ACKNOWLEDGEMENT

The National Institute of Mental Health wishes to acknowledge the generous cooperation of the State governments and of the public hospital superintendents and staffs.

I. --INTRODUCTION

The data in this report are taken from the 33rd Annual Census of Patients in Mental Institutions. This yearly census was conducted by the U. S. Bureau of the Census, Department of Commerce for the years prior to 1947, and by the National Institute of Mental Health since then. A detailed historical account of the development of this census may be found in "Patients in Mental Institutions: 1947" pp. 1-4, U. S. Government Printing Office, Washington 25, D. C.

This report provides basic data on the numbers and characteristics of hospitalized mental patients, movement of patient population, and certain administrative data for the public mental hospitals and institutions.

The publication is divided into four parts as follows:

- Part I --Public Institutions for Mental Defectives and Epileptics
- Part II --Public Hospitals for the Mentally Ill
- Part III--Private Hospitals for the Mentally Ill and General Hospitals with Psychiatric Facilities
- Part IV--Private Institutions for Mental Defectives and Epileptics

Provisional and special survey data for the public hospitals and institutions are published more currently in Mental Health Statistics - Current Reports, Series MHB. These publications are available on request from the National Institute of Mental Health, National Institutes of Health, Bethesda, Maryland.

II. --COVERAGE

This report includes data from (a) State and county mental hospitals (public prolonged-care hospitals), and (b) State psychopathic hospitals. Veterans Administration hospitals, military hospitals, and Public Health Service hospitals are excluded. Territorial hospitals are not included since the annual census is confined to the continental United States.

This report covers the fiscal year ending in 1958. Most of the hospitals' fiscal years end on June 30th. Exceptions are as follows:

- March 31 - New York
- May 31 - Pennsylvania
- August 31 - Texas
- September 30 - Alabama
- December 31 - Iowa (1 of the 5 hospitals)

The schedules distributed to the various hospitals were as follows:

- a. Movement of population by sex
- b. Detailed schedules:
 - First admissions during year by age, sex, and diagnosis
 - Resident patients at end of year by age, sex, and diagnosis
 - Personnel employed by type of position
 - Financial statement

The population movement schedule was completed by 261 of the 266 public prolonged-care hospitals and by all of the 12 psychopathic hospitals (see Table A). Incomplete reporting of the detailed schedules is given in Table B.

III. --DEFINITIONS

Type of Hospital

1. State and county mental hospitals.--Hospitals operated by State and county governments in which length of stay is unlimited. They are classified together as public prolonged-care hospitals.
2. State psychopathic hospitals.--Intensive treatment, teaching, and research hospitals in which patients generally are held for only a short time.
3. Exceptional cases.--Three hospitals have been classified by the way they function rather than the authority under which they operate.
 - a. Saint Elizabeths Hospital, Washington, D.C.--Although operated by the Federal Government, this hospital serves the residents of the District of Columbia in the same way a State hospital serves the residents of a State. Operating funds come largely from the District of Columbia Government.
 - b. Wayne County General Hospital and Infirmary, Eloise, Michigan--The large psychiatric unit of this hospital is classified as a State mental hospital since it serves the residents of Wayne County in this capacity.
 - c. The DeJarnette State Sanitarium, Staunton, Virginia--Although under State authority, this hospital is not tax-supported and is operated as a private hospital. Therefore, it is not classified as a State mental hospital but is included in the Census as a private hospital (see Part III of this report).

Discussion

In order to reflect accurately the number of patients hospitalized in a State public mental

hospital system, the appropriate types of hospitals must be included. All states have State mental hospitals; but in addition, some States have county mental hospitals and/or psychopathic hospitals. In these States, the county or psychopathic hospitals may care for specialized groups of patients who, in States without these facilities, may receive comparable care in the State hospitals. Since some of the county hospitals serve the same function as State mental hospitals and others are similar to chronic wards in State mental hospitals, the data for these two types of hospital have been combined in this report. In making comparisons between States with regard to admission rates, resident patient rates, etc., it is important that data on all of the State, county and psychopathic hospitals be taken into account.

Patient Movement Categories

A movement of population table is a book-keeping account of the flow of patients into and out of a mental hospital during the year. Since this type of table shows the number of transactions rather than the number of patients, there may be some duplication of patients. Each movement category is defined as follows:

1. Patients on the Books at the Beginning and End of the Year.
 - a. In hospital. Patients physically present, or accounted present, in the hospital, i.e., those considered "resident patients" (See Section V).
 - b. In extramural care. Patients on the books of the hospital but not in actual residence, i.e., subject to hospital control but residing in a location other than the hospital proper. Patients in extramural care are further classified as follows:

- (i) In family care. Patients who have been placed in the community in private families other than their own, under State supervision. The expense of maintenance may be borne by the State or local government, the patient's estate, relatives, Old Age Assistance or some other agency or person.
- (ii) In other extramural care. Most of these patients are on trial visit (usually to their homes), a type of care which tests the ability of the patient to adjust to normal community life. Since the patient is retained on the books of the hospital, he may be returned to the hospital for his own protection or for that of the community or because he failed to make the necessary adjustment. The provisions under which patients are placed on trial visit vary widely from State to State. Moreover, factors such as the degree of overcrowding, the development or extension of methods of therapy and the number of social workers available for follow-up may affect the number of patients on trial visit. This category includes escaped patients and patients absent from the hospital for reasons not classified elsewhere.

