however, been disregarded.

2. THE DEPARTMENT OF THE PACIFIC—TABLE XXII.

This table includes all reports received from stations in the region west of the Rocky Mountains which are not embraced in the Department of New Mexico. (Table XXI.)

The Department of the Pacific, as it existed officially during the year, comprised the country west of the Rocky Mountains, except those portions of it included within the limits of the Departments of New Mexico and Utah. Utah is included in the present table.

 CONSOLIDATED TABLE FOR THE UNITED STATES—TABLE XXIV.

This table is prepared by consolidating Tables XII, XX, and XXIII.

TABLE XXI.

SICKNESS AND MORTALITY OF WHITE TROOPS DURING THE SECOND FISCAL YEAR OF THE WAR.

(FROM JULY 1, 1862, TO JUNE 30, 1863.)

ATLANTIC REGION.

The reports of sick and wounded received from troops in this region are consolidated into statistical tables for seven armies or departments, as follows:

1. The Department of the East	- - - - -	Table	XXV.
2. The Middle Department	- - - - -	Table	XXVI.
3. The Department of Washington	- - - - -	Table	XXVII.
4. The Army of the Potomac	- - - - -	Table	XXVIII.
5. The Department of Virginia	- - - - -	Table	XXIX.
6. The Department of North Carolina	- - - - -	Table	XXX.
7. The Department of the South	- - - - -	Table	XXXI.

To these tables are added—

8. A table showing the mortality in the general hospitals of the Atlantic Region	- - - - -	Table	XXXII.
9. A consolidated table for the Atlantic Region	- - - - -	Table	XXXIII.

1. THE DEPARTMENT OF THE EAST—TABLE XXV.

The Department of the East was created by General Orders No. 2, January 3, 1863, to consist of the New England States and the State of New York, General J. E. Wool to command. By General Orders No. 33, February 6, 1863, the State of New Jersey was added. In this table the Department of the East is, for geographical reasons, made to include all the reports received from the troops within the above limits and the State of Pennsylvania. The table, therefore, embraces all reports received from troops in the New England and Middle States, excepting the State of Delaware. The Departments of the Monongahela and the Susquehanna, created June 9, 1863, by General Orders No. 172, have not been separately consolidated. The boundaries of these departments were as follows: The Department of the Monongahela embraced that portion of the State of Pennsylvania west of Johnstown and the Laurel Hill range of mountains; the counties

of Hancock, Brooke and Ohio, in the State of Virginia, and the counties of Columbiana, Jefferson and Belmont, in the State of Ohio. The Department of the Susquehanna embraced that portion of the State of Pennsylvania east of Johnstown and the Laurel Hill range of mountains. The Department of the Susquehanna and that part of Pennsylvania embraced in the Department of the Monongahela have been included in the present table. Of the remaining portions of the Department of the Monongahela, the Ohio counties have been retained in the Northern Department, and those belonging to West Virginia in the Department of Western Virginia.

2. THE MIDDLE DEPARTMENT—TABLE XXVI.

This table embraces the reports received from troops stationed within the boundaries indicated for the Middle Department during the year ending June 30, 1862. By General Orders No. 66, March 16, 1863, Western Virginia was added to the department; but in these tables the reports from that district are kept separate, and the boundary has been fixed at Hancock; all Maryland east of this point, except what is included in the Department of Washington, being embraced in the Middle Department, all west of it being consolidated with the Department of Western Virginia. This boundary is that established by General Orders No. 186, June 24, 1863, by which the Department of West Virginia was created, to consist of that part of the Middle Department west of Hancock, including the adjacent counties of Ohio. General Wool continued to command the Middle Department until December 17, 1862, when General R. C. Schenck was assigned.

3. THE DEPARTMENT OF WASHINGTON—TABLE XXVII.

The Department of Washington, which, on the 17th of August, 1861, had been merged into the Department of the Potomac, was again made a separate department by General Orders No. 26, of February 2, 1863. It was to consist of the district of country north of the Potomac river, from Piscataway creek to Annapolis Junction and the mouth of the Monocacy, and south by Goose creek and the Bull Run Mountains to the mouth of the Occoquan. General S. P. Heintzelman was assigned to command. These boundaries have been observed in the present table for February and subsequent months. Prior to that time the table embraces, under the same designation, the garrison of Washington and the troops covering that city, which are not included in the Army of the Potomac. Here, therefore, is consolidated during July and August, 1862, the Army of Virginia under General John Pope. This army was created towards the close of June, 1862. It embraced the garrison of Washington, the Army of the Rappahannock under General

McDowell, and the armies of Generals Frémont and Banks, then in the Shenandoah Valley. These armies were hastily concentrated, with reinforcements from Western Virginia and North Carolina, and the campaign made which led to the battle of Cedar Mountain, August 9th, and terminated in the second battle of Bull Run, August 29th and 30th, and the battle of Chantilly, September 1st. Subsequently to these actions the Army of General Pope was consolidated with the Army of the Potomac. The confusion of this campaign has led to considerable imperfection in the returns for July and August.

4. THE ARMY OF THE POTOMAC—TABLE XXVIII.

This table embraces all reports received from the Army of the Potomac during the year. The battle of Malvern Hill, July 1, 1862, was followed by the movement of the army to Harrison's Landing, on the James river, where it lay until about the middle of August, when General McClellan commenced moving his forces by water to effect a junction with the Army under General Pope in front of Washington. Subsequently to the second battle of Bull Run the Army of the Potomac, reinforced from the late Army of Virginia, crossed into Maryland, and, marching by way of Frederick, fought the battles of South Mountain, September 14th, and Antietam, September 16th and 17th. Subsequently to these engagements the army remained in Maryland until near the close of October, when it crossed the Potomac into eastern Virginia, and General McClellan being relieved by General A. E. Burnside, November 7th, the march was continued to Falmouth, on the Rappahannock, opposite Fredericksburg. December 13th the battle of Fredericksburg was fought; after which the army which had been thrown across the Rappahannock for the attack was withdrawn to Falmouth. Towards the close of January General Burnside was relieved by General Joseph Hooker, who, during the last few days of April, crossed the Rappahannock and Rapidan, and brought on the battle of Chancellorsville, May 2d, 3d, and 4th, after which the army was again withdrawn to Falmouth, in the vicinity of which it lay till the middle of June, when General Hooker marched northward and crossed into Maryland to meet the Rebel Army under General Lee, which had invaded Maryland and Pennsylvania. June 27th General Hooker was relieved from command by General George G. Meade, under whom the battle of Gettysburg was fought, July 1st, 2d, and 3d. The table terminates, therefore, on the eve of this engagement.

5. THE DEPARTMENT OF VIRGINIA—TABLE XXIX.

This table embraces the reports received from Fortress Monroe and its vicinity, including Norfolk and Portsmouth. The boundaries recognized are those fixed by General Orders No. 57, June 1, 1862, which extends the Department of Virginia to

include that part of Virginia south of the Rappahannock and east of the railroad from Fredericksburg to Richmond, Petersburg, and Weldon. General J. A. Dix took command in September, 1862. The most important movement during the year was the expedition up the York river to the White House in the latter part of June, 1863.

6. THE DEPARTMENT OF NORTH CAROLINA—TABLE XXX.

This table includes, as during the previous year, the reports received from troops in North Carolina; General J. G. Foster was assigned to command December 24, 1862.

7. THE DEPARTMENT OF THE SOUTH—TABLE XXXI.

Here are included the reports received from the troops at Hilton Head and the various points occupied along the coast of South Carolina, Georgia, and the east coast of Florida, including Fort Jefferson, Tortugas, and Key West. Key West and Tortugas were transferred to the Department of the Gulf by General Orders No. 66, March 16, 1863, but are nevertheless retained in the table. General J. M. Brannan assumed temporary command of the department September 5, 1862. September 17th General O. M. Mitchel took command. General Brannan again assumed temporary command October 27th, and January 20th General D. Hunter resumed command. In June, 1862, a landing on James Island was effected by the troops in this department, with a view to operations against Charleston, and in January, 1863, reinforcements arrived from North Carolina having the same object in view.

CENTRAL REGION.

The reports of sick and wounded from troops in the Central Region are consolidated into statistical tables for eight armies or departments, as follows:

1. The Department of Western Virginia	-	-	-	Table	XXXIV.
2. The Northern Department	-	-	-	Table	XXXV.
3. The Department of the Ohio	-	-	-	Table	XXXVI.
4. The Department of the Cumberland	-	-	-	Table	XXXVII.
5. The Department of the Tennessee	-	-	-	Table	XXXVIII.
6. The Department of the Gulf	-	-	-	Table	XXXIX.
7. The Department of the Northwest	-	-	-	Table	XL.
8. The Department of the Missouri	-	-	-	Table	XLI.

To these tables are added—

9. A table showing the mortality in the general hospitals of the Central Region	-	-	-	Table	XLII.
10. A consolidated table for the Central Region	-	-	-	Table	XLIII.

1. THE DEPARTMENT OF WESTERN VIRGINIA—TABLE XXXIV.

This table embraces the reports received from troops in the State of Maryland west of Hancock, and in that portion of Western Virginia which, by the Act of Congress approved December 31, 1862, was constituted the State of West Virginia. This region was embraced in the Mountain Department at the commencement of the year now under consideration. August 12, 1862, the Mountain Department was discontinued, its troops being merged into the Army of Virginia. The greater portion of these troops were transferred to the Army of Virginia, as has already been shown.

September 19, 1862, Western Virginia was attached to the Department of the Ohio, and March 16, 1863, it was transferred to the Middle Department; these changes, have, however, been disregarded in the construction of the table.

June 24, 1863, the Department of West Virginia was created by General Orders, No. 186, to consist of that portion of the Middle Department west of Hancock, including the adjacent counties of Ohio, General B. F. Kelley to command. The limits assigned to the department by this order coincide with those used in the table, with the exception of the part of Ohio referred to, which has been included in the Northern Department.

2. THE NORTHERN DEPARTMENT—TABLE XXXV.

The Northern Department was created by General Orders No. 17, January 12, 1864, to consist of the States of Michigan, Ohio, Indiana, and Illinois. In this table the designation is applied to the same region, with the addition of the State of Wisconsin. It embraces, therefore, that portion of the Central Region which lies between the Mississippi and the Ohio rivers.

3. THE DEPARTMENT OF THE OHIO—TABLE XXXVI.

Under this designation are embraced, after the first of January, 1863, all reports received from troops in that portion of Kentucky lying east of the Tennessee river. The Department of the Ohio, which, as has been explained, was discontinued March 11, 1862, was re-established August 19, 1862, by General Orders No. 112, and defined as embracing the States of Ohio, Michigan, Illinois, Wisconsin, and Kentucky east of the Tennessee river, and including Cumberland Gap and the troops operating in its vicinity, General H. G. Wright to command.

As shown above, all this region, except the portion of Kentucky east of the Tennessee river, has, for geographical reasons, been embraced in a separate table under the designation Northern Department. It has also been found most convenient, on account of the complicated movements involved in the retreat of the army of General Buell to Louisville and its subsequent advance, to embrace this part of Kentucky in the Department of the Cumberland until the close of 1862. March 25, 1863, General A. E. Burnside assumed command of the Department of the Ohio.

4. THE DEPARTMENT OF THE CUMBERLAND—TABLE XXXVII.

In this table are embraced all reports received from the Army of the Ohio under General Buell, the Army of the Cumberland under General Rosecrans, and during the first six months the reports from that portion of Kentucky lying east of the Tennessee river. The Department of the Cumberland, which, as already mentioned, had been merged into the Departments of the Missouri and the Ohio November 9, 1861, was re-established by General Orders No. 163, October 24, 1862, to consist of the State of Tennessee east of the Tennessee river, and such parts of northern Alabama and Georgia as should be occupied by the troops of the Army of the Cumberland, General W. S. Rosecrans to command. Subsequently to January 1, 1863, these are the limits relied upon in the construction of the table. The Army of the Ohio under General Buell, at the commencement of July, 1862, was in motion in northern Alabama threatening Chattanooga. The advance of Generals Kirby Smith and Bragg, after the raids of Forrest and Morgan in

July and August, compelled the retreat of General Buell to Louisville, which he reached September 25, 1862. Nashville, however, was still held by its garrison. General Buell concentrated his army at Louisville, and, October 1st, being well reinforced, marched out after the united Rebel Army under General Bragg. The battle of Perryville was fought October 8th, and shortly after the Army was withdrawn towards the line of the Louisville and Nashville Railroad, where General Rosecrans took command October 30th.

General Rosecrans advanced by way of Nashville towards Murfreesboro', near which place the battle of Stone River was fought, December 31, 1862, and January 1, 2 and 3, 1863. After this no further advance of importance was made until June 24th, when the army was again put in motion by way of Manchester, flanking the Rebel Army under General Bragg, and compelling its retreat to Chattanooga.

5. THE DEPARTMENT OF THE TENNESSEE—TABLE XXXVIII.

As already explained, the Department of the Tennessee was created by General Orders No. 159, October 16, 1862, to embrace Cairo, Forts Henry and Donelson, northern Mississippi, and those portions of Kentucky and Tennessee lying west of the Tennessee river, General U. S. Grant to command.

The table embraces the reports received from troops in this region prior to the order, as well as subsequently. At the close of the previous year the greater part of the army under General Grant was in northern Mississippi and southwestern Tennessee.

September 19th the battle of Iuka was fought, and October 4th the battle of Corinth. Subsequently Vicksburg became the objective of the army. General Grant moved into northern Mississippi by way of Holly Springs, advancing as far as Oxford; but the capture of Holly Springs December 20th compelled his retreat to that place. Meanwhile a part of the Army of the Southwest under General Hovey had crossed from Helena, Arkansas, into Mississippi, and operated without decided results against the enemy's communications, and on the day of the fall of Holly Springs a strong force under General W. T. Sherman embarked at Memphis, and descended the Mississippi to the mouth of the Yazoo, near which it was disembarked for the attack of Vicksburg. After the unsuccessful assault of December 29th, this force was re-embarked and carried up the Arkansas and White rivers to Arkansas Post, which was captured January 11th. Subsequently it returned to the Mississippi river, and towards the close of the month united with the forces under General Grant, which descended the river on transports from Memphis, and landed at Young's Point and Milliken's Bend. General Grant established his headquarters at Young's Point February 2d, and after various unsuccessful enterprises, among which may be mentioned the Yazoo Pass and Steele's Bayou expeditions, began, March 29th, to move the army by land on the Louisiana side of the river to Perkins' Plantation, a point on the west bank of the Mississippi a few miles below New Carthage. After the naval demon-

stration against Grand Gulf, the army was marched to a point on the Louisiana bank south of that place, and April 30th the advance crossed the river to Bruinsburg on transports which had run by the Vicksburg batteries. This was followed by the march via Jackson, Mississippi, which, after the battles of Port Gibson, Raymond, Jackson, Champion's Hill, and Big Black River, terminated in the investment of Vicksburg May 19th. The siege of Vicksburg was then pressed till the surrender of that place, July 4, 1863.

6. THE DEPARTMENT OF THE GULF—TABLE XXXIX.

This table embraces reports from substantially the same region as the table for the previous year. August 8, 1862, west Florida was annexed, which, as already explained, had from the first been consolidated in these tables with the Department of the Gulf. March 16, 1863, Key West and Fort Jefferson, Tortugas, were added; they have, nevertheless, been consolidated with the Department of the South.

August 5, 1862, a rebel force attacked Baton Rouge, but was repulsed; the place was, however, evacuated on the 12th. Towards the close of October General Weitzel made an expedition into the La Fourche District, which he occupied.

December 14th General N. P. Banks reached New Orleans with reinforcements, and took command of the Department. In March he concentrated an army at Baton Rouge, and after a demonstration against Port Hudson, moved into the Teche District, penetrating as far as Alexandria, on the Red river, which was reached early in May. After the termination of this expedition General Banks returned to the vicinity of Baton Rouge, and thence moved against Port Hudson, the siege of which continued from the latter part of May till the surrender of the place, July 8, 1863.

7. THE DEPARTMENT OF THE NORTHWEST—TABLE XL.

This table embraces the reports received from troops within the same limits as were assigned in constructing Table XVII, viz: the States of Iowa and Minnesota, and the Territories of Nebraska and Dakota. The reports from the State of Wisconsin, which officially formed a part of the Department of the Northwest, have been consolidated with the Northern Department. The most important events during the year were the Indian massacres, during the summer of 1862 and the following spring, which led to the expedition of General Sibley in the summer of 1863.

8. THE DEPARTMENT OF THE MISSOURI—TABLE XLI.

This Department was reorganized by General Orders No. 135, September 19, 1862. By this order the Department was composed of the States of Missouri, Arkansas, Kansas, and the bordering Indian Territory; Alton, Illinois, was also attached. General S. R.

Curtis was assigned to command. The limits here indicated have been observed in constructing the table, with the exception of Alton, Illinois, which has been included in the Northern Department, and of the force at Helena, Arkansas, which, on account of its position and its intimate relations with the army of General Grant, has been consolidated with the Department of the Tennessee.

October 11, 1862, the Territories of Colorado and Nebraska were added to the Department of the Missouri by General Orders No. 155. This change, however, has been disregarded in constructing the table. General E. V. Turner was assigned to command March 9th. and General J. M. Schofield May 13th, 1863.

TABLE XXXIV.

Abstract of the Sickness and Mortality

YEAR.....	1862.									
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.	
	4, 851.		2, 377.		7, 656.		21, 244.		25, 462.	
MONTH.....	4, 851.		2, 377.		7, 656.		21, 244.		25, 462.	
MEAN STRENGTH.....	4, 851.		2, 377.		7, 656.		21, 244.		25, 462.	
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
CLASS I.—ZYMOTIC DISEASES.										
ORDER I.— <i>Miasmatic Diseases.</i>										
1. Typhoid Fever.....	31	11	18	11	38	11	69	2	98	8
2. Typhus Fever.....		3		2		2				
3. Typho-Malarial Fever.....			16		56		53	1	13	
4. Yellow Fever.....										
5. Remittent Fever.....	14		3		90		200		141	
6. Quotidian Intermittent Fever.....	40		10		52		246		79	
7. Tertian Intermittent Fever.....	6		27		69		363		154	
8. Quartan Intermittent Fever.....			9				21		4	
9. Congestive Intermittent Fever.....							2			
10. Acute Diarrhœa.....	379	2	319		422		1, 384		741	
11. Chronic Diarrhœa.....	3		4		3		84		43	1
12. Acute Dysentery.....	84	2	34		107	3	257		140	1
13. Chronic Dysentery.....	2			1			18		9	
14. Erysipelas.....	1		1		8		10		22	
15. Small-pox and Varioloid.....										
16. Measles.....	39		12				165		137	
17. Scarlet Fever.....										
18. Diphtheria.....							9		20	
19. Mumps.....	35		1		3		73		83	
20. Epidemic Catarrh.....					5		215		638	
21. Other Diseases of this Order.....	20	1	14		166		168	2	51	
ORDER II.— <i>Enthetic Diseases.</i>										
22. Syphilis.....	2				25		27		29	
23. Gonorrhœa.....	1				35		92		108	
24. Orchitis.....	10		2		4		12		4	
25. Stricture of the Urethra.....					1				2	
26. Purulent Ophthalmia.....									6	
27. Serpent Bite.....										
28. Other Diseases of this Order.....	1		4		2		1			
ORDER III.— <i>Dietic Diseases.</i>										
29. Scoury.....	3		1							
30. Purpura.....										
31. Delirium Tremens.....							1		1	
32. Inebriation.....										
33. Chronic Alcoholism.....										
34. Other Diseases of this Order.....										
CLASS II.—CONSTITUTIONAL DISEASES.										
ORDER I.— <i>Diathetic Diseases.</i>										
35. Gout.....										
36. Acute Rheumatism.....	25		13		40		172		168	
37. Chronic Rheumatism.....	8		6		10		146		193	
38. Anæmia.....					2				55	
39. General Dropsy.....	2				2		2		1	
40. Cancer.....									3	
41. Tumors.....							1			
42. Other Diseases of this Order.....	2		2		1		9		2	
ORDER II.— <i>Tubercular Diseases.</i>										
43. Consumption.....	3	1	3		4	4	9		11	
44. Scrofula.....	1						6		5	
45. Other Diseases of this Order.....										
CLASS III.—PARASITIC DISEASES.										
46. Itch.....									17	
47. Tape-worm.....										
48. Other Intestinal Worms.....	6						3		3	
49. Other Diseases of this Order.....										
Carried forward.....	718	20	499	14	1, 115	20	3, 818	5	2, 981	10

TABLE XXXIX.

Abstract of the Sickness and Mortality

YEAR.....	1862.										
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.		
	10,027.		13,203.		18,558.		13,168.		15,480.		
MONTH.....	LIST OF DISEASES.		Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	
MEAN STRENGTH.....											
	CLASS I.—ZYMOTIC DISEASES.										
	ORDER I.— <i>Miasmatic Diseases.</i>										
	1. Typhoid Fever.....	49	15	85	25	100	41	53	22	70	17
	2. Typhus Fever.....			11	2	6	4				
	3. Typho-Malarial Fever.....	108	2	82	2	69		27	1	36	1
	4. Yellow Fever.....										
	5. Remittent Fever.....	172	2	205	5	346	12	355	13	249	11
	6. Quotidian Intermittent Fever.....	296		341		566	2	704		716	2
	7. Tertian Intermittent Fever.....	126	1	500		838	1	1,127		1,066	1
	8. Quartan Intermittent Fever.....	26		18		27	1	44		45	
	9. Congestive Intermittent Fever.....	30	15	12	5	26	6	35	12	22	11
	10. Acute Diarrhoea.....	1,009	4	962	5	1,432	5	874	1	926	1
	11. Chronic Diarrhoea.....	100	3	163	15	289	10	185	21	254	41
	12. Acute Dysentery.....	71	4	46	1	226	9	171	3	169	2
	13. Chronic Dysentery.....	13	4	22	5	43	5	41	13	34	11
	14. Erysipelas.....			2		12	2	6	1	6	1
	15. Small-pox and Varioloid.....										
	16. Measles.....					3		1		66	
	17. Scarlet Fever.....			1							
	18. Diphtheria.....									12	1
	19. Mumps.....	5		2		6				2	
	20. Epidemic Catarrh.....	40		20		10		97		145	
	21. Other Diseases of this Order.....	328	1	251	12	297	14	134	6	205	10
	ORDER II.— <i>Enthetic Diseases.</i>										
	22. Syphilis.....	73		66		101	1	87		103	1
	23. Gonorrhoea.....	65		71		125		68		87	
	24. Orchitis.....	13		13		19		21		18	
	25. Stricture of the Urethra.....	3		2		1		2		3	
	26. Purulent Ophthalmia.....										
	27. Serpent Bite.....										
	28. Other Diseases of this Order.....							2			
	ORDER III.— <i>Dietic Diseases.</i>										
	29. Scurvy.....	4		42	2	178		24		13	1
	30. Purpura.....										
	31. Delirium Tremens.....	4		2				4	1	5	1
	32. Inebriation.....	4	1	13				1		1	
	33. Chronic Alcoholism.....										
	34. Other Diseases of this Order.....										
	CLASS II.—CONSTITUTIONAL DISEASES.										
	ORDER I.— <i>Diathetic Diseases.</i>										
	35. Gout.....										
	36. Acute Rheumatism.....	15		60		116	2	64		59	
	37. Chronic Rheumatism.....	90		95		155		74		109	
	38. Anæmia.....	46	2	8	1	72	2	42	1	13	1
	39. General Dropsy.....	9	1	26	1	45		27	1	32	3
	40. Cancer.....					2	1				
	41. Tumors.....	3		1		2		1		1	
	42. Other Diseases of this Order.....	10	1	2	1	5		2		3	
	ORDER II.— <i>Tubercular Diseases.</i>										
	43. Consumption.....	36	4	16	5	34	7	11	1	13	3
	44. Scrofula.....			2		5		2		1	
	45. Other Diseases of this Order.....										
	CLASS III.—PARASITIC DISEASES.										
	46. Itch.....									2	
	47. Tape-worm.....									1	
	48. Other Intestinal Worms.....	1		2		2				1	
	49. Other Diseases of this Order.....

MONTH.....	MEAN STRENGTH.....											
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.		
CLASS I.—ZYMOTIC DISEASES.												
ORDER I.— <i>Miasmatic Diseases.</i>												
1. Typhoid Fever.....					3		14	3	8	2		
2. Typhus Fever.....			1				1		1	1		
3. Typho-Malarial Fever.....	5		14		10				1	1		
4. Yellow Fever.....												
5. Remittent Fever.....	13		7		20		59		21	3		
6. Quotidian Intermittent Fever.....	3		5		4		95		6			
7. Tertian Intermittent Fever.....	5		4		1		6		13			
8. Quartan Intermittent Fever.....					1							
9. Congestive Intermittent Fever.....	1						1		1			
10. Acute Diarrhœa.....	44		22		31		182		58			
11. Chronic Diarrhœa.....			1				2		3			
12. Acute Dysentery.....	15		6		7		34	1	5			
13. Chronic Dysentery.....					1				1			
14. Erysipelas.....					2		2		7			
15. Small-pox and Varioloid.....							5					
16. Measles.....					2		47		90	2		
17. Scarlet Fever.....							1					
18. Diphtheria.....									47			
19. Mumps.....							8		3			
20. Epidemic Catarrh.....							7		84			
21. Other Diseases of this Order.....			4		1		7		8			
ORDER II.— <i>Enthetic Diseases.</i>												
22. Syphilis.....	4		3		6		2					
23. Gonorrhœa.....	5				6		27		9			
24. Orchitis.....	3		3		1				2			
25. Stricture of the Urethra.....									1			
26. Purulent Ophthalmia.....												
27. Serpent Bite.....												
28. Other Diseases of this Order.....												
ORDER III.— <i>Dietic Diseases.</i>												
29. Scoury.....	1		1		1		11		5			
30. Purpura.....							1					
31. Delirium Tremens.....	1								1			
32. Inebriation.....	3		2		3		5		1			
33. Chronic Alcoholism.....												
34. Other Diseases of this Order.....												
CLASS II.—CONSTITUTIONAL DISEASES.												
ORDER I.— <i>Diathetic Diseases.</i>												
35. Gout.....			1									
36. Acute Rheumatism.....	6		5		10		23		37			
37. Chronic Rheumatism.....	2				4		14		30			
38. Anæmia.....							5		6			
39. General Dropsy.....												
40. Cancer.....												
41. Tumors.....												
42. Other Diseases of this Order.....									1			
ORDER II.— <i>Tubercular Diseases.</i>												
43. Consumption.....	2						2		1			
44. Scrofula.....									2			
45. Other Diseases of this Order.....												
CLASS III.—PARASITIC DISEASES.												
46. Itch.....							1		1			
47. Tape-worm.....												
48. Other Intestinal Worms.....												
49. Other Diseases of this Order.....												
Carried forward.....	113		79		114		562	4	454	9

PACIFIC REGION.

The reports from the Pacific Region have been consolidated into two tables, as follows:

1. The Department of New Mexico - - - - - Table XLIV.
2. The Department of the Pacific - - - - - Table XLV.
- To which is added—
3. A consolidated table for the Pacific Region - - - - - Table XLVI.

1. THE DEPARTMENT OF NEW MEXICO—TABLE XLIV.

This table embraces all reports received from stations in New Mexico and Colorado. January 14, 1863, the district of western Arizona was added to the Department by General Orders No. 13. It has still, however, been consolidated with the Department of the Pacific.

2. THE DEPARTMENT OF THE PACIFIC—TABLE XLV.

This table includes all reports received from stations west of the Rocky Mountains which are not embraced in the Department of New Mexico.

 CONSOLIDATED TABLE FOR THE UNITED STATES—TABLE XLVII.

This table is prepared by consolidating tables XXXIII, XLIII, and XLVI

TABLE XLIV.

Brought forward.....	874	4	939	2	1,073		1,021	5	1,116	4		
ORDER VI.— <i>Diseases of Digestive Organs</i> —Continued.												
104. Hæmorrhage from Bowels.....												
105. Inflammation of Tonsils.....	17		14		22		19		18			
106. Inflammation of Stomach.....	11		22		16		19		8			
107. Inflammation of Bowels.....			1		8		2		2	1		
108. Inflammation of Peritonæum.....							1	1				
109. Acute Inflammation of Liver.....					3		3	1	6			
110. Chronic Inflammation of Liver.....	3		3		2		4		2			
111. Jaundice.....	1				1							
112. Piles.....	7		19		14		19		18			
113. Other Diseases of this Order.....	1		5		1		1		7			
ORDER VII.— <i>Diseases of Urinary and Genital Organs</i> .												
114. Stone and Gravel.....	1						1					
115. Diabetes.....	3		2		1				1			
116. Bright's Disease.....												
117. Diseases of Prostate.....												
118. Diseases of Testis.....												
119. Inflammation of Kidneys.....					2		6		4			
120. Inflammation of Bladder.....							1					
121. Incontinence of Urine.....												
122. Hydrocele.....	1		1		2							
123. Other Diseases of this Order.....	16	1	11		7		8		6			
ORDER VIII.— <i>Diseases of Bones and Joints</i> .												
124. Anchylosis.....			1									
125. Caries.....												
126. Inflammation of Joints.....												
127. Inflammation of Bones.....												
128. Inflammation of Periosteum.....												
129. Necrosis.....												
130. Other Diseases of this Order.....	1											
ORDER IX.— <i>Diseases of Integumentary System</i> .												
131. Abscess.....	12		12		12		16		19			
132. Boils.....	20		12		15		19		18			
133. Carbuncle.....	2		3		6		1		1			
134. Whitlow.....	7		14		8		3		4			
135. Skin Diseases.....	22		21		21		15		10			
CLASS V.—WOUNDS, ACCIDENTS, AND INJURIES.												
ORDER I.— <i>Wounds, Accidents, and Injuries</i> .												
136. Burns.....	4		3		1		1		3			
137. Contusions.....	43		40		29		35		44			
138. Concussion of Brain.....	1						1		1			
139. Drowning.....												
140. Sprains.....	13		18		15		20		23			
141. Dislocation.....	2		3		5		1		1			
142. Simple Fractures.....	3		3		6		5		7			
143. Compound Fractures.....												
144. Gunshot Wounds.....	5		7		7	1	4		12	3		
145. Incised Wounds.....	11		10		14		16		12			
146. Lacerated Wounds.....	19	1	24		17		15		17			
147. Punctured Wounds.....	2		3		2		4		3			
148. Poisoning.....	3		11		7		2		4			
149. Other Accidents and Injuries.....	4		2	3	2				8			
150. ORDER II.— <i>Homicide</i>												
151. ORDER III.— <i>Suicide</i>												
152. ORDER IV.— <i>Execution of Sentence</i>

SICKNESS AND MORTALITY OF WHITE TROOPS DURING THE THIRD FISCAL YEAR.

(FROM JULY 1, 1863, TO JUNE 30, 1864.)

ATLANTIC REGION.

The reports received from troops in this region are consolidated into statistical tables for seven armies or departments, as follows:

- | | |
|---|---------------|
| 1. The Department of the East - - - - - | Table XLVIII. |
| 2. The Middle Department - - - - - | Table XLIX. |
| 3. The Department of Washington - - - - - | Table L. |
| 4. The Army of the Potomac - - - - - | Table LI. |
| 5. The Department of Virginia - - - - - | Table LII. |
| 6. The Department of North Carolina - - - - - | Table LIII. |
| 7. The Department of the South - - - - - | Table LIV. |
| To these tables are added— | |
| 8. A table showing the mortality in the general hospitals of
the Atlantic Region - - - - - | Table LV. |
| 9. A consolidated table for the Atlantic Region - - - - - | Table LVI. |

1. THE DEPARTMENT OF THE EAST—TABLE XLVIII.

In this table are included the reports received from troops within the boundaries indicated in the remarks on Table XXV, viz: The New England States and the Middle States, excepting the State of Delaware.

Officially the Department of the East continued throughout the year, to consist of the New England States, the State of New York, and the State of New Jersey. General J. A. Dix was assigned to command July 15, 1863. The State of Pennsylvania, which is also here included, was divided between the Department of the Susquehanna and the Department of the Monongahela, as has already been shown. By General Orders No. 152, April 6, 1864, the Department of the Monongahela was merged into the Department of the Susquehanna. It has not been considered necessary to represent these departments by separate tables.

2. THE MIDDLE DEPARTMENT—TABLE XLIX.

As during the previous year this table includes the reports received from troops in the State of Delaware, the Eastern Shore of Virginia, and those portions of the State of Maryland east of Hancock, which are not embraced in the Department of Washington.

These boundaries are essentially those fixed by General Orders No. 186, June 24, 1863. (See remarks on Table XXVI.)

By General Orders No. 226, July 23, 1863, the county of St. Mary's, Maryland, was detached from the Middle Department to form a separate military district. December 21, 1863, the District of St. Mary's and the Eastern Shore of Virginia were annexed to the Department of Virginia and North Carolina, and March 12, 1864, Fort Delaware, Delaware, was detached. These changes have, however, been disregarded in constructing the tables. General H. H. Lockwood assumed command of the department December 5, 1863, and March 12, 1864, General Lew Wallace was assigned to command.

3. THE DEPARTMENT OF WASHINGTON—TABLE L.

Here are embraced the reports from the garrison of Washington and the troops in its immediate vicinity. The boundaries of the department continue to be those fixed February 2, 1863. (See remarks on Table XXVII.) General C. C. Augur was assigned to command October 14, 1863. By General Orders No. 214, June 21, 1864, the Department was extended to embrace that portion of Maryland between the Patuxent, Chesapeake bay, and the Potomac river, including the Prisoners' Camp at Point Lookout. This change has been disregarded in the construction of the table.

