General View of Fishery of Hiroshima Prefecture -

ECONOMICS
CHIEF
D.C.I
A.R.

Of 5 cities and 16 gun of this prefecture 5 cities and 7 gun (82 towns and villages) faces the sea, with a coast line extending about 248 'ri' (about 620 miles).

The coastal district have many promontries and bays firming excellent harbours. Besides, there are upward of 160 islets and Ota, Ashida, Numata and other rivers flow into the sea, offering good breeding places for all kinds of fish. Even the fish of the outer seas seek their pawning place here. The waters along the coast are generally shallow and fit for the growth of shells and eatable weeds. Even the inland districts are watered hy fairly big rivers and ponds which offer good haunts for fresh-water fish.

According to the 1949 fishing census, the prefecture had 12,892 fishing families, 35,245 fishers, 5,407 fishing boats with prime movers, 8,716 fishing boats without prime movers, 6,665,426 kan of catch of Inland Sea besides 157,000 kan of catch from outer seas.

The coastal fishing of this prefecture is, comapred with other prefectures, superior in its technique, but its equipment is of smaller scale and the fishing grounds are too small for the considerable number of fishing people, who, therefore, were in prewar days naturally forced to go elsewhere in search for larger grounds, such as Sanuki-nada, Bingo-nada, Hiuchi-nada, Iyo-nada, Bungo-nada, and even waters near Korea and Kanto-Shu, and the South Seas. However, after the War, nearly all the foreign fishing grounds have been lost to them and hence have been forced to be content with the narrow grounds. However, with a hope of future expansion, every effort is being made to improve the fishing technique suitable for outer Seas.

The means of transportation of this prefecture are well developed so most of the fish caught are being sold raw. On the other hand chief processed products from the prefectural sources are dehydrated sardine and lobsters, sea-weed, fish-paste. Beside chipped dried bonito, tangle and soy-boiled small fish are produced from material of other prefectures.

The chief plan of relieving the ever-increasing number of hard-pressed fishing people is guide them in the direction of the systematic fishing. For this the radical improvement of fishing system on the basis of the new fishing law is of vital importance -- the preservation of resources, development of

嘆願書

私等は従来より豊前海面に於て漁業を経み生活の糧を得てゐた者でありますが本年も夏季の漁期を豊前海面（大分縣）で操業致し一月末を以つて休業期となり取敢ず帰郷致しました

九月十日操業開始期になつたので大分縣中津市（豊前海）根據地へ行致しまた妻他縣下撤廃とて絶体的に操業を拒み始何なる條件も容れられず停私一ヶ月余及び止むなく非常に暮れて帰郷致し次第であります

私等の祖父が明治初期に開拓し今日迄で代々豊前海面に入漁して生計を樹て来たものであります

今般の如く絶体的に入漁を拒否された場合は数十家族の三百余名の妻子は路頭に迷はねばならぬ苦境に陥らね

福岡県漁業会用紙

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

ばならぬ現状であります

廣島縣は御承知の如く狹隘な海面そして五万の漁民の過半数は他縣入漁に依って露命を繋いで今日に及んで居ります

準ずるに横島村は漁業を主体として僅か百町歩の農地しかなく然も他縣入漁に依って村を支へてゐます

右の様な事情でありますから此の上は民事部の御力に俟つ外なく何卒私等漁民の眞情御賢察御善処情情下さいまして従前通り入漁許可下さる様御盡力賜り度く漁民連署を以て懇願申上げます。

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 77 5013

INSTRUCTIONS

1. Personnel going on field trips will complete Sections (1) through (6), inclusive, of this form, in triplicate. The original will be forwarded to the Deputy Chief, 24 hours before departure.

2. Upon return from field trip, Section (7), of duplicate copy will be completed and forwarded to Deputy Chief. Section (7) should include: estimate of success of meeting, conference or inspection, any changes from original schedule and reason thereof, any further remarks person preparing report desires to include.

3. Third copy will be retained in the Section for file.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

HEADQUARTERS
CHUGOKU CIVIL AFFAIRS REGION
APO 182

5 August 1950

SUBJECT: Field Trip Report - Hiroshima City Central Market, 1 August 1950

TO : Chief,
Chugoku Civil Affairs Region
APO 182

1. Purpose:

To check conditions of the fish market and quality of the fish being received.

2. Background:

O.D. #13, Civil Affairs Section, GHQ, SCAP, subject: "Fisheries", dated 12 April 1950.

