Appendix

Florida's Secretary of State Tom Adams Speaks on Water Pollution

EXTENSION OF REMARKS

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1966

Mr. FASCELL. Mr. Speaker, all of us in the Congress are increasingly aware of the need for immediate action to halt the increased poisoning of our environment by all sorts of physical and chemical wastes.

Last year the 89th Congress made a significant beginning to halt this pollution and protect mankind's most precious resources, the air we breathe, the water we drink.

But Mr. Speaker, all our good intentions would be of little consequence without the tremendous interest in pollution control being shown across the country by State and local governments. We in Florida are particularly fortunate in having had a long record of constructive action against pollution, but much remains to be done.

de

Recently Florida's distinguished secretary of state and vice chairman of its board of conservation addressed himself to the need for more concerted action in pollution control. He expressed his great approval of the expanding scope of the Federal water pollution control program and the further proposed increases of Federal activity in this area.

One of the State's leading conservationists, interested in conserving and utilizing the State's resources in the most beneficial way. Tom Adams has been in the front of those in Florida calling for increased plans and action at the State level. He has formulated an imaginative program for giving a new sense of enthusiasm to Florida's efforts at pollution control. In order to enable the State to meet its full responsibilities under the present and planned Federal programs, he vigorously urges that all State agencies connected with water pollution and related problems be coordinated by the Florida cabinet.

Secretary Adam's thoughts concerning the problems of pollution are set forth in the following recent speech:

It is a privilege to share this occasion with you, especially since we also share a mutual concern over the invasion of pollution into our natural waterways.

Florida's waters always have been among our most outstanding assets, both from the standpoint of sheer beauty, and from the standpoint of economic value.

Back in our territorial days Governor William DuVal described our rivers and streams as being more valuable than mines of gold. Since that day, we have used them for commerce. We have used them for recreation. We have admired their natural, scenic beauty. We have drawn water from them for farms, homes, and factories, proving the abundant truth in the statements of DuVal

more than 100 years ago.

We can never attain a level of development
in excess of that which is capable of being
sustained by our available and useable fresh
water resource.

In the sleepy days of plantation culture—when only a handful of hardy pioneers had pushed as far into Florida as Sebastian Inlet—we not only found our rivers and streams to be beautiful and valuable, but we also found them to be convenient—convenient to carry away the wastes of city, home, and farm. In those days people were few and the rivers were adequate. Pollution was no problem. Nature was still able to overcome the carelessness of man.

The picture is quite different today. Six million people now live where only hundreds lived before. Thousands of acres of land have been cleared. More is being cleared each day. Evolving technology has brought with it industrial processes which demand more water, and which at the same time contaminate more water. Farmers till the soil to the river banks. Fertilizers and pesticides are washed out. Cities still find these watersways convenient dumping grounds for street drainage and sewage systems.

Consequently, pollution has reached such extremes that nature can no longer overcome it . . . or the pollutants are so complex that nature has no effect upon them.

As our population grows, as agriculture and industries grow, and as more and more demands are made upon our water supplies, this condition will continue to worsen. That is, of course, unless we can establish water quality standards, and have enough backbone to enforce them.

The time has come when we must realize that the demands for our water will continue to increase, but that our supplies of water will not. Every drop of water which you use in your homes and gardens—every drop that flows through our rivers and streams—every drop that is used by agriculture and industry—fell somewhere in the form of rain. Our rivers, our lakes, and our underground supply—the water which bubles from our many springs—at one time fell as rain. And the volume of rain is fixed—controlled by the laws of nature, of which we are a part.

Generally speaking, however, we are abundantly blessed with water. But it is not always where it is needed. And is is not so abundant that we can long continue to waste it. In some areas, the demand already has exceeded the natural supply.

Already the rivers and streams—which we too often have used to carry away municipal, industrial and agricultural wastes—are being called upon to supply drinking water for thirsty, growing cities. There are all too many examples in Florida today where the waste discharge of one city is polluting the water supplies of another. Industry and agriculture also are adding their wastes to our rivers and streams, thus compounding the problems and dangers of pollution.

This free-flowing, wanton pollution of our natural water courses, actually is confounding our efforts to conserve this vital and oft-times beautiful resource.

For on the one hand, we are spending millions of dollars here in Florida building reservoirs to trap and hold water. We are spending millions of dollars digging canals and improving river channels to move water. We are spending millions of dollars study-

We are spending millions of dollars studying our water resources, projecting demands, and developing programs for conservation. And yet, at the same time, we are quietly—

And yet, at the same time, we are quietly but deliberately—pouring millions of gallons—literally tons—of garbage, of poison, and other refuse and waste into that which we are trying to save. It just doesn't make sense! And it cannot be allowed to continue! The time has come for the citizens of

The time has come for the citizens of Florida to take a long hard look at our water resources. The time is rapidly approaching when we will have destroyed more than we have conserved.

We must clean up our water.

We must sweep pollution from our rivers and lakes.

We must demand that industries clean up their wastes, that cities treat their sewage, and demand that fertilizers and pesticides be kept out of our lakes and rivers.

For too long we have blindly ignored the threat of pollution, except as it relates to human health. We have adopted septic tank regulations, to protect us from typhoid, hepatitus, and other diseases. We have placed quarantines upon polluted oyster beds to protect us from pollution-borne diseases.

But short of this—short of halting pollution when it becomes so extreme that it is a matter of life or death—we have done very little.

The fact of the matter is that we still have no effective means of establishing and enforcing water quality controls in Florids. We still have no agency which can move in and stop anyone from pumping our waters full of pollutants, unless, of course, it endangers human health.

So long as we keep separate the responsibility both of providing and protecting water resources, we will never have an effective water resources.

fective water resources program.

We must fuse these responsibilities together and mold them into a single comprehensive effort with a single comprehensive purpose. For we cannot think of conserving water, without thinking of protecting its quality as well as its quantity.

It is time that we created an Air and Water Quality Control Board—consisting of the Governor and the Cabinet. Thus, the executive body of Florida—those who are elected and responsible directly to the people would be directly and completely responsible for preventing and cleaning up pollution.

This board, by necessity, must have the authority to establish water quality standards, and the power to enforce them. It should have the authority to utilize every existing State agency to develop these standards and to enforce compliance with them.

We are long past the point where we can continue to ignore the impact of pollution upon our natural resources. There are many other legitimate uses of water, other than those directly involving public health. These, as well, must be considered in our program of water quality control.

To be effective, expert technical advice, as well as competent and trained enforcement personnel, must be made available to the Air and Water Quality Control Board.

This could best be accomplished through a council composed of those agencies involved with water and its varied uses. The council should consist of representatives from the Board of Conservation, the Board of Health,

the Forest Service, the Board of Parks, the Agricultural Experiment Station, the Game and Fresh Water Fish Commission, one member representing municipalities, and one member representing the counties.

Participation by each of these agencies effectively coordinated by the Cabinet, acting as an Air and Water Quality Control Board, would assure the citizens of Florida that our program of water quality control would be administered and enforced with full consideration to the total need, whether it be for natural resources, fish and wildlife, or human health.

Without such a "hard-nosed" approach to poliution, we will soon reach the point of diminishing returns in our conservation

The water which we seek to save will be destroyed with pollutants before it reaches the reservoirs.

The cost of conserving the water will be compounded by the cost of reclaiming it. Eventually we will be spending millions of dollars just to trap and hold the sewage of

Without water quality controls, without an effective means of preventing pollution of our water resources, we would be far better off to abandon conservation programs and seek ways of expediting the flow of sewage, industrial and agricultural wastes to the

But if we did, the land would soon dry up. Salt water would invade our underground water supplies. People would leave. Crops would wither. Industry would be forced to migrate to dependable and usable water supplies. And Florida would wither up into a rain-soaked desert of pollution—waiting for the evolutionary process to begin all over again.

This is the grim promise of our future, unless we can effectively marry our efforts to conserve with our efforts to protect our water resources. This is the challenge which faces us today. It is an urgent challenge which must be met with determination—lest we be guilty of destroying more than we build

Breakthroughs in the Life Sciences

EXTENSION OF REMARKS

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Wednesday, June 29, 1966

Mr. JAVITS. Mr. President, early this month, on June 6, Georgetown University here in Washington conferred upon a distinguished alumnus, John J. Powers, Jr., an honorary degree of doctor of laws. Mr. Powers, president of Charles Pfizer & Co., in receiving this recognition typifies those leaders in business whose interests and concerns go beyond those encompassed by the corporate world.

The following day, Mr. Powers was a featured speaker at the Industrial Science and Technology Conference sponsored by the National Association of Manufacturers. In his address, he discussed acientific research and the roles which can be played by government, the universities, and private industry in cooperating to eliminate the diseases which continue to plague mankind.

I ask unanimous consent that Mr. Powers' address may be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BREAKTHROUGHS IN THE LIFE SCIENCES (Remarks by John J. Powers, Jr.)

It was not too long ago that research directed to the discovery of medicinal products was in the main, of a fairly simple nature in the sense that it was largely empirical. Very likely this was due to the fact that there was an inadequate background of essential basic knowledge and of instrumentation to do more. The medicinal products discovered by these means such as barbiturates, digitalis, insulin, vitamins, aspirin, morphine and others, had important therapeutic value, but in the main, tended to relieve symptoms and deficiencies caused by disease and not to attack the disease itself. And some of the most serious health problems like tuberculosis, pneumonia and many other infectious disease were scarcely touched by the older remedies.

Then came the era of the sulfa drugs and the antibiotics and the first successful far ranging attack on the causes of disease, with the spectacular results we all know so well. This was the high point of empirical research the spectacular pay-off of sheer hard work. It was characterized by a massive application of ingenious, efficient, but none-the-less empirical methods, such as the soil-screening techniques which discovered the microorganisms from which antibiotics were produced. It was backbreaking work in those days but it paid off handsomely in the relief of human suffering—and it also provided the funds for greatly increased research expenditures by the pharmaceutical industry.

As the number and variety of biologically active substances proliferated, a new excitement stirred in the world of drug research and scientists became unwilling to continue to discard all substances rejected by their screening programs. The organic chemist and the biologist, working together, speculated as to what changes in the molecular structure of a rejected substance might correct its deficiencies.

The massive search for new antibiotics, hormones and growth factors, began to give way to a systematic attempt to improve on nature. The phrase "structure-activity relationship" became highlighted in the laboratory as the chemist grappled with the riddle of molecular structure and how it might be used as a key to the expected activity of adrug. A very substantial body of knowledge began to be accumulated by those skilled in forming and reforming molecular structures. And it would be fair to ascribe to this work such important developments as the oral anti-diabetic drugs, the newer synthetic corticosteroids, the sulfonamide diureties, the phenothiasine anti-psychotic drugs, and many others. It was because of this important work of systematic variation and selection of optimal compounds, that I have always regretted the way in which the term "molecular manipulation" came to have derogatory implications when the record shows that it has served medicine so well.

From these several—we might call them classical—techniques for seeking useful drugs, came continued progress, but by the early 1960's the pace of new drug development had slowed down. The era in which mass empirical screening dominated, successful as it was had been mined out. And the more sophisticated structure-activity work of the bloogist and the medicinal chemist, which had built upon and extended the usefulness of empirical screening, had lost momentum probably because it had used up much of the basis knowledge then available. However, this work had built a body of information and developed laboratory techniques that are now helping to launch the era of research in the life sciences—the era of molecular biology.

The molecular—or physico-chemical approach to blology as a basic concept—can be traced back for some time, but now are the years of its spectacular growth. It has been said that there is no holding back an idea

whose time has come, and this certainly is the time of molecular biology. It has influenced all sectors of biological research, from the specialist whose field is the invisible chemical reactions taking place deep inside the living cell, to the clinician who is warily administering a new drug to the first human patient. It has taken away much of the mystery of biological events, reducing them in many instances to chemical equations and physical interactions, thus finally linking up the study of life processes with all the great advances in chemistry and physics of the nuclear age.

The modern period in molecular biology might be dated from a brilliant series of discoveries in the early 1950's at the California Institute of Technology, culminating in Linus Pauling's postulation of the helical structure of proteins.

As the atom is to matter, the cell is to living things—the smallest functional unit of life. Within each cell are smaller organized units, the most important being the nucleus. The nucleus contains the chromosomes which the molecular biologists have now shown us to be strands of a giant polymer—desoxyribonucleic acid or DNA. Outside the nucleus are the ceil's working parts, controlled by DNA as a switchboard controls its widely separated telephones. And the helical structure of DNA is capabale of an infinite variety of sequences and is accordingly somewhat different in each of us.

DNA is the model for the synthesis of an-

DNA is the model for the synthesis of another large, polymeric molecule, called messenger RNA, which is a blueprint for the manufacture of protein. DNA sends the messenger RNA to the ribosone, which is a protein factory in the working area around the nucleus of the cell. For each different protein to be synthesized, it sends out a different messenger RNA.

It is no imagery, but a sober fact that DNA exercises ultimate control of all functions in the cell with consequent major impact on the entire organism. It carries the genetic code—the master blueprint—which determines what cellular proteins shall be made and what the function of that cell shall be. Under the influence of appropriate control molecules, it directs the organization of cells into groups, and into organs and genetic code—the master blueprint—which groups of organs up to the whole living organism: the microbe, the tomato plant, the bumble bee, you—and me. And this code has been cracked. We now know what message is related to the production of what protein and have demonstrated the principle in living systems.

Obviously, these discoveries culminating in the cracking of the genetic code, the basic insight into how this fundamental cellular mechanism works, constitute one of the greatest scientific advances of our time. It certainly suggests to me that while we have had our telescopes trained upon a distant universe, it may be that the greatest developments of the decades ahead will be rather in the vast microscopic and submicroscopic world of the human cell. But we must realize that important as these developments are in providing a unifying concept for all of the life sciences they no more solve all our problems than Einstein's famous equation, E=mc², solved all the problems of theoretical physics.

Nevertheless our new basic knowledge in the life sciences is a true platform for growth. It is in many important respects a take-off point for the final problem solvers—the drug discoverers—and it thus imposes a grave responsibility on the industrial laboratories which are particularly skillful in this phase of research. And while there are as yet many basic knowledge gaps which will for a while limit the application of molecular blology to drug discovery, many interesting leads are being developed. Indeed industrial research in this field has become a mixture of basic knowledge and drug discovery research.

But there are deeper mysteries. Microbes do not get diabetes. Men do. And yet the knowledge gained from genetic studies with microbes may provide by far the most power-ful approach to the elimination of this disease from man. Diabetes may well be traced to a defective gene somewhere on that im-mensely long coil of DNA. Some day we shall have the ability to correct this bio-chemical defect, and diabetes, and possibly other diseases, will be a thing of the past.

The application of the concepts of molecular biology is even more difficult to visualize however in the case of the chronic degenerative and metabolic diseases. There certainly will be no easy solution to these problems. In fact it is probable that their solution will depend on our first utilizing molecular biological concepts to determine the underly-ing causes of these disease conditions.

What are the most likely causes of these chronic degenerative and metabolic diseases? My scientific colleagues tell me that it is often possible to identify one or more regu-latory processes that are out of balance in these diseases-but they cannot usually distinguish which "component" in the plex biological control network failed first, and which systems are merely readjusting to compensate for the primary malfunction. This kind of problem has sometimes been called "systems biology"-the biology of the complex, self-regulating control mechanisms that manage the house that DNA built.

Indeed it is worth noting that this moves us beyond the genetics aspects of molecular biology and involves a molecular visualization of all of the biological events of the body. For example, a visualization of energy transfer at receptor sites involved in smooth muscle control coupled with new drugs acting at these sites has led scientists in our laboratories towards a promising new approach to the management of hypertension.

Of course all this portends the beginning of an exciting new phase of medicinal prodarch in industry laboratories, rational rather than empirical, sophisticated beyond anything previously practiced, costly, adventuresome-but the objectives for mankind are magnificent. Now the door is open, or at least ajar, and it is not impractical for the pharmaceutical industry to consider tak-ing on any of the ills the flesh is heir to. But brilliant as are the breakthroughs that make these considerations possible, the road ahead for the industrial researchers who must now create new drugs for the relief of human suffering in a long one. A good deal of this work can now be done with consider-ably greater hope of success, but much more basic new knowledge is needed if we are to satisfy within a reasonable time the high expectations for progress in health now freely discussed throughout the world. And so the basic knowledge seekers and the product re-searchers slike have their work cut out for them in the years ahead. I am implying, of course, that there are a number of groups at work and I think that needs some further comment.

Up to this point we have been talking about the technical breakthrough in contemporary medical research. We should not however overlook the changes in the politicoconomic atmosphere in which this research has been carried out. Perhaps the single most important factor in medical research since 1950 has been the impressive growth of both Federal and private support, and the developing patterns of interaction between the three parties in the health resarch community, that is, government, the universities and industry. For example, the National Institutes of Health which do or sponsor of the government research in the health field increased their expenditures from \$73 million in 1950 to a budget in 1966 of \$1.3 billion. The pharmaceutical industry in this same sixteen-year period increased its expenditures from \$39 million to an esti-

n

mated \$355 million. In this connection it is important to understand that while there has been an increasing tendency toward government support of research through con-tracts with industrial laboratories, to date this amounts to something less than 5% of the total funds expended by the pharmaceutical industry for health research.

Traditionally, most government-supported work has been devoted to the development of basic knowledge and the training of young scientists but-spurred always faster-there has been an increasing tendency for government to work on or support directed to the discovery and devel ment of specific products. Concurrently, in-dustry has found it necessary to supplement its traditional product discovery and development role with an increasing amount of basic knowledge research to help fill some of the gaps in knowledge to which I have just And so the traditional lines of demarcation between government and indus-try in medical research are becoming blurred.

It is timely to look again at our respective roles, not only because of obvious political and economic connotations, but also to achieve the greatest efficiency in our effort to reach the challenging health goals being placed before us by the present Administra-

In hearings earlier this year before the House Committee on appropriations for the Department of Health, Education and Wel-fare, the Chairman, Congressman Fogarty, asked Dr. Shannon, Director of National In-stitutes of Health, where he thought "the line" was between government and private industry in health research. A part of Dr. Shannon's reply was as follows: "Industry feels that the Federal dollar should be spent in two ways: One, in the support of funda-mental research, and two, in the development of broad scientific competence as the basis for the educational process. They feel, in our economy, that industry is there primarily to do the developmental work leading to a product with full patent cover-With a competitive system this is the st way they can operate.

Indeed, I agree with them in many fields. I think there are certain fields in which they do not have the broad competence, that they do require extensive involvement with the Federal laboratories and with the academic world. It is this type of thing that we feel we play a very important role in."

As I interpret this reply, Dr. Shannon backs the traditional view that government, in the main, should support what I have been calling basic knowledge research as well as the training of young scientists, and that industry should be called upon to discover the new drugs and develop them for use in any field in which it has competence. The reference to competence is surprising. As an example of its application, Dr. Shannon referred to the history of viral vaccine de-velopment as showing in his opinion that industrial capability had not been developed to a sufficiently high point in this particular field to assure that new knowledge would be rapidly applied by industry without government help and support. But even under these circumstances, Dr. Shannon went on to say that: "Industry is an abso-lutely essential component. Industry must be involved and very early. They have a very important role to play. But there are certain areas where the individual corporate bodies cannot go it alone." (p. 274)

This may be true. Who can say that the need for joint action in special circumstances may not be indicated in the busy years ahead? And so it is difficult to disagree with this concept. There will probably be more debate about its application than about the concept itself. One of the problems will certainly be who is to decide the competence of industry with respect to the application to new drug research of a new piece of basis

knowledge. But rather than worry this thought any further today, let us concede the need in some circumstances for joint action, and when collaboration is clearly warranted, let us plan for it as a whole-

hearted, cooperative effort.

In summary, then, I believe that there is a pressing need for a substantial enhanceent of the infrastructure-if I may borrow a term from the economists—of basic knowledge and of trained people in the health research field. This calls for a massive effort which is beyond the power of industry alone to supply. The government is already sub-stantially supporting this infrastructure, and in doing so releases the energies of the private sector to do what it does best; to discover new drugs and to develop their application in the practice of medicine.

Government does and can accomplish its role with its own research effort but more importantly by financing university projects. importantly by mancing university projects. There may also be times when the government can discharge its role by contracting for fundamental research by industry, where industry is, for special reasons, the best fitted for the job. Finally, as I have just mentioned J. think we hould advanced the them. tioned, I think we should acknowledge that there may on rare occasion be special circumstances that would require government support of industrial medicinal product discovery but this would be considered the exception, not the rule, in delineating the re-sponsibilities of those concerned.

I would like also to suggest that the government, in developing the research infrastructure, should pay primary attention to the training of scientists. If one factor is to be singled out for major emphasis, this is surely the one and this means strong support of the universities. In this connection the goals of government should be not merely to support to an optimal level the major centers of academic excellence, but also to help smaller universities become adequate centers for the training of scientists and the generation of useful knowledge. It is, of course, essential in stressing the importance of government financing of university efforts to realize there must be a limit. The universities must not lose their freedom and independence of action. In this paper I can only point this out but its lirisf treatment here does not suggest my own minimization of this important question.

A program for the development, principally by government and the universities, of a broader infrastructure of basic knowledge, made freely available to anyone, and of trained scientists, will create the platform for a tremendous forward thrust in new drug discovery and development beyond anything heretofore imagined. And to accomplish the latter is the primary responsibility and the special skill of industry, operating in a competitive climate. Some visualization such as this of the division of responsibility between the three participants in health re-search, it seems to me, is essential to our continued rapid progress as a nation in the health field. It is an attempt, in a time when there is so much to do to suggest the need for each group to concentrate on the thing it does best.

Captive Nations Week

EXTENSION OF REMARKS

HON. CLAIR CALLAN

OF HEBRASIKA

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. CALLAN. Mr. Speaker, the over-whelming desire of the captive peoples of

east central Europe for self-determination and freedom from Communist tyranny is a factor that can too easily escape the allegiance of our alertness during this time of major focus on the war in Vietnam.

I urge my colleagues to avoid this potential oversight and wish to call to their attention the annual observances of Captive Nations Week this July 17 to 23

The problems of the captive east central European nations belong in the forefront of international issues. Let us not so quickly forget the difficulties we have been so long exposed to because of Communist objectives in Europe. must not focus so intently on the Vietnam situation that we forget our obligations to encourage and support all efforts to free these captive peoples from their totalitarian regimes.

Any tendency on our part to readily accept news of liberalization in Communist East Europe as a sign that the threat to freedom in that area has ended is a tendency mistaken in its identity of the overall objectives to which this nation has pledged itself.

The peoples of east central Europe are still denied fundamental human rights. Communism still maintains its stranglehold of the minds and bodies of 100 million people in this area. The woes of the captive peoples in Europe have thus not subsided. They remain a subject for major consideration in the conduct of our foreign affairs.

I urge my colleagues to renew their vital interest in the welfares of these captive millions and to endorse that part of the Captive Nations Week 1966 manifesto that accuses the Soviet Union of violating "its solemn promises of freedom and independence to the nine nations made captive during or after World War II-Albania, Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, and Rumania."

Balance the Elephant

EXTENSION OF REMARKS

HON. KARL E. MUNDT

OF SOUTH BAKOTA

IN THE SENATE OF THE UNITED STATES Monday, July 11, 1966

Mr. MUNDT. Mr. President, George Todt, widely read political analyst of the Los Angeles Herald-Examiner, and a solid supporter of Ronald Reagan's campaign for the governorship of California, recently wrote an interesting column of sound advice for all Republicans nationally. I take pleasure in calling it to the attention of the Congress and the country by having it printed in today's issue of the Congressional Record.

Mr. Todt makes a valid and important point by suggesting that those who defected from the Republican Party in 1964 should scarcely be entitled to lead or control it in 1968. He argues effectively against those in our party who would endeavor to purge from party leadership any segment of the party and suggests the mantle of republicanism is broad

enough to encompass all citizens sin-cerely concerned about the drift toward centralized paternalism which is so evident in America today.

He also implies that the Republican Governors of 17 States out of this country's 50 who presume to embrace for themselves the right and the power to name our National Republican slate for 1968 are a bit too intoxicated by their high offices when they attempt to set themselves up as our party's spokesmen and kingmakers. After all, the delegates to our National GOP conventions rather than either our party's Governors, Senators, or Congressmen have the authority to write party platforms and to nominate candidates for President and Vice President. In the meantime, there surely must be some problems of statewide importance and significance which might better occupy the time of our country's Governors rather than having them devote so much time to playing politics in the big league and attempting to determine proper foreign policy toward Vietand appropriate techniques for fighting the military actions of that area.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

BALANCE THE ELEPHANT

(By George Todt)

"I shall denounce no good Americans in my campaign. There has been too much friction inside the GOP between right, left and center in the past. We all must be tolerant of our differences and unite our total efforts for final victory."-Ronald Reagan, June 25, 1966.

A great deal of opposition and chagrin is being mounted inside important segments of the Republican party at the GOP governors meeting here at the Century-Plaza Hotel.

They seem more intent on calling the presidential nominee in '68 than getting on with the most important job—which is to improve the national image now.

Leave it all to the governors at this early date and why even bother to hold a national convention two years hence?

Or how could any future delegate expect to get hold of credentials unless first he passed "moderate-liberal" saliva test?

Why not just wrap up the nomination and hand it to Gov. George Romney of Michigan without further ado?

A SIGN AHEAD

There are at least several important reasons why the GOP—including the august governors of 17 states—ought to "Stop, Look & Listen" first.

In the first place, the "liberal-moderates" (these names are fairly interchangeable and neither rates first in order of priority) able to command little more than 30 per cent of the party faithful.

That was the way it was at the 1964 convention in San Francisco. And that was the way it was recently in California when Ronnie Reagan—a temperate conservative beat George Christopher by a whopping 68-31 per

What cost the Elephant victory in 1964 not a matter of the much-maligned, anti-Socialist philosophy of Barry Goldwater-but the defection of 8 million "liberal-moderate" Republicans who voted for Lyndon B. Johnson. They took a powder!

LIKE AN ARMY

A major political party is like an army, with a right wing, center and left wing. In 1964, the whole left wing of the GOP took off—all 8 million of them. And it made a

gap of 16 million between Johnson and Gold-

If the 8 million GOP defectors had stayed home and voted for their party candidate, the arithmetic would have looked like this: 8 million added to the 27 million Goldwater received would have totaled 35 millions

Conversely, 8 million subtracted from the total of 42 million received by Johnson would have left him 34 million and a deficit of one million votes.

A potential Republican triumph was surrendered because of petty differences by 8 million GOP defectors to their party standard bearer.

A LESSON HERE

For this action, the "moderate-liberals" have no real claim to first place on the 1968 Granted they know how to muddy the waters, take the party down to defeat if they please. Is this required leadership? No, it is not. On the other hand it is not

good statesmanship in the GOP to refuse to allow the left wing due representation. Give it second place.

An ideal Republican ticket in 1968 for those without axes to grind on the ideological front, might be the temperate conservative Richard Nixon named to the No. 1 spot and Gov. George Romney as Veep.

This would balance adequately the overall ticket between the far weightier GOP conservatives and the accompanying 30 per-cent of "liberal-moderates." Had Goldwater done so, he might have won.

Can a needed lesson be learned here?

Solution to Vietnam War-and Strategic Deterrence for Peace-Lies in Antimissile Nike-X

EXTENSION OF REMARKS OF

HON, J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. YOUNGER. Mr. Speaker, Rear Adm. Chester Ward, U.S. Navy, retired, former Judge Advocate General of the U.S. Navy, addressed the Commonwealth Club of California on June 24, on the subject "Solution to Vietnam War-and Strategic Deterrence for Peace—Lies in Antimissile Nike-X." A summary of his address, as published in the Commonwealth, follows:

SOLUTION TO VIETNAM WAR-AND STRATEGIC DETERRENCE FOR PEACE-LIES IN ANTI-MIS-SILE NIKE-X

Friday Flashes-June 24th

(From address by Rear Adm. Chester Ward, U.S. Navy, retired, former Judge Advocate General of the United States Navy)

Because the lock was not put on the stable door until after the nuclear missiles had been sneaked into Cuba, scores of millions of Americans were subject to danger of imminent nuclear incineration. From that horrendous peril, we were, in the words of the Commandant of the U.S. Marine Corps, saved only by the grace of God and an aerial photograph.

Any solution to a major Communist threat must meet four tests: (1) political possi-bility; (2) financial feasibility; (3) strategic soundness, and (4) it must not start a nuclear war or allow people to think it will.

The solution I suggest for Vietnam, I think, meets these tests.

It is politically possible because it requires no escalation in Vietnam. It does not widen the war into Laos or Cambodia, it doesn't inr

volve the use of American seapower to block-

ade the coast or mine Hatphong.

It is financially feasible, because it does not require additional dollars in Vietnam nor investing any money that wouldn't be invested if the Communists had never tricked us into Vietnam.

SOLUTION WON'T START NUCLEAR WAR

Will it start a nuclear war? No. For the first time it will give us a defense against nuclear attack. It will vastly strengthen deterrence against nuclear war.

I do not criticize Secretary McNamara, I am in awe of the man and fear the man. I am in awe of the man because he is spending a billion dollars a week and, last November, after spending \$300 billion, finally said that we are starting not to lose the war.

His idea in Vietnam is to pursue the policy of persuasion—the theory that by continuing to shoot North Vietnamese soldiers as Ho Chi Minh feeds them into South Vietnam,

we can persuade Ho to stop the aggression.
We are only killing about four thousand
a month, but they are being infiltrated into
South Vietnam at the rate of 7,750 a month.

A critical point is that North Vietnam executes more of its own people than we could kill in two years. They do not have a high regard for human life.

TAKE WRAPS OFF AIR FORCE!

Another alternative, which military men favor, is to decide to win the war and go ahead and win it. There is practically no question that this can be done.

The Chief of Staff of the Air Force stated in December 1965 that the war against North Vietnam could be won and North Vietnam destroyed virtually overnight if the President would permit the Air Force to do it. By virtually overnight, he later explained, he meant something on the order of three weeks. He is not talking about nuclear weapons, nor killing millions of civilians, but just of taking the wraps off the U.S. Air Force. There is no question that our air and naval power can defeat North Vietnam, leaving the Vietcong with no place to go.

Only about two weeks ago, the Commander in Chief of the U.S. Pacific Fleet advocated a naval quarantine of Halphong, and said that, once given orders, the Navy could do it in a day or two.

APPEASERS FEAR RED CHINA

The apostles of appeasement and accommodation say that this would not end the war—that Red China and perhaps Russia would come in.

Would winning the war bring China in? If the Chinese thought they could get into the war without suffering unacceptable results, they'd be in aiready. They're highly vulnerable in many ways.

Bombing fifty targets in China would wipe out more than half the urban Chinese, including all the key people in government and industry. And we could destroy their newly developed nuclear production complex.

As to Russia, either we have the Soviet Communists deterred or we do not. They don't need an excuse to start a war. We are the one obstacle to their complete domination of the world. What keeps them from attack is their fear of our retaliation.

FOR HANOIS

Do you really think the Kremlin will sacrifice Soviet Russia to nuclear rubble for the sake of Hanoi? We should go ahead and win.

I feel Congress should carry out the Constitutional mandate and recognize the state of war that exists.

They tricked us into it. Remember that their motor torpedo boats attacked the Seventh Fleet. They were shelled in return, but no other response was made. Since they didn't get much reaction, they attacked again. The President had to retaliate be-

cause he was in the midst of a Presidential from under President Diem? A: The over-

It was deliberate provocation. There was no military value in attacking the Seventh Fleet or in attacking our compound and bombing the Embassy.

We owe it to the men who are going there

We owe it to the men who are going there to be shot at to recognize that a war exists. It will have a tremendous effect in cutting down the number of lives lost needlessly. It will have a great effect on the men who are there. It will have a great effect on the home front. It will make actual treason, legal treason. It will unify the country. Americans have always pulled together in war.

It would have a terrific effect on the enemy. If we declared war, they would know we were there to stay and we would win.

REDS TRAPPED US INTO SPENDING BILLIONS ON SMALL ARMS

Why have the Communists trapped us into this situation? The answer is obvious now, but was not then. It was to trick us into spending scores of billions on tactical weapons—on aircraft, helicopters, ground materiel, anything useful in small war, and to reduce spending on strategic weapons.

You can detect the strategic aim of the enmy by the type of weapon he wants you to produce, or to stop producing. If the Communists intended to conquer the world on the installment plan, by small wars, they would not have us spending billions of dollars on the weapons to meet these wars.

What they want to do is to divert us from spending money on the big strategic weapons that will deter them from world conquest.

Expenditure on our strategic weapons is down 43%. Our spending on research and development of latest weapon systems is \$1½ billion iess per year.

TRICKED US INTO ORBITAL MISSILE BAN

Meanwhile the Soviets are building late model strategi eweapons. They are building an advanced system of orbital missiles.

They tricked us into the test moratorium, and again into the U.N. resolution against orbital missiles, and we stopped research.

orbital missiles, and we stopped research.
Then last November they bragged about
the orbital missiles they had produced, and
said, 'hai hai hai'—the U.N. resolution was
against the orbiting of such missiles, but it
didn't say they couldn't be designed and
produced.

The Communists are about to observe the 50th anniversary of the Russian revolution. In fifty years we have never tried to outsmart the Communists.

They were so doggone smart in trapping us into Vietnam that we could turn it right back on them if we were smart enough. The only time American people spend enough to develop defense is when we are in a state of

The enemy's objective is Western Europe. Vietnam has no national product. Western Europe, with 340 million people, has a gross national production of 500 billion a year.

NEED MISSILE DEFENSE

There is one way that we can defeat that aim and that is by building a defense against nuclear weapons.

We now have available the Nike-X system.
The Joint Chiefs of Staff have recommended that we produce this immediately, they recommended it unanimously two years ago, the committees of Congress favor it, but McNamara won't apend the money.

Nike-X could have 70 million Americans, possibly including you and your family. I don't want to save just 70 million Americans—I want to save 180 million Americans—and the Nike-X, if we had it, could do this too."

ANSWERS TO WEITTEN QUESTIONS FROM FLOOR
Q: (Hillary H. Crawford) Why did Democrats send Republicans to Saigon to pull rug

from under President Diem? A: The overthrow of Diem was set up by the New York Times and the Washington Post. Despite his achievements he was anti-Communist and

you can't have that!
Q: (Russell Warner) General MacArthur said that we should never get in a ground war in Asia. Why did we? A: General Tay-lor opposed it too. But he commented later, what could we do? They kept on sending in The answer is to develop the more troops. Nike-X. If the enemy saw that when they started a little war, we got ready for a big war, they'd stop. The Nike-X system might cost us \$30 billion over six years—that's peanuts compared to the 70 million Americans a nuclear war would kill. There wouldn't be a question regarding pe Western Europe if we hadn't worked against the credibility of our nuclear deterrence. If we had said to Russia, "you go across the line and we'll use our battlefield nuclear what we say is, "if you go across, we weapons will pause and let you reflect on the serious-

ness of what you are doing."

Q: Should we bomb Hanoi? A: Hanoi is one great munition factory. It needs to be wiped out. We should tell the population that it will be destroyed and then go to it. By our creeping escalation, too little and too late, we have given them the chance to decentralize. The solution is more difficult now, but still possible.

Q: (R. D. Adams) Do you agree with Secretary of Defense's policy of holding reserves for a possible later duty? A: I never agree with any policy of the Secretary of Defense, because over the years, if he is for it, that's strike two against it. I don't think we need to call the reserves, I think we should pull troops from Europe. They are doing no good there. Across the border are 130 divisions. If anything broke up NATO, it is McNamars, by making it obvious that we would not use our strongest weapons against the Soviet Union, nor our tactical weapons.

Q: (Ralph Johnson) How will the war in Vietnam probably end? A: I'm afraid I know and that is one reason I feel Congress should recognize that a state of war exists. If we don't, the chances are that there will be a negotiation and at the negotiating table will be the Vietcong, and the Reds will take over as they are doing in Laos. Rusk has said that we have offered everything except the surrender of South Vietnam. If that is accepted, we have offered everything except open surrender. Coalition government with the Communists will be a victory by the Communists. If you were a Soviet, and had the problem of eliminating your principal obstacle to world conquest, how would you do it? Again and again you find Soviets blaming the German invasion on American "warmongers." We're the ones they blame for the war in Europe and against Japan. Do you see what that is? To get peace in the world, you have to eliminate the Americans, and to do this, with the least possible danger to the rest of the world, by surprise attack. That is the war plan. The way we can beat this is by building up our antimissile defense.

Community Hospital Facilities

EXTENSION OF REMARKS

HON. GEORGE McGOVERN

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 11, 1966

Mr. McGOVERN. Mr. President, with the adoption of medicare, new demands are arising on our clinic and hospital facilities and there is increasing need for the type of facilities for which a loan program was proposed in H.R. 9256, later included in the demonstration cities bill and now pending in the Senate.

The pend for this sort of loan program

The need for this sort of loan program is described in testimony given before the House Banking and Currency Committee last March 11, by Jerry Voornis, president and executive director of the Cooperative League of the U.S.A. I ask unanimous consent, Mr. President, that Mr. Voornis testimony appear in the Appendix of the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF JERRY VOORHIS, EXECUTIVE DI-RECTOR, COOPERATIVE LEAGUE OF THE U.S.A., BEFORE THE HOUSE COMMITTEE ON BANKING AND CURRENCY IN SUPPORT OF H.R. 9256, MARCH 11, 1966

Mr. Chairman and Members of the Committee: My name is Jerry Voorhis, and I appear before the committee on behalf of the Cooperative League of the USA, which organization I am privileged to serve as executive director and president.

director and president.

The Cooperative League is a national federation of all kinds of mutual and cooperative enterprises in the United States. Its affiliated organizations comprise about 16,000,000 different families in their members, and they are owners of their own businesses which serve their needs for insurance, housing, marketing of farm crops, procurement of farm supplies, credit, health care, electricity, and household needs. The purpose of the Cooperative League is to encourage the use of the voluntary self-help method of solving problems which individual families cannot solve alone.

Our support of the legislation before the committee has been repeatedly and specifically expressed by biennial Congresses of the Cooperative League which is the supreme delegated authority of our organization.

The reasons for that support are as follows.

The reasons for that support are as follows. Like the Group Health Association of America, the Cooperative League believes in the better and more rational organization of medical care and health services in our country. We believe that there are four basis elements in that more rational and effective organization. One is group practice of medicine by balanced groups of doctors and professional medical personnel. Another is prepayment of the costs of medical care on a budgeted basis so as to bring the best of modern medical care within reach of as large a percentage of our people as possible. A third is preventive, comprehensive, regular care, aimed at maintaining family health and keeping people out of hospitals rather than episodic medical care which is necessarily limited to attempting to cure disease after it has been serious. And the fourth element is the opportunity and the responsibility of groups of our citizens to act voluntarily in the formation of group health plans in collaboration with groups of their doctors and nurses.

Such plans are to be found all across our country, in all sorts of communities, among all kinds and groups of people. Their basic philosophy is that the doctor should be provided with an assured income as a reward for keeping people well instead of having to depend on an uncertain income derived from people after they have become sick.

We support this legislation—H.R. 9256—because we are convinced it is necessary if voluntary constructive action by consumers of health care is to receive the encouragement it should have and to make the contribution to the better health of our people which such action can bring.

Only where the costs of preventive care are already paid and where dootors' income is thus already assured through the voluntary action of his patients—only under these circumstances is there incentive on the part of dootor and patient alike to keep people out of hospitals and thus to check the alarming increase in costs of medical care and the alarming and soon to be aggravated presure upon both hospital space and hospital costs.

We can submit carefully compiled evidence to show that subscribers to group health plans do have hospital utilization rates which are from 50% to 80% of those of other insured groups in the population.

But for easily understood reasons group health plans face a difficult problem of receiving financing for the physical facilities they need. This has always been true and no one can accurately estimate how much benefit such plans might have brought to our country through voluntary action of its citizens if the financial problem could have been solved.

Such consumer-sponsored plans are nonprofit, of course, to begin with. They therefore cannot offer expectation of substantial
earnings as security. Second, the doctors'
facilities, clinic buildings, and the like, which
are essential if such plans are to operate at
all, are single-use buildings and therefore
not in the nature of prime objects of investment by financial institutions. Third, in
many many cases the need is greatest in
smaller communities where even if the local
bank desires to make such loans, it simply
lacks the resources with which to do so unless
a guarantee is provided such as H. R. 2256
could give. Fourth, while the members and
subscribers to such plans—or the potential
members and subscribers to such plans—
could and indeed have put up enough contribution to finance the operations of a plan,
there are many, many instances where they
are quite unable to subscribe the amounts of
money necessary to finance expensive modern
health facilities.

Let me cite a couple of examples.

First, take the case of a small community threatened with loss of its only hospital and of all its doctors and where families subscribed \$100 each to provide their town with desperately needed modern clinic facilities. Some \$45,000 was needed to complete construction of these facilities over and beyond what could be raised by the people's efforts. In the absence of legislation like H.R. 9256, it took 15 years before these earnest people were able to borrow the funds necessary to supplement their own and to provide the facilities their town needed.

Another case is one where an already established group health plan in a rural area is ready and willing to construct a branch clinic in a neighboring community. The nearest hospital to this community is 30 miles away. And no facilities exist where efficient medical service could be provided or where, in fact, well trained modern physicians are willing to practice. So the need is obvious. The local bank is quite willing to make a loan to finance the needed facility but it simply does not have adequate reserve and is not large enough to take the admitted risk of financing a building which it would obviously have considerable difficulty in selling in case foreclosure became necessary Were H.R. 9255 on the statute books the local bank could and would make this loan, doctors could be attracted to this community and the health of the people protected.

Many similar examples could be given, both from other rural areas, to which the legislation would give preference and also from cities where labor-sponsored and co-operative consumer-sponsored group health plans could care for much larger memberships if only they could receive the financing for the additional physical facilities they

Finally, we submit that with the advent of the medicare program, the pressure upon existing health facilities will be greatly intensified. Indeed something approaching a crisis in this respect may result. What better way of forestalling such a crisis than by encouraging through a loan guarantee program the kind of constructive action on their own behalf which groups of our people are endeavoring to take through developing of group health plans like those about which I have been speaking?

In times like the present it indeed seems the part of both wisdom and statesmanship to encourage voluntary action by the people of this country in attacking and solving their own problems—that of health economics at their forefront.

For these reasons The Cooperative League of the United States hopes that this distinguished committee will report favorably upon H.R. 9256 and the other measures now before you and that they can be enacted into law at an early date.

Rules for Hosts and Guests

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Monday, June 6, 1966

Mr. SIKES. Mr. Speaker, from the editorial columns of the Christian Science Monitor comes a sound and pertinent discussion of the unhappy situation provoked in New York during the visit to this country by King Falsal:

RULES FOR HOSTS AND GUESTS

The uproar over King Faisal's visit to New York was a comedy of errors that should never have happened. Nobody comes out of it with credit—even if it is possible to explain why they spoke and acted as they did. The United States is a great power. It is appropriate that it move with majesty and command respect. King Faisal's hosts in Washington conducted themselves with that in mind. It remains to be seen whether the beneficent effect of their hospitality has been undone by what subsequently happened.

According to a correspondent of this newspaper, the whole thing started when a reporter submitted in writing to the moderator at King Faisal's news conference a question that was intended as a joke. We would have expected journalists with some acquaintance of international propriety—which presumably goes with being a Washington correspondent—to be discriminating and sensitive enough to avoid initiating the kind of charade that followed.

If King Faisal was to answer candidly any question put to him about his or Arab attitudes toward Israel, he was bound to offend those sections of American opinion with a commitment to the Zionist movement. Nobody can take exception to such Americans objecting to any statement by King Faisal criticizing them. But in a wider context, it should be remembered that Arabe have just as deep a feeling of having been wronged as do Israelis and their partisans.

Wryly, there is still doubt about what exactly King Faisal said. The New York Times correspondent covering his news conference concluded his dispatch with an observation to the effect that some observers in the capital felt the most significant thing in King Faisal's remarks was his implied backing away from "the objective espoused by some Arab extremists—destruction of Israel."

Non-Americans may fail to appreciate the terrific political pressures that operate in New York City. And they may need to be reminded that the Jewish population of the city is roughly equivalent to that of the entire state of Israel. To state this does not necessarily imply approval of what Mayor Lindsay or Governor Rockefeller did, when their doing so must seem to outsiders a snub to a head of state in New York while still the official guest of the United States Government.

The lesson to be learned from all this is that Americans at every level must in some measure allow to devolve upon themselves the responsibility and the sensitivity which their land and their government have been called upon to manifest in the world that has emerged from World War II. The United States makes sense and can count on wellbeing only so long as its citizens and its government remain dedicated to the principles enshrined in the Founding Documents. These imply above all else the pursuit of justice and the purging of hatreds that corrode the human race.

All those involved in any way in the uproar in New York should not less sight of this foundation upon which the Republic is based. That foundation will remain when the pettiness of some aspects of this incident has been forgotten. And we trust that King Faisal's sagacity will enable him to recognize this fact when the unpleasant dust of the peat few days has settled.

Equal Opportunity Is Good Business

EXTENSION OF REMARKS

HON, JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, July 11, 1966

Mr. JAVITS. Mr. President, on May 19, Charles W. Meares, executive vice president of the New York Life Insurance Co., delivered an address concerning equal employment opportunity.

Entitled "Is Equal Opportunity Good Business?" Mr. Meares' address is replete with examples of how nondiscrimination in hiring practices is not only right, but good business practice. Urging inservice training programs, recruiting of minority groups, and a rejection of "tokenism," Mr. Meares' address will make good reading for business leaders throughout the country.

I ask unanimous consent that the text of his remarks be printed at this point in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

IS EQUAL OPPORTUNITY GOOD BUSINESS?

If I were asked which year of my 43 in the business I consider to be the most significant one to life insurance and to management in general—I would answer this one . . right now. Few moments in business history have been as pregnant as the current one with the ferment of constructive change and progress. I'd like to discuss one of these areas of ferment with you tonight. It is one that is highly significant to us all, as managers and businessmen. And it is one in which you Fellows and Associates can be enormously effective in implementing progress.

effective in implementing progress.

The area I speak of—is equal employment opportunity. The issue of equal opportunity is certainly of deep concern to us all—as busi-

nessmen and as believers in democracy. In regard to this, there's a significant passagin George Orwell's satiric parable, "Animal Farm." Some of the animals on a farm lead the others in a revolt against a tryannous farmer. But, after the tyrant has been overthrown, the plowhorse finds he is being as overworked and badly treated under the supposedly enlightened new order as he was by the farmer. "I thought all animals were equal," the horse complains. "They are," the leader of the revolt explains jovially, "but some are more equal than others."

There's no denying that traditional patterns of discrimination in American life have often caused Negroes and other minority groups to justifiably feel that "some are more equal than others." But these patterns are enabled to hanging as more and more Americans are coming to realize that anything less than a fully democratic society—is a non-democratic society. Now others can speak with greater eloquence than myself about the moral and ethical basis of equal opportunity. To like to explore it from the one standpoint which is especially important to all businessmen—the standpoint of profitability.

I'm sure we'd all agree that equality of opportunity is a pie-in-the-sky term unless society has the kind of economic strength and growth which makes real opportunity possible. In our society, that strength comes from the competition of private enterprise—the profit system. Profits enable an industry to expand, thus creating new jobs, new opportunities, a higher standard of living.

Businessmen tend to look at the population in terms of potential markets not only their goods and services but also for their changing labor needs. Today there are over 20 million Negro Americans. They do have a growing middle class, and Negro professionals, businessmen, technicians and so forth have always made important contributions to American life. More and more are doing so today. Yet the unvarnished fact remains that for most Negroes opportunity has been traditionally limited, tobs low-grade and unemployment high. Unless this climate is changed, the unemployment situation is bound to get worse, especially since automation is removing whole categories of low-level

Now this situation is hardly profitable to anybody. For many Negroes it lias meant lives of unending poverty and hopelessness, passed along from generation to generation. Such an environment is a seed-bed of crime, of swollen welfare rolls and other conditions highly unprofitable to society as a whole. It's certainly without profit to those of us, in New York, for example, who must look to the increasing Negro labor market for future manpower—nor to businessmen who are being deprived of a prosperous Negro market for their goods and services.

What can we do—we business people—to help solve this problem? First, let's consider the role played by traditional hiring practices. When the tradition has been discrimination by race or color, this has obviously presented a stone wall to Negro aspiration. But even when companies such as ours reject unfair discrimination, they are forced to practice another kind which has been a serious factor in the problem.

For we must all discriminate in terms of skills. We owe it to our stockholders, pelicy-owners, the job security of our employees, to be able to compete successfully. And that means seeking those whose ability, training and potential will make it profitable

for our companies to hire them.

A real difficulty has been in finding sufficient numbers of qualified Negroes for the skilled job and management-training opportunities which are available. To some degree, this is a communications problem. Sometimes, qualified Negroes aren't aware of these openings. Sometimes, they are aware

of them, but don't apply because they don't really believe they will get a fair shake.

We all need to do a more vigorous job of getting the message across—that we're really serious about equal opportunity—to minority-group communities and organizations themselves. For example, at New York Life, we work closely with the Urban League, telling them of stenographic, secretarial and clerical openings, and urging them to send us qualified applicants. We recruit at high schools and colleges with a large proportion of Negroes and other minority group members in their student bodies. Our recruit-ers make it clear to placement counsellors that jobs will really be open to all qualified graduates, regardless of race, color, creed, or national origin. We distribute material which tells young people just what careers are possible in the insurance field, and what the qualifications are.

But it's not enough to hire new people and just leave it at that. All new people especially if they come from disadvantaged backgrounds—need to feel welcome, to be encouraged, to feel they can rise as high as their abilities can take them.

Company policy—promotion from within—refunding the night school tuition coets of ambitious employees, and so forth—can be of great help here. But I believe it is you managers and senior people in the business, by the kind of sympathetic guidance you give, who can, in the long run, exert the greatest influence for good. I'm not suggesting that you become unselfish do-gooders. Merit and ambition ought to be encouraged because of their long-term profitability to your companies.

Still, there's no doubt that concrete encouragement of this kind can help a disadvantaged person to raise his sights because he feels that others are interested in his future, his human potential. That's extremely important.

I'd like to speak out at this point against "tokenism"—maintaining a few "showcase" Negroes in scattered jobs as insurance against accusation of discrimination. Management shouldn't hire Negroes just because they're Negroes, and shouldn't keep anybody, Negro or otherwise, on the payroll if he won't shape up even after attempts have been made to help him. "Tokenism" won't solve the problem of Negro unemployment. Being taken on or kept on as a "special case" who doesn't have to measure up against general standards ian't going to build the Negro's—or anybody's—confidence. I believe that such practices are not only hypocritical—they are highly unprofitable.

However, mere voluntary compliance with the principle of equal opportunity isn't going to solve the problem, either. Even aggressive recruiting within the Negro community—working with the Urban League and other organizations—haan't enabled my Company to find as many qualified Negro applicants for our job openings as we'd like. The problem seemed largely one of education and development. This was an area where we felt a company such as ours could help, in terms of both our own needs and those of youngsters who might be salvaged from the hopelessness of chronic unemployment or low-salaried poverty.

In cooperation with the National Urban League, we launched a special Stenographic Development Frogram in July 1964. Twenty-eight young women, mostly from Negro and other minority groups, attended free classes in one of our training rooms 15 hours a week for 6½ weeks. We retained N.Y.U. to help us give them intensive, practical instruction in shorthand, typing, English, filing, telephone techniques, and other skills. All 28 young women completed the course, applying themselves well to self-improvement, and demonstrating especially good attitude and attendance.

Although we had made no commitments as to jobs, we were so impressed with these young ladlen that we made offers of steno jobs to 10 of them. Six accepted our offers, the other 4 apparently feit they could do better elsewhere. We repeated the program in 1965 with equally encouraging results, and are continuing it through 1966. Incidentally, we've tried to follow up on the progress of the original group, and it would appear that 25 out of the 28 young people have either gotten jobs or are continuing their educations and seem well on the road to productive and rewarding lives.

Statistics like these suggest that this kind of educational program will definitely pay of in skilled employees... and salvaged lives. Of course, education is a 2-way street and must extend to the new employee's coworkers. Once a minority group member is hired, he or she may run up against attitudes, prejudices, passive resistance, which make it hard for the new employee to succeed. Like many companies, we hold meetings with our management and office staffs and distribute educational literature which says, in effect: "Your Company is totally committed to equal employment opportunity. All we ask is that you give these new employees the same chance to prove themselves that we gave you. Let the proof be in the pudding."

The surprising thing is, that many anticipated problems never deveolp. Once the older employees see that the newcomer does his job well, is cooperative and considerate, fear and suspicion tend to melt away, myths dissolve before reality, and the newcomer is accepted. Of course, it's not all roses, and some attitudes resist change; but if employees see that a Negro co-worker has been hired or promoted for merit alone—that's why it's so important—the acceptance problem can be overcome. Apropos of this, a recent American Management Association survey asked a number of firms the results of pro moting Negro supervisors over mixed groups of employees. Ninety out of 92 firms reported there had been no problem when Negroes attained supervisory status on demonstrated ability.

And so, another myth bites the dust.

In regard to our minority group employees, I'm happy to report that their job performances and morale seem to be no different from the job performance and morale of

our other employees.

Up to now, I've discussed equal employment opportunity in terms of our experiences—and the conclusions to be drawn from them—in hiring office personnel. But perhaps the most enlightening experience we've had has been with the agents in the

Field.

As you well know, recruiting agents with with the necessary talent and qualifications is a difficult problem all insurance companies share. Keeping them is another. Insurance selling is one of the most fiercely competitive of all professions.

Now, tradition has said that Negroes couldn't succeed as agents for white insurance companies. They wouldn't be able to service large enough markets. People wouldn't trust their financial judgment. And so forth. With so much going against them, it was felt, they would discourage easier, produce less, drop out quicker than

the average.

So said tradition. Now we at New York
Life are great believers in tradition; after
all, we're 120 years old. But we're also in
the business of taking risks, and we decided
that giving Negro agents a chance to prove
this tradition wrong was a human risk well
worth taking.

Remember again that our approach had to be profit-oriented, not pro-Negro nor pro any other minority group but simply pro-New York Life. We had to apply the same severe selection standards to all agents since failure would mean many dollars lost to the Com-

pany, the general manager, the policyowners. We were among the first of the non-Negro insurance companies to hire Negro agents. And among the first we hired were Cirilo A. McSween of Chicago and Theodore R. Tillman of Philadelphia who began working for us as full-time agents in 1967. Within a year, each had written more than a million of "paid-for" insurance. Every year since, each has repeated this accomplishment. And in the last year, each has produced over \$2 million worth of business.

Profitable? You bet.

When our other general managers saw what could be done, they were anxious to get on the band wagon. After all, records like these could mean money in their pockets.

Cirilo McSween and Ted Tillman now have lots of comapny—and competition too. Last year, for example, New York Life had 43 Negro agents on its rolls. And, collectively, they sold a total of \$23 million of ordinary paid insurance—better than the Company average. And I should make it clear that these sales are being produced from mixed markets.

Is it any wonder that this year we've already raised the number of Negro agents to more than 65?

Incidentally, there are only 3 Negro members of the famous Million Dollar Round Table—and I'm afraid I can't resist the temptation to brag that all 3 are New York Life agents.

One of the most heartening aspects of the story has been in the area of human relations. Agents with good records are invited to attend Sales Educational Conventions and Career Conferences. They often bring their wives and, while the get-togethers are very largely business, they are in part social. Sometimes the meetings take place down South, where our Company is particularly strong. It was thought that this might cause a train where News agency were converted.

a strain, where Negro agents were concerned. Now, we had insisted from the first that all agents be permitted to go wherever their earnings would take them. So qualified Negro agents were invited to all conventions and conferences. They were booked at the same hotels, invited to all functions. The results? The hotels have proved no problem at all. And as far as acceptance by the other agents is concerned . . . the experience of Negro Agent Dennis Henry is an encouraging example. A millionaire producer in his first year, Dennis recently served as vice president of his Career Conference—out of 35 first-year agents. This took place in Atlanta, Georgia, and Dennis was elected by his fellow agents themselves—all white southerners!

So much for tradition. So much for myth.

And that about sums up our experiences to date.

I won't deny that there's more to do at New York Life—and we're going to do more, especially since the steps we've taken so far have proved so profitable to us. But they couldn't have been successfully taken without the cooperation and skill in human relations of our Company-wide management team.

It is you people, after all, who have the greatest responsibility—and opportunity—for implementing this kind of progress. I leave you tonight with the confidence that you share my own conviction about the practice of democracy.

It's not only just, ethically right, and, in some cases long overdue.

It's good business.

Thank you once again, Miss Votteler, for your award and the great compliment you have paid me this evening—and thank you ladies and gentlemen for your kind attention.

Incentive Income for AFDC Mothers

EXTENSION OF REMARKS

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 29, 1966

Mr. FRASER. Mr. Speaker, a recent resolution of the Minnesota Governor's Commission on the Status of Women reveals the need for allowing AFDC mothers to become self-reliant by finding employment that can become part of their families' support.

Anticipating this resolution by the Minnesota commission, I introduced a bill, H.R. 15167, to permit recipients of AFDC aid to retain the first \$85 of monthly income and one-half of all income over \$85. A similar measure is, in fact, already in operation for mothers working in programs under the Economic Opportunity Act.

I have also introduced H.R. 13073 to permit similar income procedures for mothers working under the Elementary and Secondary Education Act.

Mr. Speaker, the excellent resolution of the Minnesota Governor's Commission on the Status of Women follows:

RESOLUTION BY MINNESOTA GOVERNOR'S COMMISSION ON THE STATUS OF WOMEN ON INCENTIVE INCOME AND ENLARGED OP-PORTUNITIES FOR EDUCATION AND TRAINING OF AFDC MOTHERS, MAY 20, 1966

The basic purpose of AFDC is to "provide, for families with breakdown in parental functioning, a reasonable standard of maintenance and medical care and the opportunity dor self-support and to strengthen family life."

While a large number of mothers of young children still regard child-rearing as full-time activity, and should be encouraged to do so, nevertheless many mothers can and wish to be self-reliant by working.

wish to be self-reliant by working.
Under existing law, those mothers who
wish to work are required to report their
earnings and these are substantially subtracted from their AFDC payment.

The existing law provides little financial advantage for the AFDC mother to be employed, thus stifling initiative and ambition; and thus denying those mothers who wish to work a sense of competence and independence derived from improving the standard of living of their children; and discouraging mothers from participating in the dignity of work to improve their lot in life.

This situation does not realistically emphasize that portion of the purpose of AFDC which states that the program should provide "The opportunity for self-support and to strengthen ramily life."

arrow which states use program anomaly provide "The opportunity for self-support and to strengthen family life."

The existing law provides little encouragement for the AFDC mother to seek opportunities to continue her education and seek training and work experience to prepare for her own self-support, as her children grow older and she is no longer eligible for AFDC.

The Federal Government has accepted the principle of a realistic incentive income by permitting AFDC mothers who work on the programs of the Economic Opportunity Act. Title I and Title II, to retain a portion of their earned income. Therefore, be it

Resolved, That the Governor's Commission on the Status of Women encourages Congress and the State Legislature to strengthen the law to permit wider opportunities for AFDC mothers to continue their education and training; and to change the laws both

federal and state in order to establish a policy of incentive income that will be both realistic and reasonable; that will enhance self-support, normal participation in the community, and a spirit of enterprise in the family.

The Revolution at 190

EXTENSION OF REMARKS

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1966

Mr. RUMSFELD. Mr. Speaker, an editorial in the Chicago Daily News of July 2, 1966, in commemoration of Independence Day, reminds Americans of the origins of and the principles underlying their system of government. As the memory of Independence Day of 1966 still lingers on, all Americans should ponder well the thoughts expressed in this editorial, which follows:

THE REVOLUTION AT 190

These were not dirty-necked rabble-rousers, but substantial citizens—lawyers mainly, and merchants and plantation owners and a printer named Franklin. But they were radicals according to any standard of their time.

What they wrote they felt deeply, for to sign the words was to risk reprisals at least, and at worst the hangman's rope.

They wrote of independence, and what it consisted of, and how its absence had made life intolerable in the colonies.

Independence, they declared, involved government with the consent of the governed, and the preservation of certain "unalienable" rights, among these being "life, liberty and the pursuit of happiness."

But their Declaration was full of strong verbs, and the context clearly establishes that life, liberty and happiness were not viewed as pleasurable birthrights, like grandfather clocks, to be handed down from father to son, but as opportunities to be taken up and used. They clearly meant unalienable right to live life, to pursue happiness, to exercise liberty and—as they were soon to prove—defend it.

As for independence, their whole document testifies to their conviction that this applied, first of all, to the mind and spirit—the right of the individual to think, not as George III or any ruler advised, but as he, himself, thought best.

This, they felt, was the wellspring of individual Integrity, and thus of mutual faith and common strength. If a man was scrupulously honest with himself he was bound to be honest straight through. And an aspect of that honesty was a willingness to invest energy and sweat for an equitable return.

For a century and a half, the proposition worked so superbly that this country began piling up a great surplus of productivity. Having found the magic formula to release the creativity of the free human spirit, we began to reach the point where resourcefulness was no longer needed to meet our basic needs. There was enough for all, and to spare. The work week slid from 60 and more hours to 48, to 40, to 37 and on down. The sick, the halt and the aged were relieved of concern for their basic needs. Cradle-to-grave security came into sight for all.

k

r

M

n

n

or

But it didn't turn out to be all peaches and cream.

Suddenly the clerk in the store doesn't really need you and your custom. You can take his indifferent service, or go elsewhere.

Suddenly the contract between individuals loses some of its sanctity. If a man doesn't really need your money, your job can wait.

Suddenly the zeal to please—to do an expert repair job, or build a lasting product, or create a permanent customer—goes limp.

Gradually a new class of people is bornthose who feel no constraint to work for a living. The relief rolls buige, and some families manage to make the dole not only a career but a tradition, through the second and third generations.

And coupled with all this has been a widespread retreat from troublesome mental and spiritual challenges. Millions have grown too shiftless to do their own reasoning. They adopt "safe" viewpoints, surround themselves by "safe" friends and neighbors, and reject dissenting voices as radical and therefore to be shunned.

There are dangerous radicals around, to he sure, but they have never been the prime danger in this land of the free. The prime danger has been that we would run out of radicals of any kind. The result would be as tragic for freedom today as it would have been in 1776, when a little band of trouble-makers put their lives, their fortunes and their sacred honor on the line for the right to differ.

In short, there has been serious erosion of both discipline and vigor within the national mind and spirit. And with this, inevitably, came an erosion of respect—self-respect and respect for others.

It is a curious result, from a system invented to serve exactly opposite ends, and that served them so well for so long a time.

The histories of Greece, Rome and the

The histories of Greece, Rome and the great empires of Europe tell us, however, that it is not so curious after all. The cycles have been dictated by human nature as the lean and hungry strove for success and the rich and indoient let it slip away.

This is a time of danger as great as that of 1776. But who can hear the quiet ticking of the nuclear clock, or mark the silent hardening of hatred between one people and another? We are not accustomed to danger in these subtle forms.

And yet we have a heritage of resourcefulness, two centuries long, that has seen us through a catalog of crises ranging from the bloody agony of the Civil War to the bloodless triumph of the Marshall Pian. Perhaps a new generation now trying to drown the tolling of the doomsday clock in the tintinnabulation of the amplified guitar—the first children of the nuclear age will hear a trumpet over the din, and get back in touch with destiny.

A Letter of Appreciation From an Ex-GI

EXTENSION OF REMARKS

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1966

Mr. YOUNGER. Mr. Speaker, recently I received a remarkable letter from an ex-GI living in our area, which was written on July 4, expressing his deep appreciation and gratitude for the treatment afforded our veterans. In addition to his appreciation for the services rendered the disabled veterans this letter is a fine recognition of loyalty as indicated by his thanks to this country in general, on its birthday.

The expressions in this letter are all the more unusual because this veteran has given almost his last drop of devotion to this country, and perhaps had it not been for the outstanding medical services furnished the GI's, he may well have been one of those who gave his life for his country. His thoughtful letter follows:

REDWOOD CITY, CALIF., July 4, 1966.

Hon. J. ARTHUR YOUNGER, Representative in Congress, San Mateo. Calif.

San Mateo, Calif.

Dian Ma. Younger: I cannot let this glorious birthday of our country go by without expressing my gratitude and appreciation for the care and treatment given to veterans by this nation.

When I was released from an army hospital after two and a half years of orthopedic and plastic surgery, the army doctors told me that they had done all that they could do at the time. They told me that after two or three years, when the skin had loosened up on my face, more work could be done to improve my appearance.

improve my appearance.

However, I have a good-sized family, (four children) and have not been able to take off work to go to a distant Veterans Hospital for this surgery. (I had one operation at Fort Miley in San Francisco.)

So, Mr. Younger, I am thankful for the wonderful, large Veterans Hospital recently erected in Palo Alto. I can run over for an appointment in the E.E.N. & T. Clinic and only lose an hour or an hour and a half from my work.

They have an expert plastic surgeon for a consultant there, Dr. Howard Martin, and such conscientious, talented VA doctors. The army tried twice to open my left

The army tried twice to open my left nostril so that I could breathe through it. Both times, however, scar tissue grew back and obstructed and opening. Dr. John Epley and Dr. Richard Good, under Dr. Martin's supervision have been able to improve the appearance of my face and have succeeded in opening my left nostril.

If you have an opportunity some time, I wish you could express my thanks and gratitude to the Congress of the United States.

Sincerely yours, Charles J. Shields.

Florida Newspaperman Wins Forestry Award

EXTENSION OF REMARKS

HON. ROBERT L. F. SIKES

OF PLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1966

Mr. SIKES. Mr. Speaker, I am pleased to submit for reprinting in the Congressional Record a statement from John McMahon, farm forester in Okaloosa County, Fla. It tells of the good work for forestry being done by a local newspaper, the Okaloosa News-Journal.

The statement is as follows:

PLORIDA NEWSPAPERMAN WINS FORESTRY AWARD

(By John McMahon, farm forester)

A Crestview newspaper editor has won a press award from the Society of American Foresters for the best publicity of forestry in a weekly paper for 1965. The award was presented at the Florida Section's meeting in Gainesville on June 23rd.

Mr. Ed Broderick, recipient of the award was born in Buffalo, New York. He had re-aided in northeastern Ohio in the Cleveland area before moving to Florida about 12 years

At present he is the owner and editor of the Okaloosa News-Journal published at Crestview, Fla. He received a B.A. degree in Journalism from the University of Michigan in 1924 and later acquired a Masters degree in English from the Western Reserve University in Cleveland.

Mr. Broderick has demonstrated his interest in forestry not only in a journalistic way, but also by planting about 125 acres of slash pine on his farm in the Galliver community near Crestview. Even though he has objectively publicized all the social, economic and industrial activities in his paper, he has given consistently good coverage to conwildlife and forestry. ervation, recreation, He has been especially generous in giving public agencies space in promoting their

various programs to help educate the public.
He admits that part of his interest in the great outdoors is due to his wife. Mrs. erick gives local lectures on trees and bird life, and is well known as a horseback riding fan. Mrs. Broderick is a journalist in her own right and composes a human interest column on local events and people. Their daughter Terry, is also a hard working member in the family news business.

Mr. Broderick has won two other news aper awards in Florida in recent years. 1962 he won the best traffic safety editorial presented by the National Trucking Associa-In 1964 he won an award from the Press Association for the best editorial in a Florida publication.

He is also an active member of the Forest Fire Prevention Committee whose members are appointed by State Forester Coulter to assist the Florida Forest Service in promoting and carrying out its various programs

Mr. Broderick has an outstanding reputa-tion for personal integrity, professional ability and public service in his community and has won the respect and affection of his

Farm Forester John McMahon, who has worked closely with Mr. Broderick in promoting forestry, says he is delighted to see such a fine gentleman and capable journalist receive the S.A.F. Award, and congratulates

receive the S.A.F. Award, and congratulates both the Society and Mr. Broderick for their activity in promoting forestry.

"The real challenge to a forester is in getting people outside the profession to help promote forestry. In our particular business this is a hard job, because only one person in every 10,000 is a forester. Furthermore, forestry is a rather quiet subject when compared to space travel, sex, war, and the Dow-Jones But with the help of conservation minded editors like Mr. Broderick, we can get as forceful message to the average man about his relationship to the forest. With urban population increasing it is important that both the volume and quality of forestry publicity be expanded," according to McMahon.

We Ask You"-A Prayer Offered by Dr. Walter Menninger of Topeka, Kans., at a Rotary Meeting Held Shortly After the June 8 Tornado in That City

> EXTENSION OF REMARKS OF

HON. CHESTER L. MIZE

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. MIZE, Mr. Speaker, any person who survives a natural disaster the likes

of the tornado which struck Topeka, Kans., on June 8, has the right to wonder. "Why was I spared, while my neighbor was buried and killed? Why did my property escape damage while nothing remains of the house next door?"

Searching for the answers brings those who survived a little closer to their Creator, and Dr. Walter Menninger, of Topeka, becomes their spokesman in a prayer which he offered as an invocation at a Topeka Rotary Club meeting. This prayer was reprinted in the Topeka, Kans., Daily Capital, and should have the attention of all my colleagues. Under leave to extend my remarks, I ask that the prayer, "We Ask You" be printed in the Appendix of the RECORD. The prayer follows:

Ww ASE YOU . .

(EDITOR'S NOTE.—The imponderables posed by a calamity of the proportions of the June 8 tornado were explored by Dr. W. Walter Menninger, of the Menninger Foundation, who delivered the invocation at a meeting of Rotary Club of Topeka Thursday at the Hotel Javhawk.)

Let us pray . . . Praise God from whom all blessings flow. But, Lord, it's hard for us to readily accept adversity, to tolerate profound pain, and to understand why Fate seems to capricious. why some of us were devastated two weeks and others untouched. We couldn't help but be reminded of our relative impotence and our helplessness in the face of this Greater Power.

Most of us are again carrying on our "busi-ness as usual," yet, in the middle of this busy day, we interrupt our personal pursuits and pause. And we ponder. And we ask

What should we have learned from Your Infinite Wisdom? Are we fully open in our understanding? Or are we nearsighted and missing Your communications?

Did You mean to remind us of our one ness as human being struggling to survive, of the fallacy of being self-centered and too contented, of Your proverb that "Pride goeth before destruction and an haughty spirit before a fall," of the necessity to think beyond ourselves and our immediate interests?

And in those brilliant, still moments after the storm had passed, did You mean to re-mind us of the brightness and glory that can follow adversity? Did You inte end us to re ize how we must help one another to achieve that goal, and understand the thought behind a Nigerian proverb which says, "When the right hand washes the left hand, the right hand becomes clean also."

As we consider these imponderables, will You please help us to understand how to accept and deal with the plight of those who have suffered and who are angry and resentful at being devastated or hurt. And assist us all in our responsibilities to lead others to bring forth new hope from our

We ask this, in Jesus' name. Amen.

Margaret Creek Watershed Project

EXTENSION OF REMARKS OF

HON. WALTER H. MOELLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, June 30, 1966

Mr. MOELLER. Mr. Speaker, today I want to congratulate the fine citizens of my district, who last week finalized

details for the construction of the first dam for the Margaret Creek watershed project in Athens County in the 10th Congressional District of Ohio.

I wish to personally commend Mr. Perry Munn, chairman, of the Margaret Creek Conservancy District, whose untiring leadership has brought this project to reality.

The contract, signed last week, for \$117,000 will be for a multiple-purpose flood prevention fish and wildlife reservoir. Of the cost, \$95,238 will come from Federal funds and \$16,000 of the remainder will come from the Ohio State Department of Natural Resources. The 46-acre fish and wildlife reservoir to be created will be operated by this department.

The Margaret Creek watershed area covers 38,600 acres. The purposes of the watershed plan are to reduce flood damages and soil erosion, provide municipal water storage, and also provide for water recreation, and fish and wildlife use. The planned works, in addition to the above-mentioned reservoir, include four flood prevention impoundments, another multiple-purpose reservoir, and almost 10 miles of channel improvements. The entire program will be installed over the next 5 years.

The monetary benefits from the total watershed structure program are estimated at \$96,173 yearly. Most of this-\$85,449-will come from flood prevention, water supply, and recreational use. About \$2,065 will come from redevelopment benefits and \$8,659 from secondary benefits

About 96 percent of the Margaret Creek watershed area is in agricultural land. Frequent floods cause extensive damage to lands, buildings, and transportation facilities.

In March of 1964, Margaret Creek overflowed its banks and covered 1,200 acres, causing damages estimated at \$40.750.

In March of 1963, flood damages of \$51,000 were reported. And in the summer of 1961, an estimated 1,100 acres were inundated, causing \$30,600 worth of damage. Obviously, there is a clear need for flood prevention measures in this area.

New methods of water management are also necessary. The city of Albany has increased its population 57 percent since 1950. The water supply is rapidly diminishing and does not now meet present demands. In addition, a recently created school district is planning to build a new school and this will create further needs.

As for outdoor recreation, this is a must, not a luxury, in today's urban society. Parks, beaches, and picnic areas were jammed all over the country this past holiday weekend, and authoritative sources estimate that by the year 2000. our outdoor recreational needs will triple, although our land area, of course, will not grow by an acre.

The Hocking River Valley, in which Margaret Creek watershed is located, is one of the most scenic areas in Ohio. At present, the nearest State park provides facilities only for picnicking. I am pleased that the Margaret Creek watershed plan is including swimming, fishing, and other basic facilities for outdoor recreation in its plan. In addition, the recently signed contract for the first reservoir to be built will also create a 46acre fish and wildlife sanctuary for rabbits, squirrels, muskrats, and other species of wildlife in the area.

The sponsors of the watershed project are the Athens County Board of Com-missioners, the Athens Soil and Water Conservation District, the Margaret Creek Conservancy District, the Ohio Department of Natural Resources, and the village of Albany. Federal assistance is provided by the Department of Agriculture's Soil Conservation Service and Forest Service.

I know all these people have worked long and hard for this project, and I congratulate them on achieving this interim milestone of the signing of the first contract for construction. With the continued support and assistance of these sponsors, I know the project will be successfully completed.

The Feast of Cyril and Methodius

EXTENSION OF REMARKS

HON. CHARLES S. JOELSON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. JOELSON. Mr. Speaker, as we ark the feast of SS. Cyril and Methodius, it is fitting to consider also the observance of Slovak independence. These two apostles of the Slavs in introducing Christianity in Slovakia in the middle of the ninth century, also brought in the idea of freedom to Slovakia. Since then, these brave and industrious people have clung as tenaclously to the tenets of Christianity as they have to the idea of freedom and independence. The Christianity thus preached in Slovakia by these two Byzantine missionaries became, in the course of centuries, the principal binding force among the Slovak people, the very core of their spiritual unity.

In the course of their turbulent history the Slovaks have preserved this spiritual unity. Unfortunately, however, they have not been as successful in retaining their national political freedom At the end of the First and unity. World War they united with the Czechs and formed the Czechoslovak Republic. In 1939 when the Czechoslovak Republic was broken up, then Slovaks proclaimed their independence, only to fall under the oppression of Nazi Germany. Since the end of the war they were once more united with the Czechs and today they enjoy some form of autonomy in the People's Republic of Czechoslovakia.

All loyal and patriotic Americans of Slovak descent have maintained some spiritual ties with the land of their Slovak forebears. Here in this great republic they have appreciated the opportunities offered to them, and they have made the best of these opportunities. have numerous welfare, educational and philanthropic organizations, all of them

rendering invaluable services to American-Slovak communities. Particularly strong is the Sokol, an organization de voted primarily to the physical development of the youth, and also very active in the improvement of the mind, in educational work.

A Friend Says the Last "Goodby"

EXTENSION OF REMARKS OF

HON. JOHN M. SLACK, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. SLACK. Mr. Speaker, the news of each day is so dominated by big names and big events that we often lose sight of the fact that communities and nations are actually made up of individuals, the majority known only to friends and relatives. It is not necessary that any of these individuals be famous or acclaimed by history for them to live out their lives in such a manner as to create a reservoir of good feeling touching all who may have known them.

The sudden passing of one such man recently, leaving his friends shocked and bewildered, was memorialized in a manner which reflects the loss felt by all members of the community. As a final mark of my respect for a man who typifled the phrase "good citizen," I offer this touching and sincere tribute to the late Eddie Byrnside, as written by his friend Dean Morrison and published in the St. Albans, W. Va., Advertiser on June 30, 1966:

A REQUIEM FOR EDDIE BYRNSIDE

"In the midst of life we are in death."-Traditional.

"God's finger touched him, and he slept."-Tennyson

"The Lord gave, and the Lord hath taken ray. Blessed be the name of the Lord."— The Holy Bible

These words are for Eddie. In the heat of summer in the closing days

of the beautiful month of June, George (Eddie) Byrnside passed away. Funeral services for Mr. Byrnside were held

on Tuesday of this week, and he was buried in Cunningham Memorial Park, in St. Albana These few words, therefore are a requiem for Eddie Byrnside.

He was a good man, fine, honest, polite, courteous, a hard working, busy minded, enterprising, intelligent individual.

It has often been said that the good die young, and Eddie Byrnside was relatively young, dying at only 49.

Eddie Byrnside was a man involved in many enterprises: a filling station operator, a driver of a school bus, an ex-military serviceman, a justice of the peace, a councilman-at-large of a growing city, a member of the Abney St. Church of God, a member of the Beni Kedem Temple, Scottish Rite hodies and Washington Lodge 58 of St. Albans. And he was vice-president of the St. Albans Kiwanis

And he was a Democrat, uncessing, dedicated, a Democrat involved in party projects, and a Democrat elected to public office by his peers.

He was a husband, a father, a good citis of a growing community, a man active in public affairs.

And he was unfailingly polite, obliging,

patient, friendly.

We knew Eddle over a long series of council meetings, held in city hall, year after year, and never once did he ever display ill or or rudeness

The City Council table is shaped like unto a huge T, and Eddie sat at the top, at the end of that part which you might say was the bar that crossed the huge T.

Eddie was a man of good and stable emo-tion, a man of human laughter, and of fairs man of the keen enjoyment of life

and the living thereof.

He devoted considerable time to the city, to the stuties of being a councilman: he worked hard at being a member of the city government.

Many people knew George (Eddle) Byrnside, and all who knew him respected him as an individual, as a councilman, as a justice of the peace, as a Democrat.

He had been ill, but apparently had recovered, and then came the cruel filness he suddenly suffered on an outing, and after a week in a Huntington hospital, Eddie Byrnside passed away.

With his death, St. Albans has lost one of its most enterprising and finest, and most dedicated citizens: We all shall miss Eddie Byrnside.

He was genuine and sincere. had some trouble with Eddie about the re-zoning of a street. Eddie held his ground, frankly and openly stated his position, and was completely and entirely honest about his own position and belief. You could not help but respect him.)

Thus we say goodbye, and thanks a lot, to Eddie Byrnside.

Universal Language of Music Overcomes Tensions of International Relations

EXTENSION OF REMARKS OF

HON. THOMAS M. REES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. REES. Mr. Speaker, in times of war the most conspicuous acts of excellence are often those occurring on the battlefield. But if man is ever to achieve peace, he must pursue excellence in realms of beauty and not in fields of death. Thus I view with hope and pride, the achievements of Misha Dichter, a 20year-old student from Beverly Hills, Calif., and would like to bring his achievements to the attention of my colleagues.

In the recent Third Tchaikovsky Music Competition in Moscow, Mr. Dichter was awarded second place in the piano divi-The first-place winner, a Russian, was all but ignored by the audience, who gave the young American an ovation unprecedented since Van Cliburn's triumph 8 years ago. It seems that the universal language of music was able to overcome the tensions of international relations.

Misha Dichter was born in Shanghai. China, in 1945 and came to the United States with his parents, Mr. and Mrs. Leon Dichter, in 1948. A lifetime resident of West Los Angeles. Mr. Dichter began plano lessons at the age of 6. Throughout his elementary and secondary education, he was able to maintain good grades, participate in athletics, and

still practice piano up to 8 hours a day. His first public concert was given at the University of California at Los Angeles in early 1963, where his presentation of Stravinsky's "Petrushka" won praises from music critics.

After graduation from Beverly Hills High School in June 1963, Mr. Dichter spent 1 year pursuing a full course load at UCLA and continuing his music at home under the direction of Aube Tzerko. In the fall of 1964, he was accepted at Juilliard School of Music to study piano under Rosina Lhevinne. For the past 2 years he has devoted himself to his music, and his hard work has yielded well-earned recognition in Mos-

We of California's 26th Congressional District are proud of Mr. Dichter, as must be all Americans. Proud, not only because of his triumph in Moscow, but also because his dedication and his talent offer a reminder that the universality of art can supercede the diversity of politics. John F. Kennedy once said that he believed in the Greek definition of happis-the full use of one's powers in pursuit of excellence. On that ground, Misha Dichter must be the happiest of men, and we congratulate him on his victory.

Federal Takeover Is Frightening

EXTENSION OF REMARKS OF

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1966

Mr. QUILLEN. Mr. Speaker, under unanimous consent I insert at this point in the RECORD an editorial from the Bristol Virginia-Tennessean, which seeks to point out the dangerous trend in our Federal Government to assume responsibilities that rightfully belong to our people.

In fact, rather than the Federal Government charging into every area of our lives, it should be demanding that the people assume their responsibilities if our Government is to continue along the lines

in which it was conceived.

The editorial follows: PEDERAL TAREOVER IS PRIGHTENING

The constant drive to have the federal government take over more and more of the affairs of individuals and businesses is frightening. One of the most disturbing manifestations of this disposition to control is the growing agitation for laws to "protect" the consumer from the ravages of merchants and manufacturers.

If legislation is ever passed straitjacket-ing the marketplace and standardising packng, labeling, grading and merchandising methods, two results are certain: Consumers will no longer be able to control by their purchases the kind of goods they want, and the federal agency setting out to administer the legislation will be the biggest one in the government.

Commenting on this new inroad on personal affairs, James M. Patterson, director of public relations of a major oil company, ays government officials are underestimating the intelligence of American women when they seek to advise homemakers on how to

shop for bargains. He emphasized that, "If our state and federal governments were as good at holding down the cost of government as our women are at holding down the controllable items in the family budget, we'd have very little to worry about." It can be added that the retailers themselves are the housewives' greatest allies in seeking out bargains—that's an essential part of running a successful store. Increased effort is being directed to encouraging bargain buying.

Mr. Patterson points out that while the cost of living index has increased only 6.5 r cent in the last five years, the cost of federal government is up 31 per cent and that of local and state government is up 45 per cent. The price of government is increasing the cost of living more than the items in the cost of living index.

"American women should demand that the cost of government be included in the cost of living index, where it can be subjected to . . . the same demands for economy and efficiency, that private individuals and corporations are subjected to."

A Needed Warning Voiced by Romney

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. CHAMBERLAIN. Mr. Speaker, constantly in the spotlight at last week's National Governors conference in Los Angeles, Michigan Gov. George Romney deserves still more attention for the light he shed on problems of Federal and State governmental relationships. Decrying the erosion of the American system of cooperative federalism in the face of growing Federal domination, he in-State governments to work for needed internal reorganization.

He suggested changes in the national tax structure to allow State and local governments a larger share in these revenues, and he suggested modifications in the form of Federal grants, rebates, and so forth. Governor Romney called for prompt judicial review of conflicts between States and Federal administrative agencies, and he proposed that the Vice President head an Office of State

Relations.

As indication that Governor Romney's refreshingly constructive and thoughtful suggestions merit serious consideration, under unanimous consent I include in today's RECORD this editorial from the July 7, 1966, issue of the Lansing State Journal, entitled "A Needed Warning Voiced by Romney":

A NEEDED WARNING VOICED BY ROMNEY

In a speech Tuesday at a Town Hall luncheon in California where he is attending National Governors conference, Romney again stressed the importance of cooperation in solving the problems and meeting the needs of the nation, the states and the local communities.

He said the American system of Cooperative Federalism—the balanced partnership between the national government and the states—has "served us well" but that today it is in crisis because the tides of change have eroded the position of the states.

"The federal government is weakening the

vital principle of cooperation with the states by moving in and taking over responsibilities which properly belong at the state and local level," the Michigan governor said. "It is re-placing Cooperative Pederalism with a grow-ing trend toward federal domination."

Asserting that it is right and proper for the federal government to use its superiority of money and credit to help the people meet their needs, Romney said it must act wisely, but that many of its methods are dangerously mistaken.

"America's emerging centralism masquerades under the false label of 'Creative Federalism'," the governor said. "But its supporters subscribe to a fundamental miscon-

"They assert that the federal government, rather than increasing its own power, is creating new centers of power and independent action. It is not. It is merely acquiring new administrative appendages at the state and local level to carry out its programs. It is encouraging conformity, not diversity and creativity. It is fostering compliance, not cooperation. It is centralizing power, not dispersing it."

Romney made it clear he was not talking bout "some dusty dogma" of "states" about rights."

"I'm talking about a job to be done," he said. "I wouldn't be in state government if I didn't believe it has an indispensable job to do . . . I know that some of those who shout the loudest about states' rights are laggards in state responsibility. They cry out against action by the national government—not because they want to act themselves, but because they don't want anybody to act at all."

Romney said that, fortunately for Cooperative Federalism, most states are doing everything they can to master change and step up to their responsibilities but that they face a serious handicap because they are running out of money under a system in which "the steeply-graduated federal income tax is bringing money into Washington hand over flat.

Unlike those who merely criticize federal policies and warn against their consequences, Romney offered some specific proposals to reverse the trend toward central dominatrend toward central domination and control:

Governors and state legislatures should redouble their efforts for fundamental orga nizational, fiscal and legal reform of state

and local government.

The federal government should correct the imbalance in the national tax structure which leaves the states and cities starying in the midst of plenty." Romney said this could be done by the federal government allowing certain state and local taxes to be credited against specific federal taxes; by the federal government making "bloc grants" to the states in specific program areas, without restrictive and expensive controls; by rebating federal taxes to the states on a basis of need and population, with no strings attached; or by relinquishing some federal tax sources to the states so the states could raise their own money.

The federal government should channel aid to cities through the states to make possible state-wide coordination for effective and fair use of tax dollars.

Congress should require periodic review of all federal grant programs, and permit prompt judicial review of conflicts between states and federal administration agencies.

Congress should recognize the states as partners in meeting new inter-governmental challenges.

The President should put the vice president at the head of an Office of State Relations instead of giving him the lesser responsibility for relations with the nation's

As a state executive and as a possible Republican nominee for the presidency in 1968. Gov. Romney has obviously given deep thought to what he believes to be a proper relationship between the national government and the states.

We believe his suggestions deserve careful consideration by those in government at all

America's best hope for the future lies in a nation of 50 strong and responsible states, not in a system in which virtually all power would be centralized in an ever growing federal government.

"Big Brother" FDA Contends It Knows Best

EXTENSION OF REMARKS

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1966

Mr. YOUNGER. Mr. Speaker, Mr. James J. Kilpatrick's column in the Washington Star of July 10 gives substance to a remark that we frequently hear on Capitol Hill, that we are now living under a constitutionally elected tyranny.

His column follows:

"BIG BROTHER" FDA CONTENDS IT KNOWS

(By James J. Kilpatrick)

One of the most maddening aspects of the benevolent paternalism that passes for government in the United States today is to be found in the bland process by which bureaucratic opinion takes on the force and effect

The process pervades the whole of government everywhere. Racial integration is held to be an affirmative good, in schools, hospitals and housing developments; therefore, integration will be compelled or Federal funds will be withheld. Billboards are viewed an distasteful; therefore, under penalty of law, billboards must go. The government con-ceives some interest in the American bathroom; so the American citizen must answer all the bathroom questions on his census

form, or the citizen will go to jail.

Re-

re-

on's

968,

Nowhere in our government is this arro-gance of power less restrained, or more abused, than in the Food and Drug Ad-ministration. Here is the pletistic face of Big Brother, solicitous but firm, looking after our waist lines. Perhaps we ought to be grateful, but how did the FDA get control of the ice box? Who says that Big Brother knows best?

Two recent incidents are typical of the FDA's obsessive drive to impose its will, by law, on everyone else.

In New York, on the complaint of the FDA, marshals recently swooped down upon the Ohsawa Foundation at 317 Second Avenue, and there confiscated a large quantity of "macrobiotic foods," and a large quantity of books and pamphlets on Zen cookery. Now, it is important to understand that the foods themselves were not contaminated in any way. They were not mislabeled. The barley flour was pure barley flour, the Azuki beans precisely as described; the roasted malt, soy sauce, rice cakes, millet seeds, and sesame oil were not adulterated in any way.

It was the ideas that were bad. The Zen philosophy holds that a certain diet is affirmatively good, and that certain of these foods will cure diseases ranging from apoplexy to trachoms. In the view of the FDA and the FDA is doubtless right, dandelion root tea bags are not adequate and effective treatment for anemia, appendicitis, arthritis,

burns, cancer, cataracts, constipation, diabetes, and so on down the line. "Such diets are dangerous," says the FDA in a press release. Four persons are known to have died in New Jersey and one in California from following the Zen precepts religiously. So the food must be seized and the books con-

Why? In all seriousness, why? If a relative handful of Zen Buddhists think they will make it to nirvana on soybean paste, why should the Federal government say them nay? Is this a threat to the public health of such magnitude that the very idea of Zen dieting must be routed out by writs and injunctions? And if the Federal bureaucracy has power to condemn the religious diets of the Zen cultists what of its power over the diets of orthodox Jews and Catholic monks?

The second incident is of much wider application. On June 17, the FDA laid down sweeping regulations governing the labeling and fortification of a variety of food products. Henceforth, if the FDA's edict stands up in court, a new label must appear on die-

tary supplements:

"Vitamins and minerals are supplied in abundant amounts by the foods we eat. The Food and Nutrition Board of the National Research Council recommends that dietary needs be satisfied by foods. Except for persons with special medical needs, there is no scientific basis for recommending routine use of dietary supplements."

These are plainly value judgments. are opinions. They may be the very best opinions, but that is all they amount to. Yet under its rule-making power, the FDA proposes to transform these opinions into binding law. Nutrients may be added to certain foods "only if they have real value." Fortified foods will become illegal "if the labeling or advertising contains any statements or pictures implying that a diet of ordinary foods will not supply adequate amounts of vitamins and minerals." The FDA says flatly that "excessive amounts of vitamins and minerals cannot be used by the body." Therefore, no man may use them.

Doubtless the Food and Nutrition Board has abundant evidence to support its view. No layman is in a position to argue. But if a man "feels good" by resent of a multi-vitamin tablet, or thinks he "gets energy" from a fortified cereal, what business is this of Big Brother? A whole lot of therapy, as every physician knows, is entirely in the mind. Suppose vast sums of money are squandered on useless vitamin pills? Much vaster sums are squandered on bookles and blondes, in ways that may also lift the hu-

The most precious of all rights, Brandels once remarked, is the right to be let alone. Someone ought to chisel that motto in stone on the portals that lead to the FDA.

Walter R. Graham, Managing Editor, the Springfield Sunday Republican, and Sports Editor of the Springfield Daily News and Sunday Republican, Retires After 43 Years of Active, Illustrious Years in Journalism

EXTENSION OF REMARKS

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. BOLAND. Mr. Speaker, Walter R. Graham, managing editor of the

Springfield, Mass., Sunday Republican, and sports editor of both the Sunday Republican and the Springfield Daily News, retired on June 30 after 43 years of action-packed, illustrious, and dedicated service to the profession of journalism in western Massachusetts.

Walter Graham was a newspaperman's newspaperman of the first order, and his contributions to western Massachusetts in sports, cultural, civic, patriotic, and charitable endeavors were numerous and invaluable.

A talented writer who possessed a warm and endearing personality, Walter Graham began his newspaper career in Springfield in August 1923, as a sports writer on the Springfield Republican, then published daily and Sunday. His ability won him the sports editorship of both the Republican and the Springfield Daily News in 1930.

The Springfield Republican has been one of the most respected newspapers published in the United States. Established by Samuel Bowles as a weekly in Springfield in 1824, it began daily publication in 1844, and Sunday publication in 1878. Walter Graham succeeded to the long line of distinguished managing editors of the Republican in 1947.

Mr. Speaker, Walter Graham covered all of the major sports events in America during the past 43 years. He was known by sports writers and editors throughout the Nation. I am sure that they would want to join me in wishing this wonderful, congenial editor from Springfield the best of health and happiness in retirement. I have permission to have printed with my remarks an editorial on Walter Graham's career, and a story on his retirement by Frank B. Murray, both taken from the Springfield Sunday Republican of June 26, 1966:

[From the Springfield (Mass.) Republican, June 26, 1966]

WALTER R. GRAHAM'S CAREER

Walter R. Graham, managing editor of The Sunday Republican since 1947, who will retire Thursday after 43 years of service on The Springfield Newspapers, has had a notable career, seldom paralleled in journalism, because it has embraced success in two distinctly different parts of the newspaper business—the sports area and the managing editorship field. Few paragrapers were combined to the company of th torship field. Few newspapermen combine the talents necessary to perform both of these functions well, as he has done.

Mr. Graham began his local newspaper career in 1923 as a sports writer on The Republican. His ability was soon recognized and in 1930 he was chosen to be the sports editor of both The Republican and The Daily

As a sports writer and editor, Mr. Graham was particularly interested in promoting wholesome athletic recreations among young people. The big growth and great success of boys' baseball and hockey and other young people's sports in this region has been substantially due to his efforts and enthusiasm.

When a managing editor was needed for The Sunday Republican in 1947, Mr. Graham again was the choice. This was a big challenge, for it meant entering a part of newspaper work which to a certain extent was new to him. But his true talent for all phases of journalism was clearly shown by the entirely successful way that he took over this task. He built up and improved The Sunday Re-publican, maintaining its old prestige, yet adding new, improved, progressive elements. Under his direction The Sunday Republican has grown largely in size, circulation, contents, reader interest and general public service.

Not the least of Mr. Graham's achievements has been the fact that, while managing editor of The Sunday Republican, he has also continued to serve as sports editor of The Republican and The Dally News.

The Sunday Republican's sports section is widely regarded as one of the best and largest in the country, providing a breath of general coverage that is equalled by very few papers, even the biggest.

few papers, even the biggest.

Mr. Graham has been notably successful for several reasons: a high level of native intelligence, a natural aptitude for newspaper work, an intense devotion to the painstaking detail which is so important in this field, a good capacity for leadership, and a talent for making friends. This latter quality, based on a warm heart, an outgoing spirit, a sympathetic attitude toward all, is one which is of special value to men in newspaper management positions, for it promotes good relations with the public as well as harmony and cheerful co-operation among the paper's staff members.

Mr. Graham's deep humanity, his eagerness to help others at all times, has found further expression in his numerous valuable contributions to the improvement of community life as a whole. He has been a leader in such constructive enterprises as the United Fund and the Chamber of Commerce, and an active participant in numerous musical, educational, cultural and religious organizations.

A man of unusually pleasing personality, and gifted both as an elocutionist and a poet. Mr. Graham has been in wide demand as a speaker and toastmaster at many events in this region for a long time. His services to sports and public welfare organizations have been widely recognized, and have brought him numerous honors and trophies.

In the newspaper office, Mr. Graham has been an invigorating, constructive and stabilizing force for many years. To his deak have come countless people, from all departments, seeking advice, encouragement, assistance of one sort or another. He has received them all cordially, given generously of his time to them, solved their problems, revived their spirits, encouraged their ambitions, helped them in many ways. There is scarcely a person who has been on the local newspaper for any appreciable length of time who has not benefited, in one way or another, from these advantageous contacts with him.

So saying "goodbye" to Walter Graham—inspired leader, good friend, warm-hearted humanitarian, first-class newspaperman—is very hard to do. Yet we all know how thoroughly he has earned his retirement. No matter how much we will miss him personally, regardless of how great a gap his departure will leave in our professional grouplife, irrespective of the loss that we will all inavitably suffer through his leaving, we cannot be selfish about it.

So we all wish for Walter, in the very fullest abundance, many years of complete rest, total relaxation, utmost happiness. And this wish is shared, we know, by the host of friends that he has all around the country.

WALTER R. GRAHAM TO RETURE THURSDAY AS EDITOR OF THE SUNDAY REPUBLICAN

(By Frank B. Murray)

With the publication of today's edition of The Springfield Sunday Republican, Walter R. Graham, managing editor of this newspaper and longtime sports editor of both The Republican and The Daily News, brings to an end 43 action-packed years in the general news and sports world.

SUCCEEDED BY DYKSTRA

His retirement, effective Thursday, June 30, cilmaxes a career that has carried him from the nation's great football stadiums, baseball parks and hockey arenas to the edi-

tor's chair of The Republican. His successor as editor of The Sunday Republican will be Roy W. Dykstra, present managing editor of The Springfield Union, himself a veteran of 40 years in the newspaper business.

The many years of Mr. Graham's newspaper work have been marked by an active dedication to public service which has embraced such community endeavors as the Joint Civic Agencies of Greater Springfield and its Breakfast Club, United Fund-Red Cross campaign committees, Citizens Action Commission, Naismith Memorial Basketball Hall of Fame, Springfield Area Development Corp. and numerous other projects undertaken over the years by churches of all creeds and organizations of every complexion.

Mr. Graham was born in Dorchester, Nov. 26, 1899, the son of Arthur F. and Annie A. Graham. He attended Boston Latin School and Newton High School and was graduated at Boston College in 1922. It was at BC where Mr. Graham groomed for his newspaper career, for in addition to coming under the college's rigid scholastic discipline, he became editor of "The Heights," the student newspaper. He also took part in dramatics as president of the BC Dramatic Club. This helped prepare him for the public speaking of which he did much in later years.

BEGAN IN COLORFUL ERA

Mr. Graham began his newspaper career in Springfield in August, 1923, under the aegis of an able sports editor, F. J. "Joe" Collins of The Republican. He started in a colorful era. Jack Dempsey was in training for his heavyweight bout with Luis Firpo, Bill Tilden was preparing to lead America's defense of the Davis Cup, and Bobby Jones was ruling the golf realm. Babe Ruth was moving to his prime and Red Grange was making headlines for Illinois in football. It was the sports period known as the Golden Twenties.

The Eastern Baseball League was going strong here in Springfield, and in all there were 21 minor leyague ball clubs in New England. The Greater Springfield area was studded with numerous first-rate semipro baseball and football teams. In basketball, the YMCA and the YMHA had potent teams.

One of the first assignments Graham received from Mr. Collins was to cover a semipro baseball game at old League (now Pynchon) Park. It was an extra exciting beginning. The North End Bridge burned down. His first by-line story was of a football game between Amherst College and its crosstown rival, the Massachusetts Agricultural College, now the University of Massachusetts. Ever since that day, Mr. Graham has had a warm spot in his heart for the small college games.

In 1930, he was selected by the late Shermann H. Bowles to become sports editor of both The Republican and The Daily News. Thus began a new phase in his newspaper career. His column, "From the Crow's Nest" in The Daily News and later in The Sunday Republican became a bible for countless thousands of sports followers. With the strong support and inspiration of Mr. Bowles, Walter stressed the organization and encouragement of schoolboy and junior sports. He has always been ready and eager to be of aid to youth's amateur sports endeavors. For his untiring work in that field, Mr. Graham has been the recipient of many awards.

Mr. Graham is a member of St. Michael's Cathedral parish and one of the original members of the Boston College Club of Western Massachusetts. He is married to the former Beatrice E. Morehouse. Their wedding took place at Newton in 1935. They make their home at 158 Maple St., Springfield.

SUNDAY EDITOR

Mr. Graham entered still another phase of his newspaper career when he was named editor of The Springfield Sunday Republican by Mr. Bowles in 1947. Now, in addition to his vast sports interests, he was to become immersed in community activity that was not closely connected with sports. It was a position that called for an acute, sensitive intelligence that could recognize the temper and feel of the community, the slow ground swells of opinion, the premonition of social changes, the subtle changes in manners, customs and thoughts.

Under Mr. Graham's guidance, The Springfield Sunday Republican advanced steadily in circulation. He gave to the paper a distinct warmth and humaneness. Under careful guidance, the paper sought to meet its main responsibility, to represent an accurate reflection of what this Greater Springfield community is like, what its people are doing and saying and thinking.

Every week, he approached the serious business of publishing a newspaper with the same meticulous attention to detail as a football coach planning for a major game. Nothing was left to chance. Everything was mapped out from start to finish, and if an emergency arose he expected his writers and editors to adapt themselves quickly, efficiently to the unanticipated, because that is the way the journalistic ball bounces.

RARE SENSITIVITY

He brought to the editor's position an unusual warmth, a rare sensitivity to the feelings of people. This is perhaps his most noticeable characteristic. Another was his rollicking sense of humor, his explosive laughter. Another still was his deep sense of responsibility to those working with him and for him, and for people in general, particularly those down in their luck.

Seldom was he able to walk the length of Main St. without being halted in his tracks at least 30 times by friends. He never was able to finish lunch without such interruptions. And while this might have bothered a lesser man, Walter seemed always deeply interested in the trials and tribulations of almost everyone he knew.

MUCH IN DEMAND

His services were demanded by such community organizations as the old Chamber of Commerce and its successor, the Joint Civic Agencies. He became a Chamber director in 1961 and served two terms, in 1962 and 1963, as its vice-president. In 1955 he took over what was to become one of his pet community ventures, the JCA Breakfast Club. He labored long and hard in the Breakfast Club vineyard and in the nine years when he was its chairman it became one of the leading community activities, an informal gathering of the community's top business leaders.

When the Citizens Action Committee was organized in 1958, by the then Mayor Thomas J. O'Connor, Graham became its chairman of public relations. The United Fund-Red Cross appointed him to a similar task. But in addition scores of other organizations sought his help which, busy as he was, he always gave willingly. It might have been a small church group seeking help to pay off the mortgage. It might be a drive for a new hospital, a new school. It might be a fraternal organization, or a Legion outfit. Whichever it was, it came to Walter Graham.

DEMANDS EXHAUSTIVE

Graham is one of Springfield's best known newspapermen, and among its best-loved, because of this characteristic of warm and human understanding, but his reputation also widened because of his speaking ability. He became much in demand as a public speaker and master of ceremonies. The demands in time became exhaustive, but while he still had his health he accepted them. Here again the people discovered another facet in the Graham character. His research was meticulous and vast, so that when he took over as a master of ceremonies he knew almost more about the people he was to introduce

8

than they knew themselves. His was a highly professional, competent job.

WORK TAKES ITS TOLL

Devotion to what he accepted as his public responsibility as an editor, a task that kept him busy from early morning until very late at night, eventually took its toll. He suffered a heart attack in the winter of 1964 and was confined to Springfield Hospital, and then at home, for six months.

But in time he was back at work again. He jumped into the mainstream of the news, and even some of the gatherings. In February 1965 he was called to the University ssachusetts to accept the 25th Harold M. "Kid" Gore Award for his 42 years service to schoolboy basketball. In the following April, 500 figures from virtually all walks of life joined with amateur sports leaders in the Springfield College Field House to formally recognize his long and conscientious service to this community. He received a silver Paul Revere bowl from Gov. John A. Volpe, a portrait painted by Reggie Therrien. a plaque from Romeo J. Cyr, coordinator of eeWee baseball, a Parks and School Committeeman, and a portfolio containing scores of testimonials from schools and organiza-

FITTING ACCOLADE

It was here that Graham received an accolade that best sums up his 43-year newspaper career. Dr. Edward S. Steitz, director of athletics of Springfield College, the principal speaker, said, in the name of all present, and the four western counties:

"We honor Walter Graham for upholding a set of principles . . . his truly outstanding work and distinguished service and his fight for the elimination of discrimination by reason of race or creed. His reputation as a fearless fighter for the good of the people of this community as well as his own staff, have marked Walter Graham as one of the finest editors in the country."

Next Thursday night promptly at 6 when Walter Graham, tanned, impeccably groomed as usual, turns the key of his office on the second floor of the newspaper building at 32 Cypress St. a personable, competent intelligent gentieman who practiced a high art, and an honorable one, will lock the door on

a distinguished newspaper career.

Those of us who remain . . . we who worked
with Waiter Graham for the last quarter of
a century or more . . . will know down deep
in our hearts that the place will never quite
be the sume again.

Something good will be leaving the newspaper business,

EXTENSION OF REMARKS

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1966

Mr. ASHBROOK. Mr. Speaker, several months ago I stressed the value of reports and documents prepared by congressional sources. Since then I find that my comments have been underlined by Prof. Benjamin E. Lippincott, of the University of Minnesota, in his book "Democracy's Dilemma, the Totalitarian Party in a Free Society," in which Dr. Lippincott uses materials available from the House Un-American Activities Committee and the Subcommittee on Internal Security of the Senate.

Dr. Lippincott states that in this material he found "a wealth of data that was most useful in understanding Communist activity, personnel, and organization in the United States."

He also states:

It is the author's experience that until late years liberals have made little use of the hearings and reports of the House Committee on Un-American Activities and the Subcommittee on Internal Security of the Senate. The author found, for example, that hearing after hearing and report after report in the libraries of two great universities, Harvard and Minnesota, had never been opened.

This is indeed a sad comment on those who could use the committee's public information, as Dr. Lippincott did in researching his book.

I believe it should be stressed that these materials are available from the House committee and the Senate subcommittee.

Dr. Lippincott is professor of political science at the University of Minnesota and past vice president of the American Society for Political and Legal Philosophy. In addition to being the author of several other books, he is a former teacher of Vice President Hubbert Hubbert Hubbert for the Washington Post.

While his comments on the chairmanship of Martin Dies and Parnell Thomas are open to question, his statements generally show the quality of the valuable information available from these committees. I therefore insert these comments in the Recorp at this point.

[From Democracy's Dilemma, The Totalitarian Party in a Free Society]

A Note on Source Materials
(By Benjamin E. Lippincott, University of
Minnesota)

A comment may be of interest on source materials provided by Congressional committees, which was useful for Chapter 2. The author approached, at the outset of this study, the hearings and the reports of the Congressional investigating committees with considerable misgivings, but was surprised to find a wealth of data that was most useful in understanding Communist activity, personnel, and organization in the United States. These sources, obviously, must be used with discrimination, but anyone who is knowledgeable with respect to the Communist movement, especially if he has had direct experience with it, will find the reports and hearings richly rewarding.

It is the author's experience that until late years liberals have made little use of the hearings and reports of the House Committee on Un-American Activities and the Subcommittee on Internal Security of the Senate. The author found, for example, that hearing after hearing and report after report in the libraries of two great universities, Harvard and Minnesota, had never been opened.

The materials turned up through investigation were apparently avoided because of the excesses of Martin Dies and Parnell Thomas, the early chairmen of the House Un-American Activities Committee. Part of this reputation springs from the fact that on occasion witnesses were abused, but as a rule this did not happen unless the witness was arrogant and insulting to the Committee. Part of this reputation also springs from the liberal press emphasizing the violations of fair play by the Committee, minimizing the provocative behavior of witnesses and giving little attention to the data that were developed. The Committee's reputation doubtless suffered, too, from the concerted

attacks made upon it by Communists and fellow travelers.⁵

It may be remarked, in passing, that liberals who were quick to ruise their voices in protest against the excesses of investigating committees dealing with Communists were on the whole notably silent with respect to the excesses of such committees dealing with the misdoings of bankers and capitalists in the twenties and early thirties. The studies made in recent years on communism in the United States under the auspices of The Fund for the Republic are correcting this lapse with respect to the use of materials in the reports and hearings of Congressional investigating committees.

⁴ For the criticism of the House Committee, see Robert H. Carr. The House Un-American Activities Committee: 1945-1950 (Reinhart, New York, 1951). For a defense see, William F. Buckley, Jr., The Committee and Its Critics (Putnam, New York, 1962). The last chapter, "A Record of the Committee's Work," lists the various hearings, reports, and consultations undertaken by the Committee. See pp. 276-335. Anyone who would attempt to understand the character and the extent of the Communist activities in the United States cannot afford to neglect these materials.

⁵ The ability of a pro-Communist minority to discredit the House Un-American Activities Committee was strikingly illustrated, during the latter part of 1939 and early 1940, at the Board of Directors level of the American Civil Liberties Union. The Board had appointed the Wise Committee to investigate the HUAC under the chairmanship of Martin The Wise Committee's conclusions were mixed, although they were very critical of HUAC's methods, they said that much in the Dies findings was of value as an aid in legislating and in preparing a more adequate national defense. After the pro-Communists went to work on the conclusions, the value west to work of the conclusions, the value was insignificant. See Joseph Tanenhaus, "American Civil Liberties Union," to be published in Studies in Infiltration: The Strategy and Tactics of Communist Maneuver (Cornell University, Ithaca, 1965), edited by John P. Roche, a volume in the Fund for the Renyllic series. the Republic series.

Radio Station KLOL in Lincoln, Nebr., Honors Vietnam Units

EXTENSION OF REMARKS

HON. CLAIR CALLAN

OF WEBBASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1966

Mr. CALLAN. Mr. Speaker, on Monday, July 4, 1966, KLOL radio in Lincoln, Nebr., devoted the entire broadcast day to saluting officers and men of the U.S.S. Tortuga and the armed helicopter detachment, Sea Wolf, of the 145th Aviation Battalion, operating from the flight deck of the Tortuga, both serving with the 7th Fleet along the coast of Vietnam. This special broadcast was recorded and rushed to the U.S.S. Tortuga and played back over the ship's public address system.

The Tortuga, a specialized Navy ship equipped with a flight and well deck, is stationed in the maze of river mouths where the Mekong River meets the South China Sea east of Saigon. The Tortuga, along with Sea Wolf, assists Vietnamese

forces in the control of Communist river traffic.

All of the officers and men of the Tortuga and Sea Wolf were individually recognized during KLOL's special July 4 broadcast with many of the midwesterners receiving specially recorded messages from home. Officials of the various branches of the armed services and State and local government personalities also participated in this special recognition.

We, the people of Nebraska, invite all Americans to join us in paying tribute to the gallant men who represent our armed

forces in war-torn Vietnam.

Community of Atlantic Democracies Advocated by National Planning Association

EXTENSION OF REMARKS

HON, DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1966

Mr. FRASER, Mr. Speaker, last month the National Planning Association released a report entitled "Strengthening of the Free World Through Steps Toward Atlantic Unification" which urges the establishment of an Atlantic "community of democracies" as one proposal leading to a more secure international order.

Such an Atlantic community could evolve from present forms of cooperation to increased supranational sovereignty, common defense and foreign policies, and eventual economic integration, The community could eventually be open to democracies of the entire world.

Mr. Speaker, because of the importance of Atlantic cooperation and the large number of Senate and House resolutions calling for the establishment of an Atlantic union declaration to attend a convention of Atlantic nations, I offer for the RECORD the following story by Joseph Sterne, in the Baltimore Sun of May 30, 1966:

PANEL URGES COMMUNITY OF DEMOCRACIES: STATE DEPARTMENT HELD SLOW TO FACE NEED FOR LARGER UNITY

(By Joseph R. L. Sterne)

Washington, May 29.—North American and European countries were urged today to give up part of their national sovereignty in building an Atlantic community that eventually could grow into a worldwide "community of democracies."

The National Planning Association said Americans—and the State Department—have been too slow in facing up to the positive requirements needed in the construction of a

more secure order.

This group of influential leaders in business, labor, agriculture and the professions contended that the Atlantic nations must be prepared to create a common organisation that could integrate their foreign and defense policies.

NO VETO POWER

Following a pattern established by the six-nation European Common Market, decisions could be made on the basis of a "weighted

United Naions and NATO.

A the outset, the proposed Atlanic Com-

munity Organization would have the powers ry to raise appropriations to carry out foreign and defense policies.

Economic integration and the knotty problem of freedom of migration, would come later, under the National Planning Association formula.

addition, the Atlantic community would not be an exclusive "club." would not be an exclusive "club." As con-ditions permit and agreement is reached, democracies in Africa, Asia and Latin America would be added.

FEDERAL PATTERN

The association said the proposed international organization should be based upon the Federal pattern followed when the thirteen American colonies formed the United

Certain powers now exercised by the individual nation-states would be delegated to the "community," an agency with suprana-

tional powers.

In a report entitled "Strengthening the Free World through Steps toward Atlantic Unification," the N.P.A. board and its standing committees argued that the "limitations" of the nation-state are obvious in a world threatened by nuclear weapons.

MORE "EVOLUTION" NEEDED

The United Nations and NATO were expressions of a growing trend toward "inter-dependence" and "community," it said, but more "evolution" is needed.

"Along with the feeling of loyalty Americans have always had toward their city or town, their state and their country, they will have to develop an additional loyalty toward

a larger political entity," said the report.

For the people of the United States, however, the price will not be paid in the loss of their sovereignty. In a democracy, sover-eignty is the possession of its citizens: the governments they create are only their

"The sovereign citizens of a democracy can entrust certain functions to entities other than national governments without 'sacri-ficing' or 'losing' any of the sovereignty they

"They lose nothing, and may gain much, by delegating powers to a new agent when the existing agency cannot adequately serve their interests in peace, freedom and economic welfare."

The National Planning Association said an integrated Atlantic community could be cre-"around" France if President Charles de Gaulle continues his nationalistic policies.

Once Europe and North America are united, it said, there will be a sufficient concentration of military power to secure peace and a sufficient concentration of economic strength to bring real improvements in the living standards of less developed nations.

At a press conference last week in which today's report was discussed in advance of publication, top officials of the N.P.A. expressed disappointment over the State Deartment's attitude toward Atlantic commu-

Elmo Roper, the public opinion expert and a member of the association's board, sum-marized the department's attitude as: "It's a fine idea, but not now."

Roper noted that Senate support for the concept is rising.

In 1946, only the late Estes Kefauver fa vored the community idea. Now, he said, Senators Gonz (D., Tenn.), Casz (R., N.J.), Coorez (R., Ky.), McGez (D., Wyo.), CHURCH (D., Idaho), KUCHEL (R., Cal.), JAVITS (R., N.Y.), McClariff (D., Minn.) and others support bills pending before Congress.

vote" that, in effect, would deny the United Ground-Breaking Ceremony for Cleveland Transit System

EXTENSION OF REMARKS

HON. CHARLES A. VANIK

OF OHTO

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. VANIK. Mr. Speaker, on Thursday, June 30, 1966, it was our privilege in the city of Cleveland, Ohio, to break ground for the Cleveland transit system's extension to the Cleveland Hopkins International Airport.

This was an epic making event in Cleveland, which was made possible by a grant of \$6,995,000 from the U.S. Department of Housing and Urban Development for half the project cost. If the community completes a comprehensive land use study within 3 years, the Federal Government has committed itself to donate an additional \$2,250,000 for the project.

Additionally, the voters of Cleveland and Cuyahoga County have approved bond issues to finance parking lots and bridges in order to develop the transit extension. Cuyahoga County will spend an estimated \$3.7 million on the project by providing five bridges along the rapid

transit extension.

This extension of the Cleveland rapid transit system will make Cleveland the first city in the United States to have a rapid transit line serving the downtown area and the airport. This will make the Cleveland airport only minutes away from hundreds of thousands of greater Clevelanders.

It was our privilege to have the Honorable Robert Weaver, Secretary of Housing and Urban Development, signal this transit achievement which was made possible under Federal law. Following is the statement of Secretary Weaver: REMARKS AT CLEVELAND TRANSIT SYSTEM GROUND-BREAKING BY ROBERT C. WEAVER,

SECRETARY, HOUSING AND URBAN DEVELOP-

I am doing a lot of business these days with Mayor Locher and the City of Cleveland. The Mayor and I met in Washington early

this month to announce a joint agreement between the city and the Department of Housing and Urban Development on an immediate action program to speed up Cleveland's urban renewal program.

We met again at the Conference of Mayors in Dallas in mid-June when I urged Mayors to give strong support to our major 1966 legislative proposal—the Demonstration Cities Act. The Conference did endorse the proposal, and the House Banking and Currency Committee this week reported out an excellent bill.

This kind of cooperative action is increasing as we gear ourselves to meet the increas-ingly complex problems of urban areas and to the kind of coordination required to meet these problems.

President Johnson has characterized this as Creative Federalism, which he defines as follows:

"Many of our critical new programs in-volve the Federal Government in joint ventures with State and local governments in thousands of communities throughout the The success or failure of these programs depends on timely and effective com-munication and on readiness for action on the part of both Federal agencies in the field

and the State and local governmental units."
We meet again today in a test of this new partnership. We are celebrating the ground breaking for an extension of the Transit System's line to this great international airport. This extension is possible because of a \$6,995,000 grant from the Department of Housing and Urban Development. The City is investing a considerable sum in parking lots at two new rapid transit stations and for an access roadway to the airport lots. And Cuyahoga County will make a considerable contribution by providing five bridges along the rapid transit extension.

This is Creative Federalism at work in the most practical way, activating the city, its transit system, the county and the Federal Government in a constructive and effective joint venture.

This expansion is an example of good planning and imaginative thinking. If I have read my facts correctly, you will have this combination:

The first modern rapid transit line in the nation serving both the downtown area and the airport:

Attractive and comfortable high-speed trains:

A convenient access road to airport parking lots;

Good parking facilities at transit termi-nals to lure the driver from the highway;

Loading platforms at transit terminals to accommodate feeder bus lines and what you

accommodate receive bus lines and what you describe as "kiss-n-ride" passengers.

It sounds to me as though you are instigating a lively flirtation between your customers and your transit system. You have my congratulations. I hope it leads to a compatible marriage.

I would also like to indulge myself in

pointing with pride to our Federal achievements in this field.

The Urban Mass Transportation Act of 1964 was characterized by President Johnson as "one of the most profoundly significant domestic measures to be enacted by the Congress during the 1960's." It is already living up to its promise.

The Congress authorized \$375 million for grant assistance to cover a three-year period. The largest outlays have been for capital improvement grants for equipment and facilitities, as in the Cleveland Transit System extension.

Let me report briefly where we stand at

the end of this fiscal year: There have been 35 capital grants approved for a Federal commitment of about \$133.7 million;

These have gone to communities of all sizes, in every part of the country. smallest was about \$49,000 to Kenner, Louisiana—population 17,000—for two busses and The largest was more than \$23.4 a garage. million to the City of New York for 400 new cars for the subway system;

Some of these grants have prevented a breakdown or total loss of public transportation service:

The capital projects approved to date will generate an estimated \$243 million in manufacturing and construction work in the transportation industry over the next two to three years, so there is a sizeable contribution to the economy;

There have been 43 grants for research, development, and demonstration projects-for a total Federal commitment of \$38.4 mil-These have ranged from a project to test an air cushion vehicle (known as a hovercraft) in San Francisco Bay, to one in Massachusetts which led to a reorganized metropolitan transit system.

Since a key requirement is that of planning, the Federal grant program has been a major factor in creating coordinated urban transportation systems as part of the planned development of whole metropolitan areas. This, in the future, may turn out to be our most important contribution.

All these projects have been developed locally, with the Federal involvement restricted to assistance and incentives. The fundamental concepts in this program are local initiative, local responsibility and local

Having passed out congratulations, I must now take a moment to view with alarm.

We have barely started the arduous journey to rebuild and revitalize our urban mass transportation systems. It is a strange combination of events indeed when we realize that while the number of people in urban America has doubled in forty years, railway commuting has been cut in half and travel by rapid transit has declined by millions of customer rides each year. As a matter of fact transit riding is less in 1966 than it was in 1907.

We must orchestrate all the transportation facilities of whole metropolitan complexes highways, subways, surface rail systems, and water transportation if necessary. coordinate these systems into the whole urban scheme of things, so that transportation doesn't tear the physical and social fabric of the community.

We must recognize, in short, that transportation must help create the urban environment we seek; that the principal problem of the city is not how to move, but how to live. In this effort, our new Department intends to move forward vigorously and effectively. We, too, have barely started our journey to help create viable and attractive urban transportation systems. We mucelerate—together—toward the future. We must ac-

Feeding the World

EXTENSION OF REMARKS OF

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 16, 1966

Mr. HANNA. Mr. Speaker, protein deficiency is a major element of malnutrition that must be fought. Cooperation between the U.S. Government and the U.S. food industry on this problem has begun and deserves our support. consequence of this cooperation can only be a step forward in the war on hunger.

Since increased food production is difficult and at best a future hope, and since malnutrition is an immediate and growing problem, improved diets supplemented by high-protein concentrates such as those now being developed from fish and by commercial products like Incaparina made by Quaker Oats are a major frontier in the fight.

The article that follows from the Wall Street Journal of Wednesday, July 6, 1966, concisely presents some of the latest work being done to combat malnutrition on the level of improved diets. The article is well worth the attention of my colleagues; the efforts described here as well as all efforts to fight hunger on all possible levels are commendable and must be supported. The problem of world hunger is our problem. We have the means to solve it. We must get on The article follows:

DING THE WORLD: FIRMS, UNITED STATES PLAN PIGHT ON PROTEIN DEVICIENCY IN IM-POVERISHED LANDS—FAST RISE IN LIVING STANDARDS SEEN IF DISEASE IS HALTED— MASS TEST SLATED IN INDIA-QUARER OATS AIDS COLOMBIANS

(By Burt Schorr)

WASHINGTON .- Malnutrition afflicts an estimated 350 million children, or 70% of the world's population under the age of six. Half of its victims probably will die before they are grown; the remainder may be marked for life by stunted physical and mental development

Malnutrition is no stranger to history. In recent years, however, medical men have begun to recognize one of its forms as a particular menace to world health. Its name: Kwashiorkor-or, less exotically, protein deprivation.

If its debilitating grip can be loosened, living standards in impoverished lands might begin to rise with surprising speed. come kwashiorkor, U.S. foreign ald officials say, and the food and population pinch which confronts poor lands like India could ease sharply. Their reasoning: A healthier, more alert populace could work harder and more effectively to feed itself; mothers, given hope that their babies might live beyond childhood, might become more receptive to birth control appeals. U.S. planners caution. however, that because protein deficiency is deeply rooted in regional food customs and national poverty, its remedy won't be simple or swift.

WORLD-WIDE ASSAULT

Even so, U.S. Government hunger-fighters are assigning a high priority to the first world-wide assault on kwashiorkor, now be-ing planned. Their efforts have the enthusiastic backing of President Johnson; the Administration's "food for freedom" bill, now nearing final action by Congress, is expected to provide encouragement by shifting U.S. food aid aims further from the surplus disposal of past years to filling specific diet deficiencies of hungry lands.

Barring some hitch, the Agency for International Development and the Agriculture Department hope by the year-end to begin a massive pilot program, probably in India, distributing wheat whose protein quality has been significantly improved by the addition of a special compound. Up to 1 million tons of the grain and as many as a million persons may be involved. The goal is to show the benefit of adequate protein intake in actual human diets—far from the laboratory.

The Government also is turning to a posship powerful kwashiorkor weapon that has been left almost idle during two decades of foreign aid: The U.S. food industry.

In a few months AID officials expect to begin granting indirect subsidies, probably in the form of wheat, corn and other commodities, to support marketing abroad of locally adapted protein foods by overseas subsidi-aries of U.S. food and chemical companies. probably including General Foods Corp. and Quaker Oats Co. More liberal use of AID's extended risk guarantee program, which offers reimbursement for losses ranging up to 75% of capital investments, is expected to encourage American companies' outlays for plant and equipment to produce protein food in hungry lands with shaky economies. Profits aren't the prime aim; but participating firms could well discover that the new pro-tein drive has exposed their brand-name products to millions of potential new cus-

UNITED STATES PEEDS 500 MILLION

Since World War II Uncle Sam has given away or sold on long-term credit more than \$14 billion of foodstuffs, and U.S. ald currently is helping to feed some 500 million persons around the world. "But we've alCOUNTING ON CEREALS

ways avoided using brand-name products," notes Herbert J. Waters, head of AID's Office of Material Resources. "Now we want to escape the stigma of charity donations and at the same time build up local food processing on a country-by-country basis." Adding urgency to AID's efforts is the fact that surplus stocks of dry milk, heretofore the prime source of proteins for U.S.-aided foreign diets, have been cleaned out, and the climbing free-market cost of milk rules out heavy purchases by the Government for shipment abroad.

The complex interplay of diet deficiencies that comprise general malnutrition still is only partly understood by nutritionists. But this much is known: The body needs more than 20 amino acids to build the proteins essential for bone and tissue growth and maintenance. Given an adequate diet, it can produce all but 9 of the acids itself; the others it must obtain from animal or vegetable protein sources.

Where undernourishment—or hunger for food of any quality—is the problem, though, it's probably useless to increase protein intake; rather than building up its supply, the body will consume protein as calories until calorie needs are met. Even a combined improvement of protein-calorie intake can precipitate vitamin A deficiencies in children, causing impaired vision or total blindness—a problem that developed in Brazil before vitamin A was added to U.S.-donated powdered milk.

IMPACT ON CHILDREN

There's increasing evidence, all the same, that kwashlorkor is the single, most important element of malnutrition. Studies repeatedly have shown that in protein-poor regions such as Central America and southern India, rice, corn, bananas and other high-carbohydrate foods commonly consumed help provide a certain minimum amount of essential protein for adults, yet often fall to do so for children whose protein needs are far greater.

Kwashiorkor, in fact, is originally a Ghanian expression used to describe the poor health of toddlers recently weaned from mother's milk, a source of high-quality protein. Preely translated, it means "the sickness the older baby gets when the new baby comes." In Guatemala, mothers often stop nursing infants when they are about six months old, an age when they require some three times as much high-quality protein per pound of body weight as the average adult. Even at two years, the weaning age in some parts of central Africa, a child needs about one and a half times the proportion of protein adequate for an adult.

Kwashiorkor victims suffer stunted growth, diarrhes, swollen tissue and hair discoloration; often they die from measles, chicken pox and other childhood diseases that otherwise wouldn't be fatal. Recent studies of afflicted youngsters in Mexico aeem to show permanent damage to the central nervous system.

"The listlessness and apathy of some people in underdeveloped countries may be in direct consequence of infantile protein mainutrition," theorizes Max Milner, an AID blochemist.

Some nutritionists, concerned that life-saving protein nourishment will cause a sudden population bulge in already-crowded regions of the globe, warn that birth control measures must grow apace. Aaron M. Altschul, who heads the Agriculture Department's share of the anti-kwashlorkor campaign, doesn't disagree but contends that better diet actually will "reduce population pressure in countries like Libya where a mother must give birth to five sons in order to have one live to support her in her old age." Mr. Altachul also argues that sufficient protein intake is essential if farmers abroad are to be healthy and alert enough to adopt needed agricultural techniques like intensive fertilizer use.

As diet-conscious Americans know, meat, milk and eggs offer high concentrations of protein. But because of the needed investments in feed, processing equipment or both, only the wealthier nations can afford them in the quantities needed to make inroads against kwashiorkor. (The average U.S. diet provides about 90 grams of protein daily, 70% derived from animal sources; in Pakistan, protein intake averages a skimpy 45 grams, only 12% of it from animal sources.) So U.S. planners are counting on common cereals like wheat, corn and rice, all diet mainstays in kwashiorkor-affected regions, to provide the needed protein.

Such cereals contain the nine essential amino acids; but because one of them, lysine, is present in too small quantities naturally, the utilization of the other eight is limited. So the needed amount must be added. Lysine, a nitrogen compound produced by a fermentation process, already is used to provide the "high protein" content of certain breads and breakfast foods sold in this country; it can do much the same for national dishes abroad. Though lysine-reinforced wheat can't match milk or meat for protein quality, it comes close to protein standards established by the United Nations' Food and Agriculture Organization.

Government nutrition planners hope the mass test with protein-supplemented wheat in India will provide the first definite information about its benefits in actual human discs.

Initially, the experiment will employ U.S.-milled wheat flour to which lysine as well as calcium and vitamins have been added. Distribution would be confined to one or more Indian cities where U.S. flour already is being consumed—usually in the form of chapatits, India's traditional hand-shaped patty. Later on, unmilled wheat would be used, possibly by mixing with it supplementation capsules shaped and colored to resemble wheat kernals. This wheat would be shipped to isolated interior villages for grinding into flour.

MEASUREMENTS PLANNED

"From the standpoint of food research, India is an advanced country," says an AID nutritionist. "With the help of local technologists, we'll be able to get precise measurements for the first time on weight gains, tissue changes and other biochemical results in defined groups of people eating supplemented and non-supplemented wheat."

Successful wheat supplementation obviously would cause a sharp jump in lysine production. Merck & Co., Inc., and a Japanese concern now are believed to account for nearly all the world's estimated annual output of 12 million pounds. Judging by prospective supplementation of the approximately 16 million tons of wheat yearly the U.S. is shipping to foreign aid recipients, demand for this amino acid eventually could soom as high as 90 million pounds annually. Besides Merck, several major U.S. chemical companies, including FMC Corp. and Union Carbide Corp., have indicated interest in supplying the additional lysine needed.

High-ranking executives of 10 leading U.S. food companies, for their part, pledged their support of the protein drive at a meeting with ADD and Agriculture Department officials at Harvard Business School last month. A number of the conference participants already are surveying prospects for launching low-cost protein products in needy areas. General Foods is considering marketing in a Latin American country a blended food that would include its patented fish flour.

Quaker Oats, however, seems first in line for receiving Government help in the protein push. For the past three years, a Colombian subsidiary, Productos Quaker, S.A., has been marketing Incaparina, a blend of corn, cottonseed and soybean flours plus yeast, calcium carbonate and vitamin A. Government officials view the effort as a model for other

American companies and are eager to support it.

TEST IN GUATEMALA

The Incaparina formula is one of several cereal blends developed by the Institute of Nutrition of Central America and Fanama (INCAP). The cottonseed and soybean flours themselves are rich in the essential amino acids and also provide extra lysine to unlock the corn protein. A teet in Guatemala showed that 75 grams of Incaparina daily raised average protein intake for children two to three years old from less than 60% of the recommended level to 110%.

Like corn meal, which it resembles, Incaparina can be used to make colada, the traditional thin gruel of Colombia, as well as other dishes calling for corn. It's quite a bargain too; one glass costing only one-third of a U.S. cent matches the nutritional value of five-cents-a-glass powdered milk.

So far, though, Colombians are buying only half the 2,000 tons of Incaparina Quaker Oats figures it must sell annually to repay its investment and yield a modest profit.

"We've distributed samples at health centers, and made heavy use of radio and sound-truck advertisements," ssys A. J. Dimino, the company's vice president for Latin America. "Most of the people willing to try it become customers. But at the lowest economic and educational levels we're trying to reach, it's very difficult to change food habits even enough to accept a free sample." Such an experience with a nutritious food that undernourished people refuse to buy is common in less-developed regions of the world.

mon in less-developed regions of the world. Quaker Oats believes that with \$150,000 a year in AID assistance over a three-year period, it could boost Incaparina sales in Colombia to profitable levels and perhaps as high as 5,000 tons yearly. Assuming the Colombian government agrees, AID officials envision donating soybean and cottonseed flour to Colombia in amounts equivalent to the annual dollar figure requested by Quaker Cots. The Latin country in turn would sell the commodities to Productos Quaker for pesos which would be set aside for further promotion efforts and for purchases of Incaparina for free distribution to schools, hospitals and villages.

Ferkauf Graduate School of Humanities

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1966

Mr. KUPFERMAN. Mr. Speaker, in my district at 55 Fifth Avenue we have the Ferkauf Graduate School of Education of Yeshiva University.

Recently they announced at a symposium-convocation the establishment of Ferkauf Graduate School of Humanities and Social Sciences.

At the convocation, President Samuel Belkin states that the next 2 years would be devoted to selecting distinguished department chairmen and an outstanding faculty, with the first student to be admitted for the 1968-69 academic year. Concentrating its programs for doctoral level students, the school will offer programs in three broad areas of inquiry: education, behavioral and social sciences, and liberal arts.

Dean Joshua A. Fishman outlined the goals of the new graduate school in an address delivered on March 21, 1966, at the symposium-convocation.

I commend it to my colleagues:

A New Departure in American Graduate Education

(Address delivered by Dr. Joshua A. Fishman, dean, FGSE, March 21, 1966, at symposiumconvocation marking establishment of Ferkauf Graduate School of Humanities and Social Sciences)

I am privileged to address you in two different capacities this afternoon: first, as dean of Ferkauf Graduate School of Education and, secondly, as chairman of the Interdivisional Planning Committee, consisting of faculty and administration representatives, for planning a new graduate school of humanities and social sciences at Yeshiva University.

For Ferkauf Graduate School of Education the expansion into a full-fledged graduate school of humanities and social sciences signals a vast improvement in the ability to develop in the very direction that the School first adopted six years ago, that is, in the direction of cross-disciplinary research and multi-disciplinary theory on human havior. Even as a graduate school of educa-tion it did not seem possible or desirable for us to emphasize teacher training, in view of the dearth of reliable knowledge about how children learn and how teachers influence such learning. As a result, Ferkhauf Graduate School of Education began to specialize more and more in conducting research and in preparing research specialists concerned with matters one or two or even three steps distant from the actual classroom confrontation between pupils and teachers. To borrow a phrase from another field, we decided to cut back the production of consumer goods and to invest in basic productive capacity instead.

NEED FOR INTERACTION

However, the more we came to stress basic knowledge about man and mankind-and to do so across the board-not only in psychology, where it is commonplace to do also in guidance, in special education, in administration, and in other fields of more immediate traditional relevance to educa tion, the more we came to realize that our goal was substantially beyond our grasp, given the limited range of disciplinary competences and interests traditionally located within even the most illustrious graduate schools of education. For effective work of the kind and the caliber that we have been pursuing and seeking to pursue we have had a need for interaction, on the part of faculty and students alike, with sociology and philsowith history and literature with linguists and political science, with anthropology and economics.

Indeed, we required at our level, at the graduate level, the same kind of broadening and deepening that has resulted in the expansion of hundreds of undergraduate teachers' colleges into general colleges of liberal arts and sciences.

What we requested was the recognition that at the graduate level, too, teacher education is much more than simply another professional endeavor. It is first and foremost an intellectual endeavor striving to increase knowledge about man and the processes whereby he learns, grows, changes, and influences others.

The University's decision to expand our school into the entire domain of the humanities and the social sciences could not be more welcomed than it is by the faculty and administration of Ferkauf Graduate School of Education. It is, for us, a dream come true, the flowering of a seed planted several years ago and nourished by hard work and considerable sacrifice. We are grateful to the University, to its President, and to the Board of Trustees for taking this momentous step. We are sure that our gratitude will be matched by the increased stature of

our work at the University, as well as by the increased stature of our University among the centers of higher learning. We hope that the detailed planning of the precise structure and operation of the expanded school will now continue with increased involvement and increased momentum so that the first fruits of these plans and of today's convocation will not be far off.

As chairman of the Interdivisional Committee appointd in 19ffs to prepare a statement of general guidelines for a new graduate school of humanities and social sciences at Yeshiva University, I would now like to read a few of the introductory paragraphs from our preliminary report which has been submitted to and generally accepted by the President and Board of Trustees in January of this year.

PRIMARY GOAL

The primary goal of Ferkauf Graduate School of Rumanities and Social Sciences is to further extend and transmit knowledge bearing upon the humanities and social sciences by the conduct of exemplary graduate-level research and training. For this purpose the School brings together scholars and students from a variety of disciplines, running the gamut from the empirical to the applied and from the empirical to the philosophical, so that while pursuing their own specializations and priorities they may nevertheless, more easily interact to their own untual stimulation and to the benefit of all who are dedicated to the humanities and the social sciences.

Yeshiva University realizes that a single graduate school including sociology and phychology, special education and guidance, literature and art under one roof is a relatively new departure in American graduate education. However, this approach is certainly no more revolutionary than that which long ago brought together the liberal arts and the natural sciences in one institution at the graduate level, or that which brought together the applied and the pure health sciences in medical colleges, or that which brought together the humanities, the physical sciences, and the behavioral sciences in undergraduate colleges throughout the medern world. Thus, the primary goal of Fer-kauf Graduate School of Humanities and Social Sciences is not revolutionary, but, rather, facilitory. By facilitating the interaction of scholars and students in a wide variety of humanities and social science fields the University seeks to promote greater familiarity and respect for the different but often complementary approaches and emphases that these fields represent.

AREAS OF JEWISH STUDY

Ferkauf Graduate School of Humanities and Social Sciences provides opportunities for interested faculty and students to extend and transmit knowledge in areas of Jewish study related to the domains of inquiry and instruction established at the School.

A further goal of Ferkauf Graduate School of Humanities and Social Sciences is that of service to the University. The University's undergraduate colleges and its other graduate schools recognize the importance of the humanities and social sciences for their own academic and professional programs. Fer-kauf Graduate School of Humanities and Social Sciences seeks to strengthen teaching and research in its areas of specialization at the other units of the University by various means, including joint faculty appointments, formal vertical integration between departments, joint conferences and projects, etc. Most faculty members appointed to the new school will teach from time to time at the undergraduate level.

GREATER INTERACTION

Most basically, however, the University hopes that interdisciplinary problems of modern life and of modern thought may be

more frequently and soundly tackled as a byproduct of the facilitation of greater interaction between students and scholars who have hitherto normally been physically separated from each other and whom Ferkauf Graduate School of Humanities and Social Sciences seeks to bring together under one roof. Nevertheless, the University realizes that interdisciplinary progress must rest on strong disciplinary progress must rest on strong disciplinary foundations. As a result, the University undertakes to initiate and maintain strong disciplinary work at Ferkauf Graduate School of Humanities and Social Sciences while leaving to the faculty of the School the establishment of as many interdisciplinary channels and pursuits as are feasible and productive.

Mr. President, we are ready for graduate work in the humanities and in the social sciences to begin in earnest at Yeshiya University.

Fraser Survey Finds Public Opinion Divided on Vietnam

EXTENSION OF REMARKS

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1966

Mr. FRASER. In May, Mr. Speaker, I distributed a questionnaire among my constituents on some of the critical issues facing our Nation. Paramount among these issues is the Vietnam war. For this reason a question on Vietnam headed the list of 15 topics covered by my questionnaire.

The answers reflected the divided opinion of our Nation toward the conflict. Three choices were offered: Withdrawal of American forces, increases military activities or continuation of our present limited involvement while seeking avenues for negotiation. None of the three choices attracted a majority. A plurality of 42 percent favored continuation of our present policy. Military acceleration was favored by 30 percent, and 28 percent supported withdrawal.

WIDE DISTRIBUTION

More than 150,000 questionnaires were mailed out—one to every household in the city of Minneapolis—to Minnesota's Fifth Congressional District, which I represent.

Some 5,300 were returned. This is a stable response, considering that the questionnaires were printed on the back of a newsletter and had to be torn off and put in an envelope by the recipients. I realize that a separate questionnaire would have produced a larger response, but the combined mailing was made to save money. The cost of printing the questionnaire was paid with my own funds, not with tax money.

The response to the questionnaire has demonstrated, above all else, that the people of Minneapolis are aware of and concerned about the problems with which we in Congress struggle every day.

POLLUTION

The greatest majority of all—88 percent—expressed concern over our increasingly polluted air and water by favoring Federal action to control pollution. The next most popular issues were truth-in-packaging and truth-in-lending bills, with 86 percent in favor.

CONTRIBUTIONS

Only one question drew a predominantly negative response. This was the question concerning tax relief for persons who make small political contributions. More than 60 percent of the respondents said no.

RHODESIA

Relatively small numbers of "undecided" answers to most questions indicated that most persons who returned the questionnaires have definite opinions on most of the subjects covered. The greatest uncertainty—more than one person in five undecided—centered around our support of British efforts to guarantee majority rule in Rhodesia. While I consider this an important issue, apparently it has not attracted a great deal of public attention. Those with an opinion were quite evenly divided.

THREE-FOURTHS SUPPORT

All the remaining questions received a majority of support. Three out of four respondents favored a change in the electoral college system and federally required safety features for new cars.

TWO-THIRDS SUPPORT

Among the issues that attracted at least 50 percent, but fewer than 66 percent, of support were these: 4-year terms for Congressmen; an increased minimum wage; a new Federal Department of Transportation; more Federal aid to education; a Federal highway beautification program; and Federal aid to cities for police training.

TABULATION

Mr. Speaker, I submit for the Record the following tabulation, question, by question, showing the percentage responses to my questionnaire:

[Results in percent]

- 1. Vietnam—Should we—
- 2. Do you favor 4-year terms for Congressmen?
- 3. Do you favor raising the present \$1.25 minimum wage?

41

- 4. Do you favor a Department of Transportation that would bring under one department all Federal agencies now engaged in transportation activities?
- Yes 6 No 2 Undecided 1
- 5. Do you favor a change in the electoral college system to divide a State's electoral votes in proportion to the popular vote instead of on a winner-take-all basis?
- 6. Do you favor tax relief for persons who make small political contributions?

- Yes 30
 No 62
 Undecided 8
 7 Do you favor expanded U.S. trade in
- 7. Do you favor expanded U.S. trade in nonstrategic goods with eastern European countries?
- 8. Do you favor a Federal requirement that auto manufacturers include additional safety features on new cars?
- Yes 7. No 2. Undecided
- 9. Do you favor continued U.S. support of the British Government in opposition to the Smith regime in Rhodesia?
- Yes______No_____Undecided_____
- 10. Do you favor "truth in packaging" and "truth in lending" laws?
- No_____Undecided_____
- 11. Do you favor the return of a percentage of Federal funds to State and local governments?
- 12. Do you favor expanded Federal aid to education?
- 13. Do you favor Federal action against water and air pollution?
- Yes______ & No_____ Undecided_____
- 14. Do you favor a Federal program to beautify our highways?
- Yes______5 No______3 Undecided_____
- 15. Do you favor Federal assistance to cities for training and strengthening their police forces?
- Yee 52
 No. 40
 Undecided 8

Let me make it clear, Mr. Speaker, that I consider the results of my questionnaire to be a cross-section of community thought in Minneapolis, and nothing more. The questionnaire makes no pretense of being a scientific poll. I have tried, however, to phrase the questions as objectively as possible to avoid eliciting a particular response to any of them.

BIPARTISAN BESPONSE

Those who went to the trouble of responding were, I am happy to report, representative of the entire political spectrum of Minneapolis. Three blanks were provided: Democratic-Farmer-Labor, Republican, and independent.

Thirty-four percent of the persons who returned questionnaires identified themselves as Democratic-Farmer-Laborites, 19 percent as Republicans and 37 percent as independents. An additional 10 percent did not identify themselves by party.

MANY COMMENTS

It has been gratifying to receive a large number of personal comments in

the space at the bottom of the questionnaire. And more persons than ever before sat down and wrote letters containing their thoughts on some of the issues.

Mr. Speaker, I have found during my two terms in Congress that these questionnaires are most useful tools in the give and take between me and the people of my district.

Obviously it is impossible to exchange information personally with each of the nearly 500,000 residents of Minneapolis. As a substitute for personal conversations, I have discovered that questionnaires draw out opinions from many persons who otherwise would not have the opportunity to express them.

TWO-WAY CHANNEL

A two-way communications channel is imperative if a Congressman is to keep in touch with current thinking in his district. Congressman and constituent alike are, in effect, both a transmitter and a receiver of facts and opinions.

The Congressman has the dual responsibility both of initiating and working toward passage of legilsation he believes in and of representing the aspirations and desires of the voters who elected him. It is impossible, of course, for these two elements to run parallel all the time. But they are more likely to run parallel if the Congressman receives a periodic sounding of opinion in his district.

U.S.S. "Henry L. Stimson"

EXTENSION OF REMARKS

HON, THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1966

Mr. O'NEILL of Massachusetts. Mr. Speaker, I have had the pleasure of receiving recently a letter from Adm. H. G. Rickover regarding the first sea trials of the 38th Polaris nuclear submarine, the U.S.S. Henry L. Stimson. The letter is especially significant to me because it stands as a tribute to a wonderful and very distinguished American, Henry L. Stimson.

Anyone familiar with public affairs knows of the many high public offices held by Mr. Stimson during his career. Fewer people, however, are familiar with the achievements of Mr. Stimson in his private vocation—the practice of the law. In both public and private life Mr. Stimson had as his foremost concern the welfare of society. From the time he entered private practice as an associate of Elihu Root through his service as Secretary of War under President Truman, he gave more of himself than could be expected of any one man. He was truly a citizen of which this country can justly be proud.

Mr. Speaker, I have unanimous consent that Admiral Rickover's letter be printed at this point in the RECORD.

U.S.S. HENRY L. STIMSON (SSBN 655), CARE OF FLEET POST OFFICE, NEW YORK, N.Y.,

New York, N.Y., At Sea, North Atlantic, July 4, 1966. Hon. Thomas P. O'Neull, Jr.,

U.S. House of Representatives.

DEAR MR. O'NEILL: We have just successfully completed the first sea trials of our

thirty-eighth Polaris nuclear submarine. The USS Henry L. Stimson was built by the Electric Boat Division of the General Dynamics Corporation, Groton, Connecticut. We also have in operation twenty-three attack type nuclear submarines, making a total of sixty-one. This ship is named for Henry L. Stimson (1867-1950), a man of notable achievements both in his vocation, the private practice of the law, and in his avocation which was public service of the appointive kind.

Born in New York City, son of a distinguished surgeon, Stimson received his education at Andover, Yale and Harvard Law School. He was only twenty-five when Elihu Root took him into partnership. The young lawyer learned much form association this commanding figure in the legal profes-sion of whom it was said that he had been connected with every important case in New York since 1880. Root, who became a lifelong friend and mentor, taught him not only a highly effective trial technique emphasizing painstaking preparation, close reasoning and systematic ordering of arguments—intellectual habits that proved useful to Stimson in the varied positions he later filled with great distinction—but living and working in Root's office, as he later remarked, also made him aware of "the importance of the active performance of his public duties by a citizen of New York." Though his steadily expanding practice kept him busy, Stimson found time to participate energetically in local and state politics his chief interest being better government

In 1906 Theodore Rooseveit appointed him to his first public office, that of U.S. Attorney for the Southern District of New York. Thereafter and until he finally retired in 1945 at seventy-eight, Stimson took frequent leave of absence from his lucrative private practice to assume public duties, serving under every President except Woodrow Wilson and Warren G. Harding. He was the first to sit in the cabinet of four Presidents (two Republicans and two Democrats): as Secretary of War under William H. Taft, Franklin D. Rooseveit and Harry S. Truman, and as Secretary of State under Herbert Hoover. He served Calvin Coolidge as adviser on Latin American affairs, peacemaker in Nicaragua and Governor General of the Philippine Islands.

All his public offices, except one, were appointive and came to him unsought. Stimson had no flair for politics of the elective kind. He lost his bid for Governor of New York in 1909. The only election he won was for delegate at large to the New York Constitutional Convention of 1915. There he worked tirelessly for reforms that would give the State a more honest and efficient government. Although in that year's election the voters rejected the revised Constitution, by 1926 almost eighty percent of the proposed amendments had become part of New York's fundamental law and thirty other States had followed suit.

Politically, Stimson was identified with the reform or progressive element in the Republican Party. His views on government were formed early in life and changed very little. They are set forth in the autobiographical book, "On Active Service in Peace and War," written conjointly with McGeorge Bundy and published shortly before Stimson's death at eighty-three. "His basic convictions were two—first that the primary and overriding requirement of all government was that it should not infringe the essential liberties of the individual, and second, that within this limitation government could and must be made a powerful instrument of positive action." The restraint imposed by law on government in the interest of "the primary and essential liberties of the individual" was, to Stimson, "a fundamental

principle of any decent society. But to construe this respect for personal freedom into an assertion that all government was evil seemed to him absurd." He felt that "in the industrial civilization of the twentieth century it was the duty of government to provide for the general welfare wherever no private agency could do the job."

Given this point of view, Stimson could serve Theodore Roosevelt loyally as U.S. Attorney and Franklin D. Roosevelt equally loyally an Secretary of War. Under the Republican Roosevelt, his task was enforcement of federal laws which had been enacted to protect our society against harmful actions of large and powerful private organizations; under the Democratic Roosevelt, his task was mobilization of the country's industrial potential in support of a war we fought against powerful nations threatening our free society. He accomplished both tasks extremely well.

Stimson's private work made him rich (he remained throughout his active life a member of the firm which originally had been headed by Root), but he derived his deepest satisfaction from the public services which supplemented and at frequent intervals replaced his private activities. He once told friends that the life of an "ordinary New York lawyer" could never wholly satisfy him since it was "primarily and essentially devoted to the making of money." Stimson shared with his father a desire to serve some larger cause than his own well-being.

The elder Stimson was a first-rate surgeon but had little interest in building the profitable private practice his talents could so easily have won him. Instead, he gave all his time to hospital work, much of it devoted to the charity cases that came to him as attending surgeon at the Chambers Street House of Relief, the emergency unit of New York Hospital. He liked to quote a famous French surgeon who said he preferred the poor for his patients since God was their paymaster.

Henry L. Stimson, the son, found that when he became U.S. Attorney, thus defender of the public interest and of the people, his work had an ethical content that enormously increased the satisfactions he derived in his professional life. Now he could do something to help redress a deplorable situation he found all too common: whenever private interests came into legal conflict with public interests, whenever great public issues put "a rich corporation on one side and only the people on the other," the side of the people usually "went by default," since so few successful lawyers were "putting their shoulders to the public wheel."

There can be little doubt that ancestry had something to do with Stimson's strong sense of civic responsibility. Nearly all his forebears were of New England stock, having arrived before 1650. After the Revolution they migrated westward and took up land in upper New York State. Hardworking, thrifty self-reliant and strongly identified with their community, they fought in every war in which the country was embroiled (even as Stimson volunteered in the Spanish-American War and World War I) and produced, as he put it, "enough clergymen and deacons to keep up fairly well the moral standards of the stock."

In a more direct sense, Stimson's devotion to public service was an outgrowth of his concept of the function of law and advocacy in a democratic society. This comes out clearly in his autobiography where he describes how he came "to learn and understand the noble history of the profession of the law," and "to realize that without a bar trained in the tradition of courage and loyalty our constitutional theories of individual liberty would cease to be a living reality." He was much impressed by the ex-

perience of countries with constitutions and bills of rights not unlike our own where liberty was lost because they had no "bar with sufficient courage and independence to establish those rights by a brave assertion of the writs of habeas corpus and certiorari," and he came to feel strongly that every "American lawyer should regard himself as a potential officer of his government and a defender of its laws and constitution," for "if the time should ever come when this tradition had faded out and the members of the bar had become merely the servants of business, the future of our libertles would be gloomy indeed."

As a lawyer, Stimson brought to public office the special qualities that characterize the "professional man"; qualities that dis-tinguish him from the "organization man" whose metier is "pure" administration. They are qualities extraordinarily valuable in a public servant, yet increasingly difficult to find in this age of giant organizations when it is common practice to fill high government posts with men whose careers have been the management of large private organiza-There is always a danger that private organizational loyalties may consciously or unconsciously influence such men in their public work; that they may in a sense think of themselves as ambassadors from the private to the public area. Stimson, who had a law practice awaiting him after each venture into public life, was bound by no con-flicting loyalties. He could and did bring dedication to every public task he assumed.

He had the professional man's respect for technical expertise; this led him to take infinite pains collecting able men to assist him whenever he took on a new post. He did not glibly assume that all it takes improve an organization is to put a capable administrator at its head who will then issue orders that will make it "efficient." Nor did he believe in blind obedience to commands emanating from superiors on the administra-tive totem pole; he had the professional man's habit of acting upon his own con-sidered judgment and of according other professionals the same right. Of his service in World War II, Robert H. Ferrell wrote that "no few words or easy statement can indicate the labor that produced an American Army and sent it over the world. Stimson's con tribution was to put brains at the center of the War Department, to create a situation in which men of intelligence and knowledge could work together without feeling that whatever they did would be cancelled by some ignoramus higher up the chain of command "

Finally, Stimson had the professional man's commitment to a personal code of ethics. Nobody believed more strongly than he in a cabinet member's loyalty to his President but he never hesitated to stand up to a presidential action he thought wrong. A notable example was his insistence in opposing Franklin D. Roosevelt's approval of the Morgenthau Plan which would have stripped Germany of her industrial plant and turned her into an agricultural country.

The services public servants in high appointive office are expected to render the nation are not unlike the services a competent and responsible professional man renders his client. Thus, it is not surprising that the qualities Stimson possessed as a professional man should have made him an outstanding public servant. He was, as his biographer Eiting E. Morison wrote, "a forthright gentleman, a great trial lawyer, a courageous soldier, a dedicated public servant, a statesman who would live in grateful hearts."

Respectfully.

H. G. RICKOVER.

Commencement Address by Dr. Alphus R.

EXTENSION OF REMARKS

HON. WALTER H. MOELLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, June 30, 1966

Mr. MOELLER. Mr. Speaker, last month marked the delivery of numerous addresses by distinguished Americans at commencement exercises at this Nation's colleges and universities. These speeches are always designed to give meaning and inspiration to the educational achievements of the college graduates.

One of the outstanding speeches this year was the commencement address delivered in my district in Ohio at Rio Grande College by its president, Dr. Alphus R. Christensen.

Since the date of the commencement, June 5, 1966, marked not only the completion of 4 years of study by the graduating students but also the 4th year of Dr. Christensen's great service to Rio Grande College as its president, it was indeed most appropriate that he should be the commencement speaker.

I wish to commend this commencement address to the attention of my colleagues:

PUT A TIGER IN YOUR TANK

(Rio Grande College commencement address by Alphus R. Christensen)

Good Afternoon, Ladies and Gentlemen: In 1939, 27 years ago this month, I began my work toward a master's degree at Northwestern University. I had received a fellowship from that great university. In November of the preceeding year, 1938, I had purchased my first car—a 1936 Chevrolet. It had a stick shift and it had four-on-the floor—if you counted reverse. I was proud of that car—it was my only significant material possession. Even though I was just a country boy from the plains of South Dakota, I was determined to take it with me to the big city; however, my parents had other ideaa. They suggested I leave the car at home and take the train, and then I wouldn't have to worry about it. But being a man of determination, as all young men are, I insisted this was my automobile and I was taking it to Chicago with me.

The first day I reached the Twin Cities Minneapolis and St. Paul-spent the night with friends, and the next morning I started Somewhere west of Chicago, late that afternoon, I began to wonder if I was ever going to get to Evanston. As it began to get dark I dropped into a service station to ask for directions. I told them I was looking for Highway #58 which would lead me into Evanston. I was assured that I was headed in the right direction and that soon I would reach the junction. Just as I pulled out of the station, I found that the stick would not stay in gear. I would put it in low and it would slip back to neutralthe same was true for all gears, so I drove the rest of the way holding the stick in high gear. I had had some experience driving with one hand, but not under such circumstances. You can imagine my predicament visions of serious transmission trouble-my parents' suggestion. How was I going to pay for it? Shades of gloom. Once again I should have listened to my parents. Finally I nursed my pride and joy into the parking lot at Northwestern-unpacked and went to

The next morning, while shaving and showering, I related my story to a couple of new acquaintenances—who, incidentally, were to become personal friends. One of these men more sophisticated than I was—suggested I contact the Chevrolet garage and have someone come out and examine the car.

During breakfast I turned the idea over in my mind. I finally decided that I might as well get some expert advice, so I called the garage. Arrangements were made to meet at the parking lot at 3:00 o'clock that afterneon.

I stationed myself at the entrance chortly before three, and soon the tow truck drove up. The driver got out. I pointed out my car. He looked at the license and said, "Oh, you are from South Dakota." Momentarily, I didn't know whether I had to defend myself or to brag. Before I could say anything, he told me had been born and reared in Yankton I told him I had spent quite a bit of time in Yankton because I had a friend who lived there.

He asked me if I happened to know a certain lady who had a local reputation as a poet. I told him I had been at her home several times to visit and listen to her read poetry. He smiled and said that was his aunt. We chatted for awhile about Yankton. Frankly I didn't object because I didn't think this past relationship was going to hurt my present case.

Finally, he said, "Let's pull the car down to the garage and see what the trouble is." So off we went. As we approached the garage, I noticed that next to the garage was the Emerson Radio Company factory, and Lo and Behold—there was a picket walking up and down in front of the plant. Being from a rural area, I had read about pickets; I had referred to them in speeches, exalted their virtues or denied their need in debates, but I had never seen a live picket before.

After we pulled into the garage, I left my car to examine this picket more closely. I walked up and down with that picket, back and forth in front of the Emerson Radio Co., asking what I know he considered very, very stupid questions. After about 20 minutes I knew that he was getting disgusted with me so I returned to the garage.

I found my car quite unattended. I thought to myself—Oh, my—this is going to be terrible; this is such a big job that they don't even want to start it this afternoon; they are going to wait until tomorrow morning. I sought out the only person I knew in that garage, the man who came and towed me in. I walked up to him, and I know that I didn't look very happy. I said, "I see my car is standing over there by itself. Did you find out what the trouble was?" "Oh," he said, "yes, we did. It is already repaired." I knew right then and there it couldn't cost me too much. The problem was simple—a pin had slipped out—it had been replaced and the car was ready to go. What a wonderful break for me! I asked him, "How much is the charge?" He looked at me and said, "Mister, we don't charge people from South Dakota anything."

Well, now I don't know whether his motive was altruistic, whether it was determined by a self-enlightened interest, or whether my countenance of dismal financial dismay caused him to decide not to charge me anything, but I did learn something. I realized that here was a service man who, long before the slogan-makers of Madison Avenue designed that one, "put a tiger in your tank," had put a "tiger in his tank," and I will tell you why. I spent three summers at Northwestern University, and I sang the praises of that garage to every person I met, and I also used that garage for any difficulties I had. I did account for at least 88 other individuals who made use of the service of that garage—not only did they provide good service, but quality workmanip. Now imbedded in this personal, fac-

tual illustration are four principles which should be basic to every institution of higher learning in the United States, and I hope, as President of Rio Grande College, these four principles prevail on this campus; these principles will emerge as we continue this discourse.

In March of this year I attended the annual meeting of the Association for Higher Education in Chicago. I chose on that occasion to attend a group discussion—No. II—entitled "Employer Expections in Conflict with In-stitutional Expections." On the panel were two men: Dr. Roy Bryant, Professor of Higher Education and Director of Placement, University of Southern Illinois; and Mr. Roye Walters, Director of College Employment of one of the small corporations of this country. American Telephone and Telegraph—AT&T. In addition, in that audience, were two other individuals who held corresponding jobs in other small corporations, General Motors and United States Steel. Now out of the discussion that lasted two hours in the morning and three in the afternoon, three common goals were agreed upon. Dr. Bryant had conducted, among 42 of the largest school systems in the State of Illinois, an open-ended questionnaire survey in which he wanted to find out what the superintendants were looking for in teachers. Mr. Walters, who had employed many, many college graduates, had made a similar study, based upon his own experience and upon the experience of other industries in the United States and fortunately corroborated by the two gentle-men who held corresponding positions with General Motors and United States Steel. Agreement was unanimous on the following points: (1) teach the students to think, (2) teach them how to communicate, and (3) realize that inter-personal relations are important.

Now I am going to change the wording of one of these goals just a bit, because after I one of three grows just a returned from Chicago I began to wonder about this word "think." Maybe the scientists had discovered the intricacles of the thinking process; maybe we now knew what goes on in the mind when we "think." I read several books after returning from Chicago, and I found out we still didn't know, but what these men were driving at was this: teach the students how to solve problems, make a decision on the basis of the solution of the problem, and ultimately act on decision; that was what they meant by think-ing—in other words—a felt difficulty, a problem defined, an evaluation and analysis of the problem, several possible solutions, selection of the correct solution, then action upon that solution. So, instead of saying to these young men and young women that I hope that we have taught you to think, I am going to say I hope that we have taught you the fundamental skills, which must be refined in the future-necessary to make decisions. Always making that decision with this reservation—subject to change—because, Ladies and Gentlemen, if you and I are going to wait until all the evidence is in—until we can compile and document all the evidence and data, we probably would never make a decision. Decisions must be made on selected opinions and on selected pieces of evidence which you may or may not be able to docu-You will make fewer errors in the ment. future as you refine the process

They tell us that knowledge is power—and knowledge is power, but knowledge today is such a nebulous thing. It is so changing, particularly in our technological and scientific fields, that what you learn here today probably will change tomorrow—except in some areas—except in the areas of general education, the liberal arts, that classical portion of education. If we have given you the opportunity to learn how to, at least begin to make decisions, to decide, and then to act upon that decision, we have accomplished

The second significant point, and they did not put these in any rank order, the gentlemen who spoke to us that day in Chicago, was to teach you how to communichicago, was to teach you how to communicate orally and in a written manner. You may know something, but if you cannot put it on paper so that other people can understand it, or if you cannot express it orally in a manner that it can be understood by other individuals, it makes no difference what you know. I hope that we have given you an opportunity, not only in the class-room, but since we are a small college, an opportunity to communicate with your peers and to communicate with your instructors outside of the classroom. Now when you talk about communication, I'm talking about the simple, direct type of communication. And I think anyone who attempts to communicate should communicate as simply and directly as possible. There is no value in using a 25 cent word when a 10 cent word will do. Some people are inclined to be verbose, but I don't think that is honest and true communication. For example, there was a plumber who wrote to a research bureau pointing out that he had used hydrochloric acid to clean out sewer pipes and inquired whether there was any possible harm. The first written reply that came back from this research bureau was as follows: "The efficacy of hydrochloric acid is indisputable, but the corrosive residue is incompatible with metallic permanence."
The plumber then thanked them for this information approving his procedure. dismayed the research bureau so they wrote him another letter saying, "We cannot as-sume the responsibility for the production of toxic and noxious residue with hydrochloric acid and suggest you use an alterna-tive procedure." Once more the plumber thanked them for their approval. Well, the research bureau didn't know what to do, so they called in a third scientist; he wrote the plumber saying, "Don't use hydrochloric acid. It eats hell out of the pipes." Now that type of communication he could understand. He knew what they meant. In be-coming communicators be sure that you communicate directly, briefly, and clearly, because one of the major problems in communication whether it is oral or written is semantic; the choice of words. Choice of the right word is needed to express the idea that you have in mind. If we always choose the right word, we will be much more effective.

The third point was inter-personal relations. I have reduced that to the one word, The gentleman, who represented United States Steel, in talking about college graduates who he had employed over the years reminded us that he could not recall one instance where an employee was dismissed for lack of technical knowledge. Whenever they had to dismiss an individual it was for some other reason, and more often than not it was for the reason that the person did not have the ability to get along with others. He said this was one of the significant qualifications a person should have who is seeking employment. I have said, I reduced that phrase to the So I want you not only to word relate. be able to communicate, to make decisions, but I want you to develop that skill of relating yourselves to other individuals. have had golden opportunities on this campus to do that too. Again you have had that opportunity because we are small, again because we have had to rely on many of you to participate in our extra-curricular activi--to participate in those things which may happen and occur outside of the class You have had to learn to get alongparticularly the boys who had to live three-in-a-room this year in a two-in-a-room dormitory; I am sure there were certainly some inter-personal relations under those circumstances.

Now, in my estimation, imbedded in this third point is a fourth. It was never discussed; it never came up during that five hour period; however, I am positive it was implied—that point, to serve. Actually all you have to offer is service. If you will recall my initial illustration, factual illustration, that gentleman offered service way beyond the call of duty. Much more than was asked of him, much more than was absolutely necessary. And I know in talking to p lic school superintendents, not only southeastern Ohio, but in other states And I know in talking to pubthe Union, one of the major problems they have in employing teachers is finding persons who are willing to do the complete job and not expect to be remunerated in some way or other for every little task that they are asked to do. In fact, I had one superintendent tell me, and this story may apocryphal, that he recalled an insta apocryphal, that he recalled an instance where a teacher trampled the children when the final bell sounded in the afternoon as she raced them out of the room. Now I don't believe that is service. I don't believe you are serving under those circumstances. Here at Rio Grande College we have given you an opportunity to serve, and I will say this, and I have much evidence of it in my office, in my files, of superintendents who have said this of Rio Grande College graduates-that these graduates are willing to go a little bit further, to give just a little more. I had a superintendent of a rather large district tell me that if he had a choice, everything else being equal, to choose been a Rio Grande College graduate for the classroom and another one from another institution he would choose the Rio Grande College graduate because of this little bit of extra something our graduates are willing to

So I say to you, the significant thing is to serve. Serve your employer; serve your community; serve your church; serve lowman and serve your Alma Mater. And your Alma Mater as of today is Rio Grande College. You have an obligation to this institution. You have an obligation that you will never be able to repay. Many of your are seated here today because, if Rio Grande College had not been located where it is, you would not have an education. Others you are here today because you could not attend the college of your choice, but you were accepted at Rio Grande College; you have developed; you have progressed and you have reached this point today. You owe something to Rio Grande College. You have paid during the last several years \$500 for tuition. It costs about \$1100 in the E & G budget to support each one of you. That extra bit of money—that \$300 difference has to come from someplace. If we didn't have educationally-minded men and women serving on our Board of Trustees, as we do; if we didn't have friends of Rio Grande College who are willing to contribute financially to the welfare of this institution, it would be impossible for us to keep our fees within reason. They would be higher, much higher.

I don't think a week passes that I don't hear from some graduate or former student, either verbally or in a written manner, praising Rio Grande College. I love to hear it—it's music to my ears—it makes me proud of Rio Grande. However, talk is cheap. Praise will not pay salaries. Praise will not pay utility bills. Praise will not erect new buildings. Praise will not maintain present structures. It takes money! I honestly believe you are obligated to contribute to the financial obligations of your Alma Mater. You must help so students who follow you have the same opportunities which you have had. I think we could cut the tuition if it were possible to balance our budget with words of praise, but we can't do it that way.

This past spring Dean Schaefer and I were negotiating with an individual, a new staff member for this campus, who at the present

time is an associate professor at one of the larger universities in a western state. He comes from this area, from this region; he wanted badly to come back to this area. We couldn't meet, of course, his salary demand. When I had to write and tell him that it was impossible for us to get together, I received a very nice letter from him, a long letter. I would like to read a couple of sentences from -"The school and the persons as sociated with the school are dear to me. Rio Grande College had not existed, I might not have done anything in my life except dig coal or farm in Cheshire Township," Those are noble words-a beautiful tribute. It was a two page letter, so I shook the pages hoping something more substantial would fall out of it. I even held the envelope to the light to see if something was hidden within. But alas, to no avail, just words.

Each year a number of private colleges and universities cease to exist as such. No longer can they compete. The spirit is gone. The struggle is too great so they forfeit their identities, either by affiliating with suns state system, some other institution, or they just wither and die, and we don't want that to happen to Rio Grande College. We want that diploma of yours to mean something, and we want it to grow in meaning. We want it to be as sound as blue chip stocks. We want it to be as good as any diploma you might earn from any institution, and the only way to we can do that is to obtain support from you and the friends of Rio Grande College.

Remember now, we have given you—basically, at least—the development of the fundamental skills to decide, to communicate, to relate, and to serve. Commencements and diplomas are nothing more than punctuation marks in the process of learning which is never completed.

Commencement Address by Dr. Ronald C. Nairn

EXTENSION OF REMARKS

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1966

Mr. RHODES of Arizona. Mr. Speaker, I am pleased to insert the following excellent address which was given at the commencement exercises of the University of Arizona on June 1 by Dr. Ronald C. Nairn, president of Prescott College, Prescott, Ariz. Dr. Nairn is an outstanding authority on southeast Asia, and I believe his remarks, "The American Intellectual and Southeast Asia," will be of great interest to all my colleagues:

We, the American intellectuals, need an The great hisintellectual reformation. torical dramas which the intellectual world has faced especially since World War I, continuously reveal the redundancy in intellectual conceptions; the inadequacy of information, the emotion rather than the intellectuality of response, and particularly the tendency to conduct intellectual dialogue around constricting confines of relatively middle-aged ideologies. Race relations, the integrity of individual cultures, man and violence, values in a techno-economic society especially theological values, just to quote some examples, are less and less viewed as primary intellectual questions but rather as resolvable issues per medium of this or that ideological system. And yet nothing is resolved: and the intellectual becomes either

mute or a cliché-touting countermarcher. There is, I repeat, a need for an intellectual reformation

Here, tonight, is gathered the human re sources of a great university, representing an important segment of American intellectual
life. The concern of the American intellectual with great historical dramas should be your concern, and the response your re-sponse. Tonight instead of talking vaguely about a "challenge of the future", I would like to bring you a real challenge, one centered about my call for an intellectual reformation but using a current historical drama. st Asia, as the focus. My contention is that the American intellectuals' concern with Southeast Asia reveals that we are not handling this historical drama very well.

Let me select, at random, a few examples from Southeast Asia to illustrate my general point. Basic to any intellectual exercise is embling of data, or shall we call it "knowledge". Society in Vietnam, as one example, is at least as complexly structured as the atom. It is strange, is it not, that people who could never be persuaded to publicly declaim upon the structure of an atom can barely wait to make the most elaborate commentary on what is wrong with the structure of society in Vietnam and indeed elsewhere in Southeast Asia. I can quote many examples. In May 1962, there was a notable first, a prelude to a veritable flood. Some of our most distinguished scholars, including a Nobel Prize winner, signed an open letter calling for the general restructuring of society in South Vietnam, including such things as the liquidation of the President, Ngo Dinh Diem. Upon what did they base this call? Did they have the same kind of knowledge about Vietnam as they would have brought to commentary on the atom or was their advocacy of this radical, and indeed brutal, action based upon something more primitive? I suspect the real knowledge of Southeast Asia held by this symbolic intellectual group was slight. For example, the much-quoted cliché that we must "win the minds of the Vietnamese peasant" arose at this time. It just so happens that the first full-length study ever written by an American on the Vietnamese peasant appeared in print only last year. What then do those who declaim this cliche mean? Where do It occurs to they get their basis in reality? me that most of us would be hard put to provide a formula for winning the minds of the people of Arizona, our own people. But, here it was; Americans must not only "win the mind of the Vietnamese peasant", but as well, restructure his society-a remarkable requirement based, I suggest, on ignorance.

I doubt if one could find today 100 Americans fluent in the written and spoken Vietnamese language. How many of you here tonight have read a comprehensive Vietnamese history—there is only one in the English language. The American people have been told that 80% of the Vietnamese are Buddhist—the reality is that nobody knows, but I would say that fewer than 30% be classified as Buddhist; and this group is highly-fragmented geographically and as regards Buddhist belief. And, so I could go on, questioning the basic data so many intellectuals use as premises for their commentary on Southeast Asia.

I believe we have an intellectual responsibility as old as our Greek progenitors that first part of any intellectual discourse is embling of knowledge about a subje This is a sacred element in the search for truth. It is even more sacred when the reality of things stirs us emotionally. face real intellectual dangers if we do not have the integrity to at least strive for the reality of things when we use our intellectual status to become public spokesmen. fucius summed it up well; he said, "Thinking without knowledge is a dangerous pastime. The American intellectual relative to Southeast Asia is indeed indulging in a dangerous pastime and is doing little for his intelectuals' reputation.

This leads to another random factor-'patterned" thinking that the American intellectual brings to many contemporary problems. Let me expand. We have developed an etiology-a philosophy of the causation of things-which constrains free intellectual investigation. Rousseau was one progenitor and gives one illustration of what I mean. To Rousseau man was good by nature, a considerate and kindly fellow. If he were not good, but instead violent, brutal, selfish, deceitful, and even murderous, then this was due to his environment or to the system of government. It was, therefore, not necessary to consider the reality of violence, brutality, selfishness, deceitfulness, cruelty, and killing, because, if the system were changed, then man reverted to his natural, kindly self. Let us see what this kind of patterned thinking means relative to the historical drama in Southeast Asia. The few American writers on economics and politics in Southeast Asia, basically starting after World War II, were mainly concerned with the issue of colonialism. They said that colonialism was bad and that when the inevitable nationalist revolution ensued and was inevitably successful, then the new nationalist elan would evolve into democracy and with the advent of democracy would well-being and contentment of all

The thesis was, of course, nonsense; and the trouble with such "patterned" reason-ing is not that we make mistakes now and again. Rather it is that, with "patterned" reasoning, we become unable to analyze new situations. As intellectuals have so often demonstrated in the past, the applications of formula to a situation is but reliance on ancient but comforting rituals and is the anti-thesis of a free, unfettered search truth. It has become a contemporary ritual that solution to Southeast Asia's and America's problems will be easy and immediate if some great devil image like colonialism, a military dictator, or a repressive non-demo-cratic premier, or the advancement of "free" elections occurs. Is it any wonder then, that the intellectual, who is usually appalled by the destructiveness wrought by American military might, can, by a strange about-face, condone counterdestruction of a society and justify all this by his "patterned" reasoning which allows him to readily diagnose the social and political cancer obstructing health and above all gives the same intellectual the right to recommend the most violent remedies for the promotion of instant salvation.

I could further this theme, but let me now take one practical example affecting United States involvement in Southeast Asia and see if I can tie together some of the syndromes I have been talking about. Let me talk about a great American concern, which will, no doubt, become even greater when the shooting stops, as it will, in Southeast Asia.

I refer to what we call "underdevelopment" and the consequent aid process. Conceptually, the idea of underdevelopment within the human family is abhorrent and offensive to the real or potential dignity of the human individual. The word "underdevelopment" raises quite profound emotions. You will recall that much of our "patterned" scholarship divides the world into an underdeveloped segment; a smaller transitional segment, that is, a move to something better; and an even smaller segment which is "developed"

Southeast Asia, of course, falls within the "underdeveloped" category. But, what is meant by the word "underdevelopment" as it applies in reality to the lives of Southeast Asian people? Would we, for example, say that the religious sense of Southeast Asia is underdeveloped? I have lived some of my life with Thai peasants. Between 80-90% of the peasant male populace in Thailand at one

time or another becomes a Buddhist priest. Some pursue their studies only for the of Lent, some for a year or so, some all their life. In a nation of some 6 million adult males, nearly 1/2 million, at any one time, are priests. If this is "underdevelopment," what development would you propose? And let us take a Southeastern Asian family—religion and family are, after all, fairly im-

portant ingredients in living.

Vietnamese family "underdevelthe oped"? Some belong to a unilineal descent group which has immutable ties over time Should these ties be broken? Should the family become tenuous? Is filial plety an out-of-date conception? Is family I could go economic sharing un-Keynsian? on and ask about handicraft, art, ceremony and festivals, village sociology, and the harmony of man and nature in Southeast Asia. I think what the users mean by "underdevelopment", is underdevelopment in an industrial sense and here it is clear Southeast Asia does not have the drive, the skills, the management, and above all, the resources and techniques possessed by the United States and Western Europe. Thus, here we face the first syndrome; our desire to change a reality we have not defined. We tell these people they have to change. We have now been telling the Vietnamese for five years that they must reform. Change or reform what?

Do we mean only to build factories and roads or reform something else, and if so, what? Do we really mean change of all of their society and if so, to what model? Why will a Thai peasant village use its highlydeveloped construction skills to build a beautiful Buddhist temple when, for their development in the mode of the West, should build a dam to hold water or a bridge

to promote commerce.

Why will the individual peasant have a picture painted on the tailboard of his cart rather than spend the money to buy some grease for its squeaky axle? The most perverse of all results coming from the present thinking which divides the world into un-derdeveloped is that we, of the developed world, have conceived a model into which the underdeveloped must aspire and have sumed that it is our duty to make good this transition. With this kind of "patterned" thinking, based upon a massive lack of data or knowledge, a frightening situation arises. The Nazis had their model of the Nordic superman. The Russians have theirs of the new Soviet man. Here are models to which people must be molded. Do we have a model for Southeast Asia? When you talk about transplanting the "Great Society" in Vietnam, what does this mean to a Vietnamese?

On the one side, the Communists are saying it is bad to be a South Vietnamese, that their society is not progressive, that it should be destroyed and Vietnamese must develop into the Communist model of modern man. The Communists with their patterned thinking say that this is an inevitable progression, the pattern of history. Are we not also tell-ing the South Vietnamese that it is bad to a Vietnamese, that they must also be made over in another image of modern man. Two peoples are now telling them it is bad to e a Vietnamese.

The tragedy of this situation is that as far as the Communists are concerned, they have no alternative. They are caught up in their own dogma, their own "patterned" thinking, but we, in the United States, should be different. We should be the very anti-thesis of the Communist obsession to recreate man in a preordained image. It is extraordinary, is it not, that some intellectuals (and here I must extend my preview well beyond the United States) who wring their hands about the physical destruction of a Southeast Asian village, would, if they got the chance, make over tomorrow a whole Southeast Asian society into what they, the intellectual, knew to be "good." Aggression can come in many

u

forms as modern totalitarian movements have demonstrated and social, cultural, and economic aggression need not produce a lesser trauma than physical aggression. But to repeat, the tragedy is that this is a betrayal of the American ways and the fact that the leadership of such betrayal may belong to distinguished American intellectuals does not mitigate the act.

As I sense the American dream, the historic mission of this nation was respect for the integrity of every single human, and this is what we should return to in our relationships with Southeast Asia and indeed elsewhere. It would be exciting, would it not, to attempt to make the world safe for diversity, or should I say the integrity of the individual human, rather than for conformity to the

Tonight I have barely touched upon some of the stereotyped thinking which is plaguing our intellectual world. The examples drawn from Southeast Asia could have been continued ad infinitum, and let me quickly present two or three more.

War is no longer being examined but reacted to, usually in a negative or an apathetic manner. Vis-a-vis the current war in Veitnam, a study of the "teach-ins" leads one to imagine that Mao Tse Tung does not exist. Yet this man has been the most prolific and original writer on war over the past 300 years and personally claims, as of now, to be an exponent of "Protracted Limited War". This might at least be intellectually acknowledge. On a more philosophic note, regarding war, we have heard of the term "unjust wars". This is alarming because I fear that these same people could easily on another occasion talk about "just wars"; and "just wars", we know, have always been the most bloody and holocaustic in history. Perhaps war is neither "just" or "unjust", but a vivid demonstration of limitations inherent in contemporary human existence. Intellectual probing of war, I suggest, is needed; and I suggest that carrying a sign bearing a vague cliché is a poor substitute for hard thinking about realities.

There are other more abstract issues about Southeast Asia almost unknown to the contemporary American intellectuals. The Buddhist process of logic and its conflict with Aristotelian logic; Freud and the Adhidhammas; peasantry as an existential expression, especially in a technological age; the nature of God or the transcendent; or if you want to be practical, cybernetics and its impact on politics and culture in Southeast Asia. The spectrum of the Asian unknown is wide.

It seems to me, therefore, that rather than seeing a great intellectual ferment stirred up by Southeast Asia, instead, we have intellectual despair and confusion. It often seems to me that the placard-carrying intellectual is indulging more in a form of psychic therapy to relieve his intellectual confusion rather than giving perceptive thought to real issues. This is why I suggest an intellectual reformation—not a revolution because revolutions have a distressing habit of consuming their own young—which, I suggest, is a debilitating intellectual process, that is if you accord the past any validity.

What then in a positive sense is meant by intellectual reformation because a great nation and a great intellectual community when it recognizes its shortcomings does not give way to sickly, despairing introspection. Rather it goes out and meets this challenge, prevails and is regenerated. The great historical dramas of our times need not frighten us even when we do not understand them. Rather as intellectuals, we should be stimulated to strike off intellectual shackles and use the occasion to get new insights. But we must reform. We must cleanse our intellectual home, free our thinking from the humbug of middle-age ideologies, and free

t

n

18

ourselves from the vested interests of the ideological and intellectual establishments which thrive on the comforting status quo given by the soporfic of "patterned" thinking. Reformation is, however, basically an individual process, as is all salvation. No one can do it but you. It is you, the individual who must resume a new humbleness before that which you do not know. It is the individual who must assume his or her own responsibility for individual action in seeking out the truth about that which he first admits is not known. Above all, it is only the individual who can bring integrity to his action and without integrity we can never know truth.

It becomes increasingly clear that the great historical drama in Southeast Asia about which I have talked of tonight and the response of the American intellectual to this drama is but a symptom of a vast intellectual disturbance the roots of which (in my opinion) go deep into the failure of 20th century liberalism to accept the reality of the world as an existential thing and especially intellectualism's allied action in endeavoring to dispense with human values and instead make politics, social action and culture conform to simple utilitarianism—but this is another topic. The drama of Southeast Asia and the American involvement is as good an excuse as any for us to pause and review our intellectual decline and see if we—you, the graduating class of '66, and we, your teachers—might not recognize our inherent intellectual greatness and act in bringing forth its realization.

Humbleness, action, integrity—is there an intellectual substitute? Our nation needs us in this role; and, the world about us, upon which we impact so mightily, needs the American intellectual in this role. Neither our nation nor the world can long suffer us if we continue to fail in our trust.

Senator Charles E. Daniel Looked Ahead

EXTENSION OF REMARKS

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1966

Mr. DORN. Mr. Speaker, many solutions have been offered to the civil rights problems confronting our beloved Southland and the Nation in recent years. Some have stood in the schoolhouse door. Others have suggested nulfification, interposition and massive resistance. Still others have sought a solution to this problem through street demonstrations and disrespect for law and order.

The late U.S. Senator, Charles E. Daniel, of South Carolina, offered a positive solution to the people of South Carolina and to the people of the South. South Carolina's industrialists, educators and men of good will at the local level largely followed Senator Daniel's advice, creating job opportunity and educational opportunity for all of our people.

Mr. Speaker, the late Charles E. Daniel was one of the greatest industrialists of our time and one of the world's largest industrial contractors. He was named "Industrialist of the Year" and was presented the coveted award at the Waldorf Astoria Hotel in New York City in 1963 by former Vice President of the United States, Richard M. Nixon, on behalf of

the National Association of Industrial Realtors.

Mr. Speaker, July 1 was the anniversary of that great speech delivered by the late Senator Charles E. Daniel, president of Daniel Construction Co., at the annual Watermelon Festival at Hampton, S.C., in 1961.

Mr. Speaker, the Greenville News is a progressive, dynamic newspaper published in Greenville, S.C., the hometown of the late Senator Daniel. The following are excerpts of that courageous address delivered by Senator Daniel as printed this year in the Greenville N's:

DANIEL LOOKED AHEAD, GAVE VIEV.

In a speech at Hampton on July 1, 1961, Charles E. Daniel gave his views on what South Carolina should do to meet the economic challenge of the present and the future

"I emphasize that we cannot manage our affairs under the same pattern of inaction we have followed in the past." he said.

we have followed in the past," he said.

The following are excerpts from his addresa:

"We are proud of our state and its fine people. We are proud of the progress which has been made; but most of all, we should be concerned with current problems and the implications of the future.

AT CROSSROADS

"We have arrived at a crossroads in South Carolina, economically and educationally. Though our progress has been encouraging, we must determine now to move faster from more elevated levels.

"We rank at, or near the bottom in per capita income; in standards of education; indeed, in too many areas of progressive life . . .

"We cannot catch up by maintaining the same pace nor by postponing the inevitable when others already are dealing our hands for us.

"We need to maneuver into positions where we can seize the offensive by fair and honest management of South Carolina's own affairs...

"If we are to lift South Carolina from near the bottom in so many areas of economics and public education to a position near the top, we will have to meet our industrial and agricultural challenges with all our resources and the complete and enlightened cooperation of all our people...

"More than ever today, management insists that plant locations be near cultural and recreational facilities; good schools, including industrial training; excellent shopping facilities; adequate air service; good living conditions in general.

"Progressive areas with these modern facilities have a decided advantage in attracting industry.

"South Carolina cannot get on an economic footing with the rest of America by being content to get only our percentage chare of new development. To catch up, our state must forsake some of our old ways and aggressively outdo other states in selling South Carolina to the nation . . .

"There are two vital elements which must move together if we are to succeed: (1) A rapid elevation of the economic status of all our people; (2) A crash program of quality education.

JOBS FOR NEGROES

"The desegregation issue cannot continue to be hidden behind the door. The situation cannot satisfactorily be settled at the lunch counter and bus station levels. We must handle this ourselves, more realistically than heretofore, or it will be forced upon us in the harshest way. Either we act on our terms, or we forfeit the right to act.

"The Negro population represents a large working force in South Carolina relatively untrained. It is an important potential to industry.

"We have a definite obligation to increase the productivity of our Negro citizens; to provide them with good jobs at good wages; and to continue to assure them of fair treatment. By raising their education and economic status, we would raise the whole economy of the state."

Propaganda and Toxic War

EXTENSION OF REMARKS

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1966

Mr. SIKES. Mr. Speaker, in the May-June 1966 issue of the magazine, Ordnance, there appears an article by Brig. Gen. J. H. Rothschild. It is entitled "Propaganda and Toxic War." General Rothschild, now retired, was Chief of Research and Development for the U.S. Army Chemical Corps and is one of the Nation's better informed people on this important subject. His article is such a rational one that I feel it should be reprinted in the Congressional Record.

The article is as follows:

PROPAGANDA AND TOXIC WAR—DESPITE STA-TISTICS TO THE CONTRARY, A FREILING HAS BEEN ENGENDEEDED IN THE PUBLIC THAT CHEMICAL AND BIOLOGICAL WEAPONS ARE IN-HUMANE, AND ONLY A FREE DISCUSSION OF THE SUBJECT WILL DISCLOSE THE FACTS

(By Brig. Gen. J. H. Rothschild)

(Before his retirement, General Rothschild was Chief of Research and Development for the U.S. Army Chemical Corps. He now resides in Phoenix, Ariz.)