4. THE ARMY OF THE POTOMAC—TABLE LI.

Subsequently to the battle of Gettysburg, July 1, 2, and 3, 1863, the Army of the Potomac, under General Meade, crossed into Virginia and moved towards the Rappahannock; fell back subsequently to the line of the Bull Run—the Second Corps being involved in the action of Bristoe Station on the way—after which, again advancing, the passage of the Rappahannock was forced November 7th, and the Mine Run movement made towards the close of the month; no considerable operations occurred subsequently until the following spring.

March 10, 1864, Lieutenant General Grant made his headquarters with the Army of the Potomac, which, on the 3d of May, crossed the Rappahannock and made the campaign by way of the Wilderness, Spottsylvania Court-house, and Cool Arbor, to Petersburg. The chief engagements were in the Wilderness, May 5th, 6th, and 7th; at Spottsylvania Court-house, May 9th, 10th, 12th, and 14th; at Bethesda church, May 30th, and at Cool Arbor, June 1st and 2d. June 14th and 15th the Army crossed the James

river, and on the 16th, 17th, and 18th, assaulted the works of Petersburg. The close of the year found the army still besieging that place.

The Eleventh and Twelfth Corps were detached from the Army of the Potomac September 24, 1863, and ordered to the Department of the Cumberland. The reports of these corps for September are consolidated with the Army of the Potomac, for October with the Department of the Cumberland. The Ninth Corps was brought from the Department of the Ohio and effected a junction with the Army of the Potomac in April, 1864. It remained a separate command until May 24, 1864, when it was consolidated with the Army of the Potomac. In these tables the reports from the Ninth Corps for March are consolidated with the Department of the Ohio; those for April, May, and June, with the Army of the Potomac.

5. THE DEPARTMENT OF VIRGINIA—TABLE LII.

The boundaries of this Department continue the same as during the previous year. (See remarks on Table XXIX.)

General Orders No. 217, July 15, 1863, consolidated the Departments of Virginia and North Carolina, assigning General J. G. Foster to command. October 28, 1863, he was succeeded by General B. F. Butler. In these tables, however, the reports from troops in North Carolina have been kept separate.

May 5, 1864, the Tenth and Eighteenth Corps were moved from Gloucester and Yorktown on transports down the York and up the James river to Bermuda Hundred, participated in the battle of Cool Arbor, and after the arrival of the Army of the Potomac before Petersburg, in the operations against that place.

6. THE DEPARTMENT OF NORTH CAROLINA—TABLE LIII.

As during previous years this table embraces the reports from troops operating in North Carolina.

7. THE DEPARTMENT OF THE SOUTH—TABLE LIV.

As during previous years this table includes the troops operating on the coast of South Carolina and Georgia, and on the east coast of Florida, including Fort Jefferson and Key West.

July 16, 1863, General Q. A. Gillmore was assigned to command; May 5, 1864, he was succeeded by General J. G. Foster.

Besides the operations against Charleston, which were protracted throughout the year, the most important movement was the Florida expedition in February, 1864, which led to the battle of Olustee, February 20th.

TABLE I.

Abstract of the Sickness and Mortality

YEAR.....	1863.											
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.			
	27, 657.		31, 788.		30, 902.		28, 998.		33, 964.			
MONTH.....	MEAN STRENGTH.....		LIST OF DISEASES.									
	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.		
CLASS I.—ZYMOTIC DISEASES.												
ORDER I.— <i>Miasmatic Diseases.</i>												
1. Typhoid Fever.....	138	22	187	20	181	29	87	20	62	10		
2. Typhus Fever.....	2		2	1								
3. Typho-Malarial Fever.....	115		245	7	127	13	189	6	41	2		
4. Yellow Fever.....												
5. Remittent Fever.....	153		473	2	586	2	251		183	2		
6. Quotidian Intermittent Fever.....	166		718		724		508		489			
7. Tertian Intermittent Fever.....	193		477		659		650		947			
8. Quartan Intermittent Fever.....	15		17		15		127		57			
9. Congestive Intermittent Fever.....			5	1	11	1	17	1	5			
10. Acute Diarrhœa.....	1,330	1	1,914		1,541		829		1,113			
11. Chronic Diarrhœa.....	78		116	1	140	2	63		111	2		
12. Acute Dysentery.....	352	9	399		325	5	183	6	209			
13. Chronic Dysentery.....	12		30	2	52	1	28	3	26	3		
14. Erysipelas.....	17	1	14	1	7	1	3		35			
15. Small-pox and Varioloid.....	2				5		4		4			
16. Measles.....	4				2				4			
17. Scarlet Fever.....									3			
18. Diphtheria.....	8		22	1	25	6	22	2	21	3		
19. Mumps.....	20		19		17		13	1	10			
20. Epidemic Catarrh.....	24		31		17		83		298			
21. Other Diseases of this Order.....	27		71		74	1	46		24	1		
ORDER II.— <i>Enthetic Diseases.</i>												
22. Syphilis.....	99		152		168		142		241			
23. Gonorrhœa.....	138		175		136		145		244			
24. Orchitis.....	24		17		17		32		28			
25. Stricture of the Urethra.....	6		4		5		3		9			
26. Purulent Ophthalmia.....	4		2				4					
27. Serpent Bite.....	1											
28. Other Diseases of this Order.....			6						4			
ORDER III.— <i>Dietic Diseases.</i>												
29. Scurvy.....	4		8		1		4		1			
30. Purpura.....	3											
31. Delirium Tremens.....	19	1	3	1	7	1	11	2	12			
32. Inebriation.....	11		28		7		6		7			
33. Chronic Alcoholism.....	2		1		3							
34. Other Diseases of this Order.....	1								1			
CLASS II.—CONSTITUTIONAL DISEASES.												
ORDER I.— <i>Diatetic Diseases.</i>												
35. Gout.....												
36. Acute Rheumatism.....	151		172		150		236		211			
37. Chronic Rheumatism.....	86		125		57		95		166	1		
38. Anæmia.....	13		53		13		45		25			
39. General Dropsy.....	1		1		26		1	1				
40. Cancer.....	1											
41. Tumors.....			4		2		1		5			
42. Other Diseases of this Order.....	12		2		9		8		15	1		
ORDER II.— <i>Tubercular Diseases.</i>												
43. Consumption.....	9		17		14	1	16		10			
44. Scrofula.....	7		7		8		7		3			
45. Other Diseases of this Order.....	6				2		5					
CLASS III.—PARASITIC DISEASES.												
46. Itch.....	30		7		6		31		49			
47. Tape-worm.....												
48. Other Intestinal Worms.....	1				4		1		10			
49. Other Diseases of this Order.....									2

Abstract of the Sickness and Mortality

YEAR.....	1863.									
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.	
	203,083.		219,614.		217,345.		205,014.		214,539.	
MONTH.....										
MEAN STRENGTH, (not including Table LV).....										
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
CLASS I.—ZYMOTIC DISEASES.										
ORDER I.— <i>Miasmatic Diseases.</i>										
1. Typhoid Fever.....	572	279	653	258	504	186	393	143	325	95
2. Typhus Fever.....	18	3	8	4	7	14	2	3	2	
3. Typho-Malarial Fever.....	890	15	920	32	653	33	583	28	396	35
4. Yellow Fever.....										
5. Remittent Fever.....	2,285	30	3,874	36	3,335	39	2,312	13	1,655	9
6. Quotidian Intermittent Fever.....	2,658		4,746		5,927	2	4,637	8	3,908	2
7. Tertian Intermittent Fever.....	2,731	4	4,655		4,710		4,622		4,120	
8. Quartan Intermittent Fever.....	183		363	1	602		492		205	
9. Congestive Intermittent Fever.....	43	12	55	14	56	11	57	18	99	10
10. Acute Diarrhoea.....	10,607	10	16,563	13	14,682	16	9,068	8	8,409	5
11. Chronic Diarrhoea.....	955	72	1,248	107	1,461	137	1,281	239	1,254	222
12. Acute Dysentery.....	1,762	25	1,869	23	2,485	44	1,653	40	1,253	20
13. Chronic Dysentery.....	131	4	123	13	202	27	173	32	181	22
14. Erysipelas.....	110	4	120	4	70	2	76	2	106	4
15. Small-pox and Varioloid.....	6	9	1	2	6	3	17	4	24	8
16. Measles.....	29	2	27		59	1	53		27	
17. Scarlet Fever.....			1	1					3	
18. Diphtheria.....	58	3	149	25	153	19	79	15	83	13
19. Mumps.....	50		42		54		35	1	101	
20. Epidemic Catarrh.....	375		355		495	1	849		1,136	
21. Other Diseases of this Order.....	310	8	337	5	252	2	184	2	204	5
ORDER II.— <i>Enthetic Diseases.</i>										
22. Syphilis.....	412		539	2	754	3	750		764	1
23. Gonorrhoea.....	554		735		978		810		857	
24. Orchitis.....	68		60		92		112		113	
25. Stricture of the Urethra.....	14		15		15		17		28	
26. Purulent Ophthalmia.....	9		9		18		12		8	
27. Serpent Bite.....	3		2						1	
28. Other Diseases of this Order.....	2		25		6		8		27	
ORDER III.— <i>Dietic Diseases.</i>										
29. Scurvy.....	115		196	1	170	2	109	5	90	6
30. Purpura.....	20		24		36		5		3	2
31. Delirium Tremens.....	47	6	29	7	43	4	50	3	38	5
32. Inebriation.....	31		48	1	23		37	2	37	
33. Chronic Alcoholism.....	4		17		15		14		10	
34. Other Diseases of this Order.....	27			3		1			10	8
CLASS II.—CONSTITUTIONAL DISEASES.										
ORDER I.— <i>Diathetic Diseases.</i>										
35. Gout.....	3				5		5		19	
36. Acute Rheumatism.....	742	1	890		896	1	1,103	1	1,086	1
37. Chronic Rheumatism.....	602		595		571	1	615	2	674	1
38. Anæmia.....	269	3	355	2	287		273	4	248	6
39. General Dropsy.....	23		11		34		3	1	1	
40. Cancer.....	2			1	2		2		1	
41. Tumors.....	8		13	1	5		8		11	1
42. Other Diseases of this Order.....	28	3	36	1	48		52	1	38	1
ORDER II.— <i>Tubercular Diseases.</i>										
43. Consumption.....	75	14	103	23	111	26	92	23	74	25
44. Scrofula.....	24	1	53		31		40	1	41	1
45. Other Diseases of this Order.....	6		2		2		17		5	2
CLASS III.—PARASITIC DISEASES.										
46. Itch.....	223		57		78		122		218	
47. Tape-worm.....	4		4		2		8		2	
48. Other Intestinal Worms.....	18		13		18		10		16	
49. Other Diseases of this Order.....			2		2		1		2

CENTRAL REGION.

The reports from troops in the Central Region are consolidated into statistical tables for nine departments, as follows:

1. The Department of West Virginia	-	-	-	-	Table	LVII.
2. The Northern Department	-	-	-	-	Table	LVIII.
3. The Department of the Ohio	-	-	-	-	Table	LIX.
4. The Department of the Cumberland	-	-	-	-	Table	LX.
5. The Department of the Tennessee	-	-	-	-	Table	LXI.
6. The Department of the Gulf	-	-	-	-	Table	LXII.
7. The Department of the Northwest	-	-	-	-	Table	LXIII.
8. The Department of the Missouri	-	-	-	-	Table	LXIV.
9. The Department of Arkansas	-	-	-	-	Table	LXV.

To these tables are added—

10. A table showing the mortality in the general hospitals of the Central Region	-	-	-	-	Table	LXVI.
11. A consolidated table for the Central Region	-	-	-	-	Table	LXVII.

1. THE DEPARTMENT OF WEST VIRGINIA—TABLE LVII.

This table embraces for July the reports from troops in the State of West Virginia and in Maryland west of Hancock; subsequently the reports from West Virginia and Maryland west of the Monocacy.

The boundaries for July are those fixed by General Orders No. 186, June 24, 1863. (See remarks on Table XXXIV.) They were extended by General Orders No. 266, August 3, 1863, to include all of the State of Maryland west of the Monocacy, and that part of Virginia in the vicinity of Harper's Ferry.

General F. Sigel was assigned to command February 29, 1864, and General D. Hunter May 19, 1864.

The most important movements during the year were the advance of General Sigel up the Shenandoah valley in May, and the movement of General Hunter against Lynchburg in June.

2. THE NORTHERN DEPARTMENT—TABLE LVIII.

As for the previous year this designation is here applied to the region north of the Ohio and east of the Mississippi river, comprising the States of Ohio, Indiana, Illinois,

Michigan, and Wisconsin. The department was created by General Orders, No. 17, January 12, 1864, to consist of the above States, excepting the State of Wisconsin, which officially formed part of the Department of the Northwest, General S. P. Heintzelman was placed in command.

3. THE DEPARTMENT OF THE OHIO—TABLE LIX.

This table embraces the reports received from troops in Kentucky east of the Tennessee river, and from the Army of the Ohio in East Tennessee. The boundaries are those fixed by General Orders, No. 369, November 16, 1863, by which the department was declared to consist of the State of Kentucky east of the Tennessee river, and such parts of the State of Tennessee as might be occupied by the troops of that army.

In August, 1863, General A. E. Burnside moved with the Army of the Ohio into East Tennessee, occupying Knoxville September 1st.

In November, Knoxville was besieged by a rebel force under General Longstreet, who arrived before the place November 17th. The siege was raised December 4th on the arrival of a force from the Armies of the Tennessee and the Cumberland, under command of General Sherman.

November 16th General J. G. Foster was assigned to the command of this department, and January 23, 1864, General J. M. Schofield.

The Army of the Ohio, or Twenty-third Army Corps, subsequently moved southward, formed a junction, during April, with the Armies of the Cumberland and the Tennessee, and accompanied them in the campaign against Atlanta.

The term Department of the Ohio was understood to embrace this Army of the Ohio, as well as the garrisons and detachments left in portions of Kentucky and Tennessee embraced within the boundaries above indicated. The Ninth Corps is consolidated with this table from August to March, inclusive; during April, May, and June, it is consolidated with the Army of the Potomac.

4. THE DEPARTMENT OF THE CUMBERLAND—TABLE LX.

This table includes the reports from troops in Tennessee east of the Tennessee river, and west of the Cumberland mountains, and from the Army of the Cumberland.

The Army of the Cumberland, under General W. S. Rosecrans, had occupied Chattanooga and advanced into Georgia, when the battle of Chickamauga, September 19th and 20th, compelled its retreat to Chattanooga.

On the 24th of September the Eleventh and Twelfth Army Corps were detached from the Army of the Potomac and sent to reinforce the Army of the Cumberland. October 16, 1863, the Military Division of the Mississippi was created by General Orders No. 337,

to consist of the Departments of the Ohio, the Cumberland, and the Tennessee; General U. S. Grant was placed in command. The same order assigned General G. H. Thomas to the command of the Army of the Cumberland.

General Sherman with a part of the Army of the Tennessee was now brought across to form a junction with the Army of the Cumberland, and the combined force fought the battle of Chattanooga, November 23d, 24th, and 25th.

After the battle of Chattanooga General Sherman was sent with a force to the relief of Knoxville, as already mentioned. The siege of that place having been raised he returned to his position on the right of the Army of the Cumberland.

March 12, 1864, General Grant was assigned to the command of the Armies of the United States, and General W. T. Sherman to the command of the Military Division of the Mississippi, which was extended to embrace the Department of Arkansas. May 7th the Department of Arkansas was transferred to the Military Division of West Mississippi.

At the beginning of May the Army of the Cumberland lay in the neighborhood of Ringgold, Georgia; the Army of the Tennessee, under General McPherson, was a few miles to the right, while the Army of the Ohio, under General Schofield, had been brought from East Tennessee and lay a short distance to the left.

Simultaneously with the movement of the Army of the Potomac these armies also moved and made the campaign which resulted in the occupation of Atlanta September 2d.

The close of the year represented in the table finds the combined army in the neighborhood of Kenesaw mountain. The most important engagements up to this time had been the battle of Resaca, May 14th and 15th, the battles around Dallas, and the battles in the neighborhood of Kenesaw mountain, including the assaults of June 27th.

5. THE DEPARTMENT OF THE TENNESSEE—TABLE LXI.

The boundaries of the Department of the Tennessee continue the same as during the previous years; portions of the Army of the Tennessee were, however, moved long distances beyond these boundaries during the year.

The first of July, 1863, found the Army of the Tennessee, under General U. S. Grant, engaged in the siege of Vicksburg, which surrendered July 4th. After the fall of that place a portion of the troops were transferred to other departments. During the latter part of July General Steele was detached on the Arkansas expedition; August 3d the Ninth Corps commenced leaving for the Department of the Ohio; August 10th the Thirteenth Corps began to embark for the Department of the Gulf, with which its reports are consolidated for September and subsequent months.

Early in October General Sherman, with the Fifteenth Corps, which had been brought on transports to Memphis, marched eastward and effected a junction with the Army of the Cumberland.

After the Military Division of the Mississippi was created, October 16th, General Sherman, who was now placed in command of the Department of the Tennessee, continued his march, arriving in time to participate in the battles before Chattanooga, November 23d, 24th, and 25th, and subsequently moved to the relief of Knoxville, returning during the month of December to Northern Alabama.

March 12, 1864, General J. B. McPherson was assigned to the command of the department—General Sherman being placed in command of the Military Division of the Mississippi.

Towards the close of April the Seventeenth Corps was sent from Vicksburg on transports, by way of Cairo, to join the Fifteenth Corps on the right of the Army of the Cumberland. The Army of the Tennessee, as this force was designated, accompanied the Armies of the Cumberland and the Ohio on the campaign against Atlanta, as already stated. (See remarks on Table LX.)

6. THE DEPARTMENT OF THE GULF—TABLE LXII.

The boundaries of this department remain unchanged.

The beginning of the year represented in this table found General Banks still engaged in the siege of Port Hudson, which surrendered July 8th. During August the Thirteenth Corps was transferred from the Department of the Tennessee. September 4th the expedition to Sabine Pass under General Franklin set out from New Orleans. October 26th a force was sent from New Orleans to Brownsville, Texas, occupying that place November 6th.

In March General Banks made an expedition to Alexandria, and thence up the Red river; a force from the Department of the Tennessee, under General A. J. Smith, being sent on transports up the Red river with the fleet to coöperate. After the engagement near Sabine Cross-roads, April 8th, and that near Pleasant Hill, April 9th, the expedition retired, General Banks returning to New Orleans and General Smith to Vicksburg.

7. THE DEPARTMENT OF THE NORTHWEST—TABLE LXIII.

As during previous years this table embraces the reports received from troops within the States of Iowa and Minnesota and the Territories of Nebraska and Dakota. The most important military event was the Indian expedition of Generals Sibley and Sully during the summer of 1863.

8. THE DEPARTMENT OF THE MISSOURI—TABLE LXIV.

This table embraces the reports received from troops within the limits of the States of Missouri and Kansas. The reports from troops in the neighborhood of Fort Smith,

Arkansas, and the adjacent Indian Territory for the month of July, 1863, are also embraced; but for August and subsequent months they are consolidated with the Department of Arkansas.

Officially the limits of the department continued as fixed by General Orders No. 155, (see remarks on Table XLI,) until January 1, 1864, when the Department of Kansas was created by General Orders No. 1, to consist of the State of Kansas, the Territories of Nebraska and Colorado, and the Indian Territory, including the military post of Fort Smith.

January 22, 1864, General W. S. Rosecrans was assigned to the command of the Department of the Missouri.

9. THE DEPARTMENT OF ARKANSAS—TABLE LXV.

This table embraces, after the month of July, 1863, the reports from troops in the State of Arkansas and Indian Territory. The Department was created by General Orders No. 14, January 6, 1864, to consist of the State of Arkansas, except the military post of Fort Smith; General F. Steele was assigned to command.

April 17, 1864, the Indian Territory and the military post of Fort Smith were added. The boundaries thus established are those employed for the table.

After the fall of Vicksburg an expedition under General Steele was organized, which occupied Little Rock September 10th. This expedition and the troops at Helena belonged officially to the Department of the Tennessee until the Department of Arkansas was created by General Orders No. 14.

General Orders No. 192, May 7, 1864, united the Departments of Arkansas and of the Gulf into the Military Division of West Mississippi, General E. R. S. Canby to command. In these tables, however, the departments have been kept separate.

MONTH.....										
MEAN STRENGTH.....										
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
CLASS I.—ZYMOTIC DISEASES.										
ORDER I.— <i>Miasmatic Diseases.</i>										
1. Typhoid Fever.....	11	3	43	1	53	8	39	1	23	5
2. Typhus Fever.....					2	1	1		1	
3. Typho-Malarial Fever.....	5	1	8	2	10		2		4	1
4. Yellow Fever.....										
5. Remittent Fever.....	72		53		40	1	53		44	1
6. Quotidian Intermittent Fever.....	107		54		81		28		44	
7. Tertian Intermittent Fever.....	27		13		23		49		29	
8. Quartan Intermittent Fever.....	5		1		13		2		1	
9. Congestive Intermittent Fever.....					1		1	1		
10. Acute Diarrhœa.....	724		396		179		129		143	
11. Chronic Diarrhœa.....	47		16		10		33		27	
12. Acute Dysentery.....	265	1	84		82		34	1	14	
13. Chronic Dysentery.....	9		7		5		3	1		
14. Erysipelas.....	7		7		3		4		5	1
15. Small-pox and Varioloid.....	5	1								
16. Measles.....	8									
17. Scarlet Fever.....										
18. Diphtheria.....	3	1			1		2		11	
19. Mumps.....	31		1		1		6		11	
20. Epidemic Catarrh.....	28		27		14		12		61	
21. Other Diseases of this Order.....	10		3	1			2		2	
ORDER II.— <i>Enthetic Diseases.</i>										
22. Syphilis.....	18		2		2		5		12	
23. Gonorrhœa.....	76		25		16		41		30	
24. Orchitis.....	11				2		1		1	
25. Stricture of the Urethra.....	1									
26. Purulent Ophthalmia.....	50		11		3		1		4	
27. Serpent Bite.....	1									
28. Other Diseases of this Order.....										
ORDER III.— <i>Dietic Diseases.</i>										
29. Scurvy.....	4		3		3		10		6	
30. Purpura.....										
31. Delirium Tremens.....	2						2		2	
32. Inebriation.....	7				1		1			
33. Chronic Alcoholism.....							1			
34. Other Diseases of this Order.....	13		20		13					
CLASS II.—CONSTITUTIONAL DISEASES.										
ORDER I.— <i>Diathetic Diseases.</i>										
35. Gout.....							2			
36. Acute Rheumatism.....	62		52		33		23		46	
37. Chronic Rheumatism.....	88		41		30		23		31	
38. Anæmia.....	6		10		4	1	1		4	
39. General Dropsy.....										
40. Cancer.....										
41. Tumors.....									1	
42. Other Diseases of this Order.....	4		1							
ORDER II.— <i>Tubercular Diseases.</i>										
43. Consumption.....	4		1		1		5		3	
44. Scrofula.....	7		1				1		2	
45. Other Diseases of this Order.....			3		9		12		10	
CLASS III.—PARASITIC DISEASES.										
46. Itch.....	29		8		4		16		15	
47. Tape-worm.....					1					
48. Other Intestinal Worms.....										
49. Other Diseases of this Order.....

Abstract of the Sickness and Mortality

YEAR.....	1863.									
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.	
	27, 144.		24, 475.		24, 134.		25, 388.		23, 429.	
MONTH.....	MEAN STRENGTH.....									
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
CLASS I.—ZYMOTIC DISEASES.										
ORDER I.— <i>Miasmatic Diseases.</i>										
1. Typhoid Fever.....	17	1	19	12	36	5	23	5	40	9
2. Typhus Fever.....	1								1	
3. Typho-Malarial Fever.....	16	1	6		9		6		2	1
4. Yellow Fever.....										
5. Remittent Fever.....	282	5	312	2	350	2	258	1	332	1
6. Quotidian Intermittent Fever.....	390		473		669		429		445	
7. Tertian Intermittent Fever.....	328		438		506		359		436	
8. Quartan Intermittent Fever.....	41		56		70		46		123	
9. Congestive Intermittent Fever.....	11	2	7		32	2	45	1	35	3
10. Acute Diarrhœa.....	1,512	1	646		633	1	532		449	
11. Chronic Diarrhœa.....	170	3	148	4	164	5	107	4	80	7
12. Acute Dysentery.....	300	5	222	2	273	2	222	1	100	
13. Chronic Dysentery.....	26	3	78	5	50	3	76		40	1
14. Erysipelas.....	40		17		30		24		26	
15. Small-pox and Varioloid.....	15	2	1	1	3		2		3	1
16. Measles.....	7		1		2				1	
17. Scarlet Fever.....										
18. Diphtheria.....	2		1		3		9		1	
19. Mumps.....	32		8		10		5		12	
20. Epidemic Catarrh.....	77		16		31		186		641	
21. Other Diseases of this Order.....	19		24		9		2		7	
ORDER II.— <i>Enthetic Diseases.</i>										
22. Syphilis.....	63		80		83		82		56	
23. Gonorrhœa.....	128		139		192		210		245	
24. Orchitis.....	7		7		3		10		6	
25. Stricture of the Urethra.....					1		1			
26. Purulent Ophthalmia.....	8		12		37		46		31	
27. Serpent Bite.....	2									
28. Other Diseases of this Order.....	1		1		2		1			
ORDER III.— <i>Dietic Diseases.</i>										
29. Scurvy.....	43		27		5		2		9	
30. Purpura.....					7		1			
31. Delirium Tremens.....	7		10		2		6		3	
32. Inebriation.....	7	1	1		2				5	
33. Chronic Alcoholism.....	5		7	1	7		4	1	10	
34. Other Diseases of this Order.....							5			
CLASS II.—CONSTITUTIONAL DISEASES.										
ORDER I.— <i>Diathetic Diseases.</i>										
35. Gout.....										
36. Acute Rheumatism.....	80		40		60		70		145	
37. Chronic Rheumatism.....	58		48		43		54		51	
38. Anæmia.....	78		35		26		28		29	
39. General Dropsy.....										
40. Cancer.....	1								1	
41. Tumors.....			1						1	
42. Other Diseases of this Order.....	5		5						2	
ORDER II.— <i>Tubercular Diseases.</i>										
43. Consumption.....	11		2		7	2	6		21	2
44. Scrofula.....	4		8		21		16		23	
45. Other Diseases of this Order.....									1	
CLASS III.—FARASITIC DISEASES.										
46. Itch.....	65		28		45		28		82	
47. Tape-worm.....	1									
48. Other Intestinal Worms.....	1		2							
49. Other Diseases of this Order.....										
Carried forward.....	3, 861	24	2, 926	27	3, 483	22	2, 901	13	3, 495	25

PACIFIC REGION.

The reports from the Pacific Region have been consolidated into two tables, as follows:

1. The Department of New Mexico - - - - - Table LXVIII.
2. The Department of the Pacific - - - - - Table LXIX.
- To these are added—
3. A consolidated table for the Pacific Region - - - - - Table LXX.

1. THE DEPARTMENT OF NEW MEXICO—TABLE LXVIII.

This table embraces the reports received from stations in New Mexico and Colorado. January 1st, 1864, Colorado Territory was transferred to the Department of Kansas. This change, however, has been disregarded in the construction of the table.

2. THE DEPARTMENT OF THE PACIFIC—TABLE LXIX.

This table includes the reports received from all stations west of the Rocky Mountains which are not embraced in the Department of New Mexico.

 CONSOLIDATED TABLE FOR THE UNITED STATES—TABLE LXXI.

This table is prepared by consolidating Tables LVI, LXVII, and LXX.

TABLE LXVIII.

Abstract of the Sickness and Mortality

YEAR.....	1863.

SUPPLEMENT TO THE TABLES OF THE THIRD FISCAL YEAR.

On account of the great interest attaching to the Atlanta campaign it has been thought desirable to add a supplementary table, in which are consolidated all reports for May and June, 1864, received from such of the troops belonging to the Military Division of the Mississippi as were engaged in the operations from Chattanooga southward. (See remarks on Table LX, page 363.)

This supplement will serve as an introduction to Table LXXXV, (Military Division of the Mississippi, Part II, year ending June 30, 1865.) It is to be borne in mind, however, that the regimental reports here consolidated, have been included in the tables already presented for the Departments of the Ohio, the Cumberland, and the Tennessee for the same months.

TABLE LXXII.—SUPPLEMENTARY TABLE.

Abstract of the Sickness and Mortality of the Military Division of the Mississippi for the months of May and June, 1864.

SICKNESS AND MORTALITY OF WHITE TROOPS DURING THE FOURTH FISCAL YEAR.

(FROM JULY 1, 1864, TO JUNE 30, 1865.)

ATLANTIC REGION.

The reports received from troops in this region are consolidated into statistical tables for eight armies or departments, as follows:

1. The Department of the East	-	-	-	-	-	-	Table LXXIII.
2. The Middle Department	-	-	-	-	-	-	Table LXXIV.
3. The Department of Washington	-	-	-	-	-	-	Table LXXV.
4. The Middle Military Division	-	-	-	-	-	-	Table LXXVI.
5. The Army of the Potomac	-	-	-	-	-	-	Table LXXVII.
6. The Department of Virginia	-	-	-	-	-	-	Table LXXVIII.
7. The Department of North Carolina	-	-	-	-	-	-	Table LXXIX.
8. The Department of the South	-	-	-	-	-	-	Table LXXX.
To these tables are added—							
9. A table showing the mortality in the general hospitals of the Atlantic Region	-	-	-	-	-	-	Table LXXXI.
10. A consolidated table for the Atlantic Region	-	-	-	-	-	-	Table LXXXII.

1. THE DEPARTMENT OF THE EAST—TABLE LXXIII.

This table embraces the reports received from troops in the New England States and in the Middle States, not including the State of Delaware. Officially the boundaries of the Department of the East were the same as during the year ending June 30, 1864; the State of Pennsylvania, which is here included, being embraced in the Department of the Susquehanna, until December 1, 1864, after which that Department was designated the Department of Pennsylvania.

2. THE MIDDLE DEPARTMENT—TABLE LXXIV.

This table embraces the reports received from troops in the State of Delaware, the eastern shore of Virginia, and those portions of the State of Maryland east of Hancock which are not embraced in the Department of Washington, or occupied by portions of the army under the immediate command of General Sheridan. (See remarks on Table LXXVI.) Officially the boundaries of the department remained the same as during the previous year. General E. O. C. Ord was assigned to command, July 11, 1864. After August 7, 1864, the Middle Department formed a part of the Middle Military Division.

3. THE DEPARTMENT OF WASHINGTON—TABLE LXXV.

This table embraces the reports received from troops within the boundaries indicated in the remarks on Tables XXVII and L. There was no change in the official limits of the department during the present year.

4. THE MIDDLE MILITARY DIVISION—TABLE LXXVI.

The Middle Military Division was created by General Orders No. 240, August 7, 1864, to consist of the Middle Department, the Department of Washington, the Department of the Susquehanna, and the Department of West Virginia, General P. H. Sheridan to command. In preparing these tables the Middle Department and the Department of Washington have been separately presented, and the troops within the limits of the Department of the Susquehanna have been consolidated with the Department of the East. The present table, therefore, has been made to embrace simply the Department of West Virginia and the troops operating under the immediate command of General Sheridan in the Shenandoah valley. This disposition of the Department of West Virginia is rendered necessary by the intimate connection between the operations of the Army of West Virginia and those of other troops, under General Sheridan, in the Shenandoah valley.

The movements of General Early, threatening Washington, led to the 6th Corps being sent thither from the Army of the Potomac July 6th, and the first and second divisions of the 19th Corps, recently from the Department of the Gulf, also arrived there from the 13th to the 29th of the same month. After General Early retired, these troops followed him to the Shenandoah valley, uniting with a force belonging to the Department of West Virginia, and reinforcements from other sources. It has therefore been found convenient to consolidate the reports from the 6th Corps, and the portions of the 19th referred to, with those from the Department of West Virginia for the month of July in the present table, although the Middle Military Division was not organized until the following month.

Among the chief engagements during General Sheridan's operations in the Shenandoah valley may be mentioned that at Opequan creek, September 19th, that at Fisher's hill, September 22d, and that of Cedar creek, October 19, 1864.

Early in December the 6th Corps was transferred to the Army of the Potomac, with which its reports are consolidated for that month and subsequently.

Towards the close of February, 1865, General Sheridan moved up the Shenandoah valley with the 1st and 3d Cavalry divisions of his army, and effected a junction with the Army of the Potomac near City Point, March 26th. The reports of these divisions for February and March are embraced in the present table; subsequently they are consolidated with the Army of the Potomac.

5. THE ARMY OF THE POTOMAC—TABLE LXXVII

At the commencement of the year the Army of the Potomac was still before Petersburg. The operations against that place were continued until April 2, 1865, when General Lee abandoned his defensive works and surrendered, April 9th, near Appomattox Court-house. The Army of the Potomac was subsequently marched to the vicinity of Washington, where, after the review of May 22d, its muster-out commenced.