3. Discussions:

a. Accompanied by an official of the Hiroshima-ken Fisheries Section, the Hiroshima City Central Market was inspected on 1 August 1950.

b. This market does not handle a very large volume of fresh fish since it just started handling fish from 1 April 1950. Large amounts of canned and otherwise processed fish are sold through the market. An average of 200 kan of fresh fish are handled daily at the market which comes mostly by truck from Hamada (Shimane-ken), by train from Shimonoseki and a small amount by three-wheeled motorcycle from local ports. All fresh fish are reported to be in excellent condition. An 8% commission is charged by the market on all fish handled.

c. No refrigeration facilities are available at the market and according to market officials, are not currently needed since all fish are sold on the day received and none are held over. However, in case of an emergency arrangements have been made with the Nippon Refrigeration Company, Hiroshima City to store fish for them. Future plans call for the construction of a 100 tsubo refrigeration room.

d. Sanitary conditions appeared to be very good. The floor was concrete, not broken and was well flushed with water.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

Fish boxes had been washed and were neatly stacked criss-cross to allow drying by aeration.

4. Conclusion:

Everything appears satisfactory as far as fish quality and sanitary conditions are concerned.

5. Recommendation:

None.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

Res. Division
File No. 5-1-0

OKAYAMA PREFECTURAL GOVERNMENT

OPGL No.: 3551 April 3, 1950

Subject: Report on Fishery.

To : Chief,
Chugoku Civil Affairs Region.
Attn: Economics Section.

Thru : Director,
Chugoku Liaison and Coordination Section.

In compliance with your request regarding the above subject through the officer in charge of natural resources, we hereby wish to submit the following report together with the annexed papers.

By the way, the report on petroleum will be submitted by Material Adjustment Office.

1. No. and membership of Fishermen's Cooperative Associations.

See Annex No. 1

2. Total catch in 1949 by each Cooperative Association.

See Annex No. 2

3. Total No. of nets owned by each Cooperative Association.

See Annex No. 3

4. How the producers are paid by Receiving Agencies.

In the past one or two receiving agencies failed to pay the producers. They were disqualified from the office of agency in consequence. But at present the producers are being paid punctually by the receiving agencies.

5. Incentive goods.

With the exception of working-gloves, all cotton incentive goods have hither to been of inferior quality and their prices have been nearly as high as the market prices. Consequently many of fishermen used to refuse the receipt of incentive goods.
Rubber goods and liquors (including Sake), however,, were very popular among the fishermen.

It is desirable that such goods as to be welcomed by fishermen should be chosen in future if the Incentive System is to be kept up.

File Index
No.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

6. Removal of Control on Aquatic products and the prices of fish.

With the removal of control on aquatic products, the future prices of fish is a matter of deep concern with the interested businessmen. The sudden increase of shipment in near future can hardly be anticipated judging from the existing economic circumstances. Consequently the present prices of fish are expected to be maintained for some time.

7. Future of Harbor Facilities

Many of the harbors in this prefecture are being silted with the sands and earth carried down by the rivers. Efforts are, therefore, being exerted for the rehabilitation and improvement of those harbors, but in the present financial circumstances, their prompt rehabilitation is out of hope. We are awaiting for the financial recovery for the complete rehabilitation and improvement of those harbors.

8. Future problems concerning fishing rights

With the enforcement of the new Fishing Law, the existing rights have been nullified.
Accordingly we intend to re-arrange fishing grounds in consideration of the general wishes of the interested fishermen and also to cooperate closely with the Local Fishing Adjustment Committee for the re-establishment of fishing rights in conformity with the new Fishing Law.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

FISHERY DEPARTMENT
SHIMANE PREFECTURAL GOVERNMENT

Matsue, Shimane ken
21 September 1950

SUBJECT: Question of Debrining Lake Shinji

TO : Chief, CCAR

ATTENTION: Natural Resources Section

Pursuant to the verbal request made by your Mr. G. K. Blackwood during his visit to Matsue on 12 September we are reporting to you on the subject matter, its history, and development in recent years.

History

So far as is known Lake Shinji has always been fresh water lake. Whatever salt there was in the lake water in the early days did not hurt agriculture on farms flanking the lake shores.

In 1931 the bed of the Ohashigawa the principal outlet of Lake Shinji was dredged as far east as the confluence of the Tenjingawa (another outlet paralled to the Ohashigawa). By 1939 the entire stretch of the Ohashigawa was dredged. It was part of the Hiigawa conservancy project launched in 1925. This gave Matsue harbor enough depth for mooring of 500 tonners.

