This is a recognition that many have split and spread at the deposit insurance level. We felt that if we pursued the philosophy that Mr. Fowler had explored and pointed out that at \$10,000, we would precipitate another crisis. Move the thrust of the problem from the specialized financial institutions right into the small banks, for we believe that if this \$10,000 cut-off that we found in banks, is as important as it is, that people would combine their balances to move for higher rate and this would make a major shift in flow of funds from small banks to large, and in effect, get the smaller banks in this country.

We tried to find answers, we kept looking. A week ago, before Mr. Patman, I proposed the same philosophy that Mr. Fowler used, but with a cut-off of \$100,000. This is not due to any great wisdom, but we did base our decisions on some observations in the market, and, hopefully, they are realistic.

These observations brought us to the conclusion that we believe that there are probably two savings markets that we deal with. One, for lack of a better term, we might call the "domestic personal savings area"—the people that save liquid cash balances for needs, that after a certain point in time and in size, they invest their money into other parts of the financial market and no longer keep personal monies just in savings accounts or in time deposits.

Second, we have a large market of temporarily idle corporate funds and the international market, where it is so important to be competitive in order to preserve some sanity, the belonge of payments systems.

sanity in balance of payments systems. Treasury informs us that they must have at least a market of 5½ percent to be competitive with foreign countries. This was the point where we felt that perhaps we could argue that the \$100,000 cut-off made some sense, that the personal deposits tended to level out, or the personal holdings in cash tended to level out some place between \$25,000 and \$100,000. We felt, first of all, and place to start, that the \$100,000 cut-off would have less adverse effect in the market. We did not propose it as a cure-all, a panacea, we proposed it only as a possibility to stem some of the adverse problems that were approaching us rapidly, in effect, to buy time, to allow for adjustments in the market place that finally must resolve themselves in a free market.

There is another point in the testimony that I made and it was a plea for flexibility, and for a single or coordinated authority. One of the problems we have, at the present time, in FDIC, in regulation, is that we have a parallel control of interest ceilings with the Federal Reserve, called Regulation 329. We have responsibility to enact this regulation over the state insured, non-member banks of this country, but we have no authority to put it into place.

We believe that, finally, one party, either the central bank or a coordinating committee of some type must have the responsibility and the authority to have the regulations that may be necessary.

that may be necessary.

We made our plea, first of all, for flexibility. We believe that if we have learned anything from the action of the Fed in December of 1965, we have learned that the problems increase in intensity from an arbitrary ruling made, or taken, in the market place, that any arbitrary act has unforeseen consequences, any arbitrary act for imposed ceilings is going to cause problems where we have not known them before.

A proposal, such as currently exist in the Congress to impose across the board a flat rate of 4½ percent could be chaotic if someone does not have the authority later on, to make second, third, fourth generation decisions and adjustments to smooth out the impact of this kind of regulating action.

We also know that we cannot avoid the disciplines of a free market by any type of regulation. Yesterday, a Fannie Mae issue was put out, expected to yield an average return of 5.7 percent. If the ceiling is moved down away from the disciplines of this market, it will not solve the problems of the savings and loans, the mutual savings banks or the commercial banks. It will result only in the flow of funds from the financial intermediaries to the open markets.

These are the disciplines. Again, the only answer in this period is one of flexibility.

I have no love for controls, nor am I trying to sell controls to you today, nor do I have any love for an allocated market. The fact remains that we are on the hook of a controlled market with portfolios held artificially low from World War II to the present time.

To get way from this period of time, it is going to take the best capacities and the best thinking that we have to avoid painful and serious consequences. Right now, we are in the period of strong withdrawal symptoms.

The the world of reality, the only same method is to provide some method for less rapid adjustment, than we are seeing, and we have seen, within the last six months. To me, this can only come about with the use of flexible controls in the hands of a regulator who will allow for movement to the free market the long-run objectives without tearing at the fabric in the intervening period of time.

This is the only answer that regulatory agencies, as representatives of responsible Government, can provide. We must provide, I believe, at this time, for methods of orderly adjustment. These can only be created by flexible tools and possible regulation across the board.

That means not just banks under ceilings

That means not just banks under ceilings and under regulatory controls, but mutual savings banks, savings and loans, and possibly insurance companies under the same type of regulatory factor.

We must move to a free market. I have no question about that. But we must also be concerned with the fact that above all, we must maintain confidence in a system that is basically sound and find the methods that the regulatory agencies can use to maintain that confidence.

I am certain, that even without new tools, all of the agencies are going to use every facility, at their command, to maintain confidence in the system. This will be done with some tools of flexibility. It may be less painful.

I presume what I am saying today is that we have some problems and we do live in the short run and the adjustment is painful and difficult. I think I am also trying to say "thanks" to you for allowing me the luxury, momentarily, of unburdening my mind. This has some therapy, also.

We live in difficult times.

Thank you.

James Drought's Letter to Harry Gilroy, of New York Times, Carries Insult to Members of Congress

EXTENSION OF REMARKS

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. IRWIN. Mr. Speaker, I should like to bring my colleagues' attention to the rather unfortunate terminology used by the National Foundation on the Arts and Humanities in describing publications totally or in part financed by an author. The descriptive term used by the Foundation is "vanity." Is it appropriate or right to imply that a man is vain if he contributes to the publication of his own work? I think the term lends only injury to the promotion of the arts in America—the raison d'etre of the National Foundation.

Insult is added to injury by another revelation in Mr. James Drought's letter

h

to Mr. Harry Gilroy, of the New York Times. This time the insult is directed to the Members of Congress. Chairman Roger L. Stevens' special assistant, Frank Crowther, has been reported as saying that being recommended to the Foundation for a writer's grant by a local Representative is not only not helpful "but may hinder chances that a writer will be considered."

Dr. Drought's letter follows:

SKYLIGHT PRESS, INC., Norwalk, Conn., July 4, 1966.

Mr. HARRY GILROY The New York Times, New York, N.Y.

DEAR HARRY: I hope you will consider the following newsworthy, because I believe it has far-reaching healthy ramifications for the entire book industry in this country.

As you know, after publishing eight books of mine in 3½ years, Skylight is having diffi-culty raising the capital necessary to comthe Drugoth trilogy by publishing the final two novels in it which would be my ninth and tenth books. Most all of our capital must come out of profits, and although we have been extraordinarily successful in the marketplace—selling nearly 550,000 cop-les of my first seven works, and garnering a great deal of world-wide acclaim and recognition—our costs have been considerable since we were forced to establish a new company, a new author and new titles on almost no capital to start.

We attempted to make public to our many friends and devoted readers that we would have to deny them the opportunity to purchase Drugoth II. We released this information and even took advertisements to get the message across to them. Since then many possibilities for financing the considerable cost of completing the trilogy have been advocated.

Senator RIEICOFF, Senator Doop and even Senator PROXMIRE (who chairs the Senate sub-committee on Small Business) attempted to help us get a Small Business Loan for the purpose of producing the trilogy. How-ever, their endorsements turned out to be ineffective because of a qualifying clause in the legislation which denies Small Business Loans to "businesses engaged in publishing books, magazines and/or newspapers".

Naturally, we tried all available methods of enlisting private capital and bank-capital. I believe the controversial nature of the previous books closed this channel.

à-

er

er

Recently our local Congressman, Donald Iswin, submitted my name for one of the writer's grants from the National Foundation on the Arts and the Humanities. He thought this might provide, at least, the capital necessary for finishing the writing of the trilogy and thus help make the publishing of it possible.

Although we assumed that I was eligible, Lorna found out very recently that being recommended by the local Representative is not only not helpful "but may hinder chances that a writer will be considered," or so reported the Deputy Chairman of the National Foundation, a Mr. Crowther. He said that most of the awardees would be chosen by the National Institute of Arts and Letters. Since I have not been asked to be a member of this private organization I assumed to would have little sympathy for my need or my project. Mr. Crowther also informed us, however, that Carolyn Rizer who works directly for the Founda-tion as "Director for Literary Programs" is supervising the applications for grants and screening worthy artists and projects for consideration.

I wrote a brief note to Miss Kizer, telling her I wanted to complete the Drugoth

trilogy. I enclosed copies of my first seven books, as well as a copy of the eighth, which as you know is Drugoth I, the first book in the trilogy. I included some of the favor-able world-wide critical response to this book hoping that it might suggest a necessity for the trilogy to be completed.

This weekend I received a note from Miss Kizer, enclosing an application blank and instruction forms on how to complete it. On page 2 of the instruction booklet I

found the following:

"Writers should provide a bibliography of published work (although in the case of prolific and frequently-published the bibliography may be limited to five short stories, five long or ten brief poems, and five to ten essays or reviews. List all book publications.) 'Vanity' publications (those for which the author has paid all, or part, of the expense of publication) must be listed

As you know, my first two books, "The Secret" and "Mover," were published entirely at my personal expense, and their original was the very thing which provided the capital that Skylight Press Inc. was formed on. Since then, whatever capital Skylight has operated on has come from profits, a small bank loan for which I personally had to be the co-signer, and any funds that I could return into the business from the royalties and salary that it paid me. I think of the manner in which I have published my work as almost exactly similar to the method of operation which in drama, phonograph records, and now movies is described as "Independent Production."

Yet. I find that in order to fill out my application and become eligible for a writer's grant from this national foundation (which gets its funds from the broad taxation base that I am part of) I must ascribe a descriptive term to my books, 'Vanity', which brands me with a motive that I find despicable. (In any court of law the use of the term "Vanity" in relation to a piece of work would be grounds for libel action on the part of the producer, because if his production is public then anyone who ascribes the term "Vanity" to it is attributing private motive for a public act and to do this is illegal and damaging.)

Therefore, I find I have my choice: 1) libel myself and fill out the application; or 2) deny myself as a writer any possibility being eligible for a grant, the funds of which I help to create by paying taxes on the very royalties that these books have earned me!

I refuse to chose between these two alternatives. Both of them seem equally unjust

Instead I am considering protesting the despicable, illegal, and damaging stipulating for application. I happen to think that small independent firms like mine should be favored rather than discriminated against in regard to their writers being eligible to receive national grants. If my work were published by a large and powerful corporation, operating off a large capital base, I believe I should be entitled to advancements for completing any work my publisher wishes to publish. The very fact that I personally financed the independent vehicle that publishes me should entitle me perhaps more so than any other writer to look to this taxsupported source for help.

It seems that my protest can take only two mapes. 1) Public denouncement of the Foundation, its program for literary grants to writers, and its rationale for best selecting worthy projects, because it obviously fa vors those writers whose work is published by large corporations and discriminates against "Independents." 2) Refusal to pay my personal income taxes, rather than sub sidize a National Foundation on the Arts and the Humanities which discriminates against me as an "Independent Book Publisher" and author.

I believe it only remains for me to say that no work of mine would have been pub lished in the past, the present, or in the forseeable future by any large established corporate publisher, and had I not been willing to be personally responsible for creating my own publishing vehicle none of my work would be public today. (We have files and files full of letters to substantiate this from every large corporate publisher turning down our requests for publication of my work, for distribution help, etc.)

Also, it seems to me, that the critical commentary the work has garnered, upon being made public by me, as well as the 550,000 in sales, indicates that at least very many people believe that my efforts through Sky light were worthwhile.

It is important to me that my view be made public. I think my readers deserve to know why I refuse to avail myself of this possibility for providing them with the completed trilogy, and I think I deserve the right to protect myself from this kind of discrimination which I can combat only by making my charge public. I think also that the many "Independent Publishers" springing up across the country deserve to be ap-praised of the situation by exposure to my Of course, I also believe that any de cent newspaperman should be a little bit outraged that a writer should be forced to ascribe a motive of "Vanity" to his efforts just because he finances the production of

I know one thing: if Mr. Arthur Hays Sulzberger really believes all those things he told my graduating class from Knox College in 1958, Galesburg, Illinois, then he will want his newspaper to report my view of this matter as thoroughly and objectively as possible.

Cordially.

JAMES DROUGHT.

Rees Supports Amendment To Restrict Foreign Aid to United Arab Republic

SPEECH

OF

HON. THOMAS M. REES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

The House in Committee of the Whele House on the State of the Union had under consideration the bill (H.R. 15750) to amend further the Foreign Assistance Act of 1961, as amended, and for other purposes

Mr. REES. Mr. Chairman, I rise in support of the amendment and the amendment to the amendment.

I firmly believe that economic assistance should be withheld from countries which persist in policies of belligerence and in preparation for their execution.

The proposed amendment to the foreign aid bill will make the policy of Congress clear concerning the bellicose attitude of General Nasser and the United Arab Republic toward the establishment of peace and stability in the Middle East,

The intent of the amendment proposed by the gentlemen from New York IMr. FARESTEIN and Mr. HALPERN] is clear to all of us:

No assistance shall be furnished under this act to the United Arab Republic unless the President finds and reports within 30 days of such findings to the President of the Senate and the Speaker of the House that such assistance is essential to the national interest of the United States, and further that such assistance will neither directly or indirectly assist in aggressive actions by the United Arab Republic.

Our foreign aid program should be for those countries believing in peace—those which are concerned with the peaceful development of their economies.

Unfortunately the more than \$1 billion of aid we have given the United Arab Republic since the commencement of our aid program has done little to promote the peaceful intentions of this country. Today the United Arab Republic has over 60,000 troops in the country of Yemen actually engaging in a civil war, while refusing to deal with the situation in a peaceful manner. The United Arab Republic has continually goaded the Arab extremists to war against the State of Israel and has led the escalation of the Middle East arms race. The United Arab Republic has for 18 years done everything possible to prevent a reasonable solution to the sad plight of the Arab refugees.

I am afraid that much of the impact of our aid these past years has been to free United Arab Republic funds for the purchase of more and more Soviet arms.

Mr. Chairman, only last month the House adopted an amendment to the food-for-freedom bill to prevent food sales to the United Arab Republic unless the President determines that such sales are in the national interest. The amendment to the foreign aid bill now before us will be consistent with the House's previous action.

In conclusion, may I say that our policy should not only affect the aggressive actions of Nasser and the United Arab Republic, but all nations receiving aid who would use this aid in perpetrating militant acts against their neighbors.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STILE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD SEMIMONDAL WILLIAMS AND SEMIMONDAL STATES AND SEMIMONDAL

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the Recons without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congenssional. Recomb the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. Arrangement of the daily Record.—The Public Printer shall arrange the contents of the daily Record as follows: the Senate proceedings shall alternate with the House proceedings in order of placement in consecutive issues insofar as such an arrangement is feasible, and the Appendix and Daily Digest shall follow: Provided, That the makeup of the Record shall proceed without regard to alternation whenever the Public Printer deems it necessary in order to meet production and delivery schedules.

2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the Record shall be printed in 6½-point type; and all relicalis shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

duction is necessary.

3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the Recombisued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Recomb for 1 day. In no case will a speech be printed in the Recomb of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.—The manuscript of speeches containing tabular statements to be published in the Recons shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. Proof furnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr.——addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional Records any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections.—The permanent Recorn is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only

of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10(a). Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magasine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the sine die adjournment of a session of Congress may be printed in the Congress

10(b). Makeup of the Appendix.—The Appendix to the Congressional Record shall be made up by successively taking first an extension from the copy submitted by the Official Reporters of one House and then an extension from the copy of the other House, so that Senate and House extensions appear alternately as far as possible throughout the Appendix. The sequence for each House shall follow as closely as possible the order or arrangement in which the copy comes from the Official Reporters of the respective Houses.

The Official Reporters of each House shall designate and distinctly mark the lead item among their extensions. When both Houses are in session and submit extensions, the lead item shall be changed from one House to the other in alternate issues, with the indicated lead item of the other House appearing in second place. When only one House is in session, the lead item shall be an extension submitted by a Member of the House in session.

This rule shall not apply to extensions withheld because of volume or equipment limitations, which shall be printed immediately following the lead items as indicated by the Official Reporters in the next issue of the CONCRESSIONAL RECORD, nor to RECORDS printed after the sine die adjournment of the

11. Estimate of cost .- No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, teleor articles presented in connection with a speech delivered in the course of de-bate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or with-out individual headings, shall be considered single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Higher Education for Washington

EXTENSION OF REMARKS OF

HON, CARLTON R. SICKLES

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. SICKLES. Mr. Speaker, legislation establishing a system of higher education for the District of Columbia, is now pending before both the House and the Senate. The following article by Dr. Carl Bode of the University of Maryland discusses this very important issue:

A GREAT UNIVERSITY THAT NEVER WAS

(By Carl Bode)

Today each of the great capitals of the world, from Moscow to Tokyo, has a great university. Except Washington.

It isn't as if the problems before us don't grow more massive, more formidable every Our attitude may have been appropriate during the pastoral age of our Republic, say in the Presidency of Jefferson, but it seems a little unrealistic now. And yet the efforts to provide a first-class university for the District of Columbia have been nothing but dismal faflures.

Instead of one great university we have five middling ones. Each has its areas of strength; each has some eminent man on Its faculty. But it is no service to gloss over the truth, and the truth was reaffirmed a few weeks ago when Allen Carter published An Assessment of Quality in Graduate Education. He polled professors over the country to find out how they rated American universities at the graduate level. The verdict on our local institutions was deeply disappointing. I should add that my own university in the Maryland suburbs, failed to fare much better.

As I see it, from a worm's-eye view, the blame lies in two places. It falls, first, on the leadership of the local universities. boards that appoint the presidents have long been the essence of mediocrity and they have chosen presidents in their own image An academic statesman would have made them feel uncomfortable; a visionary would have made them nervous. If somewhere in the history of higher education there has been a great president or two—and I know that aroused alumni will remind us about them—they linger only as names over ivycovered entrances.

For the strongest as well as the weakest of them faltered before the profound indifference of the citizens of Washington. The brute fact is that even now the people who manage the District and the people who live in the District do not prize higher education enough to fight for it. On them the bulk of the blame must fall. At this moment Congress is shrugging off a bill to start a fouryear college. At this moment the civil-rights groups are laboring and picketing for other things. Education is still an orphan.

I am afraid it will continue to be, and I have history on my side. As far back as 160 years ago, in the time of Jefferson as it happens, a notable proposal for a great university was laid before the Congress and the They ignored it, as they ignored its But for those who value educa-

tion the original proposal has a certain melancholy interest, and so I give its highlights.

The ideas come from Joel Barlow, a writer and diplomat of the early Republic, in the shape of a Prospectus of a National Insti-Many of his suggestions are still sensible. He saw the chief jobs of a Federal university as teaching and research (he even the word research). The curriculum would include moral, political and scientific studies—fit subjects for the new Nation. It would include some study of the fine arts, which Barlow defended against the puritan charge that they led to degeneracy.

To manage the university there would be a board of 15 trustees and a chancellor, all appointed by the President of the United sponded by the research would be a university press. There would be laboratories, libraries and gardens for botanical and agricultural experiments. The two services the state of the state ice academies and a museum might also be attached.

Even now the prospect can kindle the imagination. Imagine a splendid campus, with much of the scientific research done today in the Federal Government brought together in its halls. Imagine the Library of Congress, the Smithsonian, and the Na tional Gallery all on the same stately quad-rangle and all related through the common aim of illuminating and enobling the mind. Imagine West Point and the Naval Academy humanized by being in a notable center for humane studies.

The money for the Federal university, Barlow believed, would come from private citizens and from the Government. It would surely be provided because the need was so plain. As he said, the people are our mas-ters; "They must be instructed in their work." He felt certain that the work. "The project," he announced, ripe. "The project," he announced. He felt certain that the time was brought forward at a happy moment." That was in 1806. Jefferson himself once observed that it took time to persuade the people to do even what was for their own good. But 160

Fort Sheridan Bids Col. Ben Chapla Farewell

EXTENSION OF REMARKS OF

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. McCLORY. Mr. Speaker, my friend, Col. Benjamin C. Chapla, commanding officer at Fort Sheridan, Ill., for the past 4 years, is leaving this post on July 28 to become deputy post commander at Carlisle Barracks, Pa.

A graduate of the U.S. Military Academy at West Point in 1929, Colonel Chapla distinguished himself as an Inbattalion commander during fantry battalion commander during World War II, taking part in five combat campaigns including the Normandy and Brest Peninsula engagements in France, the Ardennes breakthrough in Luxembourg, and the Hurtgens Forest assault in Germany. He had become executive officer of the 28th Infantry, 8th Infantry Division, at the time our troops made contact with the Russian forces north of Berlin, where the Germans surrendered. Colonel Chapla also served in South Korea and in many other posts.

In addition to his career as a combat officer, Colonel Chapla served during 1952 as a professor of military science and tactics at St. John's University, Collegeville, Minn. Later he was assigned to the Pentagon as executive secretary in the Secretariat of the Joint Chiefs of Staff, where he was in charge of career planning in the Army.

Colonel Chapla's military service has been recognized by the award of many honors and citations. He was decorated three times for bravery in combat and, in addition, received the French Croix de Guerre avec Etoile. As a result of his service in the Korean conflict he was decorated by the Korean Minister of Defense with the Ulchi Medal with Silver

Mr. Speaker, I have observed conditions at Fort Sheridan since Colonel Chapla assumed his command there in 1962. During this period I have noted the excellent care given to the physical surroundings at Fort Sheridan, as well as to the high morale of the military and civilian personnel at this historic Army post. Fort Sheridan celebrated its 75th anniversary last year. At about the same time the Department of Defense, with the approval of this Congress, authorized a transfer of the 5th Army Headquarters from the south side of Chicago to Fort Sheridan. The able assistance provided to the Department of Defense and to the committees of the Congress, as well as the reputation of Fort Sheridan under Colonel Chapla's command, contributed substantially to this result.

The officers and men at Fort Sheridan have come to admire and respect this courageous infantryman and able administrator. In addition, the citizens of the surrounding and nearby civilian communities have developed an affection for Colonel and Mrs. Chapla which will endure long after their departure from Fort Sheridan

Many friends of Colonel Chapla, including an outstanding group of governmental, military, civic, and business leaders, will be joining together to pay tribute to him on July 26. Under the general chairmanship of Mr. Arsene J. Denoyer and representatives of the Waukegan-North Chicago Chamber of Commerce, the military liaison committee of the Association of the U.S. Army, Lt. Gen. Joseph A. Teece, retired, and many other residents of the 12th Illinois Congressional District will gather at 6:30 p.m. at the Glen Flora Country Club, Waukegan, Ill., on Tuesday, July 26, at a reception and dinner honoring this out-

I am proud to include Colonel Chapla as one of my good friends, Mr. Speaker. I take this occasion to express to him my appreciation for a job well done at Fort Sheridan and to convey to him and his wife, Opal, my wishes for a pleasant and successful tour of duty at his new post in the War College, Carlisle Barracks, Pa.

Remarks of Congressman Fogarty at the Catholic Hospital Association Annual Convention

EXTENSION OF REMARKS

HON, JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

ADDRESS BY CONGRESSMAN JOHN E. FOGARTY, CATHOLIC HOSPITAL ASSOCIATION ANNUAL CONVENTION, CLEVELAND, OHIO, JUNE 16, 1968

I am happy to be here today with so many of the members, friends, and well-wishers of the Catholic Hospital Association. I welcomed Father Flanagan's invitation to talk briefly with you about civic and political climates, the necessity for social legislation, and the potential impact of some of that legislation on basic values and its relationship to the provision of health services in a pluralistic society. I welcomed his invitation because I am convinced that the Association and its member hospitals must seek an increasingly important role in providing health care under the changing philosophies that have surfaced in recent and pending legislation.

As you know, your representatives in Washington are doing their utmost to obtain the widest cooperation of our public and private forces in remolding the health aspects of our society. In the process, important questions are raised and important decisions must be made at many levels.

As one of the forces whose support must be marshaled in this effort, the Catholic Hospital Association represents one of these levels. When an organization of this nature meets in plenary session, major questions of public as well as of internal policy come under the gavel and controversy abounds in the give-and-take of discussion. Under our democratic system, this is as it should be and an entirely healthy situation.

When Father Flanagan invited me to participate in your 1966 convention, he was kind enough to send me an information copy of your planned program. As I read it over, your choice of "Commitment to Values" as the convention's theme struck me as both happy and logical.

It is a happy choice because the Hospital Apostolate is firmly rooted in commitment to values, practical as well as religious and humanitarian, values whose dimensions grow ever largar as your hospitals assume greater responsibilities.

It is a logical choice because it brings to a focal point a quality that has characterized the Association from its very beginning. As evidence I might cite:

Father Moulinier's initial commitment to hospital standardisation and his later concept of educational commitment;

Father Schwitella's commitment to the voluntary hospital;

Monsignor Griffin's commitment to emphasis on the human side of the hospital;

Monsignor McGowan's commitment community involvement; and

Father Flanagan's commitment to determine the role of the Catholic hospital in a society that grows more complex day by day

I was also pleased to learn of the Monsignor McGowan Memorial Address, which will be

delivered later today. McGowan, or "Father Luke," as he was affectionately known to most of us, was a close friend of mine for many years. His personal attributes and everything his life stood for have already made him a candidate for unofficial canonization by those of us who knew him well. But we have been unable to find a "devil's advo-

There is no need to list Father Luke's achievements for this audience. When Cardinal Cushing preached at Father Luke's silver jubilee as a priest in 1959, he declared that the monsignor's "accomplishments are too numerous to mention." I will abide by Cardinal Cushing's judgment.

I recall Father Luke's significant contribution to the Catholic Hospital Association's publication, "A Voluntary Approach to a National Health Program," written in conjunction with Monsignors John O'Grady and George Louis Smith. When it appeared in this document presented a "positive statement of Catholic social principles con-cerning the individual, the state, society and the place of government in relation to the health care" of people. By providing a crystal-clear statement of Catholic thought on current health proposals it brought those concepts back into the mainstream of contemporary health philosophy. In addition, it spared no words in pointing out certain obligations under the principles of social justice first expressed by Pope Leo XIII.

Father Luke had a compassion for all humanity that enabled him to find something likeable and admirable in everyone he met. And, no matter their differences, no one who met Monsignor McGowan could fail to react

to him.

None of us who knew this wonderful priest who they are the very forever on the side of the angels, the Monsignor Mc-Gowan Address will serve as a fitting memortal to Father Luke

In my 25 years in the House of Representatives, I have been exposed to a variety of civic climates. If I can indulge in a bit of oversimplification, some were hot enough to establish the validity of President Truman's famous remark about ". . getting out of the kitchen." Others were sufficiently frigid to banish certain proposed legislation to a permanent deepfreeze, But, in any case, their influence is undeniable.

It is important to recognize that civic climate arises from the manifold changes that occur in the socio-economic-political conditions present during a given period of time in our country—changes which affect any consideration of our nation's health needs. Today's civic climate involves such variables as population explosion and population shifts, urbanization and ex-urbanization, the breathtaking explosion of knowledge triggered by scientific and technological advances, automation and its implications, and changing patterns in age groups, with increasing numbers of very young and very old people.

As a result of the pressure of these factors, the focus of health services has changed. As communicable diseases decrease, prime attention is paid to chronic diseases. And, in addition to insisting upon stronger preventive health programs, our people want protection from an environment that is being

increasingly contaminated with disease-producing substances.

In brief, we have witnessed in this country since World War II the birth and coming to maturity of a national philosophy of health, expounded by an increasingly health-conscious and increasingly sophisticated citizenry. Our citizens have come to recognize the need for comprehensive personal and environmental health services, and they have acquired the means toward realization by a favorable combination of social, economic, and political events.

and political events.

Now, while Mark Twain is quoted as saying that nobody ever did anything about the weather, the same statement does not hold true with reference to "climate," civic or political. Let me give a few examples from history—incidentally, two of them were physicians, and both of them were significantly able to alter the "climate" of their times.

Consider Dr. Thomas Wakley, an English physician of a century ago. Here was a man who was certainly outside the Establishment as it then existed—yet, because his livelihood was threatened by the conservative "climate" of the College of Royal Physicians in London, he entered politics and was elected to Parliament. During his career, his legislative efforts won him much prestige, but he remained proudest of his "Bill for Registration of Qualified Practitioners..." which led to the passage of the Bill of 1858, the present legal basis for English medical practice.

Consider Rudolf Virchow. This young pathologist, even before banishment from Berlin and subsequent fame in Wurzburg. dared to challenge the "climate" of the Prussian government for what he termed "centuries of neglect and corruption which were the foundation for the poverty and ignorance of the people." Virchow's efforts were instruental in bringing about the Revolution of 1848, in which he was a leading figure. Despite the fact that the government was overthrown, Virchow realized—and persisted in stating—that the Revolution was "essentially social." An objective appraisal will substantiate his claim.

But let us move closer to home—right here to Ohio in our own time. I have in mind the case of the National Society for Crippled Children and Adults. This national organization came into existence because one man, Mr. Edgar F. Allen of Elyria, Ohio, was shocked by his son's tragic death and distressed by the pitiful inadequacy of our knowledge about and facilities for the care of crippled youngsters. Through his personal dedication and effort, Mr. Allen created a civic climate that was favorable to crippled children. That climate spread from his own community of Elyria to cover the state of Ohio, and ultimately it blanketed the entire nation.

The Catholic Hospital Association's own history indicates no lack of ability to recognize climate, and to do something about it by winning friends and influencing people—and legislation. When certain by-products of the flood of legislation that appeared during the great depression posed a threat to the voluntary hospitals of America, these institutions signaled their common interests by establishing a Joint Committee to represent them in hearings on Federal legislation dealing with health and hospitals. With Father Schwitella as its spokesman, the Joint Committee achieved outstanding results:

It won exemption for voluntary hospitals from the National Reconstruction Administration Code and a proposed excise tax on voluntaries.

It secured Federal help for payment for cars of the medically indigent for voluntaries without sacrifice of their autonomy.

It "insisted upon the philosophical and ethical implications of the indigent patient,"

calling these people wards of society rather than of government.

It fostered the idea and ideal of cooperation and partnership, rather than competibetween private and public health tion. agencies.

In this regard, who has not heard the story—perhaps more than once—of President Roosevelt's famous letter to the Catholic Hospital Association on the occasion of its Silver Jubilee, wherein he assured the Association of his appreciation of the work for the nation accomplished by the private insti-tutions and particularly by the sister's hospitals, and further described that work as for him the chief argument for the maintenance of public and private institutions which is so characteristically Ameri-

But perhaps the best example of the ne-cessity for hospital people to involve themselves in influencing legislation, and an indication of the results that can be achieved by meaningful involvement, is found in the story of the Hospital Survey and Construc-Act of 1946, more familiarly known as the Hill-Burton Act:

It marked the first time that consideration was given to a measure providing for both tax-supported and voluntary hospitals;
It marked the first time that safeguards

were provided for the rights of individual institutions in a sizable statewide program;

Most significant of all, it marked the first time that a bill had been initiated, developed, and perfected by the hospital associations of America acting in concert.

These are only a few examples, but I believe they waive necessity for further proof of the desirability for understanding and helping to form—and thereby to influence civic climate; and the desirability for influencing-and thereby helping to formlegislation.

The development of legislation is a legitimate concern of any citizen or group of citizens in America. Laws are made to answer needs and, since no lawmaker can be aware at one and the same time of all the needs of his own constituency, or his own geographical area, or the nation, there is a requirement that these needs be known. It would be difficult to find a Senator or a Congressman who has not benefited from a few spoken words, or a letter, or as a result of a visit from citizen's groups or organizational committees. All of these agencies are able, in their own way, to offer convincing arguments for the need of a particular piece of legislation, and this is a legitimate use of personal or group influence.

In the face of the problems inherent in the mass of recently-enacted health legislation and of that yet to come, it is easy to understand the concern of those responsible for the management of our Catholic hospitals. Central to that concern is the necessity to maintain present values so that the principles for which the Catholic hospital

stands will not be sacrificed.

I share the commitment of the Hospital Apostolate to those values, but I certainly can offer no panacea, nor would I, realizing that for some time your best minds and deepest thinkers have focused considerable

energy on the problems involved.

While there is no disposition here to attempt to illuminate even a single facet of one problem, I do believe that an article I read in a fairly recent issue of your publication, "Hospital Progress," provides a starting point for the accommodation that must be made. This thoughtful article pointed out that "We have entered an era of new relations between the Church and the world . . . with new organizations, new institutions, new fields of action with their new dimensions . . . [that] have brought about new roles for the clergy, bishops, religious, laity and the whole Church."

The accommodation between Church and world initiated by the recent Ecumenical Council is swiftly being reflected by the actions of its leaders and agencies. This suggests to me that it is time for our Catholic hospitals to take a hard and realistic look at the future and what it may bring.

There will be . . . there can be . . . no impact on that future without planning. Some nameless genius has epitomized this by saying that we must do more than improvise plans for the future—we must begin to plan our very improvisations. It is obvious to the discerning eye that unless more of our Catholic hospitals move from calm waters directly into the mainstream of hos-pital affairs, they will be forced to react to situations and circumstances not of their own choosing, and this is disastrous in strategic planning.

If Father Luke were here with us today,

I am confident that he would transmit the presently engaged in community dialogue and community services must become en-gaged, and those who are already involved must expand the dimensions of that involve-

What I am trying to say is that even as each generation is born and passes away, leaves an inevitable legacy-Change. face of the hospital apostolate itself is changing to reflect the presence and pressures of socioeconomic factors almost unknown only a few years ago. As a result, the activities and functions of our religious men and women are reflecting a similar change.

Of course, we know that it will always re-tain the "Apostolate of Competency" of main the which Father Flanagan so often speaks.

The Catholic Hospital Association has met here this week to focus attention on the many problems facing our Catholic hospitals and to establish a means of operation that will guard against any lessening of basic values as it moves toward their solution. When I meet our religious people today, I sense that they have the same qualities that motivated religious men and women in ancient times to minister to the sick and needy, and I have complete faith in their ability to cope with the complex health picture of tomorrow-and to do so with none of our basic values diminished.

We cannot resolve the unresolvable, but with a full measure of dedication, selfiessness, and patience, plus vigorous and imaginative pursuit of our goals, we can fashion the instrumentation—human and administrative—to win through to those goals. The real threat may well come from those who view the need for adjustment as some-

one else's struggle.

believe that our denominational hospitals have a great service to render in tomorrow's health panorama. Come what may, I can visualize no circumstances that will deny the need for the particular zeal demonstrated by our religious people in medical service. And the other tangibles the Catholic hospital provides its patients in meeting the continuing health needs of modern society help to provide a balance in our pluralistic society—the same kind of balance the government .recognized so many years ago when it entered its first cooperative agreement with the voluntary hospitals.

Perhaps I could best advise you in whatever efforts you see fit to make with regard to legislation deriving from the civic climate of today by repeating the oft-spoken injunction of Father Moulinier, the Association's "Founding Father." Father Moulinier's counsel was to "Find the facts—filter the facts—fix the facts—and face the facts fear-lessly." Fifty years of Association experience indicate that action taken after following that formula has rarely, if ever, failed to be appropriate.

Meanwhile, your organization is performing an outstanding service by stimulating among our people an understanding of the processes and problems inherent in our free society and its government; by encouraging more active participation and appearing in the van of that movement at practical levels; and by advancing the art of involvement, thereby aiding the public—and Congress, as its representative—in meeting the many problems confronting us in the health field.

Only with the help of organizations such as yours and the assistance of public-minded citizens in every walk of life can we continue to ferret out and do something about this nation's health needs and aspirations. Given that kind of help, your Congress can move to the fulfillment of one of its own commitments, its determination to make the Great Society a means to a full life for all of our

Arnold Toynbee, in his special "Study of History," has asserted that "The twentieth century will be chiefly remembered not as an age of political conflicts or technical inventions, but as an age in which human society dared to think of the welfare of the whole human race as a practical objective." I be-lieve the Catholic Hospital Association has many contributions to make toward that objective, and I wish you Godspeed in their accomplishment.

Captive Nations Day

EXTENSION OF REMARKS OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. REUSS. Mr. Speaker, I am delighted to join today in marking Captive Nations Day as a part of the observance of Captive Nations Week from July 17 through July 23.

Liberty is our dearest possession in the United States. It is a condition of life we seek not for ourselves alone but for all men, everywhere. It is important, therefore, that we remind ourselves today of the peoples of Europe and Asia living in bondage and of their aspirations to become free to choose their own destinies.

Although the Western nations have granted independence and freedom to more than 50 nations since World War II. the Soviet Union has not only retained its 19th century empire in the east and south but extended its sway to the west, encompassing the ancient and proud nations of eastern and middle Europe

These peoples' resistance to subjugation has expressed itself again and again—in the East German revolt of 1953, in the Polish stirrings of 1956, in the great Hungarian uprising of 1956. and in the individual decisions of some 4 million East Germans to seek freedom in the West.

Tyranny takes many forms. To continue to work for liberty from within the modern totalitarian states requires a rare courage and tenacity. It is fitting, therefore, that this eighth Captive Nations Day takes place on the 22d anniversary of a grasp for freedom by men with just such qualities. On July 20, 1944, the men of the German resistance carried out their plan to rid Germany and the world of Hitler and Hitlerism-and only the most bitter misfortune prevented their

success

To all those who have given their lives for freedom in middle and eastern Europe, we in the West and their countrymen owe a great debt of gratitude. They have helped to keep alive the flame of liberty that Nazi and Communist governments worked to snuff out.

For ourselves, we must pursue policies that aid the countries of middle and eastern Europe in their efforts to achieve greater independence from the Soviet Union. We must encourage the tendencles toward economic liberalization that have already begun. We must, despite the conflict in Asia, go one to build the bridges to Eastern Europe that offer the best hope of an expansion of individual freedom for the captive peoples.

Who Is Responsible for Inflation?

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr. CURTIS. Mr. Speaker, an editorial in the St. Louis Globe-Democrat of June 25-26, 1966, entitled "Big Brother the Villain" is to be commended for laying the blame for the recent inflation at the administration's door. When the Federal Government runs a cash deficit which actually increases from \$1.5 billion in the third quarter of 1965 to \$4.2 billion in the first quarter of this year, there can be no doubt about this administration's responsibility for the price increases. In a pattern that has become all too familiar, the administration through its "voluntary" guidelines tried to blame the private sector for responding to the forces of excess demand set loose by its own fiscal policy. If editorials like this one get the wider circulation they deserve, an informed public will see and condemn this administration's economic wheeling and dealing. With this hope in mind, I insert the editorial in the RECORD

INFLATION STILL GNAWS THE ECONOMY: BIG BROTHER THE VILLAIN

Commerce Secretary John T. Connor revealed this week he has sent letters to more than 26,000 of the nation's corporation heads, urging them to "exercise reasoned restraint in purchasing, inventories, pricing and in rring capital expenditures wherever possible.

He is worried about more inflation. He should be. But as usual an Administration spokesman seeks to thrust onus of the pricespiraling battle upon industry.

Meanwhile, Big Brother in Washington keeps merrily on his way with bust-budget

spending.

at this point:

The real villain in the play of inflation is Pederal Government—both the Administra-tion and Congress. Their idea of political economy, especially in an election year, is to spend politically and prodigally. That is what they are doing.

With feints at piddling economies, like curtailing school lunch programs and snapping off White House lights, the Administration has asked \$121,900,000,000 in new spending Dower.

Congress is raising this deficit ante promiscuously.

According to Republican Congressman Tom CURTIS of Missouri, new money authority rolling through Congress will be added to a carryover of \$114,700,000,000 spending power

already in the pipelines.

The vast majority of this federal expenditure has nothing to do with the Vietnam war, sometimes used as an excuse for lavish

costs of federalia.

Connor said it would be a "serious" mistake to consider the present slow-down in the feverish rate of advance earlier during 1966 "is a forerunner of recession." In this judgment, we believe the Secretary quite

The demand for new cars has shrunk somewhat, probably only for a short time. Home building has dropped from its peak. Borrowing is a bit more difficult. There is some restraint on expansion of business investment. The mortgage market is a bit tougher.

But such indices can be ephemeral and quickly vanish. Last week retail sales rose 7 percent above a year ago. Bank business loans were up this week. Steel's second quarter earnings were notably better than the first quarter, though not as good as the second quarter of 1965. Car loadings last week were 3.5 per cent up from '65. Living costs are mounting. The job market is tighter than for years, with millions more at work and thousands of jobs begging for takers.

No, there is no immediate prospect of a recession. But unless the inflation trend is battened down, there will come a recession.

And the easy, often mentioned panacea new federal taxes-is no cure-all for inflation despite all the pontificating talk of the New Economists.

It is true that another cost-siphoning will result from the Vietnam war. But the major expansion of government spending has been for domestic purposes-well intended, often desirable, but heavily studded with waste, boondoggling, bureaucratic duplication and

politics—almost always politics.

If President Johnson really wants to curb inflation's rapacity, he must set a brake on the hand-over-first disbursement of federal moneys for every kind of social nostrum he

can dream up.

The best way to block runaway inflation. the only effective way, is to balance the national budget and keep it balanced. This despite the drain of the costly Viet issue.

It's no good merely to preach curbs upon business, a ploy that in effect points to the inflation ogre and tells American industry, "let's you and him fight." Big Brother must practice what he preaches.

Is this likely for LBJ? It certainly is not in line with his paternalism theories or his conduct. Yet if he doesn't make the Administration show the way in clamping a lid on profligate spending, he is asking for drastic inflation and a resultant crushing recession.

Simplification of Laws of Farm Credit Administration—S. 2822

> SPEECH OF

HON. CHARLES M. TEAGUE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. TEAGUE of California. Mr. Speaker, I yield myself such time as I may consume.

The gentleman from Texas [Mr.

POAGE] has explained the purpose of this bill very well. There is no reason for me to repeat that.

The bill was reported unanimously by the Subcommittee on Conservation and Credit and by the Full Committee on Agriculture. I urge that the rules be suspended and that the bill be passed.

Mr. Speaker, I yield now such time as he may consume to the ranking minority member of the Committee on Agriculture, the gentleman from Pennsylvania [Mr. DAGUE].

Airman Luther M. Bailey and Capt. Thomas A. Murphy-A Special Kind

> EXTENSION OF REMARKS OF

HON. GALE SCHISLER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr. SCHISLER. Mr. Speaker during my recent inspection tour of Vietnam, I was extremely impressed by the dedication of our servicemen to the conduct of the war against the Vietcong. Equally impressive was the devotion of the servicemen who have voluntarily taken on an additional war-the war to alleviate the suffering and deprivation of the civilian population of South Vietnam

Aside from their duties on the battlefield, many of our military personnel have been constructing village homes, Many water systems, and schools. others are teaching children and adults. In these and many other ways, military personnel throughout Vietnam are de-monstrating a special kind of heroism. Their actions are all the more meaningful because their involvement with the Vietnamese people comes willingly, unpretentiously, without expectation of reward

A1/c. Luther M. Bailey, son of Mr. Hano Bailey, Jr., East Moline, Ill., in my district, won the confidence and love of children in South Vietnam's central highlands while his detachment was constructing a spillway for a water reservoir in the village of Plei Piom. Airman Bailey began teaching the children games, simple mathematics, reading, and science. The spillway has been com-pleted and the detachment has moved on, but Airman Bailey continues to visit the children of Plei Piom. Along with this speech, I am inserting a headline article from the Moline, Ill., Daily Dispatch recounting Airman Bailey's work with the Vietnamese children. The Dispatch article is reprinted from the 7th Air Force News published in Vietnam.

In many instances, a serviceman's aid to civilians involves whole communities in the United States. Capt. Thomas A. Murphy, an officer from Kewanee, Ill., in my district, began teaching English to the faculty of a Vietnamese technical high school. When Captain Murphy became aware of the need for a dormitory at the Vietnamese school, he wrote to his mother, a teacher at Wethersfield High School in Kewanee. Mrs. Murphy passed on her son's letter to WHS President Joseph Winek and the students. The students wanted to help Captain Murphy with his project for the Vietnamese boys and, through their own donations, raised \$100 which the captain used to purchase lumber for construction of the dormitory.

The heartwarming story of Captain Murphy's contribution and the contributions of the students of Wethersfield High School is told in an article by Annette Murnan in the Kewanee Star Courier which I am inserting in the Record along with my remarks.

I am extremely proud of Airman Bailey, Captain Murphy, and the Wethersfield students. Anyone who doubts that our real purpose in Vietnam is to secure for the South Vietnamese people the peace and progress of which the enemy would deprive them, need only read these articles. Of our servicemen, we expect dedication to the task on the battlefield. That so many servicemen are equally devoted to aiding and comforting the civilian population of South Vietnam gives us extra reason to be proud.

[From the Moline (III.) Daily Dispatch]

EAST MOLINE ARMAN IS "PIED PIPER OF
PLET PROM"

(EDITOR'S NOTE.—The following story, concerning Airman Luther M. Bailey of East Moline, is reprinted from the Seventh Air Force News, published in Viet Nam. Bailey has been dubbed the "Pied Piper of Piel Piom" as a result of his work there with Vietnamese children. Airman Bailey is a son of Hano Bailey Jr., 1516 9th Ave., East Moline. He was graduated from United Township High School in 1960 and before enlisting in the Air Force in 1961, he attended Black Hawk College and was employed by Fresh Pak Candy Co., Moline. He has been in Viet Nam since last Thanksgiving Day.)

PLEIKU.—"Bay lee, Bay lee," scream the small children as they run toward the Air Force vehicle at the Montagnard hamlet of Piel Plom in Viet Nam's central highlands,

Plei Piom in Viet Nam's central highlands. Cause of the excitement is Airman 1.C. Luther M. Balley of East Moline, the "Pied Piper of Plei Piom," who uses games to teach children who have never been to school.

Airman Bailey, a military policeman at Pleiku Air Force Base, first became acquainted with the villagers through a project of his unit—Detachment 10 of the 619th Tactical Control Squadron.

Detachment men supervised and assisted the Montagnards in construction of a spillway for the village water reservoir.

Noticing the children watching from a distance while the work was going on, Bailey decided to see if he could become acquainted with them

His first attempts to make them come nearer were met with shy refusal, but with a little whistling mimicry and general clowning he brought them closer.

By the time the spillway was completed, Airman Bailey and the youngsters were fast friends. He had them involved in play periods, while he acted as leader. The play periods led to school classes.

h

d

n

0

Most of the detachment men seldom come to Piel Piom now. They are helping construct a spillway for another village. But Airman Bailey is still a regular visitor.

The children eagerly gather around him when he arrives. He supervises games of leap frog. tag. one-legged and relay races or whatever strikes his fancy. "Of course, I bring the girls into the fun, too," he explains, "with our quieter sessions of counting, recting the alphabet or identifying trees and flowers." When the boys are engaged in the rougher games, the girls cheer from the sidelines.

"I split the children into competing groups in the teaching classes, with about 20 on a side. They give me numbers or names in English and then laugh at my feeble efforts to speak Vietnamese," he says.

About 40 or 50 children are usually present for Airman Bailey's supervised play and school classes. Some of the children are as old as 17, but most of them are much younger. Since they receive no formal schooling, the classes are new and exciting to them.

The airman's past experience has helped prepare him for his role as a teacher. While stationed with the Air Force in Germany from 1961 to 1964, he worked with the American Youth Alliance coaching a fifth and sixth grade basketball team, a Babe Ruth baseball team and a trampoline class of boys and gris from 9 to 18.

"Of course, it's a little harder where there is a language barrier," he says of his work with the Vietnamese children, but he admits "the feeling of satisfaction is also greater."

On a recent visit to the village, Airman Balley encountered a small problem when the children spotted a 5-foot-long cobra lying across a tree's roots in the play area.

After obtaining the village chief's permission, he and another member of his detachment shot the snake as the children stood at a safe distance with their fingers in their ears.

This made the "Pied Piper" even more of a hero than ever to the young people of Piel Piom.

[From the Kewanee (Ill.) Star-Courier, June 11, 1966]

STUDENTS SHARE, EARN FUNDS FOR VIETNAMESE (By Annette Murnan)

Captain Thomas A. Murphy, a Kewanee officer in Viet Nam, touched by the effect of the misfortunes of war on young Vietnamese boys, has helped the students of Wethersfield High School to accomplish an investment in the future that they and the Vietnamese will not soon forget.

Through their concerted efforts and selfimposed economies, and not with donations solicited at home, the WHS students in the past semester gathered and sent the captain \$100. The money will be used for lumber to build a dormitory for homeless Vietnamese boys who seek an education at the Technical High School in Qui Nhon in the central highlands of Viet Nam.

The dormitory will make it possible for 30 or 40 boys—among the 400 students who have been separated from their families by the vagaries of war to live in quarters other than the classrooms. The classrooms have been serving double duty for them.

Captain Murphy is the son of Mrs. Arlene Murphy of the Wethersfield faculty, and is attached to a mobile laboratory of the 85th Evacuation Hospital. He has a Ph. D. from

Yale as a blo-chemist.
After arriving in Viet Nam, Capt. Murphy became acquainted with a Mr. Ai, principal of Troung Trung Hoc Ky Thuat (Technical High School) of Qui Nhon. He says that Mr. Ai impresses him as a man of the highest ability and integrity. The captain learned that Mr. Ai has a master's degree in industrial education from Los Angeles State College.

Capt. Murphy began teaching English to the teachers of the school, and in so doing became aware of the many problems facing Mr. Al, his faculty, and most of all, the young students. He put all of these discoveries down in letters to his mother, who in turn told WHS Principal Joseph Winek and the high school students about them.

The students prevailed on Winek and Mrs. Murphy to let them carry out some project to assist the Vietnamese school. Upon learning of the offer, Captain Murphy was most pleased and wrote the students of several ideas he thought could possibly be carried out.

The students chose to earn money on their own—not soliciting their parents for it—and own—asked that it be dispatched to the captain to use as he saw fit for the students at Out Nhon.

They earmarked book fines to the fund for one month because Mrs. Murphy is librarian at Wethersfield. At the annual Junior-Senior prom a smiling, costumed and bowing Arab demanded a stipend from the couples as they entered the Arabian Nights setting in the gym and earned \$12 for the Viet Nam school. Some of the young people shined shoes during the school noon hours, others gave up candy and coke money.

gave up candy and coke money.

Captain Murphy wrote that war the caused an inflation of prices which has doubled the cost of living in the Qui Nhon area during the past few months. This places a great burden on the students, he said, many of whom have been forced to quit school. The teachers, whose monthly salary is equivalent to about \$60, presently support 30 of these students, who otherwise would have had to leave.

"We of the military are helping by hiring some of the boys to help in our laboratory, and by contributing to the 'rice fund'," the captain writes. "However, it would seem especially appropriate for Americans of the same age and situation to aid this cause.

"There are many aid projects in this country which give little lasting benefit, and often sizable proportion of aid money never reaches the intended recipient. To provide aid directly to a technical school, which gives training essential to the economic development of this country, would seem particularly worthy," writes Captain Murphy.

And, now, months later, the money has been earned and the Wethersfield students are proud to learn through word from Captain Murphy and one of the Vietnamese students what the money will be used for. The Army has contributed cement, no doubt at Capt. Murphy's suggestion, and the \$100 from Wethersfield will be used for lumber to build a dormitory so the homeless Vietnamese boys, seeking an education though thwarted by war, will have a place to live while pursuing their studies.

Let's Travel: With Mrs. L.B.J. to Big Bend

EXTENSION OF REMARKS

HON. RICHARD WHITE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. WHITE of Texas. Mr. Speaker, this spring, America's First Lady, as a part of her campaign to keep America beautiful, visited Big Bend National Park, in my west Texas district. Among the correspondents who accompanied the tour, of which I was honored to be a part, was Frances Koltun, travel editor of Mademoiselle magazine. Under leave to extend my remarks, I should like to bring Miss Koltun's excellent article to the attention of Congress:

LET'S TRAVEL: WITH MRS. L.B.J. TO BIG BEND (By Frances Koltun)

Normally, about 50 people a year drift down the Rio Grande through the sheer-

walled Mariscal Canyon-and college students from here abroad. It is remote country, difficult to reach. Last April, its awesome stillness was shattered by a strange fiotilla of 24 heavily Mexican jays must have looked down in amazement. Not since the wandering bands of Comanches and Apaches, had such a gathering come to this wild, silent country.

The occasion was the visit of Mrs. Lyndon B. Johnson to Big Bend National Park. Accompanying her were Secretary of the Interior and Mrs. Stewart Udall, George B. Hartzog, Jr., Director of the National Park rvice, and a curious expeditionary force of iters, photographers, TV commentators writers, photographers, TV commentators and crews, wire-service and newspaper reporters, plus a sprinkling of magazine representatives, Mile's Travel Editor among The avowed purpose of Mrs. Johnson's trip was to focus attention on Big Bend in particular and the National Parks in genfor 1966 marks the 50th anniversary of the founding of the National Park Service. Presidential and Federal interest in recreation and conservation have never been greater than they are at this moment.

Her trip was also meant to emphasize the campaign to Keep America Beautiful. Reserving the beauty of our landscape and salvaging our national heritage are the major concerns of the National Park Serviceand while she heads no Federal agency or bureau, Mrs. Johnson has become the Administration's leading spokesman for this

Franklin D. Roosevelt said, "There is nothing so American as our national parks. meant, of course, that within their confines the scenery and wildlife are quintessentially native. But there are another less-understood aspect of his statement: few people realize that only the choicest of our areas are ever raised to the status of a national park. No terrain is ever taken into the National Park Service unless it is considered matchless among regions of its kind. Thus, the national parks are an aggregation of superb areas of enormous variety and richness. These are the great scenic places—the deserts and mountains, rain forests and rock coasts, the sand dunes, even the swamps—and the National Park Service is their custodian for the American people. Caught before they were despoiled, they remain vast stretches of fresh land; within their boundaries you can know what America was like before it was scarred by cities, highways and railroads, farms and industry, and suburban sprawl.

The parks, however, are for pleasure, not ust preservation. They must, of course, be maintained absolutely unimpaired for future generations, but they are also meant to be used and enjoyed. Here, you can camp, ride, fish, hike, and glory in the great outdoors. Here, you are meant to know the serenity of mountains and forest, the gleam of a glacier, the roar of the surf, the life of strange new plants and animals; or, simply, if this is what you seek, space, solitude, and silence

In choosing Big Bend for her visit, Mrs. Johnson, characteristically, picked a park that deserves far more notice than it gets. (Of the more than 9,000,000 visitors to our parks last year, fewer than 200,000 came here.) Isolated and hard to reach, Big Bend National Park is a harsh, hauntingly beautiful landscape of spectacular desert, can-yons, sienna-colored plains, mess, and weird, timeless mountains. It is lonely country (the nearest good-sized grocery store is 100 miles from the park's center), and if you are unaccustomed to such terrain, its vast space em, at first, more like emptines But it is a hypnotic landscape and, given a few days, you will be in its thrall forever.

The park takes its name from the deep curve or big bend that the Rio Grande makes about 300 miles downstream from El Paso. Embraced by the curve are 700,000

acres, a wast primitive wilderness that pre-serves the best of the Chihuahuan desert. Along its southern border flowing quietly for 107 miles is the Rio Grande, the peaceful boundary between the U.S.A. and Mexico. It is this land that makes up Big Bend, our sixth-largest national park, now swept into the stream of White House history.

It has known its share of history before where the Rio Grande makes its wedge into Mexico, the Spaniards moved north from the border and the Indians moved south from the Great Plains country; war between the Indians and the ranchers was still going on as late as the 1860s. As you ride or hike along canyon walls, you are reminded of the time when America was young and westwardbound through Texas.

Erosion has been Big Bend's master-draftsman, creating fantastic gorges, strange rock formations, and its ghostly Chisos mountains. Millions of years ago, it was the floor of a vast inland sea and, as you drive along,

the illustion of that sea still surrounds you, only now it is a sea of strangely carved land.

Time after time, the crust of this earth has been fractured by gigantic upheavals. The surface changes quickly from gorge, to sunbaked plain, to a sudden thrust of mountain range.

Here, dinosaurs roamed, and scientists have found the fossilized remains of oysters three to four feet wide. Many colleges bring their students hundreds of miles to study unique geology of this area. Because millions of fossil fish remain embedded in its limestone, paleontologists come from all over the

During one of our flights, Secretary Udall described a national park as being "in essence, a vast zoological garden without a fence around it," and he called the Big Bend country a "new kingdom of plants and animais." Within it are rure species of trees, birds, and plants that are found nowhere else, making it a biological island and a zoologists, magnet for botanists. biologists.

This is not a park meant for soft pleasures, and because of its ruggedness, our exhilarating visit took on the sense of an adventure. as yours will, too. The first afternoon, Mrs. Johnson and company hiked, as all visitors do, up the Lost Mine Trail, a path that climbs through piñon and juniper until it ends at an overlook from which one can see into the purple distance of Mexico. The next day, we paddled in rubber rafts down the Rio Grande, where it cuts through Moriscal Canvon, the least accessible of the park's three canyons through which the river flows. It was a day of warm sunshine and brilliant blue skies. The odd flotilla made its slow day down-stream—swirling, getting caught in the rapids, bumping into each other like the cars at an amusement park-for nearly six hours. The canyon walls, carved by wind and water—one side the U.S.A., the other, Mexico-towered beside us. At noon we drew up to a sand bar for a picnic lunch. Mrs. Johnson, looking marvelously turned out in slim pants and checked shirt, sat among us on the grassy bank, at ease and obviously delighted.

At the end of the day, her nose reddened by the sun, Mrs. Johnson was asked how she felt about it all. She said, "How wonderful it is to be able to get so completely out in the wilderness away from towns and cities, and to find that this much solitude still remains in the U.S.A." Then, turning back to the reporters, she said she wanted to add some-thing: "How very pleasant simple things can be: a vagrant breeze, a drink of water, just the feeling that you have enough strength to cope with paddling a cance—to get out in the open and to come to terms with things."

And all of us--wet-bottomed, slightly bruised, and thoroughly happy with our ex traordinary day on the Rio Grande-looked

around at the soaring canyon, the mountains glowing gold in the clear, desert light—the vista without beginning or end-and agreed.

Congress and University: A Partnership in Health

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following:

CONGRESS AND THE UNIVERSITY: A PARTNER-SHIP IN HEALTH

(Address by Representative JOHN E. FOGARTY, University of the Pacific, June 15, 1966)

President Burns, Dean Tocchini, University Regents, Members of the Graduating Class, Ladies and Gentlemen: The first thing I want to do, of course, is to extend my congratulations and best wishes to those of you who have just now received your doctorates in dentistry. As one who has long had a deep, personal interest in your new profession, I have some idea of the rigors of your past four years in dental school, not to speak of the lengthy period of preprofessional education. cation. The degree you have received symbolizes an accomplishment in which you and your families can take great pride. It marks, as well, the beginning of a promising future for each of you. No one, naturally, can promise that the future will be entirely innocent of complications and frustrations. Indeed, any one of you could take over this lectern and give the rest of us chapter and verse on what some of the problems might well be. On graduation day, nonetheless, it seems to me permissible for you to take a laissez faire attitude toward the future and, if only for twenty four hours, concentrate on the pleasures of the present. This may well be the last day of your life when you, your family and friends can all agree on how wholly admirable you are and you should make the most of it.

I want, as well, to express my deepest gratitude to the officers of the University of the Pacific and its dental school for the high honor you have done me this evening. has been said that "science promises neither peace nor happiness; it promises only truth." Such a promise, it seems to me is truth." Such a promise, it seems to me, is value enough and if this doctorate in science you have so generously bestowed holds the key to the truth in any way at all, it is worth a dozen trips across the continent, not the mere one I have in fact taken.

According to the program you have received, the topic toward which my brief remarks will be directed is "Congress and the University: A Partnership in Health." I do not, of course, mean to imply by that title that health is the only matter of common concern Congress and the University have though certainly it would be a simpler and more pleasant world if that were so; if, indeed, we could reasonbly say that the ques tion of health could be dealt with in the abstract and without reference to any of the other challenges facing our society today. Were that true, there would be no end to the noble predictions that could be made. There would be no need to have the slightest hesitancy about the future.

Regrettably, such a view would be a pre-tense; would be futile; would be, in the long run, impossible. The question of health, like every other fundamental consideration with which we must deal, is woven deeply 6

lth. tion eply and inextricably into the fabric of our society. Decisions taken in health affairs inevitably interact with decisions taken in other areas of concern. If a priority is given to health, then it cannot be given to something else. Money spent on health cannot at the same time he spent on something else. A man who devotes his life to health affairs cannot at the mans time devote that life to business or politics or the fine arts. We are faced, as always, not with the easy decision of choosing the good in preference to the

We are faced with the hard decision of choosing them among a variety of good things and arranging them in an order that reflects a fundamental social decision concerning our relative need for them at a precise time in our history. We must talk about health matters at the same time as we talk about our commitment to the underdeveloped nations or the war on poverty or the war in Vietnam.

This question of the standing of health on the scale of the cultural, economic and political facts of modern life has been of concern to me for some years. It has been, indeed, inescapable since the life of a Member of Congress centers about the neces-sity of standing up and being counted a dozen times a month on this business of sorting out America's priorities and decid-ing which ones we need to emphasize, which ones we need to meet first. And, to com-plicate matters a bit further, the process is carried out in a public forum with all the pressures inherent in such a method. It is something like a dentist standing in the town square surrounded by a crowd of peo-ple clamoring for his services and needing to decide which one or two or three patients he will care for that day and which ones will have to wait until tomorrow or next week or next year when it may be too late to really help them.

Out of this kind of experience, which in my case began in 1940, has evolved a set of convictions. One is that our nation has, in the past, underestimated and, to some extent prison description. extent, misunderstood the impact health has on our total progress as a nation. We have as a consequence, been needlessly diffident about devoting to health matters a sufficient share of our resources such as to enable us to realize our full potential in this area. There are some, I know, who would disagree with this analysis but the facts, I think, are not with them.

At the present time, only about six percent of our Gross National Product is being spent in the health field. And most of that represents payment from a member of the public to a private practitioner for personal health service. Less than one percent of the Gross National Product is being devoted to health related research, education and public health

activities. Surely, this is not over-emphasis.

Believing as I do, then, it has been pleasing to see this diffidence beginning to dissipate; to see us, at length, coming to a fuller understanding of how significant to our daily life and to our basic strength as a nation is the work being carried out in our laboratories, clinics and private practices. It seems to me that we are today on the thresh-old of a totally new public attitude, one that holds out to us more promise than any other in our history. This change has had and will continue to have its effect on many institutions but it seems to me that its imact is especially clear on Congress, on the University and on the partnership they have formed. Before commenting on why I think this is so and what it means to these two institutions, however, let me offer briefly some evidence to document what I call this

change in our concern for health matters.

A convenient starting point in offering evidence is the National Institutes of Health.

This bureau of the Public Health Service is, as you know, the major health research arm of the federal government. Nearly all fedof the federal government. Nearly all federal funds devoted to health research are distributed through it. From its beginnings in 1798, the Institutes had progressed by 1946 to a point where its annual budget totalled \$\frac{1}{2}\$ million. In the twenty years since that time, growth has been much swifter. In early May of this year, the House of Representatives passed a fiscal 1967 budget bill that allots \$1.4 billion to the National Institutes of Health.

Incidentally, in the same post-war span of years, the National Institute of Dental Research has progressed from an annual budget of \$510,000 to an allocation in the recently passed House bill of \$28 million.

Only a small percentage of this money is used intramurally by the National Institutes of Health. Almost all of the \$1.4 billion is instead distributed by means of grants and contracts to the universities of the nation to support their ongoing investigations. Some of the money, as well, is used to provide fellowships for those preparing themselves for a research career and, finally, a segment of it is devoted to support universities in the renovation or construction of health research facilities.

At the same time as this growth has been readily discernible in health research, new national emphasis has also been brought to bear to meet the shortage of health manpower, a shortage that already exists in some specialties and is clearly impending every-where else. The key piece of legislation in this effort is the Health Professions Educational Assistance Act that the Late President Kennedy first signed into law in 1963 and that has been, subsequently, revised and expanded. The law has a three-fold purpose: first of all, it provides assistance for con-struction of health educational facilities; secondly, it provides loans and scholarships to students of the health professions, and, finally, it provides direct grants to health schools for curriculum improvement. A number of people—the leaders of the American Dental Association and myself included long urged such legislation. One of the most active and effective dental educators doing so was Dean Tocchini. It is appropriate, then, that when the law was passed one of the first grants made under its provisions was for a new dental school here at the University of the Pacific.

The third segment of the health field in which new stirrings can be detected is that of provision of care. Here there is no central agency, such as the National Institutes of Health, nor no single, key piece of legislation, such as the Health Professions Educational Assistance Act. The pace of activity nonetheless has perceptibly increased. This present Congress, for example, has passed legislation that broadens significantly the kind of health services made cooperatively avail-able to the indigent and the medically indigent by state and federal governments. This

gestation is shaped, properly I believe, to place special emphasis on needy children. This same emphasis on the young can be seen in the health aspects of the War on Poverty, particularly with regard to Project Headstart, which is designed to assist three and four year old children from impoverished families and to prepare such children for their school years in a more adequate way than has been possible ever before. Since Project Headstart has begun, incidentally, those directing it have discovered how accurate the dental profession has been over the years in pointing out that oral disease is the single most serious health problem these youngsters suffer from.

Closely related to individual well being in the area of public health. Again, we are seeing an increase in the pace of activities.

In environmental health, for example, programs combatting air pollution and water pollution are being mounted. In dentistry, at the National Dental Health Center located here in San Francisco, there has begun a notable series of research investigations on cleft lip and palate and on periodontal

Taken as a whole, then, this outline of the new level of effort being mounted by this nation in the health field is most significant. Some of us might wish that this effort would have been mounted sooner, would have been mounted, say five or ten years ago. But the future is clearly too complex and challenging for us to worry about what might have been. Instead, the question that we now must face is how best to master this widening spectrum of health activities, how to keep control of it so that such resources as are devoted to it will be used as meaning-

as are devoted to be win be used as meaning-fully and fruitfully as possible.

It is here that we arrive at the concept of partnership between Congress and the Uni-versity. The concept is, I would submit, a key one in any plan we may devise to define and guide our progress toward a more effective, more efficient and more readily acces-

sible health research, health education and health care system of tomorrow. The indications that this is so are overwhelming. Consider the field of health re-search. It is founded precisely on this part-nership concept. There is a well defined division of effort in health research. The Universities of the nation, for their part, have undertaken to supply the ideas and the workers in this field. Congress and the rest of the federal government, as its part of the partnership agreement, provides coordination to preclude undesirable duplication, reviews applications to assure that previously agreed upon standards are maintained and provides most of the funding. There are exceptions to this but by and large it is a fair description of how we proceed in health re-

The burden of this arrangement, it seems to me, lies most heavily on the universities, not the government. Certainly, most university officers of my acquaintance are quick to say so. But one doesn't have to be a university official to recognize that ideas are rarer, harder to come by, more precious than our dollars. You can't buy that combination our dollars. You can't buy that combination of imagination, insight and industry that leads to the kind of research breakthroughs we have experienced in the United States since World War II. To achieve them, you must develop a man who shows promise, give him the room and tools he needs and have faith in his ability to produce. Ultimately, it is the university that must welcome and shelter such men.

Much the same is true, in terms of the balance of partnership obligation, in the field of health education. Congress is in a posi-tion to recognize that support of health education is imperative, to recognize that more health professionals must be graduated an-nually than we are able to do today. Congress can authorize new programs to meet the situation and then move to fund such programs adequately. But Congress cannot graduate a single physician, dentist or nurse. In fairness to Congress, I should point out that I don't mean to deny it can be highly educational in many ways, its just that the practice of dentistry or medicine is not included in its broad curriculum.

This partnership concept, as I have just delineated it here, is not totally a creation of the post-war era. But, I would submit, the events of the past twenty years have so transformed it that, in the practical sense, it is new. There is today an interchange between the man in the University and the man in Congress that has never really existed before in this country. There is, I think, a

greater feeling of trust flowing from both parties. The cliche professor who didn't understand the urgent realities of life has pretty well disappeared. So too, I hope, has

pretty well disappeared. So too, I holye, make the Congressman who lacked respect for academic endeavor and its longterm contribution to the quality of our society. There has been, from time to time, a sense of strain and of misunderstanding. This will still occur in the future. But today such misunderstanding is an isolated incident, not an

I have no hesitation in saying that the partnership has been of benefit to Congress and, certainly, to this particular Member of Congress. Aside from my general responsibilities, I have, as Chairman of the Appropriations Subcommittee responsible for health expenditures, the obligation of deciding annually how billions of dollars of public funds are going to be invested. Such an annual expenditure, obviously, does much to shape the direction and thrust of our effort in the health field. I need to have, in discharging that obligation, the candid, expert

intrinsic characteristic of the partnership.

advice of those who are professionally involved in health. I couldn't do the job without it. By the same token, if I may say so, I think

the University has benefitted from this more active and intimate partnership that has developed since World War II. I think it has spurred more than one such institution to rethink its posture in relation to the society surrounding it. I think it has spurred more than one such institution to shoulder willingly a more active and responsive role in

combatting the ills that plague that society. It is to be hoped, in any case, that my estimate of the partnership as having achieved a sound and lasting character is accurate since the demands of the future are going to exert heavier pressure than ever on the bond that links Congress and the

We need, I believe, to continue to step up substantially our commitment to health research. We need, I believe, to continue to pay greater attention to the health manpower problem. We need, I believe, to continue to search for new and better methods for distributing our health care so that it is as readily accessible as possible to all our

In all of these instances, the University will play a vital part. The academician will be needed both as an advisor and and as an implementor. The University itself will be needed to serve as the laboratory in which new ideas are studied, not just for their pragmatic effectiveness and for the larger implications they may hold.

All of this, as I have already said, will have to be pursued while at the same time we continue to pay attention to the national and international context within which health problems must be viewed. Neither institution will be able to retire from the arena where health needs clash with the many other pressing needs of this country's people. Neither institution will be able to shirk the responsibility of helping to set priorities for meeting these problems.

I have great confidence, however, that both institutions, in partnership, will be able to continue this work and will be able to make greater contributions in the future than we have thus far. It is for this reason that I am so pleased to be here with you this evening to share my thinking on this subject. It is because I look to the University an often for advice and support that your generous action in honoring me holds such meaning. Let me close, then, by again oftening my best wishes to those who have begun tonight their professional careers in dentistry. I look forward to being with you again some time in the future. Thank you.

The Beirut Agreement and U.S. Exports

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. CURTIS. Mr. Speaker, on June 28. House Joint Resolution 688 was ordered reported by the Committee on Ways and Means. This resolution, and an identical one which I introduced, House Joint Resolution 1158 would authorize the President to designate a Federal agency to be responsible for carrying out the provisions of the agreement for facilitating the international circulation of visual and auditory materials of an educational, scientific, and cultural This agreement, character. know as the Beirut agreement, would provide a certification procedure whereby each qualifying imported audiovisual item is guaranteed to be of an educational, scientific, or cultural character, and is therefore free of duty no matter in how many implementing countries it is shown or otherwise used.

When I introduced House Joint Resolution 1158 on June 6, I pointed out that implementation of this agreement would increase duty-free exports of U.S. audiovisual products to foreign countries-Congressional Record, June 6, 1966, page 11705. An article by Alena Wels in the Journal of Commerce—June 16, 1966, page 1—entitled "Foreign Boom Looms in U.S. Industrial Films," illustrates some of the benefits that implementation of this agreement could provide. It is most significant that makers of industrial films, a \$400 million activity in the United States last year, feel that "the export of nontheatrical films would at least double within 5 years" after the United States implements this agreement. The free interchange of all types of educational material can provide the benefits of understanding and greater knowledge for all the countries involved. When an agreement will add to international understanding, as well as substantially increase U.S. exports. think it should be expedited as much as possible. For that reason, I ask the Members of this body to support House Joint Resolution 688 when it comes before the House, and submit this article for their consideration:

[From the Journal of Commerce, June 16, 1966]

WITH BEIRUT ACCORD: FOREIGN BOOM LOOMS IN U.S. INDUSTRIAL FILMS

(By Alena Wels)

Americans, who have been much maligned in their business and political involvements abroad in recent years, will be able to strike back with a new more graphic approach when the United States finally puts its long withheld signature to the Beirut Convention.

Industrial films, a \$400 million activity in this country, could soon become an important method for establishing the American industrial image abroad and for promoting American products and ideas in important foreign markets. CUTS RED TAPE

Designed to facilitate the free flow of films of a scientific educational and cultural nature, the Beirut, Convention will help do sway with much of the red tape which has restricted the export of American films of this kind to date.

When it is ratified, industry sources feel, the export of non-theatrical films would at least double within five years. It is understood that most governments will be liberal in their interpretation of what is considered "educational" and the way will be opened for foreign screening of the innumerable films made by the 550 American producers specializing in industrial and business films and 3,000 industrial firms with production facilities.

Currently only a small proportion of their films is distributed abroad but U.S. distributors of non-theatrical subjects already have begun to lay plans for the development of expanded sales. As is natural because of the language affinity and the advanced state of that country's own film industry, Britain is the first port of call.

Thus, Association Films, for example, which distributes films for such diverse organizations as U.S. Steel, Johnson and Johnson, American Airlines, UNICEF and several foreign clients, including Alitalia, the Italian Line, the German Federal Railroads and the German Tourist Information Office, recently reached a distribution agreement with Britain's Rank organization.

The agreement opens up 15 countries to American clients and negotiations are underway for a good many more, including Czechoslovakia.

Robert M. Finehout, vice president of Association Films, explained in an interview that undeveloped channels of distribution, prohibitive tariffs and disturbing red-tape are the major blocs to the expansion of foreign screenings of American films. The Rank agreement overcomes some of these difficulties, enabling Association clients to take advantage of the Rank distribution network and promotional activities.

Rank also undertakes to dub American films into a number of foreign languages. The inclusion of lip synchronized dialogue in a film rather than off-screen commentary makes it a more expensive proposition, however, suc drubbing costing up to \$2,000.

Mr. Finehout also indicated that Associa-

Mr. Finehout also indicated that Association has a Canadian subsidiary and films are distributed in Mexico under the sponsorship of the Mexican Ministry of Education. The Ministry, he added, provides mobile trucks which carry projection equipment to audiences around the country.

GOOD FUTURE SEEN

There's a good future for the growth of American films for international promotion purposes through educational organizations and directly to clients, Mr. Finehout said. But a good deal has to be done by the countries themselves to make distribution feasible.

He explained how the films made for his 225 cilents are distributed in the U.S. The greatest growth is through school class rooms where up to 70 per cent of the films are shown. We understimate the spending power and the eventual influence of the teenager, Mr. Finehout observed. "Teenagers represent an \$11 billion market now and it is moreover, important for our sponsors to reach them at a time when they are receptive to new ideas."

The remaining 30 per cent of the industrial film audience is caught through various professional societies, political action groups, national service organization and civic and

special interest groups.

Airport theaters are becoming increasingly important as outlets for travel sponsored

films. Also of great significance are commercial and educational television stations, which are offered the various sponsored films free of charge and make considerable use of them.

FEW ACCEPT FILMS

Mr. Finehout pointed out that the latter outlet is generally unknown overseas where many television stations are government owned and do not accept sponsored films. This, however, is changing slowly. Motion picture theaters, on the other hand, are more widely used for advertising in Europe and are, therefore, more receptive to sponsored films.

While most of the films produced are 16 mm, there has been an increasing trend to the use of 8 mm sound films for industrial training and as a direct sales device, Mr. Finehout said. They require less equipment to produce and projection equipment is compact and portable. These films are produced primarily by "in-house" production units.

The American method of distribution of

The American method of distribution of non-theatrical films, Mr. Finehout concluded, is one of the few ways a company's image or idea can reach both a mass audience and a highly selective audience with specialized interests.

Thomas W. Hope, who compiles the annual review of the audio-visual field for the Journal of the Society of Motion Picture and Television Engineers, points out that the whole industry is "running wild" this year.

SWING TO COLOR

He attributes the great expansion in production to non-theatrical films to the swing to color and the growing government interest in supporting educational films.

The government, he pointed out, is also concerned about the relatively low exports of these films abroad—estimated at some \$4 million last year—and is strongly behind the passage of the Beirut Convention, which was first drafted in 1948. At recent hearings on the Convention, he added, there was apparently unanimous support in government and business testimony for the provisions of the agreement.

Retirement of Lt. Gen. Charles B. Duff

EXTENSION OF REMARKS

HON. FRANK E. EVANS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. EVANS of Colorado. Mr. Speaker, on the last day of this month—July 1966—one of this Nation's distinguished military leaders will retire from active duty after 35 years of commissioned service. I refer to Lt. Gen. Charles B. Duff, a 1931 graduate of the U.S. Military Academy at West Point, who has commanded the U.S. Army Air Defense Command, with headquarters at Ent Air Force Base in Colorado Springs, Colo., since September 3, 1963. In an appropriate ceremony on August 1, at Fort Carson, Colo., he will hand over the responsibilities of that vital command to a West Point classmate, Lt. Gen. Robert Hackett.

Many of the gentlemen of this House, especially those who have served on the Committee on Appropriations and the Committee on Armed Services, will recall with pleasure, I am sure, those times when General Duff appeared before the committees to give expert testimony on Army financial matters.

Although I was not privileged to be a Member of this House and its committees at the time, my colleagues have kindly pointed out to me that they remember General Duff as a very cooperative witness, an expert in the usually tricky field of finance who had reduced typical financial terminology into language that could be understood by all members of the committees. Certainly his expert and understandable testimony assisted the Members of this House in performing the legislative functions incident to the Army's vital role in our national defense.

Among his many assignments in the Army, General Duff served for over 8 years in the Department of the Army budget and financial offices. Before becoming Comptroller of the Army in 1962 he served as Assistant Chief of the Estimates and Funding Division for the Army and later as director of the Army budget.

General Duff and his wife, the former Miss Sallie Edmondson of Anniston, Ala., plan to make their home in the Colorado Springs area following retirement. I am pleased that the Duffs will become permanent residents of Colorado's Third Congressional District.

National Airlines Strike

EXTENSION OF REMARKS

HON. JOHN JARMAN

OF ORLAHOMA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1966

Mr. JARMAN. Mr. Speaker, nothing is more certain to today's fast moving American public than the fact that a major transportation strike is both inconvenient and intolerable.

Our dependence on the airlines presently being struck has reached such proportions that even their temporary shutdown causes serious repercussions. Not only are the airlines themselves the only parties injured by this strike. We are now tightly bound together, in all parts of the country, by the air. We depend on it for freight, for business travel, and for the tourist trade. A strike against airlines, Mr. Speaker, is a strike against the public, for all the population is inconvenienced in some way.

Other employees of the airlines must be given leave, the hotel industry depending on convention and tourist traffic suffers, movers of air freight must turn to slower means of transportation or line up for the remaining facilities. Bus and train terminals became congested, and more and more people are forced onto our crowded urban highways.

Settlement of this strike at the earliest possible moment should be urged in a single coordinated demand by the public, the Congress, and the President, acting together in what has become an emergency situation to restore these vital air services.

The time has come also for the Congress to carefully review present emer-

gency strike legislation under the Taft-Hartley Act to consider whether revisions are necessary to assure that our urban and industrial society will never again be deprived of its essential transit links.

Captive Nations Week

EXTENSION OF REMARKS

HON, ROBERT E. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. SWEENEY. Mr. Speaker, the week of July 17-24 marks the eighth consecutive commemoration of what is known as Captive Nations Week. During this week, Americans will gather to manifest their concern for the plight of the freedom-loving people of the world who today find themselves the captives of aggressive totalitarian imperialists. Certainly Captive Nations Week stands as a reminder to all of us who enjoy the benefit of freedom and liberty that the long-range goal of self-determination and freedom is yet to be achieved by countless millions behind the Iron and Bamboo Curtains of the world.

Certainly those of us who have any historical appreciation of the world situation in Europe and in Asia understand that no amount of occupation by Communist puppet governmental leaders can still the burning desires of the freedomloving peoples of these enslaved lands. These peoples, no matter how long the term of their occupation by outside forces, still look to the United States of America as their hope for once again reclaiming their freedom and independence. Every intelligence report, every diplomatic contact confirms without doubt that there is strong aspiration for free, democratic, consitutional government in the occupied countries of Bulgaria, Czechoslovakia, Estonia, Latvia, Lithuania, Hungary, Poland, Rumania, and the area of the Ukraine.

Captive Nations Week gives us cause to pause and reflect upon the horrors of Communist enslavement that have been visited upon these peoples and to rededicate ourselves to the task of sympathetically pursuing ways and means of bringing these enslaved people their natural right of self-determination. Captive Nations Week is the week in which the United States of America should record for the world once again its long-range intention to work for the interests of the enslaved peoples of the world who suffer under the oppressive yoke of Communist occupation.

The liberation of these people, our fellow human beings of different national identities, creeds, and colors, should be the mission of this Republic for this Republic was born in a spirit of resistance and rebellion to tyrannical imperialism and it should piedge in the world forums to help all peoples in their difficult struggle for freedom and national independence.

Criminal Brutality

EXTENSION OF REMARKS

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. BRAY. Mr. Speaker, I can remember the day when the police, in the eyes of the public at large, from children playing cops and robbers to adults, were viewed as the "good guys" of American society and the criminals were the "bad I say "remember" intentionally; guvs." it seems more and more evident that this picture of the police as guardians of society and as symbols of law and order is being systematically destroyed. In many instances they are being deliberately and unfairly depicted as greater enemies of the American people than the criminals whom they are sworn to oppose and who purposely live outside the bounds of society.

This is truly appalling and the dam-

This is truly appalling and the damage it has done and can do to every individual and agency charged with the writing or enforcing of law cannot be measured. From the ill-considered policy of selective obedience to law, that is, obey only those laws which you as an individual choose to obey, we have progressed to the point where direct and vicious attacks are leveled at the instruments of law enforcement themselves.

I believe the following editorial from the July 11, 1966, Indianapolis Star makes an excellent point. "Police brutality" is a cry raised out of all proportion to its actual occurrence. "Criminal brutality" is the real threat to our society.

The editorial follows:

CRIMINAL BRUTALITY

Broadway columnist Walter Winchell issues the "police brutality" note that 478 New York policemen were shot, stabbed or otherwise injured making arrests last year.

Meanwhile, J. Edgar Hoover, director of the Federal Bureau of Investigation said, "We know there is a calculated and deliberate attempt by some groupe to inflame hostility against law enforcement by charging 'police brutality' without cause. To a large degree they have succeeded. The term is bandled about in all media of communication without serious consideration as to its true meaning or its harmful effect on a profession which is charged with enforcing the basic rules of civilized living."

The fact is that almost all charges of "police brutality" throughout the nation have proven to be groundless. What is not groundless is the overwheiming number of cases of criminal brutality against law-abiding citizens and law-enforcement groups responsible for defending the citizenry.

We wonder what the effect would be if every newspaper in the country published a daily box score under the headline "criminal brutality" where a list would be made of the innocent people beaten, robbed, mugged, assaulted, raped or battered in the previous 24 hours. Such a box score would probably elicit a terrible wall from that noisy minority that claims "there are no criminals, just sick, or alienated or disadvantaged people." These defenders of the criminal element would charge newspapers with trying to whip the law-abiding group into a frenzy against the

thugs. But it may well be that such a frenzy against thugs and bums is just what we need to reverse the rising tide of crime.

Bill To Create a National Commission on Reform of Federal Criminal Laws

EXTENSION OF REMARKS

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. McCLORY. Mr. Speaker, there is no one in this Chamber who does not realize the gravity of the crime problem. Directly or indirectly it affects all of us. Statistics released recently by the FBI show that in the first 3 months of 1966 there was a 6-percent increase in the number of crimes over the same period of last year. In the next 24 hours over 7,000 major crimes will be committed in the United States. The FBI estimates the total cost of such crimes to be over \$27 billion annually—or \$143 for every man, woman, and child throughout the Nation. Even more unfortunate is the fact that this rate appears to be ever increasing. Projections based upon present statistics indicate that by 1985 1 American in every 15 will be the victim of a major crime.

I am certainly not one to be smitten with "imaginary horribles"; however, the fact does remain that at this moment we are experiencing an unprecedented wave of lawlessness which should be dealt with now and not sometime in the future when the problem may be of uncontrollable magnitude. The present crime rate reflects a real need for updating many of our criminal laws. Problems of lawlessness, particularly organized crime, are crying for solution.

Despite the increase in nearly all types of crime, our Federal criminal laws have not undergone a major revision in 18 We, as legislators, have clearly not kept pace with the new horizons which are being discovered daily by psychologists, sociologists, criminologists, and penologists in the study of crime and its causes. It is sad, indeed, that our law enforcement agencies must struggle to maintain law and order, and our courts must attempt to dispense evenhanded justice with a Federal criminal code which needs modernization of language and remedies, and elimination of overlapping provisions. In addition, recent Supreme Court decisions relative to criminal safeguards demand a complete review by the Congress with a view toward revising certain fundamental concepts of the federal system of criminal justice.

Recently, I introduced several bills to strengthen the arm of law enforcement agencies in the investigation and prosecution of violations of our Federal criminal code. Also, I have joined with several of my colleagues in urging creation of a National Commission to study the existing laws and to recommend to Congress legislation which would improve our

present system of criminal law and procedure.

The Commission would be comprised of 12 members—3 appointed from the House of Representatives, 3 from the Senate, 3 from the Federal judiciary, and 3 from private life. In performing the work of the Commission, the Commissioners will have the assistance of an expert staff, headed by a Director who will act as reporter to the Commission. In addition, the Commission may hire experts in fields requiring special study.

The Commission will have the advice and counsel of an advisory committee, the members of which will be selected from such groups as: defense lawyers, legal aid attorneys, U.S. attorneys—that is, prosecutors—law professors, criminologists, penologists, and others who deal with criminal behavior and the applications of the Federal criminal law. Also the Commission may draw upon the experiences of several States which have revised their criminal codes in recent years.

The great strength in this bill is the fact that the advisory committee would be drawn from a community of men who know the criminal law best—men who live it from day to day. These are the men who develop new ideas and approaches to the law and who may utilize their wealth of talent and experience in producing recommendations for the Commission and ultimately for the Congress. This advisory committee is vital to the work of the committee—vital in the sense that it will be a life force and creative element behind the work of the Commission.

Mr. Speaker, I encourage all of my colleagues to study and support this measure. I deem it to be the next major step in our fight against crime and a first step toward preparing the best laws that can be written to curb the antisocial behavior of the criminal and to provide a full measure of justice for those who would transgress our Federal criminal laws.

Dr. Victor Umbricht, President of the Swiss Center, Speaks at Dedication Ceremonies

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. KUPFERMAN. Mr. Speaker, I had the honor of attending the dedication ceremonies for the Swiss Center on Thursday, June 23, 1966. Among others present were Prof. Friedrich T. Wahlen, former President of Switzerland; deputy mayor of New York City, Robert Price; the Swiss Ambassador to the United States, Felix Schnyder; the Consul General of Switzerland in New York, Dr. Hans Lacher; the General Manager of the Swiss Bank Corporation, H. Strasser; the president of the Fifth Avenue Association and also president of

Lord & Taylor, Mr. Melvin E. Dawley; the president of the Swiss Society of New York, Mr. Frank J. Weibel; and the president of the American Society for Friendship with Switzerland, Mr. T. F. Davies Haines.

At the dedication ceremonies, Dr. Victor Umbricht, president of the Swiss Center spoke of the origins and development of the center. I commend his address to my colleagues:

REMARKS OF DR. VICTOR UMBRICHT, PRESIDENT OF THE SWISS CENTER, AT DEDICATION CERE-MONIES, JUNE 23, 1966

Distinguished guests, friends.

Energy, imagination, and faith by a number of persons have not brought a long nourished hope to fruition—the dedication today of The Swiss Center.

It was at a dinner party in New York some 4 years back, that a working group was formed to bring reality the long-considered Swiss Center.

It is our pleasure to be here today—four years, many meetings, and a few glasses of wine later—to see this new landmark in the heart of Manhattan dedicated to mark the presence of Switzerland and provide information on all aspects of the country, its peoples and its economy.

Fourteen Swiss enterprises have joined together to establish this 11-story center at 608 Fifth Avenue, near another prestigious tourist attraction, Rockefeller Center.

Our new institution is designed to be a focal point from which to project and foster Swiss economic, cultural, touristic, and other interests in the United States.

In the course of history the Swiss have shown tolerance for one another and charity for others. Switzerland in one way is somewhat like New York, for it is a kind of melting pot. It is made up of 73 per cent German-Swiss, 21 per cent French-Swiss, five per cent Italian-Swiss and one per cent Romansh. This combination of people, speaking different languages, worshiping different religions, have survived as a nation for exactly 675 years . . which is longer than the Roman Empire lasted between Caesar and Theodosius.

I could go on and on dispelling the myths and discussing today's story of Switzerland, but what could be more symbolic of our country, its diverse interests and its contributions to the world, than the 14 Swiss-affiliated participants who made the Swiss Center a reality. These companies represent all aspects of the Swiss economic life. They are: Swiss Bank Corporations; Swiss Air Transport Company, Limited; Swiss National Tourist Office; Union Bank of Switzerland; CIBA Corporation; Gelgy Chemical Corporation; Accident and Casualty Insurance Company-Winterthur; Sandoz, Inc.; The Nestlé Company; Heberlein Patent Corporation; Banque Populaire Suisse; Machine Tool Works Oerlikon; Watchmakers of Switzerland; and Ebauches S.A.

It is clear that there is no Swiss type, and it is clear that the Swiss have a good case for presenting their country to the rest of the world. The Swiss influence has always been present throughout the world. There was the Swiss Louis Chevrolet, for whom an auto was named, Admiral Edward Walter Eberle, Chief of U.S. Naval Operations—of course—and Swiss-descended Walter Schirra who piloted the Gemini spacecraft when the first rendezvous in space was made. There are other contemporaries in the Swiss hall of fame including, architect Le Corbusier, sculptor Giacometti, painter Hans Erni, and writers Dürrenmatt and Frisch.

Today the Swiss Center can assist anyone seeking information, industrial, financial, touristic and other documentation. And if the answer they are looking for cannot be supplied on the premises, The Swiss Center

can suggest the best place to find it. The services also include several offices of the participating enterprises.

The Swiss Center has also been conceived as a gathering point for another key audience—the 25,000 or so people who make up the Swiss colony in the United States, a majority of whom live in the Greater New York area. Thousands of them hold double citizenship and are proud to call themselves both American and Swiss.

For the future I hope that facilities can be made available at the Swiss Center to open the doors for lectures, receptions, exhibits, dances and similar gatherings or to giving a chance ot self expression with a Helvetic accent. The sponsors would like to see the proceeds from the Center—as it develops—be turned to setting up a fund to support such activities and, in particular, to assist deserving young artists.

Before closing my remarks about the Swiss Center, I wish to pay a tribute to a man who is not with us today, but who played an important part in bringing it about—that is, Mr. Robert Goelet who owned the property at the time we leased it from him. Mr. Goelet died in Pebruary of this year, and so was unable to see the project of the Swiss Center, in which he took a genuine interest, brought to fruition. His executor, counsel and close personal friend, Mr. Sidney Davidson, is however sitting here with me on the dais, and I shall now ask him to convey our warm greetings to the members of Mr. Goelet's family and to tell them that we are thinking of Mr. Goelet on this occasion.

Ladies and Gentlemen, as you know, the

Ladies and Gentlemen, as you know, the invitations for today's luncheon were sent out jointly by the American Society for Friendsip with Switzerland and by the Board of Directors of the Swiss Center. I should like to thank the co-sponsors for today's event, the American Society for Friendship with Switzerland, and I would wish its President, Mr. T. F. Davies Haines, present here, to convey our thanks to his colleagues.

And so today the Star-Spangled banner and the simple standard with its white white cross on a field of red fly together at the Swiss Center symbolizing the friendly ties which Switzerland has always enjoyed with its sister democracy in the New World. It has been a distinct pleasure, and a great source of pride to be the first President of The Swiss Center and to participate in these historic ceremonies. Thank you.

Tom Leach Named Washington Correspondent for Chicago's American

EXTENSION OF REMARKS

HON. FRANK ANNUNZIO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. ANNUNZIO. Mr. Speaker, on July 11, Chicago's American carried the announcement that Mr. Tom Leach has been named Washington correspondent for this outstanding Chicago newspaper.

Mr. Leach, who started with Chicago's American as a copy boy at the age of 15, has been with the paper ever since. His appointment at the age of 28 to this important post in Washington is a real tribute to his journalistic abilities.

I want to congratulate Mr. Leach on his appointment as Washington correspondent for Chicago's American. He is a capable and experienced reporter, and I know he will serve in the best interests

of our great Chicago community and will do an outstanding job in keeping our community informed about events in Washington.

An informed citizenry, as we all know, is our best tool for maintaining a strong democracy.

The article follows:

Tom Leach Our New Washington Reporter Tom Leach, a staff member of Chicago's American for 13 years, has been named Washington correspondent for this newspaper.

Assigned to the county building for the last 3 years, Leach has developed friendships among political leaders, judges, lawyers, and financial and governmental experts.

Before assuming that post, Leach was a general assignment reporter, covering news of leaders at the municipal and state government levels.

ment levels.

His appointment to Washington at the age of 28 is a tribute to Leach's unusual experience in the 13 years he has been part of the American's staff. He was only 15 when he started with the American as a copy boy.

ATTENDED DE PAUL, N. U.

Leach attended Waller High school and worked as a copy boy at night. After Waller, he attended De Paul university and later Northwestern university.

Northwestern university.

Ten years ago, Thomas Richard Leach was sent out on his first story as a reporter. Since then he has covered a variety of stories, with the greatest emphasis being placed on governmental affairs.

grownmental affairs.

In announcing Leach's appointment, Luke
P. Carroli, managing editor of Chicago's
American, said:

"The promotion of Tom Leach to this key post is in line with our policy of promoting from within. This policy produces stability and high morale and is one of the reasons why Chicago's American is now the No. I evening paper in this city and the suburbs."

PRAISE FROM BOYLE

Chief Judge John S. Boyle of Circuit court said of Leach:

"Tom is one of the finest young reporters I have sver had the pleasure of meeting. He is alert, ambitious, and completely honest in his reporting.

"Leach's stories concerning the new judicial article and the new dvic center and the different dvisions of the court have been masterpleces. All of us in the county building are sorry to see him go, happy as we are for his advancement."

WED 2 YEARS AGO

In Washington he will have a chance to renew old friendships with Sen. DOUGLAS, Sen. DIRKSEN, and the congressmen from this area. In his new work, Leach will concentrate on "behind-the-scenes" stories.

Two years ago, Leach married the former Miss Lynn Hensley. Their first child, Susan Lynn Leach, was born July 2 in Columbus Memorial hospital.

Hopeful Signs in Asia

EXTENSION OF REMARKS

OF

HON. WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. MURPHY of Illinois. Mr. Speaker, with no scarcity of crises around the world, the Wichita Eagle remarks that positive and successful events often fail to get the attention they deserve.

has been the ouster of President Sukarno in Indonesia. The newspaper suggests this action by the Indonesian Peoples Consultative Congress means the Djakarta-Peking partnership has truly ended, the confrontation with Malaysia is over and communism has been outlawed from the land.

In Vietnam, the Wichita newspaper notes, the Mekong Delta is coming back into South Vietnamese hands.

Because these hopeful developments are worthy of attention, I would like to insert in the RECORD the editorial that appeared in the Wichita Eagle on July 7, 1966. The editorial follows:

A FEW HOPEFUL SIGNS BRIGHTEN PICTURE IN ASIA

There is no scarcity of crises in the world, and they dominate our thinking. And we tend to brood about our failures and frustrations as a nation. Consequently, the posi-tive and successful happenings often do not get the attention they deserve.

Something occurred this week which has to be judged a victory by Western standards. The government of Indonesia made official what hus been taking place for months—President Sukarno, the erratic and power-hungry president of Indonesia, is out. A more realistic and Western-oriented regime

Sukarno's authority has been steadily diminishing in recent weeks. Now the Peoples Consultative Congress has stripped him of his life presidency and authorized Lt. Gen. Suharto to form a new cabinet. Today Sukarno is truly nothing more than a figure-

Indonesia has been heading this direction ever since the abortive Communist coup of last fall. Now we can see how far the nation really has come. The Congress' action means that the Jarkarta-Peking partnership which Sukarno nourished is truly ended, that the explosive confrontation with Malaysia which Sukarno encouraged is over, and (the Indonesian government spelled it out) that communism, Marxism and Leninism are outlawed in the land which not long ago seemed

irrevocably leftist.

All this represents an almost incredibly bright spot in the dark world of interna-tional events. The prospects for peace in that region of the world are immeasurably So are the hopes for building an Indonesia to the free world's liking. In less than a year the tide has completely reversed.

We are in danger of overlooking bright spots in Viet Nam, too. While attention has been centered on fighting in the North, significant developments have been taking place in the far South. The current issue of U.S. News and World Report tells about them.

Eighteen months ago, the lush Mekong delta was all but lost. Now the South Vietnamese army, with a minimum of U.S. aid, has turned the tables on the Communists.

So far this year more than 2,500 Viet Cong erted to government forces. and a half ago, only 36 per cent of the delta population was under shaky government control. Now more than 55 per cent is, and another 20 per cent is under "clearance" to make it secure from Red terrorism. Civic make it secure from Red terrorism. Civic action, spearheaded by South Vietnamese "pacification" teams with U.S. advisers, is improving the lot of the villagers. The delta represents a real success story for our side. We need to realize the significance of these developments. When Indonesia reverses course, when the Mekong delta shows signs of being won, we must be doing something right.

One such encouraging development Arizonans Seek Support of Kin and Friends for Desecration of the Grand Canvon

> EXTENSION OF REMARKS OF

HON, HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. REUSS. Mr. Speaker, recently I have received a number of letters from Arizonans containing essentially same message: that the writer is a former resident of my State or congressional district, that since coming to Arizona he or she has discovered that it is a dry State and in need of water, that "many friends and relatives" from Wisconsin have visited the writer in Arizona or have been visited by him or her since the writer moved to Arizona, and that the writer now plans to write all these friends and relatives in Wisconsin to urge them to urge me to support the construction of two dams in the Grand Canyon. In addition, some of the letters point out that the writer and all the friends and relatives in Wisconsin will watch my vote with interest.

A substantial portion of the population of Arizona consists of recent migrants from other States. Between 1955 and 1960, for example, 6,928 Wisconsin residents moved to Arizona. The proponents of the unnecessary power dams in the Grand Canyon are showing real resourcefulness in employing some of these people in an effort to obtain passage of H.R. 4671.

But not even widespread ties of kinship and friendship will succeed in inducing Americans to accept a majorand unneeded-alteration of one of their great natural resources

Most Americans and most Members of Congress, I believe, are ready to help Arizona get the water it needs, but to insist that it do so without damming the Grand Canvon.

I include hereafter a letter typical of the correspondence I have received from a number of Arizonans.

I include also a more spontaneous letter in which a 16-year-old Texas youth compares the plan to flood the Grand Canyon—the Bridge and Marble Canyon dams would back up water in the Canyon for 132 of its 280 miles—to the destruction of the Alamo in Texas.

TEMPE, AREZ., July 3, 1966. Congressman Henry S. Reuss,

House Office Building, Washington, D.C.

DEAR CONGRESSMAN REUSS: Before moving to Arizona, I lived in the district you now represent in Congress. Many of the friends I left in Wis. have spoken well of you. I plan to write to them, as I am to you, urging support of the Colorado River Basin Project

legislation now pending.

Contrary to what the so-called preservationists say, the dams at Bridge Canyon and Marble Canyon will not "ruin" the Grand Canyon but will actually make much marvelous scenery accessible to millions of Americans.

Arizona and the whole Southwest desperately need this bill passed. The water supply situation is already a critical problem in this state, and threatens to become wors Assurance of more water in Arizona will benefit the economy of the entire country.

I am strongly urging my friends in Wisconsin to write you requesting that you vote for the Colorado River Project bill. I know that they, as well as I, will watch your vote with interest. Thank you.

Respectfully,
Mr. RUSSELL A. BENNETT.

LONGVIEW, TEX., July 12, 1966. My DEAR MR. REUSS: I am sixteen years old and will be a junior in high school.

Recently I read in our daily newspaper that the Interior Secretary has proposed a plan to flood the Grand Canyon and that you are fighting the project. What I would like to say is—please keep fighting! The Grand Canyon is a trademark of America. I think that to flood the Grand Canyon in Arizona would be like tearing down the Alamo here in Texas! We have that same problem of badly needed water here in Texas, but it's just in the Western part and our state officials are working out careful plans for the situation.

I haven't seen the Grand Canyon but the day that I do see it I would like to see it

Mr. Reuss I'm sure millions of other Americans are fighting with you but in a silent

Mr. Reuss please keep fighting. Sincerely.

WAYNE ADAMS.

Vietnam Poll Results Tabulated

EXTENSION OF REMARKS OF

HON. ROY H. McVICKER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr McVICKER. Mr. Speaker, I am including here the results of a poll I conducted in the Second Congressional District of Colorado. I would like to thank the more than 14,000 citizens who took the trouble to inform me of the views they have on the Vietnam war, for my poll was devoted entirely to that subject.

Mr. Speaker, one reason for devoting the entire questionnaire to the subject of Vietnam was that as I conducted a districtwide series of town meetings, I discovered that the war was of such vital interest to my constituents that I should delve deeper into their opinions, giving them a better individual opportunity to express their views on the subject.

One especially gratifying aspect of this questionnaire is that so many persons added comments elaborating their views on one or more of the questions of concern to them. Of those answering, 35.5 percent were Democrats, 30.2 percent Republicans, and 34.3 percent independents. I also intended the questionnaire to point up the complexity of the problem and the difficulty of our decisions. I think the questionnaire served that purpose.

Perhaps the most significant conclusion to be drawn from these answers is e

t

m

io ne or at

ct

ng

of

eir

of

g,

e-

he

ed

that a great majority of those answering felt that our nation has a vital interest in southeast Asia, that our Vietnam intervention was justified, and that we must resist Communist aggression with force if necessary. These conclusions must be tempered however, by the fact that recent political disturbances in Vietnam have created uneasiness and distress among many people.

Mr. Speaker, I take pride in representing one of the most educated, literate and informed constituencies in the Nation. I am certain that the views of the citizens of Colorado's Second Congressional District will be of particular interest to this House.

The results of my poll follow:

McVicker Vietnam survey compilation

	- 4	Percent	
	Yes	No	Responding to question
Do you think the United States should be involved in Vietnam?	78.4	21.6	9
Have we expanded the war in Vietnam more than was necessary? Do you think it is vital to the United States to save South Vietnam from a Communist takeover?	20. 0 80. 3	80. 0 19. 7	9
Does the United States have a vital interest in the future of southeast Asia?	87.5	11.5	- 8

Airline Strike

EXTENSION OF REMARKS

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr. LIPSCOMB. Mr. Speaker, the airline strike is causing great hardship to the Nation and a way must be found to bring it to a close. Action is needed now for the strike is having serious effects on hundreds of thousands of people in many vital areas of our economy.

All sections of the Nation are being affected and southern California is among those which is being especially hard hit.

I have received numerous telegrams and letters from residents of the district which I represent and other concerned persons telling of the hardship the strike is causing.

The board of directors of the Los Angeles Chamber of Commerce has issued a statement about the problem which I am submitting for the information of the Congress.

It is vital that action be taken now as called for by the Los Angeles Chamber of Commerce and many others in southern California and throughout the Nation to bring about an immediate settlement

I urge all-out effort toward this end by the President and the Congress.

The Los Angeles Chamber of Commerce urges the President of the United States and the Members of Congress to use promptly their best offices to restore full airline service and to insure a fair and equitable settlement of the airline strike.

Prolonged negotiations are still in progress between the International Association of Machinists and Eastern Air Lines, National Airlines, Northwest Airlines, Trans World Airlines and United Air Lines for a labor

The dispute between the International Association of Machinists and the five airlines

involved has grounded 60% of the domestic airlift in the United States.

On July 27, the Transport Workers Union will be free to strike American Airlines, which would shut down 80% of the nation's air service, and a month later this Union will be free to strike Pan American World Air-

ways.

Diversion of the international passengers normally carried by Northwest Orient Airlines and Trans World Airlines to foreign flag airlines increases the deficit of the United States international gold payments by \$1 million daily.

The daily loss in revenue to the Los Angeles International Airport in landing, parking and other fees exceeds \$10,000.00 during the current strike.

Continuance of the strike is crippling business travel, hotel, convention and resort business, the movement of perishable farm products, and is retarding military supply and military travel. Continuance of the strike is affecting the entire economy and commerce of the nation and Southern California particularly.

Its early termination is imperative. Therefore, we urgently request immediate action by the President of the United States and Members of the Congress.

Mr. Stanley Mace Barrett, Editor of Havre de Grace Record, Dies

EXTENSION OF REMARKS

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr. LONG of Maryland. Mr. Speaker, on June 21 the distinguished and able editor of the Havre de Grace Record, Mr. Stanley Mace Barrett, died at the Harford Memorial Hospital following a year of falling health. Although Mr. Barrett had been ill for the past year, he remained active in the publishing of the Record and was at his desk until Thursday preceding his death. In tribute to its editor, the Record met its regular Thursday deadline following Mr. Barrett's death, and honored Mr. Barrett with the following memorial editorial, which I quote in part:

At a time of deep and personal sadness, the Record reports the death of its Editorons who has guided the policies and editorials of this newspaper for more than forty years. The name of Stanley M. Barrett is synonymous with the very best traditions of the Fourth Estate in Havre de Grace and in Harford county.

To such a one as Stanley Barrett there was no call for retreat because of the burden of failing health. His newspaper was so much a part of his life that he gave all of the strength that was in him for as long as that strength lasted and that was until the very end.

Having attained the three score and ten years allotted man and adding nearly four more to that span, Mr. Barrett had, in his time, served his country in war and in peace, both in the Army and in civilian life. His memberships in many civic and service organizations attest to the interest he held in public affairs.

Stanley Barrett was one to welcome the newcomer to the City's life and to give help and encouragement to all. One thing is

certain, he was deeply and sincerely concerned with the welfare and best interests of his native home.

There was always something of the nostalgic within him and he took particular pleasure in reminiscing with old friends who stopped by the office for a chat. More often than not the talk would turn to baseball as it was played in the good old days or time spent at the American Can Company as a youth or just plain swimming in the Susquehanna on hot, sultry days. He (Mr. Barrett) liked nothing better than

He (Mr. Barrett) liked nothing better than to be in the middle of a lively political fray. But he was a quiet and gentle man, with the talent for writing about the important issues and encouraging those who sought elective office.

Leave Aid for GI's Should Be Provided

EXTENSION OF REMARKS

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. CHAMBERLAIN. Mr. Speaker, in testimony before a Special Armed Services Subcommittee, Brig. Gen. James D. Hittle, U.S. Marine Corps, retired, the director of national security and foreign affairs for the Veterans of Foreign Wars, has proposed that the Government pay the air transportation for servicemen on emergency leave, convalescent leave, and leave before going overseas and on returning from overseas.

turning from overseas.

Noting that in view of the fact that Job Corps trainees were paid Christmas leave expenses last year, General Hittle tellingly asserted that similar assistance can hardly be justifiably denied our fighting men. The State Journal, of Lansing, Mich., has found this latter proposal to be of merit and in an editorial on Thursday, June 16, entitled "Leave Aid for GI's Should Be Provided" recommends its passage into law.

I include this statement in the RECORD as it is deserving of the attention of my colleagues:

LEAVE AID FOR GI'S SHOULD BE PROVIDED

We agree with the retired Marine general who said in an appearance before a congressional committee this week that if the government could foot the bill for leave expenses for Job Corps trainees it should do the same for members of the nation's armed services.

Brig. Gen. James D. Hittle, a former resident of East Lansing who is now an official of the Veterans of Foreign Wars, proposed that the government pay for air transportation for servicemen on emergency leave, convalescent leaves and leaves before going overseas or on returning from overseas. Hittle made his proposal while testifying

Hittle made his proposal while testiflying at the opening of hearings by a House Armed Services subcommittee into the availability of commercial air transportation for military personnel on authorized leave.

of commercial air transportation for minitary personnel on authorized leave.

He told the committee the V.F.W. was not condemning or approving the decision that paid leave expenses be granted last Christmas to 14,000 Job Corps trainees.

But he said, "Whatever may be the justi-

But he said, "Whatever may be the justification for the Job Corps, those in the Job Corps are by no stretch of the imagination serving their country as well or at such cost of life and limb as those who wear the uniform of the U.S. fighting man.

An important point for congressmen to consider in connection with Gen. Hiller's testimony is that members of the military services are at their present posts because their government has ordered them there and these include the thousands who are engaged in active combat in Viet Nam.

When the G.I.'s are on authorized leaves the purposes listed by Hittle, we share his view that they should not be forced to use their own financial resources for transportation to and from their homes. We think this should be the case even though similar treatment were not accorded those in civilian roles in government programs.

No one is deserving of better treatment at the hands of their country than its military servicemen.

A government which spends billions on space and Great Society programs certainly should not object to the spending that would be necessary to put Gen. Hittle's proposal into effect.

Protection of Veterans Pensions

EXTENSION OF REMARKS

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

8

n

Mr. ST. ONGE. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of a state ment I submitted today to the House Committee on Veterans' Affairs on my bill H.R. 10557. The committee is currently holding hearings on legislation dealing with veterans' pensions.

My statement is as follows:

STATEMENT BY CONGRESSMAN WILLIAM L. St. ONGE TO THE COMMITTEE ON VETERANS' AF-FAIRS, U.S. HOUSE OF REPRESENTATIVES, JULY 19, 1966

Mr. Chairman and distinguished members of the Committee, I want to thank you for this opportunity to present my views on the bill now under consideration before your Committee, H.R. 10557, which seeks to amend title 58 of the United States Code to protect any veteran against a loss of pension as a result of enactment of the Social Security Amendments of 1965. As sponsor of this measure, I wish to express my deep grattude to all of you for scheduling these hearing:

The enactment of the Social Security Amendments of 1965 increased Social Security benefits by 7%. In the case of veterans who were receiving pensions, this increase was treated as an addition to their "income" by the Veterans' Administration for purposes of determining what pension would be paid. This increase in "income" has brought many veterans (an estimated 30,000) over the allowable income limit, at which point their pensions are either decreased or discontinued altogether. Each of the 30,000 veterans lost considerably more than they gained by the increases in Social Security benefits.

Just to give one among many examples in my district, I cite the following: A World War I veteran, who had previously received a pension of \$105 s month, ended up with a net loss of \$300 a year when his income was raised to over \$4,000 by an increase in his Social Security benefits which amounted to \$54 a year. Because of the small increase in Social Security benefits his pension was decreased by \$25 a month. In a case such as this, common to many veterans, a \$300 cut in a yearly income of barely \$2,000 could

mean a complete and drastic change in one's way of life. A change of this sort at an elderly age is not an easy chore. It can be avolded by the passage of this legislation.

Even though it is true that the 88th Congress authorized a 10% retirement income exclusion for pension purposes and the beneficiaries are receiving more pension in 1968 than they did in 1964, the fact remains that the pension rates for 1968 have been substantially reduced from those of 1965. The fact is that the increase over the 1964 rate resulted from a general increase in pension rates voted by the 88th Congress, and would have been received whether or not the Social Security increase had adversely affected veterans' pensions.

Also, the veterans who were not on the rolls in 1964 became entitled to one rate of pension

Also, the veterans who were not on the rolls in 1964 became entitled to one rate of pension in 1965 and then, a few months later, it was reduced substantially because of the receipts of a few extra dollars in Social Security payments. Surely, Congress did not intend to deprive these people of all or part of their VA benefits by increasing Social Security payments. These are people who have demonstrated their patriotism beyond the call of their duty as citizens; many have given their lives to their country, and have left widows and children.

On July 7, 1965, the Senate approved, without dissent, an amendment by Senator Mnles of Iowa, which would have prevented any cut-back in veterans' pension payments because of the 7% Social Security Increase. Senator Long, the manager of the Social Security Bill and majority member of the Senate Finance Committee, accepted the amendment after pointing out that there was no intention of having any harsh results by having any veterans deprived of any portion of their pension because of Social Security increases. The amendment went to conference, but unfortunately it was eliminated. This resulted in the situation which now exists, and which my bill, H.R. 10557, seeks to correct.

H.R. 10557 is not identical to the Miller amendment, but it will correct the same unjust condition. If enacted into law, it would eliminate from consideration as income (for purposes of determining eligibility for a pension paid by the Veterans Administration) the increases in monthly Social Security benefits paid to an individual by enactment of the Social Security Amendments of 1965.

The question regarding the effects of the Social Security Amendments of 1965 on veterans' pensions is: "Have you killed me with kindness?" For those directly involved, the increase in Social Security benefits would appear to be a cruel hoax, and the whole intent of the VA pension program and the new Social Security legislation would seem to be defeated. It was a mistake to have overlooked this flaw in the law passed at that time; this can be proven by the present situation. All of the members of this Committee have undoubtedly heard from their constituents regarding this matter. Many veterans are being hurt and will continue to be hurt if the situation is not corrected promptly. This is not a just way to treat sur veterans and widows of veterans who have served our country in every war and remained loval to our democratic ideals.

Mr. Chairman, I strongly urge you and the members of your Committee to approve the proposed bill, HR. 10557, so that those most deserving of aid will receive that to which they are entitled. The impoverished state of many of these people does not warrant any cuts in the low yearly income they receive now, and the intent of Congress was certainly not toward this end in the passage of the Social Security Amendments of 1965.

Jobs for Elderly

EXTENSION OF REMARKS

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1966

Mr. BRADEMAS. Mr. Speaker, medicare represents one of the most important advances ever made toward solving problems of the elderly.

But there are others, and perhaps none more pressing than the lack of employment opportunities.

Sargent Shriver Director of the Office of Economic Opportunity, recently asserted that America is dedicated to improving the lot of the senior citizens.

Sylvia Porter, the financial columnist, reports on just what is being done in an article carried by the Washington Evening Star. She tells about programs initiated by the new Administration on Aging, the Small Business Administration, Mr. Shriver's own agency, the National Council on the Aging, and the U.S. Employment Service.

We are making a good start, but vastly much more needs to be done, Miss Porter concludes

Because this is a challenge which will require increasing attention, I offer her column for the RECORD:

JOBS FOR ELDERLY—A TOKEN START (By Sylvia Porter)

"Across the land," declared antipoverty chief Sargent Shriver at a recent hearing by the Senate Special Committee on Aging, "the American people are thinking about the problems of aging. America cares, America is concerned, America is dedicated to improving the lot of its senior citizens."

Are we? If so, exactly what are we doing

Are we? If so, exactly what are we doing to relieve the poverty that now hits one in five of the elderly, the forced unemployment through mandatory retirement, the massive job discrimination because of age?

A new Administration on Aging has been created under the Older Americans Act of 1965. It is supposed to be working up "a coordinated program of services and opportunities for our older citizens."

The Small Business Administration is trying to draw up a "national roster of retired business and professional men and women" to provide faitering small businesses with specialized counseling in a variety of different fields.

The Office of Economic Opportunity has launched a "foster grandparents" project which employs older Americans to provide desperately-needed "tender loving care" to abandoned and underprivileged children in orphanages and other institutions. As one worker remarked: "It gives me something to get up for in the morning."

The OEO also is helping to finance "Operation Green Thumb," employing retired farmers to help beautify our rural roadsides and countryside. Says an OEO spokesman: "Communities all over the country are just beginning to draw up plans to help the elderly poor—and to request antipoverty funds."

The National Council on the Aging has been developing and distributing models for a variety of part-time and full-time job opportunities and employment services in communities where the elderly are con-

centrated. The work is mostly in community and household services. And the OEO has approved plans for several "comprehensive senior citizen service centers" which offer counseling, job-referral, health and legal services, educational and recreational opportunities.

opportunities.

The U.S. Employment Service has trained and hired 75 "older worker specialists" in six major U.S. cities who will interview and counsel elderly job applicants and attempt to develop new local job opportunities tailored to the specific needs and abilities of the elderly. This effort is due to be extended soon to 20 U.S. cities.

to 20 U.S. cities.

The USES has, in addition, launched two experimental projects to organize special part-time employment services primarily for elderly workers—and to tap the services of volunteers who can help pinpoint suitable part-time lobs.

We have made a "good beginning," in the words of the just-released report of the Senate Special Committee on Aging. But it is painfully obvious that every single effort to develop jobs for older Americans new under way is on an extremely limited scale. It is a "good"—but token—start.

Vitamins and Milk

EXTENSION OF REMARKS

HON. CLAIR CALLAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. CALLAN. Mr. Speaker, a proposal has been offered by the Federal Food and Drug Administration to be effective 180 days from June 18, 1966, in which certain foods are allowed to be vitamin fortified and others are not. Milk is one of those food products in which vitamin foritifying is not allowed.

There are several views on this proposal. A recent statement by J. Gordon Roberts, president of the Roberts Dairy Co. of Nebraska, effectively presents one side of the question. The Roberts Dairy Co. has been a leader in the dairy industry for several years. I wish to submit parts of Mr. Roberts' statement for inclusion in the Record:

Our company was the first in the nation successfully to introduce vitamin D into fresh milk. A few had tried, half-heartedly.

Not too many will undertake a project of this kind, and take the inevitable back-lash

Not too many will undertake a project of this kind, and take the inevitable back-lash of resistance to change. My own father told me that the American diet had been "perfected" with the advent of pasteurization, and cited authorities to prove it.

Prior to embarking upon this enterprise, however, we investigated the need for vitamin D. We found that an alarming percentage of children in low-income families were suffering from crippling rickets.

This was particularly true in the non-white elements of our society, most of whom at that time could not afford vitamin D by prescription. Nevertheless, we ware accused of trying to be medicine men rather than milk men. The majority of doctors, themselves, however, supported us. Otherwise the product just would not have sold, irrespective of any governmental action.

At that time, though, I became convinced that the only protection against pressure

groups in government within a democratic society is the right to tell the truth.

For pressure groups have always been active since the founding of the Republic, and apparently always will be. What such people might have done to vitamin D milk under the proposed regulation must be a moot question. But more about pressure groups later.

Today, rickets has disappeared almost completely from the American scene. But some of our finest athletes today might otherwise have been afflicted with twisted limbs. For our company successfully introduced vitamin D milk back in the early 30's, in the depth of the depression. Other companies of course later followed our lead.

Prior to the introduction of homogenized milk by Roberts Dairy, dairymen said that milk had always been and always would be sold on the basis of cream-line. And again we were accused of resorting to a gimmick, the nastiest of all words in nutritional jargon.

Actually, we were trying to make cows' milk as nearly like human milk as we could. We did not then, and do not now subscribe to the theory that cows' milk as it comes to the calf is an ideal food for human beings.

For example, the curd of unhomogenized cows' milk is the size of a wainut, suited to the four stomachs of a calf. The curd of homogenized milk is the size of a pea, and the curd of human milk is even much smaller.

Some people need milk with the milksugar removed, which is not being done very satisfactorily now. Many things need doing.

Although this may not be proved, it is our theory that as cows' milk may be made to approach human milk, human health may also improve. Such a goal may hardly be described to meet "special dietary need" according to the terms of proposed regulation.

So far as vitamin C is concerned, the amount of vitamin C is either cows' milk or human milk must depend upon the kind of food fed to the mother. At least one textbook comparison of maximum quantities of vitamin C, however, in human as compared to cows' milk, shows that human milk may be nearly eight times richer than cows' milk in this vitamin.

The well-documented fact that breast-fed babies have an advantage, ru the average, over babies fed any kind of cows' milk indicates beyond question that cows' milk may hardly be described as ideal. But spelling out the difference in terms of "special dietary need" might be difficult. For who knows the sum total of such needs as a basis for comparison?

At about the time we started investigating the addition of vitamin C and other micronutrients to milk, highly fortified "reducing" foods were coming into vogue.

foods were coming into vogue.

I asked myself, "Why should the benefits of vitamin fortification be limited to the

My experience with vitamin D milk made me feel that I might accomplish some good.

In a later conversation, a representative of the Boys' Clubs in Omaha described the deplorable teeth of many of his young charges from areas of economic disadvantage. I could not give away enough product to affect this problem materially, but I could help with the diet . . . and education as to need.

Our research indicated that many lowincome family groups eat very few fresh fruits.

And many members of low-income groups suffer from very had teeth. Yet, at the very least, vitamin C affects the problem of healthy teeth and gums through affecting general health. For vitamin C is "cement" in the body.

The need of elderly people, particularly those with fixed income, for a low-cost source

of vitamin C in milk should be too obvious for comment. Many such people practically live on milk because of bad dentures, for economic and other reasons.

To our knowledge, there is no evidence that vitamin C, even in very large quantities, may be harmful to health in any way. And hazard of vitamin C shortage for the very young and very old may be found described in a medical textbook.

Research demonstrates that vitamin C is extremely important in overcoming infections, through attacking some bacterial toxins, as well as bacteria themselves, and

conceivably some virus.

Outside of noticeably improving flavor, the value, if any, of protecting the milk itself through vitamins is not presently known. It may not ever be known if the fortification of milk with such a non-toxic, wholesome product as vitamin C may be prohibited. For indications are that vitamin C may feasibly afford added protection to the milk, itself.

The possible effect of vitamin C upon other vitamins in milk is not known either, but there is no indication that it may be detrimental. And according to a consumer survey, vitamin C does improve milk flavor, normally considered reason enough for artificial sweeteners with no nutritional advantage.

The following statement is supported by research as indicated:

"Some foreign substances, not normally a part of the human diet, may produce a slight or severe harmful effect. Yet the consumption of such foreign substances (medicines, for example) may provide benefits that offset by far any conceivable effect of an undesirable nature.

"So far as the consumption of products not normally a part of the dlet is concerned, vitamin C may tend to counteract possible ill effects. For example, for nearly thirty years it has been known that vitamin C may help prevent the toxicity, allergic reactions and shock caused by drugs.

"Such drugs as aspirin, the antihistamines, barbiturates, adrenaline, stilbestrol, estrogen, sulfonamides, ammonium chloride, thiouracil, thyroid, and atropine are considered to cause a continuous destruction of vitamin C as long as the drug is taken and sometimes for six weeks after it has been discontinued.

"The effect of even such presumably innocuous substances as fluorine, and excessive amounts of vitamins A and D may be minimized by vitamin C.

"Research indicates that smoking may tend to reduce the amount of vitamin C in the body. It seems reasonable that such would be the case, because such a pattern would be consistent with the general pattern here described.

"Moreover, the blood of persons with allergles shows an unusually small amount of vitamin C."

In researching sources of vitamin C, we were amazed to discover that many frozen fruit items contain little or no vitamin C

We discovered that we could supply for no more than two cents a quart very substantial fortification to milk, including vitamin C and iron, and other micro-nutrients, which might cost a low-income family from one to two dollars to obtain through fresh fruits or by prescription. Moreover, few low-income families consult a doctor about a diet as a means of preventing illness.

diet as a means of preventing illness.

It is our purpose to discuss specifically the virtues of vitamin C and iron, rather than B vitamins. In fact, it is not our purpose here to sell a specific product at all, but rather to present a principle.

In this connection, nevertheless, we believe that restriction with regard to B vitamins, too, should be based upon predictable damage to health, as demonstrated by scientific method, rather than upon unproved propositions. If dangerous, B vitamins,

should be sold by prescription only, rather than by economic stratification.

However, according to one writer, a complicating factor in fortifying diets with B vitamins without creating a damaging imbalance consists of regulation requiring that some B vitamins be sold by prescription and some sold without prescription. Whether accepted as completly correct or not, this observation points out that the total diet must be considered in any rational appraisal of public health.

or public health.

Today, prepared infant formulas provide additional B vitamins and niacin, as well as C and iron, much as does the fortified product we offer for sale. The need for this fortification in prepared formulas is recognized by the Federal Food and Drug Administration even in its recommendation with regard to new regulation.

Should such fortification at low cost be denied low-income families who must settle for cow's milk, such regulation may hardly be considered as other than class discrimination, whatever the justification.

There are at least three logical carriers of food fortification for wide usage: salt, flour, and milk. And milk is obviously the most suitable for wide utilization in the United States.

The carriage trade may presently buy fortified dietary food for adults in the form of "reducing" foods, almost without restriction, and with none suggested apparently. A "reducing" food is comparable to fortified milk, but sold at approximately \$1.25 a quart.

By our own examination, such products are by no means perfect, and it seems doubtful that any ever will be. At least, our own efforts to describe a "perfect" food—much less produce it—encounter some difficulty.

In any case, a company selling food for approximately \$1.25 a quart would, in its own interest, probably favor restriction upon any processor adding micro-nutrients at two cents per quart. So, little opposition may be expected from such companies against regulation in their own favor, even though the essential product difference here is one of verbal description rather than constituency.

Paradoxically, in proposing new regulations, the Federal Food and Drug Administration has offered a statement of intent which seemingly contradicts the declaration of adequacy of diet by definition, through recognizing the need for fortification to meet the requirements cited:

"The principle of the addition of specific nutrients to certain foods is endorsed, with defined limitations, for the purpose of maintaining good nutrition in all segments of the population at all economic levels . ."

Opinion Survey of Residents of Bergen County, N.J.

EXTENSION OF REMARKS

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. WIDNALL. Mr. Speaker, late last spring I polled the residents of Bergen County in my district on some of the issues currently facing Congress and the Nation.

Over 12,000 of my constituents in 28 communities responded to the survey, many of them sending along extensive comments with their cards. Students in 21 high schools in Bergen County used

this poll as an extension of their studies in history and government by reviewing background information on the issues, compiling the results of the adult survey, and polling themselves on the same questions. This project provided a unique educational experience for the students involved, as well as a valuable service to me, and I was pleased to receive many favorable comments from the schools which participated.

The results of this poll have been dis-

tributed to the press, and will be circulated among the adults and students in my district. I believe they would be of interest to my colleagues as well.

The results of both the adult poll and the student poll follow:

National Drum Corps Week

EXTENSION OF REMARKS OF

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr. ST. ONGE. Mr. Speaker, I am pleased to call attention to our observance of National Drum Corps Week, during the week of August 21 through 27, designated as such in honor of the 1 million teenagers in the United States who are a part of this colorful and decent activity.

On this occasion, I am very happy to join with my colleagues in Congress to show our respect and admiration for these fine young people and to extend my best wishes to them for their continued participation in this meaningful and wholesome activity. The description, "an expression of order, color, symmetry, and beauty," accurately portrays the wonderful marching and maneuvering, the bugling and drumming in which these drum corps units participate.

Certainly this activity deserves the seal of "Juvenile Decency," as a clean, interesting, and inspiring activity for our youth. Unfortunately, in this confused world, where youth is struggling to find a place for itself and an outlet for its zest and energy, many of our young people get off on the wrong trail and fail to find worthwhile activities, ending up as juvenile delinquents or in the world of

I am pleased to note the continued growth that this activity has experienced in the past few years, and hope that the numbers of our young people now par-ticipating multiply manifold in the future. National Drum Corps Week is aimed at bringing to the attention of the American people the importance of this youth activity, and serves as an encouragement to our youth and to the fine contribution they are making to our way of life. This movement deserves the cooperation and support of all Americans. The spirit fostered within these organizations adds to the spirit that makes this Nation the leader in today's world.

Milwaukee Journal Hails Nomination of Justice Thomas Fairchild to Seventh U.S. Circuit Court of Appeals

> EXTENSION OF REMARKS OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. REUSS. Mr. Speaker, in an editorial on July 6, the Milwaukee Journal endorsed enthusiastically President Johnson's nomination of Justice Thomas E. Fairchild of the Wisconsin Supreme Court to the Seventh United States Circuit Court of Appeals.

I concur fully in the Journal's view that he is the "preeminent nominee" for

the place on the circuit bench customarily filled by a Wisconsin man.

I include the editorial lauding the

I include the editorial lauding the qualifications of Justice Fairchild:

A PINE COURT CHOICE

President Johnson has seen that Justice Fairchild of the Wisconsin supreme court is indeed the preeminent nomine in this state for the federal circuit court of appeals in Chicago, in the seat customarily filled by a Wisconsin man.

In judicial career terms it is distinctly a promotion, even from a state's highest court where Fairchild was next in line to be chief justice. The federal circuit bench is the second highest in the land, with great power and prestige, overrulable only by the United States supreme court. The position has the added advantages of a \$33,000 annual salary for life and security against having to compete in elections.

The occasion for congratulations should not pass, however, without an embarrassing reminder that Wisconsin has persisted in treating Justice Fairchild shabbily in the matter of pay, through a defect in the constitution which the voters have twice refused to correct. This left him stuck with the lowest salary on the court through a 10 year term during which newer members received good sized and needed raises.

There will almost certainly be another opportunity to make this correction, perhaps as early as next April.

Doctors and Medicare Bills

EXTENSION OF REMARKS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1966

Mr. DINGELL. Mr. Speaker, as we enter a great new era of medical care for the elderly, it is disturbing to read that many doctors intend to bill their patients directly instead of the appropriate medicare agent.

This could work a real hardship on the poor. And as an editorial in the Washington Daily News points out, full payment of a substantial bill might be imnossible.

Dr. James Z. Appel, retiring president of the American Medical Association, has reminded doctors that their first concern must remain with the patient. Any other policy would invite hostility.

The editorial in the News says patients with the means to pay and wait for reimbursement could be asked to do so. But it warns that doctors will be making a great mistake if they insist on payment from those who can't really manage it.

I hope to emphasize this warning by placing the editorial in the RECORD: [From the Washington Daily News, June 27, 1988]

DOCTORS AND MEDICARE BILLS

It already is apparent, as the American Medical Association convention gets under way in Chicago, that many of the doctors hope to shed some of the paperwork involved in Medicare by billing patients directly.

This would mean the patient would have to fork over the whole of the bill and then seek reimbursement from Medicare.

For patients who really are poor, this could work a genuine hardship. If the doctor's fee

was of any size, full payment by the patient, even if prompt reimbursement were promised, might be impossible.

Under the law, the doctors have a choice. For instance, on a \$300 fee (nominal for a major operation) the patient in any event would have to pay the first \$50 plus 20 per cent of the balance or a total of \$100. Digging up the whole \$300 might be rough.

In his swan song as retiring president of the AMA Dr. James Z. Appel told the delegates their first concern, as always, must be with the patient, regardless of what they think about Medicare. He said any other policy would "invite hostility" from most people—and so it would.

Extra paperwork, admittedly, would be burdensome to a busy doctor. But it also lis burdensome to the patient, especially the elderly of scanty resources. Patients who can afford to pay a total fee and wait for reimbursement from the Government properly could be asked to do this; but the doctors will be making a great mistake if they insist on such a system for those who can't readily manage it.

GOP Defense Study Idea Is Timely

EXTENSION OF REMARKS

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. LIPSCOMB. Mr. Speaker, the Los Angeles Times on July 11, 1966, commented editorially on the proposal other minority members of the House Defense Appropriations Subcommittee and I have made for a blue-ribbon commission to study our national defense policy.

In expressing support for such a study, the Times said:

There is room for legitimate concern about America's long-range defense posture, and uneasiness on this score has been expressed by the Times on past occasions.

It stated that such a high-level study would be in the public interest.

The Los Angeles Times also on July 11 in an article by staff writer Ted Sell discusses various far-reaching and in-depth questions that have been raised concerning vital aspects of our defense planning policy. They are questions which give rise to the proposal for a commission on national defense policy.

Under leave to extend my remarks, I submit for inclusion in the RECORD the editorial and article:

GOP DEFENSE STUDY IDEA IS TIMELY

Republican members of the House defense appropriations subcommittee propose that a "blue ribbon commission" be created to study basic U.S. defense policies.

A resolution to this effect has been introduced by Rep. GLEN LIPSCOMB (R-Los Angeles), ranking Republican on the subcommittee.

There is room for legitimate concern about America's long-range defense posture, and uneasiness on this score has been expressed by the Times on past occasions.

A high-level study by a group of distinguished citizens, therefore, would indeed be in the public interest—provided it is not used as a vehicle for partisan politics, or for congressional attempts to "get" Defense Secretary Robert McNamara.

The GOP lawmakers are worried on several

In recent years, they say, weapons development and other defense decisions have been influenced more by a benevolent reading of Soviet intentions than by Red military capabilities.

The Republican critics see a reluctance by the Defense Department to move forward with development of a new manned bomber, an arti-missile defense system and military space vehicles—despite evidence that the Russians are "aggressively pursuing new developments."

LIPSCOMB and his colleagues are especially concerned about "the time frame of the 1970's"—whether defense policies of the past five years have failed to take adequate account of long-range security needs.

There is ample precedent for the proposed

There is ample precedent for the proposed Commission on National Defense Policy.

President Truman's Air Policy Commission, headed by Thomas K. Finletter, made recommendations in 1947 that laid the basis for today's awesome American air power.

Since members of the proposed new com-

Since members of the proposed new commission would be appointed by leaders on Capitol Hill, however, there would be a strong temptation to name a group which would support increased congressional prerogatives in the making of defense policy.

That is, or should be, a separate quarrel. What's needed is a high-level study group which would not owe any special loyalties either to the executive or legislative branches—but only to the security of this nation.

GOP FIGHTS MCNAMARA ON POLICY ASSUMPTIONS—NEW CRITICISM BY CONGRESS STUDY GROUP BASED ON ANALYSIS OF BASIC PHILOSOPHY

(By Ted Sell)

WASHINGTON.—Republican criticism of Robert S. McNamara is nothing new. In the past it has been directed at specific decisions. But now, perhaps with the idea of staking out an issue for the coming congressional elections, ranking House Republicans have mounted an assault in depth on the basic McNamara philosophy.

They are now attempting to dissect the premises on which McNamara erected his defense policy and military force structure.

The new criticism, sponsored by Melvin R. Larin (Wis.), chairman of the House Republican Conference, and GLEMARD P. LIPSCOME (Calif.) and WILLIAM E. MINSHALL (Ohio), members of the House defense appropriations subcommittee, was contained in a lengthy statement delivered by Larin in the House.

POLITICAL BASE LAID

Laying a small political base for November campaigns against the Democratic administration—in the face of continued Republican protestations of general support for U.S. military policy as it relates at least to Vietnam—Lamp prefaced his presentation with the declaration:

"Obviously, if the secretary of defense did not accurately and adequately personify administration thinking in this vital area, he would not be secretary of defense."

From there, the GOP group went on to declare that McNamara's defense policies have been based on foreign policy assumptions which may be faulty.

In effect, the Republicans borrowed Mc-Namara's own technique, used in presenting his annual budget request to Congress.

POSTURE STATEMENT

McNamara precedes his request with a "posture statement" outlining in detail (more than 100 pages usually) the world situation as it relates to the United States. These statements are usually halled as masterful outlines of foreign policy, considered by many Washington observers to be superior to anything turned out by the State Department.

But what, ask the Republicans, if the foreign policy presentation is not accurate; what if its analysis of potential threats is incorrect?

"The defense structure of any nation," the GOP group declared, "is determined by that nation's foreign policy. The secretary of defense has said that the development of our defense structure should be guided by U.S. foreign policy.

"With this principle there is no disagree-

ate

"Yet we do disagree with much that is being done in the defense establishment today especially in those areas that directly affect our present ability (Vietnam) and our programme policy to deter potential policy to deter potential long-range

"It follows, then, that our basic disagree-ments derive in part from basic foreign policy assumptions of the current administration and in part from the assumptions the secretary of defense uses to justify his force structure projections."

CHANGES LISTED

The Republicans suggest that several changes have been made in foreign policy assumptions since the Democrats took over

These, the GOP group says, include: 1—A changed U.S. attitude toward the

cold war which has resulted in a different assessment of both the current and future threat to the United States.

-Because of this altered attitude, there has been a corresponding change of view about the desirability or necessity of pur-suing advanced weapons development as vigorously as possible (and by implication, as vigorously as did the preceding Republican administration, the advanced developments of which are still coming into operational while few weapons inaugurated under the Democratic post-1961 administration are yet seeing use).

-Also because of the changed attitude toward the cold war, there has been a shift in decisions on which defense planning

should receive priority.

ASSUMPTION HIT

Democratic defense policy, the GOP group says, results from an assumption that there has been a reduction in tension between the free world and the Communists, except for

This assumed reduction, the GOP charges, is based on two other assumptions about the Communists—that nuclear war is as unthinkable to them as to us; that the threat from them to the free world has been eased and that a U.S. attempt to maintain decisive superiority over the Communists might

reverse this process. McNamara's policy, according to the Re-publicans, has been to keep U.S. defense strong enough to meet visible Communist threats in the realm of potential Communist nuclear war and large enough to exert "crisis ontrol" in nonnuclear-war areas such as

Vietnam

The GOP study suggests that the assumption that U.S. efforts to push advanced and potentially decisive weapons development would result in increasing tensions has stultified research and production of weapons such as antiballistic missile missiles, manned interceptors and advanced manned bombers.

McNamara's effort to hold down defense costs leads him to push defenses, the study indicates, only against visible threats—those known to exist or solidly reported by intelligence sources as existing or potentially ex-isting.

But, the studies ask, what if not all the

threats are visible?

"We believe that our military force struc-ture," the GOP study says, "should not be related to the 'visible' threat but rather to the capabilities of the Communists and to

the fulfillment of our own national objec-

McNamara's policies, the group charges, amount to a "reactive" approach instead of an "initiative" one.

We believe that the strategy of response both with regard to crisis situations and with respect to weapons development should give way to a strategy of initiative. We would define a 'strategy of response' as one in which this nation permits a situation to become so serious that it must take extraordinary steps even to return to the status quo, and a strategy of initiative' as one in which this nation when it first sees the possibility of a situation developing will take steps to prevent its becoming a crisis situation either with respect to potential conflicts or to new advances in weapons development."

"Mr. McNamara," the report says at one "has committed himself and the United States as well to an essentially de-

fensive and reactive philosophy." This philosophy, according to the Republicans, may encourage China, the greater

threat Strong U.S. moves in the Atlantic Alliance as well as maintenance of nuclear forces there, the report says, apparently have convinced Russia that military moves against

Western Europe are not worth the risks. "The same situation does not pertain in

the Far East . . ," the report says.
"Piecemeal response" by the United States in Vietnam has only encouraged China, the GOP study suggests.

Continued Chinese success, without U.S. retaliation, may even encourage the So-viet Union in supporting similar wers of national liberation, in the GOP logic.

"In such a circumstance, American de-fense policymakers must ask themselves whether American conventional (i.e., non-nuclear) forces, no matter how mobile and how large, will in the end be sufficient to meet the variety of threats the Soviet and Chinese Communists doctrine of 'wars of national liberation' can create,'" the report declares.

From the philosophical basis, the Republican group proceeds to criticize McNamara decisions on specific defense programs.

Hanoi, Haiphong

EXTENSION OF REMARKS OF

HON. N. NEIMAN CRALEY, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 30, 1966

Mr. CRALEY. Mr. Speaker, the Christian Science Monitor printed an article from the Economist, published in London, concerning the recent decision to bomb the oil tanks near Hanoi and Haiphong. The article is an excellent summary of opinion from another part of the world as well as a full account of the ramifications of this bombing, the effects upon China and Russia, the response we can expect from each of these nations. I should like to include this article in the RECORD as I believe it a valuable and informative commentary on these aspects of our military actions in Vietnam:

HANOI, HAIPHONG

Most people in Britain will regret that the United States has found it necessary to bomb the oil tanks on the fringes of Hanol and Haiphong. It is a geographical extension of the war, though not in any real sense an escalation of the level of it; and it is bound to have killed a number of civilians.

Each new act of war, by either side, is something most people would prefer not to have happened. But for all that it was pre-mature of Mr. Wilson to dissociate himself from the American action before he was in a position to judge its effects. Other people will prefer to wait for the results and then make up their minds on the basis of Mr. Wilson's own support for the general American position in Vietnam. It is the Americans who have offered to talk without conditions. It is the North Vietnamese who have refused to talk. [The extension of the] bombing will probably not shift the leaders of North Vietnam out of this refusal any more than the original decision to start bombing the north 16 months ago did. So it does not serve a political purpose. But it may serve a military purpose; and it is against this test that it will be judged. . . .

The military argument for a strike against North Vietnam's oil storage tanks is that transport down the Ho Chi Minh trail has become increasingly mechanised and therefore dependent on oil. A diminution of traffic along the trail would be a considerable help to the American and South Vietnamese troops fighting in the south. Since the tanks in Hanoi and Haiphong are some way from the urban area (on the other side of the Red river, in Hanoi's case) it should have been possible, by accurate bombing and the risk of heavier American casualties that this entails, to keep down the loss of civilian life. This is the double test. If events show

that the operation has cut the flow of supplies to the south, and if photographs show that the bombing was reasonably accurate. there will be no cause for dissociation except on the part of those who would not mind a communist victory in Vietnam. If those two tests are met, the Americans will have been following exactly the same re-strained and relatively humane bombing policy as they followed in the second world when the British were burning cities.

The new American strike is unlikely to have much effect on the international aspects of the struggle in Vietnam. The Chiness will protest, and they may use the occasion to offer anti-aircraft units for the defence of Hanol and Haiphong. But China still probably wants to avoid a direct con-frontation with the United States. The North Vietnamese leaders are no more anxious than before to have a Chinese military presence around their capital; would probably prefer some more Russian missiles. Nor is it likely—so long as the new bombing does not amount to obliteration tactics à la Bomber Command—that it will be the straw that breaks the back of coexistence between Russia and America.

The Russians honestly detest what the Americans are doing in Vietnam. But their relations with the United States are built on a hard sub-stratum of self-interest that is unlikely to be eroded by anything less than the prospect of seeing a fellow communist state pass under non-communist control. The Americans have no designs on North Vietnam. Their maximum aim is to preserve the independence of South Vietnam.

The action against Hanol and Haiphong came after long deliberation. Even on [the eve of the bombing the State Department said no decision had been taken. It now remains to be seen whether it can produce the results expected from it in shortening the war. If it does, then it will have been worth while. Mr. Wilson's statement put the action in perspective. If there really is a difference between the British and American governments over this question it is a tactical difference. No more than when Mr. Attice flew to Washington during the Ko-rean war does it mean dissociation on Brit-ain's part from the objectives of American policy.—The Economist (London)

Captive Nations Week

EXTENSION OF REMARKS

HON. RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. McCARTHY. Mr. Speaker, this week marks the eighth annual observance of Captive Nations Week by the American people. It is a week dedicated to note the yearning for freedom and independence in the hearts of the peoples of Eastern Europe.

The bonds which unite us with these people are strong. But it is difficult for us in these United States to comprehend fully what it means to live without the basic freedoms that are so much an integral part of our way of life—freedom of speech, freedom of the press, freedom of assembly, freedom to worship as one pleases.

But I am convinced that the desire of man to be free will ultimately prove more powerful than brute force.

Ireland gives the world an example of a country that for 800 years never relinquished her zeal and determination to be free and independent. As a boy I well remember the many tales told to me by my late grandfather Charles McCarthy, a native of County Cork, Ireland, of those eight centuries of oppression. Although denied their religion, their language, their customs, their rights, these courageous people never lost the love of freedom of independence that their tenacity and determination finally won for them.

and determination finally won for them.

Freedom, indeed, is the wave of the future.

The peoples of Eastern Europe have not lost their spirit or yearning for freedom. In East Germany in 1953 and in Poland and Hungary in 1956, these courageous people dramatically showed the world their valiant determination to live under governments responsive to their needs and wishes.

And even more recently, we have learned of Rumania's attempts to introduce some flexibility in the tightly controlled eastern bloc and Warsaw Pact. In many of the other satellite states including Poland, Yugoslavia, Czechoslovakia, Bulgaria, and East Germany one can find signs of a deep yearning for peace, freedom and independence.

Just this week we learned of sharp differences between the Soviet Union and its satellites over fuel and raw materials. The Eastern European countries are convinced that the Soviet Union is charging them excessive prices for these goods. The Soviet Union has taken cognizance of this situation, and Soviet economist I. Dudinsky has even broadly suggested that the Eastern European countries would do well to begin looking toward Asia, Africa, and Latin America for much of their future increased raw material and fuel needs.

Czechoslovakia recently expressed its belief that it pays almost twice as much for Soviet oil as does Italy.

Some observers believe that this squabbling could forecast the eventual

end of the Communist economic bloc and perhaps even the dissolution of the Comecon.

Western sellers of raw materials and fuel may have new opportunities for sales to Eastern European countries on a scale never before considered possible.

There are many other indications that the United States and the other Western nations can assist the movement toward independence in the Eastern European countries by increased trade, cultural exchanges, tourism and moral encouragement. These, in my view, are the best ways for us to encourage the freedom and independence of the present Soviet satellites.

Knowledge Is To Use

EXTENSION OF REMARKS

HON. DANIEL J. RONAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. RONAN. Mr. Speaker, the Chicago Dally News finds good reasons for public support of President Johnson's call for a reexamination of priorities in medical research.

In instructing the Government's top medical men to conduct such a study, the newspaper says, the President was merely calling attention to the need for balance beween discovery and application in the science of life and health.

The President made this statement:

We must make sure that no life-giving discovery is locked up in our laboratory.

For this he may be assailed as antiintellectual or unscientific, the News says in an editorial. But it contends the American people who foot the multibillion-dollar research and development bills are not likely to find him at fault.

My colleagues may want to read the entire editorial, so I include it in the RECORD:

[From the Chicago Daily News, July 2, 1966] KNOWLEDGE IS TO USE

The President has instructed the government's top medical men to re-examine their priorities to determine whether too much energy is being spent on basic research and not enough on translating laboratory findings into tangible benefits for the American

The President was merely calling attention to the need for a sensible balance between discovery and application in the sciences of life and health. The disinterested quest for knowledge is one of the wellsprings of science and it can be muddied by short-sighted grubbing for immediate returns. But another wellspring of knowledge is the desire to put it to use and it can get clogged if not enough work is done to process and apply the new knowledge that accumulates at a compounding rate.

"Knowledge is power," Francis Bacon said. But knowledge and power do not exist in the abstract. Knowledge is what individuals know and power is what individuals and groups are able to employ. Is something "known" if it merely exists somewhere in a file and not in the ward or operating room or outpatient clinic where it is needed?

"We must make sure that no life-giving discovery is locked up in our laboratory,"

the President said. For this he may be assailed as being "anti-intellectual" or "unscientific" but the American people, who foot the \$16 billion research and development bills, are not likely to find him at fault.

Things Are Looking Up

EXTENSION OF REMARKS

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. CASEY. Mr. Speaker, the Houston Chronicle has surveyed the current world situation and found things are looking up almost everywhere.

And why?

The big answer to that question is the strong action this country is taking in Vietnam—

The newspaper says.

If the United States had not acted, the Chronicle contends, the Vietcong and North Vietnamese would have conquered the whole country. Laos would be under Red control. Cambodia would be a full-fledged vassal of Red China. Thailand would be under immediate threat, if not seriously infiltrated. India and Pakistan would be quaking in their boots. Indonesia might be under Red rule, and Malaysia conquered.

In this hemisphere, the newspaper credits our move in the Dominican Republic last year with an apparent abatement of the Communist threat.

There are still trouble spots, of course. But as the newspaper says in an editorial which I offer for the Record, they represent less danger than a few months or a year ago:

[From the Houston (Tex.) Chronicle, July 8, 1966]

THINGS ARE LOOKING UP

As one surveys the current world situation he cannot fail to note that things are looking up for the free world almost everywhere. The capacity of the communist giants, the

The capacity of the communist giants, the Soviet Union and Red China, to stir up trouble obviously has decreased due to serious internal problems and the strain upon their economies imposed by foreign expenditures.

The forces of freedom are making significant gains in the Viet Nam war.

While France has withdrawn from NATO, the other members are in a mood to solidity the alliance. And France no doubt would side with the West in a showdown, in or out of NATO.

Why are things looking better? The big answer to that question is the strong action this country is taking in Viet Nam. If anyone doubts that, let him consider what would have happened if the United States had not vastly increased its forces there and shifted from its advisory role to active prosecution of the war in partnership with the South Vietnamese.

By now, no doubt, the Viet Cong terrorists and the North Vietnamese invaders would have conquered the whole country. Laos also would be completely under Red control. Cambodia would be a full-fledged vassal of Red China if not entirely occupied by communist troops.

Thailand would be immediately threatened by now, if not seriously infiltrated. India and Pakistan would be quaking in their boots at the prospect of vassalage to Red China. Indonesia might be under Red rule and Malaysia conquered.

Instead, the enemy forces have been severely punished, Thailand is growing stronger and progress is being made against the Reds in Laos. Indonesia has turned

westward following failure of a Red coup and the massacre of most of its Communists. Our strong stand in Asia also has heartened our European allies, however much some of them publicly deplore it. Certainly if we had not stood fast there the Europeans would wonder whether they could depend upon us in a crisis.

It no doubt has contributed to Africa's relative stability of late, although there the major factor may be the failure of Russia and Red China to deliver on promised aid.

In our own hemisphere also the commu-

In our own hemisphere also the communist threat seems to be abating. Here again strong action by this nation must be given most of the credit, not so much in Viet Nam as in the Dominican Republic where a Red takeover was averted by prompt action several months ago.

eral months ago.

There are trouble spots, to be sure, but in general they present less danger than a few months or a year ago.

EXTENSION OF REMARKS

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. FRASER. Mr. Speaker, the National Association for the Advancement of Colored People has a long and distinguished history of working to secure equal rights for all men. Their concern has been not only for the Negro citizens of our own country, but for black men all over the world who have been denied their political rights.

At its recent convention in Los Angeles, the NAACP passed a resolution which voices concern over the situation in Rhodesia, where a minority government representing 5 percent of the people seeks permanent control over the rest of the country's population.

Mr. Speaker, several times I have stressed the danger of the Rhodesian situation and the need for vigorous action by the United States to deal with the problem. I am pleased to learn of the NAACP's statement on Rhodesia, and include it in the Record:

RHODESIA

By its initial declaration in support of Great Britain and its first steps to carry it out, our government recognized the gravity of the Rhodesian rebellion.

We believe those first steps were more symbolic than definitive. We believe, further, that the time is here for the imposition of any sanction within our power, short of intervention by the armed forces of the United States.

We urge an embargo on all trade with the rebel group which has seized the government of Rhodesia, including products and raw materials of every description. We urge specifically the shutting off of oil shipments and the enlistment in this project of the full cooperation of all companies and nations now engaged in the furnishing of oil to Rhodesia.

We believe, further, that there is precedent in both our past practice and in our national traditions and policies for lending assistance to nations which may feel impelled to launch military moves against the Rhodesian regime.

The whole world knows that the Rhodesian rebellion against Great Britain is based, without pretense or apology, upon the perpetuation of naked racism. The Rhodesian white minority of approximately five percent of the population has not only excluded the black ninety-five percent from any voice in government today, but had declared its intention to deny the black Rhodesians any voice "in our lifetime."

This deprivation, based openly and unilaterally on race, could precipitate a race war, whose consequences, if not its actual conflicts, would penetrate and poison every area of the world.

The black and brown peoples of the world have provided too much evidence of the falseness of the infiammatory doctrine of white supremacy to sit idly by while it is used as a spur to racist demagogues across the world and as a vehicle to oppressive power. Even under the handicaps inherited from a colonial system, the progress of the new African nations has already refuted the assumptions of Rhodesian racism.

Our country, the United States of America, can have no part in abetting the ugly business of racism. We must sever all economic as well as diplomatic relations with a regime of rebels—one dedicated not to the attainment of freedom from oppression, but to the imposition of the most rigid control, based upon the meanest and most fearful of grounds: the color of a man's skin.

National Association of State Universities and Land-Grant Colleges Believes Institutional Grants Essential To Meet Federal Responsibilities for Higher Education

EXTENSION OF REMARKS

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1966

Mr. REUSS. Mr. Speaker, on June 30, I included in the Recorp, information from three university faculty committee studies which confirmed findings of the Research and Technical Programs Subcommittee report on the conflicts between the Federal research programs and higher education.

In commenting on the statement, Dr. Christian K. Arnold, of the National Association of State Universities and Land-Grant Colleges, urges the replacement of the present project-grant system by a program of stable, predictable institutional grants, as a way of resolving these conflicts. He calls attention to a recent editorial by Mr. Dael Wolfle, publisher of Science, which raises the question of Federal responsibility for more stable support than universities now have through the project-grant system.

As an additional reason for reconsidering the present project-grant system, Dr. Arnold warns that growing commercialization in the submission of project applications threatens the integrity of the system. He points out that some uni-

versities now have Washington representatives to see to their research grant interests, and that a firm has even been established which offers to write up proposals for a fee.

There follows below the letter from Dr. Arnold, Mr. Wolfle's editorial, and an excerpt from the July 14, 1966, newsletter of the National Association of State Universities and Land-Grant Colleges:

NATIONAL ASSOCIATION OF STATE Universities & Land-Grant Colleges.

Washington, D.C., July 15, 1966. Hon. Henry S. Ravos, U.S. House of Representatives, 2159 Rayburn House Office Building, Washington, D.C.

DEAR MR. REUSS: We continue to be impressed with the impact that "Conflicts Between the Federal Research Programs and the Nation's Goals for Higher Education" has had and is having as an aid in clarifying basic issues relating to the Federal involvement in higher education. You are to be congratulated for inserting sections from the Yale, Berkeley, and Cornell studies in the June 30 Congressional Record as a further means of keeping alive the important issues raised in your report.

Here in the Association we become more and more convinced that a basic resolution of these conflicts cannot come about through an extension or modification of the project-grant system but can only be achieved through a program of starle, predictable institutional grants that provide a wide degree of flexibility in their use by institutions, Science publisher Dael Wolfle expressed much of our reasoning for this belief in an editorial entitled "Stable Federal Support" in the July 8 issue of Science. I am enclosing a copy in case you have not had an opportunity to see it. You might wish to consider inserting it in the Recoap.

Another reason involves the integrity of the project-grant system itself. That system, as you know, has served us remarkably well during the post-war years to provide stimulus and innovative force to research and education in the sciences at the colleges and universities. Applied to what are esentially support functions, however, it leads to a growing entrepreneurship that increasingly involves the utilization of commercial aid. This has already resulted in the growth of a cynicism about the system that could eventually erode its usefulness even for those situations for which it is well adapted. You might be interested in seeing the marked them in our most recent Circular Letter. A firm has been established that offers assistance in proposal writing at \$25 to \$100 per job.

These are among the reasons the Association has sponsored the Miller bill (H.R. 18786) to establish a National Institutional Grants program. A program of this sort is very much needed to fully resolve the conflicts that your report defined with such precision. We hope to be able to discuss it with you at some time when your schedule permits.

Sincerely,

CHRISTIAN K. ARNOLD.

[From Science, July 8, 1966] STABLE FEDERAL SUPPORT

Has the Federal Government acquired any responsibility for the continuing and general support of higher education in the United States? The answer may be debatable, but the amount of federal money going to institutions of higher education has reached a level that makes it necessary to consider the question.

Federal assistance provides research support, new equipment, building aid, library improvements, student assistance, and other forms of help to a college or university that can qualify. Other federal money flows to universities that assist federal agencies in meeting their obligations for training programs, demonstrations, assistance to other countries, and other services or action pro-

Despite important differences, the financing of all these activities comes in the form of individual grants or contracts that are made for specific purposes, for a limited period, without commitment for the future, and with some restrictions on use. Such funds have often had an emergency character and have been appropriated to meet meeds that were considered temporary. The result is that a university often includes a substantial number of independently planned and temporarily financed extensions or "subagencies" of a variety of federal agencies.

This kind of financing is in marked contrast with the reasonably stable funds that colleges and universities have traditionally counted on for most of their annual budgets. State appropriations, student fees, and income from endowment, in varying proportions, have provided the solid core of academic budgets. Although none of these sources has been fully guaranteed for the future, all have been sufficiently stable to permit long-term commitments and planning. Moreover, the nature of these sources

Income from fees and endowment can be used where needed most, and if not spent this year is available next. Many state colleges and universities receive lump-sum appropriations, and those states which require more detailed budgets usually allow appropriations to be used quite flexibly.

encouraged prudent use of the funds.

These more flexible funds now provide for about three-fourths of higher-sducation expenditures. The more inflexible federal grants and contracts supply about a quarter of the national total. The percentage varies greatly from one institution to another, however. In some it is close to zero; in others it is far more than half.

Higher education and the Federal Government have both benefited greatly from their financial and intellectual collaboration. The partnership will continue. But the amount of money now involved and its highly segmental character strain the ability of many institutions to pian and use their other resources most constructively, and these strains are most acute in the institutions that receive the most federal delians.

The question therefore arises: has the Federal Government acquired a responsibility for contributing to the continuing and general support of higher education? The institutional grant programs of some agonies indicate a limited acceptance of such responsibility. But no general policy decision has been made, and no very effective one can be made by individual agencies. Decision at a higher level will be necessary, and that decision will be difficult, for constitutional, religious, regional, and educational issues are all involved in a matter of national policy. This whole problem is likely to become more vexatious before it is settled.

-DARL WOLFLE.

[National Association of State Universities & Land-Grant Colleges, circular letter No. 20, July 14, 1966]

COLLEGE-UNIVERSITY WASHINGTON REPRESEN-TATION ATTACTS ATTENTION

Representation of interests of colleges and universities in Washington is the subject of an article in *The Reporter* for June 30, 1968, entitled "The University Lobbyists" and written by Mark Levy, who works for NBC News.

The article, generally superficial and frequently inaccurate, concentrates on representation of the interests of individual uni-

versities and colleges, university complexes, etc., by individuals stationed in Washington. The growth of commercial and semi-commercial organizations which represent institutions to the executive branch of government is touched on to some extent, as is that of associations of institutions. Leading commercial firm is Bell Educational Services, Inc., headed by Marjorie Bell, formerly Senior Counselor for Women's Affairs, Indiana University. Her firm is said to represent, on a retainer fee basis, about 20 colleges and universities Associated Colleges of the Midwest (10 liberal arts colleges) recently established a Washington office headed by Ida Wallace, formerly associated with Miss Bell. The New York Finger Lakes group is also represented by a former staff member of the U.S. Office of Education.

Recent additions to the field are Leo S. Tonkin and Associates, recently established by Mr. Tonkin and Pat Nugent, both formerly the staff of the District of Columbia's Advisory Council on Higher Education. cording to the Washington Post, Mr. Tonkin, a former Congressional aide, said his firm "help colleges keep tab on expanding federal education programs and cut through red tape to government grants and loans. Also new in the field are the Governmental Affairs Institute, which has announced the establishment under its wing of "Thiversity and College Associates" "as an aid to educa-tional institutions and agencies of the U.S. and other governments" to be headed by Dr. Edgar B. Cale as President (he will also be a Vice-President of the Governmental Affairs Institute). Dr Cale was previously engaged in development work for the University of Buffalo prior to its becoming a constituent university of the State University of New York, and subsequently with University of Pittsburgh.

Still another in the field is Robert L. Gale, formerly Vice-President (development) of Carleton College and more recently with the Peace Corps, who has opened a Washington office as "Gale Associates—specializing in consulting with government agencies."

Civil Rights Under Communist Rule

EXTENSION OF REMARKS

HON, TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. RONCALIO. Mr. Speaker, those of us who have long been in the fight for equal rights have been heartened by the progress made under such great civil rights leaders as the Honorable Thurgood Marshall. However, certain new leaders in the movement have shown signs of departing from the nonviolent policies of the past.

The use of the "Black Power" slogan is likely to do more harm than good to the civil rights cause. This vague term carries an unfavorable connotation, arouses fear of a new militancy, and sounds to some people like discrimination by blacks against whites.

I believe that an article in the July 15, 1966, issue of Time magazine will help provide a new perspective on the situation of the American Negro, and demonstrate to the militants that more is to be gained by pursuing the possibilities of peaceful change, where their predecessors were able to accomplish so much

The article points to the fact that, compared to Communist regimes, a democratic country is far more responsive to the demands of minority groups and is more willing to accept other groups into the society. This lesson is brought home by the experiences of those who defected to the side of the Chinese Communists. A comparison of the United States and China shows that avenues for peaceful change are open in this country and that progress has been made here.

This article is the story of a Negro who tried both communism and democracy and found that there is a better chance for equal opportunities under the latter system. This is reaffirmed by the great support which Negro soldiers have been giving to our effort in Vietnam, as I was able to witness them during a recent tour of that country. Many African students who studied in Moscow also found that the adoption of communism does not mean the abolition of inequalities but only makes it harder for disaffected groups to dissent.

Under unanimous consent I place this item in the Record, for, as a friend of those who are struggling to provide equal opportunities for all our people, I hope some of the present civil rights leaders will see the wisdom of revising their "Black Power" policy, which has only been eroding the support of their cause:

DEFECTORS

By mutual consent—
Communist China and the American defectors it wooed after the Korean War seem to have sadly disappointed each other. Of the 21 defectors, a dozen came back to the U.S., five took up residence in other parts of the world, and one died in China. Last week Clarence S. ("Skippy") Adams, 37, a slender Negro from Memphis who was captured in North Korea in late 1950, became the 18th turncoat to forsake the Communists. That leaves only two still in Red Chins, and Adams believes that one of them is about to leave. Said Adams, after arriving in San Francisco with his Chinese wife and their two children: "I think that they were as happy to get rid of me as I was to leave."
Constant Indoctrination. Thinks were not

Constant Indoctrination. Thinks were not always that way. A Tennessee boy who had never been out of the state until he joined the Army at 18, Adams, after his defection, went to People's University in Peking for two years and Wuhan University for five, learning Mandarin and other Chinese languages. He met and married Liu Lin-feng, a teacher of Russian and the daughter of a deceased war lord, was given a job as a translator for the Foreign Languages Press at about \$55 a month. He lived well by Chinese standards in a three-room apartment, had access to Western publications (including Time) because of his work. Despite constant indoctrination at every stage of his life in China, the great promise of China began to dim: "In China, the people are not free of mind. They don't dare conflict with the official view."

ti

h

Pita

ir

First, Adams discovered the emptiness of one of the promises that had lured him to China; racial equality. On two occasions, he got into scuffles over racial slurs. He also began to be stifled by the indoctrination and the joylesaness of Red Chinese life. "The Chinese have no sense of humor," says Adams. "When you go to the movies there, you don't go to be entertained; you go to study." Starved for recreation, he began visiting Peking's African embassies "to hear music, to dance and to talk freely." The Chinese did not like it, urged him to break off contact with the Africans. When he asked to leave China, they quickly agreed.

A Rest from Polemics. Eighteen months ago Adams taped two broadcasts urging Negro U.S. soldiers in Viet Nam to put down their arms and return home to fight for racial equality, but he insists that "I never considered myself a Communist" Now he wisely has little to say about the war except we have to find some way to solve it." After visiting his mother in Memphis, he hopes to get a job teaching Mandarin, lead "a quiet life" with his family. As for civil rights or antiwar demonstrations, he says that he wants no part of them. After more than 15 years with the Chinese Commun-ists, Clarence Adams feels that he needs a rest from polemics

Let's Have Some Lightning

EXTENSION OF REMARKS OW

HON, FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. BOW. Mr. Speaker, earlier today I met with a group of business and in-dustry leaders interested in Federal fiscal problems, at which time I made the following remarks:

LET'S HAVE SOME LIGHTNING

As much as some of us may disagree--with certain facets of his philosophy of Government, Chairman Fulbright of the Senate Foreign Relations Committee recently expressed some telling observations about our Federal system. I refer to his series of Christian Herter lectures at the Johns Hopkins University School of Advanced International Studies, during which he said:

"In a democracy, dissent is an act of faith. Like medicine, the test of its value is not its taste but its effects, not how it makes people feel at the moment, but how it inspires them

to act thereafter.

"Criticism, in short, is more than a rightit is an act of patriotism, a higher form of patriotism, I believe, than the familiar

rituals of national adulation

"It is only when Congress fails to chal-lenge the Executive, when the opposition lenge the Executive, when the opposition fails to oppose, when politicians join in spurious consensus behind controversial policies, that the campuses and streets and public squares of America are likely to become the forums of a direct and disorderly democracy . . .

To the Senator's conclusions I would add that when an enlightened and intelligent public fails to demand from the Executive and the Congress a strict accounting of their stewardships, then our campuses and streets and public squares also are likely to become forums of a direct and disorderly democracy.

The 89th Congress not only has failed to challenge the Executive—it has given rubber-stamp approval to most of the administration's Great Society programs. Moreover, it has done so even though we are engaged in an extended and expensive hot war in Vietnam.

While the administration and Congress have been marching down the Great Society's primrose path, the general public has maintained an ominous and—to me—incomprehensible silence about the tremendous proliferation of Federal programs. This has resulted in greatly expanded Federal spending, the acceleration of Federal tax payments, a considerable amount of inflation, and the utilization of manipulative budget devices to support the fiction that Federal spending is nailer than it really is.

THE ATTON TO CONTINUE

I ask you, "what does all of this add up to?" While you may disagree with me on would agree that the eventual outcome will progressively encompass all of the follow-

First, we shall continue to have price inflation, which may reach serious proportions in the months ahead. The demand for goods and services has continued to be robust.

I am told that manufacturers' backlogs of orders have increased substantially and steadily in recent weeks. An even more serious situation is the fact that the wait between ordering and delivery of goods is being extended with almost every order. Thus, it would seem to me that pressures on capacity to produce will remain critical for some time to come

Moreover, competition in the labor market for skilled help is also increasing steadily.
To the extent that industry is unable to hire competent workers, pressures on capacity will become more critical. So, we can certainly expect an unabated demand for goods and services which will result in price increases throughout the economy.

Second, we can expect a demand from the administration for a tax increase, which would be expected to ease the inflationary pressures that are at work in the economy and which would be used to finance con-tinuation of Great Society and other nondefense spending. Of course, the administration has not told me when we may expect a tax message, even though I sit in the President's meetings with the leadership in Congress. I would hazard the guess, though, that we can expect such a request no later than next January.

However, we could get it before the end

of this congressional session if the admin-istration concludes that such an increase would not become too much of a political liability in the November elections.

Third, if the Vietnam war continues and

there is further escalation of our war efforts and if the administration and Congress fail to exercise substantial restraint in the area nondefense spending, we may very well the administration's "voluntary guideposts" replaced by statutory wage and price controls, and I might add that except for a 1930's-type depression I cannot think of anything that would be more devastating to our economy than the statutory imposition of such controls.

In time of war, and make no mistake about it, we are at war, just as we were during World War II and Kores, no nation can afford to indulge itself in unbridled spending without running the risk of incur-ring irreparable damage to its economy.

And that is especially true in our free enterprise economy, which has made this the greatest Nation in recorded history. least, until this war is over, we desparately need to stop trying to be all things to all

APATHY AIDS SPENDERS

So, I think the time has some when we must have dissent and criticism and challenge of the Executive by Congress. But, the only way we can have adequate and wholesome dissent and criticism and challenge is when an aroused public demands as much from the Congres

Now, I did not come over here today to be purveyor of gloom and doom. And I did not come to give you a case of the jitters. And I did

But, I say to you with all of the sincerity and feeling that can come from a human heart, we must somehow and in some way arouse the public from its lethargic unconcern for the state of our Federal fiscal affairs.

Just 18 months ago the administration made a great to-do and for weeks the press reported in detail the administration's efforts to hold the budget below the level of \$100 billion. What was the result of that effort? I can tell you we are now well on the way to a \$200 billion budget and with little prospect for calling a halt unless business, responsible labor leaders and the general public rise up in righteous indignation over the squandering of our tax dollars.

ing or our tax dollars.
Together, George Mahon, as chairman of
the Appropriations Committee, and I, as
ranking minority member, have accomplished some modest gains this year for economy with our subcommittees-only to have our hopes bashed and our efforts overturned by either the full committee or the House.

Early this year, I initiated what is now known as the Bow expenditure limitation amendment. When applied, it would have administration's limited the spending in fiscal 1967 to 95 percent of what the President had proposed to spend in his January budget for items covered by a specific appropriation bill. You and I know full well that, except for defense, there isn't a single agency which could not absorb a 5 percent cut in spending without adverse effect upon its programs. But what was the outcome of my efforts—a resounding rejection.

After I tested the House and found no sentiment at all for effecting substantial reductions in requested new spending authority, I made repeated efforts and offered amendments which would have cut appropriations back only to the level requested by the President. These amendments were relected too.

Let me turn now to some individual items which to me, at least, point up the need for a concerted effort on behalf of economy at the Federal level.

Every time the second hand of your watch makes a full sweep, it has cost us \$28,000 just for servicing the public debt.

A few days ago Sargent Shriver, who heads

the Office of Economic Opportunity, acknowledged that the administration's war on poverty program is expected to cost upwards of \$40 billion in ten years. Almost two thousand years ago in the village of Bethany our said years ago in the vinage of Bethany our Lord said: ". . . the poor you shall have with you always." Certainly, we should do for those who are sick and in need and unable to do for themselves, but I am convinced that poverty cannot be abolished by legislative fiat and the indiscriminate and often purposeless distribution of Federal largesse.

At least in Tennessee, representatives of the Agriculture Department have mailed post cards to local farmers, urging them to lay down their hoes and sickles, sign up for the

cropland adjustment program and then go fishing—as their neighbors are doing. In ten short years, the budget for the Department of Health, Education, and Welfare has increased by five-fold from \$2.1 billion to \$10.4 billion and a leveling off of its budget still is not in prospect.

WAR GROWS MORE COSTLY

Our defense efforts in southeast Asia alone are now costing us \$2 billion a month. These costs certainly will increase sharply as our war efforts are intensified.

On July 11 Secretary of Defense McNamara held one of his "economy news conferences" at which he announced a 30 percent cutback in the planned rate of air munitions production. At that same conference he announced savings in fiscal 1966 of \$4.5 billion in defense costs. He also said that over the last

fense costs. He also said that over the last five years since July 1961, he has managed to save \$14 billion in defense.

Of course, Mr. McNamara is not doing any more in running a "tight ship" than would be expected of any good administrator, whether he be a businessman or a public employee. But, one thing the Secretary failed to mention were increased costs which he has incurred by the initiation of crash programs to meet our Vietnam war needs. There have been reported shortages of military clothing, materiel, bombs and small arms ammunition

and the Department has had to "rob Peter to pay Paul" with respect to some of our military needs.

I will be delighted if he can manage to see the Vietnam war through to its end without accumulating the \$12 billion surplus in supplies and equipment which were on hand t the end of Korea, but he has shaved our curity might close. He cannot substansecurity might close. He cannot substantiate a good many of his reported savings, but neither can anyone else disprove them because they fall in the area of intangible speculation on what defense would have cost, had he not followed his course of action for the last five years.

In the five and one-half years that Mr. McNamara has been the Secretary of Defense, he has spent \$256 billion for our defense and I cannot help but wonder why we were not fully prepared when the Vietnam war began.

The President has complained that Congress is increasing his budget for 1967 by more than \$3 billion. After he made that statement I challenged him to veto some on all of the bills that exceeded his requests. To date, he has not seen fit to accept the challenge, but he will still have opportunities to do so in the days ahead. President Eisenhower vetoed appropriation bills which exceeded his requests and President Johnson can and should do the same.

I have chided the administration for sending Postmaster General Larry O'Brien and his legislative liaison troops to the capitol to do battle on behalf of funding the rent supplement program and the national teacher corps, but then failing to send them to help those of us who have been trying to hold tho the budget down to the level proposed by the President.