6. THE DEPARTMENT OF VIRGINIA—TABLE LXXVIII.

The boundaries of this department continue the same as during previous years. (See remarks on Tables XXIX and LII.) Officially united with North Carolina, it formed the Department of Virginia and North Carolina until January 12, 1865, when the State of North Carolina was transferred to the Department of the South and the Department of Virginia restored. General E. O. C. Ord was assigned to the command, February 6, 1865.

The portion of the troops of this department constituting the Army of the James, continued to coöperate with the Army of the Potomac in the siege of Petersburg until the fall of that place. The troops composing the expedition against Fort Fisher, in December, 1864, were from this Department, as were also those of the second expedition in January. Fort Fisher was captured January 15, 1865, and the troops of the expedition which remained there are embraced for subsequent months in the Department of North Carolina.

7. THE DEPARTMENT OF NORTH CAROLINA—TABLE LXXIX.

This table includes the reports received from troops stationed in North Carolina, which State was embraced in the Department of Virginia and North Carolina until January 12, 1865, when it was transferred to the Department of the South. January 31st, the Department of North Carolina was created to consist of the State of North Carolina, and General J. M. Schofield assigned to command. During the latter part of the month

of January, the Army of the Ohio had been transferred from the West, and is embraced in the table for February and subsequent months. Wilmington, North Carolina, was occupied February 22d. General Schofield subsequently moved from Newbern by way of Kingston to Goldsboro, which he entered March 21st, and effected a junction with the Army of General Sherman.

8. THE DEPARTMENT OF THE SOUTH—TABLE LXXX.

The boundaries of this department continued as during the previous year, with the exception of the temporary transfer during January of the State of North Carolina—a change which has been disregarded in constructing the table.

The district of Savannah is embraced in the table for January and subsequent months.

CLASS IV.—LOCAL DISEASES.										
ORDER I.— <i>Diseases of Nervous System.</i>										
49. Apoplexy.....		2		3		5		4		4
50. Epilepsy.....		1		2		2		2		
51. Headache.....										
52. Insanity.....										
53. Inflammation of Brain.....		11		9		4		3		3
54. Inflammation of Membranes of Brain.....		3		3				2		2
55. Inflammation of Spinal Cord.....		3		1				2		
56. Nostalgia.....										
57. Neuralgia.....										
58. Paralysis.....				1		4		2		
59. Sun-stroke.....		6		8		4		1		
60. Other Diseases of this Order.....		3		7		1		2		3
ORDER II.— <i>Diseases of Eye.</i>										
61. Amaurosis.....										
62. Cataract.....										
63. Inflammation of Conjunctiva.....										
64. Inflammation of Iris.....										
65. Night Blindness.....										
66. Other Diseases of this Order.....										
ORDER III.— <i>Diseases of Ear.</i>										
67. Inflammation of Internal Ear.....										
68. Deafness.....										
69. Otorrhœa.....										
70. Other Diseases of this Order.....										
ORDER IV.— <i>Diseases of Organs of Circulation.</i>										
71. Aneurism.....		1				1				1
72. Valvular Disease of Heart.....		2		6		2		7		3
73. Dropsy from Heart Disease.....										2
74. Dropsy of Pericardium.....						1				
75. Inflammation of Pericardium.....		2				1		1		
76. Inflammation of Endocardium.....				1						
77. Inflammation of Veins.....						1				
78. Varicose Veins.....										
79. Varicocele.....										
80. Other Diseases of this Order.....		3		5		2				
ORDER V.— <i>Diseases of Respiratory Organs.</i>										
81. Asthma.....		1								
82. Acute Bronchitis.....		1		3				2		
83. Chronic Bronchitis.....		4		2		1		1		2
84. Dropsy of Chest.....				1				1		1
85. Hæmorrhage from Nose.....						1				1
86. Inflammation of Larynx.....				1		1		1		1
87. Inflammation of Lungs.....		58		46		29		35		48
88. Inflammation of Pleura.....		2		4		3		6		2
89. Hæmorrhage from Lungs.....				1		2		3		1
90. Other Diseases of this Order.....		9		3		2		2		6
ORDER VI.— <i>Diseases of Digestive Organs.</i>										
91. Colic.....		1				1				
92. Constipation.....				1						
93. Cholera Morbus.....		2		1		1				1
94. Cirrhosis of Liver.....										
95. Dropsy from Hepatic Disease.....		2		1		3		4		5
96. Dyspepsia.....								1		
97. Diseases of Pancreas.....										
98. Diseases of Spleen.....										
99. Fistula in Ano.....										
100. Hernia.....								2		
101. Hæmorrhage from Stomach.....						1				1
Carried forward.....		888		1,159		921		1,102		621

CENTRAL REGION.

The reports from troops in the Central Region are consolidated into statistical tables for seven armies or departments, as follows:

1. The Northern Department	- - - -	Table	LXXXIII.
2. The Military Division of the Mississippi—Part I	- - - -	Table	LXXXIV.
3. The Military Division of the Mississippi—Part II	- - - -	Table	LXXXV.
4. The Department of the Gulf	- - - -	Table	LXXXVI.
5. The Department of the Northwest	- - - -	Table	LXXXVII.
6. The Department of the Missouri	- - - -	Table	LXXXVIII.
7. The Department of Arkansas	- - - -	Table	LXXXIX.

To these are added—

8. A table showing the mortality in the general hospitals of the Central Region	- - - -	Table	XC.
9. A consolidated table of the Central Region	- - - -	Table	XCI.

1. THE NORTHERN DEPARTMENT—TABLE LXXXIII.

As for the previous year, this table embraces all reports received from troops in the States of Ohio, Indiana, Illinois, Michigan, and Wisconsin. The latter State is here included for geographical reasons, though officially forming part of the Department of the Northwest. General J. Hooker was assigned to the command of the Northern Department September 28, 1864.

2. THE MILITARY DIVISION OF THE MISSISSIPPI, PART I—TABLE LXXXIV.

The Military Division of the Mississippi was created by General Orders No. 337, October 16, 1863, to consist of the Departments of the Ohio, the Cumberland, and the Tennessee. In preparing the tables for the fiscal year ending June 30, 1864, these departments were separately presented, but a separate table was given for May and June (Table LXXII) in which were consolidated the reports from all troops directly coöperating with General Sherman south of Chattanooga. For the present year it has been thought best to consolidate the reports from the Military Division of the Mississippi in two tables, of which the first embraces the garrisons and detachments left behind when the army under General Sherman moved into Georgia, while the second represents this army.

Part I therefore embraces all reports from troops in the Departments of the Ohio, the Cumberland, and the Tennessee left north of Chattanooga. It includes those stationed in the States of Kentucky and Tennessee, in northern Mississippi and in northern Alabama. The army of the Ohio, (23d Corps,) with the 4th Corps from the Department of the Cumberland and a portion of the Cavalry Corps which had accompanied General Sherman on the Atlanta campaign, were detached about the close of October to join General Thomas at Nashville; they are therefore included in this table for November and subsequently. About the middle of January the 23d Corps was sent east to the Department of North Carolina, with which it is consolidated for February and subsequent months.

The troops belonging to the Department of the Ohio, left behind when the 23d Corps was ordered east, were united with the Department of the Cumberland by General Orders No. 5, January 17, 1865, by which, also, the Department of the Cumberland was extended to embrace such parts of Mississippi, Alabama, and Georgia as may be occupied by troops under the command of General Thomas. By General Orders No. 21, February 10, 1865, the Department of Kentucky was constituted to consist of the State of Kentucky. It is included in the present table. By the same order the portion of the State of Tennessee not already embraced in the Department of the Cumberland was added to that department; this portion of the State was that lying west of the Tennessee river. It was detached from the Department of the Tennessee November 28, 1864, by General Orders No. 28, which constituted the Department of the Mississippi to comprise the State of Mississippi, and that portion of Tennessee west of the Tennessee river. The reports received from the Department of the Mississippi have been consolidated in the present table.

The most important movements of the troops embraced in this table were those connected with the concentration of troops at Nashville, rendered necessary by the advance of General Hood against that place, which led to the battle of Nashville, December 15th and 16th, and the subsequent pursuit; and the cavalry expeditions under General Stoneman from Knoxville into North Carolina, and under General Wilson from Nashville through Alabama and Georgia, during March and April, 1865.

3. THE MILITARY DIVISION OF THE MISSISSIPPI, PART II—TABLE LXXXV.

This table embraces the army immediately under General Sherman, which at the commencement of the year was engaged in the Atlanta campaign. (See remarks on Table LXXII, p. 459.) Atlanta was occupied by the forces of General Sherman September 2d. The chief engagements occurred in the vicinity of Atlanta July 20th and 22d, and near Jonesboro' September 1st.

The fall of Atlanta was followed in October by the movement of General Hood to the north, threatening the communications of General Sherman, who, towards the close

of October, detached the 4th and 23d Corps to reinforce General Thomas at Nashville, and breaking off from his base prepared for the march through Georgia to the sea. The last train for the north left Atlanta November 11th, and the march commenced November 16th, the moving column consisting of the 14th, 15th, 17th, and 20th Corps, and a division of cavalry. By the 10th of December the army was before Savannah, Georgia; Fort McAllister was carried by assault December 13th, and Savannah was evacuated on the night of the 20th. From Savannah the army moved northward February 1st, marching through South Carolina and North Carolina to Goldsboro', N. C., which was occupied March 21st by General Schofield with troops belonging to the Department of North Carolina.

Setting out from the neighborhood of Goldsboro' on the 10th of April, Raleigh was reached on the 13th. The army of General Johnston surrendered April 26th, and subsequently the army of General Sherman was marched to the neighborhood of Washington, whence, after the review of May 23d, the troops were moved to convenient points for muster-out.

4. THE DEPARTMENT OF THE GULF—TABLE LXXXVI.

This department continued to constitute a portion of the Military Division of West Mississippi until May 17, 1865. It is however here presented as a separate table, embracing the reports from troops within the same general boundaries as during former years.

Among the more important movements of troops may be mentioned the expedition against the forts at the mouth of Mobile harbor in the summer of 1864, and that against Mobile in the spring of 1865. Fort Gaines surrendered August 8 and Fort Morgan August 23, 1864. Mobile was evacuated April 11, 1865.

5. THE DEPARTMENT OF THE NORTHWEST—TABLE LXXXVII.

This table embraces the reports received from troops within the States of Iowa and Minnesota, and the Territories of Nebraska and Dakota.

6. THE DEPARTMENT OF THE MISSOURI—TABLE LXXXVIII.

As during the previous year, this table embraces the reports received from troops within the States of Missouri and Kansas. Officially the State of Kansas was included in the department of that name until January 30, 1865, when the Department of Kansas was added to the Department of the Missouri by General Orders No. 11. By the same order the Departments of the Missouri and of the Northwest were united under the

designation of the Military Division of the Missouri. It has, however, been thought best to adhere to the geographical boundaries indicated, which are those employed in compiling the tables of the Departments of the Missouri and of the Northwest for previous years.

7. THE DEPARTMENT OF ARKANSAS—TABLE LXXXIX.

This table embraces the reports from troops in the State of Arkansas and the Indian Territory. General J. J. Reynolds was assigned to command November 29, 1864. By General Orders No. 44, March 21, 1865, this department was added to the Military Division of the Missouri. It has, however, been thought best to present it separately in these tables.

Abstract of the Mortality in the

YEAR	1864.									
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.	
	34, 551.		32, 829.		28, 027.		24, 363.		30, 512.	
MONTH	34, 551.		32, 829.		28, 027.		24, 363.		30, 512.	
UNDER TREATMENT AT CLOSE OF MONTH	34, 551.		32, 829.		28, 027.		24, 363.		30, 512.	
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
CLASS I.—ZYMOTIC DISEASES.										
ORDER I.— <i>Miasmatic Diseases.</i>										
1. Typhoid Fever.....		255		164		125		87		103
2. Typhus Fever.....				1		4		3		
3. Typho-Malarial Fever.....		50		48		62		40		37
4. Yellow Fever.....										
5. Remittent Fever.....		58		52		46		38		20
6. Quotidian Intermittent Fever.....		7		7		4		2		10
7. Tertian Intermittent Fever.....		8		9		6		2		1
8. Quartan Intermittent Fever.....								3		1
9. Congestive Intermittent Fever.....		20		24		18		20		4
10. Acute Diarrhœa.....		81		53		30		24		28
11. Chronic Diarrhœa.....		493		460		431		389		346
12. Acute Dysentery.....		41		53		56		56		44
13. Chronic Dysentery.....		69		46		48		41		42
14. Erysipelas.....		10		8		7		5		4
15. Small-pox and Varioloid.....		23		15		11		10		39
16. Measles.....		15		7		7		7		9
17. Scarlet Fever.....										
18. Diphtheria.....		1		3		2		2		2
19. Mumps.....		1				2		1		
20. Epidemic Catarrh.....										
21. Other Diseases of this Order.....		15		9		8		6		6
ORDER II.— <i>Enthetic Diseases.</i>										
22. Syphilis.....		2		1		2				2
23. Gonorrhœa.....										
24. Orchitis.....										
25. Stricture of the Urethra.....										
26. Purulent Ophthalmia.....										
27. Serpent Bite.....										
28. Other Diseases of this Order.....										1
ORDER III.— <i>Dietic Diseases.</i>										
29. Scurvy.....		1		7		3		2		1
30. Purpura.....		1								
31. Delirium Tremens.....		4				1				2
32. Inebriation.....								1		
33. Chronic Alcoholism.....										1
34. Other Diseases of this Order.....										
CLASS II.—CONSTITUTIONAL DISEASES.										
ORDER I.— <i>Dialhetic Diseases.</i>										
35. Gout.....										
36. Acute Rheumatism.....		4		1		1		1		1
37. Chronic Rheumatism.....		1		1		1		1		3
38. Anæmia.....		12		10		5		4		6
39. Cancer.....										
40. Tumors.....				1						
41. Other Diseases of this Order.....								1		
ORDER II.— <i>Tubercular Diseases.</i>										
42. Consumption.....		44		34		26		36		28
43. Scrofula.....		3						1		
44. Other Diseases of this Order.....		2								
CLASS III.—PARASITIC DISEASES.										
45. Itch.....										
46. Tape-worm.....										
47. Other Intestinal Worms.....										
48. Other Diseases of this Order.....										
Carried forward.....		1, 221		1, 014		906		783		741

Abstract of the Sickness and Mortality

YEAR.....	1864.									
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.	
	332, 672.		344, 895.		319, 709.		317, 627.		318, 212.	
MONTH.....										
MEAN STRENGTH, (not including Table XC).....										
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
CLASS I.—ZYMOTIC DISEASES.										
ORDER I.— <i>Miasmatic Diseases.</i>										
1. Typhoid Fever.....	600	461	668	337	763	278	433	190	380	173
2. Typhus Fever.....	116	15	17	5	10	4	4	5	8
3. Typho-Malarial Fever.....	699	110	778	128	552	144	389	96	236	56
4. Yellow Fever.....
5. Remittent Fever.....	6, 159	106	7, 871	136	4, 957	88	3, 444	87	2, 667	37
6. Quotidian Intermittent Fever.....	8, 339	14	10, 252	17	10, 190	8	9, 197	11	5, 827	12
7. Tertian Intermittent Fever.....	8, 018	13	9, 839	10	8, 616	7	6, 680	3	5, 118	1
8. Quartan Intermittent Fever.....	911	2	1, 109	928	1	847	4	622	1
9. Congestive Intermittent Fever.....	285	78	312	106	345	105	210	65	139	36
10. Acute Diarrhœa.....	21, 358	140	20, 627	101	14, 814	74	11, 885	53	9, 918	37
11. Chronic Diarrhœa.....	2, 558	712	2, 662	740	2, 583	722	1, 905	704	1, 516	447
12. Acute Dysentery.....	6, 153	145	6, 178	176	5, 202	182	4, 190	152	2, 774	79
13. Chronic Dysentery.....	528	98	524	104	588	101	488	88	355	56
14. Erysipelas.....	402	13	380	10	250	10	246	8	244	8
15. Small-pox and Varioloid.....	38	32	42	18	35	12	56	15	103	46
16. Measles.....	368	52	155	13	70	9	284	10	422	26
17. Scarlet Fever.....	3	4	4	3
18. Diphtheria.....	93	3	66	4	53	3	53	2	57	3
19. Mumps.....	365	1	227	4	101	4	176	1	289
20. Epidemic Catarrh.....	499	613	651	1, 173	1, 764
21. Other Diseases of this Order.....	1, 465	26	1, 548	20	1, 224	24	1, 180	17	875	17
ORDER II.— <i>Enthetic Diseases.</i>										
22. Syphilis.....	722	2	821	2	733	2	649	2	625	3
23. Gonorrhœa.....	1, 300	1, 236	1, 029	1, 012	1, 029
24. Orchitis.....	107	114	1	94	106	83
25. Stricture of the Urethra.....	32	22	17	18	16	1
26. Purulent Ophthalmia.....	142	141	105	76	78
27. Serpent Bite.....	6	5	7	3	2
28. Other Diseases of this Order.....	102	22	39	8	22	2
ORDER III.— <i>Dietic Diseases.</i>										
29. Scurvy.....	1, 483	6	1, 620	16	1, 523	26	664	9	498	12
30. Purpura.....	24	1	12	2	13	6	2	1
31. Delirium Tremens.....	30	7	40	2	27	3	33	1	22	6
32. Inebriation.....	33	1	30	1	37	35	1	32	1
33. Chronic Alcoholism.....	6	23	4	7	5	1
34. Other Diseases of this Order.....	15
CLASS II.—CONSTITUTIONAL DISEASES.										
ORDER I.— <i>Dialthetic Diseases.</i>										
35. Gout.....	5	2	1	12	1
36. Acute Rheumatism.....	1, 336	6	1, 406	4	1, 193	2	1, 363	3	1, 450	2
37. Chronic Rheumatism.....	737	4	915	5	784	3	718	5	784	5
38. Anæmia.....	368	14	345	12	312	6	195	5	104	6
39. Cancer.....	9	2	4	2	1	3
40. Tumors.....	35	40	1	21	32	13
41. Other Diseases of this Order.....	12	1	22	2	11	6	3	7
ORDER II.— <i>Tubercular Diseases.</i>										
42. Consumption.....	116	62	125	52	97	37	98	58	70	45
43. Scrofula.....	85	5	100	1	76	56	2	44
44. Other Diseases of this Order.....	2	1	6	5
CLASS III.—PARASITIC DISEASES.										
45. Itch.....	484	423	259	422	447
46. Tape-worm.....	13	8	10	13	6
47. Other Intestinal Worms.....	27	22	24	2	19	4
48. Other Diseases of this Order.....	3
Carried forward.....	66, 174	2, 132	71, 368	2, 030	58, 368	1, 857	48, 403	1, 601	38, 669	1, 120

PACIFIC REGION.

The reports from the Pacific Region have been consolidated into two tables, as follows:

- | | | | | | | |
|--|---|---|---|---|---|--------------|
| 1. The Department of New Mexico | - | - | - | - | - | Table XCII. |
| 2. The Department of the Pacific | - | - | - | - | - | Table XCIII. |
| To these are added— | | | | | | |
| 3. A consolidated table for the Pacific Region | - | - | - | - | - | Table XCIV. |

1. THE DEPARTMENT OF NEW MEXICO—TABLE XCII.

This table embraces the reports received from stations in New Mexico and Colorado.

2. THE DEPARTMENT OF THE PACIFIC—TABLE XCIII.

This table embraces the reports received from all stations west of New Mexico and Colorado.

 CONSOLIDATED TABLE FOR THE UNITED STATES—TABLE XCV.

This table is prepared by consolidating Tables LXXXII, XCI, and XCIV.

TABLE XCII.

Abstract of the Sickness and Mortality

YEAR.....	1864.

used for the year, the cases being, as a rule, reported under the head of "Other Diseases" of the order to which they belong.
year the order did not exist.

TABLE C.—GENERAL SUMMARY—Continued.

YEAR.....	May and June, 1861.		Year ending June 30, 1862.	
MEAN STRENGTH IN FIELD AND GARRISON.....	41, 556.		279, 371.	
IN GENERAL HOSPITALS.....			9, 548.	
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.
Brought forward.....	16, 336	36	516, 824	10, 065
CLASS IV.—LOCAL DISEASES.				
<i>ORDER I.—Diseases of Nervous System.</i>				
53. Apoplexy.....	6	1	195	123
54. Epilepsy.....	42	1, 203	39
55. Headache.....	280	7, 126	1
56. Insanity.....	20	494	12
57. Inflammation of Brain.....	50	10	151	93
58. Inflammation of Membranes of Brain.....	7	167	105
59. Inflammation of Spinal Cord.....	*	*	*	*
60. Nostalgia.....	65	572	1
61. Neuralgia.....	248	7, 544	1
62. Toothache.....	327	7, 517
63. Paralysis.....	6	330	24
64. Sun-stroke.....	74	1	416	18
65. Other Diseases of this Order.....	59	1	1, 518	47
<i>ORDER II.—Diseases of Eye.</i>				
66. Amaurosis.....	3	147
67. Cataract.....	1	71
68. Ophthalmia.....	351	8, 553	1
69. Inflammation of Conjunctiva.....	*	*	*	*
70. Inflammation of Iris.....	5	282
71. Night Blindness.....	2	136
72. Other Diseases of this Order.....	55	1, 173
<i>ORDER III.—Diseases of Ear.</i>				
73. Earache.....	64	1, 770
74. Inflammation of Internal Ear.....	51	1, 458
75. Deafness.....	8	263
76. Otorrhœa.....	49	1, 409	1
77. Other Diseases of this Order.....	12	173	1
<i>ORDER IV.—Diseases of Organs of Circulation.</i>				
78. Aneurism.....	2	35	6
79. Inflammation of Heart.....	5	152	21
80. Valvular Disease of Heart.....	*	*	*	*
81. Dropsy from Heart Disease.....	*	*	*	*
82. Dropsy of Pericardium.....	*	*	*	*
83. Inflammation of Pericardium.....	3	1	224	42
84. Inflammation of Endocardium.....	7	107	15
85. Inflammation of Veins.....	73	3
86. Varicose Veins.....	19	774	1
87. Varicocele.....	33	986
88. Other Diseases of this Order.....	23	1	730	46
<i>ORDER V.—Diseases of Respiratory Organs.</i>				
89. Asthma.....	33	1, 169	11
90. Acute Bronchitis.....	720	26, 160	102
91. Chronic Bronchitis.....	33	1	3, 893	36
92. Catarrh.....	2, 012	1	83, 665	5
93. Dropsy of Chest.....	1	23	5
94. Hæmorrhage from Nose.....	49	406	4
95. Inflammation of Larynx.....	83	2, 591	34
96. Inflammation of Lungs.....	418	9	11, 055	2, 152
97. Inflammation of Pleura.....	169	5, 077	84
98. Hæmorrhage from Lungs.....	51	1, 051	23
99. Other Diseases of this Order.....	140	5, 033	234
<i>ORDER VI.—Diseases of Digestive Organs.</i>				
100. Colic.....	484	11, 366	11
101. Constipation.....	1, 262	27, 178	5
102. Abdominal Dropsy.....	150	15
103. Cholera Morbus.....	242	4, 306	34
104. Cirrhosis of Liver.....	*	*	*	*
105. Dropsy from Hepatic Disease.....	*	*	*	*
106. Dyspepsia.....	247	6, 134	1
107. Diseases of Pancreas.....	*	*	*	*
108. Diseases of Spleen.....	2	281	2
109. Fistula in Ano.....	16	375
110. Hernia.....	92	3, 804	6
111. Prolapsus Ani.....	22	344
112. Hæmorrhage from Stomach.....	20	177	3
Carried forward.....	24, 309	62	756, 811	13, 433

ON

SURGEON'S CERTIFICATE OF DISABILITY.

DISCHARGES OF WHITE TROOPS ON SURGEON'S CERTIFICATE OF DISABILITY.

Table CI presents a summary view of the causes of the discharges from the service on surgeon's certificate of disability during the war. It has been drawn from the lists of names on the monthly sick reports, and it has been thought that the facts would be best expressed by modifying somewhat the tabular form employed in Table C and previously. The reasons for this change are given in full on the remarks introductory to this volume.

TABLE CI.

Discharges of White Troops on Surgeon's Certificate of Disability.

YEAR.....	MAY AND JUNE, 1861.	YEAR END- ING JUNE 30, 1862.	YEAR END- ING JUNE 30, 1863.	YEAR END- ING JUNE 30, 1864.	YEAR END- ING JUNE 30, 1865.	YEAR END- ING JUNE 30, 1866.	TOTAL.

PART II.—COLORED TROOPS.

SICKNESS AND MORTALITY OF COLORED TROOPS.

SICKNESS AND MORTALITY OF COLORED TROOPS DURING THE YEAR ENDING JUNE 30, 1864.

The monthly reports of sick and wounded from such colored troops as were mustered into service prior to July 1, 1863, are too few and fragmentary to serve as the basis of a table. Those received during the year ending June 30, 1864, are here presented consolidated into three statistical tables; one for the Atlantic Region, one for the Central Region, and a consolidated table embracing both regions. There were no colored troops in the Pacific Region. These tables present the strength and diseases of the colored men of the organizations represented in the reports. The white officers are not included.

1. ATLANTIC REGION—TABLE CII.

The colored troops represented by this table were chiefly stationed in the Department of Virginia and North Carolina and the Department of the South.

2. CENTRAL REGION—TABLE CIII.

The colored troops represented by this table were chiefly stationed in the Department of the Tennessee and in the Department of the Gulf, the majority of them reporting from stations along the Mississippi river.

3. CONSOLIDATED TABLE FOR THE UNITED STATES—TABLE CIV.

This table is prepared by consolidating Tables CII and CIII.

TABLE CII.

SICKNESS AND MORTALITY OF COLORED TROOPS DURING THE YEAR ENDING JUNE 30, 1865.

The monthly reports of sick and wounded received during the year have been included in three statistical tables, as follows:

1. ATLANTIC REGION—TABLE CV.

The colored troops represented by this table were chiefly stationed in the Department of Virginia and North Carolina and the Department of the South.

2. CENTRAL REGION—TABLE CVI.

The colored troops represented by this table were chiefly stationed in the Department of the Gulf and at stations along the Mississippi river.

3. CONSOLIDATED TABLE FOR THE UNITED STATES—TABLE CVII.

This table is prepared by consolidating Tables CV and CVI.

Abstract of the Sickness and Mortality

YEAR.....	1865.									
	JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		NOVEMBER.	
	22,584.		21,547.		16,883.		12,735.		12,162.	
MONTH.....										
MEAN STRENGTH.....										
LIST OF DISEASES.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
CLASS I. ZYMOTIC DISEASES.										
ORDER I.— <i>Miasmatic Diseases.</i>										
1. Typhoid Fever.....	88	31	27	15	26	23	24	20	9	7
2. Typhus Fever.....		1			4	2				
3. Typho-Malarial Fever.....	67	28	219	27	329	18	135	36	34	7
4. Yellow Fever.....										
5. Remittent Fever.....	438	9	429	20	463	16	291	11	92	5
6. Quotidian Intermittent Fever.....	533		632		756	4	430	1	355	
7. Tertian Intermittent Fever.....	425	1	401	1	392	1	619		317	1
8. Quartan Intermittent Fever.....	22		43	1	84		89		58	
9. Congestive Intermittent Fever.....	9	1	8	4	32	3	23	13	12	2
10. Acute Diarrhœa.....	1,023	10	696	2	369	7	174	2	204	1
11. Chronic Diarrhœa.....	45	45	36	14	45	15	41	16	6	19
12. Acute Dysentery.....	209	17	165	5	81	4	49	4	73	2
13. Chronic Dysentery.....	25	6	11	2	5	1	5	6	4	3
14. Erysipelas.....	4		2	1	4		1		2	
15. Small-pox and Varioloid.....	21	12	6	4	6	2	27	8	17	6
16. Measles.....	65		23	1	4				1	
17. Scarlet Fever.....										
18. Diphtheria.....	1		7	2	14	1	2		2	
19. Mumps.....	91		107		115		88		75	
20. Epidemic Catarrh.....	7		17		11		19		31	
21. Other Diseases of this Order.....	259	8	219	3	88	6	162	5	70	1
ORDER II.— <i>Enthetic Diseases.</i>										
22. Syphilis.....	100		87		94		71		86	
23. Gonorrhœa.....	141		153		136		82		76	
24. Orchitis.....	9		10		12		23		9	
25. Stricture of the Urethra.....	4		3		2		1			
26. Purulent Ophthalmia.....	1									
27. Serpent Bite.....										
28. Other Diseases of this Order.....	3		7						1	
ORDER III.— <i>Dietic Diseases.</i>										
29. Scurvy.....	75	1	22	2	33		6		49	1
30. Purpura.....									1	
31. Delirium Tremens.....										
32. Inebriation.....										
33. Chronic Alcoholism.....										
34. Other Diseases of this Order.....										
CLASS II.—CONSTITUTIONAL DISEASES.										
ORDER I.— <i>Diathetic Diseases.</i>										
35. Gout.....										
36. Acute Rheumatism.....	122	1	92		67		29	1	43	
37. Chronic Rheumatism.....	54	2	31		20		26	1	46	
38. Anæmia.....	25	1	8		4		9	1	2	1
39. Cancer.....							1	1		
40. Tumors.....	2		3		3		6		2	
41. Other Diseases of this Order.....										
ORDER II.— <i>Tabercular Diseases.</i>										
42. Consumption.....	11	17	11	11	10	10	9	10	6	5
43. Scrofula.....	22	1	20	1	25		10	1	8	1
44. Other Diseases of this Order.....										
CLASS III.—PARASITIC DISEASES.										
45. Itch.....	60		45		45		28		65	
46. Tape-worm.....										
47. Other Intestinal Worms.....	3		3		3		1		1	
48. Other Diseases of this Order.....

THE
MEDICAL AND SURGICAL HISTORY
OF THE
WAR OF THE REBELLION.

APPENDIX

TO

PART I.

CONTAINING

REPORTS OF MEDICAL DIRECTORS, AND OTHER DOCUMENTS.

Edited, under the direction of Surgeon General JOSEPH K. BARNES, United States Army.

BY

Assistant Surgeon J. J. WOODWARD, United States Army,

AND

Assistant Surgeon GEORGE A. OTIS, United States Army.

NOTE BY THE EDITORS.

The Appendix to Part I, of the Medical and Surgical History of the War of the Rebellion contains such portions of the reports of Medical Directors and other Officers, received during the War by the Surgeon General, as have appeared to possess historical interest.

In preparing these documents for publication, the Editors have endeavored to place on record, in the language of the original observers, such of the official statements relating to the operations of the medical department of the Union Army, as illustrate the Medical and Surgical volumes. They have omitted nearly all detailed descriptions of cases, remarks on special diseases, on hospital construction, and transportation of the wounded, and many observations which will more advantageously appear in other parts of the work, as well as some paragraphs relating to subjects fully discussed in antecedent reports. Asterisks indicate where omissions occur.

During the first year of the war, medical officers were guided by the General Regulations only in making their reports; but, as the organization of the army progressed, such instructions were given as secured comprehensive accounts of the operations of the Medical Staff by the senior medical officers of corps, divisions, and brigades.

The Editors have sought to observe either a chronological or geographical sequence in the arrangement of the documents, in order to approximate a connected narrative; but, when it has appeared advisable, either in order to connect sub-reports with those of the chief medical officers, or for other reasons, they have frequently deviated from this course. They have not felt at liberty to alter, materially, the phraseology of the Reports except where obvious grammatical inaccuracies, due to hasty composition, were apparent. They have diligently searched the files of the Adjutant General's Office as well as those of the Surgeon General, and believe that no reports of importance have been overlooked, though portions of many have been reserved for publication in the body of the work.

A few wood-cuts and photo-lithographic maps have been inserted, to indicate the positions of hospitals, the direction in which the sick and wounded were taken to the rear, and the like: but facilities for original illustrations of this kind have been very limited.

The Circulars and Orders printed with the prefatory remarks of the Surgeon General, will explain the reasons of the frequent repetitions in relation to the supplies of food, water, medicines, stores, shelter, and transportation which will be observed in some of the reports.

APPENDIX
TO
PART I
OF THE
MEDICAL AND SURGICAL HISTORY OF THE REBELLION,
CONTAINING
REPORTS OF MEDICAL DIRECTORS AND OTHER DOCUMENTS.

Edited, under the direction of Brevet Major General J. K. BARNES, Surgeon General, United States Army,
BY
Brevet Lieutenant Colonel J. J. WOODWARD, Assistant Surgeon, U. S. Army,
AND
Brevet Lieutenant Colonel GEORGE A. OTIS, Assistant Surgeon, U. S. Army.

I. *Report of the Events connected with the First Bull Run Campaign.* By Surgeon W. S. KING, U. S. A., Medical Director of the Army under General McDowell.

The first battle of Bull Run will ever be memorable in the annals of the country as the great contest at the commencement of the struggle now going on for the maintenance of the supremacy of the Union. Having arrived in Washington, from a distant frontier station, a few weeks previously, I was detailed to report, as medical director, to the General in command of the Department of Northeast Virginia. Upon reaching the headquarters at Arlington, where our forces were assembling, I became painfully impressed with the vastness of the work to be done to prepare for the coming conflict, and with the very short time, apparently, that would be allowed for the purpose. I found the army with which we were to meet the enemy composed of the best, and also of the worst material I had ever met with. This force had been hastily collected; many of the men had never been examined by medical officers, and were inferior to those in the regular army, where the physical defects are more carefully regarded. Impressed, by the lessons of the Crimea, with the importance of hygienic measures in the camps, I began my visits to them, and pointed out, particularly to those who possessed the power to enforce them, the necessity of observing these precautions.