Toxic warfare, encompassing the use of chemical and biological agents, has been in a peculiar position since World War I. It is too dangerous to ignore, but still it has not been accepted.

Why such an important means of warfare should be in this anomalous status, and what the factors are which affect decisions as to its possible use, warrant examination.

The decision as to whether the U.S. should employ toxic warfare in any form should depend only on whether or not such use enhances the over-all position of the country. This deliberation must necessarily include all aspects—basically, the political and military considerations.

Political considerations, as always, are very complex. They include the humanitarian, moral, and psychological viewpoints and the legal position. We must weigh the effects of our contemplated actions on our own people and on the peoples and other nations of the world.

The military value of toxics should be dedetermined solely on their ability to accomplish the mission as compared with other available military systems.

other available military systems.

The purely emotional approach, unfortunately so common, does not contribute to the solution of these problems.

Chemical warfare proved itself very effective in World War I, but still it and toxic warfare as a whole are not in general use. Why not?

In the first place, it takes a long time for a weapon to be accepted. The initial reaction of the military users, a proverbially conservative group, to something new and, therefore, unfamiliar and requiring new tactics, is one of rejection. This has been true of the longbow, gunpowder, and motor vehi-

cles of all kinds, as well as of chemical

The fifty years since the introduction of gas as a major weapon of war normally would have been expected to be time enough for its acceptance in this modern era, except for a complicating factor.

When the Germans launched the first large-scale gas attack in World War I at Ypres, Belgium, during April 1915, the Allies had nothing with which to combat this new weapon. They had been warned of the impending attack by intelligence but refused to accept the possibility of a new weapon being used. After the success of the attack, they then resorted to the historic method used against innovations in war—they declared the weapon inhumane and barbarous However, at this time in history, the means of discussing propaganda were much more efficient than in the past, and the propaganda campaign was successful.

In fact, it was so successful in whipping up a war spirit against the "inhumane, gasusing Hun" that it was continued even after the Allies themselves were using gas very ex-

tensively and effectively.

The statistics on casualties during World War I do not support the description of "inhumane" as applied to gas when compared with other weapons of war. The ratio of deaths among gas casualties verus those among casualties from other weapons was less than a tenth. The percentage of gas casualties discharged for permanent disability was about a sixth of those wounded by other means. In addition, the suffering on the battlefields and during convalescence was less.

Biological agents were not used to any extent in World War I, but here again it is difficult to adjudge disease as inhumane compared with the weapons of war which cause trauma from explosive, fire, and radiation. Certainly none of us likes disease, but we are exposed to it constantly and use methods to try to avoid it.

When we contract a disease, medical attention can alleviate the suffering and reduce the death toil. Those who would recover from most of the diseases which probably would be selected for biological warfare would be whole human beings. This cannot always be said of those who survive after being wounded by other weapons.

The result of the propaganda campaign against gas was to inculcate a generation with the feeling that chemical warfare weapons were inhumane. This led to a period of effort to outlaw the use of gas, occasioned—as expressed by J. M. Read in his book, "Atrocity Propaganda 1914–1919"—"largely because the delegates [of the Allied Power in 1921] were still under the impression left by the first gas attacks of the war, whose cruelties were writ large for political purposes."

In this country, this culminated in President Rocevelt's statement in 1943 that the U.S. would not resort to the use of toxic-gas weapons unless they were first used by its enemies. This is the last statement of policy on the subject by the United States.

Incidentally, this policy cost many thousands of American casualties in the Pacific in World War II, and probably cost many Japanese lives as well.

The impression one gets from the actions of the U.S. Government since then is that of a fear of touching the entire subject publicly. It seems to be an ironic case of the leaders of the country selling an idea—a false one—so thoroughly to the people that now, instead of the Government exercising leadership, it is managed by the result of its action.

The limited surveys conducted show a very general public ignorance on the subject of toxic warfare, and this ignorance is fostered by the policy of the Government. Public discussion has been discouraged for many years by the restrictions in releasing information

which have been placed on civilian and military officials.

The absurd result of this approach was demonstrated following the use of nonlethal riot gases in South Vietnam early last year. Instead of voluntarily releasing the information that the South Vietnamese (later, the U.S. forces) had employed tear and nauseating gases in order to save the lives of women and children being used as shields by the Viet Cong, the information was allowed to leak out through reporters.

The public outery in this country and abroad was damaging. Our Government obviously had no prepared position, but made an apologetic, very weak defense through our highest officials. Then, the humanitarian aspects were brought out, and the use of riot agents became widely accepted.

With this atmosphere in our Government, logical factual considerations involving toxics are impossible. Decisions as to possible use are taken with a strong input of emotion and

Until the Government is willing to nurture free discussion of toxic weapons, education of the public in the subject is impossible and, therefore, a meaningful determination of the

therefore, a meaningful determination of the American citizen's views on the employment of toxic weapons cannot be made.

What specific action is recommended? The Government should promulgate a continuing policy of free release of information on toxic weapons and the defense against them and permit officers of all military services to engage in public presentations and discussions, with the only restraint being the requirements of national security.

In other words, the present restrictions which have been imposed in the name of national policy should be removed, to permit the same type of discussion pro and con as is permitted regarding other weapons.

The moral considerations are partially based in the humanitarian aspects but go further. The fundamental morality enters when a country decides to go to war. An ethical country will not go to war unless it feels that its national existence, in an acceptable form, is seriously threatened by aggression and that there is no other resort.

Once this decision has been taken, it is difficult to understand why, within limits, any weapon of war which would give a major advantage should be eschewed. It may be within the province of an individual to say that he would rather die than do such and such, but leaders do not have the right to jeopardize their nation with this philosophy.

The limits to war which have been agreed upon in the past restrict the use of weapons or materials which are calculated to cause unnecessary suffering, to combatants or noncombatants.

In practice, according to the field manual, "The Law of Land Warfare," this comes down to "the illegality of the use of lances with barbed heads, irregular-shaped bullets, and projectiles filled with glass, the use of any substance on bullets that would tend unnecessarily to inflame a wound inflicted by them, and the scoring of the surface or the filing off of the ends of the hard cases of bullets."

Since general war has become total, the protection formerly granted to noncombatants has become less meaningful. Certainly every effort should be made to avoid the infliction of unnecessary suffering. Aside from these restrictions, however, every weapon required to end the war on acceptable terms and with the least loss of life to our people should be employed wherever necessary.

Most of the public objections to the use of toxics have been expressed by those who are strongly opposed to war itself. In a parallel effort to this opposition to war, the same people have opposed, through the centuries, the use of any new methods of war.

However, these two courses are entirely apart. Trying to find a reasonably safe, en-

forceable way to ensure that war cannot occur is a logical action. On the other hand, trying to ban any specific weapon of war from being used after the war has started is illogical in the extreme.

Any weapon system that is being banned at a given moment always will be to the advantage of one side or the other. If that weapon system has a major impact, when the chips are down it will almost certainly be used. If it is to the enemy's advantage, we have to be prepared in any case but will be at a grave disadvantage in training and planing if we have declared that such a weapon system should not be used.

If it is to our benefit and we do not use it, we are foregoing an advantage that we can probably ill afford to give up in a life-ordeath struggle.

On the psychological side, one of the arguments frequently advanced against the use of toxics is that it will give the enemy a propaganda advantage. This argument is weak, as the Communists have demonstrated that they do not need a factual basis for a propaganda campaign.

In the Korean action, for example, the Chinese launched a major propaganda campaign accusing the U.S. of using biological warfare. I was Chemical Officer of the Far East Command and the United Nations Forces during that time and can state unequivocally that there was no basis whatever for the accusation.

With regard to the legal question, the United States is not a signatory to any treaty prohibiting the employment of toxic weapons.

From the military side, the U.S. has not conducted large-scale troop tests with toxics to determine their value relative to other systems. The basic difficulty rests in the statement of policy issued by President Roosevelt in 1943, which is still in effect.

War is a complicated business. It is sufficiently difficult to train our forces in the methods we know they will use.

It is illogical to try to obtain a reasonable standard of training and planning with toxics when our country says it will not use them unless they first are used against us implying that such use is morally reprehensible and therefore should not be employed by an enemy either.

Furthermore, the introduction of this feeling of repugnance has been a large factor in the lack of any large-scale troop tests to obtain sound data upon which to determine the comparative value of the system. In fact, there has not even been a demand for a good chemical munition for use in realistic troop tests to determine the efficacy of chemical weapons.

Until these large-scale tests are conducted and commanders actually observe the effects on their troops, no evaluation of the worth of toxics will be accepted generally by military leaders. Technical data and small-scale tests upon which to make a determination are available, but the final conclusion is open to the argument that the worth of toxics has not been demonstrated.

Is toxic warfare acceptable as a means of modern combat? Toxics proved their military value in World War I. To decide the question as to whether their use is desirable politically, we must have much more public education and discussion.

Until Government policy is changed so as to encourage such discussion, the determination of the place of toxics in the enhancement of the over-all position of the United States will remain nearly impossible.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cuset thereo (U.S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Gov-ernment officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Recons.

Senator Robert C. Byrd Writes in National Magazine of the Spruce Knob-Seneca Rocks National Recreation Area—A New West Virginia Vacation Center in the Midst of Beautiful West Virginia Scenery

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 12, 1966

Mr. RANDOLPH. Mr. President, under the caption, "West Virginia's Do-It-Yourself Forest," our colleague from West Virginia [Mr. Byrd], authored an interesting, inviting, and informative article for the July 1966 issue of the American Automobile Association's widely circulated magazine, American Motorist.

It was my privilege to have cosponsored my colleague's legislation under which was authorized the Spruce Knobseneca Rocks National Recreation Area of West Virginia, and I share in his recommendation of that facility only 2 to 3 hours away from Washington, D.C., and within 350 miles for some 65 million people—more than one-third of the Nation's total population.

Senator Robert C. Byrd has demonstrated commendable leadership and concern in making our scenic State—the Mountain State—attractive and available to our citizens and tourists. I am privileged to cosponsor his legislative proposal for an Allegheny Parkway which would facilitate access to the Spruce Knob-Seneca Rocks Recreation Area and other unique and historical locales which he describes briefly in his timely article.

And it is appropriate to note that my West Virginia colleague cosponsored the Appalachian Regional Development Act which I introduced and managed, and which will afford improved developmental roads through scenic West Virginia and especially one in proximity to the Spruce Knob-Seneca Rocks National Recreation Area.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the article by Senator Byen, of West Virginia, from the July 1966 issue of American Motorist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEST VIRGINIA'S DO-IT-YOURSELF FOREST (By U.S. Senator ROBERT C. BYRD of West Virginia)

You will enjoy this pastoral paradise—an island of serenity surrounded by the population explosion—for many reasons. There are

the rolling green hillsides, the abundance of colorful wildflowers, a great variety of trees and other foliage, endless rivers to fish, swim, or canoe in, and a panorama of geological and historical wonders.

It is one of the country's newest yearround vacation centers. At a safe freewaydriving speed, it is only two or three hours away from Washington, D.C., and it has been estimated that it is within 350 miles for some 65 million people—more than one-third of the Nation's total population.

I recommend the new Spruce Knob-Seneca Rocks National Recreation Area of West Virginia.

Not only will you find your days filled with pleasurable activities, but you may enjoy the feeling that here is a real modern-day do-it-yourself forest all around you. In this day of population density and disappearing natural hillsides, Spruce Knob-Seneca Rocks stands, for me, as an outstanding monument to man's ability to rehabilitate nature in its finest form.

There was a time—not too long ago—when these shaded hills were scarred and blackened. The trees that stood there for a thousand years or more fell before the woodman's ax and were carted away by railroads which crisscrossed the hills. The tree bark that was left behind quickly caught fire and the flames far outreached the primitive fire-fighting equipment which was used to hold it at bay.

The Monongahela Forest as we know it today, was then called the "Monongahela Burn."

And burn it did, many times, until the U.S. Forest Service stepped in to acquire the land, to plant new trees and to salvage the historical monuments.

I was happy to sponsor the legislation which created the Spruce Knob-Seneca Rocks National Recreation Area and I was indeed pleased to have the full support and endorsement of American Automobile Association and its members for the project. It was approved by Congress and signed into law by President Johnson in September, 1965.

All of the natural attractions are there for visitors to see. However, the legislation will permit the expenditure of Federal funds to conserve the natural resources and to develop them wisely for greater public use. We will go to work on this program immediately.

But today, visitors can enjoy the same fishing streams that the Seneca and Shawnee Indians used for the family food baskets. There is also Spruce Knob, the highest point in the State, having an elevation of 4,860 feet. Soon to go up near that peak will be an observatory tower, standing about 25 feet tall, all of native stone, and affording visitors an unobstructed view of five surrounding peaks.

Some of the many attractions to see include:

Seneca Rocks: Rising almost 1,000 feet, above a branch of the Potomac River, they are considered one of the most spectacular and interesting natural wonders east of the Mississippi. They are sometimes compared in appearance to a ruined ancient castle, but they record the geological history of the country.

Smoke Hole Cave: A former Indian home, it is located on a mountaintop and is outstanding for its maze of corridors and side rooms, representing Indian efforts for multi-

Smoke Hole Country: A writer in the area centry described the valley this way: "The Smoke Hole country lies in almost untouched beauty, a haven of escape, a Shrangri-La of all things—trees, flowers, animal life, scenic vistas, and climate. It provides a retreat from the disturbing noises of expanding American industrialism."

Big Cave: Formed in solid rock at an altitude of 2,200 feet in Cave Mountain, it is the best known of the many caves in the Smoke Hole Country. In it, early settlers and Confederate soldiers dug nitre which they boiled in iron kettles and used in manufacturing gunpowder.

Big Spring: Situated at the base of Cave Mountain, it is a famous fishing ground, as trout gather there where the water is always cool. The Shawnee Indians first used the area, but were driven out by the Seneca, who eventually ruled all of the region now contained in Pendleton County.

Seneca Caverns: A series of subterranean rooms, located only a few miles from the highest peak in the State, they are decorated with stalactites and stalagmites which have been fashioned by drops of water trick-ling through the roof of the caverns for thousands of years. The deepest room is 165 feet below the earth. Well-lighted for tourists, they contain Statue of Liberty, Niagara Falls, and Metropolitan Opera to name just a few of the interesting formations.

Hermit Island: An area of about 4.5 acres where one botanist in 1933 found 283 species of flora, indicating the abundance and variety of plants at Spruce Knob. Many nature-study groups made treks into the valley to collect rare plants. Game and fish are numerous and varied, but, strangely enough, there are a few insects.

Rivers: Two major tributaries of the Potomac River—the South Branch and the North Fork of the South Branch give life to the valley. Feeding into these are dozens of clear, cold, spring-fed streams flowing from forested watersheds, creating scenic attraction as they cascade out of the high mountains into the valley below. As it wends its way down between the rocky cliffs of the gorge, the South Fork creates some of the most spectacular fishing water and scenic beauty to be found in the eastern United States. The South Branch is noted for fishing and white water canoeing.

Timber: The high country around Spruce Knob is a bit of Canada transplanted into the West Virginia countryside, with native red spruce and other forest tree species being unique in the typically Appalachian hardwood srea.

Cranberry Glades: Just outside the recreation area, the glades are a mass of color produced by the ground cover which abounds in the area. It is the site of a Visitor Information Center.

There is the story of a man who traveled through this area many years ago. He left behind his impression in a simple one-line statement: "Paradise Discovered, October 23, 1725."

Perhaps you can send a postcard from the same area reading, "Paradise Rediscovered, 1966." I hope you will come early and stay for a long time—the experience will be just what the doctor ordered.

Biographies of Political Figures

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. KUPFERMAN. Mr. Speaker, this week the American Library Association is holding its annual convention in New York City. I think it appropriate, therefore, to call the attention of Members to the following article which appeared in the June 1966 issue of the American Library Association Bulletin, about biographies of political figures. This article raphies of political figures. is written by Oscar Collier, president of Fleet Publishing Corp. of New York, a hard-cover book publishing company which has published in recent years such books as "Barry Goldwater, Freedom Is His Flight Plan." by Stephen Shadegg: "Lyndon B. Johnson, a Biography," by Harry Provence; "Adam Clayton Powell and the Politics of Race," by Neil Hickey and Ed Edwin; and most recently "John V. Lindsay and the Silk Stocking Story,' by Caspar Citron.

Mr. Collier, a New Yorker, who was introduced to politics during his youth in Texas, offers in this article the worthy thesis that books about political figures serve a useful public function of spreading information and stimulating interest in the actions of government, but that reviews of such books often strongly criticize them for reasons that have little to do with their true value. Mr. Collier also admits that as a publisher and editor, he has enjoyed the opportunity given to him by the ALA Bulletin to reply to. and criticize, the critics—a role seldom afforded a book publisher, and all too little to those whose work in life is enng, assisting, and promoting While I do not necessarily agree couraging. with Mr. Collier's judgments, I believe his broad experience with biographies of political leaders make his views worthy

of consideration.
The article follows:

USEFUL BUT MUCH MALIGNED BOOKS
(By Oscar Collier)

The dust from the election of the mayor of New York and other 1965 political contests has settled, and, as the opening guns of new elections are being fired, perhaps it is a good time to comment on certain useful, but much maligned, books: timely books on candidates running for office or, as such books are often called, "campaign biographies."

It is tiresome to a person as interested in politics as I am to read feview after review with such a typical opening statement as, "While retrospective accounts of current American politics have improved greatly in recent years, the campaign biography has remained stubbornly lodged in a literary substratum. In the best of hands, it is likely to be hastily conceived, prematurely produced, inaccurate, and—by accident or intention—obsequious." This comment is in Warren Wenver's review of Lindsay, a Man for Tomorrow, by Daniel Button (Random House), and John V. Lindsay and the Silk Stocking Story, by Casper Citron (Fleet), in The New York Times Book Review, October 24, 1965.

This comment is a typical cliche used by reviewers of the timely political biography.

Such remarks strike me as irrelevant, because I have found that reading campaign biographies is the best way to learn a great deal quickly about candidates and public men. Bear in mind that these two books are the only ones available on John V. Lindsay and his background and that the review published near the end of Lindsay's long, massively publicized, successful campaign for mayor of New York-a campaign which had created considerable national interest. Both Mr. Button and Mr. Citron had contracted to write their books long before Lindsay an-nounced for mayor or, apparently, even intended to do so. Button's book is a biogra-phy, focussing on Lindsay's political career; Citron's book is a history of Lindsay's congressional district, with heavy emphasis on Lindsay's races and political methods in recent years.

The reviewer of the timely political book often comments extensively, and apparently from his own knowledge, about the political figure who is the subject of the book. most cases, the reviewer draws heavily from the information in the book, often shortly after claiming that the book has incomplete information. Michael Harrington reviewed the Button and Citron books in the October 13 Book Week. After commenting that the books contained "parts" of Lindsay's record, continued, apparently from knowledge, "In the 1964 congressional race, his opponent, Eleanor Clark French, docuhis conservative positions against Area Redevelopment. . . " Mr. Citron writes, quoting his interview with Mrs. You've got to have government help to start a project like Area Redevelop-ment . . . that Lindsay voted against," and so on to considerable detail.

In some of the reviews of this kind of book, the candidate (or potential candidate) only is reviewed, and the book, except for its title, is completely ignored. In a slight variation of this approach, the review consists entirely of interesting information cribbed from the book, usually following a short attack on the book as "admiring." "heroworshipping," or "uncritical." And often, when two or more of these books are reviewed together, there is no discussion at all of each individual book, and all are damned together for their collective defects. In another variation, one book is typically called better than the other, with faint, condescending praise for the one and outright condemnation for the other.

The political positions of some reviewers seem to make objective descriptive appraisal difficult. I recall that William Hogan in the San Francisco Chronicle called Barry Goldwater: Freedom Is His Flight Plan, by Stephen Shadegg, "press-agentry with a tomtom beat," and Jules Feiffer in Life called five Lyndon B. Johnson biographies at once "mythology."

THE BISK INVOLVED

Since timely political books, including candidates' biographies, continue to appear during each preciection season and readers and librarians continue to buy them in fair numbers, this sort of book must be useful and fill a need. When you consider that the average hardcover book takes from three to six months to manufacture and that the need for information is not definitely established until about six months to a year beforehand, it becomes obvious that both publishers and authors take a considerable risk in such ventures. If the public-figure subject fails to gain a nomination or lease the election, the book is practically dead commercially. An outstanding exception, of course, was Booth Mooney's The Lyndon Johnson Story, republished in 1964 by Farrar, Strauss.

But the more usual fate of the book is the remainder counter. In offering a very low price for copies of a Barry Goldwater biography returned from bookstores, a remainder dealer justified himself by saying, "It's more than I paid for Nixon's." I was pleased at the bargain when I bought a well written and informative biography of Nelson Rockefeller from a remainder counter several years ago. I recall reflecting at the time that the publisher had remaindered his book too soon; it was 1962. But later events proved the publisher right. Information about some candidates just doesn't seem to sell, an additional hazard to publisher and author.

So we see that the earliest possible publication is essential to the success of these books, hence they must often be written quickly and certainly with a deadline. But even when the writer has a greater than usual head start, the inevitable comment of the reviewer is "hasty" (Library Journal, September 1965); and even if the candidate has repeatedly received national exposure through magazines and television, library-oriented reviewers are likely to say "of local interest only" (Virginia Kirkus, August 1965). The only way that I can imagine to explain this comment is to picture a reviewer, so wrapped up in reading and reviewing books, as to have little time for newspapers, magazines, or television.

Isn't haste in writing and publishing a virtue in books on candidates? It would be good to see a comment such as "a timely book, published with commendable speed." For there is no substitute for information in book form. No matter how complete and informative magazine articles are, they are difficult to keep at hand for explicit reference, and radio and television material usually lives on only in the mind of the listener and viewer.

DO

Biographies of living political figures fall into two groups: the "authorized" ones, in which the subject has cooperated by providing information, often exclusively, to the author who is very sympathetic to him; and the "unauthorized" or independent books, conceived by their authors or publishers as potential good sellers or vehicles of self-expression. Of the unauthorized ones, some are favorable to the candidate-subject, even if he doesn't cooperate at all out of respect to his other chosen biographer, and others are critical and opposed to the man being written about. The authorized books are damned by many critics as "by a close friend and admirer," and the unauthorized ones are damned because of "obvious mistakes" or they are called "impersonal."

In the came of John F. Kennedy's race for the Democratic nomination for the presidency and later race for the office itself, we had two excellent books published before his race: John Kennedy: A Political, Profile, by James M. Burns, and an "unauthorized" book, by Ed Plaut and Ralph G. Martin, Front Runner, Dark Horse. It seems to me that both kinds of books are very welcome. Front Runner has since been extensively quoted on Kennedy. Anyone who reads both books understainds Kennedy's political development and the foundation of his style much better than is possible by just reading the Burns book.

THE READERS

Before proposing a new and different kind of review treatment such books might well begin to receive. I will set forth the kind of readers who read and enjoy these biographies. I myself am a good example of one class of readers—political buffs. Such readers buy or borrow and read everything that comes out about prominent candidates and men who are likely to become candidates in the future. They will read several books about a single person, if publishers and authors make them available. They want to know everything possible about the subject—including whatever biases he and his friends and supporters want to present in

"authorized" books. They like to compare the various versions and note what was included and also what was left out. The book reviewer is the last person whom the author and publisher have in mind while the book is being planned and written. It is the ordinary, occasional reader—the literate voter, really—and the news-breaking, image-transmitting political columnist to whom the "campaign biography" is addressed. The authorized biographer likes to have some 'news' of his subject, if possible—particularly human interest items and a chronicle of accomplishments—but he is most interested in giving the effect of complete coverage, even though there is much that he knows, and will reveal in conversation, which he leaves out of his book.

The unauthorized biographer usually assumes that the reader has a great deal of information already—but the wrong kind: fragments from magazine articles, radio and television interviews, newspaper pieces, and, possibly, a surfeit of detail from the authorized biographer. Whether he admires his subject, as is the case with Plaut's and Mar-Whether he admires his tin's Front Runner on John F. Kennedy or Harry Provence's Lyndon B. Johnson, A Biography, or aims to tear his subject down, as in Fred Cook's Barry Goldwater, Extremist of the Right or Fred Haley's A Texan Looks at Lyndon, the unauthorized biographer believes he possesses vital information and understanding of his subject and tries to impart what he knows to convince his readers of the correctness of his viewpoint and the superiority of his information. Often, he fails to offer the whole story, but the part he does tell is unavailable elsewhere and often expresses an important point of view toward

The authorized political biography probably descends in style and intention from accounts of the lives of the saints. It is within the older context of exemplary "lives" that it can be properly judged. The un-authorized biographer is usually a political activist and writes as a modern, personal reporter, including his own experience and knowledge. Both kinds of biographers have an intimate understanding of material which originates from their subject's public relations staff—and so do most of their regular political-buff readers. The attempts of candidates for office to shape an image do not disturb those biographers. They cornot disturb those biographers. rectly see that this image controls the man as often as the man the image and, therefore, accept image-shaping press releases and position papers as being highly relevant to the man, his supporters, and his intentions. They also see the subject of their biographies, not as just a person, but as the leader and spokesman for a team and, often, for a substantial part of the electorate.

So I think it is fair to say that the earliest biographers of political figures are usually persons with considerable political experience and a general understanding of the politics, the issues, and the relevant history which have produced the public figure, as opposed to the private man, about whom they are writing. Probably much of the irritation of book reviewers comes from the fact that they (as sophisticated persons) know that the public man set forth in the book is not the same as the private man they have heard of, and the reviewer resents the fact that the authors are writing about and accepting seriously the public figure, images and all, and focusing on his public actions and postures instead of on his inner personality.

With all the considerations pointed out above in mind—that timely biographies of political figures, which accent their images or postures, will continue to be published, bought, and read; that their authors are addressing a definite audience, not including the literary book reviewer or critic; that the authors are usually knowledgeable and seriously concerned with politics, politicians, and contemporary history, rather than with character studies; and that a book on their subject produced quickly is useful and desirable—I would like to suggest some new ground rules for critical consideration and review of biographies on public figures.

1. The reviewer should avoid the cliché preamble about how awful campaign blographies are and, rather, address himself to those interested in this kind c. book. The term "campaign blography" itself should be little used or not used at all, as it carries a critical, derogatory message.

2. The reviewer should be a person known to have an interest in timely political books of all kinds and in public offices and should not be just a well-known book critic or reviewer, nor simply an experienced political reporter who is likely to believe or assert that he has better dope on the subject.

3. The fact that the book was probably written quickly and finished considerably before being published should be accepted as inevitable and the book should be welcomed rather than dealored.

rather than deplored.

4. Crusading "social critics" and sociologists should not be considered qualified reviewers, as they almost always have an axe to grind of their own and usually cannot resist the opportunity for self-expression which a political book offers to its reviewers.

5. Newspaper editorial writers and publishers are unqualified because of their habit of taking violent partisan positions. Let them rour against the book from the editorial page not in the book reviewer's space.

page, not in the book reviewer's space.
6. Possibly political scientists, who both teach and have some practical political experience, are the most reliable group to choose from. Next would come persons who are known political figures themselves, particularly if they are not currently running for

7. Magazine editors and book editors concerned with politics or communications are qualified, as they are often knowledgeable, interested in the subject, and pleased at the opportunity to gain new information.

In sum, experienced writers, who are not bored by politics or public posturings, have much to commend them as appraisers and reviewers of books on politicians and public figures. It seems fair to ask that the reviewer will like the kind of book he is reviewing.

What should the review itself be like? First of all, it should describe the book, riscoverage, its limitations. Then it should identify and place the author and assess his relationship to the candidate. In the interest of urging the voter to inform himself, the merits of the book should be set forth. If the book makes a contribution to public knowledge but is not sufficient by itself, a recommendation of other additional reading is welcome. For example, both of the Lindsay books referred to above, which are largely sympathetic to him, were reviewed by Murray Kempton in the New York Review of Books, together with comments on an attack on Lindsay by Noel Parmetel in Esquire magazine.

I believe reviewers and publications that disparage timely books on political figures do the public a disservice by sneering at political activists and discouraging the natural interest of the public in learning more about public men. There surely must be something wrong with reviews at these books when one book can be called both "the best book of its kind on U.S. politics" and "the crassest attempt to capitalize on the emergence of."

Address by Vice President Humphrey Before the National Association for the Advancement of Colored People

EXTENSION OF REMARKS

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 12, 1966

Mr. MAGNUSON. Mr. President, a highly significant address was delivered last week by Vice President Humphrey at the national convention of the National Association for the Advancement of Colored People, held in Los Angeles.

Vice President Humphrey reviewed the long struggle for civil rights and the advances that have been achieved, and he also outlined problems which continue to confront the movement and the philosophy that can guide us in seeking to meet these problems.

In reading over this speech—and I have done so several times—several points that the Vice President made appealed to me as particularly impressive. These included:

We have the moral obligation to match our promises with performance and to reward faith with fulfillment.

We must understand that now the question is not whether all men shall have a full measure of freedom and justice but how it shall be provided.

There is no room in America for racism of any color. We must reject calls for racism, whether they come from a throat that is white or one that is black.

Programs financed by all of the people—black and white—shall not be operated to benefit only part of the people.

There is an urgent need for new initiatives and responsibility in civil rights matters by our States and local governments.

As may be noted from the few observations cited above, the Vice President, in his address before the NAACP, not only was offering wise counsels to the delegates assembled at this important convention, but was expressing principles of morality and justice which are equally applicable to all of us.

Mr. President, I ask unanimous consent that the remarks of Vice President HUBERT H. HUMPHEY, as delivered at the National Convention of the NAACP in Los Angeles, Calif., on July 7, be printed in the appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

America is marching on the road to free-

I am proud to be back among my friends of the NAACP who have led this march for 57 years.

From the shadows of a dark past toward the shining hope of a brighter tomorrow, this march has been difficult, uncertain, and often dangerous. But history shall surely record its glory.

For we marched . . . even when our band was small and our ranks thin and ragged . . .

even when victory seemed a distant and unattainable goal.

There have been young marchers and old . . . Negro and white . . . rich and poor . . . but always marching with a common spirit-moved by a common hopeand striving for a common objective.

We marched and fought against separate and unequal education, and segregated lunch counters, and a seat in the back of the bus. There have been defeats, but many more victories.

There have been many heroes, and some martyrs.

Yes, the road to freedom is tained with tears and the blood of many Americans-including men such as Medgar Evers-men already counted among authentic American

We have learned there is no single road to follow. . . no one program . . . no one slogan that will bring us to the end of our march.

There have been many things to do, and many roles to play. And through the years the NAACP has played a role second to none in terms of dedication and determination of sacrifice and courage.

We are here today because of millions of hours spent in the courthouse and on the courthouse steps—sitting down and standing in voter registration drives and in the halls of Congress

Our triumphs have been impressive and Our progress has been unmistaknumerous. able. Yet these triumphs and this progress must be judged from the perspective of the man who has borne the burden of oppression and prejudice.

A generation ago, it may have been enough for the Negro to ask for the right to enter a restaurant.

But today the Negro American asks

Is my life better? Are my children attending better schools? Do I hold a better job or any job? Do I have a voice in the life of my city and my neighborhood? Am I a firstclass citizen—a man among men, in my own eyes and in the eyes of my family?

Until a man can truthfully answer "yes to these questions, we should not expect him to consider the battle won or the struggle ended. And neither should we.

For what is left for such a man when the

dust of the march has settled?
Where today the slogans of a better world spring from his lips, tomorrow there may be nothing but the taste of ashes

So, precisely at a time when the civil rights movement has achieved its most stirring victories, the revolution of rising expects tions demands that we turn now to confront the work which remains.

It is one thing to cry "freedom now" on a picket line. But it is another to achieve true freedom in the squalid world of the ghetto-where generations of exploitation have produced problems which no man can overcome in a day, week, or year—where we see and feel the devastating impact of that tragic equation which has too often decreed that poor shall beget poor and ignorance shall beget misery.

It is one thing to demand the federal government to meet its growing responsibilities in civil rights. But it is another to generate in our states and localities the commitment and urgency required to produce significant improvement in the lives of people.

And it is one thing to overcome flagrant examples of racial prejudice—segregated hotels, buses and parks. But it is another to eliminate the more subtle and sophisticated techniques which effectively restrict true freedom of choice in jobs, education and housing.

Now we must combine an acute sense of urgency with a heightened understanding of the complexity of the remaining civil rights problems. We must balance dedication to action with commitment to achievement.

We must understand there are no easy answers, no instant solutions, to problems generations in the making.

But there are certain problems demanding priority attention as we strive to translate legal promises of equality and freedom into

First, the federal government accepts the job of meeting its growing responsibilities.
One of those responsibilities is to press for legislation to fulfill the promise of the Constitution. You know what this Administration is doing on Capitol Hill to discharge that responsibility-and we need your support urgently if the Civil Rights Act of 1966 is to become law.

There are other responsibilities as well. And one of these is to see that programs financed by all of the people—black and white-shall not be operated to benefit only part of the people.

Last Friday a new day of security and wellbeing dawned for the senior citizens of this country-the long-awaited program of medicare went into effect.

But another revolution took place simultaneously—a revolution in medical facilities available to Negro Americans and other minorities.

Acting with a clear mandate from Congress, the federal government directed that hospitals could only participate in the medicare program if they provided non-segregated facilities and medical service to persons of all ages

More than 92 per cent of our hospitals met these standards on July 1-and many of these hospitals were previously segregated. I predict the large majority of those not in compliance will be in the near future.

One fact is certain: the funds for medicare and other federally-assisted facilities are collected without regard to race, color or creed-the benefits, therefore, must and will be available on the same basis.

Secondly, there exists an urgent need for new initiatives and responsibility in civil rights matters by our states and local governments

The battle against slumism and poverty must be waged primarily in our local com-munities—with assistance from the states and federal government.

The struggle to provide quality education for all the children of America must go forward in our localities—again with assistance from the states and federal government.

The job of achieving meaningful choice for all persons in the sale and rental of housing must be accomplished in our cities.

The federal government is fully prepared to play a major role in this process. ct of this federal assistance is magnifled a thousand-fold if a community is fully committed to the goal of decent, non-seg-regated housing for all its citizens—if a community is developing creative, bold new approaches to meet the housing crises of urban and rural America

The vital task of building a system of justice which treats all men alike—black and white, rich and poor—must be carried out in our cities and towns.

"Equal justice under law" is more than slogan etched over the entrance of the Su-preme Court. It is the foundation of our entire democratic system of government.

The Supreme Court has reiterated the need to inform all arrested persons of their right to counsel—of their right not to testify against themselves—and of their right to prompt arraignment before a magistrate.

These decisions—reaffirming some of our fundamental notions of justice in a free so-ciety—should be applauded by every Ameri-can—and implemented by every community.

For in the final analysis, the responsibility for securing equality before the law is a shared responsibility. The judical, as the legislative and executive branches, has thus posed a challenge to all Americans,

How do we replace the old argument over states' rights with the more meaningful de-velopment of states' responsibilities . . . and the responsibilities of communities, and organizations, and individuals?

There is difficult, unglamorous, backbreaking, heartbreaking, day-to-day work ahead in every ghetto . . . every election district . . . and every school district—for only there can our lofty goals and promises be redeemed

We know the NAACP has been doing this work in countless cities and towns across Yes, long ago you made the de-America cision to stay in your communities and do the work that had to be done.

We salute you for this decision. Yes, I applaud those who left their every-day pursuits to be part of the new birth of freedom taking place in the South.

But I also applaud and honor those who will remain in those towns after the fever pitch of the moment has passed. Theirs is long and arduous task of converting apathy to conviction-of translating ardor into achievement.

We should strive to do these things because they are proper and just . . . because we have the moral obligation to match our promises with performances and to reward faith with fulfillment.

But we should also do them because this nation will know little tranquility and peace until all Americans have an opportunity to share in her well-being.

We must understand that now the question is not whether all men shall have a full measure of freedom and justice, but how it shall be provided.

Thirdly, we must enlist new allies in our struggle against discrimination and derivation-from business, labor, religious and community groups.

We know that in recent years impressive strides have been made by both business and labor in rooting out blatant forms of job discrimination based on race or color.

The next phase of the battle will be less dramatic, and it will attract a smaller number of those interested in the simple issues and the easy victories. Yet this next phase—one of the nuts and bolts of the expansion of employment opportunities-is

Outmoded training programs, biased testing and recruitment procedures, apprenticerequirements and promotion patterns can deny equal employment opportunity as effectively as the old fashioned "white only" classified ads.

We must take vigorous affirmative action through skillfully designed training programs to help compensate persons who have been denied all opportunity to prepare themselves for today's job market.

We must give special attention to working out equitable procedures so that arrest rec ords, juvenile offenses, and lack of a high school diploma are not permanent barriers to employment where a person has otherwise established his trustworthiness and ability.

Federal departments and agencies are now sponsoring a number of innovative programs so that equal employment opportunity exist in fact, as well as in law. Private in-dustry must be more willing to exeriment as ek workable solutions to these knotty problems.

The time has come to broaden the base of the civil rights movement . . . to reach out into the community and enlist vital new sources of energy and strength.

Here the NAACP has an especially important role to play. You have traditionally sought close cooperation among churches, labor unions, business groups, and service We must now reach out even further with the message: "Brother, we need you for freedom."

This appeal cuts to the core of those questions of philosophy and of strategy which currently engaged the civil rights movement.

It seems to me fundamental that we cannot embrace the dogma of the oppressors the notion that somehow a person's skin color determines his worthiness or unworthiness.

Yes, racism is racism—and there is no room in America for racism of any color. And we must reject calls for racism, wheth-

And we must reject calls for racism, whether they come from a throat that is white or one that is black.

Legitimate pride in the achievements and contributions of one's forebears is, of course, another matter. One of the great tragedies of America has been that so few persons—white or black—appreciate the remarkable contributions of Negroes to this nation's history.

How many of us, for example, know that 26 of the 44 settlers who established this city of Los Angeles in 1781 were Negroes?

But pride in Negro history and achievement should establish a basis upon which to build a new climate of mutual respect among all elements of society—not false doctrines of racial superiority. We must strive to create a society in which the aims of the National Association for the Advancement of Colored People and the civil rights movement can be achieved. And, always remember, we seek advancement . . not spartheid.

advancement . . . not apartheid.

Negroes have been a part of America since Jamestown. They suffered—and survived—the cruel yoke of slavery. They have experienced hardship and discrimination of a severity and duration that no group of Americans has known. And the basis for this brutality has been segregation and exclusion—on terms imposed by the white

majority.

Today this system is being torn down through the concerted efforts of both white and Negroes. We must strive to perfect one citizenship, one destiny for all Americans.

Integration must be recognized as an essential means to the ends we are seeking—the ends of freedom, justice and equal opportunity for all Americans.

And if there are areas in this country where meaningful integration is not a realistic prospect—as there are, in both the South and the North—then the true remedy lies in creating these conditions as quickly as possible.

as possible.

As President Johnson said in his historic address at Howard University, "In far too many ways American Negroes have been another nation: deprived of freedom, crippled by hatred, the doors of opportunity closed to hope."

Who, in similar circumstances, might not feel within him the responsive echo to the cries of power and hostile pride?

Who, in similar circumstances, might not finally lose faith and patience with statements of good intention which were seldom translated into action?

Our response to these cries of outrage and despair must be hard, visible evidence—evidence that a man can see and feel and measure in his city . . his job . . . his home . . his children . . his own sense of dignity and self-respect.

Today, after far too long, we are beginning to see that evidence. The road to freedom has been obscured far too many years by hatred and habit, by anger and apathy. But it now lies clearly in view.

We march down that road not in separate columns to the sound of martial music heralding the approach of clashing armies.

We march, instead, together—to the sound of a song echoed by free people everywhere, of all colors, of all races, in every land:

"Stony the road we trod . . . Bitter the chastening rod .

Facing the rising sun of our new day

Let us, together, hand-in-hand, march on till victory is won . . ."

The "Hoosier Wing" Excels Again

EXTENSION OF REMARKS

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. HAMILTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial commending the "do it" spirit of the 434th Troop Carrier Wing, Air Force Reserve, at Bakalar Air Force Base, Columbus, Ind.

This excellent editorial, which appears in the May issue of Strike, the official newsletter of the U.S. Strike Command, recognizes the competitive, determined spirit of the Hoosier Air Force Reserve wing despite an impending order to deactivate this outstanding unit.

Brig. Gen. John W. Hoff, commander of the wing, has maintained top efficiency, combat readiness, and unwavering esprit de corps in this uncertain time for the wing.

The editorial deals with the unit's perfection of the "slingshot" method of extracting airborne supplies accurately and quickly over a given area.

This is but one more feather in the caps of the men of the 434th, which has an outstanding record in peace and in

The editorial and a story follow: THE "DO IT" SPERIT

If any accolades are to be passed out, it seems the 434th Troop Carrier Wing, an Air Force Reserve unit at Bakalar AFB, Ind., has earned them.

The unit, commanded by Brig. Gen. John W. Hoff, has perfected the "slingshot" method of extracting supplies from the C-119G more quickly and securately

more quickly and accurately.

General Hoff briefed the staff at Head-quarters, U.S. Strike Command and introduced a documentary film showing how the 434th refined method works.

As a result, the outfit has been invited to demonstrate the "slingshot" technique for Strike Command in the field.

The 434th files the C-119G twin-engine twin-boom, "Flying Boxcar" found now only in reserve airlift wings. The ground and aircrews of these aircraft continually provide airlift support for the Air Force. One day they may be dropping or resupplying \$2nd or 101st Airborne Division paratroopers in a local mission and the next day hauling supplies across the United States. Seven days a week the 434th has two crews flying airlift

Obviously, their interest doesn't end with providing aerial logistics in a professional manner. The C-119 is one of the oldest aircraft in the airlift business and the unit's attitude "How can we do the job better" is certainly worth praising.

EXTRACTS CONTAINERS IN SECONDS AND ACCU-RATELY: C-119 CREW USES "SLINGSHOT"

(By M. Sgt. John Renneker)

Dropping supplies from the air and getting them to land close to troops on the ground is a problem that the Services have been trying to solve for years.

Methods and techniques have improved over the years, especially since more emphasis has been placed on aerial delivery.

The 434th Troop Carrier Wing, an Air Force Continental Air Command Reserve unit, commanded by Brig. Gen. John W. Hoff at Bakalar AFB, Ind., has devised a "slingshot" method of extracting containers from the C-119G in seconds and accurately.

The 433rd Troop Carrier Wing at Kelly AFB, Tex., also a reserve unit, had previously experimented with the slingshot technique but it didn't catch on for cargo delivery. The 434th's technique is an improvement on the earlier method.

In a maximum load extraction, 52 A-21 containers with a total weight of 17,500 pounds were extracted in 4.5 seconds from the C-19. All the supplies landed within a rectangle of less than 275 by 30 yards. The first load landed a mere 14 yards from the designated impact point. The drop was made from 400 feet. Containers were equipped with G-13 parachutes, deployed by static lines.

In another demonstration, the twin-engine aircraft dropped 15 heavy A-22 containers with a total weight of 22,800 pounds on a single pass from 700 feet. The first load landed nine yards from the impact point. The 15 containers landed in an overall area 225 yards long and 20 yards wide. For the A-22 container, the G-12D parachute was used.

The impressive slingshot technique calls for seven basic components—monorali with trolley cable, spreader bar, pulleys, nylon strap, winch and a highpowered motor.

Secured to the center of the roof is a monorail with a trolley that moves from the rear to the front of the cargo compartment.

Attached to the trolley's clevis are two cables that go to pulleys on the sides and rear of the compartment area. The cables are separated by a seven-foot spread bar to prevent the cables tangling during cargo extraction.

At the rear pulleys, the cables practically do an about face and stretch to the forward part of the compartment where they are attached to a nylon belt. The nylon belt encircles the cargo containers along the "waistline" of the load.

When the aircraft reaches the computed release point, the navigator flips a switch and the high-powered motor activates the winch which pulls the trolley forward on the monorail, whisking the containers rapidly over the conveyor rollers to the open rear end of the cargo hold.

As the containers are thus "slingshotted" out of the fuselage, static lines deploy each container's parachute.

Freedom From Responsibility

EXTENSION OF REMARKS

HON. LEN B. JORDAN

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, July 12, 1966

Mr. JORDAN of Idaho. Mr. President, a great new era of progressive development is dawning for my home State of Idaho. But the process of change which is everywhere apparent in the State is also requiring Idahoans to face many of the problems which have become major crises in more heavily populated areas. The attitude and energy of the people in meeting these challenges are, of course, of vital importance.

On June 25, Eugene C. Dorsey, publisher of the Idaho Statesman, addressed himself to this matter in a perceptive and thought-provoking speech to the Idaho State Chamber of Commerce regional meeting in Idaho Falls. His remarks were directed to Idahoans but his basic analysis has a broad application to all Americans. So that my colleagues might have the benefit of his exposition

concerning freedom from responsibility, I ask unanimous consent that his speech be included in the appendix of the Record at this point.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

FREEDOM FROM RESPONSIBILITY

(By Eugene C. Dorsey, Idaho State Chamber of Commerce, regional meeting, June 25, 1966, Idaho Falls, Idaho)

"We've been laying a lot of emphasis for 30 years on freedom from want, freedom from disease, freedom from poverty, freedom from fear . . . now we've got to the point where we are approaching freedom from responsibility."

That's Red Motley talking. Red, as most of you know, has served in a series of National Chamber of Commerce offices. At the 54th Annual Meeting of the U.S. Chamber, Red spoke at the Challenge Luncheon.
He said, "There have been 'Great Socie-

He said, "There have been Great Societies' in the past. This is not a modern invention. But when these societies arrived at freedom from responsibility, they ceased to be 'Great Societies.'"

Other contemporary writers and thinkers have offered similar observations. Editor of the Tuiss, Oklahoma Tribune and syndicated columnist Jenkin Jones has said, "When nations cease believing in themselves, when they regard their institutions with cynicism and their traditions with dippancy, they will not long remain great nations." Will Durant in his Story of Civilization wrote, "A great civilization is not conquered from without until it has destroyed itself within. The essential causes of Rome's decline lay in her people, her morals, her class struggle, her failing bureaucratic despotism, her stifling taxes, her consuming wars."

Jenkins Jones developed a Jeremiad along these lines. He expressed alarm at the mounting evidence of moral decay. He pointed to the degeneration of our movies, the violence depicted on our television screens, the crudeness of our literature, the confusion of our art. He deplored expense account cheating, learning without effort, wages without work and excessive permissiveness with our children. He said, "There are no lazy bums anymore, only deprived persons. It is impolite to speak of thugs, they are underprivileged. Yet the swaggering duck-tailed young men who boldly fiaunt their gang symbols on their motorcycle jackets are far more blessed in creature comforts, opportunities for advancement and freedom from drudgery than 90% of the children of the world. We have sown the dragon's teeth and out of the ground has sprung the legion bearing switchblade knives and blcycle chains. Clearly something is missing. Could it be what the rest of the world's children have been given, the doctrine of individual responsibility?"

Mr. Jones has selected a rather shocking method for making his point. I think we should all be disturbed by the signs of flabbiness and decay which he sees. I am not prepared to dismiss the influence of environment and circumstances on people but I enthusiastically endorse his call for the exercise of the doctrine of individual responsibility. How we apply it then becomes the critical issue. Righteous indignation is good for the soul. I get aroused by the callow and spineless who say, "It's a world we never made." But is this some kind of license for abandoning all efforts to improve our lot and set right what it wrong? Organizations such as this one have established commendable records for reducing problems to bite size and going to work on them. Their activities stand pretty tall against the whimpering crys of hopelessness that issue from the pitiable masses of the do-nothing derelicts of our society.

Dissenting voices are needed at all times. Voices of restraint, caution and counsel. Being a newspaper man I would be hard-pressed not to condone criticism. But the wise critics haven't resorted to carrying signs, writing four letter words on walls or burning draft cards. Unfortunately, many dissenting voices are that and nothing more. They offer no alternatives for positive action. They're just agin'ers without ever deciding what they are for.

At this point in time, such attitudes will be of little service. And here, I am not referring to the responsible comments Motley and Jenkin Jones. I mean the fear-ful dissenters who are not solving the problems but becoming part of them. Our tremendous progress has untapped a gushing The outpouring well-spring of dilemmas. will either engulf us or be harnessed to the everlasting benefit of mankind. We recognize problems of gigantic dimensions but view with skepticism massive governmental efforts to solve them. But the alternative is not to do nothing. The growing needs of an expanding society will not be ignored. We must involve ourselves in the problems, minimize the cost of solutions in terms of money, time and freedom. For example, a failure to recognize the need to train a growing mass of displaced workers, will only result in a costly toll in crime and unemployment payments. To deplore the expanding relief rolls without an effort to make recipients productive employees is futile.

In a Wednesday morning editorial, The Idaho Dally Statesman quoted Ronald Regan, California gubernatorial candidate. He said, "We can't accept the negative philosophy of those who would close their eyes, hoping the problems will disappear, or that questions of unemployment, inequality of opportunity, or the needs of the elderly and sick will take care of themselves. But neither should we submit unquestioningly to those others whose only solution is abdication of personal and local responsibility as they pass the problems on to the federal government." I think that says it very well.

I'm not as concerned about the bearded prophets in Times Square carrying signs proclaiming that the world will end tomorrow as I am by Idahoans whose actions indicate they believe the world ended yesterday. They just aren't seeing the right signs.

Next weekend, The Statesmen will print a 76-page supplement to our Sunday paper called "Here We Have Idaho." It will be It will be filled with information that will warm the heart of any good chamber of commerce man. For example, acording to El Roy Nelson, Vice-President and Economist for First Security Corporation, Idaho continues to rank among the 10 leading states in busines expansion. Population has exceeded 700,000. Employment exceeded 260,000 by April or some 10,2000 above a year ago. Personal in come for the first months of the year is 10 percent ahead of last year. Average weekly earnings are running 4% above a year ago. Capital expenditures in the state will estab-lish new records. "To most observers." Mr. Nelson says, "increases in business, manufacturing, and in all major segments of the state's economy suggest an increasing role in the nation's economy."

Idaho is in a favored position. It is not yet afflicted with many of the problems of urban areas. With strong initiative at local and state levels proper planning can help us bridge many of the quagmires other sectors find themselves in.

This isn't the first age to face baffling and bewildering circumstances.

One thousand years ago, engulfed in despair, people struggled in the wake of the Roman Empire collapse. Roads were overgrown, bridges broken, walled cities fallen in. Disease lurked in many quarters. Precious marble statues were being ground to produce lime to plaster their hovels, hovels

built into the walls that were once part of the palaces of the Caesars. Five hundred years ago, we had the age of witches. Gaping crowds crossed themselves against the evil eye as poor old crones died screaming in the faggots on market day. And men and women fied to the monasteries and convents, convinced that worldly life was meaningless and retreat from man the only answer.

One hundred years ago, preachers all over the South were still proclaiming that human slavery was part of God's plan. The nation was churned with hatred and one third of it lay in ruins. Children labored in the factories 12 hours a day. The graveyards were filled with young victims of whooping cough. The lower Mississippi was a pest house of malaria and yellow fever. Thousands were agreeing with David Thoreau that the steam locomotive and the electric telegraph had made life so complicated that the wise man must take to the woods and live in solitude.

In his book, "The Changing World," Jenken Jones offers these observations for those today who would shrink from the complexities of our world. He says, "The cynics never rubbed King John's nose in the Magna Carta or established the British Common Law and the Rights of Man. The hopeless didn't ferret out the secrets of disease, the laws of sanitation and thus enable millions of children to bypass the graveyards. The runners-and-hiders from reality have done nothing to relieve the famines, to temper the injustices, to ease the drudgery of mankind... Sure, we stand in the shadow of the

H-bomb. Sure, we are approaching the day when one madman, conceivably, could press a button that would turn the earth into a scorched, dead moon. This is a problem that we must master, and we don't have too much time. If you would keep your spirits high and your perspective clear, pause long enough to look back along the road we've traveled. We've come a long, long way."

Yes, we've come a long, long way and we have a long way to go. But with the application of some ageless virtues to the problems of a new age, we will nudge the course of history into another era bright with achievement but shadowed as always with predictions of imminent doom. Charles Brower, the articulate president of a famous York advertising agency, has reflected on some of these ancient virtues in an essay he wrote on the word "Square". He said. "Square", another of the good old words has gone the way of "love", and "modesty" and "Patriotism." Something to be smirked over or laughed at outright. It used to be that there was no higher compliment you could pay a person than to call him a "square shooter." The salesman's promise of a "square deal" once was as binding as an oath on the Bible. But today a square is a man who volunteers when he doesn't have to. He is a man who gets his kicks from doing a better job than anyone else. He is a boob who gets so lost in his work he has to be reminded that it's time to go home.

A square is a guy who lives within his means whether the Joneses do or not. He doesn't want to fly now and pay later. A square is likely to save some of his own money for a rainy day, rather than count on using yours.

01

A square is a guy who reads scripture when nobody's watching and prays when nobody's listening. A guy who thinks Christmas trees should be green and Christmas gifts should be hand picked. He wants to see America first—in everything.

He believes in honoring Father and Mother and "do unto others" and that kind of stuff. He thinks he knows more than his teenager knows about cars, freedom and curfew. He tells his son it's more important to play fair than to win.

You missits in this brave new age, you disorganized, improperly apologetic ghosts of the past, stand up! Stand up and be count-

ed! You squares who turn the wheels and dig the fields and move mountains and put rivers in our dreams. You squares who dignify the human race, you squares who hold the thankless world in place.

It's a great time to be alive in Idaho. The opportunities to adorn our cities and state with achievement are unlimited. It's understandable that many do not want to see the state change—it's a tribute to the high regard in which they hold it. But the onrushing tide of progress will bring its own reward and help us, a people, to fulfill our responsibility to the advancement of the nation.

Red Motley again. "This country itself is here today because volunteers stood at Lexington and Concord. Plenty of their neighbors didn't stand with them; didn't want to get involved. They sat it out. But the colonists who believed in freedom—the volunteers—made this country possible. There wasn't any organized government. There wasn't even an organized army in the beginning—just volunteers—following their own individual star where they lived, making the necessary sacrifice."

The next chapter in the history of Idaho is being written. Are we going to sit it out? Are we going to excuse ourselves because someone else isn't doing what he should? Or will our state feel the impact of our individual responsibility.

The state song says, "Here We Have Idaho."
Now, what are we going to do for it?

First Aid Squad-Pompton Lakes, N.J.

EXTENSION OF REMARKS

HON. CHARLES S. JOELSON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. JOELSON. Mr. Speaker, I would like to call to the attention of my colleagues in the House of Representatives a demonstration program conducted by the Pompton Lakes First Aid Squad in the congressional district which I represent. This demonstration program shows techniques which prevent paralysis resulting from swimming accidents and especially from diving injuries.

A "diving injury team" of the Pompton Lakes First Aid Squad is performing a valuable public service, going around the New Jersey and Middle East area to demonstrate methods of preventing paralysis. Cervical spine injuries are often aggravated or even caused by persons attempting to help victims of diving accidents. By their demonstration programs, the Pompton Lakes First Aid Squad shows how simple it is to provide against such injuries.

The program has been presented in schools, to scout troops, at civic and community service clubs and to groups assembled at private pools who have requested the demonstration.

S

[e

Each member of the diving injury team devotes a great deal of time to program particularly Al Snyder, chief narrator; Arthur Heimall, chief instructor; and Mrs. June Hepworth, its chairman, but all feel that if their efforts prevent even one serious injury the time invested is well spent.

Other members of the team are Casey Jones, Heinz Suhl, Ed Janowski, Hans

Frese, Murray Goldberg, Jack Quinn, Bob Carroll, Joseph Hepworth, Jessie Snyder, Dot Reardon, Pat Rathburn, and Rose Rhinesmith.

Working with the group are four children who have been trained to act as victims in actual demonstrations and have also posed for the slides used in presentation of the program where a pool is not available. They are Debble Jones, Karen Carroll, Ken Crane, Jr., John Quinn, Jr., and Ron Houser.

These public-spirited people give their service free of charge and are so dedicated that they are willing to go anywhere, even beyond the Midatlantic States area, to conduct demonstrations. I am proud to be the Congressman of such dedicated people.

Seventh Annual "Vermont Shipmate Company" Ceremonies, Burlington, Vt., June 25, 1966

EXTENSION OF REMARKS

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 12, 1966

Mr. AIKEN. Mr. President, on June 25 of this year, in Burlington, Vt., the Albany Navy Recruiting District Headquarters had its seventh annual "Vermont Shipmate Company" ceremonles.

At this time, the Navy publicly swore in almost 100 young men from throughout Vermont.

The main speeches were delivered by Capt. C. H. Sewall, deputy chief of staff for Naval Reserve, First Naval District in Boston, and by the Honorable William B. Franke, who served our country so well as Secretary of the Navy under President Eisenhower.

I ask unanimous consent that these two short speeches be printed in the Appendix of the RECORD.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

SPEECH BY CAPTAIN CHARLES H. SEWALL

Thank you, Commander Kennedy, shipmates, your parents, relatives and friends, distinguished guests, ladies and gentlemen:

You young men who have just taken the first step toward becoming sailors are those whom we honor today. As I look at you this morning, I know that some of you will become leaders in the Navy, and that others will become leaders in civilian life after you have finished your active duty. Each of you will be faced with challenges during the next few months and years. I urge you to meet them head-on, and not slide around them with the false hope that somehow they will go away. All rivers, and most men, follow the course of least resistance. The leaders among you will channel their lives toward making the hard decision rather than taking the easy way.

Today, many young men seem to be objecting to the way in which we older people are running the country. I feel that most of these dissenters do not offer constructive ideas, and that they are blind to the dangers of destructive criticism. Our system can always be improved, but to tear down the prin-

ciples upon which it is based will result in anarchy. These dissenters want to enjoy the harvest without the labor. I also feel that they do not always realize that American freedom was not won easily, and that it cannot be preserved easily. Keeping America free requires men and women of every generation who remain true to American ideals and principles when the going is rough, and who value freedom more than life.

Arnold Bennett once said: "No one can possibly be satisfied, or happy, who feels that in some paramount affair he has failed to take up the challenge of life. For a voice within him, which no one else can hear, but which he cannot choke, will constantly be murmuring: 'You lacked courage. You ran away.' It is happier to be unhappy in the ordinary sense than to have to listen to the end of one's life to that dreadful interior verdict."

America is proud of its heroes who, from colonial days, have filled our history books, and she is proud of the many young men and women who are preserving freedom today. Each of them who shows devotion to duty and country has the potential of being a hero and a leader.

You young men, by your allegiance to the United States and the Navy, are keeping faith with those who strove in the past to assure a future of freedom for America. Vermont has an enviable reputation for its quiet, unyielding determination in preserving freedom, ever since the days of the French and Indian wars two hundred years ago. You men are now a part of that reputation, and will be a part of the history of Vermont and America. I have every confidence that with men like you in the United States Navy, our country will be in good hands. I wish you not simply a fair wind and a following sea in your careers, but also many challenges, for your success in meeting them will make you the leaders that are essential to Vermont, to the Navy, to the United States.

SPEECH BY THE HONORABLE WILLIAM B. FRANKE

Lieutenant Commander Bauer, Captain Sewall, Lieutenant Commander Kennedy, distinguished guests, and particularly members of the 1966 Vermont Shipmate Company and their parents, relatives and friends to whom these remarks are addressed:

Once again I am privileged to be present at a Vermont Shipmate Company ceremony. As a former Secretary of our wonderful Navy. It gives me great pleasure and pride to welcome into our Navy the members of this year's shipmate company. I will predict that, whether or not you make the Navy a career, you will always look back upon your period of service as being the greatest and most rewarding experience of your lives, for everyone who has ever been part of this superb service comes to love it. By way of example, I can tell you that, although I have been out of the Navy five years, I still miss it.

In recent weeks two Vermont mothers, whose sons have received draft calls, have told me that their sons are unwilling to enter a military service and that they must therefore be unpatriotic. I don't believe this. I think that the reluctance of these young men, whose mothers call them unpatriotic, stems from the fact that they are bewildered and cannot understand why we are fighting a war in a far-off, small country called Vietnam.

Perhaps some of you, who have volunteered for military service may also share this feeling of bewilderment.

Not enough has been said as to why we are fighting in Vietnam, and to explain it fully would consume more time than you would be willing to give ms. But I would like to tell you in as few words as possible why I support the war in Vietnam even though I may not wholly agree with the

extent of our efforts or the manner in which

we are conducting this war.

Both the Soviet Union and Communist China intend that communism shall dominate the world and, as Hitler did, they have repeatedly said so. You must realize that North Vietnam, a small country, could not continue its agressive penetration into South Vietnam without heavy support from both the Soviet Union and Communist China. This penetration is part of the whole Communist scheme and is done with the hope that we will abandon South Vietnam and thereby subject all of the free people of southeast Asia to Communist domination. It is obvious that this would be inimical to our national interests and security as well as to the interests of the free people of Asia and that if we abandon South Vietnam, we will have weakened ourselves in the eyes of the world but, even worse, that we will have stimulated the hopes of the Communists for world domination. This can only lead to further attempts at an early date and, perhaps, under even more unfavorable circumstances and closer to home.

General Giap, North Vietnam's defense minister and an expert on guerrilla warfare

has stated the issue bluntly:

"South Vietnam." he said, "Is the model of the National Liberation Movement of our time . . . if the special warrare that the United States Imperialists are testing in South Vietnam is overcome, then it can be defeated anywhere in the world."

defeated anywhere in the world."

It is pertinent to ask ourselves, "Why does North Vietnam continue this war?" Certainly an examination of the relative power available to South Vietnam and the United States, and that available to North Vietnam and its Communist allies, clearly indicates that North Vietnam cannot hope to succeed in its efforts to conquer South Vietnam as long as both sides continue to fight.

Admiral Arleigh Burke, Former Chief of Naval Operations, in a recent appearance before the House Foreign Affairs Subcommittee on the Far East and the Pacific, mentions three possible reasons why North Vietman is

continuing this war.

The first is that they hope for a spectacular military disaster to some elements of the United States and Allied Forces now in South Vietnam, with the result that the people and the Government of the United States would be so shaken that they would withdraw our remaining military forces supporting South Vietnam. This possibility is,

The second and more probable possibility is rooted in the history of Vietnam. The Vietnamese fought against the French for Years. After years of what seemed like a hopeless struggle, they eventually defeated the French on the battlefield at Dien Bien Phu. This battle had great significance for two reasons, first because a European Army was defeated by an oriental army and, second because a modern European Army equipped with modern weapons was defeated by indigenous forces largely equipped with obsolete or captured weapons. But as has been pointed out by many writers, the French campaign in Indochina failed not primarily because of combat conditions but because the French Government and the French people had lost their will to resist the Communist take-out in the Far East,

The third possibility is that the North Vietnamese may be convinced that the United States will eventually negotiate on their terms, with perhaps sums face-saving device for the United States and our allies. I do not believe despite all the public dem-onstrations and the statements of many prominent citizens of the United States, that the people of our country and our Govern-ment will be willing to accept Communist domination of all southeast Asia in the name of "Peace".

We don't want this war but certainly we don't want to surrender the world to communism. And that is the issue. We either Communist aggression in southeast Asia or we create another impenetrable Iron Curtain and shrink the free world still fur-If this shrinkage is allowed to continue, our way or life, as we know it, will disappear and all of the ideals and accomplishments of this great country of ours will disappear with it.

And so, in closing, if any of you who are members of the 1966 Vermont Shipmate Company should find yourselves on a Navy ship or in a Navy aircraft off the shores of Daigon or Hanoi or any other part of Vietnam. I hope you will remember that you are engaged in a war to preserve not only the freedom of the people of southeast Asia

but our freedom as well.

New Zealand: Red China Is the Threat

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. FLOOD. Mr. Speaker, in the course of my studies of interoceanic canal problems and world power politics over the past decade with reference to the control of strategic maritime transportation routes. I have been increasingly impressed with the crucial importance of the Malay Barrier extending from India to the New Hebrides. Since Australia and New Zealand are extensions of this barrier separating the Pacific and Indian

maintenance of world stability. For a brilliant discussion of the Malay Barrier in time of major war, attention is invited to the book, "MacArthur 1941-51," by Maj. Gen. Charles A. Willoughby, and John Chamberlain, published in 1954

Oceans, their security is also vital in the

by McGraw-Hill Book Co.

The present war in Vietnam is more significant than appears from daily press dispatches, for it is obvious that Red power is following the old Japanese war plan for gaining control of the strategic resources of southeast Asia and bases for further extension of conquest along the line of the Malay Barrier. In fact, their program appears to be a warmedover version for an East Asia coprosperity sphere.

It was, therefore, with the greatest interest that I read in the June 19, 1966, issue of the New York Times a special dispatch from New Zealand summarizing a major review to the Parliament of that country of long-range planning for its

In order that the indicated news story may be brought to the attention of the Congress and of the cognizant agencies of the executive branch of our Government. I quote it as part of my remarks: TO NEW ZEALAND, COMMUNIST CHINA IS THE THREAT

AUCKLAND, NEW ZEALAND, June 18.—The greatest threat to New Zealand's interests and security in the 1970's and beyond comes from the growing power of Communist China, in the opinion of the New Zealand Government. This danger is emphasized as a basic consideration in defense planning in a major review setting up guidelines for policy in the years ahead.

The review, presented to Parliament, stresses collective defense as the only possible basis for New Zealand security completely rejects neutralism or isolationism as acceptable foundations for national policy.

DANGER AREA SHIPPS

The review acknowledges that in 1966 the international outlook is largely overshadowed by the struggle in Vietnam, and it declares that changes in the world scene, bringing the greatest dangers to the Pacific rather than the Atlantic, have worked to the disadvantages of New Zealand.

Already, 12 per cent of New Zealand's regular forces are committed in Southeast Asia in Malaysia, South Vietnam and Thailand.

In the longer term, the Government says, planning is based on the belief that Southeast Asia will continue to be a disturbed and unstable area up to 1970 and indeed through the seventies.

The major threat is specified as "Communist China's active role as the 'exporter of revolution' throughout the area."

The Government believes there is likely to be a slow deterioration in stability and security over the period which could lead to increasing New Zealand's involvement in the military as well as political problems of the

The review says:

"In certain situations, such as the massive confrontation between Communist and Western-supported forces in South Vietnam, it that hostilities involving New Zealand and her allies could be on a scale requiring a major effort on our part.

The review lists among objectives in main-

taining national security:

"To establish a claim upon our major allies for consultation, a voice in important decisions, and, in the last resort and most importantly, military assistance and protection in time of need. This requires New Zealand in time of need. This requires New Zealand to demonstrate willingness to make an appropriate degree of national defensive effort, and willingness and ability to assist our allies in matters affecting their national interests."

The cost of modern weapons systems makes it impossible for a small country such as New Zealand to sustain a capability in more than a few selected roles, the review said. cordingly, it added, it is necessary to choose forces most able to fit flexibly into operawith New Zealand's allies.

In the short term, until 1970, the Government envisages the following roles for its

military services:

For the navy, anti-submarine and escort work with fast frigates;

For the army, ground contribution in Southeast Asia by means of an infantry battalion, paratroop detachment and an artillery battery, backed by a combat brigade group in New Zcaland but prepared for oversens service:

For the air force, close air-support opera-tions (for ground attack), transport, and maritime surveillance and antisubmarine operations.

William Forrest Foster-Horatio Alger Award Winner

EXTENSION OF REMARKS OF

HON. JOHN SHERMAN COOPER

OF KENTUCKT

IN THE SENATE OF THE UNITED STATES Tuesday, July 12, 1966

Mr. COOPER. Mr. President, William Forrest Foster, an eminent industrialist from Mayfield, Ky., has been named a Horatio Alger Award winner. He went to work as a \$5-a-week office boy in business and started life in a Graves County log-cabin home.

He became president of Merit Clothing Co. in 1942 and his firm now has more than 2,000 employees.

He is a civic planner and a civic worker as well as an industrial leader distinguished citizen, and leader of Kentucky, and I ask unanimous consent that these remarks about him which appeared in the Mayfield Messenger upon the occasion of his award, be printed in the

Appendix of the RECORD.

There being no objection, the article
was ordered to be printed in the Appendix of the RECORD, as follows:

One of the best known men in Kentucky, as industrial leader and civic planner, will receive the Horatio Alger Award May 23 in New York. He is William Forrest Foster, president of Merit Clothing Company of Mayfield. The Horatio Alger Awards Committee selected him for the honor in recognition of his rise from an office boy's \$5-a-week to the presidency of one of America's largest men's clothing manufacturers, and of his eminence as a civic leader.

The twelve annual winners of the Horatio Alger Award are chosen out of a group of several hundred national leaders, nominated by their own community organizations. After screening by the Awards Committee, the final selection is made by a panel of 3,000 college students representing some 500 colleges and universities.

In its citation of Foster to receive the award, the committee took special note of his ascent in the true Horatio Alger tradition. Born in a log cabin on a Graves County, Kentucky, farm, Foster first showed his devotion to hard work by completing a one-year business course in six months. Immediately thereafter he started hie business career as office boy-janitor for W. H. Brizendine, then the Merit Clothing Company's general manager.

Within a short time young Foster became Mr. Brizendine's secretary. From that point his rise in the Merit organization was rapid. In 1942 he was elected President of the company—the position he still holds.

Foster's career has been marked throughout by an unusual approach to business—always with emphasis on human relations. He is personally acquainted with most of his company's more than 2,000 employees. More than once he has been appealed to as arbiter of their personal problems. Foster is also one of the few company presidents on record to invite a union to organize his company's workers. He made the move in the face of strong opposition, but the fine labor relations record at Merit demonstrates the value of the decision.

Foster is known all over Kentucky for his interest in civic affairs. One of his most famous civic achievements was the drive to build a War Memorial at Mayfield. Thanks to Foster's careful planning and evangelical appeal, Mayfield citizens pledged \$200,000 the first day, and brought the figure up to \$300,000 in record time.

As part of his dedication to public service, Foster has been active in politics. His support has been a decisive factor in several gubernatorial victories. However, he has steadily refused to stand for public office.

The Horatio Alger Award has been sponsored for the last 19 years by the American Schools and Colleges Association, whose national chairman is Dr. Norman Vincent Peale. Its Awards Committee annually receives nominations of several hundred Americans whose careers typify the results of individual initiative, hard work, honesty and high

standards of conduct. These names are first screened by the committee. Some twenty names are then presented about 3,000 undergraduates at more than 500 American colleges and universities. The students elect the twelve men who, in their opinion, best reflect the spirit of achievement in the face of handicaps.

In asking these young men and women to select the Horatio Alger Award winners, the Committee seeks to demonstrate to them the truth of its motto: "Opportunity Still Knocks." Studying the caraers of the nominees, the students see proof that the basic principles of American free enterprise still lead to success in a material sense and in a real service to the community. Their election is based on their judgment of the records of the nominees.

Foster and his wife, Mrs. Katie Foster, and son, Charles Foster, reside on Foster Lane at a beautiful farm two miles southeast of Mayfield.

The president of the non-profit Horatio Alger Awards Committee of the American Schools and Colleges Association, Inc., Kenneth J. Beebe said, "Your life is an inspiring demonstration of our country as a land of opportunity for those whose brains, courage and faith have triumphed over obstacles." Governor Edward T. Breathitt had this to

Governor Edward T. Breathitt had this to say, "Mr. Foster's life parallels the 'rags to riches' stories. The higher he has climbed on the ladder to various successes the more he has done for his fellowmen. The name 'Mr. Willie' to the people of his home area means help and comfort to all with whom he is associated. His name on the state and national level means success in whatever his undertaking might me."

Mr. Foster and Mrs. Foster, their son Charles, and several other Mayfieldians will attend the award dinner in New York City on Monday, May 23, to receive this high honor to be presented by Dr. Norman Vincent Peale, the national chairman of the associa-

This will be the 20th annual Bronze Plaque Award dinner of the association.

W. F. Foster is one of the twelve prominent Americans, poor boys in their youth who won fame and fortune through hard work and determination who will receive 1966 Horatio Alger Awards in New York next month in ceremonies at the Waldorf Astoria Hotel.

The name of the award is taken from the "rags to riches" success stories of the fictional Horatio Alger novels of yesteryear. Winners in previous years included former U.S. Presidents, Dwight D. Eisenhower and Herbert Hoover, the late Bernard M. Baruch, World War I Ace Eddie Rickenbacker, General David Sarnoff, Conrad Hilton and Dr. Ralph Bunche.

The 1966 winners besides Mayfield's W. F. Foster, are:

Roy L. Ash, Los Angeles, president and cofounder of Litton Industries, who began his career at 16 as a bank messenger.

Walter A. Brennan, of Hollywood, California, one of America's best-known actors who worked as a movie extra and struggled to become known in his profession.

Chester Carlson, Rochester, New York, inventor of the Xerox Corporation's xerographic process, who did odd jobs at the age of 12 to help his impoverished family. William E. Grace, Detroit, president and

william E. Grace, Detroit, president and chief executive officer of Fruehauf Corporation, who began his career as a part-time bookkeeper.

George W. Jenkins, Lakeland, Florida, president of the 125-store Fublix Supermarkets, Inc., chain, who operated a general store while still attending high school.

Robert W. Hawkinson, Chicago, president of Belden Manufacturing Company, who worked in his teens as a gas station attendant and laborer.

John H. Johnson, Chicago, president of

Johnson Publishing Company, and editorpublisher of four magazines—Ebony, Jet, Tan and Negro Digest—who borrowed \$500 on his mother's furniture to begin publishing Negro Digest.

Samuel H. Levinson, Chicago, chairman and president of Railweight, Inc., Northfield, Ill., who worked his way through college selling clothing.

Elmer F. Pierson, Kansas City, Missouri, Chairman of the board and president of The Vendo Company, who began his career as a clerk in a grocery store. Harold Toppel, New York and San Juan.

Harold Toppel, New York and San Juan, P.R., chairman of the 178-unit H. C. Bohack supermarket chain and 14-store Pueblo Supermarkets, who helped support his family as a youngster by doing odd jobs.

Leslie B. Worthington, Pittsburgh, president and 'chief administrative officer of the United States Steel Corporation, who worked in a general store after school hours and began his career in the steel industry as a sales apprentice.

Thanks to a Marine in the Vietnamese Conflict

EXTENSION OF REMARKS

HON. KEN W. DYAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. DYAL. Mr. Speaker, as the Congressman of the 33d District of California, embracing a Marine Corps installation at Twentynine Palms, I am indebted to Paul A. Toneman, Sr., of Washington, D.C., for calling my attention to one of those marines, his wife, their feelings about the Vietnamese conflict, and what is being done for them. It is a source

constituents.

In sequence, I cite first an innocuous inquiry from S. Sgt. William R. Grayson, USMC, 152287, serving with the 3d 3-inch howitzer battery:

of great pride to me to represent such

JUDITH BARR WIG SALON, 712 H Street, NE., Washington, D.C.

Dran Miss Barn: I saw your ad in the April issue of a magazine, and my thoughts turned to my wife waiting at home until I return from this nasty war here in Viet Nam. I think she deserves a nice gift and I'm sure that one of your wigs would do perfectly. I'm not very well versed in these things so I would appreciate your help. If you would please send the information I need to purchase one of your wigs; I've heard of your company before, through my mother who is a beautician. She tells me that you are the best, and that's good enough for me.

Louis and Michael Taff who operate the nationally known Judith Barr Salons, were quickly determined to go all out, at their expense, regardless of the cost of their cumulative plans. A short time later they heard from the sergeant again:

I received your letter today and I must say that I am truly amazed at your concern. It is deeply appreciated. America is truly a wonderful place and you have made me very proud to be member of our Great Society. Being the wonderful person she is, my wife will reject my surprise as being too extravagant on my part. She tries very hard and works very hard to save so that we can have

a nice time when we are together once more. This is my second time in this area in less than one year, so when I was home last I didn't get to see very much of her. But as soon as we put an end to this threat to peace, there will be time to relax and enjoy the comports of home.

I certainly shall not tell my wife that I have sent her address, maybe it's not too late to have a surprise within a surprise—which she so truly deserves. You see, it's not so rough on me, being so far from home and my loved ones because this is my chosen profession. It's the women who suffer in so many ways, but still, it's for a cause that every American believes in, and if suffer we must, then suffer we will.

Again, I thank you for your time and concern. To be able to do something for Louise from so far away makes me a very happy husband. We have not celebrated our anniversary or birthdays together for 3 years because of my overseas commitments. She was born the very day before me. It's been very nice talking to some wonderful people.

Front-page articles were carried in both the Washington Informer and the Capital Spotlight. From these articles I learned Mrs. Grayson works as a waitress in the enlisted men's mess at the Marine Corps Base in Twentynine Palms, Calif., while the sergeant is engaged in combat with the enemy. I also discovered the Judith Barr Wig Salons had not answered Sergeant Grayson at once but had talked to the Marine Corps Headquarters first and found no insurmountable obstacles. They had the cooperation of the editor from the local California paper, who had Mrs. Grayson telephone Washington.

For the combat sergeant, who was not aware of what he had started, all details were worked out in behalf of his wife. The Sheraton Park Hotel in Washington provided accommodations for Mrs. Grayson at no charge to anyone. The local Sheraton management wanted to have a part in supporting the morale of a serviceman fighting overseas.

Mrs. Grayson arrived in Washington on July 8 via American Airlines as a guest of the Judith Barr Wig Salons. She was fitted with a wig of her own selection. The cost of the wig, the transcontinental air transportation, and all other expenses were borne by the famed Judith Barr establishments, in happy collaboration with the Sheraton Park

Being a Legionnaire myself, I am particularly pleased to highlight what followed. The American Legion really responded—the James J. Reese-Europe Post No. 5 placed all of its facilities, resources, and personnel at the disposal of Mrs. Grayson to make her visit truly memorable. An honor guard of eight was immediately appointed, to meet the lady's plane on Friday, July 8, Comdr. William E. Bibbs, an employee of the post office, greeted her in person along with several aids, and an escort for the drive to the Sheraton Park.

On Saturday morning, after being escorted to the Judith Barr Salon for the fitting and presentation, Mrs. Grayson was the honored guest at a grand luncheon arranged for her at the Two Caesars, with the DeEarl Barrie Beauty Salon as host. The District of Columbia commander of the American Legion, Rich-

ard Giasson, and his wife, Mrs. Dyal, and I were present with others. Immediately after lunch, with the assistance of the staff involved, the doors of the White House were opened to Mrs. Grayson and her entourage. The complete tour lasted about 90 minutes.

In the afternoon, Mrs. Grayson enjoyed the unique distinction and privilege of a private tea with His Excellency, Vu Van Thai, Ambassador of Vietnam, and his charming wife. Sergeant Grayson will be informed of this gracious act whereby this outstanding envoy indicates his country's feeling for the heroes we have sent to support liberty.

After a quick visit to the headquarters of the James J. Reese Legion Post, where many of the members had arranged to meet her, Mrs. Grayson enjoyed the delights of an informal dinner tendered in her honor on the Shoreham Terrace by the Honorable Stanley Barry, an executive of the Boy Scouts of America, who also has a marine son on active duty.

Mr. Toneman wrote Sergeant Grayson

Your Congressman not only attended the luncheon, bringing Mrs. Dyal along to meet your wife, but he telephoned to this delighted constituent to offer his car and to do anything else she desired to make her stay in Washington something to be long remembered by the two of you.

In his latest letter Sergeant Grayson apologized for not responding promptly:

Please forgive the delay in writing to you but we have been in an operation which ended yesterday. This is like something on TV, all the officers and men in my outfit think that it's wonderful, too. This is like seeing a dream come true; Louise has never flown before, and that's just one of the many things you are doing that will give us something to remember for the rest of our lives. With everything I am reading about this program for my wife it is almost like being there with her.

Sergeant Grayson, you placed the shoe on the wrong foot; it is we who salute and thank you for your valiant efforts in our behalf.

William A. Hyman

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. KUPFERMAN. Mr. Speaker, William A. Hyman, able lawyer, expert on space law, and generally publicspirited citizen has passed away. He will be missed.

His partner, Melville Harris, will carry on his law practice and his longtime representation of Aetna Casualty & Surety Co., but the little personal things, the ability to rise in public indignation in a cause, these were personal to Bill Hyman.

The New York Times in its issue of Monday, July 11, gave his biography. While the cold statistics do not make the man, I set it forth as some evidence of his fine background:

WILLIAM HYMAN, LAWYER, IS DEAD—EARLY ADVOCATE OF RULES FOR OUTER SPACE WAS

William A. Hyman, a prominent lawyer who was one of the first advocates of laws to govern the use of outer space, died Saturday at the Neurological Institute, Columbia Presbyterian Medical Center. He was 72 years old and lived at 25 Central Park West.

Mr. Hyman was a partner in the firm of William A. Hyman & Melville Harris, specializing in insurance, negligence, and medical malpractice cases.

As chairman of the subcommittee on air space of the New York State Bar Association, he urged cooperation among diplomats, scientists and lawyers to alert the public to the problems by the exploration of space.

Mr. Hyman once noted that the trouble with many of the arguments over ownership of space is that the earth turns. "What is the air above one man's land one moment," he observed, "is the air above another man's land seconds later."

In 1961, before the first manned space flight, he presented what he termed "Magna Carta of Space" to the Inter-American Bar Association conference in Bogota, Colombia. This series of proposed laws on outer-space use fell on deaf ears.

Last January, a limited edition of his book, "The Magna Carta of Space," was published. In it, Mr. Hyman maintained that the principles he first suggested in 1958 and codified in 1961 had been gradually winning acceptance throughout the world.

He delivered a copy of his book to Pope Paul VI during a private audience in Febru-

The Pope described the book as "an international pathway toward peace" and conferred upon Mr. Hyman a Papal Medal for his work for international peace.

FIGHT FOR PATIENTS

In 1964, Mr. Hyman led a legal crusade against the unauthorized use by physicians and scientists of elderly, indigent, chronically ill people for experimental purposes without their consent. The patients had been injected with live cancer cells.

He carried the fight through the State Court of Appeals, New York's highest court, for patients to have the right to choose whether experimental drugs and procedures would be used on them.

His work won him a Certificate of Honor from the National Health Federation as a "champion of human rights and defender of the dignity of man."

William Abramowitz Hyman was born on July 29, 1893, in Baltimore. His family soon moved to Tampa, Fla., where he spent his boyhood.

He was educated at St. Joseph's Parochial School in Tampa and then worked his way through Washington and Lee University and the Columbia University School of Law.

In 1916 Mr. Hyman went to work in the claims department of the Aetna Casualty & Surety Co. In 1929 he started his own law practice.

During the administration of Governor Alfred E. Smith, Mr. Hyman was a special deputy attorney general of New York State.

He was president and chairman of the board of governors of the Brooklyn-Manhattan Trial Counsel Association, chairman of the Committee on Aeronautics of the Federal Association of New York, New Jersey and Connecticut, chairman of the committee on the law of space of the New York County Lawyers Association, and chairman of the section on interplanetary space law of the Inter-American Bar Association.

He is survived by his widow, the former Mariorie Cohn.

A funeral service will be held at 2 P.M. tomorrow at the Riverside Memorial Chapel, 76th Street and Amsterdam Avenue.

A New Twist in Driver Education

EXTENSION OF REMARKS OF

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. HAMILTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an excellent editorial which appeared in the July 2, 1966, edition of the Madison Courier.

The editorial describes something of a new twist in driver education methods.

In Madison, high school pupils enrolled in such courses were sent out to observe grownups and follow teenagers in the process of day-to-day driving. The reports turned in by these fledgling motorists are eye openers.

The editorial follows:

ALL EYES ARE ON YOU

A group of Jefferson County youngsters had a field day, or rather, two of them, sev-eral days ago when they quietly watched the behavior of grownups who were unaware of being observed. The occasion was a traffic survey conducted by about 100 students enrolled in driver education courses at Madison High School.

teen-agers were startled to see how many traffic violations were committed in the two days of the survey. They recorded 6,824 actual cases of jaywalking, and almost as many of failure to obey "Wait" signs at cor-ners. Student surveyors also checked motorists not only in Madison, but also at several points out in the county, noting frequent violations of traffic ordinances, such as failure to stop at stop signs, to yield rightof-way, to slow at caution signs or warning blinkers, and to turn properly. Many of these offenses are actually violations of the law and drivers committing them are legally subject to arrest,

As every parent will tell you, the great moment most teen-agers live for is the time when they can drive. The American economy is an automobile economy and the auto-mobile looms large in the lives of most The United States owns more motor cars than any other country; more in total production, in cars in use, in number of cars per thousand of population. About one American in four owns a car of some sort.

The local boys and girls who are enrolled in driver education courses this summer will spend 30 hours in a classroom, and 18 hours of supervised driving in cars, 6 of them be-hind the wheel, before they are entitled to

credit for the course.
This is a fine thing. Every year the alarming increase in cars on the road makes driving more of a hazard and less of a pleasure than the year before. creating apparently insoluble traffic problems and in many cases cities are literally being clogged up and choked to death by cars.

The death toll on the highway is devastatane death out of the highway is devastating, and grows higher by leaps and bounds. So it is almost imperative for everyone involved to be as knowledgeable, skillful and careful as possible, and the more trained drivers there are, the better.

But how long as these

But how long are these youngsters going to follow the rules they are learning now when they see the grownups, many of whom, the whole problem? One salient ignoring fact of human nature (which makes bring-ing up children so hard), is that the young are more likely to be influenced by example than by precept. They do as we do, not as we say. So when they see adult drivers care-lessly and casually moving about, oblivious to rules of courtesy and safety, they are apt to forget their careful training and join the slap happy crowd.

City and state police officers are constantly on guard, trying to make life safe for drivers and pedestrians alike. But they simply cannot be everywhere or have their eyes on everyone all the time.

The rules were made to protect everyone, as far as possible, and to prevent painful injuries and deaths. Observing them takes only a few seconds of our time in most cases.

Surely we owe it to ourselves, as well as to others, to cooperate and do our best to avoid instead of cause accidents. And to remember that young people are watching. they see adults showing by their actions that safety and courtesy are serious matters to them, they are apt to follow the same path.

To coin a cliche—the life you save m your own! Or even more vital, your child's.

Captive Nations Week

EXTENSION OF REMARKS OF

HON, CHARLES S. JOELSON

OF NEW JERSET

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. JOELSON. Mr. Speaker, a few years ago important changes began to take place in Eastern Europe. In theafermath of de-Stalinization policies the Eastern European countries become more independent from the Soviet Union and won greater freedom to determine their own affairs. The dogma of a uniform international communism was gradually replaced by the recognition that different peoples and nations ought to choose policies which better suited their individual national situation and needs.

The forces of polycentrism have been steadily growing. Only a few months ago we saw Rumania's dramatic initiative in asserting her national sovereignty and political independence. During the first decade of the cold war there was no question that the nations of Eastern Europe were wholly Soviet satellites; countries dominated by the Soviet Union, subject to continuous Russian intervention and often outright repression of their people by physical force. This situation has changed noticeably, however, and the political and human rights of the Eastern Europeans are no longer wholly denied. Persuasion and negotation now often take the place of coercion. We welcome this change wholeheartedly, as it can only serve the causes of freedom and peace. Moreover, polycentrism has not only had an impact on international relations in Eastern and Central Europe, it has at the same time contributed to greater internal liberalizing The people of Eastern Europe are the beneficiaries of this change.

We hope, Mr. Speaker, that the conditions in Eastern Europe will continue to improve, for we have only witnessed the beginning of a change so far. The countries of Eastern Europe must gain greater independence, and their people must have greater freedom. America is committed to the ideas of freedom and independence and the fate of the captive nations could not and will not be indifferent to us.

All people have a right to determine freely their own affairs, whether they are Armenians or Byelorussians, Czechs or Slovaks. Ukrainians or residents of the Baltic States. Americans give their support to these brave people and their aspirations for freedom and independence, and we look with hope to the day when it will no longer be possible to speak of "captive nations" or "captive peoples."

Headmaster Frank Boyden of Deerfield-Part VII

EXTENSION OF REMARKS

OF HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. CONTE. Mr. Speaker, under unanimous consent procedures, pleased to insert at this point in the RECORD a further excerpt from the New Yorker magazine Profile article about Frank Boyden, headmaster at Deerfield Academy in the First Congressional District of Massachusetts

In this segment of the article, we pick up further selections from the headmaster's voluminous and perpetual stream of correspondence. We learn also of his love and interest in horses, and how these and other interests combine to create a furious daily routine that perhaps helps to explain the almost fantastic vitality of this man now in his 86th year.

The excerpt follows:

THE HEADMASTER-VII

FEBRUARY 3, 1928. DEAR CHARLES: Thank you very much for your cordial invitation to speak before your Men's Club. Unfortunately, I have only one talk, which is the story of the development of Deerfield Academy in general and of Tom

Ashley in particular. If you wish me to give that and then answer any questions which may be asked by the men, I shall be glad to do so.

DECEMBER 10, 1934

My DEAR Mrs. GRAVES: Thank you very much for your cordial invitation to speak for the ladies of the Baptist Church. I am one of the few headmasters who realize their speaking limitations and have not spoken anywhere for the last few years.

SEPTEMBER 5, 1953.

DEAR MRS. BANNISTER: I can come and would be glad to say just a word or two but. as Mrs. Dwight will tell you, I am entirely out of my element, I don't do it well and don't like to do it at all. Mrs. Dwight, as I am sure you know, always speaks well and can talk for an indefinite period.

SEPTEMBER 28, 1953. DEAR MR. COWDREY: Your letter is a very appealing one and I share your sentiments with regard to Amherst, the Connecticut Valley, and Western Massachusetts. My own home was in the town of Foxboro, but I have been in Deerfield now for fifty-one years and I am

thankful to have spent my life in this valley.
... Many years ago I realized that I was not a good speaker and that that was a field in which I was not qualified and so for many years I have not spoken. I have no definite topic. I would not quite know how to approach any other than an educational sub-

ject, and in my work have just gone ahead from day to day without any particular theory or any particular policy except a real personal interest in the boys, in their work, and in their activities. I am afraid you would be very definitely disappointed in any effort which I might make.

SEPTEMBER 8, 1949.

DEAR Mr. WILK: I really question the advisability of a moving picture about Deer-field and particularly about me. I hope you will understand, however, how much I appreciate your interest.

DEAR MR. GARLAND: I have heard several rumors to the effect that I was to retire, but so far as I myself am concerned I have no idea of doing so ...

Every secretary he has had remembers this scene: While the headmaster is dictating, his hostler goes by outside the window in the act of exercising one of the headmaster's carriage horses. The headmaster gets up in the middle of a sentence, goes out the front door, and takes over the reins. He rides around in his buggy for ten minutes and comes back, site up on the fire screen again, and picks up the sentence just where he broke it off. He owns sixteen buggles and four horses. "Nothing will ever take the place of the horse and buggy with me," he says. "I go back to that period. I don't drive much these days, but the mere fact that those horses are out there brings me a lot of comfort." For years after he came to Deercomfort." For years after he came to Deer-field, he mads his trips home to Foxboro in his buggy—two days, ninety miles, and an overnight in Worcester or Barre. As his children grew up, he often confused their birthdays with the birthdays of colts that had been born at about the same time. His knowledge of the behavior of horses helps him in his handling of boys, and the reverse is probably true as well. The only pilgrim-ages of any kind that he has ever made have been to Goshen. On the walls of his office in the school building there are, among other things, six pictures of horses, including one of Assault, and a letter from President Eisenhower thanking him for the use of a horse hower thanking him for the use of a horse and buggy. Mounted as a hood ornament on the nose tip of Boyden's big black Cadillac is a chromium sulky-and-horse that was given to him by one of his Amherst friends. The car was waiting for the light at Fortyfifth Street and Seventh Avenue one day when a man stepped off the sidewalk, shoved his head through the window, and-assuming that the headmaster was a trotting asked him for a hot tip on that night's meeting at Roosevelt Rac master's wife hates horses. evelt Raceway. The head-

AUGUST 23, 1946. DEAR MR. DOWNING: Thank you for your letter, which I enjoyed very much. I wish that more people could experience the thrill of driving a good horse. Last Wednesday, I drove all three of mine. The first, Hollywood Robin, was once a very fast race horse. has a natural road gait of from ten to twelve miles an hour. In spite of all his power and strength, he is very easily handled, and he gets as much fun out of a trip as I do. Talisman, the second, is a beautiful chestnut with one white ankle and one white leg. He is a more delicate horse but is very good on the road and in some ways more of a handful than Robin. Don, the third, is a fat, lazy, little Morgan who can go just as fast as you want but will not voluntarily contribute anything to the speed of the ride. On the other hand, he is a comedian and keeps the whole stable in an uproar when given the chance.

OCTOBER 2, 1953 DEAR Ms. BROWN: Yesterday morning early, Bert Tilton, who takes care of my horses, sent ne word that Don was very sick. We had a veterinary immediately, but there was nothing that could be done, as he had had a very bad heart attack and passed away shortly. Up until then, he had been in per-

fect health, and just the night before ate his grain and hay and also kicked around be-cause he was feeling so good. I do want you to know how much I have enjoyed him during the twenty-eight years since you sent him down. He has always been very much of a personality, and I have never had a horse that meant so much to me. He liked to travel, and when he couldn't go fast enough to suit himself at a trot would swing into the smoothest pace that I have ever seen any horse have. A ride with him was always a horse have. A ride with him was always a pleasure, because there were always so many exciting things along the road from squirrels to pheasants to attract his attention. There was never anything mean or difficult about him, and everyone, including the little children who came almost every day to see him, will miss him.

DECEMBER 30, 1953. DEAR MR. AND MRS. MAYBURY: Thanks ever so much for your very clever Christmas card. I did not realize that the horse and buggy would be inside the barn until I lifted it up. Those really were good old days, and I wish that more people were in the horse and buggy stage. I am really quite lonesome as I go out, because I guess I am the last one with a driving horse, but I get a real satisfaction as people stop along the street and everyone in the automobiles turns to look at Madagascar as we go along. He really is a wonderful little horse. He is a smart little apple and nothing escapes his attention. Some-how or other, when I get very tired, nothing relaxes or refreshes me so much as to ride behind a good horse. JULY 23, 1945.

MY DEAR MR. HINRICKS: I am very much interested in the illustration at the heading of your stationery, for when I first came to Deerfield forty years ago there was an old horse trader with a very long white beard who looked like your illustration. He could drive anything and handle the most difficult horse with no effort whatsoever. I am enclosing a check for \$3.00 to cover my subscription to Hoof Beats.

Books come and go in the headmaster's study, but some seem to have been there longer than others. Among these are "The Complete Book of Horses," "New Testament in Four Versions," "Herbert H. Lehman and His Era," the Foundation Directory, "Ways of Giving to Amherst," "The Reverend Jonathan Ashley House," "Jamestown 1607-1957," Congressional Directory, "From Maine Pastures to Vermont Shores," Miller's Catalog (Everything for the Horseman), "Operation Crossroads Africa," "Building a Championship Football Team," "Coaching the Zone and Man-to-Man Pressing Defenses," "Caval-cade of American Horsest", "Warsen & Home," "Horses at Home," cade of American Horses. "Selections from the Old and New Testaments," Private Independent Schools, Mather of the National Parks," "Phillips Exeter Academy—A History." However, the However, the books that the headmaster likes most to read, the novels of Agatha Christie, are not in evidence; he keeps these upstairs. He says that a headmaster does not have time for wide reading, but he has what is known in some circles as the luck of the dip. He can dive into the middle of a book and emerge with a highly quotable fragment that might escape the memory of someone who had read the book thoroughly. A year later, the fragment may pop out in conversion. He is honest about such devices. "You know, I read a very interesting book," he will say, and then he will correct himself, saying, "I didn't actually read the book. I opened The magazines in his main living room, strewn about in rampant variety to divert the faculty, include Defenders of Wild Life News, American Forests, the New England Former, Main Currents in Modern Thought. ent Church Buildings & Equipment, Natural History, the United States Investor, the National Parks Magazine, and the Massachusetts Review ("New Light on Emily Dickinson")

MARCH 31, 1947.

DEAR MR. SULLIVAN: I have been away of the time for the past two weeks and have missed the Foxboro Reporters for February twenty-eighth, March eighth, March fifteenth, and March twenty-seventh. If you have any extra copies of those issues, I would appreciate your sending them to me

R 13, 1934 OCTOBER 13, 1934.

DEAR MR. CATON: I saw the other day the notice of your Birthday Anniversary want to write you and Mrs. Caton a note of congratulations and best wishes. I always remember with pleasure the good times we had at your house and occasionally on Sun-day nights my mind goes back to the stere-opticon entertainments which you gave at

JANUARY 25, 1935. DEAR MR. FINNETY: I was very much interested in the item in the Foxboro Reporter about your eighty-eighth birthday. I remember very well when we used to meet at

DEAR MRS. THOMPSON: I have just been reading my copy of the last Foxboro Reporter and find that I missed your birthday. I hope that you will excuse me this time and I am putting it down on my calendar for next year.

At nine o'clock, he gives up dictating and goes over to the school building, which he enters through the Browsing Library, a highceilinged, oak panelled room with reference books on its shelves and newspapers on its long oak tables. This morning, a man, a woman, and a boy are standing in one corner, obviously feeling strange as they wait or an interview with a young admissions man. The headmaster walks over to them. "Hello," he says. "My name is Boyden."
The people are from Minnesota. The headmaster launches into a long discussion of geographical distribution and its importance to an independent school. Have they, by chance, read the article in the school paper by the boy from Rhodesia? He'll see to it that they get a copy. On he moves into the main corridor, where he meets the admissions director of Rutgers University and the admissions director of Princeton. He tells them a story about a man he recently encountered in a club in New York. The man heard him mention Deerfield, Massachusetts, and said to him, "Do you live there?" "Yes." said the headmaster.

"Do you know the old man who runs the school there?"

Yes," said the headmaster. "How old is he?"

"Eighty-six, I believe." "Can he still get around?"

A long-distance call comes in from a woman whose son has decided that he wants to go to college immediately and does not want to go through the formality of completing his senior year at Deerfield. The headmaster takes the call at his desk. When he puts the phone down, he sees his athletic director in the corridor and complains to him that there has been a letdown in the way receptions after sports events are handled.

The headmaster of another schoolformer master at Deerfield—telephones. had them seventeen to fourteen when one of our very good backs fumbled a punt," Boyden tells him. "Andover? They are a little better than Exeter. Playing Exeter was like playing one of our smaller high schools around here They'll get back at us-don't worry.'

He has a call put in for him to Calvin Plimpton, president of Amherst, to whom he complains about a stipulation placed upon Amherst and Deerfield in the transfer of ecurities from a Wall Street trust to both institutions. "After all," he says, "it was institutions.

Charlie's money." This is a reference to the late Charles E. Merrill, Amherst '08, a close friend of the headmaster, and a founder of Merrill Lynch, Pierce, Fenner & (in his time) Beane.

"There is nothing like given money away,"
Merrill once said happily to the headmaster,
"Charlie," said the headmaster, "we see
eye to eye."

He sits down at his desk to watch the boys go by between classes. He waves to them and calls two aside to mak them questions. When the building has become quiet again, he goes downstairs and into the duplicating room, where he fusses with some papers and makes unflattering remarks about the Xerox machine, not because it jams once in a while but because it is a machine. He goes into another room and tells the alumni secretary He goes into about a trip he made to New York the previ-ous day. (An observer standing outside 30 Rockefeller Plaza might have seen him step out of the car in a cold wind, without his coat, slightly stooped, and with a frayed briefcase under his arm. He handed the volving door of the great skyscraper, looking very worn and tired. Anyone's heart would have gone out to him for undertaking these long, exhausting journeys for his school, going alone to make rounds of the city that would last all day. But the pathos of it all was modified, because when he came back out through that revolving door he had a hundred thousand dollars in the briefcase.) He reports this sum to the alumni secretary. "I just look old and frail and sick," he once told a Deerfield parent in describing his approach to fund-raising. Throughout his career, he has assiduously cultivated the appearance of helplessness—a talent for which he has found many practical applications.

He talks to the master who runs the school bookstore about remodelling the store and doubling its size. The downstairs corridor is jammed with teachers drinking coffee. He talks to one after another-thirty seconds apiece. He retreats to a small room to discuss ideas for a new library with his faculty committee on architecture, which includes his son John. He goes back up to the main floor and stops to speak to a boy from India. who is about to be interviewed by the man from Princeton. Another headmaster is on the phone-like the earlier caller, a former master at Deerfield. He has lost a physics teacher and needs one as soon as possible. Boyden says he will do what he can. He spends a few moments with the admissions man from Swarthmore. He signs a couple of dozen letters. His handwriting is firm and forthright, unflorid but remarkably graceful. Penmanship like his has not been widely taught or practiced in this century. For ten minutes, he confers with a fellow-trustee of the University of Massachusetts, who has stopped in on his way through town.

The headmaster is chairman of the university board. The University of Massachusetts was once the Massachusetts Agricultural College, a small institution in Amherst. It had a thousand students in the early nineteenfifties, and, like all state schools in Massachusetts, it was under complete legislative con-The college could'nt make a move could not even hire a new teacher or schedule a new course-without the approval of the state. Boyden eventually changed that. In 1962, he persuaded the legislature to give antonomy to the university. The university has increased its enrollment to over thirteen thousand, and in a few years it will level out at twenty thousand. New buildings—some by I. M. Pei, Marcel Breuer, Kevin Roche, and Edward Durell Stone—radiate from the original campus not so much by the dozen as by the mile. One new building, the largest gymnasium in the United States, is called Frank L. Boyden Physical Education Building. Boyden has presided over all this development with a hand that is used to holding reins. He is known among his fellow-trustees, many of whom come from the east-ern part of the state, as "the fastest gavel in the west."

The headmaster says goodbye to his fellowtrustee at the Browsing Library door, then, within eight minutes, talks with an alumnus who has brought his son to the school as a candidate for admission; a boy who has just been interviewed by Harvard; another alumnus and his wife: and a master who is eager to tell him-and is given sixty seconds to do -that a visitor from Groton was impressed by Deedfield's new dormitories. Still another applicant for admission comes into the school building with his father. The headmaster urges the father to sit down and talk, while the boy is interviewed elsewhere. The headtreatment of the man is too excited for this to be, say, the president of Bethlehem Steel, so he must have something to do with a major-league baseball club. The man actually owns one. The headmaster apologizes that he is no longer coaching at Deerfield and starts to talk about Leo Durocher and warren Spahn. The conversation lasts for more than half an hour and never once touches upon the man's purpose in coming to Deerfield, but his son's chances of getting in are one-in-one. After they leave, the headmaster reviews the afternoon schedule. talks for several minutes with a math teacher. goes into a study hall and touches the arm of a sleeping boy, returns to his deak, signs more letters, and tells another story to the admissions man from Princeton. It is almost noon. He goes over to his house for a short nap.

He is not taking the nap because he is eighty-six and needs it in order to keep going. He has been doing this all his life. Even more than fireplace fires, his naps are the essence of his mechanism, for he can go to sleep absolutely anywhere, at any time, and he can sleep soundly, if he chooses, for less than three minutes. Sometimes, while he is interviewing parents, he will press a button and his secretary will appear and may that he has a phone call. Excusing himself, he goes out, holding up five fingers cate the number of minutes he wants to sleep. He pulls a shawl over himself. It takes him thirty seconds to fade out. After five minutes, he is awakened. Up goes the hand again, this time with three fingers extended. Three minutes later, the secretary awakens him again. He gets up—as fresh as if he had slept through a night—and goes back to the interview. The first component back to the interview. The first component of this art is that he can wash his mind free of anything at any time. Then he starts at the north end of the village and tries to remember who lives in the first house. George Lunt. Then he moves to the next house. He has never got beyond the third house. He can go to sleep while he is waiting for an operator to put through a call. Most of the time on automobile trips, he either dictates or sleeps. On athletic trips with his teams, when he was the coach, he used to sleep all the way, and the only things that could wake him up were "kid stuff," as he would put it, or off-color stories. "Cut that he would say, and go back to sleep.

Congressman Horton Commends Constituents' Help for Vietnam

EXTENSION OF REMARKS

HON, FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. HORTON. Mr. Speaker, I rise in tribute to certain of my constituents who are presently in Vietnam and to indicate the pride I feel for what they have been able to accomplish in support of our men and mission there.

Among the items to which I wish to call my colleagues' attention are a series of articles written by Mr. Ross Boyle, former president of the Rochester Junior Chamber of Commerce who resigned in February to go to South Vietnam as a consultant to the Agency for International Development. These articles published by the Rochester, N.Y., Times-Union demonstrate clearly the service which Mr. Boyle has accomplished in informing the people of Rochester of the present situation in Vietnam as well as the contribution that his activities have made in bettering the economic and social conditions of the South Vietnamese people.

In support of Mr. Boyle's work, the Jaycees of Rochester have recorded a series of comments from people in our community and sent this tape to him. Mr. Boyle is playing this tape in various places as another example of the feelings his fellow Americans have for South Vietnam. I was pleased to record my comments for this purpose and would like to share them with my colleagues, as well:

To Ross Boyle, past President of the Rochester Jaycees and now currently serving with the Agency for International Development in Viet Nam, I wish to thank you for informing Rochesterians of conditions in Viet Nam by your articles which have ap-peared in our local newspapers. I hope you will play this tape in many places in Viet Nam so that Rochesterians and other servicemen will know of your country's gratitude for the important mission you are performing. As a member of the United States Congress, I can assure you that we in Washington are very much aware that full freedom for South Viet Nam means economic self-sufficiency as well as military security. In both of these areas, I am pledged to doing all in my power to insure the provision of whatever assistance is required for success. I join your fellow Americans in saluting you for helping to carry around the world our philosophy of freedom. Clearly our goal in Viet Nam is freedom—freedom for the individual, freedom in government, and freedom of a nation's future.

Mr. Speaker, with permission, I would like to have inserted here in the RECORD one of Mr. Boyle's early columns. I think it demonstrates very clearly the insight of Mr. Boyle into the situation in Vietnam and our effort there. Also I think it demonstrates that the people of Rochester are being given an excellent perspective with which to view conditions in South Vietnam.

The column follows:

VIETNAMESE SELF-HELP "WELL PLANNED"
(By M. Ross Boyle)

U.S. Embassy, Saigon.—It is, of course, impossible to be here in Viet Nam more than two or three days without developing opinions. Anyone who is here a week automatically is classified as an expert on Viet Nam and its problems. However, since I have now been here a month, I am beginning to realize how unexpert my ideas on how to win the war and the peace are. But there is one aspect of our U.S. involvement here which I would like to emphasize.

The war in Viet Nam is in the headlines every day—number of military actions, number dead, wounded, captured, number of missions flown. Now, following the Honolulu Conference, even the struggle for improving the lot of the Vietnamese people is getting some coverage because Secretary of Agriculture Freeman and the Secretary of Health, Education, and Weifare Gardner have both come to review the situation with large parties of experts and have made many recommendations on returning to the U.S.

The day-to-day job that is being done and has been done for the last 10 years and more by the men and women of the United States Agency for International Development (USAID) here in Viet Nam is generally ignored. These Americans, now numbering more than 800, along with several hundred assistants from other areas of the Far East and over 1,000 Vietnamese, work quietly but effectively with the government of Viet Nam to provide the people with improved education, better living facilities, adequate food, and a better understanding of a democratic way of life.

Contrary to popular opinion in the U.S., this task is not accomplished by merely giving away American dollars and commodities. Dedicated men work long hours, seven days a week, planning a well balanced program designed to help the people help themselves.

Some of the most successful programs run here are self-help projects in which the U.S. provides a hamlet with a few bags of cement and some aluminum roofing material and the people build themselves a school. They then identify themselves with that school and if the Viet Cong attempt to destroy it, they lose the support of even the portion of the hamlet population that had been VC sympathizers.

To implement projects of this kind we have province representatives who live and work in every one of the 43 provinces of South Viet Nam. They act as advisors to the Vietnames province chief, construction engineers, truck drivers, friend, midwife, and whatever else is needed to show the people the good side of the American.

I have just returned from a two day trip during which I visited province representatives in Nha Trang, Cam Ranh City, Ban Me Thuot, and Bao Hoc. They were proud of the accomplishments which the people in their areas had made—schools, refugee centers, orphanages, new market places, agricultural experimental stations, and many others. They were also concerned about how much more needed to be done. They are dedicated and enthusiastic.

If we are able to achieve any real lasting success here in Viet Nam, it will be men like those in AID who will be responsible because they live with the problem every day.

Two of the people I have met here in the mission are ex-Rochesterians—Bob Klein is mission program officer, responsible for planning the projects to be implemented throughout the country. He lived in Brighton and worked at Kodak Park for six years from 1958 to 1954. Ray Gordon is head of the Food For Peace operation here. Several years ago he was employed by the Gannett Newspapers.

This is an operation which probably will play as big a part as the military operations under Gen. Westmoreland in any long range success which will be achieved here but the American people hear too much about the war effort and military buildup and not enough about the people-to-people civilian effort being undertaken.

It will do us no good to win battles unless we can follow them up with well planned and well implemented programs of social reform. That is what only 800 American civilians (not 225,000 troops) are undertaking.

Mr. Speaker, I am pleased to pay tribute to another of my constituents, Peter R. Liebschutz, who also is acting as a consultant to the Agency for International Development. I had the opportunity to meet with Mr. Liebschutz

on the steps of the Capitol just before his departure for Vietnam earlier this year and talked with him about his forthcoming work. Recognition also should be given to Mr. Kenneth Halaby, of Rochester, who had joined Mr. Boyle and Mr. Liebschutz in Saigon with AID. Realizing the sacrifices that these men have made to take leave of their regular jobs for a period of 6 to 8 months, it is a privilege to commend them publicly in the hopes that such actions and their mission will not be forgotten in the context of combat.

On March 12 I said in addressing the Rochester chapter of the American Institute of Banking:

Economic assistance alone cannot continue as an effective diplomatic device. We need to encourage popular participation of the people in these foreign lands so that they are partners in the progress of their country.

It is in this area that the Agency for International Development performs a vital function and it is to men like Boyle, Liebschutz, and Halaby that credit can be given for the structure of such programs as they exist today in Vietnam. We must never overlook the fact that private individuals like these men are working daily in order to guarantee that a free South Vietnam will be able to survive and grow in the years following the cessation of hostilities in that land.

I also am pleased to take note of the efforts of the 31 students in the Twelve Corners School in Brighton, N.Y., who have sent gifts to be used in an orphanage in Saigon. The students are members of Mrs. Susan Davis' fourth grade class.

The schoolchildren have mailed boxes of clothing, soap, toothbrushes, toothpaste, bandages, towels, washcloths, and toys to Army Capt. Hilton Bicknell in Vietnam. Captain Bicknell in turn distributed the items to the children of one of Saigon's orphanages.

The idea originated with 9-year-old Lauren Crawford, who was acquainted with Captain Bicknell's family. Lauren interested her fourth grade classmates in the idea, and through their combined efforts immeasurable good was accomplished in Vietnam.

I salute these children and their elders who through their own abilities and initiative have done so much to help the Vietnamese people. I urge my colleagues and all who might take note of this speech to explore similar avenues of assistance to Vietnam. I firmly believe that the road to peace and prosperity in Vietnam will be paved with the contributions made by Americans and Vietnamese working together today.

As We View It

EXTENSION OF REMARKS

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1966

Mr. HALL. Mr. Speaker, under leave to extend my remarks and following a prior insertion in the Congressional Record dated April 27, 1966, page 8728, entitled "A Housewife Looks at the Great Society," I would like to insert in the Record an editorial from Radio WMRN Script, Marion, Ohio, entitled "As We View It." The editorial, dated May 29, 1966, follows:

As WE VIEW IT

It might make a sounder United States if the story told in this letter to Congressman Durward Hall, and read into the Congressional Record by him, April 27.

Probably the most important phase of the situation, however, is the reaction from the White House, to which the Congressman referred the letter as he had been requested. HALL says "A short time later, Mrs. Stafford received a reply from the White House. As might be expected, the White House missed the entire point of the letter and suggested several ways in which the Stafford family might get on the Federal gravy train."

After telling about watching their disposable income shrink as increased social security and other taxes ate up more and more, Mrs. Stafford writes—"I am getting just a little tired of seeing men and women sitting around collecting welfare and producing children. Living in rural areas where they could have gardens, a cow and chickens, yet not lifting a hand to do so—example:

"One—One-quarter mile from us is one family. A family of nine children (last count). The father probably is 70 years old, the mother may be 35, the children from one to 17. Big healthy children! No garden, no cow, no chickens, Welfare!

"Two—One-quarter mile in another direction, a widow lady almost 70 years old, 5 feet tall, 200 pounds, has a heart condition, lives alone, has a garden each year, makes jam and jelly by the gallon, as well as canning all her garden vegetables. She has lived her whole married life on the 120 acres she now lives on alone, Without welfare!"

Mrs. Stafford has an interesting postscript to her letter, and commenting about "no one has to work to get things—if he can get on welfare." She writes—"I am told that since the youth program began, it is practically impossible to get anyone to put bailed hay in the barn. Who wants to lift those heavy bales when you can get \$1.25 an hour for "goofing off" for someone who doesn't care whether you do a good job or not, since the Government is paying your salary anyway?"

This is what we have commented on for years—it isn't the billions of dollars the federal government has wasted in its rat hole programs—it is what continued handouts have meant to disintegration of character of the American people. We have become a nation of suckers—those who pay and those who receive.

How can we ever expect to reverse the trend started by Franklin D. Roosevelt's socialistic welfare state—capitalized on by the politicians who saw an opportunity to spend and spend to elect and elect. Roosevelt showed it could be done—with his four elections as president.

Nobody in government will ever have the courage to face hard economic facts—not even if the people adopted a Constitutional amendment limiting the term of president to six years, non successive. Congressmen still must be reelected every two years—and you can see what they have been doing with appropriations in the past months.

The first responsibility of every politician seems to be to himself—to get elected or re-elected. Everything else is secondary, truth, honesty, intelligence, the welfare of the United States. Don't expect that to change either, not on this earth.

The People Look at Employment, Social Security, and Pensions

EXTENSION OF REMARKS

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1966

Mrs. GRIFFITHS. Mr. Speaker, the morning's mail brought to my desk three letters pointing to vital problem areas in employment, social security, and pensions.

The first is a letter from a woman in California describing conditions of discrimination against women in the armed services. The second letter, written by Jim Barry, of California, makes a sensible suggestion on social security. third letter, written by a Flint, Mich., man, Robert B. Linn, Jr., relates to pension systems. Mr. Linn makes a criticism against present pension plans better than any accountant or any other person who appeared before my Subcommittee on Fiscal Policy at the time of our investigation of pension plans. He also makes some interesting suggestions for improvement. The letters follow: The Honorable Martha W. Griffiths.

House of Representatives, Washington, D.C. DEAR MRS. GRIFFITHS: I was happy to see

that finally someone is being made aware of the sex discrimination in the services. As the woman marine told you, a husband is not entitled to quarters, and if the wife has orders to go overseas, the husband does not "rate" transportation.

A husband is not entitled to medical care. I have seen wives who were not even citizens receive thousands of dollars of care, while my husband can't get an aspirin. And although I have no objection to people-to-people projects (for example the "elective surgery performed on Vietnamese by U.S. medical personnel) it does get under my skin that my husband would be thrown out of a military hospital if he requested the same.

The PX restriction is a farce—I can purchase items for my husband just as many men buy cosmetics, etc. for girl friends. If I buy him clothing and have to return it because of incorrect fit, its just a bother to me and the PX.

I am due for orders shortly, and I wonder how I might go about putting in a claim for my husbands travel as well as mine. Although some may say it doesn't matter, things like this can, sad to say, jeopardize a career. It seems that if it does, the career isn't worth much.

I have served in the Armed Forces for almost ten years and wish to continue. However, I'd like to be treated as an officer, and as such receive the pay and allowances

of an officer, not a female.

Would you advise me to go shead and file a travel claim when the time comes? It seems somebody has to start the ball rolling. Just in the last ten months I have "lost" \$250 in quarters allowances that married male officers have—whether they are married to "heiresses" or "really dependent" women. I certainly hope something can be done

I certainly hope something can be done soon. It should be, and retroactively, at that I don't appreciate having my husband regarded as an unwanted stepson.

Hon. MARTHA W. GRIFFITHS, House of Representatives, Washington, D.C.

DEAR MRH. GRIFFITHS: This is to acknowledge and express my appreciation for your

letter dated June 15, 1966 which was in reply

to mine concerning "Pensions".

I have some more thoughts on this problem which may or may not be of interest to you. Under Social Security pensioners are allowed to earn up to \$1500 per year. Deductions are made from the Social Security payments during the month in which a person earns from \$1.00 to \$125.00. This arrangement is unfair and should be amended.

The maximum should be \$1800 per year in the least and should be charged against the pensioner on an annual basis for this

reason.

A person may live in an area where he is able to secure only seasonable work to supplement the pension, i.e. may earn \$300 per month for only 3 months out of the year which is a total of \$900.00 he is at a disadvantage over the person working a few hours per day throughout the year but who may earn a total \$1500.

Also due to wage adjustments the past 2 years the usual wage rate for employment which pensioners are able to find pays \$300 per month for 8 hours per day and 5 days per week. Employers who are willing to split the work load between 2 pensioners 4 hours each per day would gross them each \$150 per month, this would result in a reduction of Social Security payments. Eighteen hundred dollars per year maximum would not alter S.S. payments.

Social Security use the gross earning figure whereas they should consider one's NET income after taxes and other deductions would amount to only about \$240 per month. If S.S. used Net figures then the \$1500 maximum would be obey (\$120 helf time)

mum would be okay (\$120 half time).

Most available to pensioners is positions with Stock Brokers as Runners. Mail room work, guard work and the like. Regardless of what level they attained during productive years the older people are just not employed for positions higher than those described and one is fortunate even to secure this type of work.

Persons on welfare and on the poverty program fare much better than pensioners who throughout life time have made some contribution to the country.

Cordially,

JIM BARRY.

Representative Martha Griffiths, House of Representatives, Washington, D.C.

DEAR MA'AM: I read of your private pension investigation in the Detroit Free Press of May 27, 1966; that is why I am writing this letter.

I went to work when I was thirteen years old and living in Arkansas. Since then, I have worked at many jobs such as digging ditches, working in grainerys, driving tractors and trucks, worked as a welder, Millwright and Electrician both on maintenance and construction. I have also worked at repairing cars and trucks in garages.

The reason I have had so many jobs is I was willing to work at anything to pay my own way for my family and me. I have six children now and so far the Good Lord has let me take care of them real good. Yet today, I have no pension time built up because everytime I had to change jobs, I lost my former pension rights. I have paid dues into the International Brotherhood of Electrical Workers, Washington, D.C. Union Pension Plan for eighteen years, yet II miss paying one months' dues, I lose what little pension rights I might get in the future (I don't have any pension rights through this plan yet). I have also paid into the General Motors Plan for six years and still have nothing under it If I lose or quit my job today.

I figure if I could receive credit for all the years I have worked I would have twenty-six

years of pension rights.

I have gone to school in my spare time and night to learn Real Estate. Now that I have a chance at bettering my social and financia standing, I am reluctant to take the chance because if I quit, I will lose what pension time I have built up. I cannot freeze the six years I have paid into the G.M. Plan or the eighteen years I have paid into the International Brotherhood of Electrical Workers pension plan.

The following I would like to recommend for your consideration:

No. 1. I would like to see all pension plans put under Social Security. This would give you company to company rights.

No. 2. Have all private pension funds transferred to the Social Security fund. This would insure workers of collecting their pensions when they retire.

No. 3. Federal Law requiring all empyoyers to contribute a percentage for each hours' work in an amount that would give a worker sixty-five percent of his earnings when he retires, with a minimum equal to the Poverty Program Cost of Living Recommendations.

No. 4. Any pension above the minimum would be based upon wages received for each year worked. Therefore, if a man's wages advanced in later years, a company would not have to pay extra into the fund.

Sincerely yours,

ROBERT B. LINN, Jr.

Floor Statement by Chairman Holifield Concerning Uranium Enrichment Services Criteria

EXTENSION OF REMARKS

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. HOLIFIELD. Mr. Speaker, the Atomic Energy Commission on July 1, 1966, submitted to the Joint Congressional Committee on Atomic Energy proposed "Uranium Enrichment Services Criteria," in accordance with the 1964 private ownership amendments to the Atomic Energy Act of 1954. The act requires that these toll enriching criteria lie before the Joint Committee for 45 days while Congress is in session before becoming effective.

The AEC's proposed toll enriching criteria, and the contracts which the Commission intends to use in providing these services, are of great significance to the Government and the rapidly expanding nuclear power industry. Accordingly, the Joint Committee intends to hold one or more public hearings on these criteria and related matters prior to the expiration of the statutory waiting period, which commenced on July 11.

The committee hearings, at which testimony is expected from Government and industry witnesses, will also afford a timely opportunity to review other subjects pertinent to the private ownership legislation. For example, we will probably wish to consider the AEC's policies for lease and sale of uranium, and for safeguarding against diversion of fissionable material in the hands of licensees. The Joint Committee expects to announce the dates of the planned hearings within the next few weeks.

Under unanimous consent I include in the Record at this point the proposed "Uranium Enrichment Services Criteria," and the AEC's letter dated July 1, 1966, transmitting these criteria to the committee: U.S. Atomic Energy Commission,
Washington, D.C., July 1, 1966.
Hon. Chest Holliegle.

Chairman, Joint Committee on Atomic Energy, Congress of the United States.

DEAR CHAIRMAN HOLIFIELD: Pursuant to section 161v of the Atomic Energy Act of 1954, as amended, the Atomic Energy Commission hereby submits to the Joint Committee on Atomic Energy proposed Criteria for uranium enrichment services.

Draft proposed Criteria were published in the Federal Register on October 1, 1965 and a 90-day period was set for receipt of public comments. In addition, draft contracts reflecting the method of implementing the Criteria were made available on request. Comments were received from eleven organizations and discussions were held with a number of industry representatives convened by the Atomic Industrial Forum. After consideration of all comments received, appropriate modifications have been made and the modified Criteria are submitted herewith.

In addition to the matters specifically set forth in the Criteria, AEC will agree generally to waive the 90-day period between feed and product delivery, as provided in item 5(a), for the 120-day period immediately following January 1, 1969. We intend to announce this waiver at, or prior to, the JCAE

hearings on the Criteria.

We are separately providing to the JCAE staff, for the information of the Committee, copies of the draft contract forms which are planned for implementation of the Criteria. Copies of these draft contracts are also being made available for public comment and/or use in connection with the hearings on this matter.

Cordially,

GLENN T. SEABORG,

ATOMIC ENERGY COMMISSION URANIUM EN-BICHMENT SERVICES CRITERIA

1. GENERAL

(a) The United States Atomic Energy Commission (AEC) hereby gives notice of the establishment of criteria setting forth the terms and conditions under which it offers, subject to available capability, to provide uranium enrichment services in facilities owned by AEC, as authorized by the Atomic Energy Act of 1954, as amended (the Act). Specifically, these criteria are established pursuant to section 161v of the Act, which was added by Public Law 88–889, the "Private Ownership of Special Nuclear Materials Act." As used in this notice, the term "enrichment services" or "enriching services" means the separative work, 'necessary to enrich or further enrich uranium in the isotope 235. The enrichment services shall be provided pursuant to contracts to be entered into (1) with persons licensed under section 53, 63 of 104 of the Act, and/or (2) in accordance with agreements for cooperation arranged pursuant to section 123 of the Act. (b) The contracts will provide for the

(b) The contracts will provide for the furnishing of depleted, normal or enriched uranium by the customer and the delivery by the AEC of an appropriate quantity of enriched or more highly enriched uranium. The quantity of material to be furnished by the customer in relationship to the quantity of enriched uranium to be delivered by the AEC and the related amount of separative work to be performed by the AEC normally will be determined in accordance with the then-current standard table of enriching services published by the AEC. In the event, however, that the AEC does not have available capability to undertake to perform requested enriching services on short notice in accordance with such standard table, the AEC may agree to perform such services in

accordance with such other table as is within its capability. The general features of standard contracts, including the hasis for AEC's charges for enriching services, are set forth herein.

(c) Except as specifically provided, nothing in this notice shall be deemed to affect the sale or leasing of special nuclear material by the AEC or the entering into of "barter" arrangements whereby special nuclear material is distributed pursuant to section 54 of the Act and source material is accepted in part payment therefor. Neither the execution of an agreement for the furnishing of uranium enrichment services nor the termination or expiration of such agreement will in itself alter or affect any rights and obligations of any AEC licensee under its license or construction permit other than those regarding any allocation of special nuclear material in connection therewith.

(d) The criteria contained in this notice are subject to change by the AEC from time to time; however, any such changes shall be submitted to the Joint Committee on Atomic Energy for its review in accordance with the

2. EFFCTIVE DATE

This notice shall become effective as of 1966.

3. PERIOD OF CONTRACT

Contracts with domestic licensees will be respecified periods of time up to 30 years. Contracts entered into in accordance with an international agreement for cooperation must be for a term within the period of such agreement. In either case, contracts may be entered into at any time after the effective date of this notice; however, no such contract shall provide for delivery of special nuclear material by AEC or delivery of uranium fred material to AEC before January 1, 1969.

There is no restriction on the provision of enrichment services to persons furnishing as feed material uranium of foreign origin where the enriched product is not intended to be used in a utilization facility (as defined in the Act) within or under the jurisdiction of the United States. Where the enriched material is intended to be used in a domestic utilization facility, however, the standard contracts will prohibit the furnishing of feed material of foreign origin. This prohibition is established, pursuant to section 161v of the Act, in order to assure the maintenance of a viable domestic uranium industry. From time to time, the AEC will review the condition of the domestic mining and milling industry to determine the need for continuing this restriction, modification or removal of which shall constitute a change in these criteria.

5. GENERAL FEATURES OF STANDARD DOMESTIC

The following types of contracts have been developed in the light of the uncertainties necessarily attendant to contracts which may be for periods as great as 30 years. Accordingly such contracts will provide that, at the request of the customer, the AEC will negotiate and, to the extent mutually agreed, amend them, without additional consideration, in a manner consistent with the criteria then established by the Commission in accordance with the requirements of section 161v of the Act to eliminate or reduce restrictive provisions which the AEC determines are inequitable, discriminatory or no longer required to protect the Government's interest.

The AEC will use two standard types of uranium enrichment contracts to be entered into with domestic licensees. These are entitled (a) Agreement for Furnishing Uranium Enrichment's Services (Domestic Customers—Firm Quantities), and (b) Agreement for Furnishing Uranium Enrichment Services (Domestic Customer's Requirements). The AEC may also offer a

uranium enrichment contract combining features of the foregoing types of contract.

The type of contract first mentioned, at the customer's option, will either (i) define the specific quantities and assays of enriched uranium to be delivered to the customer, the schedule for such deliveries, and the quantity and assay (or a range of quantitles and assays within permitted amounts) or feed material other than natural uranium to be delivered by the customer, with the re-mainder of the required feed material to be delivered as natural uranium, or (ii) define the amount of enriching services to be performed by the AEC in terms of units of separative work as related to the AEC's standard table of enriching services in effect at the time the parties agree to such amounts and provide for the adjustment of such amounts in the event of a revision of the AEC's stand-ard table of enriching services through the application of such revised standard table to the relevant portion of a reference schedule of feed material deliveries by the customer and enriched uranium deliveries by the AEC incorporated into the contract for this purpose. The second type would provide for the furnishing of part or all of the customer's requirements for enriching services for a designated facility or facilities during the term of the contract.

In addition to the items discussed above, the more significant provisions of the standard domestic contracts are summarized below:

(a) Delivery schedules

Deliveries of specific quantities and U-235 assays of feed material to AEC and enriched uranium to the customer shall be in accordance with the agreement between the parties and (except as provided in 1(b) above) in accordance with the published AEC standard table of enriching services in effect at the time of the delivery of enriched uranium by the AEC. The schedule for delivering enriched uranium to the customer shall reflect an interval after receipt of feed material equivalent to the estimated average time which would be required to receive, handle, and process equivalent feed material to the desired enriched uranium. The AEC will not necessarily use the specific feed material furnished by the customer in producing the enriched uranium delivered to the customer. Unless otherwise agreed, deliveries of feed material to AEC shall precede requested deliveries of the enriched uranium by at least ninety (90) days. The AEC may agree to perform enriching services in cases where the lead time requirements for furnishing feed material are not satisfied; in such case appropriate surcharge may also be imposed to provide for recovery of additional AEC costs and interest charges.

(b) Chemical form and specifications of material

Both feed material furnished to the AEC and enriched uranium delivered to the customer are required to be in the form of UF, and conform to the AEC's established specifications as published in the Federal Register and in effect on the date of delivery.

(c) Charge for enriching services

(1) The charge for enriching services, in accordance with the Act, will be established on a nondiscriminatory basis and provide reasonable compensation to the Government. Applicable charges for enriching services and related services will be those in effect at the time of delivery of enriched uranium to the customer as (1) published in the Federal Register, or (ii) in the absence of such publication, determined in accordance with the Commission's Fricing Policy. The charge per unit of separative work for enriching services will be the same as that employed in the Commission's published schedule of charges for sale or lease of enriched uranium. The AEC may impose an appropriate surcharge representing additional costs if any to the

AEC for providing enriching services on short notice.

(2) The Act requires that such charges provide reasonable compensation to the Government. AEC's charge for enriching services will be established on a basis that will assure the recovery of appropriate Government costs projected over a reasonable period of time. The cost of separative work includes electric power and all other costs, direct and indirect, of operating the gaseous diffusion plants; appropriate depreciation of said plants; and a factor to cover applicable costs of process development, AEC administration and other Government support functions, and imputed interest on investment in plant and working capital. During the early period of growth of nuclear power, there will be only a small civilian demand on the large AEC diffusion plants. These plants were originally constructed for national security purposes, but will be utilized in meeting fu-ture civilian requirements. In this interim period of low plant utilization, the Commission has determined that the costs to be charged to the separative work produced for civilian customers will exclude those portions of the costs attributable to depreciation and interest on plant investment which are properly allocable to plant in standby and to excess capacity.

(3) Projections of supply and demand over a reasonable time period will be used in establishing a plan for diffusion plant operations. This plan will be the basis for establishing an average charge for separative work over the period involved, which charge will be kept as stable as possible as operating plans are periodically updated. Under such operating plans, AEC will at times be pre-producing enriched uranium. Interest on the separative work costs of any such pre-produced inventories will be factored into the average separative work charges.

(d) Ceiling on charge for enrichment services

The contract shall specify for the term of the agreement a guaranteed ceiling charge, subject to upward escalation for the cost of electric power and labor. The ceiling charge as of July 1, 1965, the base date for application of escalation, is \$30 per Kg unit of separative work for separation of U-235 from U-238. (In its standard table of enriching services, as well as its schedule of charges for sale or lease of enriched uranium, AEC will take into account any significant effect of the presence of other isotopes of uranium on the number of separative work units required to perform a given U-235-U-238 separation.)

(e) Customer's option to acquire tails material

The customer shall be granted an option to acquire tails material (depleted uranium) resulting from the performance of enriching services. The option as to quantity (Kg U) of tails material desired by the customer, within the maximum quantity subject to the option, must be exercised at the time of delivery of the related quantity of feed material. The U-235 assay of the tails material delivered to the customer will be within the sole discretion of the AEC. The maximum quantity of depleted uranium subject to the option will be equal to the difference between the total uranium supplied by the customer as feed material and the total enriched uranium furnished to the customer, less processing losses as established from time to time by the AEC. No charge will be made for tails material delivered to the customer under the agreement other than AEC's withdrawal, handling and packaging charges. Delivery of tails material will normally be at the same time as delivery of enriched uranium.

(f) Responsibility for material meeting specifications

The customer warrants that all feed material meets specifications and, with stated exceptions, sgrees to hold the AEC and its representatives harmless from all damages, liabilities, or costs arising out of a breach of the warranty where such damages, liabilities, or costs are incurred prior to inspection, assaying and acceptance of the feed material by AEC. However, the customer is not de-prived of any rights under indemnification agreements entered into pursuant to section 170 of the Act (Price-Anderson indemnifica-tion). The AEC's obligation to furnish specification material to the customer terminates upon final acceptance of such material by the customer.

(g) Termination by AEC

(1) The contract may be terminated by AEC without cost to AEC upon reasonable notice at such time as commercial enriching services are provided by another domestic source; provided, however, that AEC will upon request by the customer rescind any notice of termination and will continue to furnish the services specified in the contract if the services of the domestic source are not available to the customer: (i) to the extent provided for in the AEO contract during the remainder of its term; (ii) on terms and conditions which are considered by the AEC to be reasonable and nondiscriminatory as between domestic and foreign customers; and (iii) at charges considered by AEC to be reasonable, nondiscriminatory, an no higher than the ceiling charge under the AEC contract, as escalated for the cost of electric power and labor.

(2) The AEC may terminate the contract without cost to the AEC in the event the customer loses its right to possess enriched uranium, defaults on its contractual obligations, or becomes involved in bankruptcy proceedings. In such instances the customer will be required to pay a termination charge determined as if the customer had termi-nated the contract on the notice, if any, given the customer by the AEC.

(h) Termination by customer

The customer may terminate the contract in whole or in part. In such instances the customer will be required to pay a termina-tion charge equal to a specified fraction of the charges for those enriching services which would have been furnished but for such termination. Such fraction of such charge shall be a maximum of 0.25 of such charge for those amounts for which mini-mum advance notice of termination is given and shall be a lesser figure for amounts terminated for which a longer notice period is given. No termination charges shall apply to amounts of separative work which would have been funished at times three years or more subsequent to the date of receipt of the notice of termination of such amounts.

The amounts of separative work and enriching services charges related thereto (prior to the application of the specified fraction) shall be determined in accordance with the published AEC standard table of enriching ervices and established charges in effect on the date of the receipt of the notice of termination. The AEC will determine the extent to which, if any, such termination charges exceed the probable costs to the Commission which may arise from such termination and such charges shall be corre-spondingly reduced. Such determinations shall be final. Upon request of the customer prior to its delivery of a notice of termination, the AEC will advise the customer of the approximate amount of termination charges which would be payable.

(i) Delivery-title

The f.o.b. delivery point for both feed material furnished to AEC and enriched

uranium delivered to the customer is the designated AEC facility. The AEC's enriching facilities are situated at Oak Ridge, Tennessee; Paducah, Kentucky; and Portsmouth. Ohio. Title to all material passes upon delivery.

(j) Changes in charges and specifications

Any change made after July 1, 1968, in the specification for UF, the AEC's standard table of enriching services, or any increase in the charge per unit of separative work for enriching services shall require at least 180 days' notice to the customer by publication in the Federal Register or otherwise.

(k) Customer's requirements contracts In addition, requirements contracts will

(1) Quantities and Enrichments of Material The customer will be committed to obtain.

and the Commission to provide, part or all of the customer's actual requirements for enriching services for a designated facility or facilities during the term of the agreement. Timely notice of the customer's requirements must be furnished to AEC. Except as provided in 1(b) above the quantities and enrichments of feed material furnished by the customer will be those required, in accordance with the published AEC standard table of enriching services, to obtain the material of higher enrichment desired by the customer. A maximum net amount of enriching services to be provided will be established.

(2) Utilization of Material

The contract will provide the basis for determining the portion of the customer's requirements for enriching services to be furnished by the AEC by describing the extent

a. enriched uranium furnished by the AEC under the contract will, after being used in or in support of the operation of the designated facilities, be recycled or delivered to the AEC as feed material under the contract;

b. plutonium or U-233 produced in and discharged from the designated facilities will be recycled for use in or in support of the operation of the designated facilities;

c. special nuclear material obtained from sources other than through the contract or the operation of the designated facilities, will be used in or in support of the operation of the designated facilities, including delivery of such material to the AEC as feed material under the contract.

Where the contract does not initially provide for the recycle for use, as in b. above, of the plutonium or U-233 produced, the customer, at any time prior to June 30, 1973, or such later date as the AEC may establish for this purpose, may elect, without incurring termination charges, to so use such plutonium or U-233 thereafter. In such cases, the contract will also provide for use of plutonium or U-233, as the case may be, from another source in lieu of such produced material. The customer may further change such utilization of material by agreement or by terminating the contract in whole or in

6. GENERAL FEATURES OF CONTRACTS ENTERED INTO IN ACCORDANCE WITH AN AGREEMENT FOR COOPERATION

It is expected that the general features of uranium enrichment services contracts entered into pursuant to agreements for co-operation with foreign nations or groups of nations will be generally consistent with those discussed above.

7. CORRESPONDENCE

Any correspondence involving this notice or request for copies of standard contract forms should be addressed to: Manager, Oak Ridge Operations Office, United States Atomic Energy Commission, Post Office Box E, Oak Ridge, Tennessee 37831.

¹The work devoted to separating a quantity of uranium (feed material) into two fractions, one a *Product* fraction containing a higher concentration of U-235 than the Feed and the other a *Tails* fraction containing a lower concentration of U-235.

The initial table, as presently contemplated, will not provide to the customer flexibility to select a quantity of feed and an amount of separative work other than those specified in the AEC table. However, the AEC is giving further study to the question of providing, at some date in the future, a form of contract under which flexibility would be available.

³ In view of the authority granted to the AEC under the Act to execute long-term fuel supply agreements, the AEC is reviewing its existing regulations and procedures with respect to the need for allocations of special nuclear material in licenses.

The 60th Anniversary of the American Hungarian Federation

EXTENSION OF REMARKS

HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. PATTEN. Mr. Speaker, this is the 60th anniversary of the American Hungarian Federation, a civil organization of American citizens of Hungarian descent, uniting in itself most of the Hungarian-language churches, clubs, and associations in the United States.

The organization is headed by Judge Albert A. Flok, of Pittsburgh, as national president and bishop emeritus, the Very Reverend Dr. Zoltan Beky, formerly of Trenton, N.J., now president of the Hungarian Reformed Federation of America, a fraternal insurance company in Washington. The federation concerns itself with immigration matters and with an observation and analysis of events and trends in Hungary.

On July 7, 1966, the President delegated Acting Assistant Secretary of State Walter J. Stoessel to receive a delegation from the American Hungarian Federation in his name and to accept a memorandum of the federation on American foreign policy.

The members of the delegation besides Bishop Beky and Judge Flok were the secretary of foreign affairs, Prof. Z. Michael Szaz, of Seton Hall University, South Orange, N.J.; Dr. Louis Fury, national executive secretary; and Rev. Joseph Kecskemethy, a member of the board of directors.

I think that my colleagues will be interested in reading the contents of this memorandum and in the thoughts of the federation on the current problems in Eastern Europe. The memorandum follows:

JULY 7, 1966.
The Honorable Lyndon Baines Johnson,
President of the United States,
Washington, D.C.

DEAR PRESIDENT JOHNSON: Our organization, representing 600,000 United States citzens of Hungarian descent who are members of American Hungarian churches, clubs and associations, respectfully submits the following memorandum for your kind consideration. We repeat again our wholehearted support of United States policy of helping the Vietnamese people to maintain and defend its freedom and national independence in the face of Communist subversion and invasion. We agree with the steps taken to ensure that Communist aggression be halted, including the recent raids against the oil storage facilities of Communist North Viet Nam near Hanoi and Haiphong. Our best wishes accompany you at a time when you and the United States have become the only beacon of hope for people willing to defend their freedom and national independence against Communist oppression and aggression.

As our members are of Hungarian descent, we pay close attention to events and trends in Hungary. We deplore the continuing denial of human and civil rights in Hungary and the permanent occupation of Hungary by Soviet Russian troops, despite 26 United Nations resolutions between 1956 and 1962.

We know that Hungary cannot be restored to genuine national independence as long as foreign troops are stationed at its territory. You have eloquently expressed concern for human rights and national self-determination in your address of May 28, 1966 at the third anniversary of the Organization of African States. We trust that you will do everything in your power to bring to an end the present semi-colonial status of Hungary.

In this connection, may we note that the Warsaw Pact does not sanction the presence of Russian troops in Hungary and that the agreement of May 27, 1957 between the U.S.S.R. and Hungary was concluded by the Kadar Government at a time when it was officially condemned by United Nations resolutions, falled to conduct any elections, and was generally ostracized by the world community outside of the Communist bloc. Therefore, even under international law, the agreement, signed under duress, remains of doubtful validity.

Today, we observe a certain loosening of the blocs in Europe. Even the Rumanian Communist Party Secretary in May, 1966 questioned the timeliness and basis of the maintenance of Soviet troops on the territory of Warsaw Pact states, including Hungary. We trust that in your policies you are working toward the goal of gaining Soviet consent for a withdrawal of troops from Hungary, thereby fulfilling one of the major demands of the United Nations resolutions.

As citizens of a free and democratic country, we are abhorred by the continuing denial of human and civil rights to Hungarian citizens by the present Government despite minor concessions in the last years. Arbitrary arrests and convictions, lack of representative governmental institutions, grave restrictions on the rights of worship, speech and assembly, imposition of a one-Party regime upon a people which has little or no sympathy for its goals are still salient characteristics of Hungarian life. The only solution lies in free, secret, and multi-Party elections.

While the election laws and civil rights are within the domestic jurisdiction of every state, we hold the United States has a legitimate concern when the most elementary political and human rights for its citizens are denied by the ruling regime. We hope that in our policy of "building bridges" to the peoples of East Central Europe we are not forgetting that any real contribution to world peace by these peoples is only possible if their national independence and the individual human and civil rights of their citizens are restored and respected.

One of the issues that concerns us deeply is the continued declining birth rate of the fungarian people. This is due to a large extent to legalized abortions and not to birth control methods. The number of legalized abortions according to the present Government are in the neighborhood of 200,000 cases per year since 1957. This is a tragic indictment of the Communist regime

in Hungary both because of people's despair in the future and the unavailability of housing for young couples with children. Economic improvement and more political freedom both must be worked for if the tragic situation should be alleviated, but in the meantime the abolition of the legalized abortion law must be demanded as a demand for international morality.

One-third of all Hungarians live outside of the confines of Hungary; the largest single group, approximately 1.7 million in Transylvania, now a Rumanian province. Their fate is similar to those in Hungary as far as but they are political rights are concerned, also discriminated against culturally, educationally and in regard to the economic development of their provinces. Over 100 documented cases are available to us about Hungarian professionals and civil servants being forcibly transferred into other provinces with no Hungarian population in order to deprive the Hungarian minority from its natural leadership, and most informants put such cases into the thousands. It is hope that you will take into consideration the memorandum of the 48 members of the House of Representatives discussing this problem in the light of American foreign policy which was sent by Representatives SEYMOUR HALPERN and EDWARD J. PATTEN to Secretary of State Dean Rusk.

We realize that in order to defend freedom and the independence of small nations against communism, priorities have to be made, and Viet Nam today must have first priority. However, United States policy is showing signs of activity in Europe as well. May we respectfully ask that when decisions are made our suggestions contained in this memorandum be taken into consideration and that the United States pay increasing attention to the fate and future of the Hungarian people who, in 1956, have shown to the world the duplicity and mendacity of Communist theory and practice and struck a blow for human liberty finally dispelling the monolithic nature of communism and telling the non-committed peoples of the world the truth about Communist tyranny.

Again accept our most loyal and complete support in all of your policies designed to defend and extend freedom in the world, and especially our open endorsement of your course of action in Viet Nam, and expressing our appreciation, we remain,

Respectfully yours,
Rt. Rev. Bishop Zoltan Bekt,
Chairman of the Board.
Albert A. Fiok,
National President.

In the Nation: The Last Heir of Monticello

EXTENSION OF REMARKS

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Arthur Krock which appeared in the New York Times of Thursday, July 7, 1966:

IN THE NATION: THE LAST HEIR OF MONTICELLO (By Arthur Krock)

Washington, July 6.—When Harry Flood Byrd sank today into the come whence consciousness of the living world has departed, the political principles on which his every public position was firmly founded had already become ancient history in his party and in the popular concept of the role of government in the United States. Hence his death will not mark the ending of an age but instead the passing of the American statesman who most honorably and courageously exemplified its philosophy.

JEFFERSONIAN PRINCIPLES

He was the public man of commanding influence over contemporary political action who held steadfast to the fundamental Jeffersonian doctrines of democratic government. And he never compromised their essentials under the pressure of expediency, although, like all politicians, Byrd often experienced this force and knew the hazards of resistance. His long domination of the political process in Virginia can be partly accounted for by the particular appeal he had for Virginians as a fellow citizen whose status was fully established as the lineal heir to the philosophy of Thomas Jefferson. But it was Byrd's personality, character, courage and grasp of the subject matter and mechanics of legislation that account for his extraordinary and abiding influence in a Senate where Jefferson's doctrines were becoming more and more outmoded among members of both parties.

He was born to the struggle for attainment that was imposed on post-bellum youth in the conquered Confederacy, not excluding those who, as in his case, had a dozen or more generations of the great Virginia landholders in his family background. From the age of fifteen, when without parental knowledge or consent, he dropped out of high school to restore to solvency—as it proved—the Winchester newspaper over which his brilliant father exercised indifferent and sporadic proprietorship, hard work was Byrd's

choice and his only heritage.

As deputy head of the family, he financed for two brothers the college education he had denied himself. By the time Harry Byrd was of voting age, he had impressed himself on a growing area of the Virginia community as a coming man in the press and in politics. There duly followed a state legislative career of distinction, a tenure as Governor unatched before and since for administrative ability, a stable economy and a party organization then and since totally free of corruption.

The trend of political science education in this country, and the wide collegiate and popular acceptance of the Welfars State as the expression of the only authentic American liberalism, have obscured the fact that there were earlier and proved claims to the designation. So that, as a subscriber to Woodrow Wilson's economic and social reforms, and to the 1932 Democratic platform which Franklin D. Roosevelt pledged to carry out if elected, Harry Flood Byrd was also a certified liberal. As such, he played one of the decisive roles in Roosevelt's first nomination.

Not until the second New Deal completed the blueprint of Roosevelt's shift toward the Federal centralization and collective statism that began with the end of The Hundred Days in 1933 did Byrd the liberal find himself tagged as Byrd the conservative. He had not changed except in constructive adjustment to the larger Federal responsibilities generated by the Depression, the prewar emergency and then the Second World War itself. But the thinking of Byrd's party had changed to the point of adopting the Hamiltonian Federalist concept overthrown by Jefferson, the party's founder.

SENSE OF HUMAN DIGNTTY

A genial, courtly man, of natural compassion, with an acute sense of the common human entitlement of dignity, Harry Byrd did not oppose the various judicial and legislative compulsions of interracial association on the prompting of personal or group prejudice. He opposed them as invasions without constitutional warrant of the right of free choice of association in essentially intimate environments. He did not oppose Government deficit spending in all circumstances—such as war, war emergency, internal disaster—but as a fixed policy in a flush as well as in a depressed economy, and one which had never demonstrated the efficacy to attain its stated goals.

His death will not mark the date on the human calendar when, as the Swiss philosopher Amiel mourned a hundred years ago. "The age of great men is going." But certainly the end of Byrd's public career came when, as Amiel wrote in the same entry in his Journal, "The epoch of the ant-hill, of life in multiplicity, is beginning."

The War Against God in Lithuania

EXTENSION OF REMARKS

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mrs. KELLY. Mr. Speaker, during my service as chairman of the Subcommittee on Europe of the Committee on Foreign Affairs, our subcommittee has devoted considerable effort to finding out what is happening in Eastern Europe—and in reporting those facts to the Congress.

In one of the most comprehensive studies of this subject undertaken by the Congress, our subcommittee, nearly 3 years ago, held lengthy hearings on the social, economic, legal, and political developments in Eastern Europe. Many experts appeared before our subcommittee and their testimony filled two printed volumes which were so much in demand that they are virtually out of print by now.

Our able colleague from Connecticut, Representative John S. Monagan, did an excellent job in outlining and guiding those hearings, and deserves much credit for the results which they produced.

Again last year, our subcommittee held hearings on the conditions in the Baltic States, on the persecution of Jews in the Soviet Union, and on antireligious activities in all of the Communist-dominated countries of eastern and central Europe.

Because of our continuing interest in the plight of the people living under communism, I should like to call to the attention of the Congress a recently published book by Dr. J. Savasis, entitled "The War Against God in Lithuania."

I just finished reading a review of that book prepared by Father Daniel L. Flaherty, S.J., the executive editor of America magazine. The review itself is an excellent summary of the book—and a very clear and forceful exposé of the continuing war against God and religion being waged by the Communist regimes of Eastern Europe.

The bitter irony of that war comes from the fact that the constitutions of all of those Communist states guarantee their people freedom of conscience and belief—while in practice, no stone is left unturned, no effort spared by the regimes, to deny those freedoms to the

Mr. Speaker, under leave to extend my remarks, I should like to place in the RECORD, and commend to the attention of my colleagues, Father Flaherty's review of "The War Against God in Lithuania" which was prepared for publication in the Lithuanus magazine.

The review follows:

THE WAR AGAINST GOD IN LITHUANIA (By Dr. J. Savasis)

Anyone interested in a quick, cram course on how the Soviets go about suppressing religion need look no further than this small and inexpensive paperback by Dr. Savasis. It can be read and digested in a few hours at one sitting. The prose is spare and lean, with hardly a wasted word. Only occasionally does the author allow an ironic twist in a sentence to betray his objective reporting and reveal his personal feelings.

For a study of Soviet persecution of the Catholic Church, Lithuania makes an ideal paradigm. Before the Soviet takeover, 85.5 per cent of its more than three million inhabitants were Catholic; 94.4 per cent of its native Lithuanian population (80.5 per cent of the total population) were Catholics. Nearly every method known to have been used in other Iron Curtain countries was employed by the Soviet government of Lithuania, since the Communist pattern is generally the same everywhere. Dr. Savasis, therefore, has been able to analyze these patterns and narrate them in detail.

His book contains a host of documented facts and figures, but presented in a way that does not overwhelm the reader. The forbidding technical appearance of some other studies and reports of the situation I have read are happily absent here. (And if the statistics given here do not correspond in every detail to figures in other studies, it is doubtless because present-day statistics on the Church in Lithuania are extremely hard to come by—even for the Vatican). Dr. Savasis has also had the good sense to illustrate each pattern of Soviet persecution with concrete examples that make the actual application of each Communist tactic crystal clear, even for readers not yet familiar with Soviet methods or Communist double-talk on the subject of religion.

In the straightforward manner I find so appealing in this book, Dr. Savasis begins with an historical survey. His first five chapters cover only 30 pages, but they are brilliantly written. After a brief examination of pre-war Lithuania to set the scene, he vividly sketches the first Soviet take-over of the country. As a result of the infamous Ribbentrop Pact, Red Army troops invaded Lithuania on June 15th, 1940, after only a ten-hour ultimatum. Within one month, the occupying forces had announced the "separation of Church and state," expelled the apostolic nuncio, forbade teaching religion and recitation of prayers in schools, dismissed all chaplains, nationalized all private schools, arrested 2,000 Lithuanian leaders and elected a new Soviet Parliament from a single list of Communist candidates.

Within a year, 34,260 Lithuanians—the first of a planned 700,000—were shipped to Siberia. Bishops and priests were among those deported; seminaries were closed, all church property confiscated; the clergy left without any means of support. Moscow's emissary, Pozdniakov, told Church authorities that what had been accomplished in Russia in twenty years was to take only two or three years in Lithuania.

The Nazi occupation of 1941-44 meant little change for the Church. Schools and seminaries remained closed, Church property remained confiscated. More priests were deported, this time to Germany, and thousands more Lithuanians were deported—this time to labor camps in the Third Reich.

When the Red Army drove the Germans out of Lithuania in 1945, therefore, the Communists could take up against the Church almost where they had left off. Organized partisan resistance, begun under the Nazis, became the pretext for new and more vehement mass deportations. And because the bishops refused to denounce the resistance movements, the Church and the hierarchy were especially hard hit. By the end of 1947, Lithuania was left with but a single bishop. In that same year, the last remaining convents and monasteries were closed and religious communities dispersed; any person discovered to be a member of a monastic institution faced imprisonment or deportation.

There was a slight breathing spell or "thaw" following Stalin's death in March, 1953; it included an amnesty for some prisoners in Siberia. 35,000, or less than 10 per cent of the deportees, returned to Lithuania. The others, after their release from the prison camps, were forced to remain in Russia. About 130 priests returned to Lithuania, though some remained voluntarily in Russia to minister to the exiles there. Two bishops returned, but were not allowed to administer their dioceses. They had to live where they were told and they died in Lithuania without ever regaining their pastoral functions. In 1955, Rome appointed two new Lithuanian bishops. One has never been permitted by the Communist regime to assume his duties; the other operates under severe government restrictions—forbidden even to issue a pastoral letter.

By far the largest part of Dr. Savasis' book, though, deals with the present status of the Church in Lithuania under Soviet persecution. It is in these pages that he analyzes and explains in great detail the tactics of the Communist war against religion. It is in these pages, too, that he presents an outstanding handbook of Soviet strategy for anyone who cares to study the full range of Communist methods vis-a-vis the Church.

Since Lithuania is considered part of Soviet territory, the status of religion is covered by Article 124 of the Soviet Constitution, that peculiarly worded article which guarantees "freedom of religious worship and freedom of anti-religious propaganda. Dr. Savasis begins, then, with an analysis of the massive Soviet campaign of atheistic propagands—in the factories and on the farms, in the schools and in all social organizations, in the press and the mass media, in the arts and cultural activities. Even doctors are pressured into testifying that such religious practices as the kissing of crucifixes or relics, or the dipping of fingers into holy water, are unhygienic and dangerous to public health. Courses in atheism are required in all schools, and "Universities of have been set up for the sole purpose of training lecturers and teachers of atheism.

The youth of the country are the special target of this indoctrination. It begins in kindergarten (specific examples are given in the book) and continues through the university. Dr. Savasis even includes a sample of the official lesson plans followed in grades 5 through 11. Unless a student masters his course in athelsm at each level, he cannot progress to the next level of education. In the higher grades, students are given anti-religious propaganda duties; if they refuse, they lose their scholarships or are expelled from school. Even during summer vacation, they are required to lecture and conduct atheistic discussions in summer camps for younger children. If they fall to do so, they cannot return to school.

In order to "protect" children from the religious influence of parents and grand-parents, a law forbids all persons under 18 to attend church. Parents who refuse to co-operate can lose their jobs or suffer other penalties. The same is true of parents who insist on having children instructed by the

parish priest, which is strictly forbidden. Children are also forbidden to participate in religious services as altar boys, choristers, etc.; they may not even march in a church procession. Parents and priests who permit children to violate these regulations can be severely punished.

Priests who do teach religion to young people are accused of violating "Soviet cult regulations" (since Communist culture is officially atheistic) or of violating "freedom of conscience" (since they contradict what the children are taught in school). The press constantly accuses priests of such violations, but no newspaper will print a denial by a priest of such slanders nor will any court try a libel case brought by a priest. The reason is that such slanders in the press are seen as a legitimate extension of the "freedom of antireligious propaganda" clause of Article 124.

It is impossible to list in this review all the ways by which the Soviet government of Lithuania persecutes religion. Dr. Savasis, however, has outlined, analyzed and illustrated every facet of Soviet strategy. From this standpoint, I cannot recommend the book too highly. About the only tactic used in other Iron Curtain countries that is not mentioned in this book is the now-familiar attempt to form a "national" Catholic church subject to the State. The aim of this maneuver is to split the Church away from Rome, thereby weakening it and ultimately destroying it in practice. I should note in closing, however, that such an attempt was made in Lithuania. It failed and was quietly shelved, however, when no authoritative clergyman could be found to serve as a figurehead for such a government controlled church.

DANIEL L. FLAHERTY, S.J.

The War on Hunger Will Bring Benefits to U.S. Business

EXTENSION OF REMARKS

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1966

Mr. HANNA. Mr. Speaker, an excellent article in the March 1, 1966, issue of Forbes has just come to my attention. I feel that the discussion it presents on the beneficial aspects of the war on hunger for U.S. business is of sufficient importance to warrant its inclusion in the Record. I hope that the Members of Congress will note especially the spirit of cooperation that exists between the private and public sectors for work on this urgent humanitarian problem.

The article follows:

WORLD HUNGER: ENEMY OF U.S. PROSPERITY

Two-thirds of the people of the world are now face to face with famine. Humanitarian reasons aside, the U.S. cannot let them starve because a starving nation is not a market.

One billion people, a third of the world's population, drag themselves through the day weak from hunger, an easy target for disease and frequently for death from starvation. Another billion are badly mainourished, almost on the borderline of starvation. What we call progress, civilization, prosperity is meaningless to two-thirds of the human race. These people are only half alive. They are half dead from hunger.

The average American consumes 3,100 calories a day in foods rich with proteins, vitamins and minerals. In the underdevel-

oped nations, the average person must drag his body along on a mere 2,030 calories a day, and his food usually is deficient in those nutrients. While the U.S., Western Europe, Japan and a few other nations get richer, the hungry get hungrier, because, in the underdeveloped part of the world, human fecundity is outstripping agricultural fecundity. In Asia and Latin America in the past five years the population has risen by 12% and 17%, respectively. In contrast, production of food has risen by only 10%. The result is that per-capita food production has fallen by 3% in Asia, by 7% in Latin America.

ica.

The deadly effects of the population explosion aren't for tomorrow. They are here and now. Today.

As Chairman Robert S. Stevenson of Allis-Chalmers puts it: "The U.S., Canada and Australia are going to have to feed the world, or we're going to have to help the world feed itself." Nobody realizes this more keenly than President Lyndon B. Johnson and his top aides. The more newsworthy problems of Vietnam and inflation have not, even for a day, crowded it out of their deliberations.

Humanitarian motives aside, the President and his aides know full well that the U.S. economy cannot continue to grow without an expanding world market. Moreover, as the President has noted, quoting Seneca, "A hungry people listens not to reason, nor cares for justice, nor is bent by any prayers."

The malnourished masses love their children as intensely as well-fed Americans love theirs. They are not about to starve peacefully and quietly, in patience, resignation and fatalism, as their ancestors might have done. They know there is a world without hunger somewhere outside their dusty villages. They have transistor radios, and they have bumped in rickety buses into market towns. They have taken seriously the politicians' promises of a better life. They will riot and kill to achieve it. They are doing so right now.

ESCALATION

Almost in desperation, the U.S. plans to escalate its efforts to deal with the world hunger problem. In so doing it will create tremendous opportunities for businesses that have the knowhow, the foresight and the capital to help end hunger.

President Johnson fired an opening gun

in the stepped-up war against hunger he sent a message to Congress last month, asking for a new food program to replace the present Food-for-Peace program. Public Law 480, which expires this year. The Presi-dent did not spell out all the details of his Food-for-Peace Food-for-Freedom program, but, even agricultural experts agree that it eventually will have an enormous impact on the entire U.S. economy. For one thing, it will change the whole direction of the foreign aid program. Until now, foreign aid has gone primarily toward industrial development; hereafter, it will be directed more toward agricultural development. The Food-for-Freedom program will have an even greater impact on U.S. agriculture. Since the first Agricultural Administration Act, the U.S. Government has attempted to keep food production down. Now, the Administration plans to offer inducements to farmers to raise production of certain foodstuffs. Under the Food-for-Peace program, the U.S. sent abroad primarily those agricultural products it had in surplus in government warehouses. Now, it will gear its production more directly to the needs of the hungry, using incentives to increase production of certain foodstuffs when necessary.

Out of this inevitably will come several other developments: Little by little, land which has been retired from production under the present farm program will be brought back into cultivation. The exodus of marginal farmers into the cities will be speeded

d

up, since they will not have the capital to expand production as the Government re-The big farmers will get bigger. Even if world prices of agricultural products don't rise, the big farmers will become so efficient and have such an enormous market they will be able to prosper with lower subsidies-or even without them.

One expert. Don Lerch, a Washington management consultant who specializes in agriculture, believes that by 1976 there will be only 500,000 farmers in the U.S. (as compared with 3.2 million today). But, he quickly adds, they will all be immensely prosperous.

The farmers of Canada and Australia also will benefit. Both countries, as a result, are

likely to keep booming.

The U.S. plans to fight the war against hunger on two fronts. The first will be a crash program to supply the underdeveloped countries with food. The U.S. has been giving away \$1.5 billion worth of food abroad every year under Public Law 480. If Congress approves the President's new program as seems all but certain-food shipments could rise to \$3.3 billion by 1967-68. This move is designed to cope with such emergencies as the recent drought in India, which already has led to Communist-organized riots in the state of Kerala.

In the long run, the second front will be the decisive one. This is the self-help part. Every nation receiving U.S. aid will have to promise to build up its own agriculture as swiftly as possible. Not only promise, but show results. The reason for this is simple. 'We don't have enough capacity to feed all these people," says Secretary of Agriculture Orville L. Freeman. "Unless they learn to feed themselves, there will be world famine. The estimated increased needs between now and 1980 are in the neighborhood of 300 million tons. The potential reserve productive capacity of this country is 50 million to 55 million tons more. There is a 250-millionton gap here that only the underdeveloped nations themselves can fill."

Along with the food, therefore, the U.S. will send the underdeveloped nations fertilizer and farm equipment. It will also encourage U.S. companies to build fertilizer plants and farm-equipment factories abroad It will teach farmers in Asia and Africa and Latin America how to make the most of the land they have. It will urge—and even arm-twist—governments to re-rig archaic policies in the field of price incentives, farm credit and land reform. This will all be done under the Agency for International Develop-

ment (AID).

ß

Increasing food shipments abroad will mean increasing production at home, for according to Freeman, the reserves in government storage don't come anywhere near the world's requirements. "Our reserves are now in the land rather than in the storage bin," he says. Grain in storage has been dropping steadily since 1961-wheat, from 1.4 billion bushels to 800 million; feed grains, from 77 million metric tons to 50 million.

This means that millions of acres of land that have been retired under the present farm program eventually will be brought back into production as needed. It will be done gradually, Freeman says, first to prevent chaos in the marketplace, and second because there isn't enough shipping to handie all the food the U.S. farmer could pro-duce if the wraps on him were taken off all

All told, there are now nearly 57 million acres of U.S. farmland "in reserve." man won't reveal just how many he intends to put back into production, but some government officials believe it will be somewhere between 5 million and 7 million acres. He already has taken a small step in that direc-tion. "Just last month," he points out, "I discontinued the alternative of voluntary acreage reduction whereby a spring wheat

producer could take 10% out of production and get paid for doing it. The producer no longer has that option. He has to plant his full allotment.

MURE TO COME

The acreage allotment for rice will be increased this year by 10%. Many experts believe it will eventually be necessary to increase the allotment for winter wheat. Sava Claude W. Gifford, senior economist of Farm Journal: "A shortage in wheat is only a few years away.

years away."
Freeman's guideline will be the President's
promise to Congress to "bring these acres
back into production as needed—but not to
produce unwanted surplus." In short, to change the very nature of U.S. agricultural policy but without causing chaos on the

farm and in the marketplace.

In his message, Johnson called for in-In his message, Johnson teams The Secre-tery of Agriculture believes this can be achieved by the judicious use of incentives more acreage with guaranteed prices. "In corn," he says, "we have too much. We still have a surplus. We'll do something which will make it possible for those farmers to plant soybeans on those acres and come out just as good. We need the soybeans. We don't need corn." Soybeans produce a high-protein, low-cost diet meal for animals. They also are one of the richest sources of protein in food mixes for humans.

Robert W. Engle, manager of marketing of Allis-Chalmers' farm equipment division, believes that increased production will have to come from improved farm equipment and improved farm techniques, as well as from greater acreage. "One area where output per man hour has been neglected is farm materials handling," he says. "There are going to be some giant strides made in coordinating "There are going a farmer's growing system with a pushbutautomated method of handling and

storing his crop. "Another way of increasing farm production is . . . by growing two stalks of corn where only one grew before. . . . Instead of

growing corn in the standard 38- or 40-inch news we've tried it in 30 or 20. Yield often

increases 10% or 15%.

CHANGE IN POLICY

Under Public Law 480, the U.S. has either been giving the food away or else selling it for local currency. In simple fact, selling it for local currencly almost invariably meant giving it away, because so little of the currency can be used. According to Sam I. Nakagama, a senior economist of the First National City Bank of New York, the U.S. now holds an amount equivalent to twothirds of the currency of India as a result of selling the Indians food. Must of this money obviously can't be used; spending it would create horrendous inflation. Under a tacit agreement with the Indian government, therefore, the U.S. simply hoards it. The U.S. now holds \$2.8 billion in counterpart

Under the Food-for-Freedom program, food will no longer be sold for local currency and only a maximum \$800 million worth will Food-for-Freedom be given away. Only those nations which clearly can't subsist except on charity will receive free food. The U.S. will grant the others-nations like Taiwan, Spain, Greece and the United Arab Republic—long-term credits at low interest, perhaps 2%, to buy the remaining \$2.5 billion worth. They will have to pay the world market price. They They William They will be required to repay the money in dollars.

Prices also should be bolstered by the fact that at times, the U.S. will have to get the food on the open market.

There are those who fear that, by helping other nations increase their food production, the U.S. will destroy its own commercial food-export market, which now amounts to about \$4.5 billion a year. According to Freeman, these fears are groundless. Experience

proves, he says, that, as a country raises its proves, he says, that, as a country raises to production of food, what it does is switch to importing other U.S. agricultural products like animal feeds. The result is a net gain for the U.S. farmer. Freeman cites the case of Japan. That country used to get massive agricultural aid from the U.S. It soon may be buying \$1 billion worth of U.S. farm products annually on a straight cash basis. Western Europe, which also used to receive agricultural aid, is now this nation's biggest customer of feed grains and poultry. In 1964, U.S. food exports to Western Europe totaled

As Freeman sees it, prosperity abroad, therefore, will mean prosperity at home. "Every 10% increase in per capita income [abroad] results in a 16% increase in the commercial imports of our products," he says.

In the fight to increase production of foodstuffs abroad, the U.S. will count particularly on the manufacturers of fertilizer. Says David E. Bell, Administrator of the Agency for International Development: "Fertilizer will be our biggest need." Dr. Lester R. Brown, staff economist of the Department of Agriculture, adds: "Ironically, the less-developed regions of Asia, Africa and Latin America, which contain two-thirds of the world's peo-ple and where the food needs are greatest, use only 5 million tons of the 35-million-ton annual world total. In other words, only one-seventh of the world fertilizer supply is used in the regions containing two-thirds of the population. As the supply of new land that can be brought under cultivation diminishes, fertilizer becomes the principal substitute for land in the food production process.'

FERTILIZER BOOM AHEAD

The U.S. is now shipping about \$325 million worth of fertilizers abroad every year through foreign ald and commercial channels. By 1970, it will be shipping about \$1 billion abroad each year. In addition, the U.S. will spend about \$250 million to help build fertilizer plants in partnership with natives in the underdeveloped countries such as Gulf Oil's project in Korea. Says an AID chemical engineer: "One mil-

lion dollars worth of food aid will feed 70,000 people for a year, but the same \$1 million put into fertilizer would help feed

200,000 people for a year."

AID's Bell is also counting on farm-equipment manufacturers and food processors to help beef up the agriculture of the underdeveloped countries. The farm-machinery makers will have to develop equipment especially designed for their needs, he says, point-ing out that in India, for example, "the land holdings are very small. Farming takes on the characteristics of gardening. You need small power units, hand equipment almost."

A great deal rides on the success of this new program—which partly explains why support for it seems to cut across party lines. President Johnson's proposals have the support of many Republicans, who in the past were leery about foreign aid. "Much of the Republican leadership in Congress comes from farm states, where food-aid programs naturally have strong support. Moreover, as Senator Mil. Ton R. Young of North Dakota, the ranking Republican member of the Senate Agricultural Appropriations Committee, points out, "Republicans originated the whole Food-for-Peace program back in the Eisenhower Administration." He adds: "I think the President will get substantially what he wants. Giving people food and helping them produce more food is the best kind of foreignaid program."

Is the Food-for-Freedom Program alone big enough to deal with the problem? No. The sad fact is that, no matter how generous it is, it can only supplement the efforts of the underdeveloped countries themselves.

Some pessimists think that the problem is hopeless; that the population explosion is

now out of hand. But some very hard-headed

experts think otherwise. To quote Bryson M. Filbert, vice president and director of Esso Chemical Co., a big factor in the world fertilizer business, "It is possible to double or even triple agricultural production in all of Asia, Africa and Latin America through the use of more fertilizers, more irrigation, better seed varieties, more pesticides and other improved farm practices. I have been told by experts that four times the present world population could be supported by widespread use of improved farming methods."

But the key word is "could." To turn "could" into "will" is going to take some very fastic, very fast changes in the under-developed countries themselves. Almost without exception they misread the economic history of the prosperous nations. They only noticed that these countries built industries and turned farmers into workers. What they failed to note was that in most cases such countries did so only after developing a prosperous agriculture first. In part this misreading of history was due to an obsession with the "Soviet experiment."

BUSSIA'S BAD EXAMPLE

The Soviets reversed the normal process of economic development. By starving agriculture of capital and by keeping food prices artificially low, they made the farmers bear the cost of building hydroelectric dams and plants and steel mills. The Soviet Union became a great industrial power, and this bedazzled the underdeveloped nations. What they failed to realize was a fact that has since become obvious to everyone: The Soviet Union produces more steel than it needs, but it can't feed its steel workers without importing food.

India is the classic case of a country that was misled by the "Soviet experiment." India concentrated all its capital and most of its foreign aid into building up industry. It used the free food it received from the U.S. to keep food prices low for industrial workers. The program has proved self-detating. Low food prices have kept the Indian farmer too poor to provide a market for the goods the industrial workers are producing. At the same time, the low prices have discouraged the farmer from attempt-

have discouraged who are ing to increase production.

Says Richard W. Reuter, director of Foodfor-Peace: "The Indians said they were putting priority on agriculture in every one of their five-year programs, but agriculture was always the first place to get short-changed when they ran out of money. This year, according to the Indian government's own minimum goals, there should be production of 1 million tons of nitrogenous fertilizer. In fact, production is less than 400,000 tons."

The U.S., Bell says, it not without blame for this situation. "We didn't use our maximum leverage to get the Indians to put more emphasis on agriculture. We saw what was wrong, but we didn't do enough about it."

Under the Food-for-Freedom program, the U.S. plans to get tough with India and the other underdeveloped nations. They will have to put agriculture first or they won't get aid. As a Départment of Agriculture official puts it: "The President is going to lean hard on them."

The job of educating the Indian farmer to farm more efficiently will be a staggering one. There are 60 million farmers in the country, spread over 500 million acres of crop land. They speak 14 different languages. The overwhelming majority of them is illiterate.

BREAD VERSUS BULLETS

And yet, to say that India is hopeless is almost the same as saying that one day Red China will dominate all of Asia; India is the only other potential world power on the continent. Neither President Johnson nor Congress is willing to concede Asia to Red China, and, while they realize the difficulties in raising food production in underdeveloped

countries, they can point to several notable triumphs in the past. In Greece, for example, the U.S. persuaded the government to give wheat farmers a better price and a guaranteed market, and the results, says Foodfor-Peace Director Reuter, "were next to miraculous. They're now producing wheat till it comes out of their ears."

Undaunted by the difficulties, therefore, at least half a dozen congressmen already have introduced bills to implement the President's program. One of the first was Representative Hasold D. Cooley (Dem.) of North Carolins, chairman of the House Agricultural Committee. "I am convinced that, in the end, bread will be more important that bullets in bringing peace to the world," he says.

To be perfectly blunt about it, bread will be more important than bullets in assuring that the economic growth of the U.S. itself will continue.

U.S. BUSINESS VERSUS MALTHUS

It will take all the nation's economic resources to defeat the arithmetic of starvation. Obviously, the U.S. farmer will be the first to feel the impact of the Food-for-Freedom program. In a recent talk with midwestern grain dealers, Robert C. Liebenow, president of the Corn Industries Research Foundation, predicted that food exports under the program and through regular commercial sales would increase by 50% within the next few years." They now amount to \$5 billion a year. A 50% increase would bring them close to \$9 billion. Land values are going to rise. Smart farmers with capital will become rich.

Major segments of U.S. industry are going to benefit, too. The menace of starvation will mean steadily mounting sales for the producers of fertilizers, farm machinery, seed and feed. According to Liebenow, in order to increase exports by 50%, the farmer will have to spend \$3 billion a year more for those products than the \$13 billion he spends now. Little wonder that farm machinery companies are expanding as fast as they can, that almost every major oil company is striving to build a major stake in fertilizer.

James Devlin, director of domestic agricultural sales of American Metal Climax, which makes fertilizer, goes further. Increased food exports, he says, will "affect the whole gross national product." The railroads will prosper, he points out, because the food must be shipped from farm to seaport by rail. The steel industry will profit because farm machinery is made of steel. Even the paper industry will profit, he says, noting: "We put our fertilizer in paper bags."

SHIPS AND SHIPPERS

"It will mean a lot more business for us," says Alvin Shapiro, executive vice president of the American Merchant Marine Institute, which represents the nation's shipowners, who will have to carry the foodstuffs and fertilizer and farm machinery abroad. He doubts, however, that it will have an immediate effect on the nation's shipbuilders because "there is still tremendous unused capacity around. The big tankers are excellent for shipping grain and are not being fully utilized." Increased exports also will mean a lot more business for such commercial grain shippers as Cargill and Continental Grain.

Claude W. Gifford, senior economist of Farm Journal, believes that, aside from the farmer, the makers of fertilizer will profit most from the Food-for-Freedom program. "You can get fertilizer on the land quickly," he says, "and it's easy to teach peasants how to use it even if they can't read. It's harder to teach the operation of machinery, and there's the problem of repairs."

This does not mean that manufacturers of

This does not mean that manufacturers of farm machinery won't benefit, too, Gifford is quick to add, naming specifically Massey-Perguson, Deere and International Harvester. Others who will benefit are seed companies

like DeKalb, Northrup King and Pioneer, he says.

DEMAND FOR BOADS

Norman R. Urquhart, assistant vice president in charge of commodities of the economics department of the First National City Bank of New York, foresees a growing demand abroad for American earth-moving machinery. "When I was a boy growing up on an Illinois farm, one of the farmers' great cries was for good farm-to-market roads. We have them now, but the rest of the world needs them." This should help Caterpillar Tractor, he says. He also sees great opportunities for companies that build chemical plants, like Fluor, Foster Wheeler and Pullman's M. W. Kellogg division, "if they can get the contracts against foreign competition."

Some experts fear that increased production of foodstuffs in the U.S. and abroad actually may create a world shortage of fertilizers. Urquhart and one of First National's senior economists, Sam I. Nakagama, insist there is a world fertilizer cartel outside the U.S. Asked why U.S. companies don't attempt to break it, Nakagama says: "Perhaps they don't find it advantageous to do so."

Whatever the facts about this may be, according to Devlin of American Metal Climax, the world potash industry is geared to expand only at the rate of 6% to 7% a year. If demand rose to a 10% increase a year, Devlin admits, the industry wouldn't have the facilities to keep up with it for more than a few years. "We couldn't, in that time, bring out new mines," he says. Devlin doesn't believe that such a rise in demand is likely, but this view is far from unanimous.

One company that is all but certain to

One company that is all but certain to benefit is International Harvester. Says Hugh A. Davies, general manager of Harvester's overseas division: "We do research all over the world, in places ranging from Argentins, which is a net exporter of foodstuffs, to Africa, where the people eat bananas. We have facilities in 20 nations outside the U.S. We're in road-building, trucks and farm equipment. Only where farming is done by hand and horse do we not supply the tools. . . .

"We can fill any demands that come. We just hope that demand is created. Roadbuilding might be a big thing. You have to have a way to get the food to market. The hinterland of Brazil is an example. You need better roads, schools, dams and irrigation channels."

Deere & Co., already the biggest farm machinery manufacturer in the U.S., is spending heavily to expand abroad. These investments have yet to pay off, but Chairman William A. Hewitt is sure they will. Meanwhile, he believes, the new farm policy will mean a big sales increase for his company in the U.S. White Motor, which got into farm machinery through a series of mergers, now gets 30% of its \$638 million in sales from that business and is out for more. So are Allis-Chaimers and the revitailzed JI. Case

M

Since the war against hunger can succeed only if the underdeveloped nations learn to produce more food, the U.S. Government is particularly anxious for U.S. manufacturers and food processors to expand abroad. Says AID Administrator David E. Bell: "There are lots of American companies beginning to invest abroad in fertilizer plants and there will be more in years to come. International Minerals & Chemical is putting up a big plant in India. We've recently made two loans for fertilizer plants in Korea; there the principal American investors are Gulf Oil and Swift. Now we are working with Standard of Indiana, Armour and others on fertilizer projects."

Bryson M. Filbert, vice president of Esso Chemical Co., says: "We have already invested about \$90 million in facilities to produce ammonia, nitric acid and various other fertilizers and fertilizer compounds in Colombia, Aruba, Costa Rica, El Salvador and Spain. In addition, we are building or planning plants in the Philippines, Greece, Jamaica, Malaysia, Lebanon and Pakistan, as well as one in a very economically advanced nation, the Netherlands. In all, these plants will have more than 1 million tons of ammonia capacity and more than 1.8 million tons of fertilizer capacity. * * Their capital cost will exceed \$200 million.*

The company also is working on new techniques which, it hopes, will make the sand dunes of Tunisia and Libya bloom. These involve using oil to stabilize them.

dunes of Tunisia and Libya bloom. These involve using oil to stabilize them.

The U.S. Government is putting a great deal of pressure on the underdeveloped nations to make it attractive for U.S. companies to build fertilizer plants abroad. For a long time, India insisted that it handle all the distribution of fertilizers produced in that country by U.S. companies and that it also set the price. Standard of Indiana understandably refused to accept these conditions. AID put food shipments to India on a month-to-month basis until the Indian government let Standard of Indiana market the fertilizer itself at its own price.

OPPORTUNITY-AND PROBLEMS

Bell believes "there is a real opportunity in food processors themselves think it may be a long time before they make any great progress in the underdeveloped countries. Harry Meisel, technical coordinator for Corn Products International, points out his company has sold a product derived from corn called "Maizena" which has been known for 100 years in Latin America. Recently, it brought out a new product in Brazil, "Enriched Maizena." This is "Maizena" with proteins, vitamins and minerals added. "It solves the problem of getting nutrition into the diet in an innocuous way," says Meisel. But Corn Products is losing money on "Enriched Maizena" because the protein element, which is made of milk and soybeans, costs too much. One reason is that it's been difficult to shift Brazilian farmers to soybean production. U.S. farmers will shift from one crop to another at the drop of a dollar, but in Brazil, caution and suspicion prevail. It takes 15 years to get a Brazilian farmer to shift crops, Meisel says. Introducing a new product in underdeveloped countries, he concludes, is "a baptism of blood."

Quaker Oats has been having a similar experience with "Incaparina." This is a powdered cereal mix that contains cotton-seed and soy flour. Quaker Oats is promoting the cereal with an advertising campaign. Particularly effective have been movies which show babies before and after drinking the cereal.

"But," admits Michael Hore, general manager of Latin American and Pacific operations for Quaker, "we have a long way to go. It's a matter of education, and the money for that has to come from us."

Dr. Harold L. Wilcke, director of research for Ralston Purina, suspects there may be greater opportunities in the underdeveloped countries in processing food for animals than in food for humans. "In many areas," he says, "animals cannot economically compete in food value with direct consumption of grain. But in some areas, the land can grow food fit only for animals. These are areas similar to our Rocky Mountains, where grass is the only crop, and they exist in India, Mexico, and Venezuela. In addition, animals can compete when they scavenge or when they seat spoiled grains."

This could mean business for Ralston Purina's supplementary feeds, which help the animals grow faster and bigger, Dr. Wilcke says.

Clearly, the outlook is this: In the U.S.,

the economic impact of the Food-for-Freedom program will be swift. In the under-developed countries, however, the problems are as great as the need. For many of the companies that go overseas, these problems will make it difficult to show a profit for a long time. But for many the opportunity is simply too great to miss, whatever the risks.

The great 19th century clergyman-economist Thomas Malthus believed that population growth inevitably would outstrip food supply; only massive starvation and misery could re-right the balance, he said. It didn't happen that way in the countries of the West and in Japan, but it seems to be coming to that for the world as a whole. In the struggle to prove Malthus wrong, the know-how and enterprise of U.S. businessmen are going to prove mighty weapons.

THE TERRIBLE PATTER

In 1850, there were I billion people in the world. There are now 3.3 billion—more, it happens, than all the people who ever lived throughout all of history. The way things are going, in 15 years there will be 4 billion, and in 30 years, 6 billion. Those simple figures underlie the menace of what a worried writer calls "the terrible patter of tiny feet." The horrible fact is that 85% of this population increase will come from the underdeveloped countries which can't even support their present populations.

"Population control will have to go along with these agricultural programs," says Dr. Albert H. Moseman, AID Assistant Administrator for Technical Cooperation & Research, but he adds a warning: "We can insist only up to a certain point. It's a delicate situation. We could be accused of using potential starvation as a threat to get these people to do something against their own social values."

Dr. Moseman cites the case of India, where, he says, the infant mortality rate is so high, parents have to have six children to be able to have two or three survive to maturity. "As long as they still have to have all these children in order to have a few survive, you cannot convince them to cut down on the number of children they have," he says.

THE ANSWER

Some of the underdeveloped countries already have recognized the problem. Korea, Talwan, Pakistan, India, Turkey, Colombia and Chile (the latter two are overwhelmingly Catholic) have birth control programs in various stages of development. The method being used in those places, according to Dr. Moseman, "is the plastic loop, an intrauterine device."

The loop was invented by a U.S. doctor, Jack Lippes, and is made in this country by his own company, the Hohabe Co. of Buffalo. It costs Hohabe about 25 cents to manufacture, package and distribute. Overseas, the Population Council, a Rockefeller-supported organization, distributes it free. Dr. Lippes also permits anyone to manufacture it abroad without restrictions and without paying royalties. In the underdeveloped countries, the cost of making the loop runs to about 2 cents.

to about 2 cents.

Dr. Moseman believes the Lippes loop is the answer to "the terrible patter of tiny feet." Birth-control pills, he says, are "far too expensive" for people living in the under-developed countries.

According to Herbert J. Waters, AID's Assistant Administrator for Material Resources, Thalland is a good example of how a birth-control program can work. "In Thalland, they have a village mdiwife program," he says. "When a woman comes into the midwife station to get ready to have a baby, they set her up for the next time not to have a baby."

An Overmodest CIA

EXTENSION OF REMARKS

HON, JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. MOSS. Mr. Speaker, the following article from the St. Louis Post-Dispatch, which also appeared in the Sacramento Bee under date of July 7, 1966, is one which deserves the thoughtful consideration and reflection of every responsible member of the Federal Government:

[From the Sacramento Bee, July 7, 1966]
AN OVERMODEST CIA

Only in the most narrow and technical sense can it be considered accurate to say that the CIA has never made policy and never tried to influence a presidential decision. Those were the modest assurances which the agency's new director, Richard M. Helms, gave senators when the Armed Services Committee recommended approval of his nomination. They can scarcely be squared with the record of CIA operations in Iran, in Guatemala, in the Bay of Pigs invasion and in South Viet Nam.

Perhaps it is technically precise to say that the CIA does not make policy, but creates situations. This was certainly the case in the Bay of Pigs invasion, which from start to finish was a CIA enterprise, originated, as Arthur M. Schlesinger reports in "A Thousand Days", by CIA Director Allen Dulles and his assistant Richard M. Bissell Jr. By presenting a newly installed President with the situation of an exile force ready to invade Cuba with American training and support, the CIA created the circumstances under which the policy decision it wanted—the President's approval—was virtually assured.

This may not be making policy in the strict sense, but it is so close to it that the difference is not important.

Similarly in South Viet Nam it was the CIA that undertook to install Ngo Dinh Diem as head of a military anti-Communist government offering a military lodgment to the United States on the Asian mainland and thus undermining the neutralist basis of the 1954 Geneva settlement. Out of that situation grew on policy decision after another adding up to deep American involvement in an Asian land war.

It is true that at every stage of these and other CIA operations the agency obtained nominal approval from the National Security Council and the President. So the responsibility of its ventures has been widely shared. Yet it is a familiar fact of bureaucratic life that the agency which originates projects, controls the information about them and directs the day-to-day operations has an overwhelming influence upon the basic policy underlying them.

It is for this reason that the CIA ought to be kept under strict and severe control. That means, first of all, control by the President. We do not see how such control can be exercised unless very rigid restrictions are applied to the initiation of any clandestine operation (as distinct from the gathering of information) at the very beginning. It is not the American mission to go around the world setting up governments and knocking them down, and no governmental agency should enjoy carte blanche to engage in this business without strict supervision by the very highest responsible officials. That kind of supervision, applied with a heavy dose of skepticism as to the long-run effectiveness

of cloak-and-dagger work, should cut the CIA's "dirty tricks" division to a minimum.