DEMAND FOR ECONOMY

So far this year, including the defense appropriation bill which will be debated today, the House has considered \$97.9 billion of budget request for 1967. It has approved appropriations of \$905 million more than was requested. That \$905 million does not tell the whole story, however, because incre in spending authority, as contrasted to ap-propriations, and meaningless cuts in some bills have increased the actual total to \$1.2 billion above the budget.

The House still has a total of about \$17.5 billion of budget items to be acted on before the sessions ends. That amount does not include almost \$14 billion of permanent appropriations but it does include funds for foreign aid, public works, a variety of educa tion programs, the war on poverty, economic development and for a number of other programs. An opportunity still exists for Congress to effect some economies, but not much will be accomplished in that regard unless there is a demand from back home for economy.

If the demand for economy fails to maerialize, I will estimate now that this session of Congress, alone, will approve new appropriations of about \$145 billion. Of course, that \$145 billion includes the supplementals for fiscal 1966 and the regular bills for 1967, but it is a staggering amount. Moreover, it will come close to the all-time record total of \$147 billion which was provided in the second session of the 77th Congress during the thick of World War II.

gress during the thick of World war II.

Mark Twain once said: "Thunder is good,
thunder is impressive, but it is lightning
that does the work." I close with the admonition that concerned Americans will be monition that concerned Americans will be well advised to generate some lightning in Washington with respect to where and why the administration, with the acquiescence to Congress, is needlessly dissipating the pub-lic's hard-carned tax deliars.

War on Poverty

EXTENSION OF REMARKS OF

HON. RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr. McCARTHY. Mr. Speaker, I would like to call to the attention of my colleagues a recent three-part editorial review of the war on poverty in the Buffalo Evening News. I believe that these editorials fairly and justly review the gains and minuses of the war on poverty since the program's inception 21 months

The tone of the editorials stress the ideals and successes of the program while at the same time emphasizes that the flaws can be rectified through certain structural changes, a sharper definition of function and assignment, curbs on political instincts and continued research.

Under leave to extend my remarks, I insert into the RECORD these editorials for all to read in their entirety prior to the scheduled debate on the Economic Opportunity Act:

(From the Buffalo (N.Y.) Evening News, July 11, 1966]

TIME TO REFOCUS-WAR ON POVERTY-I

As the wealthiest nation on earth, the United States undertook in 1964 to accomplish something no other nation had ever come close to doing-the elimination of pov-

erty within its borders.

Fresident Johnson dubbed it a War on Poverty, and not too fancifully either, for a war of sorts is required to lick this ageless social problem.

The News has generally withheld judgment, even when scandals and other blemishes appeared, while this social war unfolded. It deserved a fair trial. Now, 21 months after its start and with Congress poised for a full-dress review, seems a good

time to offer some tentative appraisals.

What has anti-poverty really accomplished in its first 21 months? Is it on the right track? What of its chances for success? Will we look back upon it in later years as a pioneering success or misguided blunder?

Our judgments start with a generally favorable impression of the Buffalo-area anti-poverty programs. They appear to us to be developing productively and they so far have avoided any hint of the scandals

popping up in some other cities.

It is the national program, however, on which this review is mainly focused.

In our opinion, this national war on pov erty is still falling short of achieving objectives-yet not so far short as to blight its underlying idealism, or dim its chances of worthwhile success. And certainly we see nothing yet to justify an abandonment of the challenge.

The faults we do detect can be overcome but they are serious enough not be blinked

What is the true scope of the challenge? Sargent Shriver, director of the Office of Economic Opportunity, the national antipoverty agency, told a Senate subcommittee just a few days ago that 32 million Americans, or nearly one-sixth of our total population, live in poverty; that is, with urban

incomes below \$3100 a year or with rural incomes below \$2200.

So far the anti-poverty program has cost \$2.3 billion. It has "affected the lives" of 4 million Americans, according to Mr. Shriver's office, which claimed that by last March 1 it had helped 85,000 people find full-time jobs "in the private sector." To step up his war, Mr. Shriver wants \$1.75 billion—up 17%—for the fiscal year just beginning.

The approaching debate in Congress will

determine how much he'll get. Probably it will also mirror the confusion many feel about this poverty war.

Here are three general conclusions, or dis-tinctions, which in our view may help dis-pel this confusion and refocus on necessary improvements:

-Anti-poverty differs markedly from traditional welfare programs. In general they are passive; it is active. They merely guarantee the needy a minimum of food, clothing, shelter and medical care; it searches out the impoverished and their conditions in the hope of motivating and directing them toward productive, self-sufficient and rewarding lives.

2-The fight to crack the shell that hardens around the impoverished person consists of a three-step sequence—stimulating his desire to improve; harnessing that desire, through training, to a useful skill; and help-ing him find and hold a job.

-There is no time like a boom-timelike right now, that is-to wage this fight effectively.

Under recession conditions, with the national economy contracting, it would be hard even to conceive of making major headway against the hard core of poverty. But jobs now are plentiful, employers are willing to take more chances in their hiring, to devote more cost and effort to retraining and onthe-job training. People with only marginal skills can find useful work. Now is the time to press the anti-poverty war with utmost

[From the Buffalo (N.Y.) Evening News, July 12, 1966]

ITS FLAWS ARE FIXABLE-WAR ON POVERTY-II

The War on Poverty has probably churned more controversy per dollar spent than any other recent domestic program, which is why it is so hard to separate smoke from fire in seeking a balanced judgment.

Many of the countless anti-poverty disputes spring from the inexhaustible well of politics. Others flow from flaws of varying everity that mar the program itself.

A simple tightening of accounting procedures and administrative controls, for example, could quiet some critisism. In New York, Harlem's anti-poverty agency owes the federal government \$290,000 in withholding taxes it apparently either failed to deduct or somehow lost track of. In Chicago, 27% of the 23,800 children in last year's Operation Headstart came from ineligible families whose incomes exceeded the poverty level.

Such flaws seem inexcusable, but could be quickly rectified.

The now-famous requirement that local community action boards contain "maximum feasible participation" of representatives liv-ing in the target areas spawned a controversy both noisy and powerful—yet largely political. Big-city mayors rebelled furiously, fearing this precept might upset hallowed political-social arrangements.

The concept itself is vital, however, because it involves the poor and their reprecentatives in their own destiny.

Yet the anti-poverty program does contain serious flaws.

The institution is sometimes faultily structured. It often breeds inter-agency rivalry and confusion. This occurs because the responsibility for administration and for funding sometimes intermingles Sargent Shriver's Office of Economic Opportunity (OEO), the basic anti-poverty agency, with other federal departments.

The Neighborhood Youth Corps mixes

The Neighborhood Youth Corps mixes OEO and the Labor Department, for example, and the work-experience program is administered through the Department of Health, Education and Welfare.

A sharper definition of function and assignment would clarify such fuzziness.

Rep. Adam Clayton Powell, chairman of the House committee responsible for antipoverty, says only jobs, in the end, can eliminate poverty. He's right, of course, but jobs are the final step in an essential sequence of actions. Training must often precede the landing of s job. And before training, in many cases, must come an arousing of pride, hope and confidence. Something must stir the desire of the cynically hardened man or woman, numbed by fallure or the rebuffs of discrimination, even to undertake the training that leads to the job.

While the full process of regeneration spans all three steps in the sequence—motivation, training, and job-placement— and embraces several agencies, OEO itself should generally concentrate on the first step: stimulation.

Much of OEO's success to date reinforces this impression. VISTA, the domestic peace corps, sends talented people into rural areas and city slums to advise and encourage people. Its contact is person-to-person and it thrives. Headstart, which combines education, enrichment and health for preschoolers, achieved striking success. Already the nation's first povery research center has been created at the University of Wisconsin.

This sharpening of the focus to determine what functions belong where is essential. It will illuminate what should be discarded and what conserved to make more effective this profound campaign to sweep poverty off our national doorstep.

[From the Buffalo (N.Y.) Evening News, July 13, 1966]

CAN'T AFFORD TO LOSE IT-WAR ON POVERTY-

The United States can afford a costly crumade to wipe out poverty—even the \$1.75 billion sought for the next year. What it cannot afford is to let the scandals, boondoggling and slipshod administration that have scarred this crusade in the past get enough worse to discredit it.

f

g

n

d

y

It cannot afford, either, the luxury of putting off incisive changes where experience shows them necessary.

Nor can it afford the public-relations euphoria exemplified in Sargent Shriver's recent statement that poverty will be eliminated by 1976 to coincide with the 200th anniversary of the Declaration of Independence. Such wild over-optimism invites distillusion.

The war on poverty even under the best circumstances will be messy, misunderstood, occasionally maladministered, stubbornly opposed—and long.

America will have to work at this warlong and hard—for it to succeed. Fundamentally the task consists of a three-step atclon sequence: Understanding the nature of poverty and motivating a man or woman to improve; linking that desire through training to a useful skill, and proper jobplacement.

One reason for the snarled administration that has dogged the poverty war until now is that Mr. Shriver's Office of Economic Opportunity sometimes strays beyond its critical function of learning about poverty and stimulating the impoverished to break out of their past.

Nearly half the budget request, for example, concerns three job-focused programs:
Job Corps, Neighborhood Youth Corps and the work-experience venture. In our view, these should go to the Department of Labor to be administered under the Manpower Development and Training Act.

Further, a perceptive suggestion by Rep. Changes E. Goodell (R., Jamestown), that private industry be allowed to participate in the Neighborhood Youth Corps has real

While the Labor Department should do the job-training, OEO, with its concentration on motivation, should recruit, screen, counsel and assign people into these programs.

The distinction here is important, we think, between specific job-training programs and those primarily concerned with stimulation and enrichment—broadly education. It is the latter which should remain the direct responsibility of OEO—including VISTA. Headstart, the migrant programs, and community action. And in the local programs, the principle of maximum participation by representatives of the poor should be persistently applied.

Among other changes needed to make the war against poverty more effective:

1.—The special program for jobs in subprofessional fields, such as teacher and nurse aides, where an estimated 5.5 million vacancies exist, should be expanded. Medicare may even enlarge this job area.

2—Adequate funds for research should be provided, contrary to a house committee recommendation. It makes little sense to choke off well-informed analysis early in a battle no nation has yet won.

3—The Hatch Act, which curbs political activity by federal employes, should apply to all full-time OEO staffers. Poverty and politics shouldn't be allowed to mix.

4—A committee proposal to limit federally aided community-action salaries outside Washington to \$12,500 a year smacks of political expediency and timidity.

These moves to tighten the administration, refocus its institutional structure and curb its political instincts would improve the anti-poverty program, not cripple or decimate it. Since the GOP opposition in Congress, while critical of some details, supports the objectives, strong bipartisan support should exist for poetitive action.

The flaws are fixable and they should be corrected now, because this anti-poverty war cass do much to redeem the highest of American ideals—the respect for individual dignity and worth—if properly executed. It's a war we can't afford to lose.

The Importance of Social Science and the Need for Government Aid to Social Scientists and Liberal Arts Institutions

EXTENSION OF REMARKS

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. O'NEILL of Massachusetts. Mr. Speaker, we are all aware of the need for additional and continuing research in the scientific and technological fields. But too often the social sciences are ignored or slighted. This is a very dangerous state of affairs, for what good will it bring if we understand the chemical composition of the whole universe and fall to understand why or how men,

alone or in groups, react to the world about them.

The social sciences are concerned with men—with men in society. The range of the subject covers all the inhabited areas of the globe and is concerned with primitive, developing, and developed nations.

It is well understood that our foreign policy can only be successful if we know with whom we are dealing and understand their attitudes toward life. Our domestic policy will only be effective if we know how it will be received in all sections of our diverse country and by all of our people.

Prof. Alex Inkeles of the Department of Sociology at Harvard University is vitally concerned with the future of the social sciences in this country and with the relationship between the Government and the centers of learning throughout the country. Today he testified before the Subcommittee on Government Operations of the Senate and presented his views about the need for Government aid to the social sciences, aid from other than the existing agencies. This testimony is concise and persuasive. It has good reason to be so.

Professor Inkeles is Director of Studies on Social and Cultural Aspects of Development in the Center for International Affairs. He is an expert on the Soviet social system and is coauthor of "How the Soviet System Works" and "The Soviet Citizen." He has done research within and without the Government, studying the developed and the developing nations, and has worked with many other American and foreign scholars. He is eminently well qualified to discuss this matter.

Under unanimous permission I place Professor Inkeles' testimony in the Record at this point:

TESTIMONY PRESENTED TO U.S. SENATE SUB-COMMITTEE ON GOVERNMENT OPERATIONS, SENATOR FRED R. HABRIS, CHAIRMAN, BY ALEX INKELES, PROFESSOR OF SOCIOLOGY, HARVARD UNIVERSITY, JULY 19, 1966

The quality of the federal government's program for the development of the social sciences will be profoundly affected by its answer to three basic questions: (1) How shall we conceive the nature of social research and its purposes? (2) What do we believe to be the character and professional nature of social scientists and the professional social organization which provides the institutional framework for their efforts? and (3) What do we consider to be the appropriate form for relations between social science and other elements of society—its sponsors, its research subjects, its clients, and its audience?

SOCIAL RESEARCH AND ITS PURPOSES

Not only in the United State, but around the world, governments have had a hard struggle in coming to accept two simple facts about science—namely, that the greatest progress is made not by directing research to certain channels but by general investment in the scientific community according to its sense of where promising opportunities lie; and second, that a high level of investment in basic research is vital. Unless special care is exercised a kind of Gresham's Law operates, such that too much applied research can drive out virtually all basic research.

Many will question how far one can soundly identify social science with natural science. I for one feel that in respect to the issues of direction from outside and the

balance of basic to applied research, the two branches of science share a common condition. There is good reason, furthermore, to state that in the case of the social sciences the federal government has been particularly inclined to give support mainly to "directed" or "program" research, and mainly to applied as against basic research. research, and The growing sense of responsibility which the federal government has come to feel for correcting social conditions such as the extreme dependency of the aged, the poverty in many rural areas and the blight of our cities, commendable as it may be, has undoubtedly contributed to creating, maintaining, and strengthening the imbalance. Similarly, the growing awareness in federal agencies, especially those concerned with defense, that the intelligent conduct of our foreign relations requires the generation of large bodies of social science information undoubtedly contributed greatly to further draw us away from the ideal balance of emphasis. It would be a serious mistake. of course, to assume that the large programs "directed and applied" research never in any way contribute to "free and basic" There undoubtedly is a substantial spill-over or leakage from the former to the latter. There are serious reasons for asserting, however, that it is inappropriate and probably unproductive for our undirected and basic research to be funded so heavily on the basis of mere incidental spill-over from other sources.

THE ORGANIZATION OF SOCIAL SCIENCE

In the natural sciences many great profit making corporations have established large well equipped scientific laboratories. More recently some corporations have been established whose main rather than ancillary business is scientific research and subsequent development work. The federal government after World War II progressively established a large and imposing network of research fa-cilities of its own. Under the circumstances there is some reasonable element of rational choice in the allocation of research tasks in the natural sciences. When there is a practical job to be done along a particular line, the responsible government official may turn to any number of organizations especially equipped and eager to undertake the task. New programs of directed and applied research in the natural sciences may, therefore, be undertaken without deflecting the organizations and individuals engaged in basic research from their essential mission.

The situation is quite different in the social sciences. Other than a few well established agencies for the study of public opinion such as the Gallup organization, and to a limited degree the advertising research agencies, there exist almost no substantial commercial organizations effectively equipped to conduct social science research on a large scale. From some points of view this may be a good thing. But an inevitable consequence of this condition has been that the expanded government activity in social science research was exceptionally heavily concentrated in the universities, in which there were—or seemed to be—the necessary scientific talent as well as reserves of administrative energy. As a result the social science staffs of many universities have been flooded, some even overwhelmed, by the inflow of research demands from the federal government.

The consequences have certainly not been consistently positive. The initiative in the selection of the problems to be worked on has substantially passed from the hands of the social scientist himself to the agencies of the federal government in charge of the various research programs. Basic research has been crowded, sometimes crowded out, by the competition on the same campus created by the disparity in the levels of support for the different types of research.

Once involved in program and contract research, professors and research directors find themselvee obliged to meet deadlines and produce specified reports according to fixed schedules in a way any practicing scientist knows to be unreal and quite unrelated to the actual progress of living basic research. In order to meet fixed obligations, second rate personnel may be employed who would not ordinarily be invited to join university staffs. In extreme cases, a university may involve itself in large-scale programs which are planned, organized, staffed, and executed almost wholly without the direct participation of the regular faculty. This does not advance the progress of social science. Neither does it benefit the university, nor is it likely to get the taxpayer a fair return on his investment in social research.

ON THE RELATIONS OF SOCIAL SCIENCE TO OTHER

The social scientist is above all a profes sional. This means that in common with other professionals he is encouraged by the tradition of Western civilization to accept rather stringent and special rules of honorable professional conduct, rules usually established by his professional colleagues rather than by outside agencies. Among the rules governing professional conduct, that protecting the sources of information. and guaranteeing the subjects and clients the professional the most absolute integrity of treatment loom very large. Other important rules, or at least standards, commonly emphasized are that the professional should undertake no activity not in accord with the ethics and interests of his profession, and in the sciences this is generally understood to include the freest and fullest possible communication of all results and findings to one's professional colleagues. In the social sciences, furthermore, the fact that the subject of research is almost inthe fact variably another human being or a social organization creates especially sensitive is-It is generally understood that research will be done in a way as not to exploit the subject of the research. Although codes of ethics in the social science do not have a long history and are as yet not well institutionalized, many now under discussion stress that the subject or source of information be told as fully and frankly as possible the sources of support for the research and the objectives which it is meant to attain. The information he gives is supposed to be privileged, and it is a breach of the moral code if it is used against him.

When social scientists are doing research for the federal government, some of these principles become difficult to adhere to. If esearch conducted in the university is classified, this of course, means almost none of the professional code enumerated above can be followed. When the research involves work on foreign areas, conducted at the instigation of, or under contract or agreement with government agencies, there are also substantial pressures to depart from the norms. Most obviously, a government official will support only that research he believes will advance the interests of the United States as he defines them. Those may not be the interests of the country or people being studied—at least not in their view—even if the Americans involved are convinced other-Insofar as this becomes manifest, the social scientist is placed in conflict between the objectives of his sponsor and the selfdefined interests of his subjects. Interests aside, the research may deal with issues which, in the local setting, are very sensitive. In some cases the mere fact that the United States government, and in particular its defense agencies, are sponsoring the research, makes it ipso facto unacceptable to important segments of the population and in some cases to the foreign government likelf. This was

The more there is sensitivity over such issues, the more American social scientists are tempted to be less than frank in the disclosure of the sources of their support the ultimate purposes of their government sponsor, insofar as they know those purposes. When these breaches of trust are exposed, as they must inevitably be, trust is further impaired, suspicion is heightened, and future cooperation is rendered unlikely. this is the sense of frustration that many social scientists of other countries feel about the terms of exchange between themselves and the Americans with whom they deal. The money and power, and often the re-search skills and technology are overwhelm-ingly concentrated in the hands of the Americans, who are therefore in a position to determine, local people often say dictate, the terms of research exchange, including the definition of the problem to be studied, the methods to be adopted, the staff to be employed, the reports to be written. The crowning blow in the view of these non-American social scientists is that often they feel the American, with all this power, lacks familiarity with the local scene sufficient to permit him to design intelligently or to execute effectively research which is really relevant and germane to his host country. Although this happens less often and in less extreme forms than would be indicated by some of the tales one hears, it happens often enough to be quite embarrassing.

Taking into account the more general points made above, I would like to propose some guidelines for federal government support of social science research. These suggestions rest on certain assumptions which it is no doubt best to make explicit. I assume that:

A. The encouragement of increased knowledge about foreign areas and the support of the institutions which generate that knowledge is a legitimate concern of the federal government, not only because of its value to operating agencies but as well to the Congress and to the American people at large.

B. The current levels of basic and general information about foreign areas is inadequate. This has been, I believe, a major factor in the decision of operating agencies of the federal government, including the Defense Department, to fund large-scale programs of social science research. In large measure this research has not been done intra-murally but rather through extramural research, mainly by contract or grant to universities.

C. The peculiar political sensitivity of social research, especially in the context of international tensions such as those surrounding the armed conflict between India and Pakistan, and our intervention in the Dominican Republic, makes it inevitable that such research, conducted under the auspices of operating agencies such as State or De-fense, even if carried out by university social scientists, will be either unacceptable or will be viewed with hostility or at least great suspicion by governments, the people, and social scientists in other countries. As a result, the research efforts are rendered ineffective, and in the worst circumstances they may lead to international incidents such as surrounding Project Camelot. contributes to foster an image abroad of the United States as using its power in a ruthless and devious way to advance its purposes without respect to the interests and rights of other peoples and nations. It also contributes to develop the impression that social scientists are not really scientists, but rather are mainly agents or officials of government, and in the extreme case spies, posing as scholars to cover their real identity. The long term consequence in many foreign countries is to discredit, or at least to ren-der suspect, all social scientists from the United States, or indeed, from anywhere else.

D. Within universities in the United States the extreme dependency of the social scientists studying foreign areas on grants and contracts from operating agencies has created unfortunate conditions quite apart from the strained relations with their colleagues abroad. These conditions include lost autonomy in the selection of areas to be studied and problems chosen for research, restricted freedom for truly independent criticism of government policy, and limitations on the free exchange of information and experience with colleagues working in the same field.

E. I do not believe, as many do, that these conditions have come about primarily be-cause of extreme ineptness, political immaturity, or lack of respect for the academic community on the part of operating agen-cies of the federal government. There have been, and are now, numerous programs of social research supported by U.S. government agencies, including those on foreign areas and even some conducted abroad, which have been a contribution to social science and have not left behind a residue of misunderstanding. But on balance the results seem unfortunate, and the situation to be worsening. I believe the condition we now face results in good part from the basic pattern of support for social research on foreign areas which has been allowed to grow up spontaneously and without careful review for lack of a definite policy. It seems clear that the time for establishing such a policy has arrived.

In the light of these and other considerations which limits of time do not permit me to enumerate, I would like to present a series of proposals which I believe should guide our policy for support of foreign area research.

1. Federally supported hasic research into foreign areas should be substantially expanded to meet the imperative need for greater understanding of all parts of the world, but especially of the developing countries of Asia, Africa, and Latin America.

2. The channels through which both cur-

2. The channels through which both current support and any future increments are directed should be profoundly changed. Insofar as possible operating agencies of the United States Government, and especially those charged with formulating and implementing its foreign policy, notably the Defense and State Departments and the CIA, should not be used as channels for the financing of university based social science research in foreign areas. This restriction should apply especially in regard to basic research, fundamental fact gathering, and descriptive library and field research. As alternatives the following should be considered:

(a) The establishment of a high level and maximally independent national research institute which would itself undertake research on foreign areas and international affairs. It might be modelled after either the National Institute of Mental Health or the Brookings Institution. Because of the inherent political sensitivity of this area of work, however, I fear that any such governmental resolutions results to the content.

mental organization would be ill-starred.

(b) The budget of the National Science Foundation could be significantly augmented with funds especially earmarked for research on foreign areas. The Congress might also provide through this channel for the creation within the universities of semi-permanent centers for advanced study underwritten by grants sufficiently large and long term to permit the development of significant programs of research and publication. Only recently a series of regional research centers on problems of education were established on a comparable basis. If the Congress saw fit, this might be done on a matching or contributory basis similar to that used in creation of the federal highway system.

tion of the federal highway system.

(c) A separate and relatively independent fund granting agency might be created which would not itself do research but would rather have prime responsibility for fostering the growth, within universities and research

institutes, of our national capacity for basic research in foreign areas and international affairs. The National Science Foundation might serve as a model.

To adjust to the political sensitivity of foreign area research, which would apply even to a foundation on the lines of the NSF. it might be desirable to adopt a totally new pattern of federal support in this area. I propose the creation of a truly independent fund granting authority modelled after the University Grants Commission in Great Britain. Although created by and supported by the British government, the Grants Commission is not an agency of the government in the same sense as is the NSF. Its members are mainly distinguished scholars, but no longer actively connected with any university, thus assuring their impartiality in handling the claims of the universities for The Commission is assigned to block of funds by the Parliament, which it in turn then distributes to universities and to programs within them. The Grants Commission, rather than the government, decides on the allocation of funds as between different competing programs, and exercizes initiative in the fostering of new activities. Administrative controls and the accompanying bureaucratic apparatus are kept minimum because the accounting is done in accord with the custom of each university rather than according to centrally established and administered procedures. So-called "block" grants are spent entirely at the dis-cretion of the university which receives them. So-called "earmarked" funds are for the support of neglected areas, such as foreign re-search, but again the university rather than the government decides how to use money to best advance the purpose indi-cated. In addition the British system includes a number of so-called Research Councils which operate in various special fields of research These also are controlled by leading and highly experienced specialists in each field, who distribute to the university researchers the sums of money Parliament has allocated for various programs.

The new Commission or Authority on International Studies should receive a block grant from Congress, including sums now allocated to the research budgets of individual departments and operating agencies. In addition, funds in blocked currencies accumulated in foreign countries under PIA80 could be administered to support foreign area research both by social scientists from the United States and from the countries concerned. The Commission would presumably be composed of men of the highest distinction, intellectual eminence, and personal in-tegrity, whose knowledge and experience would give them particular competence to guide the allocation of resources for research on foreign areas and international relations. could then operate much as do the private philantropic foundations such as the Ford, the Carnegie and the Rockefeller Foundations. Direct application to it could be made by university scholars, but at the same time the Commission might take more direct action to foster the development of existing and of new research centers and to encourage study of neglected areas and problems. But it would not be bound by the policy of any administration nor the imperatives any given operating agency. It would rather seek to foster the fullest development of knowledge and competence for research on foreign areas as a truly national resource available not only to the administration, but also to the Congress and to the people.

The universities and the scholars within them would be given maximum opportunity based on their special professional competence, to decide how to invest their resources and to concentrate their energies, rather than having those decisions made primarily by government efficials in Washington. The result, I believe, would not only be

greater freedom and less bureaucracy, but a larger and superior flow of information and ideas concerning foreign areas and international relations.

Placing responsibility for the award of re search funds in a nongovernmental body guided by a distinguished and autonomous civilian commission would, in addition, free the government from the onus of responsibility for the behavior of researchers abroad, would free the researchers of the onus of being agents of the U.S. government when they confront scholars and officials of other countries. Furthermore, it would permit a reduction in the scope of authority of the newly constituted review board for foreign studies which now, in effect, passes on the propriety of research conducted not only by agencies of the federal government but also by university social scientists who are supported by such agencies. I consider it a most dubious practice, however, that the problems a social scientist selects and the countries in which he studies them should be chosen according to the considerations uppermost in the minds of a review board of the Department of State, rather than autonomously by the social scientist in accord with his sense of what it is important to know

3. Programs should be developed which permit social scientists from other nations to enjoy some degree of reciprocity in exchange for the cooperation they, their nations, and their governments extend to the scholars from the United States studying those areas.

This could be accomplished by permitting the new Grants Commission, the National Science Foundation, or whatever granting agency is finally selected by Congress to administer funds in this area, to make a cer-tain number of research and institution building grants, free of excessive restrictions, either directly to foreign social scientists or their universities. Alternatively, funds could be given to U.S. universities but earmarked for the explicit purpose of facilitating their entering into cooperative ar-rangements with social scientists and uni-versities in developing countries for the launching of joint research, as well as the exchange of research materials, students, and advanced scholars. There are numerous examples of outstanding success in such ventures, two known to me being the cooperation of Cornell University and the National University of Chile in the development of a program in regard to labor relations, and that between the Catholic University of Chile and the University of Chicago, to build the former's economics department, both programs, I believe, having been sponsored by the Agency for International Development. Such direct university to university cooperation is highly productive and minimally complicated administratively. It is most likely to generate a maximum of trust and good will which can be of great long term benefit to the foreign relations of the United States government

4. Even if all the measures proposed above were adopted, it would probably continue to be true that some direct grants and contracts linking the operating agencies to the universities would be necessary for the purposes of the government, and might be desired by the universities and their staffs. Where such programs, hopefully kept to a minimum, are undertaken, I would propose they be guided by the following provisions and considerations:

(a) Classified research on foreign areas should in no case be contracted to universities, but rather should be performed either in-service or by contract with commercial organizations.

Even more important, the government agencies should absolutely be forbidden to use university organizations, or the mames of colleges and universities, as cover operations especially abroad, for activities other than the announced and legitimate purpose To create such of foreign area research. cover operations is, in effect, to polson the wells from which we must hope to continue

to draw the substance of our future research.

(b) The government should reverse its tendency to rely so heavily on university researchers for doing routine descriptive studies. Although university personnel may be able to do them better, it is a poor use of a very scarce resource to tie up the more highly trained and specialized personnel at the universities in such projects. They should be done either in-service, or through contract with commercial research organizations.

This proposition, like that in 4a, assumes that in-service facilities for foreign area research should be greatly expanded. While I would acknowledge that currently there are not sufficient commercial agencies to satisfy the demand, my confidence in the enterprise of American private capital leads me to believe that with the announcement and letting of contracts commercial services would quickly expand to meet the need.

(c) Research on foreign areas supported by operating agencies should, wherever possible, be limited to work to be undertaken in the continental United States and its possessions. I consider it undesirable that American social scientists should do research abroad under the more or less direct auspices of the operating agencies, especially Defense, State and CIA. This consideration applies less strongly in the case of agencies such as Agriculture, and very much less in the case of research institutes such as the National Institutes of Health. Nevertheless, if all foreign research to be conducted by university scholars abroad came through an independent scientific foundation, rather than an operating agency, it would certainly help maintain distinctions now painfully blurred.

(d) To compensate the universities for the deflection of their limited resources into this more applied research, each such contract or grant should provide as a supplement a fixed ercentage to be given as unrestricted funds for support of facility development and basic research by the university. I would propose that a figure of 20% of the grant or contract would not be unreasonable as an initial goal

for this supplement.

To sum up, then, I believe the national interest requires that the federal government provide funds sufficient to support research on foreign areas and international relations commensurate with the growing complexity of world affairs and the deep involvement of the United States in the system of international politics. In my opinion the best way to generate knowledge concerning foreign areas is to encourage more and more intensive basic research by qualified scholars in universities and their affiliated research institutes and centers. Such centers will be most productive to the extent that we leave to the scholars themselves, on the basis of their professional competence, the decision as to which countries and problems should be most studied at any given time. The direct participation of the operating agencies the federal government in financing such research by contract or grant is not necessary, and is often prejudicial to the chances for acquiring the desired information and to its acceptance both at home and abroad. The Congress should, therefore, provide either through the National Science Foundation, or an especially created agency, for an increased flow of support for foreign research which the universities and the scholars in them will have the main responsibility for further development of the facilities and the research which will provide the nation the breadth and depth of knowledge about foreign areas which it requires in modern

Fairplay Versus Law and Order

EXTENSION OF REMARKS OF

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr. QUILLEN. Mr. Speaker, many of us and many of our constituents are gravely concerned over the recent ruling of the Supreme Court in regard to the questioning of suspects.

We all watch as the Chicago law enforcement officials do all that they can to protect the rights of the accused, yet we hear voices saying that the Chicago police should not have given out the name of the suspect, that they should not have termed the despicable deed the "crime of the century."

We cannot help but wonder whatever has happened to the idea of protecting innocent victims from those who would do such evil.

As all this controversy swirls around us, I would like to include here in the RECORD an article from the Mountain City, Tenn., Tomahawk, which discusses the Supreme Court's ruling:

[From the Mountain City (Tenn.) Tomahawk, July 13, 1966]

FAIR PLAY VERSUS LAW AND ORDER

The individual's right to fair play versus ociety's right to maintain law and order has been brought into sharp focus by a recent Supreme Court decision. Newsweek magazine states in a feature article that the Court's ruling . . . imposed sharp new limits on the police power to question suspects—a power lawmen claim is vital to convictions in four out of five criminal cases." rules provide, among other things, that after arrest police may not question a suspect until they have told him that he has a right to remain silent, that what he says may held against him and that he is entitled to have his lawyer with him in the interrogation room. It is almost certain that according to ethical practice and "good professional judgment" the lawyers will advise their clients not to answer. It appears to many law enforcement officers, and with some justification, that under these conditions it will be almost impossible to ever get a confession.

Chief Justice Earl Warren, expressing for the Court the bitterly contested five-to-four majority opinion, states that, "... the ... practice of incommunicado interrogation is at odds with one of our nation's most cherished principles—that the individual may not be compelled to incriminate himself." In his dissenting opinion, Justice Harlan stated that, "This doctrine . . . has no sanction, no sanction . . . It's obviously going to mean a gradual disappearance of confessions as a legitimate tool of law enforce-ment." Although, in general law enforce-Although, in general, law enforcement agencies across the country were ap-prehensive and critical of the Court's decision, opinions are sharply divided even among police officers and their closest allies, prosecuting attorneys.

Despite the Supreme Court's legal rhetoric and the debate which follows it, certain facts stand out. The rights of the accused have been further protected, but the problems of law enforcement have been vastly increased. This comes at a time when crime is increasing at a sharp rate—six times faster than popu-lation since 1956 and still growing. Last year, more than 2,600,000 serious crimes were reported in the United States.

But, as Newsweek observes, we are in a time of transition. There is developing a new approach, a renaissance in law enforcement procedures. Law enforcement has bethropic and government research agencies. The Ford Foundation alone, ". . . has poured more than \$5 million into police studies and education projects." There are such pro-posals as one for a "two-platoon police force" in which, "One group would handle matters requiring the sophisticated approach: social problems—like juvenile delinquency—and major investigations. The other group would do the manual labor: directing traffic, investigating accidents New ideas are being discussed relative to handling narcotics problems, alcoholics and homosexuals.

However, in the light of such developments as the Supreme Court's present ruling, some authorities feel that we may be moving too fast. Such laws may be too sophisticated to be applicable until our society has evolved to a little higher level than it has yet reached. Mr. C. D. DeLoach, assistant director of the FBI, has put it this way: ". . . to all those who continually clamor for more restrictions on law enforcement, I pose this question-Where will you turn for protection of your individual rights when you have totally destroyed the effectiveness of law enforce-This is a question that concerns every person in the nation. How will the new rules affect the rights of the individual, the morale and effectiveness of police officers, the orderliness of community life and the safety and security of every law-abiding citizen?

Monetary Deadlock: A Solution?

EXTENSION OF REMARKS OF

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. HANNA. Mr. Speaker, the recent meeting of the International Monetary Fund's Group of Ten has highlighted one of the major problems facing world trade and economic abundance—the instability in the present international monetary mechanism.

As my colleagues know I have been long concerned with the state of the gold exchange standard-our present international monetary system—and its effects on world trade, particularly the U.S. balance of payments. It seems apparent, given the pressure on the British pound, and the continued deficit in our international payments, that some definite reform of the present system is not only advisable but imperative.

Therefore, I was pleased to find a very informative and timely article in the July 10, 1966, issue of the Los Angeles Times regarding the recent talks between proponents of two alternate international monetary structures. In this article, the major architect of President de Gaulle's suggestions for world monetary reform, Mr. Jacques Rueff, discusses with Robert Triffin—the proponent of the Anglo-American Triffin plan for international monetary reform—the present condition of the world monetary struc-ture and various advantages and weaknesses of two alternate proposals to our present system.

I commend this article to my colleagues in the House, and if there is no objection I would like to insert it into the RECORD.

MONETARY DEADLOCK: A SOLUTION?

A week ago in Paris, two of the world's leading monetary experts met and talkeds Jacques Rueff of l'Academie Francaise whose theories have inspired President De Gaulle's doctrines, and Robert Triffin, a Yale professor and unofficial adviser to high members of the Johnson administration.

Their joint fear: economic catastrophe on the 1931 pattern. And cardinally they called for urgent action on breaking the world monetary deadlock.

Triffin and Rueff agreed on the following

propositions:

There is no present lack of assets, but an immediate and dangerous weakness of the international money system.

The Group of Ten has concentrated on the far-ranging problem of assets and neg-lected the search for remedies to this general fragility of the system.

3. Abandonment of the gold exchange standard in the future is vital.

4. Avoiding any massive liquidation of the dollar and the sterling balances is the first

condition to avoid catastrophe. Triffin and Rueff disagreed on the long-

term problems. The Rueff solution: reimbursing the bal-

ances through an increase in the price of gold.

The Triffin solution: consolidation of the debts inherited from the gold exchange standard without increasing the price of gold.

But both added a rider:

Triffin-If we do not agree on management of the fiduciary reserves, the re-evaluation of gold cannot be avoided.

Rueff--If we do not agree on the re-evaluation of the price of gold, together with the reimbursing of the dollar and the sterling balances, the Triffin solution is the only one

that could prevent a world catastrophe. Here, then, is how their talk went:

Rueff: Unless the international monetary system is reformed quickly, the world is threatened with serious disorder—not only monetary but also in the more serious economic and social areas.

Triffin: I agree absolutely. The most serios trouble spots at present are the recurrent crises of sterling and the dollar. A few years ago, an attack on one of these currenotes helped the other because the movement of capital went from London to New York or vice-versa. Today, a grave crisis in sterling automatically engenders a crisis for the dollar, as well as in other world currencies.

Rueff: This situation is the result of the use, over an extended period, of the gold ex-change standard, operating through, in fact, dollar and the pound sterling. the United States, for example, has a deficit, it pays dollars which are returned the same day to New York, where they are re-invested. The deficit therefore does not affect the supply of funds in New York; in this way the deficit can continue indefinitely. If this continues, we risk finding ourselves one day in a situation where banks refuse to increase their holdings of dollars and pounds.

Triffin: I agree entirely. Mr. Rueff has expresed, in a way to which I subscribe 99%, our two essential points of agreement. It is unhealthy to allow a country to obtain automatic financing of its deficits. And the element of instability which this entails in the long, even in the average, run is dangerous.

I would even say that we are already well into this situation. Even if America regains her balance, the sudden liquidation of past debts could trigger disturbances. Mr. Rueff was saying: this can happen any day. In fact, it happened last year. In 1965, the European countries, which until then had accumulated one to two billion dollars per year, liquidated inside 12 months more than billions of reserve currency and contwo verted it to gold. One notices mainly the French withdrawals, but one must underline that all the European countries—with the sole exception of Denmark—took part. France's share was less than 50%, the other countries shared over 50% among them. It is here that I underline with Mr. Rueff that we are in an extremely serious situation.

The present U.S. monetary position has been dominated by short-term capital movements. From 1951 to 1958 we received \$1.5 billion of short term assets each year. 1959, that is to say well after the reestablishment of confidence in European currencies, we received \$1.8 billion. In 1960, we had about \$2.3 billion of withdrawals—a turnaround from one year to the next of more that \$4 billion. Starting from 1960 to the end of 1964 we lost an average of \$1.5 billion a year of short term assets.

Up to the beginning of 1965, our problem was largely tied to the instability of the international monetary system—to the fact that more and more people are losing confidence in the stability of the dollar and were searching for other forms of invest-ment: gold, investments in securities, on the different markets, plus investments in land or other assets.

TWO REASONS FOR CHANGE

The situation changed in 1965 for two reasons: voluntary restrictions cut the U.S. capital deficit, yet these measures applied only to American residents. To finance their investments, companies tend to borrow the money they invest in Europe, probably \$1 billion this year. To face these new demands, Europeans need to repatriate some of their U.S. assets. As a result, we lose on the one side what we gain on the other. The export of assets continues, especially since the foreign assets in the U.S. amount to some \$57 billion.

The expansion of military operations in Vietnam has also contributed to the deterioration of our balance of payments, not only on external account but because of internal repercussions. The economic boom that accompanies the war in Vietnam has led to inflationary pressures, which in turn adversely affected the balance of payments to the extent of \$2 billion.

Anxiety may result from this—not only among speculators, but also on the part of central banks themselves—which may lead to some withdrawal of gold.

Rueff: Can one seriously base all the con-siderable weight of the international monetary system on the currency of two countries have constant balance of payments deficits? This situation is truly absurd. It could easily be dealt with through the sup-pression of the gold exchange standard which produced it.

Triffin: The situation is all the more serious since the only operational agreement reached by the Group of Ten is that any reform of the international system must depend on an equilibrium in the American balance of payments.

'FUNDAMENTAL MISTAKE'

Rueff: There is a fundamental mistake here. To wait for the deficit to disappear before introducing a reform is to remain in a vicious circle from which we must escape

The world has no lack of international liquidity: Both Mr. Triffin and I agree on this But the U.S. and the U.K. lack the

means to keep paying for their deficit.

For the time being the real problem is hidden. This is serious for it has allowed under the guise of general interest-operations whose unique purpose was to give the U.S. and England the means to pay for their deficits. All that has been done in the past five years, by raising quotas at the In-

ternational Monetary Fund, the general borrowing agreements, etc., are so many ways of extending real assistance to the U.S. and England. These two countries have been allowed to offset their deficits without cutting their gold and foreign exchange reserves. I consider that this has been an unforgiveable mistake.

Triffin: One of the solutions that looks essential to me is the reinforcement of the commitments inherited from the past. The first problem to resolve is to avoid the world monetary crisis that would be provoked by massive withdrawals of gold from the system.

Rueff: This leads to the second part of our analysis, namely the study of remedies.

Triffin: The work of the Group of Ten is almost at a complete dead end today, caught as they are between the anglo-American standpoint on the one hand and the French one on the other: The other countries ap-pear to be more or less divided between the two extremes. I do not think we should expect any agreement for another year or two except on two points, which Mr. Rueff and I would say are logically incompatible.

The first point is that we should not do anything until the balance of payments of the United States reaches its equilibrium. I trust that we both agree, on the contrary, that the U.S. deficit is a product of the international monetary system. It is absurd to argue that we must maintain a dangerous situation as long as the U.S. has not restored

a payments balance.

The second point on which the Ten have reached some agreement is that the new in-ternational monetary system should be mainly or almost exclusively run by a dozen countries—the very countries that have proved in the past that their money was healthy enough. This is again absurd. The list of the countries that form the Group Ten includes several whose financial policies in the past were not particularly healthy Even French policy, for a number of years, was not a model. Many countries today have strong doubts about American and British policies. It would be dangerous to insist on determining, on the basis of past experience, which are the wise and foolish policies.

Rueff: The best method for the Group of Ten is to define urgently their aims and -only thereafter could procedures be usefully discussed.

Triffin: The essential today is to protect oneself against immediate danger.

Rueff: The question now is not a return to the gold exchange standard. We already have it. The proof of it is that those countries that want to get some gold from the United States can easily get it. There is no question of introducing in any way a new system but only to get rid of the gold exchange standard which makes the present system inefficient and dangerous. People keep saying that I want to return to gold and gold alone. That is largely untrue.

The most rational solution, it seems to me, consists of admitting that although the price of gold was fixed in 1934 at \$35 an ounce by President Roosevelt, all the prices in the U.S. have doubled, leaving gold far behind. If we accept the hypothesis of a dou-bling of the price of gold—and I am not against a smaller increase if it appears sufficient—the gold reserves of the United States, now \$13.5 billion would be worth \$27 billion. Obviously, such an operation could not take place through the signing of an international agreement fixing a simultaneous increase of the price of gold in all countries which have convertible currencies.

This solution would, of course, give rise to difficult political and constitutional problems in the United States, where my proposal has been so strongly criticized. During my last visit to the U.S. I met an extremely important senator. He received me

roughly and declared: "I understand your policy. You want to take all our gold, double the price and so make an enormous profit at our expense." I replied: "Mr. Senator, exactly the reverse. I advise you to double the price of gold so long as you have some left and to give us only half of the weight that you persist in giving us now."

Triffin: I, too, condemn the gold exchange standard as it exists now. But I do not think that one could improve the system by going back to the pure gold standard. Monetary assets throughout the world depend on a country threatened by civil war, namely, the Union of South Africa, and on the U.S.S.R., which provides on average the two-thirds of the new gold reserves which go to central banks each year.

Speculation and private hoarding have absorbed more than the western production of gold. Moreover, the decision in 1934 by President Roosevelt did not mean another golden age. As early as 1935 these accumulations resumed, and a year or even six months after the devaluation of the dollar has been devalued it will maintain its value some time, and consequently it is more interesting to make a yearly 3 or 4 or 5% profit on international reserves than to keep them in the form of gold that will bring no interest.

WOULD GIVE NEW VIGOR

Since an increase in the price of gold largely overlooks the danger of another immediate devaluation, this means that an increase in the price of gold would give new vigor to the gold exchange standard that we both condemn. The effect of this measure would therefore be the reverse of what we hope for.

I believe that before any reevaluation of gold we must come to a world agreement on the clearing out of the currencies from the international reserve system, except for the necessary revolving funds. If we cannot reach an agreement, the value of gold will be re-established by itself as a result of a catastrophe. There will be an unplanned devaluation, which could be a tragic repetition of the thirties.

Ruef: I agree with Mr. Triffin when he say that doubling the price of gold could create a risk of inflation. This is why I insist we should at the same time repay both the dollar and the sterling balances. Even more, since we know that Great Britain is in a difficult position I propose that the countries which have gold stocks and no dollar and sterling balances to repay offer a twenty-year loan to Great Britain in order to repay the rest of the sterling balances.

Triffin: I myself have elaborated a precise plan to this effect. I believe, as much as Mr. Rueff does, that there is absolutely no need to plan for an increase of the total volume of the world's monetary reserves for another two or three years. But I think that we do not need to raise the price of gold.

AGREEMENT URGED

That is why I suggest an immediate agreement between the eight richest countries of the world, that is the U.S.A., Great Britain, Switzerland and the Common Market five—Belgium and Luxembourg, France, Germany, Italy and the Netherlands. These countries would have not to retain more than 15% of of their central-banks reserves in national currencies. The rest should be in gold. They would have not to provoke an international crisis by drawing too much gold in exchange of their sterling or dollars. And they would have to create an international organization within the I.M.F. or the I.B.R.

The organization would be a gold and currencies depot. Countries like Germany or Italy, the only ones who have considerable dollar surpluses, would be able to exchange these dollars against gold—a gold guarantee should be attached to these dollars—through the organization. The U.S.A. would have to supply the organization with no more than \$1.5 billion in gold to make the exchange possible. The consequence of this would be a complete elimination of dollars and sterling from central bank reserves.

Rueff: This is a very logical and sound project. Nevertheless, I believe it has no chance whatsoever of being accepted because of the discrimination it establishes between the eight countries and the others. As for the gold guarantee for dollars and sterling, it looks like a dangerous precedent; it would make it more difficult if not impossible in the future to free ourselves of the past.

Triffin: I know that these problems exist. In fact the other countries which owe money to the states will not try to convert their gold because it is a tradition with them.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents. Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not inter-fere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when resented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Remarks of Hon. John E. Fogarty, U.S. Representative, Second Congressional District of Rhode Island, at the Graduation Exercises of St. Mary's Academy, Bayview, June 10, 1966

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

REMARKS OF HON. JOHN E. FOGARTY, U.S. REPRESENTATIVE, SECOND CONGRESSIONAL DISTRICT OF RHODE ISLAND, AT THE GRADU-ATION EXERCISES OF ST. MARY'S ACADEMY, BAYVIEW, JUNE 10, 1966

I was not only honored but also sincerely grateful to Sister Marie Andre when I was asked to speak on this very happy occasion. It is an event to which all of us who are here have been looking forward, for this is a moment filled with the memories of growth and achievement as well as with great hopes and expectations for the future. And it is also a moment that provides us who have watched and shared in the growing up of the young ladies of the graduating class to express our thanks and appreciation to the good Sisters of Mercy.

I am sure that I speak not only for the parents and friends of the graduates, but for all of the people of Rhode Island when I say that the Sisters of Mercy make a contribution to the educational life of our State which can never be measured. For almost a century and a half, they have held a place of service to our youth which is unsurpassed, and their presence among us has been a blessing for generations.

Consequently, as we all join in congratuing the very lovely young ladies of the graduating class upon the completion of their high school years, I am sure that all of their happiness is shared by the Sisters, who together with parents and friends, have looked forward to this happy event. The graduates know, perhaps better than anyone, that their teachers at Bayview will always follow their progress through life with the same devoted personal interest which has marked their concern for their students during the past four years of school.

A graduation is not a time for long speeches. It is a time when the happy focus of attention should fall upon those who are graduating. And for the moment, I would like to address them and to speak of one of two things that seem to me to have an important bearing upon the future in which they will be called upon to make use of what they have learned at Bayview.

Now one of the things which must be very clear to every member of the graduating class is the simple fact that the world is changing at a rate that is unprecedented in all of history. It is hard for a person living in 1966 to imagine what the world was like in 1866, or even 1926. The musket used in the Civil War was not very different from the weapon that won the battle of Waterloo.

And the Civil War musket was not really much of an improvement over the hand fire-arms of the fifteenth century. A sailor of Roman times, who might have sailed on a ship that took St. Paul on his missionary journeys, would not have found it difficult to work on board many of the sailing ships that still dominated the seas less than a hundred years ago.

There is no parallel in history to compare with what has resulted from the invention of the steam engine, the modern smelting of metals, the telegraph, the introduction of electric power, the airplane, the electric valve and the release of atomic energy. Travel in space, once the subject of fiction, is a fact of our times. Plagues and diseases which wiped out whole populations in the past are seldom heard of in the present.

In my own years in Congress, it has been my good fortune to share in bringing government aid to medical research and if I had the time to tell you of the advances that have been made in the last few years, I am sure that you would see that the expression "the miracle of modern medicine" is no exaggeration. Even as I am speaking to you, the men of medical research are making great new breakthroughs in the fight against such scourges as cancer and heart disease.

Change is indeed the keynote of our times. Nations that lived for centuries in the backwash of history are today emerging as powers in the world. Asia, which once seemed so remote, is now very much a part of our daily lives. Civil rights, so long denied to many Americans, are today written firmly into the law of the land.

In the Church, too, there is moving the spirit symbolized by good Pope John and the Vatican Council. And today we see the sisters and the lay people taking roles of responsibility which were almost unheard of a generation ago.

Here at Bayview the students of the graduating class—all of you who are receiving your diplomas—you have been well prepared to live and work and grow in a world of change. You are well prepared for such a world, not only because you have been taught the things which will help you to understand the changes but also because you have been taught to understand that there are some things which will never change. You have learned of the eternal truths of faith and of the enduring principles of right living that are as true today as they were when God gave the Ten Commandments to Moses and the people of Israel in the desert.

I would, therefore, believe that no word of advice to the graduates could have more importance than this: Live happily and courageously with changing times and keep faith with the changeless truth that is in you.

That, I am sure, is the spirit of Catholic education today. And some of its leading exponents are religious sisters who, as teachers and administrators, are among the foremost pioneers in American education.

Because of the special role which they have as the bearers and guardians of growing human life, women have a unique role to play in the modern world. In an age of computers and machines of many kinda, women have a special sense of the importance of the personal, human values. And it is this sense of the personal that must be preserved and respected if we are not to become the victims of our own technical progress. Charity, regard for the individual, creativity, and the opportunity for each per-

son to develop his own abilities—these are all things which must never be brushed aside as unimportant or insignificant. On the contrary, they are vital to human survival. And only those who hold fast to the eternal values of faith and morality can bethe kind of women who will know how to preserve and promote these humane qualities.

In concluding my remarks to you today, I would like to say one final word about the progress which has been made in bringing equality of educational opportunity to all of our people. The series of legislative acts relating to education which have been passed since the National Defense Education Act have made the Federal government a real partner in American education at every level. And I believe that we have made real progress in doing this in such a way that aid has been made available not only to the public, but also to the private sectors of education.

This is a matter of the greatest importance, for it is privately supported schools, colleges, and universities which are the guarantee that our educational system will always have that variety which reflects our free society and is the major bulwark against the domination of education by the government.

education by the government.

I am, however, by no means satisfied that
we are yet doing all we can to assure true
freedom and equality for parents and students who choose to attend privately supported institutions.

There is, in my opinion, much to be said for the suggestion made by Dr. John D. Milett, the chancellor of the Ohio Board of Regents. Dr. Millet has recommended that the state should give tuition grants to college students whose parents have effective incomes of less than \$10,000. Certainly such a plan should be seriously considered, for it would serve to strengthen the role of those independent institutions upon which so much of the variety and freedom of American education depends.

On thing is perfectly clear: Education for every American to the fullest degree of his or her potentiality ought to be recognized a part of the American birthright. And we cannot achieve this goal and preserve the freedom and rich variety of our schools if we do not consistently make aid to the student a guiding principle of policy.

The members of this graduating class are taking their places in the long procession of young women who have gone out from Bayview—and hundreds of other fine schools like it—to make their contribution as Catholic women to the progress and infinite variety of life of a free America. Let us, therefore, not only thank God and His dedicated teachers for the work which they have done. Let us also firmly resolve that this good work of education for God and country will continue to grow and flourish in the years to come.

There has always been a need for the ideals of Christian womanhood to be exemplified in our nation. That need, and the opportunities for service that go with it, is ever more urgent in the rapidly changing world of the latter part of the twentieth century. As we share in the joy of this commencement day and in the happiness of the graduates, I am sure that in them we can see the symbols of a future that is bright with promise. And I know that all here will join me when I say that the future which belongs to them will be better because of the contributions which they will make to it.

Veterans' Pension Amendments

EXTENSION OF REMARKS

HON. BILLIE S. FARNUM

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. FARNUM. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statement which I presented to the House Committee on Veterans' Affairs under date of July 19, 1966, relative to a bill I introduced, H.R. 11886, which proposes to amend Public Law 664 of the 88th Congress:

VETERANS' PENSION AMENDMENTS

Mr. Chairman, I would like to thank the committee for allowing me to make a brief statement concerning a bill I have introduced, H.R. 11886, to amend the laws relating to pensions for veterans and their survivors.

A number of amendments to liberalize and improve the pension laws were enacted in 1964 under Public Law 88-664. Other deficiencies and injustices in these laws, however, remain in need of correction. The bill I am proposing would make several important corrections in this area of veterans' legislation, particularly with respect to the types of income that are included in applying the income limitations of the pension laws.

income limitations of the pension laws.

The bill provides, first, that the retirement income of a pensioner shall be excluded in computing his income for the purposes of the income limitations of the pension laws. This means that income received from social security, civil service retirement or a private pension plan could not, as it now may, be used to reduce the amount of veterans' pension or to completely disqualify him from receiving a pension.

The enactment of this provision would eliminate the possibility of another anomalous situation from arising such as arose last year when the enactment of a cash benefit increase by the Social Security Amendments of 1965 resulted in some 27,000 veterns and veterans' widows having their V.A. pensions reduced or cancelled.

Under existing law, 10 percent of a pensioner's retirement income is disregarded in determining his pension. This makes very little sense and adds complexity to the law. I believe that a total exclusion of such insome should be enacted.

I am aware that the Senate has passed H.R. 14347 with committee amendment to eliminate the 1965 Social Security increase and future increases as a determining factor in the amount of pension a veteran may receive. But does this take care of the situation when private, railroad retirement, or civil service retirement pensions increase their benefits? The enactment of my bill excluding retirement altogether would eliminate the possibility of such a similar situation from recurring.

The second amendment contained in the bill is intended to add simplicity and uniformity to provisions of the pension laws that are now overly complex and discriminatory. This amendment would allow the entire income of a veteran's spouse to be disregarded in determining his income. Under existing law there are two pension programs in operation. One of these is for those who were on the pension rolls prior to July 1, 1960. The other pension system, established by Public Law 86-211, is for those whose pensions were initiated since that date. Pensioners under the old pension system may elect, if they so wish, to come under the new sys-

tem. The rules that apply with regard to the income of a spouse are different under the two systems. All of such income la disregarded for those under the old system, while under the new system the law provides for the exclusion of all of the spouse's earned income, or \$1200 of her other income, whichever is the greater. This change in the bill would merely apply the same rule—the one that now applies to those under the old system—to all pensioners. This is not a great change in terms of dollars and cents, but it would improve the law by ridding it of its present confusing provisions.

The third section of the bill would similarly provide uniform treatment for those under the two pension systems. It would eliminate the "net worth" test which applies to pensioners under the new system but not to those under the older system. This test allows the V.A. to consider the total assets of a pensioner, not merely his income, in determining his eligibility for, or the amount of, his pension. The present "net worth" test should be abolished because it tends to pensiize veterans who have had the foresight and initiative to provide some savings or a home for themselves and favors those who have not.

The last section of the bill eliminates a

The last section of the bill eliminates a provision of the law that requires a veteran's pension to be reduced while he is a patient in a V.A. hospital. This is another provision that applies only to those under the new pension system. As with the two changes preceding it, this amendment would merely apply the same rule that now applies under the old pension system to all pensioners.

the old pension system to all pensioners.
Mr. Chairman, the veterans' pension rolls are made up predominantly of aged veterans and their widows. Monthly pension payments are small in relation to today's living costs, ranging from \$43 to \$100 a month for a veteran with no dependents and from \$27 to \$64 a month for a veteran's widow. These payments are circumscribed by stringent income limitations. The bill I am offering would grant a moderate amount of relief to those in need of pension assistance. I do not think it is too much to ask for them.

Hats Off to the Champ

EXTENSION OF REMARKS

HON. ROBERT E. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. SWEENEY. Mr. Speaker, one of the great joys in connection with my service as a Member of the 89th Congress has been the opportunity afforded me to develop a friendship with one of New York's greats. It has been my observation that men of the Empire State go to extraordinary extremes to lead the way in many fields. That great State has produced the John Pierpont Morgans in the field of finance, the Franklin Roosevelts in the field of government, the Babe Ruths and Lou Gehrigs in the field of sports, and Hugh Carey in the field of paternity.

Mr. Speaker, I cannot help but admire our colleague's excellence in the field of paternity and to reflect with awe when I learned today of the fact that he had become the father of his 14th child—9 boys, 5 girls—a magnificent record indeed.

In the field of paternity here in the House and perhaps someday in the Nation, he is truly our leader, and we are proud of his accomplishments.

I am sure all of us in the House join in extending warm congratulations to our gifted and most able colleague and his lovely and most capable wife on this happy occasion.

The Bigger Battle

EXTENSION OF REMARKS

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mr. WRIGHT. Mr. Speaker, we read and hear every day of progress in the ground and air fighting in Vietnam, but too infrequently do we have a chance to follow the progress that has been made behind the battlefront.

President Johnson has enumerated a number of gains in the field of agriculture, education, and health. The Dallas Morning News recounts them in an editorial which also quotes these remarks by the President:

We are now attacking with all of our strength the basic problems of illiteracy, poverty, disease. It is these problems that bring on the wars. We must continue to press this battle forward.

It is vital to wage war for the advancement of the entire population, the News asserts. And it says our recognition of this need and the fact we are doing something about it are among our major strengths—not only in Vietnam but in the underdeveloped nations.

I include this editorial in full in the RECORD:

THE BIGGER BATTLE

President Johnson's press conference at the LBJ Ranch revealed encouraging aspect of the war in Viet Nam. One of the most significant was the progress behind the battlefront in helping the Vietnamese. Mr. Johnson listed these gains:

Addition of 600,000 acres of irrigated land for food production.

Sale of land to small farmers on easy terms.

Improved education, including vocational training for 10,000 Vietnamese.

Establishment of 13,000 health stations, stocked with U.S. medicine.

"We have not waited for fighting to end before we have the beginnings of the works of peace," the President commented. "We are now attacking with all of our strength the basic problems of illiteracy, poverty, disease. It is these problems that bring on the wars. We must continue to press this battle forward."

It has been by promising, and pretending to help the peasant—and sometimes even by actually relieving his distress—that communism has made many of its gains. Often the Red oppressor has been disguised as the good servant while the free world has been pictured as the enemy of progress and improvement.

Emphasis on helping the people of Viet Nam is one of the wisest policies we could pursue. Military victory, of course, must be the primary objective, but in the long run an even greater battle must he waged for the advancement of the entire population. r

Our recognition of this and the fact that we are doing something about it are among our major strengths. This is true not only in Viet Nam, but wherever U.S. knowhow and resources are being used efficiently to improve the conditions of underdeveloped na-

Youth in America Today

EXTENSION OF REMARKS OF

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. BROCK. Mr. Speaker, the youth of today hold the key to the America of tomorrow. These young people comprising almost 50 percent of the population in the United States, are a dynamic, influential force in every sector of our economy and every region of our Nation.

Former Vice President Richard M. Nixon, in his article for the North American Newspaper Alliance column summarizes the challenges, the frustrations, and the hopes of the American youth. Under unanimous consent I include Mr. Nixon's remarks in the Appendix of the RECORD:

NORTH AMERICAN NEWSPAPER ALLIANCE COLUMN

(By Richard M. Nixon)

The most startling and saddening failure of the Johnson Administration is the way it has totally lost touch with the nation's youth. The importance of this breakdown in communications becomes clear when you consider that close to half the people in

America are under 25. Item: College campus demonstrations by students, as well as street riots often led and manned by youngsters, have reached an all-

time high and are getting worse; Item: Bitter resentment against the unfairness of the draft system, which favors the wealthy and the gifted, is boiling up among millions of draft-age Americans; Item: Unemployment among young work-

ers is running at a rate close to twice the national average while unemployment for highschool dropouts and youngsters in minority groups is even worse.

What underlies the draft-card burnings, the troop-train blockings, the lure of LSD, the rebellion against authority at some of our greatest universities?

The answer is loss of contact, and here are some of the reasons for it:

The torch that was supposed to have been passed to a new generation appears to have been passed right back, and the young-est generation recents it. In the Johnson Administration, the problems of youth just have to wait until they become the problems

Youth today sees no idealism in our national purpose. Where they seek commit-ment to a cause, they find only compromise to a consensus. The shining promises of the Kennedy Administration—which had enormous appeal to young people throughout the country—have been replaced by the Johnson Administration's image of shrewd politics at home and confused goals abroad

This generation of Americans feels that thas no "rendezvous with destiny," in FDR's phrase, which explains the shift away from Johnson and the attraction of ROSERT KENNEDY, not so much for what he does or says, but for the idealism he seems to symbolize.

The trouble is that the government does not know "what's happening" in the young people's sense of the term.

What's happening" is this: Never before has a "younger generation" been so edu-cated, articulate, aware of big issues.

Never before has a younger generation been so closely attuned to a social revolution, pressing its elders in the cause of equal rights. There is a world of difference be-tween the campus horseplay of the past and the demonstrations of today.

Never before has a generation of under-25 Americans felt itself so estranged from the rest of our society, so alienated and isolated. This generation is neither "lost" nor "beat;" it is lonely, partly due to the natural rebelliousness of youth against any established authority, but due largely to an outdated paternalism on the part of our national leaders.

Young people today do not appreciate a pat on the head and a smiling "someday you'll understand" from their parents or their government. While the beatniks and the demonstrators receive all the attention, the vast majority of American youth is responsible and thoughtful; they deserve a voice in the decisions that affect them because big government affects every American's life much more now than in any previous generation.

To re-establish contact with the millions of worried, rootless, exuberant young peo-ple—many of whom will be the future leaders of our nation—the Administration should take these immediate steps:

1. Convene a White House Conference on Youth, to focus national attention on the problems and opportunities facing our young men and women. In the past few years we have had White House Conferences on subjects ranging from Export Expansion to Health to Natural Beauty. Certainly a major effort is called for on something as important as the re-involvement of the young people of

2. Appoint a representative group of young people to be a permanent Advisory Council on Youth, giving both students and posthigh school working youngsters a genuine voice in the making of policies that affect all young people.

3. Reject the defeatist, life-is-unfair approach to military service and adopt a uni-form way of putting men in uniform. Handled in a superficial, publicity-stunt

way, the White House Conference and the Advisory Council would surely be a waste of time and money; but handled with under-standing and a willingness to learn, a clear channel of communication could be opened between the government and the most vital

single segment of our population.

The Communist world has used youth conferences as a means of propaganda and in-doctrination; we could expand our own youth conference to a world gathering of young leaders with the purpose of commitment and self-expression.

In this way, representatives of all segments of America's youth could become involved in those decisions that affect them. We talk about bringing the poor into the poverty program-why not bring the youth into the decisions about youth programs? Only if they participate, can we expect them to become committed to constructive causes.

In that context—with genuine contact made—an older generation will have the chance to express its own resentments about a decline in moral values, a rejection of responsibility by many young people. But for a change, an older generation will not be muttering to itself or shouting to deaf earsa two-way street will have been created that permits some sort of dialogus. To a new gen-eration that considers itself "turned on," the older generation can hardly afford to turn itself off.

In that context, many of our young people

will be willing to be exposed to solid direc-tion and face hard questions like these: How can a rule of law be established by breaking laws that you do not like? How can your rights be protected if you are unwilling to respect the rights of others? Where does responsible protest end and irresponsible rebel-liousness begin?

If the government will only undertake an all-out effort to communicate with its younger citizens, if government shows an inclination to listen more than to lecture, youth will be served-and the nation will be served as well.

Food for Thought: OEO and the Law

EXTENSION OF REMARKS OF

HON. JAMES F. BATTIN

OF MUNTANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. BATTIN. Mr. Speaker, Montana and other States have been granted funds by the Office of Economic Opportunity to provide legal services. This program as outlined by the Montana Bar Association, is a new and radical concept of supplying legal services.

Mr. Charles F. Moses, a Billings, Mont., lawyer, has made a thorough and searching analysis of this program and I have permission that his appraisal, comments, and conclusions be inserted in the Appendix of the Congressional Record:

BILLINGS, MONT.

June 30, 1966.

In attending the recent Montana Bar Association meeting, the purposes and functions of O.E.O. were casually discussed. Everything appeared to be cut and dried and the program for federal intervention in the law business seemed launched to a bright future amid the seeming approbation of the leaders of the Bar. Two thoughts carried the day. First, if the Bar does not do something, then the Government will, and the Bar must proceed, oneupsmanship, to pro-vide federal services for the poor. Secondly, there is a dramatic need to aid the poverty-stricken people of Montana. And so it goes— "participate or perish" and "provide for the poor"—and if you do, the Federal Government will give you bushels of money to provide legal services for the poverty-stricken in Montana.

It sounds like a fair deal, but let us ana-

Accept the fact there are many people who are unable to afford to hire an attorney when he or also needs one. Accept the further fact that the necessity for a lawyer in any case is inherent in our judicial system. This is borne out by the recent decisions of the Supreme Court of the United States. Accept the fact that the Bar Association should participate and fill this need. Accept the furthere fact the Government will pay to satisfy this need. All arguments are therefore re-solved and accepted without question that a program to help the needy is required in Montana to be fronted by the Bar.

There may not be a scintilla of evidence, or proof or measurable fact to sustain the lofty conclusions supported by the Bar. It would be interesting, indeed, to have such a presentation made before a judge and the question of whether the burden of proof was question of wester is observed in proof was sustained would be an interesting one if left to the courts—but we shall not argue or suggest that they are not fully sustained by the evidence—this may be too lawyer-like for a

federal program. Therefore, we accept fully lawyer to handle so he will not bother us, the premise, "Participate for the Poor". use our time or expand our energy with cases

COMMENTS

But these are not really the points in Issue. The need, duly established, the participation, duly polled, are indeed irrelevant to the discussion. What then, in fact, are the basic issues to be discussed about the program before we dip our fingers into the government till?

First. What is the role, scope and purpose of the Federal Government in this program? Can we help carry out these goals?

Second. How can we provide effective and competent legal services to the disadvantaged? What have they a right to expect? Third, What can the individual lawyer do

Third. What can the individual lawyer do to aid the poor? What should be our position on this program?

Fourth. How does this program fit into our judicial system?

These issues appear to me to be of vital concern to all practicing lawyers and bear analysis, discussion and eventual decision.

Let us briefly consider my point of view on this problem. It is not important that you agree or disagree, but it does seem important to consider the issues as they are presented. If there is no consideration of these issues, then a complete judgment by default is apparent and as we make our bed surely we will lie in it.

1. The interest of the Government

It is not trite to suggest that the interest of the Government is two-fold—one, to provide legal services for the poor, and, two, to provide the money to pay for these services. This philosophy is fine and should meet with our general approval, but when coupled with control, direction, and a new branch of government to aid the poor as an "overlay" upon our present judicial system, 't must require more than casual study. Again, it seems to me that two fatters merit thought and consideration by members of the Bar.

(a) This program as outlined by the Montana Bar Association is a new and radical concept of supplying legal services. The administration of justice is not now a judicial matter where attorneys are "officers of the Court", some are now officers of O.E.O. and controlled by the Poverty Board which is controlled, in turn, by the Federal Covernment. We are not so naive to say that this isn't so, and if it is not so now it surely will be in the future. The question that is properly raised is why the departure? Is not our judicial system able to fill the need within its own framework? Cannot lawyers be, controlled by the Court? Why this administrative federal executive approach? Has a study been made to demonstrate our judicial system just cannot handle the problem? If this program has such merit, why not have federal lawyers to handle criminal cases as well? Why not blanket our system with a comprehensive federal program?

Why not, indeed!

(b) Consider the possibilities where the federal lawyer represents the indigent plaintiff and the federal lawyer represents the indigent defendant and the federal lawyer represents the indigent intervenor and the federal lawyer who represents the indigent witness in the same case who must be protected against the right of self-incrimination. And finally, the same federal lawyer who represents the wife of the indigent plaintiff, the ex-wife of the indigent defendant and the abandoned children of the indigent intervenor. Surely federal actorneys will fight federal attorneys and, like Topsy, it will grow and grow until we can charter a federal Ray.

2. The poverty people

But what does the poor person have a right to expect? It seems that we speak of him as a class apart, as someone we will assign a lawyer to handle so he will not bother us, use our time or expand our energy with cases below our talents. On the other hand, it seems to me that he should have a right to expect competent services, fair choice, and ultimately a lawyer of his own choosing. In one casual moment, we seemingly strip a person of his right to "choose" his lawyer. What is bad about letting a poor person have the choice, like everyone else? Why is she or he chifferent? Is this the price of being poor—and the cost of securing such services? Can he or she change lawyers if they like? It seems the only conclusion by O.E.O. is that poor people can be classified, organized and given a specific attorney who will be paid for by the Government and they had damn well better be grateful.

It is my impression that the poor people are, after all, people. They are not different and need not be organized, classified or specified. All they want is a lawyer of their choice, and they should be entitled to exercise this right of choice. It may be that the Government feels they are not capable of making the choice and that we can do this small chore for them, but I feel we should let them try.

3. The lawyer

Let me recite my views in clear and unmistakable terms.

(a) The lawyer stands to lose his lawyerclient relationship. There will not be a "choice" by a person who wants you to perform legal services. Clients will not be yours to represent over the years. In this respect, I am not concerned about the established firms—they could care less, because it does not affect them. They have even had the temerity to suggest it would relieve the lawyer of some of his "nasty" business.

(b) The role of the lawyer, as I see it, is to represent all of the people in the state of Montana, including the poor. This is his responsibility. He cannot create a program transferring this problem to a federal attorney who will be paid to "handle" the problem and then say he is "participating". All of us must be involved with the poor and it is totally indefensible to shirk responsibility by creating a program where you say, "Don't knock on any door particularly my door." We have a government attorney to "handle" these things—keeping, nonetheless, the "good business" of the poor by careful classification.

Has it occurred to anyone or has it even been suggested that we handle the Negroes in the same way? We could suggest that he is not our problem, and we could create a program where the government aids the Negro and that ought to be enough responsibility and certainly would satisfy our participation in such program. It does not seem to me to be logical or citizenlike.

In sum, the lawyer is disclaiming responsibility for the poor not accepting or advocating it. The individual lawyer who so abdicates his responsibility is not now an independent, thoughtful, participating member of his community. He isolates the poor, he doesn't face up to the problem in supplying his talents to the poor.

4. Judicial system

It seems to me that we organize attorneys as officers of the Court. We represent indigent defendants in state and federal courts. We are subject to eliaborate disciplinary procedures. Our licenses are a privilege soon taken for transgression. We are subject to being held liable for contempt of Court. Yet, on the other hand, we like to think we uphold the interest, integrity and honor of our judicial system.

Instead of using this system to expand aid to the poor, we now have a new federal program. Is it impossible for us not to work within our system our framework as we know it? As Bob Emmons said at the Bar meeting if attachments, landlord-tenant, and related

problems, cry for assistance to the poor, why not legislate? Is the Bar unable to grip the problem other than by a vast overlay of government legal intervention controlled outside of our traditional judicial system? These questions require some response.

CONCLUSION

All in all, I find the proposed program at variance with our traditional sense of justice, our judicial system as a whole, and our legal relationship with our clients, past, present and future. It is a radical, controlled innovation that will, in my opinion, alter the independence of lawyers and our entire judicial system.

It need not be so!

Let us serve the poor. I propose that we use the Government's money. Let each person have the lawyer of his own choosing. Let the disadvantaged pay if they can-and if they can't, judicial approval of claims should satisfy our friendly Federal Govern-ment. In cases where no lawyer will take the case, the Bar may decide who has the task, but the Bar should be advisory only. It is my view that we should fit this program into our judicial system and that lawyers should be responsible to the Courts and not to the Federal Government. It appears that if there is a need for legislation the Bar should take an affirmative step in solving the problems that confront the poor by legislation. We should face up to the specific problems of the poor. I think we should participate, I think we should reflect upon the lawyerclient relationship and satisfy ourselves as to how to provide the best services to the poor. and it is clear that the obvious answer to that question is to provide "your services if you care."

The Bar Association should be criticized for its failure to personally participate in helping the poor. The Federal Program as the answer merely neatly sidesteps involvement. Obviously, "We don't care enough to give our very best."

Formal approval of \$216,000 for the Program by members of the Association has not been done. Can we say this represents the desires of the majority of the lawyers in the state?

Since there has not been a formal vote of the lawyers of this state with respect to this program, I respectfully submit that each lawyer should examine the issues and formally vote "No" to the program as outlined by sending your comments to the President of the Montana Bar Association. You have an opportunity to make an appearance in this matter, and I do not feel that the cause must be lost by default.

Let me review the situation:

1. The need for legal services for the poor is used as the basis for a federal program creating federal responsibility and federal control. There is but passing concern for improving legal assistance to the poor within the framework of our judicial system. In my view, this approach is bad. The solution is not a new federal program, it is increased responsibilities of lawyers and courts to solve the problems of the poor. Greater participation, not federal intervention is the true answer.

2. The concept of our judicial system as a branch of our government handling legal affairs is abandoned. The executive branch now, and in the future, will control a segment of our judicial system. We must assume, if we accept such program, that our system is incapable of solving the needs, and I do not believe this to be so.

3. The segregation of poor people by creation of federal attorneys to handle their problems is contrary to every concept of O.E.O. as stated by Sargent Shriver. He seeks to place these people in the mainstream of life without the burden of their financial status. Their respect, their integrity, their

s a gal

eir

He

promise for the future is dependent upon individual lawyer's responsibility. We must integrate the poor, not separate them. The outlined program of the Bar is not in accord with these basic concepts.

4. The future will, in my opinion, see at least one federal attorney for each private

4. The future will, in my opinion, see at least one federal attorney for each private one. The wage rate, the secretarial services, the investigative help, and the entire overhead will make the private practice of law intolerable because we cannot financially meet the competition. It would literally be competing with the Federal Government.

5. Limiting or classifying, for the present,

5. Limiting or classifying, for the present, good business of the poor for the private attorney is but a temporary classification. Even now on some Indian reservations in the nation service is provided federally in any case without limitation. This not only is the trend, but the poor people will demand it, since it is only logical that they will soon want every case handled by the federal attorney.

6. Can we spend great sums of money for federal aid and control when we think less money provided to an integrated system will do the job better for less, with each lawyer contributing to the poor?

contributing to the poor?
7. Should a lawyer participate or should a lawyer transfer his responsibility to the Federal Government?

Finally, these comments are subject to the valid criticism that they are emotional in character and come too late. In my judgment, it is never too late to think and care, and I respectfully submit this matter for your consideration.

CHARLES F. MOSES.

The Airline Strike

EXTENSION OF REMARKS

HON, JOHN N. ERLENBORN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. ERLENBORN. Mr. Speaker, the current strike of machinists against five airlines is costly—costly to the companies, costly to the men on strike and their families, costly to other airline employees and, most of all, costly to many businesses and the traveling public.

We, the people, are paying too high a price to protect somebody else's privileges. I do not know who is the privileged one in this instance, the companies or the union. Inasmuch as the union has been unwilling to accept the terms proposed by the Emergency Board, however, it seems to me it must bear most of the blame for this strike. At least, the burden of proof falls to the union.

Every strike involving a public utility means that collective bargaining has failed as a method of settling labor disputes, and reemphasizes that, some day, the people are likely to do away with the bargaining process and the strike. They will be replaced by compulsory arbitration in some form.

I do not think that will be good for either side; but it might be better for the people—who want labor peace—and the economy—which wants production.

I urge that both sides in this dispute go to the bargaining table with this larger issue in mind.

A New Century—A New Challenge— Address by Vice President Humphrey Before Tennessee Education Association in Memphis

EXTENSION OF REMARKS

HON. GEORGE W. GRIDER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. GRIDER. Mr. Speaker, this spring some 9,000 members of the Tennessee Education Association gathered in Memphis for their annual meeting.

The highlight of the 3-day event was an address by Vice President HUMPHREY, who completely captivated the city during his brief visit. It was my great privilege to introduce him to members of the Tennessee Education Association.

I would like to include at this point in the Record the text of the Vice President's magnificent address:

Address by Vice President Hubert Humphrey to the Tennessee Education Association, Memphis, Tenn., April 1, 1966

Thank you Congressman Games for your gracious and eloquent introduction. I thank you especially because you didn't let yourself be confined by Washington protocol and just say: "The Vice President." You took a little time to talk me up, and I want you to know that I appreciate it.

I shall address my remarks today to this year's theme for your organization: "A New Century—A New Challenge." It has a special meaning for you as an organization, because last year you celebrated your own centenary. But it has a wider significance, for the entire South and for the nation. For it marks the beginning of a new century—the second century—since the end of the War Between the States.

It is a time to close the books once and for all on the past, and to look bravely and hopefully to the future. You yourselves took an important step forward last year, when you opened your membership to teachers of all races. I am sure you will be even more effective in reaching your goals when all your forces are united in the cause of better education for all of Tennessee's children.

For, as Thomas Jefferson wrote soon after the founding of our Republic, our task must be to "educate and inform the whole mass of the people"...to "enable them to see that it is to their interest to preserve peace and order...they are the only sure reliance for the preservation of our liberty."

This new century holds great promise for Southern education and the people of the South. I say this for two reasons.

First, because of the far-reaching legislation enacted last year, with the invaluable help of Congressman Gades and the other members of the Tennessee Congressional delegation. This legislation puts us at the threshold of a new era for all American education.

And second, the South itself is clearly in the opening of a new cycle of economic growth—a new renalssance. This forward thrust will in large part be fostered and sustained by its educational resources,

The American people have always pinned their hopes for the future—the future of the nation and the future of their own children—on education. This has been particularly true in the South. But, while the desire for good education in the South has always been strong, harsh economic realities

have limited educational opportunity. But times are changing, and changing for the better. The South is moving out of its old agricultural economy and into an industrial era. The gap between the South and the rest of the nation is closing. The economic gap is closing. We must also close the educational gap.

If I seem all wrapped up in this subject, it is because I am still a teacher at heart. More importantly, this is an "Education Administration" that I am privileged to represent. There are a great many teachers in the Executive Branch and in the Congress, President Johnson is a former teacher, and proud of it. Senator Mansstrain, the Majority Leader, was a professor of history at the University of Montana. Congressman Carl Labers, the Majority Leader of the House, was a Rhodes Scholar. You can go through the top echelons of our government and find teachers in place after place.

This Administration, I want you to know, will not rest until every American child, wherever he may live, whatever his race, religion, or national origin, has all the education he can usefully absorb. The legislation which Congress enacted last year will result in profound changes not only in education, but in our whole future social and economic life. The new programs are going to give fresh impetus to people and communities hitherto left behind the rest of our nation.

Under these new circumstances, you as professional educators will occupy key roles in your communities. The financial headaches of your schools are not over—in the nature of things, they never will be—but for the first time many of you will be able to "think big."
You will find that, in the councils of gov-

You will find that, in the councils of government, the educator will no longer be string below the sait. Instead, he will be moving a lot closer to the head of the table. In the state house, educators will no longer risk being regarded merely as supplicants. Tomorrow, the educator will be seen as a man who brings wealth into his community—and not just federal aid to education. For quality education attracts and holds business and industry, creating new payrolls and new resources. Indeed, a recent survey of 500 of our leading corporations showed that they have their decisions on the location of new plants first of all upon the educational facilities of a community and its commitment to their further extension.

I congratulate you on your new—and abundantly deserved—status in our society. If I can offer one word of advice, it is this: Let no feelings of false modesty induce you not to press your advantage to the utmost.

This new generation need—and deserves—

This new generation needs—and deserves the best education we can give them. They are fine young people, with a great potential. Just as Tennessee is the Volunteer State, this is the volunteer generation. Whether serving in uniform or in shirt-sleeves, at home or overseas, they are giving generously and willingly of their best.

A nation that can produce the kind of young men and women who serve this nation in our armed forces, the Peace Corps, our government missions overseas, in the CARE program, and in the relief services of our great religious denominations—a society with this degree of voluntarism is a society that has something to commend itself to history. Never at any time has a nation given so much in the cause of peace and humanity, and expected so little in return, as the United States.

In the years immediately ahead, our young people will be confronted with new challenges which will call upon ever cunce of their energy, intelligence and dedication.

their energy, intelligence and dedication.

They will have the task, first and foremest, of building an enduring peace—a peace which will have to be built by a hundred thousand individual, positive acts. For peace will not

be built by any grand gesture or magical It will be built in the hot streets and muddy fields of countries which did not even exist 20 years ago. It will be built in long months of tireless, patient negotiation over the most minor of international issues. It will be built by people possessing adequate knowledge of their world and its complexities.

Our young generation will have the responsibility, too, of making technological prog-ress the servant rather than the master of

humanity.

They will have the privilege of waging the war against poverty which President John-son has launched—an undertaking without precedent in the history of the world.

But there is one piece of unfinished business we must not and cannot leave to them, because it is far too urgent. We must make good, in fact as well as in law, without delay or equivocation, the pledge of our Constitution that all Americans, everywhere, shall have equal opportunity to enjoy the blessings of our Republic.

The greatest single contribution we can make to the future of America is to see to it that each individual is given every opportunity to make the most out of his life. We bear heavy responsibilities in this world, and the denial to anyone of the right to participate in shouldering them weakens this country. A century ago Abraham Lincoln called America "the last, best hope on earth"—and it still is.

Congress has recognized its responsibilities to our new generation in the historic school legislation it adopted last year. Members of Congress from the South—and particularly Senator Bass, Senator Gors, Congressman Games and other Tennessee Congressmen—

worked hard to achieve this.

Under the formulas adopted, the Southern states will, as a group, gain the most. We expect the programs in the Elementary and Secondary Education Act to bring 1.2 billion dollars to education throughout the country during the first year of its operation, and 1.3 billion in its second. Roughly a halfbillion of this will be channeled each year into the elementary and secondary schools of the South. They will receive more than their proportionate income tax contribu-

This is as it should be. All the same, I think we should pay tribute here to the many legislators from high-income states who have consistently, over the last 25 years, worked to enact programs which would cost their taxpayers more than they bring into their own states.

The Elementary and Secondary Education Act will help approximately seven million educationally deprived children from low-

income families.

Now for a few words about what the Act means to Tennessee. As you know, it includes several different programs.

First and most substantial in dollars, it provides aid to low-income districts—that is, districts with a substantial number of families with incomes of less than two thousand dollars. Our estimate is that this can mean over 32 million dollars for Tennessee. The indications are that some 300,000 children in this state will benefit from this part of the

Act in the current fiscal year.

Next, the Act provides funds for school

libraries and textbooks. Our estimate for this is over 1.8 million dollars for Tennessee. Further, it includes grants for supplementary educational centers and services, estimated for Tennessee at almost 1.5 million

Also, it offers grants to strengthen state departments of education-estimated at almost 300,000 dollars for Tennessee.

Another provision of the Act authorizes the Office of Education to step up the improvement of education through research and development activities. Experts from all parts of the country have been involved in

the planning of the National Program of Educational Laboratories, the largest single effort under this authority. Developmental contracts for nine such laboratories were approved and announced on March 1. Of these, two include parts of Tennessee in the areas they serve—the Appalachia and the Central Mid-Western Regional Educational Laboratories.

Here, certainly, is opportunity for creative innovation in the schools of Tennessee, as in schools throughout the nation. Here, to revert to your theme for this year, is a new

challenge for a new century.

Those in our society who most need edu-cation too often have been the ones least cation too other have been the ones least likely to receive it. Here I can speak out of personal experience. When I was Mayor of Minneapolis, one thing that perplexed me was why the best public services were in the areas of the city that needed them the least. The newest schools were located where peo-ple had the highest incomes: the best playgrounds, where families had memberships in country clubs. Actually, the best schools, playgrounds, and other facilities ought to be in the areas that can least afford them. Otherwise, students whose home environment is drab and dulling all too often find their schools equally so.

We must make our schools lively and challenging to these youngsters. We in Washington can't tell you how to do it, and we don't intend to try. But we do hope and expect that you will come up with new and But we do hope and effective teaching techniques which will make the schools so interesting that there won't be any drop-outs. We can't afford them, because we need well-educated people in our modern, technologically advanced economy. Every school drop-out is a poten-tial liability to himself and to the com-

munity.

In conclusion, I should like to direct your attention to the international implications of education. In his message to Congress on this subject

a few weeks ago, President Johnson said: "Education lies at the heart of every nation's hopes and purposes. It must be at

the heart of our international relations." Of course, I am sure you have felt this all along. But it is new-a real landmark in the history of American education—to have it stated as national policy.

The proposed International Education Act

of 1966 also embodies that high commitment. The keystone of the new program is the establishment within the Department of Health, Education, and Welfare of a Center for Educational Cooperation. This will bring into being for the first time a general headquarters for coordinating our work in international education.

The President has directed that funds be earmarked to strengthen and enrich the curriculum relating to world affairs in elementary and secondary schools. There is a provision also for establishing a placement service to put our teachers in posts abroad, so as to add to their international experience.

The proposed International Education Act will help our smaller colleges so that they can better equip their graduates with knowledge of the outside world. It will also support the further strengthening of the larger universities as the nation's leading centers of advanced training and research in interna-

In this connection, I want to congratulate Memphis State University—many of whose graduates, I understand, are here—on its plans to establish an Institute for the Study of the Soviet Union and Eastern Europe. am pleased, also, to hear that the University hopes in the future to add a number of courses on China, and make the Institute a major center for the study of Sino-Soviet

I came back from my recent trip to Asia with a clear and strong feeling—which, not being reticent by nature, I have frequently

and forcefully shared—that we Americans need to know much more about the world which we live—and particularly about Asia, with its two billion people. world leader, but we have only half-world knowledge.

It took World War II to bring us to the realization that we could no longer ignore Europe. It took Vietnam-the sorrow, the pain, and the misery of that terrible strug-

to awaken us to Asia.

Education will become an increasingly important part of our aid program in Asia. Already, for example, we have helped the Government of South Vietnam more than double its classrooms, nearly triple enrollment in primary schools in its first decade of independence, and step up its enrollment in secondary schools by a factor of better than six over the same period. More and more, we see education as the keystone in the building of nations.

I like to think that mankind will come to regard the United States, not as a gendarme among nations, but as a global center

of enlightenment and learning.

I want us to understand that, important as nuclear power is, the power of the mind and the spirit is more important. I want the world to know that the America of the 20th Century is not only a nation that steadfastly fulfils its commitments, it is a nation that inquires, that seeks to learn, that honors

the scholar and the teacher.

The educator is already as vital to our international relations as the diplomat or soldier. I can foresee a time when he will be even more important—the tine when cooperation rather than conflict is the rule in human relations and when, in the words of the prophet Isaiah, "Nation shall not lift up sword against nation, nor shall they learn war any more."

Suicide and Alcoholism: Americans Look the Other Way

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I gave at the 74th annual banquet of the East Providence Chamber of Commerce, on June 11, 1966:

SUICIDE AND ALCOHOLISM: AMERICANS LOOK THE OTHER WAY

(Remarks by Representative FOGARTY, Second Rhode Island District, before the 74th annual banquet of the East Providence Chamber of Commerce, Metacomet Country Club, June 11, 1966)

Judge Weisberger, I'm pleased to be home again this evening, to celebrate with you at the seventy-fourth annual dinner of the East Providence Chamber of Commerce.

As toastmaster, you are presiding at a very special event, because I doubt if there are many towns and cities across the breadth of the United States whose Chambers of Commerce have an unbroken history of almost three quarters of a century of civic leader-ship. I hope you will invite me back next year, for your diamond jubilee.

I am especially pleased to be able to salute your guest of honor as he completes his term as President of this Chamber. Jim Reilly and I went to school together and even after all these years, we are still friends. I know

that his stewardship in the past year has brought the affairs of this organization for-ward, and that his successor will take over the guidance of a strong and effective group.

I am going to talk about two subjects tonight that are not usually discussed at bannight that are not usually discussed at banquets and social events. But I am going to do it anyway, because the time has come when all of us, from East Providence, Rhode Island to West San Diego, California, must admit failure and—what is much more important—get some civic programs going at the National, State, city and even neighborhood levels, if we are to change the situation I want to discuss with you here.

I am talking shout suicide and I am talk-

I am talking about suicide and I am talk-

ing about alcoholism. We have suicides in East Providence and we have alcoholics in East Providence. And we don't do very much to help the man who is finally driven to kill himself, or the person whose life is wrecked by the bottle.

son whose life is wrecked by the bottle. The whole point is that East Providence is not alone in this neglect. In most parts of this Nation, these are facts of living that are—at worst, simply ignored and swept under the rung, or—at best, given lip service rather than effective consideration.

The thing that infuriates me is the fact that we know enough to prevent many suicides and we are beginning to collect some knowledge about controlling alcoholism. But we don't put what we know to use.

You know that I am deeply involved, in the Congress, with securing good health leg-

the Congress, with securing good health legislation and appropriating the money necessary to make that legislation work.

It is no platitude to say that the mental health of the people in any town and in the entire country is our greatest resource. I propose that we put the knowledge and the funds available to us to work immediately to stop this human waste. Let's look first at suicide and suicide pre-

The rate of suicide in the United States is ten suicides for every hundred thousand residents. That means that every 24 min-utes, another person kills himself. Suicide in this country is the tenth leading cause of death. death.

The facts are even more shocking when you

begin to find out who these people are.

In the armed forces, suicide is the second cause of death.

A current suicide study conducted at the National Institute of Mental Health indicates beyond doubt that adolescents of college age present the highest potential sui-elde risk group within the population. The number of adolescent suicides is low, in re-lation to the total population, but the risk is

In the 15-to-19 age group, suicide is the third-ranking cause of death, exceeded only by accident and cancer.

In the collegiste group, suicide is the sec-end ranking cause of death, with the rate for boys twice as high as the rate for girls.

I know you agree with me that tragic as the suicide of an adult may be, it pales be-aids the tragedy of the child who is so lost and lonely and confused that he takes his own life.

In a study of the 41 children in the New Jersey school system who committed suicide between -1960 and 1963, we have some in-formation that can and should be acted

In going back over the lives of these young-sters, the investigators found out that suici-dal children are often those who do not take part in school activities outside the class-room—the athletic teams, the orchestras, the dramatic clubs or any of the usual after-school activities most children like.

Thirty of these 41 youngsters were seriously retarded in reading, even though they had better than average intelligence ratings. But the most significant factor related to

suicide among school children was that in every case of suicide in the study the child had no close friends.

In every instance, the difference between the child who threatened suicide but did not and the child who took his life was the presence, or the absence, of someone to whom that kid felt close; someone he could talk to

and someone who liked him the way he was.

You know, it should not be difficult to change that situation; all that takes is time and interest in these youngsters.

The statistics go on and on; and so do the suicides. But the most tragic part of the whole sad story is that most suicides are unnecessary. We already know how to prevent many of them, if we wanted to.
Dr. Stanley Yolles, the Director of the Na-

tional Institute of Mental Health, tells me that within 5 years, given adequate support, we could cut the number of suicides in half. And he adds that this can be done with the knowledge we already have—to say nothing of the things we could learn as we went along.

I am happy to report to you that we are making a beginning in establishing a na-tional suicide prevention program this year. The National Institute of Mental Health is restablishing a Center for the Study of Suicide Prevention. This, as I say, is a beginning, but the success of any such center rests in the long run with the local communities.

Through this Center, the Federal Government can support research, pilot studies, training and consultation. But the actual prevention programs must be set up in East Providence and in San Francisco and in rural areas, if we are to put that Federal support to work for us.

More doctors must be told how to recognize a person's cry for help when he first indicates that he is in deep trouble.

In over half the suicide deaths, the in-dividual who killed himself had indicated to someone that suicide was on his mind. sometimes he did it directly, by saying "I'm going to shoot myself." Sometimes he hinted at it by, for example, asking "how do you leave your body to the medical school." But in half the cases, the suicide had asked for help in one way or another. What we need to know is how we can recognize those with for help and how was not documentable. cries for help and how we can do something when we hear them.

The new community mental health centers which are being built and organized now, with grants from the Federal Government, can help to reduce the number of suicides. One of the services required, if a center is to receive Federal funds, Is a psychiatric emergency service; and such a service is a neces-sity for hundreds of people in a suicidal

Very few communities today have anything like an adequate service for any kind of psychiatric emergency. If you doubt me, just try to get professional help for sumeone who says he's going to commit suicide in the middle of the night, or on a weekend, or for that matter-at any time of the day in a lot of places.

This, to me, is a shocking situation: especially since we know what to do. I would suggest that this Chamber of Commerce membership take a look at the situation here; it isn't the responsibility of the doctor or the policeman or the priest alone. Simply from a dollars-and-cents point of view, it is a civic question and a civic problem. I hope that Rhode Island takes some leadership in avail-ing itself of the help that the new Suicide Prevention Center at the NIMH is prepared to provide us. Some communities are going to provide us. Some communities are going to leap at the opportunity and some are going to let it go by. It's a brand new national suicide prevention program and our State should participate at its beginnings.

The suicide problem is big enough, but the wos and trouble and waste of men's lives caused by the misuse of alcohol in this coun-

try is so much greater that it is almost impos sible to visualize it in the national sense. I think that is one reason we have failed so dismally up to now in this area.

I am not talking about the person who likes his drinks and handles them. I'm talking about the men and women who let alcohol wreck their own lives, the lives of their families and cause trouble wherever they work.

There are at least 5 million alcoholics in this country and nothing has been done about them.

Oh, I know. There has been some research. some treatment and some effective attempts at rehabilitation, but these are extremely insignificant when you place them beside the total problem.

I have argued and pleaded and cajoled— from the floor of the House, in Committee, and at many a gathering in and outside Washington, and up until now, I'm afraid I haven't achieved much. But I am happy to tell you this evening that the National Insti-tute of Mental Health has finally organized a National Center for the Prevention and Control of Alcoholism.

Control of Alcoholism.

Now this, too, is just a beginning, and I'm sorry to say that we do not know as much about preventing alcoholism as we do about preventing suicide. But we know more, even about the control of alcoholism, than we are putting to use.

This new Center, if it does what it is supposed to do, can put the pieces of our knowledge together in a usable package so that community services can do a lot more than to throw a drunk into jail and hope that he will sleep it off and then leave town.

Research into the cause and control and treatment of alcoholism has improved in the past ten years and many more competent investigators are becoming interested in the problem. If we give them the money and the trained personnel they need, we can speed things up because the new Center can pull the knowledge together and get it out to the community where it can do some

I do not mean to imply that the mere es-tablishment of such a Center will solve our problems, but at least it can exert some national leadership in developing and coordinating a scientific program.

The NIMH can put a number of experts to work on various parts of this program, to accelerate activity in everything from basic research in the biological effects of alcohol on man to the kinds of treatment and counselling that can be provided to alcoholics and members of their families in their home communities.

In the long run, it will take more money and more trained personnel to do this job,

because this is only a beginning.

If the new National Center can come up with some answers—even on a trial basis communities can test them out.

Here again, the community with a new mental health center may have the best op-portunity to solve at least part of its alcohol problem.

problem.

Some of the new Centers plan to provide emergency treatment and rehabilitation services to alcoholics in the same facilities where persons with other psychiatric problems are treated. Others are planning sparate services for alcoholics. However, no matter what the pattern for treatment may be, the new National Center for the Prevention and Center (Center) of Alcoholics will be able tion and Control of Alcoholism will be able to provide support for community programs in several ways.

The Institute's Regional offices will handle local requests for help in setting up treatment and educational programs. It will take more trained people to do this job, and Federal funds available for grants to training facilities can make this possible.

I shall not go into further detail this eve ning on the mechanics necessary to make these two new Centers effective. But I did want to tell you about them so that East Providence and other Rhode Island communities can take advantage of the help they will have to offer.

Because we can all be sure of one thing. Suicides and alcoholics will not disappear, sven if we look the other way. We have done this so long that today, no matter where we look, we see the tragic results of the uncontrolled use of alcohol, and in too many directions, we see the headlines on suicide or the man jumping off the bridge. And then we see what the fact of that unprevented suicide does to the family, the friends and the colleagues left behind.

As modern Americans—even though we, personally, may never have been affected by someone's self-inflicted death, or never have been hurt by the alcoholic tragedy of a personal friend—we know that a healthy community is made up of healthy individuals.

Health and health services are now community business and a civic concern. So, only with a personal investment on all our parts can this or any other community in the United States become a healthy place in which to live.

A 4-Year Term for Congressmen

EXTENSION OF REMARKS

HON. D. R. (BILLY) MATTHEWS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mr. MATTHEWS. Mr. Speaker, under leave to extend my remarks, I would like to enclose the testimony that I presented before the Subcommittee on Constitutional Amendments, of the Senate Committee on the Judiciary, in support of my House Joint Resolution 412, a 4-year term for Congressmen. Even though my term of office expires this year, I feel that a 4-year term for Congressmen will mean better service on the part of a number of dedicated public servants, and I surely hope that my colleagues who agree with me will continue to work for this goal. My testimony follows:

A 4-YEAR TERM FOR CONGRESSMEN

(Testimony of Hon. D. R. "BILLY" MATTHEWS, before the Subcommittee on Constitutional Amendments of the Senate Committee on the Judiciary in support of House Joint Resolution 412)

Mr. Chairman, I am grateful for this opportunity to testify in behalf of H.J. Res. 412, a proposed constitutional amendment providing for a four year term for Members of the House of Representatives. My resolution is similar to H.J. Res. 394, by the gentleman from Kentucky, Mr. Chrize, which provides for half of the Members of the House of Representatives to be elected each two years, as nearly equal as possible. Half of the Members would be elected for two years and half for four years, by lot, after the first election or changes. My resolution further provides that incumbent Members of the House may not resign to seek any other elective office unless years then sought.

The present two year term for Representatives was instituted by the framers of the Constitution in the belief that such a term would be sufficiently long to enable Members of the House to come to grips with public issues and to give the best of themselves to the resolution of these issues, and yet sufficiently short so that they would be placed under the

necessity of keeping the rights and legitimate interests of their constituents in the forefront of their thinking and acting.

The factors involved in public issues have changed so completely and have become so enormously complex and highly technical that the two year term for Members of the House has not only ceased to further the aims that the Founding Fathers had in mind but actually frustrates their attainment.

Consider, if you please, some of the public issues with which Members of the House are concerned and which were not their concern during the early days of the Republic. Today, Congress must confront the problem of unemployment caused by technological innovation. It has allocated to itself the reand evaluation of the needs of our public schools. It must seek constant resolution of the conflict between management and labor. It must determine the future of our technological effort in space. It must judge the needs of our urban centers with respect to such things as housing and mass transit. It must respond to the problems of agriculture. It must determine the role of government in experimental research in the physical sciences. It must pass laws in the area of our national security that are becoming tremendously more complex. It must evaluate the mounting problems banking and currency. It is being urged to more and more legislation in the consider area of civil rights.

We could continue with examples of the responsibilities of Congress today, which did not confront our forebears in the early days of the Republic. I maintain that, if Congress is to continue to fulfill the duties assigned to it by the American people, each and every Representative in the House, from freshman member to the most senior, must be enabled to acquire a comprehensive grasp of social factors and an insight into the moral obligations implicit in complex social situations, which are indispensable to the work of legislation. I maintain that a four year term for members enhances their opportunity in the House of Representatives to acquire that practical grasp and moral in-Our representative form of government envisaged lawmakers who would be able in a reflective and objective attitude to consider the vital issues of the day. years is simply too short a time.

Consider the situation of the new Congressman. He must, first of all, familiarize himself with the procedure by which Congress conducts the public business. He must necessarily do this before he gets down to the public business itself. This procedure must become second nature to him and he must become a real member of the family before he can begin to realize his potentialities as a legislator. He must organize his office staff, hire assistants and assign jobs in such a way as to provide himself with the best possible service. It is no small task and requires a considerable amount of time, especially in the beginning. The new Congressman has been sent to Congress by his constituents to deal with national issues and to perform the public business. Two years, I believe, even without considering the time required to get an office staff in motion, is not enough time to acquire the understanding of the great issues that face this Republic.

Now, no sooner has the new Congressman been elected, no sooner has he arrived to undertake his legislative duties, than he is compelled to face up to the necessity of reelection. With a two-year term, the very next year in an election year for the Representative during the First Session of Congress. His whole political future, in order to remain in a position to represent most effectively his political spectrum, depends on his re-election. Can it be expected of him that he will not feel pressured to devote a good part of his energy to maintaining the Support of his constituents?

During my fourteen years as a Member of Congress, I have only had opposition in three primary elections and I have had no opponent in the general elections. It was necessary for me during my fourth year in Congress to absent myself for six weeks to campaign and, again, after ten years in Congress it was necessary for me to absent myself for approximately the same amount of time, while this last year I was away for approximately four months in a primary campaign that I regret to say was Insurgersful

that, I regret to say, was unsuccessful.

For the record, may I be permitted to point out that when the Florida State Legislature combined my Eighth Congressional District with the Ninth Congressional District. represented by my friend and opponent, I had ten thousand less registered Democratic voters in my district than he had in his. This was a disadvantage that I could not overcome. To go on, however, with the problem of absence from Conrgess, both I and my opponent, let me repeat, were away for approximately four months of this Second Session of the Eighty-Ninth Congress. We, in Florida, are fortunate in that our primary elections are over in May and we have a chance to be present for the debate and votes on most of the critical issues facing From January of Congress. this through May 3, the date of our first primary election in Florida, there were 82 quorum calls and yea and nay votes in the House. Since then, as of July 1, there have been 75, and there probably will be at least that many more before this session of Congress is adjourned. However, those of my colleagues in Florida who have Republican opposition must concern themselves about the campaign before the November election.

Let me emphasize that, in my opinion, one of the most stressing problems of a Congressman is how to campaign and remain an effective Member of Congress during that period of campaigning. There are those who say that campaigning should be done the year around. The question is, that since Congress now meets ten, eleven, and even twelve months a year, at what time of the session would you get official permission to go home and campaign? The adjournment dates of Congress during the past six years have been as follows: in 1960, on September 1; in 1961, on September 27; in 1962, on October 13; in 1963, on December 30; in 1964, on October 3; and last year, 1965, on October This year most of us, I believe, would agree that we are certainly going to be here for several more months.

Let me emphasize the negative effect of a Congressman's absence, due to campaigning, on his committee work. In Congress, as we know, legislation is largely by committee. The precise and tedious details of legislation are the responsibilities of the committees. The Congressman's presence is as essential in a committee meeting as it is during the debate and final vote on an issue on the Floor of the House.

So, certainly, if a Congressman could be elected for a four year term, the fact of absenteeism should be tremendously reduced.

I believe that a four year term would give a Member of Congress a more secure feeling which, in turn, would give him a freedom which he must have in order to devote himself, heart and soul, to his legislative duties. I do not mean to imply that concern for political success and devotion to legislative duty are necessarily contradictory. They may or may not be. The motivation involved in one is likely to be different from that involved in the other. Elected Representatives are not meant to enjoy absolute political security. That would contradict the meaning and efficacy of representative government, but the relative political insecurity and apprehension engendered by too frequent elections are obstacles, I maintain, to wholehearted devotion to the public business. I say this in the knowledge of the numd

businumbers of Congresemen who, much to their credit, have risen above such insecurity and have demonstrated complete dedication to the public business to be done in Washington.

It is my conviction, Mr. Chairman, that both the future role of Congress in national affairs and the fundamental interests of constituents would be enhanced by the four year term for Representatives.

Mr. Chairman, I believe that the fundamental interests of our constituents are, first, the preservation of genuinely representative government. By this, I mean that the rights and interests of constituents are put forward and effectively represented in the very process by which we formulate law. If Con-gressmen are handicapped in acquiring a gressmen are natureappear in acquiring comprehensive grasp of difficult and complex problems so that effective power begins to pass to the Executive Branch, to that extent, the rights and interests of constitutions. uents will not be properly represented in the process of making decisions which affect their lives. The second fundamental in-terest of constituents is the public interest as it incorporates their own legitimate in-terests. Certainly it would be to the advantage of the American people, as con-stituents of the House of Representatives, for each member to be given a better chance to contribute a comprehensive knowledge of factors and a deeper moral insight toward m furtherance of the public interest. With m better chance to deal with the public issues which a four year term would afford, every Member of the House would be able to demonstrate more conclusively his qualifications as a lawmaker and constituents would be able to judge his qualifications more effec-

I believe that a four year term for Members of Congress would reduce expenditures for political purposes and to me this is one of the most necessary problems which demands our attention as we consider this important matter. I believe that on the average a Member of the U.S. House of Representatives, to be re-elected when he is opposed, has to spend fifty thousand dollars. Some Members of Congress have to spend two or three times this amount. Others spend less. Up until this current year, during my fourteen years in Congress, I have only had to spend a little over thirty thousand dollars in all my campaigns. My expenditures for the primary campaign this year amounted to approximately fifty thousand dollars. The adequate financing of a political campaign is, let me repeat, one of the greatest problems that confronts us.

If only Americans would individually give a small amount to the candidate of their choice without extracting from him any political promise! But, seemingly, they are not going to do this. It means then that if you have a campaign every two years you are going to have to spend a tremendous amount of time seeking campaign contributions, that do not obligate you, in sufficient amounts to carry on the necessary advertising program that is essential to being elected. Surely I believe we can agree that to run a campaign every four years would be less expensive than to run one every two years. I recognize that this matter is of basic interest to the candidate and not to the constituent. I maintain, however, that with less worry about the financial aspects of campaigning, the Congressman can apply himself to the problems of his constituency in a much more effective fashion.

In conclusion, Mr. Chairman, it is my conviction that a four year term would advance the interests of Congress, as such; the interests of the American people as constituents of the House of Representatives. Let me add that as a defeated Congressman a four year term will be of no help to ms. It will, though, in my opinion, be of tremendous value to a

number of dedicated public servants whose service to our country will be greatly enhanced.

Large Ice Cube Causes Large Headache

EXTENSION OF REMARKS

HON. JOHN R. SCHMIDHAUSER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. SCHMIDHAUSER. Mr. Speaker, the article which I am about to insert in the Record conceals in a colorful title what could have been a tragic situation. This article, written by a constituent of mine who is commander of the Quad City Squadron of the U.S. Power Squadrons, for their publication the Ensign, describes the ice jam which occurred in the Mississippi River at Davenport, Iowa, this February. In graphic terms Cmdr. Alan Hathaway tells of the danger which the ice jam brought to the Quad Cities area and of a possible long-range preventive measure, that of maintaining an ice-free channel to Dubuque, Iowa.

A resolution providing for a study of the feasibility of such an undertaking has been approved at my urging by the Public Works Committee and I hope that this is but the first step in maintaining year-round navigation on this section of the Mississippi.

The article follows:

Large Ice Cube Causes Large Headache
(By Cmdr. Alan D. Hathaway, AP, Quad
City Squadron)

What do you do with an ice cube 10 miles long, up to 12 feet thick, and one river

In February 1966, a quirk of nature reintroduced an age-old problèm that, under most circumstances, has no ready solution. The Upper Mississippi River and many other northern rivers periodically suffer from ice jams, but the jam this winter had particular significance, not only because of its huge size, but also because its location threatened to flood the Quad Cities of Davenport and Bettendorf, Ia., and Rock Island and Moline, Ill., for the second time in 10 months.

Just 11 months ago, the area suffered the worst flood in history, due to the rampaging Mississippi. Now the extreme cold temperature that prevailed for a 10-day period, following an early breakup of unusually heavy ice, caused an ice jam below Davenport that grew daily and literally froze to the bottom of the Mississippi. As much as 40 percent of the flow was being held back, and at one time the water at the upper edge of the jam was 10 feet higher than at the lower end, 10 miles downstream!

Local anxiety was high, as one Squadron member can attest after many sleepless nights. (His house is on an island that was surrounded by ice!) Much discussion was generated as to the best method of breaking the jam. An early and logical suggestion, dynamite, was vetoed by the State of Iowa, on advice of the U.S. Army Corps of Engineers, as too dangerous and probably too ineffectual n such a large accumulation of ice. It was estimated that one million pounds of dynamite would be needed!

Finally, experts from the Corps of Engineers were brought in to survey the problem, and their conclusion was that, if it couldn't be blown up, it must be melted.

The use of lamp black spread over the surface of the ice to absorb the sun's heat and thus melt the ice rapidly was suggested. This method had been used in salt-water harbors in Russia, with good results, but there was no record of its use on fresh water. Another way of melting the ice, through the application of salt, was considered. But the temperatures were too cold, and the towns downstream use the Mississippi River water for drinking purposes. The chance of pollution almost ruled this choice out.

Colonel Howard B. Coffman, Jr., District Engineer of the Rock Island District of the Corps of Engineers, decided to implement several test plans as yet unproven. In one of them, coal dust, instead of lamp black, was spread from crop-dusting planes and helicopters over the lower end of the gorge to cause heat-absorption meiting. In another plan, calcium chloride was spread over the ice in other areas to cause chemical meiting. Although it was felt that this chemical would cause the least pollution of the stream, it was tried only in small quantities.

Another way to solve the problem was to try and break up the ice with icebreakers. But the only icebreaker on the Upper Missispipi was located 100 miles upstream and frozen in the ice. The icebreaker from St. Louis was available, but not powerful enough, and, besides, Lock 20, downstream, was out of operation for repairs.

Some solution had to be found; already the water was four feet over flood stage in the city of Davenport. Mayors, governors, congressmen, senators, generals, admirals, experts, and citizens—all came to Davenport to survey the jam and make suggestions.

Two large towboats and the U.S. Coast Guard cutter from St. Louis finally arrived at the scene, after hasty repairs were completed to Lock 20 at Canton, Mo. The two boats worked as a team, with one breaking a path through the ice and the other keeping the channel cleared downstream.

Finally, the combination of coal dust, calcium chloride, boats, and the return of warmer temperatures broke the jam!

The follow-up tests showed that the coal dust melted three inches of ice, the calcium chloride melted up to 10 inches, and the boats broke a path 200 feet wide through the jam.

The water went down after the third highest flood in the area's history, caused by ice blocking the river. Old Man River is back to normal now, but there will be much further discussion as to the best way to break up another ice jam in his gullet, should it occur next winter.

Some solution to the problem may be forthcoming from legislation introduced by Congressman Joseps Schemensusser of Iowa. He requests a feasibility report from the Corps of Engineers on a 12-month navigation season on the Upper Mississippi as far north as Dubuque, Ia. This would go far toward increased flood control, the major aim of this legislative action.

Rusk in Far East

EXTENSION OF REMARKS

HON, ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mr. NIX. Mr. Speaker, the circumstances are propitious for Secretary of State Rusk's tour of the Far East.

In fact, the Philadelphia Evening Bul-

letin describes the atmosphere in that part of the world as improved far beyond anything that could have been predicted 6 months ago.

The newspaper remarks that Secretary Rusk could report military and political advances in South Vietnam. And it declares that striking changes in the entire area would not have taken place had not the United States held firm in South Vietnam.

Because this is an aspect of the Secretary's trip that should not be overlooked, I include the editorial in the Record:

SECRETARY RUSE IN THE FAR EAST

Secretary of State Rusk is making a Far East tour in an atmosphere improved far beyond anything that could have been predicted six months ago. Mr. Rusk could not report to the annual meeting of the Southeast Asia Treaty Oraganization in Canberra, Australia, that peace in Viet Nam was only a day or two away, but he could say that the military situation was never better and that Saigon's political troubles had eased.

But it is the change in the region outside Viet Nam that is the most striking, a change that would not have taken place had the United States not made the stand it has in support of South Viet Nam. The Red Chinese-Indonesian axis has been broken and the Sukarno guerrilla campaign against Malaysia has gone with it. Nine Asian countries have created an Asian and Pacific Council, and the defunct Association of Southeast Asia has been revived. The talk is going beyond economic and technical collaboration toward establishing a permanent organism.

Mr. Rusk will visit Tokyo, Taipei, Manila and Seoul before returning to Washington, all of which capitals are involved in what may be called the new Asian spirit. The secretary will find Japan cautiously emerging from its postwar isolation and playing a leading role in the formation of the Asian and Pacific Council. This is all to the good, and it heralds the necessity for a realignment in the not distant future of our relations with Japan.

The light is still dim, but it is brighter than any that the secretary has had to travel by in previous journeys to the Far East.

The Late Police Chief William H. Parker

EXTENSION OF REMARKS

HON. ALPHONZO BELL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. BELL. Mr. Speaker, Police Chief Parker was one of our Nation's great lawenforcement officers and one of the new breed of men who helped to revolutionize the police profession in the United States.

He will be remembered both for the efficiency and effectiveness of his department and for the personal standard of integrity which he maintained.

He was equal to the challenges of the unique period in which he lived. He distinguished himself during a time of great tension and strife in American society.

We hope that he was not irreplaceable. But to his great credit there is much evidence to suggest he was. Address by Congressman Graham Purcell at the Conference of the Americas on "Malnutrition as a Vital Factor in Development," at the Hotel El Continental, Panama, June 20, 1966

EXTENSION OF REMARKS

HON, JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. WRIGHT. Mr. Speaker, recently the House of Representatives passed and sent to the Senate the Food For Freedom. Act of 1966. Within days after the House action, a very exciting demonstration of Latin America on the move in the war against hunger was given in Panama when more than 175 Latin American leaders representing 17 countries, from government, business, church organizations, and other voluntary groups met under the auspices of the Bureau for Latin American Affairs of the Agency for International Development. The purpose of the Conference was to build an action program for a campaign against malnutrition. The theme of the Conference was "Malnutrition-A Vital Factor in Socio-Economic Development." At the conclusion of this Conference, a document was prepared which has become known among those who partici-pated as the "Charter of Panama for

Mr. Speaker, life in Latin America continues to be very grim. Recently the World Health Organization released some tragic facts:

Among children aged one to four, about half the deaths are attributable to malnu-

From the Rio Grande to Cape Horn in every second coffin carried toward a grave is the body of a child who could live no longer than five years.

Added to this is the recent report by some leading nutritionists in Latin America that by any standard acceptable in the United States, 7 out of 10 people in-Latin America would be considered malnourished.

Action is indeed needed. It is for this reason that I am very proud to announce that a fellow Texan and good friend, the distinguished Congressman Graham Purcell, addressed that Conference and brought to the Latin American leaders the strong conviction, presented just a few days before when the vote was taken on the Freedom From Hunger Act, that the American people are committed to freedom from hunger for all men. Surely he spoke for all of us when he said:

We pledge our best efforts to support those governments and those people who are committing their own resources to the War Against Hunger.

Carry home to your countries the message that the Members of the United States Congress . . and all our fellow countrymen, are committed to that battle.

I believe his speech is a message not only for the Latin American leaders present in Panama, but I believe this speech is truly a useful message to all

peoples who have a national will and determination to help themselves in the struggle against want.

Congressman Purcell's speech follows:
Address by Congressman Graham Purcell
at the Confreence of the Americas on
Malnutrition as a Vital Factor in Development, Panama, June 20, 1966

I welcome this opportunity, and consider it a great privilege to share with you, the leaders in the campaign against malnutrition, some of the concern of the people of the United States and some of the legislative activities of the United States Congress which are planned to help those who are underfed and undernourished.

President Johnson has taken a bold lead in the fight against hunger. He has made the position of our people clear in his messages to the Congress . . . and the Congress has responded. They have indicated by their actions and speeches that this is the kind of fight the people of my country prefer to respond to . . . The War against Hunger.

respond to . . . The War against Hunger.
While the United States is generally thought of as being affluent and its people as being well-fed, our Congress has recognized that we are not without our own problems involving hunger and malnutrition.

Mindful of this, and of the economic advantages that accrue to a society where each and every member is properly nourished, President Johnson recently proposed the Child Nutrition Act of 1966. The Congress, fully aware that children are one of our most valuable assets, is currently working on this proposal.

Specifically, the Congress is trying to expand the National School Lunch Program to reach more needy children. The program already is serving 18 million children on a regular basis. The Special Milk Program is being expanded to provide more milk for children who need it. We are experimenting with the concept of a Pilot School Breakfast Program which will be tried in low-income areas. Grants are being made to schools to develop additional food service facilities and better staffing of these facilities. The Food Stamp Plan is another domestic

The Food Stamp Plan is another domestic program designed to fight malnutrition. Through this program, recipient families have increased their consumption of quality foods, such as meat, fruits, and vegetables, by more than 80%. President Johnson now visualizes that more than 1.3 million people will be receiving Food Stamp help a year from now.

Legislation which has been receiving a growing amount of enthusiasm in my country these past few months is the Food for Freedom Program.

For the past eleven years, the United States through the Food for Feace Program under Fublic Law 480 has delivered 150 million tons of food, valued at more than \$15 billion, to nations needing more food. Seventy million children now receive United States food, and yet, the problem of world hunger is more serious today than ever before.

On this premise . . . that the problem of world hunger is more serious today than ever before . . . the Food for Freedom program was conceived. I had hoped to be able to share the details of our program with you at this Conference, but they are still being formulated by the United States Congress. An emphasis on self-help and the elimination of the "surplus" concept in food aid will, however, be the main features that distinguished this new program from its predecessors. By the elimination of the "surplus" concept, I mean we will begin to produce for recognized needs rather than shipping only foods which are in surplus. Also, under the new program, there will be increasing stress on nutrition . . . especially for young people.

ngry hich is having great impact. That is the so-called "world population explosion." This problem, and the related threat of famine, have been the quiet concern of many of us in the Concress for several ways.

gress for several years.
Suddenly, however, the problem has been brought into focus by the interest of the public press, by the famine in India, by the heavy purchases of wheat by communist bloc countries that cannot under their system develop a productive farm program, and by the reduced stockniles in my own country.

the reduced stockplies in my own country.

The problem is a complex one, and one which deserves lengthy and intensive study. But unfortunately we do not have time to give it the study it needs. The problem is here—now—and time is fleeting.

Certainly at the heart of the problem is

Certainly at the heart of the problem is the fantastic growth rate of our world's population. I know many of you are more familiar with the staggering statistics than I am, for you face this problem in your own countries. To show how serious it is, however, total world-wide food production in 1965 was about the same as it was in 1964. But, in 1965, there were 63 million more mouths to feed than the year before—more than enough to populate a good-sized country.

Today, there are more human beings in the world who are underfed and undernourished than the population of the entire world in 1900.

Another part of the problem of growing populations and less food for each person lies in the fact that some of the old answers are no longer available. When the United States was developing, the answer to our increasing population was for people to move on to new territory and to open virgin land for farm production. There are no longer such promising frontiers in the United States, and very few in the rest of the world.

All over the world, the most valuable land is already under cultivation. Much of the land which is not in use, or only slightly used, is either too cold, or too dry, or too rough, or too hot, or too wet, or too remote, and does not offer the immediate potential we need.

With the increasing population, and an inability to find new land readily available for easy production, the less-developed areas of the earth are losing their battle to feed themselves. Before World War II, these less-developed regions exported an average of eleven million tons of grain per year to the more developed areas. Since then, the situation has been reversed and these less-developed regions, which are now the areas of highest population growth, have to import more than 20 million tons annually from the developed regions.

A third problem is the increasing number of people who are living in the cities where they cannot supply even a portion of their own food. They are becoming increasingly dependent upon the extremely complex marketing distribution system.

Reting distribution system.

Although half of the world's population still is classified as agricultural, people are beginning to pile up at a faster and faster rate in our cities. This may contribute to economic growth and industrial progress, but—in the case of food—it means that many, many millions of people are at the mercy of imported supplies. It also means that the ability of the rural areas to expand food production easily and quickly under conditions of crisis is more limited than it might be otherwise.

Another problem area which needs study is that of increasing productivity of land already under cultivation. Increasing the yield, the nutritive value, efficiency of harvest, storage, and distribution are problems which must be solved. Unfortunately, answers to these problems will not solve our immediate situation, but do hold great promise for the future.

Along this line I want to report a major breakthrough in developing the nutritive value of food. Furdue University has just recently identified a new genetic component which nearly doubles the protein level of corn and other grains. AID is now initiating a project-to make this discovery available in Latin America. This is one of the most exciting food discoveries in recent years and is a real triumph in our struggle against malnutrition.

Another consideration to the problem is the fact that people all over the world are seeking and expecting better diets. Those who do not have the benefit of adequate nutrition see others around them eating their fill. We, in the Congress, know that our citizens will not tolerate a program which might reduce the availability of reasonably priced food in our own country. We also know that people in any other part of the world are no different in this respect. When they become accustomed to a diet of good food, they tend to react strongly to any reduction. Friendly governments can get into serious difficulties with their people when their food supply is curtailed, for any reason.

In short, temporary programs which merely whet the appetite of our people must be avoided unless we are also prepared by means of long-range programs to be sure the people will be fed equally well in the future.

will be fed equally well in the future.

There is another problem which I feel has been a significant contributor to the international food crisis. For centuries, it has been an economic truth that industrial so-detice can be built only on a sound agricultural foundation. Too many of the developing countries have ambitions of becoming industrial nations and have failed to understand that they must first develop a sound agricultural base. Too many national economic plans have milked the agricultural sector of the economy of necessary capital to spend it on unnecessary, or poorly planned, industrial adventures . . . or both

. . . and some have even squandered their national resources and economic resources on petty external or internal wars. This reduces both the total food supply, and the in-

centive for production.

These are only a few of the problems which must be faced if the people in our hemisphere, and in the rest of the world, are going to be properly fed. There are many other problems of a political, economic, and social nature. I have not even discussed the serious marketing and distribution difficulties. I have not mentioned the physical problems of many of the receiving countries, such as inadequate port facilities. This discussion has not considered the more immediate problems, like drouth. Furthermore, we must recognize the political motives and self-interests of the governments with which we will be working. And, in looking for solutions, we must take into consideration the fact that the countries most in need of food assistance are also the countries least able to pay for it.

There are no easy answers to these problems. There is no neat little legislative package available to us which can solve the world's hunger problem. And so, the United States Congress has been looking for new approaches to a solution of the growing international food crisis.

Massive foreign aid has, in the past, been one of the solutions adopted by the United States. Now, however, it has become very difficult to get approval of these programs in the Congress. It is difficult to explain to our people that they must be taxed to pay for donated supplies of food and other items going to countries who then spend their money for military and other purposes rather than for the development of agriculture. This is particularly true when the military purposes are contrary to the best interests of the United States. It is equally difficult to

explain to our constituents that they are being taxed to make up for shortages based on the inability of some recipient nations to collect their own taxes.

collect their own taxes.

Massive foreign aid has other shortcomings. It has a tendency to lead countries to become dependent on donated supplies, rather than encouraging the recipient countries to develop programs for themselves.

tries to develop programs for themselves.
Also, such a program tends to develop an appetite of the people for a continuing supply of better food. This, in turn, can create some serious political difficulties between our governments.

And, we do not want to bury a people's pride in an avalanche of well-meaning United States charity. Instead we want to extend a helping hand wherever possible in a manner which will encourage friendly developing countries to work out their own solutions to their individual problems.

We are not looking for dependencies. We are looking for independent partners who will work with the United States to make a better life for men of good will, wherever they may be.

Certainly our solutions much be more than answers to temporary needs for more food. We must also concentrate on finding solutions which show promise of being long term.

tions which show promise of being long term. First, we must face up to the problem of a rapidly growing population and work on population controls. I recognize that any program in this area will be loaded with economic, political, religious, and social conflict... but work must begin.

Last year, for the first time in my country, a Congressional committee held extensive hearings on population controls. The study will be resumed. For the first time, a President of the United States is speaking on the problem. Encouragement has been given by the actions and words of the Pope who is giving new study and thought to the problem.

Within recent months, public attention in the Americas was focused on a significant discussion meeting, held in Cali, Colombis, on problems of population. All these indicators offer hope that positive actions will be taken in the near future to help cope with the population crisis. If you and I have any concern for hungry people, we must press for these answers.

Secondly, people from all the Americas must work together to establish sound agricultural programs. United States food production will not eliminate the food shortage. At best, it can only be a temporary answer to the present food shortage. We want to assist your efforts with our technology and skills in agriculture because we believe, working together, we can find more lasting answers to far greater food production in our hemisphere. In connection with these considerations, President Johnson stated that, "There is one characteristic common to all who have increased the productivity of their farms: A national will and determination to help themselves."

This increase in production will require more fertilizer, technical services, tractors, and other equipment, resulting in new industries and more jobs for your workers. Of course, the United States wants to help supply the needs which you cannot produce at home. Such progress will mean stronger economies, and in all candor, stronger economies and increased trade make better neighbors. It is no secret that crime, disease, and revolution breed and multiply where there is hunger and poverty.

Now, for the first time in our history, my country is in a position in which it can work with you in making real progress against the scourage of hunger. We have a new farm program which gives us much needed fiexibility. My fellow countrymen are ready to accept the challenge, for it gives us an opportunity to demonstrate the compassion

and concern of our people, a free people, for our fellow man.

We believe that all the American Nations . . joined together in efforts to conquer our own problems . . . can join together help others who have even greater problems.

Our creed is simple. Ours is a nation of people concerned about the problems of individual pepole. Ours is a government which, under God, seeks to serve people rather than be served by people. We cannot, and will not, deny to our citizens either the freedom of opportunity, or food for their bodies. We cannot be true to these principles. and at the same time, ignore the problems of hungry people elsewhere in the world.

President Johnson has told us:

There is a great moral principle at stake. It is not right...in a world of such infinite possibilities... that children should die of hunger, that young people should live in ignorance, that men should live in misery, shrouded in despair.

"If we truly mean our commitment to freedom, we must help strike at the condi-tions which make a mockery of that hope.

"We have the skills and resources to improve the life of men. I do not believe we lack the imagination to find ways to shatter the barrier between man's capacity and man's needs."

When the President presented the Food when the Fresident presented the Foot for Freedom program to the Congress, he pointed out that when "men and their families are hungry, poorly clad and ill-housed, the world is restless—and civiliza-tion exists at best in troubled peace."

For Americans of both North and South America, there is only one answer. We must turn our collective, creative abilities loose on the problem of food production and together develop the great agriculture productive capacity we possess to feed hungry people wherever they may live.
You, the leaders assembled here today, have accepted this challenge. Your presence at this Conference makes this clear.

You know we will not have an easy victory. The struggle will be long and arduous, but

I mak you . . what better war could mankind be engaged in than one to achieve "Freedom from Hunger" for all men? As a member of the United States Con-gress, I believe I speak for all my colleagues when I say "We pledge our best efforts to support those governments and those people who are committing their own resources to the War against Hunger."

Carry home to your countries the message that the Members of the United States Con-gress . . . and all our fellow countrymen, are

committed to that battle.

Remarks of Congressman Samuel N. Friedel, of Maryland, Har Sinai Congregation, Baltimore, May 29, 1966

EXTENSION OF REMARKS

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. FALLON. Mr. Speaker, recently the Har Sinai Temple in my city of Baltimore retired a historic U.S. flag, and replaced it with a new one. That temple houses America's oldest continuous Reform Jewish congregation and is a beautiful edifice in a city noted for the striking architecture of its churches.

The new flag presented to the temple was flown over our Capitol on the occa-

sion of the 150th anniversary of the writing of "The Star-Spangled Banner."

One of the speakers at Har Sinai Temple on May 29, 1966, was my distinguished and able colleague, Congressman SAMUEL N. FRIEDEL, who has ably served his city, State, and Nation. We, here, in the Congress of the United States are indeed, proud of him and his invaluable contributions as a legislator and statesman. When I read my colleague's statement, I was so favorably impressed that I wish to have it inserted in the pages of the Congressional Record, believing it to be of general interest and worthy of further notice.

Congressman Friedel's remarks are as follows:

REMARKS OF CONGRESSMAN SAMUEL N. FRIEDEL. MARYLAND, HAR SINAI CONGREGATION, BALTI-MORE, MAY 29, 1966

Dr. Shusterman, Rabbi Simon, Cantor Cooper, officers and fellow members of Har Sinai Congregation:

We are gathered here today to retire our historic flag and replace it with a new one. This banner which has flown over this house of God will long be remembered as the one which was actually flown over our Capitol in Washington on the 150th anniversary of the writing of our national anthem-The Star Spangled Banner.

It is, therefore, proper that this ensign be placed among the archives of our temple and forever treasured for its historic significance. The Har Sinai Congregation, America's oldest continuous Reform Jewish religious organization, has at all times placed patriotism for the United States immediately after duty

and love for the Lord.

The story of the origin of our national flag parallels the story of the origin of our management parallels the story of the origin of our country. As our country received its birthright from the peoples of many lands who were gathered on these shores to found a new nation, so did the pattern of our stars and stripes rise from antiquity. The star is a symbol of the heavens and the divine goal to which man has aspired from time immemorial; the stripe is symbolic of the rays of light emanating from the sun. Its colors also inspire us-red stands for courage, white is the symbol of purity, and blue is the color of justice.

Here, in the presence of representatives of all Har Sinai activities, its officers, board of trustees, brotherhood, sisterhood, Boy Scout trustees, orderinged, siteringed, any occur-organizations, youth groups, and the entire temple family, we respectfully retire this flag and replace it with a similar flag that has also flown over our Nation's Capitol in Washington.

Bail Reform Act of 1966

EXTENSION OF REMARKS

HON. JOHN R. HANSEN

OF IOWA IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. HANSEN of Iowa. Mr. Speaker, the recently passed Bail Reform Act of 1966 (S. 1357) is the first significant change in the basic Federal bail procedures that were established by the Judiciary Act of 1789. It now enables Federal prisoners without sufficient funds to

raise bail to obtain a pretrial release.

The bill requires judicial officers to "release on personal recognizance or on unsecured bond persons charged with

noncapital Federal offenses," unless the officer determines that later appearance is "not reasonably" assured. It also establishes certain conditions under which the prisoner may be released, in order to assure his appearance at trial. Under this bill, the officer must take various factors into account. He must fully consider the record of the accused, his family ties, financial resources, and other important facets of the case.

President Johnson recognized the necessity of this legislation when he advocated its passage in his message on crime and law enforcement and when he signed it into law. In view of its importance, I now place into the Record an editorial broadcast over WHO radio in Des Moines, Iowa:

THE CHANGE IN THE FEDERAL BAIL LAW

President Johnson has signed into law a bill that will result in many federal prisoners being released without bond to await their

The effect of the legislation is limited; it applied only to Federal Courts, to charges involving noncapital crimes and to persons who are not considered dangerous and who can be trusted to show up for trial.

Judging by the success of the pre-trial release program in Des Moines, a surprisingly high percentage of persons charged can be trusted to return voluntarily for their trial.

For those who are released under the program it means they will not have to serve time simply because they don't have money, nor will they have to pay an exorbitant rate of interest to a professional bondsman to gain their release. It will give even more meaning to the principle that a person is innocent until he has been proven guilty.

The passage of the law is a significant step in improving the quality of justice in the Federal Courts.

Free Postage to Combat Zones

EXTENSION OF REMARKS

HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. PATTEN. Mr. Speaker, I rise today to introduce legislation which would provide for free postage on first-class mail, newspapers, and small parcels for all citizens sending that mail to members of the U.S. Armed Forces serving in com-

I was surprised to discover that no Members of Congress has introduced legislation of this sort before; I would certainly hope that H.R. 16389 is given immediate and serious consideration so that this situation can be quickly alleviated. Under this bill, mail will be sent by air on a space-available basis on U.S.-flag carriers to combat zones, as designated by the President.

On November 1, 1965, Public Law 89-315, giving free postal privileges to soldiers in combat areas and providing for air service on the free mail, was signed by President Johnson and enacted into law. On March 21 of this year, the House passed H.R. 13448 which would provide for airmail from the United States to combat zone areas at surface e

continental rates. This measure has not yet been acted upon by the full Senate Post Office and Civil Service Committee. Although it was encouraging to see the public law signed and it was heartening to see the House pass the latter measure, neither goes far enough in terms of giving servicemen the maximum opportunities to receive mail.

I received a letter from a constituent in South River, N.J., who told me:

I am thinking of older people who depend on social security for their only income. For people in this category and people on relief it would sometimes almost be impossible to send even a small package to Vietnam.

Why must it be so coetly to send a small box of hope, love and a bit of home to the GI's who are so bravely sacrificing their lives for our country.

Now, it may cost up to \$4.08 to send a 5-pound parcel air mail from New York to San Francisco, the point of embarkation for Asian mail. To many families, this may prove to be a heavy financial burden.

Here is a situation where some 300,000 soldiers are engaged in a fight for their very lives—the least we at home could do would be to insure these men some small measure of the comforts of home. It is unfair both to the members of the Armed Forces and their parents who may be prohibited by costs from sending them news from home or small packages.

It is bad for morale as well. In a communication to Postmaster General Lawrence O'Brien, the President has said:

Mail is the vital link that bridges vast distances, bringing warmth and mews and, most important, easing the pain of separation. To have mail delivered sooner is to bring home that much closer.

It goes without saying that, to paraphrase the President, to have mail delivered more often is also to bring home that much closer.

It is a well-known fact that mail call is one of the few bright spots of the day of a soldier in combat. If we in Washington can make this moment a bit happier, then, I think that we can say that we are doing our part.

What is more, this bill will not be a burden on the taxpayers. I have been informed by Mr. Eugene B. Crowe, Acting Assistant Postmaster General of the Post Office Department, that revenue loss on first-class letters and small parcels going to Vietnam—based on a survey made at the San Francisco Post Office—terminal for all U.S. mail going to Vietnam—will be only \$1.6 million. Although \$1.6 million is not a figure which one usually precedes with "only," we must put the cost in the proper perspective of the entire war. Although official figures are not available, it is likely that we are spending \$20 billion a year or more in Vietnam. In comparison to that figure. \$1.6 million is but a minute fraction.

Eric Sevareid has pointed out that it costs about \$1 million for each member of the Vietcong that American forces kill in action. This additional cost of \$133,000 a month will not be great at all.

In addition, we have set precedents in past wars of giving soldiers mailing privileges home. Now, I feel that an extra measure is necessary so that soldiers are

not faced with the problem which was reported by Mrs. Walter Glynn, national president of the American Legion Auxiliary:

A serviceman in Da Nang portrayed the plight of those who receive little mall when he wrote "Although I would like a hometown newspaper, I have a friend who needs one more than I do. He does not receive much mall; in fact, if he receives a letter once every two weeks, he's lucky. Some time ago he told me that if he had his hometown newspaper, he would not miss mail so much.

Certainly, if there is any body of American citizens which ought to receive special compensation from the Government, it is those soldiers serving in combat areas. I believe that my bill, H.R. 16389, by giving these men the added "bonus" pleasure of hearing from loved ones and friends, would help provide a needed and vital service for our men in uniform.

Mr. Speaker, I ask for speedy and positive action on my legislation.

California Loses a Distinguished

EXTENSION OF REMARKS

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. JOHNSON of California. Mr. Speaker, a few days ago the Golden State of California lost one of its most distinguished citizens who was a conservationist of world renown.

During his 91 years, Dr. Charles M. Goethe played a major role in the development of our national park system and also in the fostering of recreation areas not only in this country but in many areas throughout the world with especial emphasis on areas attractive to our children.

Early in my career of public service I was privileged to become acquainted with this outstanding man who, I should point out, was born at Lake Tahoe at a time when this world-famed recreation spot was still known only to the hardiest of ploneers. In my own association with Dr. Goethe, I was honored to work with him toward the development of the American River, including the construction of the Folsom Dam and Reservoir, the conservation projects on Middle Fork, and the developments on the South Fork constructed by the Sacramento Municipal Utilities District, and, finally, with the Auburn Dam project which was authorized by this Congress just in the last year.

Paying tribute to this distinguished citizen of California, the Sacramento Bee, which serves most of northern California, published an outstanding editorial. It is my pleasure to include this editorial in the Record at this point:

Sacramento has lost one of its most distinguished and honored citizens in the death of Charles M. Goethe.

And while he was a native of this city it also can be said of him that in a very real sense he was a citizen of the world, so wide ranging were his interests and so diversified the activities to which he devoted his time and a goodly portion of his fortune as well.

In business, he was most successful. And to those who knew him best it appeared he coveted material success not so much for its intrinsic value but because it provided him with the manns and the leisure to promote the philanthropic, conservation and religious causes which were closest to his heart.

To enumerate these would take an article

encyclopedic in length.

Typical of them were such activities as the establishment of the ranger naturalist service in our country's national parks, the fostering of the kindergarten movement, the establishment of children's playgrounds not only in the United States but in many foreign countries as well, the saving of the redwoods for the enjoyment of generations yet to come, the promotion of the junior museums, the establishment of the Everglades National Park in Florida which resulted in the salvation of the egrets.

A naturalist, he was the Audubon of his time as the nature series he long has contributed to The Bee gives wide and varied

illustration.

And he richly deserved the rare distinction for an American of being elected to a fellow of the British Royal Arts Society.

Goethe and his wife, Mary Glide Goethe, for many years spent six months of each year in travel primarily to learn about the flora and fauna and peoples of distant lands. His knowledge of these was both varied and intimate. They were a constant wonder to those who talked with him. He had a passion for knowing and understanding.

Yet he himself was not always understood, for his ways of helping others with finances, with kindness, were known only to a few. But the scope of the material aid he passed along monthly, especially to young people and to groups working with or for young people, was so very wide, the total sum of his assistance had to be large.

Scholarships, vacations, blocks of tickets for the children's theater—the list of his gratuities was very long indeed, still the donor always remained modestly in the background.

Goethe's life was one fruitful and rich in human satisfactions far beyond the usual.

And it can be said with truthfulness that the world was made a happier and better place because he walked this way.

He may be gone but the good he did will continue to endure as long as little children romp in playgrounds and as long as people gather around campfires to listen with eager minds to rangers relating to them the wonders of the great out of doors.

The Coast Guard in Vietnam

EXTENSION OF REMARKS

HON, CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. CHAMBERLAIN. Mr. Speaker, for a year, Squadron 1 of the U.S. Coast Guard has been prowling the coastal waters of Vietnam charged with sharing the responsibility of halting the movement by water of men and supplies from North Vietnam to Vietcong units in the south. In order that the contribution of the Coast Guard to the war effort may be more fully understood and appreciated, I include in today's Record, H. R. Kaplan's article "The Coast Guard in

Vietnam," from the June 1966 edition of Navy magazine:

THE COAST GUARD IN VIETNAM

(By H. R. Kaplan)

Half way around the world, in the South China Sea, the United States Coast Guard's Squadron One is keeping watch over the sea approaches to the embattled Republic of Viet Nam. Its mission is to bar movement by water of men and materials from North Viet Nam to Viet Cong units in the south. It's an objective more easily stated than accomplished.

Squadron One has been in Viet Nam waters since last July, when the first units arrived via the Philippines. Operating under the direction of the United States Navy, the Squadron's twenty-six 82-foot patrol boats, together with Navy units and naval craft of the Republic of Viet Nam, make up the Coastal Surveillance Force. The Force is a major part of the sea war being waged by the United States and its allies to prevent a Communist take-over.

Day and night, seven days a week, units of the small Coast Guard fleet prowi the seemingly placid coastal waters of Viet Nam on the lookout for inflitration from the sea. The land they guard is, in many ways, a beautiful one, with dazzling white beaches, lofty mountains and green valleys. But it is a land scarred by war. Its dense forests and jungles conceal Viet Coag soldiers. Its people are terrorized by marauding Communist guerrillas.

Like other servicemen in Viet Nam, the men of Squadron One must endure the ione liness of being in a distant part of the world, far removed from our own in customs, language and tradition. There is also the intense heat, ranging from 90 to 120 degrees, high humidity and the drenching seasonal

rains that make life difficult.

In the 11 months the men of Squadron One have been at their job, they have become veterans. They've learned that war in Viet Nam is a hard, grinding, unglamorous affair, filled with unpleasant surprises. That innocent looking junk can suddenly become a blazing instrument of death. Those mild looking fishermen may be Viet Cong soldiers armed with grenades and other weapons. So the one rule you keep uppermost in your mind is: Don't relax. It could mean your life.

The patrol function carried out by the Squadron has the intriguing title, "Operation Market Time". It's a curiously peaceful name for so dangerous a mission. No one knows exactly how it received its name, but one theory is that it was derived from the thousands of commercial junks plying these waters daily. In this part of the world, where refrigeration facilities are virtually nonexistent, the junks serve as floating markets. These marine markets have sometimes provided the Viet Cong with opportunities for smuggling men and supplies into battle sones.

THE VUNG BO CAPER

What finally brought the matter of sea infiltration to a head was the discovery in February, 1965, of a large arms cache in Vung Ro Bay by members of the U.S. and Vietnamese navies. A 130-foot camouffaged junk had been sighted by a helicopter while on a medical mission out of Qui Nhon. Aircraft were called to the scene and four air strikes sank the vessel in shallow water.

Afterwards, investigators found that she was carrying enough supplies to outfit an entire Viet Cong battalion. Her armament was sufficient to knock out any normal-size patrol vessel. From caches on the beach nearby, investigators recovered 1,500 weapons and 30 tons of ammunition, explosives and medical supplies. Most of the equipment

was of Red Chinese manufacture. Papers found on the ship clearly showed that it was of North Vietnamese registry and engaged in infiltration.

This episode and several others like it convinced the Navy that something had to be done quickly to halt further infiltration. But Viet Nam's highly indented coastline made it very vulnerable to incursions from the sea. Faced with this problem, the Navy turned to the Coast Guard for assistance. The Navy Command knew that the Coast Guard's fast, highly maneuverable 82-foot patrol craft were ideally suited to the operation. Accordingly, they requested that vessels of this type be made available for close in-shore patrol work along the coast of the Republic of Viet Nam.

The Coast Guard responded by ordering 17 of its 82-footers to Viet Nam duty. On May 26, 1965, at Alameda, California, this force was commissioned as Coast Guard Squadron One. It was an excellent demonstration of the close working partnership that has existed between the two Services throughout our country's history. It is a partnership which has been confirmed many times on the beaches of Guadalcanal, Normandy, Sicily, North Africa and many other places far from the American homeland.

But before the Coast Guard vessels could be sent to the theater of operations, they had to be fitted out with additional armament. This included four 50-caliber machine guns and, as a main battery, a 50-caliber machine gun ingeniously moutned "piggy back" fashion on an 81-millimeter mortar. The mounting was devised by Chief Warrant Gunner Elmer Hicks. Obviously, Coast Guard personnel have not lost their ability to improvise.

Merchant ships carried the 82-footers to Subic Bay, Republic of the Philippines, which was the shakedown and staging area for the operation. Here the cutters and their crews were paired off for the first time. In the months ahead they would get to know a lot about one another. Each cutter was to carry an 11-man crew and a Vietnamese interpreter.

Before leaving for Viet Nam, Squadron One was split into Divisions 11 and 12. The nine cutters of Division 11 were to operate out of An Thoi on the island of Phu Quoe in the South to seal off the Viet Nam-Cambodian border and to patrol the Viet Nam coast on the Gulf of Thalland. Division 12's eight cutters were to be based at Da Nang and its area of activity was to be near the northern sector of the Republic of Viet Nam just south of the 17th parallel, the border between South Viet Nam and the Communist North. In February, 1966, an additional nine vessels were dispatched to the Squadron, bringing the total to 26. The new unit, Division 13, operates along Viet Nam's central coast and is based at Vung Tau (Cat Lo), about 40 miles south of Saigon.

The stretch of coast patrolled by the Coastal Surveillance Force, of which the Squadron is a part, totals about 750 miles, roughly comparable to the coast of California. That's a lot of water for a small fleet to cover. Working with it are ships and aircraft of the U.S. Navy and naval units of the Republic of Viet Nam.

A TYPICAL DAY

In command of Squadron One is Captain Robert LoForte whose headquarters are in Saigon. His command is composed of about 400 men, including relief crews, maintenance personnel, medical corpsmen and the headquarters staff. He serves directly under the Commander, Naval Forces, Viet Nam, who controls the operations of the entire Coastal Surveillance Force.

What's a typical day on patrol? As a rule

it's pretty strenuous. Once a susplcious looking junk is sighted, the cutter heads for it. Boardings are business-like, but courteous. Most of the interrogation is conducted by the Vietnamese officer who checks the junk's registry and the crews' credentials. Inspectors are fully aware of the importance of establishing good relations with the civilian population. Many of the people on the junks are well known to the inspectors through previous boardings. Food packages, medicine, cigarettes and other gift items are distributed. Last Christmas, Squadron One distributed gifts to fishermen and dependent children of personnel of the Vietnamese Navy.

Squadron One's war may not have the heart-quickening tension of the war in the rice paddies and the jungles, but it has some built-in dangers of its own. Take for example the case of the Point Marone in Division 11 in the Guif of Thailand. For more than a month the cutter had been on patrol without incident. To her skipper, Lleutenant David R. Markey of Groton, Conn., it looked very much as though he were never going to see any action in this strange war.

All that changed on August 23, 1965. While patrolling the northern end of Phu Quoe island, Markey spotted a junk headed for Cambodian waters. There was something about her that put Markey on his guard. He ordered pursuit of the craft, overtaking it. The three men on board were taken prisoner and turned over to Vietnamese naval authorities. Later they confessed that they were members of the Viet Cong.

Two days later, on August 25, the cutters Point Mast, Point Comfort, and Point Clear and a Navy destroyer escort shelled a Viet Cong staging area not far from the Vietnamese Navy Junk Base at An Thol. Using their 81-millimeter mortars, firing high explosive rounds, they saturated the target area.

On September 19, 1965, the tempo of war

On September 19, 1965, the tempo of war really speeded up for Division 11. On that day, a Sunday, Point Glover made the first capture of a Viet Cong junk, attempting to infiltrate via the Gulf of Thailand. The action started at 1 a.m. when the cutter detected an unlighted junk in the area and started to close in. At first the junk attempted evasive action. The cutter stopped the junk by smashing her engine with machine gun fire. A boarding party found rifles, including Chinese Communist carbines, 480 rounds of ammunition, cargo and personal effects. One survivor was found by the Point Garnet, the other crewmen of the junk were presumed drowned.

On the same hectic Sunday at 11:30 p.m.

On the same hectic Sunday at 11:30 pm. the Point Marone sighted another junk trying to reach the Viet Nam coast on the Gulf of Thailand. The Marone fired two warning shots as the junk tried to evade and outmaneuver the cutter. The Marone's fire was answered by Communist small arms and grenades. Then the cutter let go with her bow machine gun. During the fight, the Point Glover arrived on the scene and illuminated the area with her mortar, providing supporting small arms and machine gun fire. Riddled with bullets, the junk sank soon after it was taken in tow by the Point Glover. In the action, 11 Viet Cong were killed. One badly wounded survivor was taken ashore near a U.S. Special Forces Camp at the village of Ha Tien on the mainland. None of the cutters sustained damage.

On the following day, the Point Young carried a salvage party to the scene from Division 11's support ship, U.S.S. Krishns. From the second junk, the Coast Guard recovered six rifies, ammunition, hand grandes, a large amount of Vietnamese money and documents, confirming that its crew were Viet Cone.

RAMMING ENEMY JUNE

Frequently, the cutters provide gunfire support for ground forces in danger of being overrun by the enemy, assist Viet Nam naval units engaged by the enemy forces, and shell

enemy shore installations.

Squadron One racked up another score against the enemy on the evening of March 9, 1966. At 10:15 p.m., the Point White of Division 13 spotted a 25-foot motorized junk attempting to grown the Soirap River from the mangrove swamp area designated as the Rung Sat Special Zone. The cutter hailed the junk at a distance of about 150 yards, simultaneously illuminating the area. A savage burst of automatic and small arms fire was the junk's answer. The enemy fire was immediately returned by Point White's small arms and 50-caliber machine guns.

The cutter's reply disabled several of the enemy and tore big chunks out of the junk's But the Viet Cong were stubborn and a hail of bullets continued to pour out of the junk. In the face of the continuing fire. Point White's skipper, Lieutenant Eugene J. Hickey, ordered full speed ahead to ram the junk. He hit the junk amidships. Within 30 minutes after the ramming, she went down. A fanatical Viet Cong in the forward section kept firing until the vessel sank. Because of his resistance, only four crewmen of the junk were rescued.

On March 19, 1966, Point Garnet provided covering fire to permit the withdrawal of a U.S. Special Forces team which had run into an enemy ambush on Phu Quoc island. Be-cause of the Garnet's action, the force escaped intact.

As these incidents indicate, Squadron One's job is anything but routine. So far, the cutters of Division 12 at Da Nang have been involved in much more offshore work than those of Division 11. But whatever their job, all the men of the Squadron must their job, all the men of the Squadron must remain on continual alert and be able to re-spond instantly to any situation. Even without the outright challenge of the enemy, their normal patrol duty is taxing enough. By the end of December, 1965, the original 17 cutters had inspected nearly 12,500 junks and boarded 9,741. Since then, these totals have gone up tremendously.

Squadron One's divisions work closely with junk divisions in their patrols, exchanging information and taking frequent occasion to compare notes on suspicious areas, such as approaches to rivers and canals where traffic appears to be heavier than usual. In contrast to peacetime patrols, the Squadron's ships spend more than 70 per cent of their time on patrol. This is well over twice the time underway for similar ships in peacetime. But nobody is complaining and morale is high.

Coast Guardsmen in Viet Nam do have several things going for them. Their ships are airconditioned and the food is up to the usual high Coast Guard standards. ever possible, the men are given liberty to rest at recreational facilities at Ha Tien, Vung Tau, and occasionally at Hongkong, Bangkok and other areas. This doesn't hap-pen very often, however. On the relatively rare occasions they go ashore, they are well received by the native population, especially the children to whom Americans are "Okay, Number 1", the highest oriental rating. No. 10 represents the other end of the popularity

Squadron One, of course, is only a small part of the complex and difficult operation now being carried out in Viet Nam. Nevertheless it is an important one. Its men know that a great deal depends on the skill and dedication which they bring to their work. H.R. 13419

SPEECH

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

(Mr. ROGERS of Texas asked and was given permission to revise and extend

his remarks) Mr. ROGERS of Texas. Mr. Speaker, the distinguished chairman of the full committee [Mr. Aspinall] and the gentleman from Pennsylvania [Mr. SayLor] have rather fully explained the purposes and need for this legislation. I want to reemphasize the fact that we have this legislation before us today because of the desire of the legislative committees to limit the authority of the Secretary of the Interior and the Bureau of Reclamation with respect to feasibility grade investigations and the preparation of feasibility reports. In other words, this bill implements the limiting provision adopted by the Congress last year when we passed the Federal Water Project Recreation Act. Up until now, since 1902, the Bureau has had general authority to conduct these studies. From now on, each feasibility investigation must be specifically authorized.

The reason for the great number of studies listed in this bill is because this is the first legislation considered since enactment of the Federal Water Project Recreation Act. Thus, this bill must provide authority to continue all the investigations underway at the present time, including even those that have been completed where the projects have not been authorized for construction by the Congress. In the future, the Congress will need to authorize only the new planning starts.

The restriction on the Bureau's general authority, approved by the Congress last year, permits the legislative committees to examine these proposed projects at an earlier stage in the planning procedure and to exercise better control over the program. Past experience has shown that, once a project study reaches the feasibility stage, the impression prevails among the people in the local project areas that congressional authorization is pretty much a routine matter and foregone conclusion.

The local people and the local sponsoring groups are usually surprised to learn of possible delays in authorization. They cannot understand why the projects should not immediately be authorized once the feasibility report has been completed. They are unaware of the problem of imbalance between the Bureau of Reclamation's planning program and construction program, and that all of the projects with completed feasibility reports cannot be authorized because of budget ceilings.

Under the new procedure, it will be possible for Members of Congress to be familiar with the studies that are being conducted, and they will not be suddenly confronted with a completed projects report and local pressure for immediate authorization.

Mr. Speaker, as has already been pointed out, the investigations authorized in this legislation will be conducted over a period of at least the next 10 years. These investigations will result in a flow of completed feasibility reports to the Congress and will provide all of the information necessary for Congress to approve those projects that are meritorious and needed. The enactment of this legislation will permit orderly development of plans to meet the ever-growing water problems and needs of the Western United States.

I urge the approval of this legislation.

Happy Half Century

EXTENSION OF REMARKS

OF

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. MONAGAN. Mr. Speaker, with your permission, I ask our colleagues to join in congratulating Sanford H. Wendover, editor of the Meriden, Conn., Journal, on the completion of his 50th year with the Journal. There is something unique and commendable in the completion of half a century of service with a single employer, but when this service is recognized as eloquent and essential in the public domain it becomes all the more admirable and deserving of commendation.

Editor Wendover was pleasantly sur-prised by his associates with a 50th anniversary party, complete with cake, candles, flowers, and telegrams and messages from friends and associates from throughout the State and in other parts

of the country.

Mr. Speaker, in recognition of Editor
Wendover's dedication to the task of
protecting the community by enlightening the individual, I wish to include here the text of a letter which was addressed to Mr. Wendover by William L. Plante, Jr., president of the New England Society of Newspaper Editors, and a resolution introduced by Alderman Albert Hyman and adopted unanimously by the Court of Common Council of the City of Meri-

The letter from Mr. Plante is as fol-

The officers and the governors of the New England Society of Newspaper Editors congratulate you upon your 50 years of service to journalism in New England.

Years alone do not tell the story. hard work, your professional competence, your talents as writer and editor, and your role as community leader set a mark for the rest of us to emulate.

The society is proud to number you among its earliest members. It extends to you greetings and best wishes for continuing good health at this significant point in your career.

The resolution is as follows:

This is probably one of the most unusual resolutions our body will be acting upon because it contains no 'whereases and now therefores.'

The reason is because the man to whom we are paying tribute is one who just won't tolerate the redundancies of our governmental

It's not unique in this day and age for a man to be doing the same job for 50 years, but when that job is serving as a responsible critic and conscience to a city it behooves us all to take a brief moment to say thank you.

For his 50 years—celebrated today—as one of the pioneer developers and later leading voice of the Meriden Journal and for his many other years of public service, including terms on the Board of Apportionment and Taxation, this council takes this occasion to say thank you to Sanford H. Wendover, editor, Meriden Journal.

Dr. Teruo Ihara: Add New Dimension to International Understanding by Increasing Grants To "Have Not" Foreign Students

EXTENSION OF REMARKS

OP

HON. SPARK M. MATSUNAGA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. MATSUNAGA. Mr. Speaker, our Government's foreign scholarship program, established by the Congress in 1946, continues to be one of America's most important efforts toward promoting international understanding. And yet, Asia, which is recognized as an acute area in which the United States ought to promote understanding, receives only 4 percent of the total Fulbright scholarships. Western Europe, on the other hand, enjoys approximately 80 percent of the educational exchanges.

Dr. Teruo Ihara, associate professor of education at the University of Hawaii, says that this imbalance in geographic distribution is largely caused by the requirement for fluency in English. He adds that this language requirement has also tended to limit the grantees to those who come from the upper socio-economic level of their country. Dr. Ihara offers some helpful suggestions as to how the selective process might be improved.

Fortunately, Dr. Ihara, who happens to be a personal friend of mine, was recently appointed to the State Department's 12-member Board of Foreign Scholarships, and we will have the benefits of his views.

The newspaper article, written by Judy Chase, summarking Dr. Ihara's views appeared in the Honolulu Star-Bulletin of June 30, 1966. I now submit the article for inclusion in the Congressional

[From the Honolulu Star-Bulletin, June 30, 1966]

More Grants Unger FOR "HAVE-NOT" FOREIGN STUDENTS

(By Judy Chase)

The United States should concern itself more with ferreting out the "have-not"

youngsters of developing foreign countries for student grants, Dr. Teruo Ihars believes.

Thara, associate professor of education at the University of Hawaii was recently appointed by President Johnson to the U.S. State Department's 12-member Hoard of Foreign Scholarships.

He said, "we can't get through to these people with handouts.

"The Red Chinese are getting through to them via their minds. We should approach them in the same way."

Thara was critical of the fact that most Fulbright grants awarded by the board to foreigners go to students who are better off than average socially and economically.

He said the same is true of East-West Center grantees from foreign countries. "All this does is maintain the status quo."

KNOWLEDGE OF ENGLISH

The reason foreign students selected are so homogenous is that selection depends heavily on proficiency in English, Ihara said. The only people who are able to learn English are in the higher socio-economic brackets.

Yet, to keep pace in American graduate schools, he said, any student has to be fluent in English. (All Fulbright grantees are etther graduates students, researchers or lecturers.)

Ihara said to solve this dilemma in educational and cultural interchange, he advocates that an intensive English training program be started making all bright foreigners eligible.

The Board of Foreign Scholarships is a blue-ribbon panel including Chairman Oscar Handlin, Warren professor of American history at Harvard; John M. Stalnaker, president of the National Merit Scholarship Corporation; Francis Keppel, assistant secretary of the Department of Health, Education, and Welfare for education; Brooks Hays, former U.S. congressman from Arkansas, and Arthur Vanderbilt, professor of political affairs at Rutgers University

Though the board sets the State Department's educational exchange policy and stampe final approval on all Fulbright grants, bi-national commissions recommend the students from foreign countries.

Where none exists, the U.S. embassy's cultural affairs officer makes the recommenda-

CHANGE IN PROCESS

Thara feels the selection process might be improved by awarding grants to institutions rather than individuals, so that foreign students will be more likely to return home to jobs or studies after their stay in the U.S. than they are now.

than they are now.

"Remaining in the states is a problem which the board recognizes and is seeking to solve, though, of course, it depends on the individual country."

For example, "just about all students who come here from Thailand go back, while Kores has not been as fortunate," he said. Also, "I know many Pakistanis who would dearly love to get out of their country."

hara feels, too, that giving the Fulbright grants to institutions both in the U.S. and abroad "would ensure the maximum benefit to all concerned."

AMERICAN STUDENTS

Selection of American students now is based primarily on scholastic achievement and their proposals to tie in a study grant with their own educational experiences and goals.

Preliminary screening is done by the Institute for International Education and the Conference Board.

Though the board puts education before politics, Thara said, "Sometimes we have to turn students down because the State Department is concerned that on the biasis of their past actions in this country, their actions abroad might not be in the best interests of the United States."

Ihara added that the board has a policy

under which no explanation is given to a student as to why he has been turned down. He said the reason is that "the large number of students involved makes it impossible."

of students involved makes it impossible."

Personally, Ihara said, "I think it is in
the best interest of the United States to have
completely free interchange of ideas between
the U.S. and foreign countries.

"I think it would be great if we could arrange educational exchanges with Red China, Russia and Indonesia, but these countries are unwilling."

He said the U.S. does have student exchanges with Poland, Romania and Yugoslavia and that Burma and Ceylon recently expressed interest in joining the Fulbright program.

The student exchange program adopted by Congress in 1946 was intended to be a new dimension in international understanding. Despite its shortcomings, Ihara said, "testimonies by return grantees are generally in agreement that increased understanding of Americans has been one of its most important results. And this dispelling of ugly stereotypes about the American people is very important."

Thara, who has attended two of the board's four annual meetings in Washington since his appointment, said he has several recommendations he plans to make in the future.

As a member of the Far Eastern Committee, he said he will work toward more educational and cultural exchanges with Asia.

"Right now, about 80 percent of the exchanges are with Western Europe, and only four percent with the Far East.

"The Viet Nam and Red China situations being what they are, I think that the next great area of world conflict will be Southeast Asia. If we can help these people to developtheir capabilities to carry on viable ongoing societies, it will add to their desire for freedom."

Thara said he would also like to see more Fulbright grants go to teachers. "Since teachers are the ones who mold the thinking of our children, the benefits of their grants would be multiplied."

Overregulation Can Kill

EXTENSION OF REMARKS

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. QUILLEN. Mr. Speaker, in the present issue of American Heritage, there is a very profound article on the regulating of the natural wildlife in our Nation, which stresses the theme that by regulating many of the species of animal life, we are seriously tampering with nature's balance.

In effect, by meeting our problems with short-range solutions, we are multiplying our problems for the future.

In line with the thoughts expressed in American Heritage is an editorial from the Claiborne County, Tenn., Progress, which I insert in the RECORD, stressing its conclusion that—

Pesticides and their proper use are the difference between abundance and scarcity.

The editorial follows:

OVERREGULATION CAN KILL

Population increases bring inescapable environment changes. Dr. Warren C. Shaw, a top official of the U.S. Department of Agriculture, says that the world's population of humans, domestic animals and wildlife could

not exist today in the environment of the

In most areas of the world, the native vegetation was not very efficient as a source of food and fiber. Thus, as man developed, he had to replace the native vegetation with more productive plants. The result was an increase in pests too, and in the words of Dr. Shaw, "When man creates ideal conditions for the multiplication of pests, he must also create efficient means of controlling them." That is why it is essential that the use and regulation of pesticides be governed by good judgment and dispassionate re-search. Again in the words of Dr. Shaw, "* * * pests cause losses in reduced yields and quality of crops and livestock of more and quanty of crops and investors of more than \$10 billion each year. In addition, farmers spend more than \$3 billion for cul-tural, mechanical, chemical, and biological methods of controlling pests."

The United States has the most comprehensive laws and enforcement procedures in the world for ensuring the effectiveness and use of agricultural chemicals, but it ahould be remembered that pesticides by and large have been the product of private enter-prise. Overregulation can kill any private enterprise just as surely as a pest can kill a plant. Overregulation can be as dangerous to the future of our food supply as undercontrol, because pesticides and their proper use are the difference between abundance

and scarcity.

Captive Nations Week

EXTENSION OF REMARKS OF

HON. RONALD BROOKS CAMERON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. CAMERON. Mr. Speaker, after their "liberation" by the Red army in those momentous days following World War II. the nations of Eastern Europe entered a long period of brutal oppres-sion directed from the Kremlin. We correctly termed these once-proud nations "satellites."

Today there are encouraging signs that the Communist bloc has been fragmented and is now in a state of disarray. A struggle is underway to determine who will provide the orthodox line of Marxist-Leninist precepts. Eastern Europe is feeling effects from the dialog of dissent and we in the free world continue to hope that these states will regain the precious freedoms so long denied them.

The right to worship one's own God in his own way is a basic tenet of any free society. The peoples of Eastern Europe have been chafing under the conspicuous absence of this right. Communist leaders refuse to allow the national churches of Poland, Hungary and the Ukraine, to name but a few, to compete with their tired doctrines of dialectical materialism

So, even as there is cause for cautious optimism for the future of the states of Eastern Europe, we must remain con-stantly aware of the many instances of tyranny which continue to oppress these proud peoples.

Captive Nations Week is an appropriate time for Members of the Congress to again articulate their great concern for

the cause of political self-determination for the millions of people living behind the rusting Iron Curtain.

Captive Nations Week

EXTENSION OF REMARKS OF

HON, THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. PELLY. Mr. Speaker, President Johnson has set aside July 17 to July 23 for the eighth annual observance of Captive Nations Week. It is a great personal privilege for me to be able to participate in an event concerned with the future of millions of our fellow human beings, now under Communist domination.

Already numerous measures calling for the creation of a Special Committee on Captive Nations have been introduced in this Congress. I hope my colleagues will vigorously support this effort, for the creation of such a committee would be living proof of our dedication to those liberties denied to captive peoples.

So long as other peoples are denied the right to vote, our own freedom is insecure. So long as nations are denied the right to self-determination we can-

not have a truly peaceful world.
Soon after the nations of Eastern Europe achi ved their independence after decades as vassals of the giant European empires, they were engulfed in a new form of imperialism, enforced by the Red army.

Despite more than 20 years of Communist rule the spirit of liberty and national independence lives on in the hearts of the peoples of Eastern Europe. Rioting and unrest continue to frustrate the plans of the Communist puppet regimes.

We in the United States have a strong stake in the future of these brave peoples. Our Nation has often been called a "melting pot" because it was built by men and women of many nationalities who came here to escape from tyranny and limited opportunity. The peoples of the captive nations are not simply the unfortunate victims of despotism in far-off lands. They are the broken families and relatives of many of our own citizens.

But as Americans we have another reason for supporting the cause of these brave people. Ours is a Nation founded on the principles of political liberty, national self-determination, and government through representative institutions. These ideals are part of the definition of our American nationality. We must continue to do all we can to promote the spread of freedom and representative institutions to all of the countries of the world.

For both these reasons, the peoples of the captive nations look to the United States as the champion of their deepest aspirations. Although the United States was initially reluctant to abandon its traditional isolationist role, our record since the war in stemming Communist tyranny is commendable. Greece and

Turkey remained stanch allies of the West while Austria and Finland retained their independence as neutrals. New challenges have been met in Berlin, Korea, and now Vietnam. But while we direct our attention to Communist aggression in one part of the world, we cannot turn our backs on Communist tyranny in another.

Mr. Speaker, we must continue to do all we can to promote the growth of freedom and national independence in the captive nations. There are many signs that the Communist rulers are less and less able to impose their will on the gallant peoples still beholden to Communist imperialism.

New Kensington, Pa.: 75 Years of Progress

EXTENSION OF REMARKS OF

HON, JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. DENT. Mr. Speaker, New Kensington, Pa., in my 21st District of Westmoreland County, has an historical heritage dating back to Kensington, England. This setting, which is just a few miles away from my childhood home on the Allegheny River at Johnetta, became an early center of activity for the Allegewi Indians along the trails and shores of the Big and Little Pucketos Creek forming the Allegheny.

This area rapidly developed as part of the star of the west and presents a his-tory rich and important because of its strategic position as the gateway to the west. During the years of colonial life the location invited the stout in heart and stalwart in courage to come to the green hills and fertile valleys.

Industrial development began almost simultaneously with the incorporation of the town and this city became the home of the aluminium industry-the Aluminium Co. of America and the Wear-Ever Aluminum Co., Inc.—and gained a national reputation for business and manufacturing

New Kensington rapidly became the hub for commerce, industry, and trade to become known as the Allegheny-Kiski Valley Leading Shopping Center.

This city is now celebrating its diamond jubilee to commemorate 75 years of progress. Along with the celebration of its past comes plans for educational, research, renewal, and industrial expan-sion for continued growth and development of the community.

I take this opportunity to offer tribute to the fine historical heritage of New Kensington and salute the community and its many fine citizens.

I also extend congratulations and success for the diamond jubilee celebration of July 21 and 31 and offer best wishes for the future.

It is communities such as this which have and will continue to make America great

Shorten the Campaign

EXTENSION OF REMARKS

HON, JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mr. MONAGAN. Mr. Speaker, I was delighted to see that General Eisenhower in a recent magazine article has renewed the suggestions which he made after the presidential conventions in 1964 to regulate and control the quadrennial party nominating sessions. In an article in the July 6 Reader's Digest he rightly criticized the tumuit and chaos of the conventions and their increasing lack of dignity. He stressed the fact that these are now internationally televised proceedings and carry a message for the whole world and that we must eliminate the tawdry and the cheap.

In my judgment, there were two faults in the General's article. In the first place he took too sober an attitude toward the legitimate controversial, funmaking, and combative aspects of the convention. In the second place, he failed to note the really objectionable point about current tendencies, the elimination of the delegate as a person of significance. In today's conventions, the delegates simply go along for the ride in equal or even subordinate rank with television technicians, youth demonstrators, and sundry visiting firemen.

General Eisenhower, unfortunately, falls to address himself to one other regretable aspect of our presidential campaigns which cries for reform and that is the inordinate length of these national canvasses.

Practically no other civilized country in the world subjects its citizens to the deluge of nonsense that accompanies a presidential campaign in the United States. At any rate, in other countries the electoral antics are limited to a period usually less than 30 days. In Canada and in England elections were recently held on a national scale and completed within such a period with complete satisfaction to all.

Why can we not do the same?

If any real purpose were being served by prolonging the agony, I would cheerfully remain quiet, but I have never seen a campaign where interest could be maintained at a constant pitch for more than a month. Beyond that all the money spent, the advertising bought, and the television preempted is just so much waste.

The long campaigns waste time, waste money, and waste the nervous energies of the candidates themselves. At the same time, the public becomes bored and apathetic and the informative purpose of a campaign is no longer served.

I sincerely hope that by the time the next campaign rolls around the American political parties will have seen fit to limit their elections to the reasonable space that adequately serves the other nations of the world. Otherwise I think that Congress should take action and

pass bills such as H.R. 96 and House Joint Resolution 16 which I have introduced to establish reasonable controls.

How John Bright Outsmarted His Union

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. MULTER. Mr. Speaker, the history of the American labor movement is one in which all Americans can take pride. I think that it is necessary to examine, now and then, exactly what it is that unions do for their members.

This was done recently in a short story published in the July 10, 1966, edition of the RWDSU Record published by the Retail, Wholesale & Department Store Union, AFL-CIO.

I commend this story to the attention of our colleagues:

HOW JOHN BRIGHT OUTSMARTED HIS UNION:
A STORY WITH A MORAL

(By T. P. Cauldwell)

Once there was a fellow named John Bright. John worked in a small warehouse and was a member of the union—but not through choice. The shop was union when John started there, so he had to join; but he didn't have to like it.

The pay wasn't bad at the warehouse, and conditions in general were good. But there was a gripe John had that bothered him from the first day he took the job, and the bother grew and grew until it was all-consuming.

It began at the union office when the local president told John about conditions on the job, like "fringe benefits" and such.

"You and your family are covered for hospitalization, surgery, sick benefits," said the local president. "Then there's life insurance and a pension too, if you stick it out till you're 65."

John was not named Bright for nothing. "And what will this cost me?" he asked.

"Not a cent," said the union president.
"The company pays into the Health Fund and the Pension Fund, to the tune of \$107.38 a month, for these benefits. I guess you could say this is your money, since it would go to you in cash if we didn't have these benefits, but * * * obviously it's better this way."

John didn't think so. He walked away from the union office mentally dividing \$107.38 into hourly pay, and his resentment grew as the arithmetic was worked out.

It happened also that John at this very moment was suffering from a financial virus known as the "shorts."

"Hell," said John, "this fringe stuff will cost me 63 cents an hour—my money which they are horsing around with * * My money, and they—the union—decides how I should spend it."

John Bright was not only a mathematical whis, he was also a gifted orator. At the meetings of the Enights of Pichicarus, no one ever had the last word over John, and while some soreheads attributed a falling-off in attendance to this fact, John denounced this rumor as a vicous canard. At any rate, John was not the kind of guy to keep a big gripe like this to himself, and so after a brief period of acclimation to the

job and the six other men in the warehouse, he brought up the subject at lunch.

"We get 62 cents an hour swiped from our pay every week," John sald, for openers. "How come?" asked one of the men.