It is while engaged in the labor of introducing sanitary reforms that the want of substantial rank is most sensibly felt by the medical officer, and more or less paralyzes all his efforts. If he finds an unusual number of cases of disease in a regiment, and ascertains that the walls of the tents are seldom if ever raised to admit fresh air, that the straw is saturated with emanations from the bodies and breaths of the men, and, that low forms of fever are thus engendered, should he naturally desire to instantly change this condition of things, he will learn, by bitter experience, the extreme difficulty of inducing those in authority to listen to his requests or to act on his suggestions. When we learn that diseases destroy more soldiers than do powder and the sword, it cannot be too often repeated that these disastrous results may be easily prevented by simple hygienic precautions, for the institution of which there must be united and harmonious action between the field officer and the surgeon.

This can be effected in no other way than by adopting the practice of admitting the chief medical officer of each separate army to a seat in the council of war. As a general rule, such officers would bring with them tried experience and extended and varied information on many branches of knowledge, to the benefit of the service. To give weight to his opinion, the chief medical officer should have a higher rank than that of major, his present status, there being no provision, at present, whereby it is possible for him to hope for promotion. He is the best judge as to the condition of the men, as to their capability to sustain a forced march, and whether the physical endurance proposed to be exacted of them will not so overtask their powers as to unfit them for the duty required. The selection of a camping ground for the night is also a matter of great importance. A spot thus fixed upon may, from necessity, be occupied for weeks; and, should it prove unhealthy, the evil must be suffered; whereas, in a majority of cases, a more healthy location would have answered equally well for all military purposes.

Every medical director at least, should have the authority to order the prompt removal of a nuisance that is contaminating the air; and such military assistance should be furnished him as he may require for the immediate carrying into effect of any measures he may deem essential to the prevention of disease in camps, provided they do not interfere with the military necessity of the position. The orders of medical directors relating to sanitary matters should be binding upon all, and should not be disregarded unless satisfactory reasons be given. On landing at Rangoon, during the first Burmese war, the superintending surgeon of the Bengal division there had warned the officer commanding, that without fresh food and vegetables the soldiers must perish from scurvy. The reply was: "medical opinions are very good when called for." Is not this answer characteristic also of the opinions entertained by many at the present time in regard to the advice of medical officers in similar cases?

In the Bull Run campaign, Assistant Surgeon Magruder and myself were, with few exceptions, the only medical officers who had served with troops, and our advice and assistance were eagerly sought in relation to the details of camp life and the mode of procuring the necessary medical supplies. In preparing for the expected battle, a limited number of ambulances which had been furnished, were distributed with great care, so as to equalize the amount of transportation among the regiments. I made an estimate of twenty wagons for our medical supplies, which, although approved by the commanding officer, did not result in their being sent. A few days before the forward movement, directions were issued by the General commanding, to have the army put in light marching order; that all officers and soldiers should carry with them three and a half days cooked rations, and that all baggage and stores of every kind should be left behind in camp, to be subsequently sent for. As the conveyances estimated for had not been furnished, these arrangements made it impossible to transport any medical supplies except such as could be placed in the ambulances or forage wagons, and this I directed the medical officers to do.

The command moved on the Fairfax road on the afternoon of the 16th of July, 1861, and after a march of seven miles halted for the night. At daylight, the following morning, the advance was resumed. The day was unusually hot, and the troops plucked with avidity the blackberries growing abundantly by the roadside, as a means of relieving both thirst and hunger, for which purpose this fruit is eminently fitted. The road we found impassable in many places, owing to felled trees which the rebels had placed in our way. Arriving, at length, near Fairfax, we discovered that the enemy had abandoned their works, and that a small force, left evidently to watch our movements, had just gone, leaving behind, in their haste, carpet-bags, trunks, a keg of whiskey, and half eaten meals. Our troops were in excellent health, and no cases of disease were reported to me or came under my observation.

We encamped for the night near Fairfax. July 19th, was spent by the General and staff in making a reconnaissance of the roads between Fairfax and Centreville. In the afternoon, heavy firing was heard on our left, towards Blackburn's Ford. Riding rapidly in that direction, to ascertain the cause, we found that the division of General Tyler had been smartly engaged with the enemy. We pursued our course on the road leading to the ford, and soon met the ambulances with the dead, wounded, and disabled men. One soldier had had his face shot away completely. Some in the ambulances were not wounded, but were disabled from sunstroke or exhaustion. The ambulances were stained with blood, evincing the terrible earnestness with which the rebels had commenced their struggle. I dispatched Assistant Surgeon Magruder to accompany the forward ambulance to Centreville, and to select suitable buildings for hospital purposes, and I followed him with the remainder, after picking up all the wounded we could find. A hotel, a church, and a large dwelling, were selected by Assistant Surgeon Magruder, and some wounded were placed in them before my arrival. Unfortunately, two of the ambulances had been drawn up on the wrong side of the road, and the division of General Tyler, of twelve thousand troops, marching in close order, filled the passage between our wounded and the church hospital, and we were obliged to wait, for two hours, for men and wagons to pass, before the wounded could be taken out. Several attempts were made to cross the road, but such was the press and confusion that it was found to be impossible, and we were obliged to desist. An unexpected difficulty was now encountered, in the great scarcity of water. There were very few wells in Centreville, and these had been so exhausted by our thirsty men that they were nearly all dry. Water, procured with great difficulty and placed in basins for the purpose of washing the wounded, was snatched up and drunk by stragglers, as they passed, before they could be prevented. By 9 o'clock P. M., through great exertion on the part of Dr. Magruder and myself, we succeeded in organizing, to some extent, our improvised hospitals. Several amputations were performed; one, I remember, of the thigh, which resulted fatally the next day, and one of the leg, which did well.

To give an idea of some of our difficulties on this night, I might mention that the hospital in the church, as soon as emptied, became filled again by men stepping out of the ranks as they passed, in search of their companions, or for something to eat or drink. Having no guard, we were very much embarrassed and incommoded by this crowd, and it required a great amount of exertion before order and quiet could be secured. And here I would recommend all medical directors to wear conspicuously the insignia of their rank while on duty, as I found it rather awkward, notwithstanding I had on the usual undress uniform of an officer, to have my right to give orders repeatedly questioned by surgeons, hospital stewards, and others, who, having had directions from those known to them, were unwilling to obey strangers if the commands appeared different from those they had been receiving. A medical director should always have with him at least two mounted orderlies to convey his orders, and, if necessary, to enforce them.

As soon as General Tyler, who commanded the division which had engaged the enemy, arrived, I sought him and obtained a sufficient number of men as a guard for all our hospitals, and to procure a supply of water for our wounded. An

incident which occurred at Centreville will show how the distinction so often made between Federal and State soldiers may operate injuriously to the service. I had directed an ambulance with two wounded soldiers to be taken to a large dwelling selected as a hospital, and to have them placed in charge of the medical officer in attendance. Passing some hours after, I found these men still in the ambulance, and, on inquiry, was informed that the surgeon had declined to receive them because they did not belong to his regiment. I requested the surgeon, who appeared at the door, to inform me why he had not taken the soldiers into the hospital, when he commenced an explanation by stating that he considered his obligation to extend no further than to his own regiment, and he was proceeding, in the most serious and emphatic manner, to justify his course, when I cut short his argument by promptly ordering the removal of the men from the ambulance, and I remained long enough to see that they received the necessary attention.

Assistant Surgeon Magruder and I made frequent visits to all the hospitals, assisting in their organization and operations, and helping to make the wounded as comfortable as our means would admit. This task we completed near midnight, and completely worn out with fatigue, having eaten nothing since daylight, we sallied out to find our camp at headquarters, wherever that might be. In a strange country, on a dark and rainy night, without any information as to where the camp had been removed since morning, it seemed hopeless to seek it. Presuming it must be somewhere in the rear, we rode in that direction, and fortunately, after going a mile across the fields, towards a light, we stumbled upon the object of our search.

The 19th and 20th of July were occupied in camp, waiting for the arrival of supplies. We embraced the opportunity to repair our ambulances, and again to visit the hospitals at Centreville. Sensible of the want of additional medical supplies which would be needed in the event of the expected battle, and knowing that the sympathy of the entire country had been aroused to the importance of providing with the utmost liberality for our sick and wounded, I felt it my duty to make known our needs to the Surgeon General, stating the circumstances in which our army had been left, and the impossibility of bringing with us, for want of adequate transportation, a larger amount of medical stores. These points I urged with earnestness, and expressed my anxiety that nothing should be wanting on my part to the fulfilment of the just expectation of the country; and I requested that everything should be sent, without stint, that would be required by an army in the field, and on the eve of battle. This appeal was responded to. I was informed that the needed supplies would be sent next day to Fairfax Station, seven miles distant, the railroad having been repaired to that place.

All our wounded in the Blackburn's Ford affair that could be removed were forwarded, on July 20th, in ambulances, with a proper escort, to Fairfax Station, to be sent by rail to Alexandria, where I had established a hospital but a few days before, for the special purpose of receiving our sick and wounded.

On the night of the 20th, all the division commanders were assembled at headquarters, to arrange the plan of battle. After receiving their orders, the council broke up, about 11th o'clock, P. M., with directions to take up the line of march to Bull Run, before daylight, by the various routes designated.

The chances of the battle to ensue next day were gravely discussed by the staff officers till a late hour of the night. All seemed deeply impressed with the magnitude of the events that hung upon the success or defeat of our arms, and longed for the moment when the suspense would be ended, as we hoped, in a glorious victory. It was late before I closed my eyes in sleep, as I could not help thinking of the strangeness of my position, and could, with difficulty, realize that the army of the Federal Government was menaced by another composed of our countrymen, the chief leaders of which I had been associated with for many years at a distant post, and with some of whom I had parted but a few weeks before in New Mexico.

On the morning of July 21st, 1861, the General commanding, accompanied by his staff, passed, at daylight, through our columns, already moving in the direction of Bull Run, until he reached a point beyond Cub's Bridge, where a road inclined to the right, through a dense body of timber, and crossed the run a short distance above Sedley Church. Here we halted in the shade, as the day, even thus early, promised to be one of the hottest of the season. While observing the troops passing, we discussed the prospects of the day before us. I perceived that our troops marched at double quick, and some at a full run, while many, overcome by the heat, threw away their blankets and haversacks. I expressed my opinion to the General, that owing to their rapid movement, the men would be exhausted before they arrived on the scene of action. In this view he acquiesced, and directed the men not to run; but, as the officers behind, from an idea that great haste was necessary, constantly repeated the command to close up, the troops were kept at a run a great part of the way. The weather was excessively hot, and, as one of the causes of the Bull Run failure, I desire to record my belief that the exhaustion of our forces, by the long and forced march, contributed as much as anything else to the disasters of the day. The comparative freshness of the rebel troops gave them great and decided advantage. It is often the case that on what may be termed little things, if there can be such in a battle, the fortune of war depends. I observed, on several occasions where our men faltered, apparently, or did not pursue with vigor an advantage gained, that it was manifestly owing to complete exhaustion, rather than to any want of spirit or courage. At one time, when a small body of troops was called upon by the General and staff to renew the attack, I saw at a glance that their failure to do so was from inability for further exertion. The spirit of these men was willing, but the flesh was weak.

After Colonel Hunter's Division had filed along the road on the right, as mentioned, General McDowell rode rapidly ahead, crossing Bull Run just as the advance of Hunter's column was in the act of passing. Advancing through the woods about half a mile after crossing the creek, we emerged into an open field a short distance beyond Sedley Church. At this moment we were saluted with a volley of musketry and artillery by the enemy concealed in the woods on our left. Fortunately, the bullets fell harmlessly, knocking up the dust under our horses' feet, while the cannon balls passed over our heads. Immediately wheeling round, we had the first view of the rebel forces, in a long line on the slope of a hill. On the General's remarking, there they are, I beheld the array of grey-coated soldiers who were evidently watching us, and I became impressed with a sense of that determined resistance to federal authority on the part of the rebels that has since been manifested so repeatedly. Our troops now hurried forward, the artillery was placed in position, and the action soon became general. Desirous of seeing all that was going on, I accompanied the General in his visits to those places where the contest raged fiercest. I was thus enabled to give a comprehensive supervision of affairs connected with the medical department of the army, and to see that the wounded were being attended to by the regimental officers. I found the medical officers, as a general rule, on the

alert, and many performing their duties coolly under the fire of the enemy. My impression at the commencement of the battle was, that there would be a brisk skirmish, and then the rebels would most probably fall back and take up a new position. I thought it would be a small task, therefore, to make out a list of the killed and wounded, and with notebook in hand I began to count the number of each. It is a singular fact that I observed near one hundred dead before one wounded! Soon I became convinced that a most desperate engagement was at hand, and I directed Assistant Surgeon Magruder, who had thus far remained at the headquarters, to proceed to Sedley Church, which was near by, yet out of the line of fire, and to prepare it, and if necessary, a couple of houses close to the church, for the reception of our wounded, and to send forward the ambulances as rapidly as possible. These orders were promptly executed, and the drivers brought their conveyances as close to the points where the wounded were as the nature of the ground would permit. Having my saddlebags well supplied with instruments, dressings, and stimulants, I found frequent occasion for their use in restraining hæmorrhage, and in relieving exhaustion and suffering on the spot where the wound was received.

Twice our men drove the rebels over the crest of the hill, and victory seemed, for a brief period, to perch upon our banners, and shouts of triumph went up as the General and staff rode along our lines, during a few brief moments, while the enemy's batteries seemed to have been silenced. But this exultation was of short duration: the rebels again appeared, and their artillery opened more fiercely than ever. Our men could not be again rallied, from sheer exhaustion mostly, I believe, and we commenced slowly and sadly to retire. As I followed General McDowell, and about six of the staff officers, to the right of the enemy, it did not occur to me that all was over and the battle was lost, until we had crossed the creek at five o'clock P. M. We then entered a field, and dismounted. Hardly had we alighted when some one exclaimed: "General, the enemy are upon us." Turning to look, we saw the enemy not more than two hundred yards distant. A cannon ball, that struck the ground a few paces from us, informed us that we were observed; and, remounting hastily, we galloped across the field, and our steeds leaping over the fence into a dense forest, we were soon concealed. Pushing our way as rapidly as possible through the thick undergrowth, without heeding scratches or blows, in the direction of Centreville, and avoiding all roads, we finally reached, at Cub Creek, the way along which we had marched in the morning, and arrived at Centreville, tired and disappointed, near sundown. Here we waited for the coming of our straggling troops. After sending them on in advance, followed by all the wagons, we left at half-past ten o'clock P. M., for Fairfax, where we intended to remain till morning.

The weather, for some time past, had been excessively dry and hot, and the dust of the turnpike, between Centreville and Fairfax, raised by our soldiers and wagons in passing, floated over the road like a thick fog, and made it impossible to see for a distance of more than ten paces. In this passage, horse, foot, and vehicles were jammed in great confusion; upturned wagons and their contents blocked the way at short intervals, making it necessary for horsemen to leave the road and return again in order to go round the obstructions. I may say it was one of the most unpleasant marches of the campaign, and so slow was our progress that we did not reach Fairfax, a distance of only seven miles, till two o'clock in the morning. I soon became separated from the General and staff, until on nearing Fairfax, I recognized Major Brown, one of the General's aids. Finding we could see nor hear anything of the General, or any one to inform us of the plan of march, we lay down in a field close by till daylight. As soon as morning dawned, we saddled our horses, and finding the whole army on the march to Washington, we followed, overtaking the General on the roadside, about seven miles from the city. Fearing that the supplies which had been ordered to Fairfax Station might fall into the hands of the Confederates, I obtained permission from General McDowell to hasten forward to Washington to inform the Surgeon General, if not too late, to have them returned to Alexandria. Fortunately there had been some delay, and, on inquiry, it was found that the supplies had not left the latter place.

A report of Assistant Surgeon Magruder, U. S. A., as given below, in regard to our wounded, conveyed, during the action, to Sedley Church, will show all that was done up to the time of our defeat, and compelled abandonment of the field. Our retreat from the ground occupied, operated like a curtain to conceal from view all knowledge of the subsequent history of our cases, or the results of our ministrations. So rigidly and effectually were all avenues closed by the rebels, that no attempt to obtain information met with any success.

A few days after the battle, General Wadsworth, with a flag of truce, entered the enemy's lines to bring away the remains of one or two distinguished officers, and also to succor, and, if possible, to remove our wounded. I, and Assistant Surgeon Schell, U. S. A., followed with thirty-nine ambulances, and arrived at midnight at Bailey's Cross Roads, which was in possession of our pickets, there to await the return of the General, when we were to be informed of the result of his mission.

At daylight next morning, finding that he had not come back, I took several ambulances and procured everything that I thought would be required for wounded men on the way, and hastened back again to Bailey's Cross Roads. Arriving in that vicinity, I met Dr. Schell with the remainder of the ambulances, proceeding back to Washington. He informed me that General McDowell had completely failed to obtain the permission desired, and that the enemy's cavalry having driven in our pickets, he was fearful lest the ambulances, with their supplies, should be captured. All the knowledge gained was, that the wounded would, probably, be removed to Richmond. A few days after, I was ordered to report for duty with General Banks's Division, and I therefore close this narrative. I am aware that this medical history of the campaign is very meagre; yet, imperfect as it is, it may serve as a record of events not supplied by other reports.

ARLINGTON HEIGHTS, VIRGINIA,
July 25th, 1861.

"DOCTOR: In compliance with your wishes, expressed during a conversation this morning, I have the honor to submit the following very brief report in relation to the engagement at Bull Run:

On the morning of the 21st inst., as you are aware, I accompanied General McDowell, as one of his staff, to the battle-field, when I remained with yourself and the other members of his staff, in close attendance upon the General, until ordered by

you, as medical director, to go in search of some house or houses, as near the field as possible, suitable to be converted into a hospital for the wounded. After only a short search, I found and took possession of a stone church, pleasantly situated in a grove of timber, directly on the side and to the right of the road we had passed on advancing to the attack. I then ordered that the ambulances should proceed to the field, as quickly as possible, to bring off the wounded to the hospital, which order was executed very promptly.

Upon taking possession of the church, I set men to work at removing the seats from the body of the church, with as little injury to them as practicable; had the floor covered with what blankets could be found, buckets of water brought, instruments and dressings placed in convenient places for use, an operating table improvised, and sent off men to the fields near by to bring hay for bedding. Very soon after the work of fitting up the building had begun the ambulances commenced returning from the field loaded with wounded men. In about two hours the church, both upon the main floor and in the gallery, was completely filled, and I was obliged to take possession of three other unoccupied buildings, which are situated about seventy-five paces further down and on the opposite side of the road towards the creek. So soon as I could get them cleared out, wounded men were carried into them until they were filled also. For want of other buildings, I was obliged to order many of the wounded to be laid under the trees, in the grove immediately around the church.

As soon as I had established the hospitals, and the work of removing the wounded to them had commenced, quite a number of medical officers of different regiments came in, offered their services, and betook themselves immediately to work in rendering all the assistance in their power. Among those particularly distinguished, it affords me pleasure to mention the names of Assistant Surgeons C. C. Gray, H. R. Silliman and G. M. Sternberg of the medical corps of the regular army, Surgeon C. Gray, 11th New York Volunteers, Surgeon Foster Swift, and Assistant Surgeons Winston and De Graw of the 8th Regiment New York Militia. Several others also distinguished themselves in their assiduous attentions to the wounded, but, as their names are unknown to me, I am unable to mention them as I should wish to do.

I had no opportunity to ascertain correctly the number of wounded brought to the hospitals, but think there could not have been less than two hundred and fifty.

Several capital operations were performed, and many of a minor character also, before the rush of the retreating columns crowded the hospitals so completely that work for the time being was suspended.

After the retreat commenced, and it was found impossible to carry off the wounded, it became a question as to which of the medical gentlemen present would remain to take care of the wounded. Assistant Surgeons Gray and Sternberg, of the regular army, volunteered to surrender themselves as prisoners, for the purpose of taking charge of the regular soldiers, and Surgeon Swift and Assistant Surgeons Winston and De Graw, of the 8th Regiment New York Militia, also gave themselves up to attend the wounded of their regiment and others of the volunteer forces. These gentlemen all staid at the hospital located by me in accordance with your order.

I have the honor to be, Doctor, very respectfully, your obedient servant,

Dr. W. S. KING,

Medical Director, Department N.E. Virginia, Arlington Heights, Va.

D. S. MAGRUDER,"
Assistant Surgeon U. S. A.

The following very imperfect resumé is added:

1st. Our troops, in the action of July 18th, 1861, were exposed to the fire of artillery at long range. In the battle on the 21st of July, 1861, of Bull Run, the troops were exposed to the fire of artillery and musketry at long and short range. Duration of battle, seven hours.

2d. The casualties of the action at Blackburn's Ford, July 18th, 1861, were as follows, (approximately):

Killed.....	10
Wounded.....	33
Aggregate.....	43

Three of the wounded died within twenty-four hours after the reception of their wounds. The wounded in the above action were sent, on the evening of the 20th of July, in ambulances to Alexandria.

3d. Many of the wounded of the Bull Run fight found their way to Alexandria, and accompanying our army in its retreat, were helped along to the hospitals in the vicinity of Washington; many who gave out by the way, were brought in the day following in ambulances sent out for them. I can form no idea of their number. Immediately after the action, I directed the regimental medical officers to send in a report of the casualties of their respective regiments.

As large numbers who were at first reported killed are found to have straggled only, a long time usually is required to obtain correct results after a battle. I was ordered to join General Banks's division before the reports were received sufficient for an approximation even. I must, therefore, refer you to reports of General McDowell, or to Assistant Surgeon Magruder, U. S. A., who remained with the command.

The wounded, during the action, were removed from such portions of the field as were accessible, to Sedley Church and vicinity, as described in the report of Assistant Surgeon Magruder. The maps will show the situation of this church.

I am unable to make any report as to our wounded on the field in possession of the enemy, and have no knowledge as to where they or those left in the hospital at Sedley Church and buildings near by, were removed.

The report of the General commanding will show the strength of the command.

W. S. KING,
Surgeon and Medical Director.

II. *Report to Gen. I. McDowell, Commanding the Department of Northeast Virginia, relative to the Operations of the Medical Department at the Battle of Bull Run.* By Surgeon W. S. KING, Medical Director.

ARLINGTON, DEPARTMENT N.E. VIRGINIA,
July 26th, 1861.

SIR: Being chief of the medical staff serving with the army in the department of Northeast Virginia, I have the honor to make the following report of so much of the results of the action on the 21st, at Bull Run, as came within my charge. As the officers of the medical staff were attached to the different regiments, and on duty with them, I deemed it proper to remain with and accompany the general commanding and staff, from the beginning to the termination of the battle, in order that I might be present if any were wounded, and also that I might be enabled to visit, in this way, every part of the field where the killed and wounded might be found. After the action had fairly commenced, and the wounded and dead were lying on the field in every direction, I dispatched Assistant Surgeon D. L. Magruder, U. S. A., to the rear, with directions to prepare a church, which I had observed as we passed to the scene of action, for the reception of our wounded, and also to send the ambulances forward, as rapidly as possible, to pick up the wounded and dead. In a very few minutes the ambulances made their appearance, and continued throughout the day to visit every part of the ground which was accessible, in order to be within reach of those parts of the field where the fighting was going on, and wounded were to be found. It is due to the ambulance drivers to say that they performed their duties efficiently, and the results of their operations also show how absolutely necessary these means of conveyance are to the comfort and relief of the wounded in giving them shelter and water, when they are ready to perish with heat or thirst. By means of the ambulances, also, the men who go to the relief of their wounded comrades are separated but a short time from their companies, as, having deposited them in the ambulances, they can return to their proper positions. As the general commanding visited almost every part of the ground during the conflict, with a view to encourage or direct the movements of the troops, my position, as a member of his staff, gave me every opportunity of seeing the results of the action. I therefore embraced the opportunity thus offered to give directions, when needed, to the drivers of ambulances, where to find the dead and wounded, and also to those carrying off the wounded, where they could find the needed conveyances. The stretchers were found very useful and comfortable to the wounded, and were in constant requisition in carrying them to the nearest ambulances. So far as I am informed, the medical staffs belonging to the different volunteer regiments discharged their duties satisfactorily. I observed Acting Assistant Surgeon Miles busily engaged in dressing wounded men under the shade of a tree in a part of the field where the fire from the enemy was very hot. He addressed me a brief inquiry as I passed relative to the safety of his father, and then resumed his occupation. Surgeon C. C. Keuey, U. S. A., of Col. Hunter's division, and Assistant Surgeon D. L. Magruder, U. S. A., attached to the commanding general's staff, did good service in the hospital church I have mentioned, and also in two houses near the church where the wounded were placed after the church had been filled. These officers remained busily engaged in their duties until the enemy's cavalry made their appearance, and but narrowly escaped capture when they left. Drs. Swift and Winston, attached to the Eighth New York, remained with their sick, sacrificing all selfish considerations for their own safety, in order that the wounded might not be neglected, and are now prisoners. I am informed that Assistant Surgeons Gray and Sternberg, of the regular army, and Drs. Homiston and Swalm, of the Fourteenth New York, also preferred to remain rather than abandon their charge; the conduct of these officers is worthy of all commendation. It would be premature in me, in the absence of sufficient data, the reports of the regimental surgeons not yet being received, to express a positive opinion as to the number killed and wounded in the action of the 21st; there were, no doubt, many concealed from observation under cover of the woods and bushes; but, judging from the number I saw in various parts of the field, and allowing a wide margin for those unobserved, I should think that the killed and wounded, on our side, did not exceed from eight hundred to one thousand. The impossibility of making a careful survey of the field, after the battle had ceased, must be my apology for the brevity and want of detail in this report. It may not be amiss to mention that I met on the field Col. Heintzelman, U. S. A., with a Minié ball in his arm. I extracted the ball as he sat on his horse, and applied the necessary dressings; he could not be persuaded to leave his command. As I carried with me a case of instruments and a supply of dressings, I attended to a number of cases on the field, where, from hæmorrhage and other circumstances, immediate attention seemed to be necessary.

I am, sir, very respectfully, your obedient servant,

(Signed) W. S. KING,
Surgeon and Medical Director.

Captain J. B. FRY,
Assistant Adjutant General, U. S. A.

III. *Extract from a Report of Services at the First Battle of Bull Run.* By Assistant Surgeon C. C. GRAY, U. S. Army.

* * * I left Arlington on July 16th, 1861, with the advance of the army upon Manassas, having the medical care of five companies of regular cavalry, commanded by Major I. N. Palmer, U. S. A. Nothing of interest transpired until the 18th, when a fight took place at Blackburn's Ford between a reconnoitering force under General Tyler and a Confederate force under the immediate command of General Bonham, of South Carolina. This affair lasted for about three hours. Our fire was principally from artillery. Supplies for the wounded on the field were sufficient. There was, however, difficulty in obtaining water. The wounded were immediately removed to Centreville, ambulance wagons being sent forward for the purpose. The wounds were chiefly from small arms loaded with round balls. I saw no operations performed on the field; but several amputations were made at Centreville. Our loss was, I think, about fifty killed and wounded. The Confederate loss, I subsequently learned, was sixty-eight. Our forces were reproached by the Confederates for having fired upon a hospital situated about a mile

from our advanced battery. No damage was done, I believe, and the firing was from ignorance of the meaning of the flag flying over the hospital. I know this to be true, as I was standing by the officer who sighted the piece. My attention, during the engagement, was mainly directed to the removal of wounded from the field. I performed no operations. The only case of interest under my immediate care was that of Lieutenant Lorraine, 3d U. S. Artillery, shot through the tarsus, by a musket ball. There was profuse and troublesome primary hæmorrhage in this case. On Sunday, July 21st, the army moved upon the rebel position. I was attached to Colonel Porter's Brigade of General Hunter's Division. We made a long detour to the right, turned the enemy's left, and became engaged about noon. The cavalry not being brought into action, I left them, by permission, and gave assistance to the wounded of Colonel Burnside's Brigade, immediately in advance of us, and suffering severely. Few ambulances could come up, and our attentions consisted chiefly in conveying the injured men into the shade, giving them water, extracting balls, etc. About two in the afternoon, I received an order from Assistant Surgeon Magruder, U. S. A., to report immediately at Sedley Church, a small building surrounded by farm houses, about half a mile in the rear of Bull Run. Here was the principal depot for wounded. I remained here till the retreat commenced, about five in the afternoon. At that time not more than a tenth of the wounded had received attention, and I determined to remain, if practicable. I suggested this to Dr. Magruder, and received his permission. After our retreating column had passed this hospital, I went out to meet the advance of the rebels, to explain the nature of the duties on which my companions and I were engaged, and to ask permission to continue them unmolested, for shot were beginning to fly near the hospital. The officer to whom I surrendered, a lieutenant of Virginia cavalry, was an unreasonable man, and would neither permit me to return to our wounded, nor promise any protection to our hospital. I was compelled to accompany his party to Manassas Junction, eight miles distant, which place we reached about ten at night, when I was turned over to the chief medical officer, Dr. Gaston, of South Carolina. Observing my exhausted condition, he obtained permission for me to sleep on the floor of a Confederate hospital. In the morning, he sent me, with Dr. Lewis, of the Wisconsin Volunteers, with a captured two-wheeled ambulance of the Coolidge pattern, to assist in collecting and caring for our wounded on the field. It was raining, and, on reaching the battle-ground, we found these unfortunates suffering much from cold. We soon found that many must perish before we could possibly remove them, and, accordingly, we were obliged to select such for immediate removal as it seemed possible to save by treatment and shelter. We were told to seek that shelter for ourselves, and we bore most of the patients to a farm house called the Lewis House, already nearly full of rebel wounded. Here we found Colonel Wilcox and Captain Ricketts, severely wounded. The house and outbuildings were soon packed with wounded, and still many were left on the field, and numbers doubtless died for want of timely assistance. We were unable to operate in many cases urgently requiring, as our instruments had been taken from us. We suffered much for want of food, water, and blankets. For the first, we were dependent upon the precarious bounty of our enemies, themselves short of provisions, and upon the knapsacks of the dead; for the second, upon a small muddy spring half mile distant, a broken pitcher being our best means of transportation. We had blankets for but five or six men. We found a large supply of linen in a chest of drawers, and turned it to account for dressings. The amputations performed were, with one exception, done by Dr. Darby, of Hampton's South Carolina Legion. Dr. Darby was very kind, and, I believe, did his best to alleviate our situation. Our instructions were to forward the patients to Manassas, as fast as possible, for removal to Richmond; and a peculiar vehicle, known as a Virginia wagon, and eminently adapted for an instrument of torture, called daily to take such as could be moved. In a week, all of our surviving patients, excepting the two officers, Colonel Wilcox and Captain Ricketts, had been sent to Manassas Junction, and, on Sunday, July 28th, I accompanied the last load to that depot. At Manassas, I met Surgeon Thomas H. Williams, medical director of General Beauregard's army, and was informed by him that I should remain at the Station, and assist in placing our wounded, as they arrived, upon the cars destined to transport them to Richmond. During the few days that I was thus employed, I witnessed suffering which I shudder to remember. Our wounded arriving from the field, from which they came crowded in rough army wagons, and under a scorching sun, had to be thrust into freight cars, in which they were obliged to lie on the bare floor. Often they had been a whole day without food, and time was barely allowed us to furnish them with water. These railroad trains, having no right of track, were sometimes two days in reaching Richmond. Numbers died on the road. I do not think that Surgeon Williams was responsible for this state of affairs; nor am I certain that it could have been entirely avoided. I proceeded to Richmond on a train with Colonel Wilcox and about sixty wounded privates. Two of the latter died, exhausted, before reaching the end of the journey, the trip taking twenty-four hours; neither food, water, nor medicine, were provided. At Richmond, I was sent by General Winder to assist in the treatment of our wounded at the tobacco warehouse hospital, now become historical and infamous, at which place I remained, with some eight or ten federal surgeons, till the 10th of September, when, an order having been issued to send South all field and regular officers able to travel, I was included in a party of thirty-three officers and about one hundred privates, to go to Fort Pinckney, Charleston harbor. At the battle of Bull Run, our medical supplies were good, but inaccessible. The rebels had few of their own, and did not make a very judicious use of what they captured. The greater number of our wounded were injured by round musket balls. The wounds inflicted on the Confederates were of a graver character, a large proportion of them being from conoidal rifle balls and canister shot. I saw no cases of excisions; amputations prevailed, and, as a rule, resulted badly. I learned of no deaths from chloroform, the anæsthetic generally employed. I do not think that the number of our wounded reached one thousand. Although circumstances apparently favored the development of tetanus, no cases were observed. Gunshot fractures of the thigh were particularly fatal, whether amputated or treated conservatively. Cases were about equally divided between the two methods of treatment. I saw about twelve treated conservatively; one only survived. In penetration of a single lung, the results were favorable, half recovering. I saw no cases of erysipelas or gangrene. At Richmond, our wounded, except those that were crowded, were as well cared for as could have been expected. The few medicines we needed were at command. Water was abundant, a bath tub on each floor; dressings were, generally, plentiful; and food, though coarse and lacking in variety, was supplied in sufficient quantity."

[Assistant Surgeon Gray then recounts the circumstances attending his incarceration in Richmond, Charleston, Columbia, and Salisbury, and his release on July 28th, 1862, and then resumes the relation of his surgical experiences. The latter part of his report will be printed in connection with documents relating to the battle of Antietam.]