Effective control also means congressional knowledge of what is going on. We see no good reason why members of the Senate Forgood reason why memoers of the senate For-eign Relations Committee should not be added to the "watchdog" group now nomi-nally responsible for keeping the CIA under review. That the agency's work vitally affects foreign policy is obvious, and the Senators who are responsible for reviewing our international relations should know what the CIA is doing all the time, early as well as

Midwest Governors Endorse Location of Bey Accelerator in Their Region

EXTENSION OF REMARKS

HON. JOHN R. SCHMIDHAUSER

OF TOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1966

Mr. SCHMIDHAUSER. Mr. Speaker, the Midwestern Governors Conference adopted a number of resolutions at its fifth annual meeting held in Cincinnati on June 19 to 22, 1966. I think one of these resolutions, concerning the proposed atomic accelerator, is particularly worthy of the attention of the Congress. As we are all aware, the the Atomic Energy Commission has narrowed to a handful the number of sites under consideration for the 200 billion electron volt accelerator, three of which sites are located in the Midwest. At their annual meeting the Governors formally endorsed the location of the accelerator in the Midwest and urged that the AEC consider fully the Wisconsin, Michigan, and Illinois sites in making its decision.

I would like to add my voice to this endorsement, Mr. Speaker. For too long the Midwest has been a stepchild when the time came to award Government research and development contracts. It is time that the intellectual resources which the Midwest has been exporting to other parts of the Nation are provided with an opportunity to contribute to the

region which trained them. The resolution follows:

RESOLUTION 1. PROPOSED ATOMIC ACCELERATOR

Whereas, construction of the proposed 200 BEV Atomic Accelerator in the Midwest would be a significant contribution to the continued economic growth of the area as well as a major factor in giving the Midwest a more vital role in the advancement of scientific research; and

Whereas, all three of the selected Midwestern sites being considered are characterized by having either the "nucleus of a strong accelerator design group", or one of the nation's outstanding Universities nearby; two of the most important criteria; and

Whereas, the proposed Midwestern sites have the natural and human resources, accessibility, good climate, and area available for experimental or expansion purposes; the prime prerequisites for site selection: Now therefore be it

Resolved by the Midwestern Governors' Conference, That it formally endorses the location of the proposed 200 BEV Atomic Accelerator in the Midwest and urges the Atomic Energy Commission to consider, fully, the Stoughton (Wisconsin), Ann Arbor (Michigan), and Weston (Illinois) sites.

Responsible Accident Reporting

EXTENSION OF REMARKS

HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. RONCALIO. Mr. Speaker, highway safety is a major issue confronting this session of Congress and is of great concern to the people of my State. have long felt that more realistic and responsible reporting can contribute much to public understanding of the real human tragedy involved.

One of the best pieces of accident reporting I have ever seen was done by my good friend, Chuck Morrison, in a recent copy of the Casper, Wyo., Star-Tribune. So that his realistic insights may be shared with those of us dealing in the abstractions of policy, I request unanimous consent that his contribution be printed in the RECORD.

The article follows:

PHOTOGRAPHER ON WRECKS: YOU NEVER GET USED TO IT

(By Chuck Morrison)

The wail of a siren cuts the night air, the phone in the news room has that sound of emergency that only a phone seems to have at times. "Bad accident above Garden Creek turnoff," The voice is shouting and nervous. "Bad accident above Garden Creek You jump into your car and head toward the scene.

Flashing red and yellow amber lights stab the darkness on the road, a Highway Patrol unit with sirens shrilling, passes in a hurry. You pull up to the scene of the accident. A Volkswagen is grotesquely hung in a guard rail on its side, in the middle of the road is the ambulance with its red lights flickering, sideways. Spotlights stab down the side of the boulder strewn mountain. You pick out white ambulance attendants, volunteers and patrol officers struggling with an overturned car.

The accident victim is pulled from the

wreckage, blood whips across the sagebrush and across the faces and clothes of rescue workers

The wind is blowing a terrific gale and it is bitter cold. From the makeshift stretcher, comes the soft sucking sound of air as the injured man fights to breathe. His left arm flops aimless, and his face is badly smashed. It is a sound you never get used to -it is the sound of the dving.

The ambulance attendant stumbles, and the injured man falls off the side of the stretcher. He is picked up, placed in the center and they struggle upward, someone falls and the victim is pitched off again. Finally he is placed in the ambulance along with the walking injured for the long ride to the emergency room at the hospital.

Three doctors work feverishly to save a life, the night nursing supervisor is helping the emergency room nurse give oxygen. pressure keeps dropping, and the physicians work against time and shock.

Short, terse orders are coming from the shrouded curtain that surrounds the injured The situation becomes tense, every effort is made by the three physicians to save the young man.

It's too late. Shock, loss of blood, and other injuries take their toll of another highway victim. It's 10:55 a.m.

Outside in the waiting room, a relative of the victim becomes hysterical, a quick call is put in for help. Police officers arrive within minutes and get him quieted down. A phone call is made to the next of kin.

Meanwhile, on the mountain road, a patrolman is busy trying to keep traffic mov-ing. The morbid curious are attracted by the flashing lights. "What happened?" a ing. head shouts from a passing car, "Can't you see there has been an accident," a patrolman says. "Yes, but what happened?"

The wrecker men move in with quick deliberate jerks of their vehicles. One attaches a cable to keep the small foreign car from whipping off the mountain road. The other moves across boggy mountain sod to the fatal CAF

"What's your name, son?" asks the patrolman as he questions the driver of the Volkswagen.

He hands the patrol officer his driver's license. "Been drinking?" says the officer, "Yes, but only one beer!" "What speed were you going?" "Oh maybe 50 or 60 mph." "What happened?" "Well this other car started to pass me on the curve and that's all I know . . ." The officer continues writall I know . ." The officer continues writing out his accident report. "Were you wearing seat belts?" he asks, and continues taking notes.

A Sheriff's deputy comes up after directing

traffic away from the accident scene.
"Need any help with your measuring tape,
Harry?" They move off down the mountain road in the cold wind measuring the long black skid marks made by the two vehicles.

The wrecker men continue their methodic cleaning up. Glass is swept up, a boot picked up, a beer stein thrown into the blood spattered front seat along with papers, personal belongings, pieces of the car.

"All wrapped up, Harry. How about a hot cup of coffee when we get down. Okay?"

The patrol cars move on down the mountain, the wreckers slowly pace their way down

the road with their broken cargo. You never get used to them.

Ken Bruning, a Fine American

EXTENSION OF REMARKS OF

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. WOLFF. Mr. Speaker, the death of Ken Bruning of Levittown, N.Y., long a leader in the Disabled American Veterans both in Long Island and nationally, is a sad loss for his community, for the organization he served so well, and for the Nation.

Ken Bruning lost his sight as a result of his service to the Nation during World War II. Yet, in spite of this greatest of physical handicaps, he fashioned a constructive career, raised a wonderful family, gave unsparingly of himself to the causes in which he believed, and was never heard to complain.

To me, Ken Bruning exemplified the quiet courage of the thousands of Americans who have given and are giving far more than the rest of us so that we all might live in freedom.

8

The

PCe

CA

Ci ti

In a memorable press conference, President John F. Kennedy suggested that life is not always fair in its demands upon those who serve the Nation. Jack Kennedy's death was tragic testimony to the truth of his words.

It is sad but true that some give everything including their lives, the greatest gift of all, while others give little or nothing. We do not know why.

I know this: Ken Bruning can take a place of honor in the company of our Nation's heroes.

His quiet courage has won for him our deepest admiration and of him it can be truly said: Here was a man.

L.B.J.'s Foreign Policy Successes

EXTENSION OF REMARKS

HON. RONALD BROOKS CAMERON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. CAMERON. Mr. Speaker, selfcriticism has long been an attribute of the American character. No person or policy can expect to avoid vigorous inspection from our press, our political leadership and from various public forums.

In recent months American foreign policy has been undergoing an intensive and extensive study by all of these groups. Critical study is, of course, necessary and helpful, but I cannot help feeling that many observers have become overly concerned with what is wrong with our foreign relations and have neglected to consider a growing roster of successes that have become evident.

Iffe magazine has, I believe, succeeded in reminding us of many of the positive results of the administration's foreign policy. Their editorial of June 24, 1966, has brought into perspective many recent occurrences in Asia, Latin American, and Europe. As a broad overview of President Johnson's world policy, the editorial has served to strike a much needed note of optimism. I applaud their calm reappraisal and commend the editorial to my colleagues:

The Johnson administration has been looking for fresh ideas and initiatives in foreign policy. Examples are the President's espousal of a "summit meeting" of Latin American leaders and of regional development programs in Africa. Others probably lie ahead. Some White House advisers exude a new mood of resolute optimism. Johnson's critics dismiss all this as an "exercise in rhetorical rejuvenation" or attribute it to the White House fears of the coming congressional elections based on Johnson's own bad showing in recent polis. Yet a glance at the major sectors of U.S. foreign policy will show that a measure of optimism is not out of place.

Let us start with Europe. On the anniversary of D-day last fortnight, peace in Europe had lasted one day longer than it did between World Wars I and II. As it passed this milestone Europe had less reason to expect another war than at any time since the Cold War began. This despite De Gaulle's efforts to dismantle NATO. Even De Gaulle's efforts to dismantle NATO. Even De Gaulle counts on the natural coherence of the Atlantic world, and its U.S. nuclear umbrells, for ultimate security. Meanwhile the changes in NATO are echoed by fissures in the Warsaw Pact, and the so-called "satellites" of Eastern Europe show increasing independence of Moscow.

In Asia there is a grisly war, but it is not a very dangerous one either to the U.S. or to

world peace. Moreover, the news from Vietnam is so much better than a year ago that Johnson and McNamara ought to be taking bows instead of brickbats. The fierce battle in the central highlands—a "spoiling attack" on General Giap's North Vietnamese troop concentrations—is another sign that the initiative has moved to U.S. and Vietnamese forces. The casualty ratio: the enemy desertion rate; the increased mobility, firepower and morale of Westmoreland's troops, all justify his confidence that he can handle the "monsoon offensive" which Giap may be preparing. Even the Saigon political situation looks more stable on the first anniversary of the Ky directory.

the Ky directory.

Red China is going through a purge, the first major split in its leadership since the Mao regime took power. It may signal the end of that regime and its successor may be less bellicose and more concerned with China's enormous internal problems. Maoism has lost all influence in Indonesia, whose new leaders have just terminated Sukarno's insane war on Malasia and seem to be steering their unfortunate country back

to ways of order and sense.

Indeed a new Asia is beginning to take Perhaps its birthplace will be recorded as Seoul, the capital of an even bloodier war than Vietnam's only 15 years ago. In Seoul last week the foreign ministers of nine free Asian and Pacific countries-Japan, South Korea, Taiwan, Thailand, the Philippines, South Vietnam, Malaysia, Australia and New Zealand-met to discuss their mutual desire to cooperate on trade, development and other common problems. For the first time the new men of Asia (as Thei Foreign Affairs Minister Thanat Khoman put it) "are getting together without being in-fluenced by any of the former colonial pow-The initiative came from the proud leaders of the Republic of Korea, a successful new nation (economic growth rate almost eight percent a year) anxious to assert its

Asian identity.

This new free-Asian regionalism is indigenous, not made in America, and it is welcomed by U.S. policy makers. The U.S. role is mainly to give it financial and technical aid, as through the Mekong Basin project and the Asian Development Bank.

In Latin America our main regional agencies are the Alliance for Progress and the Organization of American States. In what was widely criticized as his major blunder, President Johnson broke the letter of the nonintervention treaty on which the O.A.S. was founded when he unilaterally sent over 22,000 U.S. troops to quell the Dominican rebellion of April '65. That "blunder" does not look so bad today.

Johnson intervened, so he said at the time, solely to save lives and to assure a free election. He has succeeded in both. His intervention enabled the C.A.S. to take control of the troops of six nations (mostly U.S.) that have kept substantial peace for a year in the Dominican Republic. C.A.S. picked the provisional president, Garcia-Godoy, whose disinterested integrity made the recent election possible. C.A.S. oversaw the voting and can now withdraw its remaining 8,000 soldiers as soon as the new president-elect, Joaquin Balaguer, agrees.

Balaguer campaigned on a promise of civil peace, and the Dominicans, especially the rural women, supported him with a land-alide. One can even hope that the Dominicans, despite their long history of violence and tyranny, are now on the road to successful self-government. Hats should be off to Garcia-Godoy, to the U.S. representative to the O.A.S., Eliswoth Bunker, and to all others who made possible this success story (knock wood) of inter-American diplomacy. And not just diplomacy. Democracy also had a victory. The right of a people to choose their own government is the essential principle at issue in our struggle with Company of the control of the company
munism. Whenever a people freely exerts that right, our side scores a political victory of a kind that our adversaries can't answer.

or a kind that our adversaries can't answer.

An even more crucial election is scheduled in Vietnam in September. Some U.S. policy makers are gloomy about it, since the Vietcong will try to sabotage it and the Buddhists threaten not to participate. Yet the very prospect of an election, and Marshal Ky's evidently serious preparations for it, have already strengthened the directory. The U.S. has every reason to cheer the plans for this election. It could well result in the first broad popular base for a government in Salgon, and so make the political side of the war as hopeful as the military.

war as hopeful as the military.

Johnsonian foreign policy has not been uniformly successful, nor should it get credit for all its own recent good news. But neither has it been the series of disasters some of Johnson's critics love to wallow in. We must be doing something right, for aggression is being contained, regional institutions of order are developing, some new countries are thriving, and there is even a little permea tion of the Iron Curtain (as in Willy Brandt's East-West German conversations). If Johnson is serious in his talk of new initiatives in foreign policy, the time is opportune. He should ignore the polls when he knows that a policy is the right one, such as his attempt bridge-building in Eastern Europe. little outcroppings of sense, decency and hope now visible around the world prove that good policies sometimes have their reward. And there are ample opportunities ahead for U.S. policy to continue trying to make the world at least somewhat safer both for democracy and for diversity.

Patriotism Pledge

EXTENSION OF REMARKS

HON, THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1966

Mr. DULSKI. Mr. Speaker, the Inter-High School Student Council of the Buffalo Public Schools, Buffalo, N.Y., developed a patriotism pledge to remind the Nation's adults that the overwhelming majority our young people are responsible individuals who are deeply appreciative of their heritage and grateful for their blessings as American citizens. They secured more than 12,000 voluntary signatures during the closing days of this school year. This is particularly impressive in view of the fact that the council was hampered in its efforts by final examinations, graduations, and other endof-vear activities.

A volume containing the pledge and signatures has been forwarded to President Lyndon B. Johnson by the Superintendent of Schools in Buffalo, Dr. Joseph Manch.

The members of this student council are to be highly commended, and it is a privilege for me to call this action to the attention of my colleagues.

Under leave to extend my remarks, the patriotism pledge developed by the student council follows:

In these troubled and uncertain times, there is a need to stop and think about what makes our Nation great.

We the Students, of the Public High Schools of Buffalo, New York, do pledge our support to the principles set forth in the Constitution of the United States of America.

We consider ourselves fortunate to be living in this Nation. We wish to acknowledge our faith in its leaders.

Chairman L. Mendel Rivers Impresses San Diego

EXTENSION OF REMARKS

HON. G. ELLIOTT HAGAN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. HAGAN of Georgia. Mr. Speaker, during the July 4 recess, the distinguished chairman of the House Committee on Armed Services, the gentleman from South Carolina, the Honorable L. Mendel Rivers, made a fast-moving inspection tour of several military facilities in the country.

He was warmly received by the public throughout his tour as is evidenced by the knowledgeable editorial which appeared in the July 11, 1966, issue of the San Diego Union:

No CALCULATED RISK: REPRESENTATIVE RIVERS BUILDING ON FACTS

Unfortunately, the visit of Representative L. Mendel Rivers, Democrat of South Carolina, to San Diego was all too brief. Fortunately, however, the afterglow of warm feeling and confidence he left remains.

Of particular comfort to all of the United States of America, as well as San Diego, is the fact that a person of Mr. Rrwsss' opinions, stature and leadership is chairman of the House Armed Services Committee. As an expert on military affairs, an ener-

As an expert on military affairs, an energetic congressman who inexhaustibly seeks the truth and is a bluntly outspoken person when he finds it necessary, Mr. Rivers is a refreshing figure in government.

His visit to San Diego for part of a day when he was on vacation is illustrative of his dedication. Earlier in the day he had inspected defense installations in Mobile, Ala.

He flew to San Diego to inspect defense plants, visit-with squadrons at Miramar Naval Air Station that had just returned from Viet Nam, tour the Marine Corps Recruit Depot and hold a press interview.

On the following day, while still on "racation" during a recess of Congress, Mr. Rivers continued his tour of other California defense plants and military installations.

Here is a man with an inexhaustible store of information about defense who takes personal vacation time to keep his knowledge current almost to the hour. The result will be the best possible defense laws and appropriations the nation can have.

Such dedication leaves a comforting feelings that all will be well with our security. The feeling is bolstered by the words Mr. Rivers speaks.

Mr. Rivers firmly believes that Congress has a major role in determining the defense and security of our nation, as the Constitution specifies.

Like many military leaders he believes the war in Viet Nam should be fought according to the science of the military profession, developed through the years. He understands the military system and defense and is not a bit interested in the theory of "calculated risk" so far as survival of our nation is concerned.

The House Armed Services Committee chairman also advocates fighting the war in Viet Nam on a military basis, striking all strategic targets with our defense might. When called a "hawk," he sakn: "who do you want fighting your war, a hawk or a dove?"

And above all, he shows his appreciation to the military men for the sacrifices they are making and the task of defense they are performing. He translates the appreciation into tangible benefits from Congress.

Best interests of the United States of

Best interests of the United States of America would be better served if the Pentagon fully heeded the advice of Rep. Rivers and the men he champions as our experienced military leaders.

Grand Canyon

EXTENSION OF REMARKS

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. CONTE. Mr. Speaker, the Washington Post of Sunday, July 3, 1966, contained a forceful and thought-provoking column by Irston R. Barnes, chairman of the Audubon Naturalist Society. The column deals with a subject of some concern to me, and one that all of us in the House will be called to consider in the coming weeks. I should like to include an excerpt from it at this point in the RECORD:

THE NATURALIST: CASH BEFORE BEAUTY AT GRAND CANYON?

(By Irston R. Barnes)

Many Americans are puzzled; with a forthright leader of the New Conservation in the White House and a highly articulate spokesman for natural and wilderness values as Secretary of the Interior, how is it possible for the Bureau of Reclamation to be promoting two new dams on the edges of Grand Canyon National Park, Marble Gorge, above the park, and Bridge Canyon, below. The lower dam will back up water into the park and require construction within it.

Both dams will drown out 130 miles of some of the finest scenery in the Grand Canyon. They will, by impounding its waters, kill the Colorado River as a living geologic

Neither dam will serve a public or economic purpose. Indeed, the Bureau of Reclamation wants to "borrow" a billion-odd dollars, at less than the interest cost to the Treasury, to be repaid out of revenues after completing payments on the Hoover, Parker and Davis

Both new dams are a part of the Bureau's power projects. They are not to conserve water. Instead, they will increase evaporation losses by enough to supply both Phoenix and Tuscon.

The Bureau's Rube Goldberg stunt is to generate electric power and use the revenues to finance pumping water to Arisona from an existing reservoir and to reimburse southern California by bringing water from the Columbia River.

Unfortunately for the Bureau's antiquarian economics, before the existing Glen Canyon dam (now only half full) and the new dams can begin producing electricity, equivalent power from cheaper sources will be available. So the Bureau's "cash register dams" (Its own designation) would destroy the living Colorado, its priceless scenery, waste water in a water deficit region, and misuse public funds at vast cost to the taxpayers.

La. Alexander F. Morze Receives Commendation Medal

EXTENSION OF REMARKS

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1966

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a very fine article entitled, "Local Soldier Receives Commendation Medal," which appeared in a recent edition of the Gardner News concerning my esteemed friend and constituent, 1st Lt. Alexander F. Morze.

The article cites the fact that Lieutenant Morze displayed "a high degree of aggressiveness, tactical proficiency, and deep appreciation for material readiness." In addition, he received the highest rating within his battalion during a command maintenance inspection conducted by higher headquarters in Germany.

This is but one honor conferred upon Lieutenant Morze whose sister, Miss Beverly A. Morze, is a very efficient secretary in my office. Lieutenant Morze continues to have a splendid record in the Army, and time and time again he has distinguished himself and demonstrated his fidelity to duty, his superb qualities of positive leadership, and his constant concern for his troops and the overall needs of the service.

This fine young officer is in the best traditions of the Army, and I am confident that he will continue in the future with the same high type of dedicated, devoted service to the Nation that he has performed during the time that he has been in the Army.

In congratulating him and his family

In congratulating him and his family upon this honor, I wish for him and them continued success and happiness. It is young men like Lieutenant Morze who are the real assurance of the present and the hope of the future.

The article follows:

LOCAL SOLDIER RECEIVES COMMENDATION MEDAL

The Army Commendation Medal has been awarded to 1st. Lt. Alexander F. Morze, of this city for meritorious service from Jan. 1954 to April of 1966. During the period cited, Lt. Morze distinguished himself by meritorious service as Tank Platoon Leader and Support Platoon Leader of Company B and Bn S4 and Bn Property Book Officer while serving as a member of the 3/37th Armor 4th Armored Division. As Tank Platoon Leader, Lt. Morze displayed a high degree of aggressiveness, tactical proficiency and deep appreciation for material readiness. His Platoon received the highest rating within the battalion during a Commander Maintenance Inspection conducted by Higher Headquarters in April 1964; and in the company and platoon Army Training Tests at Holenvels, Germany, in February 1965.

Rile

Lt. and Mrs. Morze, daughter Karen 5 years old, and son Phillip, 20 months, arrived in Gardner the 23rd of May for a 30-day furlough and are now living in Columbia, S.C., where Lt. Morze is stationed at Fort Jackson, S.C., as an officer in charge of a combat range.

Lt. Morze is the son of Mr. and Mrs. Alexander Morze of State Road, Westminster;

Mrs. Morze (Margaret) is the daughter of Mr. and Mrs. Robert E. Weeks, 129 Elm

The Unwelcome Troublemaker

EXTENSION OF REMARKS OF

HON, EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. DERWINSKI. Mr. Speaker, a few weeks ago, Chicago suffered from complications which were fed additional fuel by uninvited agitators. This practice, uninvited agitation, adding confusion to a local scene and creating havoc, has prevailed elsewhere in the country. WBBM-TV discussed the subject in their editorial "The Unwelcome Troublemaker," in a most practical fashion.

The editorial follows:

THE UNWELCOME TROUBLEMAKER

(Presented by Carter Davidson, editorial di-WBBM-TV, Friday, June 24, rector of

It isn't often that street rioting has any result other than the destruction of property and the letting of blood. The Division Street uprising of two weeks ago in Chicago's Puerto Rican colony was an exception. It brought about some prompt and bene-ficial results. Some 150 Chicago policemen will start Monday in an accelerated course in the Spanish language to counter the complaint that the language barrier prevents communication between Police and Puerto Ricans. A Puerto Rican editor, Claudio Flores, was inducted this week into membership on the Human Relations Com-mission. The Board of Education is sharply increasing its English language classes in Spanish-speaking neighborhoods.

Perhaps more important, although less visible, is the new awareness on the part of political leaders that the Puerto Rican community can no longer be ignored, as it had so weefully been for so long. You can credit the street violence for much of the push that brought about these benefits.

There is, unfortunately, a possibility that those benefits will be more than offset by the threat of an ill-advised march on City Hall by Puerto Ricans, scheduled for next Tuesday. The agitation for the march is being sparked by an unwelcome troublemaker from New York's Puerto Rican com-munity. Chicago's own Puerto Rican leaders say they want no part of such an un-

necessary demonstration.

In the first place, most of the demands to be made by the New York troublemakers already are being met. In the second place, the Chicagoans wisely want to avoid any spectacle that could create new tensions of the sort that caused the Division Street uprising in the first place.

Until the rioting two weeks ago, most Chiagoans were unaware of the wretched plight of the Puerto Rican community.

Years of neglect by the politicians who were supposed to represent them, plus the fact that three out of four Puerto Ricans are unable to speak proper English, had virtually sealed the Spanish-speaking community off from the rest of the city.

When the facts became known, because of the rioting, there was a shock wave of un-derstanding and sympathy for the Puerto Ricans, even though no one condones vio-lence and the burning of police cars.

It will be the Puerto Rican's loss if that sympathy and understanding is flushed away by an unnecessary demonstration—led by an unwanted outsider—next Tuesday.

Rampart Dam Is a Fraud

EXTENSION OF REMARKS OF

HON, THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF PEPRESENTATIVES

Tuesday, July 12, 1966

Mr. PELLY. Mr. Speaker, the July 3 "Today" supplement of the Seattle Post-Intelligencer contained an excellent article entitled "Rampart Dam Is a Fraud." Its author, Blaine Freer, is a vigorous conservationist and outdoor writer and in this article drew from an address he recently delivered in Anchorage, Alaska

I have long opposed construction of the Rampart Dam which has been proposed on the Yukon River northwest of Fairbanks. This opposition is shared by many Alaskans who have written me and likewise is opposed by conservationists throughout the entire Nation.

In the hope that other voices in America will join in the outcry "Don't do this to Alaska," I am placing Mr. Freer's article at this point:

> RAMPART DAM IS A FRAUD (By Blaine Freer)

Although less has been said about the destruction of wildlife other than waterfowl which the proposed Rampart Dam would inflict, these other losses have a far greater significance to Alaska. Like the salmon, for All five Pacific species of salmon run up the Yukon, and a great portion of them would be destroyed. And two of the most valued species, kings and silvers, would be the two suffering the greatest loss.

Here is a unique fish. Because of the

great distance traveled up the Yukon to their spawning streams, the Yukon king and silver are superior fish to those spawning closer to the salt water. They are stronger, with richer, oilier flesh.

There is no way that the great bulk of them could be saved if Rampart is built. believe that fish passage facilities could be constructed to surmount the 530-foot height of Rampart, that adult fish could then find way through the vastness of the impoundment to their spawning streams, that the hatched fry could then find their way down the lake, through the dam and out to sea, would mark you as a wishful thinker of the first magnitude. The most feasible solution would be to build hatcheries below the dam, but at enormous expense, and also at a loss of the unique qualities of the Yukon ealmon.

Lost, too, would be all wildlife now residing in the impoundment area. This would include in excess of 12,000 moose, as well as grizzly bear, black bear, possibly some dall sheep; and smaller game such as beavers, mink, muskrat, otter, martin, weasel, wolverine, lynx, fox, wolves, coyotes, snowshoe d squirrels, grouse and ptarmigan.

All of these would be lost for all time, because there is nowhere for them to go. have been told that many would merely move to another suitable area. But you don't have to be a game biologist to understand that this is not true. Common sense will tell you that other suitable habitat for these species would already be occupied.

You may fly over areas of Alaska in a plane and see much marshland that is little by ducks and geese. It would be easy to assume, without giving it any real thought, that the waterfowl could move in there after the spreading waters of Rampart had driven them out. But this is not true. A great many of the northern lakes in both Canada and Alaska are too sterile to provide nourishment. After all, water is only one requirement. A duck needs food, too.

Only at the expenditure of an enormous amount of money and effort could other habitat be made suitable to salvage even a nall portion of the wildlife that Rampart would destroy.

Now, if Rampart Dam were to serve some useful purpose, if it were to truly contribute to the wealth of Alaska, or to the security of the nation, then it would be necessary to make whatever effort was required to salvage some part of the loss, and to accept with what good will we could muster, the permanent destruction of all the rest.

But Rampart is a fraud.

We are told that it will supply Yukon power for America, and to provide the necessary power for Alaska industry. are not told is that the real purpose of Rampart is to lay hands on somewhere up to two billion dollars of federal funds. We all know that the economy of Alaska, both as a territory and as a state, has been based on military spending. When that spending starts to subside, Alaska feels the pinch. And what better way, according to the thinking of some, than to devise a project that will funnel in more federal money? Which is a legiti-We have no quarrel with mate aim. concept, and certainly an economically stable Alaska is highly desirable.

But better to funnel the money toward something that would have some value, like road construction, which would really con-tribute to Alaska's well being.

Let's take a good, hard look at Rampart, and see just how necessary it really is. Let's take a look at Yukon Power for America. Recently a special study team, com-missioned by the Natural Resources Council of America and headed by Dr. Stephen H. Spurr of the University of Michigan school of graduate studies, completed its findings. From that report I quote:

"Even today, it would appear to be cheaper to build a nuclear plant on the Pacific Coast rather than to transmit Rampart power south, even writing off the cost of the Rampart project as a total loss."

The Spurr team also agreed with the U.S. Fish and Wildlife Service's apprehensions about the destruction of wildlife resources, but called them conservative.

It would be necessary, of course, in transmitting Yukon power to the Lower 48 to cross Canadian soil, a fact which doesn't receive universal indorsement on the part of Can-As a matter of fact Arthur Laing, Canadian Minister of Northern Affairs and Natural Resources, has stated that Canada does not desire power transmission lines crossing its territory.

He also objects to Rampart on the basis that it would prevent Canada from devel-oping its own watersheds, and that besides, Treaty of 1871 requres the Yukon River be kept open for navigation.

As far as Yukon power being required to stimulate Alaskan industry, this is a com-plete fallacy, and I am sure that those who

advocate it don't really believe it themselves. How do you think Alaskan industry could ompete against Midwest and eastern in-ustry when manufacturers in those areas are already hard-pressed by foreign imports? Who now makes nearly all the transistor radios in the world? Is now the world's leading shipbuilder? Makes two-thirds of the motorcycles? Now ranks fourth in production of motor cars and is beginning to give Detroit nightmares?

Before you get too many woolly dreams about Alaska industry, start getting realistic about what it takes to compete and survive.

We will imagine that some small industry, by its particular and unique nature, could be located in Alaska and could survive the crucible of competitive world trade. If one is still thinking in terms of hydroelectric power there are a number of places where smaller dams could be erected which would have little or no adverse affect on wildlife. and maybe even enhance the recreational resources of the area. Certainly if those who ek power for a yet unconceived Alaska industry are truly sincere, they would seek every means possible to obtain the power without wreaking the havoc that would be aused by Rampart.
They would also explore the possibility of

atomic power.

Already the march toward nuclear power for domestic and industrial use has begun. In this regard I would like to quote from a recent speech by L. E. Karrer, senior vice sident of Puget Sound Power and Light, efore the Industrial Bureau of the Tacoma

Chamber of Commerce:

"Based on present technology, it appears that by the middle '70's generation of elec-tricity by atomic energy will be commonplace and, hopefully, competitive. How important is this trend? Several points stand out which I think are important to you as customers. There are presently only about 1,000,000 kilowatts of atomic energy power plants operating in the United States. is about half the size of Grand Coulee. There are another 2 million kilowatts under construction, and another 4,600,000 programmed. It is presently estimated that by 1970 there will be about 9 million kilowatts of installed nuclear capacity in the United States; that by 1975 this will be increased to about 13,000,000 kilowatts; by 1980--a mere 14 years away—to 90 million kilowatts; and by the year 2000, to 700 million.

'As you look into the future, it is obvious that greater emphasis will be placed on the generation of electric power through the use of the atom. In fact, I am advised that in the northeastern part of the country, and in the State of California, additional electric generating facilities presently planned are of the nuclear variety. In Europe, due to the fuel shortage and population explosion, they are far ahead of us in number and capacity

of nuclear plants.

"All this means that the technology associated with nuclear power will advance rapidly in the decades to come. Already substantial economies in fuel processing and use are deemed possible. New construction methods forecast lower capital investment."

What does this mean to Rampart? Merely that if it is not now obsolete, it surely will be by the time the first electricity flows from its

turbines.

I should here make some comments directed specifically at the Army Corps of Engineers

I am sure they are accustomed to criticism. we all are, in some degree, because just about anything we do may be criticized in some way or another. But it becomes bearable, and even stimulating, when you know that what action you took was right.

Certainly the Corps of Engineers comes under a barrage of criticism. Every dam it builds will find the barbs of those particular interests-like steelheaders and salmon fishermen-who feel that it does them injury.

Naturally they have come to expect this, and there is little sting if they can see the benefits that the dam brings in other ways. However in this era of increased awareness of the need to protect our wildlife and our natural resources, and to preserve the wild and primitive character of the land wherever possible, it becomes doubly important for them to be sure of what they're doing.

It has been claimed that the electroprocess industries, which require snormous amounts of power, could be competitive in spite of it all by the mers fact of having low cost power. Once again referring to the Spurr Report, it stated that minerals are not known to exist in quantities in Alaska sufficient to attract such industries.

In summary of our objections to Rampart on the basis that it would serve no useful purpose, we refer once again to the Spurr Report which concludes that Rampart would be a great gamble, would grievously damage fish, wildlife and related resources, and states that there are logical and feasible alternative power sources which can meet Alaskan needs.

We from down below treasure the dream and the image of Alaska that we carry in our hearts and in our minds. It's the dream of a grimy steelworker hoping some day to save the money to take his family on a fabulous Alaska vacation. It's the dream of an office worker who sees himself on a stream, filled with huge and hungry trout. It's the dream of a hunter imagining a huge moose filling the sights of his rifle, who pictures himself peering over a craggy rock and see-ing a full curl ram, unsuspecting and within

It's the dream of all Americans who have seen their land despoiled by greed and a lack of concern for the future, and who cry out, "Don't do this to Alaska."

Jet Noise: A Plea for Bipartisan Support

EXTENSION OF REMARKS

HON. HERBERT TENZER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. TENZER. Mr. Speaker, I have today introduced a bill to amend the Federal Aviation Act of 1958 to authorize aircraft noise abatement regulation and for other purposes. I am pleased to sponsor this legislation following its introduction by the distinguished chairman of the House Interstate and Foreign Commerce Committee, the Honorable HARLEY O. STAGGERS.

The aircraft noise abatement bill comes to the Congress with the support of the White House and the Federal Aviation Agency. The bill is a direct result of the White House Conference on Aircraft Noise, held on October 29, 1965, in answer to my request to the President by letter of August 19, 1965, and the report of the President's Task Force on Noise Abatement, headed by the President's Science Adviser, Dr. Donald F. Hornig. While my present view is that the bill does not go far enough it is nevertheless a constructive step forward in the direction of an ultimate solution. It represents at least a recognition from the highest level of Government, that jet noise is a problem, national in scope, requiring action on the executive, congressional, and administrative levels.

The identification of jet noise as a national problem was the major objective of my efforts during 1965 to bring to the attention of my colleagues in the House the seriousness of the noise problem and its effect upon the daily lives of millions of Americans-men, women, and children—who reside near our Nation's airports. I have addressed myself to this problem on 12 separate occasions in the House and have introduced 2 bills, H.R. 7981 and H.R. 7982, to help solve the problem of aircraft noise.

I am pleased that hearings on legislation to alleviate this problem will be scheduled shortly and that all bills on this subject will be reviewed and studied by the committee. I will make every effort to strengthen the legislation along the lines of my bill H.R. 7982 in an effort to bring the resources of the Federal Government to both local governments and to private industry, to share the cost of developing noise reduction techniques on airports as well as aircraft. I favor and will propose amendments to provide Federal funds to pay for part of the cost of implementing noise reduction techniques

The bill which I have introduced today along with the distinguished committee chairman authorizes the FAA or the proposed Department of Transportation to set noise standards and regulations and to use these standards in connection with the issuance, amendment, or revocation of certificates authorized by title VI of the Federal Aviation Act. This is an important step in the direction of alleviating the noise problem and I am hopeful this effort will not be delayed, thwarted or frustrated by those who would make this issue a political one. Jet noise affects many millions of Americans—of both political parties-and the effort to attack this problem should be a bipartisan effort.

I have today written to the chairman of the New York State delegation steering committee, the Honorable EMANUEL CELLER, requesting that the entire delegation consider giving its endorsement to aircraft noise abatement legislation on a bipartisan basis and take the issue

out of partisan politics.

I have also requested the chairman of the New York steering committee to consider appointing an ad hoc committee of New York Members to work with Members from other States in arriving at a united position on the legislation and on proposed amendments to strengthen the legislation. By coordinating the effort in this bipartisan manner, we can move forward in the battle against aircraft which pollutes our environment and disrupts the daily lives of millions of our citizens.

Hawaii Continues To Show Outstanding Gains in Personal Income

EXTENSION OF REMARKS

OF HON. SPARK M. MATSUNAGA

OF HAWAII IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966 Mr. MATSUNAGA. Mr. Speaker, a recent survey showed that Hawaii con-

tinues to occupy its enviable position as one of the Nation's top leaders in personal income percentage gains.

A survey of the first 4-month period in 1966 by the Business Week magazine revealed that Hawaii had a 13.2 percent increase over last year's figure for the same period. This revenues for the same_period. This percentage gain is second only to Iowa's 14.4 percent in-

It is with considerable pride, therefore, that I submit for inclusion in the CONGRESSIONAL RECORD the newspaper article which reported the personal income percentage gains for Hawaii. apeared in the June 27, 1966 issue of the Honolulu Star-Bulletin:

PERSONAL INCOME HERE KEEPS CLIMBING

Hawaii continues to be among the leading states in the percentage gain in personal income over comparable periods last year.

Business Week survey shows Hawaii had total personal income of \$184.2 million in April, 14.8 percent over the \$160.5 million reported for April, 1965.

This increase was surpassed only by North Dakota's 18.6 percent gain, due to start of

work on a missile base.

For the first four months Hawaii reported \$733.6 million, up 13.2 percent over the \$647.8 million in the same four-month span last

This also is the second highest increase, outdistanced only by Iowa, which reported a 14.4 percent increase.

What Price Competence?

EXTENSION OF REMARKS

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. GUBSER. Mr. Speaker, recently Mr. Paul L. Davies, chairman of the executive committee of FMC Corp., San Jose, Calif., delivered a most interesting keynote speech at the annual meeting of the Manufacturing Chemists' Association entitled "What Price Competence?"

Mr. Davies' speech dealt with the problem of attracting the best possible people into Government service and, in my opinion, is a most significant presentation, which deserves the attention of the entire Congress. Therefore, I submit the entire text of Mr. Davies' speech except for the introductory remarks:

WHAT PRICE COMPETENCE?

So many subjects came to mind that ould be profitably discussed, that it was difficult to single out just one. For example, the subject of guideposts on wage increases merits attention. Are these guideposts a boon to labor by establishing floors to start from, or are they helping to keep wage increases at a more reasonable level than might otherwise exist?

Another likely topic relates to taxes. Would a tax increase really discourage the threat of inflation and the "over-heating" of our economy, or are we at a point in the business cycle where we should be concerned with deflation instead of inflation in the months ahead?

The balance of payments problem presents another meaty topic. Can our deficit bal-ance and our declining gold reserves be rectified by voluntary measures, or should we adopt mandatory controls over imports, foreign travel, and foreign investments? As a corollary to this, is it realistic to discourage foreign investments? Don't they represent our "best bet" for curing our balance of pay-ments problem over the long term? Would other restrictive measures, such as limiting unproductive foreign aid in areas of the world where we are not appreciated be more appropriate?

No list of potential subjects would be complete without considering the Viet Nam conflict. It seems like everyone is discussing and "cussing" the subject. In complex world problems of this type, not one of us is knowledgeable enough to express sound opin-

tons. Consequently, no matter what our political affiliations may be, I believe we should support the policy of our Administration. are convinced that the Administration policy is wrong, isn't it better to work toward changing the administration, rather than to weaken our world leadership image in the eyes of our enemies and friends through a national display of diffidence and diversity?

Among numerous other subjects deserving attention is the problem of the Federal Budget. Is it in our national interest to have a deficit budget during the most prosperous period our economy has ever experi-If so, then we must reconcile ourselves to the realization that the dollar is going to be worth less and less as this philosophy continues. As opposed to this concept should we accept international unrest as a "normal" way of life and try to reduce non-essential government spending in order to offset increased defense expenditures in time of "abnormal" tension?

There are many other subjects in the national interest that I considered developing for discussion, but I finally concluded that every subject eventually related to our Gov ernment, our Administration, our over-all policies, and the people all along the line who make and execute these policies. So, after screening and attempting to refine and define all of this into a single topic that we could examine and evaluate together, I decided that the key to all of the problems I had considered as far as government attitudes were concerned came down to the individuals in government who had the responsibilities for either developing or determining policies, whether they were in elected or appointive offices. Hence, the title What Price Competence?

My thesis is that in one way or another because of the increasing importance of the Federal and State Governments in our industrial, political and personal lives, we must find ways and means to attract and hold the most competent personnel possible in every facet of our senior administrative and elec-

tive offices

We, in business, I am sure realize that the basic reasons for the success of our com-pany operations are not our surplus cash and securities, our sophisticated data processing equipment installations, the degree -to-dateness of our process equipment and structures used in operations or even our basic raw material positions. Rather our success depends on the caliber and competence of our management and supervisory personnel. I'm sure we would all agree that only through the utilization of skillful, dedicated and able people strategically located with responsibility to anticipate potential problems and authority to resolve them, can any modern day business hope to move

I believe the same needs for capable and devoted people exist at all levels of our administrative and legislative branches of Federal government. Yet, we in America have either wittingly or unwittingly created a highly impractical compensation level for our public servants, an impossible expense level and an atmosphere of persecution by the columnists and others who at real sacrifice, are devoting their careers to govern-

ment service.

The imbalance and inequity between management salary levels in government and those in industry are appalling. A recent issue of Business Week, for example, listed the salaries of senior officers in 119 of our leading industrial companies. Considering salaries alone, without additional compensation benefits, average annual compensation for the chief executive officers was \$178,000. The combined annual gross revenues of these companies totaled \$213 billion.

Now, let's compare these statistics with compensation levels in the Federal Government which in the current fiscal year will be responsible for a spending budget of over \$100 billion. At the head of the list our President receives \$150,000 a year of which \$50,000 is earmarked for expenses. The next highest paid officer, the Vice President, re-ceives \$43,000. Cabinet officers are paid \$35,000, Congressmen and Senators \$30,000, Under Secretaries \$28,500, Assistant Secretaries \$27,000, and key positions in various departments at levels below these amounts.

Even if we relate these salaries to middle management salaries in the 119 companies I mentioned previously, where middle management salaries represent 30% to 40% of the chief executive officer, middle management salaries in these 119 companies would be substantially in excess of salary levels paid our senior government officials, with the single exception of the President of the United States.

This startling contrast can be carried further by dropping down to the State level where expenditures and responsibilities are also of a very high order. New York state, for example, pays its Governor the national top salary of \$50,000 while Arkansas' Governor gets the national low of \$10,000. This latter salary is not as much as many of us are paying for starting salaries of the top one-third of college graduates with MBA or PhD degrees.

A good case in point relates to the Secre-tary of Defense. He controls \$55 billion in expenditures—receives a salary of \$35,000. His executive vice president, the Under Secretary of Defense, receives \$28,500.

Most of you know Secretary of the Treasury Fowler, who for many years as head of his Washington law firm, was counsel for our Association. Secretary Fowler has been in and out of Government service in key positions for the past many years at tren dous personal sacrifice. dous personal sacrifice. Secretary Fowler's position as second ranking cabinet member and fifth highest government official, administering one of the most complicated jobs in government, covering tax policies and money policies involving many billions of dollars, pays \$35,000.

The same sentiments could be expressed regarding Secretary Connor, a former Chairman of MCA and president of Merck & Co., who has made real sacrifice in compensation and in sale of personally owned securities to serve our country as Secretary of Commerce at the munificent salary of \$45,000 he now receives compared with in excess of \$200,000 which he received at the time he left Merck & Co. to become a member of the Cabinet.

While some individuals such as those I have enumerated are dedicated individuals and willingly make the sacrifice entailed, by we cannot expect to attract large talented and capable individuals to staff the multiplicity of government posts and to serve in Congress unless rewards are somewhere in line with competitive positions available in industry or in the professions.

Not only are salaries all the way through government not competitive but expense ac counts in government are on the whole much more meager and benefits such as those offered outside government are not comparable.

All of the foregoing really boils down not to a question of what we can afford but rather to the conclusions that we cannot afford not to create pay incentives, work conditions and benefits that will be sufficient to attract capable talent to cope with the multiplicity of problems of big government.

The need is now! A recent study entitled "Men Near the Top" by John Corson of McKinsey & Company and Shale Paul of Research Analysis Corporation points out that there are 5,000 career men and women in the Pederal Government who hold key civilian posts at the so-called "supergrade" level, just beneath the top level of political appointees. This group represents the "elite corps" working force in the management of government programs.

Over the next decade 4,000 of these key people (60% have been in government service over 20 years) will have to be replaced. Most of the 5,000 entered government service during two unique periods: (1) After the Depression when many talented and educated young people couldn't get jobs and (2) The immediate Post World War II period when veterans annious to return to civilian life, availed themselves of the preference given them in government hiring.

Both of these periods were "buyer's mar-

Both of these periods were "buyer's markets". The situation is completely reversed today. A "seller's market" for talent exists throughout business and pay incentives and other non-monetary incentives are so far beyond government levels there is no contest at all.

One more problem which can be "thrown into the hopper" is the limited average tenure of appointees to government positions. I remember when I was Chairman of the Committee us set up a new organization for the Department of the Army, our study revealed that over the past ten years the average tenure of Assistant Secretarys of the Army had been a little over one year and that 70% of the appointees had been attorneys. I'm sure you can imagine how much an Assistant Secretary of the Army could contribute during a tenure of one year.

I don't believe it's necessary for me to go

I don't believe it's necessary for me to go further in highlighting the problem we face in getting capable people in government. Incompetence and bumbling of key government positions cannot only cost untold billions in wasted tax dollars but can ultimately silide us over the precipice of disaster in our economy, our world position and our way of life as we know it today.

What can we do in our small way to try to get our contemporaries, our Association, our company managements, our fellow citzens conscious of the problem and get steps started toward ultimate solution of the

problem?
At this point I'd like to tell you the story about the young grade school pupil whose teacher told him to read a book on the life of Socrates and then prepare a brief review of the subject. A week later this student turned in his review which consisted of three

1. Socrates was a Greek.

2. He went around giving advice to people.

3. They poisoned him.

In spite of the risk entailed in giving advice, I would like to conclude my talk by presenting some ideas for your contemplation and hopefully after contemplation for your helpful assistance by suggestion and discussion.

First—Primary in any planned improvement in compensation levels in government is the compensation level of members of

Congress.
Unless this level of compensation is adjusted upward, any serious consideration for change in other government salary levels is doomed.

If the \$30,000 salary level of Congressmen and Senators were doubled, these salaries would still be in a range well below compensation levels of moderate size business senior executives.

senior executives.

It goes without saying if salary levels of our legislators were increased we would attract better talent in many cases and with less worry about finances our legislators could do a better job.

If the salary levels of our legislators were increased, then salary levels in all senior government posts could be scaled up proportionately.

Along with increased salary levels should go increased expense allowances for normal expenditures commensurate with those allowed in comparable industrial positions.

If pay levels and expense allowances for government positions were increased, then I believe business leaders should accept the

responsibility of changing their attitude toward middle management executives entering government service.

In my opinion we cannot have good management in government in the years ahead unless industry is willing to give leaves of absence, not for a year or a little more, but for a minimum of several years.

Just being willing to give leaves of absence will not be enough. Industry management must be anxious to offer incentives to those who are willing to enter government service so that on their return to their companies they will be advanced to the salary and benefit status they would have had had they stayed with the company and in addition be given a year of time as "roving centers" to catch up with what has gone on in the business during their absence.

I believe extra credit could be given in companies to those individuals willing to undertake government service something akin to the Medal of Merit of World War II. In addition, securities owned by those

In addition, securities owned by those entering government service should not have to be sold but legislation should be passed so those securities could be "Trusteed" and the individual not have to be penalized by capital gains tax and other penalities.

the individual not have to be penalized by capital gains tax and other penalities. Now that I am reaching the end of my talk I'm sure some of you will thing I've been taking LS.D., talking hopefully about what might be done but with little chance of anything being accomplished.

At least I hope I've highlighted to you the problems of competence in government in the years ahead.

In my opinion the future of our country and our position of world leadership depends on finding the solution to the problems I have highlighted.

There have been some excellent reports and recommendations on this subject. President Kennedy appointed a Panel headsel by Clarence Randall which in 1963 made some thoughtful recommendations regarding compensation levels in government career and executive salaries as well as Congressional salary levels and expense allowances. However, little has been done about adopting the suggestions.

President Johnson appointed a Panel to submit recommendations on Federal salaries headed by Marion Folsom, which reported in April 1865 reiterating some of the reports of the Randall Commission but so far nothing of major import has been accomplished in bringing up the overall level of Federal executive and career salaries to a point where the average individual can afford without great personal sacrifice to enter government service.

To accomplish the goals outlined in my talk and in many previous studies by eminent Panels of outstanding authorities its essential that the Administration once more take the necessary leadership in cooperation with leaders of industry, education, and labor to meet head on the problem of finding ways and means to assure that capable men dedicated to their country's service will be able without undue sacrifice to serve at all levels of appointive

and elective offices.

The task can be accomplished—we cannot affort to fail!

The Price of Freedom

EXTENSION OF REMARKS

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. QUILLEN. Mr. Speaker, lest we forget, I would like to include in the

RECORD an article from the Johnson City, Tenn., Press-Chronicle, which quotes the American Creed adopted by the House of Representatives in 1918:

PRICE OF FREEDOM

"Those who expect to reap the blessings of freedom must, like men, undergo the fatigue of supporting it."—Thomas Paine. These words, spoken long ago, challenge

every American today.

Freedom is not free. It comes at a price. Sometimes the price is high, as high as life itself. Our fighting forces in Viet Nam bear witness to this. Many here at home make a mockery of it by tearing up draft cards, spitting on the flag, and in general behaving in a manner that sickens decency.

Yet the nation endures, because the great majority of its people still subscribe to the American's Creed adopted by the House of Representatives in 1918. It goes like this: "I believe in the United States of America

"T believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic, a sovereign nation of many sovereign states; a perfect union one and inseparable; established upon those principles of freedom, equality, justice and humanity for which American patriots secrificed their lives and fortunes. I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies.

Let's Wave the Flag

EXTENSION OF REMARKS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1966

Mr. DERWINSKI. Mr. Speaker, the recent Fourth of July commemoration produced pertinent and proper editorial comment.

Typical of the comments are three items placed in the RECORD at this point, which appeared in weekly newspapers from the Fourth Congressional District of Illinois.

The Palos Regional, Palos Heights, Ill., carried comments writen by Sidney L. DeLove. The Lansing Journal had a prominent front page editorial by its editor, Tom Inkley. The Calumet Index carried a poem by Lee Sobanski.

The material follows:

[From the Palos Heights (Ill.) Regional]

LET'S WAVE THE FLAG

Is it possible to wave the flag too much? Provided, of course, that you wave it with integrity? Is it possible to study Lincoin or Shakespeare too much? Is it possible to read the Bible too much? The great, the good, the true, are inexhaustible for inspiration, example and strength. I believe that we are not waving our flag enough, not nearly enough. It seems to me that we are developing a tendency to be timid or oven apologetic about waving the stars and stripes. Walk up and down the streets on July 4th and count the flags. It is our nation's hirthday, a sacred day in world history, the most important day of America. Why isn't the flag flying on every rooftop and from every home and building? This complacent attitude is strong evidence of cancerous patriotic decay.

The flag is a symbol of our national unity. It is the spirit of our undying devotion to

our country. It stands for a the best that is in us . . . for loyalty, character, and faith in democracy. Isn't our flag a synonym of the United States of America? Does it not represent man's greatest, noblest, most sub-lime dream? Is it not the zenith of achievement, the goal to which generations have aspired? Ladies and gentlemen, I believe it is time for us . . . for the mad, rushing Twentieth Century American . . . to stop for a moment and think. Let us arrest our near reverential admiration of material success and return to the spiritual and ethical values. Let us imbue and rekindle in ourselves and our children the so-called old-fashioned way of patriotism, a burning devotion to the principles and ideals upon which our coun-try was founded. Should not every home own and proudly display the colors on holidays and other such occasions? Isn't the flag Patrick Henry, Jefferson, Franklin, Washington, Nathan Hale, Gettysburg and Valley Forge, Paul Revere, Jackson and other great men and women who have given us our heritage. When you look at the flag can't you see the Alamo, Corregidor, Pearl Harbor, The Monitor, The Merrimac, Wake Island, and Korea?

Lest we forget, isn't the flag Flanders Field. Bataan, Iwo Jima, Normandy, Babe Ruth and Davy Crockett? The great events of our past and present are wrapped up in our flag. It is a symbol of this blessed nation, a glant in industry, education and commerce. Millions of fertile square miles, wheatland, coal mines, steel plants. Our great republic, the chosen infant destined to be man's last and remaining hope for suffering humanity, a shining beacon of light, noble and glorious, the haven for the oppressed and persecuted and truly God's gift to mankind. That is what the flag means to me.

Can we wave it too much? I don't think

[From the Lansing (Ill.) Journal, June 30, 19661

INDEPENDENCE DAY BELLS RING IN AREA

(By Tom Inkley)

This year there will be many four year old Americans ringing bells on July Fourth, who will grow up believing that this was always the custom.

will gaw ...
Actually it was, from the first Independence Day till about a century ago when the sounds of peace were drowned out by the noise of war, and the day became celebrated only with firecrackers and rockets.

Writing in a book called "The Seasons of America Past" a few years ago, the author uncarthed the story about Independence Day bell-ringing, and he mentioned that "it seems with firecrackers disappearing we might well revive that early American

d

x

h

n

ly.

h

nt

The idea quickly took hold and supported by organizations and churches and newspapers it reached millions of people. In 1983 it was passed Washington as Senate Concurrent Resolution 25, requesting

In 1993 it was passed Washington as Senate Concurrent Resolution 25, requesting that all American bells, public and private, church, school, fire, college and town bells ring simultaneously at 1 p.m. on July Fourth.

Some places now ring bells for two minutes, along with many radio, TV programs, and even public loudspeakers in parks, race-tracks, ball games and on ships at sea.

For the past three years the "Bells on Independence" project has been included in governor's Fourth of July proclamations, and this holiday which was losing much of its solemn significance, was rekindled into a day of bells ringing out America's birthday, just as it was in the beginning.

It has been said that a thing must be done four times before it becomes a habit, so this fourth year, for the revival of the early American custom of ringing bells on Independence Day, is a most important one.

Perhaps there will be great bells within reach of your hearing, perhaps you will seem to be the only one ringing a small handbell; but you will know that all over the nation in every state, millions of bells will be ringing out the mesage of democracy and liberty.

A safer and less noisy pastime for children, let them ring bells on this day, proclaiming it America's birthday.

And wherever we are, let us remember this greatest of American days with joy and reverence.

The bell ringing observance in Calumet City was undertaken this year as a special project of the Calumet City Jaycees.

One of the area churches joining in the nationwide program this Fourth of July is Our Saviour's Lutheran church in Lansing. Speaking on behalf of the church, the paster, the Rev. Richard Horst told the Journal, "We are highly privileged to participate in this national Bells of Peace' observance. We feel sure that the ringing of every bell in the land simultaneously with the bells at Independence Hall will symbolize our deeirs for peace and liberty in a way that will be understood by the freedom loving people of the world."

The ringing of bells and carillons will coincide with the ringing of the bells at Independence Hall in Philadelphia. The observance was originated by the late Presi-

dent Kennedy.

A carillon is installed each year at Independence Hall, where it is used to simulate the tone of the original Liberty Bell during the observance ceremonies. The Liberty Bell has been stilled permanently to prevent its further deterioration.

There is probably no better way to sum up the importance of the Fourth of July than in the words penned by William Tyler Page back in 1916 in his "America's Creed": "I believe in the United States of America as a Government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a soversign Nation of many sovereign states; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice and humanity for which American patrious sacrificed their lives and their fortunes.

"I, therefore, believe it is my duty to my country to love it; to obey its laws; to respect its Flag; to support its Constitution; and to defend it against all enemies."

[From the Calumet (Ill.) Index, July 3, 1966]

HAPPY BIRTHDAY U.S.A.

(By Lee Sobanski, West Pullman)

Justice called men to a challenge 'Gainst a tax from 'cross the sea, Urged men on to give their live gay To become the subjects free.

Lexington became the marble
Where men carved the thoughts of free,
Yorktown proved their rights to pen it
'Pon this land with blood as fee.

Forward, onward, was the order Death to those who disagree, Of man's right to represent him 'Fore some ruler's harsh decree.

Ultimate became the prayer And men fingered decades few, Rights for man was then the subject For the Good Lord to review.

The Good Lord review each item, Paused—then worded this decree: Heaven bless this newborn nation, Spread its Freedom—sea to sea.

William O. Wooldridge Named Sergeant Major of the Army

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. FISHER. Mr. Speaker, at 11 a.m., on July 11, William O. Wooldridge, of Brownwood, Tex., was sworn in as the sergeant major of the Army at a ceremony outside the mall entrance of the Pentagon. Army Chief of Staff, Gen. Harold K. Johnson, selected Wooldridge from among 4,700 senior noncommissioned officers in the Army to be the first to occupy the recently created position of sergeant major of the Army.

A much-decorated veteran, this soldier has been awarded the Silver Star with the Oak Leaf Cluster, Legion of Merit with Oak Leaf Cluster, Bronze Star Medal, Air Medal with five Oak Leaf Clusters, Army Commendation Ribbon with two Oak Leaf Clusters, the Purple Heart, and the Combat Infantry and Redge with star second award

man Badge with star—second award.
This new title awarded to this distinguished soldier is unprecedented in Army history. The selection was made from nominations by major Army commanders throughout the world.

Mr. Speaker, I am proud to share with the people of Brownwood, Tex., with his family, and with all Americans, great pride in this outstanding achievement that has been accorded to Sergeant Major Wooldridge. It is richly deserved,

Under leave to extend my remarks, I include a release from the Department of the Army containing Sergeant Major Wooldridge's record, and also an article which appeared on the front page of the Washington Evening Star, July 11.

The two items follow:

SERGEANT MAJOR OF THE ARMY WILLIAM O. WOOLDRIDGE

Sergeant Major of the Army William O. Wooldridge was born in Shawnee, Okla., on 12 August 1922. He moved with his family to Brownwood, Tex. when he was three years old, where he attended elementary and high school.

He enlisted in the Army at Fort Sam Houston, Texas on 13 November 1940, serving initially with Company F, 23rd Regiment of the 2d Infantry Division. In December 1941 he was assigned to Company E, 10th Regiment, 5th Infantry Division and stationed in Iceland.

Sergeant Major Wooldridge was assigned to the 1st Infantry Division in 1944 and landed at Normandy on D-Day as a squad leader (sergeant). He was awarded the Silver Star for gallantry in action at Aachen, Germany in October, 1944. He received a second award of the Silver Star during the Battle of the Bulge in December 1944 while serving as platoon sergeant (staff sergeant).

Upon returning to the United States in May, 1945, Wooldridge was assigned at Fort Bam Houston where he remained until December 1946. He next served a brief tour with Post Headquarters at Schofield Barracks, Hawall. He went to Japan in January 1947 where he served with Headquarters Eighth Army until September, 1948

Sergeant Major Wooldridge was again assigned to the 1st Infantry Division in July 1949 as First Sergeant, Company K, 26th Infantry Regiment then stationed in Germany. Upon returning to the United States in May, 1954, he was assigned as First Sergeant of Company G, 3rd Infantry, Fort McNair,

Washington, D.C. Sergeant Major Wooldridge returned to the "Big Red One" as First Sergeant, Company D, 26th Infantry at Fort Riley, Kansas in December 1955. He was appointed Ser-geant Major of the 3rd Battalion, 26th Infantry on 20 December 1956.

He went to Germany as Sergeant Major of 2d Battle Group, 28th Infantry, 24th Infantry Division in December 1958. He became

the Division Sergeant Major in March 1963. Sergeant Major Wooldridge returned once again to the 1st Infantry Division as Sergeant Major of the 1st Brigade in January 1965. He was appointed Division Sergeant Major in August 1965. He went to Vietnam with the "Big Red One" the following month.

Sergeant Major Wooldridge was appointed Sergeant Major of the Army on 11 July 1986, the first noncommissioned officer to hold the position.

PERSONAL DATA

Date and Place of Birth-12 August 1922, Shawnee, Oklahoma.

Parents-Father: William R. Wooldridge, Brownwood, Texas; Mother: Arminta (Gray) Wooldridge (deceased), Norman, Oklahoma. Marriage—Date: 3 December 1945. Wife:

Barbara (Gentry) Wooldridge (formerly of

Lawrenceburg, Tenn.).
Children—William R. (son), age 18; Gentry (Terry) (son), age 17; Sue (daughter), age 14; John (son), age 11; and Mike (son), nge 9.

DECORATIONS Silver Star with 1st Oak Leaf Cluster. Legion of Merit with 1st Oak Leaf Cluster. Bronze Star Medal.

Air Medal with five Oak Leaf Clusters. Army Commendation Ribbon with two Oak Leaf Clusters.

Purple Heart. Combat Infantryman Badge with Star (1st

and 2d awards).

CEREMONY GIVES SOLDIER NEW TOP NONCOM RANK

William O. Wooldridge, a soldier whose sole ambition 25 years ago was to be a good private, became today after three wars the first

sergeant major of the Army.

In his new rank, established by General Order 29, July 4, Wooldridge, holder of 2 Silver Stars from action in Europe in World War II, became the highest ranking enlisted man in the Army. He will serve as an adviser to Gen. Harold K. Johnson, chief of staff.

Wooldridge, who was sworn in at cere-monies on the parade field at the Pentagon, was selected as top soldier from among 47,-000 senior noncommissioned officers of the Army.

Sgt. Maj. Wooldridge's new ensignia was pinned on by Gen. Earle G. Wheeler, chairman of the joint chiefs of staff. Looking on Wooldridge's wife, Barbara, and four

were Wooldrage aons and one daughter.

When told in Viet Nam recently of his Wooldridge commented "I feel like I've just been kicked out of home, It's a great honor but I'll miss the division, I'll really miss this outfit." Wooldridge was then serving as sergeant major of the 1st Infantry Division.

"Twenty-five years ago I came into the Army hoping to be a good private," he re-

Wooldridge joined the Army in 1940 and was assigned to the 1st Infantry Division, then at Ft. Sam Houston, Tex. He served in all of the division's eight European cam-paigns from North Africa through Germany.

In 1944 he suffered a face wound from tank fire during the battle of Aachen. After returning to the United States in 1945 he was sent to Japan for two years, then it was back to Europe and once more to the 1st Division

Wooldridge went to Viet Nam with the division's advance party last September. He was due to rotate back to the United States in July but extended for six months to remain with the division. He made a brief visit to the United States last December as the division's representative when Birmingham, Ala., adopted the 1st Division.

The 43-year-old sergeant major is a native of Shawnee, Okia. He was recommended for his present post by Maj. Gen. William Dupuy, commanding general of the division.

The new title, unprecedented in Army history, places an enlisted man on the staff of the Army's chief of staff to advise on prob-lems affecting enlisted personnel, the education and advancement of noncommissioned officers and on morale, training, pay and promotions. His job, in brief, is to present the enlisted man's viewpoint to the Army's staff chief.

Hudson Honors Firemen

EXTENSION OF REMARKS OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1966

PHILBIN. Mr. Speaker, people of Hudson, Mass., in my district on June 12 honored the deceased members of its dedicated fire department in memorial services, in which I was honored and privileged to participate.

I ask unanimous consent to have printed in the RECORD the text of my remarks at this simple, but impressive community exercise

The material follows:

REMARKS IN PART OF CONGRESSMAN PHILIP J. PHILBIN MEMORIAL SERVICES FOR DECEASED FIREMEN, HUDSON, MASS., JUNE 12, 1966

This community, indeed all our communities can be thankful that we have had the steadfast, effective services of these men of both past and present generations. men, like the men of our police forces, are called upon in the performance of their duties to be ready at a moment's notice to risk their lives for the sake of community security.

In that sense, they are like members of the armed services and must respond instantaneously and oft-times at great risk to protect private and public property from destruction, and to prevent powerful conflagrations that would cause widespread damage and waste of valuable economic resources and even loss of life.

In the course of their daily work, these brave men, whom we so fittingly honor to-day, have not only unselfishly protected the public safety and private property, they have performed countless other services having to do with local well-being, the saving of life and the promotion of worthy civic causes. They have never lost an opportunity to take an interest and to play a part in activities that help and benefit the people as a whole of every age, class and group.

I commend and congratulate those of you of this very efficient Fire Department, your leaders and comrades throughout the state and nation for arranging suitable exercises to acknowledge the tremendous public contribution that has been made by your departed comrades.

This thoughtful, well-arranged program gives all of us a chance to join collectively today in paying heartfelt tribute to all those of your Fire Department who have served so devotedly throughout the years in the very best traditions of our American way of life for the protection, the security, the well-being and welfare of every man, woman and child in this community.

As we turn our hearts and minds today on this touching occasion, to the deeds, the sacrifices and the outstanding fidelity to duty of these men, let us give public expression to our grateful appreciation for what they have done during their lives, and during their faithful service to this beautiful community, to uphold our very best standards of

public service.

The example of their complete devotion to their vital work will long be remembered. The memory of their many brave deeds will long be acknowledged. The fond recollections of their staunch, loyal, friendship, fine citizenship and whole-hearted service will long be recalled in our prayers and in our thoughts by a truly grateful people.

How fortunate we are these days that their capable successors are following in their footsteps, as you here assembled are doing, inspired by their legacy of devotion and loyalty to carry on in the spirit, in the faith and in the superb dedication to the public interest that they exemplified and is needed so much in these days of crisis, to guard and strengthen our community life and sustain and guard the great free system of which we are so proud and which we are determined to preserve and enrich.

May these cherished comrades of yours find rest and peace in their heavenly home. And may you, their proud successors, long carry on their great work for community. state and nation.

Vice President Pays Tribute to Rev. Richard E. Evans

EXTENSION OF REMARKS OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. FARBSTEIN. Mr. Speaker, it gives me great pleasure to submit for the RECORD a letter from Vice President Hu-BERT H. HUMPHREY in tribute to the late Reverend Dr. Richard E. Evans of the old Labor Temple, formerly located at East 14th Street and Second Avenue in New York City, which is part of my congressional district.

Vice President HUMPHREY's letter has been laminated and has been affixed in a place of honor in the Reverend Richard E. Evans Interfaith Meditation Room of the J.F.K. Library for Minorities, Inc., which is dedicated to the Nation's immigrants in the spirit of the book "A Nation of Immigrants," written by the late President John F. Kennedy.

The letter follows:

THE VICE PRESIDENT, Washington, May 25, 1966.

1

1

Mr. J. P. SOMMER Director, J.F.K. Library for Minorities, Inc., Brooklyn, N.Y.

DEAR MR. SOMMER: Please convey my greetings and congratulations on the dedication of the Reverend Richard E. Evans Interfaith Meditation Room. Its location is so very appropriate in the Library for Minorities which bears the immortal name of our late, beloved President John F. Kennedy. Dick Evans would have been so pleased to be remembered in this meaningful manner—which serves the cause of God and of human brotherhood. As Dick Evans' friend, as one who admired his humility, his spiritual dedication, his devotion to the Family of Man and to the cause of liberty and good will, I join with his many other friends and admirers in commending this fine occasion.

One of the greatest success stories in all the world consists of the contributions to our nation by immigrants of every background, every race, creed and color. By giving the foreign-born the opportunity to rise individually to their highest potential, America has enriched itself beyond measure—in in-

tangibles as well as tangibly.

It is a fact—all to unfortunately, that at times in our history, America has not been fully true to its own ideals. There have been unhappy times of bigotry and intolerance. The door of discrimination has often been slammed in the face of many innocent people—native or foreign-born—merely because of the color of their skin, the temple of their worship, the land of their of their father's birth. Fortunately, our nation has turned the corner. Most of these regrettable situations have now been changed for the better. More corrective action is still to be taken. As you pause for prayer in this Interfaith Meditation Room may you—may all of us-take renewed strength from Dick Evans' great values. May you-may all of usproceed to fulfill the highest principles of our respective faiths. By putting our creed into our daily deed, we will demonstrate our true devotion to the Fatherhood of God and the Brotherhood of Man. We will thus carry on in Dick Evans' inspiring memory. Sincerely.

HUBERT H. HUMPHREY.

The American Farmer—God Bless Him

EXTENSION OF REMARKS

HON. CLAIR CALLAN

OF MEBRASIKA

OF MEBRASHA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. CALLAN. Mr. Speaker, at a time when millions of the world's inhabitants are plagued with famine, I believe we should acknowledge those responsible for the abundance of food with which we have been blessed.

ith ap-

ich

The people of our country are too often so enamored with the great food supply available, they take this abundance for granted. But more importantly, the man responsible for this abundance has been obscured by decorative wrappings and labels embracing the products of his toil. I am speaking of the American farmer.

If we stop to envision the various roles performed by the typical American farmer, we can see not only an American farmer, we can see not only an American flothed in the simple garb of his trade, but a soldier in uniform fighting a global war against hunger and starvation, a world trader selling his goods to foreign lands and bringing precious gold home to America, and a diplomat who speaks the only international language—the language of contentment. The American farmer does all this and more.

A recent article in the Plainsman, a Nebraska-based publication serving the

Midlands States, clearly and succinctly pointed out this fact.

Under leave to extend my remarks, I place the entire article from the July-August, 1966 issue of the Plainsman at this point in the Record:

THE AMERICAN FARMER-GOD BLESS HIM

Every American, whether city-dweller or small-town merchant, has a vital stake in a strong, aggressive United States agriculture an interest that strikes far beyond the incredible quality and variety of food products that daily are set before him.

The American farmer, in fact, has become a significant force in the struggle to solve one of this nation's most difficult economic problems, to wit, the deficit in our international balance of payments.

The farmer has become a salesman—a global salesman. And in just the last seven years, he has played an increasingly vital role in preserving the integrity of the dollar. Consider these facts, presented at a conference on agricultural export trade held recently in Minneapolis.

Item: Agricultural exports now represent about one-fourth—repeat, ONE-FOURTH—of all United States merchandise moving into export.

Item: Total farm exports in this fiscal year are expected to hit a record \$6.7 billion—more than double the figure of only seven years ago, and exceeding by at least \$500 million the export records set in each of the previous two years.

Item: Farm exports for eash (as opposed to concessional, under Government programs) will approach \$5 billion in the current fiscal year—compared with \$2.5 billion just zeven years ago.

A CLEAR PICTURE

Secretary of Agriculture Orville L. Freeman, in a speech before the Minneapolis conference, provided an even clearer picture of what all this means.

And whether he understood it or not, every American obviously would have been affected by a weakening of the dollar on the international level, which could have resulted had it not been for the enormous contributions of our agriculture.

But more important than this, the tremendous productive capacity of American agriculture serves as a keystone for a solution to an even more serious problem—and with far more awesome consequences.

World population is fast outpacing its ability to produce food. If this trend is permitted to continue, or so the experts have predicted, the result could mean widespread global famine within 20 years.

Any resulting global conflict to control the world's food resources, as one Government official stated it, "Would make Viet Nam look like a neighborhood squabble."

But the United States and other nations are attempting to reverse the trend—to expand the capacity of the under-developed nations to become more self-sufficient in their production of food.

And, as Secretary Freeman commented in his Minneapolis speech, "The American farmer holds the key to whether there will be time enough to avoid disaster. A large measure of hope for peace in the world depends upon his ability to furnish food for restless, hungry people—to buy time while scientists and agricultural technicians of our own country and other advanced nations teach the less-developed regions to produce more for their own needs."

A VITAL STAKE

Need we repeat that every American has a vital stake in agriculture?

In the first nine months of the 1965-66 fiscal year, Secretary Freeman said, our agricultural trade balance is up 10 per cent over the same period a year earlier. The balance of farm exports over farm imports amounted to some \$1.7 billion, compared with about \$1.5 billion a year earlier.

But at the same time, he noted, the nonagricultural trade balance was DOWN 25 per cent. The balance of non-farm exports over non-farm imports was \$2.3 billion, compared with \$3.1 billion the year before. On the same program, Secretary Freeman's Director of Agricultural Economics, Nathan M. Koffsky, put it more bluntly:

Koffsky, put it more bluntly:
"To my mind," he said, "there has not been an appropriate recognition of the important contributions that agricultural exports make to our balance of payments."

If farm exports had not risen as they did in the past seven year, Mr. Koffsky added, "the deficit in our balance of payments last year would have been twice as big as it was. And the threat to our economic stability would have been that much greater."

What would this have meant to the layman, to the non-economist who doesn't think in such terms as "the integrity of the dollar"? It almost certainly would have meant much more stringent controls on the flow of dollars out of the country.

SEVERE RESTRICTIONS

To the fertilizer dealer from Keckuk, Ia., it might have meant more severe restrictions—or even a total embargo—on the liquor he wants to bring back with him from a trip to Canada.

The same restrictions might have been applied to the school teacher from Tennessee who bought some Irish linen on a vacation trip to Europe—if her trip had been allowed at all.

And to the businessman who thinks big who has expanded his operations abroad the "persuasion" now employed by the Government to limit his overness investments might have acquired some formidable teeth.

Wagons Ho

EXTENSION OF REMARKS

OF

HON. ROBERT DOLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1966

Mr. DOLE, Mr. Speaker, through the ingenuity and foresight of Mr. and Mrs. Frank Hefner of Quinter, Kans., in my congressional district, anyone with the spirit of adventure may taste the experiences of the hardy pioneers who endured untold hardships in opening up the West.

Mr. and Mrs. Hefner are the sponsors of a unique recreation project, "Wagons Ho," which features covered wagons, saddle horses, campfires, and even an Indian raid. Caravans begin at Castle Rock, a point on the historic Butterfield Trail over which wagon trains and stages traveled, and along which vast herds of Texas longhorns were driven before the turn of the century. "Wagons Ho" traverses portions of the trail where at certain points the wagon ruts are still discernible.

After several days of living under the stars, present-day "pioneers" are returned to the point of origin, much richer for the experience, and with some idea of the hazards to which early day settlers were subjected.

I invite the attention of my colleagues to the article, "Wagons on the Prairie," appearing in the July 1966 issue of Soil Conservation, a U.S. Department of Agriculture publication: The article, which follows, features the Hefners and is written by Jack W. Walstrom of the Salina Kans., SCS office, and Howard V. Cheney, Gove County work unit conservationist: Wagons on the Prairie: Kansas Farm Cou-

PLE REVIVE OLD BUTTERFIELD WAGON-TRAIN
DAYS FOR RECREATION PROFIT

The cry of "Wagons Ho" once again echoes across the western Kansas plains as covered wagons move out along the old Butterfield Trail.

"Wagons Ho" is a new income-producing recreation project for Frank and Ruth Hefner of Quinter, Kans.

ON THE TRAIL

Guests of the Hefners spend several days and nights on the trail, enjoying many varied activities and the quiet beauty of the Kansas prairie.

Potential ploneers usually arrive at a selected campaite the evening before the trip begins. They get to know one another, and the Hefners explain the activities to come. The next morning, it's "Wagons Ho!" And the wagon train starts its journey down the Butterfield Trail.

A typical day's schedule: Eating a hearty breakfast on the open prairie; riding in a covered wagon, Concord stage, or on a saddle horse; fording a shallow section of the Smoky Hill River; searching for fossils or rocks in prime hunting areas; viewing occasional cattle herds; being entertained around an evening campfire; and resting beneath a western sky. And somewhere along the way an Indian raid and a visit by a Pony Express rider are sure things.

Good food, and plenty of it, are of course a vital part of the Hefners' western hospitality.

The Hefners, cooperators with the Gove County Soil Conservation District, completed a Great Plains Conservation Program contract on their 2,560-acre farm in 1964. Under the plan, 230,000 feet of terraces and 2 acres of windbreaks were installed, and 83 acres of cropland was converted to grass. With the major conservation work done, they turned their attention to recreation.

An interesting aspect of this 20th Century wagon train is the cooperation the Hefners receive from the many people involved.

receive from the many people involved.

Howard Cheney, SCS work unit conservationist, helped determine the original route of the Butterfield Trail, still visible on aerial photographs. He made a list of landowners whose permission would be needed to cross their lands.

Pifty-five landowners and tenants gave the Hefners permission not only to cross their lands but also to use likely areas for campsites and stopping places. Many landowners have become as enthusiastic that they pitch in and help, providing skilled wagon drivers and horsemen for the tour.

The wagon train includes 13 covered wagons, 25 horses and mules, and a stagecoach.
The stagecoach, built from the original
plans of the Concord Coach Company, has
no springs. Concord used strips of leather
to cradle the body and absorb bumps. The
stagecoach wheels also are authentic, made
specially in Arkansas by Mennonite craftsmen. Passengers trade places at each rest
stop so that everyone has an opportunity to
ride in the Butterfield coach.

As the caravan moves along, drivers and cowboys point out scenes of interest—a homesteader's long-abandoned and house; the ruts of the Texas cattle trail trampled into the sod by millions of longhorns in the 1870's; and the original stage stations along the Butterfield Trail. Also of interest to the Easterner and all city folk are some of the signs of modern farming—fields receeded to grass, terraces, and trench silos.

AT DAY'S END

After a day that passes all too soon, the wagon train forms a circle at the predetermined prairie campeite. Not far away, behind a grove of trees, is a ranch house that offers a chance for travelers to take a refreshing shower and wash the trail dust off their faces. They do not tarry long, however, because the campfires are lit, and the aroma of food soon fills the sir.

Before the last rays of the sun disappear, all hands prepare their sleeping bags. The bags are furnished at the journey's start to make a more comfortable bed under the stars or upon native hay piled high in the wagons. The dark outline of the wagons against the dimly lit western horizon, the smell of campfire smoke, and the sound of whinnying horses truly bring the old West back to life. At night, the modern pioneers gather

At night, the modern pioneers gather around a campfire and blackened coffeepot to hear western music from guitar and fiddle. Those who want to can dance to their favorite western and polka tunes on the buffalo sod. Others listen to the wagon-master spin tales of cowboys who camped nearby while driving huge longhorn herds to the northern railroads.

AND THEN THE MAIL

One of the trip's exciting moments comes when a Pony Express rider delivers to each traveler a letter from Wagons Ho. The letter is an invitation to attend a reunion each fall with other Wagons Ho guests. Tourists from the United States, South America, Germany, England, Ireland, and Sweden have already enjoyed Wagons Ho hospitality. Harry Morris, an airline executive from Middlesex, England, wrote the Hefners, "Our

Harry Morris, an airline executive from Middlesex, England, wrote the Hefners, "Our time with Wagons Ho was the most exciting of our trip in the United States. You are to be commended for keeping the heritage of the West alive, for this part of America is known and loved the world over."

Wagons Ho has made 13 trips across Kansas prairie since its beginning 2 years ago. The Herners so far have come out about even financially, but they expect to realize a small profit this year.

With satisfied guests urging their friends to travel wagon train, the old Butterfield Trail is once again taking more and more "pioneers" west.

The Draft Question

EXTENSION OF REMARKS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1966

Mr. DERWINSKI. Mr. Speaker, much discussion has been promised on the draft question, but related issues deserve equal commentary. I insert, for the RECORD, the editorial of radio station WIND in Chicago, given on July 5, and a column by Editor Fred C. Lilley, of the Oak Lawn News, which I believe observe attention:

[From WIND Radio, July 5, 1966] THE LEGAL AGE

(By Edward Wallis, general manager)

The long Independence Day week-end holiday gave a lot of people a lot of time to relax and to think. We were thinking, as we hope you were, about our independence; about those who fought for it and those who drafted the Declaration and the principles which it set forth a hundred and ninety years ago. Then we started

thinking about the youth of our country... those particularly between eighteen and twenty-five, who make up the principal age group serving in our armed forces. What brought it to mind was a letter we had from a listener, whose son enlisted at age seventeen in 1964. Out of his two years, he has served one manning a machine gun post in a helicopter in Viet Nam.

He is now back in the States, but is based outside of Illinois. He owns a 1956 automobile, which is registered in Illinois and insured in Illinois, but because of his age, it is in his parents' name. In order for him to use his car at his out-of-state base, he would have to purchase the State's license plates, as well as be subject to higher premiums for his car insurance as the principal driver of the car, plus the costs of transfer and title.

We recognize the complexity that such situations create for State licensing and for insuring, but we submit that no matter how difficult making exceptions may be, that young men particularly under the age of twenty-one who are serving in our Armed Services, especially those who have served in active duty, have responded to the highest call of their country... to risk their lives. In our estimation, they have met the greatest test... they are men... and, if they are men on a battlefield, then they should be accorded that same status when they return home.

for the wit lish

In discussing the same subject with a well-known Chicago attorney, he cited numerous other areas involving the rights of those under the legal age, which perhaps need examination. A young man may be subject to the draft or compulsory military training at the age of eighteen . . . but he cannot vote; he cannot sign a legal document; he or his parents must pay premium payments for auto insurance until he is age twenty-five; in essence, he has no legal status. We suggest that this is inequitable for those who have served in active duty and, we believe that government, as well as business, should make provisions to compensate for it.

[From the Oak Lawn News, June 30, 1966]
As I SEE IT
(By Fred C. Lilley)

War is hell and I hate it as I have said many times in these articles. "Police actions" or undeclared wars are even worse since there is no clearly defined motive for our boys to be fighting and dying in these actions. If you will remember, those of you who can, country's reaction to World War 1. A After many incidents, culminated by the sinking of an American ship, the country was quite prepared to go to war in every sense of the We were fired up with enthusiasm to raise money and armies to any degree nece sary to not only fight to win this unwanted but seemingly necessary war. Then look at World War II. Here again a dastardly inci-dent of direct action against the United States stirred the people to the necessary heights so that making the necessary effort was automatic. The Korean War lacked that spark which is necessary to really instill patriotic fervor in the populace. However, the action of the North Koreans was so sudden and dramatic that it did capture some of the imagination of people who were con-vinced that the South Koreans were being over run. But in the latest of the undeclared Wars, the Viet Nam conflict, we have no such drama. There is fighting which has been going on for many, many years prior to our involvement. The French were thrown out ignominiously and why we thought we

would fare better is a mystery.

Is it any wonder then why young men are burning draft cards and using various means of subterfuge to avoid the draft? True, they are in a very small minority, for which we thank God, but nevertheless it is unfor-

tunate that any segment of our society should feel this way. And, it is to such groups that the fringe of unscrupulous, un-American hangers-on attach themselves. It does not take a large force of well trained, Un-American individuals, indoctrinated with some foreign ideology to transform a rabble of individuals into an active violent mob. Thus, we project an image to the werld of a dissatisfied people, which on the whole is not true. Certainly, many of us do not agree with many things going on in Washington but we will attempt to use our ballot to change matters rather than the violence in the attents.

Now, we are having hearings in Washington regarding the draft. I believe and have so stated previously that the draft was a war time measure and should be abolished. However, if we must have it let us at least administer it constructively. For example, why should a young man wait around until 24 or older before he is called. In the in-terim he cannot secure a cereer job since companies know he is subject to the draft. Why not induct each youth at age 18 or upon graduation after that birth date. He would spend one year in the Armed Forces during which time he would undergo fair and impartial screening and testing for aptitudes and College potential. Then, if he shows such potential he would be released go to College at his own expense if possible or at Government expense if necessary. Others would be screened out or into other areas of service for their country. ary scale would be raised materially for military service to encourage those qualified to make such service a career. I believe through these efforts we would solve the problems of our youth and maintain an adequate fighting force composed of men who are there because they want to be. What do you think?

Tight Money-Remedial Legislation

EXTENSION OF REMARKS

HON, EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. CELLER. Mr. Speaker, presently, the economy of the Nation is faced with the growing scarcity of bank credit. Commercial banks cannot supply the present credit demands. Today, credit at the Federal Reserve is available at the discount rate of 41/2 percent but only on eligible assets and then only for 15 days. These eligible assets are Treasury securities and certain short-term paper. Other assets like customers' loans and other obligations are eligible, but at a penalty rate of an additional one-half of 1 percent and also for 15 days. This penalty and this limitation of time are the rub. In today's economy, these are costly burdens and are contributing to tigher mon-These restraints and limitations should be removed if commercial banks are to serve adequately business and industry generally.

Banks are competing one with another for funds in all markets in all sections of the country. When banks thus compete with each other, no new credit is established to meet growing demands. They are hampered by their ineligibility to borrow readily and economically from

n

h

the 12 Federal Reserve banks which comprise the country's central banking system.

The outmoded and obsolete borrowing restrictions are intensifying present difficulties. The Federal Reserve has recognized a need for change and has recommended legislation. There is a bill pending in the House, which has already passed the Senate last August. It is S. 1559. It is presently lodged in the House Banking and Currency Committee. The proposed bill would permit a member bank to borrow from a Federal Reserve bank on the security of any assets acceptable to the Reserve Bank without paying a penalty rate of interest. The 15-day limitation would be removed.

William McC. Martin, Jr., Chairman of the Board of Governors of the Federal Reserve System, has stated:

As long as member banks hold a large enough volume of Government securities, they need not, of course, be particularly concerned as to the eligibility for discount with the Reserve banks of customers' paper held by them. Since World War II, however, there has been a sharp net decline in the aggregate holdings of Government securities by member banks. If a continuing substantial increase in economic activity should cause banks further to reduce their holdings of Government securities in order to meet increased credit demands, many banks would be obliged to tender other kinds of collateral if they should seek to obtain Federal Reserve credit.

In order to avoid cumbersome administrative procedures and problems arising from the necessity of distinguishing between "eligible" and "ineligible" paper, the Reserve Board urged Congress to move in and revise and update the law so as to eliminate the existing restrictions with respect to "eligible" paper.

The administration approves of this new procedure.

This legislation would remove technical impediments to ready access to Federal Reserve credit without penalty. The Federal Reserve Board wants to make the discount window an effective means of supplying funds to commercial banks.

Enactment of this measure would benefit all banks—large and small—in all sections of the country. It would relieve the pressure and reduce destructive competition for funds among banks and between banks and nonbank financial institutions

Clinton Memorial Day Observance

EXTENSION OF REMARKS

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1966

Mr. PHILBIN. Mr. Speaker, on May 30 this year, I was privileged to participate in the stirring and impressive Memorial Day exercises in my own hometown of Clinton, Mass., w.d under unanimous consent I insert in the Record the news account of this event which appeared in the Clinton, Mass. Item.

The material follows:

MEMORIAL DAY RITES OBSERVED IN CLINTON

"Memorial Day is a great, nationwide, spontaneous outpouring of tribute, honor, gratitude and remembrance of the gallant and the great, of those in every American generation who thought so much of American freedom and the American way of life that they willingly laid down their lives."

So said Congressman Philip J. Philips, in his Memorial Day address in Central Park Monday while hundreds of Clintonians participated in the annual ceremonies there to honor their dead loved ones.

In both Woodlawn and St. John's cemeteries, graves were decorated and prayers were said as taps were sounded and the National Guard firing squad saluted deceased veterans from all past wars.

Three bands and the Joanette Drill Team from Leominister highlighted the musical portions of the parade and marchers included the Veterans units, their auxiliaries, Gold Star mothers, Boy and Girl Scouts, Cubs and Brownies.

Parade marshal was Lt. Col. William M. Duncanson U.S. Army Ret., assisted by Gerald Ruberti, Francis M. Ponyta and Donald McGuirk. Prayers were read by the Rev. Richard L. Harding of the First Baptist Church, Miss Nancy L. Anderson (highest honor pupil at CHS) delivered the Gettyaburg Address, and John Bandalewicz Commander of the Polish American War Veterans from Maynard read the general orders.

The musical units were: The Clinton High School Band, the Clinton Junior High Band and the Shirley P.A.L. Band.

ALL AMERICANS

The Congressman's remarks follow in part: "Memorial Day has deepest significance to us and to all Americans. The day was first officially established following our Civil War and many gallant young men of Clinton served and fought in that bloody conflict to establish national and civil rights.

"Most of the bitterness of that fratricidal conflict has disappeared, but the memory of these gallant heroes remains, and their devotion to country is permanently enabrined in the hearts of our people and inscribed upon permanent monuments in our beautiful park, side by side with fitting memorials to the gallant service and sacrifice of those who fought and died in the Spanish-American War, World War I, World War II and veterans of other Americans wars.

"While Memorial Day came into being to commemorate the brave veterans of the Civil War, it has thus been extended to pay fitting tribute to all those who have given of themselves, who have made the supreme sacrifice, or who have served faithfully and heroically to uphold American liberty and justice,"

OUTPOURING OF TRIBUTE

"Today, Memorial Day is a great, nationwide, spontaneous outpouring of tribute, honor, gratitude and remembrance of the gallant and the great, of those in every American generation who thought so much of American freedom and the American way of life that they willingly laid down their lives, or offered their lives, most of them in the flower of their youth, in order that this great government dedicated to human freedom might survive, grow, prosper and become, as it has become, the greatest nation in world history.

"No honor we could confer upon them would be enough to express our thanks, and the thanks of the country, to these valiant veterans for what they have done to protect, preserve and save this great nation, its homes, its freedoms, its vaunted institutions of enterprise and justice.

"No monument, no plaque, no words can measure their noble sacrifices. They rest in honored glory. They are enshrined in grateful American hearts with eternal love, devotion and gratitude. "On this day of devout remembrance, dedicated to them, this day of prayer, of fond recollection for departed loved ones, let us once again, as we have done for so many years, throughout the grand history of our beloved citadel of liberty, turn our hearts and our prayers to them with tender, enduring thoughts of appreciation deeply harbored in the heart of every American."

GREAT HYROES

"Hail to these great heroes, hall to these men, and these women too, of revered and honored memory, who have bequeathed to us such a precious, noble legacy of true Americanism, and who have consecrated with their blood, their sacrifices and their love, the shrines of this great country and the exalted purposes for which it exists.

"Their sacrifices have not been, and will not be, in vain. They will live forever in the hearts and minds of true Americans. These heroes will be revered and they will be emulated, as they have been throughout our history, to the end of time, and as long as men and women strive, struggle and sacrifice

to be free from oppression.

"This day, and these days of struggle, turmoil and strife serve to remind us of the price that a great free people are always willing to pay to defend and preserve their liberties.

"Today, our honored dead, resting in their eternal, heavenly bivouac, speak to us again in the voice of freedom, in the example of their spirit of sacrifice and loyalty, more eloquently than words, and more nobly than we can describe."

BURDEN OF CALL

"It is for us today, as it always has been for real Americans, to take up the burden of their call, to give living expression to the memory and example of their sacrifice, to carry out the inspiration they have given us to defend our blessed free country and the priceless liberties that have made it great against those who seek our destruction, and who strive to turn this free nation and the free world into a fiery shambles of conflict and tyranny.

"With prayerful tribute and flowers and the flag for which they fought and died, let us honor and exalt on this day of remembrance, all those who have served us so gallantly, so faithfully and so well with such

imperishable devotion, sacrifice and love.

"Let us in our time, make very sure that their example shall never die, and that their sacrifices will never be forgotten by a grateful American people who owe them so much."

Freedom

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1966

Mr. DULSKI. Mr. Speaker, an excellent address on the subject of freedom was delivered recently by Lt. Col. George A. Maloney, U.S. Army, at the Fourth of July observance at the 'Monument grounds in Washington, D.C.

Colonel Maloney, a graduate of West Point and the recipient of a number of military decorations and awards, has served in Korea, Iceland, Okinawa, and southeast Asia. He recently completed a 3-year tour with the 1st Special Forces Group, which included duty in Vietnam as commander of the 1st Corps, U.S. Special Forces, at Danang.

Under leave to extend my remarks, I wish to include Colonel Maloney's address which follows:

FREEDOM

Tonight we celebrate a great national holiday. A day which has meaning for freemen throughout the world. A day which marks the attainment by our forefathers of an individual, political, spiritual and national freedom, previously unknown. A freedom for which our forefathers paid a heavy price. A freedom which successive generations of Americans have rebought with their blood. In the 190 years of our freedom, we have learned that freedom brings responsibilities to defend it as well as rights to enjoy it.

We have learned that freedom isn't free, that it can be lost and once lost is seldom regained. We have learned that freedom lost anywhere, weakens free men everywhere. We have learned that to surrender freedom anywhere invites attack on free men every-

Because we have learned this, tonight, at this very moment, this generation of Americans is making another payment for freedom. On the other side of the globe, closer to us now than California was 20 years ago, 30 nations of the free world are united in a struggle to keep the peoples of southeast Asia free.

We lead this struggle as we have led others in the past 20 years for our heritage of freedom includes the burden of free world leadership. Our forefathers pledged their lives, their fortunes and their sacred honor to their struggle. The four most recent Presidents of the United States have pledged that we will honor our commitment in southeast Asia and we shall.

Our Vietnam commitment is total and extends from national to village level. Our military men, statesmen, medics and builders make their contributions both to freedom and to the improved living standards, which make freedom meaningful.

Our Viet Nam commitment is both similar to and different from others we have honored. Similar in that we are containing aggression in the form of Red inspired, Red supported, and Red directed infiltration forces: Communist forces that disguise their true identity and purposes. The Chinese Reds of Mao Tse Tung called themselves agrarian reformers. The Cuban Reds of Fidel Castro called themselves liberators. The Vietnamese Reds would be known as civil warriors and reformers.

We know better. We know them as scavengers of human misery found wherever poveerty, disease and illiteracy make men desperate. We know them as false promisers of peace, progress and liberty but deliverers of immediate violence and the eventual captivity of a state society.

Our Viet Nam commitment is similar to Korea in that once again we find ourselves again in a difficult place. Once again, we are at the end of a long supply line, once again in a terrain which limits the effectiveness of our military machines and sape the strength of our men. Once again fighting for a small nation whose divisions and confusion are exploited by the same Communist techniques that would divide and confuse

our American people.

Our Viet Nam Commitment is similar to Korea, Berlin and Cuba in that the threat of nuclear war hovers in the background limiting our efforts and lending urgency to the requirement for eventual success.

But there are also differences in our Viet Nam commitments. To a greater degree than before, people are both the objective and the tools of war. This is a war in, amongst and for people. We fight, not for cities, roads or other terrain features, but for the hearts and minds of men.

There are also differences in the timing of

the efforts of our national agencies in Viet Nam. In prior wars, the military fought, then the statesmen made peace and finally the aid specialists rebuilt the devastated areas. But in this war, all of our agencies operate concurrently under a single control at the very top level of our government.

Finally and sadly, this war is different in that a small portion of our people have manifested a violent and irresponsible dissent to our national purposes and efforts. I speak not of those who seek to clarify issues within our democratic process but of those whose dissent is neither reasoned nor honest. Whose dissent reflects their craven self interest, their cruel distortion of facts and their callous support of causes detrimental to our common defense of freedom. In so doing they sully that common resolve, that unity of purpose, that universal determination which has characterized our national will in every past war. They distract our attention from the utterly magnificent fashion in which our valiant youth are conducting their defense of freedom.

I see a requirement that we insure that those of these splendid men who must die for us do so free of doubt that their sacrifice is unappreciated.

I see a requirement that we so broaden and pass on this priceless heritage of freedom that it can never be said of us that we were so involved in enjoying freedom that we couldn't successfully defend it.

His Holiness Pope Paul VI Continues His Quest for an End to the Fighting in Vietnam

EXTENSION OF REMARKS

OF

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. WOLFF. Mr. Speaker, His Holiness Pope Paul VI has been untiring in his efforts to bring about peace talks to resolve the Vietnam conflict, and in this quest His Holiness deserves the thanks of all mankind. I would like to insert the following excerpts, released by the National Catholic Welfare Conference, in the Record. I commend the Pontiff's remarks on the Vietnam question to the careful attention of my colleagues. The Holy Father's patient devotion to peace should be an inspiration to our Nation's leaders not to falter in the vital task of bringing a just peace to Vietnam.

[From the N.C.W.C. News Service]

POPE PAUL CONTINUES PEACE EFFORTS
VATICAN CITY.—Pope Paul VI is determined
to press his thus-far fruitiess campaign for
a negotiated settlement of the war in Vietnam.

He said that although his suggestions for neutral arbitration of the war have not been successful, "we are not on this account disheartened in the pursuit of our efforts."

Vietnam, he said, is "tormented by a conflict and by struggles that make it suffer greatly and seem to have no end." He continued:

"With the worsening of the situation and the terrible prospect of a possible extension of the conflict, the demands of our apostolic ministry have spurred us to strive in every way, even blazing new trails, that a solution may be sought and achieved through frank and honorable negotiations." He recalled that he had made "reiterated appeals both public and private" for peace in Vietnam and had left no stone unturned "to hasten the meeting of minds." He also recalled his proposal for a Christmas truce and his hopes that it would be not only prolonged but would serve as "a base for launching peace negotiations."

He indicated that he had channeled his suggestions for neutral arbitration in Vietnam through the United Nations: "Trusting once more in the work of the United Nations—of that organization that works for peace and in the 20 years of its existence has prevented so many conflicts and settled so many others—we thought it good to suggest aribtration, to be confident in neutral nations, for a pacific solution of the grave problem."

He continued:

"You well know the inconclusive outcome of our sincere and unselfish efforts in favor of peace. But we are not on this account disheartened in the pursuit of our action, for we are anxious to foster in the society of men the concord and brotherhood proclaimed by the Gospel message.

"Meanwhile we renew to the heads of state and to all men of good will—who have so generously and enthusiastically responded to our solicitude as universal father and shepherd—our sincere and profound gratitude, and the appeal to focus their thoughts on a just peace that may give those peoples liberty, order and prosperity."

Budget Bureau Policy Threatens To Endanger Soil Conservation Service Watershed Program

EXTENSION OF REMARKS

HON. BERT BANDSTRA

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1966

Mr. BANDSTRA. Mr. Speaker, I would like to express my deep concern over the Bureau of the Budget's recently adopted policy with regard to new projects under the U.S. Soil Conservation Service watershed program.

Since last December, the Soil Conservation Service has sent 51 new watershed work plans to the Budget Bureau for review. In the past, the Budget Bureau has checked watershed work plans and, if no objections to their economic feasibility were found, has transmitted the projects to the Congress for review and approval by the appropriate committees of the House and Senate. der provisions of the Watershed Protection and Flood Prevention Act, projects with a single structure of more than 4,-000 acre-feet capacity are sent for review and approval to the House and Senate Public Works Committees, and projects with a single structure of less than 4,000 acre-feet capacity are sent to the House and Senate Agriculture Committees. The provision for review and approval by congressional committees has been part of the law since it was enacted in 1954.

Within the last month or so, however, the Budget Bureau has changed its longestablished policy and has refused to send any new watershed projects to the Congress for review and approval, regardless of the merits of any of the individual projects. As a result, all 51 new watershed work plans are still pending in the Budget Bureau and, even though there has been no change in the law, the appropriate committees of the House and Senate have not been given an opportunity to review and approve these new watershed projects. This new policy of the Budget Bureau threatens to endanger one of the most effective programs for soil and water conservation.

It is my understanding that the Budget Bureau has held up these watershed projects because of a contention that the provision for congressional review and approval of individual projects is an unconstitutional infringement on the power of the executive branch. Very frankly. I do not think this matter involves any great constitutional crisis. The Soil Conservation Service watershed program has operated under the provision for congressional review and approval of individual projects for a dozen years. During this time, the House and Senate Agriculture Committees have approved 293 projects, and the House and Senate Public Works Committees have approved 153. In other words, 446 watershed projects have been approved under the present provisions of the law, and there have been no previous complaints that this law violated the Constitution. Only last year the Congress, with the approval of the executive branch, amended the Watershed Protection and Flood Prevention Act so as to permit Soil Conservation Service to provide assistance to watersheds with structures of up to 12,500 acre-feet flood detention capacity. Nothing was said at that time about the possible unconstitutionality of review and approval of these projects by congressional committees. In fact, it was not until late May of this year that Soil Conservation Service officials first learned of the Budget Bureau's objections to this procedure.

If the Budget Bureau's new policy is not reversed, and if the new watershed work plans are not sent to the Congress for review and approval, it will be extremely unfair to the local officials who have spent years preparing detailed plans for these projects. Among the projects now being held up by the Budget Bureau is the Three Mile Creek Watershed. which is of great importance to the Union County area in Iowa. This project was officially proposed in 1958 and it has been in the planning stage since January 1961, more than 5 years ago. After a great deal of hard work on the part of the local sponsors, plans for the Three Mile Creek project were sent to the Budget Bureau on April 25, 1966. This project, which I have been following closely for more than a year, would provide valuable soil conservation, flood control and recreation benefits to the Union County area. In addition, it would offer a source of municipal water supply to the town of Afton, which has been hampered by acute water shortages in the past. And, in the long run, the Three Mile Creek Watershed would provide the basis for future economic growth in the area. I feel it would be most unfortunate if this project, as well as the others pending with the Budget Bureau, were

delayed by a dispute over abstract legal-

In my opinion, the Soil Conservation Service watershed program is far too valuable to be endangered by arguments over the alleged unconstitutionality of a law which has been in operation without previous objections for a dozen years. Any question as to the constitutionality of the provision for congressional approval of projects can be resolved at a later date, when the Congress has the time to consider the matter with care. In any event, if there is anything certain about this dispute, it is that nothing in the Watershed Protection and Flood Prevention Act authorizes the Budget Bureau to deliberately hold up projects which merit approval. I therefore think the Budget Bureau should reverse its policy of holding up watershed work plans and allow this program to move forward, as it has in the past, under the procedures established by law.

Statement Made by Irvin M. Frankel, President, American Society of Travel Agents, Presentation of Plaque to Senator Magnuson

EXTENSION OF REMARKS

HON. CHARLES L. WELTNER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. WELTNER. Mr. Speaker, my friend Mr. Irvin M. Frankel, of Atlanta, Ga., is president of the American Society of Travel Agents.

The society recently paid tribute to Senator Warren G. Macruson for his contribution to the travel agency industry and the public which it serves. Because of my respect for Mr. Frankel's distinguished leadership in the travel industry, I place his statement on that occasion in the Recorn at this point:

STATEMENT MADE BY IRVIN M. FRANKEL, PRES-IDENT, AMERICAN SOCIETY OF TRAVEL AGENTS, PRESENTATION OF PLAQUE TO SEN-ATOR MAGNUSON, JUNE 23, WASHINGTON, D.C.

Honored Guests and Fellow Members of ASTA, thank you very much for taking time from your busy schedules and important responsibilities to participate in this occasion. I know that I voice the sentiments of all

I know that I voice the sentiments of all the members of the American Society of Travel Agents when I say that we long have looked forward to this opportunity to pay tribute to our guest of honor, Warren G. Manuson, who—although a Senator representing the State of Washington—is, in our opinion, a Senator representing all of the United States.

During his more than 30 years of public service in the House of Representatives and the Senate, he has demonstrated that imperative quality which, in the words of Alexander Hamilton, distinguishes a representative of all the people as contrasted with a parochial approach.

"Learn to think continentally," Hamilton admonished his contemporaries.

Senator Magnuson, in answer to the demands of the present and in response to his own profound awareness of the course of history, has exceeded that heretofore valid injunction and thinks internationally.

The important legislation which marks his career in public service is monumental testimony to his fidelity to the philosophical observation that "the difference between a politician and a statesman is that a politician thinks only of the next election and a statesman thinks of the next generation."

Every proposal advocated by WARREN MAG-NUSON, every piece of legislation which he has authored, sponsored and successfully has brought to enactment, is incontestible evidence of his fidelity to this concept.

We, in the American Society of Travel Agents, long have watched with deep and personal interest his devotion to furthering the best interests of all—his steadfast adherence to the principle that all legislation must be based upon equity and justice.

We are here today to express our deep ap-

preciation of his inspired leadership and recognized wisdom during his many years of public service.

His sound imagination has assisted materially in creating a strong, self-sufficient air transportation system. He prophetically ploneered in an appreciation and under-standing of the benefits which would be derived by our national economy from travel and tourism. And he, time and time again, has directed the specific attention of the nation to the tremendous contribution to our gross national product made by the indeendent, private enterprise businessmenwho constitute the Travel Agency industry.

He has listened sympathetically and per ceptively to our problems, lauded our effort to serve the public in accordance with the highest standards of responsibility and professionalism and has given us that sound advice which is the distillation of experience

and statesmanship. No single tablet of bronze adequately could describe our appreciation of his services to our nation and, of course, to our industry.

So-we are forced to be content with the following phrases which, even at their best, are inadequate to express the full extent of e sentiments.

On behalf of the American Society of Travel Agents, Senator Magnuson, and in accordance with the resolution adopted by our Officers and Directors, we present, with pride and pleasure, this testimonial of appreciation in recognition of your distinguished leadership and positive contributions to the Travel Agency Industry and the public which it serves; and for your significant achieveinta in the development of travel and tourism

We wish you many more years of similar outstanding service to our peoples and our nation.

This tribute, Sir, is from our hearts.

Scramble for Cash Unprecedented

EXTENSION OF REMARKS OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. BOB WILSON. Mr. Speaker, the President is not sending a tax increase bill to Congress at least until after the elections. Instead, he is trying to check escalating inflation resulting from wild and wasteful Federal spending by applying the monetary brakes.

Now no one knows whether the public is going through the windshield or up through the roof. L.B.J, has reached the point where, having spent too much to try to create prosperity, he is now

drying up the market of free money which can create a depression. This is the price of butter and guns together. The unemployment rate is rising again and serious unemployment, particularly in the building trades, may be the result. Meanwhile, we are going up and down on an economic roller coaster.

The banks have been encouraged to buy what are called "certificates of deposit" for 51/2 percent and, under the rules, a little more. This looks good because it increases their deposits. But these "certificates of deposit" are relatively short term, often 3 months. bank must earn better-and usually far better-than 6 percent quickly to pay these high interest rates. This has shoved, and is shoving, the price of money for borrowers to ruinous rates. It is hitting the construction and other trades and will hit more. This is a new twist on robbing Peter to pay Paul and only this corkscrew administration could have nurtured it.

By unanimous consent, in this connection, I introduce in the RECORD an article by Harold B. Dorsey in the Washington Post:

SCRAMBLE FOR CASH UNPRECEDENTED

(By Harold B. Dorsey)

NEW YORK, July 10 .- The scramble for cash that has been so evident in the past few weeks has reached a stage that has only rarely been experienced in this country during the 20th century. The competition for money by the savings institutions, com-mercial banks, non-bank lenders, Federal agencies and business borrowers is now on a knock-down, no-holds-barred basis.

One result of this condition is a distortion in normal interest rate relationships which is tending to cause violent shifts in cash flows. For instance, the recent increase in dividends paid on savings and loan shares is probably more than some of the S&L's can afford to pay out of interest earned. Nevertheless, ne boost in the rates seemed to be necessary to restrain an even more embarrassing out flow of deposits to higher yields obtainable elsewhere. But the yields obtainable elsewhere are also rising in this most unusual scramble for money.

One cannot help but wonder what is go ing to happen to the approximately \$43 billion of ordinary passbook savings deposits of the weekly reporting commercial banks. The ceiling interest rate on these deposits is only 4 percent. The depositor can probably put his money in the savings bank or the next door and obtain 5 percent. of them could probably do better than that if they wanted to buy Certificates of Deposits issued by commercial banks or to invest their money in top quality relatively short-term debt issues of the Federal agencies and corporations.

Over \$17 billion of the deposits of the commercial banks is represented by Certifi-cates of Deposits on which the ceiling is 5½ per cent. But in the secondary management of C.D.'s maturing in six months are available C.D.'s maturing in six months are available. on a 5.60 per cent basis. A substantial pore C.D's represents a temporary tion of th vestment of the surplus cash of corporations.

But to the extent that the commercial banks lose the C.D. money, and it ultimately comes back to them in the form of demand deposits, the money available to the commercial banks for lending and investing would be reduced because the reserve requirements on demand deposits is nearly 3 times the recently upward revised require-ment on C.D.'s.

Meanwhile, the 41/2 per cent Federal Re-

Fed charges for its loans to member banks) is now further out of line with most other interest rates than has been in many yearsif ever. The historical interest rate relationships suggest that the discount rate should have been boosted a couple of months ago.

I suggest that it has not been raised because this particular rate is considered a symbol of monetary ease or tightness and an increase under present circumstances might be a psychological shock to the financial system—although anybody that does not already know that the credit stuation is extraordinarily tight doesn't read the newspapers.

The rarity of this financial situation makes it difficult to envision just where the scramble for cash is going to end, and what its consequences may be. It is clear that the cause of the condition is the most unusual demand for credit necessary to finance the abnormally high rate of demand for goods and services. These pressures certainly would have been less excessive if the government had decided late last year to siphon off \$5-\$7 billion of the purchasing power of the private sectors by boosting tax rates.

ince this step was not taken, the correctives are coming in the form of extreme tightness in the capital and credit markets and also in the form of higher prices, which reduce the ability of the economy to move units of goods and services into sumption.

How AEC Report Pictures Ann Arbor

EXTENSION OF REMARKS

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. WILLIAM D. FORD. Mr. Speaker, the interest of the Michigan delegation in this and the other body of Congress in the location of the Atomic Energy Commission's 200 Bev. accelerator facility on a site in our State is, I am sure, well known to all Members. should like to call to the attention of my colleagues an article which appeared in the Detroit News on Sunday, July 10. This article, written by Mr. Robert L. Pisor, of the News Washington bureau, is one of the most lucid and comprehensive I have had the privilege of reading on this complex subject.

Mr. Pisor writes of the role of our distinguished colleague, the gentleman from Michigan [Mr. VIVIAN], in leading the Michigan effort to secure the Atomic Energy Commission research facility. The gentleman's efforts on behalf of the Michigan site have been tireless. colleagues in the Michigan delegation have been much impressed not only with his broad knowledge of scientific and research matters, based on his background as a scientist and businessman, but also with his seemingly boundless energy on behalf of his State and his district. work is well documented in Mr. Pisor's

Finally, Mr. Speaker, Mr. Pisor emphasizes the facts, well known to many of my colleagues, regarding the failure of the Federal Government, to date, to bring about an equitable geographical distribution of Federal research and development funds. He points out the crucial importance of such research and development funds to the economic wellbeing of an area's economy. And he reminds his readers of information recently published which shows that Michigan is one of the three States in the entire Nation—all of them located in the upper Midwest—which have actually suffered adverse effects due to the changing pattern of Federal expenditures in the past decade or so.

At this point, Mr. Speaker, I include this article in the Congressional Record:

How AEC REPORT PICTURES ANN ARBOR (By Robert L. Pisor)

Washington, July 9.—The federal government's largest research project of the decade will cost \$400 million and look very much like a doughnut-shaped pile of earth heaved up by a glant mole.

For Ann Arbor and southeastern Michigan, this molehill could mean \$1 billion in payrolls and federal research and development grants over the next 10 years—and a big boost for the state's economy, industry, educational institutions and prestige.

The project is a 200 Billion Electron Volt (BEV) proton accelerator, already on the planning boards of the Atomic Energy Commission (AEC) as the largest machine of its kind in the world. It will be three miles around, a mile in diameter and buried under a mound of earth 30 feet high.

The 200 BEV accelerator, nearly seven times larger than its nearest competitor in Geneva, Switzerland, is looking for a home.

DECISION AWAITED

Ann Arbor, or rather a 5,700-acre section of Northfield Township just outside the university city, is one of six "finalist" sites for the accelerator.

The National Academy of Sciences selected the six communities from 200 proposed sites

in 46 states.

Now the decision is up to the AEC with approval required from Congress and the

President.

"The decision could come next week, although that's not very likely," one AEC

"But the commission will definitely make its decision in the next several months—at the latest by the end of the year."

A "yes" vote for Ann Arbor would capture what Indiana Gov. Robert D. Branigan called "the scientific prize of the century."

CONGRESS IS CAUTIOUS

Eight years would mass after the decision before the first tiny proton particle could be rocketed around the circular accelerator at speeds nearing 186,000 miles a second. The Joint Atomic Committee of Congress

The Joint Atomic Committee of Congress jealously refuses to yield its right to approve the project. Congressional hearings and approval and appropriations are required before the project can get under way.

Detailed designs and land surveys will take two years then four to five years for construction of the colossal machine and finally a year of preliminary testing and exploration.

By the early 1970s, more than \$375 million would have been spent on a machine hidden below a gently-rising mound of earth.

A community of 2,400 physicists, technicians, mathematicians and electronics experts would spring up and hundreds more would fly in for temporary projects on the huge machine.

The annual payroll would be \$60 million.

But Michigan boosters of BEV see the project as only a catalyst for an economic boom in the southeastern part of the state, stirring up expansion and creation of allied industries, surveying firms, heavy construc-

tion, housing, shopping centers and new schools.

A part of an AEC report indicates need for "tons and tons of equipment and shielding, specialized surveying, precision components to support experimental facilities, buildings for offices, laboratories and shops, housing for the thousands of the permanent staff and and housing for visiting technicians."

Many boosters expect "spin-off" industries, the tiny specialized shops that spring up almost overnight to produce sophisticated hardware for the many research projects.

These small, specialized industries crowd the areas around the Boston technological center, the space research complex in Houston and the research centers of southern California, greatly increasing the tax base, the wealth, the quality of education and the economic future of these communities.

ANN ARBOR'S CHANCES

Using a list of 43 requirements, the National Academy chose Ann Arbor, Brookhaven National Laboratory on Long Island, New York; Denver, Colo.; Madison, Wis.; the Sierra footbills near Sacramento, Calif.; and South Barrington (or Weston), near Chicago.

All but Denver boast of either an existing nucleus of accelerator specialists or one of the nation's outstanding universities. But Denver offers virtually unlimited room for expansion of the accelerator, an attribute strong enough to place it on the final list of six.

What are Ann Arbor's chances?

The requirements range from land suitability and available air transportation to the quality of education and medical care in the proposed communities.

The BEV site must be on solid ground, not subject to earthquakes or frequent extreme weather changes, either too hot or too cold. The home state must be able to supply up to 180 million watts of electricity without interrupting normal service and great quantities of water must be available to cool the machine.

ATRPORT AS FACTOR

The location must be close to a major national airport with connections to every major city for the convenience of technicianvisitors. It must have high quality universities and colleges, good schools, museums and libraries and an active cultural life, and be near a large and vital city.

Light and heavy industry and technological activity must already exist in the site area for support of the research projects.

Next to the geological structure of the ground itself, "The nearness of a major university is absolutely essential," the AEC noted.

Only about 50 men in the United States are capable of designing and putting together a new accelerator "and many of them are strongly oriented toward university life and its associations," the report stated.

With these considerations in mind, the curious can compare Ann' Arbor's chances against the other sites.

BAILROAD SERVICE

Without recommendation, the National Academy discreetly listed the six finalists in alphabetical order, noting their special qualifications or shortcomings.

Northfield Township can offer 5,700 acres about alx miles north of Ann Arbor on relatively-level land and serviced by a nearby railroad.

The soil foundation of clay, sand and gravel seems to fall somewhat short of the AEC ideal, and deep pile foundations were recommended to keep the huge machine steady at all times.

But Ann Arbor is only 35 minutes from Metropolitan Airport and only 30 miles from Detroit. It has acceptable weather and climate conditions, a good industrial and technological base and an unbounded ability to supply electricity and water.

"The chief attraction of this site is its nearness to the campus of the University of Michigan," the initial report said. "A major university with strength in the physical, engineering and mathematical sciences.

STIFFEST COMPETITOR

"The opportunity for the nation's top scientists to participate in academic programs at the nearby university would aid materially in attracting them to the site."

Brookhaven in New York possesses the nation's largest (30 BEV) accelerator, and thus the best nucleus of accelerator specialists. It is within 90 minutes of New York airports and quick connections to the major eastern universities. If the need for trained technicians becomes the most important consideration, then Brookhaven would have an excellent lead.

The Madison site, within 10 miles of the University of Wisconsin and fine vocational schools, is considered by some from Michigan to be the stiffest competition. The draw-backs of severe winters, uncertain electric power capabilities and the two-hour drive to O'Hare Airport in Chicago are offset by soil conditions.

"The site seems to be ideal from the standpoint of foundation requirements in that (the machine) can be placed directly on bedrock without unusual or expensive construction necessary," the study noted.

The site study committee accepted the Sierra foothills near Sacramento with the note that "it would be prudent to provide protection against seismic shocks."

UNIVERSITIES NEARBY

Although the airport and cultural facilities of San Francisco are two hours drive away, the weather and electric power conditions are considered excellent.

tions are considered excellent.
And the site "would probably be attractive to many highly competent physicists and engineers now in the design group at the Lawrence Radiation Laboratory" and at Berkeley and Stanford.

South Barrington has approximately the same soil problems as Ann Arbor, but it is only an hour from O'Hare Airport and very convenient to nearly all the universities of the Midwest.

These are the AEC's assessment of the geological, physical and cultural assets of the six proposed sites.

But there is one other recommended "consideration."

This is the consideration that "a new center of excellence be established," a proposal which would knock California and New York out of the running.

PLEA FOR GRANT EQUITY

With \$1 billion to spend in research and development funds, the federal government can easily create a new center of excellence. This is the chief hope of Midwestern congressmen seeking the accelerator.

The most active of all might be Michigan Congressman WESTON E. VIVIAN, a Democrat from Ann Arbor and the only Ph.D. in electronics in Congress.

In a plea to the Senate to spread federal research funds more equally among the various states, Vivian noted that the U.S. government spends nearly \$18 billion a year in such grants.

But 96.8 percent of these funds go to only half the states and most of that to the East and West coasts.

PROMINENT LAG

In 1963, the north central states of Michigan, Ohio, Indiana, Illinois and Wisconsin received \$18 per capita in federal research and development (R&D) money, compared with the Pacific coast states with \$181 and New England's \$108.

Residents of the north central states received back only \$24 in R&D funds for every \$1,000 paid in federal taxes, compared with \$142 received in the Pacific states and \$110 in New England.

"Research money draws the brains, the idea man, the innovators and entrepreneurs to the recipient companies and institutions," Vivian testifies.

"And development money builds the technological capability and trains the working force which can give these organizations a virtually insurmountable advantage over competitors for commercial, as well as military, markets."

LURED FROM MIDWEST

VIVIAN, who received his Ph.D. from the University of Michigan, noted that the Midwest produces about 40 percent of all the advanced degree scientists and engineers, but that most are pulled away by the lure of federal R&D funds placed elsewhere.

Dr. Roger E. Bolton, in a recent book on "Defense Furchases and Regional Growth," singled out the north central states as "least beneficiaries" of federal funds since 1962.

Of all 50 states, Bolton contended in his economic study, only three suffered adversely or saw their economic growth depressed by shifts in federal spending. These are Michigan, Wisconsin and Indiana.

Flag Festivals

EXTENSION OF REMARKS

HON, HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. KEITH. Mr. Speaker, every Fourth of July millions of Americans pay tribute to the spirit of patriotism and renew their dedication to our country's ideals. I have just returned from Vietnam where every day in the jungles and swampy ricelands young Americans are paying a very special kind of tribute to patriotism—a tribute in blood and lives.

The sobering sight of these young men going into battle brings to one's mind the question: Where does their dedication come from, what loyalty inspires their sacrifice? I believe that the answer is in their loyalty to our flag and to our young people every Independence Day, and though they may never be given such terrible trial, they are the strong foundation on which our country's strength rests.

Mr. Speaker, I would like to include in the Record two newspaper articles—one from the Sippican Sentinel and an editorial from the New Bedford Standard-Times—which give an account of the patriotic programs recently held in the towns of Marion and Fairhaven, Mass., in my district. These fine programs are an example of the way our young people are imbued with the spirit of patriotism and respect for our figs. I think that the citizens who participated are deserving of great praise for these outstanding tributes to our Nation's ideals.

The articles follow:

[From the Sippican (Mass.) Sentinel]
In elaborate and impressive ceremonies at
the Sippican School on Tuesday, Flag Day, 20

students of grades five and six were cited for excellence in citizenship and received awards and certificates in the First Citizenship Awards made by the Sippican Society, sponsored by the Sippican Woman's Club in memory of the late Mrs. Irma Hunt of Marion.

Mrs. C. Joseph Nowak, club president, made the presentations.

The stirring program began at 10 a.m., in the crowded school auditorium with a Flag raising ceremony and Color guard by Girl Scouts of grade 6, followed by a salute to the Flag led by Joseph Burke, a member of the Town Committee for Flag Day. Diane Hickey then read Governor John A. Volpe's Flag Day Proclamation. "The Flag Goes By" was presented by grades 1, 2 and 3; followed by singing of the Star-Spangled Banner by grades 4, 5, 6, and the special education class, led by Mrs. Rhona Blasdale.

The special induction ceremony of the Sippican Society was presented by guest speaker Mrs. Nowak.

Dr. Joseph C. Kunces, superintendent of schools, made the response and was later presented a Flag, as an outstanding example of the ideals set forth in the citizenship program, by Miss Allen, in a surprise ceremony.

The program closed with the children singing "America the Beautiful," ringing throughout the auditorium.

The special program kicked-off the "21 Day Salute to the Flag," in Marion and was applauded by the Flag Day Committee appointed by Marion selectmen. Committeemen are Donald Perry, Mrs. Nowak, Miss Etta-Hix Allen, Sippican School Principal; Mrs. Virginia Pruchnik, Mr. Burke, William F. Henry, Mrs. Robert Thompson and Lawrence P. Pangaro, chairman. The complete program will end on July 4, Independence Day, at the Marion Horse Show.

Awards and certificates were presented to

Awards and certificates were presented to the children based on: Courage to stand for high ideals; honesty and fairness; dependability; cooperation, and consideration for others.

Sixth graders receiving the citizen pin awards and Sippican Society memberships were: Elien Adams, Richard Burrell, Gary Cobb, Daniel Gibbs, Diane Hickey, Elizabeth Kunces, Susan Marini, Donald Nielsen and Linda Pina.

Fifth graders receiving certificates and junior memberships were: Maureen Burke, Russ sell Burns, Debra Cobb, Sara Converse, Diana Cruz, Kathyrn Heuston, Robin Jenny, Joseph Marini, Vicky Sherman, Elin Waagen and Martin Wickenden.

During the ceremonies all of the children were presented with Flags to make the program one that will long be remembered. Principal Allen stressed that the program for next year will include junior memberships for grades 1 through 5 and awards to grade 6 as was done this year.

[From the New Bedford (Mass.) Standard-Times]

FESTIVAL OF FLAGS

Today marks the opening of Fairhaven's four-day Festival of Flags, a unique patriotic celebration designed to honor the U.S. Flag and to demonstrate support for the nation's Viet Nam policy.

Sponsoring it is the Fairhaven Association of Businessmen and a hard-working committee headed by Kenneth Lavallee. Through their efforts, this star-spangled spectacular will bring to the community parades, demonstrations, pageants, displays and ceremonies—all relating to the Flag, the military and the American effort in space.

A representative of the Japanese ambassador will be on hand for re-creation of the town's famous 1918 samural sword presentation; missiles and space capsules will be demonstrated; military and civic leaders will

speak at various gatherings, and Flags will be displayed throughout Fairhaven.

Undoubtedly, thousands will turn out to view this timely display of patriotism, and The Standard-Times wishes the Festival of Flags good fortune and good weather, for this program in behalf of love of country deserves the broadest exposure.

Salute to Our Two-Party System

EXTENSION OF REMARKS

HON. G. ROBERT WATKINS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. WATKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

SALUTE TO OUR TWO-PARTY SYSTEM

(An address by the Honorable Gerald R. Ford before the American Heritage Foundation's Northeastern Regional Vote Workshop. Philadelphia, Bellevue-Stratford Hotel, July 11, 1966)

When those who are deep in the political battle—like Mr. Bailey and me—are invited to give non-partisan talks, we are forced to make some major readjustments in the content of our remarks.

Mr. Bailey and I have to make such readjustments not only because of the nature of this audience but also because of the place selected for this conference. We are meeting in the City of Brotherly Love. We shouldn't forget that this evening.

Among other things, we have to write a new speech. That basic talk for partisan gatherings which we give over and over again has to be scrapped. Even the jokes have to go because partisan political humor just doesn't seem funny to those outside the ranks of party faithful.

Tonight we salute the two-party system, the political system that our Nation has had almost from its beginnings. As the representative of what is temporarily the minority party, I want to thank the American Heritage Foundation for the valuable work which it has done for many years to give life and meaning to that system. I congratulate the Foundation on the inauguration of these Regional Yote Workshops, and I wish you success in your 1966 Nonpartisan Register and Yote Campaign.

The work that the Foundation is doing looks to nurturing in the hearts of all citizens the ideals of democratic government. Unless these ideals flourish there, no constitution, no law, certainly no political party or its leadership can maintain the health of our political system.

In 1960 the Democrats alleged a "missile gap." Republicans from General Eisenhower on down denied the charge. In 1966 the Republicans contend there is a White House "credibility gap." John Balley will protest vehemently. But both of us will likely agree there is a "commitment gap" on the part of too many Americans. What we need is a commitment to broad, staunch, and constructive support for the two-party system.

Several centuries ago, the Italian poet Dante put it this way: "The hottest places in hell are reserved for those who, in a period of moral crisis, maintain their neutrality." My plea is that all American discard political neutrality and enlist in the battle to preserve the two-party system.

What is called for, I sincerely believe, is a decision by more and more Americans to renounce political neutrality during elections and to bring their entire individual effort to

bear on behalf of candidates who meet their rigid specifications of honor and outlook.

As individuals, you have the responsibility and duty to become actively engaged in partisan politics. I am not here as a recruiter for the Republican Party aithough I will be glad to take applications at the door. What I am saying is that you cannot, as individuals, expect to achieve concrete political results if you are unwilling to join and work for the party of your choice. It is only within a party that you can help to determine party policy, help select candidates for party momination and work for their eventual election. It is only within a political party that you can till and fertilize the soil which will produce the kind of legislators who will, for example, get some of our basic problems, state and national, out of petty political Many like myself in the political arena are disappointed that more of our highly motivated citizens are not working as actively as they should be in a political party.

What the Foundation is aiming at is the broadest type of citizen participation in the political process. It is a goal that deserves the unstinting support of both great American political parties.

The political party is the agency, and really the only agency, through which citizens can fully and effectively participate in the political process.

Where there is freedom, there will be more than a single political party, for free men will not all think alike.

It may seem strange that the founding fathers viewed the growth of parties with alarm. They made no provision for them in the Constitution. George Washington warned his countrymen against them in his Farewell Address. Our forefathers' apprehension was not without reason. Political wars in the England of their time were characterized by bitter party strife and divisive partisanship.

It was Thomas Jefferson who started our two-party system. You might say that as vice-president he was the first minority

leader on Capitol Hill.

Jefferson thereby added to the constitutional checks and balances another safeguard in our experiment in democratic government. It has saved the nation from the oppression which so often characterizes those countries where a single political party dominates every aspect of political life and, unchecked, stiffes all dissent. And it has saved the nation from the anarchy and chaos which so often characterizes those countries where every conceivable faction organizes

itself into an independent political party.

Ellhu Root called the two-party system a sign of political maturity. The two-party system guarantees a wide appeal to the electorate and it increases the chances for coherence and stability in government. It avoids the irresponsibility of factionalism which, at beet, operates to allow popular control in a one-party state. More important than these theoretical considerations is the fact that the two-party system, in the context of America, her institutions and traditions, has met the test of history. It works. It is an imoprtant part of that complex set of balances and mechanisms that have made the American experiment in democratic government the world's greatest success story.

ns

Under Jefferson's innovation, America has prospered, maintaining always her commitment to both majority rule and freedom of dissent. Many countries, particularly in Latin America, have copied our Constitution. And in many cases they have met with repeated failure. One of the keys to understanding why is their inability to develop a two-party system.

A goal of this Northeastern Regional Vote Workshop is to consider ways to sharpen the cutting edges of our two-party system. The problem was never stated better than it was some forty years ago by the prominent British writer, Mr. J. A. Spender. The problem, he said, "is to convince our fellow countryment that to have political convictions, to join a party, to work for it, and to support it out of their purses, so far as means allow, are among duties of all citizens, and cannot be neglected without serious harm to the country." This is one of the great unsolved problems of democracy. Until we solve it, our two-party system and the very quality of our government will be defective.

The indices of citizen involvement in politics do not tell an encouraging story in the United States. The percentage of citizens of voting age who have voted in recent presidential elections has hovered about the level of 60 per cent. In off-year Congressional elections, it has been running between 45 and 49 per cent. In local elections a turnout of 30 to 40 per cent is common. These levels of voter participation do not compare favorably with those of advanced nations with a democratic form of government in other parts of the world.

With less than two-thirds of the potential electorate actually voting, how many less ever actively work for a political party or for candidates for office? And of those who work—performing the important role of informing their fellow citizens—how many less ever make a financial contribution? The number gets smaller and smaller, and diminishing with it is the effectiveness of our two-party system.

Particularly acute is the need for an adequate financial foundation, one consistent with democratic principles. Herbert Alexander, Staff Director of President Kennedy's Commission on Campaign costs, has put the costs of 1964 campaigns at 200 million dollars. Such expenditures are not unjustifiably large in campaigns directed toward a potential electorate of more than 100 million who are asked to vote for at least 200,000 offices of some significance.

Only about 10 per cent of adult Americans ever contribute to election campaigns. This figure is significantly higher than it was fifty or even twenty-five years ago, but it is still far too low. It is not healthy for the costs of democracy to be met by so few. The day when political parties can sit back and de-pend on large contributors must end. Our The day costs must be covered without jeopardizing our public morals. Our goal should be securing ever more contributors to our political parties on a regular year-round basis. The wider the base of party funds, the less suspicion there can be of improper influence. There is a job to be done.' Recent data from the University of Michigan Survey Research Center shows that less than half of those interviewed had ever heard of efforts to raise money for campaign expenses. Eighty-five had never been saked to contribute. Only one out of fifty had ever participated in a campaign fund-raising drive. When asked if they would contribute if approached, a fourth said yes, while 58 per cent

Our failure here is deplorablemore so because we raise annually throughout the country large sums for welfare and other community needs. Is the well-being of our political system any less important? With hard work and organization, and with the help of groups like the American Heritage Foundation, our political parties can meet this test. My own party has made strides in this direction. Since 1963 a substantial portion of the operating budget of the Republican National Committee been met by annual ten-dollar sustaining memberships. In 1964, through the exten sive use of direct mail and television appeals, 72 per cent of the contributions for the Republican presidential campaign came in sums less than 500 dollars. Only 30 per cent of the contributions to the Democrats came in these smaller sums. But establishing the measuring rod at 500 dollars is still setting it awfully high. There is much more that both parties can do and must do to interest the individual citizen of limited means in investing in our political process. Until we do—until the costs of democracy are apportioned democratically—our two-party system will not be doing the best job it can.

In the field of legislation there is also much that can be done. Efforts here are generally aimed at restraining abuses in raising and spending campaign funds.

I suggest that it is time to emphasize the need for adequate financing of parties and candidates through mass contributions of small amounts. The present methods of fund-raising too often shut out of elective office men and women who lack substantial personal funds or lack personal access to great wealth.

There are other steps that can be taken to lighten the burden of campaign costs—notably modifying the restrictions of Section 315 of the Federal Communications Act—the equal time provision—which operates to prevent television and radio stations from providing free time to candidates for office.

Those who discuss the inadequate participation of citizens in the political process generally center their fire on the citizen. He is denounced by critics as apathetic, uninformed, and uninterested.

I feel that the indictment must be extended to cover politicians and perhaps others in our society. If the citizen is uninterested, is this lack of interest due to some degree to the failure of politicians to offer something that will arouse his interest? If he is uninformed, is it because much political oratory is not really informative? Some will contend—perhaps it's an alibi—that they just can't get the facts from any source.

There is need for drastic reform of campaign procedures that go back to the horse-and-buggy era. Something in this direction is being done by the Republican National Committee. On the suggestion of President Eisenhower, Chairman Blies has a commission at work studying the quadrennial national convention with a view to streamlining this venerable but soportific institution.

This is a start, but much more is needed if campaigns are better to serve the purpose of spreading information and capturing public interest...

In 1968 I hope that televised debates between presidential candidates, so successful in attracting public interest in the 1960 campaign, will be conducted again. I see little merit in the argument that any incumbent president should not engage in debate with his opponent. I believe President Kennedy would have debated his Republican challenger in 1964 had he lived to run for reelection—and the voters would have been the beneficiaries.

If, however, the candidates themselves are unwilling to engage in debate, they could designate spokesmen to participate in joint televised appearances on their behalf.

Debate between the parties should be practiced far more widely than it is at present. Although I attach special importance to debate in presidential campaigns, there should be a running debate between party spokes men at all political levels at all times. There are always important issues. There are always differences of opinion on some of them. The parties would be strengthened, the public would be better informed, and policy decisions would be made more wisely if we argued out things before the public.

To talk of the two-party system is to invite attention to the wees of the minority party. I shall refrain from inflicting on you any long list of complaints, but I do want to express one fear which, if justified, should be of concern by all recognitions of party.

be of concern to all regardless of party.

It is not easy for the minority to make its voice heard. In this age of mass com-

munication, the Office of the President dominates the American political scene. The eyes of the nation and the world are fixed upon And rightly so. Its power is awesome, as is the responsibility which confronts the man who possesses it. It is power to do enormous good. But the great power to do good is, at its root, simply great power. Free men must be able to check it and challenge it, lest it consume them.

If free men cannot check and challenge it, then we do have one-party rule. If it is becoming increasingly difficult for them to do so, then we have begun a journey down a dangerous road.

We seek in our political life the attainment of justice and the containment of power, The two-party system plays a vital role in the struggle to achieve these goals. By pro-viding debate and discussion it helps us travel a much surer course toward justice for

The minority must be able to get its views out to the people. I hope that the minority State of the Union Message, first delivered this year, will become a permanent institugiven time and prominence corresponding to that of the President.

Although I speak tonight for the minority, the Republicans, I do not believe that those in the minority can or should sit back and bide their time. There are some, a very few fortunately, who argue that the minority shoul await a national disaster at home or abroad and then move in, pick up the pieces and build from the shambles. This I contend is neither the tradition nor the heritage of the Republican Party in the 1960's. This was not the role of the Republican Party This under Lincoln or Eisenhower. It was not the role of the Democrats in their dark days in the minority in the 1920's. We must by the competence of our candidates, by the record of legislators and administrators and by the philospohy that we espouse earn the respect of our fellow citizens.

My suggestions only touch the surface. In the final analysis the future of our two-party system depends on the courage and conviction of all Americans—of whatever political stripe—and their commitment to the values of majority rule and freedom of dis-

sent. These values are the heritage of all Ameri-They are values that will be preserved only through strengthening the two-party

Vets of Famed 4th Marine Division. Spearhead of Many Pacific Campaigns, Received Warm Aloha Upon Visit to World War II Base in Hawaii

EXTENSION OF REMARKS OF

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

MATSUNAGA. Mr. Speaker, probably the most popular and the most captivating of all of Hawaii's manysplendored charms is its friendly spirit of aloha. That this charming spirit of aloha has not been diluted with the coming of urbanization to the Hawaiian archipelago was recently demonstrated by the people on the island of Maui.

The valley islanders displayed their oldtime aloha when they welcomed 129 veterans of World War II's 4th Marine Division. The ex-marines recently returned for a nostalgic visit to their

wartime home in the Hawaiian Islands. The beautiful valley island of Maui was the division's home base before and after their rugged Pacific campaigns.

Organized by capable County Chairman Eddie Tam and Richard E. Nawson, the welcoming party of 2.000 Mauians greeted the World War II veterans and their families with hundreds of fresh flower leis and Hawaiian music. Indeed. the islanders' aloha was as cordial as it was 21 years ago when the 4th Marine Division called Maui its home.

Reporter Charles C. Young's heartwarming account of the nostalgic return of the 4th Marine Division veterans appeared in the Honolulu Star-Bulletin of June 27, 1966. I now submit the newspaper article for inclusion in the CONGRESSIONAL RECORD:

[From the Honolulu Star-Bulletin, June 27, 19661

WORLD WAR II MARINE VETS RECEIVE BIG ALOHA ON VALLEY ISLE (By Charles C. Young)

Kahului, Maul.—Nearly 2,000 Mauians were waiting with leis when 129 World War II veterans of the Fourth Marine Division arrived with their families yesterday for a nostalgic reunion.

For many an ex-marine it was a first look at Maui in 21 years.

The Valley Island was the home base for the division before and after some of the Pacific's bloodiest fighting.

Carl Dearborn, a Whittier, California, mail carrier, said "I knew we would get a big re-ception but I never anticipated anything

Dearborn is a former member of Company F, 2nd Battalion, 25th Marine Regiment. Three plane loads of old marines arrived

yesterday at Kahului's new airport terminal. Camp Maui at Kokomo was their home in 1944-45 in between battles to secure Roi-

Namur, Saipan, Tinian and Iwo Jima. They arrived yesterday from the division's annual reunion in Los Angeles.

They came to Maul in three Aloha Airlines flights arriving between 5:15 p.m. and 8:10 p.m. last night.

Many Maulans had answered County Chairman Eddie Tam's call for volunteers to pick flowers and string 200 leis. Approximately 500 leis were received.

A huge banner on the terminal read, "Maui Welcomes Our Fourth Marines.

The veterans and their wide-eyed families assed down a path of young girls with leis for them on one side and red-capped mem-bers of the new Camp Maui chapter of the Marine Corps League.

The Marine Corps League members included five former members of the Fourth Marine Division who now make their homes on Maui.

There was some disappointment at the non-appearance of Colonel Joseph J. Mc-Carthy, a Fourth Marine Division Medal of Honor winner, who could not make the

The persons who came the furthest to meet one of the returning vets were Police Lieutenant and Mrs. Leslie C. Medeiros with their grandchildren, Lelie Jo and Benjamin, of Honolulu.

The Medeiroses were there to greet Henry De Loof, a corporal and a trooper in the Michigan state police who retires next year.

De Loof served with the Fourth Marine Division's military police battalion as a mo-torcycle patrolman when Medeiros, a police sergeant, also worked out of the Makawao district police station at Paia.

Mrs. John Johnson of Wailuku saw De Loof and remembered him as the M.P. who used to patrol past her house on his motor-

cycle. The Medeiroses and De Loof have corresponded through the years.

Mr. and Mrs. T. S. Shin of Wailuku were there to greet their friend, Charles Bateman, of Huntington, Long Island, New York, who arrived with his wife Virginia and daughter, Carol, 19.

Bateman served with Headquarters Company, 3rd Battalion, 23rd Marine Regiment. Many of the returning former Maui Marines inquired about friends they knew here in World War II.

Joseph Irby, formerly of the 25th Regiment, now a steel fabricator at Gulport, Mississippi, inquired for the Harry Stibbards who are now residing in Honolulu. Mrs. Stibbard's hula troupe used to play Camp Maui on the local U.S.O. circuit.

Ken Edwards, an apartment house builder in Atlanta, Georgia, and his wife, were greeted by Mr. and Mrs. Ken Kuwahara of Paia.

Edwards, then a captain in the First Battalion, 23rd Marines, often visited the Kuwaharas when stationed at Camp Maui. They have corresponded through the years. Mrs Kuwahara said the Edwardses every year at Christmas have sent them picture cards of their growing family.

Chairman Eddie Tam and Richard E. Mawson, co-chairman of the homecoming, had the combined Rogers Akiu and Rena Ching troupes keeping the wives and daughters entranced with their hula dancing from a raised platform within the terminal.

India-Funnel for Foreign Aid Waste

SPEECH

OF

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, July 11, 1966

Mr. ASHBROOK. Mr. Speaker, the President recently proposed that we give an amount equal to approximately 90 percent of our annual consumption of wheat to one nation, India. While this might seem humanitarian on the surface. the more that the recipient nation is studied, the more questionable the gift becomes. India is the pious neutralist state which seems to see little difference between communism and capitalism. They in effect say a plague on both of your houses. They supposedly see some moral position in neutrality, although I fail to see their logic.

Aside from political and philosophic considerations, there is the very realistic and practical consideration that this Nation is ill equipped to utilize what we give them, and in many ways we are wasting billions of dollars which we can ill afford to squander. A most perceptive article appears in Look magazine's July 12, 1966, issue which highlights many of these problems of ignorance, antipathy, religious taboo, and poverty. It is well worth studying before we contemplate pouring billions into a bottomless funnel in India which could better be used elsewhere in the world if we feel we must spend but, from many standpoints, would better be left unspent.

[From Look Magazine, July 12, 1966] INDIA: TOO POOR TO BE EFFECTIVE-TOO BIG To BE IGNORED

One-seventh of the world's people are Indians. One million more are born every

month. For India, this is the arithmetic of desperation. It is an equation that hangs like a black cloud over a proud subcontinent struggling to become self-sufficient but frighteningly close to drowning in a human Out of a long past came the tradideluge. tion that gave the world such heart-clenching beauty as the Taj Mahal (above), but that same tradition can keep a picket-ribbed peasant from killing the rat that is eating his precious grain. A kaleidoscope of grandeur, squalor, hope and futility, India is a painracked land that reveals man at his noblest and his dismal worst. Angry rioter, flyencrusted villager, Brahmin patrician and scabrous beggar, the people of India are at war with themselves, their neighbors and the elements, and they are winning few battles. Yet India is not all bad news. It is making advances that would be stunning in any but a land with stunning problems. It is slowly grasping the urgency of change. Though poverty, population, the weight of custom and war dog India's attempts to move ahead, her half-billion people must be reckoned with in any assessment of Asia's realities. For a look at the complexity of this faltering giant, see the following pages:

INDIRA GANDHI: LADY ASTRIDE THE INDIAN TIGER

On most mornings at 8:30, Indira Gandhi walks swiftly out of her white bungalow in New Delhi, blinking uncomfortably in the glaring sunlight and frowning vaguely. The lines around her mouth recall her late father, Jawaharlai Nehru. Collected on her lawn in tidy groups or huddled under a striped awning are varicolored clumps of Indians come for her autograph, to seek advice, volce a complaint or just to lay eyes on the leader of India's half-billion people. She moves briskly among them, gathering a silken sari about her, gracious but business-like. Those who came for pictures with her have already been shuffled into the proper formations—facing the sun, small ones down front, tall ones in the rear. She pauses briefly for the cameras, accepts their bouquets, murmurs good wishes, gildes on to the next delegation.

As soon as she has left a group, security men hustle them out, some obviously wondering whether they ever really saw her. After the audiences, she drives off to her office and another day as the leader of the world's second most populous country. Hers is no enviable task. On any given day, there may be bloody rioting in Calcutta or Kerala, reports of villagers selling their children for food in Orissa state, noisy demonstrations in Parliament by the opposition, acid-tinged disparagement by members of her own Congress party, intelligence warnings of Chinese troop maneuvering on India's northern borders or Pakistani muscle-flexing to the

The hordes of foreign journalists who descended on Delhi in January, when Mrs. Gandhi became her country's first woman prime minister, are gone now. Left are all the painful decisions, the Himalayan-sized problems and the desperate need. In the press galleries of Parliament, the bars of posh Bombay hotels and the dismal warrens of North Calcutta, cynics speak slightingly of her as a weak executive picked by party moguls as the person they could best control. "What the country needs is a strong man," they say.

Indira Gandhi is aware of the rumors. But she is more aware that her country is in its worst crisis in 19 crisis-filled years of independence. She expects no special sympathy because she's a woman.

The Chinese attack that bloodied India's nose in 1962 also undermined its position as the voice of the noncommitted nations. But Mrs. Gandhi sees no reason for anxiety. "We have never attempted to be the leader of the nonaligned," she says. "We believe in certain values—peace and freedom—and if we became a leader, it was through the force of circumstances. We were able to express

what was in the hearts and minds of stillsubject peoples. Many are now free and no longer need the voice." But she still believes India has a mission. "Because of our population and our geographical position. what happens in India is important to the rest of the world. We believe the bent way to play a useful role in world affairs is to be stable, united, strong and independent. Sporadic probing of Indian defenses has kept the country nervous about its big neighbor. "We were fully aware of the tension between our two ideologies," she mys, "but we thought that China might change. struggle is between two methods of achieving the welfare of the people, and the value of the Indian experiment is that it is succeed-

How serious is the Chinese menace? "China is a constant threat," she acknowledges. "We have a long border, and we have to be vigilant. It is hard to speculate about China's intentions. Everybody who comes back from there has a different opinion. But all Chinese have viewed part of India's territory as theirs. Even the Nationalists had maps showing that." Then she smiles mis-"Of course, we have equally old maps which show quite different things."
Famine, riots and politics grab headlines, but she thinks beyond them to another problem: India's "brain drain." "Many of our bright young people go to the U.S. to study and stav because there are more opportunities there. Obviously, we cannot match the U.S. in opportunities for research or facilities. That's where ideals come in. We've been criticized for putting ideals above pragmatism, but it's only devotion to ideals which can persuade people to give up an easy life, come back and identify with the problems here.

The weight of custom, she admits, is also keeping some of India's most promising talent from returning. "Some of our younger people abroad would come back if they feit there would be recognition of their talent, but they cannot function under the old setup, under the old ways. So the job of my government is to create an atmosphere which will make it easier for them to return and do their job."

Custom is only one of Mrs. Gandhi's enemies. After her spring visit to the U.S., critics in and out of the Congress party accused her of selling out to the Johnson Administration and of abandoning Nehru's socialist programs. Ex-Defense Minister V. K. Krishna Menon, once a close friend, called her foreign policy "drifting flotsam and ietam"

But Indira Gandhi, like her humble predecessor. Lal Bahadur Shastri, has chosen to turn naide such attacks with soft replies while getting on with the business of pulling India from the edge of the abyss. She has worked to beat off famine with increased shipments of U.S. food and cautious incentives for foreign investment in fertilizer plants. She has stood up to Congress party snipers by reminding them that she worked closely with her father to build a socialist But she also warned them: "If I feel that a departure from Nehru's policy is necessary because India's future calls for it. I will hesitate to suggest such changes the same time, she is refurbishing her thirdworld credentials by calling key nonaligned leaders to confer in Delhi. With the prospect of a national election next February, assaults on her policies can be expected to mount. But the Indian pols, who overrated Nehru and underrated Shastri, may yet have to revise their charts on Indira Gandhi.

India: Angry, Hungry, Stubborn and Proud (By Ernest Dunbar)

As I walked through the village, an acetylene sun burned down from a cloudless sky. At my side was a young Peace Corps nurse, six weeks in India, who had come to teach the country people public-health practices.

Flies and filth were everywhere. Open drains coursed over the dusty soil, and small children ran barefoot, dirty and thin, over human excrement. As we walked up a back street, we heard the sound of a child crying. We drew near and found the source, an infant girl huddled on the doorstep of a mud hut, covered with flies and hawling plaintively. Her mother was nowhere to be seen. Women and men passed by without glancing at this common sight. The nurse started toward the child, then checked herself and pulled back. She advised me not to interfere, and we walked on. Curious, I asked her why we did not do something for the child. "The villagers may misunderstand." she answered, "and I do not want to jeopard ize the relationships I have carefully built up." She told me about a Peace Corps agriup." cultural volunteer in another settlement who had planted a small garden near his house to show the villagers how to cultivate nutrition-rich vegetables to fortify their lean diet. Although he chose a small, barren plot, a village elder had berated him for planting land that was not his own.

Both incidents were symbolic of India. bottomless need a forest of tahons and a painful clutching for the answer that will help people who require that helpvery special terms. I still have not shaken that baby from my memory. Hers was another of the vivid portraits I was to carry away from India. India beggars the journalist's tidy bag of words. It refuses to be catalogued with the same flerce stubbornness with which it often refuses to be governed. India can be a wizened six-year-old with hand out, a smooth professional trained to pick out not just the foreigner but the American tourist. Or it can be a sari-clad Delilah dancing tipsily on the edge of a hotellobby fountain on her way home from a latenight party. It can be a naked holy man sitting, pencil-like legs folded under, by the side of a dusty road, staring off into some distant Nirvana. Or the anger-swollen face of a rioter hurling a brick through the windshield of your passing is more than all of these. ssing car. And yet India

In her most trying season in 19 years of nationhood, India is looking up toward the heavens of greatness from the depths of despair.

The Big Famine of 1966, which now appears to be less critical than the panicky, frightening early forecasts, is just the latest of India's agonies. Since it wrested independence from Britain in 1947, India has been wrenched by a succession of crises that have pertodically threatened to pull down the structure its leaders have worked to erect. With six distinct ethnic groups, 345 languages and dialects, seven major religions and two hostile cultures—of the Hindi-speaking peoples in the North and the Tamil- and Teluguapeaking minorities in the South—India holds within itself the explosive seeds of disruption.

Though India's problems are dizzying, two stand out as paramount: The masses must be fed, and the birthrate must be reduced. Ironically, for any country but India, the progress already made in increasing the production of grain would have been spectacular. Since 1951, India's output of foodstuffs has risen 55 percent. But in the same span, the population has risen by 35 percent. Currently, India's food production is expanding at the annual rate of three percent, but births are still rising at almost 2.5 percent.

The present food shortage is a ghastly reminder of what can happen if anything occurs that jars this shaky equilibrium. Last year, the monsoon rains upon which farmers rely were inadequate, and a drought followed. As a result, early this year, India found itself 12 million tons short of the food grains it needs to keep its population at even the scant subsistence level. In recent

months, stepped-up shipments of U.S. wheat have been rushed to Indian ports at the volume of one million tons per month. Other countries have also contributed to the antifamine grainlift. But sending food to India and getting it into the bellies of the hungry are not the same thing. Bad storage facilities, a clumsy system of distribution, a lack of a good road network are all serious hurdles. And there is little sense of emer-Thus, while wheat piles up in Calcutta warehouses, villagers in remote areas may still be woefully short of food for the one meal a day that is the maximum for many. Although the gloomy forecasts of millions of famine deaths made by Indian and foreign observers now seem exaggerated people are succumbing in rising numbers to hunger-connected diseases. A Western health expert told me in Delhi: "Indians have always looked at food from the standpoint of survival rather than nutrition. When you pull the nutritional average below the danger point, lots of people will die from a lot of other things.'

India has another hurdle that hangs up the famine fight as it does a lot of other efforts to move ahead: the barrier of oustom. Many Indians are traditionally rice-eaters, and a large part of the population will not eat wheat. Others who do eat wheat dislike the hard-kernel American variety furnished as aid. As I stood on a beach in Kerala, tching fishermen pull in a net heavy with protein-rich fish, one of them dropped his end of the net and rushed over to me, making begging gestures to his mouth. He was a rice-eater, and eating fish was as objectionable to him as eating certain kinds of Indian food might be to an American. He

will not change easily.

Religious beliefs keep predominantly Hindu Indians from killing the 21/2 billion rats that are eating an estimated 20 percent of the country's food grains. Peace Corps volunteers in one Rajasthan hamlet got into trouble with villagers when they poisoned some of rodents that had overrun their small The villagers themselves norapartment. mally caught rats, took them out into the countryside and released them. Religion also decrees that Indians shall not kill the 200 million cows that wander across India's fields, lie in her streets and rummage hungrily among piles of food in the bazaars. Hindus, devout in their belief that a cow may be someone's ancestor or friend returned from death in another form, bitterly resent being told by foreigners that many of these animals are unproductive consumers of food and ought to be destroyed.

Custom hampers India's attack upon the second overriding problem: too many people. A young mother of eight children hovering the edge of existence may refuse to let a male doctor insert a conception-preventing plastic loop into her uterus only because he She may wish to have some sort of birth-control aid-and that shift in attitude is the real revolution in Indiais unable to bring herself to let a male physician perform the task. Yet India is short on both female doctors and female technicians, who might acceptably perform ame service, and there is no prospect that they will be produced for years. In a society where disease and other calamities have taken the lives of so many children in the past, villagers still feel they must raise large broods to insure the surivial of some offspring who can help out now and take care of them in old age. So five-year-olds walk around bearing infants on their backs, while their again-pregnant mothers, virtually human factorie es, labor with husbands in the fields. And the brutal cycle continues.

But though India has not yet managed to bring births under control, it has made impressive inroads against death. In the last 15 years, the average Indian's life-span has been raised from 35 to 50 years of age.

What should be a source of joy is not always that. Although food output is rising slightly faster than the birthrate, it has not kept with the combination of more births and less deaths. The result is that India has ever more mouths to feed but less to feed them with. U.S. food shipments may ease but cannot solve that problem

While wrestling with the twin nightmares of famine and overpopulation, India must also worry about and devote precious resources to coping with external enemies. The long-standing dispute with Pakistan, which flashed into open warfare last August, drains Indian energies and resources away from the pressing work of internal develop-ment. Kashmir, the largely Muslim state that Hindu India acquired at Independence, is the prize that remains the burr of contention between the two countries. istan presses for a plebiscite that might give the Kashmir Muslim majority an opportunity to vote themselves into Pakistan, India, in which the issue raises passions hardly to be dreamt of in the West, refuses to discuss the ceding of a region that is the strategic gateway (for the Chinese as well as the Pakistanis) to her heartland. Defiant and inflated by the victories they insist they won over Pakistan during the abortive 50-day sumer war of 1965, the Indians have turned their backs on any thought of compromise (Among the grievances that in Kashmir. the hypersensitive Indians nurse against the U.S. is the notion that America somehow wishes to engineer the accession of Kash-

mir to Pakistan.)

India's other-and far more serious-external enemy is its mammoth neighbor to the north, China. China is a dragon 2,000 miles long, the length of the border India ahares with China and Chinese-occupied Tibet. Since 1959, the Chinese have built an extensive road network along the Tibetan border and, more recently, in the part of northeastern Kashmir given to China by Pakistan. In the 1962 border rumble with China, the unprepared and underequipped Army suffered a humiliating defeat that still rankles in the minds of soldier and civilian alike. The brief, bloody struggles in the high Himalayas had two conse quences, one that still endures, the other, shortlived: India began to take a more realistic view of its position vis-à-vis China in Asia, and for a few months, religious, language, and regional differences were put aside, as all the people pulled together to defend their country. Observers in New Delhi Joked that "if the war had only lasted a bit longer, it might have made a nation out

To prepare for possible future battles against Pakistan or China, India has had to divert \$1.5 billion of precious funds to defense spending, a shift that quickly made itself felt throughout the economy. Top Indian leaders believe that such diversion was one of the objectives sought by China when it attacked India. The other: to humble India in the eyes of the nonaligned nations, and establish once and for all who is the dominant power in Asia.

The war between India and Pakistan had another, unexpected result for both. The Johnson Administration, alarmed at this misuse of U.S. defense aid and squandering of scarce resources, decided to hold up on aid commitments to the two countries until they quit fighting. That help has now been resumed in part, but the temporary holdup hurt India more than Pakistan.

Within its own borders, India has its hands full with two full-scale revolts by ethnic groups seeking to leave the federal union and sporadic rioting over issues ranging from food to language. In the Mizo Mills of Assam, tribesmen are fighting Indian troops to gain autonomy. In the Nagaland district on the Burmese border, an on-again-off-again revolt of Naga tribesmen demanding an independ-

ent Naga state has been punctuated with terrorism, including the bombing of two trains, which took the lives of 95 people. In Bombay, Calcutta, Kerala and Madras, rioters sometimes burn trains, sometimes burn cars and in one paroxysm—over the establish-ment of a separate Punjabi-speaking state burned alive three members of the ruling Congress party who were trapped in a Panipat store. Army units and police detachments have battled rioters, with the resulting deaths of at least a score of lawbreakers in Calcutta alone. Despite its championing of the principles of nonviolence, India is no stranger to bloodletting, and some of its domestic disputes spill into the streets, where screaming, rock-throwing mobs take over.

"The world thinks of India as a place of spiritual wealth, as a place of nonviolence, a Bombay editor told me. "Nothing could be further from the truth. The principle of "Nothing could be nonviolence was proposed for a very specific purpose by Mahatma Gandhi: to use against the British. Anybody who comes here will see that Indians are not only violent in deed but also in thought. We often argue and debate in violent ways, and some of us carry violence in our words because we do not have the physical resources to carry out violence in deeds! I know the rest of the world thinks of India as a spiritual force, but this is largely a myth. yth. Just as you have your 'ugly we also have our 'ugly Indians.'" Americans.'

This tendency toward violence makes the fuse that much shorter among the country's antagonistic ethnic, linguistic and religious Hindus and bearded Sikhs have fought over the creation of the new state in which the Punjabi-speaking Sikhs will dominate a large Hindu minority. Stirred by leftist provocateurs using food shortages as a pretext, residents of West Bengal have gone on rioting binges. In battles with police and troops, scores have lost their lives. and hundreds more have been injured. dense and volatile city of Calcutta was brought to its knees twice last spring, when Communists and left-wing labor unions ordered general strikes that the public dared not defy. For a few tense hours, it was evident that neither the central nor the state government was in complete control there.

Sometimes the violence takes a more per-Recently, an enraged member sonal turn. of one of the state parliaments removed his shoes and threw them at the presiding speaker, striking the latter on the head. Brawling legislators had to be ejected from the house

Present-day India was formed by the British from some 500 princely states into one nation-state. But a dangerous trend has developed. Starting in 1953, successive Indian governments have yielded to demands from religious and linguistic leaders and reorganized a number of states along lines of language. With the recent decision of Mrs. Gandhi's government to create the new Junjab state, each of the country's 14 main languages is now the dominant and official tongue in at least one state. But each of the political concessions has planted a potential land mine in the subcontinent's path toward national unity. Language and religious differences, over which emotions can blaze in India, have intensified. Loyalty to one's state (and hence to one's own lin-guistic group) tends to shoulder aside allegiance to the nation. Even in the midst of the country's most desperate food crisis. this tendency appears. While schoolchildren in Italy and the Netherlands go without lunches to donate money for India's famished masses, its own surplus-food states have sometimes been unwilling to share their excess grain with neighbors whose inhabitants were starving.

Perhaps the strongest challenge is that posed by India's states, preoccupied with their individual woes, to the national solu-tions that have been worked out by India's central government. Food rationing, for example, is being pushed by the central government in New Delhi, but is being mired in the states, which carry out rationing through indifferent and inefficient bureaucracies.

The central government declared a state of emergency at the time of the Chinese invasion in 1962 and invoked a form of martial law called DE (the Defense of India Rules). It is still in effect but is used now principally as a weapon to curb violence and internal Under pre, a number of civil rights strife. have been suspended, including free speech, free assembly and the right of appeal to the courts for those arrested. Thousands have been imprisoned, among them state legislators and dissidents ranging from Communists through troublesome opposition members to right-wing extremists. The frequent use of on has disturbed wide sections of Indian opinion. But the Delhi administration, confronted with revolts like those of the Miso and Naga tribesman (which the government believes are aided by the Pakistanis and the Chinese), has refused to end pra. In the meantime, critics speak out at their own peril.

Aside from communal and other stresses and these are big asides—India is also suffering from severe economic strain. The nation is critically short of foreign exchange with which it might recharge its lagging industry and galvanize its agriculture. Inflation is surging, and unemployment is also rising.

But it may be that India's march to progress will be quickened because a changed her mind. Prime Minister Indira Gandhi, who took office lukewarm to the idea of granting foreign firms an entry into India's chemical-fertilizer market, has now said yes. It was a key decision, for most experts agree that a massive fueling of chemical fertilizer is the booster that Indian agriculture needs to leap from its launching pad. Indian farmers plant 320 million acres annually—about the same amount as U.S. farmers—but their return is only about 40 percent of the yield obtained by their American counterparts. And India's population is 2½ times ours. Indian farmers use only about one-thirteenth as much fertilizer per acre as Americans. Agricultural experts agree that they could quadruple or quintuple their harvests with enough chemical fertilizers. With the Gandhi cabinet's decision to relax restrictions on private fertilizer production, the Indian Government hopes thereby to lift output from the present 400,000 tons a year to 2,500,000 by 1970.

The fertilizer deal, like the Johnson Administration's proposal to channel \$300 million of the hoard of rupees accumulated by the U.S. from the sals of food aid into an Indo-American educational foundation, is suspect to many Indians. In a country wedded to the idea of state dominance over key sectors of the economy, many Indians fear that giant foreign firms will improperly exploit the Indian market. Similarly, critics see the joint educational foundation as a Trojan horse for the CIA at worst, and an unwarranted American interference in Indian educational policies at best.

These are but the latest rubs in the U.S.'s sometimes chaing relationship with India. India is tied to the U.S. by bonds that both succor and constrict. We are far more important to India than its pride or politics can often tolerate. Of the \$10 billion India has received in aid from other countries since 1951, the U.S. has furnished 58 percent. The mountain of amassed rupes held by the U.S., \$2.5 billion, is over 20 percent of India's currency. Even in relatively good food-production years, India must still count upon large grants of American grain to feed its hungry half-billion people. When President Johnson held up on U.S. ald to India and Pakistan during last year's short war, India's economy was dealt a severe blow. An Indian columnist voiced a widespread feeling

when he wrote: "Economic planning which gets completely disrupted by the withholding of assistance by one country cannot be regarded as 'sound.'"

If Indians are irritated by their dependence on America and angered by those who point out their shortcomings, Americans are often equally irritated by the Indians' querulous ways and what seems like an inability to assault problems with the energy they demand In the face of what the Indians themselves describe as their worst calamity in 70 years, the bumbling pace of govern-ment bureaus is perplexing to the outsider. Even harder to understand is the corruption that rots some offices. As the Indian Ex-press complained: "Of the several tricks employed by the Government employee, the which the common man is most with familiar is the one of being forced to wait on him day after day to get his business done until he breaks down and is psychologically prepared to comply with the official's un-spoken demand." Though the Gandhi government has declared war on corruption, practice is deep-seated and will be difficult to cut out.

American policy makers feel that while India has made promising advances in its short life as a nation, it must work even harder in the future if it is to move out of the shadow of famine and into the light of self-sufficiency. The agreement to permit foreign firms to start fertilizer production will be a big leap in that direction. A stepup in the birth-control program will be an-Economic and administrative reother. forms are also needed to streamline India's Kafkaesque bureaucracy. But Western experts who have worked and lived in India for years believe the scent of change is in air and that the next decade may be India's time of rebirth. The edge of the custom curtain is beginning to lift. But what kind of spectacle it will reveal is something even the seers cannot foretell.

IN 19 YEARS, INDIA HAS ROLLED UP SOME SOLID
ADVANCES

Most foreigners who visit India come away shaking their heads. But foreigners have been shaking their heads for 19 years. In that time, India has rolled up some solid advances. Its industrial production has grown at the remarkable rate of about nine percent a year, and almost 80 percent of its total inestment has been financed by internal savings. Electrical power has tripled since 1951, road mileage has doubled. Striking hard at disease, India has increased the supply of physicans by half and doubled the number of hospital beds. Malaria has now been virtually eliminated. The nation is also making substantial progress in education: Although illiteracy is still up at the 80-percent level. school enrollment has jumped to three times what it was in 1951.

India struggles to move ahead even as the waves of over-population threaten to wash away these hard-won accomplishments. As a start, the government is putting \$50 million a year into its birth-control program, and thousands of clinics around the country are handling the lengthening lines of those who wish contraceptive aid. A government plant is turning out 15,000 plastic intrauterine loops a day to help in the fight. Employers like Sudhir Thackersey of the Bombay textile family have installed surgeries where male workers can get a free vascotomy (tying the sperm duct) and are paid during recuperation.

In Punjab state, 27,000 of these operations were performed in 1965, more than the total of those performed in the previous ten years. In Bombay, the birthrate has already come down to 28 per thousand, 12 points below India's average.

As India works to overcome internal problems, there is always the danger that another war may further cripple its painful progress. The truce concluded between the late Prime Minister Shastri and Pakistan's President Ayub Khan in Soviet Tashkent, under Russian prodding, has been eroding ever since Pakistan has acquired a few Chinese tanks and jet fighters; its top officials have been making increasingly belligerent speeches aimed at New Delhi, and each side has ac-cused the other of treaty violations, Indian leaders fear that Pakistan, egged on by China, which seeks to embarrass Russia, may risk some new military adventure. Moreover, each detonation of a Chinese nuclear device sends tremors reverberating through the Indian political scene. So far, Mrs. Gandhi has refused to yield to the clamor within her own party that calls for an Indian A-bomb. perts concede that India which is building one of the world's largest nuclear-power stations, has sufficient nuclear know-how to turn the trick. But an Indian bomb would mean more precious resources diverted.

India, the world's largest democracy, is being challenged to prove that its leap into self-sufficiency can be achieved without the resort to totalitarian discipline used by Asia's other two giants, the U.S.S.R. and China. The rest of the underdeveloped world is watching anxiously from the sidelines.

"South Louisiana Hayride," With Its Deep South Western Music of Ponchatoula, La., Threatens to Outdo Nashville, Tenn.—Home of "Grand Old Opry"— It Has Many Rabid Fans, Famous Stars, and Abounds With Colorful Entertainment Every Saturday Night

EXTENSION OF REMARKS

HON, JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. MORRISON. Mr. Speaker, it used to be that you would have to go to Nashville, Tenn., on a Saturday night to see and hear good old country western music played by famous artists who come from far and wide to join together each week for the famous "Grand Ole Opry" show.

But this Tennessee monopoly is about to be challenged by one of the best western Saturday night performances in the Deep South, and people come from miles around, from anywhere and almost everywhere to see Ponchatoula's pride and joy, the "South Louisiana Hayride."

Unlike the famous stage show-namely, "Louisiana Hayride," which many years ago was a Broadway hit, starring Carol Bruce and other celebrities, south Louisiana's "Hayride" could almost be considered a distant cousin of a stage show musical comedy which ran for years on Broadway and across the "South Louisiana Hayride" is Nation. not a nightly production of the same show, but a brandnew one, every Saturday night, that packs them in with standing room only, to bring fame and widespread publicity to the colorful little city of Ponchatoula with its famous and even fabulous western music.

Ponchatoula used to boast it was the "Cypress Capital of the World" with two giant cypress sawmills, one owned by the husband of a famous yesteryear movie star, Marguerite Clark, which have long

since disappeared. But, today some people call it the "Little Athletic Capital of the United States," with championship American Legion baseball teams and tournaments and championship semiprobaseball teams. And in the spring of the year you can always get a big dish of the finest strawberries in the whole wide world.

When famous western music stars arrive in Ponchatoula for this 8 o'clock hayride every Saturday night, things really begin to happen. Mothers and fathers, sons and daughters, come from every direction, both near and far, and come early to try to get a seat.

This hayride western show happened, almost by coincidence, because Stanley Cowen wondered why our people of this area could not have a fine, clean show each week to entertain them after a week of hard work. His father, M. A. Cowen, affectionately known as "Dunk," said:

Son, you are right—if you do it right with good western music and fix it so that any man would be as glad to see his daughter there, as in a church, you cannot miss, and I will back you all the way.

That is just what happened and even those few critics who said it might last 6 months have joined in applauding all the fame that the south Louisiana hayride has been bringing to this country-side ever since it started in February of 1964.

Working with Stanley Cowen was a western music stalwart named Lloyd "Hank" Jones, who not only has a thriving insurance business, but carries on a little politics along the way, holding an important elected office as police juryman for the seventh ward of Tangipahoa Parish.

Every Saturday night, at about 8 o'clock as the crowds pull in, those who cannot get a prize seat just stay home and turn on the popular radio station, WFPR, that has a listening audience of well over 100,000 folks, and with the talented aid of "Rube" Rogers, known far and wide as the original "Country Boy," Terrel McCrory and George Holly, all of the neighboring city of Hammond, the show is brought by this radio station, to all the armchair fans who sit at home listening to Rube opening up:

Get comfortable, just take off your shoes, you'll feel better, get the coffee poured around 'cause here comes the show you have been waiting for.

And with big time flare on comes one of the most unusual and entertaining western shows to the delight of thousands who take their hillbilly and western music so seriously. Many will drive miles to hear their favorite stars.

RCA Victor thought so much of this Ponchatoula Hayride talent that they sent in to Ponchatoula over a million dollars worth of recording equipment to make the Porter Wagoner album, en-titled "Porter Wagoner on the Road," with other favorite stars Norma Jean and "Speck" Rhodes participating. Few, if any western music stars enjoy the popularity of Porter Wagoner. This very album made at the Ponchatoula Hayride is near top spot in the Nation's ratings of like albums. With Porter Wagoner and other stars, this show has attained worldwide publicity, while the loyal folks of Ponchatoula, with a twinkle in their eye, will usually say "whether it's western music with Porter Wagoner at our South Louisiana Hayride or a championship American Legion baseball team, or a championship high school football team. Ponchatoula always brings home the bacon.'

And on any Saturday night, it is not uncommon to see people from as far away as Florida or California or even see Louisiana's most successful and popular Gov. John J. McKeithen with his family sitting right there in the front row, or a U.S. Congressman, or a visiting U.S. Senator-they all come, and sometimes as many as 2,000 or 3,000 at a time to see their favorite, the "family fun show." with folks of all ages from 2 to 92. Some doubted it all could happen, but thanks to Stanley Cowen, his fine father, "Dunk," Hank Jones, Country Boy Rube Rogers, George Holly and others, it did happen. And the only thing that worries the people of Ponchatoula is that many might start calling their show, the "little grand ole opry" of the Deep South and that would be terrible, because they, are so proud, that they never want to change the name of the South Louisiana Hayride which they love so dearly.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939). LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Recomb.

Appendix

Bankers Back Student Aid

EXTENSION OF REMARKS OF

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. BROCK. Mr. Speaker, one of the most important resources of our Nation is its educational system. With modern technology the importance of excellence in education continues to mount. Unfortunately for most families the cost of higher learning, like most other goods and services, has increased-up 50 percent in the last 10 years. A principal source of financing higher education are public and private guaranteed loans. America's banks have long participated in the plan and now they have pledged full support of the college loan program to provide adequate finances for students desiring to complete their education.

Dr. Benjamin Fine, education editor of the Bell McClure Syndicate, recently wrote an informative article on "Bankers Back Student Aid." I have unanimous consent that his column be printed in the Appendix of the RECORD.

COLLEGE FOR THE ASKING: BANKERS BACK STUDENT AID

(By Benjamin Fine, Ph. D.)

The top management of the nation's largest banks, members of the Association of Reserve City Bankers, have pledged their full support to finance student loans under state and private guarantee plans.

The bankers plan to develop methods and procedures to provide adequate amounts of funds in all sections of the country. An estimated 775,000 college students will be eligible to borrow \$620 million during the next

school year to finance their education.

According to Charles E. Walker, executive vice president of the American Bankers Association, all banks will eventually participate in the program. He predicted that students will borrow primarily in their home towns rather than in their college towns.

The federal government is the principle source of college loans. More than \$190 million a year is loaned to some 250,000 students. But the federal government wants private and state agencies to take over this job. though the government will continue to underwrite the loans and subsidize the interest rate. Thus, if the banks charge the students 6 percent interest, the federal government will pay 3 percent and the student will pay the other 3 percent.

As the importance of education continues to mount, so does the cost of obtaining a higher education. The cost of financing a higher education at either a public or private school has increased by 50 percent in the cent by cent by 1970. Enrollments are climbing along with costs. The number of students in college doubled between 1955 and 1965, going to 5.5 million. By 1970 enrollments will reach 8 million.

AGREEMENTS SIGNED

Interim agreements to initiate the insured student loan program during the upcoming

academic year have been signed by the U.S. Office of Education with agencies in 13 states and the United Student Aid Funds which operates a nationwide student loan program. The United Student Aid Funds, 5259 N. Tacoma Ave., Indianapolis, Ind., is a nonprofit student guaranteed loan agency with programs in all 50 states.

The USFA guarantees the loans, reimburses the banks and continues the collection procedure if the loans become delinquent. The of course, are supplemented with scholarshing fellowshing and outright grants from private, federal and state sources.

Under the government-guaranteed loan program the government assists state and private student loan insurance plans in underwriting loans up to \$1,000 a year for undergraduate students and \$1,500 for graduate students.

I have prepared a series of bulletins that spell out the sources available for scholar-ships, fellowships and loans and the steps to follow in getting college funds. Write to Dr. Benjamin Fine, in care of The Star, and ask for these bulletins: Bulletin No. 1. "College Help for Children of Veterans"; Bulletin 2, "Where To Get Federal, State and No. 2, "Where To Get Feberas, state and Private Loans"; Bulletin No. 3, "Major Scholarship Sources"; Bulletin No. 5, "Scholarships Available Through Business and Industry" and Bulletin No. 10, "Federal Scholarships, Fellowships and Loans." Please send a long, stamped, self-addressed envelope and 25 cents in coin for each bulletin desired to cover handling charges. (All five for \$1.)

One of the major sources of scholarship aid are the colleges themselves. During the year the colleges are scheduled to offer \$100 million in scholarship aid to 300,000 students. Not everyone who applies gets help, of course. But two important considerations are involved: academic record and need.

YALE EXAMPLE

Yale University is a good example. present the total financial assistance received by the four Yale classes amounts to \$3 million each year. A request for financial aid will in no way handicap an application. This is generally true among all colleges.

Financial aid, in accordance with need, will be continued all four years, provided only that the student remains in good academic and personal standing. Jobs will normally be offered but are not mandatory. Yale loans may always be substituted for the job. Every effort is being made by Yale to find on-campus jobs when requested. More than 40 per-cent of each recent class of Yale has received financial aid.

You can get a listing of the scholarships, loans and jobs available at each college and university in the United States from the 360-page U.S. Office of Education book "Financial Assistant for College Students: 360-page Undergraduate." (U.S. Government Printing Office, Washington, \$1.25.)

For those interested in graphic arts, the Educational Council of the Graphic Arts Industry, 1411 K St. NW, Washington, has set up a national scholarship trust fund for 12 fourth-year scholarships to be used at institutions offering degree programs or majors in printing design, printing teaching, printing management and technology. The values of the scholarships range from \$100 to \$1,000 a year. Additional scholarships are offered by several companies, foundations and other donors in the industry.

Proposed Alteration of U.S. Capitol

EXTENSION OF REMARKS

HON. LEVERETT SALTONSTALL

OF WASSACHTISPINS

IN THE SENATE OF THE UNITED STATES Wednesday, July 13, 1966

Mr. SALTONSTALL. Mr. President, fartin Nolan, the Washington re-Martin Nolan, the porter from the Boston Globe, has written a very perceptive article concerning the reconstruction and relocation of the west front of this historic building. This is a subject that needs very careful and thoughtful study by the experts and those who have an interest in maintaining our Capitol as an example of our national heritage.

I ask unanimous consent that Mr. Nolan's article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

IS OUR CAPITOL A NATIONAL SHRINE OR JUST ANOTHER OFFICE BUILDING?-ALTERATIONS PLANNED; ARCHITECTS BATTLE

(By Martin F. Nolan)

When Major Charles Pierre L'Enfant was ordered by George Washington to find a suitable place for the new national Capitol Building, he chose Jenkins' Hill near the Potomac, calling it "a pedestal waiting for a monument."

And a monument it has become, resting on the 88-foot hill, its gleaming white dome surmounting older portions of the building as a familiar symbol of the work of govern-

The Capitol Building, which has survived fire, explosion, neglect and a hundred fads in architecture, is now faced with being mummified by its current caretakers.

The architect of the Capitol, J. George Stewart, plans to extend the west front of the Capitol, "fill in" its recesses and courtyards and wall up the result in marble. This plan will make the Caiptol harmonize with its new neighbor, the three-block-long Rayburn House Office Building, also a Stewart product.

Stewart, a 75-year-old former congressman from Delaware, is the eighth Architect of the Capitol. He is not, however, an architect, but an engineer. Stewart's talents also lie in the field of public relations. In 1958, he convinced Congress to spend \$24 million to extend the east front, the ostensible reason being the need for more office space and the architectural necessity of correcting an 'overhanging' dome.

The east front, the more famous because of presidential inaugurations, was extended 32 feet, its sandstone finish replaced with marble, thus requiring morning visitors to wear sunglasses when scaling its steps. aesthetic change supposedly means better balance for the building, although one architect wrote at the time that "no one actually sees that the skirt (of the dome) appears to rest on the portico unless he is hovering above the structure in a helicopter.'

A more compelling reason for the east front extension is given in an official guide to the Capitol, "We, the People," sold to tourists in the building's lobby:

"The Capitol gained 2½ acres of space apread over five floors. Brought into being were 102 rooms, including individual office and reception rooms, dining committee rooms, kitchens and entrance foyers.

Current plans for extending the west front involve 4½ acres of new office space. If the pattern of past expansion holds true, much of the new space will go to private offices held by senators. Some 30 senators enjoy the use of these hideaways, all of the room entrances unmarked and their locations unrecorded in Capitol floor plans found in the Congressional Directory. About half of these offices were created by the east front extension.

Senators who have such rooms use them for speech-writing or relaxing. Each senator, of course, is given another large suite of offices in one of two Senate office buildings a half-block away.

New office space in the expanded west front would mean shorter walks or subway rides for some of the most powerful men in Con-The new offices would also look out on the most imposing view in Washington down the mall to the Washington Monument and Lincoln Memorial and down Pennsylvania Avenue to the White House.

These architectural circumstances perhaps explain why only one congressman fought the \$240,000 appropriation last year to let Stewart study the west front and come up with recommendations. Cong. SAMUEL S. STRATTON (D-N.Y.), who represents eight counties of New York State farmland, sed himself last Oct. 14 to Stewart's main argument for extending the west front, i.e., that the Capitol is slowly collapsing.

"O, I will be told that the present sand-stone walls are crumbling," STRATTON said. "Of course they are. I have seen them. They need to be shored up and strengthened. And I have seen the engineering report which ays that the only way you can save these walls is to cover them up. But engineering reports are like lawyers' briefs. You can get them to prove either side you want; you get what you pay for.

"I just do not believe that this great nation, so technically advanced that we can orbit two men for eight days in space, cannot find it possible to preserve the west front of the Capitol without destroying its his-toric integrity."

STRATTON'S point of preservation has been backed by Wolf von Eckardt, architectural critic for the Washington Post and the New Republic:

'It is ludicrous to pretend that there are insurmountable difficulties in shoring up a few arches and replacing a few stones. It has been done on far older buildings, such as Hagia Sophia (in Istanbul) and St. Paul's Cathedral (in London)."
"If the west front new needs restoration,"

says Von Eckardt, "let it be restored as hundreds of old buildings have been restored."

The American Institute of Architects here, representing 21,000 architects, has officially opposed the west front expansion, saying that "if the Capitol continues to expand, it will rapidly lose all resemblance to the original building. The A.I.A. believes that it should be a permanent policy of the Congress that the exterior of the Capitol remain unchanged."

Stewart has already disregarded this adbetween this screening this topic timber braces against the columns of the west front, as well as massive buttresses at the building's base. He ordered this work done last Fall after engineers testified that stones might fall out, causing a partial collapse of the building.

The engineers testified before a commission called—for the benefit of doubting Thomases—"The Commission for the Exten-sion of the United States Capitol." The com-mission carries a little bit of political weight

around town. Besides Stewart, its members are Hubert H. Humphrey, John W. McCor-MACK, EVERETT MCKINLEY DIRKSEN and GER-ALD R. FORD.

The commission's hearing last June 24 established only the need for study funds, not money to begin building again. Although the study is virtually complete after almost a year, Stewart's office refuses to talk about it, saying only that the study is "very com-plete" and will be released "soon."

An article in the April issue of the A.I.A. Journal outlines three alternatives open to the commission. One would preserve the walls as they are now, another would extend the west front a la the east front expansion and the third would redesign the building "in a basically different manner some distance from the present walls."

The author of the article, Francis D. Lethbridge, a Washington architect, states flatly "it is the third alternative which is being carried forward at the present time by the Architect of the Capitol." This tack will result, says Lethbridge, in the Capitol's becoming "a shapeless mass signifying nothing but its own bulk."

Architectural opinion on the west front is not universal. Paul Thiry of Seattle, a mem-ber of the National Capitol Planning Commission, supports the call for more office space and meeting rooms, stressing that the expansion can preserve the Capitol's original appearance if not its exact form.

The hassle over the project will surely be delayed by the Viet Nam war's effect on the budget. Since Stewart has estimated the cost of the west front expansion as between \$24 and \$31 million. Congress and the President will be most reluctant to approve such a sum. Republican critics, after all, almost torpedoed \$750,000 for a house for vice presidents. Cong. James C. Cleveland (R-N.H.) called it "a frill upon a hill," a description that may come back to haunt congressmen who voted with Cleveland against "the V.P. teepee" if they want to enlarge their own wigwam.

The argument of historic preservation and continuity may prove to be the telling blow against the new west front, if indeed it is stopped. As Cong. STRATTON said last Fall, "this country went to great expense to preserve the original walls of the White House when reconstruction was undertaken in 1948. I believe we should do no less in the case of the U.S. Capitol . . . I oppose this exten-sion because if it goes through it means that the last remaining exterior facade of the original Capitol Building, dating back to 1800, will be forever covered from view. We fight to preserve our historic shrines and buildings, not cover them up with garish

Honorary Degree for Bill Springer

EXTENSION OF REMARKS OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. BOW. Mr. Speaker, Lincoln College in Illinois on Sunday, June 12, conferred the honorary degree of doctor of laws on our good friend and colleague BILL SPRINGER. This was the second time that the gentleman from Illinois has been so honored by an institution of higher learning in his district. In 1953 he received an honorary degree from Milliken University in Decatur.

This time he really had to work for his degree. Lincoln College assigned him no

easy task. It called on Congressman SPRINGER to deliver the commencement address, on the college's 101st anniversary, as a substitute for the Senate minority leader, EVERETT McKINLEY DIRKsen, one of the great orators of our time. Senator Dirksen's recent hip injury forced him to cancel his scheduled commencement address at Lincoln College.

Congressman Springer handled this difficult assignment with the same good humored deftness we are accustomed to seeing him display as the ranking minority member of the Committee on Interstate and Foreign Commerce. speech at Lincoln College shows wit and erudition. I include it here so that all of my colleagues can read and enjoy it:

I am here as your speaker today because Ev DIRKSEN fell out of bed.

I understand you were to be privileged to hear that great personality on this occasion had it not been for his accident. Please do not expect me to emulate his style appearance. Try as I will my hair will not stick out like that. It has been suggested that the Senator carries batteries in his pockets to keep that effect, but I think the insinuation is fallacious and shocking.

It is an honor to be considered worthy to fill in for the sage of the Senate, and I am sure that years hence when asked who delivered the commencement address at your college you will unhesitatingly reply, "Some congressman substituting for Senator Dirkcongression and state of popularity. You can be assured that the Senator would much rather be with you today, hip intact and bon mots at the ready.

Over the years I have had occasion to oberve many commencement exercises—not too often as a participant, I hasten to explain, but as a speaker and as a proud parent eag-erly awaiting the thrilling end to a four year financial disaster. Without doing any research in depth on the subject, I have observed that most commencement speakers tend to reminisce and bore you stiff with stories about the good old days. You should be very pleased to know that I shall be no exception to the rule. I would not want to break old traditions and have the ivy fall off the walls from surprise.

But I will keep in mind that the "hard times of today" are what we later on refer to as the "good old days." Having gone to col-lege in the depths of the "Great Depression," which at the time was a description of an economic condition and not a psychiatrist's term, I recall meeting an old college crony in his cups who wisfully described those happy, carefree college days when we had no worry in the world—except the haunting fear that might starve to death.

But as we old duffers recall the day of the five cent hamburger, I cannot help but ponder how it will sound in years to come when you, as the old crocks who make the speeches, turn on the nostalgia and tell about the days when

A hamburger only cost thirty-five cents and the catsup was free. You could buy a reasonably good suit for

as little as ninety dollars.

Some working men were able to subsist on about one hundred fifty dollars a week.

There was a little coin called a dime that was made out of silver.

Young people were much better behaved.
When you are young, any kind of days are
good days if you will just let them be so.
Another thing the commencement speaker is famous for, according to my little personal research project (which was turned down for a grant by NIH), is that invariably he has

a grant by N(H), is that invariably he has some pet philosophy which he has expounded ad naussum to his children for the last quarter century. The general reception in that forum is always PHFFT. But now he

has a whole new group to try it out on. Best of all, he has them in a position where they must listen politely and even applaud. What rapture. He can now hold up his head at home. And that is why it is not difficult to recruit commencement speakers.

So, in this instance also, I will do my best to live up to the commencement speaker's code. I have a philosophy which meets all the specifications, and I shall proceed to ex-

pound it, so brace yourself.

Let us talk for a moment about an old and overused word—Security. We can look at it from various points of view and in several of its ramifications to see whether or not it deserves the awe in which it seems to be

First, there is that elusive but apparently demanding thing called "national security." At times the country seems to be obsessed with it, whatever it may be. We find that nearly everything we do has some bearing on that nebulous thing—national security. We keep stockpiles of materials in its name. We probe space in its name. We spend over half of our staggering national budget for its most apparent aspect, military preparedness. We support other nations and international agreements and even international armed forces in its name.

At the same time we make it known privately and publicly that the United States is so strong and so resolute that all other nations really exist by our permission. We can, if necessary, says the gospel, annihilate any nation or group of nations which seriously threatens our existence. Probably so. But if so, what are we so worried about all

the time?

ed

Back in the beginning of our country, talk about national security must have been a kind of joke. We were a shaky little ruht of a nation with practically no military might and economically always struggling to beat our checks to the bank. Perhaps, we didn't really win our independence so much as we fell into it by reason of bungling in Britain and big troubles on the continent. But one thing is for sure—while the struggle was on the word security could have been taken out of the dictionary and not been missed. There was no such animal.

