**THE NEW STRAWBERRY**

**THE MUSKINGUM.**

**It Originated in Muskingum  
 County, Ohio.**

In 1884 this berry received the first prize and was named at the summer meeting of the State Horticultural Society, held at the Experiment Station, June 11, 1890. We have been cultivating and testing this variety for about eight years, being better pleased with its behavior each year, till it is now our main cropper. It makes a large, perfect blossom on good, stout fruit stems, and is very prolific in bearing, and in vigor and growth of plant is not surpassed by any. Never blights, scalds or burns in the leaf, no matter how hot or wet the weather. The berries are of large size, and continue large to the end of the season. In form, obtusely conical, but mostly round toward last of the season; yet few of the very largest are coxcomb. They ripen very evenly all over; the berries never scald or burn in the sun, and we have had them to hang on vines for several days after ripening without spoiling. The berry is a very nice, red, glossy color, with red flesh and of good flavor, which makes it a good berry for home use and the most profitable market berry we have ever grown.

It is as productive as the Crescent, in quarts. In June, 1890, one row made nearly as much money as two rows of Crescent with equal cultivation.

Pickers gather 200 quarts very easy a day, and would rather gather them than any other variety.

Last year (1891) was an off year on account of frost. Some of the pickers picked 200 quarts in a day at several pickings during the season.

We do not claim that it is entirely frost proof, but it escaped better than the Sharpless, Bidwell, Parker Earl and others, growing side by side.

The prices the past season ranged from 75 cents to \$1.25 more per bushel than the Crescent.

We consider it the most profitable berry we have ever grown.

OHIO AGRICULTURAL EXPERIMENT STATION BULLETIN, AUGUST, 1890.

(Page 217.)

*Muskingum.* (Perfect.) Originated with GRANT KEARNS, Zanesville, Ohio. Plant very vigorous, healthy and productive; berries conical, usually flattened, but regular in outline and uniform in size; color dark, glossy crimson; quality good. This variety has been on trial at the Station two seasons, and has proven satisfactory in every way. It is one of the most productive of the perfect flowering sorts, but being rather late in ripening it might not answer if used alone, to pollenize Crescent and Haverland. As compared with Enhance, the two are about equal in vigor and productiveness, and ripen at about the same time. In appearance the Muskingum excels the Enhance, and perhaps also in quality. A few plants were sent to Mr. CRAWFORD for trial, and he regards it as very promising. It will, no doubt, take high rank among perfect flowering sorts.

---

BULLETIN, OCTOBER, 1891. (Page 117.)

*Muskingum.* (Perfect.) This variety has been on trial several seasons, but is not introduced. It appears to have no serious faults, and is believed to be an acquisition of great merit. The plants are healthy, vigorous and productive, while the berries are uniform in size, large and attractive. Season, medium to late.

---

OHIO AGRICULTURAL STATION, COLUMBUS, W. J. GREEN, HORTICULTURIST.

COLUMBUS, September 4, 1891.

GRANT KEARNS, Zanesville, Ohio:

DEAR SIR:—The frost injured our strawberry blossoms so much that we cannot tell much about the comparative merits of varieties. We had but little fruit on Muskingum plants, but judging from what we had and from what we have seen of it in previous seasons, we can say that it is a very promising variety. The plants make a good, healthy growth, and are

productive, while the berries average well in size and are of good color and quality. The variety has very decided merits. If we had a cut we should like to insert it in our report. Yours truly, W. J. GREEN.

I expect to be at your next horticultural meeting.

---

J. J. PITTS & Co., PRODUCE COMMISSION MERCHANTS.

CLEVELAND, OHIO, October 22, 1890.

GRANT KEARNS, ESQ.:

SIR:—The strawberries you shipped to us last June arrived in better condition than any you had shipped us in previous seasons, although the season was very wet and receipts, as a rule, were in bad order. We refer to berries of the Muskingum variety, which were of fine flavor and excellent quality. We can heartily recommend them as a good shipper.

Yours truly, J. J. PITTS & Co.

---

F. R. PALMER & SON, HORTICULTURISTS.

MANSFIELD, OHIO, July 20, 1891.

MR. GRANT KEARNS, Zanesville, Ohio:

DEAR SIR:—The Muskingum plants you sent are growing nicely. We let a few blossoms set fruit and the berries were fine.

We think it will be a very valuable variety. Hope to be able to report favorably of it next year when it fruits.

Very respectfully, F. R. PALMER.

---

ZANESVILLE, OHIO, January 10, 1892.

The Muskingum, as I have seen it grow on G. KEARNS' farm, is a strong, healthy grower, perfect bloomer, and productive; berries large and very uniform in size and shape; moderately firm; ripens mid season and continues very late. For profit to the grower, one of the very best.

WESLEY EVANS.

CRAWFORD'S JULY REPORT ON STRAWBERRIES FOR 1890.

*Muskingum*.—From Zanesville, Ohio. This berry received the first prize and was named at the summer meeting of the State Horticultural

Society held at the State Experiment Station on June 11th. It is a variety of very great promise. It fruited here this year, and at this date there is not a spot of rust on its foliage. Besides being a great bearer it is of large size, and continues large to the end of the season. In form it is obtusely conical and nearly round towards the last. It is dark red and glossy, with red flesh, and its flavor is good.

---

I am located near by the originator of the Muskingum strawberry, Mr. GRANT KEARNS, and have had opportunities to watch its habits since its birth, which was in the year of 1884.

I am frank to say, that, as far as I know, it has but few equals and no superiors, and is in every way all that is claimed for it. Mr. KEARNS has grown berries for a number of years, and is a good grower of this fruit, and his modesty prevents his sending out anything but a modest introduction of his first production of a new fruit.

S. R. MOORE.