IV. *Extract from a Report on the Duties assigned to him, from the Outbreak of the Rebellion till May 1st, 1863.* By Assistant Surgeon G. M. STERNBERG, U. S. Army.

* * * "I was ordered to report for duty with five companies of the Third United States Infantry, two companies of the Second Infantry, and one company of the Eighth Infantry, forming a battalion under the command of Captain G. Sykes, U. S. A. * * * This battalion of regulars was attached to the division of Colonel D. Hunter, U. S. A., and took up the line of march at daybreak on the 21st of July. After proceeding some distance beyond Centreville, a road to the right was taken, which, followed through open fields and woods for about ten miles, brought the head of the column to Bull Run at a point above the enemy's position. The stream was forded, and the column proceeded at double-quick towards the field of action. The battalion of regulars was soon engaged; the enemy was driven some distance, and many of their dead and wounded were left on the ground. The fight continued until between three and four o'clock in the afternoon, when our troops began to give way, and were soon in full retreat. * * * I followed the retreating army as far as Sedley Church, where I found nearly three hundred of our wounded, and determined to remain. Several medical officers of volunteer regiments also remained at this place. We at once raised a white flag, and commenced doing what we could for the wounded. Shortly after the last of our troops passed the church, a company of the enemy's cavalry rode up and took possession. The following morning a cold rain commenced, which continued almost without intermission for two days. The church would not hold all of our wounded, and many were lying around in front of it. I obtained a detail of men from the commander of the cavalry troop to erect a shelter. We made a frame about thirty feet in length by twenty in width, and covered it with rubber blankets, great numbers of which had been left on the road by the men in their retreat. A number of capital operations were performed at the church, but, owing to the want of food and stimulants, and to the unfavorable circumstances under which the men were placed, most of these cases terminated fatally within twenty-four hours. On Monday, July 22d, a small quantity of corn meal was obtained from a house near the church, and some gruel was made. A cup of this was given to nearly every man, and this was all the food we were able to obtain for them till Monday evening, when all the medical officers were taken from Sedley Church to Manassas. How the wounded fared after we were taken from them I do not know. At Manassas we were lodged in a barn with some thirty or forty other prisoners, officers and privates, under guard. On Tuesday, all but three of our number took a parole not to serve again during the war. Those of us who refused to take this parole, were shortly after allowed to go out and attend our wounded, upon giving a parole not to attempt to escape for five days. I found a large number of wounded lying under a shed by the railroad depot, and more were constantly brought in from the field. On July 25th, I was sent to Centreville, where I found a number of men who were wounded at the affair at Blackburn's Ford. They were generally doing well. On Sunday evening, the 28th July, my parole having expired the evening before, and a favorable opportunity offering, I made my escape from Centreville, and, after a tedious tramp, arrived in Washington on the following Tuesday, July 30th, 1861, footsore and weary." * * *

[Other extracts from Assistant Surgeon Sternberg's report will be printed in connection with the reports on the Peninsular campaign.]

V. *Extract from a Narrative of Services.* By Surgeon ZENAS E. BLISS, U. S. Volunteers.

* * * "The skirmishers of General Richardson's Brigade engaged the enemy at Blackburn's Ford, about noon, on July 18th, 1861. * * * The first wounded were taken to a ravine a little to the left of the position of the Federal battery; but this place becoming too hot, the surgeon and his assistants retired to a point two hundred yards to the left and rear. There was a great scarcity of water. After primary dressing, the wounded were conveyed to Centreville, about two miles distant." * * *

VI. *Extract from a Narrative of Services.* By Assistant Surgeon C. S. DE GRAW, U. S. Army.

* * * "I had the position of assistant surgeon to the Eighth New York State Militia. * * * On the memorable 21st of July, my regiment went into action about the middle of the forenoon. * * * In following it to the field, I entered a thicket in which lay a large number of wounded, with only an assistant surgeon of the 71st New York Infantry attending them. As he had more than he could possibly care for by himself, I remained to assist him. Here many wounded were brought us, who were temporarily dressed and forwarded to the hospital at Sedley Church. About the middle of the afternoon, I placed a severely wounded man of my regiment in an ambulance and accompanied him to the division hospital. Here I was detailed as an assistant. In the course of an hour I observed large bodies of troops passing in a disorderly, hurried manner. The question immediately arose among the surgeons whether we should remain to take care of the wounded. After deliberation, some medical officers decided to join the retreat. Surgeon Stewart, 1st Minnesota, Sergeant Peugnet, 71st New York, Surgeon Swift, Assistant Surgeon Winston and myself, of the 8th New York, and a number of others, decided to remain, and proceeded in the discharge of our duties. * * * About dusk, a detachment of cavalry, under command of Lieutenant Cameron, surrounded the church. We were ordered to report to this officer. Upon doing so, we were informed that we were to consider ourselves prisoners of war to the army of the Confederate States of America. We were then requested to give our parole not to attempt an escape. Upon doing so, we were allowed to proceed with our duties, each surgeon being allowed to choose one from among the prisoners as an attendant. On Monday, July 22d, an order arrived transferring us to Manassas. We reached the Junction at midnight, and were informed that a mistake had been made, and that no order had been issued taking us from the wounded. The circumstances of the case rendered this statement rather doubtful. On July 23d, Col. Preston, of Gen. Beauregard's staff, came

to us, bringing a parole for us to sign. * * Upon asking if we would be allowed to return to our hospital to attend to our wounded if we did not sign this parole, we were emphatically answered in the negative. Many of the medical officers captured at Sedley Church then signed the parole, and were immediately returned to the hospital. A heavy rain had prevailed during our absence, and the wounded had suffered greatly, having had no surgical attendance. On July 25th, the Confederate authorities ordered that the wounded should be conveyed, as rapidly as possible, to Richmond and other points where general hospitals had been established. There was such haste in transportation, that many died in transit. The wounded being all removed by August 2d, we ourselves were transferred to Manassas Junction to be sent to Richmond. Gen. Beauregard forwarded with us a request to the Confederate Secretary of War that we should be sent home as soon as our services were no longer required, inasmuch as we were non-combatants and had given ourselves up voluntarily for the purpose of attending our wounded. Upon our arrival in Richmond we were ordered by the Secretary of War to find quarters until our cases were decided upon. On August 10th, we were ordered to report immediately to Gen. Winder, commanding the post, to be sent home the next day. From Gen. Winder we received a copy of a parole, witnessed by himself. On August 11th, we were sent to Fort Monroe under flag of truce. * * At Sedley Church hospital we had a plentiful supply of water, there being a good spring close by. For the first day or two, food and soups were very much needed, inasmuch as we had no means of supplying ourselves. By that time, some of the inhabitants of the surrounding country, recognizing our wants, began bringing soup, chickens, eggs, milk, butter, etc., so that, considering the circumstances, the wounded fared quite well. There being some two hundred wounded at this hospital, for want of room in the buildings, many were necessarily exposed for a day or two. Owing to the surgeons being removed to Manassas Junction the day after the battle, the exposure was protracted longer than it would otherwise have been. Immediately after our return, we made shelter for those exposed, using blankets, overcoats, and whatever else was attainable that would serve our purpose. The heat was intense, and the men suffered excessively therefrom." * * *

VII. *Extract from a Report of his Medical Services.* By Assistant Surgeon W. W. KEEN, JR., Fifth Massachusetts Volunteers.

* * * "The 5th Massachusetts infantry left Alexandria, on July 16th, 1861, in the brigade of Colonel A. E. Burnside. Our supply of medical stores was amply sufficient; but we had no means of transporting them, and they had to be left in the teams of the quartermaster to be forwarded from Alexandria. The first hospital I was at during the battle, was at a spring, about half a mile beyond Sedley Church, near which our brigade crossed Bull Run. Here we had instruments and dressings, water, and a canteen of brandy. Afterwards, I went, by order, to the church. Our drum corps was with the ambulances in the field, and, so far as I know, there was no other detail made to attend to the fatigue duties at this hospital, such as removing wounded, preparing food, bringing water, etc. I left this hospital between four and five o'clock in the afternoon, on the approach of the Confederates, with Colonel Lawrence, who was wounded. The wounded were exposed that night to rain; but it was not unaccountably cold. The operations I saw were all amputations or extractions of balls, but the main thing done was to apply primary water dressings. There were many cases where simple cerate was unwisely used. It is proper to state, in extenuation of the faults observed, that they were mostly, in my opinion, due to the utter lack of experience on the part of medical officers, and I would by no means exclude myself, of both the mode of obtaining supplies and the proper persons to apply to. In time of peace and order it is difficult, at first, to understand the forms of the regulations; but in the excitement of such times as July, 1861, and in the urgency of battle, with no books at command among officers, to most of whom army regulations were a myth, many defects may be excused. Comparing the present admirable regulations, what progress is exhibited and what credit reflected on the wise, humane, and energetic men who have brought such order and system out of chaos and confusion!" * * *

VIII. *Extract from Report of Services after the First Battle of Bull Run.* By Assistant Surgeon CHARLES R. GREENLEAF, U. S. A.

* * * "After the first battle of Bull Run I was detailed to bring the wounded to the hospitals in Washington. A number had received no surgical care, and the great majority had been exposed to heavy rain. Ambulances being placed at my disposal by Colonel D. H. Rucker, Quartermaster, U. S. A., the wounded were removed to the Union Hotel Hospital, at Georgetown, and to the Columbian College, E Street, C Street, and Liberty Hall Hospitals, Washington. Wounded prisoners were conveyed to the hospital of the Old Capitol Prison, an hospital of which I then had the immediate charge. The number of wounded whose removal I supervised was about two hundred." * * *

IX. *Extract from a Narrative of Services from the Commencement of the Rebellion till July 18th, 1863.* By Surgeon H. P. STEARNS, U. S. Volunteers.

* * * "I received, April 18th, 1861, a commission as Surgeon of the 1st Connecticut Volunteers. Colonel D. Tyler, commanding, to serve for the period of three months. The regiment was mustered out of service in August, without the death of any person connected with it. * * In the early part of June the regiment received orders to proceed to Virginia, and, soon after, to the advance of the army, remaining at Falls Church till the movement of the army to Centreville and Bull Run. During the first two days, the 1st and 2d Connecticut led the advance under command of Colonel E. D. Keyes, U. S. A. At

the battle of Bull Run, the 1st Connecticut was in the reserve, and received orders to advance to the field at ten in the forenoon. After it had advanced about one mile, I selected a house to be used as an hospital, and hoisted the hospital flag, and gave orders to the musicians of the band, who had been detailed for that purpose, to follow the regiment and bring the wounded to the hospital. The regiment was not hotly engaged during the day, and consequently only a few were slightly wounded. The *morale* and general condition of the regiment was as good as could be expected of any troops who had seen so little service, and the time of whose enlistment expired upon the day of the battle. Their approximate strength was between 600 and 700. The supplies of medicines and hospital stores were ample. There was one four-wheeled two-horse ambulance, no hospital tent, and but two ordinary wall tents for hospital uses. I cannot give the precise location of the house chosen by me. It was not within the range of the enemy's guns, and had four rooms. Water was abundant, but we had no soups, and no food, during the time I remained upon the field, except such as was in the knapsacks. The wounded in my regiment were so slightly injured that they walked from the field. The wounds were in the upper extremities. The wounded of other regiments, who were brought for care to the hospital established by me, were generally borne upon blankets fastened to poles, as the nature of the ground was such that they could not be conveyed in ambulances. The regiment was upon the field about five and a half hours. The wounded were taken care of by me until the regiment was mustered out of service. No operations were required, except the amputation of one finger, for those wounded in my regiment. Chloroform was given sufficiently to quiet pain in the extraction of balls. There were no deaths. The number of wounded was about eight or ten." * * *

[Other extracts from the narrative of Surgeon Stearns will be printed with documents relating to the western campaigns.]

X. *Extract from a Report of Services from April, 1861, to June, 1863.* By Surgeon C. F. H. CAMPBELL, U. S. Volunteers.

* * * "On the 17th of April, 1861, I left Philadelphia, with the 23d Pennsylvania Volunteers, as assistant surgeon. * * * On the 2d of July, the whole army, under Major General Patterson, advanced across the Potomac river at Williamsport, Maryland. * * * The enemy were reported to be in force, a few miles to our front, to resist our advance on Martinsburg. Upon advancing about three miles, to a place called Hainesville, or Falling Waters, they opened upon us with artillery and musketry, and thus was the first action of the war in Northern Virginia initiated. The enemy, in line of battle, two thousand seven hundred strong, were under Col. T. J. Jackson, the celebrated "Stonewall" of later fame, while our advance brigade, Colonel George H. Thomas, 2d U. S. Cavalry, commanding, numbered about two thousand men of all arms. The action was sharp and vigorous for about one hour, when the enemy broke and retreated in confusion, pursued by our cavalry. The casualties attending this skirmish did not amount to more than eight men killed and fifteen wounded. * * * A small house on the roadside, contiguous to the field, was converted into a temporary hospital, where the wounded were received. The wounds were all from gunshot, and principally of the lower extremities, produced by round musket balls, buckshot, and, in one or two instances, by sphero-conical balls, fired at a range of from sixty to two hundred or three hundred yards. These wounds were, in no instance which presented itself to the writer, of a necessarily fatal character. As fast as the facilities of ambulance transportation offered, these men were removed to the general hospital at Hagerstown, Maryland, arrangements for their reception having been carefully provided by Surgeon C. S. Tripler, U. S. A., medical director of the army." * * *

XI. *Extracts from Reports of the Wounded at the Engagement at Ball's Bluff, Virginia, October 21st, 1861.* By Surgeon A. B. CROSBY, U. S. Volunteers.

* * * "Early in the day, anticipating an action, I ordered forty-two fresh beds made in the brigade hospital, at the time nearly completed, and took possession of two large halls in town, and caused them to be abundantly supplied with fresh straw. An ambulance train was ordered to Edwards's Ferry, and another to Conrad's Ferry, to await orders; it being doubtful where the engagement might occur.

I took a position with General Stone, on a height near Edwards's Ferry. The engagement took place on a bluff, opposite Harrison's Island, between the two ferries, probably four miles above Edwards's, and a mile and a half below Conrad's. When it became evident that an engagement was taking place, I asked permission of General Stone to repair to the scene, and was ordered to do so at once. Brigade Surgeon Bryant accompanied me. We arrived when the retreat had fairly commenced, and each boat, coming from the island, brought wounded men. A house and barn on the island were used as a hospital, where the severer injuries were cared for. The difficulties in the way of getting off the wounded were very great. They were to be transported from the Virginia shore to the island, thence to the main land, where they were landed on the tow-path of the canal. The tow-path was entirely filled with artillery, and, unfortunately, the regimental ambulances had been taken across the canal on to the bank of the river by a flat boat, which was afterwards put into the river to transport troops, so that they were rendered useless.

Requesting Brigade Surgeon Bryant to stop the wounded at the point where they crossed, and a skiff being discovered further down the canal, I ordered the wounded to be put across the canal as rapidly as possible. Pushing my horse by the artillery to Conrad's Ferry, I went through an arch under the canal, and ordered the ambulance train there to take down the fences and to drive to the point where the wounded were being put across the canal. It was now quite dark, but we were so fortunate as to find two barns about a mile from this point. These were rapidly cleared, and the floors were covered with straw. I ordered fires to be lighted along the path through the woods as a guide to the ambulances, and, returning to the canal, ordered Assistant Surgeons Fassard and McNeil, to repair to the barns and receive the wounded. Then crossing on to the island, I found Brigade Surgeons Bryant and Lidell together with Surgeon Hayward and Assistant Surgeon Haven. These

gentlemen were untiring in their relief of the wounded, and in supervising their subsequent removal. Directions were given that all the wounded on the island should be removed and transported by canal boat to Edwards's Ferry during the night, and thence, by ambulances, to Poolesville. Returning to the barns I busied myself with the wounded, and promising to send an ambulance train early the next morning to remove them to Poolesville, I returned to headquarters in season to receive the first wounded that arrived, and, by six o'clock A. M., commenced performing the necessary operations at the Brigade Hospital. Surgeon Osborne and some other surgeons, whose names I am not familiar with, did good service at Conrad's Ferry and other points.

I have already furnished General Stone with an official list of one hundred and sixty wounded, and there are, undoubtedly, more in private houses, and among those who have straggled. Of these, about a hundred are provided for here, and the remainder in their regimental hospitals.

It is greatly to the credit of the surgeons that there were few amputations; I think not more than ten in all. Most of the balls have been removed. None have died who underwent amputation, and only five or six since the wounded were first dressed. There was, with very few exceptions, an entire absence of shock, and the men are now well cared for and cheerful. Most of the wounds were about the shoulders or the extremities. Thus far the wounds are looking healthy, and, apparently, very few secondary operations will be necessary. It is believed that, almost without exception, the wounded were covered, and their wounds well dressed, within the first four and twenty hours. * * *

The advantage of a drilled ambulance corps, short as our drill in that respect has been, was very observable, and the ambulance trains did their work well. * * *

Pardon the hasty and desultory character of this communication."

* * * * *

* * "The whole number comprised in the list of wounded is one hundred and sixty-nine. The following rough table gives the number of wounds in the different regions of the body:

Wounds of the Head and Face.....	93	Wounds of the Hip.....	11
“ “ “ Neck.....	4	“ “ “ Thigh.....	32
“ “ “ Chest.....	10	“ “ “ Knee.....	7
“ “ “ Abdomen.....	15	“ “ “ Leg.....	14
“ “ “ Back.....	5	“ “ “ Ankle.....	7
“ “ “ Shoulder.....	18	“ “ “ Foot.....	10
“ “ “ Arm.....	26	“ “ “ Testicle.....	1
“ “ “ Elbow.....	4	Deaths since the engagement.....	12
“ “ “ Wrist.....	4	Compound fractures.....	4
“ “ “ Hand.....	9	Large amputations.....	8

Under wounds of the chest, several wounds of the lungs are included. None of these cases have proved fatal, and all now bid fair for recovery. Veratrum viride has been freely exhibited in these cases, and the pulse thoroughly controlled. In the most interesting of these cases the ball entered above the nipple, and, passing downward and inward, fractured a rib and lodged in the left lung. A good deal of gangrenous matter discharged from day to day, and, on the tenth day, secondary hæmorrhage occurred from the external mammary artery. As the vessel could not be reached, the wound was plugged with persulphate of iron. In four days suppuration brought away the plug without any renewal of hæmorrhage. The patient breathes very little with the left lung, but is improving.

All the wounds of the abdomen which penetrated the cavity, some four or five, proved fatal. From two men I removed, within twenty-four hours, conical balls, which had passed through the back and lodged in the abdominal wall. In both cases pus followed the knife, and they died in a few hours. One man was wounded through the liver and diaphragm. He was troubled with constant hicough, became very yellow, and died of peritonitis on the sixth day. The remaining cases proved fatal in the same way. In all these cases opium was exhibited very freely.

The wounds of the shoulders were, generally, not severe. The case of most interest was one where a conical musket ball struck the scapula beneath the spine, shattering the bone, and, apparently, bruising the axillary artery; it passed out anteriorly. On the tenth day, secondary hæmorrhage occurred from the subscapular artery, which, as it could not be secured, the wound was plugged with a styptic. Three days afterwards, the hæmorrhage recurred moderately. In two days more, the axillary artery lost two inches by a slough, and the man died. The wounds of the arms are, many of them, flesh wounds, and are doing finely. Two are complicated with fractures of the fore-arm, and two with fractures of the humerus. In two instances balls passed through the elbow-joint. Lieutenant Colonel Wistar had a ball to pass through the joint, knocking off a portion of the olecranon. For fourteen days there was no sign of disturbance about the wound. At the end of which time severe inflammation was lighted up, under which he is still suffering. The wounds of the hands were generally not severe; a few fingers were lost; but no operations of moment were necessary in this region. The hip and thigh were the seat generally of flesh wounds, and are doing well. One case is, however, worthy of mention: a private, shot in the neck, was making his way to the hospital on the island, when a ball struck his bayonet, in the sheath by his side, was flattened somewhat, and entered the posterior surface of the left thigh, passing downward and forward in the middle line of the limb. On the third day the biceps muscle took on a spasmodic action; two days afterwards the extensor muscles became rigidly contracted. By the most careful examinations, I could get no trace of the ball. The tetanic spasm gradually affected all portions of the body. One night, at midnight, the respiratory muscles became rigidly contracted, and before they relaxed the man died. An autopsy showed that the ball had split the great sciatic nerve, leaving a slit an inch and a half long, and then, striking the femur, had glanced downwards between one and two inches entirely away from the nerve.

Of the wounds of the knee, only two penetrated the joint; one of these I amputated above the knee, and the patient is making a most rapid recovery. In the other case, I advised amputation, but was overruled. The patient died last night of

traumatic inflammation of the knee joint. Many of the wounds of the legs passed through the calf, and are simple in their character. Lieutenant Colonel Ward lost a foot by amputation, the ankle being shattered and the circulation cut off.

The remaining case of particular interest is one where a ball passed through the left buttock, through the scrotum, grazing the testicle, and entering the penis at its anterior third, ploughed its way out through the urethra. Two days afterwards the contraction of the dartos had forced the testicle through the opening in the scrotal wall; I removed it and the case is doing well. All the stumps and all the wounds are perfectly healthy. Water dressings have been used almost exclusively. Plenty of air and an abundance of cold water have been the principal adjuvants in the treatment. I have taken care of a hundred here; about fifty-four have been cared for in the hospitals of Lander's brigade, and the balance in the hospitals of Baker's brigade. There are very few cases which now seem in any particular danger, and our mortality, thus far, has certainly not been very great. I attribute this to the fact that the enemy inflicted but few minie wounds. Their cartridges generally contained a round ball and three buck shot. No doubt the splendid *morale* of the men contributed much towards the favorable results in these cases. It was a defeat, a rout, but there was no panic, no depression, no shock. On the contrary, the wounded bore their sufferings without complaint, and, in many instances, with a great deal of cheerfulness. An amputation at the shoulder joint, of a leg and of a fore arm, were done on the island, mainly, I believe, by Surgeon Nathan Hayward. I performed three large amputations myself, and in all these I neither heard of, nor saw, any appreciable shock, before or after the operations. None of the cases in which amputation was done terminated fatally." * * *

Your obedient servant,

A. B. CROSBY,
Brigade Surgeon, U. S. V.

Surgeon C. S. TRIPLER, U. S. A.,
Medical Director of the Army of the Potomac.

XII. *Extracts from a Narrative of the Surgery at Ball's Bluff, Virginia, and from a Report of the Wounded of Gen. Baker's Brigade at the Affair of October 21st, 1861.* By Surgeon JOHN A. LIDELL, U. S. Volunteers.

* * * "On October 21st, 1861, I was surgeon of Gen. Baker's brigade, consisting of the 69th, 71st 72d, and 106th Pennsylvania Volunteers, with one company of cavalry. The brigade was quartered at Camp Observation, Maryland, four and a half miles above Poolesville, on the road to Nolan's Ferry, at the mouth of the Monocacy River. At early dawn, a battalion of the 71st Pennsylvania, commanded by Lieut. Col. Isaac J. Wistar, was sent to Conrad's Ferry. The remainder of the brigade was put in marching order. After making provision for the medical wants of the regiments remaining in camp, I proceeded to Conrad's Ferry and joined Wistar's battalion, but found that the crossing of the Potomac had taken place a mile lower down the river, opposite the lower part of Harrison's Island. This island is separated from the Maryland shore by a channel two hundred and fifty yards wide, and from the Virginia shore by a channel seventy-five yards wide, and the river flows through these channels with a swift current. * * * About noon Col. Baker prepared to cross the river. To increase his transportation he got a scow out of the canal and launched it in the river. He also took tow lines from several canal boats, and, fastening them together, had the cable thus formed stretched across the river at Harrison's Island to facilitate crossing the swift current. He sent Wistar's battalion across, going himself with the advance, and ordered up the rest of his brigade. I crossed with this battalion, numbering about six hundred men. * * * I established a hospital at a farm house near the Virginia shore at Harrison's Island; but such wounded as could walk I directed to cross the island to a barn near the Maryland shore and our ferry. Dressings were applied and operations performed mainly at the farm house. Fighting ceased at dark. The enemy had no artillery, and most of the wounds of our men were inflicted by round musket balls. About two hundred wounded had to be provided for. I determined to remove them that night, lest they might be captured the next morning. I deemed it of the first importance to get the wounded to the Maryland shore, as the enemy could command the island with artillery, or occupy it with infantry. Late at night, accompanied by Surgeon Martin Rizer, 72d Pennsylvania Volunteers, I carefully searched the Virginia shore of the island for any wounded that might have been overlooked. The enemy's pickets did not fire on us, though we were less than one hundred yards distant, and carried lanterns. We were evidently recognized as searching for the wounded. We were much delayed in the removal of the wounded by the stragglers, who crowded our boats with their worthless carcasses. Surgeon Justin Dwinelle, 106th Pennsylvania Volunteers, rendered efficient assistance. At midnight I crossed to the Maryland shore. Most of the wounded were sent to Edwards's Ferry by canal boat, and thence by the brigade ambulance train to the general hospital at Poolesville, under the direction of Surgeon A. B. Crosby, U. S. V. A number were sent to our field hospital in our brigade ambulances. Of Baker's brigade only one battalion, six hundred strong, was engaged. I brought off sixty-five of their wounded. I had dressings and anodynes in plenty on the island. The morning after the battle was rainy. During that day the wounded were all comfortably cared for. About thirty-five remained at the field hospital until they were convalescent. The balance were treated at Poolesville. * * *

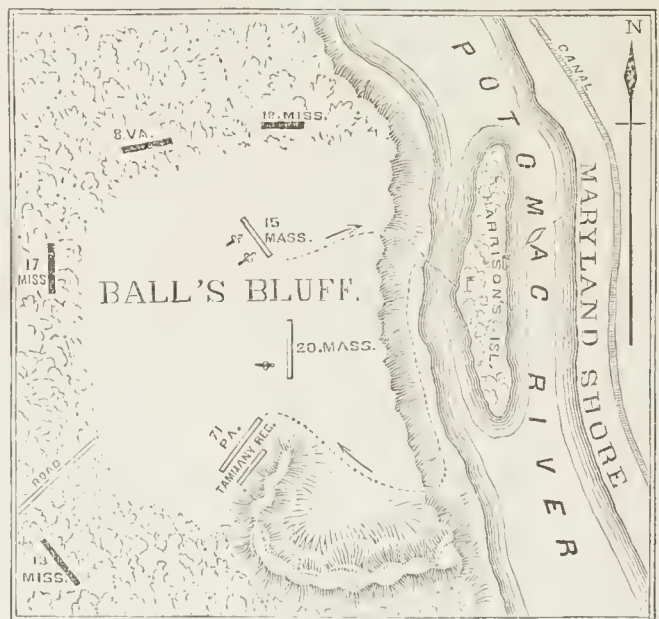

FIG. 1.—Map of Ball's Bluff, with the location of the Hospitals on Harrison's Island.

Lieut. Col. Isaae J. Wistar had a gunshot wound of the right elbow-joint. Capt. Robert C. Hicks, 71st Pennsylvania, a wound of right shoulder, and Sergt. Maj. Hubert Bastian, a wound of right elbow-joint, and were sent to private quarters. The following were sent to the field hospital of the California regiment: Capt. L. Bierel, contused wound of back; Lieut. R. Templeton, Privates E. Wisner and John Stanley, wounds of the shoulder. Privates E. Mann, B. Watson, R. Joslin, R. Hartley, W. Thomson, J. Tallon, P. Smith, and A. Mink, with wounds of the lower extremity; Corporal Lambert, Privates Makey, Heckley, Piper, Fisher, Lipseth, Bouton, and Calligan, with gunshot wounds of the upper extremity; and Sergeant John Thatcher, with a wound of the breast. The following were sent to general hospital at Poolesville: Lieut. T. Wade, Privates Hooper, Randall, Hooper, Schafer, Brunt, Steinbeck, Holland, Mahan, Ellis, Fulton, Kelly, Patterson, Coles, Theuble, Murphy, Coles, Rich, Pilley, Sloan, Taylor, Harvey, Burr, Paul, Lutze, McKenny, Wood, Nichols, Smith, Rand, Pilley, and Sloan." * * *

XIII. *Extract from a Narrative of Services.* By Assistant Surgeon R. F. WEIR, U. S. Army.

* * * "The narrative of my field services under General Patterson and General Banks, comprises only the ordinary events of marches, from Harper's Ferry to Darnestown, and thence to Conrad's Ferry, on October 21st, 1861, the day of the repulse at Ball's Bluff. * * I assisted in conveying a portion of the wounded from Conrad's Ferry, by means of wretched one-horse ambulances, to the general hospital at Poolesville. I did not assist at any operations." * * *

XIV. *Extracts from Reports relative to the Operations of the Medical Department in the Campaign in Western Virginia in the Summer of 1861.* By Surgeon J. J. B. WRIGHT, U. S. A., Medical Director of the Department of Ohio.

* * * "I reported to Major General G. B. McClellan, U. S. V., at Cincinnati, Ohio, on May 28th, 1861, under an order of the War Department, as medical director of the Department of Ohio. Gen. McClellan had been assigned to that command but recently, and the duty devolved on me of organizing the affairs of the medical department. My first efforts were directed towards providing hospital outfits for the new regiments, so hastily organized and sent to the field in Western Virginia, where the rebels were massing their troops under Garnett and Pegram. Through the agency of the very efficient purveyor at New York, Surgeon Satterlee, my object was promptly and satisfactorily attained. * * [After a series of inspections of troops and hospitals, Surgeon Wright returned to Cincinnati.] Before the affairs of the purveying department were fully regulated, I was ordered to accompany Gen. McClellan to Western Virginia. I understood that I went to make an inspection of the hospitals at Grafton, Clarksburg, etc., but found that we had entered on an active campaign. To obviate the necessity of returning to Cincinnati, I instructed Assistant Surgeon J. P. Wright, U. S. A., who was on duty with a battery at that city, to supervise the requisitions and issues of medical supplies. The campaign culminated in the defeat of Gen. Garnett at Carrick's Ford, and of Gen. Pegram at Rich Mountain. Nothing of special interest, worthy to be noted in the Medical History of the Rebellion, occurred in the department until the period of the engagements alluded to. The diseases prevailing were such as might have been expected among raw troops, having inexperienced officers to care for them. The prevalent disorders were diarrhœa, dysentery, intermittent fever, and rheumatism.

The attack on the enemy's work at Rich Mountain was made by infantry against artillery, cavalry, and infantry. The wounds, therefore, were inflicted by round shot, grape, and minie balls, and were of every description and character. A large three-story house on the battle field was occupied temporarily as an hospital, and tents were pitched in the vicinity. Having organized this hospital, and witnessed the performance of the principal necessary operations, I proceeded to join the headquarters at Beverly, distant seven miles, where immediate arrangements were made for the permanent accommodation of the sick and wounded. A general hospital was established in several commodious houses in this town, and Assistant Surgeon H. R. Wirtz was placed in charge of it, aided by Assistant Surgeons Dunster, Willie, and Eastman, U. S. A. So soon as transportation could be furnished, the wounded from Carrick's Ford were transferred to this hospital. The enemy's wounded received the same attention as our own, though they were, for the most part, kept separate. For a particular description of the wounds, and of the operations performed in this hospital, I have to refer to the monthly consolidated reports from the medical director's office, and to the quarterly reports of Assistant Surgeon Wirtz and of Assistant Surgeon Dunster, who succeeded him in charge of the hospital. Besides sundry amputations of the leg and arm, rendered necessary on the battlefield of Rich Mountain, the femoral artery was ligated in one instance for hæmorrhage of the popliteal, caused by a bullet passing through the hamstrings of the right leg. Among the extraordinary cases, was that of an Indiana soldier who was wounded in the upper part of the thigh by a grape shot, which penetrated over the track of the femoral artery, emerged through the nates, and lodged in the man's cartouch box, from which the brave fellow coolly removed it, and exhibited it as a trophy of the battlefield. A fortnight after the battle I left him in the hospital in a fair way of recovery."

[Other portions of this report of Medical Director Wright will be printed in connection with documents relative to the establishment of military hospitals at the West. The following extracts are taken from a letter to Surgeon John H. Brinton, U. S. V., dated Carlisle Barracks, March 17th, 1863, in answer to a series of questions. The author observes that his position had not permitted him to notice minutely, or to investigate closely, individual cases of surgery, and modestly declares himself unprepared to contribute a paper that could advance surgical knowledge.]

* * * "The troops engaged at Rich Mountain had not been in action, but were animated by the spirit which induced some of the first volunteers from Indiana solemnly to swear that they would prosecute the war until they had fully vindicated the character of Indiana volunteers from the aspersions of alleged misconduct before the enemy at Buena Vista. Under the lead of the brave Rosecrans, and the intrepid Lander, they charged the enemy's battery and long line of breast-works over an open field five hundred yards wide, and drove him from his position and captured all his artillery. The engagement lasted

scarcely more than half an hour. The troops on this campaign were generally well supplied with medicines, hospital stores, tents, and other necessary field equipments. Ambulances in sufficient number were improvised by the purchase, by order of Gen. McClellan, of light two-horse spring wagons. Soon after the engagement at Rich Mountain, several of the regulation one and two-horse ambulances were furnished to the army. * * Most of the medical officers discharged their duties very well, except as relates to making returns, reports, etc. * * The battle of Rich Mountain was fought on July 11th, 1861. The wounded suffered somewhat, I suppose, for want of nicely prepared food, for a day or two after the battle, as is always the case during the organization of the temporary hospitals. Everything, however, was done for their comfort which circumstances permitted, and on the arrival of the wounded at Beverly, on the third day, they were well cared for in all respects. There was an abundant supply of good water near the battle field. The wounded were not exposed to any uncomfortable degree of cold. Their wounds were inflicted, principally, by solid and grape shot, and minie balls. The wounded were conveyed to Beverly in ambulances and spring wagons, a distance of seven miles, over a smooth road. The principal operations were primary amputations of the thigh, leg, and arm. No excisions were performed. Chloroform was administered in all operations involving much pain. There were no fatal results from the use of this anæsthetic." * * *

XVI. *Extract from a Report on the Duties assigned him from the Outbreak of the War till July 14th, 1863.* By C. C. DUMREICHER, Surgeon U. S. Volunteers.