Where along the line then did we achieve this thing called national security? Not certainly by the War of 1812 when our disgruntled parent came over to teach us a lesson or two. Her troops roamed around and inflicted damage at will. The biggest mistake they made was to choose to burn up the most worthless plece of real property in the country at the time—the Capitol in Washington. Other problems brewing among stronger nations saved our bacon. We survived, but you could hardly describe the situation either before or after as national security.

when, then? By 1860? At that time we found out for sure that local squabbles are far more important to people than national security. There could be no swifter way to lay ourselves helpless before the world than to bleed the nation white by internal dissension and bloody fratricide. The War of

the Riness had taught us nothing.

Again we were lucky. No one needed, or knew what to do with an unruly colony at the moment. It would have been like adopting Peck's Bad Boy. So they left us pretty much alone to bleed ourselves to death. And we tried hard enough. Did we then or soon thereafter have anything which might by any definition be called national security? I think not.

Once in our history we thought we had finally achieved national security. After World War I everyone was determined that we would never again be caught up in the wars of others. And we thought we knew how to accomplish it as well. It was simple—destroy everything needed to fight with and tell the remainder of the world we

simply were not interested in their problems. If that was national security, I hope we don't have any again soon.

By 1941 we were wondering "What Happened". The Japanese were fixing to gobble up the Pacific including anything we had or might want out there. Europe was disappearing down the Nazi craw, and Hitler's disciples were making alarming inroads in South America. If security means being all alone in the world looking out at a ring of wolves, we had achieved it. Many a long year went by before we could breathe easier and see the tide turn. Fighting men on the bleak islands of the Pacific in 1944 saw no easy road home as they chanted "Golden Gate by '48."

Reminding you of the history since World War II with its cold war, its brinkmanship, the dark cloud of "the bomb," it should not surprise you to find that I think this thing known as national security is a myth. No one ever had it and no one ever will. What we like to think of as national security is a continuing gamble with history based on a series of hunches known as 'National Se-

curity Estimates.

There should be no expectation that we will win them all, but it might be nice to stop playing with the other guy's dice now and then. We should be as confident these days as we were smug before World War II and remember the story of the Russian school boy who was being interrogated by the visiting commissar.

"What do you know about the United States, Ivan?" asked his Honor. "Sir, Commissar," said Ivan, "the United States is a bloated, rich, evil, capitalist nation which wants to dominate the world. It feeds on its poor, downtrodden people who are illiterate and stund "

"Fine, fine," said the pleased Commissar.
"Now tell us what you know about the aims of the Glorious Peoples Republic."

"The aims of the Peoples Republic," recited Ivan, "are to catch up with the United

These are uncertain and perilous times in the history of man. That speech could also have been made when the sabre toothed tiger roamed these parts. All times are uncertain—uncertain for nations and uncertain for individuals. An observation on this point was well put by Admirai Radford when he said: "Freedom is not something we inherit by the accident of being born Americans. Each generation must earn it for itself"

So let us examine the idea of personal security for a bit, remembering that in this vale of tears we have no assurance from anywhere that we will get home for dinner tonight. Certain elements among our youth proclaim loudly that they cannot conform to ordinary standards because this generation left them with such tough problems to solve. So they choose to ignore them in the hope that they will go away. Even if their assumption were correct—that we did just purposely unload horrendous problems on them out of pure meanness—they spite only themselves and succeeding generations if they refuse to tackle what we bumblers may have messed

It is popular to look backwards at an idyllic age when life was more secure. There comes to mind an image of a rosy cheeked boy in knickers, wearing a cloth cap and rolling a hoop down a quiet, shady street. At the same time, father wore a high celluloid collar which would surely melt under the rigors of a Watusi. This generation, it could be argued, had that thing called security. The country seemed to be entirely safe economically and diplomatically. So little Rollo could look forward to taking over father's business and living in quiet luxury and respectability to a ripe old age.

So Rollo went to Yale and lived with the

So Rollo went to Yale and lived with the Bulldog for four years, meeting some of the best people. From them he learned that the best way to make it go forever and ever was to get into stocks and bonds. So this Yale graduate went on to Wall Street and sold Such was the temper of the times that in due course he had acquired those trappings of security which we all recognize. He had a seat on the Exchange, a home on Long Island and a yacht on the Sound, to say nothing of shares and shares of the best corporations. And then one day something impossible happened. The market went "Boom." He looked around at all his security and found that it had vanished. All he had in the world was a degree from Yale which had long since withered for lack of use. So he opened his window and went to the payement clutching in his hands some pieces of paper called securities.

This story to you sounds strange, but it happened more times than you would like to know about. It happened in many different ways, in every generation, and it can only lead to a conclusion that security for the individual is also something of a myth. It is, at least, if we think of it in terms of safety from the buffeting of the world—if we think of it in terms of insulation from material worries. All of the high powered social programs designed to insure security, at least late in life—life insurance, social security benefits, medicare—are useful but

no guarantee of anything.

If we must define security, I think we would have to compare it more with religion. It comes from within. It is there as long as you believe and know it is there and also do the things your Intellect tells you must be done in its name. If you do not doubt

it, you have it.

friend of mine once told me that he had received his inheritance at age 18. said that was when his father, a lawyer, told him never to expect any property or money to come to him from his, the father's "First of all," he said, "there would death probably be none anyway because I would probably be none anyway because I would use it as I go along. And if I tried desperately to leave an estate for you, it could be wiped out overnight, and the effort would be wasted. One thing I can and will give you and now, so make the most of it. You can have any kind of an education you wish to work for. I will ask no questions as to how long or how expensive. This inheri-tance, properly managed, will bring you more security than any property I might be in a position to hand on down to you. It is a property which is not perishable or subject to the fluctuations of the market. It can adjust to any circumstances and be used to take care of you and all those you love. It can also be the source of the greatest satisfactions in life." And so it was. Now I doubt that the son was so overwhelmed with this magnanimity that he fell down and kissed his father's feet. I can imagine what his inner reactions might have been. But today he would agree with his father's

Now that you know my philosophy on the importance of education and the relative unimportance of more material attributes of society you can also understand why over the years I have been in Congress I have supported most of the measures which would make more educational facilities available and make it possible for more of our qualified youth to attend college. A combination of factors has dictated such a course for the government. The large population bulge in college age people has created an acute shortage of physical facilities in which education can take place. The recognition of the national need for scientists and all other advanced skills pointed to government participation.

It started with Sputnik. Suddenly there was a great urgency to train scientists. Great emphasis—probably too much—was concentrated on facilities and courses to pro-

duce graduates equipped to speed up our space age image. The concept was too narrow and motivated by misplaced concern, but

it did point up a problem.

Trying to solve what at first appeared as a limited problem, the nation was brought face to face with the realization that the need for well educated citizens was far broader. We could not produce high powered scientists by suddenly making the field attractive if we did not build an educational base in the lower grades and secondary schools. To do this required a new breed of teacher and instructor. That in turn required new emphasis on educational courses for aspiring teachers and retreading for those already working at it. To launch a satellite into space and go on from there takes more than a new crop of Werner Von Brauns. Behind every countdown is an immense background of scientific work in many related fields from basic research on matter itself through medical research to engineer-

As these truths gradually dawned upon us we saw evidence of new dedication and new direction in all of education. The National Defense Education Act was expanded greatly to include what might look like extraneous curricula at first blush. That was proper.

My own activity in that regard has been concentrated somewhat in the field of health professions education because the main committee upon which I serve, Interstate and Foreign Commerce, deals directly with them, but the principles hold true throughout the higher education. In the last few years we have made funds availble to build new schools and expand or update schools which will produce doctors, dentists, nurses and other health professionals. There are traineeships for graduates who will strive to qualify as teachers and supervisors in their respective professions. There are loans and now even scholarships to make these professions more available to qualified individuals. At the present time our committee is working on a bill to extend this same kind of help to the supporting professions in the health field such as medical technology and physical therapy. Many new subdivisions of these categories are appearing, and we need to encourage them in the same manner.

I am sure that I would be categorized as "Progressive conservative" although these pigeon holes mean very little. I have felt for many years and so stated that the best way we could help other countries is to give them technical and educational assistance in such basic matters as health, education and food production. Huge sums sunk into foreign economies seldom pay off. But in the matter of increasing opportunities for our own youth to gain education and make use of its tremendous potential, I see no reason to spare the horses. I said previously security is an attitude, and I think further that it must be based on knowledge. where we insure our national security.

Yes, problems you will have. Some we will leave you and some you will think up by yourselves. The pressures on your genera-tion are terrific. But you also are better equipped to cope with them than any generation so far.

A laundry list of the problems we plan to leave for you would not be comforting either. They range from basic problems like "Is God dead?" to the franchise for a local CATV system. And all of them can give someone

By all appearances foreign aid in its present form will still be with you for policy ecisions. I have some misgivings about decisions. the course this program has taken over the years. How long shall we continue to build up and support countries which refuse political and economic freedom to their own people? It is argued that recipients of our aid must remain neutral in order to retain their self respect. I must confess that it bothers my self respect to have someone help himself to my picnic basket as though he had brought it, eat the best part of the chicken and throw the bones in my face. And when to you with failing hands we throw this hot torch, lots of luck.

And among you here today may be someone who will find himself faced with a duty to make decisions, or at least recommendations about military commitments to other countries. Perhaps you will come forth, as one of my staff assistants did recently when he said, "Congressman, here are four wrong answers—which one do you like?" Shall we help our friends all out? How far should this go? Should we supply only equipment? Should we train troops for other countries? Should we supply our own troops to fight for them? How do we tell who our friends are at any given moment without a score-

I think my point is made. It's an uncertain old world and you are struck with it. So I can only suggest one antidote for the somber and threatening aspects of mankind's future. Don't worry too much about life because you are not going to live through Remember that the world is three-fourths water so the Lord must have intended that we do three times as much fishing as hoeing. About half of life is for-malized nonsense which need not impede your progress if you recognize it for what it is and smile at it.

And if the clucking of the old fogies about the younger generation gets on your nerves at times, just remember that every one of them would gladly join you, taking on the burdens you must bear to enjoy the fun you will get out of life in these next few years of work and play. Not pretending to speak for anyone else, I am greatly comforted to realize that the heritage we leave to you is to be in the hands of a new group which is considerably brighter and better prepared for it than my own crowd was thirty-five years ago.

Very Rev. Dr. Vladimir Klodnycky, Bayonne, N.J.

EXTENSION OF REMARKS OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Wednesday, July 13, 1966

Mr. CASE. Mr. President, on May 1, 1966, the parish of the Ukrainian Orthodox Church of St. Sophia in Bayonne, N.J., honored its founding pastor, the Very Reverend Dr. Vladimir Klodnycky, with a testimonial dinner in celebration of his 75th birthday. For his many friends, of whom I am glad to be one, it was a most happy occasion. Dr. Klodnycky has distinguished himself as an administrator, as a scholar, and as a humanitarian in his years of service to his native Ukraine and to the community of

I ask unanimous consent to insert in the Appendix a translation of a citation presented to Dr. Klodnycky when he was awarded the 1962 Torch of Liberty Award in recognition of his efforts to save the Jewish community of Shmelnyk during the years 1919-20.

There being no objection, the translation was ordered to be printed in the RECORD, as follows:

(Translation from old Hebrew language made by Prof. P. Koyfman, chief rabbi of the community, city of Chmelnyk, Province of Podollia)

This is a certificate of acknowledgment given to Army Officer Vladimir Stepanovich Klodnycky, born in Galicia who distinguished himself for his great spirit, love of truth, and

love for the Jewish people.

In the month of Elul 5679 when the rivers of the Ukraine were overflowing with the blood of innocent people, when thousands and tens of thousands of Jews were killed and cut to pieces for loyalty to their faith, an angel appeared in the county of Lityn in the person of Army Officer Klodnycky. With his talent as a military genius, he saved all the Jews of the area from the sword and looting. Time and again in order to save them, he bravely disregarded danger to his own person from the blood-thirsty peasants. brilliant speaker, he was frequently able to destroy their wicked schemes with his effective speech

Army Officer Klodnycky was an able nego-tiator between Christian and Jew, destroying ill will and pacifying the blood-thirsty.

During the year he spent in Chmelnyk, when danger subsided, he showed admirable talent in the field of administration. great skill he organized hospitals, homes for the aged, took care of the poor and provided and firewood for them. He participated in all administrative meetings, civic and Jewish. The suggestions he gave were always full of good sense and wisdom. short, he was the embodiment of high virtues, which characterize great men. It is to be regretted that this plant, uprooted by war from his native soil, cannot put down its roots in the Ukraine, where brother fights brother and son fights father. His reward is the reward of all great people; he is forced to wander from place to place. This fate may bring him to places where he is unknown. Therefore, I appeal to the Rabbis of all Jewish Communities and to the people in authority in Israel to help Vladimir Klodnycky in every way in case he finds himself in need of engaging in military or civic career.

May God grant that here be many like him among Christians and Jews, then nation will

not raise its sword against nation.

Klodnycky highly repects and values the Zionist movement with his whole heart, as a Ukrainian patriot and human being dedicated to righteousness. He often expressed the wish that he might have had the opportunity to help establish a Jewish homeland in

their own country.

If the great nations of the world had men like Officer Klodnycky, much would have been ideal in the life of these nations. A man of his caliber should be received with open arms wherever he goes. Because of his qualifica-tions, military and administrative, I would entrust to him the leadership of the sons of Jacob in their pilgrimage to God's mountain. I am sure that leaders of the Jewish movement would entrust to him the guiding of the inspired young pioneer in the realization of their ideals.

A short biography of Army Officer Vladimir Stepanovich Klodnycky: He was born in Galicia in the small town of Chotymyr in the county of Tovmach. The date of his birth is April 2, 1891. In 1918 he completed a course in Juridical Science in Franz Joseph I University in Lviw with diploma number 1293. He also took lectures in political economy. In 1915 he served as officer in the Austro-German Army. In the Ukraine, he had the following positions: Commander of Chmelnyk garrison, Commander of Lityn Brigade, Commander of Second Galician Brigade with the rank of Major.

As I consider this certificate to be of great importance, I attach a picture of said Vladimir Stepanovich Klodnycky. On the back of it is the Talmudic saying, "The righteous of this world will find their reward in the world July 13, 1966 to come." Also it is written in Isaiah, "And all the peoples of the earth will gather round about him." May God grant him good luck wherever he may go. Problems of the National Labor Relations Board

EXTENSION OF REMARKS

HON. ADAM C. POWELL

OF NEW YORK IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. POWELL, Mr. Speaker, I would like to insert into the RECORD the recent address given by the Honorable Howard Jenkins, member of the National Labor Relations Board, pointing out some of

the problems which have confronted the Board during 1966:

ADDRESS BY HOWARD JENKINS, JR., MEMBER, NATIONAL LABOR RELATIONS BOARD, WASH-INGTON, D.C., AT THE THIRD ANNUAL SEMI-NAR ON LABOR LAW OF THE ATLANTA LAW-YERS FOUNDATION, ATLANTA, GA., JUNE 23,

It is indeed a pleasure for me to come to Atlanta and to participate in this important conference. My colleagues and I have taken part in as many labor law seminars throughout the Nation as time will permit. I'm certain that I express their sentiments as well as my own when I say that the unique character of the labor law seminar contributes immensely not only to the growth of the labor bar and its jurisprudence, but also, and perhaps more importantly, to an increased understanding of problems that are central to our industrial growth.

As we reason together during this retreat

from our daily activities, the temptation will be strong to focus on detail and, so far as the NLRB is concerned, on isolated cases. This is a natural tendency of specialists; and, this is an age of specialization, in the industrial relations field no less than in others. As a result we sometimes seem to lose perspective and are inclined to look at problems from the wrong end of the telescope. Thus detail becomes enlarged out of proportion to its importance so distorting the total picture that fundamentally sound positions and important long-range goals are lost or obscured.

In a very real sense, the problems of the industrial community are a reflection in miniature of the problems of our Nation. The socio-economic problems that beset us in the human relations field which are the concern of all Americans are not unlike the socio-economic problems that constitute grist for the industrial relations mill. Underlying both sets of problems are the major political and legal tasks of testing and readjusting doctrine so as to harmonize two fundamental democratic principles, namely: preservation of the rights of the individual and preserva-tion of free democratic institutions.

Upon reflection it should not be surprising to find that neither set of problems can be solved in isolation. Whatever judgments form the base from which doctrine emerges in the one area will also by logic and necessity dictate doctrine in the other. Those of us whose primary concern is with the strengthening and expanding of our economy as well as those of us whose efforts are directed toward elimination of social and economic inequities in the broader sense need clearly to recognize the fact that neither group can achieve its goals, if it disregards the other

It is not my purpose here today to lecture anyone in terms of what his obligations are or what his rights are. Rather it is to share with you an uneasiness that pervades when we strip the facade of positionalism from the structure of industrial relations. Most ob-servers tend to concentrate on the sharp conflicts and the deeply divisive positions in the labor-management arena.

Not simply to be different, but because of their relative importance, I would focus on the similarities and would draw attention to the parallel objectives shared by management

and by organized labor.

At the risk of oversimplification, let us first look at the true fundamentals stripping away the less important facade and protective coloration with which they are surrounded. Management, as a category, descriptive of owners and managers of business organizations, is committed to the development and growth of economically sound, financially profitable business enter-Spokesmen for management remind us again and again that such institutions can flourish only if free from governmental intrusion and independent of governmental controls over the internal decision-making processes.

In much the same way, and for many of the same reasons, organized labor espouses the view that if our economy is to be strong and viable, there must exist a strong, independent, free trade union movement composed of autonomous, separate organizations likewise free from governmental intrusion and governmental control of its internal decision-making processes. Both manage-ment and labor then approach the industrial relations problems in our economy basically in agreement at least as regards the role properly to be exercised by Government and, more importantly, as regards the necessity that private organizations, be they business or labor, must be privately con-trolled and their choices dictated by their own self-interest.

Both labor and management taken generically speak as one in espousing the principle that central to sound labor-management relations is employee freedom of choice. There is no ideological dispute between mature spokesmen of unions or employers over whether employees have the right to act in concert or singly as they choose. Perhaps the less sophisticated are even more obviously dedicated to the principle of free employee choice—if one can judge by the campaign materials in representation cases.

We also find evidence that unions and employers, on the whole, are together in acceptance of the view that if a bargaining relationship has been established (voluntarily or involuntarily), the obligation to deal with each other is real.

In like manner, we could describe the basic components of our national labor policy and find little basis for disagreement on the understanding of those basics between lawyers who represent unions. Perhaps that is why both can work together professionally in a single section of the bar.

Despite these important positives and they are important, two detractions emerge, each of which deserve comment.

First is the fact borne out by the recent compilation and analysis issued by the General Counsel of the NLRB. It appears that the vast majority of his prosecutive time is spent litigating cases in which there is no legal issue whatsoever and in which the factual issues involve questions that have been answered literally thousands of times. Lengthy briefs are still being filed challenging the constitutionality of the statute, questioning the validity of delegations of authority, and raising frivolous matters. Hearings are being burdened with the assertion of defenses conceivably known to be without merit. Procedures designed to assure fair process are utilized to thwart the administrative objectives, not with a view toward prevailing but for the sole purpose of

delay.

The second item relates to the dimensions of the case load of the Agency. I will cite no statistics or attempt to overwhelm you with the enormity of the task. I leave that for others who are more directly involved. This audience in its sophistication is well aware that Board Members see only the tip of the iceberg. My concern, however, is as real as though all 30,000 matters which this Agency handled during the current fiscal year came personally before me. The fact to which my concern is directed is the fact that this ever increasing case load is largely in the control of the labor bar. In the past seven years the Agency workload has almost doubled.

The National Labor Relations Board is not a self-initiating operation. Neither the Board nor the General Counsel has the authority to initiate proceedings. Our processes must be invoked. Every unfair labor practice case which this Agency has processed began when some person walked into some office of the Board and filed a charge alleging that the law had been violated. We do not

d

al

maintain a wide ranging investigative force roaming the countryside to discover who is violating the law. This is not to criticize governmental agencies whose responsibilities require them to do so. It is simply to say that our responsibilities neither contemplate nor permit self-initiated action.

Theoretically, with all of the problems inherent in the system, it should break down. Even as theoretically the democratic process is inefficient and unworkable. It is only because of a third ingredient that these theoretical results do not materialize. That ingredient, for want of a better term, can be denominated the public interest. But for general acceptance of that as a legitimate involvement, the system would not work. Labor unions and employers, each undertaking to exercise traditional rights in their own self-interest, unconcerned with the ideals to which reference was made earlier, could not only render the system unworkable but impair our basic democratic assumptions.

Fortunately most of us accept as reasonable the temporizing influence of the public interest. For those who do not, it must be This is never an easy task, for it asserted. runs counter to the assumption that the public interest will be best served by accepting the free interplay of opposing self-interests. Yet it seems clear from the empirical evidence that societal prohibitions are a consequence of behavior thought by most to be irresponsible or undesirable viewed from a public interest standpoint. It is probable that if early human behavior had not included the commission of murder, theft and the bearing of false witness, only seven Commandments would have issued.

In like manner, if neither employers nor unions had engaged in the practices of interfering with, restraining, coercing, and discriminating against employees, we would have fewer "Thou Shait Nots" in the federal labor laws.

In these comments I have sought only to open some areas for further development—areas in which the bar has a special concern. If lawyers are to fashion the fabric enabling free institutions as well as free men to function effectively, we must concern ourselves with ends as well as means. Because of the central position of our industrial economy in the whole democratic design, the labor bar occupies an even higher role.

Thus, as I see it, those here who have these important responsibilities of advising and guiding their clients in this area—men, who represent the leadership of the bar, have an unusual opportunity, both professionally and in terms of the social good, while at the same time serving your own clients' enlightened self interest.

What better way to minimize governmental intrusion, what better way to enable reasonable men to settle their differences privately between themselves without governmental intercession, than to lay hold of these problems and thus avoid the "Shalt Nots" being superimposed by an exasperated or wrathful Government.

Captive Nations Week

EXTENSION OF REMARKS

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. WYDLER. Mr. Speaker, the right of self-determination and independence for all peoples is a principle firmly engraved in the American character; and it is in pursuit of these principles that the United States has guided her actions. Yet to more than 25 nations in the modern world, these principles of freedom and justice mean only memories and hope. These are the captive nations of Eastern Europe, Asia, and the Caribbean.

It is in sympathy with the unfulfilled aspirations of these gallant people that the President recently designated the week beginning July 17, 1966, as Captive Nations Week. The eighth annual response to a unanimous resolution of the 86th Congress, Captive Nations Week is dedicated to the exhibition of U.S. determination that the status quo of Communist domination should not be recognized as a permanent situation. appropriately centered on those nations engulfed by communism. strengthening the weapons of truth and fact throughout the United States, the ceremonies and activities of Captive Nations Week will thus contribute to overall American support of the gallant cause of freedom.

Many have recently pointed out the socalled process of "liberalization" that seems to be taking place in a number of Communist satellites; and being a realistic observer of world politics, one must be aware of certain movements in this direction.

However, though he may see some brief hints of progress, an astute observer will, beyond doubt, recognize that these people are not free, nor are they even close to true possession of the freedom with which we of this country are blessed. Witness the Berlin wall: witness the recent rise of religious tension in Poland: witness numerous other instances of totalitarian suppression of ideas and action. Communist oppression has sought, without success, to destroy the existence of national identity in these nations; and the all too gradual improvements have brought virtually no change in the actual status of personal liberty and national independence.

Therefore, in observing Captive Nations Week, we must recognize the plight of these people and pledge our support in their aspiration and struggle. Recognizing their undying spirit, we should extend our sympathy at all times and our aid to the people where it may be practicable in order to negate the unjust denial of their inalienable rights.

President Johnson, in his proclamation of July 8, 1966, has invited the people of the United States of America to observe Captive Nations Week with appropriate ceremonies and activities and has urged them "to give renewed devotion to the just aspirations of all people for national independence and human liberty." In addition, it should be our duty and responsibility to put forth every effort enabling the family of captive nations to receive the opportunity to reenter the family of free nations; they should not be thwarted by lack of support and encouragement in their quest for renewed membership in this privileged

And, of course, Mr. Speaker, this goes for the people of Russia as well, for those enslaved by communism in the Soviet Union will someday be freemen as they attain their inalienable rights.

Money

EXTENSION OF REMARKS

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. BROCK. Mr. Speaker, the continued increase in the cost of living is apparent to the housewife who does the family marketing, the parents who send their children to college, the homebuyer who tries to find a reasonable mortgage, and in fact every American who has to balance his personal budget to purchase the necessities of life. Inflation is not a step around tomorrow's corner, it is walking beside us today.

The demand for money, and its cost as defined by the interest rate, is at a new high—a level not reached in 37 years. Commercial banks have resorted to one of their major tools in combating inflation—an interest rate rise, from 5½ to 5¾ percent. The purpose is to put a brake on spending and an incentive on savings.

The result of this action affects nearly every segment of the economy, especially the important housing and automobile industry which depends on the availability of money and cost of borrowing for sales.

The tragic fact of this situation is that higher interest rates can be laid squarely on the doorstep of the Johnson administration because huge Federal Government spending is a direct cause of the higher cost of borrowing money.

Mr. Speaker, under unanimous consent I include an article on "Money" from the July 8 issue of Time magazine in the Appendix of the Record:

MONEY: A CLASH OF INTEREST

The cost of money—the most influential cost in the U.S. economy—soared last week to a peak not seen since 1929.

Led by Chemical Bank New York Trust Co., the nation's fifth largest, commercial banks from coast to coast boosted their prime rate—the minimum interest charged for loans to their biggest customers—from 5½ % to 5½ %. With unsual speed, major banks in such money centers as New York, Chicago, San Francisco, Boston, Atlanta and Houston fell in line with the increase, which was the third since last December. At that time, banks lifted their prime rate from 4½ % to 5%; in March they upped it again to 5½ %. Taken together, the rises amount to the swiftest jump in borrowing rates in a generation

ON THE ESCALATOR

Because other loan rates are scaled upward from the prime rate, the increase means that the already high cost of borrowing money for everything from autos to homes, from financing business inventories to major industrial expansion will also escalate to new altitudes. While these effects will ripple through the economy slowly—depressing housing starts further and perhaps hurting auto and appliance sales—Wall Street reacted swiftly. Already jittery over Viet Nam, the U.S. balance-of-payments deficit and the cloudy prospects of higher taxes, the stock market staggered through its worst

week in seven. The Dow-Jones Industrial average of 30 key stocks sank briefly during one day's trading to 859—below the 864 bottom of its spring decline—and even after a rally closed the week with a 20-point loss, as 877.

Raising interest rates is the bankers' way of fighting infiation by rationing funds, the supply of which has been increasing rapidly this year—but not nearly so fast as the demand for money in the exuberant economy. Accordingly, the increase surprised neither bankers, brokers nor Washington. The prime-rate hike caused speculation that the Federal Reserve Board would any day now increase its 4½ % discount rate—the amount it charges member banks for borrowing funds. Yet if the board acts, it seems likely to disrupt further the delicate competitive balance between the nation's financial institutions.

That disruption showed clearly last week in the increasingly wild rate war for savings deposits between commercial banks, savings banks, and savings and loan associations. In New York City, about a quarter of the mutual savings banks boosted their rates from 4½% to 5%. Even so, many reported "heavy" withdrawals by savers attracted to "heavy" withdrawals by save--money left to earn interest for a stated time-at commercial banks. In California, at least 40 nzsociations followed the controversial lead of Los Angeles-based Home Savings & Loan in raising rates on passbook accounts from 5% to 51/4 %, and on longer, 36-month accounts, to 53/4 %. That move semed more successful; Home experienced a \$2.600,000 savings gain in one day. But it brought angry criticism from other S & L men who cannot afford to match the increase.

A LAUGH AT DISTRESS

Responding to industry and congressional pressures to cool the fight, the Federal Reserve last week took a small step to make it unprofitable for commercial banks to pay high rates for certificates of deposit; it raised the reserves that banks must stash away against large time deposits from 4% to 5%. That only infurlated the board's critics. "An invisible crumb from the rich man's table," fumed Chairman Weight Patman of the House Banking Committee, "a horselaugh at people in distress."

Chairman John Horne of the Federal Home Loan Bank Board seemed to feel the same Calling the Reserve Board's action "minimal," he demanded among other things that action be taken to "reduce the widespread availabiltiy of certificates of deposit." With that, the HLBB handed S & Ls more power to fight back. Abandoning its only restraining weapon over S & L interest rates, the board suspended a policy cutting off S & Ls paying more than 4½% in most states (and 5% in California and Nevada) on passbook accounts from borrowing privilat the twelve Federal Home Loan Banks. "We were simply fighting windmills," ex-plained Horne. "Rather than penalize the plained Horne. good people who were holding the line on rates, we decided to discontinue a policy that was no longer effective."

Behind all the squabbling stands the awkward fact that a rapid rise in interest rates the classic but imperfect monetary weapon against inflation—hurts some segments of the economy (such as savings institutions and housing) but leaves others (such as banks and industry) relatively unscathed. Partly for this reason, there are limits to how much credit can be tightened without so dislocating the economy as to threaten a recession. If Washington reduced its massive domestic spending on top of the cost of Viet Nam, banks and the Federal Reserve could pursue a gentler course. In the Shadow of a Mighty Oak

EXTENSION OF REMARKS

HON. SAM GIBBONS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. GIBBONS. Mr. Speaker, during the week of June 19 through 25, Sertoma International held its 54th annual convention here in Washington. I was very proud to have met the recipient of this outstanding service organization's 1966 Service to Mankind Award, Glenn M. Young. Mr. Young is one of my constituents from Hillsborough County, Fla., and I know all of us in the 10th Congressional District are extremely proud of this man and his record of over 40 years of service to the young people of this country.

Glenn Young lived in Duluth. Minn... from 1923 until his retirement to Florida in 1955. In those years, he served the Boy Scouts of Duluth in an extraordinary manner. Following his retirement in Tampa in 1955, he became active in Scouting in our State. He has founded no less than 44 Boy Scout troops since that time, and his immediate goal is 50 troops. He is personally responsible for opening the world of Scouting to more than 1,000 Tampa area youngsters, not to mention the more than 100 adult leaders he has recruited and trained for service. He has been and continues today to be a living inspiration to the youth of our Hillsborough County area.

In the June-July edition of the Sertoman, the national publication of Sertoma International, there is an interesting story of Glenn Young and his work in the service of mankind. In the words of the Dale Mabry Chapter of Sertoma in Tampa, which nominated him for this outstanding award, "we now sit for a moment in the shadow of a might oak—Mr. Glenn M. Young." I insert the article about Mr. Young appearing in the Sertoman in the Record at this point.

IN THE SHADOW OF A MIGHTY OAK: SERTOMA

IN THE SHADOW OF A MIGHTY OAK: SERTOMA INTERNATIONAL PRESENTS 1966 SERVICE TO MANKIND AWARD TO GLENN M. YOUNG

"The Oak is a mighty tree. Its roots reach deep into the soil and give it a timeless quality. We are humbled by its quiet and enduring strength... we now sit for a moment in the shadow of a mighty Oak... Mr. Glenn M. Young..."

These were words used in presenting the Service to Mankind Award by the Dale Mabry Sertoma Club to its recipient for his many years of community service in scouting and first ald instruction. He, in turn, became the district and then the International award winner.

The first roots of Glenn Young's service reaches out more than 42 years. He was born in Coldwater, Ohio, and spent 37 years with the American Steel and Wire Company. His long career of voluntary service began when the U.S. Bureau of Mines initiated inplant first aid emergency training in 1923. Glenn was selected by his plant to receive this training.

C t

d

n

ge

In 1929, a camping trip brought forth the second and strongest root of his service. Glenn was married to a wonderfully patient woman and it was only natural that she encouraged him to heed the pleadings of their eldest son—a Boy Scout—to accompany him on an overnight hike. This was Glenn's introduction to Scouting. A few months later he became a Scout Committeeman and from that time—1930—until his retirement on February 1, 1955, he served Scouting in the Duluth, Minnesota, area in every conceivable "volunteer" position: Committeeman, First Aid Instructor and Merit Badge Counsellor for Boy Scouts, Girl Scouts and Cub Scouts, a Scoutmaster and an active member of the Duluth area Scouting Extension Committee.

So from 1923 to 1955, Glenn Young served well the youth of Duluth. He used his skills at emergency treatment many times in those 32 years to save life or to give comfort to industrial accident victims. He passed his knowledge of emergency treatment along to all who would accept it, whether adult or youth. For his faithful services to Scouting, he was awarded the Silver Beaver, the highest honor bestowed by the Boy Scouts of

But it was not in recognition of those years in Duluth that he was chosen as the Dale Mabry Sertoma Club's Service to Mankind Award winner. For when he "retired" and moved to Tampa he presented himself to Boy Scout officials there and, armed with letters of recommendation, he immediately began forming new contacts and locating areas where youngsters were in need of scout troops.

His legend is virtually unknown even to those whom he has served, for that is the kind of man this Glenn Young is. Each Scout unit sponsor—church, school, or neighborhood—is for the most part unaware that his efforts on their behalf are repeated over and over again on behalf of other units in other parts of the city.

Glenn's method of operation is simple and consistent. He locates an area of need, and then chooses a likely sponsor—preferably a church because reverence toward God and the creatures of God, as nature, go with Scouting. Before anyone knows "how," Glenn has rounded up the 25-35 boys; sold the institution on sponsorship; recruited and trained scoutmasters and committeemen; has a functioning, successful scout troop where shortly before there was none; and he has quietly faded out of the picture.

Since "retiring" in 1955, Glenn has performed this miracle 44 times, single-handedly. His immediate goal is 50 scout troops even though he already is personally responsible for opening the wide world of Scouting to more than 1,000 Tampa youngsters, not to mention the more than 1,00 adult leaders he has recruited and trained for service. Officials are helpless in the accounting of his services in man-hours each year. They are certain it exceeds 500 to 600 hours, but simply can't keep up with him.

In addition to organizational work, he teaches first aid to Scouts; serves as a first aid merit badge counselor and each year operates the emergency field aid tent for the Scouts' Camporee "treating all the things that happen to boys at summer camp."

In 1955 Glenn took a refresher first aid course and since that time he is credited with having taught 54 organized first aid classes. Each class requires 10 to 16 hours time. The more than 1,000 students of these classes do not include 50 public school bus drivers who must be properly certified to render emergency aid. Red Cross officials—like the Scouters—simply don't know how much time Glenn gives in teaching or "applying" first aid on behalf of the Red Cross.

n

Ask Glenn Young about the most unforgettable incident in his life and his mind leaps back to a dreary depression day in Duluth. There were two boys talking fur-

tively, but Glenn's presence went unnoticed by either. They were plotting the robbery of a street car conductor. Both were Boy Scouts. Glenn's heart was saddened and he knew he had to take a chance on telling them that he knew of their plan. Fortunately, he succeeded in talking them out of the crime and back on the straight and narrow. He is grateful that he was able to see both boys grow up to become fine, productive men. Each has made many opportunities to let Glenn know how much his act has come to mean to them.

In this 4me when it is so easy to depend on "government," Glenn is teaching our youth to be self reliant; to "be prepared" to meet and solve life's challenges, each with his own initiative. Glenn Young is concerned and doing something for the young people of his community. He is quietly going about teaching youngsters to develop creative skills and, above all, encouraging them to honor their God and their country before all else.

Glenn has more than enough reasons to say, "I've done my share, now I'm entitled to a little more time for fishing and sunning." But he says without a trace of regret that he hasn't had time for fishing since he got his "Work" in Tampa organized.

Mr. Young's family includes two saus and two daughters of his own whose molding he shared with his wife. All four are steadfastly tracing their parent's steps in voluntary service to Red Cross and Scouting; there are 17 grandchildren and two great grandchildren who can be lavished with time and attention.

In presenting the award to Mr. Young, it was stated, Our Sertoma freedom program is one of the best tools we have to promote in every way the freedom of individuals and the maintenance of the principles of free enterprise; to encourage good citizenship. But we can't succeed without the Glenn Youngs who never stop caring; whose example keeps alive the spark of individuality; whose inspiration goads us to dedicate ourselves to the protection of our country rather than government protection of us.

We, as Sertomans everywhere, have the privilege of projecting our names into eternity on the strength of his courage and the quality of Glenn Young's service to his fellowman. He Serves Mankind.

Washington National Airport and the FAA

EXTENSION OF REMARKS

HON. WILLIAM T. CAHILL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. CAHILL. Mr. Speaker, on several occasions in the past month, I have brought to the attention of the House, and to the Federal Aviation Agency, the serious problems confronting the traveling public at Washington National Airport.

I have pointed out in my statements to the House, the tremendous increase in traffic at Washington National and the physical impossibility to accommodate the number of flights in and out of this airport. I have also suggested that stricter regulations by FAA be initiated and that other airports, particularly Dulles, be utilized for long-haul flights.

I was therefore pleased to note that the FAA, on July 1, 1966, announced the

adoption of a new policy effective August 7, 1966, which should greatly improve conditions at Washington National.

Under the new regulations, it is anticipated that long-haul flights will be drastically curtailed at Washington National, that the number of scheduled air taxi and general aviation flights will be equitably controlled along with commercial air carrier flights to secure maximum safety and prompt scheduling at Washington National.

While the changes suggested may not correct all of the problems, I believe this is a step in the right direction, and I commend the FAA administration and its Administrator, Gen. William F. Mc-Kee for this effort to improve service and to end congestion at Washington National Airport.

I anticipate that various organizations will be critical of this effort, but in my judgment it will make flying safer and certainly more comfortable and reliable for the traveling public.

I do believe, however, that the FAA should continue its efforts toward the solution of this and other problems confronting aviation in the Washington area. Certainly Bolling Field and other airports in this general area should be examined and, if possible, utilized to make the city of Washington conveniently accessible to general aviation traffic as well as scheduled commercial flights.

For some time many have been urging the utilization of the Bolling-Anacostia facility for nonscheduled air traffic. It makes good sense to me, and I hope along with the regulations recently announced, further study and early action will result in even better service and safer air transportation for the citizens of this country.

Our Goal Is Clear

EXTENSION OF REMARKS

HON, ROBERT B. DUNCAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. DUNCAN of Oregon. Mr. Speaker, President Johnson has made our goal in Vletnam crystal clear.

We seek an honorable peace that will assure the independence of South Vietnam.

In his speeches at Omaha and Des Moines and in his news conference last Tuesday, the President distinctly restated our objectives for any who had failed previously to grasp them.

Many newspapers have commented on the President's unambiguous statements and have declared the vast majority of Americans stands firmly behind him. They express hope that Hanol soon reaches the only logical conclusion that we are not divided, that we do back the President—and accepts our standing offer to sit down at the peace table.

A great moral issue is involved in Viet-

Can free men merely look on as Communist aggressors take over a nation by force and exterminate or enslave its people?

The President has left no doubt of our response

This is a matter widely discussed in the press. I offer for the RECORD editorials from the following newspapers on this subject and other aspects of our position in Vietnam:

The Philadelphia Inquirer, Houston Chronicle, Washington Evening Star, Arizona Republic, Portland Oregonian, Christian Science Monitor, and Houston Post.

I also offer an article by Richard Wilson, the syndicated columnist. [From the Philadelphia Inquirer, July 2,

19661

THE GOAL OF PEACE IN VIETNAM

If Hanot's leaders "will only let me know when and where they would like to ask us directly what can be done to bring peace to South Vietnam, I will have my closest and most trusted associates at that time and at that place in a matter of hours."

This is the President of the United States speaking and, if there ever was a clear, direct appeal for peace negotiations from one party to another, it is here.

How can anyone assert fairly that the U.S. is to blame for the continuance, and the epping up, of hostilities, and for failing to take positive steps toward negotiation, in face of President Johnson's declarations in Des

Yet we find his critics, in and out of the U.S. Senate, and in and out of this country, harping still on their favorite theme that, if it were not for the Johnson Administration's stubborn policy of aggression, the war in Vietnam would be ended.

Has it ever occurred for even a fleeting second to these people that it is Hanoi, and not the U.S., that has prevented peace talks?
Why are some Americans so quick to find their own countrymen the villains in the conflict, and to exculpate their country's

The U.S. has been searching for ways and means to bring the Communists to the con-ference table for many months. It has been rebuffed in its every attempt, right up to now

Our persistence in seeking negotiations has been seized upon as evidence by the Communists that we are weakening in our resolu-tion to continue the war. Their miscalculations in this direction have been reinforced by the peace demonstrations in America and by the loud criticism of the President's policy in Congress.

It has been necessary to prove to Hanol and the Vietcong that we are not folding up; that we are as determined as ever to uphold our commitments and to resist Red aggres-The bombings in North Vietnam are a part of that necessary strategy, although one might think, from the outraged comments in some quarters, that the U.S. has performed an act of brutal treachery against a peaceable and defenseless people.

The U.S. has shown that it wants peace. The Communists won't want peace until they can be shown that they can't win militarily

[From the Houston Chronicle, July 2, 1966] LET THERE BE NO DOUBT

President Johnson's Omaha address was an earnest, eloquent effort to explain the moral justification for the U.S. presence in Viet Nam. He obviously was appealing for un-derstanding and support from critics, both at home and abroad, who oppose U.S. pollcy. The timing of his speech was significant, also, since it came just after U.S. planes

launched intensive attacks on oil storage facilities on the outskirts of Hanoi and

Mr. Johnson correctly pointed out that the Communists hope we are losing heart. They are banking on us to bog down in disagreement, doubt and confusion. But they are wrong, the President said.

The President met head-on the frequently heard contention that the war in Viet Nam is essentially an internal conflict.

"Let these be no doubt about it," he said. "Those who say this is merely a Vietnamese 'civil war' are wrong." The Hanoi government started the warfare in 1959 and has increasingly supported the flow of men and arms into the south. The Communist cam-paign is directed and led by a skilled pro-fessional staff in North Viet Nam, he said, and only a small minority of the population of South Viet Nam supports it.

The sincerity and the earnestness of the President shows through the phrases of his speech. He talked of South Viet Nam's right to decide its own destiny, of the importance of the fight for the rest of free Asia, of the necessity for proving to the Communists that they cannot win with the new type of aggression-internal subversion and guerrilla war-

The United States, Mr. Johnson said, seeks nothing in Viet Nam but an honorable peace. We seek nothing in or from Red China. But so long as Hanoi refuses to end its aggression, "we will carry on. No one knows how long it will take. But I can and do here and now tell you this: The aggression will not succeed. The people of South Viet Nam will be given the chance to work out their own destiny . . .

It was a message which stems, we suspect, from the agony of presidential decision-making. But Mr. Johnson's determination is clear. The United States will do what it has to do. We can only hope that the rulers in North Viet Nam understand this message and act on it before further escalation of this unfortunate war is necessary.

[From the Washington (D.C.) Evening Star, July 6, 1966]

ESCALATION PRESSURES

A few days ago Pennsylvania's Governor Scranton said he approved the President's action in authorizing the bombing of fuel dumps in the Hanoi-Halphong area, but that it would have been more efficient militarily and less contentious diplomatically if it had been done earlier.

The governor may be right, although we don't recall any earlier demand from him for these bombing attacks. Still, the point is arguable—and this it more than can be said for some of the other comments which have attended this escalation of the war. One of these is a statement by an unidentified senior naval officer that he would like to bomb Ho Chi Minh's headquarters at Hanoi. There doubtless are other military commanders who would like to do this sort of thing, and it is the best argument we think of for leaving the decisions on further escalation where they belong-with the President.

Since the first bombs fell in the north some 17 months ago, Mr. Johnson has moved slowly, cautiously and reluctantly to step up the raids. His objective has been to curb infiltration of South Viet Nam by blowing up bridges, railroads, highways and the like—all the while trying to induce the enemy to come to the conference table. When these hopes were disappointed he moved on to the bombing of oil depots, a necessary but still limited measure in support of the troops fighting the battle in the south.

The President has clearly indicated that other military targets will be destroyed if necessary, and this is right. But these deci-sions, as with the earlier ones, should be made carefully and with deliberation. Other

factors than those of a purely military nature must be taken into account. For example, there has been a clamor for mining the port of Haiphong, and this may yet have to be done. But the risks involved in the possible sinking of ships of other nations such as the Soviet Union are obvious enough

Mr. Johnson spoke hopefully yesterday of diplomatic reports which indicate that the Communists no longer expect a military victory in Viet Nam. Even if this is true, however, it does not necessarily follow that the end is in sight.

Other reports say that North Viet Nam is evacuating from Hanoi all civilians whose presence is not essential to their war effort. Some 500,000 people have been sent out since the bombings began, and more now are to he moved

This suggests that Ho Chi Minh is digging in for a long wir. If so, more decisions, perhaps drastic decisions, may have to be made. But the President should not be pressured into any abondonment of the cautious resolution that has characterized his handling of the problem thus far.

[From the Arizona Republic, July 3, 1966] THE GOAL IS THE SAME

President Johnson did not lightly reach the decision to bomb Communist oil installations near Hanol and Haiphong. Getting so close to the enemy's population centers was bound to raise considerable opposition, both here and abroad. But the President realizes, if others don't, that in war there is no substitute for victory. He obviously means to win the Vietnam War, and we think the decision is wise.

As for escalation, the American bombing decision was made in response to the Communist decision to send regular Victoria army detachments into South Vietnam. These are not guerrillas, carrying their supplies on their backs down jungle trails. are well-trained troops, equipped with sophisticated weapons, and moving on trucks that are powered with gasoline. Bombing the highways and bridges has not proved capable of stopping the trucks. But they can't move without gasoline, and Wednes-day's radie were aimed at 60 per cent of the North Vietnamese petroleum supply dumps.

It used to be said that the United States could not possibly cope with the guerrillas in South Vietnam. It is now apparent that we have done so. In fact, we have been so effective that North Vietnam has sent in regular army units operating with full equipment. Clashes approaching the division level have occurred. Here, too, the U.S. forces have shown their ability to prevail on the field of battle. But enemy supply lines can now best be cut by denying the enemy oil, and that's exactly what the U.S. is doing.

In Secretary McNamara's words, the war has been escalated from guerrilla action to "a and some excented from guerrina action to a quasi-conventional military action." The shift was initiated by the North Vietnamese. The United States has responded. But our alms in this war remain the same, to force North Vietnam to stop its aggression against South Vietnam.

As President Johnson put it in his Des Moines address Thursday, "As long as they persist in their aggression against South Vietnam, we will resist aggression. As long they carry on, we will persevere. cannot wear us down and they cannot escape paying a very high price for their aggression."

Despite some opposition to his Vietnam policy, President Johnson has the mass of the American people behind him. For most Americans realize that the issue here is more than keeping a pledge to South Vietnam, important as that may be. The real ques-tion is whether communism can take over an independent country by force, while the free

world stands by impotent to stop it.

Those who want the U.S. to get out of Vietnam should remember that communism has been set back on its heels more than once in Asia. It was stopped cold when the Hukbalahap movement was beaten in the Philippines; it was defeated in Malaya; it has been routed in Indonesia. A defeat of communism in South Vietnam now would permit the peaceful development of Southeast Asia. And that's exactly what President Johnson is aiming at.

[From the Portland Oregonian, July 2, 1966] UNTENABLE WAR VIEWS

The difference of opinion on the Viet Nam war between Rep. ROBERT B. DUNCAN, Democrat, and Gov. Mark O. Hatfield, Republican, Oregon's nominees for the U.S. Senate, is clearly defined in their responses to the bombing of heretofore immune oil depots in Hanoi and Haiphong.

in Hanoi and Haiphong.

Rep. Duncan held the bombings to be "essential to the continued success of our defense of South Viet Nam." He said he would have "long ago selected these installations for pin-point bombing."

After a one-day delay for consideration, Gov. Hatfield deplored the bombling escalation as taking us "closer to confrontation with Red China and the Soviet Union." He saw this action as sinking "deeper and deeper into the quicksand of an Asian land war against which we have been warned by military experts for decades."

This and other statements on the Viet Nam war by Gov. Hatfield are wholly unacceptable to the editors of this newspaper, who recognize the sincerity of the governor's

He and other critics of U.S. policy in Southeast Asia who now cry out against bombing certain previously exempt military objectives in North Viet Nam have also condemned bombing of enemy concentrations in South Viet Nam, the nation under attack from Communist forces. There position is that the United States should "deescalate" rather than escalate its military actions. Essentially, their views are in harmony with those of the earlier advocates of the "enclave" theory. Their idea is that by withdrawing from the battlefield the United States would somehow influence the Viet Cong and the North Vietnamese to sue for peace.

When President Johnson listened to this kind of advice and suspended the then very limited bombing of military movements and supply bases in North Viet Nam for 37 days, the reaction of the enemy was anything but conciliatory. The cost in American lives may not be measured exactly. But North Viet Nam used the suspension to send more thousands of regular troops into South Viet Nam, to step up the infiltration of heavy weapons, and to gather strength for bloodier assaults on U.S.-South Vietnamese positions.

We do not know on what logic Gov. Hatfield bases his idea that depriving the North Vietnamese of their "privileged sanctuaries" of military power brings us nearer to war with Red China and the Soviet Union, or deeper into the quicksand of an Asian land war." From a military standpoint, the greater use of air power against the aggressor would seem to relieve the enemy's pressure on U.S. and allied toops in South Viet Nam. There is no intimation from Moscow or Peking that they consider the Hanoi and Haiphong bombings in a different category than the more limited bombings which preceded them. There is no reason to think that the United States has committed itself at any time to fight a massive land war in Asia, beyond the commitment of defending South Viet Nam from Communist aggression.

The idea that the war can be stopped by refising to fight it has been refuted at every stage of the long, careful escalation of U.S. effort. We see no justification for the critics' insistence that South Viet Nam cannot be freed from Communist aggression, nor for their protests against every military action designed to accomplish that. We do not think the price will be too high to stop Communist conquest. We do think that liberation of South Viet Nam is the most important objective of the free world since the Communist invasion of South Korea was hurled back, primarily by U.S. military power, in the 1550s.

We wish Gov. Hatfield and other critics would face the reality of Communist aggression rather than wring their hands over the bloodshed it is causing. What they are advocating, in that final phase they do not wish to discuss, is U.S. withdrawal. If they have gone all the way back to the isolationist doctrine of a "Fortress America," they ought to say so.

[From the Christian Science Monitor, July 5, 1966]

THE PRESIDENT'S STRONG WORDS

President Johnson has strongly reemphasized that neither Communist resistance on the battlefield nor divided counsels at home will deter Washington pressing the Vietnamese war with increasing vigor and strength. It is thus clear that limited but nonetheless clear escalation of the war can be looked for by the Communists, the American people and the rist of the world. It is the President's strongly reiterated thesis that—

Only thus can enough pressure eventually be brought upon the Communists to convince them both that the war cannot be won and that the continuing struggle is not worth the increasingly heavy price they will have to pay.

America's pledges and the necessity of halting aggression, terrorism, and the threat to regional independence make it obligatory for the United States to push its efforts to the point where peace negotiations are hegun.

No one can know at this stage just how far such escalation will go. Clearly, Washington hopes that the apparently effective air strikes against North Vietnamese oil dumps will have both a mental and military effect upon Hanol. If they do not, the President's words indicate that further steps will follow.

We hope with the President that this latest evidence of America's determination and its military potential will convince the North Victnamese and the Viet Cong that they can no longer expect a military victory. Although we have long hoped that raids so close to Hanol and Halphong could be avoided, it is obvious that the oil dumps near these cities are military targets of considerable importance.

We, too, wish that it were possible to convince the Communists of both the fruitlessness and the evil of seeking to thrust their rule upon the South Vietnamese through war, assasination and terror. In fact, we wish that the vigor of the President's speech would signal to Hanol that divisions and discussions at home indicate no weakening in America's determination and that the Communists will never be able to get better peace terms than they could get today. At the same time there is no legitimate reason for the President to imply, as he seemed to do, that his critics lack patriotism, courage, or wisdom.

This newspaper reiterates its oft-given conviction that each step in escalation be carefully and prayerfully weighed before being taken. We do not believe that this will inhibit such military moves as will help toward peace. Rather, we believe that it will ensure that such moves are tailored to the over-all military, diplomatic, and humanitarian requirements of the situation.

[From the Houston Post, July 3, 1986] TRUE MORAL ISSUE IN VIETNAM

Opponents of any American action to help the people of South Viet Nam keep their freedom reacted predictably to the bombing of a few oil storage tanks on the outskirts of Hanoi and Haiphong.

Their tender concern for petroleum storage facilities is ludicrous, of course, but at least they are consistent in opposing and denouncing anything that makes it harder for Communists to kill American and South Vietnamese fighting men.

One can respect them perhaps for their consistency but hardly for pretending that their opposition is based on morality, by which they fool nobody unless it is themselves.

Under the twisted reasoning that they use in trying to justify their positions, it is moral for Communists to try to take what they want by force, but it is immoral for anyone to oppose them.

It is moral for Communists to commit aggression and try to impose their brand of tyranny upon others, but it is immoral to defend freedom.

It is moral for Communists to practice murder, terrorism, assaustination and barbaric cruelty against civilians on a mass scale, but it is immoral if some noncombatants unavoidably are killed or wounded in the course of non-Communist defensive military operations.

It is moral for Communists to use every weapon, tactic or device available to them, but it is immoral for non-Communists to use the weapons they have against Communists.

It is moral for Communists to kill large numbers of unarmed civilians by exploding bombs in the streets of Seigon or elsewhere, but it is immoral to use napalm or B-52 bombers against Communist combatants.

It is moral for Communists to increase their military effort, but it is immoral for non-Communists to try to match or uffact that escalation.

It is moral for Communists to kill countless numbers of North Vietnamese in trying to impose their system upon the people of the North and to change the whole Vietnamese pattern of life, but it is immoral for at least half of the Vietnamese people to refuse to submit to this englayement.

And now, it is moral for Communists to import and use petroleum products for purposes of killing Americans and South Vietnamese, but it is immoral to try to keep them from doing so.

Much is made of the fact that the oil storage facilities bombed were near heavily populated areas. Their location is, of course, under the control of the North Vietnamese government. The choice is not that of the South Vietnamese or American governments. The Communists never have been deterred by the fact that a target was in a populated area, whether a city or a village.

Actually, the bombing of the oil tanks was a precision operation, with great effort being made to prevent civilian casualties. The targets were, in fact, somewhat isolated from thickly populated areas. And, if some civilians were in the areas where the bombs fell, it was not from lack of warning. Some Washington newsmen collaborated in seeing to that.

There is a moral issue in Viet Nam, a very more than the components of American action appear blind. It is whether or not other free people should stand aside and permit more than 15 million people who want no part, of Communism to be either exterminated or enslaved. That is the moral issue that has been involved in Viet Nam from the beginning of the Communist effort to take over South Viet Nam. Who then are the truly morally guilty?

It can be argued that the use of physical force in human relations always is immoral, under any circumstances, but it can be even more immoral not to defend the things to which one attaches great value against those who do use force.

RAIDS REFLECT HARDER ATTITUDE ON VIET GOALS

(By Richard Wilson)

Possibly of more significance than the expanded scope of the bombing is the hardening of attitudes at the highest levels here on the nature of a settlement of the war in Viet Nam.

If there was ever any concern that President Johnson would settle for something considerably less than the sacrifices justify, it is now dispelled. That is the inner meaning of the increased bombing and the renewed alertness for any sign that Ho Chi

Minh is ready to negotiate.

It was a hard decision requiring a finding that the only way to bring Ho Chi Minh to the bargaining table was to hurt him much more, on the order of two or three times the punishment inflicted on North Viet Nam in

the past.

Along with that finding went the determination that any settlement that resulted could not be permitted to be another Lactian fiasco in which the United States pulled out but the Communists remained. It was concluded that the only way to get a meaningful settlement was to drive the government of North Viet Nam to it, and make Ho Chi Minh want it.

These cruel decisions were not easily taken, and it is not known if they will produce the desired result, but if they do not it can be foreseen that the screw will be tightened

again.

The basic strategic measurement made at the highest level here is that China will not enter the war directly, even though both Chinese and Russian aid may be increased as the United States steps up the military pressure.

No illusions are entertained of quick results from the stepped up war. It is obvious that at this stage the United States is not planning to invade and subdue North Viet Nam, or destroy its government. Our military effort is still limited, but the limits are expanding and thus this is the factor relied on to convince Ho Chi Minh that he must negotiate without the preconditions he had so far outlined.

Johnson appears far more settled in his mind on the rightness of his course than earlier this year, when he was somewhat unsettled by the increasing public concern over the war and the internal disturbances.

The chief problem at present is continuing public support for the war. The President

The chief problem at present is continuing public support for the war. The President made it clear in his recent visit to the Midwest that he will not weaken in his determination. More than this, he will make the determining issue in the congressional campaign support or non-support of the United States in a dangerous war. When this is the issue there is usually little doubt of the outcome.

Some highly unrealistic illusions were indulged by Republican candidates for Congress who came here to attend a "candidates school" conducted by the Republican National Committee for the cetensible purpose of showing these candidates how to win. Some of them seemed quite out of touch with the trend of events here. They thought that the President would engineer a peace-at-any cost negotiation just prior to election day to influence the outcome. They reasoned that the President would take action a few days before the election so that voters would not really have a chance to determine if he was right or wrong but would be caught up in enthusiasm for peace at any price. This is about as remote from the actual

This is about as remote from the actual conditions existing as it is possible to get. While it might be conceivable that between now and November Ho Chi Minh would decide he would have had all he could take, it is not conceivable that Johnson would back

down and seek a truce on North Viet Nam's conditions.

The conditions to which he already agrees are as far as he is likely to go. These conditions permit Ho Chi Minh to stop fighting without risking the loss of his capital, his country or his head. This is about as generous a bargain as was ever offered an aggressor, and Ho Chi Minh is counted on to recognize it as such as the bombing and other coming attacks continue and increase.

Home Buying Bogged by Rising Interest Rates

EXTENSION OF REMARKS

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. BROCK. Mr. Speaker, home buyers are finding it increasingly difficult to find mortgage money they can afford. While the supply of money is bigger than ever, the demand for it is too, largely because of the economic boom, and also due to competition for funds in our burgeoning Federal establishment. The resulting tight money makes interest rates higher and downpayments larger.

Mr. Sam Dawson of the Associated Press recently wrote an article outlining the plight of the family attempting to purchase a home. Under unanimous consent, I include his column in the Ap-

pendix of the RECORD:

[From the Chattanooga (Tenn.) News-Free Press, July 8, 1966]

WITH MONEY TIGHT—HOME BUYING BOGGED BY RISING INTEREST RATE (By Sam Dawson)

New York.—John and his wife had made up their minds. They would take the \$30,000 house in the neighborhood where they thought their children would have a better chance. The down payment of \$3,000 had inally been scraped together. Monthly payments on the mortgage would be pretty high for them; but they thought they could swing it, just barely.

"Sorry," said the real estate agent. "You should have come back a month ago. Now, the only possible source for the money to finance the purchase is asking a down payment of \$6,000. And the interest on the mortgage has gone from 5.5 per cent to 6.5 per cent. Money's tight, you know."

John and his wife and the children are staying in the old neighborhood.

On the other side of the country, an aggressive junior executive was being moved to a new post. Joe was happy at the promotion. His family was reconciled to leaving their friends and the home his wife liked so much. A buyer had been lined up for it.

GOES BEYOND REACH

But just before the deed was to be signed, the would-be buyer backed out. He still liked the house. But to swing the deal for him, the lender of the mortgage money was now asking much more in down payment and carrying charges that would put the monthly payments beyond the stretching point of the prospect's income—even if the asking price for the house was shaved. The lender had explained it was hard to find any money, even costiler money, for the deal—and the going interest rates for everything were up, way up.

Much the same thing is reported here and there by professional builders. The financial institutions that carry them while they build and hunt for home buyers are hard to deal with just now. Banks and savings and loan associations say they're short of funds to lend. They also are fearful that home buyers able to handle the costiler mortgages may prove few and far between.

Tight money is coming as a shock to many folk because the money supply actually is bigger than ever before. But there's a booming demand for credit to run a booming economy. Businessmen are competing for loans. Government agencies and private corporations are selling securities—and competing for any available money. Homes are still being sold, and still being sold, and still being sold, and still being

Homes are still being sold, and still being built. But financial institutions that traditionally lend the money for the purchase of homes are finding it harder to get more deposits, because people with idle money can get higher returns by depositing elsewhere, or buying securities.

EXCEEDS 6 PERCENT MARK

The Federal Home Loan Bank Board reports that in May the average interest rate on conventional home mortgage loans in this country rose to 6.02 per cent, compared with 5.77 per cent a year ago. But in many areas the rate was well above the average. In the Ban Francisco-Oakland area the average was 8.49 per cent, in Atlanta 6.41 per cent, in Denver 6.40 per cent. The lowest in the country was the Boston area at 5.55 per cent.

The average term of maturity for mortgages was above 24 years, with a range of around 23 years in Boston and Philadelphia, to 29 years in New York. The average purchase price for new homes rose to \$25,500 from \$24,700 a year ago, with the highest being the Boston area at \$34,500 and the lowset in Baltimore at \$21,600.

The higher interest, bigger down payments, difficulty of finding money available to finance the mortgage have cut off some would-be home buyers here and there. Others may be finding it harder to buy a house because all their bills seem to be going higher, and

all their bills seem to be going higher, and their taxes, and demands on their incomes. Getting a mortgage seems a lot tougher in some places where it once seemed easy. Meeting the monthly payments is tougher, too, for a lot of folk. They could still get a mortgage—if they could meet the price.

Malawi: Independence Anniversary

EXTENSION OF REMARKS

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. POWELL. Mr. Speaker, on July 6, while this body was in recess, the nation of Malawi observed the second anniversary of its independence and proclaimed itself a republic within the British Commonwealth. It is with extreme pleasure that I take this opportunity to extend warmest greetings to His Excellency Kamuzu Banda, first President of the Republic of Malawi; to His Excellency Vincent H. B. Gondwe, Malawi's Ambassador to the United States; and to all the people of Malawi.

Malawi, formerly known as Nyasaland, was years ago an important base of operations for the slave trade. The territory was relatively unknown until men such as the explorer-missionary David Livingstone ventured there in the latter half of the 19th century. Livingstone was a foe of the slave trade and his explorations led to the establishment of missions by the Church of Scotland and the Free Church of Scotland in 1874-75 to carry on his work. In 1878, the African Lakes Co. was formed by Scottish businessmen to supply the missions and to combat slave trading through the establishment of commercial alternatives.

The task of eliminating the remaining slave trading groups fell to the British Government, which annexed the terri-The British Protectorate tory in 1891. of Nyasaland continued until 1953, when it was joined with Southern Rhodesia and Northern Rhodesia in the Central African Federation. However, Nyasaland preferred an independent future and the Federation dissolved.

A smooth transition from colonial rule to responsible African government con-tinued, and Nyasaland became an independent member of the British Com-

monwealth on July 6, 1964.

Rich in natural splendor, Malawi has been described as one of the most beautiful countries in Africa. Her striking mountain scenery and Lake Nyasa, third largest in all of Africa, make Malawi a highly attractive country for the development of tourism

Malawi's agriculturally based economy is similar to those of many of the newly independent African States. She de-pends upon agriculture for the main source of her export earnings. country is endowed with good land and imaginative management has resulted in increased production. A major effort in this direction is the young pioneer program which teaches young Malawians new agricultural methods. Other projare a \$1 million sugar factory, a textile mill, housing construction, and a transistor radio plant. A \$9 million hydroelectric facility will provide enough power for any planned expansion through 1975.

I am sure that you will agree with me that the above facts indicate that Malawi is using its independence with skill and imagination. There are problems to be overcome, it is true, but the courage and determination demonstrated by the people of Malawi can lead one to conclude that they will overcome. I congratulate them on a job well done and urge them to continue in the tradition of unselfishness and achievement as the Republic of Malawi marches forward under a banner

of cooperation and progress.

South African Justice

EXTENSION OF REMARKS OF

HON. CHARLES C. DIGGS. JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. DIGGS. Mr. Speaker, I would like to call to the attention of the Congress the following article entitled South African Justice" from the May 20. 1966, issue of New Statesman. It de-

scribes the steady expansion of apartheid barbarities and how such barbarities have finally and completely subverted any administration of justice in political trials in South African lower courts. As one who spent the Saturday and Sunday of June 24 and 25 in Mississippi as one of 20.000 participants in the march to the State capitol in Jackson, I cannot overlook the moral obligation to call again to notice the devastating sameness of details and of the issues of political justice—voting participation and court justice—behind the Mississippi demonstration and in the prevailing conditions in South Africa.

It was not a new declaration, that which President Johnson said on the recent anniversary of the Organization of African Unity. Despite the conflicting history of its relations with black people of this Nation, America's advocation has been from inception that "human rights will not be restricted in this country nor supported in our policies abroad." This indefensible and nationally humiliating gap between our pronouncements and our deeds must be, now, finally and completely closed. We can ignore, but history moves to relentlessly repeat its truth that freedom and justice prevails for all or survives for none. We must in this Congress take the step which is open to us to lift continuing restrictions on human rights in this country through the civil rights legislation we have pending this body. As concerns our relations with other nations, we must demonstrate the credibility of our pronouncements affirming human rights by ending our promotion and fostering of special interests in other lands which in fact give support to the denial of human rights.

The article follows:

SOUTH AFRICAN JUSTICE

(By James Fairbairn)

It used to be said that, however unjust white South Africa's laws were, the courts would provide a fair trial. Even with 'passconvictions being churned out rate of one every three minutes, this was once at least partly true of serious—i.e. political—trials. It is true no longer, at least in the lower courts, as is shown by Christian Action's booklet The Purge of the Eastern Cape (1s. 6d. from 2 Amen Court, EC4).

Hundreds of former members of Chief Luthuli's banned African National Congress of Chief and of the rival PAC are being systematically and brutally seized by Verwoerd's security police in the Eastern Cape, traditionally an area of African struggle and militancy, and held indefinitely without charge. crack under the strain of prolonged interro gation, which often includes assaults and sometimes physical as well as mental tor-ture, and agree to give the kind of evidence required, they become state witnes Those who somehow hold out become the accused.

The conservative Johannesburg Star has aptly spoken of the 'practice of arresting in haste and collecting evidence at leisure'. Frequently the charges relate to actions allegedly committed three or four years ago, making it almost impossible to prove an alibi, yet state witnesses unable to recollect events four months old are drilled to give precise and detailed 'evidence' which, however absurd or even fantastic, they with a pathetic air of intense self-satisfaction. To listen to them is 'like hearing parrots come to court'. Asked to repeat earlier evidence about a meeting allegedly held three years ago, one African witness said: 'I

am trying to repeat it word perfect, so that there should be no argument'. He then reeled off a long list of names in the identical order given months before. Questioned the defence about this feat, he proudly replied 'Word perfect.' Word perfect.' transpired that he and two other state witnesses had been held in a cell with an African security policeman. The defence asked: 'And is he with you all the time?' Witness: 'All the time.' Defence: 'When he goes to the toilet he takes you with him?' Witness: No reply. Defence: 'No answer to that?' Witness: 'No, there is an answer.' Defence: Witness: Yes, there must be an answer. Each and every question has to have its answer.' With intense pride, he then suddenly voluntered information about the allegedly violent aims of the ANC, word for word as set out in the charge-sheet in the trial, which was accessible only to the court, the prosecution, the defence and the police.

This is typical of what goes on at the trials. Most are held in remote hamlets, trial dates are withheld until the last moment, the venue changed without warning, and the charge-sheets are conveniently cyclostyled with only names to be filled in to answer to vaguely drawn charges. The security police decide who may attend court and who may visit awaiting trial prisoners; they supervise or exclude the press, and they tell the prosecutors who is to be charged, who is to give evidence and how the cases are to be conducted. The resident magistrates usually refuse defence requests for further particulars and grant the inevitable prosecution request for state witnesses to appear in camera. The severity of the sentences has become frightening—as is intended.

Men already fined or imprisoned for an offence are recharged, years later, for the same offence. Thus the employees of the Bay Transport Company in Port Elizabeth were fined £7 10s. each in 1961 for having gone on strike, which is forbidden to Africans under any circumstances. Three and a half years later several were rearrested. It was then alleged that the strike had been organised by the ANC and, after more than a year awaiting trial in prison, they have now been sentenced to four and a half years' imprisonment.

Only donated money and the courage of a remarkable core of good men and women of all races has hitherto enabled Defence and Aid in South Africa to challenge in the higher courts the justice acted out in apartheid's lower courts. When Mrs. Diana Collins was in South Africa last year, she commissioned Miss Mary Benson to compile the report which forms the basis of Purge of the Eastern Cape. An early unsigned copy of the material was selzed by Verwoord's security police last year. Subsequently Miss Benson was placed under house arrest and prohibited from writing. Next came the banning of Defence and Aid, a decision which was upheld this week, and most re-cently the banning of Miss Ruth Hayman, the brave and tenacious solicitor who has been almost alone in being prepared to act for political prisoners. The families of convicted men and women are mercilessly hounded, but most whites choose to ignore the whole thing, too afraid of the police and human involvement even to give cast-off clothing to the starving children of political prisoners.

Yet, as in prison, some still retain their integrity. Legal ways and means are being found of channelling funds to them to at least help the desperately needy families; there are up to 4,000 such women and children around Port Elizabeth alone. This is surely one time when banning is the highest recommendation of an organisation—and for increased support of Christian Action's Defence and Aid Fund.

The Soul of the Polish Millennium

EXTENSION OF REMARKS

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. DULSKI. Mr. Speaker, upon the occasion of the 1,000th anniversary of the founding of Christianity in Poland, many commemorative religious services and events have been sponsored and scheduled. These millennium observances have great meaning not only for the more than 8 million loyal Americans who pride themselves in their Polish ancestry, but for all who enjoy independence and liberty today.

Among the leaders active in the celebration of this important event is Mr. Henry J. Osinski, of Buffalo, N.Y., who is lay chairman of the Polish millennium observance for the diocese of Buffalo. Prominent in many community affairs and religious endeavors, Mr. Osinski serves as treasurer of the Polish Union of America; chairman of Villa Maria College's advisory board of regents; vice president of the Community Welfare Council; and treasurer of the Urban League of Buffalo. He also is a member of the Council of Youth for the State of New York; board of regents of Canistus College; and the board of trustees of Catholic Charities, in Buffalo.

Mr. Osinski is the author of an article which appeared in a May issue of Magnificant, published by the Buffalo diocese, entitled "The Soul of the Polish Millennium." This article was reprinted in the Ampol Eagle, July 7, 1966, a Buffalo weekly newspaper. Under leaye to extend my remarks, I include it below:

THE SOUL OF THE POLISH MILLENNIUM

(By Henry J. Osinski)

One thousand years of fidelity to the Chirstian faith—to the Roman Catholic Church—Ever faithful—Ever loyal—Ever ready to defend and die for her faith.

Semper Fidelis Polonia-such were the words and phrases used by the church in referring to her noble and loyal daughter, Poland.

For ten centuries, during which she passed many trials because of her steadfastness to Christianity, and particularly to the Roman Catholic Church, Poland never for once doubted the validity of her belief. Poland is ever mindful that once she accepted the church, she placed upon herself an obligation to defend the truths which are the dogma of the Roman Catholic faith.

To Poland and her people, Christianity is not political expedience necessary for preservation of her sovereignty.

Poland did not accept the Roman Catholic faith either to gain power or prestige among nations of the world.

Poland accepted Christianity for in it she found the true reason for her creation and existence. In Christianity, the Polanie found the answer to life's many mysteries. The dwellers of early plains of Poland, known as Polanie, were people of resolute purpose. Life and everything about them had a reason for existence and useful purpose to man. Man, as far as they were concerned, had to have a greater and higher destiny than the material nature around him. They felt they were superior to their environment, but could not find an answer in their images which they worshipped.

All of life's sufferings, tribulations and sacrifices appeared to them in vain, for their Gods recognized only strength, brutal force and material ends. All this seemed ineffectual, for their soul pined for love, understanding, tolerance, compassion and meroy Without them life seemed meaningless, directing them towards some confused, inexplainable, and subservient destiny with their man-created God.

A RAY OF LIGHT

Baptism, by Mieszko in 966, was the ray of light that pierced their darken pagan atmosphere, nourishing their strayed heart and souls with true faith, firm hope, and Christ's charity. This sacramental ray of light unleashed the latent spiritual forces in the Polish Nation, initiating a Christian movement which has never lost its momentum.

Over centuries, Christian faith carried the people of Poland through crisis upon crisis, without tarnishing their faith, nor their determination to keep it, protect it, and, if necessary, die for it. History teaches us that many people lost their allegiance to Christianity and the Roman Catholic Church under circumstances in many instances less critical than those of the people of Poland.

critical than those of the people of Poland. Since the year 966, Christianity became the core, the substance, the soul of the Polish Nation and its people's culture. Catholic thought and action transcended every phase of private, public and national life.

A WAY OF LIFE

The Roman Catholic faith became deeply rooted in the very marrow of their bones and in every faculty of their souls. Since 966 Catholicism is not only the faith, but the way of life; the only valid passport to the eternal city of God.

Time flees-governments are recorded in annals of history—political ideologies, social and cultural movements, civic and economic reforms came and left their imprints on the lives of the people.

Wars, during the course of centuries, forced reconstruction in villages, towns and cities.

Religious reformations were rampant all over Europe. New religions, sects, and denominations were being established overnight.

Spiritual insecurity and spiritual chaos reigned in Europe in the middle ages. Catholicism was attacked by everyone. Rome found itself constantly on the defense. Confusion reigned for a time in the Vatican. The Roman Catholic Church, for a time, found itself in organizational turmoil. The Middle Ages were really darkened and the horizons did not appear bright.

The French Revolution, with its atheistic philosophy, followed the reformation. Many felt that it would find fertile soil in Poland. The Polish and French cultures, for many years, found themselves compatible. The French influence was felt everywhere in Poland. Chopin, Moniuszko, Mickiewicz, and others, found haven in France when allen forces persecuted them in Poland.

A TEST OF FAITH

Partitions came and lasted for over a century and a half. The people of Poland were without their own government. Prussian, Russian and Austrian cultures were being superimposed on the lives of people. Persecution was at its height. The people of Poland were deprived of their God-given dignities and rights. Many fied to foreign lands, not to escape and forget, but to better resist and preserve all that is Catholic and Polish.

The Prussian Cross pressed heavily in Europe. Bismark was unifying the anti-Catholic forces in neighboring countries to the west. Russian Empress and Czars were forcing their political, social and religious concepts on the Poles in the Eastern Europe.

The Twentieth Century found the people for two decades masters of their destinies. But, the liberty was not long lived. Again

the tyrants of East and West became determined to destroy all that is Catholic and Polish in the land of the Polanie.

Yet, through all this, the people of Poland remained steadfast. Their faith was unshaken. False prophets found no haven in Poland. In fact, Poland was the country they all feared, for they could find none in this land of soil dwellers to espouse their false gospels.

STRENGTH THROUGH SUFFERING

Ten centuries passed and the first love is still there. It has survived all man devised trials, tribulations and struggles. The seeds of truth sowed on the day of Mieszko's Baptism found deep roots in the fertile hearts and minds of the God-fearing, God-loving Polanie. The suffering and persecution served only to fortify and strengthen their faith and love for Christ and His Church.

The Polanie felt that they too made a covenant with God, through their sacrament of Baptism in the Church, established by His beloved Son. This covenant was for eternity and no force on earth could break it. The suffering they experienced, and are experiencing because of the faithfulness to it, is to them a test of their love for Christ and His Church.

This test they welcome; for it assures them of their eternal destiny, of the kinship to the Son of God.

All in passing here on earth. It is the eternal life that is their hope. The love of God has and is their strength—for that is a lasting and eternal love. Such love can only be ever faithful, ever loyal.

The Cross of Christianity, taken voluntarily by Mieszko and his wife, Daobrowka in 966, was and still is the guiding light and national symbol of Poland. The Moors, the Tartars, the Huns, the Prussians, the Hapsburgs, the Cossacks, the Communists, all struck their fiercest blows at the people of Poland to break their covenant with the Son of God, without success.

CROSS IS AGELESS

The Cross is still the Way of Life for the Polish people. With the Cross to lead them and Our Lady of Czestochowa to shield them, the people of Poland began a new Millennium of Catholicism with a greater determination and fervent loyalty to the Roman Catholic faith. For all things pass, but the Cross is ageless and timeless, as is God the Creator, as is His Son, the Redeemer, as is the Holy Spirit the Sanctifier—so is the soul Christian Catholic Poland.

Polonia Semper Fidelis ad eternetatem.

The Impressive Case for Two-Way Radio

EXTENSION OF REMARKS

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. KLUCZYNSKI. Mr. Speaker, a very fine editorial on a topic in which I have a keen interest appeared in the June 29 edition of the Chicago Daily News. At the conclusion of my remarks, I would like to have the editorial included in the RECORD.

Mr. Speaker, the editorial makes the irrefutable point that a strong and impressive case can be made for the necessity of additional allocations of the radio spectrum to the land mobile radio service. The land mobile radio service is basically composed of two-way radio users. including many businessmen,

industry, the press, as well as the police and other public service organizations.

My interest in this topic stems from my participation in hearings held May 24 of this year before the Subcommittee on Regulatory and Enforcement Agencies of the House Small Business Committee. Chaired by my very able colleague from Michigan, the subcommittee heard the witnesses testify of the many benefits they themselves derive from their use of two-way radio as well as of the benefits derived by their customers and the general public. The subcommittee members also heard the many problems these small businessmen face in their use of radio-overcrowded channels, interference from other users, and lack of action by the FCC to alleviate the congestion.

I can r rsonally attest to the accuracy of some of the testimony we heard. I own a restaurant in Chicago, and I have freezers, refrigerators, and air-conditioning units. One night we were having trouble with these units, and I had to place a call to have them repaired. We have 24-hour repair service in Chicago and my call was immediately relayed by radio to a serviceman, and within 15 minutes he was at the restaurant door

ready to go to work.

I am also interested in the use of twoway radio in police work. Since the 1920's police have had radio-equipped cars, but today's police force needs the best possible all-around communications network. I am indeed happy that Chicago has one of the finest, if not the finest, communications center of any police force in this country. Attesting to this fact, the crime rate has fallen in Chicago for the past 3 years. Last year it fell 12 percent. However, as our population grows and our cities spread over larger areas, more communications equipment will be necessary; and this means more frequencies will have to be allocated if the equipment is to be effectively utilized. Right now the police, just like the small businessman, in many cities are having trouble getting the frequencies they need.

According to the editorial, use of twoway radio increased over 600 percent since 1960. We now have 2 million licensed units, and by 1977 it is estimated

that there will be 5 million.

From listening to the witnesses, personally receiving the benefits of two-way radio communications, and seeing the benefits the entire public can derive from the more effective use of two-radio communications, the public interest demands that a serious effort be made to find the additional frequencies needed and to assign them to all users on an equitable basis.

I am glad to see that this problem is finally being brought to the attention of the public through the news media. I hope other fine newspapers around the country will inform the people of the problems confronting two-way radio.

The article follows:

Two-Way Radio—Its Case for New Air Space (By John M. Johnston)

Grant that the Electronic Industries Assn. wants to sell more two-way communication equipment, and you still have to be impressed by the case it makes for a bigger share of the radio spectrum for this use. If you think

of this air space as a yardstick, then mobile, two-way radio gets less than two inches of it. The rest goes to television, radio broadcasting, air and marine navigation and longdistance telephone.

The expansion of mobile radio communication is one of the fantastic developments of our age. The list of varied users runs long, and its importance may be gauged by the multiplication of demand. Federal Communications Commission records show that for the Chicago area there are 17,461 two-way radios licensed on the channels assigned to service businesses.

For comparison, in 1960 there were 2,400 such radios on the air. That's a 600 plusper cent increase, and the waiting lists indicate an equal growth in the next five years if

the air space is available.

Everyone is familiar with the value of twoway radio to the police department, adding an efficiency to men and vehicles that would cost millions to duplicate without instant communication. With the automobile at the service of criminals, it is terrifying to imagine the problem of law enforcement without radio.

Similarly, fire fighting, whether in the city or the forest, is heavily dependent upon ability to route men and equipment quickly. Some 8,000 fire departments use radio equipment. Police agencies use nearly 200,000

two-way sets.

A few years back, if you wanted a taxicab you telephoned the nearest cab stand. If a driver was idle, he answered the phone. Nowadays a central dispatcher can instantly canvas all the ours in the area by radio and find the one soonest available. Railroads use 120,000 two-way radios, and bus lines are equally heavy users.

Truck lines have found that three radioequipped vehicles can do the work of four, and these employ 50,000 radios. A driver can be detained or detoured to pick up a load that otherwise would require another trip.

that otherwise would require another trip.

It was only in 1959 that the FCC opened the use of two-way radio to general business organizations, but since then 400,000 vehicles have been equipped with radio.

These and other uses explain the multiplied growth of two-way radio from 86,000 licensed units in 1949 to 2,000,000 today. The industry estimates that it will grow to 5,000,-000 units by 1277—provided the air space can be found.

The channels assigned to two-way radio have remained constant at 5 per cent of the total. Other users, of course, advance claims for the retention of what they have, or additions thereto. Still, in Chicago, all of the police channels are in use, barring the use of new techniques and hampering new communities in their search for efficiency.

Allocation of the air space is, of course, a matter of assigning priorities. There may be hope for two-way rado in sharing bands with other uses, and in technological progress that will split the channels into thinner slices.

But on the evidence of the fantastic growth in use, two-way radio is performing a service that merits a high priority in the allocation of space.

A Detroiter Looks at Auto Safety

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mrs. GRIFFITHS. Mr. Speaker, Detroiters have been particularly interested in the congressional hearings on automobile safety. The following is a letter I have received from a constituent, Leon A.

Rodgers, whose insight into the core of the problem is a valuable addition to this discussion:

DEAR CONGRESSWOMAN GRIPTITES: The recent hearings on auto safety have greatly disturbed me. I feel that the truth on auto safety was not truly represented. On one hand we had Raiph Nader, a seemingly self-made expert, and a group of "experts"—that no one seems to have heard of either. On the other hand, we had the chiefs of the auto industry. Naturally, they're going to swear to the Almighty that safety is their only purpose and goal. It develops that no impartial, true experts were heard. I believe that true experts, policemen, race drivers, ambulance drivers, truck drivers, etc., should have been consulted.

It seems that Mr. Nader exhibited a model of a "safe" car. It had a long front. The interior had wads and wads of foam rubber; even the steering wheel was padded. I would like to point out that the "Toronado" has an elongated front. Owners complain that on hills they can't see well—the front of the car is in the line of vision. Recent newspaper articles point out that foam rubber is not really a safety feature. It does not absorb a shock extremely well; in fact, it can produce even more bouncing around. The Big Three are trying to eliminate the steering wheel altogether.

steering wheel altogether.

I'm not saying that "the Big 3" are not blameless. They have sacrificed good, strong suspension for a soft, smooth ride. Many a person has hit his "funny bone" on a door knob, or banged a knee on a door handle, or snagged a sleeve or a stocking on a handle. Many an unfortunate person has hit his head on a dashboard, suffering severe injuries.

on a dashboard, suffering severe injuries.

Now, a bill on auto safety has come out. I mak you to consider, Congresswoman, if the bill will be really effective, will really reach to the root of traffic fatalities, the driver? Ninety percent, at least, of all accidents are the fault of the driver. More than half of there are caused by drunk drivers. Will this bill stop this problem? The little old lady from Royal Oak never drives over 35 m.p.h., even on the freeway (min. 45 m.p.h., max. 70 m.p.h.). She's never had an accident, but has caused countless others by causing traffic to jam up, drivers to cut quickly from lane to lane to get out of a rear-end colli-sion trap. Will this bill cure this problem? A punk, speeding down a road at 90 with his A punk, speeding down a road at 90 with his lights off, trying to beat the police, swerves access the center line and wipes out a family in a head on collision. He'll wake up in a hospital with a broken arm, a couple of stitches, vague memory, and maybe, just maybe, a slightly guilty conscience. Will this bill cure this problem? Will this bill the physically market will approximate the second of the problem? take the physically, mentally, and emo-tionally unable off the road? Will it take "Walter Mitty," the next door neighbor, who on his porch pets dogs and kisses babies but who in his car would put Jack-the-Ripper to shame, off the road? Will it take the kid down the block and his 1945 rattle and death trap off the road? (Is the auto industry responsible for a car once it sells it to a buyer? Will it take the "tailgater" off the road? A bill that could do one of these things efficiently and practically if at all, would be a milestone in world

I, for one, would be sorry to see a bill telling the auto industry how to build its ears. I think that the government has too much control over private industry as it is. I recognize the fact the government controls the safety in the airline industry.

I believe that this is necessary in public transportation, but a car is a private vehicle. I would prefer, that the States get together to establish uniform traffic laws and uniform methods of testing and licensing. I think that the auto industry should be given a chance to make good its claims and prove that it is concerned with

safety. Only a few major improvements are necessary—not wholesale revamping. A blanket federal law would probably cause confusion and ineffectiveness.

Sincerely,

LEON A. RODGERS.

Heart-Warming Message by an American Marine

EXTENSION OF REMARKS

HON, JAMES HARVEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. HARVEY of Michigan. Mr. Speaker, a 19-year-old marine, Pfc. Stanley "Bud" Barrett recently put into words what I believe to be one of the finest commencement addresses I have read.

His was a special letter to a fifth grade graduation class in the Saginaw, Mich., Fuerbringer School. He was "adopted" by these youngsters who sent a birthday card to him earlier. Bud, son of Mr. and Mrs. Stanley G. Barrett, 1427 Brown Street, Saginaw, wrote his message from Vietnam.

I hope that every Member will read this special letter. Our Nation's future, I submit, is in strong hands with the likes of all the Bud Barretts serving their country so well.

The news article, which appeared in the June 12, 1966, edition of the Saginaw News, follows:

MARINE TELLS STUDENTS ABOUT AMERICANISM

Fifth-grade pupils normally don't hear a graduation address. They pass into the sixth grade via report cards.

The situation, however, was different this year for Mrs. Frances Clum's fifth graders at Fuerbringer School.

They heard a graduation address, even thought it wasn't called that. Principles of Americanism and the traditional advice to graduates were delivered with poignant

The honored guest was an American Marine. He didn't appear in person because he's too busy fighting in Viet Nam. His address was conveyed by letter.

Wrote Pfc. Stanley (Bud) Barrett:

"This letter is in reply to the much-appreciated birthday card you sent. It was a very pleasant surprise.

"Our unit is located seven miles from the North Viet Nam border, the farthest north any American ground troops have gone in Viet Nam. We have 89 men in our battery. We're opposed by 2,600-2,800 Viet Cong. Nice odds, but we can call in air support if needed.

"But even if we did get killed, it would be a small price to pay for freedom. I'm willing to pay it, and so is every Marine here. We fight for what we believe in and we also believe in our own strength and skill as a fighting unit. We're the best and proud of it. We're defenders of freedom.

"You young people are the nation's future defenders. Do your part now as students so that later you may decide matters wisely, with the knowledge that many may profit through your decisions.

"One thing: No matter how smart one is with books, without common sense one is an idiot. Common sense can get you by in everyday situations, sports, business and, for

me, in combat. If I went strictly by the book I'd be dead, because you can bet the Viet Cong hasn't read the same book.

"I would like to ask a small favor. Please pray for me and for others like me—that we do our job with persistent courage and never-ending faith in God. Bless you all Bud."

Pfc. Barrett is 19 years old, a 1965 graduate of St. Andrew's High School. His parents are Mr. and Mrs. Stanley G. Barrett, 1427 Brown.

Say the Barretts: "We're proud of our son—very proud."

War on Poverty

EXTENSION OF REMARKS

HON. JOHN R. HANSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. HANSEN of Iowa. Mr. Speaker, much of a critical nature has been said about the war on poverty. Generally speaking, most of the comments made by the critics have been at the carping level and supporting data has been quite minimal.

Critics of the program decry an alleged trend toward big government. But so far as I can determine, practically all of the failures have had their roots in mismanagement at the local level.

It is possible to assemble a group of interested citizens who can and will do a responsible and effective job with the resources furnished by the Federal Government. This is forcefully attested to by an article in the Creston News Advertiser which contains certain remarks by Dr. C. Edwin Gilmour at a meeting recently held in Creston, Iowa. Moreover, it also contains responses made by various citizens who are assuming their proper role of responsibility.

I submit the article for the benefit and enlightenment of my colleagues:

GILMOUR SPEAKS ON MATURA PROGRAM: DIRECTED BY LOCAL PEOPLE AT LOCAL PROB-

Dr. C. Edwin Gilmour, Iowa director of the Office of Economic Opportunity, spoke to members of the board of directors of the MATURA community action program and others interested in the "war on poverty" program at a dinner meeting here last night. The dinner and meeting was held at the Inn, wast of Creston, with about 65 persons present.

Dr. Gilmour was presented with a large key carved from wood and carrying a silver plaque recognizing his work in directing the "war on poverty" programs in Iowa and his help in organizing the MATURA program. The presentation was made by Fred McCard of Corning, a member of the MATURA board of directors, on behalf of the board and the community action program committees of the six counties in MATURA.

EQUAL OPPORTUNITY

The Iowa O.E.O. director told the group that the program should be called the Equal Opportunity Program rather than Economic Opportunity Program since the purpose is to give underprivileged Americans an equal opportunity with others.

Dr. Gilmour spoke of two misconceptions that he said many people have about the community action program. One is that it is

a federal program. The other is that it is just another boondoogle or another giveaway program. Both of these ideas are wrong, he added.

Iowans, he said, have a long record of distasts for federal programs. But, he added, today we live in an era of interdependence in which individuals and communities cannot rely solely upon themselves.

LOCAL DIRECTOR

The local community, he declared, is the strength of the American Democracy. The economic opportunity program is an opportunity to recapture the sense of responsibility and helpfulness which local communities used to have.

Under the E.C.P. program, he said, local communities and local people have been assigned the most challenging problem government has ever faced. Poverty, he said, does not exist at the national or state level. It exists in the local communities and must be attacked there. Only the people in a community can grapple with it and conquer it.

The MATURA board and committees are composed of local people from the six counties—Union, Adair, Adams, Madison, Ringgold and Taylor—and the community action programs in these six counties will be planned and carried out by them.

"I know of no program in the last 50 years that is more deemphasized and which places more emphasis on the local level", Dr. Gilmour said.

PEDERAL AID

He added that the program is financed 90 percent by the federal government and 10 percent by the local groups, but added that E.C.P. is only another in a long list of federal grants-in-aid which give surplus federal funds to local communities to administer and use on the local level. "I have heard no objection", he said, "to using 90 percent federal and 10 percent state funds in the interstate highway program, but some people seem to object to use 90 percent federal funds to build people."

If the E.C.P. program succeeds, he said, it will be the people in the local community who make it succeed. If the program falls, he told the group, "you will be to blame." This program will be what you and the people in your communities make it. You can make it big or small, good or bad. It is an exciting challenge but also a responsibility. You can build a stronger, better people for a stronger, better lowa."

POVERTY INCREASING

Dr. Gilmour said that E.C.P. is not a "something for nothing" program but a "something for something program." He pointed out that huge amounts are spent on welfare programs, which, he said, "are nothing more than a holding action." He pointed out that there were four million people on public assistance rolis in 1946 and today, after 20 years of unprecedented economic prosperity, there are eight million on the rolls. Under the minimum help philosophy under which welfare programs operate, he said, it is difficult for the people receiving welfare ald to better themselves. Their initiative, self-respect, self-confidence and hope are croded. This philosophy has increased and perpetuated poverty. If we continue to do nothing, the problem of poverty will continue to get bigger.

But, he declared, if we explore and exploit the potential of the economic opportunity program we can cut welfare costs by one-half in 10 years. He said the economic loss from unemployment, under-employment and underprivilege has amounted to \$548 billion in the last 11 years. If these people were brought back into productive economy the gains would have been tremendous. We have not been conserving our human resources but have been wasting them shamefully since the depression years. Poverty,

a u

at

C

he added, is never free or cheap. He pointed out that the Iowa legislature at its last session appropriated \$61 million for public assistance programs but only made \$49 mil-lion available for aid to schools.

REMEDY CONDITIONS

How can people as realistic as Americans tolerate such a condition, he asked.

In the economic opportunity program, he said, we are going to find out why people are unemployed and then remedy the condition. "Let's try to motivate the people on welfare rolls to a better life", he said. "This pro-gram", he added, "is a new concept, a new approach to human need. It gives the underprivileged an opportunity to be what their potential permits them to be. It is a program of self-analysis, self-lelp and self-esteem. It gives the underprivileged the

equal opportunity they should have."
"This program, with your help," he told the MATURA people, "can make the American dream of equality for all a reality."

Mayor Frank Boortz of Creston spoke briefly. He commented that only through cooperation and close communication can MATURA accomplish its goal. MATURA, he said, is you. He added that he is pleased that the program is being handled by local men acquainted with local needs.

Joe Pals, director of the MATURA com-

munity action program, presided at the meeting.

verty,

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. NIX. Mr. Speaker, as the Philadelphia Inquirer sees it, the North Vietnamese Government has displayed its barbarity to the world by parading captured U.S. airmen through the streets of Hanoi

North Vietnam's handling of the Americans is a clear violation of the Geneva Convention for Humane Treatment of War Prisoners, the Inquirer points out.

Propaganda was undoubtedly the intent of this savage reprisal, the newspaper says. But it can easily backfire. This cowardly abuse of defenseless prisoners, as the newspaper puts it editorially, and the pictures showing their mistreatment can only produce worldwide revulsion.

I consider this further evidence of the nature of freedom's enemy in southeast Asia, and ask that the editorial be entered in the RECORD.

PARADED THROUGH THE STREETS OF HANOI

The North Vietnamese Government has displayed its barbarity to the world by parading captured American airmen through the streets of Hanoi and subjecting them to the abuse and threats of the crowds.

The pilots were handcuffed and marched under armed escort. In describing the scene, Hanol Radio spoke of the "menacing fists and formidable screams" of the street crowds and declared that the soldier escort had to use "both words and muscles to contain the anger of the masses." It again voiced the threat to execute the prisoners as war

cans is clearly in violation of the Geneva Convention for the humane treatment of war prisoners. The Hanoi Communists have

only contempt for such restrictions on their conduct. Savage reprisal is their way of get-ting back at their enemies whenever they can, and they could not care less about what might happen to their own soldiers after their capture.

Hanoi undoubtedly intended the parade of the American prisoners as propaganda: to give their people a chance to vent their anger at American bombing and the individual prisoners; and to give weight to their threats to kill the captured pilots if the bombing continues.

Propaganda can hit both ways, however. In this instance, the cowardly abuse of de-fenseless prisoners of war, and the pictures showing their mistreatment, can only produce world-wide shock and revulsion.

Remarks of Vice President Hubert Humphrey to the U.S. Jaycees

EXTENSION OF REMARKS OF

HON. LUCIEN N. NEDZI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. NEDZI. Mr. Speaker, one of the significant and illuminating speeches of the entire year was made in Detroit on June 29 by the Vice President of thet United States. Speaking before 10,000 members of the Junior Chamber of Commerce at their national convention at Cobo Hall, Vice President HUMPHREY emphasized, in striking manner, the thirst for individual freedom opportunity which is surging throughout the world, the American passion for creativity and individualism which has helped write our Nation's success story, and the positive impact of American business activity overseas.

Because of the congressional recess, my colleagues may have missed this marvelous restatement of what America is all about, as well as the attendant report on the situation in Asia. Therefore, under leave to extend my remarks, I place the Vice President's speech in the RECORD:

REMARKS OF VICE PRESIDENT HUBERT HUM-PHREY BEFORE THE U.S. JAYCEES, DETROIT, MICH., JUNE 29, 1966

Eighteen years ago, a brilliant English author named Eric Blair unleashed a nightmare vision of life in the future.

Blair foresaw endless wars among three great super-powers. Every aspect of life would be totally controlled and man would be reduced to a robot-like existence-directed in his behavior and thought-processes by an all-seeing tyrannical government.

Blair's book was a warning to mankind: Unless the course of history changed, man would be doomed by what he had created.

And unless man himself changed, he was destined to lose every trace of personal free-dom and every trace of his individuality. If this book sounds familiar, it should

Eric Blair wrote under the pen name of George Orwell. And his book was 1984.

We are now halfway to the year 1984-halfway to Orwell's perpetual bad dream where apathy, cruelty, and ignorance were not only dominant characteristics of life, but the aims of the state itself.

In 1948, when Orwell wrote his novel, the reign of Josef Stalin had sealed off all of the Soviet Union and Eastern Europe in a bleak

and brutal police state, where all movements were controlled, all individuality suppressed, all thoughts suspected. Stalin himself per-Orwell's fictional dictator, sonified Brother.

The world knew, in Churchill's words, "that it is only America's possession of the

atomic bomb that has kept bombs from falling on London again."

Today, 18 years later, no responsible gov-ernment in the world believes that war be-tween East and West is either imminent or inevitable.

During the past 10 years alone more than 60 new countries have been born-nations which previously had not existed, except as colonial enclaves, or as tribes or protec-

But none has turned to communism.

Nor have the voters of any nation yet freely elected a communist regime to power. Even in Eastern Europe, monolithic control has gradually eased in favor of a system of national regimes each increasingly following its own course.

Indeed, self-determination and national independence have domiated the post-war period.

The last 18 years have brought us many troubles, but they should nevertheless give us hope that totalitarian regimentation is not the wave of the future.

not the wave of the future.
Our time is not ruled by political dogma.
The great moving force in the world today is humanity's restless craving for freedom...for opportunity...for a fuller share of the blessing of life...above all, for a chance for individual expression and fulfillment—in short, for the very things which lie at the heart of our own American Regolution. Revolution.

It is, in fact, the precepts of the American Revolution—not those of Marxism—to which the bypassed people of the world are today stirring.

The marching feet in the world today are those of people seeking freedom.

Millions of people in the world-yes, in our own country—are restlessly seeking the same freedom and well-being that you and I en-

It has been said that foreign policy is really domestic policy with its hat on. In a sense, this is true.

We know that rich nations cannot be secure amid the overwhelming misery of the poor nations.

We have learned, too, that no prosperous American neighborhood can really be secure amid other neighborhoods filled with poverty and pent-up anger.

have learned that no business operate at maximum efficiency until those who are unemployed find work * * * that no city can provide the best in life until the worst of its slums come open to the light

" " and that our own children cannot
achieve the fullness of the future until the

achieve the fullness can share in it.
Some say we seek to create in America
a welfare state. I think this reflects a deep
misunderstanding on the part of those who say it. What we seek to create is a state of

opportunity.

We seek to increase the opportunity of the individual to achieve his full potential, unhampered by ignorance, poverty and dis-crimination. We seek to make it possible for the individual to identify and satisfy his own aspirations.

We seek not to paralyze initiative, but to revive it; not to build up the opportunity of those below at the expense of those above—but to broaden the horizons of both; not to dictate the terms of help, but to allow each community to find its own an-

swers in its own way.

That is what our national investments in education, in health, in the war against poverty are all about. They are investments in self-help, in personal initiative, in oppor-

All the new laws which go under the Great Society label were written to encourage and insure the full participation and partnership of state and local governments, private organizations and individual citizens.

And I hope that many of you will read those laws, examine them, understand them, and use them to help your own communi-

All of us know that the most effective action is action at the grassroots level-and that is where we all want it to come.

No, we are not avoiding Orwellian misery by constructing a welfare utopia that would diminish human choice and incentive. Instead, we seek a course that provides growth. purpose and direction to all who are willing to grasp the chance to use their talent and energy

Our system does not guarantee individual success. But it can—and does—provide the climate and opportunity for the individual to be himself and to go as far as his abilities allow.

Yet, I think it would be inaccurate to say that there are no challenges—in the Orwellian sense—to our freedom or to our individuality in America today.

And, as young men who are also businessmen, your responsibility in meeting these challenges is great.

For you are leaders. You are successful. And your stake in our American success is great

great challenge which faces us is to assure that, in our society of bigness. we do not strangle the voice of creativity . that the rules of the game do not come to overshadow its purpose . . . that the grand orchestration of society leaves ample room for the man who marches to the music of another drummer.

It is the businessman who, of all citizens, most clearly knows what many others but dimly see: That much of our American progress has been the product of the individual who had an idea; pursued it; fashioned it; tenaciously clung to it against all odds; and then produced it, sold it, and profited from

It is the businessman who knows that a society which turns away from the man who has the courage to speak the unpopular, the unfashionable, the new and the untriedthat society is dissipating one of its greatest potential sources of strength.

It is an unpleasant fact that many of our most talented young people are not choosing business careers because they feel business leaves no room for individual expression or higher goals.

The word must reach our young people that business is a place both for individual accomplishment and for public service.

Our national growth . . . our ability to carry our responsibilities at home and in the world-these things depend on the creative and dynamic force of private initiative in our economic system.

It is part of your responsibility, as busi-

nessmen, to get this story across.

Young Americans must know that individuality and initiative are a part of the daily environment of business . . . that new ideas are greeted with enthusiasm . . that business is not fust profit and loss, but also the business of the community and of responsible citizenship.

Our young people must know that business is a place "where the action is" and that it is action which benefits people and which has a place for idealism.

The story of American business is the greatest story ever told.

I work each day with Plans for Progres an organization of private businessmen which have helped tear down barriers of domination in America, which is helping provide new opportunity to hundreds of thousands of our citizens.

I work each day with businessmen who seek to keep young Americans in school, and on the path to responsible citizenship, through summer jobs. Last year they helped provide one million jobs to young people who otherwise would have been without them.

American businessmen are leaders in our efforts today to make our cities livable . . . to preserve the natural beauty and resources of our country . . . to bring education of quality to every American child . . . to make the arts, culture and recreation an every day part of American life.

American businessmen are at work on behalf of clean and honest government. They are at work on behalf of charity and philanthropy.

And the wages and benefits they extend voluntarily to those in their employe are better than those extended by many governments known for their welfare programs. American business has been the advanced guard, too, in many countries, of enlightened social, economic and political policy.

The present change in Western policy toward Eastern Europe-a charge which is helping to hasten the movement toward independent policies there—has been aided in no small part by the economic bridge-building of American and Western European businessmen. Businessmen, with confidence in their economic system, have moved ahead on their own initiative to open Eastern Europe to ideas, to trade, to the winds of change. And all of us are the better for

It is a fact, too, that American private investment in the developing countries has, in many cases, triggered changes which have not only brought economic development, but political stability and social development as well. In many places, American private investment is making possible, for the first time, large-scale development of housing . . . the building of rural schools, roads and hospitals . . . construction of fertilizer plants—the things which not only develop an economy, but also give immediate and concrete evidence that democratic government can meet the needs and aspirations of simple, ordinary people.

The so-called Adela group—a consortium

of American and European businessmen—is today taking equity shares in much-needed Latin American enterprise which could not otherwise find the capital to get off the ground.

In Latin America and in other parts of the world, hundreds of private American investors are today providing capital-to places starved for capital-for economic and social projects. And I might add that your government backs them up with guarantees.

And there is the personal commitment, too, of American businessmen who know that the labors of one man can make a difference

There are the efforts of American small businessmen in Tunisia, teaching their counterparts there how to sell a better product, provide a better service, make a profit,

There are the efforts of the men and women the International Executive Service Corps—retired American business executives—who are giving several months out of their lives to help enterprises get started in Latin America and in Southeast Asia.

All these things not only strengthen na-tions desperately in need of help . . . they strengthen the fabric of freedom. that there does not have to be a big brother to get things done. They show that free men, working together, can do far more than any totalitarian system giving orders.

Your own Project ACTT train and the Jaycees International Movement exemplify the spirit with which business has met the opportunities of international service.

And all of us are in debt to men who have, at personal sacrifice, left the world of busi-

ness to enter the public service at local, state and national level.

American businessmen are indeed where the action is. And, for the good of men everywhere I hope they will remain there.

It is part of the good news of the day that

our free economic system-and the people who make it work—is not only providing profits, it is providing life and hope to the family of man.

Now, finally, it is my responsibility as your Vice President to give you a report, as of today, about where we stand in Asia and in Vietnam.

I say Asia and Vietnam, because we cannot see Vietnam as a vacuum, unconnected to its neighbors or the rest of the world.

When I returned from Asia and the Pacific earlier this year, I reported to the American people that I believed we had reason for measured optimism. I believe that this is more true today than it was then.

Last week, nine nations of Asia formed a new organization to be known as the Asian and Pacific Council. This organization was formed to strengthen these nations cooperation and peaceful development, but also— as the final communique put it—"To preserve their integrity and sovereignty in the face of external aggression."

This is but one of the things that can give us reason for encouragement.

Faced with communist pressure, the independent noncommunist states in Asia are working together to strengthen themselves and to inoculate themselves against aggression. Old quarrels and disagreements are being pushed aside and the nations of Asia and the Pacific are banding togetherand among those banding together are nations which have traditionally taken go-italone positions.

Communist China still looms as a powerful force in Asia. But today Communist China is being torn by power struggle—a struggle with other communist nations, a struggle, too, from within. At the same time, her neighbors are achieving a unity of purpose and action that was missing before.

For, as the President of Singapore made clear a few days ago to the people of Europeall the independent nations of Asia feel the pressure from the North-all of them feel they have a stake in what is happening in Vietnam.

On my Asian mission. I talked with no national leader who felt otherwise.

What of the immediate struggle in Viet-

That struggle is being waged on four fronts—the economic front . . . the political front . . . the diplomatic front . . . and the military front.

th

BI

A

an

th

th

ch

in

ms

wh

lag

eac

fin

uni

sup

eque

7

On each of these fronts we are gaining. And our efforts on these fronts are increasingly being coordinated, in proper balance. On the economic front, the Vietnamese

government, with our help, is taking the hard steps and decisions necessary not only to carry forward a program of economic development, but to defeat inflation-which can destroy economic progress.

The devaluation announced June 19 has not resulted in any sharp increase in prices. The price of retail items, including the critical price of rice, has steadied off. of fish, chicken, charcoal and firewood—all critical to the economy—have fallen. Import prices are steady.

the meantime, the hard day-to-day work of building a strong economy—the hard work that never makes the daily headlines goes on in the Vietnamese cities and coun-

Land is being redistributed. Wells are being dug. Schools are being built. Agricultural production steadily increases. Hospitals and roads are being completed.

These things are not dramatic. But every day the Vietnamese economy-and the life

of the Vietnamese citizen-becomes a little better than it was the day before, despite calculated communist disruption and terror.

On the political front, work goes forward toward election this September for a con-stituent assembly. Representatives of all South Vietnamese political groups have been meeting to prepare the way for democratic government.

This is a nation which has undergone centuries of foreign rule and oppression. This is a nation with no comfortable, built-in republican and democratic parties. This is a nation trying to create stable, representative government in the midst of war and disorder. This is a nation with dozens of political, ethnic and religious groups-all seeking their own place in the future.

If this process should bring conflict and confusion, it should not surprise us.

The important fact is that the Vietnamese people are finding their way toward nationhood, and that they are doing it their own way and not under the direction of any communist commisar.

I think there is another thing to remem--in all the political ferment in South Vietnam there has been no call for a communist government.

The people of South Vietnam know the communists for what they are. And they know the so-called national liberation front for what it is-a front, for Ho Chi Minh and a communist takeover.

As on the economic front, the progress is slow and sometimes unnoticeable. But it is there, day-by-day. The time is near when the people of South Vietnam will show their commitment to democracy with their ballots. Many of them will be threatened with vio-lence and even death, but they will vote. And I predict that the percentage of South Vietnamese who will vote-in face of these threats-will exceed the percentages in many of our American towns and cities.

On the diplomatic front, we continue our search for a just and peaceful solution to the conflict.

In these past weeks, we have repeated our message again and again—through diplomatic channels, through third parties, through public statement, through private and official sources-our willingness to come to the conference table to bring the violence to an end.

Although we have met with nothing but rebuff, we shall continue these efforts. And we shall maintain our offer to aid in the peaceful development of North as well as South Vietnam if only Hanoi will leave her

neighbors alone.

At the same time, we have reaffirmed throughout Asia and the Pacific, our commitment to the security and economic growth of that part of the world. And we have reaffirmed our commitment to stand and see it through in Vietnam.

I believe that the depth of our commit-ment has been one of the major factors in the development of the regional cooperation and spirit of common cause we now see in Asia and the Pacific.

The purpose of our diplomacy has been, and will remain, the end of the fighting . . . the establishment of conditions under which the people of South Vietnam can freely choose their own future . . . and the gathering together of the resources of all nations to make life better for the by-passed millions who have waited for centuries in Asian village streets.

On the military front, we are gaining, too, each day.

y

1-

The American troops in Vietnam are the finest men who have ever worn this nation's uniform. They are superbly led. They are trained. They are superbly superbly And their performance has been equipped.

With our allies, they have inflicted in these past weeks a series of defeats on both Guerrilla and regular North Vietnamese units.

They have done nothing less than this they have caused our adversary to re-examine all his old assumptions about "wars of national liberation.

The jungle or cave is no longer his sure refuge. His movement can no longer remain undetected. His supply can be cut off. attacks he begins at great numerical advantage can become, in a matter of minutes, a disastrous defeat as he faces unexpected re-inforcements and firepower. He can no longer choose his own time and place to fight.

And, perhaps most important, he can no longer count on the discipline of his own troops

In the last six months of 1965, more than 8,000 communist defectors left his ranks. In the first five months of this year, he has lost more than 11,000 defectors—and more and more of them have been squad and platoon leaders and officers.

Today there must be some hard thinking taking place in Hanoi.

Today Ho Chi Minh is in Peking. Other officials of his government are in Moscow.

I think it must be clear to Hanoi that what President Johnson said more than a year ago remains true today.

"We will not be defeated. We will not grow tired.

"We will not withdraw, either openly or under the cloak of a meaningless agree-

Our adversary must know that time is not on his side.

He must know that we will not sacrifice small nations for the sake of our own com-

He must know that we-and those who stand with us-count freedom no less sacred elsewhere than we do at home.

He must know, above all, that the American people have the resources, the vision, the courage, and the endurance to see it through for what we believe in.

Finally, may I say this.

The Alien fields of Vietnam will not be our final testing place between now and the year

There will be other tests . . . there will be other challenges on man's path toward a future of his own making.

Let us recognize, today, that the future lies in large part on our own American door-

For our American wealth and power—our power to shape the course of events for good—is unparalleled in the history of the

More than any other people on earth, the American people have the means today to determine what kind of world it will be in 1984

It is our opportunity—and our responsi-bility—to do whatever is within our power e that 1984 does not bring stifling confromity and slavery. It must be our mission to see that 1984 will be a time when human freedom and human dignity may come to shining reality.

H.R. 4671

EXTENSION OF REMARKS

HON. JOHN R. SCHMIDHAUSER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. SCHMIDHAUSER. Mr. Speaker, in the past few weeks I have received a deluge of mail from my constituents in southeast Iowa expressing a great concern for the proposals contained in H.R. 4671 to authorize the construction of two dams in the Grand Canyon area. I believe that the sentiments stated in a letter to me from Dr. Donald B. McDonald of the Department of Civil Engineering. University of Iowa, Iowa City, present most clearly and concisely the sound reasons why this proposal should be defeated:

JUNE 13, 1966.

Hon. John R. Schmidhauser,

House Office Building, Washington, D.C.

DEAR SIR: I am writing to you to voice my objections to the proposed Marble Gorge and Bridge Canyon Dams which are included in the Colorado River Bill (H.R. 4671) which is now before the House Interior Committee.

In 1958 I directed pre-impoundment studies on the Colorado River in the Glen Canyon area for the Utah Fish and Game Department, and thus have some first-hand knowledge of the situation on the Colorado River. I do not feel that this project is justified from the reclamation standpoint, but more important, I feel the damage to the recreational and scenic resources of the Colorado River, one of the last great unspoiled rivers in the country, would be immeasurable. Not only would the impounded water invade the Grand Canyon recreational area and seriously damage the scenic beauty of one of our few remaining wilderness areas. but the fluctuation in water level and the changed environment which result from the formation of a reservoir of this sort would destroy much of the unique blota of this area. This loss becomes particularly significant when one considers the rapidly increasing population and the critical need for

adequate unspoiled recreational areas.

I am well aware of the critical water prob-lems which exist in the Far West, but I feel that solutions are possible which do not re-sult in destruction of irreplaceable scenic resources.

Yours very truly,
Donald B. McDonald, Ph. D.,
Associate Professor, Civil Engineering, University of lows.

Internal Revenue Agitation

EXTENSION OF REMARKS OF

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. WYDLER. Mr. Speaker, efforts to inform the public about proposals to dam the Grand Canyon have been challenged by the Internal Revenue Service in an unprecedented action.

If this move were effective in cowing the various conservation organizations, the reclamation lobby would be unhampered in its attempts to foist on my colleagues the proposals for Bridge Canyon-or Hualapai-and Marble Gorge Dams in the Grand Canyon.

I hope that conservationists will continue to defend the Grand Canyon from these ill-advised proposals.

An editorial in Sports Illustrated of June 27, 1966, deals with this subject, and I offer it as part of my remarks;

A RISE WELL TAKEN

On June 9 the Sierra Club, the nation's largest and most eminent conservation group, ran full-page ads in The New York Times and The Washington Post importuning readers to protest two proposed dams which the club feels would irrevocably alter and ruin the "essence and excellence" of the Grand Canyon.

Less than 24 hours later the Internal Revenue Service, in a wholly unprecedented move, advised the club that it could no longer be assured that its donations would be tax deductible. The IRS claimed that the club may have violated the section of its code denying tax-exempt status to organizations which devote a "substantial" part of their activities to attempts to influence legislation.

Although it is generally believed that the Sierra Club's "lobbying" amounts to less than 1% of its total activities and expenditures, and although the IRS is unable to come up with any figure or percentage defining "substantial," the club may well lose a good deal of revenue before the IRS gets around to auditing its books, and making

some sort of ruling.

Undeniably, tax exemption is a privilege that shouldn't be abused, but it appears, in this instance, that the IRS proceeded with excessive zeal and haste. Furthermore, its action is an intolerable perversion of one of the principles of justice—that one is not punished before guilt is determined.

It also seems unreasonable that the Reclamation Bureau can, with impunity, lobby for the dams at the taxpayers' expense while the Sierra Club is not permitted to combat effectively what it believes to be against the public interest.

"We saw that there was risk," says David Brower, executive secretary of the Sierra Club, "but the risk to our solvency is much less important than the risk to the land. We're going to continue defending Grand Canyon, and we're hoping that enough citizens will care enough to help keep us afloat."

An Act To Adjust the Rates of Basic Compensation of Certain Employees of the Federal Government

SPEECH

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. SPRINGER. Mr. Speaker, this bill provides an across-the-board salary increase averaging 2.9 percent for postal workers and other Federal employees. This is a very modest pay boost considering the rise in the cost of living that has occurred since the last Federal salary increase in October 1965.

The Congress in 1962 pledged that Federal salary rates shall be comparable with those paid by private enterprise for the same levels of work. President Johnson strongly affirmed this principle of comparability when, in a message to Congress on May 12, 1965, he declared:

We do not have two standards of what makes a good employer in the United States: One standard for private enterprise and another for the Government. A double standard which puts the Government employee at a comparative disadvantage is short-sighted. In the long run, it costs more.

Yet, despite the increases voted last year and in the bill we are considering today, the salaries paid to Federal employees continue to lag behind the rates paid for comparable work in private industry.

My colleagues will recall that last year the original House bill provided for a 4 percent first-step increase effective in 1965 and a second step adjustment to become effective a year later. The amount of the second-step adjustment was to be determined according to a special formula designed to bring Federal employees' salaries into closer relationship with those paid in private industry. However, the Senate reduced the 1965 increase from 4 to 3.6 percent and eliminated the 1966 second-stage increase altogether.

The reason given last year for reducing the increase voted by the House is the same reason given this year for not making a greater effort to close the gap between the salaries of Government employees and their counterparts in private industry: the threat of a Presidential veto if the increase exceeds the administration wage-price guidelines.

The Consumer Price Index was 110.4 in October 1965. Within 6 months the index jumped 1.9 percent to 112.5. So the purchasing power of the 2.9-percent increase we are voting today is actually only about 1 percent, minus Federal, State, and local taxes, civil service retirement deductions, and life insurance premiums.

I do not intend to be critical of either our own Post Office and Civil Service Committee or the corresponding committee of the other body. They have both been as generous toward the Federal employee as could reasonably be expected of them in view of the wage guidelines which the administration appears to be applying more rigidly to Federal employees than to those who can bargain collectively with private employers.

The fringe benefit features of the final version of H.R. 14122—including more liberal retirement provisions, increased Government contribution to the cost of health insurance, overtime pay and increased annuities for certain overtime pay and certain annuity increases—bring the cost to slightly more than the administration's wage guidepost figure.

To do less, as the Senate committee's report so well concludes, "would be to do practically nothing at all."

Disclosures of the Week-Part IX

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. PELLY. Mr. Speaker, hereinafter is recent information that has come to my attention and which it seems to me should cause concern to the American CASE I

Tax Foundation, Inc., in June 1966 reported to its members that estimated Federal civilian employment at the end of April was 2,644,244, an increase of 33,464 for that month alone. The U.S. Civil Service Commission was quoted as indicating Federal employment will further increase by 100,000 by 1969.

CASE II

According to an article by William Beecher in the July 10 New York Times, despite optimistic declarations about Vietnam war prospects by President Johnson and others, the administration is quietly starting another major expansion of the Armed Forces. By the end of the year the 280,000-man force currently in South Vietnam will have increased to 375,000 by yearend and to 425,000 by next spring.

The Times itself in the same edition said supply problems in Vietnam are being overcome. But it added that lack of candor by the Johnson administration and the attempt to hide problems is unfair to the military.

CASE III

The Scripps-Howard roundup which appeared in the June 4 Washington Daily News said the Johnson administration has a hush-hush policy on prices. It said Cabinet members, economists, statisticians all have been told to soft-pedal prices and inflation which this newspaper pointed out are political dynamite.

CASE IV

According to a recent report of the Senate minority policy committee, the civil service retirement fund has \$15 billion in investments. Income from this investment, plus Government contributions, keep the outgo current, but by 1970 the outflow will exceed cash receipts. On an accrual basis, there is an arrearage in the capital account of about \$40 billion. Congress is obligated to vote funds to pay retirement benefits to civil employees.

Under the title of "Politics in Poverty," the July 1 Washington Daily News described job security in a federally financed Kentucky coal area poverty program as conditioned on political kinships or economic interest to the county's Democratic courthouse machine.

CASE VI

Arthur Sylvester, Assistant Secretary of Defense, according to a letter published in the Nation, berated a Washington, D.C., professor who in a broadcast pointed out that weekly figures on American deaths in Vietnam do not include casualties from disease, air accidents, and the like. In the past, when Sylvester did not approve of newsmen he threatened to go to their editors; in this case he carried his protest to the president of the university where the professor teaches.

Att I

et

CASE VII

The Department of Agriculture placed a rush order for 2,900 special typewriters which cost more than \$500 each. Due to the rush, the Department was spending \$1,500,000, or \$500,000 more than the cost would have been if it had taken

competitive bids.

According to the Agricultural Stabilization Service the rush was to meet a deadline of January 1, 1967, for reporting of farmers' payments. What the Department overlooked was that an amendment establishing the deadline had been defeated and was not in the law.

Not long ago an article in U.S. News & World Report said antipoverty funds granted to Syracuse University were used, in part, to hire baby sitters and pay taxi fares to transfer people from heavy Democratic public housing areas to voter registration centers in the city.

DARK TX

A recent Gallup poll reported that 41 percent of the population lists crime as the greatest domestic problem in America. Some 51 percent of those polled believe that the problem had worsened in the last 5 years.

Statistics bear out this worry. In a report on June 20, 1966, the U.S. Depart-ment of Justice revealed that crime increased 6 percent in the first 3 months of 1966. The increase was led by a 14-percent rise in forcible rape, 11 percent rise in larceny, 9 percent in aggravated assault, 5 percent in auto theft, with murder, robbery, and burglary each chalking up 4-percent gains.

CASE X

An editorial in the June issue of a trade magazine, Welding Engineer, mentions a program of the Federal Office of Economic Opportunity. It criticizes the program's cost of \$16,000 to train four welders but especially is critical because the students only received training in one kind of welding. It points this up as an example of Government getting into some areas about which it knows little or nothing, and wonders why a welding school has to be set up in a city that already has two of the best privately operated welding schools with experienced teachers in the country.

National Cemetery Sought for Ohio

the

EXTENSION OF REMARKS

OF HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mrs. BOLTON. Mr. Speaker, early in this Congress I introduced a bill (H.R. 5763) to authorize the Secretary of the Army to establish a national cemetery in Ohio. Several of my colleagues have introduced identical bills. So far no action has been taken by the Committee on Interior and Insular Affairs because of the administration policy opposing further expansion of our national cemetery system. It becomes more apparent each day that it is going to be necessary to change this policy if we are to fulfill our obligations to veterans and their families.

One of my constituents, Mr. Nunzio R. Calvo, commander of American Legion Post 74 of Cleveland and commissioner of the Soldiers' Relief Commission of Cuyahoga County has worked tirelessly to obtain a national cemetery for Ohio. There is none in our State at present, although we have the fifth largest veteran population in the Nation. In view of this, I am hopeful that we will be successful in obtaining favorable action by the Congress on the proposed legislation.

As part of my remarks I include a letter written to Mr. Calvo by Maj. Gen. Erwin C. Hostetler, the adjutant general of Ohio, and an article from the Cleveland Press of May 9, 1966, entitled 'National Cemetery Sought for Ohio":

STATE OF OHIO, ADJUTANT GENERAL'S DEPARTMENT

Columbus, Ohio, May 4, 1966. Hon. N. R. CALVO,

Commander, American Legion Post No. 74, Soldiers Relief Commission, Cleveland, Ohio.

DEAR MR. CALVO: Your letter of 13 April 1966, addressed to Governor Rhodes, has

been handed to me for reply. I have studied your proposal for creation of a national military cemetery in Ohio. It does appear that there exists a very logical basis for the establishment of such a cemetery in Ohio. I note that our neighboring States of Indiana, Kentucky, and West Virginia each have one or more national mili-

tary cemeteries still open for veteran burials.

There appears to be no valid rationale against creating a national military cemetery in our State, especially in view of our total war veteran population of 1,212,000. I note that only 4 States (California, Illinois, New York, and Pennsylvania) have larger veteran populations than Ohio. Of further interest is the fact that in California there are 3 national cemeteries; in Illinois, 5; in New York, 3; and in Pennsylvania, 2.

As you stated, veteran deaths in Ohio

averaged 843 per month during Fiscal Year 1965, and have been rising at a rate of almost 200 per month for the last few years. A projection of these data indicates that, barring future large-scale hostilities, a peak in veteran deaths should occur in about 15

in veteran deaths anound occur in about its to 18 years, when the average age of our World War II veterans approaches 65.

I see no reason why our veterans should be denied the privilege of burial in a national military cemetery in their own State, if they are desire. I shell recommend to if they so desire. I shall recommend to Governor Rhodes that he extend Ohio's full support to your project.

A copy of this letter will be transmitted to all Ohlo Senators and Congressmen; to the President; and to the Chairman of the Committee on Interior and Insular Affairs.

Sincerely yours, Maj. Gen. Erwin C. Hostetler The Adjutant General.

NATIONAL CEMETERY SOUGHT FOR OHIO (By James Johnson)

COLUMBUS .- It is the right of every honorably discharged veteran to be buried in a

national cemetery.

And Ohio officials are asking the federal government to establish a national cemetery somewhere in the state.

There are no national cemeteries in Ohio, even though the fifth largest veteran population in the U.S. lives here.

Records show veterans currently are dying in Ohio at the rate of 843 per month. And in 15 to 18 years, when the average age of World War II veterans reaches 65, the rate will top 2000 per month.

So far, any veteran who exercises his right

to a free burial plot in a national cemetery has had to accept the fact it would be in an-

Agitation for a national cemetery in Ohio started with N. R. Calvo of Cleveland, commissioner and American Legion representative on the Soldiers Relief Commission.

Calvo checked the statistics on the veteran population and death rate with the Adjutant General's Department, then wrote Governor Rhodes, urging him to do what he could to

secure a cemetery.

Calvo explained that only California, New York, Illinois and Pennsylvania have more resident veterans than Ohio.

California and New York have three national cemeteries each, Illinois has five and Pennsylvania has four.

Even Texas, which has fewer veterans than Ohio, has three national cemeteries.

Calvo suggested a national cemetery could be on a 500-acre portion of the Rayenna Arsenal. Rhodes turned down this suggestion. He wants the site for an industrial park.

"Right now we are casting around for a suitable site." said John M. McElroy, Rhodes'

top aide.

"It should be somewhere which is convenient. Perhaps we might select a site in connection with a state park—somewhere that would be scenic but where people wouldn't necessarily trample the graves.
"We are open to suggestions," he said.

Private Enterprise and International Relations

EXTENSION OF REMARKS

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. QUILLEN. Mr. Speaker, I am inserting at this point in the RECORD a recent editorial from the Bristol Virginia-Tennessean, which pays tribute to the accomplishments of private enterprise as a booster of sound and helpful international relations:

INTERNATIONAL RELATIONS BOOST

The history of the Arabian American Oil Company is an inspiring chapter in international relations. Aramco, as it is called, is a major American oil company that many years ago pioneered in developing petroleum production in Saudi Arabia. A recent review of Aramco's 1965 operations tells a story of commercial and cultural progress that would be hard to equal. In that year alone, the company and its employes spent about \$117.5 million in Saudi Arabia for materials, services, personal taxes and welfare.

The rising rate of the company's operations contributed directly and indirectly to the progress of the economy in Saudi Arabia, particularly in the fields of commerce, health,

education and agriculture.

Company agriculturists assisted farmers in increasing food production. Assistance was also given in land reclamation, development of medical services and water resources. short, the story of Aramco in Arabia is a story of an advancing civilization.

Private enterprise has brought progress to an area that otherwise would have very likely been officially classified as one of the under-developed nations—eligible for help from American taxpayers. Incidentally, it is the same kind of private enterprise that we see all around us in our own country-paying taxes to support government, employing millions of people, producing goods and services in astronomical quantities. The underdeveloped nation is a nation without private enterprise.

Headmaster Frank Boyden of Deersield— Part VIII

EXTENSION OF REMARKS

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. CONTE. Mr. Speaker, for the past week or so, I have been pleased to insert in the Record segments of a lengthy biographical profile from the pages of the New Yorker magazine about Headmaster Frank Boyden of Deerfield Academy.

I have done so in the belief that the story concerns not only a great American life, but a great American institution. It has been the story where the energies and passion of a single man, seemingly rail and physically slight, were almost solely responsible for the growth and development of both the academy and the historic community in which it stands.

Frank Boyden is the only headmaster Deerfield Academy has ever known. He came to the school 64 years ago, when it was a crumbling country public school of uncertain future. Harboring private plans for an altogether different career, Frank Boyden began to build and to mold the school. Without really realizing it, Frank Boyden was making a lifetime commitment to an ideal—and he has lived and worked to see it come to full fruition.

Under unanimous consent procedure, I am pleased to place in the RECORD at this point a final segment of that profile. It brings the article to a close by bringing us up to date on the lifework of Frank Boyden.

Although this excerpt concludes the New Yorker profile of the headmaster, the story has no end. In spite of his 86 years, Frank Boyden continues to lead his charges at Deerfield, continues to seek funds whenever and wherever he can to perpetuate his school, and continues to maintain a pace in both work and play that would have stopped a less dedicated, less courageous, less devoted man many years ago.

I respectfully commend the story of Headmaster Frank Boyden to the attention of my colleagues, and to the American people.

The excerpt follows:

THE HEADMASTER-VIII

The headmaster wakes up from his midday nap and decides to take a quick look around the school before lunch. He betieves correctly that the more people see of himstudents and faculty alike—the more smoothly his school will run. "You won't see any confusion anywhere, I'm sure," he says. (Recently, he was scheduled to go on a complicated journey from Deerfield to Worcester to Chicago and back to Deerfield. He went to Worcester but decided to backtrack to Deerfield. It was 5 p.m. when he reached

the campus, and at that time the greatest concentration of students happened to be in the gymnasium. He walked into the gym, stayed two minutes, walked out of the building and went on to Chicago.

stayed two minutes, walked out of the build-ing, and went on to Chicago.
Getting into his golf cart, he shoots at full throttle along Albany Road, which goes through the center of the campus and forms a right angle with the long town street. He loops, twists, drives with his hands off the wheel, dives downhill, shaves trees, goes up the left side of the street into oncoming traffic, and waves and houks to people with-out regard to obstacles rapidly approaching. He has never actually known how to drive a car, but he used to swirl around Deerfield in an old Pontiac he had, going everywhere at top speed in second gear, because that was the only gear he knew how to find. People learned to get out of his way then. day, although the golf cart is les s alarming. everyone remains alert. He goes out onto his baseball field, spins around second base, and looks back at the academy. "Let's not be boastful, but let's be thankful for what we've got," he says. "Isn't it beautiful? We didn't have anything for so long that we had years and years to think of what we would like. I go around as often as I can to make sure it's still there. This is the kind of day when you get the shadows on the hills and the mist on the river. I've been so fortunate all my life to live in the country."

He sees the coach of Junior A soccer and drives about three hundred yards to intercept him and tell him how he wants the reception after the Junior A soccer game a few hours hence to be run. "I like receptions run better than they have been this fall," he says. "I don't like boys getting loose in the store and then wandering into receptions with ice-cream cones." He drives over to the Memorial Building, where the reception will be held, for he wants to make sure that everything has been properly set out. Before he goes in, he removes the keys to the golf cart and puts them into his pocket.

On his way out, he wipes a bit of dust off a windowsill. He goes to the gymnasium and downstairs to the football locker room, where he weighs himself. One hundred and forty-four. He is pleased. He notices the black-board: "Beat Worcester—they'il be tougher this year." "That's high-school stuff," he says, and he erases the sentiment from the board. On the front steps of the gym, he picks up a crushed, lipstick-ameared cigarette butt and carries it back into the building as if it were a dead rat. He puts it in a waste-basket, straightens a bench, and goes home to have lunch with his wife.

After another nap, he gives an hour-long tour of the school to an alumnus from Michigan who has returned, with his wife and son, after a long absence. Then he gets into his Cadillac and departs for Amherst, where he has an appointment. The car is driven by Foster F. Babineau, who is known as Fuzzy and is in his late fifties, Fuzzy's predecessor in the job was his father-in-law. On major highways, the headmaster sometimes gets out a stopwatch and times Fuzzy as he sails past the mileposts. If his calculations don't please him, he tells Fuzzy to speed it up. In twenty-three years, the headmaster has never told Fuzzy to slow down. "And, boy," says Fuzzy, "have we had some pretty good rides!" The headmaster will get into the car in Deerfield and tell Fuzzy what time he has to be where. Then it is up to Fuzzy to get him there, even if the destination happens to be more miles away than there are minutes left before the appointment. It was the same way with Fuzzy's father-in-law. In those days, the headmaster often used a train called the Minute Man for his longer trips, but, of course, he had to catch it.

The Minute Man's route went along the base of the hills to the west of the school, across the river. The headmaster would wait until it went by, then go out and jump in

the car and tell Fuzzy's father-in-law to go after it. Sometimes they caught the train at the next stop, sometimes two stops down the line, but it never got away. The night of the Brink's robbery, in 1950, a squadron of state policemen closed in on the Cadillac, waved fuzzy over, and told him to get out, because they were going to investigate the car. The headmaster was saleep, but he sat up and said, "Tell them to go away." They went away. Fuzzy spends more time with the headmaster than anyone else does. "He's never given me hell for anything," Fuzzy says. "If that isn't a record, I don't know. God knows he could have. You know, weather has never questioned that man. We're left Deerfield in blizzards. He's a corker. He's drier than a covered bridge."

The headmaster's appointment is at Amherst's new Robert Frost Library, where he has asked Deerfield's architect. William Platt, to meet him and talk about Deerfield's new library, which will incorporate similar features. He points out to the architect what an exciting opportunity this is to create something unparalleled among facilities at secondary schools. Then he tells the architect exactly how he wants each element to be done. He returns to Deerfield and has din-ner with three young admissions men from Harvard. He reminisces about his friend Dean Pennypacker, their distinguished pred-ecessor, who died before they were born. At half past six, the faculty fills up the headmaster's living room, having afterdinner coffee. On some occasions during this daily event, the headmaster has clapped his hands and told everyone to be sure to go to the town hall and vote on soning, or a bond issue. or whatever happens to be going on in politics in the valley. If the headmaster is an educator by intuition, he is a politician by in-

While he was building his school, he built himself into a political force incomparably more powerful than the headmaster of any school would be simply by virtue of his position. Boyden started by going around to church suppers all over the area. Then he served for years as town constable; he represented the district at state conventions; and he opened up his academy for the use of the community. Every three or four weeks, for decades, a banquet has been held there for hundreds of people—Red Cross, county assessors, Community Fund, a tool company's annual blast. The headmaster charges little or nothing. Once a month, the village Men's Club eats gluttonous slabs of roast beef for fifty cents aplece. At Commencement time, the great academy dinner is open to anyone from anywhere, and hundreds of people come.

The headmaster is paying them back. When he had no money, the great academy dinner was prepared by the farmers' wives, who brought the food with them. During the First World War, the academy boys saved local businessmen by unloading freight cars, and throughout the Second World War they picked potatoes. The headmaster constantly repeats to his boys the theme of responsibility to the community, of the need for all of them to become engaged citizens. From this base he has risen to be "the master politician in western Massachusetts," as one man in Greenfield puts it, going on to say, "All people in this part of the state consult him when they are thinking of running for office." A Massachusetts state policeman once said, "The headmaster is the only person of importance around here who calls us all by our first names."

In 1959, when Nelson Rockefeller was trying to decide whether to seek the Republican nomination for President, he invited ten men from New England to a meeting in New York. Boyden was one of the ten—and not because Rockefeller had earlier sent two sons to Deerfield. The will of Charles Merrill was a complicated one—it involved payments to Deer-

field, Amherst, and other institutions, spread out over many years—and a tax ruling was made that was unfavorable to the beneficiaries. They stood to lose millions, and the only way to change the situation was through only way to change the attuation was through an Act of Congress. The possibility of such legislation was considered nil by everyone but the headmaster, so one day in 1957 Boyden went alone to Washington. He was there only long enough to look up his contacts in Congress, the Senate, the Cabinet, and the White House. The bill was written and

The headmaster recently moved a proposed alignment for an interstate highway with a flick of his elbow. No one knows the num-ber of people in the valley who are wholly or partly supported by him, but no one doubts that it is considerable. His charitable inatincts have never been reckless, however. In 1940, a man in Greenfield wrote to the headmaster, told him that he was out of money, winter was coming, his children were sick, and he would be immeasurably grateful if the headmaster could send him two tons of The headmaster sent him one ton of coal.

SEPTEMBER 29, 1955.

DEAR SHERM: I am sorry about the President's Birthday Party, for we had such a good time at the one in Pennsylvania.

FEBRUARY 7, 1959.

DEAR PRESIDENT EISENHOWER: Thank you for your letter. As always I am very grateful to you for the appointment to the Jamestown-Williamsburg-Yorktown Celebration Commission. . . I think back with much pleasure to the half-hour which you gave me when you took one minute to say you could not come to Deerfield and then suggested that since we had twenty-nine minutes left we talk about something in which we were both interested and experienced—namely, the seventeen to eighteen year old boy. also very glad that you and Mrs. Eisenhower used my cart for the Birthday Celebration in Hershey.

SEPTEMBER 24 1957.

DEAR NELSON: This is a letter which do not require an answer, but I did want to tell you how interested I am in your efforts to keep the Dodgers in Brooklyn.

DECEMBER 15, 1923.

DEAR FATHER SULLIVAN: I have just been looking at the Greenfield Recorder for December 8th, and have seen the notice of your ordination to the priesthood. Please accept my hearty congratulations on the completion of your studies. I am always very much in-terested in the progress of any of the boys from this section with whom I have been associated in athletics and otherwise. I always felt during your connection with the high school in Turners Falls that you had real power of leadership.

Tonight, in place of the ordinary Evening Meeting, a visiting alumnus is going to describe to the boys his experiences, swim-ming under the ice in the Antarctic and recording the sounds of seals. The headmaster talks first, telling the boys how nice it is to have alumni return, especially from such remote and unusual places, and as he goes on in this vein he is before his school in his most characteristic attitude. He has gripped both lapels of his double-breasted jacket, and he draws them together as if he were cold. He wrinkles his nose. He has a smile on his face, and he interrupts himself with soft, inaudible laughter. He sits down to hear the lecture, resting one ankle on the other knee.

After the evening study period, the headmaster's living room fills up again—this time with varsity athletes, who have come for milk, crackers, and a blackboard talk by the coach. The coach is modern, very able, and

technical. The headmaster adds a few words that are not even faintly technical. These brief evening gatherings of football, basketball, and baseball players have been going on at the headmaster's house for about fifty years. When the boys have gone, he sits down, puts his ankle up on his knee, and says, "I don't feel any less power or any less vigor than I did forty years ago. I'm hoping to be able to have three more years."

In the late nineteen-thirties, some prospective Deerfield parents hesitated before sending their sons to Deerfield because they sending their sons to Deerneid because they thought that the headmaster, being close to sixty, might be nearing the end of his career. Among these was Henry N. Flynt, who did decide to send his son to Deerfield and is now the chairman of the academy's board of trustees and the head of the foundation that has financed the preservation of many Deerfield houses. The headmaster many Deerfield houses. The headmaster himself, in the nineteen-thirties, said to a member of his faculty, "One of the things I regret is that I am not going to live long enough to see how Deerfield boys do." In the mid-forties, the headmaster began saying, "If I can only have five more years . —a stock preamble to a discussion of his plans of the moment. He used this same line through the nineteen-fifties and the early sixties.

Now, in his living room, he repeats, "I'm hoping to be able to have three more years. I'd like five, but I'm very conscious of my age. Look, I'm not selfish about it. I'm not going to bother anybody by hanging on too long, but I would like to see the library finished. Perhans I will have to retire some day, but I'm not setting any definite date."

The headmaster recently wrote a long, discursive letter to all Deerfield alumni and parents in which he obscurely used the word "retire." Hundreds of eloquent testimonials and thousands of dollars arrived by return Answering the letters, he everyone and assured them that he had no intention whatever of retiring. "I've got to intention whatever of retiring. "I've got to do an awful lot in three years, if I can," he says. "I have a feeling that if you've got something good enough to be preserved, it will be. I just kept working. I have never had time enough to concentrate on any one difficulty. The thing I have tried to build is a unity of feeling. The thing I hope is always retained here is the school's flexibility. always retained here is the school's flexibility. We've just kept abreast of the times. We haven't gone wild. There's a sense of permanence in the school." He looks with surprise at some notes about the academy that were written by him in 1906. They have been filed away for sixty years, and he has forgotten that they existed. "The object of the school hould be the development of pharacters to should be the development of character, to help each pupil to do that for which he is best suited," he reads. "This can be done in the country, because the comparatively small numbers make it possible to do much personal work, and the relationship between pupil and teacher becomes more intimate."

"Not bad," he says. "I was ?'head of things, wasn't I? I didn't know I could do it."

-JOHN MCPHER

Support for Our Fighting Men in Vietnam

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. MULTER. Mr. Speaker, the 1966 graduating class of George W. Wingate

High School, in the finest spirit of our American tradition, has dedicated its yearbook in the following manner:

In this world of conflicting ideas, In this world or connecing iteas, may this book be a symbol of friendship to be cherished in the years to come.

As we recall the events that shaped the world during our years at Wingate, we will

remember those who fought for the ideals they believed in.

We the graduating class of 1966 dedicate our yearbook to the troops in Vietnam, and hope that some day all people may be free and at peace.

I know that all of the Members of the Congress join with the graduating seniors of Wingate in their desire for a lasting peace.

The yearbook called Mosaic, 1966 is. indeed, a fine literary and artistic piece

An interesting innovation is the insert in the back of the book containing the school songs in print and on a disc record.

The school principal and faculty and more especially the faculty adviser, Samuel B. Koltun, have every right to be proud. Their students reflect credit proud. upon their teaching by this accomplishment. Congratulations to them and to the entire student body.

Stockholders Should Wake Up!

EXTENSION OF REMARKS

OF

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, June 23, 1966

Mr. SHRIVER. Mr. Speaker, under leave to extend my remarks in the REC-I include the following editorial written by Mr. Floyd Souders, editor of the Cheney Sentinel. I commend Mr. Souders' timely and pertinent article to my colleagues and other interested persons who read the Congressional RECORD.

STOCKHOLDERS SHOULD WAKE UP!

The people are the stockholders in the greatest corporation in the world, the U.S. government. Just as in a business corporation, they elect the officers and directors of the "company." If the officers of our government corporation spend its money faster than income and good business practice war-rant, it is up to the stockholders (voters) to express their views at annual meetings

If they don't do this, and if they accept constantly greater dividends (gifts) than the corporation's income can stand, they are headed for trouble. In the case of governthat means assessments (increased taxes) for every stockholder (citizen)—or economy to bring the operating costs of the corporation within its income.

The stockholders in the U.S. government corporation have a choice—they can instruct their hired officers and directors to cut ex-penses to income, or they can pay higher

The result of rising public debt, waste and demands from voters for handouts is infiation. The stockholder voters are getting a taste of inflation. But, they have seen noth-ing yet, unless they curb their own demands and those of their elected officers and directors. They still have free elections and the right to vote and express their wishes. we have. It makes no sense to constrict it with dams in order to make money; most especially as long as any contention exists that steam plants could do the same job.

Grand Canyon Danger

EXTENSION OF REMARKS

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. BROCK. Mr. Speaker, those of us in Conugress concerned about the increasing destruction of our natural resources stand firmly against the proposed Grand Canyon legislation which would authorize the building of dams to flood portions of this great scenic wonder.

I sympathize with the plight of those living in the Southwest for an adequate water supply. The purpose of these dams, however, is not to increase avallability of water, but, rather, to raise revenue from the sale of electricity in order to pay the costs of importing water from the Columbia River. Electricity could be generated at least as cheaply by steamplants without destroying the natural beauty of the Grand Canyon.

Mr. Speaker, under unanimous consent I include an editorial on this important subject in the June 25, 1966, Chattanooga Times in the Appendix of the RECORD:

GRAND CANYON DANGER

We hope the Tennessee delegation in Congress and all others interested in conservation will oppose the Administration-backed bill to build dams above and below the Grand Canyon. Vigorous opposition will be necessary, even though the case against the measure is obviously strong.

The reason advanced for the building of

The reason advanced for the building of these dams is not flood control, the provision of water for the Southwest or anything else but the generation of revenue through electricity sales.

What the incomparable Grand Canyon gets is a flooding in part, destruction of some of its beauty and a general encroachment on its natural state.

Rep. Bill Brock says: "Conservationists are unanimous in their opposition. They suggest that electricity could be generated at least as cheaply by steam plants. . . I believe they are right, but the fight will be difficult to win."

Proof enough of this lies in the fact that one day after the Sierra Club ran newspaper advertisements about the danger to the Grand Canyon, the club received notice from the Internal Revenue Service that contributions to it would not necessarily be tax deductible any longer.

Propaganda organizations have no right to deduct their activities. But we say that the Sierra Club is in an entirely different role in this instance. The law says that an organization that devotes a "substantial" portion of its income or efforts to politics is lobbying. But the IRS has no standard definition of "substantial."

In the meantime, the club is unlikely to get many contributors until its status is decided. And the move smacks of harassment and reprisal.

It should strengthen the resolve of those who want the Grand Canyon preserved as it is against bureaucratic assaults. The canyon is perhaps the foremost scenic wonder

Wayne State University Policy on Student Draft Deferment

EXTENSION OF REMARKS

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. DIGGS. Mr. Speaker, I include in the RECORD the following letter and statement by Dr. William R. Keast, president of Wayne State University:

WATNE STATE UNIVERSITY, Detroit, Mich., June 20, 1966. The Honorable Charles C. Diggs, Jr., House of Representatives, House Office Building, Washington, D.C.

MY DEAR MR. DIGGS: Knowing that you are concerned about the operation of the Selective Service System and about the future of higher education in Michigan, I take the liberty of enclosing a statement on the Wayne State University policy with respect to certain aspects of student draft deferment. I would be happy to have your comments. I hope very much that the Congress will undertake as soon as possible a thoroughgoing review of national service policy. I would be happy to lend any assistance I can to such a review.

Sincerely yours, WILLIAM R. KEAST,

R. KEAST, President.

WAYNE STATE UNIVERSITY POLICY ON SELECTIVE SERVICE

(By William R. Keast)

The changing guidelines for student deferment under the Selective Service System, and the widespread concern over the operation of the system in general, especially as it involves the university, make it urgent that we review the policies under which Wayne State University's relations with Selective Service System are conducted. This statement is confined to the role of the University, under current legislation and national policies, in providing information to be used by Selective Service Boards in deciding upon the deferment of students. It does not attempt to deal with national service policy as a whole.

I hope that this statement will not only clarify Wayne State University policy but that it will contribute to general discussion of an urgent national problem.

Before turning to questions of immediate University policy, however, I wish to record my strong personal conviction that a comprehensive review of our entire national service policy is long overdue and urgently needed. The deferment of college students, whatever the method of its administration, should be prominent in such a review. The present system of student deferment is, in my judgment, deeply inequitable. Access to higher education is very unevenly distributed in our society. Identification of students as a separate group eligible for deferment, without regard to other factors, has had the effect of reinforcing major defects in our educational system and of compounding inequities in our social and economic structure.

If university students are to be deferred, however, and if universities are expected to

provide information on which local boards can base their deferment decisions, universities have a heavy responsibility to insure that such information is as accurate and reliable as possible. They have an equally heavy responsibility to insure that in its dealings with the selective service system, the university does not distort or damage its educational program or compromise fundamental responsibilities. This re its This review of University policy is prompted by the fear that information now being requested Selective Service is not and cannot be reliable enough for the serious purposes for which it is to be used, and that the procedures required to provide the requested information may indeed prejudice the educational program and objectives of the University.

Until the Spring of the current year, Selective Service guidelines for student defer-ment required local boards to determine whether a registrant was enrolled in a regular academic program, and whether he was making satisfactory progress toward completion of that program in the time normally required. Wayne State University has supplied to local boards, when requested to do so by its students, official statements on these questions. It has also supplied, at the stu-dent's request, transcripts of his course record and grades to supplement the statements concerning enrollment and progress. Wayne State University will continue to provide these categories of information to Selective Service Boards when requested to do so by its students. Such information is also customarily provided, for example, to prospective employers and to other schools to which students may wish to transfer. A student would seem to have a right to this information and to its distribution. The only requirement is that the student himself initiate the request that it be supplied to any agency outside the University.

The revised Selective Service guidelines on student deferment issued this Spring introduce a new element. Selective Service Boards are now directed to consider not only the student's status and his progress toward a degree, but in addition his class standing or, alternatively, his performance on the new Selective Service Test. These new factors are intended to provide local boards with a basis for selecting, from within the group of students making satisfactory progress toward degrees, those to be called first as draft quotas increase. Students are eligible for deferment, in general, if they rank in the upper half of the full-time male students in their class at the end of the freshman year, in the upper two-thirds at the end of the sophomore year, and in the upper three-quarters at the end of the junior year. Graduate stu-dents are eligible for deferment if they ranked in the upper quarter of their undergraduate senior class. Students falling below these ranking points are eligible for deferment if they score 70 or above on the Selective Service Test as undergraduates and 80 or above as graduates.

Class rankings may be determined in any way an institution sees fit, provided the ranking includes only full-time male students. Rankings may be determined by colleges within the University or on a university-wide basis. They may be based on cumulative grade averages or on a term-byterm analysis of grades.

Currently, Wayne State University practice is to determine and record the class rank, by college, for men and women together, only for students completing an undergraduate degree program, on the basis of the student's total record. Class rankings are not recorded for freshmen, sophomores, and juniors. The questions of University policy, therefore, are whether to make such rankings before the end of the degree course, whether to rank male students alone, and whether to make these rankings available,

c si h ti a g a st

upon request by students, to local selective service boards.

After careful review of this question, in which I have had the benefit of the advice of the University Council Policy Committee and the recommendation of the University Council, I have come to the conclusion that it is unsound educational policy to establish class rankings of Wayne State University students prior to the completion of their undergraduate programs of study and to make rankings available for use outside the University. (I have serious reservations about our present policy of making senior class standing a part of the student's final transcript, but I am not prepared to modify this policy without further study.)

The educational arguments against class rankings are numerous and in my judgment compelling. Many of them have been put forward in the public discussions of selective service during recent months. I have space here to list only a few of the more important

of them.

1. Grading practices and standards vary widely among members of the same faculty, among units of the same university, and between institutions. Inferences as to comparative aptitude, application, and progress based on such variable measures are highly unreliable. Institutions also vary greatly in their selectivity, in the quality and intellectual homogeneity of their student bodies, and in the rigor and difficulty of their programs. Comparisons among students of relatively equal ability or promise enrolled in different institutions will almost certainly be untrustworthy, even if we could assume that grading standards were comparable.

2. It may perhaps be possible to make tolerably accurate discriminations between the very best and very poorest students in a class on the one hand, and the great bulk of stu-dents on the other. But fine distinctions based on grade-point averages among students in the large middle range-and this is the zone where such disinctions must be made for Selective Service purposes—are impossible to make with confidence. The attempt to do so leads to absurdity. It regularly requires computing grade averages to the second or even the third decimal place. A grade of 3, or B, may be intelligible if we know enough about the institution, course, the teacher, and the other students. But what does an average of 2.926 mean? When such averages are rank ordered, further absurdities appear. The last student in the upper half of the class is found to have an average of 2.435, and the top student in the lower half of the class has an average of 2.429! A selective service board, informed, that the first student stood in the upper half and the second student stood in the lower half of his class, might well believe it was making a rational decision if it continued to defer the first and drafted the second. But a university would surely be remiss to mislead serious citizens in this way. Its culpability would be the greater if it were to follow the advice of a national professional organization on how to break ties between students who have identical averages: "date of birth and alphabetic sequence." we are informed, are "reasonable" ways of breaking

T

an

gs

itv

ch

nd

3. The emphasis on grades and class standing produced by these selective service procedures will surely intensify several undesirable features of our present system of higher education. Many educators are troubled by the emphasis on conventional academic achievement in the form of high grades already pronounced in our colleges and universities, and indeed in our secondary schools as well. Competition for admission to colleges, competition for graduate places and for scholarships and fellowships, and competition for employment opportunities often distorts the normal patterns of intelectual growth, curbs the impulse to experi-

ment and explore, which should be encouraged in college students, and suggests to students that immediate and obvious evidence of achievement, whether or not accompanied by other evidences of personal development, by other evaluation of the socially destrable. These pressures are also likely to inhibit needed experimentation in colleges and uni-University faculties across country are trying to find ways of breaking the academic lock-step. Experiments are being carried out, for example, to substitute "pass" and "fail" for traditional grades for the entire freshman year, or for a certain portion of the student's entire program, as a means of encouraging students to broaden interests. Such academic -which we should consider at Waynementswould be difficult or impossible under a system of regular class ranking of the sort contemplated by the new selective service guide-

4. Class rankings are likely to operate to the disadvantage of the student who can pursue his education only if he is employed, because his performance will be limited by the time he must devote to his job. Approximately 75% of the Wayne State University students are employed. To compare their class standings directly with those of students of comparable ability who are not obliged to work for a living will place our students at a disadvantage.

students at a disadvantage.

5. The awareness on the part of both student and teacher that grades are to be converted into class standings for a purpose not directly educational may well introduce into their relationship an element prejudicial to fruitful educational experience. Some instructors will be too lenient. Some students will substitute compliance for serious inquiry with the risk of being wrong. In any event all will be aware of a new and disturbing presence.

These are some of the reasons that have led me to conclude that the determination and publication of detailed class rankings is educationally undesirable. The University Council has recommended that the University should not provide class rankings on its students. I have attached the Council's recommendation on this and related topics. I am directing the University's administrative officers to inform selective service boards that class standings will not be provided for students before the completion of their undergraduate studies. We will of course review this policy continuously. We will conduct discussions with student representatives to assess its impact.

This policy cannot be put into effect immediately. Wayne State University students may have decided not to register for the June Selective Service Test (the last scheduled until Fall 1966) on the presumption that their class standings would be reported and would be high enough to make them eligible for deferment without reliance on the test. We must not place these students at a disadvantage. Therefore, class standings will be determined on an individual college basis, using cumulative averages, for all male students as of the end of the Spring Quarter 1966. Individual standings will be reported to local boards upon the registrant student's request. Thereafter, or until selective service guidelines and procedures are modified, class standings will not be available. Registrants will therefore need to consider taking the Selective Service Test as an alternative.

I am aware that the policy announced here is at variance with the current practice of most institutions in Michigan and elsewhere, and that it runs counter to the recommendations of certain national educational associations. I hope to see a widespread reappraisal of current institutional policies. Accordingly I am forwarding copies of this statement to my colleagues on the Michigan Council of State College Presidents and in the Michigan Association of Colleges and Universities with

a request for early meetings to discuss the issues. I am also sending copies to the Presidents of the American Council on Education, the Association of State Universities and Land Grant Colleges, the American Association of Colleges, and the Association of Urban Universities requesting them to join me in a call for immediate review of Selective Service procedures affecting education.

The educational issues discussed in this statement include but a few of the pressing problems identified in recent months as reasons for a comprehensive reconsideration of our entire national service policy. Therefore I am sending copies of this statement to Michigan members of the Congress, to members of cognizant House and Senate committees, and to officers of the Federal Administration strongly urging such a review.

Who Manipulates the "Student Protest"

EXTENSION OF REMARKS

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mrs. KELLY. Mr. Speaker, I found the following article a most interesting analysis of the "organized student protest." "Who Manipulates 'Student Protest'?" could well bear reading by all my colleagues who are trying to cope with this problem of our youth in revolt in their own cities and towns.

[From the Washington (D.C.) Post, June 20, 1966]

WHO MANIPULATES 'STUDENT PROTEST'?
(By John Chamberlain)

When this country dies, the medical examiner's verdict many very well be that it has perished of its own innocence.

Curiously enough, one of the main culprits in sustaining this innocence is our vaunted scientific method. Here we have at hand a rather exhaustive statistical poil purporting to determine "the scope of organized student protest in 1964-1965." It comes to us from the Educational Testing Service of Princeton, New Jersey, and the man who has put the polisters' material into analytical words is Richard E. Peterson.

The Educational Testing Service survey

The Educational Testing Service survey sought to get behind the "stereotypes" epitomized by the Berkeley revolt, and it succeeds in making a case for the view that "proportions of students involved in pacifist demonstrations were, comparatively speaking, quite small." As for the "proportions of student bodies actively objecting to U.S. Vietnam policies." these by no means matched the number of protesters against such politically innocuous matters as dress regulations.

Off-campus questions of civil rights moved more protesters than any other issues. But the issue of food—"organized unhappiness about institutional cooking"—ranked second as an issue for campus protest, well ahead of such questions as Vietnam, the Dominican Republic, "ban-the-bomb," and the censorship of student publications or clampdowns on campus appearances of "a particular person of leftist persuasion."

All of this data is worth having, for it tends to "cool" much of the excitability engendered by reports of the student "revolt." But the survey is woefully deficient when it comes to probing for the origins of the "new student left." It utterly ignores the question of the forces that have been working behind the scenes to harness "left-

ist" protesters to the end of serving Soviet and Red Chinese foreign policies at the expense of basic U.S. interests.

The survey speaks vaguely of "the activities of the Student Nonviolent Coordinating Committee and the Students for a Democratic Society . . and other organizations (that) are clearly working on a number of fronts to expose and eliminate perceived sources or injustice and contradiction . . . in American society."

But you will search in vain through Peterson's pages for anything bearing on the role of the "Old Left," whether Soviet Communist or Maoist or Trotskyite, in penetrating and twisting the operations of supposedly indigenous student organizations.

indigeonous student organizations.

The FBI has documented the role of 75 young comrades who were trained by Communist leaders Gus Hall and Herbert Aptheker at Camp Midvale in Ringwood, N.J., to go forth and make the DuBols groups the "youth section" of the Soviet Union in the United States.

If "student radicalism" is worth probing, it should be probed in terms of its organizing dynamics as well as in terms of its answers to abstract questions about "justice." But the computer is evidently blind to questions of origin and control. This is the "new science," a cunuch thing.

Tribute to Harvey O. Payne

EXTENSION OF REMARKS

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 14, 1966

Mr. PICKLE. Mr. Speaker, at the recent annual convention of the Texas State Bar in San Antonio, Mr. Harvey O. Payne, director of public relations for the State bar, was honored for his outstanding contributions to the organization during the past 10 years.

Over the past 25 years, I have had the good fortune of knowing and working with Mr. Payne. We were both area directors under the old National Youth Administration in the early days of that fine program.

Years later, I had the privilege of working with his lovely daughter, Janis, when she was a member of my staff in Washington. Harvey Payne, his genial and vivacious wife, Mary, and Janis, are great citizens and leaders in their community.

Mr. Payne's keen observations and timely recommendations have been of immeasurable assistance in the successful efforts of the Texas State Bar.

Mr. Payne, who possesses a warm and endearing personality, has also on numerous occasions provided invaluable assistance in cultural, civic, patriotic and charitable endeavors.

The plaque honoring Mr. Payne was presented by Mr. Byron Fullerton, assistant dean of the University of Texas Law School, and I believe that Mr. Fullerton's remarks provide a fitting footnote to the distinguished career of Mr. Payne, and so therefore I commend his words for your attention:

PRESENTATION OF PLAQUE TO HARVEY O. PAYNE
It is hard to conceive of anyone from
Hutto, Texas becoming a success at anything—but we have finally located one man
who deserves the title of "The Pride of
Hutto" because of his success in his chosen
profession.

Harvey O. Payne, Director of Public Relations for the State Bar, has served the bar since 1956 with loyalty and distinction.

The Public Relations Committee, its present and past members, take this means, Harvey, of saying "Thank You" for the ten years of distinguished and effective work you have done in behalf of the State Bar.

We need not recite your work but we do point with pride to the great benefits realized by the Bar from what is considered by many to be the finest public relations program conducted by any state bar association, a program planned and executed largely through your efforts.

On behalf of the Public Relations Committee I present this plaque to you. It reads as follows:

"Presented to Harvey O. Payne with deep affection and appreciation of his services as Director of Public Relations of the State Bar of Texas. 1956-1966. From present and former members of the Public Relations Committee of the State Bar. General Assembly, State Bar of Texas, San Antonio, Texas, June 30, 1966."

You can now say that you are truly the greatest of all Hutto Hippos.

And we do not want to overlook the farsightedness of such men as Homa Hill whose dedication to the bar spawmed the public relations program and retained the services of Harvey Payne. To these men we also express our apperication.

The Promise of American Life

EXTENSION OF REMARKS

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. BLATNIK. Mr. Speaker, the full promise of American life for each and every citizen is a goal toward which we are all striving. The Congress has taken and is continuing to take giant steps in this direction. In the midst of unprecedented prosperity for most, striking examples of special hardships remain.

A call to abolish the barriers to fulfillment of the promise of American life for all was eloquently issued at the commencement of the University of North Carolina at Greensboro in Greensboro, N.C., June 5, by the Honorable Frank E. Smith, a former Member of the House who is continuing to serve his country as a director of the Tennessee Valley Authority.

Through our service together on the House Public Works Committee, I have personal knowledge of Mr. Smith's service and dedication to improvement for all sections of the Nation. His remarks at Greensboro reflect that dedication to the full promise of American life for all people. I am including his address at this point in the Record:

THE PROMISE OF AMERICAN LIFE

More than fifty years ago a young scholar named Herbert Croly published a book called "The Promise of American Life." It still ranks as one of the most influential books in American history. Woodrow Wilson's New Freedom and Franklin Roosevelt's New Deal both reflected the ideas it encompassed. In that book Croly first voiced the concept that massive government intervention should boister the economic system in times of stress, a remedy commonly accepted today by all political faiths.

Today the American economic system, working in collaboration with government, has achieved a state of prosperity and stability virtually undreamed of a few years ago. Those of your generation fortunate enough to receive above-average education enter a world where economic security is almost a fact of life.

There are, of course, significant exceptions to this prosperity and security. There are regions of the country in which industrial expansion, automation, and change have been too swift to accommodate all the unprepared human beings involved. The most striking examples of these archaic economies, with their resulting hardships, are the coal regions of Appalachia and the cotton country of the deep South, but there are others, equally acute if not equally publicized—the remote forest areas of the Far West, for example.

Aside from the regions where there is special hardship today, there is another kind of exception with an even more crushing type of hardship—that of the disadvantaged and the uneducated, whatever their race, or their age, or their locale. You will recall that in heralding our new world of unparalleled economic security, I carefully limited the guarantee to those members of the new generation who had the benefit of an above-average education. For the young Negro who fits this definition, today's opportunities have never been equalled. By contrast, however, the uneducated Negro actually faces the probability of falling even farther behind his educated brother than he already is.

If, without forgetting our obligation to improve these exceptions, we accept the success of the American economy, what then is to be the promise of American life for your generation?

One of the privileges of youth is your tendency to ignore the long stretch of time. So, though you have very likely not realized it, your generation will dominate our society for the remainder of the 20th century. I suppose you have to reach my age bracket before you begin to realize that the actuaries count you better than half done, and to balance the years and what you've done with them against the span and spirit of man.

I don't think anyone would take issue with me if I said the 20th century has been the most cataclysmic in history, for both good and ill. We necessarily believe that the good outweighs the ill. But the 20th century is two-thirds gone. In terms of the promise of American life, what, for the next 34 years, will it be? Or perhaps the more important question is, what should it be? I am an optimist, and I believe that the answer to the second need not be far removed from the answer to the first.

On that premise, what must the promise be? First of all, it must bring to full reality the promise of equal citizenship given in the Declaration of Independence and the Constitution. In the great social and political revolution of the past few years, the last important legal barriers to this reality have fallen. The Federal Government is fully committed to the task of eliminating second-

a A ti s si d

ir

class citizenship. In the days ahead here in the South, we should not be content until our state and local governments reach the same commitment.

There is every reason to believe that this goal can be achieved. One of the great hopes for the future of American life is that there will be lifted forever from the white Southerner the burden of conscience of race which he and his forebears have had to carry for three hundred years. There is every reason to believe that the affluence of our economic system will continue through your lives and beyond. Enlightened business leadership, as well as enlightened governmental policy, will both contribute, for both have now accepted their responsibility to maintain full employment and the fullest possible prosperity.

As I mentioned earlier, however, there are still blight and hardship in the midst of this unprecedented national prosperity. There is no reason why they should be allowed to femain. The War on Poverty, with all of its imperfections, is evidence of the national will to reject economic deprivation for any citizen. The commitment to the future must be continuing efforts to increase the efficiency of our economic system so that it can utilize the productive labor of every citizen. The pressures for a larger labor force today, both skilled and unskilled, provide ample proof that our American system can be so improved that it will offer economic security for every citizen.

The scourge of poverty and hunger will be eliminated in its entirety only by an economic system that operates always at the

top level of efficiency.

Active government intervention has been necessary in the past, and it will undoubtedly be necessary in the future. The greatest need, however, for our economic system is a better educated citizenry. Better prepared workers and managers can provide greater productivity for the system, and thus enable continual improvement in wage and salary levels. Better education is therefore probably the best contribution that government at all levels can make to the American future.

Flowing from the potential productivity of our economic system, there is good reason to believe that every citizen should be able to earn a return above the level we have come to define as poverty. For that matter, there is no reason why our standards for measuring poverty should not become broader every year. Tomorrow's minimum standard should be, and can be, what is regarded as a medium standard today.

It is easy to belittle the potential of economic utopia and talk about the dole and the alleged adage that the poor must always be with us. Of course, there will always be individuals whose personal handicaps, physical or psychological, are so great that they cannot meet a useful responsibility in society, but there is no real evidence at all to support the theory that Americans will not respond to valid opportunity with productive work. The contrary is being proved every day, as labor supply becomes more difficult and valuable new additions to the labor market are regularly drawn from groups heretofore considered useful for only the crudest of unskilled work.

Even though we recognize that we are not likely to achieve a complete economic utopia, I think we can all safely accept the fact that for most of our society, the struggle for bare existence is behind us. Just a generation ago this was a fiercely real struggle for most Americans, and it is not surprising that there has been much comment about the seeming obsession with personal economic security on the part of my own generation during the two decades since World War II.

All but the exceptionally underprivileged of our society are now reasonably assured of economic security. Does that leave a meaningful goal for the generations who will grow into maturity and dominance during this

last third of the century? I believe it does, but, even more, I believe the realization of that goal can offer more to mankind than civilization has ever had the opportunity to achieve. In a word, that goal should be quality—the quality of life.

The quality of life will be much improved by the elimination of racial injustice and discrimination. It will be further improved by the elimination of economic injustice, which denies a reasonable opportunity to earn the level of livelihood that makes possible present-day standards of comfort and security. The quality of American life will be improved, too, by the new recreational opportunities and facilities essential for vigorous people with healthy bodies to enjoy.

But the most important addition to the quality of life must be an intensely personal one, the greater individual capacity to absorb, appreciate, enjoy, and extend the lasting values of the intellect and the spirit which are the supreme contributions of our heritage of Judeo-Christian civilization. We need to build and preserve a physical environment which permits an appreciation of esthetic qualities that our ancestors were denied by the sometimes grubby and mean affairs of the daily struggle for existence. Exposure to artistic creation, nature's and man's, can help develop an appreciation for qualities of life too often unknown to much of our population.

It will be your task to build a society that gives free and full reign to the development of man's intellect. Thus the economic growth essential to America's future must include varied education, from the basics needed to comprehend and communicate to the scientific and inventive genius upon which we have come to depend. But much beyond these fundamentals, education must be a stimulation of the intellect to help us achieve more of the finite and infinite capacity of the human mind.

For too long we have depended upon luck and circumstance for the men who have left the marks of achievement on their fellow man and on succeeding ages. Far from disparaging these achievements, let us create for the future a citizenry keenly perceptive enough, and appreciative enough, of the intellect to assure us that there will be no unrecognized or undeveloped genius. An educational system that offers opportunities limited only by each man's capacities and initiative is the only way to achieve this.

We have been talking about the American future and the American institutions which must create it, but we all realize that a parochlalism which would limit our progress or our failures to national boundaries would doom us. Full economic achievement is vastly dependent upon economic expansion in the rest of the world. The American economic system influences the whole world and is in turn influenced by factors throughout the world. The attainment of a stable and peaceful world is basic to fulfillment of the promise of American life.

We are far more mature about the world in general than ever before. Hopefully, our maturity will let us approach the problems of world relationships in such a way that we will not collapse into obliteration of the civilizations we have achieved.

The steadily developing maturity which has marked our relationship with the Communist powers is an example of the progress that has been made and that must be continued on a vastly greater scale. No political doctrine is more abhorrent to the American people than that of totalitarian Communism. We have checked its spread in the world at considerable sacrifice in both blood and money. Striving to hold this aggressive ideology in relative checkmate, we have come to realize that we have to coexist with it or face the witless alternative of a war of annihilation. We have seen healthy evi-

dence that the same pressures for a better life which motivate us also influence the people of Russis, with a resulting, if reluctant, acceptance of a balance of power while the needs of individual citizens are met. There is reason to believe that some of the same inevitable pressures are beginning to work in China. Nothing has changed enough to warrant relaxing our guard against the aggression of the Communist powers, but there is certainly a faint outline of the way out of the dilemma of armed camps at permanent standoff. Unremitting search for an end to the cold war must be continued, for without its eventual solution, the promise cannot become reality. That solution must rest on a common realization that the ideals of human life hold no place for human slaughter.

This, then, is what the promise of American life should be. Its fulfillment is essential, and it doesn't really matter whether we want it selfishly in order to achieve our own hopes for our own country, or in order to attain the universal hope of peace and brotherhood for the world, because intelligent American leadership is also essential to permanent

world peace and stability.

We will not succeed, however, without the kind of activist, discontented, provocative minds that have always made the greatest contribution to our country's achievements. Those minds do not grow out of placidity. In spite of the relative physical comfort and security we have now, and to which we will grow even more acclimated in the future, we will succeed only through hard work and sometimes frustrating struggles. It is these struggles which offer the true challenge and the ultimate excitment for you and your generation.

The popular notion that we can live without atress and conflict is one of the philosophic errors of our time. A world so cushioned and sheltered against experience would not be worth the trouble to the healthy, intelligent human. Another passing fad is the notion that drugs or other artificial stimulants are needed to induce excitement and revelation. The world around you, for anyone who bothers to examine it, is full enough of excitement, in the fight for a better life, and of the revelation of the height to which man's spirit can soar in the process.

So far, everything I have urged upon you could as well have been said at any university, or before any audience. But what I am about to say has a real significance for each of you. It refers to another current notion and one I would ask you to consider with We are told from every sort of forum that we have wasted the talents of women, and so we have. I would deny the whole theme of my statements today if I suggested that you should not pursue careers and seek in that way to add to our intellectual community and our progress. But I do suggest that it also lies with you to develop successors worthy of the climate you must strive to create, and that you should not short-change the importance of the children who will one day shoulder your tasks to such an extent that you fragment your energies and your talents and in the end achieve nothing so much as the destruction of your own serenity. A great deal of what we call civilserenty. A great deal or what we call civilization is, in fact, tradition, and to a large extent tradition is the province of home. It survives, to sustain, by being passed on, and children do in fact become what their parents inspire them to become. I hope you will remember with confidence and a great deal remember, with confidence and a great deal of satisfaction, that contributions to the intellectual and spiritual progress of man are not all made by manning a microscope or a computer.

In whatever realm you elect to work, and upon whatever path you choose to follow, my invitation will be open to you. I invite you to join in the quest for quality in American life.

The 158th Birthday Commemoration of President Jefferson Davis

EXTENSION OF REMARKS

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. ABBITT. Mr. Speaker, on June 4, on the occasion of the 158th birthday commemoration for Jefferson Davis, there was held, in Statuary Hall of the Capitol, a ceremony under the auspices of the United Daughters of the Confederacy, District of Columbia division.

For this ceremony, they selected Mr. John N. Wheelock, executive director of the Federal Trade Commission, as their speaker, and he made a very fine ad-

dress.

I wish to include herein with my remarks, the text of his address and commend it to the reading of the Members of the House.

The address follows:

SPEECH BY JOHN N. WHEELOCK, EXECUTIVE DIRECTOR, U.S. FEDERAL TRADE COMMISSION, JUNE 4, 1966, ON THE OCCASION OF THE 150TH BIRTHDAY COMMEMORATION FOR PRESIDENT JEFFERSON DAVIS, IN STATUARY HALL, U.S. CAPITOL, WASHINGTON, D.C., PRISENTED BY THE UNITED DAUGHTERS OF THE CONFEDERACY, MRS. WAYNE R. DELANEY, PRESIDENT, DISTRICT OF COLUMBIA DIVISION

Mr. Payne, Madam President, Madam President General, Daughters of the Con-

federacy and Friends.

I want to express my appreciation for the singular honor you have bestowed by allowing me to assist you in perpetuating the memory of Mr. Jefferson Finis Davis on this, his one hundred fifty-eighth birthday. Down through the ages men have distinguished themselves for as many reasons as there are grains of sand on the desert.

In Jefferson Davis, we find a man steeped in a selfiess devotion to an ideal, a principle, a way of life that men had struggled to achieve since the beginning of recorded history. The dream seemed to have become a reality 25 years before the birth of him, whom we honor today, in the ratification of the Constitution of the United States.

Jefferson Finis Davis could not have been other than he was—being the tenth child and last issue as well as the fifth son of Samuel Emory Davis, a Revolutionary War soldier, and ardent admirer of Thomas Jefferson and Jane Cook Davis, who numbered among her relations, one General Nathaniel Green of Rhode Island, the same Nathaniel Green who put the British to rout in South Carolina. Jefferson Davis' middle name leads us to suspect that among his parents' many virtues lurked a fine sense of humor, since he was to be the last child through nature's intervention, they gave him the middle name of Finis.

The name Jefferson was given to honor the author of the Declaration of Independ-

At birth, because of an ailing mother, his care passed into the hands of his sister Ann, then 16 years of age.

We conjecture that from Ann he learned to appreciate beauty and gentleness. From a stalwart, physically active father and the older brothers, who worked the fields along side their slaves, came the lessons of manhood. An oft quoted family axiom was "Cowardice is the most contemptible of bad qualities." The lad's formal education began at the age of 5 in the usual backwoods

log cabin school. At age 7, his Baptist reared father, being dissatisfied with the scholastic quality of the school, decided to send the boy to St. Thomas, a Catholic school located in Kentucky. Jefferson accompanied a friend of his Brother Joseph's on this 700 mile journey by horseback and coming to Nashville, Tennessee, he was introduced to Andrew Jackson and spent several days as "Old Hickory's" guest. In later years, he was to remark of his brief sojourn with Mr. Jackson, that prior to our meeting, I had heard that the General could cuss streak, therefore while in the General's com-pany I listened very attentively, but to my disappointment not one curse word did he Needless to say, the brief visit made Taking a lasting impression on the boy. leave of the Jacksons, Jefferson Davis continued on the journey and arrived at St. Thomas School in good time to begin the term. Since the child was the only Protestant and the smallest boy in the school, an elderly priest took him under his protection, had the boy's bed placed in his own room, and looked after him as a father would a At St. Thomas, Jefferson witnessed the fruits of service and self-abnegation. good friars of the school were careful to isolate him from their religious teachings and he gained a thorough respect for discipline and authority.

There came a time when young Davis felt that he wanted to embrace Catholicism and he voiced his desire to Father Angler at the dinner table one evening. Remarking on this incident years later, Mr. Davis said, "When the good Father heard what I had to say, he looked at me for a moment with a sweet and gently indulgent smile, and replied, "That for the time being you had better partake of some nourishing Catholic food and offered me some biscuits and

cheese."

Toward the end of his second year at St. Thomas, Jefferson was called home at the insistence of his mother. It was decided that the return trip would be made by steamboat, a mode of transportation starting to appear on the great rivers of America. at the age of 9, he became one of the first Americans to use this method of travel. On the slow voyage down the Ohio, thence into the Mississippi, the impressionable, astute observer with an open mind, rested little. It has been written that questions were ever on his lips, his inquiries delved into facade of what he beheld and heard. Captain deHart, the Commander steamboat Aetna, on which young Jefferson Davis was a passenger was thoroughly examined by the boy, throughout the voyage. The good Captain jokingly remarked to brother Joseph that he felt himself fortunate indeed that the boy was not a member of the Marine Examining Board at the time of his application for a Masters License. As the steamer plied its way down the river, making stops to pick up and discharge cargoes at various and sundry settlements, Davis noted the appearance and listened to the conversations of the men at the docks. He was singularly impressed by the cleanliness and independence of the Indians who came to the boat to trade fresh killed meat for staples. He noted that the Indians were a cleaner lot than many of the white men he had seen along the river. The vastness and dynamism of his country began to impress itself on his comprehension. It was as if he sensed the pulse beat of America.

He was enthralled by the panoramic beauty of its geography and said as more than the pulse beat of the pentral beauty of the geography and said as more than the pentral beauty of the geography and said as more than the pentral beauty of the geography and said as more than the pentral beauty of the geography and said as more than the pentral beauty of the pe

He was enthralled by the panoramic beauty of its geography and said so many times. At long last the Astna docked at Natchez, population 2.000, where his brother Joseph had a

law practice.

Brother Isaac had come from Woodville to meet him and when Isaac and Joseph met the young man at the gangplank they were delightfully surprised at how he had grown. The self assurance of his mannerisms and

way of speech were noted and Joseph sensed that here was no provincial lad, but a young man who was better traveled at age ten than most adults and that the seeds of a first rate liberal education had been planted in fertile soil. The welcome he received on his arrival home was more than warm, it was the first and last time he ever witnessed his mother's tears and his father who had always suppressed deep emotional feelings, threw his arms around the boy and kissed him again and again. After a brief rest, Jefferson Davis. was entered in Jefferson College and during his attendance at the school, he spent the weekends with Joseph in Natchez. seph, at this period, was in the middle of drafting the Constitution of Mississippi, which incidentally, was admitted to the Union on December 10, 1817, which happened to be Joseph's 33rd birthday. After a year at Jefferson College, Jefferson Davis was transferred to the Academy of Wilkinson County, a school closer to his home. It was while attending this school that young Davis felt that the work load was beyond his abilities and he complained to his father about it. After a moments reflection, his father informed him that all the members of the family must work with their heads or their hands and if Jefferson felt that the school work was too difficult for him, he would employ him in the fields. After two days in the blistering hot cotton fields, Jefferson returned to school and complained no more.

At 13, Jefferson Davis was considered ready for University training and he was enrolled in Transylvania University at Lexington, Kentucky. The president of the school was an ordained Unitarian minister from whom Jefferson learned religious tolerance. At Transylvania, he developed an avid taste for reading and seldom took part in sports. It was at this time he made a lifelong friend of Albert Sidney Johnson who became his "ideal of manliness." It was here that he came under the eye and won the "favorable re-

gard" of Henry Clay, whose son was one of Jefferson Davis' close friends.

His Commission to West Point, dated March 11, 1824, arrived just as young Davis was preparing to enter the senior class at the University. Jeff was not overwhelmed with joy, even though appointments to the academy were much coveted in that year. He had been looking forward to studying law at the University of Virginia but financial difficulties at home precluded his desire. Three days before he accepted the academy appointment, news came of his father's death. This coupled with the death of his youngest sister and childhood playmate, Mary, just two months before seemed to crush him completely. An excerpt from a note to his sister-in-law gives us an insight into his sensitive nature and the trace of melancholy that lurked there. He wrote, "This is the second time I have been doomed to receive the heartrending intelligence of the death of a friend. God only knows whether or not it will be the last. If all the dear friends of my childhood are to be torn from me, I care not how soon I follow."

from me, I care not how soon I follow."

The grief stricken boy of sixteen took leave of his many friends at Transylvania in July of 1824 and started his journey to West Point Military Academy. Arriving too late for the new term, he was required to take a special entrance examination. The examination was so unorthodox and sketchy, that Jefferson Davis later wrote, "Since that time, I have never believed than an examination formed a very conclusive rule of decision upon qualifications of a person subjected to its est." In any case, the examination passed, Jefferson entered into the rigorous routine

of the Academy.

He renewed the old friendship with Albert Sidney Johnson and was accepted into Johnson's "set" where he made the acquaintance of Leonidos Polk, later to become Episcopal Bishop of Louisiana and a fighting

General in the Confederate Army. During the period 1825-26, there were five men at the Academy destined to become leading figures in the Confederacy. Jefferson Davis' record at the Point was not exceptional, being a high spirited, fun loving individual, with an independent temperament, he had little difficulty in accruing 120 demerits in his plebe year, 70 demerits in his second year, and a rousing 137 demerits in the third year. Two hundred demerits in any one year would have meant automatic dismissal. At graduation on July 12, 1828, he stood 23rd class of 33. It has been written by fellow cadets that Jefferson Davis was distinguished in the Corps for his manly bearing, his high-toned and lofty character. His robust and soldierly figure and his springy step was likened to the tread of an Indian on the warpath. He stood approximately six feet in height. The discipline instilled at West Point was probably the most useful thing Jefferson Davis took along when he left the Academy. He certainly did not absorb the way of pliancy and assumed cordiality of the politician-in fact, the reverse was true. He had no use for phonies or sychophants and became openly hostile on encountering anyone who suffered from these defects. has been written that this lack of political virtue was a prime source of Davis' failure to please a lesser breed of men during his term as President of the Confederacy.

After his graduation, Lt. Davis visited his home on three months' furlough and went from there to Jefferson Barracks situated near St. Louis. After a brief taste of pleasant duty, Jefferson Davis was transferred to the northern frontier where he served with exceptional credit for almost four years. It was during this tour of duty that he came in contact with Colonel Zachary Taylor and fell in love with the good Colonel's daughter, Sarah Knox Taylor. Every member of the family grew fond of the young Lt., but Colonel Taylor frowned on any thought of marriage where an army man was concerned, because of his awareness of the rough life that women were forced to lead on the frontier. To add weight in the father's case against the marriage was Jefferson Davis' yote against him on a matter of principal in

a minor court martial. During the year in which he met and fell in love with Sarah, the first challenge to his patriotic philosophy was encountered in the form of South Carolina's threat to nullify the unjust protective tariff decreed to favor New England industries. Davis became convinced that his regiment would be among those sent to force the State into submis-Of this incident he was later to write "by education, by association, and by preference, I was a soldier, then regarding my profession as my vocation in life. Yet, looking the issue squarely in the face, I chose the alternative of abandoning my profession rather than be employed in the subjugation or coercion of a State of the Union." "The compromise of 1833 prevented the threatened calamity, and the sorrowful issue was deferred until a day more drear, which forced upon me the determination of the question State Sovereignty or Federal Supremacy, of independence or submission to usurpation.

The same year, in 1833, Jefferson Davis was promoted to 1st Lt., and ordered to Kentucky to recruit troopers for his unit, thence to Arkansas where he began to realize that army life on the frontier was no place for a woman and that his fortunes had not advanced appreciably after almost seven years service. Furloughed home, Jefferson Davis discussed his problem with Joseph who finally persuaded him to leave the Army and become a planter. Jefferson Davis tendered his resignation from the Army, to take effect on June 30, 1835, and married his sweetheart over the objections of her father.

Immediately after the wedding, the bride and groom booked passage on a steamboat bound for Mississippl and brother Joseph's plantation, where they were to live until Jefferson Davis had cleared his land and built a house. Three months after the wedding Sarah Knox Taylor Davis was dead of malaria—a blow from which Jefferson Davis never recovered. It was decided that a change of scenery would help him get over his grief and so accompanied by his body servant James Pemlerton, he sailed for Cuba, thence to New York, Washington, D.C., and home to Hurricane, the Plantation, on Davis' Bend.

Jefferson Davis shut himself away from the world for seven long years, and occupied himself with devouring the books contained in his brother's vast library. Discussions between the brothers were endless and without argument for they were as one in their thought on history, politics, and philosophy.

In 1843, he was persuaded out of his seclusion to run on the Democratic Ticket in opposition to the Whig Party, at that time a power in Mississippi.

Although he lost the election, the Democratic Party saw in him, a dedicated Paladin for the cause of State's Rights. It was shortly after this that Jefferson Davis met and lost his heart to Varina Anne Howell, the daughter of one of his brother Joseph's closest friends. After an extended courtship and engagement, they finally married on February 26, 1845. Returning to Brieffield from their honeymoon in New Orleans, Jefferson Davis almost immediately found himself caught up in the swirl of politics and was nominated to run for Congress on the Democratic ticket. It was while he was traveling to Natchez to speak that he decided to spend a day with his mother and found her laid out She had died the day before. burial. Shocked to the core of his sensitive nature, he rode all night to inform his wife of the tragic news. After a brief rest and with a fresh mount he rode back to keep the promised engagement because he knew that people had come for miles to hear him speak. The election won, Jefferson Finis Davis was sworn in as a member of the 29th Congress of the United States on December 8, 1845.

From this day forward Jefferson Davis became a man of destiny. He served with great distinction in the Army during the War with Mexico. Subsequently, he was U.S. Senator, and was Secretary of War in the Cabinet of President Franklin Pierce. Finally, he was selected by his beloved Southland as President of the Confederate States of America. No man fought and worked more nobly for his country than did Jefferson Davis. He was a great Mississippian—he was a great American. With the passage of time, Jefferson Davis of the South and Abraham Lincoln of the North became a part of the heriage of all America—both North and South.

Fujiwara: Success Over Handican

EXTENSION OF REMARKS

OF

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1966

Mr. MATSUNAGA. Mr. Speaker, one of the notable characteristics that successful men have in common is their resolute determination to achieve success. An example of this truism may be seen in the career of Honolulu contractor,

Mr. Harold Fujiwara. Mr. Fujiwara's success—he is president of Island-Wide, Inc., a well-known construction firm in Hawaii—is all the more admirable because he attained this pinnacle in spite of a physical handicap.

Long hours, personalized services, careful paring of overhead, and a policy of passing on to his customers the savings he gained as a diligent businessman have given him an enviable reputation among Island construction circles.

The inspiring story of Mr. Fujiwara's persistent endeavors to become a success was the subject of a recent newspaper article by reporter Charles Turner. I now submit for inclusion in the Congressional Record the story which appeared in the June 29 issue of the Honolulu Advertiser:

FUJIWARA A SUCCESS, DESPITE HANDICAP
(By Charles Turner)

Fifteen years ago, Harold Pujiwara was a beaten man.

He had suffered a crippling accident while working as a carpenter, losing four fingers on one hand.

No one wanted a one-handed workman in those days, when jobs were scarce and Oahu was yet to experience its post-statehood building boom.

But Fujiwara made a comeback, first by struggling along as a commercial fisherman and later by taking correspondence courses which enabled him to go into the construction business on his own.

Today, he heads Island-Wide, Inc., a company which did \$3 million worth of business in its first two years.