"Because they (pointing in the direction of the union office) decide what fringe benefits we get," John said. "Seems to me we could decide for ourselves. With 62 cents an hour more in our jeans, we could do a lot of fringe benefitting on our own."

John was nothing if not persuasive. Came contract time, John had all but one of the men on his side, and despite all the arguments of the union officers, the shop voted 6 to 1 to convert fringes to cold cash. And it was so ordered.

John went home that evening a very happy

"Give that chuck roast to the dog," he told his wife. "We're eating steak. I got over a hundred dollars a month raise today on top of five bucks a week the union negotiated. And for the hundred bucks you can thank little Johnny Bright, 'cause it was me that got it, all by myself."

His wife was impressed, and being Bright also, was doubly impressed when he told her how the extra raise was maneuvered.

"Certainly it was smart!" ahe said. "What benefits can they give you that will be worth \$107.38 a month? You outfoxed them, Johnny, and I'm proud of you!"

So the next morning, with a light heart and a head to match, John got in his car and started to work. When he arrived, there was a note for him to call his wife. "John," his wife said when he called, "Jun-

"John," his wife said when he called, "Junior stuck a pea up his nose and it has worked its way into his head. He's in the hospital."
"In the hospital." John general.

"In the hospital!" John gasped.
"Well, he's just like you," his wife said.
"He's got a brain the size of a pea and the doctor says they've got to be real careful that they don't make a mistake and remove the brain instead of the pea. It's going to cost us \$48 a day for the hospital, and the doctor wants \$150 for himself."

"Forty-eight dollars a day! A hundred and fifty bucks!" John gasped again. "Well, thank the Lord I've got hospitalization and surgical coverage!"

"But have you?"
With that John raced down to the union office.

"My boy's in the hospital with a pea in his head," he told the union president. "You haven't cut off my hospitalization and surgical coverage, have you?"

cal coverage, have you?"
"I had to, John," the president sighed.
"It's a benefit, and we have to pay into the fund for anyone covered. You wanted the money instead * * " remember, that 62 cents an hour?"

"But I couldn't keep the dog at the vet for that kind of money," said John. "I need hospitalization, and surgical, and I'll buy it myself, for the family."
"It'll cost you maybe three times as

"It'll cost you maybe three times as much," the officer said. "We buy at a group rate, like wholesale."

"I ought to be shot!" John said.

"You can't afford it!" the union man replied. "Your life insurance is cut off too. That's another fringe benefit. But of course, you have the 62 cents an hour."

John thought a moment, and asked, "How much will it cost me to get the same amount of insurance?"

"Maybe four times as much. We get that wholesale too."

John looked like he was going to cry. "I think I'll just retire!" he whimpered.

"You can't do that, either," said the president.

"Your pension has been cut off, and to get an annuity that would match your pension would cost you over 10 percent of your salary per month." 6

"Well, I know what I can do!" John said grimly. "I can punch you right in the mouth. You let me talk the other fellows mouth. into pulling out of the fringe benefits plan. You let me make a fool of myself!"
With that, John hauled off and took a

swing at the union president. The president ducked and John's fist went through the window.

"Well, don't just stand there," John snarled, staring down at his bleeding knuc-

kles. "Get me a doctor for this hand!"

The president sighed. "I think you should be told first that the doctor's fee will have to be paid by you personally. You know that you're no longer covered for treatment."

John looked at his hand, and then at the

John looked at his hand, and then at the union officer.

"Can I make a suggestion?" he asked.

"Sure, as long as you don't expect a suggestion award. What is it?

"All I want to suggest," said John, "is this: take back the \$107.38 a month. Take back the lousy money and give me back my henefits." benefits."

"Gladly," said the president. "We know you're one man who will really appreciate

Safer Autos and Drivers

EXTENSION OF REMARKS OF

HON. DANIEL J. RONAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. RONAN. Mr. Speaker, there can be no doubt that making automobiles safer is in the public interest.

The Chicago Sun Times affirms that truth in an editorial discussing the safety bill passed by the Senate and legislation under consideration in the House.

Congress is doing its part to make autos safer, the Times says. And now the States and cities must apply themselves to accident prevention by enforcing traffic laws and improving the standards of driving and road construction.

Since all phases of highway safety are of intense concern, I ask that the editorial be made a part of the RECORD. [From the Chicago Sun Times, June 29, 1966]

SAFER AUTOS-AND DRIVERS

The Senate has passed an auto safety bill for U.S. and foreign cars, trucks, buses and motor scooters that is somewhat more stringent than had been anticipated. The bill calls for certain interim safety measures to be built into this year's new models and full compliance with 26 new safety standards in 1968 models. Further safety standards will be explored and if found necessary, adopted. The House Commerce Committee has a similar bill under consideration.

There is no doubt that making autos safer is in the public interest. The added safety features are not aimed primarily at eliminat-ing the number of auto accidents, although some of the requirements, such as higher standards for tires and larger windshield wipers, to improve visibility, should help lower the accident toll. The new federal regulations are drawn chiefly to reduce the severity of injuries caused by the "second collision," the ricocheting of the driver and passengers within the auto as a result of a collision. Toward that objective, the Senate has ordered that all knobs and projections inside the auto be recessed or padded to protect the occupants.

Other strong measures are needed if the number of accidents is to be reduced. The

National Safety Council says that driver error is a factor in 90 per cent of auto accidents. The two main offenses are speeding too fast for conditions and failure to yield the right of wav.

Congress is doing its part to make autos safer. The individual states and communities must now do their part in applying themselves to the larger problem, that of accident prevention. A start can be made on that problem by the strict enforcement of intelligently drawn traffic laws, the real-ization that licensing a person to drive an auto is a grave responsibility and not just a revenue-producing or bookkeeping chore, and by the safe engineering of roads and

South-West Africa Verdict

EXTENSION OF REMARKS OF

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. BINGHAM. Mr. Speaker, many of us are deeply distressed about the decision of the World Court in the South-West Africa cases and the implications of the decision. As I indicated on this floor yesterday, I consider the Court's action a "tragedy" and noted that, in my judgment, the decision was based on "technical legal reasons of dubious validity."

The New York Times lead editorial today reflects the same judgment and concern and I commend it to my colleagues and to other readers of the RECORD:

SOUTH-WEST AFRICA VERDICT

The decision of the International Court of Justice to throw out the South-West African case will baffle laymen and arouse fierce de-bate among international lawyers.

It is bound to affect the stature and usefulness of the World Court. It will necessarily alter the means employed by African governments, in the U.N. and elsewhere, to press the fight against white domination and racial segregation in southern Africa.

One reason why the decision will provoke enduring argument among lawyers is the remarkable seven-to-seven deadlock of the justices on so important a case. This re-quired the vote of the Court's President, Sir Percy Spender of Australia, to produce a verdict, which in effect reversed a previous verdict of the same Court on the same case.

Another reason is the devastating nature of some of the dissents, particularly that of the American justice, Philip C. Jessup, who said the judgment was "completely unfounded in law.'

The question about the ruling that both lawyers and laymen find most puzzling is this: Why did the Court take jurisdiction in the case if Ethiopia and Liberia could not establish "any legal right or interest in the subject matter of their claims" against South Africa? As Justice Jessup posed it in his dissent:

"Why would the Court tolerate a situation in which the parties would be put to great trouble and expense to explore all the details of the merits, and only thereafter be told that the Court would pay no heed to all their arguments and evidence because the case was dismissed on a preliminary ground which precluded any investigation of the merits?"

The answers can only be: Because the Court line-up had changed—due to death, illness and disqualification—between the acceptance of jurisdiction in 1962 and the ver-dict of 1966. And because this Court ma-

jority (given the President's votes) drew a fine, legalistic line between the right to jurisdiction and the right to a decision on the merits of the complaints of the two plain-

Prior to deciding not to rule on the merits, Sir Percy and his colleagues probed deeply into the claims of the plaintiffs. In the most protracted case it has ever heard, the Court studied sixteen printed volumes of written pleadings and listened to nearly 6,000

pages of oral argument in 112 sessions.

After all this, the majority declined to rule even on whether the League of Nations mandate for South-West Africa, conferred on South Africa in 1920, is still in force. And it evaded the question of whether extension of racial segregation (apartheid) into South-West Africa violates South Africa's mandate obligation to "promote to the utmost the material and moral well-being and the social progress" of the 526,000 inhabitants, all but 75,000 of them nonwhite.

This verdict will disappoint all who had

hoped for a valuable addition to the body of international law. On the South-West African question it represents retrogression of a sort, for in an advisory opinion in 1950 the Court had held that South Africa was still bound by the mandate and that the U.N. had inherited the League's supervisory functions.

For South Africa, the decision is a victory beyond the fondest hopes of Prime Minister Verwoerd. The verdict means that for the foreseeable future South Africa can continue to administer South-West Africa, including the extension of apartheid, unhindered by international supervision or interference.

With the legal route to change in South-West Africa and an international legal judg-ment on apartheid barred indefinitely, the new African nations will not turn to other channels. Moderate African voices will have vastly greater difficulty gaining a hearing; the language of the African majority in the U.N. or the Organization of American Unity will become more strident and its actions progravident. more violent.

It will be a long time before the United States or anyone else will be able to persuade any African government that it can obtain justice from the International Court of

The Continuing Water Crisis

EXTENSION OF REMARKS OF

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. RUMSFELD. Mr. Speaker, the gravity of the water crisis throughout our Nation is of deep concern to me. The crisis cannot be permitted to continue if we are to remain a strong, growing Nation. Uncontaminated water is necessary for survival. Our polluted water resources and declining water supply can only be attributed to many years of neglect, both public and private. neglect must be ended at once.

I insert in the RECORD the following editorial comment on this subject from the Chicago Daily News of July 16, 1966:

POLLUTION'S HIGH COST

The bill unanimously passed by the Senate for a massive cleanup of the nation's water resources emphasizes the immensity of the problem, in size and cost. Going far beyond President Johnson's recommendations, the Senate has authorized spending

\$6.2 billion in federal funds over the next six years—with an additional \$13.8 billion to be contributed by states, local governments and industries

As many experts see it, this proposed \$20 llion outlay is only the beginning of a billion outlay program that ultimately may cost as much as \$100 billion. As shocking as the price tag may be, it is no more so than the years of public and private neglect, ignorance and indifference that brought America's rivers, lakes and other water resources to their present state of contamination.

The time is past due to start paying for these old mistakes. There is, unhappily, no bargain-basement approach to the problem. The longer its solution is put off the higher will be in dollars and in public the cost health and dwindling recreational facilities.

If there is a lesson to be learned from all this, it is that the pollution or devastation of our natural resources is cheaper to prevent than to remedy. The lesson applies to other resources besides water.

Public Opinion Poll

EXTENSION OF REMARKS OW

HON, ROBERT J. CORBETT

OF BEWWENT PARTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. CORBETT. Mr. Speaker, we have completed another poll of public opinion in the 18th Congressional District of The district embraces Pennsylvania. most of Allegheny County north of the city of Pittsburg. It is basically residential and industrial, and contains a large variety of ethnic groups. The district also varies from wealthy areas to economically distressed areas, but at present unemployment there is low.

The total number of citizens replying to the questionnaire was gratifyingly large, and probably sufficient to represent a referendum on each issue. tabulated results with some observations are included below. I sincerely hope many will find them interesting and in-

formative.

TABULATED RESULTS FOR POLL CONDUCTED JUNE 1966

1. What should we do about Vietnam? (Please select only one.)

(a) Continue our present course, 8%. (b) Mount an all-out effort (not including nuclear or chemical weapons) for a mili-

tary victory; 55%.
(c) Hold key defensible positions and try

to negotiate a settlement, 19%.
(d) Withdraw as soon as possible, 18%. Practically all your replies were received before the U.S. bombing of oil depots in

North Vietnam, so it is evident that most of our people favored the decision to do so before it was made. In our February poll 81% of our respondents agreed that we were doing the right thing in fighting to preserve the independence of South Vietnam.

Which do you think would be the one best step to fight inflation and the rising

cost of living?

se personal and corporate in-(a) Increase come taxes, 4%.

(b) Reduce domestic Federal spending,

(c) Impose Federal wage, price, and credit control, 19%.

Our people realize that inflation is the eruelest tax of all and they clearly feel that

the best way to fight it is to cut the amount of Federal domestic spending which is already seriously eroding the value of our dollar. However, spending Federal revenues for pet projects continues to be so popular with voters that reducing the bulging budget is not as easy as it would appear In the February poll 81% indicated that they expected increase in inflation within 2 years.

3. Do you think the "War on Poverty" has been worth the cost? Yes, 12%; No, 88%. There can be little doubt that, regardless of the ideals embodied in the "War on Poverty," the agency in charge has done a poor

toh and that the chief hanoficiaries of this big, money spending project have been the officials selected to administer the programs instead of the needy.

4. Would you vote for substantial cuts in our foreign aid program? Yes, 87%; No,

For many years our people have been voicing increasing disenchantment with our foreign aid expenditures. It is interesting to note that in February of this year 85% answered Yes when we asked the limited ques tion, 'Should the U.S. withhold foreign aid from nations that do not generally support our foreign policies?" 15% answered No.

5. Do you favor the crash program to be the first nation to land a man on the moon?

Yes. 38%: No. 62%

Our race with Russia to be the first nation to land a man on the moon is primarily a matter of pride and prestige. Our current crash program is costing many millions of dollars and demands the time and skills of hundreds of scientists and technicians that could be saved if we were to proceed at a more measured pace. In fact, many believe that a joint effort by all nations capable of helping would be good and that we should try to bring about such a cooperative effort.

6. Do you favor the proposal that all American youths be drafted for two years of Federal military or civilian 'service?

66%; No, 34%.

Several years ago our respondents voted definitely in favor of universal military training, so the results here are not surprising. e is also a general feeling that the pres ent draft regulations result in too many in-This was illustrated in our Febfustices. ruary poll when 79% said that they thought the draft regulations exempted too many young men on physical, mental, and educational grounds.

7. Do you favor Federal standards for packaging and labeling of consumer prod-

cts? Yes, 86%; No. 14%.
This is the first time that we have included a question on this subject, and the results here suggest that the great majority of consumers feel confused or deceived by the multiplicity of sizes and weights that are displayed on the shelves or are advertised. Although standardization of packaging and labeling will put some companies to siderable expense, it is likely that action in this direction will be made by the Congress.

8. Would you vote to permit political con-tributions of up to \$100 to be allowable in-

come tax deductions? Yes, 45%; No, 55%. The results on this question were the closest on the poll and do not reflect a clear cut pro or con decision. With the terrific insomething must be done to help candidates financially, or only the rich will be able to run for important offices. Perhaps if Presi-dent Johnson had asked for an allowable deduction of less than \$100 (say, \$50) more would support the proposal.

9. Would you favor uniform traffic regula-tions, automobile safety devices, and driver's license requirements throughout our fifty states? Yes, 89%; No, 11%.

The variety of speed laws, drivers' qualifi-cations, automobile inspection regulations, traffic signs, road markings, etc. that exist in our several states have resulted in much

bewilderment to drivers and have probably caused some accidents. Uniformity of all such items should have been established

10. Do you believe that the Administration releases enough accurate information to keep the press and the public adequately informed on the actual state of the nation? Yes 23%:

The Administration has not kept the press and the public adequately and accurately informed on what is going on regarding the policies of our country. While certain information must be classified and kept secret, this power has been abused. In fact, the phrase, "Credibility Gap," is very commonly heard and its existence is too often true.

11. Do you feel that the Executive and Judiciary have encroached too much in the field of legislation: Yes, 82%; No. 18%.

There results here indicate that the public is as aware as the Congress that the Executive and the Judicial branches of the government have so encroached on the nowers of the Legislative that the balance of power between the three branches should be restored. The trouble here can be partly traced to the present ineffectiveness of the two party

12. How would you rate President Johnson's over-all performance in office to date? (a) good, 12%; (b) fair, 48%; (c) poor,

Here we have three sets of figures available for comparison. In June 1965 the responses indicated Johnson's performance good, 28%; fair, 58%; and bad, 14%. In February 1966 the rating was good, 22%; fair. 54%; and bad, 24%. In the current question we used the word "poor" instead of "bad," but even this milder definition does not detract much from the conclusion that the President's standing with the people has gone down fast.

Max Newman, 89, Veterans Leader

EXTENSION OF REMARKS OF

HON, THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. KUPFERMAN. Mr. Speaker, Max Newman has died at a young 89. Although a veteran of the Spanish-American War and one of the active members of the United Spanish-American War Veterans, he still found time for government and politics and was one of my most helpful constituents.

Although few of his contemporaries survive, all who knew him will mourn.

His New York Times obituary follows. but it cannot possibly cover the little personal items which meant so much to those who had the good fortune to know him.

[From the New York Times, July 20, 1966] MAX NEWMAN, 89, VETERANS' LEADER

Max Newman of 320 East 42d Street, New County commander of the Spanish-American War Veterans for 10 years, died Monday night in the Veterans Administration Hospital in Manhattan. His age

Mr. Newman was to have been grand marshal of the Memorial Day parade here this year, but could not serve because of illness. He had officiated as marshal of two earlier parades

Until he became ill several months ago, he went to the veterans' quarters in City Hall 66

every day. There, he handled welfare and other affairs for his organization and helped veterans in need of aid.

Mr. Newman was a retired real-estate broker. He was born in New York and enlisted in May, 1898, in Company G. Eighth Regiment, New York Infantry. He was discharged for a physical disability almost four months later

Project Vietnam

EXTENSION OF REMARKS OF

HON, JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. MINISH. Mr. Speaker, among the unsung heroes of the tragic conflict in Vietnam are the American physicians who have voluntarily faced hardship and danger to minister to the civilian victims of war. In the noblest tradition of their profession, these physicians have self-lessly subordinated their own interests to the needs of suffering humanity.

One hundred and nineteen physicians

have served in this most valuable Project Vietnam since it started in August 1965. At present 32 are on duty there with 192 scheduled to go during this fiscal year.

A distinguished member of the profession, Dr. S. William Kalb, of Newark, N.J., has written a most interesting account of his recent tour of duty. article appeared in the Clara Maass Hospital News, Bellville, N.J., April 1966. The spirit that animated Dr. Kalb and his fellow physicians is exemplified in his concluding remarks:

It was quite a rewarding experience. Would I do it all over again? You bet!

The article follows in full:

PROJECT VIETNAM

(By S. William Kalb, M.D.)

Where in the world but in Viet Nam can you be a real doctor once again? All the dreams you had as a little boy . . . all the ideals that possessed you in high school . . . all the hopes and aspirations you had in college were realized on the other side of the world.

No worries about an office, your help, making money for your family, hospital committees, malpractice, and a hundred other things you are concerned about in daily prac-

tice at home. I was sent to a small town about 50 miles south of Saigon in the Mekong Delta. There I was to do general practice. I was the only medical man in a 400-bed hospital consisting of thirteen one-story buildings. Sanitation was something you talked about, but was not

a reality.

Forty iron beds in every ward with boards for mattresses. Two or three patients in every bed. One would find a diabetic, a typhoid, and a cholera patient all in one bed. If a mother had an amputation or some other If a mother had an amputation or some other wound or sickness, the husband and all the children moved in. Some of the family sleeping with the patient and the rest of them under the bed. The hospital fed the whole family. A forty-bed ward might easily have a hundred people living there. Lizards crawling all over the cracked walls and cellings. These helped to reduce the census of

files, mosquitoes, and ants.

In the clinic I saw about 300 to 350 patients
a day . . malaria, cholera, tuberculosis,

pneumonia, leprosy, dysentery, plague, small-pox, tetanus, nutritional diseases, skin lesions, and many tropical diseases.

In the emergency room I helped out with horrible to describe.

I was on call for maternity emergencies, such as placenta praevia, dystocia, ruptured uteri, and prolonged labors.

During my last three weeks in Viet Nam

I worked in a bomb shelter dispensary in a nearby village where I had to do all the medical and surgical emergencies. Every medical and surgical emergencies. Every afternoon I spent five hours in jungle villages, twenty of them, to treat Vietnamese and Viet Cong families. Here I inoculated over 3,000 children against smallpox, typhoid-paratyphoid, cholera, and tetanus.

It was quite a rewarding experience. Would I do it allover again? You bet!

Youth Opportunity Fair

EXTENSION OF REMARKS OF

HON, HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. GONZALEZ. Mr. Speaker, recently in San Antonio in my home district a unique program was inaugurated with the first youth oportunity fair which gave the young people of my district the chance to see in an organized fashion just what educational and job prospects there are in their home area.

Many fine San Antonio leaders worked in this fair and spent a great deal of time and effort in planning it. I would like to share with you the report I have re-ceived on this fine project from Mr. Ray Broussard, an employee of the Texas State Department of Welfare, who served as public relations chairman for the fair. Mr. Broussard's report follows:

Youth Opportunity Fair-San Antonio RESPONDS

On May 31st and June 1st, 1966, the first annual Youth Opportunity Fair was held at the Villita Assembly Hall in San Antonio, Texas. What the Youth Opportunity Advisory Council envisioned as an "idea" some fourth months prior to the Fair, developed into an unbelievable reality during the two days the function was held.

days the function was held.

The Youth Opportunity Fair was the brain child of the Youth Opportunity Center's Advisory Council appointed on January 11, 1966. For four months a number of civic-minded individuals worked with the community of San Antonio, other cities and agencies in Texas and representatives in Washington, in order to make the Fair a distantification of the property of the propert reashington, in order to make the Fair a "giant" career day which would make possible the distribution of educational and occupa-tional information to school drop-outs, high school students, high school graduates and college students—this was done on a mam-ments read moth scale.

The magnitude of Youth Opportunity Fair can be envisioned only by making a comparison between the Fair and a regular school career day.

Consider for a moment, the floor space of a large high school gym completely occupied by exhibits depicting the educational and occupational opportunities of some fifteen or twenty industrial, governmental, religious and educational organizations. Manning these exhibits are professional individuals who furnish educational and occupational

information requested by the students in attendance

During the aforementioned career day the school would be offering the student body information on selected and limited educa-tional and occupational areas—that is, the school would not offer information in all phases of education and the world of work And, moreover, the school drop-out would not be reached

not be reached.

In considering the Youth Opportunity Fair of 1966, however, one would have found not fifteen exhibits, not twenty exhibits, but some eighty-five exhibits occupying the first and second levels of the Villita Assembly Hall in San Antonio, Texas.

Imagine—under one roof—the following exhibitors offering information, free of charge, on educational and occupational opportunities in San Antonio, in the state of Texas and at the national level:

EVHIDITORS

Business, industry, and labor

Friedrich Refrigerator, Inc., Southwest Reretarion Reingerator, Inc., Southwest Research Institute, Pepsi-Cola Bottling Co., Texas Hotel and Motel Assn., AFL-CIO. Columbia Industries, Inc., Wall Colmonoy Corporation, Coca-Cola Bottling Co., Urban Renewal Corporation, United Services Automobile Assn.

Government

San Antonio Air Material Area, Kelly AFB; Brooke Army Medical Center, National Aeronautics and Space Admin., U.S. Army

Aeronautics and Space Admin., U.S. Army Medical Training Center, State Dept. of Public Welfare, City of San Antonio, Brooks Air Force Base, San Antonio River Authority. U.S. Army Recruiting Station, U.S. Navy Recruiting Station, U.S. Marines Recruiting Station, U.S. Air Force Recruiting Station, U.S. Clvil Service Commission, City Public Service Recruit Opportunity Center Of ice Board, Youth Opportunity Center, Of-fice of Economic Opportunity, Bureau of Apprenticeship & Training, Health Careers Committee, San Antonio Chamber of Com-merce; Office, Congressman HENRY B. GONZALEZ.

Educational and training institutions

San Antonio College, St. Philip's College, Gary Job Corps Training Center, Women's Job Corps (WICS), SANYO, San Antonio Commercial College, Durhams Business College, Community College (Business), St. Mary's University, Edgewood High School, Lanier High School, Our Lady of the Lake College, March of Dimes.

Religious

San Antonio Council of Churches, Catholic Chancery, Temple Beth-El, Baptist Missions.

HIGH SCHOOL GRADUATES WHO ASPIRE COLLEGE ATTENDANCE

Imagine the impact made by the National Aeronautics Space Administration exhibit covering some 750 square feet of floor space and the information distributed on the infinite opportunities in the field of space technology for the college graduates and skilled technicians.

Consider as well the value of the information given by St. Mary's University. Our Lady of the Lake College, San Antonio Col-lege and St. Philip's College on college at tendance and information on how and where to obtain scholarships and loans in order to attend college. The values brought about by the Youth Opportunity Fair in these areas are immeasurable.

HIGH SCHOOL STUDENTS

The high school students were amazed and spellbound by the occupational opportunities depicted by the exhibits of the City of San Antonio, City Public Service Board, Urban Renewal Agency, Durham and Community Business Colleges, Kelly Air Force Base, Brooke Medical Center, Santa Ross Medical District, State Department of Public Welfare, all armed services and many more.

If this exposure on such a gigantic level did not encourage students in attendance to stay in school, nothing will keep them from dropping out of school.

SCHOOL BROP-OUTS

The school drop-out was not only exposed to exhibits mentioned heretofore, but also to a multitude of exhibits directly related to opportunities available for the drop-out.

The Camp Gary Job Corps had twenty-nine exhibits depicting opportunities available to the drop-out. Edgewood and Lanier high schools had exhibits and their personnel encouraged the drop-out to return to school. The Youth Opportunity Center in San Antonic had its staff available in order to counsel with the drop-out and encouraged him to visit the center at a later date for further counseling, testing, possible placement, retraining, or referral to some work-study program.

It is only appropriate to conclude with the knowledge that the Youth Opportunity Fair was a tremendous success and that some 8,000 youths attended the Fair—they came, they were interested, they were informed about the vast opportunities available to them and they left at the conclusion of the Fair with a brighter outlook on life and the future in store for them.

The Youth Opportunity Advisory Council should be commended for taking the lead by initiating a yearly program which is geared under the President's national Youth Opportunity Program.

Gerald Taniguchi of Hawaii Relates Peace Corps Experiences in Sarawak

EXTENSION OF REMARKS

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mr. MATSUNAGA. Mr. Speaker, the overwhelming success of America's Peace Corps is due largely to the outstanding men and women who have volunteered for service in the Corps. The dedication with which they have upheld its highest ideals is truly inspirational. An example of this excellence in our volunteers is Mr. Gerald Taniguchi, of Honolulu, Hawaii.

Mr. Taniguchi served 2 years as a teacher in distant Sarawak. His experience has not only enriched his personal life but it has brought to the people of Hawaii an intimate knowledge of a heretofore little-heard-of country in southeast Asia. Presently a student at the University of Hawaii, he hopes to return to Sarawak when he completes his studies.

The fascinating account of Mr. Taniguchi's commendable work in southeast Asia was related to Honolulu Advertiser Reporter Jane Evinger. I submit for inclusion in the Congressional Record the newspaper article which appeared in the Sunday Star-Bulletin & Advertiser, July 10, 1966?

[From the Honolulu (Hawaii) Star-Bulletin & Advertiser, July 10, 1966]

PEACE CORPS ADVENTURE IN SARAWAK

(By Jane Evinger)

Gerald Taniguchi, at 22 s veteran of two years as a Peace Corps volunteer in Sarawak, gives the impression of being quietly selfsufficient

Poised and relaxed, he pauses for a moment at times, trying to find exactly the right words to describe his experiences. When the answers come, they reflect this thoughtfulness, and are spoken in a pleasant, clear voice.

There's also a quality of reticence in the Kauai-born volunteer.

He's obviously not a young man who blows his own horn, and an interviewer gets the impression that if Gerald hadn't been asked pointblank "what did you do on your vacation in Sarawak?" the most impressive act of his stint there would never have been mentioned.

What Gerald did on his vacation was take four students from his remote village on their first trip to another country.

He paid for the trip, which cost the equivalent of \$650, with money he'd saved during the past year out of his \$70 monthly Peace Corpe living allowance.

And he passed up the opportunity to vacation alone in Hong Kong and Singapore, neither of which he'd ever seen, in order to take the kids on a holiday.

"We had an essay contest at school on Why I Want to Go to Sabah' and I took the boys who wrote the four heat ones." Gerald said. Sabah borders Sarawak, on the island of Borneo.

"The kids had never been out of the jungle or their town, and this was the first time any of them had ever flown or ridden boats and trains."

Staying sometimes in hotels and sometimes with other Peace Corps people, they traveled for three weeks, making their first visit to Sarawak's own capital of Kuching, as well as to another country.

"They were really good kids, who had never been out, and I wanted to see the country but not go alone," Taniguchi says simply.

He spent the last three weeks of his vacation living with a student and his family in one of the "long houses." Sarawak's common structures housing 50 or so families.

"I wanted to see how they lived," Taniguchi said. Among other things, he learned how to tap rubber during the stay with the family.

Gerald grew up on Kauai but moved to Hilo with his parents when he was 15.

He is a 1961 graduate of Hilo High. His father, Masao Taniguchi, is a parts manager for an automotive warehouse in Honolulu and his mother, Mrs. Toyono Taniguchi, formerly a waitress in Hilo, lives in Eleele, Kaual. An older brother is a dentist on the Mainland.

Gerald had two years at the University of Washington as an engineering student, then volunteered for the Peace Corps. Asked why, he muses "that's a hard ques-

tion—I never really could find an answer."
Part of it was his indecision over whether
to become a teacher or an engineer. Part
of it was that "I did want to work as a
volunteer, and in a way I felt that if I had
something to offer that the Peace Corps could
use, it would be a way of serving."

He trained for 10 weeks in Hilo and arrived in Sarawak on Jan. 4, 1964.

From the capital, it was a 19-hour trip by river launch to Saratok government secondary school, where Gerald spent his first year in Sarawak.

His second year was at another government school near Binatang, a town of about 900 people, "about twice the size of Saratok," he said, "The towns aren't very big because only the Chinese live in them. The natives live out of town in the long houses."

Living conditions were not bad he recalls. "I lived in a teacher's house with several native teachers at each school, and we had electricity and piped water."

Diet was another story. Gerald lost 30 pounds during his two years in Sarawak, due mainly to lack of protein.

"I ate at the school, and at every meal we'd get a big plate of rice, a bowl of vege-

tables, and a third dish. Sometimes this was salted fish or peanuts or what they call 100-year-old eggs. I never could eat them, although I tasted one—they were too salty," Gerald said.

Pork was forbidden at the school because the country is Moslem, and beef was unobtainable.

At the school, Gerald taught math six hours a day to 240 students.

He also organized sports and coached basketball, organized a "sort of world affairs council discusion group of students," and worked with the students after school and week-ends building fishponds for tilapia "farms" to supplement the usual diet in Sarawak.

"It was kind of hard to get the natives motivated to work, but I found that they would work if I worked with them," he explained.

Most of his students had had no contact with anything beyond the village, and were the first generation in their families to receive an education.

"I feel they are the best students I've ever seen in their behavior, manners, respect for elders and motivation to study," Gerald said. "I enjoyed teaching them and I still get letters from them."

In free moments, he wrote a freshman high school math text.

"They needed one adapted to Sarawak. Instead of problems dealing with flying from London to somewhere in Europe, they needed ones about flying from Kuching. Instead of pounds and pence, the problems should deal with the Malaysian dollar."

Gerald said he suffered no "cultural shock" when he first arrived in Sarawak, but "after I'd been there nine months I got into a state of depression, asking myself why, what was I doing there."

It lasted about a month, but then came the trip with four students, which snapped him out of it. "I enjoyed the start of my tour as a volunteer, and I enjoyed being there the second year even more after the bout of depression," he recalls.

Gerald feels that anything he accomlished in Sarawak "is not something you can see right now—it's getting students to learn by themselves, in some ways breaking through the tradition of learning by rote."

He extended his tour by three months in order to finish up the Sarawak school year, which ends in mid-December. He spent three weeks traveling to Singapore and Japan, and arrived in Honolulu last January.

Gerald now lives in a neat, spotless groundfloor apartment, entered through the garage, at 2026 Linohau Way. It is decorated with farewell gifts given to

It is decorated with farewell gifts given to him by his students. A gorgeous cotton print hangs on the wall, along with several decorative hats. There also are a carved, painted walking stick, an ancient head hunter's dagger, and intricately woren baskets.

"They're nice, good people, Southeast Asians," Gerald says.

From his Peace Corps experience, he feels he has gained in "understanding very poor people—that there are different kinds of people—and the way they think."

His experience in Sarawak also answered the question of whether he should become a teacher or an engineer.

Gerald entered the University of Hawaii last January, planning to become a high school math teacher. He also works 11 hours a week in a tutoring program designed to help prepare students from low income families for college.

After graduation, he would like to go back to Sarawak to teach for a few years—and write sequels to the freshman math text.

Eventually, he hopes to go into school administration in the Islands "unless I find teaching too interesting."

As the interview concluded, Gerald asked if he could say one thing further. It was this:

"I'd like to see more people from Hawaii go into the Peace Corps if they can. It's a good opportunity for college graduates, and I think the Orientals will find hardly any problem adapting to the culture in Southeast

"The white man is considered superior there, and the people can't accept him as a companion, but they can the Oriental volun-ters."

Operation Combat Leave

EXTENSION OF REMARKS

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. LEGGETT. Mr. Speaker, while much of the Nation is presently crippled by the airline strike, I wonder if my colleagues have stopped to wonder how our Vietnam veterans on leave have been getting home. Travis Air Force Base in the Fourth District, the major point of embarkation for troops flying to and from Vietnam, has taken imaginative steps to enable combat returnees to enjoy their well-deserved leave with their families.

For the great success of Operation Combat Leave, I salute Brig. Gen. Maurice F. Casey, of the 60th Military Air Lift Wing. Following is a release I received today from Travis Air Force Operation Combat Base explaining Leave:

A task force for the emergency conversion of Travis Air Force Base terminal facilities to speed the air lift of combat returnees held up by the air lines strike has been put in operation by Brig. Gen. Maurice F. Casey of the 60th Military Air Lift Wing.

The task force is composed of engineering operations, Red Cross facilities, and Chaplain service representatives. It was placed on a crash schedule during the weekend with two

main objectives:

(1) Reorganization of the terminal to expedite the handling and air lift of combat returnees seeking to reach home areas

(2) Full utilization of every available resource to assist the returnees.

"Travis intends to do its full share to take care of these personnel for the duration of strike," General Casey said. making Herculean efforts—including removal of walls in the terminal to make better accommodations for them.

"Since the air lines strike began we have mover over 5,000 passengers on state-side routes set up as an interim measure, and we have already moved 50,000 passengers this month on regular military air lift command routes. At this rate we will shatter our previous record for passenger air lifts to all parts of the world."

He praised the manner in which Travis personnel, many off-duty for the weekend, answered the emergency call to create a new state-side travel area in the North Wing of the terminal. Officers throughout the Wing were quickly evacuated, equipment removed and partitions torn out to make space for a Personnel Center and auxiliary wing lounge for the steady influx of Army, Navy, and Air Force returnees seeking in-land flights.

Approximately 1,300 servicemen, plus a sprinkling of dependents who landed at

Travis with them, were placed aboard Air Reserve National Guard and military air lift command planes for "Operation Combat-Leave" flights. An additional 715 returnees were flown from Travis Monday.

The Combat Leave flights are being co-ordinated along five major coast-to-coast routes by reserve officers assigned here by serve officers assigned here by Air Command Headquarters Continental from the 6th Air Force Reserve Region, Hamilton Air Force Base, California.

Hastily relocated by the terminal conversion were Army, Navy and Air Force Liaison and Traffic Coordinating Officers and officers of the Army Terminal and Logistics Processing Branch at Oakland, California. Returnees arriving here overseas new are advised to check with the E & J Travel Office at the terminal and proceed directly to the new state-side clearing center if they cannot make connections to their mainland destinations.

On reporting to the clearing center, they consult a flight schedule and indicate a choice of flights on a card along with their name and home destinations. Cross country routes and pickup points are Travis to Mc-Guire AFB, via Richards-Gebaur, AFB, Missouri and Wright Patterson AFB, Ohio; sourn and wright Fatterson AFB, Onlog-Travis to Langley AFB, Virginia, via Tinker AFB, Oklahoma and Sewart AFB, Tennessee; Travis to Charleston AFB, South Carolina via Kelly AFB, Texas and Maxwell AFB, Alabama, and Travis to Hunter AFB, Georgia via Biggs AFS, Texas and New Orleans Naval Station, Louisiana.

Lt. Col. Orville D. Beardsley, Travis Passenger Services Office, declared that most of the combat returnees are able to make flight connections from Travis within 24 hours and all but a few are able to get flights within

48 hours.

Spokesman for the travel service office estimated that bus travel from the terminal has tripled since start of the strike and space on commercial airlines from the Bay Area is slightly easier than during the first days of the strike. They described military halffare travel as a victim of the strike, because of existing backlog of full-fare passengers.

Greyhound Bus officials have agreed to provide express service to major cities for groups of 32 or more but only a few such trips have been made thus far.

Outstanding Legislative Assistant: Terry Segal's 24th Birthday

> EXTENSION OF REMARKS OF

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. O'NEILL of Massachusetts. Speaker, I would like to call the attention of this distinguished body to the 24th birthday of my outstanding legis-

lative assistant, Terry Philip Segal. Terry Segal, a graduate of Amherst College and now a third-year student at Yale Law School, has been with me for four summers.

Mr. Speaker, Terry Segal is an invaluable addition to my office-keeping me informed on key legislative developments, handling press relations, and supervising my summer intern program.

It is truly a pleasure and comfort to me to have such an outstanding person as Terry Segal on my staff; I wish him many more happy birthdays.

Business Is Exciting

EXTENSION OF REMARKS OF

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. HAWKINS. Mr. Speaker, one of the truly enlightened businessmen in the city of Los Angeles is Eddy S. Feldman. A considerable amount of his time is devoted to civic and cultural activities in our community, and because of his progressive views he is greatly in demand as a public speaker. His recent speech before the Downtown Business Men's Association offers a challenge to American business that deserves broad attention. I am pleased, therefore, to insert it in the RECORD for the edification of my colleagues:

BUSINESS IS EXCITING (By Eddie S. Feldman)

Mr. Beardsley Ruml, one time head of Macy's department store, wrote that:

"Business is one of the most pervasive facts of modern life. Practically everybody who lives in a city, town, or village does business with business several times a day, and practically everybody else has something to do with business many, many times in every year. We depend on business for the things that we eat and wear, for the home we live in, for most of our amusements and recreation, for going places and knowing what is going on in the world. Most of us depend on business for the kind of jobs we have. Many of us own some part of a business or receive some income from lending business our savings. Business is so common that we take it for granted, and use it without thinking much about it-just as we do any other familiar facility. And yet, even though we do not give as much thought to business in general, because of this pervasiveness of busi-ness in modern life, business is important in its relation to most people, not only because of what it does for them, but because of what it does to them. . . . "1

And then he added a definition:

"This is the business of business: first, to get things ready for use; second, to provide people for purposeful activities; and third, to give people a way to save productively a part of what they can earn. . .

Business includes manufacturing, mining, growing, buying, selling, banking, investing, insuring, communicating, transporting-and the record keeping for all of these varied activities. Romantically enough, they can and do take place all over the earth and in outer space.

And, as George Bernard Shaw observed back in that auspicious year of 1929, the work of the businessman needs be neither dry nor dull:

"Modern businesses tend to become more interesting and important, and even more scientific, than average professional work. Their activities are much more varied: in fact modern commercial magnates, when they control a dozen different businesses, become better informed and better developed mentally than the rank and file of the pro-What is more, they are learning to fessions. snap up the ablest university scholars and civil servants, and take them into partnership not as office managers but as thinkers, diplomatists, and commercial scientists. is in industrially undeveloped countries that professional men rank as an aristocracy of learning and intellect: in European centers today commercial society is a more effective reserve of culture than professional society. When the professional man or the public servant tells his son that a berth in the civil service is a blind alley, or doctoring at the call of the night bell a dog's life, contrasting them with the unlimited prospects and the infinite scope for personal initiative in busi-ness, he is recommending the young man to improve on his father's condition instead of starting him on the downward path socially."

Surely, activities which are as different from one another as these are, and which involve the organization of men and nature

are bound to be exciting.

Consider for a moment some aspects of our society which distinguish it from societies of the past. One: change ' today is so rapid in all of technology that we cannot abreast of it—let alone comprehend fully where it is taking us. We have developed through computers the ability to handle masses of data so quickly that the time which once existed to contemplate philosophically what we might do in any given situation has disappeared. With the costs of computers declining sharply through microminiaturization they can become so common that early and quick solutions will be found to the lowest priority bottlenecks.

Two: in the times of affluence our productive capacity has become so great that we can turn out all the things which are needed to satisfy everyone in this country, at least. (Mr. Frederik Pohl, in one of his brilliant science fiction stories, described a time in the not too distant future when everybody is forced to consume through a system of ration points everything being turned out by the robots as otherwise the population would be drowned in its own goods. penalty, if anyone fell down on his obligation to consume the assigned amount, was more rations points which had to be con-

sumed promptly!)

Three: the means to control population growth are available to mankind. riod of uninhibited and unceasing expansion of bodies on this limited globe is over.

Finally: there is the fact that communications are instantaneous and simple. The picture of the affluent life is flashed immediately to those who have not-no matter where they may be-and they are demanding a share of this affluence—NOW. The pres-sures on the "haves" to provide for the "have note" are becoming more apparent daily.

It follows that

"Today's changes are so different in scope and kind as to constitute a new order of phenomena that dwarfs in social significance all past change—This, in fact, is a time of technological revolution."

This revolution must be accepted, under-

stood, evaluated and coped with. The listing of these particular facets of society enables us to group some of the challenges of the world which lie within the peculiar ability of business to meet. So: society seeks to reduce economic poverty.

Jobs are certainly a real solution to this—
and businessmen are the creators of jobs. They can also help others to a stake in the society by helping them become entrepreneurs. There must be improvement in our physical environment. We must eliminate and prevent water and air pollution. The cityscape must be de-uglified. Businessmen, who may very well have created some of these negative conditions, can come up with the means to remove them.

Our cultural life must be enriched—for the advancement of technology is producing even more leisure, which is not used mean-ingfully will end in a fatal boredom.

(Let me digress here for a moment. The greatest danger to the world is not from the

unfriendly explosion of fissionable materials, nor from the several instances of military belligerence abounding all over the world at the moment, nor from the unfulfilled wants of a large part of the world's population. Rather the danger to be feared is being bored to death. The living of life now is so intense that by the time we reach age 30 too many of us are going to find that there is little to do-except make trouble for ourselves.

(In this morning's Los Angeles Times there appears a story of a conference held this past week-end in San Francisco. Mr. Arnold Gingrich, publisher of Esquire magazine, suggested that American business zine, suggested that American business should contribute one per cent of the five per cent amount permitted as a charitable deduction from federal income tax to "help support and stimulate" the development of outstanding programs in the arts.)

Henry Ford II recently summed up the challenges in another way when he declared

in Detroit three weeks ago:

"What really counts, when we measure so-cial purposes, is not the ingenuity of technology or the growth of natural product, but the quality of our society and our individual The basic measures of social achievements are such things as human satisfaction and fulfillment and the growth of harmony, goodwill and respect among men."

This, then, is a fourth element which must be added to Mr. Ruml's definition of the business of business: it is the business of business to improve the quality of our society and of

our individual lives.

In the free enterprise society it is the businessmen-unusual ones, obviously-who are called upon by our politicians or professionals to apply their special organizational gifts to reduce poverty (Sargent Shriver), to change the physical environment (John T. Connor). and to help establish a broad cultural establishment (Roger L. Stevens and Edward Carter)—in short, to improve the quality of our society of our individual lives.

How do we-how do you-continue to meet

these challenges?

Obviously, education in business is needed. But so also is education in the arts and humanities. Business is far too complicated to extend its best success-except in the rare instance—to the poorly rounded. A broad education is required to be able to identify the problems which affect a given business or a city or even the world, itself.

There is needed, too, an acceptance of the responsibilities which go with being in business. The responsibilities include, among others, the acknowledgement that business cannot be carried on in a vacuum, disregarding the interests of others in the same society and on the same planet. Where this acknowledgement is not forthcoming government will surely step in: witness laws concerning air and water pollution, conservation of natural resources, signs and bill-board use, and hundreds of other ordinances which restrict business activities in a thousand different and detailed ways.

Pride in one's work and business is essential, too. Pride comes from turning out a product or performing a service in a manner which will be satisfying to the user. Our courts are far too clogged with litigation over physical injuries and financial damage arising out of defectively designed or made food products, drugs, vehicles and other objects, signifying far too often a disregard for the welfare of users.

Finally, I think that none of these lenges will be met if there is not intelligent sction by businesmen. Such action may even have to be participation in politics, or a volunteering for civic, social or charitable tasks. It may be by articulated questioning of traditional patterns of business and com-munity behavior. Remember that our rules of behavior have been shaped in a society coping historically with the problems of scarcity-with conditions where there has not been enough of the good things to go all round. We must ask ourselves whether these same rules are adequate in coping with the problems of a society in which there is or will be more than enough to go around. The businessman cannot escape from the burden of Mr. Ford's charge that-

"The free enterprise system will not gain the respect and the acceptance it needs until all men share in the abundance that system provides.

You, my young friends, at the outset of your business careers, should be excited when confronted with a world which is filled with these challenges, or, looked at in another way, opportunities, since what is involved in taking on the challenges and surveying the opportunities is not at all inconsistent with the objectives and possibilities of making money. No apologies are needed, either. Mr Shaw summed it up so nicely in the preface to "Major Barbara"

"Now to deplore this preference as sordid, and teach children that it is sinful to desire money, is to strain towards the extreme possible limit of impudence in lying and corruption in hypocrisy, civilization, the one sound spot in our social conscience. Money is the most important thing in the world It represents health, strength, honor, generosity and beauty as conspicuously and undeniably as the want of it represents illness, weakness, disgrace, meanness and ugliness. Not the least of its virtues is that it destroys base people as certainly as it fortifies and dignifies noble people. It is only when it is cheapened to worthlessness for some made impossibly dear to others, that it becomes a curse. In short, it is a curse only on such foolish social conditions that life itself is a curse. For the two things are inseparable: money is the counter that enables life to be distributed socially: it is life as truly as sovereigns and bank notes are money. The first duty of every citizen is to insist on having money on reasonable terms; and this demand is not complied with by giving four men three thousand pounds for nothing. The crying need of the nation is not for better morals, cheaper bread, temperance, liberty, culture, redemption of fallen sisters and erring brothers, nor the grace, love and fellowship of the Trinity, but simply enough money. And the evil to be attacked is not sin, suffering, greed, priestcraft, king-craft, demagogy, monopoly, ignorance, drink, war, pestilence, nor any other of the scapegoats which reformers sacrifice, but simply poverty.

Mississippi Dairy Progress

EXTENSION OF REMARKS

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. WILLIAMS. Mr. Speaker, dramatic economic progress is being achieved in Mississippi through a bold industrialization program which has accelerated growth at an unprecedented rate. But agriculture—long the heart and soul of the State's economy—continues to play a vital role in this upsurge as our farmers work with renewed enthusiasm to build a better way of life for themselves and for their respective communities.

The flourishing Mississippi dairy industry is an example of a segment of agriculture which is adding momentum to our upsurge in prosperity. The spectacular progressive development in dairying in Mississippi is particularly significant at a time when the dairy industry is experiencing a sharp decline in many other sections of the Nation.

Last year, Mr. Speaker, Mississippi was the only Southern State which produced enough milk to fill the demands of its own residents. For a number of years now, our dairy farmers have exported about 40 percent of their grade A milk into adjoining States. The total production last year rose to more than a billion pounds of good quality milk and the industry, both directly and indirectly, is now contributing \$130 million annually to the State's economy.

Dairy dollars are earned and spent in every county in Mississippi. Dairying generates employment. An estimated 25,000 people in Mississippi are primarily employed in producing, processing, manufacturing and selling dairying foods. They include about 8,000 dairy farmers, managers and employees of 25 pasteurizing plants, 4 butter and dry milk plants, 4 condenseries, 8 cheese plants, 22 ice cream manufacturing, and 380 retail ice cream establishments. In addition, many allied industries in Mississippi depend entirely or in part on dairying including dairy equipment dealers, manufacturers and dealers in feed, fertilizer, seed and general farm equipment, pesticides and building materials; dealers in petroleum products; transportation and other services.

The remarkable increase in both productivity and earnings in the past decade illustrate best the dynamic new significance of dairying in Mississippl. Last year, for instance, our grade A dairy farmers marketed 787 million pounds of milk—an increase of 36 percent in the 10-year span. Cash receipts in this category rose by 39 percent and producer milk exported increased by 22 percent in those years. In the past year alone production per cow increased 6.4 percent over 1964

What has been responsible for this unique record of progress? Of course, favorable climate, temperature and natural resources have each hard a hand.

But the real key to this progress is the improved management and techniques of Mississippi dairy farmers who are meeting the challenge of keeping pace with progress.

Walthall County in my congressional district is known as the "Cream Pitcher" of Mississippi because it produces more milk than any other county in the State. A recent edition of the Tylertown Times published in the county outlines the impact of the dairy industry in the area economy.

Here is the nutshell story from the

Walthall County has a population of 13,512 people and 10,000 dairy cows. Dairying accounts for a whopping \$4 million annually—or one-third of \$12 million total. Dairying there has grown from a million-dollar industry in less than 25 years. The growth stands as a monument to farm and business leaders who worked hand in hand to improve the entire economic life of the county.

The exciting Walthall County story is typical of what is happening throughout the State. Mississippi will undoubtedly enjoy continued progress and the State's dairy industry will be a part of that growth as new production goals and income advances are achieved.

How Effective Is Our Blacklist of Ships Doing Business With Cuba and North Vietnam?

EXTENSION OF REMARKS

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mr. ADAIR. Mr. Speaker, in this year's minority views of the report of the Foreign Assistance Act of 1966, we spoke of the number of free-world-flag ships that are transporting supplies and materials to North Vietnam. Chief among the offenders in this regard is Great Britain. Great Britain is also the leading offender among the free world nations in numbers of ships carrying goods to Fidel Castro.

The facts are that 36 free world ships called at North Vietnamese ports in the first quarter of 1966, 29 of which were British, and the further facts are that 67 free world ships, 26 of which were British, have visited Cuba during the same period.

This lends considerable credence to an article which recently appeared in Navy magazine for July 1966. The article points out that U.S. policy regarding this shipping problem is weak and ineffectual. It further points out that the British can and do prevent the shipping of other nations from aiding Rhodesia and in this venture we have cooperated with them. However, they have hardly lifted a finger to aid us in stopping aggression by Castro and Ho Chi Minh. I, therefore, commend this article to the attention of my colleagues.

HOW EFFECTIVE IS OUR BLACKLIST OF SHIPS DOING BUSINESS WITH CUBA AND NORTH VIET NAM?

(By Helen Delich Bentley, Maritime Editor, the Baltimore Sun)

While the United States' Ambassador to the United Nations fought vigorously for passage by the Security Council of the toughest economic sanctions ever voted by the U.N. in order to support Great Britain's atand against Rhodesia's defant government, more British-fiag ships were being added to America's blacklist for calling both at Cuba and North Viet Nam.

The addition of the British vessels to

The addition of the British vessels to these blacklists—inaugurated by the United States against two countries it considers real enemies—is nothing unusual, because ahips flying the Union Jack head both lists.

But it points up the ironic—almost ridiculous situation of the United States as far as international shipping is concerned.

international shipping is concerned. Perhaps this was best illustrated in a cartoon printed recently in a Western newspaper. The drawing depicts a British navy captain on the bridge of his frigate looking through a telescope. On a nearby chart is marked a big "success" for having diverted a Greek-flag tanker bound for Mozambique to deliver oil to Rhodesia. Passing directly in front of the Navy vessel is a British-flag tanker laden with Soviet MIGS on its deck and oil in its holds with the words "North Viet Nam" emblazoned on its sides.

"This one can go because it is not heading to our enemy," remarked the British captain. Ambassador Arthur Goldberg led a Security Council sit-in until the economic sanctions were voted. Those sanctions call for Britain "to employ all measures including armed force" to crush the Rhodesian regime of Premier Ian Smith. Rhodesia is a (former) colony of Great Britain in a continent somewhat removed from the United Kingdom.

Compare this series of moves to Great Britain's response when the United States called upon the countries of the Free World to stop their ships from going to Cuba, which had become Communist-dominated and armed with Russian missiles only 90 miles from the shores of the United States. Britain's Government accused this country of trying to control the sens and declared Uncle Sam was interfering with the freedom of the

The United Kingdom stated it would not attempt to halt its shipowners from serving Cuba. It obviously has not, since more British ships are regularly being added to the blacklist. Of the 251 Free World and Polish vessels now on the official Cuban blacklist, 72 are British.

COULDN'T CARE LESS

But even more significant is the fact that British-flag ships have made 461 trips or nearly 45 per cent of the 1,157 voyages made to Cuba by Free World and Polish vessels since the United States inaugurated its blacklist on January 1, 1963.

Of the 10 ships on the North Viet Nam blacklist—which became effective as of January 25, 1966, months after the buildup in South Viet Nam was announced by President Johnson—seven are British. Great Britain has used the lame excuse that it can not control the ships in Hong Kong. However, Greece did strip one of its tankers of its registry when it appeared in Beira with oil for Rhodesia.

When the United States protested Great Britain's sale of buses and other equipment to Cuba, the U.K. defied the protest and proceeded with the sale and shipment. Therefore, when it states that it cannot control the Hong Kong ships, there is a cerious question whather Great Britain wants to

whether Great Britain wants to. Greece's stripping of the tanker's registry is another note of irony in the international shipping picture. Although the Greek Gov-

ernment has issued Royal Decrees forbidding any of its ships to call at Cuba or North Viet Nam, Greek-flag vessels still are going to both countries. Some 35 of the ships on the Cuban blacklist belong to Greece, while two of the 10 going to North Viet Nam also are registered in that Mediterranean country.

"WORLD OPINION"

It would appear that the only reason the Greek government seized the registry of the Joanna V is because it had become an inter-national issue with blazing headlines in every country in the world.

In January, the State Department reported that Free World ships trading with North Viet Nam had declined from 34 per month in 1994 to 13 per month in the latter part of 1965. The blacklist became effective as of January 25, 1966, and the number may have declined even further, although no other figures have been issued.

However, it has been said on Capitol Hill that many of the ships transporting goods to North Viet Nam no longer are going directly there, but discharging their cargoes in Hong Kong for transshipment to the Com-

munist country.
Thomas W. Gleason, president of the International Longshoremen's Association (AFL-CIO), who has been working with United States Government officials to break the logjam in shipping in the Republic of Viet Nam ports, told the House Merchant Marine and Fisheries Committee that he has viewed English, Panamanian, Greek and other ships in Hong Kong, "supposedly

other snips in Hong Kong, "supposedly bringing in cargo for Hong Kong," "But this stuff," he continued, "would be transferred into the small coastal vessels operated either by Chinamen or a few North Vietnamese or Crown Colony ships, and brought down into Haiphong for final dis-

charge there."

Soviet Union ships also are running from Hong Kong to Haiphong, according to Lloyd's

Weekly Shipping Index.

Although the United States' blacklist as such is considered weak and somewhat in-consequential in this country, there is a definite principle which our friends are defy-ing. It is considered weak because the only thing the blacklist does is prevent the ships listed thereon from calling at United States ports to pick up Government-financed car-

However, these blacklisted ships can:

1. Pick up commercial cargoes in American ports, if the longshoremen will load them

2. Pick up United States Governmentfinanced (through counterpart funds) car-

goes in foreign ports.

And then, of course, when the owner feels that his trips to Cuba or North Viet Nam are not as remunerative as they might be if he picks up U.S. aid cargo in American ports, all he has to do is sign a pledge that he'll never send that ship again to that area. Ninety-one vessels—including 39 British and 25 Greek—have been freed from the Cuba blacklist in this manner.

The International Longshoremen's Association (AFL-CIO) succeeded in imposing a more stringent boycott of ships serving Cub for two years after the Cuban crisis, but it has waned somewhat because of the difficulty in keeping track of the ships.

UNION SHOWS WAY

But the ILA refused to handle the ships of any owner who might have had even a single ship calling at Cuba. The union boy cott went into effect three months before the U.C. government did anything officially.

Likewise in the case of North Viet Nam, the maritime unions began pressing to boycott or bar ships from the United States long before any official action was taken. Various Congressmen picked up their complaints and introduced legislation which would do every-

thing from preventing such ships from ever calling at the United States again to stopping any ship from any country which had a single vessel going to North Viet Nam from calling in an American port. These bills are languishing on Capitol Hill and probably will never see daylight.

Even when Congress passed an amendment to the foreign aid bill that prevented doling out any money to any nation whose ships were calling at Cuba, the Executive Department chose to ignore that order.

When the State Department first decided to lift the blacklist from the ships of owners who "took the pledge" not to send the ship into Cuba again (a similar pledge is available in the instance of North Viet Nam), the longshoremen refused to go along and clear these ships.

The test case was the SS Tulse Hills, an American-built liberty sold after the war to help rehabilitate the Greek merchant marine and subsequently switched to British registry by the Mavroleon Kulukundis interests when they headquartered in London.

The Tulse Hills arrived in Baltimore shortly after the agreement was signed between Basil Mayroleon—whose combine had tween Basil mayroleon—whose combine had the most ships in the Cuban trade—and the State Department. Baltimore longshore-men—all members of the International Longshoremen's Association (AFL-CIO) refused to load the grain aboard the vessel. The owners took the dockworkers to court and went up through the Fourth Circuit Court of Appeals, which concurred that no force could make an individual load a particular vessel or do a special job if he did not want to.

After 137 days of waiting the Tulse Hills departed from Baltimore without any fanfare and without its cargo. The dockworkers again proved that their "blacklist" more potent than the Government's.

In addition to the Greek and British ships on the Cuba blacklist, there are 57 Lebanese, 18 Polish, 18 Cypriot, 14 Italian, 9 Yugoslav, 7 French, 5 Moroccan, 5 Maltese, 4 Finnish, 2 Dutch, 2 Norwegian, 2 Swedish, and one from Monaco.

A number of these have since changed their register by the same owner or been sold to another owner and registered in another country. However, their new identity also is carried on the blacklist published regularly by the Maritime Administration. As a result, the current list includes such countries as South Africa, Panama, Guinea, Haiti, Liberia and Nationalist China.

MANY ARE U.S.-BUILT

There are many ironies in this blacklistboycott picture. For instance, a substantial portion of the ships on the list are former Liberty vessels built in the United States during World War II and sold to the friendly nations at a cheap price to help them get their merchant marines going after the war. Both Panama and Liberia issued proclamations that no ships in their registry could serve Cuba and yet six have been transferred to those countries and now are appearing on the list.

A number of the ships registered in both Lebanon and Cyprus are owned by Greeks who are somewhat concerned that their own nation might seize their registries, so they charged over first. Lebanon and Cyprus can both be considered "fiags of convenience," along with Panama, Liberia, and Honduras, for shipowners, although it is believed that no American shipowners have transferred any vessels to the Middle East area.

Some American shipping circles have expressed grave concern over the fact that the Security Council upheld London's position on the Rhodesian boycott so strongly. They note that morality of Britain's dispute with Rhodesia is one thing, but the morality of the kind of blockade-enforced boycott is

What would Great Britain's reaction be, they ask, if the United States should seek a similar boycott against both Cuba and North Viet Nam-a country with which American troops are at war and losing their lives?

DANGEROUS PRECEDENT

It also is noted that perhaps a dangerous precedent has been set and they ask what would happen if the situation should be reversed: A Communist-oriented power decided to apply heavy pressure on a neighbor friendly to the West, declares a boycott and then goes not to the Security Council but to the General Assembly of the United Nations for approval of stronger measures, including a blockade. The conclusion is that western maritime nations may find themselves in a most embarrasing position.

And the big question is whether Great Britain, with one of the largest mercantile fleets afloat, would defy that blockade in the same manner it has the blacklists of the

United States?

Rees Announces Results of 1966 Questionnaire to Constituents

EXTENSION OF REMARKS. OF

HON. THOMAS M. REES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. REES. Mr. Speaker, this May I sent to my constituents in California's 26th Congressional District my annual congressional questionnaire. The response was immediate and enthusiastic. and I would like to thank the more than 12,000 citizens who were sufficiently concerned to take the time to complete and return this poll.

My congressional district is in the western section of Los Angeles County and includes the cities of Beverly Hills and Culver City; the Los Angeles City communities of Rancho Park, Venice, Mar Vista, Westdale, West Los Angeles, Cheviot Hills, Beverlywood, West Adams, and Fairfax Avenue; as well as the Los Angeles County areas of Marina del Rey, West Hollywood, and the Sunset Strip. Incomes range from lower middle to upper; a majority of my constituents are homeowners, and their educational level is higher than average.

The questions were written to reflect issues of particular concern to my district, as well as the current major national and international issues. In the multiple-choice questions many respondents chose several alternatives. Because of this some percentages add up to more than 100 percent. Also particularly gratifying was the high degree of respondents who further elaborated their views with notes and letters. I regret that space limitations make it impossible for me to share these comments with my colleagues as, having read them, I can testify to the worthwhile nature of the overwhelming majority of the state-

Knowing that my colleagues in Congress will be interested in the response of my constituents to the vital issues of the day, I include here the tabulated results of this poll:

Rees 1966 congressional questionnaire survey compilation POREIGN POLICY 1. Vietnam: Which policy do you favor for the United States in Vietnam? Percent favoring (a) Continue the administration policy of supporting the South Vietnamese, including limited bombing attacks in the north, while actively seeking a peaceful solution to the situation (b) Expand the war to achieve a complete military victory ... pere mintary victory—
(c) Restrict our military efforts with the view to pulling out in the near future whether a peaceful solution can be developed or not—
(d) Push for immediate elections in South Vietnam and let the new government negotiate its own solu-tion with all essential elements involved __ 2. Communist China: Our policy should be to: (a) Oppose admission of Communist China to the United Nations_____ Extend United States diplomatic recognition to Communist China_. (c) Initiate such programs as trade in non-strategic goods, cultural exchanges and exchanges of news reporters with the Communist Chinese . The Middle East: Arab League nations, led by Egypt, have refused to sign a peace treaty with Israel and have harassed her with constant threats of war, worldwide economic boycots, and the closing of the Suez Canal to Israeli ships. The United States should: (a) Continue to supply arms to Arab nations to lessen their dependence on Soviet arms____ (b) Continue to supply arms to Israel to maintain an arms parity in the Middle East__ (c) Refuse any aid, including wheat, etc., to countries engaging in aggressive acts toward Israel_. (d) Demand that an international meeting be called to draft a peace treaty between Israel and the Arab League Latin American policy: The United States last year sent American troops to the Dominican Republic when it was suspected that far left and possibly Communist elements might be taking over the Government. (a) The United States should not have acted unilaterally, but should have operated through the Organization of American States or through the United Nations

(b) The United States should send troops to any Western Hemisphere country where Communist takeover is suspected _____

curtailed because of the increasing cost of the war in Vietnam. Such programs would

include the War on Poverty, aid to education,

and urban area aid, such as housing and

transit. Would you favor-

(c) In the future, the United States, or the international body through which it is acting, should be far more care-ful to ascertain the true nature of the elements involved before stepping into such a power struggle DOMESTIC POLICY 1. Vietnam and the President's domestic program: There have been some congressional demands that domestic programs be

Percent (a) Maintaining these programs and the war in Vietnam, even if a tax increase struggle? (c) Expanding these programs?____ Transit: Recently I introduced legisla-tion which would authorize the use of Fed-eral gas tax funds, now being used exclusively for highways, for local rapid transit develop Would you favor this proposal? Yes -----18 3. Air pollution: There are currently many bills before Congress dealing with air pollu-tion, including proposals for mandatory in-stallation of anti-smog devices on all new cars, the establishment of national air purity standards, and a special tax on indusries creating air pollution.

Would you favor this type of more active
Federal participation in the fight against smog? Federal aid to urban areas: Do you feel that Federal aid to metropolitan areas for projects such as open spaces and parks, rapid transit, housing and community development should be withheld from cities which refuse to participate in minimal cooperative regional planning? 5. Civil rights: Recently the President proposed minimal legislation to combat racial and religious discrimination in the sale and/or rental of housing. Would you favor such a proposal? Yes -----No -----38 Legislation has also been introduced to prohibit racial discrimination in the selection of juries. Would you favor such a proposal? 6. Bills are presently pending before Congress offering solutions to the following problems. Which do you feel should receive the most immediate attention? (Constituents were instructed to rank 12 alternatives in order of importance. Percentages are shown for those five preferences ranking the highest.) Education _ Civil Rights
Unemployment Crime
Air Pollution The Wages of Hatred

EXTENSION OF REMARKS

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. MULTER. Mr. Speaker, it is difficult to think about the commonsense approach to civil rights when the conditions in the Negro ghettoes in our largest cities are so very bad. But the commonsense approach is impossible to even discuss when these communities erupt into the kind of violence we have witnessed in the past week in Chicago, New York, and Cleveland.

In connection with this problem I commend to the attention of our colleagues the following very sensible editorial from the July 18, 1966, edition of the Wall Street Journal:

THE WAGES OF HATRED

Not quite a year ago, in the wake of Watts,

we observed in this space:
"... the civil rights leadership should
turn from its spectacular displays and occasional rabble-rousing and devote itself to a far greater degree to Negro individuals, Negro children, Negro families; to education in the home and group as well as in the school."

It is not an especially original thought, but the intervening twelve-month, sadly, has only given it greater pertinence. For in some ways race relations are if anything worse, as the nation now witnesses violence and death in Chicago while Watts itself and other areas are said to be at flash-point.

Part of the worsening is an increasing bitterness toward the white man among some elements of the Negro community. It is strange, although to an extent understandable, that the more civil rights legislation is piled onto the statute books, the more Fedphet office are statute from the more real money poured into attempts at Negro betterment, the more help freely proferred by businesses and individuals—the more the anger rises. To the extent it is understandable, the reason is that none of these efforts have accomplished much.

The darker mood can be sensed in the anti-white militancy of certain groups, perhaps small and insignificant, perhaps not; the ones reportedly arming themselves and training in paramilitary fashion (there was no lack of arms in Chicago these past several days). Not surprisingly, the ugly mood has found sudden articulation in a single phrase, "black power."

The men who gave currency to the term have been trying to tone it down ever since, suggesting it means only a fresh initiative on the part of Negroes to work for their advancement, which would be all to the good. But also present are the connotation of black racism, the demagogic appeal to hatred of the whites, the implication of seizing by force what the majority has built up over generations of painful effort.

In the divisiveness currently afflicting the civil rights movement, such leaders are called militant, as distinguished from "mod-called militant, as distinguished from "mod-The men who gave currency to the term

called militant, as distinguished from "mod-erates" like Martin Luther King. Modera-tion, though, seems to have a peculiar definition in this context.

The King organization came to Chicago ostensibly to transform it into a just and open city; in fact, they made no bones about intending to spread civil disobedience in order to force the "power structure" to undertake radical improvements in Negro conditions. There is even a term for that too, albeit a somewhat self-contradictory one: "Militant nonviolence."

Here is the minister himself speaking a few days ago about disrupting the flow of the city: "I know it will be rough on (Chi-cago city officials) when they have to get 200 people off the Dan Ryan (expressway), but the only thing I can tell them is: Which do you prefer, this or a riot?" Somehow "mili-tant nonviolence" does not seem to have averted night after night of murdering rioting, necessitating the intervention of the National Guard.

Moreover, this "moderate" attitude be-speaks more than a slight overtone of the

same bitterness and hatred conveyed by the militants. All in all, it is further alienating the support of the white liberals who have been in the forefront of the movement; what else can be expected when a civil rights leader calls super-liberal Hubert Humphrey a racist?

We fear that the hatred and violence are also allenating the generally passive support of the majority, most of whom, including us, would like to see the Negro get every break a citizen deserves. But who needs this year after year of disorder, preachment of contempt of the law, taking to the streets in orgies of pillage and shooting?

The leaders might reflect on a simple fact acknowledged by Martin Luther King: The Negro population is only 10% or 11% of the whole. Only a minority of that minority participates in the rampages, but the point for the leaders to understand is that the Negro needs the white man far more than the other way around.

And so we can only end as we did a year ago, except less hopefully. Not all the Federal aid or private help imaginable can lift the Negroes as a group into instant contentment. It will be slow at best, and most of the progress will have to be made by the Negroes themselves. That is the way the world is.

If, instead, the leadership keeps turning on the white man, it is exceedingly hard to be optimistic about the chances for any substantial progress in the future.

The Case Against Dams in the Grand Canyon

EXTENSION OF REMARKS

HON, JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mr. DINGELL. Mr Speaker, it has been encouraging to note that residents of Arizona are speaking out against the proposal to build dams in the Grand

Canyon.

An editorial in the Navajo Times, published at Window Rock, Ariz., argues for preservation of the Grand Canyon intact. I submit this editorial for inclu-

sion in the Record.

The relationship of the Grand Canyon dain proposal to the future of the Indian tribes in the area has been studied by Dr. Stephen C. Jett, a geographer who has specialized in southwestern resource management. Dr. Jett is the author of "Tourism in the Navajo Country: Resources and Planning," which is being published by the Navajo Tribal Museum.

Dr. Jett concludes that construction of Bridge Canyon and Marble Canyon Dams would result in a net loss of economic opportunities for these tribes.

His letter in the Navajo Times explores, in summary, the implications of the current proposals. This letter is offered herewith for the information of my colleagues.

GRAND CANTON GIVEAWAY

The West needs water—and should have federal help in getting it. But not at the expense of the Grand Canyon.

Congress is getting ready to act on a clumsy, costly and unimaginative plan to finance a diversion of Colorado River waters to dry areas of Arizona.

The U.S. Reclamation Bureau wants to slap up two dams, a \$511,000,000 job just below Grand Canyon National Park and a \$860,000,-000 structure just above it. The impoundments would flood 13 miles of the inner canyon within the national park.

This abuse of a natural wonder might be justified as a last-resort measure if this plan alone would provide the needed water. But that's not even the purpose of the plan. Instead, the dams are intended merely as

Instead, the dams are intended merely as a financing device. They would produce hydro-electric power, the sale of which would pay for a \$500,000,000 aqueduct.

This is absurd. If the Government wants to finance the aqueduct by power sales it could do so much more cheaply and efficiently by building steam or nuclear generating plants.

The architects of this clumsy scheme obviously don't dare risk a proposal to go into the power business in a businesslike way—locating efficient steam or nuclear plants near potential markets. (Most of the ultimate consumers are in California.) This would draw down on them the ire of a wellorganized private power lobby.

Instead, under the guise of a "reclamation"

Instead, under the guise of a "reclamation" project, they prefer to take something away from all the people, who don't have well-healed lobbyists to protest. (The Cleveland Press)

Mr. CHET MACRORIE, Editor, The Navajo Times, Window Rock, Ariz.

DEAR SIR: At the end of last month, a conference was held at the Grand Canyon to discuss proposals to construct hydroelectric dams (Bridge Canyon Dam and Marble Canyon Dam) in the Grand Canyon. As an Assistant Professor of Geography whose area of regional interest in the Southwest, with an emphasis on resource management, I was invited to attend this conference. I looked for representatives of the Navajo Tribe, who would presumably take a great interest in this matter, but saw none. I looked for mention of the conference in the Navajo Times, to which I subscribe, but found none. Therefore, since I have a particular interest in the Navajo country, having written the book "Tourism in the Navajo Country: Re-sources and Planning," now being published by the Navajo Tribal Museum, I am taking it upon myself to bring this matter to the s tention of the Tribe, although I note with satisfaction that the Editor of the Navajo Times appears already (March 17, 1966, p. 4) to have spoken out in opposition to these

One of the two proposed reservoir sites, Marble Canyon, would inundate a portion of the Navajo Reservation. In my study of the resources for tourism on the Reservation, I recommend that the Tribe oppose the dam, since it would cause great damage to the scenic values of Marble Canyon, which is essentially an upstream extension of the Grand Canyon. This portion of the Grand Canyon is owned by the Navajo Tribe and could with relatively little difficulty be developed as a scenic attraction by the Tribe. Since the Grand Canyon is one of the world's most visited scenic spots and since this dedevelopment of the "East Rim" of the Canyon is possible, it would seem to be to the advantage of the Tribe to keep the scenery intact. In contrast to these development possibilities, which would cause visitors to linger and spend money on the Reserva-tion, the reservoir that would be created by the dam would probably have its only point of access at Lees Ferry, entirely off the Reservation. Access from the Reservation side would be very difficult.

If, on the other hand, the Tribe did not permit the construction of this dam, whose function is to generate electricity to pay for the Central Arizona irrigation project, then alternative means of power production would have to be sought, in which event the Tribe would stand to profit from an increased de-

mand for Black Mesa coal and/or Reservation uranium.

Since half of the reservoir site is on the Navajo Reservation, and since no representative of the Navajo Tribe was present at the conference, I inquired of Barry Goldwater, who also attended the conference, what measures had been taken to obtain the Tribe's permission to flood part of their Reservation. He said that to his knowledge, the Navajos hadn't been consulted. Let's don't let the Bureau of Reclamation do to the Navajos what the Corps of Engineers did to the Seneca Indians recently, flooding forever a portion of their homeland in violation of their treaty with the United States Government.

Sincerely,

STEPHEN C. JETT,
Assistant Professor of Geography.

The John F. Kennedy Peace Forest in Israel

EXTENSION OF REMARKS

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. HALPERN. Mr. Speaker, this July fourth, thousands of Americans joined the people of Israel in dedicating a unique, living and ever-growing memorial to the late President John F. Kennedy.

The memorial is a stone monument in the shape of a tree trunk, representing untimely death, and surrounded by land which will become the "John F. Kennedy Peace Forest." On this land, there will be a tree planted for every American of the Jewish faith.

The Jewish National Fund raised money for the memorial whose symbolism so impressed Chief Justice Earl Warren, that, upon seeing the site, he revised his dedicatory remarks, according to the New York Times report. I insert the full New York Times story, since I believe it reflects the confidence the late President Kennedy had in the future of the spirited young State of Israel.

WARREN DEDICATES KENNEDY MEMORIAL IN ISRAEL

(By James Feron)

JERUSALEM (ISRAEL SECTOR), July 4.—A memorial to President Kennedy was dedicated in an informal atmosphere this morning atop a barren but historic hill outside Jerusalem.

Nearly 2,000 official guests, including many from the United States, were joined by hundreds of enthusiastic American students and tourists as well as throngs of Israelis in the small plaza facing the memorial.

Chief Justice Earl Warren, whose enthusiasm for the dramatic memorial after he had seen it for the first time, redrafted his dedicatory speech. He praised the striking symbolism, a tree trunk representing untimely death.

Justice Warren also said that the Kennedy Peace Forest planted on the slopes of the memorial hill, would have "greatly pleased" the young President.

"Something more than mere surmise justifies my statement," Justice Warren said. He recalled Mr. Kennedy's words in a

He recalled Mr. Kennedy's words in a speech eight years ago when the then junior Senator from Massachusetts told a Jewish National Fund meeting: "What work could be more heartwarming or more enduring than the great forest at Jerusalem. Your children and grandchildren when they visit Israel will find your monument."

PICNIC ATMOSPHERE

Now they will also find a monument to Mr. Kennedy, dedicated on a July 4 with dignity and affection by Israeli and American leaders before thousands who seemed to relish the occasion. At times the milling throng lent a picnic atmosphere to the event.

The Jewish National Fund, which raised money for the memorial in the United States, posted general invitations in hotels this morning. In addition, hundreds of young Americans who are studying and touring in Israel made their way to the site.

The memorial is five miles from the nearest regular bus at the end of a winding road leading through two moshavim, or communal settlements. Several miles southwest of Jerusalem's outskirts and standing atop the highest hill in the vicinity, the memorial overlooks a border valley containing the Tel Aviv-Jerusalem railway and the Jordanian village of Bittir.

This is the site of ancient Betar, the last stronghold of Simon Bar Kochba's revolt against the Romans in A.D. 132-135. The Jewish army of insurrection, numbering 200,-000, fought the Roman legions until overwhelmed on these slopes.

CHILDREN'S BAND PLAYS

To open the proceedings a children's band played "Hatikva," the Israeli national anthem, and then made a valiant attempt at "The Star-Spangled Banner." The American anthem, played slowly by the children, was picked up by strong voices until the music swept the audience.

Speaker after speaker standing before the sturdy monument, which was designed by the Israeli architect David Reznik, drew attention to its symbolism and to the significance of the growing trees around it.

I

eef

đ

d e d Jacob Tsur, world president of the Jewish National Fund, said it had been "conceived in the shape of a mighty trunk of a fallen tree, among the thousands of saplings which will grow one day into a great forest."

Walworth Barbour, the American Ambassador to Israel, recalled that Mr. Kennedy had said, "A nation reveals itself not only by the men it produces but also by the men it honors, the men it remembers."

"In thus honoring and remembering the

late President Kennedy," Mr. Barbour said,
"the men and women of the Jewish National
Fund honor themselves—beyond and above
the glory they have already earned in their
work for Israel."

Justice Warren observed that Washington had "more than its share of edifices in stone and bronze," but he paid special tribute to what he described as the "living memorial" being planted for Mr. Kennedy in Israel.

Justice Warren said that Mr. Kennedy had "a very special feeling for this nation and an unwavering confidence in its future." He added that Mr. Kennedy visited here first in 1939 when it was still a British mandate. He next came in 1951 and Justice Warren spoke these words that Mr. Kennedy had used on that occasion:

"Perhaps the greatest change of all I found in the hearts and minds of the people. For unlike the discouraged settlers of 1939 they looked to the future with hope. I found a revival of an ancient spirit."

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a.

PRINTING OF CONGRESSIONAL RECORD

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Recorp, the person ordering the same paying the cost thereo. (U.S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Recons.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-113, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

Appendix

The Escalation of Frightfulness

EXTENSION OF REMARKS

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, July 21, 1966

Mr. HARTKE. Mr. President, I have often said that escalation breeds escalation, that our increased military effort can be expected to meet with stiffened resistance rather than a crumbling into a suit for peace.

The distinguished dean of political columnists, Walter Lippmann, takes the same view and uses a similar phrase when he speaks, as he did in yesterday's Washington Post, of the "vicious spiral in frightfulness" toward which the war in Vietnam is tending.

"Frightfulness begets frightfulness," says Mr. Lippmann, in pointing out the fact that efforts to destroy the will to fight lead ever upward to an "escalation of frightfulness." In this, as he points out, "we are approaching the point of no return," leading to irrational rather than rational solution. We certainly need, as Mr. Lippmann concludes, to support the civilized conscience of mankind by interrupting and breaking the vicious spiral in which we are caught up.

Mr. President, I ask unanimous consent that Mr. Lippmann's column may appear in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

TODAY AND TOMORROW: THE ESCALATION OF FRIGHTFULNESS

(By Walter Lippmann)

Because the Vietnamese war cannot be decided by military means, it has become increasingly a vicious spiral in frightfulness. Because it is both a civil war of Vietnamese against Vietnamese and at the same time a war of Vietnamese against foreign white men, it is, as such wars usually are, increasingly ferocious and barbarous. Unable to subdue the other side by conventional military actions, each side tries to overcome the enemy by destroying his will to fight. Prightfulness begets frightfulness and anger demands vengeance, and all that remains is a fury which, insofar as it reasons at all, thinks that by topping frightfulness with more frightfulness, the enemy will be silenced and paralyzed.

The world is now confronted with this

The world is now confronted with this escalation of frightfulness. To the American threat to bomb closer and closer to the populated regions of North Vietnam, Hanol is replying by increasing its mobilization, by evacuating the civilian population from Hanol and Haiphong, and by threatening to try the captive American filers, humiliate them, and use them as hostages in the war of frightfulness, and, in the end, perhaps

even to execute them.

There is no doubt that this treatment of the filers would evoke dire reprisals. The warning of Secretary General U Thant and

the declaration of the Senators who have dissented from the Johnson policy in the war are accurate. They are teiling the truth in calling the attention of Hanoi to the fact that the punishment of the prisoners of war would make the war, frightful as it is already, still more frightful. For the ultimate weapons of frightfulness are in the hands of the United States, and no one who knows this country and the character of the President can be sure that they will not be used if the escalation of frightfulness continues.

In this escalation we are approaching the point of no return, the point where the war becomes inexplable, where it becomes incapable of rational solution, where it becomes a war of endless killing, a suicidal war of extermination. The war is not yet at that point. But the war will pass that point of no return if the prisoners are executed and the North Vietnamese cities are destroyed in retaliation.

There is great honor and glory to be had by anyone speaking for the civilized conscience of mankind, who interrupts and breaks the vicious spiral.

Reform Our Election and Campaign Statutes

EXTENSION OF REMARKS

HON. HERBERT TENZER

OF NEW TORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1966

Mr. TENZER. Mr. Speaker, in the space age, with the advances in the modern techniques of communication, the costs of political campaigning have been skyrocketing at an alarming rate.

Political campaigns have been conducted since the founding of our Nation, yet no adequate rules and regulations or guidelines have been established for the guidance of political parties or candidates for office. This applies to Federal, State, municipal, and other local candidates for office. We can be justly proud that in our beloved Nation, the people choose their candidates and vote for candidates of their choice and exercise other privileges in free elections.

I firmly believe that the Congress should take a good hard look at the problem, through the established legislative process. I would strongly recommend that public hearings be held on pending legislation to examine the subject of campaign costs and expenditures. I would express the hope that some appropriate guidelines be established for candidates for public office; of course, I refer in particular to candidates in presidential and congressional elections.

It is quite possible that we may not be able to solve this problem by the passage of a single piece of legislation. It may very well be that we will have to work toward enactment of a number of legis-

lative reforms, including some proposed by the Joint Committee on the Reorganization of Congress. The subject deserves continuing study, with consideration to tax incentive legislation to encourage small campaign contributions and stricter rules governing reporting of campaign contributions and expenditures by candidates. The tax incentive bills have a worthy purpose in encouraging greater participation of citizens in the political affairs of government.

With respect to campaign expenses, I support legislation to provide a tax incentive for small contributions, under \$100, in order to encourage a broader segment of our society to participate in the political process. In addition I believe our outdated laws governing the reporting of campaign expenditures on the part of candidates should be revised and undated.

There have been many proposals for reforming our Federal and State laws on this subject. Some are controversial but all are in the spirit of constructive criticism of our present laws and point up the lack of appropriate guidelines, indicating the need for legislation. The evolution of legislation is derived from dialog, debate, and decision. For that reason it is my hope that while we may not solve all the problems connected with the high cost of campaigning, we can

Recently I came across an article in the June 27 edition of the Nation entitled "Campaign Costs Are Soaring" by Victor H. Bernstein. I believe my colleagues will find the article informative and interesting and I insert the article in the Recomb at this point:

make a start in that direction.

PRIVATE WEALTH AND PUBLIC OFFICE: THE HIGH COST OF CAMPAIGNING

(Victor H. Bernstein)

The cost of political campaigning imposes on the office seeker a qualification not specified in the Constitution: he must either he rich or have rich friends. Perhaps because he qualified so handsomely on both counts, the late John F. Kennedy showed himself to be more sensitive to this situation than have most of our Presidents, and shortly after taking office he appointed a Commission on Campaign Costa empowered to recommend more democratic ways of gliding the path to public office.

The commission made its report to the

The commission made its report to the White House in April, 1962, where for four years it lay (presumably lightly) on the conscience of Mr. Kennedy's successor. At any rate, at the end of May, 1966 (whether by design or not, probably too late for legislative action this election year) President Johnson laid before Congress a series of proposals which in some respects follow the commission's recommendations, but in others depart from them considerably. His proposals are analyzed in detail elsewhere in this article.

These developments have been stimulated by a steady and staggering rise in the cost of political campaigning. A four-year lesses on the White House runs to many millions of dollars. A Senate seat can cost a million or more (a fact which accounts, at least in part, for the current travail of Sen. Thomas More than \$2 million was spent to make John Lindsay mayor of New York; even a House race, if it is in a competitive metropolitan district, may require \$50,000 for the nomination campaign, and as much again for election. In 1964, the country's political campaign bills (including all races from dog catcher to President) totaled an estimated \$200 million. This year, with the White House lease still unexpired, the bill is likely to be somewhat smaller-say \$175 million, with the bulk spent at State leveis. Do these formidable sums account for the prevalence of riches among our leading politicians (Rockefeller, Kennedy, Harriman, Romney, PELL, OTTINGER, Johnson, et al.), and is this good for democracy? On the other hand, is democracy better served by relatively penurious politicians who owe office to support by the rich? How can a democratic electoral system be divorced from an aristocracy of wealth?

Politically, the rich have always been very much with us. The signers of the Declaration of Independence, and to an even greater extent, the authors of the Constitution, were largely landed gentry or wealthy merchants. early Presidents were all patricianeven Andrew Jackson, symbol of the rough frontier. Abraham Lincoln proved nothing except that the exception proves the rule. there was a tendency for the post-True. Civil War new industrialists to run the country from wherever they were making their money, rather than from Washington. But beginning with Teddy Roosevelt, most White House occupants have again been drawn from the upper economic strata of American society.

The influence of affluence has been noticeable in the Congress, too, and especially in the Senate, once known as the "millionaire's club." Donald R. Matthews, in his U.S. Senators and Their World, analyzed the personnel of the Senate for the decade 1947-58. Of the 180 individuals studied, the author found only two who were sons of unskilled workers: Wagner, son of a janitor, and O'Daniel, son of a construction worker. A handful revealed lower-class origins: Marcher Chars SMITH, daughter of a barber, and Everett Director, son of a house painter, among others. The "typical" Senator, Mathews found, was white, Protestant, native born of upper-middle-class origins, and college educated for a profession (most often law). "If these are taken as requirements," he added, "probably less than 5 per cent of Americans have any significant chance of becoming a Senator."

The American democrat who tends to sneer at the British caste system may be astonished to learn that proletarians—miners, steel-workers, carpenters—are a good deal more common in Farliament than in Congress. One reason is that we have no labor party. But more important, perhaps, in an upwardly mobile society such as ours, an individual tends to identify with strata above him, whereas in a more rigidly stratified society he is likely to look to his own class for political representation.

In this country, running for public office is a private enterprise; except in one or two states, tax money does little more than provide boards of elections, polling booths and ballots or voting machines. Like that other waif of the American political system, the political party itself, methods of financing campaigns evolved quite outside the law, and it was not until certain obvious abuses touched the national conscience that regulative legislation was enacted. The fiscal federal statute was adopted in 1867; it protected federal employees against political massesments. Over the next six decades, further laws were passed, and these were finally codified and revised by the Federal Corrupt Practices Act of 1925. This Act as amended, to-

gether with the Hatch Act of 1939-40, provides the principal ground rules for the raising and spending of money to attain federal elective office.

Unhappily, the regulations regulate nothing, as is indicated in the boxed summary below of the laws and the loopholes. In the view of many experts, such as Herbert E. Alexander, director of the Citizens' Research Foundation, they make a bad situation worse by encouraging cynical disregard for law, increasing the costs of campaigning, falling to broaden the base of political financing, and leading to so complicated a flow of funds from giver to receiver as to deprive both of any assurance that the money always follows its intended channel.

All advertising, whether to sell soup or win office, entails risk; one never knows whether the results justify the expenditures. In political advertising, there is built-in waste. The multiplicity of committees typical of a candidate's campaign multiplies administrative costs without necessarily increasing income. TV, which is eating up more and more of campaign funds, is more often than not a hugely wasteful medium. At least a dozen times, on my home TV, I watched Richard Hughes campaigning for office in 1964, and he rather won me over. But my admiration, so expensively won, did him no good at all; he was running for governor of New Jersey, while I live in Connecticut.

For a Congressional candidate in a metropolitan district TV is so wasteful that it is rarely used; there are forty or more districts within listening range of the major New York City broadcasting stations. But even without broadcasting costs, a Congressional campaign comes high. "One district-wide mailing," says Robert Price, the deputy mayor of New York and a veteran campaign manager, "will cost at least \$20,000, including printing and postage. Two brochures—not too much for a four- or five-month campaign—cost another \$20,000. If you are lucky, you minimize paid help by getting volunteers; still, there are office rentals, posters, advertising, stationery, phone bills, etc., to pay. The absolute minimum is \$50,000." If primary expenses are included, the total may rise to \$75,000 or more. That's a lot of money to pay for a \$30,000-a-year job with tenure guaranteed for two years only.

How best to spend the money is a big problem; how to raise it is even bigger. The average Congressional candidate," Mr. Price, "can expect to get \$1,500 from the National Congressional Campaign Committee, another \$1,000 from the county committee. and perhaps an additional \$1,000 from other party groups. The rest must be raised through solicitation. If he commands a party groups. popular following, he can raise a substantial sum from the small contributions of many people through a broadcast or mail appeal But usually for the bulk of what he needs he must rely on friends, or friends of friends, labor or business. The biggest givers are likely to be firms with government contracts, or with hopes of getting one; they are what I call the predators—the guys who, if you win, will want something for their money." Mr. Price is on record as stating that, manager of Lindsay's \$2 million-plus may-oralty campaign, he turned down certain large contributions because he thought there were strings attached.

Most campaign managers, and presumably most candidates, are not likely to be that fussy, and the higher and more influential the office sought, the more likely is the contributors' list to be studded with the names of the wealthy. They give directly to party committees, or they buy a page ad in a party pamphlet for \$15,000 (until a few months 1.30, such ads were tax deductible), or they join the President's Club for \$1,000, or they pay \$100 or more for a "campaigm" or "testi-

monial" dinner (at this writing, Senator Dobb is most anxious to establish before the Senate ethics committee that there is a difference between the two, even if the beneficiary is an incumbent). And not a few are suffused with nonpartisan generosity; in 1964, according to the Citizens' Research Foundation's extensive files, at least eighty individuals gave \$500 or more to candidates or committees of both parties.

The real question in all this is not who gives, or how much, but what the giver gets in return. It would be a calumny on our legislators, I trust, and certainly an oversimplification of our politico-economic system, to say that we are governed not so much by the men in office as by the men whose financial support put them there. On any issue, the legislator has many factors to think about other than the interests of his big contributors: his party platform, the wishes of the Administration (particularly if it is of his party), the recommendation of the relevant legislative committee, a voting deal he may have made with a fellow legislator, the rival claims of lobbyists, what he thinks the ordinary people of his constitutency want (in the last analysis, their votes put him into office). There may even be times when he votes his best judgment on what's good for the country.

But history reveals many instances of outright legislative corruption and even more of what appears to be legislative subservience to an industry. There are in Congress today legislators known as "oil men," or "cotton men," or "air industry men," et al. When, as frequently happens, the welfare of a constituency is bound up with the welfare of an industry, the legislator is torn by no divided loyalty. The worst that may be said of him is that he may be betraying consumers elsewhere who can't vote for him—an occupational hazard in our political system, based as it is no sectional representation.

Furthermore, one may ask: Did big money shape the politics of these "industry" men, or was it their politics that attracted the big money in the first place? In 1956, with Eisenhower the candidate, the top men of the American Petroleum Institute made contributions of \$500 or more, totaling \$171,750—all of it to the GOP. In 1964, with an old Texas hand running on the Democratic ticket, GOP receipts from this source dropped to \$48,000, while the Democrats received \$24,000. Considering Johnson's regional and economic background, is there any reason to suppose that he would be a less staunch supporter of the oil-depletion allowance if he hadn't received the contribution of \$24,000?

None of this means that the big political contributor gets nothing for his money. Is to coincidence that eleven of the nation's top twenty-five defense contractors paid \$15,000 each for a page ad in a book put out by the Democrats last year? Is it coincidence that in 1952, of twenty-seven noncareer diplomatic appointments made by Truman, half the ebneficiaries had contributed \$500 or more to the Democratic Party, and all were Democrats; and that a year later, of thirty similar appointments made by Eisenhower, twelve of the appointees had given \$500 or more to the GOP, and all but one were Republican? At the very least, the big contributor gets what Alexander Heard, chancellor of Vanderbiit University, calls "access" to the decision makers.

There is a final consideration: Does money win? From 1932 to 1942, the Democrats, consistently spending less money, won the Presidency. They have done so again since 1960. The 1960 figures will surprise many. Repeated accusations have been made that the Kennedy family "bought" this election; nevertheless, Citizens' Research Foundation statistics show total reported campaign expenditures at the national level as: Republicans, \$11,300,000; Democrats, \$10,587,000. In

1964, the GOP outspent the Democrats by one of the biggest margins in history—and certainly lost by the biggest margin.

However, this seeming triumph of ideology over crass money ignores several factors. For one thing, the incumbent usually does not have to spend as much money as the challenger; his "image" has already been projected. Secondly, the figures given do not include pre-nomination (primary or convention) costs, which federal law does not require to be reported. "It is in seeking the nomination," says Robert Price, "that wealth, or access to it, counts most for the candidate. Once he wins the nomination, he already has the attraction of a winner, and he has the party apparatus at his disposal; until then, he is more or less on his own." In this context, it was in Kennedy's primary victory over Humphery in West Virginia, say, that money talked loudest.

The conditions under which political campaigns are financed in this country are indictable on a number of major counts: they (1) breed contempt for law, (2) put a premium on wealth, (3) open the office holder to charges of subservience to his financial backers and (4) fail to encourage widespread citizen participation in the pre-balloting

electoral process.

Conditions in the West European democracies are somewhat better, I think. This is not because they have better laws, or their people are more law abiding, but because of the nature of their party structures. All major Left parties are tied to labor; whether you are a Labour candidate in Britain, a Socialist in France, a Social Democrat in Germany or a Communist in Italy, everyone knows that your campaign is being financed by union treasuries. While the Center and Right parties are less well organized, and their fund sources not always so precisely definable, they are equally plainly the creatures of business and industry (and, in some in-stances, the Church). In Germany and France, various trade and industry organizations have set up central collecting agencies for political funds. In some countries (the Conservative Party in Norway, for example), fixed annual quotas are collected from each business firm or trade association. In any case, membership in a European party, whether of the Right or Left, involves not merely an act of penmanship but some form of financial responsibility.

I do not want to oversimplify the European party system; it has its own complexities. But broadly speaking, party labels on the Continent, at least, mean more than they do here, as regards both politics and the

financing thereof.

As long as running for public office in the United States remains a more or less private enterprise, it is difficult to see how its financing can be effectively controlled. dy Roosevelt saw this in 1907, and as President suggested that election campaigns be subsidized out of the federal treasury. Nobody liked the idea; no doubt it smelled of socialism. In Europe—and elsewhere abroad—the Socialist devil is thoroughly familiar, and no stigma attaches to borrowing from him occasionally. Thus, partial subsidies of the electoral process are quite common there. Where broadcasting is state owned, parties are given a certain amount of free time, usually in proportion to their voting strength. The French Government prints and distributes campaign circulars and sample ballots in behalf of all candidates, and also pays for election posters; Britain underwrites one free mailing for each candidate. Japan publishes an "electoral gazette" containing objective descriptions of all candidates and their platforms, and underwrites two 4x5-inch newspaper ads for each office seeker. Some West German states (Laende) award small but direct cash subsidies to the state party organizations; in some instances, the law requires that the money must be used for "educational purposes" (it almost never is); in other cases, no strings at all are attached.

It remained for Puerto Rico, however, to go almost the whole hog. Under its Election Fund Act of 1957, initiated by Luis Muños Marin to rid the country of vote buying and kickbacks from government employees, the national treasury allots each party \$75,000 annually in non-election years and (under a 1964 revision of the law) a minimum of \$162,500 in election years. The latter sum may be increased, depending upon the number of "straight-ticket" votes the party receives in an election; it cannot, however, be decreased. The allotments are expected to cover the major share of campaign expenses. The law requires a strict accounting of all receipts and expenditures.

In this country, proposals to reform our systems of political financing fall into two schools. Both seek to broaden the base of citizen involvement, to restore public confidence in and increase public respect for the relevant legal regulations, and to increase the opportunities of the poor man to attain office. The difference is that while one school hopes these objectives can be reached in the framework of our "private enterprise" system of fund raising, the more radical school insists that in this field private enterprise simply won't work, and turns to the direct

subsidy as a solution.

Typical of the "conservative" school are President Johnson's recent proposals which, like the recommendations of the Kennedyappointed Commission on Campaign Costs, seek not to change or broaden present political financing methods in any basic way, but simply to control them more effectively. The commission was somewhat more daring than the President, as can be seen by reference to the boxed analysis of the Johnson proposals. Moreover the commission, aware that its recommendations might not prove adequate, suggested that after a trial period they should be subject to revision, with special attention given to a "matching-incentive" system under which private contributions up to perhaps \$10 each would be matched by equal contributions from the national treasure.

Plainly, the commission's report was a compromise; its chairman, Professor Heard, has taken a bolder approach elsewhere. While he subscribes to many of the commission proposals, he also urges (1) consideration of payment of cash subsidies to parties and candidates at both state and national levels; (2) government action to reduce TV and radio costs so as to make broadcast opportunities more available for all; and (3) an underwriting by government of some, at least, of the general communica-

tions costs of political campaigns.

A year before the Puerto Rican bill was passed, the late Sen. Richard Neuberger (D., Ore.) offered a measure authorizing direct payments from the federal treasury to the national party committee. In a Presidential year, the amount would be 20c per vote based on the average number of votes cast for President in the preceding two elections; in off years, it would be 15c based on the two preceding votes for Congress. In terms of recent elections, this would mean a subsidy of \$10 million to \$12 million for each party in a Presidential campaign, and \$6 million to \$7 million each for an off-year campaign.

Aside from affirming the logical principle that running for public office is properly a public enterprise, and therefore should be publicly financed, the subsidy system offers certain specific advantages. It involves every taxpayer in every election, at least financially, it makes the legislator more (or entirely) independent of private interests, and it increases the political opportunity of men without access to wealth. The tendency toward an undue proliferation of small parties which a subsidy system might encourage could be guarded against by adopting the British practice that requires candidates to

post deposits which are refundable only if the candidate garners a stipulated number of votes.

Formidable arguments can be raised against the system. Authority goes where goes, and allotting the subsidies to the national committees makes the state and local organization subservient to Washing-Local Democratic leaders are already restive over the phenomenal success of the President's Club as a money raiser; they are in it not only a drain of money that ought to remain at home, but also an expansion of Presidential authority over the party. Even if the law mandated the sharing of funds with state and local party organizations, on what basis would the eligibility of these ganizations be decided? The New York City Democratic organization is torn by a reform movement; would the reform group be entitled to subsidy funds?

Opponents of subsidies raise two further arguments. Will candidates for nomination be subsidized as well as candidates for election? If so, how do you keep out the crackpots who represent no one but themselves? The British system of demanding deposits might work in states where there are primaries; how could it be adapted to the convention or caucus type of nominating procedure? Finally, the opponents say that subsidies would discourage, rather than encourage, citizen involvement in the electoral process; impersonal tax money should not be allowed to replace the individual, voluntary contribution which gives the voter the feeling that he has a personal stake in the campaign.

Perhaps the most singular aspect of the political finance problem is how few people want to do something about a situation that so many admit to be scandalous (many of the charges against Senator Done could leveled, with equal plausibility, against other legislators). Many politicians agree that the present system is bad; still, the experts' consensus is that even President Johnson's modest reforms will meet with stout Congressional opposition. Legislators who have managed to win office under existing conditions see little reason to make things better for potential rivals. Nor is there any sign that the American voter is pressing hard for change. Most Americans view politics with considerable skepticism anyway; they expect shenanigans, and whether these occur before or after a man reaches office seems of no great moment.

One can argue plausibly that in a country where money, education and broad social outlook tend to be strongly ocrelated, it is a good thing that wealth should play an important role in politics. In a better ordered society, of course, no such correlation would exist, and there would be no justification for the advantage that wealth now gives the politician. While we wait for the millennium, some form of subsidy would seem to be in order, if only for the reason that the one-third or one-quarter of Americans who are ill fed, ill housed and ill clothed are also ill represented—or not represented at all—in government. And perhaps, as a start, the funds needed for subsidies could be raised by a turnover tax on the broadcasting, advertising, printing and newspaper industries. They are the industries the money would be spent on in any case.

THE LAWS AND THE LOOPHOLES: A SUMMARY OF FEDERAL REGULATIONS APPECTING THE FINANCING OF POLITICAL CAMPAIGNS—AND WHY THEY DON'T WORE

The Law: No political committee can receive contributions or make expenditures of more than \$3 million in any one year. The Loopholes: The limits apply only to committees operating in two or more states, and therefore state and local committees are exempt; it permits the creation of any number

J

ti

la

m

of

m

m

th

u

sh

ir

th

n

0

of interstate committees, each of which may receive or spend up to \$3 million a year.

The Law: Every political committee covered by federal statute must report periodically to the Clerk of the House of Representatives the names of all contributors of \$100 or more and the names of all persons to whom at least \$10 was distributed, together with the totals of all other expenditures. The Loopholes: Nobody checks or audits the reports, and you to go to Washington to see them. They

need be kept on file for only two years.

The Law: A candidate for the Senate may spend up to \$25,000 and for the House up to Each candidate must file, shortly before and again within a month after each election, a statement itemizing each contribution and expenditure made or received by him, or by any person for him, with his knowledge and consent. The Loopholes: Note that the law limits expenditures, not contributions receivable. With regard to expenditures, the key phrase is "with his knowledge and consent." The candidate can state that one of his committees put up 100 highway billboards "without his knowledge and consent," and by common consent he can get away with the disclaimer.

Since the candidate is entitled to as committees as he can gather members for, limits to spending disappear entirely. As for reporting, a candidate merely states that all contributions made to him were turned over to a committee for his election. And the committee need not report at all because it is intrastate.

The Law: No national bank, corporation or labor union may contribute to the election, primary, pre-nomination convention or caucus campaign of any candidate for federal elective office. The Loopholes: The banned organizations contribute in the name of individuals, or form "educational" or "non-partisan" organizations which may legally contribute for "bipartisan" purposes. But how "bipartisan" is a COPE get-out-the-vote

The Law: No government contractor may contribute during the negotiations for, or the life of, the contract. The Loophole: The president (or secretary or treasurer) of the

firm makes the contribution.

The Law: No individual may contribute more than \$5,000 to any one candidate or committee during the calendar year. The Loophole: But there is nothing to stop the individual from making unlimited \$5,000 gifts to as many candidates and committees as he likes.

Note: No limitations of any kind are placed on the personal receipts or expenditures of candidates for President and Vice President, nor are they required to make any financial report to anyone.

THE PRESIDENT'S PROPOSALS: AN ANALYSIS OF HIS SUGGESTIONS FOR A FEDERAL ELECTION

Proposal: All gifts exceeding \$100 received by federal legislators, and all income from personal services received by them or on their behalf, are to be reported annually, with penalt, are to be reported animally, with appropriate criminal sanctions to be provided for failure to comply. Critique: A highly desirable plees of legislation timed, no doubt, to relieve the Democratic Party of some of the pressures upon it generated by the charges against Sen. THOMAS E. DODD (D., CONN.).

Proposal: Every candidate for federal office,

-state as well as as well as every committee interstate or national—that supports a caninterstate or national—that supports a can-didate would be required to report all con-tributions and expense items that exceed \$100. For the first time, the disclosure pro-visions would include candidates for the Presidency and Vice Presidency, and also all fund raising and spending in pre-election campaigns (primaries and convention nominations), Gritique: While plugging many loopholes in present law, the proposal is weakened by two factors. Pirst, its lack of

definition of a "committee" would require, presumably, that a handful of high school youngsters who collected \$100.29 for a favored candidate would have to report. Under such conditions, disclosures could prove so massive as to be indigestible. The proposal's sive as to be indigestible. The proposal's second weakness aggravates this difficulty: it fails to set up adequate machinery for receiving and processing the reports.

Proposal: Present ceilings on total expenditures by candidates for federal office would be repealed and the total contribution coming from any single source to the campaign of any candidate would be limited to \$5,000. Critique: All experts would agree on the repeal of present ceilings. Since they are un-enforceable, they simply encourage cynical disregard of law. The \$5,000 suggested limitation, if adequately enforced, would go a long way toward plugging the scandalous leaks in present law. However, it could not prevent the determined Democrat (or Republican) giver from contributing \$5,000 each to as many candidates as he wished.

Proposal: The present law preventing cor-porations with government contracts from making contributions to federal campaigns should be extended to cover state and local campaigns. Critique: A sound broadening of present law, but it leaves untouched a major loophole in the field: corporations, banks and labor unions, all of which are ostensibly barred by present law from political contri-butions, can still contribute through their individual officers.

Proposal: Individual contributors could deduct from taxable income each year the first \$100 of their contributions. Critique: As a possible alternative to an income-deduction plan, a Kennedy Commission on Campaign Costs recommended a flat tax credit of half the contribution up to a maximum of \$10 As between the two schemes, the flat tax credit is clearly preferable. Under the income-deduction system, the wealthy are favored; i.e., to a person in the 25 per cent income tax bracket, a \$100 contribution would cost \$75, while to a richer man in the 75 per cent bracket, it would cost only \$25.

Proposal: The only item permitted for sale by a candidate or committee would be cam-paign souvenirs at no more than \$5 each. Critique: In 1964, the Democrats charged \$15,000 for 1-page ads in their convention publication; if the President's proposal is enacted into law, the Republicans won't be able to follow suit.

Mr. Speaker, while I do not agree with some of the references and some of the inferences in the above article, I agree with most, and that is why I want to add my voice in favor of an early study of the President's suggestions for a Federal Election Reform Act. I am certain that when the House has worked its will on the proposed legislation a step in the right direction will have been taken.

Captive Nations

SPEECH

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mrs. GRIFFITHS. Mr. Speaker, Captive Nations Week is a yearly reminder to the world of the hundreds of millions of unfortunate people of central and eastern Europe. Repressed in action. they still strive for freedom of thought

and expression. Their dignity and courage are a spur to all freemen.

In this Congress, I have introduced a resolution which would establish a Special Committee on the Captive Nations. Such a committee would inquire into means by which the United States can assist, through peaceful process, the people of these nations in their just aspirations to regain individual and national freedom. On the observance of this 8th annual Captive Nations Week. let us reaffirm our great concern for all nations subjugated by totalitarianism.

New Rules Needed in Public Utility Disputes

EXTENSION OF REMARKS OF

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. DUNCAN of Tennessee. Speaker, I should like to call to the attention of my colleagues and readers of the RECORD an interesting editorial in the July 15 edition of the Maryville-Alcoa Daily Times, published by Mr. Tutt S. Bradford, in Maryville, Tenn. Since our entire Nation has been affected by the current airline strike, I feel that this article is worthy of special notice by Members of Congress:

NEW RULES NEEDED IN PUBLIC UTILITY DISPUTES

Along with most of the flying public, we were greatly relieved by the CAB ruling the airlines could maintain and operate the planes of those lines struck by the Inter-national Association of Machinists. This does, however, still place a great hardship on the public, many of whom depended upon the public transportation as a means of conducting their business.

This particular labor situation apparently is boiling itself down to personalities with various people getting riled up and walking out of conferences. Management had refused to negotiate with the union because the union had abrogated a status quo contract in spite of assurances otherwise and the union broke off talks by marching out of the meeting, stating that the airlines broke faith.

In the meantime, the public which both are dedicated to serve with scheduled transportation is being severely penalized by the inability of each party to the dispute of accomplishing their appointed tasks. Management is supposed to be able to negotiate in good faith with the union and union leaders are selected to negotiate with the management. Both are failing their responsibility, not only to the people they represent but to the public-at-large.

Once again this points up the need for further legislation into the realm of public utility labor problems. When the govern-ment issues a protective veil over an industry from a competitive standpoint by issuing authorizations for service to the public which only they can serve in this manner, the ac-tions of those who ignore the public while taking advantage of the monopolistic factors

in their business should be curtailed.

Authorizations to serve the airline routes are given to airlines as certificates of neces-sity, the public welfare demanding this. Labor and management problems do not stop this public necessity for the public still needs the service in spite of the disputes. Still we cannot deny anyone the right to strike, the right to walk off their job when they feel they are getting a raw deal, when they want to search elsewhere for better

Public necessity, however, demands that public transportation, public utilities and other privately owned and quasi-public utilities be made to conform to more stringent labor regulations in return for the governmental protection of their interests. Before their service to the public can be terminated, a set of regulations such as a 90 day cooling-off period, a secret ballot on the last offer of management among union members and other steps for both management and labor to conform should be established.

During this cooling off period, the government should step in and set up procedures with other companies who would take over the services being performed by the public utility. Equipment of the idle company should be available but neither striking personnel nor management should participate in the emergency proceedings in order to bring both to normal conversations around the bargaining table.

The public then would still be served but the rights of the workers to strike would be protected. Both management and labor would be penalized for their failure to achieve accord with the pressure on each toperform his job as quickly as possible.

The time has come for Congress to recognize the rights of the public in this field.

Congressman John E. Fogarty, Brain Research Foundation, Drake Hotel, Chicago, Ill., June 2, 1966

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECord, I include the following:

CONGRESSMAN JOHN E. FOGARTY, BRAIN RE-SEARCH FOUNDATION, DRAKE HOTEL, CHICAGO, ILL., JUNE 2, 1966

g

d

y

y 1-h When I received Mr. Linck's invitation to speak to you this evening I was particularly pleased, for several reasons. For one, I hold voluntary health organizations such as yours in very high regard. Over a period of twenty-five years as a Member of Congress, I have shared in the tremendous excitement of the growing medical research movement, and have been in a particularly privileged position to observe the role and importance of voluntary health groups in backing up the Federal side of the program. The tireless efforts of your officers and volunteers, in serving on our advisory committees, testifying as citizens before Congress, promoting the whole national movement in a thousand ways, have had an immense effect in making the Federal medical research program both popular and successful. And from overshadowing your efforts, we have helped you too, as the growth statistics amply show. We see partners in the greatest battle in history—the battle for human health.

Another reason why I was pleased to come was because the occasion offers a chance to meet some of the nation's leaders in brain research, and to think with you for a few minutes about this especially fascinating and challenging part of medical research.

The miracle of the brain and nervous system to me exceeds that of any other part of the body.

And the challenge is not so much undersanding of the miracle itself, but the goals of brain research—solution of the problems of the neurological and sensory diseases. We are sometimes inclined to relegate neurological diseases to a minor position because of the importance of heart disease and cancer as public health problems. But when we group them together, we find that they are responsible for a major share of all deaths, disability, and suffering.

I would like to dwell this evening on that

I would like to dwell this evening on that part of the nation's effort in brain research with which I am most familiar—the Federal program as administered through the National Institutes of Health, and more specifically, the National Institute of Neurological Diseases and Blindness.

As many of you know, this Institute has been in existence since 1950; it has grown with the other Institutes at NIH; it has an appropriation in the range of \$100 million annually, most of which is devoted to grants and awards for the support of neurological research and research training in universities, hospitals and other institutions throughout country, with most of the remainder supporting intramural research, both basic and clinical, in Bethesda, Maryland. The Institute has had a strong impact upon the field generally, both in increasing the amount of research going on, and in encouraging people to enter the field, but the needs are still many times what can be accommodated. As a simple example, there are still less than 2,000 neurologists in the United States, with estimates of more than 10,000,000 people suf-fering from neurological illnesses. There are large areas of the country which remain hundreds of miles from a hospital large enough to have a neurology department. Institute training programs have been steadily increased, they could be doubled and still not meet the need.

There are a number of areas in the NINDB program upon which Dr. Shannon, Dr. Masiland, and their staffs are attempting to focus interest and in which activity is being stimulated.

BRAIN INJURY

An important neurological concern that is demanding increasing national attention is the problem of accidental brain injury. We have data showing that accidents are the major cause of death during the productive years from birth to the age of 44. Over 100,000 people are killed annually in accidents. Approximately 70 percent of these deaths are from head injury, according to our best estimates. Hospital records show that approximately 1.3 million people suffer at least temporary disability from head injury, and that 130,000 a year have serious permanent disabilities.

The conflict in Viet Nam and the alarming rise in brain injuries from auto accidents point up the significance of this problem. NINDB is approaching the problem in a number of ways. One of these is the support of, research projects such as that of Dr. Joseph P. Evans here at the University of Chicago. Dr. Evans and his group, I understand, are conducting a laboratory and clinical study of head injury which includes an exploration with the electron microscope of the many changes which take place in brain tissue as a result of the internal swelling caused by a blow on the head. They are also evaluating current forms of treatment, and attempting to develop better methods of handling these cases.

Some of you were probably awars of the NIH-supported head injury conference held here in February. This produced a highly valuable set of recommendations outlining needs in the epidemiology, diagnosis, and therapy of head injury, and calling for the creation of clinical research centers pat-

terned after those already in existence in many other problem areas. The conferees were some of the most knowledgeable people in the world in this field, and proceedings, which we had incorporated into the NIH appropriation hearings in March, should be of substantial help in stimulating wider interest.

Our concern here is not limited to the early stages of the head injury reaction, or to adults, but extends also to the effects which are detected later, and to the braininjured child. Many individuals whose ini-tial injury seems trivial have a subsequent relapse due to swelling of the brain. in about 10 percent of the cases of mental retardation, the disorder results from some post-natal event. To better coordinate the attack on the problems of the brain-injured child, NINDB has organized three task forces. One is devoting itself to definition of the problem, which ranges from cerebral palsy, epilepsy, and gross intellectual defe what is classified as minimal brain dysfunction. A second is studying the medical and educational services needed for these children. This task force is sponsored by the Neurological and Sensory Disease Service Program of the Public Health Service, the National Society for Crippled Children and Adults, and the U.S. Office of Education. Task Force III will outline the scientific research necessary for solution of the problem. In addition to the task forces, a col-laborative research project is in process of being organized, with the aim of evaluating the effectiveness of various forms of treatment. These efforts at coordination and providing guidance while not as glamorous are, of course, just as essential as the actual scientific work in the laboratories and the training support in the schools.

STROKE

Another major neurological disease area, in which the Federal Government, through NIH, has begun a big "push," is stroke. Coupled with the overall research training program of NINDB, including neurology, neuropathology, neurosurgery, and the many other disciplines needed, there has been a program of research grant support in cere-brovascular disease for many years. This, however, has been pathetically inadequate, considering the extent of the problem, and the program has been accelerated, reflecting the great interest and concern during the last several years of both the Congress and the President.

One of the major developments has be establishments, through grants from NINDB, of a group of broad-based, multidisciplinary research centers where patients can be studied by experts, and various aspects of this complex disease investigated. Three of these stroke research centers, located at Minneapolis, New York City, and Detroit, were begun in 1961; five more, in Mlami, Durham, Baltimore, Boston, and Philadelphia, were funded in 1985; and grants for two others, in Rochester, Minnesota, and Winston Salem, were just awarded in March of this year, bringing the total to ten. Each of these centers has a major area of emphasis within the stroke field: examples are mechanisms of blood clotting; dynamics of blood flow; the pathology and chemistry of the cerebral els; speech difficulties following a stroke; epidemiology; and general problems of diag-nosis and treatment. As you can see, these centers are presently concentrated in the East, for the reason that resources and interest have been rather heavily concentrated there. I understand, however, that number of grant applications from scientists in midwestern and western population centers have been received, and we are hopthat this distribution can be improve within the next year or two, so that we will have a base for training of research and service personnel throughout the country, as

well as a vital research resource. These centers can become an important component of the evolving regional medical programs for heart disease, cancer, and stroke.

In addition to the expansion of the stroke centers program, several new types of training support, both direct and institutional, are now available from NIH, for clinical study. Clinical training grants and clinical traineships are now providing short term training opportunities to medical practitioners who want to learn from experts the latest developments in stroke diagnosis, prevention, and treatment. Since most physicians cannot leave their practices for very long, some of these traineeships may be awarded for periods as short as six weeks. As soon as the training courses can be set up in the hospitals, these traineeships will begin to move us toward our goal of bringing the latest advances in care to the remotest villages and hamlets of America.

At the apex of the Federal stroke research program is a Joint Council Subcommittee on Cerebrovascular Disease, consisting of members of the national advisory councils of the Heart and Neurology Institutes who have special skills and experience in this field. This subcommittee has to its credit some remarkable achievements, the chief one being co-ordination of the whole national program through recommendations to the Councils.

EPILEPSY

Epilepsy is another of the major areas of our Federal neurological research program. There are estimated to be between one and two million victims of epilepsy in the United There is no known cure and treatment is largely through anticonvulsant drugs. More than 50 percent can now have their seizures controlled through anticonvulsants but for many the answer has not been found. A large part of the program relates to fundamental research on the basic mechanisms. Two epilepsy research centers, similar to those I mentioned in the stroke field, are being supported through grants. In one, at the University of Washington, neurophysiologists, neuroanatomists, neuropharmacologists, and behavioral scientists are pooling their talents in long-term basic studies; in the other, at the University of Wisconsin, new drugs are being evaluated, using electroencephalog-raphy, and other approaches. Part of the UCLA Brain Research Institute program is devoted to mechanisms of epilepsy, and at the Neuropharmacology Research Center at the University of Utah, anticonvulsant mechanisms are under scrutiny. In addition to these, there are some 80 other NINDB-supported research projects, as well as an intramural program in Bethesda including patient studies and studies of artifically induced epilepsy in animals,

For purposes of improving national coordination and encouragement of the epilepsyresearch effort, a Public Health Service Advisory Committee on the Epilepsies was just officially announced by Surgeon General Stewart about three weeks ago. This committee is being chaired by Dr. H. Houston Merritt, dean of Columbia University's College of Physicians and Surgeons, and also codiscoverer of the well-known anticonvulsant drug, Dilantin. Other members are persons of national prominence in the field, and I know they will make an important contribution.

PARKINSON'S DISEASE AND MULTIPLE SCLEROSIS

Another area in which the NINDB is attempting to focus greater research interest is that of the so-called degenerative disease of the nervous system, including Parkinson's disease, and multiple scierosis. There are again afflictions for which medical science has little to offer. In Parkinsonism, drugs, physical therapy, and surgery offer three ways of possibly alleviating some of the crippling symptoms. Drugs can provide 25 to 50 percent control of the rigidity, tremor, and

lethargy. Intensive physical therapy can bring patients from 50 percent to 75 percent of normal, under ideal conditions. Surgery, although widely publicized, is a more limited possibility, because only 10 to 12 percent of all victims are suitable subjects, and because, usually, patients over 65 are not helped by surgery. The picture for these people is discouraging, but there are some hopeful developments. One, of course, is the growth of the program, both Federal and voluntary.

the program, both Federal and voluntary.

The NIH research grant and intramural programs range broadly from clinical studies with patients to basic investigations of the physiology, biochemistry, and metabolism of brain centers and muscle groups involved in motor control. The Neurology Institute's biggest programming effort of the past several years has been establishment and support of a Parkinson's Disease Information and Research Center at Columbia University. Here scientists are making electron microscopic studies of brain tissue from Parkinson patients taken at autopsy, and analyses of the neurohormones, enzymes, and other substances making up the metabolic chain which, when properly functioning, preserve balance in the nervous system, and which appears to be deficient in some cases, in the brain tissues of Parkinson patients.

In multiple sclerosis, there is no effective treatment that can be offered the patient, in spite of an extensive research program for years. This disease produces disintegration of the myelin sheathing nerves in the brain and spinal cord. It afflicts about a quarter of a million Americans between 20 and 40. good portion of the Federal program in MS is devoted to exploration of the theory that the cause may be a slow virus-one which may be carried for as many as 10 years before the symptoms develop. A particularly interest-ing research study on this is underway in Israel. It has been known for a long time that the incidence of MS is much greater in colder climates than in warm climates. fact, the disease is almost non-existent in the tropics. Before the influx of many peoples to Israel, the disease was almost non-existent there. Now, however, the incidence has risen considerably and the cases are found among those peoples migrating from Europe rather than the Afro-Asian countries. Additionally, it has been found that many do not show symptoms until a number of years after they have come to Israel.

Pursuing the viral theory, MINDB is supporting substantial work at its Paturent Research Center at Laurel, Maryland, on slow animal viruses causing neurological diseases resembling multiple sclerosis. But this is just one approach; to mention a few others, NIH and grantee scientists are studying autoimmunity, the abnormal process causing the body to reject, or develop antibodies to certain of its own tissues; they are studying the chemistry of demyelination, and, in collaboration with the National Multiple Sclerosis Society, they are treating nerve cell cultures with specimens taken from the blood and and spinal fluid of MS patients to see if these patients carry myelin-destroying substances in their own bodies.

What may be a very important development in slow virus research just took place this year when scientists succeeded in transmitting kuru, a rare neurologic disorder somewhat related to Parkinson's disease and MS, from man to chimpanzees. This opens up tremendous possibilities for the study of processes that could not be observed in human patients.

CONCLUSION

This is far from being a comprehensive summary of the broad Federal program of research in the diseases of the brain and nervous system. I am simply attempting to highlight some of the areas in which progress is being made. We, of course, think in terms of larger sums and programs than is possible for even the largest of the volun-

tary health organizations, but I would like to stress again that this doesn't make the job you people are doing any less important. It is probably more important, because of the immensely crucial public acceptance you help to secure for the whole movement. Voluntary agencies, such as the Brain Research Foundation and the Federal Government are each concentrating their resources where they will do the most good in a complementary and highly effective effort. There are still oceans to span—and unexplored continents. Most of the neurological diseases are still unconquered. But we have a magnificent movement underway in this country, and all of us here tonight are part of it. Let us hope that it continues to grow.

Cash Before Beauty at Grand Canyon?

EXTENSION OF REMARKS

HON. JOHN R. SCHMIDHAUSER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1966

Mr. SCHMIDHAUSER. Mr. Speaker, in the July 3 edition of the Washington Post, Mr. Irston R. Barnes, chairman of the Audubon Naturalist Society, presented most accurately the argument against the construction of two dams in the Grand Canyon region of our Nation.

I believe a better course of action for the 89th Congress would be to approve my bill, H.R. 15072, and other identical measures, which would greatly expand the size of the Grand Canyon National Park. I believe the grandeur of this region should be a part of our national park system where it will remain in its, natural state for the enjoyment of future generations.

Cash Before Beauty at Grand Canyon?
(By Irston R. Barnes)

Many Americans are puzzled: with a forthright leader of the New Conservation in the White House and a highly articulate spokesman for natural and wilderness values as Secretary of the Interior, how is the possible for the Bureau of Reclamation to be promoting two new dams on the edges of Grand Canyon National Park, Marble Gorge, above the park, and Bridge Canyon, below. The lower dam will back up water into the park and require construction within it.

Both dams will drown out 130 miles of some of the finest scenery in the Grand Canyon. They will, by impounding its waters, kill the Colorado River an a living geologic force.

Neither dam will serve a public or economic purpose. Indeed, the Bureau of Reclamation wants to "borrow" a billion-odd dollars, at less than the interest cost to the Treasury, to be repaid out of revenues after completing payments on the Hoover, Parker and Davis dame!

Both new dams are a part of the Bureau's power projects. They are not to conserve water. Instead, they will increase evaporation losses by enough to supply both Phoenix and Tucson.

The Bureau's Rube Goldberg stunt is to generate electric power and use the revenues to finance pumping water to Arizona from an existing reservoir and to reimburse southern California by bringing water from the Columbia River.

Unfortunately for the Bureau's antiquarian economics, before the existing Glen Canyon dam (now only half full) and the new dams can begin producing electricity. ?

equivalent power from cheaper sources will e available. So the Bureau's "cash register dams" (its own designation) would destroy the living Colorado, Its priceless scenery, waste water in a water deficit region, and misuse public funds at vast cost to the tax-

The proposal is now before Congress in the Lower Colorado River Development Act (H.R. 4671) and Rep. Aspinall's House Interior Committee is expected to move soon to bring the bill to a vote. The two dams should be eliminated from it.

Even though the Administration's decision should be easy in principle, it will be difficult politically without public support. You, the public, can kill this proposal by communicating with your Senators and Representatives. It also would help to write to Interior Secretary Stewart Udall and President Johnson.

Even though the new dams would have their sites outside the present boundaries of Grand Canyon National Park, the grandeur of the canyon in these reaches dictates that these areas should be incorporated into the park with additional areas along the North Rim.

We Need a Nuclear Navy

EXTENSION OF REMARKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. BOB WILSON. Mr. Speaker, the public wants a nuclear Navy as a protection for the United States against its very active enemies. In this connection, I hope that the Secretary of Defense will not oppose the American people and their elected Representatives in the Congress

For both the Senate and House in the \$17 billion defense procurement bill recently passed have agreed that \$130.5 million of the funds available for Navy shipbuilding in the current fiscal year "is authorized only" for construction of a nuclear-powered guided-missile frigate. Secretary McNamara's refusal to use this sum for a frigate would mean that he is against a nuclear Navy.

In this connection, by unanimous consent. I introduce an article which gives some true facts about the nuclear frigate provided for by Congress:

WE NEED A NUCLEAR NAVY (By Louis Stockstill)

The development of a nuclear-powered surface Navy may hinge on the Administra-tion's reaction to an important proviso which has been appended to the fiscal 1967 military procurement authorization bill.

Just before Congress departed Washington for a 10-day summer recess, House and Sen-ate conferees agreed to language in the \$17billion procurement bill which provides that \$130.5-million of the funds available for Naval shipbuilding in the current fiscal year "is authorized only" for the construction of a nuclear powered guided missile frigate (authorized last year) and \$20-million "is au-thorized only" for procurement of long lead-time items for an additional nuclear frigate. The proviso stipulates that the contract for the frigate authorized last year "shall be

entered into as soon as practicable unless the President full advises the Congress that its construction is not in the national interest."

By refusing to build the first of the two frigates and by rejecting a Navy request for

funds for the second such ship (even though it was accorded the second-highest priority in the overall shipbuilding program by the Chief of Naval Operations), the Department of Defense acted on the basis of cost-effectiveness studies which the Navy has challenged and, we think, discounted. Obviously, Congress agrees.

In turning down the Navy requests, Secretary of Defense McNamara initially contended that he had never been furnished with an adequate Navy rationale for nuclear power in escort vessels. Subsequently, how-ever, CNO Admiral David McDonald presented the Secretary with a comprehensive memorandum on the subject which made some hard-hitting points.

The data in the McDonald memorandum showed that for a one-third increase in overall cost the Navy could obtain a nuclear frigate (instead of a conventional destroyer) which would have (1) twice the number of missile launchers and missile magazines (2) helicopter landing facilities not available on the destroyer, (3) facilities and accom-modations for a screen commander, which the destroyer does not have, (4) more complete Naval Tactical Data System, facilities, (5) twice as many torpedo tubes, and (6) ali the advantages of nuclear power.

Admiral H. G. Rickover pointed out in his Congressional testimony on the subject that fuel also was an important cost-comparison factor discussed in the CNO memorandum. The initial nuclear cores for two frigates (good for ten years) would cost \$24-million. Regular fuel for two conventional destroyers for the same time period would cost \$12million, but an additional \$26-million would have to be extended on delivery of the oil.

We feel that the Navy has made a solid case, particularly in light of the statement in Admiral McDonald's memorandum that "The endurance, tactical flexibility, and greater freedom from logistics support of nuclear warships will give the United States an unequaled Naval striking force. Our new warships, which the Navy will be operating into the 21st century, should be provided with the most modern propulsion plants available. To do less is to degrade effectiveness with grave implications for national security.

The Role of Agriculture in Achieving Peace on Earth

EXTENSION OF REMARKS OF

HON. CHESTER L. MIZE

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. MIZE. Mr. Speaker, Dr. Glenn H. Beck, vice president for agriculture at Kansas State University, Manhattan, Kans., has recently emphasized the role which agriculture and the people trained in this field, will play in bringing peace to the family of nations. His observations have been summarized in a news release from the office of university news at Kansas State University.

With the importance which the Congress is placing upon food for peace and food for freedom, I feel that it is particularly apropos for my colleagues to know about Dr. Beck's comments. Under leave to extend my remarks, I am placing this news story in the Appendix of the REC-ORD, and respectfully recommend it to the Members of Congress:

MANHATTAN, July 18 .- The hope for peace on earth will rest more, in the almost immediate future, with agricultural graduates than with graduates in any other field.

That is the opinion of Dr. Glenn H. Beck, vice president for agriculture at Kansas State University, Manhattan, who is administratively responsible for agricultural college staffs in India and Nigeria and who recently has studied and observed food production problems in those and many other foreign countries. Eliminating hunger is a prerequisite to stable governments, and stable governments are a prerequisite to peace, he explained.

Developing nations especially need crops and soils specialists to increase food production and to release their citizens from peas ant-type agriculture for education and industrial development. Many developing na-tions still are using more than 75 per cent of their labor force in food production-often at below subsistence levels, Dr. Beck said.

The supply of well trained agronomists is woefully inadequate to meet present demands. The Agency for International Development, the Foreign Extension Service, foreign governments, the U.S. State Department, foreign industries and U.S. industries with foreign businesses all are seeking graduates of agricultural curricula to help increase food production in many of the countries where food shortages are the government's number one problem.

Agricultural colleges need curricula and professors to inspire young Americans to help export agricultural know-how, Dr. Beck says. Internationally oriented agricultural options should be available at the undergraduate level and students should be encouraged to take the courses as undergraduates. Graduate programs that prepare students for foreign service have been developed by many U.S. colleges of agriculture, but the KSU vice president for agriculture thinks too few under-graduates recognize how great opportunities are for service and employment abroad.

Beck thinks no classroom experience can teach an understanding and appreciation of world food problems as well as service abroad. Neither can classroom experience give so keen an understanding and appreciation of other cultures.

There is great demand in foreign countries for persons trained in crops, soils, agricultural engineering, irrigation, entomology, plant pathology, animal sciences and economics. Beck said persons trained to increase food production are so scarce that land-grant universities cannot begin to meet the de-mands for men needed now, except by pirating from each other, which doesn't increase the supply one person.

In the tropical and subtropical areas, where plant diseases and insects are not regulated by freezing, entomologists and plant pathologists are needed to meet year-round probologists are needed to meet year-round prob-lems. Much of Latin America, Africa and Asia (countries with the most hunger) is tropical or subtropical. Every developing foreign country needs economists to help it develop marketing institutions, sources of credit, and to teach farm management principles, Dr. Beck points out.

Despite the dense human populations of underdeveloped nations, many such countries still have vast areas that can produce nothing but forages, Beck said. It takes animals, usually ruminants, to convert the forages to food (protein) so opportunities for persons interested in livestock production also are greater than ever before in history.

Beck's office recently has been asked by International Voluntary Services, Inc., to help find 45 men for agricultural develop-ment work in Vietnam, Loss and Algeria. Four recent requests from the U.S. Depart-ment of State asked for help in finding per-sons with advanced degrees in agriculture to work in various Agency for International

Development missions in Latin American countries at salaries from \$12,500 to \$22,900. Such positions are going begging now for lack of applicants, Beck said. Yet the need for them is increasing as people in nearly all countries realize that wars settle no basic problems such as hunger.

However, the K-State vice president does not recommend training for work abroad be-

cause the pay is good.

The kind of students needed, and the kind Kansas State University's College of Agriculture wants, he emphasized, are those motivated for service—those who want to help their fellow man. Agricultural training for service in developing nations has no peer.

Many persons in no way connected to agriculture now agree that the basic need of nations trying to develop industrially and politically is more efficient food production, Dr. Beck said. Such awareness of the problem means it will be easier to solve. Historically it previously has been considered unsolvable.

Address of the Honorable Durward G. Hall, Before the Missouri Rural Letter Carriers Association, Springfield, Mo., July 8, 1966

> EXTENSION OF REMARKS OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. CUNNINGHAM. Mr. Speaker. I call to your attention and to the attention of the Members of this body, an excellent address by one of our colleagues, the Honorable Durward G. Hall, of Missouri. Congressman Hall, who has had a longstanding interest in the welfare of our Government workers, addressed the Missouri Rural Letter Carriers Association in Springfield, Mo. I join with our colleague when he says he is proud of the tremendous job our rural letter carriers are doing.

REMARKS BY CONGRESSMAN DURWARD HALL, MISSOURI RURAL LETTER CARRIERS ASSOCIA-TION CONVENTION, JULY 8, 1966, SPRING-

FIELD, MO.

It's indeed a pleasure to have the opportunity to address the Missouri Convention of the Missouri Rural Letter Carriers Association, to welcome you not only to Spring-field, but also to this 7th Congressional Dis-trict. I hope you'll come often and stay late to enjoy our Ozarks hospitality. I think particular congratulations are in order to your State president, Harry Thompson, who has the responsibility of presiding over this convention.

We here in the 7th district are especially proud that one of our own, Floyd Huffman, from Flemington, has had the distinction and the honor of serving as national president of your great association.

I had an opportunity to read the June issue of the Missiuri Rural Carrier and to read of Floyd's interest throughout his career in the affairs of your State and national organization. The story I read said that this was a proper place to show your appreciation for the long hours, many sleepless nights and thousands of miles traveled by Floyd on your behalf. I can personally vouch for the fact that many of those hours have been spent in my Washington office keeping me informed of the legislative matters in which

you have an interest, briefing me on some of your problems, as well as the problems of the Nation in seeing that the mail gets de-livered, and always doing these things in his courteous and understanding way that's so typical of Floyd's personality. I don't your organization could have had a better man to represent you on Capitol

While Floyd has been briefing me so much, I welcome this opportunity to brief you and to advise you of the status of some of the legislation in which you have an interest. checked with my office in Washington today, and with the House Post Office and Civil Service Committee just to be sure we were

up to date.

I know you're all interested in the pay bill, and let me say here that I think a word of appreciation is due to you and the letter carriers in general, because in your efforts to reach comparability you demonstrated responsibility, and I might even add states-manship, in recognizing the tremendous demands on the Federal Budget resulting from our involvement in Vietnam, and in tailoring your requests to meet this situation. I'm not a strong exponent of compulsory guidelines, but this certainly is a period when restraint is needed by all segments of the economy, and you have measured up to that need perhaps better than most groups and organizations.

I'm sure you're wondering, along with me, why the pay ball isn't over on the President's desk awaiting his signature

I'm sure I don't have to tell this knowledgeable group that it takes both the House and the Senate to enact legislation. We've done our part, about 2 months ago, in fact, but there seems to be some kind of delay going on in that other body. As you know, the rules of comity prevail between the House and Senate, and we never say harsh words about the other. I don't know who comes out ahead under this arrangement, but I think maybe they do.

Now, one of the reasons, I understand, for the delay in the other body was a fear that the Bureau of the Budget didn't like the July 1st effective date we inserted in the House. That's the beginning of the fiscal year and we thought it both prudent and

I can report to you that effective date remains July 1 and there was no change made by the Senate Post Office and Civil Service Committee. I'm adivsed that the pay bill will be the first order of business when the

Senate reconvenes next week.

One of the other provisions of the bill which I'm confident will not be changed permits retirement at age 55 after 30 years of service or age 60 after 20 years service.

Also, for the first time there is a mandatory annual uniform allowance of \$125 a year, and an increase in automobile allow-

ances on special delivery calls.

The Rural Letter Carriers Association has always been a working organization, working always to provide a better service to those in the community in which you live. Yours is an honorable career, and I especially concur in the purpose of your organization as published in the National Rural Carrier magazine which comes to my office regularly. . To improve the methods used by rural mall carriers, to cooperate with the Post Office Department and the public for the good of the service, to promote a fraternal spirit among members of the association, and to benefit their conditions of labor."

You, the rural carriers, have an excellent opportunity to lead the way for all postal employees in the execution of an outstanding customer service program. You are the principal contact and in many instances, the only contact for over one fifth of the country's population with the postal service.

No other position in the postal service can be looked upon in quite the same perspective as a rural carrier. You are both clerk and distributor, carrier and collector, educator and emissary, and I'm sure, in many instances, confidant and postal chaplain to vour customers!

I'm sure there isn't a rural carrier who hasn't been unduly detained while a customer expands on his pet theory for the postal service or offers his solution to all the problems facing the postal service.

I know this often presents a problem in still take the time to discuss a particular problem with one of your constituents—if I can use that term or it. trying to maintain your daily schedules and can use that term-as it applies not to

me but to you.

Yet, I'm sure you know that suggestions and inquiries from patrons are often a forerunner of customer complaints, and occasionaly I, too, hear from those who think they know what's needed to speed up the delivery of mail. I'm happy to say that I don't get many such complaints from your routes here in the 7th District.

I think the postal service has found that some of the best suggestions for improved service comes from the carrier themselves, for you're at the grass roots location where

the problems are noticed.

We in the legislative branch are also vitally interested in ways to improve service and sometimes we can see that a good suggestion is brought to the attention of those who have the direct responsibility of managing the Post Office Department. I may not always be able to see that your suggestions are followed, but I usually can insure that it will be given serious consideration.

want to stress again that I'm proud of the work you are doing and the calibre of the people that are here today, good fine patriotic Americans, the salt of the earth, people with a dedication to their country, to their job, and to their fellow man who are so vitally dependent on the service you

I find in reviewing the annual report of the Postmaster General for last year that there are in Missouri 1,346 rural routes involving a total mileage of almost 81,000 miles. That's a lot of driving, a lot of walking, and a lot of responsibility, and I know there are a lot of good men here today who will see carried out to the best of their that It's ability. I know you will continue to work together with the Congress for a progressively improved postal service to which our 190 million fellow Americans are justly entitled, and I want you to know that in the future, as in the past, I am always anxious to work with you on every matter in which we have a mutual concern. Thanks for the opportunity to be with you this afternoon, and to show my personal appreciation for the good works you are doing.

Physical Fitness

EXTENSION OF REMARKS

HON. WILLIAM H. AYRES

OF OHNO

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. AYRES. Mr. Speaker, we, as a nation, have become more aware of the importance of physical fitness. Industry recognizes its importance by spending over \$1 billion for employee recreation programs.

In 1956, President Dwight Eisenhower recognized the need of a coordinated plan for the improvement of the physical fitness of our youth and by Executive order O

created a Council of Youth Fitness. In 1961, President John Kennedy reorganized this Council so that its interest became that of the adult as well as that of youth. Mr. Stan Musial is the present head of the Council.

Now known as the President's Council on Physical Fitness, it has had the full support of President Johnson who has said:

The fitness of our Nation for the tasks of our times can never be greater than the general physical fitness of our citizens.

In the past, we have concentrated very heavily on the major sports of football and baseball. These are great sports but not all of our citizens can participate in them. I would call your attention to a less publicized athletic activity—the game of squash.

A short time ago, I noted a very interesting squash tournament held at the University Club here in Washington. No one could question that this sport in which people of all ages could play, would add to our physical fitness.

The tournament was organized by Peter Gaynor, Bill Wilson, and the club professional. Henry Goodheart.

professional, Henry Goodheart.

I am certain that those young and mature people who watched Charles Ufford, of New York, defeat Deihl Mateer, of Philadelphia, in the finals or watched Blair Sadler defeat Bill Morris in the consolation match, would be encouraged to become players and thus improve their physical fitness.

I mention this as an encouragement to all people to search out some of our less publicized sports so that they might find one that meets their needs. In this way, we can truly be a part of our national physical fitness program.

Reclamation Is Conservation

EXTENSION OF REMARKS

HON, JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1966

Mr. McFALL Mr. Speaker, in a recent town hall speech in Los Angeles, Commissioner of Reclamation Floyd E. Dominy pointed out that reclamation is conservation in a very real sense, something which is sometimes not understood or is overlooked a half century after this very important program was initiated by the Congress.

Commissioner Dominy paid special tribute to one of our most respected colleagues, Congressman Michael J. "Mike" Krrwan. In his address, the Commissioner pointed out that Congressman Krrwan worked as a day laborer and roustabout in the construction of the Mulholland Tunnel long before he came to Congress, and thoroughly understands how important reclamation is to the national economy.

With increased emphasis being placed today on conservation of the Nation's natural resources, I commend to the attention of all Members of the House the

remarks of Commissioner Dominy before the Los Angeles audience:

RECLAMATION IS CONSERVATION

(Address by Floyd E. Dominy, Commissioner of Reclamation, Department of the Interior, before the Los Angeles, Calif., town hall meeting on June 28, 1966)

It was a timely invitation which brought me before this Town Hall audience today. A great debate is building up on the manner of preservation, conservation and use of our publicly owned natural resources and the Pacific Southwest is sitting squarely in the center of the argument.

Consequently, it is appropriate that I select this opportunity to offer some remarks that I have been contemplating for some

I don't need to tell anyone here that neither Los Angeles nor any other metropolitan area of the Pacific Southwest would be in existence today at their present size and scale if man had not taken some positive steps to correct nature's imbalance of natural resources.

Some people question whether or not this is a good thing. I have read some letters to the editors criticizing your State's and our federally developed cooperative plans on the lower Colorado, which infer it would have been much better if Los Angeles and Phoenix and all the vast sun country in between had been allowed to be just that, sun country and nothing more. But from the fact that you seem to be happy and pleased to be living here, I would judge that you disagree, we I do.

Consequently, I am very proud that our Bureau of Reclamation, placed in business by the Congress back in 1902 under a great conservation President, Theodore Roosevelt, has been a major cooperator with the States of the Pacific Southwest in the development of essential water supplies.

Our role in the early Reclamation development in Arizona, through the Yuma and Salt River projects, is well known. What is not so well known is that when your predecessors here in Los Angeles were scratching around seeking an additional water supply in those same early years of this century, it was the Bureau of Reclamation which found a suitable reservoir site from whence developed the Owens Valley Project. That project was developed by your own local government, which is as it should be, wherever possible. I am a hearty believer in the philosophy that the Federal Government should undertake only those things which local people and local governments cannot undertake for themselves.

I also take some vicarious pleasure in the fact that one of the best Reclamationists we have today worked as a day laborer and roust-about in the construction of the Mulholland tunnel. He is Mike Kirwas, now a Congressman from Ohio and Chairman of the Appropriations Subcommittee on Public Works.

He is one of the most solid friends and supporters Reclamation has, because he knows what the Bureau of Reclamation has accomplished and how important its mission here in the Western States is to our national sconomy. He knows, as well as anyone, that Reclamation is conservation.

I emphasize that little word, is, because I believe it to be true. Reclamation is conservation. It is the kind of conservation that helped lay the groundwork for the historic Conference of Governors on Conservation of Natural Resources in 1908. It is entirely in keeping with the declaration that came out of that conference and which inspired the past half century of unparalleled advancement in conservation.

"We agree that the land should be so used that erosion and soil-wash shall cease," formally declared the assembled Governors; "that there should be reclamation of arid and semiarid regions by means of irrigation, and of swamp and overflowed regions by means of drainage; that the waters should be so conserved and used as to promote navigation, to enable the arid regions to be reclaimed by irrigation, and to develop power in the interests of the People; that the forests which regulate our rivers, support our industries and promote the fertility and productiveness of the soil should be preserved and perpetuated; that the minerals found so abundantly beneath the surface should be so used as to prolong their utility; that the beauty, healthfulness and habitability of our country should be preserved and increased; that the sources of national wealth exist for the benefit of the People and that monopoly thereof should not be tolerated."

The Bureau of Reclamation has lived up to this credo within the framework of its responsibilities and the West and the Nation are richer for the work we have been able to accomplish in a cooperative effort with the Western States and their people. Nevertheless, today we are being branded as "destroyers" in critical \$25 books and expensive full-page newspaper advertisements. The Congress is receiving a flow of emotional letters, canned postcards, and prepared coupons, most of which clearly stem from the unprincipled and erroneous allegation that we are "flooding out" the Grand Canyon and ruining the National Park System.

Let's take a look first at what Reclamation has accomplished. It may help in determining whether we are destroyers.

mining whether we are destroyers.

Your own growing metropolis outstripped the Owens Valley water supply and started looking for new sources in the 1920's. The Metropolitan Water District of Southern California was organized in 1928 and authorized to build another great water lifeline, turning this time to the Colorado River. This project, the Colorado River Aqueduct, was made possible by the Bureau of Reclamation's construction of Hoover Dam, a massive concrete plug which harnessed the Nation's most erratic river. Moving quickly against the threat of new water shortages, the Metropolitan Water District advanced funds to the Bureau of Reclamation to build Parker Dam, an after bay dam below Hoover, and in the mid-1930's started construction of the giant pumping plant and aqueduct to bring Colorado River water across mountains and desert to Los Angeles and San Diego. The American Society of Civil Engineers designated this aqueduct and Hoover Dam as two of the seven engineering wonders of America. But I suppose we and you both are destroyers because these great engineering works were built in the natural sevenity of the desert.

And while we were all busy on the Colorado River, the Bureau of Reclamation also was working elsewhere in the West, so much so that a new productive area, equivalent in size to Connecticut and Delaware, has been added to the assets of the Nation. Of course we have altered a lot of desert land, but there are nine million agres of a lush irrigated greenbelt where before there was only desert land or drought threatened cropland. You who prize your irrigated suburban greenery be the judge as to whether we are destroyers.

In addition to water for irrigation, Reclamation projects deliver in excess of 500 bitlion gallons of water annually to municipalities and industrial areas—serving a population of more than 10 million. Hydroelectric
power, produced as a by-product of the storad
agricultural and municipal water, is now
being generated at a level of 33 billion kilowatt-hours annually—enough to supply the
residential needs of a city of 6 million. This
hydroelectric production, incidentally, does
not pollute the air and it conserves valuable
fossil fuels.

The Bureau of Reclamation has completed nearly 200 storage dams in the West. These impoundments have a storage capacity for 127 million acre-feet (more than 41 trillion galions) of water. This stored water is cool, clear, and sparkling after the sediment settles out, in stark contrast to its muddy, rolly state when it is imounded as it flowed to the sea in the natural rivers during and after the spring snowmelt. In addition to a major flood prevention and flood control role, these man-made lakes provide water-oriented recreation to millions—more than 35 million days of visitor use last year by fishermen, boating enthusiasts, campers, and others.

But of course, we are destroyers because we regulate the rivers and streams, clean them up and keep them flowing year around, without ruinous seasonal floods or the slim

trickles of the dry months.

Construction is now at the half-way point on a third—500-mile-long—water supply line for this area. This is the California State Water Project. The Bureau of Reclamation is proud to be associated with the State of California in one of the key reservoir and canal sections of this great water system, the jointly constructed San Luis Dam and Canal on the west side of the Ban Joaquin Valley. The Feather River water will take care

The Feather River water will take care of the needs of Southern California until about 1990. But the far-sighted officials of the Metropolitan Water District and the State of California and the Bureau of Reclamation are already actively seeking to assure the additional water for continued growth and development for the 21st Cen-

The vehicle for this new future water supply for southern California along with Arisona and Nevada, is one of the most fareaching resource developments ever proposed. This is the Colorado River Basin Plan, a seven-State proposal that has evolved during the past three years out of the long-planned Central Arisona Project.

Much credit for broadening the Central Arisona Project legislation into a regional water plan goes to Chairman Wayne Aspanall of the House Interior and Insular Affairs Committee and to Secretary of the Interior Stewart Udall. In 1962, Chairman Aspanall wrote to the Secretary seeking his views on a coordinated comprehensive pattern for development of the water and power needs of the entire Pacific Southwest. Secretary Udall responded in January 1963 with an announcement of the start of a new study for the Lower Colorado River Basin Plan, aimed at solving the growing water and power problems of the Pacific Southwest.

This proposed plan, wrote Secretary Udall, "erases the outmoded concept limited by State lines, and concentrates on meeting the total water needs of a region. In the parched Pacific Southwest, we can prosper together or slowly shrivel separately."

As a result, a massive assault had been launched against threatening water shortages for the driest and fastest-growing region in the United States. And, parenthetically, a simultaneous attack has been mounted against the Bureau of Reclamation

as the "great destroyer."

By August of 1963, a planning report had been completed by the Bureau of Reclamation on the proposed Pacific Southwest Water Plan. It was submitted to the States and interested Federal agencies for review, and legislation subsequently was introduced in the Congress. Sponsors of this regional legislation were members of the Arizona and California Congressional delegations—for the first time in history united behind a water resource development proposal affecting the Colorado River and all the States that look to it for their water lifeline.

Subsequently, the proposal became known as the Lower Colorado River Basin Project and it won qualified approval by the Administration prior to House hearings in the fall

But there was still room for further regional expansion in a heartening display of

water statesmanship. At the 1965 House hearings, members of the Congress from the Upper Colorado River Basin States had expressed concern about the effect of this downriver project upon future developments contemplated upstream, and they had pointed to the need for additional water in the upper basin by 1990. Accordingly, agreement were hammered out in a series of meetings last winter involving Congressional representatives and water officials of the seven States. Out of these eventful meetings emerged a basinwide project, supported, also for the first time in history, by all seven States of the Colorado River Basin.

This expanded legislation now proposes immediate authorization and construction of the Central Arizona Project. Other water supply projects in the Basin would be authorized also. In addition, if would establish a regional development fund to finance future projects to augment the inadequate water supply of the Colorado River. These future projects—desalination, weather modification, and/or importation from water surplus areas—would be determined in a feasibility study to be completed within three years, according to the proposed legislation. The general objective of the feasibility studies would be to augment the Colorado River water supply by some 2½ to 6½ million scre-feet—the latter amount being equivalent of another river nearly half the size of the persent Colorado, which today is totally committed to consumptive uses or long-term storage.

Simultaneously, there is before the Congress a proposal for a national water supply study commission. While detailed research is pressed in desalination and a practical effort is being made to put known principles of weather modification to use in developing an additional water supply, there must be a complete array of facts and figures on water needs, supplies and potential surpluses in the various river basins. Only when these data are in and comparative costs are available, can Congress be expected to act on farreaching proposals to augment the water supplies in areas of shortage.

Perhaps even more significant than the agreement on the terms of the Lower Colorado River legislation is the fact that the seven States of the Colorado River Basin are now working collectively, with the Federal Government, to solve the most pressing, largest, and most complex water supply challenge of our times. This unity of purpose is vital if the most arid part of the Nation is to enter the 21st Century without facing a water supply ceiling, limiting further eco-

nomic and population expansion.

Associated with this Colorado River development during the past six decades in the seven basin States of Arisona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming, have been other noteworthy resource activities under Federal-State auspices. These include such major undertakings as the development of the Salt and Gila rivers in Arizona, the \$2 billion Central Valley Project in California, major transmoun-tain diversions to the Rio Grande, Arkansas, North Platte rivers and to the Great Basin in Utah, and headwater development in the Missouri River Basin in Wyoming. Collectively, the Federal-State water resource development in this seven-State area is the largest and most successful water use effort in the world. The existing projects are now world-renowned demonstration area for arid zone resource conservation and utilization—and will be for many generations to come. Yet we are accused of being destroy-

This sketchy resume of water resource development in the Colorado River Basin States is intended to remind you of this area's stake in this program. I again suggest to you that Reclamation is Conserva-

In spite of this background, those of us who have given our careers to water resource conservation and development have been attacked in recent months by massive propaganda and lobbying campaigns, in the name of conservation, which appear directed at discrediting and undermining the Reclamation program.

Consider these sweeping charges and glittering propagandistic generalities used by sincere but misguided preservationists against Reclamation during consideration of the Lower Colorado River Project Bill:

Blind planning; faulty arithmetic; threatening the National Park System; wasting water; stretch facts beyond the breaking point; selling a bill of goods; a boondoggle; anaky economic underpinnings; obsolete precepts; hydroelectric power outmoded; reclamation laws no longer appropriate.

These people, carried away by their singlepurpose zeal, have failed to recognize the great grey area between total preservation and total development, neither of which is contemplated.

As an example of the scare tactics used to achieve their emotional purpose, the following statement is made in an article in a conservation magazine, later digested in a mass circulation magazine:

"Much of the Grand Canyon habitat of the desert bighorn sheep would be destroyed by Bridge Canyon Dam."

りはは

you will The

Since my agency had originally proposed this structure, I sought information from the Federal agency which has jurisdiction over such wildlife, the Bureau of Sport Fisheries and Wildlife.

This is an excerpt from that Bureau's

Bighorns known to be in Bridge Canyon Reservoir area, but extent of population little known because of inaccessibility. If bighorns are in fact in Marble Canyon, population would be very limited. There are known populations above Bridge Canyon Reservoir in Grand Canyon National Park and in Lake Mead area (Black Mountains) below dam-site. Bighorns have no particular affinity to river bottom except possibly for watering purposes. They normally range above valley floor. At Havasu Lake (behind Reclamation's Parker Dam) bighorn populations adjacent to lake have increased in the since impoundment, and they are commonly seen by boaters on the lake. At this year's Bighorn Council meeting, a Utah game department biologist gave a paper concerning apparent recent increase in bighorn populations adjacent to Lake Powell (Glen Canyon) reservoir."

Hence, the facts appear to be that Bureau of Reclamation reservoirs have actually increased the population of desert bighorns. But propagandists have deliberately distorted or misrepresented the facts and the vaunted editorial review of one of the world's largest circulation magazines apparently accepted this false statement on its face.

A principal impression the preservation propagandists seek to foster in generating their emotional appeal, is that the reservoirs proposed in the original Southwest Water Plan would "flood out" the Grand Canyon and thereby ruin the National Park System.

The Marble Canyon damsite is located 12½ miles above and outside the upstream boundary of the Park and dam and reservoir would be totally outside of either Park or Monument. The proposed Bridge Canyon Damwhich is in the area-sponsored legislation, but which the Administration has recommended be deferred for further study, is downstream on the Colorado River from both the Grand Canyon National Park and Monument. It would, however, back water in the inner gorge of the Grand Canyon through the National Monument and for 13 miles alongside the boundary of Grand Canyon National Park.

The preservationists have failed to point out that in our efforts to "flood out and destroy the Grand Canyon"—and those are their quotes, not mine—that the same vista from any viewpoint along the rim within the National Park will be visible without change when either or both reservoirs are created.

There are accusations that Marble Canyon Dam will affect the regimen of the river through the canyon. But the regimen was changed when Glen Canyon Dam was built and as a result, there is much clearer and colder water flowing downstream. There is now an excellent trout fishery below the dam where none existed before. It is true that there are power fluctuations but the minimum flow is greater than the natural flow in years of low runoff and the power dis-charges can help get the river runners through the rapids.

In sum total, the river running season has been extended from a single uncertain month in periods of high runoff, to several months as the result of construction of Gien Canyon Dam. The situation will be im-proved even more in future years when Lake Powell is higher Powell is higher.

We and the Congress have been bombarded with accusations that the dams are unnecessary to the project, that hydropower is out-moded and will soon be replaced by great thermal generating plants. We have ana-lyzed all of these counter proposals thoroughly and in good faith. Yet, we find them wanting.

For example, the low-cost kilowatts which would come from these new thermal plants are predicated upon high load factor opera ition which is economically feasible only with a supplementary source of peaking energy such as hydro can supply. We also are aware that the utility industry still contemplates investment of many millions of dollars in hydro facilities, something that would be highly unlikely if hydro is going out of style.

or their arguments have been that there are alternative means of financing Reclamation development. But such liess have found a singular lack of practical support in Congress. Thermal or nuclear power alternative actions of their developments. natives to either or both of these dams are not options open to consideration under present Congressional thinking or experience.

Nevertheless, because we operate within a framework which has been laid down by the Congress in carrying out our water development responsibilities, we are not conservationists but destroyers, in the image these groups are seeking to build up. I say the contrary is true, that Reclamation development which gives full consideration of all existing values and all benefits which will be created, is the real conservation as Teddy Roseevelt and the other broad conserva-tionists who have followed him have repeate edly endorsed.

Our critics have even sought to usurp the mage of this great conservationist when they quote President Theodore Roosevelt, as he stood on the south rim of the Grand

"Leave it as it is. You cannot improve on it. The ages have been at work on it and man can only mar it."

Congress took him at his word and incorporated all of the Grand Canyon, as far as the eye could see from his viewpoint and much farther in each direction, in Grand Canyon National Park. And you today, and your children, and your children's children, will be able to see the magnificent vistas Tasodore Roosevelt viewed, unchanged, even when Reclamation's tank is completed.

Who is to say what Theodore Rocsevelt was thinking when he stood on the rim of the Grand Canyon. What was he thinking of when he wrote:

"It is becoming clear that our streams should be considered and conserved as great natural resources. . . . The time has come

for merging local projects and uses of the inland waters in a comprehensive plan de-signed for the benefit of the entire country . . . It is not possible to properly frame so large a plan . . . without taking account of the orderly development of other natural resources."

This has been a guiding policy of the Bureau of Reclamation through the years and more so now than ever before. The competitive demands of a growing population, a growing economy and vastly greater leisure time and travel convenience, make the careful planning and use of our natural

resources of greatest importance.

I am a veteran of 33 years experience in the Federal career service, all of it in natural resources administration and am familiar with the President's record in conservation since his days as a young Congressman, back in the 1930's when my own career was just

getting underway.

He and Secretary of the Interior Stewart He and Secretary of the Interior Stawart Udail are down in my book as solid conservationists. I am convinced they both have at heart the definition Gifford Pinchot and his aides used so much, that conservation is "the use of the natural resources for the greatest good for the greatest number.'

greatest good for the greatest number."

President Johnson is beset with international problems, but nevertheless, he keeps a firm hand on the resources picture, with Secretary Udail at his able and forceful lieutenant. Indicative is the recent transfer of the poliution control administration to the Department of the Interior. It reflects the President's same judgment and confidence in Secretary Udail that we all share who work with him. who work with him.

who work with him.

Such belittling and ill-advised references as have recently been made about him are in poorest taste and judgment when balanced against his overwheiming record of accomplishment in the public interest. They reflect the panic of those critics who refuse to recognize that Reclamation is Conservation.

Celebrate in 1976

EXTENSION OF REMARKS OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. ROGERS of Colorado. Speaker, the Denver Post regards the joint resolution signed by President Johnson to create a commission to plan a celebration for the 200th anniversary of the birth of our independence as a sensible approach to a significant event.

But the newspaper offers a valuable suggestion.

The Declaration of Independence can best be commemorated by completing a number of unfinished tasks by 1976, the Post contends.

For instance, we can cleanse our air and rivers, beautify our cities and countryside, and enrich our cultural life. We can wipe out slums, conquer poverty, secure peace, and enable more of our people to share in the blessings of our country.

Then the bicentennial will have far greater meaning.

This is an appeal for concerted action that I would like to place in the RECORD: MORE TO CELEBRATE IN 1976

President Johnson, like many of his pred-

fluenced by a deep sense of history and has acted with history in mind.

The President demonstrated this again last

week in handling a joint congressional reso-lution setting up the American Revolution. Bicentennial Commission to plan the na-tional celebration of the 200th anniversary

tional celebration of the 200th anniversary of the birth of American independence. It was natural enough that the President should sign the bill on July 4, the date of the signing of the Declaration of Independence. That is when the President did sign it.

But, in order to involve some extra history, Mr. Johnson postponed announcing that he had signed it until July 8, the anniversary of the ringing of the Liberty Bell, proclaim; "liberty throughout all the land."

Whenever and however it was signed, the bill represents a sensible and useful approach to an important national event, which is now

only 10 years away.

The Bicentennial Commission will be com-

nne Sicentennia Commission will be com-posed of four senators, four representatives, nine federal officials and 17 private citizens. Their assignment is a challenging one, for the nation will not only be commemorating an event on July 4, 1976. It will also be rededicating itself to a set of ideals.

It will be asserting that, despite the changes of two centuries, the old principles still hold good, the old ideas still work, the old course is still a sound one.

This rededication and this assertion deserve an appropriate ceremony. But the birth of independence in this country can best be commemorated through a series of unfinished national tanks which can be begantly the series of unfinished national tasks which can be brought to completion by 1976.

If we can cleanse our air and our rivers, beautify our cities and our countryside, expand and enrich our cultural life, wipe out alums, conquer poverty, secure peace and enable more of our people to share in the privileges and blessings of this country, the bicentennial ceremony will have far greater

We have 10 years to do it in. While the Bicentennial Commission is at work planning the celebration, the rest of the nation can be busy as well seeing to it that there is more to celebrate.

McNamara Hit on "Paper" Savings

EXTENSION OF REMARKS OF

HON. JOHN J. DUNCAN

OF TENNE

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. DUNCAN of Tennessee. Mr. Speaker, an interesting article by Mr. Mike Miller, Scripps-Howard staff writer, appeared in the July 18 Washington Daily News. I would like to place in the RECORD this discussion of Defense Secretary McNamara's cost-reduction program:

House Probes Claim: McNamara Hit on "Paper" Savings (By Mike Miller)

Robert S. McNamara constantly recites the instructions he received from the late President Kennedy on being named Defense

Mr. Kennedy told him to build a military second to none, but to do so at the lowest possible cost.

And that, says Mr. McNamara, is still his philosophy—sacrifice nothing in national security while refusing willingly to spend one dime more than necessary to provide the required readiness.

rel

try

Mr. Kennedy's first orders to Mr. McNamara are the basis of the Defense Secretary's widely acclaimed cost reduction program, which Mr. McNamara contends saved the taxpayers \$4.5 billion during the past fiscal year.

His goal is an annual saving of \$6.1 billion by fiscal 1968.

DISSENT

But even in claiming to give the taxpayers a break Mr. McNamara is controversial.

A house sub-committee is now investigating his cost reduction program amid charges that some savings Mr. McNamara claims are "phony"—on paper only, rather than money in the treasury.

A quip being told around the Pentagon sums up much of the criticism. Mr. Mc-Namara's son, the story goes, came home and announced that he had saved 25 cents.

announced that he had saved 25 cents.

"Instead of riding the bus, I ran home beside it." the boy said.

beside it," the boy said.
"That's great," replied Mr. McNamara.
"Tomorrow save \$1.50. Run home beside a

Mr. McNamara acknowledges that there is no Defense Department surplus of \$4.5 billion because of the cost reduction program. But he says that to have the same military readiness the U.S. enjoyed last year would have cost \$4.5 billion more without it.

His critics in Congress and elsewhere reply that it is every Federal bureaucrat's duty to cut costs where possible and live within his budget. Mr. McNamara is no exception, but he makes more noise about money saved,

The critics challenge Mr. McNamara even on a 40-cent bolt for helicopter armor. Mr. McNamara said the bolt was substituted for a more sophisticated one which costs \$24 each. So far \$13,104 has been saved.

Skeptics question why a \$14 bolt was used in the first place if a 40-cent one is sufficient. They would chalk the price difference of the more expensive bolt up to waste rather than savings.

Paying and Voting

EXTENSION OF REMARKS

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1966

Mr. DAVIS of Wisconsin. Mr. Speaker, property ownership as a criterion for voting eligibility has, for all practical purposes, disappeared from the American scene. I suppose that one who were to advocate the restoration of that test would, in today's vernacular, be branded as an extremist.

I suppose it is likewise true that just a few years ago anyone who seriously advocated a guaranteed annual income, with the guaranteed income to come from the Federal Treasury, would be branded

as an extremist.

Loyal Meek, chief editorial writer of the Milwaukee Sentinel, has shocked a number of his readers by proposing serious consideration of limiting the right to vote in national elections to citizens who pay personal Federal income taxes. Extreme, reactionary, 18th-century thinking? Maybe so, but if these adjectives apply to Mr. Meek's provocative suggestiton, should not the same adjectives be used to characterize the guaranteed annual income proposal?

The editorial referred to follows:

PATING AND VOTING

Why not limit the right to vote in national elections to citizens who pay personal federal income taxes?

In the face of the current emphasis on extending and loosening voting qualifications, this proposal may appear to be a drastic step away from democracy.

It is not, however, as restrictive and discriminatory as it might appear at first glance. The vast majority of present American voters are federal income tax payers.

Linking the privilege of voting with the payment of income taxes would be logical and just. It would give those who support the government the right to pick who is to operate the government. It would exclude dependents from voting. He who pays the piper will call the tune. Revolutionary as it may sound, this proposal deserves serious consideration. It is none too soon to begin. A movement is under way to establish a guaranteed annual income—according to current standards, about \$3,000 a year for a family of four. The money would come from the federal treasury, which would get it from the taxpayers.

Will it be proper for those who receive free incomes to have the vote for president or for senators and representatives? This would be the reverse of taxation without representation. It would be representation without taxation, which would be just as wrong.

taxation, which would be just as wrong. Taking the vote away from those who are dependent on the government would be a form of penalty. But what would be wrong with that? It might serve as an incentive for some to stay off or to get off the guaranteed income rolls. Those left on the dependent rolls, without the right to vote, would not become the prey of politicians more interested in buying their votes than in their welfare.

Tying the vote with the payment of federal individual income taxes would have many ramifications. It would upset the present arbitrary and varied age limits for voting. Children would, with few exceptions, remain without the vote.

A considerable number of elderly people might lose their right to vote upon reaching that stage where they no longer have to pay federal income taxes.

Young people, upon nearing maturity, could be encouraged to become full fledged citizens by seeing the possibility of earning the right to vote well before they reach their 21st birthday.

As a practical matter, the vote would probable have to go to every person who filed a return, individually or jointly, whether he or she ends up paying anything or not—just so the individual doesn't get back more than he or she paid in. After all, the government did have the use of their refund money for a time.

Most importantly, we believe, relating the right to vote with the duty of paying income taxes would be the best and surest way to put the prime responsibility of democratic citizenship where it belongs—in the hands of the responsible citizens.

This would tend to produce the most responsible government, to the benefit of everybody, including all voteless dependents.

Capitol Improvements

EXTENSION OF REMARKS

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1966

Mr. QUILLEN. Mr. Speaker, I submit the following editorial from the

Elizabethton, Tenn., Star as it expresses its views on the proposal to provide a new west front for the Capitol:

LET THE CAPITOL ALONE

It would be nice, no doubt, for tourists to dine in the nation's capitol, improving their time the while by gazing out upon the memorials to Washington and Lincoln. Doubtless, all things considered, it would be a fine thing to give members of Congress another 109 offices to add to those they now have in the office buildings nearby. It might even be argued that additional committee and conference rooms, not to mention movie auditoriums, would be a fine addition to the capitol.

But would these rather questionable needs justify adding a bulging shell of white marble to the west front, thus destroying the historic facade and terrace? We think not.

If space is needed for yet more congressional offices and conference rooms, it can be found elsewhere. That goes double for tourist restaurants. The sandstone west front wall should be repaired—and then left alone.

"Open Mouth" Controls a Conspicuous Failure

EXTENSION OF REMARKS

HON. GERALD R. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1966

Mr. GERALD R. FORD. Mr. Speaker, an editorial in the Detroit News for July 18 is a significant one. Entitled "Open Mouth Controls a Conspicuous Failure," it points up the obvious fact that economic stability cannot be achieved by political announcements.

The continued increase in the cost of living, brought about by the inflationary policies of the Johnson administration, works a serious hardship on all our people especially those living on fixed in-

As the editorial points out, fiscal restraints are essential if we are to escape an additional increase in the cost of living or greater Federal taxation.

Under leave to extend my remarks, I include the editorial:

"OPEN MOUTH" CONTROLS A CONSPICUOUS FAILURE

The headlines tell the tale: "Government Wins a Price Rollback for Molybdenum." and "Congress Urged to Curb Rising Rates of Interest." The nation is witnessing an era of economic manipulation by "open mouth" policy and ad hoc controls. It is economics of the absurd, and the public will ultimately pay for Washington's folly.

Price increases have been rolled back for steel, copper and aluminum, and they have been modified for newsprint and shoes. Some intended price increases have faded away, as in the case of cigarets. But none of this has been done on any systematic basis or with a legislative mandate. Instead, the threat of government power or the critical tone of highly placed officials has been responsible.

Yet for every price selectively shouted down, two or three others escape notice and creep upward. Controlling specific prices in a period of generally rising prices is as futile as carrying water in a sieve. And, of course selective wage controls are no better. Limiting wage gains in "conspicuous" industries

does not solve the problem of rising wages elsewhere.

The attempt to curb interest rates by legislation is another piece of economic chicanery. Denied the support of fiscal measures to limit demand in our full-employment economy, the monetary authorities have had to rely on tight credit to dampen the boom. The administration, applauding the action in private, publicly rails against rising interest rates as though they were the unnecessary result of an ulterior plot.

High interest rates are the price of scarce money, and this scarcity is currently the major bulwark against runaway inflation. To clamp controls of interest rates thwarts the purpose of tight monetary policy and penalizes the savers whose very act of saving fights inflation.

Is it possible that Washington is economically illiterate, or that it is advised by incompetents? We think not. We think every point made here is thoroughly understood, but shunted aside in favor of more politically palatable devices.

The most dangerous part of Washington's "jawbone economics" is that the public may believe that pronouncements can, in fact, solve economic problems. And, in this belief, the public may tolerate half-way measures while inflationary pressures continue to mount. Ultimately, Washington will have to impose full monetary and fiscal restraints in a larger corrective dose than would be needed now. Washington will have to do even more fast talking to explain that to the weary taxpayer.

Good News From Asia

EXTENSION OF REMARKS

HON, WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1966

Mr. MURPHY of Illinois. Mr. Speaker, Secretary of State Rusk was cautious in weighing the recent hint from Red China that it would not intervene in the Vietnamese war.

So is the Chicago Daily News, but the newspaper suggests it adds to growing evidence that communism and Chinese influence are on the wane in Asia.

The News refers in an editorial to a recent dispatch from Keyes Beech, its correspondent in Asia, reporting that from all along the periphery of Red China things are looking up for our side. Mr. Beech is convinced this trend could not have occurred except for the strong U.S. stand in Vietnam.

I offer the editorial for the RECORD:

Reading significance into the output of Peking's propaganda mills is a risky enterprise. Sec. of State Dean Rusk was appropriately wary in weighing the hint from Red China that it would not intervene directly in the war in Viet Nam.

But if the editorial in the official Peo-

But if the editorial in the official People's Daily of Peking meant what it said, another piece of good news can be added to the others coming out of Asia. The editorial said that Peking would continue to give support to the North Vietnamese, but added that "people should and can rely only on themselves to make revolution and wage people's war in their own country, since these are their own affairs."

The implication seems clear enough: The Red Chinese are willing to fight the war in Viet Nam down to the last Vietnamese. But as long as it's a "revolution" and not an attack on China itself, encouragement and tools are all the Vietnamese will get from China.

Coming as it does after the U.S. attacks on oil dumps near the heart of Hanoi and Haiphong, the statement tends to reduce the fears that heavier American commitments in the area would bring China into the war. And while we hope such reassurance will not contribute to needless American escalation of the war, it adds to the growing evidence that communism and Chinese influence have passed their peak and are on the wane in Asia.

Our correspondent Keyes Beech, reporting from Thailand, rounded up the case for such a belief on Monday. He cited the turnabout in Indonesia from a pro-Communist to an anti-Communist stance, the ousting of a pro-Communist foreign minister in Pakistan and a growing disenchantment with Communist ideas and power elsewhere in Asia.

A seasoned observer of the Asian scene, Beech is not given to wishful thinking. He has in the past filed copy from his beat that fairly dripped gloom. Now he says that "from Korea to Karachi, all along the sprawling periphery of Red China, things are looking up for our side."

The turnaround could not have occurred, Beech believes, except for the United States' strong stand in Viet Nam, for it is the presence of American power there that is giving the Asian nations the courage to develop in their own way and not Red China's way.

their own way and not Red China's way.

Obviously, there is a long road shead in Asia before true stability can be attained. But the word out of Asia's capitals—now including the word out of Peking—is more encouraging than it has been for some time.

Herschel Newsom's War on Hunger

EXTENSION OF REMARKS

OF

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1966

Mr. HAMILTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an excellent article describing one Hoosier's personal war on hunger in the world.