* * * "In the summer of 1861, I was commissioned as Assistant Surgeon of Illinois Volunteers. I served two months in a camp of organization near Springfield, and was then ordered to Western Virginia, with a detachment of Illinois cavalry. I was present at the engagement at Carnifex Ferry, between the forces under General Rosecrans, and the rebel troops under General Floyd. After the engagement I was placed in surgical charge of the hospital. I met with a number of interesting cases, but do not recollect the details of them. The regiments engaged were all from western states, and their ranks were nearly full. Their supplies of medicines, hospital stores, ambulances, and tents were limited, and, in several instances, insufficient. The wounded were removed, on litters and by ambulances, to a house a little more than half a mile from the field of action. Urgent cases were attended to, under fire, within a few hundred yards of the troops. The supply of water, materials for soups, and other food, were procured in sufficient quantities. The wounded were not exposed to cold or rain, but were made quite comfortable within a short time. The troops were under fire nearly four hours. * * The wounded were removed to Cincinnati at periods varying from two to six weeks after the battle, being sent thirty-five miles in ambulances or wagons, and then placed on steamboats. To my personal knowledge, seven capital operations were performed within twenty-four hours after the battle. These were amputations of the thigh, and all proved fatal. The men had been on forced marches for several days, and were quite exhausted when they went into action. Chloroform was used in most of the operations; in some, a mixture of one part of chloroform with two of ether." * * *

XVII. *Memorandum relative to the Wounded at the Affair at Great Bethel, Virginia, June 10th, 1861.* By Surgeon A. H. HOFF, 3d New York Volunteers.

* * * "At the main fight we had only four or five killed, and twelve wounded. In the collision at night between our own troops, there were thirty wounded. The wounded were taken to the Seminary Hospital near Hampton, and to the Hygeia Hospital at Fort Monroe. Most of them soon returned to duty. A few of the severely wounded were sent to New York." * * *

XVIII. *Extract from Report from St. Aloysius Hospital, Washington.* By Assistant Surgeon
ALEXANDER INGRAM, U. S. Army.

* * * "A few wounded of the 1st Ohio regiment were received at this hospital from one of our earliest collisions with the enemy. I refer to General Schenck's skirmish at Vienna, June 17th, 1861. The wounds were mostly slight in character; no operations of magnitude were necessary; and all the patients did well." * * *

XIX. *Extract from a Report of his Services from June 1st, 1861, to June 19th, 1863, relative to the Battle of Wilson's Creek.* By Assistant Surgeon PHILIP C. DAVIS, U. S. Army.

* * * "On June 1st, 1861, I was ordered to report to the commanding officer at Fort Leavenworth, Kansas, at which post an expedition was then fitting out for a campaign in Missouri. I reported on June 6th, and was assigned to duty with the troops about to take the field. We left Fort Leavenworth, on June 10th, and proceeded to Kansas City, where we went into camp. Our forces consisted of one battery, one battalion of infantry, and one squadron of regular cavalry. We were afterward joined by two regiments of infantry, the 1st and 2d Kansas Volunteers; the whole being under the command of Major S. D. Sturgis. We remained in camp until July 1st, when orders were received to join General N. Lyon, who was then on the way to Springfield, Missouri. We broke camp, and moving rapidly across the country in a southeasterly direction, communicated with General Lyon, near Papinsville, on the right bank of the Osage River, at which place he was then crossing, after much delay, in consequence of the destruction of the bridge. The combined forces then took up the line of march for Springfield, which place was then held by a small force under Colonel Franz Sigel. In the latter part of July the expedition joined Colonel Sigel, and went into camp. Nothing of interest occurred during the march; the weather was good, the water abundant, and the health of the troops excellent. Our forces, under the command of General Lyon, now amounted to an effective of about five thousand. On August 2d, a reconnaissance was ordered by General Lyon, and our men proceeded to "Dug Spring," where a sharp skirmish ensued. Our loss was twelve or fourteen killed, and about forty wounded. The wounded were sent to Springfield. The loss of the enemy was not known. Our forces then returned to camp, near Springfield. Typhoid fever and dysentery having made their appearance, General Lyon ordered Surgeon E. C. Franklin, U. S. V., to establish a general hospital in the village for the benefit of the forces stationed in the vicinity, as the hospital accommodations, although good, were inadequate for the increasing number of sick. The unfinished court house building was taken for the purpose, and I was assigned to duty in this hospital. We had scarcely commenced our labors, when the enemy, in large force, under Generals Price, McCulloch, and Rains, moved up the Fayetteville road, and took up a strong position along Wilson's Creek, about five or six miles from the village. It was decided to attack them, and our column moved on the night of August 9th, and next morning opened fire upon the enemy. The right wing was commanded by Major Sturgis, the left by Colonel Sigel, the whole under General Lyon.

This battle was the most severe and well contested that had occurred up to that time since the outbreak of the rebellion; the fight raged furiously for six or seven hours; General Lyon having fallen, the command was taken by Colonel Sigel. About noon the fire of both sides slackened, the enemy fell back a mile, and our forces retreated to Springfield, where they remained a short time, and then fell back to Rolla, the southwest terminus of the St. Louis Railroad. We succeeded in carrying away everything except the medicines, hospital stores, and supplies, which had been accumulating at Springfield for the use of the general hospital at that place. Our dead and wounded fell into the hands of the enemy. Our loss was estimated at two hundred and fifty killed, eight hundred wounded, three hundred prisoners and missing; or a total of thirteen hundred and fifty. Thus, after a six hours' fight, our casualties amounted to the high figure of thirteen hundred and fifty out of the small force of five thousand. I was ordered by Colonel Sigel to remain to assist in taking care of the wounded. Our column having retreated towards Rolla, the enemy came in about day-break and took possession of the village, and immediately proceeded to appropriate everything that was deemed by them necessary, either for their comfort or convenience, and we were consequently left without many articles for the benefit of the wounded under our charge. Our supplies of medicines, hospital stores, &c., were taken, and but little to work with was left us. The wounded were brought from the field in wagons, carriages, ambulances, litters, and, in fact, every kind of conveyance which could be brought into requisition. Our ambulances were few, and it occupied five or six days before they were all brought in, as, after the enemy arrived, they took all the means of transportation that could be found in the neighborhood. The fire to which our men were exposed was principally from musketry at very short range, the artillery doing but little execution. The Confederates used the minié rifle, while the Missouri State Guards, and other irregular troops, were armed with smooth-bore muskets, western rifles, and double barrel shot guns; this last being very effective at short range. In consequence of the severity of the engagement and the constant changing of position by the troops, no operations were performed on the field as far as I could learn or observe. Primary dressings were applied and the wounded were sent to the village. With regard to supplies, I would here remark that nothing was furnished us by the Confederates. We purchased everything for the use of our own wounded, for whom we had an abundance; only medicines being deficient, most of the hospital stores, dressings, etc., being appropriated by the Confederates for their own wounded, we being allowed the privilege of using only such as would not benefit them. I have said that the number of our wounded was eight hundred; although, in consequence of the great confusion incident to the enemy taking possession of the village, it was extremely difficult to keep anything in order, or to be exact as regards numbers. The churches, hotels, court house, and nearly all of the private dwellings were filled with wounded of both sides. It, therefore, required several days before we could arrange the patients with any degree of comfort, but we finally succeeded in bringing partial order out of utter chaos. The sum of \$5,000, turned over for the use of the wounded, enabled us to procure every comfort that could be purchased in that part of the country. The operations were mainly secondary. The mortality was very great in cases of amputations for compound comminuted fracture of the femur; better success being met with by using splints and other appliances adapted to the nature of the cases. The cases requiring amputation for wounds of the upper extremities and leg all did well; the number of cases treated I am unable to give at this

late day. The anæsthetic we employed in all cases was chloroform, from which I did not observe a single untoward symptom; it was the only agent of its class that we had. But one case of tetanus occurred, and this supervened upon a very slight wound about ten days after the receipt of the injury. Death followed in forty hours. This was the only case of tetanus that came under my notice, nor do I recollect of any other being reported. In the case referred to above, the injury was so slight as to be called rather an abrasion than a wound. The ordinary duties incumbent upon surgeons were attended to, and nothing of interest transpired. Of the whole number of deaths I am ignorant, as patients were visited by other surgeons in various parts of the village, and no record was kept by them, owing to the unsettled condition of affairs. On September 20th, a flag of truce was sent from Rolla, by Colonel Wyman, 13th Illinois Volunteers, when I left Springfield, with about fifty patients who were able to travel. After many interruptions from roaming bands of Confederates, we arrived safely at Rolla. Remaining a few days, I proceeded to St. Louis, Missouri, at which place I reported to the medical director, who had the men placed in hospital in that city." * * *

[Other extracts from Assistant Surgeon Davis's report will be printed in connection with documents relating to the Peninsular campaign, Antietam, and Fredericksburg.]

XX. *Extracts from Observations on the Battle of Wilson's Creek.* By Assistant Surgeon H. M. SPRAGUE, U. S. Army.

* * * "This engagement was fought nine miles south of Springfield, Missouri, on August 10th, 1861, between the United States forces under Brigadier General Nathaniel Lyon, U. S. V., and the enemy under General Ben. McCulloch. * * * The sanitary condition of the troops was excellent. None of the regulars had been seriously sick. Surgeon E. C. Franklin, U. S. V., in charge of the general hospital at Springfield, had received medical supplies for five thousand men for three months, and had distributed among the regiments what they needed. Of instruments, I am inclined to think there was a lack. The limited time given to the different regiments to prepare themselves for the fight, and the small supply of the purveyor at St. Louis at the time the regiments were organized, forced each surgeon to rely on his private instruments. But if any regiments lacked medicines and medical stores, it was through the inefficiency of the medical officers. Of ambulances, there were but two in the command. These were large spring wagons drawn by six mules. It was only at the earnest solicitation of Major Sturgis, that even these were allowed to move with the troops, so great was the fear of General Lyon that the rumbling of teams might give notice to the enemy of our approach. * * * Of the names and efficiency of the medical officers it is difficult to speak, as few were personally known to me. Assistant Surgeon S. H. Melcher, U. S. V., was on the field, and was said to have been very active. The 2d Kansas was represented by Assistant Surgeon Patee, the surgeon being sick at the time. Drs. Cornyn and Feehan, both efficient and able men, were with the 1st Missouri Regiment. Acting Assistant Surgeon Lyon was on duty with Major Osterhaus's battalion, and was said to have been quite inefficient. Of the regular staff, there were on the field, Assistant Surgeon P. V. Schenck, and myself; Assistant Surgeon P. C. Davis, U. S. A., being on duty in the general hospital at Springfield. * * * An imperfect idea of the ground may be obtained from this very rough sketch of the field. (FIG. 2.)

General Lyon's forces, early in the fight, were divided into two columns: the larger at A, and the battalion of regulars, under Captain Plummer, at B. The latter were repulsed early in the fight. As many of the wounded as could walk came across the open field, and were cared for at a ravine back of the line of battle at A, at a point indicated by a flag. Colonel Sigel's wounded were left on the field, and were brought in during the night following the battle. The attention shown the wounded was good, but not specially praiseworthy. The only medical officer that I knew to be actually on the field of battle, was Surgeon Cornyn, 1st Missouri Volunteers. Assistant Surgeon Patee and myself were at the hospital station in the ravine. The supply of water was abundant, a large stream running through the valley. There were no subsistence supplies except the cooked rations in the haversacks of the men. The fire was from musketry and artillery at long range. * * * Most of the wounded were removed to Springfield. About two hundred were carried along with the troops in their retreat, and were sent to hospitals at St. Louis. Not only the slightly wounded, but those with compound fractures, wounds through the chest and testes, were conveyed on baggage wagons, caissons, and the six-mule spring wagons. Through a flag of truce, an arrangement was made to remove all of the wounded who could be moved between half-past eleven A. M., the day of the fight, and midnight. Most of them were provided for before the truce expired.

* * * No operations were performed on the field beyond the extraction of balls. At no time, during the engagement, was the situation of the ambulances considered safe. The enemy's cavalry were continually threatening our rear. No one acted as medical director, and there was no drilled ambulance corps.

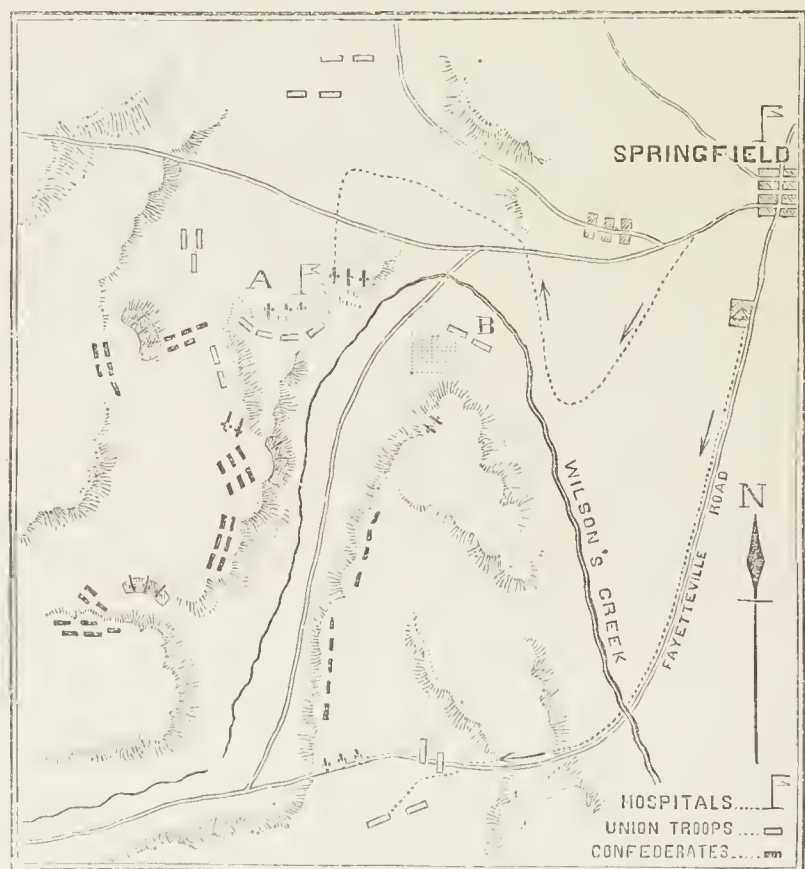

FIG. 2.—Map of the Vicinity of Springfield, Missouri, with the Positions of Troops at the Action of August 10th, 1861.

and the wounded were not systematically carried from the field. The severely wounded could only be moved on stretchers, and were not carried off until after the engagement. Those brought to the hospital stationed in the rear, were wounded in the upper extremities, or had flesh wounds of the lower. There were about twelve hundred killed and wounded, and few prisoners except the wounded. The percentage of casualties was very large. General Lyon's command, excluding Colonel Sigel's, probably did not number more than twenty-seven or twenty-eight hundred. Colonel Sigel's loss, in killed and wounded, amounted to only thirty-five; so that in a force of less than three thousand, eleven hundred and seventy-five, or nearly forty per cent. of the men engaged, were wounded. Taking into consideration the facts that the skirmishing commenced at half-past five in the morning, the battle proper opening at eight, and closing at half-past eleven, the casualties are very numerous, and speak volumes in praise of officers and men. The great want in the medical department was a head. There was no medical director. The regiments had no community of action or feeling. Had the commanding general designated an officer of rank as his medical director, there could have been no reason why nine-tenths of the wounded could not have been cared for and sent to general hospital by the time our forces retreated." * * *

XXI. *Extract from a Report in regard to the Operations of the Medical Department in the Action at Wilson's Creek.* By Surgeon E. C. FRANKLIN, U. S. Volunteers.

* * * "I transmit the following information relative to the engagement at Wilson's Creek, Missouri, August 10th, 1861. * * * The troops engaged were the 1st, 3d, and 5th Missouri Infantry, the 1st and 2d Kansas, detachments of regular and volunteer artillery and cavalry, one company of "home guards;" about four thousand five hundred men in the aggregate, one thousand of whom were under command of Acting Brig. Gen. F. Sigel, U. S. V. Medical supplies, at the period of the battle, were abundant. Ambulances and hospital tents were scarce. The medical officers present were: Surgeon F. M. Cornyn, and Assistant Surgeon Feehan, 1st Missouri Volunteers; Surgeon F. Heussler, and Assistant Surgeon Charles Ludwig, 3d Missouri Volunteers; Surgeon E. C. Franklin, and Assistant Surgeon S. H. Melcher, 5th Missouri Volunteers; Surgeon S. D. Smith, and Assistant Surgeon Patee, 1st Kansas Volunteers; Surgeon A. B. Massey, and a German assistant surgeon of the 2d Kansas Volunteers; Surgeon W. H. White, and Assistant Surgeon Reichenbach, 1st Iowa Volunteers; Assistant Surgeons P. V. Schenck, H. M. Sprague, and P. C. Davis, of the regular army; and Acting Assistant Surgeon G. D. Lyon. The fire was from artillery at long and short range, and from rifled and smooth-bore muskets. Most of the wounded were conveyed to Springfield. They received as good attention on the field as was possible under the circumstances. * * * There were no primary resections on the field, and, I think, no amputations; but quite a large number of operations of all kinds in the hospitals at Springfield." * * *

XXII. *Extracts from a Report on the Regimental Hospital of the 22d Iowa Volunteers at Wilson's Creek.* By Surgeon W. H. WHITE, 22d Iowa Volunteers.

* * * "As to the condition of medical supplies, ambulances, and hospital tents, the 1st Iowa Volunteers will furnish a fair specimen. Our medical supplies consisted of a few drugs, stored away in a dry-goods box. My instruments were good, as I had my own general operating and pocket cases. My transportation for the wounded consisted of a single wagon. I had no hospital tents. I partially supplied the deficiency by giving up my own wall tent. Personally, I was without assistance, my assistant surgeon being inefficient, and I was so closely confined to the wounded of my own regiment that I had little contact with other members of the medical staff. * * * On the field, I was on the descending ground back of the line of battle of the 1st Iowa Volunteers. The wounded men were brought back to me by their comrades. I had them placed in three divisions, forming a triangle, and I passed from one to another, simply stopping to check hæmorrhage, or to apply primary dressings. Sometimes I used digital compression, and, in other cases, I used a tight bandage, and placed over the course of the feeding artery a small roller or pebble. By an order from Major Schofield, I removed most of the wounded, a half an hour before the battle terminated, to a ravine. Here I had to reapply the temporary dressings. From this place they were removed by commissary wagons to Springfield, and were placed in a large brick hotel, a church, and two private houses. I made two amputations, and extracted many balls. Nine men of the 1st Iowa Volunteers received balls in the shoulder. I was strongly urged to amputate, but refused. In time, all of these men recovered." * * *

XXIII. *Extracts from a Report of his Services at the Battle of Wilson's Creek.* By Assistant Surgeon S. H. MELCHER, 5th Missouri Volunteers.

* * * "The Third and Fifth Missouri Volunteers, with two companies of artillery recently organized, had marched from Rolla to Carthage, by way of Neosho, in eighteen days. The distance was over two hundred miles. On one day, not less than twenty men fell, sun-struck, on the road. In the streets of Carthage, on July 4th, 1861, six men were sun-struck, and had grave cerebral symptoms. The Fifth Missouri Volunteers had no medical supplies. I furnished all the medicines and instruments, procured wagons on the road for the sick, and treated one hundred and eighty-five patients without aid from the army

medical department, at Mount Vernon. I received a small supply of medicines from Surgeon E. C. Franklin, U. S. V. * * The wounded were sent to the rear in wagons as the fight progressed. The attendance they received was trifling, consisting of water dressings or adhesive plasters. Surgeon Heussler, Third Missouri Volunteers, sent one of his stewards, early in the action, to the front with his amputating case, which was captured, thus depriving the command of the few surgical instruments there were. For the first two hours the fire was from artillery, and at long range. Two men were killed by spent solid shot striking the abdomen. One was in great agony, with excessive tumefaction, for four hours. The other lived twenty hours in great pain. There was no abrasion of the skin in these cases. On the retreat, the fire was from small arms and artillery combined. The wounded were taken to the general hospital at Springfield. There were no resections on the field, and but one amputation, which was of the arm, for fracture of the elbow. In a case of fracture of the right humerus by a minié ball, I removed spiculæ and used splints. The arm recovered, one inch short, and the patient is now in Company L, First Missouri Artillery. The injured arm is as useful as the other. * * There were plenty of secondary amputations in the hospital. All above the knee resulted fatally, from secondary hæmorrhage or typhoid fever. There were twelve cases of compound fracture of the femur. All but two resulted fatally. Some were amputated; others were treated with splints, generally arranged as double inclined planes. I treated two cases with Liston's straight splint. Both of the patients are living. Michael Sullivan, First Missouri, is now [February 10th, 1863] in St. Louis. The other, Private John O'Brien, First U. S. Infantry, is at the Marine Hospital, St. Louis, and can walk about. He has two inches shortening. Sullivan has about three quarters of an inch shortening. * * The flies were exceedingly troublesome after the battle, maggots forming in the wounds in less than an hour after dressing them, and also upon any clothing or bedding soiled by blood or pus. The wounded left on the field in the enemy's hands were swarming with maggots when brought in. After several ineffectual attempts to extirpate these pests, I succeeded perfectly by sprinkling calomel freely over the wounded surfaces. When the sloughs separated, clean granulating surfaces were presented, and by using balsam of copaiba as a dressing, smearing the bandages with this oleo-resin, I could keep the wounds free from maggots. For this purpose it is, in my opinion, one of the most valuable agents supplied by the medical department. Surgeon E. C. Franklin, U. S. V., had charge of the hospital at Springfield. On the night of the retreat he was ordered to remain, with Surgeon S. D. Smith, 1st Kansas Volunteers, Assistant Surgeon P. C. Davis, U. S. Army, and Assistant Surgeon S. H. Melcher, U. S. Volunteers, as assistants. On September 7th, Surgeon Franklin left us, and on September 20th, Surgeon Smith, and Assistant Surgeon Davis, left. I remained with two hundred and nine wounded and sick, and, with help obtained from convalescents, they were made very comfortable. During October, I sent one hundred and fifty of these patients to Rolla. On November 11th, in obedience to an order from General Sigel, I started with the remaining wounded, all of whom arrived safely in St. Louis on November 19th. The history of the Springfield general hospital from that time till about the middle of February, 1862, cannot readily be obtained, the town having been occupied by the rebels, until they were driven out at that date by the forces under General Curtis." * * *

XXIV. *Account of the Operations of the Medical Department at the Battle of Belmont, Missouri.* By Surgeon JOHN H. BRINTON, U. S. V., Medical Director of the Troops under General Grant, stationed in the District of Cairo and its Dependencies.

"The battle of Belmont was fought on the 7th of November, 1861. The national forces engaged consisted of Illinois and Iowa troops, and amounted, in the aggregate, to about twenty-nine hundred men of all arms. The expedition started from Cairo on the afternoon of the 6th of November, and proceeded down the Mississippi in transports. During the night the boats laid to on the Kentucky shore, eight or ten miles above Columbus. This was done for the purpose of deceiving the enemy, and leading him to the belief that the fortifications of Columbus were the threatened points. Early on the following morning the boats crossed to the Missouri side of the river, and the troops debarked at a point three miles distant from the enemy's camp at Belmont. The latter place was directly opposite to the town of Columbus, and was commanded and protected by numerous heavy guns, planted on the high bluffs of the Kentucky bank of the Mississippi. As soon as the light batteries were landed, the troops moved forward, skirmishers being thrown to the front to feel the enemy's position.

In a very few minutes, his pickets were driven in, and the engagement became general. The wounded shortly began to appear in the rear, and to gather around the hospital stations. The advance of the national troops was steadily pushed on, and the enemy were driven from tree to tree, from behind the bushes, and across the corn fields, until their camp at Belmont was reached, when they sought the cover of the river bank. It was in dislodging the enemy from the rolling corn fields that the chief loss was sustained. The standing corn screened him perfectly from the observation of the national troops as they ascended the cleared slopes to the attack, whilst the latter presented a target against which every shot told; at the same time the enemy opened, with fearful execution, from his batteries planted on the ridges. A subsequent observation of the fallen on the hill side revealed numerous bodies of men who had been slain by round shot, grape, and canister. As soon as the enemy were driven from their camp, it was immediately fired and destroyed, by order of General Grant. Three of their guns were here captured, one of which was spiked, and the others drawn off. During the conflagration of the camp, and when the scattered troops of the enemy had found shelter under the river bank, the heavy guns mounted on the Kentucky bluffs above Columbus, opened their fire. Every foot of the low plain of Belmont was commanded by these batteries; but, fortunately, the necessary depression of the guns was not obtained, and the shot and bursting shells passed high above the heads of the national troops, doing little or no damage.

One of the objects of the expedition, the destruction of the camp, having thus been completely accomplished, the General commanding directed his forces to fall back toward their transports, and to re-embark. In the meantime, an attempt had been made by the enemy to land a large force in General Grant's rear, and thus to cut him off from his boats. The backward path was, consequently, the scene of fierce conflict; but General Grant finally succeeded in reaching his transports, which lay at the

original landing, under the protection of the gunboats Tyler and Lexington. In attempting to prevent and embarrass the embarkation, a few battalions of the enemy unwarily exposed themselves to the fire of the gunboats at a distance of not more than two or three hundred yards; the resulting carnage is reported to have been terrible. The expeditionary force, having been safely put on the transports, returned in the night to Cairo.

The resources of the medical department during this battle were limited. The enterprise had been hastily undertaken, and the water transportation was insufficient for the carriage of wagons. Not one ambulance or spring wagon of any description was, at that time, in the possession or at the command of the author, the medical director of the expedition. In fact, the medical officers of the troops stationed at Cairo did not, until a period long subsequent to the battle of Belmont, receive from the quartermaster's department a single vehicle suitable for the transportation of invalids. The want of the essential facilities for the removal of wounded was, in this action, most severely felt, and caused many of the injured, especially those who had been hurt in the body or lower extremities, to fall into the hands of the enemy. Two or three road wagons, obtained from the quartermaster's train, were the only vehicles for conveyance of the wounded to the rear. In many cases, the injured, unable to walk, were placed on the horses of the medical officers, and thus sent back to the boats.

A sufficient medical force had been left on the river bank, near the transports, to administer to the surgical necessities of those wounded who might arrive there. A hospital had also been established at a small house on the edge of a wood on the line of advance. Surgeon Bowman, 27th Illinois Volunteers, and Surgeon A. Witter, 7th Iowa Volunteers, were placed in charge. These gentlemen discharged their duty zealously; and, although the hospital subsequently fell into the enemy's possession, they succeeded in transporting to the boats nearly all of the wounded under their care. All those injured during the advance of our troops from the landing place towards Belmont, were removed in time to the boats. Unfortunately, it was not so with those who were hit on the retreat. Efforts were made by the author to carry away as many as possible by emptying ammunition wagons and filling them with the disabled; but the number so conveyed was necessarily limited. Undoubtedly, most of those who fell on the backward march were abandoned. The fighting occurred in the woods and amongst thick bushes, so that the loss of the men could not, at the time, be readily discerned. Had the medical officers been well supplied with ambulance wagons, the abandonment of the wounded, a most mortifying circumstance, might have been obviated.

The entire national force engaged in this action numbered somewhat less than twenty-nine hundred men, of these eighty were killed, and about three hundred and fifty wounded. Of these latter, the injuries of about forty were so slight as not to require surgical mention. These casualties, as reported, were distributed as follows:

COMMAND.	KILLED.	WOUNDED.
27th Illinois Volunteers.....	11	47
30th " ".....	9	27
31st " ".....	10	70
22d " ".....	23	74
7th Iowa ".....	26	93
Cavalry and Artillery.....	1	11
TOTAL.....	80	322

There were, therefore, in all, eighty killed and three hundred and twenty-two wounded. The number of missing was fifty-four. The total number of killed, wounded, and missing forming thus a little more than fifteen per cent. of the entire force engaged.

On the return of the expedition to Cairo, the wounded were properly cared for. Ninety-eight were conveyed to the depot hospital, under the charge of Surgeon W. R. Burke, U. S. V., and one hundred and twenty were received into their respective regimental hospitals. The wounded unavoidably left on the field, and captured by the enemy, were all subsequently exchanged, and brought to Cairo from Columbus, on November 13th, under a flag of truce. Of these, one hundred and three were conveyed to the Mound City hospital, in charge of Brigade Surgeon E. C. Franklin, U. S. V. Most of these cases had been very severely injured, and had lain for many hours uncared for on the field, before being removed. They had been partially stripped by the enemy, and had suffered much from exposure and hunger. Little attention had been paid, during their stay in Columbus, to the dressing of their wounds, and the operations which had been performed reflected but slight credit on the enemy's surgeons.

In the accompanying tables a concise view is presented of the nature, treatment, and results of three hundred and twenty cases of gunshot wounds, admitted into the hospitals of Cairo and its vicinity immediately after the battle of Belmont. The surgical operations and their results, are also exhibited in tabular form. By reference to these tables, it will be seen that out of three hundred and twenty cases of wounded reported in this action, thirty-five died subsequently of their wounds, in hospital, while two hundred and eighty-five recovered; of the thirty-five deaths, five occurred after operation:

In all of these operations anæsthesia was previously induced. Washed sulphuric ether was the agent generally employed, and in no case was any untoward result observed. When the fact is considered that those of our soldiers who were wounded in the lower extremities underwent considerable privations and exposure, and were subjected to much rough transportation, the final results must be considered as exceedingly favorable. In this engagement two of our medical officers, Surgeon Gordon, 30th Illinois Volunteers, and Assistant Surgeon Whitenall, 31st Illinois Volunteers, fell into the hands of the enemy. They were retained and treated as prisoners of war for many months.

On the 10th of January, an expedition, under the command of General Grant, left Cairo, and passed down on the opposite, or Kentucky shore of the Mississippi, toward Columbus. No attack was, however, made; the movement was simply one of reconnoissance, and after a few days the forces returned to their respective camps in and around Cairo."

XXV. Second Extract from a Narrative of Services from the Commencement of the Rebellion till July 18th, 1863. By Surgeon H. P. STEARNS, U. S. V.

* * * "On the evening previous to the battle of Belmont, November 6th, 1861, I received orders to accompany the first and second brigades, then stationed at Bird's Point, Missouri, upon an expedition, the destination of which was, at that time, unknown to me. During the afternoon and evening, the forces at Cairo, Illinois, and Bird's Point, were embarked upon steamers. I accompanied Surgeon J. H. Brinton, U. S. V., medical director of the forces under General Grant. The forces were debarked about three miles above Belmont, Missouri, upon the west bank of the Mississippi river, at about eight o'clock in the morning of November 7th. The lines were formed, and the forces marched towards Belmont. The pickets of the enemy were encountered about one and a half miles from the town, and quickly driven in. Very soon afterwards, the enemy appeared in force, and the battle commenced with much spirit upon both sides. As I was engaged in providing for the wounded, and in superintending the care they received previous to sending them to the steamers, I am unable to furnish any detailed account of the action. The troops appeared to be in excellent spirits, and very eager to meet the enemy. Their soldierly appearance, neatness, and proficiency in field manœuvres were not satisfactory. The approximate strength of our troops was twenty-eight hundred. There were no hospital stores, or ambulances. There was a sufficient supply of morphine, chloroform, instruments, and dressings. The wounded were attended to at a log house, about one mile in the rear of Belmont. All that were conveyed to this place were well cared for, and after their wounds were dressed, were immediately sent to the steamers. There was abundance of water; no soup and no food except such as the men had in their knapsacks. When the troops left Belmont to again return to the steamers they were in danger of being flanked by the enemy, and, consequently, some of the wounded were left upon the field, and many of them remained till the next day, when we removed them under a flag of truce. There was no rain, and the night was not cold. The wounded were removed from the field upon wagons, stretchers, and blankets fastened to poles and muskets. The action lasted about two hours before the enemy were driven from their encampment. There was some fighting also, by detachments, in returning to the steamers. The enemy used both the smooth musket with round ball, shot guns with ball and buck shot, and rifles with conoidal ball. Most of the wounded were conveyed by steamers to general and regimental hospitals at Cairo, Illinois, during the night. The remainder of the men, severely wounded, about fifty in number, were conveyed to the same hospital the next day. Some of the more slightly wounded were captured and remained prisoners a few days before they were released. I performed an amputation of the fore-arm; also, of a part of the

hand, and two amputations of fingers, at the hospital before mentioned, upon the field. I cannot say if any others were performed till after the removal of the wounded to Cairo, Illinois. A number of balls were extracted, and all wounds were temporarily dressed before the patients were sent to the steamers. Chloroform was the anæsthetic employed. No deaths occurred from its use. Between three and four hundred were wounded." * * *

XXVI. *Reports on the Battle at Mill Spring, Kentucky, and the Hospitals at Nashville, Tennessee.* By Surgeon ROBERT MURRAY, U. S. Army, Medical Director of the Department of the Ohio.