How was he able to make such a success? "Because I made up my mind to be some-body," Fujiwara said.

In the days when he was struggling to support his wife and two children on a meager income from commercial fishing, Fujiwara drove himself 12 to 16 hours a day.

It broke his health, and his doctor warned him to get out of fishing.

"He told me, 'You must get on land and on a diet,' "Fujiwara recalled.

With the knowledge gained from his correspondence courses, he managed to get a foreman's job with the Capehart Housing project at Schofield Barracks. He later became a superintendent on similar projects at Barber's Point and Manana Housing.

In 1959 he opened his own business, Rural Home Builders, with a work force of five or six men.

"With the experience I had and the knowledge I gained in construction I felt that I could make a success," he said.

Rural Home Builders became well known in its field, principally because Fujiwara made it a point to be always available to his customers. He worked out their financing problems and helped design their homes.

ing problems and helped design their homes.

As his reputation grew, so did his confidence.

In 1964 he founded Island-Wide "to help sub-contractors create more jobs and help out the local industry." Business was slow at first, but gradually the jobs came in. By the end of the year, he had done \$1 million worth of home-building.

One of the secrets of his success, Fujiwara said, was his ability to cut overhead to the bone and pass the savings on to his customers.

What does Pujawara think about the future of the home-building industry in Hawaii?

"It's going to level off, but will pick up gradually." he said. "It has to level off, because costs keep going up. But the tight money situation should hold prices down.

'It's also going to slow down construction, at least until the money situation cases." Meantime Fujiwara isn't going to sit back

and wait for things to get better. He plans to keep his office at 3249 Koapaka

St. open until 9 p.m. daily, Since his day begins at 6:30 a.m., it will mean a return to the old routine of working 12 hours or more a day. But Fujiwara thinks it's worth the effort. And the 30-odd subcontractors who depend on him to provide them with home-building jobs agree.

Freedom of Information

EXTENSION OF REMARKS OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. MOSS. Mr. Speaker, quite naturally, the press of the Nation has hailed enactment of the freedom-of-information bill.

The information media are especially interested because they are links with the general public. But ordinary citizens will also be the beneficiaries.

As President Johnson said when he signed the measure, no longer can curtains of secrecy be pulled around decisions which may be revealed without injury to the public interest.

The people's right to know is vital in a free society as several newspapers have remarked in editorials calling attention to the new law.

These editorials are illustrative of many which have been printed on the subject, and under previous permission I insert them in the RECORD. They are taken from the Washington Post, Christian Science Monitor, Indianapolis Star, and Wyoming Eagle.

[From the Washington (D.C.) Post, July 6, 1966]

FREEDOM OF INFORMATION

President Johnson's signature on the freedom of information bill puts a useful statute on the books. He deserves a great deal of credit for signing it in the face of the adverse position toward it taken by a gree many government spokesmen. Citizens will be grateful, not only for the bill, but for the attitude toward information which the President disclosed when he directed officials to observe the spirit of the law before its

effective date a year from now.

The novelty of the new legislation lies in provisions under which the citizen denied information can appeal to the courts. This proposal grew out of the studies started in 1950 by the American Society of Newspaper Editors and emerged from the findings of the late Harold Cross, author of The People's Right to Know. Dr. Cross was appalled at the discovery that government officials were asserting a right to withhold information and that citizens had no appeal from the mere assertion of an official that he would not disclose

The machinery for compelling disclosure probably is of more practical use to ordinary citizens than to the press, because of the inability of ordinary judicial process to move swiftly enough to satisfy press requirements. But the detail of the statute's practical remedy is less important than the assertion of principle. Citizens hitherto enjoyed a cer-

power to compel disclosure by sheer publicity. If they could not compel officials to divulge they sometimes could make them wish they had. Now, in addition, they are morally armed with an explicit assertion that citizens have a right to know, except in certain well defined exceptional situations. And they are legally armed with the right to officials into court for improper

From the Christian Science Monitor, July 7, 1966]

PEOPLE'S RIGHT TO KNOW

With the passage and signing of the "freedom of information" bill, secrecy for the wrong reasons on the part of the federal government's excutive agencies should at last be substantially curbed. In the words of President Johnson, government officials should no longer "be able to pull curtains of secrecy around decisions which can be revealed without injury to the public interest.

Past law has been wholly inadequate to Past law has been wholly inadequate to force disclosure of information which in-fringes neither the national interest nor individual privacy. When this legislation goes into effect, any person can challenge the government in court to produce spe-cific records or prove their withholding justi-

The burden of proof, in other words, will rest with the government. Should the court decide that a government official is wrongly withholding information from the public, he can be held in contempt of court.

The President is satisfied that the bill, while providing for public access, contains adequate safeguards to protect national seccurity, vital foreign policy information, trade secrets, personal data, and the like. Such vague reasons for nondisclosure as "good cause found" will be replaced by certain clearly defined exemptions.

In the case of categories exempt from ne bill, it is contended that, on balance. the public interest and the cause of indi-vidual liberty are better served by secrecy than by disclosure. The measure, more-over, does not curtail, or affect in any way the traditional executive privilege whereby the President may direct government agencies to withhold disclosure of certain information from Congress when he believes this to be in the national interest.

This legislation, with its recourse to the courts, should prove a boon to lawyers, journalists, historians, and ordinary citizens who on occasion in the past have been unjustifiably rebuffed in their efforts to break through official wraps of government secrecy.

[From the Indianapolis (Ind.) Star, July 6, 1966]

THANK YOU, MR. PRESIDENT

A great many commentators have been predicting that President Johnson would either refuse to sign or reluctantly sign the Freedom

of Information bill just passed by Congress.
They were wrong. The President not only signed it, he issued a strong and enthusiastic statement praising the aims and require-ments of the law. "I signed this measure," he said, "with a deep sense of pride that the United States is an open society in which the people's right to know is cherished and guarded. Democracy works best when the people have all the information that the se-

curity of the nation permits.
"No one should be able to pull the curtain of secrecy around decisions which can be revealed without injury to the public interests."

one should. The President deserves the thanks of all free Americans, as does this Congress, for seeing to it that this law is now on the statute books. For the first time the right of the people to know what their

government is doing, how their government is doing it, and why their government is doing it is specifically protected by Federal law.

Objections have been raised that such a law might force disclosure of national security secrets, but the law provides adequate safeguards against that. The final decision what should or should not be disclosed will rest with the courts—should a dispute arise. Now the burden of proof is put upon the government to show that information is withheld justifiably, and not to hide error, fraud, misuse or deception.

This is not a law just to give power to the press to get information from the government. It is a law guaranteeing that the people will now have seess to information about their government, from many sources, so that they can better judge whether they are

being served well or badly.

While the importance of this law to the future freedom of our people cannot be over-stated, the President went even further in supporting the principle of freedom of speech in this country. "A citizen must be able, in in this country. "A citizen must be able, in confidence, to complain to his government and to provide information just as he is-or should be-free to confide in the press without fear of reprisal or of being required to reveal or discuss his sources."

Some state laws allow prosecution for refusing to reveal sources of information in which news stories are based. In a recent case a young editor was hailed before a court because she refused to reveal her source of information about a drug addiction story. So it is clear that while this new law is a great step forward, there is more to be done on a local level.

The President's unequivocal support of the Freedom of Information law should give impetus to new efforts in the states to end these remaining restrictions on the rights of the people to speak up without fear or persecution.

[From the Cheyenne (Wyo.) Eagle, July 6. 1966]

FREEDOM OF INFORMATION

"I have always believed that freedom of information is so vital that only the national security, not the desire of public officials or private citizens, should determine when it must be restricted."

With those words, President Lyndon B. Johnson signed into law, on July 4, 1966, the "Freedom of Information" bill.

With exceptions, the measure is aimed at giving any person the legal right to look at government records and to put the burden of proof on federal officials if they invoke secrecy on security or other grounds.

The President said he did not share the concern of some that the bill might "impair

government operations."
"I am instructing every official in this administration to cooperate to this end and to make information available to the full extent consistent with individual privacy and with

the national interest," he said.
Signing of the "Freedom of Information"
bill mams just a week after the U.S. House of
Representatives unanimously gave it final congressional approval.

At that time, Rep. JOHN E. Moss, D-Calif., who had fought for open-files legislation for 10 years, said the measure would make available information which federal offices often withhold "only because it was embarrassing or inconvenient to supply."

There is no doubt many government offi-

cials-at all levels of government-are and perhaps always have been inclined toward secrecy.

As any newspaper reporter can tell you, many public officials—at local, state or national level—are inclined to hold back on information which might be embarrassing or uncomplimentary. Those same officials, on the other hand, frequently are more than

cooperative in getting out the information that makes them look good.

The public is entitled to all the news the good and the bad—so long as it doesn't affect the national security. That's one of the things that makes democracy work.

It seems particularly appropriate the President should have signed the "Freedom of Information" bill on the 190th anniversary of the adoption of the Declaration of Independence.

Independence.
Thomas Jefferson, who headed the committee and was assigned the job of drafting that great document, was one of history's great champions of freedom of the pressthe right of the people to be informed.

Jefferson once said, "The basis of our gov-

Jefferson once said, "The basis of our government being the opinion of the people, the very first object should be to keep that right; and were it left to me to decide whether we should have a government without newspapers, or newspapers without government, I should not hesitate a moment to prefer the latter . . ."

Sermon by the Reverend Sydney Waddington, Rector, St. John's Episcopal Church, Lancaster, Ohio, July 3, 1966

EXTENSION OF REMARKS

HON. WALTER H. MOELLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. MOELLER. Mr. Speaker, from the pulpits of many churches across this Nation the modern-day relevance of God and country was reiterated on Sunday, July 3, the day before this country celebrated the 190th anniversary of its independence.

The Reverend Sydney Waddington, rector of St. John's Episcopal Church in Lancaster, Ohio, my home city, took the same occasion to deliver a most thoughtful and informed sermon in support of current U.S. policy in Vietnam. Since the Reverend Mr. Waddington spent most of his ministry in the Far East and is an active student of foreign affairs, he is well qualified to speak on the subject.

I am happy to commend to the attention of my colleagues in the Congress the recent sermon of this distinguished Ohio

It is not my purpose this morning to deliver a theological sermon. I remember on board ship one day a woman was telling me about her lack of religion, but she said one thing that impressed me. She said she liked to go to hear a certain preacher because he discussed foreign affairs so well. Having been engaged in some discussions previously with the lady, I wondered how she knew, and I also felt that this was not the best method of preaching the word of God!

method of preaching the word of God!

Yet this morning I should like to do just
what at that time I seemed to me I would
not care to do, and that is to discuss foreign
affairs from the pulpit.

affairs from the pulpit.

I do so because the United States is today faced with many problems in its forign affairs and apparently there is a great deal of confusion about what is attempted and what is being done. Having spent the major portion of my ministry in the Far East and having continued my interest and reading in this field, it may be that what I have to say should carry at least equal weight to that

of the Chairman of the Senate Committee on Foreign Reliations, who until a short time ago apparently did not know that Australia and New Zealand had separate governments!

In my discussion of what is happening in the East today may I preface my remarks with a short review of history. For the life of these United States until after the First World War we enjoyed the peace enforced by British sea power. When trade, commerce and the freedom of man to go anywhere he wished was hampered, British sea power soon set matters right. True, Perry opened Japan to Western trade but it was only because nine-tenths of the high seas were controlled by the British that the United States was able to send such a sizeable fleet to Japan.

As British power faded we hoped that the League of Nations (of which the United States was not a member) would fill the power vacuum, but Mussolini in Abyssinia, Japan in Manchurla, showed the League, with all its good points, could not keep the

Finally Germany proved that an unscrupulous major power could defeat, conquer and occupy a weaker country and only a coalition of powers could whip it back into line. World War Two further proved that any coalition without the industrial might of the United States was pretty weak.

of the United States was pretty weak.

Like it or not, before World War One
England was the great peace keeping force
in the world and after World War Two the
industrial might required to keep the peace
resided in the United States.

Power brings responsibility. If you use your power properly this is the responsible exercise of power. If you fail to use the power granted you this is just as much an abuse of power as is its improper use. When power is yours you must from a moral point of view make good use of it, for it is immoral to allow it to go to waste.

Harland Cleveland, U.S. Ambassador to NATO says, "We are concerned about every breach of the peace because the peace of the world is too likely to prove indivisible, and because it trouble spreads, local Communists backed by major Communist powers have an opportunity to take sides as a prelude to taking over. We are involved because we are widely believed to have the power to fight or prevent fighting, to sit on the lid or let the pot boil over, to change or maintain the existing balance of political power in every part of the globe. And this impression is not far from the truth, for we are probably the only nation which now has the wealth, firepower, alrift capacity, organization skill, and (we hope) political imagination to put together an operational world system for peaceful change."

Times have changed since the beginning of the century. No one power can by itself hope to control the world. Anything on the international scale must be done in cooperation with other nations. This we Americans, so long protected by the British Fleet and so long accustomed to going our own way, do not seem to understand. The Amerway, do not seem to understand. The materican Government, a trifle sensitive to the appellation "big bully", tries not to go it alone. Whenever action is necessary it will take action, but will do everything possible to act in consort with other nations. This refusal to play "big brother" or "big bully", depending upon what view you take, has us united with other nations in NATO, SEATO, OAS, and about 440 other multilateral pacts besides the United Nations. While we United Nations. jumped into Korea we were quick to appeal to the U.N. We acted in the Dominican Republic but immediately appealed to the OAS. We are now deeply involved in Viet OAS. We are now deeply involved in view Nam but SEATO has been called in and Australia, Korea, and the Philippines all have sent help, and we are using beses in Thailand. We are not "going it" alone. We are attempting in cooperation with other interacted and concerned nations to see to it. ested and concerned nations to see to it

that South Viet Nam has the opportunity of setting up its own government. Much has been said about lack of elections, of government by a few instead of a truly democratic government. It always distresses me that no such charges are made against the government of North Viet Nam where no election has ever been held nor are any elections scheduled, talked about or even contemplated!

It is not clear to me that a Democratic government is possible, desirable, or necessary, but an enlightened government with the interests of the people rather than the promotion of an ideology is all that can be hoped for.

Time last week had a most excellent essay "On Understanding Asia" that it would pay you to read before you make up your mind about the necessity of insisting on a democratic form of government for Asiatic states.

When France was forced to withdraw from Viet Nam the power formerly exercised by her vanished, and the only real holders of power were the Communists in the north who then wanted to fill the power vacuum in the south. It is thus the present task of our allies and ourselves to supply to the South the power that is lacking. The right use of power is what is saked of us, for as I pointed out earlier, to fail to use the power we have is just as much a misuse of power as is its abuse.

So, to me at least, we are morally bound to use power in a cause we consider right!

As any executive knows, as his power increases his decisions become more complicated. And as one problem is solved two more require his attention. We are inclined to want simple black and white alternatives but the problems are complex. The Marshall Plan, a great success story, solved the reconstruction of Europe, but now we have the even more complex problem of how to get along with Charles DeGaulle. We must not over-simplify. We can no longer think in terms of peace or a world war. The alternate to a world war may not be peace but rather a series of small disputes and small wars.

Our President has been sharply criticized in the last few days for bombing so close to Hanol. A bomb dropout from an acroplane is a devastating thing, but not more devastating than a bomb placed outside a hotel on a street by a secret agent. Surely the techniques of warfare are terrible. But the clandestine assassination of school teachers and village leaders is more terrible. The Viet Cong in 1965 alone murdered or kidnapped over 12,000 civilians. This is a tragic drain on the intellectual, political and economic life of the country.

The terrors of war are real. The devastation and demoralization of the country and population are facts that I have had to live with without benefit of army rations, PX privileges or massive organizational support. These horrors are perhaps more real to me than to most. But the final justification for our continuing to carry on the struggle against Communism is the continuing choice made by the people of North Viet Nam. Wherever and whenever the opportunity has been given or can be seized these people have voted in the only way possible where Communism holds sway. They have voted with their feet, and by the thousands, men and women have turned their becks on the Worker's Paradise and made their way as best they could to the sanctuary of non-communist territory.

To refuse to sustain those who look to us for the power they lack will not postpone but, rather, hasten the day of our own downfall.

At any point in history from Hitler's occupation of the Ruhr to the falsely labeled "Peace In Our Time" of Munich, Hitler could have been stopped as the records available

today clearly show. But after his power grab at Munich nothing but all-out war could stop him. When the communistic world understands that it will be stopped wherever it tries to extend its system, no matter what disguise of ruse it tries to use, then, and not until then, will it seek to expend its energies for the welfare of mankind rather than the subversion and enslavement of others.

Peace at any price is too high a price to pay for slavery. May God who gave us this good land for our heritage, who has placed upon us the responsibility of power, grant that we may use it in His service and to the benefit of

our fellow men!

Meeting Tomorrow's Challenges Today

EXTENSION OF REMARKS OF

HON. ROY H. McVICKER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. McVICKER. Mr. Speaker, not too long ago, Mr. Hugh Downs of the "Today" show, spoke at the Air Force Academy in Colorado Springs on the occasion of the banquet honoring the outstanding squadron of the year at that unique institution.

The thoughts he so aptly expressed seemed so apropo to so many people outside of his immediate audience that I asked Mr. Downs for some excerpts from his speech to insert in the Congres-SIONAL RECORD, and I offer them now:

REMARKS BY HUGH DOWNS AT THE AIR FORCE ACADEMY DINNER, JUNE 4, 1966

This is my first experience at an Air Force Academy event and—I must say—I am very

Not only that—this is my first trip to Colorado Springs. How anyone who likes to say he's been around could be so late in arriving at the home of the Air Force Academy, I'll never know.

This is a most invigorating spot. Not only the air, which is great, but the whole at-mosphere of the place. It is invigorating to get caught up in the spirit and dynamics of the Acrospace Age which the Air Force Academy epitomizes. There is a feeling of drive, of a rushing the seasons to a more exciting and challenging tomorrow.

Dr. Harold Brown, the brilliant physicist who serves as Secretary of the Air Force, recently indicated that the modern Air Force is fast becoming an egg-head organizationthat the number of blue suiters with Master's Degrees and Ph. D.'s is rapidly increasing . . . that the interface between higher education and the Air Force is getting closer and I thought of this also when I was in England and did a broadcast feature on Oxford University and one of my guests was a Rhodes scholar—from the Air Force Academy.

You are eggheads . . . military eggheads. Be proud of it.

The late Adlai Stevenson once told a graduating class—"Eggheads of the world—unite. You have nothing to lose but your yolk."

It was, I believe, good advice.

Now there must be a way to establish a relationship between eggheadedness and girl-

chasing or life isn't worth living.

I don't mean girl-chasing—literally. I use the phrase to represent loosely the more gutsy qualities of the balanced human male.

History identifies the so-called "Renaissance

Man" of a few hundred years agoindividual who brought combined mental and physical efficiency to a high pitch.

He was a great student and thinker, perhaps a poet of stature, and at the same time he was skilled in swordmanship and a leader of men. But most important his strength never stood in the way of his capacity to -for a woman-and for the human race.

The modern age calls for—is crying for—the Renaissance Man of the Twentieth Century, who merges the scientific and the humanistic, who can handle both technological and social problems with intellectual toughand emotional stability . hard-boiled egghead with a soft yolk of social

consciousness, you might say,

Now, if such a guy is going to emerge, in any numbers, my guess is that he has to be motivated where big issues are forced and he has to absorb his education in the brisk environment of efficiency that is currently associated more with the military than any where else. And I would add that the Air where ease. And I would add that the Air Force Academy, with its merging of the humanities, scientific knowledge, physical fitness and military leadership, shows evi-dence that it is pacing the educational world in the development of the modern Renaissance Man. In fact, this Outstanding Squadron of 1966, which we saluate tonight, lected for its all-around strength rather than its specialties, is representative of this educational movement.

Continued good leadership for our nation requires that we encourage and develop new thought as conditions change—that we maxiuse of our manpower resources—that we insure a supply of men who know how to use strength without losing compassion, and how to voice dissent without damage to loyalty. And that we keep up our tech-nological capabilities.

Science and technology have yet to make the world safe for democracy. But at least they can reduce the chance of worldwide conflict—as long as the forces of freedom retain technogolical superiority.

That's one side of the technological story. The other, of course, is that progress and technology are practically synonymous in the era we live in. This inter-dependency is well-known. And the historic pattern of well-known. And the historic pattern of technology being created largely in response to defense requirements, remains pretty solid. The interrelation of technology and progress can be seen as a chain: Progress is essential to science. Science makes possible defense capabilities—a position of sound defense sound defense safeguards an atmosphere of freedom. Free dom can tolerate and afford new thought. And new thought creates progress.

So ultimately it will become the responsibility of you cadets, along with other uniformed and civilian members of the government, to guard and guide our national technological resources. There is perhaps no more demanding and challenging task today. You have the education, the incentive and the teamwork to master the job. And, thank God for that.

First Anniversary of Convening of Congress of Micronesia

EXTENSION OF REMARKS OF

HON. N. NEIMAN CRALEY, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 30, 1966

Mr. CRALEY. Mr. Speaker, I should like to congratulate the people of Micronesia on the first anniversary of the convening of their first territorywide Con-

A year ago Congressman Rogers C. B. MORTON and I observed and participated in the formal opening of that Congress for the people of the Marianas, Caroline, and Marshall Islands, islands which the United States has administered as a trust territory for the United Nations as a result of World War II.

On July 12, 1965, I had the honor and privilege to address the first Micronesian Congress in the territorial headquarters at Saipan. I was there to represent Congressman Wayne N. Aspinall, chairman of the House Committee on Interior and Insular Affairs, of which I am a member.

Spread over 3 million square miles of the Western Pacific Ocean, the 2,141 islands with a population of some 90,000 people, are known to Americans for the battles fought there in World War II and as the testing grounds for the Atomic Energy Commission after the war.

As the islands' administrator United States has worked for the political, economic and social progress of the people, fostering schools, teachers, immunication and hospital programs. The first Micronesian Congress is a symbol of the progress that has been made-a significant step in the development of self-government for these people. A vital tradition of American democracy has been entrusted to the Micronesians who occupy a strategic position in the Pacific They are anxious to prove themselves capable of such political maturity and I wish them well in this endeavor.

Cleaner Water, Purer Air

EXTENSION OF REMARKS OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. IRWIN. Mr. Speaker, the New York Times gives hearty support to legislation approved by the Senate Public Works Committee to provide cleaner water and purer air.

One bill, of course, would help finance a program to enable cities and towns to treat municipal wastes that are now handled inadequately or not at all.

With State and local cooperation, the bill's proponents believe a \$20 billion backlog of needed waste treatment facilities can be wiped out in the next 6 years.

A second bill would effectively expand the scope of the present Air Pollution Control Act.

By enacting these measures, which have administration backing, the Times suggests great progress can be made toward cleaning up our water and air. Its editorial on the subject follows:

[From the New York (N.Y.) Times, July 3, 1966]

CLEANER WATER, PURER AIR

If a bill reported by the Senate Public Works Committee is enacted into law, the nation will take a giant stride toward cleaner water.

th

Under leadership of Senator EDMUND S. MUNKIS of Maine the committee his approved a program to spend \$6 billion between now and 1972 to help towns and cities treat municipal wastes that are now treated inadequately or not at all. Since this Federal contribution would represent roughly one-third of the total cost of each project, proponents of the bill believe that with local and state cooperation the entire backlog of \$20 billion in needed municipal waste treatment facilities can be wiped out in these next six years.

In the past, the Federal Government has contributed 30 per cent of the cost of each project, but up to a limit of only \$1,200,000. This low ceiling harshly penalized cities that required large projects. The pending bill eliminates any dollar ceiling. It would have been ideal if the committee had adopted the proposal of Senator Gaylon Nelson of Wisconsin, who urged that the Federal Government meet 90 per cent of the cost, as it does on the interstate highway program. But the committee judged, probably correctly, that such a ratio was not politically feasible at this time.

If all states were now to follow the excellent pattern developed in New York under which the state matches the Federal contribution and the locality puts up the remaining 40 per cent, then the pending bill would meet its goal. But not all states are willing to invest in clean water. To encourage state participation the bill provides a bonus of 10 per cent of the Federal grant wherever a state joins in, as New York has done. Where states do not provide matching funds, mulcipalities can still apply directly to the Federal Government and can also qualify for a Federal loan to substitute for the state share.

The committee bill follows only in part the "demonstration rivers" proposal set forth earlier this year by President Johnson. But if the interested states can agree on a plan to clean up an entire river basin, the bill would enable the Federal Government to defray half its cost.

In a companion measure the same committee approved a considerable expansion in the scope and financing of the existing Air Pollution Control Act. Over the next three years, \$196 million in Federal aid would be made available to the states to help in control of air pollution.

Much more has to be done, particularly at the local and state level, to combat water and air pollution. Too many communities still refuse to recognize that dirty water and smoggy air are major menaces to the health and safety of the nation. An effective program requires construction of more facilities to treat raw sewage and air pollutants, strict enforcement of quality standards for air and water, and intensive research and more rapid application of what is already known.

If the two bills reported by the Senate committee are approved by Congress, important progress can be made in meeting all three of these requirements.

Dam the Grand Canyon: IRS— Yes or No?

EXTENSION OF REMARKS

HON. HERBERT TENZER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. TENZER. Mr. Speaker, damming the Grand Canyon may be a major step backward for conservation. If Bridge Canyon—or Hualapai—and Marble Canyon dams are to be built, two-thirds of the Colorado River's length through the canyon would be flooded by reservoir waters. This may very well be a tragic impairment of the canyon—not, as the Bureau of Reclamation would have us believe, a desirable improvement.

One of the conservation organizations which brought this threat to the public's attention is being investigated by the Internal Revenue Service at this critical time when the Nation is just beginning to appreciate the gravity of the dam proposals.

The unfair procedure by which the IRS, in effect, is seeking to deprive the Sierra Club of tax-deductible status was the subject of a thoughtful editorial in the Long Island Press of June 18, 1966. I submit this fine editorial for the consideration of my colleagues.

GRAVE ERROR BY THE IHS

Every non-profit, public service group in the country has cause for concern over the Internal Revenue Service's treatment of the Sierra Club. Citizens who count on such public service organizations, and who support them by their contributions, also have reason for considerable concern.

The Sierra Club, headquartered in San Francisco, is one of the oldest and bestknown campaigners for conservation. It has 20 chapters throughout the country.

Like millions of other Americans, it doesn't like the idea of two more dams being built in the Grand Canyon. Many Long Islanders have raised their voices.

Last week the club ran two advertisements in newspapers opposing legislation in Congress to permit the dams. Almost quicker than you can say Grand Canyon, the IRS suspended the Sierra Club's tax-exempt privileges, pending further investigation.

rhe RES position—or excuse—is that the revenue code says a group can't have tax-exempt status if a "substantial" part of its income and efforts are devoted to politics or lobbying. The code doesn't say what

or lobbying. The code doesn't say what "substantial" is, however.

A galling aspect of the IRS action is that even before opening an investigation, IRS said it would no longer necessarily view donations to the club as tax-exempt. That is an authoritarian and unfair position. At least it should have waited until after a full

investigation and hearing.
David Brower, the Sierra Club's executive secretary, made a neat comparison when he said the IRS action was "like Con Edison pulling the switch as a warning to you that they are going to shut off your power. It is clear that no sizable contributions will come to the club as long as this cloud hangs over."

The IRS action is an arrow into the heart of vigorous public-service voluntary organizations who draw heavy financial support from givers taking their tax deductions. It would apply to any kind of organization—educational, cultural, even religious—which raises its voice on any side of any issue. Tax exemption loss—or threat of its loss—must never, even accidentally, be used to throttle public service groups from speaking through any and all channels.

The Sierra Club should be commended for its public service in bringing this matter to the forefront of public attention. I do not consider an action designed to benefit the great number of Americans who seek to preserve our natural resources, as "lobbying." If indeed it is—then "lobbying" for the commonweal—where private or corporate interests and profit are not involved—should not be objectionable.

Committed to Freedom

EXTENSION OF REMARKS

HON, BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. CASEY. Mr. Speaker, in his recent speech at Omaha, President Johnson asserted:

This nation, working with others, must demonstrate in Vietnam that our commitment to freedom and peace is not a fragile thing.

The Deseret News of Salt Lake City cites that statement of determination in an editorial commemorating Independence Day. The newspaper reminds those who sometimes may forget the fact that men are endowed by their Creator with the spirit of freedom in their souls.

This is one of the several editorials which I have seen honor the spirit of patriotism and focus on the basic truths of the society envisioned by the signers of the Declaration of Independence.

Seldom in our history has it been so necesary to emphasize that the pursuit of liberty is a continuing struggle. For it is right now that we fight in Vietnam in defense of the principles to which Thomas Jefferson gave such eloquent expression.

I would like these editorials to appear in the Record. They are from the Deseret News, Newark Sunday News, Philadelphia Inquirer, Chicago Sun-Times, Dallas Morning News, Denver Post, Houston Post, and the Los Angeles Times, as follows:

[From the Deseret News, Salt Lake City, Utah, July 2, 1966]

OUR COMMITMENT IS NOT PRAGILE

"We hold these truths to be self-evident," wrote Thomas Jefferson in the Declaration of Independence 190 years ago, "that all men are endowed by their creator with certain unalienable rights..."

These, he, John Adams, Benjamin Pranklin and the other signers defined as "life, liberty and the pursuit of happiness."

The Declaration was bold. Yet, in less than two centuries, nation after nation has adopted this very theory of government: that men are, or should be, equally entitled to liberty.

America has battled side-by-side with other nations to defend this principle—16 years ago in Korea, and now in South Viet Nam.

President Johnson, speaking in Omaha this past week about peace and war, said: "Someday we will all work as friends and brothers—to grow more food, to build more schools, to heat the sick, to care for the old, to encourage the young.

"But history is not made by nameless forces. It is made by men and women, by their governments and their nations. This nation—working with others—must demonstrate in Viet Nam that our commitment to freedom and peace is not a fragile hing. It can, and it will sustain a major test."

Freedom no longer lies in independence alone. It lies also in interdependence. Today, in an age of dictatorship—of the right or the left—the idea that governments "derive their just powers from the consent of the governed" remains a daring concept, and is more important than ever.

On this July 4, ponder the imposing message of the Declaration of Independence. It rang true in 1776. It rings true today. Men are endowed by their creator with the spirit of freedom in their souls. Throughout history men have fought and died for this concept. Brave men always will.

[From the Newark (N.J.) Sunday News, July 3, 1966]

SO PROUDLY WE HAIL

This age recalls the Independence Days of tradition with mingled nostalgia and cynicism. And, indeed, it would be amusing to hear now some of the chauvinistic oratory that marked the Fourth of July in bygone years, featuring George III and his Hessians as villains and proclaiming the superiority

of all things American.

The danger is that in our more sophisticated self-appraisal we may lose appreciation for the enduring significance of the day we celebrate. We were the first people since the fall of the Roman Empire to rebel against colonialism, and our example is still an inspiration. It is 190 years since the adoption of the Declaration of Independence, but its phrases still echo in Asia and Africa.

In defense of the principles to Thomas Jefferson gave such eloquent expression, we have twice fought against aggression in Europe where, at enormous expense, we still stand guard. It is in their defense that we fight today in Viet Nam. That our interventions have not been without self-interest does not make them less worthy.

Like all nations, we have been fallible and foolish. But never has any people supported its ideals with more fidelity and generosity, or suffered, in return, more misunderstand-

ing and contumely.

With all our faults, at home and abroad, we have used our power to serve others. contrast with some contemporary great powers, we have caused no nation to lose independence. On the contrary, we have helped many to win it, or keep it.

Despite the breastbeating of some of our fellow citizens, and the indictments of our nemies, we have a right to hold our heads high, taking pride in the fact that Americans are willing to die that others may be free.

[From the Philadelphia (Pa.) Inquirer, July 4, 1966]

FOR WHOM THE BELL TOLLED

One hundred and ninety years ago American independence was proclaimed. The Liberty Bell subsequently pealed the momentous tidings of the farthest reaches of Phila-delphia and—symbolically—"throughout all the land unto all the inhabitants thereof."

Then, as now, there were voices of doom and defeatism. Counselors of chronic despair said the declaration could never be implemented. It was direly predicted that the end result would be not independence but disaster.

If delegates assembled in their chamber overlooking sunbaked Chestnut street had paid heed to the critics they would have adjourned and gone home-the evils of tyranny But they were not to be unchallenged. deterred.

If General Washington, a year and a half later at Valley Forge, had yielded to the advocators of surrender he would have disbanded his army and fled. But he and his men were made of sterner stuff.

Today, in this city and in this State and in this Nation, there are families bereaved by the loss of loved ones who have made the supreme sacrifice in a far-off place called Vietnam. Some say they died in vain.

No man who dies in defense of freedom for himself or fellowmen gives his life in vain. The pursuit of liberty is a continuing struggle and all who dedicate themselves to it, irrespective of their momentary successes or reversals, make an enduring contribution to attainment of the goal.

For us, the living, on this Fourth of July in 1966, the message and the spirit of 1776 still ring true. To understand this it is only to pay a visit to Independence Hall and to watch them come—by the thousands and the millions, the old and the young, from across this Nation and from abroad—to see that grand old bell, to touch it gently and to walk away taller than they

Why do they come?

Isn't it because the Declaration of American Independence speaks not for one people in one time but for all people of all time? Isn't it because the Liberty Bell, on that day in the long ago, rang out the notes that are sung in the hearts of all men who aspire to be free-then, now and forevermore?

Isn't it because a yearning to cast off the yoke of oppression is universal among all

who bear its burden?

The timid and the misguided in America suggest that this Nation close its eyes and ears to the plight of victims of Communist aggression. They would have us pass by on the other side.

When the freedom of any man is diminished, so is the freedom of us all. Liberty cannot survive on a lonely isle in a sea of tyranny.

[From the Chicago (Ill.) Sun Times, July 4, 1966]

IN FREEDOM'S CAUSE

The Declaration of Independence, published 190 years ago today, laid down with reasoned passion an indictment of the deprivation of self-government and the denial of the natural rights of man. It stands today as a historic utterance of man's deep desire to be free.

The Declaration grew out of repression. It was given impetus by an 18th Century movement called the "Enlightenment," a movement which spread new ideas exalting the natural rights of man throughout West-American leaders found civilization. in the works of its advocates, John Locke, Voltaire, Rousseau, Diderot and others, vindication of their outrage against British colonial policy, which levied a succession of new laws that taxed and regulated their economy and restricted their efforts to govern themselves.

Public demonstrations against the new laws advanced the resistance. When British soldiers fired into a jeering Boston crowd, in 1770, the resistance became a cause independent. In April, 1775, the cause became rebellion when a group of colonists standing on the Concord Bridge opened fire on advancing British troops—the "shot that was heard round the world." The fight by 13 colonies—pigmies arrayed against one of the world's mightiest powers—has served as an inspiration to men everywhere.

Throughout history one form of restraint or another has been imposed on man to stifle his desire for freedom. Today it is the Communists who would destroy freedom and liberty. They know man's right to them and their threat to the Red ideology. Nikolai Lenin once said, "It is true liberty is precious-so precious it must be rationed.

It is the rightful heritage of all Not so. men to be free. It is a right not easily earned. Those who own it and are weak must be protected from those who would take it away from them. Liberty is so precious that it must belong to all. And as the mightiest free nation in this anxious and dangerous world it is the responsibility of the United States everywhere to help preserve and expand free-

In doing so, the United States help preserve its own way of life. The greatest inter-national security any free nation could have would be a world of nations governed by the people who inhabit them, and dedicated to principles enunciated by America's

founding fathers on that historic occasion we celebrate today.

[From the Dallas (Tex.) Morning News, July 4, 19661 PATRIOTISM

This is the day, the Glorious Fourth, when

we Americans celebrate our patriotism.

The word itself, "patriotism," has has been twisted and distorted in recent years. For some, it is a sneering term, the "last refuge of a scoundrel," in the sour phrase of Sam-To them contempt for one's uel Johnson. own native land seems the first step to cosmopolitan sophistication.

To others, patriotism seems to be their own private preserve, open only to the select who can meet the membership standards. These standards require in most cases agreement in every particular with the speaker's beliefs and prejudices.

Still others see patriotism as a quaint term, as dated as a tricornered hat or a powdered wig. They display it on certain festive occasions, after which they put it away with the colored bunting until next year.

In fact, real patriotism is simply the love of one's country and devotion to its welfare. Almost all of us are patriots in the true sense of the word; we need no one to bestow the title upon us, nor can the cynic take it away from us. We grow into our patriotism nat-urally, and it becomes a part of us. It remains with us always and we express it in a variety of ways.

It is the lump in the throat when the national anthem is played, the pride when the flag passes by. But it is more, much more. It is not just a short and frenzied outburst of emotion, but as Adlai Stevenson once said, "the tranquil and steady dedication of a lifetime

We Americans have no monopoly on patriotism; every country has citizens who prize it above all others. But, as is perhaps understandable for patriots, we feel that our patriotism is of a special kind.

We do not feel that the enjoyment of our love of country depends on the denigration, humiliation or conquest of others. We do not feel our country is diminished because our neighbor states are flercely independent.

Our patriotism does not lead us to attempt to force our culture or our way of life on others. We have no tendency to regard ourselves as a master race, fated to rule the

The patriotism of Americans represents a quiet pride in their country and, above all, faith in the idea that the country represents. Ideals that were set on the first Fourth of July have proved to be good ones. If we have not achieved them in all times and places, the pursuit of these goals has taken us higher than any others have gone.

This is the day to celebrate our people's achievements, to honor those our forefathers made in the past and to dedicate ourselves and our children to the tasks of the future.

[From the Denver (Colo.) Post, July 4, 1966] THE FLAG IS STILL IN STYLE

On the occasion of the 190th anniversary of our national independence, we note signs of a slackening of patriotic fervor, some feeling that displaying patriotism is "out," at least in these cynical times.

One reason, we suppose, is that patriotism has so often been sullied by fools and charlatans. Samuel Johnson said aptly in 1775 that "patriotism is the last refuge of the scoundrel."

There are those in our society today, as there always have been, who would misuse this natural and admirable feeling of national pride.

Patriotism has been used to build fortunes and glittering careers; to justify interna-tional piracy; to deny civil liberties and blacken the names of loyal citizens; to sabotage honest efforts toward world peace.

The American of 1966 is more conscious of these abuses of patriotism than his ancestors is encouraged to be better informed, to be more thoughtful, even to be more critical of his country and its position in the world.

He concedes that the United States has made serious mistakes in 190 years, some of them in the name of patriotism. He knows most certainly that as a creation of human beings she will make more mistakes.

Even now great national debates go on. Americans are searching answ for national purpose and direction. Many, on this 190th anniversary of independence, are concerned and confused, feeling as a nation they may not be doing their best.

Yet they are still patriots, except in a

quieter way.

Sharing their doubts and concerns to some degree, we judge nevertheless it is accurate and appropriate on the Fourth of July to say this: the United States of America, for all her faults, is altogether the most powerful, the most responsible, the most unselfish and the most compassionate nation on earth.

That's something to wave the flag about.

[From the Houston (Tex.) Post, July 4, 1966] A DAY FOR REJOICING

"These are the times that try men's souls," Tom Paine wrote in the fall of 1776, a few months after the Declaration of Independence was signed.

The Revolution that the Declaration had set in motion was not going well. Gen. Washington's army was retreating after a series of defeats in New York. He was in great need of troops, munitions and money. The high hopes that had greeted the Declaration on July 4 were sagging. Grumbling that the war could not be won was widespread. The colonists who opposed the war-and there were a great many of them-were pleased.

But courage, determination and belief in their cause paid off for the rebels, although it must be admitted they were helped substantially by the stupidity of King George's military leaders. On Oct. 19, 1781, Lord Cornwallis surrendered his army at Yorktown. The war was won, and a new nation was on

its way.

ŧ

n

75

nd

This is the 190th anniversary of the signing of the Declaration of Independence. tainly, Jefferson, John Adams, Benjamin Franklin and the others who debated during the hot weeks of June whether to proclaim the colonies' independence from the British crown had no idea of the great results their efforts would produce, but they did realize what independence would mean. John Adams wrote his wife that the day of adoption of the declaration "ought to be solemnized with pomp and parade, with shows, with games, sports, guns, bells, bonfires, and illuminations from one end of this continent to the other, from this time forward, forevermore.

And so it has been since that first Fourth of July. Most of the forms of celebration listed by Adams are still to be found throughout the land on this day.

But once again we know times that try men's souls. Once again we are engaged in a war for freedom, this time the freedom of a friendly nation, and we have some dissent among our people. At home, we are striving to give full meaning to the Declaration's assertion that all men are created equal, and we have some dissent among our people.

But these struggles, too, will end. We as a nation are determined that the free people of South Viet Nam will not be enslaved by Communism. We as a people are deter-mined that the benefits of freedom and a richer life that the Founding Fathers risked no much to gain for us will be available to all Americans in all parts of our land.

Ring out the bells. Despite our problems, it is a day for rejoicing.

From the Los Angeles (Calif.) Times, July 4, 1966]

A DOCUMENT THAT LIVES

There were, of course, giants in those so King George III could read it without glasses). The Adamses, Sam and John. Thomas Jefferson, Robert Morris. They, and 51 others from all 13 colonies signed it, knowing that the very act might condemn them to a rebel's death.

Thus, on July 4, 1776, the Declaration of Independence became a living document. It has never died. Pray God, it will inspire us

for all time.

For other struggling lands, the freedom envisioned in the Declaration is still a dream. Men are dying to make that dream come And we, having resolved the issue, are sending our best young men abroad to aid

Today it is well to reconsider these words from the preamble, lest they grow dim in memory, or be lost to view in the modern

sweep of events:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness. to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed, that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security.

U.S. Pharmaceutical Firms Face Difficulties in Argentina

EXTENSION OF REMARKS OF

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. ST. ONGE. Mr. Speaker, under unanimous consent, I include in the RECord an article which appeared on March 22, 1966, in the publication Economic Survey, of Buenos Aires, Argentina. This article refers to decree No. 3042 of the Argentine Ministry of Health which seriously affects the entire pharmaceutical industry in Argentina.

In my statement of last year I stated that medical authorities in Argentina indicated that this decree, if rigidly enforced, could bankrupt the Argentine pharmaceutical industry whose 20,000 employees supply the nation with its lifesaving drugs. I also indicated a year ago that investment circles in both Argentina and the United States were watching developments in Argentina very closely because of the affect which this decree could have on the pharmaceutical industry.

Many U.S. firms operate plants in Argentina so this decree affects not only the employees in Argentina, but those in the United States which manufacture the raw materials which are sent to their Argentine plants. In view of the fact that there is now a new government in Argentina, it might take advantage of the current situation by correcting this problem which has caused so much difficulty for the Argentine pharmaceutical industry.

[From the Economic Survey, Buenos Aires, Argentina, Mar. 22, 1966]

SALES DECREASE PRECIPITATES CRISIS IN LABORATORIES

(Summary)

After 27 months of price control, during which the cost of living index has risen 77%. the already critical situation of the pharmaceutical laboratories has become extremely acute in the past few weeks due to a de crease in sales and the lack of financial

liquidity.

As we reported previously, the majority of foreign laboratories and drug houses decided to surrender to the arbitrary regulations of the Law on medicaments, encouraged by the fact that with the massive in-crease of sales due to inflation at least partial relief was obtained to some of their problems.

Such an increase in sales resulted in more profits, even under the price control im-posed by the Ministry of Public Health, and since the profits were increasing it was difficult to oppose a measure designed to control them.

But the situation has changed in the past few months particularly in the last few weeks, during which sales levels have been considerably lower than six months ago.

Furthermore, the current strike of postal employees has caused the Post Office to hold up over four million mail pieces, thus ag-gravating the problem of the laboratories

which usually handle all shipments by mail.

If the creation of such a situation was the purpose of the Ministry of Public Health. its success is complete, although inflation and a temporary sales increase kept the true situation blurred for a while.

SLOW PROCESSING OF DOCUMENTS

In order to further assure its "succe i.e., the crisis of the entire pharmaceutical industry, the Ministry of Public Health established a very slow processing of the documents submitted by the drug companies in compliance with the provisions of Decree 9047/85. 3042/65.

After resisting these provisions for a num ber of months, most of the large foreign laboratories, and the majority of small local laboratories decided to abide by the Ministerial demands.

The only laboratories still maintaining the original position are, therefore, the larger Argentine, laboratories.

Decree 3042/65 stipulates a period of 45 days during which the Ministry must study the data submitted by the laboratories, and then authorize the prices justified by costs. An automated standard system of analysis of the submitted data was to be established, but such formula was received skeptically since it would require a previous exhaustive research (not stipulated) and a large staff of specialized personnel which the Ministry does not posses

Such a standard system has now proved to be a failure and the Ministry at pres examines the data submitted with irritating slowness, requesting clarifications, additional data, and time to study same. This result is complex paper work which calls for delays and more delays, some of them extending over six months.

The Ministry is not interested in solving the petitions for reconsideration of prices, since they would have to allow higher prices than the current ones frozen 27 months ago.

The situation has reached a truly untenand to the entire pharmaceutical industry, it is indispensable, in view of the many unprocessed documents, to grant general adjustment of prices compatible with reality.

Fair Packaging and Labeling Bill

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. MULTER. Mr. Speaker, for many years now the American public has been subject to a barrage of "wonder" products and panaceas that offer relief from all sorts of pains, conditions, ailments, and diseases. Because of their overwhelming success, the drug and health food industries have flooded the market with a multitude of cure-alls, and have made these seemingly potent under the disguise of clever advertising that falsely promotes the value and effect of these products.

This type of campaign has been directed primarily at the senior citizens of this country—those who are in ill health most often and who can least afford to throw away their meager savings on these almost useless commodities. This is not merely the result of careless spending on their part; rather it is brought about by a public naivete capitalized on by false and alluring advertising, intended prevarications that can and should be combated by correctly informing the consumer.

I have introduced a bill, H.R. 15707, a Fair Packaging and Labeling Act. This, as an extension of the Senate's bill on food and packaging, provides for clear-cut regulations on the labeling and packaging of items as to their net quantity, contents, and advertising.

It is with pleasure that I commend to the attention of our colleagues one such method of educating the public as to these false claims. The Seafarers International Union, in their publication Seafarers Log, has published an article entitled "Caveat Emptor, Let the Buyer Beware," which deals with the exact subject we are now concerned with here in the Congress. People must know the standards by which to judge these products before they can recognize and understand which are fakery.

The article, which appeared in the May 27, 1966, edition of Seafarers Log, follows:

CAVEAT EMPTOR: LET THE BUYER BEWARE

Pakes and swindles in the field of health have become big business in the United States. It has been estimated that Ameri-

cans spend \$1 billion a year on falsely promoted, worthless, or dangerous health products.

Much of this fakery is aimed at the na tion's elder citizens—those who can least afford to waste their money on fake treatments and products, and who can be harmed by delaying necessary professional medical treatment while in pursuit of non-existent "miracle" cures. But no one is immune from the assaults of these health quacks and frauds They make appeals to people of all age groups, all social and economic levels. and the highly educated as well as the poorly educated. Vast amounts are spent on ad vertising products and techniques which have at best limited value, and at their worst can be deadly to the individual who falsely places his trust in their effectiveness.

At hearings conducted by the Senate Sub-committee on Frauds and Misrepresentations Affecting the Elderly, which is part of the Special Committee on Aging, witnesses estimated that, of the \$1 billion spent annually on health frauds, \$500 million goes for dietary frauds in the form of "health" foods, food supplements, weight-reducing gimmicks and literature, and fads and cults of this nature. Arthritis sufferers alone are bilked for another \$250 million yearly on misrepresented remedies. But far worse than the staggering financial loss involved in self-diagnosis and self-treatment with ineffective products, is the danger that reliance on them can cause fatal delay in getting proper medical treatment

Under the suggestion of Senator Harrison A. Williams, chairman of the Special Senate Committee on Aging, a nationwide study is to be made of factors that induce people to fall for fakes and swindles in the field of health. The study will be coordinated by the Food and Drug Administration of the Federal Government, with the cooperation of other government agencies.

The variety of frauds and misrepresented remedies which are practiced against the American public is staggering. They range from complicated, worthless and very expensive machines which supposedly diagnose or treat various ailments, to miracle charms of magnetized iron. Vitamins, health foods magnetized from the magnetized and books on folk medicine are classified under the category of fraud when exaggeclaims are made concerning their nutritional value to the individual. highly advertised patent medicines must be placed in this same category when the advertising does not make clear to the public that although the product may give tem-porary relief of the symptoms of an illness, it does not provide a cure for the illnessas is often implied.

The health fakes and swindles discussed on these pages represent only a partial listing, compiled from data accumulated by the Food and Drug Administration of the U.S. Department of Health, Education, and Welfare and the Senate Subcommittee on Frauds and Misrepresentation Affecting the Edderly. The following facts should be read carefully because they are of vital importance to everyone's life:

Vitamins. No one will deny that a balanced vitamin supply is essential to good nutrition and health. Yet vast amounts of money were wasted yearly on expensive vitamin supplements simply because people fall to realize that abundant supplies of vitamins are already present in the American food supply, which is the best in the world. Daily use of common foods such as vegetables, fruits, milk, eggs, meats, fish, and whole grain or enriched bread will supply all of an average individual's nutritional needs. High pressure sales techniques are used to sell millions of dollars worth of vitamins which are not needed. They are often pushed as cure-alls for every kind of disease. The fact, is however, that some vitamins are actually harmful if one takes too much for too long.

Well-planned meals will supply all the vitamins needed by the average individual. In case of any doubts about individual requirements, self treatment with vitamin supplements is a serious mistake. In such cases the money would be much better spent by visiting the family doctor for a complete checkup.

Health foods. All sorts of wild claims are made for so-called "health" foods by food faddists and dietary cultists. These claims are invariably false because the "special" foods, which are sold at grossly inflated prices. contain the same nutritional value as the foods you can purchase at any grocery store Food fads can be dangerous or supermarket. to health as well as expensive when the diet is limited to one food or family of foods. Much of this food faddism has been aimed at the nation's older citizens, yet the same rule applies. No matter what his age, if an individual is in good health these special foods are of no value. If an individual is not in good health a doctor should be consulted--attempts at self treatment with special diets or products are dangerous.

In this same category are the so-called "folk medicines," often popularized in do-it-yourself health books. The potions they advocate for treating everything from arthritis to warts are often common plants and substances which have no appreciable medicinal value. All things being equal, for instance, consuming quantities of unsaturated will not prevent hardening of arteries; cod liver oil and orange juice will not cure arthritis; garlic has no effect on high blood pressure; and royal bee jelly will not restore an aged individual's lost man-What often happens with false reliance on these quack cures, unfortunately, is that proper medical attention is postponed until successful medical treatment is either impossible or extremely difficult.

Limited-value medications. Limited-value medications are the kind that most Americans are exposed to most often through advertising. In general they offer relief for the symptoms of a disease rather than making an attack on the disease itself. This can be extremely dangerous because, relieved of the painful, embarrassing or discomforting symptoms of an aliment, people often postpone seeking professional treatment for the disease itself. Such products include pain killers, cough and cold remedies, laxatives, rupture devices, cancer treatments, sinus pain relievers, arthritis remedies, diabetic foods, antacid ulcer preparations, anemia (tired blood) preparations, and many others. The use of these products involves the ever-

The use of these products involves the everpresent danger that relief of symptoms often masks the fact that a serious and often deadly disease is at work. A persistent cough, for example, may be the warning sign of throat cancer. Frequent colds may be the warning sign of a badly infected internal organ. General weakness (tired blood) may be caused by any number of serious bodily allments. Stomach pains may mask cancer. The list is practically endless.

Limited-value medications have their place, but must not be considered as cures or depended upon for long periods of time. The admonition which goes along with the most reputable of these preparations to "See your doctor if pain persists" is extremely important and usually not stressed nearly enough in advertising or printed prominently enough on the package. Diagnosis of a condition must be left to a qualified doctor who, after a thorough examination, will tell you whether temporary relief or serious treatment of a disease is necessary for whatever condition is troubling you.

N

m

af

Arthritis remedies. Arthritis is a painful, sometimes crippling disease, which affects both young and old, although it is more frequent among the aged. Because of the severe pain and crippling effects associated with arthritis, a booming business in phony cures

has sprung up. Over \$250 million yearly is spent on worthless preparations and treatments for arthritis and rheumatism, ranging from pills composed of varying chemicals to expensive electric machines

Inexpensive drugs can relieve arthritic pain to some extent, but there are as yet no drugs, devices or methods which can cure arthritis. Early treatment by a physician can reduce the pain and crippling effects. Diagnosis and treatment by a competent physician is of the utmost importance because there are many forms of arthritis which require different

kinds of treatment.

Cancer treatments. There are no serums, drugs, or diets which have been proved to be effective in curing cancer although many cancer victims or their families spend large amounts of money on worthless treatments. Prompt treatment by effective methods could save millions of lives which are now need-

Cancer can be cured with early treatment by surgery, X-ray, or radiation. Some specific types of cancer will also respond to certain drugs. Early diagnosis and treatment by a trained physician is of the utmost importance. To be cured, cancer must be nipped in the bud. The earlier it is caught and treated, the greater are the chances of recovery. Regular medical checkups are your best protection against cancer. In addition, see a doctor without delay if you observe any of the following warning signals: Any lump, especially in the breast. Irregular bleeding or discharge from body opening. Persistent indigestion. Unexplained changes in bowel movements. Unexplained weight loss. Changes in color or size of a mole. Any sore that does not heal promptly.

Cosmetic medicines. No one can seriously deny the value of good cosmetic prepara-tions, properly applied. They can improve personal appearance and in so doing contribute greatly to improving the individual's medical health and general outlook on life, and even, because of psychological factors, make them feel better physically. Many unscrupulous persons, however, have cashed in on human vanity which makes many people willing to spend a great deal of money for products that promise what they cannot per-

form.

cts

re-

ere

ith

The worst of these promises are made for products containing supposed miracle chemical or scientific discoveries which will return the body, or portions of the anatomy, to a state of youth. This is impossible. The process of aging cannot be reversed. Proper care can often improve the condition of the skin, for example, if it has been neglected or exposed to wind, weather or other irri-tants. There is no preparation, however, which can return the skin to a state of youth. Such a false claim is often made for royal bee jelly, for example. Wrinkle removers are worthless. Similarly, there is no cure for baldness (part of the process of aging) either through medications or massage treatments. Another process of aging, the loss of the hair's color, is similarly impossible. The hair can be dyed, but its natural color cannot be restored. Special vi-tamins or other preparations are worthless to achieve this end.

Reducing foods and schemes. One of the most lucrative fields of fakery involves reducing products. Many fraudulent promoters have gotten rich quick by "fooling the fat" as they cynically put it, in the sale of drugs, gadgets, and diet plans and books. Barring serious glandular disturbance, overeating is the basic cause of overweight and careful and proper dieting under the supervision of a physician, is the only treatment. No matter what anyone says, no matter how many titles a convincing huckster has placed after his name, you cannot eat as much as you please and still lose weight. "Get slim quick" is nothing but the worthless slogan of huckster who wants to get rich quick.

Machines which supposedly diagnose or

treat disease. One of the biggest and most dangerous health swindles is the mechanical or electrical gadget that is supposed to tell what disease a person has and how to treat Thousands of such machines have been manufactured and are in use by various kinds of health practitioners to diagnose and treat every kind of human ailment

Keep in mind that there are legitimate medical devices such as those used by physicians to determine blood pressure, and to record heart action, (electrocardiograph) However one must immediately beware when phenomenal claims are made for mechanical or electrical devices. They are invariably dangerous frauds. Such devices include uranium impregnated gloves for the treatment of arthritis, machines which emit gasses supposedly beneficial for various diseases (but which are often themselves dangerous to health), devices which supposedly beneficial electrical transmit currents through the body, and other such fake gadgets.

The vibrator or massage devices are often useful to give temporary relief of muscular aches and pains, but are not effective for arthritis, rheumatism or heart conditions-nor for "spot" reducing.

How to know if it's fake or has value. The Food and Drug Administration suggests the following ways to determine whether a

remedy is worthwhile:

It is a "secret" remedy? If so, you can be almost certain that it is a fake. Does the sponsor claim he is battling the medical profession or the government which is trying to suppress his wonderful discovery and keep it from the public? This is one of the surest signs of quackery. How did you hear about If the treatment was advertised or promoted in a sensational magazine or by a faith-healers' group, or by some crusading organization of people with little or no medical training, be skeptical. Reputable physicians or medical researchers do not operate that way.

The safe thing to do. If you feel ill, are worried about unexplainable symptoms or bodily changes, or suspect for any reason that something is wrong physically, visit a reputable doctor for a complete physical examination. Seafarers and the dependents of Seafarers should take advantage of the free diagnostic medical examinations available to them in the competently-supervised SIU clinic facilities. These facilities are staffed by experienced doctors and technicians utilizing the latest in diagnostic equipment and techniques. The SIU urges all Seafarers and their dependents to take advantage of this service regularly, even if they do not feel sick or suspect the presence of an ailment. In the early stages of most diseases the patient feels no discomfort and shows no physical symptoms of illness. In the earliest stages, when they are most easily treated and complete recovery is most likely, many diseases are discoverable only with the aid of complete diagnostic facilities utilized by competent physicians and laboratory technicians. The lives of many Seafarers and of the dependents of Seafarers have been prolonged because in the course of routine check-ups incipient ailments were discovered that they might not have otherwise learned of until it was too late for medical treatment.

Poverty and the Senators

EXTENSION OF REMARKS

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. BROCK. Mr. Speaker, one of the most ill-advised, wasteful acts to come

from Congress, in my opinion, was the so-called poverty program. There is no need to again elaborate on the mismanagement and political scandals of Sargent Shriver's inept "war." However, the respected columnist, James J. Kilpatrick, recently shed insight into the basic concepts of Republican opposition to this program and our desire to formulate alternatives which foster incentive and self-respect.

Under unanimous consent, I include Mr. Kilpatrick's article, "Poverty and the in the Appendix of the Senators" RECORD:

> POVERTY AND THE SENATORS (By James J. Kilpatrick)

Sargent Shriver turned up a few days ago before a Senate Labor sub-committee, with ten top assistants in tow. They made an impressive safari as they filed into the jungles of the hearing room, briefcased and charted, seriously bent on their big game quest. Mr. Shriver wants another \$1.7 billion for the War on Poverty, and he expects

to bring home his trophy.

Pennsylvania's Joe Clark was presiding. Some other Senators-JAVITS, RANDOLPH, Pell—wandered in and out. But the most interesting figures were the junior Senator from Massachusetts, Mr. Kennedy; and the junior Senator from California, Mr. MURPHY; and the director of the Office of Economic Opportunity, Sargent Shriver himself. Together they approached the probelm of poverty, with MURPHY going at it from one direction and KENNEDY and Shriver from another: but unlike those famous teams of tunnel drillers, they had no prospect of meeting in the middle of the mountain.

The diffident KENNEDY, firm-jawed, mophaired, speaking so softly he barely could be heard, was there to set up some easy volley-ball questions for his affable brother-in-law. The brisk and competent Shriver, an excellent sales executive, was full of a salesman's rhetoric: "What does the chart show? Let me tell you what the chart shows." And MURPHY, ordinarily one of the most articulate men around the Senate, had trouble making his points. Throughout the long morning, he never took his level blue eyes off Shriver; he looked at the leader of the War on Poverty as if he thought him not quite right for the part.

To California's MURPHY, poverty is a personal thing. He has known it, in ways that KENNEDY and Shriver never have. MURPHY grew up in a poor section of Philadephia, where 50 years ago he attended a grammar school that was 75 per cent Negro. MURPHY was 11 when his father died, 13 when his mother died. He was raised as an orphan in the Corktown neighborhood of Detroit, down behind the ball park, in a tiny house with a wood stove in the kitchen and not enough beds to go around. Later he loaded coal in a Pennsylvania coal mine. He was 23 before he finally saved enough money to

finance a year at Yale.

KENNEDY and Shriver came to the hearing room, of course, with far different back-grounds. It is inevitable that they should come to the problem of poverty with quite different ideas. Shriver inclines toward the large, galactic view. He thinks in terms of billions of dollars and millions of potential recipients. His prepared statement was adsed to the several "universes of among the poor and illiterate. Within ten years, he thought, if enough money is spent, the universe of poverty can be dispelled.

"What we can accomplish," said Shriver, "will depend of course on what the nation feels it can devote to this effort and the President and Congress believe it should appropriate to it."

To MURPHY, gazing in perplexity on the witness, a great deal more is invloved than an act of Congress. The governments vari-

sus crash programs, unplanned, ill-thought, seem to him a fantastic waste of money—and he still sees the waste of money—that it is seen to have the waste of money with boyhood eyes. Was it true, he asked Shriver, that the annual cost of training one enrollee in the Job Corps is \$11,000? The actual figure, said Shriver, is \$9,700; he expects it to drop to \$8,000 next year. Murphy looked at his hunds as if he were still shoveling coal. "It seems high," he said plaintively, "to the ordinary family."

The adversaries got into argument on the high salaries paid within the OEO, both in Washington and in the field. Shriver brushed the charges aside as the merest nitpicking. Muzrhr asked about the waste in such scandals as Haryou-act in New York. Shriver reduced him to a decimal point: Sample audits had turned up improprieties in only two-tenths of one per cent of the last billion dollars spent. Muzrhr praised the work of a private businessmen's group in Los Angeles, which has provided 5,000 paying jobs for residents of the Watts area without a penny in Federal funds. Wasn't this a better approach, he asked, than bureaucratic aid? Shriver made polite murmurs. The universes of need were too vast, he seemed to be saying, for anything but universal Federal aid.

MURPHY and his Republican colleagues are not fiat-out opposed to Federal aid. They see its usefulness, especially in the educational supplements that can lead to jobs and thus to self-respect. Their often inarticulate and inchoate protest goes rather to the philosophy that denies a man the uses of himself. When 569 staff members are hired to train 624 Job Corpsmen, as at Camp Breckinridge, what room remains for boys to master self-reliance? In the hands of an army of child development experts, what Headstart toddler learns to walk alone? Says MURPHY: "They don't teach that anymore."

In a way, this week's Senate hearing produced nothing more than the old charges, the old defenses, the same black marks, the same whitewash cover. Yet in the contrast of Groscz Murphy and the Kennedy clan, one caught a suddenly new insight into the nature of man, and the role of the state.

Captain Roberts' Letter

SPEECH

HON. WESTON E. VIVIAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1966

Mr. VIVIAN. Mr. Speaker, Capt. Archie T. Roberts is a U.S. Army chapplain on duty with the 1st Infantry Division in South Vietnam. Before going on active duty, Captain Roberts was pastor of the Dixboro Methodist Church in Ann Arbor, Mich.

Mrs. Gary Woodward, of Ann Arbor, has forwarded to me a copy of a mimeographed letter which Captain Roberts wrote to his many friends in the Ann Arbor area. The letter describes how one group of American fighting men are working to build an orphanage for Vietnamese children in Ben Cat. In order that the Members and readers of the Congressional Record might know of his work and learn where contributions can be sent, I am including Captain Roberts' letter and his APO address at this point in the Record:

HEADQUARTERS, OFFICE OF THE CHAPLAIN, 20 BATTALION, 28TH INFANTRY, 1ST INFANTRY DIVI-

> APO San Francisco, Calif., 96345, April 27, 1966.

DEAR FRIENDS: Well, as was the case last time I sat down to do a mimeo letter, right after Christmas, either I do it this way or you probably won't hear from me at all. I have finally given up the idea I had earlier that soon things would settle down and I would have time to write more personal letters. There seems to be no real let up in the pace of life that one leads here, and from experience I can truly sympathize with the parents who write to the chaplain wondering why their boy doesn't write more often—just ask Gail how even she has had to wait sometimes.

In early February, soon after my battal-ion commander, Lt. Col. George Eyster was killed, which to me personally was one of the roughest blows so far, I became involved in an orphanage building program as the This has really had me going project officer. in circles but it has been a very rewarding experience as well. It has given me an opportunity to travel around some to see other orphanages and to meet many other people. Most especially, it has given me a chance to work closely with some very fine Vietnamese people. It has been very encouraging to me to hear first hand how thankful these people are just for our presence here and for all we've done for them-expecially the degree of freedom they already have experienced.

This project began because we, as an Army unit, wanted to do something meaningful for the Vietnamese people and at the same time establish a lasting memorial for our dead comrades who gave their lives for this country, our country, and the freedom of the world. Realizing that the future of this country will be up to the children of today, what better way could we help than to help these poor needy children, many who have no home. This was also fitting and readily accepted by the men—who always seem taken by children wherever they go.

Our first stop was to ascertain the need—which was real then to get the government approval to go ahead. All of this came very soon as did a promise for free land. Because we just wanted to sponsor an orphanage by building it and providing the operating funds we next tried to locate a reputable group to administer and supervise the orphanage. This finally came after much discussion from the National Evangelical Church of Vietnam. This church body, which is the only significant Protestant Church group in Vietnam, is an out-growth of the Christian and Missionary Alliance over the past half century. Today the C & MA acts as an advisory group to this completely Wittenmers controlled church. It is pletely Vietnamese controlled church. It is ideal that they have accepted this because they have experience in orphange work and very best interests of the people at heart. At the present time I am trying to raise some \$20,000, which not only will provide much of the original construc tion cost but should also give us funds for our first year's operating budget of \$8,000 to \$10,000. We plan to begin with facilities to care for about 100 children with probable expansion to about 250 children in the future. In addition to the orphanage itself we plan to have a school so that many of the children in the area who cannot afford it otherwise might get an education. This orphanage and school is to be built at Ben Cat which a short time ago was a VC area on one corner of the previously feared Iron Triangle. To me this too witnesses to the progress we've made in the war effort-now we must also win the hearts of these people.

Well, enough of that for now but many of you have written of your interest in this

project and expressed a wilingness to help. Right now the main need is financial but in a couple of months we will also need items of clothing, personnal care needs, school supplies and many others. If you or any group you represent are at all interested in helping out feel free to let me know and I will keep you informed.

All of my efforts have not been in this direction though because my military obligation is still present as before—that of providing services anywhere at any time, visiting the troops and going with them on operations (which have really increased) to help them keep up their morale, counseling them with their problems—most of which interestingly enough come from home, not here—and just being a part of the staff team to keep everything going smoothly. In all, just as I have mentioned before, I still find this a very rewarding ministry even as we begin our eighth month. I am also thrilled and pleased with how well the plain old average American boy is doing in this situation—It's an honor just to be a part of this whole effort over here.

Probably one of the most interesting things for me recently happened on Easter Sunday. We were on a two-week operation in the Delta Country at that time and were moving a lot so we traveled very light-no chaplain's kit, in fact all I had was a pocket stole, prayerbook and Bible—not even a cross. Yet it seemed to many that our Sunday Sunrise service was still as meaningful as ever and the message of the Ressurection Story as we read it and sang it (without musical accompaniment) seemed even more meaningful and real in this situation. It was a real joy to have so many come together to worship at all the services we held in every place. This is all important but the most interesting part for me was that of flying by helicopter out to a destroyer to provide its crew with religious They were giving us naval gun supservices. port for the operation and on Thursday we received word that they would not have a chaplain available so our Brigade Commander, Colonel Brodbeck, asked if I would be willing to go and of course I was. We were very welcome but I'm afraid a grimy Army chaplain and pilot were a sight on a spotless Naval vessel. They were sure eager to know too how the war was going on dry land. But even after cleaning up a delicious dinner I'm still glad I didn't go into the Navy—no offense to my web-footed friends.

Previously I made quite an issue over getting used to the heat-well I found out you never really completely accomplish this task. February and March are what they call the hot months in our area and I think probably that is correct with the daily temperatures ranging between 100 and 115 degrees. Here in April the temperature has dropped down to the 80's and 90's but the humidity has really gone up with the approaching Now for the next four months we monsoons. will be in the monsoon season-rain like I've never seen anywhere. The big struggle now will be to try to keep everything from getting moldy. Somehow we'll survive it all and look back on everything with a degree of humor.

Well, I think I have gone on long enough for new or you'll get bored. I hope you don't mind hearing from me in a general mimeo letter but I assure you that I am thinking of everyone individually as I write it. We all certainly appreciate your thoughts and prayers for us over here and believe me it has helped countless numbers of men pull through. I should get back to the states sometime in October and I hope Gall and I will have time to visit with many of you then, Sincerely,

ARCHIE T. ROBERTS, Chaplain (Captain) USA, Battalion Chaplain,

ti

P.S.—I was honored with a quick promotion to Captain in January.

Junior Achievement of Union County, N.J., and Operation Free Enterprise

EXTENSION OF REMARKS OF

HON, FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mrs. DWYER. Mr. Speaker, on several occasions in recent years, I have had the pleasure of bringing to the attention of our colleagues information about one of the most encouraging youth programs in the country. Junior Achievement, and in particular the accomplishments of a truly outstanding example of this program. Junior Achievement of Union County, N.J.

Situated as it is in the midst of the Nation's largest concentration of business and industry, Union County is an ideal location for an active program through which young people can be introduced to the principles and practices of our free enterprise business economy. With the cooperation and active assistance of many of our most prominent industrial firms, Junior Achievement of Union County has enlisted many hun-dreds of bright and enthusiastic boys and girls of high school age who have relished the challenge presented by the opportunity of operating their own manufacturing businesses.

The 1965-66 Youth Incentive and Economic Education Project of Junior Achievement, which was recently completed, was especially successful. It was highlighted by a 20-percent gain in sales of JA Company products and by the highest attendance record in the eastern JA region, and was climaxed by what must have been a most rewarding trip to Ireland for the 60 outstanding Junior Achievers of the area.

Under leave to extend my remarks in the RECORD, I include the report of this year's "Operation Free Enterprise" prepared by the very able executive vice president of Junior Achievement of Union County, Mr. J. Kenneth Roden:

HIGHLIGHTS OF "OPERATION FREE ENTERPRISE" 1965-66 YOUTH INCENTIVE AND ECONOMIC EDUCATION PROJECT OF JUNIOR ACHIEVE-MENT OF UNION COUNTY, INC.

"Operaton Free Enterprise," latest in a long series of youth incentive and economic education projects developed and executed by Junior Achievement in the Union County-Carteret, N.J. area, was an unqualified success. Designed to stimulate outstanding cess. Designed to stimulate outstanding performance in all phases of Junior Achievement, all objectives were attained.

h

111

1

Products of the 28 junior companies were well designed and attractively packaged.

Supported by "Zero Defects" quality control and safety programs, production was efficient and kept pace with record sales.

Dollar sales of Junior Achievement com-pany products increased 20% over the previous year.

78 Junior Achievers made individual sales exceeding \$100, the record being \$1,078, and the aggregate sales by this group being in excess of \$14,000.

The attendance record was the highest in the Eastern Junior Achievement Region.

27 of the junior companies operated at a profit and paid dividends to stockholders: 1 company operated at a breakeven but was

able to return 100% of its stockholders investment upon liquidation.

60 outstanding Junior Achievers were nominated for participating in the Operation Free Enterprise award visit to industrial, educational and cultural sites in Ireland, May 14 to 22. 24 award winners and two alternates were selected by a panel of business and community leaders after probing in-terviews encompassing their understanding of the principles and functions of free enteruprise, their performance in Junior Achieve-ment, their extracurricular activities, and their knowledge of the history and economic development of Ireland.

OFFICIAL RECEPTIONS ARE BRIEFINGS

Preliminary to their visit to Ireland, the 26 Junior Achievers were complimented upon their achievements by Vice President HUBERT H. HUMPHREY who met them in his Washington office, presented Free Enterprise Award Citations, and said: "Junior Achievement of Union County's Operation Free Enterprise project has enabled you young people to broaden your knowledge and strengthen you rbelief in our profit system. Your enthusiastic endorsement and support of the economic system which has made America great is an inspiration which I am sure many young people will follow. I congratulate you your industrial sponsors, your Advisers and Junior Achievement for this job well done."

A briefing by Department of State officials followed, emphasizing the importance of the functions and responsibilities of American Ambassadors and their staffs throughout the Their subsequent meeting with the Chargés d'Affaires at the American Embassy in Dublin gave the young people first-hand insight into this important aspect of their nation's international responsibilities.

ENLIGHTENING VISITS TO IRISH INDUSTRIES

At the Industrial Site at Shannon Free Airport the Junior Achievers saw new industries developing under Ireland's five-year Economic Programme and had an opportunity to discuss the importance of the industrial revo-lution taking effect there. Host industries were Shannon Free Airport Development Co. Ltd., E. I. Company Limited (Subsidiary of Ltd., E. I. Company Limited (Subsidiary of General Electric Company), Lana-Knit (Ire-land) Ltd. (Subsidiary of Jonathan Logan, Inc.), Mohawk Europa Ltd., S.P.S. (Inter-national) Limited (Affiliate of Standard Pressed Steel Co.). Visits to these new fac-Pressed Steel Co.). Visits to these new fac-tories, affiliates of American industries, and to Shannon River Veneer Mills, Ltd. at Limerick, impressed upon the young people the importance of the special incentives available in Ireland for foreign capital investment; designed to create new employment oppor-tunities to hasten the transition from an agricultural to an industrial economy.

Personal meetings with executives of these new firms in the Shannon area, and of the longer-established industries in the Cork and Dublin area, including Henry Ford & Co., Ltd., Irish Refining Company, Ltd., Becton-Dickinson & Co., Ltd., Irish Driver-Harris Company Ltd., and the affiliates of W. R. Grace & Co., Urney Chocolates Limited and the Hughes Brothers, Ltd. Hazelbrook Dairy, resulted in very stimulating discussions of raw material procurement, production methods, personnel programs, marketing, capital investment, international trade, and general economic activities.

Witnessing the development of this young private enterprise economy emphasized to the Junior Achievers and the business people who accompanied them the values, func-tions, motivations and rewards of free enter-Most importantly, by contrast it also emphasized to them the strength of the American economy and the scope of opportunities available to them at home. They returned rededicated to the principles of free enterprise. One Junior Achiever, 16 year old Fred Berger of Hillside, N.J., sponsored by Bristol-Myers Company, expressed it this way: "It taught me that we really have a lot going for us in the United States. And Lynn Turner, 17 year old Cranford, N.J. high school senior, sponsored by The Singer Com-pany, and named "Treasurer of the Year" by the Union County and New Jersey Societies of Certified Public Accountants, said: "Irish businessmen are similar to American businessmen, but like their employees they do not live the fast-paced lives that most American businessmen do, and therefore their results are not as fantastic.

YOUNG AMERICANS PROUD OF THEIR EDUCA-TIONAL ADVANTAGES

A meeting with Irish Minister for education, George Colley, and his staff, and discussions with students and professors from the Universities of Dublin and Cork, and Trinity College, as well as a visit to the new facilities of the College of Technology in Dublin, emphasized the changes engulfing the educa-tional system in Ireland. Mr. Colley told the Junior Achievers that "Ireland is in the throes of educational change, but change for its own sake is pointless. It should be made with a view to improvement. One of the most successful ways towards this objective is to learn from the successful projects of other countries.

The Junior Achievers learned of efforts being made to raise standards of education, improve educational facilities, and prepare the young Irish to participate in the techand industrial nological advancement planned for the Irish economy. Considerable emphasis was placed on the necessity of lengthening the period of learning for Irish students, many of whom leave school at age 16 or younger.

As a result of these contacts the Junior Achievers became particularly conscious and proud of the educational and employment opportunities available to them at home as contrasted with the limited opportunities for majority of young people abroad.

In Cork, executives of Ford and Irish Refining Company hosted a dinner at which the Junior Achievers met with local students. A rapport was easily and quickly established and new friendships, which undoubtedly will be lasting, developed during meaningful dis-cussions of the American way of life, career interests, hobbies and other matters of in-

terest to teenagers everywhere.

During this meeting the Junior Achievers made an excellent impression with serious minded, probing questions and logical, well expressed answers to questions posed to them. REITISH INDUSTRIALISTS EXCHANGED INFAS WITH

ACHTEVERS Hubert G. Starley, C.B.E., Managing Director of Champion Sparking Plug Co. Ltd. of Farnham, England, flew from London to Dublin especially to entertain the Operation Free Enterprise group. Mr. Starley has been responsible for the start-up in the United Kingdom of Young Enterprise, counterpart of Junior Achievement. He and his Irish associate, John Roy, Director of Champion Sparking Plug (Ireland) Ltd., were hosts at an informal dinner at world famous Royal Hibernian Hotel in Dublin, attended by the Lord Mayor of Dublin, Eugene Timmons, and leading Irish industrialists, in-Chairman, cluding Stephen O'Flaherty, O'Flaherty Group of Companies

Following the dinner and in lieu of formal speeches, Mr. Starley announced that he and his associates desired an informal cussion with the award winning Junior Achievers in order that they might become better acquainted and learn from each other's experiences. A spirited discussion took place between the businessmen and the Junior Achievers after which Mr. Starley commended the young people for their dedica-tion to the principles of free enterprise and their knowledge of business fundamentals as well as their broad interest in public

TRISH MOSPITALITY EXPERIENCED AND RECIPRO-

Each formal meeting with Irish industrialists and government officials was followed by an informal reception or dinner at which the young people were extended warm hospitality. Also, they were guests at a buffet luncheon in the home of Mr. and Mrs. T. A. Headon. Mr. Headon is Managing Director of Urney Chocolate Limited. Everywhere it was emphasized to them that their experience in Junior Achievement and the opportunity presented to them through Operation Free Enterprise was unique and unmatched in any way in Ireland.

The Junior Achievers were impressed with the hospitality and friendship extended to them by the Irish people. This was ex-pressed by Jean High, 17 year old senior at Sacred Heart High School, sponsored by Weston Instruments Inc., after her return when she said to a newspaper reporter: "The Irish are a warm, generous and honest people, working hard to succeed in this transition from an agricultural to an industrial way of life. But I think we all agree that, regard-less of the results, they will remain a people who enjoy life to its fullest."

In a goodwill gesture, the Junior Achievers and Mayor Thomas G. Dunn, representing the City of Elizabeth and the residents of the Union County-Carteret area, presented to the industrial and government hosts educational, scientific and industrial films donated by New Jersey Bell Telephone Company, Humble Oil & Refining Company and White Laboratories. They also distributed a small library of books on free enterprise, biographies of American industrialists, and references on New Jersey including the just-published New Jersey Almanac, and recordings of the fa-mous Westminster Choir College choral group.

FREE ENTERPEISE ESSAYS

As part of the "Operation Free Enterprise" competition, the Junior Achievers were required to write an essay on "Why I Believe in the Free Enterprise System". Biographies of the award winning Junior Achievers, which were sent to Irish hosts and newspaper, ra-dio and television editors, prior to arrival in Ireland, included excerpts from their essays and information about the young people's extra-curricular activities. The readers were so impressed that Junior Achievement received requests for the young people to ap-pear on television. Also, several industrial-ists and educators extended special invita-tions for the young people to be guests in their homes to meet their families and friends

The following excerpts from free enterprise says are typical of the astute statements of the young people in their essays and in discussions abroad:

"When you start a business, what is your main objective? It is to make a profit . . . Individuality and incentive are most necessary to a successful system . . . This pride which I saw develop in my own company, Hopco, is one reason why I believe in free enterprise . . . If you are going to succeed in anything, you must believe in it and in your ability to conquer any problem which may arise . . And this is the main item needed to do anything worthwhile: Character." Thomas Gallagher, 15 year old sophomore at Roselle Catholic High School, sponsored by Radio Corporation of America.

"I believe that private, not government, ownership of a nation's wealth is a positive good. The hope of success in business is in itself a positive good. The hope of success in business is in itself an incentive for consistent effort. It causes individuals to exert themselves to be creative and to seek success constantly and to produce more necessary products . . . I wish to have the opportunity to develop my capabilities at the same time I am contributing to the preservation of business," Gary L. Goodman, 18 year old

senior at Thomas Jefferson High School,

sponsored by IBM.
"The free enterprise system is the founda-tion of our democracy. It is a major factor in our daily lives, and vital to our standard of living . . . After investigating the other forms of economic systems, one cannot help but believe wholeheartly in the Free Enterprise System. There is no other system that, with proper knowledge, labor, and attitudes, can allow man such great economic freedom so that he may succeed to his utmost ability . . . The many virtuous aims of this system have benefited individuals of our society by allowing them equal opportunities to prosper in all facets of life." Joan Kruger, 18 year old senior at Linden High School, sponsored by Humble Oil & Refining Company New Jersey Sales Di-

"The search for security is perhaps the most difficult problem to overcome. People are willing to sacrifice for halfway success. They are willing to acquire enough prosperity to become one of the crowd, but they are not willing to further their achievement to its fullest measure. Despite these drawbacks, our American success story is as real and possible today as it ever has been. A person possessing the imagination, initiative and industry can strive towards his goal The Free Enterprise System makes it

ossible for even you and I to be a part of the great American success story. Today the sky is the limit." Patricia C. Lapidus, 16 year old junior at Mother Seton Regional High School, sponsored by Schering Laboratorie

"If a man works for something he should reap the rewards of that work. In America this is true. It is up to every individual to earn his own way and those with more aggressiveness and ability can surpass the average. Through free enterprise the motivation in inspired in the individual. He works harder because he seeks the rewards works harder because he seeks the rewards and profits that can be gained with certain effort." Gerald Rotella, 17 year old junior at Roselle Catholic High School, sponsored by Merck & Co., Inc.

TELEVISION APPEARANCES

Bunny Carr, popular moderator of the Irish television program "Teen Talk" invited 16 Junior Achievers to participate with Irish students on his program. The Junior Achievers impressed an audience of 5 milstudents on his program. lion viewers with their alert, thoughtful discussion of serious questions about the American private enterprise system, America's role as a world leader, and their own social responsibilities.

Also, Mayor Dunn, J. Kenneth Roden, Executive Vice President of Junior Achievement of Union County, and two Junior Achievers were invited to appear on the "Late Late Show", Irish equivalent of the popular American "Tonight Show", also viewed by a television audience of 5 million. The Achievers, Jacinta Smolinski, 17 year old senior at Jonathan Dayton Regional High School, sponsored by White Laboratories, Inc., and Joseph Wlazlowski, 16 year old junior from Sacred Heart High School, sponsored by Schering Laboratories, were complimented by the producer and roundly ap-plauded by the studio audience for their articulate discussion of the American busis system, their Junior Achievement activities, and on their thoughtful comments as to the group's impressions of Ireland.

Tapes of these broadcasts have been obtained and will be made available to New Jersey radio and television stations,

JUNIOR ACHIEVERS GOODWILL AMBASSADORS

Everywhere the Junior Achievers complimented on their knowledge of Irish affairs, its Economic Programme, and politi-cal and cultural activities, as well as their ability to converse intelligently about American and international affairs. The Junior Achievers were attired throughout the trip as young businessmen and women.

Not only Irish residents, but tourists from Canada, Australia, Europe and the United States, met en route, made a point to compliment them on their appearance and conduct. The young people reflected great credit on Junior Achievement, the sponsoring industries, their high schools and their community.

Coments of the business and government officials with whom they associated during the week in Ireland indicate that the Oper-Free Enterprise award winners did much to change the unfavorable impression of the American teen-ager being built up as a result of distortions in the world press and through American television programs distributed throughout the world. was gratifying to receive the following com-ment from Mr. Robert Chalker, Charges d'Affairs at the American Embassy in Dublin: "The visit of the Junior Achievers from Union County and Carteret, New Jersey, was an outstanding success. They were examples of what we like to think of as typical of dynamic, intelligent and serious-minded American young people. They made an ex-cellent impression everywhere they went. We consider they were a credit to their country.

PARTICIPANTS

In addition to those mentioned in this Highlight Report, the following participated in the planning and execution of "Operation Free Enterprise.

SPONSORING INDUSTRIES

Air Reduction Company. American Cyanamid Company.

Bristol-Myers Products Division-Bristol-Myers Company.

Call the Keeper

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. KUPFERMAN. Mr. Speaker, Nat Hentoff is a writer and a commentator on the passing scene. He is honest, intelligent, difficult, and aware. He is extremely controversial. The complacent do not and cannot appreciate him. Many will disagree with him. He has written, among many other

He has written, among many other publications, for the Village Voice, published in my district and covering Greenwich Village but also sold nationally. His latest work is his first novel entitled "Call the Keeper" published by Viking.

the Keeper" published by Viking.
The New York Times of Friday, July
8, reviewed the book, and, on balance,
found it "rather likeable."

Eliot Fremont-Smith the reviewer referring to Nat Hentoff's treatment, concluded:

He does it knowledgeably, humorously, succinctly and—once one's expectations are brought into line—effectively.

THE RACE GAME

(By Eliot Fremont-Smith)

(Call the Keeper. By Nat Hentoff. 116 pages. Viking. \$3.95.)

There are two epigraphs to Nat Hentoff's first (adult) novel. One is from a play by Bertoit Brecht: "The endless isolation of Man makes enmity impossible." The other is a saying of John the Avenger: "You are putting me on." Now John the Avenger presumably doesn't exist; he is one of Mr. Hentoff's created or amalgamated characters; so it is a bit of a question right off as to who is putting whom on. In fact, once into the book, the suspicion comes that it is the author who is being put on. If so, he takes the advice of another of his characters, to wit, "The only way to answer a put-on is to be as straight and succinct as possible." Mr. Hentoff is—and thereby answers the put-on and produces an overly programed novel.

Or, perhaps, the scaffolding for a novel as yet unwritten. It is, in any case, an unwieldly structure, held together by good intentions, which may explain a minor oddity: "Call the Keeper" is at once a tedious book and a rather likeable one.

Facets of the theme are reflected in the quotes above; it is indeed about being put on, also about isolation and the frustrating uselessness of enmity, specifically Negro enmity toward white people.

NS

lew

rish

CIES

ism

The scene of the book is that one place where the races mix on at least pretend equal terms, Greenwich Village. Here the games people play include the race game, which, because enmity must constantly be deferred, is only verbally violent; when it comes to action, the nervous cry from blacks and whites alike is "cool it." Even John the Avenger, who dreams of black revolutions is forced to cool it (this after a wry, pathetically hilarious audience with a cautious Cuban Marxist theoretician).

The most he can do, when really pressed, is force his white wife and child to leave him.

He knows the meagerness of the gesture, ao his anger is real and touching; the trouble is, there is absolutely nothing to do with it. When a brother revolutionary, a Dostoevsky manque named Septimus, proves to the world (it takes some doing) that he's a psychopath, it merely seems another, more logical and more final way of cooling it. Before that, the most Septimus could do was pretend he may have murdered a sadistic cop—a Negro cop at that.

The implicit observation in all this is that black revolutionaries who would force concessions from "whitey" by violently dislocating white society are themselves too dislocated even to make coherent plans. "I am sure," says Horowitz, the police officer who puts Septimus away and who is hated not because he is white but because he is smart and incorruptible, "I am sure there will be a rise in terrorism for some years. Isolated, futile terrorism." Possibly to keep it futile, Horowitz, at the end of the book, quits the force to join the war on poverty. A symbol of evil, this unfeeling libertarian who is committed first and last to order, Horowitz will be successful; alone, he understands the uses of accommodation as a weapon. He is "the

John the Avenger, Septimus and Horowitz are the protagonists of the novel; four others serve as a chorus and as Mr. Hentoff's alternating mouthpleces: Thomas (white), who cape-records race relations "documentaries" for a "listener-supported" radio station and sleeps with Dlanne (black), an ex-Smith undergraduate who shares her Bleecker Street apartment with Billy (her brother), a radio bug who plays it cool with pot and admires the super-cool of Randal (white), who gave up junk for jazz and friendly non-involvement.

keeper of us all."

It is a difficulty of the novel that these four voices are not distinguishable from each other, that for all their articulateness they remain patently mechanical contrivances. (What are they doing? Are they talking to us? To each other? Writing in their diaries? Being tape-recorded?)

This is the scaffolding Mr. Hentoff has, as it were, left behind. And scattered all

This is the scanfolding Mr. Hentoff has, as it were, left behind. And scattered all around the edges is their, or his debristoo obvious coy and constant references explicit and implied, to Malcolm X, LeRol Jones, self-conscious WASPs, lost liberal Jews, the Cedar Street Bar, WBAI-FM, Charlie Parker the Frogressive Labor Movement, Camus, Jimmy Baldwin, group therapy, Downbeat, Erich Fromm and virtually it seems all the other familiar people, concepts and concerns that have occupied Mr. Hentoff as a long-time social critic and explainer of the militant Left to sympathetic liberals.

The concern one feels is missing, or relegated to some low place on the scale, is for the novel as a novel, its own engine, its own sources of energy and art. In these terms, Mr. Hentoff is himself a keeper. He won't let go; he must explain. Yet it should be added that he does it knowledgeably, humorously, succinctly and—once one's expectations are brought into line—effectively.

The War on Poverty in Rural Eastern Colorado

EXTENSION OF REMARKS

HON. FRANK E. EVANS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. EVANS of Colorado. Mr. Speaker, the Yuma Pioneer, a weekly newspaper in Yuma, Colo., has published a two-part series on the war on poverty in Yuma County. The stories were written "after much study and observation," the editor said, to provide better public knowledge and to "clear up public misconceptions" of the program.

I was impressed by the quality of these two stories and include them in the RECORD for the benefit of my colleagues:

A LOOK AT THE WAR ON POVERTY BEING WAGED IN YUMA CO.

It's known by many names. . . . The Poverty Program. Title V Project. Economic Opportunity Act or E.O.A. War on Poverty, and several which are unprintable. Likewise, opinions regarding the program range along a large scope, and almost everyone can quote first-hand examples to show how good, or how bad, it is.

This is the first installment of a two-part article in which the Pioneer takes a look at the War on Poverty, as being waged in Yuma County. It's offered after much investigation, study and interviews; neither to champion the program nor ridicule it, but rather as explanation.

Floyd "Bud" Murphy is the Title V Project Director for Yuma County, and he says that a once fresh joke has long ago turned stale, sometimes offered as a greeting, "How about getting me on the Poverty Program?" A quick look at the pay-scale figures readily

A quick look at the pay-scale figures readily indicate that those employed under the E.O.A. don't have the "chocolate mountain" that many claim. Wages are based on the number of people in the family. A man and his wife, for instance, receive only \$81.72 per month plus shelter and working expenses. A three person family, whose household head is working under the program, gets \$117.83; four people receive \$154.94; five, \$192.05; six, \$229.16; and seven, \$256.76.

For this, they are committed to work not less than 40 hours each week, attend night school, and cannot receive any outside compensation for "moon lighting" on jobs for revenue.

Yuma County received \$258,300 to launch their War on Poverty last November, but not nearly all of this fund will be used, according to Murphy

The first person went to work under Title V on December 20, 1985, and since then thirty-four families have been included in Yuma County. The occupations of those employed are widely varied, but with few exceptions, are working for schools, county, town, hospital, or other levels of government. Their jobs include: bridge construction, heavy equipment, landscaping, plastering, painting, carpentry, tile laying, custodian, streets and utilities, mechanic, policeman, telephone line repair, surveying, terracing, secretarial, cook, laundry and brand inspec-

Only four people have been placed with private business, including three in nursing homes and one as a garage mechanic. While the employer is not responsible for their salary, he is committed to their training and advancement, and must indicate a willingness to hire the person at the end of their training.

Of the thirty-four participants, seventeen are now self-sufficient, having received steady employment. In other words, they are off the welfare roles and pulling their

are off the welfare roles and pulling their own weight in society.

"There were some hard feelings, particularly early in the program, displayed by the public," according to Murphy. "Most of this stemmed from misunderstanding," he said. A trainee told the Ploneer that he hadn't detected any ridicule from the public in regards to being on the Poverty Program, however.

Participants are expected to attend schooling two nights a week at Eckley. Classes are

taught by three R-J-1 instructors, held in two-hour sessions. Their goal is a General Education Diploma, which the State recognizes as equivalent to a high school educa-

In addition to the Title V students several others are receiving adult basic education under Title II. These are usually well-to-do people who merely wish to further their education, or brush up on particular subjects. Some are housewives, others are employed by private business, and still others are self-employed. They dont receive money or compensation for going to school, nor are they linked to a welfare program of any type. Most, in fact, are substantial taxpayers who financially support such programs, and many have high school diplomas

While the program will not remain federally sponsored after this year, the educational portion is expected to continue from money channeled through state offices and sustained

by the county.

Murphy said that the Title V Program does not work with alcoholics or mentally retarded people, feeling that they need a more spe-cialized type of assistance.

Murphy is the only full-time Poverty work-

er in Yuma County, though he is assisted by part-time stenographer, case worker, and three instructors.

A Denver Post editorial writer pretty well summed it up in a recent story. He said "It should be remembered that these immediate and direct benefits are only temporary tokens of greater public benefits. E.O.A.'s goal is and should be, to win the war and do your-self out of a job."

So much for the basic glimpse of Title V

in Yuma County. For editorial comment, see

Next week we offer the second and concluding chapter of the story; more interesting, as a trainee of the program tells how he feels about it, its benefits.

TITLE V TRAINEE VOLUNTEERS OPINION

We took a broad look at Yuma County's Anti-Poverty Program in the Pioneer last week, dealing primarily with facts and fig-ures within the county. This week, for the second and concluding article, we'll examine the program in personal detail, as seen by one of its participants.

Vincent Gallagher is 29 years old, father of three, and training to become a police officer under the Title V Program. He speaks openly and frankly in regards to poverty training, and it's apparent that he's genuinely grateful for the opportunity it offers.

Gallagher previously worked for plumbing companies in Yuma and Wray, supporting family of five. Following an operation on his back, doctors ordered him to find a less strenuous occupation. But what? Previous which in the Navy. He was forced to partial welfare for a couple of months following his operation, then joined the Title V Program, training for a new line of work while maintaining a degree of financial footing.

Gallagher says, "I think it's a good deal (the Poverty Program). It has got me into something I can work at without my back being a hinderance. I feel that I'm getting good training under Albert (McNichols). I hear a lot of things about the Poverty Program, but I think a lot of this comes from the people in it, themselves."

Gallagher receives \$281.00 a month from Title V, and this is the only source of income he's allowed. He even has to have a fellow law officer sign violation tickets he writes, since there is a \$1.00 rebate fee to the officer.

\$281.00 can hardly be considered a living wage for a family of five, and certainly noth-

ing to turn cartwheels over. Gallagher however, considers it as a 'God sent', and a real opportunity to make a new start.

Gallagher reflects, "I have never had much

money, and I'm used to getting by without You may want something, but you learn to just walk by it. My wife does our sewing, and makes pretty near all the children's clothes." More amazing is the fact that Gallagher is making payments on a modest home in north Yuma and fixing it up in his spare time, a tribute to careful budgeting.

Like other trainees in the Poverty Program, Gallagher is committed to work 160 hours each month at his job. Like many others, too, he puts in extra hours for the experience, without pay. He sometimes dou-bles as a radio dispatcher at the police station, working a 16-hour shift.

Police Chief Albert McNichols, and fellow law officers, agree that Gallagher has become a good law man, and is very serious about his duties. Gallagher isn't afraid to write traffic tickets, and to him a traffic violation is a traffic violation, regardless of the offender's social standing within the town. recently discovered two break-ins while making routine night checks of downtown business places.

The schooling segment of the program is very good, Gallagher feels. He is attending classes twice a week at Eckley, taking math and English. He completed the eighth grade in his hometown of Crosby, North Dakota, but will take a test in the near future for the

equivalent of a high school education.

The Title V training period will end in November. Gallagher says, "I hear a lot of talk about people going right back on welfare when this program is finished, and some of them probably will; but a good percentage will move into regular, self-sustaining jobs.

Gallagher likes police work, and hopes for a chance to get on the Yuma force as a regular officer. If not, he'll find an opening elsewhere, and move.

One might suppose that a law officer training under the Poverty Program might meet with hostility when writing a discrimination, or at least some kidding. Gallagher said that he hadn't noticed any.

Floyd Murphy, Title V Project Director for Yuma County, said that "most people in the program are very sincere in their desire for steady employment, and ready to put forth the effort to learn. One man worked 78 hours over his regular 160-hour training time, voluntarily, just to get experience. There was no extra pay. Many of our There was no extra pay. Many of our workers have had seasonal jobs, but aren't professionally trained. Our job is to see that they develop work skills and work habits, and don't become accustomed to loafing," Murphy commented.

And so, the War on Poverty continues. There may be "fat cats" on higher administrative levels getting fatter, we don't know: but we can pin-point a degree of merit for the program when viewed on the local level.

Pending political campaigns will probably toss Title V back and forth with charges and countercharges. If our readers realize that the program is not a cure-all, as some will claim; or a complete waste of money and time, as others will say, then this brief glimpse of Anti-Poverty on the local level will be worth while.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is lo-cated in room H-112. House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompa-nied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section re-lating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the tions are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not inter-fere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Gov-ernment officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

p

Comptroller Arthur Levitt's Address at the Conference of Mayors

EXTENSION OF REMARKS

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mrs. KELLY. Mr. Speaker, the Honorable Arthur Leviti is one of the most devoted and noncontroversial personalities who is serving the State of New York.

I am most fortunate to have shared a close friendship with him and his family for nearly a quarter a century. He was a classmate of my late husband, Edward L. Kelley, during their academic year at Columbia College.

Because of the fact that I share the views which Mr. Levitt has expressed in his many endeavors over the years, I am delighted to insert in the Congressional Record, an address made by the Honorable Arthur Levitt, who is comptroller of the State of New York, at the annual meeting of the Conference of Mayors, held at Grossingers Hotel, on Tuesday, June 14, 1966:

Address by Comptroller Arthur Levitt at the Conference of Mators, Grossingers Hotel, Grossingers, N.Y., June 14, 1966

I am pleased to be with you this morning and to once again address the Annual Meetof the Conference of Mayors. It is pleasant to be among old friends and to establish new once.

Your forum offers an excellent opportunity for local and State officials to meet and discuss problems of mutual interest and concern.

Today my topic is one which personally concerns each of us—retirement benefits for public servants.

Many among us today can probably recall the days when a pension was considered an outright gift from a benevolent employer. Few of our parents were fortunate enough to work for such an employer and it wasn't until the establishment of Social Security that there was any hope of financial security in any measure—aside from the meager savings that one could accrue over a lifetime—during the wears of raticement.

during the years of retirement.

But Social Security wasn't enough and gradually over the years—through the power of unionism, collective bargaining and legislators concerned with the problems of a growing population of persons over 65—fixed income retirement plans began to expand.

Today, with infiation our paramount domestic economic concern, fixed retirement income is inadequate to meet the day-today needs of retirees, whether they be in private industry or public service. You simply can't buy a dollar's worth of groceries with a 40-cent dollar.

One of my most important responsibilities as State Comptroller is that of sole trustee of the New York State Employees' Retirement System.

It is an area in which I have a personal interest, for I strongly believe that a government employee—at any level—deserves, as

part of his career benefits, a pension which will have meaningful value in his retirement years.

Government, from the standpoint of employee satisfaction, must be the leader in obtaining adequate pension benefits. It is also prudent that government assume this leadership, when we consider the fact that, one way or another, our society will not tolerate depressed living standards for its senior citizens who live on retirement incomes. If retired public servants are unable to provide for the necessities of life out of their pension incomes, it is logical to assume that, like retirees on inadequate private pensions, they will turn to government for various forms of assistance.

It is therefore economical in the long run for government to provide an adequate retirement income for its employees in order that they can fully provide for their own support after retirement rather than being compelled to resort to government welfare handouts.

Tt is for this reason, in part, that much of the legislation which I suggested this year in Albany has been pointed toward improvement of the New York State Employees' Retirement System.

Of all these proposals—some 31—none will have greater economic impact upon the retired public servant than my plan calling for an automatic retirement income adjustment based upon changes in the U.S. Bureau of Labor Statistics' Consumers' Price Index.

Quite simply, this bill would gear monthly pension checks to realistic price factors. It the cost of living index rose to a significant level—my formula suggests any three per cent change as a trigger point—then the pension would be increased similarly.

In other words, the pension payment would be tied to the economy. The monthly dollar pension income would reflect current price trends. The pensioner wouldn't be caught between the rising tide of inflation and an income based upon an earlier economic period in which the dollar had more purchasing power.

I needn't remind this audience of the hundreds of loyal public servants who retired after long years of dedicated work who are now living in poverty because their pensions were geared to horse and buggy living costs.

Government has a special responsibility in this matter because rising living costs are directly related to Increased government expenditures and higher taxes. The burden has been especially heavy on our senior citizens who, though they have less need of these facilities, are still compelled to pay increased property taxes for support of government programs.

My plan is justified and I sincerely hope, once it is established, every level of government will take advantage of the permissive clause of the bill to provide all public servants with the protection necessary against the ravages of inflation.

Those of you who follow legislative news probably know that the bill was passed earlier this year in both houses of the State Legislature with overwhelming bi-partisan support only to be vetoed at the hands of the

Fortunately, a similar companion bill is still in the Legislative hopper with revisions which should fit the necessary reforms recommended by the Governor. To date it has been approved by the Assembly and is now before the Senate.

I sincerely hope this measure will win the support of the Senate and the approval of the Governor. Although it is less than I desired, it is a step forward—even on an experimental one-year basis—for public servants in New York State.

Let me point out that the bill provides for financing any additional cost directly from State Retirement System earnings. There is no burden on the taxpayer to provide this benefit.

One of the reasons why this measure can be funded with proceeds from Retirement System earnings is the remarkable investment history of the System's fund during the past 11 years.

With the able assistance of an Investment Advisory Committee, numbering experts in the field of finance, economics and investment, we have expanded the Retirement System portfolio from \$774 million in 1955, the year I took office, which produced an average yield of only 3.19 per cent to a current portfolio of more than \$2.5 billion with an average earning level of 4.47 per cent.

The New York State Employees' Retirement System is one of the world's largest; its massive funds involve careful management and constant attention. Its investments exceed that of many foreign nations.

But despite its size and complexity, its administrators have never lost sight of the human value factor which guides us in every decision we make.

Working to guarantee decent pension income is a major battlefront of our operations. Its dimensions cover more than 300,000 members and more than 43,000 pensioners now in retirement. The System is sensitive to the needs and problems of government employees in service of the State and its municipalities, employees whose skills, devotion and labor have helped this State achieve its present affuence. I hope you will join us in support of retirement legislation that will insure each of you economic dignity in retirement. Thank you.

Another Chapter

EXTENSION OF REMARKS

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. ABBITT. Mr. Speaker, for many years, the people of Prince Edward County, Va., have been waging a legal fight to retain the control of their public schools. Throughout all of this period, these people have conducted themselves in a most commendable way in trying to meet the demands which have been made upon them by certain minority pressure groups and by the courts.

Nowhere in America has there been a more graphic picture of the impact of the Supreme Court decision upon public education, then in Prince Edward County, and nowhere has the defense of constitutional principles been more graphically presented.

During the course of this encounter between the people of Prince Edward County and the courts, the editor of the Farmville Herald, Mr. J Barrye Wall, has been a continuing voice of reason in steering the course of the actions there.

He has written many splendid edi-torials over the years, and his writings have provided a chronicle of the times. I take privilege in including, with my remarks, another editorial, which appeared on June 24, 1966, in his paper, under the title "Another Chapter."

I commend this to the reading of the Members of the House:

[From the Farmville (Va.) Herald, June 24, 1966] ANOTHER CHAPTER

Announcement on Monday of the Fourth Circuit Court's decision holding the Board of ervisors in contempt came as a bombahe to the citizens of the County. In the long 15 years of litigation in this county the Board of Supervisors and all others in the efforts to maintain local control of education have been exceedingly careful to litigate differ-ences strictly within the law. No untoward incident has occurred and personalities have been held to a minimum. It has been en-tirely a legal battle before the courts. That it has taken 15 years, for the courts to settle fundamental and constitutional questions is of some moment. Certainly it indicates that the original decision of 1954 was on "thin es, (the Civil Rights Acts of 1964 and 1965) was there much legal substance upon which the courts could act. Yet, through visors, and the people of Prince Edward fought for their rights with meticulously

Originally in 1955, there was but one defense, namely, to take the position to refuse to pay for integrated public schools, or schools over which local control was lacking. This action led to the unfortunate closing of public schools in Prince Edward County. Lack of legal decision let the schools of the county remain closed until the maze of legal questions were finally resolved when the U.S. Supreme Court, on threat of contempt, forced the Board of Supervisors to levy taxes and re-open public schools in 1964, which now practically have been taken over by the federal courts and/or the federal bureaus.

Virginia by law provided a system of educational grants to parents who preferred not to use the public schools to educate their children. The parents of Prince Edward County used the grants one year, 1960-61, to establish their own schools under their con-trol. But in 1961, ten days prior to school opening, the right to the grants was denied until public schools had been provided. se parents continued to operate their schools on an independent their own or from private funds donated for that pur-pose. In 1964, when the Board of Supervisors had provided for reopening of public schools, parents applied to the State of Vir-ginia for the educational assistance for the The State Board of Education agreed, but a NAACP attorney in a historic flight to Charlotte N.C., obtained from Justice Bell a temporary injunction, from Justice Bell a temporary injunction, which subsequently became a permanent injunction against reimbursement of the 1963-64 grants. However, the Court declined to enjoin future grants. With the former injunction of the District Court removed by the provision of public schools, the Board of Supervisors was free to act on future grants duly appropriated and then in the treasury of the county. This they did on August 4, after denying an informal request sent by the Chief Judge through a cierk to attorneys that no tuition grants would be

paid pending an appeal. Acting as swiftly as did the NAACP attorney, they paid the first half of tuttion grants for the coming year 1964-65. The NAACP attorneys admitted they were caught "flat-footed."

Now, two-years later, the Fourth Circuit Court in a 3-2 decision declares the Board of Supervisors in contempt and orders them to repay the county treasury \$180,000 by recovery or otherwis

A sordid chapter it is.

CONTEMPT OF COURT

Chief Judge Haynesworth of the Fourth Circuit Court in a dissenting opinion, quoted the law on contempt of court:

He savs: is clear that this Court has an inherent power to punish contempts. It was originally defined by the seventeenth section of the Judicary Act of 1789 as the power to punish by fine or imprisonment all contempts of authority in any case or hearing before the Court. But the power has since been limited and redefined by the Act of Congress of March 2, 1831, now USC No. The Statute prescribes:

"'A court of the United States shall have power to punish by fine or imprisonment, at its discretion, such contempt to its authority, and none other*, as

"'(1) Misbehavior of any person in its presence or so near thereto as to obstruct the administration of justice;

(2) Misbehavior of any of its officers in their official transactions;
"'(3) Disobedience or resistance to its

lawful writ, process, order, rule, decree, or command.

And he observes further: "Measuring the facts in the present case by the word of Congress, I am unable to find basis in the statute for a contempt citation. Phrases (1) and (2) of the statute are not applicable The majority finds, under phrase (3), that there was a disobedience or resistance to a lawful writ, process, order, rule, or command of this Court. Yet none in fact existed to be disobeyed or resisted.'

The fact is that the Prince Edward Board of Supervisors paid out upon legally executed requests a sum of tuition grants entirely from county funds, legally assessed and appropriated for that purpose. It was the first time since 1961 that the Hoard was free to act, and the last time because the federal courts have denied the parents of Prince Edward County the right to receive these benefits which are and have been legally constituted by the Acts of the Virginia General Assembly and ordinances of the County of Prince Edward.

The parents of every other county in Virginia have received this educational assistance, but not Prince Edward. Why? tance, but not Prince Edward. Why? Could it be discrimination? Could it be because Prince Edward had the temerity to contend for its rights for a period of 15

[From Richmond (Va.) News Leader, June

TALKING ABOUT CONTEMPT

After so long a time, the mind becomes numb to incredible decisions from the Federal courts. Thus one views yesterday's pronouncement of the Fourth U.S. Circui Circuit Court, in the continuing matter of Prince Edward County, with neither shock nor out rage, but with a certain sense of the inevitable recurring. Judges Albert V. Bryan and Simon Sobeloff, as two of the chief umpires in this game, have blundered with one bad call after another. Why should better he expected of them now? Why should anything

Yesterday Judges Bryan and Sobeloff, al-lied with Judge J. Spencer Bell who knows

better, contrived an opinion out of thin air and less majests, holding the Prince Edward board of supervisors in contempt of court for an action taken two years ago. Their af-fronted eminences ordered the six supervisors, "personally and in their own right," to restore to the county treasurer, "through recapture or otherwise," some \$180,000 in county funds paid out in tuition grants on the night of August 5, 1964. It is an aspect of the dream world which judges inhabit that these six countrymen do not have \$180,000. never had it, and would find it impossible to recover these public funds from the parents who disbursed the grants long ago.

The important thing in this case is not the \$180,000. It is not the conduct of the Prince Edward supervisors (though their conduct was misguided, deplorable, inadvised, and keenly regrettable). It is rather the conduct of the three circuit judges in letting their pique get the best of judgment. They thought the Prince Edward supervisors had pulled a fast one in their midnight caper, and doubtless the super-visors did just that. But the Federal statute defining contempt of court is crystal clear. Under circumstances such as those in the Prince Edward case, persons may be punished for contempt only for disobedie or resistance to a Federal court's "lawful writ, process, order, rule, decree, or com-

The supervisors simply are not guilty of violating that statute. They may have be-haved very badly, or precipitately, or mischievously, but on the night in question, they did not disobey or resist any lawful writ, process, order, rule, decree or command. None was in existence. They took slick advantage of a momentary hiatus in the stream of court orders. In effect, they stole home while the pitcher was looking the other way. Time hadn't been called. The ball was still in play. For a court to cite them for contempt, nearly two full years later, is simply

Which is to say, it is what we have to ex-pect from Fourth Circuit judges in suits hav-In a non-legal sense, ing racial overtones. the supervisors may have had contempt for the court; it is a feeling not sharply confined. what is to be said of the contempt of circuit judges for the law that limits their own jurisdiction?

Ebbing Treasury Supply Hikes Silver Futures

EXTENSION OF REMARKS OF

HON. W. E. (BILL) BROCK OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. BROCK. Mr. Speaker, the silver supply in the United States is not keeping pace with its consumption. Cog-nizant of this fact, the Congress acted last year to eliminate the silver from dimes and quarters and reduce the silver in half dollars. However, by the end of this year, the Treasury—the largest source of silver supply—will have only 600 million ounces left. In a couple of years, the Treasury may stop pegging the price of silver and then silver prices would soar. This is a most disturbing trend and could encourage hoarding, a contigency the Treasury apparently is willing to face.

Mr. Henry Kadri, writing in the June 27 issue of Barron's explains the silver

appears to have overlooked these words," " '* Emphasis added. The majority opinion

problems today and what we can expect in the future. I have unanimous consent that "Ebbing Treasury Supply Hikes Silver Futures" be printed in the Appendix of the RECORD.

EBBING TREASURY SUPPLY HIKES SILVER
FUTURES

(By Henry V. Kadri)

Since early in March, prices of silver futures, particularly the distant options, have strengthened and daily volume has jumped, both moves reflecting expectations that the U.S. Treasury—the biggest source of supply—soon will run out of salable silver.

In this event, the Treasury would be forced to abandon efforts to peg the price of silver at its monetary value of \$1.2929 per fine troy ounce. Such a freeing of the market would push silver beyond \$1.3834, at which point the face value of pre-1965 half dollars, quarters and dimes would be worth their respective silver content.

PREMATURE PRICES?

The Treasury, however, believing that ample stocks will become available during the present introduction of new silverless coinage, says it intends to continue providing silver at \$1.2929 through mid-1968. In its view, the recent speculation is silver futures is premature. Similar rallies have occurred, particularly in the spring and fall, ever since silver futures trading resumed on June 12, 1963. And apart from doubts of the ability of the U.S. Treasury to continue to peg prices, some of the domestic and foreign buying represents hedging against currency devaluations.

Owing to the availability of Treasury silver at \$1.2929, premiums on futures in recent years have consistently vanished as contracts neared delivery time. The July future, for example currently is selling for around \$1.29 per troy ounce but well below its November high of \$1.329.

The September contract, meanwhile, has dropped from a peak of \$1.328 last November 16 to a low of \$1.298 on March 25; it currently is quoted around \$1.30. The February 1967 delivery, which rose from a March 11 low of \$1.316 to a high of \$1.3425 on May 3, currently is selling around \$1.332. The most distant May 1967 option is selling at \$1.351, vs. a high of \$1.3575 on May 31 and a low of \$1.344 on June 2.

FOR THE BULLS

While the recent buying of silver futures again may prove unprofitable—the big winners of late have been the short sellers—time seems to be working in favor of bulls who see prices ultimately rising to \$1.50 and to perhaps \$2.00 or more, with even \$4.00 mentioned by some. As has been the case for years, demand continues to outdistance supply.

Beginning in 1959, rising U.S. industrial and coinage demands for aliver exceeded market supplies and resulted in large withdrawals from the U.S. Treasury's free (non-monetized) silver stocks, which dropped from 202 million ounces at the end of 1958 to 28 million ounces on November 29, 1961. At this point, the Treasury suspended sales, which had been made at 91 cents per ounces.

Subsequently, the market price of silver moved steadily upwards to \$1.2929 in September 1963. This followed the June 4, 1963, pussage to the Silver Act, which repealed all previous silver legislation, authorized the Administration—which quietly had retired most \$5 and \$10 silver certificates—to issue \$1 Federal Reserve notes, eliminated the profits tax and allowed the redemption of \$1 silver certificates for silver buillion or pellets.

ly

10

es

12

is

World silver production—largely a by-

product or co-product of base metal output (copper, tead and zinc) and dependent upon the silver content of ores mined—has increased only modestly in recent years, averaging under 220 million ounces annually during the past three years. Meanwhile, owing to sharply rising industrial demand (photographic uses, sterling articles, electrical and electronic uses, brazing alloys, etc.) and growing coinage requirements, world consumption has soared.

In 1961, consumption totaled 376.6 million ounces, against output of 221.5 million ounces. Consumption in 1962 came to an estimated 375.4 million ounces, vs. output of 208.6 million ounces. The gap between output and usage widened in 1963 to 306.1 million ounces, in 1964 to 337.4 million. In 1965, the shortage reached 486.8 million ounces, as world production totaled 221.5 million ounces, while total consumption—including 320.3 million ounces for U.S. coinage—shot to 708.3 million ounces.

LOT OF BULLION

With consumption exceeding production by such a wide margin, total Treasury silver builtion (excluding silver dollars and small amounts of silver subsidiary coin) fell from 1,691.5 million ounces in 1963 to only 801.5 million ounces in 1963 to only 801.5 million ounces, though mid-June, these stocks dwindled further to only 694.8 million ounces. However, the Treasury's free silver balance in mid-June stood at only 228 million ounces. Assuming an additional 25 to 50 million ounces were contained in other coinage metal on hand, the silver available for sale on that date can be roughly placed at between 250 and 275 million ounces.

Yet the market seems to be saying that the amount of silver the Treasury has for asle is even less. Such a view would have a strong foundation only if, as some suspect, war and defense requirements call for a silver stockpile of 165 million ounces, rather than treating silver stocks as an informal reserve for critical national needs and even for use to maintain the present silver price. Deducting the stockpile objective of 165 million ounces from the June 10 silver balance, plus silver in other coinage metal as indicated above, would leave a mera 85 to 110 million ounces readily available for sale—enough to last months rather than vears.

NO NEW CARTWHEELS

The Silver Act of 1965 eliminated silver from dimes and quarters, cut the silver content of half dollars from 99% to 40%, and barred the striking of new silver dollars for five years. Since then, the Mint has been producing billions of cupro-nickel coins. Because of reduced coinage needs this year, it is estimated that about 100 million cunces of silver will be used for U.S. coins in 1965, and industrial demand will call on Treasury stocks for another 100 million cunces, reducing the inventory to around 600 million cunces by December 31, 1966.

Leland Howard, Director of Domestic Gold and Silver Operations for the U.S. Treasury recently stated: "We expect to get through the next two or three years and have some silver left. Then we will let the Commission created by the Coinage Act decide about continuing to peg the price of silver. The Treasury will continue to maintain the price of silver during the transition period, and there appears to be no problem involved."

Nevertheless, purchasers of silver futures appear to be betting that the price of silver futures appear to be betting that the price of silver is going up. Many believe that the coin hoarders and collectors will not release much, if any, of their huge holdings of silver dollars, bars, half-dollars, quarters and dimes This being the case, like Lord Grosham, they are saying that bad money will drive the good out of circulation.

Russia's Air Code

EXTENSION OF REMARKS

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. BROYHILL of Virginia. Mr. Speaker, the principal article in the May 19, 1966, issue of Aeroplane, the international air transport journal, a leading British aviation magazine, is based on a recent book, "The Air Code of the U.S.S.R.," written by my constituent, Col. Denis A. Cooper, U.S. Air Force retired, of Arlington, Va., and published by one of the oldest legal publishers in the United States, the Michle Co., of Charlottesville, Va. Colonel Cooper, who holds doctorate degrees from both European and U.S. universities, is an expert on foreign aviation law.

Under unanimous consent I include the above-mentioned article which, among other things, has some cogent thoughts on United States-U.S.S.R. commercial aviation relations, in the Recorn. These are provocative thoughts, and I am confident that many Members on both sides of the aisle share the author's views.

The article follows:

RUSSIA'S AIR CODE

(Norm.—If there is one reason why Russian air transport is so mystifying to the outsider, it is because of a communications curtain through which only chinks of light can pass. Up till now there has not even been an authentic translation of the Official Air Code which governs all air transport in Russia. Thanks to the initiative of the Michie Company—iaw publishers of Charlottesville, Virginia—this gap has now been filled by a distinguished translator. Lt. Col. Denis Cooper. "Aeroplane" is fortunate to have this opportunity of reproducing Col. Cooper's introductory essay. Those who are professionally concerned with Soviet aviation will, of course, wish to study the complete text.)

1. GENERAL

Air transportation constitutes an essential component of the Soviet Union's passenger and cargo transportation system. In accordance with the prevailing State concept, however, air transportation is a Government function occupying much the same position as railroad and maritime transportation. Thus, public air transportation is simply a Government monopoly, the Government being the sole public air carrier. Consequently, breach of that monopoly by unlawful utilization, for profit, of public means of transportation constitutes a criminal offense.

The public air transportation system is operated through a single Government air carrier, known as Aeroflot, which is subject to the regulation and control of the Central Administration of the Civil Airfleet (Glavnoe Upraviente Grazhdanskogo Vozdushnogo Flota). The functions and powers of this Government agency resemble those of the United States Civil Aeronautics Board and of the Federal Aviation Agency, combined.

the Federal Aviation Agency, combined.

The Central Administration of the Civil Airfleet was, until recently, an agency under the jurisdiction of the Council of Ministers of the USSE (Soviet Ministrov SSSR), which

is the highest executive and administrative organ of State power of the Soviet Union. In 1964, there was created a Ministry of the Airfleet (Ministerstvo Grazhdans Aviatsti), headed by the former Chief of the Central Administration of the Civil Airfleet. E. F. Loginov, as Minister of Civil Aviation of the USSR (Minister Grazhdanskoi Aviatsii SSSR). Consequently, jurisdiction over the Central Administration of the Civil Air fleet sed from the Council of Ministers of the USSR to the Ministry of the Civil Airfleet.

In principle, foreign aircraft may operate in the Soviet Union under authority granted by the Central Administration of the Civil Airfleet for each individual flight, or for scheduled flights pursuant to appropriate international agreements. Agreements pro-viding for scheduled air transportation between the USSR and other countries are now in effect with 38 nations. These include al-most all West European countries (except those of the Iberian peninsula); most Arab countries: Cuba; as well as several countries of West and East Africa and of the Far East.

2. THE SOVIET AIR CODE

All Soviet civil aviation, and air navigation in general, except aviation and air navigation activities engaged in by the aviation industry insofar as necessary to test and experiment with aircraft, is governed by a spe-cial statute, the "Air Code of the USSR", promulgated Dec. 26, 1961, and ratified April

The Air Code contains one hundred and forty five (145) sections and one Appendix. The latter describes the flag and emblem of the Civil Airfleet of the USSR. The sections are incorporated into 10 chapters under the

following headings:
1. General Principles (Sections 1-8).

2. Aircraft (Sections 9-17).

3. Aircraft Crew (Sections 18-26).
4. Aerodromes and Airports (Sections 27-5. Flights in USSR Airspace (Sections 44-

69) International Flights (Sections 70-80).
 Air Transportation of Passengers, Bag-

gage, Cargo and Mail (Sections 81-119). 8. International Air Transportation of Pasengers, Baggage and Cargo (Sections 120-

9. Utilization of Civil Aviation and Civil Aeronautics in Various Branches of the National Economy (Sections 137-140).

10. Penalties Imposed Administratively by the Central Administration of the Civil Airfleet Attached to the Council of Ministers of the USSR (Sections 141-145).

The Code concerns itself solely with civil aviation and civil aeronautics, in general. Military and para-military aviation, as well as flight activities engaged in by the aviation industry for test and like purposes, are not covered by its provisions. Unlike its United States counterpart, the Soviet Air Code contains no criminal penalties for violation of any of its provisions. However, where violations thereof result in consequences covered by the general criminal laws, the latter apply.

3. AIR SOVEREIGNTY

Section 1 of the Air Code states that "The USSR exercises full and exclusive sovereignty over the airspace of the USSR". "Airspace" is there defined as the airspace over land, inland and coastal waters considered as such by the laws of the USSR. However, an official Soviet textbook gives a broader definition to the term "airspace". There it is defined as "the column of air over Soviet territory by land and by sea as well as the

troposphere and the stratosphere".

A like view is expressed by A. Kislov and S. Krylov, of the USSR, in an article written in 1956, discussing the 1935 Soviet Air Code, which was substantially identical with the present Air Code as regards the definition of the term "airspace". According to these writers there is no upward area limit to sovereignty. Hence, they maintain that exclusive sovereignty over airspace extends to infinity

The Air Code also contains provisions dealwith overflight of Soviet territory by pilotless craft. Unless authorized by Soviet authorities, pilotless craft are forbidden to navigate in USSR airspace. Consent thereto is conditioned upon disclosure to the Soviet authorities of the craft's flight control de-Since present-day pilotless craft do not fly in navigable airspace, this provision constitutes, in effect, a statutory affirmation of the extension of Soviet airspace sovereignty into outer space. This, however, is in accord with international law, since the Chicago Convention, too, prohibits the unauthorized passage of pilotless aircraft over the territory of a contracting State.

4. AIRCRAFT

The Soviet Air Code contains no definition of the term "aircraft". It defines, however, the term "civil aircraft" by considering as such any contrivances other than those operated by the Armed Forces. Hence, space-craft, missiles, rockets, etc., are "civil airwithin the meaning of the Soviet Air Code, as long as they are not operated by the military establishment.

All Soviet civil aircraft must be entered in the State Register of Civil Aircraft of the USSR. It is to be noted, in this connection, that the Soviet Air Code has adopted the principle of preference of Soviet registration, in that registration in the USSR automatically invalidates any prior foreign registra-tion, at least in so far as Soviet law is con-If, however, an aircraft registered in the USSR is subsequently registered abroad the foreign registration will not be recognized by the Soviet Union unless preceded by cancellation of the USSR registration.

Civil aircraft, foreign as well as Soviet. must display their identification markings and may, of course, not be operated without an airworthiness certificate. Authority to prescribe the procedure for issuance thereof, and for periodic reinspection of airworthiness, rests in the Central Administration of the Civil Airfleet. All aircraft, Soviet as well as foreign, are required to carry aboard certain documents, such as certificates of registration and of airworthiness, and a log book; foreign documentation is given recognition if compliance with the law of the State of registry.

Aircraft, entered in the State Register of Civil Aircraft of the USSR, may be expunged from the register in case of: (1) withdrawal from operation; (2) destruction; (3) when missing; and (4) sale or transfer, in accord-ance with established procedure, to a foreign State, foreign juridical entities or allens.

5. FLIGHTS WITHIN U.S.S.R. AIRSPACE

All navigation in Soviet airspace is subject to Soviet laws and regulations. Consequently, all aircraft, Soviet and foreign, are governed by Soviet law when in Soviet airice, and the former are so governed even when abroad, unless otherwise provided by the laws of the host country.

ursuant to the Soviet Air Code every flight across Soviet frontiers is regarded as an "international flight". Soviet aircraft require therefore, authorization of the Central Administration of the Civil Airfleet. Foreign aircraft crossing Soviet frontiers must adhere to a prescribed air route while in Soviet airspace and utilize only designated airports.

Unauthorized frontier crossing, deviation from the prescribed air route, altitude, landing places, or other flight rules may engender mandatory landing orders as well as criminal liability. Deviation from the flight plan, ever, is authorized when the gravity of the situation demands instant decision to do so, in which case the aircraft commander must immediately notify the traffic control authority of the decision thus made. In order that the traffic control authorities may

always be informed of the aircraft's flight position, aircraft in flight must maintain constant radio communication with the ap-In case of propriate traffic control service. interruption of such communication, the aircraft must, if resumption of communication becomes impossible, land at the nearest airport and advise the traffic control authority of its location.

Although the USSR is not a signatory of the Chicago Convention, these provisions appear to have been enacted with a view toward conformity with international practices established thereby.

6. AIRCRAFT CREWS

Because of the Soviet concept of national security and public safety, the Soviet Air Code requires Soviet citizenship for the crews manning Soviet civil aircraft. Exceptions to this rule may be made in accordance with a procedure established by the Council of Minters of the USSR.

The Air Code provides for training, rating, licensing, and identification of aircraft operating personnel, but contains no provision regarding licensing or recognition of licenses of crew members of foreign aircraft. However, a sampling of a number of bilateral aviation agreements entered into between the USSR and various countries shows that this matter is covered therein on the basis of reciprocity. It is to be noted, in this con-nection, that take-off clearance includes inspection as to availability of a complete and properly licensed crew.

In the event of aircraft distress, no crew member may abandon the aircraft unless au-

thorized by its commander.

7. THE AIRCRAFT COMMANDER

The Soviet Air Code establishes the concept of the aircraft "commander" (komandir), a feature not found in the United States Federal Aviation Act. In Soviet law he is regarded as the agent of the aircraft as well as of the cargo owner, when cargo is carried abroad. As such, he has authority to enter into any transaction which the aircraft and/or cargo may require under emergency conditions. He must use every means in his power to safeguard life and limb of passengers and crew, as well as of property aboard. In case of distress, he is the last to abandon the aircraft. He is also required to render assistance to aircraft and vessels in distress, as well as to their passengers and crews, provided that he can do so without endangering his own aircraft, passengers or

In order to enable him effectively to dischange his duties, the law provides that his orders must be unquestioningly obeyed by all persons aboard. In case of failure to obey, or of actions by passengers or crew endangering flight safety, he is required and empowered to use any means deemed necessary to meet the situation.

8. PASSENGER AIR TRANSPORTATION

The Soviet Air Code provides that civil aircraft may, among other things, carry pas-sengers, baggage, mail and cargo, and that ropriate tariff reulations are issued by the Central Administration of the Civil Airfleet in accordance with a procedure established by the Council of Ministers of the USSR.

W]

W

As a general rule the issuance of a passenger ticket by the air carrier evidences a transportation-by-air-contract between passenger and air carrier.

A passenger ticket is valid only on the route and date indicated thereon. The date is extended if the flight is cancelled by Aeroflot or if the passenger cannot participate therein because of sickness certified by an accredited medical institution. Passengers are not reimbursed for lost tickets and neither are duplicates or certificates evidencing the purchase of tickets issued. A passenger missing an aircraft may obtain a new ticket only upon payment of a price differential of 25 per cent of the original ticket cost; in the alternative he may cash in the ticket with a forfeiture of 25 per cent of the original ticket cost. Reimbursement of the remaining 75 per cent takes place within 10 days.

With the above in mind, it is clear that neither passenger nor air carrier has the right to renege on the contract, except that a passenger may cancel his flight, and be reimbursed within the aforesaid limitations, for the paid fare in the event of:

(a) illness certified by a medical institution;

 (b) delayed departure of the aircraft at the point of flight origin, or substitution of the aircraft with a different type of aircraft;
 (c) return of the aircraft to the point of

origin without completion of the flight; and (d) passenger notice to the carrier of flight cancellation, but not later than within the time limit prescribed by the transpor-

tation regulations.

In the event that a passenger cancels his flight later than said time limit, a prescribed fee is deducted from the refunded transportation fare. This fee, however, amounts to 25 per cent of the tariff rate for one-way transportation.

Aside from the air carrier's obligation to refund the paid air fars in the above specified instances, the passenger air carrier in international traffic is also liable in damages for delayed arrival. No such liability is provided for in domestic traffic, and agreements between the parties tending to alter the statutory liability of the contracting parties to a passenger air transportation contract, or for that matter to any air transportation contract, are void.

As regards tort liability, whether arising out of a passenger air transportation contract or otherwise, it is founded upon the principle, recognized in all civil codes of the Soviet Union Republics, which, in essence, establishes that he who causes damage to persons or property of another is obligated to make compensation therefore.

Compensation practice

However, Soviet law does not recognize compensation for mental anguish, pain and suffering (injuris absque damno). Also, compensation for bodily injury to or death of persons may not be awarded, unless accompanied by financial loss.

Hence, in cases of bodily injury or death, compensation is payable for economic damage actually suffered, but where the victim or his next of kin, as the case may be, are eligible for social insurance or any other similar benefits, compensation is payable to the extent only that the financial loss exceeds the social insurance benefits. Thus, the tendency of Soviet law is to restore the victim to his economic position preceding the tort. To this end, Article 410, RSFSR Civil Code, provides: "Compensation for damage shall consist of restoration of the former condition, and insofar as restoration is impossible—to compensation for the lesses suffered."

The amount of compensation for personal injury depends upon the degree (percentage) of disability in relation to the average yearly earnings; in case of temporary disability, in relation to the two months' earnings preceding the injury. The right to compensation begins with the date of injury. In the event of death, the right to compensation belongs to the dependents of the deceased who have no other means of support.

\$

te

n

nd

C-

Personal insurance

In domestic air transportation passengers are subject to mandatory flight insurance amounting only to a maximum of 300 roubles (i.e., approximately \$300), the premium for which is included in the fare. Incidentally, where the insurance carrier is called upon to make payments to an individual as a result

of injury or death suffered in an air accident, it may seek reimbursement from the air carrier to the extent of payments made to the injured party.

Another feature of Soviet law is that compensation for bodily injury or death may be payable in the form of an annuty rather than in a lump sum. Where the defendant is an allen, e.g., a foreign air carrier, the total amount adjudicated may be ordered paid by it into the Soviet social insurance fund for disbursement to the successful plaintiff in the form of an annuity.

As regards the air carrier's liability for injury to or death of persons, the Soviet Air Code distinguishes between domestic and international transportation. Thus, because an aircraft is regarded in Soviet law as a "source of increased hazard", an air carrier in domestic air transportation is held to absolute liability for injury to or death of a passenger, even where it occurred as a result of force majeure (stikhinnoe bedstvie; nepreodolimaia sila); i.e., either an emergency caused by the elements of nature or an event which could have been prevented by neither the air carrier nor any other person, even by taking all precautionary me ures in accordance with the present-day state of science and technology (e.g. storm flood, earthquake, etc.). In such instance, however, the carrier may be exonerated if it be shown that the death or injury, or aggravation of the latter, was intended by the victim, or resulted as a consequence of his own gross negligence.

In international air transportation, the law governing aviation tort liability is founded upon the Warsaw Convention of 1929, which the Soviet Union signed and ratified on Aug. 20, 1934. However, where the Convention does not apply, or is silent, the Air Code and civil law, in general, are

Thus, in international air transportation the air carrier, unless otherwise provided by international agreement, is relieved of liability upon proof that the death or injury occurred notwithstanding its measures to avoid the same, or that it was impossible to take such measures. Liability is further nonexistent upon evidence that fault, i.e., intent or negligence, of the victim himself was either causative of or contributory to the damage.

In connection with the foreging, it is well to note that the above principles apply to passengers only, and that the protection of the Air Code is not extended to the aircraft crew, for both Sections 101 as well as 127 of the Air Code specifically refer to passengers only. The aircraft crew, on the other hand, is provided for by Article 91 of the Fundamentals of Civil Legislation.

Neither do the above principles apply to third persons or property on the ground, or to those in another aircraft, or to another aircraft in case of collision. As to these, the Soviet law takes the earlier mentioned position that aerial navigation is a hazardous activity. Hence, it makes the air carrier an insurer of persons and property, subject only to the defences of intentional misconduct or gross negligence on the part of the person injured.

Thus, an Act of God or force majeure does not constitute a valid defence. It follows that the owner of a civil aircraft is liable for any material damage caused by aircraft in flight, taking off or landing, or by any article falling from aircraft, to any person or property on land, water or in the air, without proof of negligence or intention, except where the damage was caused or contributed to by the intentional misconduct or gross negligence of the person suffering the damage.

As regards damage to other aircraft, the Air Code applies general tort liability principles. Where the degree of fault cannot be determined, the divided damages rule, as in American admiralty, is applied.

9. CARGO AIR TRANSPORTATION

As a general rule the issuance of an air waybill (gruzovata nakladnata) evidences a carge air transportation contract between the carrier, on the one hand, and the consignor, on the other.

The Code, therefore, prescribes a penalty for breach of a cargo air transportation agreement. Failure to make available the planned transportation facilities, or failure to present the cargo for reserved air shipment, subjects the carrier and consignor, as the case may be, to a penalty amounting to 25 per cent of the shipping cost of the not shipped or not transported cargo. The consignor, however, is relieved of liability for non-delivery of cargo for shipment or for delivery of a lesser quantity thereof, where such was the result of an event of elemental character, or any other event of such nature as to produce work stoppage for a period of not less than 72 hours. The carrier, too, is under like circumstances, relieved of liability for not making available transportation facilities; and this includes inability of the air-jeraft of the for meteorological reasons.

Besides liability incurred for nonshipment of cargo after reservation of space, a consignor may be liable for damage resulting from incorrectnes, inaccuracy, or incomplete information, supplied by him when preparing the air waybill which accompanies the cargo on its entire route.

A cargo air carrier is, of course, liable for the cargo entrusted to him, except where the loss or diminution thereof was unavoidable or beyond its means to prevent it, or due to the consignor's action or inaction, or to natural causes. The extent of the air carrier's liability is precisely circumscribed by the statute, which also covers damages for delay in the cargo delivery. Conversely, consignors and consignees are held accountable for any damage caused by them directly to the cargo air carrier, as well as to others whom the carrier is obligated to compensate therefor.

10. CONCLUSION

This author, upon analysis of the state of progress of the Soviet aviation industry, and of the laws which govern it, has come to the conclusion that from the American point of view it is not desirable that the dormant United States-USSR bilateral aviation agreement be made effective. Neither is there really any need therefor.

Comparatively few Americans are travelling to the Soviet Union. Their insignificant number provides no incentive for an American air carrier, short of a sizeable United States Government subsidy, to undertake the arduous tasks of flying a non-productive route, and under operational conditions and rules which are deliberately kept enigmatic by the Soviet authorities. It follows, that making effective the United States-USSR hilateral agreement would be tantamount to payment by the American taxpayer for another Russian propagands success, for enhancement of Soviet prestige in Communist and newly emerged nations and, thus, for another Soviet diplomatic victory.

As regards the Soviet average citizen as a potential customer, he is not going to the United States nor, for that matter, anywhere else, and will not be going for a long-time. The American traveller, on the other hand, tempted to chance the hazards of travel to or within the Soviet Union on Aeroflot, must know that to do so is to subject himself to laws which provide little comfort and show little concern for those to whom they apply.

One more thought: the Russians do not release reports of their aircraft accidents, nor do they publish the names of the passengers involved therein.

Remarks of the President at the Swearing-In Ceremony for Barnaby Keeney as Chairman of the National Endowment for the Humanities

EXTENSION OF REMARKS

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1966

Mr. MOORHEAD. Mr. Speaker, in the 88th Congress I introduced legislation to establish a National Foundation to promote progress in the arts and the humanities.

This idea became a reality in the 89th Congress when the bill to establish a National Foundation on the Arts and Humanities was passed by the Congress and signed by the President.

Today, Dr. Barnaby Keeney, former president of Brown University, was sworn in as Chairman of the National Endowment for the Humanities in an impressive ceremony at the White House.

For the benefit of all of my colleagues, but especially for those who cosponsored the legislation, I insert the eloquent remarks of President Johnson on this occasion.

REMARKS OF THE PRESIDENT AT THE SWEARING-IN CEREMONY FOR BARNARY KEENEY AS CHARMAN OF THE NATIONAL ENDOWMENT FOR THE HUMANITIES

Carl Sandburg, our great poet and good friend, speaks in one of his poems of our endless search for things beyond mere wealth. Americans, he writes, always come—

"To the time for thinking things over; To the dance, the song, the story— Or the hours given over to dreaming."

Today we gather not only to honor Barnaby Keeney as he begins a new chapter in his distinguished career. We are here to help our best minds find "the time for thinking things over"; to encourage our singers and story-tellers; to assist our scholars and thinkers whose hours of dreaming assure our years of greatness.

It has been less than a year since I signed legislation establishing the National Endowment for the Humanities—only a few months since the members of the Humanities Council took their oath in this room.

But in a short time, they have raised large hopes. Under the wise and spirited leadership of Dr. Henry Allen Moe, the Council has underwritten 200 summer fellowships for young scholars and teachers; 50 grants to established scholars in the humanities; awards totaling \$300,000 to museums and historical societies for their education projects.

The council's grants are making our American classics more widely available; assisting historical researchers; distributing recorded classics to the blind; and improving the quality of educational television and radio.

The new chairman of the Council and the Endowment, Dr. Keeney, is a product of a great public university—the University of North Carolina—and a great private one, Harvard. He served in World War II and has distinguished himself as a professor of history, dean, and president of Brown University.

But I know he agrees that his new responsibilities will be the most demanding of his career. For Dr. Keeney and the Council will be dealing with far deeper questions than how to distribute dollars. They will be probing deep into the heart of our people and our society for answers to the ancient mysteries; What meaning has life? What purpose has man?

That is the veil mankind has always sought to part; it is the mystery that has challenged and shaped us as a Nation from the first.

Our first soldiers and politicians were also our first scholars and philospohers. The Nation they brought forth excited all men because it promised answers to the ancient mysteries, new meaning and fulfillment for man.

Ours was the only Nation ever based on an idea—that all men are created equal that every man is entitled to life, liberty and the pursuit of happiness.

But today, we still ponder the questions of the meaning of life and the purpose of man.

We know the answers are not wealth, or weapons, or wise government. These can help make life possible—but they can never make it meaningful.

So we turn for our answers to those whose profession is ideas; our scholars and writers, our historians and philosophers; our men and women, boys and girls of the Arts and Humanities.

They have contributed as much to our national life as our soldiers and politicians. They have lighted our path for almost two centuries—and the centuries ahead ask even more of their mind and heart.

That is why I have such great hopes for the Humanities Council—greater, perhaps, than the Endowment's budget—but I know that small budgets can spur large imagina-

And if the council has only a small membership and staff, I know that small budgets can spur large imagination.

And if the council has only a small membership and staff, I know that accomplishment does not depend on size.

I think of the Council as a small spark which can give the Nation—and the world great light.

All of us, Carl Sandburg has written, are reaching out "for lights beyond . . . for keepsakes lasting beyond any hunger or death."

These keepsakes are not the products of industry, or spoils of war, or luxuries of wealth. They are the old ideas, the old words. The older they are, the more their meaning excites all men.

Freedom is one of them. Truth is another. How well we preserve these priceless keepsakes, Dr. Keeney will depend a great deal on the work which you and your colleagues

So I wish you well. I welcome you—and I am happy to be your witness as you take the oath of office.

Thank you.

Indianapolis Hard Hit by Airline Strike

EXTENSION OF REMARKS

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. JACOBS. Mr. Speaker, the strike against five major airlines is now in its seventh day.

It would be a serious mistake, in my opinion, to underestimate the economic consequences which could result from a prolonged strike.

The situation in Indianapolis, a major industrial center of Indiana and the Midwest, already is grave.

This fact has been explained in telegrams which have been sent to President Johnson from the mayor of Indianapolis and the president of the Indianapolis Chamber of Commerce.

I insert the text of these two telegrams to be printed at this point in the Congressional Record.

Hon. Lyndon B. Johnson, President of the United States, White House, Washington, D.C.

White House, Washington, D.C.

DEAR MR. PRESIDENT: Indianapolis and Indiana is suffering economic loss at the inconvenience and traffic delay occasioned by the present airline strike. I urge that all resources available to the Office of the President be used to settle this dispute as equitably and expeditiously as possible.

JOHN J. BARTON.

JOHN J. BARTON, Mayor of Indianapolis.

July 8, 1966.

The Honorable Lyndon B. Johnson, President of the United States, White House, Washington, D.C.:

The current strike agaist major airlines has a serious effect on the economy of our city. Being one of the Nation's significant industrial centers, it is in the national and public interest to use your good office to bring about an early equitable settlement.

Respectfully yours,

ROY C. ECHOLS,
President, Indianapolis Chamber of
Commerce.

SBA Assists Doctor's Dream

EXTENSION OF REMARKS

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. JONES of Alabama. Mr. Speaker, the outlook is often dark for rural residents when it comes to seeking many of the services and conveniences urban residents take for granted. The prospects for medical services were especially dark in northwest Limestone County, Ala., when the State health department announced its Lester Clinic would be closed.

The darkness now has been broken. The long time dream of Dr. David Eldridge Jackson of Lester to establish a rural hospital in his community will come true through the assistance provided by the Small Business Administration. Paul R. Brunson, regional director of SBA for the State of Alabama, worked with Dr. Jackson and the people of Lester to insure the medical needs of the citizens will be met close to home.

The Huntsville, Ala., Times has pointed to this achievement as a "good example of what community enterprises and the Small Business Administration cooperation can do toward saving and expanding the Nation's villages and small towns." As part of my remarks, I include the entire editorial:

ai V

qı

ia

for

A COMMUNITY DISCOVERS SBA

Lester, Ala., Hes in the steep hills and challow farmlands of northwest Limestone

County, and it is there that Dr. David Eddridge Jackson planted a dream a quartercentury ago.

It was the dream of a young man who as a medical student, wished to come back to the hamlet he had known as a boy and to establish there a rural hospital. And since 1940 his small hospital has strived to handle a share of the Lester community's problem of the alling.

of the alling.
When the State Health Department announced that its Lester clinic would be closed, it was apparent that Dr. Jackson's own medical facilities for the community—isolated by distance from Lawrenceburg and Pulaski, Tenn., and Athens, Ala.—would be

alarmingly over-taxed.
But now the Farmers Bank in Anderson in cooperation with the Small Business Administration has approved a loan of \$200,000 to Dr. Jackson. It will enable him to erect a new 22-bed hospital with outpatient departments and complete facilities for two doctors. Surgical departments, emergency rooms, labor and delivery rooms and up-to-date diagnostical equipment are in the plans.

Indicative of the needs of the community are the figures which show that Dr. Jackson in his present hospital admitted 607 patients and treated 3,300 outpatients last year. The SBA loan for a new hospital has been made under the loan guaranty plan, with the SBA guaranteeing a portion of the bank loan. Recognizing that the facilities provided by

Recognizing that the facilities provided by this type loan will alleviate much suffering and care for many medical needs of the Leeter community suggests that there are many other communities in Alabama with problems akin to those of Lester. SBA assistance could be an answer. In fact, SBA assistance can be, and is proving to be, of vast assistance to communities in many areas and in many fields of enterprise.

many fields of enterprise.

Lester itself, for instance, already has seen other possibilities for community development with SBA aid. A broad-based group of interested citizens now plans SBA financing to bring industry into the community to provide jobs for its homefolks—a people in a region where crop failures often have meant near-disaster. Under such a program, SBA will furnish as much as \$8 for every \$2 the citizens group provided. And with these funds, land can be purchased, buildings constructed and machinery purchased to operate a small business.

Lester soon may be known as a good example of what community enterprises and Small Business Administration cooperation can do toward saving and expanding a nation's villages and small towns.

Eugene C. Pulliam Receives Honorary Doctor of Laws Degree

EXTENSION OF REMARKS

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. BRAY. Mr. Speaker, the distinguished publisher, Eugene C. Pulliam, was recently given an honorary doctor of laws degree from Vincennes University at a dinner in his honor held by the Vincennes, Ind., Historical and Antiquarian Society and the university.

In his remarks at the dinner, Mr. Pulliam spoke on the role of a free press in a free society. He also announced the plans for a new building and equipment for the Vincennes Sun-Commercial.

Mr. Pulliam's closing words to the audience are especially pertinent today when the United States faces grave problems and crises throughout the world:

If America remains free under the Constitution, then sometime, somehow, someway, America being free will show the rest of the world the road to freedom. . . This is the divine mission of America—freedom for ourselves and eventually freedom for all the world.

The following story from the Vincennes, Ind., Sun-Commercial, June 30, 1966, deals with the ceremonies and Mr. Pulliam's address.

SUN-COMMERCIAL TO BUILD PLANT

Plans for a new building and equipment for the Vincennes Sun-Commercial were announced Wednesday evening by publisher Eugene C. Pulliam.

The veteran Hoosier publisher made the announcement at a dinner in his honor held by the Vincennes Historical and Antiquarian Society and Vincennes University at the Robert Green Auditorium.

Before the announcement Dr. Isaac K. Beckes presented him with an honorary Doctor of Law degree from Vincennes University, the oldest college in Indiana. Thomas Emison, former president of the Vincennes Historical and Antiquarian Society, presented him with a lifetime membership in the society.

society. "Vincennes has been good, very good to the Sun-Commercial which has simply outgrown its old coat and pants. It needs a new suit and that's what we are going to give it—a brand new newspaper plant on a new site with a new offset press and all the trimmings," Pulliam said.

The new plant, which is to cost "at least a quarter of a million dollars, maybe more," will contain a display outlining the history of the free press in Vincennes and in the nation, Pulliam explained.

Speaking before some 200 society members and Sun-Commercial employes, Pulliam outlined the role of the free press in the development of a free society.

opment of a free society.

Especially he noted the role of Elihu Stout, publisher of the Indiana Gazette in Vincennes.

"Abraham Lincoln saw his first newspaper press in this city. He became one of the foremost champions of the right of the people to know what their government is doing and why," Pulliam said.

He pointed out that Governor William Henry Harrison deserves more credit from history than he has received.

"Harrison encouraged the establishment of 'A Press' in the capital of the Indiana Territory."

He reminded the audience that the only business mentioned in the Constitution is the newspaper business.

"The very first of the Bill of Rights says that Congress shall 'make no law . . . abridging the freedom of speech, or of the

He also referred to the first section of the first article of the first constitution of Indiana, "That the printing presses shall be free to every person, who undertakes to examine the proceedings of the Legislature, or any branch of government; and no law shall ever be made to restrain the right thereof. The free communication of thoughts and opinions, is one of the invaluable rights of man; and every citizen may speak freely, write, and print on any subject, being responsible for the abuse of that liberty."

Pulliam urged that ". . . the simple and direct language of the original Indiana Constitution might be impressed upon every government official, every member of Congress, every judge, every administrator, every bureaucrat, and most of all, every American citizen."

Concluding he reminded the audience that "If America remains free under the Constitution, then sometime, somehow, someway, America being free will show the rest of the world the road to freedom. This is the message and this is the mandate from old Vincennes to the new Vincennes. This is the divine mission of America—freedom for ourselves and eventually freedom for all the world."

Pulliam was accompanied by his wife, Mrs. Nina Pulliam and his son Eugene S. Pulliam, assistant publisher of Indianapolis Newspapers. Inc.

Why a Tax Increase?

EXTENSION OF REMARKS

HON, PAGE BELCHER

OF OWLAHOMA

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1966

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the CONGRESSIONAL RECORD the following news article by Henry J. Taylor, entitled "Why a Tax Increase?"

WHY A TAX INCREASE?

(By Henry J. Taylor)

No, fellow peasants, it's not enough to have living costs hit us now with the biggest three-months leap in 15 years. The Washington Robin Hoods of the Red Ink ponder a beautiful solution.

What we need, you see, is a tax increase. The penalty and stupidity of the political world is astounding and proverbial, but this latest affront to the pocketbook and common sense of the American people takes the cake.

We need higher taxes like we need a hole in the head.

We're willing to pay for everything we should pay for, including the Viet Nam War, and the tax take is already colossal. But it's high time we told these electioneers by a revolt at the polls that they can't make patsies out of us forever.

Here we sit, paying for all their blunders in foreign policy, their mixed-up decisions and waste, and they have the gall to say we should pay still more. We will never do with dollars what they fall to do with brains.

Here we sit, paying for their givesways in 83 countries all over the world in ways that are often so silly that millions don't call us Uncle Sam. They call us Uncle Sap. The harder some country, like Egypt, kicks us in the teeth the more determined our Robin Hoods seem to be to give it more of our taxpayers' money. And at home? Is the war on poverty, for example, a war or is it a political racket?

Here we sit, footing the bill for everything, while the politicians themselves sacrifice nothing. We pay for their gleaming cavalcade of superabundant jets, limousines, junkets and other goodies while their taxes on us are the largest single item in our cost of liv-

ing.

The over-all buying power of the dollar you work for and save for a rainy day has melted away 15 per cent in the past decade. While you're working for a dollar that's going down you are paying taxes that are going up. And nothing remotely compares with these in your cost of living.

your cost of living.

At about \$167 billion this year Federal, state and local taxes equal \$851 for every man, woman and child in the United States.

The rich do not support these taxes. That's political pap. The rich are too few. About 85 per cent of all families earn less than \$10,000 a year, 14 per cent earn \$10,000

to \$7,500; 26 per cent earn less than \$3,000. Only 22 per cent earn more than \$10,000 a

This column has pointed out previously that the average wage earner must work two hours and 19 minutes every working day of the year just to pay his taxes.

the year just to pay his taxes.

If taxes go up the inflation will go up, and sn will the cost of living. The next time anybody disputes this, ask a few simple questions:

If the government spenders add a thousand dollars to your taxes what happens to the money? They just take it from you and spend it themselves. The money supply and the pressure on purchases have not been reduced. The only time taxes are anti-inflationary is when they're used to reduce the government debt or in other ways used to lessen the money supply. Nobody is proposing that. All the talk is about more and more spending.

Under today's conditions, increasing taxes increases today's inflation. When taxes go up, take-home pay goes down. Workers need higher wages to live on what they earn, after taxes. This pressures wages higher as taxes go higher.

Both wages and taxes are factors in the costs of production. Prices go up as taxes and wages go up. Up goes the cost of living. Politicians try to make us swallow higher

Politicians try to make us swallow higher taxes by saying they are a help against inflation—an inflation due chiefly to their own mishandling of our money at home and abroad.

Even a criminal is entitled to fair play. And we're not criminals; we're taxpayers. If I had my way, I'd like to see any politician who passes the buck like this run out of town on a rail. Enough is enough of their bloody nonsense.

The Peace Corps

EXTENSION OF REMARKS

HON. JOHN J. GILLIGAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. GILLIGAN. Mr. Speaker, the Peace Corps is providing an enormously valuable service to humanity. It is an idea which has been accepted, not only by all in our Nation, but by nearly all the peoples of the earth.

It has provided experiences to young Americans which will prove to be invaluable to our Nation in the future.

One young American, currently serving with the Peace Corps in Tanzania, Miss Gretta Conlan, like so many of her fellow workers, has been taken to the hearts of the people of her host country. At the recent Ecumenical Council in Rome, one of the leading Cincinnati clergymen attending was sought out by an African bishop who had firsthand knowledge of the work of the Peace Corps, and in particular, of Miss Conlan. The bishop told the pastor of Miss Conlan, Msgr. Edward A. Freking, of St. Mary's Church in Cincinnati, to carry back home the heartfelt thanks of those Africans who were privileged to work with Miss Conlan, and to tell her friends of the deep respect and affection they have for her.

Miss Conlan has often sent to her famfly and friends in the United States letters which describe her experiences and

her feelings for the people of Africa. I have been permitted to read most of her letters, and find them so very well written that I would suggest that the Corps might want to publish them in the future as an example of what it is trying to do in the world.

Several excerpts follow:

[Letter of February 19, 1965]

What makes it all worthwhile are the warm and fun loving people, especially the students. I am impressed by how much people are the same, especially children. They are full of life; love a good time; enjoy a good laugh; love to twist; are interested in all kinds of things and love impressing you with anything new and exciting. There are barriers, but we are growing accustomed to each others' ways and are learning to enjoy things together. The boys will come over in the evening and ask us to tell them about this or that; or to help them with some problem. I just had a session with about six boys this evening who wanted me to explain why God made some people black and some people were very sincere and thought that I could answer the question. They are coming back tomorrow to hear about President Kennedy, in whom all are very interested. They know the whole story of his assassination very well. They speak of him with a great deal of respect.

I must say that getting to know these people beneath the surface has made me reevaluate myself. I did not realize the prejudices I held till I came here and felt so free of prejudice. I have never been so uncolor conscious in my life. Subconsciously I believe I lived as though man's basic desires decreased with lack of opportunity. The facts are blinding me to the contrary.

[Letter of July 29, 1965]

IF YOU ONLY KNEW (THE PEOPLE OF AFRICA)

If you only knew What gifts they had, What smiles of warmth And gladness were brought To all who pass their way

If you only knew
Their ways of knowing,
Your trials detected—
And their ability
To make things right

If you only knew What thoughts of others Filled their hearts With love and brotherhood

Then no sacrifice could be So great So overwhelming To hinder your passing here If you only knew.

Poetry is not my line, but sometimes it's the only way of expressing ones feeling, and this is my feeble attempt at describing for you the people of Africa.

Places are the same without people, and this is where my real love for Africa lies—in the people. I want to try and describe some of them for you because this is the real heart of Africa. Let me begin by saying that I feel inadequate to describe in words; because it is only by the day to day intermingling of our lives that we have come to an understanding, appreciation and love for each other. We have experienced one another as humans who share the same needs, the same desires, the same reactions to situations, and the same feelings of love, sadness, joy and laughter. Our different backgrounds of experience and environment are the only things which separate us. Only by living with people can you come to a knowledge of this. I am constantly aware of this privilege that is mine.

Though my skin is white, though I speak

with a foreign accent, though the image of the Wazungu (British) is still fresh in their minds, they have accepted me and made me a very welcome member of the Family with whom I stay. Mr. Mgalula is the father of the Family. He is a man with wisdom beyond his years; his sensitivity and goodness I find to be limitless. I'm sorry that these sound like platitudes without meaning. I will try to share some of the experiences with you. Mr. Mgalula is our Headmaster, and was the first person to welcome us at Mwisenge. He had spent weeks helping to make our house ready and comfortable. I shall never forget his comment when I asked what we could do to get the school ready, since it was opening the day after our arrival. He said, "Oh no, what can I do for you? My most important job now is to see that you are happy and welcome in my country."

Experience has shown that these were not idle words. When our United States Ambaşsador left this country and the Tanzania representative returned from the United States, I felt uneasy. I discussed this uneasiness with Mr. Mgalula. He told me that we were people living together trying to share ideas and help each other; that we could not control the decisions of our governments; and that the relationship of one person to another, or individual people to other individual people, went beyond anything which might tend to separate us. We have often had Mr. Mgalula to our house and we have often visited his. One night he was here and noticed a picture of my mother and father. "Bwana and Bibi Conlan." he said fondly—"they have given us something which I'm sure they miss deeply, as I would miss my own daughter." And then he turned to me and said, "Thank you for coming to help us."

He is very fond of saying, "Americans do things in a big way," and "A friend in need is a friend indeed." He incorporated these two thoughts into a conversation I overheard with the football team. He said that Americans were our friends and that they had the foresight to see the needs in our country. That they had people who were willing to leave the comforts (which he described in detail) of home, family and friends and live with people who were not so fortunate. He told the boys never to forget that the Americans had come themselves and had not sent "representatives" as had some other countries which he named.

Should Rich Kids Get Handouts?

EXTENSION OF REMARKS

HON. W. E. (BILL) BROCK

OF TENNESSEE

U

Pi

gu

bı

ye ar Re ve

ap no

ST

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. BROCK. Mr. Speaker, all Americans are concerned about the future of our country and the quality of leadership in the generations ahead. Every Member of this body is also vitally interested in providing excellence in education for today's youth. However, the approach to this worthwhile objective differs. Some of us voted against the Elementary and Secondary Education Act last year for a variety of reasons. The administration pleaded for the legislation on the basis of its strengthening education for children whose parents were living in conditions of poverty as defined by the Federal Government.

In the House debate surrounding this measure some of us tried to pinpoint the shortcomings of the bill by showing that children not in need of financial assistance, even youngsters from wealthy homes, could benefit from the grant, We were reassured this was not the case and only children of impoverished families would be eligible for assistance. This has not been the experience of the

An excellent exposé on the Elementary and Secondary Education Act of 1965 appears in the July edition of Nations Business and I have unanimous consent that it be printed in the Appendix of the RECORD

SHOULD RICH KIDS GET HANDOUTS?

The much-heralded, billion-dollar package of federal aid for elementary and secondary education, enacted last year after decades of struggle, is getting poor marks in many parts of the country.

Although many projects under the Elementary and Secondary Education Act of 1965 are just now getting started, already

there are these disturbing developments:

To a significant extent, the stated purpose of the act's costliest provision-to expand and improve educational programs in areas where there are concentrations of poor children-is being abused.

Money is being urged on communities that don't want it.

The poorest states are getting the least amount of money per school child.

There's an alarming lack of personnel to

carry out the new law.

Some school districts are spending frantically to use up a full year's allotment in just a couple of months.

ABUSES NO SURPRISE

These developments come as no surprise to such lawmakers as Rep. EDITH GREEN (D., Oregon), Rep. Charles GOODELL (R., N.Y.) and Rep. ALBERT QUIE (R., Minn.). They, along with business and other groups, warned of these fallings.

Even more disturbing to some people, both in and out of government, is what's ahead. At a time when many are urging a cutback in nondefense expenditures, this law is al-

most certain to be expanded.

President Johnson regards the school Act as one of his proudest accomplishments. Signing the bill on Palm Sunday last year at the one-room schoolhouse he attended as a boy in Stonewall, Texas, the President enthused: "I believe deeply no law I have signed or will ever sign means more to the future of America."

Its meaning is becoming more cloudy as

various weaknesses appear.

The major thrust of the Act is Title I. Under this more than \$1 billion can be spent through this summer for 22,000 projects in all 50 states and the territories.

Title I's stated aim is to help broaden and strengthen education for children in poverty. It seeks to do this through grants, for both public and private school children, to pay for such programs as remedial instruction. guidance and counseling services and health and welfare services. Money can also be used to acquire equipment and, in a few cases, build facilities.

When the bill was debated in Congress a year ago this spring, an outvoted minority argued that the poverty label was phony. Rep. Goodell called the legislation "a thinly veiled attempt to launch a general federal aid to education program by means of a spurious appeal to purposes which it would

not adequately serve."

p

d

d

or

B.-

he OF

in he One of the measure's backers, Rep. Robert Starton Republican, of Vermont, admitted as much: "This is the only general aid to education bill presented over these many

years with a real chance of passage by the House of Representatives.

Former Rep. Rosest Graven Republican, of Michigan, took this view: "Some may vote for this bill because they think it will cure poverty. Others may vote for it, not as poverty legislation, but as a general aid to education bill. It ought to be one or the other but, unfortunately, it is a poor bill for either purpose." Mr. GRIFFIN is now

The poverty criterion was written into the bill mainly to enhance its chances of overcoming years-old resistance to helping finance nonpublic and parochial schools. How, then, is the measure working?

Take Garden City, N.Y., a charming town of about 25,000 population 19 miles east of New York City. Hardly a center of destitution, median family income there is about \$14,000 and median value of the homes along the village's quiet, tree-lined streets is about \$30,000. Within its five square miles are about 7,000 dwelling units, three golf courses,

Adelphi University and a stately resort hotel. Though it doesn't expect to spend all of its allocation, Garden City can get \$33,551 of Education Act money because of its "poor" children. But well-to-do Garden City's supposed poor children apparently exist only as statistics. School officials can find no chil-

dren in poverty.

The Act tells states to use 1960 census figures and the most recent welfare figures they have in determining how much federal money each school district in the state

should get.

In New York, as in other states, educa-tion official have had difficulty relating census tract figures to their 997 school dis-

Richard Schilling, a planning supervisor for the state Department of Education, tells Nation's Business that in many cases you can't pinpoint the poor by school districts. "Most of the money is going to areas need-ing it, but there are inequities."

Garden City School Superintendent Oliver Melchior says he was surprised when the state notified him that its sampling showed his district had 91.76 economically deprived youngsters and thus was entitled to the \$33,-551. Mr. Melchior scoured the village for these "poor" children, but he couldn't find one or even .76 of one. Still, the state told him that if his district didn't use the money, no other could. Garden City submitted project, got it approved and is spending about a third of its entitlement to give slow-learning children more individual help.

Aid is supposed to be restricted to areas "with high concentrations of children from low-income families." Office of Education regulations say. And such proponents of the bill as Rep. Roman Pucinski, Democrat, of Illinois, reassured in last year's House debate: "I wish to emphasize that no community can get any assistance under Title I unless it has children of impoverished families." But once an area qualifies, the money can be spent on any "educationally deprived" kids in the district, even the children of rich parents.

Office sources told Nation's Education Business in one breath that "Garden City has a damn good program dealing with the problems we want dealt with," and in an-other that the village probably won't get any money next year. One bureaucrat described Garden City—in a phrase that might apply to other seeming misfits under the Act—as a "small price to pay for getting the over-all aid program off the ground."

Now jump across the country to Beverly Hills, Calif., for a more self-reliant approach to federal school aid. Using 1960 censu data, the California Department of Educa census tion determined the Beverly Hills Unified School District was entitled to \$82,875. That data showed 460 local families reporting annual income of less than \$2,000. On investinual income of less than \$2,000. On investi-gation, the district could find only six families, with eight children in school, who qualified.

"We looked at these children and found "We looked at these children and found they are neither educationally deprived nor handicapped. They already are in small classes and have remedial help available, if they need it," says Superintendent Ken-neth L. Peters. "Our board decided against applying for the funds. We aren't opposed to federal aid, but after reading and rereading the law, we think it would be difficult to justify a wealthy district partici-pating in this program. We should not be-come involved in inventing crash programs just to qualify for federal money.

THEM AS HAS TAKES

Ironically, the wealthiest county in the nation, Montgomery County, Md., is a major recipient of elementary and secondary aid. Though the 1960 census gave it a median family income of \$9,317, it's eligible for \$557,000. Says William Feddeman, director of the county's Department for the Planning and Development of Federal and State Proms, "We feel a responsibility to spend Most of the money is going to 10 "target" schools for remedial reading, psychologi-cal services and health and physical edu-

But nearly \$18,000 of federal money from another part of the Act will help send aspiring young musicians to a summer music camp in the woods of western Maryland. Youngsters are auditioned, not chosen on

the basis of poverty. So taxes collected from rich and poor alike will be spent on musi-cally inclined youngsters of the wealthiest county in the U.S.A.

New York City is getting \$65 million under Title I of the Act—more money than any other city. Yet the president of the Board of Education told a city hall budget hear-ing that "the New York City public schools surpass in quality and in their forward mo-mentum those of any other city in America."

In contrast not a dime is going into oneroom school houses in some impoverished Kentucky areas and in other border and southern states where there are concentra-tions of the poor. The U.S. Office of Education says this is on purpose, that it is try-ing to do away with the inefficient, out-dated, one-room structures. This may well be a beneficial long-range goal, but critics point out that until more modern school facilities are available, the children in some of these ramshackle schools get the short end of the hickory stick. And, as Congress-woman Green points out, the Education Act contains no provision for closing any kinds of schools

Major blame for what many regard as a misdirection of funds can be placed on the Act's requirement that 1960 census figures be used to determine where the poor are. These figures, the latest census data available, actually were gathered in 1959, seven years ago. So they don't show any movement of population since then or any increase in people's income during recent boom years.

Some blame has to be laid at the feet of Education Act administrators who tell questioning local school superintendents not to worry how allocations are arrived st.

Under another section of the Education Act, Title V, Congress appropriated \$17 million to strengthen state departments of education. New York and California, states which an education office spokesman said already have the strongest departments in the country, get the most aid.

FORCING FUNDS ON THEM

Some local school officials whose districts

don't want education aid money complain they are being harassed by bureaucrats. Santa Ana (Calif.) Unified School District learned of its \$425,222 entitlement not from state authorities but by reading about it in a Los Angeles newspaper. Despite pressures that built up within the district between the time of the news article and the time the

district was notified by the state that the story was accurate, Santa Ana school trustees rejected the money.

Burbank (Calif.) Unified School District also learned of the \$247,869 available to it from reading a newspaper account. "I was astonished by the amount," Superintendent Richard Clause recalls. Burbank didn't apply for the money. "We are a moderately wealthy district with no clear pockets of poverty. Our school board feels we're able to pay our own way."

Oxnard Union High School District, about 40 miles northwest of Los Angeles, rejected its \$77,064 entitlement. Superintendent Joseph W. Crosby explains, "We believe local taxpayers should handle our education cost. If we were taxed to the hilt, I don't think we'd refuse federal help. But we aren't and we feel it's more economical to do the job ourselves. We've set up, on our own over the years, a curriculum for the extremely bright voungsters.

We have remedial classes, classes for non-English-speaking children, classes for the mentally retarded and the severely mentally retarded and speech therapy. The school board has never refused me a program that meets a genuine need."

California school districts entitled to about \$5 million have replied: "Thanks, but no thanks."

Critics of the Act point out that one of its most unfair features is that the poorest states will get the least amount of money per disadvantaged child. By keying the amount of aid a locality can get to the state's average per pupil expenditure, more affluent states that spend more per child because they have more tax dollars to spend, get more federal doles than the poorer ones. "The rich get richer and the poor get poorer," says New York's Rep. Goodball.

Reps. Genera and Quir, among others, have maintained that if the intent of the Act is, indeed, to help children of the poor, the formula doesn't work. Since the bill became law, it has also been found that localities which might best use more money either aren't getting it or have to wait far back in line because they can't afford to hire a special staff properly to draft their applications. Well-heeled school systems, such as Maryland's Montgomery County, have a staff of experts to do the paperwork.

experts to do the paperwork.
School officials are discovering that it's one thing to formulate a project but quite another to find qualified personnel to carry it out. A blue-ribbon panel picked by President Johnson to evaluate the operation of Title I of the school law recently issued its first annual report. It found "in virtually every area studied, there is an alarming lack of personnel, particularly in specialized skills."

A manpower survey should have been taken before committing the billion of taken dollars, Mrs. Gesen says. Rep. Goods. notes the intense competition, even with the federal government, for the teachers and specialists the Act seeks. "In my state, we lose some of these already scarce people to higher-paying, antipoverty jobs in the Office of Economic Opportunity."

First-year spending under the Education Act was supposed to end June 30. But districts have been allowed to extend their spending through the summer. Some are even trying to spend a whole years' allotment in just a couple of months. Glendale (Galif.) Unified School District, for example, was late in getting its project in and approved, but now it hopes to spend its entire \$315,584 entitlement for a summer reading clinic. Altogether, the Office of Education estimates, \$300 million will be spent this summer for 3.5 million children to attend summer school projects.

In its report, the Presidential panel says, "It is too early to obtain evidence about the results of any of the programs, but it is

abundantly clear the evaluation will be difficult." While commending officials and educators for launching the program in such short time, the group is concerned that, among other things, there's no system of quality control, that coordination is in some cases lacking between Education Act projects and those sponsored by the Office of Economic Opportunity and that nonpublic school pupils don't seem to be getting their share.

One community, Anaheim, Calif., is especially sympathetic toward the financial burdens the federal government now carries. So sympathetic, in fact, that the Anaheim City Council has adopted resolution 66R-2^{A7}, which reads:

"Resolution of the City Council of the City of Anaheim tendering a grant-in-aid to the Great White Father.

"Whereas the Great White Father in Washington has spread his omniscient munificence to enfold the fiscal welfare of his American municipalities, and

"Whereas this benevolent munificence is manifested by a tender of untold millions in grants-in-aid for water, sewers, urban redevelopment, poverty, public works, housing and a multitude of other fields in which Great Father opines his children are unequal to the task; and

"Whereas Great Father nevertheless has informed the children that there will be necessary a great raise in taxation; and

necessary a great raise in taxation; and
"Whereas the city of Anaheim has compared its fiscal condition with that of the
Great Father and found that the city is in
far better financial condition, and that Great
Father is in great need of a grant-in-aid for
himself: Now therefore, be it

himself: Now, therefore, be it
"Resolved, That the city of Anaheim does
hereby tender to Great Father, the sum of
\$100 as a grant-in-aid (with no strings attached) to be used for whatever national
purpose may be in greatest need thereof."

The Fair Housing Debate

EXTENSION OF REMARKS

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. BROYHILL of Virginia. Mr. Speaker, we are approaching the time when we may be called to vote on the crucial issue of the 1966 civil rights bill. I must state that I find title IV of that bill destructive of the right of private property ownership. Furthermore, title IV is calculated to palce the homeowner in a position where he must defend his rights against any frivolous complaint, a position that could lead to his financial distress. Conceivably, any disappointed person whose offer to buy or lease was not accepted could take the owner to court, have his case paid for by the Government, and watch the legal apparatus of the Department of Justice go to work

on the hapless homeowner.

I have recently read an editorial in the Washington Daily News of June 15, 1966 entitled "The Fair Housing Debate," in which testimony by Mr. Dennis M. Lynch is briefly discussed. Mr. Lynch, who is president of the Real Estate Association of Rhode Island, advocates that local programs handle the problem of fair housing, for as he says the Rhode Island fair housing law is ineffective, and a Federal housing law could do no

more. I agree with Mr. Lynch and feel that title IV would serve only to destroy the basic rights of the property owners.

I, therefore, include this editorial in the RECORD:

THE FAIR HOUSING DEBATE

Real estate spokesmen, who know the field best, are marshaling some powerful arguments against the fair housing section of the Administration's civil rights bill now under study in Congress.

They do not quarrel with its goal—free and equal accress to housing for every individual, regardless of race, color or creed. Nor would most Americans. But they do contend that trying to achieve this goal thru Federal law will do more harm than good to all concerned. Most worrisome is their argument that the law could be used to harass innocent homeowners.

Alan L. Emlen, spokesman for a Washington committee of the National Association of Read Estate Boards, said even "frivolous" complaints alleging discrimination could keep an owner's home off the market as long as several years pending court action. And even if the home owner finally were found innocent of any discrimination the long process "could wipe out (his) equity in his home."

"could wipe out (his) equity in his home."

America is an increasingly mobile soclety. Many are required by their jobs to sell
their bomes and use the proceeds to
buy homes elsewhere. Which would make
any such harassment doubly punitive.

Other real estate witnesses have voiced like fears and have warned such a Federal law would discourage real estate investment. They may be overstating their case somewhat. But in raising the red flag against sacrificing an innocent home-owner's property rights in an effort to end housing discrimination they have made a positive contribution to the debate.

The only abiding answer to the problem was proposed by Dennis M. Lynch, president of the real estate association in Rhode Island, which has a fair housing law Lynch said was ineffective. He proposed local, voluntary programs to help people find homes in areas they choose, to build neighborhood acceptance of minority families and to encourage formation of non-profit housing corporations.

It has been, of course, the absence of just such efforts over the years that finally gave rise to the Federal fair housing proposals—which Congress may decide create more problems than they solve. But even if approved, they won't do the constructive job Mr. Lynch correctly says must be done.

Concurrent Resolution Adopted by the 1966 Keystone Boys State General Assembly

EXTENSION OF REMARKS

HON. THOMAS E. MORGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following concurrent resolution adopted by the 1966 Keystone Boys State General Assembly, which was held at University Park, Pa., June 20 through 28, and which expresses the support of the President's policy and our men in Vietnam.

The petition accompanying this resolution, which was sent to the President, contained 372 signatures:

SENATE CONCURRENT RESOLUTION: SERIAL No. 3—IN THE SENATE, JUNE 28, 1966

(Expressing the support of the 1966 Keystone Boys State General Assembly of the President's policy and our men in Viet-

Whereas the Armed Forces of the United States are currently engaged in combat with the Viet Cong forces in South Vietnam in response to a request for aid from the government of South Vietnam and in protest of the violation of the treaty agreements by the government of North Vietnam; and

Whereas the Armed Forces of the United States are seeking to combat the hardships and cruelties inflicted upon the helpless people of South Vietnam by the communist supported Viet Cong; and

Whereas our action is in keeping with our National policy both from the standpoint of self-interest and from the standpoint of helping those people in the world who are unable to help themselves against aggressors;

Whereas there are citizens in the United States who are openly criticizing and either knowingly or unwittingly attempting to un-dermine this National policy of the United States government and are thereby giving aid and comfort to the enemy; therefore be it Resolved (the House of Representatives

concurring), That the General Assembly of Keystone Boys State hereby expresses its wholehearted support of the men in the Armed Forces of the United States in their loval and courageous stand against evil communist forces in keeping with the historic tradition of the men of Pennsylvania in every conflict in which our country has been engaged; and, as representatives of the citizens of Keystone Boys State, the General Assembly deplores the aid and comfort rendered the enemy by the public utter-ances and demonstrations of persons who seek to weaken the stand of our government: and the General Assembly by this resolution hereby extend to the men of the Armed Forces in South Vietnam its admiration and appreciation of their courage and dedication to duty and by this resolution reaffirms its faith in our Country, support of the Presi-dent's Policy, and faith in those who are so loyally defending its honor and integrity; and be it further

Resolved, That a copy of this resolution and a petition with the signatures of the citizens of the 1966 Keystone Boys State be sent to the President of the United States, the Congress of the United States, and the Governor of the Commonwealth of Pennsyl-

Captive Nations Week 1966

EXTENSION OF REMARKS

HON. FRANK ANNUNZIO

OF BLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. ANNUNZIO. Mr. Speaker, President Johnson, in his captive nations proclamation for 1966, has set aside July 17 to 23 for the eighth annual observance of this event.

It is a privilege for me to participate in

the commemoration of Captive Nations Week for it is our responsibility in the free world to give hope and support to those captive nations which aspire to national independence. By so doing, we insure the preservation of freedom in the United States and reaffirm our dedication to the noble principles of liberty and self-government on which our country was founded.

We deceive ourselves and threaten the existence of our own liberty when we remain apathetic as each year the list of captive nations increases, and more and more people fall under the yoke of Soviet domination. The list of captive nations to date includes the following:

Country and year of Communist domination

	Year
Armenia	1920
Azerbaijan	1920
Byelorussia	1920
Cossackia	1920
Georgia	1920
Idel-Ural	1920
North Caucasia	1920
Democratic Republic of Far East	
(Siberyaks)	1920
Ukraine	1920
Turkestan	1922
Estonia	1940
Latvia	1940
Lithuania	1940
Albania	1946
Bulgaria	1946
Outer Mongolia	1946
Serbia, Croatia, Slovenia, etc, in	
Yugoslavia	1946
Poland	1947
Rumania	1947
Czechoslovakia	1948
North Korea	1948
Hungary	1949
East Germany	1949
Mainland China	1949
Tibet	1951
North Vietnam	1954
Cuba	1960

Only our own vigilance and renewed dedication to the cause of freedom will prevent this list from growing longer. And only our own willingness to throw aside our complacency and to bend every effort in the cause of human liberty will shorten the list.

The Soviet Union is maintaining the last remaining enclave of political slavery in our world for today it contains over 119 million non-Russian captives. So long as others are enslaved, our own freedom is insecure. In the interests of a peaceful world order based on universal justice, the right of self-determination must be insured to all peoples.

Dozens of measures have been introduced in this Congress calling for the establishment of a Special Committee on Captive Nations. I urge my colleagues to give their support to this legislation, for its early enactment would be a positive step forward in the heroic, sometimes silent, but never-ceasing strug-gle for freedom being carried on in all parts of the world.

My own city of Chicago last year was honored by the National Committee on Captive Nations which recognized it as the city carrying on the most active captive nations program in the Nation.

Once again, under the inspired and vigorous leadership of Mayor Richard J. Daley, Chicago is commemorating Captive Nations Week. Mayor Daley has issued a proclamation marking the event and has named a Captive Nations Day Committee to coordinate the programs which will be held.

Captive Nations Day will be celebrated in Chicago on July 16 with a parade on State Street beginning at 12 noon followed by an assembly at Grant Park in which all the national groups of our city tracing their ancestry to the captive nations will participate.

It is my pleasure to include in the CONGRESSIONAL RECORD Mayor Daley's proclamation on Captive Nations Day, which follows:

PROCLAMATION

Whereas, the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czecho-Slo-vakia, Letvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Malniand China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Serbia, Crotia, Slovenia, Tibet, Cossackia, Turkestan, North

Vietnam, Cuba, and others; and Whereas, the Congress of the United States by unanimous vote passed Public Law 86-90 establishing the third week in July each year as Captive Nations Week and in-viting the people of the United States to observe such week with appropriate prayers, ceremonies and activities; expressing their sympathy with and support for the just aspirations of captive peoples for freedom and independence; and

Whereas, the City of Chicago is linked to these captive nations through the bonds of family, since numbered among the people of Chicago are hundreds of thousands of our citizens who through nativity or ancestry treasure the heritage which endowed them with the culture and industry which are theirs; and

Whereas, these nations have been made captive by the imperialistic, aggressive and eartless policies of communism; and

Whereas, the peoples of these communist-dominated nations have been deprived of their national independence and their indi-

vidual liberties; and
Whereas, it is appropriate and proper to
demonstrate to the peoples of the captive
nations the support of the people of the City of Chicago for their just aspirations for free-dom and national independence; and Whereas, the people of Chicago, as do all the people of the United States, want for the

peoples of the world the same freedom and justice which is theirs:

Now, therefore, I, Eichard J. Daley, Mayor of the City of Chicago, do hereby designate the week beginning July 16, 1966 as Captive Nations Week.

I urge the people of Chicago to join in the programs arranged for observance of the occassion, and I urge all of our churches, our educational institutions and all media of communication to observe the plight of the communist-dominated nations and to join in support of the just aspirations of the people of the captive nations.

I especially encourage everyone to concretely demonstrate his or her interest in the people imprisoned in the captive nations by their attendance at or participation in the parade to be held on State Street on Saturday atternoon, July 18 at 12:00 P.M. and at

ne assembly following in Grant Park. Dated this 5th day of July, A.D., 1966. RICHARD J. DALEY, Mayor.

The Tunnel's End

EXTENSION OF REMARKS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the Congressional Recommen an excellent editorial by Mr. Joseph Alsop entitled "The Tunnel's End," which appeared in the Washington, D.C., Post, on Monday, June 27, 1966.

This editorial serves as a remainder to us that, if this Nation continues to proceed with the courage, diligence, persistence, and vigor that are needed to see the unfortunate matter in South Vietnam through, we will reach a new era of peace which the United States and the world generally desire and for which our brave young men are fighting in Vietnam.

The editorial follows:

MATTER OF FACT: THE TUNNEL'S END (By Joseph Alsop)

At least three times since March, President Johnson has been on the verge of intensifying the bombing pressure on North Vietnam by authorizing such new departures as systematic attacks on the vital oil fuel stores and power stations.

Now, it seems probable, the necessary order will at length be given. This is in fact a very modest step for the President to take, in view of the progressive northern take-over of all aspects of the war in South Vietnam. Flagrant, massive and continuing invasion of one country by another usually leads to a riposte far more grave than anything the President is considering.

President is considering.

But the real cause for rejoicing is not the probable imminence of the President's decision to accept the oft-repeated advice of the Joint Chiefs of Staff. The real cause is the reason for the President's decision, which is the restoration of relative political stability in South Vietnam.

On all three earlier occasions, in brief, the needed presidential order to intensity the bombing was aborted at the last moment by renewed outbreaks of political instability in South Vietnam. These last months have been a hard passage for the astute South Vietnames Premier General Neuven Cao Kv.

Vietnamese Premier, General Nguyen Cao Ry. Among the opponents of the President's policy, denouncing "the puppet Ky" is currently the fashion. In fact, however, General Ky has shown real independence, quite often defying or ignoring advice from the backseat drivers here in Washington. He also has shown real adrotness as well as genuine moderation in his handling of the political Buddhists and he has succeeded very well.

One has to add the very famous remark of Napoleon's old mother: "Fourvu Que es Dure"—if only the success lasts! But for the moment, the political outlook in the South has vastly improved. And with luck the outlook should improve further, with the oncoming national election.

In itself, this is a fact of cardinal importance. For the intelligence is crystal clear that the war planners in Hanol are placing their main hopes for victory on political disorder in South Vietnam and/or mounting opposition to Fresident Johnson here at home.

The disappointment of these hopes must be a grave blow to Hanol. The blow comes at a bad time, too, for the actual fighting in the south has been going far worse for the Hanol war planners than most people in this country even begin to suspect.

Behind the confusing pattern of many big and little engagements, two facts stand out. On the one hand, throughout this winter and spring, the Hanoi war planners doubled the scale of their invasion of the South, greatly intensified their efforts in many other ways, and dangerously increased the strain on the Vietcong infrastructure in the South Vietnamese countryside.

The purpose, beyond doubt, was to assume the offensive on a considerable scale, with far-reaching political-military results. Thus far, however—and here is the second key fact—the Communist forces in the South have everywhere falled to regain the initia-

With extreme brilliance, General Westmoreland has instead kept the enemy continuously off balance by a remarkable series of spoiling operations. These operations have not only left the Hanol war planners in the wretched situation of a man making huge investments and getting no return at all. In addition, they also have taken a very severe toll on the manpower and morale of the enemy forces.

Furthermore, General Westmoreland has achieved these very impressive results with a margin of strength that is still inadequate. But his margin is widening month by month. Add that the supposedly Buddhist-controlled Vietnamese Ist division has just inflicted a severe defeat on the V.C. in Quangtri Province—which must mean that the recent disorders have affected the Vietnamese srmy much less than might have been feared. With the South Vietnamese forces rela-

With the South Vietnamese forces relatively unimpaired, and with his own margin continuously widening, it is obvious that General Westmoreland is soon going to be able to do all sorts of things which his limited resources have not previously permitted.

These new departures, such as virtually permanent occupation of some of the key V.C. base areas, will bring much bigger dividends than can be got with spoiling operations.

Greater pressure on North Vietnam; still worst reverses for the V.C. and North Vietnamese troops in the South; the disappointment of Hanoi's most fondly cherished political hopes—that triple combination, if it can be realized, should produce another turning point in the war.

We were on the brink of catastrophic defeat last year. We are now gaining slowly on the other side. If the turning point comes by autumn, it may even be possible to see light at the end of the tunnel.

Insight Into the Role of Government

EXTENSION OF REMARKS

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1966

Mr. JONES of Alabama. Mr. Speaker, an unusually vivid insight into the role and nature of the Federal Government is provided by a recent editorial in the Huntsville, Ala., Times. The comments originally were printed in the Tupelo, Miss., Journal before being reprinted in

Because false and misleading information is so prevelant, it is easy to loose sight of the real importance of government in the life of the Nation. This editorial points out that to the extent that the dog wags the tail, rather than vice versa, private enterprise is Govern-

Huntsville.

I am certain my colleagues will be interested in views of this editorial and I ask that it be included at this point in the RECORD:

THE DOG WAGS THE TAIL

Government is everybody's whipping-boy. Many of us with a bouse with a 50-foot frontage and a checking-account that frequently won't check feel nevertheless capable and authorized to declaim about the costs and wastes of government.

The Times is aware that true understanding of the role of the federal government is met with rarely. Too frequently, virtually all of us declaim when we might better be reflecting. A short time ago, the Tupelo (Miss.) Journal published an editorial which counters that trend. In fact, it provided such a rare clarity and examples that The Times feels it is both proper and incumbent upon us to provide space to reprint it herein full:

Years ago when we were in school, it was assumed that we had pretty well described the U.S. government if we could rattle off the names of the cabinet members along with those of the President and vice president.

And there are still many who assume that if a few more names are added—such as those who head the Federal Communications Commission of the Interstate Commerce Commission—the American government has been fairly well covered.

But today the sector of private enterprise which draws its living from Uncle Sam is far bigger than the federal government itself. Thus when we talk about reducing or ex-

Thus when we talk about reducing or expanding government expenditures, we automatically imply major changes in private enterprise.

For to the extent that the dog wags the tail, rather than vice versa, private enterprise is government.

That, of course, sounds confusing. And this whole subject is mentioned only because so many people—including boosters of big business—seem to like to condemn "the government" while assuming that business is something wholly apart from and above association with the "federal bureaucracy."

Yet here are a few simple facts which indicate how inadequate the old-time knowledge of cabinet names and duties is in providing an understanding of what the federal government actually is.

Government payments each year to the North American Aviation Company for example, are larger than the sums required to operate the State Department, the Justice Department and the Commerce Department combined.

Yet nobody ever thinks of this two billion dollar outlay to a single private firm as being a part of government—or government costs being affected by the efficiency or wages of this plane manufacturer.