That man is Herschel Newsom, master of the National Grange; chairman of the Committee on the World Food Crisis, and trustee of the American Freedom From Hunger Foundation.

Mr. Newsom, who comes from the rich farmlands of Bartholomew County in Indiana, has brought with him to Washington that particular wit and wisdom of the Hoosier farmer.

I am especially proud of Mr. Newsom's outstanding work in the effort to erase starvation from the face of the earth. And I am pleased to submit Mr. Newsom's commentary on the war on hunger as it appeared in the July 7, 1966 edition of the Columbus Evening Republican:

SWORDS INTO PLOWSHARES: NEWSOM'S WAR ON HUNGER

(By John Rutherford)

A former Bartholomew county farmer who now lives in Washington, D.C., is the leader of a movement aimed at marshaling forces for an international "war on hunger."

"We live today in a world of strange and

baffling paradoxes," says Herschel Newsom, who left the Azalia community where he still owns land to become master of the National Grange.

"We know more about how to produce and prepare high-quality food for maximum nutritional value than at any other time in history; yet we have the bleak prospect that many people will starve to death this year, and the prospects for adequate diet for the rapidly expanding population will become increasingly dim."

Since Dec. 9, Mr. Newsom has been chairman of the Committee on the World Food Crisis, formed that day to spearhead efforts to stamp out starvation.

Subsequently, he has conferred with U.S. and Asian officials over an Indian food crisis; testified before congressional committees; conferred with British Prime Minister Harold Wilson, and met with President Johnson's assistants to give them his views.

A BUSY MAN

He also is president of International Federation of Agricultural Producers and a trustee of the American Freedom-From-Hunger foundation.

In testimony before a U.S. House committee studying problems of world hunger and appropriate U.S. response, Mr. Newsom explained his views at length

plained his views at length.

"The United States," he said, "cannot forever exist in alliance with its friendly and affluent international neighbors as an island of abundance in a sea of despair. The very survival of our much heralded and highly valued Western civilization and the validity of the professions of Christian culture are dependent upon our ability to successfully meet the challenge of world hunger."

His solution:

"Since our objective is a peaceful and prosperous world in which there is security for political systems and persons, where the differentiation between the hungry and the well-fed is eliminated, where the fear of pestilence and death is removed from the weak and strong alike, where famine stalks his prey with devastating effects no more, indeed, where the lion and the lamb shall lie down together and men shall beat their swords into plowshares and their spears into pruning hooks—then we must mobilize the total productive resources of the developing and food-deficit areas of the world simultaneously with an expansion of the productive capacity of the United States."

LACE PROGRAM

He says that in the Western nations, the best techniques of food distribution have been developed in all history "yet a substantial part of the world is hungry simply because there exists no marketing and transportation organization adequate to move foodstuffs into the food-deficit areas."

He said nations with a long-time record of production in agricultural commodities have slipped behind the Iron and Bamboo curtains and for the foreseeable future have become food deficit areas and "the block over which they stumbled was agriculture."

"Today," he says, "the great subcontinent of India is in political distress and threatens to be pushed into the Communist orbit along with all of southeast Asia because of the political problems that come from hungry people."

Turning to Scripture, Mr. Newsom remarked:

"Thus, the truth of the statement of the prophet Isaiah is verified when he said, 'And it shall come to pass that, when they shall be be hungry, they shall fret themselves, and curse their king and their God'—Isaiah 8:21."

NOT ENOUGH

Mr. Newsom notes that the U.S. has had a food-for-peace program for the past decade and while it has done much good it has not been enough. "Food relief and production problems are so vast," he says on this point, "that the United States should not presume to meet these obligations alone. The fact that they would become permanent objects of ou charity is not so disturbing as the fact of their failure to develop their own agricul-ture and, consequently, their own economy." How would all this affect American agri-

"The prosperity of American agriculture does not, and must not depend on the expansion of relief markets, but rather on the development of commercial markets in the rest of the world," says Mr. Newsom.

He does not want the war-on-hunger, foodfor-freedom or similar slogans to be an excuse for removing all U.S. government farm

"Programs to remove the restraints on our production and to transfer the costs of the agricultural programs to relief programs yould serve only to reduce the income of American farmers and to seriously impair the opportunities which may be developing in the emerging nations for their agriculture to become a viable part of a growing and prosperous economy," he said.

Mr. Newsom outlines a 3-step priority

program:

"Our first priority is to prevent as far as possible any mass starvation in any country of the world."

2. "Another priority must be in the devel-

opment of commercial markets."

"A third priority must be development of the agricultural production in the less-developed countries, for use by such coun-

"A major opportunity for multi-lateral ac-tion," he said, "is offered in the development and administration of programs to improve nutrition for children, reduce illiteracy, improve per-acre production of essential crops provide for long-term credit and low-interest loans, finance and staff regional research facilities, develop transportation, storage and marketing facilities, and so forth. The scientific and technical know-how of the developed countries must be fully utilized in these programs and, in the meantime, the necessary dietary supplements and additional food supplies should be made available . . . "

Speaking as president of the international food producers association, he said:

We believe that the time is at hand when it must be recognized that the piecemeal and uncoordinated application of the productive resources of the developed world is not sufficient to meet the commitments of resources which will be required for the solution of the problems we are considering here today. With all due respect for the pronouncement of the Secretary General of the United Nations, the appeals of Pope Paul, the statements of the World Council of Churches and other international bodies, the fact remains that we simply are not marshaling our forces in any unified way to solve these trenmendous problems."

He issues this call:

"For attainment of our ultimate objective, we must advance all of our forces for victory on a total front. Great salients of unre-solved areas cannot be permitted to remain, if the overall goals of food production and nutrition are to be accomplished."

Mr. Newsom sums up his concern in the

following words:

"We know more about nutrition for both humans and animals than ever before... yet two-thirds of the world suffers from malnutrition, and in some parts of the world, over half the babies born die before they reach school age because of ingrowing crops by the use of herbicides for weed control, yet much of the productive land of the world is unusable because of the rank growth of vegetation choking our food.

We know how to protect our crops.

"We know much about protecting our growing and stored food from insects. Yet

the food productive capacity of the develop-ing world is severely limited by plagues of food-destroying worms and insects.

"We know how to protect our stored grain om damage due to weather and atmospheric conditions, yet the lack of storage capacity which can accomplish these same objectives in the food-deficit areas is a major factor in the lack of food where it is needed.

"We know how to protect stored food from rodents, yet we read with dismay that in the hungriest nation of the world—India half of the food grown is either destroyed or made unfit for human consumption by lusses due to rodents.

We know how to educate yet the world is illiterate.

"We know how to control population, but population continues to expand at an explosive rate.

"We know how to control disease, but disease is rampant."

"In short, we know how to feed the world ... (yet) ... the Four Horsemen of the Apocalypse—pestilence, war, famine and death-continue to stalk the world. though they may emerge at different times from different doors, they come from the

same barn."

Hon. Wood T. Brookshire and Hon. Louis Morgan

EXTENSION OF REMARKS OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. BECKWORTH. Mr. Speaker, I desire to include in the CONGRESSIONAL RECORD an editorial concerning the successes of Mr. T. Brookshire and his family and Mr. Louis Morgan. I know these people well. I subscribe wholly to this editorial which appeared Wednesday afternoon, July 13, 1966, in the Longview Daily News:

[From the Longview Daily News, July 13, 1966]

THEIR DREAMS CAME TRUE

Any city in East Texas would be excited over the prospects of securing a new industry with 130 to 140 full-time employees and to 35 part-time workers.

We have the equivalent of such an industry in the four Brookshire Food Stores, which represent an investment of well over \$1 .-

They are here because of the vision, courage and faith of a man who has built the largest independent business organization of its kind in East Texas.

Wood T. Brookshire, whom we are privileged to have had as a friend nearly 38 years, is one of the most successful businessmen in Texas and a legendary figure in the food and merchandising fields. His manifold achievements cannot be ascribed to luck. They are the end result of ambition, desire, drive, determination, perseverance, ability and abiding faith. Coupled with these attributes is an innate high quality of leadership that automatically springs from a quick, sharp and perceptive mind.

A fine, Christian man himself, Wood Brookshire always has been able to surround him-self with capable and dedicated people. He has imbued scores of young men with the desire to work hard and accomplish worth-while things. His honor and integrity have made a profound influence on hundreds who have worked for and with him. His policy of fair dealing has been one of the keystones of his monumental success.

Love of people comes naturally to him. We observed an example of this Tuesday at the opening of his new store. A woman came in with two handsome twin baby boys. He stepped over and spoke to her and congratulated her on her two fine sons. After she had started shopping, he told one of his associates to be on the lookout when she came to a checkout counter, and to notify her that all of the items she had selected were to be with his compliments.

It was in 1926 that Wood Brookshire en-

tered the grocery business in Lufkin with his brothers. He moved to Tyler in 1928 to open the third store for Brookshire Brothers. Ten years later, he acquired the company's three Tyler stores. He now heads 23 supermarkets in East Texas and Shrevesport. predict there will be many more.

The Brookshire operation is owned by our longtime friend and his two sons, Bruce Brookshire, executive vice president, and S. W. Brookshire, vice president and north Serving as vice president district manager. and manager of the eastern district is Zack Nutt, who has been with the company many years. This trio will play an important role in the continued growth in the Brookshire organizations. They have accepted whole-heartedly the responsibilities placed upon them and are performing admirably.

While it is not our pleasure to have known Louis Morgan as long as we have known Wood Brookshire, we have observed with great admiration the pride and progressive spirit that he has manifested since coming here 15 years ago. He has given Longview three modern drug stores of which any city in East Texas would be proud, and his new location will compare favorably with any in the metropolitan centers of the nation.

Wood Brookshire and Louis Morgan have a kindred spirit, and it is not by happen-stance that they have adjoining stores in three Brookshire Centers here. They believe in progress—and they believe in East Texas! We feel we bespeak the sentiment of citi-

zenry of Longview and this area when we say ese two fine businessmen we are proud of them, and offer our warmest congratula-tions for another big accomplishment on their part.

Let us hope that what they have done will serve as an incentive to others in this area to make the most of the opportunities that abound here.

Captive Nations Week

SPEECH OF

HON. JOHN R. SCHMIDHAUSER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. SCHMIDHAUSER. Mr. Speaker, would like to join with my colleagues who this week have risen to express their renewed sense of obligation to the people of the captive nations of the world. Certainly if any principle is basic to America it is that the people of every nation must be able to freely determine their own destiny without coercion from outside powers. Where they are not, then America must help, through efforts such as those made in Congress this week, to maintain the spirit of freedom in the oppressed peoples.

We know, of course, Mr. Speaker, that there are other captive nations in the world besides those in Eastern Europe where the Soviet Union's power stands h

as an ever-vigilant guard against meaningful self-determination. Countries such as Rhodesia and South Africa, where a small white minority refuses political and economic freedom to the majority of the inhabitants of the nation, can just as rightly be called captive nations and, as Senator Kennedy of New York has shown in his recent trip, even in these countries America can function as a symbol and hope for a better, freer life. If America is to fulfill her true
"manifest destiny" it will be by ever
raising her voice to salute freedom and to encourage those who would create nations where the rights of the individual would be free from government coercion, where the will of the majority would be able to determine the political direction of the country.

I would also like to comment, Mr. Speaker, that the dedication to freedom and self-determination expressed in Congress this week gives me renewed hope that we will move this session to end the last vestige of outside rule in our country and approve meaningful home rule for the District of Columbia.

Disability: A National Health Problem as Seen From Capitol Hill

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following:

DISABILITY: A NATIONAL HEALTH PROBLEM AS

SEEN FROM CAPITOL HILL

(Remarks of U.S. Representative JOHN E. FOGARTY, Second Congressional District of Rhode Island, at Georgetown University symposium, Washington, D.C., Thursday, June 9, 1968)

I accepted with pleasure this invitation to appear here tonight, because I welcome every opportunity to participate in an activity whose aims is to improve the health of the American people. This seminar today is such an activity.

I have been asked to talk to you this evening on disability, a subject that is of as much concern to me as a legislator as it is to you as physicians and health workers, although from a somewhat different point of view.

Health matters have traditionally been a great concern of law as well as of medicine. The history of health legislation is almost as old as the history of lawmaking itself in this country. Let me go back for just a moment to these earliest efforts on the part of governing bodies to halt the inroads of disease on the citizens of our first colonies. Our earliest health laws were related almost exclusively to the spread of disease through travel, which was originally of special importance in maritime traffic and more recently has between in proportions in air traffic.

In Colonial America, the earliest quarantine restriction, to halt the spread of disense from foreign ships, was enacted in 1647 by the Massachusetts Bay Colony against ships arriving from Barbados, and in 1700 the Province of Pennsylvania enacted legislation

"to prevent sickly vessels coming into the government."

Although the original legislative health efforts were directed specifically against communicable diseases entering by sea, governing authorities began to develop broader health concerns as early as 1754 when the Colonial Government of New York imposed a tax on all seamen and passengers entering the port of New York, and with these funds provided not only quarantine hospital accommodations but estiblished the first city dispensaries and provided financial support to the Society for the Reformation of Juvenile Delinquents.

In 1798 the U.S. Public Health Service, now the principal health agency of our country, was created as a Marine Hospital Service when an act of Congress providing for the relief of sick and injured seamen was signed by President John Adams. Proponents of the Act were not concerned with the humanitarian considerations alone, but argued also that the National defense demanded a National program of direct medical and hospital care for seamen, since the merchant fleet had always been a major element of the Nation's naval defense.

In the more than a century and a half which followed these pieces of legislation, Congress has often demonstrated its continuing interest in the health of the American people. This interest is based upon a conviction that a healthy nation is a productive nation and that a general state of National health is an economic asset and an essential component of defense even if there were no human issues involved. This Congressional concern has been reflected in such laws as these:

Legislation to control a third "killer" disease was enacted in 1833 as the result of a widespread outbreak of cholers, and authorized the use of revenue cutters in enforcing quarantine laws of States and cities.

The world-wide pandemic of influenza in 1918 stimulated Congress to appropriate one million dollars for the Public Health Service to use in suppression of influenza in the United States. In the 20's, the Veterans Bureau, later to become the Veterans Administration, and the Bureau of Indian Affairs were both established by law.

And so it has gone, with each decade bringing new laws relating to health and disease control.

A new dimension of health concern began with the National Health Survey of 1935, the first definitive survey of health to determine the relationship of disease and certain environmental factors such as income, education, and housing conditions. This survey brought together for the first time information that formed a basis for Federal, State, and local action directed toward the prevention and control of the chronic as well as the communicable diseases, and stimulated the development of programs aimed at the bettering of social and economic conditions among the deprived of our Nation.

among the deprived of our Nation.

Beginning with the impact of the findings of the first National Health Survey, and given additional impetus from World War II, there has been a gradual but substantial shift of legislative perspective in regard to health. This has evolved as a response to the changing health needs of a changing society. That our society has changed, few persons would argue.

For example, while by no means entirely eliminated from the health picture, the communicable diseases and the sanitation problems incident to these no longer have a dominant claim on either medical or legislative attention. Just as our society has changed greatly in the past 30 years, so it will no doubt continue to change, at least into the foreseeable future. A glance at the population figures reveals one very basic factor: we are becoming a Nation of the very young and the very old. We have in-

creased our life expectancy to span the decades in which chronic diseases are increasingly common and their crippling effects more disabiling.

We have managed to control the great killers of the past—yellow fever, smallpox, cholera—but we have created new killers and cripplers to take their place. Heart disease, cancer, and stroke claim over a million lives every year and disable many more. Vehicles with fatal highway speeds cause mass crippling in the youth of our land. We have acquired great technological skill, but with it a longer life span in which to develop social and economic hardships in the so-called "golden years".

We have, in short, set the stage for disability. For nearly a century we have collected statistics on mortality. Only in recent years have we really begun to realize the vast implications—of chronic and malignant diseases, of injuries and old age—for those who do not appear on our mortality tables because they are not yet dead.

What are some of these implications? In the three great killer diseases I have just mentioned—heart disease, cancer, and stroke—death itself is not the only tragedy. If those individuals we have listed in the statistical tables as "survivors" are merely snatched from the jaws of death to become doomed to a bedfast existence at home or in the back wards of public institutions then the advances merit only limited praise. There is abundant evidence, however, that disability no longer need be accepted as the natural and inevitable aftermath of cancer surgery, or heart disease, or stroke, or old age; evidence that disability can be prevented or minimized; evidence that knowledge already available could be more fully utilized to offer useful and productive years to be lived in dignity by millions of chronically ill and aged persons.

I am referring, of course, to that area of medical care known as medical rehabilitation. For in this portion of comprehensive health care lies our conception of medical science as a tool for health, rather than limiting it to the bare provision of basic bodily survival. We have in the past directed our major medical and legislative efforts toward those activities—from immunization to organ transplant—designed to prevent death. But we have an additional obligation to those whom we have rescued—we must insure that that life is worth living. We must do more than substitute one tragedy for another. And this is where medical rehabilitation comes into focus.

The respect I have for those who cultivate the fields of rehabilitation is profound. I have come to know many of these workers well. Through the work of the appropriations subcommittee which I have chaired for several years, I too have endeavored to serve the disabled people of this country. In these years I have had an opportunity to gain an understanding of the national problem posed by disability and an awareness of the obstacles to delivery of medical rehabilitation services to those who need and could benefit from them. I have come to understand that medical rehabilitation, or disability control, or whatever you choose to call it, has vast potentials, not only in restoring the disabled to a high level of independence, but in preventing disability from developing.

Those of you here today are demonstrating by your presence at this seminar on the management of the chronic disease patient your concern for better care of this segment of the poplation. You and your counterparts in other sessions of his type are seeking to expand the horizons of medical care for this neglected group. You are denying, in effect, the validity of medical attitudes which claim that nothing can be done for those so unfortunate as to be afflicted with chronic diseases and old age. You are attempting to

find solutions to the common problems as-sociated with disability. We have learned by now that shutting the disabled out of sight accomplishes nothing. We can never build enough custodial "boxes" even for this.

And we should not try.

In the process of gathering information relative to disability and to the need for rehabilitative services throughout the country, I have come to view rehabilitation in its broadest sense-health care concerned with preventing disability and maintaining function, as well as restorative services to those with existing impairments—as the window on the future. I am convinced that health measures enacted by Congress and health services provided by physicians and other health professionals must all take into account the chronicity of many illnesses and conditions. In our fight for life-saving tech-niques, let us make sure that it is really the whole life we are saying. Let us philosophy be based on reality, and let our goals be based on a belief in the true worth of man.

Workers in public health know that when large numbers of people need health services which in the usual course of events they do not receive, then it becomes a public health problem. When such a need is widespread, then it becomes also a national problem and of concern to legislative authorities. there has been legislative recognition of such national health problems is evident in such

laws as the following:
The Community Health Services and Facilities Act of 1961, which provides for demonstrations of new methods of providing community health services, including a variety of rehabilitation services.

The Health Professions Educational Assistance Act of 1963 and the Nurse Training Act of 1964 are both designed to increase professional health manpower, for without sufficient personnel to provide health services, the most desirable and effective medical program falls short of its goal.

The Heart Disease, Cancer, and Stroke Amendments of 1985 which assigns respon-sibility to the Public Health Service for en-couraging and assisting the establishment of regional cooperative arrangements among medical schools, research institutions and hospitals, designed to forge a closer link between the centers of scientific and academic medicine on the one hand, and community health services on the other. This legislation specifies that this forthright program must not interfere with present patterns of patient care and professional practice, but it is nonetheless a revolutionary piece of legislation. It is designed to develop and disseminate medical knowledge of treatment techniques through cooperative efforts of medical resources in the community.

Nowhere in the legislation, or in the testimony in its support before the Congresical committees, will you find a blueprint for this program—because there is no Federal blueprint and it is not intended that there should be one. The pattern of grants-in-aid, already so well established and so successful in the support of medical research, will also be followed in this new program.
These grants will be made in response to local initiative, to facilitate local planning, and to assist local execution of the plans. The emphasis of this program is clearly on bringing this country's proven research ca-pability—as reflected in the medical schools and research hospitals—into a closer relationship with medical practice, as a resource for the practitioner, the local hospital, and the community health services in a wide geo-

The Social Security Amendments of 1965, which provide health insurance benefits to the aged and is popularly known as "Medicare." This legislative package evolved out of a recognition that it is one thing to have improved medical service, but quite another

thing to pay for it. The rapid and dramatic increase in the costs of hospital care and health services generally is alarming. It is alarming because it means that despite our general prosperity we are still putting some forms of medical care beyond the reach of many of our citizens. This is not a tolerable situation. I am not contending that the charges made for medical services are excessive in relation to costs, or in relation to value but merely that they are still too often excessive in relation to ability to pay. Fear of the doctor's bill or the hospital bill should not be the factor that keeps members of any economic group from availing themselves of medical care.

There is another aspect to this problem of costs which disturbs me. This is the attempt to extend to the field of health servand medical research the concept of cost-benefit economics generated by our defense and space technology. These approaches start off with the assumption hat every public act must be weighed in terms of its economic rate of return. This is a concept which we must reject out of hand. It involves a principle which cannot be applied to health.

This is not to say that there are never economic savings as a direct result of medical care. Certainly, the nearly 200,000 vocationally rehabilitated persons each year are returning to the labor market and paying taxes where formerly they contributed only to the costs of medical care, or prevented a family member from being employed. But there are millions of citizens with no em-ployment potential. Those over 40, handicapped and uneducated for other than manual tasks; those with deteriorating chronic diseases; those past retirement. What of these? How do we measure the dollar costs to society of not providing them with necessary health services? And if we could do this, would it be in any way a yardstick of the human values involved?

There will be new advances in medical science in the years to come, and there will be new laws relating to health. Hopefully, breakthroughs in preventing death will lead to enriching human life as well, and emerging legislation will consider the human above the economic values of life. Medicine and law have been partners for generations in this land of ours. I expect this to continue into more and more areas, such as poverty— which goes hand in hand with disease and disability—and old age—which has outlived the killer diseases of youth only to fall heir to the chronic diseases in later years—and ignorance—which prevents the delivery of appropriate health services to all who need

Only then, when all men have the oportunity to achieve and to maintain their highest potentials, may we—the health pro-fessions and the lawmakers—rest upon our laurels secure in the knowledge that we have done our job faithfully and completely.

Open and Shut

EXTENSION OF REMARKS OF

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. ROSENTHAL. Mr. Speaker, the Baltimore Sun supports the recent liberalization of passport rules applying to travel to Communist China and four other countries. It is well, the Sun says in an editorial, to have the United States moving further toward on open-door policy.

We scored a point in principle by announcing the relaxation as Red China reportedly was shutting its travel doors even more tightly because of domestic political troubles, the newspaper feels.

Our position is strengthened, in the Sun's opinion, by the examples provided by Red China and by Russia in canceling a trip by its athletes to this country for a United States-Soviet track meet. The editorial follows:

OPEN AND SHUT

In principle, the United States scored a point by announcing a further liberalizing of passpart rules applying to travel to Communist China (along with Cuba, North-Viet-nam, North Korea and Albania) just as Communist China was reported to be shutting its doors to foreigners because of its domestic political purge.

Whether the relaxing of our State Department's restrictions will result in a larger number of Americans going to Communist China will depend, of course, on whether China will open its doors. Its internal troubles are serious and widespread, as we can see from the lengthy discussion of them in official Red Chinese publications, and no one can be sure what their outcome will be,

But in any case it is well to have the United States moving further toward on open door policy. The examples provided by Red China, shutting its doors to Americans, and by the Soviet Union, shutting its doors to its own athletes as an expression of political policy, help to affirm our position.

University of Miami Cuban Doctors Program Eulogizes Antonio Micocci

EXTENSION OF REMARKS OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. FASCELL. Mr. Speaker, it is a privilege to be able to inform my colleagues of a unique and humanitarian program being conducted at the University of Miami School of Medicine. The university is conducting a postgraduate program on basic medical sciences for Cuban dentists, pharmacists, and veterinarians in order to enable those already skilled professionals who were forced to flee their homeland to obtain a license and practice in the United States.

One of the stanchest supporters of this program was our good friend, the late Antonio A. Micocci, staff adviser of the Cuban Refugee Program. "Tony" Micocci gave tirelessly of himself to these refugees from communism and they recognized his efforts by dedicating their "Memoir" or yearbook to him. Upon learning of his untimely death, they added a page "In Memoriam" to Tony Micocci. A translation follows:

IN MEMORIAM: ANTONIO A. MICOCCI

"Many thanks for whatever you can do to asist your fellow professionals from Cuba to make a new start in this land of Freedom, they have paid so dearly to reach."1

¹Paragraph of a letter written by Mr. Micocci to a Professional Association of North Americans, in February, 1966.

When this memoir was being finished, sad word was received in Miami of the death of Mr. Antonio A. Micocci, Staff Advisor of the Cuban Refugee Program.

The first draft of this memoir was given by the Dean of the School of Medicine, Dr. Hayden C. Nicholson at the closing of the course. He was surprised to find out that the Memoir was dedicated to him.

At the end of the ceremonies Micocci told us how glad he was to meet the Cuban dentists, pharmacists and veterinarians. "I receive great satisfaction from filling this position. The talent of the professional Cuban should be carried on in this country and returned to Cuba when it becomes free. I regret having to receive compensation for my work. I would like to be in conditions that would permit me to donate my time and effort to such a noble cause."

In one of his last letters he asked me to

In one of his last letters he asked me to invite a Cuban doctor to go practice in a small town in the North; "where I would like to live when I retire". He could not see his wishes come true.

Rest in peace Antonio Micocci, great friend of the Cubans, to whom he always referred as "we" never as "you".

RAPAEL A. PEÑALVER.

Better Air Travel Deal

EXTENSION OF REMARKS

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1966

Mr. BRAY. Mr. Speaker, a subcommittee of the House Committee on Armed Services has been looking into the problems encountered by servicemen traveling while on leave. This may seem a relatively minor matter when compared to major defense money bills or the overall posture of our military establishment, but anyone who has ever traveled while in uniform knows that it can present difficulties for the serviceman and his family.

This investigation to date has been extremely productive and is a superb example of how a great deal can be accomplished without fanfare or headlines. The following editorial from the July 27, 1966, issue of Air Force Times lists the results:

BETTER AIR TRAVEL DEAL

The current House of Representatives' study into travel problems of servicemen on leave is a good example of how to get quick—and, we hope, long-lasting—results without writing a batch of new laws.

The hearings, conducted by Rep. Richard Ichord (D., Mo.) in his first subcommittee chairmanship, already have stimulated action throughout the government and the American airline industry. The beneficiary of all this activity is the servicement.

of all this activity is the serviceman.

When House Armed Services Committee chairman L. Mender. Rivers announced the investigation, we frankly were skeptical. The South Carolina lawmaker, a powerful man in the military realm, has no control or legislative authority over the airlines. It was difficult to see how he could do much to ease the plight of servicemen forced to wait as long as 30 hours to get a seat aboard an airplane (under the standby 50 percent fare plan). Now we all can see what Mr. Rivers was getting at, and we can clearly see how he and Mr. Ichorp are going to get there.

While some new laws are likely to develop from the subcommittee hearings, beneficial developments already have taken place. For example:

Defense has established a full-time committee to identify the problems of servicemen traveling on leave status. This group is trying to work out contracts with some of the airlines to send extra flights to and from military areas during peak traffic hours. It also is working on a plan whereby large groups of trainees can get home at the end of the training course aboard chartered planes, paying the considerably cheaper charter fare.

The Civil Aeronautics Board has given its approval to the airlines' getting together to come up with consistent, nationwide policies for standby travel, without getting the airlines in trouble for violating the antitrust laws. CAB has told the airlines to frame plans which will guarantee that military passengers won't be bumped during stops en route.

Several airlines already have agreed to sell confirmed, reserved seats to servicemen at reduced rates. One will now guarantee that a military standby passenger will get a reserved seat on the next flight if the first flight can't accommodate him.

Another program triggered by the subcommittee is Operation Combat Leave, which provides military planes to take Vietnambound men home on leave during the airlines' strike.

Defense also has recommended to the CAB and the Air Transport Association that the airlines sell 50 percent discount tickets to servicemen for specific, reserved seats on days other than the heavily-traveled Fridays and Sundays. The airlines are interested.

The more than 100 flights per month by Air National Guard and Reserve planes in support of Vietnam operations will be used to carry servicemen on leave. Many of these planes can carry as many as 100 passengers, so the number of seats being made available soon will number in the thousands per month. That's progress resulting from some simple snipping of red tape.

Defense is examining a proposal to use dual configuration on State side logistical flights. In other words, the part of the plane that isn't filled with cargo could be filled with seats.

Defense also is considering having staggered release dates for leave purposes, so that more servicemen would start their leaves around mid-week when rides are most available.

It's also a good bet that the House Armed Services committee will soon consider a proposal to provide commercial airplane rides to all servicemen on emergency and convalescent leave at government expense.

The airlines themselves have not yet had their day in court. That will come in early August when the hearings resume.

Meantime, the probe so far has had a most salutory effect. It had focused the spotlight on (1) some things that shouldn't have been tolerated, like the "bumping" of servicemen in remote towns; and (2) on things that both the airlines and Defense should have done but didn't.

Nice going, Messrs. ICHORD and RIVERS, for paving the way to a better air travel deal for servicemen.

Open Letter From Chicago to Dixieland

EXTENSION OF REMARKS

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1966

Mr. TUCK. Mr. Speaker, under leave heretofore granted me to extend my remarks in the Appendix of the Record, I include a column by Paul Harvey, the celebrated news commentator, which appeared in the Danville Bee, Danville, Va., July 19, 1966. In this article, Mr. Harvey extends the apologies of the people of Chicago, and other areas, to the South for their criticism of the South and for the slandering publicity in regard to racial riots in that area.

We of the South understand the Negro race, and they understand the white race. In Virginia, the races have lived in peace and harmony for more than 300 years. We can continue to do so if these lawless demonstrators, agitators, and troublemakers, parading under the cloak of "nonviolence," can be kept away from that area. These lawless outbreaks and law violations are inspired by the Communists. These flagitious forces swarm in like the "locusts of Egypt" whenever and wherever they believe they can foment racial discord and strife, and incite to riot.

Paul Harvey has requested the sympathy and the help of the southern people. I would suggest first, the defeat of the present so-called civil rights bill. H.R. 14765, and the repeal of those other vicious, spurious, unconstitutional pleces of legislation passed in the immediate preceding Congresses which, instead of suppressing racial strife and discord, have served to acerbate the same.

The excellent letter of Paul Harvey is as follows:

OPEN LETTER FROM CHICAGO IS ADDRESSED TO DIXIBLAND

(By Paul Harvey)

DEAR DIXIE: Can you possibly find it in your heart to accept our sincere apology? When there was race rloting in Little Rock, Arkansas, we were convinced that the cause was callousness. Our public officials and our press in Chicago insisted that the only two reasons for Negro restiveness were your segregated schools and your stubborn governor. We in Chicago, with integrated schools and a very liberal governor are now writhing in the agony of race rloting. And as we seek to set our house in order, we hope your headlines will be kinder to us than ours were to you.

And when a Mississippi Negro boy was found drowned, we in Chicago called this the "inevitable result of a white-supremacy tradition." Now a Negro girl, 14 and pregnant, has been shot to death on the front porch of her own home in Chicago—and we are confused and ashamed—and frightened.

What are we doing wrong that has made eight square miles of our city a battleground? Help us, if you can find it in your own hurt heart to help.

heart to help.

And Alabama, when your state police were photographed subduing rioters with night sticks, Chicago's bold-face front pages condemned you for "indefensible brutality." Now Illinois State Police have resorted to armored cars and cracking skulls and shooting to kill...

Your governor has alleged that "Communists are fomenting this strife." We scoffed.

Now 13 Negroes on Chicago's West Side have been charged with "piotting treason." We are sweeping admittedly Communist literature from our littered streets.

Porgive us for not knowing what we were talking about.

Georgia: When you were photographed in the act of turning back crowds of marching children—we could not control ourselves. "The very idea," the Chicago press editorialized, "that youngsters should be considered a menace sufficient to justify the use of tear gas!" Now, in our own asphalt jungle, we have seen Negro youngsters of 9, 10, 11-advance on police with drawn guns or broken botscreaming, "Kill Whitey!"

And we used gas and clubs and dogs and guns and, God forgive us, what else could we do! Can you, Georgia, forgive us, too?

We tried the patience we had preached. Honest, we did. We tried so desperately that seven policemen were shot the other night, two of them through the back. So, in the end, we resorted to methods more brutal than yours. But, don't you see, we had to!

And our mayor listened to the Negroes' leaders, as he so often admonished you to do. He had listened, he had made compromises and confessions and he had offered sacrificial police officials and school officials-but they kept coming from so many directions with so many demands—and then—demanding to keep the fire hydrants gushing for their playing children during the city's most critical drought-

Dear Dixie, perhaps we have not yet learned fully to appreciate what you have been trying to do to effect evolution without revolution-but for whatever belated comfort it may be, from our glass house we will not be throwing any more stones at you for a while.

The Pro Draft and College Baseball

EXTENSION OF REMARKS

HON. WILLIAM L. DICKINSON

OF ALABAMA

IN THE HOUST OF REPRESENTATIVES

Thursday, July 21, 1966

Mr. DICKINSON. Mr. Speaker, it is certainly no secret that the people of Alabama are sports minded. To embellish that statement further would be totally superfluous. Alabamians, however, for the most part are devoted followers of amateur athletics-particularly at the three school levels; college or university, high school, and elementary.

One of the leading authorities on Alabama athletics and commentators on the general sports scene is Mr. Sam Adams, of the Montgomery Alabama Journal. Mr. Adams recently wrote me concerning the play-for-pay football folks who now appear to be making the same mistakes as have been committed for the last two decades by baseball men more eager for a profit than for the preservation of the sport. I share Mr. Adams' concern, and feel certain that my colleagues will be equally alarmed upon reading the piece which he enclosed from the newspaper Collegiate Baseball, and his own column of Monday, June 27, from the Alabama Journal.

The articles follow:

[From Collegiate Baseball]

AACBC CHARGES: PRO DRAFT RUINING COLLEGE BASEBALL

OMAHA.-College baseball, charging that the professional draft of players is wrecking the campus game, has called upon the Congress of the United States for relief.

In a sharply worded resolution the American Association of College Baseball Coaches, meeting here during the College World Series, seeks the aid of Congress in urging professional baseball to end its drafting of players and "encouraging student-athletes to leave college before the completion of their educa-tion."

The AACBC asks that professional baseball follow the practice of professional football and basketball in protecting student-athletes through four years of college.

John (Hi) Simmons, University of Missouri coach who is president of the AACBC, de-clared, "We are at a crucial time. When professional baseball drafts between 800 and 900 players and will sign less than half, maybe only one-third, I think the time has come to take some sharp action. The professional

baseball people do not have enough minor league teams left to play all the players they are drafting. And they are wrecking the col-lege baseball program—the last place re-

maining for players to gain experience.
"The time has come for our organization to seek relief through legislation.'

Coaches attending the meeting of the AACBC reported that the professional draft has cut such inroads into collegiate baseball that some areas of the country are thinking of dropping the sport.

Eilbracht, secretary-treasurer AACBC and coach at the University of Illinois, said that athletic directors of the Big Ten Conference "are seriously considering dropping baseball as a collegiate sport be-cause of the pro raids."

Eilbracht said, "We have been trying to get

together with the pros the last 16 years Our committees have met with the pros and we have had little success in arriving at an Some people in pro baseball agreement. want to help us, but I don't believe the owners do.

'It is very possible that the Big Ten will give up baseball. We're all getting murdered by the draft. It is time for action." And W. F. (Dutch) Fehring, baseball coach

at Stanford University, said that the Athletic Asen. of Western Universities, is "highly dis-

turbed" over the problem.
"One athletic director in our area told me," Fehring said, "that if the pros continue to take athletes off the campus, he is in favor of dropping baseball completely.

And I ask if there is no college baseball, where will the pros get trained players?

They've killed off the minor leagues."

George Wolfman, baseball coach at the

University of California at Berkeley, said that he was instructed by his school to lodge official protest against the professional draft.

"We cannot wait any longer to seek relief," Wolfman declared.

> SPORTIVELY SPEAKING (By Sam Adams)

would think professional football would have profited by the many mistakes made by major league baseball in recent But apparently policymakers of the two play-for-pay football circuits no longer want to enjoy cordial relations with the people responsible for operating high school and college football programs.

This is evident in the schedules of the National and American Football Leagues for the coming season. Both have scheduled games that will be in conflict with high school and college contests, with the high schools encountering major opposition in

If these week day games are televised—and many of them will be—high schools throughout the country will suffer at the gate. Attendance at prep games played in the proximity of a week day pro game, even though not televised, will shrink.

AFL WORST OFFENDER

The American League is the worst offender. It has games scheduled for two Friday nights, both at Miami, and seven on four different Saturday nights, two of them in Houston.

But the National League had to get into the act by opening the season with a single game (Green Bay at Baltimore) on Saturday night, Sept. 10, and approving a Friday night game at Los Angeles on Sept. 18.

The seriousness of such scheduling can

be found right here in Alabama, or coming near home, Montgomery. Friday night, Sept. The majority of Ala-9, is a good example. bama high schools will be playing that night, many of them in season openers. On the same night the Miami Dolphins will be host to the New York Jets. Should this game be televised, thousands of fans who normally would watch their high schools play will stay home to watch Joe Namath operate against Miami, a team well stocked with Auburn players.

Now let's come home with the problem. On the same night, the Lee High Generals will be playing their opener at Cramton Bowl against Ensley and the Lanier Poets will be in Selma for an opening engagement with the Parrish High Rams.

A much smaller number of Alabama high school games scheduled the following night, Sept. 10, will suffer the same fate. followers will remain by their TV sets and watch Bart Starr and the Packers go against Johnny Unitas and the Colts.

Webster would define such treatment of the high schools as ruthless, but maybe rotten is a better word.

THREE GAMES ON THANKSGIVING

Both leagues compete with the colleges on Thanksgiving Day with three games, two involving National League teams. And there is no justification for these conflicts, although few in number. This is a holiday that should be left to those schools wanting to use it for a football date.

Until 1964, when there were an outbreak of premature signings, professional football had stuck pretty close to a policy of not interfering with high school and college football. But it now appears that lust for television gold is gradually destroying this just and honorable consideration of the school football programs.

There isn't any doubt the schedule conflicts that have arisen this year resulted from competition between rival television networks.

But pro football leaders must realize that all the television money in the world won't replace the steady stream of player talent produced by the high school-college system. Too, they must know that greed for the radio and television dollar has destroyed minor league baseball. Also that campus raids for talent has given baseball a bad infage and is gradually choking off the last source of player material.

INVITING TROUBLE IN WASHINGTON

And surely the bigwigs of professional football must know that the high school and college people, if pushed around, could cause trouble in Washington. All of them have a congressman and two senators ready to listen to the problems of a constituent. Cries of anguish from the folks back home have stirred up a lot of storms in Congress, you

The cool and sensible heads of professional football would do well to see that interference with the high schools and colleges

American Seapower

EXTENSION OF REMARKS

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. BOW. Mr. Speaker, I would like to share with the Members of the House an important address by our colleague, the gentleman from California [Mr. MAILLIARD], on the subject of American seapower. As ranking Republican member of the House Committee on Merchant Marine and Fisheries, the gentleman from California [Mr. Malliand] is an expert in this field whose analysis and warning should be heeded in the agencies of our Government and wherever men and women are concerned about the security of the United States. The address follows:

AMERICAN SEAPOWER—WHERE ARE WE GOING?

The great 17th century Dutch statesman, Jan De Witt, once admonished his fellow countrymen in the following fashlon, and I quote:

"Never in time of peace . . . will they take resolution strong enough . . . beforehand . . . unless danger staren them in the face . . I have to do with people who, liberal to profusion where they ought to economize, are often sparing to avarice where they ought to spend." Well, today, three centuries later, the Johnson Administration is subject to the same reproach. It, too, is liberal to profusion where it ought to economize, yet sparing to the point of folly where it ought to spend.

The even greater irony, however, is that the lopeided priority of the current federal budget allocating our national resources is being accomplished at a time when danger is staring us in the face—the very real danger that, within the time frame of the mid-1970's and beyond, the United States will no longer be a major world sea power, and that we will have abdicated our position of maritime superiority to none other than Soviet Russia. Thus, the title of my remarks—"American Sea Power—Where Are We Going?"—is simply a manifestation of my deep personal concern over the current shocking demphasis in our national maritime efforts.

The concept of sea power and its importance to the United States is neither new nor complex. At the turn of this century Admiral Alfred Thayer Mahan gave the all time classic statement of the effect of command of the seas upon the destiny of nations. Since then his concepts have been fortified and expanded to a point where today, as at no time in our history, sea power is vital to both our national security and our economic well-being. The misfortune, however, is that nothing that is so readily understood or so blatantly apparent as the importance of sea power seems to concern our policy makers of today!

In its broadest sense, and conceived as an integral whole, sen power is the ability of a nation to project into the world ocean in times of peace its national sovereignty; in times of war, its military might. It is composed of all those elements enabling a nation to use the oceans advantageously during either peace or war—its navy, its merchant shipping, its shipbuilding, its fishing industry, and its knowledge in the field of marine science and engineering (now usually referred to as oceanography). It is within this frame of reference that the United States, as a world leader with global security commitments, must face-up to the issue of the future sufficiency of its elements of sen power.

We face today and in the future what frequently has been referred to as the rsw four-ocean challenge. The naval conflict in World War I was a one-ocean war centered about the North Atlantic. World War II was a two-ocean war involving the North Atlantic with the adjacent area of the Mediterranean and the Pacific Ocean. These two ocean areas—the North Atlantic and Pacific—still remain of primary concern, but advances of modern science and the retrenchment of traditional allies have added two new ocean areas. The third is the Arctic Ocean to the north as a result of accessibility gained with nuclear submarines. The fourth is the Afro-Asian Ocean embracing the broad expanse of the South Atlantic and Indian

Oceans, extending all the way from New Guinea across to the southern shore of Asia and Africa. The withdrawal of France from Indo-China left us as the only western nation capable of filling the power vacuum in the Asian theatre, a factor which has been further enhanced by Great Britain's announced intention to phase out its fleet air arm and hint of eventual military withdrawal to "West of Suez." Whether we have the requisite national leadership to marshal and direct the national will to meet this expanding challenge at sea, and the foresight to provide adequately for the tools of sea power—fast, modern ships and skilled seamen to man them—is a matter of utmost concern to me.

U.S. NAVY

Despite the absence of any major naval engagements, the U.S. Navy has been playing a significant role in the current conflict in Southeast Asia ever since the Tonkin Gulf incident of August 1964. At that time we had but three attack carriers deployed in the western Pacific, one of these being kept on the line in combat readiness at all times. But, as the need for tactical air strikes increased faster than our ability to construct air fields ashore, additional carriers were called for until today there are five carriers in the western Pacific with three of these on the line at all times, providing about half the air strikes against North Viet Nam, plus tactical support. In addition, U.S. Navunits, augmented by the U.S. Coast Guard, are maintaining patrols in the waters off

The importance of this ability of the Navy to carry the war to an enemy located more than 8,000 miles from our shores cannot be too strongly emphasized to demonstrate the geographical and tactical mobility of sea power. However, in our praise for the Navy's admirable response to this demand, let us not lose sight of, and fail to capitalize upon, the shortcomings brought to light on this Southeast Asian proving ground. But, in doing so we must assume the risk of being accused by our esteemed Secretary of Defense of taking "... pleasure in failing ourselves with imaginary weaknesses." Or, perhaps we, too, will be favored with the more succinct retort, "Baloney!"

Well, regardless of how Mr. McNamara wishes to slice the baloney on this occasion, the fact is that, great as our Navy was at the end of World War II, it has now reached a critical point in obsolescence both by age and technology. Two-thirds of our naval tonnage consists of vessels designed to meet combat conditions prevailing more than twenty years ago. Some of these ships have been converted and modernized, but there is a practical limit to the process of trying to make silk purses out of sows' ears—a factor which the Department of Defense "whiz kids" frequently seem to forget to crank into the As I stated on the floor of the House of Representatives six years ago, and I quote: "A fleet of ships with limited capability—and such limitations increase with years of service—cannot do the job. * * To expect World War II ships, even though modified and modernized, to continue to perform reliably after twenty years of strenuous service is absurd; . . . to demand naval fulfillment of present and prospective worldwide commitments with obsolete or obsolescent major vessels is to invite costly operational losses in peacetime and disastrous unreliability in time of combat." So acute has this problem become that the Secretary of the Navy has stated that for the next ten years the Navy's needs call for the building of a ship a week, if we are to keep our position on the seas from deteriorating. Yet, our current rate of construction of nuclear warships is such that professional naval officers point out it will take 200 years to replace our present fleet!

Military hardware, like all machinery, wears

out, but this deterioration is further accelerated by the rapidity of technological developments. Obsolescence arising out of technological change is perhaps the gravest threat to the future responsive capabilities of the Navy, since the ve sels we design and construct in the immediate future will be those which must serve us into the 21st cen-Yet, despite this widely recognized fact, Vice Admiral Hyman G. Rickover pointed out to the House Committee on Appropriations in May of this year that the President's budget request for fiscal year 1967 for the construction of major surface warships represents only 3% of the total Navy budget and, that for the three prior fiscal years, the Defense Department has not requested the construction of a single major surface warship of either nuclear or conventional propulsion. As a matter of fact, it is only owing to efforts during the Eisenhower Administration that today we have in the fleet three nuclear-powered surface warships-the carrier Enterprise, the missile cruiser Long Beach, and the frigate Bainbridge. Moreover, the frigate Truxtun, which is the only nuclear-powered surface warship currently under construction, was changed from a conventional oil-fired vessel to nuclear power, not upon the initiative of the current Administration, but rather by Congressional action five years ago.

Notwithstanding the superior operational capabilities of our three nuclear-powered surface warships demonstrated during their recent deployment off Viet Nam in actual combat operations, and the fact that they can withstand the rigors of continuous high speed better than any warship of the past, the Johnson Administration continues to drag its feet in the field of nuclear naval construction. Of course, the Secretary of Defense has tacitly acknowledged the errors of his ways by now requesting a second nu-clear aircraft carrier. But, oddly enough, in the same request the Secretary seeks to build conventionally-powered escorts which can only serve as a limiting factor upon the opcapabilities of nuclear carriers. This continuing frustration of the Navy's modernization efforts by the "dead hand" of cost effectiveness and the hesitancy in high places of the Executive to make the transition from oil to nuclear propulsion boldly and unequivocally simply begs the question -Will we meet the future challenge at sea with modern high speed nuclear-powered surface ships?

STRENUOUS DUTY IN VIET NAM

Further aggravating the problem of obsolescence of our naval vessels is the strenuous duty to which they are being subjected in Viet Nam. Units of the Seventh Fleet are being kept in a state of underway combat alert for periods as long as 30 to 40 days at a time, making it next to impossible to conduct routine maintenance. Moreover, it is reported to be commonplace for naval personnel to work 16 to 18 hours a day. The aircraft carrier, Coral Sea, for example, was deployed in the western Pacific for a period of 11 months, 8 of them in combat. Ships, like automobiles, if run hard enough and long enough cannot help but wear to the point where there will be a succession of failures until the only economical solution will be new construction. As Admiral A. G. Ward pointed out in November of last year when speaking of the Navy's role in Viet Nam, and I quote: "It would be difficult to continue indefinitely to maintain our current level of deployment without increases in force levels and in manpower."

Bear in mind also that this potential main-

Bear in mind also that this potential maintenance problem and deferral of routine overhauls is arising in the absence of any major naval conflict to cause battle damage. As Rear Admiral E. J. Fahy, Chief, Bureau of Ships, commented before the House Committee on Appropriations last March, and I quote: "We are really keeping our fingers

crossed that we do not come up with something in the way of hattle damage." And, on a related subject before our own Committee on Merchant Marine and Fisheries in the same time period, Vice Admiral Glynn R. Donaho, Commander, Military Sea Transportation Service, stated, and I quote: "We are having difficulty in even keeping the ships up that we are operating in our own ficet." Again, in recent weeks I received a copy of a letter from a young sallor assigned to a fleet ofler operating off Viet Nam, in which he wrote, and I quote: "... this ship is run down and falling spart. Forty rivets were leaking when we came into port last week... when we were out by Viet Nam, our radar was out, both radios were out, the fathometer was out and one steering engine was out. " " A guy dropped a hammer in the bilge the other day and it went through the bottom. It's rusted out."

I would surmise, also, that the limited demands of Viet Nam are taking their toll in adversely affecting the Navy's responsive capability in other areas of the world by "robbing Peter to pay Paul." For example, as a result of the decision to take the carrier Lake Champlain out of service and to transfer the carrier Intrepid to the western Pacific, the Chief of Naval Operations, Admiral David L. McDonald, testified this year that, and I quote: "Our ASW [antisubmarine warfare] capability as far as the hunter-killer force in the Atlantic is concerned is reduced by two-fifths." Thus, while you cannot get anyone to officially admit it because of Departingant of Defense "muzsling." I have good reason to be concerned over the general ability of the Atlantic Friet to meet many demands of its contingency plans.

Viet Nam has served also to raise the question of whether our active fleet contains sufficient non-nuclear fire power to assure the continued success of the Navy in gunfire support missions. Fear has been expressed that since World War II the Navy's gunfire support capability has been allowed to deteriorate in the backwash of more glamorous weaponry to a point where we may have a possible "gun gap." For example, during fiscal year 1966 the Navy found it necessary to reactivate four missile ships for Viet Nam and to retain two heavy-gun cruisers which had been scheduled for deactivation in fiscal 1967-68. It has even been recommended by Vice Admiral John S. McCain, Jr., that the battleship MISSOURI he reactivated at the earliest date to accommodate General Westmoreland's continuing demands for naval gunfire support. I strongly concur in this recommendation.

THE AMERICAN MERCHANT MARINE

We should be doubly concerned over the direction of American sea power if, as Admiral Mahan states in his "Elements of Sea Power," and I quote: ". . . sea power includes not only the military strength affont, . . . but also the peaceful commerce and shipping from which alone a military naturally and healthfully springs, and on which it securely rests." The unfortu-nate truth of the matter is that the general condition of the American Merchant Marine today is deplorable and borders on being a national disgrace. It is obsolete both physically and economically since more than 80% of the ships were constructed during World II and are destined to reach the end of their economic life within the next five Personally, I can think of no unhealthler fountainhead for our Navy to spring from, or no more insecure base on it should rest! Yet, it is this same American Merchant Marine which has been called upon by the Johnson Administration to go to war in Viet Nam while the rest of our economy remains at peace.

This same American Merchant Marine responded to our country's defense needs in World War II, in Korea, and now in Viet Nam with many of the same ships constructed 20 years or more ago. The only noticeable difference between Viet Nam and the Korean conflict of 16 years ago is that airlift is transporting 2% of the military supplies to Viet Nam, reflecting a splendid increase of 1% over Koreal American-flag shipping today is again demonstrating that the art of war is the art of the logistically feasible. Over a sea route of more than 8,000 miles, all the bulk petroleum requirements of Viet Nam, 98% of all the military equipment and supplies, and two out of every three fighting men are being transported by ship.

Thus, as in the past, the American Mer-chant Marine is meeting the shipping needs of our Nation's security requirements, but it has been severely taxed to accomplish this Several American-flag subsidized ship operators whose ships were the first to be diverted to Viet Nam since they were the most modern, found that they were required to take the unprecedented action of chartering older, foreign-flag ships to maintain commercial services. Still other Americanflag ships were chartered from non-subsi-dized operators. Also, we already have reac-tivated more than 100 World War II vintage ships from our National Defense Reserve Fleet at an average cost of about \$500,000 per ship, and an additional 40 to 70 are scheduled to be reactivated before the end of this It is becoming increasingly apparent, therefore, that we are well on our way to the figure of 200 reactivated cargo ships, which I anticipated as early as August of last year in a statement made on the floor of the House of Representatives.

Almost 19 months ago, in his State of the Union Message of January 1965, President Johnson promised to submit to the Congress maritime policy to revitalize our ailing merchant marine. Consistent with the lip-service being paid the American Merchant Marine by the present Administration, we are still waiting for that promise to be Meanwhile, as reported by the Maritime Editor of the Baltimore Sun, and I quote: "Since President Johnson first stated on the floor of Congress that a new maritime policy was forthcoming, the United States has slipped from first to sixth place in size of its active fleet; from sixth to fourteenth (or fifteenth) in ship construction, and literally to rock bottom in the number of new ships being built to fly the stars and

The Congress has before it today the President's budget request for new merchant ship construction, representing a cut of about one-third below the prior fiscal year's level of actual appropriation. If everything breaks right, this might give us a dozen ships for the Vessel Replacement Program, which even now is about 100 ships behind schedule. This is the replacement program which was started during the Republican Administra-Yet, under the stewardship of tion in 1958. this Democratic Administration there has been an increasing and cumulative slippage in the program, and with almost diabolical precision the American Merchant Marine is today being slowly but surely strangled through budgetary privation.

By way of comparison, the budget request for new merchant ship construction for fiscal year 1967 is about one-half the amount requested by the Republican Administration in fiscal year 1959 at a time when the total federal budget was about 60% of the present level. Thus, there is more than ample merit to the recent characterization of the American Merchant Marine as a "Hero in War—Stepchild in Peace" since today it in truly treated as a stepchild in the Great Society!

U.S. SHIPSUILDING AND SHIP REPAIR

During this same period, American shipyards have been chided by Administration spokesmen for failing to modernize their facilities and become more competitive, yet it is this Administration that is depriving the industry of ship construction support funds necessary to enable our yards to modernize. Then we have these same agencles of the Executive using their own criticiams as a vehicle to advance the cause of building American ships in foreign shipyards.

The Department of Interior, for example, earlier this year was proposing the construction of stern-ramp trawiers in Polish ship-yards, yet the same Administration spokesman has testified in the Senate one year earlier that he knows of no one in Government desiring to construct ships abroad. Similarly, only last week the press reported that the Department of Defense is proceeding to award a \$17 million contract to a British shipyard for the construction of two survey ships. And, finally, we have had the former Maritime Administrator, the Honorable Nicholas Johnson, stating, and I quote: "We may very well end up sinking our [merchant] fleet in the name of preserving our shipyards." * * unless we embrace the concept of constructing our ships abroad.

Now, every school child knows of our international balance of payments problem, and the fact that the President has had the Secretary of Commerce out beating the bushes for months urging private American businessmen to reduce their expenditures abroad. Yet, on the matter of ship construction we have not one but several agencies of the Executive actively promoting the blatantly contradictory concept of buying ships abroad. You reconcile the inconsistency of this approach. I am unable to, unless it is "Do as I say, not as I do!"

More importantly, however, this trend to foreign ship construction evidences an ignorance of the importance of American shipyards to American sea power. Shipyards are a defense industry and as much a part of a nation's sea power as its Navy and its merchant shipping, witness the current demands upon our ship construction and repair facilities because of Viet Nam and the present shortages of skilled shipyard personnel.

In the four year period from 1961 to 1965, twelve American shipyards were forced to close, and further threatening to deteriorate the industry by reducing the geographical diversification of our shipyard facilities, we have both the Department of Defense and the Maritime Administration proposing single shipyard contract awards. By far the one promising to have the greatest effect is that of the Department of Defense with its Fast Deployment Logistic ship project valued at \$800 million to \$1.5 billion to be financed entirely by the taxpayers. Yet, the investment of these same funds under the subsidy provisions of existing federal legislation could reduce the cost to the taxpayer by as much as one-half and yield from two to three times the number of ships now contemplated under this program.

U.S. FISHING INDUSTRY AND OCEANOGRAPHY

No examination of the direction of American sea power would be complete, of course, without consideration of our fishing industry and our efforts in the field of marine science and engineering. As the population of the world increases and our resources on land diminish, we must look to the oceans for food, fresh water, raw materials and power.

Unfortunately, the United States fishing industry is plagued by many of the same problems afflicting our merchant marine and is in a state of relative decline. When the higher labor costs of the American standard of living are combined with antiquated vessels and outmoded equipment, international competition becomes exceedingly difficult, if not impossible. Because of this, roughly every other fish in an American frying pan is imported. Congressional concern over the state of the industry has resulted in some federal assistance to alleviate the situation, but much more remains to be done.

In the field of oceanography, the Federal Government finally stuck its big toe in the water when on the 17th of last month the President signed into law the Marine Resources and Engineering Development Act of 1966. This represented the culmination of seven years of congressional effort, commencing during the Republican Administration in 1959. An earlier congressional effort to co-ordinate federal activity in this field received a pocket veto by the late President Kennedy following the adjournment of the 87th Congress.

Hopefully, this new federal legislation in the field of oceanography will serve as a catalyst to bring about a unified national effort so as to enable effective exploitation of the promising rewards of this area of so-called "inner space." Our effort heretofore has been disjointed and has been described by one foreign observer in the following terms: "The administration of U.S. oceanography reminds me of a contemporary abstract resulting readered by an early."

stract painting rendered by an ape!"
Our total national oceanographic program budget for each of the past three fiscal years has been at a level of less than 4% of that provided for our "outer" space programs. In the field of education over the last twenty years, only about 50 undergraduate degrees and less than 900 graduate degrees have been conferred by major institutions offering courses in the field.

U.S.S.R.: SEAWARD THRUST

What is really most disturbing about this generally unfavorable direction being taken with American sea power is that while we appear to be "fiddling and declining," Russian sea power is modern and growing at a fantastic pace. Two years ago Hanson W. Baldwin noted in his article, "Red Flag Over the Seven Seas," and I quote: "If to vast Russian land power is added major maritime power, the problem of deterrence becomes formidably difficult. If we lose control of the seas, it becomes impossible." Yet, this is the very real danger that now stares us in the face.

Today Russia has the second largest navy in the world. Its merchant marine is growing at the rate of about one million tons a year. Its fishing industry has invaded every major fishing ground in the world, and she will soon surpass even Japan as the leading industrial fishing country. Russia's annual catch, for example, is valued at close to four times our balance of payments deficit. And, she has more than 100 oceanographic vessels employed worldwide.

The point is that since World War II the Soviet Navy, like the Soviet merchant marine and fishing fleet, has been transformed from what was formerly a coastal defensive force into a "blue-water" offensive fleet. And, the intensity of this Soviet seaward thrust has not faltered for lack of funds, including the expenditure abroad of scarce "hard" cur-

The British publication "Jane's Fighting Ships" assesses this Soviet drive in the following terms, and I quote:

"The Soviet Union is reaching out with her naval units and infiltrating in a multi-pronged movement into all the seven seas, not only with combatant ships but with intelligence trawlers and research ships in a determined effort to achieve a worldwide naval capability in conjunction with a challenging increase in her merchant fleet and developing a maritime strategy as a major factor in her overall policy of extending her influence throughout the world.

"There is no doubt that the Soviet Navy is growing with the object of challenging U.S. supremacy at sea. The Soviet Union now understands the value of sea power."

CONCLUSION

Even without this growing Soviet threat, the present unfavorable direction of American sea power should be a matter of national concern. Yet, when I add up the negative actions of the past five or six years, in the face of our ever-expanding worldwide military responsibilities and the growing demands of the American industrial complex for raw materials from overseas, I am not overly optimistic. It seems crystal clear that we, unlike Soviet Russia, are sadly lacking in an appreciation of the value of sea power. We appear to be pursuing the idiotic course of sticking our heads in the sand, blithely ignoring this very real threat to our national security and economic well-being in the hope that, like a bad dream, it will go away. But the fact remains that the challenge is real and unless there is a rebirth of national leadership—and soon—we will be aroused from this dream-like state by what Admiral Mahan called, and I quote: "The rude awakening of those who have abandoned their share of the common birthright of all people—the sea."

Camp Roosevelt: A New Use

EXTENSION OF REMARKS

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. MARSH. Mr. Speaker, this past weekend there was dedicated in the George Washington National Forest, in Virginia, a recreation area which is located on the site of Camp Roosevelt, the first Civilian Conservation Corps camp in the United States.

This camp was established in the spring of 1933. One of the Army officers responsible for the opening of this camp was a young second lieutenant who only shortly before had begun his Army career. His name was William F. Train. The selection of this young officer over 30 years ago for such an important assignment was prophetic in a career of one of America's most distinguished officers of the Army. The fine work that he did in assisting in the opening of this camp was characteristic of his performance of later assignments in the Army.

Second Lieutenant Train is now a lieutenant general and is the commanding general of the 1st Army.

It is most appropriate that he should speak at the dedication exercise marking the opening of the Camp Roosevelt Recreation Center, and I would like to make available to other Members of the House the remarks of General Train as he reminisced about an important assignment that he was given early in his Army career.

REMARKS BY LT. GEN. WILLIAM F. TRAIN, COMMANDING GENERAL, 1ST U.S. ARMY, AT DEDICATION OF CAMP ROOSEVELT RECREA-TION AREA, GEORGE WASHINGTON NATIONAL FOREST, JULY 17, 1966

The privilege of joining you in the dedication of this Camp Roosevelt Recreation area is an honor which holds a twofold pleasure for me.

The mere fact of visiting this magnificent section of the Blue Ridge Mountains, with all the splendor of its natural beauty, is always truly an enjoyable experience for me.

On this occasion, I am doubly delighted because this site recalls one of the happiest memories of my Army career.

It was here that, in April 1933, before I had completed my second year as an Army Officer, I was assigned the responsibility of laying out and building the first camp for the Civilian Conservation Corps.

That was a cheerful task and a rewarding one despite the vagaries of the weather which varied from deep snow to an equal depth of mud and despite the arduous labor of hewing a clearing in the forest.

The job was a dual conservation effort.
On the one hand, there were some 200 boys from all parts of the United States but gathered off the streets of Washington, D.C., who were to be directed into useful and healthful work and thus saved from the evils that lurked in the idleness of the depression years.

On the other hand, we had before us the formidable task of opening up the trails, thus preserving the beauty of this scenic area for the enjoyment of the people.

. Getting here to undertake the job was an ordeal in itself.

Our CCC company departed by bus from Fort Washington across the Potomac from Mount Vernon early on the morning of 3 April 1933.

I was second in command under Captain Leo Donovan, who later rose to major general before his retirement from the Army following World War II.

After numerous mechanical breakdowns and contract disputes with the bus drivers, our company finally arrived here between 10 o'clock that night and two the next morning.

A representative of the forestry service was awaiting us.

Our first major problem was 18 inches of snow which fell on the second day and turned into a wallow of mud on the third.

Undaunted by this adverse turn of weather, our boys went about their job energetically and enthusiastically under my supervision and that of a few local carpenters and members of the regular army cadre.

Since our building supports were large diameter logs which floated in the foundation holes, it was necessary to have a boy stand on each while I ran a level line.

Another boy followed me to pull by boots out of the mud.

We had been instructed to have the camp completed in a week for a visit by President Roosevelt.

Anticipation of his visit stimulated considerable progress during the first few days despite transportation and terrain problems.

Unfortunately, for reasons unexplained, the President cancelled his visit.

We named the camp for him anyway.

During the few weeks I was in charge of construction. I found great satisfaction in

construction, I found great satisfaction in observing how the boys, most of them raised in city environments, adapted themselves readily to the work of woodsmanship.

I also was pleased to note the healthful effects of their work in the outdoor atmosphere and their obvious pride in their accompliahment.

You may know that at the time each boy received \$5 cash a month, whereas \$25 was sent to his family.

At the same time our private soldiers were paid \$21 a month.

Their initial efforts and the unending work of the forestry service during the ensuing three decades have borne ample fruit in the beauty that exists today in the George Washington national forest and this Camp Roosevelt recreation area.

I know of a State Governor who was in a CCC camp and is now buying up CCC camp sites for similar recreation areas.

I am well sware of the tremendous contribution of the work of the CCC to the awakening of our Nation to the protection of its valuable forestry resources.

As I behold this enchanting scene, I recall a thought from John Muir, the pioneer in American forest conservation, who said:

"The forests of America, however slighted by man, must have been a great delight to God; for they were the best he ever planted." The Camp Roosevelt area, I am sure, will remain a delight to God and to countless

visitors in the years to come.

Inflation Curb Sorely Needed Now

EXTENSION OF REMARKS

HON. RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr. McCARTHY. Mr. Speaker, I was relieved to read of President Johnson's plea for Government frugality made Tuesday at a meeting with ranking Democratic and Republican members of the Senate and House Appropriations Com-His concern was again voiced later in the afternoon at a White House press conference.

The President requested that Congress make every effort to keep Government expenditures within the limits of his proposed budget. He advised us that with the possibility that supplemental appropriations may be necessary to finance our military operations in Vietnam, it is extremely important that we in Congress hold the line on nonessential costs. He expressed concern over the problem of inflation and indicated that unless spending is held in line, an increase in taxes may be required to con-trol our overheated economy.

I definitely share the concern the President expressed Tuesday in this matter of inflation. Indeed, I have been deeply troubled over this mounting problem for several months. By appropriating money for programs that are neither urgent nor essential, we are indeed adding to the problem of inflation. United States is presently involved in an expensive struggle in southeast Asia, both in terms of life and money. appropriations for this war have reached enormous size, and with these increased costs comes the genuine threat of uncontrolled inflation. Programs which, in themselves, are good ideas and desired by the majority of Americans will have to wait. Our commitment in Vietnam requires sacrifices. Desired programs must be postponed, or we may be faced with the undesirable reality of runaway inflation.

I feel that it would be much better to hold down the costs of nonessential programs rather than to be forced into increasing income and corporate taxes. For these reasons, I have voted against a number of programs which I consider to be out of line with this philosophy. I don't believe we can afford the risk of tax increases or large deficit spending. The sensible alternative is that which the President suggested Tuesday.

Mr. Speaker, I would like to join the President in urging all Members of Congress to use restraint in appropriating funds for governmental operations.

Finally, I should like to call the attention of my colleagues to an editorial on

this subject that appeared the same day as the President's warning about inflation in the Buffalo Courier-Express:

INFLATION CURB SORELY NEEDED NOW

Everything costs more these days. Even borrowing money. And prices—including that of money—seem destined to go higher in the next few months unless something drastic is done to reverse the trend.

This isn't the way it's supposed to work. of course. Raising interest rates—the cost of borrowing money—is supposed to have a dampening effect. That's the whole theory behind the manipulation of interest rates. The idea is that when rates are high, there is less borrowing; when there is less borrowing, there is less spending and when there is less spending prices fall as sellers compete for fewer dollars available.

But this whole theory breaks down if there is just as much demand for money at 6 per cent as there was at 5 per cent. And that seems to be what's happening. Interest rates are higher today than they have been for more than 35 years without any noticeable effect except in the housing and construction industries.

In other fields the classic theory simply hasn't worked the way it was supposed to. As Herbert Rowen of the Washington Post reports: "Businessmen, convinced markets and boom times, have willingly paid the price-higher interest rates-to expand their operations and build up inventories."

What the high interest rates have done is to cause a basic feeling of uncertainty among investors in securities and this uncertainty has sharply reduced the volume of trading on the stock market. Most investment is a relatively long-term matter and people simply don't know what to expect of eccomy in the months ahead.

Money can be taken out of circulation, even though the higher interest rates failed to do the job. The federal government can by increasing taxes or reducing ex-tures or both. These courses are not penditures or both. particularly appealing to politicians in an election year but neither is run-away inflation with its resulting economic chaos.

We learned during World War II and the Korean conflict that governmental attempts to control wages and prices while money is plentiful did not work. We have learned in the past year that an attempt to impose voluntary controls when money is plentifu does not work either.

At this point we need more than anything governmental self-control, som real belt-tightening. We could well pone some of the proposed projects whichwhile desirable—are not essential. Back in New Deal days, these were called "pump primers." Certainly the one thing we do not need to do in the Great Society today is to prime the pump.

Statement on Fair Housing

EXTENSION OF REMARKS

HON. PRENTISS WALKER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

WALKER of Mississippi. Speaker, the Civil Rights Act of 1966 is scheduled to come before the House next Monday, July 25. When this bill comes to a vote, the Members of the House will have to justify their vote on the basis of their oath of office, in which they swore to support the Constitution. For the

benefit of my colleagues I am inserting in the RECORD a statement concerning title 4-the so-called fair housing provision—of the administration's civil rights bill, showing that this section is definitely unconstitutional.

This paper was prepared by Mr. Frank Sobolewski who is a member of my staff. It was adopted by the District Heights, Md., Teenage Republicans as a statement of club policy at its July 8 general meeting.

The article referred to follows:

STATEMENT ON TITLE 4 OF S. 3296

Although four civil rights laws have been enacted in the last decade the Johnson Administration has sent a civil rights bill to Congress again this year. The most con-troversial section of this legislation is Title Four, which would prohibit discrimination on account of race, color, or religion in the sale, rental, and leasing of housing. In effect, it would take away from the individual homeowner the right to sell his home to whomever he wishes. The following is an explanation of my views on this matter.

Before the merits of any legislation can be considered, one must determine whether the bill is constitutional. In this case, the "fair housing" provision fails to meet the test. It is blatantly unconstitutional and there are several Supreme Court decisions on record which show its unconstitutionality.

In the 1963 case of Lombard v. Louisiana, Mr. Justice Douglas stated in a concurring opinion: "The principle that a man's home is his castle is basic to our system of jurisprudence."

In the 1963 case of Peterson v. Greenville, Mr. Justice Harlan stated in a concurring opinion: "Freedom of the individual to choose his associates or his neighbors, to use and dispose of his property as he sees fit, to be irrational, arbitrary, capricious, even unjust in his personal relations are things all entitled to a large measure of protection from governmental interference

The proponents of Title Four have based their argument for constitutionality on two provisions of the Constitution: Amendment Fourteen and the interstate commerce clause. Again, there is no basis for their position.

Amendment Fourteen applies to STATE ac tion and not to the action of an INDIVIDUAL citizen. The Supreme Court stated in the 1948 case of Shelly v. Kraemer: "The principle has become firmly embedded in our constitutional law that the action inhibited by the first section of the 14th amendment is only such action as may fairly be said to be that of the State. That amendment erects no shield against merely private conduct, however discriminatory or wrongful."

Article One, Section Eight of the U.S. Con-

u

I

p

to

th

CO

stitution gives the Congress power to regulate interstate commerce. However, I fail to see how the sale of a house can be considered interstate commerce as long as the house itself does not cross state lines in the It has been argued that the materials used to build the house had previously crossed state lines, and therefore, the sale of a house is interstate commerce. However, a deed to a house does not state that Mr. John Doe owns "s" amount of shingles, "t" amount of bricks, "w" amount of lumber, "x" amount of windows, "y" amount of lights, or "z" amount of cinderblocks. states that he owns a building. house is legally defined to be a building and not "n" amounts of building materials.

Now that the question of constitutionality has been settled, let's consider the merits of this proposal.

This so-called fair housing provision does not prohibit all discrimination. It does not prohibit discrimination on the basis or age or size of family. Why doesn't it? Perhaps 0

Senator ROBERT BYED presented the best answer when he stated: "Why the legislation does not make it unlawful for property owners to discriminate against elderly people or against parents with children has not been explained, but one may conjecture that it is perhaps because the elderly folks and the large families have not yet taken to the picket lines and have been noticeably absent from the sit-ins, and thus far, have not

threatened to riot."
This section of the civil rights bill, instead of trying to promote equality among the races, actually would grant special privileges toward some citizens at the expense of others. Specifically, this applies to the provision authorizing a U.S. Court, in a case involving a violation of Title Four, to appoint an attorney to the plaintiff at no cost to him, and authorizing the Attorney-General, if he considers the case of sufficient importance, to intervene on behalf of the plaintiff. On the other hand, the defendant is entitled to no such services. Senator Robert Byrn described the problem faced by the de-fendant by saying: "The defendant property owner, of course, will have to furnish his own attorney and pit his own resources, be they great or small, against the all-powerful Federal Department of Justice and its lawyers

whose salaries his own taxes help to pay."

In summary, Title Four is completely unconstitutional and unmeritorious. It does not prohibit all housing discrimination. It seeks to provide special treatment to some instead of equal treatment for all. In short, Title Four should be completely defeated.

Remarks of the Very Reverend Monsignor Leo J. Coady

EXTENSION OF REMARKS

OF HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. MATHIAS. Mr. Speaker, in a recent graduation address to the graduates of Holy Redeemer School, Kensington, Md., the pastor of Holy Redeemer and the director of Catholic Charities in the Archdiocese of Washington, the Very Reverend Monsignor Leo J. Coady. presented some interesting thoughts in a most charming manner. Under leave to extend my remarks I include Monsignor Coady's remarks:

THE BROOK

It is the mountain to the sea That Makes a messenger of me: And, lest I loiter on the way And lose what I am sent to say, He sets his reverie to song And bids me sing it all day long. Farewell: for here the dream is slow, And I have many a mile to go.

The stream of your life flows slowly now; it is the quiet brook meandering through

the meadow of your young year.

There will be times when you wish it would move faster. Youth is impatient to get into the life of the grown man and

The 14 year old is impatient to be a sixteen-year old when he can drive the family

The lowly freshman is impatient to be-come the lordly sophomore; and the junior can't wait until senior year puts him on top of the heap.

But the brook will keep moving; it won't stand still. And as this stream of your life wanders through the field of the years of time, it gets wider andwider and touches more shoreline and embraces in its view and ever-broader horizon.

What is happening tonight is that this little stream is bursting out into a bubbling

You will now be taking on new relationships, you will be cutting some old ties—old friends will go off in other directions, and you will be acquiring new bands of friend-ship. New vistas of knowledge will be opened up, and your mind will make many discoveries. Much of what you have been doing will soon seem to be corney kid stuff;

and you'll wonder how you stood it.
But the dream is slow and you may have
many a mile to go. What you have been
doing up to now is merely getting those

dreams ready.
What will I do with my life? Where will I go? What path shall I take? These are the questions that will be uppermost in your minds in the years just ahead. You may struggle with them mightily, and you may ask the help of others in coming to an answer. Do not be afraid of the questions; do not be afraid to look at yourself honestly and openly and, above all, do not be afraid to go to others, your parents, your teachers, your priests, and to God Himself, to get some

assistance with the answers.

This evening you will receive your certificate of completion of one step along the way to making those important decisions of adulthood. Much has been invested in you by others, by your parents, by your teachers, by the Church in providing you with a system of education that seeks after excellence in all things.

We congratulate you, then, and wish you well in the future. It is our fervent prayer tonight that you may grow in wisdom and grace as you mature in age through the years of growing up.

We ask of you in return that you show your gratitude by your continued loyalty to the pursuit of excellence—intellectual, moral and spiritual—that has been given you at Holy Redeemer, and by an abiding loyalty and interest in the parish family, and in the works of the Church.

May the Lord bless you and keep you; may He give His mercy to you; may He make His countenance shine upon and grant you

H.R. 16369

EXTENSION OF REMARKS

HON. WESTON E. VIVIAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. VIVIAN. Mr. Speaker, yesterday I introduced H.R. 16369 in the House of Representatives, a bill to make certain that employees are not forced by the Internal Revenue Service to pay income tax on reasonable moving expenses for which they are reimbursed by their employers. My bill joins many others, introduced by colleagues of both parties. I hope the Ways and Means Committee will take swift and affirmative action on this much needed legislation.

Mr. Speaker, for some unknown reason, the Internal Revenue Service has been shackled to the absurd reasoning that an employee must pay income tax

on all the money he is reimbursed by his employer on an employer-dictated move except the barebones cost of actually transporting his household goods and his family. All of us are aware of numerous expenses involved in moving: Travel to the new area to search for a new home; maintenance of a family in the new area while they search for a new home; and other miscellaneous expenses associated with moving a family fom one area to another.

As an ex-corporate officer of a substantial research and manufacturing firm and as a member of the often nomadic engineering profession, I have long been aware of the problems involved in moving my own and my employees' families.

Mr. Speaker, I have recently heard from a number of corporate officers in my district, urging me to support the legislation which I have introduced. This legislation was first introduced in the House by the gentleman from Massachusetts [Mr. Burke]. The Michigan State Chamber of Commerce, of which I am a member, recently sent me its Federal legislative report, urging favorable action on the bill. I include a portion of the July 13 Federal Legislation Report at this point in the RECORD:

FAMILY MOVING TAX

H.R. 13070 introduced by Representative James A. Burke (D-Mass) and S. 3181 introduced by Senator Eugene McCarthy (D-Minn) will "un-tax" reimbursements for more types of moving expenses, by removing them from consideration as taxable income. To the "bare bones" expenses, which are al-ready non-taxable, the legislation would add these five ordinary and nearly always necessary expenses:

1. Travel by employee and spouse to hunt

for a new house.

2. Temporary living expenses in the new city, until the house is ready.

3. Commissions and other expenses in-

volved in seiling former home, or satisfying unexpired lease.

4. Out-of-pocket expenses for buying new home—legal fees, commissions, taxes, etc.

5. Other miscellaneous related expenses— not to exceed the lesser of two weeks' pay or \$1,000 for a family man, or of one week's pay or \$500 for a single man.

A case example of the problem:

John Brown is an employee of a mediumsized insurance company located in Chicago. He, his wife, and high school son lived in a nice but unpretentious suburb of the city. They had owned the house for nine years. Shortly after the first of the year, John was offered a promotion—if he and his family would move East. There would be a pay in-crease—\$1,000. John's employer had a pol-icy of reimbursing the employee for all the costs of a transfer, so the Browns felt there would be no out-of-pocket expenses. Of course, there would be no way of compen-sating for the other hardships of a move. "Goodbyes" to old friends, the son's graduation from a high school he would only attend for a few months, and leaving the house that had been their home for nine years. But they moved. It cost \$1,879.08 to move the family and the household belongings. It cost \$446.12 for food and temporary lodgings at the new location while they were waiting to occupy their new home. John and Laura made an advance trip to locate housing near a church of their choice and close to a good high school. The total expenses of the trip were \$293.56. They paid the real estate were \$293.56. They paid the real estate broker who sold their old home a commission of \$1,272.00. Incidental expenses, such as recutting and installing carpets and draperies, connecting appliances, and new auto-licenses comes to \$158.99. John's employer fully reimbursed him for moving his family and household belongings. Further, he was reimbursed \$293.56 for the costs of house hunting, food and temporary lodging, the broker's commission and other incidentals. Total reimbursement—\$3,849.75. BUT, the IRS said only \$1,679.06, the "bare bones" costs of moving the family and the belongings would not be considered income. The difference, \$2,170.67, was income to the Browns (according to the IRS), and taxable

at their highest rate. The Treasury Department ruling exempts reimbursements for only two things, which are often called "bare bones" expenses: The cost of moving household goods, and the cost of transporting the employee and his family to the new location. All other reimburse-ments are taxed as income. These include such legitimate and necessary expenditures as the cost of a house-hunting trip, the cost of selling the former home, the expenses of temporary family housing in the new city, and the like. Further, the rate of tax is that for the individual's tax bracket. The Treasury was upheld by a court of appeals decision in 1965.

On the Edge of Angry

EXTENSION OF REMARKS

HON. PRENTISS WALKER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. WALKER of Mississippi. Mr. Speaker, over the past several weeks, we have heard about racial violence in four States that happen not to be in the southeastern portion of the United States.

National columnist and noted radio commentator Paul Harvey, in his July 12 column, which appeared in the Meridian, Miss., Star expressed the sentiments of thousands of southerners who are "on the edge of angry."

I commend this article to my colleagues, especially those who have joined the national press in their persecution of my State and other Southern States:

ON THE EDGE OF ANGRY ABOUT SLANTED STORIES

(By Paul Harvey)

There is a time to be calm and there is a time to get angry.

There was a time when even Christ, His patience exhausted, found it necessary to storm into the temple with a short length of rope in one hand and start smashing up the

I am saddened when anybody walking down any road in Mississippi is shot from

But I'm on the edge of angry when Mississippi is castigated nationwide for the misconduct of a Memphis, Tennessean.

And when Time, Life, Newsweek, The New York Times, and TV hurl their editorial epi-thets at Mississippi for one shooting.

MURDER A DAY

And look the other way from a murder a day in Chicago, Los Angeles, New York.

I'm on the edge of angry when one man wounded in Mississippi crowds from the front pages and the nation's conscience 2,000 dead Americans in Viet Nam.

I am on the edge of angry when kookie college kids can demonstrate for peace at any price, but can't find time to shave and take

And when my government protects those who break the law and intimidates those who dare try to enforce it.

I am on the edge of angry when a college professor can limelight himself by proclaiming "God is dead!"

While a free press ignores the greatest demonstrations of all, when 126 million Americans march—every week—to church! And when Government tells me I must

acrifice the fruits of my labor to support those who do no labor.

WHY THE DIFFERENCE

I'm on the edge of angry when the tax man says I get an allowance of only \$600 a year to rear my legitimate son.

Yet the ADC welfare people would pay me \$900 a year if he were an illegitimate

I am on the edge of angry, realizing that every baby is born into this one-time land of the free \$1,700 in debt.

I am on the edge of angry when we make a big domestic to-do about saving on elec-tricity and groceries in our White House while we dump millions into thankless foreign ports.

When we regulate and regiment and over tax and tyrannize our own countrymen while defending "freedom" for foreigners.

ICNORE THE INDIANS

I'm real close to the edge of angry when I hear our hypocritical breast-beating over the urgent rights of one minority which we ignore the Amish and the Indians.

When we Judas-kiss our sons goodbye because we own weapons adequate to end any ar, yet lack the guts to use them.

When we have everything going for us to create a Golden Age of arts, culture, sciences—and let unfriendly friends and friendly enemies siphon away this glorious opportunity.

Between now and November I may move "over the edge" . . . if the best either party can offer is a perpetuation of this sad circus, this pusilianimous political game of crisisafter crisis after crisis after crisis.

Eliminating Aircraft Problems

EXTENSION OF REMARKS

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. RUMSFELD. Mr. Speaker, I have long been concerned over the increasing problems caused by aircraft in the vicinity of the Nation's major airports, particularly at O'Hare International Airport located northwest of the city of Chicago. The problems of noise, safety, volume of flights, landing and takeoff patterns, and others are serious ones for citizens of the residential communities neighboring major airports.

My interest in this matter has caused me to follow closely the Federal Government's approach to providing solutions. I am convinced that the Federal Government can and should do more than it has been doing to find an answer. With this in mind. I strongly support inclusion, under the proposed new Department of Transportation, an Office of Aircraft Noise Suppression which can accept the responsibility for coordinating all Federal activities in this increasingly critical area. The Federal Government must accelerate its effort in research and planning if these air problems are to be eliminated.

I introduce for the RECORD at this point an editorial from the July 14, 1966, editions of Paddock Publications' 16 suburban newspapers which supports a coordinated Federal effort:

REDUCING JET NOISE

Congress has before it a proposal, enjoying substantial bi-partisan support, to create a cabinet-level federal department of transportation, The new agency would amalga-mate the functions of most federal agencies concerned with transportation, substituting a coordinated bureaucracy for a splintered

Agencies which would be included in the new department are the Federal Aviation Agency, Bureau of Public Roads, Maritime Commission and others. Retaining their current independent status would be the Interstate Commerce Commission and Civil Aeronautics Board.

Both northwest suburban congressmen-DONALD RUMSFELD (13th) and JOHN ERLEN-BORN (14th)—support the legislation.

In addition, RUMSFELD has announced he will support an amendment calling for creation of an office of aircraft noise suppression within the new department. pose of the office would be to coordinate research into the reduction of aircraft noise. As RUMSFELB has pointed out: "The major metropolitan centers of this country must have assistance in solving the aircraft noise dilemma. The residential communities sur-rounding O'Hare International Airport, for example, must have relief. O'Hare is the busiest airport in the nation and is going to get busier. An answer must be found for reducing this serious aggravation."

Noise around airports is a serious problem here and in suburban areas across the country. There has been little information developed about ways and means of reducing aircraft noise, consistent with safety. hope Congress pays heed to the suggestion of RUMSFELD and other suburban representatives in a positive effort to make air traffic less a hardship on suburban residents.

Chief Parker and the Law

EXTENSION OF REMARKS

HON. ED REINECKE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. REINECKE. Mr. Speaker, may I take this opportunity, under previous permission to extend my remarks, to call the attention of the House to the passing of William H. Parker, chief of police of the city of Los Angeles. Chief Parker set a high standard of public service in the difficult area of law enforcement. built the police department of the city of Los Angeles into one of the finest in the Nation. Chief Parker was direct, efficient, honest, and sincere. He brought to the law-enforcement profession across this Nation a new pride and professionalism. He served our city during turbulent times, and although he was criticized by a few, he will always be respected by all.

Mr. Speaker, I insert into the RECORD at this point an editorial from the Los Angeles Times of Monday, July 18, 1966, which expresses the thoughts of the citizens of Los Angeles in their loss of this distinguished public servant.

CHIEF PARKER AND THE LAW

Los Angeles is in deep mourning for William H. Parker—the man who devoted his life to making this the best-policed city in the nation.

Police Chief Parker is dead, but his dedication, integrity, and professional ability live on in the great department he led and inspired.

"Law and order" was not a casual phrase to Parker. He believed devoutly that no community, no nation could govern itself without respect for the law and its authority.

Those who violated the law, who threatened the person or property of others were his sworn enemies. Chief Parker enforced the law with a single-mindedness and efficiency that led to controversy, but there was never a doubt as to his honesty and sincerity.

These were the very characteristics in a chief that Los Angeles desperately needed when Parker took over in the critical year of 1950. Scandals and low morale in the department had made the city vulnerable to criminal interests.

Before long, however, Parker developed a police force of great pride and outstanding professional competence. No large city has so successfully resisted the challenge of organized crime or won so high a reputation for over-all excellence.

Chief Parker thus epitomized the protection of the law to most citizens. To others he was the defender of the "status quo"—and the focus of resentment toward other law officers and toward laws that Parker enforced but had not enacted.

Yet, significantly, many of the tributes to the late chief came from those who had often differed with him, such as City Councilman Tom Bradley and John A. Buggs, executive director of the County Human Relations Commission. A. L. Wirin, attorney for the American Civil Liberties Union and a frequent critic of Parker, said "I have admired him through the years as an efficient and dedicated police officer."

66.

it-

his

Although William Parker canont be replaced, a successor must be named. One of his legacies to the city is the number of outstanding police executives in the department eligible to assume the top post.

The new chief must be as dedicated to the enforcement of the law and the preservation of order as was Parker. The Times believes that within the ranks of the L.A.P.D. is such a man, who will also be accepted by all elements of the citizenry—even those who in recent months have been critical of the department.

Captive Nations Week

SPEECH

OF

HON, RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mr. OTTINGER. Mr. Speaker, I am pleased to join our colleagues and other freemen throughout the world in participating in the eighth annual observance of Captive Nations Week, author-

ized by an act of Congress in July 1959.

Although this 1 week is set aside for sober reflection and a rededication to purpose, we must continually strive to keep alive the ideals of freedom and independence which burn in the hearts and souls of the valiant people behind the Iron Curtain. We must never digress from our efforts to assist these people in

gaining their political, economic, social and cultural independence and to take their rightful place as full members in the society of freemen.

We are not only speaking about Hungary, Poland, Czechoslovakia and other Eastern European nations but Cuba, mainland China, North Vietnam and all other nations which have been subjugated by the force of arms, conspiracy, subversion, and deceit of international communism.

I believe all of us have been heartened by the action of several Soviet satellites over the past few months in asserting their own national sovereignty and political and economic independence. I feel we are beginning to see a change which will eventually prevail in all of the countries now under the whip of internal communism. No matter how hard Moscow and Peking may try to dominate these people and make them helpless pawns in their own design, their free spirit cannot be permanently subdued by armed force. However, this change will not occur overnight and other countries are being continually We must stand ready, threatened. therefore, to assist the captive nations in their present plight by peaceful processes and in their aspiration to throw off the yoke of totalitarianism and to regain their national and individual freedom.

Last year at this time I was privileged to join my distinguished colleague, the gentleman from Pennsylvania FLOOD], in introducing House Resolution 484—which calls upon Congress to establish a Special Committee on the Captive Nations. I would like to urge the Rules Committee to take expeditious and favorable action on this and similar resolutions so that force will be given to our moral support of the captive nations. Definite action must be taken to make known our desire to promote the return of the people of the captive nations to the state whereby they can freely determine their own social, political, and economic institutions.

Captive Nations Week

SPEECH

OF

HON. DANIEL D. ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mr. ROSTENKOWSKI. Mr. Speaker, yesterday I had the privilege of presiding over the House when Members observed Captive Nations Week. Having supported this annual recognition since it was first proclaimed by the 86th Congress, I was pleased to act as temporary House Speaker during this year's observ-

ance.

In the 86th Congress I cosponsored a resolution in the House which stated that "the Soviet Union have repeatedly declared their determination to pursue reientlessly their political, economic, and ideological drive for a worldwide victory

for communism" and "in its efforts to attain that objective through force of arms, subversion, infiltration, and other methods has imposed puppet Communist regimes upon the people of the captive nations of Eastern and Central Europe and exerted tireless effort to crush their spirit" and "that the people of the captive nations are still being denied the opportunity to solve their problems by democratic means and to choose, through free and unfettered elections, national governments of their own free choice." It was this understanding that brought Congress to declare, "its belief in the inalienable right of the people of the captive nations to live under governments of their own choice" and "urge the restoration of the fundamental freedoms and basic human rights of the captive nations."

In observing Captive Nations Week this year, we, in America, continue to recognize the human bondage of 1 billion people in the world who are being denied the most basic human right of self-determination. Therefore it is necessary for the free world this year to renew our faith in the cause of freedom for the people of the captive nations. We must continue to encourage them to resist the Communist tyranny which rules their destiny. These people are a deterrent against the Communists desire for world rule. Whatever resistance they offer will keep the Communists off-balance in car-

rying out their plans.

In view of the Communist aggression in southeast Asia and recent Communist resistance to friendly gestures by our country to ease tensions in the world, it becomes apparent they are trying to solidify their position to regain the control of people in captive nations who are slowly making progress in breaking the bonds that hold them. However these people will not give in to complete domination by Communist tyranny if they are certain that the free world supports their cause in every way possible. The moral support we offer to these people in observing this week as a reminder to the captive nations that we Americans have not forgotten them, will add strength to their determination to once again become free people.

I am proud to join with the voices of the free world in rededicating ourselves in the great cause of liberty for all peoples. Although this week is set aside for this purpose, our words and deeds should continue through out the entire year so that we can realize a day of world freedom in the not too distant future.

Captive Nations Week

SPEECH

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. COLLIER. Mr. Speaker, I consider it a great privilege to be able to join my colleagues on both sides of the aisle in observing Captive Nations Week.

While properly welcoming the many new countries that have joined the family of nations during the present generation we tend to forget that, while old-fashioned colonialism is ending in Africa and large parts of Asia, a new kind of colonialism has taken its place in Europe and the Orient.

Likewise, when we do remember such Soviet colonies as Estonia, Latvia, Lithuania, Hungary, Poland, Czechoslovakia, and so forth, we overlook the fact that the first victim of communism was Russia and we fail to realize that the peoples of both Russia and China are as much the victims of Communist colonialism as are the Baltic peoples, the Magyars, Poles, Bohemians, and so forth. Soviet Russia is a huge conglomeration of ethnic groups whose independence has been as ruthlessly exterminated by the Communists as it was earlier by the czars.

At the same time that we are expressing our sympathies for the peoples who live behind the Iron and Bamboo Curtains, some powerful volces are urging closer contacts with Communist China and its recognition by the United States. The same voices call for stepped up trade with the Reds.

There are some who say that "you just can't ignore 700 million Chinese." Have these people forgotten that the Peking Communist regime has, during its 17 years in power, liquidated many millions of people and placed other millions in slave labor camps?

It is certainly inconsistent to welcome new and free countries to the family of nations and simultaneously invite such a destroyer of individual freedom as Red China to sit down and help celebrate. Let us hope that the new nations can maintain their freedom and let us hope that the captive nations will some day soon regain their independence, but let us not defeat the purpose of Captive Nations Week by calling for recognition of Communist China and advocating more trade with Communist Russia.

The Other War in Vietnam

EXTENSION OF REMARKS

HON. N. NEIMAN CRALEY, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1966

Mr. CRALEY. Mr. Speaker, the "other war" in South Vietnam, the effort to improve the economic, educational, and health conditions for the Vietnam people, receives little attention when compared to stories of our military action there. This phase of the fight for freedom and independence in Vietnam is certainly as important since it provides hope for the future of the Vietnamese people when the fighting ceases.

No effort can be more worthwhile nor of more long-term value than educational progress. I should like to include in the Racone an article from the Washington Post describing this progress at the present time:

EDUCATION EXPANDED BY WAR-VIETNAMESE ENROLLMENT TRIPLED SINCE 1954 FRENCH PULLOUT

(By Raymond R. Coffey)

Saigon.—It is, Harold Winer observed, "a heliuva state of affairs when it takes a war" to get a nation moving educationally.

to get a nation moving educationally. But one of the happier ironies of the war here is that it has helped make classrooms, teachers and textbooks available for the first time to hundreds of thousands of Vietnamese children.

Winer is chief education adviser in the U.S. Agency for International Development (AID) program here, which operates in the midst of the war and which has made most of the educational gains possible.

When the French pulled out in 1954 there were 600,000 children in elmentary schools in what is now South Vietnam—about 25 per cent of the number then in that age bracket.

Today, with a rising population, there are 1,700,000 children in elementary school—almost 65 per cent of those in that age bracket.

Not only are more youngsters in school, but education has been made available to a much wider social and economic range of the nonulation.

In the past schooling was available only in larger population areas. Since 1963, the Vietnamese government and the U.S. aid program have constructed hamlet schools with a total of 8500 new classrooms in rural areas.

During and immediately after the years of French rule, the country had a drastic shortage of textbooks. The ones that were available were often pretty meaningless to Vietnamese children, since the texts were Frenchoriented.

Reading primers were "all about the snowy Alps of France and other things the kids had never seen," is the way one U.S. official described the situation.

American aid experts got together 36 committees of the best Vietnamese teachers they could find, gave them American advisers, and had them write new texts on every subject taught in elementary schools.

The new texts are based on Vietnamese culture and things familiar to Vietnamese children. Instead of autos and Alps the illustrated texts now are about water buffalos and rice paddies, and instead of Napoleon the youngsters read about their own heroes.

The U.S. program also has included development of two new normal schools and the training of thousands of new teachers.

With the cooperation of the Vietnamese government, teacher status and salaries also have been notably improved. Two years ago an elementary teacher was being paid 600 plastres (about \$9 at the then current exchange rate) a month.

A new increase just approved by the government will raise this to 3200 plastres (about \$26.67 at the present exchange rate) a month.

Captive Nations Week

SPEECH

HON. FLORENCE P. DWYER

OF NEW JERSET

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mrs. DWYER. Mr. Speaker, this week—the eighth annual Captive Nations Week—provides us with an important opportunity to keep the light of truth focused on the plight of the millions of once-free people who now live under Communist domination and on the fact that their freedom and their countries'

independence were the victims of aggressive communism.

The purpose of our commemoration of Captive Nations Week in the House this year remains what it has been since the 86th Congress, in which many of us were privileged to serve, unanimously adopted the first captive nations resolution in 1959. That purpose is twofold: to convince the people behind the walls and curtains of communism that the free world has not forgotten nor abandoned them and shall never acquiesce in their illegal captivity; and to rally the free people of the world to a greater understanding of our obligations toward those who have been forcibly deprived of their freedom and of our responsibilities in the preservation and the strengthening of freedom everywhere.

Is is a mark of the significance of our effort and of the sensitivity of Communist leaders to this issue that today, as in 1959, Captive Nations Week continues to be greeted with cries of outrage in Communist capitals. Their objections are understandable, for Captive Nations Week exposes international communism as a most brutal form of imperialism. It identifies the Soviet Union as the world's most oppressive colonial power. And it proclaims the free world's conviction that, like all of history's oppressors, communism must ultimately succumb to man's powerful instinct for freedom.

This year's observance, Mr. Speaker, should serve to remind us that we can do more than talk about the captive nations. The shifts and uncertainties that seem to characterize so much of today's Communist world present a challenge to our capacity to understand and to take reasoned action. The situation requires the most careful attention of the Congress as well as of the executive branch. For this reason, several of us in the House have been sponsoring legislation to establish a Special Committee on the Captive Nations, a committee whose tob it would be to study changing conditions in the Communist world, especially in Eastern Europe, to understand more fully the meaning of those changes, and to recommend ways in which we can use those changes to encourage the growth of freedom there.

A concrete example of such an opportunity exists in the apparent desire of Communist-bloc nations to increase their trade with the United States. We shall miss this opportunity if, on the one hand, we abruptly slam the door or, on the other, too readily, and without qualification, open the door to whatever arrangements they may desire.

Communist countries desire to trade because they need to trade. We should trade if it is worth our while to trade, and we can determine whether trade is in our best interests by exploring the possibilities of a political quid pro quo which could bring at least some measure of relief to the peoples of the captive nations.

I have no specific formula to suggest, Mr. Speaker, but I do suggest that this question is one which administration officials should consider seriously and one to which a Special Committee on the Captive Nations, should it be established, could devote some expert attention.

Stevenson Memorial

EXTENSION OF REMARKS

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1966

Mr. JACOBS. Mr. Speaker, in expressing pleasure with the memorial planned for the late Adlai Stevenson, the Washington Post calls attention to our unending responsibilities as a world power.

The institute of international affairs to be established in his name by friends of Ambassador Stevenson will commemorate his service to our understanding of foreign policy, the newspaper states. Not only was Ambassador Stevenson

Not only was Ambassador Stevenson eloquent in supporting world peace, disarmament, and conciliation, the Post recalls, but he also was a stout advocate of the use of force against aggression. For example, he backed resistance to North Korea and China in order to preserve peace.

Since then, the newspaper remarks in its editorial of July 15, 1966, there have been other "Koreas," and the same high purposes of eventual peace will again involve us in the use of force.

It is hoped that the Stevenson memorial will keep us aware of the responsibility of great power and of the need to resist aggression in South Vietnam—or elsewhere in the world.

I ask that this editorial be made a part of the Record:

[From the Washington Post, July 15, 1966] STEVENSON MEMORIAL

Adlai Stevenson surely would have liked the memorial his friends are planning—an institute of international affairs. In announcing the memorial today, the memorial committee appropriately marks the first anniversary of his death. And the continuing institute now set up will commemorate, year after year, his service to American understanding of foreign policy.

He had many wise things to say about foreign affairs while he lived and the establishment created in his name will make hereafter contributions to national understanding in his name.

His voice was always eloquent when raised in support of world peace, disarmament and conciliation. But, as is sometimes forgotten, he was also an eloquent advocate of the use of force against aggression. In the midst of the Korean crisis he spoke firmly in support of resistance to North Korea and China. In an article in Foreign Afairs, in April, 1952, he defended American policy and asked: "What would have happened if the United States and the United Nations had ignored the Korean aggression?"

This is what he thought would have happened: "Our friends throughout Asia and in the Pacific would with perfect reason have doubted our intention to resist Soviet design elsewhere in that area, and they would of necessity have taken the path of appeasement. Disiliusionment would also have swept Western Europe at this impressive demonstration of Soviet-satellite power and of American indecision in the face of a direct challenge. Then would not the Soviet Union, having challenged us successfully in Korea, have followed that challenge with another? And still another? Munich would follow Munich. Our vaciliation would have paralyzed our will and worked havoc in the community of like-minded nations. Then

when we did succeed in pulling ourselves together we would have found it too late to organize a common front with our friends." He said it was our object "to convince them

He said it was our object "to convince them that other aggressions, disguised or direct, will meet the same response, and thus deter them from a perhaps fatal gamble."

He was reconciled to and an advocate of the use of force but he did not lose sight of the ultimate object of force in Korea. "By limiting the war in Korea," he said, "we hope to avoid a third general holocaust. We are trying to use force not only to frustrate our immediate antagonists in the hills of Korea but to preserve world peace."

Since then, there have been other "Koreas." The same objectives and the same high purpose of eventual peace will again involve us in the use of force, from time to time. It is to be hoped that the institute formed as a memorial to Adlai Stevenson will keep his countrymen aware of the responsibility of great power and keep them alive to the necessity of resisting aggression in Korea or South Vietnam or Greece or elsewhere in the world.

Captive Nations Week

SPEECH

HON, GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. LIPSCOMB. Mr. Speaker, in July America celebrates the recurrence of the day of its independence. In the same month we also observe Captive Nations Week. On both occasions we assert the same principles: the rights of peoples and nations alike to determine freely their own course of action.

Ever since our independence, generations of Americans have committed themselves to the defense of freedom and justice in their own country; again and again they have given support to the cause of liberty and independence for other peoples and nations.

On our Independence Day we do not merely remember a historical event of the American past but we assert that the ideas we upheld almost 200 years ago are of universal importance and relevant also to the rest of the world. For these reasons we cannot remain indifferent to the fate of the nations of East and Central Europe, and that is why Congress adopted the resolution calling for the third week of July to be designated Captive Nations Week.

In the first decade after World War II the countries beyond the Iron Curtain were Soviet satellites, subject to continuous Russian interference in their internal affairs. They were not allowed to conduct a foreign policy of their own, they were forced to adhere to the doctrine of international communism as interpreted in Moscow. Disobedience was punished, often by direct physical intervention. Today, while from outward appearances conditions have changed somewhat, the hold of the Soviet Union on the 20 captive nations remains intact and remains brutal.

It is for this reason that we must rededicate ourselves to the cause of freedom of the captive peoples, and to their right to self-determination. Establishment of Cape Cod National Seashore and Dedication of Salt Pond Visitor Center, May 30, 1966

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1966

Mr. BOLAND. Mr. Speaker, the Cape Cod National Seashore was formally established during impressive Memorial Day exercises on May 30 last at the Salt Pond Visitor Center in Eastham, Mass.

The Cape Cod National Seashore was created to extend to mankind forever the opportunity to enjoy, within this stimulating and inspiring seaside environment, the outstanding scenic, scientific, and historical values found there. Our late beloved President John Fitzgerald Kennedy, who sponsored the authorization bill in 1959 when he was the junior Senator from Massachusetts, signed the Cape Cod National Seashore bill into law on August 7, 1961.

It was with a great deal of pride that I participated in the dedication cere-monies, because I had cosponsored the first comprehensive bills, along with Congressman Thomas P. O'Nells of Massachusetts, to authorize the Cape Cod National Seashore Park, on May 12, 1958. My bill that year was H.R. 12449. Congressman PHILIP J. PHILBIN, of Massachusetts, had earlier introduced a Cape Cod Park authorization bill. Senator Leverett Saltonstall and the then Senator John F. Kennedy cosponsored the bills in the Senate, and Congressman HASTINGS KEITH, who represents the Cape Cod area, and Congressman Silvio CONTE joined with us in sponsoring similar bills after they took their seats in Congress in January 1959.

Mr. Speaker, under previous permission I include with my remarks in the Appendix, the program for the establishment ceremony and dedication of Salt Pond Visitor Center, Cape Cod National Seashore, Mass., and the speeches by Secretary of Interior Stewart L. Udall and Director George B. Hartzog of the National Park Service.

ESTABLISHMENT CEREMONY AND DEDICATION OF SALT POND VISITOR CENTER, 2 P.M., MONDAY, MAY 30, 1966

Lemuel A. Garrison, Regional Director, Northeast Region, National Park Service, Presiding. Musical Selections; Nauset Regional High

Musical Selections: Nauset Regional High School Band and Frank James, Director. Advance of the Colours: United States Coast Guard, Race Point Rescue Life Boat

Station, Chatham Coast Guard Station. Invocation: Rev. William J. McMahon, Pastor, St. Joan of Arc Parish, Orleans.

Pastor, St. Joan of Are Parish, Orleans.
Welcome to Cape Cod National Seashore:
Stanley C. Joseph, Superintendent.
Remarks: Luther Smith, Chairman of

Remarks: Luther Smith, Chairman of Board of Selectmen, Eastham, representing Towns of the Lower Cape.

Introduction of Guests: George B. Hartzog, Jr., Director, National Park Service.

Presentation of Deeds: Honorable John A.
Volpe, Governor, Commonwealth of Massa
chusetts.

Acceptance of Deeds and Dedication class

Visitor Center: George B. Hartzog, Jr.
Remarks: Senator Edward M. Kenny

Remarks: Senator Levererr Saltonstall. Remarks: Representative Hastings Keith. Musical Selection: Nauset Regional High

Establishment Address: Honorable Stewart L. Udall, Secretary of the Interior. Benediction: Rev. Richard E. Waters, Pastor, Eastham Methodist Church.

ment of the Colours: United States Coast Guard.

REMARKS OF SECRETARY OF THE INTERIOR STEWART L. UDALL AT DEDICATION OF CAPE COD NATIONAL SEASIFORE, CAPE COD, MASS.,

Today we dedicate anew one of the lasting landmarks of America. It was landfall for the Pilgrams, recon-

noitering their new homeland. Sea tains have blessed the guiding glow of Cape Cod's beacons, and intrepid generations of

fishermen and whalers have blessed the beckoning anchorage of this beautiful Cape. These brave people have already given Cape Cod a special place in the American heart. We rededicate it today as another landmark—a gift of untrammeled nature

for all the gene erations of the future. Each generation has its own rendezvous with the land: the questing seafarers who looked for the headlands of other shores; the settlers who plowed the land and made

it prosper.

Now, at a later hour, we turn to this landscape to support and renew other values. We who have chopped and mined and built and machined our way to wealth and power now grope out from our cities, puzzled, yearning. almost wistful, for something we cannot forget. Beyond the noise and the asphalt and ugly architecture we yearn for the long waves and the beach grass; we see white wings on morning air, and, in the afternoon, the shadows cast by the doorways of history.

Cape Cod National Seashore is, in a very real sense, a pioneer park. It marked a turning point in conservation—a reversal of the shortsighted policy of refusing to pay from the public purse to acquire scenic materpleces for all of the people.

President Johnson described our predica-ment recently in these words: "The increas-

ing tempo of urbanization is already depriving many Americans of the right to live in decent surroundings. More of our people are growing into cities and being cut off from nature. Cities themselves reach out into the countryside, destroying streams and trees and meadows as they go. A modern highway may wipe out the equivalent of a fifty acre park with every mile. And people move out from the city to get closer to nature only to find that nature has moved farther from

The original sponsors of the Cape Cod legislation had deep roots in this Commonwealth and an abiding love for this Cape.
Two of them are with us today: Levererr SALTONSTALL, the senior Senator from Massachusetts, and Hastinos Kerrit, who represents Cape Code in the House. Americans down the generation will thank them for their forceight.

The third cosponsor is gone—but his spirit burns brightly here. If John F. Kennedy had a special attachment to this continent it was to its shoreline and marginal sea He agreed, in his private thoughts, with another New Englander, Henry Thoreau, that "the seashore... is a most advantageous point from which to contemplate the world." It was part of his conservation philosophy that a father should be able to show his children-all children-the wonders of nature he himself had known. The marshes,

the seascapes, the sea itself should remain inviolate for all time for all men.

"We have been alow as a Nation," he told. Congress in introducing the original Cape Congress in introducing the original cape. Cod bill, "to adapt our public policies so as to improve the quality and breadth of recreational experience for the Nation. Yet we are aware of the increasingly narrow margin which still exists—especially in the East—for National Park development . . . we know of no alternative . . . which could provide the citizens of the Commonwealth and the national public with such a rich and varied blend of scenic, recreational and scientific

With the p sage of the Cape Cod National With the passage of the Cape Coal Matter Seashore bill five years ago, the Nation resolved to open its eyes to need for safeguarding and restoring the beauty of our land. Here began a new era of conservation in America. Since President Kennedy proudly signed this pioneering legislation into law, the Congress has added a record-setting thirty-four new national parks, seashores, and other historic and recreational areas to

our National Park System.

The Nation's battle to save the common restate is far from won. In October 1963, President Kennedy warned that, "Our economic standard of living rises but our environmental standard of living—our access to nature and respect for it-deteriorates ... we must expand the concept of conservation to meet the imperious problems of the new age. We must develop new instru-ments of foresight and protection and nurture in order to make sure that the national estate we pass on to our multiplying descendants is green and flourishing.

This is our only world; if we care, our duty is to love it.

We commemorate here today a love affair with land. And this piece of land—this masterwork of nature—is now decliented to the people who shall henceforth call themselves citizens of these United States.

REMARKS OF DIRECTOR OF THE NATIONAL PARK SERVICE GEORGE B. HARTZOG, AT DEDICATION OF CAPE COD NATIONAL SEASHORE, CAPE COD, Mass., May 30, 1966

Receiving these deeds on behalf of the pe ple of the United States to be administered by the Department of the Interior is a great

honor and privilege.

Too few people may appreciate the signifi-cance of the transfer of ownership of the Province Lands Reservation. This Reserva-tion is one of the oldest tracts of hand in America under continuous public ownership. These dunes and marshes at the tip of Cape Cod were set aside as early as 1670-nearly 300 years ago-by the "Plimoth Colony" in years ago—by the "Pilmoth Colony" in pioneering conservation action. In trans-ferring title of these lands, you, in effect, challenge us to carry out the far-sighted action of those hardy pioneers. One of the missions of the National Park

Service is to provide for the enjoyment of the park areas. It is our belief that enjoyment of these great resources is almost inevitable and that our true mission, in this ard, is to stimulate the visitor to open his to this enjoyment in the fullest sense. Our programs, then, are ones that help the visitor interpret what he sees for himself.

One of the most successful tools if we can call them that, has been visitor centers, like this beautiful building, and the exhibits and orientation programs presented in it. Our National Park people are here to help.

It is to this purpose—assisting you in getting the most meaningful experience out of your visit to Cape Cod-that we dedicate the Salt Pond Visitor Center.

Amos Martin, Miami-Dade County Chamber of Commerce, Praises Cubans' Economic Contributions

EXTENSION OF REMARKS

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. FASCELL. Mr. Speaker, the Latin American community in Dade County, Fla., has made many worthy contributions to the entire area in the fields of culture, international friendship, and economics. The fine Spanish-language newspaper, Diario Las Americas, recently published an interview with Mr. Amos Martin, executive vice president of the Miami-Dade County Chamber of Com-Mr. Martin, one of the area's outstanding young leaders, has helped to guide the chamber, and through it, the economy of Dade County, to its present high level of growth and prosperity. I believe my colleagues would be interested in reading this excellent article and Mr. Martin's comments on the contributions of Miami's Cuban colony to the entire community. A translation of the interview follows:

EXECUTIVE FROM CHAMBER OF COMMERCE PRAISES THE LATIN AMERICAN BUSINESS ACTIVITY IN MIAMI

Mr. Amos Martin, Executive Vice President of that Organization said that the Cuban exiles have greatly aided in the development of this area. "Private enterprise: Cornerstone of the Nation."

"The Miami Dade County Chamber of Commerce has as its principal goal to promote the economic improvement of Miami in business as well as in civic progress," said to Diario Las Americas Mr. Amos Martin, Executive Vice President of this well-known organization.

Mr. Martin pointed out that "an important part of this constant progress has been the Latin American businessmen of this area who account for twenty-five per cent of the business volume in the County."

WHAT IS THE CHAMBER OF COMMERCES

The conversation takes place in the new offices of the Chamber of Commerce, having as a backdrop the splendid view of Biscayne Bay, seen from large glass windows. Mr. Amos Martin is a young and dynamic man, fervently dedicated to improving this Orgafervently dedicated to improving this Organization and to strengthen what is the blood of this great Nation: private enterprise

Explaining what the Miami-Dade County Chamber of Commerce is, Mr. Martin said:

"The Chamber is a voluntary membership Organization that receives contributions and support from owners of businesses, large and small. Our fundamental aim is to en-courage private enterprise and at the same time improve the community in all aspects.

T

C

Li

L in

"PRIVATE ENTERPRISE: CORNERSTONE OF THE NATION

Going deeper into the subject, Mr. Martin points out the importance of private enterprise in the astounding growth of the United

"The continuous economic apogee of our Nation is based fundamentally on private enterprise. This does not mean that we ignore the social changes that have taken place: we acknowledge and support them. But it is evident that the Government can only grow when it receives the necessary im-

activities. The enthusiastic repi reply of Mr.

"The organization was created in 1907 under the name of 'Board of Trade.' In 1915 its name was changed to 'Miami Chamber of Commerce' and finally in 1955 it was again modified to the one it now has 'Miami-Dade County Chamber of Commerce'. We have approximately 3,000 members who receive adequate orientation, advice and exchange of information from our organization."

ENROLLMENT FEE

Giving us more details, the Executive Vice President of the Miami-Dade County Chamber of Commerce adds:

"The minimum fee to be a member of our organization is \$75 per year, payable quarterly. We have a great number of members who are part of the growing Latin American colony of Miami. It is worthwhile to mention the fact that 25% of the volume of business carried out in the County is done by Latin American businessmen in Miami."

Expressing his sympathy towards the Cuban and Latin American businessmen in general in the Miami area, Mr. Martin added:

"It would be a great satisfaction for the Miami-Dade County Chamber of Commerce to have as members of our organization a massive number of Latin American business men of Miami, no matter how small their businesses might be. It is good to point out that ninety per cent of the businesses in the U.S. employ an average of 20 people. That is, small business enterprises are a principal part of the economic force of our nation."

PRAISE FOR THE CUBAN EXILE

The reply moves us to ask Mr. Martin for his opinion about the massive presence of Cuban extles in Miami and its meaning for the community. His words are a touching homage to those who left everything so as not to accept a tyranny.

They have made a great contribution to this community in several ways. The Cubans in particular and the Latin Americans in general have turned Miami into an international city because of the different activi-ties of every kind that they perform. Like-wise, they have greatly contributed to the improvement of the area's economy, not merely as buyers but as businessmen and professionals. Also, a great number of them buy homes, pay taxes and belong to civic groups in the area. Purthermore, they have given us a better perspective of the world and the relations with other peoples."

THEY HAVE BROUGHT A SPIRIT OF PREEDOM Emphasizing on the Cuban presence in Miami, he added:

"I would also like to say, particularly in connection with the Cuban colony, that they have brought a spirit of freedom, reminding us all of the fighting spirit of our pioneers. Also, their tragedy has made us dramatically remember the blessings that we have in the U.S. and that sometimes we overlook just because we take them for granted."

The conversation with the dynamic executive of the Miami Dade County Chamber of Commerce comes to an end with him speak-ing, with logical enthusiasm, of what the International Department of the Chamber

"Our international division has as an aim the promotion of a greater trade exchange between Miami and the world, especially Latin America. Our principal objective in to offer services to all businessmen interested in trading with other nations. Additional information is furnished about shipping timetables, export data, etc., and we have an expert staff of 'multilingual' employees,

that eases any difficulties of interpretation guarding of our own independence as that might arise."

GREAT JOB OF PROPAGANDA

Also, it is timely to point out before closing as report, that the Miami Dads County this report, that the Miami Dade Count Chamber of Commerce publishes a well-doo umented monthly magazine called "The Miamian", under the responsibility of Mr Amos Martin, and as editor Miss Susan Neuman, that shows graphically the constant progress of Miami and the convenience of maintaining commercial relations with this important tourist area.

Captive Nations Week, 1966

SPEECH

OF

HON, HENRY P. SMITH III

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. SMITH of New York. Mr. Speaker, just 2½ weeks ago the citizens Mr. of the United States celebrated the 119th anniversary of their Declaration of Independence, and reaffirmed their faith in the principles set forth in that dec-laration. During the course of this summer, many new nations in Africa and Asia will also observe anniversaries of their achievement of independence. In our celebrations, and in their celebrations, we may see proof that the flame of liberty still burns bright, that in the year 1966 the principles of self-determination and independence for peoples bent on shaping their own destinies and on managing their own affairs have lost none of their force.

But in this year 1966 we must also recognize that there are large areas of the world where these principles are denied, large areas of the world where peoples who were once proud and independent now see the liberties that they cherished trampled upon, and large areas of the world where a new and ominous kind of colonialism holds sway. There are those in this country and elsewhere who think that we must learn to live with this situation, that we must practice the principles of peaceful coexistence even if those with whom we are asked to coexist deny the ideals we hold most dear, and that the world is imperfect and there is not much of anything we can do about its imperfections.

Fortunately, those who hold these views are few. This is the eighth year in which the leaders of this country and the great majority of its citizens have set aside a week designated as Captive Nations Week to show that they care about the fate of millions of people in other parts of the world who have been denied their freedom, to show that the true foundations of peaceful coexistence are self-determination and liberty for all peoples who seek to exercise these rights, and to show that we will never resign from efforts to right the imperfections of the world in which we live.

It is right that Captive Nations Week should follow so closely our annual celebration of the anniversary of the Declaration of Independence. For we thereby make it crystal clear that we see the safelinked with the achievement of independence by peoples now enslaved, and that we see our own liberties threatened through the denial of liberty to others. Equally important, through what I hope will be an annual observation of Captive Nations Week, we send a vital signal to the captive peoples in Eastern Europe. in the Soviet Union, in Asia and in the Caribbean.

We show them that we have not forgotten them, that we will not be deluded by talk of polycentrism and de-Staliniza tion in the Soviet bloc, and that we will not mistake apparent liberalization for real freedom. These peoples must not give up hope. By observing Captive Nations Week, we help to strengthen their faith in eventual freedom. Their faith in their future freedom, we all must know, is part of our strength.

Resolutions of the Connecticut VFW 1966 Convention

EXTENSION OF REMARKS

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. ST. ONGE. Mr. Speaker, it is with great pleasure that I insert in the RECORD several resolutions passed by the 46th Annual Convention of the Department of Connecticut, Veterans of Foreign Wars, held in Hartford on June 10,

11, and 12 of this year. Although this fine organization passed 30 resolutions which will serve as the basis for the policies, programs and goals of the organization for the ensuing year, I have, in order to conserve on space. selected those resolutions dealing primarily with matters of national interest.

I had the honor and pleasure of attending the convention on June 11 and will continue to lend my support to, and admiration for, this most worthwhile organization.

Following are the resolutions referred

RESOLUTION ON VETERANS FEDERAL SERVICE, EMPLOYMENT AND RE-EMPLOY-

Be it resolved, by Department of Connecticut, Veterans of Foreign Wars of the United States, That we seek approval of the follow-ing recommendations by administrative changes or legislation, as applicable: 1. Modification of the current three-year

probationary period by re-establishing a oneyear probationary period as a prerequisite for career status.

2. Reformation of the United States Civil Service Commission appeals system, includ-ing access to all records, confrontations and examination of witnesses, and right of oral argument in the Regional Offices and the Board of Appeals and Review.

3. Authorization of voluntary retirement for Pederal Civil Service employees after a minimum of 30 years, including active Fed-eral Military Service.

4. Vigorous enforcement of all provisions of the Veterans Freference Act of 1944, as amended, and opposition to any and all efforts to weaken or reduce the beneficial provisions of this legislation.

5. Adequate funds for the Federal Bureau of Employment Security, U.S. Employment Service, Veterans Employment Service, Bureaus of Re-Employment Rights and State Agencies supporting these activities in behalf of veterans.

6. Amendment of the Civil Service Retirement Act to suthorize retirement without reduction in annunity of employees with 20 years of service by reason of abolition or relocation of their employment.

7. Amendment of the Federal Employees

Compensation Act to provide:

A. Repeal of the forfeitures extracted from a veteran by the Service Department when a veteran military retiree is injured or disabled in Federal employment.

B. Repeal of the provision which requires disabled veteran to forfeit his Veterans Administration compensation when he is awarded a Federal Employees' Compensation for injuries or disabilities incurred during federal employment.

RESOLUTION ON VETERANS ADMINISTRATION GENERAL

Be it resolved by Department of Connecticut, Veterans of Foreign Wars of the United States, That we seek approval of the following recommendations through legislation:

1. Elimination of the age 23 limitation for completion of training imposed on most beneficiaries of War Orphans Educational Annistance

2. Public Law 88-151 be interpreted literally to allow waiver of loan guaranty indebtedness where veteran is without fault in creation of the indebtedness or that collection of the indebtedness would work a nevere hardship upon the veteran.

3. Reopen National Service Life Insurance program for those veterans who served in the Armed Forces during the period of Oc-8, 1940, and December 31, 1956

inclusive

4. Authorization of waiver of service-con-nected disabilities for the purpose of rein-stating "H," "RH," "J," or "JR" policies (the -connected disability permitted veterans to obtain the insurance initially).

5. Authorization to waive service-connected disabilities to permit granting of the total income provisions on National

disability income provisions Service Life Insurance policies.

6. Continue as a permanent program within the Veterans Administration insurance issued pursuant to Public Law 88-664 veterans with service-connected dis-

RESOLUTION ON VETERANS' ADMINISTRATION COMPENSATION PROGRAM

Be it resolved, by Department of Connecti-cut, Veterans of Foreign Wars of the United States, That we seek approval of the following recommendations through legislation:

1. Substantial increases in disability compensation rates

2. Substantial death compensation rate in-

3. Substantial regular aid and attendance allowance increa

4. Substantial increases in income guidelines and limitations for dependency of parents for death compensation and DIC purposes under Sections 102 and 415 respectively, Title 38, USC.

5. Classifications of campaigns and expeditions involving hostilities as wartime

6. Presumption of service connection of chosis if manifested within three years following wartime service.

7. Elimination of the prohibition against payment of dependency and indemnity com-pensation in any case because Government Life Insurance was in force at time of death waiver of premiums under Section 724,

Title 38, USC (formerly Section 622, NSLI Act.)

8. Elimination of the requirement for waiver of death compensation or dependency and indemnity compensation in order to obtain the \$5,000 death gratuity authorized by Public Law 89-214.

RESOLUTION TO BROADEN COLD WAR "GI" EDUCATION

Whereas the Veterans of Foreign Wars of the United States took the lead in 1956 in demanding educational benefits for Cold War

Whereas our efforts bore fruit when in 1966 Public Law 80-358 was enacted which provides educational benefits for all Cold

War servicemen; and

Whereas the Veterans of Foreign Wars of the United States was the largest and oldest veterans organization who campaigned for the last decade to do justice for our comrades of the Cold War; and

Whereas the final result of the Cold War "GI" Bill was not as broad as that provided veterans of the Korean Conflict; and

Whereas the educational allowance under Public Law 89-358 is less than that of previous veterans' education programs; and

Whereas Public Law 89-358 does not provide on-the-job training or on-the-farm training as in previous veterans education programs: Now, therefore, be it

Resolved, by Department of Connecticut, Veterans of Foreign Wars of the United States, That the Veterans of Foreign Wars of the United States supports legislation which will broaden Public Law 89-358 by increases in the educational allowance and providing on-the-job and on-the-farm training for those veterans eligible under this law.

RESOLUTION TO OPPOSE CLOSING OF ANY VA HOSPITALS

Whereas by direction of the President of the United States, upon advice of the Bureau of the Budget, a number of Veterans Administration Hospitals throughout this great nation, consisting of several thousand beds, were ordered closed in 1965; and

Whereas said closing has created a hardship upon veterans needing hospital care with the result that they may be denied immediate entry into a Veterans Administra-tion hospital or compelling them to apply Veterans Administration hospital another state, or, seek private medical care,

and

Whereas the present Cold War situation existing between the Free World and the Communist World, has fomented into a "Hot situation, with the present day result. that in the service for freedom of mankind, and to carry out the mandate of this great nation under four administrations, presidents, upwards of 3,000 young Americans have sacrificed their lives, and more than 20,000 have been seriously wounded and/or permanently handicapped, and

Whereas the available hospital beds now remaining in the limited number of Veterans Administration Hospitals, are not adequate to handle the need of 22 million vet-

erans, and

Whereas it is the responsibility of government for complete care and rehabilitation of thousands of young Americans, with all necessary aid to them to a normal productive life; Therefore be it

Resolved, That the Veterans of Foreign Wars of the United States unanimously reaffirm its stand and strong objection to the closing of any VA Hospital; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, the Connecticut Congressional delegation, the Chairman of the House Veterans Affairs Committee, the Administrator of Veterans Affairs and the press.

Captive Nations Week

SPEECH OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. O'HARA of Illinois. Mr. Speaker, I join with my colleagues in this body and with my fellow Americans everywhere in deeply sympathetic participation in the eighth observation of Captive Nations Week.

I am mindful of the fact that Captive Nations Week, which now has become an American institution of powerful protest marshalling the free world to the continuing battle for complete liberation of the captive nations, is the conception of my good and distinguished friend, Dr. Lev E. Dobriansky, world-renowned professor of economics at Georgetown University. I have read with keep interest and applauding approval the article by Dr. Dobriansky, entitled "The Traditional Captive Nations Week: Red Nightmare, Freedom's Hope," in the summer, 1966, number of the Ukrainian Quarterly and with this article I will conclude my remarks after some observations on the developments of fundamental significance that have taken place in the Soviet bloc over the last decade. In the course of Khrushchev's de-Stalinization policies the countries of Eastern Europe have begun to assert their political rights of selfdetermination. Centrifugal trends have broken the unity of the once monolithic Communist bloc. The forces of polycentrism have promoted the growth of independence among states and parties within the Communist camp.

The Soviet Union has come to acknowledge that individual countries cannot be forced indefinitely to act according to undifferentiated dogmas of international communism, and that cultural heritage and national peculiarities make it mandatory for Eastern European countries to have greater freedom of action. The Soviet Union can no longer completely subject the peoples and nations of eastcentral Europe by virtue of its superior physical force. Compromise and negotiations are gradually taking the place of suppression and coercion. These important changes have filled us with new

ti

ti

81

da

PB

C

Polycentrism has not only affected the international relations of the countries in the Soviet bloc, but it has deeply affected the internal conditions of the countries concerned. The human and political rights of the people are respected to a much greater degree; artists and writers are allowed to speak up more freely than had been the case in the Stalinist era. There is a new openness to outside influences; the people are no longer as sealed off from the rest of the world as before. We hope that these liberalizing tendencies, limited though they may be, will continue to benefit the peoples and nations of East and Central Europe. Only when nations are allowed to determine their own course of action, independent from outside interference, can there be true peace. No man and no country can hold the free will of a people and the political will of a nation captive

Mr. Speaker, the fate of the countries of Eastern Europe has always deeply concerned us; we cannot be indifferent to their striving for freedom and justice. We welcome the progress of greater external and internal freedoms. Yet we have only witnessed the beginning of a movement in the right direction. Much remains to be done. We will continue to support the peoples of the East European nations until that time when they will have gained complete freedom.

Mr. Speaker, I now conclude with the article by Dr. Dobriansky in the Ukrainian Quarterly, as follows:

THE TRADITIONAL CAPTIVE NATIONS WEEK: RED NIGHTMARE, FREEDOM'S HOPE (By Lev E. Dobriansky)

Confusion, misdirected thinking, and the repetition of old errors dominate the current scene in the United States and thus much of the Free World. These dominant trends are, in part, the logical consequences of the superb maneuver engineered by Moscow in the last decade under the deceptive banner of "peaceful coexistence." Continue to build and strengthen the empire within, while all feasible forces are utilized to undermine the enemy without has been the practical assence of this highly successful maneuver. functionaries in Moscow's Agitprop have good reason to gloat over the results and doubtless are banking on even phenomenal successes in the near future.

The needless mess in Vietnam, the NATO rupture, self-paralyzing absurdities about "arrogant power," "escalation," and "containment" again, the steady over-all Red penetrations in Asia, the Middle East, Africa and Latin America, the repeated softening-up process on communism in our own body politic, and the insidious deterioration of our national will for positive victory, whether military or psycho-political, are only a few evidences of the new pattern of confusion and old errors. As though the lessons of U.S. trade with the Axis powers into World War II were never learned, the present drive for easy trade with the Red Empire is another point of evidence. Self-nurtured illusions about "national independence" among the so-called satellites in Central Europe, "the evaporasatellites in Central Europe, tion of the Cold War," a materially explosive Peking-Moscow showdown, and the spread of peace-orienting "capitalism" in the empire also have their able precedents in the illusions of the 30's, when the nature of modern imperio-colonialist totalitarianism eluded the understanding of that generation.

e

N

d

What in all these years has been a cardinal objective of the totalitarian Red Syndicate is a progressive Free World disinterest in the genuine liberation and independence of the captive nations, the oppressed peoples them-selves as against the Red states dominated by totalitarian Communist Parties. The enormous advantages of achieving this should be obvious; easier consolidation of the empire, stronger posture for Cold War aucresses in the Free World, and the moral and political demolishment of Free World democracies. This Red objective, shared by all in the syndicate, is a crucial and integral part of Red psycho-political warfare which Brezhnev, in his report to the 23rd Party Congress last March, lauded as the prime, unsurpassed weapon wielded by a "political army of revolutionaries for class struggles." 1
The heavy emphasis placed at the Congress on the "great, complex art" in "leadership

of class struggle"-meaning the imperiocolonialist art of psycho-political warfare—
is unmistakable as to what we can expect in the years ahead.

High on the priority list in Red psycho political warfare is the downgrading and eventual elimination of Captive Nations Week. This has been evident since 1959, and unfortunately some in this country have sought to assist Moscow and the syndicate in realizing this aim. One major element that they hope to capitalize on is a pro-tracted American ignorance of the many captive nations in the Red Empire, particularly in the USSR. Another is the signifi-cance of the Week in the current struggle, measured especially by their own reactions. The mountain of evidence formed since 1959 clearly shows that Captive Nations Week is a deep thorn in the side of the Red totalitarians and their efforts to expand the Red Empire chiefly through the art of psychopolitical warfare. As in many other cases, they depend on apathy, distraction, indifference, ignorance, and even educated stupidity to accomplish their work for them.

THE ABC'S OF CAPTIVE NATIONS WEEK

When this writer wrote the Captive Na-tions Week Resolution in June, 1959, little did he appreciate the extent to which elements of misunderstanding and cultured ignorance can contribute to Moscow's ends. A sterling example of this was an editorial in a Washington paper that was promptly refuted by the writer.3 In 1964, another editorial attack against the captive nations in the same organ evoked delight and praise in Moscow.3 To identify the misleading and disinforming sources among us and, at the same time, to prevent Red manipulation of such misguiding opinions, it is most essential for every American to become familiar with the ABC's of Captive Nations Week.

The Week is sponsored each year by the National Captive Nations Committee with headquarters at 1028 Connecticut Avenue, N.W., Washington, D.C. The Honorable Herbert C. Hoover was the honorary chairman of the Committee from 1960 to 1964; Mr. George Meany, president of the AFL-CIO, has occupied this position since 1965. Over one-third of the House of Representatives and close to one-third of the U.S. Senate are members of NCNC. Every year half of the Governors issue Captive Nations Week proclamations, as does every Mayor in each of our major cities.

NCNC is supported by voluntary contributions from individuals and organizations. Its activities are mainly supported by local Captive Nations Committees that extend from Boston to Miami, Washington, D. C. to San Francisco. Almost every major city has a committee made up of citizens who are quite versed in the ABC's of the Week. In the past few years the movement has extended overseas so that observances now are held in Free China, West Germany, Turkey, and Sweden. Much of this steady growth is regularly noted in the U.S. Congress which legislated the Week in 1959.

THE CAPTIVE NATIONS WEEK RESOLUTION

It is often curious that some commentators who write about the Week give every evidence of never having read the resolution and law upon which it is based. example, one writer has this to say: "When I was in Moscow during the October Party Congress, Khrushchev once again violently denounced the innocuous Captive Nations Week Resolution which Congress Week Resolution which Congress plasses every year to attract minority votes." ⁴ As I pointed out in another article, this comment is "a gem of fact, illogic, and fiction." Fact, the Russian's violent denunciation; illogic, the supposed innocuousness of the resolution; fiction, Congress' passing it every year to attract minority votes. Now, to see how writers can misguide, read the resolution which is Public Law 86-90, one of the ABC's:

CAPTIVE NATIONS RESOLUTION

"Whereas, the greatness of the United States is in large part attributable to its having been able, through the democratic to achieve a harmonious national unity of its people, even though they stem from the most diverse of racial, religious and ethnic backgrounds; and

"Whereas, this harmonious unification of the diverse elements of our free society has led the people of the United States to sess a warm understanding and sympathy for the aspirations of peoples every-where and to recognize the natural interdependency of the peoples and nations of the world; and

"Whereas, the enslavement of a substantial part of the world's population by Communist imperialism makes a mockery of the idea of peaceful coexistence between nations and constitutes a detriment to the natural bonds of understanding between the people of the United States and other peoples; and

"Whereas, since 1918, the imperialistic and aggressive policies of Russian Communism have resulted in the creation of a vast empire which poses a dire threat to the security of the United States and of all the free peoples of the world; and

"Whereas, the imperialistic policies of Communist Russia have led through direct and indirect aggression to the subjugation of the national independence of Poland, Hungary, Lithuania, Ukraine, Czechoslovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Tibet, Cossackia, Turkestan, North Vietnam and others; and

Whereas, these submerged nations look to the United States as the citadel of human freemdon for leadership in bringing about their liberation and independence, and in restoring to them the enjoyment of their Christian, Jewish, Moslem, Buddhist or other religious freedoms and of their individual liberties; and

"Whereas, it is vital to the national security of the United States that the desire for liberty and independence on the part of the peoples of the conquered nations should be steadfastly kept alive; and

"Whereas, the desire for liberty and independence by the overwhelming majority of the people of these submerged nations constitutes a powerful deterrent to war and one of the best hopes for a just and lasting peace;

"Whereas, it is fitting that we clearly manifest to such peoples, through an appropriate and official means, the historic fact that the people of the United States share with them their aspirations for the recovery of their freedom and independence.

"Now, therefore, be it resolved by the Senate and the House of Representatives of the United States of America, in Congress as-sembled, that the President of the United States is authorized and requested to issue a proclamation designating the third week in July, 1959, as "Captive Nations Week" and inviting the people of the United States to observe such week with appropriate carsmonies and activities.

"The President is further authorized and requested to issue a similar proclamation each year until such time as freedom and independence shall have been achieved for all the captive nations of the world.

THE CAPTIVE WATIONS: WHO'S NEXT!

The reader will observe that in its fifth paragraph the resolution contains an open end clause as concerns the enumeration of captive nations. In 1950, after a year of disputes with certain House members who were offered the first opportunity to consider the measure, the writer found it necessary to insert "and others" in order to allow for new captive nations, such as Cube in 1960, and to gradually familiarize many segments of our public with some old ones. Here, too, the force of stubborn and narrow preconcep-

tion had to be combatted.

Perspective is the usual, lacking quality in the thinking of those who draw mythical dis-tinctions between "fat" and "lean" Com-munists, "liberal" and "doctrinaire" Com-munists, and "independent" and "Sovietdominated" Red states. Similar distinctions were concocted in the 30's with respect to the imperio-colonialist totalitarians of that period, and easy trade, cultural exchange and period, and easy trade, cultural exchange and other devices were also employed then in the interest of world peace. The list below clearly ahows the unitary base of the Red Syndicate; it shows the phenomenal success the Red imperio-colonialist totalitarians, building an unprecedented empire in the span of less than fifty years and with strikingly inferior resources; it also indicates the poverty of U.S. foreign policy, which com-mitted two colossal political blunders in this century (contributing to the power of the Soviet Russian Empire both after World War I and during World War II) and is now on the brink of committing another with East-West trade plans, the Consular Convention and other myopic measures.

There is nothing like success, and this list is the roll call of Red success, primarily in psycho-political warfare. Given the same course of U.S. foreign policy and the pathetic absence of psycho-political warfare training, this list is bound for extension. Read it carefully and think:

REPRESENTATIVE RED BEACTIONS

A most important part of the ABC's of Captive Nations Week is the three R's, representative Red reactions to the Week cumulated since July 1959, they can fill several volumes. Be they the Khrushchevs, the Maos, Gomulkas, Titos, Castroe, and all other aquabbling or non-squabbling members of the Syndicate, the Red totalitarians screech at the list of captive nations and vituperatively condemn the Week. There's no mystively condemn the week. There's no mystery as to why they react so. The two mirror their wretched past and their deceptive present—and perhaps their doomed future. Conquest, terror, tyranny, genocide, totalitarian oppression, Cold War operations, the USSR as an "imperium in imperio," illegiti-

macy, imperio-colonialism, philosophical fraudulence and many other things are reflected by the mirror.

The following, selected at random, scarcely

require comment:

"This resolution stinks." (Then, according to Vice President Nixon, "he spelled out what he meant in earthy four-letter words.")4

-NIKITA S. KHRUSHCHEV, July, 1959. It represents an "hysterical campaign of petty provocation, proving that panic-stricken monopolists are losing the faculty of controlling their own actions."

-N. S. KHRUSHCHEV, July, 1959. "The resolution is a new American provo-

cation and a hostile act." s

-Protest of Red Czech regime, 1959. "I would not be telling the full truth if I did not say that the adoption of this illstarred resolution was regarded by the Soviet people as an act of provocation."

-KHRUSHCHEV, August, 1959. "Take, for instance, the much-to-be-regretted decision of the American Congress to hold the so-called 'Captive Nations Week' and to pray for they liberation. In this case words other than 'rolling back' were used, but the gist remained the same, the same appeal for interference in other people's

-KHRUSHCHEV. October, 1959. "When in July of this year American Senators officially shed crocodile tears over the captive nations, they did not forget to cry for Ukraine . . . It would appear that the Ukrainian people are enslaved." "

-Red publication, August, 1960. "Some members of the U.S. Congress, who apparently are not too busy with state affairs, deliver 'moving' speeches, using the same mimeographed crib concerning the socalled 'week of captive nations'

NICHOLAS V. PODGORNY, U.N., October, 1960. "It is not at all fortuitous that this time the farce presented by the 'Captive Nations Week' should coincide with the hullabaloo created by American propaganda around the West Berlin question." 18 (Khrushchev again denounced the Week at the Communist Party Congress in October, 1961.)

-Moscow, 1961. "All progressive mankind greeted the news of the so-called 'Captive Nations Week' with a feeling of anger and indignation. foaming mouths the imperialist predators inmist on the fantastic idea of restoring the capitalist order in the lands of the peoples' democracies and Soviet socialist republics." 14

—Radyanska Ukraina, July, 1961. "The Americans who invented the 'Captive Nations Week' are like those proverbial thieves who are yelling 'Catch the Thief,' while they themselves are living off the explotted masses in many countries of the world." 15

PETRO PANCH, poet, USSR, August, 1961. "On the basis of the 'weeks' held in the past, we already know what these appropriate ceremonies represent—unbridled anti-Soviet and anti-communist slander. * * Yes, it is only thanks to American bayonets that opprescors of freedom and blood-thirsty dictators are sustained in power in a number of countries of the Latin American continent and Southeastern Asia." ¹⁸

-Moscow, 1962 (In 1962 the Russian imperio-colonialists cored a victory in getting UNESCO to publish the scandalous and fraudulent Equ of Rights Between Races and Nationalities in the USSR.)

"Is it not high time to discontinue the 'Captive Nations Week' in the United States? That is just as much a dead horse as the Hungarian Question." π

—Moscow, January, 1963 "The President of the United States, losing his sense of reality, has declared 'a week of

Footnotes at end of speech.

the Captive Nations' and is trying to turn attention away from the struggle of the Negroes for their liberation."

-Pravda, Moscow, July 8, 1963. "Kennedy is a third-class clown proclaiming Captive Nations Week, which is a despicable animal campaign of the U.S. ruling circles."

-Pyongyang Radio, N. Korea, July 10, 1963. "With every passing year 'Captive Nations Week' becomes a nuisance. The stupid situation in which the Washington legislators and rulers found themselves is becoming evident even for those who earnestly prop agate the imperialistic policy of the U.S.A."

——Izvestia, Moscow, July 15, 1964.

"In the United States a farce entitled 'captive nations week' is held every year. people's democratic system has been in existence for 20 years but the imperialists still ramble on with nonsensical ideas of 'liberating' the nations of eastern Europe." 18

—Khrushchry, August 1964. "An annual, pitiful undertaking. One could treat it as a joke . . . One could treat it like that, if it were not for the fact that Captive Nations Week, an annual undertaking organized by men who have long since lost contact with their nations, is supported by the U.S. Congress and by a proclamation of the President of the U.S."

—Trybung Ludu, Poland, July 27, 1965.

"They are beating the drums again across the sea, filling columns in newspapers and delivering hypocritical speeches. For the umpteenth time the ruling circles of the United States are holding the so-called 'Captive Nations Week.' And the propaganda machine is deafening the citizens with 'atrocious' inventions about the fate of nations which are suffering under the yoke of the Kremlin regime."

-Radyanska Ukraina, Ukraine,

July 25, 1965.

"Especially disgusting is the villainous demagogy of the imperialistic chieftains of the United States. Each year they organize the so-called captive nations week, hypocritically pretending to be defenders of nations that have escaped from their yoke. These international gendarmes, stranglers of freedom and independence, would like again to enslave the free nations of Lithuania, Latvia and Estonia. But that will never happen." -Mikhail Suslov, chief Russian ideolo-

gist, Vilnius, Lithuania, July 17, 1965. One can go on and on with these denunciations, drawn from Red China, Cuba, Hungary and elsewhere in the Red Empire. The most important place is, of course, the Soviet Union, which in every respect is the central power base of the empire. In ultimate cal-culation, every other Red regime, including the Chinese, Yugoslav, Rumanian, and Cuban, depends for its survival on the USSR. No amount of inter-Party squabbles and rifts can hide this supreme truth. So, when Vice President Nixon candidly reported "The Capresident Nixon cannot reported The Cap-tive Nations Resolution was the major So-viet irritant throughout my tour." what in effect he was saying was that the resolution's ideas tore into the whole tenuous psycho-political fabric of this power center of "world It opened up a fundamental and promising opportunity that we haven't

even begun to explore and cultivate. THE PHESIDENTIAL PROCLAMATIONS

Another integral part of the ABC's of Captive Nations Week is the successive Presidential Proclamations. Prepared by the restraining and unimaginative hand of the State Department, the general content of these proclamations explains in part why we are still faced with fear and reluctance to seize this opportunity. The reader will find it a most productive exercise to read these proclamations carefully, compare a number of them, and then compare all of them with the resolution upon which they are based. Your comparisons should reveal the essence of our foreign policy plight in the most recent period. They should also motivate you to fight for the elimination of this plight. Read them carefully:

"CAPTIVE NATIVES WEEK, 1959-BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

"Whereas many nations throughout the world have been made captive by the im-perialistic and aggressive policies of Soviet communism; and

"Whereas the peoples of the Soviet-dominated nations have been deprived of their national independence and their individual liberties: and

Whereas the citizens of the United States are linked by bonds of family and principle to those who love freedom and justice on every continent; and

"Whereas it is appropriate and proper to manifest to the peoples of the captive na-tions the support of the Government and the people of the United States of America for their just aspiriations for freedom and

for their just aspirations for freedom and national independence; and "Whereas by a joint resolution approved July 17, 1959, the Congress has authorized and requested the President of the United States of America to issue a proclamation designating the third week in July, 1952, as "Captive Nations Week," and to issue a similar proclamation are horse justile such these proclamation are horse justile such these proclamations when the proclamation are horse justile such these proclamations are horse justile such these proclamations are horse justile such these proclamations are horse justile such these proclamations are horse justile such these proclamations are horse justile such that the such that is not a such that the s lar proclamation each year until such time as freedom and independence shall have been achieved for all the captive nations of the

"Now, therefore I. Dwight D. Eisenhower, President of the United States of America do hereby designate the week beginning July 19, 1959, as Captive Nations Week.

"I invite the people of the United States of America to observe such week with appropriate ceremonies and activities, and urge them to study the plight of the Soviet-dominated nations and to recommit themselves to the support of the just aspirations

of the peoples of those captive nations.

"In witness whereof, I have hereunto set
my hand and caused the Seal of the United States of America to be affixed.

"Done at the city of Washington this 17th day of July in the year of our Lord 1959, and of the independence of the United States of America the 184th.

"LYNDON B. JOHNSON, "DRAN RUSK, "Secretary of State."

THE ABC'S AND SOME BASIC ISSUES

The ABC's of Captive Nations Week go a long way in enabling us to think clearly and responsibly on the issues basic to the security and freedom of our nation. Some these issues deserve mention here. One an intelligent, concentrated effort fosed on the fundamental reality of Sino-Soviet Russian imperio-colonialism. In the or elsewhere we have done virtually nothing in this fundamental respect. The more the Red totalitarians prattle about "American imperialism," the more millions of minds about the world will believe it. One would think that Goebbels taught us something thirty years ago.

A second basic issue is the formulation of a sensible liberation policy as the best guarantee against both a hot global war and an interminable string of guerrilla wars. This policy, with its almost exclusive emphasis on psycho-political activity and skillful

paramilitary engagement, wasn't sufficient-ly understood in the 50's, and with the re-emerging discussion on "containment" today, not to speak of further communist takeover tomorrow, it stands as the real and winning alternative to the policy of patched-up containment. How unrealistic the proponents of containment are can be gleaned from the evident fact that the Red Syndicate leaped over the Maginot-like containment wall years ago, into Cuba in our hemi-sphere, into the Middle East, into Africa and All this through means of calculated, psycho-political warfare, which is even being applied forthrightly in our own country today.

Thirdly, a Special House Committee on the Captive Nations is necessary for obvious symbolic, legislative, and educational reasons. Equally necessary is the establishment of a Freedom Commission and Academy for psycho-political warfare training. Had this been in existence ten years ago, with a doit-yourself course for foreign nationals, I am convinced that we wouldn't today be sacrificing American lives and treasure in Last-minute recourse to military Vietnam. arms is not the answer to the Red-staged conflict of our day: nor is economic aid and welfare the answer.

Other significant issues are the Consular Convention with the USSR, which should be repudiated by the Senate because it plays into Russian imperio-colonialist hands, and liberalized East-West trade, which should be strongly opposed as a blind repetition of our errors of the 30's and falling into the trap of an over-all Red economic strategy that by now should have been honestly portrayed to our people. Representative of Arkansas has earned the praise of all sober-thinking Americans who refuse to be stampeded into the Syndicate's trap.

THE UNITARY REALITY OF CAPTIVE NATIONS

Through all the foggy and murky talk about "East European independence," "the nationalism of Rumanian Communists" and other such ghosts, "containment," ing bridges of understanding" (with whom?), "detente with the Russians," and similar figments of confused minds, there is one massive, unitary reality that cannot be be-cluded by these illusions and exercises in elf-deception—the captivity of close to billion people. These are the people who constitute the captive nations. They are in Red states, but they are not of these

Our primary appeal, our foremost efforts should be directed toward the freedom of the captive nations, and not the freedom of action of their unrepresentative Red regimes which will always confront us with syndicated action aimed at the expansion of the Red Empire. The mistakes being made today are in great measure a repetition of those committed in yesteryear. Real, progressive change demands revisions thought, policy, and action; an ever-broadening kowledge of all the captive nations, particularly those in the USSR, propels such change—a change for a more secure peace, expanded freedom, and positive victory in the Cold War.

Enough Clean Water: A Growing National Concern

EXTENSION OF REMARKS OF

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr. MARSH. Recently, I had occasion to attend the dedication of a new watertreatment facility at Bridgewater, Va., in my congressional district. The construction of this modern treatment plant is a tribute to the citizens of Bridgewater and the leadership of their municipal officials. A great deal of credit for this accomplishment must go to the mayor of that community, C. E. May, who is a professor at Bridgewater College, and to members of the town council, particularly the sewer and water committee.

We frequently overlook the accomplishments achieved by those small communities which undertake major public works programs of this type without advance assurance of substantial financial assistance from the Federal Government. The public service rendered by the leaders of local government is invaluable in such situations, and this facility at Bridgewater is a case in point.

It was most appropriate that a distinguished scientist associated with water research would make the keynote address at the dedication exercises. Dr. David G. Stephan, the speaker, is Chief of the Division of Research of the Water Pollution Control Administration. He brings to that position a rich background of education and experience relating to air pollution and water treatment research that reflect his great knowledge in the field of basic and applied science.

Because of the pertinence of his remarks on water resources, I would like to make available to other Members of the House the speech given by this very capable public servant, as follows:

WATER-VIRGINIA'S PRICELESS RESOURCE

(Address by David G. Stephan, Deputy Chief, Division of Research, Federal Water Pollution Control Administration, Department of the Interior, at the dedication of the Bridgewater water treatment plant, Bridgewater, Va., June 26, 1966)

Congressman Marsh, Mayor May, ladies, gentlemen, distinguished guests; Secretary

Udall regrets that he cannot be here with you today, but he has relayed your kind in-vitation to speak at this dedication ceremony to me. I am particularly pleased and honored to be with you today representing not only Secretary Udall and the Department of the Interior, but also the Federal Water Pollution Control Administration—the very newest Agency to have been created in the Federal Government—an Agency which only last month became a part of the Department of the Interior-and an Agency which in a most direct way personifies the Government's and indeed the public's awakening interest in and consern for the preservation of one of our Nation's most vital assets-water. a great pleasure to be here today in the Commonwealth of Virginia in the Shenandoah Valley, particularly during this beautiful season and during an occasion of broad and long-lasting benefit to all of us-the dedication of this new water treatment plant. This plant will not only promote the con-tinued growth and well-being of this area, but will provide a basic life necessity-clear,

cool, and clean water.

The need for developing good, usable water supplies is certainly not new to Virgin-Some 350 years ago water was a major concern of Captain Newport when the Susan Constant, the Godspeed, and the Discovery dropped anchor at Jamestown. Apparently, there were no natural springs at the settlement site and early records show that the first settlers tried to draw water from the salty James River but gave up because of foul taste. From the first, shallow and easily contaminated wells appear to have been the principal source of water for these colonists. Usually, these wells did not pro-vide the so called "sweet water" but at least it was better than river water. A poor drinking water supply is generally accepted by historians as the chief health problem of early Jamestown and it is probable that this

11-

was a major factor in the loss of the colony. But, now, let's talk about water and our country's water resources today. one of the very cheapest materials which you can buy and yet, at the same time, it is priceless. To illustrate, in this country, the average cost of water delivered to the kitchen sink is only 7¢/ton. That's hard to believe compared with the \$280/ton we pay for milk; the \$100/ton we pay for gasoline; the \$20 or \$25/ton we pay for coal; or, believe it or not, the \$2 or \$3/ton we pay for dirt! The phrase "dirt cheap," therefore, is not nearly so meaningful as the phrase "water cheap" and yet, how many of us have ever realized this?

Today, recognition of the value of water as a priceless asset is widespread. President Johnson has stated, "To improve the quality of our waters will require the fullest cooperation of our State and local governments. Working together, we can—and will preserve and increase one of our most valuable na-tional resources—clean water."

Secretary Udall himself has said, "We must learn to respect water. We must recognize that it is an indispensable element of our daily lives. We must increasingly treat water as we do our minerals—as a resource to be sought, recovered, processed, utilized, reclaimed, and reutilized."

And State officials of Virginia have said, "No one will question that water is perhaps Virginia's most valuable natural resource and, unfortunately, one of the least appreciated."

The "priceless" nature of water is easily understood when one reads of the prospector dying of thirst or the lifeboat passengers with throats so parched they would give th entire possessions for one cup of water. Man can live for months without the sun; he can live for weeks without food; but he can live for only days without water.

How much water does man need to live? Under rigorous experimental conditions man can exist on only a quart or so of water per day. But how much does man and his society act ally use? About 65 gallons are used daily by the average American in his home and about 150 gallons/day are used by a municipality for every person in residence In addition to these municipal or public water withdrawals, almost 200 gallons/day are withdrawn from rivers, lakes, and wells by industry for every person in the United States and, if we count the amount of water used by power plants for cooling water in the production of electricity, this total jumps to almost 500 gallons/day per person. Another 500 gallons of river and well water per person is used every day for irrigation of our croplands. These volumes add up to over 250 billion gallons of water used in this country each and every day. Predictions are that by 1980, just fifteen years from now, water usage will jump to over 600 billion gallons/dav

Did you know that up to seventy gallons of water are used in making one gallon of gasoline? Did you know that as much as 150 gallons of water are utilized in the production of a single 5-pound bag of sugar or that 65,000 gallons of water are used to make a ton of steel or a ton of paper? figures are quite astounding to many people and a question on many lips today is, "are we running out of water?" The fact of the matter is that the amount of rain falling upon the earth stays just about the same from year to year while our population and our industrial usages of water go up and up and up. It should be clear, therefore, that at some point in time, our use of water will equal our available supply and, at that time, our Nation will run out of water. Can you imagine the effect? Industrial growth would be stymied; population pressures stemming from limited water supplies would create a crisis such as we have never seen before; our whole economy would be upset as the price water would command would begin to sour upward and upward. The fact of the matter is that on paper we reached this crisis point in 1957. At that time, our withdrawal rate of fresh water actually exceeded our de-pendable supply and yet, no such calamitous water crisis has occurred. Certainly we have water problems, but we have not seen the fulfillment of the many predictions of "water doom" which are based on the argument I have just presented.

The real answer is that our Nation, as a whole, is not running out of water and will not run out of water within the reasonably foreseeable future. The simplest explanation is this: First, neither our water supply nor our water needs are uniformly distributed geographically. Second, neither our water supply nor our water demands are uniformly distributed with time, and third, and most important of all, all of the water withdrawn and used by our cities, by our industries, and by our farms is not consumed. Much of it, in fact most of it is returned to our fresh water resource for re-use. Recognition of this one simple fact, I believe, will lead to a more realistic understanding of our water problems in this country than any other single thing. The fact that the very same water is being used and re-used on this earth over and over again is almost obvious if you stop to think about it, but very few people have taken time to reflect on the problem in this way. I can prove, for example, that this very glass of water, or in fact, any glass of water that the residents of Bridgewater will draw from the output of this new treatment plant will contain some of the very same molecules of H₂O which were in the Red See when Mos crossed from Egypt or which touched Jesus' body when he was baptized in the Jordan. This use and re-use of the world's water supply has been recognized for thousands

In the Bible, for example, Ecclesiastes 1: 7 says, "All the rivers run into the sea, yet

the sea is not full; unto the place from whence the rivers come, thither they re-turn again." In modern terms we call this the hydrologic cycle. Rain falls to the earth, runs to the sea, and is evaporated to form rain clouds once again. Re-use of water occurs, however, not only through the hydrologic cycle but as population expands and industry requirements increase, re-use occurs inevitably through an ever-tightening circle of withdrawal, use, discharge, and reuse even while "the rivers run into the sea." It is this recognition of both deliberate and non-deliberate use and re-use which ties together so intimately the problems of water supply and water pollution and which emphasizes so strongly that these problems can-not be divorced from one another but rather must be examined and resolved simultaneously through a major coordinated effort by municipalities, by States, by industries, and by the Federal Government working together to give us our vital heritage—clean water at the right place, at the right time, and in the right quantity for all of the beneficial uses of water man should enjoy.

Thank you.

Captive Nations Week

SPEECH OF

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. RUMSFELD. Mr. Speaker, this week the Nation is observing Captive Nations Week. Twenty-two separate nationalities have lost their independence in recent decades through direct and indirect aggression of Communist forces. We are now fighting a war to preserve the freedom of another nation against Communist aggression. Although the eves of the world today are on Asia, we cannot forget the totalitarian rule that still holds in bondage the people of east and central Europe.

Man's yearning for freedom has been a driving force throughout the history of the human race. Those who have once known freedom and lost it realize full well how precious is this inalienable right. The forces of liberty in the cap-tive lands continue to fight Communist tyranny and to look to the free world to help maintain their faith in their struggle for freedom and independence. The people of this country who cherished individual freedom and national liberty as a priceless possession give recognition and observance to the aspirations of these oppressed people. We stand here to reassure them that we remain firm in our policy of self-determination of nations and of individual dignity and

Mr. Speaker, man's yearning for peace cannot be fulfilled until every nation is free to determine its own destiny and until every individual lives in the full knowledge that liberty and justice pre-Today we bring hope and courage to those still struggling under the yoke of tyranny and new determination to those who remain free to guard their freedom. We hope and pray that the day will soon come when the cause of liberty will triumph—as it mustall captive people will once more lift their heads as free men.

U.S. Industries Plunge Into Oceanspace

EXTENSION OF REMARKS

HON. RICHARD D. McCARTHY

OF WEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1966

Mr. McCARTHY. Mr. Speaker, the oceans of the world, covering threefourths of its surface, are luring 20th century man to their infinite resources and untold riches.

Three to five hundred companies are talking about a new American continent where one day man is expected to live,

work, and play,

A recent article in the Buffalo Evening News, "Industries Are Going Underwater for Space Age Profits," delineates the visions of industry, Government, and the academic community for "cities under the sea" on the Continental Shelf. For United States this means approximately 800,000 square miles of underwater continent.

Many of the Nation's largest industrial giants are participating in this plunge

into oceanspace.

Under leave to extend my remarks, I commend this article to the attention of my colleagues:

INDUSTRIES ARE GOING UNDERWATER FOR SPACE-AGE PROFITS

(By Rose Allegato)

WASHINGTON, July 9 .-- A new "ocean consciousness' is luring the 20th-Century corporate man back to the ancient sea.

Visionaires in big business are talking about a new American continent—the sea floor where man can one day work, play and even live.

They are backing their talk of "cities under the sea" with money—a \$2 billion in-vestment this year alone in deep-sea pioneering.

Blue chip names in big business are "inner ace" disciples who see the ocean bottom the last frontier to conquer and colonize the "new world" of this century.

They think the "70s will be their decade.

one that will pay off more than a man on

the moon.

Industry, government and the academic

community envision:

A Lewis-and-Clark kind of expedition of the continental shelf to plant the American flag on the ocean bottom (the continental shelf is the submerged land just off our asts.)

Prospectors with picks and mechanical burros mining the ocean floor with the same aplomb as their forerunners in the western mountains.

Sailors reporting for duty at defense bases

under the sea.
Settlers "homesteading" the higher spots of the scabed along the Atlantic ridge.

In 10 years or so, the world's fresh water

supply coming from seawater or artisan (fresh water) wells discovered in the briny deep. (Some have been found off Florida.

Control of the world's climate through control of scean currents.

Oil drilling by men living on the ocean

Just as the ocean beckoned to businessmen in the middle ages, it beckons now. The National Association of Manufacturers says 300 to 500 top companies are getting their feet wet in the modern rush to the sea.

Industry's interest-it puts up from 50 to 70% of the money invested in sea pioneerg—is giving status to oceanography.

No one knows better than the oil industry,

which began offshore exploration as early as the mid-'30s, that there is a fortune under-

Dr. Charles F. Jones, president of Humble Oil Co., says the seas offer food, minerals, and energy in profusion.

He points out that three-quarters of the earth is covered by water and it is "essentially unexplored and untouched."

Jones thinks we may be facing "an international underwater treasure hunt with the winner's share going to the country with the best sea science."

At a 1958 Geneva conference, the United States and other countries were assigned title to their own continental shelves. For the U.S. this means an underwater continent of 800,000 square miles. Not as much land has been added to the United States since the Louisiana purchase of 1803.

But beyond the shelf, the nation's that get there first and dig in will probably reap

the sea's wealth.

Specifically, to conquer the sea, man must fathom its depths, down to 35,958 feet, the bottom of the deepest undersea trench, Challenger Deep in the pacific.

The handiest seabeds, and the most valuable, are the continental shelves

These submarine plains lie within the first thousand feet. They are only 10% of the ocean bottom. Yet they have half of the ocean's biological population and most of its commercially valuable minerals. They will probably be explored and settled first.

The Navy's Sealab II has reached 205 feet off La Jolla, Calif. Men, including astro-naut Scott Carpenter, lived and worked in the undersea chamber for 45 days. In the spring of 1967, Sealab III will go down to 400 It will be a prelude to a more ambitious "home-in-the-sea," called the Habthat. By 1969 or 1970, the Navy hopes to put the Habitat down at 600 feet and leave it

Like counterpart space platforms, the Habitat would be a jumping off spot for astronauts. With a small sub, stored in the Habitat, they would make voyages to the bottom of the sea

Hannes Keller has left a diving bell at 1000 feet for less than a minute for an ocean-

Another 15% of the sea-floor lies within the first 6000 feet. Most of America's small subs, built either by government or private industry, operate here. The Aluminaut, made by Reynolds Aluminum, and one of the craft that raised the H-bomb off Spain, holds the "deep record." It has been down to 6250 feet and is built for 15,000 feet.

Most of the ocean floor lies between 6000 to 20,000 feet. Called the unknown world of innerspace, it has been penetrated by man only a very few times. (The Bathyscaphe Trieste and a two-man crew went into Challenger Deep in 1960.)

By the end of 1967, the Navy hopes to begin on a deep-diving research sub that will eventually put us 20,000 feet under the sea.

The Navy and Atomic Energy Commission are teaming up to develop NR-1, a sub that could sit an the ocean floor for long periods of time. It would be equipped with a small nuclear propulsion plant. Where do we stand on developing the sea's wealth. Here's a thumbnail look.

Minerals: We now get all of our magnesium and much of our bromine from the sea. Sulphur and coal also have been taken from the ocean. Tin is the next big development.

Important lodes have been found off the United Kingdom and Malaysa. Six com-panies are prospecting for platinum off Alaska and showing their samples. There is

gold, copper, and even diamonds.

Oil: Offshore oil exploration began three decades ago and now the industry is convinced that one-sixth of the proven oil reserves lie under the sea. Offshore oil fields in the free world are producing over 4,000,000 barrels of oil a day or 16% of the free world's total. This industry has made more profit

from ocean than any other. Seafood: Fishing is as old as history, but now, fishermen will go after fish of types man has never tasted.

Who are the industrial giants taking the dip into oceanspace?

U.S. Steel, which has established a research division to develop and test super-strong steel that could withstand the tremendous pressures of the deep.

Lockheed has established a marine laboratory and is developing Deep Quest, a sub to operate a mile down.

Westinghouse is building a new research and test facility, adding highly sophisticated diving support systems to its torpedo and sonar business.

General Electric and General Dynamics have entered the field. General Dynamics built a two-man sub called Asherah. Union Carbide, General Precision, and

Edwin A. Link have teamed up to form Ocean Systems Inc., which will manufacture diving

support systems and provide divers.

Brown & Root is putting its know-how in offshore oil engineering to work in the Mohole ocean-bottom coring project to penetrate the earth's mantle.

Reynolds Aluminum launched its deep-

sea sub Aluminaut in 1964, and Aluminum Co. of America is producing aluminum spheres designed to protect delicate instruments below the surface.

No one expects the new surge to slow down, mainly because there's money to be made undersea.

Captive Nations Observance

SPEECH

HON. JOSEPH P. ADDABBO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. ADDABBO. Mr. Speaker, again this Nation and freedom-loving people everywhere join in observing Captive Na-Week. I feel honored to again have the opportunity to join in this observance.

Today we are fighting in southeast Asia to preserve the rights of a people to their sovereignty and to live under a government of their own choosing. While this fight is going on with military weapons of war, there is a quiet but persistent fight of many people to again obtain the freedom to which they are entitled. I refer to the many countries, the captive nations, now under the yoke of communism which came about forceable action on the part of the So-These nations look to us for support in their unceasing quest for selfdetermination.

As we live up to our commitments in southeast Asia, we are in effect reaffirming to all nations the fact that a pledge by the United States will be honored.

As we stand against the spread of communism in southeast Asia, we give courage to the courageous people of the captive nations in their determination to stand free of the tyranny of that

ideology.

While we set aside this one week of the year to renew our pledges of support for these nations, we must keep them in the forefront of our minds and in our deeds throughout the year continue our efforts in their behalf.

Captive Nations Week, 1966

SPEECH

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mrs. KELLY. Mr. Speaker, in the eighth annual response to a unanimous resolution of the 86th Congress, the President has designated this week as

Captive Nations Week.

The United States is justly concerned with the aggressive efforts of the Communists throughout the world today, but far too little attention is given to those countries who have already been caught in the constricting vice of Communist oppression. Captive Nations Week duly focuses on those countries who formerly had their own form of government and whose people have since been unwillingly subjugated by the Communists; this deplorable situation, of course, exists not only in Eastern Europe, but also in Cuba, a number of territories now enclosed within the U.S.S.R., and many areas of Asia. Through the various ceremonies and activities scheduled for this week, Americans will again display their dedication to the reachievement of personal dignity, freedom, and independence by these peoples.

The objective of Captive Nations Week is thus to demonstrate the American determination that Communist subjugation is never to be recognized as a permanent situation; the resistance of the courageous peoples in dominated countries and of their valiant relatives and friends elsewhere cannot go unaided or

unassisted

le

n

is

le

8

g.

in re es, ke by o-p-if-in m-leed.

Therefore, it is in a spirit of encouragement and action that we should observe Captive Nations Week, recognizing the duty of the free world to release the bonded from their captivity under despotism. We are in pursuit of freedom; and we shall not lose.

Captive Nations Week

SPEECH

HON. J. WILLIAM STANTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. STANTON. Mr. Speaker, I welcome this opportunity to express my support for the aims of the Captive Nations Week observance. I consider it a deep tragedy that at a time when colonial empires all over the world have virtually disappeared, the colonial status imposed by communism has retained its grip over the lives of more than a hundred million souls. Following events in Eastern and Central Europe today, one is almost led to believe that genuine freedom and justice does exist. However, this is certainly not the case, and we must make certain that the world knows the truth of Communist deception.

By the end of World War II, Soviet Russia was well on the way to becoming a great power, and at the same time, she was demonstrating attitudes as barbaric and negative as those of the Nazis who had just been defeated. Few acts perpertrated by the Soviets were as blatant and loathsome as was the capture and enslavement of the large number of East European nations. That was, and remains to this day, a most shocking and heart-rending case of international banditry.

Prior to the war these nations had constituted independent, sovereign states in their respective lands with a culture and past of their own. As a result of the war, and in its wake, all of them were quickly overwhelmed by the Red army, and then gradually enslaved as satellites of the Soviet Union.

The fate of these people must be of vital concern to each of us. We must do all in our power to encourage and hasten the day when these people will join us in working for a better world in which to

work and live.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Gov-ernment publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

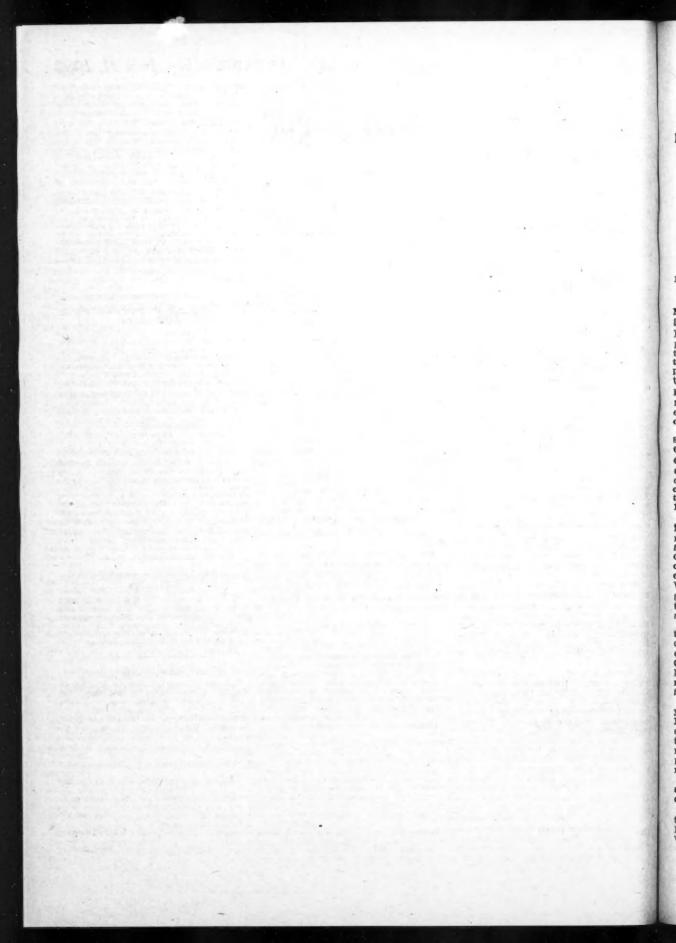

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracta from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Frinter, under the direction of the Joint Committee on Frinting, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

National Petroleum Council Excellent Example of Government-Industry Cooperation in the Public Interest—Hon. Stewart L. Udall, Secretary of the Interior, Commends the Council for 20 Years of Service

EXTENSION OF REMARKS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES
Friday, July 22, 1966

Mr. RANDOLPH. Mr. President, in May 1946, the President of the United States, by letter to the Secretary of the Interior, stated that he had been impressed with the meaningful contributions of Government-industry cooperation in the success of the World War II petroleum program. He commented on the importance of such close and harmonious relations between the Government and the petroleum industry, and emphasized his belief that it should be continued.

Accordingly, President Truman suggested that the Secretary of the Interior establish an industry organization to consult with and advise the Department on oil and gas matters. Pursuant to this direction, the National Petroleum Council was established by the Secretary of the Interior, Hon. J. A. Krug, on June 18, 1946.

In honor of the 20th anniversary of its establishment the Council held a dinner last Monday evening, July 18, at the Statler-Hilton Hotel, Washington, D.C. Guests included members of the Council, congressional and governmental leaders, and oil and gas industry officials. West Virginia is an important oil and gas producing State, and I was pleased to be present on this important occa-

The purpose of the Council is solely to advise, inform, and make recommendations to the Secretary of the Interior or the Director of the Office of Oil and Gas with respect to matters which relate to the industry, and which are submitted to the Council or approved by the Secretary or Director.

Its members are appointed each fiscal year by the Secretary of the Interior. Membership is drawn from all segments of the petroleum and natural gas industries, from the production phase to the retail marketing level. It is wholly supported by the voluntary contributions received from members.

The Council is headed by a Chairman and Vice Chairman, and the Secretary of the Interior serves as a Cochairman.

Mr. President, I am pleased to note that the first Chairman of the National Petroleum Council was the Honorable Walter S. Hallanan, of Charleston, W. Va. Mr. Hallanan, a cherished friend, served in this responsible post for the first 16 years of the Council's existence, and made many contributions in bringing it to the present level of responsive and effective action.

From 1962-64 the Council was headed by R. G. Follis, chief executive officer of Standard Oil of California. Mr. Follis was succeeded by Jake L. Hamon, an independent oil producer from Dallas, Tex., who was honored at the July 18 dinner. He was presented a citation by former Assistant Secretary of the Interior John M. Kelly. The citation expressed the appreciation of Council members for Mr. Hamon's outstanding service and leadership.

Now serving as Council Chairman, having been elected at a meeting on July 19, is James C. Donnell II, president of

Marathon Oil Co.

Mr. President, there were two speakers at the anniversary dinner. Carl E. Reistle, Jr., former chairman of the board of Humble Oil & Refining Co., urged closer communication between leaders of government and industry. He pointed out that this interchange of ideus has been instrumental in building a 20-year record of effective action between the Council and the Department of Interior.

Hon. Stewart L. Udall, Secretary of the Interior, responded for Government. The Secretary expressed appreciation to the Council for its substantial assistance over the years. He point out that we must have the closest liaison and cooperative effort between Government and industry if we are to meet the challenges of a highly industrialized society.