HEADQUARTERS DEPARTMENT OF THE OHIO,
MEDICAL DIRECTOR'S OFFICE, LOUISVILLE, January 22d, 1862.

SIR: I have the honor to report that telegraphic information has been received of a battle between General G. H. Thomas's command, and General F. Zollicoffer's forces, at Mill Spring, near Somerset. The victory of General Thomas was complete. Our loss was thirty-nine killed, and one hundred and twenty-seven wounded. That of the enemy was one hundred and fifteen killed, and one hundred and sixteen wounded. The wounded of the enemy, together with a large number of horses, wagons, guns, and stores, were captured. General Thomas's command made a march of over one hundred miles over almost impassable roads, and were nearly destitute of ambulances. I have daily representations made to me from surgeons of regiments, brigades, and divisions of the absolute need of ambulances. I have made every effort to have them furnished by the quartermasters here, but they cannot procure them. Would not a representation from you induce the quartermaster general to send them from Washington, or some eastern city? At least a hundred four-wheeled ambulances are needed. The two-wheeled are not strong enough for the rough country and bad roads here. Our army, of nearly one hundred thousand men, is a moving army, and the demand for transportation for the sick is imperative. We have much sickness, principally measles, typhoid fever, and diseases of the lungs. The average of men excused from duty is thirteen and a half per cent. * * *

MEDICAL DIRECTOR'S OFFICE,
DEPARTMENT OF THE OHIO, NASHVILLE, March 5th, 1862.

SIR: I have the honor to report that I arrived at this place on the 2d instant. I found that ample accommodations had been prepared here by the Confederates for their sick. The hospitals which were, and had been occupied would hold thirty-five hundred men. Many of the buildings, however, were not suitable for hospitals as they were warm houses with low ceilings, and long ill-ventilated rooms. On the hill, near the town, the university barracks, blind asylum, and high school, all in the same neighborhood, with a new and commodious factory building, will make most admirable hospitals, and all have been used as such, except the latter. I propose to speedily occupy all these, and have recommended that, on the same hill, hospitals be built to accommodate fifteen hundred men; so that we may have accommodations for at least three thousand, and in the same healthy location. My experience in Louisville has satisfied me that warm houses cannot be made available for large hospitals with any regard for the lives of patients. I have recommended frame buildings with single wards in each, and good ventilation, as these hospitals will be used mostly in summer. The troops made a forced march from Green River to this place, and many of the regiments left their supplies behind them. They have been sent across the river also, without tents, and are exposed at night to rain, without shelter. We have to look after over twelve per cent. of sick from the command in Kentucky, and the men here are fast falling sick. It is evident, from the preparations for the sick made in this city and at Bowling Green, and from the accounts we have received, that the sickness in the Confederate army has been greater than ours, and that much of it was produced by the same epidemic, that is, by measles. In an army which never exceeded forty thousand men, they must have had six thousand in the hospitals as an average, and they lost, at least, seven thousand by death. I regret that I cannot send in reports of sick. Our army has been so scattered that not more than one-half of the regimental surgeons could be reached by brigade surgeons and medical directors, and their reports have been very partially received. I had hoped, now that they are nearly all here together, I could get all reports in for January and February at least, but many surgeons have left all their records behind them. There is a great scarcity of medical officers. The average is about three medical officers to two regiments, many surgeons being absent sick, or having resigned. I shall adopt the same hospital system here as in Louisville. But the citizen physicians who have remained Union men are but few, perhaps eight in all, and our soldiers will have a great repugnance to be attended by the disloyal. While the army is near us, perhaps for a fortnight, we can employ regimental surgeons in the hospitals. I find sick men left in such miserable condition, as I follow the rear of the army, that I have determined to give supplies to each division in the hands of a division medical purveyor to fit up hospitals. The transportation of the army is very limited, and one wagon only is allowed a regiment, and but two ambulances; so that the sick cannot be carried along, and must be left in every village that is passed. The

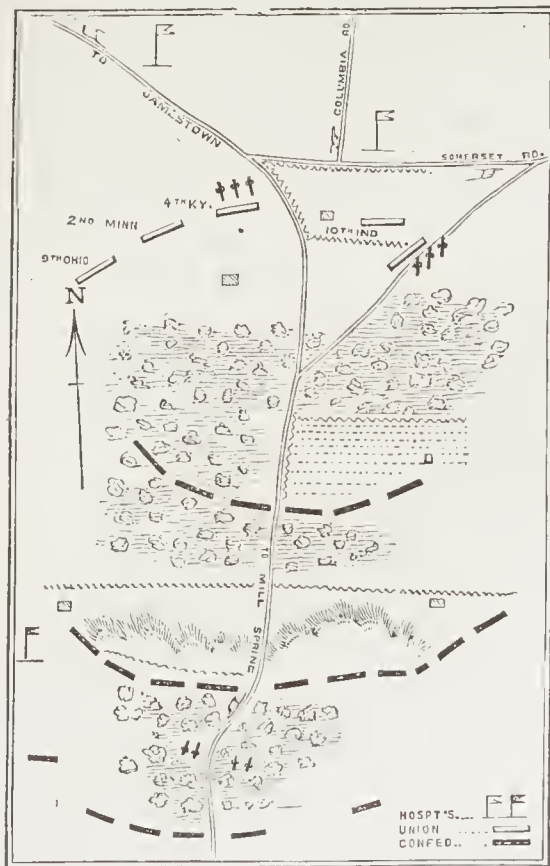

FIG. 3.—Map of the Battlefield of Mill Spring.

regimental surgeons cannot spare bedding, or even medicines, from their small supply, and the men are sometimes found on the floor with no medicines, bedding, or any other comforts. The army is still encumbered with soldiers who will never be fit for duty. I have recommended to General Buell to appoint a commission, consisting of the medical director, an adjutant general, and a paymaster, to visit each regiment, and at once discharge and pay off all those presented by the regimental surgeons, and found to be proper cases for discharge.

Very respectfully, your obedient servant,

R. MURRAY,

Surgeon U. S. A., and Medical Director.

Colonel C. A. FINLEY,

Surgeon General, U. S. A.

XXVII. *Extract from a Narrative of Services in the Medical Staff, from July, 1861, to May 28th, 1862.* By Surgeon DAVID P. SMITH, U. S. Volunteers.

* * * "I first entered the service in July, 1861, as Surgeon of the 18th Massachusetts Volunteers. * * In December, 1861, I was commissioned Brigade Surgeon. Reporting for duty on January 23d, 1862, to Brigadier General D. C. Buell, at Louisville, I was ordered to proceed, with all possible despatch, to General G. H. Thomas, the news of whose victory over Zollicoffer, at Fishing Creek, had just reached Louisville. Purchasing strong horses, I essayed the mud embargo. From Lebanon, the railroad terminus, to Somerset, Kentucky, where I found the General, the road to be traversed by all supplies for the General's division was of a most atrocious character. It spoke volumes for the hardihood of the men who could get, not only infantry, but artillery and supply trains, over it. Although but seventy-five miles, a wagon was often a fortnight on the road. Reaching Somerset on the 29th, I found the little village crowded with sick and wounded. Churches and the town-house had been pressed into the service. The wounded belonged to the 10th Indiana, 4th Kentucky, 2d Minnesota, and 9th Ohio Volunteers. Going out to the battle ground, ten miles distant, to see if all the wounded had been brought in, I became aware of the terrible trial it had been to the sufferers to be brought in by wagons. The roads were of such a wretched description that, taking into account the continual rain, it was wonderful that transportation of them to Somerset had been effected. Returning thither, I commenced service with the wounded. With the exception of a few primary amputations, no operations had been done, and none seemed thought of. The chief medical officer was sick; and the others, new in the contemplation of the ravages of the conical ball, maintained the most heterodox and opposite theories. It was a lamentable example of the tendency of the human mind to pass over the golden truth present to the eye, and amuse itself with fatuitous theories. The dreadful roads over which all of the wounded had been brought had induced profuse suppuration. All the food that could be procured was beef, pork, and hard bread. Shortly after my arrival, I saw one man die from the irritation produced by fragments of the upper jaw; which, although split in every direction by the passage of a minie ball, had been left without excision. The same state of things existed also in the case of a fractured lower jaw, and was followed by the same result. Two cases of gunshot wounds of knee-joint, in which amputation had not been performed, also came to a rapidly fatal termination. In four cases of gunshot fracture of humerus, reported to me as doing well, I found such complete comminution that in two cases I excised large portions of the shaft, and, in the remaining two, the head of the bone. One of the last named two died; the three remaining recovered, as I afterward heard, and had very useful arms. In one of these cases a ball striking at about the insertion of the deltoid, drove a splinter of bone down between the head of the radius and external condyle. One man, with a buckshot in his brain, near the base, remained for one fortnight after the reception of the injury in a very comfortable, intelligent state; then convulsions, gradually increasing in severity, closed the scene. Two stumps of amputations in the continuity of the fore arm came under my notice, whether done for good and sufficient reasons I could not ascertain. I saw no living thigh stump. Of two amputations at the knee-joint, done by me, one for sloughing stump and protruding tibia, the other for gunshot fracture of tibia, I never was able to learn the results. I twice ligated the femoral artery in Hunter's canal for secondary hæmorrhage. In one case, in which the external wound had nearly healed, the muscles had been so dissected up, and the entire limb so infiltrated with blood that gangrene followed. The other recovered from the operation, but I afterward heard died of diarrhœa about a month after the operation. I found the rat-toothed bullet forceps of Tiemann's peculiar pattern of very great use, enabling me to extract bullets with great facility. I saw here no case of injury of elbow-joint. Several cases of gunshot fracture of the femur, of men belonging to the 9th Ohio Volunteers, were doing well when I last saw them; and, as I afterward learned from the surgeon of the regiment, they reached Cincinnati in safety. From Somerset General Thomas's division was ordered back to Louisville, and thence was sent around by steamboat to Nashville. Nothing of interest, surgically, occurred during this voyage, or during our stay in Nashville." * * *

[Other extracts from the report of Surgeon Smith will be printed with documents relative to the Battle of Shiloh.]

XXVIII. *Account of the Campaign of the Army of the Tennessee, from February to June, 1862, including the Capture of Forts Henry and Donelson, and the Battles of Shiloh and Corinth.* By Surgeon JOHN H. BRINTON, U. S. V., Medical Director of the Army of the Tennessee.

"In the latter part of the month of January, 1862, preparations were completed for the departure of most of the troops stationed at Cairo and its dependencies, on an expedition, afterwards known as the campaign of the Tennessee and Cumberland. The force which left Cairo on February 3d, under the command of General Grant, consisted of ten regiments of infantry, chiefly Illinois and Iowa troops, with an appropriate force of cavalry and artillery. The troops embarked on large Mississippi

transport steamers, and proceeded, on the same day, up the Ohio River as far as Paducah, Kentucky. Here the expedition laid to during the night, and, on the following morning, having been reinforced from Paducah by an equal body of troops under General C. F. Smith, steamed slowly up the Tennessee River, towards Fort Henry. This fort was erected on the right or Tennessee bank of the river, and was so situated as to command completely the navigation of the stream. The waters of the Tennessee at this period had risen forty feet above the ordinary level, an almost unprecedented height. In consequence of the swollen stream, the fleet was enabled to pass safely over the torpedoes numerously planted by the enemy along the bed of the river. On the morning of February 4th, the transports were moored in safety to the bank, within ten miles of the rebel fort, and the debarkation of the main body of the troops was effected. During this day and the one following, the gunboat fleet, consisting of the Essex, the Carondelet, the St. Louis, the Cincinnati, the Conestoga, the Tyler, and the Lexington, which had acted as the armed guard of the transports, were occupied in clearing the river of the torpedoes and infernal machines. The attack on the fort was fixed for the 6th of February. In the meantime, General C. F. Smith's Division, consisting of the 7th, 9th, 12th, 23th, and 41st Illinois, the 11th Indiana, the 7th and 12th Iowa, and 8th and 13th Missouri Volunteers, with cavalry and artillery, were debarked on the left bank of the river for the purpose of occupying Fort Hindman, which crowned a hill on the opposite bank, overlooking and commanding Fort Henry. Early on the morning of the 6th, General McClelland's Division, composed of the 8th, 18th, 11th, 20th, 27th, 29th, 30th, 31st, 45th, and 48th Illinois infantry, the 4th Illinois cavalry, four batteries of artillery, and four companies of detached cavalry, were ordered to march towards the Dover road, in order to come in the rear of Fort Henry. At the same time the gunboats were directed to open upon the works, and to drive the cannoners from their guns. A heavy storm on the previous day rendered the march of General McClelland difficult and tedious; and it was with the greatest labor that his guns could be dragged along. In the meantime, the attack had been commenced by the gunboats, and, after one hour's cannonading, the fort surrendered to Commodore Foote. It was by him turned over to Brigadier General Grant, commanding the expedition. After the fall of Fort Henry, the major part of the U. S. forces encamped on the hills overlooking the fort. A few companies were placed within the work and on the low ground in its immediate vicinity. A small garrison was subsequently stationed here. These troops occupied the log huts of the enemy, and were sufficiently protected from the inclemency of the weather. They suffered much, nevertheless, from disease, especially typhoid pneumonia and typhoid fever. On the 11th of February, all of the sick who had accumulated were dispatched on board the hospital transport City of Memphis to the hospitals established at Paducah and Mound City. The men who had been scalded by the explosion of the boiler of the gunboat Essex had been previously sent to the hospital established at the latter place. On the 12th of February, one portion of the army moved in two columns and by different roads, from Fort Henry on the Tennessee, towards Fort Donelson on the Cumberland River. Another embarked on transports, and, under cover of the gunboats, steamed down the Tennessee, and up the Ohio and Cumberland Rivers, and landed on the left bank of the latter stream, about three miles below Fort Donelson. The reinforcements, which were then on their way from St. Louis, Cincinnati, and other points on the Mississippi and Ohio Rivers, were also ordered to this landing-place. The march from Fort Henry across to the Cumberland River was readily accomplished, the road, for the most part, being in good condition. The transportation and baggage had been reduced as much as possible, and the army moved without tents, bivouacking in the woods. The hospital department, in consequence of the limited number of wagons and animals at its disposal, carried but the scantiest supplies. It was intended that the residue of its stores should be forwarded by water to the landing on the Cumberland River.

The force which moved from Fort Henry by land, in all some twenty-eight or thirty regiments, advanced to within two miles of the enemy's stronghold. Here his pickets were driven in, and a line of investment was formed. On the 13th, this line was contracted. On the 14th, the skirmishing was heavy, and the enemy was gradually dislodged from the hills and woods and forced within his line of rifle pits. During the morning of this day an attempt was made by the gunboat fleet to force the passage of the river. This, however, failed, as the fire from the water batteries of the enemy proved too severe. One or two of the gunboats were disabled, and the fleet dropped down beyond the range of the heavy guns. On the morning of the 15th of February, a vigorous sortie was made by the enemy, who endeavored, in force, to cut his way through the investing lines on our right. This attempt on his part was, however, stoutly resisted, and during the afternoon and evening he again retired to his works. The action of this day was the most severe and bloody which occurred during the attack. In the meantime, General C. F. Smith, by a determined assault, succeeded in occupying a portion of the line of defence, from whence his guns could enfilade the remainder of the rebel works. Early on the morning following, Sunday, the 16th of February, the fort surrendered.

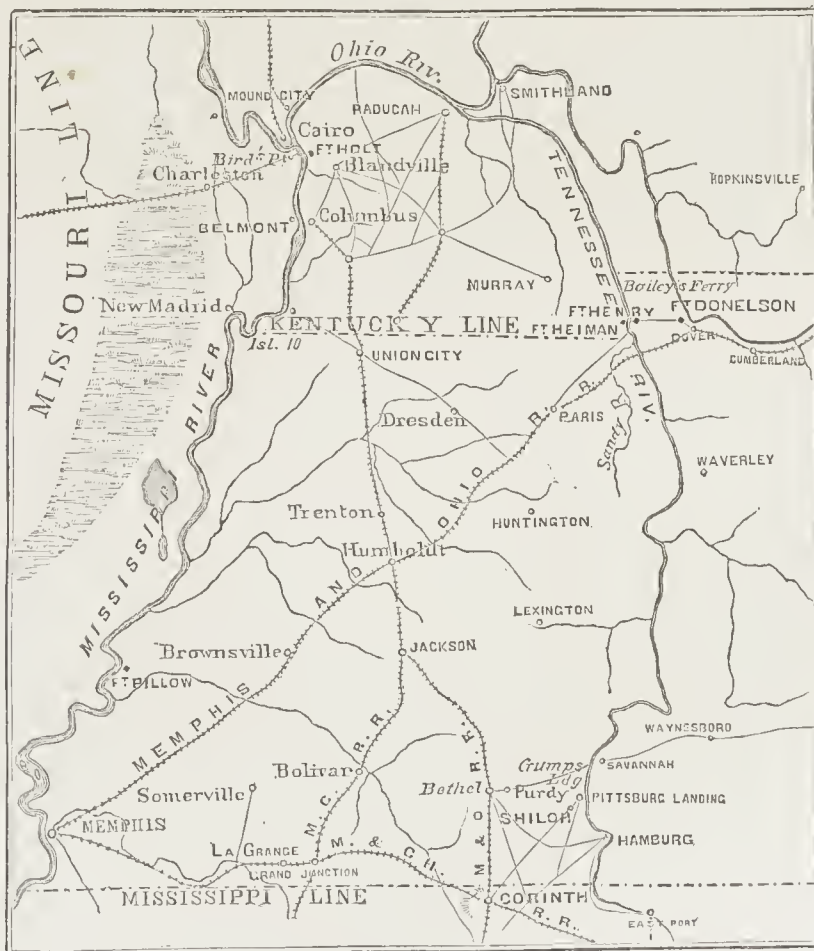

FIG. 4.—Map of the Field of Operations of the Army of the Tennessee, from February to June, 1862.

and during the afternoon and evening he again retired to his works. The action of this day was the most severe and bloody which occurred during the attack. In the meantime, General C. F. Smith, by a determined assault, succeeded in occupying a portion of the line of defence, from whence his guns could enfilade the remainder of the rebel works. Early on the morning following, Sunday, the 16th of February, the fort surrendered.

Before entering into any detailed account of the action of the medical department throughout the siege of Fort Donelson, it may be well, for a moment, to allude to its general condition at the commencement of the campaign. The medical resources of the expeditionary force of the Cumberland and Tennessee were altogether insufficient. Irregularities in the quartermaster's department had for months existed in the District of Cairo, and the supply of ambulance wagons and hospital tents to the troops composing the force, did not equal the average amount distributed to the other armies of the United States. The number of medical officers, also, was too small; but two, a surgeon and assistant surgeon, were, at that time, allowed to each regiment, while the regiments were, for the most part, of nearly maximum strength. The amount of labor which subsequently devolved upon the medical officers was immense, and when it is considered that the campaign about to be initiated was to be sustained in a malarious country, and that the troops were to be subjected to every privation and exposure, it will readily be seen how unenviable was the position of the medical staff. In addition to the ordinary hardships of the march and bivouac, great battles were to be fought, and the wants of vast numbers of men, placed suddenly *hors de combat*, were to be met and supplied. The theatre of the bloody drama was almost a wilderness. Towns and villages were comparatively few, and the region, to a great extent, was uncultivated. Farm houses were encountered only at intervals, and the country had been impoverished and drained of its resources by the enemy. The distances to be traversed were great, and the bases of supplies remote. At no time, during the early part of this campaign, were the conveniences for the establishment of large general hospitals to be found; in fact, the drugs, medicines, and hospital stores absolutely essential for the field, were, with difficulty, obtained. Fortunately for the Army of the Tennessee, Surgeon J. Simons, U. S. A., the medical director of the district of Cairo, had, at an early

FIG. 6.—Rear view of the same.

period, organized a general hospital at Mound City, Illinois, with a capacity of one thousand beds. After the surrender of Fort Donelson, and the battle of Shiloh, the capacity of this hospital was augmented to seventeen hundred beds. The hospitals at Paducah were also enlarged to the utmost, and it was the endeavor of the surgeons to keep, at all times, a certain number of beds vacant and in reserve. The regimental medical supplies, as a general rule, were less than the quota allowed by regulations. Usually every regiment possessed one or two two-wheeled ambulances of the pattern figured, and one, or sometimes two, four-wheeled ambulance wagons. The former vehicles proved, practically, failures; they were too light in their construction, unsuited to the rough, miry roads of the country, and were easily broken.

FIG. 7.—Side view of the Wheeling or Rosecrans Ambulance.

They accommodated but two or three invalids, and, especially in rainy weather, required two horses to draw them. The four-wheeled spring ambulance, figured on the preceding page, fulfilled its purpose better. Every regiment was furnished with the ordinary hospital knapsack, intended to be carried by the orderly accompanying the surgeon, in action. Most of the regiments possessed, also, in addition, a medicine chest, filled with drugs. This chest was carried in one of the ambulance wagons.

The surgeons of regiments were ordered by the medical director of the expedition to carry with them, each some fifteen or twenty extra blankets. The number of hospital tents did not exceed two to a regiment, and frequently there was but one. Of hand-litters or stretchers, two or three were usually carried. The very great degree of dampness and cold during the commencement of this campaign rendered some permanent means of warmth necessary for the comfort of the sick and wounded in the hospital tents. The stove usually adopted was the ordinary funnel-shaped one of sheet iron, open at the bottom, and placed directly on the ground. It answered the purposes of heating a small tent sufficiently well, but was too small for the larger tents. Each regiment was also furnished with an hospital mess chest.

The arrangements for the accommodation and relief of the wounded, during the siege and assault of Fort Donelson, were as efficiently conducted as was possible under the circumstances. The medical department suffered great privations. The supplies of stores and medicines, for the reasons previously given, were but scanty, and the number of medical officers was hardly sufficient. Still, under the efficient supervision of Surgeon H. S. Hewit, U. S. Volunteers, at that time medical director of the expedition, such disposition was made of the men and means at hand, that all the wounded were rapidly removed from the field, and promptly and properly dressed. To accomplish this result the following system was adopted: every regiment, as it passed into action, was accompanied by one medical officer. This officer remained with the regiment and shared its fortunes and its dangers. In all cases of severe injury, and when the peril to life was imminent, the necessary surgical attentions were rendered on the spot, and under fire. When the case was less grave, and especially when the patient was able to walk, he was sent some two or three hundred yards to the rear of his regiment to the most advanced point attained by the ambulance train. This depot was generally so placed as to be removed from the immediate range of fire. The locality selected was commonly a ravine, and the route was so chosen as to wind in and out the valleys, with but little exposure. The fire from the enemy's guns, mounted on works cresting the hills, was apt to be high, and this fact contributed to the ease and security with which the wounded were transported from the field to the large hospitals established in the rear, at points completely out of range. These hospitals were four in number. Three of them, A, B, and C, under the direction, respectively, of Surgeons H. P. Stearns, D. W. Hartshorn, and Horace Wardner, U. S. V., were established in small log huts and out-buildings. A fourth was formed of hospital tents, and was in charge of Surgeon C. Goodbrake, 20th Illinois Volunteers. The author acted as consulting surgeon.

A building occupied as headquarters, near the intersection of Hickman Creek and the Fort Henry road, was, during the progress of the siege, turned over to the medical department, and was also used as a hospital. To these hospitals all the wounded were transported as soon as they fell; those from the left wing to the hospitals at B and C; those from the centre to the hospital at A, and those from the right wing to an hospital near to A. As the division of General McClelland moved to the right, and when the severe fighting occurred on this wing, additional field hospitals were established by Surgeon H. P. Stearns at some small houses on the roadside.

All of the ambulances of the various regiments in the field were collected together for the formation of the ambulance trains. Each one of these trains was placed under the charge of a non-commissioned officer, whose business it was to see that a continuous line of wagons should ply between the scene of conflict and the general hospitals. These orders were strictly followed, and, as a result, the majority of the wounded on the field were, in a few minutes, transported to points where every surgical attention could be rendered, and where their cases could be definitively acted upon. At the general hospitals, the accommodations afforded by the log huts and stables were found to be utterly insufficient, and it became necessary to extemporize shelter for the injured. This was effected by littering the ground with hay and straw, and spreading, as a protection, canvass covers obtained from the quartermaster's trains. Large fires were built, bullocks killed, soup, tea, and coffee prepared, and thus the wounded

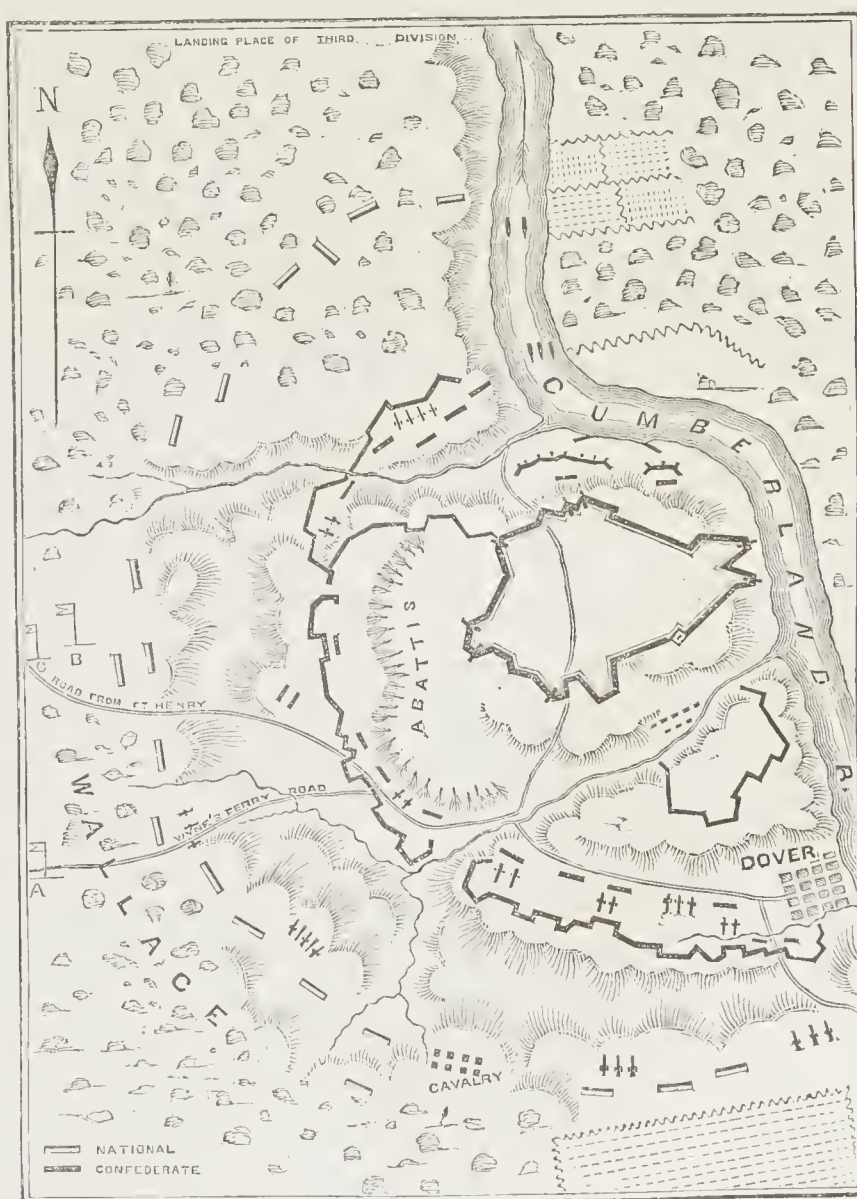

FIG. 8.—Map of Fort Donelson and its Approaches, and the Hospital Stations of the besieging Army.

were placed in a state of comparative comfort, despite the inclemency of the weather. The inmates of these field hospitals were allowed to remain four or five days, at the expiration of which time arrangements were perfected for their transportation to other points. They were shipped in steamers, sent down the Cumberland River, and were distributed to the hospitals at Paducah, Mound City, Cincinnati, Louisville, and St. Louis. Many of the operations performed in the field hospitals were of the most serious character, and the surgeons in charge labored incessantly for several days. The immediate results of these operations were, as far as known, successful. No ease of death occurred under the knife, or following immediately any major operation. In almost every instance anaesthetics were employed, chloroform being commonly selected. No untoward result followed its use. In many cases of compound fracture of the lower extremity, and especially of the femur, attempts were made to save the limbs. These efforts, in some instances, were attended with remarkable success. At this period of the war in the West, the want of a number of hospital steamers, properly fitted up and well officered, became painfully manifest. The lack of such means of transportation was, in many cases, the cause of great misery to our poor invalids, and, to the certain knowledge of the author, many lives were, in consequence, sacrificed. It was not until some weeks after the events described that this deficiency was remedied by the action of the military authorities.

The strength of the national forces engaged, during the three days' attack upon Fort Donelson, was about thirty thousand men. The loss, as stated officially, amounted to four hundred killed, and one thousand seven hundred and eighty five wounded. The casualties resulting from cannon shot or shell, in this action, were comparatively small; by far the majority of the wounds were inflicted by the rifle. In many cases, the missile employed was the conoidal ball fired from the improved arm. In other instances, the wounds were produced by the round ball fired from the ordinary western rifle. The great predominance of injuries from small arms, as noticed at Fort Donelson, arose from the fact that the action was essentially one of sharpshooters. The enemy, from behind his earthen breastworks surmounted with logs, kept up an incessant fire, to which the Federal troops were unavoidably exposed for a protracted period. The only shelter of which they could avail themselves was the abatis of felled timber on the hillsides in front of the enemy's works. This cover was slight and precarious, and to extricate a wounded man from the intertwined branches and prostrate trunks was painful and difficult for him, and perilous for the litter bearers. Despite these difficulties, the wounded who could not drag themselves off were borne away early in the evening of each day by the ambulance attendants, whose courage and perseverance was worthy of the highest praise. In many instances they succeeded in removing the wounded from within a very short distance of the enemy's lines. The loss sustained in this action was disproportionately divided among the investing forces. Some divisions suffered far more than others. The casualties in General McClelland's first division were greatly in excess of the average. This was probably due to its exposed position, forming, as it did, the extreme right wing, stretching toward the Cumberland river and across the road leading from the fort to Clarksville, the path by which the enemy endeavored to effect his retreat.

The loss of the enemy during the siege and assault was probably not quite as heavy as that experienced by the national troops. The former fought behind earthworks deliberately and carefully constructed, and for the first two days they were but slightly exposed. During all this time, they were able to observe every movement of their assailants, and to mass their forces and direct their fire wherever an assault was threatened. Most of their wounded were rapidly conveyed, by steamers, to Clarksville and Nashville. At the subsequent capture of these towns, many of them fell into our hands. When the village of Dover, in the immediate rear of Fort Donelson, was occupied by General Grant, only a few of their injured were found, and the wounds of these were generally so severe, as to have forbidden their previous removal. During the vicissitudes of the fight of February 15th, one or two small temporary depots of the Federal wounded fell into the hands of the enemy. These patients were sent by the enemy, with their own injured, to Nashville, and a few days later were recaptured by the national force which occupied that city. Immediately after the occupation of Dover, all of the slightly wounded were placed in hospital in the houses of that town. The seriously injured, as has been already stated, were despatched in transports to large general hospitals, prepared for their reception, in the cities on the Ohio and Mississippi Rivers. The exposure of the troops during the siege was very great. The weather was, at first, excessively cold; a light fall of snow, degenerating into a sleet, then occurred. The troops resting on their arms during the night in the presence of the enemy were, of course, unprotected by tents. But their greatest suffering arose from the total absence of fires during the night, an absolute military precaution. Each morning, at sunrise, the firing recommenced, and it was with the greatest difficulty that provisions could be prepared. The suffering of the wounded during this protracted battle, although unquestionably great, was, however, not to be prevented. The hospital accommodations afforded by the two or three mean farm houses in the neighborhood were, at best, but insignificant, and of hospital tents there were scarcely any. Transportation for the few tents in the possession of the medical staff, when at Fort Henry, had been denied, simply because it could not be procured. In fact, the teams and wagons were too few in number to meet the wants of the army. Those at command were employed day and night in bringing up food and ammunition, and this was with difficulty accomplished. It was, however, a noticeable fact, that despite the benumbed condition of the men before being wounded, and their comparative exposure afterwards, not a single case of tetanus occurred during their sojourn in the vicinity of Fort Donelson. Nor does this affection appear to have been met with subsequent to the removal of the same wounded to the general hospitals. At least no cases were reported, and the author has every reason to believe that they did not occur. The unavoidable exposure sustained by the troops at Fort Donelson resulted, ultimately, in grave diseases, which materially thinned the ranks of the army. Diarrhoea, dysentery, and pneumonia of a typhoid type became fearfully prevalent, and thousands of soldiers were broken down, and were then sent down the river to the general hospitals. During the two weeks following the surrender of the fort, the army lay, for the most part, on the surrounding heights. Detachments were pushed up the Cumberland River to Clarksville, and about the same time the division of Brigadier General Nelson, which had been detached from General Buell's army to reinforce General Grant, was directed by the latter to proceed in transports, under convoy of a gunboat, to Nashville. This, General Nelson accomplished, reaching Nashville simultaneously with the arrival of General Buell at Edgefield, on the opposite bank of the Cumberland. General Buell, with the army of the Ohio, had advanced by way of Bowling Green. General Nelson immediately landed his troops and occupied the town, which, on the following day, was formally surrendered by its mayor and prominent citizens to General Buell.