Similarly, the federal government each year pays to a single private firm, the Lockheed Aircraft Company, as much as the nation's entire price support and subsidy program for all the farmers in America has averaged over the last 10 or 12 years.

bs

ti

H

Li

re

U

And the Boeing Aircraft Company draws as much from the federal budget each year as is required to operate the entire U.S. Commerce Department with is scores of programs affecting every aspect of private and business life.

Is the opeartion of Congress, the legislative branch of American government, getting out of hand with its higher salaries, costly investigations, global travel, etc.?

Sometimes all of us probably get to wondering if this isn't so.

But Congress, through one of the three basic branches of American government, actually costs no more than Uncle Sam spends each year on projects conducted by the California Institute of Technology.

And remember all those important agencies of yester-year which were considered so important in government—the Federal Trade Commission, the Federal Power Commis the Tariff Commission, the Interstate Commerce Commission, the Securities and Exchange Commission and the Civil Service Commission?

Today all riz of these key independent agencies are administered for less than what the federal government pays each year to the Massachusetts Institute of Technology for research work and similar projects.

And while the Atomic Energy Commission and the National Aeronautics and Space Agency have a payroll themselves of only 40,000 people more than 500,000 people em-ployed by private firms owe their jobs to the contracts their companies have with these two federal agencies

When we say that government costs too much, that government is wasteful, etc., we mean in a way, therefore, that all these private firms which do work for the government are wasteful in the manner they run their business and in the wages they pay their eight million employes.

As a matter of fact they may be. For a number of large American firms pay their presidents two to four times as much as the President of the United States makes.

And a few private firms even pay their top man as much as in earned by the President of the United States and all his Cabinet members combined.

As far as we know all this doesn't prove a thing.

But we believe that if we keep such information in mind it helps us not merely to understand our government better but to be a little more tolerant of its ever-rising costs.

For the federal government, itself, em-ploys only two and a half million civilian workers compared with the eight million em-ployed by private firms to supply the things bought by the government.

How these private firms operate their business and what wages they pay, therefore, has as much to do with the cost and efficiency of the federal government as does the government's own operations.

Liberals, Unite

EXTENSION OF REMARKS

OF

HON, WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. RYAN. Mr. Speaker, as primary campaigns and periodicals have made clear during the last few months, there is a division of opinion in the country about what constitutes "liberalism." This division has the disadvantage of dividing the liberal ranks, as it has been pointed out, but it also has the advantage of forcing liberals to reexamine their own views rather than smugly to sit back and continue to accept past positions.

In the June 24 issue of Aufbau, Von Hans Steinitz takes note of the problem. Liberals are "bitter, confused and breaking up," he writes. He then goes on to recommend that liberals unite around a basic program which he briefly outlines.

His comments, I think, should be of interest to liberals and conservatives alike. The column, entitled "Liberals, Unite," follows:

LIBERALS, UNITE

(By Von Hans Steinitz)

American Liberalism is in bad shape. The forces of progress and reform, which in this country are known by the somewhat mis-leading catch-all name of "Liberalism," are split, discouraged, bitter, confused and breaking up. They are helplessly looking for new ideas and purposes, for new for-mulas and programs which might pull them together and give their set of values a new

Hardly two years ago, everything was clear and simple. American Liberals, overcoming their original skepticism, had gathered around President Johnson, then at the threshold of his 1864 Presidential campaign. He was opposed by Senator Goldwater, representing all elements of yesteryear, standing for everything that Liberals opposed, and their choice was easy. They could look back on some splendid accomplishments in the field of civil rights: their sit-ins, their Freedom rides, their March to Washington, their fraternal "We shall overcome" demonstrations for better citizenship; they had just stood up against what was then called "the white backlash," they had achieved results, good new laws had been passed, and good new programs had been proclaimed by the man in the White House.

After his overwhelming victory at the polls, Congress followed suit. Liberals saw tangible progress: bright new reforms, the first steps toward the "Great Society," courageous attacks on the perennial evils in our big cities, our schools, our countryside, our rural slums, the neglect of our elderly. And Liberals were more hopeful, more united, more confident than ever.

Then came the backlash, the real one. The tragic developments in Vietnam took their toll, splitting the liberal community wide open. The civil rights movement lost its momentum—and was further weakened by the appearance of a militant new "black nationalism": easily explained, easily undernationalism": easily explained, easily under-stood, and yet an ugly spot on the broad united front of liberal whites and colored. The pacifist Left (or "New Left") rose against LBJ, and even more bitterly against vice President Humphrey, hitherto the undis-puted leader of all liberal forces. While some Liberals continue to support the gov-ernment's policy in Vietnam, albett reluc-tantly others the majority have long distantly, others, the majority, have long dissociated themselves from it-without, however, knowing exactly what other course to follow in this diabolic situation.

The result is uneasiness, malaise, despair, confusion. Furthermore, it has shown up in the latest primaries: the conservative right of the Goldwater-heir Ronald Reagan reasserted itself, the democratic primaries sufasserted itself, the democratic primaries suf-fered from intranural party squabbles be-tween "doves" and Johnson supporters, with inconclusive results; litterness increases, hopes diminish. America seems to move to-ward the right—for want of cohesion and

ward the right was a sign of t for the sick liberal body politic? Do we merely have to stand by and watch the decline and fall of the heritage of Pranklin Roosevelt and Adlai Stevenson? Cannot the Liberals be united again? Granted that Liberalism—as Hubert Humpher put it—is no dogma and may very well thrive through dis-sent and debate; yet a minimum of common goals would be necessary to galvanize it and inspire it with new vigor. Given the calami-ties of Vietnam and the loss of momentum in the civil rights movement: can such a mini-

mum set of new goals be achieved?

Let us try to sketch such a minimum program. By playing down all controversial issues, cannot a set of common goals be lined up on which Liberals of all factions—from the pacifist "New Left" to the labor unions, the civil rights workers and the more old-fashioned big-city intellectuals—might

agree? Cannot a measure of new vitality be achieved just by concentrating on what unites them and disregarding what pulls

them spart?
Liberals of all shades can agree on the original vision of the "Great Society" and support its implementation—a big job ahead.
They can, and should, enthusiastically agree rney can, and should, enthusiastically agree on programs of urbanism and the protection of nature, of school reforms and public transportation, of public health and guarantees for senior citizens. They could agree on a bigger role of government inspection in the fields of drug control and automobile safety, on truthful packaging and advertis-

They could, and should, agree on con-tinued vigilance in the field of civil rights not so much for further laws, but for en-forcing the application of the existing ones; pushing for peaceful progress on the social and human level, always remembering that the goal remains honest equality for all

In foreign affairs—the most delicate field In foreign many the first in a foreign all—Liberals ought to strive in a forceful united front for a solution of the Vietnam war at the conference table, as was done twelve years ago in Geneva. They should oppose senseless escalation, militarist "No-substitute-for victory"-ideas, and the haughty neglect of all civilian reform moves. On the other hand, the Liberals ought not to endorse unilateral and unconditional surrender of the American forces in Vietnam:

render of the American forces in Vietnam:
the wur should be ended by conference, and
not by any dictates on either side.
Liberals should furthermore, and quite
urgently, support the new ware of east-west
contacts in Europe, the reduction of cold war
tensions, the loosening of military alliances,
the improved atmosphere of east-west trade,
travel and cultural exchanges; a wide field
which Librals have addom explored enough

which Liberals have seldom explored enough.

Could this be a new beginning? Could these modest minimum goals be instrumental in welding together what acrimonious dissension has lately torn apart? Could Liberalism, once Americas proudest political force, be brought to the forefront again, ready to carry on? Is it not high time for Liberals to unite, in the interest of all that still needs to be done?

Federal Versus Local

EXTENSION OF REMARKS

HON. W. E. (BILL) BROCK

OF TENMESSEE

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. BROCK. Mr. Speaker, I have long been an advocate of the concept of the Federal Government sharing part of its revenues with the States. I think this approach of Federal-State tax cooperation is essential if the State and local governments are to survive in an era of accelerating authority by the National Government. My bill, H.R. 10696, would authorize the Federal Government to share up to 5 percent of its income with the States for use in strengthening edu-

cation. This legislation has received wide support among tax authorities, Governors, educators and Members of Con-

Mr. Henry C. Wallich, one of the top economists, teachers, and journalists in our country today, wrote a most persuasive column in the June 27 Newsweek citing the urgency in adopting a tax

sharing plan. Under unanimous consent I include the article "Federal Versus Local" in the Appendix of the Record.

PEDERAL VERSUS LOCAL

(By Henry C. Wallich)

Mayor John Lindsay's epic battle for the budget of New York City has laid bare the malaise that afflicts state and local finances throughout the United States. The finances of New York City have been mismanaged, to be sure. But if that were all, Mayor Lindsay's troubles would be minor. The real problem is one of financial incompatibility between the services a large city should provide and the resources upon which it can draw. This may end in a divorce of local responsibility to provide services from political power to control them. If the mayor of a large city cannot raise the money he needs to do his job, control of the city's affairs inevitably slips from his and his constituents' hands.

As Mayor Lindsay—and many of his colleagues elsewhere—contemplates his deficit, he does not have far to look for the causes. Many people want to work in the city, but only the very rich—and the very poor—can afford to live and raise their children there. The city must provide a rich menu of services to many people who do not pay for them. So the mayor tries to reach out into the suburbs to tax the commuter. There he encounters the resistance of the state

government.

COMPETITION IN LAXITY

New York State is no ogre. Like all other states, it contributes heavily already to the support of its cities. Nationwide, states finance their cities to the tune of almost 30 per cent of local general revenues. But neither New York nor any other state operates a gold mine. And other resources are hard to come by for state governments, much in contrast to their big Federal brother.

At first blush this seems hard to understand. When one compares the usual tax rates of states with the rates charged by the Federal government, the impression is that the states ought to have a much easier time increasing their revenues than would the Federal government. It is easier to double a 3 per cent sales tax than a 48 per cent

corporate-profits tax.

To argue this line is to overlook the competition in tax laxity to which our states are committed. The state or city which pushes its taxes out of line loses its industries. The New York Stock Exchange has been trying to make that clear to Mayor Lindsay. Hence the difficulty in raising state and local revenues. Hence the difficulty in providing the services that must be paid out of those revenues.

A POWER VACUUM

The Federal government, which abhors a vacuum, may feel tempted to step in and fill the gap. Aiready it has injected itself by making conditional grants to the states for amounts now budgeted at \$14.7 billion. Each grant twists the arms, more or less gently, of some state or local authority: "Do this, do that, or do without the money." Much of the time, no doubt, the Federal government's standards ure reasonable. The Federal government, by and large, is honest and competent. Not all state and local administrations are. But if we want limited government, we cannot let the Federal government, we cannot let the Federal government acquire unlimited power.

A logical way out of this dilemma is shown by the widely discussed Heller-Pechman plan providing for unconditional grants of Federal money to the states. The plan uses the great financial power of the Federal revenue system, but does not let it be translated into political power over state and local authorities. The plan incurs the risk that some states may not make the "right" use of the money. They may even take advantage of it

to cut their own taxes. The answer to critics who make this point, located mainly on the political left, must be that the money after all is the taxpayers'. If the taxpayers of some states prefer the money to the services, why shouldn't that be their privilege? Senator Javris of New York has offered a bill embodying the main features of this

Senator Javrs of New York has offered a bill embodying the main features of this plan. The humiliating struggle between the City and the State of New York demonstrates the urgency of channeling some Federal money, with no strings attached, to the local level. The Federal government, comfortably off as it is, may feel that its present method of tied grants has worked well enough. But here is one case where to leave well enough alone means to let things go from bad to worse.

Awaiting Johnson's Promised Word on Strikes

EXTENSION OF REMARKS

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. ROUDEBUSH. Mr. Speaker, I am sure that the Members of this Congress are very much aware of the numerous problems that have been caused by the current airline strike. Much has appeared in print concerning the matter, as well as many statements that have been made by public officials. One of the finest articles that I have read is one that was written by Clayton Fritchey. I believe that this fine article will be of interest to all the Members. I, therefore, have leave to have it printed in the Record:

Awarting Johnson's Promised Word on Strikes

(By Clayton Fritchey)

In his State of the Union message on Jan. 20, President Johnson, in the wake of New York's crippling subway strike, said:

"I intend to ask Congress to consider measures which without improperly invading state and local authority will enable us effectively to deal with strikes which threaten

tively to deal with strikes which threaten irreparable damage to the national interest." That's the last we've heard about that. Six months have gone by and, as the shutdown of the airlines painfully shows, nothing has been done. There has been no White House followup, and none appears on the horizon. In fairness to Johnson, it should be noted that he finds himself in the same dilemma that has frustrated many other White House incumbents. It's easy to talk about doing something; and it is not at all easy to do it. The plain fact is that no President has been able to find a wholly acceptable and effective remedy for strikes that imperfil the public interests.

It is also a notable fact that both George Meany, president of the AFL-CIO, and Walter Reuther, the number two labor leader, joined Johnson in denouncing the subway strike, but they have not come forward with any

new remedies either.

Meany, in his usual constructive fashion, merely said he would oppose any Presidential effort to obtain federal legislation covering city and state employes. Reuther, in his more responsive way, said, "Society can't tolerate stoppages which endanger the very existence of society.

Reuther is wrong. Society not only can, but does tolerate such stoppages. In the last few years there have been big strikes

that shut down shipping, building, public schools, newspapers, taxis, buses, and the sirlines.

In each instance everybody, including the lawmakers, agreed "there ought to be a law." But it takes time to prepare legislation, and by that time the emergency is over and the pressure is off. It is also then discovered that while strikes are damaging, they seldom prove fatal to the national interest. They just seem to at the time.

At the moment, the country is indignant about the airline shutdown, and there is renewed talk of "doing something." but in the wake of settlement, the passion for reform will, as usual, soon spend itself. The politicians are wise to this. Six months ago everyone thought this session of Congress would certainly pass new strike legislation, but there is little or nothing left of that innocent hope.

Perhaps, after all these years, it is time for us to stop kidding ourselves that there is some miraculous answer to these exasperating, and often stupid strikes, which hurt the innocent bystander—namely the

public.

After the Manhattan subway strike, New York State was urged to emulate the National Railway Labor Act, which provides for a National Mediation Board to handle disputes between rail or air carriers and labor unions. It also permits a Presidential Emergency Board to make nonbinding recommendations if mediation falls, and provides for a 30-day cooling-off period before a strike can be called.

Yet in the airline dispute, every step of this procedure was followed, and still there was a strike. That's what prompts recurring demands for compulsory arbitration.

demands for compulsory arbitration.
For years this radical but seemingly simple solution has tempted Americans. A recent Gallup poll showed the public 2-1 in favor of it, a large increase over last year. Unfortunately, it has two serious throwbacks.

First, various state experiments with compulsory arbitration have not been too encouraging, nor has experience of other countries where it has been tried nationally.

Second, both labor and management shrink from such critical government intervention, and as long as they feel that way it is unlikely that Congress will go against them.

Still, even if forced arbitration is not the instant answer, Congress has an obligation to develop better strike machinery than we have now. It could do worse than consider the formula sponsored by Senator Javirs.

If, under his proposal, a labor dispute did not yield to fact-finding or a compulsory 30-day bargaining period, federal courts, at the President's request, could appoint receivers to operate struck facilities to the extent necessary for health or safety.

If the administration feels this is not a good answer, it would be helpful to know why—and also what its own promised answer is.

Effects of Revision of Residual Import

EXTENSION OF REMARKS

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. GIAIMO. Mr. Speaker, I have been advised in a letter from Charles W. Colsen, counsel to the New England Council for Economic Research and Development, dated May 31, 1966, that due to revision in the residual oil import quotas announced by the Secretary of the Interior, March 25, 1966, quotations on residual oil in New England were down 35 cents a barrel from the period immediately before the quotas were removed.

It is estimated by the council that this will result in a saving of more than \$30 million to the New England consumer. This, I believe, is sufficient evidence of the wisdom of the strong efforts made by all 25 New England Congressmen in bringing to the attention of the OEP and the Secretary of the Interior, the inequities of the system of import quotas. The old system benefited no one and burdened the consumers of New England as well as placing unnecessary strain upon relations with those countries which are principal exporters of residual oil.

We should be aware that under GATT, the General Agreement on Tariff and Trade, subscribed to by some 75 nations, import quotas are regarded as highly inimical to the best interests of world trade. The removal of the import quota on residual oil is in line with GATT policies and I am sure will be so recognized by other signatories in future tariff negotiations.

I am pleased to have had a part in bringing about a decision beneficial to my constituents as well as to our announced policy of liberalized world trade.

Senator Douglas Is Right: Plug the Tax Loopholes

EXTENSION OF REMARKS

HON. JOHN R. SCHMIDHAUSER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. SCHMIDHAUSER. Mr. Speaker, since last year I have periodically made proposals to reform our Federal tax system which presently affords special privileges to many large companies and the very wealthy.

Senator Paul Douglas, one of our greatest defenders of the public interest, has persistently pushed for the elimination of massive subsidies for privileged groups and individuals. I would like to call to the attention of my colleagues an editorial pertaining to the tremendous efforts over the years of the distinguished senior Senator from Illinois. I also would like to say that this editorial very succinctly and accurately points up the urgent need for a prompt and thorough reform of our tax system.

On February 23, 1966, I introduced a bill, H.R. 12993, which is identical to legislation sponsored by Senator Douglas and others in the Senate. Approval of this legislation would be the first step by Congress along the road to an equitable and fair tax system, a move in our best democratic tradition.

The editorial follows:

SENATOR DOUGLAS IS RIGHT: PLUG THE TAX
LOOPHOLES!

The tax loopholes scandal was in the news again lately. In one development, newspapers published a "secret" report on an in-

vestigation being made by the Internal Revenue Service into 400 cases of possible abuse of the "charity" loophole.

Also, Sen. Paur Douglas (D., Ill.), long a battler against lopsided taxes, put the spotlight anew on innumerable loopholes and called for plugging them to secure added revenue before imposing any general tax increase to finance the Vietnam war.

The 400 cases being studied by the IRS deal with "philanthropists" who claim tax write-offs totaling \$4.3 million on gifts of art works that actually cost them loss than \$1.5 million—and many of whom apparently rolled up handsome cash profits thereby.

Here's an example of how this "gift" scheme operates: A prospective donor buys an art work for \$50,000 which he eventually presents to his "alma mater." Before doing so, he has a friendly art appraiser say the work is worth \$150,000.

He then deducts the \$150,000 as a "charity gift" on his income tax return. If he's in the top bracket of say 50 to 80 per cent, he cuts his tax payments by far more than the \$50,000 and ends up with a tidy "profit."

The Los Angeles Times, which first reported the IRS probe, quoted a tax agent as saying that one high bracket taxpayer over a 12year period claimed contributions of art totaling \$813,000 in value, for which he had paid \$265,000. His tax saving was said to be over \$492,000.

Phony "offers" are also used to infiate the value, the IRS let it be known. For example, the "philanthropist" has an acquaintance offer an infiated price for his art. The owner turns that down, and instead donates the art to his old school. He then uses the pumpedup offer as his figure for income tax deduction purposes.

Douglas cited some glaring examples of the results of other tax loopholes. Latest available Treasury figures, he said, show that 32 persons with incomes of over \$500,000 (of whom 20 had incomes of over \$1 million) didn't pay a single cent in taxes in 1963! Why was that? "Because," said Douglas,

Why was that? "Because," said Douglas, "of the oil depletion allowances, the capital gains provisions, and the stock options."

Doubtas declared that because of the depletion allowance, and related tax loopholes, one oil operator with \$28 million in income in one year "paid not one penny in income taxes." Also, a major oil company with profits of \$65 million over a five-year period "not only paid no taxes, but received a rebate of \$425,000."

"I say, let's plug these tax loopholes," Douglas urged. "Let's abolish lavish subsidies to the well-to-do before we raise the taxes of average American citizens."

Labor wholeheartedly agrees with Senator Douglas. It's time for action by Congress to close the loopholes by which so many of the rich escape paying their fair share while the ordinary worker must pay his taxes in full.

L.B.J. in Iowa

EXTENSION OF REMARKS

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. SMITH of Iowa. Mr. Speaker, President Johnson visited Iowa on June 30. He left Washington before noon and did not leave Iowa until almost midnight Washington time. That 12-hour period was packed solidly with events and, of course, could not possibly be fully covered in one article in a newspaper, but the interpretive article which

I think probably most nearly portrarys the highlights of the trip is one from the Davenport Times-Democrat of July 3 which I have set forth in the CONGRES-SIONAL RECORD so that others may read it.

I was one of those privileged to accompany the President from Washington to Iowa and to be with him while he was in Iowa. I was in the automobile with the President as it drove through the streets and roads lined with thousands of people. I was also in the automobile with the President as he drove through the same streets in the fall of 1964.

From this vantage point, sitting in the automobile with the President, I could see the expression on the faces of the people as they viewed the President. On both occasions they were clearly saying, "That is our President, we want to greet him, we are depending upon him, he has our best wishes." I could not detect any change in the expressions on the faces of the people and their reactions on the two trips.

When the President would stop and get out of the car to give a personal greeting on a particular street corner, the crowd would simply go wild with enthusiasm and many people were moved to tears. Children would jump up and down with joy; it was a truly moving experience to watch the reaction of the people. When we drove through the countryside, crowds would be accumulated at crossroads and one could see cars parked for a long way back from the crossroads indicating that people had driven for many miles so that they and their children could see the President.

The principal speech lasted 58 minutes because it was interrupted 56 times with applause. The speech was delivered in an auditorium in Des Moines on one of the hottest evenings in history and without the benefit of air conditioning. In spite of this physically uncomfortable situation, the crowd was applauding as often and with as much enthusiasm in in the last 5 minutes of the speech as it was in the first 5 minutes of the speech. Highlights of the speech are set forth in the article I mentioned and which is set forth below:

L.B.J. IN IOWA: STANDS FIRM, NO ALIBIS FOR

(By John McCormick of the Times-Democrat staff)

DES MOINES.—Anyone who expected President Johnson to be apologetic or offer alibis for any of his administration's policies and statements was sorely disappointed in L.B.J.'s visit to Iowa Thursday.

In his curbetone and barnyard chats with the crowd that turned out to greet him, and in his formal address at a \$100-a-plate fundraising dinner, Johnson made it clear that he stands solidly behind his programs.

He went so far as to bring Secretary of Agriculture Orville Freeman with him, unannounced, on the foray into the "heartland of the farming industry." Freeman's presence was symbolic of Johnson's full backing of his chief agriculture aide.

There were no apologies nor alibis for the recent statements and actions by both Johnson and Freeman which have stirred some resentment among the nation's farmers.

WORDS DELIVERED CALMLY

Nor were there any for the way the war in Viet Nam is being conducted—another issue that has been severely criticized in many

While his words were forceful and clear, they were delivered, for the most part, calmly. Johnson's speech lacked the bombast characteristic of political campaigns.

But he came not to arouse people to ac-He came to quiet criticism and resentment—to reasure those who are "disturbed and worried"—and to reaffirm that the course he has chosen for the country will be pur stied with persistence and perseverance so long as Lyndon B. Johnson is President. If there was any plea in the President's

message, it was for understanding and compassion for any man who bears the "tremendous, terrifying responsibilities of the President of the United States."

FINDS STRENGTH

He said he came to Iowa "to draw strength from you" and found that strength in the "smiling, healthy, happy faces" of the thousands who turned out to welcome him.

And if Iowans object to policies of the Juhnsen administration, it was not evident in their manner. Only about 100 persons, many of them college students representing dissident factions, put on a display of protest over continuation of the fighting in Viet Nam.

The crowds at the airport for his arrival and departure, the little clusters of farm folk at roadside crossings along the route of John-son's farm tour, the thousands who lined the streets of Indianola and Des Moines, waved American flags and placards lettered with words of greeting and support.

There probably were some, perhaps many, who differ with Johnson. But in true American fashion, they showed their respect for the office of President of the United States—whatever his name may be.

And Johnson played on this theme.

DECISIONS ARE JOHNSON'S

In his address at a \$100-a-plate Democratic dinner that grossed an estimated \$250,000 for state and national campaign chests, Johnson emphasized that in 1964 the people of this nation elected "one man, and only one man as your President." and on that man alone rests the respon-

sibility to make decisions for the nation.

Johnson said he has made decisions and will continue to make them, "based on what is good for the United States and the Free World."

In what might be considered a plea for understanding and compassion, Johnson said grade school history books make it appear that presidents are "forever smiling and self-sufficient . . . never seem to need any-thing. Besieged by problems on every hand, with the winds of crisis howling all about them, they seem to rest, like some Gibraitar,

Johnson said he may some day "rewrite a few chapters of those books" to say something about the needs of a president to have the support of, and to draw strength from "the men, women and children whose servant he is."

NOT ROCK OF GIBRALTAR

"For no matter how steadfast in his determination a president may be, he is not a rock of Gibraltar.

"As you may have heard on the grapevine, he is a plain, simple human being," Johnson mid.

It was then that he gave humble thanks for the welcome he received in Iowa

"Nothing is as satisfying, nothing gives your president more pleasure, than such hospitality as you have shown, and to see so many happy, smiling faces.

"Your president has drawn strength and comfort from the association with you," Johnson said.

He called the "prosperous, healthy, happy people of America" his "hidden asset."

Johnson told of his conference with former Presidents Dwight D. Eisenhower and the late Herbert C. Hoover, both Republicans, and Democrat Harry S. Truman to get their advice and counsel before making some of his more momentous decisions.

But with all the good advice, counsel and information that a president can muster, it still is he, and he alone, who must make the

decisions.

The problem of the president is not do-what is right. It is knowing what is what is right. I t," Johnson said.

DEPARTS FROM TEXT

In his dinner speech, Johnson departed frequently from his prepared text, paraphrased other portions, omitted many para-graphs entirely, substituting extemporane-ously to piece together what Gov. Harold E. Hughes called "one of the greatest speeches I ever heard him give . . . significant and of nationwide and worldwide importance."

What started out to be a farm policy address replete with statistics was supple-mented shortly before delivery time with a

hard-hitting text on Viet Nam.
On farm policy, he pointed out the rising per farm income in the last five years, the \$3.5 billion in government subsidy payments made to more than 2 million farmers this year, and federal action to curb inflation including efforts to stabilize farm prices.

"It is the story of a successful farm policy unparalleled in the world—and I'm proud on said

Not only did Johnson not offer apology or alibi for his agricultural programs, he called on the nation's farmers to accept larger commitments "to help more" in providing the food needed by underdeveloped countries where there is "malnourishment, starvation, the weakness that breeds disease and slows production and destroys hope."

"I know that Iowans, who for generations have offered their skills and their humans concern to less fortunate peoples, will not hestiate to do so again," Johnson said. "For because you are those to whom much has been given, so from you is much expected." CHOKES BACK A BOB

On Viet Nam, Johnson choked back a sob and squinted his eyes as if to stop a tear as he spoke of American casualties.

want to get out as bad as any boy tanding tonight in a rice paddy of Viet Nam. And they all want to get out," Johnson said.
"But not one of those boys has written his
President asking to get out, except with

Johnson left no doubt in the minds of Americans, their allies and enemies that he has no intention of slackening the Viet Nam

"If we quit the fight--if we abandon our effort to keep stability in Asia—every nation there will once again be an easy prey for hungry Communist appetites.

"So firmness is a must. And as long as I am President, we will stand firm." he said. At the same time he left the door unconditionally open to the Communist leaders of North Viet Nam to negotiate peace.

TONES ARE PLAINTIVE

His tones were plaintive as he said, "If they will only let me know when and where they would like to ask us directly what can be done to bring peace in South Viet Nam, I will have my closest and most trusted associates there in a matter of hours

"This is one way to stop the fighting. It is one way to move toward peace. It is one way to end the killing in the South and the bombing in the North.

"And this, of course, is our desire.
"They cannot wear us down. And "They cannot wear us down. And they cannot escape paying a very high price for their aggression if they continue with their

"We do not want to be bellicose or bellig-The minute they change their mind—the minute they decide the price is too high for a policy that cannot succeed— we will be waiting.

"None of this, my friends, will be easy. But a world of small and new nations—a world where our word and our power can mean the difference between war and peace is counting on us to produce the imagination and the inttiative

We will not fail them."

The Great Unfinished Job of Peace

EXTENSION OF REMARKS OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. MOORHEAD. Mr. Speaker, the supreme purpose of the United Nations is to maintain peace and prevent war. In that connection I introduced last June House Concurrent Resolution 689 to establish a permanent United Nations peacekeeping force and House Concurrent Resolution 794 urging free elections in South Vietnam supervised by the U.N.

In support of this legislation, and because I believe with U.N. Ambassador Arthur Goldberg that "I cannot escape the deep sense that the peoples of the world are looking over our shoulders waiting to see whether we can overcome our present problems and take up with fresh vigor and renewed resolution the great unfinished job of peace," I insert in the Record an article by Scripps-Howard Writer Hal Hendrix, complimenting the impressive efforts of the first inter-American peace force which helped re-store democratic constitutional government to the Dominican Republic.

PEACE FORCE HELPED ARMY IN DOMINICAN: TROUBLEMAKERS TODAY WOULD FACE TRAINED MILITARY

SANTO DOMINGO, July 12.—The hemi-sphere's first Inter-American peace force, which helped restore democratic constitutional government to the Dominican Republic, has begun its gradual withdrawal.

Departure of the foreign troops after 14 months here has arounsed contrasting re-action among the Dominicans. Some are glad, some sad.

ti

Some fear new violence as soon as the last of the 8000-man force leaves. Extremists of the left and right have been itching to get at each other with hidden weapons.

CONDITION CHANGED

But any such troublemakers would find the Dominican military and police today aren's the same disorganized, ill-trained units the rebels challenged when the rev-olution began in April, 1965.

Since then the Dominican armed forces and police have received intensive training in riot control and anti-guerrilla operations. Their tutors were among the best in the trade—the U.S. Special forces.

Withdrawal of the peace force began of-ficially June 28, three days before the inauguration of President Joaquin Balaguer. Unless he requests some to remain longer, all the troops are scheduled to be gone by Sept. 30.

As the dismantling got underway, the U.S. had about 6500 men here. Another 1200 were divided between Brazil, Coeta Rica, Nicaragua, Honduras and Paraguay.

The arguments were over the intervention and presence of the peace force will continue long after the foreign troops have departed.

OPINIONS DIFFER

Many Dominicans are convinced the landing of foreign troops saved the country from catastrophe.

But critics of the intervention, the rebel or so-called "Constitutionalists," charge it frustrated a movement that could have achieved constitutional rule in less time and at far less expense.

But the result of the June 1 presidential election argues against the rebel critics. Their man, Juan Bosch, whom the rebels wanted to put back into the palace by violent revolution, was overwhelmingly defeated by the Dominican electorate.

U.S. and OAS officials have declined to

U.S. and OAS officials have declined to reveal how much it has cost to send and maintain the peace force here. Presumably most, if not all, the logistical costs have been borne by the U.S.

U.S. INSTALLATIONS

Scattered about the city have been field hospitals, telephone switchboards, emergency power plants, huge banks of food freezing units, miles of wiring.

Circulating libraries, post exchanges, military post offices, barbershops, a printing plant and a radio station for entertainment and news broadcast in English, Spanish and Portuguese.

Portuguese.
The peace force at its peak had some 1750 jeeps and trucks and a fleet of helicopters.

Hoffman-La Roche Indigent Patient Program

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. RODINO. Mr. Speaker, I am privileged to call to the attention of the Congress and the American people the indigent patient program conducted by the Roche Laboratories of Hoffman-LaRoche Inc., Nutley, N.J., a pharmaceutical house in my district. This pharmaceutical company has pioneered in the institution of this program in the drug industry, for they have long considered it their obligation to make available a selection of their drugs without cost to indigent sick and handicapped patients in the care of private practicing physicians.

It is in the highest tradition of American medicine for physicians in private practice to care for indigent patients whenever possible, and Roche assists the medical profession in this endeavor by making its products available free of charge.

This splendid example of humanitarianism was introduced during May of 1962. All of the drugs are obtained by the treating physician who informs Roche of the circumstances of each case, the medication needed, and the dosage strength. Hoffman-La Roche does not require the doctor to reveal the patient's name and should the indigent require additional medication, the physician may write to the company and request

additional supplies for as long as the patient requires it.

I want to commend one of the world's largest pharmaceutical companies for the inauguration of such a program of merit. Once again, we see that it is possible for self-sacrifice and the desire to aid our fellowman to overshadow the profit motive. Even though we enjoy to-day a most progressive and rich society, there still remain many unfortunate people who are suffering from the effects of ill health and poverty.

The Roche indigent patient program is indicative of the manner in which private industry can work to insure a more secure and comfortable life for our citi-

Soviet Education

EXTENSION OF REMARKS

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. MARSH. Mr. Speaker, at this critical time, when the Soviet Union seeks to convince the world that communism is the wave of the future, it is significant to note the inadequacles of their education system as related in the current issue of Time magazine.

It seems that their boast of the avail-

It seems that their boast of the availability of college opportunities is more fiction than fact. It also appears that, in admissions to colleges, some are "more equal" than others. For the benefit of the House, I include an article from the educational section of Time magazine for July 15, 1966:

EXAM FEVER IN RUSSIA

In city, town and village across the vast plains, students last week burned the midnight oil as they crammed for university entrance exams. Providing moral support, their parents besieged admissions officers with pleading telegrams, desperately sought out the help of influential friends in politics or government. Doctors suddenly found themselves busy trying to stamp out an epidemic of youthful exhaustion and nervous tension.

Far worse than the admissions crush at the Ivies or Oxbridge, so it seems, is the placement struggle currently taking place in that self-styled educational paradise, the Soviet Union. Although Russia claims to spare no rubles when it comes to schooling, its universities and technical institutes are addy inadequate to meet the national demand.

University candidates sweat through ten or more zachety, or trial tests, before being allowed to take the major exams given by the government during June and July. Moreover, even a top grade is no guarantee of admission. Students with some factory or military experience have an edge in the selection; so especially have those with a well-placed friend in the party apparatus.

A university diploma, as every Soviet schoolboy knows, is an essential passport to a white-collar job and ultimate success. Inevitably, the competition for college has led to a displeasing amount of corruption. This spring, reported Komsomolskaya Pravda, 32 students were expelled from the Armenian state university in Erivan when authorities discovered that they had gained their ad-

mission through political influence and faked records, and had not passed a single entrance test.

National Federation of Independent Business

EXTENSION OF REMARKS

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. DENT. Mr. Speaker, I have known the National Federation of Independent Business organization and its founder for many years.

The recent action by the Senate on H.R. 318 came as a great disappointment to this group and especially to Mr. Burger who has spent a great deal of time and effort in this attempt to equalize competitive positions between the independently owned tirestores and company-operated establishments.

After many years of effort, the House finally granted relief, however, the Senate action may doom the House amendments.

I present Mr. Burger's letter to me covering this situation.

NATIONAL PEDERATION OF INDEPENDENT BUSINESS, San Mateo, Calif., July 11, 1966.

Re H.R. 318.
The Honorable John Dent,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DENT: Following up my visit with you shortly before the recess or Thursday. June 30, you said "George, write me on the proposition," referring to the action of the Senste Finance Committee on June 21, 1966, on H.R. 318, which was voted unanimously by the House in the Fall of 1965, which would compet tire manufacturers owning and operating retail stores to pay the excise tax on their stocks of tires in their retail stores in the same manner and form as independent retailers have been compelled to pay for over a quarter of a century. I am not unmindful of your splendid action at the time the bill came up for a vote on the floor of the House.

I am also reminded of the splendid remarks you made on the floor of the House on October 5, 1965, when the subject matter was before the House for consideration. You said, "Mr. Speaker, one of the dangers of the so-called company-owned stores is the danger of monopoly." You hit the nail on the head in no uncertain words.

of monopoly." You lit the nail on the head in no uncertain words.

The Ways and Means Committee in its report stated its findings were that through this concession, the tire manufacturers owning and operating retail stores—their stocks of tires are exempt of the tax to the extent of approximately \$3 million.

It is interesting to note, my good friend, that at the public hearings on June 21, 1966, the Rubber Manufacturers Association, through their spokesmen from General, Goodyear, and Firestone stated that if the five companies operating retail stores had to pay this tax in the same manner and form as the independents, they would be compelled to pay \$12,400,000 to the Government. It is my opinion that if a real thorough check was made as to this figure, it might disclose double or triple that amount.

It is our hope and trust that the Senate Finance Committee will repeat its action of last June when they called it "meritorious" legislation and reported the bill out to the floor of the Senate.

I would be more than pleased if you would find it convenient, my good friend, to insert this in the Appendix of the RECORD with the attachments.

Sincerely,

GEORGE J. BURGER, Vice President.
Attachment.

[From the Akron Beacon Journal, June 22,

TIRE TAX SPEEDUP NOT WORTH IT, TREASURY SAYS

(By Philip Meyer)

Washington.—The Treasury Department Tuesday asked the Senate to forget about a proposed speedup in tire excise tax collections.

Even though the move would bring the Treasury from \$5 million to \$12 million, it wouldn't be worth the trouble, said Lawrence M. Stone, the department's tax legislative counsel.

Stone and spokesmen for the tire industry testified before the Senate Finance Committee.

"I take it," said Sen. CLINTON ANDERSON (D-N. M.), "that you are strongly opposed to the bill."

"I wouldn't use the word 'strongly,' " replied Stone. "We're opposed to it. But it's not a matter of life or death."

The Rubber Manufacturers' Association (RMA) is strongly opposed. Patrick J. Moran, chief tax counsel for General Tire, said the bill would place "an additional financial burden on the tire manufacturers and an unnecessary administrative burden on the Internal Revenue Service."

Pressure for the bill comes from independent tire dealers, represented at the hearings by George Burger, vice president of the National Federation of Independent Busi-

Burger said the present system of tax collection is unfair to the independents.

He figures it this way:

The 10-cent a pound tax is collected when the tire is sold. For the independent dealer, this comes when he buys the tire from the manufacturer. But for the manufacturerowned store, there is no sale until the retail customer gets the tire.

The proposed bill, which passed the House last year, would equalize matters by collecting from company stores when they receive the tires from the plant.

The present system gives company stores an unfair advantage, Burger said, because independent dealers must "maintain continuing sizable investments in prepaid Federal taxes" on their inventory.

But the Treasury Department and the RMA said the inequity is not as great as Burger pictures it.

The average tire dealer turns over his stock every 95 days and pays the manufacturer 85 days after delivery. This means, he said, that the dealer carries a tax-paid inventory for only nine days.

His only loss, said Stone, is the interest he could have earned for nine days on money tied up in taxes. It figures out, he said, to about 1½ cents a month for each tire.

The price of wiping out this small inequity would be a confusing new system of tax rolls, he said.

The proposed change got this far only by accident. It passed the House under suspension of the rules, a procedure reserved for non-controversial bills.

Rep. William Ayres of Akron was present at the time and intended to declare the bill controversial. But he was called to the phone just before the bill was called up and missed

The Entron,
Wall Street Journal,
New York, N.Y.:

Front page Wall Street Journal today says that "Independent tire dealers try to persuade Congress to exempt them from having to pay excise tax on tire stocks at the time they are purchased from the manufacturer." This is not true as the record will show in Congressional hearings on the subject matter for nearly a quarter of a century tire dealers have requested that the stocks of tires and tubes in manufacturers' retail stores be taxed in the same manner and form as the independent tire dealers are subject to. What they are requesting in simple words is equal-justice under the law. As a benefit to all of your readers, will you make this correction?

Vice President, National Federation of Independent Business, Washington, D.C.

[From the Wall Street Journal, June 29, 1966]

Independent tire dealers strive to persuade Congress to exempt them from having to pay excise taxes on tire stocks at the time of purchase from the manufacturers. pendent dealers maintain that the tax law discriminates against them because retail outlets owned by the tire makers aren't required to pay excise levies until tires are sold; under present law, such intra-company actions don't count as sales. Congressional tax-writing committees seem sympathetic to the independent tire sellers' plea, but Treasury opposition may block a bill that would give them relief. The Treasury argues that changing the rules for non-affiliated tire dealers would prompt similar pleas from other independent retailers, such as truck dealers, who also must pay excise taxes in advance, leading to "administrative and compliance problems."

Wall Street Journal made the correction on July 1, 1966, and advised me accordingly.

President's Address Memorable

EXTENSION OF REMARKS

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. CASEY. Mr. Speaker, David Lawrence in today's Washington Star very ably sets forth the full import of the President's Tuesday night television and radio address. This very clearly again shows the efforts the President exerts to bring to an end the Vietnam conflict.

I ask that Mr. Lawrence's article be inserted following my remarks.

PRESIDENT'S ADDRESS MEMORABLE

(By David Lawrence)

A memorable address delivered by President Johnson over television and radio on Tuesday night could change the course of human history. For the first time, the head of a nation talked directly to another people in the midst of a war. He earnestly pleaded the cause of peace and emphasized that "cooperation, not hostility, is the way of the future."

Mr. Johnson's speech was neither belligerent in tone nor blustering. The President tried the art of persuasion. He pointed

out that, since "humiliation can be the seedbed of war," America is not seeking in Viet Nam "the peace of conquest."

Stressing what could lie beyond a peace conference, Mr. Johnson spoke of the need to strengthen the economic and social development of countries in Asia with their enormous populations which suffer from poverty, hunger and disease.

The President may have been thinking of Red China's detachment from the world community as he tactfully argued that isolationism is not good for China any more than it has been for the United States. He

said on this point:

"Americans entered this century believing that our security had no foundation outside our own continent. Twice we mistook our sheltered position for safety. Twice we were wrong. If we are wise now, we will not repeat our mistakes of the past. We will not retreat from the obligations of freedom and security in Asia."

The President's frank and outspoken words might have been uttered in the privacy of a "summit" meeting with the heads of other governments. But they take on added significance because of their directness and the willingness to make such statements in the open. Here are the significant passages:

"As long as the leaders of North Viet Nam believe they can take over the people of South Viet Nam by force, we must not let them succeed.

"We must stand across their path and say: "You will not prevail. Turn from the use of force—and peace will follow.' . . .

"We are not trying to wipe out North Viet Nam. We are not trying to change their government. We are not trying to establish permahent bases in South Viet Nam. And we are not trying to gain one inch of new territory. Then why are we there?

"Because we are trying to make the Communists of North Viet Nam stop shooting at their neighbors. Because we are trying to make their aggression unprofitable. Because we are trying to demonstrate that guerilla warfare, inspired by one nation against another, cannot succeed. Once that lesson is learned, a shadow that hangs over all of Asia will begin to recede...

"However long it takes, I want the Com-

cin

.

en ti

th

mi

az

tie

of al

pr th

th

Th

in

Wa

chi

str

"However long it takes, I want the Communists in Hanoi to know where we stand. "First, victory for your armies is impos-

sible. You cannot drive us from South Viet
Nam by force. Do not mistake our firm
stand for false optimism—as long as you
persist in aggression, we will resist.

"Second, the minute you realize that a military victory is out of the question, and turn from the use of force, you will find us ready to reciprocate. We want to end the fighting. We want to bring our men home. We want an honorable peace in Viet Nam. In your hands is the key to that peace. You have only to turn it."

Rarely in the relations between two adversaries during a war has such frankness been displayed, at least on the part of the nation which has the more powerful military force and weapons. The strategy behind the kind of speech that President Johnson delivered may not be apparent to the naked eye, but it doubtless was based on the advice of those experts here and abroad who know what's happening inside Red China and who recognize that this is the time to present to the people on the mainland a formula that could lend to peace. The President said:

"A hostile China must be discouraged from aggression. A misguided China must be encouraged toward understanding of the outside world and toward policies of peaceful cooperation. For lasting peace can never come to Asia as long as the 700 million people of mainland China are isolated by their rulers from the outside world."

The text of the President's address doubtless will be relayed by radio throughout the world. At least the diplomats will read it in full text, and those who have contact with Red China's government are in a position to point out that never has there been a more sincere or constructive declaration made to an enemy during a war than that which has just been proclaimed by the President of the United States in a conscientious effort to bring peace in Viet Nam.

Self-Help: A Challenge of the Future

EXTENSION OF REMARKS

HON. KEN W. DYAL

OF CALTPORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. DYAL. Mr. Speaker, I requested a report from the gentleman who has written the following letter and I am tremendously impressed with the job that is being done in South America under AID. I felt that his letter would be helpful to the hearings we have been holding and to the understanding of the public of the accomplishments in this

The challenges to America today will be dwarfed by the challenging problems facing America in the future. In one area alone Latin America, we are confronted with the problems that bear not only on the world scene but on our own immediate future as well. Today we face more than twenty na-tions representing 200 million people, tomorrow we must deal with these same sister countries representing 600 million demanding citizens. How we meet these demands and cope with these problems may well shape the course of our own nation as well.

Much has been written about AID's fail-ures and very little about its success, because seemingly so many people like to point out errors but leave success to minor gibes that they were probably errors to begin with that

somehow managed to become successes. The following story represents a program that was planned to be successful and has remained just that, a story of self-help, where man's humanity to man has made pos-able the education of thousands of children.

Self help school construction, its concepts and its basic ideas originated in Guatemala in 1960, long before the Alliance was a new theme of our overseas program.

The U.S. AID Guatemala school construction program was the basis in the past for what is now known as the self-help concept of the future, a concept now so popular in all of our efforts throughout the world. This program of community effort, coupled with the Cooperating country and the U.S., built wene 2250 classrooms in Guatemala, and these same concepts and ideas spread to El Salvador, Nicaragus, Panama, and Ecuador. The author of this paper must say that it was the vision of all people concerned that made these programs the success story that they are today.

Ecuador represents the culmination of all our past efforts to sell the concept that man, in the interest of his children for a better way of life, will make every sacrifice to overe practically any obstacle to see that his child receives an education.

The Cooperative Program of School Con-Struction was created by an Agreement signed May 17, 1962 between the U.S. AID and the Government of Ecuador. Its primary objective was to prepare and train personnel for a new division in the Ministry of Education to assume the responsibilities of a future AID loan based on the Self-Help con-Its primary objective then was in tion building coupled with results, building school rooms.

A series of studies conducted by AID/E, and other agencies had estimated that as of December of 1963, Ecuador's classroom shortage amounted to 11,000 classrooms; that Ecuadorian resources from the central government alone could not solve this shortage. Purther, during this same year 300,000 children would not attend school because of this classroom shortage. Of those in school in the 1st. to the sixth grades, 87% would drop out before finishing the sixth grade, pri-marily because of lack of classrooms, which within ten years would increase the illiteracy figure from a conservative estimate of 43% to possibly 50-60%.

The U.S. AID pilot project created a Co-operative Program of School Construction to help the Government of Ecuador to solve this lack of money resources and the resulting waste of human resources. The Co-operative was created as a bilateral organiza-tion co-directed by a USAID construction engineer and the Chief of School Construction of the Ministry of Education. This bi-lateral organization administers the con-struction of schools based upon tri-lateral and bilateral agreements signed between the Cooperative Program of School Construction, the Provinces, Municipalities, Pueblos, CARE and other civic groups participating in the

program. The original agreement specified the fol-

(A) CONTRIBUTIONS

- 1. United States, \$200,000.
- (a) Imported materials, cash. 2. GOE, \$200,000.
- (a) Cash.
- 3. Communities, \$200,000. (a) Land, material, labor, cash.
- (B) OBJECTIVE: 300 CLASSROOMS

Within the Original Pilot Project monies outlined above constructed 420 classrooms and 28 teacher's lodgings from funds pro-jected for 300 classrooms. This was possible through over subscription to the program by the government and the people throughout the country. It further integrated 34 members of the Peace Corps into a Community Development section of the project, and initiated a Food for Peace Program which provided a noon meal for workers contributing their labor.

From May of 1962 until April 1966 the original Agreement has been amended seven times. Each of these amendments were requested by the Officials of the Cooperating country and they stemmed from a realization that self-help and its saving to the Central Government could be extended to vocational and secondary programs as well. These amendments covered many aspects that were not projected in the original agreement. Each amendment in reality broad-ened the responsibility of the Cooperative to include not only the engineering, the development and the construction of primary schools, but the more complex administra tive planning and construction of vocational and secondary schools.

In view of the success of the Cooperative and its low construction cost the Minister asked the Cooperative Organization in 1963 to construct six vocational schools in addition to the pilot primary project for the Ministry of Education, representing an additional expenditure of \$935,000 on the part of the GOE without additional contributions from the U.S. Five of the schools

are finished and occupied at this time. In addition to this overall program be-tween AID, the GOE and the people of Ecuador, a people-to-people and town-to-town plan was inaugurated in 1965, through CARE. This program has involved the

building of one and two room schools, including kitchens, lodgins for teachers and the provision of desks for 40 students per classroom, by a cooperative effort on the part of CARE, the Cooperative Program of School Construction (CPSC), the Peace Corps and Local Communities.

CARE provides a standardized donation of \$1,500 and \$2,250, contributed primarily from civic service organization in the U.S. which through individual contracts, transferred to the account of the CPSC.

The Local Communities as in the pilot program contribute with land, labor and ma-terials, a contribution which has generally amounted to 35% of the total land and con-struction costs. The CPSC purchases and delivers the material to the school site, and the Cooperative Engineers supervise and direct the Peace Corps Volunteers.

As of April 1966, then, the Cooperative has expanded its operations to accomplish the following:

A. Contributions:

- 1. United States (cash, materials)

 2. GOE (cash)

 (a) Ministry budget

 (b) Public Law 480 loan 8366, 618, 86 2, 438, 482. 10 lget...... 1, 724, 514. 00 80 loan... 715, 071. 50 3. Community____ (a) Land, material, labor, cash. 4. CARE_ 13, 737, 89 (a) U.S. citizens to Ecua
 - doran communities (cash).
- 5. Private Ecuadoran Contri-166, 476, 89 butions

Total Contributions.... 3, 821, 446. 90 (a) 18.18 (O.R.E.)

AID's Contribution:

- (a) 9.8% of construction and
- administrative cost. (b) Technical Administrative and advisory cost for 4 years_

140,000

B. Accomplishments of the total program:

1. 1,267 primary classrooms and teachers' lodging_______56,000 2. 5 vocational schools.... 3. 1 secondary school____ 1, 200 4. 3 normal school additions

C. Cost and time factors: (1) Classrooms constructed prior to 1962 averaged \$2,900. Cooperative school costs averaged \$2,000 which includes classroom furniture. (2) Schools constructed by the Ministries Construction Department took as long as 2 years to build because of the deficit financing plan. Cooperative Schools have averaged six months in building. (3) The Self-Help fac-tor has reduced the National budget outlay for primary schools and construction sites by 40%.

After nearly four years of preparation in engineering and establishing administrative practices, the bases for a National School Construction Agency to be created by the Government is nearing reality. This agency of the Minister of Education will be charged with planning and administering construction of all primary, secondary and vocational schools in the country. It is to be formed from the employees of the original Coopera-tive Program of School Construction and will also absorb the construction department of the Ministry of Education.

The establishment of this New National Agency forms the bases for an 11 million dollar, 3000 classroom school construction program. The U.S. government has granted a 5.3 million dollar loan for the construction of schools, training of teachers and the development of a national text book program.

From the concept of an idea in Guatemala in 1960 to the accomplishments of the people of Ecuador in 1966, we have experienced many errors, frustrations and periods of changa. But change is brought about through desires, and no greater desire exists than the need for a better way of life. A better way of life through education.

JAMES F. W. WATSON,

JAMES F. W. WATSON, Construction Engineer, Chief School Construction.

Essays of Sixth Grade Students at Roger Sherman School: Commemoration of U.N. 20th Anniversary

EXTENSION OF REMARKS

HON, ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. GIAIMO. Mr. Speaker, on June 21, 1965, the students of the sixth grade at the Roger Sherman School in conjunction with the commemoration of the 20th anniversary of the United Nations, planted trees along the path of peace—Edgewood Mall, in New Haven, Conn. To accompany the tree planting, some of the children wrote short essays giving their impressions of public figures who they feel, have made contributions to the spirit of the United Nations.

Children, I have found, sometimes have the enviable ability to see through the rhetoric which clouds the issues of our day, to their essence. I thought that my colleagues might enjoy sharing in the simple eloquence of their words.

A PRAYER

(By Samuel Hurwitz, age 11)

Thank you God for giving us a world where peace overshadows war, love overshadows hate, and freedom overshadows slavery.

We are here now to honor men and women who have helped to make it that way. May other people be inspired, and carry on, as the U.N. has been doing for twenty years. Maybe, someday, if everyone works hard

Maybe, someday, if everyone works hard and long, our prayers may be answered. Then everyone will live in peace and good will. Amen.

BIG HEART

(By Nancy Kasimer)

The United Nations has a big heart trying to help mankind reach the great goals of an educated world, a healthy world, a friendly world, a world without war, and most of all a happy and peaceful world.

The Big Heart went to needy countries and distributed dry powdered milk, flour, grain, and advice. They met poverty, disease, ignorance, hunger, overcrowded cities, unemployment, city life, street life, and naked children roaming the streets. With these wretched sights in mind W.H.O., World Health Organization, attacked disease armed with injections, medicines, doctors, nurses, sanitation and nutrition experts, medical officers, physicians, and other people involved in medicine.

U.N.I.C.E.F., United Nations International Children's Emergency Fund, was fighting hunger in many countries all over the world where the people were too weak to work, think and improve.

T.A., Technical Assistants, taught the people new trades which the people had never heard of before. They showed them modern machinery and taught them how to use them.

Along with T.A. comes F.A.O., Food and Agricultural Organization, showing people what crops would grow best, what natural resources they have, how to rotate crops, and other agricultural facts.

The U.N. has equipped the largest dairy in Asfa, in Bombay. They learn new ways to process foods with protein in them. They teach the people to prepare and use new foods. The U.N. sprays homes and villages with DDT to kill the malaria carrying mosquitoes and lice. They teach sanitation and provide equipment to build central water wells. They build Health Centers where there is one doctor for every 10,000 people. The U.N. is teaching the parents and the children making less and less ignorance in our world. They teach because they know that there is no future without education. The U.N. supplies creative toys and learning materials.

The U.N. with the big heart has helped many people and is helping more and more everyday.

I think the U.N. has done much for all people, and is a great stepping stone to peace.

PRESIDENT JOHNSON

(By Jeffrey Zonenshine, age 12)
To President Johnson for what he has done

in Appalachia, and for Civil Rights.

What he is doing for his war on poverty and what he is doing for education facilities.

JOHN F. KENNEDY

(By Gailene Thornton, age 12)

To John F. Kennedy for his faith, courage and feeling for people. We are hoping this tree will be a symbol of

peace for which he stood.

For he believed that peace, brotherhood, and progress were possible only if the young people of the world faced the future with hope and determination.

JOHN F. KENNEDY (By Craig Fort, age 11)

To John F. Kennedy for his courage and

feelings for all man kind.

He believed that in order to make progress the young people of our world today would have to look forward to the future. We are hoping this garden will be a symbol of peace and strength for our world today.

DWIGHT DAVID EISENHOWER (By Mark Grove, age 12)

To General Eisenhower a great war leader. He was Top Commander of all the Allied Forces. In 1950 Eisenhower was recalled to Military Service by President Truman to serve as Head Commander of NATO. He resigned this post to become the Republican Nominee. Eisenhower won the presidency over Adlai Stevenson. While Eisenhower was president, he passed many bills, such as the Hydroelectric bill. Eisenhower had conferences with South Korean leaders and Top U.N. commanders, meetings with his son Major John Eisenhower, a member of U.N. Forces. On his return from the trip, Eisenhower said that "this journey marks not the end but the beginning of a new effort to make peace through out the world."

Franklin Delano Roosevelt (By Eugene Esares, age 12)

Franklin D. Rocevelt served many public offices. But in 1933 he was elected thrity-second president of the United States. He was noted for helping the common people. One such law that has helped the United States greatly is Social Security. People looked upon Rocevelt as a loval friend.

States greatly is Social Security. People looked upon Roosevelt as a loyal friend.

Roosevelt helped to end the depression by providing jobs for the unemployed, in public works.

His death in 1945 was a shock to all people of the world.

HERBERT CLARK HOOVER

(By Kenneth Marder, age 12)

For the good job he did as Food Administrator of the United States during World War I. Beginning his job in 1917, he helped save many lives by feeding the starving people of Europe.

As President, he signed many Commissions the National Commission on Law Observance, and Law Enforcement.

CONGRESSMAN GIAIMO

(By Samuel Hurwitz, age 11)

Because he voted for every bill that was helpful to education. He was on the Appropriations Committee and the Education Committee. He is interested in Medicare and preventing juvenile delinquency.

MAYOR LEE

(By Jeffrey Zonenshine, age 12)

To Mayor Lee for what he has done for New Haven with his rehabilitation project—building playgrounds and new and better homes for the senior citizens, new schools, and better schools.

WE THANK YOU: Mr. COOGAN (By Shelley Hankin, age 11)

We would like to give our thanks to Mr. Coogan the head of the New Haven Park Department, for constructing so many beautiful public parks and play areas around New Haven.

Sometimes when I walk through Edgewood Park or any other one, I get such a great feeling that I just stop right there and sit down in the fresh green grass and observe the beautiful things around me. Ever since I can remember, my mother always used to take me to the park to play on the swings.

I always have loved to go down and visit the ducks in the pond at Edgewood Park. It is fun feeding them, and watching them sobble down the food.

gobble down the food.

During the winter, when I do not have anything to do, I take a little walk to the Edgewood Skating Rink and go ice skating. The ice is beautiful, very clean and smooth. I am really thankful that Mr. Coogan chose such a lovely spot to put the rink, It is so close to everything.

We are showing our appreciation for all he has done by planting a tree in his honor.

Thank you once again, Mr. Coogan.

MARIAN ANDERSON

(By Nancy Kasimer, age 12)

We are honoring Miss Marian Anderson for gladdening the hearts of people through her lovely voice. We are also honoring her for sharing her life story with her autobiography, "My Lord, What a Morning," which has inspired so many people. Her life story has been an inspiration to every child in our classroom.

DAG HAMMARSKJOLD

13

in

ur

31

ler

ch

(By Ellen Perecman, age 12)

To Dag Hammarskjold who in 1953 was elected Secretary-General of the U.N. While in office, he tried to make peace between the U.S. and Russia. His mind was always on ways to settle world problems, and he wanted to help the needy people of the world. He helped end the fighting between Israel and Egypt in their dispute over the Sues Canal. He created the U.N. Emergency Force to keep the peace. In 1954 he went to Communist China to help free U.S. airmen who were being held captive there. In 1956 he went to the middle-east to try to get them to agree to the Palestine Armistice Agreement. He also made visits to Lebanon and Laos. He died in an airplane crash in

1961, on a mission to aid the Republic of the Congo. A few weeks later he received the Nobel Peace Prize for 1961.

WILLIAM HOROWITZ

(By Cheryl Brown, age 11)

To William Horowitz for his love and concern for people.

For all the time he gave to education as Chairman of the Conn. State Department of Education.

For his knowledge and wisdom.

DR. MARTIN LUTHER KING, JR. (By Patricia Haynes, age 11½)

For trying to bring equal rights to the Negroes in the south.

He also helped the Negroes in the south get their civil rights and in 1964 he won the Nobel peace prize.

JAWAHARLAL NEHRU

(By Shelley Hankin, age 11)

To Mr. Nehru for working so hard in helping India gain her freedom and for having such a great and strong love for the children of this world. Another reason why the tree has been planted in his memory is because in 1962, he suggested the resolution of International Cooperation Year to the General Assembly of the United Nations.

MRS. ELEANOR ROOSEVELT

(By Ethel Symolon, age 12)

A tree was planted in honor of Mrs. Roosevelt because she helped many people and donated money to organizations, and was active with the United Nations. In 1947 she was named delegate to the General Assembly of the U.N., was Chairman of the Civil Rights Commission, and also won many awards she was a great humanitarian.

Mrs. Roosevelt died November 7, 1962, the whole world mourned the loss of this great

lady.

Mrs. Julia Ruopp

(By Susan Winnick, age 1134)

To Mrs. Julia Ruopp for founding World Pen Pals which brings children and teachers of more than a hundred countries and territories closer together through letters. And also the volunteers who have come every week for years to help.

SECRETARY GENERAL U THANT (By DeVeria Grant, age 11)

We planted a tree for Sec. Gen. U Thant for his dedication to bring world peace into a troubled world. He has the hardest job in the world. Sec. Gen. U Thant has had conferences with President Johnson and other people for situations that lead to world peace.

UNICEF

(By Jeffrey Zonenshine, age 12)

Unicef and WHO have already safe-guarded 134,000,000 children from T.B.

Unicef has already cured 11,000,000 people

from trachoma and conjunctivitis.
Unicef has saved millions of children and

mothers by sending milk. Two million line up for milk in Korea alone.

Unicef and WHO has lowered the Malaria death tell from 3 000 000 record to 1 000 000

Unicer and WHO has lowered the Malaria death toll from 3,000,000 people to 1,000,000 people.

Unicef and WHO has given penicillin to 31,000,000 people against the disease, Yaws. It has treated 1,000,000 people against lebrosy.

Unicef helps saves lives of mothers, and children.

United States Peace Corps (By Allan Fine, age 12)

To the United States Peace Corps for their service to the world. They teach people in

underdeveloped nations to read, write, plant things, build schools, houses, roads, hospitals, and they help children by fighting discases. They are not afraid of work and not afraid of discomfort. We thank them for making this a better world.

The tributes which appear in this booklet, all original writings by the children, were recited by them at the Tree Flanting Ceremony held on June 21, 1965 at Edgewood Mail.

Food Prices on the Rise

EXTENSION OF REMARKS

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. ROUDEBUSH. Mr. Speaker every housewife in America has felt the pocketbook pinch during the past few months as she does her weekly grocery shopping.

Rampant inflation caused by prolonged and heavy deflicit spending by the Federal Government is to blame for much of the problem, but thus far we have seen no indication the administration intends to offer any relief in the

form of reduced spending.

Just how serious this inflation has become is reflected in an outstanding report published in the Indianapolis News on July 8. The article, written by talented Antoni E. Gollan, one of the fine young editorial writers on the staff of the News, indicates that food prices in the Indianapolis area have risen 20 percent in just the last 6 months.

Reports from elsewhere around the Nation indicate this situation is general as the result of uncontrolled spending in

Washington.

In order that all Members of Congress receive this excellently researched and highly informative article by Mr. Gollan, I have permission for its publication in the RECORD. The article follows:

FOOD PRICES UP 20 PERCENT IN 6 MONTHS

(By, Antoni E. Gollan)

In just six months, a selected group of food prices at Indianapolis supermarkets have increased by an average of more than 20 per cent.

A cross-check of local major supermarket prices for January and June reveals increases in practically every common food category.

The prices compared were those of the same supermarkets so that price variations among stores were not a factor. Some of the price differences are as follows:

Milk, one gallon: Up from 65 cents to 71 cents.
Wieners, one pound: Up from 49 cents to

Wiener 59 cents.

Bologna, two pounds: Up from 89 cents to 99 cents. Potatoes, 10 pounds: Up from 50 cents to

79 cents.

Bread, 1¼ pound loaf: Up from 20 cents

to 23 cents.

Ground beef, one pound: Up from 49 cents to 53 cents.

Bacon, one pound: Up from 65 cents to 79 cents.

Coffee, two pounds: Up from \$1.39 to \$1.49. Flour, five pounds: Up from 45 cents to 49 cents.

Round steak, one pound: Up from 79 cents to 89 cents.

Rib steak, one pound: Up from 79 cents to 89 cents.

Braunschweiger, two pounds: Up from 89 cents to 99 cents.

Cut frying chicken, one pound: Up from 43 cents to 53 cents.

Beef roast, one pound: Up from 79 cents to

Tuna: One dollar bought four cans in

January, three cans in June.

Peaches: Eighty-nine cents bought four cans in January, \$1 bought three cans in June.

Catsup: The same price bought a 20-ounce bottle in January, a 14-ounce bottle in June. Oranges: Five pounds for 49 cents in January, four pounds for 69 cents in June.

These particular price increases during just the past six months are a great deal more accelerated than the 15 per cent rise in the cost of living of the past 10 years.

The general price-increase trend holds true in every local supermarket checked, though ultimately the stores themselves are not to blame.

The reason is inflation. Though its effects are suffered by all, especially those with lower incomes, the causes of inflation are not generally understood.

Inflation is caused almost solely by the policies of government. Says the Encyclopaedia Britannica: "Important inflations can occur only with the acquiescence or active support of the government."

Simply defined, inflation is an increase in the supply of money that exceeds increases in available goods and services. The money

thus has less value.

In the United States, the over-supply of money is directly due to deficit spending by the Federal government as it spends far more than it takes in. Deficit spending, an

increasingly regular occurrence but one officially approved only so recently as by Presidents Kennedy and Johnson, injects more money into the economic system. A recent survey showed that the money

A recent survey showed that the money supply in the United States at the present time is nine per cent higher than a year ago—and 47 per cent higher than in 1960.

Deficit spending by the Johnson administration, under the theories of the late British economist John Maynard Keynes, last year was \$3.4 billion. This year it is expected to go up to \$6.4 billion. And each year Congress is requested to increase the "temporary ceiling" on the already mammoth national debt.

The long-range results could be catastrophic. But one immediate result is the already dramatically higher food prices Indianapolis housewives are forced to pay these days—significantly higher than they were six months ago.

Local homemakers may recall ruefully President Johnson's admonition of a few months ago to buy more selectively for lower prices. The fiscal policies of the administration are rendering such efforts futile.

Eugene F. Nixon Elected to Board of Trustees of Citizens Public Expenditure Survey

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. KUPFERMAN. Mr. Speaker, Eugene F. Nixon, my constituent, an outstanding citizen of the Greenwich Village area, has just been elected to the board of trustees of the Citizens Public Expenditure Survey.

The New York State Taxpayer, a publication which recognizes valuable aid to community, featured the fact on the front page of its June 1966 issue, and I commend the item to my colleagues:

E. P. NIXON ELECTED TO C.P.E.S. BOARD

Eugene F. Nixon of New York City and Quogue, New York, has been elected to the Board of Trustees of the Citizen's Public Expenditure Survey.

A native of North Adams, Massachusetts, Mr. Nixon attended schools in North Adams, is a graduate of the University of Pennsylvania, Wharton School and a member of Delta Tau Delta.

An account executive with Dreyfus Co. for 15 years, Mr. Nixon has been associated with various Wall Street firms for the last 30 years.

He is president of the Northern Dispensary, a member of the New York State Dental Board, a member of the board of directors of the Long Island Club, and a member of the Quoque Beach Club.

Mr. Nixon is a former Trustee of the Village of Irvington and former District Governor of the Hendrick Hudson Council Boy Scouts of America.

The Truth Shall Make You Free

EXTENSION OF REMARKS OF

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. QUILLEN. Mr. Speaker, one of the finest sermons I have ever read was preached recently by the Reverend Richard B. Sims, pastor of Litz Manor Baptist Church in Kingsport, Tenn., my hometown.

I believe there is no greater statement of the place of religion in our American life, and I am honored to insert the complete text of Reverend Sims' remarks here in the CONGRESSIONAL RECORD.

> SWEET LAND OF LIBERTY (By Richard B. Sims)

Texts: Psalm 33: 1-12, Psalm 78: 1-7. The "sweet land of liberty" owes its birthright to the Christian faith and the open The open Bible has marked out its pathway across the Western world beginning with Paul's answer to the Macedonian call The Gospel message rode upon the vehicle of Greek, Latin and Hebrew tongues to reach the East, the West, the North, and the South. Whenever a people has enjoyed freedom to read and practice the principles of God's word as set forth in Holy Scriptures that people has become a redeemed people. Their literacy rate rises. Their living standards The respect for the dignity of man improve. appears in the culture. Womanhood is emancipated. Children are accepted, protected, and loved. High standards of morality and ethics are infused with government and business as well as religious organizations. A responsible citizenship emerges to develop a highly refined, tightly-knit society which remains free to propagate spiritual truths and to enhance human welfare.

When the Bible is closed God's voice is hushed for most people in a given society. Whether it be closed by ecclesiastical tyran-nies or political despots, the results are the same. The people are left without vision, without faith, without hope. "Where there

is no vision the people perish." The decline of the nation begins with the departure from God. In the absence of the inspiration of the Bible the incentives of faith, hope, and love wane. Men lose respect for self, for their fellowman, their country, and the values that have insured freedom. Such a people fall easy prey to the corrupt, egotistical, ambitious political would-be despot who seizes the advantage of circumstances pro-vided by economic depression and moral

The nation that keeps the open Bible will have people with an open heart, an open mind, and an open hand.

The laws of God are inscribed upon the table of this nation's heart. "Then Joshua built an altar unto the Lord God * * * and he wrote there upon the stones a copy the law " " and afterward he read all the words of the law " " according to all that is written in the book of the law,'

8:30-34).

"Thou shalt have no other gods before me. * * Thou shalt not make unto thee any graven image. * * * Thou shalt not take the name of the Lord thy God in vain. * * Remember the sabbath day to vain. * * * Kemember the sabbath day to keep it holy. * * * Honor thy father and thy mother. * * * Thou shalt not kill. * * * Thou shalt not commit adultery. Thou shalt not steal. * * * Thou shalt not bear false witness. * * * Thou shalt not covet thy neighbor's house * * * (Exodus 20: 3-17)

"Hear, O Israel; The Lord our God is one Lord: And thou shalt love the Lord thy God within thine heart, and with all thy soul, and with all thy might." (Deut. 6: 5.) And thou shalt love thy neighbor as thy-self." (Lev. 19: 18.)

The worship of God from the beginning of the nation has been woven into the fabric of the American Republic. Our founding fathers were intellectual giants, steeped history, philosophy, language, and the Bible, if you please, and guided by a personal faith in God as the Beneficent Providence who was and is the source of life, liberty, and blessing. On March 23, 1775, the year before independence was declared by the American colonies, Patrick Henry delivered his famous address on American Lib-Note these excerpts:

"This is no time for ceremony. The ques-tion before the House is one of awful moment to this country. For my own part I consider it as nothing less than a question of freedom or slavery." . . . "Three millions of freedom or slavery." . . . "Three millions of people, armed in the holy cause of liberty, and in such a country as that which we pos sess, are invincible by any force which our enemy can send against us. Besides, sir, we shall not fight our battles alone. There is a just God who presides over the destinies of the nations; and who will raise up friends to fight our battles for us. The battle, sir, is not to the strong alone; it is to the vigilant, the active, the brave. Besides, sir, we have no election. If we were base enough to desire it, it is now too late to retire from the There is no retreat, but in submis sion and slavery! Our chains are forged! Their clanking may be heard on the plains of Boston! The war is inevitable—and let it I repeat, sir, let it come! It is in vain, sir, to extenuate the matter. Gentlemen may cry peace, peace-but there is no peace. The war is actually begun! The next gale that sweeps from the north will bring to our ears the clash of resounding arms! Our brethren are already in the field! Why stand we here idle? What is it that gentle men wish? What would they have? Is life so dear or peace so sweet, as to be purchase at the price of chains and slavery? Forbid it, Almighty God! I know not what course others may take; but as for me, give me lib-

erty, or give me death!" Little more than a year later on July 4, 1776, came the Declaration of Independence in Congress. The purpose of the declaration was set forth in the Preamble. "When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness; that, to secure these rights, govern-ments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends. it is the right of the people to alter or to abolish it and to institute new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness."

The ideas of the sovereignty of the people, the equality of citizens, the fundamental rights of all, were just as revolutionary as the break with Britain. It required twelve years for the drafting and the ratification of the Constitution of the United States. Its high purpose was stated clearly in the Pre-"We the people of the United States in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America." It was signed

September 17, 1787.

Immediately men of political and spiritual stature called for amendments guaranteeing personal and religious liberties. So. in 1791 the first ten amendments, "A Bill of Rights", were adopted. The First Amendment reads, "Congress shall make no law respecting an establishment of religion, or prohibiting the establishment of religion, or prohibiting the free exercise thereof; or abridging the free-dom of speech, or of the press, or the right of the people peaceably to assemble, and to petition the government for a redress of grievances." If you could ask the members of that 1791 Congress who was responsible for the American "Bill of Rights" they would in one voice answer, James Madison. But if you could ask James Madison who was re-sponsible for the American "Bill of Rights" he would answer, "A Baptist preacher named John Leland." Throughout our history Baptists have stood for religious liberty for all men of every creed, and today we re-affirm our faith in the Bible, the First Amendment to the Constitution of the United States of America, the Constitution as a whole and our belief in the right of every man to worship God in a free conscience even if we do not agree with him,

In times of national crisis our people have drawn deeply from the wells of religious faith. The worst threat to the unity and peace of the nation came with the War between the States over the question of slavery. In 1862 while the Civil War was in progre four dignitaries stood on the street just outside the City of Washington, D.C. watching a group of soldiers marching by on their way to the battle front. As they marched they were singing, "John Brown's Body". The four people watching were the Governor of Massachusetts, Mrs. Julia Ward Howe, her husband, and her pastor. Impressed by the scene, the pastor said, "Mrs. Howe, why don't you write some decent words to that stirring tune?" That night Julia Howe was restless. She got up out of her sleepless bed, picked up an old stub of a pen, and with an inspired hand began to write:

"Mine eyes have seen the glory of the coming of the Lord;

He is trampling out the vintage where the grapes of wrath are stored; He hath loosed the fateful lightning of

His terrible swift sword:

His truth is marching on.

In the beauty of the lilies Christ was born across the sea, With a glory in His bosom that transfigures

you and me; As he died to make men holy, let us die to make men free,

While God is marching on."

With a nation on its knees the classic statement of America's faith in democracy fell from the lips of Lincoln at Gettysburg. "Fourscore and seven years ago our fathers brought forth on this continent a new nation, conceived in Liberty, and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field, as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. But, in a larger sense, we cannot dedicate, we cannot consecrate, we cannot hallow this ground. The brave men, living and dead, who struggled here, have consecrated it far above our poor power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us, the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here de-dicated to the great task remaining before us-that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this nation, under God, shall have a new birth of freedom; and that government of the people, by the peo-ple, for the people, shall not perish from the earth."

A charter of democracy could be written from statements of the nation's presidents. In his first Inaugural Address George Washington said, "No people can be bound to acknowledge and adore the Invisible Hand which conducts the affairs of men more than those of the United States. Every step by which they have advanced to the character of an independent nation seems to have been distinguished by some token of providential agency the preservation of the sacred fire of liberty and the destiny of the republican model of government are justly considered, perhaps, as deeply, as fi-nally, staked on the experiment intrusted to the hands of the American people."

John Adams in a message to the Senate said, "In a humble reliance on Divine Providence we may rest assured that . . . the independence of our country cannot be diminished, its dignity degraded, or its glory tarnished by any nation or combination of nations, whether friends or enemies." In his Second Inaugural Address Thomas Jefferson said, "I shall need, too, the favor of the Being in whose hands we are, who led our fathers, as Israel of old, from their native land and planted them in a country flowering with all the necessities and comforts of life; who has covered our infancy with His Provi-dence and our riper years with His wisdom and power, and to whose goodness I ask you to join in supplication with me that He will so enlighten the minds of your servants, guide their councils, and prosper their measures that whatsoever they do shall result in your good, and shall secure to you the peace, friendship and approbation of all nations."

Our fourth President, James Madison said

to Congress, "The contest in which the United States are engaged appeals for its support to every motive than can animate an uncorrupted and enlightened people—to the love of country; to the pride of liberty; . . . and, finally, to the sacred obligation of transmitting entire to future generations that precious patrimony of national rights and independence which is held in trust by the present from the goodness of Divine Providence.

In his farewell address in 1837 Andrew Jackson declared, "You have the highest human traits committed to your care. Providence has showered on this favored land blessings without number, and has chosen you as the guardians of freedom, to preserve it for the benefits of the human race." In 1863 Lincoln proclaimed, "And whereas it is the duty of nations as well as of men, . . . to recognize the sublime truth, announced in the Holy Scriptures and proven by all history, that those nations only are blessed whose God is the Lord. . . . But we have forgotten We have forgotten the gracious hand God which preserved us in peace and multiplied and enriched and strengthened us, and we have vainly imagined, in the deceitfulness of our hearts, that all these blessings were produced by some superior wisdom and virtue of our own. Intoxicated with unbroken success, we have become too self-sufficient to feel the necessity of redeeming and preserving grace, too proud to pray to the God that made us."

Now we can see that the pattern of the past is clear. Political principle and religious faith are met in the souls of high statesmen. Liberty and personal faith in God go hand in hand. That first Independence Day was celebrated because men dared to dream, to believe, to struggle, to fight. To keep liberty in America each new generation must envision its possibilities, relift its burdens, refight its battles, face again its conflicts and pay once more its price. May it be our firm resolve to lead all men to Jesus Christ who is the source of all true liberty and who said, "Ye shall know the truth and the truth shall make you free."

Address of Vice President Humphrey at Michigan State University Commencement

EXTENSION OF REMARKS OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

MOORHEAD. Mr. Speaker, I Mr. would like at this point in the RECORD to call to the attention of my colleagues in the House the remarks made by Vice President HUMPHREY at the recent commencement at Michigan State University. He congratulated American youth, our greatest natural resource, and encouraged them, while being mindful of the lessons of history and past traditions, to have the will to do and the soul to dare for the future challenges and responsibilities of this great country.

The text of the address follows:

REMARKS OF VICE PRESIDENT HUBERT H. HUMPHREY AT MICHIGAN STATE UNIVERSITY, EAST LANSING, MICH., JUNE 12, 1966

HUBERT HUMPHREY feels a kinship with college students.

I like to be where the action is.

I was raising Cain with the system before you were born, and as I am just beginning to

get started, I don't doubt that I will be raising Cain when you are running things too.

In fact, I wish I were being graduated to-ay. I might have a better idea where my next job is coming from.

Today I speak in a relatively new role. I speak for management.

As management's spokesman, I wish first to thank you for service to your nation.

In all these years of study, I am sure you thought you were improving your position to compete in the years ahead or to enter a profession. But you today are more than college graduates.

From management's viewpoint, you are valuable national resources.

More Americans are in college this year than all the Americans alive when our nation was founded. More Americans are in graduate schools today than all the Americans who bore arms during the Revolution. Those are lots of resources.

And we will need them all.

For by the time one of you is likely to stand in this place at some future Commencement, the American people will number more than 300 million—and the people in the world almost too many to even think about.

And I need not recite for you the future needs and problems of those people.

You will be in charge. You will be responsible for our national security and my medicare.

You will be responsible for the education of my grandchildren and the freedom of my great-grandchildren.

So I propose to take a look at you and have talk with you.

But first, about your parents—it may be hard to believe but, in another century's history books, the very people who have been helping with your tuition may be ranked among the greatest radicals in modern his-

Some of your parents might flinch if you told them there were radicals in your family. But they have been nothing le

Theirs is the first generation in all of history which, by its own hand, has surrendered the privilege of telling its offspring: This is how things are; this is how they always have been; this is the way the world goes.

Your fathers and mothers were born children of hills and valleys. Today they see

the galaxy itself.

They have created amazing new systems of management, science and technology. They have found new and better systems to care for people. And I have been right in the midst of it with them, just as I am with

I am not going to bore you with tales of the Great Depression, or of World Wars, and of the hardships your parents faced. Nor will I recount the struggles that took place in our country to achieve the measure of well-being and social justice we have reached today.

But I can tell you, it has been no picnic. It has been no improvised "happening." It has taken involvement, and hard work, and study, and self-doubt, and passionste disagreement, and finally, understanding and

Progress has ridden no fast express. It has been a local all the way. Thus, as older generations welcome you aboard, I think you ought to know that they've not been cooling their heels waiting for you.

The generation of your parents has lived amid the floodwaters of history. Most of them have known genuine hardship. Many of them have lost loved ones on other con-tinents. Their old horizons have gone far off in space, yet they have followed, cautious but willing. The world has come to their dinner table, and at times has seemed to stay a long while, yet they remain hospitable.

They have made history. Yet to many of you, I know, it seems "the heavy hand of

history." Remember this: The challenges they have faced didn't leave room for some

of the niceties of today.

They have had to meet trouble in large sizes. They have had to feed and clothe and house and transport and produce and educate and struggle in big portions, just to overcome the clear and present perils of their time.

Individualism has been the backbone and concern of their work. Yet to serve the individual, they have had to build on a scale which has seemed at times to dwarf the individual. By and large they have been, I believe, a resourceful and courageous generation. And now, to you, I know, it seems they have hidden their history. Over the battlefield they have laid out the golf course.

For those of you who have grown up within putting distance of a country club or within walking distance of a second car, it is hard, I know, to recognize many vestiges of radicalism. "Where's the action?" you ask. And I reply: There's plenty of action. Roll up your sleeves and have some.

Your parents had to fight desperately, at your age, to stave off poverty at home and violence abroad—and they in large part succeeded.

Yet the challenges you face are far greater, and far more exciting, than those they faced. The scale of effort to be required of you will be far greater than that required of them.

For the fact of our time is this: The poverty our nation knew in the Great Depression . . . the peril that mankind knew in World War II—these are nothing compared to the poverty and peril that surround our strong, rich America in the world today.

There are desperate conditions of injustice and hunger and disease throughout most of the human family.

There are, in human society, conditions which not only bring a sense of shame and insufficiency to those of us who live in such a blessed land... but conditions which can lead to the eruption of the little disorder, which can grow to the small war, which can build to the cataclysm which could destroy rich and poor, black and white, believer and non-believer—all of us alike.

That is where the action is.

This is the environment in which you will be in charge. This is the human adventure on which you embark. I believe you sense the full measure of what you face. I feel a sense of concern and of involvement among you. I have seen you in the Peace Corpa, helping strangers. I have seen you marching down dusty roads on behalf of fellow Americans whose skin doesn't happen to be white. I have seen you, in VISTA, lifting the forgotten to a place of self-respect in life. I have seen you, standing calm, resisting the temptation of violence, for what you believe in.

I have seen you wearing your nation's uniform, fighting bravely for a cause far more difficult to understand than any we have defended before. I have seen you speaking out, from deep personal conscience, without thought of personal popularity. You perform remarkably well in the system your parents built, yet I know that you are probing relentiessly to find your own personal relationship to it. . . deeperately seeking identity in a society of bigness.

For your generation, the old labels seem to have little meaning. Whether you are part of the "New Left" or the "New Right" or the "Out" or the "In," your concerns are far more for basic humanity than they are political. And I think it is a mistake to see in either your protents, your reservations, or your dissent, much than can fit into the traditional

political categories.

Indeed, if much of our political history seems to have escaped you, you are not too troubled by the loss. You are deeply and personally caught up in what matters today. You set high standards for yourselves, and you judge yourselves harshly. And you show

a remarkable degree of serious introspection for the children of prosperity. And I sometimes fear that, in your introspection, you may come to believe you are alone.

I tell you now that when you stand alone, you are not alone. When you speak out and act alone in America, you are more a part of this land and more a source of its strength than are all of the multitude who join in silence, no matter how vast they may seem. "The most dangerous enemy to truth and freedom amongst us," said Ibsen, "is the compact majority." Oppose that compact majority, and you are sure to collect a few bruises. But I have found that the best remedy for a bruise is to collect a few more.

The more you speak out, and the more you are going to discover that you are lending courage to a surprising number of people whose feelings will come to the surface in response to yours.

True freedom in any land is a relentless, never ending process of self-discovery among its people. This you will preserve, for our own land, not because it is your inheritance; nor because some deatiny says you must; but because your own free search for individual identity in the living present, demands it.

identity in the living present, demands it.

The strongest bulwark of liberty is man, free and in search of himself. A good number of your generation have already learned this lesson, in search of themselves in places and causes far distant from East Lansing, Michigan.

It is your opportunity to carry that lesson into forgotten corners of our country—and of the world—where people have never had any reason to learn it, or believe it.

We face today the incomparable opportunity—in the red dust of South American villages, in the neon minefield that is Watts, California—to stimulate the will to seek identity and to discover one's course.

You will be tempted to chart your progress by Gross National Product or by trade indices, or by many other of the quantitative measures you so distrust today.

Reep your distrust of these things. Measures your progress by whether those you help—those who have known in their lives nothing but despair and defeat—by whether they can begin to have hope, by whether they can begin to find themselves.

Yours is the opportunity to prove in the world what the generation of your parents has already begun to prove in America: That the course of history is not a mindless juggernaut we are powerless to control, but a fresh challenge susceptible to courageous action in each generation. I hope you will be sensitive to that opportunity. I hope you will waste no time in setzing it.

The story is told that Pericles of Ancient Greece in his later years came across a young lawyer of Athens who was deeply devoted to causes, who wished to change immediately what was wrong in the world. Pericles chastized the young man for being too bold and brash—for concerning himself with things better left to older men. The older man patronizingly said: "Of course, I understand for I, too, was overeager in my youth. But now that I am older I have learned better. Take my advice and do not become so involved." To which the young man replied: "I regret I did not have the privilege of knowing you when you were at your best."

Despite the fact that I represent management here today, I will tell you this: If you do not choose to follow, precisely the trails that others have blazed, then I do not think we ought to count the future unsafe in your hands.

In your search for identity and self-knowledge, you will have much to discover before you determine what is worklwhile, and what is worthless. But in a land of individuals, better the mystery of the search than some counterfeit security. In a world society des-

perate for change, better your dedication to it than your fear of it.

It is the special blessing of this land, that each generation of Americans has called its own cadence, and written its own music and our greatest songs are still unsung.

Tax Inequality

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. MULTER. Mr. Speaker, the retail tire business has operated over the years with an inherent inequality that favors one particular type of dealer, the manufacturer-owned store. These dealers have been permitted to avoid paying an excise tax when the tire has been sold, while the independent seller has had to pay such a tax when he purchases tires from the manufacturer. I have introduced a bill, H.R. 566, which would offer at least a partial solution to this inequity.

I would like to commend to the attention of our colleagues a letter addressed to me by my good friend, George J. Burger, vice president of the National Federation of Independent Business, and the accompanying articles which concern my bill and the situation it seeks to correct.

Mr. Burger's letter follows:

NATIONAL FEDERATION OF INDEPENDENT BUSINESS, San Mateo, Calif., July 7, 1966.

Re H.R. 566, Hon. Abraham Multer, House Office Building, Washington, D.C.

DEAR CONGRESSMAN MULTER: Let it be stated for the record that during your membership on the House Small Business Committee, your actions in behalf of small busia have spoken louder than words. referring to your splendid leadership both in the Committee on Small Business and the House Banking Committee to bring into existence, by law, a strong Small Busines Administration and more recently a major correction in that Agency, placing the power in the hands of the Administrator, eliminating any control of the loan policy from the Treasury and the Department of Commerce. Then again, your continuing action in behalf of small business when you introduced the above bill and similar bills in the preceding Congress that would prohibit tire manufacturers owning and operating retail stores in competition, not alone with their own independents but all other independents in the rubber tire industry.

During the life of this proposed legislation (1942), to the credit of the then Senate Small Business Committee headed by the late Senator Murray, followed shortly thereafter by the action of the Senate Banking Committee then headed by the late Senator Robert Wagner—in both instances the Committees reported the legislation out unanimously.

It has been reported that the late Senator Tark, a member of both the Senate Small Business Committee and the Senate Banking Committee remarked on two occasions that "soomer or later Congress would have to approve such legislation." In other words, a pattern as being set to curb other major pro-

t

ducers in other industries to enter into dual distribution. It is to be noted that now the same situation is facing independent retailers in the men's apparel field.

It is a matter of record as early as 1942, concerning concessions enjoyed by these major tire manufacturers operating retail stores nationwide where stocks of tires and tubes in these stores have been exempt of the excise tax until sold to the ultimate buyer, right up to the present moment.

To the credit of the House Small Business Committee early in 1942, by unanimum sation, they recommended to Ways and Means and to the Secretary of the Treasury correction be made of this rank tax discrimination.

In the First Session of the present Congress, for the third time the Ways and Means Committee of the House, by legislative action, recommended the adoption of such legislation.

To the credit of the Ways and Means Committee they have repeatedly voted out legislation unanimously to the floor of the House and in two instances, it was unanimously approved by the House.

mously approved by the House.
On June 21, 1966, the Senate Finance Committee held public hearings on H.R. 318. This was the bill that was unanimously voted by the House in the First Session of the present Congress.

The Ways and Means Committee in its reports, estimated that at least a \$3 million saving was accruing through these major tire manufacturers operating retail stores—that is, deferring any tax payment to the Government until their stocks of tires are finally sold. The Ways and Means Committee also stated that at least 15% of the total cost of the inventory of tires and tubes in the hands of independent dealers nation—wide was tied up in advance excise tax to the Federal Government whereas they stated the manufacturers' retail stores stocks were exempt. I am attaching herewith a report that appeared in the Akron Beacon Journal on June 22, which is self-explanatory.

It's hard to believe that the Treasury

It's hard to believe that the Treasury Department would oppose any action that would bring in increased revenue to the Federal Government. It is self-evident the power exercised by these tire manufacturers must be far-reaching in destroying the business life of independent retailers in the rub-

ber tire industry.

Finally, it is self-evident that your bill is a major move setting a pattern that would prevent the increasing monopolistic trends by major producers to monopolise all branches of the retail field.

It is my hope and trust for the overall good of small business that you might find it convenient to insert this communication in the Appendix of the RECORD.

Again, Congressman Multer, you are to be complimented for your sincere efforts in behalf of small business. Sincerely,

GEORGE J. BURGER, Vice President.

Enclosures.

[From the Akron Beacon Journal, June 22, 1966]

TIRE TAX SPEEDUP NOT WORTH IT, TREASURY SAYS

(By Philip Meyer)

Washington.—The Treasury Department Tuesday asked the Senate to forget about a proposed speedup in tire excise tax collections.

Even though the move would bring the Treasury from \$5 million to \$12 million, it wouldn't be worth the trouble, said Lawrence M. Stone, the department's tax legislative counsel.

Stone and spokesmen for the tire industry testified before the Senate Finance Committee.

"I take it," said Sen. CLINTON ANDERSON (D-N.M.), "that you are strongly opposed to the bill."

"I wouldn't use the word 'strongly'," replied Stone. "We're opposed to it. But it's not a matter of life or death."

The Rubber Manufacturers' Association (RMA) is strongly opposed. Patrick J. Moran, chief tax counsel for General Tire, said the bill would place "an additional financial burden on the tire manufacturers and an unnecessary administrative burden on the Internal Revenue Service."

Pressure for the bill comes from independent tire dealers, represented at the hearings by George Burger, vice president of the National Federation of Independent Business.

Burger said the present system of tax collection is unfair to the independents. He figures it this way:

The 10-cent a pound tax is collected when the tire is sold. For the independent dealer, this comes when he buys the tire from the manufacturer. But for the manufacturer-owned store, there is no sale until the retail customer sets the tire.

owned store, there is no sale until the retain customer gets the tire.

The proposed bill, which passed the House last year, would equalize matters by collecting from company stores when they receive the tires from the plant.

The present system gives company stores an unfair advantage, Burger said, because independent dealers must "maintain continuing sizable investments in prepaid Federal taxes" on their inventory.

But the Treasury Department and the RMA said the inequity is not as great as Burger pictures it.

The average tire dealer turns over his stock every 95 days and pays the manufacturer 85 days after delivery. This means, he said, that the dealer carries a tax-paid inventory for only nine days.

His only loss, said Stone, is the interest he could have earned for nine days on money tied up in taxes. It figures out, he said, to about 1½ cents a month for each tire.

about 1% cents a month for each tire.

The price of wiping out this small inequity would be a confusing new system of tax rolls, he said.

The proposed change got this far only by accident. It passed the House under suspension of the rules, a procedure reserved for non-controversial bills.

Rep. William Arms of Akron was present at the time and intended to declare the bill controversial. But he was called to the phone just before the bill was called up and missed his chance.

The Editor,
Wall Street Journal,
New York, N.Y.:

Front page Wall Street Journal today says that "Independent tire dealers try to persuade Congress to exempt them from having to pay excise tax on tire stocks at the time they are purchased from the manufacturer." This is not true as the record will show in Congressional hearings on the subject matter for nearly a quarter of a century tire dealers have requested that the stocks of tires and tubes in manufacturers' retail stores be taxed in the same manner and form as the independent tire dealers are subject to. What they are requesting in simple words is equal justice under the law. As a benefit to all of your readers, will you make this correction?

GRORGE J. BURGER,
Vice President, National Federation of
Independent Business, Washington,

[From the Wall Street Journal, June 29, 1966] Independent tire dealers strive to persuade Congress to exempt them from having to pay excise taxes on tire stocks at the time of purchase from the manufacturers. The independent dealers maintain that the tax law discriminates against them because retail

outlets owned by the tire makers aren't required to pay excise levies until tires are sold; under present law, such intra-company transactions don't count as sales. Congressional tax-writing committees seem sympathetic to the independent tire sellers' ples, but Treasury opposition may block a bill that would give them relief. The Treasury argues that changing the rules for non-amiliated tire dealers would prompt similar pleas from other independent retailers, such as truck dealers, who also must pay excise taxas in advance, leading to "administrative and compiliance problems."

Wall Street Journal made the correction on July 1, 1966, and advised me accordingly.

We Need a Nuclear Navy

EXTENSION OF REMARKS

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. RIVERS of South Carolina. Mr. Speaker, as I said on the floor of the House on Tuesday of this week, during the consideration of the conference report on S. 2950, the military procurement authorization bill, "We need a nuclear Navy, and we had better get it."

Mr. Louis Stockstill, editor of the Journal of the Armed Forces, has written an excellent editorial dealing with our need for a nuclear Navy. The editorial, which appears in the July 9, 1966, issue of the Journal, follows:

WE NEED & NUCLEAR NAVY (By Louis Stockstill)

The development of a nuclear-powered surface Navy may hinge on the Administration's reaction to an important proviso which has been appended to the fiscal 1967 military procurement authorization bill.

Just before Congress departed Washington for a 10-day summer recess, House and Senate conferees agreed to language in the \$17-billion procurement bill which provides that \$130.5-million of the funds available for Naval shipbuilding in the current fiscal year "is authorized only" for the construction of a nuclear powered guided missile frigate (authorized last year) and \$20-million "is authorized only" for procurement of long lead-time items for an additional nuclear frigate.

The provise stipulates that the contract for the frigate authorized last year "shall be entered into as soon as practicable unless the President fully advises the Congress that its construction is not in the national interest."

By refusing to build the first of the two frigates and by rejecting a Navy request for funds for the second such ship (even though it was accorded the second-highest priority in the overall shipbuilding program by the Chief of Naval Operations), the Department of Defense acted on the basis of cost-effectiveness studies which the Navy has challenged and, we think, discounted. Obviously, Congress agrees.

In turning down the Navy requests, Secretary of Defense McNamara initially contended that he had never been furnished with an adequate Navy rationale for nuclear power in escort vessels. Subsequently, however, CNO Admiral David McDonald presented the Secretary with a comprehensive memorandum on the subject which made some hardhitting points.

The data in the McDonald memorandum showed that for a one-third increase in overail cost the Navy could obtain a nuclear frigate (instead of a conventional destroyer) which would have (1) twice the number of missile launchers and missile magazines, (2) helicopter landing facilities not available on the destroyer, (3) facilities and accommodations for a screen commander, which the destroyer does not have, (4) more complete Naval Tactical Data System facilities, (5) twice as many torpedo tubes, and (6) all the advantages of nuclear power.

Admiral H. G. Rickover pointed out in his Congressional testimony on the subject that fuel also was an important cost-comparison factor discussed in the CNO memorandum. The initial nuclear cores for two frigates (good for ten years) would cost \$24-million. Regular fuel for two conventional destroyers for the same time period would cost \$12-million, but an additional \$26-million would have to be expended on delivery of the oil.

We feel that the Navy has made a solid case, particularly in light of the statement in Admiral McDonald's memorandum that "The endurance, tactical flexibility, and greater freedom from logistics support of nuclear warships will give the United States an unequaled Naval striking force. Our new warships, which the Navy will be operating into the 21st century, should be provided with the most modern propulsion plants available. To do lass is to degrade effectiveness with grave implications for national security."

Right Words; Wrong War

EXTENSION OF REMARKS

HON, EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1966

Mr. DERWINSKI. Mr. Speaker, from time to time it is necessary to correct deliberate historical distortions, and one of the latest of such departures from reality made by former President Harry Truman was effectively discussed in the July 10 edition of the Chicago Tribune. I insert it in the Record as part of my remarks:

RIGHT WORDS; WRONG WAR

The changes are Harry S. Truman never recognized the incongruity of his own words in a Fourth of July speech at Independence, Mo. Speaking of the Johnson administration's belated decision to bomb the vital communist oil depots near Hanoi and Haiphong in North Viet Nam, Truman said, "They finally awakened to the fact that they have got to win the war and I'm glad they are going ahead to do it."

Sixteen years ago another American commander, Gen. Douglas MacArthur, sought to win another war in Asia after the Chinese Communists poured across the Yalu river from Manchuria into North Korea. He sought permission to knock out the source of their strength by bombing the Chinese industrial sanctuary in Manchuria, and by driving the Chinese ground forces back to the Yalu. His boss, President Truman, said.

The United Nations, in whose name estensibly the communist aggression in Korea was being resisted, flew into a tissy of apprehension that MacArthur's bombing of the Chinese Reds would bring their Russian pals into action and launch World War III. Lad by Great Britain, the U.N. turned its pressure on Truman, who ordered MacArthur to hold

back. The United States would not bring its

full power to bear for victory.

Manchurla was not bombed. MacArthur was fired and the Americans, with their South Korean allies and U.N. troops, were finally haited along the 38th parallel. Korea remained divided. Instead of victory there is an inconclusive armistice that persists to this day while the United States fights the same communist aggression in southeast Asia.

Had President Truman followed in 1950 the "win the war" advice he uttered in 1966, the Korean war might well have ended in victory instead of stalemate. The words at Independence sound remarkably like the advice of the man Truman relieved of command in Korea: "There is no substitute for victory."

Australia Stands With Us

EXTENSION OF REMARKS

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. ZABLOCKI. Mr. Speaker, Prime Minister Harold Holt of Australia continues to speak out in favor of our action in South Vietnam.

In so doing, Mr. Holt attests once again to the friendship and unity of interest between our two countries.

The Chicago Tribune comments approvingly on Mr. Holt's statement in London urging NATO nations to play a more positive role in freedom's defense in southeast Asia. He recognizes, the newspaper states, that the struggle to resist Communist aggression is indivisible.

So it is—and in paying my respects to the Prime Minister, I insert the Tribune editorial in the RECORD:

[From the Chicago (III.) Tribune, July 8, 1966]

ONE ALLY WHICH STANDS WITH US

Prime Minister Harold Holt of Australia, who visited Washington to express his country's support of the United States in the war in Viet Nam, spoke from London yesterday to America's laggard allies in western Europe. He called upon France and other members of the NATO alliance to play a more positive role in the far sust and southeast Asia.

He said that the United States deserved a return for American support in two world wars that began in Europe, criticizing French hostility to America's efforts in Viet Nam and the disposition of other European nations to "coast along" on the struggle and sacrifice of the United States.

The United States, he said, is carrying out a task of value to the free world as a whole. He added that America was justifiably disappointed that it had been given so little support, "when in principle they find, as we find, it is hard to distinguish between the issues arising in South Viet Nam and those in West Berlin,"

Australia, with South Korea and New Zealand, has sent troops to Viet Nam. It is encouraging to find one ally which is willing to stand with us not only in principle but with tangible support. Prime Minister Holt recognizes, as any realistic statesman should, that the struggle to resist comunist aggression is indivisible. Freedom cannot be compartmented, and battles in Asia may yet be what saves Europe.

The Colorado River Issue-I

EXTENSION OF REMARKS

HON. ED REINECKE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. REINECKE. Mr. Speaker, the editorial page of this morning's Washington Post—June 14—carried some commonsense thoughts about the current Colorado River issue now before the House Interior and Insular Affairs Committee. I place the editorial in the Record for the consideration of Members of

COLORADO RIVER ISSUE

Congress:

Debate began yesterday in the House Interior and Insular Affairs Committee on one of the most important bills before Congress this year—the measure to authorize the Central Arizona Project. It is vital to the 30 million people of the seven states in the Colorado River Basin. Indeed the entire country will be affected by the outcome because of the great national interest in the Grand Canyon of the Colorado.

yon of the Colorado.

The Committee will have to weigh two major objectives. The Colorado Basin states are clamoring for this final step in harnessing the great river as an essential elment of their continued growth. Indeed, they insist that they cannot survive without additional water. With rare unanimity, they are asking Congress to authorize a project that will divert 1.2 million acre-feet of water each year to the parched and thirsty areas around Phoenix and Tucson.

The Upper Basin states are supporting this undertaking only because the bill would also authorize five new water projects in Colorado at a cost of \$361 million and a study of 13 other Upper Basin projects. In the picture is the further hope of importing water for the semi-arid Southwest, to be financed at least in part by power revenues to be derived from the proposed dams at Bridge and Marble Canyons, Representative Morris K. Udallo drizons recently held out hope that about \$3 billion will be left in the basin fund "to help solve the larger water problems of the seven basin states."

The project unfortunately comes into collision with the passionate desire of many conservation groups to avoid any further obstruction of the picturesque Colorado. Ignoring or playing down the water problem, they cry out against the "ruin of the Grand Canyon." The Sierra Club and a number of Congressmen are asking Congress, not only to defeat the proposed Bridge and Marble Canyon Dams, but also greatly to extend the existing Grand Canyon National Park.

To our way of thinking, the answer must necessarily lie somewhere between the two extremes. The inescapable fact is that harnessing of the Colorado has been essential to the burgeoning of the Southwest. It could not support its present population without the impoundments of water behind immense dams (Hoover, Glen Canyon, Flaming Gorge and others). There is no doubt a compelling logic to completion of the system with due regard for scenic and recreational values as well as economic advantages.

We think that Congress will recognize this logic and pass some measure authorizing the Central Arizona Project. At the same time it is under obligation to this and future generations to minimize the impact upon the natural beauty of the Colorado River. Any grave encroachment upon the Grand Canyon National Park itself would be unthinkable,

and even the change of the river into a lake for 13 miles at the western end of the park by the Bridge Canyon Dam ought to be avoided if possible.

While earnestly seeking an alternative, however, it is plain nonsense to speak of this proposed minor change in the park as ruining the Grand Canyon. It would not after the awesome sight that visitors in the National Park see. The 175-mile Lake Powell behind Glen Canyon Dam has demonstrated, moreover, that stored water in the desolate Southwest can in some cases add greatly to recreational values.

We hope that Congress, in moving to we nope that congress, in moving the full potential of the Colorado for the people, will give due weight to scenic and recreational values. Numerous suggestions for a compromise between the demands for water and the demands for preservation of natural beauty have been made. One is elimination of the proposed Marble Canyon Dam and the addition of this gorge to Grand Canyon National Park. Another is reduction of the height of Bridge Canyon Dam so as to avoid any water storage in the park and reduction of the flooding in the Grand Canyon National Monument.

There are various other proposals for enlargement of Grand Canyon National Park by the inclusion of sections of the Kalbab Game Reserve, the Kalbab National Forest and the National Monument. Congress could soften the impact of whatever it finds necessary to do to meet the water problem of the Southwest by adding to the remarkable complex of scenic and recreational preserves in the area.

Mr. Abraham Kofman

EXTENSION OF REMARKS OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. MILLER. Mr. Speaker, members of the so-called fourth estate very often directly serve the public anonymously due to their own innate modesty of not wanting to extol their own virtues and due to the competitive nature of the newspaper business where rival interests would not want to give appropriate recognition.

One of the members of the fourth estate who is doing an outstanding job not only in publishing newspapers but in serving the people of California on the State highway commission is Mr. Abraham "Abe" Kofman, of Alameda,

d

al

al

d

ut

ge

n-

he

ny

on

Recently, the California State Legislature adopted a resolution commending Mr. Kofman upon the outstanding administrative services in journalistic contributions he has given to the people of California and to his community. In view of this action, I am pleased to insert in the Congressional Record a newspaper clipping which appeared in the San Leandro Morning News commenting on this fine honor:

KOPMAN HONORED FOR SERVICE TO PEOPLE OF STATE, COMMUNITY

SACRAMENTO.-The State Assembly has honored Abraham Kofman, publisher of the Alameda Times-Star, the San Leandro Morning News and the Fremont News-Register for

his recent election for a second time as vice chairman of the California Highway Commission.

The commission is responsible for selecting routes for all state highways and freeways and also has sole authority for adopting a budget for highway construction. The budget amounts to nearly \$700 million a year, including state and federal funds.

The Assembly adopted HR 452 by Assem blyman Robert W. Crown, D-Alameda, which resolved that the Assembly "command and congratulate Mr. Abraham (Abe) Kofman upon his election as vice chairman of the California Highway Commission and upon the outstanding adminstrative services and journalistic contributions he has given to the people of the State of California and his community.

Kofman first was appointed to the commission in September 1961 and was reappointed to a four-year term in January 1964. He was elected vice chairman of the com-mission in 1964 and again in 1966.

Long Wharf Theater

EXTENSION OF REMARKS

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. GIAIMO. Mr. Speaker, recently the National Council of the Arts awarded the Long Wharf Theater in New Haven, Conn., a \$50,000 grant. I would like to tell you about some of the unique innovations which the theater has instituted.

The Long Wharf Theater is a yearround, professional repertory company. It could be called an experimental theater. The distance between the play and the audience has been eliminated, not only by abolishing the proscenium arch, but also by conducting seminars after the performances, by discussions between the actors and the audience, and by free workshop productions.

In addition to the regular performances, Long Wharf has several special programs. These special programs enable people who ordinarily would have no contact with the theater, to acquire an appreciation and an understanding of the theater.

Young people have benefited especially from the programs at Long Wharf. The high school program brings the theater to the students and the students to the theater. Since October, the touring company has visited 33 schools. During the same time, 17,000 students from 110 schools and 75 towns in Connecticut, Massachusetts, and New York have taken advantage of reduced student rates to preview regular performances. The Children's Theater presents plays which have been written especially for chil-dren. Disadvantaged students in all grades are able to attend productions by means of grants.

The experimental programs also reach two adult groups which have limited incomes. Grants have been established so that the elderly and the members of the adult literacy classes might attend theater performances.

The grant from the National Council

of the Arts has helped make these innovations possible. It has enabled the theater to develop independently its unique cultural services and it has enabled Americans from all walks of life to understand and to enjoy the performing arts.

Many of the successes of the Long Wharf project and the recognition given it by the National Council prove the validity of the establishment of this council. Such work as Long Wharf's should clearly be supported, and I am proud to bring it to the attention of the Con-

Terror and Persecution in Ukraine

EXTENSION OF REMARKS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. DERWINSKI. Mr. Speaker, next week we will commemorate Captive Nations Week, and in the face of continued State Department hopes that Moscow is "mellowing" we find new evidence of Communist oppression of the captive peoples. I insert in the RECORD as part of my remarks an editorial which appeared in the May edition of the Ukrainian Bulletin which eloquently tells the story of the latest persecution of anti-Communist nationalists in the Ukraine: NEW TERROR AND PERSECUTION IN URRAINE

While Soviet Foreign Minister Andrei Gromyko was recently being received by Pope Paul VI at the Vatican, the Kremlin was unleashing a new wave of terror and persecution in Ukraine. Frank admissions in Moscow and Kiev that in Ukraine anti-Soviet rumblings and unrest are widespread, especially among the youth, testify con-clusively to the fact that the Ukrainian people are more restive than ever and that they resent and oppose the despicable and ed Communist rule imposed upon them by Moscow.

This renewed persecution of the Ukrainians by their Russian Communist masters is well-coordinated and centrally-directed, and is pressed forward under diverse forms and aspects. On March 28, 1966, for example, the Associated Press reported that 8 Ukrainians were sentenced to death for alleged collaboration with the Germans in Ukraine some twenty-five years ago. On another front, Moscow is ranting against Western radio broadcasts, which admittedly have a strong impact upon the Ukrainian people, especially the youth. Finally, Moscow has been arresting a number of Ukrain-ian writers, poets and literary critics for their espousal of non-Communist ideology or simply for their critical views of Communism and the totalitarian system in gen-

EFFECT OF PSYCHOLOGICAL WEAPON

For almost two decades this publication has been steadily campaigning for effective and enlightened broadcasts to Ukraine and other non-Russian nations, held captive by Moscow in the USSR. We have been pointing out that the communist rule of Moscow is extremely vulnerable to the ideas of freedom and liberation. We have urged a stronger "Voice of America," and the improvement of its broadcasts to Ukraine. A few years ago, when the broadcasts in the

non-Russian languages of the "Voice of America" were threatened with elimination, we protested with all the vigor at our command against the short-sighted and craven policy-makers who would have cut out these broadcasts on the insipid pretext that the U.S. government had no adequate transmitters to continue these vital broadcasts.

To be pointed out is that the necessity of the Ukrainian-language radio broadcasts to Ukraine is recognized by other instrumentalities. There is "Radio Liberty," a private U.S. group (which operates far more effectively than the "Voice of America"), the Canadian Broadcasting Corporation (CBC), the Spanish Radio Nacional de Espagna, the Italian government's Foreign Ministry and the Vatican Radio. (The British Broadcasting Corporation, surprisingly, balks at installing Ukrainian-language broadcasts on the ground that "everybody in the USSR understands the Russian language." The obvious benefit of communicating with a people in their own language needs no comment.)

The effectiveness of all this direct communication with the enslaved nations is now to be measured by the reaction in Moscow. The position over the years of this publication, as well as that of the Ukrainian Congress Committee of America, is fully vindi-

FURIOUS REACTION IN UKRAINE

On March 25, 1966, The New York Times reported that Communist party leaders throughout the USSR are expressing concern about the influence exerted by the Western radio broadcasts upon ordinary Soviet citizens, especially those in the non-Russian republics.

Significantly, while there is a revolt among Russian intellectuals against the Party conformism and dictation, it is in Ukraine, the Baltic countries, Byelorussia, Georgia and Armenia that these broadcasts are making their most telling impact.

In Ukraine, two 'top-notch Communist leaders have denounced the Western psychological warfare weapons and admitted that they are making deep inroads in Ukraine.

These apprehensions of the Soviet leadership were voiced at a series of republic party congresses held in March, 1966. They suggest that Soviet ideological indoctrination is being seriously undermined by this exposure to non-Communist ideas and news.

For instance, Peter Shelest, secretary general of the Communist Party of Ukraine and a member of the ruling Politburo of the USSR, said at the Ukrainian party congress:

"The poisonous seeds of bourgeois ideology are hitting us through various channels. Every day tens of enemy radio stations broadcast for many hours against Ulrains.

cast for many hours against Ukraine.

"There are individuals who become conductors of opinions alien to us. Our society cannot reconcile itself to these people who continue to spread the rumors, gossip and inventions from the hostile press and radio."

Another top-ranking Ukrainian Communist, playwright Alexander Korneichuk, stated at the same party gathering:

"Not so long ago American Senators formulated the clear and unequivocal goal of the subversive action against the Soviet Union: to wage propaganda by all available means, not sparing expense... You see whither the mad unleashers of war are aiming... The sworn enemies have cast many rusted nationalist hooks with rotten worms into the airways: perhaps a fool will come along and swallow it. Unfortunately, they find such fools, who repeat every single lie that is fabricated in West Germany for dollars and marks by the surviving German fascists.

"With such 'young talents' who lose their honor and conscience, who do not respect the great fortune in the world—to belong to the great family of the Soviet nations—there can be only one kind of talk: 'Come to your senses, because if not, you will have to face the people, they might take away your Soviet passports and say, "Get off our sacred land.":"

ARREST OF UKRAINIAN WRITERS

This threat of the Soviet literary commissar in Ukraine was not an idle one. As reported by the New York Times on April 7, 1966, the Soviet secret police arrested two Ukrainian writers, Ivan Svitiychny and Ivan Dzyuba. Their arrests came after the publicized trial of Andrei D. Sinyavsky and Yuli M. Daniel. The Ukrainian writers were accused of having smuggled to the West the Ukrainian nationalist poetry and "bitter" diary of another Ukrainian poet, Vasyl Symonenko, who died in 1963 at the age of 29 of natural causes.

Both poets emerged into prominence in the 1960's as the staunch supporters, defenders and popularizers of a new group of Ukrainian writers whose work is characterized by a humanistic and highly individualistic approach to the problem of man in relation to society and government. Moscow saw them as, above all, true Ukrainian patriots; as such they had to be condemned and removed from their native land.

ASSAIL UKRAINIANS IN FREE WORLD

Finally, on April 19, 1966, the Foreign Ministry of the Ukrainian SSR in Kiev staged a press conference at which Communist officials assailed the United States, West Germany and other Western governments, and the Ukrainian nationalists in the free world as well, for their alleged undermining of the Soviet Union. A Ukrainian nationalist defector from Munich was brought to the fore as proof that the insidious design of the United States is to smash the USSR, for the defector, Stepan Daugalo, reportedly stated that the United States and British intelligence services were financing all the activities of the Ukrainians in the free world!

All the attacks on the Ukrainians in the free and enslaved worlds demonstrate above all one thing: Ukraine is an unsubmissive captive nation whose undying spirit for freedom and independence haunts the Russian totalitarians. The phantom of Ukrainian rebellion is ever-present.

The imperio-colonialistic reaction to this eternal spirit of freedom and decency which dominates the captive Ukrainian people can be only what it is: arrest, terror, persecution and the extirpation of all liberal and humane ideas.

OPPORTUNITY FOR THE WEST

The unrest and rumblings in Ukraine offer a new opportunity for the West generally, and the United States particularly, to recognize and capitalize upon the importance of the captive nations inside the USSR. While we are preoccupied in Vietnam, we tend to neglect or underestimate the Communist enemy which has been planning our destruction relentlessly without respite or change of mind, "peace" talks with the Vatican notwithstanding.

Ukraine has been our ally in the past and it remains one today. A reasonably sound recognition on our part of its claim to freedom and independence would encourage its people to resist even more strongly on the side of freedom and against the forces of bleak totalitarian ruthlessness which the

Eremin represents today and in the future.

The Eremin's unwilling confession of its failure in Ukraine represents a great hope not only for the brave Ukrainian people, but for the friends of freedom everywhere.

Colorado River Issue

EXTENSION OF REMARKS

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1966

Mr. RHODES of Arizona. Mr. Speaker, I call the attention of my colleagues to the excellent editorial "Colorado River Issue" which appeared this morning in the Washington Post. As the editorial points out, "it is plain nonsense" to believe that the construction of the two dams, Marble Canyon, and Bridge Canyon or Hualapai, would in any way ruin the Grand Canyon. No such thought has ever or would ever enter the heads of those who are working so tirelessly for the passage of Colorado River Basin project bill.

I hope this editorial will be read and taken to heart by all those who believe otherwise:

COLORADO RIVER ISSUE

Debate began yesterday in the House Interior and Insular Affairs Committee on one of the most important bills before Congress this year—the measure to authorize the Central Arizons Project. It is vital to the 30 million people of the seven states in the Colorado River Basin. Indeed, the entire country will be affected by the outcome because of the great national interest in the Grand Canyon of the Colorado.

The Committee will have to weigh two major objectives. The Colorado Basin states are clamoring for this final step in harnessing the great river as an essential element of their continued growth. Indeed, they insist that they cannot survive without additional water. With rare unanimity, they are asking Congress to authorize a project that will divert 1.2 million acre-feet of water each year to the parched and thirsty areas around Phoenix and Tucson.

The Upper Basin states are supporting this undertaking only because the bill would also authorize five new water projects in Colorado at a cost of \$361 million and a study of 13 other Upper Basin projects. In the picture is the further hope of importing water for the semi-arid Southwest, to be financed at least in part by power revenues to be derived from the proposed dams at Bridge and Marble Canyons. Representative Morans E. Upala of Arizona recently held out hope that about \$3 billion will be left in the basin fund "to help solve the larger water problems of the seven basin states."

The project unfortunately comes into collision with the passionate desire of many conservation groups to avoid any further obstruction of the picturesque Colorado. Ignoring or playing down the water problem, they cry out against the "ruin of the Grand Canyon." The Sierra Club and a number of Congressmen are asking Congress, not only to defeat the proposed Bridge and Marble Canyon Dams, but also greatly to extend the existing Grand Canyon National Park.

Letter From Steinbeck to Yevtushenko States Vietnam Position

EXTENSION OF REMARKS OF

HON, JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. WYDLER. Mr. Speaker, it some-times appears that people in the literary field are most critical of the foreign policy decisions made by our Government. Seldom, if ever, is there similar criticism of our opponents. For that reason, I was particularly pleased to see the position of our Nation defended so clearly by a recent letter from John Steinbeck to the Soviet poet Yeogeny Yevtushenko.

This letter appeared in the great daily newspaper Newsday in Nassau County which is published in my congressional district

In this letter, Mr. Steinbeck answered a plea by Yevtushenko that the Pulitzer and Nobel Prize winning American novelist speak out on the war in Vietnam. This Mr. Steinbeck did, but not, I am sure, as Mr. Yevtushenko expected.

Mr. Steinbeck wrote his letter not only as a world figure and famous American writer but as a father with a son now fighting in Vietnam.

Mr. Steinbeck's letter follows:

MY DEAR FRIEND GENYA: I have just now read those parts of your poem printed in the New York Times. I have no way of knowing good the translation is, but I am pleased

and flattered by your devotion.

In your poem, you ask me to speak out against the war in Vietnam. You know well how I detest all war, but for this one I have a particular and personal hatred. I am against this Chinese-inspired war. I don't know a single American who is for it. But,

my beloved friend, you asked me to denounce half a war, our half. I appeal to you to join me in denouncing the whole war.

Surely you don't believe that our "pilots fly to bomb children," that we send bombs and heavy equipment against innocent civil-This is not East Berlin in 1953, Budapest in 1956, nor Tibet in 1959.

You know as well as I do, Genya, that we are bombing oil storage, transport and the heavy and sophisticated weapons they carry to kill our sons. And where that oil and those weapons come from, you probably know better than I. They are marked in pictograph and in Cyrilic characters.

I hope you also know that if those weap-ons were not being sent, we would not be in Vietnam at all. If this were a disagreement between Vietnamese people, we surely would not be there, but it is not, and since I have never found you to be naive you must be aware that it is not.

This war is the work of Chairman Mao, de-This war is the work of Chairman Mao, designed and generalled by him in absentia, advised by Peking and cynically supplied with brutal weapons by foreigners who set it up. Let us denounce this also, my friend, but even more, let us together undertake a program more effective than denunciation.

I beg you to use your very considerable influence on your people, your government, and on those who look to the Soviet Union for direction, to stop sending the murderous merchandise through North Vietnam to be used against the South.

For my part, I will devote every resource I have to persuade my government to with-draw troops and weapons from the South, leaving only money and help for rebuilding.
And, do you know, Genya, if you could accomplish your part, my part would follow
immediately and automatically.

But even this is not necessary to stop the
war. If you could persuade North Vietnam

to agree in good faith to negotiate, the bombing would stop instantly. The guns would fall silent and our dear sons could come home. It is as simple as that, my friend, as simple as that, I promise you. I hope to see you and your lovely wife Galya soon.

With all respect and affection,

JOHN STEINBECK.

Rogers Lauds President's Enthusiasm

EXTENSION OF REMARKS OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. ROGERS of Florida. Mr. Speaker, all of us who have been keenly interested in the future of oceanography were pleased by the enthusiasm shown yesterday by the President at the commissioning of the Oceanographer.

The President's call for redoubled efforts in marine science and technology should be a rallying point for our future efforts in ocean research.

As the President pointed out, we have started on this trip into our last frontier, but we still have a long journey. The President's endorsement of oceanography will help speed the journey.

Culver Notes Honor to Cedar Rapids Public Library

EXTENSION OF REMARKS OF

HON. JOHN C. CULVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. CULVER. Mr. Speaker, today, at the American Library Association Conference in New York City, a well-deserved award is being made to the Cedar Rapids Public Library.

I have personally had the opportunity to use the facilities of the library for a number of years, and I know of the outstanding service which it is providing for the residents of the community, and particularly the young people.

I am pleased and proud that the Library Public Relations Council has awarded first place in a national competition to the Cedar Rapids Library for "the most creative use of illustration in a publication promoting library serv-

The Cedar Rapids Gazette has described the award and the publication in some detail, and I include this article in the Appendix of the RECORD as evidence of the valuable contribution which is being made by the library director, James C. Marvin, and the highly qualifled members of his staff:

CEDAR RAPIDS LIBRARY HONORED FOR PUBLICATIONS

The Cedar Rapids public library has been awarded first place in the Library Public Re-lations Council competition for "the most creative use of illustration in a publication promoting library service."

Library Director James C. Marvin was noti-

fled Monday of the award, to be presented at the American Library Assn. conference in New York on July 14.

The Cedar Rapids library's winning entry was the "Paul Bunyan Parade" summer reading program. It was developed by Children's Librarian Evelyn Zersanek, Nancy McHugh, publications consultant, and other members of the staff, for use in 1964.

Line drawings by Cedar Rapids artist Jean King provided the basis for the entire pro-gram, which was planned to introduce America's legendary heroes and to promote public library service for children.

Miss King's drawings were used extensively

throughout the library's 8-page "Paul Bun-yan Parade" reading-record booklets; on the companion "Land of Legend and Lore" maps and on the sets of 20 gummed stamps depicting various characters in American folklore, which were to be located in appropriate

areas on the map.

The copyrighted publications were given, without charge, to participants in the library's 1964 summer program.

Jean King illustrations have been featured in the library's bulletin board displays and publications for the last 15 years, and are currently to be seen in the "Wonderland" vacation reading program now in progress.

Another Cedar Rapids library publication, "All about Growing Up", received the Library Public Relations Council award in 1963 as "the best library booklist of the year". Illustrations for that pamphlet were by Maurice Sendak, noted illustrator of children's books.

Purpose of the LPRC awards is "to make public recognition of the many fine pieces of publicity which libraries are supplying for their borrowers, through booklets, annual reports and circulars about library affairs".

Harold L. Roth, director of the public li-

Harold L. Roth, director of the public library of East Orange, N.J., is chairman of the 1966 awards committee.

Poland Springs Job Corps Training Center for Girls Aims at Reversing "The High Cost of Failure" in the Past

EXTENSION OF REMARKS

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1966

Mr. BOLAND. Mr. Speaker, the Boston Herald in an editorial on June 5, 1966, says that the Job Corps Training Center for Girls in Poland Springs, Maine, "is off to a good start with high morale among both the staffers and the corpsmen." This editorial puts forth extremely well what Poverty Program Director Sargent Shriver has been saying right along:

If these girls are going to succeed they will need a great deal of help and especially individual help.

I recommend that this editorial be read by my coleagues, so I ask permission to have it printed with my remarks in the Appendix:

[From the Boston (Mass.) Sunday Herald, June 5, 1966]

THE HIGH COST OF FAILURE

In her series on the Poland Spring Job Training Center for girls, Herald Reporter Arline Grimes revealed that the estimated cost for educating one girl for one year ranges between \$4,000 and \$8,000. This sounds terribly high, and it is, higher in fact than the cost of a university education.

But it is important to remember that the Job Training Centers are not universities. They do not contend primarily with the mind. They must also concentrate on the hands and hearts of the girls. In short, they must try to do in one year what the American social, economic, and educational systems have failed to do for many years; make them capable of work, teach them how to work, and make them want to work.

There are girls at Poland Springs who

There are girls at Poland Springs who cannot see well but who have never been tested for glasses. There are girls with speech problems who cannot communicate. There are girls who completed high school and learned nothing. And in many cases, the girls arrive at the center with a history of defeat and despair, at home, in school, and at work.

If these girls are to succeed they will need a great deal of help and especially individual help. At Poland Springs the girls will get this help, but having one staff member for every three girls costs money. There must also be a variety of classes available to avoid the regimentation that mars the public school systems . . . Variety of classes means variety of teachers and equipment, and this costs money, too.

Whether or not all this money and effort will do the job is the big question. According to Miss Grimes, the Poland Springs Job Corps is off to a good start with high morale among both the staffers and the corpsmen. But the real test will come several years from now when the government will be able to do followup studies on the Center's graduates and determine how well they are doing.

After the results are in the Job Corps officials can begin to revise their program, eliminating some parts and adding others. Perhaps then the costs of the program can be reduced. But some sort of expensive program like this will always be necessary, at least it will be necessary as long as we have industries that shirk their responsibilities, sociols that do not teach, and governments that tolerate slums.

A "Wet" Burial for the United States?

EXTENSION OF REMARKS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the Congressional. Record an article by Edith Kermit Roosevelt which appeared in the Sunday Bulletin, Philadelphia, Pa., on June 26, 1966, warning of the hazard of Soviet Russia's shipbuilding and shipping endeavors to the United States, our world trade, and the free world.

It would be well for this Nation to reappraise its maritime policies in the light of this commentary.

[From the Sunday Bulletin, Philadelphia, Pa., June 26, 1966]

A "WET" BURIAL FOR THE UNITED STATES?— SOVIET MARITIME INTERESTS "OWN" THE OCEANS

(By Edith Kermit Roosevelt)

Washington.—The Soviets have promised to bury us through trade. They are in the process of doing just that. Their chief weapon is their merchant marine which they are using as part of their integrated military economic and political offensive.

The ominous consequences of the Soviet vessels and ships from the satellite countries are providing the bulk of the sinews of war to the Viet Cong. Moscow has maneuvered our NATO allies into collaborating in this effort. Shipping companies in Britain, Germany, Greece, Italy, France and the Scandinavian countries have been chartering their vessels to the Soviets through the Baltic Exchange. The London-based blue ribbon European shipowners club. This procedure enables Soviet Russia to free its own ships to engage in direct traffic with North Viet Nam as well as Cuba.

AVOID "BLACKLISTS"

The significance of this is that by using this shipping market our NATO allies can avoid U.S. "blacklists" or boycotts against their shipe that trade with North Viet Nam. Thus, assurances by any NATO country to curb trading with North Viet Nam are virtually meaningless.

The names of the shipping companies and the numbers of ships that have been chartered to the Soviet Union since the USSR became a member of the Baltic Exchange last September is one of the world's most closely guarded secrets. The technique were described in testimony June 6 before the Senate Commerce Committee's special subcommittee on the merchant marine, Capt. J. W. Clark, chairman of the Committee of American Standard of the Committee of American of the Committee of American Standard of the Committee of American of the Committee of Ame

can Steamship Lines, told the subcommittee:
"It is a sad fact that not only are our
'allies' not assisting us to any extent in the
Viet Nam conflict, but in many instances

their ships are serving adjacent mainland ports of (Red) China and transhipping their cargoes to small coastal vessels for delivery to the Communists in North Viet Nam. This chartering and transhipment practice of our 'allies' produces the same results as would occur were their ships going directly into Haiphong" (major North Vietnamese port.)

BOASTS OF SUCCESS

The Soviets are making no secret of the significance of this operation. In a press release distributed by their embassy in Washington last Nov. 18, Viktor Bakayev, minister of the Soviet Merchant Marine, boasted how he had forced the unwilling "high navigation aristocracy" to let him into the Baltic Exchange which he referred to as a "capitalist fortress." Bakayev said after he boycotted the center of the world chartering market, it "suffered big losses." As a result of this blackmailing operation, he said, "the terms were favorable and we chartered ships at a rate moderate for this season."

This proves the dangerous economic power that is wielded by the minister of the Soviet Merchant Marine. The fact is that Bakayev can drive a hard bargain not only with Britain but with any of our Western allies as well as Japan. As the world's biggest customer of international shipowners, shipbuilding and brokers, the Soviets exert a tremendous influence. The USSR supports shipyards in nine Western countries and all of the satellite countries, supplying them with more than \$1 billion worth of Russian ships and motor equipment.

Moscow's fleet expansion already has placed the Kremlin in a position to manipulate ocean freight rates. Through a superiority in terms of numbers of ships in-being and mobility, the USSR is advancing towards its objective of economic domination of the world. Last Oct. 18, the Maritime Transportation Letter, published by the German Shipowners Association, gave some of the details of rate cutting by the Soviet bloc. The newsletter said:

"The rates quoted by the shipping companies of the Eastern bloc often lie from 25-40 percent below the Western conference rates."

The newsletter went on to say that a Soviet controlled shipping company recently quoted a shipment of steel pipe to the Near East at 42 percent below the going rate.

THREAT IS MINIMIZED

At the same time, this steadily growing threat of the Soviet merchant marine on oceans continues to be either ignored or minimized as a factor in the formulation of U.S. national policy. By what has become the usual coincidence, U.S. Government policy on shipbuilding dovetails into this Soviet approach.

According to Edwin M. Hood, president, Shipbullders Council of America, the Soviets are building ten times as many shipe as we are with a lifting capacity eight times greater. He told the House Merchant Marine & Fisheries Committee on June 9, that 100 new ships were delivered to the Soviet fleet last year, while only 16 were delivered to the U.S. fleet.

Imagine this ratio: 100 to 16!

Recruiter's Woes

p

D

EXTENSION OF REMARKS

HON. ROY H. McVICKER

OF COLOBADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. McVICKER. Mr. Speaker, the Denver Post tells us that youthful idealism is causing a note of despair in the college campuses for job candidates.

A recent Associated Press survey turns up the fact that there are more openings and fewer applicants.

The draft has taken some June graduates and induced others to continue their schooling. But idealism also enters into the situation.

Many college graduates are now choosing jobs at low pay and uncertain working conditions in such programs as the Peace Corps and the poverty war's VISTA, the newspaper reports. It concludes editorially that as long as we have young people willing to make sacrifices to help others in need at home and abroad, we should not be too concerned about the future leadership of the Nation.

I offer this endorsement of the younger generation for the RECORD:

ENCOURAGING ASPECTS TO RECRUITER'S WOES

This is the time of the year when the voice of the industrial recruiter is heard throughout the land. The voice is joyful if all is going well on a placement of June college graduates, anguished if the opposite is true.

Lately, there has been an evident note of despair in the voices of industry recruiters. And an Associated Press survey last week discloses why: more jobs and fewer job candidates.

the

ES

the

leal-

Obviously, the military draft has taken a number of June graduates out of the job market and indirectly created further candidate shortages by encouraging students to continue their education in graduate school to avoid service in the Viet Nam war.

But industry recruiters are also facing another unexpected development: youthful idealism.

High starting salaries and fringe benefits aren't as enticing to students as they once were. Many college graduates now are choosing jobs with low pay and uncertain working conditions with the Peace Corps and the war on poverty's VISTA.

This may be discouraging to companies unable to meet quotas for qualified new personnel, but it also has its encouraging aspects at the same time.

As long as the United States has young people who are willing to make personal sacrifices to help people in need at home and abroad, we need not be overly concerned about the future leadership of this nation.

Community Development Districts-Another Layer of Bureaucracy

EXTENSION OF REMARKS

OF HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. RONCALIO. Mr. Speaker, I was pleased to support the action of the House Appropriations Committee when, in April 1966, the administration's agricultural budget was trimmed by \$113,611,000 less than the original request. This restored funds for proven programs while cutting back where reductions were needed.

One saving I favored, which was made at that time, was a \$2,431,000 reduction in the request by the Rural Community Development Service. I agreed with the statement of the committee that existing

voice of industry recruiters combing the Department of Agriculture personnel could handle the workload more effectively without an additional layer of supervision. But now we are faced with the revival of a similar request, under the guise of a new bill, S. 2934, despite the fact that the House already this year opposed expansion of the Rural Community Development Service. In addition, S. 2934 would duplicate existing governmental and private programs and would aggravate the problem of inflation.

Thus far, the bill has been railroaded through Congress. Public hearings in the House Committee on Agriculture consumed only 2 days, time which had previously been scheduled for the more vital school milk and child nutrition pro-

A committee minority report expressed disappointment with the limited scope of the hearings, as the committee failed to hear representatives from numerous agencies which conduct programs which would only be duplicated by this legislation. As the bill has been reported favorably by the committee, Mr. Speaker, I submit that the House should take a close look at this bill and vote it down when it is presented for our consideration.

The proponents of this bill allege that it will make available to rural communities the same type of development planning assistance as is now available to urban areas. A regional "community." usually embracing several counties, would be organized through State action and a planning board established in the district with members elected by the governing bodies of the various political subdivisions represented. Then the planning board could receive a grant from the Department of Housing and Urban Development to assist in drawing up development plans.

UNNECESSARY DUPLICATION

The main trouble with the bill is that it may create an administrative boondoggle which will prevent officials at any level of government from solving rural problems. Existing planning programs already are available to rural communities on an individual or multicounty basis. Section 701(a) of the Housing Act of 1954 permits Federal planning grants to nine different types of State, local, and regional planning units. Of the grants made under this program through fiscal 1965, \$43 million have gone to 4,500 small communities and counties, \$23 million to 130 metropolitan and regional planning areas, and \$15 million to 30 States for statewide and interstate planning.

In addition to this HUD authority, pianning activities are authorized through the Departments of Commerce, activities are Labor, and HEW, the Office of Economic Opportunity, the Economic Development Act of 1965, and the Department of Agriculture. Earlier this year, the Appropriations Committee noted that rural problems had been handled effectively through the regular established agencies of the Department of Agriculture, which have been working successfully with rural people for many years. These rural people for many years. These agencies can function more effectively if additional layers of supervision are not added between Washington and the rural CHAMBER OF COMMERCE ACTION

In addition, most States and localities have planning agencies of their own, both governmental and private. Local chambers of commerce are deeply involved in community planning. Com-munities in my State of Wyoming are participating in total community development programs as outlined by the National Chamber of Commerce.

Another rationalization for this bill has been the argument that local communities are not aware of their opportunities under present programs and that this bill is needed to acquaint them with the various Federal programs available. But the Department of Agriculture publishes an Agriculture Handbook which covers every program in existence. The National Chamber of Commerce has a clearinghouse service providing information on Federal programs applicable to local communities. Finally, myself and my colleagues in Congress are only too glad to help any State or local unit of government which is interested in utilizing a Federal program. I, personally, have processed hundreds of such requests.

INFLATIONARY PROBLEMS

With this country involved in a war and with the current problems of inflation, this bill provides for an open-end authorization, so that no one is sure how much money will be spent. Estimates have ranged from \$5 million to \$230 million.

The House should adhere to its previous policy of supporting the well established and useful agricultural programs, such as the school milk and school lunch programs, while cutting back on the unnecessary spending represented by bills like S. 2934.

BURAL DEVELOPMENT

The proponents of this bill argue that it would cure the ills of our cities by making the countryside more attractive. I have long been an advocate of helping the people in rural areas in order to discourage them from moving to the cities. It is quite true that many urban problems are the result of rural maladjustments that have been neglected. But these problems will not be solved by more plans. We have plans to implement today, only if we had the funds to do so. The money that will be spent for planning under this bill could be better put to use on current projects. It does no good to spend money on plans if you are afterward too broke to implement them. I represent a State which is largely rural and no one is more eager to develop this area than I am, but more planning boards are not the way to go about it.

There is absolutely no need for this legislation. There has been no evidence presented which shows that there is a deficiency of rural community planning or that there is not sufficient information available concerning Federal programs. This bill would only confuse the situation by creating another administrative unit, duplicating present efforts, and continuing to aggravate inflationary problems.

This session of Congress has compiled an admirable record of safeguarding the economy by reducing inflationary administrative requests. The House should

continue to perform this vital role by defeating this unjustified and redundant legislation.

. Ending the Great Treasury Raid

EXTENSION OF REMARKS

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. ZABLOCKI. Mr. Speaker, I have been most heartened by the increasing chorus of protest by individuals and groups around the country objecting to the continued abuse of the municipal bonding privilege through municipal industrial financing.

Recently, for example, Prof. Elbert Byrd, of the University of Maryland, wrote the Prince Georges County Commissioners opposing a plan to issue taxexempt municipal bonds to finance a new plant for the Macke Vending Co.

As he said, the decision to issue such bonds would commit the county to a practice of subsidizing private corporations at the expense of the taxpayer Because of the relevance of Professor Byrd's letter to the national situation, I include it in the Record hereafter.

Heartening too has been the recent firmness of attitude which has been exhibited by the Department of the Treasury in stopping this raid on the national coffers. I was particularly pleased to read in the June 29, 1966, Wall Street Journal that Department officials are giving "highest priority" to drafting a measure that will deny a tax exemption to new State and local bonds used to finance plants for commercial enterprises.

As you know, Mr. Speaker, the gentleman from Wisconsin [Mr. Reuss] and I have sponsored bills, H.R. 5587 and H.R. 5599, which would have the same effect as the proposed Treasury Department-supported legislation.

It is my hope that action can be taken soon to end once and for always this abuse of the municipal bonding privi-

In order to bring my colleagues up to date on recent developments in this attuation, I also will include two recent items from the Wall Street Journal, and urge attention to them:

[From the Washington Post, June 24, 1966] CAPITAL COMMERCE: COUNTY'S PLAN TO SELL BONDS FOR PRIVATE PLANTS OPPOSED

(By S. Oliver Goodman)

A University of Maryland professor warned the Prince George's Board of County Commissioners against issuing tax-exempt bonds to finance buildings as a means of attracting new industry.

In a letter to the board, Elbert Byrd urged the commissioners from "making the basic decision to commit Prince George's County to a policy of subsidizing wealthy corporations..."

Byrd, a political science professor, referred to a proposal under consideration to sell county bonds to finance a new headquarters plant for the Macke Co., a Washington vending and food service firm.

Taken by itself, Byrd said, the Macke proposal of a \$3.5 million bond issue is minor "but if Prince George's County embarks upon this road many more companies will feel called upon to demand equal treatment.

There has been a growing trend in recent years for towns, counties and even states to attract new industry by offering to construct buildings. These are financed at relatively low cost through the issuance of tax-exempt bonds. Congress has several bills under study to eliminate the practice as an abuse of the tax-exempt privilege.

Last year, nearly \$1 billion of municipal bonds were issued, according to Byrd. This resulted, he said, in the loss of more than \$20 million annually in tax revenues to the U.S. Treasury.

Byrd observed that authorities are warning that falure to end this practice will jeopardize the status of all tax-exempt municipals.

[From the Wall Street Journal, June 24, 1966] The Financing Game

Though it may seem a little surprising, state and local governments last year sold considerably more new securities than the U.S. Treasury. It isn't this non-Washington competition, however, that is mainly con-

cerning Treasury Secretary Fowler.
Rather, it is the way some states and localities use their money. While most of it still goes into such enterprises as schools, roads and various public utilities, an increasing proportion goes for other purposes.

Many state and local governments, for exmple, borrow money to build factories
which are then leased to incoming new industry. This practice, Mr. Fowler warns,
eventually becomes self-defacting because
"the advantage to any state or municipality
decreases as more and more states and localities enter the field."

In addition, governmental units may sell bonds to finance commercial ventures like real estate development. Or, the Treasury Secretary charges, they may raise money with the "principal purpose" of immediately investing it in higher-yielding Federal securities to make a profit.

The Federal Government has a legitimate interest in these financing practices, since it in effect subsidizes them. Interest on the securities of state and local governments is exempt from Federal income tax, a fact that enables those governments to raise money a good deal more cheaply than they otherwise

With that in mind, Mr. Fowler cautions the states and localities that they are in danger of running a good thing right into the ground. Whatever the Government gives, whether it's tax exemptions or something else, the Government also can take

Although the Treasury Secretary is talking only of curbs on commercial enterprises, sure-thing investing and industrial subsidies, once started a crackdown could go further. There have long been critics who favor complete removal of the tax exemption from state and local securities.

So, it's actually of secondary significance that the states and localities are outdoing the Treasury at financing. In this case, what really matters is not that they're winning but how they're playing the game.

[From the Wall Street Journal, June 29, 1966]

TAX REPORT: A SPECIAL SUMMARY AND FORE-CAST OF FEDERAL AND STATE TAX DEVELOP-MENTS

Administration leans toward voiding taxexemptions of industrial development bonds.

Treasury officials are giving the "highest priority" to drafting a measure that probably will deny a tax exemption to new state and local bonds used to finance plants for commercial enterprises. They also seek to curb the practice of floating tax-exempt bonds to purchase U.S. bonds and realizing a profit from the difference in interest rates. Following Treasury Secretary Fowler's midJune hints of action along these lines, Administration men are striving to get their recommendations to Congress before the end of the current session. However, no action is considered likely before next year.

One reason for the go-ahead decision at this time: The accelerating pace at which industrial development bonds are being floated, it's contended, is making it increasingly difficult for states and localities to sell taxexempt issues for civic improvement projects. At the end of last year, according to Treasury estimates, there were about \$1 billion of outstanding industrial development bonds.

At least \$300 million more were sold in the first four months of 1966, the Government figures.

True Moral Issue in Vietnam

EXTENSION OF REMARKS

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. CASEY. Mr. Speaker, I have long viewed with concern, and I might add with a great deal of personal distaste, the constant carping criticism both abroad and at home by those who oppose our country's efforts in Vietnam.

The recent decision to nullify the strategic importance of oil stockpiles touched off a new wave of indignation on the part of those who for various reasons oppose our efforts to keep South Vietnam free. While this reaction was not unpredictable, as an American and as a Member of Congress, I find the critics deep concern for the Communist and the lack of concern for the safety of our fighting men, to put it mildly, obnoxious.

men, to put it mildly, obnoxious.

The Houston Post, in its editorial of July 3, 1966, gave this entire matter the perspective long needed.

Personally, I support the decision of our President to eliminate all strategic stockpiles in North Vietnam. Our men on the battleline do not deserve the added handicap of fighting a war with one hand tied behind their backs.

I strongly urge my colleagues attention to the accompanying editorial:

1

N

TRUE MORAL ISSUE IN VIETNAM
Opponents of any American action to help

Opponents of any American action to help the people of South Viet Nam keep their freedom reacted predictably to the bombing of a few oil storage tanks on the outskirts of Hanoi and Haiphong.

Their tender concern for petroleum storage facilities is ludicrous, of course, but at least they are consistent in opposing and denouncing anything that makes it harder for Communists to kill American and South Vietnamese fighting men.

One can respect them perhaps for their consistency but hardly for pretending that their opposition is based on morality, by which they fool nobody unless it is themselves.

Under the twisted reasoning that they use in trying to justify their positions, it is moral for Communists to try to take what they want by force, but it is immoral for anyone to oppose them. It is moral for Communists to commit aggression and try to impose their brand of tyranny upon others, but it is immoral to

defend freedom.

It is moral for Communists to practice murder, terrorism, assassination and barbaric cruelty against civilians on a mass scale, but it is immoral if some noncombatants un-avoidable are killed or wounded in the course of non-Communist defensive military oper-

It is moral for Communists to use very weapon, tactic or device available to them, but it immoral for non-Communists to use the weapons they have against Communists.

It is moral for Communists to kill large numbers of unarmed civilians by exploding bombs in the streets of Saigon or elsewhere but it is immoral to use napalm or B-52 bombers against Communist combatants.

It is moral for Communists to increase their military effort, but it is immoral for non-Communists to try to match or offset

that escalation.

It is moral for Communists to kill countless numbers of North Vietnamese in trying to impose their system upon the people of the North and to change the whole Vietnamese pattern of life, but it is immoral for at least half of the Vietnamese people to refuse to submit to this enslavement.

And now, it is moral for Communists to import and use petroleum products for pur-poses of killing Americans and South Viet-namese, but it is immoral to try to keep them

from doing so.

Much is made of the fact that the oil storage facilities bombed were near heavily populated areas. The location is, of course, under the control of the North Vietnamese government. The choice is not that of the South Vietnamese or American governments. The Communists never have been deterred by the fact that a target was in a populated

area, whether a city or a village.

Actually, the bombing of the oil tanks
was a precision operation, with great effort being made to prevent civilian casualties The targets were, in fact, somewhat isolated from thickly populated areas. And, if some civilians were in the areas where the bombs fell, it was not from lack of warning. Some Washington newsmen collaborated in seeing

There is a moral issue in Viet Nam, a very important one, although one to which opponents of American action appear blind. is whether or not other free people should stand aside and permit more than 15 million people who want no part of Communism to be either exterminated or enslaved. That is the moral issue that has been involved in Viet Nam from the beginning of the Com-munist effort to take over South Viet Nam. Who then are the truly morally guilty?

It can be argued that the use of physical force in human relations always is immoral, under any circumstances, but it can be even more immoral not to defend the things to which one attaches great value against those

who do use force.

Reds Won't Let Their Youth See the United States

EXTENSION OF REMARKS OF

HON, EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. DERWINSKI. Mr. Speaker, the Nation's sport fans were shocked and disappointed when the Soviet Union and its puppets in Warsaw canceled athletic events between their teams and the U.S. teams. The motivation of the Communists was purely propaganda, with the possibility existing that they were afraid of the power of the U.S. athletic aggregations. This pattern of frustrating contact even on a nonpolitical level is seen in the recent action of the Rumanian Government in interfering with the hopes of their students to travel to the United States.

I insert in the RECORD as part of my remarks an article by Dumitru Danielopol which appeared in the June 17 edition of the San Diego Union:

REDS WON'T LET THEIR YOUTH SEE THE UNITED STATES

(By Dumitru Danielopol)

Cultural exchanges can serve a useful purpose—if they are handled properly.
When the well-known Parisian painter,

Dimitrie Berea, was exhibiting recently in Los Angeles and San Francisco, he was saked to lecture at some California campuses.

He accepted.

He told students that an artist must live in freedom if he is to create. He deplored the regimentation forced on artists in Communist countries.

Having lived in Romania until 1946, Berea speaks from first-hand experience.

Much to Berea's surprise, the students were cool, even cold, to his remarks. At the Untversity of California at Berkeley, he met open hostility and feers.

"The so-called 'progressives,' the 'new left' which is operating on the campuses have done a pretty intensive brainwashing job,"

"Obviously your young people do not know what communism is really like. Otherwise they would not so easily accept such propa-

From behind the Iron Curtain there comes

a different story.

The celebrated French actors, Jean Louis Barrault and his wife Madleine Renaud, were recently playing in Bucharest on a cultural exchange program.

Packed houses greeted them. Eager stu-

dents asked Barrault to lecture to them.
At first he refused. He had not prepared for such eventualities. Finally he accepted. Eager young people listened to him.

He talked of the modern theater in France and other countries. He deplored attempts to infiltrate political thought into modern

The theater is meant to entertain, he said, not to sell political ideas.

His audience burst into applause.

As he finished, the students asked Barrault to recite something.

The first thing that came into his mind was the song of the French resistance during the Nazi occupation of Paris.

When he reached the line "liberte, liberte, liberte" the audience rose to its feet and exploded into a rousing ovation.

"It was dramatic," said a woman who was present. "It was like a cry, like an appeal for freedom from hundreds of Romanian

Barrault was moved to tears.

The experiences of the two artists pose some interesting thoughts.

We know the Communist regimes would not dare allow their young students to visit America

But what if some of our "new left" youngsters went to live for a while among the stu-dents behind the Iron Curtain?

They'd soon find that it's easier to firt with communism in California than to live under it in Europe.

Noted Americans Honor Washington Correspondent Ben Cole on His 50th Birthday

> EXTENSION OF REMARKS OF

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. JACOBS. Mr. Speaker, it is not hard to get prominent people to write perfunctory laudatory letters about someone on his 50th birthday.

But it is impossible to get people to write letters of the warmth of those which follow, unless the person praised has actually earned a warm spot in the hearts of those who do the writing.

To paraphrase Will Rogers, I never met a man who didn't like Ben Cole.

The letters follow:

STATE OF INDIANA, OFFICE OF THE GOVERNOR, Indianapolis, July 7, 1966.

BENJAMIN R. COLE, Esq., Washington Correspondent, The Indianapolis Star, Washington, D.C.

DEAR BEN: Somehow it seems appropriate that you are marking your 50th birthday exactly ten days after the inauguration of Medicare. Fifty years are not the same as sixty five years, but they do demonstrate your determination to reach that golden age when Geritol calls.

Your long tenure as a scribe on the Washington scene probably means you have a book up your sleeve. Louis Ludlow wrote From Cornfield to Press Gallery. Your rural beginnings, your service as a political re-porter, and your career at the Nation's Capitol match the record of Ludlow remarkably. But your record is Ben Cole's record and you have covered the news of your era well.

Happy birthday, Ben!

Sincerely,

ROGER D. BRANIGIN, Governor of Indiana.

CONGRESSIONAL STAFF DIRECTORY, Washington, D.C., July 8, 1966.

Mr. BENJAMIN R. COLE,

Washington Correspondent, The Indianapolis Star, National Press Club Building, Washington, D.C.

DEAR BEN: When we first met during the Indianapolis mayorality campaign in 1947, neither of us were thinking much about fiftieth birthdays or Washington.

This note is to tell you how much I appreciate the full measure of yourself you have given your friends during the short, short nineteen years that have, someway, passed all to suddenly.

During those years I have usually agreed with what you wrote and have always agreed with your sense of justice, your kindness and your sincerity as you wrote.

Together you and I went through an interesting period when, for all to short a time, we had a President in the White House who was younger than we. I expect we, and all those in our general age group, aged more in those days than is possible on any one birth-

Congratulations. Happy Birthday. You're only one day older than you were yesterday.

Sincerely,
CHARLES B. BROWNSON,
(Former 11th District Representative, State of Indiana.)

THE SECRETARY OF COMMERCE, Washington, D.C., July 11, 1966.

Mr. BENJAMIN R. COLE. Washington Correspondent, Indianapolis Star and Arizona Republic, Washington, D.C.

DEAR MR. COLE: I join your many friends in offering warmest congratulations as you celebrate your fiftieth birthday. You have my good wishes for continued good health and happiness and a long career of covering activities in behalf of the people of In-dianapolis by Congressmen Jacobs—first the father, now the son, and—who knows maybe one day the grandson. Sincerely yours,

JOHN T. CONNOR. Secretary of Commerce.

CONGRESS OF THE UNITED STATES, HOUSE OF REPRESENTATIVES, Washington, D.C., July 11, 1966.

Mr. BEN COLE. McLean, Va.

DEAR BEN: My warmest congratulations to you upon the anniversary observance of your 50th birthday. I hope in the years to come you will celebrate many more bearing witness to years of health, activity and usefulness.

When I arrived in Washington, of course we were friends already and had worked together when I was in the Legislature and you were working in Indianapolis. I was delighted when you were assigned to Washing-ton shortly after I was elected to Congress. Both in Indianapolis and in Washington it has been extremely gratifying to work with You have respected my confidence and you. You have respected my continued in I think your reporting has been objective and I think your reporting has been objective and of the nature that a reporter should strive to achieve. I have always found when I needed information or advice from a trust-worthy source I could call on you. This policy has stood the test of years and I have designated you a journalist of the highest integrity.

Because of your pleasant bearing and op timistic attitude, you are always a welcome visitor and I know you will see through the window-dressing to the core of any matter we are discussing.

Just let me say, Happy Birthday from one good friend to another.

Sincerely yours, WINDIELD K. DENTON Member of Congress.

U.S. SENATE. COMMITTEE ON LABOR AND PUBLIC WELFARE, July 6, 1966.

Mr. BENJAMIN R. COLE, Correspondent, The Arizona Republic, Washington, D.C.

Dear Ben: This is not the first congratulatory letter I've had the pleasure of writing to you and I trust it will not be the last,

Your tenure in Washington goes back much further than mine, of course, but in my limited time here I have come to recog-nize why you are held in such high pro-fessional regard by your colleagues in the press corps, your editors and publisher, and by those members of the Congress whose offices you cover.

Citizens in Arizona as well as Indiana are indeed fortunate to have a man like you re-porting in the capital. Your work has al-ways been distinguished for accuracy and fairness, and no public servant could ask for more.

On the occasion of your 50th birthday, it is a privilege to join with your many other friends in Washington in expressing the hope that you will be covering the Arizona-Indiana beat for many more years.

Best personal wishes, Sincerely,

PAUL FANNIN, U.S. Senator.

DEPARTMENT OF AGRICULTURE, Office of the Secretary, Washington, July 8, 1966.

Hon. Andrew Jacobs, Jr., House of Representatives, Washington, D.C.

DEAR Mr. JACOBS: Secretary Freeman is in the Far East and will be out of the country on July 12, when the reception honoring Ben Cole is to be held.

I know the Secretary will be disappointed at being unable to attend this event. extend to Mr. Cole birthday greetings and wishes for success and happiness.

Sincerely,

JOHN C. McDONALD, Assistant to the Secretary.

GATES, GATES & MCNAGNY, ATTORNEYS AT LAW. Columbia City, Ind., July 8, 1966.

Mr. BENJAMIN R. COLE, c/o Hon. Andrew Jacobs, Jr., Member of Congress. Washington, D.C.

DEAR BEN: I have been advised of your 50th birthday which occurs on Sunday, July 10th.
I am indeed sorry that I cannot attend the reception which is to be held for you on

July 12th. I want to congratulate you upon reaching the ripe old age of 50 years.

It has been my privilege to have known you personally during one-half of that half a century and my you know, I have always had a deep affection for you and have appreciated the fine friendship that we have enjoyed through that span of years.

I trust that you have continuous success happiness and good health in the years ahead.

I shall always remember you best during

those years when you were covering the State House. I recall particularly the time that I sent for you to offer you a position in the State Government and you were under the impression that I had sent for you to be critical on some of the articles that you had written. You were greatly relieved when you found out that I wanted you to take a posi-tion in the State Government and that I was not critical of you. You, of course, made a great decision when you stayed with the Indianapolis Star and you have made great progress since that time and your friends are proud of the great success that you have had in the newspaper field.

Again I congratulate you and I am sorry that I cannot be present at your reception. I do trust that before too long a time I will have the privilege of seeing you and enjoying

I am grateful to Congressman Jacobs in advising me of this occasion and giving me

this opportunity to write you. With kindest personal regards to yourself and family. I am

> RALPH F. GATES. (Former Governor, State of Indiana.)

> > PHOENIX, ARIE., July 12, 1966.

Hon. Andrew Jacobs, Jr., House of Representatives, Washington, D.C.:
Deeply regret my inability to be with you tonight for reception honoring Ben Cole. He is an excellent correspondent, one in whom I have the highest esteem, and I only wish I could be there with you in marking his 50th birthday. The Arizona Republic is as proud of him as am L

BARRY GOLDWATER. (Former United States Senator, State of

CONGRESS OF THE UNITED STATES. HOUSE OF REPRESENTATIVES. Washington, D.C., July 12, 1966.

Mr. BENJAMIN B. COLE.

The Indianapolis Star,
Washington, D.C.
DEAR BEN: It's a pleasure for me to offer
birthday congratulations,

And it's doubly pleasant to join in a tribute to you and your service to your newspaper and to the people of Indiana.

Since words are your stock and trade, I couldn't hope to impress you with my Congressional rhetoric.

I'll say only that I appreciate your interest in the Ninth District. I appreciate your accuracy and honesty in writing about me and my work. And, on behalf of all Hoosiers, I appreciate your fine sense of humor.

Your friendships on both sides of the aisle attest to your integrity and fair play.

Many happy returns of the day.

LEE H. HAMILTON. Member of Congress.

HANDLEY & MILLER, INC., July 10, 1966.

Mr. BENJAMIN R. COLE. National Press Club. Washington, D.C.

Dean Ben: I couldn't pass this opportunity to extend birthday greetings from both Barbara and myself, and to wish you continued health, happiness and success in the years ahead.

As one who is already past the 50th meridian of life, I do want to reassure you that life really does begin at 50-that is if you just care anymore.

I am only sorry that I can't attend Andy's birthday reception for you Sunday but, un-fortunately, Harks still has my plane ticket in his pocket, and has had since Best wishes

Your old friend,

HAROLD W. HANDLEY. (Former Governor, State of Indiana.)

U.S. SENATE, COMMITTEE ON COMMERCE. July 8, 1966.

Mr. BENJAMIN R. COLE, Washington Correspondent, Indianapolis Star, Washington, D.C.

DEAR BEN: It gives me great pleasure to add my good wishes for continued success upon this most fitting observance of the 50th birthday of one of Washington's most outstanding correspondents, Ben Cole,

My acquaintance with Ben dates back many years. I am proud to say that my esteem and appreciation for his fine talents as an excellent journalist and a truly fine person have grown over the years and have become deeply rooted into a lasting friend-

Congratulations, Ben, for the splendid record you have made for yourself not only on the Washington scene, but also with your readers throughout the years. With kindest personal regards, I am

VANCE HARTKE, U.S. Senator.

U.S. SENATE, COMMITTEE ON APPROPRIATIONS, July 8, 1966.

Mr. BENJAMIN R. COLE. Washington, D.C.

DEAR BEN: I am indeed pleased to congratulate you as you celebrate your fiftieth birthday. Speaking from experience, I can assure you that the second half-century can be even more enjoyable than the first. All of us who have come to know you and appreciate your keen insight into the Washington world and to value your opinions and advice are indeed grateful for the service you have rendered, not only to those of us in the Congress, but to the public as well. I am sure that we can continue to enjoy the warmth and wisdom of your friendship and understanding for many years to come.

You are an honest newsman—indeed a credit to your profession—and, above all, a good and dear friend. I am proud to be

among those who honor you on this auspiclous occasion. Many, many happy returns. With best personal wishes,

Your friend.

U.S. Senator.

PURDUE UNIVERSITY, Lafayette, Ind., July 12, 1966.

My Dear Cole: Recently I heard a jour-nalistic anecdote which may be an old one to you, but it was a new one to me. It goes like this.

A new copy boy, working nights on a large metropolitan paper, stopped the night managing editor and announced that he had been a copy boy long enough, he now wanted to be a reporter. When the editor asked him why he felt he was qualified to be a reporter, the boy replied, "I've been watching them. It's easy!"

I suspect that the readers of your newspa-per columns may be somewhat like the copy boy: your excellence and journalistic ability make it seem so easy. On the contrary, I know that it has taken dedication to duty and painstaking effort to interpret correctly for the enlightenment of your readers the many facets of the Washington scene.

I send heartiest congratulations to you on this day, your mid-century birthday. I hope that all the readers you serve will continue to benefit for many years to come from your insight and uncanny ability to analyze and insight and uncanny ability to analyze and report the complex national and political problems that face our nation and affect us as individuals. Without reporters of your great interpretative ability, we citizens would be hopelessly entangled in shrouds of ignorance and misunderstanding.

With many happy returns of the day, I am,

Yours most cordially.
FREDERICK L. HOVDE,

President.

OFFICE OF THE VICE PRESIDENT. Washington, July 8, 1966.

Hon. Andrew Jacobs, Jr., House of Representatives, Washington, D.C.

DEAR ANDY: Thank you for your kind in-vitation to the Vice President to attend a reception celebrating the birthday of Ben-

jamin Cole to be held July 12.

The Vice President would like to be able to accept. Unfortunately, he will be in St.

Louis at that time. However, the Vice President dent has asked me to pass along his regrets and to thank you for thinking of him.

With all best wishes. Sincerely,

WILLIAM CONNELL, Administrative Assistant.

JACOBS AND JACOBS, Indianapolis, Ind., July 10, 1966.

Hon. Andrew Jacobs, Jr.,

Member of Congress, House Office Building, Washington, D.C.

DEAR SON: Ben Cole is a kind, generous and just man. His discourse is stimulating and always seasoned with good humor. He would never willingly hurt anyone.

You are good to honor him on his 50th birth anniversary. He was your friend when you were a boy. He comforted me while you

were away at war. He is my friend and I consider him one of God's noblemen.
You recall that through the years I have told you that he was one of the few I missed when my constituency came to miss me so deeply it voted overwhelming for me to come home.

May Ben have as many more birth anniversaries. The world will be richer for every one.

ANDREW JACOBS, Sr., (Former 11th District Representatives, State of Indiana.)

THE WHITE House, Washington, July 8, 1966.

Hon. Andrew Jacobs, Jr., House of Representatives, Washington, D.C.

DEAR CONGRESSMAN: I have been asked to respond further to your invitation to the President to attend the reception you are planning for Mr. Benjamin R. Cole on July twelfth

Although it will not be possible for the President to attend or send a personal message, he is certainly appreciative of your thoughtfulness of him and sends his warm. good wishes for the occasion. Sincerely,

W. MARVIN WATSON. Special Assistant to the President.

> THE ATTORNEY GENERAL. Washington, July 11, 1966.

Mr. BENJAMIN R. COLE, Indianapolis Star.

Washington, D.C.

DEAR MR. COLE: It is a pleasure to join in paving tribute to a talented journalist.

Although the term "public service" is generally used to describe government work, it is most certainly applicable to your career as a seeker and reporter of truth.

Best wishes for continued success.

Sincerely,
NICHOLAS DEB. KATZENBACH.

McHale, Cook & Welch, Indianapolis, Ind., July 10, 1966. Mr. Benjamin R. Cole,

The Indianapolis Star, Washington, D.C.

DEAR BEN: Providence has given to Amerloa riches, strength, and power, and may I paraphrase Bill Herschell who wrote "Ain't God Good to Indiana" by saying "Ain't God good to The Indianapolis Star and its reader for He has given us Benjamin R. Cole, Indiana's greatest Washington correspondent". I regret that I cannot be present to celebrate the deserving recognition you will be ac-corded on your 50th Anniversary by your many friends in recognition of your great ability to accurately and fairly report the doings and happenings in Washington without slanting the facts. In so doing, you have out stanting the facts. In so donly, you have ingratiated yourself into the hearts of us all and when the legislative history of Wash-ington during these years is written, the historians will have to get the facts from

I am proud of you and of your great work and of the fact that I went through high school in Logansport with your beloved mother and your uncle, and therefore, I could expect nothing else from you.

As the Irish would say, "May the good Lord hold you in the palm of His hand and may the wind be ever at your back" for many more years.

Sincerely.

FRANK M. MCHALE.

THE ASSOCIATED PRES Rochester, N.Y., July 8, 1968. Hon. Andrew Jacobs, Jr., Congress of the United States, House of Representatives,

Washington, D.C. DEAR CONGRESSMAN JACOBS: Many thanks for the invitation to join the birthday party for Benjamin B. Cole.

As one who regards Washington as the news capital of the world, and who never ceases to recall with pleasure five years on the Washington scene, I would like nothing better than to meet with you. Ben Cole and the others-I never miss a Washington press

corps rally if I can help it.

I have a trip to the mid-West on Tuesday, however, so all I can do is say thanks again for counting me in and congratulations on

the idea of honoring Ben Cole, one of the tops in the Washington press corps.

With very best wishes to you both,

Cordially,

PAUL MILLER, President.

THE POSTMASTER GENERAL. Washington, D.C., July 10, 1966.

Mr. BENJAMIN R. COLE, Washington Correspondent,

The standard of the standard o

today and for many years to come.

With kind regards. Sincerely yours,

LAWRENCE F. O'BRIEN.

CONGRESS OF THE UNITED STATES. House of Representatives, Washington, D.C., July 11, 1966.

Mr BENTAMIN B. COLE Central Newspapers, Washington, D.C.

DEAR BEN: Happy Birthday! It is a real pleasure to express my good wishes to you on your "half-century" mark-and it would take another half-century to say thank you for another half-century to say thank you for your friendship and many kindnesses to me. Arizona, as Indiana, is proud to claim you, and fortunate to have a newspaperman of your integrity, dedication and talent on whom to depend and call. Working with you over the past years has been a very gratifying and happy experience, and I look forward to many more years of this pleasant association. association

May you have many more happy birthdays, each bringing you only the best and happiest years.

Sincerely.

JOHN J. RHODES, Member of Congress.

CONGRESS OF THE UNITED STATES. House of Representatives, Washington, D.C., July 12, 1966.

Mr. BENJAMIN R. COLE. Washington Bureau, The Indianapolis Star. Washington, D.C.

BEAR BEN: One of the real pleasures of being a Member of the Indiana delegation in Congress is the constant working acquaintance and friendship I have with you.

Not only are you a competent and careful craftsman of the journalistic trade, but you are a true friend and adviser to those of us who represent the people of Indiana,

In my three terms in the House, I have come to regard you not only as a fine cor-respondent and talented writer, but actually as another Member of the Hoosier delegation

We have all benefitted many times from your great store of governmental information and experience, and your wealth of Indiana and national political knowledge.

I consider you, Ben, as one of the finest newsmen on the Washington scene, and wish to offer my sincere congratulations for your past years of service to your employer and

My warmest wishes, too, on your 50th birthday. May it be the beginning of a very happy and successful year for you.

Sincerely,

RICHARD L. ROUDEBUSH.

DEPARTMENT OF STATE, Washington, July 8, 1966.

Hon. Andrew Jacobs, Jr. House of Representatives.

DEAR CONGRESSMAN JACOBS: Thank you for your letter of July 5 inviting Secretary Rusk to attend a reception in honor of your friend Mr. Benjamin R. Cole and to send a message of conglatulations on the occasion of his 50th birthday.

Secretary Rusk has not yet returned from his trip to the Far East, but in view of his very full schedule following his return I regret that he will not be able to accept your kind invitation to the reception or to send ssage. I know, however, that he would want me to send best wishes on his behalf to Mr. Cole.

Sincerely yours, DOUGLAS MACARTHUR II, Assistant Secretary for Congressional Relations.

> KNOK, IND., July 9, 1966.

DEAR FRIEND BEN: I am proud and happy to extend my warmest congratulations on your 50th birthday, and regret very much that I cannot attend Representative Jacobs' party in your honor on the 12th. I well re-call our fine relations during your tour of duty at the State House and I still enjoy your column in the Star.

Best wishes to you and your loved ones. Sincerely.

HENRY F. SCHRICKER. (Former Governor, State of Indiana).

CONGRESS OF THE UNITED STATES, House of Representatives, Washington, D.C., July 10, 1966.

Mr. BENJAMIN R. COLE. The Arizona Republic, The Indianapolis Star,

Washington, D. C.
DEAR BEN: It occurs to me that July 10. 1916, was a rather significant date in history. For example, on that day the U.S. House of Representatives passed the Omnibus Revenue Bill by a vote of 240-140, Pancho Villa issued a proclamation declaring his intention to recapture parts of Arizona for Mexico, the French advanced to within one mile of Perrone in their drive to remove the Kaiser from France, and President Wilson told a World Salesmanship Congress in Detroit that the Democratic Party was a friend of busi-

Yet one must confess to a certain disinterest in the aforementioned when they are compared to an even more momentous event of overriding importance—the birth of Ben-

jamin R. Cole.

Ben, we are indebted to your mother and father for their foresight. Without your fine, journalistic hand, life here in Washington

might occasionally grow tedious.

My very best wishes to you on this birthday. The entire staff joins with me in the hope that the next 50 years will be just as you want them to be.

With warmest personal regards, I am. As always,

GEORGE F. SENNER, JR.

U.S. DISTRICT COURT. SOUTHERN DISTRICT OF INDIANA, Indianapolis, Ind., July 9, 1966. .

DEAR BEN: Andy's much appreciated letter announcing your 50th birthday on Sunday, July 10th, and inviting me to the reception in your honor on Tuesday, reached me during my absence from Court while on vacation. I am grateful to him for the announcement and invitation so that I too can be among those of your host of friends to give you birthday greetings and best wishes on this happy occasion.

I need not tell you of the high esteem in which I have always held you, both as in which I have always held you, both as a man and as a writer—my warm regard and respect for you, I am sure, have spoken that message many times. So it is with real joy that I—and Vitalias joins me—wish many, many more happy birthdays, and may you and your family be blessed with an abundance of good health in the years to come.

Except for the distance that separates us, would certainly be present on Tuesday. With warmest personal regards, I remain, Cordially,

BILL STECKLER.

UNITED PRESS INTERNATIONAL New York, N.Y., July 6, 1966.

Mr. BENJAMIN R. COLE, c/o Hon. Andrew Jacobs, Jr., 234 Cannon Office Building,

Washington, D.C.

DEAR BEN COLE: I regret very much that I cannot attend the reception that Congressman Jacons is giving in your honor on Sunday, July 10. I am compelled to be in Chicago this weekend and will not be able to get back in time.

Although I have not had the privilege of meeting you personally I know your name and your reputation quite well and I salute you on the fine work that you have done for your newspapers in Washington over the

I'm glad that Congressman Jacobs is celebrating your birthday and not your retire-ment. Carry on!

Cordially,

MIMS THOMASON. President.

THE SECRETARY OF THE INTERIOR. Washington, July 12, 1966.

Mr. BENJAMIN COLE, Washington, D.C.

DEAR BEN: Not only do I want to congratulate you for the singular achievement of reaching the age of 50 with your imagination, professional integrity, and zest for the job undiminished, but I also want to congratulate ANDY JACOBS for having the foresight to honor you on this occasion.

As ANDY noted, the first Congressman from Indiana you were assigned to cover was his father. In a similar vein, when I came to Washington as a freshman Congressman you were the first reporter that it was my pleasure to become acquainted with. The constructive and understanding way you have covered not only Arizona news but my own personal part in it has earned you my greatest respect. I am happy to count you among my best friends and hope we are both around to mark the successful conclusion of your second 50 years.

Best personal regards. Sincerely,

STEWART L. UDALL, Secretary of the Interior.

INDIANA STATE CHAMBER OF COMMERCE Indianapolis, July 7, 1966.

Mr. BENJAMIN R. COLE. Washington Correspondent, The Indianapolis Star, Washington, D.C.

DEAR BEN: As you reach the ripe, young age of 50, I want to join your host of other friends in expressing appreciation for the fine job you have done and are doing to keep us Hoosiers informed about the Washington scene.

With your background of reporting governmental and political affairs in Indiana, you continually bring to us news and comments tailored to Hoosier readers. The fact that you occasionally deal with the antice as well as the actions of legislative and ad-ministrative leaders in Washington, and particularly of those from Indiana, adds flavor to the newsy reports and columns.

John Barnett tells me the members of the State Chamber staff rely heavily on your informative weekly reports outlining the votes of Indiana members of Congress on

I wish you many more happy and successful years of reporting from Washington about Hoosiers and for Hoosiers. If our paths do not cross before then, I hope in any event to have the opportunity to visit with you again at the Chamber of Commerce Congressional Reception next spring. Reception and Sincerely yours, Walter W. Wale,

President.

JULY 8, 1966.

Mr. BENJAMIN R. COLE. % ANDREW JACOBS, JR. 234 Cannon Office Building, Washington, D.C.

DEAR BEN: Congratulations on your many ears of faithful interpretation of Washington to Hoosiers.

Knowing the characters involved as I do, I have a real appreciation of the quality of the job you have done and sincerely feel that all of us have a much better understanding of the problems of our national government.

May we have many more years of your wisdom!

With warm regards, Sincerely.

MATTHEW E. WELSH. (Former Governor, State of Indiana.)

Hearty Congratulations to Governor Scranton and the Pennsylvania Legislature

> EXTENSION OF REMARKS OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1966

Mr. FULTON of Pennsylvania. Speaker, it is a pleasure to call to the attention of Congress and the American people the fine editorial from the Pittsburgh Press which is an excellent statement of the outstanding record of educational development in Pennsylvania:

DIVIDEND OF THE TIMES

These are times of high production, high consumption, high demand for labor-and, taking the bitter with the sweet, high living Most of us are earning more and living better, and more of us are employed than was the case a few years ago.

We get some excellent dividends from all this activity. The State of Pennsylvania ended its fiscal year June 30 with a record high budget surplus of \$134,500,000. Much of that came from the two big taxes collected by the State—the corporate net income tax and the 5 per cent sales tax. More profits for industry and more purchases by consumers combined to swell the treasury receipts.

One dividend from this windfall was a one-shot bonus to public schools throughout the state of 34 million dollars, and anyone familiar with the financial needs of our school system can appreciate how welcome such an

unexpected boost will be.

Another will be appreciated by some 17,000 families who have members enrolled at the University of Pittsburgh. The treasury surplus makes possible legislation to increase State aid to Pitt by \$9,700,000 and thus make possible a reduction of the tuition rate from \$1400 a year to \$450.

This plan, which makes Pitt a State-related university, has been long in the making and has unfortunately been delayed in the Legislature pending passage of the general appropriation bill which takes precedence over other appropriations.

However, Governor Scranton has announced a general bipartisan agreement on the Pitt appropriation which will make possible quick passage in time for the families of Pitt students to make their financial plans before the school year starts in September.

P

This is the forerunner of a new plan for higher education in Pennsylvania, still to be recommended, which should make it easier for deserving students to get to college at a reasonable cost. It may be noted also that the expanded State scholarship loan program should aid generally both students and the

colleges they attend.

An encouraging feature of the budget windfall is that, according to most of the signs discernible now, it will continue well into the new fiscal year and probably beyond it. The State's improved financial health thus will be reflected in better financing not only for education but for other essential State services.

Kawaa: VISTA Volunteer

EXTENSION OF REMARKS OF

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. MATSUNAGA. Mr. Speaker, I received positive indication today that we are winning a war on our own shores. I of course refer to the encouraging signs from VISTA, our flagbearer in the war against ignorance and poverty in these United States.

Mr. Earl Kawaa, 21, a young resident of Kaunakakai, Molokai, Hawaii, is back in his home State for a vacation of 3 weeks before returning to serve as a VISTA volunteer in New Mexico. Mr. Kawaa is an outstanding example of the caliber of young men and women our Nation is producing, one of those who are willing to spend several years of their lives in the service of their country.

Reporter Gregg Kakesako's interview with Volunteer Kawaa appeared in the Honolulu Star-Bulletin of June 30, 1966. I now submit the newspaper article for inclusion in the CONGRESSIONAL RECORD: SELLING BENEFITS OF EDUCATION: ISLANDER

BACK AFTER VISTA STINT ON INDIAN RESERVATION

(By Gregg Kakesako)

A man from Kaunakakai, Molokai, who has been a V.I.S.T.A. recreational director on an Indian reservation for the past year, is back in the Islands for a three-week vacation

Earl Kawaa, 21, was assigned to the Pueblo Acoma Indian Reservation, New Mexico, as

director of physical resources

As a member of the Volunteers in Service to America, V.I.S.T.A., he was involved in establishing recreational activities for the Indian youths.

"I built a baseball diamond and organized several leagues for both girls as well as boys while I was there," Kawaa said.

DESCRIBES JOB

"My job there was to teach these young people games and to make them realize the opportunities which are offered to them," he added.

"In fact I was there primarily to sell them

the benefits of education."

The past year seems to have also benefited Kawaa, for he revealed that his work with the Indians developed confidence in himself and enabled him to express his feelings with a lot more ear

noted that his four-week training period had prepared him for the assignment and once the people got over their "edgy" feeling they responded enthusiastically.

PEACE PIPE

Using the baseball as a modified 20th century peace pipe, Kawaa tried to approach the students in an informal way.

"The younger generation has been exposed to both cultures and is willing to accept progress and assimilate it into their own culture," Kawaa noted.

"Yet many of the youths do not want to leave the reservations because the outside world is uncomfortable to them." he added. They would rather stay and improve the conditions within their culture."

Kawaa revealed that he joined V.I.S.T.A. because it offered opportunity to travel, to see how people in other areas live, and to exchange cultural ideas.

NOT MATTER OF MONEY

Asked about the personal material benefits of such a program, Kawaa said that he was receiving about \$80 every two weeks.

"Yet when you join V.I.S.T.A., you're not in it for the money," he explained. "Once you become involved with the environment and the people the rewards are far greater."

"In fact money doesn't seem to take that much of a precedent; it's the opportunity to help and to obtain a broader view outside of your own culture that counts," Kawaa concluded.

V.I.S.T.A. has been referred to as the "domestic peace corps."

AEC Testimony Contradicts Conservationists on Dam Plans

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. DINGELL. Mr. Speaker, the proposed Grand Canyon dams have been criticized as an outdated means of financing the proposed central Arizona

Alternate means of generating salable power may serve the purpose equally well, and without necessitating the damage to the Grand Canyon which would be caused by Bridge Canyon-or Haulapai-and Marble Canyon Dams.

Nuclear power has been suggested as particularly promising alternative which is expected to outstrip the efficiency of hydropower long before the Grand Canyon dams can pay for themselves. The competition of low-cost nuclear power may well prevent the dams from returning their cost to the Treasury.

A newspaper account in the Denver Post of May 26, 1966, attempted to relate these proposals to recent testimony of Dr. Glenn T. Seaborg, Chairman of the Atomic Energy Commission, before the Subcommittee on Public Works of the House Appropriations Committee

This account, however, went too far in implying that Chairman Seaborg considered nuclear power an unfeasible alternative to hydropower from Grand Canyon dams.

As was indicated by a recent exchange between Dr. Richard C. Bradley, of Colorado Springs, and Dr. Seaborg, the testimony of Dr. Seaborg did not relate to the Grand Canyon case. Dr. Seaborg's remarks do not at all conflict with proposals for a nuclear alternative to dams in the Grand Canyon.

For the information of my colleagues,

I request that the Denver Post article, the letters of Dr. Bradley and Dr. Seaborg, and the pertinent portion of the hearing record be included in the RECORD at this point,

[From the Denver (Colo.) Post, May 26, 1966] AEC TESTIMONY CONTRADICTS CONSERVA-TIONISTS ON DAM PLANS

WASHINGTON.—Conservationists and others who oppose the plan to build Bridge and Marble Canyon Dams on the lower Colorado River apparently have based their arguments on a belief hydroelectric power is on the way out.

In a relatively few years, they have said, the chief source of power in the United States, including the areas that would be served by the Bridge and Marble Dam power

stations, will be atomic reactors.

As Dr. Spencer M. Smith Jr., secretary of the Citizens Committee on Natural Resources, told the House Interior and Insular

Affairs Committee recently:

"It appears to us that the problem of competition and its effect upon peaking power rates, the lower cost nuclear alternative and the rather minimal contribution to the lower Colorado River basin development fund by the Marble Canyon project are sufficient to argue against the proposal and to cause immediate consideration of a more efficient alternative."

Testimony at hearings held by the House public works appropriations subcommittee last month and released Thursday show that this view isn't shared by the chairman of the

Atomic Energy Commission.

Asked by Rep. GLENN R. DAVIS, R-Wis., whether he can foresee a substantial substitution of nuclear power as a source of electric power for the conventional and hydroelectric sources of power that we now have, Dr. Glenn T. Seaborg replied:

"Not for many years. I don't look at it as a substitution. I look at it as a supple-

ment of the fossil fuel source."

Atomic power, he added, may ultimately substitute for conventional power but this won't take place "for many decades."

OUT OF ACCORD

"Then," Davis continued, "when people tell us . . . that we don't need particular sources of hydroelectric power, this isn't in accordance with the practical situation as you see it?" you see it?

"That is right," Seaborg replied. see a number of situations where it is to our country's economic advantage, to exploit a source of hydro-electric power."

He was joined in stressing the importance of hydroelectric and other types of non-nuclear power by Dr. G. F. Tape, a colleague

on the AEC. Said Tape:

"The true conservationist, and I mean with respect to conserving our energy resources, would like to see every bit of energy taken from every drop of water as it runs to the sea in the same sense we would like to see every drop of energy taken from a drop of uranium ore that comes from the ground."

> DEPARTMENT OF PHYSICS. Colorado Springs, Colo., June 2, 1966.

Dr. GLENN T. SEABORG Chairman, Atomic Energy Commission,

Washington, D.C.

DEAR Dr. SEABORG: The enclosed news story from the May 26 issue of the Denver Post puts an interpretation on some of your re-cent remarks that I wonder if you really in-Specifically, your statement that conventional power sources will continue to be useful for many decades to come is being taken as a refutation of the conservationists' claim that power can be generated eco nomically in the Southwest without building any hydroelectric dams in Grand Canyon. I find nothing in the text of the news story

itself to suggest that you were endorsing these particular dams. Nevertheless, it seems to me that the headlines suggest it.

You are probably well aware of this controversy. The federal Bureau of Reclamation proposes to build Bridge and Marble Canyon Dams in Grand Canyon to serve as "cash registers" for its water salvage program in the Southwest. The conservationists oppose the dams on the grounds that they will impair Grand Canyon National Monument and Grand Canyon National Park and will violate the integrity of the entire national park system. They have also pointed out at Congressional hearings that these dams will cost much more per installed kilowatt than thermal plants, will take 50 years to amortize, will evaporate several million dollars worth of water each year, and will sell power at a cost that is only barely competitive with other sources even today.

Dam proponents dismiss the ethical and aesthetic arguments as being unimportant, but they do not dismiss the economic arguments. It is all the more important, therefore, that the record be straight as to what is fact and what is interpretation.

Would you be willing to write a brief, clarifying statement, perhaps as a letter to the editor of the Denver Post? I think it would be very helpful if you would tell to what extent your endorsement of conventional power plants in general implies an endorsement of any particular project, such as, for example, Bridge and Marble Dams in Grand Canyon.

Sincerely yours,
RICHARD C. BRADLEY,
Professor of Physics.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., June 14, 1966.
DR. RICHARD C. BRADLEY
Professor of Physics
Colorado College
Colorado Springs, Colorado

DEAR DR. BRADLEY: In response to your letter of June 2, 1966, I am enclosing for your information the complete text of the testimony referred to in the newspaper story you were kind enough to send to me.

As you will observe from the text of my testimony, I responded to a question concerning a hypothetical dam on the Columbia River, and my reply led to a general discussion of the value of developing the three sources of electrical energy under the proper circumstances. My remarks were offered neither as a general unqualified endorsement of hydroelectric power nor of any particular project. The point of my response was that the question of whether or not to build a new dam on the Columbia River would depend on the circumstances attending the particular situation. I went on to point out that there would be instances when it would be to our economic advantage to exploit conventional power rather than nuclear power. I stressed that we, in the Commission regard nuclear power as an important supplement to hydroelectric and fossil fuel sources of power.

Sincerely,
(Signed) GLENN T. SEABORG,
Chairman,

TESTIMONY BEFORE THE HOUSE APPROPRIA-TIONS COMMITTEE SUBCOMMITTEE ON PUB-LIC WORKS, APRIL 20, 1966

Mr. Davis. Doctor, when we are confronted with large expenditures for development of hydroelectric power I am sure that we all get a great deal of mail from people who say that this is ridiculous, that in 5 years this power will be developed from nuclear sources. Why spend a half billion dollars to build a new dam on the Columbia River?

What would be your comment?

Dr. Seaborg. It would depend on the particular situation. I think that there are certainly instances when it is to our economic advantage to exploit our hydroelectric power potential. The hydroelectric power potential, however, is limited, and once we have exploited it to the maximum we will still need additional electric power due to this high growth which I indicated. Hydro cannot take care of the whole load in the years ahead, and for this reason we will need the development of nuclear power in all of its aspects. Continued application of the presently economic water cooled reactors and then the application in the future of the advanced converter and breeder reactors are all concurrent with an increased use of fossil fuels to meet this large growing demand for electricity.

Mr. Davis. Can you foresee in the foreseeable future a substantial substitution of nuclear power as a source of eleteric power for the conventional and hydroelectric sources of power that we now have?

Dr. SEABORG. Not for many years. I don't look at it as a substitution. I look at it as a supplement of the fossil fuel source.

In a number of decades, however, when fossil fuel plants wear out and the question arises as to how they might be replaced it might be a matter of substitution. However, that is a number of decades from now. For many decades I look at it as a matter of nuclear power supplementing the hydro and the fossil fuel sources of electricity.

Mr. Davis. Then when people tell us, at least within your foresight, that we do not need particular sources of hydroelectric power, this is not in accordance with the practical situation as you see it?

Dr. SEABORG. That is right. I can see a number of situations where it is to our country's economic advantage to exploit a source of budgestellaries avantage to

of hydroelectric power.
Dr. Tape. There are also some technical differences in the sense that the nuclear plant likes to run continuously for long periods of time and feed base load requirements. There are certain hydroplants where it may be difficult, due to seasonal variations and water supply and other reasons, for them to operate in quite that way. Thus a hydroplant furnishing the peaks of demand, coupled with other plants that might be furnishing the base load, would make excellent combinations.

As the chairman said, you cannot categorically say one way or the other. You literally have to look at them on a case-bycase basis.

The true conservationist, and I mean with respect to conserving our energy resources, would like to see every bit of energy taken from every drop of water as it runs to the sea in the same sense we would like to see every drop of energy taken from a drop of uranium ore that comes from the ground. I can see real advantages of considering hydroplants from the energy conservation point of view and from the point of view of integrating it into the overall power system.

Dr. SEABORG. But economics come into it in both cases because there are some cases where, as you begin to get to the end of your supply of hydropower, you will need to draw the line and it will not be economically sensible to use every drop of water that is on its way to the ocean.

Mr. Davis, I think you have made the point. The people who in effect tell us that we should not be developing any hydroelectric sources of power at the present time because you and your people are going to be making this power available from nuclear sources at a very economic rate in the immediate future—this is simply not your judgment of the situation at all?

Dr. SZABORG. I would not make that kind of a categorical statement at all.

A Raid on Private Enterprise

EXTENSION OF REMARKS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. DERWINSKI. Mr. Speaker, a few weeks ago majority members here in the House badly twisted arms and rammed an increase in parcel post rates that was tied to expansion of that Post Office Department operation through the House. Columnist John Chamberlain, writing for the King Features, properly described this as a raid on private enterprise, and I insert his column in the Record as part of my remarks:

A RAID ON PRIVATE ENTERPRISE

(By John Chamberlain)

Not so long ago the Post Office decided to get out of the banking business. The reason for this was that it was duplicating saving and insurance services that were being more efficiently performed by private institutions. But now, quite perversely, Postmaster General Larry O'Brien is making a determined pitch to put the Post Office into competition with free enterprise in another field that is currently being served quite adequately by private businessmen.