2. Additions. Patients who enter a mental hospital during the course of a year.

- a. First Admissions. All patients admitted to a public mental hospital without a record of previous care, i.e., a record of an admission and a formal discharge, in a public or private mental hospital anywhere. The term is usually applied exclusively within a given type of facility; thus, a patient going from a hospital for mental disease to an institution for

mental defectives and epileptics, or vice versa, is considered a discharge from the first facility and a first admission to the second institution rather than a transfer or a readmission.

- b. Readmissions. Patients admitted with a record of previous care as indicated above.
- c. Transfers In. Patients who are shifted within the same State system from the supervision of one public mental hospital to another without a formal discharge. Thus, transfers in do not represent additions to the total patient population of hospitals within a given State system.
- 3. Separations. Patients who are removed from the books of the hospital.
 - a. Discharges. Patients formally removed from the books of the hospital. Such patients may be discharged directly from the hospital or from extramural care.
 - b. Deaths. Patients who die while in the hospital or while on extramural care.
 - c. Transfers out. Patients shifted within the same State system from the supervision of one public mental hospital to another, without a formal discharge.

Age of Patients

Age of first admissions is reported as of the last birthday prior to admission. Age of resident patients is taken as of the last birthday prior to the end of the reporting year.

Diagnostic Nomenclature

The diagnostic nomenclature can be found in Standard Nomenclature of Diseases and Operations, "Psychobiologic Unit", American Medical Association, 1952, or in Diagnostic and Statistical Manual--Mental Disorders, American Psychiatric Association, 1952.

IV. --LIMITATIONS OF HOSPITAL DATA

It might be expected that interstate differences in resident patient and first admission rates for the public mental hospitals would provide a basis for inference as to variations among the States in the prevalence and incidence of mental disease which is sufficiently serious to require hospitalization. However, based on present knowledge, there are a number of reasons why such inferences should not be made. Not all persons with serious mental illness are admitted to public mental hospitals. The number of persons in the community who, under examination, would be diagnosed as mentally ill is unknown. Furthermore, there are many factors other than the person's mental illness which deter-

mine whether or not he will seek psychiatric care, such as (a) availability of family and willingness to keep the person at home and (b) community attitude toward the person's behavior.

For those persons seeking psychiatric care, there are several factors which determine whether or not they will be admitted to public mental hospitals. The more important of these factors are:

- a. In many communities, psychiatric clinics, various other outpatient services, psychiatric facilities in general hospitals, private hospitals for the mentally ill, and other specialized agencies may be used for the treatment of some mentally

ill persons who would otherwise have been admitted to the public mental hospitals. There is considerable variation among States in the availability of these facilities and in the ways they are used by the communities they serve.

- b. Within a public mental hospital system, existing facilities may expand, new facilities may open, or other changes may occur that would have the effect of

increasing or decreasing the number of patients that could be accommodated.

Therefore, since the number of persons in public mental hospitals does not reflect the entire problem or even a known proportion of the problem of "serious" mental illness, rates of admission to or residence in public mental hospitals are not valid measures of incidence and prevalence of "serious" mental illness.

V.--THE MODEL REPORTING AREA

In order to undertake the task of solving, in a constructive and cooperative manner, the complex problems involved in gathering uniform, comparable, and meaningful statistics on the mentally ill, a group of State mental hospital authorities, with the aid and counsel of the National Institute of Mental Health, have joined together in the Model Reporting Area for Mental Hospital Statistics.

The expressed objectives of this organization are:

1. The development of a strong central statistical bureau in each State mental hospital system.
2. The development and use of standardized definitions of the various categories of mental hospital patients.
3. The production of standard basic tabulations.
4. The use of appropriate statistical methods in follow-up studies of mental patients.

One of the first projects undertaken by this group was to develop a set of standard defini-

tions for the patient movement categories; first admission, readmission, transfer, resident patient, and temporary visit. Of special interest with respect to this report is the Model Reporting Area definition of resident patient-- "Includes all patients physically present in the hospital, plus those patients who are permitted to leave the hospital on a temporary absence with the understanding that they are to be returned within a period not to exceed seven days. Patients absent without permission, termed--escape, elopement, AWOL, etc., are not to be included in the resident count". Resident patient data in this report for States in the Model Reporting Area are based on this definition. The membership of the Model Reporting Area is shown in Figure 1. Further information about the organization may be found in The Model Reporting Area for Mental Hospital Statistics, U. S. Department of Health, Education, and Welfare Publication No. 699, available on request from the National Institute of Mental Health.
