a/ Data for 1930-1942 refer to deaths of Japanese nationals in Japan Proper and Okinawa. Data for 1943 refer to deaths of Japanese nationals in Japan Proper, Okinawa, and Karafuto. Data for 1944-1946 refer to deaths among Japanese nationals and foreigners in Japan Proper and are limited to the civilian population only. All other death statistics include military personnel in the country. Data for 1947 refer to Japanese nationals in Japan Proper. Data for 1930-1943 and 1947 are based upon tabulations of death certificates. Data for 1944-1946 are based upon follow-up reports on communicable disease cases and data for 1947 are based upon tabulations of death certificates.

Monthly data for 1945 and 1947 refer to calendar months. Monthly data for 1946 are combinations of four and five week periods.

b/ Diphtheria. 1930-1932: excludes diphtheric endocarditis and croupous bronchitis; includes laryngeal croup. 1933-1943 excludes diphtheric endocarditis; includes croupous bronchitis and laryngeal croup. 1944-1946: unknown whether diphtheric endocarditis, croupous bronchitis, and laryngeal croup are included. 1947: includes diphtheric endocarditis; excludes croupous bronchitis and laryngeal croup.

c/ Scarlet fever. 1930-1943: includes puerperal scarlet fever. 1944-1946: unknown whether puerperal scarlet fever is included. 1947: excludes puerperal scarlet fever.

d/ Typhoid fever. 1930-1943: includes typhoid pneumonia. 1944-1946, unknown whether typhoid pneumonia is included. 1947, excludes typhoid pneumonia.

e/ Typhus fever. 1930-1943 and 1947: includes typhus-like diseases. 1944-1946: excludes typhus-like diseases.

f/ Data are for nine months, excluding January through March.

2/ Rates for 1945 and 1946 are based upon deaths among Japanese nationals and foreigners in Japan Proper and are limited to the civilian population only. Rates for 1947 are based upon deaths of Japanese nationals in Japan Proper. Rates for 1945 and 1946 are based upon follow-up reports on communicable disease cases, and rates for 1947 are based on tabulations of death certificates. Data for 1945 and 1947 refer to calendar months and data for 1946 refer to combinations of four and five week periods.

NOTES

1/ a) Diphtheria. 1930-1932: excludes diphtheric endocarditis and croupous bronchitis; includes laryngeal croup. 1933-1943: excludes diphtheric endocarditis; includes croupous bronchitis and laryngeal croup. 1944-1946: unknown whether diphtheric endocarditis, croupous bronchitis, and laryngeal croup are included. 1947: includes diphtheric endocarditis; excludes croupous bronchitis and laryngeal croup.

b) Scarlet fever. 1930-1943: includes puerperal scarlet fever. 1944-1946: unknown whether puerperal scarlet fever is included. 1947: excludes puerperal scarlet fever.

3/ Typhoid fever. 1930-1943: includes typhoid pneumonia. 1944-1946: unknown whether typhoid pneumonia is included. 1947: excludes typhoid pneumonia.

4/ Typhus fever. 1930-1943 and 1947: includes typhus-like diseases. 1944-1946: excludes typhus-like diseases.

5/ Data are for nine months, excluding January through March. Rate is computed on an annual basis.

NOTES:

a) Birth, death, marriage and divorce rates are the number of events per 1,000 population. Infant death and stillbirth rates are the number of events per 1,000 live births in the corresponding period.

Monthly rates based on estimated July populations.

Total						

a) Data based on fiscal years. Excludes society-managed ~~Government managed program~~ health insurance roughly equal in scope and volume of benefits to the government-managed part here reported

c) The per-case figure is not significant since the total amount ^{spent} consists for the most part of payments made to National Health Insurance for treatment given to dependents of persons insured under Health Insurance. This arrangement is based on the Enforcement Ordinance to the Health Insurance Law. The total amount is given to the Federation of National Health Insurance Associations, which distributes it among the associations treating dependents. The number of persons thus treated is not reported and therefore, not included in the number of cases reported above.

TABLE: 19

Seamen's
Insurance

A complete health and accident, unemployment, invalidity, old-age and survivors' insurance program covering in the years reported over 90,000 seamen and fishermen.

TABLE: 20

Health
Insurance

A health insurance program for industrial workers except those working in very small establishments or trades exempted from coverage. In the years here reported the program covered well over four million primary insured and an estimated ten million dependents. The program is divided into two about equal **parts**, one managed by the government, the other by individual societies established in the larger enterprises.

TABLE: 21

Welfare
Pension
Insurance

An old-age, invalidity and survivors's insurance program for industrial workers. With minor exceptions it covers the same people as are insured under Health Insurance, in the years under review well over four million.