It is also noteworthy that the former Secretary of the Interior, Hon. Oscar L. Chapman, was in attendance on this occasion, and was received warmly. He ploneered in the Government-industry

concent

Mr. President, the Council is a continuing means through which the American Government and our oil and gas industries can work jointly in promoting long-term national security and emergency preparedness. During its life the Council has prepared at the request of the Department of the Interior more than 160 detailed studies on the complex operations of the petroleum indus-The problems examined fall into four categories: supplies of crude oil, natural gas, and petroleum products; facilities for producing, refining, transporting, and storing oil and gas; advance planning and preparations by the Government and industry for possible national emergencies; and specialized informational and advisory studies.

I commend the National Petroleum Council and congratulate its members for lasting contributions to the public welfare. It is an excellent example of the positive results which can be achieved through a working partnership between our Federal Government and the private sector of the economy.

I request that the address of Hon. Stewart L. Udall, at the July 18, 1966, meeting of the National Petroleum Council be printed in the Appendix, together with the text a citation presented to Jake L. Hamon on that occasion.

There being no objection, the address and citation were ordered to be printed

in the RECORD, as follows:

REMARKS OF THE HONORABLE STEWART L. UDALL, SECRETARY OF THE INTERIOR, BEFORE THE NATIONAL PETROLEUM COUNCIL, WASHINGTON, D.C., JULY 19, 1965

I would like to begin my remarks with a quotation from a distinguished writer and city planner about a current problem: "If atmospheric sewage was the first mark of paleotechnic industry, stream pollution was the second. The dumping of industrial and chemical waste products into the streams was a characteristic mark of the new order. Wherever the factories went, the streams became foul and poisonous; the fish died ör were forced, like the Hudson shad, to migrate, and the water became, unfit for either drinking or bathing. In many cases the refuse so wantonly disposed of was in fact capable of being used; but the whole method of industry was so shortsighted and so unscientific that the full utilisation of by-products did not concern anyone for the first century or so. What the streams could not transport away remained in piles and hillocks on the outskirts of the industrial plant, unless it could be used to fill in the water-courses or the swamps on the new sites of the industrial city."

Does all this sound like something you read in the Magazine section of the New York Times last week? It isn't. This was Lewis Mumford, writing in 1930 about a condition that had attended the very birth of Western industrial society, and which has steadily worsened in direct proportion to the growth of what Mumford aptly called "carboniferous

capitalism."

My point is simply that the problem of environmental pollution is not new. The new feature in the story is the encouraging fact that under President Johnson's leadership we have finally recognized that we do have a problem—a national problem—and that we must find a solution as the condition for our continued survival. This is a strong statement. I believe it. I believe that we must restore our air and our water resources to some tolerable state of purity or we shall as a nation surely suffocate in our own effluvia.

For nearly three hundred and sixty years we have been steadily building a naction, organizing and exploiting an incredible inventory of natural resources to make ourselves the richest, most powerful people the world has ever known. We have buildings that rise a thousand feet into the air; planes that span the continent in four hours; automobiles—nearly one for every two people—that transport the average American family farther in an hour than George Washington could travel in a week—and in air-conditioned comfort to boot. We have poured out of our horn of plenty a flood of devices to ease the burdens of housewife and mill worker alike. This year we shall increase our grose national product in real terms by over \$40 billion over that of 1965. No people on earth ever had more in the way of material comforts and conveniences; and no peo-

ple on earth ever had to put forth less physical toil to enjoy them.

We have come this far in only three centuries. We are indeed an affluent society. But as you fly at 600 miles an hour to-

But as you my at 600 mies an hour toward any one of several of our major cities, the first thing that tells you of its presence is likely to be a pall of yellow haze that floats like a blanket between the city and the blue sky.

In the largest of these cities last summer you had to ask for a glass of water to go with your dinner. The waitress risked a fine if she provided it without your specific order. In other cities the aroma of rotten cabbage and the sour taste on your tongue tell you of the proximity of a pulp mill or a chemical plant. In a hundred valleys of the Appalachians the corrosive leachings from coal mines poison the streams and everything in them. In the Great Lakes area, rivers warm to the touch, and loaded with human and industrial waste, threatens to make a second Dead Sea of Lake Erie, and seriously menace the lower portion of Lake

But if you should fall into it, your wisest action would be to go get a typhoid shot. We have come this far, too, in only three centuries. We are also an effluent society.

Michigan. On our own doorstep you can admire the quiet beauty of the Potomac.

The truth is that there is a direct connec-Lon between affluence and effluents. Our material opulence is the product of an enormous conversion of natural resources to human use, accomplished through the interaction of technology and energy upon the raw products of the land. The inevitable byproduct of this massive conversion is a vast amount of waste material which has no appare it economic use and which has to be disposed of in some manner. Our traditional way of disposing of the fluid portion of these wastes has been to pump it into the air or into the closest watercourse in the hope that a forgiving Mother Nature would somehow take care of it for us. And for many genera-tions, she did. But no more. There are so many of us, and our capacity create pollutants is now so extensive that we can no longer trust the assimilative capacity of our air and water to absorb the unanted residue of our industrial society.

We are very late in recognizing the seriousness of the problem we have created for ourselves, in no small measure because of the fugitive nature of our air and water resources. It was a simple matter to vent pollutants into the air or the nearby river, knowing that the next day they would be gone, borne away by the currents of wind and water. And all too few were troubled by the fact that they had simply moved their problem downstream a few miles, there to wer the lives of their riparian neighbors. Both authority and responsibility were fragmented along the course of our Nation's major streams, with the result that all could degrade and abuse them, and none could raise an effective voice of protest against what was taking place.

Slowly—very slowly—our Nation began to awaken to the fact that a river that extends for a thousand miles through a dozen states and a hundred municipalities cannot be adequately protected by any authority below that of the Federal government. The first official recognition of this truth cams with the passage of the Water Pollution Control Act in 1948—the first to pass of more than 100 anti-pollution bills that have been introduced in Congress in the preceding 60 years. Although the law had no great impact, at least it represented a victory over the forces that have su consistently and successfully opposed Federal entry into this particular area.

In the years since 1948 public awareness of water pollution problems became more perceptive and the demands for their solution more insistent. But it was not until President Johnson rallied the Nation to full

understanding and acceptance of the great efforts needed to correct the situation that real progress began to be made.

In Feburary of 1965 the President sent to Congress his now famous message on Natural Beauty. In it was included an assignment to me, to take the leadership in devising a clean-up program for the Potomac River. His language was blunt and clear: "Clean up the river and keep it clean, so it can be used for boating, swimming, and fishing."

used for boating, swimming, and fishing."
Eight months later, at a ceremony at the
White House, the President elaborated on
his clean-up order. In equally blunt and
clear terms, he deplored the use of rivers as
pipelines for toxic wastes. And then he said:

"This sort of carelessness and selfishness simply ought to be stopped; and more, it must be reversed. And we are going to reverse it. We are going to begin right here in Washington with the Potomac River ... with the signing of the Water Quality Act of 1965 this morning, I pledge you that we are going to reopen the Potomac for swimning in 1975. And within the next 25 years we are going to repeat this effort in lakes and streams and other rivers across this country."

In Feburary of this year, the President announced a reorganization plan to transfer to the Department of the Interior the Federal Water Pollution Control Administration, which was then under the Department of Health, Education, and Welfare. Last May 10 this transfer became effective. It was, as I said at the time, a "red-letter" day in my five and a half years as Secretary. The legislative authority and the administrative structure are now available for an effective attack upon the formidable problems of water pollution at a truly national level.

As a result of the Water Quality Act, we of the Federal establishment find ourselves in a new role. The water quality standards afford us an opportunity to extend our nationwide effort beyond mere correction and into the area of prevention. The battle for better environment thus moves from a rearguard action to a forward attack. The task is no longer just to clean up yesterday's mess, but to prevent tomorrow's from occurring at all.

The guidelines to the States have been established pursuant to the authority containted in the Act, and the response has been uniformly satisfactory. I have even detected a note of relief that the troublesome task of insuring equitable application of water quality standards is to be shouldered by the Federal government.

These standards will take into consideration several factors. One of particular interest to refiners and petrochemical manufacturers is your competitive position with relation to plants in other regions. In recognition of this problem, the Federal position is a reasonable one. It takes account of the economic feasibility of water quality requirements and sets up hearing procedures by which affected industries may state their cases for modification of proposed standards. We want to have full knowledge beforehand of what the likely effects of our contemplated actions will be. We do not intend for our enforcement practices to be hasty or illadvised. We do intend for them to be effective.

In this national water clean-up effort we ned—we welcome—your help. Water and oil may not mix, but they certainly have a lot to do with one another. I was amazed to learn recently of the tremendous volumes of water—most of it saline—that oil producers must dispose of in the course of their operations: 24 million barrels of it a day; a million barrels every hour; 3 barrels of water for every barrel of crude oil produced. I was also gratified by the manner in which your industry, working with State conservation authorities, is dealing with the probelem: the protection of fresh groundwater strata by drilling, casing, completion and

abandonment procedures which insure that no brines or other contaminants are allowed to leak into fresh water aquifers; the reinjection of saline water into oil reservoirs to stimulate recovery-a double dividend for conservation; and the steady reduction of the amount of salt water being disposed of in surface pits. The oil industry's record of brine disposal is one of encouraging progress. But in 1963, over 21/2 million barrels a day of salt waer was still going into unlined pits and another million was going into streams and rivers. You still have a way to go, but your willingness and ability to progress in this area have been demonstrated, and you need only to press to a conclusion the excellent programs you now have under

Oil processing operations also use huge amounts of water, with the possibility that the water returned to the streamflow may be contaminated by oil droplets, or by chemical wastes, even though in minuscule concentrations. The oil industry has done much in the past to reduce the frequency and extent of such occurrences, and the very large sums of money the refining segment has spent, and is spending, for the abatement of air and water pollution is a testament to the importance you attach to this effort. The cooperation of the refiners in the Chicago area in working with Federal, State and local officials in the effort to save Lake Michigan is another example of responsible civic action. Your initiative is appreciated. Your continued active support of and participation in pollution abatement actions is solicited.

Nobody expects the clean-up program to be cheap. Last year the people of New York State voted four to one for a billion dollar bond issue to clean up their rivers. many more billions must be paid by other citizens in other parts of the country before we can begin to see the kind of results we are aiming for. What makes the programs appear so costly to us now is the fact that for a hundred years we have been skimping on the essential and legitimate costs of our material abundance. We have not been paying full fare. We have failed to face up to the fact that the cost of clean-up, the cost of restoring the landscape for other uses, the cost of properly disposing of waste on a current basis, are all properly chargeable items in the price we should have been paying for our goods and services for many years gone by.

From now on we shall not only have to pay the current costs of these items, but we shall have to amortize the deferred charges of the past several decades as well. It is quite a load. But there is no reason for the most prosperous nation in the world to give off the look and smell of the shabblest. We can surely create an environment worthy of our wealth, our talents, and our technical skill. We can have again the clean sir, the clear streams, the sparking lakes, the white unblemished beaches that have been so largely lost to us through generations of shortsightedness and neglect.

We meet on the common ground of concern for our environment. From each of our secture of society must come a sincere effort to improve the quality of that environment. Working together in a spirit of cooperation and understanding, I know we can succeed.

PRESENTED BY THE MEMBERS OF THE NATIONAL PETROLEUM COUNCIL TO JAKE L. HAMON ON THE OCCASION OF ITS 20TH ANNIVERSARY

In grateful appreciation for his outstanding leadership as Chairman of the National Petroleum Council, 1964–1966.

As a charter member of the Council, he has continued to serve this organization for 18 years. He has actively participated in over 20 major study committees of this Council, and has been a member of its Agenda Committee since 1961.

Through his abiding belief in the value of the National Petroleum Council, together d

with his complete dedication to its purposes, Jake L. Hamon exemplifies the principle that the American oil and gas industries can and should cooperate at all times with the Government of the United States in the interest

of this Nation and its people.

Throughout his life Jake L. Hamon has worked diligently to serve the petroleum industry, of which he is a most vibrant part, through positions of utmost responsibility which he has so faithfully fulfilled. Yet he has not confined his energies solely to the oil industry, but has also given of himself unstintingly toward the betterment of his community, state and country.

The Members of the National Petroleum Council, by this Citation, wish to express to their associate, Jake L. Hamon, their deep appreciation for his warm friendship, for his devotion to those sound principles in which he believes, and love of his fellow man. Let it be known, therefore, that we, the Members of the National Petroleum Council, regard Jake Hamon as a good friend, and respect him as a true gentleman, an industry states-

man, and a great American.

Presented this 18th day of July, 1966, in the City of Washington in the District of Columbia.

Captive Nations Week

SPEECH

OF

HON. L. H. FOUNTAIN

OF NURTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. FOUNTAIN. Mr. Speaker, I am pleased to join with my colleagues in commemorating the observance of the Captive Nations Week.

Two decades have passed since the Allied victory in World War II, but millions of people in Eastern and Central Europe are still awaiting the day when they will be able to exercise fully their right to self-determination.

In all of those countries—from Latvia, Lithuania, and Estonia on the north, to little Albania on the south-freedom has not been made secure. Ruled by Communist regimes, the people of those countries are denied the opportunity to shape the destinies of their nations in a manner consistent with our Western tradition. Neither are they able to exercise their basic human rights—even in instances where such rights as freedom of conscience, of speech, and so on, are ostensibly guaranteed to them by their constitutions.

Mr. Speaker, the Subcommittee on Europe of the Committee on Foreign Affairs, has conducted hearings relating to the conditions in Eastern and Central Europe. The record of those hearings amply documents the plight of those people and exposes the hypocrisy of Com-munist professions of respect for the dignity and worth of all human beings.

It is for this reason, Mr. Speaker, that the Congress and our Chief Executives have for years observed this Captive Nations Week. The whole purpose of this observance is to focus attention on conditions prevailing in Eastern and Central Europe and to reaffirm our refusal to accept them as permanent.

Mr. Speaker, I join with my colleagues in expressing our hope that the day will soon come when the people of such coun-

tries as Poland, Hungary, Rumania, and of all the other countries currently dominated by communism, will once again enjoy the full blessings of freedom.

"Planned Noise" and Aircraft Noise-A Whimsical Interview

EXTENSION OF REMARKS OF

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. HALPERN. Mr. Speaker, Washington's political pundit Art Buchwald, paid a visit to New York City recently and reported on one aspect of his observations of my hometown. He reported,, in the Sunday, July 10, 1966, edition of the Washington Post that he visited the central office of the "Planned Noise Organization," which, he said, "has the contract for making New York one of the noisiest cities in the country.'

Observer Buchwald interviewed the head of the company and was shown a map, with various colors designating degrees of noise in the city. "The red areas are where we have made our greatest impact," the company president said.

While the "planned noise" company's president admitted there are parts of Queens and Staten Island which are still "virgin territory," the group has suc-cessfully instilled in parts of Queens a certain decible-consciousness.

Mr. Buchwald asked:

I noticed there are sections of Queens that are marked in red. What did you do there?

The planned noise company president declared:

That was one of our toughest jobs.

We didn't have enough jackhammers or garbage trucks to do a decent job in Queens, but we had something else in our favor. found out that the jet planes landing at LaGuardia and Kennedy were making their approaches to the airports over water. So we arranged with the airlines to have the jets make their approaches over the densely populated areas at night, and now we not only keep people awake in Queens but in parts of Brooklyn and Nassau County as well.

Although I am sure that "planned noise" is not as real as the planned music of Muzak, Mr. Buchwald's observation do point to the need for further research and development of aircraft noise controls-both mechanical and regulatory. While noise restrictions should not exist at the expense of air travel safety, I am convinced that there can be further reduction of aircraft noise so that citizens of areas in Queens and others living near airports can be spared this sonic nuisance

Following is Mr. Buchwald's column: Macbeth at Large—Clever Organization
Murders Sleep Nightly in New York

(By Art Buchwald)

New York.—It's hard to believe that noise in a major city is accidental. Most noise these days is planned and there are even companies who specialize in it. One such company is located in New York City and is known as the Planned Noise Organization,

It has the contract for making New York one

of the noisiest cities in the country.

I interviewed the president of the PNO in his luxurious offices on Sixth Avenue. He showed me a map of the five boroughs.

The different colors on the map," he said, "stand for the success of failure we've had in our noise campaign. The red areas are where we have made our greatest impact. There people get an average of four hours sleep a night. The blue areas are where we have made some inroads, but unfortunately acceled the state of the s people still get six hours sleep a night. The green areas over here in Staten Island and parts of Queens are virgin territory which we haven't gotten around to yet. Residents there still get eight hours sleep a night, but they won't for long."

"How do you manage to make a place noisy?" I asked him.

"We have many ways of doing it. Let's take 56th Street for example. For quite some time it was a very quiet street and the city vas making very little headway in keeping the people awake. So they hired us. The first thing we did was to start digging up the streets at six in the morning on the

pretense that it had to be paved.

"We did this for several weeks, but the people started to complain, so we had to come up with something more permanent. We discovered that the garbage trucks on 56th Street were making their pick-ups at 10 o'clock in the morning. Therefore we revised their schedule so they would start picking up and grinding garbage at 4:30 in the morning."

"That's wonderful," I said. "I notice there are sections of Queens that are marked

in red. What did you do there?"
"That was one of our toughest jobs. We didn't have enough jackhammers or garbage trucks to do a decent job in Queens, but we had something else in our favor. We found out that the jet planes landing at LaGuardia and Kennedy were making their approaches to the airports over water. So we arranged with the airlines to have the jets make their approaches over the densely populated areas at night, and now we not only keep people awake in Gueens, but in parts of Brooklyn and Nassau County as well."

"Do you ever use automobile horns in your work?"

"We have on occasion started honking horns in a quiet section late at night, but it hasn't had any lasting effect. We'd much prefer to use police sirens and fire engines or to get a group of teenagers and give them a free case of beer around two in the morn-

"But those are only special jobs," he said.
"For the long pull, the best way to keep people from sleeping is to arrange to tear down a building next to them or build a subway under their street."

"That must require quite a bit of funds," T said.

"Money has never been a problem when it comes to keeping people in New York awake. But in the past it's been a hit or miss proposition. With our planning organization will be able to make every part of the city as noisy as every other part. Our goal for 1970 is to cut the average amount of sleep of each person down to two hours a night if they're lucky, that is."

Government by Law

EXTENSION OF REMARKS OF

HON, STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, July 22, 1966

Mr. THURMOND. Mr. President, I would like to call to the attention of the

Congress and the Nation a fine editorial entitled "Government by Law," which appeared in the Wednesday, July 13, 1966, issue of the Aiken Standard and Review, Aiken, S.C. This editorial is a succinct statement on the grave situation existing in this country today where we are seeing demonstrations and intimidations threaten our system of laws.

I ask unanimous consent that this article appear in the Appendix of the Con-GRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

GOVERNMENT BY LAW

A danger in the United States today is that demonstrations and intimidations will replace government by orderly, le,,al process.

It is very difficult to draw a line, in opposition to peaceful demonstrations. During the sit-in vogue, with a minority seeking goals most Americans were in sympathy with, many were nevertheless disturbed that crowds were allowed to enter a private place of business, sit in all chairs or on all stools, disrupt the business completely—the owner having no access to law or protection.

Many people are in sympathy with the goals of the leaders of some marches. But again, when thousands converge on a small rural town, some shouting such things as: "We want white blood now," it is almost certain to cause ill feeling at the last, and to do as much harm as good.

Of course, there are injustices on the other side perhaps outweighing the excesses of marchers but that is not the question. The question is how we can achieve lasting progress. One must question incorrect methods, or the taking of the law into one's own hands, though few politicians seem to do so. Now that the Communist Party has announced, as of June 24th, that its members will join the civil rights marchers and demonstrators, it seems that things could get out of hand.

There has been great progress by reliance on government by law and change by the due and legal process. Minorities in this country enjoy better living conditions and greater opportunities than anywhere else in the world. And change and new laws have been rapidly forthcoming. All Americans have much to be thankful for, and all should avoid extreme actions or counteractions.

Allied Health Professions Personnel Training Amendments

EXTENSION OF REMARKS

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1966

Mr. O'NEILL of Massachusetts. Mr. Speaker, on June 23 the House approved the allied health professions personnel training amendments, which authorize a 3-year program of Federal assistance to schools and students of the allied health professions. It passed unanimously; 364 to 0. I was proud to record my vote in favor of this forward-looking and urgently needed bill. Now, Mr. Speaker, I hope the Senate will act quickly on this measure. There is no question of partisanship—only one of health.

The allied health professions personnel training amendments is one of the

three major proposals of President Johnson's health message this year. In combination with the others—one to strengthen our attack upon the obsolescence of hospitals and other health facilities; and another to stimulate the development of comprehensive public health services—it will permit the Nation to move ahead in its efforts to insure, for all its people, the benefits of an unsurpassed medical care bility.

passed medical capability.

The final enactment of H.R. 13196 is essential. In this decade of the 1960's, the Nation's shortages of health manpower have for the first time received the congressional attention they so long demanded. With the Health Professions Educational Assistance Act and the Nurse Training Act, we have made possible a long overdue expansion of the training capacity of our professional schools. We have taken an important step toward assuring the quality and quantity of highly trained doctors, dentists, and nurses required by our national goals in health.

But health care is very much a team effort today. The team includes our physicians and dentists, our home health aids and practical nurses, our medical technologists and hospital administrators. I am happy that we are at last moving to assure that the needed allied health professions workers will be available.

A major gap has existed in what should be a comprehensive training effort-until now, with the hope of the Allied Health Professions Personnel Training Act becoming law, there has been no attempt to deal with the allied health professions. The allied health professions encompass some 30 occupations, each one vital to modern health services. Some of their members-medical record librarians, X-ray technologists-provide services essential to the operation of our hospitals and health facilities. Others—dental hygienists, for example-render health services under the supervision of more highly trained members of the health team.

Baccalaureate level training in the alled health professions is offered by colleges and universities throughout the country. And a growing number of junior colleges are preparing students for careers in certain allied professions through associate degree programs. Our manpower needs are so great that we must take advantage of all existing opportunities for training, and I was delighted that the bill, as reported from committee, and as passed by the House, will permit Federal assistance to both baccalaureate and associate degree programs.

For just seven of the allied health professions—dental hygiene, medical record library service, medical technology, occupational therapy, physical therapy, speech pathology and audiology, and X-ray technology, manpower estimates indicate the necessity for more than doubling our current manpower by 1975. To reach this goal, schools in the fields will have to graduate annually before 1975—twice as many medical X-ray technologists as they are now doing; twice as many speech pathologists and audiologists; three or four times as many dental

hygienists. There must be even greater increases in the numbers of workers trained in such occupations as medical record library service and physical ther-

H.R. 13196 will provide major support in reaching this goal. Through grants, it will aid colleges, universities, and junfor colleges in expanding and modernizing their teaching facilities and in improving their educational programs. advanced Through traineeships for training, it will prepare members of these professions for teaching, supervision, and administration. The shortage of teachers is a major block to still larger training programs. This bill, in addition, looks to the future of education in the allied health professions by encouraging the development of new types of health technologists and technicians.

Mr. Speaker, the Committee on Interstate and Foreign Commerce, and its distinguished chairman, should be commended for its most thoughtful consideration of this measure which is so important to the welfare of our country.

The health sciences move forward with every passing day. As they do, their potential benefits for the improved health of our people grow ever larger.

Medical science promises the rehabilitation to productive lives of the victims of accidents and strokes and heart attacks. It has made possible the early detection of such diseases as cancer and glaucoma—and the prevention of death and disability. To assure the full benefits of our great scientific advances to all who need them, there must be technologists and technicians to provide specialized services, to administer and process diagnostic tests.

Mr. Speaker, the action of the House on June 23 was a much needed step. We are at a crossroad. Our national commitment is a broad one-to provide the best possible health care to every citizen. Medicare and other new programs will make medical and hospital services accessible to many millions of Americans who have been unable to afford good medical care. Our great scientific advances are making medical diagnosis and treatment both more complex and more costly. Thus, even as we progress we have only begun-there must be changes in organization for the delivery of health care. There must be new and better kinds of facilities. And they cannot be

I am sure that all of my colleagues share my concern, and that they will continue to support the legislation we need to underwrite our promise of good health for all America.

Captive Nations Week

SPEECH

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mr. RHODES of Pennsylvania. Mr. Speaker, it has been almost 49 years since communism won its first victory by

179 by

overthrowing the Kerensky government in Russia. Since then Communists have seized power in Eastern Europe, parts of Asia, and most recently Cuba. Nowhere have the Communists come to power through free elections. Force and violence have been the hallmark of their success. The Congress which is elected by freemen has taken note of these misdeeds and others in the captive nations resolution of the 86th Congress and since then during Captive Nations Week.

We hope that things are getting better. that the era of suppression is passing. Still we read that the Lutheran Church is being prevented from holding its convocation in East Germany. The Polish Catholic hierarchy is being challenged by the Communist government as it attempts to celebrate the 1.000th anniversary of Poland's conversion to Christianity and Poland's birth as a nation.

In the Soviet Union itself, dissenting writers are being suppressed as illustrated by the trials held recently for two authors who dared to criticize the regime in their works.

These are but a few recent examples of how freedom is still being suppressed. We in the West know of them only because they involved famous people or large organizations. The plight of the common man is probably just as great for he is caught in conflicts between his inner strivings to be free and the world in which he must live.

Mr. Speaker, we can hope that some-day these people will be able to live in a world which will not suppress their desire to be free. Until that day we shall demonstrate through actions such as the proclamation of Captive Nations Week that we know of their plight and desire as much as they do to see a world which knows only freedom for all of its inhabi-

Disclosures of the Week-Part X

EXTENSION OF REMARKS OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. PELLY. Mr. Speaker, the usual number of unpleasant news items and other shocking bits of information came to my attention this past week. Among these were the following:

CASE I

Herb Robinson, associate editor of the Seattle Times, revealed a new item of Federal largesse. In his column recently he told of Project Public Information financed by Federal funds involving a mobile study which will travel throughout Alaska and the Pacific Northwest. It will produce documentary films, television news clips and articles to build the image of public schools. Critics call this unit a propaganda wagon. The cost to the taxpayers-\$153,000.

CASE II

The Wall Street Journal of July 15, 1966, in a report by Bryce Porter says things are worse than ever in Harlem and getting worse all the time. The poverty

It was disclosed last week that the Department of Justice dismissed an antitrust suit against the Anheuser-Busch Co. of St. Louis less than 30 days after the firm's top executives contributed a total of \$10,000 to the President's Club.

CASE IV

Congressman GERALD R. FORD, speaking of the urgent need for reform in the field of political finances said all who are interested in the integrity of the election process will be grieved that Congress is dragging its feet in considering bills to effect long-overdue reforms.

CASE V

Prof. F. Benham of the London School of Economics made a study of underdeveloped nations. He decided that to raise the more than 1 billion inhabitants of backward nations to a modest income level of \$200 each per year would require \$83 billions of foreign aid a year. This estimate was made in 1961. Writer Walter Trohan of the Chicago Tribune says the cost today would be \$100 billion per year.

CASE VI

According to the Chamber of Commerce of the United States strikes idled more workers during the first quarter of this year than in any similar period over the last 11 years.

CASE VII

The U.S. chamber also says it has analyzed 12 Great Society programs and found spending is up 258 percent since 1964 for these programs.

CASE VIII

Lyn Shepard, staff correspondent for the Christian Science Monitor gave the latest political whodunit. He noted that on July 12, 1966, Vice President HUBERT H. HUMPHREY flew to St. Louis in a plane furnished by Anheuser-Busch. President Busch arranged this so the Vice President could throw out the first ball at any all-star baseball game.

He later addressed a luncehon of major party contributors. The head of the Justice Department's antitrust division and son accompanied Mr. Hum-PHREY and flew back with him to Wash-

ington.

CARE DE

Columnists Robert S. Allen and Paul Scott have pointed out that Sargent Shriver has \$2.5 billion to spend in the poverty war.

The columnists' report says it goes without saying that the Democrats will take the utmost advantage of these funds to improve their uncertain election prospects.

School Desegregation in the North

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, July 22, 1966

Mr. THURMOND. Mr. President, in the July 7, 1966, edition of the Anderson

program, he says, does far more harm Free Press, Anderson, S.C., there appeared an editorial entitled "Northern Segregation." The editorial makes some excellent points on school desegregation and particularly as regards the development in this area which has taken place in many of the larger cities in the North.

> I ask unanimous consent that this editorial appear in the Appendix of the Con-GRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NORTHERN SEGREGATION

It has been 12 years since the U.S. Su-preme Court issued its famous ruling outlawing school desegregation, yet there is more school segregation than ever before in the north.

Since 1954, there has been a startling discovery that segregation is not confined to the Southern region. It is a national mat-ter, a fact that is disturbing among those who have left their own messy backyards and pilgrimaged South to protest the evils of segregation.

After all the effort to create an integrated educational system, this fact remains:

Within the next 25 years, if present trends continue, public school enrollments in all big U.S. cities will be almost entirely nonwhite, and the enrollment in private schools will be at least 90 per cent white.

The Wall Street Journal, commenting on the situation, says the neighborhood school—which has sound arguments in its favor in practice resulted in schools being all white or non-white, since few city neighborhoods are racially mixed.

"Negro leaders," the newspaper continued, "contend that sort of segregation is just as detrimental to Negro children as separate schools were in the South. The average white child is more ambitious, more educa tion-minded than the average Negro child; thus, Negro leaders say, the Negro child in a school with a few white youngsters lacks examples to emulate. Moreover, the teachers sometimes tend to shy away from schools where Negro predominate."

All the "expert" advice that has been of-fered on how the South can best achieve school integration apparently doesn't work

Chicago Woman Wages Fight Against Damming the Grand Canyon

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1968

Mr. REUSS. Mr. Speaker, like most Americans, I believe, Donna-Wynne Rhys, of Chicago, wants to see all 280 miles of the Grand Canyon preserved unspoiled and unmarred by two huge power dams.

But few, if any, have been as vigorous as Miss Rhys in her independent action to back up her convictions.

Miss Rhys has written letters of protest to the newspapers in her areas, has had printed bumper stickers against the damming of the Grand Canyon, and has collected 616 signatures on petitions protesting the proposed dambuilding and urging the passage of legislation to ex-

pand the Grand Canyon National Park to include the entire canyon. Among the signers of the petition are three Illi-nois mayors, Edward E. Bluthardt, of Schiller Park; Benjamin J. Brzezinski, of Franklin Park; and Joseph Sieb, of

Because of the strong feelings illustrated by these actions I include hereafter the petition circulated by Miss Rhys. As a result of her efforts a number of concerned individuals have also written to her to express their opposition to the dams. I include also two typical letters:

To the Committee on Interior and Insular Affairs, House of Representatives, Washington, D.C .:

"SAVE THE GRAND CANYON

"Must the Grand Canyon of Arizona, that awesome and wondrously beautiful work of nature, be sacrificed to industry?

"The U.S. Department of the Interior says it should. A House subcommittee has before it a bill sponsored by that department that would authorize the building of two dams across the Colorado River within the Grand Canyon. One of the dams, to be built at the lower end of the canyon, would flood the entire length of the Grand Canyon National Monument and back up 13 miles into the Grand Canyon National Park.

Those in favor of the dams say they are needed to irrigate Arizona. No one would deny that Arizona needs water. But that is not the real purpose of the dams.

"The purpose of the dams is to create a source of electrical power. The water the dams pen up in reservoirs will not be used for irrigation. It will be used as a source of power, one-fourth of which will be used to pump water to Arizona's Phoenix-Tucson areas from already existing Lake Havasu, be-hind the Parker Dam, far down the Colorado The remainder of the electrical power created by the dams will be sold. Opponents to the project have pointed out that there are sufficient alternatives to the proposed dama as a source of electrical power in the South-west and that Department of Interior spokesment have referred to the two dams as potential 'cash registers.'

"The Grand Canyon is one of the great scenic wonders of the world. On its walls are written millions of years of the geo-logic history of Earth. To contemplate trading that treasure for a 'cash register' is shameful.

"Rep. HENRY S. REUSS (D-Wis.) has introduced a bill to increase the size of Grand Canyon National Park and prevent the construction of the dams. Illinois members of the House should give Exuss full support. The Grand Canyon doesn't have to be de-stroyed but it will be if firm action is not taken.

We, the undersigned, join in a Petition protesting the construction of dams across the Colorado River within the Grand Canyon in accordance with the editorial contained in the Chicago Sun Times on Tuesday, May 10, 1966, a copy of which prefaces this Petition, and urge passage of bill No. H.R. 14211 introduced on March 31, 1966, by Rep. HENRY S. REUSS of Wisconsin to enlarge the boundaries of Grand Canyon National Park in the State of Arizona.

JUNE 20, 1966.

DEAR MRS. RHYS: I neglected to write this letter when I first saw your contribution in "Opinion of the People," intending to do it "some time". But yesterday I saw (for the second time) Joseph Wood Krutch's mag-nificent film about the Grand Canyon on television, and once again cringed at the

sight of the results of man "tinkering" with nature

So please forward our double protest to the men in Washington who will support ER 14211. We must put a stop to the despoilage of beautiful, natural landscapes to benefit a few people with money.

Sincerely,

Mr. and Mrs. M. E. Ross. PARK RIDGE, ILL.

WINNETKA, ILL.,

May 30, 1966. DEAR MRS. RHYS: Please add my name, that of my husband and of our friends, Mr. and Mrs. Weldon Reynolds of Evanston to suport HR 14211, and in opposition to any dam affecting the Grand Canyon.

We have written our representative to this effect, but want to add our voices to other pressures you can apply.

Sincerely.

MIRIAM F. STEEL.

Andy Borg, National Commander of Veterans of Foreign Wars, Urges Vietnam Step-up

EXTENSION OF REMARKS OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. TEAGUE of Texas. Mr. Speaker, last Saturday night, Mr. Andy Borg, national commander of the Veterans of Foreign Wars speaking in Asheville, N.C., urged a big and fast stepup in the U.S. war effort in Vietnam.

Under leave to extend my remarks in the RECORD, I would like to include a newspaper article on Mr. Borg's remarks and add that I am wholeheartedly in support of his remarks:

VFW COMMANDER URGES STEP-UP IN WAR EFFORT

A big and fast step-up in the U.S. war effort in Viet Nam was urged here Saturday night by Andy Borg of Superior, Wis., the commander-in-chief of the Veterans of Foreign Wars of the United States.

Borg delivered a major VFW policy speech at a banquet session of the mid-summer meeting of the Southern Conference of VFW

in the Battery Park Hotel.

The VFW chief said he had sent a telegram to President Lyndon B. Johnson "on behalf of the 1,300,000 oversens veterans of foreign wars" conveying the "complete support of foreign war veterans for your courageous and necessary decision to bomb enemy targets in the Hanoi-Haiphong area.

"This decision by you," Borg said in his telegram, "will reduce communist capability for aggression and will thus help reduce United States casualties and those of our

Commenting on the Viet Nam demonstra-tions, Borg said that the demonstrations by certain elements in South Viet Nam are an unfortunate, but understandable occur-

"There is no doubt that the turmoil, although limited as it apparently is to the three major cities, has temporarily slowed

the momentum of the war effort," he said.
"However," he continued, "the demonstra-tions have not altered the basic situation.
The fact still remains that the communists,

directed, supplied and supported by Red

China, and the Soviet Union, are waging a war of aggression against South Viet Nam."

The VFW chief also pointed out that communism is determined to seize that country and defeat the United States in the process and we must be just as determined the stop

"Of course," Borg said, "the demonstrators cannot all be labeled as communists. In a country which has been at war for 12 years. there are some who are tired and discouraged. But we would be naive, indeed to assume that the communists are not actively helping and exploiting the unrest.

Borg explained that the war has not been going well for the communists since the sizeable commitment of U.S. combat troops. "We must recognize that it is standard communist strategy for them to try to win in the streets what they cannot win on the battlefield," he said.

The VFW commander urged a four-point program in stepping up the U.S. war effort in Viet Nam:

Cut-off free world and communist-bloc shipping into North Viet Nam by blockade, Haiphong and, if necessary, mining the harbor.

Bomb fuel supplies, and other military targets in the Hanoi area.

Destroy railroad communications between Red China and North Viet Nam.

Build-up U.S. troop strength in South Viet Nam.

Borg explained that his recommendations with respect to South Viet Nam are based on his personal observations in that country a few months ago. While there, he was with U.S. and South Viet Nam troops in every major combat area.

The VFW commander also said, "The VFW fully supports the stronger action being taken by the Johnson Administration in South Viet Nam. The VFW believes that the United States has no choice but to win this war. To do so, requires patience, persever-ance and power. We must prove to the com-munists and the free world that we have, as a nation, these indispensable ingredients for victory.'

A grand ball was held after the banquet in the Gold Room. The Ladies Auxiliary will hold a breakfast Sunday morning honoring national officers. Joint, individual meets Sunday will close the summer session.

SPEECH

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr. SIKES. Mr. Speaker, I am grieved to hear of the death of the Honorable James B. Hare, one of our distinguished former colleagues and a dear friend. It was my privilege to serve with James Hare when he represented the Third District of South Carolina in the 81st Congress and to enjoy a warm friendship with him. Congressman Hare served his district with distinction and ability. He comes from a family of dedicated and loyal Americans who have given long and able service to our Nation. His father is the Honorable Butler B. Hare, with whom I also had the privilege and great pleasure of serving in Congress and who is still living.

Many of my colleagues here today will also remember with affection Congressman Hare's brother, Adm. Robert Hayne Hare, who served here with great ability representing the U.S. Navy in Congress and who is now in the Pentagon.

I consider it a privilege to add my praise to his memory, and I extend my condolences, as a longtime friend, to the members of his family.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 18, 28 Stat. 603.)

TITLE 44, SECTION 182D. SAME; ILLUS-

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MARS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. Arrangement of the daily Record.—The Public Printer shall arrange the contents of the daily Record as follows: the Senate proceedings shall alternate with the House proceedings in order of placement in consecutive issues insofar as such an arrangement is feasible, and the Appendix and Daily Digest shall follow: Provided, That the makeup of the Record shall proceed without regard to alternation whenever the Public Printer deems it necessary in order to meet produc-

tion and delivery schedules.

2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the Recomb issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Eschan for 1 day. In no case will a speech be printed in the Recomb of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.—The manuscript of speeches containing tabular statements to be

published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

lowing morning.

5. Proof furnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress.—Advance speeches shall be set in the Recoan style of type, and not more than six sets of proofs may be furnished to Members without charge.

bers without charge.
6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional. Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee. 8. Corrections.—The permanent Record is

8. Corrections.—The permanent Recoms is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

 The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10(a). Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, the Congressional Record, in 7½-point type; or article delivered or released subsequently to the sine die adjournment of a session of Congress may be printed in the Congressional Record.

10(b). Makeup of the Appendix.—The Appendix to the Congressional Recome shall be made up by successively taking first an extension from the copy submitted by the Official Reporters of one House and then an extension from the copy of the other House, so that Senate and House extensions appear alternately as far as possible throughout the Appendix. The sequence for each House shall follow as closely as possible the order or arrangement in which the copy comes from the Official Reporters of the respective Houses.

The Official Reporters of each House shall designate and distinctly mark the lead item among their extensions. When both Houses are in session and submit extensions, the lead item shall be changed from one House to the other in alternate issues, with the indicated lead item of the other House appearing in second place. When only one House is in session, the lead item shall be an extension submitted by a Member of the House in session.

This rule shall not apply to extensions withheld because of volume or equipment limitations, which shall be printed immediately following the lead items as indicated by the Official Reporters in the next issue of the Concassional Recomp, nor to Recompositional Recomposition of the Concassional Recomposition of the Recomp

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional. Heropas by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional Recorp which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Recons, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for-sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1999).

Daily Digest

HIGHLIGHTS

Senate worked on foreign aid bill and cleared NASA authorizations for White House.

See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 15935-16014

Bills Introduced: Six bills and three resolutions were introduced, as follows: S. 3639-3644; S.J. Res. 179-180; and S. Con. Res. 103.

Bills Reported: Reports were made as follows:

H.R. 15225, increasing limitation on authority of the TVA to issue bonds to finance its power program (S. Rept. 1300);

H.R. 14548, extending the authority of the Postmaster General to enter into leases of real property for periods not exceeding 30 years, with amendment (S. Rept. 1400);

H.R. 8188, allowing Federal income tax deduction for contributions to nonprofit organizations operated to consider questions of judicial reform, with amendments and with individual views (S. Rept. 1401);

H.R. 12389, to increase authorizations for development of the Arkansas Post National Memorial (S. Rept. 1402);

S. 2007, providing for judicial review of the constitutionality of grants or loans under certain acts, with individual views (S. Rept. 1403);

S. 1237, proposed Design Protection Act, with amendments (S. Rept. 1404);

S. 3238, private bill (S. Rept. 1405);

S. 3254, relating to the scope of the Federal Rules of Civil Procedure and to repeal inconsistent legislation (S. Rept. 1406);

H.R. 13277, providing for the reapportionment of the Legislature of the Virgin Islands, with amendments (S. Rept. 1407); and

S. 3070, to repeal provisions of the Mineral Leasing Act with respect to limitations on the leasing of coal lands imposed upon railroads (S. Rept. 1408).

Pages 15935-15936

Relocation Payments: Senate passed with committee amendments S. 1681, to provide for uniform relocation payments to persons or businesses displaced by federally assisted programs.

Pages 15947-15965

NASA Authorizations: H.R. 14324, fiscal 1967 authorizations for the National Aeronautics and Space Administration, was cleared for President when Senate adopted conference report thereon.

Pages 15981–15984

Foreign Aid: Senate continued consideration of S. 3584, proposed Foreign Assistance Act of 1966, taking the following additional actions on amendments:

Adopted: By 51 yeas to 31 nays (motion to reconsider tabled), Ellender-Morse amendment to reduce from \$700 to \$658 million authorized funds for supporting assistance in fiscal year 1967; and Miller amendment to allow aid to any nation in arrears on U.N. assessments only if President determines that such aid is in the U.S. interest and he transmits report to Congress setting forth the assurance of the nation in arrears that it is putting such payments on a current basis or its statement of exceptional circumstances making it incapable of so doing.

Senate debated a McCarthy amendment to retain minimum interest rate for second stage of loans under Development Loan Fund at 2½ percent rather than raising it to 3 percent, but the amendment was modified and then withdrawn to be reoffered July 25 as amendment No. 607.

The yeas and nays were ordered on the pending Cooper amendment (No. 175) that would increase to 2 years from 1 year the authorization for development loan program to Alliance for Progress nations. By unanimous consent, it was agreed that after voting on the pending Cooper amendment, Senate will consider Bayh amendment No. 652 barring certain iron and steel products containing components originating elsewhere than U.S. or a limited free world country, and will then consider McCarthy amendment No. 697 respecting interest rates on certain Development Loan Fund loans.

Appendix

The Factor of Morale in Vietnam

EXTENSION OF REMARKS

HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. RONCALIO. Mr. Speaker, in addition to the report made Tuesday, July 12, with my colleagues on our recent trip to Vietnam, I am pleased to add to my report of that date the following items dealing with the morale of our troops—and the morale of the other side.

As Tolstoy pointed out in "War and Peace," morale is the x factor in a fighting force which can compensate for many other deficiencies and which is so often decisive.

I have never known the morale of fighting men, based upon my experience in the two wars since my youth, to be any higher than I found in Vietnam. On the one particular day I spent with the troops of the 18th Infantry Division, I was pleased to notice that nearly all rifle company combat infantrymen seemed to have had a calm approach and professional, businesslike demeanor in their combat duties.

I was particularly struck with the fact that a large percentage of the troops were colored and I made a point of visiting for a few minutes with several squads at a time to discuss the tremendous opportunities open to these men, all of them, following their service in Vietnam. I believe every veteran there will wear his Vietnam service as a badge of honor for the rest of his life and I have no question but what those who probably will come to the front of leadership in America-in our rights movement and in the progress for all people-will come from the ranks of those now serving in Vietnam. It disturbs one very much to read. in the current issue of Life magazine, the constant repetition of the fact that the masses in the Watts area and other ghettoes of the colored sections of the large towns of America simply do not have leadership. We lack leaders, we have no leaders, is the saying.

BLACK POWER MILITANTS

It is my true belief that what a few rights activists in the States now ought to do is to get to Vietnam without further ado and to fulfill the proof of loyalty to the Nation and to its institutions with a tour of duty in the infantry ranks there and then return to speak of equal opportunity, once proof is available of the equal responsibility and the equal accomplishments of defending America and protecting it from foreign aggression.

With these particular troops it was my pleasure to be accompanied by my col-

league, Roman Pucinski, and we made it a point to stress that the two of us stemmed from immigrant parents and the lowest economic levels possible in the United States of America and we stressed that in one short generation each of us was able to practice his profession, serve honorable duty for our country in a war, establish his education and professionwith the benefit of the GI bill-and proceed to a career as a Congressman. impressed on each and every one of these soldiers that this role is open for them and that the sky is their limit, too-and that the greatest achievement they have made is to begin their cureers as infantrymen in time of war. We believe this is the strongest and best thing we could do for the morale of these gentlemen.

ROTATION OF TROOPS

There is no question but what the 1year rotation policy is one reason that morale is as good as it is.

Following my speech to request rotation in Vietnam, I was particularly grateful to staff officials at the White House, to the Secretary of Defense, and members of his staff, and particurlarly to Gen. Earle G. Wheeler. Chairman of the Joint Chiefs of Staff, for their help and assistance to me in the discussion of the complicated factors involved in rotation. Further, Mr. Speaker, had it not been for the great loyalty and help of the chairman of the Veterans' Affairs Committee, my distinguished and widely respected friend OLIE TEAGUE, of Texas, I doubt very much if the success now enjoyed in these policies could have been accomplished.

In March, Chairman Teague gave me his assurance of cooperation and his efforts to establish a tour of duty and rotation from combat assignment is perhaps another of the many accomplishments of this remarkable man in his service to the people of America—from his vantage point of power as chairman of the House Veterans' Affairs Committee.

I also feel I should pay great tribute to the Vice President of the United States, the Honorable Hubert H. Humphrey, and to three members of his organization, who were kind and patient enough with me to sit down and go through the difficult work in distinguishing the factors of rotation as they would effect combat efficiency, personnel changes, morale, and numerous other items, which had a bearing upon this complicated subject matter. Without the personal help of the Vice President, I doubt very much if these changes could have been effected.

It has now been established by the Office of the Secretary of Defense, Mr. Speaker, that, first: rotation and replacement will be accomplished on an individual basis; not on a unit basis; and second, the personnel rotation is a consecutive of the personnel rotation is a consecutive of the personnel rotation is a consecutive of the personnel rotation is a consecutive of the personnel rotation is a consecutive of the personnel rotation is a consecutive of the personnel rotation.

tinuing process; and third, and sure the most important matter, that current and planned replacements as of this time contemplate an average monthly rotation for in excess of the 2 percent of unit personnel—or four riflemen per company, per month, that had been my suggestion in my speech on the floor of the House on February 24, 1966.

I wish to quote from a communication sent to me by General Berg, the Deputy Assistant Secretary of Defense, regarding the effect of this type of rotation policy. His letter of April 23, contains the following:

I realize it might appear that under a prescribed 12 months tour of duty for Vietnam, unit composition will change only upon the anniversary dates of unit arrivals in Vietnam. In this regard, it is true that some members who initially arrived in Vietnam with their units will remain for a full 12 months' tour of duty. Hopefully, there will be many in this category for their Vietnam experience is most essential, not only for unit combat effectiveness, but also for orienting and giving guidance to new replacements as they are integrated into operating units. But the fact is that not all unit members had 12 months remaining to serve on active duty or on their units' arrival in Vietnam. Some had as little as four months remaining. Obviously, these personnel have to be replaced and sent home for discharge in accordance with their terms of service. other cases, units ordered into Vietnam from other Pacific bases contained members who had already served portions of their over tour. These members also were rotated home early. Inevitably, too, there is personnel attrition resulting from battle casualties.

As a result, Mr. Speaker, the process of change in unit personnel composition tends to be a continuing one, wherein replacements are being effected on a weekly and monthly basis. Obviously, there will be peaks and valleys in the rotational flow. But, as a minimum, rotation should average about 8 percent of unit personnel per month. For a rifle company, this should amount to an average of about 14 to 16 men per month depending on the size of the company—180 officers and men for an Army rifle company; 203 for a Marine rifle company.

Thus, while the morale of American troops improves, that of the Communist forces seems to be declining. Recent Rand Corp., studies of captured Vietcong show that, in contrast to their attitude a few months ago, our opponents no longer seem to feel that they have a chance of success. Their desertion rate has been steadily increasing.

More insight into the trends of morale on both sides is provided by a perceptive editorial by Bernie Horton, in a recent edition of the Wyoming Eagle, published in Cheyenne. He points to major developments which confirm that the tide is now running in our favor and will continue to do so as long as those of us here

at home provide the necessary moral support to our fighting men in Vietnam.

Mr. Speaker, I have unanimous consent that the editorial be printed in the Record, so that I may share these worthy ideas with my colleagues:

NOTES OF OPTIMISM

Slight as they may be, there have been notes of optimism in connection with the war in Viet Nam this week.

war in Viet Nam this week.

Tuesday, President Johnson said there were indications that the Communists no longer really expected to achieve a military victory in Viet Nam.

The President told a news conference at his LBJ ranch that these indications had come to him through diplomatic channels but he did not pinpoint any specific source.

but he did not pinpoint any specific source. It was the first time a top U.S. official had reported evidence that the Communists had come to a conclusion that they could not win on the battlefield.

The President's remark attracted particular attention because it came after a French magazine report that North Vietnamese leader Ho Chi Minh had advised Peking and Moscow that unless he received greatly increased help, he would have no choice but to undertake negotiations with the United States and South Viet Nam.

Meanwhile, Premier Nguyen Cao Ky installed a new 80-man military and civilian council to "help unify the nation," and he predicted a victory over communism within a year.

Ky said allied forces are within sight of final victory over the Viet Cong.

"According to intelligence reports, the Communists have strengthened their forces," Ky said. "But with the greater firepower of the United States, Allied and Vietnamese troops—with ability and flexibility—we may have victory by the end of the year."

Yesterday, Undersecretary of State George Ball said the leaders of North Viet Nam apparently had given up hope of a military victory in the war. At a Washington news conference, Ball said this was the tone of reports from other governments with contacts in Hanol.

Ball also said there is no evidence that the Red Chinese are likely to intervene directly in the war. The undersecretary, who is running the state department while Secretary Rusk tours Asia, and he did not want to draw "an overly optimistic picture" of the Viet Nam situation. But he said the reports the department has been receiving bear out the war-wariness of the North Vietnamese people.

All of this points up the importance of our presenting a unified front to the world. It has long been apparent the Communists

It has long been apparent the Communists had no intention of moving from the battlefield to the conference table so long as there was any hope they might win.

Only last week, Secretary Rusk said the Communists apparently were pinning their hopes on criticism of the Viet Nam war from

hopes on criticism of the Viet Nam war from within the United States.

"America has reason to think Hanol has been banking heavily on criticism from within the United States and elsewhere in

within the United States and elsewhere in the free world as well as on political dissent within South Viet Nam," he said.

The time is now for the arch-critics of

American policy in Viet Nam to put away their megaphones.

We must make it clear to the Commuists that the United States is united in its effort and determination in Southeast Asia.

Once the Communists realize their final hope for success is gone—that they are not going to be allowed to take over South Viet Nam—perhaps they may be willing to end the fighting and move to the conference table.

Remarks of U.S. Representative John E. Fogarty at New England School Library Association Spring Conference,

Newport, R.I., Saturday, May 21, 1966, at 1 p.m.

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

REMARKS OF U.S. REPRESENTATIVE JOHN E. FOGARTY AT NEW ENGLAND SCHOOL LIBRARY ASSOCIATION SPRING CONFERENCE, NEWPORT, R.I., SATURDAY, MAY 21, 1966, AT 1 P.M.

I am happy to be here today to address the New England School Library Association on new legislation and its impact on school libraries.

In the past 3 years, it would seem that the Congress has been extremely busy increasing the demands to be placed on school librar-The Vocational Education Act of 1963, the Library Services and Construction Act of 1964, the Economic Opportunity Act of 1964, the Higher Education Act of 1965, the National Foundation on the Arts and the Humanities Act of 1965, and the Elementary and Secondary Education Act of 1965 are six pieces of major legislation that will either directly or indirectly affect school libraries. The poverty programs of the Economic Op-portunity Act, as we all know, are creating a market expansion of library books and textbooks geared to the culturally and educa-tionally deprived. School librarians are meeting demands for afterschool programs and paperback lending libraries for the underprivileged with every ounce of their ener-They are being called upon to survey existing resources and to absorb great quantitles of new resources. And with their help these programs for tutoring, independent study, and general strengthening of community education are working.

Programs under the Library Services and Construction Act are calling upon cooperation between public librarians and school librarians in assessing the overall needs of the community for expanded library services. Interlibrary agreements will be formed to extend the flow of books in areas which must be upgraded educationally.

Vocational education programs will place greater listings of technical and vocational education reference books in school libraries. Programs of the National Foundation on the Arts and the Humanities will bring greater quantities of instructional materials in these two categories to be placed in school libraries.

The Higher Education Act of 1965, which includes a title for community service and continuing education programs, will create an increased request for books on social problems to be made available in both school and public libraries. School librarians will be called upon to masist public and school administrators in pulling together informational materials for the study and solution of community problems.

These are just a few of the acts which will place indirect demands on school librarians as the administrators of school library programs. The act most responsible for direct involvement of school librarians in new programs is the Elementary and Secondary Education Act of 1965. Because of these new responsibilities, I would like to turn our at-

tention to this act for the next few minutes.

Last year, when considering the proposals for strengthening elementary and secondary education in the United States, my colleagues and I were alarmed by the status of school libraries. We felt that quality in textbooks and school library programs was directly related to a student's academic achievement and future educational goals. Yet, almost 70 percent of the public and more than 50 percent of the private elementary schools had no libraries. Nearly one-half of our elementary school children were attending schools that did not have libraries. Public schools were spending from \$2 to \$4 less per pupil than was recommended to maintain even minimum school library standards.

As a result of reports relating to us the extreme needs of schools for assistance to build up their libraries, we drafted Title II of the Elementary and Secondary Education Act of 1965. Later, when the bill was passed by the Congress, the U.S. Office of Education and the State Library Agencies joined together to administer the program for strengthening school library resources, textbooks, and other instructional materials.

The State plans that have emerged from State Library Agencies show great promise for the future of school libraries. State plans had to illustrate specific needs by category within the three main headings of library resources, textbooks, and other instructional materials.

In order to pinpoint such needs, many States had to take inventories of library books within each major classification of the Dewey decimal system for the first time. This meant that school library problems would no longer be clouded by simply vague statistics on the need for a number of estimated volumes. Each State Library Agency would have a quick catalog of all school library resources and could draw up specific title listings of standard volumes to be purchased. Each State Library Agency would also know whether grant funds should be concentrated on library books or on items such as filmstrips, globes, encyclopedia sets and classroom reading books.

Title II State plans reflect the reports of these surveys. Acquistion of library resources has been given priority by the States. Every State plan calls for spending at least half its money from school library resources. Twenty of the 34 State plans require at least two-thirds of their allotments to be used for this category.

The progress in the New England area under the Title II program has been extremely encouraging. In our State of Rhode Island, a special Title II coordinator has been appointed to the Office of the Commissioner of Education to assure effective administration of the program. The State plan for Vermont calls for 100 percent of Title II funds to be used for school library resources. It calls for the Director of the Division of School Libraries to administer Title II. His position is financed by by another section of the Elementary and Secondary Education Act of 1956. The State plan for Maine similarly emphasizes library resources by calling for 100 percent of the allotment to be spent on this item. One good feature of the Maine plan is the stipulation requiring that each project application contain an assurance that all teachers were given an opportunity to submit lists of materials needed by them and their pupils. This kind of stipulation brings the teacher and the librarian into even closer coordination as they work to achieve the best possible educational atmosphere for their students.

Connecticut's Title II plan, in addition to concentrating on school library resources, establishes an index of need to determine grants to local school districts. The four criteria for grants include: the quantity of

materials presently available in relation to existing State standards; quality of available materials; average expenditure of the school district in the past; ability to pay factor.
In this manner the Connecticut State plan
hits the areas with the greatest need first.
In the State of New Hampshire, adminis-

trators of the Title II program will call for regular inventories of available resources in each individual school participating in the program. These inventories should help them continue to raise school library re-sources to recommend standards over the next few years.

Finally, the Massachusetts State Plan provides for coordination of Titles I, II, and III of the Elementary and Secondary Education Act to establish demonstration school li-braries. These libraries will serve as inservice program locations in several regions of

the State.

My talking about the Massachusetts State Plan coordination of Titles I, II, and II brings me to another important and encouraging aspect of the impact of Elementary and Secondary Education Act programs on school libraries. When the Congress passed this act, we could only guess about the emphasis to be placed on library resources in elementary and secondary education programs. We hoped Title II would immediately aid school districts in alleviating the substandard conditions of many school libraries. Since that time, we have seen local and State educatime, we have seen local and state educa-tional administrators develop and mount projects totaling roughly \$1 billion worth of school aid. Now, we have a clearer picture of what the schools are doing. Library re-sources are being emphasized in Title II projects. Just as important is the fact that Title I projects for the disadvantaged are emphasizing library books as a primary learning tool for school children. Out of 5,000 approved projects, 2,000 had library components. Recurringly, projects have expressed the need for the provision of buoks and period the provision of buoks and period to the provision of buoks and period to the provision of buoks and period to the provision of buoks and period to the provision of buoks and period to the provision of buoks and period to the provision of buoks and period to the provision of buoks and period to the provision of buoks and period to the provision of th odicals to create a desire to read on the part of educationally deprived children. Title III of the Elementary and Secondary Education Act has predictably received applications emphasizing better library resources for school children. Community school libraries are being established. In New England, the creativity of local school districts has led to even more exciting developments for school libraries. The Pittsford, Vermont, Title III project provides a Mobile Library Service Center to transport library and instructional materials among nine elementary and one secondary rural schools. In North Providence, Rhode Island, A Center for Reading Diagnosis and Remediation will provide resources for all remedial reading programs.

As you can see, States are really working to develop educational resources under the Elementary and Secondary Education Act. The groundwork for better instruction, for more individualized study, and for excellent school libraries has been done. It is left to each librarian and each teacher to make the plans really work. At the Congressional level, we can only pass the legislation. hard work of local and State administrators coupled with school librarians and teachers must be counted upon to make programs effective. I think, judging from the reports and plans coming from the New England States, we can depend upon you to see that the new legislation programs have the im-pact of education hoped for by the Con-

gress that passed them.

But mounting the programs currently providing new services and more books to school children, their parents, and members of com-munities in the United States is not the only demand that faces school librarians in the next few years. At the same time that Ele-mentary and Secondary Education Act pro-grams are raising school library standards by bringing volume numbers up to par, educational technological know-how is growing

at such a pace that within a decade school librarians will be receiving requests for ref-erance materials how beyond the scope of our limited experience and imagination. computer centers for information storage and retrieval units now being established under Title III of the Elementary and Secondary Education Act will be vitally linked to school libraries. The Systems Approach to Learning-which will involve basic instructional kits, audio-visual support for research, and textbooks including informa-tion punch cards for computers—will de-mand cooperation between teacher and school librarian in leading children to the full exploration required in individual research and programmed instruction suited to each student's particular need.

These new developments are going to call for tremendous growth and flexibility on the part of school librarians. The very general wording of our legislation only sets forth the principles for programs to cope with educational and technological advances in elementary and secondary education. School librarians will have to supply the specific operational support to make such advanced

programs effective.

Again, I want to commend you for your fine work thus far under current programs and the demands which they have placed upon you. I can only envy you the challenge that future educational programs have in store.

A Veteran Reporter Answers a Columnist

EXTENSION OF REMARKS OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. BRAY. Mr. Speaker, I wish to invite the attention of my colleagues to the following article by Mrs. Sarah Mc-Clendon, which appeared in the July 17 issue of the El Paso Times. The article is in response to the article recently written by a well-known columnist about our colleague, the Honorable L. MENDEL

As you all know, Mrs. McClendon is a veteran Washington newspaper woman, who has always had a great facility for ferreting out the facts. This article is a fine example of her excellent reportingwritten in her own inimitable style:

RIVERS, DENYING CHARGES, ASKS "WHY DID PEARSON ATTACK ME?"

(By Sarah McClendon)

Washington.—Rep. L. Mender Rivers, Democrat, of South Carolina, chairman of the House Armed Services committe, who was accused by Columnist Drew Pearson of being drunk and delaying vitally important military bills in the House, stood his ground and declared Pearson's accusation wholly

Rivers gave no question but that if the two should ever meet face to face, the feud would break out again.

The South Carolinian, noted for his hard work, long hours and plainspoken criticism of the way Secretary of Defense Robert Mc-Namara is running the defense establish-ment, said it might be well for the American people "to examine deeply to see what are the causes of Pearson's personal attack on himself and Sen. THOMAS DODD, Democrat, of Connecticut.

"Sen. Done fought communism. Pearson atacked him viciously, personally. I at-tacked the Pentagon, McNamara and the way

this administration has been weakening the military forces of this nation and trying to military forces of this match and trying to take away the powers of Congress. What Pearson is trying to do, I don't know but maybe I will find out eventually. I have a long memory. And when a man attacks me, I don't forget. I am not going to sue Pearson now, Maybe I will wait and see how Sen. Dopp comes out in his suit against him,"

SAYS STATEMENTS FALSE

RIVERS was described by Pearson in a columne on June 14 as a drunkard whose bouts with drunkeness had caused five cancellations in the committee meetings on the military construction bill and in floor consideration by the House of the nearly \$18 billion military procurement bill for weapons.
"This just is not true and records of my

committee on each committee meeting will prove that I am right and Pearosn wrong,"

said RIVERS.

The column appeared, Rivers noted, on the day he was scheduled to present the bill to the House.

After the article appeared, Speaker of the House John McCormack, Democrat, of Massachusetts, and House Majority Leader CARL ALBERT, Democrat, of Oklahoma, both somewhat straitlaced, joined in tributes to RIVERS as did a number of other House members. Their remarks gave the impression of showing defiance, independence and disbelief of the Pearson article.

"I deny these charges absolutely, personally and officially. I have been really ill. There have been no delays in committee consideration of the procurement bill or in the military construction bill which my commit-

tee is presently considering.

ADMITS SOME DRINKING

"I have been suffering excruciating pain from a calcium formation in my neck, a con-dition which doctors say looks like a fog bank on x-rays. I have been under doctors' care for this and have taken treatments here at the capitol and at Bethesda Naval hospital. I will not go there again for fear I would get more publicity. I will say if you take the pills they give you out there, they will put you out of your mind.

"I have in my time indulged in some drinking. But it makes me sick when I drink so in recent years I have stopped it. want to take a drink, that is my business I have liquor in my office right now for visitors. Who around here does not? But I want to tell you something—I don't drink nearly as much as many other people I ob-

serve around here. So, why was Pearson hammering at me? He must have a reason. "I was drinking ginger ale down at the White House the other night when the congressional leaders were summoned there. I notice another congressman whom Pearson treats so kindly was taking one drink after Liquor was being served freely.

"I don't think my drinking is what Pearson is really getting after. I don't know what he is after. But I think this attack is aimed at the things I stand for and what I have been trying to do with this committee.'

SEES ATTACK ON CONGRESS

"I also think Pearson is attacking the Congress, for its daring to differ with the Pentagon and for its stand in support of me and my committee in upping our defense program above and beyond what McNamara

"I am quite sure that this is an attack on the belief that Congress has the con-stitutional right to 'raise and support armies' to defend this country sufficiently."

RIVERS said he is confident that Secretary of Defense Robert McNamara had nothing to do with the Pearson article, despite the fact it referred to the ennity between the

RIVERS said he had reason to believe that Pearson told McNamara about the forthcoming column and McNamara begged him not to print it. McNamara told Pearson, so Rivers was informed, "Please don't write that—he will think I put that out, and I want to get along with him."

want to get along with him."

Here are some of the major differences
Rivers has had with McNamara:

The McNamara plan to reorganize the reserves and National Guard, to cut out large numbers of the reserves and to shift command of the various guard units;

The amounts of money to be spent on research for the nation's future bomber, with Rivers favoring \$11.2 millions and McNamara backing only about \$8 millions;

The scrapping by McNamara of the manned bombers used in the Strategic Air Command, the B-58's and others; Rivers' favoring further research and de-

velopment now on Nike X;

The nuclear Navy;

RIVERS' insistence on the Congress giving the Defense Department \$620 millions more than McNamara wanted and the latter's serving notice that he would not spend it;

A general feeling by Rivers that McNamara's dogged determination and policies were weakening, not strengthening the armed forces

NECK, SHOULDERS RUBBED

RIVERS' aides say that he had been going to the gymnasium in the Rayburn Office Building repeatedly of late to have his neck and shoulders rubbed. He left the committee on one occasion to do this, possibly others, turning the gavel over to another highranking member. He smelled strongly during this time of a well known medicine, wintergreen, used to rub joints, his associates said. He showed friends how calcium deposits caused his neck to pop if he held it to one side. He also had heat treatments in the office of the House physician at the capitol.

RIVERS produced the files of his committee to show that it held frequent and scheduled meetings.

These files upon examination show that he presided on May 3 when the final consideration of the military procurement bill took place. He then announced that hearings on the military construction bill would begin on Tuesday, May 10. From then on, records of the committee showed that there were many hearings of the committee. Hearings on the construction bill were held on May 11, May 12, a Thursday, when the group adjourned to go over until Monday, May 16, as is customary with House committees. They met on May 17 and 18.

On May 18, Ervers called the meeting to order, and immediately turned the chair over to Rep. Philip J. Philip J. Philip J. Ass., "as he, Mr. Riyers, had to appear before the Rules Committee in behalf of a rule on S. 2950," the military procurement bill. Philips, at the close of business on this date, announced hearings on the construction bill would be resumed the following Monday, May 23.

Hearings were held on May 23, 24, 25. On that last date, the chairman announced that the hearings would be resumed on Tuesday, May 31.

MANAGED VITAL BILL

Rivers presided as the meeting opened on May 31. Soon after the committee met, it was necessary for the chairman to leave for another appointment and he turned the chair over to Rep. F. Edward Hésear, D.-La. What the appointment was, was not mentioned in the records. Hésear presided all that day and again on June 1, when he announced that the hearings were adjourned subject to the call of the chair.

On June 14, RIVERS presented the Military Procurement bill to the House. He spoke and "managed" the bill to passage, with an additional \$900 millions which McNamara did not want but which RIVERS thought ought to be allowed for nuclear Navy, Nike X and other programs.

The committee next met on June 15. It met on June 16 to resume hearings on the military construction bill which are still on.

Certainly it would appear that Pearson was wrong when he wrote that an five successive times when the House committee was called to meet during the past weeks to approve massive new military construction bill that it could not function because of Rivers' drinking. It would also seem that from May 18 when the House Rules Committee acted on the Military Procurement Bill until June 14 was not too long a time to wait for scheduling by the leadership of this bill especially in view of the fact a national holiday over a long week-end had occurred during the interval.

ADDITIONAL FACTS

These additional facts were uncovered:

RIVERS had avoided liquor for five years. During that time, some persons who knew and saw him frequently said he stayed away from it altogether. Others were not so sure that he did not now and then take a little on occasions.

One man said "I have seen him in his office for 20 years and I have never seen him drunk, nor have I ever seen bottles lying around as Pearson said. I have been in his office at the close of a hard day and had a drink or two when he did not take any. I have been with him in South Carolina when others about him had drinks and he did not."

Pearson referred to Rivers being unclothed partially in his office. An associate said he would have to admit that he had seen Rivers in his office at 7 a.m. when he was not wearing a tie. But Rivers frequently gets up at his home in McLean, Va., and drives to his office at 4 or 5 a.m. After he gets there, he somtimes shaves. That could have accounted for the fact that he was not wearing a tie when a friend with whom he frequently talks early in the morning walked in.

If Rivers is an alcoholic, then his appetite does not indicate it.

The chef in the House restaurant cafeteria where Rivers usually eats says he gets there around 4 or 5 a.m. and often Rivers has beaten him. Rivers keeps a huge southern ham in the restaurant and the chef cuts him a swathe of it. He regularly eats with this two eggs and a quantity of grite, butter and biscuits.

Friends say he seldom complains about his aches and this is one reason why his neck pains were not known about generally.

Basically he is one of those full-of-energy guys who is wound up all day. Then when he unwinds, he is exhausted.

Rep. O. C. Fisher, D-Tex., member of Rivers' committee, did not participate in the speech making in praise of Rivers' conduct on the committee that follower the Pearson article. Did he believe the Pearson article? Fisher was asked.

"It was about 10 per cent truth and about 90 per cent untruth," said Fisher. "I have known Menner. fairly closely and in three years I personally have never seen him take a drop of liquor. And I think I would have known if he had."

CERTAINLY NOT DRUNK

During the period when Pearson indicated Rivers had been in a drunken condition, unable to preside over his committee another old friend of the Congressman, Rep. W. R. Poace, D-Tex., said he saw Rivers at the airport with his wife" and he certainly was not drunk nor did he give a evidence of having been drunk."

A woman reporter for southern newspapers said she covered his office for five years and not once had she seen him when he had been drinking.

A man who has known Rryers since his youth and who has occasion to supervise his habits said he assumed the chairmanship of the Armed Services Committee with rever-

ence and dignity and full recognition of the importance of the office. He was determined, said this old acquaintance, to remain scrupulous in his conduct at all times as he realized fully that there were certain interests out to prey on him seeking to use him if they could. He was determined not to deviate.

INFLUENCING TRIED

It was learned that some friends had tried to influence him in actions which would have operated to serve their special interests and they had found Rivers to be unbending, according to his old friend. They had reasons for wanting Rivers to conform to their thinking. There is some indication that finally these persons wooed Rivers by making liquor available in one of his unsuspecting moments in South Carolina.

Why did certain persons want to collaborate with Pearson to try to ruin Rivers?
He is a man of leadership and never has run from a fight. New, faced with Pearson's devastating column and feeling somewhat humiliated, Rivers is nevertheless not cowed by it. But he is more determined than ever to carry on with his committee chairmanship and his programs for what he believes to be in the best interests of the nation.

The Police and Law and Order

EXTENSION OF REMARKS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. DERWINSKI. Mr. Speaker, the Nation was properly concerned with the racial unrest which erupted in Chicago this month, and as always in such instances, there is much comment over the background, the immediate cause, and finally possible cures for the problem. I submit for the Recors two editorials, one broadcast over WBBM-TV, Chicago on July 19, and the other over WIND, Chicago on July 15 which I believe gives a very clear picture, each in its own effective fashion, of the thinking of concerned citizens not only in the Chicago metropolitan area, but for that matter, across the country.

The editorials follow:

STANDPOINT—POLICE AT WORK

(Broadcast by Carter Davidson, WBBM-TV, Chicago, July 19, 1966, 6:25 to 6:30 p.m.)

li

8

0

n

18

43

re

d

br

Seldom, perhaps never, has a police force of a major city been put to the test like Chicago's was this past week. And, it may be added, seldom, perhaps never, has a police force acquitted itself so well.

The senseless, ghastly massacre of eight nurses last Thursday stunned virtually the whole community, indeed the whole country. But the police went quietly and expertly to work, and within hours were on the heels of a prime suspect. Seventy-two hours after the mass murder, he was in chains. Admittedly, he brought about his own arrest by trying to kill himself, but his capture was a dead certainty.

It was not movie-style detective work, but slow, arduous and painstaking police work, by foot and in the crime laboratory, that assured the capture of the suspect.

And, it all took place while the police force was already strained by the taxing effort of combatting one of the city's worst outbreaks of street rioting, the eruption of shooting, burning and looting on the West Side of Chicago. Six policemen, including a police captain, were laid low with gunshot wounds in one night in that fracas, and scores of others were bruised and cut by flying bottles and rocks.

To so ably solve a flendish mass murder, already dubbed "the crime of the century," while so beleaguered by street violence, reflects infinite credit upon the police department. It has a right to be proud of itself. More, it has earned the thanks and respect of the entire community.

It has become the fashion lately, thanks to the self-serving efforts of publicity-minded civil rights agitators, to bandy about such

phrases as "police brutality."

This and other gimmicks, has caused a disrespect for the police that has led directly to the stoning, and even burning of police cars, and personal, insulting attacks upon policemen themselves.

It also has led to demands for a policing of the police, through a civilian review board. At the same time, high court rulings on the rights of criminals have tended to shackle policemen with their own handcuffs, as far as traditional police procedures are concerned. Add to this the fact that policemen are notoriously underpaid for the work they do and the risks they take, and the odds seem pretty highly stacked against the police force.

Chicago's police force, from Superintendent Orlando W. Wilson to the newest rookie, proved this past week that it doesn't count the odds. It does its job.

(Broadcast on WIND radio, Chicago, Friday, July 15, 16, 1966, by Ralph L. Atlass, vice president)

LAW AND ORDER

These remarks have to do with law and order, the basic concept upon which our life in America was based and can continue. The cornerstone of our civilization is an orderly procedure and the enforcement of that order by authorized men in uniform.

No personal liberties or private property can exist if the right to that property is

not protected by our police. It is ridiculous and frightening to contemplate the purported arrangement for the withdrawal of police from a riot-torn neighborhood while unauthorized and private citizens tried to negotiate a peace. The very moment that occurred was an open invitation for anarchy to take over.

Perhaps there is some excuse for this al-leged indecision, because the police did not have sufficient forces available to them at the time. Nevertheless, such an act is an out-and-out breakdown of the very fiber

of our law and order. The man in the police uniform must be respected and he must be able to enforce the laws which he has sworn to uphold if we

are to have an organized and orderly society.

The exercise of that authority means that the police must make arrests of individuals and mobs who defy the law. But law and order does not stop there. After the arrests have been made, the courts must enforce the law. The courts cannot be permissive with lawbreakers. Cicero once said, The safety of the people shall be the highest law." That safety can only be secured by an orderly procedure. The law spells out the regulations; The police enforce those regulations; the courts must punish for in-fractions of those regulations.

It is good for Chicago that the National Guard has been called out to join with the police in the enforcement of law and order. The Guard should be kept in the troubled areas of our city until law and order have been restored.

Street gangs, mobs and individual law-breakers must be deterred. They should be arrested when they violate the law. And the courts should realize that they have the sworn responsibility to properly pass sentence on those violators.

The courts must take that responsibility and cease giving rioters passes just because they are in great numbers. Instead, the courts should think about the risks incurred the police and the National Guard in dealing with those who flout the law. The courts should reflect on the danger to lives and the damage to property. The courts should remember that the men who wear the uniform of the Chicago Police and the uniform of the National Guard are also citizens of the United States . . . and that they have sworn an oath to uphold law and order and to keep peace.

Law is a form of order, and good law must necessarily mean good order. If good order can only be maintained by curfew, then a curfew should be established with the proper authorities arresting everyone who is on the streets contrary to the established regula-

The authority of the government of Chicago must be maintained at all costs. Without that firm authority there can be no government. Without that authority there can only be anarchy.

The Wilderness Is a Wilderness: Or To Save the Grand Canvon

EXTENSION OF REMARKS OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. COHELAN. Mr. Speaker, the proposal to build dams on the Colorado River at Bridge Canyon and Marble Gorge are being vigorously contested, as my colleagues are well aware.

Basic to this controversy is the fact that the American people have a deep interest in saving our last remaining wild lands from impairment of the sort entailed by these dams. The Wilderness Act of 1964 was an expression of this interest.

Many people who have never seen any part of the Grand Canyon have written to me, and to other Members of Congress, to say that they care about the Grand Canyon. It is no exaggeration to say that if we authorize dams in the Grand Canyon, citizens everywhere in the United States will be hurt by our action.

Mr. Arthur Hoppe directed his satire to this issue in a recent column in the San Francisco Chronicle. An excerpt from this column follows:

[From the San Francisco (Calif.) Chronicle, June 15, 1966]

> THE WILDERNESS IS A WILDERNESS (By Arthur Hoppe)

The news that the Sierra Club may lose its tax exempt status for trying to save the Grand Canyon has led to the formation of a new conservation group—The Consensus Conservation Club.

"Our first goal is to establish our tax exapt status," explained Director Homer T. empt status, Pettibone, "through a militant campaign to fill up the Grand Canyon."

With what? "Water," said Mr. Pettibone. "The dams presently proposed will fill only portions of the canyon a mere 300 feet deep, still leaving tourists a gruelling trek down to the water's edge. We contemplate a single, huge dam which will fill the Grand Canyon to the

brim—thus creating an easily accessible lake offering boating, deep sea fishing and unlimited room for underwater sports.

"Needless to say, the Bureau of Reclamation, which dearly loves to build dams, is out of its mind with joy at the prospect. And once we have our tax exempt status, we expect limitless financial support from all true conservationists. Like the private power companies.'

But filling up the Grand Canyon will be just a first step?

"Oh, yes," said Mr. Pettibone, adjusting his omburg. "It's what we lovers of the Great Homburg. Outdoors call "Creative Wilderness Develop-

"Now the basic problem with the wilderness areas of America today is that they are, let's face it, a wilderness. They've gone un-changed for millions of years. You certainly can't call that progress.

"Fortunately, however, there is a consensus that the wilderness must be conserved. Cattlemen, for example, favor conserving it for grazing; mining men for mining; oil men for oil drilling; advertising men for bill-boards; and as forth. We of the Consensus Conservation Club naturally favor conserving it for all these things."

But what about those who love the wilder-

ness for itself?

"That's us!" cried Mr. Pettibone, placing "That's us!" cried Mr. Pettabone, placing his hand over the narrow left lapel of his mohair suit. "We all love the wilderness deeply. But who can enjoy t? Only a few hardy hikers and horsemen. Is this fair? No. We are thus fighting for freeways through the wilderness with hotels, restaurants and hot dog stands to refresh the weary wilderness lovers—not to mention housing tracts for those who wish to live in the

But what will happen to the wilderness?
"Oh, it will always be there just like the Grand Canyon," said Mr. Pettibone. "Down underneath."

Grand Canvon Debate

EXTENSION OF REMARKS

OF HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. CONTE. Mr. Speaker, this week the House Interior Committee expects to conclude hearings on the controversial Colorado River project, and indications are that the bill will be reported favorably to the House. This is, therefore, a good time to reexamine the provisions of the legislation and the effect it will have on the economy and welfare of all Americans and particularly those in the Southwestern United States.

The Arizona Republic of June 25, 1966, contained a letter to the editor which I found particularly interesting, because the writer, a native Arizonan, is nevertheless opposed to the Colorado River project, especially the provisions for the central Arizona project. In her letter she focuses on the important economic aspects of the Grand Canyon issue, which are often overlooked in the furor over "saving" or "ruining" the canyon. I think the letter makes several sound points, and I commend it to the attention of all of my colleagues in the House.

The letter follows:

THE PEOPLE SPEAK: CANYON DEBATE RAGES
ON-READERS OPPOSE EDITORIAL

EDITOR, The Arizona Republic:

In commenting on your editorial "Canyon AND Project" (June 19), I would like to say that I am not a member of any conservationist organization, but I have hiked down the Grand Canyon to the Colorado and am of the opinion that dams, access roads, marinas, etc., would compromise the awesome serenity of the canyon and further alter the flow of the river.

Your editorial, as usual, equates the benefits that the Central Arizona Project would provide to a numerical minority with the interests of "Arizona" in general. I believe this is unfounded, and have derived my observations from numerous magazine articles, the record of the hearings of the Lower Colorado River Basin Project before the House Interior Reclamation Subcommittee, August 1965, and a well-documented analysis by Dean E. Mann entitled "The Politics of Water in Arizona," University of Arizona Press, 1963.

In your editorial you state, "CAP is of utmost importance in maintaining the economic underpinnings of Arizona." Even if economics must be the measure of all values, CAP, as now conceived, does not reflect a proportionate balance of these values. Dr. Mann says, "It is clear that not all of the demands presently being made on the water supply can long be satisfied. Some water

uses will have to decline for others."
What are the demands? Arizona's population is somewhat over 1,300,000. Of that, 8,000 are farmers, or, 0.6 percent of the population. This 0.6 uses 95 per cent of the water. The remaining 5 per cent is used for domestic, industrial, municipal and recreational purposes combined. Moreover, the farmers are responsible for the shortage, having over a period of many years overpumped the groundwater supply, currently at the rate of 2.25 million acre feet annually.

Dr. Mann shows how the economic interests not only of the farmers, but of the catternen, lumbermen, mining, railroads and utilities have determined the use of water. Historically, the legislature has been putty in the hands of these pressure groups. For this reason, no state action has been taken "to provide for orderly planning for management of the water supply to pursue this task." This planning and machinery are essential in view of the "scarcity of water and the changing economic situation in the state." (You do not quote the Sierra Club when you say that it "pictures Arizonans as mean, soulless, mercenary individuals," but I am sure the Club refers to the situation described above rather than to individual Arizonans.)

How does CAP fail to take into account the changing economic situation? A Bureau of Reclamation chart shows the following contributions to Arizona income in 1963: manufacturing—39 per cent; agriculture—24 per cent, mining—21 per cent and tourism—16 per cent. In referring to these figures, Floyd Dominy says, "We would like to preserve that good balance by getting this project into being."

But the economy is not static. In contrast, Dr. Mann says that agriculture and mining constituted "20 per cent of the total income of the state in 1953. But manufacturing has recently overtaken both of these, and agriculture will probably continue to decline in relative importance. In the long run, mining will probably also diminish in importance as the vital ore resources are depleted."

However, "tourism has shown decided increases in the last decade." Consequently, I don't think it can be said that the economy of Arizona depends on CAP water when CAP's prime purpose is to ball out 0.6

per cent of the population and enable farmrelated activities to contribute 24 per cent toward state income (or less than 20 per cent, depending on which source you prefer), a percentage, at any rate, that is on the wane.

It is this shift in emphasis that is not reflected by CAP. Tourism and recreational needs are treated as justifications for dams when indications are that the Grand Canyon without dams will better meet future needs. It is this failure of CAP, and the inexcusable failure of the subcommittee to hear the evidence in support of these conclusions, that arouses justifiably emotional protests from conservationists.

Here is a situation where private utilities do not want the functions of the Bureau of Reclamation extended to steam or nuclear power plants and where the B of R would find itself without a job if alternative methods of power production and financing were assigned to others. This situation is summarized by Secretary Udall's statement, "Water salvage in the West is tied historically to hydropower. Anything else would require a whole new type of reclamation program." In other words, whether or not the alternatives have merit has had nothing to do with the decision to ignore them.

A third major defect of the CAP legislation is the fallacious reasoning that hydroelectric projects pay for themselves. This theory is contested by modern economists, as evidenced by Stanford and Harvard studies (Fortune, April, 1965), and, I believe, is the content of Dr. Alan Carlin's testimony during the hearings on the Upper Colorado River Basin Project last month.

CAP is so obviously the product of the era in which it was originally conceived; its roots go back 30, 40, 50 years when its means and end were justified. Now, it fails in all its objectives: it will not provide enough water to replace overdrawal; its economic, mechanical, recreational and esthetic "underpinnings" do not measure up to modern standerds. CAP is "old hat."

Sixty years ago there was a need to tame flooding rivers; today the need is to preserve what wilderness remains.

Mrs. E. B. BARNETT.

No One Has a Right To Take the Law Into His Own Hands

EXTENSION OF REMARKS

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. BENNETT. Mr. Speaker, President Johnson said last week some things that greatly needed saying. In Sunday's Washington Post the account of his speech was as follows:

JEFFERSONVILLE, IND., July 23.—President Johnson warned sternly today that street riots and other disturbances jeopardize the reforms sought by civil rights leaders.

The President spoke out on street demonstrations at a luncheon for 450 business and labor leaders in Indianapolis. He warned:

"Our country can abide civil protest. It can improve the lives of those who mount that protest. But it cannot abide civil release."

"Riots in the streets do not bring about lasting reforms. They tear at the very fabric of the community. They set neighbor against neighbor and create walls of mistrust and fear between them.

"They make reform difficult by turning sway the very people who can and must support reform.

"They start a chain reaction the consequences of which always fall most heavily on those who begin them."

Mr. Speaker, yesterday I attended services at the National City Christian Church, where the President is an honorary elder. The President was in attendance with his daughter, Luci. We heard an excellent sermon by Dr. George Davis, touching sympathetically on the theme of the President's remarks in Indianapolis. In the church bulletin for the day, the following comments by this able pastor were included:

TEN THOUSAND TIMES WATTS—ONE THOUSAND TIMES CHICAGO—THE IMAGINATIONS OF EARLY MORNING

What is Watts multiplied by ten thousand, and Chicago by one thousand, all in one night? It was not a nightmare, not even a dream. I was wide awake at the time, at least as wide awake as a man could be at 3:30 a.m. I usually awaken early, and am generally an early riser. On that particular morning, the moment I came to consciousness, Watts and Chicago were in the focus of my consciousness, and so they must have been there in the unconscious in a marked way during the sleeping hours. But there seemed to be a countless number of Watts, and a countless number of the City on Lake Michigan. I think in my sleep I had been asking, "What if ten thousand areas in our nation's cities, and a thousand cities large and small were all in turmoil at once, in a single night, for several days on end perhaps, requiring large forces of policemen, large groups of soldiers, every National Guard in every state, at one and the same time?"

Of course even as I write now, there is news of last night in Cleveland, and New York, Jacksonville, South Bend, in turmoil. And the question, my friends, "Just where next?" Riot, piliage, burnings, looting, plundering, killings, all in the night's routine, here and there. And added to all this. law and order, and men who are assigned to preserve our society against anarchy, undermined by the eroding of respect for the police, laughed at, held up to ridicule. The places multiply two by two, three by three. But what if the number of places went up, until policemen, and national guardsmen were not sufficient to quell them? And what And what if the policemen and guardsmen being sufficient numerically, had lost finally and completely the morale required for the doing of their jobs because our society had finally and completely thrown regard for them to the "four winds"?

The Washington Post this morning, as I write, states in front page headline, "Cleve land Rioters Defy Guard Patrols" But that sort of thing had occurred with increasing frequency. Mr. Joseph Alsop this morning in his editorial pages comment, "Since the Civil War" writes about, "The American atmosphere this summer is heavy with warnings of an oncoming national crisis." he goes on with the usual admonition to all sides, but with the usual heavily aimed criticism of the police with the late Chief William Parker of Los Angeles as a central target. I am increasingly surprised that the police in any city are able to work at all, to maintain any order at all. If we are to speak of our war victims, and the victims of our highly pressurized society as having been "killed" by that society, because their hearts could no longer stand up under the pressures (and I think we may quite honestly say that of many men in the business world, in government, and of just ordinary citizens) then we may honestly say that man like Chief Parker were driven to their deaths, and their hearts gave in and under the pressures of a society which no longer supported them, let alone appreciated them, indeed a society which seemed to increasingly prefer disorder, violence, anarchy, a society gradually surrendering to what Dr. Karl Menninger in another connection years ago first called, "the death wish of man."

"The death wish of man." In a paper written on the title, "The Death Wish of Western Man," (based on lecture given at Stanford University this past February) I dealt at length with that "death wish." The paper reflected impressions gathered years ago from Dr. Menninger's book, "Man Against Himself." Our society reflects that death wish, among other ways, in our conscious or unconscious attack on the agencies and persons assigned the task of "preserving our society" in times of emergency and extreme peril, as well as their task of routine day by day watchful care over the "morally and criminally sick" in our society, and who day by day keep the ordinary channels of that society flowing, in such sim-

ple things as traffic.

We have behaved with very little intelligence, in our quest to bring justice and equality to all citizens, through civil rights, and in other areas, and in seeking to bring fuller justice even to our criminal population by protecting their rights too, by undermining our law enforcement agencies in the process. And that is exactly what we have been doing. One could go on at length to illustrate from the writing of all too many, such as Mr. Nicholas von Hoffman (Washington Post Staff Writer), as for example in his front page article of Tuesday, July 19, 'Negroes Convinced That Watts Faces New Showdown With the Los Angeles Police." Throughout the article he undermines, as do many of his contemporaries the influence of the law enforcement agencies. Whatever his real point may have been (which he suggests was to point up the dreadful condi-tion in Watts), what he really achieved was "pull another rug out from under" men who alone can give any security, any-where, when "all hell breaks out." And when those men can't do it, next it will be the National Guard, as in Chicago, and Cleveland, and perhaps Jacksonville, by the time this article is printed. And if we some day find ourselves involved in "Ten Thousand Times Watts," and "One Thousand Times Chicago," and not enough policemen and guardsmen here at home, perhaps we could bring some of our men home from Vietnam to do the job. That would at the same time please the "peace beat-niks," the "ivory tower students and professors," "the sophomore doves" in our Senate who would rather debate than to open their eyes in the twentieth century. That would please all those who perpetually have the United States cast in the role of the "bad guys." For too much of press, radio, and television have assisted in creating that "bad guy picture." Some of the worst offenders have been some of the newspapers and TV and Radio Systems who boast of their greatness and size, and who claim they are "listened to and heard and read most widely."

For a good many months I have written and spoken, suggesting "we might reach the point of no return," in our marching, demonstrating, lawlessness. And I have "taken a beating" over that. But nothing in yesterday's or today's newspapers offer evidence

that my view was incorrect.

V

I am conscious of the terrible problems we have to solve in this Nation. But I am growing weary of the constant, relentless attack upon the very centers of our society in the United States. It is not deserved, and it will only eventuate in the complete destruction of the foundations. I am not unconscious of the vast problems.

I dread the thought of children sleeping in rat infested buildings in Washington, D.C., as they do, with "rats nibbling at their toes"

(as they do), and in many cities across this Nation. I remember standing on the corner at Thomas Circle, my first long, hot Summer here, five years ago, late at night, looking around (when Thomas Circle still had the slum look). And I remember standing on that same corner, my first Winter here, in the snow at night, looking around. I think I have never seen "such a God forsaken looking place," and beneath the majesty and beauty of the magnificent Church edifice in which we worship and work here. And then the Circle began to change. I remember when the first old buildings began to go down, watching the rats scurry at night. Twice I myself called the exterminators.

On the other hand, every dwelling torn down puts people in the street. And so housing remains a serious problem in big cities. I am not unmindful of the grave problems. I do not know what I would do if my family were caught in some of the traps known to some people. But I will not for one moment given encouragement by direction or indirection, by silence or by spoken word to "revolt" and "riot," and "anarchy" as the answers. And I will not for one moment go along with civil disobedience, and rebel-

lion as the answer!

Vast progress has been made, was being made. It just could not all be done overnight, or even all in our lifetime. But it will never be done, in an atmosphere of anarchy, and violence, and it will never be done if we follow the ways of the Stokely Carmichaels, the Dick Gregorys, the Adam Clayton Powells, and the others of that frame of mind. It will never be done if we succeed in tearing apart the fabric of law enforcement, if we succeed in achieving anarchy. For Dr. Martin Luther King to deny that a part of the Chicago riots was planned, is to deny the facts.

The very man who has been in Chicago, Kansas City, and other large centers to teach the "art of resistance, riot, violence," came to Washington some months ago, brought here by some of the Civil Rights leaders. For some "unknown" reason, it was decided for the "time being," not to invite that man to "organize Washington," at least not openly. I sat in a meeting in our own Scott Hall some months ago, and heard one of the Assistant Ministers of one of Washington's large "white Churches" admonish his listeners that "all of us must cooperate with the revolutionaries," including that man I have mentioned above, if he came here "to organize." And not a single Minister in that listening audience raised a finger to object. I regret to say, I did not either. I think I was growing weary at that time of being "the lone voice" to raise a word of caution.

The Chicago situation is serious, as is Cleveland, Boston, Los Angeles, etc., etc., But the answer is not with the "revolutionaries." And it never will be. To show you how cynical our society has become, no Administration has done more for the Negro than has the present Administration. man has done more than President Johnson (and at the risk of political criticisms, and far worse than criticisms). Indeed President Johnson while he was Senate leader guided through Congress the first Civil Rights Bill in seventy years, and as a "Southern Sena-Laws are on the books (and I must in all candor say, some of those laws going to greater lengths than a good many serious people in our Nation think they should have gone) which hold answers to solving many problems. But the revolutionaries would not allow the nation "time to catch breath," time "to absorb." The revolutionaries kept pressing, marching, shouting, demanding. And to show you how cynical some of them have become, one need only listen to the violent words of men like Stokley Carmichael against the President; Mr. Carmichael's planned demonstration on August 6th, near the Catholic Shrine. I hope Mr. Hays of Ohio is able to get his Bill through Congress immediately to call a halt to such cynical, ridiculous, crude, sickening behaviour. And I hope the Nation becomes so sick of all of this, we will wake up to the "facts of life."

When men advocate "civil disobedience," out of the context of our kind of society, who declare that "the answer to black power" is the more radical revolutionary spirit of Jesus Christ, they are not being true to Jesus, to man's future. They have misinterpreted what the "revolutionary spirit of Jesus was." His spirit would not be at home, in some of what we have dared to relate His spirit to today. When a woman, a national religious leader declares that "Jesus was a tough guy," and thereby leaves an impression that Jesus was some "kind of Marion Brando, James Bond, or dark street hoodlum" she has maligned the life of Jesus. And it is time for the Church to think straight, and for some of us to stop swallowing all of "this stuff we read and hear." You know of course, if you listen to me with any regularity, that I know you have the privilege to reject "my stuff" too. But I have the right to "be a part of the dialogue."

Mr. Speaker, certainly no one has a right to take the law into his own hands. What is bad for the Ku Klux Klan to do is bad for "black power" advocates to do. A militant black racist sat in my office several weeks ago and stated that if he and his followers did not get their way, law or no law, they could with a handful of people pitch the big cities into complete darkness by cutting off the electric power and then light the skies with burning buildings. He insisted that everything they ask in new laws should be enacted or America would take the consequences. That was not a very persuasive argument to me. In today's mail, I received the following sermon from Dr. Richard L. James, pastor of the Riverside Christian Church of Jacksonville, Fla., where I serve as an elder. This devout Christian and dedicated American said in his sermon of July 17:

"WHEN OTHER METHODS PAIL, KILL SOMBODY"

Scripture: Act 12:1-19.

Herod Agrippa I, was the grandson of Herod the Great. He was nephew of Herod Antipas, ruler of Galilee and Ferea. Herod Agrippa I, was trained in Rome and was included in the influential circles of the Empire. His son, Agrippa II, was the one whom Paul appeared before in his plea for the Christian faith.

Herod Agrippa I, belonged to that school of thought which held that you can stop a cause by killing a few people. The book of Acts of Apostles records that he laid violent hands upon the church and killed James, the brother of John, with the sword. This action seeming to please the population, Herod had Peter arrested and thrown in jail. When Peter escaped and there was no other satisfactory way of placing the blame, he had the guards killed. In other words Herod operated on the principle that when other things fail, kill somebody! Never mind who, just kill someone! It does not matter whether or not death is deserved or the individuals are quilty, just kill somebody for the sake of the activity.

The very thought of such an idea is revolting to us. It repels us because we have learned through the long avenues of history that one cannot stop truth simply by murdering its children. The time for the spread of Christian faith had arrived on the stage of history. Polytheism and superstitions had served their day. Never again in the civilized world could they have the glory by which they controlled men's minds and

bodies. The clanging of the hammer on the nails which spiked the hands and feet of Christ to the cross was the tolling of the bells for the funeral of the Empire's pag-Kill all the Christians and still the old religions were dead. Herod could not stop that movement by killing James nor arresting Peter. The Christian faith was the idea whose time had come!

When Herod tried imprisonment of those who believed and prohibited their preaching, he thought likely this would stop them. When his commands and threats failed, he killed somebody. The method repels us because we have been trained to respect human life. We have been conditioned to the idea that human beings, just because of their natures, deserve better treatment. We are committed to the proposition that the death penalty is reserved only for those who have stood trial for their deeds and been found quilty.

One of the reasons I like to view "Gun-smoke" as a television program is that it has historical significance as we watch the conflict between the representatives of law and order on one hand and the gunslingers and criminals on the other. It is the battle between law and order and those who take the law into their own hands by mob violence, lynchings, ahootings, arson, and other violent methods. In the old West, the due process of law won out and our nation came into being. However, each generation must fight this battle and the outcome decides

what the next era will be like.

Today we are in the battle of the same nature as that which is represented by the II S Marshal of the old West. Our weapons may not be the fast draw with a pistol, but the battle goes on all around us. Whenever, for any reason, we decide to disregard the laws of our land, we choose our side in the battle. Whether the law be a simple regulation of safety, such as a stop sign at a busy reaction, or the more complicated regulations, they are all the symbols of our civilization which depends upon our respect and obedience for our survival.

Retired Justice of The Supreme Court Charles E. Whittaker, in a speech delivered at the University of Kansas in April 1966, "We must return to Law—or face hy." Said Justice Whittaker, "Some Anarchy." would-be leaders have been voicing slogans and cliches which in instances, appear on the surface to be logical, and some even religious, but which, in truth, are neither. Instead they are dangerously deceptive and destruc-

tive.

Judge Whittaker then enumerates five of the slogans which are being passed around these days: "Government owes every citizen a living," "human rights, not property rights." "production is for use, not profits," "obey the good laws, but not the bad ones," and "action now, not the delays of the law." To each of these slogans, Mr. Whittaker gives some thoughtful answers. I am concerned with the two which refer to our attitudes and respect for law and order in our

"Is not each of these cliches a call for anarchy?" asks Judge Whittaker. "Does not the fourth invite men to violate the laws they do not like? And does not the fifth invite men to spurn the courts and all constituted and to take the law into their

own hands."

"If we allow men to disobey with impunity the laws they do not like, or to spurn the courts in all constituted authority by taking the law, or what they think ought to be the law, into their own hands, will we not be

inviting anarchy and chaos?"

"The philosophy of 'obeying only the laws you like,' and of attempting to rule by force, has given rise to mobs and mob actions that have proven, as certainly as we should have expected, to be tailor-made for infiltration, take-over and use by rabble-rousers and radicals who are avowedly bent on the break-

down of law, order and morality in our society, and hence on its destruction. And we now see that virtually all of such 'demonstrations' are being infiltrated by rabble-rouners and radicals and, not infrequently, break into open violence."

Mr. Justice Whittaker continues with illustrations of violent action which has spread across our country until today it has reached the crisis-point, and concluded his remarks with an appeal for "a return to simple honesty, responsibility and forthrightness in our public speakings and writings, that they may honestly inform and not misinform the people, and for a return to an orderly society by requiring respect for and obedience to our laws by the prompt, impartial, even-handed, certain and substantial punishment of all persons whose willful conduct violates these laws, and that we do so promptly, and I would hope, before mass crime gets, as it surely can, so far out of hand as to be beyond the curbing capacities of our peace-keeping agencies and authorities."

So much for the problem before us today. As much as the violence represented by the philosophy of Herod repels us logically, too many persons subscribe to it by their actions. Whenever we become exasperated and confused and give way to angry actions we embrace Herod's way of life. In anger we strike somebody. We may not intend to kill, but many a murder has been the result of an angry brawl. Whenever we throw a rock, hit someone with a club or fist, we must be prepared for murder as the end result.

On the other hand, many persons who would not dare strike someone nor do violent physical harm frequently become frustrated in an argument. Not being able to win through logical reasoning, they give way to mental violence by calling the opponent bad names. Opprobrious labels are given to the person with whom we disagree. Instead of facing the issue and keeping it on a rational basis, we destroy character by attacking the personality, belittling the motives and destroying integrity of character. Whenever, our dislikes cause us to use hateful words and name-calling, we join up with the Herod mob.

This, of course, has been the basis for much of the world's warfare of past and present. Not being able to work out peaceful arrangements at the conference table, nor competing economically by fair methods, reason and good faith disappear and the armaments

begin rolling.

However, some persons become so obesed with hatred that they become the willing pawns of interest groups which see to it that such dislike is used to good advanage. Some persons in the midst of pressures laid upon them by interested organizations become an Oswald, pick up a rifle and slay their Kennedys. No matter how we go about the matter: by mob demonstration, irrational hatred and name-calling or by use of the rifle and shot-gun, we become henchmen of Herod whenever we do so. In contrast, we hear the words of Paul, the Apostle, 'Let every soul be subject unto the higher powers. For there is no power but of God: the powers that be are ordained of God. As one muses upon the 13th chapter of Romans, there emerges from Paul's words the clear-cut thought and instruction that our behaviour toward men in general should he regulated by love. Whenever we become more concerned about methodology, or principles that we behave toward individuals through hatred and violence, we cease to have the Christ-like spirit and give way to the methods of Herod.

May I appeal to you today not to be like Herod. Do not allow wrath to find harbour in your life. Do not give way to violence. Do not participate in destructive activities. Rather, as those who have been redeemed by Christ, let us live worthy lives deserving of the great price which was paid upon the cross for our salvation. There are three things

which I would suggest that we do and do with all earnestness and promptness.

First, let me suggest that we respect our

This is a good time for every Christion to give thanks for the blessings we receive simply because we are citizens of the United States of America. We should be proud of the heritage received from the founding fathers of the sacrifices of those who made religious freedom possible, of the hard-working, liberty-loving pioneers who developed our natural resources, and the system of economics which has made possible the inventions and industrial developwhich are a part of today's America. We should be proud of the abolition of slavery, of opportunity for self-advancement, of our school systems and our patriots who bravely fight throughout the world to maintain freedom for ourselves and other smaller nations. This is a good day to stand up and be counted as proud citizens and let the world know we are glad to be a part of this nation 'under God" with the fervent prayer that it shall never perish from the earth.

I would suggest further, that we obey the laws of our cities, states and nation. All the laws are a part of the complex system of government which is summed up in one glorious word, "America." No one can ignore any law nor deliberately violate it without doing injury to the entire land. There are no bad laws. Some laws may not be as desirable as others. Some laws may have passed beyond their usefulness. Changing times may have made some laws no longer However, a law must not be ignecessary. nored. If the law is no longer necessary, we must work diligently to have it rescinded, but no one has the right to decide which laws he is to obey and which he may dis-

Another and final suggestion I would make in all humility and seriousness is that we practice the law of love and thus fulfill the whole law. If we say hateful things about the citizens of our nation, be they in capacities of industry, labor, government, or whatever, we add to the contempt of the nation as a whole. Being a citizen of the U.S.A. is a very personal matter. We vote as an American citizen at the local polls. It is a face-to-face encounter with your neighbor and your peers. Your attitude toward them is a reflection of your patriotism. Your actions toward government employees is further evidence of your love of country. Hate them, renounce them, and you are to that extent renouncing the nation.

All of this is much more than patriotism. It is the Christian faith in action. The apostles and martyrs witnessed for the faith in the economic and political areas of their time as much as they did in homes. They carried their love and respect for ordained authority into the market-place, the political relationships as well as in church. motivation for it all was expressed in the commandments of loving God and loving When love is the motive of life, there will be no need to kill someone. it is the nature of Christian love that it never fails. Love endures. If we give ourselves to this principle of life, there will be no need for us to become a member of Herod's society.

A Permanent U.N. Force

EXTENSION OF REMARKS

HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. RONCALIO. Mr. Speaker, I am pleased today to introduce a House concurrent resolution to urge that the United Nations develop permanent organization and procedures to enable it promptly to employ suitable U.N. forces for observation and patrol purposes in situations that threaten international

peace and security.

This resolution does not ask for a huge standing U.N. army, but only calls upon the U.N. to adopt methods which will expedite peacekeeping operations in future situations similar to the Suez and Congo crises. This resolution is not to be seen as an attack upon the U.N. or a call for a radical new development that might alienate many U.N. members, but only as a helpful suggestion from those of us who believe that the U.N. has made a great contribution toward world peace and should prepare itself for even greater participation in the future.

A survey of past U.N. actions shows the need for some kind of permanent peacekeeping organization, instead of relying upon the present ad hoc method of starting from scratch on each crisis. In January 1948, the Security Council established a U.N. Commission on India and Pakistan to try to secure a ceasefire and plebiscite. But, due to delays in organizing a group, the Commission did not reach the area until the middle of 1948. However, once in action, it took a leading part in negotiating a cease-fire and a truce line.

THE SUEZ CASE

Organizational delays were also evident after Israeli and Egyptian troops clashed on October 29, 1950. A General Assembly resolution on November 4 authorized the creation of a U.N. Emergency Force. By November 7, the Secretary General had received offers of troops from 24 countries. A few U.N. officers reached Egypt on November 12. with the first troop units arriving 3 days later. The U.N. contributed a great deal in relaxing tensions in the Middle East but, according to Peter Calvocoressi, in his book "World Order and New States," done for the London Institute of Strategic Studies:

The main lesson was that if the members of the U.N. wanted such operations to be undertaken, they should equip the organiwation with regular machinery before the next emergency occurred.

THE CONGO OPERATION

The U.N. was able to react somewhat more quickly in response to the Congo situation, but delay was still evident. The Security Council decided to intervene in the early hours of July 14, 1960. On the 18th, 600 U.N. troops reached the Within 4 days of the Security Council resolution, 4,000 troops had been pledged, 3,500 had arrived. The figure rose to 8,000 on the 26th, 11,000 on the 30th, and later reached 20,000 from 14 countries. U.N. action in the Congo succeeded in preventing the intrusion of the major powers into the heart of Africa.

Mr. Calvocoressi states:

The U.N. succeeded further; to an astounding degree in the circumstances, in keeping the Congolese economy going, providing elementary services, alleviating disease, pre-venting famine, and protecting life. . . . On the first anniversary of Congolese inde pendence, chaos had been contained, outside powers had drawn away and a parliament

representing virutally the whole territory was about to meet in Lovanium.

The Congo could have become an international battlefield if no U.N. force

had been interposed.

But even with this history of successful intervention, if another emergency were to arise tomorrow, the Secretary General would not know whether or not he could assemble a force, nor how long he could keep it in the field. Mr. Calvocoressi believes, this is the cardinal fault and until it is remedied peace will be ruled by coincidence

ALTERNATIVES AVAILABLE

Given this state of affairs, what can be done to strengthen the ability of the U.N. to react promptly if called upon by the nations of the world? There is no present prospect of a permanent standing force. The larger powers dislike the idea of force being used in circumstances beyond their control and, if they changed their minds, the smaller states might accuse them of trying to create an instrument with which to discipiline the weaker members. The late Secretary General Dag Hammarskjold argued against a permanent standing force on the ground that the circumstances in which it might be employed are too diverse and unpredictable: the force would either be inappropriate to the next emergency, or it would have to be large enough and varied enough to cope with any emergency and thereby impossibly expensive.

But, given these limitations, U.N. capacities can still be strengthened. Units offered to the U.N. are not necessarily the ones it needs. Most countries offer infantry, which have limited usefulness in police roles unless they have very high standards of discipline. States willing to contribute have little idea in advance what they can most usefully provide. Some states have earmarked troops for secondment to the U.N. in a crisis, but they receive no guidance on training which thees units ought to be receiving. There is little information available at U.N. headquarters as to where to go at a particular moment to fill a precise re-

RECOMMENDATIONS FOR CHANGE

quirement.

Mr. Calvocoressi makes a number of specific recommendations for strengthening the U.N. reaction. He suggests a small, permanent staff at U.N. headquarters, with a chief of staff to make in-spection tours of likely national contingents, and a staff college. The U.N. could work out a course of training suited to the most likely contingencies it will face. It could develop a uniform staff procedure. It needs an intelligence unit to provide information about terrain and climate in every part of the world. The staff college could create staff doctrines and a reserve of staff officers who had passed through its courses and returned to their own countries with some knowledge of how the U.N. works. Mobile communications teams should be continuously available. The U.N. might even have a broadcasting station.

ters, with a chief of staff, to make in-procedure. It needs an intelligence unit It is important that these and other suggestions receive publicity and study. House passage of this concurrent resolution would promote such an investigation. It appears that this move would receive the support of the American people since, according to a 1961 poll, a considerable majority of U.S. citizens were in favor of some kind of permanent U.N. emergency organization.

Mr. Speaker, some permanent procedures would facilitate the world's ability to respond to international crises by removing some of the delays which have hampered past U.N. action, thus providing a more certain mechanism for handling future threats to world peace.

Three Columns by Satirist, Arthur Hoppe

EXTENSION OF REMARKS OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. YOUNGER. Mr. Speaker, the all-American satirist, Arthur Hoppe, has returned from his vacation and three of his columns, published in the San Francisco Chronicle on July 13, 15, and 17, follow: [From the San Fracisco (Calif.) Chronicle, July 13, 1966]

ELBIE JAY, FATHER OF THE BRIDE (By Arthur Hoppe)

Howdy there, folks, How y'all? Time for another tee-vee visit with the rootin'-tootin' Jay Family, starring of Elbie Jay—a hardworkin' feller who minds his own business. When he can find the time.

As we join up with ol' Elbie today, he's oing over the guest list with his pretty wife, Birdie Bird. For their youngest tad, Myna Bird, is getting married. That's her, stand-ing there wringing her hands, while the proctive bridegroom, Pat Somethingorother,

looks on. Glumly.

ELBIE (heartily). My, that's a nice long guest list. I sure do like big parties. let's see here who's coming. Altwhistle? Baccigaluppi? Cravendish? Say, they certainly do have a lot of new fellows in Congress I don't even recognize, I must be losing my touch.

BIRDE BIRD. Those aren't Congressmen, Eible. They're personal friends of the chil-

Elbie: Oh. Well, I think it's mighty nice to invite personal friends, Too. (As he reads on.) Yep, I'm for sticking with your personal friends through thick and thin no mat-ter what they * * What? Who's this here? You invite that mangy, low-down, two-tim-ing, no-good polecat and the wedding's off.

Myra Bird. No, no, Daddy. That's William Y. Fulbright, a high school chum of Pat's.

ELBIE. Pat who? Par (nervously). That's me, sir. And I just want to say you're not losing a daughter, you're gaining-

ELBIE (scowling). A passle of your personal friends who're likely not old enough to vote. Well, I guess they can come. And you try to make it, too, son, you hear? Now, let's see, all we got to do to this here guest list is add the Congressional Directory, the Diplomatic Corps, the Press Club roster and leave us not forget my dearest friend, Hubert H. Whats-

BIRDLE BIRD. Now, Elbie. You're escalating

ELETE (irately). I'm not either. I'm merely making a step for peace. "Tween me and Capitol Hill. Now, then, as to the wedding tizelf, I better get to work on my speech.

MYNAH BIRD (near tears). Oh, Daddy, you

can't make a speech in church.

ELBIE (surprised). I can't? What are the folks coming for, then? You want to disappoint them?

MYNA BIRD. No, I want Pat and me to be united in a solemn ceremony in the silent presence of the Almighty.

ELRE (fondly). All right, honey. If you want me to be there and keep silent, I'll do it. It'll be a new experience. And seeing as how you're such a wonderful daughter, I'm a-going to change the seating arrangement at the wedding supper. You get to sit on my right instead of Senator Russexx. Why, hang it, I'll even make a place for your boy friend there. Somewhere. My, I'm going to have a mighty fine wedding.

MYNAH BEED (sobbing). It isn't your wed-

ding, Daddy. It's mine.

BIRDIE BIRD (firmly). She's right, Elbie.

You must stop interfering.

ELEE (yielding graciously and putting an arm around Myna Bird). There, there, honey. You can plan the wedding (brightening). And I'll plan where we'll all go on your honeymoon. Let's see, Ohio's a swing state and . . .

Tune in again, folks. And meantime, as you mosey down the long trail of life, remember what Elbie's old Granddaddy used to

"If'n you're the father of the bride, be happy you're gainin' a son. Think how he feels about gainin' you."

[From the San Francisco (Calif.) Chronicle, July 15, 1966]

WILL NEWARK SIGN A SEPARATE PEACE? (By Arthur Hoppe)

EN ROUTE TO NEWARK, N.J.-I am carrying a peace feeler to Newark, N.J. which just shows you the condition of world affairs today.

Actually, I had no intention whatsoever of carrying a peace feeler to Newark, N.J. That's a ridiculous idea on the face of it. I had intended to carry it to Washington, which is where we ace newsmen, diplomats, curio dealers and other collectors of peace feelers are supposed to bring them these days

But then the airline strike hit and the only place I could get a plane to was Newark, N.J. I had already happly envisioned the triumph my peace feeler would bring me in Wash-

ington.

There I'd be, strolling jauntily up to the entrance of the State Department marked, "Deliver Peace Feelers Here," my peace feeler secure under my arm.

"What've you got there, another peace feeler?" the bored clerk would say with a yarn. "That's the fourth one today." I'd casually hand it over. He'd wearily

take out his magnifying glass, give it a cursory examination and then . . "By George!" he'd cry. "This just may be an authentic Chinese peace feeler!"
With cool smile, I'd inform him that it was definitely an authentic Chinese peace feeler. I'd bought it myself in an alley in

San Francisco's Chinatown from a shady, inscrutable character who sidled up, tugged on my sleeve and whispered sibilantly: "Past! You want to buy genuine Chinese peace

"By golly," the cierk would say in wonderment. "That does look like a genuine, hand-carved ivory handle and a live, authentic peacock feather. And what's this stamped on the bottom? 'Made in Peking.' Good heavens, I think it's the real thing.

Fine. I'd say. And now if he'd just reimburse me the \$3.98 I paid for it . . .

"But what'll I do with it?" he'd say with a frown.

Why, I'd say, I assumed he'd take it up to the seventh floor and brush it across Mr. Rusk's sensitive antennae. Mr. Rusk would Rusk's sensitive antennae. call Mr. Johnson and Mr. Johnson would . . . well, he'd .

At this point, if I know the State Department, the clerk would say there was absolutely nothing in the Procedures Manual for dealing with this sort of situation. He'd think about sending it down to Exploration for exploration. But nobody would be there. And finally he'd suggest I come back next week when he was on vacation.

So, after mulling it over, I guess it's just as well I'm carrying my authentic Chinese peace feeler to Newark, N.J., instead. If Newark wants to sign a separate peace, it's a step in the right direction.

Besides, the more I think about it, the more convinced I am that if anybody ever does manage to deliver a genuine peace feeler to Washington, nobody there would know what on earth to do with it.

[From the San Francisco (Calif.) Chronicle, July 17, 1966]

> THE EYE ON LUCI'S BACK (By Art Hoppe)

Washington.-Preparations are moving ahead for the simple family wedding of Miss Luci Johnson to Mr. Patrick Nugent.

Invitations have gone out to their 700 closest friends. The White House is issuing daily press releases. And we are newsmen are foraging feverishly to ferret out yetunpublished details for a waiting world. There aren't many left.

But through an incredible stroke of good fortune, I was able to obtain an exclusive interview with Mr. Homer T. Pettibone, president of The Pettibone Hook & Eve Mfg. Co.

"In the long history of Pettibone Hook & Eye this, I think I may say without fear of contradiction," said Mr. Pettibone proudly, "is our finest hour."

"The rumors are true, then," I said, my heart leaping up. "You did manufacture the hook and eye for the back of Miss Johnson's wedding gown."

"Only the eye," he said modestly. "The contract for the hook was let to a Texas firm. But we have been in constant joint-planning sions to make sure one dovetails perfectly with the other."

"The challenge has been a grave one," agreed Mr. Pettibone, nodding somberly. "Not only did the eye have to be an esthetic masterpiece—a high water mark in American eye design—but it had to be faultlessly con-struct to meet the stresses and strains that will inevitably be placed upon it.

imagine the dire consequences structural failure would bring." Mr. Pettibone shud-dered. "On network television too."

Well, I said, it wasn't as though he was inexperienced in these ticklish jobs. I dis-tinctly recalled the Nationwide publicity when it was revealed he designed the eye of Mrs. Kennedy's inaugural gown. Would he mind comparing?

"I certainly would," said Mr. Pettibone, glancing nervously over his shoulder. "But off the record, you might say the eyes of the previous Administration were perhaps more brilliant, more cosmopolitan, while the eyes today are most American, more sincere, more folksy."

I said I wouldn't quote him on that. now could he describe for 190 million waiting Americans exactly what Miss Johnson's eye looks like?

"Good heavens!" cried Mr. Pettibone ghast. "That's top secret."

I looked so crestfallen that Mr. Pettibone relented. "Well," he said hesitantly, "I think it might be all right at this stage to reveal that the eye is, in general terms, round!"

After I'd thanked him profusely, he went off to appear on Meet the Press, Face the Nation and the Ed Sullivan Show, happily

singing his firm's theme song, "The Eyes of

Pettibone Are Upon You."
As for me, I set out to unearth the only other unpublished story—an interview with the man who made the hook. But I couldn't find him. I think the opposition has him stashed away in a roll-top desk.

Oh, well, it isn't every day we ace newsmen in Washington get a story like this. Even though it's every day we try.

Power of the Bald Eagle Is the Answer

EXTENSION OF REMARKS OF

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. MIZE. Mr. Speaker, a constituent of mine, Donald R. Collins, D.V.M., of Topeka, Kans., does not hold with either the "hawks" or the "doves" in bringing about a settlement in Vietnam. He feels that we will have to depend upon the power of the bald eagle. His reasons for reaching this conclusion—and I am sure many will concur—are set forth in a let-ter to me. I think that this letter should have the attention of my colleagues. is but the voice of one American, but it speaks for many Americans. Under leave to extend my remarks, I ask that this letter appear in the Appendix of the RECORD. The letter follows:

Hon. CHESTER MIZE, Cannon House Office Building, Washington, D.C.

DEAR CHET: Now is the time for all good men to come to the aid of their countrymen! The dove has taken its olive branch and own. All that remains in the Valley of Preedom is that great hawk, the Bald Eagle. His sharp eye is fixed upon the main street of Hanoi. In sack cloth and thong sandals he sees men who believe that the starry flag they followed was the banner of the Free and the Brave. But the men are not free and you and I, apparently, are not brave! We can no longer withhold the powers of the Eagle with the excuse that in doing so we are saving American lives; American lives are being lost! We can no longer withhold the power of the Eagle with the excuse that his intimidations create fear or hatred throughout the world. America is already feared or hated throughout the world! Our only excuse now for withholding the power of the Eagle is fear for our own lives or hatred for our own weaknesses.

The issue no longer is whether or not we should be in Vietnam. It transcends the arguments Senator Fulbright and Secretary McNamara have over military policy. It revolves simply around a well known phrase and its counterpart . . . "Greater love hath no man than to lay down his life for a friend." The real issue is whether or not you and I, Friend, have as much love as those men in sack cloth and thong sandals and, if we are brave enough to do something about it.

Because of our concern for history we must have reasons for making great decisions of attempting great departures. The reasons for unleashing the powers of the Eagle to end the Vietnamese struggle are at hand. demand which we wish to place on the North Vietnamese can now be made. To the Americans who must justify their actions to someone besides themselves, that justification now exists.

The presence of American flyers held captive in North Vietnam and now threatened with inhuman treatment, illegal prosecution and perhaps even public execution, gives you and me a most singular opportunity to bring peace to our time. It gives me the chance, once and for all, to answer the question:
In peace worth risking freedom for? It gives you the chance to answer the question: In a representative republic do those who represent still function as the voice of the people or has this land become the bureaucratic republic in which those who represent function only as the whipping boy of the people and the liaison of a dictatorial executive branch?

The American flyers in Vietnam, like Francis Scott Key, are looking across a great body of water and wondering, "Oh say, does that star-spanjed banner yet wave, o'er the land of the free and the home of the brave?" Our only answer to them and to the world must be this ultimatum by Congress to North Vietnam:

The sovereignty of American human rights and dignity has been desecrated by the parading of American flyers as a public spectacle on the streets of Hanoi. We would not treat our basest criminals in this manner. To have another country do so to our heroes cannot be tolerated.

The time for consideration has ended. If withdrawal of North Vietnamese troops and a firm appointment to negotiate a peaceful settlement of the disagreement over the Vietnams is not effected by October 1, 1966; or should American prisoners now held by the Government of North Vietnam be handled in any manner other than that prescribed for prisoners of war by the Geneva Convention; that is to say, should they be further displayed publicly as criminals of war, should they be tried as criminals of war, or should they be executed as war criminals, the Government of the United States shall, through its Armed Forces, neutralize North Vietnam by destruction of its war making industries, acquisition of its natural resources industries, acquisition of its insuran resources and annihilation of any of its people who resist. This will be done without reservation and by invasion and blockade.

Furthermore, interference by any nation in the world in these actions will be considered.

sidered as a hostile act against the United States and dealt with accordingly.

Every man must make his own choice when the whole world hangs in the balance. I am too proud to sacrifice freedom, dignity and individuality at any cost, peace notwithstanding! I am as the Bald Eagle. This letter expresses my choice, I have the strength of conviction that faced with such an ultimatum not only North Vietnam but an utimatum not only North Vietnam but any country in the world would meet the demands. And ultimately prove that the powers of the Bald Eagle, not the virtues of the dove will bring peace to our time. Best personal regards, DONALD R. COLLINS, D.V.M.

A Difficult Decision

EXTENSION OF REMARKS OF

HON, WILLIAM G. BRAY OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. BRAY. Mr. Speaker, a young man in my hometown of Martinsville, Ind., was recently faced with a difficult decision: Should he accept a deferment from the Army, because of the death of his father or should he go ahead and be inducted.

He made his choice, and his letter in the July 21, 1966, Martinsville Reporter is one of the very finest statements of personal conviction, integrity, and dedication I have ever read. We should all be grateful to boys like Craig; upon them rests the hope of our survival as a free

To the EDITOR:

Recently I received my papers to report for induction into the United States Army. I was quite surprised after failing my physical for enlistment last summer.

Last week I was offered a chance for a deferment because of the death of my father which left me as the eldest son capable of helping with the family in case of emer-

The decision was left up to me to choose between staying home or going to serve my country.

The way I came to my decision is why I am writing to you.

Friday night, as usual, I came into town to get one of my buddies. He had a new album that he wanted me to hear so I went in to listen. I never caught the name of the album, but the words stuck in my mind. It was a protest song against draft dodgers and the description went something like this, 'They are the ones who would never be caught dead with their eyes closed at public prayer. They wouldn't put their hands anyprayer. They wouldn't put their hands anywhere but behind their backs during the Pledge of Allegiance, or would they let the little ones hear them sing 'America' at the ballgame."

The communist cause does not have to fight us to win, they just have to walt until we rot in our own cowardice.

I might not get back, and if I do I might not find a fine job, another car to compare with the one I have now, or the girl I want, but I will be able to hold my head up and walk down the street.

I personally would be grateful if you would do an article to get my point across. Every boy has a responsibility to God, his country, and to his loved ones to do his part to make his country and their country a free

Thanks a lot.

CRAIG SAVAGE.

Atrocious Crimes in South Vietnam

EXTENSION OF REMARKS

HON. ROBERT H. MICHEL OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. MICHEL. Mr. Speaker, F. F. McNaughton of the Pekin Daily Times, dated July 23, comments on a speech by British Foreign Secretary, Michael Stewart.

Secretary Stewart points out clearly the terror that the Vietcong have wrought in South Vietnam. He leaves no doubt that there is no balance of terror in that war-torn country, only the heavy weight in the deaths of key South Vietnamese. For those who believe that our bombing of oil facilities is inhumane. Secretary Stewart's presentation is must

Under unanimous consent I include Mr. McNaughton's column in the RECORD at this point:

THE EDITOR'S LETTER (By F. F. McNaughton)

The U.S. bombs key things. Viet Cong kill key men. Like Stalin killed key farmen Like Mao killed key Chinese.

To us has just come a speech made in Parliament by the British Foreign Secretary Michael Stewart.

American filers had just bombed oil tanks. They had done it so skillfully that hardly a civilian was killed—as expertly as a surgeon's knife takes out a tumor.

But it caused angry cries from the Labor benches and from Yank haters in the House

So Michael Stewart told them: "You are screaming about some careful bombing; but what about the cruelty that the Viet Cong

has carried on for years?"
He went on to say: "There is a long story of the most merciless cruelty carried out by the Viet Cong over a long period of years. As far back as 1960, the number of persons, quite apart from operations of battle, being murdered or abducted by the Viet Cong was running at 6,000 a year."

By 1955 it was 9,000 a year.

In the first half of 1966, 5,000.

Secretary Stewart say it is important to note who these victims are. Not only are they civilians and unarmed, but they are particularly people who held any kind of governmental position, or positions of authority in their villages.

Stewart said their aim is: "To fill everyone with so much dread that he dares not take on a responsible position."

These continuing, cold blooded murders in South Vietnam all but prevent competent government. This, says the British Foreign Secretary, is one reason why the Geneva Agreement can not be fulfilled.

Whereas U.S. bombing of oil tanks may have killed watchmen, the Viet Cong are murdering mayors and other officials and civilian leaders of their communities at the rate of 10,000 in this year 1965.

Retardation Legislation: What It Means To Massachusetts

EXTENSION OF REMARKS OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the REC-ORD. I include the following:

RETARDATION LEGISLATION: WHAT IT MEANS To MASSACHUSETTS

(Representative JOHN E. FOGARTY, remarks to the Massachusetts Association for Retarded Children, annual convention banquet, White Cliffs, Manomet, Mass., May 22, 1966)

President Frankel, distinguished guests, ladies and gentlemen, I am always pleased to visit my neighboring State of Massachu-setts, and even happier to address the Mas-sachusetts Association for Retarded Children at this convention banquet.

Actually, I feel somewhat humble to speak to citizens of this great State who have contributed such a great deal in the continuing battle against mental retardation.

It is rather an odd feeling to be standing here where the Kennedy family virtually started the great movements against mental retardation we are involved in today.

You can all be very proud of this State's Kennedy family, for it was from this State that John F. Kennedy traveled to Washington

as a young Senator and later won the Presidency. As President, he fought, successfully, to create a bold, new approach to mental retardation problems. He, and the panel of experts he called together, formulated the national plan to combat mental retardation that has meant so much to this State and to the country.

From this place, also, you have sent another young Senator, Edward M. Kennedt, who is no less interested in furthering plans to conquer mental retardation.

As a Senator and as President of the Joseph P. Kennedy, Jr. Foundation, "Tko" Kennedy has the same spirit of action that his older brother John possessed. Upon his return to Massachusetts at the end of the last Congressional session, he quietly toured State schools and residential institutions for the retarded to gain first-hand knowledge of the problems they face.

As President of the Kennedy Foundation,
"TED" KENNEDT, and other members of the
family, have diligently worked to get retarded
persons accepted as part of the national work
force.

Their efforts have begun to pay off in recent years. For example, the Kennedy Foundation was instrumental in opening up an important area of employment for the mentally retarded—the Federal government. Prior to 1964, there were only a handful of retarded citizens working in Federal jobs. Then, in 1964, through the efforts of the Kennedy Foundation, the Federal Civil Service was persuaded to waive its usual written examination in cases involving the mentally retarded. Now the Civil Service Commission will accept mentally retarded workers if State vocational rehabilitation officials will certify that a retarded man or woman can perform certain lobs.

By the end of last year, this procedure had already resulted in more than 500 retardates being placed in Federal jobs as copy machine operators, messengers, clerical workers, and as custodial personnel in Federal buildings.

The Kennedy's were also instrumental in developing a model project to train retarded workers. Just last month, they saw their idea become a reality when the Vocational Rehabilitation Administration granted \$149,000 to run the John F. Kennedy Flame of Hope Candle Project. Through this project, more than 1,200 mentally retarded workers will be employed to make hand-molded candies. It is hoped that this project will serve as a model for training the retarded for simple hand craft jobs in private industry.

Federal support for mental retardation programs, like the one under which the candlemaking grant was made, has been possible as the result of some major legislative developments over the past three years.

Mental reterdation programs began to be truly effective in 1963, even though many of us in Congress had been calling for more Federal support since shortly after World War H. At any rate, the big push for action against mental retardation was started by President John F. Kennedy. In 1963, his administration put forward two bills which became milestones in the fight against retardation. These two bills, signed into law by President Kennedy, were "The Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963," and "The Maternal and Child Health and Mental Retardation Planning Amendments of 1963."

Under the program authorized by the maternal and child health and mental retardation planning law, over 50 States and Territories have completed initial planning for comprehensive programs against mental retardation. In addition, the same law has given assistance to insure better prenatal care for mothers in low-income areas, thus further combating a cause of possible re-

tardation resulting from inadequate care during pregnancy.

Construction aid, authorized in 1963, has been initially successful. Advances made under three basic programs of this law include the following:

Community mental retardation centers— As of last December, two such centers had been approved for funding, and 175 other applicants were interested in receiving such aid. This program will gain momentum as State planning programs are more fully developed.

University-affiliated facilities—This program, to aid in the construction of buildings in which professional and technical training for mental retardation can be given, has so far received over 55 applications for grants. Nine of these have been funded with a total money value of nearly 17 million dollars.

Mental retardation research centers—Since the inception of this aid program, 8 awards, totaling nearly 20 million dollars, have been made to aid in constructing large, multidisciplinary centers to be used for research and research training in retardation.

Your State is participating wholeheartedly in the programs authorized by 1963 legislation. In fact, this year the State will receive 57,200 dollars for planning money, and a like amount next year.

Also, Massachusetts' institutions have received large awards for both universityaffiliated centers and for research centers.

The Waiter E. Fernald School in Waitham has received some 1.5 million dollars to help construct a retardation research center, and a community evaluation and rehabilitation center on the school grounds.

Working closely with the Massachusetts General Hospital, Boston, and the Harvard Medical School, the research center at Fernald School will focus on basic research in retardation with scientists working in such areas as neurology, psychiatry, pediatrics, epidemiology, and the like.

The school's Community Evaluation and Rehabilitation Center will concentrate on diagnostic and evaluation procedures and will provide training for special education, psychology, social work, nursing, and other allied disciplines.

In Boston, the Children's Hospital Medical Center was recently awarded over 3.3 million dollars in Federal matching funds to help construct facilities for research and for a child development research and evaluation center.

Nearly 2.5 million dollars of the Children's Hospital money will go toward the construction of a large research center with research areas including experimental neurological sciences, behavioral sciences, genetics, and metabolism and clinical research. As at Fernald School, this medical center is closely-linked to the Harvard Medical School.

The Child Development Research and Evauation Center at Children's Hospital will be constructed as a two-and-a-half floor addition to Children's new outpatient building. This extra space will allow the hospital to increase its services to the mentaly retarded in Massachusetts and from surrounding New England States.

Besides the activities generated by the planning and construction acts of 1963, four other major pieces of legislation related to mental retardation were recently signed into law.

"The Social Security Amendments of 1965" authorize 2.75 million dollars, for each of the years 1966 and 1967, to assist the States in implementing retardation plans started with earlier Federal aid. This law authorizes further funds to help train professional personnel to care for the mentally retarded and other handicapped children. In addition, financial aid is authorized for the needy

aged in mental or tuberculosis institutions, including the mentally retarded.

A second law passed in 1965 is "The Mental Retardation Facilities and Community Mental Realth Centers Construction Act Amendments of 1965." These amendments extend and expand programs for the training of teachers of handicapped children, and for research and demonstration programs related to training and teaching mentally retarded and handicapped children.

A third law—"The Elementary and Secondary Education Act of 1965"—authorizes a three-year program of Federal grants to the States to improve the education of some 5 million children in low-income families. This will benefit those children who are considered retarded because of cutural deprivation.

Finally, fourth law—"The Vocational Rehabilitation Amendments of 1965"—provides further aid to help rehabilitate retarded persons through vocational rehabilitation programs. Under these new amendments, programs for service and for rehabilitation facilities will be expanded and improved.

All of the legislation mentioned here will benefit the retarded and their families in Massachusetts and throughout the country.

In addition to these programs, however, the Federal government is supporting milions of dollars worth of research in various private institutions. The Federal government, through its own agencies such as the National Institutes of Health and the Children's Bureau, is also conducting far-reaching research and reasearch training programs aimed at solving the problem of mental retardation.

We in the Congress will continue fighting for new and better legislation to combat mental retardation, as will President Lyndon B. Johnson. President Johnson's own commitment to this fight was made very plain this year in his Health and Education Message to Congress. In that message he said, "We have begun to ease the tragic burden of the mentally retarded and their families . . . (and) . . . We shall continue our increasing attack on this problem. It deserves the concern and attention of our most able specialists . . ."

President Johnson then said he would appoint a new committee in 1966 to study new and better ways to attack mental retardation. In saying this, President Johnson followed the lead set by your own State son, John F. Kennedy, who created the first President's Panel on Mental Retardation several years ago.

Since the establishment of the original President's Panel, the Nation had made great advances in its attack on mental retardation. I think that now we would all agree even more with the words of President Kennedy delivered to the 1963 White House Conference on Mental Retardation: "We have left behind prejudice, superstition and ignorance which since the dawn of time distorted our thinking about the mentally retarded. We have entered a new era of understanding, hope and enlightenment."

Right To Know

EXTENSION OF REMARKS

HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. McFALL. Mr. Speaker, the Sacramento Bee, Sacramento, Calif., expresses its pleasure with the recently en-

acted freedom of information bill—and its esteem for a favorite son, the gentleman from the Third District of California who was chiefly responsible for the legislation.

President Johnson emphasized anew the people's right to know when he signed the measure, the newspaper comments. And it finds reassurance in the President's insistence on openness in Government.

Many had a part in producing the legislation, the newspaper notes editorially, but in its words, "none more than Representative JOHN Moss."

For the district and State he represents, the editorial says, the signing of the bill brings a great measure of pride in him and new respect for Government consideration of the public.

I would like to see this newspaper tribute printed in the RECORD, and so offer it:

PUBLIC'S RIGHT TO KNOW IS INVIOLABLE

President Lyndon-B. Johnson emphasized answ the fundamental premise that the people have the right to know what is going on in their government when he signed the freedom-of-information bill defining that right.

As he said, a democracy works best when the people have all the information the security of the nation permits. No one, he insisted, should be able to withhold public information when that information is not dancerous to the security of the nation.

No one challenges the logic in holding secret any knowledge which might give an enemy nation an advantage or which would reveal to other nations important defense data. This is only a reasonable reservation and a calculation in the public interest.

However, the end aim of government in confiding the business of government is that insofar as possible an open society should be maintained; indeed, under the promises of the founding documents, this open society is a guarantee.

The legislation defining the people's right to know is the product of too many attempts within government to suppress information which legitimately is public information. Usually this could be traced to the oversensitive public official more concerned with the protection of his own private little empire within government than with his obligation to the public knowledge.

It is reassuring, moreover, that the President made it clear he intends to demand openness in government, to conform with the stipulations of the freedom-of-information bill. He said he is instructing "every official" in his administration to create the fullest access to information on government business in all cases where that information in not privileged. Without such execution, the law merely would be so many words on so many sheets of nice, clean, white paper.

iy

ft

Meantime, many in the two houses of Congress contributed to the producing of this legislation, but none contributed more than Rep. John Moss of the 3rd, Sacramento County, district.

As chairman of a House subcommittee on government affairs charged with investigating secrecy in government, Moss focused attention upon growing abuse within government of the people's right to know, and so minutely documented his case Congress responded with the passage of this new stipulation.

For Moss, the signing of the legislation into law by the President should bring immense satisfaction and some small measure of pride.

For the district and the state he represents, it brings a great measure of pride in Moss and new respect for the government's consideration of the public.

White Moderates and Black Power

EXTENSION OF REMARKS

HON. JOHN G. DOW

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. DOW. Mr. Speaker, among all that has been written about the present racial unrest in our Nation, I find the following article by Mr. Tom Wicker one of the finest. This appeared in the New York Times of Thursday, July 21, 1966.

As other Congressmen know, we stand up for human rights while at the same time mail arrives from many who are unsympathetic to the Negro's plight.

I believe that Mr. Wicker's article puts the problem in sharp perspective, while still maintaining a considerate understanding of the opposing views involved. The article follows:

WHITE MODERATES AND BLACK POWER
(By Tom Wicker)

Washington, July 20.—President Johnson, who has been an outspoken and effective champion of the civil rights cause, inadvertently exposed today the central difficulty of a problem that is becoming increasingly racial rather than legal, economic or constitutional.

At his news conference, asked about the rioting in Chicago and Cleveland, Mr. Johnson replied in the authentic voice of the white moderate. Negroes had to realize, he suggested, that they were only a 10 per cent minority, that by explosions of violence they were jeopardizing gains already made, that most white Americans believed in orderly and peaceful progress for the Negro, and that he personally would do everything he could to see that "equality is given."

THE PROPER COURSE

Thus, Mr. Johnson said, the proper course for "every citizen" was to "cooperate with constituted authority" so that progress could be made in an orderly manner.

All of this was true. Undoubtedly most white Americans and many Negroes—for instance, those who follow Roy Wilkens—believe deeply in what the President said.

The trouble is that as two summers of urban rioting and the emergence of the "black power" movement show, great numbers of Negroes realize all too well they are only a minority and believe it is precisely the democratic power with a small "D" of which Mr. Johnson spoke that has denied them their rights, equality, jobs and comforts for a full century.

The trouble is that while no citizens sharing plentifully in a reasonably orderly society—least of all its President—can advocate anything but peaceful and lawful change, great numbers of disadvantaged Negroes are convinced the record shows that kind of change to be too slow and too limited to offer them any hope in their lifetimes.

The trouble is that while cooperating with "constituted authority" is the essence of an orderly society—and "constituted authority" itself is what any President is sworn to uphold—ghetto Negroes facing sluggish and inept and sometimes corrupt city regimes,

waiting for Federal programs that seem inevitably too little and too late, and living in states quicker to call out the National Guard than to move effectively against conditions, are beginning to see "constituted authority" as the enemy.

Three times Mr. Johnson spoke today of "giving" equality or justice or both to Negroes—gitfs which no one who calls himself an American wants to withhold. But the Negroes for whom they are intended not only have been waiting long enough to doubt the intention; as citizens, they also are wondering out loud why these things have to be "given" to them when they are the unquestioned rights of others. Viewed from this perspective, who is the iswbreaker—the man who takes his rights by violence or the man who withholds or stifles or trifles with the rights of others?

As for those gains that Mr. Johnson feared would be jeopardized, there has been no Negro rioting in the South where gains are visible and tangible—newly opened accommodations, newly integrated schools, newly registered voters, newly elected officials, even a scattered few newly convicted white civil rights offenders. In the great noxious city siums, what gains was Mr. Johnson talking about? More jobs? Decent housing?

rights offenders. In the great noxious city siums, what gains was Mr. Johnson talking about? More jobe? Decent housing? Granted that it takes a long time to provide these things, let alone the more subtle evidences of social equality, promises will not long be an adequate substitute. And if the honest and needed promises of the white majority are not fulfilled with at least all deliberate speed, then who is jeopardizing what?

This is at the root of black power, no matter how the Negro leaders define it. "Constituted authority" is not performing well enough; the thought processes, the innate reactions, the interests of white moderation were born and nourished in a radically different environment from those of the rioters and the looters and the parents whose children's toes are nibbled by rats. To the one the established order is a friend; to the other it is oppression.

MILES TO GO

Yet, change and progress are always alow and inefficient in a democratic society; white moderates can no more remake themselves and their instincts than alum Negroes; and it does little good for either to preach at the other in a language he cannot understand about values he finds irrelevant or unworthy. Perhaps seldom before has it been so true that all Americans have promises to keep, and miles to go before we sleep.

Abuses Through the Bureaucracy

EXTENSION OF REMARKS

HON. PRENTISS WALKER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. WALKER of Mississippi. Mr. Speaker, upon my return from Vietnam, I was contacted by the press regarding my impressions of a situation involving the Neshoba County Hospital in my district, and its application for approval by the Department of Health, Education, and Welfare to administer medicare.

The following editorial which appeared in the Meridian, Miss., Star on Sunday, July 17, 1966, offers a warning that does not stop merely with the Southern States. It transcends all State boundaries.

I personally feel that the Great Society bureaucrats selected Neshoba County, already abused by the press and civil rights organizations, as the ideal locality for which to set an example in the application of their rules, regardless of the affect it will have upon the elderly, awaiting badly needed medical care. The people of Neshoba County are just as eligible to receive the benefits they have coming to them as anyone else in the country.

Further, this is merely one example of the way the Great Society bureaucrats can take one program and use it as a whip to make the citizenry knuckle under to other socialistic demands.

I urge my colleagues to heed this warning:

ENDANGERING LIVES

The Neshoba County General Hospital has been the cynosure of the nation's eyes concerning medicare for the past week. Some may feel it regrettable that such publicity has again been focused on Philadelphia and Neshoba County, but we believe the situation at the hospital has opened the public's eyes to the abuses being heaped on the South through the bureaucracy which surrounds the administration of the medicare program.

The Health, Education and Welfare Agency, through its refusal to approve the hospital for medicare, has now proved beyond a shadow of a doubt that the LBJ administration is bent on making slaves of all citizens of the Deep South—both black and white.

HEW has definitely endangered the health and welfare of those people—either white or colored—who are over 65 in that area, all for the sake of politics and the precious vote of the trouble-mongers. It is now known that HEW listened to the demands of Civil Rightists who wanted to keep medicare away from their own people.

It is further proof that medicare—which we were against in the first place—will be nothing but a political football anywhere in the nation.

Sooner or later, congressmen will hear the cries of outrage from their constituents about such abuse—the sooner the better. Whether they will heed these cries is another story.

We admire the courage of the administrative officials—Lamar Salter and the board—at the Neshoba hospital in their fight to gain what they believed was right for their patients. As taxpayers—paying the bill for medicare ever-where—we join them in their efforts to throw off the yoke of discrimination which HEW apparently wants to place on all hospitals in the Deep South.

Message From Senator Hugh Scott on Occasion of the Assembly of Captive European Nations' Dinner, National Press Club, Washington, D.C., July 20, 1966

EXTENSION OF REMARKS

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. HORTON. Mr. Speaker, last Wednesday evening, July 20, Hon. Hugh Scorr, the distinguished Senator from the State of Pennsylvania, sent an inspiring message to those attending the Captive Nations Week dinner.

The wisdom and determination expressed by Senator Scorr should be shared with all Americans, and all who love freedom throughout the globe. It is for this reason that I am making the Senator's words a part of the Record:

Unavoidable circumstances prevent my being with you tonight in person, but I want you to know that I am very much with you in spirit. Your cause has been my cause for many years.

Our era has witnessed the near total abolition of West European colonial rule over
underdeveloped and divided areas of Asia
and Africa. The United States supported and
aided this great historical process because we
Americans believe that all peoples are entitled to determine their own destinies. But
our era has also witnessed the rise of a new
and more insidious form of colonialism—
the colonialism of communist imperialism
which has engulfed many hitherto free and
independent countries in East Europe. Just
as we opposed colonialism in Asia and Africa,
so too must we oppose it in East Europe. Not
to do so would be a betrayal of our own basic
ideals.

It is up to us to repeat, and to continue to repeat that we in the United States do not recognize oppression whether it occurs in Asia, Africa, Europe or in our own hemisphere. We must declare with renewed vigor our belief that the captive peoples of East Europe will one day regain control of their own destinies.

The captive peoples have faith that we will hold fast to that belief. I know that you will keep that faith, and you can be sure that I will.

HUGH SCOTT, U.S. Senator.

Bob Jones Appreciation Luncheon

EXTENSION OF REMARKS

HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. EVERETT. Mr. Speaker, it is with a great deal of pleasure that I call to my colleague's attention a recent event in North Alabama honoring one of the distinguished Members of the House.

The citizens of Limestone County, Ala., which borders Tennessee, honored Representative Robert E. Jones, of Alabama, with a Bob Jones appreciation luncheon for his important contributions to the development of Limestone County and all of the Tennessee Valley.

It has been my privilege to serve with our respected colleague from Alabama on the Public Works Committee for a number of years. I have long admired his vast knowledge of resources, public works, economic development, and water resources; and I value and respect his skill as a legislator. Most recently, he demonstrated his concern for our area and the entire Nation in his work for approval of the Tennessee Valley Authority revenue bonding authorization.

The Limestone County event was the subject of an editorial on July 13, 1966, in the Huntsville, Ala., Times. I include the editorial as part of my remarks:

AW APPRECIATIVE LIMESTONE

Monday's luncheon in Athens honoring Rep. ROBERT E. JONES must have been a truly heartfelt attempt at appreciation. The efforts of the congressman have gone far in adding Limestone County's attempts to carve ou a newer and much larger place in the economic future of the North Alabama area.

Specifically, the 200 Limestone County citizens were marking the success of the Eight District representative's diligent efforts to secure a \$1.3-million federal waterworks grant for Athens. And the efforts were obviously necessary if there is to be increased urbanization in the area—for such an increase must be predicated upon increased water development.

But the luncheon also provided an occasion properly to credit the congressman with introduction of a billion-dollar Tennessee Valley Authority revenue bond issue to aid in financing the world's largest nuclear-powered generating plant—another near-fabulous asset for tomorrow's Limestone County.

In short, keeping up with this Jones is quite a feat if you're a public servant intent upon watching your region progress.

The 14th Anniversary of the Commonwealth of Puerto Rico

EXTENSION OF REMARKS

HON. FRANK ANNUNZIO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. ANNUNZIO. Mr. Speaker, the month of July brings many national celebrations. On the Fourth, we mark our own independence from Great Britain. On the 14th, our oldest ally, the French celebrate Bastille Day. And today, July 25, I should like to take a few minutes to pay a special tribute to the unique partnership in self-government that was established in Puerto Rico, on this date, 14 years ago.

On July 25, 1952, the Commonwealth of Puerto Rico was formally proclaimed, and we embarked on one of the most progressive experiments in the history of American government. Today, 14 years later, I am proud to say that that experiment has been an unqualified success.

F

0

n

P

C

Through a constitution adopted by the people, Puerto Rico has provided her more than 2,500,000 residents a republican form of government guaranteeing the same freedom of speech, freedom of religion, and freedom of the press enjoyed by their fellow American citizens everywhere. But, as we all know, these most cherished freedoms represent only a shallow liberty if they are not accompanied by freedom from the ravages of poverty, hunger, and disease. This is the real test of a great society, and it is in this test that Puerto Rico has staked out a place of honor in the history of our hemisphere.

For through Operation Bootstrap, the program first conceived by the legendary Luis Muñozi, Marín, Puerto Rico has performed what is perhaps the economic miracle of the century. In the years since 1942, when the island's development program got underway, per capita income has risen from \$120 to \$905, illiteracy has been largely wiped out, and the best indicator of progress, the average life span, has jumped from 46 years to 70 years, while the death rate has drop-

ped to a point lower than that of the mainland.

The machine that has transformed Puerto Rico from the reputation of the "Poorhouse of the Caribbean" to the "Showcase of Latin America" is the Economic Development Administration-or, Fomento. It is this agency that has stimulated private investment to the extent of more than 800 highly diversified and modern manufacturing plants, What this kind of industrial development can mean to an economy of a small island is best demonstrated by the fact that recently Puerto Rico's net income passed the \$2 billion mark, and with this income, our partners to the south have purchased over a billion dollars in mainland products-almost as much as West Germany purchased with a population of 56 million people.

This fantastic economic success is not limited to manufacturing. With sugar production running at about 1,100,000 tons a year, agriculture remains an important economic cornerstone; and, as anyone who has ever had the pleasure of visiting this balmy paradise of the Caribbean knows, the tourist industry is very much responsible for a share of Puerto

d the erage rs to dropRico's success story.

Today, then, Puerto Ricans have much to be thankful for and much to celebrate. But the task that Luis Munoz Marin set out to tackle a generation ago has not been fully completed. The work of Operation Bootstrap remains unfinished. Puerto Rico still has its problems. Poverty has not been eradicated for all, unemployment has been gradually rising, and a rapidly growing population will make these problems increasingly difficult to cope with in the years ahead. But what is important is that Puerto Rico has made an effort to solve these problemsan effort that has met with great success. Under the guidance of the beloved Munoz, and under the leadership of the new Governor, Roberto Sanchez-Vilella, and with the hard work and dedication of the Puerto Rican people, the island has pros-

The success that Puerto Rico has so deservedly achieved attests to the benefits of the democratic way of life, and the annivensary of the Commonwealth constitution, which we honor today, represents the best American traditions of political inventiveness, belief in human liberty, and belief in government by the

consent of the governed.

Again, on this Constitution Day, I should like to salute the people of Puerto Rico and wish each of them the best of life in the coming years.

The Civil Rights Bill

EXTENSION OF REMARKS

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. EDWARDS of California. Mr. Speaker, this week the House will take

up H.R. 15765, the civil rights bill. We have an opportunity here to enact effective legislation to deal with many facets of our racial problems which have not been adequately dealt with in previous legislation.

Every section needs the careful consideration of all of us. We must be certain that the language is clear, and that it covers exactly those areas we mean to include. On Sunday, July 24, the New York Times discussed very ably two of the most important issues with which we are faced. I think the comments are penetrating, and believe my colleagues will find them useful in their deliberations on this bill. I would like, therefore, to insert the editorial into the RECORD.

THE CIVIL RIGHTS BILL

When the House of Representatives takes up the civil rights bill on Monday, it will have to make two difficult but crucial deci-

The first is on Title IV, which is intended to stop racial discrimination in the sale and rental of property. This section as drafted by the Justice Department was excellent and needed no revision. Unfortunately, a bi-partisan majority of the House Judiciary Committee yielded to the selfish clamor of the National Association of Real Estate Boards and approved an amendment offered by Representative Mathias of Maryland.

The purpose of the Mathias amendment was to exempt the sale of one-family houses and the rental of small apartment houses (four apartments or less) in which the owner occupies one of the units. This amendment would leave nearly two-thirds of the existing housing in the nation outside the scope of the bill and maintain the lily-white suburbs intact. Moreover, Representative MATHIAS told reporters that his amendment would permit a real estate broker to dis-criminate against Negroes when requested to do so by the seller of an exempt property.

Attorney General Katzenbach last week advised a Senate committee, however, that the amendment would exempt owners only if they themselves tried to sell or rent their properties. A broker would not be legally immune if he discriminated, even though he were acting under instructions from the owner. Since most property is sold through real entate agents, Mr. Katzenbach's inter-pretation renders the Mathias amendment relatively innocuous. The test for the House will come if Mr. Mathias attempts to strengthen his amendment to make it possible for brokers to discriminate.

The second critical test on the bill concerns the Judiciary Committee's insertion of the seemingly innocent and honorable word "lawfully" into Title V. This section of the bill is designed to punish acts of violations of the bill is designed to punish acts of violations of the bill in the workers and New York and New York and New York and New York and New York and New York and New York and New York and New York and New York and New York and New York and New York and New York and New York and New York and York a lence against civil rights workers and Negroes which occur when these persons are exercising their constitutional rights. The insertion of the word "lawfully" in this context tears a great, gaping hole in the bill.

Over and over again, civil rights demonstrators in Southern towns have been ar-rested for loitering, jaywalking, trespassing, or parading without a permit. Because a man is jaywalking, should he be teargassed? Because a man is "trespassing" on public property, should he be beaten with nightsticks or set upon by police dogs? It was precisely to prevent such violence, much of it committed under the thin color of legality, that Title V was drafted.

The bill has several excellent provisions, notably the improved procedure for nondis-criminatory selection of jurors. It could be further strengthened by providing finan-cial indemnification in cases of death or in-jury resulting from civil rights activity. But

the protection of the housing section against further enfeeblement and the restoration of the antiviolence section to its full effectiveness are the challenging decisions now before the House.

Unions in the War Against Poverty

EXTENSION OF REMARKS OF

HON. CHARLES S. JOELSON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. JOELSON. Mr. Speaker, I was impressed by an article by Thomas Cos-grove in a recent edition of Communities in Action, published by the Office of Economic Opportunity.

Unions and union leaders are particularly equipped to be helpful, and I believe that Mr. Cosgrove has performed a valuable service in letting the public know what the AFL-CIO leaders have done to promote and encourage the programs of the Office of Economic Opportunity. Much remains to be done, and I certainly hope that union participation will be continuing and even widening. The article follows:

UNIONS IN THE WAR AGAINST POVERTY

Scratch almost any union leader and you will find he was once poor himself, that he believes a union is a democratic device by which its members, largely, have lifted themselves out of poverty . . . and further, that he and his organization have an obligation to help others help themselves.

For these reasons the AFL-CIO and other unions support OEO programs through politi-cal and legislative activities. They also support many other measures which are part of the larger war on poverty. These include civil rights, increased unemployment com-pensation, adequate workmen's compensation, higher social security and welfare benefits, regional development, programs to in-crease the number of jobs available, increases in the minimum wage, Medicare and other legislation aimed at helping the poor and other Americans.

AFI-CIO leaders have been involved in AFI-CIO leaders have been involved in OEO from the very beginning. A. Phillip Randolph, president of the Sleeping Car Porters, and Miles Stanley, director of the AFI-CIO anti-poverty office, are members of OEO's National Advisory Council.

David Sullivan, president of the Building Services Employees International Union, is chairman of OEO's Labor Advisory Council.

and 12 other top trade union officials are also council members. Many local union officials, nearly 2,000, now serve on governing boards of local com-

munity action agencies.

munity action agencies.

A dramatic example of union leadership in CAP development has unfolded in Cincinnati, Ohio. There, Al Bilick, head of the local AFL-CIO Labor Council, served as president of the city's Community Action Commission in its first year of operation in 1965.

Bilick's organization was already deeply involved in community, problems before OFO. volved in community problems before OEO came into existence.

came into existence.

In 1963, Cincinnati labor and civil rights groups staged a successful march for jobs and freedom. Following the lead of Congress' inquiry that year into the nature and extent of poverty in America, Cincinnati's City Council was urged to conduct its own investigation by those mobilizing the jobs and freedom campaign. and freedom campaign.

Theodore M. Berry, then a Cincinnati city councilman, and chairman of the council's

welfare committee, headed this investigation. When the Economic Opportunity Act was signed into law, Berry became director of Community Action Programs for OEO.

Thus with labor supplying much of the push, Cincinnati launched its own Community Action Program within weeks after the anti-poverty legislation became national law.

But labor's involvement in the War, as Billick points out, goes beyond the broad outline of community action in Cincinnati or in the nation. He said, "Job training programs directly concern us and we are involved."

To follow through on the basic issues of employment, the Cincinnati AFL-CIO Labor Council co-sponsors a unique program with the Neighborhood Youth Corps and the city's rehabilitation division.

This project puts together skilled union craftsmen, crews of youngsters and owner-residents of rundown houses in poor neighborhoods who qualify for rehabilitation grants of up to \$1,500 from the Federal Housing Administration.

Four local unions of painters, plasterers, carpenters and cement masons supply craftsmen who, paid at the prevailing union rate, serve as foremen and instructors for crews of boys age 16 to 22, who receive \$1.25 an hour.

This program has been so well received the Labor Department is now being asked to approve an expanded two-year operation.

Out in California, the Alameda County AFL-CIO Central Labor Council has also concentrated on the job problem. This county includes the city of Oakland.

In May of 1965, the council submitted a plan to OEO for a twelve-week summer job project for the employment of 200 jobless youths in various types of community work, all under supervision of the Labor Council.

Last June 9, the OEO approved a grant of \$235,000 for the project.

of \$235,000 for the project.

A project director and staff of supervisors and foreman-instructors were hired, largely from the ranks of retired or unemployed union members, and a list of proposed work projects was obtained from community non-

profit agencies.

Job applicants were sought through schools, church organizations, the state employment service, welfare rolls, youth centers—and police records. Requirements were: age 15 to 21, family income of not more than \$4,000 a year for a family of four (less for a smaller family) and willingness to work.

The task of recruitment was an agonizing

The task of recruitment was an agonizing one. In less than three days, nearly 700 had applied for the 200 openings. Some 200 were finally chosen, 140 boys and 60 girls.

Nearly a third were on parole or probation or had previous police records—the sort of kids who nine times out of ten would be rejected by traditional social agencies. Most came from families receiving public assistance. A high proportion were school dropouts. About 90 per cent were Negro.

With few exceptions, the young workers tackled their tasks with zest and hustle. The work, and the prospect of regular \$1.25-an-hour wages, seemed to promote new feelings of self-respect, ambition and responsibility. Many opened bank accounts for the first time in their lives. They began to dress better, both on and off the job. A supervisor of a group of girls reported that her charges had matured remarkably in just a few weeks—"no more gum chewing and bubble popping, and they've gained a new respect for themselves and each other."

Not the least significant aspect of the project was the effect it had on the foremanistructors. Harold Wilson, the labor council's community services director who acted as overall project coordinator, reported:

"We conceived this project with the idea that experienced working men could guide kids in proper work channels. This has happened just as we foresaw. What we

didn't foresee was how deeply the experienced workers would be affected, too. They've come to understand these kids and their problems; they've gotten not only involved but enthused."

Another typical union-inspired project has 45 young men undergoing training as surveyor's aides in a Neighborhood Youth Corps project sponsored by Operating Engineers Local 545 in upstate New York and the New York State Department of Public Works. They have been doing so well most of them will be put to work before they finish their scheduled 21 weeks of instruction.

The project was developed by Local 545, with help from the International Union, to fill a widening shortage of men qualified to work in surveying gangs. Instruction is given by experts from the union's ranks.

Another interesting union-backed program is the custodial training project of the Building Services Employees International Union in Washington, D.C. This is a pilot project sponsored by BSEIU and its locals 82 and 536 in cooperation with the U.S. Office of Education.

"Our main purpose in sponsoring this school," says BSEIU President David Sulivan, "is to secure jobs for unemployed workers after they have completed the 12-week course."

"The school represents a concrete effort to support the War on Poverty. If it is successful, we hope to establish similar schools in other cities."

Every day, the students make their facilities sparkle. They are learning the techniques of efficient cleaning from experienced teachers. And, in remedial education classes, they are brushing up on English and basic math.

On the work skills side, they learn how to "strip" a floor, use mops and waxes, operate buffing machines and clean rugs and windows efficiently and carefully.

These trainees used to be "hardcore" unemployed or chronically unemployed. They don't plan to be any more.

Unionists are workers with skills to offer, and some are offering them free. Many are among the 2300 VISTA Volunteers who are giving their time, energy and concern to poverty programs of all sorts throughout the country. There is also some union involvement in the Job Corps now and strong prospects of unions taking a very large part in many Job Corps camps.

One of the most interesting programs involving unions and OEO was described by Sargent Shriver at the recent AFL-CIO convention in San Francisco. This is the Appalachian AFL-CIO trade union program which includes training and a year of community action work for 100 leaders of AFL-CIO city, county and state councils in ten Appalachian states.

The 100 people now in training at the University of West Virginia will return to their communities after their initial two-week program is completed.

"We could like to have the program in haif a dozen different parts of the United States" Shriver told the AFL-CIO convention, "in the iron range area, in the northeastern states, in the Ozarks, in the West, in the Rocky mountains and in the South."

The programs described above and a dozen others in development indicate a very fruitful expanding union involvement in all assects of America's War on Powerty

aspects of America's War on Poverty.
But of course some of the poor see unions as just another part of the establishment which is holding them back. In fact, in the area of discrimination in employment, some of the poor hold unions responsible for discrimination against minority groups. Of course unions don't have any voice whateoever in who most employers hire, but they do have some influence in the building trades, where there have been some problems.

The national leadership of the AFL-CIO is working hard to help end discrimination.

"Segregation in unions is no better than segregation in schools, and we hope that the problem will be eliminated in a short period of time," Donald Slaiman, AFL-CIO Director of Civil Rights, recently said.

"Not only do we urge segregated unions, on the besis of AFL-CIO policy, to merge with all possible speed, but we also notify them that these laws exist," Slaiman said, "We tell them that they are subject to complaint (for discriminating) and that the law is being violated."

Is being violated.

Some progress in this area has been noted by Ben D. Segal, of the U.S. Equal Employment Opportunity Commission. He has said:

"For instance, there are eight Negro ap-

"For instance, there are eight Negro apprentices and several journeymen in the electrician's local here in Washington. Just a few years ago there were none."

And last month the AFL-CIO and the National Urban League joined hands to help prepare Negro youths for apprenticeship training in unions. Another similar project was set up earlier in Chicago by Building. Trades Unions together with employers, the federal government, the city government and civil rights organizations. So there are indications of progress.

It should now be clear that AFL-CIO leaders are in the OEO effort to the hilt. Together with OEO they are combatting discrimination and poverty by participating in planning at the national level and implementation at the local level.

AFL-CIO President George Meany recently wrote:

"The time to end poverty is now—in the decade of the Sixties. The means are available; they need only to be used."

—Thomas Cosgrovs.

Public Office and Business

EXTENSION OF REMARKS

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. MINSHALL. Mr. Speaker, many years ago when I decided for the first time to run for office, I sought counsel from an old friend of the family, a judge who had been on the political scene for half a century.

Upon learning of my interest in entering into politics, he looked up at me with a wry and wise smile and said:

Young man, if you would just put onetenth of the effort that you will in running for public office into selling old mops and brooms, you will be a millionaire.

His comment returned to me the other day when I read a very excellent editorial in the Bethesda-Chevy Chase Tribune. It is a most thoughtful analysis of an increasingly controversial area of the political life. I commend it to the attention of my colleagues and to all good and honest men of public spirit who are hesitant about embarking upon what many of us consider one of the most noble careers of all, that of public service.

The editorial follows:

PUBLIC OFFICE AND BUSINESS

It's amazing how badly some people want public office.

Not only will they spend several grueling months running breathlessly from meeting to meeting, shaking hands and making speeches, but they subject themselves and their families to various sorts of indignities.

The latest evidence of the sacrifices which candidates are willing to make is revealed in the financial statements of the gubernatorial hopefuls. On the apparent theory that the public must know the most intimate details of a candidate's life before he ran make an intelligent choice, several of the candidates have made full confession of their assets.

It is true that such disclosures can show where potential conflicts of interests might occur, but this is hardly any guarantee of integrity. The mind of man has an infinite capacity for figuring out clever ways of wrong-doing, and there certainly are ways in which an office can be corrupted which would never be reflected on such financial statements.

The public announcements of assets also raises an interesting question: "In politics, is it better to be poor or rich?"

There was a time when persons of wealth were considered a political liability; the "common man" approach seemed a surer road to success at the polls.

Today, however, there seems to be an undeccurrent running which states that you cannot really trust a man who is financially insecure; consequently the candidate with the most worldly goods would be the least likely to succumb to the temptations of selling the favors of his office.

There is no evidence to support such a neory. It could be argued to the contrary that the person resigned to living on modest means doesn't have the appetites which require frequent infusions of new wealth.

We should rejoice that despite that dis-tasteful aspects of campaigning there are many able and qualified persons willing to seek public office. We hope the demands made of them will not be such to drive the most able out of public life, leaving only the opportunists and self-seekers.

A 16-Year-Old Writes to Our Men in Vietnam

EXTENSION OF REMARKS OF

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. QUILLEN. Mr. Speaker, last week I received two wonderful letters from a young lady in my district, Miss Jeanne Pierce. One of the letters was addressed to me, the other to our men in Vietnam.

It was my pleasure to forward Miss Pierce's letter to one of the men from my district who is serving in Vietnam, and I am sure that he will pass it around for many of his comrades to see. However, I would like to insert the letters here so that all of us might know Jeanne's thoughts, which are highly commendable.

The letter follows:

KINGSPORT, TENN.,

July 20, 1966. Congressman James H. Quillen,

House of Representatives, Washington, D.C.

el

th

di-

er

11-

b-

of

he

n-

ant

ing

DEAR SIR: You have been so kind and considerate in the past. I would like to ask you one more favor.

Would you please see that my letter gets to any soldiers anywhere in Vietnam. It doesn't matter what branch of the service.

I think you can get it there. If it isn't possible, thank you for your efforts. You're doing a great job up there!

Sincerely.

MISS JEANNE PIERCE.

KINGSPORT, TENW.,

July 19, 1966. Dear Men: I can't call you "boys" because don't believe anyone who has fought for his country remains a child.

I don't know anyone personally in Vietnam. but you are all Americans so I really know and love you all.

You must get darn mad when you hear about all those ridiculous draft card-burnings, beatnik demonstrations, and so on. I get boiling!

Sometimes it scares me to see what is happening to America. Good ole' flag-waving patriotism is seldom seen now. God is being removed from the mainstream of American life-or so the Commies and athiests think. But they are sadly misinformed-you can't throw out God by abolishing prayer in schoolt

I imagine God seems sort of alien out there sometimes. It's hard to think of God in connection with blood and bullets and death. But He's out there with you-believe that. Never lose faith.

Maybe some of you are from Tennessee or Mississippi. Those are the two states I know most about. I was born in Jackson. Miss. and lived there until three years ago.

East Tennessee, where I live now, is beauti-I live atop a ridgeful country. -Chestnut Ridge and from here you can look down upon the town. When I look out my bedroom window. I see other mountains, all green and covered with summer foliage.

I'm sixteen and for two years I've been trying to do something for you who are serving our country on far-away battlefields. A teen-age girl doesn't have much influence, you know.

But I do have one thing—a marvelous Con-gressman, James Quillen. I hope he can get this to you.

I don't even know whether you want this letter, or if it does any good. But I wanted to write it.

Just remember—you are not forgotten. We here at home, most of us, except for a few stupid kooks, love you, respect you, admire you, support you, pray for you, believe in you.

Keep up the good work! If there is anything special you mil need, maybe you can get word to your families. I mean, I know you can—but if they won't send it, I will.

Someday I hope to meet some of youwhat an honor for me!

JEANNE PIERCE.

U.N.'s Spendthrifts

EXTENSION OF REMARKS

HON, EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. DERWINSKI. Mr. Speaker, in view of the fact that the House just a little over a week ago passed the foreignaid bill with its very liberal provisions for funding U.N. projects, I believe an editorial from Chicago's American of July 23 deserves the special attention of House Members and therefore I insert it in the RECORD as part of my remarks:

TIN'S SPENDINGS

The nearer to bankruptcy the United Nations comes, the more it seems to increase its spending. A special committee of experts in finance from 14 countries has issued a report urging the U.N. to cut back its growing number of conferences around the world and also to curb its frantic passion for issuing voluminous documents.

U.N. meeting in New York, Geneva, Switzerland, and elsewhere have almost doubled in the last six years while the U.N. goes deeper and deeper in debt. More than 7,000 meetings have been scheduled for this year. and the cost of issuing documents has risen in six years from 13 million dollars to 26 million.

The committee recommended that Secretary General U Thant reduce the number of conferences to fit the visible resources, but Thant is not likely to do it. Everybody at the U.N. thinks Uncle Sam will come to the rescue again as he has before, and that extravagance need not be controlled.

We suggest therefore that the best way to get economy in the U.N. is not through appeals by committees, but through a flat announcement by Ambassador Arthur Goldberg that the United States hereafter will pay only its just and agreed proportion of the U.N.'s expenses.

California Assembly Joint Resolution No 29

EXTENSION OF REMARKS

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. GUBSER. Mr. Speaker, on several occasions in the past I have called to the attention of my colleagues in the House a proposed Bureau of Reclamation project which would be of great benefit to central California. It is the San Felipe division of the Central Valley project and would be authorized for construction by my bill, H.R. 777.

For the benefit of those who will be called upon to vote on this matter, hopefully in the not too distant future, I commend to your attention California Assembly Joint Resolution No. 29 which follows:

ASSEMBLY JOINT RESOLUTION No. 29-RELA-TIVE TO THE SAN PELIPE DIVISION OF THE CENTRAL VALLEY PROJECT

Whereas, It is the purpose of the San Felipe Division, Central Valley Project, California, to provide, among other things, irri-gation and municipal and industrial water supplies, conservation of fish and wildlife resources, and enhancement of outdoor recreation opportunities within the Counties of Santa Clara, San Benito, Santa Cruz and Monterey; and

Whereas, The proposed San Felipe Division will make use of a tunnel to be constructed from San Luis Reservoir westward under Pacheco Pass into said service area and will, by reason of its location, harmonize with and assist the State of California's water plan;

Whereas, There exists at present in said service area a drastic shortage of underground water; now therefore, be it

Resolved by the Assembly and Senate of the State of California, fointly, That the Legislature of the State of California re-spectfully memorializes the President and the Congress of the United States to expedite

authorization of the San Felipe Division, Central Valley Project, California; and be it

Resolved, That the Chief Clerk of the Assembly is directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to the Chairmen of the Committees of the Senate and the House of Representatives on Interior and Insular Affairs, and to each Senator and Representative from California in the Congress of the United States.

Address of Congressman Lester L. Wolff, Captive Nations Week Dinner, National Press Club, Washington, D.C., July 20, 1966

EXTENSION OF REMARKS

OF

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. HORTON. Mr. Speaker, it was my privilege to be present on Wednesday, July 22, at the Captive Nations Week dinner here in Washington at the National Press Club. On this occasion, sponsored by the Assembly of European Captive Nations, a plaque in honor of the Unknown Freedom Fighter was presented to Dr. Kenneth D. Wells, president of the Freedoms Foundation at

Valley Forge, Pa.

This plaque was presented to Congressman Lester L. Wolff and me during Capitve Nations Week exercises held last year at the United Nations in New York City. Therefore, I was particularly proud to participate with Congressman Wolff in the presentation of this symbol of freedom for the captive nations to the Freedoms Foundation, its new and temporary home. I say that this plaque will reside only temporarily in Valley Forge, because last year, it was decided that it should be lodged permanently in the capital of the first satellite nation that is freed from the Communist yoke.

On the same occasion, celebrating Captive Nations Week 1966, Congressman Wolff addressed the Assembly of European Captive Nations. His words were so moving and so inspired that I want to bring them before all Americans by making them part of the Record. I could not state Congressman Wolff qualifications to speak on this crucial subject any better than they were stated by Chairman Vaclovas Sidzikauskas upon his presentation of the ACEN Medal and Scroll to my New York colleague:

It gives me great pleasure to present, on behalf of the Assembly of Captive European Nations, our Commerciate Medal and Scroll to Mr. LESTER L. WOLFF, Representative from the 3rd Congressional District, New York.

After a distinguished career, which included participation in U.S. Trade Missions to the Phillipines in 1962 and to Malaysia and Hong Kong in 1963, Mr. Wolff and Hong Kong in 1963, Mr. Wolff as elected to Congress in November 1964. Scace his election, Representative Wolff has consistently and unfilinghingly given his full sup-

port to the captive peoples of East-Central Europe in their struggle for freedom and self-determination. Both in Congress and in other forums, Congressman Wolff has continued to bring to public attention the plight of captive East-Central Europeans suffering under Communist tyranny.

In recognition of and gratitude for Representative Wolff's record in defense of freedom, the Assembly of Captive European Nations begs the Congressman to accept this Medal and Scroll as a token of its apprecia-

tion.

SPEECH OF HON. LESTER L. WOLFF

It is a real privilege for me to speak tonight before this most respected organization—an organization whose members know perhaps better than anyone else the true meaning of Freedom.

Today, we stand at a crossroads. The past has been tragic for us all since the tyranny of Communism enveloped some of the proudest nations of the earth. Yet the future will inevitably be brighter, for a day will surely come when the liberty we enjoy in the Free World will be shared by all.

We meet here tonight on a fateful anniversary. Last Saturday was the 21st anniversary of the convening of the Potsdam Conference, where the free world first began to realize how coldly, determined, were the Russians in their goal of world conquest.

Within a few years of that fateful meeting, nearly one billion men, women and children lost their most precious possession—their freedom—because of the ambitions of the totalitarian Soviet state. Untold millions have suffered now these

Untold millions have suffered now these many years under the yoke of Communist

We live in a time when American attention is riveted on the fight for freedom in Vietnam.

Yet, important as that struggle may be, it is equally important that Americans remember the unhappy fact that the Captive Nations of Eastern Europe are still captive—that their freedom is still to be won.

