WORLD COFFEE CROP ESTIMATED

TO BE LARGEST SINCE 1959-60

The Foreign Agricultural Service's first estimate of the 1965-66 world coffee crop places total production at 75.5 million bags ^{1/} and exportable production ^{2/} at 60.8 million bags. Such a crop would be the largest since the 1959-60 coffee year, when the total world output was 78.9 million bags, of which 66.4 million were exportable. Hence, the 1965-66 crop is up almost 50 percent over the relatively small outturn of 51.5 million bags in 1964-65.

Of some significance in the world production picture is the fact that Brazil produced about 56 percent of the total in 1959-60, as compared to an estimated 43 percent in 1965-66. Meanwhile, Africa, which produced 16 percent of the total crop in 1959-60 ^{3/}, is expected to produce 23 percent of the total in 1965-66.

Production

North America: Total coffee production in North America in 1965-66 is estimated at 10.9 million bags, of which 8.0 million is exportable production. This is up from 1964-65, principally because of larger crops in El Salvador, Guatemala, and Mexico.

In Costa Rica, 1965-66 production will be up slightly from 1964-65, which crop itself came in larger than that forecast. The Costa Rican coffee industry still has not fully recovered from the natural disasters which affected the 1964-65 crop. Production continues to increase in the Dominican Republic.

^{1/} All bags in text and tables equal 132.276 pounds.

^{2/} Exportable production: Total production minus domestic consumption.

^{3/} The June 1965 issue of World Agricultural Production and Trade erroneously gave this as 1956-60.

1/ The coffee marketing season begins during the second half of the calendar year starting in some countries like Brazil as early as July 1 and in other countries about October 1. Exportable production represents total production minus consumption, except for Brazil prior to 1959-60 which was based on "registrations" of current crop minus port consumption and coastwise shipments. 2/ 132.276 pounds each. 3/ 2-year average. 4/ Includes Guadeloupe, Hawaii, Jamaica, and Puerto Rico. 5/ Includes Bolivia, British Guiana, Paraguay and Surinam. 6/ Prior to 1962-63, was shown as Ruanda-Urundi. 7/ Beginning with 1961-62 includes West Cameroon. Prior to 1961-62 this area was identified as Southern Cameroon and its production was included with Nigeria. 8/ 3-year average. 9/ Prior to 1959-60, Ruanda-Urundi shown in Congo (Leopoldville). Beginning 1962-63 shown as Burundi and Rwanda. 10/ 1 year only. 11/ Prior to 1964-65 year was shown as Tanganyika. Now includes Zanzibar as well. 12/ Includes Cape Verde, Comoro Islands, Dahomey, Gabon, Ghana, Liberia, Nigeria, Congo (Brazzaville), Sao Tome and Principe, Sierra Leone, and Spanish Guinea. 13/ Includes Malaysia, New Caledonia, New Hebrides, Papua and New Guinea, Portuguese Timor and Vietnam.

In El Salvador a larger crop is expected, principally because of an "up" year in the production cycle, while in Guatemala good weather conditions during the flowering stage augur well for an increase in 1965-66 over a 1964-65 crop which was seriously reduced by the coffee leaf miner. Weather conditions in Mexico have been favorable and the crop is expected to be up about 7 percent.

South America: The 1965-66 crop in South America is expected to be more than double that of 1964-65 because of the recovery of the industry in Brazil. Production in the rest of the area will increase slightly.

The USDA's first estimate of 1965-66 Brazilian production is 32.0 million bags, of which 25.0 million is considered exportable production. Hence, a sizable quantity is expected to be added to stocks in that country. In Colombia, production is expected to remain about the same as in 1964-65. Provided weather conditions remain favorable, the total coffee output in Ecuador, Peru, and Venezuela is expected to be larger in 1965-66 than a year earlier. In Venezuela, extensive plantings in 1961-62 are among the factors contributing to the expected increase in production.

Africa: Total African production in 1965-66 is expected to reach 17.5 million bags, up more than 3 percent from 1964-65. Because consumption is still very low in Africa, about 95 percent of this, or 16.8 million bags, is estimated to be exportable production.

A slightly smaller crop is expected in Angola in 1965-66, while the outlook is for a larger outturn in the Congo (Leopoldville). The Ivory Coast, the world's third largest producer, is expected to have a big crop in 1965-66. That country's estimated total production of 4.0 million bags is up about 14 percent from 1964-65 but still below the record level of 1963-64.

Production in Kenya is expected to be up slightly, though that country continues to be plagued by Coffee Berry Disease. The favorable conditions that brought about a good crop in Malagasy in 1964-65 are apparently lacking this year, as production is expected to be down slightly. In Uganda, production continues to increase and a total of 3.1 million bags is estimated for 1965-66.