Specifically, the Post Office is seeking congressional authority to double the weight limits of objects carried in its parcel post business. It would also more than double the cubic-foot content. The original reason for the parcel post was to help country people avoid costly trips to town for objects that could be conveniently carried by postal employes.

The more bulky and heavier "freight-type" objects were left to the common carriers, who were the heirs to the tradition of the Pony Express and the old Wells-Fargo freight forwarding business. Practically speaking, this now means the Railway Express Agency, which has been maintained ever since the 1920's by the railroads to serve some 20,000 communities both in the United States and abroad. The REA boasts that it carries anything "from an emerald to an elephant," and it has been doing its job responsibly and well, and at no cost to the taxnaver.

Larry O'Brien does not say that the REA and smaller private shipment companies haven't been doing a good job. He simply wants more business for the Post Office of a type that would, as he thinks, permit it to increase its own net revenue.

There is, of course, more than meets the eye in the proposed bill to divert bulky parcel shipments from private carriers to the already over-burdened Post Office. The fight, actually, is between two segments of the private enterprise community. On the one hand, the big mail order houses stand to benefit by O'Brien's proposed change. Local merchants would lose. As things are now constituted, you can't get a stepladder or a lawmower delivered to you by mail.

In the normal course of events a person will go to a local shopping center for such objects, and 'the merchant will arrange for delivery if necessary. But if lawnmovers or ladders could be moved by Government parcel post, the mail order companies would, in effect, be getting a big lift from the Government. Cynics have observed that O'Brien, who was one of President Kennedy's famed "Irish Mafia," is not unmindful of the desirability of political support from mail order tycoons.

The fear of the Railway Express Agency is that it will be forced out of business if O'Brien has his way in Congress. If nobody cares about railroad stockholders, it should be observed that some labor leaders are on

the REA side of the fight.
C. L. Dennis, president of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, AFL-CIO, has said that "along with REA's destruction will be the jobs of 40,000 employees, many of whom have devoted years of their lives in helping to develop the carrier's service. There is involved more than \$200 million in annual wages . . . REA Express now uses the services of some 71 standard railroads and of approximately 21 shortline railroads . . . also 37 U.S. domestic air

Presumably, any displaced personnel could be hired by the Post Office. O'Brien has promised as much. But they would lose all seniority benefits. And you and I, as the taxpayers, would be responsible for the wages of all those Government employees.

Lest We Forget

EXTENSION OF REMARKS

OF

HON. CLAIR CALLAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. CALLAN. Mr. Speaker, a recent publication asserted:

No nation is any greater than its agri-culture permits it to be.

There is a great deal of truth in this statement. I believe that many of my fellow Congressmen have become aware of this fact in recent months. Those of us who represent this Nation's highly efficient and productive agricultural States have been aware of this truth throughout our lifetimes. The only change of mind we have experienced relative to our knowledge of the essential role agriculture plays in this Nation's economic well-being is one of increased devotion to the cause of the American farmer and heightened respect for his productivity.

As our Nation has shifted to an era of migration from the farm to the city, many of our citizens have all too often forgotten the farmer. When drought has stricken large sections of our foodproducing lands, the city dweller in nonagricultural areas has given it only passing notice. For the city dweller has become so accustomed to the shelves of plenty supplied by the American farmer, that he knows despite the loss of millions of bushels of food, he shall not want for

his next meal.

d

h

r

n

d

We in America have been truly blessed with an abundant food supply. blessing has been so extensive that too many have been willing to take it for granted. In failing to respectfully recognize the farmer for vital role he plays in keeping American stomachs filled and American bodies nourished the general public has all too often done him a great

When the price of food has gone up many have been too ready and too will-ing to caustically assail the farmer.

They have chided him for his complaints of not receiving a fair price. They felt sure they were correct in doing so be-cause they considered it obvious that he was receiving substanitial income from the additional money they were

spending for food.

Some doubted our contentions that though the consumer was paying 33 percent more for food in 1965 that in 1947-49, the farmer was receiving 10 percent less for his product than in 1947-49. I, and several of my fellow Congressmen from agricultural States have done our best to tell the farmer's story throughout the land this year. Our story has been a simple one—the American farmer, rather than being the principal cause, is in reality the victim of inflation. I feel the farmer's story told in recent months has been communicated well. I think the American public has learned a lesson in agriculture and I sincerely hope that lesson can be cast indelibly in the minds of all consumers.

Steadfast in his purpose, undaunted in his willingness to nourish the soul of our countrymen, and determined to blanket this country's fertile lands with abundance, the American farmer has met the challenge of hunger that has throughout history plagued man with sorrow and death. Not only has he met the challenge of this Nation, but he has contributed substantially to meeting the challenge of hunger throughout the world. I know, you know, and the American people know that the farmer will continue to meet this challenge.

Let us now resolve in this period of history when the eyes of the Nation have focused on the American farmer, to pay him his due respect, to assure him of our support and confidence and to pledge him the heartfelt thankfulness he so

justly deserves

How Long Will the War on Poverty Last?

EXTENSION OF REMARKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. BOB WILSON. Mr. Speaker, I believe the innovator of the war against poverty in modern times was the Emperor Napoleon III. After his exile, he continued to write about this favorite subject in London. But even Napoleon III had the intent of ending poverty in his country, France.

We had understood this was the intent here too-to end poverty yesterday if not tomorrow in the United States of America, to wipe it out, to eliminate it. Alas, this does not seem to be the true

intent of this administration.

For Lyndon B. Johnson has allowed the Office of Economic Opportunity to buy a vast array of new office equipment. Included are such items as electric typewriters, file cabinets, film cameras, and a host of others. This monumental acquisition of shiny new supplies for the sumptuous offices of those directing the war on poverty can only mean, I submit, that the President and his aids expect our poverty war to go on a long, long time. I only hope that the purchase of adding machines does not mean that in the back of the high command's mind is the thought of adding to the number of poor.

The Department of Health, Educa-tion, and Welfare, the Veterans' Administration, and the Post Office, all agencies which have proved they can, given the chance, produce, have been ordered to cut new equipment to the minimum. The Army in Vietnam may have 29 items in short supply in the Vietnam war area as reported by a Senate committee.

But Sargent Shriver's chair-borne home command is now adding to its record of having stamp lickers getting \$50a-day record salaries, the best and newest machines for their war in which the poor are often the chief sufferers.

I would suggest that if the President does not intend the war on poverty to go on forever, he might at least order the new machines for the permanent agencies and let Sargent Shriver's circus employ their used equipment. Or maybe the money could even go to help the poor.

Peter Schoemann Honored by Wisconsin State Society

EXTENSION OF REMARKS OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. ZABLOCKI. Mr. Speaker, yesterday the Wisconsin delegation to Congress participated in a luncheon meeting at the Congressional Hotel at which the Wisconsin State Society presented its first annual Citizenship Award to Peter Schoemann, president of the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada, a distinguished son of the State of Wisconsin.

I am happy to insert in the RECORD at this point, a report of the proceedings on that occasion:

OFFICIAL PROCEEDINGS FOR AWARD PRESENTA-TION OF THE WISCONSIN STATE SOCIETY OF WASHINGTON, D.C., TO ME. PETER T. SCHOEMANN, GENERAL PRESIDENT, UNITED ASSOCIATION OF JOURNEYMEN AND APPREN-TICES OF THE PLUMBING AND PIPE FITTINGS INDUSTRY OF THE UNITED STATES AND CAN-ADA, WASHINGTON, D.C., JULY 13, 1966

(Mr. Jerome O. Hendrickson, President, Wisconsin State Society of Washington, D.C., presiding)

Mr. HENDRICKSON. The invocation will be delivered by Bishop Tanner.

Bishop TANNER. For the invocation today have chosen the Blessing of St. Benedict: Oh Thou who clothest the lilies and feedest the birds of the sky, who leadest the lambs to the pasture and the heart to the waterside, who has multipled loaves and fishes and converted water into wine, do Thou come to our table as Guest and Giver to dine.

Mr. HENDRICKSON. We are happy to see you today. I want to read some communications:

John Cosgrove, Assistant Director in the Executive Office of the President, Office of Emergency Planning wrote as follows:

"Dear Mr. Hendrickson: I deeply appreciate the invitation of the Wisconsin State Society to honor Mr. Peter T. Schoemann on the occasion of the presentation of the Distinguished Citizenship Award to him on July 13, 1966.

"I regret that I cannot be with you. Nothing would give me greater pleasure than joining in so deserved a recognition. I worked with Mr. Schoemann in his capacity of Chairman of the Standing Constitutional Committee on Education of the AFI.—CIO, and know of his contributions to education in general and the National Defense Education Act in particular. His dedication, integrity and qualities of leadership continue to be an inspiration to all of us who have the privileges of associating with him in whatever capacity.

"Please extend my regrets and cordial best wishes to Mr. Schoemann on this important

I also would like to read a telegram from the Staff of the Milwaukee Labor Press:

"Our best wishes on being designated Wisconsin's most outstanding national labor leader. May God continue to bless your future endeavors as he has in the past."

I would like to make some introductions:
Mr. James P. Schoemann, the son of the
man we are honoring this afternoon. Jim
Schoemann is the Administrator of the International Training Fund, a Joint labor
management trust which extends financial
and technical assistance for the apprentice
and journeyman training of the plumbers
and pipefitters:

Congressman ROBERT W. KASTENMEIER, Representative of the 2nd District of Wis-

Andrew J. Biemiller of Milwaukee, former member of our Wisconsin Congressional Delegation and currently Legislative Director of the AFL-CIO:

John Loomis, a Vice President of the Wisconsin State Society and former General Counsel of the Agency for International Development:

Development;
William F. Schnitzler, Secretary-Treasurer
of the AFL-CIO and a colleague of our honored guest. He is on the AFL-CIO Council;

The Treasurer of the Wisconsin State Society, Charlotte Norris;
Casey Ireland, Secretary of the Wisconsin

Casey Ireland, Secretary of the Wisconsin State Society;

Congressman Lynn E. Stalbaum, from the 1st District of Wisconsin;

Charles Donahue, Solicitor of the Department of Labor and former Research Director of the United Association of Flumbers and Pipefitters;

Congressman John A. Race from the 6th District of Wisconsin;

The Most Reverend Bishop Paul F. Tanner, native son of Milwaukee and the General Secretary of the National Catholic Weifare Conference;

The Honorable John F. Henning, Undersecretary of Labor;

Congressman Henry S. Ruess, past President of the Wisconsin State Society and Representative of the 5th District.

We had expected to have with us today at the head table Mr. Martin J. Ward, General Secretary-Treasurer of the United Association of Plumbers and Pipefitters, who was regrettably called away to Chicago yesterday by the untimely death of his father.

My Executive Committee directed that this presentation ceremony be bipartisan, and we are very fortunate to have received acceptances from the two Wisconsin Members of the House of Representatives who have the longest term of service for their respective parties.

Our Democratic Representative is a member of the Foreign Affairs Committee. It is my distinct pleasure to present Representa-

tive CLEMENT J. ZABLOCKI, Representative from the 4th District of Wisconsin.

Mr. Zablocki. Thank you, Mr. Hendrick-

Your Excellency, Bishop Tanner, our Honored Guest, my Colleagues, distinguished guests, this is truly a great privilege for me to be able to say a few words today as the Wisconsin State Society honors one of America's outstanding labor leaders and a fine son of Wisconsin, Peter T. Schoemann. Knowing you as I do—your vast energies,

Knowing you as I do—your wast energies, your broad range of interests and your searching intellect—it is not easy to select one or two topics to dwell on in the few minutes alloted to me.

Since this week in Congress we are considering the Foreign Aid Bill, I think it appropriate to 'dwell briefly on the contributions which Pete Schoemann and the American labor movement are making to American policies and programs abroad.

As you all know, the AFL-CIO has supported the President 100 percent on Vietnam and our efforts to block communist aggression there and everywhere.

Pete Schoemann has been one of the most outspoken of our labor leaders on this subject. He has frequently stated his support for President Meany's vigorous anticommunist stance on the part of American labor in international labor circles. Among labor leaders from other nations he has been a constant, effective proponent of U.S. policies.

To me, Pete Schoemann represents the dedication to the American way of life of the labor movement in this country.

Communism, as you know, has classically aimed its appeals at the workers of the world, promising them a paramount place in their "new society."

American labor has rejected these blandishments and, for the most part, has refused even to toy with the suggestion that there might be something to gain under communism.

At the same time, our trade unions have been in the forefront of the free labor movement of the world. They have tried to impress upon the workers in other countries the benefits which can be obtained through participation in a democratic system.

participation in a democratic system.

In short, Pete Schoemann and other American labor leaders have not been content to be merely anti-communist. Rather, they have made, and are making, vigorous efforts to promote free institutions abroad which can act as a bulwark against Marxist philosophies, and rarely has any effort had such success as that undertaken by the labor movement.

For example, the Foreign Aid Bill now before the House contains a provision for assisting labor's efforts at providing low-cost housing for workers in Latin America.

American labor has invested millions of dollars and much time and effort in demonstrating U.S. techniques for building, financing and marketing privately developed housing. In doing so our trade unions have helped alleviate a crying need for decent housing for Latin American workers.

But Pete Scheemann can tell you much more about this labor program than I can. He has been in the forefront of these efforts, as he has been in the forefront of other

progressive projects of American labor.

Because of his leadership, Pete has gained tremendous respect here on Capitol Hill and in the Executive agencies downtown. He has become well known in the past few years as one of the most vocal and effective spokesmen for the labor movement.

His fellow plumber and pipefitters are all indeed fortunate to have such an able leader, and a man who is unafraid to speak out courageously on those public issues which touch the welfare of his own membership and the entire labor movement.

It is our hope that this Citizenship Award

from your fellow Wisconsinites will—in some measure—express the general recognition which exists in Washington for the fine contribution which you, Pete Schoemann, are making to the labor movement and the progress of our nation.

Congratulations!
Mr. Hendrickson. Now, we are privileged to call upon Representative ALVIN E.

O'Konski, of the 10th District of Wisconsin.
Mr. O'Konski. Mr. Chairman, distinguished guests and my colleagues in the House: After the very appropriate remarks made by Clem, I think that any words will merely be supplementary to the wonderful thoughts that he has expressed.

It is a great privilege for me, Pete, to be here and to take part in the ceremonies honoring your great service and your great contribution.

Just because we are honoring and awarding you today doesn't mean we are asking you to quit and to give up. You are still young in spirit, you are still young in heart, and you still look young.

Pete, people of America, people of Wisconsin, and people of the world I think have good memories of your dedicated services to mankind.

You know it is an accomplishment to be singled out in your life for a single accomplishment. It is an honor to be designated as a great labor leader and to be designated so in one field. That in itself is honor enough. But when you have a man who is singled our not only for his contribution to labor but for his contribution to another field of activity, then I think that is a real achievement and real accomplishment.

Peter is known in the field of education for his accomplishment in that field just as he is known for his accomplishment and achievement in the field of labor.

achievement in the field of labor.
There are hundreds of thousands of young people in America today who are enjoying the privilege of education because Pete was a forerunner in that field. Because Pete felt what good does it do to bring all these emoluments to labor if they don't have the privileges and benefits of getting the fruits of that labor, namely, getting their children adequate education.

One of the reasons the United States of America ranks as high as it does in the field of vocational education is because of the pioneering spirit and the tenacity of Pete Schemann over here the man we are honoring today. He started in the State of Wisconsin where he is not only known as a labor leader but as a leader in education as well.

Incidentally, I first heard about Pete Schoemann not about the labor movement, I heard about his work in the field of education in Wisconsin. He was on the school board of Milwaukee. I believe he is the only living—or dead—citizen of Wisconsin who has been honored by three governors of three different parties. Ordinarily most states have only two parties. We have three. Wisconsin always offers more.

But here was a man singly honored not by one governor of one party but honored by three governors of the State of Wisconsin that needed his consultation and work and his effort in the field of education.

I just want to say to be recognized in the world for just one achievement is a good thing but when a man is recognized for the things you have done in the field of education, besides the things you have done in the field of the labor movement, it is a double honor.

I am privilege indeed to stand before these people and pay tribute to you and pay you honor. You deserve it. No man deserves it more.

Apart from his direct activities within the labor movement, Pete Schoemann's favorite extracurricular activity—if I may call it that—has certainly been his interest in edu-

cation; and this is of particular interest to me as a former teacher.

Many years ago, when he chose to become active in politics in Milwaukee, his interest in education led him to choose membership on the school board as a target of his efforts. He was a member of the Milwaukee Board of School Directors for 21 years and was twice president of the Board.

His involvement has included all kinds of education, both academic and vocational, and at all levels.

For 18 years, he was a member of the Wisconsin State Board of Yocational Education, serving under Wisconsin governors of three different political parties. He was also president of the Board for seven years.

Long before he came to Washington, then, in order to take over as president of his own international union, Pete Schoemann had captured the spirit of organized labor's traditional spirt of as much education as possible, and for as many people as possible, in the United States.

President Meaney of the AFL-CIO made an excellent choice in selecting Pete Schoemann to be the Chairman of the AFL-CIO Committee on Education, in which capacity he often appears before committees of both Houses of Congress to present the AFL-CIO's position on various education bills.

Once upon a time, it seemed that the barriers to eventual passage of federal aid to primary and secondary education were practically insuperable. Those barriers have finally been broken down, and for this achievement, the school community-the school boards, the supervisors, and the teachers—owe a lasting debt of gratitude to their friends in the American trade union movement who kept up the fight year after year and never gave up in the face of what amounted at times to very discouraging odds. This persevering and very effective assistance is personified in labor leaders like Pete Schoemann who long ago recognized that it would profit little to achieve better wages and shorter hours and improved working conditions for themselves, if they could not help their children prepare for a richer and fuller life than they themselves had known.

Peter Schoemann's dedication to improvement of the educational system has always been reflected in his constant efforts to improve the quality of apprenticeship training for members of his own union. The high value he has placed on continuous training for skilled craftsmen has resulted directly in new and improved programs of training for journeyman members of his union as well.

Today, the apprentice and journeyman training system of the United Association of Plumbers and Pipe Fitters in conjunction with employers at both the national and local level is rightfully considered one of the very best, if not the best, in this country.

Two characteristics of Pete Schoemann's fight for bigger and better apprenticeship programs deserve mention. One is his resistance to substitute methods of training in the form of spot training in some few skills of the trade for a shorter period of time than the full five years which his craft requires. Secondly, there has been his insistence that apprenticeship and journeyman training are primarily matters for joint labor-management determination and control; and that while government assistance is welcome and profitable and even deserved, the nation's various systems of apprenticeship training must never become comprehended into, and consumed by, sh overall governmental manpower program.

By way of proving this latter point, his international union under his direction has established in conjunction with large interstate or national construction firms a very interesting trust arrangement known as the International Training Fund. Although, in the construction industry, apprenticeship is

locally directed and locally financed in the first instance, it is the role of this Fund to assist local training programs through direct financial grants, and also by maintaining a corps of five full-time technical experts in the field whose job is to help local apprentice committees improve the quality of their training. I understand that this International Training Fund has made grants totalling more than \$B million in the ten years it has been in existence, and that all of this money was contributed in the first place by employers of union plumbers and pipefitters.

This emphasis on the rightful place of private enterprise in the total American scheme of things is an example of Pete Schoemann's political and social philosophy. American trade union movement today is distinguished from labor organizations in many foreign countries by the fact that it believes in the fundamentals of the capitalistic or private enterprise system. Schoemann, however, is one of those American labor leaders who stands out by being unafraid to say just that; that is, he is not content to give lip service to such things as private ownership of the means of produc-tion, competition in the market place, and the right of business owners to a fair profit, while relying largely on government initiative to solve our big social problems. He fre-quently speaks out on the rightful role of business and labor in solving some of these problems, not merely as following the leader-ship of public officials, but sometimes as taking the initiative.

Lastly, any tribute to Pete Schoemann at this time from a Republican would be incomplete without mentioning his outspoken insistence just within this past year greater political independence for the labor movement. Labor has always maintained a formal or technical kind of political neutrality, and every now and then supports a Republican. I myself am very proud of the constant and loyal support I have received from union members and their chosen leaders in my own congressional district. Sometimes though, we are led to believe that it is almost futile for a Republican member of Congress to vote for what he conscientiously believes is the real welfare of the working men and women of this country, because his Democratic opponent in the next general election is sure to take what is sometimes called a more "liberal" stand on certain issues, and this alone will be sufficient to win him the endorsement of the labor move-

Pete Schoemann has lately pointed out, in connection with the fate of the 14(b) repeal and the situs picketing bill, that "liberal" and "pro-labor" do not always mean the same thing. I believe this point is very, very well taken and heartly recommend this consideration to other leaders in the trade union movement. I believe we are beginning to see the signs of an awakening to this political truth. I believe we saw that during the AFL-CIO Executive Council meeting this past winter down in Miami. I believe we saw that also during the National Legislative Conference of the Building and Construction Trades Department held here in Washington this past March. Most assuredly, liberal and pro-labor are not the same thing, and they who are mostly intent upon securing enactment of a long list of welfare programs are not necessarily they who recognize the need for legislation that will stimulate organizing initiative on the part of labor and enable labor to better serve the welfare of its membership at the bargaining table.

Mr. Hendelcheson. At this time I would like to call upon Congressman Hendel Revise of the 5th District to make a special presentation to our distinguished guest.

Mr. Revss. Thank you very much. Reverend Clergy, colleagues, brothers and sisters: Wisconsin is illustrious for its cheese, renowned throughout the world for its beer, but there is nothing of which it is prouder than its great, clean, progressive labor movement. And no man has brought more luster to that movement than that peerless plumber, that sterling steamfitter, that genial journeyman. Pete Schoemann.

A lot of us in Milwaukee, when Pete left for bigger things in Washington a dozen years ago, were fearful that this might gn to Pete's head, that he would forget his old friends in Wisconsin and the problems of Wisconsin. But as the history of the last dozen years demonstrates, he has not forgotten us. And we have not forgotten you, Peter.

I have the privilege of presenting on behalf of the Wisconsin State Society to you, Peter, a flag of the United States which has flown over the United States Capitol. If anyone doubts that fact, I have in this packet a letter duly signed and subscribed to by J. George Stewart, Architect of the Capitol, saying it has flown over the West Wing of the Capitol. It may be the last flag ever to fly over it. [Laughter.]

I know, because the love of your country

I know, because the love of your country has been your great philosophical characteristic all your life, that this flag will ripple proudly over the Schoemann home and illuminate your love for your country—and I hope, sir, remind you that Wisconsin loves

On behalf of the Wisconsin State Society I proudly present this flag to you.

Mr. Schoemann. Thank you very much.

Mr. Scholmann. Intank you very much.
Mr. Hendercken. Some months ago the
Wisconsin State Society thought it would be
an excellent idea to have a suitable award or
citation to confer deserved public recognition
on distinguished citizens of our State. We
felt that since we were the Wisconsin State
Society of Washington, D.C., that our recipient should be a person who has distinguished
himself in some way, both in our home State
and also here in the Greater Washington

The man we selected to receive our Distinguished Citizenship Award certainly fills the bill on both counts. He was a leading citizen of the City of Milwaukee and the state of Wisconsin, not only in his chosen field of labor union leadership, but in a number of other civic activities as well. all that behind to come here to Washington to become a top executive official of his own international union. His union, The United Association of Journeymen and Apprentices of The Plumbing and Pipefitting Industry, s been known for many years as an organization which was willing to try bold new experiments in labor management relations. It is a union which in the past has been in the habit of producing national leaders. Among its members have been numbered the late Senator Patrick V. McNamara from our neighboring State of Michigan, who passed away just this year; also, the late Martin P. Durkin from another of our neighboring states, Illinois, who was Mr. Schoemann's predecessor as president of the union and the first Secretary of Labor under President Eisenhower. Another outstanding member of the same union is Mr. George Meany, the first and until now the only president of America's merged labor federation, the AFL-CIO.

I would like to mention also that we are most happy to have with us today still another of Mr. Schoemann's fellow union members, Mr. James A. Brownlow, who until his retirement was president of the Metal Trades Department, AFL-CIO.

For the rest, I think I will let this scroll

tell its own story.

The scroll says: "The Wisconsin State Society of Washington, D.C. Presents to Peter T. Schoemann its Distinguished Citizenship

"Whereas Peter T. Schoemann is a native son of the State of Wisconsin, having been born in the City of Milwaukee, where he received his formal education and his apprenticeship training in his chosen calling, the numbing trade; and

plumbing trade; and
"Whereas he labored faithfully at that
trade in Milwaukee for many years; and
"Whereas he answered the call of his

"Whereas he answered the call of his brother journeyman plumbers to serve their interests as an officer of Plumbers Local Union 75 of Milwaukee for eighteen years; and

"Whereas he occupied an influential role in building up the city of Milwaukee by serving as President of the Milwaukee Building and Construction Trades Council for some twenty years; and

"Whereas he was not content to confine his abilities and influence to his home town alone, but played an active role also in his international union, serving as an elected official of that body from 1928 continuously to date; and

"Whereas dearly as he loved the labor movement, he was unwilling to allow it to become the sole focus of his attention, but instead devoted himself to the general welfare of his fellow Wisconsonites by serving on, and sometimes chairing, such bodies as the Milwaukee Board of School Directors, the Wisconsin State Board of Vocational Education, and the Housing Authority of the City of Milwaukee; and

"Whereas in 1955, he was chosen General President of one of America's largest and most influential trade unions, the United Association of Journeymen and Apprentices of the Piumbing and Pipe Fitting Industry of the United States and Canada, a position to which he has been twice re-elected unanimously by conventions of that body; and

"Whereas in the exercise of his high office, he has given the American trade union movement a constant and faithful example of wisdom, courage and administrative excellence; and

"Whereas he has never allowed his necessary involvement in large national and international issues to cause him to forget that the welfare of his brothers is grounded upon protection of his union's work jurisdiction and continuous training; and

"Whereas he was most instrumental in preserving and reshaping the National Joint Board for the Settlement of Jurisdictional Disputes in the Building and Construction Industry, for the purpose of keeping intraindustry disputes in private hands where they belong and

they belong; and
"Whereas he has encouraged and promoted
the extension and improvement of apprenticeship training, the only adequate form
of training for preparing a journeyman to
work at his trade; and
"Whereas under his guidance, the United
Association cooperated with national contruction forms to extensible the Interna-

"Whereas under his guidance, the United Association cooperated with national construction firms to establish the International Training Fund, an altogether unique institution for the purpose of providing financial and technical assistance to training programs for apprentices and journey-

"Whereas by establishing the International Training Fund, both the United Association, under his leadership, and the national construction firms have provided a model which other skilled crafts may well follow in training the craftsmen needed by American industry, thereby saving American taxpayers millions of dollars annually; and

"Whereas as a Vice President of the AFL-CIO, he has fought a vigorous campaign for an American labor movement, whose affillates are unified in purpose and free to pursue their individual members' needs; and

"Whereas his ability and interest in international labor affairs have led to his twice being appointed as a labor advisor to International Labor Organization conferences, and as an AFL-CIO delegate to a Congress of the International Confederation of Free Trade Unions; and "Whereas his knowledge, skill and authority within the labor movement have caused him to be named to such bodies as the Atomic Energy Commission, Labor Management Advisory Committee, the National Manpower Advisory Committee, the Advisory Committee on Vocational Education, and the Missille Sites Labor Commission; and

"Whereas in all of his service to various private and public interests, he has kept steadfastly before him the truth that labor is not the same thing as government, while business is different from both; so that while he has shown a capacity for tempering private demands in the light of public necessity, he has refused to equate labor statesmanship with a forgetfulness of the needs of those who elected him to union office; and

"Whereas especially by this means, he has provided an example of leadership that is a bulwark of American democracy, wherein the state is not the whole of Society; and

"Whereas he has, for all the causes above recited, reflected glory and honor upon his native State of Wisconsin, and endeared, himself to his fellow Wisconsinites who now reside in Washington, D.C.: Therefore, be it "Resolved, That on this thirteenth day of

"Resolved, That on this thirteenth day of July in the year of our Lord the nineteen hundred and sixty-sixth, and of the state-hood of Wisconsin the one hundred and eighteenth, the Wisconsin State Society of Washington, D.C. hereby confers its Distinguished Citizenship Award upon Peter T. Schoemann, with all the rights and privileges consequent thereto."

Mr. SCHOEMANN. Most Reverend Bishop Tanner, Honorable Congressmen, Mr. Toastmaster, Members of the Wisconsin State Society of Washington, D. C., my Colleagues and Friends:

I am deeply grateful for this honor you have paid me, and I cannot tell you how much pleasure it gives me to accept this award here in the company of so many friends from the labor movement and from the State of Wisconsin, with whom I have been associated for many years. It is a special honor to accept this award

It is a special honor to accept this award from my two good friends of many years standing, the distinguished Congressmen who have the highest seniority rank among members of their respective parties in our Wisconsin congressional delegation, CLEM ZABLOCKI and AL O'KONSKI. Both of them are friends of the working people of this country, and both have stood up time and time again to be counted on issues where the welfare of all our citizens was at stake.

Incidentally, the same goes for the man who earlier made the presentation of the flag that flew over the Capitol, that dedicated and very able Representative from Milwaukee, Henry REUSS.

Thank you too for all the good wishes for a successful convention which so many of you have expressed to me here today.

I am especially pleased by those words in the scroll which say that labor statesmanship is not the same thing as forgetfulness of those who elect you to office. When you say statesmanship, you immediately suggest the relation of the individual citizen to the state and government at various levels, and you also suggest the relation of the individual to his community at various levels. There are situations where the overriding concerns of the larger community require us to curb our own particular aims and ambitions, but we do not always arrive at the goal by forgetting our own special interests from the very beginning. I wonder whether we have not become so cynical in our view of certain things which go on here on Capitol Hill, for example that we miss the deeper meaning in a complex process that makes our American democracy work.

Thus, labor unions, business interests, farm interests, the school lobby and all the rest are often described as pressure groups for special pleaders. Statesmanship for

their representatives is supposed to consist in forgetting their own special aims to take the broader, general welfare viewpoint.

In the field of economics, we once had the unseen hand of Adam Smith. The theory was that, if everyone sought his own maximum gain most selfishy, then by the operation of an unseen hand the selfishness of all would produce the greatest good for all. During the years of the Great Depression, if not before that, we finally learned that the hand was not only not seen, it simply wasn't there.

Could it be that the pendulum has now awing too far in the opposite direction? Could we be missing the important lesson that the general welfare is sometimes very well served by those seeking their own private interest, that sometimes it cannot be well served in any other way?

So, the better job one makes of his own talents and his own possibilities, the more he has to contribute to the general welfare.

Furthermore, proposals made in the name of public interest are not always what they claim to be, and unless they are subjected to the criticism which spring from private interest, what we could end up with is a great collection of foolishness enacted in the name of the general welfare. Special pleaders then serve as devil's advocates to make our public-spirited servants prove their case.

Perhaps our great public policy debates are somewhat similar to the situation we have in a courtroom. The judge is there to serve the administration of justice, but so are the lawyers for the plaintiff and the defendant. The judge does it by being an impartial judge; the lawyers do it by being the most persuasive advocates they can be for their own respective clients. To get the whole job done, we need the impartial judicial decision of the judge, and we also need the special pleading of the attorneys for both sides. For one thing, justice cannot be served unless the litigating parties get everything that is coming to them, and to get that they have to fight for it. For another, on a given question it can happen that the judge is wrong while one of the special pleaders might be right.

And so it happens that our private groups can serve the general welfare by making out the best case they can for their own special interest. Since the start of this year, a number of such issues have come up involving my own and other unions.

One such issue is that of the wage guidelines we are supposed to be acting in the public interest if we keep negotiated wage gains within the guidelines, and contrary to the public interest if we exceed them. But is it in the public interest, given our free enterprise economic system, for labor organizations to bow their heads meekly to a decision in which they had no opportunity to participate, and which is dictated unliaterally by an agency of the government? I say no, not of the whole government, but only of its administrative branch. Much the same can be said of business firms on the question of price decisions that are made.

Another such issue would be the relation of federal manpower policy to the institution of craft apprenticeship. It is alleged that apprenticeship, in its present state, cannot provide the skilled craftsmen needed by American industry, and that therefore those who sponsor apprenticeship should permit and even encourage the establishment of every sort of less-than-apprenticeship training program. To do so is said to be in the public interest, and to obstruct the new development, so it is argued, can proceed only from motives of selfishness.

Our argument with this position is that its wisdom does not equal its sincerity. It overlooks the truth that even now many gain entrance to the skilled crafts without apprenticeship preparation, and that some of them do not survive very long; that many of

those who leave the skilled trades were not totally without training, but rather did have some kind of vocational school or technical institute training, approximately the equivalent of what they would receive under many of these manpower training proposals.

take another example, the racial issue is indeed a serious national issue, and the achievement of full racial equality and racial justice would be a precious national asset. But have we not other precious national assets which need not be torn up and consigned to the rubbish heap for the sake of solving this one problem in social justice? The school system which does not discriminate on racial grounds would be a precious national asset, but so—I would argue—is the neighborhood school, provided it is not used as a cover-up for discrimination. It is good and right that our society provide everyone a full and fair opportunity to work at the occupation of his choice, but so is the requirement that a person make some effort on his own part to obtain the occupa-tion that he chooses to follow.

there is a selfishness and a selfcenteredness that is disruptive of the community, so is there a well-regulated love of one's own self and one's own group, and a socially necessary campaign for self-interest, both personal and collective.

Again, I want to express my appreciation to the officers and members of the Wisconsin State Society of Washington, D.C., and to everyone here present who has played a part, large or small, in these various activities that are recorded in this handsome scroll you have presented to me, and that was

made possible by my activity in my labor organization that I love so dearly.

This scroll will occupy a place of honor in my office and be a constant reminder in my few remaining years of the inspiration and encouragement I have received over these many years from my fellow Wisconsinites.

Thank you very much. Mr. HENDRICKSON. At this time I would like to call on Honorable John F. Henning, Undersecretary of Labor.

Mr. Henning. Mr. Chairman, Friends: I am honored to be here in joining in this tribute to Pete Schoemann,

The mere mention of the name Wisconsin recalls some of the great progressive tradi-tions of American political life. In fact, I think we can agree that in the years between the turn of the century and the First World War, Wisconsin was perhaps the most enlightened, the most active of all the states in terms of social legislation.

Wisconsin was the first state in the union to acknowledge the coming of the Industrial Revolution and establish those industrial laws which would protect the worker against the abuses of the factory system. And it is only proper that a state with such traditions should honor Pete Schoemann.

Pete is President of one of the greatest trade unions of America. In fact, by family tradition I am compelled to say he is President of the greatest labor union in this na-

Pete, I would meet another loyalty test. I must say that you head the second most skilled craft in America. The first, of course, being the lathers. The lathers of Los Angeles and Boston where Neil Haggerty worked his trade.

It is a great tribute that Wisconsin provides to Pete Schoemann today. It is a magnificent thing. Pete has given the great years of his adult life, the great productive years of his life, and he gives them still, to the national interest and the cause of the American worker. He has achieved wonders for the people he represents but above that he represents the independence and the integrity of the American trade union move-ment. Pete Schoemann and men like him have made the AFI-CIO the greatest trade union organization in the history of the

Mr. HENDRICKSON. At this time I would like to call upon Congressman John A. RACE for a presentation to our distinguished guest. Mr. RACE, Thank you, Mr. Chairman,

Honorable Bishop, Our Honorable Guest today, My Colleagues, Members of the Wis-consin State Society and Officers and Members of the different union organizations present.

Pete, it is a distinct honor to be with you today and I want to personally congratulate you. I feel very akin to you. I happen to have been a member of the Machinists for the past 25 years. I have served on the State Board of Adult Education of Wisconsin recently, and I see our background is similar. I don't think I will ever be a president of an international, but being a Member of Congress is another honor. I hope to stay here awhile.

I have a letter here, Pete, from the Wisconsin Congressional Delegation, which I would like to read:

"Mr. PETER T. SCHOEMANN,

"General President, United Association of Plumbers and Pipe Fitters, Washington, D.C.

"DEAR PETER: The Wisconsin Congressional Delegation wishes to take this occasion to thank you for the honor you have brought to our State, the Labor Movement, and the

"We know that you are one of the great leaders of the Labor Movement. We also know of your contribution in the field of education, both academic and vocational. For eighteen years you were a member of the Wisconsin State Board of Vocational Education serving under Wisconsin Governors of three different political parties.

You believe that democracy demands wisdom of the average man. Without the exercise of wisdom, free institutions and personal liberty and inevitably imperiled. For this, we thank you.

"In the exercise of your high office, you have given the American Trade Union Move-ment a constant and faithful example of wisdom, courage, and foresight. imparted to the familiar language--what too many have come to treat as the cliches of Christianity-a new poignancy and vibrance. You did not do so by reciting them, but by proving that it is possible to live them. "Because much work remains to be done,

we hope that you will be with us a long time. The people of the Labor Movement need your services, the young people of America need your example of selfless dedication, and we need your friendship and counsel. not only wish you success in your approaching Convention, we predict it.
"With kindest personal regards, we are

"Sincerely yours,
"Senator William Proximes, The Hon-orable Senator Gaylord Nelson of Wisconsin, Congressman LYNN E. STALBAUM, Congressman ROBERT W. KASTENMETER, CONGRESSMAN VERNON W. THOMPSON, CONGRESSMAN CLEMENT J. ZABLOCKI, Congressman HENRY S. REUSS, Congressman JOHN A. RACE, Congressman MELVIN R. LAIRD, COngressman John W. Byrnes, Congressman GLENN R. DAVIS."

And also last but not least, the dean of our Congressional Delegation, "Congressman ALVIN E. O'KONSKI."

Mr. Schoemann. Well, this is a very pleasant surprise. I am deeply moved and sin-cerely grateful to both Senators and all of the Congressmen from my home State for the kind sentiments and good wishes expressed in this letter.

And I am deeply pleased to accept it from such a fine, outstanding young Congressman as John Race. John may your performance during this 89th Congress mark the beginning of a long and successful career here in Washington. Thank you again.

Mr. HENDRICKSON. We have men from all walks of life and the labor movement with

us. I would like to introduce a Federal Judge

who is a member of the Wisconsin State Society, Jim Durfee.

I want to thank Bob Shafer, Charlotte Norris, Bob McMillen of the United Association who is on Pete Schoemann's staff, Larry Gilbertson, Past President and Awards Com-mittee Chairman of the Society, Dick Nelson and John Loomis of the committee, as well as Carm Dye and Sukey Wray.
At this time I would like to close by call-

ing on Bishop Tanner before he gives his benediction to tell us of a little sidelight on our honored guest.

Bishop TANNER. This will only take about a minute but it is a story that I think is important to illustrate Pete's character.

There aren't many people in this room who were adults in 1932, the black, desperate days of the depression. At that time I was in youth work in Milwaukee and we were graduating a class of about 75 union men from law school who could probably earn \$75 a month any place in town. Pete gave them a talk and an opportunity which I regret to say they didn't take. It amounted to this: He wanted them to get jobs in a shop and not to mention they ever went to high school, and above all that they were graduated lawyers, but to work themselves up to be shop stewards and after that Pete would pull them up in the labor movement.

I have never forgotten it because in those days a union wasn't very popular and unions needed intelligent leadership. And Pete had the intelligence to offer it.

(Benediction).

Will Two Huge Power Dams Improve on Nature and Beautify the Grand Canyon?

EXTENSION OF REMARKS

OF HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1966

Mr. REUSS. Mr. Speaker, the advocates of building two huge power dams in the Grand Canyon are underestimating the Nation's devotion to its great natural heritage.

Proponents of the dams say that the miles-long reservoirs the dams would create are acceptable because they could not be seen from the most traveled highways or from the point where most people now look into the Grand Canyon.

In fact, motorists can reach the rim of the canyon at Toroweap only to look down—if the Bridge Canyon Dam is built-into a dead storage reservoir.

Recently I have noted a letter in the Arizona Republic, in which M. E. Bernard, of Phoenix, argues that areas of the Grand Canyon which are not usually seen by a majority of the visitors are fair game for destruction. care less," he says. "Tourists could

Sometimes this argument is carried a step further with the contention that the Grand Canyon would be enhanced by the two dams, creating easy boat access into the canyon for the multitudes.

This argument persists despite the known hazards of boating on reservoirs surrounded by the sheer walls of the canyon and the Bureau of Outdoor Recreation's assertion that no new recreational benefits can be expected from the dams

In a letter to me of June 24, J. M. Clint of Phoenix says:

I ask you what difference a rise of five or six hundred feet in the water level behind e dams will make in the canyon's natural beauty. I'll answer my own question and tell you that far from defacing or ruining or detracting from the beauty of the canyon. the lakes will improve and add to its grandeur. Envision it for a moment.

Yes, let us envision the difference between two manmade dams and their reservoirs and the natural canyon created by time and the river flowing.

Dams and reservoirs we can and do ave in number. But the Grand Canhave in number. yon is unique and irreplaceable.

Congress and the American people have committed themselves to the proposition that there are some parts of our country that should be preserved as nature made them-regardless of whether they are seen and visited by masses of people. Indeed, the preservation of some areas in their natural state requires that they not be developed for mass use. The Wilderness Act which Congress passed after long and careful consideration reflects a deep concern by Americans for what happens to the areas out of sight

Americans have wisely decided to protect and preserve wild portions of our landscape. Let us make certain that the Grand Canyon, one of our greatest nat-

ural creations, is among them. In claiming that the dams will beau-tify the Grand Canyon, it is clear that the proponents of the project are groping for arguments.

In order to present the full arguments contained in the letters I have mentioned. I include these letters hereafter.

I include also the letter of June Terrin, of Winslow, Ariz., who argues that unless the dams are built we may all starve. As is well known the proposed dams are in no way necessary to provide the additional water needed by the farmers, cities, and industry of Arizona.

Entros, the Arizona Republic: Attention: Rep. Henry S. Reuss, Demoerat of Wisconsin:

Of all the millions who have seen the Grand Canyon, only a few hundred have seen more than the few miles of the Colorade River and then just a glimpse of it here and there. Most tourists see only a few spots that are near the hotel and main lookout

In their mad dash across Arizona on U.S. 66 they dash in from the Williams entrance and dash out the same way. Some have en-tered from the Cameron side which is on ate 64 and a very interesting drive if one

takes the time to stop now and then.

Thousands more have seen the canyon from the north rim.

However, tourists could care less if a dam was built below for they do not want to was built below for they do not want to delay their trip to Las Vegas or to California, or to the old homestead back East. So, it boils down to the old shell game in Washington: What's in it for me?

M. E. BERNARD.

PHOENIX, ARIE., June 24, 1966

Hon. HENRY S. REUSS. House Office Building, Washington, D.C.

DEAR Mr. REUSS: I just read in this morning's issue of the Arizona Republic that you had used "letters of protest" written to the local newspapers, by Arizona residents, against construction of the Bridge and Marble Canyon dams, to show a barrage of pro-tests from Arizona residents.

There were letters of protest from some Arizona citizens against the construction of these dams, and if there was any way for you to investigate and learn, you'd discover they were all of the same stripe as the fanatics of the Sierra Club. You should also know too, that ninety-eight percent of the citizens of this state are for the dams and the resultant additional water they will eventually provide.

Now, about the argument of the Sierra Club that these dams will ruin the Grand Canyon. The contention is completely wrong; in fact the construction of the dams and formation of the lakes behind them will enhance the accessibility of the canyon by providing an easy boat-route to more points where its awesome grandeur can be observed and contemplated. Undoubtedly you are already aware that this canyon is a mile deep. I ask you what difference a rise of five or six hundred feet in the water level behind these dams will make in the canyon's natural beauty. I'll answer my own question and tell you that far from defacing or ruining or detracting from the beauty of the canyon, the lakes will improve and add to its grandeur. Envision it for a moment.

I'm as avid a conservationist as anyone, but I cannot agree with the intemperate ac-cusations brought against this program. Any thinking person will immediately understand the great, and very great benefits to be realized by the human population of the west from the water and electric power provided. There is a definite shortage of both. And all of this and more from a project that will bring more beauty to the canyon rather than destroy it, as sometimes claimed.

I understand that most of your eastern rivers are becoming more noxious daily because of pollutants, both human and industrial, being dumped into them. I recom-mend this to you as a problem for your at-tack. I am confident you will have the fullest support of all our representatives in Washington.

Most sincerely,

J. M. CLINT.

EDITION, THE AREZONA REPUBLIC: Mrs. E. B. Barnett (letter June 25) would disregard the needs of the farmer here in Arizona. After all, they are a mere 0.6 per cent of the population of Arizona. Let's just eliminate that group completely as her letter seems to suggest. And as she emphasizes, tourism is so much more important and we, in Arizona, can then depend completely on that industry.

But I would like to ask one small question. What does she propose we eat? Especially if all the other states decide Arizona has a good thing going and proceed to treat their farmers likewise.

JUNE TERRIN.

WINSLOW.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting re-ports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Frinter, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publica-Additional copies of Government publica-tions are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a,

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracta from the Congressional Record, the person ordering the same paying the cost thereo. (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

One Hundred Young Men Attending West Virginia's Fourth Annual National Youth Camp Hear President and Vice President During Tour of Nation's Capital

EXTENSION OF REMARKS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Friday, July 15, 1966

Mr. RANDOLPH. Mr. President, the annual National Youth Science Camp, a permanent outgrowth of the West Virginia centennial celebration in 1963, is held in scenic Pocahontas County, near Greenbank, W. Va. The camp is op-erated by the State of West Virginia and West Virginia University, and is under the direction of Charles N. Cochran, professor of mathematics at the university.

n-

Each year two outstanding scienceoriented young men represent each State at the camp. Delegates are selected on the basis of academic achievement and scientific knowledge.

Annually, the camp participants are brought to Washington to supplement the 3 weeks which are spent in camp activity ranging from work with computers and telescopes to group singing and sports participation.

This year's Washington visit was highlighted by two significant events on Wednesday-one a luncheon at which Vice President HUBERT H. HUMPHREY addressed the 100 young men who were guests at the event over which I was privileged to preside. A number of Senators jointed us for the occasion and heard the Vice President remind that the wonders of science can be applied to

create a better life for man. We were also pleased to have had with us James E. Webb, Administrator of the National Aeronautics and Space Administration, and Dr. Glenn T. Seaborg, Chairman of the Atomic Energy Commission, both of whom have been our guest speakers in previous years.

Immediately following the luncheon, the students were transported to the navy yard where President Lyndon B. Johnson was dedicating a new research ship, the \$9.2 million Oceanographer.

The President acknowledged the presence of the young men by referring to the 100 outstanding high school science students who have joined us here today from all over the United States."

The President told them:

I hope there are among you some of our oceanographers of tomorrow. You could not choose a more important and challenging

President and Mrs. Johnson greeted and talked with the campers individu-

ally. Certainly, it was a thrilling day for

our young guests.

Mr. President, I ask unanimous consent that the speeches of President Johnson and Vice President HUMPHREY be inserted in the Appendix of the RECORD.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

ADDRESS OF VICE PRESIDENT HUBERT HUM-PHREY, NATIONAL YOUTH SCIENCE CAMP, WASHINGTON, D.C., JULY 13, 1966

I am glad to see you here sharing your interests and exchanging your knowledge. Science brings men together. It has brought men together over the centuries across the boundaries of nations, races and generations.

Today, in America, we see a spirit of creative cooperation fostered by the quest for scientific knowledge. One of the rewarding experiences that has come to me, as chairman of the Space Council, has been to see universities . . . the many departments of government . . . labor . . . large and small businesses all working together to achieve our common goal-mastery of space.

With this and other similar examples to serve as a model, we must try to harness our divergent and separated resources, and our energies, to solve the problems of our earthly environment—problems of housing, of health, of education, of transportation . . . yes, and problems too of defeating poverty, injustice and discrimination,

and of keeping the peace.

These problems are of immense magnitude. But if we create the science needed, discover the relevant knowledge, apply the best technologies, and utilize all our resources, each of these problems turns into an exciting opportunity to make life better.

A mathematician told me recently that, in his field, if a man or woman did not contribute some significant result before age 30—it was too late.

While I think he may have been exag-gerating for effect—he assured me he was not. He was an old fogey of 33.

The truth is that scientists in their 20's and 30's are in important positions in our scientific programs. I expect that in the nex tiew years I will be able to say the same

It took mankind 200,000 years to emerge from the Stone Age.

It took another 10,000 years from the first use of metal tools to the Industrial Revolution, now hardly a century old.

Two key exhibits in our Smithsonian In

stitution vividly illustrate the dramatic acceleration in the tempo of progress. One is the first commercial computer, only 17 years old. The other is astronaut John Glenn's space capsule, only four years old, but already a museum piece.

If any age can lay claim to being a golden age, of adventure and discovery, ours can. Yet we have barely begun.

Here are some of the developments we can look forward to within the next 20 years.

In agriculture, the large-scale use of desalinated sea water.

In medicine, the transplantation of nat-

ural organs and the use of artificial ones.

In psychiatry, the widespread application of drugs that control or modify the personality.

In education, the use of more sophisticated teaching machines.

In worldwide communication, the every-day employment of translating machines.

In industry, the extensive use of automa-tion, up to and including some kinds of decision-making at the management level.

In space, the establishment of a perma-

nent base upon the moon.

Some of you might say that there is nothing very surprising here. And you would

Experience shows that it takes 10 to 30 rears for a new idea to make its way from its inception in a scientist's mind to its general application in everyday life. Therefore, the world of 20 years from now already exin embryo, in today's advanced res establishments.

For the year 2000 however, we can foresee some really far-out developments.

The virtual elimination of bacterial and viral diseases.

The correction of hereditary defects

The stepping-up of our food supply through large-scale ocean-farming and the fabrication of synthetic proteins.

Control of the weather, at least on a re-

In space, the landing of men on Mars and

the establishment of a permanent unmanned research station on that planet. The creation, in the laboratory, of primi-tive forms of artificial life.

This can indeed be an age of miracles. It will be your age.

Your federal government is committed to working with you to help bring about a bet-ter tomorrow. The amount of the budget which is devoted to support of research and development has been the fustest growing item in the federal budget.

I have heard it suggested that this is a result not of public officials learning about science, but of scientists learning about politics. In fact, I think it has been a bit of both: The nation and its store of knowledge have been the beneficiaries of this mutual

learning process.

The percentage of funds for research and development has gone up from about 25 per cent of the monies to support science in 1957 to about 40 per cent in 1965.

Since you have a mathematical back-ground, you know that these percentages tell you nothing about the absolute dollar mag-

So I feel I must add that the 1957 figure is 25 percent of 3 billion dollars and the 1965 figure is 40 per cent of 15 billion dollars.

The funds available for scientific research have increased in the last 8 years by a factor of B

Of course, the costs of doing scientific research increase very quickly as scientists ask more sophisticated questions of nature, and expect answers which are much more precise. Probably the most drunatic example of this is the decision to build an atom smasher with the power of 200 Bevatron (billion electron volts) at a cost of approximately 300 million dollars.

Since this item and many others are be yond the financial limits of any of our universities, and since the benefits are for everyone, it is only right and proper for the federal government to play its role and it will continue to do so.

Research costs more. There has also been a change in the strategy of research.

I return, for my example, to our space program.

I have logged over a quarter of a million miles in looking into various aspects of our

space program.

The discovery of the structure of space has required new theories, new instruments, new materials and techniques. We have begun to experiment on a vast scale and we are only now at the threshold. The impetus which the space program has given us has led to advances in education, medicine, electronics, and many other fields.

And this has increasingly been done-I pointed out before-through the creative development of many programs, involving many disciplines and many scientists, carried out not only by government but by all

sectors of our society.

The value of our coordinated assault on the unknown has given us the impetus to extend our knowledge in other places. Luckily, for

me. I am again involved.

I have recently been appointed chairman of a newly created National Council on Ma-rine Resources and Engineering Development which will look at the state of our knowledge of the oceans to see what kind of national program is needed to extend and utilize our knowledge of this inner space. We are now the position where current exploration and theory has revealed how little we know and has suggested the vast benefits which may be possible.

The oceans cover 70 per cent of the earth's surface and hold untold wealth. Maybe it is

time we took the plunge.

I have only touched today on some of the challenges and opportunities that lie ahead. But I will go no further. I would like to close by having a brief personal word with

I have heard it said that science is a cold and unemotional career.

We know better.

The world of science is the world of man's greatest adventure. It is an adventure far beyond that begun by Columbus or by Alex-

ander the Great or by Cortez.

It is an adventure into the unknown. It is the search into the deep secrets which may yield answers far beyond man's hope. It is the place for the man or woman who will devote himself, through long hours of labor and difficulty, to mankind's cause. It is the place where years of dedication and effort may yield little. Yet it is the place where discovery and accomplishment can bring a sense of reward and exhilaration that comes

to few people.

I applaud your choice of career. It is a career of excitement. I wish you well in it.

REMARKS OF THE PRESIDENT AT THE COMMIS-BIONING OF THE NEW RESEARCH SHIP, THE "OCEANOGRAPHER," NAVY YARD, PIER 2, JULY 13, 1966

Secretary and Mrs. Connor, Reverend Har-s, Captain Wardwell, my beloved friend Senator Manuson, Governor Burns of Ha-waii, Distinguished Members of Congress, Guests, Ladies and Gentlemen:

We meet here today at the beginning of a new age of exploration.

To some, this might mean our adventures in outer space. But I am speaking of ex-ploring an unknown world at our doorstep. It is really our last frontier here on earth. I am speaking of mountain chains that are yet to be discovered, of natural resources that are yet to be tapped, of a vast wilder-ness that is yet to be chartered.

This is the sea around us.

While our knowledge of the sea is quite primitive, we do know something of its great potential for the betterment of the human race and all mankind.

We know that we can, for instance, greatly improve our weather predictions. save thousands of lives and millions of dollars in property each year. We just must start learning more about the sea.

We know that the sea holds a great promise of transforming arid regions of the earth into new, rich and productive farmlands.

We know that beneath the sea are countminerals and fuels which can be found and exploited. We know-most important that the sea holds the ultimate answer to food for the exploding population in the world. Nearly four-fifths of all life on earth actually exists in salt water. Using science and technology, we must de-

velop improved ways of taking food from the

But catching fish is just not enough. It has been said that throughout history we have been simple hunters of the sea. must now learn how to farm the sea.

Our scientists are developing a process for turning whole fish into a tasteless but highly nutritious protein concentrate which can be used as a supplement to our daily diet.

In addition, the United States Senate has recently passed a bill for the construction of several pilot plants to begin the commercial development of this fish protein food. The daily output of one of these plants would provide enough high protein supplement for

rell over half a million people each day.

It is toward a goal of understanding all aspects of the sea that we have commis-

sioned the Oceanographer today.

Oceanographer is one of the Coast and Geodetic Survey's 14 research ships which will begin to help us explore the environment around us. Her sister ship, Discoverer, is under construction and also will be commissioned shortly.

In the past decade, our support of marine science and technology has grown from some \$21 million to more than \$320 million.

The Federal research fleet today totals 115

Our progress has been the handiwork, of course, of many men. These men are in and out of Government. But the Nation owes a very particular debt to those particular members of the Congress, men such as our distinguished Senator Magnuson of Washington, who is here today and whose efforts have accomplished so much for oceanography over the last decade.

I want to pay tribute to the Secretary, the Under Secretary, the Assistant Secretaries, all the employees of the Department of Commerce and the Coast and Geodetic Survey, and other Government officials.

But I also want to say that today we must redouble our efforts. In the months ahead, re shall establish our priorities, we shall then set our timetablesand we shall follow them, just as we have followed an orderly and relentless program for the exploration of space. And the distinguished Scientific Adviser to the President, Dr. Hornig, is going to keep seeing that we do this. The frontier of our deep challenges our spirit and we want to see that that challenge from the deep is fully met.

My Science Advisory Committee has recently completed a report on "The Effective Use of the Sea." Through Dr. Hornig I am releasing that report today. I should like to commend it to the attention of all Ameri-

I commend it, in particular, to the 100 outstanding high school students who have joined us here today and who have come to the Capital from the States of this Union. hope that there are among you some of the great oceanographers of tomorrow. You could not choose, in my judgment, a more important or a more challenging career.

am referring this report from my Science Advisory Committee to the new National Council on Marine Resources and Engineering set up by statute under the leadership of Senator Magnuson. This Council will be headed by our distinguished Vice President; distinguished members of the Cabinet and others will serve on it.

This Council will survey all marine science activities to provide for this Nation a com-

prehensive program in this field. I will ask them to complete their initial recommendations by the time the new Congress convenes next January.

Truly great accomplishments in oceanography will require the cooperation of all the maritime nations of the world. Today I send our voice out from this platform calling for

such cooperation, requesting it, and urging it.

To the Soviet Union—a major maritime power-I today extend our earnest wish that you may join with us in this great endeavor.

In accordance with these desires I am happy to announce that one of the first long voyages of Oceanographer will be a sixmonth global expedition in which the scientists from a number of our great nations will participate. It is our intention to invite Great Britain, West Germany, France, the U.S.S.R., India, Malaysia, Australia, New Zealand, Chile, and Peru to participate in the first round-the-world voyage of Oceanographer.

We greatly welcome this type of international participation. Under no circumstances, we believe, must we ever allow the prospects of rich harvest and mineral wealth create a new form of colonial competition among the maritime nations. We must be careful to avoid a race to grab and to hold the lands under the high seas. We must ensure that the deep seas and the ocean bottoms are, and remain, the legacy of all

human beings.

The sea, in the words of Longfellow, "divides and yet unites mankind."

So to Capitain Wardwell and his distinguished officers and men of Oceanographer, we say today: Yours is a most worthwhile mission. May you bring back much for the benefit of all humanity.

We congratulate you on the commissioning of your marvelous new ship. We wish you the best of results, fair winds, and smooth

And now I look forward with a great deal of personal pleasure to the opportunity to view the ship and some of the developments at first hand.

Thank you very much.

Maynard Flag Day Exercises

EXTENSION OF REMARKS

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, June 16, 1966

Mr. PHILBIN. Mr. Speaker, American flag and all it represents is the best hope of the Nation and the world for freedom and peace. That is the message I conveyed during impressive Flag Day exercises at Maynard, Mass., in my . district, in which I was privileged to participate as guest speaker.

I ask unanimous consent that part of my remarks at these exercises be printed in the Congressional Record.

The material follows:

REMARKS IN PART OF CONGRESSMAN PHILIP J. PHILBIN, FLAG DAY EXERCISES, MAYNARD, MASS, JUNE 5, 1966

Our flag with its striking colors has inspired millions and millions of Americans to uphold the cause of liberty and justice. an emblem of courage, loyalty, sacrifice and determination to preserve American ideals and principles and our free way of life, so vital to each and every one of us.

Old Glory is a symbol of encouragement and enlightenment, truly a beacon light of hope and inspiration for the down-trodden

and the oppressed of all lands, as well as a powerful motivating force for the people of this country to strive for security, independ-

ence, progress and peace.

Our Flag exemplifies the spiritual beliefs and moral aspirations of a people dedicated, as we are, to the protection of individual rights, the sanctity of family life, social justice and humane betterment for our fellow citizens and human kind.

Today, as always, we rededicate ourselves to this flag, and this country, and this great, free government, this fabulous, free-enterprise system that has enabled us to become the greatest, most powerful, most prosperous

nation in history.

As we renew our pledge of allegiance to this flag, let us lift up our hearts in prayer-ful gratitude to our Maker for the blessings he has conferred upon our nations, and upon us, and let us resolve to stand firmly, un-falteringly and bravely against tyranny and injustice, as Americans have always stood, for our freedoms, our homes, our shores and all the precious values that America means to for the rule of law, order and justice in the country and the world, and for en-during peace which will end bloody conflict, and restore amity, understanding and friendly relations in the world.

Hail to Old Glory—may it always wave over a free, secure, prosperous nation. And may it soon wave over a land and in a world united in peace and brotherhood.

The Open-Housing Provisions of the Civil Rights Act of 1966

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, July 15, 1966

Mr. THURMOND. Mr. President, an outstanding broadcasting station in my neighboring State of North Carolina, presented an excellent editorial concerning the so-called open-housing provisions of legislation now pending before the Senate. The thoughts expressed in this editorial so clearly reflect the principles involved in this type legislation, that I ask unanimous consent that the editorial broadcast on June 7, 1966, by WBT in Charlotte, N.C., be included in the Appendix of the Congressional Record. ask unanimous consent that the editorial was ordered to be printed in the RECORD, as follows:

WHOSE HOUSE IS WHOSE CASTLE?

One of the great problems in extending equal opportunity to all the citizens of America is the discrimination in housing that has created ghetto patterns in the cities of America. One of the most tragic errors and greatest threats to fundamental liberty that the citizens of America have ever faced is the provision of the new civil rights bill that tries to correct this situation by force of

The bill, on which Senator Sam Envin of North Carolina has opened hearings, forbids anyone anywhere who is selling or renting property of any kind to discriminate on account of race, color, religion, or national origin. If an individual or the Attorney General's office cares to bring a charge, anyone owning or leasing property can be hauled into court at their own expense while the govern-ment foots the bill for the plaintiff, and will have to prove by some means that he was not discriminating on these grounds.

You might have turned the applicant down

because he drinks too much or has more children than you want in your property, or keeps parakeets, or sings loudly in the bathtub, but he can claim it was because he was Negro, Indian, or Irish-Catholic, Protestant or Jew-German, Swedish, or Sudanese. amount of consideration you would get in a Federal court in this day and age can be

pretty well predicted.

The fifth and fourteenth amendments guarantee private property rights, but this is another case where the government lawvers can see only the interstate commerce clause of the Constitution. When Senator DIRKSEN said, "If you can tell me what interstate commerce is involved in selling or renting a house fixed to the soil, or where there Federal jurisdiction, I'll go out and eat the chimney off the house." Attorney General Katzenbach solemnly replied that the house materials, furniture, and other items must have moved across a state line at some time. so the whole house is a product of interstate commerce. That far-fetched reasoning was seconded by a Professor Philip Kurland of the University of Chicago, who said that "the time has come to regard the commerce clause as almost plenary in its application".

Well, if the interstate commerce clause supersedes all the other parts of the Constitution and can be used to nullify all limitations on the Federal Government and justify any act, constitutional or otherwise, we longer have a Constitution or a Bill of Rights-we have only an interstate commerce

clause.

In this debate, we are going to hear very often the old bromide, "property rights versus human rights." But these are inseparable. Property rights are a human right. If this bill passes, all the rights that go with ownership of property will be done away with in principle awaiting only the practice or application of an all-powerful government. And certainly a man's home will no longer be his castle.

You cannot extend freedom by taking it

A Case for Bridge and Hualapai Dams

EXTENSION OF REMARKS

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 30, 1966

RHODES of Arizona. Speaker, former Senator Goldwater is one of Arizona's great outdoorsmen. It would be difficult to find a person who has the awareness and love of his State's beauties which he has. Therefore, when Barry Goldwater states that the construction of the Bridge and Hualapai Dams on the Colorado River in no way will destroy the beauties of the Grand Canyon, you may be sure that it is so, and no one need fear otherwise. The following article by Senator Goldwater sets forth in clear fashion the facts of the case for the dams:

Because of the continuing controversy over the construction of dams in the Grand Canyon area, I would like once again to step aside from my political role and discuss what is essentially a technical matter.

There are very few men living who have explored, studied, and photographed the Grand Canyon as much as I have—or love it as much.

Others who claim to know and love the canyon, however, are now in arms against using its waters to bring new life to the arid central valleys of Arizona. The Sierra Club, an organization for which I have always had the highest regard, is leading the way. In my opinion they have fallen far short of their usual candor and honesty.

words taken from their widely-advertised opposition to the Grand Canyon project will explain why I make this charge.

They claim that dams on the Colorado River will "inundate" and "flood" the Grand Canyon. To a person not familiar with this beautiful canyon, which averages twelve miles in width, a mile in depth, and is 380 miles long, the vision conjured up by those two words must be horrible. No wonder such persons immediately write their Congressmen to block the project. Imagine the Canyon actually full of water! I agree, it is unthinkable. It also is a totally false impression.

Let's look at the truth. A key dam is Hualapai, or Bridge Canyon Dam as it was first called. It would be 600 feet high. It would rest at the bottom of the lower inner-gorge, which is 1,500 feet deep and is at the bottom of a main gorge which is 5,000 The dam, therefore, would not feet deep. even flood the inner gorge. It would, also, be in an area outside the boundaries of the National Park. Where its narrow lake would impinge on the Park it would be for a distance of only 13 miles and would have a maximum depth of only 90 feet.

As for marring the view of the Canyon, to my knowledge there is only one point, and this on the north rim, where a road now approaches the edge, from which this lake could be seen. It is also highly questionable as to whether such a relatively small lake would be an offensive view in such a vast-

ness anyway.

In the future, of course, other roads or trails could be constructed to either the north or the south rim, but even then, a view of this lake would be very difficult to obtain because of the extreme depth in which it would rest in the bottom of the Canyon.

No matter how you see it, however, the Sierra Club's frightening vision of a flooded canyon is false and unworthy of their usually accurate stands in defense of sound conservation. In this case they are taking the role of a special pleader, arbitrarily trying to halt a measure which is, at its root, a perfectly sound conservation measure which will not imperil any "national treasure" or even a good view.

The water that the dam will make available is needed by the people who live in the deserts of Arizona. It would be provided under a plan that calls for repayment by the actual users of the water so that the Federal government would not be providing a special

subsidy.

It is true that we have enough water right now. But we won't in a few years. This whole area could become another Ho-Ho-Kam, which is the name given to the five other civilizations which have lived in thes valleys but had to leave because of lack of

And it seems to me that when one weighs the needs of the landscape against the needs of man, it should be man who wins out.

The Airline Strike

EXTENSION OF REMARKS

HON. JAMES B. PEARSON

OF MANHAS

IN THE SENATE OF THE UNITED STATES Friday, July 15, 1966

Mr. PEARSON. Mr. President, I join with my other colleagues today in expressing great concern over the continuation of the present airline strike which has crippled air traffic throughout the United States. I cite the State of Kansas as another example of how many businesses are being unnecessarily affected by a strike which must be settled soon to protect the economy of the Nation.

Such firms as florists in the Kansas City area rely on air freight service to sustain their business. The president of the Olathe, Kans., Chamber of Commerce has advised me of serious economic hand-icaps in his city. Mr. B. C. Helzberg, president of the Helzberg Diamond Shop forwarded his telegram to my office explaining the economic ramifications on his business.

Sales efforts of such firms as Thermo Dynamics in Shawnee Mission are being crippled because salesmen are unable to make their calls. The Bio Laboratories in the same area has suffered a crippling blow due to the reduction in freight and personnel hauling requirements.

The President must move swiftly to avoid any furtherance of the damaging effects of this strike. I ask that telegrams from 25 separate Kansas establishments be inserted in the Appendix of the RECORD.

There being no objection, the telegrams ordered to be printed in the RECORD, as follows:

KANSAS CITY, MO., July 14, 1966.

Senator James B. Pearson. New Senate Office Building, Washington, D.C.:

The airline strike has moved to its seventh It is seriously affecting the normal operation of our company which depends beavily on serving its customer emergency spare parts needs via air freight and disspare parts needs via air freight and dis-patches service personnel to points all around the country via commercial airlines. Inability to provide parts and service means envelope manufacturers throughout the country are deprived of machine productivity and hence revenue. Even as small operation as ours is being seriously handicapped in its normal operation with much more serious As a Johnconsequences to our customers. son County Kansas resident I urge that you intercede for rapid settlement of the airline

JAMES W. LENK, Vice President.

BALDWIN, KANS. July 14, 1966.

Senator James B. Pearson, Senate Office Building. Washington, D.C .:

As educational institution we are appealing to you to help settle the present airline strike. We fly out of Kansas City, Mo., on student recruiting trips. Our students and parents use the airlines to visit the colleges and Kansas. Your help will be greatly appreciated.

P.S. Enjoyed your commencement address on our campus June 6.

M. Ray Terrell,

Director of Admissions, Baker University, Baldwin, Kans.

> EMPORIA, KANS., July 14, 1966.

HOR JAMES B. PEARSON. Senator of Kansas,

U.S. Senate, Washington, D.C.:

My administrative staff joins me in expressing grave concern over the current airplane strike and its effect on our nationwide economy and its great inconvenience to the traveling public this summer. Any personal attention and help you can give to this serious situation will be deeply appreciated by your many constituents. We have wondered if

President Johnson is receiving the deluge of telegrams now being directed to his attention.

JOSEPH R. LAUGHLIN. President, College of Emporia.

KANSAS CITY, Mo., July 14, 1966,

Hon. JAMES B. PEARSON. Senate Office Building, Washington, D.C.:

6,000 airline employees in this area are out 6,000 airline employees in this area are out of work as a result of the mechanics strike. Million of dollars of payroll is lost to local economy. This has a damaging effect on the economy plus great inconvenience and loss of time to many of our citizens. I urge your influence in any way possible to bring the disastrous strike to an early end.

SMITH GRIEVES Co., Kansas City, Mo.

KANSAS CITY, MO., July 14, 1966.

Senator J. B. PEARSON, Senate Office Building, Washington, D.C.:

Respectively request your utmost effort to promote agreement in strike of five major airlines permitting settlement satisfactory to union, management and our country. Each passing day multiplies hardships seriously affecting business and the national economy.

A. C. Swanson,

President, Western Auto Supply Co.

LAWRENCE KANS. July 14, 1966.

Senator James E. Pearson, New Senate Office Building.

Washington, D.C: Believe time public and business get protection from arbitrary crippling strike. Air-line strike interfering with our business operations. Please exert your influence to settle the strike.

RUSSELL A. MOSSER, Centron Corp.

KANSAS CITY, Mo., July 14, 1966. Hon. James B. Pearson,

Senate Office Building. Washington, D.C.:

We plead with you to lend all possible assistance in settling the airline strike that is affecting the Nation. Our immediate territory is being hurt severely.

MAURICE D. S. JOHNSON, Executine xecutive Vice President, National Bank of Kansas City.

KANSAS CITY, Mo., July 14, 1966. Senator James B. Pearson,

Senate Office Building, Washington, D.C.:

Urge your support in ending airline strike. It is important for the economy of Kansas City and the Nation that something be done quickly.

HARZPELD'S INC., SAUL D. KASS, Treasurer.

WICHITA, KANS., July 14, 1966.

JAMES B. PEARSON, U.S. Senator, New Senate Office Building, Washington, D.C.: Please bring to bear all possible force in

your command to end the airlines strike. ASSOCIATED INDUSTRIES, INC., W. F. HENRY.

> SHAWNEE MISSION, KANS., July 14, 1966.

Senator James Pearson, U.S. Senate Office Building,

Washington, D.C.:
Major airline strike is beginning to seriously effect our shipment and sales. Would appreciate any efforts you can exert to bring about a settlement.

GEORGE M. McGREW. Chairman of Board, Electro Dynamics Corp.

SHAWNEE MISSION, KANS. July 14, 1966.

Hon. James B. Pearson, U.S. Senate, Washington, D.C.:

International and domestic business al-ady suffering because of airline strike. We ask your help in bringing pressure upon mediators to settle strike soon as possible. JOE F. KNAPPENBERGER,

President, Haver-Lockart Laboratories.

KANSAS CITY, KANS., July 15, 1966.

Senator James B. Pearson,

Senate, Washington, D.C.:
We request your help in ending the airline strike. In our opinion strong Federal measures are in order to force the unions back to work examples the airlines have more than complied with the Presidential emerency board recommendations the airlines have consented to use the national mediation board the unions rejected this categorically.

Let's stop the useless harm to our economy.

ROBERT J. CLARK, Vice President, Conroy Coffee Co.

OVERLAND PARK, KANS., July 15, 1966.

Hon. James B. Pearson, Senate Office Building, Washington, D.C.:

Airline strike disastrous please take immediate steps for reinstatement for flight operations. Thanks

Mr. and Mrs. George D. Burton.

TOPEKA, KANS. July 14, 1966.

Hon. James B. Pearson New Senate Office Building,

Washington, D.C.:
Request you use every facility of your office to bring about settlement of airline strike which is hurting economy of Kansas. C. C. Kilker,

Executive Vice President, Kansas State Chamber of Commerce.

> KANSAS CITY, MO., July 14, 1966.

JAMES PEARSON. Senate Building, Washington, D.C.:

Airline strike effect on local economy is We urge you to help effect Governsevere. ment action to halt strike immediately. ALFRED LIGHTON.

President, Woolf Bros.

WICHITA, KANS., July 15, 1966.

Hon. James B. Pearson, Senate Office Building, Washington, D.C.:

The operation of our business is seriously complicated and may soon be curtailed by the current airline strike. We understand the companies have agreed to the President's committee guidelines but that the unions want to ignore them. Suggest congressional intervention to determine whether or not this is good faith bargaining under the Taft-Hartley Act.

VULCAN MATERIALS Co., CHEMICALS DIVISION.

KANSAS CITY, KANS., July 14, 1966.

Senator JIM PEARSON. Senate Office Building, Washington, D.C.:

Air strike crippling to our industry in both freight and personnel hauling requirements. Your cooperation in helping to bring this to a conclusion is sorely needed. My friend, Albert Kiesow, sends his regards. I hope to meet you personally on your next visit home.

DUKE SWEEN, President, BIO Laboratories, Inc. KANSAS CITY, MO., July 14, 1966.

Senator James B. Pearson, Senate Office Building, Washington, D.C.:

The air strike is beginning to hurt the country. Can't some way be found to make the unions work while difference are being arbitrated.

India's Import Initiative

EXTENSION OF REMARKS OF

HON. RONALD BROOKS CAMERON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. CAMERON. Mr. Speaker, the illstarred, ill-fed democracy of India represents the hope of mid-20th century Asia. Her desire for national political unity on a democratic basis is a desire shared by all of us in the West who benefit from democratic institutions and ideals every-

Yet, those who look with high expectation to India's future know at a glance that her population, weather, agricultural production, and industrial capacity militate against the stability that democratic institutions demand in order to flourish. The economic plight of India must be alleviated and finally solved if this vast subcontinent is to offer a model to other Asian countries now emerging into the harsh realities of the 20th century.

With these thoughts in mind, I was heartened to read recent newspaper accounts that Prime Minister Ghandi's government had announced a policy which bodes well for the increased development and productivity of India's delicately balanced economy. The announcement balanced economy. The announcement outlined a policy of liberalization of restrictions on imports affecting foreign raw materials and spare parts.

It was a bold move and courageous step forward along the path of economic viability. In breaking out of the cage of a controlled and protective economy, India has shown herself willing to meet assisting countries and world organizations halfway. She has recognized the great harm that comes of a domestic industry running at only half its capacity. And it became painfully clear that foreign sources of assistance were increasingly reluctant to extend aid to an economy whose prospects for self-sustained growth were becoming ever dimmer.

Mr. Speaker, it is for this reason that the new expansionary policy should re-ceive our praise and support. It will restore confidence in the countries providing aid, as well as increase the chances that aid money will be better invested. As Americans, steeped in the tradition of self-help and free competition, we owe India our vote of confidence and a re-newed promise of willing financial support. In so doing we reaffirm our belief in the developing nations who care enough to help themselves.

Following is an editorial from the Washington Post and two articles from the Post and New York Times which report on the new Indian policy.

[From the Washington Post, June 23, 1966] PRAISE FOR INDIA

The liberalization of India's import policies which have hitherto limited the availability of many commodities needed by Indian industry ought to receive general praise. is not just because the action has been urged and recommended by the United States, the World Bank and others involved states, the world bank and others involved in adding India. It is primarily because it is a policy that, by every available evidence, is necessary to get the economy of India moving. And the very first essential of progress in India is a rate of economic growth that will move the economic system forward and achieve a high rate of self-sustained industrial and agricultural development.

The Congress Party has kept the Indian economy in wraps. It has had an exaggerated confidence in economic controls. The Prime Minister has had the courage to take the initiative and depart from this policy.

Much as the United States may and will applaud this courageous act, India needs more than praise and applause. We have a large stake in helping the Indian government prove this expansionary policy the right one. It will be a catastrophe indeed if the freer economy does not produce progress in India. It must be made to work and, if it is to work, foreign help for industrial and agriculdevelopment must be forthcoming from the United States and from the whole consortium involved in financing India.

India has taken several bold steps—devalu-ation, lower import barriers, a shaking up of the public sector, a new impetus in agriculture. But it faces a crisis in the next six months in which the weather and foreign help that it does not control still may be decisive. We cannot control the monsoon which so cruelly disappointed India last year, but we can have a great influence on aid.

[From the Washington Post, June 22, 1966] AID BOOSTED, INDIA EASES IMPORT BARS (By Warren Unna)

New Delhi, June 21.-India decided today to liberalize her import policy on foreign raw materials and spare parts. The decision was made as the World Bank's "Aid India" consortium came up with a record amount foreign currency to help ease the risk in the new liberalization.

The liberalization on imports is a radical step for a country that has long prided itself on a controlled and protective economy.

Raw materials and spare parts are badly needed by a domestic industry that has been running at half its capacity.

The World Bank consortium figure ap-

proaches \$900 million in what is called "non-project assistance." This is aid that is not to designated programs and thus is readily usable for whatever India's economic

planners deem most necessary.

The total aid package, including the "project" or designated assistance for this current first year of India's fourth 5-year plan, is expected to reach \$1.5 billion.

In the past the World Bank consortium had been able to raise only about \$600 million in nonproject and about \$1 billion in overall annual aid.

The United States, as in the past, is the biggest contributor.

The U.S. commitment is for about \$450 million, \$100 million for nonproject raw material and spare parts purchases promised earlier this year during the visit here of Vice President Huseat H. Rumphary, \$280 million in new nonproject aid and \$70 million in

Two countries, West Germany and Japan, had been holding up the World Bank consortium announcement—and the parallel Indian liberalization announcement. The Germans, whose thinking is governed by hard headed business terms rather than considerations of international politics, are expected to come up with about \$76 million in nonproject aid after Indian Finance Minister Sachindra Chaudhuri makes a personal visit to Bonn later this week. The Japanese are now expected to come up with \$53 million.

With the final tally in from Germany, Japan, the United States, as well as the other consortium members (Britain, France, Canada, the Netherlands, Italy, Belguim, the Bank itself and its International Development Association) it is hoped that the figure will be nearer \$900 million than the present \$800 million.

The difference will have an effect on how much and how readily India feels it can liberalize its imports. Originally, after an understanding reached between World Bank President George Woods and Indian Minister of Planning Asoka Mehta in Washington in April, India hoped to make an across the board import liberalization on all spare parts and raw material components in return for getting \$900 million in nonproject aid.

With something less than that, India feels its liberalization must come more gradually. This means allowing in such noncompetitive raw materials as copper and zinc now and assuring the country's 59 priority industries that they will be granted import licenses for other goods when they apply.

Some economists see a danger in this. They fear that India's big industrialists will be delighted with the assurance of importing the essential parts but will pressure the government against any later liberalization on importing the foreign finished goods that may give them a run for their money.

And yet this liberalization also is considered vital to India's economy. If the country is ever to be prodded into expanding the use of its existing capacity, as well as into increasing the industrial capacity itself, foreign competition is considered the necessary prodder.

[From the New York Times, June 22, 1966]
INDIA LIBERALIZES LIMITS ON IMPORTS:
SWEEPING MOVE IS DESGINED TO SPUR INDUSTRIAL GROWTH

(By J. Anthony Lukas)

New DE.HI, June 21.—The Indian Government announced tonight a sweeping liberalization of restrictions on imports. The purpose is to provide more raw materials and spare parts for the country's lagging industrial machine.

The move follows indications from the 10nation Aid India Consortium that it would provide increased commodity assistance to finance these imports.

Although the Government announced its intention to liberalize imports two weeks ago, the timing of the move surprised observers here. It had not been expected until after the consortium announced a predicted \$900-million aid pledge.

The consortium pledge has been delayed in part because of hesitation by West Germany and Japan over their contributions but the Indian Government decided to go ahead with the liberalization now.

INDIANS EXPRESS CONFIDENCE

Indian officials said tonight they were not taking much of a chance. They said India already had private pledges from most of the consortium countries. They expressed confidence that the full \$000-million aid or a sum close to it, would be announced shortly. Finance Minister Sachindra Chaudhurl left on a trip to Europe during which he is to discuss aid prospects with West Germany, the country providing the most difficulty now, as well as with Britain, the Netherlands,

France and Italy.

However, officials here also said that the liberalization could not have waited. They said that it was a companion move to the devaluation of the rupee announced June 5 and that, without it, devaluation would have been meaningless.

The Government is counting on the increased supplies of raw materials and spare parts to bring industrial production up to full capacity, reduce prices raised by devaluation and permit increased exports. Every day the liberalization was delayed meant delay in getting this process started.

STEPS URGED BY CREDITORS

Liberalization and devaluation are among the steps that had been urged by the United States and the International Bank for Reconstruction and Development in order to get the Indian economy moving. They had become the conditions for increased Western assistance for India's fourth five-year plan.

Tonight's move, which was described by the Government as a first step, affected primarily 59 so-called "priority" industries.

These are industries that either contribute to exports, help provide substitutes for goods now imported or produce for essential domestic consumption.

Small companies operating in these 59 industries will be able to obtain licenses virtually automatically. They will be authorized to handle imports up to three times the rupee value of the licenses they were granted in 1964–65.

Chairman of Senate Public Works Committee Keynotes Leadership Seminar Which Initiates Citizen Workshops on Clean Water for America

EXTENSION OF REMARKS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Friday, July 15, 1966

Mr. RANDOLPH. Mr. President, the Izaak Walton League of America and 13 cooperating organizations have scheduled—for this summer and early fall—a series of citizen workshops on clean water for America. These workshops are designed to inform and educate the public in the need for active participation in the development of water quality standards, as called for by the Federal Water Quality Act of 1965. This educational project in all regions of the country is being financed in part through a grant to the Izaak Walton League from the Federal Water Pollution Control Administration.

Mr. President, it was my privilege to have participated as keynote speaker in the initial nationwide planning and study seminar which was held at the University of Maryland's Center of Adult Education on June 17 to 19. Eighty officials representing the Federal Government, State agencies, conservation and wildlife organizations, business labor groups attended this initial seminar which will contribute significantly to the success and effectiveness of the subsequent area workshops. My home State was represented by H. G. Woodrum, president of the Izaak Walton League in West Virginia.

The conferees pursued extensive discussions of the various aspects of State and Federal roles in water quality control, including proper financing of State agencies, adequate statutes, financial assistance for construction of abatement

facilities, education, enforcement, and research. In this initial conference, special emphasis was placed on the Water Quality Act of 1965, under which States may establish water quality standards on interstate waters within their boundaries.

The 3-day leadership seminar at College Park was chaired by the able president of the Conservation Foundation. Russell E. Train, who has established a distinguished record of public service in conservation affairs. The distinguished national president of the Izaak Walton League, Reynolds T. Harnsberger, extended the official welcome to the conferees and the league's conservation director, J. W. Penfold, explained the objectives of the citizen workshops. Among the guest speakers was James M. Quigley, Commissioner of the Federal Water Pollution Control Administration. Commissioner Quigley discussed the "Federal Government and Clean Water." The Izaak Walton League and the cooperating organizations obviously visualize the 1965 act as offering significant opportunity for citizens to constructively participate with Federal and State officials in the critical effort to achieve clean water. The league considers it important that the leadership of the various workshops be in a position to advise citizen participants on pollution abatement programs and on how to participate in State hearings.

Those who were present at the initial planning and study seminar returned to their respective home areas to form committees to sponsor regional workshops. These workshops—consisting of discussions and planning sessions—will be attended by representatives of service clubs, conservation organizations, and other local and area persons who may be concerned with future water quality hearings in their regions. The importance of participating in public hearings and methods of effective presentation will be the theme of the regional citizen workshops on clean water for America.

For this commendable endeavor in the development of citizen education and awareness of the pressing national problem of water quality, I congratulate the Izaak Walton League of America and the cooperating organizations: Conservation Foundation, American Fisheries Society, Garden Club of America, General Federation of Women's Clubs, League of Women Voters Education Fund, National Association of Counties, National Association of Soil and Water Conservation Districts, National Audubon Society, National Council of State Garden Clubs, National Wildlife Federation, Sport Fishing Institute, Wildlife Society, and Wildlife Management Institute.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the program of the planning seminar for citizen workshops on clean water for America, the welcome by Mr. Reynolds T. Harnsberger, the remarks by Mr. J. W. Penfold, and the text of my address.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CITIZEN WORKSHOPS ON CLEAN WATER FOR AMERICA—LEADERSHIP SEMINAR—JUNE 17-19, 1966—CENTER OF ADULT EDUCATION, UNIVERSITY OF MARYLAND, COLLEGE PARK, MD., FRIDAY, JUNE 17

Morning Session-Chairman: Russell E. Train, President, The Conservation Foun-

Welcome—Reynolds T. Harnsberger, National President, The Izaak Walton League of America.

Why the Workshops—J. W. Penfold, Con-servation Director, The Izaak Walton League of America.

Address-Hon. JENNINGS RANDOLPH, Chairman, Committee on Public Works, United States Senate.

The Federal Government and Hon. James M. Quigley, Commis-Water-Federal Water Pollution Control Administration.

State Government and Clean Water-James Coulter, Chief, Bureau of Environmental Hygiene, Maryland State Health Department.

Afternoon Session—Chairman: Thomas L. Kimball, Executive Director, National Wild-

life Federation.

WHAT QUALITY WATER IS NEEDED FOR

Fish and Wildlife—Richard H. Stroud, xecutive Vice-President, Sport Fishing Executive Institute.

Public Health and Recreation: C. L. Wilbar, Jr., Chairman, Pennsylvania Sanitary Water

Industry: David E. Simon II, Cyrus Wm.

Agriculture: Clarence S. Britt, Assistant to Branch Chief, Soil & Water Conservation Research Division, USDA.

Steering Committee Meeting on Regional Workshop Planning.

SATURDAY, JUNE 18

Chairman: Mrs. Haskell Rosenblum, League of Women Voters of the U.S. Water Quality Standards and Enforce-

ment: Murray Stein, Federal Water Pollu-tion Control Administration.

Working With Industry on State Water Quality Standards and Clean Water Programs: Harold Jacobs, E. I. DuPont Co.

Coffee and Doughnuts in Exhibit Hall. Organizing Responsible Statewide Citizen Cooperation for Clean Water: Charles H. Callison, Assistant to the President, National

Audubon Society.

Techniques of Effective Citizen Participation in the Hearings Process: Mrs. C. F. S. Sharpe, Program, Secretary Water Resources, League of Women Voters of the U.S.

WORKSHOPS CONVENE, 1:30

Workshop No. 1: Helping Local Government to Participate Effectively in Developing State Water Quality Programs. Chairman: Rodney Kendig, Field Service Director, National Association of Counties. Co-Chairman: John R. Sheaffer, Resources Planning Officer, Northeastern Illinois Metropolitan Area Planning Commission.

Workshops No. 2: Making the Most of State Hearings-the Procedural Process and Fol-Chairman: Sydney Howe, The Conservation Foundation. Co-Chairman: Philip Barske, Northeast Field Representative, Wild-

life Management Institute.

Workshop No. 3: Defining the Water Quality You Want—Expressing Clean Water Objectives in Terms of Uses, with Awareness of Costs, etc. Chairman: Gerard A. Rohlich, Director, University of Wisconsin Water Re-sources Center. Co-Chairman: Mrs. Frank O. Sandstrom, Northeastern Zone Representative The Garden Club of Ameirca.

Workshop No. 4: The Citizen's Water Quality Survey—How to Get and Present Useful Information. Chairman: Joseph Chantig-ney, General Vice-Chairman Cook County, Ill., Clean Streams Committee. Co-Chairman: Francis T. Christy, Jr., Vice-President (Conservation) Audubon Naturalist Society of the Central Atlantic States.

Workshop No. 5: Working Together—Orga Effective Sustained Cooperation Among Citizen Groups, Local and Statewide. Chairman: Mrs. Donald E. Clusen, Chairman, Water Resources Committee, League of Women Voters of the U.S. Co-Chairman: William B. Morse, Northwest Field Repre-sentative, Wildlife Management Institute.

SUNDAY, JUNE 19

Chairman: Mrs. Arthur E. Whittemore, League of Women Voters Education Fund. Workshop Reports by Workshop Chair-

Report on Plan for Regional Workshops. Summary: Frank Gregg, Vice-President, The Conservation Foundation.

Closing Remarks: J. W. Penfold, IWLA.

(Reynolds T. Harnsberger, national president, the Izaak Walton League of Amer-

Judge Train, Ladies and Gentlemen: It is a great privilege for me to open the first Citizen Workshop for Clean Water. I welcome you, individually as respected conservation leaders, and also as representarespected citizen organizations who—with us in the Izaak Walton League— are determined to improve the environment within which all Americans must live.

In a real sense, a welcome from me might be thought superfluous, because this workshop and seminar is yours as well as ours. Your interest and cooperation has helped make it possible—its values will assuredly be realized only as your talents, expertise, imagination and foresight are utilized during workshop sessions.

We in the Izaak Walton League of America have had a long history of interest, concern and action in the clean water movement. It can be said truthfully that a major reason for establishment of the League nearly 45 years ago was a growing disgust at the accelerating rate at which prime fishing waters were being lost to municipal, industrial and watershed pollu-

tion.

In 1927-1928, the League undertook at the request of President Coolidge's Outdoor Recreation Committee a nation-wide survey of water pollution. Handled through our State Divisions, local chapter and cooperating groups and individuals the survey was hardly a complete one, but it was the first national effort to appraise the water pollution problem nationally. What it found was shocking. And a shocked public very slowly began to take action. You have all been a part of that progress.

A great deal has happened since; a great deal of progress has been made, but the progress has not been fast enough and Congress itself in 1956—thirty years later—decided this was true and with enactment of PI— 660 began to mobilize the resources of the Federal Government to supplement, compliment and stimulate State programs and community action.

Congress acted again in 1961 to strengthen the Federal role. And last year in passing the Water Quality Act launched an intensified program and announced an unequivocal national policy that we are in business to enhance the Nation's water resources, that we are in business to get water clean.

The States still retain their prerogative and priority of position to Act. This is as it should be, but—if they can not or will not act-the public is through with temporizing, and the Federal Government will act

I believe all of us here are unanimous in hoping that the States will act. The purpose this workshop and those to follow is

basically to help mobilize responsible citizens to help their individual States do the best possible job for themselves.

This is a worthy and most laudable objective. You are accepting the challenge of good citizenship in a most meaningful sense. We welcome you. We applaud you. We wish you God speed in your endeavor.

WHY THE WORKSHOPS

(J. W. Penfold, conservation director, the Izaak Walton League of America)

In the Water Quality Act of 1965, Congress threw a direct challenge to each of the 50 States "to put up or shut up." It calls on them to declare their intentions and to follow up with positive actions to clean up pollution of interstate waters within their boundaries, or to expect the Federal Government to act for them in the public interest. almost unanimous vote for the measure in Congress makes it clear that positive action is what the public wants. The public is tired

of temporizing with filthy, unusable water.
The Act provides for the establishment of
"water quality standards" on Interstate
waters. It provides a period, ending June 30,
1967, during which each State has the opportunity to develop such standards and a program for their implementation and enforcement. If standards and programs proposed by a State are found satisfactory by the Secretary, he will declare them to be the Federal standards. If he does not find them satisfactory, or if a State does not act at all, the Secretary is directed by the Act to institute procedures whereby standards shall be established. In every sense this is a challenge to all the States to "get cracking."

The Act calls for each State to develop its water quality standards program "following public hearings." Congress thus emphasized that the general public has a stake, a right and a responsibility in establishing water quality standards. Thoughtful citizens should insist that full public hearings be held in their States. It is equally their obligation to participate responsibly and effectively in such hearings.

The hearings will provide opportunity for citizens to state their right to clean water. As the President said "no one has the right to use America's rivers . . . which belong to all the people, as a sewer." But reiteration of this truism is not enough. Citizens must be prepared to answer arguments against high

Citizens must be prepared to state clearly the uses which the public wishes to make of public waters.

Essentially, determining the beneficial uses which each lake and stream in each State must serve is the basis of the water quality standards program. If the public decides that a stream should serve no purpose other than as a sewer, that will be a standard, and an unconscionable one. The Nations can't afford to waste water that way. If the public decides that it shall be kept clean enough to support trout (or other game fish) and to permit water-skiing and swimming, it will likely be clean enough for use as water supply and for industry and agriculture as well . . . a high standard and a desirable one.

To maintain such a standard, or to accept a lower one is a political decision which the people themselves must make, or in default, it will be made for them.

Briefly, this is what the whole water quality standard program is really about—the public deciding what standards of excellence, or of filth, shall be maintained in its public waters to fulfill, or to limit, the beneficial uses to which the public wants to put their lakes and streams.

Essentially the purpose of this workshop program, which we are getting underway this morning, is to broaden our own understand-ing of the problem and the opportunities

d

nea

0

n

available to citizens to help solve it and to broaden the base of understanding among citizen groups generally . . . to the end that citizens will more nearly fulfill their role in the nation-wide effort to achieve clean water.

It is not enough that we declare ourselves for clean water. We must be prepared to accept the more difficult tasks—to secure legislation, to pass bond issues, to accept increased taxes, to pay higher commodity costs and to stand up and be counted when the going is rough.

Citizens will do this and do it well, but they must have the confidence which comes with understanding. Our work is to develop such understanding ourselves and to communicate it effectively to as large a segment of the public as we can.

During the next two days we shall be discussing ways and means for achieving these objectives and designing the plan whereby each of us and the citizen organizations we represent may make the maximum contribution toward this vital public need . . . clean water for America.

KEYNOTE ADDRESS BY SENATOR JENNINGS RAN-DOLPH, CHAIRMAN, SENATE COMMITTEE ON PUBLIC WORKS, AT LEADERSHIP SEMINAR INITIATING NATIONWIDE CITEEN WORKSHOP OM CLEAN WATER FOR AMERICA

Mr. Chairman, I congratulate the Imak Walton League for this manifestation of obligation as members of the American community.

The workshop, which begins today and is directed toward development of public interest in the establishment of water quality standards, is indeed a laudatory action.

When the Water Quality Act of 1965 was passed, the law provided that all affected segments of our national community should have an opportunity to participate in the extablishment of water quality standards. There is no doubt in my mind, and I am sure there is no doubt in yours, that the industrial and governmental sectors of the economy will be well represented at any conference on standards.

The extent of citizen participation, however, would be clearly questionable were it not for the educational effort upon which you are embarking today. You are the consumers of water. You use it in every aspect of your daily life. Without it, you cannot function. Any problem associated with water becomes, uniquely, a human problem. Any decisions relative to the use or misuse of water, therefore, should be subject to the scrutiny of the people.

Last week in committee hearings on air pollution, as the new chairman of the Senate Public Works Committee, I made a brief statement of my intentions regarding air and water pollution. As you are aware, that subcommittee is chaired by the very able Senator from Maine, Edward S. Muskie. I told Senator Muskie, and those present, that I intended to give my every support to an aggressive attack on the problems of air and water pollution. I stated that we are going to go into these problems in a depth and scope never before attempted or achieved.

For your information, I would like to expand on that commitment. The late Senator Pat McNamara, when chairman of the Senate Public Works Committee, established the Special Subcommittee on Air and Water Pollution and instructed that subcommittee to do whatever was necessary to protect the public health and welfare from the hazards society faces due to continued misuse of our vital air and water resource supplies. That subcommittee, of which I am pleased

That subcommittee, of which I am pleased to have been a member, has firmly set milestones on the path toward a solution of these problems. But the road is long, the job is tremendous, and time is not working in our favor. I therefore remind you—who will be working throughout the nation to achieve effective water quality standards—Senator

McNamara said "Let us begin." I say, "Let us continue."

There is much that needs to be done. There are hurdles which must be passed over. The efforts that we make now are essential if we are to leave our future generations more secure in health and resources.

Water pollution control, adequate standards of water quality, effective enforcement, better and more economically feasible methods of treatment or, in sum, clean rivers—this is our goal. It is well that we understood both the problems and the costs associated with achieving that goal.

Before any acceptable program of water quality standards can be implemented, much of the eixsting pollution must be eliminated and all of it must be controlled. This in itself is a tremendous task, exemplified by the size of the pollution problem. I think we should look at the magnitude of the situation with which we are dealing.

with which we are dealing.

The size of the pollution problem may be illustrated in a number of ways. One yard-stick is available in terms of the population equivalent of wastes entering our water-courses. In 1990, these wastes equaled the raw, untreated sewage of a population of approximately 24 million. In 1980, this population equivalent had tripled to more than 75 million people. By 1980, if we do not markedly accelerate our efforts and results, we will be inflicting on our water resource the population equivalent of untreated sewage from 114 million people. This takes into account only municipal wastes,

Perhaps a better method of evaluation is the relation between total available supply of fresh water and how much of this supply is withdrawn and returned as waste-carrying

water.

Our national available water supply is about 1,100 billion gallons a day. Currently, we withdraw about 355 billion gallons a day and return more than 190 billion gallons a day of waste-waters. By the year 2000 we will be withdrawing 990 billion gallons daily and returning 732 billion gallons of waste-carrying water. And, these are national averages. Many sections of the country can expect to overdraw their water supplies at a much earlier date.

Domestic sewage and other wastes that impose an oxygen-demand on the receiving waters have a serious impact on the aquatic life of our streams. By 1980, if waste treatment efficiency is not substantially improved, our treated effluents will impose an oxygen-demand great enough to consume the entire oxygen content of a volume of water equal to the dry weather flow of all the 22 river basins of the United States. This would be devas-

Measured in immediate terms, we have only to admit the evidence of our senses of sight and smell to perceive the extent to which pollution has degraded our rivers, lakes and streams.

The Water Quality Act of 1965 did not in any effective manner deal with the cost associated with a problem of this size.

Our investment in municipal waste treatment facilities is presently about \$40 billion. It is conservatively estimated that an additional \$20 billion of municipal waste treatment works construction is necessary to effectively control this important source of pollution. Combined sewer systems are another major source. Physical separation of these combined systems, which will utimately be essential, will cost from \$20 to \$30 billion unless a more feasible and economical answer is found. Industrial treatment cost is generally estimated to be at least equivalent to that of the municipalities, about \$20 billion, though this figure is purely conjectural.

All together, at least \$70 billion, and perhaps \$100 billion, is the price tag on dealing with the pollution problem if we are to preserve, maintain, and improve water quality

to meet all of our legitimate needs and demands.

While the costs of pollution my present two alternatives, there is but one realistic choice. The nation's efforts must be geared to the preservation, maintenance and improvement of the quality of our available supplies. Time is not on the side of clean water. The problem is not one that will solve itself or even diminish by itself. Anticipated demands for clean useable water can only be met if pollution is swiftly checked and reversed. Each additional period of indecision results in increasing the necessary costs.

This year we are attempting to provide a more realistic Federal share of the cost of pollution control. As a result of hearings held throughout the nation last year, the Subcommittee on Air and Water Pollution of the Senate Public Works Committee wrote legislation which was introduced by Senator Muskie and cosponsored by myself and 46 other members of the Senate. legislation is designed to increase the federal commitment by removal of existing limitations on the federal share of a project's cost and providing, a minimum 30 per cent participation, regardless of the total cost We determined that a full 30 involved. per cent federal share would require at least \$6 billion. We further determined that if minimum water quality needs are to be achieved, every effort should be made to deal with the problem within the next six years.

There is no question but that the problem requires earlier solution. However, it is equally obvious that it is not feasible to attempt to seek that earlier solution. The committee recognizes the problem of moving an effective program too rapidly.

The legislation sponsored by the sub-

The legislation sponsored by the subcommittee goes beyond broadening Federal
participation, and increasing the total authorization. It was the opinion of most
members of the subcommittee at the time
the bill was drafted, that the states should
be encouraged to participate on a much
larger scale in the cost of pollution control.
The subcommittee decided that an appropriate and acceptable method would be a
Federal economic incentive. As introduced,
the subcommittee's bill provides that when
the states agree to match the Federal 30
per cent, and additional 10 per cent of the
facilities cost will be provided by the Federal government.

There are other urgent needs which must be met. The subcommittee bill provides 25 million dollars annually for five years for a program of research in the area of advanced waste treatment and combined municipal and industrial treatment. It is particularly important that this research be done and that answers be found as quickly as possible.

Finally, the need for some kind of assistance to industry is highly apparent. Sugested alternatives include tax incentives and direct federal grants. The Congress cannot ignore this problem. Industrial effluent must be treated and in some instances has a higher priority than does municipal waste treatment. Some persons argue that industry should bear this burden alone. Unfortunately, and all too often, the cost of installation of adequate pollution control facilities would bankrupt an industry.

If a tax incentive approach seems warranted, Federal legislation would be handled by committees other than those presently concerned with pollution legislation. If a grant-in-aid approach is indicated, then my committee and its House counterpart would receive the legislation.

This matter needs, and will receive, intensive study. We are working closely with industry to decide the proper course to follow, and we shall find an answer.

In summary, I have discussed that which we are considering and will consider. But I

would add that without a financially effective Federal grant program, the water quality standards which are achieved in the conference that many of you will attend, will be meaningless. Unless a method of treatment is developed for many of those wastes which do not lend themselves to the existing technology, water quality standards will suffer.

And even more importantly, unless the public is keenly aware and vitally interested in this process of standards setting, the pub-lic interest may not be protected.

But, I don't want to leave you on this negative note. The job is immense; the task is difficult; but with the research which is moving shead today, and with the funds which will be made available, the job can be done. As chairman of the Senate Public Works Committee, I can assure you that efforts you make in the various regions of this anotion to establish effective water quality standards will be worthwhile. The Congress did not pass the Water Quality Act of 1965 as a gesture. It will be implemented as rapidly as is possible and this generation will leave clean rivers to the generations yet to

Prime Minister Pearson Proposes New **Atlantic Community**

EXTENSION OF REMARKS

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 13, 1966

Mr. FRASER. Mr. Speaker, recently in the hometown of Abraham Lincoln, New Salem, Ill., peace awards were presented to three great contemporary statesmen: Prime Minister Lester Pearson of Canada, former Secretary of State, Christian Herter, and the late Ambassador to the United Nations, Adlai Stevenson.

On receiving this award, Prime Minister Pearson presented a memorable speech outlining what America and other NATO nations must now do to revitalize an alliance which appears to be in disarray.

His comments are especially pertinent as Congress considers a number of Senate and House resolutions to establish delegations to attend a future convention of Atlantic nations. A report of Prime Minister Pearson's speech from the New York Times of June 12, 1966. follows:

NATO SUBSTITUTE URGED BY PEARSON-SAYS UNITED STATES SHOULD SHOW WAY TO RE-VITALIZED ALLIANCE

Springfield, Ill., June 11.—Prime Minister Lester B. Pearson of Canada urged here to-night that the United States lead the way in establishing a new, revitalized Atlantic alli-ance to replace what he described as the outdated North Atlantic Treaty Organization.

Whether or not the organization survive the crisis precipitated by the French military withdrawal, he said the Atlantic powers must move forward to "an international commu-nity with common political institutions."

"An alliance for defense only is an anach-ronism in the world of 1966," the Prime Minister declared.

In an address purpose for an Atlantic Union dinner in the Leiand Hotel, Mr. Pearson obliquely criticized the United States for not

acting sooner to alter "an Atlantic alliance of independent states, dominated by Ameri-

"France, and not only France, feels that continental Europe is now strong enough to be given its rightful share in the control of the policies of the alliance" declared the Prime Minister, who won the Nobel Peace Prize in 1957.

Earlier in the day, Mr. Pearson received an Atlantic Union peace award at a ceremony in New Salem State Park, where the village of New Salem has been restored as it was when Abraham Lincoln ran a store there. The award was presented by Clarence Strett, president of Federal Union, Inc. This is a private organization that has worked for many years to bring European and North American states together in federation. Christian Herter, former Secretary of State, also was given an Atlantic Union peace award. The late Adlai E. Stevenson, who was chief United States delegate to the United Nations, also was honored with a peace award.

CITES DOUBT AND DISTRUST

Prime Minister Pearson said that the Atlantic powers had worked together enthusias-tically in the trying days after World War II but had developed "impatience and doubt and some distrust" after the recovery of Europe. NATO, he suggested, had fallen vic-tim to "inertia and vested interest in a new status quo."

He said Canada, since 1964, had tried without success "to find anyone . . . on either side of the Atlantic . . . prepared to specify what should be changed (in NATO)."

Change at last was occurring only because "abrupt and unliateral action by France thrust change upon us," he said.

Mr. Pearson disagreed with the nationalist motives of President de Gaulie in taking

France out of the defense alliance. But he suggested it was "dangerous" to rail at General de Gaulle for demanding for France "a position in the Atlantic alliance equal to position in the Atlantic alimnee equal to that of Great Britain and somewhat closer to that of the United States." Rather, Mr. Pearson said, the Atlantic power must find a way to enable France to participate "in the march to greater not less Atlantic unity." The way, he suggested, would be to build toward Atlantic unity by first giving Europe

"more control . . . of its direction and its character."

"I realize, he said, "that the united Europe would, in its political, economic and

rope would, in its political, economic and military decisions, be more independent of Washington than is the case now.

"But what is wrong with this?" he asked. A realistic approach to Atlantic union, he said, would be to accept a united Europe, Britain, "not as an obstacle to, but as a stage on the way to Atlantic union.

"If we cannot at present achieve a pattern of Atlantic federalism," he said, "it may be necessary to acknowledge the realities of

be necessary to acknowledge the realities of the situation and, as North Americans, work with Europeans in the hope that, in the longer sweep of history, both European and North America will come to realize that their respective affairs can best be harmonized in

a wider union.
"If an intervening European stage is necessary, however, it must be taken not in continental isolation but in close Atlantic cooperation and understanding.

He added that he felt that "continentalism, either of the European or North American variety is not the answer."

Finally I believe "only the United States can give the effective lead required for At-lantic unity," he said. "Without her active participation and support nothing can be done, at least on the broad front which is essential. Without her leadership we will be driven back to a national or continental solution for the organization of security and

Stop Harmful Shoe Imports Now

EXTENSION OF REMARKS OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, June 16, 1966

Mr. PHILBIN. Mr. Speaker, thoughtful Americans have been understandably greatly concerned about the flow of cheap goods from abroad which are having such a disastrous and dangerous impact upon some of our domestic industries, their faithful employees and upon the national economy.

While I think that most of us realize the advantages and needs of truly reciprocal foreign trade and are destrious of maintaining healthy, mutual trade relations with other nations, we are not willing to accept the thesis that foreign trade should be a "one-way street," as it has become in many instances today.

It is true that we have substantially expanded our own exports and foreign trade and this would normally bring us measurable benefits. But when we realize that a very sizable portion of our exports stem from foreign aid programs, grants, and loans to other nations, do not necessarily involve reciprocal trade benefits, and often entail additional charges upon our already sorely afflicted and heavily burdened taxpayers, admittedly, this situation must give us some pause.

It is also true that many nations which are enjoying liberal access to American markets are at the same time firmly closing their choicest markets to American goods and thus barring them from many foreign countries.

Even at a time of the peek prosperity which our country is currently enjoying, there are many of our industries here faced with injurious, cutthroat com-petition from overseas which, because of their relatively low costs and standards, we cannot possibly absorb without damage to our competitive posture.

In the longrun, and even in the shorter run, the continued flow of cheap imports is bound to produce undesirable effects upon our economic system, and weaken certain industries, and result in unemployment.

From time to time under current trade policies we continue to make substantial concessions to foreign importers and

Recently we adopted guidelines relating to the American selling price valua-tion of certain footwear and, in addition, data as to the imports of such footwear.

The American selling price basis of value is defined in the tariff act under section 402e and 402a(g) and the choice of these two definitions is determined by the final list status of the merchandise. When the merchandise is not on the list, section 402e applies. When it is on the list, section 402a(g) applies.

I think that we need something more than palliatives to help our shoe indus-try. We need safeguard amendments of the trade bill. It is not surprising, therefore, that the shoe industry, which is being directly harmed, should be greately concerned to see foreign competition increasing and new increases forecast.

It seems clear to me that Congress must sooner or later give careful attention to the operation of our trade laws, as I urged at the time the trade bill was pending, and as soon as it can be done, I would suggest that our appropriate committees conduct investigations to ascertain the impact and the damage and injury that has been done, and is being done every day, to domestic industries by the large influx of foreign goods coming into our markets. If proper safeguards had been written into the trade bill in the first instance, we would not now be suffering from these deplorable conditions.

At least the facts of the situation should be vigorously sought so that we may know definitely the scope and extent of the danger to our American economy and to the prosperity of our industries, resulting from cutthroat competition from abroad, which under our standards of wages and living, our industries and our economy could never possibly absorb without serious damage to our economic system and dire threats to our prosperity.

I hope and urge that the leadership of the House may take note of this situation and, as soon as possible, provide complete inquiry and analysis by our House committee looking toward the development of appropriate legislation to

development of appropriate legislation to neutralize the grave danger of irreparable damage from continuing unfair foreign competition to our industry and economic structures that is at present threatening the stability and prosperity of many in this great American shoe industry.

It is late for us to act in these matters to be sure. We might well have acted, as I had urged so vehemently when the trade bill was pending. But it is better late than never, so let us act, and act vigorously now.

Ben Cole

EXTENSION OF REMARKS

HON, WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. BRAY. Mr. Speaker, last Sunday, July 10, was the 50th birthday of a fellow Hoosler, my good friend Ben Cole, a member of the Congressional Standing Committee of Correspondents.

Ben is chief of the Washington bureau of the Indianapolis Star, the Muncie Star, and the Arizona Republic. He has been with the Star since 1944, serving as state-house reporter and city editor in Indianapolis and has been chief of the Washington bureau since 1949.

Ben is a well-known and respected figure on Capitol Hill, not only to the members of the Indiana congressional delega-

tion and their staffs, but to a wide circle of colleagues and congressional friends on both sides of the aisle. It was men like Ben of whom the author of "The Newspaper Guy" was thinking when he wrote his famous lines:

"Some day I'll pass by the Great Gates of Gold.

And see a man pass through unquestioned and bold.

'A Saint?' I'll ask, and old Peter'll reply:
'No, he carries a pass—he's a newspaper
guy.'"

Ben has always exemplified the best and finest in the field of journalism. His fellow Hoosiers and his many friends are proud of him, and I wish him many more happy and productive years in the profession he serves so well, for his papers, his State, and his country.

Airline Strike Should Be Settled

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. PELLY. Mr. Speaker, the continuance of the airlines strike is not only causing great inconvenience to the public but also is resulting in substantial financial loss to a great many business firms which is evidenced by many communications I am receiving from constituents.

Both management and labor would gain much in public good will if they would bring this unfortunate strike to a rapid conclusion, because from the tone of the communications that I have so far received the general public is quite out of sympathy with the present state of affairs.

I am also sure that there are reasonable men on both sides of this issue and it is my hope that they will not let this unhappy situation continue.

Under unanimous consent I include at this point some of the many telegrams which are self-explanatory:

SEATILE, WASH.

Present airlines strike very crippling to this area and to us. Our extensive use of airmail in connection with national operations is essential. Each day it becomes more critical. Since administration may have no legal power to act we think Congress should take cognizance of this bad situation particularly in view of President's Committee having made a realistic recommendation which was accepted by management.

SAFECO INSURANCE COMPANIES, W. L. CAMPBELL, Chairman.

SEATTLE, WASH.

I know you realize the great loss accruing from the airline strike which is particularly detrimental in the far Pacific Northwest. Not only is the economic loss terrific but relates itself to all business in many areas. Any help you can give to get this matter in high level hands for the purpose of seeking a solution will be appreciated.

PACIFIC NATIONAL BANK OF SEATTLE, CHARLES P. FRANKLAND, Chairman of the Board. SEATTLE, WASH.

Airline strike is producing extreme dislocation of entire economy this region. Lack of governmental action most conspicuous. Either executive or legislative action urgently needed.

DONALD H. YATES.

SEATTLE, WASH.

As you know, the airlines strike is crippling the Northwest. Hope you can do something about it.

SIMPSON TIMBER CO.

SEATTLE, WASH.

Current airlines strike seriously hampering our ability to deliver aircraft and missile equipment for both military and civil use. Would appreciate all possible help in settling strike.

UNITED CONTROL CORP., J. E. NAVARIE, President.

SEATTLE, WASH.

I know this is asking a great deal, but anything your office can do to encourage a settlement of the present airlines strike will be greatly appreciated by all of us in the travel and hotel industry. Having our two main lines of transportation to the east closed down, particularly at this time of the year, is really a serious handicap.

WASHINGTON STATE HOTEL & MOTEL

ASSOCIATION, TOM GILDERSLEEVE.

Chairman, Legislative Committee.

SEATTLE, WASH.

Continuancy of airlines strike seriously hampering our coastwide business because of inability to staff and line executives to travel by air. This wire to urge you to put forth your best efforts to bring about reasonable settlement to get the planes flying.

LOOMIS ARMORED CAR SERVICE, WALTER F. LOOMIS,

Chairman of the Board.

SEATTLE WASH

Our company, Western Tours, in providing the exclusive bus service between SEATAC and Seattle is seriously involved in the airlines strike. Business is down approximately 70 percent and drastic personnel cut has been necessary. We respectfully request your personal action to solve this very crippling situation as soon as possible. Sincerely yours,

WILLIAM B. SEWELL. EDWIN O. CEDERGREN. ALFRED R. ROCHESTER.

Sowing Cultural Seed

EXTENSION OF REMARKS

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1966

Mr. IRWIN. Mr. Speaker, I should like to give a moment of attention to the recent story by Howard Taubman in the New York Times on the grants that have been made by the Office of Education under title III of the Elementary and Secondary Education Act. Mr. Taubman's article reflects the imagination and flexibility with which the Office of Education has pursued the implementation of title III.

Praise must also go to the many localities which have spent much time, effort, 11

h

d-

in

el

ry n-

ıld he he ave mecn's xiion itle aliort. and imagination in developing programs than can broaden the scope of education in the United States.

Mr. Taubman's story follows:

[From the New York Times, July 12, 1966] SOWING CULTURAL SEEDS-A GENEROUS UNCLE SAM CULTIVATES REGIONS SUFFERING ARTIS-TIC NEGLECT

(By Howard Taubman)

Can you conjure a picture of the symbolic Uncle Sam in top hat, waving jauntily, with tailcoat flying in the wind as he strode through America scattering seeds with the exuberance of a Johnny Appleseed? That is how the Federal Government begins to loom in the imagination as one studies the 336 new projects approved by the Office of Education in its second batch of grants to local schools under Title III of the Elementary and Secondary Education Act of 1965. Under Title III the Government may assist in providing vitally needed educational services not ordinarily available and may help to develop model programs.

Although the 336 projects involve \$23.8-

million in Federal grants, their nature and quality impresses one even more than their magnitude. "For unmet cultural needs" is a phrase that recurs in the description of the programs. One can only hope that the Gov-

programs. One can only hope that the Government will reap as generously as it sows.

Two categories of grants are especially significant and bear promise of great rewards. One encompasses projects that encourage doing. The other concentrates on regions remote from artistic traffic and on school populations that for ethnic and economic reasons suffer soute cultural neglect. In some cases projects seek to come with all reasons suffer acute cultural neglect. In some cases projects seek to cope with all these challenges.

The programs for doers embrace the sciences and humanities and some touch on problems of local government: those in the arts are particularly fascinating in their potentialities.

GRANTS FOR TUSHINGER

Tuskegee, Ala., has received two grants in music. One of \$58,400 is for an institute for 200 talented high-school students, including planists, string and wind players and vocal-ists, who will receive intensive instruction at Auburn University in the fundamentals of music, performance techniques and repertory. The other, funded with \$71,500, will explore new methods of instruction on the strings among children 4 to 6 years old in five counties and 10 school systems. One dares to envisage the result: a sudden spurt of musical awareness and achievement in unexpected parts of Alabama.

Techniques developed on different conti-nents will be tested in California. In El Monte 125 fourth-graders will engage in an experiment with the Suzuki method of learning to play an instrument, thanks to a \$30 .-000 grant. Shinichi Suzuki is a Japanese violin teacher who has established a system of teaching by listening and playing and has achieved considerable international fame.

In Madera there will be a pilot program in the approach of Carl Orf, the Ger-man composer and teacher, for the culti-vation of musical sensitivity through simple

instruments, speech, drama, rhythmics and LAWS RELATIVE TO THE PRINTING OF singing. The grant is for \$10,400. Campbell, with \$8,200, will devote itself to

an American specialty, the musical stage, in a summer workshop for 120 high-school stu-

The doers will be scattered agross the land. Sarasota, Fla., is to use \$48,600 to establish a clinic of instrumental performance with groups of three to eight youngsters meeting for one and a half hours a day five days a week to play in ensembles and to give weekly concerts. Haverhill, Mass., has \$18,000 for a Saturday-morning center of art, music and drama, which will top off a year's endeavors with a summer arts festival.

Huntington, L.I., receives \$55,800 to plan integration of the performing arts into the curriculum. Allentown, Pa., has \$45,600 to plan a center with a museum, theater and active participation in art, music, drama, and dance. One of the largest grants, \$176,-500, goes to New York for 60 centers that will offer art classes to children from the third grade to the ninth grade, whether they at-

tend public or private schools.

A child in the heart of the biggest American city can be an culturally deprived as a youngster in a remote village, but sooner or later, one likes to think, public-spirited individuals and institutions would be moved to do something for him. Such vigorous, activating forces have a lot more trouble getting started in a remote village, and it is heartening to note that the Government is becoming the deus ex machina.

Broken Arrow, Okla, has \$15,200 to create "a cultural enrichment center." Seattle re-ceives \$17,000 to take its Symphony and other musical groups to rural and sparsely populated areas in the state of Washington.

Eastman, Ga., gets \$30,600 to plan a fine-arts curriculum for grades one to 12 in six school systems in relatively isolated central Georgia. Mesa, Aris., obtains \$90,400 to plan a center that will, among other things, "stimulate interest in art and music among relatively isolated schools." Harrison, Ariz., Harrison, Ariz., has \$55,300 to plan instruction in the visual and performing arts, especially for young-sters with creative potential.

The possibilities for the future of the arts in America seem breathtaking—thousands upon thousands of the new generation discovering the pleasures of doing as well appreciating.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will plea give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20403, at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintend-ent of Documents and the head of the re-spective department or establishment of the Government (U.S. Code, title 44, sec. 72s, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where or ders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Broom should be processed through this the Ruconn should be processed through this

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p.

Chamber Action

Routine Proceedings, pages 15086-15093

Bills Introduced: 4 bills were introduced, as follows: S. 3617-3620.

Bills Reported: Reports were made as follows:

S. 3466, to change the name of the Rolla Jewel Bearing Plant at Rolla, N. Dak., to the William Langer Jewel Bearing Plant (S. Rept. 1372);

S.J. Res. 167, authorizing organization of an International Conference on Water for Peace in the U.S. in 1967 (S. Rept. 1373);

S. 3498, facilitating the carrying out of obligations of the U.S. under the Convention on the Settlement of Investment Disputes Between States and Nationals of Other States (S. Rept. 1374); and

H.R. 318, making excise tax on tires and tubes payable when such items are delivered to a retail store or outlet (S. Rept. 1375).

Pages 15085, 15086–15087

Senate

Bill Placed on Calendar: H.R. 15750, to amend further the Foreign Assistance Act of 1961, as amended, was ordered placed on calendar.

Page 15085

Agriculture Appropriations: By 77 yeas to 2 nays (motion to reconsider tabled), Senate passed with amendments H.R. 14596, fiscal 1967 appropriations for the Department of Agriculture, and related agencies, after taking the following additional actions on amendments:

Modified Montoya amendment to increase from \$100 million to \$110 million necessary expenses for the food stamp program and to increase from \$25 million to \$30 million additional funds appropriated under this heading in the fiscal 1966 Agricultural Appropriation Act (P.L. 89-316); and modified Hart amendment to provide \$2.5 million additional funds for school lunch program for special assistance to needy schools; and

Rejected: By 28 yeas to 53 nays (motion to reconsider tabled), modified Brewster amendment to restrict certain sugar price support loans or payments to \$50,000 to any one person or entity.

Senate insisted on its amendments, asked for conference, and appointed as conferees Senators Holland, Russell (Georgia), Ellender, Young (North Dakota), and Mundt.

Pages 15093–15123

Foreign Aid: Senate made its unfinished business S. 3584, proposed Foreign Assistance Act of 1966.

Page 1515

Treaty Reported: Protocols to the Northwestern Atlantic Fisheries Convention of 1949 (Ex. I, 89th Cong., 2d sess.), was reported (Ex. Rept. 7). Pages 15085-15086

Nominations: 55 postmaster and numerous Air Force nominations were received.

Record Votes: Two record votes were taken today.

Pages 15111, 15122

Program for Monday: Senate met at noon and adjourned at 3:45 p.m. until noon Monday, July 18, when it will consider its unfinished business, S. 3584, foreign assistance.

Committee Meetings

(Committees not listed did not meet)

FOOD FOR FREEDOM

Committee on Agriculture and Forestry: Committee continued its executive consideration of H.R. 14929, proposed Food for Freedom Act, but did not conclude action thereon, and will meet again for its further consideration on Wednesday, July 20.

SMALL BUSINESS

Committee on Banking and Currency: The Small Business Subcommittee held hearings to review the small business investment company program. Witnesses were Bernard L. Boutin, Administrator, and Howard Greenberg, Deputy Administrator, both of the Small Business Administration; Donald P. Moen, Marathon Battery Co., Wausau, Wis.; and Grogan Lord, National Association of Small Business Investment Companies. Hearings were recessed subject to call.

SURFACE TRANSPORTATION

Committee on Commerce: The Surface Transportation Subcommittee continued its hearings on S. 1729, to amend the Interstate Commerce Act to provide for issuance of certificates of exemption to cooperative and shippers associations upon application and proof of eligibility, having as its witnesses Frank A. Smith, Transportation Association of America; Albert B. Kelley, Transportation and Communications Department, U.S.

J.S.

Mr. KUPFERMAN. Mr. Speaker, last month I commended to your attention and the attention of my colleagues the remarks made by the new deputy mayor of New York City, Robert Price, before the recent Governor's conference on decisions for progress. See Congressional Record of June 15, page A3234. In his talk, "Is City Government Obsolete?" he offered seven goals of urban government. One goal concerned "more than adequate health" facilities.

I am happy to say that New York City Mayor Lindsay, taking the health care goal as one for his administration, has set about to make this goal a reality. Residents of New York City are fortunate to have as their new health services administrator, commissioner of health, and chairman of their board of health, an outstanding public health physician, Dr. Howard J. Brown. Before this recent appointment. Dr. Brown served as director of the Gouverneur Ambulatory Care Unit of Beth Israel Hospital in New York City.

A graduate of Western Reserve University School of Medicine, he was certified in 1956 by the American Board of Internal Medicine. In the 10 years elapsing, his services have earned the respect of his fellow physicians and honors from other health care professions. 1965, for example, he received the Public Health Association of New York Merit Award.

Dr. Brown's most recent award came to him last month in Boston during the 69th Annual Congress of the American Optometric Association. On June 23 he received the Apollo Award, the highest honor bestowed by the optometric pro-fession. Its symbol re-creates the form of the mythical Phoebus Apollo, Greek god of light. It is granted only to those individuals who have made outstanding contributions to the visual welfare of

When AOA president, Dr. V. Eugene McCrary of College Park, Md., presented the award, he noted Dr. Brown's unique contributions in the public health field which include a vital social and professional concern for and service to the vision care needs of the American people. He also cited Dr. Brown's services as an associate professor of community medicine at Mt. Sinai Medical School and medical consultant to the Office of Economic Opportunity.

Brown said:

I am very proud to be with you today and to receive this award. I would be still prouder if I felt that I indeed deserved it. This award should go to the members of the staff of the Optometric Center of New York who have provided optometric services to the indi-gent of the Lower East Side of New York. The quality and completeness of their care of patients and the courtesy with which they treat patients have led me to have a deep respect for optometrists and optometry. There have been those who have criticized the service that was developed on the Lower East Side of New York, but on every occa-sion we have asked them to come and examine the service in terms of quality of care, completeness of care and kindness of attention to patients. In each instance, after such a visit there has been no more criticism. Perhaps I am getting the reward for simply being able to recognize outstanding service when I see it.

Though we are entering a new era of health services in this country, we are clearly moving toward a point where the government is guaranteeing to all citizens the right to a full range of health services. We are presently engaged in implementing this right in New York City under the provisions of the fine bill passed by the New York State legislature. If this change were occurring in the 1920's or the 1930's we might simply characterize the role of government as a fee payer. However, in view of the progress of science, it is important that government do more than pay, but take responsibility to see that people get their appropriate share of all services.

Now this has particular relevance to optometry. We could never deliver the needed eye services in this country without the valuable help of your profession. In terms of scientific standards it would be im-portant to note that without optometry, ophthalmology, as a profession that treats medical disease and performs surgery, could not exist.

Anyone then who is concerned about care for people and care provided under scientific standards must concern himself with the future of optometry. I would long for the day when optometry is Integrated both in terms of education and in terms of clinical performance with the other health disciplines. I believe this day will come because it is presented.

cause it is so essential.

So again, let me tell you how honored I am to receive this award. I appreciate it very much.

Federal Versus Local

EXTENSION OF REMARKS

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Monday, July 18, 1966

Mr. JAVITS. Mr. President, I wish to call the attention of the Senate to a very able analysis written by Dr. Henry C. Wallich-of Yale University, and a

Upon receiving the Apollo Award, Dr. member of President Eisenhower's Council of Economic Advisers-in the June 27 issue of Newsweek on the problem of Federal-State-local relations.

He points to the grave dilemma of the growing demands on our city and State governments and their inability to meet many of these demands because of limited resources resulting in the gradual loss of political control over local problems to the Federal Government. His conclusions agree with my own and that of the Nation's Governors who at their annual conference in Los Angeles last week declared that the logical answer to this dilemma is the institution of some form of unconditional grants of Federal money to the States.

I am pleased to say that I introduced a bill last October which embodies one form of such unconditional grants based on the Heller-Pechman tax-sharing plan, and which now represents one of the three approaches that has received the endorsement of the Nation's Governors.

I ask unanimous consent that the article by Dr. Wallich, be inserted in the RECORD at the conclusion of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HENRY C. WALLICH ON FEDERAL VERSUS LOCAL Mayor John Lindsay's epic battle for the budget of New York City has laid bare the malaise that afflicts state and local finances throughout the United States. The finances of New York City have been mismanaged, to be sure. But if that were all, Mayor Lind-say's troubles would be minor. The real problem is one of financial incompatibility between the services a large city should pro vide and the resources upon which it can vide and the resources upon which it can draw. This may end in a divorce of local responsibility to provide services from po-litical power to control them. If the mayor of a large city cannot raise the money he needs to do his job, control of the city's affairs inevitably slips from his and his con-

stituents' hands. As Mayor Lindsay—and many of his col-leagues elsewhere—contemplates his deficit, he does not have far to look for the causes. Many people want to work in the city, but only the very rich—and the very poor— can afford to live and raise their children there. The city must provide a rich menu of services to many people who do not pay for them. So the mayor tries to reach out into the suburbs to tax the commuter. There he encounters the resistance of the state government.

COMPETITION IN LAXITY

New York State is no ogre. Like all other states, it contributes heavily already to the support of its cities. Nationwide, states finance their cities to the tune of almost 30 percent of local general revenues. But neither New York nor any other state operates a gold mine. And other resources are hard to come by for state governments, much in con-trast to their big Federal brother.

At first blush this seems hard to understand. When one compares the usual tax

rates of states with the rates charged by the Pederal government, the impression is that the states ought to have a much easter time increasing their revenues than would the Pederal government. It is easier to double a 3 per cent sales tax than a 48 per cent corporate-profits tax.

To argue this line is to overlook the competition in tax laxity to which our states are committed. The state or city which pushes its taxes out of line loses its industries. The New York Stock Exchange has been trying to make that clear to Mayor Lindsay. Hence the difficulty in raising state and local revenues. Hence the difficulty in providing the services that must be paid out of those revenues.

A POWER VACUUM

The Federal government, which abhors a vacuum, may feel tempted to step in and all the gap. Already it has injected itself by making conditional grants to the states for amounts now budgeted at \$14.7 billion. Each grant twists the arms, more or less gently, of some state or local authority: "Do this, do that, or do without the money." Much of the time, no doubt, the Federal government's standards are reasonable. The Federal government, by and large, is honest and competent. Not all state and local administrations are. But if we want limited government, we cannot let the Federal government, we cannot let the Federal government acquire unlimited power.

A logical way out of this dilemma is shown by the widely discussed Heller-Pechman plan providing for unconditional grants of Federal money to the states. The plan uses the great financial power of the Federal revenue system, but does not let it be translated into political power over state and local authorities. The plan incurs the risk that some states may not make the "right" use of the money. They may even take advantage of it to cut their own taxes. The answer to critics who make this point, located mainly on the political left, must be that the money after all is the taxpayers'. If the taxpayers of some states prefer the money to the services, why shouldn't that be their privilege?

Senator Javirs of New York has offered a bill embodying the main features of this plan. The humiliating struggle between the City and the State of New York demonstrates the urgency of channeling some Federal money, with no strings attached, to the local level. The Federal government, comfortably off as it is, may feel that its present method of tied grants has worked well enough. But here is one case where to leave well enough alone means to let things go from bad to worse.

A Tribute to Wilfred E. Roosa

EXTENSION OF REMARKS

HON. CHARLES S. JOELSON

OF NEW JERSET

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. JOELSON. Mr. Speaker, I would like to call the attention of my colleagues to the fact that Superintendent of Mails Wilfred Roosa last winter completed 53 years of service as a postal employee in the city of Passalc. This is a record of service in the Passalc Post Office. Since I was out of the country at the time, the occasion of his retirement escaped my poetice.

It is unsung heroes like Wilfred Roosa, doing their jobs with dedication from day to day, who do so much to keep the wheels of our government moving.

The people of his area have every reason to be grateful to him for his splendid service.

Fair Housing Law Needed

EXTENSION OF REMARKS

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. ROGERS of Colorado. Mr. Speaker, the need for a fair housing law is clear as we assert our belief in the principle of equal opportunity.

The Denver Post, as a matter of fact, regards the fair housing proposal before Congress as a bare minimum. To speak of weakening its provisions in order to obtain passage, in the newspaper's opinion, is "laughable."

Colorado already has a strong housing law, and the newspaper believes it has been instrumental in bettering the racial climate in the State. The law has served as an emotional safety valve, for Negro families are now assured of the right to move if they wish.

Every large city needs such a safety valve, the Post contends. And unless the States act more swiftly than they have so far, only a national law will meet the need.

The complete editorial follows: [From the Denver Post, June 23, 1966] NATION NEEDS A FAIR HOUSING LAW

Eisewhere on this page, Columnist Joseph Alsop reports on how expanding Negro ghettos are certain to change the face of most of America's large cities, "if present trends continue." What Alsop doesn't say is that the only thing that can change those trends is a national fair housing law.

Such a law won't make any difference in Colorado—we already have a stronger, more effective law than any Congress is likely to pass. It won't even make much physical difference for several years in the rest of the nation. What it could do is make far-reaching change possible—eventually—and improve the nation's racial climate immediately.

A potential national fair housing law is contained in Title IV of the 1966 civil rights bill now pending in Congress. It is not much of a law. In fact, it is downright laughable to hear congressmen say it must be weakened in order to pass.

Principal means of enforcement would be civil suits filed by those who believe they have been victims of discrimination. Can anyone imagine the average Negro ghetto-dweller filing a civil suit against someone who refused to rent or sell him a home? Particularly when the amount of damages he could collect is limited by the law to \$500? In most of the nation, even if a Negro complainant won, that \$500 wouldn't cover his legal fees. If a court wardfed less than the legal maximum damages, a Negro home-seeker could easily lose his shirt while winning his case.

How much weaker, we wonder, would opponents like to have that law?

Actually, if the bill is to do any good, it should provide for enforcement by the Justice Department or some other federal agency. There is a provision in the bill permitting the Justice Department to sue for compliance wherever it detects a "pattern" of discrimination. This may be useful against developers of tract housing.

Presumably it was this feature that led William J. Levitt, president of the giant homebuilding firm that has built whole new towns in four Eastern states, to testify before a House Judiciary subcommittee that the bill "would work, and work well." He favors the bill—if it covers all builders.

But we cannot see how the bill as written would really touch the individually-owned, used home which make up 80 per cent of more of the housing market.

Yet, the nation—particularly its cities—needs a really effective fair housing law.

For the long run, such a law is essential to prevent the nation's largest cities from becoming super-ghettos. (The law itself will not, of course, do that job. But it will so widen the area of freedom in housing that education can do the job.)

education can do the job.)
And for the short run, such a law would vastly improve the racial climate in America's city shottes.

ica's city ghettos.
Colorado, which has had an effective fair housing law for some 14 months now, provides proof.

vides proof.

Nothing very spectacular has happened in Colorado as a result of that law. The number of Negro families who have used it to flee the ghetto can probably be counted in decemes.

But the racial climate has changed. All Negro families in Colorado now know they are free to move "out" if they wish. So we hear no cries here, as we do from places like Watts, that "Whitey has fenced us in." The Colorado law now holds open a safety valve on Colorado's urban ghettos.

It seems fair to say that every large American city in the nation needs a safety valve like that. Certainly they all need some way to change their present ghetto-building trends. And unless the states act more swiftly than they have so far, only a national law will meet the need.

Chicago's District of Columbia Air Link

EXTENSION OF REMARKS

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. RUMSFELD. Mr. Speaker, the Federal Aviation Agency's announced intention to ban all nonstop flights into Washington's National Airport from cities more than 500 miles distant is clearly unreasonable. There are obviously more equitable alternative ways to alleviate the serious congestion at National Airport.

The following editorial from the July 14 edition of the Chicago Daily News sums up very well, I believe, the case against this arbitrary decision by the

CHICAGO'S DISTRICT OF COLUMBIA AIR LINK

The Midwest will be the principal loser if the Federal Aviation Agency's order halting certain nonstop flights to Washington's National Airport is not modified. Landing privileges would be limited to flights originating within a 500-mile radius of Washington; others beyond that limit, including some 15 a day from Chicago, would be diverted to Dulles Airport, which is much farther from the capital.

Members of Congress from Illinois, Indiana, Wisconsin and Iowa have rightly protested the order. They point out that landing at Dulles would add from one to two hours—depending on highway traffic conditions—to the travel time between Chicago and Washington. National is located only four miles from the White House and thus offers speedy transportation to and from the capital.

Granting the FAA's contention that the heavy air traffic at National must somehow be curtailed, we believe the problem should be resolved in other ways. The arbitrary elimination of flights from Chicago and other points outside the prescribed limit discriminates against them unfairly, while unduly favoring such cites as New York and Boston.

Chicago is the main transfer point for many Midwesterners seeking the fastest air route to Washington. Since Washington is the capital of all the country and not merely of the Eastern states, this fact should be taken into consideration by the FAA.

A more equitable solution would be to determine how many flights National can safely handle per day, and divide them up among all the airlines now providing nonstop service to the airport—regardless of the distance covered. The quotas should be based on the volume of passenger traffic. This would assure Chicago and other outlying cities of a fair share of the National traffic, instead of penalizing them for the accidents of geography that place them beyond the 500-mile pale.

Poverty Aid Can Be Embarrassing

EXTENSION OF REMARKS

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. CEDERBERG. Mr. Speaker, how well-to-do and self-supporting school districts are being shoved unneeded financial assistance under the Federal handout programs is disclosed in an iluminating article in the Christian Science Monitor of recent date. The article by staff correspondent Josephine Ripley is entitled, "Poverty Aid Can be Embarrassing," and follows:

POVERTY AID CAN BE EMBARRASSING (By Josephine Ripley)

Washington.—Giving away a billion dollars isn't easy.

n

is

0

nd-

wo

State boards of education are learning this, as they hand out poverty grants under the flabby distribution formula in the administration's elementary and secondary school aid program.

This program is designed to funnel money into school districts with large concentrations or low-income families with large numbers of school-age children.

But the basis of computation has turned out to be so broad and unreliable that some of the nation's richest communities have been startled beneficiaries of poverty grants for their schools.

One person, however, is not surprised, Rep. EDITH GREEN (D) of Oregon vigorously opposed the formula from the first. It would give more to the richer states and less to the poorer ones which need it most, she

argued.

But even she is amazed at the extent to which thousands upon thousands of dollars have been flowing to communities more noted for their millionaires than their pockets of poverty.

VANISHED CHILDREN

More particularly, since this money was intended to go specifically to children from

families with an annual income of less than \$2,000.

Yet this is the way it has worked, in some

Garden City, N.Y., a well-to-do Long Island community, was surprised to find itself "eligible" for \$35,000 in poverty grants under the program.

How did this happen? The United States Office of Education, when queried, masts this explanation: Mainly because the 1960 census, on which the whereabouts of indigent families is determined, showed a concentration of poor families on an Air Force base on the outskirts of Garden City.

That was in 1960. The base has since been closed. But the little children who aren't there still entered into the allocation formula. Many communities, whether they like it or not, suddenly find themselves eligible under this criteria.

Beverly Hills, Calif., didn't like it. City officials indignantly disclaimed eligibility for the poverty grant of \$82,000 which they were due to receive.

They said they could not identify the "poor children" whom this money was supposed to benefit. They refused to accept it.

Santa Ana, Calif., qualified for a \$400,000 grant. This affluent and politically conservative community promptly refused the money on the ground that it would lead to federal control of their schools.

Rep. Henry S. Reuss (D) of Wisconsin rose up to protest when Whitefish Bay, Wis., a well-known millionaire's resort, came in for a \$35,000 school aid grant.

LEGALITY CHALLENGED

To be eligible, a community must have a minimum of 100 impoverished children, he pointed out. Whitefish Bay has only 89, according to his count.

Mr. REUSS, whose district includes the city of Milwaukee with its large concentration of poor, challenged the legality of the grant in a three-page letter to Secretary of Health, Education, and Weifare John W. Gardner.

Whitefish Bay, nevertheless, accepted \$25,000 of the grant to conduct summer remedial courses.

Representative Green warned, at the time the bill was passed, that the distribution formula was automatically stacked in favor of the richer states.

Aid is computed on the basis of the number of poor children, times the amount of the state expenditure per pupil. The highly industrialized Northern states, generally richer, pay more per pupil for education, hence receive more under that formula.

Mrs. Green often compared Westchester County, N.Y., hardly noted for its poverty, with Sunflower County, Miss., to make her point.

A check with the United States Office of Education shows how it actually worked out.

Westchester County qualified for \$2,812,000 in aid on the basis of 7,692 poor children. New York State pays \$709 per pupil toward its schools.

Sunflower County, with 9,543 children in the poverty bracket received \$1,156,000. It pays \$273 per pupil.

COMPLEX UNDERTAKING

Another apparent inequity turned up when high-toned Grosse Pointe, Mich., received \$117,500 as its share under the aid formula—almost exactly the same amount allocated to the depressed town of Inkster in the same state.

These are some of the glaring inconsistencies and inequities which have cropped up in the first year of administration of this massive and otherwise highly successful school aid program.

In the main, it is thought to have worked remarkably well, considering the complexities of this unprecedented undertaking.

of this unprecedented undertaking.

The Achilles' heel of the program appears
to be the formula for computing aid.

Authorities at the Office of Education whe have been working on this Title I section of the bill since the beginning blame its inequities on "a combination of old data [the 1960 census] and the lack of minimum eligibility requirements" which would preclude allocations to wealthy communities.

As it is now, "a very wealthy district can get a small allocation because there is no floor—no minimum for a cutoff," according to one spokesman.

The 1960 census has been a big stumbling block. It has resulted in computations based on nonexistent poor—on families who have moved since then to other places.

Also, while school districts are mentioned in the law, it has been necessary to compute the concentrations of poor on a countywide rather than a school district basis.

HORNEY'S NEW

School districts are rapidly being consolidated, for one thing, and some parts of the country operate their school system on a county basis anyway.

"And once you have made an allocation on a county basis, then almost any district within that county becomes eligible," the Office of Education has found.

It is up to the state board of education to make the distribution within the county.

This responsibility has churned up a "hornet's nest politically," as someone put it. The California board "took a beating" in the case of Beverly Hills, and other state boards across the country have also felt the political heat.

It has been suggested to Congress by the Office of Education that current welfare statistics would provide a more accurate count of the poor than the 1990 census.

By that is meant statistics on Aid to Families with Dependent Children (AFDC). "AFDC figures are current. We know who

"AFDC figures are current. We know who needs help. With this information as a basis, aid could go where it is most needed," said one authority.

He feels that states would go along with this. "It would get them off the hook."

As for Mrs. Green, "I agree," she said in an interview, "that something besides the census figures should be used. They are obviously out of date. Studies show that about one-fourth of the population moves once a year." But she feels this is not the only solution

But she feels this is not the only solution to the program's inequities. She still insists that the states which spend more for education will get more, rather than those who spend less and need more.

An amendment to the act, by Rep. Albert H. Quie (R) of Minnesota, approved by the House Education Committee, would correct this to some extent. It would permit a state to compute its application for aid on the basis of its own expenditure per pupil, or on the national average expenditure whichever is the higher.

The national average is \$484. This computation would benefit the Southern states, particularly, as many spend less per pupil than that.

Interracial Marriages: Hawaiian Success

EXTENSION OF REMARKS

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. MATSUNAGA. Mr. Speaker, a recent study of interracial marriages in Hawaii challenges the commonly held belief that differences in racial and cultural background complicate marital adjustment. Mrs. Carol Jean Kaleialoha,

of Honolulu, author of a 134-page graduate thesis, concludes that in Hawaii at least, "initial attraction and subsequent interaction evolve out of differences." She supports this new and intriguing concept with her findings that divorce rates among interracially married couples are lower than among all-Caucasian marriages in Hawaii, and that while the divorce rate for the Nation continues its upward trend, the divorce rate among interracial marriages in Hawaii remains relatively stable.

Mrs. Kaleialoha's thesis committee included the following University of Hawaii faculty members who are recognized authorities on race relations: Dr. Clarence E. Glick, chairman, thesis committee; Dr. Abe Arkoff, and Dr. Andrew W. Lind.

I submit for inclusion in the Congressional Record the newspaper article which summarizes this interesting sociological study. Written by Reporter Alf Pratte, it appeared in the June 28 issue of the Honolulu Star-Bulletin:

Interracial Marriage: Hawaiian Success— Study of Caucasian-Part-Hawaiian Couples—University of Hawaii Explores Adjustment in Internarriage

(By Alf Pratte)

The chances for a successful marriage between a Mainland "haole" woman and a "local boy" are just as good, if not better, than marriages between persons of the same background.

In short, this is the major theme in a 135page thesis "Adjustment in Intermarriage Between Local Part-Hawaiian Men and Mainland Caucasian Women" written by Mrs. Carol Jean Kaleialoha.

Mrs. Kaleialoha, a native of Wisconsin who married James Kaleialoha, a part-Hawaiian, in 1961, prepared her thesis for the Department of Sociology at the University of Hawaii over a two-year period.

She points out that most research done on marriage implies that sociologically "like attracts like" and that cultural diversity contributes to difficulty in adjustment.

Mrs. Kaleialoha takes exception to this theory to show that in Hawaii, at least, "initial attraction and subsequent interaction evolve of differences."

To demonstrate her point in six chapters ranging from the "Development of the Part-Hawalian Subculture" to "Marital Adjustment," Mrs. Kaleialoha interviewed 40 Caucasian and part-Hawalian couples.

There have been about 4,500 marriages of this type in the last 10 years. She stresses that her sample generally was

She stresses that her sample generally was "middle class," with all persons in their 20's or early 30's, married one year or more, intending to reside in Hawaii and having no less than a high school education.

She notes the "disruptive" side of intermarriages, showing statistics that divorce rates for Causcasian-part-Hawilans here are slightly higher than the national average for all divorces.

Locally, however, the intermarriage divorce rates are lower than for all-Caucasian marriages. Furthermore, the national divorce rate is going up while the intermarriage divorce rate in Hawaii remains relatively stable.

The study showed that only about half of the Caucasian women came from 'liberal or progressive backgrounds' and those from conservative homes generally rebelled against ently orientation," she said.

"Thus, although home lives were fairly stable, especially in regard to lack of death and divorce, this subtle rebellion served to emancipate these women partially from parnetal orientation," she said.

She writes that about half of the part-Hawaiian husbands had a liberal orientation and about half had an identification with the part-Hawaiian subculture.

"Most persons involved in intermarriage had personal needs satisfied within the marital context and did not prefer extensive contacts outside the home," Mrs. Kaleialoha said.

"In order for the couple to function satisfactorily, each mate would either directly fulfill the other's needs or arouse a latent admiration for some characteristic of the other."

As an example she said a wife who excelled scholastically and continued a professional career might be admired by her husband because he once desired this type of career but did not wish to attend school for several years or compete for grades in order to achieve the goal.

"Thus, he would be proud of his wife's motivation to excel and not feel himself to be in competition with her," she concluded.

Mrs. Kaleialoha also discovered that many of the women in her sample were "aggressive, independent, had a tendency to be assertive and ambitious."

Their husbands, on the other hand, are "relatively easy-going, independent, concerned with equality in marriage and stable in their positions of employment."

For future research, Mrs. Kaleialoha suggests that a psychological study be made of the factors she has studied from a sociological point of view.

"By studying other types of intermarriage, it could be determined whether or not adjustments varied when considering other kinds of subcultural crossings in different environmental settings."

Members of Mrs. Kaleialoha's thesis committee were Dr. Clarence E. Glick, chairman; Abe Arkoff and Andrew W. Lind.

An Old Problem

EXTENSION OF REMARKS

OF

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. JOHNSON of California. Mr. Speaker, let us hope with President Johnson that 1966 will be remembered as the year of "new conservation" for

the United States.

The Sacramento Bee recalls that the President said, a few months ago, that this goal might be achieved, depending upon how aggressively the Government

moves to reserve land for parks.

Land is not as available as it once was, the newspaper comments in an editorial, and acquiring land raises the old problem of finding the money to pay for it. But this is certainly the time, as the newspaper recalls the objective, for us to be sufficiently farsighted to protect the future by planning for it now.

Mr. Speaker, I submit the editorial for the Record:

FAMILIAR OLD PROBLEM

The federal government is engaged in one of the most ambitious parks and recreation programs in the history of the nation but the effort is suffering the malady common to just about any national program one could mention: Lack of money.

It comes about this way:

In years past, whenever the federal government felt inclined to establish a park or create a program for recreation, it would set aside land already under federal holdings.

However, accelerated urbanization is creating new problems in recreation and parks. There just is no land reserved for creation of these reserves, so the government must buy land.

Here is the rub. Much of the land which could be converted to parks and for recreation is in private ownership and land costs for such parcels are staggering. Complicating this even further, once the word gets around that the government is interested in a certain piece of land for development into a park or recreation area, the cost of the land soors.

President Lyndon B. Johnson commented in proposing his parks and recreation programs last February that depending upon how aggressively the government moves to reserve land for parks, 1966 may be remembered as the year of "new conservation" for America—as the year when men were farsighted enough to protect the future by commanding the present.

Law Against Desecration Should Be Enacted

EXTENSION OF REMARKS

HON. RICHARD FULTON

OF TENNERSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. FULTON of Tennessee. Mr. Speaker, today it was my privilege to introduce legislation designed to make illegal an act which, in itself, borders on the immoral.

The act to which I refer is the desecration of the flag of the United States of America.

This is the most liberal nation in the long history of mankind in the field of guaranteed right of expression and dissent.

The responsible exercise of this right is not only a privilege but a duty.

However, the irrational desecration of the flag, no matter by whom or for what reason, is an act that cannot and should not be condoned.

Most persons, I am sure, are not aware that there is no Federal law prohibiting this action except in the District of Columbia.

There are, without exception, I believe, State laws in each of the States prohibiting desecration of the flag.

Nonetheless, it would seem that these laws have not been sufficiently enforced to prevent this disgraceful act.

There is need for a Federal law to act as a further deterrent and to provide uniform coverage and penalty.

It may be that some would regard this as an invasion of States rights. However, I believe that since the American flag is the flag of all Americans, that because the regulations regarding its handling and display apply uniformly to all Americans, then, therefore, the penalty for disrespect and abuse should apply uniformly to all Americans.

In support of the argument for such a law, I would like to insert an editorial which appeared recently in the Nashville Banner and commend it to the attention and consideration of my colleagues:

ton

FOR THE PLAG: LAW AGAINST DESECRATION SHOULD BE ENACTED

About the silliest argument that could be raised against the proposal of a federal law to forbid and punish desecration of the American Flag is the suggestion that such a statute might "violate the constitutional guarantee of free speech."

Any Congressman entertaining such theory, as ground for legal objection, is fabricating his own gnat to strain at. There may be a relationship between words and actions

be a relationship between words and actions of infamy—as between cause and effect—but they are not legally one and the same thing. Technically, and in the eyes of the law, there is a difference between saying "Let's burn the house down," and setting fire to it.

The Flag has been descrated time and coming the law the control of the co

again in this era of rampant hooliganism and apparently privileged seditious mischief. Subversive characters have spat on it, walked on it, burned it and torn it to shreds. They thereby were showing contempt not only for Old Glory, but for the thousands of young Americans who are fighting and dying for it.

Yet with a spate of measures before Congress to make that offense a federal crime. there still is no national law against it. The

culprits go free!

For postage stamp irregularity you can go to jail. For mutilating money, pensity attaches—and nobody arises (or should) to suggest that punishment infringes the offender's "right" to talk himself blue (or Red) in the face. Red) in the face.

The law proposed is eminently in order. One with teeth should be enacted and en-

forced to the letter.

Captive Nations Week

EXTENSION OF REMARKS

HON. H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. SMITH of California. Speaker, as we commemorate Captive Nations Week, it seems to me particularly ironic that on the same recent day when the Soviet Union canceled its par ticipation in the annual track and field meet with the United States, our State Department announced a liberalization on travel by U.S. citizens to Communist countries with which we have no diplomatic relations.

Although the countries involved in this lift of travel restrictions are not among the east-central Europe captive nations, where travel by Americans is already relatively easy, there still is a most unsatisfactory inconsistency in the two announcements on the same day.

The Russians said they were canceling their athletes' trip to our country because of "our hatred for the American military who are perpetrating atrocities in Vietnam and our solidarity with the people of Vietnam."

That was the same day the State Department announced that persons in cultural, athletic, commercial, educational, public affairs, and professional fields will henceforth be eligible to apply for validation of their passports for travel to restricted areas. These are Communist China, North Vietnam, North Korea, Cuba, and Albania.

These simultaneous announcements also graphically illustrate a gradually diminishing concern on our part-by our Government and the people—over the plight of the people of the captive na-

tions of east-central Europe.

Now is a time when Communist propaganda machinery is concentrating its attacks on alleged U.S. mistreatment of smaller nations, to recognize anew the Soviet imperialist record in east-central Europe. Now is a time for us to rededicate ourselves to the principles set forth in Public Law 90, enacted by Congress in July 1959 providing for the designation of the third week in July as "Captive Nations Week.

The resolution by which the law was enacted stated, in part:

Whereas these submerged nations look to the United States, as the citadel of human freedom, for leadership in bringing about their liberation and independence and in restoring to them the enjoyment of their Christian, Jewish, Moslem, Buddhist, or other religious freedoms, and of their individual liberties; and

Whereas it is fitting that we clearly manifest to such peoples through an appropriate and official means the historic fact that the people of the United States share with them their aspirations for the recovery of their

freedom and independence.

Problems Beyond the Draft

EXTENSION OF REMARKS OF

HON, WENDELL WYATT

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. WYATT. Mr. Speaker, most of us in the Congress are aware and interested in the necessity for a revision of the Selective Service Act. In studying the problems involved, it is obvious that these problems are peripheral to overall manpower planning in this country. In this connection, the Oregon Journal, of Portland, Oreg., on Monday, July 11, 1966, published a most thought provoking editorial and with permission I print the same at this point in the RECORD:

PROBLEMS BEYOND THE DRAFT

A restudy of the military draft should be only a part of the business of the National Advisory Commission on Selective Service which has just been appointed by President Johnson.

What we need is a national policy on manpower-military and civilian-or, alterna-tively, a decision not to have a universal

manpower policy.

This is so because, barring a vast expansion of the armed forces which no one in his right mind should want, there simply are too many young men in the military age bracket to find places in the armed services. Today we have about 10 million men in the United States aged 19 to 26, and only about 3 million men in the armed forces. about half the young men of draft age ever wear a uniform. As our population grows, the surplus of men should become even greater. In only eight more years, it is estimated, the 19-to-26 age bracket will have swollen to 13.6 million men.

Therefore, no study just of the military draft is likely to answer satisfactorily one

of the basic objections to the present draft system—that it takes Joe while passing over

equally qualified Sam.

Recently suggestions have been revived that we should have a form of universal service, with every young man serving his country for a year or two in either a civilian

or military capacity. It may sound plausible on first hearing, but is this what we really want? After all, the regimented legions of Hitler Youth are one of the many ugly memories of Nazi Germany. Up to now the official line of the heads of the Peace Corps and the Vista volunteers, which might be regarded as examples of civilian alternatives to military service, has been that they wanted no part of having their organizations thought of as means for avoiding military duty. On a purely practical basis, do we want to

saddle the taxpayers with supporting every young man in the country for a year or two? Do we want to pay living allowances for the wives and children of those who are married? For that matter, if every boy is said to owe his country a couple of years of service, what about every girl? Do we want universal

service for women, too?

These are some of the really fundamental questions involved in a study of the draft. Maybe the new commission will have to conclude that while the draft should be as fair as possible, nobody ever guaranteed that life itself would be 100 per cent fair, and that therefore we will have to continue calling

some men while passing over others.

There is a nagging suspicion that President Johnson may have appointed his new commission in hopes, partly, of taking some of the heat out of the draft controversy un-til after the November elections. It is not directed to report until next Jan. 1.

The 20-member commission is heavy with people who have been closely associated with the system as it has operated in the pastpeople like John McCone, former director of the Central Intelligence Agency; Thomas Gates, ex-secretary of defense; David M. Shoup, former commandant of the Marine Corps, and even President Johnson's onetime press secretary and punching bag, George Reedy. But it also has at least one member—President Kingman Brewster of Yale University—who has been sharply critical of the present draft system. Its chairman, Burke Marshall, won wide respect when he was head of the civil rights division of the Justice Department.

The commission has the stature and background to make the "penetrating and broad-range study" which, according to his press secretary, the President wants. Nothing less

will meet the need.

Vietnam

EXTENSION OF REMARKS OP

HON. JOHN A. RACE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. RACE. Mr. Speaker, the months have stretched into years since the conflict in South Vietnam took top priority on the front pages of the newspapers of this Nation.

Many nationally prominent figures have ventured to express their opinions for or against the U.S. role in this conflict and in recent months, the term, "hawks and doves," has become a more or less standard expression in governmental and news media circles.

Today, I received a letter from one of my constituents in Fond du Lac, Wis., expressing what I believe is the prevailing attitude of the people of my district toward the Vietnam war.

I believe this letter speaks well for itself, and would commend it to the attention of all of my colleagues of this body.

Under unanimous consent I include the attached letter in the Congressional RECORD:

FOND DU LAC, WIS., July 14, 1966.

Congressman John Race, House of Representatives,

Washington, D.C.

DEAR Mr. Race: I have been putting off long enough the writing of this letter informing you of my feelings in regard to Vietnam.

So much has been written, so many have been demonstrating (some without really knowing what for), so many condemn. I hate war! But, I doubt that any human

I hate war! But, I doubt that any human being will live a lifetime without seeing it or hearing of it or being affected by it in some way, because men are greedy, are hateful, and are lacking in love for others.

My younger brother is in Vietnam (with son and wife at home). We hope and pray that he'll come home on schedule in October, unharmed. My older brother has volunteered to go to Vietnam (with four boys and wife at home).

At times what I read makes me think seriously about whether the United States really belongs there. But I always return to the same conviction.

My general feelings are:

 As long as South Vietnam is besieged with Northern murderers, torturers, and saboteurs, and is in need of support, the United States is morally committed to help them.

2. We didn't start this shameful mess; North Vietnam is the invader.

 If we keep out of this fight, the same kind of infiltration will eventually reach our shores and our neighboring countries.

4. True, the United States has made many bunders, and has wronged many, but our sincere purpose is to give all men the freedom and comforts we have here.
5. I see many injustices perpetrated among our citizens (I am ashamed when I read of

5. I see many injustices perpetrated among our citizens (I am azhamed when I read of or see TV pictures of whites being so hateful toward fellow citizens because of their color), but I feel our country has never been better, and I wouldn't want to live anywhere else.

6. I support the raiding of North Vietnam oil targets and military targets. I feel they were carried out with the safety of the surrounding civilians uppermost in the minds of the planners.

7. I compare the bombing of oil supply depots in North Vietnam with Korea. I feel President Johnson made a wise decision, while perhaps President Truman might have erred in removing MacArthur. If MacArthur had been allowed to pursue his strategy we very likely would have ended the Korean war sooner, with Iar fewer casualties, and with a more stable situation than the shaky truce now in existence.

 I am proud to be an American—I thank America for my freedom to speak, to worship, to think, to be educated, and to write this letter without fear of repercussion?

9. I thank you and all of our elected people who had the courage to run for office and the persistence to stick with all the problems presented.

10. And I thank whoever had the persistence to read this in its entirety.

Mrs. Dave Barros VIII.

Bobby Stephens Day

EXTENSION OF REMARKS

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. BECKWORTH. Mr. Speaker, I desire to include in the Congressional. Record an editorial that appeared in the Longview Morning Journal on June 18, 1966 concerning a longtime close friend of mine, Col. Robert L. Stephens. Also I include an article about Bobby Stephens Day.

I have known this very outstanding young man from the time he was a small boy. He always has been religious and a man of the highest character in all respects. His many talents and attainments warrant the signal honor he has received. Certainly he deserves the recognition he has been given.

The material follows:

BOBBY STEPHENS DAY

(By Carl L. Estes)

Any community is at its best when recognizing and honoring its citizens who have served their country faithfully and with distinction to themselves and the nation. So it is with Gilmer which places itself in the public spotlight Saturday by officially celebrating Bobby Stephens Day.

All East Texas is proud of Col. Robert L. Stephens, the celebrated and highly decorated "Silver Fox" of the U.S. Air Force who on May Day last year piloted a YF-12A jet interceptor at more than three times the speed of sound and brought the world's air speed record back to the United States from Russia.

For setting two new world flight records a straight course speed record of 2,070.101 miles per hour, and an absolute sustained altitude record of 80,257.86 feet—Colonel Stephens and four of his test flight crew officers were decorated with the Distinguished Flying Cross, awarded by Air Force Chief of Staff Gen. John P. McConnell in a Pentagon ceremony in Washington.

Gilmer is literally booming with pride, for Colonel Stephens is a native of the Upshur County capital. He is the son of Mrs. Manie Stephens of Gilmer and the late Vernon J. Stephens. A veteran Air Force test pilot at 44, he is prematurely gray—the basis for his honored unofficial title of "Silver Fox" by which he is recognized among his Air Force friends and admirers.

Colonel Stephens and his co-pilot also were awarded the Flying Tiger Pilot Award for the world record-breaking flight, and received the 1865 Thompson Trophy Award. The MacKay Trophy for 1965, awarded by the Mational Aeronautic Association for the most meritorious flight of the year, will be presented to Colonel Stephens and his flight crew at Edwards Air Base on July 23 by Genral McConnell. Air Force chief of staff.

eral McConnell, Air Force chief of staff,
Gilmer and East Texas people are proud
that Colonel Stephens' picture hangs in the
Air Force Hall of Fame at Edwards Air Base,
Calif., where he is officially known as Director
of the Air Force Flight Test Center YF-12
test force.

The intrepid Gilmer colonel has been a test pilot longer than any other man in the Air Force today. He was the first military man to be elected a "fellow" in the international Society of Experimental Test Pilots. He is a Legion of Merit Medal winner for

his work a few years ago as director of testing of the famed F-104 fighter plane. As a test pilot and aeronautical engineer for 17 of his 22 years in uniform, he has been at Edwards Air Base a number of times over the past 12 years and now heads a group of more than 100 military and civilian test pilots, engineers, technicians and others engaged in flight testing the Mach 3 (three times the speed of sound) aircraft.

Colonel Stephens is a graduate of Gilmer Goliner, a graduate of Texas A&M University with an aeronautical degree, and holds a master's degree in aeronautics from Frinceton University. He and his wife Joy have three lovely daughters, Lila, Linda and Lisa. His family will be with him for this happy occasion.

We here in Longview and throughout East Texas join in spirit with the proud people of Gilmer in honoring Colonel Stephens this Saturday. In all the activities of the day, we all shall be happy to have back home again, a distinguished citizen and one of the Air Force's finest, Col. Robert L. Stephens.

SPECIAL DAY IN HOMETOWN HONORS PILOT

GILMER.—As his home city put finishing touches on plans for Bobby Stephens Day scheduled today, the National Aeronautics Association revealed that Air Force Col. Robert L. Stephens and his record-setting pilots are to receive still further honors.

The MacKay Trophy, given for the most meritorious flight of the year, will go to the pilots and crew of the YF-12A jet interceptor in July 23, ceremonies at Edwards Air Porce Base in California. It will be presented by Gen. John P. McConnell, U.S. Air Force Chief of Staff, Washington, D.C.

Veterans test pilot Stephens, known as "Bobby" to his hundreds of friends and admirers throughout East Texas, broke world speed and altitude records on May 1, 1965, when he and his co-pilot, Lt. Col. Daniel Andre, fiew the YF-12A to 80,257.8 feet at a world speed of 2,070.1 miles per hour. This broke the previous record held by Russia—and on the Soviet Union's May Day at that.

On the same day, four other test pilots under Colonel Stephens' command, set nine world speed and altitude records in the same aircraft.

The MacKay Trophy will be awarded in the name of all the men who flew and set the nine world speed and altitude records.

Because of his distinguished career, the colonel and his family are being paid special honors all day Saturday in the town of his birth.

Festivities, under direction of Jack (Spot) Baird of Gilmer and Longview, and the Upshur County Chamber of Commerce, get under way at 9 a.m. Saturday at Kinel's Cafe where friends are invited to drop by for coffee and visit the colonel before he goes to the Strand Theater at 10 a.m. to show actual films of the record-breaking flight. He will narrate the film, and answer questions from his audience. Primarily an event for school children of Gilmer and all East Texas, the film will be shown again if interest warrants, Baird said.

At noon, an all-service club luncheon at Gilmer Country Club will spotlight Colonel Stephens and his family. This includes his mother, Mrs. Marie Stephens of Gilmer, his wife, Joy, and three daughters, Lila Lee, Linda Lou and Lisa; his mother-in-law, Mrs. Jewel Fuller of Baytown; and his two sisters, Verna Helen and Lila Blanche.

to

a

th

Gilmer Rotary, Lions and Kiwanis Clubs will combine their meetings for the lunchcon, which will see such special guests as State Reps. George Hinson and John Allen, State Sen. Jack Strong, Cong. Lindley Beckworth and Ray Roberts. Texas A&M University will send a representative from its engineering school, from which Colonel Stephens was graduated, and a San Antonio member of the famed Fiying Tigers, also is expected.

The 745th Air Force Band from Barksdale

The 745th Air Force Band from Barksdale Air Force Base will play at the luncheon as well as in concert from a bandstand on the city square beginning around 2 p.m.

Colonel Stephens will be presented from the bandstand at 2:30 p.m. and will speak briefly.

On display on the city square will be survival equipment from the 2nd Combat Support Group from Barksdale.

Colonel Stephens and his family also will be paid tribute by the Gilmer High School Class of 1946 which is holding its 20th class reunion Friday through Sunday.

What Price Welders?

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. CEDERBERG. Mr. Speaker, the magazine Welding Engineer feels that the Federal Government is getting into areas about which it knows little or nothing, and cites its own field—that of welding—as an example.

The interesting editorial, which appeared in the June issue of the magazine, follows:

llen,

WHAT PRICE WELDERS? (By T. B. Jefferson)

Among the many programs being established by the Office of Economic Opportunity, I have been told there is a welding training program in an eastern city. But "economic" it is not. On the basis of the initial program, it will cost about \$16,000 a year to train four welders. This is figured on the \$3,800 cent for a 12-week course in are welding. As if the cost were not a sad enough commentary, there is also another one: the student is receiving training only with stick electrodes.

True, stick electrodes are going to be around for some time to come, but a good portion of present day demands for welders include those who are capable of handling a Mig gun. It is doubtful that the "advisors" who set the school up ever heard of Mig welding.

This is just another example of the government getting into some areas about which it knows little or nothing. I do not know why a welding school has to be set up in a city that has two of the best privately operated welding schools in the country, schools where experienced teachers would provide welding students with adequate training and virtually insure them a job at a cost of from one-fourth to one-eighth the money the OEO

school is going to spend per student.

Perhaps we shouldn't complain too much about \$8,300. On the overall OEO program they have spent more than \$287 million to train 1,061 students in various fields. This is only a little more than \$270,000 per student and this is only the first year's operation.

There is something economically unsound about a program that spends more on "educating" a student than the student will be able to earn in his working lifetime.

If we are going to throw the taxpayer's money away, it would seem that the best thing to do would be to put the \$270,000 in the bank and then give the "student" the in-

terest. He would have the \$12,000 a year income for life and the taxpayer would know that his money was still around and was not being wasted or contributed to an ever-growing national debt.

Results of a Public Opinion Survey Taken in North Carolina's Eighth Congressional District

EXTENSION OF REMARKS

HON, CHAPLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix, I am including the results of my annual public opinion survey among residents of the Eighth Congressional District of North Carolina.

I would like to express appreciation to all those who took the trouble to inform me of their stands on some of the important issues before this session of Congress. A total of 14,104 persons completed questionnaires and mailed them to my Washington office—a return of approximately 2,000 more than last year.

One especially gratifying aspect of this year's questionnaire is that so many persons—I would estimate a majority—added comments elaborating their views on one or more of the questions or on some other issue of concern to them.

It is interesting to observe that a majority of those answering voted against a proposed International Education Act but for an International Health Act, thus indicating that the answers were given after deliberation and thought.

Questionnaires were mailed to the broadest possible cross section of district residents and returns were received from all of the counties of the district. This would indicate that the responses constitute a fair reflection of the thinking of Eighth District residents.

The answers were tabulated by Data Management, Inc., of Washington, D.C., by the use of data processing equipment.

Following are the questions asked in the 1966 poll and the responses by numbers and percentages:

 Which of the following policies would you like to see the U.S. follow in Vietnam?

(c) Transfer U.S. troops to coastal enclaves and fight a strictly de-

fensive war (653)

(d) Expand air attacks against North
Vietnam to include industrial
targets, close to the port of Haiphong to reduce the flow of war
supplies to South Vietnam, and
do whatever else is necessary to
bring the war to a successful
conclusion even at the risk of
intervention by Red China
(9,048)

No answer (982)

Please note that this questionnaire listing the foregoing questions was circu-

64 2

lated before the present stepped-up air strikes against North Vietnam.

2. The President has proposed a new program under which the government would subsidize rents of families eligible for public housing but who would reside in housing units provided by non-profit, low-dividend, or cooperative housing owners. (The family would pay 25% of its income for rent and the Federal Government would pay the rest). Do you favor this proposal?

 Yes
 (1,708)
 12.1

 No
 (12,028)
 85.3

 No answer
 (368)
 2.6

3. The President has proposed, in addition to existing financial aids to cities for urban renewal, etc., spending \$4.3 billion during the next 6 years for what he calls a massive demonstration cities program. Certain cities around the country would be selected as "demonstration cities," and a federal coordinator would be assigned to each one. Do you favor this proposal?

 Yes
 (1,436)
 Percent

 No (12,339)
 87.5

 No answer (329)
 2.3

4. The President is proposing the International Education Act of 1968, "to give children in other continents the same head start we are trying to give our own children." Do you favor this program?

 Yes
 (2,538)
 18.0

 No
 (11,034)
 78.2

 No answer
 (532)
 3.8

5. The President is also proposing the Internation Health Act of 1966, "to wipe out smallpox, malaris, and control yellow fever over most of the world in this decade." Do you favor this program?

Percent

Yes (7,836) 55.6 No (5,489) 38.9 No answer (779) 5.5

6. Do you believe the U.S. should provide funds to assist over-populated countries in promoting birth control?

Yes (6,406) 45.4
No (7,026) 49.8
No answer (672) 4.8

7. Would you favor civil rights legisla-

(a) To give the Federal Government jurisdiction over the selection of juries in state courts to assure non-discriminatory jury selection?

 Percent

 Yes (1,542)
 10.9

 No (12,026)
 85.3

 No answer (586)
 3.8

(b) To confer authority of federal courts to prosecute persons charged with murdering, assaulting or intimidating those engaged in civil rights activities?

Yes (3,406) 24. 1
No (10,023) 71. 1
No answer (675) 4. 8
(c) To prohibit racial discrimination in the sals or rental of houising?

 Would you favor granting industry a tax credit for expenses incurred in operating on-the-job training programs for unskilled labor?

9. Would you favor recognition and admission to the United Nations of Red China?

Pe	rcent
Yes (3,914)	27. 8
No (9,177)	65. 1
No answer (1,013)	7. 1

10. Would you favor legislation which would invoke binding compulsory arbitration in labor-management disputes involving public services or which threaten irreparable damage to the national interest?

1	Percent	
Yes (10,567)	74.9	
No (2,699)	19.1	
No answer (838)	6.0	

11. Do you favor four-year terms for Representatives in Congress?

Pe	rcent
Yes (8,521)	60.4
No (4,968)	35. 2
No answer (615)	4.4

12. The President is recommending an expansion of the anti-poverty program. The appropriation last year was \$\frac{1}{2}\$ billion and the request this year is for an additional \$1\frac{1}{2}\$ billion. Would you recommend:

	Pe	rcen
(a)	Increasing and expanding the pro- gram as recommended? (1,197) _	8.
	Ending the program altogether?	48.
	Reducing the money spent on it?	24.
(d)	Keeping it at the present level?	20.
No	answer (412)	2.

7

13. Do you favor stricter laws regulating the rights of individuals to purchase fire-

BEN 33379 L	p,	ercen
No (4,695)_	(497)	63. 2 33. 3

14. Do your favor federal standards for the transporting and sale of dogs, cats and other animals for use in medical research:

	Percent
Yes (8,995)	63.8
No (3,810)	27.0
No answer (1,299)	9.2

Captive Nations Week: 1966

EXTENSION OF REMARKS

HON, KEN W. DYAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. DYAL. Mr. Speaker, this week marks the eighth annual observance of our recognition of the plight of the captive nations. President Johnson, in a special captive nations proclamation, has asked us to consider the situation of peoples who still do not enjoy national independence and democratic liberties.

In the immediate aftermath of World War II the list of nations which had fallen under Soviet domination grew alarmingly long. More and more nations fell under the yoke of a new form of imperialism at the very time when the list of countries under Western colonialism was growing shorter.

Although we still have no cause for unguarded optimism, it is possible to point to a number of trends which are already threatening monolithic Commu-

nist domination in a number of countries.

Communist dogmatists are having to face the fact that the same political forces which propelled many African and Asian peoples into nationhood are operating in the countries under Communist rule. For the desire for self-determination and national independence is universal. It is even beginning to influence and divide Communist hierarchies. Only a few months ago Rumania's growing independence on economic questions was extended to certain political matters. Rumania suggested Soviet troops have been in Eastern Europe long enough.

I suspect that we have only begun to witness the changes which the forces of polycentrism will bring. For even a small amount of independence and internal liberalization tends to make people want more.

Another factor which is operating against the perpetuation of a Communist empire is the failure of Communisteonomic theories when they are actually put into practice. Yugoslavia has essentially abandoned collectivization of agriculture and has instituted a semimarket economy. The Polish regime has had to relax its policy of agricultural collectivization.

We must do all we can to help insure that these processes continue and become more widespread. For, by themselves, these changes are only a beginning. The peoples of Eastern Europe are still far from achieving true freedom and national independence. In some countries these liberalizing tendencies have not even begun.

Because America is committed to the ideas of political freedom and independence, we cannot remain indifferent to the fate of the captive nations. We must look with hope toward the day when it will no longer be possible to speak of "captive nations." We must have faith that this day will come. Great empires have inevitably crumbled because conquerors could not continue to enforce their will on diverse peoples. The Communist empire is no exception.

The Captive Nations, 1966

EXTENSION OF REMARKS

HON. JAMES J. HOWARD

OF NEW JEESEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. HOWARD. Mr. Speaker, the attention of this country, indeed of the entire world, is presently focused on the struggles in Asia. Some attention is also being paid to the crisis in the Western Alliance in Europe. But one area of contention in this age of international upheaval is given little notice. This area comprises what are properly called the captive nations.

The nations which disappeared as independent entities behind the Iron Curtain of Josef Stalin two decades ago are still held by brute force within the pattern of relationships which comprise the

Soviet Communist empire established by the late dictator. The methods of repression of dissent—there is no question of anything stronger such as outright opposition—may now be more subtle than in the past, but they are still actively used. Students demonstrate against some aspects of the floundering regime in Prague and are hauled off to prison. Religion is still vigorously attacked in all these countries. Ties with the West are not as strongly built as is sometimes supposed. Witness the refusal to allow the Pope to attend celebrations of the Polish millennium held earlier this year.

The fate of those brave young patriots who defied the mechanized power of the Red army in Hungary is not yet fully known. But we can be certain that it was an unpleasant one, as the accounts of the mass deportations which followed the Soviet intervention would indicate. The tales of horror of the police state which existed with the sanction of the Soviet Union before the revolt in 1956 have been admirably recounted in the book by James Michener, "The Bridge at Andau."

There have been some changes in the economic management policies of some of the states fashioned in the Soviet image. However, other forms of what might be called liberalization have not The absolute monopoly of appeared. power is still held by the currently supreme cliques within the Communist oligarchies which have furnished all the leaders since the Russians conquered the East European states. The basic sources of power of these regimes is still that which helped to establish and cement their capture of power 20 years ago. These sources are the omnipresent domestic police apparatus and the less obvious, but never-forgotten might of the Red army.

Mr. Speaker, we should never let the dramatic news of current events in other parts of the world, and here at home, cloud our realization of what has happened to millions of human beings living under the yoke of Soviet imperialism and its nefarious agents. We must do our utmost to let the ordinary citizens of these horrid replicas of a dark age of despotism know that we do remember them, that we do not agree that their present condition is either morally acceptable or permanent.

The observance of Captive Nations Week here in this bastion of freedom is a correct and necessary event. We are the bulwark against the tide of aggression and tyranny which has flowed from the state of Lenin and Stalin and their successors. If we do not realize that the terrible results of their previous actions are still existent in the world today, then who will bother or dare to remember and call out against the evil?

Mr. Speaker, I wish to add here my personal wish that it will not be long in the future before the observance of this week is unnecessary. I want to extend to the unbowed patriots of the captive nations my deepest sympathy and my sincerest hopes that soon we may be able to celebrate with them the achievement of their national freedom and independence.

L.B.J.'s Tardy Action

EXTENSION OF REMARKS

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. YOUNGER. Mr. Speaker, the article appearing in the Washington Post on Friday, July 15, written by Rowland Evans and Robert Novak, particularly appealed to me because of the detailed accounting of what the Banking and Currency Committee of the House contemplated in the way of legislation to supply money to the home construction field. It appears that the administration is as delinquent in handling this matter as they are in handling the airlines strike. Their column follows:

L.B.J.'s TARDY ACTION

(By Rowland Evans and Robert Novak)

Acting with his usual indirection, President Johnson telephoned Secretary of Treasury Henry H. (Joe) Fowler, soon after he arrived in Texas last week that the time had come to do something about the lack of mortgage money and the crippled housing industry.

Mr. Johnson himself wants to keep in the

background.

Specifically, the President told his Treasury chief to light a fire under the House Banking Committee. For months that Committee, headed by the old Texas populist, Rep. Waight Parman, has been trying to find some way to put more money into the mortgage market. The desperate lack of housing money is one result of the Federal Reserve Board's high-interest policy.

Board's high-interest policy.

Immediately after the telephone call from the President (who is coming under increasing pressure from friends to do something about sky-high interest rates). Fowler, Under Secretary Joseph Barr and other top Treasury aides went into action. First they made a round-robin of telephone calls of their own to members of the Banking Committee, by then scattered far and wide over the July 4 helidar.

Fowler and Barr followed that up with personal visits to Capitol Hill this week, where they buttonholed the membership to sak for

But the problem of rising interest rates is not so easily solved, even with the President himself now, and belatedly, demanding action. For when the Fed last December decided to raise the discount rate (the rate paid by commercial banks for money borrowed from the Fed), that increase spread into every crack and cranny of the Nation's money markets. Bringing rates down on a selective basis is no easier than stitching together a broken cobweb.

What, then, does the Administration want Congress to do? The package that Fowler and Barr are now unfolding for Banking Committee members is tentative and mod-

To move savings back into the mortgage market and out of commercial banks, Fowler wants Congress to give the Fed new power to set a lower interest ceiling on relatively small savings deposits (under \$100,000 placed with the banks. Banks are now paying as high as 5½ per cent on commercial deposits. If a 5-per cent ceiling were placed on the less-than-\$100,000 deposits, investors would presumably put more of their money into savings and loan establishments, which in turn would use it to finance new housing.

But Powler also proposes that the Home Loan Bank Board be given new power to es-

tablish maximum interest rates on investments in the savings and loan associations. Theoretically, then, what Fowler calls the "rapid escalation of interest rates" would cease with both the banks and the savings and loan outfits working under temporary interest rate ceilings.

Although savings and loan officials, and the housing industry, feel that this juggling of interest rates might add substantial sums to the mortgage market, particularly in money-tight California, no one can be sure. Other high-rate competition for money is fierce. Thus there is some support on the Committee for a more drastic step: empowering the Fed to buy up obligations of the Home Loan Bank Board, thus giving the Board new cash to put directly into the mortgage market.

Again, however, this panacea would precisely depend on the willingness of the tightmoney Fed to take advantage of the new law. Inordinately worried about inflation, the Fed might simply refuse to buy the Board's obligations, unless ordered by Con-

At stake here is far more than a mild depression in the vast housing industry. What is really involved is the reltaive powerlessness of the President to deal with the Nation's monetary distortions against the wishes of the wholly independent Federal Reserve Board. The action of the Fed last December started a monetary ripple that has now become a high wave, undermining the second largest industry in the Nation and menacing the entire economy.

menacing the entire economy.

Although Mr. Johnson is personally behind it, the new move comes perilously late in the face of clear signs months ago that action was needed. The President is now suffering from the lack of a clear, consistent economic policy combining both fiscal and monetary measures.

Letters From Vietnam From a Neighborhood Boy

EXTENSION OF REMARKS

HON. JAMES F. BATTIN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. BATTIN. Mr. Speaker, a recent article in the Great Falls, Mont., Tribune, by Mary S. Carroll, told a graphic story of the heroic battle American boys are waging in Vietnam. The story was done from excerpts of letters from Rod Lots, a helicopter crew chief to his mother and father in Great Falls.

I have unanimous consent that the article be printed in the Appendix of the RECORD:

LETTERS FROM VIET NAM FROM A NEIGHBOR-HOOD BOY

(By Mary S. Carroll)

This is about a boy in our block, the 300 block of Fifth Avenue North in Great Falls. He's typical of thousands of boys in many blocks, in many towns across America. These excerpts from Roger Lots' letters to "Mom and Dad" aren't arranged chronologically; dates and places have been deleted for the most part. What they do show, we think, is a picture of life in Viet Nam today and the boys who bear the brunt of the battle there.

We neighbors watched Rod grow up: Marbles, cutting grass, shoveling snow. Then, when he was in his 'teens, we began seeing his photos with Great Falls High School teams—football, basketball and track—then

he went to college at Bozeman—then to Viet

His parents, Ann and Bob Lots, and younger sister, Rosanne and brother, Bob, are courageous people.

Ann says, "My boy knows why he's in Viet Nam even if some of these people don's. Rod's letters make us realize that these Vietnamese are real people and the Viet Cong treat them cruelly. Our boys are involved a lot with people—helping them. Rod asked in a letter for some candy kisses, wrapped; not chocolate (it meite). He wanted to carry them in his pocket for the kids. He got the candy."

Rod's grandparents, Mr. and Mrs. Roscoe Lots, also live in our block and watch anxiously for news of the 1st Cavalry.

Rod left the United States Aug. 17, 1965, for Viet Nam with a helicopter unit of the 1st Cavalry. In his first letter home from Viet Nam, he told of getting their base established, then:

"We lost a couple of guys last night, but they weren't in our outfit. It seems like the night is the only time they (the Viet Cong) fight.

"One night a couple of cooks got up to make coffee. They lit a fire and the guards opened up with an M-60 machine gun. Neither got hit but it sure scared hell out of them. Me, too, as the shells went right over my tent.

"There isn't really a lot I can tell you except this isn't a fun kind of war."

Excerpts from other letters follow:
"We are at a place called An Khie. It's
about 48 miles from where we landed. There
are jungled hills all around us. This was
where the French sent 5,000 troops through
and only 140 got out alive. It rains every
day and night without fail. They just
started shelling to the East tonight.

"The food is lousy. It wasn't so bad when we got C rations but now we get A and B rations which the cooks prepare and is it ever terrible! But it will suffice. Maybe I'll get skinny!"

"Right now I'm sitting under a tree on guard duty. We become officially operational tomorrow, and I sure hope things get better. This aleeping and eating on the ground is terrible but I guess there really isn't much a guy can do. There are two regiments of VC, one on each side of us, and we really have been giving them hell for the past couple of days.

past couple of days.

"I'd tell you now but I can't and you'll read about it in the papers one of these days.

Last night on guard duty a snake wrapped itself around a guy's bead

itself around a guy's head.

"Hasn't been much happening today except a couple of plane crashes and a few guys got shot up. I guess we're moving out for a few weeks as our unit is going up in the pass to open it up for a Korean division to come through."

"Someone threw a hand grenade in a bar downtown today, injuring a couple of Git, I don't know what the guys were going in the bar as it was off limits. One of our guys got caught in a bar about a week ago. He got demoted and 14 days extra duty.

"Here is a picture of one end of our fixed wing aircraft runway. The hill is where they killed a few VC one night and found 20,000 rounds."

"Our guard was from 6 at night to 6 this morning. Today was the first time I had time, so I took a shower. It's only river water, heated and sprayed on."

"We killed one of the prettiest anakes the other day. It was a blackish-green with red about three inches down from its head and then yellow for three more inches; then white for another three. The rest was this blackish-green color. When it crawled it would raise itself about six inches off the ground and puff out like a cobra. They said it was a bamboo snake. They are related to the coral anakes we have back in the States.

They say if a person gets bitten by one they have less than an hour to live and that there is no cure; but we don't have many snakes around here so they really aren't any

"Sure do wish I could be home for Christ mas but I guess I'll have to wait till next year. Maybe this New Year will bring us closer to a peaceful understanding of the This sure is hell for those poor guys

who have to be in the infantry.
"I took the time to write this letter on
Christmas Eve to show that I was thinking about home even if I couldn't be there last night but I thought you might get shook up if they delivered one on Christmas day so I didn't send one. Merry Christmas and all that old rot, I guess, but it sure as hell isn't a very Merry Christmas being over here. I guess someone has to be here so I really don't feel too bad. Sure wish I could be home to do some fishing and some good hunting where they don't shoot back. It hasn't been very bad though."
"Now, please don't let what I'm telling

you worry you, because it was the only thing that could be done by us, I hope? We had our wounded under a bunch of trees as the main force was fighting about 600 meters ahead. Then they fell back to where the wounded were and fought until they were so overwhelmed they had to retreat further back and leave the wounded as they couldn't get any choppers to pick them up.

"They killed about 200 VC and the next day when we came back we found they'd shot those wounded in the back of the head but we killed nearly all of the Viet Cong there, I hope. One man who was wounded went through the whole terrible affair. The shelling, napalm, and bombing—the Viet Cong didn't hurt him except for the first wound he got the first day. I guess someone sure didn't want him to die."

"I went on a flight yesterday afternoon and I got back about 8 o'clock. We went to the front and carried some farmers and a woman and a child out to the rear area. Some of the guys had killed a cow they found wander-ing around. They offered me some but I didn't think I wanted any. One pilot tried

it and said it was pretty good."
"We are at Hollaway Air Strip near Pleiku
which is about 80 miles from An Khie. They have an EM Club here and we can take showers with real running water. The only bad part is we have to sleep on the ground. The weather has been real nice. Don't let the papers scare you . . . they make every-thing sound so dramatic and it really isn't."

One of the units that is part of the Third Brigade is out near the Cambodian border and has run into a division of VC. The VC had one company pinned down last night and they sent another in there this morn-We captured one VC last night and he said the VC division was hunting us and they were going to destroy us. He said they had

days and they were hungry!"
"Sure wish I had our tent and the stove here. It's going to be a long time before I go sleeping out in the woods when I get home!"