TABLE: 28

Government
Pension
System X

A retirement, invalidity and survivors' insurance program for government workers of career status. In the years under review it covered, on the average, half a million government workers. These and more than twice as many government workers of non-career status and their dependents enjoyed ^{in addition,} insurance protection comparable to Health Insurance by being covered under several Government Mutual Aid Societies. Their benefit disbursements have not been fully reported and, therefore, have not been included here.

a/ In the population census, persons enumerated were reported from the households in which they were actually present at 0001 hours on 1 October 1947. In the case of persons who were outside any household at that time, the report was made from the first household entered after that time. Therefore persons visiting in homes and transients living in hotels were reported as members of those households and not of the households at their usual place of residence.

b/ Population residing in shi (cities), incorporated areas which usually contain a clustered population of at least 30,000.

c/ Population residing in gun (rural townships), incorporated areas which together with the shi exhaust the total prefectural area.

d/ No allowance is made for general underenumeration of population (estimated to number 525,527). If the adjusted census total of 78,627,000 is used, the average size becomes somewhat larger, but inasmuch as there is no way in which general underenumeration of households can be estimated the exact average size for the country as a whole cannot be calculated precisely.

SOURCE: Bureau of Statistics, Office of the Prime Minister.

e/ No allowance is made for general underenumeration of households. The number given is that of households actually enumerated plus a very small

ALLOWANCE FOR UNDERENUMERATION IN THE FLOODED AREAS.

a/ In the ration census of 1 August 1948 persons enumerated were reported from the households reside; therefore guests in private homes and transients in hotels were not counted as a pe but as members of the households at their usual places of residence.

b/ A single individual occupying a dwelling unit alone constitutes an ordinary household. I a dwelling unit with one or more other persons and shares a common budget with one or more and those with whom he shares a common budget constitute an ordinary household. If an ind dwelling with one or more other persons who constitute an ordinary household but does not persons, he constitutes a separate ordinary household unless he is a member of a group of same dwelling unit (such as the residents of a hotel or dormitory), in which case he and the group together constitute a quasi-household. Therefore, several ordinary households may dwelling unit, and may also share the dewlling unit with a quasi-household.

SCOURCE: Bureau of Statistics, Office of the Prime Minister

census of 1 August 1948 persons enumerated were reported from the households in which they regularly
 are guests in private homes and transients in hotels were not counted as a part of those households
 of the households at their usual places of residence.

Individual occupying a dwelling unit alone constitutes an ordinary household. If an individual lives in
 it with one or more other persons and shares a common budget with one or more of these persons, he
 whom he shares a common budget constitute an ordinary household. If an individual lives in the same
 one or more other persons who constitute an ordinary household but does not share a budget with those
 constitutes a separate ordinary household unless he is a member of a group of persons all living in the
 unit (such as the residents of a hotel or dormitory), in which case he and the other individuals in
 ther constitute a quasi-household. Therefore, several ordinary households may occupy the same
 and may also share the dwelling unit with a quasi-household.

- a/ Ages are reported as of 1 August 1948 and are by Japanese method of reckoning according to which all individuals are considered to be one year old upon date of birth and become one year older on 1 January each year thereafter, irrespective of actual date of birth. Thus there is no age group under one year ~~of~~ by Japanese age reckoning. Moreover a person born on 31 December of a particular year would become two years old the following day--provided the birth was registered as of the date of actual occurrence; however, it is common practice in Japan to delay the registration of births occurring late in the year until January of the following year. As a result the registrations for the month of January each year contain a substantial number of births which actually occurred one or two months earlier.
- b/ These one-year-olds were actually born (or their births were registered) between 1 January 1948 and 1 August 1948. Thus by western methods of age-reckoning, on 1 August 1948 none were over 7 months old.
- c/ Birthday between August and January. These two-year-olds were actually born between 1 August 1947 and 1 January 1948. Thus by western methods of age-reckoning, on 1 August 1948 they were between ~~22~~⁷ and ~~23~~¹² months old.
- d/ Birthday between January and August. These two-year-olds were actually born between 1 January 1947 and 1 August 1947. Thus by western methods of age-reckoning, on 1 August 1948 they were between ~~18~~¹² and ~~19~~¹⁹ months old.
- e/ The average age of persons in this age group, by western methods of age-reckoning, is roughly one year younger than the reported Japanese age, so that 2-4 years western age is roughly equivalent to 3-5 years Japanese age. Similarly for the higher age groups as here given.
- f/ In view of conditions existing on the census date as a result of the Fukui earthquake, the figures given in this table do not include the population of the following affected localities in three prefectures (~~Japan~~): Fukui-Shi, Asuwa-Gun, Yoshida-Gun and Sakai-Gun in Fukui-~~Ken~~; Hongo-Mura in Higashi-Chikuma-Gun in Nagano-~~Ken~~; and a partial area of Isurajima-Cho in Asaguchi-Gun in Okayama-~~Ken~~. The number of persons so excluded is 292,652 for all Japan; 279,182 in Fukui-~~Ken~~, 8,093 in Nagano-~~Ken~~, and 5,377 in Okayama-~~Ken~~. ~~The total population, including these localities, is 80,316,896.~~