Farmers tilling the paddy fields along the banks of the Ohashigawa and along the eastern shore of the lake began complaining about 1935 of the damage due to infiltration of salt water in the farms.

In 1939 when the dredging was completed Shimane suffered prolonged drought in summer. This intensified the salt contents of the water of the Ohashigawa and Lake Shinji to a point where water was not fit for irrigation.

The SPG as the means of offsetting the shortage of irrigation water built many small reservoirs at various areas. Later successive heavy rainfalls and flowing of alluvion eastward accelerated by the strong west winds blowing over the lake have served to thin the salt contents of water. Even in summer the salt contents of water of Lake Shinji is approximately 0.8/1000 which does not hurt agriculture.

Econ 1555

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

Whenever it rains heavily, however, the water level of the lake frequently rises by several feet, endangering Matsue and 14 towns and villages along the lakeshores. This necessitates the dredging of the Ohashigawa and Sadagawa canal (an outlet to the Sea of Japan) and strengthening the embankments.

The Collective Hiigawa Development Committee took the matter into serious consideration. The committee, studying the question from many angles, has learned from past experiences that dredging of the Ohashigawa would inevitably invite invasion of larger percentage of salt water which in turn would damage farm crops along river banks and lake shores. The public began demanding a long-range plan designed to dispel evil once and for all about June 1948.

The Ministry of Construction, the Ministry of Agriculture and Forestry, and Shimane Farmland Department jointly investigated the possibilities in October 1948. They suggested the construction of a weir across the Ohashigawa about 1,200 meters up the mouth for the purpose of controling the upstreaming of salt water.

The first joint conference was held on 11 February 1949 and was attended by the Governor, personnel of the Okayama Farmland Secretariat, representatives of the Ministry of Construction and various SPG personnel. Experts on various lines expressed their views.

On 20 July 1950 the second joint conference was held. It was suggested that the weir be built across the eastern end of the lake a few city blocks west of the intake of the Ohashigawa instead of a point 1,200 meters up the mouth. Merits and demerits of the changed site were hotly debated.

Bearing on Fresh Water Fishery

As far as the freshery questions are concerned this Department took the following steps to date:

a. It was decided on 6 November 1948 that the Fishery Department, Public Works Department, and Farmland Department of the SPG should conduct separate investigations. The Farmland Department asked us to submit to them our findings and estimated cost, it being understood that the Farmland Department would give special consideration to our expenses incurred.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

b. The Fishery Department was represented in the first joint conference held on 11 February 1949. This conference was participated in by the Governor, Okayama Farmland Secretariat, Ministry of Construction, Shimane Public Works, Fishery, Forestry Departments.

c. The Okayama Farmland Secretariat, Shimane Fishery Department, and Shimane Farm Civil Engineering Section met on 12 February 1949. This Department presented a demand for ¥172,650 as expenses of investigation. The Okayama Farmland Secretariat promised us to let us know later how much it would credit us.

The Fishery Department checked up the volume of flow from Lake Shinji to Nakaumi Sound, annual changes of volume of water flows; the possible effects of the weir upon the rise and fall of fresh water fish, and interchange of currents in the Nakaumi Sound. In studying the problem the weir model constructed by the Farmland Department has been used. Anyway this Department has been to submit the estimate cost of plan to increase breeding of fresh water fish assuming that Lake Shinji would eventually be debrined.

d. The second joint conference was held on 20 July 1950 and was participated in by the Vice-Governor, Okayama Farmland Secretariat, Ministry of Construction, Shimane Public Works, Fishery, and Farmland Departments.

Experts declared that in the event a weir is built the water level of Lake Shinji will inevilably rise, which in turn will necessitate a drastic alteration of the Hiigawa conservancy project.

Fishery's Immediate Concern

The Fishery Department at present is interested in the following projects:

a. To increase breeding of fresh water fish.
b. To rehabilitate fishermen suffering from the decrease of fresh water fish schools.
c. Liquidation of damage from upstreaming of salt from Nakaumi Sound.
d. To study economic effects of debrining of Lake Shinji.
e. To compute cost of operating movable weir the year round.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

As things stand today the question of debrining Lake Shinji has not entered even blueprint stage yet, inasmuch as many factors have to be taken into account before a conclusion can be reached.