"We get paid in a couple of days but there isn't any place to spend any money. We have a tin box for a PX and all they have are razur blades, tooth paste and such. They did have cigarettes but they ran out. don't care about that since I don't smoke."

Two more of our ships got holes in them wo more of our snips got notes in tem-but no one was hit. One of the pilots, a major, tried to land in VC area—guess he was confused—but he sure got the hell out of there in a hurry. One unit came back from the field today so the flight will be normal again."

We didn't lose a single man from our HHC but one security section got pinned down one day, but none of them were

wounded. I saw where B52s dropped 250pound bombs and the craters were about 40 feet deep and 100 feet in diameter. I sure am glad I wasn't in that area when they dropped those bombs."

We flew up to Oai Nhon where we landed. It was a real beautiful sight to see all the mountains, rice fields and the ocean again, We were fired at but they went left and low. There were eight tracer rounds that we could see. We got a little too close to this one mountainside but we climbed in one hell of a hurry. There is a big strike on to-day. They will fly a lot of missions and we day. They will fly a lot of missions and we will have a lot of work to do for several days (repairing 'copters). One of our ships came in today with a hole in the pilot's door where a 50 cal. bullet went through but they have armored chairs to sit in and the chair deflected the bullet."

"I don't get to fly much but when I get the chance I go up. It's usually in the evenings when they have staff meetings up in the front area. They usually fly pretty high so don't worry, Mom, about my getting hit since you take greater chance walking across the street, than I do. Well, I had better close since those damned planes are coming in and I'll have to work all night."

Hard Times Knocking at Poverty's Door

EXTENSION OF REMARKS OF

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. JONES of Alabama. Mr. Speaker. because of the controversy aimed by critics from the left and the right at the proposals for extension of the Economic Opportunity Act, it behooves us to carefully assess the real record of the war on poverty.

As one might expect, problems have been encountered in getting the bold new program in operation. However, the problems are being identified and improvements are being made.

On close examination, some of the socalled problems turn out to be mere posmokescreens, For example. litical from some quarters there is a great cry about mismanagement. But less than one-half of 1 percent of all OEO funds have come under any questioning by auditing. Others have protested what they call a high cost of operation and claim that the funds are not reaching the poor. The fact is that less than 51/2 percent of the OEO appropriation is going for administration of the program.

In the Southeast, 71 percent of the counties are now engaged in the OEO programs compared to 36 percent a year ago.

In Alabama, 30 counties have programs today where only 4 had programs last year.

In my district, where the citizens are concerned about improving conditions and breaking the patterns of poverty which are increasing welfare costs, every county has participated in the OEO pro-

A thoughtful analysis of the OEO program was presented in an editorial in the Huntsville Times. I include it in my remarks at this point:

THE POVERTY WAR'S HARD TIMES

Hard times have come knocking at the door of the War on Poverty. Congress is soon to get its hands on measures to continue or revamp the budgets of the program. And because the program has become one of the biggest controversies of the current session. hazard is at hand.

The War on Poverty is beleaguered by its wn mistakes. Sharp differences over policy own mistakes. have tarnished the image of a holy war. Offyear election partisanism is at work. trenched bureaucrats think they can run the War better than the Office of Economic Opportunity. The OEO, they insist, is a clumsy upstart.

The picture of success and failure varies from region to region.

In our own area as is true in most places-Operation Headstart, the plan which introduces children to school, is clearly a Meantime, a planning session this week will map out a training project for the Negro community of Triana. The Madison County Community A.don program, how-ever, finds itself penniless for the moment—a bottleneck-at-a-higher-level situation which, as anyone will agree makes for especially discouraging confusion.

Nationally, some Republicans already are terming the Poverty War a shamble of scan-dals and abuses. A rag-tag consensus of Democrats talks of a bill that can give Congress more control over the program, set priorities on how funds will be expended and even earmark funds for poverty ghettos.

Both Democrats and Republicans seek to undercut the "government-by-the-poor" The notion of a restructure of the American constituency that suggests creation of a caste system and a whole new layer of government has many politicians nervous.

There is a Democratic plan to counter charges of politics and wastefully high sala-ries. One proposal is a sort of "Hatch Act" that would ban anyone making a living from the Poverty War from taking a role in politi-cal campaigns (as federal employes are banned under Hatch Act provisions). The other proposal is a \$12,500-a-year ceiling on Community Action program people.

Because controversy over the entire War on Poverty is going to mushroom in the coming weeks, The Times believes it behooves all of to try to assess the pluses and minuses of the program-its record, its opportunities and its shortcomings.

In the Southeast, the proof of progress in the last year seems clear.

This region includes Alabama, Georgia, Mississippi, South Carolina and Tennessee. A year ago, only 185 (36 per cent) of the 516 counties in the region had organized OEO programs. Today, 364 (71 per cent) are actively engaged.

N

D

aį

A

Jo

re

ar

cr

Br

In Alabama a year ago, only four of the 67 counties had programs. Today, 30 coun-

ties (45 per cent) do have programs.

There have been many charges of mismanagement. But less than one-half of one per cent of all OEO funds have come under any questioning by auditing.

The charge of high salaries and high costs of operation arises in this region, as elsewhere. But less than 5½ per cent of OEO appropriation is going for administration of the program. That's the smallest percentage for any federal agency. And the staff of OEO is the second smallest of any federal program.

In the Southeast region, 110,000 pre-school youngsters have participated in Head Start. There are 59,000 underprivileged youths in the Neighborhood Youth Corps. There are the Reighborhood Youth Corps. There are 64,700 adults learning to read and write. There are 7,250 more adults who have come off the unemployed roles and into work-experience programs

Every new program inevitably must under-o a shakedown. The War on Poverty, per-age because the boldness of its concept, cer-

tainly is knowing a heavy amount of adjustment. Part of the bottleneck and mishaps is attributable to OEO administration at its several levels. Part of the woes stem from beaucratic jealousies and politics in an election year. But The Times believes it is important that any legislative revamping should not be permitted to toss the baby out with the bathwater.

Firm Policy Looking Better

EXTENSION OF REMARKS

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. ROGERS of Colorado. Mr. Speaker, broad support for President Johnson's outline of a firm policy in Vietnam is illustrated by an editorial in the Denver Post.

There have been so many repercussions from the bombing of North Vietnam's fuel dumps that it is difficult to avoid speculation that a turning point is near at hand, the Post says.

The newspaper finds optimistic reports about the fighting in Vietnam encouraging, although it urges caution.

Ultimately, it declares, a peace settlement acceptable to the United States and South Vietnamese interests may be possible. Firmness in that goal, as the President has firmly outlined it, is in the newspaper's opinion our best course of action at this time.

The editorial follows:

[From the Denver Post, July 7, 1986] FIRM WAR POLICY LOOKING BETTER

There are so many repercussions to the bombing of fuel dumps in North Viet Nam—rumored and real—that it is difficult to avoid speculation that a turning point in Viet Nam is near at hand.

Top U.S. officials are on record with the new view. President Johnson, George W. Ball, undersecretary of state, and Vice President HUMPHERY all said this week that North Viet Nam no longer expects victory.

Meanwhile, a report from a French journalist in Hanoi says President Ho Chi Minh of North Viet Nam is thinking of negotiating with the United States in 1967 "if there is no new development" in the war's progress.

The brighter view of the Vietnamese war

The brighter view of the Vietnamese war was evident before the bombing. The main reasons were the U.S. troop buildup and Frime Minister Ky's successful moves against his domestic foes in South Viet Nam.

But the reports of disenchantment in Hanoi appear to have accelerated since U.S. planes began attacking fuel storage areas around Hanoi and Haiphong June 28. Damage to North Viet Nam's capability to wage war in South Viet Nam has been heavy. Aerial surveys have confirmed this.

And it must be even more disheartening to Hanoi's strategists to find that President Johnson's conduct of the war continues to receive strong backing despite flare-ups of antiwar sentiment. Success of the bombing raids, in effect, is answering the President's critics.

At the same time that optimistic reports are coming in, we would urge caution. One reason is very obvious. Hanoi may be indulging in some semi-public agonizing with a definite goal in mind: getting more help from Russia and China.

We think, also, that Americans ought to be cautioned against thinking in terms of total victory. The war in Viet Nam remains limited.

If, for example, North Viet Nam and Viet Cong units were to find the going too tough in South Viet Nam they could temporarily pull across the border into Cambodia, which they are using as a staging area now. It is doubtful the American people are ready for an invasion of Cambodia; many Americans still have reservations about the Hanoi-Halphong radds.

There is, additionally, the physical impossibility of crushing North Viet Nam short of nuclear attack or a full-scale occupation of the country—moves which would invite Red Chinese entry into the conflict.

The new optimism about the Asian war is encouraging, however. It may mean that the next Canadian peace mission to Hanoi will find a tangible sign that Ho Chi Minh is willing to talk about the possibility of negotiations. Ultimately, a peace settlement acceptable to American and South Vietnamese interests may be possible. Firmness in that goal—as President Johnson has firmly outlined it—is our best course of action at this time.

The Bombings-For and Against

EXTENSION OF REMARKS

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. HOLIFIELD. Mr. Speaker, under unanimous consent, I include an editorial from the Los Angeles Examiner herewith in the Appendix of the Excosp.

with in the Appendix of the Record.

Mr. Hearst's editorial entitled "The
Bombings—For and Against" is in my
opinion well balanced and sound. I have
been pleased by the understanding of
the Vietnam problem which has been
consistently portrayed in the newspaper
editorials of Metropolitan Los Angeles
newspapers and the weekly and daily
newspapers in my congressional district
in Los Angeles County:

THE HOMSINGS—"FOR" AND "AGAINST"
(By William Randolph Hearst, Jr., Editor-In-Chief, The Hearst Newspapers)

On this July 4 weekend, commemorating the spirit of freedom that gave birth to our great country, we find the world around us—and some here at home—plunged into controversy over the path America is taking in the world today. This is not particularly unusual, even considering the sharpness of the debate in the past few days, so I shall keep this week's column brief—giving us all more time to enjoy the annual memory of our glorious Independence Day.

of our glorious Independence Day.

The recent commotion, of course, centered upon the American bombing of oil installations near the North Vietnamese cities of Hanoi and Haiphong. Personally, I fail to see what the excitement is all about. We have been attacking North-Vietnamese military objectives by air for more than a year to the accomplishment of various mutterings and grumblings—and applause and commendations—both at home and abroad. So why all the fuss about the extensions of these attacks to such obviously military targets as these oil depots?

However, let's look at the "for" and the "against" line-up on this issue.

Included in the "against" crowd are: Senators J. W. FULBRIGHT and WAYNE MORSE

(naturally), plus Senators MIKE MANSFIELD and GEORGE AKKEN, with ROBERT KENNEDY expressing more doubt than total conviction. In addition there were the group of 16 House Democrats, UN Secretary-General U Thant and the so-called "Arab national press." Prime Minister Harold Wilson of Britain and the Vatican also voiced concern, although both have extended their efforts toward bringing the Communists to the conference table, only to be rejected with the same curtness as has greeted similar American efforts.

ness as has greeted similar American efforts.

The uncompromisingly "for" crowd, on the other hand—led by President Johnson—includes a most emphatic Vice President Hubert Hubert Hubert and U.N. Ambassador Arthur Goldberg, plus our armed services, former Presidents Eisenhower and Truman, former Vice President Richard Nixon, a great majority in both houses of Congress, and all our allies in the vast Pacific basin, including Japan and our Australian, New Zealand and South Korean battlefield partners. In this group I also most enthusiastically place myself, and the sympathies and support of The Heurst newspapers.

port of The Hearst newspapers.
Comments voiced by Ambassador Goldberg were particularly incisive. He pointed out to the U.N. Security Council and to Secretary-General Thant that a cessation of the bombing to North Vietnam was certainly not the way to stop the war—thus flatly contradicting Mr. Thant's own position. He also took issue with the secretary-general's protest against the oil depot raids—made on the grounds that they were in "heavily-populated areas"—and emphasized that the greatest caution had been taken by the U.S. to strike at military targets only. He pointed out, moreover, that Vietcong guerrillas enerciass no such caution in their terrorism and assassination tactics in South Vietnam. The sole way to peace, Ambassador Goldberg urged, was through negotiation.

urged, was through negotiation.

The attack on the oil depots also produced a flood of firmly-encouraging British newspaper editorials. It appears that the gentlemen of the Fleet Street press, many of whom are Battle of Britain veterans, have longer memories than the labor party politicians who seem to have influenced Prime Minister Wilson during this episode. From their own wartime experience they know that the paralysis of an enemy's fuel system can be a decisive step toward ending and winning a war.

Major British press comment, in fact, was

decidedly on the American side with regard to the bombing. The Times called the action "understandable" from a military point of view. The Daily Telegraph observed that military justification for the raids was clear... and that the greatest consideration was taken to avoid populated places. The giant Daily Express questioned what alternative President Johnson faced in view of the fact that North Vietnam supplies the arms which permit the Vietcong to maintain its campaign in South Vietnam. The Daily Mail observed: "Unless we want Chinese Communist influence to flood through Southeast Asia.—and it is always possible that its dangers have been over-estimated—the stand in Vietnam must be made. The war has to be

fought and won."

The entire clamor directed against the oil depot bombings, in short, was based an the fact that the attacks were the closest yet to the civilian populations of Hanoi and Halphong. But the fact remains that these targets were still considerably removed from the civilian population centers, by distances measured in miles. Moreover, neither President Johnson nor the military men on the scene in Vietnam have the slightest intention or desire to attack civilians. We only wish that similar sentiments were shared by those who indiscriminately throw hand grenades into civilian areas in South Vietnam, including crowded theaters and similar "targets." In our case, too, the pilots in-

volved in the raids were most carefully briefed on the necessity of avoiding civilian

But the most effective way of ending casualties of any kind in this grim business is to stop fighting and start talking. The U.S. is ready to do this at any time, while the Communists have brutally rejected any suggestion of negotiations to bring about peace.

Our commitment in Vietnam can survive this latest furor. Our policy will, in President Johnson's words, "continue to impose a growing burden and a high price on those who will wage war against the freedom of others." Which is precisely what that other addition to the "for" list—the great majority of the American people—feels, too.

Resource Development Action in Appalachia

EXTENSION OF REMARKS

HON. TIM LEE CARTER

OF RENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. CARTER. Mr. Speaker, I am very much encouraged by the determined efforts of rural people in the Appalachian area of Kentucky to improve their economic base by developing their land and water resources. They are moving forward in working out resource problems that have been a bottleneck to progress.

I have been following with interest the Mill Creek small watershed project in Monroe County, Ky., my home county in the congressional district I represent. It is a good example of local action that is being taken with State and Federal help. It is an indication of how tools of the Appalachian Regional Development Act are being put to work in combination with the small watershed program.

The project work plan has been completed and is under agency review before being presented to congressional committees for approval. The project area is one where there is urgent need to increase family income, which, of course, affects the economy of the entire county. Farmland, roads, and bridges are beset annually by damaging floods. This flooding has an adverse effect not only on land use, but on the economy of the watershed. Cropland, grassland, and forestland need conservation practices if they are to contribute to economic stability and halt erosion. However, many of the people involved have not been able financially to carry out this work.

The Mill Creek project was approved for help under section 203 of the Appalachian Regional Development Act. As a result, farmers have already started to apply needed conservation practices. It is significant, I think, that the majority of the people who are receiving this help have not been reached before by other programs. This is a good sign. It is an indication that the purposes of the Appalachian Act are being fulfilled.

The land treatment is a basic element of the watershed project itself. Plans call for all feasible measures to solve soil

and water problems and, in addition, to enhance the overall economy of the watershed community, especially low-income farms.

The city of Tompkinsville will have a new source of water supply from a planned 72-acre multipurpose reservoir at which public recreation facilities are also to be developed. Growth and development of Tompkinsville presently is seriously hampered by lack of adequate quality water. The recreation area is expected to serve over 18,000 people annually. This recreation area will complement a smaller development at the adjacent Old Mulkey House State Park, a historic shrine dating back to the days of Daniel Boone.

I think these people are doing a tremendous job and they have my support, as do other similar small watershed projects in the area. In many Appalachian communities, the sound development of natural resources is the main hope if sustained benefits are to be realized. Projects such as Mill Creek serve to carry out the purposes of the tools we have given rural people to stimulate economic activity.

Address of Hon. John E. Fogarty, Second Congressional District, Rhode Island, Before the American Association of School Librarians' Convention, New York Hilton, July 11, 1966

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include the following:

Address of Hon. John E. Fogarty, Second Congressional District, Reiode Island, Before the American Association of School Libralians' Convention, New

YORK HILTON, JULY 11, 1966
School libraries are caught in the middle of a whiriwind. This whiriwind will toss American education into the uncharted future of all Western civilization.

Never before in recorded history have a people turned so decisively to formal education as the basis for reaching their economic, political, and social goals. The industrial revolution depended on the human body, not the human mind. The electronic and the nuclear revolution will increasingly depend on the power and flexibility of highly trained intelligence.

As school librarians, you must not try to take shelter from this educational whirlwin. Such an act would invite disaster. Instead, face the wind at its strongest point, the electronic processing of intelligence and its immediate communication to the point

I predict that it will become increasingly difficult to tell a librarian from a teacher. Any kind of librarian at any level, from all kinds of teachers at all levels. Education involves learning. Learning is something that each of us does for himself. Teachers, colleagues, librarians, or machines can only

assist in making such learning as efficient and productive as possible.

Since learning is exclusively an individual process, more and more educational emphasis is being placed on individual instruction. New educational technology will soon make it possible to bring the best teacher, the best book, the best educational experience to each student.

We can realistically expect to achieve in the forseeable future, the electronic equivalent of Mark Hopkins on one end of the log and each of us—all students everywhere on the other.

Individualized instruction is, in a sense, the fundamental concept behind libraries. "The right book for the right reader at the right time" still sums up the best basis for developing library services. As this concept pervades educational theory, practice, the means, but not goals, will change and develop. It is the size of the job to be done and its urgency, that demands innovation, flexibility, and prompt action. We must shorten or eliminate the lag that has existed between the best library practices anywhere and all other libraries everywhere.

I have watched with interest the Knapp School Libraries project as an indicator of things to come. Oak Park, for example, has taken advantage of both the Knapp Project and Title III of the Elementary and Secondary Education Act for the electronic retrieval of concept films in the library. This effort will involve teachers, librarians, administrators, and private industry in the effort to improve learning. The library plans to provide several hundred carrels so that students may individually dial their selection at a time convenient to them.

In fact, a child at home in the evening will be able to dial the core and the required concept film would be received over his standard TV set. This kind of development which, when fully operational, should be immediately exploited by other schools to meet their particular need. I am not advocating faddism here. I do not suggest that we bow with every breeze in the whirlwind. But I do submit that we must identify what techniques are effective and we must move swiftly to equalize their impact on all students.

A vehicle for such educational improvement may be found in the network of regional educational laboratories being established by the U.S. Office of Education. purpose is to assist local school districts in assessing their own educational programs assessing their own educational programs and practices, developing or identifying new methods for their improvement, and actually implementing worthwhile innovations. Many of these laboratories will be investigating the potential of projects like Oak Park's in solving their educational problems. Whenever they are convinced that the equipment does indeed make a significant contribution to the educational function commensurate with its cost, they will develop demonstration projects to encourage local school districts to follow their lead wherever similar educational problems exist. The laboratories will have the technical competence to determine whether the software has been adequately evaluated and will recommend to the local districts those systems which have been proven effective.

This effort of the laboratories is an extension of the research which has been carried on by the Office of Education for a number of years, but the laboratories take the planning and implementation of the research and development activity out to the schools themselves and thus give the whole effort a practical orientation which will help to speed up and give direction to the entire educational improvement effort. The Federal Government will continue to carry on a wide range of research and development activities, ranging from basic studies in cogni-

tive psychology, through development and evaluation of educational techniques, to the disemmination programs necessary quaint local districts with these efforts.

It is significant to note that library-re

lated projects are being conceived and funded under every Title of ESEA. Libraries are not being confined merely to the acquisition of materials under Title II.

The technological advances which I have mentioned can make their greatest contribumentioned can make their greatest contents to the ducational improvements if we maintain a close working relationship between the "hardware" and the "software" people. It is clear from the many weddings of publishers and electronics firms that industry is becoming increasingly aware of this need. But this is not enough. The partnership must be extended also to all those in industry who depend upon the human resource develop-ment of the educational enterprise and to all those in education including librarians who must somehow get a vision of the future for which our youth are being prepared.

I am glad to report that Warwick, Rhode

I am glad to report that Warwicz, knode Island has one of the first projects approved under Title III of ESEA. This operational project was designed to be a demonstration of an exemplary library established in an elementary school. The area served has a high concentration of children from lowincome families. By next year, the facility will be used to train librarians, teachers and school administrators from all over the State on an inservice basis.

These Title III projects are becoming the pacesetters in innovation. The term PACE refers to "Projects to Advance Creativity in Education". Another example comes from Asheville, North Carolina. Their operational project calls for the establishment of an audio-visual and library center. This center is delivering instructional materials to 33 schools in an area covering 600 square miles. Services include: repairing and circulating educational films; processing library books and materials; centralizing ordering and billing; and providing facilities for inservice education of teachers and librarians. This project directly serves an estimated 21,000 students, librarians, and teachers.

These developments have enormous implications for the training and competencies of school librarians. You will be called upon to work closely with teachers in arranging schedules and facilities to aid students in individual projects. New programs will call for a new approach by school librarians in selecting and utilizing library resources. Librarians will be adding children in learning to analyze and seek solutions to the many local, contemporary problems.

Just as the public library has a responsibility to the general public for stocking the current materials on community problems, the school library also holds a responsibility for keeping students well informed on local problems. Students will be seeking answers to the problems of mental health, water poilution, and conservation as they are learning to become active, interested citizens. School librarians should aid children in searching through books and materials for the many conflicting points of view. School librarians will, therefore, be asked to perform the job of a good public relations and information officer. They will prepare picture exhibits, lecture series and informational pamphlets relate the modern world to academic studies. The school library will become the first place to which a child turns naturally for information, and the school librarian ahould be far ahead of him in knowing what the young student needs.

You, as an organization of school libarians, realize what a tremendous task it will be to reorganize and reshape many of our school libraries to meet such demands. The concept of the library as a center for individual and group research on historical and contemporary problems, will naturally cause the physical facilities of the school library to change. It will contain projectors, computers, tape recorders and consoles to enable the students to utilize library resources to maximum individual advantage. Computers will house both accurate, cross-referenced indexes for information retrieval and factual informational data. Students will use tape recorders to record oral presentations and to listen to research tapes.

The school library administered in this context has created a demand for a new kind of school librarian. Institutions pro-viding professional education for school librarians, and others concerned with inservice programs are giving increased attention to the content of the school librarian's education. Many library schools now offer courses in the school library administered as an instructional materials center. Institutes and workshops teach librarians new skills and help them become acquainted with new materials and equipment. In addition to library school improvements, there must be more school librarians. Present standards for staffing school libraries are too low for today's instructional programs. More young people should be encouraged to become school librarians; classroom teachers and other qualified adults should be recruited to librarianship. Librarians now in service should be used more effectively by providing supporting personnel.

tasks should be delegated to library clerks who can be employed at lower library clerks who can be employed at lower salaries. Other jobs may be performed by librarian aides or technicians. People like these can provide many services under the supervision of professional school librarians, thus freeing them for crucial curriculum related activities. Jobs not requiring extensive professional knowledge and judgment can be performed at lower cost and more efficiently by personnel with a training at a lesser level. In a world of specialists it is obvious that using exchool librarians as clerks. obvious that using school librarians as clerks or technicians is poor economy. It is also poor educational practice. In today's chang-ing school libraries, the school librarians should provide sound professional library service to education.

The movement of the school library from a book-centered agency on the fringes of the educational program to one that supplies the broadest range of instructional materials has radically altered its role in the school. It has moved front and center, and now must become a dynamic new force in the whole picture of elementary and secondary educa-

In assessing the role of the school library in the entire educational community, we must not overlook the vast potential of Title III of the Library Services and Construction Act of 1966. This Title, which provides funds for interlibrary cooperation, will in-clude school libraries in library networks designed to provide maximum access to materials needed by all library users. This provision of LSCA will directly supplement both ESEA and the Higher Education Act to bring focus and direction to our library efforts.

In fiscal year 1967, more than \$1/4 billion will be available in Federal grants from the U.S. Office of Education alone to improve libraries of all kinds. An investment on this scale is a great and exciting challenge to all of us interested in good libraries. the time for all of us to give our best efforts toward an educational system that will be equal to our times. We in the Congress have done our part to help assure good schools and good libraries. It is now up to you and your colleagues across the Nation to put these programs to work in a way that will do the job. Godspeed and good luck!

Energy and Transportation

EXTENSION OF REMARKS

HON. FRANK A. STUBBLEFIELD

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. STUBBLEFIELD. Mr. Speaker, I call to the attention of my colleagues the excellent address entitled "Energy and Transportation," which was given to the business and logistics forum at Stanford University, Friday, July 8, 1966:

ENERGY AND TRANSPORTATION

(An address by W. G. Blewett, vice president, Peabody Coal Co., given to the business and logistics forum, Stanford University, Friday, July 8, 1966)

Professor Ruppenthal, whether he knows it or not, paid me quite a compliment when he suggested that I talk with you on the subject of "Eleciricity and Logistics," allot-ting me thirty minutes for the talk. First of all, I want to say that I would like to refer to my paper as simply "Energy and Trans-portation." But with regard to the thirty minutes, gentlemen, I am not embarrassed to say that I could not cover the subject in thirty minutes, thirty days, or within any given length of time. As I began preparing for this talk, I quickly came to the realiza-tion that there isn't anyone in the United States, or for that matter in the enire world, who could cover the subject completely. The reason is simple. The subject is so complex, so involved, and so massive that while there are people who are expert in special areas, no one could possibly be expert in all areas. So I hope you will understand that all I will try to do here is to apply a broad brush. After that, I hope you will ask questions. I will answer those that I can, and promise to refer the others to authorities and experts who I am sure will respond to your requests.

Let me start with a few statistics to illus-

trate the imporance of energy, both to man-kind in general and in the consideration of transportation problems in particular.

It is well known that countries with high standards of living are those countries which have the highest per capita consumption of mechanical energy. The United States leads the world in per capita consumption of energy. In fact the per capita consumption in the United States is more than five times as great as the world average.

To put it another way, the world fuel requirements at the present time are slightly over five billion tons per year in terms of coal equivalent. And it may interest you to know about one-half of that total is supplied by coal, in spite of the inroads of oil and gas. The United States consumes over one-third of the world total, or nearly two billion tons per year in terms of coal equivalent. Of the amount consumed in the United States, about one-fourth, or 500 million tons, is produced in the form of coal. The rest, of course, is produced in the form of oil, gas, and hydroelectric power.

Consumption of energy requires the trans-portation of energy, and this occurs in many ways. Transportation of coal by rail, water; transportation of oil and gas by rail, Transportation of coal by rail or water; transportation of oil and gas by rail, water and pipeline; and transportation of electricity by extra-high-voltage transmission—a relatively new entry in the field. As atomic power takes its place in the energy field—and I will be saying more about that later—it will not involve much transportation, since atomic fuel has very little bulk.

Let me illustrate the importance of energy to transportation, and the importance of

transportation to energy. About one-third of the world's fuel needs are supplied by oil, and only one-half of this oil is carried across the seas. Nevertheless, sea-going oil accounts for more than one-half of all seagoing transport. To put it another way, transporting one-sixth of the world's fuel across the oceans is a bigger job than trans-porting all other goods combined.

Again, in the United States, the tonnage of coal hauled by the railroads accounts for more than one-fourth of the tonnage of all commodities hauled by the railroads. It is easy to see that energy is important in the

transportation figure.

The converse is just as true: transporta-tion is extremely important in the energy picture. Coal, oil and gas are bulk com-modities, and the cost of transporting them is far more important to the consumer than is the case with respect to most commodities. Oil and gas had a tremendous advantage over coal in this respect, because the cost of transporting a liquid is lower than the cost of transporting a solid—at least, it was, until the waterways became available on an increasing scale. Doubling the cost of transporting a new automobile might increase the cost of the auto to the consumer by 3 or 4 percent; doubling the cost of transporting coal to the consumer could easily in-

ease the delivered cost by one-third. The present production and transportation of energy throughout the world constitutes a vast undertaking, as I have already outlined. But, what about the future?

The future presents requirements so great that they are difficult for the mind to grasp.
The world fuel requirements today, of 5
billion tons of coal equivalent, are expected
to be 10 billion tons by the year 1980 and 20 billion tons by the year 2000. How will that market be supplied? It will need every contribution possible, from every source of energy and by every means of transportation.

In the United States the growth of energy requirements projected by the experts is as impressive as it is for the rest of the world. so, in the case of the electricity market which constitutes coal's primary interest. It is commonly known that electricity requirements in the United States are doubling every 10 years. The magnitude of such growth is difficult to grasp, but the president of Edison Electric Institutes put it into perspective when he said, at a meet-ing in San Francisco in June: "This means that we have less than 35 years to build the equivalent of seven additional power systems the energy size of all that is now serving the American people.'

That staggers the imagination. Seven more power systems, each as large as the existing system, in the next 35 years. You can understand why we are optimistic about the future of the coal industry. Even if atomic power could supply two or three of these additional systems, we are going to need a fantastic increase in coal production. At the same time, there must be increased facilities for transporting the energy that will be required, and this, of course, poses development problems in transportation.

On the subject of atomic power, let me point out that a great deal of misinformation has been distributed on this glamorous new source of energy. Many people labor under the mistaken belief that atomic power will supply most, or all, of the energy of the future. It just isn't possible.

In the first place, the assured reserves of low-cost uranium in the entire free world, if used in reactors of the type now under construction, ran supply the amount of power which could be produced by about one per cent of the reserves of U.S. coal. Undoubtedly, more will be found. But who knows how much?

The so-called "breeder" reactor which will be developed some day will not solve the problem of shortage of low-cost uranium.

First, it is predicted that breeders will double the supply of burnable material over a period of 15 to 25 years, but electricity needs double every 10 years. In such circumstances, breeders will be able to take care of a fraction of the increasing requirements. In addition, breeders, like the reactors of today, have problems of their own. Even when the difficult technical problems in their operation are worked out, mankind will be faced with the necessity of disposing of vast quantities of deadly material in a manner which will keep it out of the biosphere for hundreds and hundreds of years. In spite of this, the development of breeder reactors is a long-range must because, eventually, mankind will run out of low-cost fossil fuels and will have to use the breeder reactors to produce power from the very costly uranium which can be obtained in quantity from extremely low-grade ores.

I will leave the subject of atomic power with a quotation from Dr. Glenn T. Seaborg, AEC Chairman, who said just last month: "Our real concern will never be 'Is there a great enough market for our energy re-sources?' but rather 'Are our energy resources sufficient to meet the growing de-

mands of the market?"

Competition, it gots without saying, benefits the consumer—that is, the general pub-lic. That is just as true in the field of transportation as it is in any other field, including the production of energy. Let me, then, turn to past and future competition in transportation, particularly as it applies to low-cost, bulk commodities such as fuels.

Many years ago the railroads had a near-monopoly on the transportation of coal and everything else. You can imagine the results of this lack of competition. In 1932 the cost of hauling coal by rail, for instance, constituted about 64 per cent of the delivered

cost of coal.

Competition for transportation of coal and for coal's power has developed the water-ways, the possibility of coal pipelines, and the transmission of power by extra-high-voltage transmission. What has been the result? In 1961, the cost of hauling coal by rail aver-aged only about 40 per cent of the delivered cost of the coal. That is quite an improve-

ment, compared to 64 per cent. The improvement has been even more spec-acular in the area of utility coal, and the development of our waterways deserves much of the credit. In recent years, the size of electric power plants—the biggest consumers of coal—has increased spectacularly, resulting in a single delivery point for large quantitles of coal. Coal producers who were fortunate enough to have access to waterways were able to schedule long-term, largequantity shipments on a regular basis, dras-tically reducing the cost of transportation. This, in turn, forced the railroads to develop the unit train concept, where continuous use of equipment is made possible for transporting coal from a single point of loading to a single large consumer. These develop-ments reduced the cost of transportation, and of course the consumer (the public) benefits from reduced prices.

As a direct consequence of the competi tion in transportation, consumers in Cali-fornia will soon be served with low-cost electricity generated by the burning of coal many hundreds of miles away. Long-distance transmission lines are making it possible for this area to receive the benefits of

alternate energy sources.

Improvement of transportation was historically the first objective in the Federal program to develop the Nation's waterways. Improvement of the waterways to stimulate agriculture, commerce and among the earliest works of internal improve-ment undertaken by the National Government. This purpose alone has justified the program, as illustrated by the Ohio River Valley. Since 1950, on the banks of the main stream of the Ohio and its navigable tribu-

taries, some 22 billion dollars have been invested in new and expanded plant facilities. This fantastic growth, with improved job opportunities, lower cost to the public, and an expanded tax base, could not have occurred without the facilities for improvement of the waterways. And, once again, do not let us forget that the waterways belong to the public of the United States. Today, however, it is recognized that im-

provement of transportation is far from being the only benefit arising out of waterway development. Flood control, low-flow augmentation, and stabilized water supply, as well as recreational facilities and other social benefits, are interrelated to the improvement of our waterways. In this vital respect, the waterway improvement is unique among transportation media. Improvements to highways, air ways and railways perform only a transportation function; navigation improvements invariably serve other water resource objectives.

are people who express concern over the impact of waterway improvements on the railroads. This anxiety lacks foundation. Where waterways have been developed, the resulting growth of the local economy has almost invariably resulted in increased railway traffic. Once again, the problem for the future is not lack of traffic, but lack of ca-

pacity to transport.

Our country has now entered upon an era of growth, accompanied by rising demands for transportation service, on a scale without precedent in our history. The Bureau of the Census projects a U.S. population for the year 1977 of 292 million; for the year 1990, of 300 million; and for the year 2000 (only 34 years away), of 350 million. Talmost twice the population of 1960. erally, this country is in the process of doubling in size within a single generation.

Twice as many people will not require a mere doubling of transportation capacity, but more than doubling. With rising standards of wages and income, the volume of production per person is steadily increasing. The Gross National Product in 1966 will be near \$700 billion. According to the fore-casts of the National Planning Association, the GNP will be over \$2,000 billion by the year 2000, that is, nearly triple. It therefore appears quite likely that by the year 2000 the American transportation system is going to have to carry over three times the present traffic volume. And we are told that the transportation industry at the present time is contributing approximately \$130 billion to the Gross National Product.

The biggest load the railroads have ever carried so far was about 745 billion ton-miles under the forced-draft operation of World War II. By 1976, the Nation will be demanding of the railroads over one trillion ton-miles of freight. In view of the huge economic growth lying ahead, the railroads will be under severe strain to handle their present share, and I do mean present share, of the total necessary. Each mode of transportation will have to be enlarged and extended to provide that type of freight service for which it is best adapted.

Given the proper circumstances, water transportation is ideal for hauling fuel, particularly coal and other non-perishable bulk. The "proper circumstances" include, primarily, a large source of coal on or near the water plus a single very large consumer on or near the water. The advantage for water transportation is not confined to the cost of hauling. In addition, there is the advantage of equipping a modern coal mine with ex-pensive and efficient machinery, secure in the knowledge that round-the-clock operation can be relied on. In a land-locked operation, round-the-clock operation can be prevented by shortage of transportation whenever unusual demands are made on the rail system.

Round-the-clock operation is extremely important in the use of expensive machinery. As you know, private enterprise generally tre tati the

considers from 12 to 15 per cent a year as an appropriate capital carrying charge to cover depreciation, interest, amortization, taxes and a reasonable profit. If this capital carrying charge can be spread over 100 per cent operation, the charge per unit of production is only half as great as it would be if it had to be spread over 50 per cent operation. In the canse of coal, the capital carrying charge is a significant part of the mine-mouth cost.

The importance of the waterways in the coal transportation picture can be illustrated by the fact that about 100 million tons of coal per year is transported on the waterways, out of a total production of just over 500 million tons.

Let me quote again from the remarks of Dr. Seaborg, chairman of the Atomic Energy Commission, in an commencement address at San Diego State College on June 10 of this

"For about 6,000 years of recorded history the prime source of man's energy was that which he could generate by his own muscle power. In many areas of the world—perhaps as much as two-thirds—a large part of the productive power is still this same muscle power. In our own technological society, however, human labor provides only a few tenthousandths of one percent of the work performed in all our industry. The rest is done by the more than 10 trillion mechanical-electrical horsepower hours used by industry each year. In addition to this mechanical energy used by industry, we use an even larger amount of energy for process and space heating and for transportation. In the United States, with only 6% of the world's population, we use about 35% of the world's energy output.

"With a world of six billion people striving for a standard of living similar to what most people in the U.S. and Western Europe enjoy today, and this will be rising too in the future, think of the energy demands which would have to be met. And future demands will arise out of problems we are only beginning to face today."

Centiemen, the supplies of coal are in the ground in sufficient quantity to meet the growing demands of the future for centuries to come. Mining these increased amounts of coal will present a challenge, but it will be done. Mining it, however, is only part of the job. The energy has to be transported to the consumer. Some will be transported in the form of electricity by extra-high-voltage transmission lines. Some will be transported in coal-slurry pipelines. Some will be converted to synthetic liquids and gas and will be transported by pipeline. Nevertheless, a tremendous quantity will have to be transported by the railways and the waterways. The main problem with respect to transportation is not, where will the traffic come from? Rather, the serious question facing the transportation industry is, how can we handie all the traffic required?

Standpoint-Raymond M. Hilliard

EXTENSION OF REMARKS

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. RUMSFELD. Mr. Speaker, the people of Cook County, Ill., have suffered a deep loss in the recent death of Mr. Raymond M. Hilliard, the outstanding administrator and director of public aid in Cook County. Few men have done as much for their fellow human beings as did Ray Hilliard during his lifetime.

I introduce for the RECORD a commentary on Ray Hilliard's life which was broadcast over WBBM-TV in Chicago:

STANDPOINT-RAYMOND M. HILLIARD

(Presented by Edward R. Kenefick, vice president and general manager of WBBM-TV, Thursday, July 7, 1966)

Chicago has had its share of sad and difficult moments. One of those moments was saying farewell today to Raymond M. Hilliard.

His untimely death Monday at the age of 58 leaves Chicago with a special kind of emptiness because Raymond Hilliard was a unique man.

The fact that his gentle heart finally failed him is in some ways understandable, for his heart was in everything he did . . . and he did far more than most of us.

We seldom use the word superb, but we use it now because Raymond Hilliard was a superb human being. He gave hope and he gave help to thousands of hopeless and helpless people on our welfare rolls.

But more, he battled every day of his life to preserve their basic dignity . . . and there is no higher endeavor than that.

Those who worked for, and with, Mr. Hilliard have lost more than a superb administrator. They, and all of Chicago, have lost the very symbol of social compassion. The name of Raymond Hilliard and the word "welfare" have come to mean the same.

Perhaps it is only a footnote now, but it should be noted that Raymond Hilliard, more than any other person, created the pattern for erasing dependency... the same pattern from which the nation's War on Poverty was fashioned.

But he had this word of caution for Chicago's poverty planners: "Do not make this a burocrat operation . . . you can't see the faces of the poor through red tape."

races of the poor through red tape.

He, himself, was a specialist, in rebuilding broken lives, but never, not for one minute, did he forget that the poor were people—hungry, frightened, lonely people in despair.

Mr. Hilliard was almost everything we ad-

Mr. Hilliard was almost everything we admire in a man, but the things we admired most were his constant integrity, his hearfelt respect for the poor and the gentle way in which he served as their sheederd.

felt respect for the poor and the gentle way in which he served as their shepherd. We offer sympathy to his family as we at WBBM-TV respectfully join the thousands who have benefitted from Raymond Hillard's presence.

Major Setbacks in the War on Poverty

EXTENSION OF REMARKS

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. QUILLEN. Mr. Speaker, the conduct of the Office of Economic Opportunity in meeting its purposes increasingly commands our attention and scruting

There exist great needs in the fields designated as action areas for OEO; however, it has become more and more evident that bureaucracy and politics are dangerously stifling any attempts at concrete and useful advances.

A recent editorial in the Knoxville, Tenn., News-Sentinel suggests that Congress should review the use of antipoverty funds, and we all know that an attempt to do this has been made. I, therefore, join my colleagues in requesting that the report of the ad hoc subcommittee of the Committee on Education and Labor, that was authorized to study this program, be presented to the Congress before additional funds are appropriated.

ATROCTTY IN THE WAR ON POVERTY

Two professional employes of the Letcher County (Ky.) Economic Opportunity Committee have been fired, clearly in reprisal for making affidavits in which they charged mismanagement and misconduct in the administration of that county's War on Poverty.

The affidavits were first revealed in a series of articles entitled "Politics in Poverty" which ran in The News-Sentinel and other Scripps-Howard Newspapers last week. The series reported the existence of the affidavits, along with charges that the War on Poverty in Letcher County was marked by political abuse, nepotism and mismanagement. Since the articles appeared, the two Letcher County employes who made the sworn charges have been sacked, and Federal officials are busily scouring the county in an attempt to identify jobless men who complained that they were subject to political pressure as the price of continued enrollment in War on Poverty programs.

Beyond volcing a somewhat frail hope that a proposed multi-county reorganization would work needed reforms in Letcher County, the Office of Economic Opportunity has been remarkably silent. OEO insists it has no mandate from Congress" to dictate reforms in local poverty councils, although it does concede it can compel changes simply by cutting off Federal funds it believes are being maladministered at the local level.

Congress itself, of course, has the ultimate mandate to see that Federal War on Poverty funds are dispensed in a wise and evenhanded manner, and not by political whim. If OEO continues to shirk its duty with respect to Letcher County, then it is possible Congress may want to exercise its mandate.

Gen. Drazha Mihailovich

EXTENSION OF REMARKS

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. ROUDEBUSH. Mr. Speaker, on Saturday night, July 16, in the city of Indianapolis, Ind., I was highly honored by the Indiana Committee for Captive Nations and their distinguished president Mr. Ivan M. Jakovljevich. During the presentation of this unique award, Mr. Jakovljevich who fled the tyranny of Communist Yugoslavia, made a fine report concerning the great Serbian patriot, Gen. Drazha Mihailovich.

I feel that this report will be of great interest to Members of the Congress and include it in the RECORD. I present it in the exact form as it was given by Mr. Jakovijevich at this award ceremony:

GEN. DRAZHA MIHAILOVICH

Not recognizing the capitulation of Yugoslav Army, with a certain number of officers, in that time Colonel Mihailovich went to Ravna Gora, a locality in Serbia (Yugoslavia), where he organized the First Guerrilla War against German occupation forces. Col. Mihailovich fought as leader of Serbian Chetniks: communism, nazism, fascism and all kind of the totalitarianism during the Second World War. There the entire Serbian population of 10 millions greeted Col. Mihailovich sponta-

neously and volunteered to sacrificingly serve under him for the salvation and honor of

Serbia. The other part of Yugoslavia, Croatia got its independence from Germans and enjoyed as the Independent State of Croatia.

General Mihallovich with his Serbian people contributed immensely to help the Allied victory in Africa by sabotaging the vital Axis lines Beigrade-Nis-Salonica. So, in the Secand World War, General Mihailovich was the

first guerrilla leader in Europe—his army consisting of Serbian Chetniks. General Mihailovich rescued and delivered to Allied forces more than 500 American aviators who parachuted into occupied territory of Yugoslavia. At that time the free West glorified Mihailovich and pronounced him as the most glorious Army leader. His favors to Allied causes were most enthusiastically recognized by generals: Eisenhower, Sir Allan Cunningham, Marshall Tedder and De Gaulle

Mihailovich was promoted to General and appointed as Chief of Staff of Supreme Command and then as Secretary of Army and Navy to be directly under command of Allied Forces in the Middle East. He was decorated

with many war decorations.

But one day, the Allies "lost their soul" and betrayed their most fathful allies—
Draza Mihailovich and his Serbian people brought to the Serbian people Communist tyrants, the Allies handed to Communists the entire Yugoslavia and helped Communists to shackle the Serbian population who sacrified everything for Allies but received as help from them in their days of agony; the Communist hell. Arguments: wartime con-ferences of Roosevelt, Churchill, and Stalin in Teheran 1943, Yalta 1945, and Potsdam 1945

During the Second World War, General Mihailovich led the fight for honorable free dom of all people faithfully cooperating with Allies who betrayed him to the communists who barbarically assassinated General Mihailovich July 17, 1946 somewhere in Serbia. His grave is unknown.

General Mihailovich became a symbol of those enslaved and oppressed, Serbian people vow, never to deviate from Mihailovich path but to continue his fight until victory of Serbian people over injustice has been won.

The American Serbs both as an ethnic group and as individuals, have been most constructive throughout their long stay in The United States for nearly one hundred years. Their contributions to America have been, in proportion to their number, quite noticeable, even without mentioning the two great scientific giants of this century: Nikola Tesla and Prof. Michael Pupin.

But one of their most cherished heritage that the American Serbs have brought to this continent is their most profound love for liberty and their readiness to fight for it and if necessary to die for it. This they have demonstrated in the First World War by sending from The United States over 20,000 volunteers-half of their number then

in America—to fight against Austro-Germans.

The whole past life of the Serbian nation has been dedicated to liberty. This, together with Christian teaching of St. Sava has been and is now the basis of their national exist-

Tito's godless and barbarical regime has come in conflict with these fundamental traits of Serbian life. Today the Serbian people is the main backbone against communist totalitarian regime. Tito killed hun-dreds of Serbian Orthodox priest, even bishops, he imprisoned another Serbian Milovan Djilas, he ousted recently five of his generals Serbian by origin, and we just heard that the last Serbian, Rankovich with all his staff of Serbians have been ousted.

Lippmann and the President

EXTENSION OF REMARKS

HON, RICHARD L. ROUDEBUSH OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. ROUDEBUSH. Mr. Speaker, one of the truly fine editors of a great newspaper is Mr. Stan Evans of the Indianap-This distinguished author News. and newsman presents a viewpoint that is not always popular in our Nation, but at the same time insists that other viewpoints must be heard, even in the paper which he serves as editor. I submit the following article for printing in the REC-Please note that Mr. Evans refers to Mr. Lippmann, whose column appears in the Indianapolis News. I think the article is refreshing and an intelligent summary of the liberal press and its leading author.

The article follows:

LIPPMANN AND THE PRESIDENT (By Stan Evans)

Walter Lippmann, whose column of Liberal commentary appears on the opposite edi-torial page of The News, has been on many sides of many questions during his more than half-century of journalistic advocacy. As readers of Lippmann's recent dis-

patches are no doubt well aware, he is consistent on one theme-that of retreating before the initiatives of international Communism, of achieving "detente" with the Bolsheviks, of bending before the advanc-ing tide of Marxist revolution.

On just about everything else, however, it is possible to find Lippmann changing positions almost overnight without a quaver in the sonorous tone of mandarin authority

in which he wraps his prose.

Nowadays, for example, Lippmann is a strenuous advocate of centralized economic planning by government. Yet back in the Society" which took just the opposi arguing the virtues of free market competition and the need to minimize government intervention in the economy. Twenty years before that, in yet another switch, he had served as president of the Socialist Club at

Harvard University.

What is perhaps the most astonishing of Lippmann's reversals, however, is of more recent vintage. Back in 1955 Lippmann brought out a celebrated book called "The Public Philosophy" in which he argued that the executive branch of government had "lost both its material and ethereal powers" to the legislature, popular opinion, and "the misrule of the people."

What was needed, Lippmann said, was a

strong government which could, among other "resist the encroachment of the assemblies and of mass opinions." In so writing, he established himself as a spokesman for big centralized government in which the president rules supreme and lays down the law to Congress and public, insulated from the pressures of popular sentiment.

So, just the other day, along comes the current issue of Newsweek magazine, containing Lippmann's latest essay protesting President Johnson's conduct of the Vietnamese war. Needless to remark, Lippmann is outraged by the bombing of the oil depots near Hanol, as he is by just about everything else concerning the war.

Lippmann begins this week's criticism by

arguing that Johnson's action is precisely the kind of thing Barry Goldwater advocated, and Lyndon Johnson said he wanted none of, back in 1964. Johnson's recent statement in justification of this asserted reversal-that e was elected President, and he must make

the decisions—enrages Lippmann even more.

Johnson's assertion, Lippmann says, is "a
claim to arbitrary power, a claim that in
making these momentous decisions the president, once he is elected, is bound only by his personal views, not by any mandate or covenant with the people who elected him." Lippmann describes this outlook as "heresy", offensive to American notions of balanced, limited government, in which the president is not supposed to exercise such power.

It takes no trained political scientist to note that Lippmann, with one grand sweep of his oracular pen, has turned the argument his oracular pen, has turned the arguments of "The Public Philosophy" inside-out. What happened, we are entitled to wonder, to that enfeebled executive beset by the perils and encroachments of "misrule by the people"? Where now is that wispy emasculated presidents of the record of his record. dent who has been stripped of his rightful prerogatives by an uppity popular opinion which in 1955 has "acquired the monopoly of

which in 1900 has acquired see all of the effective power''?

It would seem impossible for any man called upon to place his opinions before the public to contradict himself more blatantly than this. Which suggests that, if President for your representations of the callidated for yourse. dent Johnson is to be criticized for reversing himself on the subject of Viet Nam, Lippmann is hardly the man to take on the job. Perhaps that assignment is better left to such as Barry Goldwater, who knows what he thinks about Viet Nam and the powers of the presidency alike.

Time To Move on Strikes

EXTENSION OF REMARKS OF

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. RUMSFELD. Mr. Speaker, the following editorial from the Chicago Daily News of July 16, 1966, makes a most telling point, and I commend it to the thoughtful consideration of my colleagues. It is time that the possibility of strikes which impair the economy and threaten the welfare of the people be met in a reasonable, firm, and equitable man-

o the Shih

At

a

DI BS

gr

de su

ner The editorial follows:

TIME TO MOVE ON STRIKES

The irresponsible strike of the International Machinists Union against five air lines drags on, and every day it continues the need grows clearer for better machinery to prevent such bludgeoning of the public interest. Yet neither the White House nor the Congress has made a move.

This strike, disrupting normal air transport from one end of the country to the other, surely falls in the category of abuse that President Johnson promised last Jan. 12 to correct. In his State of the Union message, the President said: "I intend to ask Congress to consider measures which, without improperly invading state and local authority, will enable us effectively to deal with strikes which threaten irreparable damage to the national interest.'

The promise sounded good then, in light of the crippling New York transit strike, and

it sounds good now when mail and military personnel as well as civilian travelers are being shunted out of normal transport patterns. It's time the promise was kept.

For the IAM strike is legal. The union complied with all the preliminary steps required by law through a year of negotiation. The presidential emergency board that recommended a more-than-fair settlement had no power to enforce its decision. Scenting a chance to get while the getting was good in its pay demands on the suddenlyprosperous air carriers, the union was free to dig in and hold thousands of planes on

to fig in and hold chooseless of places of the ground. Delay in the absence of an emergency is an old story. When it stops raining, the leaky roof slips out of mind. After the New York subway strike ended, the calls for action similarly subsided.

But the IAM's disregard of all reasonable efforts to prevent a strike raises the issue once more to emergency status. The public interest is heavily on the side of restoring essential transportation. It is in the public interest also to do this without an inflationary award that could set off a series of similar strikes and settlements damaging to the

economy. Organized labor naturally opposes any limitation on its powers, and a Democratic administration indebted to labor may be expected to move warily. But there can be no excuse for failing to move at all-failing even to "ask Congress to consider" what may be done to protect the public against union irresponsibility.

A Potential Presidential Candidate

Mr. CARTER. Mr. Speaker, in these turbulent and troublesome times, I would like to call to your attention a gentleman who. I believe warrants the Nation's serious consideration because of his high qualifications and capabilities. The gentleman to whom I have reference is Mr. Potter Stewart, Associate Justice of the Supreme Court, who was appointed to his position by former President Eisenhower in 1958 at the young age of 43. At the time of his appointment, he was the second youngest Justice to have been appointed to such a position in 105 years. Justice Stewart has distinguished himself in other areas as well, which prompts me to call him to your attention as I feel this young Associate Justice is one who should be given serious consideration as a potential presidential candidate.

Justice Stewart was born on January 25, 1915, in Jackson, Mich., but he lived the major portion of his life in Cincinnati, Ohio, attending the Cincinnati public schools and later Hotchkiss School of Connecticut on a scholarship. Following graduation from Hotchkiss, he entered Yale University on a scholarship and, prior to his graduation in 1937, he served as chairman of the Yale Daily News. He graduated with a B.A. degree and with cum laude honors. He was unable to decide after graduation whether to pursue his interest in law or journalism. But after a year at Cambridge on a

Henry Fellowship, he returned to Yale Law School. Justice Stewart was again active in student organizations. He won the Moot Court Competition, became editor of the Yale Law Journal, and graduated in 1941 with an LL.B. degree and cum laude honors.

Justice Stewart was admitted to the Ohio Bar Association in 1941. He began his practice in New York and remained there until 1942 when his Navy Reserve unit was called into active service. He served 3 years on active sea duty and humorously refers to his service as a 'sort of a 'Mr. Roberts' Navy-scared to death a very small percentage of the time and bored the rest." Mr. Stewart may be too modest, however, because during those 3 years of sea duty he received three battle stars.

Upon his discharge in 1945 as a lieutenant, he returned to his law practice in New York and his wife, the former Mary Ann Bertles, of Long Island, N.Y., whom he married on April 24, 1945. continued to practice there until 1947 when he decided to move his family, which then included a daughter, back to Cincinnati.

Mr. Stewart not only moved back to his home town but into a rich tradition in law and politics which had been estab lished by his father, James Garfield Stewart. Among the many positions his father held were the office of mayor of Cincinnati and member of the Supreme Court of Ohio. At one time he was an unsuccessful Republican candidate for the Governor's office of Ohio. Mr. Potter Stewart was a dedicated attorney but he found himself being lured into public office by 1950 when he began a 3-year tenure as a member of the Cincinnati Council. He served as vice mayor from 1952 to 1953 but rejected the opportunity to campaign for the mayor's office in order to spend more time with his family which was now complete with the addition of two sons.

He was only allowed a year's seclusion from public office, however, for he was soon called upon to serve on the Sixth District U.S. Court of Appeals by President Eisenhower. It was a difficult decision; for although he wished to be a justice, he had not thought the opportunity would come so soon. He wanted to continue his law practice, but he finally decided to accept the opportunity, and on April 27, 1954, Mr. Potter Stewart was appointed to the court of appeals. The courage with which Justice Stewart pursued justice and the ability he showed in deciding issues did not go unnoticed. During the Senate recess of 1958, a va-cancy occurred on the U.S. Supreme Court and Justice Stewart was called upon to fill this position.

It is most difficult for one to assess the philosophy of a Justice and even more difficult for a layman to undertake such a task during a few moments on the floor. It is necessary, however, to point out a few of the more pertinent areas where Justice Stewart has made outstanding contributions to our society. He has been categorized as a "swingman," "con-servative," and various other classifications; but he defies all categories except that of a "Justice." His voting record places him in the conservative category.

Justice Stewart is an advocate of judicial restraint which influences his decisions such as the school prayer rulings, for on three separate occasions he was the lone dissenter, standing for the right of children to voluntarily participate in religious activities.

Conversely, he has been in the forefront of some decisions which have liberalized our criminal procedure with needed reform. Throughout his tenure Justice Stewart has supported the right for accused to have counsel and has, therefore, been the guide for applying the sixth amendment to the States which requires a counsel to be appointed for indigents in all State criminal trials. The examples could continue but the important point is that Justice Stewart has exemplified courage and qualifications both as a speaker for the minority and as a leader of the majority.

His ability and achievements not only compel us to honor him as a capable administrator of the law but obligates us to seriously consider him as a potential candidate for President of our Nation.

The 12-Mile Fishery Limit

EXTENSION OF REMARKS OF

HON, RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. HANNA. Mr. Speaker, because of the introduction of legislation to provide a 12-mile fishery limit along the coast line of both the Atlantic and Pacific Oceans, and in view of the important stake California has in this field, covering as it does approximately 1.300 miles of Pacific coast and containing as it does a major fishery industry, I am placing in the Record two documents containing vital and valuable comments on this matter from two outstanding Californians.

The first document is a letter from Dr. W. M. Chapman, director of the division of research for Van Camp Sea Food Co., and a member of the Governor's Advisory Commission on Ocean Resources for California, to Congressman EDWARD A. GARMATZ, chairman of the Committee on Merchant Marine and Fisheries. The other is a report rendered to the same commission in California by its chairman, Dr. M. B. Schaefer, who is also a member of the staff of Scripps Institute on Oceanography, a leading institution of learning and science in the world in its field.

I believe that both statements make valuable contributions to a better and fuller comprehension of what is involved in the proposed measures. Their viewpoints, although spoken on behalf of California interests, are cogent to the total problem. Coming from such outstanding and experienced individuals, I hope they will receive the respectful attention to which they are justly entitled:

VAN CAMP SEA FOOD CO., San Diego, Calif., July 8, 1966. Congressman RICHARD T. HANNA, House Office Building,

Washington, D.C.

DEAR CONGRESSMAN HANNA: Attached is a copy of a letter sent today to Congressman GARMATS opposing the adoption of a 12-mile fishery limit (H.R. 9531, S. 2218, etc.).

We think this to be bad legislation, for rea-

sons noted in this letter. We hope that you will be able to assist in preventing its passage.

ge.
Sincerely yours,
W. M. CHAPMAN, Director, Division of Resources.

VAN CAMP SEA FOOD CO., San Diego, Calif., July 8, 1966. Congressman Edward A. Garmatz, Chairman, Committee on Merchant Marine

and Fisheries, Longworth House Office Building, Washington, D.C.

DEAR CONGRESSMAN GARMATZ: The purpose of this letter is to record our opposition to the enactment of H.R. 9531, S. 2218, or any other bill purporting to establish a 12-mile fishery limit for the United States.

The reasons for our opposition are set out more extensively in the attached testimony we presented before the Senate Committe on Commerce this spring with respect to

similar bills.

We have operated in the fish business out of California for fifty-two years. We are the largest firm in the United States dealing with fish and marine products whether considered from dollar volume of gross sales or physical volume of product. We are one of a half dozen of the largest fish firms in the world. We are expanding as rapidly as we feel to be prudent both geographically, product-wise, and market-wise. We intend continuing to and market-wise. We intend continuing to do so both domestically and foreign (we already operate in nine foreign countries).

When these bills began being considered by the Congress we were operating domes-tically out of bases in California, Puerto Rico and American Samoa. During this time we made the following expansions domestically:

1). We have participated in the building of the new anchovy fishery out of California and will press forward in expanding that fishery as rapidly as the State will permit it to expand. We are urging the State of California (with some success) to revamp other aspects of state law so as to permit the building of other new fisheries here, such as for hake.

2). In partnership with a number of the largest domestic shrimp producers in Florida and Texas we have invested substantially in the Gulf shrimp business through National Shrimp Producers, Inc. This firm's new plant in Brownsville, Texas, is the largest and most modern shrimp processing plant in the world. After a few months of highly successful operations and sales our partners and we are planning an expansion plant in the immediate future which will

approximately double its capacity.

3). We have purchased a major interest in a king crab producing firm in Alaska with the intention of doubling its already substantial production and getting it involved in the shrimp, bottom fish, and other underdeveloped resources of the ocean off Alaska,

These expansions are already under way. 4). We have taken an option on a substantial piece of waterfront property in New Bedford, Massachusetts, as a plant site antic-ipatory to developments we have planned for

the New England fisheries.

- 5). We are completing negotiations this week for the purchase of a substantial can-ning and freezing firm in the State of Wash-ington which we will use as a base for expanding the ocean fisheries out of that State.
- 6). We are in an advanced stage of nego-tiation for a firm in one of the middle At-

lantic States, which we do not wish to specify publicly at this time, which will give us a base for development of the off-shore fisher-

les of that region.

7). We have recently extended credits and other assistance to domestic fishermen building several new American flag vessels outside the subsidy program of the United States Government to the extent of several million We believe that when all of the smoke has cleared away the dollar support volume of our firm to domestic fishermen for the construction of new American flag vessels will compare favorably with that of the United States Government.

8). We have several other plans for enhancement of the United States domestic fisheries that it would be premature for us to disclose publicly at this time. We will push forward on those plans as rapidly as the Congress and the several State Governments create conditions which make such investments of capital and labor prudent. Since as Chairman of the opening session of the recent Marine Technological Society annual meeting in Washington you heard our views on the status and prospects for the ocean fisheries it is not necessary to repeat those things here

You will note from the above that we are not fearful of Russian or other foreign competition in the offshore fisheries of the United States under present Law of the Sea. We are expanding in all of them where Russians are operating. If we, as capitalists, cannot compete successfully with socialists we think they should have the fish. We think we can. We think the Congress (and particularly

the State Legislatures) should concentrate on creating a better legal and business climate for the domestic fisheries to grow in rather than try futilely to protect us from foreign competition through modification of present Law of the Sea and other protectionist measures

We firmly believe that the overall, worldwide, national interests of the United States in coastal waters will be best served by a positive (rather than negative) national policy containing all of these elements.

1). Internal waters demarcated in accordance with the terms of the 1958 Convention on the Territorial Sea and Contiguous Zone.

2). A territorial sea 3 marine miles in breadth demarcated in accordance with the 1958 Convention on the Territorial Sea and Contiguous Zone, and as set out in the "Outer Continental Shelf Act of 1953", as adjudicated by the United States Supreme Court.

3). All fisheries, both inside and outside the territorial sea, in which the United States has an interest managed in accordance with the provisions of the 1958 Convention on Pishing and the Conservation of the Living Resources of the High Seas

4). No fishery jurisdiction outside the three-mile limit beyond that authorized in the 1958 Convention on Fishing and the Conservation of the Living Resources of the High Seas.

5). Sole jurisdiction over the resources (as defined in the 1958 Convention on the Continental Shelf) of the adjacent continental shelf (as defined in the 1958 Convention on the Continental Shelf).

6). Jurisdiction over the resources of the adjacent continental shelf divided as among the governments of the several States and of the Union in accordance with the provi-sions of the "Submerged Lands Act of 1953" and the "Outer Continental Shelf Act of 1953", as adjudicated by the United States Supreme Court.

7). The regime of the High Seas manag in accordance with the provisions of the 1958 Convention on the High Seas.

8). The administration of ocean affairs in the United States Government organized along the lines of the Muskie Bill, S. 2251.

9). Adequate support funds from the

United States budget to implement the research and other activities called for by the recommendations set out above

10. Adequate attention at the White House level to a National Ocean Strategy, a National Ocean Program with which to implement it, and a National Ocean Budget with which

to fund the program. Under existing circumstances we cannot forsee any advantage to the United States fisheries from a 12-mile fishery limit which would equal the disadvantages that such a policy would bring to overall United States interests in coastal waters. We hope that your Committee will block the passage of this legislation.

You will note that subsequent to the passage of this legislation by the Senate other substantial elements of the domestic fisheries have studied the implications of this measure on their affairs and have taken views opposing it. At the very least we hope that your committee will hold over consideration of this legislation until the next session of the Congress so that mature consideration may be given to the deep seated effects of it on national and international policy and ac-tions. We think it would be a major error to pass such legislation under hysterical thrust of fear of Russian competition, which, in our considered view, has little to do with the status or prospects of the United States domestic fisheries

We would be obliged if you would print this statement in any record of hearings published by the Committee in respect of this legislation.

Sincerely yours,
W. M. CHAPMAN, Director, Division of Resources.

CONSIDERATION OF THE EFFECTS OF FOREIGN FISHERY ACTIVITIES OFF THE STATE OF CALIFORNIA: OUTLINE OF THE PROBLEM (By M. B. Schaefer)

BACKGROUND AND RECENT DEVELOPMENTS

Since the end of World War II there has been a very rapid expansion of the world's sea fisheries, and a very rapid rate of growth of the harvest taken by them. In 1938, the world marine fish harvest was only about 18 million metric tons. This decreased during the war, and in 1948 had recovered to only about the 1938 level. Since then, annual landings increased to 27 million metric tons by 1957, to 40 million metric tons by 1962, to 45 million metric tons by 1964, and are now in the vicinity of 50 million metric tons. This rapid expansion of the see fisheries has been stimulated by the need for increasing quantities of animal protein to nourish the world's growing population, especially to pro-vide better diets for men throughout the world.

There has been a particularly rapid growth of the fisheries for the abundant species which can be harvested at a low cost to provide fish-meal, which is used as a protein supplement for poultry and livestock, and fish oil, a large part of which is used to manufacture margarine, and also is used in various industrial products. Nearly a third of the total world harvest of sea fishes is now used for the manufacture of fish-meal and

At the same time, however, there has also been extensive expansion of the fisheries for those species which are particularly desired for the higher priced food markets, such as tunas, flounders, the cod and their relatives, lobsters, and shrimp.

Important elements of the expansion of the sea fisheries have been the development of fleets of vessels capable of fishing at very long distances from their home ports, and the establishment of operating bases in distant waters. Especially active in the devel-opment of fisheries distant from their nearby waters have been Japan and the USSR, al-though the United States of America has

also had considerable success in the development of its distant-water tuna fishery in the Eastern Pacific off Latin America, and in the development of distant-water fisheries, and fisheries from overseas bases, for shrimp in the Gulf of Mexico, the Caribbean, and in certain parts of the Pacific.

The Japanese have been in the forefront of the post-war development of high-seas fisheries throughout the world ocean. They have long ben a maritime nation, with well developed capabilities in fishing of all kinds, and have a pressing demand for the products of the sea both to feed their own people and as a basis of the export trade which is vital to Japan's economy. Japan has led in the expansion of fisheries for the tunas and spearfishes, conducted by long-line vessels, throughout the world ocean, and has also been active in the development of trawl fisheries for ground fishes and crustacea in the Bering Sea and the Gulf of Alaska, and to some extent elsewhere.

The Russians were not notable as high sens fishermen before the Second World War. However, they have been for the last two decades engaged in very rapid development and expansion of high seas, distant-water fisheries in the North Atlantic and North Pacific Oceans, and are in course of developing substantial operations in the Indian Ocean and South Pacific Ocean. The reasons for this are well known. The Soviet Union, faced with a need to increase the production of high quality animal proteins, and faced with very great difficulties in accomplishing this on the land, has found the sea fisheries to be an important and economical source of a large part of the requirement. There are, of course, additional benefits, of a military and diplomatic nature, flowing from having a great fleet of large, modern fishing vessels operating throughout the World Oceans.

The great post-war increase in the marine fisheries, including the expansion of the distant-water operations of many nations, has led to an increasing number of conflicts concerning rights of fishing and the conservation of the living resources of the sea. Such conflicts are, of course, nothing new in the world, there being a long history of such disputes, going back to the 15th Century and beyond. However, the frequency and importance of such conflicts rose sharply with the rapid burgeoning of the high seas fisheries immediately after the Second World This, plus growing interest in other existing and potential resources of the sea, led to actions by various nations designed to secure for their citizens a share of the ocean's riches, and to insure their conservation. This, in turn, resulted in a series of regional and international conferences, culminating in the International Conference on the Law of the Sea in 1958, at which were adopted four conventions dealing broadly with the law of the sea, and the subsequent International Conference in 1960 which attempted to agree on the breadth of the territorial sea and contiguous fishing zones. We will learn of the details of these conventions, and related mat-ters from Dr. Chapman and Mr. Herrington.

dis-

vel-

The expansion of the high-seas fisheries of the Pacific did not affect California in publicly obvious ways until quite recently. Our distant-water tuna fleet, of course, has been concerned with these matters for a number of years, and the results of disputes with Latin American Nations are reflected periodically in the press, most recently as a result of arrests of tuna vessels by Panama and Peru. The overseas operations of a number of California's large fisheries enterprises continually involve rights of fishing and conservation, but this is not widely known and appreciated.

During the last year, the imminent involvement of California with such matters, much closer to home, has become publicly wident from two events. Firstly, the north-

ward and eastward expansion of the longline fishery in the Pacific conducted by Ja-panese craft reached the vicinity of Mexico, causing great consternation among sports fishermen who believe that this commercial fishery may diminish the supply and average size of the tunas and spearfishes that they pursue for recreation. Secondly, the USSR, as a part of its systematic exploration and development of Pacific Ocean fisheries, has recently employed a fleet of research craft in making systematic explorations of the potential fisheries of the Eastern Pacific Ocean from California to northern South America. At the same time, the Soviet production fleet, which has only in the last few years expanded its operations to the wa ters in the Gulf of Alaska and off British Columbia, has very recently expanded its trawling operations for redfish, hake, and other species southerly off the Washington and Oregon coast. It will almost certainly continue the southerly expansion to the extent that the prior research operations indicate to be warranted.

This expansion of foreign fisheries to the waters of the California Current should come as no surprise. It is well known in many parts of the world that there are major stocks of harvestable fish and invertences in this part of the sea which are presently much underutilized, that is, capable of sustaining a larger continuing harvest than is presently being taken. The documentation of this, which is widely available in the open literature, has been summarized in the IMR Planning Study "California and Use of the Ocean," where there were also discussed the legal and institutional handicaps which prevent the citizens of the State of California from fully utilizing these resources. It was also pointed out to that report (pages 14-46 and 14-47):

in that report (pages 14-46 and 14-47):

"Beside the intrinsic desirability of encouraging the expansion of the fishing industry as part of the economic base of California, revision of policies and procedures in the foregoing matters are of importance because the resources in question are not under the sole jurisdiction of the State of California which, therefore, cannot prevent their utilization by others. Beyond the narrow band of the territorial sea, all nations have the right for their nationals to engage in fishing, subject to the provisions of the international law concerning conservation of the living resources.

"The international law concerning these matters was codified in the "Convention on Fishing and Conservation of the Living Resources of the High Seas," adopted at Geneva in 1958, which has been ratified by seventeen nations including the United States and will come into force in the relatively near future when four more ratifications have been obtained. (This convention entered into force in March 1968.)

"In the meanwhile, even before coming into force, it substantially expresses the rights and duties and the extent of jurisdiction of nations fishing on the high seas. Under this convention, "Conservation of the Living Resources of the High Seas" means the aggregate of the measures rendering possible the optimum sustainable yield from those resources so as to secure a maximum supply of food and other marine products. Under the provisions of this convention, all nations have an equal right to fish on the high seas but are under the obligation to cooperate in conservation measures to maintain the resources in such condition as to make possible the maximum sustainable yield.

"Only where the adjacent coastal nation can demonstration the need for conservation measures, in accordance with the foregoing definition of conservation and on the basis of appropriate scientific fladings, may it apply regulations to other nationals. It

is to be noted that the international law makes no mention of recreational activities as having any special priority. We are faced, then, with the situation where the underutilized resources of the California Current which may be caught beyond the territorial sea are completely open to the utilization by fishermen from elsewhere. For example, if the State of Oergon is able to develop a fishery for anchovy or hake, it is perfectly free to use these resources in ways which might not be permitted to citizens of the State of California.

"U.S. vessels from other states cannot be excluded even from the territorial sea uff California. Even more important, other distant-water fishing nations, including Japan and the Soviet Union, are continuing the expansion of their distant-water fisheries in the Eastern Pacific. It may confidently be expected that one or both of these nations will be operating on the underused resources of the California Current off our shores within the next few years. Exploratory operations have already been conducted."

SOME DIMENSIONS OF THE PROBLEM

We would, naturally, prefer not to have these foreign vessels operating immediately off our coast, for a variety of reasons inter alia:

- (1) There is a fear that these operations might reduce the abundance of those varieties of fish now being used by our fishermen for commercial purposes, and thus diminish the success of our own fisheries.
- (2) There is a fear that, in the extreme case, the abundance of some species could be reduced to such a level that the population might be unable to recover even if the fishing pressure were later removed.
- (3) In the case of unutilized species, there are fears among some sectors of our population that the reduction of the abundance of these could adversely affect the abundance of the species which we desire to take for comercial or recreational purposes. In any event, we would prefer to have the unutilized species remain unutilized until we get around to using them ourselves.
- (4) There is a fear that foreign commercial operations in the California Current might impair the success of the sports fisheries, by reducing the abundance or average size of the fish pursued for recrational purposes. We also wish to give a certain degree of priority to the sports fishery for some species.

With the exception of the last, these are the usual reasons for coastal nations to wish to keep foreign fishing fleets from their adjacent waters.

In dealing with this problem on the high seas off our shores, we face two kinds of difficulties. Firstly, our nation cannot claim rights off our shores which it is not willing to accede to other nations off theirs. Since, for example, we now operate distant-water fleets off the coast of Latin America, and hope to extend these and other distant-water operations, it is questionable whether it would really be to our net advantage greatly to extend our unilateral offshore jurisdiction, even if it were possible. There are also important questions of defense. An increase in the breadth of the territorial sea could greatly handicap the operations of our Navy in many important locations in the World Ocean. Secondly, after much concentrated activity on the scientific and diplomatic fronts, there were finally arrived at the four Conventions on Law of the Sea, all of which have come into force, and to all of which the United States had adhered. The provisions of these Conventions, and especially the Convention on Fishing and the Conservation of the Living Resources of the High Seas, probably constitute as equitable a system for handling such problems as can be erected at this stage in history.

In any case, one needs to think very seriously on whether, and in what way, he would wish to change the existing international law, even if it were possible. We need, then, to consider the problem in the context of the existing international law of the high seas.

THE RULES OF THE GAME

Dr. Chapman and Mr. Herrington will lead the detailed discussions on this topic. I would, however, at this time like to emphasize four of the aspects most pertinent to the California problem, although they have also been mentioned in the quotation from "California and Use of the Ocean" above:

(1) Although it was not possible at the Geneva Conferences of 1958 and 1960, to arrive at a precise definition of the breadth of the territorial sea, nor the breadth of adjacent zones for fisheries jurisdiction, it is generally conceded that the territorial sea and the zones of exclusive fisheries jurisdiction are quite narrow. It would seem that any combination of territorial sea and zone of exclusive fisheries jurisdiction extending not further than 12 miles from the shore, or from appropriate base lines, can probably be established with little objection from other countries, and would probably stand up in international adjudications. It is pertinent to note that the USSR asserts, and is willing to recognize, a territorial sea to 12 miles breadth. Although there are some claims of much more extended fisheries jurisdiction, particularly by certain countries in Latin America, it is highly doubtful that these can be long maintained, since, at the Geneva Conferences, only a very small minority of nations were in favor of such.

(2) The Convention on Fishing and Conservation of the Living Resources of the High Seas provides a fairly comprehensive set of rules for the international regulation and management of fisheries in order to conserve them. It is to be noted, however, that conservation in this convention is defined as "the aggregate of the measures rendering possible the optimum sustainable yield from those [living] resources so as to secure maximum supply of food and other marine

products."

(3) Under this convention, the coastal State has certain special rights, and can, indeed, exercise unilateral jurisdiction over the living resources off its coast when it is in a position adequately to demonstrate on the basis of sound scientific evidence that such unilateral action is necessary to effect the conservation, in the sense defined above, of the living resources. However, it is to be noted that any system of regulations must not discriminate in form or in fact against foreign fahermen on the high seek.

(4) Nowhere in the Geneva Conventions, or elsewhere in the international law, so far as I can ascertain, is any special consideration given to the use of living resources of the sea for recreational purposes. Thus, any priority to the sports fisheries requires handling within the context of the maximum sustainable yield, unless some radical change of the practice of nations in this regard is possible, which I very much doubt.

It is important to note that, so far, the USSR has been conducting its development of the marine fisheries generally in accordance with these rules, although it has not ratified the Convention on Fishing and Conservation of the Living Resources of the High Seas, and is unlikely to do so in the near future, because of certain compulsory arbitration provisions. It is, of course, to the advantage of the Soviet to develop the fisheries of the high seas on a rational basis within the concept of the maximum sustainable yield, because it has a very large and growing investment in a great fishing enterprise. Petr Moiseev, Deputy Director of VNIRO has written that ". . Soviet scientist assume that the Pacific Ocean area

could ensure a much higher level of sustainable catch than it does now, provided that there is a thorough study based on scientific data and collaboration with other countries concerned in the utilization of aquatic resources and in rational and effective fishery."

It is also to be recognized that Japanese government and industry is becoming more and more reconciled to the development and management of fisheries within the framework of the Geneva Conventions, and is beginning to recognize the necessity of conservation management of heavily exploited

living marine resources.

One can, of course, always make bilateral or multilateral arrangements with other nations which do not necessarily need to correspond to the general international rules. Such arrangements, of course, need to be based on some mutual advantages to the parties concerned. We might consider, therefore, on what basis it might be made attractive to the foreign nations with whom we have to deal to curtail their activities on the high seas off California beyond the requirements of the general international law.

SUGGESTED AVENUE TOWARD SOLUTION

I believe that it is possible to arrive at a solution to the problem, within the framework of the existing international law, that can result in our own citizens harvesting a very large share of the sustainable yield of the resources of the high seas off our coast, and, at the same time, will allow for a reasonable priority for sports fishing on the species of greatest interest to recreational users. This solution lies in the direction of developing a highly efficient commercial fish-ing industry which is able economically to outfish all comers in our home waters. the full application of science and tech-nology, and in view of the adjacency to home ports, there is no reason why we should not be able to outfish all comers, within the restriction of the maximum sustainable yield, for all the living resources of the high eas of the California Current. On this basis, we can certainly make it unattractive for vessels to come from Tokyo or Vladivostok to fish these waters. Under the protection of a highly efficient commercial operation for the abundant, presently underfished, living resources of the California Current, it should be easily possible to give priority to the recreational uses of some of the less abundant species, which are particularly desirable for sports fishing, along the lines of the recom-mendation already endorsed by GACOR. At the same time, a highly efficient fleet will also make possible the enhancement of California's own distant-water fishing opera-

During the following discussions, there will be considered in detail many of the matters that I have touched on only lightly. I would hope that on the basis of these discussions, we might arrive at the outline of a policy and program, and specific directions of action, which will best serve the broadest interest of the people of the State of California, which, I believe, will also coincide in large part with the best long-term interest of the whole community of Pacific nations.

The Nation's Water Crisis

EXTENSION OF REMARKS

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. RUMSFELD. Mr. Speaker, our Nation is beset today by threats of declining water supply and by pollution of the Nation's once-mighty lakes and rivers. Even though the Federal Government has begun to exercise its responsibility for coping with these great problems, the beginning comes late and amounts to very little. It is imperative that the American people, and governments at all levels, realize the gravity of the water crisis and act effectively to provide solutions.

I introduce at this point two articles on this subject, one from the Chicago Tribune and one from the Chicago Daily News. The Tribune article is a book review, commenting on "The Coming Water Famine," which was written by my colleague, Congressman Jim Wright, of Texas. The Daily News article is a column by Mr. Norman Ross, discussing the scope of the water crisis.

The material follows:

[From the Chicago Tribune, July 10, 1966]
A PLEA FROM A CONGRESSMAN: "THE COMING
WATER FAMINE"

(A report by JIM WRIGHT, reviewed by Ronald Kotulak)

The most important thing about "The Coming Water Famine" is that it is written by a United States congressman who is in a little better position than most people to help prevent the famine.

Rep. Jim Wright, who has represented the 12th district of Texas for the last 12 years, exhibits a practical understanding of the serious water problem in this country, how it is growing, and what steps must be taken

soon to curb it.

Altho there will not be a shortage of water as such, WRIGHT says, the pollution problem is causing a water famine because it is reducing the amount of good water that is available for drinking and irrigation.

available for drinking and irrigation.

WRIGHT tackles the entire spectrum of water needs—from the need for more cloud seeding, to produce rain, to cleaning up grossly polluted rivers and lakes.

Warehr has had a special interest in water problems, since his native state of Texas is not abundantly blessed with it and the misse of even small amounts of water can cause financial ruin for many people.

financial ruin for many people.

His concern for protecting and conserving the mountainous and hilly areas where most rivers and streams have their beginning is especially important. Careless lumbering and mining practices can cause flooding and even changes in the course of a stream.

Warght calls upon his colleagues in both houses of Congress to appropriate more money for developing sound weather modification techniques and giant desalination plants so that fresh water can be drawn from the salty oceans.

What may eventually be needed, he says, are vast projects to bring large quantities of water down from unpopulated areas in Alaska and parts of Canada to quench the thirst of populated areas hundreds and even thousands of miles away. [Coward-McCann, 255 pages, 85]

[From the Chicago Daily News, July 8, 1966] WHAT WILL BE SOLUTION TO OUR WATER CRISIS?

(By Norman Ross)

Barely six weeks ago suburban Northlake was hit, and hit hard, by the rains and flooding that caused Cook County to be designated a disaster area.

During last week's extended heat wave, the situation was all but completely reversed, has water-pressure dropped and residents were faced with the prospect of a shortage of water with which to sprinkle their lawns and wash their carm.

Both incidents dramatized yet again our growing problems in obtaining usable water

in usable amounts when and where we want

As Rep. James C. WRIGHT (D-Tex.) reminds us in his new book, "The Coming Water Famine," it takes 300 gallons of water to produce a single loaf of bread, at least 1,000 gallons to grow a pound of beef and get it to your table, 100,000 gallons to manufacture an automobile.

Despite scare propaganda, there is currently no over-all water shortage and a great deal of local wastage would quickly stop if users were charged what water costs.

New York City, for instance, wastes almost as much water each day as London uses, partly because there is no residential metering.

Also 13 billion gallons of Hudson River water flows past it and out to sea every day, but it's simply too filthy to drink.

"The costs of treatment are simply over-whelming," says Sen. EDWARD MUSKIE (D-Maine)-\$20 billion to clean up the Great Lakes, for example.

Numerous exciting and expensive ideas are being advanced to deal with our various problems. water

A thin film of alcohol spread over reservoirs can cut evaporation (and make the rospect of drinking water more intriguing?).

A 1,000-mile canal may transport water from the Columbia River basin to the Colorado River area.

Also a grandiose scheme has been advanced that would harness Canada's huge amounts of pure water for the use of farmers in the United States and even Mexico.

But before we bank on that, we'd better consult the Canadians, many of whom are hoetile to the idea. Says Blair Fraser in Mac-Lean's:

"Within the predictable future, water will be the screet issue between us and the Unit-ed States since the Alaska boundary dispute years ago, if not since the War

What can we do about this situation that is, in Interior Sec. Stewart Udall's words, "the conservation scandal of our generation"—one which sees every major river sys-tem polluted and results in 100,000,000 Americans drinking water from sources into which 120,000,000 people have dumped their various wastes?

We must disabuse ourselves of any lingering notion that our water-pollution problems are merely a part of Lady Bird's beautification program.

Says chemist Donald E. Carr in "Death

of the Sweet Waters": "We need a crash pro-gram exceeding the magnitude and pace of the Manhattan Project, which developed the nuclear bomb.

Constituents' Views

EXTENSION OF REMARKS

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. KEITH. Mr. Speaker, in late spring, I sent a questionnaire to all of the residents in my district. About 160,-000 poll cards were delivered, and more than 12,000 replies have been received to date in my office.

I found that many of my constituents liked the convenience of the computer card method of expressing themselves. They not only completed the questionnaire, but wrote notes and letters to comment on other matters not specifically mentioned. It was a pleasure to hear from so many of my constituents.

The results of the poll have been widely circulated in the district through my newsletter and by an interested press as well. I would like to bring the poll reand a few of what I found to be the more amusing and interesting letters-to the attention of the Members of the House by publishing my newsletler, in part, in the RECORD:

JULY 1966. DEAR FRIENDS: Thanks to the 11,000 of you who answered my questionnaire. I can say in all sincerity that I have seldom-during my nearly eight years in Congress-been as truly informed as I am today in my constituviews on such a variety of important issues. They will be an invaluable guide to me as I wrestle with the complex problems issues. confronting our country and the Congress.

Some poll cards are still coming into my Capitol Hill office, but we had to call a halt somewhere so that the computer could do its work.

Questionnaire results

As usual, the most interesting questions proved to be those producing highly divided -such as Number 7. As you can responses see in the results below, a substantial mi-nority (37 percent) favor expanded trade with Russia and the European Communistbloc nations. And 32 percent believe Red China should be admitted to the United Nations!

Many cards were accompanied by letters and notes-not a few of which complained that the questions were too complex to answer with a simple "Yee" or "No." I agree—but this is the problem your Congressman must face when the roll is called: His vote must be cast on the issues as presented-not in the form he might prefer.

The notes proved that no mere machine will ever take the "people" out of human beings!

One letter caused a few smiles amongst my saff. It falls in the "answer at my own sk" category. "Recently," the man wrote, staff. risk" category. "I was considering running for a position such as yours as Congressman, but I didn't know how to go about it. What is the procedure?"

Several constituents displayed real ingenuity in answering the questionnaire, such as the wife who wrote to explain "... our answer is a combination of both my husband's and my opinions . . . we had to com-promise on 3 questions . . . I conceded 2 and he 1." And then there was the democratic spirit of the father who used the poll as the basis of a round-table discussion with his family of eight. They came up with the answers by voting on each issue!

The cost of living is a disturbing problem to many. I like the way this man put it: "I do not know this country's financial standing, but . . . apple turnovers are more small, less filled, and twice as costly as the ones I bought in 1939."

. History Lessons: "Two-year term for Con-gressmen extended to 4 years? Two is enough. We are no wiser than Washington was." Also: "I am never, I repeat never, in favor of deficit spending. I can't ever be-lieve the first 31 Presidents were wrong about deficit spending and the last 5 were right."

Most replies were heartwarming and en-couraging, and all were appreciated. In, around and between my heavy Committee and floor schedules, I am trying to answer each, but the flood of correspondence has made it most difficult.

	Yee	No	Percent yes
Do you favor:— 1. Further Federal action to rid nur waterways and air of pollution? 2. A constitutional amendment to allow voluntary prayer and Bible reading in public se 3. Time for Action

EXTENSION OF REMARKS OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. DERWINSKI. Mr. Speaker, the political leaders of our friendly neighbor to the north, Canada, are spending more

of their time of late harranging against the United States and promoting questionable trade deals with Red China and the Soviet Union and Cuba. There are many complications stemming from these policies, and an interesting commentary on the numerous questions raised was in the July 12 edition of the Chicago Tribune. I have leave to insert it in the RECORD as a continuation of my remarks:

TIME FOR ACTION

The Canadian government has announced it will sell Russia a minimum of 336 million bushels of wheat and flour worth 800 million dollars in the next three years, the biggest single wheat sale in that country's history, and the shipments eventually could be much larger. Since 1963 Canada has sold the Sovieta 448 million bushels of wheat worth nearly one billion dollars.

In addition, Canada has been developing a rich market for wheat in Red China. A three-year contract was signed last April to deliver up to 250 million bushels. Canada also has been promoting wheat sales to Cuba and iron curtain countries in eastern Europe. Thus our friends to the north provide con-siderable aid and comfort in the form of

vitally needed food to communist nations

which seek to destroy us.

These transactions offer further evidence if any is needed, that the Communists are still failing to solve their critical food production They also afford evidence of the problems. They also about evidence of failure of our government to win any concessions from Canada for American embarge policies which might pinch Canadian trade. The Canadians, of course, can point out that we ourselves followed their original lead and sold some wheat to Russia.

It is unlikely that the United States will have an opportunity very soon to repeat this mistake, inasmuch as Canada has the Soviet market for wheat pretty well sewed up. It is also unlikely that as long as the war in Viet continues those persons in Washington and in the grain trade who think we ought to be selling wheat to Red China will get very

far with that idea.

The United States, in fact, no longer has much wheat to sell. In the marketing year which ended June 30 we exported an mated 850 million bushels, roughly three-quarters of our annual crop. No more than 200 to 300 million bushels was exported for The rest went abroad under food for peace, which was virtually giving it away.

After a talk with President Johnson, retary of Agriculture Preeman said he is considering the need for further increasing federal planting allotments next year beyond the 15 per cent increase announced recently. As of now, the experts are guessing that a year from now our once huge wheat surplus will have dwindled to less than 250 million bushels of uncommitted stocks, only about a

sixth of a year's output.

Perhaps President Johnson should be reminded of his statement in his farm message to Congress only last February, when he said, "Our objectives must be for the farmer to get improved income out of the market place at less cost to the government." With the end of the costly wheat surplus in sight, this is an excellent time for the President to back up his words with action, stop talking about planting allotments and subsidies, and get the government out of the wheat busi-

Metropolitan Washington Transit Authority

EXTENSION OF REMARKS OF

HON, CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. MATHIAS. Mr. Speaker, Wednesday the House Judiciary Committee is scheduled to begin hearings on legislation granting the consent of Congress to an interstate compact establishing a mass transit authority for metropolitan Washington.

Approval of this compact by the State of Maryland and the Commonwealth of Virginia is clear proof that both States recognize the immediate need for truly regional transportation planning to meet the problems of the fast-growing Washington area. I am pleased that many perceptive Marylanders have given their strong support to the enabling legislation which I have cosponsored.

I would like to bring to the attention of Congress the following editorial from the Baltimore News-American:

MATRIAS BILL

Baltimore County Executive Spiro T. Ag-new is prudent in urging Congress to enact

promptly a bill introduced by Rep. Charles McC. Matrias, Jr. to create a Washington Area Transit Authority.

As things now stand, there is real danger Washington will plunge into plans for mass transit—including subways and buses—without taking into account the needs of Marylanders living in Montgomery and Prince Georges counties.

The need for a joint authority-including part of Maryland, Virginia, and the District of Columbia—is self-evident.

As Agnew points out, attempts at coordinated planning so far have been fumbling and uncertain. Immediate establishment of a regional transportation authority like the one proposed in the Mathias bill is imperative—particularly for Marylanders living outside Washington who might otherwise find themselves left out in the cold.

Truman Peace Center

EXTENSION OF REMARKS

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. O'NEILL of Massachusetts. Mr. Speaker, on Tuesday, July 12, I made some remarks about the Truman Peace Center at the Hebrew University in Jerusalem. This center for the advancement of peace is a tribute to Harry S. Truman and a tribute to the State of Israel which has devoted so much of its time and energy to the pursuit of peace.

Mr. Joseph Weisberg, the editor of the Jewish Advocate, has written a perceptive editorial about the peace center. This center, he writes, is aptly named after the "former U.S. President, whose career was cast in the mold of so many of the heroes of ancient Jewish lore."

At this point I include Mr. Weisberg's enlightening editorial in the RECORD; TRUMAN PEACE CENTER

The groundbreaking on Monday for the Truman Center for the Advancement of Peace on the campus of the Hebrew University of Jerusalem marked the second big step towards the creation in Israel of an institution which comfortably fits the pro-phetic description of the special role of the City of David.

One cannot help but be struck by the aptness of its association with the former U.S. President, whose career was cast in the mold of so many of the heroes of ancient Jewish lore. Thrust into a position of awesome responsibility, seemingly without preparation, and faced with the chilling necessity of having to make epochal decisions, the man from Missouri boldly and forthrightly acted where others might have vacillated.

One of many such decisions was his quick recognition of the State of Israel.

The concept of the Center is magnificent The concept of the Center is magnificent in its simplicity. It would attempt to assure lasting peace through understanding. It will search out and eradicate the seeds of dissent, using all the instruments of science and scholarship.

The prospectus released by the Founders of the Center lists in its curriculum a wide diversity of subjects for study and research. Its scientists would investigate such matters as soil conservation, desalinization of water, the equitable distribution of food as well as

comparative religion and international law. It is evident by even cursory examination that such a curriculum goes far and deep into matters which have disturbed the world's tranquility through the centuries of recorded history.

Mr. Truman stated his heart's desire when he said in a speech last January in Inde-pendence, Missouri: "When it is time to close the book on my life, I will be comforted by the hope that this Center for the Advancement of Peace will become a major source of light and reason toward the achievement of eternal peace."

Pittsburgh Prayer Walk for Peace in Vietnam

EXTENSION OF REMARKS OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 30, 1966

Mr. MOORHEAD. Mr. Speaker, in my district in the city of Pittsburgh a distinguished group of clergymen organized and conducted a prayer walk for peace on July 11, 1966.

One of the sponsoring members wrote

to me saving:

I myself do not believe we should "get out." I am vigorously opposed to the men-tality which wants to "win" in just as short a time as possible regardless of the risks.

With his letter he enclosed a statement issued by the prayer walk sponsors to their clergy brethren expressing concern over the growing escalation of the Vietnam conflict and calling upon both the United States and North Vietnam not to spread the conflict. They urged parties to submit the dispute to negotiations, preferably through the good offices of the United Nations."

Mr. Speaker, I agree wholeheartedly with this statement and call it to the attention of my colleagues, as follows: TO OUR CLERGY BRETHREN:

On Monday, July 11, at 2:00 p.m., we plan a prayer walk for peace in Vietnam. cerely hope that you will join with us.

We plan to meet at 2:00 at Rodef Shalom Temple, Fifth and Morewood, From there we will march to a Catholic and a Protestant church. We will conduct an in-formal prayer service in each house of worship. The service will be led by a rabbi, priest, and minister of the respective reservice will be led by a rabbi, ligious communities. There will be preaching.

In connection with this march, a statement will be issued to the press stating our grave concern over the growing escalation of the Vietnam conflict. We will urge the United States and North Vietnam not to spread the conflict and will urge all parties to submit the dispute to negotiations, preferably through the good offices of the United Nations.

We believe that as clergy we must continue to make public witness of our desire for peace and justice in Vietnam, not a wholesale slaughter of cities and citizens that would violate all principles of morality. Won't you come with us to walk and pray next Monday?

The time is short, but we feel that the situation is urgent. If you believe in the need for a just peace, we know that you will

be with us, even if it means readjusting a busy schedule.

Sincerely.

Rev. Eugene Buchholz, Rev. Edward Biegert, Rev. Christopher R. Sherrili, Rev. Alexander Seabrook, Rev. William Boyd Grove, Rabbi Walter Jacob, Rev. Philip Park, Rabbi Jacob Edelstein, Msgr. Charles Owen Rice, Rev. Raymond Uts, Canon Robert Merry, Fr. Donald McIlvane, Rev. Alexander Stewart, Sponsors.

The Wages of Hate

EXTENSION OF REMARKS

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. FISHER. Mr. Speaker, under leave to extend my remarks I include an editorial which appeared in the Wall Street Journal on July 18, which is both timely and thought provoking. It contains a frank, fair, and meaningful appraisal of developments in the civil rights movement during the past year. It should be read by everyone.

The editorial follows:

THE WAGES OF HATE

Not quite a year ago, in the wake of Watts,

we observed in this space:

". . . the civil rights leadership should turn from its spectacular displays and occasional rabble-rousing and devote itself to a far greater degree to Negro individuals, Negro children, Negro families; to education in the home and group as well as in the achool."

It is not an especially original thought, but the intervening twelve-month, sadly, has only given it greater pertinence. For in some ways race relations are if anything worse than then, as the nation now witnesses violence and death in Chicago while Watts itself and other areas are said to be at

flash-point.

l.

0

d

18

3-

Part of the worsening is an increasing bitterness toward the white man among some elements of the Negro community. It is strange, although to an extent understandable, that the more civil rights legislation is piled onto the statute books, the more Federal money poured into attempts at Negro bettermen, the more help freely proffered by businesses and individuals—the more the anger rises. To the extent it is understandable, the reason is that none of these efforts have accomplished much.

The darker mood can be sensed in the antiwhite militancy of certain groups, perhaps small and insignificant, perhaps not; the ones reportedly arming themselves and training in paramilitary fashion (there was no lack of arms in Chicago these past several days). Not surprisingly, the ugly mood has found sudden articulation in a single

phrase, "black power."

The men who gave currency to the term have been trying to tone it down ever since, suggesting it means only a fresh initiative on the part of Negroes to work for their advancement, which would be all to the good. But also present are the connotation of black racism, the demagogic appeal to hatred of the whites, the implication of seizing by force what the majority has built up over generations of painful effort.

In the divisiveness currently afflicting the civil rights movement, such leaders are called militant, as distinguished from "moderates" like Martin Luther King. Moderation,

though, seems to have a peculiar definition in this context.

The King organization came to Chicago cetensibly to transform it into a just and open city; in fact, they make no bones about intending to spread civil disobedience in order to force the "power structure" to undertake radical improvements in Negro conditions. There is even a term for that too, albeit a somewhat self-contradictory one: "Militant ponviolence."

Here is the minister himself speaking a few days ago about disrupting the flow of the city: "I know it will be rough on (Chicago city officials) when they have to get 200 people off the Dan Ryan (expressway), but the only thing I can tell them is: Which do you prefer, this or a riot?" Somehow "militant nonviolence" does not seem to have averted night after night of murderous rioting, necessitating the intervention of the National Guard.

Moreover, this "moderate" attitude bespeaks more than a slight overtone of the same bitterness and hatred conveyed by the militants. All in all, it is further alienating the support of the white liberals who have been in the forefront of the movement; what else can be expected when a civil rights leader calls super-liberal Hubsert Humphery

a racist?

We fear that the hatred and violence are also alienating the generally passive support of the majority, most of whom, including us, would like to see the Negro get every break a citizen deserves. But who needs this—year after year of disorder, preachment of contempt of the law, taking to the streets in orgies of pillage and shooting?

The leaders might reflect on a simple fact acknowledged by Martin Luther King: The Negro population is only 10% or 11% of the whole. Only a minority of that minority participates in the rampages, but the point for the leaders to understand is that the Negro needs the white man far more than

the other way around.

And so we can only end as we did a year ago, except less hopefully. Not all the Federal ald or private help imaginable can lift the Negroes as a group into instant contentment. It will be slow at best, and most of the progress will have to be made by the Negroes themselves. That is the way the world is.

If, instead, the leadership keeps turning on the white man, it is exceedingly hard to be optimistic about the chances for any substantial progress in the future.

The President's Lonely Decisions

EXTENSION OF REMARKS

HON. CLAIR CALLAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. CALLAN. Mr. Speaker, the Lincoln Evening Journal of Lincoln, Nebr., one of the Nation's outstanding newspapers, recently published an editorial effectively and concisely pointing out the loneliness of Presidential decisions. I include this editorial in the Recogn:

THE PRESIDENT'S LONELY DECISIONS

The gregarious, consensus-loving President of the United States came to Omaha on Thursday to make a speech heard around the world.

It showed the caliber of the man who holds the reins of government of the United States. He does what, in his conscience, he feels he must do for the good of the country after weighing the counsel of his advisers. He said as long as he is President he intends to keep the country's commitments, honor its treaties and let the world know that when America gives its word, America keeps its word.

This was warning to the Communists in North Vietnam, the Soviet Union and Red China that the President of the United States makes the decisions; that critics in Congress, the students on the campuses and peacentiks across the country cannot weaken the administration's determination to stand firm in Vietnam, and that there will be no takeover of South Vietnam because of U.S. default.

President Johnson has shown he is willing to make the hard, lonely decisions which only the President can make regardless of what it does to consensus.

It is in times when there is no consensus that the country needs a strong President and in President Johnson the United States has a strong President.

The bombing of the militery targets in North Vietnam is an attempt to halt the escalation of the war by the Communists, no matter how much critics of administration policy put the escalation blame on President Johnson.

Nebraska should be proud the President chose this state as a base to make his forceful statement. Nebraskans may have quarrels with the President's domestic policies, but most are in agreement with his handling of the war in Vietnam.

Like the President, they deplore the war, but find the alternatives even more intoler, able. On Thursday Nebraskans saw a determined President and one with the courage of his convictions.

Pioneer Spirit-1966

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. ROGERS of Florida. Mr. Speaker, when the pioneers first started filtering into the south Florida area, the only contact they had with their friends and relatives in the North was by mail.

The mailman of the last 1800's and early 1900's did not have to worry about a 70-pound limit or a ZIP code. He had only to worry about Indians, alligators, hurricanes, bandits, and sore feet.

For you see, the mailman, aptly titled the Barefoot Mailman, serviced the hamlets and towns between Baker's Haulover in Miami and Jupiter Inlet by foot, walking the distance of nearly 70 miles on the beach.

As we grew sophisticated and the methods of transportation improved, the route of the Barefoot Maliman was abandoned and assumed by more modern methods.

But each year Boy Scout and Explorer units undertake the trip. They made the same trek under existing conditions as the Barefoot Mailman did some 80 years ago. They sleep on the beach at night and walk by day.

I would like to commend their incentive and sense of history. I only wish that other youths might be inflicted with such a pioneer spirit.

Wither the Earthbound Astronauts?

EXTENSION OF REMARKS

HON, RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. HANNA. Mr. Speaker, I speak today as a dedicated backer of an improved society. I have had too much humbling experience to expect the achievement of a Great Society. To my colleagues of like persuasion I give this solemn warning; money, however much, and ideals, however high, will not achieve for us the desired purpose. It can no longer be accepted that our role is simply to approve ideas and then grant requested funds. Our responsibilities to the people require a continued attention to assure that the ideas are soundly conceived and effectively executed by the administrators and to determine that the moneys appropriated are wisely and prudently applied.

Now, I am going to demonstrate to you an immense area in which there is very little likelihood that either of the above aims is to be achieved. The newest, most important undertaking of our Federal Government is in the field of environmental improvement. We have at long last accepted as a national goal the responsibility for the reclamation and maintenance of clean air, clean water, and healthy soil. Pollution has become such a damaging intrusion into the sustaining life activities of drinking, eating, and breathing that the threshold of tolerance is being challenged and the health of all is in jeopardy. To undertake the massive requirements of this job in society will call upon resources in our Treasury comparable to the costs of World War II. Virtually billions and billions of dollars in a 10- to 20-year program.

I stand with other of my colleagues saying it is necessary, and even vital, that we commit ourselves to the programs which will clean our environment. Still I say, beware, take care, for we are not proceeding wisely. When you spend massive funds, when you hope to have the talents and products of your private sector and your academic centers you must have organization, control, and cooperation to get results that are not prohibitively expensive.

hibitively expensive.

Mr. Speaker, may I suggest that all Members soberly reflect the following analogy. We, in the recent past, embarked upon another challenging and demanding venture, the penetration of space. Into this program we have poured over \$22 billion to date. The mission of this program is twofold. First, the successful penetration of space with practical reentry of vehicle. Second, if not paramount in importance, the sustaining of the life of the astronauts in hostile conditions; that is, provision of a quality controlled environment traveling with the space vehicle capable of sustaining life at a level to allow high performance in space tasks.

I suggest, Mr. Speaker, that we are all of us astronauts. We are traveling in a

spacecraft, 3 billion of us, and we have the same problem in this craft as Glenn, White, Grissom, and others have faced. We must maintain a quality of life supporting environment which will allow for a high performance of the activities which allow for an expansion of meaningful and satisfying living. As we crowd the space of our craft and increase the demands upon the elements of air, water, and land, the management and use of these elements become more critical.

We in Congress created NASA and charged that agency with responsibility for the two missions and hold it responsible for a careful and effective expenditure of funds. In recent years we have developed a set of documents and a pattern of procedures for dealing with the Government in this field. NASA procurement regulations were written to implement the Space Act of 1964. A contractor must consider these along with the board of contract appeals decisions, case laws from court cases and other in-Borrowing terpretations. from longer experience of the Department of Defense and with working experience now of its own NASA, through these regulations, has been bringing together the "incompatibles" of the free enterprise system, the great academic society and the Government to accomplish NASA's chief missions, exploration of space and sustaining of human life. The history of both DOD and NASA in procurement is not without some blemish but by and large with the advisory committees as consultants and with procedures of cooperation, there painfully evolved an impressive teamwork, coordination and cooperation which serves the Nation well and will gradually improve.

I ask now, my colleagues, that you turn your consideration to the civilian agencies which we are now involving in the impressive and ambitious program against pollution and waste on land, water, and air: in this case, Departments of Health, Education, and Welfare; Commerce; Agriculture; Interior; and State, to name a few. These agencies procure their goods and services under a set of rules flowing from the Federal Procurement Regulations FPR's-which are an implementation of the Office Appropriation Act of 1949. Up to now this procure-ment has affected U.S. industry very little. It involved housekeeping supplies, office equipment and the like. In the past, civilian agencies of Federal Government have accomplished most of their R. & D. work internally or through grants to higher education and non-

profit institutions.

A new era must be recognized by the agencies involved in the earth environmental health problem. The interface between Government and industry must provide for cooperation, coordination, and a sense for and a definition of mission. Cooperation and coordination must flow between agencies in the same mission and between agencies and industries. The mission concept must come alive as it has for DOD and NASA.

In a recent presentation of this subject matter one of my constituents, Stuart N. Davidson, director of the Contracts Division of Beckman Instruments, presented the problem I am so concerned about in these words:

To understand this best, let us look again at NASA. We have described its mission as one of space exploration. Of course, NASA's mission can be described in many other ways, but one of the definitions of the mission of NASA must certainly be the "survival of man in a closed atmosphere." The principal problem in Mercury and Gemini, and the principal problem that will be encountered in Apollo, and in orbiting space stations and in manned exploration of the planets will be the survival of a crew in a closed atmosphere. Recent research has indicated to us that men cannot survive long in a closed atmosphere. such as a space capsule or a submarine, unless certain things are done. It is not merely a matter of having enough oxygen along for men to breathe. For if you put a man in a closed atmosphere and provide him all the oxygen he needs to breathe, he will still die sooner or later. This is because the human body emits some 400-odd chemicals through the sweat glands, tear ducts, lungs, etc. Many of those 400 chemicals, which taken in even small quantities, are quite poisonous. A man, even though having enough oxygen, will die from the effects of these poisons even without breathing them. Man simply cannot survive in a closed atmosphere without some means being taken to regenerate his waste material into usable or harmless chem-

Consider, if you will, our planet earth. In reality, it is a spacecraft. A relatively small spacecraft hurtling through the uncharted void of space. It happens to be large enough, to have enough mass, so that it holds unto itself its own atmosphere. This enables its crew of three billion people to live on the outside of the capsule rather than on the inside. Nevertheless, the earth and its crew, this spaceship, is a closed atmosphere with limited resources. Now then, up to about 50 years ago there was, very fortunately for the human race, a good ecological balance. The carbon dioxide emitted by animals was taken up by plants and converted back to oxygen and we had a very balanced atmosphere which changed little, if at all, over the centuries. Waste was regenerated through natural means. Today, things are quite different. The crew of three billion on this spacecraft and the mechanisms which they build and operate are busily destroying the environment and upsetting the natural balance severely. The crew, itself, gives off something like 100,000 tons of dead skin, hair, nails and dandruff per day into this environment. It manages somehow to create six million tons of garbage per day consist-ing of paper bags, towels, empty beer cans, pop bottles, etc. The 200 million internal combustion engines that are constantly running on the highways or in fixed installations give off countless billions of cubic feet of polluted air per day, and into our streams and oceans are dumped millions of tons of industrial and personal refuse and pollution. The most optimistic of scientists when view-ing this situation give the human race a few centuries of survival at the present rate. The more pessimistic scientists indicate to us that our great grandchildren may well be the last humans on earth if something isn's done.

Well, something has started. Something is being done about this problem. This is reflected very clearly in the present restructuring of the civilian agencies of the Federal Government who now make, and will be making, their procurements under the Federal Procurement Regulations. In recent months, much legislation has gone through the Congress of the United States. To mention a few of them, there's the Public Health Services Act an amended in the 39th Congress last year; the Mental Retardation Facilities and Community Health Centers Construction Act of 1963 amended last year, the

Elementary and Secondary Education Act of 1965; the Water Quality Control Act of 1965; the Solid Waste Disposal Act of 1965; the Housing and Urban Development Act of 1965; the Pure Water Act of 1965; and many other public laws which bear upon the cleaning up of our environment and the health of our citizens.

The President's Reorganization Plan Number 2 of 1966 has gone into effect. It has created the Environmental Sciences Services Administration (ESSA) which includes the Weather Bureau, the Coast and Geodetic Survey, and is probably the administration in the Government which will concern itself most with oceanography. This reorganization plan also created within the Department of the Interior, the Federal Pure Water Control Administration, which will concern itself with stream and ocean pollution. The Department of Health, Education and Welfare is constantly being reorganized and is taking giant strides in medical research. Apparently, HEW will administer the air pollution efforts of the Federal Government. The Department of Commerce has written its own procurement regulations to implement the Federal Procurement Regulations. The Department of Agriculture and others have done the same. All of these civilian agencies are starting to make their move to become heavy buyers of research and de-velopment and hardware from American industry.

We have been used to regarding the De-partment of Defense and NASA as the complex within the Government which has the most impact on industry. This is the complex which has done a great deal of procure-ment in the past with billions of dollars and they are the Federal agencies which have had most direct influence on American industry. Now, however, the civilian agencies are beginning to enter into contracts, either directly or indirectly, with American industry. One can assume that in view of the urgency of their mission, the survival of the human race, that these civilian agencies, operating under the Federal Procurement Regulations, will soon be spending more money with industry than does NASA today. Further, barring some kind of international strife, these agencies will be more important in the future procurement arena than either MASA or DOD, and probably more important in dollar volume of procurement than both of them put together. The sales opportuni-ties for industry in this arena are fantastic (but that is not my subject today.)

Already, industry is beginning to feel the effects of this new Federal customer. Some specific examples: Five universities scattered throughout the country within the last two or three weeks, have gone to industry with requests to buy certain kinds of scientific laboratory equipment. They have issued purchase orders for this equipment, the "boiler-plate" of which has embodied the requirements of the Federal Procurement Regulations in the same way that contracts issued from the large prime contractors to their subcontractors have, in the past, embodied the provisions of the Armed Services Procurement Regulations for DOD, or the NASA Procurement Regulations for NASA. What I am saying here is that the rules of what I am saying here is that the rules of procurement of the Federal Government are filtering down to industry today through universities. In the past, universities have accomplished their procurement from industry principally with Federal grant money. In most cases they were regarded as purely commercial transactions between the university and industry. Today, this is becoming Bot so. The universities purchase orders for scientific equipment in these specific examples have been made under the direction of the Department of Health, Education, and Welfare.

I have no such specific examples concerning hospital procurements, but I do know that at the hospital level there are some indications that we will soon see what used to be purely commercial procurements made hospitals and hospital complexes now taking the form of incorporating the require-ments of Federal Procurement Regulations and the enabling legislation.

Local governments are procuring a great deal of research and hardware to help solve their local air pollution problems and their water pollution problems. All of these—traffic control, crime detection, air pollution sewage disposal, water pollution—problems to which the local governments are addressing themselves and under which they are demanding increasing skills from industry, all of these programs are backed up in one degree of these programs are backed up in one degree or another by federal funds. At the same time we are seeing the Federal Government preparing itself to exercise considerable sur-veillance over the local governments as to their means of procurement. For the Government has taken the position in all of the acts of legislation that I have mentioned before, that in order to get money for these programs-for universities, for hospitals, or for the local governments—the states have got to submit to the Government a plan which must include a means by which the local in-stitutions can show the Federal Government that they are making wise procurements, and that they are passing on to their suppliers all the terms and conditions in these procurements that are required by the legislation and the regulations.

The Federal Government has taken great strides in computerizing the procurement process. The Department of Defense and NASA are leaders in this. We have programs with the Department of Defense—one of them, for example, is called Contract and Performance Evaluation (CPE), where the detail performance of every contractor in the country on every contract above a certain size is retained in a computer's memory. All of these facts are being gathered together by DOD and put on the computer so that at any one time one can read out what is going on in the contracting area; how the prime con-tractors are handling procurements; what kind of performance they are getting from each and every subcontractor, etc. Audits are also posted in this great memory so that the DOD has a readout available of the whole procurement process.

With this kind of information and these kinds of techniques available, one can be sure that the Department of Commerce; Health, Education and Welfare; Interior; indeed, all of these Federal civilian agencies who will be the biggest procurers from industry in the next ten years will use them. They are going to follow the same techniques so that all this federal money that flows down from the civilian departments to local governments, hospitals, universities and out to industry is going to be watched carefully. They have the mechanism to examine the whole contracting process and it will be examined in some great detail.

The point I am trying to make with all of this is that the procurement people—the ical institutions, and in local governments are going to have to begin to understand more intimately the federal procurement process. They are going to be audited, for indeed the legal right of audit rests in the Federal Government. They are going to be audited as to how they spend this money, their procurement methods, the degree to which they solicit competition, conduct price analysis, etc. They are going to be examined carefully. They are, in short, going to have to learn to live with the Federal Procurement Regulations (the FPR's) in much the same way as those of us who have been in the space and defense business have learned over the years to understand and abide by the Armed Services Procurement Regulations, in the case of DOD, and NASA Procurement Regulations, in the case of the space agency.

Finally, and most important, if this is to be an efficient government-industry partner-ship, the same kind of rapport now existing between industry and government in the space and defense arena must be established with the civilian agencies so that the mission of survival can be accomplished.

Mr. Davidson speaks from long, practical experience in the interaction between government and business at the interface of procurement. His observations are most penetrating and significant. I would add that Congress must be as aware on its part as this industry representative has demonstrated he is. The situation demands that we be prepared to amend and adjust the implementary legislation supporting bills providing the major thrusts into environ-mental health. We must be concerned with procurement procedure with coordination of efforts for cooperation in projects so we meet the mission requirements. We must expect and encourage the painful yet necessary development of lines for adjustment in the face of inevitable new areas of "incompatibility between the Federal Government and its partners in both the public and private sector. We must demand and help develop new methods of measurement so that we can distinguish between real performance and a "snow job." We must be aware of the critical balances which are constantly present in the areas of material and manpower where the Federal Government and its partners are making excessive demands on limited quality and quantity. Finally the appro-priate committees should keep a constant, constructive surveillance else these important programs will be at best wasteful and at worst miss completely their important, vital mission. Only in this way can the achievement match the promise in this new and noble experiment. Only thus can we extend the comfort and the length of the journey for the earthbound astronauts.

The tocsin has been sounded, my

brethren, which of you will answer?

Twenty-sixth Anniversary of the Occupation of the Republics of Estonia, Latvia, and Lithuania

EXTENSION OF REMARKS OF

HON, JOSEPH P. ADDABBO OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1966

Mr. ADDABBO. Mr. Speaker, 26 years ago the armed forces of the Soviet Un-ion began the occupation of the Repub-lics of Estonia, Latvia, and Lithuania, thus ending the existence of these countries as free and independent nations.

That invasion and occupation and the imposition of the Soviet regime was a flagrant act of aggression and continues as such today.

The Soviets have deported to their country more than a half million people from Estonia, Latvia, and Lithuania, regardless of the fact that the U.S.S.R. joined the Genocide Convention.

In addition to those deportations the Soviet Union is forcibly resettling young people from these countries in Soviet Russia, thus obliterating their national identity by Russification, atheism, and Communist indoctrination.

The U.S.S.R. does not have any legal basis for the occupation of these countries but is trying to justify its domination by fraud and usurpation of the will of the people. The United States has never recognized the seizure and occupation of the Baltic States into the Soviet Union and has upheld and restated this position in a recent official publication of the Department of State—Treaties in

Mr. Speaker, it is my hope that the oppressed people of these once independent nations will be able once again to gain their freedom—a freedom they so richly deserve.

We Must Not Forget

EXTENSION OF REMARKS

HON. ROY H. McVICKER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. McVICKER. Mr. Speaker, this week will mark the eighth annual commemoration in this country of Captive Nations Week. Since 1959, at the request of the Congress, our Presidents have issued the call to all Americans to remember the sorry circumstances which prevail within the area of Europe dominated by the presence or fear of the Red Army. It behooves all who love the blessings of liberty, who believe that freedom and national self-determination are just goals of political action to once again reassert their feelings on the existence of the Communist dictatorships in Eastern Europe.

We who have been nurtured in the traditions of justice and the right of man to govern himself cannot prudently or morally stand by and not deery the terrible state of affairs in the captive nations. It is imprudent to ignore an evil which threatens all we hold dear. It would be an insult to our beliefs not to proclaim the deepest sympathy for the plight of millions now held in bondage by the criminal techniques of Communist domination.

We have our roster of heroes who have fought and often died to make the heritage we take so easily for granted a living and strong reality. We may well not remember that the cause of freedom suffered a grievious, but not mortal, blow when other national patriots behind the wall of Soviet armed power fought for liberty and perished in the attempt. The names of such men as Nikola Petkov, of Bulgaria and Jan Masaryk, of Czechoslovakia should be engraved on the tableaus of those who held human freedom and dignity dearer even than life.

Thousands died opposing the imposition of Communist regimes. Thousands more perished or suffered terribly in the years which followed when the new

tyrannies were destroying all opposition. In some cases, large segments of the native population were deported to camps in the Soviet Union when that state unilaterally proclaimed that small historic nations were henceforth part of the Communist Empire of Moscow.

Mr. Speaker, these events were not a tragedy in the sense of being caused by the actions of the small nations of East ern Europe themselves. The creation of Communist puppets was the result of the cynical and cruel acts of the leaders of the Soviet Union. The nations now called "captive" were the victims of both the desire for dominance which has long characterized the Russian state, and of the sordid urge to impose communism even when it was not the choice of the people. These brave nations were the victims of one of the most colossal robberies of history. At just the time when they felt that the future was bright with promise, when the hideous terror of Nazi occupation was ended, when the course of national development was apparently clear, they were thrown into the hands of groups of men who would not serve the interests of the people.

The Communist conspirators who came to absolute power were interested in two things. One was to stifle all opposition to the satisfaction of their shameful desire for total power. The other was to see that the demands of the source of their strength, the Soviet Union, were met. The result was not only the destruction of liberty, but subservience to

the goals of an alien state.

Mr. Speaker, foreign military power and a local daemonic police apparatus cannot perpetually hold down the legitimate aspirations of human beings for liberty and dignity for themselves and their nations. We may be sure that our call to the enslaved peoples during this week will not go unheeded. They will know that our belief in their eventual deliverance is correct. Let me then extend my personal wish to these brave, unfortunate peoples, that the light of freedom will soon shine again in their lands.

Captive Nations Week

EXTENSION OF REMARKS

HON. FRANCES P. BOLTON

OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1966

Mrs. BOLTON. Mr. Speaker, 7 years ago the Congress set aside this week of the year for the observance of Captive Nations Week. Much of our attention has been focused this year on the war in southeast Asia, but we dare not forget that already for more than 24 years the peoples of East Europe have been dominated by an alten power, mainland China for 17 years, Tibet for 15, North Vietnam for 12, and Cuba for 6 years.

This occasion is a solemn reminder of the tragic plight of courageous people, of the violation of promises, treaties and international law, and of the responsibility of freedom loving people everywhere to pursue a course that will bring peace to those in captivity.

In the last several weeks our press has reported new efforts to break down trade barriers into these countries, new endeavors to establish cultural exchange, and new attempts by captive nations to obtain a greater measure of freedom. We continue to hope for improvement in enslaved countries and look forward to the time when there will be no more captivity.

It is my hope that all Americans will join in observing this week to reaffirm their concern for those in restricted lands.

National Security

EXTENSION OF REMARKS

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. CHAMBERLAIN. Mr. Speaker, the Director of National Security and Foreign Affairs for the Veterans of Foreign Wars, Brig. Gen. James D. Hittle, USMC, retired has made a contribution to the continuing Vietnam policy debate in a column in the July issue of the VFW magazine. General Hittle, recently returned from a study of the situation in Vietnam, argues strongly about the dangers of accepting a coalition government in South Vietnam as a genuine solution of the problem of Communist subversion and aggression.

Under unanimous consent I include this statement in the RECORD as it is deserving of the attention of my colleagues:

NATIONAL SECURITY

(By Brig. Gen James D. Hittle, USMC(retired) Director of National Security and Foreign Affairs)

If there is one thing we've got too much of these days, it's confusion.

In particular, there is confusion about things that are basic to our way of life and to our ability to preserve it.

For instance, there's the matter of the war in Vietnam. Too many people, some of whom should know better, are urging a coalition government with the Reds, even a ceasefire agreement.

Advocates of such schemes forget a very basic fact of national life—and death. One of the greatest Americans who ever liyed, General Douglas MacArthur, said it so well: "In war there is no substitute for victory."

Those who would violate this principle by taking the Communist aggressors into the Vietnamese government are saying, in effect, that the Communists can be trusted. Those who believe this are not only confused, they also have a bad memory.

If the history of the world since the Reds took power in Russia teaches anything, it's this: communists make promises only to break them when it's to their advantage.

The Reds have repeatedly demonstrated that they look upon a coalition government merely as a stepping stone to full Communist take-over.

There's too much confused thinking, also, in the idea that a cease-fire will solve the problems of war in Vietnam.

The cease-fire advocates overlook another very basic thing—the nature of the Vict-namese war. This is a war without a front. It is a conflict that swirls through the countryside. In such situations where the war is everywhere, there can be no cease-fire any-

Why? Because to have a cease-fire there must be at least a vaguely definable frontline such as, for instance, in Korea.

In the kind of war being fought in Viet-nam a cease-fire would only be a license for the Reds to win by terror and subversion while we and our allies would be shackled by our promises to abide by a cease-fire agreement.

Those who are calling for a coalition gov-ernment and a cease-fire are confused over the difference between stopping a war and winning one.

Wall the City or Support the Police

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. DERWINSKI. Mr. Speaker, as representative of a district in the Chicago metropolitan area, I have been concerned over the violence which erupted in Chicago late last week and the deliberate definance of law and order, vandalism, and other actions which produced anarchy in a portion of the city.

The Suburban Index, which serves the South Side of Chicago and adjacent suburban communities, carried a very appropriate editorial on this subject in its July 17 edition, and I have leave to insert it in the RECORD as part of my remarks:

WALL THE CITY OR SUPPORT THE POLICE

What does tomorrow hold?-will the law abiding finally be forced to barricade them-selves in walled cities as police superintendent Orlando Wilson has seriously suggested, while the lawless roam the land to commit their crimes at will?

With a Supreme Court going all out in its interpretation of the law to protect the criminal and thwart the police at the expense of the public; with zealots and do-gooders in-cluding members of the clergy, urging a complete breakdown of the law on the grounds that the end justifies the means no matter that the innocent are the victims—those walled cities may be nearer to reality than we think

But surely it is a repugnant solution. Right now each and everyone of you can do something concrete to protect your home, your family and your neighborhood that we believe will be better than any wall. Write to Mayor Daley and Police Superintendent Wilson. Let them know that you support them in their pledge to enforce the law no matter who the criminal or what the crime.

They have both publicly stated in the wake of recent riots that no one is above the law and it shall be enforced. Back them they need your encouragement and you need Both are being subjected to tertheir guts. rific pressures-let them know you are with them

The letter need not be long-just a sentence will do, but the knowledge that you agree will help tremendously.

One letter addressed to Mayor Daley and mentioning Supt. Wilson and the police will do the job. Write Mayor Richard Daley, City Hall, Chicago, Illinois.

HON, LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. WOLFF. Mr. Speaker, one of the most important functions of a Congressman is to keep his constituents informed on the major issues of the day. I would like to include in the RECORD a report to my constituents stating my opinions in recent developments and activities in Washington:

A REPORT FROM YOUR CONGRESSMAN LESTER L. WOLFF. THIRD CONGRESSIONAL DISTRICT, NEW YORK

DEAR NEIGHBOR: The developments in Washington that affect today's fast-moving events in the world, the nation and in our District make it vitally important that you be constantly apprised of the active part your Congressional representative has and will continue to assume in shaping these developments. In order to keep you in-formed of my activities in Washington on your behalf, I shall continue to send you this report. I am presently engaged in these activities: Viet Nam, space, foreign affairs, jet noise, conservation, oceanographic development, consumer protection, industry and job development on Long Island, Post Office matters, draft problems, Veteran affairs, and current government appropria-tions. I thought you would be interested in a more detailed report on some of these

VIETNAM: THE BOMBING OF HANOI AND HAIPHONG OIL DUMPS

My position: On the morning of the day that I learned the Administration had ordered the bombing of oil supplies at Hanoi and Haiphong. I made the following statement on the floor of the Houes:

"It is easy to destroy. Our capability goes much further than the destruction of oil dumps. We can destroy all of Viet Nam and much more, if we so desire. However, our purpose is not to destroy a nation, but to permit a people the opportunity to build a nation. This is a more difficult task. The consequences of our recent action only await time. We have taken a big chance. I would have preferred our giving one more try for a bilateral cease-fire. Since there are none of the 'King's Men' around, we can't put back that which has fallen. I hope that this is not a prelude to one-upmanship that would bring us into an expanded war instead of the intended peace. People who have nothing to lose become desperate people. Desperate people do desperate things."

TRADING STAMPS ADD TO COST OF FOOD

My fight to alert consumers to the widespread abuses of the inadequately regulated trading stamp industry, which result in increased food costs, has at last been confirmed by a U.S. Government-sponsored report. The long-awaited results of a National Commission on Food Marketing independent survey corroborate the findings of my exhaustive Congressional investigation of the industry's activities in the food field. My investigation, activities in the food heid. My investigation, conducted at my personal expense, concluded, as did the Commission report, that the billion-dollar trading stamps industry, which does a large part of its business in the retail food trade, makes its swollen profits at the cost of adding considerably to your food bill. The results of the President's Committee report hear out my contention that while a

report bear out my contention that, while a properly regulated stamp industry can perform a valuable promotional service to the

Report From Congressman Lester L. Wolff

retail food business, the present uneven state regulations are entirely unsatisfactory and cost you, the consumer, an added 2% each week on your grocery budget.

The independent report of the Commission cites trading stamps as "a form of promotion whose costs are borne largely by consumers" and points to the "1964 figures of 2 billion dollars spent for advertising food and 680 million spent for trading stamps by retailers as significant in the size of the food bill that Recent rises in the cost of living have been substantially the result of increased food prices.

Thus, the Commission survey results support the basic fact that emerged from my informal Congressional inquiry: that part of the inflationary trend resulting from spiraling food prices is attributable to the lack of proper regulation of the trading stamp in-dustry. Before the close of the 89th Congress, I shall have introduced a bill authorizing the creation of a federal trading stamp agency to bring about the end of practices that dip into your pocket.

YOUR FEDERAL TAX DOLLAR AT WORK IN THE DISTRICT

As your Congressman, I believe it is my responsibility to secure for the District as many federal grants and contracts as possible. In the past week I was gratified to announce the latest in a series of grants and contracts awarded in the District during the past 2 years: a \$333,000 grant from the Na-tional Institute of Mental Health for a community mental health center in Woodbury; a \$74,105,495 Navy contract to Grumman Aircraft for production of A6-A aircraft; a \$65,-000 grant from the Federal Water Pollution Control Administration toward the cost of sewage plant additions in Great Neck; a Post Office Dept. contract for a new 20,000 square foot post office in Roslyn Heights.

OFFICIAL TRIP TO ARGENTINA

My visit to Buenos Aires was made on be-half of our House of Representatives at the invitation of Dep. Arturo Mor Roig, then President of the Argentine National Con-gress. On my return from Argentina, less than a week before the coup there, I called the political situation in that country 'volatile' and one in which anything could hap-pen. My evaluation of the situation was pen. My evaluation of the situation was based on 5 days of intensive talks with based on 5 days of intensive talks with President Arturo Illia, his Min. of War, Gen. Castro Sanches, Min. of Defense Leopoldo Suarez, and others in the congress, the Illia cabinet and military. All expressed to me deep concern over the threat posed to their government. They also volced their deter-mination to do all in their power to preserve the constitutional government in Argentina, a course our own nation and I

The ousting of Illia's administration is, to my mind, a real setback for Argentina. He had served for almost 3 years and had done more than any other man to repair the economic ravages to his country caused by years of Peronism. He had ambitious plans, both economic and social, designed to complete his nation's recovery.

When I returned to Washington after my 5 day visit to Argentina, I was able to sup-ply valuable information on the Argentine situation to Washington officials responsible for our Latin American policy.

TAPE A MESSAGE TO THE MEN IN SERVICE

To help keep the lines of communication to our servicemen overseas, my Port ashington office will continue its tape-amessage service and forward your message at no cost. To avoid delay, call 767-4343 for an appointment

AM INVERSEION

If you desire more detailed information on the matters reported above, please do not hesitate to contact me. Planning to visit Visit our office (Room 1629,

Longworth Building). To those of you planning vacations in the coming months, may I extend my best wishes for a most enjoyable time.

Sincerely,

LESTER L. WOLFF.

Captive Nations Week

EXTENSION OF REMARKS

HON, THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. O'NEILL of Massachusetts. Captive Nations Week, following as it does our own Independence Day here in the Unted States, is a time to hall the force-fulness and the fortitude of those peoples of Eastern Europe who have maintained their identity and independence despite all the vicissitudes and would-be dominance to which they have been victim.

Captive Nations Week is a reminder to all the world that the spirit of man prevails no matter what the physical conditions to which he is subjected. The nations which have been caught up in the net of Communist domination have never ceased to exist as entities, personalities in their own right. The Iron Curtain which fell around them never smothered them. The dominance of that communism which sought to amalgamete them into one conesive mass has never succeeded in erasing their identities. Each of the captive nations is today as readily identifiable as it was before the heavy hand of modern communism fell upon it.

Among these nations were those whose history of independence dates from the Middle Ages—such as Poland, Lithuania, Hungary. Some were nations of great modern development, such as Czechoslovakia. Whether by tradition or recent training, all were nations whose independence had been hailed in the 20th century with its emphasis upon the self-

determination of peoples.

The attempted subjugation by communism was, therefore, the more to be deplored. It was too, however, the more to be withstood. And it has, indeed, been withstood valiantly in the hearts and minds of the people. The basis of the tenacity of separate statehood lies in the spirit of the people who compose these individual nations. There endurance, their courage, their patriotism have persisted in the current era as they persisted before communism became a threat to the free world. These nations shared a history of collective sacrifices within their separate groups, of incredible hardships endured because of their determination to maintain their identity in spite of all aggression, and their faith in the enduring fruits of their efforts.

In recent decades we could but deplore the plight of these capitive nations. Theirs was a common fate of political domination over peoples whose national spirit had never succumbed, whose national characteristics had never been overcome, who carried a torch lighted by

a memory of past freedom and shining hope for the future.

In the last few years there seems to have been renewed hope. There have been brave signs of protest against the regime superimposed by communism. There has been open defiance of it and evidence of a renewed independence of spirit.

In honoring Captive Nations Week we hail this love of freedom, this spirit of liberty, and the faith that endures and motivates man to withstand all domination.

San Antonio Express Comments on James Farmer Being Paid \$80 a Day as Antipoverty Consultant

EXTENSION OF REMARKS

HON. O. C. FISHER

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. FISHER. Mr. Speaker, much understandable concern has been expressed concerning the exorbitantly high salaries that are being paid to so many who work for the Office of Economic Opportunity. Scores of instances have been disclosed not only of annual salaries ranging from \$10,000 to nearly \$30,000 being paid to employees, but also many others who are hired as "consultants" and whose duties are not defined or spelled out, and who receive from \$50 to \$100 a day.

A recent example, referred to in an editorial in the San Antonio Express, is concerned with the case of James Farmer, a consultant.

The editorial follows:

POVERTY WAR HAS SURPRISES

Sargent Shriver, who usually directs the nation's war on poverty from his command poet in Washington, was on an official inspection in the field, checking the extent of progress being made in the numerous Texas programs last week.

Quite properly, Shriver is on the alert for conditions signifying bungling and waste. He may find some bureaucratic deficiency, but we expect it to be negligible by comparison to anti-poverty programs in some other parts of the country.

When he finishes his tour of Texas, the national director of the Office of Economic Opportunity might well take heed of the situation in New Jersey. There the state OEO has retained as a consultant the former national director of the Congress of Racial Equality, James Farmer, to advise on adult literacy opportunities.

Farmer is to receive \$80 per day for some \$5 days that he is expected to work. As a temporary job, it should do until something permanent can be found for the civil rights leader. The appointment also will stimulate interest among the corps of literacy instructors in San Antonio and cause some of them to question the financial return on their own laudable efforts.

By New Jersey standards, the Texas bilingual experts are pikers at the pay window. Either Shriver is looking for bungling and waste in the wrong place, or Texas anti-poverty specialists are selling themselves short.

The national director should set the record straight on this seeming variance in economic opportunities between New Jersey and Tayan

Winning Essay in Fort Detrick Contest, "My Contribution to Good Citizenship"

EXTENSION OF REMARKS

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. MATHIAS. Mr. Speaker, in a recent essay contest for military and civilian personnel at Fort Detrick, entrants were asked to write on the subject, "My Contribution to Good Citizenship." The essays submitted in general expressed perceptively the obligations of citizens in this challenging era.

The grand prize in this contest was awarded to Mr. Donald E. Leatherman, of the Applied Aerobiology Department of Fort Detrick. At ceremonies last month, it was my pleasure to present Mr. Leatherman the award of \$50 and an American flag which had been flown over the Nation's Capitol.

I am pleased to bring Mr. Leatherman's winning essay to the attention of the Congress:

MY CONTRIBUTION TO GOOD CITIZENSHIP
(By Donald E. Leatherman)

The world, and an America inextricably involved in it, has entered an era of instability, breath-taking changes, terrifying hazards, and blinding promises. Never before have American citizens been confronted with such mighty dangers and, conversely, such glorious opportunities. In the face of a communistic wave which engulfs every landmark of democracy, we are challenged to create out of democracic impulses the conditions of international and domestic peace, stability, and security on which the age-old hopes of mankind rest. It is not only our freedom that is at stake but also the dream of a happier and more righteous society. The task of democracy is forever that of creating a freer and more humane experience in which all share and to which all contribute.

Since democratic government can rise no higher than the intelligence, purpose, and righteousness of the individual citizen, it is for each of us to do his part to preserve and enrich our great inheritance, enabling democracy to reach its highest fruition. Fundamentally, the vitality of our democratic system depends not on any spectacular performance of a few patriots only, but rather on the devoted and conscientious efforts of countless citizens, myself included, who apply religious ethics to civic life by demonstrating a willingness to subordinate every lesser interest for the larger good.

The American concept of democracy finds its fullest expression in the roots of religion. As Mrs. Eleanor Roosevelt pointed out in The Moral Basis of Democracy: "The principle of the responsibility of the individual for the well-being of his neighbors, which is akins to 'Love thy neighbor as thyself' in the Bible, seems always to have been a part of the development of the democratic ideal which has differentiated it from all other forms of government." Since humanity is but multiplied neighbors, this principle constitutes the motivating force in human relations, promoting self-respect by making it possible for a man to be as kind in his associations with others as his heart would dictate. It involves something larger than self, untainted by private purposes or selfish ends.

Too often we are prone to think of our citienship too narrowly and fall to realize its relationship to our lives as a whole. specific tasks of citizens-voting, doing jury duty, taxes, and serving in the armed forces are of the highest importance; but back of them stands life itself—the art of living so that life shall be free and worthy of the

human race.

re-

g it dicself. nda.

We cannot separate the exercise of our civic duties from the rest of our lives. Our aspirations, interests, ideals, tastes, and habits influence the performance of our civic If our lives are noble and rich, our citizenship will express that nobility. If we are good parents, we are more likely to be good voters, since our purpose as parents will influence our decisions at the polls. If we are good workers with joy and a sense of perfection in our daily tasks, we will make better jurors, because through our labor we will have penetrated the common heart of humanity. If we have a spirit of good will and mutual helpfulness in our relations with family and neighbors, that spirit will be our contribution toward a wholesome state of the common mind. On the other hand, if we are dishonest in our thinking and indifferent to the well-being of others. these negative qualities will degrade the public life.

Any valid claim of a contribution to good citizenship must be firmly based on the realization that our prized liberties are saferealization that our prized incerties are safe-guarded only as we see that our rights as citizens involve concurrent responsibilities. Citizenship is more than the calm assertion of privileges; it is the glad assumption of duties. It best manifests itself in service that neither doubts, nor counts the cost, nor sakes recognition. With personal initiative and a readiness for sacrifice, we must fulfill our responsibilities to the best of our abilities, and leave a country richer than we found to a society better than we found. Cer-tainly, good citizenship is due payment for a beloved land whose resources give us so much to live on and whose freedoms give us

so much to live for! These conceptions of duty have become my convictions of duty. We tend to become what we will become, what we sacrifice for, and what we work toward. Though classified as "average" among the multitude of citizens, it is still within my power to contribute these qualities to good citizenship: a determintalon to earn my own way by useful service; a personal interest in human welfare that seizes every opportunity to help others improve their lives; and a deep concern for good government combined with sustained study and action. The specially gifted may contribute more, but no man dares contribute less if he values human dignity and worth inherent in American citizenship.

It is We, the People, who must prove to the world that a nation conceived in liberty and dedicated to the proposition that all men are created equal can survive, and in its survival advance the cause of free men everywhere. Our destiny lies in our response to our noble heritage and to the unprecedented moral challenge of our time—a challenge which requires that we draw on our deepest mources of courage and responsibility to promote freedom, equality, justice, and humanity. These opportunities are our heritage and their fulfilment our obligation as American citizens. We cannot free ourselves from the responsibility that everyone has for whatever the future may bring. As James Truslow Adams warned: "The alternative is the failure of self-government, the failure of the common man to rise to full stature, the failure of all that the American dream has held of hope and promise for mankind."

Captive Nations Week

EXTENSION OF REMARKS

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. ST. ONGE. Mr. Speaker, each year at this time we observe Captive Nations Week, dedicated to the millions of people suffering under the yokes of communism in the countries of Eastern and Central Europe who are our silent allies in the worldwide conflict between the forces of liberty and Communist This observance has become tyranny. traditional since a unanimous Congress adopted a resolution designating this particular week as Captive Nations Week in July of 1959.

Although east-central Europe today is a showcase of Communist failures, as shown by the continuing nationalism and allegiance to Western democratic ideals of the peoples within this area, progress toward the liberation of the captive nations has been laborious and too slow to satisfy popular demands. The "liberalization" of the totalitarian rule in Eastern Europe is still held firmly in check by the Communist regimes, which invariably draw the line the moment the Communist Party's monopoly on power and ideas is threatened. The status quo in east-central Europe has been and still is perpetuated by the force of the Communist overlords; little progress has been made toward securing the right of self-determination; the peoples remain under alien rule and are still denied basic human rights.

We in the free nations must continue to stand fast by our solemn pledges to defend freedom and self-determination where it still exists and to help extend it wherever possible, if we are to keep alive the hopes of enslaved peoples so they will continue their struggle and their efforts for survival. We must reaffirm the conviction that a policy of peaceful evolution must not digress from the primary objective—an east-central Europe unfettered by totalitarian regimes. By reaffirming our ideals embodied in the concept as represented by Captive Nations Week, we encourage these peoples and contribute toward the ultimate achievement of that goal. We help to lighten their burden of suffering

and degradation.

Of utmost importance to the righteous cause of these people is our discussion of this problem, which focuses attention on the treatment of these captives by their Communist masters and helps to expose the ruthless face and features of Communist imperialism for all the world to see. In these days of swift historic changes, when east-central European Communists are themselves beginning to speak out, even by inference, of the il-legality of Soviet imperialistic annexations, the free peoples and their govern-

ments have an added duty of being heard clearly and forcefully on this key prob-

It gives me pleasure to join in the observance of Captive Nations Week as a way of demonstrating our support of these nations in their efforts to gain freedom to chart their own futures. It is our way of expressing renewed assurance to all captive and oppressed nations of the world that we stand for freedom, justice, and human dignity for all man-

Treaty for Space

EXTENSION OF REMARKS OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. DADDARIO. Mr. Speaker, hope grows for the early adoption of a treaty guaranteeing peace and freedom in

President Johnson originally proposed such an international agreement, and Russia followed with guite similar rec-

ommendations.

Now the Washington Evening Star notes that the Soviets have indicated they are willing to accept the course favored by the United States and have a United Nations group get work on a draft next month. This would enable the U.N. General Assembly to consider

a specific treaty proposal in the fall.

If all goes well, the Star believes a treaty could be adopted before the year ends. And in an editorial which I offer for the RECORD, the newspaper says an effective agreement could not come too soon—because men are likely to land on the moon by 1970 at the latest.

[From the Evening Star, June 28, 1966]

TREATY FOR SPACE

The outlook has brightened for an early Soviet-American accord on a treaty—to be worked out in the United Nations—demilitarizing outer space and guaranteeing that all celestial bodies, such as the moon, will be explored and exploited solely for peaceful

In a turnabout of sorts, the Russians have modified their past insistence upon deferring this matter until the September meeting of the General Assembly. Now they are willing, or so they have indicated, to follow the course favored by the United States—namely, to have the U.N. Outer Space Legal Subcommittee put the project in motion early next month in an effort to draft a treaty for immediate submission to the Assembly's fall

This is a heartening prospect, the more so because our government and the Kremlin seem to see almost eye to eye on what needs to be done. Each has just submitted to the to be done. Each has just submitted to the U.N. a proposed treaty, and the texts of both are strikingly alike. Among other things, they call for peaceful cooperation in spatial endeavors; they bar all nations from claiming sovereign rights on the moon or planets beyond; and they forbid the stationing of mass-destruction weapons or the building of military bases on any celestial body or in the surrounding environment.

Given the Kremlin's apparent readiness to join the United States in starting the negotiating process without further delay, the adoption of an effective space treaty should be possible before the year ends. It will come none too soon, now that men are likely to land on the moon by 1970 at the latest.

Save the Grand Canyon

EXTENSION OF REMARKS

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1966

Mr. MOORHEAD. Mr. Speaker, I would like at this time to reassert my opposition to the construction of two new dams on the Colorado River. Certainly we must find new sources of water, but we cannot afford to destroy great natural resources—such as the Grand Canyon—at the same time.

Under leave to extend my remarks I include an article by Charles Bancroft from the Evening Bulletin, Philadelphia, Pa., June 25, 1966, at this point in the Recom:

LANDMARK IN PERIL

(By Charles Bancroft)

Conservationists all over America are concerned with the proposal of the Federal Bureau of Reclamation to build two large dams on the Colorado River—the Marble Gorge upstream from the part of the Grand Canyon under national park protection, and the Bridge Canyon downstream.

The Bridge Canyon Dam, conservationists contend, would create a reservoir impairing the gorge of the Grand Canyon National Monument and part of the National Park.

From the Grand Canyon Monument one

From the Grand Canyon Monument one gets a beautiful view of the Colorado River flowing, like a crumpled ribbon, 3,000 feet below

If the building of this dam is approved the conservationists say, it will mean destroying invaluable goological and archeological records, the death of a river two billion years old and the wiping out of 164 miles of wilderness.

ORGANIZE OFFOSITION

If future generations are to continue to enjoy the splendor of the Grand Canyon, a tremendous effort must be made to organize

the American people against this scheme.

The primary reason stated for building the dams is to supply more water for dry areas. It is felt, however, by many opponents of the plan that there are better ways of supplying water to those areas in need.

A great deal of the water would be used to generate electricity which could be sold off to pay the cost of construction. That part of the proposal, of course, appeals to some

Some conservation groups have special interests in fighting the plans. The Audubon Society, for example, fears what might happen to wildlife if the dams reduce the flow of the Colorado and make it a trickling muddy stream in sections where it now flows with life and vigor.

PANTAST OF COLORS

I remember my last trip to the Canyon so clearly. I stood one day in the early morning light very near to a drop of 5,000 feet to the river floor below. A friendly little chipmunk tried to coax me closer to the edga,

as I tried to focus him into the lens of my

I went there in the early morning to take pictures of the Canyon. I remained till twillight, and snapped away with my camera as the sun swept over the Canyon from rim to rim creating everchanging colors of pastel blue, sun green, golden yellow—and then red and scarlet and russet browns toward evening.

TREMENDOUS SPEED

Over one million tourists visit the rim of the Canyon each year. A few of the more daring and hardy souls venture down the Bright Angel trail to spend one or two nights at the Phantom Ranch. They cross the onemule suspension bridge, which is 60 feet above the roaring river.

You catch some idea of the speed of the moving water from the knowledge that the river drops 600 feet in its passage of 50 miles through the narrow gorge, or an average of 12 feet for every mile.

This drop and the speed of the flow enables the river to carry much of the debris gathered from the sides and slopes of the rock formations, and to carry it out to the tidewater in the Southwest. The Grand Canyon, more than 217 miles long, and from four to six miles wide, is in most places still unexplored territory. Many of the smaller canyons, capes and temples have never been reached.

No President has done so much as Theodore Roosevelt to preserve our natural wild heritage. In a speech at the Grand Canyon he said:

"Keep this great wonder as it is now—The ages have been at work on it, man can only mar it—We have gotten past the state when we are to be pardoned if we treat any part of our country as something to be skinned for two or three years for the use of the present generation."

These words were spoken quite a few years ago but they echo from canyon to canyon, gorge to gorge and should reach the hearts of all nature loving Americans on our Atlantic Seaboard who would save the Grand Canyon and the Colorado River from further destruction.

New Athens, Ill., Centennial Celebration

EXTENSION OF REMARKS

HON, MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 22, 1966

Mr. PRICE. Mr. Speaker, last Friday marked the beginning of the centennial celebration of New Athens, Ill. Located in St. Clair County in the 24th Congressional District, which I have the honor to represent, New Athens prepared an outstanding 3-day commemoration of its 100th birthday.

The citizens of New Athens are proud of their town, and rightfully so, and scheduled numerous festivities for the occasion. New Athens boasts some of the finest farmland in the Midwest; its schools and churches are among the best, contributing to the well-being of the community, and its local industries have fine records and have contributed greatly to the town's progress and prosperity.

New Athens, originally known as Athens, also marks the spot of some of the initial construction and channelization work of the \$77 million Kaskaskis navi-

gation project. The residents of New Athens and their neighbors have worked long and hard on this project; it is fitting that this proud community of 1,923 should play such an important role in the development of the biggest navigation and flood control project in southern Illinois.

I salute New Athens and congratulate its fine people on their town's 100th birthday.

Jamestown, Ohio, Sesquicentennial

EXTENSION OF REMARKS

HON. CLARENCE J. BROWN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. CLARENCE J. BROWN, JR. Mr. Speaker, Jamestown, Ohio, located in Greene County in my congressional district celebrated its sesquicentennial from June 30 through July 4, 1966. It was my pleasure to participate in the "Veterans Day" observance of the sesquicentennial on July 2, and "Old Fashioned Day" on July 4.

The honored guests on "Veterans Day"

The honored guests on "Veterans Day" were distinguished Jamestown native sons Maj. Gen. Clement F. St. John, M.D. U.S. Army, retired, now vice president of the University of Cincinnati, and Lt. Comdr. Vernon H. Fix, officer in charge of gunnery school, Great Lakes Naval Training Center. Also honored that day were Col. J. C. Wise, commander of Wright-Patterson Air Force Base and Capt. C. J. Flessner, U.S. Navy liaison officer at Wright-Patterson Air Force Base.

On "Old Fashioned Day" Mr. Samuel A. Noblet of the Armco Steel Corp. made remarks citing the contribution to American industry of Jamestown native, George M. Verity, who was the founder of the Armco Steel Corp.

Under unanimous consent I am inserting the two speeches I prepared for "Veterans Day" and "Old Fashioned Day," as well as the remarks made by Mr. Noblet honoring George M. Verity:

JAMESTOWN, OHIO, SESQUICENTENNIAL. "VETERAN'S DAY" JULY 2, 1966

Mayor Borst, distinguished guests, citizens of Jamestown, as a veteran of World War II and the Korean Conflict, it is a pleasure to be here to participate in the "Veterans Day" observance of the Jamestown Sesquicentenial, and to pay tribute to the men from Jamestown and the surrounding area whe have participated in all the important wars in which this nation has been engaged since the Village was founded in 1816.

Jamestown men have served at Bull Run and Gettysburg, Manila Bay and San Juan Hill, in the Argonne Forest, the Coral Sea and Midway, Ansio, Heartbreak Ridge—and now we are adding the names of such places as Chu Lai, Pielku, and Mekong Delta.

Last Wednesday on the Floor of the House the Armed Services Committee Chairman, MENDEL RIVERS, announced that there have been more than 24,000 casualties in Viet Nam, 4000 of whom are dead.

According to the casualty lists which I receive in my office every morning, I am happy to say that no Jamestown boys have been killed or wounded to date. If anyone has information to the contrary, I would be grateful to have it, as I am keeping a record in my office of all Seventh District boys killed in the Viet Nam war.

I feel it is an honor and a privilege to share this platform with such distinguished veterans as Jamestown's General St. John, Colonel Wise and Captain Flessner. Their combat service and their decorations are so impressive that I feel like a Little Leaguer among Big League stars.

They can be justly proud, as well as their country, of their deeds of valor and their heroism in combat.

We also pay tribute to the some 400 veterans now estimated to live in the James-town area and extended our grateful thanks to them for the part they played in the cause of freedom.

Our thoughts today are also with the boys from the Jamestown area who are in Viet Nam, as their own thoughts must turn homeward on this 4th of July holiday.

As we pay tribute to the Jamestown vet-erans and servicemen here on this occasion, General Douglas MacArthur's tribute to the American fighting man in his farewell address to the cadets at the Military Academy at West Point on May 12, 1962, comes to my

Duty, honor, country: those three hallowed words reverently dictate what you ought to be, what you can be, what you will be.

They are your rallying point to build courage, when courage seems to fail, to regain faith when there seems to be little cause for faith, to create hope when hope becomes

forlorn....
"The unbelievers will say they are but words, but a slogan, but a flamboyant

Every pedant, every demagogue, every cynic, every hypocrite, every troublemaker, and, I am sorry to say, some others of an entirely different character, will try to downgrade them, even to the extent of mockery and ridicule.

But these are some of the things they build. They build your basic character. They mold you for your future roles as the custodians of the nation's defense. They make you strong enough to know when you are weak, and brave enough to face yourself when you are afraid.

"In his speech General MacArthur also described the American fighting man:

"Their story is known to all of you. It is the story of the American man at arms. My estimate of him was formed on the battle field many, many years ago and has never changed.

I regarded him then, as I regard him now, as one of the world's noblest figures; not only as one of the finest military characters, but also as one of the most stainless.

His name and fame are the birthright of every American citizen. In his youth and strength, his love and loyalty, he gave all that mortality can give.

He needs no eulogy from me, or from any other man. He has written his own history and written it in red on his enemy's breast.

"In twenty campaigns, on a hundred battlefields, around a thousand campfires, I have witnessed that enduring fortitude, that patriotic self-abnegation, and that invincible determination which have carved his stature in the hearts of his people.

"From one end of the world to the other, he has drained deep the chalice of courage. .

"I do not know the dignity of their birth, but I do know the glory of their death. They died unquestioning, uncomplaining, with faith in their hearts, and on their lips the hope that we would go on to victory.

"Always for them: Duty, honor, Coun-

Jamestown, Ohio, Sesquicentennial, "Old-Fashioned Day," July 4, 1966

As we celebate this "Old-Fashioned Day at the Jamestown Sesquicentennial, and the 190th Anniversary of the founding of our country, it is fitting that we pause to consider some of the "old-fashioned" virtues such as love and honor for our flag, loyalty, honesty, courage, thrift, duty, and patriotism—which made our country great.

I am reminded of an essay by an unknown

author entitled "I am the Nation" which is hanging on the wall in my office in Washington.

I would like to paraphrase it just a little to make it even more meaningful for those of us gathered here today.

I AM THE NATION

I was born on July 4, 1776, and the Declaration of Independence is my birth certifi-The bloodlines of the world run in my veins, because I offered freedom to the oppressed. I am many things, and many peo-I am the nation.

I am 195 million living souls—and the ghost of millions who have lived and died for me.

I am Nathan Hale and Paul Revere. I stood at Lexington and fired the shot heard around the world. I am Washington, Jefferson, and Patrick Henry. I am John Paul Jones, the Green Mountain Boys and Davy Crockett. I am Lee and Grant and Abe

I am Jamestown and her hardy pioneers who travelled over the Chiuxso (Shawnee) Trail from the Ohio River to the Mad River

I am the Browders, the Mendenhalls, the Moormans, the Strongs, the Watts, and the many others, who helped found Jamestown.

I remember the Alamo, the Maine, and Pearl Harbor. When freedom called I answered and stayed until it was over, over there. I left my heroic head in Flanders Fields, on the rocks of Corregidor, on the bleak slopes of Korea and in the steaming jungles of Viet-Nam.

I am the Brooklyn Bridge, the wheat lands of Kansas and the granite hills of Ver-mont. I am the coalfields of the Virginias and Pennsylvania, the fertile lands of the Ohio, the Golden Gate and the Grand Can-yon. I am Independence Hall, the Monitor and the Merrimac.

I am big. I sprawl from the Atlantic to the Pacific . . . my arms reach out to embrace Alaska and Hawaii . . . 3 million square miles throbbing with industry. I am more than 5 million farms. I am forest, field, mountain, and desert. I am quiet villages—and cities that never sleep.

You can look at me and see Ben Franklin You can look at his streets of Philadelphia with his breadloaf under his arm. You can have Rose with her needle. You can see the lights of Christmas, and hear the strains of "Auld Land Syne" as the calendar turns.

I am Babe Ruth and the World Series, and Gary Bradds and a basketball court am 130,000 schools and colleges, and 320,000 churches where my people worship God as they think best. I am a ballot dropped in a box, the roar of a crowd in a stadium and the voice of a choir in a cathedral. I am an editorial in a newspaper and a letter to a Congressman. I am Eli Whitney and Stephen I am Tom Edison, Albert Einstein Billy Graham. I am Horace Greeley, Will Rogers, and the Wright brothers. I am George Washington Carver, Daniel Webster, and Albert Sabin.

I am Longfellow, Harriet Beecher Stowe,

Walt Whitman and Tom Paine.

Yes, I am the nation, and these are the things that I am. I was conceived in freedom, and, God willing, in freedom I will spend the rest of my days.

May I possess always the integrity, the courage and the strength to keep myself un-shackled, to remain a citadel of freedom and a beacon of hope to the world.

This is my wish, my goal, my prayer in this ear of 1966—one hundred and ninety years vear of 1966 after I was born.

ARMCO AND JAMESTOWN, JULY 4, 1966

(Remarks by Samuel A. Noblet, supervisor, community relations, Armco Steel Corp., Middletown, Ohio)

To all of you who remember the late Ole Nelson, I wish to bring greetings from his son Bob who is a member of Armco Public Relations

I am delighted to be here in Jamestown this afternoon to share in the celebration of this historic occasion. I carry with me greetings and good wishes to you from our president, William Verity, grandson of our founder George M. Verity. I am also here today to say a few words about the relationship between Armco Steel Corporation and Jamestown which has been made possible through our founder George M. Verity.

It was here some 90 years ago that the roots of Armco actually began to form. From this early beginning there is today an Armco that is the sixth largest company in the steel industry. The company has steelmaking plants not only in the state of Ohio, but also in Kentucky, Maryland, Missouri, Oklahoma, Pennsylvania and Texas. Then too, there are the three divisions, Armco Metal Products, National Supply and Armco International. Armco Metal Products largely serves the construction industry and has steel building plant right next door-Washington Court House. National Supply serves the petroleum industry world-wide. And Armoo International is our overseas arm covering the free world.

This broad expanse, briefly described, rep-sents a capital investment of well over a billion dollars and employment for 40,000 men and women.

Let me now turn to the real heart of Armco; the roots right here in Jamestown which helped to give birth to Armco Steel Corporation. These roots I speak of are the warm friendly relationships which Armco management work so hard to maintain management work so hard to maintain among its employees, customers, shareholders and neighbors. These roots of understanding and cooperation began with the philosophy of our founder, George M. Verity, the man who spent his early formative years here on Verity Street, Jamestown

At age 14 Armco's founder spent his summer with his father, a Methodist minister, in the harvest field on the nearby farm of Reverend James W. Smith, who was the great grandfather of Mrs. Leland Smith. It was here where father and son learned greater understanding and appreciation for each other. You know full well that work on the farm also is a good way to learn how to keep digging when times get hard.

Such experiences as these help to lay the true foundation for George M. Verity's philosophy in human relations. This philosophy helped to nurture the early days of Armco and later made it possible for George M. Verity to establish Armco Policies. I am happy to say they are still our guide today. In brief Armco Policies stand for: Faith in Men; A square deal always; A True Spirit of Co-operation; Pride in accomplishment; Proper incentives to work; Best possible compensation; Opportunity for advance-ment; Good living conditions; Fair treat-ment of customers and highest business

No doubt this same creed based on Christian principles has been applied by all of you in your business operations.

you in your business operations.
Our president, William Verity, just recently published objectives for the company.
Here is what one of them has to say:

"To do business guided and governed by the highest standards of personal conduct and ethics, with Armoo Policies as a constant guide"

To me, Armoo Policies, an expression of George M. Verity's philosophy, had a great deal to do with the fact that the Middletown Works of Armoo Steel Corporation, which now has over 7,000 employees, has never experienced a strike.

Your gift to Armco Steel Corporation includes not only a founder whose son became executive vice president before retirement and whose grandson is now our president, but, it also includes for Armco a way of life born from the philosophy of George M. Verity who once lived on Verity Street, Jamestown.

On behalf of myself and the 40,000 men and women of Armco, we say thanks to you good people of Jamestown for the contribution you have made to Armco and we wish you well on this historic occasion.

Greatest Living Virginian

EXTENSION OF REMARKS

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. TUCK. Mr. Speaker, under leave heretofore granted to extend my remarks in the Appendix of the RECORD, I insert an editorial that appeared in the Danville Register, published at Danville, Va., in my congressional district, on July 14 and which I should like especially to bring to the attention of our colleagues.

It was entitled "The Greatest Living Virginian" and concerns my distinguished colleague from that State and my longtime friend, the Honorable HOWARD W. SMITH.

In the many years I have known him, I have come to look upon this gentleman as an able and most valuable friend, as well as the very embodiment of statesmanship. He represents the finest and best that there is in our State and in the Nation. He deserves to rank, as he no doubt does, with the greatest Virginians of all time who have represented our Commonwealth in either branch of the Congress, or who have been connected with Government in any way. Here is a man who has never surrendered principle for expediency.

The editorial is as follows:

THE GREATEST LIVING VIRGINIAN

When outstanding men find in one another the qualities of greatness, one may be assured they are not concerning themselves with an average, run-of-the-mine person and that agreement or disagreement has little to do with the evaluation, which is, essentially, an appraisal of character, manner and capability.

Senator Harry F. Byrd, Sr., who knew personally every Virginia figure of the Twentieth Century, and some of the Nineteenth, often remarked privately and, occasionally, publicly, that Howard Worth Smith was "the greatest living Virginian."

That was high praise from Harry Flood Byrd who, himself, probably has been for many years considered by Americans and foreign citizens the greatest living Virginian. Passing this honor to his longtime friend and colleague was characteristic of the elder Byrd.

Now that the people of the Eighth District have written an end to the Congressional career of Judge Smith after 19 terms, his closest adversaries in the Rules Committee of the House of Representatives are acknowledging that his defeat is a "terrible loss" to the whole House, and to the country. It surely is.

Liberal, Great Society Democrats such as George Rawlings are a dime a dozen in the House; there is but one Judge Smith. And all too soon there will be none.

The greatness of Judge Smith was not dependent upon his seniority in the House, although he was fifth among his peers in that respect. His greatness was in the man himself as a splendid human being, as a man of convictions who stood by them and worked for them in the belief that he was serving best the people of his district, of his state, and of his nation in so doing.

His like may not be seen again soon in Washington when the Judge returns to his farm at Broad Run, or to his home in Alexandria, where he long headed a large bank and presided as a circuit judge. He still has his interest in banking and enough properties to keep him busy.

But he will miss and the Congress will miss him most when the Rules Committee goes about its scheduling measures to reach the floor. The zest of competition, the clash of strategies will be absent. A stalwart committee that under Smith's chairmanship took its work seriously and made its weight felt will be reduced to a docile chart-keeping for the House Majority—opening and closing doors on bills as the Speaker may suggest.

It was never that way when Judge Smith was in the chair.

Captive Nations

EXTENSION OF REMARKS

HON. JOHN C. MACKIE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1966

Mr. MACKIE. Mr. Speaker, on the Fourth of July, celebrations of our national independence and individual freedom echo throughout the land. We are proud of our democratic heritage in as far as Americans may pursue distinctive courses in politics, economics, and religion. The American way of life is characterized by personal liberty. have consistently sympathized with freedom movements throughout the world as a free America would find it hard to survive in a world dominated by communism. For the fourth time in the last five decades the United States is engaged in a battle to contain menacing imperialism. But, while our attention is focused on southeast Asia let us not forget the plight of the hundreds of millions of peoples living behind the Iron Curtain.

Americans are apt to take their freedom for granted. We unconsciously enjoy our individual liberties. Disagreement and criticism in politics, a profession of one's own choosing, and religious

worship based on individual beliefs have become so essential to every American that they are pursued without second thought. Captive Nations Week must serve as a time when the American people will consider their fortunate position, and, at the same time, rededicate themselves to the peoples living under the oppressive rule of the Communists.

As the world continues to divide itself into camps of haves and have-nots, we cannot afford to lose sight of our responsibilities. As the leader in the free world we must continue our policy of building bridges to the East. The peoples behind the Iron Curtain must be aware of our sincere concern for their plight. The flame of liberty still burns in the hearts of those peoples subjugated by the Communists. We as a nation must at all times be willing to rekindle that flame.

Will the Real Secretary Freeman Stand Up—Please?

EXTENSION OF REMARKS

HON. JOE SKUBITZ

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. SKUBITZ. Mr. Speaker, Mr. Rolla Clymer, editor and publisher of the El Dorado, Kans., Times for more than half a century has been affectionately known to his readers and the people of Kansas as "Sage of the Flint Hills" because of his geniune talent for puncturing egos. I trust my colleagues as well as Secretary Freeman will take notice of his trenchant ratiocination in the following editorial on July 9, 1966:

"FAVOR" WITH A STINGER

His Lordship, the High Cockalorum of Agriculture, with power of life and death over the downtrodden masses of farmers—the Hon, Orville S. Freeman—has graciously notified the Kansas governor that 35 drought-stricken Kansas counties have been granted the satrap's kindly permission to harvest hay or graze livestock on land retired from production under the federal farm program.

Butler county is one of the 35 fortified with this boon.

With a little hay or grazing to be had from various tracts on a farmer's place, now taken out of production, available for use of a few head of cattle in a strict emergency, it would seem this should be a normal move. The generous "favor" might have been granted without restriction but, in the government's usual obtuse fashion a payback for this relief has been demanded.

His Majesty (Hon. Freeman again) said permission for grazing and harvesting of hay upon the diverted areas is dependent upon agreement by a farmer to pay, reliquish or refund payments, otherwise earned for retiring the land to the equivalent of the fair value of the vegetation to be grazed or hayed.

In other words, if the grass now growing on restricted acreage is allowed to wither and die, so mote be. But if it is employed to save a few cows from starvation in a period when rain simply will not fall, its value will have to be paid back through a juggling of some of the intricacies of the sacred farm program.

This instance is much akin to firemen telling a man they will save his daughter from the raging flames, provided he will mortgage the homestead in return from that favor.

In most cases, your distraught farmer will take the hay—and to heck with the rest of Yet the overlords of the Great Society administration mutter in their beer while wondering why the farmers do not rise up and call them blessed.

University of California, Irvine, May Offer Clinic to Sick Firms

EXTENSION OF REMARKS OF

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. HANNA. Mr. Speaker, a few weeks ago, I was privileged to speak out on the floor of this House about the tremendous positive contributions made to the State of California and this Nation by one of the world's greatest universities, the University of California. At that time, in addition to the record of excellence of the entire university, I focused on the growing greatness of the brandnew campus at Irvine, in Orange County. Truly, the seeds have there been planted for the university of the future. As I previously reported, the Irvine campus is headed by a dynamic group of educational leaders unafraid to experiment and innovate to meet the needs of the university and the community which it serves.

An article in the July 4 issue of the Los Angeles Times recently brought to my attention well illustrates the point. Entitled "UC Irvine May Offer Clinic for Sick Firms." The article describes the imaginative proposals of Dean Richard C. Snyder, head of the graduate school of administration at Irvine, to render our Orange County community a double service: First, of course, by training of students for managerial positions in industry, government, and education; and, second, by making available the knowledge and information which the university has at its command through advice and consulation to businesses, schools or even government agencies with administrative and organization problems.

The article goes on to outline the 20th century concepts underlying the school of administration as developed by its imaginative dean.

Mr. Speaker, this article well illustrates how this brandnew university is already becoming encrusted with tradition—the tradition of innovation and experimentation in service and education.

Under unanimous consent, Mr. Speaker, I would like to insert the article into the RECORD and urge my colleagues to

DEAN ENVISIONS DIAGNOSIS: UNIVERSITY OF CALIFORNIA AT IRVINE MAY OFFER CLINIC FOR SICK FIRMS

(By William Trombley)

Invine.—A California businessman whose company is "sick" may soon be able to bring his troubles to the University of California, Irvine, for diagnosis and treatment

As part of the Graduate School of Administration on this new UC campus, Dean Richard C. Snyder has proposed a "clinic," described by the dean as "a permanent, continuing diagnostic and treatment center for social organizational problems.

A business executive, a school superintendent or the manager of a local War on Poverty program could bring his problem to the UCI clinic, where faculty experts would study the problem and suggest a remedy.

SPECIAL ENOWLEDGE AVAILABLE

Dean Snyder thinks the clinic would be good for managers because it would enable them to "tap on a regular basis the special knowledge of our research people."

And it would be good for students in the Graduate School of Administration because "they could witness the proceedings in the same way medical students witness an operation." operation.

Snyder envisions an arrangement that would permit students to observe these discussions of organizational malaise and turmoil through one-way windows "so they can see and hear, yet not intrude."

Dean Snyder also thinks the "clinic" approach might help to clear up some of the confusion about outside consulting work done by university faculty members.

He would charge a set fee for the clinics services, and the money would go to the School of Administration, not to the professors.

However, to make this work, faculty sal-aries might have to be as high as they are for professors of surgery in medical schools the range of \$30,000 to \$40,000. Whether UC could, or should, pay its professors of administration that much money is a real question, Snyder admits.

But he argues, "This is a way for the university intellectual community to provide service, a better way than the present system of random consultation for fees.

"We have to make it clear that the university is not at everybody's beck and call," the dean said. "Other people do some things better than we do. What the university can offer is new knowledge and information, but this must be done without prostitution."

Dean Snyder continued: "What should a university do and what should it not do? This is muddy and complex ... nobody's got it down on paper yet. But I think the clinic idea, where services are performed for a set, pre-determined fee, might help."

SERVED NORTHWESTERN

The clinic for organizational illness is only one of the ambitious ideas the 49-year-old Snyder brought to Irvine from his former post as chairman of the political science de-

partment at Northwestern University.

He would like to use rapidly growing Orange County as a "field laboratory for the study of social change." Researchers would study of social change." Researchers would gather information about population, land use, resource allocation and the county's economic structure, with the thought that this data would provide both fascinating research material for the faculty and useful information for the county.

The Graduate School of Administration will come in the full with

will open in the fall, with a handful of fac-

ulty members and students for a "guinea pig year," as Snyder called it, during which some of the dean's ideas will be tested.

The school's assignment is unusual. It is not a school of "business administration," but a graduate program in which administration of education and government, as well as of business and industry, will be studied.

The first year of the two-year program leading to a master's degree will be devoted to making the student a generalist, the second to preparing him for specialization, Dean Snyder said.

First-year students will take a course, in the form of a series of seminars, called "Foundations of Administration." Here they will learn elements of mathematics, computer science and psychology that Snyder believes all administrators should know.

It is hoped that the computer course will prepare future managers to avoid both "ig-norance of computers" and "the phony fadism that says, 'the computer solves all', Snyder said.

First-year students also will undertake "the internal study of organizations and the relationship of organizations with their en-vironments," Snyder stated.

In these seminars, the dean said, "we hope to get a return to some old-fashioned notions of integrity. For instance, we will try to find out what is a Hippocratic oath for a man-ager, for an organizer of working units? Does he have a responsibility beyond his im-mediate task? We think he does and that this is sometimes forgotten."

In the second year (and in subsequent years for Ph.D. seekers) students will turn from general principles to specific applica-Not too specific, however, for Dean Snyder pointed out, "all we can do is slow down the inevitable obsolescence . . . our big hope is that we will turn out people who are good self-teachers."

HANDICAPS TREFTT,?

The Irvine Graduate School of Administration will be much more closely related to the social sciences and to psychology than are most educational programs in adminis-

Psychology will be important because "we want to be really serious about individual human differences," said Snyder. "We want to find out more about the invisible handicaps people have, or think they have, and teach them to have the them to the control of the c teach them to harness these handicaps and use them as skills."

"We want to get at the problem of or-ganizational dry rot," the dean continued.
"We want administrators to learn to encour-age people who sak funny questions, who look at things upside down. In general, organizations tend to ignore innovative people."

Snyder hopes to invite working administra-tors to the campus for short visits "to tell the students and the faculty what the hell it was like yesterday." He would like to estab-lish "a dialogue between the guy who has a problem and somebody who has read a book about the problem."

CHANGE ANTICIPATED

Many universities now invite prominent managers for lectures or brief visits but Snyder has observed, "They usually try to act like academics—they lecture and everybody else

listens. There's no give-and-take."
Instead, he would like to create "a safe place where a manager can be open about his problems."

One of the areas Snyder hopes his school will explore is the administration of higher education, where little research has been done, despite its increasing complexity. "It is amazing that we arrive at the year 1966 with so few people who know anything about the administration of higher education," he said.

Perhaps the University of California, presently suffering severe bureaucratic pains as it attempts to decentralize its administration, will be one of the first patients in Dr. Sny-

A Disaster, Mr. President

EXTENSION OF REMARKS

HON, PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. ROGERS of Florida. Mr. Speaker. while Florida and the Nation suffer from the continuing airline strike, there is hardly a word of encouragement from the Government negotiators. It is dif-ficult to understand how this situation can be permitted to continue.

Florida press reaction has been virtually unanimous, and indicates the costly effect of the strike on the Florida economy. I ask that the editorials from the Fort Lauderdale News, Miami Herald, and the Tampa Tribune be printed at this point in the RECORD:

IFrom the Fort Lauderdale News and Sun-Sentinel, July 9, 1966)

GREATER GOVERNMENT ROLE NEEDED WHEN STRIKERS IGNORE PUBLIC INTERESTS

Our modern civilized society becomes in creasingly complex, year by year. Each of us becomes more and more dependent on services of various kinds for health, comfort, in fact even for the necessities of life. Without these services our life is seriously disrupted, our economy suffers severe set-backs, health, even our very existence, may

The days of self-sufficiency ended when our nation became urban instead of rural.

A century ago a family living on a farm could provide for itself through its labor. It was able to produce its own food, clothing d shelter, a nd need look to the efforts of others for only luxuries, or perhaps medical care. That day has vanished and we now depend on the efforts of others to insure our eeds for food, clothing and shelter will be met.

We have long recognized this dependence on services through powers we have granted our governments. These powers include reg-ulation of operation of utilities providing vital services. We insist, through law, that utilities maintain service. We require them to obtain approval of a regulatory board, whether it be the Interstate Commerce Commission, a state board, or even a municipal body, before discontinuing service to an area regulate the rates they may charge and the return they may earn on investment.

All of this is done on the principle it is the duty of government to protect the public interest, to take action to protect the public welfare; on the principle that the public good is paramount to the rights of property ownership and use. As a result, there have been only a few instances of capricious sus-pension of service by a utility or service type of corporation.

Interruptions of service, except those due to natural disaster, such as flood or storm. have been the result of labor disputes. haps the most blatant in years; the most callous flaunting of the public good was the strike on the New York Subway system several months ago. In that instance, the Transport Workers Union and their leader, the late Mike Quill, paid no attention to the interst and rode roughshod over courts and elected officials.

The current airline strike has halted a transportation service which is vital to the public good, and necessary in the public interest. Suspension of service has disrupted the transportation of the mails and of air freight cargoes. It has caused a dislocation of the current of our life.

Since we insist the utility and transport firms maintain service, unless granted ap-proval by a regulatory body to suspend operations, should we also not require that vital transportation services remain in operation during the course of a labor dispute? Since we regulate the rates and return of the companies, requiring charges to be set by regulatory bodies and on presentation of evidence in support of a requested increase, may this same principle not apply to wage contracts as well?

In these days government has set guidelines on price increases for manufactured products and has taken swift action to roll ack price hikes which are in excess of these lines. The guidelines are supposed to

apply to wages, as well, the government said.

The airlines have offered a raise of 30 cents an hour. That is \$12 more for a 40-hour week, or a pay raise of \$524 a year. A government fact-finding board recommended 42 cents an hour, over three years. That is \$16.80 more for a 40-hour week, or \$873.60 increase for a year. The mechanics have asked 52 cents an hour more, which is \$21.20 more for a 40-hour week, an increase of \$1,102.40 per year. The present buse pay for the mechanics is \$3.52 per hour, \$140.80 for a 40-hour week, \$7,321.60 per year.

We wouldn't attempt to say who is right on the matter of pay scales. Our point is that the general public is being ignored in the matter. The public interest, the public good, the public welfare must be protected.

Continued interruptions of services vital to our national life will bring demands from the public for compulsory and binding arbitration of labor disputes in certain fields, such as utilities and transport.

The public interest is also at stake, and that stake is much greater and more vital than that of either the airlines or the mechanics.

JOHN C. GERARD.

[From the Miami Herald, July 13, 1966] A DISASTER, MR. PRESIDENT

The airline strike, an intolerable act in itself, is fast becoming a national diaaster.

Thousands of additional employees have had to be furloughed by the five struck air-

More than 150,000 travelers and 4,100 flights a day have been grounded; 70 cities have no air service of any kind.

Air express piles up; air mail has been

curtailed 70 per cent.

The money costs, which are not recoverable, are running into the millions of dollars. And the whole thing in effect is a strike

by the machinists and their associated maintenance workers against the United States

Before the walkout, all issues were threshed out before an emergency mediation board appointed by President Johnson.

It is a fact that the union rejected the board's proposed settlement, which went even beyond what the airlines offered but nevertheless agreed to.

Hear this:

"The recommendations of the mediation board offered a fair and reasonable frame-work within which the parties should come to an agreement between themselves for a final settlement of their dispute . . . This union cannot justify holding a strike gun at the head of its government."

This is not the statement of a labor-baiter but of one who is hardly an unfriend of the organized working-man. It is the statement of Sen. WAYNE MORSE of Oregon, chairman of the Presidential board.

We apprehend that the effects of the strike will grow much worse with each passing day.

The Railway Labor Act, which covers airline disputes, clearly is unworkable. Indeed, its antiquated machinery has failed in more than one railroad dispute, including the Florida East Coast case

Thus the situation calls for stern measures in the national interest.

We urge President Johnson to intervene directly and personally and with all dispatch. He alone may be able to persuade an irre-sponsible union leadership that it is trifling with the welfare and security of the country.

Efficient air transportation is the life stream of a complex industrial society and the life line to the Viet Nam war front. It is being struck to death.

[From the Tampa Tribune, July 12, 1966] THE RIGHT TO TRAVEL

For no good reason, thousands of Americans are being forced to cancel or change travel plans and mail deliveries and express shipments are being delayed.

The strike of the machinists' union against five major airlines affects 60 per cent of the nation's passenger traffic—amounting to nation's passenger traffic—amounting to about 150,000 travelers a day—and 70 percent of the airmail volume.

This constitutes a national inconvenience and, in many individual cases, a physical or

financial hardship.

There's no justification for hitting those innocent bystanders with the machinist's wrench.

The National Mediation Board had proposed that the dispute be settled by binding arbitration. The union refused. A three-man Presidential Emergency Board then studied the points of diagreement and made recommendations for a compromise settlement. The airlines said the recom-mendations constituted the basis for agreement but the union rejected them.

Members of the Emergency Board denounced the strike as "unnecessary and unjustified"-a judgment in which air travelers

would certainly concur.
Under the old contract, airline mechanics received a top rate of \$5.52 an hour. The union wants an increase of 52 cents an hour, plus provisions for cost-of-living raise and liberalized vacation and welfare benefits. The airlines originally offered a 30-cent raise. but upped it to 48 cents.

It does not appear that the airlines are being niggardly in their attitude; it seems instead, that the union is making excessive

But the merits of the dispute over pay and vacations are not really a matter for the public to judge or with which the public ought to be concerned,

The public interest is in having available the transportation service which has been duly licensed to serve the public. If service can be shut down whenever a union chooses to exercise that power as a means of enforcing wage demands, then the public interest is sacrificed to profit a private interest.

Five airlines are grounded now. All commercial airliners could be forced down by strike action.

We do not believe that any service so importantly affecting public convenience and necessity should be subject to shutdown by either management or labor.

Binding arbitration ought to be required in disputes involving public transportation. This step, admittedly, runs counter to the principle of free collective bargaining. But carriers operate under government franchise and government regulation of prices, so they are outside the free-market area occupied by ordinary business enterprises.

Congress has the power to preserve the public's right to uninterrupted public transportation. It will do so only when it fears the wrath of stranded travelers more than it does the political muscle of the striking unions.

Address of FDIC Chairman Kenneth A. Randall

EXTENSION OF REMARKS

HON. CHARLES McC. MATHIAS, JR.

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. MATHIAS. Mr. Speaker, on June 10 I was privileged to attend the annual meeting of the District of Columbia Bankers Association, and to hear a very thoughtful address by Mr. Kenneth A. Randall, Chairman of the Board of the Federal Deposit Insurance Corporation. Mr. Randall, a native of Utah, is presently a constituent of mine, residing in Montgomery County, Md. A graduate of Brigham Young University and the Stonier School of Banking, he came to the FDIC on March 10, 1964, for a 6-year term, and was elected Chairman of the Board on April 21, 1965.

In his speech, Mr. Randall reviewed many of the problems facing the banking industry in this period of economic and financial strains. While asserting the desirability of moving toward a freer financial market in the long run, he recognized and reemphasized the short-run need for flexible and enlightened regulation to "maintain confidence in a system that is basically sound."

I am pleased to bring Chairman Randall's perceptive analysis to the attention of Congress:

ADDRESS OF KENNETH A. RANDALL, CHAIRMAN, FEDERAL DEPOSIT INSURANCE CORPORATION

Mr. Randall. I feel constrained that after Mr. Marhias' very excellent discourse on the problems of regulation and business that I should present a few credentials, Mr. Marhias, if I may.

I think it may be well to start our recognizing that I live in Montgomery County, so ably represented by Mr. Mathias, that I also am a Republican. I am the only Re-

publican head of a regulatory agency in Washington at the present time, which gives me a rather peculiar perspective. So that I may add credence to this, I think back to the time when I was in school and my best friend and his family, and my family, were the only two families in the school that supported Alf Landon.

[Laughter.]

I am going to talk to you about regulation and why it is necessary today. It may seem contrast to the remarks that Mr. Marhias made, but I would ask your indulgence with a bit of perspective.

We have two problems. One is short run, and one is long run. I do embrace the phicosphies that Mr. MATHIAS so ably put to you, that the objectives should be for freedom—freedom of the market place. Freedom as much as possible to allow management to make the necessary adjustments; freedom to perform business as it should be performed in this country.

I also ask you to realize that there are short-term realities. In banking, particularly, we must recognize those realities, and they are that this industry has been built for 150 years on the concept of regulation. Regulation does exist in the industry. It has existed since the days of free banking, prior to the Civil War, and we have found, periodically, that due to the very peculiar nature of banking, there must be some method of arbitrarily taking some postures.

This isn't just the nature of banking per se, but the nature of American banking. No other society has ever created a banking structure such as we have, with 14,500 banking units operating across this broad country. It is unique. It is different. In that setting, we have found, periodically, and at points of crisis, that regulation is a become necessary and we must also remember one thing—that we always live in the short run. Sometimes items have to be done, positions have to be taken, that are part of living in the short run.

Again, may I emphasize that I share, and endorse, Mr. Mathias' viewpoints and I believe he will have sympathy with some of the things I would like to discuss with you

I want to share with you, if I may, some problems that have been giving me gray hairs and stomach aches over the last few weeks. They surround themselves with some of the dialogue that has been going on in Congress, and in another chamber, mostly in the House Banking and Currency Com-

This dialogue started around concern in this country about the phenomenal growth of the deposit instrument—the negotiable certificate. We have problems in this arens, even defining the question, let alone trying to find answers, but I believe as we go through the interchanges between witnesses and Mr. Patman, and his colleagues of this Committee, that we are at least finding out that certificates of deposit are not the problem, but what we are involved in today in this short run is the adjustment to a major change in interest rates.

If I may go back with you a moment, to look at where we were at the end of World War II, the banks of this country came out at the end of World War II, with excess iquidity by any historic standard. They had not had the ability to loan during the war, the growth of money supply had piled up in the banks, and the banks were well able to take care of all the credit demands that were placed before them with moderate growth in deposits.

The specialized institutions, the mutual savings banks and the savings and loan associations, were able to aggressively attract funds from the market to finance a booming housing industry.

housing industry.

What happened out of this? We had a major growth in—of the specialty interest, the special financial savings associations and we have created a new and a very large market. We must look at it, I believe, today as a whole. We have \$140 billion in share accounts in savings and loans in this country. We have another \$60 billion in deposits in the mutual savings banks of this country, or \$200 billion in the specialized industry, We have another \$380 billion in the banks of the country.

We have found, I am certain, that we can no longer separate these institutions, in our view. We must look at both sides of this coin. It is a coin, and an adverse factor in any segment of major proportions can be adverse, and will be adverse to all sectors of this arens.

Let me exclude from our discussion this morning, some special problems that have been well articulated by Mr. John Horn, that exist in the savings and loan industry. I am excluding those, and I would ask you to confine thinking in this arena to the economic problems that exist in this special industry.

But the position today of all financial intermediaries must be your concern, and mine, and the country's. What, then, is the problem as we look at this, how can we define the question in order to hopefully find some answers?

May I ask you to look with me at one dimension, and one of the peculiarities of Federal Deposit Insurance Corporation is that it wears several hats, and in the insurance depositor position, we have the Federal regulatory responsibility for the mutual savings banks, which are banks of deposits, although, structurally much closer to the savings and loan industry. They are conservative institutions. They have played the ballgame according to legitimate lines of endeavor. They have played it along your lines of endeavor, and your rules.

These savings banks are primarily located in the Northeast part of the country, 60 percent of their dollar volume is in New York. They have an average portfolio yield in the New York area of 5.44 percent. They are competing in a market where the yield has painfully, I think, to many of you, gone from 4, 4½ up to now 5½ and 5½ percent interest. These are institutions that to operate need a quarter of a point. In order to become competitive in a market that exists in New York City, the mutual savings banks, because they are excluded from the use by statute of the special instruments of CD's, must raise the weight—the whole weight—of structure in their bank, the whole interest rate structure, in order to be able to operate profitably and soundly.

In a period of growth, to adjust a rate change in a mutual, due to the specialized nature of their assets, takes from six to eight years to raise, say, a point in their interest yield of portfolio. In a period of net out-flow, which they are experiencing at the present time, not just a decline in a rate of growth, but in net outflow, where the amortized liquidity that is built into their portfolio is used for withdrawal, adjustment is impossible.

This problem exists not only in the mutual savings banks in New York, it also parallels another geographic area in the savings and loan industry. Primarily Southern California, Nevada, Arizona and New Mexico. These two problems have major impact in our economy. They cannot be ignored in this short term period of adjustment that

Let's go back again with some of the great wisdom that hindsight gives us. This is the great factor that we all have, as we look at a problem like today. I think we would all agree that the market has moved far faster than any of us anticipated. This market moved with such astounding speed that the action of the Fed last December in moving the ceiling on "Q" to 5½—the perspective of this is almost unbelievable. The Fed, in their statements at that time, said that they feit some minor adjustments needed to be made in the market, that the money center banks were buffeting against the ceiling at ½, and the movement to 5½, which would be effectively a stand-by movement, would allow them some leeway to make minor adjustments.

The minor adjustments consisted of a major jump of one percent in less than six months.

I have to look back and be honest with my view at that period of time—I can stand here and be scholarly and say, "They made the wrong decision, they should have done it otherwise". I was even more liberal at that time. I was arguing with the Fed that they should move the ceiling to 8 or 10 percent and establish a ceiling, at that point so that would be effectively a stand-by.

In the light of what has happened today, I wonder how far it would have gone, when one has to look back with conscience and wonder whether or not any view would have brought sanity at that point of time.

But what has happened? We have approaching, serious problems in specialized financial industry. We have approaching serious problems in smaller banks across the country, in the adjustments, and competition, and disciplines of a market under pressure.

This is the setting. Now we have to look at, "What do we do?" Apparently, something needs to be done, and, again, in the short run.

A few weeks ago, Secretary Fowler proposed a differentiation in the market, cutting CD's by size, and cutting them off at \$10,000, so that we would have a free market—reasonably free—after 5½ above the 10,000 cut-off, and a lower rate of interest under ten and a lower rate of interest under ten and a lower rate of interest on savings passbooks as presently exist.

We were concerned about this 10,000 cutoff. We did a sampling of banks that we were currently examining across the country. We found that in smaller banks between 20 and 28 percent of their time deposits were at right at—a \$10,000 denomination.

right at—a \$10,000 denomination.