By the early part of March, all obstructions to the free navigation of the Cumberland River were removed, and the army was withdrawn from Fort Donelson, and was again concentrated around Fort Henry on the Tennessee. The waters of this river still continued at an inordinate height, and its banks were, in many places, overflowed. Fort Henry itself was almost completely submerged. Towards the middle of this month the entire force, mustering nearly fifty thousand men, and filling eighty transport steamers, proceeded, under the command of Major General Smith, up the Tennessee River, as far as Savannah, on the right bank of the stream. The distance from Fort Henry to Savannah is about one hundred and twenty miles. On the arrival of the expedition at this place, the debarkation of the troops was effected, although but slowly. For military reasons the troops were kept for several days closely packed on the transports. Many of these steamers carried a thousand men, and some few even more, together with the accompanying equipage and animals. Sufficient accommodation had not been provided for the troops on the boats; and, as the result of the overcrowding and exposure to the night air, the same disastrous sickness and mortality, which had prevailed below, accompanied them here. An epidemic typhoid fever of the most aggravated form appeared, and the daily deaths were numerous. To add to the difficulties of the situation, the supplies of drugs and medical comforts ran short, while sufficient shelter and accommodation could not be provided for the sick. The town of Savannah became one vast hospital, and nearly every dwelling was occupied by invalids. Hospital tents, so badly needed, could not be procured, and the transportation by the boats at the disposal of the medical department, was sadly inadequate. In fact, but one steamer, the City of Memphis, was available for this purpose, and that but to a limited degree, the lower deck of the vessel being occupied by the quartermaster's department. As a consequence, the sick, not being removed with sufficient rapidity, accumulated on the hands of an already overworked medical staff. To remedy this evil, the author was despatched by Major General Grant, who had reassumed the command of the army at Savannah, to St. Louis, the headquarters of the department, and, after some delays, succeeded in procuring other steamers, the first of the noble hospital fleet of the western waters. The full description of the organization of this hospital transport system will be found elsewhere.

About the first of April, the main body of the army moved to a point on the opposite or left bank of the river, known as "Pittsburgh Landing," shortly to become the scene of one of the most desperate conflicts of the war, the battle of Shiloh Chapel. The physical condition of the men about to engage in this severe action was unpromising in the extreme. Many of them had been for weeks suffering from the diarrhoea peculiar to the Tennessee River. This is said to result from the large amount of animal decomposition which takes place on the mussel beds or shoals, a few miles above Pittsburgh Landing. Whether this explanation be or be not correct, it is certain that almost every one drinking the waters of the river suffered from a profuse diarrhoea which resisted obstinately the ordinary therapeutic means. These persistent discharges greatly augmented lassitude already resulting from the general malarious influence, and contributed to weaken the most robust.

On the morning of Sunday, April 6th, 1862, the national forces, commanded by Major General Grant, were attacked by the enemy, led by Generals A. Sidney Johnston and Beauregard. The disposition of General Grant's command on this morning may be thus briefly stated. His left wing rested on Lick Creek, and his right on Owl Creek, two streams emptying into the Tennessee River, nearly at a right angle to the course of the latter. The main body of the army lay between these streams, nearly parallel with the direction of the river, and was arranged in two, or rather three, parallel lines. The front line was composed of the divisions of Prentiss and Sherman, two and a half miles distant from the landing. The rear, near the river, was formed by the divisions of Hurlbut and Smith. Between these two lines were posted the forces under McClelland, the 1st division of the army. On the 4th and 5th of April some preliminary skirmishes occurred on the extreme front, and at day-break on the 6th, General Johnston attacked in force. His command was disposed in three lines, at intervals of from five to eight hundred yards. His first line was led by Hardee, his second by Bragg, and his third by Polk. A powerful reserve, under Breckenridge, followed in the rear. The assault, fierce and impetuous, commenced on General Grant's right, and rapidly extended along his entire front. After a brief resistance, the division of Prentiss, on the left, was pierced, and partially surrounded, several of its regiments, with the General commanding, were captured, and the remainder of the command was driven back. Sherman's division, fighting desperately, was also obliged to retire, and its camp was captured. The second line, McClelland's command, for a short period held their ground. But the attack of the enemy was furiously pushed, and their supporting lines were successively brought into action. By noon, the front and middle lines of the Federal force, throughout their whole extent, were pushed back on the rear lines in the vicinity of the landing. The brunt of the assault was now sustained by the divisions of Hurlbut and Smith, the latter commanded by General W. H. L. Wallace, who soon fell, mortally wounded. The career of the enemy was constantly and persistently onward, until he was confronted and held at bay by batteries of heavy artillery, hastily placed in position. In the meantime, the army of the Ohio, under Major General Buell, was rapidly hurrying to the scene of action; and by half-past four o'clock in the afternoon the first regiments of Nelson's division crossed and advanced to the support of the heavy battery. At the same moment, the guns of the Lexington and Tyler, wooden gunboats, opened on the enemy, who incautiously approached too near the river on the left. Darkness coming on, the attacking columns withdrew for a short distance. The condition of affairs on the bluffs at the landing was, on this night, most gloomy. All of the camps, with the exception of General W. H. L. Wallace's, had fallen into the enemy's hands. Many of the regiments were disorganized, and the division of General Prentiss was annihilated. The capture of the camps produced great suffering among the troops, and very materially interfered with the care of the wounded. Despite all the misfortunes of the day, one consolation remained: the enemy had failed to prevent the junction of the armies of the Ohio and of the Tennessee. The fresh troops of the former were constantly arriving from Savannah and rapidly passing to the front. Every moment of this night was spent in preparation for the coming contest of the morrow. Early in the morning, the united forces under Generals Grant and Buell, the former reinforced by the division of General Lewis Wallace, which arrived in the evening, moved forward to the attack. The enemy, obstinately disputing the ground, slowly retreated, and the national army again passed over and held the ground lost on the previous day. By four o'clock, on Monday afternoon, the enemy had been driven from the field, and was in full retreat on Corinth, abandoning his dead, and very many of his wounded. The Federal army regained its camps, and that night the troops occupied their old quarters without fear of molestation. The labors of the medical officers during the battle of Shiloh, and subsequently, were most arduous, and were effected under every disadvantage. The capture of the camps had stripped the

regimental officers of all their medical supplies and instruments, which were carried off by the enemy in their retreat. The stores which had been forwarded from St. Louis had not yet arrived. The number of medical officers was scanty, and very many of them, who remained at their posts in local hospitals, had been captured during the Sunday's fight. Under such circumstances, the medical director of General Grant's army, Surgeon H. S. Hewit, U. S. V., was called upon to provide for wounded as numerous as those of Waterloo. It must be remembered that this was to be done in a wilderness, that no depots existed in the vicinity, and that no towns or cities of any size were accessible. The only building on the field which could be taken for a hospital was a single log hut, fifteen by thirty feet, near the landing, which had been originally used as headquarters. This, with a few tents, was the only shelter for the injured which could be afforded in the first day's fight. The removal of the wounded was a matter of very great difficulty. In the early capture of the camps the wagons and stretchers were lost, and the rapid advance of the enemy precluded the transportation of the injured to the rear by hand. Indeed, during the battle, and for the two days following, men could not be spared from the ranks. Military necessity required that every man should be at his post in the field. The mass of the wounded in Sunday's fight, who received the attentions of the surgeons, had dragged themselves, as best they might, to the high bluffs between the middle and hospital landings. Here, in the vicinity of the log hut previously mentioned, such tents as were procurable had been pitched, and such dispositions as the circumstances admitted were made. A limited amount of hay had been obtained from the transports, and this, littered on the earth, served as a bed for those most grievously hurt. All others lay on the soaked ground. To feed the sufferers, bullocks were killed, and soups prepared with great difficulty, for neither cooking utensils nor hospital furniture could be obtained. The weather was terrible, the rain incessant, and the mud almost knee deep. The medical officers of the command labored faithfully, and all that was possible was done to alleviate the horrors of that fearful night. To add to the terrors of the situation, it must be stated, that even the plateau occupied by the wounded had become a thoroughfare, and was swept over by the retreating masses of our troops, many of whom, a panic stricken mob, sought the shelter of the cliffs to escape the fire of the enemy. On the afternoon of the Sunday's action, the shot of the enemy, also, fell freely among the writhing masses of wounded, whose farther removal or protection was impossible. During the latter part of the same day, large numbers of the injured were conveyed by boats, and especially by the hospital transport *City of Memphis*, to the town of Savannah, seven miles below, on the opposite side of the river. On the following morning, Monday, the advance of our troops and the retreat of the enemy commenced. During this forward movement, vast numbers of wounded were brought in to the main hospital depot. These were not only those who had been hit on that day, but also our own and many of the enemy's wounded from the Sunday's fight. Surgeon Goldsmith, U. S. Volunteers, was placed in charge of the main hospital. By the authority of General Grant, all tents that could be found were at once pitched, and the hospital shelter was extended to its utmost, and an operating staff of the most efficient surgeons was detailed. These gentlemen, among whom were Brigade Surgeons M. Goldsmith, S. W. Gross, Maylert, Smith, Mussey, and Johnston, Surgeon Stephens of the 6th Ohio, and Assistant Surgeon D. Bache, U. S. A., rendered efficient service, and are especially mentioned in the report of Surgeon R. Murray. A separate hospital for three hundred men was improvised by Assistant Surgeon B. J. D. Irwin, U. S. A., who, by prompt seizure of tents, camp kettles, cooking utensils, etc., from a camp adjacent to the fighting ground of his division, was enabled to place it in admirable working order. Dr. Irwin was ably and faithfully assisted by Surgeon Menzies of the 1st, Surgeon Griffith of the 2d, and Surgeon Welch of the 20th Kentucky Volunteers.

On the morning of Tuesday, Surgeon Murray, by virtue of his rank, assumed the medical directorship of the united armies. The general arrangements of Surgeon Hewit were approved and continued, and every exertion was made to send away the wounded. The organization and fitting up of the boats was entrusted to Brigade Surgeon A. P. Maylert, U. S. V. The regular hospital boat, the *City of Memphis*, under charge of Assistant Surgeon Turner, 1st Illinois Artillery, was immediately laden with seven hundred wounded, who were transported to Mound City Hospital. The steamers *Hiawatha*, *J. J. Roe*, *War Eagle*, and *Crescent City*, were turned over to the medical department. These boats were at once fitted up, as well as the circumstances would permit, and on Tuesday, Wednesday, and Thursday following the battle, were filled to their utmost capacity and despatched down the river to the general hospitals at Louisville, Cincinnati, Evansville, New Albany, and St. Louis. Every boat, on leaving, was placed under the charge of an experienced surgeon, and, in their downward trips, many important operations were performed. Towards the end of the week, other boats arrived: the government hospital boats *Louisiana*, *D. A. January*, *Empress*, and *Imperial*, all of which left full of wounded for the hospitals of the great western cities. The able president of the western sanitary commission, Mr. Yeatman, and Dr. Douglass, of the United States sanitary commission, soon arrived, and, by the distribution of the stores at their command, contributed much to assist the efforts of the medical officers. In addition to the civil aid thus rendered, volunteer boats from a distance shortly made their appearance. The one from Louisville deserves special mention. The officers of this vessel cooperated in the most satisfactory manner with the medical director, receiving and caring for the wounded of their own and other states, and also wounded Confederate prisoners. It is to be regretted that this same liberal spirit did not animate all of the volunteer and aid societies who hurried to this scene of carnage. It unfortunately, however, happened that, in some cases, boats fitted out by the governors of states, and by local sanitary committees, endeavored to distinguish between the wounded of their own and other states, in favor of the former, and refused to receive, or received unwillingly, those whom, in the estimation of these charitable philanthropists, were not entitled to their aid. In short, so greatly did this illiberal conduct conflict with, and prejudice the action of, the medical department, that it became necessary for the director authoritatively to declare that, as regarded the wounded, all state distinctions should be ignored, and that the helpless soldier, friend or foe, should alike be cared for.

Despite the paucity of resources, the action of Surgeons Hewit and Murray, the medical directors of the two great armies, was, under these trying circumstances, so energetic that, by the expiration of the week of the battle, all the injured were sent away to permanent city hospitals. The total force carried into this action by General Grant amounted, probably, to fifty-five thousand men. Of these, probably some twenty thousand were raw troops who had never before been under fire. Eight or ten regiments behaved badly, and sought the shelter of the river bluffs in an early stage of the action. They scattered along the river side in complete disorganization, and were of no service whatever in resisting the enemy. The number of regiments which stood to their colors, and did faithful soldiers' duty on these two trying days, did not exceed fifty. The force

General Buell engaged on Monday was about thirty-five thousand. The number of killed, wounded, and missing, in the Federal armies, amounted to about twelve thousand; by far the greater proportion of these occurred in the army of the Tennessee. The casualties in the army of the Ohio were two hundred and thirty-six killed, and one thousand seven hundred and twenty-eight wounded. It must, however, be remembered, that the bulk of General Buell's force, arriving on Sunday night, participated only in the action of Monday. The attack of the enemy on Sunday was met by General Grant's forces alone, with the exception, perhaps, of two regiments of the army of the Ohio, who, on Sunday night, marched to the support of the batteries on the left.

As has been already remarked, the supplies of medicines and hospital stores in the possession of the army of the Tennessee, on the morning of the 6th of April, were but scanty, and most of the regiments lost all, including their instruments, at the time of the capture of their camps. The sufferings of our wounded, when carried to the rear, were necessarily much aggravated by this existing destitution. This will, perhaps, be partially appreciated, if the reader will imagine thousands of human beings, who had been wounded and lacerated in every conceivable manner, on the ground, under a pelting rain, without shelter, without bedding, without straw to lay upon, and with but little food. The situation of a hale man, stricken down by violence, is at all times pitiful in the extreme, even when surrounded by those who sympathize and render the aid they can. But the circumstances attending the battle of Shiloh were fearful, and the agonies of the wounded were beyond all description. They were, moreover, fearfully increased by the dearth of those nourishments and stimulants so essential to relieve the shock of injury. It must not be inferred from these remarks that blame was to be imputed to the medical officers of the two commands. Far from it; they did much, and all that was in their power. The difficulty, at all events, so far as the army of the Tennessee was concerned, lay in the absence of supplies. This contingency had been foreseen, and strenuous efforts had been made by the medical directors to anticipate it. Requisition following requisition had been made for the very stores, medicines, and hospital tents, the want of which proved so disastrous upon the 6th and 7th of April. Unfortunately, at this time the medical department of the United States army had not yet freed itself from that system of blind routine which, serving well the wants of a small army, in time of peace, yet failed utterly to meet the necessities of a gigantic war. With regard to the army of the Ohio, the latter part of their march from Nashville had been a forced one, and their transportation, limited to but one hospital wagon to each regiment, was insufficient. As this command approached Pittsburgh, the medical officers were obliged, from military reasons, to leave their ambulances and hospital supplies behind, and hurry on in pressing haste. Instruments, and such supplies as could be carried on horse-back, were hastily brought to the field, and thus, to a certain extent, immediate wants were supplied. A day or so after the battle, the trains arrived, and also a storeboat laden with supplies, under the charge of Assistant Surgeon B. Howard, U. S. A., the medical purveyor of this army. The advent of this boat, which had been ordered from Louisville up the Tennessee river, was most opportune. The supplies thus furnished, to a great extent, sufficed to meet the wants of the destitute and impoverished hospitals.

The nature of the wounds caused by the fire to which the troops were subjected at the battle of Shiloh, was of the most varied kind. At times they were exposed to that of artillery, both light and heavy, from which almost every species of projectile was thrown—solid shot, round and conical; grape and canister, spherical case and shell. At other times, the fire was from musketry, both at long and short range. The small arms used by the enemy was the improved rifle, throwing the conoidal ball; the western rifle, and the old fashioned smooth-bore muskets. The cartridge for the latter was generally composed of ball and buck shot. The smooth-bore musket was largely used at Shiloh, and there, as elsewhere, proved itself a formidable weapon. Its destructiveness arises, possibly, from the fact that troops armed with it most frequently close with their opponents. The small balls in the cartridge also scatter to a considerable extent, and the chances of striking an enemy at short range are largely increased.

As has been observed by Surgeon Murray, in his report of this battle, a large proportion of our wounded were hit in the lower extremities. The killed were mostly shot through the head and abdomen. No case was reported to Surgeon Murray of death from hæmorrhage, and only one instance of active bleeding from a vessel of large size. Surgeon Goldsmith, U. S. V., mentioned to the author, that being desirous of learning whether external hæmorrhage often occurs as the instant result of gunshot wound, he had placed himself immediately in the rear of a line exposed to a heavy concentrated fire. As well as he could observe, of the many men injured at this time, but one such instance of hæmorrhage occurred, and that was in the case of a soldier stricken in the neck by a fragment of shell. The carotid artery was severed, and death was instantaneous, before the observer, in close proximity, could reach him. The death of General A. Sidney Johnston, commanding the enemy, probably resulted from hæmorrhage. It is stated in the despatch of Colonel Preston, who had his body in charge, that he received a wound from a minié ball which cut the popliteal artery, but he rode on, until, from loss of blood, he fell, exhausted, and "died without pain, in a few moments." But very few bayonet or sabre wounds presented themselves; a remarkable fact in an action of this magnitude, in which the losses on both sides were so heavy, and in which the forces engaged were at such close quarters. The medical corps, throughout the whole of this bloody conflict, behaved with the utmost gallantry. Brigade Surgeon Everett was instantly killed by a ball striking him in the forehead, and other medical officers were severely injured. The operations performed on the field were, many of them, of the gravest nature; among these were a large number of amputations and excisions. The surgeons of the principal hospital depots were heavily tasked, and worked for three days and nights, with but little remission. No amputations of the hip joint occurred on the field. Two, however, were performed subsequently on the transports; one at the hands of Brigade Surgeon George C. Blackman, U. S. V.,* of Cincinnati, on board of the volunteer boat sent by the city of Cincinnati. The patient died in six days. The other was performed by Surgeon D. P. Smith, U. S. V., on his way down the Tennessee River, in charge of a boat-load of wounded.* The patient lost but four or five ounces of blood, and reached St. Louis in safety, but died, as the author has been informed by Surgeon Smith, six days afterwards. The results of the surgical operations performed at the battle of Pittsburgh Landing cannot be satisfactorily arrived at. The present system of surgical reports had not, at that time, been adopted, and the one then followed was extremely faulty. But little information concerning the action of the medical department was transmitted to the chief of the bureau, and that which was furnished was, to a great degree, destitute of professional interest. The rapid removal of the patients from the scene of action precluded the observation

* Cases xxiii and xxiv of *Circular 7*, S. G. O., 1867, p. 34.

even of immediate changes, and subsequent results were lost from the reasons above stated. As far, however, as the author has been enabled to learn from verbal inquiries in many hospitals, the results of the surgery of the battle of Shiloh, were, on the whole, unfavorable. The exposure of the men immediately following the receipt of their injuries, the absence of proper nourishment, the scarcity of medical supplies, and the prolonged transportation in over-crowded boats, all tended so to depress the vital powers as to favor, to a marked degree, the development of pyæmia, and death from exhaustion. At the time of this battle, it was utterly impossible to provide permanently for the wants of the wounded on the spot. The necessity for their transportation was unfortunate, but it was inevitable. A certain number, some eighteen hundred, were conveyed to the village of Savannah, Tennessee, on the opposite bank of the river. Early in the month, and immediately following the occupation of the place by the United States troops, a number of regimental hospitals had been located at this place. Shortly afterward, the organization of a general hospital was directed by Medical Director Hewit. On the morning of the 6th of April, Surgeon Murray, in passing through the town, ordered all buildings to be at once converted into hospitals. This was done by the afternoon of the same day, by which time many of the wounded from the battlefield above commenced to arrive, and the number subsequently increased to eighteen hundred. Of these, about one thousand were placed in large and well ventilated buildings, tolerably well suited for their reception. Two hundred were placed in the houses of the inhabitants, and the remaining six hundred accommodated in tents. The location and drainage of the hospital camp was good, cleanliness was strictly observed, and the general police was satisfactory. The result of the cases treated in the tents was better, and their recovery more speedy than those who were treated in the houses. Surgeon Stearns, U. S. V., medical director of hospitals at Savannah, in his report, draws especial attention to this fact. This experience at Savannah is only one of the many instances, during the war, in which the treatment of wounded in tents in the vicinity of the battlefield has proven highly beneficial. Great difficulty was experienced, during and after this action, in procuring the necessary hospital attendants and nurses. No ambulance corps had ever been organized, and no details of men or nurses could be made from the ranks. The constant expectation of a renewal of the conflict obliged the military commanders to retain every able bodied man. The medical department was, therefore, forced to depend for hospital attendants entirely upon the panic stricken crowd who had ignominiously abandoned their colors and fled to the river for protection. It is probable that no battle of equal magnitude, where the numbers of wounded were so great, has ever occurred, in which the medical department was so destitute as on the bloody field of Shiloh. It is equally probable that, in no like conflict, have the wounded been so rapidly removed from the scene of action; a result mainly due to the energy and ability of Medical Directors Murray and Hewit.

As soon as the army at Shiloh had been disencumbered of its wounded, immediate steps were taken to perfect the organization of the medical department. This work was commenced by Surgeon James Simons, U. S. A., and energetically continued by Surgeon Charles McDougall, U. S. A., successively the medical directors of the united forces of the armies of the Tennessee, the Ohio, and the Mississippi. The latter corps, under General Pope, had been operating along the Mississippi, and, about the middle of March, had captured New Madrid, and Island No. 10. General Pope was then ordered by General Halleck to ascend the Tennessee River to Pittsburgh, and to join the troops already concentrated at that point. He arrived in a convoyed fleet on the 20th of April, with a force of twenty thousand men. His troops were then incorporated with those of Generals Grant and Buell, and formed a part of the forces thereafter known as the armies of the Tennessee. About the 20th of April, Major General Halleck, the department commander, arrived from St. Louis, and personally assumed the direction of the field movements of the united armies. By his order, full powers for procuring supplies were delegated to Surgeon McDougall, who vigorously applied himself to the work before him. At the time of Dr. McDougall's arrival at headquarters, the medical supplies of the united armies were exceedingly meagre. Great hospitals were absolutely needed, and yet but sixty-five hospital tents, some two or three hundred bedsacks, and a few cots were on hand. In the midst of this destitution, the sick commenced to arrive upon the river bank, singly and by hundreds. Orders had been issued for the command to prepare to advance, and these orders were interpreted by many medical officers as a permission to neglect and abandon their sick. The type of disease, at this time prevailing, was chiefly a camp fever, assuming a more or less typhoid form, and attended with great fatality. The violence of this affliction arose from several causes, the chief of which were the insalubrity of the camp sites, the impure water, and the scanty supply of fresh meat and vegetables. The ground, too, on which the army was encamped was the field of battle. On this, and in its close vicinity, thousands of men and animals had been buried, and in certain portions of the plain the effluvia were most disagreeably perceptible to the passer by. As the result of these combined causes, the sick list of every regiment was rapidly increasing; and it unfortunately happened, that the regimental hospitals were not those in which the invalid could best be cared for. They were generally formed of an insufficient number of tents pitched in the woods, on damp soil, with scanty supplies, and with inadequate medical attendance. The medical officers in the command scarcely averaged one to a regiment, and none were detailed to batteries. The care of the sick in these latter commands consequently devolved upon the nearest regimental surgeon, who, generally, was already overworked. To remedy these evils, Surgeon McDougall directed the formation of large general hospitals, intended especially for convalescents. The most seriously ill were received upon the hospital boats. The largest of these convalescent hospitals was established at the little village of Hamburg, three miles above Pittsburgh Landing. An effective force of medical officers was detailed for its organization and management, and supplies were furnished. A similar hospital was also established in the neighborhood of Shiloh Chapel, and others, also, in the respective divisions. When the number of medical officers was insufficient for the regimental duties, civil physicians were engaged on contract by the medical director, and were assigned to different posts of duty. In the meantime, ample stores of medicines and hospital comforts had arrived. The boat of the medical purveyor lay at the Landing, and the impoverished regimental hospitals were again supplied. About the same time, the 3d or 4th of May, great numbers of bed-sacks and cots were sent from the East to Pittsburgh, by order of the Surgeon General.

At the expiration of two weeks from his arrival at Pittsburgh, Surgeon McDougall, U. S. Army, by his energy and judgment, had effected a complete reorganization of the medical department. The command had been relieved of its sick, additional medical officers, medicines, and hospital stores had been furnished to the regiments, and the vast army of more than one hundred thousand men was again ready to take the field. In the meantime, the enemy, after the battle of Shiloh, retreated

to the town of Corinth, twenty-five miles distant. They there fortified themselves, and awaited an attack. The possession of this place was of vital importance to them; it was, in fact, the gate through which an invading force must pass to reduce Memphis, and to threaten Mississippi. The town itself is situated at the juncture of the Mobile and Ohio and Memphis and Charleston railroads, and, once occupied, the fall of Memphis would become inevitable. It was, in fact, as stated by Beauregard, in his report of the battle of Shiloh, the strategic point of the campaign. Its capture became the object of General Halleck's further operations. To accomplish this end, the national army moved forward in the early part of May. The troops advanced slowly and with great caution, throwing up breastworks at night to guard against surprises. The headquarters were first established at Monterey, a deserted village twelve miles distant from Pittsburgh Landing. During the succeeding two or three days, the advance was continued until the enemy's works were approached. Fortifications were then erected, guns placed in position, and all preparations made for a final assault. Before, however, this was undertaken, the enemy evacuated the place, and, on the 30th of May, it was occupied by the national troops. During the time consumed by the advance from Pittsburgh Landing towards Corinth, every effort had been used to prepare suitable accommodations for the wounded of the anticipated battle. By the directions of the General commanding, and under the supervision of the chief medical director, vast field hospitals were established for each separate army. These hospitals were composed of hospital, wall, and Sibley tents. Where these could not be procured, resort was had to tarpaulins stretched on poles. These latter answered admirably, and were used, to a large extent, by Surgeon Maylert, U. S. Volunteers, in charge of the general hospital of the army of the Ohio.

The hospital of the army of the Mississippi was under the charge of Brigade Surgeon O. M. Bryan U. S. V. The largest of these tent hospitals was located at Monterey, five miles in the rear of Corinth. This hospital was composed of several hundred tents, situated on the slopes of two hills, in the vicinity of a running stream. It was under the charge of Brigade Surgeon N. R. Derby. One object in the establishment of these field hospitals was, not only to provide for the reception of future wounded, but also to furnish accommodation for the numerous sick of the command. The number of the latter was, at this time, very large, amounting to thousands. The medical director, in his report of May, 1862, computes the number sent at that time from Pittsburgh Landing to be not less than eleven thousand. It was desirable to check this exodus of troops; for it had been found that, of the vast numbers who left, but few returned. This pernicious custom of leaving the command on the plea of sickness was becoming too prevalent, and had been much encouraged by the presence of boats fitted out by governors of states and by volunteer commissions. When it was once understood by any command that a boat from their own state lay at the Landing for the reception of the state's sick, it was found impossible to prevent the flocking on board of many whose only complaint was nostalgia. The really sick were left behind, and the convalescent, and often the malingerer, was sent away. When, however, the large hospitals had been once established, these difficulties were remedied. The sick from the regiments were at once received into general hospital, and, when perfectly convalescent, they were returned to duty. In this manner, many men were preserved to the army who otherwise would have been lost. The town of Corinth was evacuated by the enemy about the 1st of June. The headquarters of the army were then moved to that place. About the 10th of June, the army of the Ohio, under the command of Major General Buell, received orders to march towards East Tennessee, by way of Florence, Alabama. Surgeon R. Murray, U. S. Army, accompanied this force as medical director. The occupation of Corinth, the strategic centre of the Tennessee campaign, having been effected by the national army, the enemy fell back in the direction of Okolona, Mississippi, and there massed his forces. The surrender of Memphis rapidly followed. The position of the command of General Halleck at Corinth, on the line of the Memphis and Charleston railroad, completely cut off the railroad communication of Memphis with the forces at Okolona. The fall of the former city became thus a mere matter of time. Its reduction was finally effected by the gunboat flotilla. Immediately after the surrender of Island No. 10, the enemy collected his forces at Fort Pillow, fifty miles above Memphis. This fort was strongly garrisoned, and it was supposed that it could effectually check the progress of the Federal fleet down the Mississippi. On the 8th of May the gunboats approached this position. The enemy had collected under the guns of the fort a fleet of six vessels, four of them being rams. On the approach of the Union vessels, the Confederate fleet came out and offered battle. After an hour's sharp contest, three of them were sunk, and the rest retired. The national gunboats did not, however, pass the fort. On the 31st of May, synchronously with the evacuation of Corinth, Fort Pillow was abandoned, the guns carried off, and the stores destroyed. The fort was taken possession of by the United States troops, and the flotilla dropped down the river towards Memphis. On the 6th of June, a severe naval conflict occurred between eight of the enemy's gunboats and rams and the government fleet. Seven of the former were taken or sunk, and one escaped by superior speed. The surrender of Memphis followed on the same day. About the 10th of June, a considerable force was posted in Memphis under the command of Major General Grant. The general headquarters were, however, located at Corinth, Mississippi, and there remained until the General in command of the department was called upon to assume the command of the armies of the United States. The health of the forces in the department of the Mississippi, during the period in which the headquarters were established at Corinth, underwent a gradual and marked improvement. This, as appears by the report of the medical director of the department, dated July 28th, was, to a great degree, due to the care and attention bestowed upon the sanitary condition of the camps and hospitals; to an improved and properly prepared diet; and, especially, to the unwearied exertions of the medical officers of the several corps. In truth, the admirable system inaugurated by Surgeon McDougall had produced its legitimate effect. The medical officers felt their responsibilities, and learned from him not only how to avoid, but also how to remedy, errors which had crept into the regimental medical administration. By orders of the director, regular inspections of camps and hospitals were made by medical officers detailed for that purpose; a rigid police was insisted upon, and all failures in this respect were faithfully reported.

[Other extracts from the reports of Surgeon John H. Brinton, U. S. Volunteers, will be printed in connection with documents relating to the operations of the medical departments of the armies in Virginia.]

XXIX. *Third Extract from a Narrative of Services from the Commencement of the Rebellion till July 18th, 1863.* By Surgeon H. P. STEARNS, U. S. Volunteers.

* * * "One week after the capture of Fort Henry, February 10th, 1862, the forces of General Grant, in two divisions, respectively under command of Generals McClelland and C. F. Smith, moved towards Fort Donelson. They approached and surrounded the fort upon the second day after leaving Fort Henry, having had very little skirmishing. On Thursday, February 12th, at about 11 o'clock, General McClelland ordered three or four regiments to make a charge upon a redoubt which had apparently been silenced by our artillery. When the regiments were within a short distance of the redoubt, the enemy suddenly opened upon them with musketry and artillery. The troops responded, and pressed on till within a short distance of the works, when the fire of the enemy became so severe as to cause them to fall back a short distance in some confusion. They soon rallied, however, and again approached and held their position till ordered to retire. In this engagement, there were wounded from two to three hundred. They were immediately conveyed to a farm-house in the rear, which had been appropriated and used as an hospital. There were from twelve to twenty major amputations performed at this hospital. Early upon Saturday, February 15th, the enemy attacked the right of General Grant's forces, the First Division, and a very severe action was fought, which lasted five hours. As I was engaged at the different houses used as hospitals, and in superintending the removal of some of the more severely wounded from the field, during the engagement, I can give no detailed account of it. I herewith subjoin answers, requested by a circular letter from the Surgeon General, in reference to the battle, and also forward a copy of my official report to the division commander, of the battle, exceedingly regretting that some of the different points are so imperfectly filled up. The reason of this imperfection was the impossibility of obtaining reports from regimental surgeons, as the forces were soon after ordered to leave to proceed up the Tennessee River. The spirit of the troops was excellent, in consequence of the recent victory at Fort Henry. The approximate strength of the First Division was about eight thousand men. The supplies of medicine were abundant, but hospital stores were exceedingly limited. Most of the regiments had one or two ambulances, and two or three common wall tents to be used as hospital tents. The wounded were conveyed to three farm-houses in the rear of the army. The most distant was about two and a half miles from Fort Donelson. They received sufficient and kind attention from the surgeons. There was an abundant supply of water; but the supplies of food were such as the surgeons could get from the surrounding country. Some young beef cattle were found and killed, and soups were prepared for the wounded. The weather was very cold during most of the time, and a severe snow-storm occurred, so that it was impossible to provide comfortable quarters for the wounded. They must have suffered exceedingly, many of them. The wounded were moved upon stretchers and ambulances to the field hospitals, and were thence sent to general hospitals at Paducah, Kentucky; St. Louis, Missouri; Evansville, Indiana, and Cincinnati, Ohio. The wounded were all removed, during the five days succeeding the surrender of the fort, by steamers. Amputations and exsections of bones were performed at the field hospitals. There were but few amputations upon the field. More were performed on the hospital steamers. The anæsthetic employed was chloroform. No deaths from its use were reported. The approximate number of wounded was eleven hundred." * * *

[Surgeon Stearns then encloses a copy of his report to General J. A. McClelland, commanding the First Division of the Army of the Tennessee. The following extracts are taken from this document:]