Asia and Oceania: In contrast to the rest of the world, production is expected to be down slightly in this area in 1965-66.

Coffee output in Indonesia is expected to be down slightly, while in India and the Philippines the production trend is upward.

World Trade and Developments

World coffee exports in 1964 totaled 46.8 million bags, a decrease of 7 per cent from 1963 shipments of 50.3 million bags. It is not likely that world exports in 1965 will go much below this figure as stocks in consuming countries have been reduced somewhat during the first half of the year and will probably be maintained, at least. Exports could increase considerably were prices to drop, but this is not likely with the International Coffee Agreement's "indicator price" system in effect.

COFFEE: Exports by continents as percentage of world exports

Continent	Average : 1955-59	1960	1961	1962	1963	1964
	: Percent	: Percent	: Percent	: Percent	: Percent	: Percent
North America	15.5	15.7	14.9	16.2	14.3	16.2
South America	57.1	55.4	54.1	52.8	54.4	48.9
Africa	22.6	25.1	25.1	26.9	25.8	30.6
Asia and Oceania ..	4.8	3.8	5.9	4.1	5.5	4.3
Total	100.0	100.0	100.0	100.0	100.0	100.0

Due to the relatively small shipments from Brazil, exports from South America fell to only 48.9 percent of the world total in 1964, the lowest level in many years. The reduced shipments from Brazil helped Africa to boost its share of world exports to a new high of 30.6 percent. North America's share of the world total also rose, while that of Asia and Oceania declined slightly. Brazil continued as the world's largest individual exporter, of course, but its share of total 1964 shipments fell to 31.9 percent as compared to 38.8 percent in 1963. Colombia and Mexico increased their shares of the export market slightly, to 13.5 and 3.6 percent, respectively. Meanwhile, the Ivory Coast increased its share to 7.0 percent as compared to 6.0 percent in 1963.

COFFEE: Exports of 9 principal producing countries as percentage of world exports

Country of origin	Average : 1955-59	1960	1961	1962	1963	1964
	:Percent	:Percent	:Percent	:Percent	:Percent	:Percent
Angola	3.5	3.3	4.4	5.6	4.5	4.9
Brazil	39.5	38.5	38.1	35.2	38.8	31.9
Colombia	14.5	13.6	12.7	14.1	12.2	13.7
El Salvador	3.4	3.4	3.2	3.7	3.4	3.7
Ethiopia	1.8	2.1	2.1	2.2	2.2	2.6
Guatemala	3.0	3.2	3.0	3.0	3.3	3.1
Ivory Coast	4.7	5.6	5.8	5.1	6.0	7.0
Mexico	3.5	3.2	3.3	3.3	2.2	3.6
Uganda	3.4	4.5	3.9	4.8	4.9	5.0

Green coffee inventories in the United States in all positions on March 31, 1965, were reported at 2,989,000 bags, down considerably from the 4,470,000 bags on hand on December 31, 1964.

U. S. coffee roastings including roasting for soluble use, during the first quarter of 1965 totaled 5,452,000 bags, as compared with 6,645,000 bags during the first quarter of 1964 and total 1964 roastings of 22,374,000 bags. First-quarter 1965 roastings for soluble use were 928,000 bags as compared with 1,120,000 a year earlier.

The United States imported a total of 22,822,300 bags of green coffee in 1964, including 616,000 bags for reshipment. During the first 8 months of the 1964-65 International Coffee Agreement marketing year (October 1-September 30) imports totaled 13,773,830 bags compared with 17,290,190 bags during the same period in the 1963-64 marketing year. Imports during the entire 1963-64 year were 23,274,180 bags.

Spot prices for green coffee, New York market, in early July were up from the low levels of May, except for Santos 4's and Colombians which remained at about the same level. The prices of Robustas (Ambriz AAs) showed the biggest gains by reaching a level of 31.0 cents per pound on July 7 as compared with 21.75 cents on May 7. During the same period, Central American coffee prices rose from 42.25 cents to 44.25 cents.

Retail prices for roasted coffee in one-pound cans, as compiled by the U. S. Bureau of Labor Statistics, averaged 83.3 cents in May, compared with 84.6 in January, 1965.

The International Coffee Council's new "price indicator" scheme was brought into play in May and is generally credited with helping to strengthen prices, especially Robustas. The real test of this scheme, however, will come during the coming marketing year when the big 1965-66 crop is harvested. Producing countries have thus far been slow in proposing effective production control plans as called for in the International Coffee Agreement.