The ruthless grip of Communism has not relaxed in Eastern Europe. Freedom is still a word from the lexicon of a happier past.

Men still lose their lives in attempts to pierce the Iron Curtain to freedom. The heavy hand of the state is felt in all aspects of daily life in the Captive Nations.

There is no freedom of speech; and illadvised word can still bring the dreaded knock in the middle of the night.

And there is no freedom of the press. The only information disseminated to the people is the propaganda churned out by the puppet regime and its master, the Communist Party. The only way those in the Captive Nations can learn the truth about the world in which they live, the truth about their own country, is by furtively listening to the Voice of America and Radio Free Europe.

And there is no freedom of religion despite claims to the contrary, for Communist ideology is Godless. Red anti-semitism is but one example of

Red anti-semitism is but one example of the true intentions of the Communists, which is to erase religion and God as a competing force to Soviet tyranny.

Their campaign against God has been a

miserable failure.

In captive Poland, the Catholic Church has survived, under the brave leadership of Cardinal Stefan Wyzynski, even as the Communists continue to show their enmity to the Church, by refusing to allow the Pope to visit Poland to celebrate the Millenium of Christianity in that land.

In Hungary, Cardinal Joseph Mindszenty remains the symbol of defiance and courage.

Throughout the Captive Nations the spirit of religion has been repressed, but it has not been crushed.

However, religious freedom is not the only victim of Communism.

Within the Captive Nations there are no free elections. The puppet regimes would never dare to test their popularity by allowing the people a free choice.

For history has taught that whenever men enjoy free elections, they always vote for an increase in freedom. Free elections in the Captive Nations would bring an immediate end to every single puppet regime imposed by the new Russian imperialism. And the Russians know it, for there has never been a single nation where a free election has resulted in victory for Communist candidates.

Men are by nature free; they will never consciously choose oppression.

Tonight we are proud to entrust with Mr. Wells, of Freedoms Foundation, temporary custody of the beautiful plaque which was presented to Congressman Horron and me last year.

We hope it will not long remain at Valley Forge, the home of Freedoms Foundation. We hope it will soon find its permanent ahrine in the capital of the first captive na-

tion to be liberated from Communism.

My friends, the past has taught us many lessons. If we remember them, the day of

liberation will not be far off.

We must remember, that even today when men talk of detente, the Communists continue to see the world as a struggle between two forces, with only one essential question: "Who will survive?"

Yet there is growing evidence that the Red Tide, unleashed across the world by the Russian Revolution, has passed its crest.

Russian Revolution, has passed its crest.

I believe that we have good cause for optimism about the future.

I'm optimistic because the Communists will not prevail by force in Vietnam.

I'm optimistic because the Communists admitted the failure of their economic system to provide for the needs of their people

when they built the Wall across Berlin.

I'm optimistic because the Communists
have failed notoriously in Asia, especially
in India and Indonesia.

in India and Indonesia.

I'm optimistic because the Communists have failed in Africa where even their toe-hold has been lost.

I'm optimistic because they have failed in Latin America where Fidel Castro, who perverted the ideals of his nation's revolution for freedom, has been trying for over seven years to export his poison to other nations in the hemisphere.

And, I'm optimistic because I believe it is only a matter of time before Communism begins to crumble in the ancient states of Eastern Europe now held captive.

In fact, the process may have already

For the force that holds the Captive Nations in bondage today is none other than a modern day version of traditional Russian imperialism, and such a force, relying on violence and hypocrisy and slavery has never been able to permanently prevail.

been able to permanently prevail.

It has been almost ten years since the brave freedom fighters of Poland and Hungary fought to the death against overwhelming

odds.

There are, and there will be, I masure you, other men just as dedicated to the cause of freedom.

For God did not will that men should live in slavery.

Just as Abraham Lincoln said that the United States could not exist half slave and half free, history will bear out the prediction that our world will not continue half in submission and half in freedom.

Because all men are brothers, as long as one single man is a captive of Communism, a part of each and every one of us is captive.

May the freedom that is the birthright of all men soon come again to the Captive Peoples. Their courage and sacrifices have won for them a special place of honor among the world's champions of liberty. To you members of the Assembly of Captive Nations the world's thanks for continuing to—carry the torch of freedom—let us all remember the plight of the oppressed people of the Captive Nations and help keep the torch burning.

Robert M. Hamady: Patriot

EXTENSION OF REMARKS

HON. JOHN C. MACKIE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. MACKIE. Mr. Speaker, I include in the RECORD a story from the June 26, 1966, Flint, Mich., Journal and the July 21, 1966, Stars and Stripes, which honors my constituent, Mr. Robert M. Hamady, for his sincerity and generosity to right a wrong for 68 wounded veterans of the Vietnam conflict.

The stories follow:

[From the Flint (Mich.) Journal, June 26, 1966]

FOOTED BILL-VFW GIVES CITATION TO HAMADY

The man who footed the bill to throw a special party for 68 wounded veterans of the Viet Nam conflict has been cited by the Veterans of Foreign Wars.

Robert M. Hamady, president and treasurer of Hamady Brothers, Inc., Flint, threw the party for the veterans after the Conrad Hilton Hotel refused the veterans reservations for an ice show because of "fear it would depress the other hotel guests."

Hamady anonymously picked up the tab for the party in Chicago after making arrangements through the Veterans of Foreign Wars.

Andy Borg, national commander in chief of the Veterans of Foreign Wars issued the citation of appreciation for Hamady and it was presented to him by Cooper T. Holt, the executive director of the VFW's Washington office and former commander in chief of the VFW.

About 3,000 delegates are here for the annual Michigan convention of the VFW.

[From Stars and Stripes, July 21, 1966]
CITATION FOR MAN WHO GAVE PARTY FOR
VIET NAM VETS

The man who footed the bill to throw a special party in Chicago for 68 wounded veterans of the Viet Nam conflict came to Grand Rapids from Flint to accept a citation from Commander in Chief Andy Borg of the Veterans of Foreign Wars for his kind deed after the Conrad Hilton Hotel had refused the injured veterans reservations for an ice show for it would depress other hotel guests.

Honored with an appreciation citation was Robert M. Hamady, president and treasurer of Hamady Brothers, Inc., a chain of supermarkets with offices at 3301 South Dort Highway, Flint. The citation of appreciation was presented by Cooper T. Holt, executive director of the VFW's Washington office and a former commander in chief of the VFW who represented the National organization of overseas veterans at the Michigan Department's 47th annual convention banquet held in the Civic Auditorium.

The Flint grocery chain operator telephoned Commander in Chief Borg after reading about the hotel incident in the Flint paper. He told the commander that he too felt the boys should have a special party and after hearing that one had been planned for them at the nightclub of their choice, Hamady asked just one thing: "Would you

please give me the honor and privilege of

paying for this party?"
In making the offer, the Flint businessman made only one stipulation—that the party should be put on in the name of the Veterans of Foreign Wars and that he be given no personal publicity.

personal publicity.

After the party had been held and turned out to be highly successful, Commander Borg said he had only one regret and that was that the man honored at the VFW convention in Grand Rapids was not on hand to witness the pleasure of those 68 wounded veterans.

The commander in chief asked that Hamady be contacted to see if he would accept public thanks from the VFW at the Michigan convention.

The Veterans of Foreign Wars of the U.S. decided to give their own party for the wounded men even though the public apology demanded by Commander Borg from the hotel chain was forthcoming.

A number of Flint area VFW people attending the annual banquet at the Civic Auditorium said that Hamady had always been most generous to veterans in donations to raise funds for community betterment projects.

Speech Before the American Friends of the Anti-Bolshevik Bloc of Nations—Hon. Frank Horton

EXTENSION OF REMARKS

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. WOLFF. Mr. Speaker, my friend and colleague Mr. Horron recently delivered an address about the captive peoples of Europe before the American Friends of the Anti-Bolshevik Bloc of Nations in Rochester, N.Y. I commend it to the attention of this distinguished body:

SPEECH BEFORE THE AMERICAN FRIENDS OF THE ANTI-BOLSHEVIK BLOG OF NATIONS, HIGH-LAND PARK BOWL, ROCHESTER, N.Y., JULY 23, 1966, BY HON. FRANK HORTON

In a poem entitled "My Testament," Taras Shevchenko, the Ukranian poet of freedom

> "Oh bury me, then rise ye up And break your heavy chains And water with the tyrants' blood The freedom you have gained."

Thus, was the immortal love of freedom expressed from the heart of Shevchenko. It is appropriate that we remember and reflect on the poetry of Shevchenko this evening, for we are the people who must breathe life into his hope for freedom in Eastern Europe and for men everywhere. I want to talk to you tonight about where the hope of freedom for the Captive peoples now stands, and about what you and I must do to brighten that hope.

Communism holds captive the peoples of Hungary, Poland, East Germany, Czechoslovakia, Rumanis, Albania, Bulgaris, Latvis, Lithuania, Estonia, Armenia, Ukraine, Yugoslavia, and its Serbian, Groatian and Slovene peoples. But, the Captive Nations are not confined to Eastern and Central Europe. There are many once-free countries in the Soviet Union and Asia where the lamp of liberty no longer burns. And, as close as 90 miles to our United States shores, the Communist transits are in command in Cuba.

To say that this situation which enslaves the minds of millions is distressing is an unbelievable understatement.

Yet what steps have we, as Americans, taken to free the minds and lives of these millions, many of whom are members of your own families? How strong a stand have we made in Europe to let these people know that the hope for their freedom is safe in our hands? If we compare where freedom stood at the close of World War II and what its status versus communism is today, the contrast is frightening indeed. The shadow of Red conquest has fallen over vast new areas of the world, once-held superiority in weapons is being reduced to a mere balance of military power, and unquestioned support for our policies from freedom's friends, our "allies," has deteriorated to an attitude of "liet's negotiate."

While Americans at this hour are valiantly defending Asian frontiers of freedom with their very lives, the picture in Europe is far less bold and far less bright. Ten years ago, when the Free World failed so dismally to answer the call of Hungary, which had its Red regime in shambles, ie became clear that the United States intended ony to contain Communism, but that we would not stick our necks out to free people who were already captive. This was a sad decision for many Americans to swallow, indeed, there are many in Congress like myself who refuse to abandon our determination to win freedom for these people. But sadly, Administration foreign policy makers seem to have abandoned this obligation. In fact, there is now serious question whether even our containment objective in Europe is holding fast. At least in 1956, when we left the Hungarian revolutionaries to fend for themselves, we had a strong and viable defense structure in Europe.

Today, I have serious doubts about the unity and strength of NATO. As I told my colleagues on the floor of the House of Representatives a few weeks ago, we cannot lay all of the blame for the split in NATO at the feet of the French. Pointing the finger of blame at General De Gaulle will not strengthen or improve the Free World Alliance in Europe. We would do better to look at the trend of our own policies. When I spoke in the House on this subject I pointed out that the United States has practically receded from its former position of leaderable of the Atlantic Alliance.

We have not made a single policy initiative in Europe since the Multi-lateral Nuclear Force concept failed two years ago, despite the fact that our initiative has never been more desperately needed than in the last two years. With the Nations of Western Europe maturing once again to economic prosperity, and growing further and further from the Nations of East Europe, it is essential that someone continue to hold with determination, the threads of common interest and purpose which bind the Free World together. That someone must be the United States, for since World War II, our Nation has been rightfull regarded as the Free World spokesman in the Cold War alignment. But despite our determination in other areas of the world, our initiative and leadership have been woefully lacking in Europe.

I said at the beginning of my talk that I would tell you where the hope of freedom for the Captive peoples now stands, and that I would suggest what we could do to brighten this hope. I think I have demonstrated to everyone here how very much the hope for freedom in Bastern Europe needs brightening. Far from urging a strong American determination to free these Nations, our people today are seriously questioning-our justification for pursuing even a policy of containment in Asia. While the majority of Americans do see the need Low holding the line in Vet-Nam, the dissension

on this issue gives us an idea about the un-

certain attitude of many toward Communism.

If we want to change the policies that have contributed to this bleak prospect for freeing the Captive peoples, we must reharness the attitudes of the American people toward Communist rule. We must reswaken all Americans to the duty of this Nation to bear the standard of the Free World in protecting freedom, and in extending it to enslaved areas of the globe. When I say that we must re-harness these attitudes, I mean every one of us here tonight and throughout the co-try who holds high the ideal of freedom all men. I mean every one of us here tonight and throughout the country whether or not we have personally gone through the ordeal of Communism, whether or not we witnessed how Communism can stiffe a nation and enslave a people who once enjoyed a full and vibrant life and culture.

I mean every one of us, first or fifth generation Americans—because you and I have a common heritage. Our roots were nurtured in the same fertile soil—that of Western Civilization. You and I are the products of that Civilization, and we all bear the characteristic of Western background which stands out most in each of us in the love of individual liberty. It is this characteristic. longing to be free which binds us together in a common mission—our mission to propa-

gate ideals of freedom.

As former citizens of the nations of Eastern Europe, who can recount first hand what life is like under the boot of Red power, Americans of Eastern European derivation should make it their primary task to educate the American public about the realities of Communism-about barbed wire, about the need munism—about barbed wire, about the need for complicated papers and passports to travel only a few miles, about censored news media and about controlled education. It is not enough to repeat over and over the evils of Communism among yourselves. Many of you are here in this country because you were determined to resist totalitarian forces in the old country.

Today, there is apathy in America about our policy, or our lack of policy toward Eastern Europe. It has become old hat to talk about Captive Nations and Communist totalitarian society, just as among some of our American citizens freedom has become old hat. But for people who have seen both America and Communism, there is nothing old hat about Freedom. I know how actively you cherish the rights and privileges of re-

iding in the United States.

But this country will never take a strong stand against established European Communism as long as Captive Nations Week is celebrated by immigrant groups alone. While you, by yourselves, can exert pressures on American policy through the channels open to all citizens, the strong and effective response will only come when all Americans, whether or not they were born in or descended from Eastern Europe, show an active concern for the freedom of your peoples. Captive Nations Week must be a time for all of us to demonstrate our concern, and our disappointment with present appeasement of Red regimes.

You, having had the benefit of seeing both sides; you, to whom Communism is much more than a few words in the newspaper, must go out and reawaken Americans, those you work with and deal with, those who share this State and this community with You must communicate to them the realities of totalitarianism which many of your own relatives are now enduring. must relate your experiences and your com-parison of life under freedom with that under enslavement with your fellow Americans at every opportunity.

Captive Nations organizations and nationality groups like those many of you are active in must work together in this task of re-educating Americans. Disputes and

prejudices that are left over from the old country must be buried, for the sake of a united effort in getting this urgent message

across to our people.

Since I have been your Representative,
I have done my best to get this message across to our people and to our leaders.

I hope most of you know that my very first official act as your Congressman was to introduce a resolution calling for the establishment of a Special Committee on the Captive Nations. Ever since, I have con-tinued to work for the adoption of this resolution.

Congress should have a special body to study the plight of the Soviet-dominated nations, to report to the American people on the oppression which exists in the Captive Nations, and to make recommendations for effective policies to return freedom to these

Such an official examination could help to expose Soviet propaganda and reveal the real role of Communism. This action would demonstrate our sincers good faith and conviction to help the captive peoples once against enjoy self-determination. In addition to the moral principles which

inspire this proposal, we owe the people of these nations a great debt. We owe them our support in return for the efforts of the refugees of these countries who have helped build the golden greatness of this Nation. For as you and your countrymen have con-tributed to the ideals of freedom and independence here, we must come to the aid of those now in your homelands or the lands of your ancestors. They deserve our renewed dedication to the cause for which

they live: free government. Bringing this special Congressional Committee on the Captive Nations into being will not be easy; it will require the same determined reawakening among Members of

the Congress.

I have introduced another resolution which would put the Baltic States question on the United Nations agenda. The brutal and illegal annexation of Lithuania, Latvia, and Estonia by the Russians and the deporta-tion and death of hundreds of thousands of their people was a crime against humanity. It should be considered and condemned officially by the nations of the world.

This year, I think we have one of the best opportunities we will ever have to reawaken Americans to the plight of the Captive Peoples. 1966 is the Tenth Anniversary of the valiant Hungarian revolution. The Committee is working diligently to plan suitable events and publicity for the commemoration across the country. I know that here in Rochester, an exciting commemoration is planned for this October.

In addition to working with the Citizens Committee, I have introduced a resolution to provide for a memorial to the Hungarian Freedom-Fighters in Washington, D.C. erecting a suitable monument to the most valiant attempt at throwing off the chains of Red rule, we can assure the preservation of the spirit of Freedom of the Captive peoples in our Nation's Capital.

Three nights ago, it was my privilege to present a plaque, honoring the Unknown Freedom-Fighter Against Communism, to the Director of the Freedom Foundation of Valley Forge, Pennsylvania. This plaque was presented to me last year by the Assembly of Captive European Nations during Captive Nations Week Ceremonies. Eventually, this plaque will be enshrined in the Capitol of the first captive nation to be liberated from Communism. In the meantime, placing this plaque at the Freedom Foundation's Head-quarters in Valley Forge will serve as a fitting reminder to Americans of the task that lies

Through these and other activities, I am trying to do my part to convey the cause of Freedom from sterile Communiant to all

Americans. I have told you already that there can be no improvement in our Government's policy without a demand for improvement by the great majority of our people. Our goal must be to communicate the need for stronger ties in NATO; and above all, to communicate the realities of life under the Red boot to Americans so that they will understand the fatal flaw in appeasing Communist regimes.

Freedom is the only form of government that can sustain itself without force. The peoples of the Captive Nations want freedom and are prepared to risk their lives in order to secure its blessings.

I don't want to leave you with the impression that the only hope of freeing people who have been subject to Communist rule Hes in strengthening our military deterrent in Europe. In a world which has had twenty years to consider the dangers and responsibilitles of the nuclear age, we must look beyond a mere showing of military strength for the solutions to international problems. There is no question that NATO must be strengthened, and that its purposes must be rejuvenated, but we must also re-orient our alliance and our policies to the world as we find it twenty years after World War II, and 13 years after Stalin.

If we do succeed—as we must—in reawakening Americans to the necessity of winning freedom for all men, we must harness this reawakening to accomplish more than just a "harder line" toward Communism. We must build a determination and a love for freedom so strong that when Americans say that they seek peace along with universal freedom, the world will sit up and listen. We must build a determination so strong that even the Communist rulers will have no choice than to consider seriously our demands—not at gunpoint, but across a conference table and through diplomatic channels.

Freedom is contagious, and when faced with demands for freedom in a world where freedom reigns, and in a world where men cherish their freedom, even the Red rulers of the satellite nations must bend with the

tide

Hand in hand with our quest to reawaken America to its blessing of democracy and to the curses of totalitarianism, we must work toward a reawakening of the world to this blessing. There has been very little prog-ress made in loosening the Communist yoke in Eastern Europe, but there has been some. Travel in most of the Captive Nations is a little freer. Russia has turned a little toward providing consumer goods for her citizenry. Hungary has opened its door a crack to outsiders, and has allowed some Hungarians to leave.

As these tiny cracks widen slowly, we must kindle the lamp of freedom in our country so brightly that it will shine through these cracks enough to let everyone behind the Communist curtain know about the rights and privileges we as citizens of the free world enjoy. If we are successful in our task, these bright rays of light will serve as rays of hope-acting as an irresistible wedge in the iron door of Communism.

But we cannot make this wedge work if our own citizens are apathetic. If freedom in our minds is only a dim glow which we take for granted, it can never penetrate the cracks of the Iron Curtain. But when we are determined, and when we are proud of our way of life—not timid and afraid to show pride at the risk of annoying Red governments—then demands from the American people that freedom be granted to Red subjects will be heard and answered.

I have tried, through every means at my disposal to speak up about freedom, and to demand that it be given to Captive peoples. Since World War II, despite the Cold War, much progress has been made in freeing many of the world's people. Colonialism is now almost extinct in Africa, and most of the newly independent states on that con-

tinent were willingly freed from colonialism by their Mother countries in Europe.

We must demand that the Communist masters in the Soviet Union and in Eastern Europe act now to free the people held captive in these countries. The Red masters must recognize and respond to the desire of their people to be free, just as the colonial powers have freed their colonies in Africa, Asia and Latin America. If we are to have a peaceful world, these demands must be heeded. For as long as there are human beings living in closed societies under censorship and oppression, there will be turmoil and conflict among nations.

Our government must call upon Red leaders to answer the demands of these millions for freedom-to open their borders and their social and economic structure to the free exchange of ideas and the free movement of

To my knowledge, the resolutions I have introduced voicing these demands have fallen on deaf ears behind the Iron Curtain.

I shall continue to introduce resolutions to write letters and to speak out whenever a man is persecuted or a prayerbook is burned. I shall continue because I believe that we can rejuvenate the determination that will breathe meaning into the words of my resolutions, determination that will carry

this meaning to the ears of the oppressors.

The same determination will inspire our own Government to voice similar demands to Communist leaders. The United States through diplomatic channels and publicly must make clear our intention to stand up for the victims of this Communism. But these demands will be meaningless if they are backed up only with weapons and the threat of nuclear attack. We cannot realistically threaten the world with war and destruction in the name of freedom—for then we will be little better than tyrants ourselves. We can, however, and we must bring to bear upon the oppressors the most powerful weapon available to us-freedom itself.

A steadfast lamp of freedom shining over the Berlin wall, through minefields on the Hungarian border and through the jungles of South Asia is a far more potent force to the Communists than any other.

I am asking you tonight to help keep this lamp burning and intensify its brightness until the light of freedom will shine throughout the world.

Justus F. Craemer: 1886-1966-California Leader

EXTENSION OF REMARKS OF

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. DON H. CLAUSEN. Mr. Speaker. one of California's greatest citizens-Justus F. Craemer-has left our midst. This kindly gentleman will be sorely missed by his many, many friends. His service to mankind has left an extraordinary mark on the "sands of time."

Mr. Speaker, under unanimous consent I include in the Congressional Recorn one last eulogy to this good man, couched in the brief and pointed obituary printed in his own newspaper and the fine sermon delivered at his funeralthereby recording for posterity in the Halls of Congress, the life story of this "good and faithful servant."

The obituary and sermon follow: [From the San Rafael (Calif.) Independent-Journal, May 25, 1966]

Justus F. Craemer, chairman of the board of California Newspapers, Inc., since it bought the San Rafael Independent in 1937, died in his sleep early today at Ross Hospital. He

Craemer had been hospitalized for over two years, with a complication of ailments incident to age. But until his health failed, he was known affectionately to his many friends as "fire engine" for his unflagging energy and endless supply of ideas.

NINETEEN YEARS ON PUC

He served for 19 years on the California Public Utilities Commission, was a candidate in 1942 for the Republican nomination for U.S. Senate, served as assistant state director of public works, state building and loan commissioner, and as a member of the State Fair Board. He was also active throughout his long life in the Lutheran Church.

His greatest activity, though, was in the newspaper business, in which he became in-terested when he became half owner of the Orange News soon after completing his education at University of California.

He was born in Fort Dodge, Iowa, Oct. 18, 1886, son of a Lutheran minister, Rev. John Lorenz Craemer. His grandfather, Friedrich Auguest Craemer, came to the United States from Germany in 1845 as a missionary to the Indians of northern Michigan and later was president of Concordia Lutheran Seminary in Springfield, Ill.

His father died when Craemer was only 4 years old.

He was graduated from Fort Dodge High School and Tobin College in Fort Dodge.

FLIP OF COIN

The flip of a coin brought him to California. In 1907, he had the choice of attending either University of California or University of Pennsylvania. He tossed a coin, and California won.

Craemer came west with a close, boyhood friend, William O. Hart. The youths played basketball togethe, their first year at the university, organ zing their class squad. Play came to an end for Craemer one day when he broke a bone in his heel. The injury laid him up for several months and brought his college career to a close.

the spring, Hart and Craemer went to Southern California where Craemer's grandmother owned an orange orchard in Orange

Craemer worked in a packing house in Orange and Hart took a job on the local daily, the Orange News.

In 1909 Craemer headed for the Yukon, but the cold weather turned him back to Seattle where he took a job in a wholesale paper plant. Soon Hart was urging Craemer to go south again and buy a half interest in the Orange Daily News.

Craemer borrowed \$1,300 from his grandmother and \$700 from a bank and became co-publisher of the newspaper. Craemer handled the business end of the paper and Hart ran the editorial department. The two Hart ran the editorial department. The two worked in close harmony. There was never a written agreement between them. There did not have to be.

Craemer's first of many political jobs began in 1923 when he was appointed to the State Fair Board, a post he held for five years.

GOVERNOR'S AID

In 1934 he served as private secretary for Gov. Frank P. Merriam. He was assistant director of the State Department of Public Works in 1935-37, state building and loan commissioner in 1937–39 and a member of the California Public Utilities Commission from 1939 to 1956. He served as president of the commission in 1942.

In that year Craemer organized the Mountain Pacific States Conference of Public

Service Commissions and headed the organization until 1946. He also served as president of the National Assn. of Railroad and Utilities Commissioners in 1948-49. In 1937 Hart and Craemer Joined Roy A. Brown to purchase the San Rafael Dally

Independent. The three-way partnership continued until 1942 when Hart was killed in a commercial airline crash.

Hart's estate purchased the Orange Daily News in 1946 and Craemer took over Hart's interest in the Independent.

Brown and Craemer brought about the merger of the Independent with the Marin Journal on Nov. 30, 1948. The move brought nearly 50 years of journalistic sparring in Marin to a close.

When the papers merged, the combined circulation totaled 13,000. Today's circulation of the Independent-Journal is 40,650.

Craemer was the last survivor of the three men who took over the Independent in the organization that became California Newspaper Publishers, Inc. Brown died March 9 this year, after serving as publisher ever since the purchase in 1937.

LONG SERVICE

During his lifetime, Craemer received honors and recognition for his long public service. On the eve of his retirement at 70 from the Public Utilities Commission, he and Mrs. Craemer were honored at a reception in San Francisco Civic Center.

In 1960, Gov. Edmund G. Brown presented Craemer a gold card in recognition of 50 years newspaper service in the state. In 1956, Gov. Goodwin J. Knight gave him a silver medal in honor of his long service to newspapers.

He was president of the California News-paper Publishers Assn. in 1929, the National Editorial Assn. in 1932 and the California Press Assn. from 1943 until 1964. He served as vice president of the latter for 20 years. He also served as a director of the Inter-American Press Assn.

Craemer was a former director of the First National Bank of Orange, the Federal Finance Co. of Santa Ana, the Orange Building and Loan Assn., and the California State Cl ber of Commerce. He was a member of the Republican State Central Committee in 1936-38.

When the state chamber was organized in the early 1930s, Craemer became its Southern California division chairman.

In Marin County, where Craemer had lived since 1951, he served as public relations chairman for the Marin United Crusade. He also served a term as director of San Rafael Chamber of Commerce.

In 1957, he headed a statewide committee in a successful campaign against a proposition designed to end tax exemption for nonprofit schools.

He was also a member of the Orange Rotary Club, the Press-Union League of San Francisco, the Jonathan Club of Los Angeles, the Family Club of San Francisco and the Commonwealth Club of San Francisco.

He and his wife, the former Agnes F. Fitzsimmons, were married Jan. 6, 1915.

He is survived by his wife, of 50 Canal Street, San Rafael; a son, Justus J. (Jack) Craemer, editor and co-publisher of the Independent-Journal: his sister. Helen Craemer of Orange, and five grandchildren, Justus Theodore, John Frederick and Janine Elaine Craemer and Kenneth and Goeffrey Justus Ashley, all of Greenbrae. A daughter, Mrs. Barbara Craemer Ashley, preceded him in

Funeral will be at 2:30 p.m. Friday at Trinity Lutheran Church, San Rafael, of which Craemer was an active member. Private burial will be directed by Harry M. Williams Mortuary, San Rafael.

The family prefers that tributes be con-tributions to the Trinity Lutheran Church building fund.

(By the Rev. Fred C. Braunschweiger, May 27, 1966, at Trinity Lutheran Church, San Rafael Calif.)

Mrs. Craemer, Jack, members of the Crae-mer family, and friends in Christ: There is a booklet which Justus Craemer found useful, written by a Walter Williams, founder and dean of the School of Journalism at the University of Missouri since 1908. It is entitled. The Bible-A Textbook for Journalism. the book Williams contends that the Bible gives expression to the fundamental principle of good journalism, the principle of "right selection." We follow William's contention by turning to the Bible, to a text which stands as the motto of the alcove of religion in the reading room of the Congressional Library in Washington.

"He hath showed you O man, what is good, and what does the Lord require of you but to do justice, and to love kindness, and to walk humbly with your God." Micah 6: 8

(RSV)

It has been my privilege this morning to read some of the tributes that have poured in from all parts of the Country to honor this The one thing I noted about them was that they were not the "usual" letters of con-dolence. They were warm, intimate, and direct carrying within them a sense of deep personal loss. To give one example, the letter written to the members of the California Press Association of which Mr. Craemer was President Emeritus by the current President, Mr. Lowell E. Jessen conveyed this feeling of

deep personal loss to me.

This is a loss which I also share. I will mist those telephone calls from Mr. Craemer. The: were calls expressing his regret that he could not worship with us on Sunday due to the fact that he would be away from the community on some urgent mission relative to the newspaper business, or State, or affairs of this Country. I will miss conferences in his office at which times we would discuss the best use of his offerings to various charities, and social agencies. churches. Most of all, I will personally miss the encouragement and support that he gave a young pastor beginning thirteen years ago to do his best by the Grace of God. Our friend and brother in Christ had great faith in the youth of our land.

The text from Micah "to do justice, and to love kindness, and to walk humbly with your God," epitomized his life.

If this is true, one might ask the ques-tion then, why should it be necessary that such a man be called upon to suffer as he did, particularly in the last three years of his life on earth? The answer, if one is to be found, is in a poem entitled "The Weaver" found in his personal file with no indication of the author's name:

> "My life is but a weaving Between my Lord and me, I cannot choose the colors He worketh steadily. Oft times He weaveth sorrow, And I in foolish pride Forget He sees the upper, And I the under side. Not till the loom is silent and the shuttles cease to fly Shall God unroll the canva And explain the reason why The dark threads are as needful In the weaver's skillful hand As the threads of gold and silver In the pattern He has planned."

Mr. Craemer knew this God and had faith in Him. He agreed with Walter Williams in the booklet mentioned earlier that to have no faith "is high treason." And furthermore, that "no man can give his best for mere material considerations." Because of this material considerations." Because of this kind of philosophy of life that our brother in Christ sacrificed much of himself and by the same token, his wife and the members of his family sacrificed much. But this was

his decision to be a real, vital person on earth, to become what God has called us all to be

But what of him now? This question doesn't bother me. I am reminded of a desert scape which hung in his office. The focal point in the picture was a cross constructed of two pieces of driftwood. His faith was in the Christ Who is symbolized in that Cross and his thoughts could best be Charlotte Elliott:

"Just as I am without one plea But that Thy blood was shed for me And that Thou bid'st me come to Thee, O Lamb of God, I come, I come.'

In his personal file Mr. Craemer had several copies of an Easter editorial entitled "Empty Tombs" which first appeared in the Los Angeles Times written by W Kee Maywell. I have taken the liberty to glean from this editorial several paragraphs which he "How much himself specifically marked. "How much does the grave hold of those we have known and loved? How much of the individual consists of flesh and bone? What part of this friend and that loved one is mere chemical combinations of so many elements?

Does the grave hold the love they gave us? Does a little earthen mound contain all the gentle actions and kindly words we knew? Does the summer grass hide from our inner vision the worth and courage and sweetness and generosity that warmed our souls to

admiration and affection?

To all the broken-hearted and bereft of all time the message of the first Easter morning repeats itself with undiminished assurance: "He is not here." The loved and the lost are not hidden from those who mourn by the closing of the sod above the All that was good and true and beautiful within them persists in the hearts which held them dear, in the deeds they wrought and the cheer they gave and the words they spoke and the songs they sang and the sympathy they gave and the love they bestowed. "He is not here." Only the dust returns to dust. "For life is ever lord of death, and love can never lose its own.

The compelling question today is not what of him?" but rather what of us? There will appear in the Saturday, May 28 issue of the Independent-Journal published here in Marin County an editorial by Mr. Craemer's son Jack. It may well be the most difficult editorial he will ever have to write. In conclusion the editorial laments the fact "that they aren't making any more like him." This with reference to Justus

All I can say is that if they aren't making any more like him, then our Country is in great trouble. We may deplore our spiritual and moral plight, but unless by God's grace we adopt the platform suggested by Micah and required by God to do justice, and to love kindness, and to walk humbly with God, we will remain in great trouble. Perhaps some of you reget the fact that you did not take occasion during Mr. Craemer's life time to express to him your feelings of deep respect and admiration. There is still time however, to resolve under God to take up the cause of justice, kindness, and humility in the presence of God. This is the greatest tribute you could pay to a great and principled man.

Justus was a great admirer of St. Paul. Perhaps he shared the opinion of Walter Williams who called St. Paul "the best correspondent and editorial writer." I can hear our brother even now saying with St. Paul, "I have fought a good fight, I have finished my course, I have kept the faith." And I can hear the Savior say to him, "Well done, good and faithful servant; you have been faithful over a little, I will set you over much; enter into the joy of your Master." I'm sure that

this will come as a surprise to Justus as he asks, When? When was I faithful? When did I see Thee hungry and feed Thee, or thirsty and give Thee drink? And when did I see Thee a stranger and welcomed Thee and naked and and clothed Thee? And when did I see Thee sick or in prison and visit Thee? And the Lord immediately replies, "as you did it to one of the least of these my brethren, ye did it to Me." Matthew 25, 40 (R.S.V.).

Today we will hear our friend and brother Justus bring this sermon to its conclusion. The words, his words, were first written as a tribute to his newspaper associate, Bill Hart, who died in 1942. Justus' editorial published in the Orange Daily News on Depublished in the Grange Daily News on De-cember 16th of that year concluded with this statement, "Our parting is as simple as he would have it. Well done, thou good and faithful servant. You have served well. We shall never forget you. God bless you and goodbye 'til the morrow'."

Public Opinion Poll

EXTENSION OF REMARKS OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. COLLIER. Mr. Speaker, more than 14.100 of my constituents participated in the public opinion poll which I recently conducted. I have conducted such polls by mail during each of my five terms in Congress. The 1966 question-naire was sent to all of the 146,500 mailing addresses in the 10th Congressional District.

Four of the seven questions asked in the 1966 poll concerned the war in Vietnam. Sixty-eight percent of those who participated in the poll answered "No" to the question, "Should we withdraw all of our Armed Forces, regardless of negotiations?" while 17.8 percent replied in the affirmative, and 14.2 percent were undecided.

To the question, "Should we continue to fight a limited war, not so much with the idea of winning, but to convince the Vietcong and the North Vietnamese that they cannot win?" 16.8 percent answered "Yes," 61.9 percent "No," and 21.3 percent were undecided.

The third question on Vietnam was, "Should we cease all air attacks and call for peace negotiations, the participants to include the United States, South Vietnam, North Vietnam, the Vietcong, and the National Liberation Front?" The responses were: 20.7 percent "Yes," 60.7 percent "No," and 18.6 percent un-

To the final question in the Vietnam category, "Should we accelerate bombing, mine the Haiphong harbor, and cut enemy supply lines with the designed purpose of achieving victory?" 66.6 percent said "Yes," 20 percent "No," and 13.3 percent were undecided.

The three remaining questions concerned inflation. Obvious dissatisfac-tion with huge domestic spending programs was evident, as 72.3 percent voted Yes" when asked, "Should we curtail spending on domestic programs in order 6

to help meet the costs of defense and war?" "No" replies were given by 19.1 percent and 8.6 percent were undecided.

My constituents, for the most part, do not want their taxes increased, as only 8.2 percent of them gave an affirmative response to the question, "Should we increase taxes so that we can at the same time, fight the war in Vietnam and carry out the domestic programs of the Great Society?" "No" replies were given by 75.4 percent with 16.4 percent undecided.

The final question in the poll. "Should

we impose governmental controls on both prices and wages in order to avoid further inflation?" drew 31.1 percent affirmative votes, 55.2 percent negative, and 13.7 percent undecided.

A complete tabulation of the results of my poll follows:

	Y	es	No		Undecided	
	Number	Percent	Number	Percent	Number	Percent
VIETNAM						
Should we withdraw all of our armed forces, regardless of negotiations?	2, 519	17.8	9, 620	68. 0	2,007	14. 2
Should we continue to fight a limited war, not so much with the idea of winning, but to convince the Vietcong and the North Vietnamese that they cannot win?	2, 372	16.8	8, 763	61. 9	3,011	21. 3
Should we cease all air attacks and call for peace negotiations, the participants to include the United States, South Vietnam, North Vietnam, the Vietcong, and the National Liberation Front?	2, 935	20.7	8, 582	60.7	2, 629	18. 6

Fort Walton Beach in Top 10 of Florida's Pace Setter Cities

EXTENSION OF REMARKS OF

HON, ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 19, 1966

Mr. SIKES. Mr. Speaker, the July 22 issue of the Playground Daily News, published in Fort Walton Beach, Fla., calls attention in graphic form to the fact that Fort Walton Beach has been listed among the 10 "pace setter" Florida cities which have experienced the fastest and soundest growth in recent years. Fort Walton Beach is the only city in northwest Florida included in the top 10 list, and by gaining this distinction, the miracle city of the miracle strip continues to show dramatic progress. I am proud to salute Fort Walton Beach and to submit for reprint in the Congressional Record the Playground Daily News item:

FORT WALTON BEACH IN TOP 10 OF FLORIDA'S PAGE SETTER CITIES

The First Research Corporation of Miami has named Fort Walton Beach in its list of 10 "pace-setter" Florida cities which have experienced the fastest and soundest growth

in recent years.

In "Management Letter," the Research organization says the city has grown from a 1960 population of 12,147 to a current figure near 18,00. The city has grown as a rate of 1,200 persons a year. Retail sales increased 160 percent in the 1958-63 period, and nearby Eglin AFB and a booming tourist economy are pushing the city's growth rate

watch for further population increases, additional tourist oriented facilities and more retail outlets," the resume continues.

Fort Walton Beach is the only city in northwest Florida included in the top 10.

Others are Fort Lauderdale, Titusville, Naples, Pompano Beach, Hollywood, Gaines-ville, Boca Raton, Winter Park and Plantation.

The Research corporation explains its choice by citing a concept they call "quality that indicate rapid, but sound, community

The researchers indicated that the concept of quality growth was first applied in California, where the response was so gratifying that it was decided to expand the service to Florida. The next analysis of this type will he in the north-east

"Florida in the 60s entered another 'boom' period," the researchers reported, "but not the boom or bust land speculations of the 20s. Capitalizing on the rapid population growth of the 50s, growth," meaning unusu-ally high levels of construction, population income increases, retail value of housing, industrial expansion—these and many other factors expanding manufacturing activities a major share in the nation's turing scuvices a major share in the hatton's space program and a year round tourist flow, the State's economy is "healthler and better balanced than at any time in its history." The top 10 cities in Florida, the Corpora-

tion says, have "set the pace for others to

"We predict that each of the 10 cities will maintain a very high growth rate," Philip W. Moore, chairman of the board, said. "These cities will continue to set the trend."

First Research Corporation is a publicly held economic and market research firm that has been in operation since 1950. The firm is engaged in 3 basic fields of research: economic, marketing and financial, and has completed approximately 3,000 studies in these fields. The firm's home office is in Miami, but other offices are staffed in New York and San Francisco and a field interviewing staff covers 48 states and 800 cities, Canada and 10 Caribbean and Latin American countries.

Puerto Rican-American Citizenship Day

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. KUPFERMAN. Mr. Speaker, our fellow citizens of Puerto Rican origin date their affiliation with us back to 1917.

We have just celebrated an anniverary of the passage of the Jones Act by the Congress of the United States. Governor Nelson A. Rockefeller of New York has proclaimed the day and I am attaching his proclamation:

PROCEAMATION

The Luis Munoz Rivera Memorial Associa-tion informs me that our neighbors of Puerto Rican origin are about to celebrate the granting of American citizenship to Puerto Ricans by the Congress of the United States through the Jones Act of 1917. This is a highly appropriate commemoration.

It behooves us to show our sympathy with the desire of the Puerto Rican community to re-affirm its faith in and love for the country which has done so much to improve

country which has done so much to improve the lives of Puerto Ricans here and in the island of their origin. Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim Sunday, July 17, 1966, as "Puerto Rican-American Citizenship Day" in New York State.

Given under my hand and the Privy Seal of the State at the Capitol in the City of Albany this 28th day of June in the year of our Lord 1966.

NELSON A. ROCKEPELLER. By the Governor:

WILLIAM J. RONAN. Secretary to the Governor.

Captive Nations Week

SPEECH

OF

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. WILLIAM D. FORD. Mr. Speaker, before World War II had even ended, the Soviet Union according to its plan for world domination began its tyrannical takeover of the nations of Eastern Europe. Czechoslavakia lost its inde-pendence in 1939. Swiftly, taking the Western democracies by surprise, Estonia, Latvia, Lithuania, Poland, Hungary, Albania, Bulgaria, and Rumania were subjugated to the Communist onslaught.

These nations and East Germany which the Russians have never released from bondage following their defeat, comprise close to 100 million people. Most of these nations had during the two decades since the First World War enjoyed freedom and independence and were valued members of the community of free nations, although they were in constant fear of the growing threats of nazism and communism.

World War II halted and defeated nazism but left in its wake the confusion which laid the groundwork for the Communist's startling and devastating con-These nations joined many quest. others, Armenia and the Ukraine included, who had been crushed and ab-

sorbed into the Soviet bloc.

Twenty-one years have passed and these countries remain, under the guise of people's democracies, Soviet satellites exploited for the benefit of the Soviet Union. But the leaders of the free world and the government of this Republic in particular have not forgotten this enslavement of a large part of the world's population. During this week, observed and declared as Captive Nations Week, we renew our resolution to foster the growth and eventual independence of these countries and remain determined to see the freedom of these captive nations.

The Lesson in Indonesia-From the **Dublin Courier-Herald**

EXTENSION OF REMARKS

HON. G. ELLIOTT HAGAN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. HAGAN of Georgia. Mr. Speaker, on July 12, 1966, that fine newspaper, the Dublin Courier-Herald of Dublin, Ga. made a most cogent statement pertinent to our controversial foreign aid program,

This excellent editorial by this prominent editor of the First District of Geor-gia entitled "The Lesson in Indonesia," indicates a most perceptive observation of our much-debated foreign aid issue. The editorial follows:

THE LESSON IN INDONESIA

The situation in Indonesia, now that President Sukarno has all but been completely driven into oblivion, should be studied well and long by the U.S. State Department.

For years this country has poured so-called foreign aid into the country on the pretense of saving it from Communism.

Today in Jakarta one can find a monument to our aid and a country whose econo-

my is tottering. In the midst of a vast and empty square in the center of Jakarta is a 200 foot high monument, the favorite pet of the oust President Sukarno. Topping the shaft of the monument is a flaming torch gilded with 66 pounds of gold. The gold leaf on the monu-ment represents a sizeable part of the country's reserves, and the empty square stands as mute evidence of the seventeen useful build-ings that were razed to make way for the square in front of the Meredeka Palace where Sukarno lived.

About the square is a seedy city, mute evidence of the economic plight the country is in, thanks to Sukarno and his extravagant

The foreign debt of this Southeast Asian country is a staggering (for them) \$2.4 billion. Prices have soared 500 per cent during the past year, and observers say they could to 1,000 per cent this year. All kinds of goods are scarce, exports are down and naturally money is short for buying essentials in world trade.

All this despite the millions poured into

that country by the U.S.

If we could learn the lesson of Indonesia and profit thereby, a new and candid look would be taken at the aid that we are giving many countries that is being used to promote the personal ego and ambitions of individuals for their expensive ways of living, while the masses are made to suffer more and more. We are providing aid in depth as far as dollars are concerned, but the aid benefits for the most part only the top few.

Manuel Diaz, Jr.

EXTENSION OF REMARKS

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. RYAN. Mr. Speaker, all New Yorkers are fortunate that Manuel Diaz, Jr., has been appointed to serve on New York City's new civilian review board. He brings to this important assignment a wealth of experience and complete dedication. I hope that my colleagues will read the following article which Timothy Lee wrote for the New York Post of July 22:

[From the New York (N.Y.) Post of July 22, 1966]

REVIEW BOARD MEMBER (By Timothy Lee)

The only Puerto Rican member of the new civilian review board describes himself as a man of peace, who believes there are reasonable alternatives to violence. He is not a pacifist, he says, nor does he subscribe to the social-action philosophy of passive resist-But he has on occasion picketed City Hall with members of the poor from the Lower East Side while he was community affairs director at Mobilization for Youth

The board is an instrument that defends basic human rights of the individual, whether the citizen's or the cop's," said Manuel Diaz, Jr., the 43-year-old executive director of the Puerto Rican Community Development Project, in his second-floor of-fice at 143 W. 72d St. "It is not there merely to uphold every complaint of aggrieved ghetto members."

For a man who believes in peace and reason, Diaz speaks in metaphors of violence. He says he expects to be "shot at from all while a member of the review board. The shots will come from the Patrolmen's Benevolent Assn., he says, if the PBA sees his role as "too aggressive in defending the rights of citizens"; or from the Puerto Rican community if it appears he is "too righteous in defending the right of policemen.

"If you don't want to get shot at then don't get on the firing line," said Diaz, a gray-haired man with an easy smile, "I expect to come out of this with my head bloodied, but I hope unbowed."

Diaz' easy use of the language of violence may come from a life spent in some of the most explosive areas in the city. His parents brought their son, an only child, to East Harlem from Puerto Rico in 1927 when he

was 5 years old. His father Manuel, Sr., gave up a small printing business in Humacao to spend 30 years feeding cardboard into a printing machine in a factory in Queens, while his mother, Filomena, worked as a seamstress in the garment district and earned more money than her husband. Both are now retired and live in the Bronx.

He attended public schools here and graduated from Stuyvesant HS in Manhattan. He spent three years in the Army as a private in World War II, and while sleeping outdoors during the winter of 1944-45 in France he contracted a "minimal case" of tuberculosis.

The illness-now considered arrested-interrupted has post-war education in his junior year at City College, where he was majoring in electrical engineering. spent 1947-48 in a Veterans Hospial and there decided to be a social worker. He returned to City College as a sophomore, and after graduation won his master's from the Columbia University School of Social Work in 1953.

He spent the next seven years at the Union Settlement in East Harlem working with youth gangs. "The frustration of constantly putting out fires," he says, drove him to Plascale, Mexico, where for a year he directed a village aid project with the American Friends Service Committee. He spent two more years working with youth gangs this time in the East Bronx, before moving to MFY for three years. He left there a year ago to design the Puerto Rican Community Development Project.

While he was at Union Settlement, Diaz hired for the arts and crafts program a minister's daughter named Sharon Daniel. He fired her in less than a month and married her in less than three years. "I guess I just felt sorry for her," he said. They have a daughter, Andrea, 4. Diaz has a second daughter, Lisa, 15, by his first marriage, which ended in divorce.

They live in a five-room \$80 apartment on E. Seventh St. between Avenues C and D, a street of tenements and renovated brownstones with rents as high as \$240 a month.

"I'm a product of the ghetto who happened to go to college," Diaz said. "I could afford \$200 in a luxury building but I prefer to living in a neighborhood with some flavor."

President Praises Administrator McKee of Federal Aviation Agency for Record in Economy, Safety, and Public Service

EXTENSION OF REMARKS OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. EVINS of Tennessee. Mr. Speaker, one of the most important and one of the most difficult positions in our Federal Government today is that of Administrator of the Federal Aviation Agency, which deals with a scientific and technical field that is constantly changing and presenting new problems.

It is my feeling that this Nation is fortunate to have as the Administrator of FAA, Gen. William M. McKee, who is doing an excellent job of guiding the FAA as it fulfills its mission and, at the same time, instituting an effective cost reduction program.

As chairman of the Subcommittee on Independent Offices Appropriations, I have some personal knowledge of the Federal Aviation Agency and the way Administrator McKee is responding to this challenge. I can report that upon our subcommittee's recommendation the full Committee on Appropriations praised the FAA for its improvement in efficiency and economy of operations.

In this connection, President Johnson recently wrote Administrator McKee, emphasizing his record as Administrator and commending him for his good work. I ask unanimous consent that the President's letter be printed in the Appendix of the Record because of its interest to my colleagues and to the Nation.

The letter follows:

THE WHITE House, July 6, 1966.

DEAR BOZO: I have noted with satisfaction the excellent work which you and your associates at the Federal Aviation Agency have been doing in reducing costs and manpower while absorbing additional workload and improving service to the public.

I have taken particular note of your cost reduction program under which you saved 447 million during the 1966 fiscal year. These savings have been accompanied by a reduction in agency employment of more than 3,500 employees—8 percent—since 1963. The Agency has succeeded in combining economy in administration with a safety program which has helped the commercial air carriers of the United States achieve the best safety record in the world and the best record for any 5-year period in the history of American aviation. You have clearly demonstrated that outstanding performance in a critical and complex program can be continually achieved while reducing costs.

I am pleased to observe that the House Appropriations Committee, after thoroughly reviewing your program and budget for the 1967 fiscal year, singled out the Federal Aviation Agency for special commendation for the efficiency and economies achieved in

recent years.

As you know, in my budget message for the 1967 fiscal year, I stressed the importance of strengthening the coordination of Federal programs in the field and giving more freedom of action and judgment to the people on the firing line. The FAA has provided an example of what can be done to decentralize management to field officials who have the suthority to act promptly and effectively in meeting the needs of the public. Your success in establishing regional and area centers of field supervision while simultaneously reducing employment in field offices has demonstrated that decentralization can mean better public service and more productive use of field personnel.

I shall count on you and the good people at the Federal Aviation Agency to continue to provide examples of public service at its

Sincerely,

LYNDON B. JOHNSON.

Disabled American Veterans

SPEECH

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1966

Mr. MULTER. Mr. Speaker, the people of this great country have for well over 150 years lived in an environment that has demanded freedom, fostered

liberty, and maintained the basic rights of man. Yet many times the very shores of these United States have been ominously threatened by a variety of enemies; and on each occasion American men and women have responded to the call of duty and put their very own lives in jeopardy so that this great country might flourish and maintain its integrity while providing a common security for its citizens.

It is these brave Americans that I now praise before our colleagues, many of whom I know have served this country valiantly, both in the Congress and on

the battlefield.

But when war is over, the fighting ended, many servicemen return wounded, disabled, maimed for life; some never return at all, but lie buried in a foreign land with a heartbroken family left at home mourning and without care.

These men, women, and children who directly feel the consequences of war must be cared for, and so I take this opportunity before our colleagues to pay public tribute to an organization that has recognized the necessary responsibility of providing for and advancing the cause of thousands of disabled servicemen, their widows, dependents, and orphans. Such an organization is the congressionally chartered Disabled American Veterans whose national commander is Claude L. Callegary, and which has just recently celebrated 34 years of exemplary service to this country and its fightingmen and families.

As each citizens has an obligation to fight for his country during war, so does that country have the responsibility to aid, protect, rehabilitate, compensate, in all, to serve that person and his family after war. Once again I extend my personal praise and thanks before our colleagues to the DAV for its incalculable.

unselfish service.

Billion-Dollar Development

SPEECH

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1966

Mr. DORN. Mr. Speaker, today, July 25, I am introducing a bill which I had hoped to introduce last Thursday, July 21

This bill would authorize Duke Power Co. to build a dam across the Savannah River at Middleton Shoals in Anderson County, S.C., and Elbert County, Ga. This dam will permit Duke to build one of the world's largest steamplants in Anderson County for the generation of electricity.

The bill I am introducing today would also authorize simultaneously a Federal dam at Trotters Shoals in Abbeville County, S.C., and Elbert County, Ga.

I am introducing this legislation today as a result of an agreement reached in my office last week with representatives of Duke Power Co. and the bistate power

committee representing rural electric cooperatives in Georgia and North Carolina.

The bistate committee had filed a protest with the Federal Power Commission to prevent Duke from proceeding with the construction of still another huge Duke project upstream on the tributaries of the Savannah River at Keowee-Toxaway in Oconee and Pickens Counties in my congressional district. Duke made application for a license from the Federal Power Commission on January 4, 1965, to begin the Keowee-Toxaway project. Only a few days ago Duke announced plans to build a \$207 million nuclear power generating plant at Keowee-Toxaway in addition to the two hydro units already announced.

The bistate power committee, representing rural electric cooperatives, feared that the public power project at Trotters Shoals would never be authorized and built if Duke were granted a license to construct Keowee-Toxaway. Thus, Mr. Speaker, I agreed to support and introduce legislation calling for both Trotters Shoals and Middleton Shoals. The bistate committee agreed to withdraw their objections to Duke's application for a license to begin Keowee-

Toxaway.

This morning the Bi-State committee withdrew its objections to Duke's Keo-wee-Toxaway project in Oconee and Pickens Counties before the Federal

Power Commission.

Mr. Speaker, Duke has previously announced that its total investment in the Keowee-Toxaway project would eventually cost over \$700 million. Duke's Middleton Shoals project would cost over \$200 million. The Government dam at Trotters Shoals would cost approximately \$85 million. All of these projects are compatible as now proposed.

Mr. Speaker, Mead Paper Co. owned a pulp and paper mill site on the Savannah River at Calhoun Falls which would be flooded by Trotters Shoals. In working out the present compromise arrangement, I suggested to Mead the purchase of another site above the level of the Trotters Shoals Reservoir where Mead could build with or without Trotters Shoals. Mead did so and subsequently approved of this compromise.

Now, Mr. Speaker, the way is clear for the expenditure of more than \$1,050 million in my congressional district. Almost all of these developments will be in counties designated as a part of Appalachia. This huge expenditure will equal the entire amount authorized by Congress for the development of the

Appalachian Region.

This fair agreement reached with Duke, Bi-State, Mead, and all concerned will insure job opportunity for our people, taxes for our schools, and progress for generations to come. This gigantic development will mean cheap electricity for the people of Georgia, North Carolina, and South Carolina. It will mean for the cities of Charlotte, Greenville, Spartanburg, Anderson, Greenwood, and many others cheap electricity and a continuation of their dynamic growth. This development will mean huge revenues for the Federal, State, and local treasuries—

Duke will pay into the Federal, South Carolina, and local treasuries approximately \$44 million annually in taxes on the Keowee-Toxaway project alone when completed. This compromise is a positive alternative to stalemate, negativism; and retrogression on the Savannah. It will signal the dawn of a new era.

Heroism in Vietnam

EXTENSION OF REMARKS

HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. RONCALIO. Mr. Speaker, a number of men from my State of Wyoming have lost their lives while serving their country in Vietnam. While we are saddened by their deaths, we are heartened by the courage and professional diligence with which they pursue our objectives in that country.

Preceding the list of all Wyoming casualties in Vietnam was Capt. Carlton J. Holland, Jr., who was killed in action in Duc Phong about February 9, 1965. For his great courage in protecting a small group of tribesmen, who stayed with him to the bitter end, Captain Holland was awarded a posthumous Distinguished Service Cross, and the Silver Star for gallantry in action went to three servicemen who perished with him.

A recent article by Jim Hicks, in the Buffalo, Wyo., Bulletin, describes another heroic effort by a Wyoming citizen, 1st Lt. Bill Ahern, of Johnson County, Wyo. A graduate of the University of Wyoming, 1st Lieutenant Ahern has just returned from Vietnam after winning a Purple Heart with two Oak-Leaf clusters, a Bronze Star, and the Silver Star. His action is described in the article and provides an inspiration to all of us by bringing home the realization that our fighting men are succeeding in a new type of war, and kind of warfare that some people once said Americans were incapable of fighting.

The important thing is that our fighting men are not discouraged about the course of the war and they deserve all the support we can give them. As the article points out:

The worst thing that could happen would be for the American people to lose heart or become discouraged.

The actions of the late Captain Holland and of 1st Lieutenant Ahern are a source of pride for their State and Nation. Under unanimous consent I place this excellent story in the RECORD, to further publicize the gallant actions of our soldiers and to share a firsthand account of the experience of fighting in Vietnam, which was felt by both of these dedicated Wyoming men:

[From the Buffalo (Wyo.) Bulletin, July 7, 1966]

RETURNING SOLDIER GIVES VIEW OF LIFE, FIGHTING IN VIETNAM (By Jim Hicks)

At the present time there are several young men from Johnson county who are

serving with the armed forces in Vietnam, and it appears that many others will be fighting there in the future.

While here in Johnson county we worry about moisture conditions, the volume of tourist travel or the possibilities of indus-trial development, the young men in Viet-nam must be concerned with the number of rounds of ammunition they have in their pack or whether or not a Viet Cong sniper is

A clear picture of the situation faced by the soldier in Vietnam was given recently by First Lt. Bill Ahern who came home after about a year.

Lt. Ahern, who graduated from JCHS and the University of Wyoming, took a commission in the U.S. Army through the ROTC program at the university. He went on active duty in August of 1964 and in June of 1965 he was on his way to Viet Nam.

In the more than 300 days he spent in that hot moist land, Lt. Ahern saw what free-dom really costs. A Purple Heart with two Oak-Leaf clusters, a Bronze Star and the Silver Star awarded to him would indicate that he made a sizeable contribution to this freedom that we all enjoy.

On May 11 of this year, by direction of the President of the United States, Lt. Ahern was awarded the Silver Star. The award was given as a result of his ac-

tions during a battle in Vietnam on Feb. 1,

The reason for the award, according to the general orders accompanying it was

"For gallantry in action: First Lieutenant Ahern distinguished himself on 1 February 1966 while serving as platoon leader of a unit on a search and destroy operation in a village in the Nohn Trach District, Republic of Vietnam.

"As First Lt. Ahern's company moved through the outskirts of the village, intense small arms and automatic weapons fire was received from fortified Viet Cong bunkers.

"First Lt. Ahern rapidly and aggressively maneuvered his platoon to a position from which they could engage the bunker.

"Aided by a tank, he and his platoon assaulted and destroyed the Viet Cong position. When it became apparent that the Viet Cong bunker complex was far more extensive than originally estimated, First Lt. Ahern's company was repositioned to allow air artillery strikes. When the company assaulted the bunker complex the second time, numerous mines and grenades were detonated, and a large number of men were wounded, including the company com-mander, company first sergeant, and all company officers.

"Although wounded, First Lt. Ahern immediately assumed command of the company and moved through the battle zone which was still under intense fire, and insured that all casualties were evacuated. First Lt. Ahern, following the evacuation of the wounded, effectively reorganized the com-pany and redeployed it for another assault

against the Viet Cong positions.
"First Lt. Ahern's unimpeachable valor in close combat was in keeping with the highest traditions of the military services and reflects great credit upon himself, his unit and the United States Army."

When Lt. Ahern first arrived in Vietnam his unit was located in Vung Tau, in the southern part of the delta region. They were flown into Bien Hoa about 25 miles eastnortheast of Saigon.

They set up a base camp about six miles to the southeast. The first action for Ahern came on July 19 when his platoon, which is made up of about 46 men, ran into a machine gun position.

This was the start of something big, because the battalion had to fight for five days

and nights to hold onto their position.

The Viet Cong apparently know when a new unit takes to the field, and it is common for them to hit the new unit hard in hopes

of causing them to break and run. Ahern said the company's casualties were described as light in the engagement. U.S. artillery knocked out six Viet Cong mortar positions during the battle, using a new radar system to determine the coordinates of the mortar positions by picking up the mortar shells being fired on the radar.

Since the use of the radar system, Ahern said, the VC's fire a few mortar rounds and then run from that location if they are within the range of the U.S. artillery.

In August the unit moved to the Pleiku area where they would set up night ambushes for the Viet Cong every other night.

One night which was especially dark, Lt. Ahern and his men heard something which sounded like a good sized unit moving into their ambush.

Suddently the men opened up with intense fire which was sustained for several minutes. The fire was not returned, but when they stopped shooting they could hear heavy breathing in the jungle area. Again they opened fire, and finally all was quiet. With the dawn came the surprise that the platoon had moved down three cows.

During this period of ambushes the soldiers

also killed three Viet Cong. "We never use a trail or road when we were moving around over there," Ahern said, "because you can get ambushed that way."

Each soldier in Viet Nam carries from 300 to 500 rounds of ammunition for the new M16 rifles. They also carry about three grenades, and each platoon will also be carrying a mine or two and a light anti-tank weapon. In addition to this the foot soldier in Viet Nam also carries all his other needs including food.

Once, while Lt. Ahern's unit was being used for strategic defense of a Vietnamese unit, the Viet Cong forced the citizens of a nearby village to go out in front of the American positions at night in hopes that the U.S. troops would open fire and give the Viet Cong ammunition for their propagands machine.

The U.S. troops got word of what was going on in time, and sent a patrol out and the Viet Cong pulled back, allowing the villagers to return to their homes.

When the units, such as that of Lt. Ahern's, are out on patrol, they from time to time discover base camps of the Viet Cong. These camps, though well fortified with trenches and bunkers, are usually impossible to see from the air. More than once the Viet Cong would flee just ahead of the advancing U.S. troops and the soldiers would find food boiling on the stoves of the camps

If such a camp is located, it is marked for

destruction by artillery and bombing.

Lt. Ahern described the war as not being a battle for real estate, but more a test of mobility of force aimed at destroying the enemy

Not too long before Lt. Ahern came back to the states the company he was with captured 570 tons of rice, 68 weapons and a large number of bicycles. This was near the Cambodian border.

He said the morale of the U.S. forces seems to be very good, and as far as Lt. Ahern is concerned, the American foot soldier of 1966 well trained and is intelligent and courageous

He said that the demonstration against the war in Viet Nam did little to discourage the troops, and most soldiers receive a large supply of mail from the states.

"One man in my platoon got 97 cards and letters in one day before Christmas," Lt. Ahern said. "He was busy reading every time we stopped to take a break."

But even with the red ants, leeches and Viet Cong, the U.S. soldier in Viet Nam seems to realize the meaning of his efforts there. Lt. Ahern will probably now be stationed

in the south where he will train officers who will fight in Viet Nam. He has the experience for that job.

The young men from this area who are in the Vietnam area now are appreciated and are worthy of the thoughts of those of us at home. War is very real in Vietnam, and it would appear that many young men from this area will face this prospect in the

Lt. Ahern said he feels that he can see an end to the fighting there, but it will probably be a long way off. The only way to victory appears to be the long hard way and the worst thing that could happen would be for the American public to lose heart or become discouraged.

To date only one Johnson county man has been killed in Vietnam. Ernest Taylor of Sussex was killed on Nov. 17, 1965.

It would appear that the war in Vietnam has and is turning more in the favor of free-dom, and the only question that really remains is whether or not this country is doing

Extensive Small Business Committee Hearings Point to Improved Programs and Policies of the Small Business Administration

> EXTENSION OF REMARKS OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. EVINS of Tennessee. Mr. Speaker, the House Small Business Committee last week completed an extensive review of the programs and policies of the Small Business Administration.

It is my belief that this constructive and beneficial examination of all phases of SBA operations will assist the Agency in serving the American small businessman in a challenging year of change.

In this connection, my least weekly newsletter, Capitol Comments, gives a summary and review of the week's hearings. I ask unanimous consent that this report be reprinted in the Appendix of the RECORD.

The newsletter follows:

SMALL BUSINESS COMMITTEE HEARINGS ON SBA IDENTIFY PROBLEMS, POINT TO IM-PROVED POLICIES AND PROGRAMS

(By JOE L. Evins, Member of Congress, Fourth District, Tennessee)

The full review of programs and policies of the Small Business Administration just completed by the House Small Business Committee was, in my view, a constructive and bene-ficial examination that will help to improve SHA operations in a challenging year of change. During the week, the Small Business Committee—which I serve as Chairman— heard testimony by officials of SBA, representatives of the Bureau of the Budget and other executive agencies, by officers and directors of small business associations and by small businessmen themselves. A formal Committee report with detailed recommendations will be made at a later date.

With SBA's status established as an independent agency reporting only to the President and the Congress—with a newly appointed Administrator, Bernard Boutin-and with new financing legislation recently enacted into law, testimony indicated that as Fiscal Year 1967 gets underway the agency is doing a competent job in administering the various programs of assistance to small

business. These programs include the regular business loan program, the community development loan program (502), the pro-curement and management assistance pro-

gram and other services.

Committee testimony developed that there are two problem areas—the Small Business Investment Company program, established to provide long term equity capital to small businesses (SBIC), and the Economic Op-portunity Program (OEO), the latter enacted as part of the Anti-Poverty Program. SBA Administrator Boutin said steps were being taken to establish new standards and new rules to put the SBIC program on a sounder and more efficient basis. He also promised to explore every avenue of improvement to nature a broader application of the Economic Opportunity loan program which is currently operating only in urban areas.

As Chairman of the Committee, it is my position that officials of SBA and the Office of Economic Opportunity should comply with the law which requires "equitable distribution" between urban and rural areas, now denied this assistance. Other questions raised by the Committee included the desirability of ceilings on loans below those set by the Congress by statute and the fairnes of a system of administrative priorities. It is may belief that SBA loan programs should operate on the basis prescribed by the Congress and that each loan application should stand on its own merits without reference

to arbitrary administrative priorities.

Testimony indicated that SBA is changing with the times and endeavoring to put into effect a "team concept" that will focus all of its resources-financial, management assistance, government contract guidance, and other programs-on the problems of a small business at a time when such assistance is needed. Witness after witness testified that the objectives and and purposes of SBA programs are laudable and worthwhile. Helpful new legislation has recently been enacted into law and the future of SBA appears both bright and promising. It is the hope of our Small Business Committee that the suggestions and recommendations made will assist in a more effective use of appropriated funds and programs for American Small Business-

Questionnaire Results

EXTENSION OF REMARKS

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. COHELAN. Mr. Speaker, the responses of nearly 15,000 residents of California's Seventh Congressional District make up the results of my 1966 questionnaire.

I enclose the results of this annual legislative poll for the information and attention of our colleagues:

CONGRESSMAN JEFFERY COHELAN'S 1966 LEGISLATIVE QUESTIONNAIRE POLL

[Results in percent]

- 1. Vletnam: Recognizing that no short statement can fully convey your views, which of the following most nearly expresses your opinion on the war in Vietnam?
- (a) We should blockade ports, increase bombing and take any other steps necessary to achieve military victory_ 18.7
- (b) We should increase U.S. ground troops to whatever size is necessary to clear South Vietnam of Communist forces ----

(c) I believe the President's policy of military resistance and efforts achieve negotiations is about right__ 13.1

(d) We should continue our military resistance but publicly state our willingness to negotiate with all parties, including the Viet Cong, and to undertake a mutual deescalation of

- the war----(e) The war in Vietnam is wrong and we should pull out now _____ 32.8
- 2. Civil rights: Several proposals to guarantee civil rights have been introduced in Congress. Would you favor the following:
- (a) Establishing requirements for nondiscriminatory jury selection in Federal and State courts?

Yes 72.6 ----- 13. 4 Undecided _____

(b) Strengthening the authority of Federal courts to try those who murder, attack or intimidate civil rights workers?

No ______ 19. 2 Undecided _____ 12. 1

(c) Prohibiting discrimination in the sale or rental of housing?

Yes _____ 50. 3 35.8 Undecided _____

3. War on poverty: Congress has been asked to increase the funding for the 2-year-old war on poverty from \$1.5 to \$1.75 billion.

(a) Should the war on poverty be in-

Yes _____ 35. 2 No _____ 37. 5 Undecided _____ 29.3 (b) Should it be cut back?

Yes _____ 32.8 Undecided _____ 37.9

(c) Should it be held at its present level? Yes 21.8 33. 5 Undecided _____ 44.7

4. Rent supplements: Last year Congress authorized, but did not provide funds for, a authorized, but did not provide runes ros, a program of rent supplements to help low-in-come families, who are eligible for public housing, afford decent private housing. Should Congress provide funds for this program?

Yes _____ 40.6 No ---44.9

5. National Teachers Corps: In 1965 Congress also approved, but did not fund, a National Teachers Corps to provide local education agencies, in areas having high concentration of low-income families, with experienced teachers for two years. Should Congress finance this program?

63 0 No 26. 2 Undecided _____

- 6. Minimum wage: As this questionnaire is being prepared, legislation to increase the minimum wage from \$1.25 to \$1.60 an hour and to extend its coverage to laundry, dry cleaning, hotel-motel, additional retail trade employees, and workers on large farms is being considered.
- (a) Do you favor increasing the minimum wage?

Yes No _______ 32.0 Undecided ______ 10.8 No -

(b) Do you favor extending its coverage?

Yes _____ 6D. 5

7. Unemployment compensation: Legislation has been proposed to amend the Federal-State unemployment insurance system by

establishing minimum State standards (Cali-

fornia already is at or near the top in most

standards) and to extend its coverage to

4.5 million of the 15 million workers not

Undecided _____

vide broader and continuing review has been

presently covered.
(a) Would you favor establishing minimum state standards for amount, duration and eligibility of benefits?
Yes
No 21. 6 Undecided 18. 6
A STATE OF THE STA
(b) Would you favor extending its cover- age, as proposed, to employees of small firms,
non-profit organizations, workers on large farms and driver-salesmen?
Yes 57.3
No 23. 9
Undecided 18.8
8. Consumer protection: For several years
bills have been before Congress to insure
truth in lending (require money lenders to provide borrowers with full disclosure of fi-
nance charges) and truth in packaging (pro- hibit misleading or deceptive packaging and labeling). Do you feel there is a need for:
labeling). Do you feel there is a need for:
(a) A truth-in-lending bill?
Yes 89.5
No. 4.7
Undecided 5.8
(b) A truth-in-packaging bill?
Yes
No 6. 1
 Highway safety: Last year's highway toll was 49,000 deaths and 3 million injuries.
Legislation giving the Secretary of Commerce
authority to determine the adequacy of
authority to determine the adequacy of safety features in new cars has been intro- duced. Would you support this legislation?
Yes 74.6
No 15.8
Undecided 9.6
10. Transportation: A proposal has been
made to create a new Cabinet-level Depart-
ment of Transportation. It would provide central management for transportation and
safety functions now carried on by 11 dif-
ferent bureaus and agencies, but would not
affect the regulatory functions of the ICC, CAB, or Maritime Commission. Do you favor
this proposal?
Yes 52.2
No 22. 1 Undecided 25. 7
Undecided 25.7
11. Reapportionment: The Supreme Court
has ruled that both houses of a State legis-
lature must be apportioned on the basis of population. This is the "one man, one vote" principle. Do you favor this principle?
Yes 45.4
No 39.1
Undecided15.5
12. Four-year term: Members of the House of Representatives currently serve a 2-year
term. Would you support the proposal, pres-
ently being considered, to make this a 4-year term beginning in 1972?
Yes 50. 6
No 34.9
Undecided 14.5
13. Intelligence agencies: Congress pres-
ently reviews the CIA and other government intelligence agencies by subcommittees of the
Armed Services and Appropriations Commit-

proposed. Should Congress establish such a committee?	
Yes 56.2 No 20.4 Undecided 23.4	ß.
14. Economy: if price increases should necessitate some form of economic control in order to prevent inflation, would you favor the following: (a) Using fiscal and monetary policies (increased taxes and higher interest rates) to slow down spending, investment and inventory build-up?	
Yes)
(b) Continuing present pressures for vol- untary adherence to wage and price guide- posts?	
Yes	3
(c) Instituting wage and price controls?	
Yes	3

Water Crisis in the West

EXTENSION OF REMARKS

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 22, 1966

Mr. ROYBAL. Mr. Speaker, in view of the increasing interest here in Congress, and in the Nation at large, in the vital subject of America's future water supply. I include in the CONGRESSIONAL RECORD at this point two excellent articles taken from recent editions of the Los Angeles Times which deal with the present water crisis facing the residents of our Western States:

[From the Los Angeles Times, July 3, 1966]
WATER CRISIS IN CONGRESS

There was considerable rejoicing when H.R. 4671—the legislation to solve western water shortages—finally emerged from prolonged hearings before a House Interior subcommittee.

The cheers, however, could be highly premature.

Recent developments may, in fact, force California into a complete re-examination of the way in which the water interests of the West are being manhandled in Washington.

At the time of its introduction, the bill offered the best hope yet that the seven states of the Colorado River Basin would have the water absolutely essential to their future growth. As such, it was of the utmost importance to this state and particularly to semi-arid Southern California.

This proposed legislation was based upon an historic agreement among all the basin states to support a water development plan. Quarrels of the past were forgotten as each recognized that individual water problems could be best resolved by united action.

Provision was made for construction of projects in Arizona and the Upper Basin states, but the most important feature of the bill was authorisation of a study that could lead to importing new water to supplement the meager flow of the Colorado River.

Although it is eminently clear that the Colorado cannot possibly support the future needs of the basin states, the bill ran into determined opposition at once in the subcommittee

Most of the public controversy arose over the fears of some conservationists that the proposed Marble Canyon and Hualapai (Bridge Canyon) Dams would "ruin" Grand Canyon National Park. The far more ominous moves, however, were those by members of Congress from the Pacific Northwest, who oppose any study that could result in giving up even a small part of the vast surplus of the Columbia River.

The combined pressure was apparently so great that last week Interior Secretary Stewart Udall, an early supporter of the bill, proposed that it be emasculated by not only eliminating the provision for Hualapai Dam but also deleting any reference to an importation study.

tion study.

By so doing, the secretary would leave little more than a title and a number on a once highly promising bill.

As he well knows, there simply is not enough water in the Colorado for even the near future. To approve new projects without any provision for new water would be legislative folly.

There is already talk in the Upper Basin states of withdrawal from the basin agreement if importation studies do not start promptly. Similarly, California must carefully examine the course of water legislation to determine if it can continue to support the one-sided compromises,

We can draw little or no encouragement from the National Water Commission legislation recently passed by the Senate. Authored by the able Senator Henny Jackson, Democrat of Washington, principal "defender" of the Columbia River, this bill would institute a nationwide study of water problems with no assurance of any priority for the urgent and unique dilemma of the West.

The eastern seaboard has indeed suffered serious drought conditions, but the reasons—lack of meters, antiquated reservoirs, polluted rivers—are very different from the factors in the Pacific Southwest shortage. The problems should be studied concurrently but separately.

Neither California nor any other Colorado River Basin state would take Columbia water that is needed now or ever by the Pacific Northwest.

Any impartial survey, however, would show that a small portion of the 170 million acrefect of water dumped annually by the Columbia into the sea could be diverted to the Colorado without harm.

Inter-state rivers are a national resource. Congress has the obligation to make certain that one area of the nation is not deprived of essential water while another wastes it.

[From the Los Angeles Times, July 7, 1966]
FACING THE ISSUE: WATER AND THE WEST

Water was essential to the development of the West, and it is indispensable to the regon's future growth. The problems of water planning are discussed by U.S. Reclamation Commissioner Floyd Dominy in an interview with William Thorson of the Times Editorial Board.

Question. Mr. Dominy, some conservationists claim that the proposed Hualapai (Bridge Canyon) and Marble Canyon Dams will destroy the Grand Canyon. Do you and the Bureau of Reclamation agree?

Answer. No, we emphatically disagree. As a matter of fact I'm atraid that some of these groups are deliberately hoping that everybody will think they're talking about destroying Grand Canyon National Park.

Actually neither of these dams is in National Park, and neither of the reservoirs is in the park except that the reservoir behind Bridge Canyon will occupy the river for 13 miles at the very northwestern corner of

13 of the national park, where the river is the boundary of the park. The flow of water through the park will not be changed by reason of either of these dams, except that it will be a trout-water stream instead of a muddy Colorado River. I don't believe that change is bad.

Question. Will either the dams or the reservoirs be visible from any of the public observation points within the national park?

Answer. No! Emphatically not! Marble Canyon Dam is 12.5 miles upstream of the northernmost boundary of the park.
Hualapai Dam is clear down at the head waters of Lake Mead. Waters of its reservoir only reach into the very remote corner of

the park where there are no vista points, no roads, and no access.

Question. Will there be any change in the river itself as it flows through the Grand

Canyon National Park?

Answer. Not any further change with Marble Canyon Dam than has already occurred with Glen Canyon Dam.

Now that we have regulated the river no longer will there be high-flood flows and no

longer will there be little, low-trickle flows in the dry years. And of course the river will be colder and will be cleaner and will be trout water.

Question. Are the dams necessary to the proposed Central Arizona Project legislation?
Answer. Marble Canyon Dam is considered
necessary to finance the Central Arizona Project and to provide pumping power at a cheaper rate than would otherwise by available, thereby making the project feasible.

Hualapai Dam would not be necessary to finance the Central Arizona Project but would be necessary to augment the Lower Basin fund if we're going to add to the water supply in the Colorado River which is necessary for the continued growth and develop-ment of the Southwest.

Question. Is the Columbia River a feasible

supplementary source of water for the Pacific Southwest?

Answer. No study of any real significance or depth has ever been made. There is, however, opinion by many people that the Co-lumbia River might be a source of water above the needs of the Pacific Northwest. Therefore a study ought to be made to see whether it would be feasible, first assuming that there is actual surplus above the ultimate, full requirements in the Pacific Northwest to move some of that water down to the dry Southwest.

Question. How long would such a study

Answer. Well it's our judgment that a study of this magnitude could not be done short of about a three-year period as a minimum. Possibly it would take a little longer.
Question. If the legislation were passed
this year, then could such a study be completed by, say, 1970?

Answer. I think it would be physically

possible to complete it by 1970. Question. Can sea water desalinization make a substantial dent in water shortages

now or in the foreseable future?
Answer. A number of processes have proven physically practicable. It's the economics that determine, of course, the magnitude of desalinization in the future.

I personally don't see any possibility in the next several decades that we could hope that desalinization would be cheap enough to provide water for irrigation. I would think that it is already cheap enough in many instances to augment the growing needs of a municipality but not to fully

supply the municipality.

Question. Could desalinization ever be considered as a substitute for inter-basin importation of water for the Colorado?

Answer. I don't think one should be considered a substitute for the other. I think both should be studied and a determination made as to which is the more practical and

perhaps you need both to solve the problem the attention of the Congress and to the ultimately.

Question. Do you consider the 160-acre limitation on farms served by reclamation projects to be outmoded in certain agricul-

Answer. As an economist and as a farmer I'm very cognizant of the agricultural revolution that is and has taken place starting with World War II.

Farming as a way of life is entirely dif-ferent now than it was pre-World War II. And I think that the federal reclamation law has failed to keep pace with the change in the business of agriculture.

Now that doesn't mean that I think the principle of federal assistance to irrigation to be spread as widely as economically feasible ought to be abandoned.

But I do think we ought to take a good look at the 160-acre per individual-owner-ship limitation in the light of agriculture in day's economic climate.

Question. What is the current Interior De-

tment attitude on the Imperial Irrigation District?

Answer. The solicitors of the Department of Interior ruled a year ago last December that the 160-acre limitation of federal reclamation law does in fact apply to the Imperial

mation law does in fact apply to the imperial irrigation District atthough there had been a long history of actions to the contrary. The Imperial District has filed a brief ob-jecting to that ruling and it's my under-standing that Interior and Justice Department attorneys have advised that this brief does not change the solicitor's opinion. But the department is very willing to cooperate in a court test and to have this settled once and for all.

Question. Is a change in policy likely in the Imperial matter or in the overall 160-acre limitation in the Reclamation Law?

Answer. The Congress, a year or two ago, asked the Secretary of Interior to prepare information on the current status of excess land on our projects and to recommend any changes that he thought ought to be undertaken or considered by Congress.

That report is in its final stages. It will show that for the most part excess land law is being complied with on reclamation projects with very minor exceptions.

It will also suggest some new policies and suggest to Congress that it might be time to take a new look at this whole problem in the light of a great change in the business of agriculture.

Confident Uncertainty

EXTENSION OF REMARKS OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1966

Mr. DORN. Mr. Speaker, D. W. Bros-nan, president of the great Southern Railway System, is a dynamic, imaginative, forthright leader in the world of transportation and industry. thrives on competition and is confident in the future of our Nation.

Bill Brosnan firmly believes that the United States is on the dawn of the greatest era in our history if we only continue to move forward with our private enterprise system which made America the envy of the world.

Mr. Brosnan, on June 5, delivered an outstanding commencement address at Mercer University in Macon, Ga. I commend Mr. Brosnan's superb address to

people of our country:

CONFIDENT UNCERTAINTY

(An address by D. W. Brosnan, President, Southern Railway System, on commence-ment day, Mercer University, Macon, Ga., June 5, 1966)

True leadership is undertaken only by the confidently uncertain who recognize that the onward course of individual and of community benefit depends upon people who dare to test what they are and what they know in order to accomplish worthwhile ends.

. . a genuine idealism based on a desire to be useful to others . . . to contribute to social betterment . . . and to advance the welfare of people . . . does not require the weitate of personal initiative or the abandonment of time-proven ways in the conduct of our nation's affairs.

Desire and a confident uncertainty can combine to make each of you worthy opponents for the most challenging tests life can hold for you. They will make you seek out opportunities to add to the accumulated store of national character that identifies the American people. They will assure that you maintain your identity as an indi-vidual—a useful and a free man or woman. Life will be richer for you and for others as

you live it fully.

The assembly here today of parents, relatives and friends of members of this graduating class is a mass congratulation for each of you graduates. This is a day that marks a high point in your lives. And it is a high point, as well, in the lives of the many people who have lent a hand and encouraged you on your roads to this achievement of college graduation. We congratulate you and wish you well through the rest of your lives as you build on the foundations laid here at Mercer.

Even though it is now many years later, I can still recall the confident uncertainty that marked my own feelings on graduation day. Maybe I had better repeat part of that. I called it confident uncertainty. A somewhat similar feeling is probably general among members of the classes of 1986, at Mercer and on the other college and university campuses throughout our great country.

I would urge you to maintain this spirit of confident uncertainty throughout your lives. It is the stuff that causes growth. With it you can become ever more useful and con-tributing members of the society of which you are part.

We have only to look back through the history of this country to see what a vital ele-ment confident uncertainty has been in the development of our nation and in the shaping

of our character as a people.

From the earliest settlers through the various waves of migration to those of the present day, this great land of ours has held promise for those who were willing to match themselves confidently against a future that

could not be fully known.

The men who drafted our constitution and the citizens who ratified their action had a strong belief that this brave new venture in self government was worthy of trial. They felt so despite the absence of proof that men could govern themselves successfully in such a wav.

The men and women who pioneered to push our boundaries westward to the Pacific ventured greatly in pitting their known abilities against expected but unclearly defined difficulties. In so doing they often found previously unrecognized reservoirs of strength in their characters that enabled them to do far more than they had expected of themselves.

We could multiply examples of this sort to try to help explain the American charac-ter and what we often refer to as the Amer-

ican way of life. In one form or another confident uncertainty has marked the approaches that have led to advance over the whole broad range of experience and activity in the building of our country. It isn't out of date—it never will be—it's as fresh and new as space exploration, which is, in itself, a classic instance of confident uncertainty.

certainty.

Mercer University stands today as a fine and growing institution whose beginnings are rooted in the confidence of a man that the establishment of a school for the training of men for the gospel ministry would appealing to others. Josiah Penfield could not have been certain when he wrote his will that others would match the amount of his legacy in order that the school might established. Surely, though, we must think of his act as one of confident uncertainty. We see the fruits of it all around us today on this beautiful campus. Even more, we know of its effects through the years as Mercer graduates have influenced their generations using the foundation of knowledge acquired here.

Some may choose to call Penfield's act one of fatth. Cehtainly I have no quarrel with that. Paith is largely a confidence that uncertainties can be and will be advantageously resolved. But I think you will agree that Mercer's original benefactor could not possibly have envisioned how through the years others would expand the usefulness of what he had started.

Each one of us throughout his or her life has numberless opportunities to act decisively when it is not wholly clear what the end result of our choice will be. The fainthearted turn away from making an election. They drift and hope for the best. Others avoid true choice by electing to do that which seems to them most popular or least troublesome. They are self-satisfied conformists.

It is not likely that members of either of these groups will be long remembered. They exhibit no active desire to help shape the world in which they live. Nor to help fashion a better one for their children and their children's children. They are the raw material from which dictatorships are molded; they are the pawns of the cynical and self-seeking where elective democracy still survives. They lack a confident understanding of their own heritage sufficient to face uncertainty willingly and wisely.

certainty willingly and wisely.

I trust that all of you will exercise your right to be different from the kinds of people I have just mentioned. Your lives will be richer and much more meaningful if you do. Life may also at times seem to be much more difficult. Assuming the burdens of leadership and of personal involvement in the uncertainties of life is never easy. True leadership is undertaken only by the condensity uncertain who recognize that the onward course of individual and of community benefit depends upon people who dare to test what they are and what they know in order to accomplish worthwhile ends. You can be this kind of person. I hope you will.

There are names attached to many buildings on this campus of people who have done just that. Few of us, perhaps none, are likely to have such monuments to our memories. This does not mean that we cannot approach life with the same deep appreciation for the opportunities that exist for us to apply ourselves vigorously to leadership tasks, no matter how limited the fields may be in which we operate

be in which we operate.

As might be expected, most of these campus buildings are named for major benefactors of this University. Few if any of them could have been built were it not for a kind of confident uncertainty that is almost peculiarly American. We all know it best as the free enterprise system, the risk for-profit-or-loss business foundation of our

country's economic greatness. An excellent course in economics could be taught here just by studying the lives and business histories of the men whose personal wealth, given directly or by their heirs, has gone into providing facilities so that the members of this and earlier graduating classes and those to come might go out into the world better trained.

Private philanthropy thrives only in an economic climate where individual effort is rewarded. Funds generated from such well-used economic opportunities create in turn the opportunities to contribute to institutions that can aid in training people to meet their own needs.

Effective government undertakings to broaden the concerns of our democratic society for the welfare of all of its members can be underwritten only with funds generated by free enterprise. Governments do not create genuine economic welfare. Individual people do this—confidently uncertain people. Without economic challenge and opportunity the idealism of man's concern for man cannot be realized as a vital force for human betterment. Every penny that the federal government taxes out of us comes from this same source. In the United States, free private business enterprise the generator of the means which society uses to support those activities which the social conscience of our citizens demands should be done.

I'm not talking alone about the care of the impoverished and unfortunate. I speak, as well, about other things that enrich all our lives. Let's pursue the one example of Mercer. We have already mentioned its major benefactors. What they have given in the years since founding has been augumented by others who have also shared their means to the degrees possible in their financial circumstances. They have filled out the quotas in fund drives, they have contributed through their churches to the support of the University. They have shared the vision of creating a setting in which education for leadership and service can be fruitfully conducted.

The vast majority of such gifts have come from people whose incomes are an outgrowth of the American way of life. Its successful operation has been responsible for the fact that they had money to give to support the things in which they believe.

Our country is both great and able and willing to be generous because it encourages the exercise of the beet that men have in them to contribute toward the upgrading of life in all areas of activity. As graduates many of you will immediately enter upon your chosen life's work. Others are looking ahead to further education before entering more specialized fields of endeavor. This seta back for only a few years the time when you will be fully active participants in the careers you have chosen.

Inevitably, all of you face decisions as to what kind of people you choose to be, whether in business or professional life. Your lives can be truly useful and productive. Or, they can span years that will be meaningless in terms of character growth and of genuine usefulness and of the achievement of ambitions. None of you need fear the latter if you persist in a confident uncertainty as you go about the business of living in the years ahead.

Closely allied to this will be finding the answers to the question, "How much do you want it?" About a year ago I was very much impressed with a sermon on this subject that began with words that I think will have deep meaning for you on this graduation day. Dr. Edward G. Latch, a well-known clergyman in Washington, started this sermon by saying:

"Have you ever considered the place of desire in the attempts to achieve your ambition? Have you ever thought about the

place of the will to realize your endeavors and aims in life? Take something you want to see done . . . some objective you wish to reach . . . some task you seek to accomplish . . . some dream you would like to have fulfilled. Have you ever stopped to think about the important place desire and the will to do plays in these endeavors? More than we may be willing to admit, to a greater degree than we may realize—we succeed or fail, win or lose, largely in proportion to the feeling of desire we bring to it."

We can link these themes together. Desire and a confident uncertainty can combine to make each of you worthy opponents for the most challenging tests life can hold for you. They will make you seek out opportunities to add to the accumulated store of national character that identifies the American people. They will assure that you maintain your identity as an individual—a useful and a free man or woman. Life will be richer for you and for others as you live it fully.

it fully.

None of us dare forget the strong trend of the times that runs counter to this kind of thinking. Life cannot be lived fully in the regimented existence that is the fate of vast numbers of the world's people today. There can be no confident uncertainty for these people, only a question-mark kind of fate depending upon what the state chooses to allot to them. Many of those now living in this way chose to accept an infant-like security-blanket way of life. Now, they can have can no other. And none have achieved anything approaching the American way of life. I repeat we dare not forget this.

life. I repeat, we dare not forget this.
Ours is the better way, but it demands
that we understand that a genuine idealism
based on a desire to be useful to others . . .
to contribute to social betterment . . and
to advance the welfare of people . . does
not require the surrender of personal initiative or the abandonment of time-proven
ways in the conduct of our nation's affairs.

You will be the ones who write chapters still to come in the story of the most successful effort in the history of mankind to spread broadly the benefits of national well-being to all people. There is progress still to be made. There are new ideas and theories to be explored. Your future is in your hands and you will be moving steadily forward toward the day when full responsibility will rest upon you for decisions in business affairs... in political matters... in professional problems... in teaching and preaching... in whatever may be your sphere of activity.

Keep today's eagerness alive in your minds. Hold strongly to the idealism that marks your generation more greatly than any recent one in this country's history. But do not drift into the easy way of the conformist. Use your talents and your time and your determination to build ever more strongly on the structure that shelters the American way of life—the American free enterprise system.

Maintain a confident uncertainty. It has served others well as they met their individual challenges in our nation's past. You have been trained to begin to meet the challenges of the future. God willing, and helping, you will meet them well.

The Ney Memorial Awards Program

EXTENSION OF REMARKS

HON. RODNEY M. LOVE

OF OHTO

IN THE HOUSE OF REPRESENTATIVES

ma-

tion concerning the Ney Memorial Award's competition which I learned about as a result of a visit from my good friend and constituent, Mr. John C. Smith, formerly an Ohio State senator and presently a member of the Board of County Commissioners of Montgomery Coun.y, Ohio.

Mr. Smith and Maj. Walter Pienkowski, retired, another constituent—formerly food service officer for the U.S. Air Force—were the two men most responsible for the Food Service Executive's Association's participation in the Ney Memorial Award, Major Pienkowski having been the gentlemen who created a similar program in the Air Force known as the Hennessy Trophy Award.

Mr. Smith, recently returned from an inspection tour for the Navy, participated in a team evaluation of the nine finalists in this year's competition.

The Secretary of the Navy in 1958 announced the establishment of an all-Navy food service competition to give merited recognition for outstanding accomplishment in the preparation, service and management of food within the

The Navy has long considered good food as a most important factor in sustaining the high morale of its men on land, at sea and in the air. The establishment of a distinguished award naming the Navy's best feeders to a "Hall of Food Fame." known as the Ney Memorial awards program, has stimulated even greater interest and improvement in the already outstanding food service operation in Navy general messes.

The Ney Memorial awards program commemorates the late Capt. Edward Francis Ney, Supply Corps, U.S. Navy, who served with distinction as head of the Subsistence Division of the Bureau of Supplies and Accounts during World War II. The Ney program is administered for the Secretary of the Navy by the Commander, Naval Supply Systems Command, an office currently held by Rear Adm. H. J. Goldberg, SC, USN.

From its inception the Ney Memorial awards program has been sponsored by the Food Service Executives Association, since 1901 a national nonprofit organization of food procurement, service, and management executives. Representatives of the winning Navy general messes ashore and affoat will be guests of the association for the special plaque presentation ceremonies at the FSEA 65th National Convention from August 15 to 17 at St. Louis, Mo.

Although our Navy is advancing into the age of missiles and nuclear power the men and women who man our shore stations, ships, and planes are the key elements in its power. With the exception of leadership, probably no one thing is more important to the health and morale of these men and women than good food service.

When we consider these men and women who man the ramparts during peace and war we too often consider their morale and well-being in relation to pay and promotion, but another very direct and abiding concern of every military person is his food.

- I would like to commend the members of the Food Service Executive Association for all they have done in these past

9 years by presenting these awards to the winning naval facilities for outstanding food service and for gaining the recognition of this all important factor in the health and morale of our fighting

The Ney Memorial awards competition has economic benefits as well. It has dramatically reduced the per man ration cost per day. In every instance, without exception, the finalists in this annual program have reduced their food costs to the Government. The program has been a deciding factor in the creation of more cheerful dining areas for our seamen. It has increased the morale of our seamen and instilled pride in our The food service commissarymen. Pacific Fleet has even included participation in the Ney Memorial award competition a must for inclusion in the "E" for excellence award. It has even encouraged one of this year's winners-U.S.S. Semmes-to print a cookbook of the ship's favorite receipes to send home to the ship's personnel, parents, and dependents. This cookbook has even been requested by commercial as well as private interests outside the Navy.

As a member of the Armed Services Committee, I was glad to know about this competition and am proud of the parents and dependents of our Navy personnel. I am reassured to find that our men are the best fed and I appreciate John Smith's interest in taking his time to make this tour and I commend him and all the finalists in this year's competition.

competition.
The winners are:

LARGE MESS AFLOAT

1. U.S.S. Gridley (DLG-21) (winner), Com-

mander, Cruiser Destroyer Force, Pacific.
2. U.S.S. H. W. Gilmore (AS-16) (first runner-up), Commander, Submarine Force, Atlantic.

3. U.S.S. Proteus (AS-19) (second runner-up), Commander, Submarine Force, Pacific.

SMALL MESS AFLOAT

 U.S.S. Semmes (DDG-18) (winner), Commander, Oruiser Destroyer Force, Atlantic.

2. U.S.S. Aggressive (MSO-422) (first runner-up), Commander, Mine Force, Atlantic.

3. U.S.S. Skagit (AKA-105) (second runnerup), Commander, Amphibious Force, Pacific.

1. NAS, Miramar, Calif. (winner), Commandant, 11th Naval District.

 NAVCOMMSTA, Sam Miguel, Philippines (first runner-up), Commander, Naval Forces, Philippines.

3. NAVSUPPACT, Naples, Italy (second runner-up), Commander, Naval Forces, Europe.

Cordell Hull Lock and Dam Rises in the Upper Cumberland Area of Tennessee as a Monument to a Great Statesman

EXTENSION OF REMARKS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. EVINS of Tennessee. Mr. Speaker, Cordell Hull lock and dam-cur-

rently under construction in my State—is destined to be a great instrument for progress and a monument to a great statesman—Cordell Hull—my distinguished predecessor.

This great project being built across the Cumberland River at a cost of \$58 million will be a part of the U.S. Army Corps of Engineers development of the Cumberland River Basin.

As a member of the Subcommittee on Public Works Appropriations, it was my privilege to have had a small part in making this great development possible. This project will provide expanded water resources to the people of the upper Cumberland area in abundant supply. Hydroelectric power will be produced. Navigation and recreation will also be promoted, among other benefits.

Mr. Speaker, Tennessee magazine in a recent issue contains an article, "The Cordell Hull Project: Monument to a Statesman," featuring this great project and its significance. I include this article in the Appendix of the Record, believing it will be of interest to my colleagues and to the country generally:

THE CORDELL HULL PROJECT: MONUMENT TO

(By Larry Arnett)

"We often say how impressive power is. But I do not find it impressive at all. The guns and the bombs, the rockets and the warships, are all symbols of human fallure... A dam built across a great river is impressive." (President Lyndon B. Johnson at Johns Hopkins University April 7, 1965.)

In the prologue to the story we know today as the Cordell Rull Project, so named in honor of the late Secretary of State and Senator from Tennessee, the late President John F. Kennedy touched a telegraph key in ceremonies held at Nashville's Vanderbilt Stadium, thereby setting off an explosive some 60 miles away at the proposed damsite and officially signalling the beginning of a dream's realization.

Design, construction and operation of the project became the responsibility of the U.S. Army Corps of Engineers, and with the completion of the dam, another chapter will have been added to the story of man's development of the water resources of the Cumberland River and its tributaries in Tennessee and Kentucky. The project is a unit of coordinated plan for control of floods and the development of the water resources of the Cumberland River Basin, and will be located approximately 5 miles above the city of Carthage, Tennessee.

Rising some 87 feet high above the stream bed, the dam will require 222,000 cubic yards of concrete and seven years to construct. It will be a combination earthfill and concrete structure about 1,306 feet long and 108 feet thick at its base, containing a gate-controlled spillway, navigation lock and power intake section. The powerhouse will occupy the present river channel with necessary appurtenances on the right descending bank. It will be joined by a concrete spillway section flanked on the left by a lock and that structure by an earthen embankment. Construction was initiated in May, 1963 and it is anticipated that the project—the dam being the key structure of a \$57 million unit that includes a reservoir, powerplant and switchyard—can be completed for full beneficial use by December, 1969.

The project is presently planned for the primary purposes of navigation, hydropower

The project is presently planned for the primary purposes of navigation, hydropower generation and recreation. As a unit of the Cumberland Basin plan, the project will function to produce hydroelectric power by use of flows regulated by existing upstream reservoirs, Wolf Creek and Dale Hollow; af-

ford recreational opportunities and wildlife conservation; and under flood conditions, to provide for temporary storage and regulation of large flows as well as recreational craft, and will provide a powerful stimulus to the economic growth of the area. With Old Hickory and Cheatham (completed) and Barkley (nearing completion), Cordell Hull ultimately will provide a modern 9 foot channel 385 miles from the mouth of the Cumberland River to the vicinity of Celina, Tennessee.

At its maximum flood control capacity of 13,920 acre-feet, the reservoir will extend 72 river miles to the proposed site of the Celina Dam at the Kentucky-Tennessee State line. It will lie within Smith, Jackson and Clay Counties, Tennessee.

The powerplant, which will occupy almost half the breadth of the riverbed, is nearing completion. It will be operated so as to use as much of the water flow as possible for power production. During periods of high streamflow, the spillway gates will be opened to pass the water beyond the capacity of the turbines, with due regard for the retention and regulation of floodwaters through surcharge operation. The upper portion of the reservoir, corresponding to a seven-foot depth above the normal headwater level in flood seasons, is provided for surcharge storage. This storage space is utilized by raising all of the spillway gates in small, equal increments, thus permitting passage of some water under them but retaining or forcing into storage all inflow to the reservoir in excess of the spillway discharge and power re-

The plant will house three 33.34 megawatt generating units which will provide a total power output of 100 megawatts. Power will be generated as the water from the reservoir passes through gate-controlled intakes into the powerhouse, rotates the turbines, and discharges through draft tubes into the river below the dam. The electric current is produced by generators mounted on the same shafts with the turbines. Installation of the first generating unit is scheduled for completion in March, 1971, with the remaining units scheduled for completion shortly thereafter.

The powerplant will initially generate 350 million kilowatt hours of electricity annually. Power from the Cordell Hull Project has already been allocated to meet the growing needs of preference customers such as the rural electric cooperatives and municipalities.

Hydroelectric power will be produced by the project for distribution in a region which continues to experience rapidly increasing power demands. In multiple purpose development of water resources, power is a paying partner. The revenues from this power will be returned to the Treasury of the United States—with interest.

In addition to the protection from floods, the public will also be afforded the use and enjoyment of other big benefits to be realized with the completion of the project. For example, the man-made lakes will provide annual recreation for the millions who seek it in one of the many forms of outdoor diversions—fishing, boating, swimming, waterskiing, camping or sightseeing.

Major boat ramps are also in the making for construction at locations to be designated in the near future. Fish and wildlife enhancement and conservation will also be realized with the completion of the project. The Tennessee Fish and Game Department plans to stock the reservoir with smallfry and fingerlings, in order to assure opportunities for fishing as soon as possible, and proposes to develop neighboring areas for wildlife use.

When fully completed, the Cordell Hull Project will mark another step gained in the march toward the goal of full development of the water resources of the Cumberland

Valley and will have unlocked a vast new area to a bright tomorrow or greater economic growth, security and social well being through its direct benefits.

A Tribute to the Remarkable Taggart Family

EXTENSION OF REMARKS

HON. TENO RONCALIO

of wyoming
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1966

Mr. RONCALIO. Mr. Speaker, it is a remarkable thing these days when the family unit of our society can be recognized as a powerful force for good in its own right, as is being done in Wyoming this week, when the entire State pays tribute to one of its outstanding clans, the Taggart family of the Big Horn Basin in Wyoming.

In 75 years of statehood, Wyoming has only had a Democratic Member of this body for 6 years—only two of my predecessors have been of my political party; one of these was Paul R. Greever of Cody, Wyo., whose son, William H. Greever, is married to one of the nine children of the "Capo de famiglia" Lloyd Taggart. Lloyd and his wife, Louise, are today celebrating their 50th wedding anniversary in Cody, Wyo.

THE 1920 CELEBRATION

In 1920 the parents of Lloyd Taggart, in Cowley, Wyo., celebrated their 50th wedding anniversary. In the earlier family there were 16 children born, and at their 50th wedding anniversary the 15 living children of that family each performed a musical rendition.

As reported by the Lovell, Wyo., Chronicle in those days, after an hour of dancing there was a musical program by the Taggart family. The nine stalwart sons and six beautiful daughters rendered a series of old songs learned in childhood. The Chronicle had this to say:

The presentation of such a musical program, displaying professional talent on the part of the soloists, to say nothing of the wonderful harmony produced by the chorus, was the more remarkable from a single family. To those privileged to hear it, it was perhaps the only occasion of the kind in a lifetime. More remarkable was the picture the group presented on the stage. Friteen grown men and women, brothers and sisters—physically perfect, keen mentality, and talented far beyond the average who commercialize their talents. And the father and mother of this group appearing in equally good form with the children.

OUTSTANDING FIGNEER FAMILY

This is one of the outstanding ploneer families of Wyoming. Lloyd is one of the surviving 4 of the original 16 and I want to pay special tribute today to the 9 children of Lloyd and Louise, with 4 of whom I was privileged to be a classmate at the University of Wyoming, and particularly to the one member of the family, Mary Louise, who keeps alive the two-party tradition in the family. The children are:

Ruth, now Mrs. Quentin Blair of Cody. Lloyd Welch, the president of Taggart Construction Co., Cody.

Jesse McNiven, the vice president of Taggart Construction Co., Cody.

Mary Louise, now Mrs. William H. Greever, the wife of a Cody engineer.

Harriet, now Mrs. Joe Brytus, the wife of a retired officer of the U.S. Air Force, living in Sheridan, Wyo.

Becky Barbara, Mrs. Jay Watkins, wife of the president of W.M.K. Transit Mix, Las Vegas, Nev.

Scott Hinckley, a Boeing aircraft engineer, Paris, France.

Raye Rita, Mrs. Scott Graham, the wife of an investment consultant in New London, Conn.

Charles Welch, a real estate investment broker, Salt Lake City, Utah.

AN INSPIRATION TO YOUNG PEOPLE

One of Mr. Taggart's greatest attributes is that he has always been helpful to the young people of Wyoming, regardles of their ethnic or economic or social status. He was always helping young people at the university while I was there. I am proud that he is a citizen of Wyoming and I consider him an outstanding friend and mentor.

The Taggart family has been distinguished by its talented and hard-working members. The family embodies many of the everlasting virtues which have helped make this country great. Thus, Mr. Speaker, it is only fitting that they should receive national recognition by this tribute in the Congressional Recogn.

This Nation and the State of Wyoming send their best wishes to Lloyd and Louise Taggart on their 50th wedding anniversary and hope for the continued strength and vitality of a great American group, the Taggart family.

Graduation Address of Dr. Edward Teller

EXTENSION OF REMARKS

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 29, 1966

Mr. DORN. Mr. Speaker, I am proud of Clemson University, its past history, its superb setting, and foresee for Clemson a great and unlimited future.

Mr. Speaker, I am proud to represent Clemson University in the U.S. Congress, I am proud of its distinguished and illustrious president, Dr. Robert C. Edwards. I am proud of its outstanding, dedicated and highly capable faculty.

Dr. Edward Teller, of the University of California, delivered a magnificient commencement address to the 70th commencement at Clemson, May 14, 1966.

Mr. Speaker, I commend Dr. Teller's superb and timely address to each Member of the Congress and to the people of the United States:

CLEMSON UNIVERSITY GRADUATION ADDRESS, 70TH COMMENCEMENT, MAY 14, 1966, CLEM-SON, S.C.

(By Edward Teller, chairman, Department of Engineering, Applied Science, University of California, Davis, May 14, 1966)

Governor McNair, Senator Brown, President Edwards, ladies and gentlemen, and very particularly you young men and young

ery ung women who will go from here, from this wonderful occasion, from the sunshine into a world to use what you have learned.

When I arrived here yesterday I seem to remember, it hardly appears real now, but it was drizzling and at dinner everbody said "What will be the weather tomorrow?" There was a weather prediction which indicated improvement but, as is the case sometimes, there was also doubt.

I want to tell you that ten years from now probably there won't be any doubt. Weather will be predicted and as soon as weather will be predicted we shall begin to learn how to influence weather and then we will have done something very remarkable. We will have lost the last safe topic of conversation.

I am telling you this for a serious reason. The most valuable human property, which I'm afraid we have inherited from our simian ancestors, is curiosity. Properly channeled by learning, this leads to knowledge, and by learning, this leads to knowledge, and knowledge leads to power, power even over the elements, over the weather. And this power, without any possibility of evasion, leads to responsibility. We are living in a scientific revolution, the

increase of knowledge and consequent in-crease of power propels us from decade to decade even from year to year with ever increasing speed into an uncertain future. You may be afraid of it, you may also be chal-lenged by it. This problem of the weather

is only one example, there are others.

The increasing population needs food.

Many of you will be directly concerned with production of food, but probably even within your lifetime you may see that production of food which has been mostly confined to the land areas will return to the oceans; from where originally all life on this planet has come.

We have already started to break the bonds that tie us to this planet. We are exploring space, we are encountering more and more opportunities, and in so encountering opportunities we also meet with ever increasing problems because human power applies and always was applied to the particularly horrible application, the power to destroy each other.

Do not believe those who assert that there is danger that the human race may end. There is no such danger. But there is the reality that today human inventions can span the distance between continents in minutes, that today as a nation we are no safer than Poland was in 1939 when Hitler's army started to march.

All of this, the opportunity and the danger, means something very simple. It means, and I believe that this is true no matter how difficult the job of a prophet, it means that by the end of this twentieth century there will be established some world order, some way in which all people of different origins, of different traditions, of different races must live together because one thing that the technological and scientific revolution has done is to make this planet a very small place where indeed we are all neighbors.

A changing time is a difficult time. human animal like every living being is a creature of habit, of emotions—he is apt to act tomorrow as he acted yesterday. Thus we form a stable community. For that purpose emotions are well qualified to serve as a guide. But in a time when change has become unavoidable we must use our understanding; we must use our head, and in using our head at the same time we must never forget that we have hearts also, that we and others are strange, contradictory, terrible and

wonderful human beings.

When you are faced with the necessity of change, there are two great dangers. One is, and it is a widespread danger, that you do not recognize the necessity that you allow events to get into the saddle and then you lose initiative and you have to react in a violent manner. It is hard to realize that

tomorrow's world will be more different from today, than yesterday was as compared to the present hour, yet this is true, and this everyone must realize. To my mind the fact that more and more of our young people go through college, even go into graduate school, is the one reasonable response to the rapid

change which we must face.

There is another danger. You may recognize that change is necessary; having recog-nized it you find a solution: the world must be organized, we must have world govern-ment. I have solved everything and I have solved precisely nothing. A word is not a solution, an idea is not an act. We must learn how to live together and if you remember the problems that you encounter in cooperating with your close associates, even sometimes with your own family, you might begin to recognize how much bigger the problems are to live with for those who have a different past, a different language, a different set of ideas and idealsso different that you may sometimes imagine that they come from another world.

Therefore I can speak properly only about problems. I cannot, in a responsible manner, speak about solutions and yet I will do so, not because I believe that what I'm going to not because I believe that what I'm going wo say is right. What I've said up to now, is I am sure, correct, please believe ms. But from here on, believe ms at your own risk I am saying it, not because I am completely convinced, but I'm continuing to speak in order to demonstrate to you that the prob-lems I'm talking about are real and that however difficult a question, however un-certain the answer, I feel a duty to tackle the problem by starting a discussion.

The world will have much more organization by the time you are my age. When new organizations are growing, that is the time when the foundations for the future, perhaps for hundreds of years, perhaps even for longer, are laid.

There is in this world a big dynamic force. If I call this force communism then you may have an idea what I'm talking about, but you may also misunderstand what is worry-What is worrying me is not particularly the difference between the communist economy and the capitalist economy. The communist economy has to adopt and has adopted many of the procedures of the capitalist society, and we in turn are intro-ducing regulations which in an ever more complicated world may indeed be necessary. It may seem that the difference between the economic systems is diminishing. But if you think of our difficulties in this way I believe that you are missing the main point.

Seven hundred and fifty years ago Genghis Khan set out to conquer the world. He called himself the Great Khan of all men, and indeed he did conquer a greater portion of the world than anyone ever did before or And where he conquered, there he left his traces.

Look at the map and compare it with your books of history and you will find that al-most precisely in the same places that have been conquered by Genghis Khan, today there is communism. The difference, to my mind, is not a difference between economic systems. It is a difference between a highly organized, authoritarian, tyrannic government and the strange paradoxical, yet vital invention, the self-government of free men.

There is a real question whether in an ever smaller world, the world indeed can continue to be divided between freedom and between a tyrannical regime. This is not a question that can be settled in a right way by fighting. It is also not a question that can be settled by wishful thinking and by imagining that a tradition of more than seven centuries will change within a few years. But it is a question that has to be attacked, and this is how I would like to see it attacked. To go ahead and find a common basis be-

tween the men of the Kremlin and our own

government is to my mind simple nonsense To find a common basis, a thoroughly worked-out method of cooperation between all advanced democracies who do have the same history, who do have the same ideals, who do have the same respect for the in-dividual and the same ideas about freedom, this is a difficult task but not an impossible one. A loose but effective union of the free can become the one reliable point, the fixed point from which we can begin to change and to shape the world toward a better future, not by violence, but by strength and pa-

These are generalities, they are important generalities. At least we are opening up questions that need answers and for which answers are being generated by reason or by accident, by understanding or by rash ac-

Why do I talk to you about these things? You may feel, I am sure you do feel, that the world labig and overwhelming and that you are small and without power. Some of you may have read the famous book, "Plato's Republic," in which the terrible idea is explained, that a few highly intelligent, highly educated and completely unselfish people, the philosophers, should govern the world. is a terrible idea and it is a mistaken idea in

my mind, mistaken for a strange reason.

The world is too complex, to leave the decisions, all the decisions, to the best, to a few. This technological world, this human society Is shot through with an infinity, an almost infinity of small and highly significant prob-lems, each of which can change the fate of the world, each of which in its consequences can and will be magnified. Those of you who go into work in science will create the tools of tomorrow and many of the tools are likely to be very significant in answering the qestion, what tomorrow will be. Those of you who go into industry will have to have an open eye for using these tools, for adapting them. Those of you who will teach our children have probably the most responsible position, although not the one that has

nearly as much honor as it should have.

And those of you who may go away over the Pacific Ocean to defend the chance of some people to make a choice-people, many of whom probably have not yet understood nor even had a possibility to understand what the choice before them is; to those of you who may face a personal danger, we shall be in the greatest debt. Whether your action is one of courage or whether it is to understand and to befriend a person of a different continent, you will change our

It is a very great privilege for me to talk to you because I do feel that each of you is going to have an important part in what is going to hapen. And within limits I can tell you what is going to hapen. The world is moving and the world is going to continue to move. There will be an organization and this may have the simple machine-like structure. The simple structure, not too complicated for the mind of a conqueror on horseback who has ridden out to conquer the world in the beginning of the thirteenth century; and this rigid scheme may be the mold of the world for farther than we can think ahead.

Or it may be that by patience, by under-standing, by hard work, and by the love of our neighbors, wherever they are and whatever they are, we might be able to transform this strange invention of self-government, of democracy, into a system that will enbrace the globe

The future may be much wome than the present or it may be so much better that we shall not be able to look back to this day without wondering how all these changes that you, yourself, have made did come about. The one thing of which I am sure is that the world will not be the same. Please change it the right way.

The Anheuser-Busch Case

EXTENSION OF REMARKS

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1966

Mr. DAVIS of Wisconsin. Mr. Speaker, within the past 10 days the House has had called to its attention on several occasions the coincidental circumstances of the dismissal of the antitrust action against Anheuser-Busch and the membership of several of the top executives of that company in the Democrat fundraising effort known as the President's Club.

On July 15, I wrote to the Attorney General to inquire of him as to the legal basis for the dismissal of the Anheuser-Busch suit as contrasted to the continuation of prosecution of antitrust actions involving three Milwaukee-based breweries.

A copy of my letter to Mr. Katzenbach is set forth as follows:

JULY 15, 1966.

Hon. Nicholas beB. Katzenbach, The Attorney General,

Department of Justice, Washington, D.C. Dear Mr. ATTORNEY GENERAL: The recent revelation of the dismissal of the anti-trust

DEAR MR. ATTORNEY CENERAL: The recent revelation of the dismissal of the anti-trust action against Anheuser-Busch Brewing Company has raised several questions and prompted me to seek explanation and clarification.

As you know, I represent a part of the Milwaukee metropolitan area where there has been, over the years, considerable public discussion of the pending anti-trust actions involving three of the Milwaukee-based breweries. As I understand it, the anti-trust action against Anheuser-Busch, the largest brewing company in the entire country, with a capacity in excess of ten million gallons, involved the purchase of the Rahr Malting Company, a Wisconsin firm with a significity for providing an important element of the production of beer. This disprosecution of the anti-trust action against the Schlitz Brewing Company, now pending in the United States Supreme Court, involving a company fifteen percent smaller in its capacity than Anheuser-Busch. As I understand the Schlitz action, the Justice Department seeks to void the proposed purchase of a minority interest in Labatt, a Canadian brewing firm which apparently owns a majority interest in an American West Coast firm, the General Brewing Company.

The dismissal of the Anheuser-Busch suit results are suit to reconcile with the currently pending suit in the U.S. District Court for Eastern Wisconsin seeking to void the eight-year-old merger of the Blatz and Pabst brewing companies with a combined capacity of less than five percent of the national output.

I wish to make it clear that I have never received any complaint from the officials of Schlitz, Blatz or Pabst. I simply have been unable, as a Member of Congress to reconcile these pending actions with the rather fliplant explanation, as reported in the press, that the Anheuser-Busch case was "a weak case which never should have been started in the first place."

How can the public understand the weakness of an anti-trust case against the largest brewing firm in the country, which seeks to solidify and enhance its predominant position by the acquisition of a significant source of supply (thus denying that source of supply to its competitors) while smaller companies seeking to approach a competitive position with Anheuser-Busch are being vigorously prosecuted for violating the antitrust laws?

Very sincerely yours,

GLENN R. DAVIS, Member of Congress.

One week later, I received a letter from Mr. Donald F. Turner, Assistant Attorney General, Antitrust Division, responding to my letter. Mr. Turner's letter of response is as follows:

DEPARTMENT OF JUSTICE, Washington, D.C., July 21, 1966.

Hon. GLENN R. DAVIS, House of Representatives,

Washington, D.C. DEAR CONGRESSMAN DAVIS: The Attorney General has asked me to reply to your letter of July 15 concerning the relationship between the recently dismissed Anheuser-Busch suit and our cases against Schlitz Brewing Company and Pabst Brewing Company. As you indicate in your letter, the Anheuser-Busch case involved a "vertical" merger, while the Schlitz and Pabst cases involved "horizontal" acquisitions of competi-We are indeed concerned with vertical acquisitions of a source of supply that may threaten to put a supply squeeze on the acquirer's competitors. The suit against Anheuser-Busch attacking its acquisition of the Rahr Malting Plant was filed at a time when it apparently was believed that that acquisition and similar acquisitions by other brewers would indeed threaten smaller competitors with future difficulties. On our recent review of the case it appeared fairly clear to us that there was no serious likelihood of this occurring. There is, and has been for some time, considerable excees capacity in the malt industry; no further trend toward vertial acquisitions has developed; and because of the relative size of malt plants, it does not seem at all likely that a significant number of acquisitions will take place in the future. However, we insisted that the suit be dismissed only "without prejulice," so that the Department remained free to reinstitute proceedings in the future should any adverse developments warranting such action take place.

In both the Schlitz and Pabst cases, on the other hand, we proceeded against mergers between substantial competitors. In this area, the Department has quite consistently taken the position—recently vindicated by the Supreme Court in the Pabst and Von's Grocery opinions—that serious market concentration, with its attendant ill-effects on competition, can only be effectively stopped at an early age. In short, if you will excuse an oversimplification, we have felt by and large that the merger of any two substantial competitors should be at least prima facie unlawful.

In the Schlitz case, we attacked the acquisitions by Schlitz of Burgermeister, a west coast brewery, and a stock interest in LaBatt's, a Canadian brewery controlling General Brewing Company, another coast brewer. In 1960, the year before Schlitz acquired Burgermeister, Burgermeister accounted for 10% of beer sales in California, and Schlitz accounted for 3 to 4%. General Brewing was also a substantial seller in that area. Moreover, there was considerable evidence indicating that LaBatt's would in the future seek to expand General Brewing's sales area and attempt to convert it into a nationwide seller. On the basis of these and other facts, the federal district court recently held both acquisitions by Schlitz to be un-We understand that Schlitz is contemplating an appeal.

As for the Pabst case, at the time of the acquisition Blatz was the leading seller of

beer in Wisconsin with 12.8% of total sales in that state, while Pabst, the acquirer and one of the nation's leading seliers, accounted for approximately 11%. The merger made Pabst number one in the state. Again, therefore, the Government has been attacking a merger between two substantial competitors, and as you know, the Supreme Court has recently held that the Government established a prima facle case in violation of Section 7 of the Clayton Act.

I hope this discussion, although brief, suffices to answer your questions. Please let me know if it does not.

Sincerely yours,
DONALD F. TURNER,
Assistant Attorney General,
Antitrust Division.

Mr. Speaker, I do not question the validity of the legal positions set forth in Mr. Turner's letter. It is a lawyer-like letter deserving of respect as such.

Meantime, the distinguished Pulitzer Prize winning columnist for the Des Moines Register, Clark Mollenhoff, has given new insight into the internal workings of the Antitrust Division during the time of consideration of the Anheuser-Busch decisions of the Justice Department.

These additional revelations raise some questions to which the answers have not been provided. If this matter is not put to rest in a manner more satisfactory to the public, it may well be that the Congress has a responsibility to interest itself in this case and that the Judiciary Committee of the House will need to exercise its broad powers of oversight and investigation to assure the members of the House and to assure the public that the public interest has neither been sacrificed nor compromised.

PRESSURE BY BEER FIRM IN TRUST SUIT (By Clark Mollenhoff)

WASHINGTON, D.C.—Justice Department records indicate that the Anheuser-Busch Co. used "political pressure" to try to bring a settlement on the highly controversial antitrust suit involving acquisition of a Wisconsin malting company.

The settlement of the suit by the Johnson administration has been subject to Republican criticism since it was settled during the same period that owners and representatives of Anheuser-Busch were making political contributions of \$10,000 to the President's

PLANE TRU

Also involved in the controversy is the fact that Donald F. Turner, head of the Antitrust Division, went to the All-Star baseball game in St. Louis in a plane owned by Anheuser-Busch. The plane ride took place only three weeks after the antitrust action was dison recommendation of Turner.

Alfred Fleishman, the public relations man who arranged for the \$10,000 in contributions to the President's Club, has said there was no political pressure in connection with the settlement of the Anheuser-Busch case and no discussions of the antitrust case with the Democratic Party people who accepted the \$10,000.

The files of the Justice Department show that the trial lawyers assigned to the Anheuser-Busch case were opposed to dismissal of the action.

Trial lawyers John F. Hughes and David R. Melincoff in a memorandum of May 9, 1966, set out the historic background of the case from the time it was filed in January, 1962, on the recommendations of Lee Loevinger, then the head of the antitrust division.

Anheuser-Busch lawyers tried to obtain a settlement in 1962 and 1963, and relative to

one of these efforts in December, 1963, Hughes and Melincoff made the following comment:

"At that time, as Mr. (Baddic J.) Rashid (chief, trial section) is aware, Anheuser was not the least bit hesitant to bring political pressure to bear from among others, Senators (STUART) SYMINGTON and (EDWARD) LONG Of Missouri."

The trial attorneys contended that the lawyers for Anheuser-Busch tried to avoid a trial and had halted the "discovery" process by indicating a willingness to settle with a

consent decree at several stages.

However, the trial attorneys said this appeared to them to be "dragging heels" purposes of delay during which time the firm was operating the Rahr Malting Co. at Manitowoc, Wis.

DENY VIOLATION

Edward Barton, a lawyer for Anheuser-Busch, contended that the acquisition would not be a violation of the antitrust laws, and asked "whose interest the department (of justice) seeks to protect since all brewers, former customers of Rahr, have alternate supplies."

Hughes and Melincoff replied: "Our answer is that the public interest will be protected by retaining a vigorous competition in the malt and beer industries as possible in light of oligopolistic tendencies in both indus-

They stated that "in one swoop the nation's largest brewer (Anheuser-Busch) acquired 9 per cent of all production of malt."

In his recommendation to dismiss the case, Turner in a June 8, 1966, memorandum stated: "With great reluctance, since I believe there should be a strong presumption against taking such action, I recommend that we consent to the dismissal without prejudice of the above civil complaint. I have had the case carefully analyzed by several people, and am convinced the facts simply do not support any of the possible theories which I would consider appropriate."

In the memorandum, Turner said there might be some impact of the dismissal of the Anheuser-Busch case on other pending cases, but commented that the Justice Department is "not wholly unprepared to distinguish between" the Anheuser-Busch dismissal and other cases they do not intend to dismiss.

TIMING OF GIFT

Representative CHARLES GOODELL (Rep. N.Y.) has put together a chronology of the events showing that the contributions of \$10,000 to the President's Club took place in mid-May, during the same period that the Justice Department was making a decision to dismiss the suit.

Representative Goodell and others have raised the question as to whether the whole idea of large contributions to the President's Club does not leave an inference of a link with "influence peddling."

g

dd he ry, Von. to

Goodell claimed in a statement in Thurs day's Congressional Record that official files fail to show any "significant contributions" to presidential campaigns prior to this year by officials of Anheuser-Busch.

Republican House Leader GERALD FORD of Michigan and Goodell have asked for a full investigation of the handling of the Anheuser-Busch ense. Goodell has also asked for a full accounting of how the \$10,000 was brought to Washington, whether it was delivered in cash or in checks, to whom it was

delivered and where.
Fleishman told The Register that "the money was not delivered to the Democratic National Committee in cash."

Vincent Lopez in a "Salute to Canada"

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 12, 1966

Mr. KUPFERMAN. Mr. Speaker, I had the honor of attending the "Salute to Canada" in honor of our neighboring country to the north recently, arranged by Vincent Lopez, the prominent musician, orchestra leader, good neighbor, and numerologist.

This salute took place at the Hotel Taft in the heart of my district where Vincent Lopez holds forth nightly in the Rendezvous Room, and was 16th in a continuing series of good will events for countries with which the United States has had friendly relations.

Evelyn Eisenstadt has provided me with all of the details, which I am happy to bring to the attention of my colleagues:

VINCENT LOPEZ' "SALUTE TO CANADA," THURS-DAY EVENING, JUNE 30, 1966, HOTEL TAPT RENDEZVOUS ROOM, NEW YORK, 16TH IN THE VINCENT LOPEZ SERIES OF SALUTES TO FOR-EIGN COUNTRIES

On Thursday evening, June 30, 1966, Vincent Lopez presented a "Salute to Canada" from the Rendezvous Room at the Hotel Taft, New York City, in cooperation with the Canadian Consulate General, Canadian Government Travel Bureau, Air Canada, the Agent General of Quebec, the Industrial Commissioner of the Province of Ontario, the Manager of the Nova Scotia Travel Bureau, the Centennial Commission and the Universal and International Exhibition of 1967 at Montreal together with Canadian Pacific and Canadian National Railways. This spectacular "Salute to Canada" was highlighted by Canada's upcoming 1967 Centennial of Confederation and the Universal and International Exhibition of 1967 at Montreal. Of particular significance is the fact that this "Salute to Canada" was presented on the eve of the 99th birthday of Canada which was on the first of July and, that Canada will celebrate its 100th Anniversary during 1967 with centennial celebrations across Canada and a first category World Fair at Montreal.

The guest list, headed by His Honour R. G. G. Smith, Consul General of Canada, included His Excellency P. Dupuy, Ambassador at Large and Commissioner General for Expo '67, Mr. G. Cox the Acting Permanent Representative of Canada to the United Nations, Mr. C. Chartier, Agent General for the Province of Quebec, Mr. F. Mooney, Industrial Commissioner for the Province of Ontario, The Honorable Theodore R. Kupferman, Representative from New York City, and Mrs. Kupferman, Commissioner J. O'Brien, City of New York Public Events representative of the Mayor, and many other distinguished and prominent Americans and Canadians.

Portions of this 4 hour "Salute" were carried live by the CBS radio network from 9:00 PM to 9:30 PM in Vincent Lopes' familiar "Getting to Know You" program. This radio program was broadcast to the U.S. Armed Forces and to other overseas outlets. In addition, Voice of America taped on-the-spot interviews with Mr. Lopez, the Canadian Consul General and other important dignitaries present.

It is worthwhile to note that this "Salute to Canada" is the 16th in the Vincent Lopez series of "Salutes" to foreign countries which he conducts periodically from the Hotel Taft, as a patriotic and good-will gesture. The idea of "Saluting" foreign countries in this manner, which Mr. Lopes initiated in 1961, came about through President Kennedy's expressed desire in his many speeches for interchange of visitors to and from this country, as a means of projecting better understanding between them. And, he has continued these "Salutes" in line with President Johnson's present and similar desire for furtherance of good-will and better understanding through visitors from foreign countries to ours.

In a way, the Vincent Lopez "Salutes" are offered as a "Cultural Exchange" set to music; the initial one was to France in May Since that time, in addition to the one in the present instance, his "Salutes" to foreign countries have included Tahiti, Mexico, Italy, India, Portugal, Pakistan, Scandinavian countries, Greece, the Federal Republic of Germany, Australia, Scotland, among others, with many more to follow.

It is worthwhile to note, too, that Mr. Lopez has received 12 citations from the Treasury Department for his work along those lines, in addition to innumerable commendations in recognition of his interest in the furtherance of internatonal good will through his "Salutes."

Herman Greenberg, President, Greater Springfield, Mass., AFL-CIO Council, Honored for 25 Years of Civic and Labor Union Leadership to His Com-

> EXTENSION OF REMARKS OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. BOLAND. Mr. Speaker, for 25 years my good friend Herman Green-berg, president of the Greater Springfield AFL-CIO, has given dedicated and responsible leadership to his community and the labor movement. On the evening of June 16, more than 500 Greater Springfield business, civic, and labor union leaders gathered at the Kimball Towers in Springfield for a well-deserved testimonial honoring Herman Greenberg.

Since 1941, Herman Greenberg has earned the respect and gratitude of union members and citizens in all walks of life for his unselfish and successful efforts to make Greater Springfield a better place in which to live. On his silver anniversary as leader of the AFL-CIO Council for Greater Springfield, I want to join again with the business. civic, and labor union leadership of

Greater Springfield in a salute to Herman Greenberg for a job well done and convey to him our best wishes for continued success in the years ahead.

Mr. Speaker, with permission granted I include with my remarks a list of the head table guests and committee members for the Herman Greenberg testimonial, and a news story from the Springfield Union of June 17, 1966, concerning the testimonial:

HEAD TABLE

Sol C. Chaikin, Associate Director, Northeast Dept. ILGWU-AFL-CIO. George J. Abair, Financial Secretary, Great-

er Springfield AFL-CIO Council.

John F. Albano, First Vice President, Greater Springfield AFL-CIO Council. William Belanger, Director, Mass. Division of Employment Security.

Normand Belisle, Recording Secretary, Greater Springfield AFL-CIO Council.

Congressman Edward P. Boland, Massachusetts Second District. Salvatore Camelio, President, Mass. State

Labor Council, AFL-CIO.

Monsignor John Patrick Carroll-Abbing,

Director, Boys' Town of Italy. Maurice A. Donahue, Senate President,

Mass., State Legislature.

Mrs. Herman Greenberg. Judge Daniel M. Keyes, Jr.

Philip Kramer, Vice President ILGWU-AFL-CIO.

James P. Loughlin, Secretary-Treasurer, Mazz. State Labor Council, AFL-CIO.
Aaron Posnik, Cochairman, Testimonial

Committee.

James J. Reilly, Second Vice President, Greater Springfield AFL-CIO Council. Matthew J. Ryan, Jr., District Attorney,

Hampden County. Joseph A Salerno, New England Regional irector, Amalgamated Clothing Workers,

AFL-CIO. Robert E. Samble, President, Ploneer Val-

ley United Fund. James J. Shea, Sr., President, Milton Brad-

lev Co. Rev. Emerson W. Smith, Executive Direc-

tor Springfield Council of Churches Rabbi Herman E. Snyder, Sinai Temple.

Anna Sullivan, Treasurer, Greater Springfield AFL-CIO Council.

Hugh Thompson, Director, Region 1, AFL-CIO.

HONORARY CHAIRMEN

Congressman Edward P. Boland, Salvatore Camelio, Sol C. Chaikin, Joseph A. Salemo. TESTIMONIAL COMMITTEE

Co-Chairmen: John F. Albano, Aaron Posnik, Anna B. Sullivan.

COMMITTEE MEMBERS AND SPONSORS

George J. Abair, Ben C. Amsden, Joseph A. Aveni, Theodore W. Bamforth, Normand Be-lisle, Gustave Berman, Milton Berman, Charles H. Brinkmann, Edward Brunelle,

Onaries B. Burkley.

Sante M. Caidarola, Allan A. Campbell,
Cenze C. Cantalini, Mario P. Cantalini, Julia
Carotenuto, Edward J. Carroll, Joseph S.
Casey, Harold Chernock, Edward B. Cooley, Sidney M. Cooley.

John A. Deegan, Anthony F. DiFillippo, Joeph DiFlumera, Armando Dinauro, Stanley E. Dominick, Frank Foster, Shefford S. Gold band, David Goren, James L. Grimaldi, Jerome Guagliardo.

Richard Higgins, George Hitas, Charles Hood, Peter J. Houser, Samuel T. Izenatein, Richard F. Jameson, John Kaczmarski, Jo-seph Kawie, Edward J. King, Martha M.

John Koss, James J. Landers, Albert Le-beau, Sr., Francis Leclair, George Lesnow, Max Levine, Gerald J. Mason, William Mc-Lean, Stephen A. Moynahan, Nathan Niren-

Max Neigher, Edward J. O'Connor, Michael Pagliaro, Andrew Palpini, Gerald J. Parish, John Penzo, Cornelius W. Phillips, Jr., Aaron Posnik, Jay A. Posnik, Sy Posnick.

Thomas R. Rawson, James J. Reilly, Matthew J. Ryan, Jr., Robert E. Samble, William Shapiro, James J. Shea, Jr., Robert Simpson, Otto Steininger, Harry Storin, John Sullivan.

Benny Szarian, George B. Tazzini, Edward J. Urbec, Mary S. Vaz, Joseph Venti, Norman R. Vester, Samuel Walker, Daniel M. Walsh, Jr., Albert Zankl, Emilio J. Zucco.

[From the Springfield (Mass.) Union, June 17, 1966]

GREENBERG'S 25 YEARS AS UNION CHIEF MARKED—OLD FRIENDS GATHER AT TESTI-MONIAL FOR AFL-CIO HEAD

More than 500 business leaders, civic luminaries and union officials gathered Thursday night in the Kimball Towers for a testimonial honoring Herman Greenberg, president for 25 years of the Greater Springfield AFL-CIO Labor Council.

GUEST SPEAKERS

Guest speakers included long-time associates of Greenberg in the labor movement that has realized, as the council president put it, the "dreams" of a quarter century ago.

The feted labor leader briefly reminisced about his career in union organizing activities. He cited the sense of accomplishment that motivated him and the feeling of per-

sonal, humane betterment he derived.
"My only hope," Greenberg said, "is that
I may have 25 more years to continue my

CANDIDATES ATTEND

Political aspirants dominated the roster of guest speakers as the role of Greenberg in shaping Western Massachusetts labor policies was vividly described through personal contacts over the years.

Speakers included former Atty. Gen. Edward J. McCormack, Jr., Democratic candidate for governor; former Gov. Endicott Peabody, Democratic candidate for U.S. Senator; and former Lt. Gov. Francis X. Bellotti, Democratic candidate for attorney general.

Others speaking included State Senate President Maurice Donahue, U.S. Rep. Edward P. Boland, Salvatore A. Camelio, president of the Massachusetts AFL-CIO Labor Council, and James J. Shea, Sr., president of Milton Bradley Co.

TOASTMASTER

Toastmaster for the event was Sol C. Chaikin, international vice-president of the In-ternational Ladies Garment Workers Union and associate director of the organization's Northeast Department, largest single unit within the ILGWU.

A flery speech scoring the "unmotivated generation of today" was made by Joseph Salerno, international vice-president of the Amalgamated Clothing Workers Union, AFL-CIO.

The labor movement, Salerno said, is losing its momentum because today's young people are "enslaved by afflence." Salerno said that 25 years ago there was only \$8 billion extended annually in national credit while today there is more than \$94 billion out in personal loans.

SPENT BEFORE EARNED

"Today's workers are not about to speak out," Salerno said. "They're too busy spending next week's pay before it is even earned."

Also speaking at the event was Rt. Rev. John P. Carroll-Abbing, founder of nine Boys Towns and a Girls Town in Italy. The mon-signor told of his long association with Greenberg who was outstandingly active in fund-raising campaigns in this area for the youth groups.

A presentation to Greenberg, citing him for his many years of work publicly here, was

made by Robert Samble, president of Pioneer Valley United Fund. Samble said that Greenberg, first vice-president of the group, had shared his efforts with all levels of the community to make this city a better place

GAINS WERE "DREAMS"

Greenberg, who immigrated to this country as a youth from Russia, said that in the early days of his career such workers' gains as pensions, fringe benefits, paid holidays and vacations were just "dreams."

He said these gains had been realized and it was time now for the labor movement to aspire to even higher goals. Union ambitions, he said, would likely again be characterized as "dreams" but he urged labor leaders to take a lesson from the past.
Greenberg's role in the labor movement

started in 1936 when he took an active part in the organization of Local 290, Amalgamated Clothing Workers Union, AFL-CIO, at the Asinof plant in Chicopee. The following year he was elected president of the local.

GETS BTATE POST

In 1941 Greenberg was elected president of the Western Massachusetts CIO Industrial Union Council and shortly after was elected to the executive board of the state labor council. From 1941 to 1945 he served on the War Manpower Commission, the U.S. Treasury Bond Committee and the executive board of the United War Fund.

In 1944 Greenberg was appointed Western Massachusetts coordinator for the national CIO Political Action Committee and subsequently held various offices on the state Democratic committee. He has also served on the boards of directors of the Springfield Community Chest and the American Red

Greenberg has been vice-president of the local United Fund since 1952. He was a member of the city's Board of Public Welfare from 1941 to 1951 and served as chairman for three years. In 1950, he was named chairman of the state Personnel Appeal Board.

Head table guests at the testimonial in-cluded George J. Abair, the local labor council's financial secretary; Normand Belisle, recording secretary; Hugh Thompson, director of AFI-CIO Region 1 in New England, and Philip Kramer, ILGWU vice-president.

Also, J. William Belanger, former president of the state council and now director of the state Division of Employment Security; Dist. Atty. Matthew J. Ryan, Jr., James P. Reilly, second vice-president of the local council and president of Local 11, United Rubber Workers Union; Rev. Emerson W. Smith, executive director of the Greater Springfield Council of Churches, and Rabbi Herman E. Snyder of Sinai Temple.

Testimonial cochairmen included John F. Albano, first vice-president of the local council; Aaron Posnik; and Anna Sullivan, council treasurer.

Report of the Board of Visitors to the U.S. Air Force Academy

EXTENSION OF REMARKS OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. RIVERS of South Carolina. Speaker, I consider it a great privilege to insert in the Appendix of the RECORD the report of the Board of Visitors to the Air Force Academy for 1966. Included with this report is the entire composition of the Board. My representative was the

Honorable Frank E. Evans who is one of the most distinguished members of the House Armed Services Committee and in whose district the Air Force Academy is located.

Under the law, Mr. Speaker, this report is made directly to the President of the United States. However, I consider this document to be of such value that I want every Member of the Congress to have the benefit of its contents. I am sure all will agree that the contents of this report will stand as tribute to the Board and to its distinguished Chairman, Gen. Emmett O'Donnell, USAF, retired:

1. APPOINTMENT TO THE BOARD OF VISITORS

The Board of Visitors to the United States Air Force Academy was appointed under the provisions of 10 USC 9355.

2. COMPOSITION OF THE BOARD Appointed by the President Three Years Effective 1964

Mr. Harold Cutliff Stuart, Former Assistant Secretary of the Air Force, Tulsa, Oklahoma.

*Mr. Houston H. Harte, President, Express Publishing Company, San Antonio, Texas.

Three Years Effective 1965

Dr. Edgar F. Shannon, Jr., President, University of Virginia, Charlottsville, Virginia. Robert V. Daniels, Chairman, History Department, University of Vermont, Burlington. Vermont.

Three Years Effective 1966

General Emmett O'Donnell, Jr., USAF (Retired), McLean, Virginia.

Reverend Joseph A. Flaherty, President, Villanova University, Villanova, Pennsylvania.

* Appointed in 1965 to fill an unexpired term.

Appointed by the Vice President Senator Gordon L. Allott, Colorado. Senator Gale W. McGee, Wyoming.

Senator FRANK E. Moss, Utah. Appointed by the Speaker of the House

Representative ROBERT J. DOLE, First Dis-

Representative John J. FLYNI, JR., Sixth District, Georgia.

Representative Melvin R. Laird, Seventh

District, Wisconsin. Representative Byron G. Rogers. First District, Colorado.

Ex officio members

Chairman, Senate Armed Services Committee, Senator RICHARD B. RUSSELL, Georgia. Designee: Senator STUART SYMINGTON,

Missouri.

Chairman, House Armed Services Commite, Representative L. Mendel Rivers, First District. South Carolina.

Designee: Representative FRANK E. EVANS, Third District, Colorado.

3. CONVENING OF THE BOARD

The Board convened at 0800, 28 April 1966 and elected General Emmett O'Donnell, Jr., as its chairman. The Board completed its meetings at 1230 on 30 April 1966.

Those present were: General Emmett O'Donnell, Jr., USAF (Ret.); Dr Robert V. Daniels, Rev. Flaherty, Mr. Houston H. Harte, Dr. Edgar F. Shannon, Jr., Mr Harold C. Stuart, Senator Gordon L. Allott, Senator Frank E. Moss, Representative Robert J. DOLE, Representative FRANK E. Evans, Representative JOHN J. FLYNT, JR., Representative BYRON G. ROGERS.

4. COMMENTS OF THE BOARD Procedural considerations

The Board reiterates the recommendations of the 1965 Board that:

1. The leadership of the House of Representatives and the Senate assume respon-sibility for the appointments to the Board membership in the first month of each cal-

2. The President be informed of the importance of early selection of the Presidential appointees to the Board, which also should be announced by February 1st.

The breakfast meeting of the Board held in Washington, D.C., on 28 March at the invitation of the Secretary of the Air Force, the Honorable Harold Brown, was helpful in providing general information about the current programs of the Academy and saved valuable time during the meetings at Colorado Springs. This preliminary meeting also provided an opportunity for the Board members to become acquainted with each other and to discuss the agenda for the annual visitation

Attendance at the Academy by all but three members of the Board at the regular meeting indicates that the early announcement of appointments and early notification of the time of meeting enabled a larger proportion of the members to be present than ever before. The Board recomemnds that the next annual meeting be scheduled for 27-29 April 1967.

The Board was pleased to find that the agenda provided more time for discussions with cadets and faculty members than was experienced in the past. It is recommended that next year, new members who are not acquainted with the Academy be invited to arrive one day in advance of the Board's scheduled meeting so that they may be pro-vided appropriate general information and a tour of the facilities. It is further recommended that other members of the Board who represent colleges and universities be invited to arrive one day early so that they will have sufficient time to inquire in detail into areas of special interest to them. recommendations are intended to make it feasible to conduct the meeting with a minimum of formal briefings and to provide more time for small forums and individual discussions with cadets, faculty and staff members, and for visits to classes in session. It is particularly desired that a half day be made available for informal conversations with cadets of all classes.

While it is impracticable to increase the length of the regular annual meeting for all members, it was agreed that the Board should spend more time at the Academy. It, therefore, is recommended that the current Board be invited to have a full meeting at the Academy later this year-tentatively on the 18th and 19th of November.

Previous recommendations

The Board reviewed the recommendations made by the previous Board and noted that much progress has been made toward the suggested objectives.

Academy expansion

The Board again endorses the programmed construction of facilities and the increase in the size of the Cadet Wing as authorized by Public Law 88-276, and recommends that the funds required to meet the program be au-thorized and appropriated. It is essential It is essential that the construction of facilities be kept in balance with the growth of the Cadet Wing. Any imbalance in these areas would create chaotic conditions. The Board was pleased to find that the program is thus far on

The Board again cautions the responsible officials to provide an inspection procedure to insure that no substandard construction of new facilities be accepted by the government. The Board again recommends that, if and when a program for construction of additional family housing for staff personnel is undertaken, every effort be made to utilize more ground space per unit than was originally provided. It appears that with so

much space available, overcrowding can easily be avoided.

It was brought to the attention of the Board that as a result of the increase in the size of entering classes, the ratio of qualified candidates to appointment vacancies will drop significantly. This is not yet a serious problem but by 1968 could result in the entry of classes appreciably less qualified than the average of previous classes. Since the selec-tion ratio depends largely upon the number of candidates nominated by Members of Congress, the current provisions of Title 10, United States Code which limit the number of nominations to six per vacancy is a sig-nificant limiting factor. To alleviate this situation, it is recommended that the Academy Superintendent present a proposal through appropriate channels for legislation to amend Title 10 so that the number of nominations authorized per vacancy be increased from six to ten.

Fulfillment of Academy mission

The Superintendent is eminently qualified for his duties. He gives wise leadership to his highly motivated faculty and staff. Their combined dedication, competence and vital-ity were abundantly apparent to the Board. There can be no question that the Academy is admirably fulfilling its stated mission which is, "To provide instruction, experience, and motivation to each cadet so that he will graduate with the knowledge, character, and qualities of leadership essential to his progressive development as a career officer in the United States Air Force." The Board was greatly impressed by the continuing attention to detail along these lines, the careful introduction of innovations, and the judicious balancing of academic programs—all leading to the fulfillment of the "whole man" -all concept which is the stated goal of the Academy.

Curriculum

Of the many outstanding aspects of the academic program, the Board was most favorably impressed by the coordination of effort among departments instructional which leads to integrated understanding and application of knowledge by the cadets. Also impressive is the extensive research being carried out by cadets in advanced The Board commends the policy of making the most of individual cadet abilities and preparation through the Academic Enrichment Program which gives each cadet the opportunity to reach his own maximum level of achievement. Initially the program was uniquely successful because of the wholehearted cooperation of large numbers of qualified volunteer instructors who enthusi-astically contributed time and effort to the project. Since then additional instructors have been authorized to cover the overload, and the program is now on a sound and businesslike basis. The academic majors-for-all program and cooperative master's degree program are logical developments of the enrichment program.

A significant proportion of the Board's time was spent attending classes and conferring with individual faculty members and departmental supervisors. The impressions so gained further support the conclusion of previous Boards that the Academy's academic accomplishments are at least equal to those of the best undergraduate colleges and universities in the United States.

The physical education program is recognized as a most important integral part of the Academy curriculum. The Board was pleased to find this program effectively de-signed and executed to meet the special needs of future Air Force officers.

The Board noted with approval that emphasis on the Graduation Order of Merit has been greatly reduced. It is understood that diplomas will no longer be awarded in a sequence determined by the GOM. Not more than seven percent of the class will be designated as Distinguished Cadets and awarded

their diplomas in alphabetical order before the balance of the class who also will be called in alphabetical order.

Testing and grading

The Board made a special effort to probe testing and grading procedures in detail with the Dean and faculty members. The dis-cussions included the general problem of measurement and evaluation of academic achievement as well as the specific policies, practices, and procedures at the Air Force Academy. The information received by the Roard indicates that the current system is operating effectively and is generally in accordance with practices of the leading academic institutions in the country. Academic attrition has ranged from six to nine percent over the past four years. This low rate reflects the high quality of the entering classes and the joint effort of the cadets and faculty in the pursuit of academic excellence.

Honor code

The Board devoted considerable time to meetings with representatives of the Cadet Honor and Ethics Committees and was deeply impressed by their sense of responsibility and their deep belief in the precepts of the Cadet Honor Code. The entire Cadet Wing seems strongly committed to the Code as a per-sonal code of ethics. The Board noted the judicious and constructive modifications of administrative procedures which have been made and recommends that efforts be continued to refine such procedures. Special emphasis should be given to efforts to insure understanding of the Code by entering cadets and their parents.

Instructional staff

The dual nature of the Academy's mission, that of both military and academic training, places heavy demands on the instructional staff. The Board finds that under the capable leadership of the Dean and the Commandant of Cadets the morale and quality mandant of Cadets the morace and of the instructors are remarkably high.

of the Accreditation Team of the North Cen-tral Association, and of two ad hoc civilian academic advisory committees fully justify the rationale for the Air Force Academy of an all-military faculty academically qualified through graduate training and degrees. The Board endorses this position and considers such a faculty to be best equipped to meet the combined requirements of the Academy for professional and academic training. second of the advisory committees, which included four prominent civilian educators, stated in its report of February 1964, "We conclude that an all-military faculty is much etter suited to achieve the Academy's goal than is a mixed faculty. In this connection we thoroughly endorse the reasoning and conclusions contained in Section II of the Report of the 1962 Academic Advisory Committee." The 1962 Committee, which included fifteen educators from the fields of physical science, engineering, social science and humanities, devoted a third of its thirtythree page report to the faculty. The report noted the high level of professional knowledge and skill of the faculty members, their intense interest in their subjects, and their dedication to their teaching responsibilities. It was also noted that the advantages of a purely military faculty greatly outweigh the disadvantages

The Board believes that this favorable situation should be maintained and possibly improved by a variety of Air Force actions such as:

1. Continue to give highest possible man-ning priority to the Air Force Academy, so that the faculty and military instructional personnel come from among the best qualified officers in the Air Force.

2. Maintain the master's degree as a minimum qualification for faculty membership.

3. Continue actions which lead to increas ing the proportion of the faculty who have arned doctoral degrees.

4. Continue the effort to add stability to the faculty by appointing the authorised number of permanent professors and tenure associate professors as soon as practicable. Consideration should be given to increasing the authorized number as the Cadet Wing expands.

5. At the completion of a normal tour of faculty duty, identify the most successful teachers and assign them to Air Force duties related to their academic specialties. The names of those officers should be listed on a special roster with the thought of returning them to the Academy for a second tour of duty as vacancies occur.

6. Continue to take full advantage of manning priorities and select Air Officers Com-manding from among officers who have the desire, experience, temperament, education, and training for this vital duty. Only one of these officers is assigned to each cadet squad-It is essential that he be qualified to provide supervision, guidance, and counsel to cadets and cadet officers in every facet of cadet life, including leadership training and career motivation. This group should be representative of all Air Force commands with final selection being based upon personal interviews.

Fiscal affairs

The Superintendent and his staff are commended for their enviable success in the area of fiscal management. The Board was pleased to find that the Academy has annually exceeded its assigned goal since the inception of the Air Force Cost Reduction Program in Fiscal Year 1963.

The Board was pleased to note that the recent pay adjustment for military personnel provides a cadet pay rate which closely approximates the amount determined by the service academies as necessary to meet current expenses of cadets and midshipmen.

Flying training

The Board reiterates the Academy's need, voiced by several previous Boards, for at least a limited flying indoctrination program. Such training has a uniquely beneficial effect on cadet morale and provides valuable motivation toward an Air Force career. There is no question that a program should be established for the Academy, which is at least equal to the light aircraft pilot training provided for cadets in advanced Air Force ROTC. The Board endorses the program submitted by the Academy, which provides for management by the Air Training Command; training to be conducted at Peterson Field, Colorado Springs, Pine Valley Airstrip on the Academy site, and Butts Army Air Field, Fort Carson; and contractor operated maintenance and supply support.

The Board inspected facilities and received appropriate briefings on existing flying, soaring, and parachute training presently being conducted at the Academy. In this regard, it recommends that steps be taken immediately to improve the associated existing facilities. In particular, the Pine Valley Airstrip should be hardened, and the facility should be provided with utilities, control and communication capability, and a parking

Overseas field studies

Overseas field studies provide cadets with broadening advantages and practical knowledge through contact with our allied Air Forces on their own bases in their own coun-While the Board understands and accepts the reasons for the temporary suspension of these field studies, it strongly en-dorses the reintroduction of this program as an integral part of the curriculum at the earliest possible date.

White Committee report

The response of the Academy to the recommendations of the Special Advisory Committee on the United States Air Force Academy (White Committee) was reviewed in de-tail by the Board. The Board noted the

alacrity and positive nature of the Academy's reaction to most of these recommendations. Further, it noted and approved a delay in implementing a few of the recommendations pending completion of additional studies and analyses

Advisory Council

The Board was informed of the functions of the newly constituted Air Force Academy Advisory Council. Its stated mission is to provide continuous, broad and penetrating advice to the Superintendent and his staff concerning policies, programs, and tech-niques for the education, motivation, and professional development of Air Force cadets. It is understood that this Advisory Council to the Superintendent will eliminate the necessity for ad hoc committees which in the past have been convened on a one-time basis to complete specific studies in depth of various aspects of the academic, military, and physical education programs.

Some Board members expressed concern in regard to the Advisory Council concept of operations. The charter and concept of operations afford unusually wide latitude to the Council. The Board suggests that care be taken in developing the mode of operation of the Council to avoid interference with the Superintendent's judgment and responsibility in making major decisions. Further in ity in making major decisions. Further in the opinion of the Board, the Council should carefully review its functions in order to delineate them clearly from the functions, duties, and responsibilities delegated by law to the Board of Visitors.

The Board also suggests that it would be highly desirable to have the Council's reof the Superintendent in time for him to discuss it with the Board of Visitors at its annual meeting.

Football schedule

The Board is satisfied that every possible effort has been made to arrange appropriate football schedules for the Academy. Since major games usually are scheduled seven to nine years in advance, it is recognized that an optimum schedule is not always possible. The Academy has been successful in adjusting future schedules to alternate games with the Military Academy and the Naval Academy each year through 1971, and to compete with both each year thereafter. It was noted that the Navy game will be played at the Air Force Academy in 1966 and that the Army game will be played there in 1967.

5. CONCLUSION

The Board carefully studied the 1965 Report of the Board of Visitors and the Comments of the Secretary of the Air Force and the Secretary of Defense to the recommendations of the 1965 Board of Visitors,

While these two documents covered a very difficult year at the Academy, none of the shortcomings mentioned by the Report of the 1965 Board seems to have done permanent damage. Corrective actions have been taken slowly and carefully with considerable **BUCCESS**

The Board was pleased to note these cor-rections but believes that unremitting attention must be exercised in order to prevent resurrection and recurrence of these flaws.

The Academy is a vital and dynamic organization. The air literally crackles with the boundless energy of twenty-five hundred young men who are being encouraged to develop initiative while submitting to discip-lines far greater than those expected of ordinary citizens. Problems and troubles will inevitably occur and recur as the Academy expands and the rotation of individuals. through the institution proceeds. The Superintendent and his staff must be capable of sensing and correcting these trends before they gather momentum if possible. This means full-time dedication to the job with a minimum of interference from out6

The Board finds no area where urgent change is needed. The problem areas are locally recognized, long-range planning is fiexible and sound, and the mission of the Academy is kept constantly in mind.

"Bring Me Men" is the motto over the main ramp at the Academy. Good men are being provided by the selection process and they are being trained physically, mentally, and spiritually to be qualified for leadership in the Air Force. The balance between intellectual development and leadership training is good. It is important that this delicate balance be maintained, allowing at no time one facet of this dual-development program to outweigh or overshadow the

The Academy is charged with the task of developing men who are fighting leaders. Men who have the ability and will to fight with their intellects as well as their brawn whenever necessary—men who wear their uniform and rank well—proudly, but with compassion, understanding, and a sense of humor—men who are strong, intelligent, and happy warriors with confidence in their weapons, themselves, and each other—and finally, men with good instincts, good appetites and good control of those appetites.

While these ideals may never be fully attained, the Board notes with great pleasure that the Academy is making extraordinary progress toward their achievement.

Respectfully submitted.

EMMETT O'DONNELL, Jr.,
General, USAF (Retired), Chairman,
1966 Board of Visitors.

Conference Report on H.R. 14324

SPEECH

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1966

Mr. TEAGUE of Texas. Mr. Speaker, last Thursday the conference report on the bill, H.R. 14324, to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and administrative operations, and other purposes, was considered by this body and agreed to. Under leave to extend my remarks I submit the following additional information to be included in the CONGRESSIONAL RECORD.

On May 3, 1966, the Committee on Science and Astronautics brought to the floor of the House H.R. 14324, the National Aeronautics and Space Administration Act, 1967. The committee report which was filed with the bill recommended that the National Aeronautics and Space Administration be granted authorization for fiscal year 1967 in the amount of \$4,986,864,150. The original request from NASA totaled \$5,012 mil-The committee recommendation was \$25,135,850 less than the agency's request. On that date the House passed the bill as recommended by the committee. Following passage by the House, the Senate action on the bill resulted in total appropriations to be authorized of \$5,008 million. This represented an increase over the House bill of \$21,135,850. The Senate also struck all after the enacting clause, thus effecting a single amendment for consideration in conference. Consequently, the duly appointed members of the Committee of Conference embarked on a series of meetings to resolve the differences in the House and Senate versions.

The major monetary differences in the two versions occurred in the smaller elements of the authorization bill. In "Construction of facilities" the difference between the House and Senate was \$6.1 million. In the "Administrative operations" section of the bill there was a difference of approximately \$14.7 million. These two elements of the authorization request represent 15 percent of the total authorization bill.

For "Research and development," which constitutes 85 percent of the bill, there was only a difference of \$365,000. However, within this section of the bill there were several major program issues involved, such as the Mariner-Venus and Mariner-Mars programs, the 260-inch solid propellant booster and SNAP-8 projects, which caused considerable debate between the conferees appointed by the two Houses. Under House parliamentary rule the managers on the part of the House are bound in conference between upper and lower limits of not only the total amount authorized but also the upper and lower limits of the individual projects or programs comprising the total contained in the authorization bill.

I am pleased to inform the House that the conferees arrived at an agreement on the various projects and programs in dispute and returned to their respective chambers with a revised authorization bill amounting to \$5,000,419,000. This total is broken down into \$4,248,600,000 for research and development, \$94,919,000 for construction of facilities, and \$655,900,000 for administrative operations. Thus, the conference action has resulted in a revised fiscal year 1967 authorization bill that is aproximately \$11.5 million less than the NASA request and about \$13.6 million more than the originally passed House version.

I would now like to review briefly the major programs and projects which were in dispute during the conference and the final resolution agreed to by the conferees.

First, for the total to be authorized for research and development, the NASA requested \$4,246,600,000. The House increased the amount to be authorized to \$4,248,235,000. The Senate action on the bill resulted in an authorization of \$4,248,600,000, a difference of \$365,000. The conferees agreed to a total to be authorized for research and development of \$4,248,600,000, by effecting adjustments to the Senate amendment as follows:

In the physics and astronomy program, NASA had requested a total of \$131,-400,000. The House reduced this amount by \$4.5 million, representing reductions of \$3 million in supporting research and technology and advanced studies and \$1.5 million in the orbiting astronomical observatory project. The Senate restored the full amount of the House reduction.

The House reduction of \$3 million in

supporting research and technology was made in order to make available additional funds for the unmanned exploration of Mars. During the conference the managers on the part of the House receded and agreed to the Senate restoration of \$3 million in this project, since subsequent to the passage of the House version, information had been received from NASA that, due to the passage of time, one of the purposes for which these funds had been redesignated could not be accomplished, specifically the incorporation of an instrumented probe in the 1969 Mariner-Mars spacecraft.

The House reduction of \$1.5 million in the orbiting astronomical observatory project, an amount specifically earmarked for the development of the fifth spacecraft, was based on the fact that there is no overriding urgency in pursuing this mission. The Senate receded from their position that this amount be restored and agreed to the House position that the fifth orbiting astronomical observatory spacecraft be deferred.

For the lunar and planetary program, NASA's request for fiscal year 1967 totalled \$197,900,000. The House increased this request by a net amount of \$30 million, of which \$22 million was specifically designated for the Voyager project. The House also eliminated the 1967 Mariner-Venus mission on the grounds that it had been hastily conceived and represented a solitary effort unaccompanied by any plans for later missions. The \$12 million thus derived from the cancellation of the 1967 Venus mission along with an additional \$8 million were added to the Mariner-Mars program and specifically designated for the initiation of development of an instrumented probe to be incorporated in the 1969 Mariner-Mars spacecraft for the purpose of making direct measurements in the Martian atmosphere.

The Senate denied all House adjustments to the lunar and planetary program, restoring all projects to the original NASA request.

In conference, the managers on the part of the House receded from their position on the 1967 Venus mission basically because it was learned subsequent to the House passage of the bill that NASA had already proceeded with the development of the spacecraft using prior years' appropriations and that a substantial investment has already been made, most of which would be unrecoverable in the event this project was cancelled.

The House also receded from its position with regard to the addition of the instrumented probe for the Mariner-Mars spacecraft. This action on the part of the House conferees was predicated upon the fact that due to the passage of time the purpose for which these funds had been added cannot be accomplished.

With regard to the Voyager project, the Senate receded from their position and agreed to the addition of \$13 million for preliminary work on the Voyager program. Thus, the total amount agreed to in conference for the lunar and planetary program is \$210,900,000.

For the bioscience program NASA requested \$35,400,000 which included \$14.7 million for supporting research and technology. The House reduced this amount by \$2 million in order to make available additional funds for the unmanned exploration of Mars. The Senate restored the full amount. The managers on the part of the House receded and agreed to the restoration of these funds since the Mariner-Mars project had been restored to the original NASA request by previous conference agreement.

NASA requested a total of \$152 million for the launch vehicle procurement program. The House reduced this amount by \$20 million by effecting cuts in the request as follows: \$10 million across-the-board reduction was made in view of substantial unobligated fund carry-overs from previous years; a \$6 million reduction, representing the amount for the purchase of an Atlas-Agena launch vehicle for the 1967 Mariner-Venus mission; and a reduction of \$4 million for sustaining engineering and maintenance associated with the Centaur launch vehicle.

The Senate restored the entire \$20 million House reduction, however, in conference receded from their position and agreed upon an across-the-board reduction of \$5.25 million, and the \$4 million reduction in the Centaur sustaining engineering and maintenance fund request proposed by the House. The managers on the part of the House receded from their position and agreed to the restoration of \$6 million for the purchase of the Atlas-Agena launch vehicle to be used in the 1967 Venus mission which had previously been agreed to by the conference committee. Thus, the total amount authorized for launch vehicle procurement is \$142,750,000.

NASA requested \$42,500,000 for space power and electrical propulsion systems. The House bill increased this amount by \$2.4 million which was specifically earmarked for an increased component testing program for the SNAP-8 nuclear electric generator. The Senate bill denied this increase. However, the managers on the part of the Senate finally agreed to an increase of \$2 million for this project. The final authorization for space propulsion and electrical power systems is \$44,500,000.

For chemical propulsion research, NASA originally requested \$37 million. That amount included \$3.5 million for continued development of the 260-inch solid propellant booster. The House version provided an increase of \$7.5 million for the project, making a total available for fiscal year 1967 of \$11 million which, in the opinion of the House, would speed the development and would provide for a full-length firing rather than a one-half length firing proposed by NASA.

The Senate amendment denied this increase and agreed with NASA's request. Although our limited propulsion capability has been a major factor in the progress of our Nation's space program to date and although solid propulsion technology could provide a safer, more versatile, and more economical booster than others under development, the managers on the part of the Senate did not

agree to the increased funding authorized by the House.

A compromise position was finally agreed upon, which provides an additional \$4 million for this project in fiscal year 1967. While, in the opinion of the House, this is insufficient it will at least allow NASA to initiate procurement of long-lead time items, such as the nozzle, the steel case and facility modifications so that a full-length firing can be conducted within approximately 18 months. Thus, the total authorized as a result of the conference committee action for chemical propulsion is \$41 million.

NASA requested \$279,300,000 for tracking and data acquisition. The House bill reduced this amount by \$13,965,000. The Senate amendment restored the full amount. The Senate receded from their position and the conferees agreed to a net reduction to the NASA request of \$8,450,000. The total amount authorized for tracking and data acquisition is \$270.850,000.

The NASA request for technology utilization was \$4,800,000. The House bill increased this amount by \$200,000 to provide a limited increased flow of new technology to the private sector of our industry, particularly to small business. The Senate amendment denied this increase. The managers on the part of the Senate receded and agreed to the increase proposed by the House, thus authorizing a total of \$5 million for this program.

For "Construction of facilities," the NASA requested \$101,500,000 for fiscal year 1967. The House approved \$94,-419,000. The Senate restored \$6,081,000 authorizing a total of \$100,500,000. In conference the Senate receded and agreed to a total amount of \$95,919,000 to be authorized. There were four projects involved in the "Construction of facilities" segment of the bill which were in dispute during the conference.

The first of these had to do with the NASA request for \$10 million for the Electronic Research Center to construct two buildings and to provide additional center support facilities. The House reduced the request to \$5 million, since authorizations granted in the two preceding fiscal years have not yet been obli-The Senate restored the fiscal year 1967 request in full. In consideration of the limited progress made to date in site acquisition the managers on the part of the Senate agreed to a total of \$7.5 million which will permit NASA to proceed with an integral construction unit during fiscal year 1967.

For the Manned Spacecraft Center, NASA requested \$13,800,000, which included \$9.1 million for a Lunar Receiving Laboratory. The House approved this project. However, the Senate reduced to \$1 million. The managers on the part of the House receded to the Senate position authorizing a total for the Manned Spacecraft Center of \$12,800,-000.

NASA requested \$581,000 for the Marshall Space Flight Center to construct an addition to the new Hazardous Operations Laboratory. The House deleted this item due to the fact that in their opinion the proposed extension of the laboratory was not needed to support

on-going programs. The Senate restored the item; however, in conference the Senate managers receded to the House position, deleting the entire amount of \$581,000.

For "Facility planning and design." NASA requested \$7 million for fiscal year 1967. The House reduced this amount by \$1.5 million in view of the remaining unfunded balances from prior years' authorization for this type of work. The Senate restored the full authorization request, but in conference the Senate managers receded to the House position. Thus, the total amount authorized for "Facility planning and design" is \$5,500,000.

For "Administrative operations," NASA requested a total of \$663,900,000 for fiscal year 1967. The House reduced the NASA request by \$19,689,850, approving a total of \$644,210,150. The Senate restored \$14,698,850 and passed a total authorization for "Administrative operations" of \$658,900,000.

The Senate version of the bill also includes restrictive language which, in the opinion of the managers on the part of the House, would greatly curtail the flexibility now afforded to the Administrator to the extent that the Nation's space effort would be seriously handicapped. The restrictions imposed by the Senate language would have divided the total authorized for "Administrative operations" into two categories-"Personnel compensation and benefits" and "Other expenses." Further restrictions Were imposed which would limit the extent of transfer authority into the former account to 1 percent of the total authorized for that purpose and would limit the extent of transfer authority into the latter account to 10 percent of the total authorized for other expenses. The Senate language also struck from section 4 the authority to transfer funds into the "Administrative operations" account.

These restrictions were so limiting as to place NASA in a position of not even being able to meet any Federal pay increases which might be subsequently enacted.

The managers on the part of the Senate receded and agreed to strike all restrictive language and further receded to a net reduction of \$8 million to the NASA request, resulting in a total amount for "Administrative operations" of \$655,-

As part of its original request NASA included a new section 5 in the bill which would grant the Administrator relief from the 6-percent limitation on architect-engineer fees imposed by the provisions of title 10, United States Code, section 2306(d). NASA's proposal had been to amend the basic Space Act of 1958. thereby enacting permanent legislation which would permit waivers of the 6-percent limitation by the Administrator. The House disagreed with NASA's request in this regard and included a substitute provision which would grant relief to NASA for a period of 1 year only. The provision of temporary relief was based on the House position that all Federal agencies involved in the construction of facilities, particularly in support of research and development programs are faced with the same problem regarding the limitations on architect-engineer fees. The House report accompanying H.R. 14324 instructed the Comptroller General to conduct a Government-wide study with regard to this matter and to submit its recommendations for possible legislative change by January 1, 1967.

The Senate disagreed with the House position in this matter and deleted section 5 from the bill on the basis that NASA should abide by the same procurement practices in effect within the Department of Defense. The Senate agreed with the House that a Government-wide study should be made, however, their position was that the Bureau of the Budget should conduct this study in lieu of the Comptroller General as proposed by the House.

In conference the managers on the part of the House agreed with the Senate that the provision should be struck from the bill and that NASA should be enjoined to abide by the procurement regulations in effect within the Department of Defense pending possible revision to the statutes. The Senate, on the other hand, receded to the House position and agreed that the Government-wide study should be made by the Comptroller General.

Mr. Speaker, the foregoing account of the actions taken in conference has been somewhat in detail as, in my opinion, it should be, in view of the fact that it involves authorization amounting to more than \$5 billion. As in all conferences of this nature some compromise is necessary. However, in my opinion, the items in dispute have been settled in conference more in favor of the original House position than the position assumed by the Senate.

I feel that our conferees have adequately defended the House position and prevailed in most major issues involving the national space effort. The bill as finally agreed to in conference is the best possible that we could achieve under the circumstances. It is a bill which, in my opinion, is in the best interests of NASA and the furtherance of the Nation's space program.

The Family St. Onge Cited

EXTENSION OF REMARKS OF

HON. ROBERT N. GIAIMO

OF CONNECTICITY

IN THE HOUSE OF REPRESENTATIVES Thursday, July 14, 1966

Mr. GIAIMO. Mr. Speaker, on June 6, St. Michael's College, of Winooski, Vt., paid a unique honor to our colleague and friend, WILLIAM ST. ONGE, of Connecticut's Second Congressional District, and to two members of his family, Mother Rita de la Croix, F.S.E., his sister, and the Right Reverend Monsignor Paul Jean St. Onge, his brother. All three were awarded honorary doctorate de-grees by the college in recognition of their outstanding contributions to their communities, their country and their God

Our colleague, Representative Sr. ONGE, has had a distinguished career in

State, local and National government. As a Member of the House of Representatives he has been a vigorous and enlightened advocate of education and human rights. He is a decorated flight engineer having served in World War II. He has served as State representative, prosecuting attorney and as mayor of Putnam, Conn., before entering the House of Representatives in 1962.

His sister, Mother Rita de la Croix, is superior of the American Province of the Daughters of the Holy Ghost. This gifted lady is director of 45 houses that stretch from the east to the west coast and to Canada. She has been involved in mission work and was at one time a prisoner in occupied France.

The Right Reverend Monsignor Paul St. Onge, is vicar general of the Diocese of Norwich. He has had an important role in church leadership and typifies the new image of enlightened, forwardlooking church leadership.

It is not often that we see such an illustrious family, one which gives concrete meaning to the word excellence. The St. Onge's have not only given life to excellence, they have made it their hallmark.

President Kennedy, whose own family also epitomizes this excellence, once said: Happiness is the exercise of vital powers along lines of excellence in a life according them scope.

By this definition, the St. Onge's should be truly happy people.

I pay tribute to the remarkable achievements of my colleague and friend, and to his family, to his sense of honor, and to the honor he brings as a Member of the House. I also salute his parents whose guidance and inspiration have made this possible. I am sure my colleagues join me in extending to the entire family the heartiest of congratula-

CITATION ACCOMPANYING HONOBARY DEGREES, ST. MICHAEL'S COLLEGE, WINGOSIC, VT.

MOTHER RITA DE LA CROIK, F.S.E., THE HONOR-ABLE WILLIAM LEON ST. ONGE, RIGHT REVER-END MONSIGNOR PAUL JEAN ST. ONGE

"For God and Country" is a motto dear to Americans. Never has it been better illus-trated than in the family of St. Onge. Like Dr. Dumont and "Dr." Mulder, they edify us with the image of unity.

If Drs. Dumont and Mulder testify to the one-world of Western culture as they knit Europe and America into one Christian community, the St. Onges, originally of Quebec, evidence that "hands across the border" co-operation which has levelled the barriers between Canada and the United States.

Descended from a French Pioneer family settled in New France before the Pilgrims and landed on Plymouth Rock, the St. Onges have been builders for Church and State since their establishment in Connecticut. Together they remind us of the achievements of another illustrious American Family—the Healys of Georgia, who, overcoming the handicaps of Negro origin, gave us a President of Holy Cross, a Bishop of Portland, and a Mother Superior of Villa Barlow Convent

Mother Rita de la Croix (whose imprisonment in Occupied France reads like a novel) la presently Superior of the American Prov-ince of the Daughters of the Holy Ghost. She has done graduate work at St. Mary's College, Indiana. She has been Mistress of Novices at her Order's Novitiate in Putnam. She has represented her American Sisters at

the Motherhouse in France. She has opened missions in Chile. . . . Today she is director of forty-five houses in Connecticut. Massachusetts, Rhode Island, Vermont, New York. California and Canada. . . . We are especially happy (and grateful) to add that two Home Missions under her charge are in Ala-bama, at Anniston and Gadsden where all Edmundites acknowledge her as architect of

a truly "Good Neighbor" policy.

Brother William to her—and Congress—man William St. Once to us—is now serving his second term in the United States House of Representatives, admired universally for the vigor and enlightenment of his advocacy, especially in the field of education and human rights. Like his sister, he meens to have discovered the secret of perpetual motion-and-achievement. A decorated Flight Engineer in World War II, he has been suc-cessively, and successfully, State Representative, Prosecuting Attorney, Mayor of Putnam, Connecticut, and as United States Congressman, member of the House Judiciary Committee. . . . We are both honored and Committee. . . . We are both honored and amazed that he found the time to grace this

occasion today with his presence.

The Right Reverend Monsignor Paul St.
Onge, Vicar General of the Diocese of Norwich, may be the youngest of the trio, but we can best describe him as a spreading branch of a noble family tree. . . studies in Brittany, interrupted by the out-break of the War, he returned to finish his Theology at St. Mary's in Baltimore. dained in Hartford in 1941, he has been successively assistant pastor, chancellor, Director of the Propagation of the Faith, and now—Vicar General of the Diocese of Nor-We salute him as symbolic of the new image of Church leadership: youthful, dynamic, progressive.

