TESTIMONIAL.

Pottsville, February 4th, 1902.

MR. HENRY F. MICHELL;
DEAR SIR: I wish to say a word about our Lil. Harrisii. We had four cases (1600) and now have 1550 of the healthiest lilies we have ever grown coming into bud. The first showed signs of flowering just 105 days from time of planting. I thought you would like to know about them.
Yours truly,
W. GUY PAYNE.

Michell's Special Formula Permanent Pasture Grass Seed. 20 lbs. per bushel. \$2.75 per bu.; 5 bu. lots, \$2.60 per bu.; 10 bu. lots and over at \$2.50 per bu.

This special mixture is made by us after careful study of the very best permanent, hardy varieties of grasses, such as will produce a quick growth and of a permanent nature. All the different varieties contained in this special formula are especially adapted either for cutting for hay or pasturing horses and cattle, and can be relied upon to give the very best results. We recommend this mixture either for making entirely new pasture fields, or for replenishing partly worn out pastures.

2 1/2 bushels per acre is the proper quantity to sow on new fields, whereas 1 to 1 1/2 bushels per acre is sufficient for resowing and replenishing old fields.

P. S.—We have numerous unsolicited testimonials from our best customers, praising the results derived from this mixture.

MASTICA

FOR

GLAZING GREENHOUSES,

NEW OR OLD.

ELASTIC, ADHESIVE AND EASY TO APPLY.

PATENTED JULY 14, 1896.

MASTICA AND MASTICA GLAZING MACHINE
WERE GIVEN HIGHEST AWARD OF
THE SOCIETY OF AMERICAN FLORISTS
AT PITTSBURGH, 1895.

TO FLORISTS.

EVERY Florist has experienced difficulty in obtaining putty (whether ordinary or white lead) for glazing, that is satisfactory for any length of time. The fact is, putty is not adapted for greenhouse work, and cannot stand the severe and varied tests to which it is subjected.

FIRST.—There is the extreme heat both from inside and outside, rapidly evaporating the oils and drying the putty to a hard brittle substance.

SECOND.—The moisture from inside causes a continual expansion and contraction of the woodwork, loosening and throwing off the hard and brittle putty, allowing the water and cold air to enter and the heat to escape almost as rapidly as though it had never been puttied.

After much study, the inventor of "Mastica" decided that the composition must be of different materials from that used heretofore for this purpose, must be elastic and tenacious, and these qualities must be retained to admit of expansion and contraction without cracking. This result has been reached in "Mastica," which when applied, in a few hours forms a skin or film on the entire mass, hermetically sealing the substance and preventing the evaporation of the liquid, and remains in a soft, pliable and elastic condition for years.

The use of "Mastica" avoids the necessity of repeatedly reglazing the houses, saving much time and expense. With "Mastica" can bed in or use outside with a machine.

Broken glass can be easily removed and replaced by new without the breakage of other glass, which usually occurs with hard putty. One gallon will cover about 290 running feet (one side).

Put up in gallons, \$1.25. Packed in Cases, 6 One-gallons and
10 One-gallons each. Barrels, about 22 One-gallons.

Mastica Glazing Machine==see cut==\$1.00 Each.

DIRECTIONS FOR USING THE MASTICA GLAZING MACHINE.

In filling the machine, remove the plunger and pour Mastica in top of cylinder; replace the plunger and with a gentle pressure of the handle the Mastica is forced through the opening at the heel, and is smoothed into perfect condition by the foot passing over it. Mastica can be used, as ordinarily made, in all seasons. When there is extreme heat it sometimes becomes temporarily too thin, and will run through the machine without pressure. If such be the case, it should not be used, as there will be insufficient body of the material upon the sash and glass to last permanently. It is better then to wait for cooler weather. Should Mastica not work freely in the machine, a few drops of spirits turpentine around the sides of the cylinder will relieve it. The Machine should be thoroughly cleaned with spirits turpentine, kerosene or benzine after using.

F. C. CURTIS, Florist,
(Post Office Address) SANDY CREEK, ME.
WOODS POND RIDGE, BRIDGTON, ME., July 8th, 1898.

Gentlemen :—

I have read with much surprise the report of the Baltimore Club, regarding "MASTICA." Last winter we had two very heavy snow-storms. The first piled the snow over three feet deep on one side of our house—a tremendous weight, causing the roof to strain, and, of course, breaking some glass. As soon as we could clear the snow away, we started to reset the glass. The thermometer was falling rapidly, and it was of course necessary to work fast. Then the advantage of using "MASTICA" over Putty was manifested. We took a putty-knife, and, sliding it alongside the bars, the "MASTICA" yielded just as quickly as we could slide the knife along. The points withdrawn, the glass lifted out and a new square put in was quick work. Had we been obliged to dig putty, we should have lost many plants, as it was so cold. We nearly froze our fingers as it was. A few days later we had another similar experience. We ordered "MASTICA" for our cold frame sashes. It makes a perfectly tight roof, and we like it very much.

Truly yours,

(Signed) F. C. CURTIS.

COLORADO SPRINGS, COL., July 12th, 1898.

F. O. PIERCE CO.,

Gentlemen :—

For information of others.

I bought seventy-five (75) gallons of "MASTICA" and put it on my greenhouses over the sash bars before I painted them. I believe I saved the cost of "MASTICA" in fuel, and this spring the hail broke about 30,000 feet of glass, and where I use "MASTICA" it cleaned out with a putty-knife; but the old putty I had to take a hammer and a chisel to get it out. I am very sure I shall never be without it again.

(Signed) WILLIAM CLARK.

LUXURIANT HOUSE PLANTS

Produced by Using

SULPHO=TOBACCO SOAP.

The application is simple. Dissolve two ounces of Soap in a gallon of warm or cold water. For plants, apply the liquid when cold, using garden syringe, atomizer, a common sprinkler, or the plant may be gently sponged. Care must be taken that the liquid reaches insects underneath the leaves. One or two thorough applications will generally rid plants of the pest for the entire season. For animals; use the solution, or make a good lather and apply with hand or a sponge.