in accordance to

- a/ Ages are reported as of 1 August 1948 and are by Japanese method of reckoning according to which all individuals are considered to be one year old upon date of birth and become one year older on 1 January each year thereafter, irrespective of actual date of birth. Thus there is no age group under one year ~~of~~ by Japanese age reckoning. Moreover a person born on 31 December of a particular year would become two years old the following day--provided the birth was registered as of the date of actual occurrence; however, it is common practice in Japan to delay the registration of births occurring late in the year until January of the following year. As a result the registrations for the month of January each year contain a substantial number of births which actually occurred one or two months earlier.
- b/ These one-year-olds were actually born (or their births were registered) between 1 January 1948 and ~~1~~ August 1948. Thus by western methods of age-reckoning, on 1 August 1948 none were over 7 months old.
- c/ Birthday between August and January. These two-year-olds were actually born between 1 August 1947 and 1 January 1948. Thus by western methods of age-reckoning, on 1 August 1948 they were between ~~12~~⁷ and ~~12~~¹² months old.
- d/ Birthday between January and August. These two-year-olds were actually born between 1 January 1947 and 1 August 1947. Thus by western methods of age-reckoning, on 1 August 1948 they were between ~~12~~¹² and ~~12~~¹⁹ months old.
- e/ The average age of persons in this age group, by western methods of age-reckoning, is roughly one year younger than the reported Japanese age, so that 2-4 years western age is roughly equivalent to 3-5 years Japanese age. Similarly for the higher age groups as here given.
- f/ In view of conditions existing on the census date as a result of the Fukui earthquake, the figures given in this table do not include the population of the following affected localities in three prefectures ~~and~~: Fukui-Shi, Asuwa-Gun, Yoshida-Gun and Sakai-Gun in Fukui-~~Ken~~; Hongo-Mura in Higashi-Chikuma-Gun in Nagano-~~Ken~~; and a partial area of Isurajima-Cho in Asaguchi-Gun in Okayama-~~Ken~~. The number of persons so excluded is 292,652 for all Japan; 279,182 in Fukui-~~Ken~~, 8,093 in Nagano-~~Ken~~, and 5,377 in Okayama-~~Ken~~. ~~The total population, including these localities, is 60,216,896.~~

a/ Higher schools include university preparatory courses.

b/ Secondary schools include middle schools, girls' high schools, vocational schools, youth schools.

c/ The number of ~~non-accredited~~ schools was appreciably smaller in 1944 because some became regular. The small number reported in 1947 is due to change in policy. Prior to 1947 both accredited data on accredited schools only are given. In 1947 there were also known to be 778 non-accredited teachers and 137,397 students.

d/ The decrease in the number of elementary schools was due to the fact that in 1907 the 4-year upper course was reduced to 2 years, with a consequent union of some of the resulting 6-year and 4-year schools.

e/ This second decrease in the number of elementary schools was occasioned by the amalgamation, in 1907, of the 4-year and 2-year elementary schools into the 6-year level.

f/ A third decrease in the number of elementary schools occurred in 1947 when the upper-course elementary schools were amalgamated into the secondary level.

a/ In many higher educational institutions there is a group of "special" students taking "special" not "regular" courses. These students are not included in the figures in this table. Only occasionally do they take entrance examinations, practically all who apply for admittance are accepted, and no records of their applications are kept.

b/ As of 30 September 1947 (Cabinet Order No. 204) "Imperial" universities have been classified as "national" universities. Included with All Government Institutions.

a/ These funds allocated in the Ministry of Education budget are usually supplemented for each school by additional revenue from other special sources, such as tuition, gifts, fees, investments, etc.

b/ The category "Miscellaneous" includes allowances for social education, religious affairs, nation treasures, research institutes, the Imperial Academy, and other projects, not strictly educational, but administered under the jurisdiction of the Ministry of Education. The great increase in 1947-48 is due to inclusion of large items for construction and repair, and for supplementary salary allowances. It includes not only ¥69,033,000 for the "not strictly educational" items which are comparable with previous years, but also the following: New Construction, Repair, etc. According to National Policy, ¥1,433,786,253; High-Cost-of-Living Allowances, ¥996,814,695; Family Allowances, Bereaved Family Allowances, Retirement Allowances, etc., ¥597,762,600; Rationing of School Supplies, ¥12,090,653.

a/ "Local" includes all bodies lower in jurisdiction than the national government (prefecture, city). These data were compiled by the Ministry of Education at the request of CIE in January 1947. They are to be the budgets for the entire fiscal year, ending March 1947, including the expected supplemental currently available.

b/ Includes income from tuition, laboratory fees, examination charges, etc.

c/ College courses of public universities are treated as separate schools and are included with colleges.

d/ ~~Miscellaneous~~ ^{OTHER} schools are schools not regulated by Ministry of Education ordinances.

a/ Excludes Capital Levy receipts of ¥33,924,600,000 collected by 31 March 1948 which includes ¥9,408,900,000 in undisposed restricted checks and other assets. Total wartime claims of approximately 105 billion yen were reduced to 18 billion yen by taxing claims above allowed exemption at 100 percent. Total receipts from this tax are estimated at 87 billion yen.

b/ Transferred to local government jurisdiction for the 1947 fiscal year.

c/ Effective 1 April 1946, Income Tax Law Number 27.

d/ Effective 1 January 1948, Non-War-Sufferers Act.