Therefore, to the family of St. Onge, exemplars of community service, Saint Michael's College pays its tribute of triple investment in honorary doctorate to Mother Rita de la Croix, the Doctorate of Humane Letters; to the Honorable William Leon the Doctorate of Laws; to Right Reverend Monsignor Paul Jean the Doctorate of Laws.

[From the Putnam (Conn.) Windham County Observer—Putnam Patriot, June 8, 19661 HONORARY DEGREES FOR THREE IN FAMILY

St. Michael's College of Winooski. Vt.. awarded honorary degrees Monday to three members of the St. Onge family of Putnam. Mother Rita de la Croix, superior of the American Province of the Daughters of the Holy Ghost at Putnam, was awarded a Doctor

of Humane Letters Degree. Her brothers were presented Doctor of Law egrees. They are Representative William Degrees. L. St. Onge, and the Rt. Rev. Msgr. Paul J. St. Onge, vicar general of the Norwich

The presentations were made by the Very Rev. Jeremiah T. Purtill, a trustee and furmer vice president of the Roman Catholic college.

The mother of the recipients, Mrs. Alma Desautels St. Onge, was present at the cere-monies. She was cited by the commence-ment speaker, Bernard Auer, publisher of Time, and the Most Rev. Robert F. Joyce.

The citation accompanying honorary derees conferred on Mother Rita de la Croix, FSE, the Honorable WILLIAM L. St. ONGE, and Right Rev. Monsignor Paul J. St. Onge.

"For God and Country" is a motto dear to Americans. Never has it been better illus-trated than in the family of St. Onge. They The St. edify us with the image of unity. Onges, originally of Quebec, evidence that "hands acrose the border" cooperation which has levelled the barriers between Canada and the United States.

Descended from a French Pioneer family settled in New France before the Pilgrims had landed on Plymouth Rock, the St. Onges have been builders for Church and State since their establishment in Connecticut, Together they remind us of the achievements of another illustrious American Family—the Healys of Georgia, who, overcoming the handicaps of Negro origin, gave us a President of Holy Cross, a Bishop of Portland and a Mother Superior of Villa Barlow Convent

Mother Rita de la Croix (whose imprisonment in Occupied France reads like a novel) is presently Superior of the American Province of the Daughters of the Holy Ghost. She has done graduate work at St. Mary's College, Indiana. She has been Mistress of Novices at her Order's Novitiate in Futnam. She has represented her American Sisters at the Motherhouse in France. She has opened Missions in Chile. Today she is director of forty-five houses in Connecticut, Massachusetts, Rhode Island, Vermont, New York, California and Canada. We are especially happy (and grateful) to add that two Home Missions under her charge in Alabama, at Anniston and Gadsden where all Edmundites acknowledge her as architect of a truly "Good Neighbor" policy.

Brother Whalam to her—and Congress—

Brother William to her—and Congressman William St. Once to us—is now serving his second term in the United States House of Representatives, admired universally for the vigor and enlightenment of his advocacy, especially in the field of education and human rights. Like his sister, he seems to have discovered the secret of perpetual motion and achievement. A decorated flight engineer in World War II, he has been successively, and successfully, State Representative, Prosecuting Attorney, Mayor of Putnam, Conn., and as U.S. Congressman, member of the House Judiciary Committee. We are both honored and amassed that he found time to grace this consistent orders with his presence.

occasion today with his presence.

The Right Reverend Monsignor Paul St. Onge, Vicar General of the Diocese of Norwich, may be the youngest of the trio, but we can hest describe him as a spreading branch of a noble family tree. After studies in Brittany, interrupted by the outbreak of the War, he returned to finish his Theology at St. Mary's in Baltimore. Ordained in Hartford in 1941, he has been successfully assistant pastor, chancellor, Director of the Propagation of the Faith, and now, Vicar General of the Diocese of Norwich. We salute him as symbolic of the new image of Church and content of the descenting received.

leadership: youthful, dynamic, progressive. Therefore, to the family of St. Onge, exemplars of community service, Saint Michael's College pays its tribute of triple investment

in honorary doctorate.

To Mother Rita de la Croix the Doctorate of Humane Letters.

To the Honorable William Leon the Doctorate of Laws.

To Right Reverend Monsignor Paul Jean the Doctorate of Laws.

The three were presented for the degrees by the Very Rev. Jeremiah T. Purtill, SSE, Religious Superior at St. Edmund's Novitiate, Mystic, Conn., and former vice president of St. Michael's College and college trustee.

[From the Catholic Transcript, May 6, 1966] St. Michael's College Honors Three of St. Once Family

WINOOSKI PARK, Vr.—Three members of the St. Onge family from Putnam, Conn., will receive honorary doctorates at the 63rd commencement of St. Michael's College here on Monday, June 6, it has been announced.

Those to be honored are: Rt. Rev. Msgr. Faul J. St. Onge, vicar general of the Diocese of Norwich; his sister, Mother Rita de la Croix, F.S.E., provincial superior of the American Frowince of the Daughters of the Holy Ghost; and his brother Congressman William L. Sr. Onge, U.S. Representative from Connecticut's Second District.

Msgr. St. Onge and Congressman Sr. Onge will receive the degree of Doctor of Laws.

Mother Rita de la Croix will receive the degree of Doctor of Humane Letters. All three are natives of Putnam.

Monsignor St. Onge, administrator of St. Joseph's Church, New London, as well as vicar general of the diocese since 1962, was ordained in 1941.

He served as assistant at Sacred Heart, Tattville, and at St. Mary's, Jewett City, before appointed chancellor of the Norwich diocese in 1953. He has also served as diocesan director of the Society for the Propagation of the Faith. He was appointed a domestic prelate by Pope Pius XII in 1958, and was named a diocesan consultor the same year.

Mother Rita de la Croix has been provincial of the Daughters of the Holy Ghost since 1962. She made her profession in the congregation in 1938, in France, and later studied and taught there. During World War II she was interned for 18 months in Alsace Lorraine.

Returning to the United States in 1944, Mother Rita de la Croix served as assistant mistress of postulants at the motherhouse in Putnam, then as councillor at the general motherhouse in France. From 1953–1963 she was mistress of novices in Putnam, and in 1962 was named provincial superior.

The expansion of Annhurst College, South Woodstock, and the inauguration of the congregation's Arst foreign mission in Chile are among the projects carried out during her administration.

Congressman St. Once, a veteran of World War II, is a former member of the Putnam Board of Education and the state legislature. He has also served as probate judge in Putnam, prosecuting attorney in that city, judge of the City Court, and chairman of the Putnam Housing Authority. Later he was director and vice president of the Connecticut Urban Renewal Association. He was elected to Congress in 1964.

A brother of the three honorary degree recipients, Rev. Theodore E. St. Onge, is pastor of St. Mary's Church, Baltic. Their mother, Mrs. Alma St. Onge, is a member of St. Mary's Parish, Putnam.

COMMUNISM IS FAILING, SMC COMMENCE-MENT GATHERING TOLD

(By Ed Myers)

The publisher of Time magazine told the graduating class at St. Michael's College Monday he is optimistic about the year 2000—when the "confronted generation" will be middle-aged—partly because the United States and Russia have begun "to live with one another."

Bernhard M. Auer, speaker at SMC's 63rd commencement, attributed this "undeclared truce" to the "very cold truth that communism is simply not working," rather than to the threat to Russia from Red China or the fear of mutual destruction.

"It (communism) has falled miserably to produce a standard of living and a humane political atmosphere that could compete with the example of the West—particularly the example of Western Europe reborn," Auer told the graduates.

Auer declared that Khrushchev had admitted genuine Communist failures in reorganizing that "creature comforts had to be passed on to consumers" and in easing political repression at home to lessen Cold War pressures against the West.

He went on to cite other Communist setbacks but warned of the continuing threat of Communist expansion and subversion in the uneasy states of Africa and Southeast Asta.

He asserted as more people are exposed to the internal weaknesses behind the Iron Curtain, "the inherent flabbiness of the Communist social and political philosophy, more people will reject it."

A realization is required today, he continued, that when the newly independent

nations move quite naturally away from the West they are not necessarily moving toward the East.

"Now that's a fact of life which just 10 years ago would have been quite unacceptable in America," he commented.

Auer, one of nine to receive honorary doctorates at the commencement, spoke in Ethan Allen Gym at the abandoned Air Force base adjacent to the college proper, as a muggy atmosphere threatened the rain that held off until afternoon.

The Time publisher said he had cast aside as a topic for his talk the Normandy invasion of June 6, 1944, because it might hit the graduates "with all the impact of a jazz concert featuring Guy Lombardo."

cert featuring Guy Lombardo."
He hesitated before beginning his address long enough to ask the audience to salute a woman who had no direct part in the ceremony, Mrs. Alma St. Onge of Putnam, Conn., the mother of a nun, a priest and a Congressman who all received honorary doctorates in a joint confernal.

In many ways the 63rd commencement at St. Michael's was like any other—the pomp and color, slightly rumpled but jubilant graduates posing with relatives after the ceremony for the camera-laden spectators who always seem to outnumber the graduates.

But there were the small events that make every commencement different and unique, especially for those ending a four-year way of life—like a simple announcement by Lt. Col. Charles Rugglero Jr., as he began the Air Force commissioning ceremony that the Gemini astronauts had splashed down safety.

There was the sobering remembrance as 21 young men became Air Force officers and gentlemen that only 22 years before to the day other young men had swarmed ashore on the beaches of France.

For the graduates there was the seemingly short march into the gym and, after the ceremony, the much longer walk from college into the world.

[From the Hartford (Conn.) Times, June 7, 1966]

COLLEGE HONORS ST. ONGE FAMILY

Winooski, Vr.—Three members of the St. Onge family of Putnam, Conn.—a sister superior, a monsignor and a congressman—were given honorary degrees today at St. Michael's College.

The degrees were presented by the Very Rev. Jeremiah T. Purtill, a trustee and former vice president of the Roman Catholic College. He is now superior of St. Edmund's Novitiate in Mystic, Conn.

Father Purtill presented a doctor of humane letters degree to Mother Rita de la Croix, superior of the American Province of the Daughters of the Holy Ghost at Putnam.

Her brothers, Rep. William L. St. Once, D-Conn., and the Rt. Rev. Msgr. Paul J. St. Onge, vicar general of the Norwich, Conn., diocese, received honorary doctor of laws degrees.

The three recipients are the children of William A. and Alma Desautels St. Onge, originally from Quebec.

Their mother was at the ceremonies and was cited by the commencement speaker, Bernard Auer, publisher of Time, and the most Rev. Robert F. Joyce, bishop of Burlington.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

Appendix

Family Fun in West Virginia

EXTENSION OF REMARKS OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Tuesday, July 26, 1966

Mr. BYRD of West Virginia. President, summertime fun and vacation pleasure are abundantly available in West Virginia. Those whose family vacation plans are not yet complete will welcome the suggestions carried by the July 10, 1966, edition of the Sunday Gazette-Mail State magazine, Charleston, W. Va., in the article entitled "Family Fun in West Virginia," written by Mary Cobb.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FAMILY FUN IN WEST VIRGINIA: USING BLUE-STONE STATE PARK AS A BASE CAMP, THERE'S FASCINATING TOURING IN ANY DIRECTION

(By Mary Cobb)

Looking for a nearby summer vacation spot that will satisfy every member of your family and still fit your pocketbook? Then take a state map and draw a line from Bluefield to White Sulphur Springs to Beckley and back down to Bluefield-and there's your answer. This lopsided triangle of land offers you mountain trails, water sports and unusual sightseeing.

In the middle of the triangle is Bluestone State Park, your vacation base, where the lush Allegheny Mountains rise from the lake like so many prehistoric animals sunning themselves.

Deluxe cabins, accommodating two to six people are \$50, \$80 or \$100 per week; the state's Department of Natural Resources makes reservations. Trailer and tent sites are available on a first-come basis, \$1.50 per night for a party of six and 25 cents for each additional camper. Close by are tables, charcoal grills, firewood, water and a central washhouse. If you want to eat out, the park's restaurant overlooks a picturesque section of the 1,800-acre lake.

Bluestone is a paradise for those who like their vacation on water. Rowboats, motor boats and skiing equipment are for rent at the Park's two docks. Private boats and motors may be used on the lake without charge.

Fishermen can buy live bait, tackle and license (a six-day tourist license is three dol-lars) at the docks and then test their skill against bluegill, bass, crappie and catfish.

There is no charge for fishing in the lake

but state laws are enforced.

đ

Near one of the boat docks are fenced swimming and wading pools, a picnic area and playground. Shuffleboard, croquet, badminton, volleyball and horseshoes are available, and the game equipment can be rented hourly. Bluestone cabin guests may use the golfing facilities at the Willow Wood Country Club, about 14 miles from the park. Also,

may get acquainted, and a naturalist is employed to take guests on hikes and nature studies in the mountains.

For those who enjoy sightseeing, this oddshaped triangle is overflowing with natural beauty and uncommon things to see, all at minimum cost.

An hour's ride to Beckley takes you on W. Va. 3, a suspended mountain road that looks down on colorful apple orchards in the valleys below. In Grandview State Park outside Beckley you can watch the struggle of West Virginia's birth in an unparalleled setting of great rhododendron and stars. Dr. Kermit Hunter's widely-acclaimed play, "Honey in the Rock," is performed nightly except Mondays in the 1,300-seat Cliffside Amphitheatre.

A trip to Beckley's Exhibition Coal Mine be educational for the whole family. You'll get a lesson in the history of mining as you ride through 900 feet of damp, underground passageways in remade coal cars.

If you want to learn more about mining and mining camp life you can travel to Stotesbury, 15 miles from Beckley on W. Va. This community has turned the house that was once the superintendent's into a ten-room Coal Town Museum. Here visitors will get a complete picture of the life of a miner and his family.

A drive of about an hour and a half on W. Va. 20 and U.S. 52 will take you from Bluestone to Bluefield, "Nature's Air-Condi-tioned City." If the temperature rises above 90 degrees, you'll receive free lemonadecompliments of the Chamber of Commerce!

On top of Bluefield's East River Mountain is the Mountain Crafts Shop where West Virginia's economy is getting a boost through the selling of exquisite, native handicrafted Woodcraft, needlework, weaving, handblown glass, jewelry, china and metal pieces brought approximately \$9,000 to local people for their work last year.

Across the road from the shop is a delightful attraction, the brightly-colored Ridge Runner Railroad. This C. P. Huntington 1863 miniature train carries its 42 passengers along the mountain peak at an attitude of over 3,400 feet, providing breathtaking views of Bluefield and the cloud-shrouded Southern Appalachian Mountain chain. Because the Ridge Runner crisscrosses the West Virginia and Virginia borders four times in its mile-long run, it has the reputation of being 'the world's shortest interstate railroad."

Your family will enjoy visiting one of the many mineral springs around Bluestone Red Sulphur, Salt Sulphur, Pence, Blue Sulphur (birthplace of Traveller, Gen. Robert E. Lee's famous horse), Green Sulphur and White Sulphur (tours are conducted daily through the 6,500-acre estate of the inter-nationally-famous Greenbrier Hotel where the springs are found). Lavish health resorts were built over a century ago near some of these mineral springs. Here the older folk sipped sulphur water and exchanged talk about their ailments while the younger folk joined the gay social whirl at the spa

On W. Va. 3, two miles from Union, you'll find the Rehobeth Church, oldest Methodist church building west of the Alleghenies. Protected now by a huge tin awning, this slumbering little church was built in 1785 when Edward Keenan donated five acres for "as long as grass grows and water flows." It was around this church that some of the

most fierce fighting between the Indians and early settlers took place, making it necessary for the men to carry their guns to church with them.

The family spelunker can follow W. Va. 3 and U.S. 219 to Organ Cave. The cave's lime-stone columns are formed like pipes of an organ and when struck by stones emit musical strains. Perhaps the rest of the family would like to go along for a picnic in the breeze-riffled meadow beside the meandering stream outside the cave.

At the Federal Fish Hatchery in White Sulphur (an hour and a half from Bluestone on W. Va. 3, U. S. 219 and U. S. 60) you can see West Virginia's celebrated Golden Trout. There's also brook, rainbow and brown trout, bluegills, and bass in every stage of development. For stocking purposes, the hatchery produces annually 110,000 yearling trout, 40,000 fingerling trout, and 120,000 large-mouth bass and bluegills. At feeding time the children will have fun watching the fish tamely follow them around the tanks looking for a handout.

Near the hatchery is a modern six-room home built from blocks of cannel coal by Tip Myles in 1959. Later Myles built a crafts shop from the same material. His speciality is coal jewelry designed by his family. Thes pieces make unusual gifts for out-of-state friends if you want to do some Christmas shopping on your vacation.

Another day trip will take you to Lewisburg, real farm country, where the corn fields look as if they'd been laid out with a tape measure. Located here is the 3,500-acre Morlunda Farms, home of many prize-winning polled Hereford cattle. Visitors are welcome and your whole family will enjoy seeing this beautiful farm and some of the world's fin-

At the General Lewis Motor Inn, the antique buffs in the family can take a trip down Memory Hall, long hallways lined with antiques. The public rooms and gardens of this aristocratic old inn, originally built in 1798, are open daily to tourists. Your little girls will love the garden playhouse which holds a collection of dolls and miniature furniture.

A pleasant walk takes you to the carefully manicured grounds of the eight-room Daywood Art Gallery. Paintings and etchings by nationally recognized artists of the 1800's and early 1900's are hung home-like above English and American antique furniture. A charming second-floor bedroom obviously decorated with a little girl in mind will hold the eye of all the women in the family from 3 to 93.

Lewisburg's Old Stone Church, built by Presbyterian settlers in 1796, is the town's most cherished landmark. Years of devoted care have kept this box-shaped, green-shuttered building in excellent condition. It's the oldest church unrestored and in continuous use west of the Alleghenies.

The original long-handled collection boxes and the last Confederate offering received in April 1865, are still in the yestibule. Above the steep, maroon-carpeted stairway is the slave balcony looking down on ramrod pews facing a simple, lovely altar.

Fishing, hiking, swimming and resting in Bluestone State Park plus low-cost, unusual sightseeing in this ruggedly beautiful Southern section of the state will insure every member of your family an enjoyable vacation-one they'll even want to repeat!

Dentistry and the New Revolution

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

DENTISTRY AND THE NEW REVOLUTION (By Representative John E. Fogary, Connecticut State Dental Association, Bridgeport, Conn., May 19, 1966)

Let me say, first of all, how pleased I am to be here with you at this annual Fones Award luncheon. Pleased for three reasons. The first is that the heritage and history of Connecticut and my state are so similar, so interwoven that being here is almost as nice as being home. Secondly, it gives me the first opportunity I have had personally to commend you for the far-sighted action taken last year when your General Assembly adopted fluoridation for all towns and cities of more than 20,000 people. Rhode Island, as you know, has long taken great pride in the leadership it has exercised in the field of public health generally and fluoridation in particular; some 85 per cent of my state's population is now drinking fluoridated water. In Connecticut, I understand, the history of fluoridation dates back more than 20 years and today about 30 per cent of your population is henefitting from this exceptional public health measure. That percentage will rise sharply as this new law comes into effect and you can all take great pride in looking forward to the many benefits that will flow from its enactment.

The third reasons I am glad to be here, naturally, is because of the high honor you are paying me with the bestowal of the Fones Award. This is, I believe, the 25th anniversary of the founding of the Award. And when I note that among my predecessors in receiving it are such men as Gerry Timmons and Harold Hillenbrand, I am doubly honored. No matter how long a career in public life a man is privileged to have, recognition of what he has been trying to say and do is always welcome. This Award has meaning, however, even beyond that because of the deep feeling I have for dentistry and the respect I have for the farshighted, public spirited attitude the leaders of your profession have consistently displayed in Wash-I am most proud of the part I have ington. played in helping dentistry to gain and se-cure its proper place in the health field and this Award intensifies that pride. I thank

Over the past few weeks, while carrying out my normal duties, I have been giving considerable thought to planning the substance of what I wanted to say to you today. would have been simple enough to put to-gether a mere laundry list of the actions aken by the 89th Congress last year and during this current Session. It has been a remarkable Congress. Everyone will agree with that, even though there always are some who may not agree on whether the word "remarkable" should be said with a smile or a frown. I'm with the smilers myself. It has been a Congress of historic importance in my opinion and one that has taken giant strides in moving this nation forward. Its accomplishments are so many that I could, as I ay, fill my time here today by merely listing them. But we need to do more than that. We need, I think to try and sift through this long list and put it in some kind of perspective. Take note not only of its dimensions but of the direction in which it is lead-We need to measure what has been

done in the past 18 months not only against what used to be but also against what ought to be.

Let me start with telling you of an action that took place less than a month ago. In early May, the House of Representatives passed a bill allocating the funds to be given the Department of Health, Education and Welfare for fiscal 1967. As Chairman of that Appropriations Subcommittee that has specific responsibility in the health field, I had a good deal to do with the action taken by the House. To state the action in brief, it was to increase the amount of money to be made available to the Department of Health, Education and Welfare by about \$500 million above the level that the President had requested.

Some of the stories that I have seen reporting this action make much of the increase and, implicitly or explicitly, are critical of the fact that we raised the budget.

Now the first answer I have in response to such criticism is in the form of a question: What price tag do we put on good health for the nation? The budget figures, of course, are large, either before or after the House increase, because this is a big nation, a nation of 200 million people. Nonethe money appropriated for HEW is less than 10 per cent of the total Federal budget; indeed, it is less than 2 per cent of the currently estimated Gross National Prod-Viewed from this perspective, the figseem to me to be reasonable. They seem to me to be especially reasonable when put beside the conviction I share with many other observers, that we are today in the midst of a revolutionary situation that calls for extraordinary efforts. And dentistry, as I have suggested in my title, is involved in a special manner in this revolution.

The word, "revolution" has a harsh ring

This is mostly, I suppose, because we associate it with violence and death, with bullets, bombs and battles. But revolution isn't necessarily violent. The term "peaceful revolution" is not self-contradictory. In fact, you can explain much of the genius of America, much of the reason for our remarkable strides as a nation to our ability to bring forth great changes in our society without having War act as mid-wife. Our political system is geared to honorable accommodation, to threshing out our differences in a townhall rather than on a battlefield. Our system broke down, our efforts failed, only once in our history and the result was the Civil War. For all its horrors or perhaps because of them, we learned even more clearly than we had before that our salvation as a united nation lay in anticipating coming challenges to our basic system and finding ways of adapting our social in-stitutions to meet those challenges. We have the gift, in other words, for keeping our revolutions peaceful. It is my contention here today that the country is now in the midst of another one of those great challenges, that the core of it is in the health field and that, from dentistry's point of view, it has three aspects.

It began some five years ago when, as a nation—and I emphasize that phrase, "as a nation—we first became acutely aware of the extent to which poverty, hunger, and disease dwell among us and of what they cost not only in terms of productive capacity but, more important, in terms of human anguish and misery. We began to see for the first time the reality behind the statistics that told us that 20 per cent of our country's families were poverty-stricken and that poverty tended to be self-perpetuating; that, in other words, a man who was poor tended to raise children who, because they lacked real access to education, health services and so forth, became poor themselves when they were grown.

The national awakening is the first phase of the revolution to which I refer.

The second phase is the realization that poor people are frequently sick people and,

what is more, sick people who are not seeking or receiving the care that could restore them to health and to economic productivity. We learned that in many ways the poverty problem was a health problem. We learned, especially, that if we are to break that victous self-perpetuation tendency of poverty to which I referred, that particular attention needed to be paid to the children of the poor. This realization of the health implications of poverty is the second phase of the revolution.

The third phase is the one of particular relevance here today. It has to do with dentistry and with the increasingly widespread understanding of the importance of oral health. The significance of dentistry's present situation can be shown most clearly, think, by citing two of American dentistry's most salient characteristics: First, it is the world's best in terms of the education afforded the dentist, the research buttressing his work and the chairside care that he gives Second, it is traditionally geared to take care of less than half the population. When you look at these two facts in conjunction with one another, it becomes clear that dentistry is going to feel much of the force of this healthcentered revolution I am talking about.

Now, let me make one point quite clear before going any further. When I note that dentistry is geared to care for less than half the population, I am not being critical of your profession or undervaluing the immense efforts you have made through the years to make dental care as accessible as possible to Your efforts in the direction of evervone. extending accessibility of care are well known to me and I can say honestly that, in my opinion, you have over the years done nearly as much as could be humanly done. But you have had a number of factors working against you. For many years, there was little public understanding of the importance of dental health. People tended to view dental disease as something to be lived with, something to be endured unless and until severe pain drove them to the dentist. In addition, government on all levels-local, state and federal—did almost nothing to assist efforts to raise the dental health standards of the country and make care more accessible. Dental public health activities, for example, were shamefully neglected for years. If there is blame to distribute then, very little of it goes to the dental profession itself.

Nevertheless, the fact I have cited remains today a fact. I say "today" because it takes no special gift of prophecy to see that it will not be true much longer. Three factors explain the change that is coming that indeed has already begun. First of all, the consistent activity of the American Dental Association and its friends is paying dividends. Secondly, the public awareness of health and of dental health is daily becoming keener. And finally, as a result of these two factors, those of us in Congress who have so long fought for a deeper national commitment to health matters are being joined by more and more colleagues.

In a sanse, though, we are involved in a race; a race between the rising demand for dental care and our efforts to increase the accessibility of such care. Let me spend a minute or two, at this point, discussing some of the things Congress is doing to help the right side to win the race.

There is, first of all, the attention being paid to the two major dental agencies of the Government: The Division of Dental Health and the National Institute of Dental Research. Their appropriations over the past six years have been rising steadily, equipping them more and more adequately to attack the immense backlog of problems in dental research and dental public health that were so neglected for so many years. For fiscal 1967, the House approved a combined appropriation in excess of \$33 million, an increase of 450 percent over the Presidential recommendation of fiscal 1969. The

bulk of this increase has gone toward strengthening the basic fiber of these two agencies. The dental schools of the nation have benefited greatly from this because of the greater amount of money available for the schools' research activities and for such programs as training dental students to work effectively with dental auxiliaries. money is available now, that wasn't in fiscal 1960, for distribution to State public health agencies for dental activities. Epidemiological research in cleft palate and in periodontal disease is now possible. Investigations of the best methods to provide continuing education for you gentlemen in private practice is now possible. Programs for training young scientists in fields of dental interest have been greatly expanded. New departures of all kinds are possible today that couldn't even be considered in fiscal 1960 because of the scarcity of funds.

In the fiscal 1967 budget approved by the House, for example, an important further step is being taken for the first time: funds are being made available to implement a plan that I am deeply interested in, the establishment of a limited number of university-based dental research institutes in various parts of the country. Until now, as you know, the National Institute of Dental Research has been unique in the United States.

For some time it has seemed important to me to create privately-based counterparts to NIDR in three or four carefully selected locations. The American Dental Association, too, has had a deep interest in the matter and has testified to it before my Subcommittee on more than one occasion. Plans have been in the offing for some time but now, finally, we will be able to move ahead toward the actual establishment of such centers.

During this same span of years, new legislation has been also passed directed toward helping the nation to close the gap between what it is doing in the health field and what it should be doing. Paramount among these, I would suppose, must be listed the Health Professions Educational Assistance Act which was originally approved in 1963 and substantially expanded in 1965. Again, I think it should be noted, the American Dental Association long advocated such action and was a prime mover in its eventual accomplishment. Your own state's new dental school, now being planned, is a beneficiary of this act as is the school at the University of California at Los Angeles, Other new schools are being planned in Florida, South Carolina and Colorado. Many existing schools will be able-some have already begun-to expand and rehabilitate their facilities.

I know there are some who view this exansion of dental manpower with something less than enthusiasm, not out of selfish motives but because they are unconvinced of its necessity. But such men have not really analyzed the force or extent of the revolution in which we are engaged. They fail to understand that we are not talking merely about improving the care we give to those who tra-ditionally seek dental services on a regular What we are doing is readying ourselves for a new era in the history of dentistry in the United States, a time in which every man, woman, and child in our nation seek dental care on a regular basis and find it accessible. This is an immense undertaking and the terms of the Health Professions Educational Assistance Act are modest enough in relation to it.

In addition to its provisions for construction and rehabilitation of schools, this Acthas two sections of direct consequence for the day-to-day operation of a dental school. One provides loans and scholarships to dental students, thus making dentistry possible for many talented young people who in the past would have had to settle for their second career choice. Such assistance has long been available to students working toward graduate degrees in science fields not related to health, a factor that weighed heavily against the health schools in the competition for the best students. It was an unsatisfactory and unfair situation and we have moved none too soon in redressing it.

Another section of the Act provides direct grants to health schools, such as those in dentistry, to make improvements in the scope and quality of the curriculum they offer. The growth rate of new knowledge in the health field, as you well know, is almost literally beyond comprehension. Yet, if the bulk of this new knowledge is not swiftly conveyed to dental students, and practitioners already in the field, its accumulation will have been in vain. This new section of the Health Professions Educational Assistance Act—this section was passed last year and is not yet really in operation—will enable the schools to address themselves to this problem with an intensity not possible before because of lack of funds.

Another program bearing directly on this revolution is that of the Office of Economic Opportunity. Among their activities, the one of particular interest in the health field is Operation Head Start. The essential effort, as you know, is to bring to children of pre-school age that whole range of educational and health services that they have either not been receiving or have been receiving only in a minimal, haphazard fashion.

Before the program began in the summer of 1985, American Dental Association representatives told Head Start officials that they would discover that dental disease would be one of the major problems they would encounter. That prediction was accurate, as you would expect it to be since it was based on the Association's long-standing effort, in which I have joined, to persuade the government to pay greater attention to the dental needs of poor children.

Let me note at this point, incidentally, that I am well awars of the fact that the Head Start program, viewed from the state and local level, was quite confusing. Much of the explanation of this is because it was a new program and one gotten underway hastily. I have had occasion to bring this to Mr. Shriver's attention when he has testified before me and I think you will find in the future that the organization and coherence of the program will improve. One example of this improvement is that the Dental Division of the Public Health Service is now intimately involved with planning the dental aspects of Head Start.

The final program I want to bring to your attention today is one that passed Congress last summer and is just now going into operation. It will prove, in my opinion, to be as fundamentally far-reaching as anything that has been done in the health field in this century. There has been in existence for some time a program of Federal-state cooperation bringing health services to various categories of the needy. These programs were brought together and expanded in the action taken last summer to form a new section, Title 19, of the Social Security Act.

Under this new program, the states must offer at least five basic health services in order to qualify for the Federal matching money, which can range from 55 to 83 per cent of the total. At the present time, dental care is not one of the five requisite services, though an effort I favored was made by the American Dental Association to have it so listed. The effort was launched during Senate hearings on the measure last year and succeeded there but falled to survive a House-Senate Conference. Nonetheless, of the seven states now having approved programs under this new Title 19, four of them are offering dental services of some type. This trend will unquestionably continue as more states realign their health and welfare efforts in order to qualify under Title 19. As you undoubt-

edly know, Connecticut expects to so qualify

before the end of 1966.

Two straws in the wind buttressing this prediction as to the inclusion of dental services are the fact that your national organization, in its 1965 annual meeting, called for a national dental program for needy children and the fact that this spring President Johnson took up the subject and directed HEW Secretary Gardner to begin development of such a program. Officials of HEW and the American Dental Association are already conferring on such a program and Congress may well be looking at it as early as next year.

Now, let me raise a warning flag about Title 19. Revolutions, you know, are not in the habit of moving smoothly. Those who want to help manage them and direct them have to be quick on their feet. On the national level, I can assure you, dentistry is being well and actively represented. But Title 19's impact is going to be focused on the states and communities of the nation. A parallel effort, then, must be launched there. I have no doubt that you are already in close consultation with the state officials planning Connecticut's participation under this program but I do want to urge you to persevere in that consultation. I consider it essential that such state officials have the benefit of your expert advice in designing the dental aspects of the new program and, I would judge, you consider it just as essential.

would judge, you consider it just as essential. This survey of the components of our present day revolution in the health field could go on much further than it has already. I have not even referred, for example, to the expanding field of pre-payment and the progressive role being played by the dental service corporations. Nor have I discussed today—though I have often before and am deeply interested in it—the remarkable leadership the dentists have shown in the utilization of auxiliary personnel. As a high official of HEW recently remarked, the physicians of the nation could take lessons from the dentists on this matter of auxiliaries. Dr. Fones, who had so much to do with founding the career field of dental hygiene, would be proud of his successors on this and many other matters.

Indeed, everything we know of Dr. Fones' interest in preventive dentistry and in the dental health of children makes me believe that he would be glad to be alive today. This may not be an easy time in which to live, but it is an exciting time. No generation of health leaders in the past had opportunities equal to those available today. This is particularly true in dentistry.

I know you will take full advantage of these opportunities to extend the quality and availability of your services to a point far beyond what they have ever been before in our history. You will, I know, be openminded, progressive and constructive in your attitude toward the health revolution in which you are engaged. I want you to know that I will continue to be associated with your efforts and anxious to assist you in every way possible.

It has been a great pleasure for me to be here with you today and to accept this Award that you have so generously given me. I look forward to being with you again in the future. Thank you.

Dedication of Stephens Lake

EXTENSION OF REMARKS

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26, 1966

Mr. BYRD of West Virginia. Mr. President, on Sunday, July 17, I par-

ticipated in the dedication of Lake Stephens in Raleigh County, W. Va. This \$2.25 million recreational complex was made possible by a Federal grant of \$1.2 million, allocated under the authority assigned to the former Community Facilities Administration. I was instrumental in securing approval of these Federal funds, and it was with deep gratification that I participated in the activities marking official recognition of the project's completion.

I ask unanimous consent that my dedicatory remarks be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

DEDICATION OF STEPHENS LAKE

(Speech by U.S. Senator ROBERT C. BYRD, Democrat, of West Virginia, at Stephens Lake, Raleigh County, W. Va., July 17, 1966)

As I look around me today, in this beautiful setting, to these excellent facilities which will help people enjoy their free hours, I am reminded that the question was asked in Washington recently whether "our new age of leisure is a blessing or a curse?"

I believe that the answer can well be stated here today. We can count this as a blessing that Stephens Lake, the history of which goes back to the 1790's when Stephen English journeyed here, has been preserved and developed wisely for the wholesome rec-

reation of our people.

There are many people who deserve commendation for this project, but at this time I will mention Mr. Harry Anderson, who was one of the first to dream of this development and whose personal endeavors helped to generate strong public support. mention Fred Toothman whose tireless ef-forts led to the selection of the site, and Robert L. Davis who supervised the planning and construction activities.

Needless to say, Mr. Ping Johnson and his fellow members on the Stephens Lake Tourist Development Authority deserve the gratitude and continuing support of our people in the years to come in efforts to maintain and expand the recreational value of

this facility.

I became convinced of the value of this project early in its history, and I was instrumental in winning approval of a \$1.2 million grant for it from the former Community Pacilities Administration. I believed it was a wise investment for government funds at that time, and your presence here today proves further that I was not incorrect in that belief. From my membership on the Senate Appropriations Committee and its Subcommittee which votes funds for the Commerce Department, I was pleased to support the funding programs which made pos-sible such projects as this one. I believed then as I believe today that West Virginia will some day become one of the most popular and properly developed tourist centers in the country.

West Virginia appears to be fully aware of the growing realization in the world that man is not outside of nature, but a part of nature . . . that nature is not only a commodity we can exploit for gain, but it is also an estimate to which we belong.

This new dimension of conservation includes the past—as we see here at Stephens Lake—as well as the present; the beautiful as well as the useful; social as well as economic values; and urban neighborhoods as well as landscapes.

We in America are engaged in a massive protest against the destruction of historic landmarks, against the pollution of water and air, against the blight of unplanned development with its bleak, cheerless, monotonous march across the countryside.

There is a growing awareness that the United States will not be judged by its power alone, but also by the quality of its civilization.

I believe that Henry David Thoreau's decision to "live deliberately"-to absorb the natural world around him, not merely, through the physical senses, into his physical being but also into his deepest thoughts, to artificiality and to find richness in simplicity—is the nutrient of our culture.

Of course, I realize that the growing needs of an expanding population place a financial burden on a community to take land out of the market for commercial developments. realize that assets such as these carry a price that must be paid. And it may be legitimately asked, "How can these resources put meat on the table?"

To begin with, I want to say that beautiful scenery, clear water, and fish and wildlife wil put meat on the table. They will help the community.

It has been estimated that Stephens Lake may someday attract a quarter-million visi-With the camping area and tors annually. trailer park in operation, we can expect the tourists to stay for several days, maybe even several weeks. Would that add up to perhaps million tourist days a year? think so

Then think of the expenditures by these guests. In Washington, the Bureau of Outdoor Recreation believes the average tourist—that is each person in a group—may spend up to \$7.00 a day. If so, that income could sour to several million dolars a year West Virginia, and more particularly,

the Raleigh county area.
Our own West Virginia Department of Commerce reports that revenue from out-ofstate tourists, traveling West Virginians, and vacationers in this state resulted in \$417 million in income to the state last year. And, I am told, these are figures taken from tax reports on the five segments of the tourist economy—restaurants, amusement and recreation centers, lodgings, service stations, and auto accessory establishments.

This income resulted from some 13 million tourists and travelers in the state. year, it has been estimated that the number of travelers in the State should grow to 14 million and the anticipated income is con-

million and the anticipated income is con-servatively placed at \$425 million. I am told that with the completion of the interstate highways West Virginia can expect its tourist income to skyrocket to about three-quarters of a billion dollars a year derived from about 25 million visitors.

Needless to say, it will then compete with other branches of our economy to eventually become the largest industry in the State.

When Congress established the Spruce Knob-Seneca Rocks National Recreation Area by legislation which I introduced, it trock cognizance that at least 100,000 acres of this State's natural setting was needed as a "hide-away" for visiting tourists and recreation seekers.

The Land and Water Conservation Act, which I was happy to co-sponsor, has already accounted for the acquisition of land and the development of tourist centers at a cost of

\$251 million in just three years.

Administered by the Bureau of Outdoor Recreation, the fund provides for state as well as Federal projects. It will also finance nation-wide outdoor recreation which, I am confident, will include Stephens Lake as a major feature in Raleigh County.

As I close, let me say that only a few years ago, the people of the United States were secure in a seemingly endless earth and confident of boundless bounty.

Today there is still plenty of everything to go around. But more and more people are beginning to watch more and more anxiously as science and technology attempt to stretch a predictably finite wealth of natural re-sources to cover ever growing demands. The handwriting on our natural resources wall could read: "A rationed tomorrow."

Twentieth century man in the United States must choose—and the fact that we have a choice is strictly a matter of geography. In most parts of the world, a quality society is unattainable in the foreseeable future

Currently we are in the seventh decade of a 100-year-span that began in 1900 with a world population of fewer than 1.5 billion That same population is now persons. hurtling toward 3.5 billion.

With developments such as Stephens Lake, our people will have elbow room and an opportunity for occasional solitude. Thank

Wounded Marine Twin Brothers From Hawaii Face Future With Intrepidity

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. MATSUNAGA. Mr. Speaker, it is a tribute to America that our dispatches from Vietnam are filled with news of the valor and sacrifice of our fighting men. An unusual story of such sacrifice is that of two marines who are twin brothers, Richard and Ronald Sanoria. home is in a little town called Pahoa, on the island of Hawaii. The touching news story of the coincidental amputation of their left leg was recently published in many of the Nation's newspapers. I should like to share with you the sequel to this story of the brothers who suffered similar injuries under similar circumstances in Vietnam.

The marine brothers are now recuperating at the U.S. Army Tripler General Hospital in Honolulu. Richard, who has already been fitted with an artificial leg, sits regularly at the bedside of Ronwho only recently has undergone Despite their handicap, the surgery. brothers, who are not yet 20, are hopefully looking to the future.

I submit for inclusion in the Congres-SIONAL RECORD this inspirational story of the Sanoria brothers which was written by Reporter Lyle Nelson. It appeared in the Honolulu Star-Bulletin of July 20, 1966:

TWIN ISLE AMPUTEES, NOT YET 20, LOOK TO-WARD THE FUTURE

(By Lyle Nelson)

Richard Sanoria sits in an air conditioned room at Tripler Hospital each day watching

His twin, Ronald, lies near him watching television. Ronald's eyes open and close as he rests.

He's had recent surgery. They talk from time to time.

This is the convalescent routine for the Marine twins from Pahoa, Big Island, who both suffered coincidental amputation of the left leg above the knee after similar mine explosions near Da Nang, Viet Nam.

They look at the future a little, but not too far ahead.

Richard is much further along than Ronald at this point.

He was wounded longer ago and not as severely.

Today, Richard set in Ronald's third floor room in the Tirpler Surgical Ward and talked of their future.

"We want to got to school," he said, "prob-ably at the university." "That's what we're figuring."

He didn't know just what they would study whether they would some day go into business together.

Richard, who already has been fitted with

an artificial leg, did the talking.

He said they probably would return to
Pahoa, the little Puna town they call home, the town that rarely gets into the news except when threatened by a lava flow.

Richard is the inspiration for Ronald now. Richard can get around the hospital. Mo-bility means greater hope. No one likes to

Bilty means greater hope.

Richard probably will be the leader for many months to come.

He figures on getting out of Tripler and the service next month.

For Ronald, the healing process will take

Ronald arrived in Hawaii to a tearful re-union with his twin, two other brothers and parents a week ago. He had been hospital-ized in the Philippines.

Richard's room at Tripler is on the fourth floor. He grabs his crutches and comes down the elevator to the third floor every day to sit with his brother. Their mother, Mrs. Rose Augstin, is there also. Richard and his mother put on white

gowns and a paper mask before they enter Ronald's private room.

This is to reduce the chances of Ronald getting an infection.

Things will get better for the twins, but it will take time and patience.

They have plenty of time to plan the years . ahead.

They aren't 20 years old yet.

Good News-Asia

EXTENSION OF REMARKS OF

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. CASEY. Mr. Speaker, another newspaper highlights a dispatch from correspondent Keyes Beech reporting that the situation is looking better for our side in Asia.

Mr. Beech writes for the Chicago Daily News Service, and now the Houston Chronicle points out that his optimistic dispatch contained virtually the same key words as it had used previously in an editorial.

Not only are the hostilities in southeast Asia going in our favor, the Chronicle says, but communism is losing ground in the entire arc from Korea to Karachi.

This is taking place behind the shield of American power, it is said. And as Mr. Beech wrote:

Without the United States, South Korea would be Communist today. So would South

So that my colleagues may examine the views of Mr. Beech and the Houston newspaper, I submit the editorial for the

FLOOD OF GOOD NEWS IN ASIA

"From Korea to Karachi, all along the sprawling periphery of Red China, things are looking up for our side." So write Keyes Beech of the Chicago Daily News Foreign Service from Thailand.

Beech, who of all war correspondents has proven perhaps the most accurate in his assessments of situations and prospects, employed virtually the same key words in his Monday story as this newspaper used in an editorial last Friday.

His rather lengthy article explored the situation in greater depth than a compara-tively brief editorial could. And it made

most satisfactory reading.

That the hostilities in Southeast Asia are going in our favor is obvious to all. But perhaps more important, as both Beech and this newspaper have pointed out, com-munism is losing ground in the entire arc "from Korea to Karachi" and impressive gains for the cause of freedom have taken place.

Item: Indonesia has turned back from the brink of communism and has turned some-what westward. "Without the resolute United States stand in South Viet Nam there would have been little incentive for the anti-Communists to take the gamble that they did." Beech comments, and hints that United States assistance might have been given to those who brought off the coup.

Item: Indonesia has quit threatening Malaysia; the Philippines have dropped their

dispute with that new nation.

Item: Pakistan's flirting with Red China has "cooled."

Item: The nations of the Far East and South Pacific have shown signs of getting together with a distinct anti-Red China program. Nine of them, including Japan, re-cently formed the Asian and Pacific Council-a loose association, to be sure, but nonetheless constructive.

Item: India is shifting "more and more toward a freer economy, much to the indignation of old-fashioned doctrinaire Socialist supporters" of Prime Minister Indira Gandhi's late father.

Item: "What makes the rise of non-communist Asia all the more encouraging is the fact that it has a solid economic base. . Last year the economic growth rate in South Korea was 8 percent, in Taiwan Nationalist China) 7 percent, in Malaysia 5.5 percent, and in Thailand 6 percent. . . . Among the non-communist nations only Burma, possibly the most mismanaged nation in Asia next to Indonesia, and Cambodia cling to the social-ist path."

"It could be," Beech writes, that ". . . Asia has reached that long-awaited turning point when the non-communist nations are in the ascendancy and communism is on the decline." This is taking place "behind the shield of American power," of course. "Without the United States, South Korea would be communist today. So would South Viet Nam."

Herald Counseling Center: "To Save Families Disintegrating Under the Effects of Alcohol"

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. KUPFERMAN. Mr. Speaker, my bill, H.R. 14197, for a comprehensive program for the control of alcoholism and my statement with respect thereto appears at pages 6973 to 6975 of the Con-GRESSIONAL RECORD of March 31, 1966.

Since that time, I have made reference to the problem and to the organizations in my district with the aim of doing something about the problem, like ACCEPT or Alcoholism Center Coordinating Education, Prevention and Treatment—Appendix page A3173, Congressional Record of June 13, 1966—and New York City Medical Society on Alcoholism, Inc., and the Physician's Alcohol Newsletter-Appendix page A3262, CONGRESSIONAL RECORD of June 16, 1966.

I commend to the attention of my colleagues the circular of the Herald Counseling Center of 235 East 49th Street, New York City, of which Daniel A. Poling is president and Buford Peterson is director, whose purpose is "to save families disintegrating under the effects of alcoholism."

HERALD COUNSELING CENTER THE PROBLEM

For every alcoholic, there is a circle of people affected who suffer just as muchbeginning with his wife and dependent children. Alcoholism spawns broken homes, delinquency, despair and mental illness. It causes incalculable disruption in the lives of innocent children, and through them eats into the whole fabric of solcety.

THE SOLUTION: A BOLD NEW PROGRAM

Under the joint sponsorship of the Christian Herald and the New York Theological Seminary, the Herald Counseling Center is a bold new program to save families disintegrating under the effects of alcoholism. It combines the best skills and insights of Christian counseling, medical science and the special techniques of psychology and psychiatry to make the family as a whole understand the illness of alcoholism, and to make each of its members work together constructively to overcome the disease

A REVOLUTIONARY NEW APPROACH

The whole problem of alcoholism is attacked at its very roots through the radical new approach of the Center's "halfway howse' Here men can find food, clothing, rest, shelter and the peace and quiet in a home-like atmosphere which is so necessary to begin sober self-examination.

EXPERT AND EXPERIENCED COUNSELORS.

All staff members of the Center have themselves-with God's help-overcome chronic and uncontrollable drinking problems, loss of jobs and families. They are therefore uniquely qualified to counsel newly released alcoholics and inspire them to stop drinking for good (they've been through the same sad experience before and know all the answers).

STEPS TOWARD REHABILITATION

In an atmosphere of Christian acceptance, the counselor can soon gain the confidence of the alcoholic and give him the strength to become a productive member of society again. Medical attention, proper diet and new clothing transform his physical appearance. Soon he is able to seek assistance on his own—as needed—from outpatient clinics and social welfare agencies. Finally, employment is gained for the alcoholic, thus increasing his self-respect and confidence. THE ULTIMATE GOAL: FAMILY RECONCILIATION

When the time is ripe, families are con-tacted and meetings held in the neutral atmosphere of the Center. Under the friendly guidance of the counselor, the family can discuss its future calmly in a quiet, noninstitutional atmosphere. Reconciliation is tremendously aided by the great improve-ment shown by the alcoholic in stabilizing himself and holding a job for a long period of time.

BENEFITS TO SOCIETY

With the fether reunited to his wife and children again, the femily is no longer a drain on society but once more a productive unit. Children's anti-social conduct disappears with the father once more discharging his duties of parental understanding and discipline. (Note: over 30% of all juvenile delinquents and a high proportion of school drop-outs come from homes where the parent is an alcoholic). The worth of all these benefits in human terms can hardly be calculated.

DESPERATELY NEEDED: FUNDS POR EXPANSION

Five full time members of the Center staff are presently giving understanding counsel and guidance to alcoholics in dire straits. Several regularly make the rounds of the courts, prisons, hospital wards and the Bowery offering help to needy men with families. But a severe shortage of funds keeps them from counseling all those who want and need their understanding aid. Thousands more can be helped to return to normal living—but only if you will contribute desperately needed funds for expansion. Won't you send your generous gift today? Thank you.

Horton Bill To Establish a Commission on Architecture and Planning for the Capitol

EXTENSION OF REMARKS

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. HORTON. Mr. Speaker, the people of the United States, whom we in the House of Representatives are honored to represent, are disturbed; the proposal to extend the west front of the Capitol—their Capitol—has justifiably disturbed them. It is ironic that the proposal is partially based on the need for expanded tourist facilities, yet in providing these it is marring the greatest attraction of visitors to our Capital City. It is the private citizen of our country—for whom the Capitol is a symbol as well as a beautiful building—who is most greatly aroused by the recommended alteration of the west front.

It is evident that he would rather the much-needed tourist facilities be forgoten. Yet, the establishment of essential facilities, be they for storage of documents, restaurants, or tourist centers must not be forgotten, neither must the already established symbolism and beauty of the Capitol be forgotten.

Certainly, the protection of our great monumental buildings is as important as the protection of monumental documents. If such protection must be effected through legislation, then it is essential that such legislation be enacted.

I am today introducing a bill to amend the National Foundation on the Arts and Humanities Act of 1965, to establish a Commission on Architecture and Planning for the Capitol. It cannot be denied that certain construction projects are necessary for the improvements of the U.S. Capitol Grounds and adjacent areas. Yet, such projects must meet standards of good taste and judgment, retain esthetic and architectural values,

and demonstrate the historic and symbolic importance of our Nation's Capitol.

The Commission which my bill provides will review such proposed projects as the extension of the west front and advise how they might be carried out so that necessary standards will not be violated. Qualified professionals will help compose the nine-member Commission, seven of whom will be appointed by the President, one of whom will be appointed by the Speaker of the House of Representatives, and one of whom will be appointed by the President pro tempore of the Senate. Nominations for the members will come from groups which will be rightfully represented on the Commission—the American Institute of Architects, the American Society of Landscape Architects, the National Trust for Historic Preservation, the Federal Council on Arts and Humanities, and the Commission of Fine Arts. The members appointed by the Speaker of the House and the President pro tempore of the Senate will represent the private citizens to whom the preserva-tion of the Capitol is of such critical concern and importance.

I am pleased to note that my bill parallels that sponsored by Hon. Frank Thompson, on which his subcommittee of the House Education and Labor Committee is holding hearings today. Hon. Odgen Reid, a member of Chairman Thompson's subcommittee, also is a sponsor of this proposed legislation.

Regulation 5 of the Medicare Provisions

EXTENSION OF REMARKS

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. ROUDEBUSH. Mr. Speaker, the distinguished pathologist and delegate to the House of Delegates of the American Medical Association, Dr. Lall G. Montgomery, of Muncie, Ind., has brought a matter to my attention, which I feel should be of interest of the entire Congress. Dr. Montgomery has asked that I ask permission to have his letter of July 22, 1966, to Mr. Robert M. Ball, Commissioner of Social Sécurity Administration, reprinted in the Record.

I feel that this letter will be of interest and explains the difficulty concerning regulation No. 5 of the medicare provi-

JULY 22, 1966.

Mr. Robert M. Ball, Social Security Commission, Washington, D.C.

DEAR MS. BALL: I am writing to raise objections to the proposed "Principles of Reimbursement for Services by Hospital-based Physicians" (Regulations No. 5) as published in the Federal Register, Volume 31, No. 124, and dated Tuesday, June 28, 1966.

First of all I would object to the fact that these Regulations were not published until two days before the effective date of Public Law 89-97 which the Regulations No. 5 modify to a very great extent. This late publication gave no adequate time to study the enormously complex implications of the Reg-

ulations as they affect the practice of medicine by a wide variety of physicians who practice to a greater or lesser extent in relation to hospitals.

As you are aware an urgent request from the American Medical Association House of Delegates was brought to the Department of Health, Education, and Welfare by the Board of Trustees of the American Medical Association asking for a delay of 90 days in the effective date of adoption of these Regulations to permit adequate study and revision of the proposals they contained. I understand that this request has been refused and I am writing now to protest, and to urge further that these Regulations should be carefully reviewed with the help of representatives from the groups of physicians most affected and who would be most likely to know how best the Regulations should be written to produce the best possible effect on the practice of medicine and consequently the most effective care of the patients who will be affected.

My objections to the Regulations as proposed cannot be described in detail at this time because, as stated above, time has not been adequate to make an analysis of the far reaching implications of the Regulations. It is, however, obvious to anyone who has read them that parts of the Regulations make sweeping alterations in the intent of Public Law 89-97 in ways which were clearly not the wish of Congress when this law was passed.

To mention only one very far reaching alteration by Regulations 5, of the intent of Congress in writing Public Law 89-97, I draw to your attention the fact that it was repeatedly apparent that Congress wished it abundantly clear that the law should not interfere in the practice of medicine (e.g. 89-97, Sec. 1801).

Even the most cursory reading of the recently published Regulations makes it apparent that they vastly alter the practice of medicine in many ways which would affect the practice of a wide range of physicians from many medical fields who care for patients in hospitals. These interferences in the practice of medicine were not the intent of Congress when the Law was passed, and I do not believe they are the will of Congress now. Certainly they would not be the wish of any person who understands the effect which these Regulations would have on the care of the health of the patients affected by the Law, and the even farther reaching effects of these changes on the ultimate overall practice of medicine for the entire American people.

I would earnestly plead for careful study and complete revision of the Regulations arecently published, to bring them in line with the wishes of Congress as expressed in Public Law 89-97, and with the objective of utilizing the rewritten Regulations to bring about the best possible application of the law to the care of the patients provided for in the law.

Yours sincerely,
LALL G. MONTGOMERY, M.D.,
Delegate, Section of Pathology and Physiology, American Medical Association.

The Older Americans Act

EXTENSION OF REMARKS

THE OLDER AMERICANS ACT (By Hon. JOHN E. FOGARTY)

I very much appreciate the introduction by Commissioner Bechill and welcome this opportunity to be with you at this 4th Annual Conference of State Executives on Aging.

Addressing you at this stage of this program has some very obvious disadvantages. I am sure that Mr. Bechill's "Challenge to the States" and the panel discussions on Goals for Older Americans" have covered much of what should be included in a presentation on "The Older Americans Act."

There are however some compensating advantages in preceding "Progress Report on the Administration on Aging" and the "Workshops on the Older Americans Act."

It can prove interesting, embarrassing and challenging to review some of the basic objections Congress had in mind at the time this legislation was enacted, the status of the "action time schedule" and some observa-tions on future directions.

It is not possible to recall the goals of the Older Americans Act without paying a very personal tribute to the late Senator Pat Mc-Namara, a great humanitarian, statesman and a close personal friend who cosponsored the Bill and with whom I worked so closely for the creation of an independent Commis-sion of Aging. He dedicated his life to serving others and making the country he served a better place for his fellow men of all ages. Older Americans of today and the future

beneficiaries of the programs he sponsored and supported will long revere the memory

of Senator Pat McNamara.

Without reviewing each of the ten objectives included under Title One of the Older Americans Act, I prefer to summarize the broad goals outlined in the Bill and review the intent expressed in the remarks and statements made on the floor of the House of Representatives.

Experience and public reaction to our floundering national program in aging documented the urgency and need to create an Administration on Aging to salvage the recommendations of the White House Conference on Aging and to establish an action-oriented program free to operate without the influence and domination of other programs or policies.

The Congressional Record clearly re-reals the intent to remove aging from a welreals the intent to remove aging from a wel-fare setting and to eliminate any doubt in the minds of older persons or the public that aging and welfare were synonymous or that most of the elderly were welfare clients or recipients. There was no implied criticism of the fine work of public assistance pro-grams or agencies but a desire to represent a more accurate picture of the interests and needs of all older persons.

The lack of funds for research, training and demonstration projects had restricted action in aging to conference reports and recommedations. A grant program became es-sential as a vital force in the stimulation, support and implementation of practical proj-

Qualified staff to administer a dynamic program was an obvious must together with a nongovernmental advisory committee to rec-ommend and endorse action programs on

A strong partnership between federal, state and local programs was needed to coordinate, initiate and strengthen activities and to avoid overlapping, duplication and some-

times competing projects.

As you know, from the help and the action on the floor of the House there was an exsed intent for State executives on aging to be informed of pending applications for grants but not to the extent of overruling the approval of an application that was considered to have merit.

It should also have been obvious to those who were aware of the budget allocations, that with the creation of an Administration on Aging the need for the President's Council on Aging as originally constituted, no longer existed. The budget for the Council was eliminated believing that the Administration on Aging with its commissioner would preclude the need for a statutory body to carry out an interdepartmental program on aging.

It is my understanding that a Subcommit-

tee of the Advisory Committee has been named to work out interagency relationships on aging. This approach is in keeping with the intent of the authors of the bill.

There were many other factors that in-fluenced the language of the Older Americans Act. It was considered to be basic legisla-tion with a specific budget allocation for the first two years. During this time the experience of the Administration and the recommendations of the Advisory Committee would determine a more realistic budget and

long-range program projection.

So much for background. I would like to speak frankly about the progress in the implementation of the legislation as I see it.

My impressions are based on reports of the Administration appropriation hearings and information referred to me by my constitu-

ents and the general public.

The interest shown by the states and the number of their plans approved is encouraging. Most of the intents have designated nonwelfare agencies or departments to administer the funds. Some of these designations are regarded as temporary pending further consideration by the state legislatures when they reconvene. Several state welfare or public assistance agencies have established reputations for efficient broadly based inshed reputations for emcient broadly based programs for the aging. It can be expected to develop action that will support the principles of the Older Americans Act. At the fear of being misunderstood, it would still be my hope that the Administration on Aging would gradually evolve as an independent negative administration. pendent nonwelfare administered program at the federal, state and local levels. The next two years give us the experience we need and the time to evaluate the capacity and the abilities of the authorities now being named by the states to lead their programs

The summaries of applications approved for grants under Title IV and V for Research and Development and Training Projects appear very modest and seem to lack that dynamic quality that will be needed to meet the urgent demands in those areas so long neglected or overdue.

I will also have to admit that I have not been made aware of any fresh or new ap-proaches. Most of the approved grants have gone to support projects that seem to be restatements or updated versions of older programs and have been given to organizations that have developed skill in "grants-manship." I would hope that the funds available might also find their way to support truly different and more imaginative

Engaging qualified staff to administer a program with the broad implications of the Older Americans Act is a difficult task in a field where so little specialization or formal training has existed. Personnel must of necessity come from related areas where the experience and abilities can be translated or converted to meet the demands of the new assignment. I believe the Administration has been fortunate in obtaining the services of well-qualified personnel commensurate with program needs.

Effective utilization of the experience of the career employees or the staff can also be of great assistance in the orientation of new personnel in the continuity of the on going programs previously continued on by the former office and staff on aging.

There is little doubt that the public will be very conscious of "a new day for older Americans" through the theme and emphasis

of "Senior Citizen Month." This reflects a great deal of effort and a job well done. I can add only that if we can develop such widespread acceptance and cooperation for one month we should be able to extend it to

a twelve month program.

I am going to shift to another emphasis of what appears to be happening in the mattional focus for Action in Aging. While we have made great progress in creating a mere independent, dignified and purposeful role for the aging more and more projects seem to be slipping into a poverty oriented setting.

The testimony endorsing the Administra-tion on Aging and the Older Americans Act stresses the needs for a clearly defined focal point for aging at the federal level. A review of some of the grant programs would raise some doubts as to whether this has been

The recent reports of the Special Committee on Aging of the U.S. Senate in those sections on the Office of Economic Opportunity,

says:
"The OEO should recognize before it begins its second year of work the neglect of the elderly now will lead only to costly, hastily improvised crash programs later on and that additional authority might be given to the

additional authority might be given to the OEO for greater service to the elderly." Without passing judgment on the desirability of extending additional authority to OEO for programs for the aging, I think you, as State Executives on Aging, should react in your workshops to consider whether the need is to strengthen it and expand the Advantage and the paddet with the contraction of the paddet with the program of the paddet with the paddet wit ministration on Aging and its budget rather

than diffuse the programs.

It might be noted that the Foster Grandparent program is being funded by OEO and is actually being continued under the auspices of AOA.

Healthy competition often serves a useful purpose but I question the wisdom of dividing authority or creating parallel and con-flicting programs. A greater need exists for coordinating Federal programs in aging than ever before.

May I suggest some of the areas of possible

overlap or conflict:

1. Medicare Alert program was declared to
be a success and the information and techniques applicable to other programs addressed to the effort. I would ask what programs and by whom, remembering the project was funded by the Social Security Administration and the Office of Economic Opportunity with "excellent cooperation by the AOA.

AOA."

2. Home Health Aides with \$2½ million allocated by OBO will be carried out in cooperation with the Public Health Service.

3. The entire field of Consumer Education

o. The course need of Consumer Education for the Elderly and the proposed National Conference on Quackery have great signifi-cance for the older Americans. Where do you at the State level and the AOA sit in to these consumer programs?

4. Under the Neighborhood Facilities Fea-ture of the Housing and Urban Development Act of 1966, space and facilities for various social and recreational activities are included as action centers used by the elderly. At what point in the planning and program-ming do you and the AOA become invloved?

Each of you with your knowledge and re-sponsibilities can do much to keep our sights clear and the channels of authority welldefined. We must not encourage or permit our programs at any level to lead to playing one against the other. We cannot afford to dilute or diffuse the funds or staff. Our job has just begun and we can only achieve our goals on a team approach.

Because I am so deeply concerned that we have delayed so long in implementing the recommendations of the White House Con-ference on Aging and we have an obligation to the 3000 knowledgeable individuals and delegates who contributed so much to the success of that meeting, I am planning a conference with the leaders of the forum in

Providence, Rhode Island.

It would be my hope that we might be able to reappraise action in aging suggested at the White House meeting and develop the "Blueprint for Action" that was promised but never forthcoming after the White House Conference.

Details of my meeting will be available shortly and I hope that many of you will be able to share your time and experience, especially those who participated in the

White House Conference.

Perhaps we can call it a Mid-Decade Prog-Report on the implementation of the White House Conference on Aging recom-mendations. I believe we owe it to those who worked so hard and expected so much of that meeeting.

Not able to forget my role as supporter of the White House Conference on Aging Act or that as Chairman of the Sub-Committee on Appropriations, I believe there is still great mileage in the reports of the Con-ference and a greater realization of the funds that were expended for it.

I leave this as a further challenge to you in your workshops and assure you of my continued interest and support in practical action programs toward achieving a more rewarding role for the aging in the Great Society.

Why Tolerate It?

EXTENSION OF REMARKS OF

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. RUMSFELD. Mr. Speaker, the strike by machinists against five major airlines is now in its third week. It has inconvenienced crippled commerce. many thousands of citizens, and caused untold delays in the functions of government—including the effort in South Vietnam. This strike must not continue.

I believe strongly in the collective bargaining process between labor and business. However, it is apparent to me that this process is not working in the airline strike. There seem to be several alternatives for settling the dispute. They in-

clude:

First, having the full weight of the Office of the President of the United States being thrown into negotiations; second, the passage of legislation in Congress which either would prohibit prolonged strikes involving the transportation and communications industries which are harmful to the national interest, or merely legislation requiring arbitration in this one instance.

Of these alternatives, the former appears to be the most appropriate at the moment. However, if a way to solve this conflict is not found soon, legislation by Congress would appear to be inevitable. I introduce for the RECORD an editorial on this subject from the July 21, 1966, edition of the Washington Evening Star:

WHY TOLERATE IT?

The President's performance, in his press conference remarks on the airline strike, was much less than flattering to the architect of the Great Society.

He began by saying that Secretary of Labor Wirtz had made a strong statement on the strike, which he had. The gist of the Wirtz

statement was that the striking International Association of Machinists was "making a farce of collective bargaining." Labor Secretary denounced the threat to break off negotations and said that the cost to the public of protracted negotiations is "intolerable."

Well, if the cost is intolerable, why tolerate

Because, said the President, there is nothing more that he can do under existing law. He had appointed an impartial emergency board, headed by Senator Morse, which had made an eminently fair proposal for settling the dispute. The struck airlines, said Mr. Johnson, had agreed to accept the proposal. But it was then spurned by the union. more than this, the President seemed to be saying, could he be expected to accomplish?

A reporter asked about an earlier presidential promise to submit legislation to Congress to protect the public from crippling strikes. Well, said Mr. Johnson, he was having a little trouble with that. His experts have been working on the matter but have not been able to some up with anything that would be accepted by the administration, Congress, management and labor. Of course they haven't. And they never will. For the purpose of such legislation must be to protect the public interest, not to make everybody happy-even in an election year.

Presidential hand-wringing may have its place. But not in this situation. What is needed now is to get a bill drafted. A bit of the arm-twisting, for which the President is renowned, would produce one in a hurry.

Tax Concession for Commissioned Officers in Vietnam

EXTENSION OF REMARKS

HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. RONCALIO. Mr. Speaker, I recommend passage of a bill I have introduced today which would increase from \$200 to \$500 the monthly amount of the pay of a commissioned officer in the Armed Forces of the United States serving in southeast Asia, which is exempt from income tax.

Under present law, tax exemptions can sometimes operate to the disadvantage of commissioned officers, as compared with enlisted men. For the enlisted man in the combat zone, there is no limit on the amount of his income which is exempt from the income tax. But there is a \$200 limit to the exemption which a commissioned officer can claim. Thus, there can arise a situation where a top enlisted man would be earning more than \$200 a month, all of which would be tax exempt, while a commissioned officer earning over \$200 a month would be exempt only up to that amount, and would not be receiving the same tax benefit as the enlisted man. This bill would give the commissioned officer an exemption up to \$500, almost obviating any case where an enlisted man would be receiving a better tax break than the commissioned officer.

I commend this bill to my colleagues, as a means of correcting the present inequitable situation.

Black Power

EXTENSION OF REMARKS

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. POWELL. Mr. Speaker, the New York Amsterdam News is the largest Negro newspaper in the largest city in America and is easily one of the most influential newspapers for 20 million black Americans.

In its July 21 edition, the Amsterdam News published a front-page editorial titled "Black Power Is Self-Defense."

The editorial is signed by Dr. C. B. Powell, editor, and James L. Hicks, executive editor, two of the outstanding names in American journalism, black or

This editorial does a great deal, I believe, to clarify much of the misunderstanding on this dynamic new concept in American race relations. I have issued several statements on black power since I first used the term in a baccalaureate address at Howard University.

I think my colleagues will find this reasoned analysis of black power of great interest.

BLACK POWER IS SELF DEFENSE

Black power (Amsterdam News definition) is all acts of self defense by black men to force white city, state and Federal govern-ments to comply with the civil rights laws guaranteed by the Federal Government and the Constitution of the United States.

Can any fair-minded American quarrel with this right of a black American to defend his home, his family, his Church?

We don't think so.

Yet where is there an American who does not recall Medgar Evers being shot dead in the back in the carport of his own home because God made him black?

Who is there who does not recall young Emmett Till being dragged from the arm of his family to be lynched in the dead of night because God made him black?

11

A

R

11

gi

01

re

fo

pi

kı

h

B

th

And who will ever forget four little Negro girls being blown to bits by a bigot's bomb as they sat in their church waiting for their Sunday School lessons . . . all because God made them black?

For 300 years the Negro in America has given his blood, sweat, tears and his very life to the building of this country. Even today, in Viet Nam, although he is only ten percent of the nation's population, he is 14% of our fighting forces over there and is 16% of those dying to preserve democracy.

Does any fair-minded American expect Negroes to endure such injustices indefinitely because God made them black?

We don't think so.

When Negroes make up such a great part of America's war power 12,000 miles from home, fighting to bring democracy to ten Vietnamese, can any American object to a Negro's demands for a decem home, purposeful education for his children a job with a living wage and equality under

In this connection we thank God for the way the Supreme Court is upholding the law and the Constitution under Chief Justice Warren.

The Negro has paid his dues for full equality in America and America owes him debt—and that debt, unless paid, will han over the head of this nation as long as then is an America. There can be no escape from How can the Negro obtain payment of

this debt?

In order to obtain payment of this debt after 300 years of promises the Negro needs the help and strength of all other Americans just as all other Americans need the strength and help of the Negro.

For, despite its racial troubles, the United States is a nation of one people, and the Negro, representing only ten percent of the population, must never be deluded into thinking he can "go it alone" and force his

will on the majority.

Nor can he afford to complacently accept

Nor can he altord to complicately accept persecution and abuse as an "outsider."

The Negro is an "insider." He is an integral part of an indivisible nation and he must never forget it.

He is not alone as an American, and his match before and extra decitive here here.

he is not alone as an American, and his past history and future destiny have been and will be worked out in America through mutual coexistence with other Americans, working for a better America.

Thus the Negro needs the contributions of all black men and all black organizations in working toward his goal. He needs Dr. Martin Luther King of the Southern Christian Leadership Conference who can be comtian Leadership Conference, who can be com-pared to a "modern day Moses" attempting to lead his people out of the wilderness.

He also needs the leadership and contributions of Congressman Adam Clayton Powell; Roy Wilkins of the NAACP; Jack Greenberg, head of the NAACP Legal and Educational Defense Fund; A. Philip Randolph, the elder statesman; Whitney Young of the National Urban League; J. Raymond Jones, the polit-ical leader; Floyd McKissick of CORE; Miss Dorothy Height of the National Council of Negro Women; James Farmer, the ex-CORE leader; Stokely Carmichael of SNCC; James Lawson of the Black Nationalist Movement; Elijah Muhammad of the Black Muslims; and business leaders such as A. T. Spaulding of the North Carolina Mutual Life Insurance Company; T. M. Alexander of Atlanta; Joseph Davis, president, Carver Federal Savings and Loan Association; John H. Johnson, editor and publisher of Ebony Magazine; Carl Mur-phy, publisher Afro-American newspapers, and all other Negroes.

The solution of the Negro's problems also requires the leadership and contributions of that great reservoir of fair-minded white Americans in this country who have already contributed so much to the Negro's progress. We refer to such men as President John-

son, Vice President HUMPHREY, Senators KEN-NEDY, JAVITS, DOUGLAS and DIRKSEN, GOVERNOR Rockefeller, former Mayor Wagner and Mayor Lindsay, and thousands of others including the courageous students, many of whom have

given their lives for the cause.
All these people know that America owes a great debt to the Negro and they are the ones who stand ready to help America pay

What the rest of this nation must now realize is that 22 million Negroes, keenly aware that this debt has been outstanding for more than 300 years, are now demanding

payment, regardless of the consequences.
These Negroes know their rights and they
know the laws passed by whites which guarantee them life, liberty and the pursuit of

They can no longer be fooled by persuasion and clever promises.

For, as Abraham Lincoln has so aptly said:

"You can fool some of the people all of the time, and all of the people some of the time, but you can't fool all of the people all of the time."

Wake up America and remain great!
C. B. Powell, M.D.,
Editor.

JAMES L. HICKS, Executive Editor.

Captive Nations Week

SPEECH

HON, JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. ANDERSON of Illinois. Mr. Speaker, I am proud to have this opportunity to rise in the commemoration of the eighth annual observance of Captive Nations Week. It is a week dedicated to bolster the determination and longing for freedom of the peoples in those many nations which have been tightly yoked under Communist oppression and intolerance. Compassion for the plight of these captive peoples is difficult for us Americans to fully feel, I fear, Mr. Speaker. The heritage of freedom of the press, freedom of speech, and freedom to worship is taken all too nonchalantly nowadays. It is easy for us to let our memories and our hearts gloss over the blood and the sweat and the tears that have embossed the pages of American history with our world fight for freedom.

As a sponsor of House Concurrent Resolution 395, which I introduced on April 3, 1965, to give hope to the Baltic States in their sorrowful predicament, I am convinced that the annual Captive Nations Week can be a highly effective assistance in the movement toward independence in the Eastern European countries.

The various totalitarian Communist governments do not represent the downtrodden, underlying captive nations. A force that can help to penetrate this Communist barrier which separates the captive peoples from the realization of their long quest for freedom is an institution like Captive Nations Week, This week and others like it over the years will give courage to those who might otherwise lose all hope. It will serve as a reminder of freedom where heretofore the only reminder of freedom lay deeply submerged in the consciousness of a generation which once knew the joys of freedom but is rapidly aging under the yoke of totalitarianism.

The purpose of Captive Nations Week, and indeed the purpose of all free nations, should be the construction of a bridge of understanding sympathy. should provide moral support and exert all possible efforts to help set free from Communist colonialism these oppressed and tyrannized captive nations.

When one reads of the shameful accusations by the Sino-Soviets of Yankee imperialism and compares them with the facts that are so incontrovertible, it is perfectly clear that Russia and China are the last two remnants that remain of the world's backward centers of colonial con-

The free world and those in bondage who learn for the free exercise of their former freedoms, look to the United States for leadership. They look upon the United States as their last citadel of hope, their last bastion for the cause of freedom. While we continue to remain

strong, and champion the cause of those who are free and those who yearn to be free, we must continuously assert our leadership in that respect. Such leadership lies not only in the diplomatic and foreign policy efforts of free governments around the world but also in commemorations of freedom such as Captive Na-tions Week. This I believe to be the chief raison d'etre of the principles upon which this great Nation of ours is constructed.

A Letter From Vietnam

EXTENSION OF REMARKS OF

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. MAHON. Mr. Speaker, Mrs. E. C. Hogan, Sr., of Post, Tex., recently sent me a letter which she received from her nephew, Royce S. Bolding, who is serving in the Navy in Vietnam, indicating that she would like to share it with other Americans. The American people owe a great debt of gratitude to the young men who serve our country in Vietnam, and I would like for others to have the opportunity of reading Mr. Bolding's letter also. I am, therefore, submitting ex-cerpts from his letter of July 1, 1966, for insertion in the Congressional Record:

Before I arrived here two months ago I wondered just what the heck did we want to fight over Viet-Nam for! Well, it didn't take this farm boy long to see what we were doing here—all I had to do was look around me—and I was proud of what my country was doing and much more so to be a part of it. These people here have been at a war of one sort or the other for over 30 years and have finally attained a semblance of a partial peace. In other words, they have more free-dom now than they have ever known before. dom now than they have ever known before.
After working with them, visiting in their homes and fighting with them, I marvel at their determination and the great lengths they are willing to go to keep this newly found freedom. I have many Viet-Namese friends and really think they are great people. Of course, all things can't always have only a bright side and it seems to me the home papers always manage to print the gring side.

papers always manage to print the grim side of things. Granted the demonstrations, etc., that we had here not so long ago were truly that we had here not so long ago were truly yery discouraging, but from an eye-witness's viewpoint here is how I look at it. Most of the Vletnamese are very uneducated. By this I mean they do not have the schooling or even the facilities to teach all the pensants here. I find that this class plus teenaged kids were for the most part the main body of these demonstrations. The kids were in it mostly for kicks, as when else would they ever have a chance to throw a rock, break a window, etc. There is no doubt also in my mind that there were North Vietnamese inspired to add to all this.

Just a little on the makeup of the land here. There are over 2,000 miles of navigable here. There are over 2,000 miles of navigable waterways in the delta alone during the monsoon season, and most of the land is either steaming hot jungles, rice paddies or mountains. Life is sheer hell here for the American, who is so used to his plush living, eating, and in general all his habits that he really suffers. However, after seeing one of these little kids break into a big smile and say, "You number 1 G.I.," It is worth every-

thing one has to offer. I believe in every-thing that I am doing and will give my all as I feel this is a true threat to my family's freedom as well as my country's, and I will defend our flag as long as I am able and will always feel I have saved my children from going through the "hell" these kids are here.

Defense Pattern Alarming

EXTENSION OF REMARKS

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. LIPSCOMB. Mr. Speaker, increasingly expressions of concern are being heard across the Nation concerning the adequacies of defense planning by the administration.

One such expression of concern is contained in the July 20, 1966, issue of the

Glendale, Calif., News-Press.

Under leave to extend my remarks, I submit the Glendale News-Press editorial for inclusion in the RECORD. I believe the position taken in the editorial and in the comments it contains will be of interest to the Congress:

NEW SHORTAGE IS OLD STORY: DEFENSE PATTERN ALARMING

Testimony of Gen. James P. McConnell, Air Force chief of staff, that the Tactical Air Command is down to "bedrock" in strength sends a ripple of alarm through the nation.

General McConnell says the shortages are so serious that trouble elsewhere than Viet Nam would result in a call-up of the Air National Guard and disrupt vital training.

It is not a new story so far as the Defense Department has been concerned recently.

There have been persistent and verified shortages of vehicles, helicopters, aircraft parts, certain weight bombs and even clothing in Viet Nam. A Senate subcommittee, after a study, listed 29 items in short supply in the critical war area.

The shortages were verified after vehement dissent from Secretary of Defense Robert Mc-Namara, who labeled such information "baloney." "Never have ground operations been so well supported by air," he said. True, perhaps, but an evasion of the fact that sup-

plies were short.

Later, after newspaper reports and investigations by members of congress it was learned that fully half of the four U.S. combat divisions in the United States were not ready for combat, but engaged in training. All "ready reserve" battalions were earmarked for Viet Nam or other U.S. commitments.

Then, at the height of a crisis in the North Atlantic Treaty Organization, the secretary of defense withdrew 15,000 troops, mostly highly skilled technicians, from Europe without first consulting our allies. The withdrawal came shortly after his comment that it is "absolutely false to say we are overex-tended and cannot meet our military re-quirements."

Additionally, of course, Congress and key military leaders are concerned that there is no anti-missile defense in operation, that no program exists for a follow-up bomber to the obsolescent B-52, at cutbacks in the Strategic Air Command and refusal of the Defense De-partment to construct nuclear frigates authorized by Congress to speed a nuclear surface Navy.

The pattern is clear evidence that, regard-less of Mr. McNamara's background of man-

agement, the matter of defense is too critical to be left to the decisions of a single man. one should have this kind of Rather, defense should be a co-operative effort that includes Congress and the experienced wisdom of our military leaders.

Only time and a careful analysis of the secretary's claim that he has saved \$14 billion in defense over the last four years will prove whether this is fact.

It can be said now, however, that "savings" are a misnomer if the nation's defenses have been weakened or a war effort is slowed down by a lack of supplies.

Wars cannot be fought with short supplies and a missile that has not been built cannot

be fired.

How the Vietnam Problem Was Neatly Solved, or * * *

EXTENSION OF REMARKS OF

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. CARTER. Mr. Speaker, the Saturday Evening Post often carries thought-provoking articles. In the issue of July 30, 1966, I found this interesting observation of the Vietnam situation, written by Russell Baker:

THE HUMAN COMEDY: HOW THE VIETNAM PROBLEM WAS NEATLY SOLVED, OR * * * (By Russell Baker)

Until 10:32 p.m. when the direct phone from Saigon rang in the White House, September 17, 1971, had been just another day in Washington.

Once again President Johnson had urged the nation to be patient about the Vietnamese war. Secretary of Defense McNamara that afternoon had issued his semiannual declaration that the Viet Cong were no longer winning.

At the State Department, Secretary Rusk had assured the press that despite widespread riots and library burnings, there was every reason to believe that Gen. Quang Cal Quec, who had seized power three weeks before, would at last give South Vietnam a long period of governmental stability.

Mr. Rusk said that Gen. Quec might even agree soon to take some of the South Vietnamese army out of pagodas and put them into battle alongside the Americans.

The White House phone call was from the American ambassador. "General Quec wants an island," he said.

The presidential jet touched down at Hono-lulu 35 hours later. "What's this about an island?" the President asked Gen. Quec.

While the President and his advisers listened, the general explained. On the night of September 16, unable to get to sleep, he had slipped down to the kitchen of the presidential palace for a midnight anack, only to discover that the Viet Cong terrorists had been there just minutes before him and raided the icebox.

To govern a country under such conditions, he reasoned, was impossible. can't drive outside town without being kidnapped," he said. "The pagodas are packed with politicians, and there are so many overpaid GI's in Saigon that a premier can't even get a bad table in a restaurant anymore without slipping some plasters to the maitre d'. The trouble is that South Viet-nam is located in the wrong place."

"Keep talking," said the Fresident.
"I have loaded every available sampan
with elements of my army," Gen. Quec said.
"I propose to move offshore to the Republic

of Nationalist Vietnam, where we can rally our strength for a victorious return to the mainland.

"And just where is the Republic of Na-tionalist Vietnam?" asked Mr. Rusk. Gen. Quec smiled. "How about Catalina

Island?" he asked.

Next morning, while Gen. Quec inspected Waikiki beach, the President's advisers came to grips with the question of Nationalist Vietnam. They stayed at grips all day, all the next day, and all through the day after that.

On the morning of the fourth day their conference was interrupted by Gen. Quec with the announcement that the first sampans carrying his army has beached on the island of Mai Tai, 60 miles off the Vietnamese coast, had seized Cum Quat, the capital, and had proclaimed it the seat of the Republic of Nationalist Vietnam.

"If you will excuse me, I must now meet with the press and vow to return to the mainland one of these days," Gen. Quec said.

tary Rusk. "Look at what happened to Chiang Kai-shek." "It will never work, General," said Secre-

The papers reported that Gen. Quec excused himself and exited laughing.

Instead of flying immediately to Cum Quat, Gen. Quec accepted a series of speaking engagements in the United States, where news of his stirring pledge to return to the mainland one of these days had made him an overnight hero.

Landing in San Francisco to a tumultuous reception, Quec promised that if the United States would only unleash him, he would send the Nationalist Vietnam Army lunging across of Gulf of Tonkin to provide military advisers to American armies and clear the Communists off the mainland.

For that eventual triumph, he told a joint session of Congress, the Republic of Nationalist Vietnam on Mai Tai would require massive American aid. Cum Quat, after all, was still only a provisional island town, he noted. It needed new factories and bomber Vast sums would be required to build a Cum Quat Hilton and air-condition Cum Quat's bars for U.S. military, diplomatic, and aid teams when they arrived to defeat Com-

Meanwhile, at the White House, the President's advisers struggled with the Mai Tai problem. "The question," said a man from Texas, "is whether we are are going to recognize Mal Tal as Vietnam."
"Unthinkable." said Secretary Rusk. "Mai

Tai is only a two-bit island sixty miles off the Asian mainland."

"Impossible," said Secretary McNamars. We already have a million-and-a-half American soldiers tied down on the mainland."

The man from Texas winked. "Suppose we stopped recognizing Vietnam as Vietnam," he said. "Suppose we said that the real Viet-nam is on Mai Tai. What do we do with our "Well," said Secretary Rusk, "since we

are fighting to preserve the freedom of Viet-nam, we would, of course, have to locate the soldiers wherever Vietnam may be."

"That would mean taking them off the mainland and putting them on Mai Tai," said Secretary McNamara.

Next day the United States announced that it had recognized the Republic of Nationalist Vietnam on Mai Tai and did not recognize anyplace else that called itself Vietnam.

At his news conference Mr. Rusk was asked if Americans would continue to fight on the mainland. "Since we do not recognize any Vietnam on the mainland, your question is absurd," he explained. "Obviously an army cannot preserve the freedom of a place that does not exist."

Which, as we all know, is how the fighting in Vietnam—mainland Vietnam, that is—finally ended. For a while it was ex-pensive maintaining the American army on

Horton Urges United States To Heed Prime Minister Pearson's Warning on Weakening NATO, Support for Atlantic Union

> EXTENSION OF REMARKS OF

HON. FRANK HORTON

OF NEW YORK IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. HORTON. Mr. Speaker, this will be the third time this year that I have stood before my colleagues in this Chamber to discuss the urgent need for American initiative in the Atlantic alliance. In the past few months, with NATO undergoing turbulence and change, our foreign policy makers have responded passively at best to the initiatives of European governments. Our most recent move was the announcement of a wholesale withdrawal of U.S. military units from France. There is no evidence that our Government views the obvious weakening of the alliance with any appropriate degree of concern. Even more alarming is the fact that outside of Congress, no one in Washington has taken any serious steps to plan for strengthening the alliance.

I believe that our leaders have made a tacit decision to step down from active and enlightened leadership of the North Atlantic nations. This fact became clear when the administration failed to react to Canada Prime Minister Pearson's speech in Springfield, Ill., last month, which was highly critical of America's failure to lead the alliance toward eventual Atlantic Union. Mr. Pearson said:

France and not only France feels that Continental Europe is now strong enough to be given its rightful share in the control of the policies of the alliance.

Despite the fact that the United States of all nations should be aware of the changes in the international order since 1945, our NATO policies have remained nearly unchanged since the alliance was founded.

I am disturbed not only because there was no administration response to the Prime Minister's address, but also be-cause Mr. Pearson hit on the weakest points of our Atlantic policies, and suggested the best possible course of action to strengthen the alliance. Our failure to respond indicates to me a lack of interest in improving the alliance. How can we while we are pursuing a conflict in southeast Asia to contain communism,

fail to bolster the NATO organization which has been so successful in keeping Western Europe free without war?

My good friend and colleague, Congressman Paul Findley of Illinois. thought enough of the Prime Minister's address to insert it into the CONGRES-SIONAL RECORD. I want to add my own support to Mr. FINDLEY's proposal to actively consider the concept of Atlantic Union as a solution to the present trend of the NATO Alliance. I have introduced House Joint Resolution 999 to provide for U.S. participation in an Atlantic Union Convention with delegations from the other North Atlantic countries.

I think the need for such a move could not be stated more meaningfully than it was in the Prime Minister's own words:

I believe only the United States can give the effective lead required for Atlantic unity. Without her active support nothing can be done, at least on the broad front which is essential. Without her leadership we will be driven back to a national or continental solution for the organization of security and for progress.

We cannot in conscience let this matter drop with passive American gestures at rebuilding the alliance. Only a few nights ago, I spoke about the need for new dimensions in our Atlantic policy to a large audience in Rochester, N.Y. Their concern for this matter was evident, as all Americans who cherish the unity of the free world are concerned about the weakening trend in our ties to Western Europe.

I urge my colleagues to study this matter closely, and to join Representative FINDLEY and myself in demanding an appropriate and constructive response to Prime Minister Pearson's remarks on the future of NATO.

At this point in the RECORD, I want to include three newspaper articles which point up the need for new directions in our free world foreign policy. The three newspapers, the Montreal Star, the New York Times, and the Baltimore Sun, are to be commended for their responsible reporting on this issue:

[From the Montreal (Canada) Star, June 16, 1966]

PEARSON SPEECH: WHITE HOUSE SILENCE FOLLOWS CRITICISM

(By Raymond Heard)

Washington.—Diplomats and interested members of Congress can't understand it. Leater Pearson came to the United States Saturday to attack American "domination" of the Atlantic Alliance. Yet there has been no reaction to the speech from the Johnson administration, which is very sensitive to criticism from its foreign friends.

However, it is predicted that the speechregarded by many here and in Ottawa as one of the most outspoken anti-American decof the most outspoken anti-American declarations of Mr. Pearson's career—will have a delayed action effect. Sooner or later, the word will seep through to Lyndon Johnson that his "good neighbor" is behaving toward Washington rather like the Romanians are behaving toward Moscow.

As it is, to generate wider interest in the speech, Republican representative Paul Findley of Illinois has inserted the text into the Congarssional Record. Mr. Findley has also

Congressional Record. Mr. Findley has also told this reporter: "There should have been a full debate here on the prime minister's speech. His remarks were both plain and wise. I can't recall an occasion when a foreign head of government has spoken quite so critically while on American ground."

FINDS SYMPATHY

Sen. Frank Church, the Idaho Democrat who went to Europe last month to inquire into the NATO crisis for Sen. J. W. Ful-BRIGHT'S Foreign Relations Committee, has asked for a copy of Mr. Pearson's text. When CHURCH conducts hearings into the NATO question later this month, the Pearson statement is expected to figure prominently in the discussion. For Mr. Pearson has suggested (among other things) that de Gaulle's complaints about U.S. domination of the alliance may be quite valid after all, and Sen. Chunch, too, is reported to agree that the French president may have a point.

There is, meantime, some evidence that President Johnson has neither seen the Pearson speech nor heard about it, that the state department or the presidential aides, in the words of one Capitol Hill source, are hiding

it from his view.

At a White House ceremony Tuesday for At a White House ceremony Tuesday for the signing of a bill authorizing the construction of a new dam for the Columbia River project, the president referred to Mr. Pearson as "my good friend." Johnson-watchers say that if the president had been aware of what Mr. Pearson had said in Springfield, Ill., Saturday he would not have paid him such a warm tribute. This may sound petty; but that's the way LBJ operates. In his speech to the Atlantic Federal Union, the prime minister placed a major share of

the prime minister placed a major share of the blame for the current disarray of NATO on the United States rather than France, which the Johnson administration has cast

in the role of "bad guy."

"France," the prime minister said, "is not, has not, and will not be satisfied with an Atlantic organization, or an Atlantic alliance of independent states dominated by America." His choice of the term "dominated" is regarded as very strong, at least for a pro-fessional diplomat of Mr. Pearson's expe-

Mr. Pearson made another remark that is sure to gall the president when he equated Washington's dominant position in NATO with that of Russia in the Warsaw Pact.

EARLIER TIFF

The total lack of an administration response (even in the way of inspired reports quoting "administration sources") to the Pearson speech is all the more surprising when viewed in the light of the Johnson-Pearson tiff over Viet Nam tactics at Camp David 14 months ago. The Prime Minister offended Mr. Johnson then by suggesting, ever so discreetly, that bombing of North Viet Nam might be suspended at "the right

If Mr. Pearson's remarks on Viet Nam last year gave comfort to the "doves," his Spring-field speech about NATO has encouraged those in Congress, most of whom appear to be Republicans, who favor an Atlantic union and a more "realistic" attitude toward de

Rep. Finding, who, as representative for Springfield was one of Mr. Pearson's hosts Saturday, is dedicating himself to arguing the need for an Atlantic community bound together with federal ties. Utopian as his goal may seem, he counts such major Re-publicans as Dwight Eisenhower and Barry Goldwater among his supporters, as well as the former NATO commander, Gen. Lauris Norstad.

GOP SUPPORT

Mr. PINDLEY finds too, that Republican support in Congress and at the grass-roota level, even in the supposedly isolationist Midwest, for his Atlantic dream is growing fast as the impasse with France escalates. On Saturday Mr. Pearson paralleled the view of the Findleytic Republicans when he called on Washington to take the lead in establishing a closer Atlantic alliance, less dominated by U.S. authority. Perhaps this is the reason for the strange official silence

of the Johnson administration to Mr. Pearson's provocative remarks.

The president may not have been informed of the import of Mr. Pearson's speech. But there are others in the administration who fear that to answer the prime minister would give the Republicans ammunition to sugest that Mr. Johnson's leadership of the West has become so poor that even America's closest friends, the Canadians, are complaining.

[From the New York Times, June 12, 1966] NATO SUBSTITUTE URGED BY PEARSON—SAYS UNITED STATES SHOULD SHOW WAY TO RE-VITALIZED ALLIANCE

SPRINGFIELD, ILL., June 11.—Prime Minister Lester B. Pearson of Canada urged here tonight that the United States lead the way in establishing a new, revitalized Atlantic alliance to replace what he described as the outdated North Atlantic Treaty Organization.

Whether or not the organisation survive the crisis precipitated by the French military withdrawal, he said the Atlantic powers must move forward to "an international community with common political institutions."

"An alliance for defense only is an anachronism in the world of 1966," the Prime Minister declared.

In an address purpose for an Atlantic Union dinner in the Leland Hotel, Mr. Pearson obliquely critized the United States for not acting sooner to alter "an Atlantic alliance of independent states, dominated by America."

"France, and not only France, feels that continental Europe is now strong enough to be given its rightful share in the control of the policies of the alliance" declared the Prime Minister, who won the Nobel Peace Prize in 1957.

Earlier in the day, Mr. Pearson received an Atlantic Union at a ceremony in New Salem State Park, where the village of New Salem has been restored as it was when Abraham Lincoln ran a store there. The award was presented by Clarence Strett, president of Pederal Union, Inc. This is a private or Pederal Union, Inc. This is a private or reganization that has worked for many years to bring European and North American states together in federation. Christion Herter, former Secretary of State, also was given an Atlantic Union peace award. The late Adlai E. Stevenson, who was the chief United States delegate to the United Nations, also was honored with a peace award.

CITES DOUBT AND DISTRUST

Prime Minister Pearson said that the Atlantic powers had worked together enthusiastically in the trying days after World War II but had developed "impatience and doubt and some distrust" after the recovery of Europe. NATO, he suggested, had fallen victim to "intertia and vested interest in a new status quo."

He said Canada, since 1964, had tried without success "to find anyone... on either side of the Atlantic... prepared to specify what should be changed (in NATO)."

Change at last was occurring only because "abrupt and unilateral action by France thrust change upon us," he said.

Mr. Pearson disagreed with the nationalist motives of President de Gaulle in taking France out of the defense alliance. But he suggested it was "dangerous" to rail at General de Gaulle for demanding for France "a position in the Atlantic alliance equal to that of Great Britain and somewhat closer to that of the United States." Rather, Mr. Pearson said, the Atlantic power must find a way to enable France to participate "in the march to greater not less Atlantic unity."

The way, he suggested, would be to build toward Atlantic unity by first giving Europe "more control . . . of its direction and its character." "I realize," he said, "that the united Europe would, in its political, economic and military decisions, be more independent of Washington than is the case now.

"But what is wrong with this?" he asked.

A realistic approach to Atlantic union, he said, would be to accept a united Europe, Britain, "not as an obstacle to, but as a stage on the way to Atlantic union.

stage on the way to Atlantic union.

"If we cannot at present achieve a pattern of Atlantic federalism," he said, "it may be necessary to acknowledge the realities of the situation and, as North Americans, work with Europeans in the hope that, in the longer sweep of history, both European and North America will come to realize that their respective affairs can best be harmonized in a wider union.

"If an intervening European stage is necessary, however, it must be taken not in continental isolation but in close Atlantic cooperation and understanding.

cooperation and understanding.

He added that he felt that "continentalism, either of the European or North American variety is not the answer."

Finally I believe "only the United States

Finally I believe "only the United States can give the effective lead required for Atlantic unity," he said. Without her active participation and support nothing can be done, at least on the broad front which is essential. Without her leadership we will be driven back to a national or continental solution for the organization of security and for progress."

[From the Baltimore (Md.) Sun, May 30,

PANEL URGES COMMUNITY OF DEMOCRACIES— STATE DEPARTMENT HELD SLOW TO FACE NEED FOR LARGER UNITY

(By Joseph R. L. Sterne)

WASHINGTON, May 29.—North American and European countries were urged today to give up part of their national sovereignty in building an Atlantic community that eventually could grow into a worldwide "community of democracies."

The National Planning Association said Americans—and the State Department—have been too slow in facing up to the positive requirements needed in the construction of a more secure order.

This group of influential leaders in business, labor, agriculture and the professions contended that the Atlantic nations must be prepared to create a common organization that could integrate their foreign and defense policies.

NO VETO POWER

Following a pattern established by the six-nation European Common Market, decisions could be made on the basis of a "weighted vote" that, in effect, would deny the United States the veto power it now holds in the United Nations and NATO.

At the outset, the proposed Atlantic Community Organization would have the powers necessary to raise appropriations to carry out foreign and defense policies.

Economic integration and the knotty problem of freedom of migration, would come later, under the National Planning Association formula.

In addition, the Atiantic community would not be an exclusive "club." As conditions permit and agreement is reached, democracies in Africa, Asia, and Latin America would be added.

PEDERAL PATTERN

The association said the proposed international organization should be based upon the Federal pattern followed when the thirteen American colonies formed the United States.

Certain powers now exercised by the individual nation-states would be delegated to the "community," an agency with supranational powers.

In a report entitled "Strengthening the

Free World through Steps toward Atlantic Unification," the N.P.A. board and its standing committees argued that the "limitations" of the nation-state are obvious in a world threatened by nuclear weapons.

MORE EVOLUTION NEEDED

The United Nations and NATO were expressions of a growing trend toward "inter-dependence" and "community," it said, but more "evolution" is needed.

"Along with the feeling of loyalty Americans have always had toward their city or town, their state and their country, they will have to develop an additional loyalty toward a larger political entity," said the report.

"For the people of the United States, however, the price will not be paid in the loss of their sovereignty. In a democracy, sovereignty is the possession of its citizens: the governments they create are only their agents...

"The sovereign citizens of a democracy can entrust certain functions to entities other than national governments without 'sacrificing' or 'losing' any of the sovereignty they possess.

possess.
"They lose nothing, and may gain much, by delegating powers to a new agent when the existing agency cannot adequately serve their interests in peace, freedom and economic welfare."

The National Planning Association said an integrated Atlantic community could be created "around" France if President Charles de Gaulle continues his nationalistic policies.

Once Europe and North America are united, it said, there will be a sufficient concentration of military power to secure peace and a sufficient concentration of economic strength to bring real improvements in the living standards of less developed nations.

At a press conference last week in which today's report was discussed in advance of publication, top officials of the N.P.A. expressed disappointment over the State Department's attitude toward Atlantic community.

Eimo Roper, the public opinion expert and a member of the association's board, summarized the department's attitude as: "It's a fine idea, but not now."

Roper noted that Senate support for the concept is rising.

Airline Strike

EXTENSION OF REMARKS

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1966

Mr. QUILLEN. Mr. Speaker, "Public patience is wearing thin," so ends the following editorial from the Bristol, Tenn., Herald-Courier, which speaks out on the present airline strike.

Everyone's patience is being stretched to its limits by this disregard for the public welfare. I do not wish to see the Federal Government take control of the airlines, but I do urge that lawful means be used to end this strike, and, if necessary, that stricter laws be enacted to prevent this from happening again.

I wholeheartedly agree with this editorial, and I am pleased to insert it in the RECORD:

STRIKES ARE WEARING PUBLIC PATIENCE THIN
Do you have the feeling that the public

is sick and tired of being the whipping boy in management-labor disputes? The airline strike, for example,

Or the New York subway strike.

Or transportation strikes. Or any work stoppage which poses a threat to public health or security or seriously affects public convenience or economy.

convenience or economy.

Are you wondering why some way can't be found to put a stop to such nonsense?

This is not to suggest that all strikes should

This is not to suggest that all strikes should be outlawed. Labor has the right and the obligation to stand up and fight for what it believes it should have. So has management. And the strike is a key element in any such dispute.

The effects of some strikes are largely confined to those directly involved. Other strikes, unfortunately, work real hardships on thousands and even millions of innocent

We already have laws which are supposed to prevent this. They seem to be blandly, even enthusiastically, ignored. They also seem to be unenforceable.

Surely, some way can be found to handle a problem as big as this.

And the sooner, the better. Public patience is wearing thin.

EXTENSION OF REMARKS

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. MONAGAN. Mr. Speaker, by signing the freedom of information bill, the Pittsburgh Post-Gazette declares, President Johnson established in law the important principle of the public's right of access to nonsensitive government data.

Its effectiveness will depend on the spirit in which the law is accepted, the newspaper comments.

In this regard, the President has called upon members of his administration to honor its intent even before it takes effect a year hence.

I include the Post-Gazette editorial in the Record:

WEAPON AGAINST SECRECY

President Johnson's signing of a freedom of information bill establishes in law the important principle of the public's right of actess to certain government data and provides a hitherto unavailable method of forcing disclosure.

The new statute climaxes long efforts by the press and a few members of Congress to devise a means to keep government officials from arbitrarily withholding information in order to cover up mistakes or wrongdoing and thus avoid embarrassment and criticism. It requires federal executive agencies to disclose to inquiring citizens or reporters information which they have heretofore been able to keep secret under existing ambiguous rules. Though certain kinds of sensitive information may still be withheld under the new act, the measure provides for judicial review of government decisions to refuse disclosure.

Whatever the merits of the law, however,

Its general effectiveness will still depend on the spirit in which it is accepted by government officials. President Johnson has called upon members of his administration to honor the intent of the legislation even before it goes into effect a year from now. The months ahead, therefore, may reveal a fresh respect for freedom of information. But the real test will not come until somebody in government faces possible embarrassment and the law can be invoked against him.

Introduction to Newsday Editorial

EXTENSION OF REMARKS

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. WOLFF. Mr. Speaker, recent events have sharpened focus upon the glaring weakness of present Federal and State laws regulating the accounting of campaign funds. Last Monday, Long Island Newsday ran an editorial which endorsed President Johnson's proposals for stricter regulation of campaign spending. Under unanimous consent, I include this succinct editorial in the Record:

PAYING FOR POLITICS

It takes more than ability, integrity or even a charming smile to win election to public office. It takes money. And as campaigning grows more and more expensive, the need for answers to some of the questions surrounding campaign financing grows more and more urgent.

The questions are both ethical and practical. How much should a candidate spend? From whom should he solicit funds? What accounting of campaign funds should be rendered? It is not difficult to pose the questions. Framing the answers is a different matter. The lawmakers in 45 states have grappled with the problem and produced 43 different attempts to solve it. The result, according to a study done by the Citizens Research Foundation under a Carnegie Corporation grant, is a "hodgepodge."

The state laws, in general, are riddled with

The state laws, in general, are riddled with loopholes, inconsistent, unenforceable and unenforced. New York State, for example, requires that reports on campaign spending be filed with the secretary of state. But the vague rules on spending limitations are easily evaded through the creation of exempt committees. And the filing of the reports has become a charade. The reports are generally always tucked away in a filing cabinet and forgotten. For all the good it does, the law might as well require the candidates to certify their purity with an accounting engraved in the sir.

At the federal level, the situation is just as bad. The Corrupt Practices Act of 1925 requires House and Senate candidates to file campaign spending receipt and expenditure reports. But the act is so written that it is about as effective in catching corrupt practices as a fish net is in catching the wind. The act is a filigree of loopholes, including one that requires the candidates to report only that spending done with their "knowledge or consent."

This makes it unnecessary for many to try to evade the act. The great majority of candidates file incomplete reports secure in the legal fiction that the committees working in their behalf did so without their "knowledge or consent."

With such a so-called "law" on the books, it is easy to understand what President Johnson meant in May, when in proposing a new campaign expenditure law, he said: "... for decades we have tolerated the growth of seeds of cynicism from the underbrush surroundour present method of financing political campaigns."

Johnson's proposal, now in the Congress, has dual goals. It seeks stricter regulation of campaign spending and it seeks to aid the candidate who, because of a modest income might either have to forgo running for office or incur "obligations" to wealthy supporters. The bill provides for a nearly complete disclosure of the sources of campaign funds in both primary and general elections, puts a \$5,000 limit on contributions from a single source to a single candidate and seeks to encourage small contributions by enabling donors to claim tax deductions of up to \$100. The President's proposal has merit, and it deserves quick action in the Congress.

On the state level, a bill that attempted to put a ceiling on burgeoning campaign expenses passed the Assemby this spring and then went to a quiet death in a Senate committee. The bill had merit in that it set a limit of 10 cents that could be spent for each person in the area in which a candidate was running. It should have been passed.

What New York and the nation really need are full disclosure laws, without loopholes and with teeth.

Captive Nations Week

SPEECH

OF

HON. RODNEY M. LOVE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. LOVE. Mr. Speaker, I am saddened that it is necessary for us to observe Captive Nations Week. In this age, human slavery should be an anachronism—a condition of the forgotten past. Although we wish that all men were free, millions live enslaved.

In 1917, the Kerensky government of Russia fell victim to the Communists. Since then, the shackles of totalitarianism have bound 22 nations in Eastern Europe, Asia, and the Caribbean. The once free people of Albania, Armenia, Bulgaria, Mainland China, Cuba, East German, Estonia, Hungary, Latvia, Lithuania, North Vietnam, Poland, Rumania, the Ukraine, and several other East European nations no longer breathe the sweet air of liberty. In not one of these countries did the Communists gain power through free elections. Subversion, deception and "Gestapo" tactics are their tools for conquest. In sharp contrast, the Western nations have freed over 50 former colonies since World War II. Only a blind fool could mistake the Communists for anything but imperialistic aggressors.

Since 1958, our Government has set aside the third week in July as Captive Nations Week. First, we should observe this week to mourn the dead who lost their lives attempting to throw off the chains of captivity.

Even more fervently, we mourn the living who yearn to be free. To these millions who look toward the West as a beacon torch of liberty, we must continually renew our pledge that we refuse to accept their plight as a permanent condition. We must demonstrate that self-determination is not a hollow cry,

but a guiding principle.

I hope that the people of the emerging nations, in their search for freedom of the press, religion, assembly, and speech, listen attentively to the cries of these brave people. It should be difficult for any man to ignore the exodus from Communist East Berlin which had to be stopped with barbed wire, machineguns, and a forbidding wall. If the newly independent countries fail to heed such signs, the destiny of mankind will rest on shifting sands.

Today, it is impossible to disconnect foreign policy and domestic happenings. The events occurring in our cities and towns are seen by the whole world. The premises of the Constitution and the Declaration of Independence must be

fulfilled as soon as possible.

In the long run, our ability to aid and succor fellow men of the world in search of freedom is dependent on our own vitality. The dignity and worth of free men must be preserved. The shame of liberty must never be extinguished.

Thomas Jefferson's historic statement should become a universal oath: "I swear before the alter of God eternal hostility to every form of tyranny over the mind of man."

Jacksonville Harbor Grows—Funds Needed To Meet Defense, Economic Demands

EXTENSION OF REMARKS

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. BENNETT. Mr. Speaker, Jacksonville, Fla., is a key city in the Atlantic coast defense of our country, as the home for three important naval installations. It is also the exit to the Atlantic for the St. Johns River, a vibrant and pulsing waterway serving millions of Americans, and eastern border of the Cross-Florida Barge Canal.

In the last year or two, through private initiative and local tax funds, the port of Jacksonville has developed into a major transportation center. The Jacksonville Port Authority is the local group with prime responsibility for the growth of the harbor and its facilities to serve the Navy bases and the booming Florida economy, including the latest discovery of huge phosphate deposits in North Florida. With the completion of the Cross-Florida Barge Canal, even greater defense and business prosperity will evolve.

To meet these demands for the present and the future, the Jacksonville harbor must be deepened from 34 feet to 38 feet, and eventually greater depths, to handle the proposed new tankers that will have to service the Navy facilities and the businesses in industrial north Florids. The deepening project, totaling over \$8

million, has been authorized by Congress. An item of \$80,000 for preconstruction planning for the deepening of the harbor is now pending in Congress to begin this highly significant local-Federal project, which will benefit millions and which I hope will be approved.

I include in the Congressional Record a news report from the Journal of Commerce, Tuesday, July 19, 1966, which tells of this fine effort by Jacksonville and Florida citizens, who are utilizing the port of Jacksonville to the utmost:

NEW LOOK FOR JACKSONVILLE PIERS

Rebuilding of Jacksonville's antiquated Talleyrand Docks is to get under way about Aug. 1, with funds coming from a \$25 million issue of general obligation bonds authorized by the voters of Duval County last November.

This will be the biggest project to date for the fledgling port authority. The Talleyrand Docks, formerly owned by the city, have been in a state of deterioration for almost 30 years a spokesman for the port agency said.

TO REPLACE OLD PIERS

In the rebuilding project, three old finger plers with small cargo sheds will be replaced by a marginal wharf with 4,600 lineal feet of berthing space backed up by four large warehouse-transit shed buildings, each 400 feet

Two of the six sides of the three existing plers have been unoperative for some time. Rebuilding the terminal will use up an estimated \$15.7 million of the bond money. This amount was taken by a syndicate headed by Barnett First National Bank of Misaksonville and First National Bank of Misaki, at a rate just under 4 per cent, with the Bankers Trust Co. of New York designated as payment agent.

"We look for actual work to begin around Aug. 1," said David A. Watts, port authority chairman and vice president of the Strachan Shipping Co. "Tearing down the old and reconstruction of our new docks will be done in a manner to allow continued operation of parts of the facilities at all times.

"In fact, taking over a pier recently released back to us by Sea-Land Service, Inc., makes it possible for us to continue operation with never any less space than we had in

the past year."
Sea-Land formerly occupied one of the Tallyrand berths, but now has relocated at a new berth in Jacksonville. Its new terminal includes a shoreside crane and marshalling area for 350 trailer-type containers.

FUTURE PLANS

The port agency expects to sell the remaining \$9.3 million of the bond issue at some future date to develop 1,500-acre Blount Island for port purposes. The island is several miles close to the open sea than are the Talleyrand Docks.

In its long-range planning, the port authority believes that something close to \$100 million will be needed to rebuild and expand Jacksonville port facilities to handle the volume of business expected in the future, especially after completion of the Cross-Florida Barge Canal.

However, engineers and officials are convinced that the \$75 million needed after the current bond issue is exhausted can come from part earnings or through revenue from the control of

Meanwhile, David W. Jackson, treasurer of the Jacksonville Port Authority and a charter member of its board when it was established four years ago, has been named a director of the Canal Authority of the State of Piorida, replacing the late Harry W. Saunders of Port St. Joe.

The state body is in charge of construction of the Cross-Florida Canal. Mr. Jackson is staging manager for heavy equipment

for B. B. McCormick and Sons, president of Jackson Marine Sales, and a former executive vice president of Gibbs Corp.'s Southside Shipyard.

Strange Words From Vice President

EXTENSION OF REMARKS

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1966

Mr. ROUDEBUSH. Mr. Speaker, irresponsible statements by high Federal officials during the recent spate of racial riots throughout the country have dismayed many Americans.

The Richmond Palladium-Item, published in Richmond, Ind., commented editorially on July 24, concerning the inflamatory tirade delivered recently in New Orleans by the Vice President.

The Palladium-Item sums up in a concise manner the damage caused by such statements, and draws some other conclusions that should be considered by every Member of Congress.

The editorial follows:

STRANGE WORDS FROM VICE PRESIDENT

"I've got enough spark left in me to lead a mighty good revolt under those (slum) conditions."

The speaker was the vice president of the United States talking in New Orleans before the National Association of Counties.

HUBERT HUMPHREY, the man who stands only a heart beat from the presidency, indirectly was justifying the burning, looting and killings that have reached epidemic proportions in cities across the face of this riotscarred nation.

He had nothing to say about the store owners, Negro and white, who were wiped out by looters. He expressed no remorse at the innocent victims of mob savegery.

The vice president could only say that the rioters were frustrated because, unlike those who had worked hard to save money and enjoy the good things in life like swimming pools, they had to do without.

"That's all over," he said.

Later in the week, when repercussions began to arise over HUMPHERY's inflamatory remarks, the vice president did not deny what he was quoted as saying, but he insisted that he also had said that "we cannot condone violence, lawiessness and disorder."

This puts the vice president in a strikingly contradictory role. How can he speak in one breath about how he could "lead a mighty good revolt" and then turn around and say that "we cannot condone violence?"

The President has established a blue-rib-

The President has established a blue-ribbon committee to study the causes and preventions of crime. Riots, of course, are a form of mass crime against society and its laws.

HUMPHRET has come up with a solution to prevent riots. He said everybody should get subsidized housing so that, regardless of their personal efforts, they can live in nice homes, unless "you want violence in America."

unless "you want violence in America."

One theory is that if you put a man in a good house he, too, will be good.

What about the gangs of young affluent punks who rumble nightly on the streets of major cities of America? They have been given all the advantages of money, and like the slum rioters, tear at the social fabric of the country.

Could it possibly be that punks and rioters rampage and destroy because they have never known self-discipline or respect for people and property, law and order? Is the dole, whether an unearned allowance or federal subsidy, the answer to a lack of civilized

The riots, lootings and other forms of violence going on now in one city after another, under the guise of seeking "civil rights," have been deplored by wiser leaders of the Negro

One might expect the more militant seekers of "black power" to condone this kind of action.

But it is dismayingly surprising to hear it from the lips of the man who holds the sec-ond highest office in the land.

Grand Canyon Advertisements

EXTENSION OF REMARKS OF

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. WYDLER. Mr. Speaker, an advertisement in the New York Times of July 25, 1966, regarding the ill-advised Grand Canyon Dam proposals, prompts me to express gratitude that conservationists are not giving up this fight.

After similar advertisements were published last month by the Sierra Club, the Internal Revenue Service delivered a warning to the club—perhaps with justi-fication but certainly with unseemly haste—that its tax-deductible status was in question.

Not being intimidated by the IRS action, the Sierra Club is continuing to in-form the public of this threat to the Grand Canyon.

In the meantime, the proposed dams have become linked in the public mind with misgivings as to IRS motives in the affair, as described in the following editorial from the Rockford, Ill., Morning Star, of June 24, 1966: DAM WOULD MAR GRAND CANYON

Congress should waste no time in denying a Department of Interior bill to dam the Colorado River and ruin the Grand Canyon, one of the nation's most scenic natural spec-

The Interior Department's Bureau of Reclamation wants authorization to build dams on the Colorado River, above and below the Grand Canyon. The dams would flood the entire length of the canyon and back flood waters 13 miles into Grand Canvon National

Supporters of the bill, among them Secretary of the Interior Stewart Udall, contend the dams are needed to provide water for arid Arizona.

Not only is their position ridiculous, they have another far more productive motive in mind.

mind.
Water from the reservoirs created by the dam would not be piped to Arizona. It would be used to manufacture electrical power.
Part of the power would be used to pump water to Arizona from Lake Havasu, far down the Colorado River. The remainder would be sold to the public. This is why the dams have been called "cash registers" in literature circulated by the Bureau of Reclamation.

Eyed from every angle, the Bureau of Beclamation's proposal is asinine. There are alternative and cheaper methods of creating electrical power and better alternative sites to provide Arisona with the water it needs

without filling the Grand Canyon with

One does not have to be a conservationist or nature lover to appreciate the grandeur of the Grand Canyon. It is a natural wonder that should be preserved, not inundated. What's worse, a non-profit conservation

group is in trouble up to its ears because it attempted to alert the public to the dangers posed by the pending dam measure.

The day after newspaper advertisements were sponsored by the Sierra Club, the Internal Revenue Service notified the club that as of that date contributions no longer would necessarily be regarded as tax deductible.

Under the law, an organization cannot enjoy tax-exempt status if it devotes a "substantial" portion of its efforts and income to politics or lobbying, but no standard defini-tion of "substantial" has been offered by the IRS.

The IRS action establishes a dangerous precedent. It must be interpreted that any organization concerned with public issues could be similarly restrained by the threat-

end loss of tax exemption.

It is fair to assume that the IRS intervention against the Sierra Club at this time is more than coincidental. It smacks of harassment and intimidation. The curb was ordered without investigation or hearing.

The Bureau of Reclamation bill should be defeated. And a sharp look should be taken at IRS procedures which had the effect of muting opposition to this latest federal boondoggle.

Griffin Is Best

EXTENSION OF REMARKS

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. BROOMFTELD. Mr. Speaker, for those of us who have served in the House of Representatives with the Honorable ROBERT P. GRIFFIN during the past five terms, there is none who doubted his ability, his integrity, and his intellect. We are far from alone in this high

praise of the gentleman from Michigan who now serves so ably in the other body.

Last Sunday, the Detroit News printed an editorial in praise of Bos Griffin en-titled "Griffin Is Best."

For the benefit of my colleagues who know his considerable abilities and for the edification of those few who do not. the editorial follows:

[From the Detroit News, July 24, 1966] IN THE U.S. SENATE RACE: GRIFFIN IS BEST Michigan voters this year will choose be-tween former Gov. G. Mennen Williams and Mayor Jerome P. Cavanagh, both Democrats, to fill a seat in the U.S. Senate this year, or continue Republican Senator Rosear P. GRIF-

Judged by past performance and future promise, Williams is by all odds the worst possible choice for Michigan, Garrin the best.

That leaves Cavanagh in the middle. Initially he was put there by timing and circumstance. The determination of his party's cumstance. The determination of his party's last generation politico-labor bosses it perpetuate Williams and close the primary to a fresh face and new ideas kept him there. August Scholle has promised the nomination to his man and appears about to deliver.

Cavanagh entered the campaign on a wave of national praise for his aggressive, colorful performance in his first city hall term. Many

called him the best mayor Detroit has had in two decades. With some current reserva-tions as to his lack of concern about grand jury charges against his Police Department, we are inclined to believe he can achieve that

But, as a Senate candidate, he has dis-carded the level-headed moderation which generally has featured his municipal administration.

His peace-at-any-price program for Viet-nam, his call for diversion of union and corporate pension funds into low return urban housing loans, his assault on those spending curbs which President Johnson has -all these items portray Cavanagh as a candidate willing to grab at any bit of demagogic nonsense which might produce his own bloc votes.

And, beyond this, there is the fact that most of Cavanagh's second four-year pro-gram for Detroit is in the promissory or transition stage. This newspaper believes his vigor and city administrative skill should be kept in Detroit. His future political pro-motion should be based on a record of final accomplishment.

Williams' is a jingoistic record of personal political advancement which cost Michigan's government 12 years of stalemate. He op-erated in such subservience to labor's politi-cal bosses within the state that outside of it

he was pictured as the AFL-CIO's dancing bear in a polks dot collar. His was an administration recorded in crisis headlines but achieving no progress. It brought Michigan near to bankruptcy. It achieved for Michigan the nationally recog-nized title of the "welfare state." It was funded in large part by raiding emergency moneys previously laid aside. Eventually even the Veterans Trust Fund was grabbed and an IOU left in the till.

Under Williams, the flight of industry from the Michigan economic climate, the rise of joblesness, the exhaustion of unemployment compensation benefits, all were documented. He left Michigan wallowing in deficit financing, the state's bonds selling at a poor risk level. a poor risk level.

a poor risk level.

Williams boasts now of his part in the administration of the late President John F. Kennedy. Mr. Kennedy's judgment of Williams is best measured in the job he gave him. Williams was put in charge of African-affairs in the State Department, a job so far removed from important policy making that it had been hald previously by a civil servant. it had been held previously by a civil servant.

Williams' claim to success in that assign-

williams claim to success in that assign-ment is best measured by counting the num-ber of dependable friends this country has in Africa today.
Williams never has lost an election or solved a governmental problem. Nor does the format of his present campaign—the monotonous grin, the interminable handshaking, the refusal to debate the solid

issues—indicate a promise of other than further frustration.

Ganyin is in refreshing contrast. He comes from a workingman's family—not a millionaire's—with more than a political interest in labor. A labor-management law-yer—a new breed in jurisprudence—he has walked the middle road and already has written that philosophy into labor law. He written that philosophy into labor law. He is young, but proven, with 10 years experience in Congress.

GREFIN is a Washington spokesman who will bring prestige to Michigan and cause the state no embarrassment abroad. He bears himself with decorum, makes decisions without favoritism. He has proven his ability to both follow and lead, the highest requi-sites of a good senator.

Michigan wants a doer in Washington, not a poseur. Gauven promises to fill that bill the best of anyone since the late Senator Arthur H. Vandenberg. That is why this newspaper is urging that he be kept on the

Fair Break for Rehabilitated Veterans

EXTENSION OF REMARKS OF

HON, ROY H. McVICKER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. McVICKER. Mr. Speaker, this morning I testified before the Subcommittee on Military Discharges and Dismissals of the House Committee on Armed Services on a matter of great importance to a half million veterans.

I have introduced H.R. 15310, which would allow ex-servicemen, with less than honorable discharges, to mitigate the consequences of a misstep upon proof of rehabilitation. This does not interfere with military procedures. It does not alter their official records.

The prime purpose of the bill is to allow qualified persons an opportunity to earn a better employment opportunity and lead a more useful life for themselves and their families. Most of these veterans suffer employment difficulties far beyond what would be occasioned by the identical offense in civilian life. These men would be selected with great care; the Board would give careful thought to such an award and rightly so.

I feel strongly about this bill and I include my testimony in the RECORD:

I am happy to be here to testify on behalf of what I believe is most worthy legislation. I have introduced a bill, identical to one brought forward by the distinguished chairman of this subcommittee, Hon. CHARLES BENNETT, which would authorize award of exemplary rehabilitation certificates to servicemen who have not received honorable discharges

questionable detachment from our armed services represents a black cloud which hangs over a man for the rest of his life. He carries a stigma wherever he goes. People in his community turn their backs upon him as soon as they find out about that discharge. Employers will not trust him. Our Federal Government will not help him. while it gladly and gratefully aids other veterans. Even his wife and children know there is shame in his past. Some men may successfully hide their pasts from others, yet they know within themselves that their recis not something to take pride in.

This is the plight of a half million men and women in our country. How tragic that a man cannot rid himself of this blot, regardless of how admirable a life he leads. I am not saying dishonable discharges are handed out unjustly or indiscriminately. But many times offenders are young and immature men, who are sorry soon after. Other youths in civilian life or at college are for-given deeds which are less rapidly forgiven in a soldier. No, injustice is not the point, though we all know unjust decisions occur in military courts as well as in civilian.

My point is that a rehabilitated person deserves an opportunity to clear his record of old stains. A man who has owned up to his past mistakes and overcome his weaknesses, deserves a chance to erase this last enduring obstacle to advancement. An ex-emplary rehabilitation certificate holds out

Our bill would have the Secretary of Labor appoint review boards which would pass judgment on applications for these certifi-cates. They would not be given out lightly. Three years would have to elapse before any application would be in order. Evidence of rehabilitation would have to be strong. Ac-

ceptable evidence would include notarized statements from the chief law enforcement officer or the applicant's community, from his employer, and from people who have known him well. The reviewing board would use these statements and its own independent investigations to determine an applicant's reliability, good character, and general reputation.

If the decision of the board is favorable, an applicant's military personnel record would thereafter include a copy of his certifi-He would not become eligible for Federal benefits which would be his under an honorable discharge. However, he would be given job counseling and help in finding a job. He would be a prouder man through the effort he had made to reform himself.

The days are rapidly disappearing when men can be branded for one mistake, and victims of circumstance shoved aside without compassion. Congress has an important task to help people help themselves in achieving a full measure of dignity. I urge Congress to endorse these certificates for they reflect concern for this task.

The bill reads as follows:

H.R. 15310

A bill to amend title 10, United States Code, to authorize the award of Exemplary Rehibilitation Certificates to certain individuals after considering their character and conduct in civilian life after discharge or dismissal from the Armed Forces; and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That part II of subtitle A of title 10, United States Code, is amended by inserting immediately after chapter 79 thereof the following new chap-

"Chapter 80. Exemplary Rehabilitation Certificates

"1571. Establishment of boards.

"1572. Consideration and issuance of certificate.

"1573. Matters considered. "1574. Other benefits.

"1575. Job counseling and employment placement.

"1576. Reports.

"§ 1571. Establishment of boards.

"The Secretary of Labor shall establish boards to receive and act on any application for an Exemplary Rehabilitation Certificate received under this chapter from any person who was discharged or dismissed under conditions other than honorable at least three years before the date of receipt of such ap-

"§ 1572. Consideration and issuance of certificate.

"In the case of any person discharged or dismissed from an armed force under conditions other than honorable before or after the enactment of this chapter, a board may, with the approval of the Secretary of Labor, consider an application for, and issue to that person, an 'Exemplary Rehabilitation Cer-tificate' dated as of the date of issuance, if it is established to the satisfaction of the board that such person has rehabilitated himself, that his character is good, and that his conduct, activities, and habits since he was so discharged or dismissed have been exemplary for a reasonable period of time, but not less than three years. The Secretary of Labor shall supply a copy of each such Exemplary Rehabilitation Certificate which is issued, to the Secretary of Defense, who shall place such copy in the military per-sonnel record of the individual to whom the certificate is issued.

\$ 1573. Matters considered.

"(a) For the purposes of section 1872, oral and written evidence, or both, may be used, including-

"(1) a notarized statement from the chief law enforcement officer of the town, city, or county in which the applicant resides, att ing to his general reputation so far as police and court records are concerned:

"(2) a notarized statement from his employer, if employed, attesting to his general

reputation and employment record;
"(3) notarized statements from not less than five persons, attesting that they have personally known him for at least three years as a person of good reputation and exemplary conduct, and the extent of personal contact they have had with him; and "(4) such independent investigation as the

board may make.

"(b) Any person making application under this chapter may appear before a board con-sidering such application in person or by

"§ 1574. Other benefits.

"No benefits under any laws of the United States (including, but not limited to, those relating to pensions, compensation, hos-pitalization, military pay and allowances, pitalization, military pay and allowances, education, loan guarantees, retired pay, or other benefits based on military service) shall accrue to any person to whom an Exemplary Rehabilitation Certificate is issued under section 1572 unless he would be entitled to those benefits under his original discharge or dismissal.

"§ 1575. Job counseling and employment placement.

"The Secretary of Labor shall accord to any individual who has been discharged or dismissed under conditions other than honorable, but who has been issued an Exemplary Rehabilitation Certificate under this chapter, the same privileges and benefits accorded to veterans under chapter 41 of title 38.

"§ 1576. Reports.

"The Secretary of Labor shall report to Congress not later than January 15 of each year the number of cases reviewed by each board under this chapter, and the number Exemplary Rehabilitation Certificates issued '

SEC. 2. The analysis of part II of subtitle A of title 10, United States Code, is amended by inserting immediately below

"79. Correction of Military Records ... 1551" the following:

"80. Exemplary Rehabilitation Certificates .

SEC. 3. (a) Section 2001 of title 38, United States Code, clauses (3) and (5) of section 2002 of such title, and sections 2003 and 2004 of such title are amended by striking out "veterans of any war or of service after January 31, 1955" each place it appears therein.
(b) The first sentence of section 2002 of

such title 38 is amended by striking out "veteran of any war or of service after January 31, 1955".

(c) Clauses (1) and (4) of section 2002 of such title 38 are amended by striking out "veterans of any war or of service after Jan-uary 31, 1955," each place it appears in such

Vietnam Polls

EXTENSION OF REMARKS OF

HON. JOHN C. MACKIE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. MACKIE. Mr. Speaker, these are the results of the poll I conducted in the Seventh Congressional District of Michigan which represents a return of approximately 10,000 opinions. In April I sent approximately 111,000 questionnaires to residents in my district.

I feel the most significant conclusions to be drawn from the majority of replies is that our Nation has a vital interest in southeast Asia and that our Vietnam intervention was justified, specifically to resist Communist aggression with force if necessary.

It is evident that these results would not depict the true story since my questionnaire was mailed a few days prior to the political disturbances in Vietnam.

I am confident that the positions taken by my constituents will be of particular interest to my colleagues.

The results of my poll are:

Two-Hundred-Billion-Electron-Volt Proton Accelerator

EXTENSION OF REMARKS

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1966

Mr. HOLIFIELD. Mr. Speaker, as chairman of the Joint Committee on Atomic Energy I have attempted to keep the Congress fully informed as to the information received by the committee on the proposed large accelerator—the 200-billion-electron-volt proton accelerator.

The last time I spoke on this subject was on May 9, 1966, in connection with the House consideration of the AEC's authorizing legislation for fiscal year 1967. As I pointed out on that occasion, the AEC had not requested nor had the committee authorized funds for engineering design or construction of the 200-Bev. accelerator. The AEC was then as it is now considering six sites for the proposed large accelerator. These sites are located in the vicinity of Ann Arbor, Mich.; Brookhaven National Laboratory in Long Island, N.Y.; Denver, Colo.; Madison, Wis.; Sierra Foothills, Calif.; and Weston, Ill. A selection from among these six is expected during the remaining months of 1966. If the Commission holds to the schedule indicated to us at the time of our authorization hearings, which we set forth in the committee's report-House Report No. 1471, May 3, 1966, page 28-a selection should be expected by the end of September.

Today I wish to acquaint the Members of this House with a new estimate for the construction costs of the 200 Bev accelerator. You will recall that the President's fiscal year 1967 budget report had an estimate of \$375 million. This included \$40,500,000 for research equipment and \$27 million for a major detection device. The basic engineering and construction for the large accelerator was \$307.5 million in that estimate. An independent cost estimate subsequently

made for the Commission by a combine of architect-engineers, known as DUSAF, now places the estimated costs of basic engineering and construction of this accelerator at \$327,336,000. If the research equipment and large detection device are added to the new estimate to make it comparable to the President's budget estimate—it would show that the estimated cost for the 200 Bev accelerator is now \$395,000,000.

The new AEC report on the 200 Bev accelerator also indicates that it would take 8 years from the go ahead on the project until the accelerator is ready for experimentation.

I will continue to keep the House informed of any new information relative to this accelerator that the Joint Committee receives.

Expenses of Hawaii's First Medicare Patient Paid Without Any Hitch

EXTENSION OF REMARKS

HON, SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1966

Mr. MATSUNAGA. Mr. Speaker, I should like to share with my colleagues the happy experience of Hawaii's first medicare patient, Mr. Elias Dabalos, who was able to obtain assistance payment for his 5-day hospitalization in Honolulu under the new Federal program without any difficulty, delay, or inconvenience whatsoever.

It is a timely and encouraging story, for it serves to dispel the doubts expressed by the vociferous few about the administrative workability of medicare.

The 68-year-old taxi driver saved \$218.10 as a medicare participant. A representative of the Hawaii Medical Service Association which handles all Hawaii claims under the hospital provisions of medicare said that Dabalos' case shows up the "efficiency of the new programs and dispels fears that medicare would be an administrative nightmare".

The newspaper article revealing Mr. Dabalos' happy experience appeared in the Honolulu Star-Bulletin of July 23, 1966. I now submit the article for inclusion in the Congressional Record:

ISLES' FIRST MEDICARE PATIENT SAVED \$218

Elias Dabalos, Hawaii's first Medicare hospital patient, saved \$218.10 under the Federal program.

Dabalos, a 68-year-old Honolulu taxidriver, was admitted to Queen's Hospital at the very moment that Medicare went into effect at 12:01 a.m. July 1.

He was suffering from intense breathing difficulty resulting from a hole between his lung and chest wall that caused an excessive build-up of air to be trapped next to his lung. The undue pressure was causing his lung to collapse.

The bill for his five-day hospital confinement, plus treatment and services, totaled \$261.55.

Dabalos paid the first \$40. That payment is called for in any spell of illness. He also paid \$3.54 for take-home drugs that are not covered. His total share of the cost was \$43.45.

The Hawaii Medical Service Association (H.M.S.A.), which handles all Hawaii claims under the hospital portion of Medicare, said Dabalos's case shows up the "efficiency of the new programs and dispels fears that Medicare would be an administrative nightmare."

Compromise Urged on Grand Canyon

EXTENSION OF REMARKS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1966

Mr. DINGELL. Mr. Speaker, voices from arid parts of the West are joining those of citizens in other regions in opposition to proposals to build dams in the Grand Canyon.

An editorial in the Salt Lake Tribune of July 3, 1966, contains an excellent analysis of this issue, stressing the damage the dams would cause:

[From the Salt Lake (Utah) Tribune, July

COMPROMISE URGED ON GRAND CANYON

A bill authorizing the \$1,700,000,000 Colorado River Basin (Central Arizona) project seems destined to be approved by the House Interior Committee, but vigorous opponents in the House have warned, "we have not yet begun to fight."

The Western-dominated irrigation and reclamation subcommittee advanced the controversial bill last week by a 13-5 vote, opposition coming mainly from the Pacific Northwestern states. The measure is, as Utah Sen. Mose said, "a very complex and involved bill," and it is encouraging that Sen. Bennett has called for reading the measure carefully when it gets to the upper House.

The tenuous alliance of the lower and upper Colorado River basins may bring about final approval of the big Rube Goldberg type project but with every conservation organization of distinction lined up zealously against it, there is serious danger that the Reclamation Bureau itself will emerge with deep and lasting wounds, jeopardizing future projects irrespective of their merits.

WOULD FLOOD MONUMENT, PARK

Troublesome questions loom about details of the agreement between the upper and lower basins and about the funds, current and future, for the Central Utah and other reclamation projects. We are mainly concerned here with the proposal to build two power dams in Grand Canyon and its emotional impact on programs for best use of limited water in the West.

One damsits is in Marble Gorge of the Colorado River in Arisona, upstream from Grand Canyon National Park and downstream from Glen Canyon Dam. This would have an installed capacity of 600,000 kilowatts. The other dam, 673 feet high, would be downstream at Bridge Canyon and would have an installed capacity of 1.5 million kilowatts.

When the administration sent the program to Congress a little more than a year ago the Budget Bureau deferred the Bridge Canyon Dam, which would cost about 511 million dollars and would create a reservoir backing all the way through Grand Canyon National Monument and 13 miles into Grand Canyon National Park (though not visible from the canyon rim in the park). The implication was that Marble Canyon alone

could provide the needed pumping power and revenue for the Central Arisons project.

Reclamation Commissioner Dominy sees both dams as needed "cash registers" for the project, however, and as the bill stands both dams are included.

FOSSIL FUEL STUDY URGED

Damming the Colorado at Marble Gorge would change the river's flow and alter lite effect on the geology of the Grand Canyon floor, but it would not otherwise invade the national park as would Bridge Canyon dam (recently renamed Hualapal for Indians in the area who have been enlisted in the drive for the project). A suppressed report by the National Park Service said this dam would leave great scenic areas "clogged with sit and debris that a diminished river could never wash away." Neither Park Service or U.S. Geological Survey experts were heard at the subcommittee hearings, not even to evaluate conservationist group claims regarding sit or the startling claim that the Central Arizona project could be built and operated at a profit if both Bridge and Marble dams were deleted.

More information is needed as to the potentialities of using fossil fuels such as coal and oil, and nuclear energy to supply the needed power. Thermal power generation facilities are already planned for the area, including the touted Kalparowits plant in southern Utah which would supply several times the capacity of the two proposed hyroelectric plants. Kalparowits also would utilize raw material from one of the world's largest untapped coal beds.

NEITHER FOR STORAGE

Under present plans neither Marble nor Bridge Canyon dams would be for diversion or storage. Existing reservoirs would take care of that.

Arisona wants—has to have—water. California needs and wants power. We believe Congress has a solemn obligation to seek a solution that does not involve spoiling the lower reaches of Grand Canyon. We urge particularly that the Bridge Canyon project be omitted.

Address of Congressman Ed Reinecke Upon Receipt of an Award by the Captive Nations

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. KUPFERMAN. Mr. Speaker, I had the privilege of attending the dinner at the National Press Club in Washington, D.C., on Wednesday, July 20, held by the Captive Nations in observance of Captive Nations Week.

During the course of the proceedings, our colleague, the Honorable En REINECKE, of the 27th District of California, received an award for his service in the cause of freedom. His address on that occasion is one that I commend to my colleagues:

REMARKS OF HON. ED REINECKE, REPUBLI-CAN, OF CALIFORNIA, AT THE CAPITUR NA-TIONS WEEK DINNER, THE NATIONAL PRESS CLUB, WASHINGTON, D.C., JULY 20, 1966

Thank you very much for this opportunity to join with you tonight for the eighth annual observance of Captive Nations Week at this dinner honoring members of the United States Congress. Perhaps, however, the honor and tribute of this particular oc-

casion should be reversed. We Congressmen owe you a debt of gratitude for your sincere concern in the affairs of this nation, and the world, and for your willingness to give of your time and resources to serve the cause of freedom. Your dedication sets a valuable and excellent example.

As we gather here in this notable place we cannot help but wonder what effect these annual observances have on the communist governments of Eastern Europe. Apparently we bother them a little. And I'm glad about

that, aren't you?

After last year's Captive Nations observances a few reports of reaction filtered through the iron curtain. One editor of a newspaper in the Ukraine said, "They are beating the drums again across the sea, filling the columns in newspapers and delivering hypocritical speeches. For the umteenth time the ruling circles of the United States are holding the so-called 'Captive Nations Week.' And the propaganda machine is deafening the citizens with atrocious inventions about the fate of nations which are suffering under the yoke of the Kremlin regime."

Another Russian writer said, "Especially disgusting in the villainous demagoguery of the imperialistic chieftains of the United States. Each year they organize a so-called captive nations week, hypocritically pretending to be defenders of nations that have escaped from their yoke . . ."

It seems that these observances have been effective in developing a psychological and political weapon against the tyranny of Eastern Europe. These reactions sound like another way of saying "we'd better be careful"

We must also ask ourselves the question: "Why should we be concerned, as Americans, for the plight of people in such far away places? We have many problems of our own to solve. We are engaged in a major military action in Southeast Asia. And besides, what can we do about the people of Eastern Europe, short of a major war with the Communist world?"

I think that the answers to these questions come from the deepest roots of our own country's history. For the work that was begun just one hundred and ninety years ago is still going on today. It is spreading around the world.

I am reminded of the words of Emerson in his "Concord Hymn" when he said:

"By the rude bridge that arched the flood, Their flag to April's breeze unfurled, Here once the embattled farmers stood,

And fired the shot heard 'round the world."

The sound of that shot still rings throughout the world. For in the goals of our revolution we crystalized the deep aspirations of every man in every nation and in every age. Our revolution is still going on. And so is theirs. And that is why we cannot turn our backs on them. They are following in our battle paths. And we dare not let them down. Our revolution, and their struggles to throw off the yoke of tyranny are part of the same universal battle of mankind for freedom, for spiritual fulfillment, for peace, for prosperity and for progress.

And if we be true to our own principles of democracy and of individual responsibility and individual liberty, and to our own system of free enterprise we must believe that every people should have the opportunity to choose for themselves a system of government. They must be allowed to adapt to their own cultures the universal concepts of

free self-government.

We have often said in this country that if even one man lives in fear or in tyranny or does not enjoy the full opportunities afforded by our Constitution then we all live in fear and tyranny. In our free society if one man is robbed of his unaltenable rights or of his dignity, then all men become victims of the same crime.

And this principle ought to be applied to the world as a whole. For if the freedom of one nation is destroyed then the freedom of all nations is in jeopardy. And if any people anywhere suffer from the burdens of captivity, then all people everywhere are in some measure held equally captive.

Therefore, we see that the plight of the captive peoples of Eastern Europe, and even of southeast Asia, becomes the plight of free men everywhere. Their struggle becomes our struggle. Our stewardship of democracy becomes their hope for freedom. That is why we cannot neglect the over 100 million people held captive by Communist colonialism. That is why we are here this evening.

That is why we are here this evening.
Well, then, what are we going to do about
it? What hope do we hold out to these people? What is our responsibility?

The United States, whether we like it or not, has been thrust into history at this time as the leader of the free world. The cause of freedom and the development of its ideals has become the great work of our generation. How have we done so far?

We have not done all that we could. In current times we have seen the steady decline of the great alliance of NATO. Time and time again the initiative to take positive action in foreign affairs has been stolen from us by our enemies. Our foreign policy has become simply a series of stop-gap emergency reactions.

Because of the inaction and lack of forethought of those who carry the responsibility our diplomats have been made to appear like a water brigade running back and forth around the world putting out brush fires. It is time that the United States reassert

It is time that the United States reasert its leadership in the free world rather than to follow the whims of thuse who do not care, or who are playing power politics with the fate of their nations.

Leadership means ideas. New ideas; and we had better start thinking. I propose that we mount an effective "freedom offensive." A campaign using psychological, political and economic weapons against the regimes of captive nations everywhere. We have already seen what this simple observance here will do to unnerve and irritate those on the other side of the iron curtain. And we ought to do more of it.

In our freedom offensive we ought to draw more broadly on the resources of leadership of the responsible private sector of this country.

I propose that we gather together, under private sponsorably, or under the authority of the Congress or the President, the great technicians of mass communication, advertising, and public relations for a brief time to design a creative program of propaganda to be used against the regimes of iron and bamboo curtain countries. The technology of propaganda, and I use that word in the best sense, has been developed by private industry to an amazing degree. But not enough of this new knowledge has been put to work by our geverament's foreign public relations directors.

We need fewer foreign policy philosophers, and more communications experts in the United States Information Agency. The Voice of America should be strengthened and its programming drastically improved.

We need to draw more upon the experience and resourcefulness of our motion picture industry, our radio and television industry, and our universities with their vast new communications research centers. We ought to bring to government the fresh ideas that these people have. Then we could mount a psychological campaign that would beam the weapons of ideology and the hope of freedom to the captive peoples of the world. It has never really been done before. Why not try it?

We are all well aware of the work of the Peace Corps. I would like to propose a "freedom corps." The hope of future freedom in the captive nations lies in the youth of those countries. Through the contacts of the

Assembly of Captive European Nations, and through the opportunities offered by many other groups, the young people of the United States could begin to correspond with the youth behind the iron curtain. In this way they could share the ideas of freedom and keep alive the hopes and aspirations of youth. Perhaps even personal meetings could be arranged; and travel by American youth in the Eastern European countries could provide the opportunity to encourage the hope of freedom in the hearts of young people. In this way we would be building a sound foundation for the future liberation of captive peoples.

In the matter of the economic and political offensives, we must seek to drive a wedge into every tiny crack that appears in the iron curtain. We must avoid every pitfall that might lend comfort or support to the Communist regimes of these countries. We must not provide the means for propping up their failing economies and thereby perpetuate their dictatorial governments. If we must trade, then let's be sure that we receive a reciprocal political ad-

vantage for our trade.

I would propose that we bring before the United Nations General Assembly the whole question of the captive nations, and request that the Soviet Union be made to answer to the charges of history.

Or, as an alternative, that we embark on a diplomatic freedom offensive, similar to the recent peace offensive for Vietnam, to seek the cooperation and ideas of every free nation in a united effort to liberate the captive peoples.

Real progress demands revision of thought, policy, and action. We need to do a lot more thinking about extending the frontiers of freedom. We have grown too accustomed to living in a world half-free and half-slave.

There can be no peace in the world; no peace among nations; no peace in the hearts of captive peoples until all the world—every nation—and each person is free. "Freedom isn't free," in the words of the popular song.

"Freedom isn't free.
You've got to pay the price,
You've got to sacrifice,
For your liberty."

The easiest thing for a rich nation to do is to give of its wealth. But the noblest thing for any nation to do is to give of its heart

Let the price we pay for our freedom be to lift even higher the torch of liberty—and by its light to expose the still darkened corners of captive nations—in Asia, as well as in Eastern Europe. Let the price we pay be to extend our heart and hand in encouragement and moral support to those whose struggle for freedom is not yet accomplished. And let our word of courage be to them that "there is a universal, eternal law which is man's will to be free. And though the struggle may be long and hard, you have allies in every nation on earth, and in every age of history." The thrilling inspiration of freedom will one day thrive again in the hearts of the peoples of eastern Europe.

A Failure of the U.N.

EXTENSION OF REMARKS

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. ROSENTHAL. Mr. Speaker, on July 20 I voiced my disappointment over the decision of the World Court on

Southwest Africa, and urged the United States to take the lead in proposing new initiatives for self-determination through the United Nations. My remarks were carried in the Record at that time.

The Long Island Star-Journal of that same date carried an editorial entitled "A Fallure of the U.N.," which I would like to call to the attention of my colleagues. This article certainly echoes my sentiments.

We must continue to strengthen the United Nations, and to make it a more effective instrument in the cause of world peace.

The editorial follows:

A FAILURE OF THE U.N.

The cause of world law has been severely set back by the one instrument of that law—the International Court of Justice.

The world court, an agency of the United Nations inherited from the League of Nations, dismissed on a technicality a complaint by Ethiopia and Liberia against the invasion of apartheid in the territory of South-West Africa, mandated to the Union of South Africa by the League in 1920.

After six years of litigation, costing millions of dollars, a 7-7 deadlock of the court was broken Monday by court President Sir Percy Spender of Australia. The majority ruled that Ethiopia and Liberia, as individual members of the League of Nations, had no legal right to bring the suits. Such action, it was held, could only be brought by the League Council, which no longer exists. In other words, the world court ducked the issue

And thus, in the words of the Times of London, a "matter of great substance has been set aside on a legal technicality." The failure of the court to deal with the question of apartheid is more than a failure of the court. It points up the absence of effective law throughout the international community. It reflects the weakness of the United Nations itself

Law, if it is to be relevant to reality, must be backed by force sufficient to insure compliance. Anything else is an exercise in futility—or in this case—is unnecessary mischief. The mischief in this case was that in ducking, the court gave ald and comfort to South Africa and raised a political storm of protest throughout the world.

The court's mistake was probably in agreeing to hear the question in the first place. This compounded that mistake by failing to make a substantive ruling.

The world court should stick to minor cases of limited applicability until the world is ready to grant it the status it must have to rule effectively on such great issues as apartheid. The world court is no better or worse than the United Nations, just as the United Nations is no better or no worse than the world it reflects. The world court will be an effective instrument of world law only when the U.N. itself reflects a world ready, willing and able to give it the power to enforce that

Give Drugs to Addicts So We Can Be Safe

EXTENSION OF REMARKS

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1966

Mr. FARBSTEIN. Mr. Speaker, in a recent issue of the Saturday Evening Post there appeared an article by former

New York City Judge Jonah J. Goldstein recommending that drug addicts be given the narcotics they require through legal means, that such treatment would make our cities safer. Judge Goldstein served as a judge in New York City courts for 25 years. Now 80, he is, and has been for more than 30 years, president of the Grand Street Boys Association, a philanthropic organization formed on New York's Lower East Side, in my congressional district, in 1921. Judge Goldstein's statement appeared in the Speaking Out series of the magazine:

GIVE DRUGS TO ADDICTS SO WE CAN BE SAFE
(By Jonah J. Goldstein)

Not long ago an office building in New York's Rockefeller Center area hired private detectives to catch the thieves who were stealing everything movable and salable from the offices in the buildings, night after night. The detectives caught 49 men; 43 of them

were narcotics addicts.

Half the crimes in New York City today—the robberies, the muggings, the burgiaries—are committed by drug addicts, and other cities are beginning to share New York's dangers. A while back, one of our newspapers carried a banner headline: "New Crime Wave Expected." Because federal narcotics agents had seized a big heroin shipment in the port, the story explained, heroin prices would go up, and addicts would have to rob more people to buy their shots.

What kind of police protection is ti—what

What kind of police protection is it—what kind of law is it—that turns a great triumph of law enforcement into the cause of a crime wave?

Discussions of drug addiction always seem to turn on the question of what happens to the addict. Instead of worrying so much about the one tenth of one percent of the population who are hooked on drugs, let's worry about the 99.9 percent who aren't, and whose homes and lives are less secure because we drive sick people to crime with our parcotics laws.

narcotics laws.

Mind you, the drug addict is almost never dangerous when he's under the influence of drugs—narcotics are sedatives. What makes him dangerous is the desperate need for the money to buy the next dose. And the costs are stupendous. The \$50-a-day addict must steal \$250 to \$300 merchandise daily to support his habit; and when you catch him it costs \$15 a day of tax revenues to keep him alive in jail.

I don't want the kind of system where people have to register to get their narcotics. Some addicts are wanted by the police: they wouldn't register. All we need is a simple arrangement by which the addict who can pay for the shot can go to his doctor and get it—and the poor addict can go to the clinic, just as the poor diabetic goes to the clinic for a shot of insulin.

"You don't have to worry about giving him too much and killing him," says Dr. Herbert Berger, formerly head of the committee on addiction of the Medical Society of the State of New York. "His problem is that his tolerance for the stuff increases. You have to give him enough to keep him comfortable, the way you give the diabetic enough insulin to maintain his blood-sugar level."

Nobody would have to sign up for "treatment" unless he wanted it; nobody would even have to give a name or sign a receipt—just walk in the front door, get the shot and walk out the back door. Any nurse could do the job. The single dose, of course, would have to be moderately light. If a man's condition is such that he needs another dose, he can come around to the front door again.

A simple test could guarantee that nobody gets narcotics at the clinic unless he is already addicted. Another test, perhaps an invisible-lnk time stamp that comes out under an ultraviolet lamp, could give enough control on the number of doses to make sure nebody used the clinic's narcotics to the

point of killing himself.

Under today's rules, we can't even prevent the use of narcotics for murder. I once proposed my version of the perfect crime to the inspector in charge of New York's narcotics bureau. The mob suspects that one of the boys, an addict, is a stool for the police. So the next time he makes his connection, his little packet contains much more than his usual dose. He puts it in his arm, and goes out like a light. In New York you would hear about it, because our Chief Medical Examiner finds everything and talls everything he finds—but there are lots of places in this country where that kind of murder would go into the books as heart failure. I wondered how many police informers died of such "heart failure." My inspector friend heard ms out, then said sourly, "Do you know any more jokes?"

One night at dinner at the Grand Street Boys Association I was talking about narcotics with a monsignor of the Catholic Church. He asked me if I'd give a man five dollars if he asked me for five dollars to buy a shot of heroin. I said, "Of course I would." "Wouldn't you be concerned that you

"Wouldn't you be concerned that you might be shortening his life?" the monsignor said.

"That's his business," I said.

I smoke cigars. Now that I'm eighty I've cut down, by smoking only one at a time. I know it's bad for me. And if you don't smoke, are you going to live forever? What are they going to do about smoking—make it

I think there'd be a good case for giving the addict his drugs even if it did help him harm himself. There are a thousand times as many people who are not addicts as there are addicts, and the important thing is to help them. And I can't see how an addict can harm himself more by going to a clinic than he does now by roaming the streets and robbing people to get the money to buy adulterated stuff from a vicious pusher. Is the female addict any better off as a prostitute? Anyway, why do you think the addict is so sure to be harmed?

When I was on the bench and the cops brought in a workingman who was an addict. I'd call him and his wife into my chambers and I'd show them a map of Texas. I'd say "Pick a town near the Mexican border, and go down there and get yourself a job. When you need the drugs, just walk across the border—you can buy the stuff there for the

price of a pack of cigarettes. So you don't work eight hours a day, you only work six you're still a lot better off than you will be up here, going in and out of jails and hospitals."

The son of one of my best friends got hooked while he was at college. He and his father fought it for years—all the treatments they could buy, federal hospital in Lexington, Ky., and all the rest. Finally they came to me for advice. I-said, "Pick a country where you can get the drugs, and go live there." I saw that young man not long ago in his new country: he's married, he's got children, he's living a useful life. Here he'd be in hiding all the time.

In my 25 years as a judge, I never had a rich user brought before me. I said that while I was still on the bench, and the newspaper picked it up. The next day I got a call from the Government's chief New York narcotics agent, who said he wanted to see me. He came up to my chambers and said, "It's not true we don't go after the rich addicts. We've been following one for five years, and one of these days we're going to get him."

I asked for the name, and he mentioned one of the most famous and best-loved men in America, a man who's given away fortunes to charity, especially charity to help kids. I asked the federal chief what good he thought it would do to take a man like that and throw him in jail and ruin him, just because he used drugs. And then—as a citizen, not as a judge—I called the man and warned him. He said sadly, "I know about it."

Some say that giving shots to addicts will increase addiction. I doubt it. I don't think the end of prohibition increased the consumption of alcohol, or the number of alcoholics.

At football games in the 1920's you saw lots of people carrying flasks; you don't see as much of that today. Before I was a judge I was all Smith's assistant. He used to carry a cane with a tube inside, all through prohibition. At banquets when he was governor, Franklin Roosevelt would have a coffee cup with bourbon in it. I remember once he told the leader of the State Assembly to pick up some Pikesville whiskey for him on a trip to New York. That was his favorite—Pikesville whiskey. That whiskey had a New York City motorcycle escort to the city line, then state troopers all the way to Albany, to make sure the prohibition agents wouldn't interfere. Later the man who delivered it to the governor told me Roosevelt immediately opened one of the jugs and slung it over his arm, country style, to take a drink. My friend said, "That man'll never amount to anything!"

During prohibition important people never had any trouble getting whiskey. And there are some important people who have no trouble getting drugs today. Harry Ansilinger, who was federal Commissioner of Narcotics, once testified to supplying a congressman with drugs out of the Government's own stock, because it would be dangerous to let somebody outside get that kind of hold on a congressman. Everybody knows about doctors and anesthetists who have the habit. Narcotics agents don't want to let the doctors handle the problem because the police know that many doctors are addicts themselves. Men work as orderlies in hospitals for less money than they could make washing dishes in a cafeeria, because the job brings them near the source of their drugs. But why touch them—if they can live with their habit and do their work?

For years I have been receiving letters from people who are addicts, but nobody knows it except themselves and their doctors. They were in an accident or a fire once, or badly wounded in the war (I once had a man before me who got the habit as a prisoner of war in North Korea). The doses that then kept them from agony later became the curse of their lives. Some of them became substantial businessmen and professional men, but they had to live with the knowledge that they and their doctors were breaking the law every day.

Though many of the addicts we now make criminals could live useful lives with their habit, many others are hopeless derelicts. Nobody who has served as a judge in a criminal court could ever deny that addiction is a terrible thing. If we had a cure for addiction, there might even be an argument for the sort of program Governor Rockefeller has been advocating—ordering users to hospitals for treatment as soon as their addiction is discovered. But the hospitals don't help. We've had federal narcotics hospitals for more than 30 years in Lexington and Fort Worth, and the biggest claim I've ever seen for cures is 10 percent. Most doctors I know think 3 precent is notimistic.

I know think I percent is optimistic.

In planning what to do right now, we have to start with the fact that addicts as a rule can't shake the habit, and that nothing we know how to do is much help to most of them. The psychiatrists have quit on the problem. One of them, Dr. Joost A. M. Meerloo, recently put their belief in his own kind of language: "Drug addiction is much more related to the pusher and the emistence

of criminal seduction and hyprocritical laws than to circumscribed pathology within the individual." Do you eliminate the pushers and criminal seduction and hypocritical laws by ordering people into hospitals?

by ordering people into hospitals?
All the police and the courts can do with today's law is increase the risk to the pusher. The greater the risk to the pusher, the higher the profits from pushing, and the stronger the temptation to push. The mob opposes reform of the narcotics laws now, just as the bootleggers always backed the drys in the fight on prohibition.

Make the drugs easily available to the ad-

Anker the drugs easily available to the addicts, and you take the profits out of pushing. Then if you find anybody pushing drugs, especially to kids, you can slap him in jail and throw away the key—let him rot. The law can do its job. Without the profits, there won't be new pushers to come up and replace

the jailbirds.

Giving away the drugs doesn't solve the problem—we'll still need a cure for addiction as much as we ever did. Today's stupid laws make it nearly impossible to launch a research project big enough to get near the problem. Dr. Berger estimates that in New York, the worst-afflicted city, there are now only five or six doctors interested in the addiction problem. Take the stigma off the subject and provide money, and maybe we can have doctors instead of pushers and police determining what happens to sick people in our country.

But let's keep our eyes on what our criminal laws are supposed to do. We don't write them to protect or to rehabilitate the addict or the criminal, to mete out exact Solomon-like justice to the pusher. We write them to protect the society, all the ordinary people who obey the law without ever knowing that's what they're doing. Our laws on narcotics should benefit the 190-odd million who don't take drugs, not the 200,000 who do. I think it would turn out that we'd heip them, too, but that's not what's important. The significant victim of the present law is not the derelict half-crazed addict with the need for drugs who mugs the old lady on the street, but the old lady herself.

Let's forget some of the fancy theories and make our cities safer by giving the addict the

narcotics he needs.

JUDGE GOLDSTEIN.

New Winds in Asia

Mr. CASEY. Mr. Speaker, the Wall Street Journal quotes Secretary Rusk's remark that "new winds are blowing in Asia" in an editorial backing the substance of the Johnson administration's policy in Asia.

No single factor can be credited for the heartening developments, the newspaper says. Even so, it acknowledges, the most hopeful turn has become apparent since the United States made clear that we mean business in southeast Asia.

The Journal has in the past expressed reservations about certain aspects of our policy, but reaffirms its belief that firm-ness against communist encroachment has been necessary.

And it says the new winds blowing in Asia suggest that U.S. policy has more

substance to it than the vociferous detractors will ever admit.

I now offer the editorial for the REC-

(From the Wall Street Journal, July 15, 1966) NEW WINDS IN ASIA

"Truly one can sense that new winds are blowing in Asia," Secretary of State Rusk remarked upon completing his Far Eastern tour. He joins a growing number of observ-ers who find the Asian outlook, if not optimistic, at least noticeably brighter than a

year or so ago.

Secretary Rusk reports "fresh hope and fresh energy" in the field of economic and social development and a "growing sense of community" among non-Communist Asian nations. Certainly there are hopeful signs in the recent conference of a number of those nations in Korea and new agreements for an Asian development bank. In addition, the huge nation of Indonesia has sharply reversed its drift toward both communism and misrule, and a number of smaller nations display somewhat laws of a tendency to cozy up to Communist China.

It would obviously be foolish to describe year or so ago.

It would obviously be foolish to describe the firm U.S. stand in Vietnam as the sole, or even the most fundamental, reason for the encouraging changes. Other explanations abound: The non-Communist nations' natural self-interest in cooperation, Sukarno's blundering rule in Indonesia, Red China's own guacheries in internal development and foreign relations. It would be equally fool-ish to deny that the whole outlook could be quickly reversed by developments in Viet-nam or elsewhere.

nam or elsewhere.

Even so, and contrary to the constant criticism of American policy, the more hopeful turn has become appearent mostly since the U.S. made clear it means business in Southeast Asia. It may well be that this demonstration was the trigger which allowed un-

derlying factors to operate.

If it is clear China will not be allowed easy conquests by subversion, leaders of small non-Communist lands understandably will find more reason for serious attention to economic development and other pressing prob-

Similarly, a feeling that China after all will not ultimately dominate the entire Orient would figure in the Indonesian military's decision to move openly against the Communists, and also in the nuances of atti-tude of smaller neutralist nations. Future always weigh heavily in human affairs.

Australian Prime Minister Harold E. Holt,

for one, finds a direct link between American for one, finds a direct link between American policy in Vietnam and the apparent resurgence of non-Communist Asia. On his visit here, he commented, "It should be of some encouragement to Americans to know that the defense effort in South Vietnam is not just limited to spending money and losing lives, but has already resulted in the strengthening of all Southeast Asia."

Precisely this kind of result—influencing the future of Asia by demonstrating to friend

the future of Asia by demonstrating to friend and foe alike that even subversive aggresand foe anke that we surversive aggression will not pay—has been the basic object of U.S. policy in Vietnam. And while these columns have often expressed reservations about the haphazard "choice" of Vietnam as the place and the outlook for an acceptable sertingent we have payer doubted that able sentiment, we have never doubted that a demonstration of firmness against Communist encroachment was necessary.

Communism, like other forms of totalitarianism, will expand by force if it has the opportunity. The alternative to confronting it with force, including military force if it commes to that, is to allow its expansion, whetting its appetities and undermining the confidence of its next victims.

The new winds in Asia may prove ephemeral but they are palpable now. They suggest that American policy, whatever its tac-

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. GRABOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to bring to the attention of my colleagues an article that was published July 14, 1966, in the Hartford Times under the byline of Malcolm Carter, Times staff writer, which illustrates the vigorous, humanitarian, and friendly type Connecticut Gov. John N. Demp-

The article, describing Governor Dempsey's visit to Camp Drum, Watertown, N.Y., to greet personally the 3,291 Connecticut National Guardsmen training there, follows:

DEMPKEY GREETS GUARD: PINDS MORALE HIGH (By Malcolm Carter)

CAMP DRUM, WATERTOWN, N.Y .- Dust, heat and winds.

Also military precision, inspections and GI

Then politicking, handshaking and encouragement.

Very little rest in an 11-hour day.
Such was Governor Dempsey's visit here
Wednesday after leaving Hartford by airplane
at 8 a.m. and returning 11 hours later.

Official brass was at its polished best in the

convoy which escorted the commander-in-chief of the Connecticut National Guard ending two weeks' training here Friday. Traveling nearly 40 miles of dusty, rut-scarred roads on the 100,000 acre campsite. the Governor donned a paisiey sport shirt, casual slacks and army fatigue cap to visit personally with the 3,291 state men in training here.

Informality marked the day, with the Governor shaking every hand he saw and thanking the men for doing their part.

After jouncing 15 miles to an artillery tar-get site, Dempsey climbed into a protective bunker labeled "Pork Chop Hill" and watched through binoculars as 155 mm howitzers boomed and shells whistled and exploded in flery bursts hundreds of yards down range.

After the artillery performance, the Governor's convoy had lunch under the trees—on white linen tablecloths, with GI waiters serving chow.

The fare was roast turkey, dressing, whipped potatoes, saied, lemonade and frosted cake. No one complained.

In fact, an officer sitting at an adjacent table said: "I wish the Governor would come

every day."

every day."

Another man observed, "Gee, no lumps in these potatoes." But the remarks seemed all in fun. Men privately agreed the food is uniformly good.

The Governor asked a group of men waiting to enter a gas chamber used to make them appreciate gas masks, "How's the food here?

The men chorused, "Great." There's one in every crowd, and he quipped, "If you have an iron stomach."

Arriving at a lecture on offensive tactics, the Governor picked up a microphone and told the men:

"Fellows, you were sitting down when I came in. Will you please sit down now."

tical and other errors, has more substance to it than the vociferous detractors will ever admit.

Dempsey Greets Guard

EXTENSION OF REMARKS OF HON. BERNARD F. GRABOWSKI

Back at the microphone, the instructor decided a 15-minute break was long enough.
"With the Governor's permission," he said,
"we'd like to have you get back in your seals

and get started." and get started."

Throughout the day, Dempsey often requested pencil and paper to scribble the name of the relative or friend of a Guardsman he had met. He would remember the relative and promise to write.

As he talked to the men, the Governor spiced thanks for what the men were doing and appreciation for the rigors they were undergoing with jokes about the weather. "It's been awfully warm at home," he would say. "Of course, it hasn't been hot up here."

Before climaxing the day with a reception in the officers' mess hall, Dempsey watched a class in hand-to-hand combat. A captain explained an attack, and two experts demonstrated.

Did everybody see that? the captain asked. "Yes, sir, I did," the men shouted in unison. Again and again they were reminded they were "tigers." Shaking the expert's hand, the Governor drew a laugh when he wondered aloud whether he had inflicted serious

It was a day of morale boosting and of seeing not quite the real dirt and disappoint-ment. But it was a view very few chief executives see.

Dempsey said he was impressed with the behavior of the men and with their lack of complaints for the camp itself.

As he boarded the homeward-bound air-plane, Dempsey glanced downfield at a for-mal review for the incoming Vermont governor, Philip R. Hoff.

It was an hour after the men's work day was to have ended. The Governor abulished the practice for

himself years ago.

Dempsey shook his head and asked whether Hoff would go into the field.

Probably not, the Governor was told.
Then, he climbed aboard, weary from the strenuous day that left younger men dragging their heels.

But he had seen the camp. He had seen the men. And, he thought, they knew the state cared for them.

Grand Canyon Dams and the Internal Revenue Service

EXTENSION OF REMARKS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. DINGELL. Mr. Speaker, many citizens in all parts of the country have been shocked by recent Internal Revenue Service action which threatened to choke off public debate on the proposed Grand Canvon dams.

This Internal Revenue Service action was the subject of a petition submitted to the President by participants in the Tenth Urban Design Conference, which was held at Harvard University on June 18 1966

Since this issue is of immediate con-cern to Members of Congress, I in-clude the text of this petition and the accompanying letter, from Mr. Charles W. Eliot, in the RECORD for consideration by my colleagues:

HARVARD UNIVERSITY. GRADUATE SCHOOL OF DESIGN, Cambridge, Mass., June 21, 1966.

The White House Washington, D.C.

MY DEAR MR. PRESIDENT: The petitions enclosed herewith express the deep concern of the signers over what appears to be pressure by the Internal Revenue Service to deny to

by the Internal Revenue Service to deny to those opposed to the construction of two dams in the Grand Canyon, their rights to present their views to the public.

The papers for these petitions were made available for signature to persons attending the 10th Urban Design Conference at Har-vard University on June 18, 1966. Following the Conference, the undersigned was asked to transmit these petitions for your atten-tion.

Very respectfully submitted. CHARLES W. ELIOT.

President Lyndon B. Johnson,

Washington, D.C.
DEAR MR. PRESIDENT: According to the New York Times, The Internal Revenue Service, has threatened the Sierra Club, "a society of ergetic and outspoken conservationists", with withdrawal of their tax-exempt status, following immediately upon the Club's news-paper advertisements alerting the public to

paper advertisements alerting the public to the proposed dams affecting the Grand Can-yon of the Colorado River.

We join with The Times' editorial declara-tion that "this is a new and thoroughly un-fair procedure, comparable to inflicting punishment before guilt is established" and that "the Internal Revenue Service's action looks suspiciously like harassment and in-timidation."

We urge you to instruct the I.R.S. to re-

Promising Career Cut Short

EXTENSION OF REMARKS

HON, CHARLES P. FARNSLEY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr. FARNSLEY. Mr. Speaker, the promising career of one of our most able young newspapermen, Robert Worth Bingham, the assistant to the publisher of the Courier-Journal and the Louisville Times, tragically ended as the result of a freak automobile accident on July 12.

In this connection I would like to include in the RECORD an excellent article by Norman E. Isaacs that appeared in the Courier-Journal on July 13.

WORTH BINGHAM, 1932-66: A PROMISING CAREER CUT SHORT

(By Norman E. Isaacs)

It was the summer of '52, I think. He was on the news staff as a trainee. That morning he'd come to work in tennis shoes, dungarees and an old shirt. One look and he was on "the carpet."

"Worth," he was told, "nobody works for these newspapers looking like that. You go home and get some decent clothes on. Either be back in an hour-or don't bother to report."

Worth Bingham made it back in 40 min-

utes.

Fourteen years later he was a hard-working, well-dressed assistant to the publisher. Thursday night he stayed down at the office to have dinner with the copy desk staff. There was good-humored jesting, some of it about himself, and serious newspaper talk. He enjoyed both. Friday morning he flew off for vacation in Nantucket.

WELL BACKGROUNDED

Then on Monday afternoon he phoned from Nantucket to report on a negotiation dealing with some future planning. He added happily, "The weather here is added happily, gorgeous."

Less than 24 hours later, Worth Bingham was dead, victim of a freak accident, just as was his younger brother, Jonathan, only two

years before.

years before.

The potential for Worth was a career as one of America's great editor-publishers.

He'd prepared well. After Harvard and the Navy, he'd broken in on the Minneapolis papers, writing oblits, covering police, doing rewrite. He got his first big break when he was sent to Wisconsin on a lurid murder story. The old pros of the Chicago and Detroit papers were busy making sure the police officials were "tied up" for their purposes. Worth went off on his own and got the big story.

Later, in San Francisco, he worked on two apers there, editing copy and writing head-ines. It was out there that he met a pretty art student and it was there that they were

married.

SERVED IN WASHINGTON

His years of Minneapolis and West Coast experience complete, he returned to the Louisville newspapers, first to work on the desks and in political reporting, and then to the Washington Bureau, where he worked long and hard mastering the intricacies of coverage in the nation's capital.

His series, "Our Costly Congress," which was reprinted all across the country and in Reader's Digest, took endiess hours of rehe wrote, and rewrote, and search. And rewrote himself.

Returning once again to Louisville, he went out on the circulation trucks and knocked on doors, trying to sell subscriptions. Later he sold ads. Once a merchant didn't quite get his name and proceeded to denounce "the Binghams" up one side and down the other. Worth listened to it all

with a wry grin on his face.

The training complete, he joined the executive staff. As a member of the editorial conference, he showed he had ideas, he expressed them, and he fought for them. And if it took a 12- or 14-hour day that was all right with him. In short he had a passion for newspapering—and there just wasn't any reason to doubt that he was going

to wind up as one of the top figures in journalism.

He was a big, ruggedly handsome man, who had a little of many things mixed up in him—aggressiveness and shyness, pride and humility, reticence and forthrightness. He had great poise, and the indefinable gift of charm.

There were three things that stood out about Worth. One was his dedication to newspapering. The second was his fascina-tion with politics. The third was his addic-tion to keeping fit. In all of these things, he played to win. At bridge, he could be the picture of elation and dejection within the space of minutes. He would groan loudly over his own misplays—and complain bitterly about losing a dollar.

DISDAINED APPEARANCES

It wasn't the dollar because he came very close to being unconscious about money

close to being unconscious acous managerenerally. He just hated to lose.

Appearances meant nothing to him. He drove what others around the office looked on as an old wreck. It was a big station wagon that had a distinct air of semidecreptitude. For a long time, the back portion contained a crib.

The fitness kick was quite something. Often he'd spend a lunch hour playing squash. He played tennis, golf, loved to ski, surfboarded. It was a surfboard that surfboarded. It was a surfboard that snapped forward yesterday, killing him

instantly. Of all his newspaper work away from Louisville, he loved Washington most. Part of this was because of the political atmosphere. Part, too, was that he worked there during the Kennedy era and Worth and Joan fitted perfectly into the setting. And he made deep and close friends all through the place.

As the friend on the phone said yesterday from The Washington Post, his office probably was just like our own: "Numb."

Protecting the Criminal

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Wednesday, July 27, 1966

Mr. THURMOND. Mr. President, in the light of the recent news surrounding a mass murder in Chicago I think an editorial which appeared on TV Station WBTW in Florence, S.C., on June 24, is particularly pertinent. I ask unanimous consent that the editorial entitled "Protecting the Criminal" be printed in the Appendix of the Congressional Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROTECTING THE CRIMINAL

Last week the Supreme Court of the United States issued another of its famous landmark rulings, one which, we assume, was widely applauded by the nation's criminal element. This time the high Court reaffirmed that Prosecutors may not use damaging statements or confessions against a suspect unless they can prove that he was safe-guarded against self-incrimination.

This all came about when a Chicago man, Danny Escobedo, was accused of murdering his brother-in-law, confessed, was convicted and jailed. He was released from jail when the Supreme Court ruled that the confession was invalid because Danny had been denied the right to Counsel and had not been cautioned that his statement could be used against him.

The current Court ruling is an expansion on its 1964 Escobedo case. It would be nice to report that Danny was a model family man, unjustly accused, who panicked into making a confession and that the Court had saved him from twenty years in prison. But Danny had several brushes with the law before being jailed on the murder rap and now he's back in Court again in Chicago, charged with gun carrying. His court-ap-pointed lawyer mays that as a defense he's going to use the Court's ruling in Danny's murder case.

About now you should be getting the idea that we're being extremely careful to protect the rights of those accused of crimes. who's to speak up in favor of victims? On the heels of the Court's ruling, which makes it just about impossible for an able policeman to get any information from a suspect, the FBI issued its latest edition of the Uni-form Crime Report. In the South, comparing the first three months of 1966 and 1965 we find Murder up 7%; Forcible Rape up 6%; Robbery and Aggravated Assault up 11%; Burglary and Auto Thief both up 5% and Larceny, involving \$50,000 and over, up 13%.

If criminal suspects keep their mouths shut, and they'll quickly learn to do this before the arrival of their court-appointed, tax-paid attorneys, then police investigators will have to depend on witnesses and circumstantial evidence.

South Carolina SLED Chief J. P. Strom manfully exhibited a stiff upper lip by rue-fully commenting, "It's not going to break our spirits as law enforcement officers. We're still going to enforce the law con-scientiously". Florence Detective Gene Lessscientiously". Florence Detective Gene Less-meister said, "It's the public and taxpayers who are going to suffer and pay and they should, in some way, protest the new ruling".

Just as we have always taken a position favoring states' rights in the face of growing federal power, we assert the right of the in-dividual to resist and he protected from tyranny. However, we didn't have in mind imposing a tyranny of protected criminals over defenseless law-abiding citizens, and by a slim 5 to 4 Supreme Court Decision at that. Something has got to be real bad wrong somewhere.

Conservative, Liberal Seek Pornography Study

EXTENSION OF REMARKS

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. BURKE. Mr. Speaker, in the July 26 edition of the Washington Evening Star there is an article by the nationally syndicated columnist, James J. Kilpatrick, which points out the key roles played by our distinguished colleague, the gentleman from New Jersey [Mr. Danikis] and the senior Senator from South Dakota [Mr. Mundr] in getting legislation enacted which will set up a study group to consider the problem of

pornography. Mr. Speaker, I think this House and this Nation are very fortunate to have a man of the caliber of our colleague from Hudson County, N.J. looking into the problem of pornography. Mr. Daniels has been a member of the bar of the State of New Jersey for 36 years and for many years served as a magistrate on the Jersey City municipal bench. His long experience with the law and his judicial temperament are ideally suited for the role which he has assumed. He is neither a fanatic nor a zealot and any study which he conducts is certain to be a factfinding inquiry and not a witch hunt. There is no Member of this House who is more respected than the gentleman from New Jersey and the fact that he is sponsoring this legislation has attracted support to the bill from Members who might not, if the bill were champloned by some one other than the gentleman from New Jersey [Mr. DANIELS], be so willing to support the

Mr. Speaker, I hope that the Education and Labor Committee will give speedy approval to the Daniels bill.

Mr. Speaker, I insert at this point in the Record, Mr. Kilpatrick's article.

The article follows:

CONSERVATIVE, LIBERAL SEER PORNOGRAPHY STUDY

(By James J. Kilpatrick)

A Republican conservative from South Dakota and a Democratic liberal from New Jersey, poles apart on most issues, have taken the leadership jointly in urging a serious congressional inquiry into the whole murky field of pornography. It seems unlikely, but they may just possibly bring a measure of order to a problem that is in total confusion now.

Senator Karl Mundr's bill to create a study commission on "noxious and obscene materias" passed the Senate on July 11. Rep. DOMINICK DANIELS' almost identical bill is now pending before the full House Labor and Education Committee, after receiving unanimous endorsement from a select subcommittee April 29.

This is the third time in the last seven years that the Senate has passed such a bill. The House never has gone along. This time, Committee Chairman ADAM CLATTON POWELL has promised Daniels that hearings will be held. If enough public support can be generated, Powell may yet be persuaded to push the proposal along.

Several reservations have to be voiced about the Mundt-Daniels bill itself; and those who have serious apprehensions about government censorship will be a little wary about endorsing even a congressional study that seeks to define something as undefinable as "obscentty." Yet both sides to this controversy—those who despise commercially peddled flith, and those who defend absolute freedom of press—include decent men and women. Neither side has a monopoly on virtue or on fanaticism either. And it is conceivable that both sides could benefit if a genuinely searching and thoughtful investigation were undertaken

The commission envisioned under the pending bills, unfortunately, may be so elaborately concocted that it will bog down in its own individual ruts. The idea is for the President to appoint three members from the clergy, two from the Department of Justice, and two from the Post Office, plus one senator, one representative, one educator (secondary), one educator (higher), one librarian, one publisher (books), one publisher (magazines), one state attorney general, one city prosecutor, one local police chief, one man from the movies, one man from radio-TV and one from the Department of Health, Education, and Weifare.

This earnest foolishness stems from the thinking of men who imagine that if only you put together three potatoes, two onlone, two carrots, and a pound of cubed beef, you will have a palatable stew. Something more is required; and in this case, it is mainly the labor of a few intelligent men able to see this complex problem whole and entire, and not through little labeled windows. If the President should appoint 20 pre-frozen members with neatly packaged attitudes, the foes of smut will consistently outvote the defenders of freedom by 13-7 or 12-8, and nothing useful will have been accomplished.

That reservation to one side, the Mundt-Daniels proposal in itself is sound. All that is asked under the pending legislation is a study. The idea is to look into the "origin, scope, and effects" of the traffic in pornographic materials. The commission would examine the conflicting and overlapping local, state, and federal laws in the field. In the end, it would formulate recommendations "for such legislative, administrative, or other forms of action as may be deemed necessary to combat such traffic."

Now, if such an investigation were undertaken by broad-gauged men-men who understand enough of freedom to know that freedom can indeed be abused-a legislative foundation might be laid on which some sensible new obscenity laws could be erected. The present laws, by and large, are a mishmash, partly derived from the late Inspector Comstock and partly derived from Mr. Jus-Nobody really knows pornography is, or what the effects of pornography are, but everybody knows this traffic is a dirty and lucrative racket. The question is: How do you combat the racket without jeopardizing the right of sophisticated adults, in a free society, to obtain reading matter that would shock three clergymen, two postal inspectors, one congressman, and one cop?

The answer does not lie in permitting an honest, God-fearing Nashville officer, acting on his own Bible-belt convictions, to close up "Who's Afraid of Virginia Woolf?" It doesn't lie in harassing Hugh Hefner's "Playboy" or in prosecuting the nudist magazines. But by the same token, neither is a problem of deep public concern to be resolved through the absolutism of the American Civil Liberties Union, which scoffs at the notion that pornography could have a bad effect on anyone.

It is likely that the problem has no satisfactory answer. In the end, the whole business may have to be left where it is now, in

the rough and imperfect hands of jurors who may not know dirt, but who know what offends them. Anyhow, it would do no harm to attempt a comprehensive study that might throw congressional light on a bunch of slugs who thrive in the dark.

James Meredith and the Civil Rights Bill

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 27, 1966

Mr. THURMOND. Mr. President, the television station in Florence, S.C., has recently made some very pertinent editorial remarks in regard to pending civil rights legislation and recent events in Mississippi. Since broadcast editorials are often overlooked in commenting on this important issue before us, I ask unanimous consent that the editorial broadcast by WBTW, Florence, S.C., on June 17, 1966, be printed in the Appendix of the Congressional Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JAMES MEREDITH AND THE CIVIL RIGHTS BILL

The bushwhacking of James Meredith along a lonely road in Mississippi caused one unexpected reaction, the raising of strong voices of reason in many parts of the country—voices which condemned the shooting but refused to fall into the trap of indicting the entire white population of Mississippi and the South for it. Completely expected and vocal, as usual, was the chorus condemning the shooting and demanding action, such as immediate passage of President Johnson's new Civil Rights Bill with its controversial provisions to eliminate discrimination in the sale and rental of real estate.

Since there's considerable Northern opposition to this provision we fall to see how passage would single out the South for punishment. Representing this position though Br. Benjamin Payton, a spokesman for the National Council of Churches, who said, "The shotgun pellets that wounded James Meredith, it is hoped, will have stung our Congress into performing quickly the duty set so clearly before it."

It should be pointed out that James Mere-

It should be pointed out that James Meredith started out from Memphis on a march to Jackson to dramatize Negro voter registration. We were not aware that he was trying to drum up support for the new Civil Rights Legislation which is presently stalled in the House Judiciary Committee following its well-reported public hearings.

There's even some question in the ranks of Negro leaders as to whether Negro voter registration needed the kind of impetus James Meredith figured on providing with his interrupted march to Jackson. Charles Evers, the State Director of the Mississippi NAACP, said he didn't think that marches from Memphis to Jackson were going to get any Negroes registered and that the money being spent on plane tickets and campouts should be spent on registration.

This naturally raises the question of how much of a problem is Negro voter registration in Mississippi. On the one hand a spokesman for the National Council of Churches is saying that because Meredith was shot on a voter registration march, vengeance requires immediate passage of the new Civil Rights bill. On the other hand the Council is saying that it plans no du-

plication of its previous efforts when it trained some 600 Northern College students as Civil Rights workers to participate in soas civil reignts workers to partempte in Mis-sissippi. Evidently on the grounds that such an effort in voter registration is not re-quired. We wonder, therefore, how many people are going to buy the idea that the unfortunate shooting of James Meredith, in the course of a provocative and lonely march the coourage Negro interest in voting, requires the passage of legislation which would severely limit your ability to dispose of your real estate. The police have charged Meredith's assailant. All that is required is that he receive a fair trial and that a jury should render an honest verdict.

Abdication of the Majority

EXTENSION OF REMARKS

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. ABERNETHY. Mr. Speaker, now that we are for the seventh or eighth time in the last 12 years—it has been so frequent we have lost count—consider-ing so-called civil rights legislation designed to placate marauders in the streets and on the highways, I think it most appropriate that a recent column written by Holmes Alexander be included in the RECORD. I commend it to the reading and consideration of those who still clamor for more so-called civil rights legislation. In so doing I express the hope that everyone will soon get a belly full of this civil rights junk and allow government, Federal and local, to return to a state of normalcy under the leadership and guidance of the majority which now is being driven to the woods and the suburbs.

Mr. Alexander's column follows:

ABDICATION OF THE MAJORITY

(By Holmes Alexander)

Washington.—"Whatever happened to majority rule in the United States?" saked the Returning Traveler, who had been away for a while. "Did a small but superior group

Not exactly, he was told. The 12 per cent which disrupted America was inferior in education, in property and in just about any way you can measure good citizenship. They were even divided among themselves. Some favored violence, some were for non-violent demonstrations. Others were willing to let progress take its course.

"Then," said the Traveler, "it must be that the militant forces in the minority took to the forests and rural areas and finally beat down the majority by the standard guerrilla

On the contrary, he was informed, the minority took over the cities, including the Capital City. It drove out its opponents, who retreated to the suburbs and tried to establish new settlements to bring up their children. There remained behind little more than a garrison of the majority.

"The city of Washington is not typical," said the Traveler. "Even if the minority overcame the majority in the nation's cap-ital, there is no reason why the same thing had to happen in other cities."

The Traveler was told that, nonetheless, the loss of majority rule had happened in nearly all the major cities.

"From what you are telling me," declared the Traveler, "the disappearance of majority rule in the United States occurred by abdica-

There was a good deal in what the Traveler was saying, he was told. The 88 per cent had certainly been docile and foolish. It sustained TV programs which publicized the rioters. It made big sellers of books which virtually called for revolution-in-the-streets.
It accepted the systematic degradation of the police as an institution in this country. It tolerated a progressive weakening of the anti-criminal procedures.

The majority allowed its two major parties

to give way to the nagging of the minorities.

Said the Returning Traveler, "I have seen Said the Neturning Traveler, "I have seen many countries where a minority could set up a tyranny. But it would always have the advantages that make for power—guns, stolen money, education—while keeping the masses in ignorance. But never have I seen a minority armed mainly with switchblades, largely dependent for money upon charity. composed to a great extent of educational dropouts—never have I seen such a minority push a well-armed, wealthy and highly cul-tured majority out of its cities and out of

"Did not people back in 1966 realize it was time to assert law and order? Didn't they know that if they didn't govern the country.

it wouldn't be governed at all?" There was no need to reply to the Returning Traveler.

Racial Troubles in Parts of the Nation Outside the South

EXTENSION OF REMARKS OF

HON, STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Wednesday, July 27, 1966

Mr. THURMOND. Mr. President, recently there appeared two outstanding editorials in South Carolina in regard to some of the racial troubles in parts of the Nation outside the South. I think these editorials to be singularly important to this present situation and ask unanimous consent that the editorial entitled "Alias Martin Luther," appearing in the Columbia State on July 13, 1966, and the editorial entitled "Race Ills Challenge Journalism," appearing in the Greenville News on Thursday, July 14, 1966, be printed in the Appendix of the Congres-SIONAL RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Columbia (S.C.) State, July 13, 1966]

ALIAS MARTIN LUTHER

Sooner or later, it was bound to happen-Martin Luther King's publicity stunt of posting a set of demands on some public building.

The gimmick, of course, is the ostensible parallel between last Sunday's exhibition at Chicago's City Hall and the original per-formance by the real Martin Luther almost 450 years ago. On October 31, 1517, the great German religious reformer posted on the door of the Castle Church at Wittenberg a bill of particulars ("The 95 Theese") against clerical abuses of the Roman Catholic system of indulgences.

What makes this latter-day performance all the more shoddy is the fact that the Negro

agitator was not really named after Martin Luther at all. Both he and his father before him started out in life as Michael Luther King and Michael Luther King Jr. Not until the younger King was entering boyhood was the Michael dropped in favor of Martin. Whatever motive lay behind the change

is not a matter of record so far as we know, but the renaming proved to be a veritable bonanza for young King when he projected himself into the civil rights movement with his bus-boycott activity at Montgomery. From then on, the "Martin Luther" handle was a passport to publicity.

The name change was simply the first of a series of frauds which King has perpetrated on the people of the United States—and of the world. While plously preaching "non-violence," he has planted seeds of racial dis-cord which have erupted destructively in communities across the face of the land usually after King has moved on impassively to other fields to repeat the performance.

He has brought together under the highsounding title of the "Southern Christian Leadership Conference" a motley collection of hot-heads, parlor pinks, Red-tinged ac-tivists, and black nationalists whose manifest al is racial unrest, not racial amity.

Perhaps this is a time for posting a new indictment against indulgences. Certainly the American people have too long indulged Michael (called Martin) Luther King and

[From the Greenville (S.C.) News, July 14, 1966]

RACE ILLS CHALLENGE JOURNALISM

Newsmen and commentators constantly examine and criticize conditions in the community, state, nation and world. This is a necessary function of constructive jour-

There are times when the journalism profession also should search its own soul-and this is one of those times. So we hope the reader will bear with us—and perhaps join us—as we examine our journalistic conscience in an important matter.

Responsible American journalism is up against a stern challenge which must be

met by all newspapers, magazines and radio and television stations. It is the challenge of full, factual reporting of the serious racial crisis now building in this country, without

irritating its causes.

What we have to say here applies particularly to the radio and TV networks, which have not begun to master the fine art of presenting the flow of the news in a straightforward manner, and to certain "news" magazines which make no effort to distinguish between fact and opinion for the reader's sake and whose opinions are clearly biased.

Journalism is a profession of the highest order. Its importance is emphasized by the "freedom of the press" clause in the Constitution of the United States. The fate of the nation rests in a large degree upon how well and how wisely the "press" informs and influences the American public which controls the destinies of the country.

In times of crisis, this professional re-sponsibility increases to awasome proportions. There are times when the newsman must wrestle with his conscience to deter-mine where his highest responsibility lies and how to meet it.

At times there is a soul-wrenching conflict between the journalist's desire to get a story first and complete and his responsibility to avoid inciting more of the same sort of news with unnecessary and lurid detail.

This conflict now confronts American journalism as racial unrest builds. We are approaching the point of a greater national crisis in race relations.

It must be recognized that sustained, widespread race rioting and sabotage in major cities would disrupt American life and weaken the nation dangerously. Outside enemies would be tempted to seize the opportunity to deliver a fatal strike.

Indeed there is evidence that some subversive elements in racial unrest are linked with and controlled by an intercontinental revolutionary movement based in Cuba and supported by both the Soviet Union and Red China.

In handling this situation as it develops in major American cities, the news media bear an almost crushing responsibility to report in moderation, as well as in complete accuracy. Perspective and restraint are allimportant.

The national press, especially the broadcast networks, cannot afford the luxury of handling the big city situation as it has handled racial unrest in the South. On the contrary the national media should give sober reflection to the results of infiammatory, sensational, all-out, highly competitive reporting upon many Southern communities.

Every attempt should be made to avoid the shameful abuses which were documented in Little Rock, Birmingham, Selma, New Orleans and elsewhere across the South.

This time it is not simply the peace of Southern communities; it is the peace and safety of the whole nation which can be affected.

This is no time to turn hordes of reporters and cameramen loose on every street brawl which erupts. This is no time for kleig lights to arouse demonstrators. This is no time to give full "coverage" to every publicity-seeking radical who wants to stir up trouble.

The zeal of competitive reporting in a highly-competitive field must not get the better of mature journalistic responsibility in this dangerous situation.

The leadership of American journalism has every reason—and it must be given credit and support for trying—to lay down reason—able but firm norms for all to follow in this sensitive area of the news. Perhaps the time has come for "pool" reporting of racial violence by cooperative news media.

We have seen such arrangements work in potentially explosive situations, with a few selected and competent reporters, photographers and broadcasters gathering and sharing the complete and accurate story. Only the networks and national publications who are the worst offenders object loudly to this method of being served by the local newspapers, broadcast stations and regional wire service personnel.

At the very least it is the solemn obligation of American journalism to report whatever may come in calm, restrained fashion; avoiding rumors and lurid detail which could create more unrest; and shunting aside all attempts to use the journalistic profession as a propaganda vehicle.

This newspaper speaks with some experience in this matter. We have "been there" when racial violence threatened in this aren and others. We reported what happened, but avoided sensationalism and dire predictions which could contribute to more trouble. We refused to be used for propaganda purposes by anybody on any side of any controversy.

Recognizing their dual responsibility for reporting well and influencing wisely, this is the course which all news media should follow in the dangerous months, maybe years, which may lie immediately ahead.

Readers, listeners and viewers, likewise, have their own responsibility in this matter. They must receive the news in perspective and with their own sense of balance. They should choose their sources of news with understanding and consider the credibility and motives of those who figure in the events, movements and policies reported.

Remarks of Hon. John E. Fogarty Before the Rhode Island Heart Association

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

Congressman John E. Fogarty, Rhode Is-Land Heart Association, Providence, R.I., February 28, 1966

It is always a much appreciated privilege and abiding pleasure to meet with my friends and colleagues of the Rhode Island Heart Association.

Every event in which I have been associated with you, and they are many, has been a memorable one. But his evening's occasion surely outranks every one so far, because we are celebrating the twenty-fifth anmiversary of our heart association.

This quarter of a century has meant much for us. When the Rhode Island Heart Association was beginning, I was myself new in Congress; and we have grown and developed together.

Let me recall a talk I made here in 1958 at a special educational meeting involving the heart surgery club. I was able then to recount dramatic advances in heart surgery, new drugs for high blood pressure, rheumatic fever prevent programs, cardiac rehabilitation and work evaluation services, and other areas.

The heart association had transformed apathy into interest, given new hope to people, and begun to provide urgently needed services.

As a needed service, the heart association in partnership with physicians, local and state official agencies, and the National Heart Institute—was giving people vital public information about heart disease: what it was, what could be done, and how and where they could get help.

could get help.

In the light of these achievements, which continue today just as vitally and needfully, a recent attack on the heart association stands revealed as utterly off-track and about as intelligent as the actions of the villians in the current TV program called "Batman."

This was published in the Washington, D.C. Post, February 8, reporting a talk by Mr. Cleveland Amory before a women's group. The charge, as reported, was that the American Heart Association was spending more money on raising funds than on anything else and that over half of the funds raised last year went for "administration and public information."

Everyone who takes the trouble to become informed, knows that the charge is wrong and vicious.

The heart association accounts to the people for its stewardship of voluntary contributions. This is just as important for a voluntary agency as it is for the National Heart Institute, for example, to account for its tax funds.

The heart fund dollars go in appropriate proportions for research, education, and community services. The proportions for administration and fund raising are in reasonable percentages. They are kept at minimal levels.

When it comes to expenditures for public information, it seems to me that what really counts is the cardinal fact that the en-

deavors of the association and official agencies have made the American public the best informed in history on heart disease, and what to do about it.

Take, for example, the recent National Health Test conducted on TV. Large percentages of people, surprisingly large percentages, I understand, were reported as answering the heart questions correctly. This showed that millions knew a good deal about heart disease and what they could and should do.

Vital heart information, and all good health information for that matter, is a necessity, not a luxury.

Vital public information goes out through the media of communication and through visits, phone calls, letters, and all the work that heart associations and their allies do. It helps save lives and relieve suffering.

From heart information, a person allays his fears by reading the true facts about high blood pressure or heart murmurs. He understands what modern methods of diagnosis are. He learns about risk factors and how he can increase his chances of avoiding heart disease.

From it, a worried father is helped when he wants to know how funds can be found and where an operation can be done to save his little girl's life.

From it, a man recovering from a heart attack is helped to find out what kind of work he will be able to do.

From it, people learn what is going on in research and what progress is being made in new discoveries and treatments.

These are only a few illustrations, but they are true and make the point.

Actually, though much has been accomplished, much more public education and information are needed. The heart story is never done. It should never stop being told, by you, by the official agencies, by physicians and all health workers, and by each of us who learns and knows it.

As we reach the end of American Heart Month in 1966, we can be proud of helping enlighten people and of our progress. It has been estimated that over two mil-

It has been estimated that over two million lives have been saved in recent years because of research and the application of new knowledge against our major diseases.

If we keep on—strengthening and sharpening the focus of research, training, and community services and facilities—it might be possible to double this number of two million. It would not seem impossible or even improbable that four million lives be saved in the next four years, by 1970—instead of proceeding at the same rate as in the past and reclaiming two million in ten to fifteen years.

0

a

tl

ri

Pest

az

di

rh

00

Why is this possible?

It can be so because the increasing acceleration of research and manpower training and the widening availability of facilities and services can tremendously increase the Nation's ability to postpone premature disability and claim more lives from untimely death.

Now, I am not the only one of those who look toward this—and my optimism is based on that of authorities more skilled than I in predicting. There are some, of course, who would rather groan about darkness than raise a shade to let the sun in. But I believe that a positive approach is better than a negative one.

Present gains lend credence and strength to such a view. There have been real death rate reductions in such areas as rheumatic fever and rheumatic heart disease, strokes, and high blood pressure. There are burgeoning programs, which I have been privileged to lead and assist in Congress, such as the acts for community facilities, health research facilities, community health services exten-

sion, community mental health centers, health professions education, and heart disease, cancer and stroke regional medical programs. These promise much for the future, given appropriate funds, careful administration, and state and local execution in accordance with sound, established patterns of medical care, training, and services.

What are some realizable goals for our present and future attack? The possibilities in coronary heart disease and high blood pressure are examples of great potential progress.

More than 500,000 die each year from coronary heart disease; and it is our toughest and greatest heart enemy. But we might well set a goal of from ten to twenty percent annual reduction in these deaths for the next few years-saving 50,000 to 100,000 a year. Prospects for such an advance appear en-couraging through a number of approaches.

Drugs and hormones may reduce the incidence or prevent recurrences of coronary heart disease and its heart attacks. We have succeeded in getting launched a cooperative study of some of these promising agents to really test them out.

Mechanical devices to temporarily assist the heart acutely damaged by a heart attack should be here within the next few years. Within the foreseeable future a totally im-plantable artificial heart may be feasible. This program for the research and development of an artificial heart is now launched and should result in the saving of many thousands of lives annually.

Coronary care units and improvements in bio-engineering and instrumentation will lead to the saving of many other thousands through providing instant, comprehensive, and continuous care through critical pe-

A number of surgical procedures show great promise for improving blood flow to the heart muscle, adding to the number who

Drug research will probably develop drugs to retard clot formation or to dissolve clots; and we are hopeful for cooperative clinical trials of such promising agents as urokinase. Such a therapeutic agent could add many more thousands of reclaimed lives.

Diagnostic techniques that will spot trouble faster and more accurately are sure to come, ranging from improved motion pic-ture X-rays of coronary arteries, blood flow measurement in them, and sensitive chemical tests to the use of computers and portable, continuous electrocardiographic recorders. Prompter and better detection will also lead to substantial reductions in coronary deaths.

High blood pressure is another enemy against whom we can set new goals.

Over 69,000 died from hypertension in

1964; and many millions suffer from it. Although the death rate from high blood pressure has been reduced over fifty percent in recent years, it is, therefore, still a vast prob-

In the next few years, an increasing variety of curable or remediable kinds of hypertension can be defined by intensive studies. Also, as new diagnostic measures are developed, better and more specific treatments will result. There should be in-expensive, effective, easily administered drugs, without side effects of significance. Thus, it is not too much to set goals of further, substantial death rate reductions.

There are other exciting possibilities in rheumatic fever, rheumatic heart disease, congenital heart disease, and other heart and blood vessel conditions. But these examples concerning the two major categories show that we can seek realizable goals for greater gains than ever before.

Now, how can we attain such goals?

There are several essentials. There is the matter of teamwork. It is a most important factor; and the attack on heart disease

has been characterized by this American approach.

We in Congress will do everything pos-sible to further the cooperative spirit and approach-and we are, in a sense, members of the health team. Federal, state, and local public agencies are likewise partners. But, without the doctors, other health professional people, and the heart associations in the places where people live, the bold goals that I have mentioned would be unattain-

The Rhode Island Heart Association, other state affiliates, and the American Heart Association are in the vanguard of agencies that have learned how to work in teamwork. This means that you should play a key

role in seeing to it that things get done and done well, as a cooperative endeavor mobilizing all potential resources.

Sometimes, the question is asked, "In view of the increasing Federal programs, is there a role for the voluntary health agency?"

I think that you know the answer is a vigorous, "Yes!"

The heart association has proved itself; it has been indispensable to progress to date, and will continue to be so. The official agencies are also essential, just as are the medical and health professions. The strong combination of these resources is abolutely necessary to maximum advances.

But the need for the voluntary effort and the heart fund is an imperative one. Needs cannot and should not ever be met entirely by tax funds.

People want to support the fight against heart disease—and all disease. They want an all-out attack by their government, medical and health professions, and their voluntary agencies.

Such causes as the heart fund are, therefore, both necessary and important. The voluntary program provides opportunity for the individual to give freely to the area of his choice. It avoids hazards that lie in complete dependency upon programs sup-ported solely by public monies. It encour-ages and guides the endeavors of others. It is an effective partner for all the groups that comprise our health resources.

Also, and very importantly, the heart association provides opportunity for personal participation, for services in a direct and individual way. Those who work on behalf of the heart association and those who contribute to the heart fund do so of their own free will-and maintain the unique American tradition that is a prime source of our Nation's strength.

The heart association has other essential values. It adapts rapidly to changing needs values. It adapts rapidly to changing necessarial indications and is quickly responsive to new demands in research, in education, and community programs.

The whole history of the heart association has been one of meeting such demands and observed that the still the rational such demands and the such demands are progressed that the still the st

challenges. I am confident that this will continue and that people will continue to give increasing support.

In the long run, all the heart association and government efforts are based on the cooperation of the scientific and medical community, the Congress, and the public. In this context, each heart agency, public and private, views the other as essential not only to its own continued growth and development, but also to the achievement of the mutual aim of the conquest of heart dis-

The resources of all are needed to do the job; and the size of the task and the challenging goals warrant our maximum effort. This is a war for health which we should escalate as much as possible as soon as pos-

If we do, long before the Rhode Island Heart Association's golden anniversary we shall have attained heights of success undreamed of now. Just as, twenty-five years ago, none of us could have dreamed that we would be where we stand today, so it is not

possible now to imagine all that will be accomplished in the coming years.

But we can be sure that many new gains

will be made and we can be certain that the Rhode Island Heart Association will do its share to achieve them, alert to opportunities and responsive to the needs of the Community, of families, and of individuals.

Fair Housing and Jury Selection

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Wednesday, July 27, 1966

Mr. THURMOND. Mr. President, recent hearings on the so-called civil rights bill have elicited so much comment throughout the Nation that it is hard to know just which comments are worthy of inclusion in the Congressional Rec-ORD; however, the editorial broadcast by WBTW on July 1 and July 8 dealing with the open housing provision and with the jury selection provision of this proposed legislation are particularly apt and to the point; therefore, I ask unanimous consent that the editorials regarding fair housing and jury selection be printed in the Appendix of the Congressional RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[Television station WBTW editorial, July 1, 1966]

THE OPEN HOUSING PROPOSAL

There's been so much said lately about civil rights it's hard to believe that any area at all is to be exempt from federal legislation designed to enforce a right to something. The latest in a series of Washington legislative attempts to enforce another so-called right is the Open Housing provision in the new Civil Rights package. This says in ef-fect that the owner of housing property may not discriminate when renting or selling his property, otherwise he'll find himself in Court as a defendant with the Government financing the suit against him,

A spokesman for the National Association of Real Estate Boards told a Senate Subcommittee that the law now being considered by Congress could prevent an owner of a house for sale from advertising that it was near a Baptist Church or a Parochial school since this would seem to indicate preference for a

purchaser of a particular religious faith.

Now it is true that the open housing provision of the new Civil Rights Bill is designed to prevent racial discrimination when housing is sold or rented. But let's take a closer look at the rights involved and attempt to determine whose rights are being trampled on. It's always been part of the definition of property that the owner can dispose of it as he sees fit, subject to the common good, as sometimes set forth in zoning regulations.

The framers of the Open Housing proposal are now saying that a home owner has no right to refuse a buyer for any reason if that buyer would agree to pay the asking price. But if we're going to talk about the common good, what's so had about protecting an owner's right to sell, as opposed to creating, by law, an unheard of right to buy.

We treasure our free speech in spite of the many abuses of it, especially by mouthy sup-porters of the far right or the far left. It seems to us that the right to dispose of our property, as we choose, should be defended

even though there are and will be cases of racial or religious discrimination when property is rented or changes hands.

As free speech is guaranteed by the Constitution so also are your property rights. This is, they were until Government Attorneys decided that the Interstate Commerce Clause in the Constitution should take precedence.

On Wednesday of this week the House Judiciary Committee voted to exempt homeowners who sell or rent, up to two transactions a year, plus units of up to four family size, provided the owners live in them. But as Senator Dirassam pointed out this is still a partial liquidation of Constitutional due process and falls on the grounds of basic principle. We agree with Senator Dirassam. You can't compromise. The open housing proposal is a bad one and should be cut out of the bill entirely.

[Television station WBTW Editorial, July 8, 1966]

JURY SELECTION AND CIVIL RIGHTS

We're indebted to former North Carolina Governor, Terry Sanford, for reminding us that there's more to the 1966 Civil Rights Bill than the well-publicized open housing provision. In an address to the North Carolina Bar Association's Annual meeting last week in Myrtle Beach Governor Sanford pointed out that the Bill's provisions covering jury selection may well be the beginning of federal participation in running the state court systems.

The Federal Government would have the power to suspend any state qualifications for jury duty that discriminate or are susceptible of being applied in a discriminatory way. Specifically the bill says that no person may be denied, on the grounds of race, color, religion, sex, national origin or economic status the right to serve on a jury. There's even a provision for a so-called "Master" who would have the duty of assuring the right to serve on a jury while maintaining records which might be necessary to show proof of discrimination.

You're probably wondering why any one thought such a bill was necessary. In case you've forgotten we'll have to point out that the prime cause for its drawing was the failure of Southern juries to convict in some widely reported cases such as the shootings of Medgar Evers, Mrs. Viola Liuzzo and Lemuel Penn. It's being assumed that the absence of Negroes from the juries involved was one reason for the failure to con-However, as Governor Sanford pointed out there's no assurance of conviction by making Negroes available for service on such But since at least half the states in the nation use voter registration lists from which to select jurors and since the number of registered Negroes is increasing by leaps and bounds there seems little need for specific legislation.

Currently women do not serve on juries in South Carolina State Courts; in Federal Courts, yes, but not in State Courts. While some few homemakers have militantly denounced the state law that prevents them from taking a week off from their household chores to sit around a county courthouse, most women would greet passage of the bill like the storied little old lady who, although she didn't want to go, was helped across the street by an eager boy scout.

We agree that no one should be denied the right to serve on a jury by reason of race, color, religion, sex, national origin or economic status. But note the legislation, how it intrudes the federal government into another area traditionally reserved for the states. Again in a heavy handed attempt to preserve rights in one area the federal government tramples all over them in another. It's the insidious idea that you can fix anything with a little federal legislation that we're objecting to.

Grand Canyon Controversy

EXTENSION OF REMARKS

HON, SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. CONTE. Mr. Speaker, I noted with interest that two newspapers from the Pacific Northwest have recently joined in the effort to preserve the Grand Canyon. The Seattle Times, in a June 29 editorial, points out:

The Grand Canyon is a record of millions of years of nature's changes. Any man-made changes would only destroy a part of this record.

And the Medford, Oreg., Mail Tribune of June 15 labels the present plan to construct two power dams in the canyon "indefensible—surely on esthetic grounds and, very probably, on practical grounds, should a thorough study of alternatives be made."

The ever-growing number of newspaper editorials and columns—from all over the country—joining in the fight to keep the Grand Canyon unspoiled, seems to me a factor of great significance. Today, I should like to include the editorials from the Times and the Mail Tribune in the Record:

[From the Seattle (Wash.) Times, June 29, 1966]

COLORADO FIGHT: ROUND ONE

Federal Reclamation Commissioner Floyd Dominy says yesterday's 13-5 vote by a House subcommittee in favor of a dam in the Grand Canyon area augurs well for full congressional approval of the project.

Those millions of Americans who have acquired in recent years a renewed interest in protecting the remnants of the nation's scenic outdoor heritage have reason to hope

that Dominy is evrong.

The Huslapai Dam, a part of the \$1.7-billion Colorado River project approved by the reclamation subcommittee, would create a \$2-mile-long lake in the bottom of the canyon, extending through the entire Grand Canyon National Monument.

The reclamation commissioner admits that the dam would change some scenic values, but, he adds, "I do not think it will destroy any of them."

But the Grand Canyon happens to be one of those last remaining areas of special scenic glory—like the heart of the Olympic National Park—in which change is synonymous, to some extent, with destruction.

The Grand Canyon is a record of millions of years of nature's changes. Any man-made changes would only destroy a part of this record.

Dominy argues that the proposed dam would make the Colorado River at Grand Canyon "more beautiful than it was in its natural state." This, to our mind, would be like adding some special coloring to Crater Lake or reshaping the orest of Mount Rainter.

Northwesterners, of course, have a special reason, other than defense of the Grand Canyon, for objecting to the bill approved yesterday by the Southwest-dominated subcommittee.

The bill would authorize studies as a first step toward diverting Northwest water to the Southwest. Furthermore, the measure's sponsors intend that revenues from hydroelectric power produced by the Hualapai Dam and the Marble Canyon Dam, in the same area, would be used to finance the water-diversion project.

Dominy asserts that opponents of these dams are selfish in that "they want to lock up 253 miles (of the canyon) for a few."

A few? Can untold numbers of canyon visitors from among future generations be considered a few?

For that matter, considerably more than a "few" present-day Americans share the sentiments of Representative Thomas S. Foley, a Washington State member of the subcommittee, who says of the battle against the Colorado bill as it now stands:

'We have just begun to fight."

[From the Medford (Oreg.) Mail Tribune, June 15, 1966]

FLOODING THE GRAND CANYON

The Grand Canyon may seem a long way from Oregon. But many Oregonians have visited it, marveled at its pirmitive beauty and grandeur, and taken pride in the fact that is is THEIR Canyon, preserved for all time for future generations to enjoy.

But this noble dream may be destroyed, and if it is, the sanctity of any other National Park is in question.

Congress in on the verge of passing a measure to authorize two new dams in the Grand Canyon which would inundate 130 miles of this great natural feature. Water would be backed up into the National Park itself. Nor are these multi-purpose dams. Their only purpose is to generate auxiliary electric power for industry with the proceeds going to pay for reclamation projects in Arizona. The Sierra Club is leading the fight against

The Sierra Club is leading the fight against this descreation of the Grand Canyon for political and industrial purposes. It is putting up a stiff fight, but concedes that the measure probably will pass unless people all over the nation protest to their representatives.

The Club has pointed out that the Bureau of Reclamation, main sponsor of the plan, has been allowed to testify, but that other Interior Department agencies, which feel differently, have not.

It also points out that other sources of power, more efficient and more economical, are available, and that there is reason to doubt that these two huge dams would ever pay for themselves.

Let us first of all concede that Arizona needs more water—as do all southwestern states. But at the same time let it be known that this can be done without sacrificing one of our greatest natural assets.

With today's technology, with the increasing use of atomic power, and with a breakthrough in desalting sea water expected at any time, this pian to ravage the Grand Canyon is indefensible—surely on esthetic grounds and, very probably on practical grounds, should a thorough study of alternatives be made.

The plan should bring an outraged howl of protest from any one who ever has gasped at the sheer majesty of the Grand Canyon—or who hopes that his children and theirs will have an opportunity for similar inspiration.—E.A.

Are the Police Handcuffed?

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 27, 1966

Mr. THURMOND. Mr. President, there appeared in the Friday, July 22, 1966, issue of the Augusta Chronicle at Augusta, Ga., a timely and precise editorial entitled "Are the Police Handcuffed?" This excellent editorial clearly

sets forth some important questions which all Americans, and particularly Members of the Congress, should consider carefully. Because this is a matter which will require increasing attention, I ask unanimous consent that it be printed in the Appendix to the Congressional Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

ARE THE POLICE HANDCUFFED?

Will recent Supreme Court rulings have the effect of giving freedom and immunity to suspects held by the police, by thwarting the adeptness of law enforcement officers in questioning any who are arrested?

That is what the constitutional amendments subcommittee of the U.S. Senate Judiciary Committee wants to know, and in order to reach an opinion it scheduled hearings to begin this week. Should the subcommittee reach the conclusion that the Supreme Court has seriously weakened the protection from crime which is due to the public, it could sponsor a constitutional amendment giving police greater freedom in questioning suspects.

Dramatizing the new caution with which police everywhere are handling suspects, in order not to take any action which would be grounds for reversing convictions, is the Speck case. Richard F. Speck was arrested Sunday in connection with the slaying of eight young women three days earlier, in a

Chicago nurses' dormitory.

Chicago police already have an eye-witness in the person of one nurse who hid and escaped detection. They have fingerprints. Under the new rules laid down by the Supreme Court, however, the police cannot ask Speck one single question until they have advised him of his right to have a lawyer. They cannot ask one single question unless he agrees to be questioned. They cannot even ask him to tell his own side of the matter and confront him with discrepancies. Chicago police officials declared that they would abide by these restrictions scrupulously.

There may be cases in which eye-witnesses or other factors may be sufficient for conviction, and make questioning by police unnecessary. What about all the cases, though, in which there were no eye-witnesses, no fingerprints and no unsolicited confessions? The investigative processes on which police always have depended might go down the drain, and provide a bonanza of immunity for all but an occasional criminal.

Police and prosecuting attorneys all across the nation have protested that the Supreme Court's rulings stemming from cases appealed and acted on in 1964 and more recently on June 13, 1966, will render much of their work ineffectual.

The subcommittee will seek to determine the degree to which police questioning and confessions are essential. It will examine the potential offered by other methods of establishing guilt, including, for example, new scientific methods such as identifying persons through "voice prints." The subcommittee will no doubt probe the actual methods that have been used in station house questioning, and undoubtedly they will turn up evidence of proper regard for constitutional rights along with an occasional abuse of such rights. Such abuses, it would seem, call for remedies where found, rather than for the drastic blanket action taken by the Supreme Court.

We cannot condone physical maltreatment of suspects, or outright deception. It seems to us, however, that when criminals obviously are going to use their wits in every concelvable degree to escape responsibility for their crimes, the law should permit the police

to be equally proficient in protecting the victims and the prospective victims of such crimes.

Sidney Bernstein

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. KUPFERMAN. Mr. Speaker, I knew Sidney Bernstein as one of the leading producers of provocative and thoughtful plays on and off Broadway.

His untimely death will create a void among those producers willing to "take a chance" in the theater with a possible intellectual rather than a financial success.

He was kind and pleasant and a gentleman with none of the flamboyance attributed to Broadway.

He will be missed.

His obituary as taken from the New York Times of Saturday, July 23, 1966, follows:

SIDNEY BERNSTEIN IS DEAD AT 56—PRODUCED OFF BROADWAY PLAYS—PRESENTED "BLACKS" BY GENET, WHICH HAD 3-YEAR RUN—ALSO A THEATER MANAGER

Sidney Bernstein, a leading Off Broadway, producer, whose interest was "in plays that, loosely speaking, comment—make some comment," died of a heart attack yesterday in St. Vincent's Hospital. He was 5d years old and lived at 55 East Ninth Street.

Mr. Bernstein was co-producer with George Edgar and André Gregory of Jean Genet's "The Blacks." It had 1,408 performances from May 4, 1961, through September, 1964, at the St. Marks Playhouse.

The drama about interracial actions and reactions was, according to Mr. Bernstein, "virtually the only play ever written for Negroes which makes fullest demands on them as artists and actors."

them as artists and actors."
In 1964, he and Lucille Lortel produced "Blood Knot" by Atholi Fugard, a drama about racall tensions in South Africa.

AT UNIVERSITY OF ALABAMA

"Believe it or not," Mr. Bernstein, a native of Brooklyn, once said in an interview, "I spent two years, 1930 to 1932, at the University of Alabama. My interest in integration started right there."

For this fail, Mr. Bernstein had planned his first productions for Broadway. They were to be a revival of "Native Son," the melodrama on a racial theme adapted from Richard Wright's novel by Paul Green and Mr. Wright, and "The Secret of the World," a tragedy by Ted Allan, to be directed by Sean Connery of the James Bond films.

Mr. Bernstein had worked with the Group Theater, an experimental organization, in the nineteen-thirties and was later a filmwriter in Hollywood.

Returning here, he produced in 1950-51, an early Off Broadway presentation, "Nat Turner" by Faul Peters. In the 1956-1957 season, he was co-producer of the prizewinning "Volpone." In 1958, he presented Horton Foot's "Midnight Caller" and "John Turner Dayls."

In 1959-60, he presented the Off Broadway version of "Summer of the 17th Doll." In 1963 he produced Max Frisch's "The Fireburgh."

MANAGED GOLDEN BOT

Last year for a while, Mr. Bernstein managed "Golden Boy," the Sammy Davis musi-

cal. He had also been general manager of James Baldwin's "The Amen Corner."

He was known for his kindliness with actors.

Mr. Bernstein was a member of the League of Off Broadway Theaters and of the Association of Theatrical Press Agents and Managers.

Surviving are his widow, the former Brunetta Barnett, and a brother, Leo.

A funeral service will be held Monday at noon at the Universal Funeral Chapel, Lexington Avenue and 52d Street.

Tidy Up

EXTENSION OF REMARKS

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. KING of Utah. Mr. Speaker, a Utah newspaper appraises the impact of the Federal Government's beautification campaign in that State and concludes the effort will be difficult for some—but justifiable.

Robert H. Woody business editor of the Salt Lake Tribune, remarks in an article on the subject that Utah has nearly 80 percent of its land in the public domain and is particularly susceptible to the "conservation ethic" stressed by Secretary of the Interior Udall. For some, he comments, this will impose agonizing restraints.

But Mr. Woody writes that President Johnson has said in effect: Let there be beauty.

"It may hurt at first," the editor comments. "But in the long run it-will be worth it."

As this commentary is applicable to many of our States, I ask that the Tribune article be made a part of the RECORD. [From the Salt Lake Tribune, July 13, 1966] UDALL EDICT TO TIDY UP HOUSEKEEPING IN UTAH

(By Roert H. Woody)

"Over a year ago . . . I issued to all Bureau heads an order implementing the President's Natural Beauty Message. I suggest that you remind all of your employes that this order is still in effect and Interior is more concerned than ever in having all of its decisions reflect this memorandum and the criteria set forth by the President in his special messages on conservation."

"It should also be generally known in the department that any officials high or low, who ignore or flout my directive and the President's clear guidelines will not be regarded as individuals who deserve the advancement in a department that takes special pride in its conservation ethic—and the manner in which it implements its decisions."

Thusly in a memo to the upper echelons of the Department of Interior—Secretary Stewart L. Udall makes unmistakably clear that the national housekeeping is going to get more stringent.

Whatever, it's going to cost somebody money and effort—as do all forms of housekeeping. Any harried housewife will tell you.

For those who use the public domain pipeliners, miners, power companies, seismo crews, grazers, etc.—it means that expediency will have to accommodate aesthetics. Utah, of course, with nearly 80 per cent of its land classified as "public domain" is particularly subject to the mandates.

ticularly subject to the mandates.

The Bureau of Land Management, which falls under the Department of Interior, is responsible for 44 per cent of Utah's acreage.

responsible for 44 per cent of Utah's acreage.
The Bureau of Reclamation, also an arm of Interior takes care of another sizable chunk. And the Forest Service, under the Department of Agriculture, has several hundred thousand Utah acres in its embrace.
For some users, this conservation ethic is

For some users, this conservation ethic is and will continue to impose agonizing restraints. Disciplines applied to coring, drilling, road building, power line erection, trenching, line laying will become even more tighter. And users will argue that the government's touted multiple use philosophies will succumb to a philosophy that seeks to exclude.

The Bureau of Reclamation, which has done no small amount of altering the natural landscape, is no less subject to the new restraints.

Mandates issued to it this year give some indication of what private users may expect.

For example, transmission lines are to take advantage of the natural topography in keeping them concealed from public view.

ing them concealed from public view.
Contractors are to use designated access roads to eliminate "unsightly temporary roads." Cuts and fills are to be reseeded as soon as posible.

Architecture of buildings should grace the natural environs.

President Johnson has said in effect: Let

there be beauty.

It may hurt at first. But in the long run it will be worth it.

Who Cares?-Rivers Cares

EXTENSION OF REMARKS

HON, G. ELLIOTT HAGAN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. HAGAN of Georgia. Mr. Speaker, in his brief time as chairman of the Committee on Armed Services, L. Menber Rivers has earned himself a reputation as the champion of the GI. This reputation is attested to once again by a telling editorial in the July issue of the Exchange and Commissary News entitled "Who Cares? Rivers Cares."

As the E. & C. editorial happily puts it, Mendel Rivers is determined to keep the American people mindful of the needs of our servicemen. When it comes to defending benefits of our GI's and their families, Chairman Rivers "mans the bulwarks with similar bulldog tenacity."

It is significant that this editorial appears in E. & C. News. In 4 short years, under the able and independent editorship of John A. Kuett and with outstanding reporting directed by its knowledgeable managing editor, John Neubauer, E. & C. News has become the largest publication in the exchange and commissary field. Its accuracy and its independence are respected.

The editorial follows:

WHO CARES?-RIVERS CARES

The House Armed Services Committee Chairman, L. MENDEL RIVERS (D-S.C.) seems determined to keep Congress and the Administration mindful of the needs of the armed forces.

This has been characteristic of Rivers since he became chairman of the powerful

House group last year. Rivers is a strong advocate of the belief that the well paid and well equipped soldier makes for a strong defense arm of the Nation. The Chairman takes no back seat on this.

Almost simultaneously with assuming his Armed Services Committee post, Rivers directed the successful fight for the billion dollar military pay increase over the opposition of the White House, which had recommended only half this amount. But this is typical of Rivers. Last month his committee handed the Defense Department almost a billion dollars more than was requested under a Defense Appropriations bill to beef up the armed forces.

And when it comes to fringe benefits for the individual military man and his family. Chairman Rivers mans the bulwarks with similar buildog tenacity. During the recent GAO assault on comstores Rivers roared and the GAO backed off.

If anyone should ask who cares, Mendell Rivers and the House Armed Services Committee care.

Financial Statement of Hon. Hervey G. Machen, of Maryland

EXTENSION OF REMARKS

HON. HERVEY G. MACHEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. MACHEN. Mr. Speaker, today I am inserting in the CONGRESSIONAL RECORD a full statement of my financial status. I submit this statement voluntarily and with the reiteration of my firm belief that a strong conflict-of-interest law should be enacted in my home State of Maryland and at a Federal level. I also believe that such a statute should set forth specific guidelines for persons seeking public office.

Prior to my election in 1964, I stated that I had no objection to issuing public financial statements provided that it was the consensus that his should be done. I am pleased that this consensus has arrived and I urge all congressional candidates in Maryland to make public disclosures.

The statement follows:

Hervey G. Machen and Marian D. Machen, his wife—Statement of financial condition, June 30, 1986

World Court's 4-Year Fumble

EXTENSION OF REMARKS

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. RUMSFELD. Mr. Speaker, after 4 years of studing a case involving the extension of "apartheid" doctrines into South-West Africa the International Court of Justice at the Hague finally concluded in an 8-to-7 vote that it had no jurisdiction in the case. The Court took 4 years to decide that it should not decide.

I submit for the RECORD the Chicago's American editorial comment on this subject as follows:

WORLD COURT'S 4-YEAR FUMBLE

Strange, confusing court decisions are nothing new; but the International Court of Justice at The Hague has set some kind of record in that line. In its decision to throw out the case of South-West Africa, the court ruled in effect that it had made a mistake four years ago, and the plaintiffs must pay for it. Far from settling the issue, the court thin not even attempt to answer any of the questions it brought up—for instance, whether a 1920 mandate by the defunct League of Nations is to be considered still in effect. It merely junked the whole case on a technicality.

The court, which is the United Nations' chief judicial organ, diamissed a complaint by Ethiopia and Liberia. The action was intended to block South Africa's racist government from extending its "apartheid" doctrines into South-West Africa, a territory entrusted to South Africa in 1920 by a League of Nations mandate. There was a deadlock on the issue until Sir Percy Spender of Australia, the court's president, cast the deciding vote; the 8-to-7 decision was that Ethiopia and Liberia could not establish "any legal right or interest" in the question, so there was no case for the court to decide.

The obvious question, then, is why did the court accept jurisdiction in the case in 1962? Why did it keep the question under study for four years, with all parties to it being put to great expense and effort, only to inform them that the evidence couldn't even he examined? The 8-man majority, evidently, feels that the nations appearing before it have only the right to be heard; they have no right to a decision.

The ruling is likely to have extremely had practical results. The court has in effect upheld South Africa's brutally repressive system of race segregation and censorship and approved its extension; the ruling can only weaken or destory the confidence of new African and Asian nations in the court and the U.N.'s legal process, and impel them to look alsewhere for answers. All this would be defensible if the court had reached a real verdict on legal grounds; its job is to decide fluestions not to be promiser.

verdict on legal grounds; its job is to decide questions, not to be popular.

But the world court has taken four years to decide that it can't decide and shouldn't even have been studying the question. A more discreditable performance by a court that is supposed to be settling world questions would be hard to imagine.

National Bowling Champion at Age 19

EXTENSION OF REMARKS

HON. HERMAN T. SCHNEEBELI

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. SCHNEEBELI. Mr. Speaker, 6 years ago John Wilcox of Williamsport, Pa., was an acolyte in the church which I attend and sang in the boys' choir, at the age of 13. Today he is not only the national bowling champion at the age of 19, but he also just won, in Miami, the men's inter-American championship with an amazing 99 pin lead over his nearest opponent. The following item from the Williamsport Sun-Gazette newspaper describes this outstanding accomplishment in proper prospective:

For nearly three-quarters of a century Williamsport has had its big moments in sports. It all started just before the turn of the

century when Garrett Cochran was named an All-America football player at Princeton University.

It continued last night when the city welcomed John Wilcox back from Miami where he won one bowling championship and shared in another for the United States in international competition against some 25 nations of the Western Hemisphere.

Wilcox, a 19-year-old student of the Williamsport School of Commerce, won the men's singles championship with a 15-game total of 3,040 in the fourth annual Tournament of the Americas. He won by 50 pins over Ramiro Munoz of Juarez, Mexico.

Wilcox also teamed with Dorothy Whitesell of Belleville, Ill., to win the mixed doubles title for the United States.

For these outstanding achievements he was welcomed home in ceremonies held at the Court House Plaza.

It was a "hurry-up" arrangement of some 72 hours, the fine work of Bill Rowles, and it featured a welcoming address by Mayor Raymond M. Knaur who presented the teenage champion and record-breaker with a key to the city.

Despite the brief time for arrangements and publicity, the turnout and enthusiasm were good. And we're sure that once the impact of the job he did in Miami hits home, a more suitable testimonial will be held.

The United States couldn't have come up with a finer representative if the tournament could have been written by a script writer.

John is as wholesome and modest a teenager as can be found. Not only did he win but he accepted everything with humility and pride.

This was evidenced by a Miamian, who covered this newspaper on tournament happenings, and by John himself when he spoke last night. His first words were:

"The parade of all bowlers before the flags of all of the countries really was something. It made you choke up. And then remember why we all can get along with peoples of these countries."

Tommy Barger, lanemaster of the YMCA and a national figure in the 700 Clubs of America, summed up the 19-year-old well.

"John could have been a selfish kid and rode his laurels of winning the ABC allevents title with a sparkling 2,004.

"If he has any idea of turning professional he had everything to lose and was faced with a big gamble. The gamble was to rest on his 2,004 and national limelight or take part in the Miami tournament and risk everything.

"He could finish 22nd or something like that in the tournament, especially with his bad thumb, and then there would have been those around the country who would have called his all-events performance at Roches-

these around the country who would have called his all-events performance at Rochester just a flash in the pan.

"But John accepted the responsibility and gambled with all the courage of a 19-year-old. You know the rest of the story and all Williamsport and the country are proud of

Address by the President of Panama

EXTENSION OF REMARKS

HON, JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. DENT. Mr. Speaker, on a recent trip to Panama I had the privilege of meeting with and discussing with the President of Panama problems of mutual interest and concern.

The evening before the Fourth of July the President gave an excellent talk in the city of Colon at the Foreigners Club.

I take this time to present this address for the benefit of the membership of the House of Representatives:

SPEECH GIVEN BY HIS EXCELLENCY THE PRES-IDENT, ON JULY 3, AT THE FOREIGNERS CLUB IN COLON

Mr. President of the National Assembly, honorable President of the Supreme Court of Justice, Ministers of State, your Excellency the Ambassador of the United States of America, Honorable Deputies of the National Assembly, Distinguished Civil and Military officials of Panama and the Canal Zone:

Gentlemen: Last night at the banquet given in the El Panama Hilton Hotel by the American Society, I said and, I repeat again, that these banquets held annually in the City of Panama as well as in the City of Colon to commemorate the outstanding dates for the United States and for Panama, I name the "Banquets of cordiality and Friendship". They are banquets of brotherhood where Panamanians and North Americans mix together in a sole communion of tideals.

Last night I said, and I repeat again here, that I am greatly pleased to partilepate in these civic ceremonies. Gentlemen I feel that it is good that we should rejoice on this date and that the civic pride of all the North American and Panamanian citizens should be enhanced in the commemoration of these dates; so significant to our countries. This is very natural and very logical. But I also feel that during these days of joy and spiritual happiness we should save room for evaluation and meditation.

We should invoke the memory of thosemen who gave their lives, their efforts, their insight and their minds to the structure and the physiognomy of our countries. We should remember men in the North such as Washington, Lincoln, and Jefferson; in the central countries Morazan, Marti and Juarez; and in the South Bolivar, San Martin and O'Higgins, and we should remember which were the ideals and the purposes that inspired these men of our continent. They were the ones who gave us a free world; a world where we can live without pressures, and without apprehensions of any kind; where each one can exercise his profession, his activities and can create and produce without interference of any sort. They gave us a world where we enjoy ample freedom;

a freedom that only has as its boundary, public morality and that only ends where

the rights of others begin.

With this clear mind and on those principles the motor and the creative impulse of those great men of our continent should be formed. Let us become one bloc; a united bloc, strong and firm and let it become a barrics le to those extremist and extravagant currents that come to us from other continents trying to destroy our free lives which are full of opportunity for all. Right here in Colon only a few weeks ago those currents, taking advantage of the indignation of the students, tried to provoke chaos, pain, disaster in this city but thanks to quick and effective action by the authorities a disaster to this city and to the nation was avoided.

And it is justly so that on these historic dates for our countries we should strengthen our spirit, strengthen our soul, our heart and our mind so as to create one indestructible bloc against those currents and groups who are in the search for opportunities to assall against the very heart of the country; against our institutions, our families, our against the peace and order that should reign in our country.

On a certain occasion, after these inci-dents, I said that I took the challenge of those groups and I reaffirm it here again. I am willing to fight on any level that they challenge us. I have shown great tolerance up to now; a tolerance that has even brought criticism from my friends, because they feel that I should not be so tolerant. Up to now I have wanted to gather reason and show my country that I am not what many thought of my performance as a ruler. Many thought that I would not permit public freedom but the opposite has been the no reacon but the opposite has been the rass. I have gone to the limit in my effort to facilitate the exercise of freedom for all, but now I am ready to fight and fight to the end. From now on I will permit no hostile acts in the streets. I am ready to repress them and I am ready to go to the extreme with the students and the colleges themselves. If they wish to provoke the closing of the colleges I will close them at the first step they take to the streets.

The country is presently enjoying great prosperity, business is growing, the national economy is being revigorated, there are job opportunities for many unemployment has decreased and there are great future perspectives for the nation. This is what is being felt throughout the nation and this is also what great foreign investors have felt who come from other places to enjoy these opportunities, this state of being, and this atmosphere of national prosperity. Under no conditions will I allow this to be altered

The National Government has very encouraging programs for Colon. Ambassador Adair has just told us of a government loan with A.I.D., under the auspices of the Alliance for Progress, of three million balboas [1 balboa=\$1.00 U.S. curr.—Trans.] signed recently by him and myself in one of the slum areas of the capital city for the constru of low cost housing. To these three million balboas, obtained through the Alliance for Progress, the National Government of its own accord will add a million and a half, that is to say that four and one-half million will be invested for low cost housing. I have already told Mr. Riba, the architect who is here present, that a good part of this money should be used for continuing the multifamily program in the City of Colon so that all of these slum houses, where a great part of the people live under inhuman con-ditions, will be done away with.

The Institute of Economic Development is making the final arrangements to place up for bidding its property lots in this city so that

all those who are interested in acquiring them to construct their homes can do so at reasonable prices and on easy terms. This will create many job opportunities for the City of Colon because It is the construction industry that offers most opportunities for all since it is a very diversified industry in which many merchants, industrialists and labors participate.

The bridges for the Portobelo Highway are being made ready. Work is being done on I am concerned that these bridges be installed soon. I have talked personally to the contractor and I was assured that the structures are now being made in Panama and will shortly be transported to the rivers where they will be put in place.

As for the buildings that were destroyed by the painful events which have occurred recently in this city I should tell you that the National bank has almost been completely rebuilt and the building for the National ottery will soon be opened for public bids. I personally have seen the initial plans for this building. It will be a beautiful edifice; worthy of this city.

As far as the other National Government buildings which were also destroyed are concerned, the arrangements are progressing and the credit necessary to continue their construction is being obtained. We are greatly interested in crasing that image of pain and disaster from the City of Colon.

On the 26th of this month the bids for the installation of the Electric Plant in the De Las Minas Bay, in this Province of Colon, will be unsealed. Besides providing work for many people the plant will produce great wealth for this province in terms of electric outflow and it will give the industrialists an opportunity to acquire current at a lower cost which will be convenient, and satisfactory for industry.

A few days ago, His Excellency, the Minister of Foreign Affairs, together with the Panamanian Negotiating Commission gave to the gentlemen who are negotiating for the United States in Washington the three instruments that Panama has proposed for the consideration by that mixed commission; a new Treaty on the Canal exclusively, a pact for bases to defend the canal and the bases for the possible construction of a new sea level canal. These instruments were fully dicussed and debated by our most authoritative public men in international law and in relations with the United States. They are all men of great probity, and of great patriotism; serious men, whom the country can never doubt. They form part of the Foreign Relations Commission and others are advisors to that Commission. I confide in the spirit of justice and equity of the North American Government and people and I also have confidence in the seriousness and pa triotism of our own representatives in this grace and important mission. And Gentlemen, I ask the Almighty to illuminate the North Americans as well as the Panamanians so that the result of that round table dis cussion, where they are to negotiate on mat-ters of transcendental and vital importance for both countries, will be instruments that will give us peace, equity, tranquillity and the harmony that should reign today and always between the United States and Panama.

And finally gentlemen, I am going to ask you to raise your glasses of champagne with me in a spontaneous, and very sincere and deeply felt toast to the North American people on the occasion of this grandiose day, to the Government of the United States and personally to President Lyndon B. Johnson and his distinguished family.

Secretariat of Presidential Information, anama, July 4, 1968.

Translated by J. Richard Avena.

Water Pollution

EXTENSION OF REMARKS OF

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr. RUMSFELD. Mr. Speaker, it has been stated that the U.S. Corps of Engineers has been contributing to a potential water pollution problem by disposing of waste materials in the waters of Lake Michigan at Chicago.

In view of this situation, the board of trustees of the Metropolitan Sanitary District of Greater Chicago passed a resolution on July 12, 1966, petitioning the Federal Water Pollution Control Administration to take immediate steps to cause the dumping of materials in Lake Michigan to be halted. The sanitary district resolution observed that the dumping is being done in areas beyond the jurisdiction of the district, the city of Chicago, and the State of Illinois.

In editorial comments on July 20, and July 24, 1966, Chicago's American dis-cussed this situation and suggested a course of action to be followed to correct the problem. The American suggested that Congress provide funding for the Corps of Engineers to obtain an alternative dumping site.

I respectfully urge that all parties involved—the Corps of Engineers, the Metropolitan Sanitary District of Greater Chicago, and the appropriate Federal authorities—work expeditiously and cooperatively to arrive at a solution to this problem. The contamination of our Nation's lakes, rivers, and other tributaries is well known to all of us. The pollution of our Nation's waters must not be permitted to continue.

I introduce for the RECORD at this point a letter and the resolution of the Metropolitan Sanitary District of Greater Chicago and the two editorials from Chicago's American:

THE METROPOLITAN SANITARY DISTRICT OF GREATER CHICAGO, Chicago, Ill., July 18, 1966. Hon. DONALD RUMSFELD,

Glenview, Ill

DEAR MR. RUMSFELD: On July 12, 1966, the Board of Trustees of the Metropolitan Sanitary District of Greater Chicago resolved that the attached resolution be mailed to the Federal Water Pollution Control Administration and that a copy of this resolution be mailed to you.

Following in the footsteps of our wise forefathers, we have fought to keep all pollutants out of Lake Michigan, which has afforded Chicago the only uncontaminated metropolitan water front on all of the Great

In view of the stringent anti-pollution standards we have enacted on those within our metropolitan area, we believe that the Corps of Engineers, as well as all other Pederal Governmental agencies pursuant to President Johnson's mandate, must be enjoined from dumping dredgings and any other waste materials into Lake Michigan which threaten our beaches and our water supply, and other primary uses.

Your continued good will and support will T. Dodge, Division Engineer, U.S. Army Corps be deeply appreciated. Very truly yours,

FRANK W. CHESROW, President.

Whereas, Barge loads of soil containing contaminated and polluted waters, sand and gravel, municipal wastes and other materials, are presently being transported from the Chicago area waterways and dumped or discharged into Lake Michigan some 10 or 20 miles from the shores of the lake; and Whereas, The Metropolitan Sanitary Dis-

trict of Greater Chicago has at all times been unalterably opposed to the dumping of dredgings or waste materials of any kind into the waters of Lake Michigan; and

Whereas, The Metropolitan Sanitary Dis-trict of Greater Chicago participated in a conference in the matter of pollution of the interstate waters of the Grand Calumet River, Little Calumet River, Calumet River, Lake Michigan, Wolf Lake and their trib-utaries (Indiana-Illinois) conducted by the United States Department of Health, Edu-cation, and Welfare at McCormick Place beginning March 2, 1965; and

Whereas, President Frank W. Chesrow of whereas, Frendent Fank w. Cheslow the Metropolitan Sanitary District of Greater Chicago was designated by the Secretary of Health, Education, and Welfare as a conferee at said hearing, and participated throughout said proceedings and was a signator to the findings adopted at said hearing for the control and elimination of pollution at the South end of Lake Michigan and in the waters and the rivers hereinabove mentioned:

Whereas, The conferees on water pollution control in the Calumet River area and at the South end of Lake Michigan, on January 4, 1968, did introduce a letter dated December 21, 1965, wherein the conferees unanimously agreed that there should be no dumping of dredge materials of any kind in Lake Michi-

Whereas, the area used for dumping of dredgings is beyond the jurisdiction of The Metropolitan Sanitary District of Greater Chicago, the City of Chicago, and the State of Illinois, and thus, the dumping areas are

solely within the jurisdiction of the Federal Government: Now therefore be it Resolved, That the Metropolitan Sanitary District of Greater Chicago through its Board or Trustees, hereby petitions the Federal Water Pollution Control Administration exiting under the providence of the Federal tion, acting under the provisions of the Federal Water Pollution Control Act Public Law 660 as amended by the Federal Water Pollution Control Act Amendments of 1961 (PL 87-88), and by the Water Quality Act of 1965 (PL 89-234), to take immediate steps to cause the dumping of all dredgings and any other waste materials into Lake Michigan in areas beyond the jurisdiction of The Metropolitan Sanitary District of Greater Chicago, the City of Chicago, and the State of Illinois, to be halted and terminated for all time; and be it further

Resolved, That the copies of this Resolution be transmitted forthwith to the honorable conferees on the matter of pollution of said waters viz. Mr. H. W. Poston, Mr. Blucher, A. Poole, Mr. Clarence W. Klassen, and Mr. Frank W. Chesrow; and to the Honorable PAUL H. DOUGLAS and the Honorable EVERETT M. DIRKSEN, U.S. Senators of Illinois, and to each and every Congressman of the Illinois delegation in the United States House of Representatives; to the Honorable Stewart Udall, Secretary of the Department of the Interior; to the Honorable James Quigley, Adminis-trator of the Federal Water Pollution Control Administration; to the Regional Office of the Federal Water Pollution Control Administration headquartered in Chicago, to the Ronorable Otto Kerner, Governor of Dilnois; to the Honorable Richard J. Daley, Mayor of the City of Chicago; and to Brig. Gen. Roy

Resolved, That this Resolution be spread of record and printed in the proceedings of this date.

TRUSTEES, THE METROPOLITAN SANITARY DISTRICT OF GREATER CHICAGO,

W. Chesrow, President, Vincent D. Garrity, MAW, Vice President, Francis P. Kane, Earl E. Stuyhorn, Valentine Janicki, John B. Brandt, Nicholas J. Melan, John E. Egan, Earl A. Deutsch. Dated July 12, 1966.

[From the Chicago's American, July 20, 1966] CONFUSION ON LAKE DUMPING

The only thing quite clear about the dumping of dredged material into Lake Michigan is that several federal agencies just aren't getting thru to each other, even tho they do seem to talk. Thru the public health service and the federal water pollution ad-ministration, the federal government is conducting a vast and expensive program to save Lake Michigan from being ruined by pollution; meantime, the army corps of engineers is dumping into the lake tons of material, presumably polluted, brought up by dredges widening and deepening the Cal-Sag chan-

The sanitary district last week called on the engineers to stop the dumping, and ap-proved an appeal for action by the water pol-lution administration if it weren't stopped. In reply, a spokesman for the army engineers said the dumping would be halted if other dumping sites on land are provided by the sanitary district or some other local governing body.

The basic problem seems to be not dirt but money. The engineers say it would cost millions to acquire dumping sites on shore, and they don't have it. Which compounds this federal puzzle of neither hand knowing what the other is doing. Congress has provided hefty funds for the fight against pollution; couldn't it provide enough to keep the work from being undone?

The engineers, moreover, say they have been talking for more than a year with the anti-pollution administration, but that no one has yet told the corps what it should do to meet pollution standards or to determine

whether pollution is taking place.

To our mind, providing money for dumping grounds is a federal job, not a local one.

The Cal-Sag channel project is not for the benefit of Chicago, which will get only a small part of it. The enlarged channel will enable big barge tows to meet with ocean shipping in the Lake Calumet harbor to transship cargo; this greatly expanded trade will increase profits and earnings thruout the midwest and beyond.

Congress should finance the project adequately. First, however, it would be nice for the various federal agencies involved to say hello to each other.

> From Chicago's Sunday American, July 24, 1966]

PRICE OF A CLEAN LAKE

In an editorial Wednesday, we called attention to a confused, self-defeating situation here in which one federal agency is methodically undoing the work of another. While the water pollution control administration is fighting to reduce the pollution of Lake Michigan, the army corps of engineers continues to dump into the lake—as it has been doing since 1924—material dredged up from the bottoms of harbors and rivers

The situation is not the result of villainy or anyone's part. The engineers contend— not without reason—that spoil has to be dumped somewhere, that disposal sites cost money, and the they can't get an extra dime from Congress without justifying the expense by a cost-benefit formula. But a further element should now be added to this picture:

In an unincorporated area around 123d are two huge clay pits, 50 to 60 feet deep and with a total ares of 174 acres. The pits are now being used for dumping garbage, to the distress of Blue Island residents; community officials and a local newspaper. the Blue Island Sun-Standard, have been waging a valiant campaign to get the pits filled with something less smelly and less dangerous to health.

These holes would make ideal dumping sites for the spoil that is now being dumped into Lake Michigan. What's blocking this logical solution from which everybody would

Once again, money-or more exactly, the question of who's going to pay it. The contract to fill the holes for the Illinois Brick company is held by the John Sexton com-pany, which is now dumping the garbage. The engineers would have to reach an agree-The engineers would have to reach an agree-ment with the Sexton firm, pay it to use the clay pits, pay the extra contracting costs involved in hauling spoil from the dredging sites, and get the money from Congress. To do that, the corps has to prove that benefits will result proportionate to the expense.

The engineers would prefer to have the metropolitan sanitary district foot the bill. They point out that it doesn't matter much to the taxpayer, since the money comes out of his pocket in either case. And the sanitary district provides the land along the Cal-Sag channel where spoil from that dredging projects is being dumped.

The essential point, however, is that this buck-passing has to stop somewhere. The longer it goes on the dirtier our lake gets. It is a federal body, not the santiary district, that is contributing to lake pollution, and it is logically up to the federal government to stop it. Congress is now, in effect, tearing down with one hand what it builds up with the other, and all the other absurdities in this situation flow from that basic one.

Reps. EDWARD DERWINSKI [R.] and DANIEL ROSTENBOWSKI [D.] of Illinois are currently arranging meetings on the lake-dumping problem with representatives of the engineer corps and the sanitary district. We hope the district will take part and strongly urge its viewpoint—which we believe to be the right one—that Congress should provide money to

one—that congress should provide money to do the whole job, not see it spoiled by econ-omies in the wrong place. Surely the funds needed for a dumping site can be found somewhere. If the engi-neers find it hard to justify the expense, we suggest they concentrate on the fundamental fact: With pollution of our water supply al-ready far advanced, it costs more now to protect what's left. But clean water is worth the price.

Free Travel-Open Minds

EXTENSION OF REMARKS OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr. ROGERS of Colorado. Mr. Speaker, the Denver Post describes as encouraging the recent easing of restrictions on travel to Communist countries.

Americans will not be brainwashed by visiting such countries as Red China or Cuba, the newspaper declares. Rather, it is likely that they will be better informed and more thoughtful as a result of their observations.

Peking has refused to grant entry visas to Americans, the newspaper notes

in an editorial, and there is no reason to expect an overnight change in policy. However, it states, we should not be in the position of blocking the way when the Chinese doors are opened.

The complete editorial follows:

PREE TRAVEL—OPEN MINES

The wisest policy the United States can have on travel restrictions, we believe, is to have as few restrictions as possible. The State Department's announcement of a new relaxation of travel rules for Communist countries is encouraging.

We do not fear Americans will be brainwashed by visiting such nations as Red China and Cuba. It is much more likely American travelers will be better-informed, more thoughtful—better Americans—as a

result of their observations.

The department formerly allowed newspapermen, medical scientists, graduate scholars and public health specialists to have passports to visit five Communist countries "off limits" to normal travel. Now the list has been expanded to include persons "in cultural, athletic, commercial, educational, public affairs or other fields" who can show that their trips will benefit the United States. The secretary of state still retains discretion to determine whether a. trip is in the national interest, and he ought to use his discretion rather liberally.

Several passports have been issued recently for travel to Red China—the latest going to G. William Miller, a Rhode Island industrialist interested in touring China as a

private citizen.

So far the Peking regime has refused to grant entry visas to Americans, and there is no reason to think Peking's policy will change overnight. But the U.S. government abould not be in the position of blocking the way when the Chinese doors are opened.

Jerome C. Koch, Sr., Dies at 70; Had Developed 61 Subdivisions

EXTENSION OF REMARKS

HON. CHARLES P. FARNSLEY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. FARNSLEY. Mr. Speaker, I would like to include in the Record an article from the Louisville Times of July 6, 1966, regarding the death of one of Louisville's most prominent and civic-minded residents, Mr. Jerome C. Koch, Sr. Mr. Koch was a fine gentleman and a good friend and will be greatly missed by the people of our community.

The article follows:

JEROME C. KOCH, SR., DIES AT 70; HAD DE-VELOPED 61 SUBDIVISIONS

Jerome C. Koch, Sr., 70, president of the J. C. Koch Real Estate and Insurance Co. and an original member of the City-County Planning and Zoning Commission, died at 1:30 a.m. to day at his home, 1913 Crossgate Lane East.

He was a long-time Louisville developer and was the sales agent and development supervisor for the old Farnsley family property along Crums Lane in Shively.

With his sons, he developed 61 subdivisions, including Heatherseld on the old Farnaley property. He also constructed more than 700 single-family dwellings, plus numerous business developments.

merous business developments.

A Democrat, he was appointed to the first planning and zoning commission in 1942 and

served for two years. He was named to another four-year term on the commission in 1959, but resigned in 1961 because of ill health.

Koch was a member of the board of directors of Avery Building and Loan Association and was appraiser for the company for many years. He was also a member of the Louisville Real Extate Board, the Society of Residential Appraisers, the National Association of Real Estate Boards and the Louisville Board of Insurance Agents.

FIRST SHIVELY BOTARY HEAD

He was organizer and first president of the Shlvely Rotary Club, was a member of the Audubon Country Club and was a charter member of the 235 Club and the old Pastime Boat Club. He was a veteran of World War I and was a member of the American Legion.

Survivors are his widow, the former Pauline Hendry; two sons, Richard J. and Jerome C. Koch Jr.; a brother Chester Koch, Cleveland; two stepsons, William G. Hardy Jr. and George F. Hardy; and nine grandchildren. The funeral will be at 10 a.m. Friday at St.

The funeral will be at 10 a.m. Friday at St. Heien Catholic Church, 4005 Dixle Highway. Burial will be in Calvary Cemetery. The body will be at the W. G. Hardy Shively Chapel, 4101 Dixle Highway, after 5 p.m. Wednesday.

The family has asked that expressions of sympathy take the form of donations to the St. Joseph Orphans Society.

Congressman John E. Fogarty, National Dental Health Assembly, Emphasis: Fluoridation, Marriott Twin Bridges Motor Hotel, Arlington, Va., February 6, 1966

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

CONGRESSMAN JOHN E. FOGARTY, NATIONAL DENTAL HEALTH ASSEMBLY, EMPHASIS: FLUORIDATION, MARRIOTT TWIN BRIDGES MOTOR HOTEL, ARLINGTON, VA., FEBRUARY 6, 1968

Let me begin the brief remarks I have prepared for tonight by saying what a real pleasure it is to be here with you, to be here with so many good friends. I am particularly pleased to share this platform with the distinguished Undersecretary of Health, Education, and Welfare, Dr. Cohen, the Surgeon General, Dr. Stewart, the President of the American Dental Association, Dr. Hine, and our Chairman, Dr. Diefenbach.

I notice with great satisfaction that the participants of this Conference include representatives from virtually all segments of society. With the dental profession in the forefront, we also have gathered here distinguished leaders from government, from medicine, from education, from the scientific community in its broadest spectrum, from the law, from the theater, from news media and perhaps most importantly from the lay public.

This representative cross-section of America typifies a working democracy at its finest. It demonstrates the dynamic kind of partnership that can exist between a government and its people to reach an objective for the benefit of mankind. And mankind truly will be benefited if we are successful here in

refocusing national attention on and gaining increased public acceptance of one of the most significant public health measures of all time—the controlled fluoridation of public water supplies which was launched on an organized basis just twenty years ago.

on an organized basis just twenty years ago.
To many of us in this room who have seen the vast accumulation of unassailable evidence establishing the safety and efficacy of fluoridation, a lot of these years have been disheartening—frustrating. We have witnessed more times than we should the rejection of solid scientific findings by the use of propaganda, distortion and rumor. After surviving the critical and deep-searching judgment of their professional peers, the honest and dedicated scientists who discovered and proved fluoridation, too often have found themselves embroiled in and defeated in the arena of public opinion and politics. But while this is a disquieting and discouraging fact of life, these pioneers of whom I speak should take some solace from the fact that they are not alone among those in the course of history who have suffered similarly. The Pasteurs, the Listers and many others could be included in this company. And in this context and for what comfort it might be, I would give you a statement known as Russell's law which can be applied to fluoridation and goes something like this: "The amount of resistance to a new discovery is equal to the square of its importance."

Perhaps in the case at hand, we should modify Russell's law by saying that the "amount of noise in resistance to fluoridation is equal to the square root of its importance" since I personally am convinced that were it not for the noise and the big-scare, the vast majority of our people would whole-heartedly accept fluoridation for the beneficial health measure that it is.

Now, this three day meeting is billed as an assembly but it would be just as accurate—maybe more so—to think of it as a conversation, a conversation among a group of friends who share a long-standing commitment toward improving the health of our fellow citizens and who recognize that we must achieve this commitment primarily through a process of education and persuasion.

111

This certainly is not the easiest or quickest way of getting things done. It is frequently frustrating. It always requires great patience and the ability to take the long view. It would be much simpler, in the short run, to rely more on force than persuasion, more on sanctions against opposing points of view than on education leading to understanding and acceptance. These are especially tempting alternates when we know we are right, when every objective, scientific test that can be devised demonstrates how right we are and how wrong they are.

That we have come together for this three day conversation, however, is proof that we continue to take the long view, the wise view in my opinion; that we continue to put our faith in education and persuasion. It isn't, after all, as if we can't see any progress over the past twenty years. As of today, nearly 70 million people are benefiting from fluoridation. Just a week or so ago, Dallas refused to go along with the frightened people who urged that city to stop fluoridation: the victories of Detroit and New York are still fresh in our minds and eligible perhaps to be counted as indications of a trend. Though we are not doing as well as we might want to do in this education campaign, we aren't doing so badly either.

But, the prime purpose for our gathering here, I take it, is not to measure our progress on much in terms of raw statistics about victories and defeats as to analyze it in terms of accomplishing what is the most basic thing of all that a democracy does: capturing and concentrating the attention of community leaders and ultimately the community itself on one issue, to such a pitch that action flows inevitably, irresistibly, from this concentrated attention. This is not a difficult

process to describe but it is a very difficult thing to do and there is never a time when you can say you are doing as well as you might wish.

Let me try to illustrate my point in this way. You know, everyone, when first elected to Congress, is like that character in Gilbert and Sullivan's the Mikado: He has a little list. He came to Congres with a list of bills he wants to propose, of laws he wants to pass. Sometimes—and you can take it from an expert—that list becomes a bit dog-eared and yellow with age before he can mark every—

thing on it as having been accomplished.

At the beginning, there is a certain blindness about the items on the list. It is practically impossible for this new congressman to understand how anyone could seriously oppose any one of his proposals. While I don't go so far as to say that he expects suspension of the rules, and unanimous passage of everything he wants, if in fact it did happen that way, it wouldn't surprise him. But that is a dream world not a real one. In a real world, it is more like that story Mark Twain used to tell. When he was 15, he said, it seemed to him that his father was the most stupid man who had ever lived. When he was 20, he went on, he was amazed at how much the old man had learned in just five years.

I suppose this lesson Twain learned is what the sociologist would call interaction and that's what happens when we set out to accomplish things in the real world: we interact on each other, we learn to discard unsound concepts to see things in fresh perspective, to accept the precept that lasting progress can be made, things can be fully accomplished not only by whipping up sudden excitement but also by patient and persistent effort by cereful education.

sistent effort, by careful education.

Once in a while in the history of a nation it does happen that a number of long-supported projects come to fruition almost simultaneously, in a kind of chain reaction. When this rare event occurs, there is a sudden almost revolutionary leap forward that transforms the nation and enriches immeasurably our definition of what America is and what kind of opportunity it should hold out for its

Looking back, we can see now that this is what took place during the famous 100 days of Franklin Roosevelt's first administra It is my personal conviction that future generations will look back at today and discern much the same thing. I think and discern much the same thing. I think congressional historians especially will see that Congressional historians especially that Congress during 1964 and 1965 was engaged in what can be honestly termed peaceful revolutionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditional conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard that the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with regard the conditionary activity with re time, we enacted and implemented the Health Professions Educational Assistance Act, we enacted and implemented the Nurses Training Act, we moved ahead on health care for the aged, we vastly improved and expanded the health care available for the mentally ill, the handicapped, the disabled We moved forward on a broad and others. front in health research and initiated new programs in the fields of heart disease, cancer and stroke. We launched the War on Poverty with special attention given to health needs, particularly in Project Head-start the health needs of poor children. This is not, of course, a complete list at all but it is an indication of what I am talking about when I say this sustained congressional effort has been revolutionary in its effect on our country.

Now—you are much too sophisticated an audience for me to pretend, even if I wanted to, that all of these measures were thought up on a Monday, given hearings on a Tuesday and passed on a Wednesday.

When I first came to Congress more than two decades ago, I had in pocket one of those little lists I referred to earlier and prototypes of many of our new programs were on it. I have gone through a period when some of my

ty

11

colleagues thought I was plain crasy to urge such proposals. I have gone through another period when some of my colleagues thought I was a first class pain in the neck to persist in urging them. Lately, I have been in a kind of mixed blessing period where some of my colleagues suspect I am some kind of prophet. Now, I never thought I was crasy and I am almost as certain that I am not a prophet. What I am mostly, I suppose is a determined Irishman.

I came to Congress with a set of convictions about what I thought this country could—and should—be doing for the health and welfare of its citizens. After what I hope was not too long a period of time, I learned how Congress works toward getting things done, to what degree the normal process can be speeded and how to tell when you are at the point where haste becomes to make waste.

I'd like to spend a moment on this point—how Congress works—because I think it has some relevance to the purpose that has brought us here tonight. In the past few years, as you know, Congress has been on the receiving end of a good deal of advice; not all of it wanted, much of it unneeded. Running strongly through much of this advice, is a kind of theme, a tendency to talk about Congress—indeed about the entire federal government—as "they" in contrast to the peopel who are always "we." To draw such a dichotomy is at best unnecessary; at worst harmful.

Each two years, every member of the House of Representatives and a third of the Senate must go before their constituents to be rehired or fired. Every four years the President must go before the whole people to have his mandate extended or ended. These are facts not theory, and they symbolize the truth of the matter, which is that Congress is at least as much a part of the people as, say, the steel industry and has at least as intimate a feel for the people's aspirations as, say, has the television business.

would suspect that this audience is not one that needs to be persuaded about these facts. I doubt that many of you are victims of that dread disease called the Birch syndrome, the main symptom of which is frothing at the mouth when the word Washing-ton is mentioned. Making that assumption, let me go on to one further comment about Congress. If there does indeed exist an intimate connection between Congress and the people, then why does it sometimes take so long to accomplish the thing that we know, really know, and not just guess, ought to be done? Let me give you a two-part answer to that question. The first part is one sen-tence: We are a democracy. The second part of the answer is to be found in the Bible: "All things have their season and in their time all things pass under Heaven. A time to be born and a time to die . . . a time destroy and a time to build . . He hath made all things good in their own time Earlier, I mentioned something about learning at what point too much haste becomes That, too, is part of the answer. am not talking here about the mere taking of a vote. Taking a vote is only part of the process, not always the most important part. If one has succeeded in education and persuasion, then a vote is a confirmation of success rather than the achievement of it. In fluoridation, as in other public health measures, we have traditionally talked less about votes than about achieving understanding on the part of community leaders.

What I wish to may is that accepting.

What I wish to say is that accepting, recognizing Congress as part of the people, and as knowledgeable about the people's wants does not mean that Congress always moves forward in great leaps. Most of the time, it moves cautiously, sounds out carefully a demand for action in order to discover whether it represents a strong consensus—and consensus remains a favorable word even if it has been somewhat over-

used lately—or whether it represents a demand from a small segment of the population with a tremendous lung capacity.

Consensus among whom? Does it mean that the entire public must always be involved from the beginning? I believe it is important to draw some sharp distinctions here. When I talk about seeking a consensus, I am certainly not saying that Congress is a follower. Clearly, Congress must lead. But Congress must lead first of all in preparing the ground through that process of education and persuasion to which I have already referred. It must, through its deliberations, reach and involve at least those leaders who enjoy the community's confidence and commit it to affirmative action. Ultimately, the entire community must be involved.

Granted that this is often a tortuous procedure. Granted that it rarely proceeds with the kind of dispatch that proponents of a measure would wish. Granted even that in proceeding somewhat cautiously we run the danger of being too late, a danger about which I have been particularly concerned throughout my legislative career. Granted all of these things, I remain convinced that the general method by which Congress proceeds is a wise method. Whatever its inherent merits, a law effecting substantial change in our mode of living that is not clearly understood as to its intent and purpose is not a wise law. It is not a wise law to make because it will not generate the ultimate support of a sufficient majority of our people. This is especially true in the health field, where we so often deal with matters that are particularly and peculiarly individual in import, when the ultimate success of a measure depends so heavily on the personal decision to accept the

measure and actually help implement it. Now, why all this talk about Congress? Not just because it is interesting, though I hope it has struck you as being so, I have brought all this up because this assembly is—in relation to the people—a kind of Congress. Any group united in a national purpose which they are urging on the people is a kind of Congress because over and beyond its duty of making laws, Congress has the function of focusing attention on an issue, airing alternate methods of reaching an agreed upon goal and, through education and persuasion, leading toward the best method of achieving that goal.

The American Dental Association, for example, is a kind of Congress in its relation to the people. And let me say here, as I have said often before, that few major health groups have consistently demonstrated so profound a grasp of the process of education and persuasion as does this national dental group. The Association has understood the necessity of persistence and patience, of working away on a project, and of returning to it time and time again until the end result was realized.

The amount of effort required to attain public support and acceptance should never be underestimated. We still do not have in this nation a full understanding of the value of public health measures. This was demonstrated once again last month when, on two successive Tuesdays, the CBS Television Network administered a national health test and learned that the average American could not register a passing grade on such a test. This national health test also demonstrates how important it remains to continue enlisting the community leadership to help us explain our campaign for fluoridation.

The effort that we are committed to on behalf of fluoridation, then, is part of a total effort to enrich and deepen understanding of all public health measures. In some ways, as all of you know, the campaign for fluoridation has been a microcosm of all public health efforts. In the 20 years that we have been urging fluoridation, we have been op-

posed by some who, through ignorance, were genuinely frightened of fluoridation. We have been opposed by others who for per-sonal selfish reasons thought it expedient to be anti-fluoridationists. But for the most part, I believe, our forward progress has been limited not by people who were frightened or selfish but by well-meaning people who didn't understand what we are saying, who didn't grasp the nature and urgency of what we wanted to do. The reasons for this, the various forms it has taken, the ways in which success has been experienced or fallure suffered will be analyzed during the next two days. I don't want to anticipate any of

Neither do I want to leave the impression that I am indicting the pro-fluoridation forces. I have already made it clear that this is not my purpose. No doubt, we haven't been perfect either in our strategy or our tactics; mostly, I suppose, because we are not perfect human beings. But what is important is that we have not become so disheartened as to be paralyzed. We have instead continued to chip away, to try new methods of reaching the community leaders and the community as a whole, to give of

our time and energy to this goal.

I think that all of us, in the back of our minds, have two thoughts that we bring to this assembly. First that fluoridation is well worth the effort we have invested in it. And second, the conviction that we will ultimately make our point with sufficient clarity and force that every public water supply in the nation will become part of the fluoridation system.

I want you to know that these two thoughts are uppermost in my mind. I want you to know how pleased I am to be with so many friends tonight to talk about this vital topic. And, finally, I want you to know that I and many of my colleagues are anxious to support your effort for fluorida-tion whenever possible. Thank you for ask-ing me to speak to you tonight and I hope you will have every success during these next two days and throughout the months ahead.

Ho Chi Minh

EXTENSION OF REMARKS OF

HON, ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr. NIX. Mr. Speaker, Ho Chi Minh's latest broadcast on North Vietnam's view of the conflict with South Vietnam was as vicious as it was regrettable.

That this will be the general reaction among Americans is indicated by editorials already published by the Philadelphia Inquirer and Washington Evening Star.

The Inquirer asserts Ho's obstinate refusal to negotiate and his other declarations reflect a barbaric attitude. It calls him a dangerous fanatic willing to sacrifice his country and people for the sake of a bankrupt dogma and whatever face he may retain in Communist affairs.

The Star considers it tragic that Ho has declined President Johnson's appeal to turn the key of peace. One can only hope he will change his mind, the Star

I submit both editorials for the RECORD:

[From the Washington (D.C.) Evening Star, July 18, 1966]

Ho's ANSWER

President Ho Chi Minh's tough weekend statement in Hanoi is similar to the line he has followed in the past. Essentially, what he is saying is that the war in Viet Nam will be a long one. And as for negotiations, he has affirmed that they will be rejected unless and until South Viet Nam, the United States and other key parties accept Communist terms in advance.

This is in keeping with Peking's thinking and pressures. Also, at least on the surface, it has the support of the Kremlin, which has rebuffed efforts by Indian Prime Minister Gandhi and British Prime Minister Wilson to bring about an immediate reconvening of the 1954 Geneva Conference on Indochina. If reactivated, the conference, which is cochairmanned by Britain and the Soviet Union, might well be able to promote progress toward a peace settlement. But as long as the Russians refuse to cooperate, the bleak prospect of protracted fighting-with the danger of more and more escalation ever present-will continue.

Ho's statement may be regarded as his answer, full of bravado, to these words addressed to him indirectly last week by President Johnson: "First, victory for your armies is impossible. . . . Second, the minute you realize that a military victory is out of the question, and turn from the use of force, you will find us ready to reciprocate. . . . We want an honorable peace. . . . In your hands is the key to that peace. You have only to turn it." It is tragic that Ho, with Peking's and Moscow's backing, has refused to turn it. One can only hope, for the sake of the long-suffering Vietnamese people, that he will change his mind before the country is reduced to ruin.

(From the Philadelphia Inquirer, July 18, 1966]

THE REAL "FANATIC" IS HO

The broadcast by North Vietnam's President Ho Chi Minh on Sunday was as interesting for what it didn't say as what it did No mention was made of earlier threats to "try" American pilots and execute them as "war criminals." If the absence of such mention was a result of increasing world revulsion to such threats, then it was some slight gain.

But Ho's obstinate refusal even to discuss peace negotations, his announcement that reserve officers and rear-guard forces were being mobilized, and reiteration that North Vietnam will never "surrender" were all reflections of the attitude that U.S. Ambassador-at-Large Averill Harriman has rightly characterized as "barbaric."

The United States has never insisted—or even asked—that North Vietnam "surrender"; only that it cease sending troops and supplies to attack the legitimate Government of South Vietnam, that it foreswear support of the Vietcong bandits who make governing a calamitous burden in the south.

Now it should be apparent to everyone, friends and foes alike, that the one main-spring that keeps this undeclared war going-and escalating-is Ho Chi Minh himself. The probability that he acts as the Red Chinese tell him to act does not lessen his

primary responsibility.

We should hope that at least the "doves" and draft-card-burning beatniks in this country would have their eyes opened by Ho's uncompromising, unreasonable declara-

His reference to America's "fanatically" bombing fuel supplies near Hanol and Hai-phong is the classic illustration of how far off the mark a propaganda statement will go. There has been nothing fanatic about it; every step the United States has taken has

been carefully weighed, deliberately suited to bare-minimum needs.

There may be fanatics on both sides in this war, as in all wars, but the most dangerous fanatic is an Indochinese Communist who will sacrifice his country, his people and their hopes for the future—any future—for the sake of his bankrupt dogma and what-"face" he may still retain in Red-bloc

Hon, Edward A. "Dutch" Kliewer

EXTENSION OF REMARKS OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr. BECKWORTH. Mr. Speaker, a very outstanding gentleman, Mr. Edward "Dutch" Kliewer, died in Longview, Tex., recently. I include a splendid editorial and article which appeared in the Longview Journal July 13, 1966. To the sons of Mr. Kliewer I express my sincere sympathy. He truly was an A-1 gentleman and citizen.

The editorial and article follow:

HE HATH WROUGHT WELL

(By Carl L. Estes)

It could be said of Edward A. (Dutch) Kliewer that here was a man whose imagination and creative ability were undimmed or unmarred by the years.

A quiet, self-effacing and unassuming individual, he was not content to rest on his laurels, or, because of his advanced age, to cease his relentless efforts to dream up something that would be useful to industry and to his fellow-man. His motivation was his desire to accomplish something for which he felt there was a definite need. fying to know that he had tasted of the nectar of success on numerous occasions.

Dutch Kliewer long ago learned that success is but the reward for effort, and over a long span of years, he continued to work

and to achieve.

What a fine testimonial it was to him that in his 80th year he had developed a splash guard for heavy trucks that received the approval of the Texas Department of Public This device was designed to confine tire spray and mist from wet paving to the underside of trucks, thus contributing to safety on the highways. While he did not live to see this equipment in wide usage, it is reasonable to believe that others will see to it that his dream will be transformed into reality.

Some of his other inventions, including a smog-reducing muffler and an oil seal, have been used by the heavy trucking industry many years. These products and others were designed after he had passed retirement age. A native of Newton, Kans., Mr. Kliewer had

lived in California before he came to Longview 33 years ago. The oil industry always had an attraction for him, and he served it in several different ways—as a cable tool driller, production man and machinist. He was well known and well liked by all strata of the oil fraternity.

Dutch Kliewer was a good man by any method of measurement or evaluation. He was devoted to his family, his church, his friends, his community and his work.

His reward was a long, active life of useful service. He would not have asked for more. When his time came, he was prepared.

This man's life can be best summarized in these time-honored words: He hath wrought 1e

well. There could be no finer epitaph than this for our departed friend.

E. A. KLIEWER, INVENTOR, DIES

Edward A. (Dutch) Kliewer Sr., 30, Longview inventor and resident of the Sherman Apartments, died early Monday at his apartment.

Kliewer was an inventor who specialized in items for the heavy trucking industry. His latest invention was a splash guard for heavy trucks to confine tire spray and mist to the underside of the truck. The Texas Department of Public Safety had recently approved the item. Other inventions included a smogreducing muffier and an oil seal.

Funeral services will be held at 2 p.m.

Funeral services will be held at 2 p.m. Tuesday at the Welch Funeral Home. Burial will be in Memory Park Cemetery.

Kliewer was stricken at his apartment shortly after 4 a.m. Monday and telephoned his physician. While talking to the doctor he sank into unconsicusness and dropped the telephone. The physician rushed to the apartments, ordered an ambulance to take the stricken man to the hospital. It was then determined that immediate surgery was required. Consent of a son in Dallas was obtained for the surgery but Kliewer died on the way to the operating room.

He was born in Newton, Kans., had lived in California and had been a resident of the Longview area since 1933.

He had been a cable tool driller, a production man and an oil field machinist.

Kliewer was a member of the Woodland Christian Church.

Survivors include his sons, Edward A. Kliewer Jr., of Dallas, an attorney, and Donald E. Kliewer, Houston, managing editor of World Oll; four grandchildren, Gene, James and Edward Kliewer III and Nancy Kliewer; two brothers, Harry Kliewer of Reediy, Calif., and Elmer C. Kliewer of Fresno Calif.; a sister-in-law, Mrs. William McPherson of Sweet Home, Ore. His wife died last year.

Separate and Unequal

EXTENSION OF REMARKS

HON. JOHN A. RACE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. RACE. Mr. Speaker, I insert into the Congressional Record the attached editorial from the Sheboygan Press, Sheboygan, Wis., concerning the "separate and unequal" treatment received by some 3.3 million homes in America.

I believe this excellent expression of a very real injustice will be of interest to my colleagues.

SEPARATE AND UNEQUAL

Congressman John Race has introduced legislation to correct what he calls "separate but unequal treatment" of several million United States citizens. Interested as we are in congressional economy, it is difficult to see how anyone could oppose this bill.

The Post Office Department refuses to extend door to door delivery of mail to new residential subdivisions because of a lack of specifically appropriated funds. These homes in these new subdivisions, of which there are 3.3 million, get curbside delivery although their neighbors' mail is brought to the house. To service the 3.3 million homes not now serviced would require about \$43 million a year because of the extension of routes. This seems to work out at about a dollar a month per family.

The fact that there are Sheboygan homes receiving such separate but unequal treatment only serves to more vividly illustrate the inequity. It seems to us that any government service intended for all the people, paid for by all the people, should be spread evenly and fairly among all our citizenry. Inequity at the hand of the government is indefensible and should be corrected immediately. There should be no unequal citizens, no separate groups. Congressman Ham's action is a positive, constructive step worthy of the support of all of us.

Congress Reform Needed

EXTENSION OF REMARKS

HON, DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. DON H. CLAUSEN. Mr. Speaker, on July 25, 1966, the Los Angeles Times carried an excellent editorial relating to congressional reform. Inasmuch as the bypartisan Joint Committee on Congressional Reform presented recommendations to "overhaul the congressional machinery," I believe the contents of this fine editorial are especially meaningful. They represent the opinion and reaction of the press to the report as filed and is deserving of the attention of my colleagues.

Many of the Members of Congress, myself included, have felt the recommendations do not go far enough but feel that at long last our voices are being heard and the opportunity for action appears imminent. I am hopeful the leadership of both parties will place these recommendations high on the priority list for action in this session of the Congress. The country is deserving of a more responsive and responsible Congress.

CONGRESS REPORM NEEDED

For the first time in two decades, a major overhaul of congressional machinery is being pushed by a special Senate-House committee. The 100 or so proposals will be incorporated in a specific bill in the near future and action by both houses will be sought before adjournment.

Although the program is not as sweeping as the Reorganization Act of 1946, it has considerable merit—and will stir up considerable controversy.

Emphasizing that there can be no justification for secret hearings unless national security or matters reflecting on the character of witnesses or other persons is involved, the committee recommended that most congressional committee hearings he open to the public and the press.

To further improve functioning of the two houses and their committees it proposed: Authorizing committee majorities to meet

and report out bills if the chairman refuses to act.

Providing three assistants to minority party members on each committee.

Putting Congress on a five-day week, thus ending the Tuesday to Thursday Club type operation.

Creation of a House Committee on Standards and Conduct similar to the unit now functioning in the Senate.

Establishment of a joint committee to conduct continuing studies of organization and operation of Congress.

The committee recommended limiting the main body of the Congressional Record to verbatim reports of remarks made on the floor and material germane to legislation under discussion. That, apparently, would relegate to the appendix speeches prepared but not actually delivered on the floor.

In another section of the report the corner of th

In another section of its report, the committee called for strengthening the Lobbying Regulation Act to provide more stringent controls over persons attempting to influence the legislative process.

the legislative process.

The committee sidestepped many of the areas which have been under heaviest fire from congressional critics. In all fairness, however, it should be noted that it was specifically barred from doing anything about such things as the seniority system.

Republican committeemen, even while signing the report, regretted its shortcomings. They pointed particularly to the failure to require disclosure of assets and income by members of Congress, the lack of curbs on lobbying by the executive branch of government and the absence of reform of political campaign financing.

Those are, indeed, serious omissions, yet it may be argued that inclusion of such subject matter might jeopardize passage of what is primarily housekeeping legislation. The desired improvement in campaign financing and disclosure practices, however, should most certainly be incorporated in the administration's pending election reform bill.

Power of a Woman

EXTENSION OF REMARKS

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. KING of Utah. Mr. Speaker, the Descret News of Salt Lake City recommends that more women follow the First Lady's example in acting for the beautification of our cities.

The newspaper tells its readers that the operator of a chain of food stores in the Washington area initiated an extensive beautification program at his establishments as the result of a suggestion by Mrs. Johnson.

Because of the old adage about never underestimating the power of a woman, the Deseret News calls on more women in more cities to see the possibilities for beautification and urge that something be done about it.

In full agreement that we never, indeed, should underestimate the power of a woman, I offer the newspaper's editorial for the RECORD.

POWER OF A WOMAN

If Lady Bird Johnson lived in Pittsburgh, Chicago, Seattle, Los Angeles, or even Salt Lake City, our beautification program would be moving much faster.

The First Lady's MO (method of operation) is very direct.

A few months ago she wrote a letter to the president of Giant Food Inc., which has 88 stores in Washington, suggesting that he ought to landscape and beautify his stores and parking lots in order that they "become an oasis of beauty for your communities and customers."

The company chief replied that "in the headlong and sometimes mindless rush into technological tomorrow, we have tended to become careless in our responsibility." He

added that he had initiated an extensive beautification program as a result of Mrs. Johnson's suggestion.

Now if more women would follow Lady Bird's example in seeing possibilities for beautification, and in urging that something be done about it, well . . .

Never underestimate the power of a

woman.

Are Jobs in Danger?

EXTENSION OF REMARKS OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr. AYRES. Mr. Speaker, Mr. Ben Maidenburg is famed for his hard-hit-ting editorials. The brilliant executive editor and publisher of the Akron Beacon Journal is respected for his fearlessness in attacking the problems that beset our Nation.

Ben Maidenburg speaks directly from his knowledgeable mind and never avoids a controversial subject. He is indeed a "let the chips fall where they may" type of editor. Under his direction, the Akron Beacon Journal has become one of the most esteemed newspapers in the Nation. It has a truly outstanding editorial staff.

I believe that my colleagues in the Congress will enjoy reading the thoughts of Mr. Maidenburg as he outlined them in the Akron Beacon Journal of July 24, 1966. They follow:

ARE JOBS IN DANGER? (By Ben Maldenburg)

In the July 14 issue of "The Machinist" there is an editorial titled "Strike." "The Machinist" is the publication of the union which closed down five major airlines recently.

The editorial starts:

"As one by-product of the airline strike, we can expect some short-sighted bird brains to renew their clamor for restrictions on labor's right to strike.

"In their minds a strike is always the fault of the employes, never the fault of management.

There follows a discussion of various theories put forth to avoid strikes or force settlement by government intervention, and then the editorial winds up:

"In the long run, no system will work as well or provide fewer inconveniences than free collective bargaining with the right to That is the American system.

"That is why union members respectfully ask everyone to put up with the inconveniences and the delays until we can get this

"As this is written no one is trying harder to find a solution than International Asso-ciation of Machinists members and their repentatives. However it also takes two to ke a peace."

So it takes "two to make a peace."

How many does to take to make a strike,

And this question is the topic of my sermon today.

In the last several months there has been rash of work stoppages in Northeastern Ohio plants.

While I am not certain about all the strikes or walkouts, I would venture a small wager that in every instance the contract between the company and union provided for solu-

tion of quarrels-other than in cases where a contract has expired and a new one is being written

I am not talking about the latter.

I am talking, this morning, of the instances where the firing or disciplining of one man in a plant employing thousands, has led to an entire plant being closed down-regardless of the fact that the contract set forth exact means of settling the complaint, without work interruption.

Let us assume the worst:

The man in question was fired or suspended because the foreman came in that morning with a hard nose—the result perhaps of his wife burning the eggs and the

Let us assume that in this state of mind he was 100 per cent wrong in firing the union

Still there are provisions in all standard contracts for handling this situation—without work stoppage.

But are these matters being handled in the manner that the contract specifies—the contract agreed to by both union and management? Seldom.

What typically happens is that one man is fired, seven others refuse to work—in com-passion for the fired one.

These seven are suspended and boom the whole plant walks out, refusing to return until the suspensions are lifted!

There follows those holier-than-thou statements by the union leaders that "this is an unauthorized strike." And statements by the union chiefs that the people should go back to work until the problem is ironed within the context of the negotiated contract.

Do the appeals work? Are they listened to?

Don't make me laugh.

In other words, while "it takes two to make a peace" it takes only one man to make a strike.

In my example above, I have used a foreman who discharged a man for no good rea-It happens

On the other hand all of us know strikes On the other hand all of us know strikes have occurred time and again when a worker has really thrown a monkey wrench into the machinery, just to be gracery. When he is fired or suspended the plant has been closed down by a "sympathy" strick.

I am not even hinting that management's hands are alwars like white.

hands are always lily-white,

But if the owners of a factory closed down the whole shop because one worker bunged some machinery, that management would be hanged from the highest lamp post in no time at all.

"Contracts" would be cited and "arbitration clauses" and other items.

This being a fact, then why do contracts suddenly become scraps of paper if a union member is suspended or fired for what management considers a valid reason?

Suddenly there is this ugly picture: Signatures of international presidents and

vice presidents and local presidents and others who affixed their signatures to the contracts become valueless. It is obvious that these men, essentially, have no more control of their members than the U.S. has over Ho Chi Minh.

The whole thing is getting to be ridicu-

For a long time Akron and the area was known as an area of labor unrest

When the Area Development Committee was organized to do something about getting new industry—and jobs—its members went to all points of the compass to "sell" the

I was on scores of these trips. time, we found industries which really wanted to be located around here for pur-poses of distribution, etc., shunning Akron like it had a permanent plague.

It took the ADC much, much time and much, much selling to convince industry that the Akron area was a good place to be located.

Chrysler moved in; so did General Motors and many others.

For a long time they were happy. Now, I would say without much fear of contradiction, they aren't so happy.

It may be, one of these days, that industry will stop coming into the area.

The usual attrition will follow, and there will be jobless again at the Bureau of Unemployment Compensation windows; and at the relief offices.

And the men and women will cry out again—as they did before. They will cry out that they are being mistreated; that in-dustry, management and government are unfair and all that.

They won't remember at all that their day-to-day strikes caused it.

It is a horrible part of human nature

that if a plant is unionized, that plant is fair game for anything.

Let the plant be closed, and someone else

is to blame, certainly not the people who bedeviled the plant with contract-breaking walkouts.

That recent business at the Ford plant, the recent stoppage at Goodyear. And the constant static at Seiberling in Barbertonwhat can be the only result?

In the case of all, the companies will seek to protect themselves, and this they have a perfect right to do.

Protect themselves against what? Are they asking for 15-hour days, peanut wages things like that?

Of course not. They are only asking that the unions deliver the contracts they signed.

They are only asking that, if the International President and the other officers sign contracts in good faith then the workers, represented by the officers, also act in good faith. And that the nonsense of "This is a wildcat strike and please, lads, go back to work" be backed up with action instead of pious palaver.

If a management, I repeat, busts a contract there are all sorts of ways to bring the management to the bar of justice.

But if one man in a work-force of 10,000 decides to build a motor backwards and is fired, he can close down the whole 10,000.

And who can do anything about it? one, obviously,

When the Seiberling plant in Barberton as on the verge of being shut down, many in the area—union, management and others went to work to keep it going.

But, having saved the jobs of 1,000 or more

men and women, those of us who worked on the matter, night and day, are wondering now whether the work-force gives what is known as a good damn. There's hardly been a peaceful day out there.

The bitter thing about all this is that most of the union members are good, honest, hardworking.

But when union meetings are held, these stable people are off fishing. A group of problem children show up for the meetings

and whammol we're off and running again.
"We can't force the members to come to
meetings," the union leaders bleed. Well, they'd better start doing something about it.

I'm not for any government controls; I am not against unions—but it does seem to me that when I sign a contract, I should abide by it.

When a company signs a contract it has to live by it. But when a union signs a contract, anyone of 100,000 can break it and not

be chastised.

Let all this keep on, and Northeastern Ohio again will become an industrial wasteland. Then what will the gentlemen do?

I know one thing they won't do: Blame

Ask John Steinbeck

EXTENSION OF REMARKS OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr. KING of Utah. Mr. Speaker, the Deseret News of Salt Lake City suggests that anyone wondering whether the intellectuals who criticize U.S. policy in Vietnam are right should turn to John Steinbeck for an answer.

The newspaper refers, of course, to the widely printed reply of Mr. Steinbeck to a letter from the Soviet poet, Yevgeny Yevtushenko. Mr. Steinbeck pinned the onus for the Vietnam conflict where it belongs-on the Communists.

His words, the Deseret News says, have such a ring of truth about them that they cannot in good conscience be ignored by honest men.

In full agreement, I place this editorial in the RECORD:

WHY FIGHT FOR VIETS? ASK JOHN STEINBECK

Wherever critics of U.S. policy on the war in Viet Nam are found there is almost in-variably a disproportionately large representation from the intellectual community.

Whenever support for that policy is being voiced, however, writers, artists, educators, and the like usually are hard to find.

From this observation it isn't far to the notion that perhaps members of this educated elite are right in demanding that the U.S. give up on Viet Nam as a lost cause or even an unjust one. It wouldn't be the first time that a minority, however small, viewed a problem with greater clarity than all those arrayed against it. Is such the case in regard to the course America is following in Viet Nam?

Anyone who has ever entertained such doubts owes it to himself to ponder the letter written recently by John Steinbeck, the Nobel Prize-winning American novelist, in response to a poem by Soviet writer Yevgeny Yevtushenko calling for protests against U.S. actions in Viet Nam.

Steinbeck, who has a son serving as a U.S. soldier in Viet Nam, declared:

"You know well how I detest all war, but for this one I have a particular and personal hatred. I am against this Chinese-inspired war. I don't know a single American who is for it. But . . . you asked me to denounce half a war, our half. I appeal to you to join me in denouncing the whole war.
"Surely you don't believe that our 'pilots

fly to bomb children, that we send bombs and heavy equipment against innocent ci-vilians? This is not East Berlin in 1953, Budapest in 1956, nor Tibet in 1959.

"You know as well as I do . . . that we are bombing oil storage, transport and the heavy and sophisticated weapons they carry to kill our sons. And where that oil and those weapons come from, you probably know

"I hope you also know that if those weapons were not being sent, we would not be in

Viet Nam at all. . . ."

These words, we submit, have such a ring of truth about them that they cannot in good conscience be ignored by honest men.

As Edmund Burke once said, "All that is necessary for the triumph of evil is for good men to do mothing." No doubt just about all the critics of U.S. policy in Viet Nam are good men, but more of them need to realize, as Mr. Steinbeck does, the consequences of inaction there.

Pictured Rocks National Lakeshore

EXTENSION OF REMARKS OF

HON, RAYMOND F. CLEVENGER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr CLEVENGER. Mr. Speaker. among the most beautiful of the many natural attractions of northern Michigan are the Pictured Rocks, stretching in a 15-mile rainbow along the shores of Lake Superior. My bill to create the Pictured Rocks National Lakeshore would preserve for the enjoyment of millions of Americans the unspoiled beauty of these ancient rock formations, framed by lush green forests and the blue expanse of the lake.

During a visit to the Upper Peninsula last summer, Chicago Tribune writer Ken Ferguson was stirred by the beauty of the rocks and excited by the wealth of scenic attractions in the Upper Peninsula. His enthusiastic description of the region, published in the July 3, 1966, Chicago Tribune, brought 500 mail inquiries in 4 days, according to the Alger County Chamber of Commerce, in the Pictured Rocks country. And 80 Chicago area residents stopped in the chamber office for more information after reading the Tribune article.

If one story can enthuse 500 vacationers in the Chicago area alone, I invite my colleagues to consider what the response would be throughout the country after designation of this site by Congress as a national park.

Following is Mr. Ferguson's article: MICHIGAN'S PICTURED ROCKS: HIAWATHA-LAND-UPPER PENINSULA STORIED SHORES OF

GITCHE GUMEE (By Ken Ferguson)

MUNISING, MICH.-This is one of America's great undiscovered [by the average tourist] scenic marvels and family vacationlands—the fabled "Pictured Bocks" and Hiawatha country, which, if Congress approves, is slated to become Pictured Rocks national lakeshore.

And Chicago is only 386 miles from Pictured
Rocks, said to be the "Shining Big-Sea-Water" and the "Shores of Gitche Gumee."

Longfellow told all about it in his poem "Hiawatha":

"By the shores of Gitchee Gumee, By the Shining Big-Sea-Water Stood the wigwam of Nokomis, Daughter of the Moon, Nokomis.

At the door on summer evenings, Sat the little Hiawatha Heard the whispering of the pine trees, Heard the lapping of the water Sounds of music, words of wonder . . .*

Indian legendry suggests that Hiawatha lived here in Munising, a delightful little city [population 4,000] laced with misty water-falls, fringed with towering pine and spruce on a Lake Superior harbor, jumping off place for daily Pictured Rocks boat cruises

Closely ringed on three sides by forested hills that could be straight out of the Smoky Mountain foothills, Munising fronts on the northerly edge of rast Hawstan national forest, a great green multi-thousand-acre belt of verdant pine, spruce, and cedar wilder-ness dotted with scores of clear blue lakes in which to tent and trailer camp, rent a luxury motel or furnished cottage, fish, cruise, hike,

Situated on a magnificent sweep of Lake Superior shore [Gitche Gumee], in the lee of historic old Grand Island, where John Jacob Astor established a trading post for Indian Astor established a trading post for indian furs in 1832, Munising is located 122 miles west of Michigan's famous Sault Ste Marie locks, 119 miles from St. Ignace and the Mackinna bridge, 46 miles sast of Marquette, and 386 miles from Chicago.

Munising is an amazing place for many reasons. With Lake Superior at its front door, there are nearly 300 inland lakes nearby. Often referred to as the "Waterfalls City." Munising offers Munising falls, a rare example of grotto formations and sandstone within the city limits. No more than a mile away are Alger and Wagner falls; a short distance away are Miner's, Au Train, Rock River, Scott, and Laughing Whitefish falls, along with Spray and Chapel falls, Tannery falls and Grand Sable falls.

A short drive eastward along the Lake Superior shore from Munising is another of the nation's natural wonders, the famous "Mountains of Sand" of Grand Marais, which are the Grand Sable dunes immortalized in "Hiswatha":

"On the shores of Gitche Gumee, On the dunes of Nagov Wudjoo, By the shining Big-Sea-Water Stood the lodge of Pau-Puk-Keewis"

They rise to 1,020 feet at one point and stretch for 7 miles along Lake Superior. Semi-precious stones are found on the dunes. Agates are discovered along the beach.

Grand Marais is the only natural land-locked harbor on the United States side of locked harbor on the United States aide of Lake Superior—also the only harbor from Munising to Sault Ste Marie. Grand Marais village is a picturesque Cape Cod-type north— land community with all the charm and serenity of an East Coast harbor town. But it is Pictured Rocks that attracts most tourists to the Munising area. Pictured Rocks in a relies of water-completived, highly

Rocks is a series of water-sculptured, highly colored rock formations, rising perpendicu-larly along the cliff wall from Lake Superior to heights of 300 feet, beginning 5 miles northeast of Munising and extending 15 miles

eastward along the coast.

At least two poets of international prominence mentioned Pictured Rocks in their poems: John G. Whittier and Longfellow.

Imaginative viewers see all sorts of weird, wave-sculptured rock formations during their

wave-sculptured rock formations during their Pictured Rocks cruises . . . likenesses of chapels, pulpits, saliboats, Indian heads, houses, and other resemblances in the beautifully colored cliffs.

A Pictured Rocks boat cruise out of Munising aboard Capt. Everett Morrison's 85-passenger cruise ship, Tiger Lady II, for the 51-passenger ship Sea Queen II is one of the country's most unusual travel thrills. [Adults \$3.50. Children under 12, \$2.] The complete trip more than 37 miles takes 214. complete trip, more than 37 miles, takes 21/2 to 3 hours. The boats cruise closely to the cliffs and slowly enough for superb colorpictures. Now thru Labor day there are five trips daily, 9 and 11 a.m., and 1, 3, and 5 p.m. Wear heavy woolens—carcoats, sweat-ers, and jackets—along with rubber-soled, -heel shoes.

This is no mill pond you are venturing upon. Lake Superior is the largest body of fresh water in the world. At one spot, far out in the lake, it plunges to a depth of 1,300 feet. Forty degrees is the average water temperature. Winds have a clean sweep across 250 miles of open sea.

The cruise eastward along Pictured Rocks cliffs is a breath-taking experience. The en-tire sweep of shore is still a wild, wonderful wilderness, almost unchanged since the days of Radisson and the voyagers. Pastel-colored, rock—light tan, gray, green, darker brown, marble cakes the cliff-face.

On the ship goes, past storied Miner's Castle rock formation, into Painted coves, Colored caves, Caves of Bloody Chiefs, Lover's

eap, Rainbow cave, Sail Rock, Indian Head, Gull Rookery, Portal, famous Battleship Rock, Indian Drum, Chapel Rock, and

Rivers rush down to shore. Waterfalls cascade along the cliff-face. Great emerald

forests ride the cliff crests.

ack in Munising you discover modern motels, cottage courts, and restaurants which feature famous Lake Superior lake trout dinners [Red Cedar restaurant on M-281]. There's another culinary specialty of Michigan's Upper Peninsula which tourists shouldn't miss—the popular hot "Pasties" [meat turnovers, a meal in itself] brought over by immigrant Cornishmen known as "Cousin Jacks." Pasties are available at Starlite motel in Munising.

This city has many excellent little motels, including Starlite motel, Vacationer's motel, Dunklee's Sunset motel [only motel on picturesque Munising bay, one mile from downtown), and Scotty's motel. Write Chamber of Commerce, Dept. C. T. Munising, Mich., for brochures, motel and furnished cottage listings, restaurants, or stop in when you reach town for detailed information on how to get to the many Munising area waterfalls. There is a Hiawatha national forest ranger's office in Munising for complete camping information and maps.

Vacationers discover many things to see and do around Munising after they've toured Pictured Rocks; visits to the beautiful waterfalls; tours of Munising's paper mill [divi-sion of Kimberly-Clark corporation]; drives out to Grand Marais and the famous dunes

and harbor.

Nicest thing of all, however, is the invigorating summer spell of the great green northland itself; enchanting nights under the Northern Lights with a shimmering expanse of mirrored water in front of youand the vast, sprawling Hiawatha national forest at your back.

"Thus departed Hiawatha, Higgortha the beloved. In the glory of the sunset, In the purple mists of evening."

Willie Hunter's March

SPEECH

OF

HON, CHARLES L. WELTNER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 20, 1966

Mr. WELTNER. -Mr. Speaker, Willie W. Hunter, 17 years old, arrived in Washington last night, completing his journey from Atlanta. Traveling alone, he walked over 75 miles of the way carrying an American flag to show his love of country, and support for our difficult and trying position in southeast Asia.

I attach a copy of an editorial in the July 25 issue of the Atlanta Journal, which well states appropriate sentiments: WILLIE HUNTER'S MARCH

Willie Hunter, 17, an Atlanta Negro high school student, is walking down to Washing-ton to demonstrate his support for U.S. involvement in Viet Nam.

He is carrying an American flag and a knap-sack and he hopes to cover about 75 miles a day.

"I'm tired of hearing about the Student Nonviolent Coordinating Committee and the Congress of Racial Equality make statements opposing U.S. participation in Viet Nam," he

"Our country has its faults, but it's one of the best in the world."

Wouldn't it be nice if people all along Willie Hunter's route of march would join up and walk with him at least a little way to show they approve of what he is doing?

But they probably won't. The old fash-ioned positive support of America and America's policies doesn't seem to attract many people these days.

But at least motorists who pass him along the road the next few days can give him a smile and a wave as they go by and they might even want to stop and offer him a ride.

Meanwhile, the people who live in Atlanta can be as proud of Willie Hunter as he is of his country.

A Time for Candor

EXTENSION OF REMARKS

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

HARVEY of Indiana. Mr. Mr Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Wall Street Journal, July 27, 1966] A TIME FOR CANDOR

This summer's harvest of horror-murder. arson, looting in city after city, week after -is prompting ever more insistent ques tioning. Why? Who is to blame? Strangely enough, the response of a good many people is that it is not the fault of the rioters but of the general society and, if you please, the Federal Government.

One editorialist was moved to express the sentiment in the following extremist fashion: 'The (Federal) housing program is too small. The poverty program is too small. It is not the riots in the slums, but these lame and inadequate programs that are the real disgrace of the richest nation on earth."

We submit that attitudes of that sort are an unmerited rebuke to America and the millions whose hard work and hard thinking have made it the most abundant and just nation on earth. We are glad that President Johnson, at least, is not thus beguiled; while commiserating with the plight of slumdwellers, he is forthright in his condemnation of riots that tear at the very fabric of the community. "Our country can abuse the order of the country can abuse the country can abuse the country at the country at the country at the country at the country at the country at the country can abuse the country can a "Our country can abide civil Let us look a little more closely at the

catalog of charges against the "inadequacy" of Federal efforts.

Large-scale Federal housing aid for lowincome families has been going on for many years at a cost of many billions in tax dollars. It has falled indeed, but its inadequacy is not in terms of cost but in terms of concept. The same applies to the bulk of the activities launched by the more recent antipoverty program.

The fundamental conceptual flaw is a sentimental view, reminiscent of Rousseau, of the nature of man. According to this in-terpretation, man is inherently good and perfectible and is held down only by the ex-ternal forces of society. Put him in pleasant surroundings, or give him enough money, and all will be well.

The inescapable corollary is that the society rather than the individual is responsible for his behavior, however ambition-less, venal or criminal. The doctrine has been preached with so much vigor, and not only in connec-tion with civil rights, in contemporary America that it is hardly surprising to find some of the listeners taking it literally.

Experience, to put it mildly, lends little credence to the romantic view of man's nature; left entirely to our own devices, relatively few of us would qualify for sainthood. In that context, the political triumph of the American design of 200 years ago is that it engineered a maximum of personal liberty with a minimum of governmental compul-sion. But the order is there, and it has to be, else the design falls.

Confronted with such self-evident facts, the civil rights leaders tend to retort with the argument that if they did not promote civil disobedience, nothing would be done to improve the squalid surroundings in which many Negroes live. Anyone contemplating civil disobedience, however, in a society whose existence depends on respect for law is obligated to ask himself what alternatives exist before he turns to that last resort.

Here again, the President put it well: "The ballot box, the neighborhood communities, the political and civil rights organizations— are the means by which Americans express their resentment against intolerable conditions. They are designed to reform society, not to rip it apart."

And the truth is that many individual Negroes, even before the past decade's civil rights legislation, have come up from poverty and gotten out of the "ghetto." (The term, incidentally, is a loaded one; by connotation if not denotation it suggests the falsehood that some governmental authority is compelling Negroes to stay in segregated, walledin areas.)

Many more can be expected to make a decent living for themselves without the leaders having to rip up society. What cannot be stressed too often, and what the romanticists fail to understand, is that for the most part they will have to do it on their own; the leaders would be better occupied helping them help themselves than in creatthe climate for riots. Even then, there will be some members of any society, regardless of color, who for one reason or another will not be able to make a go of life.

It's time, we think, for a little bit of common sense and candor. Neither the society at large nor the Federal Government is responsible for the violence. Those responsible are regard for law and order.

L.B.J.'s Crunch With Congress

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr. YOUNGER. Mr. Speaker, it is always interesting to learn of the offthe-record meetings held at the White House because sooner or later what happens in these off-the-record meetings comes to light as evidenced by the article "L.B.J.'s Crunch With Congress" by Rowland Evans and Robert Novak. Their column, which appeared in the Washington Post on July 27, follows:

L.B.J.'s CRUNCH WITH CONGRESS

(By Rowland Evans and Robert Novak)

When the congressional leaders left the White House July 18 after hearing the President scold them for spending too much, the prevailing mood among the Democrats was disgruntlement bordering on anger.

One Democratic leader berated Mr. Johnson all the way back to Capitol Hill in the limousine he shared with several other lead6

ohnthe ers. Doesn't the President know, he complained, that with all this economy talk he is practically inviting Congress to emasculate

his whole program?

He wasn't alone. In the Democratic cloakrooms this is the prevailing reaction to Mr.
Johnson' low-key appeal that Congress vote
in full the money he has asked—coupled
with his loud refusal to permit one dollar to
be voted for any other programs. By pound-

ing on the economy theme, Mr. Johnson is putting squarely on the backs of liberals in his own party the onus for big spending; and big spending, he says, will mean higher taxes or big deficits.

taxes or big deficits.

What galls these liberals, many of them first-termers elected in the anti-Goldwater landslide, is that the President himself is not facing the voters in the November election but there are

tion, but they are.

Presidential silence on the Senate cut of \$250\$ million in his foreign aid bill two days later further confused the liberals. It indicated Mr. Johnson may even be ready to backtrack on some parts of his own program.

That cut was sponsored by the Republican leader, Everstr Draker of Illinois, and in the absence of a single protest from the White House, it got the support of no fewer than 64 Senators—two-thirds of the Senate.

Likewise, the antipoverty bill, already in a highly weakened state, is almost certain to feel the impact of the President's alarming talk about the budget. The same is true of Federal aid to education, of the highly-touted Johnson program to eliminate pollution from streams and rivers, and of other Great Society programs.

And yet, paradoxically, Mr. Johnson made it crystal clear in a White House session with the congressional money men last week that he did not want any congressional tampering with the Great Society. His exchange with Rep. John Flynr, a conservative Democrat from Georgia, symbolized his refusal to conceed to Congress any legislative initiatives. Flynr was one of a score of chairmen and ranking Republican members of House Appropriations subcommittees, the panels which start the money bills rolling through Congress, summoned to the White House July 19 for a tough presidential lecture on the budget. He complained to the President that every time an item was reduced in the House he got an angry phone call from the White House.

Asked to give an example, FLYNT singled out the rent supplement bill. This program, designed to help low-income families get better housing, was severely trimmed in the House and for his part in the trimming, FLYNT was scolded by the White House.

When FLYNT finished his recital, Mr. Johnson assumed a pained expression. "John, that's different. Rent supplements is my program."

Irritated by the President putting the whole spending blame on Congress, the conservative Republican, Elfon CERRERER of Michigan, then taunted the President by inviting him to veto bills that are not part of his program, such as the 2.9 per cent pay raise for Government employees.

raise for Government employees.

Mr. Johnson demurred. It's not that simple, he said. Besides, he wanted to cooperate, not compete, with Congress.

CEDERBERG shot back: "We'll promise to cooperate, Mr. President, with the first veto you send up."

The reason for the President's crunch with Congress is, of course, the growing cost of the war in Vietnam, now estimated at close to \$2 billion every month. But one likely casualty of Mr. Johnson's highly-publicized economy campaign may very well be his own Great Society program. Another may be the freshmen Democrats, who will now get the blame back home for their voting records in support of high spending.

Captive Nations Week

SPEECH

OF

HON, EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. DERWINSKI. Mr. Speaker, as I indicated in earlier remarks, there was a great nationwide surge of interest in Captive Nations Week this year. I am pleased to call the attention of the Members to proclamations issued by the mayors of Forest Park, Flossmore, and Tinley Park, Ill., in the congressional district I am privileged to represent. In addition, an editorial in the July 15 edition of the New World, publication of the archdiocese of Chicago, on Captive Nations Week, came to my attention, and I insert it in the Record as part of my remarks.

CAPTIVE NATIONS WEEK PROCLAMATION

Whereas, the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czecho-Slovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Serbia, Croatia, Slovenia, Tibet, Cossackia, Turkestan, North Vietnam, Cuba, and others; and Whereas, the desire for liberty and independence by the overwhelming majority of

Now, therefore, I, Kenneth J. Pulton, Mayor of the Village of Tinley Park, do hereby proclaim that the week commencing July 17, 1966, be observed as "Captive Nations Week" in Tinley Park and call upon the citizens of Tinley Park to join with others in observing this week by offering prayers and dedicating their efforts for the peaceful liberation of oppressed and subjugated peoples all over the world.

Dated this 16th day of July, 1966.

KENNETH J. POLTON,

Mayor of the Village of Tinley Park.

CAPTIVE NATIONS DESERVE OUR WHOLE-HEARTED SUPPORT

Speaking of Freedom Rallies, I can think of none more deserving of support than that

planned for Captive Nations Day, Saturday, July 13. There is no doubt that the general public here in the United States has become very short of memory or, worse still, apathetic to the past and present sufferings of those works are the past and present sufferings of those staturday, 25 national groups, representing enslaved nations behind the Iron, Bamboo and Sugar curtains, are taking part in a parade starting at moon at Wacker Drive and State Street. Many of these people are refugees from the 20 nations represented. They would not be in this country unless they loved our nation and the freedoms we have here, and unless they looked to our nation as the last freedom-loving people who would be willing to help them help their homelands to restore freedom.

The list of captive nations reads almost like a litany—Poland, Yugoslavia, Czechoslovakia, Rumania, Lithuania, East Berlin, North Korea, North Vletnam, Cuba, to mention only a few. The source of captivity can clearly be pin-pointed in Soviet Russia and Red China. As long as these nations continue their imperialistic programs of infiltration, insidious revolution and ultimate world domination, once of us can hope for any true freedom.

none of us can hope for any true freedom.
Our Nation is not getting much self-deserved support from our traditional allies in working toward this goal. We are being subjected to heavy criticism, often hypocritical, from our enemies and even from those whom we would call our friends. Many voices have been raised within our own nation to criticise the support that we have been giving to the relatively small nation of Vietnam. Today (Wesdnesday) is called the "Day on which that nation was divided at the Geneva Conference in 1954—the northern half being turned over to Communist rule and the southern half remaining as a free nation.

Those among us who would prefer not to consider the situation should know more about some of the peoples involved. The puppet governments in Poland and Cuba have never ceased their oppressive harrassment of their own people who want freedom. Red China has liquidated hundreds of thousands of its own citizens for the same reason. The goal of the Communists is quite clear. If we fail to secure true peace and freedom in Vietnam, we will be giving up just one more frontier of freedom.

Thailand, Laos, Cambodia—you name the place—it's been on the list for Soviet aggression for years. If we don't stop it soon, there will be no free area left beyond our own shores, and big and strong and resourceful as we may be as a nation, we may not be quite big enough to undo the damage that has made millions of people captives and has tortured and murdered millions more.

Captive Nations Day should be heraided and supported by all Chicagoans. Most of us, or our parents and grandparents, come from such nations. The less fortunate are still captive. Let's keep them in our prayers and pledge them our constant support. If we don't we don't deserve the freedom we enjoy.

J. M. KELLY.

District of Columbia Problems Cause Concern

EXTENSION OF REMARKS

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. NEISEN. Mr. Speaker, Carl Shipley, Republican chairman in the District of Columbia, recently addressed the District Junior Chamber of Commerce about matters concerning him in our Nation's Capital. I request inclusion of his speech in the CONGRESSIONAL RECORD.

SPEECH OF DISTRICT OF COLUMBIA GOP CHARMAN CARL SHIPLEY, TO THE DISTRICT OF COLUMBIA JUNIOR CHAMBER OF COM-MERCE, JULY 7, 1966

One of the most conspicuous failures of the Great Society is the constant deterioration of the Nation's Capital. Today the population of the 69 square miles which make up the District of Columbia is about 805,000 persons, roughly the same as it was 16 years ago in 1950. Municipal services are no better, and probably worse today than 16 years ago.

A main feature of the Great Society is its "creative federalism"—the Federal Government by-passing State Governments to solve local problems directly with Federal help and management at the local level. The District of Columbia is the one place in the United States where Congress has exclusive legislative authority, and where the President has absolute control by reason of the fact that he appoints, subject to the confirmation by the Senate, the two civilians and one military officer who make up the three-member Board of Commissioners, which governs the Nation's Capital. There are no elected local officials and no local lawmakers—the President and the Congress cannot escape their ultimate and absolute responsibility for conditions in the Nation's Capital.

If the Great Society's "creative federalism" is a sound theory of Government, Washington, D.C. ought to be a shining example of urban life at its best. If the Federal Government can better solve municipal and urban problems than State and local Governments, Washington, D.C. should be a model of perfection. But what are the facts?

ernments, Washington, D.C. should be a model of perfection. But what are the facts? District Building employees have increased from 24,000 in 1960 to about 33,000 in 1966. Many are in "leaf raking" or make-work jobs—unnecessary for efficient Government.

Crime and juvenile delinquency have increased steadly until Washington justifies a description made by a United States Senator on the Fioor of the Senate to the effect that is is the most dangerous city in the United States after dark.

More children "drop out" of High School than graduate every year. Unemployment continues at a high level among the unskilled, there is a serious housing shortage, and the flight to the suburbs of the white population and taxpaying, job-generating businesses continues to accelerate.

A recent report to Congress by the Comptroller-General of the United States showed 611 District Government employees identified as having licenses to drive taxicabs, of whom 222 were found to have been out driving their cabs while drawing pay, on official time as municipal employees. This double worklife is contrary to the public interest, which assumes a 40 hour work week. The health of these employees must suffer, and certainly the D. C. tax-payer does not get full value from a city employee who drives himself to exhaustion in a cab.

Is it any wonder that new businesses refuse to locate in the District or that new families coming into the area settle in Maryland or Virginia suburbs? Is it surprising that old taxpaying businesses leave for the suburbs, and old taxpaying families depart for refuge across the District line?

If it were a question of money, inadequate budget, or lack of revenue, there might be some justification for this sad state of affairs.

However, the melancholy fact of the matter is that District residents today have a budget of \$428 million to maintain the municipal government to serve our local population, as against a budget of \$241 million in 1960 to serve the very same size population. Today we have one of the high-

est ratio of municipal employees to the population served in the United States, and yet it is one of the most floundering, bungling, and confused municipal Governments to be found anywhere. District residents have endured 15 tax increases in the last 10 years, ranging from personal income to real estate, and the Great Society leaders have proposed 9 more tax increases now pending in Congress.

District of Columbia residents in 1959 paid a total revenue in local taxes of \$138 million. If the pending proposals become law, the same residents will be paying \$240 million in local taxes next year. For a typical middle-class family of four in the Nation's Capital this means an estimated burden of major taxes of \$521 per year, as against, for example, \$308 in Dallac, Texas, \$347 in San Antonio, and \$350 in Houston, Texas, which are comparable major cities.

The Great Society administrators still have a chance to save the Nation's Capital by using tax and fiscal policies to stimulate an inflow of new taxpaying and job-providing businesses, and to encourage an inflow of new white taxpaying families moving into the area. This same authority can be used to open up equal opportunity for housings, jobs, and schools in the Maryland and Virginia suburbs for a nearly 65% Negro population, many of whom would like an opportunity to enjoy suburban life.

The President and the Board of Commissioners have adequate statutory authority and administrative authority to bring about a redistribution of the Negro families who are now concentrated in the District on a more even-spread basis throughout the Maryland and Virginia suburbs.

In addition, the leaders of the Great Society should propose to Congress a 1% withholding tax at the source on the personal incomes of the approximately 222,000 commuters who work in Washington by day, but return to live, vote, and pay taxes in Virginia and Maryland after the sun goes down. Over 44% of all the 505,000 persons with jobs in the District of Columbia reside in Maryland or Virginia (19% in Virginia, 25% in Maryland). Other cities, including New York, are finding this source of tax revenue a means to distribute throughout a metropolitan area an equitable share of the cost of municipal Government among those who derive direct benefits from the services provided out of tax revenues.

These two major steps could change the Great Society's most conspicuous failure into one of its outstanding successes—A Nation's Capital of which all of America's citizens can be proud instead of a Nation's Capital which at the present time can only be a source of shame.

Sixty Arizonans, Including Joseph Wood Krutch and the Director of the Arizona-Sonora Desert Museum, Appeal for Preservation of the Grand Canyon

EXTENSION OF REMARKS

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. REUSS. Mr. Speaker, recently 60 Arizonans—mostly professional, business, and university people—expressed their opposition to the Bridge Canyon and Marble Canyon Dams in the Grand Canyon in identical letters sent to President Johnson and other officials.

usi-

ssed

yon

and

resi-

Among the signers of the letters were Joseph Wood Krutch, William H. Woodin, who is director of the Arizona-Sonora Desert Museum, and Philip Burnham, an editor of Commonweal magazine.

The eloquent appeal of these Arizonans speaks for itself. I include it hereafter:

TUCSON, ARIE., July 1, 1966.
The President of the United States,

SECRETARY OF THE INTERIOR,

The Honorable Morris Udall, The Honorable Paul Fannin, The Honorable Carl Hayden,

The Honorable JOHN J. RHODES,

The House Committee on Interior and

Insular Affairs, The Senate Committee on the Interior, Mrs. Lyndon B. Johnson:

We residents of Arizona, dismayed and saddened at the prospect of the erection of two dams within the Grand Canyon, feel compelled to tell you of our strong opposition to this unbelievable encroachment upon what is the common heritage of all Americans and of the world.

We who sign this letter live and work in Arizona and are therefore vitally concerned with the well-being of this State and of its citizens. If the Colorado River is indeed the only practical source of the additional water our growing state needs, let us have the necessary diversionary installations without the dams at Marble Gorge and Lower Granite

All of the points for and against the dams have been eloquently made, and we shall not repeat them. We simply want the President, the Secretary of the Interior, and the members of Congress to know that responsible citizens of Arizona are far from being unanimously in favor of the legislation sponsored by our congressional delegation in its present by our congressional delegation in its present form. We remain convinced after arduous study of both sides, that rast areas of the Grand Canyon and adjoining regions will be effectively and permanently modified or de-stroyed if one or both of the dams are built. We further believe that, if the nation's greatest natural gift cannot be protected, we shall see the same arguments of expediency and dollar-practicality used to harm or destroy other wilderness areas of the nation. The people of the world watch us, and future gen-erations will judge us, to see whether the world's richest nation will destroy its most valuable natural possession for gross utilitarian motives.

A nation which devotes itself principally to material progress and neglects man's primeval spiritual bonds with nature must inevitably become less human. New sources of water and power can be found, but once we have lost the Grand Canyon, or any part of it, we shall have lost it forever.

Gentlemen, we Arizonans plead with you: Don't build the dams at Marble Gorge and

Lower Granite Gorge.

WNEW's Public Service Program, "The Invisible People"

EXTENSION OF REMARKS

HON, THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. KUPFERMAN. Mr. Speaker, I have had the opportunity of hearing a program entitled "The Invisible People," on radio station WNEW in New York City, as a part of their award-winning series known as "Sunday Evening Closeup."

This distinguished series of programs has been a public service of radio station WNEW for some 5 years in the New York

metropolitan area.

The program, under the title "The Invisible People," might very well have borne a subtitle of "The Sound of Poverty."

It deals with the situation of people who, through no fault of their own, are brought down from the normal income

level to one of bare subsistence.

This particular program was written and produced by Mike Stein, and based upon the book, "Faces of Poverty," by Pastor Arthur Simon. The executive producer was Jack Pluntze, and Howard Epstein was in charge of technical supervision.

News Closeup is a public affairs presentation of WNEW and WNEW-FM, Metromedia stations in New York. The program begins with Announcer

Alan Walden stating as follows:

To most New Yorkers, the sound of poverty is the sound of several hundred demonstrators on a street . . . shouting slogans and demanding more money from the government . . . or the sound of angry poverty officials quarrelling over money for this projection.

ect or that . . . You won't hear any of those sounds to-

You will hear from the invisible people . . . from Mr. and Mrs. Carl Miller.

They're real people.

They live right next door to you . . . but you don't know it.

You may have passed them on the street day . . . but you didn't recognize them.

The Millers look just like you . . . but

The Millers look just like you . . . but they're not just like you.

You've made it in this world. They haven't. And the question is . . . why. They aren't shiftless, they aren't dishonest. They aren't immoral. They don't bear the stigma of color. They don't want to freeload on the public. They want to work. Yet they were drawn into poverty much like a drowning man is drawn into the vortex of a whirlpool.

It concludes with the statement:

More than we care to admit, ours is a society in which the fit survive. And our notion of fitness is often irrational and morally deficient. Mr. Miller wanted to work. Yet, there were few jobs open to him. There was training he could have received, but did not. Poor health and lack of skills sucked him to the bottom. And now, the spectre of second generation poverty haunts the Miller children. At best, we open only a few jobs to him. . . jobs that keep his family on the brink of disaster. And if they topple, we pay him to be useless, and heap upon his family an indignity which few of us would be able to bear.

This is Alan Walden. Have a thoughtful

In between we have the development in good dramatic fashion, of the type of poverty situation that may at any time face any one of us. All poverty stricken people are not members of minority groups or residents of Appalachia.

I commend this series and this particular program and the radio station which presented it.

Homestretch for the Avenue

EXTENSION OF REMARKS OF

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. BINGHAM. Mr. Speaker, as the sponsor of Joint Resolution 1030 for the administration and development of Pennsylvania Avenue as a national historic site, I was pleased to note in the Washington Star on Sunday, July 24, an editorial supporting the resolution. The Washington Post had previously pub-lished an editorial endorsing the resolu-tion. It is very gratifying that two major papers in the District share the same view.

I submit for my colleagues a copy of the Star editorial:

[From the Washington (D.C.) Star, July 24, 1966]

HOMESTRETCH FOR THE AVENUE

Legislation to give the present temporary Pennsylvania Avenue Commission firm congressional status for a period of five years is well past the halfway poet on the road to final enactment. It has been approved by the Senate and by the House Interior Com-mittee and awaits only action by the full House.

As a temporary presidentially-appointed body the commission has performed admir-ably in focusing public attention on the need to preserve and enhance our world-famous Avenue of Presidents. The latest version of its plan, while by no means final, is imaginative and challenging. Taken in complementary plans to revitalize the Mall and Potomac Park, it forms a vital part of an emerging master plan for the all important heartland of the national capital.

But as long as the commission remains an advisory group only, its powers to implement its plan and negotiate agreements with private property owners are limited. And, although it has received an extraordinary degree of support from both government and private developers, it has gone as far as could possibly be expected without specific legislative sanction. The bill now awaiting final passage would accomplish this, and, what is more important, involve Congress directly in the development of a final framework for the future development of the Avenue.

The bill is believed to have majority support in the House and should pass without difficulty. However, in an election year and with Congress heading into the homestretch with major legislation still on the agenda, there is always the chance that it might be lost in the adjournment shuffle. Under no circumstances should this happen.

Auto Safety Legislation a Must.

EXTENSION OF REMARKS

HON, LIONEL VAN DEERLIN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. VAN DEERLIN. Mr. Speaker, the Los Angeles Times—like many other newspapers and many millions of citizens—is heartened by the fact that Congress now appears certain to enact a program aimed at reducing slaughter on the highways.

In particular, the Times supports broadening of the measure passed by the Senate in order to cover used cars. The used car provision in the House version of the bill would not become operative until 2 years after the legislation takes effect, the Times notes. This, it says, would allow time for all the States to establish procedures for enforcement of Federal standards.

Calling action on the auto safety problem long overdue, the newspaper urges speedy approval of the broadened measure.

In the interest of the same objective, I place the Times editorial in the RECORD:

[From the Los Angeles (Calif.) Times, July 15, 1966]

AUTO SAPETY LEGISLATION A MUST

Since the turn of the century more than 1.5 million persons have lost their lives in traffic accidents. In 1965 alons there were 49,000 fatalities, 1.8 million disabling injuries and a like number of minor injuries in traffic accidents. The aggregate cost for the year in property damage, medical expenses, lost wages and insurance has been estimated at \$8.5 billion.

As 10 million cars a year are added to the traffic stream such sorry statistics are bound to mount.

It is heartening, therefore, that Congress now appears certain to enact a program aimed at reducing slaughter on the high-

The Senate has already passed without opposition bills providing for cafety stand-

ards for new vehicles, federal grants for state and local highway safety programs and expansion of federal and state research on the problem.

It had been expected that the House would approve a less stringent program. The House Commerce Committee, however, has agreed to broaden the program to cover used cars—which account for as much as 90% of the traffic on our highways.

Under the House proposal, safety standards applied to all cars, including trucks and buses, manufactured after Jan 1, 1988 would be subject to check when such vehicles were

The practical effect would be that the standards would not apply to care now on the read. That may be a regrettable gap, but proponents make the point that imposition of requirements retroactively would lead to impossible administrative problems.

Actually, California has already embarked on a safety program of its own. Any car, regardless of vintage, stopped on the road in this state for a Vehicle Code violation is subject to a safety check.

The used car provision in the committee version of the bill would not become operative until two years after the bill takes effect. That would allow time for all the states—less than a score of which now have inspection programs—to establish procedures for enforcement of federal standards.

Action on the problem is long overdue.

The broadened measure deserves speedy approval by both the House and the Senate.

A New Weapon in the War Against Hunger

EXTENSION OF REMARKS

HON. JOHN BUCHANAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. BUCHANAN. Mr. Speaker, I am proud to be able to report on the growth of the new soybean crop in Alabama. The Department of Agriculture's latest acreage intentions report indicates a new record for Alabama in soybeans—206,000 acres. At last year's per acre production, this means 4.738,000 bushels,

The soybean is a new weapon in the war against hunger. Soybean products include the valued protein for livestock, dairy and poultry feeding, and the oil for margarine, shortening and a variety of other foods. Soybeans have become this country's most valuable single export.

Like cottonseed, the soybean produces a nutritious oil for human food purposes. Margarine is one of the major products of this oil. American margarine last year utilized well over a billion pounds of refined soybean oil, and thus provided its second largest outlet. Cottonseed, and corn oils also went into margarine.

With tighter supply situations coming up in some agricultural commodity fields, these oilseeds can fill the gap. For example, the Department of Agriculture is no longer able to supply butter because CCC holdings are exhausted. With the recent raise in the dairy support price, it is a question when CCC will have more butter for the various donation programs the Department administers.

Like many consumers, in this situation

the Department has decided to fill the temporary requirement for table spread with margarine. It has been buying margarine for welfare and institutional aid programs, off and on, as needed, since December 1964. In so doing, incidentally, it has saved over \$30 million and has had to call principally on soybean oil as a major component of the margarine.

It may be necessary for the Department to adopt a similar bridgeover buying of margarine for the school lunch program. If so, soybean oil margarines again will be called upon as "reinforcements" so long as the dairy situation remains as it is.

It makes sense to use an alternate produce when it is available to fill a real need that cannot otherwise be met without large additional costs and disruption of commercial markets,

Flood of Municipal Industrial Development Bond Financing Curtails Legitimate Municipal Financing

EXTENSION OF REMARKS

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. REUSS. Mr. Speaker, critics of the use of tax-exempt municipal bonds to finance commercial or industrial activities have long predicted that one consequence of a flood of this financing would be to drive up interest rates on all municipal bonds. This would raise the cost of financing much-needed public facilities like hospitals, schools, roads, and sewers. It might even prevent the construction of some of these facilities by municipalities which are priced out of the market by higher interest costs.

In a June 16 speech to the White House Conference of State Legislative Leaders, Henry H. Fowler, Secretary of the Treasury, predicted:

These arrangements, moreover, by greatly increasing the total of exempt bonds outstanding, will eventually drive up the interest rates paid by all states and municipalities for their borrowing.

Today bond markets are deluged by municipal industrial development bonds. These issues have grown from a volume of \$12 million in 1955 to \$200 million in 1965. Already in the first 6 months of this year, \$325 million have been issued or announced; and estimates for the year as a whole range from a conservative \$700 million up to \$1 billion or more.

At \$1 billion, State and local, tax-exempt financing of private business is huge by any measure. It is more than 20 percent of the \$4.7 billion of new corporate bonds issued by all manufacturing firms in 1965. It is about 10 percent of the \$10 to \$11 billion annual total of all State and local securities marketed in the past 2 years. It is more than 10 percent of the total new issues of the Federal Government in 1965.

In part as a result of this flooded bond market, these predictions have now been affirmed. On July 21, the Wall Street Journal reported that Mississippi offered for sale four bond issues totaling \$17,-433,000. Two of the bond issues were to finance improvements in the port facilities of Gulfport and Pascagoula, another would pay for capital improvements at various State institutions and junior colleges, and a fourth would be used to finance improvements to the State penitentiary.

Only the small \$300,000 penitentiary issue which matures in 5 years was sold. The interest rate was just under 4 percent.

The State rejected as too costly a bid of nearly 4.1 percent interest on the bond issue to improve State institutions. The other two port facility offerings carried a maximum interest limitation of 4 percent and consequently, no bids were received.

All four bond issues were rated Double A by Moody's and Single A by Standard & Poor's.

As a result of the high interest rates on municipal bonds—in part the consequence of the glutted municipal bond market—Mississippl will have to look elsewhere for financing for its needed public improvements.

The July 21 Wall Street Journal article

FOUR MISSISSIPPI ISSUES OFFERED, BUT ONLY ONE, \$300,000 BONDS, IS SOLD—STATE RE-JECTS BIDS ON \$13,683,000 BONDS AND FAILS TO RECEIVE ANY ON TWO ISSUES TOTALING \$3,450,000

(By a Wall Street Journal staff reporter) JACKSON, MRS.—Mississippi offered four bond issues totaling \$17,433,000 for sale, but awarded only the smallest issue, totaling \$300,000. It rejected bids for \$13,683,000 of bonds and failed to receive bids on the other two issues, totaling \$3,450,000.

The \$300,000 general-obligation penitentiary bond issue, maturing in five years, was awarded to Deposit Guaranty National Bank of Jackson, Miss., bidding alone, at an annual

net interest cost of 3.9955%.

The state treasurer's office, however, rejected both bids it received for its biggest issue—\$13,683,000 general improvement bonds. The apparent best bid, offering an annual net interest cost of 4.0827%, came from a group headed by Chase Manhattan Bank, Blyth & Co. Shd Lehman Brothers. A group led by First National City Bank offered an annual net interest cost of 4.2260%.

TRYING FOR 4-PERCENT BID

"We obviously were hoping for a bid under 4%, but I don't think any of us were too surprised the bids were over 4% in view of the bond market situation," said State Treasurer William F. Winter, noting that "Louisiana rejected a bid over 4.50% recently." Mr. Winter said he didn't know of any civil rights protests against the Mississippi bond offering and didn't believe the recent civil rights march in the state had any detrimental effect on the bids it received for its bonds.

Before its bid was rejected, the Chase-

Before its bid was rejected, the Chase-Blyth-Lehman group was reoffering the bonds to investors, subject to award, from a yield of 3.75% for the July 1, 1967, maturities to a dollar price of 100½ for 4% bonds, due July 1, 1977-86.

All of the bonds are rated double-A by Moody's and single-A by Standard & Poor's. Proceeds were to have been used for capital improvements at various state institutions and junior colleges.

NO BID ON PORT ISSUES

The state failed to draw any bids for two port issues totaling \$3,450,000 and carrying a maximum interest limitation of 4%. Proceeds from these bonds would have gone for improvements at Gulfport and Pascagoula.

Mr. Winter said that state will finance construction slated to be supported by the \$13,683,000 general improvement bonds from short-term loans from local banks. He said several alternative financing plans, including short-term borrowing, are being studied for the planned port improvements. Compared with other recent municipal is-

Compared with other recent municipal issues, the 4.0827% "didn't look like a bad bid," Mr. Winter declared. "But the immediacy of our needs isn't such to cause us to pay that rate at this time. We're aware that sconer or later we may have to pay that interest, but we're deferring that decison for several months."

On its previous trip to the bond market, June 23, 1965, Mississippi obtained an annual net interest cost of 3.3487% in selling \$8.3 million general improvement bonds, due July 1, 1968-87, and an annual net interest cost of 3.5664% in selling \$3.5 million Greater Port of Pascagoula improvement bonds, due June 1, 1969-95.

and all cover private housing. Eight of these States cover single family homes and only two—Michigan and Indiana exempt realtors. Four States and one territory excludes lending institutions.

The 17 States are Alaska, California, Colorado, Connecticut, Indiana, Maine, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, Ohio, Oregon, Pennsylvania, Rhode Island, and Wisconsin.

More than half of all U.S. ctizens live under fair housing law which go beyond the coverage of the legislation now under consideration by this Chamber. The other citizens of the United States are entitled to the same protection for so long as we diminish the rights of a single American, the rights of a single American, the rights of all American are in danger. Freedom and democracy can make no distinctions with respect to equal treatment of our citizens and I urge my colleagues to formulate their decision upon this principle and to support the proposed Civil Rights Act of 1966.

The 1966 Civil Rights Act: A Federal-State Comparison of Fair Housing

SPEECH

HON. HERBERT TENZER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1966

Mr. TENZER. Mr. Speaker, during the course of the debate on the proposed Civil Rights Act of 1966, many questions were raised in connection with title IV, to prohibit discrimination in residential housing transactions by persons in the housing business. Because of these questions I requested statistics and research material relating to fair housing laws in the various States and territories in order to evaluate the impact of title IV on my own State of New York and on the Nation.

The statistics are interesting and revealing and I believe my colleagues will find them helpful in formulating a position with respect to title IV of the bill H.R. 14765.

The State of New York has a more comprehensive law against discrimination than the bill before the House this week. The New York State law prohibits discrimination in the sale, leasing, or rental of all housing except owner-occupied two family dwellings and the rental of a room in an owner-occupied house. Of particular significance is the fact that real estate brokers and lending institutions are specifically covered by the New York State law.

Seventeen States and the District of Columbia, Puerto Rico, and the Virgin Islands have fair housing laws which go beyond title IV of the proposed Civil Rights Act of 1966. These 17 States represent more than 50 percent of the total population of the United States.

The laws of these 17 States cover public housing or publicly assisted housing

L.B.J.'s Policy Outline Well Timed

EXTENSION OF REMARKS

HON. CLAIR CALLAN

OF NEBRASICA

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr. CALLAN. Mr. Speaker, the President's statement of policy in Asia before the American Alumni Council has been received with praise by several newspapers across the country. I am particularly proud that such endorsement is contained in a recent editorial by the Norfolk Daily News of Norfolk, Nebr., one of the Nation's leading smalltown daily newspapers.

This editorial comment recognizes that the President's speech may not have an immediate influence on the leaders of Red China. But it contends the speech will have a valuable impact on other countries—including those behind the Iron Curtain.

I am pleased to submit this editorial for publication in the RECORD:

[From the Norfolk (Nebr.) Daily News, July 14, 1966]

L.B.J.'s POLICY OUTLINE WELL TIMED

Red China's leaders may not be impressed by President Johnson's outline of U.S. policies toward that nation, but the effect of his Tuesday message upon officials in many other countries, especially the neutralist ones or those with Communist sympathies, should be great. This might ultimately help convince the Red Chinese that there is more to be gained from the "peaceful co-existence" which the President offered than there is in pursuing Asian conquest.

President Johnson simply maked the Red Chinese to renounce aggression and to open their doors to the world. This is, at the nums time, the most difficult thing for Communists to do.

It was not until after nearly four decades of Communist rule in Russia that its officials opened the doors just a crack. The Communists in East Germany went so far as to provide the ridiculous symbol of their fears by erecting a wall in Berlin. Only recently ha there been a relaxing of the barriers that for so long separated the Communist-dominated countries behind the Iron Curtain from the rest of the world.

Red leaders have concluded-and correctly so—that they have much to lose if they end their isolation. The aggressive designs that typify Communist nations merely serve to keep the focus of attention on something

other than their domestic problems.

The President has made it clear that Red China has nothing to fear from the U.S. if it halts its exports of terror, and recognizes that "co-operation, not hostility, is the way of the future." Even though the Red Chiness may not listen, the conciliatory speech cannot help but impress other world leaders.

The timing of the policy outline was excellent-for the President could not have spoken convincingly a few months ago while Americans and South Vietnamese were being terrorized in the streets of Saigon and repeated-ly ambushed in the jungles of South Viet Nam, Speaking now from a position of strength, the appeal is much more likely to be effective.

Project Headstart Is Tremendously Beneficial

EXTENSION OF REMARKS OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1966

Mr. MOSS. Mr. Speaker, Project Headstart has proven, in my judgment, to be tremendously beneficial. I had an opportunity for close observation of its operation in the city of Alexandria, Va., last year as a result of the very active interest of my 16-year-old daughter who served as a volunteer participant in the program. Her reports of improvements were most impressive. I believe that the benefits far outweigh the costs of the program—the successes more than overbalance the few instances of failure.

The Sacramento Bee in an editorial in its issue of Wednesday, July 13, 1966, reflects in part the broad public approval of Project Headstart.

I commend the editorial, particularly the closing paragraph, to my colleagues: [From the Sacramento Bee, July 13, 1966]

ALL START EQUAL?

When Project Head Start was initiated in the attempt to create a better educational opportunity among the disadvantaged very young there was scoffing from the critics it would become just another extravagant governmental boondoggle.

Weil, after only a year's operation even the harshest critics have had to pull in their necks in the face of irrefutable testimony that Project Head Start represents a magnificent beginning at helping the disadvantaged

prepare for schooling.

Those who are expert in such things have found that the IQ of children enrolled in Head Start programs increases as much as 16 per cent in the exposure. They report there not only has been a marked improvement in not only has been a marked improvement in the educational potential of these children, the project has helped the disadvantaged to adjust socially. This cannot be considered only a side benefit. In a real sense, this ad-justment is absolutely essential to living the fuller, more creative life.

There have been many stories told of the experiences of those working in Head Start

Among them include the revel tions that in the case of many children, the tots never had a book of their own to open and reveled in their new discovery: The picture and the written word. In the case of another a Negro child was asked what a policeman was. She replied a policeman was someone who would hurt you and throw you Such was her environmental concept of law, justice, in her tender years.

There also is the story of the teacher who was reading to these tots when a little boy stopped her and asked what the word "love" meant. It had been used in the sentence "The boy loves his father." He had never

learned the word in his four years of living. Every one may be born "equal" but the fortunes of family and environment can make all the difference; and this is where Head Start comes in.

New Opportunity in Vietnam

EXTENSION OF REMARKS OF

HON, WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr. RYAN. Mr. Speaker, when nations wage war it is rare that they talk to each other with words of sympathy. The more intense the war becomes, the more difficult it becomes to envision the parties negotiating to resolve their differences

The war in Vietnam has reached that level of intensity where all talk of negotiations begins to sound like propaganda. It is, therefore, highly significant that for the first time in this war the North Vietnamese appear to have responded to a plea by the United States and by voices of humanity everywhere. Ho Chi Minh has reportedly said that there is "no trial in view" for American military prisoners.

In an editorial yesterday morning, the New York Times explored some of the possible implications of this statement. The editorial, which deserves our careful attention, follows:

[From the New York Times, July 26, 1966] NEW OPPORTUNITY IN VIETNAM

President Ho Chi Minh's statement that there is "no trial in view" for American military prisoners in North Vietnam is a victory the moral influence of world opinion That victory transcends the fate of the captive airmen, for it offers hope that common sense and common humanity ultimately may prevail against the ever greater barbo ism the war in Vietnam daily inflicts on both

The United States has yielded to the pressure of world opinion in the past by offering peace proposals and twice suspending bombing of North Vietnam. But this i the first time that Hanoi has shown regard for the opinion of mankind. Its decision to ack away from talk of "war crimes trials" follows direct pleas from Secretary General Thant, Pope Paul VI, numerous governments and opinion leaders everywhere, including eighteen liberal American Senators. The hope now must be that reason can prevail on the broader issues of the war itself.

The conflict in Vietnam is a political struggle that, in the end, can only be resolved by political means. In politics, timing is of the ence. A number of opportunities to probe the prospects for peace have been neglected in the past. It is vital that the new atmosphere and the new opportunity opened by

Hanoi's response on the prisoner issue not be missed as well.

The approach favored by American mod-erates and long urged by The Times has just en summed up admirably by Prof. Arthur M. Schlesinger Jr. One essential element is to stop the Americanization of the war by halting the American buildup in South Vietnam: a quarter of a million American troops is more than enough. The second vital element is a civilian Government in Saigon that can open contact with the insurgent forces. Third, is the need to build an atmosphere conducive to negotiations by tapering off the bombing of North Vietnam. Finally, efforts to reconvene the Geneva conference must be linked with broad diplomatic discussions with Moscow, Paris and other interested states to find a formula for the neutralization and economic development of Southeast Asia as a whole

Most of all, what is needed is a clear indication that the American objective is not military victory but political settlement. The American ability to escalate the war needs no further demonstration. The need now is to halt the escalation and make a vigorous new effort to achieve peace.

Great Lakes Commission States Federal Water Pollution R. & D. Must Be Directed to Development of Effective New Waste Treatment Processes

> EXTENSION OF REMARKS OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. REUSS. Mr. Speaker, water pollution problems mount in the Nation, and it has long been known that the best available conventional waste treatment plants fail to do more than retard the growth of pollution. Yet the Research and Technical Programs Subcommittee found in a recent investigation that Federal R. & D. is not organized toward the development and actual field-scale testing of advanced treatment plants. Work on development of new technology proceeds at a mere \$5 million per year level, permitting only pilot-project-scale tests. while the remainder of some \$30 million per year in Federal R. & D. is diffused into small, scattered research studies. Many of these are no doubt useful, but they are no substitute for a deliberate, wellorganized program directed to the development of an adequate technology which could start reversing the tide of pollution in every stream, river, and lake in the country.

The executive director of the Great Lakes Commission, Mr. Leonard J. Goodsell, in a letter to me deplores this failure to direct Federal R. & D. to the development of new, effective treatment methods. Mr. Goodsell's letter follows:

GREAT LAKES COMMISSION. Aun Arbor, Mich., July 20, 1966. t

t

l

t

d

Hon. HENRY S. REUSS, House of Representatives, House Office Building, Washington, D.C.

DEAR Mr. REUSS: The Milwaukee Journal on July 10 carried an account of the report of your Subcommittee on Research and Techni-cal Programs, Committee on Government Operations which deplores the "Slow Research Pace in Pollution—." The Great Lakes Commission attempts to follow closely the activities of all who work toward the wise use and conservation of the waters of the Great Lakes. The Commission, as you know, is thoroughly interested in polution control and abatement and has on several occasions pointed up the need for new ways (procedures and methods) and new technology to eliminate entry or remove the pollutants from Great Lakes basin waters.

May I be permitted a few remarks in furtherance of yours of July 9, 1966.

In the research effort:

Many, many are collecting data, much of it duplicating that already collected or being collected by others.

Very few are processing data already gathered to make it useable and useful.

Very little is being done to devise new, really effective means of treating waste materials or sewage; e.g., we are still being told to accomplish conventional secondary treatment of waste materials and "to maximize phosphate and nitrate removal."

It appears impossible to find, despite the large fund expenditures already made for research, an answer to a specific problem.

We should direct our attention more toward the mission approach rather than the pure or theoretical research approach in order to derive at least some benefit from the dollars being spent for research.

Possibly, the answer is more in the direction of managing and directing the use of the research dollars available than a further wholesale application of funds.

Your leadership is very much appreciated. Sincerely yours,

LEONARD J. GOODSELL,

ARD J. GOODSELL, Executive Director.

Congratulations, Young and Collins

EXTENSION OF REMARKS

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. QUILLEN. Mr. Speaker, I take this opportunity to extend my heartiest congratulations to Astronauts John W. Young and Michael Collins for their near-perfect space flight last week, and under unanimous consent I place an editorial from the Knoxville, Tenn., News-Sentinel, which lauds the spacemen for this successful venture, in the Record at this point:

STARS FROM OUTER SPACE

Two more stars—named John W. Young and Michael Collins—fell out of space into the Atlantic Ocean. Precisely as planned. And like America's other Astronauts they brought a pocketful of firsts back from the heavens with them.

During their three days in orbit, the Gemini-10 twins set a space altitude record of 476 miles. Also, Collins not only walked in space—he worked, collecting two boxes of "space dust" from which scientists may determine whether living organisms exist in the world.

But perhaps the most dazzling first was their "space bus" ride—docking with Agena-10 rocket, then using the rocket's power system to boost them into higher orbit for a rendezvous with the Agena-8 target vehicle lofted four months ago.

Steering fuel shortage caused some additional planned manauvers to be scratched.
Collins lost a still camera and a third space dust sample box (empty) while walking around outside the capsule. And the Astro-

nauts had a "smog" problem when their oxygen system malfunctioned for a time.

But these relatively minor mishaps only dramatize the near-perfection America's team of space scientists, engineers and Astronauts has achieved. They have succeeded to making the miraculous seem almost commonplace.

For which all of them deserve uncommon thanks and congratulations on the success of yet another in the series of missions preparatory to a manned moon landing by 1969.

A Timely and Articulate View of U.S. Foreign Aid

EXTENSION OF REMARKS

HON. WESTON E. VIVIAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. VIVIAN. Mr. Speaker, a most lucid and eloquent statement of the goals of the U.S. foreign aid program was published earlier this month in an editorial in the Ann Arbor News, a newspaper published in my district of Michigan. The News is a frequent recipient of awards for excellence in journalism. In the last paragraph of the statement, the editor summarized his arguments as follows:

The United States' role in Asia, as well as in Latin America and Africa, should be to encourage those countries with a heart and mind to do so, to establish those political and social condtions and national institutions against which communism and revolution lose all powers of penetration. Thus communism in Asia must be contested on other fronts than the military. If the United States does not work to create strong, stable societies in Asia, one Vietnam may lead to

Mr. Speaker, under unanimous consent, I append the entire text of this thoughtful and provocative editorial at this point in the Congressional Record:
From Our Point of View: U.S. Am Most

PROM OUR POINT OF VIEW: U.S. AID MOST. EFFECTIVE BEFORE HOSTILITIES START

One question rarely raised in connection with the war in Viet Nam is what would happen if the conflict in Asia became a two, three or even four-front war. What would be the U.S. response, for example, to a reopening of hostilities in Korea, an invasion from the north into Thailand, suspected Red guerrilla activity in Malaysis all occurring at about the same time and all while the Viet Nam war drew heavily on U.S. military strength?

Would the Americans again come to the aid of the Koreans a la 1950? Would the U.S. send troops to defend SEATO ally Thalland against the invaders, and if Malaysia asked for American help against aggression would we send men to that country?

These questions are based on two premises: (1) that Red China, which has conquered Tibet, invaded India and threatened the Thais, will continue to encourage "wars of national liberation" and (2) that the loci of confrontation, military or otherwise, between the Communists and the so-called democracies in the years ahead will be in Asia, not in Europe or Latin America or even in Africa.

For reasons of her own, Red China has chosen not to send her invaders into India or Burma or Thailand or Laos concurrently with her involvement in Vist Name. The Chi-

nese certainly have the manpower to make trouble along a number of fronts in Asia, but so far have spared neighboring countries the threat of imminent invasion.

The U.S. has expended blood and treasure in Viet Nam, but the question really is how many Viet Nams could be handle at one time and still keep adequate troop levels at home, in Europe, at Guantanamo and other points around the globe. This country speaks of "containing" communism, but doesn't the containment of communism imply much more than a deployment of our military force against the enemy's, or an array of our troops against "theirs?"

Our goal should be to help people, when they request help, to build the conditions that will be unfavorable to communism or to wars of liberation, i.e., revolution. A war of liberation to succeed must be conducted within the country concerned, by natives of that country. This type of war can be won when conditions prove hospitable, but it is the period before these conditions are established that the U.S. should use to good advantage.

In short, revolution is not exportable as the Communists themselves admit. They may supply aid from outside, but a revolution does not begin and can not succeed without favorable conditions in Latin America and Africa, should be to encourage those countries with a heart and mind to do so to establish those political and social conditions and national institutions against which communism and revolution lose ail powers of penetration.

Thus communism in Asia must be contested on other fronts than the military. If the U.S. does not work to create strong, stable societies in Asia, one Viet Nam may lead to another and a great opportunity will have been muffed.

Crime Cures

EXTENSION OF REMARKS

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. CORMAN. Mr. Speaker, the Los Angeles Times writes of the breadth of the current study by the President's Special Commission on Crime and urges the States to prepare for action on its report.

Due next January, the report is expected to range from the causes of crime to the apprehension, prosecution, and rehabilitation of offenders.

President Johnson has said the Federal Government intends to help—not supplant—State and local governments in law enforcement. He has recommended that each State form a planning committee to make specific proposals for implementing the Commission's findings. Only about half the States have responded, the newspaper reports, along with the suggestion that none can afford to be indifferent toward crime and its consequences.

I place the Times editorial in the RECORD at this point:

[From the Los Angeles (Calif.) Times, July 11, 1966]

CRIME: THE SEARCH FOR CURES

A special Presidential commission is completing the first year of its monumental task of studying every aspect of crime and the administration of justice in the United States.

For the first time, the entire spectrum of crime problems is being subjected to systematic, nationwide scrutiny. The commission's report, due next January, will range from the causes of crime to the apprehension, prosecution and rehabilitation of the criminal.

The magnitude of the problems and lack of effective solutions are obvious in the nation's worsening crime statistics.

Yet as the commission's executive director, James Vorenberg, admitted, "The fact is we do not know much about crime—its causes, its extent, or the effectiveness of our system of control."

Vorenberg was addressing the National Governors' Conference, whose members will play an integral role in translating the commission's eventual recommendations into effective action. For President Johnson has emphasized that the federal government intends to help, not supplant, state and local governments in law enforcement.

About half of the states have responded to the President's request for creation of state planning committees which could make specific recommendations for implementing the findings of the commission. Every governor should take such action on behalf of the people of his state.

The commission has found, Vorenberg said, that for the most part not enough resources of men, money and information have been devoted to our police courts and correction systems—and that the available contributions of science and technology have not been adequately applied.

been adequately applied.

"We do know," he went on, "that the public . . . fails to understand the true complexity of crime and our society's response to it.

"Almost every city in the nation seems to have the problems of over-crowded courts... so busy that they are unable to make careful decisions. The result often is an unfairness to both society and the individual, and the conditions in many of our courts almost certainly promote disrespect for the law."

Vorenberg acknowledged the problems created by recent U.S. Supreme Court decisions, particularly the Miranda ruling, which he said was "a source of disappointment and concern."

The commission will attempt to provide answers to all of these compelling questions. As the result of working with 2,000 police agencies as well as numerous courts and correction agencies, it will present the most advanced approaches as a guideline for cities and states throughout the country.

Even before the report is issued, however, all states must prepare by forming planning committees. No governor can afford to be indifferent to crime and its consequences.

Milwaukee Journal Says \$20 Billion Spending To Fight Water Pollution Is Just a Beginning

EXTENSION OF REMARKS

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, July 27, 1966

Mr. REUSS. Mr. Speaker, the enormousness of the job of cleaning up America's streams and lakes was illustrated strikingly by a recent Milwaukee Journal editorial pointing out that proposed total spending of \$20 billion by Federal, State, and local governments and by industries would be only a beginning.

The Journal also pointed out that more is needed than just increased spending to combat pollution. In addition, there must be much more emphasis on the development of new techniques to prevent and eliminate pollution.

As the Subcommittee on Research and Technical Programs has pointed out, only \$5 million has been spent on research on advanced waste treatment processes while billions have been allocated to research and development in the fields of defense, atomic energy, and space.

I include the Journal editorial hereafter:

[From the Milwaukee Journal, July 18, 1966] Only a Start on Pollution

The senate has passed a bill which calls for spending \$6.2 billion over six years on the staggering job of cleaning up the nation's polluted waterways. Coupled with dollars to be contributed by states, communities and industries, this would add up to an estimated \$20 billion effort. The measure now goes to the house.

goes to the nouse.

This sounds like, and is, an enormous amount of money. But Senator Muskus, Democrat, of Maine, was quite correct when he called it only "a minimum start."

The awesome size of the problem is indicated by three figures, two of direct interest to Wisconsin. It has been estimated that it will require a \$20 billion public-private effort to clean up the Great Lakes. The cost of separating Milwaukee's troublesome combined sanitary-storm sewer system will be at least \$200 million and probably a lot more. About 1,900 American communities have similar combined systems. It would cost up to \$30 billion to separate them and avoid the dumping of untreated wastes into waterways during rainy weather.

It is not simply a question of spending more money against pollution; it is a matter of how best to spend it. Development of new treatment techniques has lagged shockingly in a nation which prides itself on the quality of its advanced research. The house government operations subcommittee noted recently that of \$416 billion in federal money lavished annually on research and development—mostly in defense, space and atomic energy—but \$5 million has been spent on research on advanced waste treatment processes.

Instead of pouring still more money into old and outmoded treatment facilities and methods it would be far more practical to spend more money on advanced treatment research. The senate bill does provide \$125 million over five years to help finance demonstration projects on sewage treatment and

onstration projects on sewage treatment and water purification. It still isn't enough. A panel of the president's science advisory committee caught the urgency of the water crisis last year when it reported: "Pollution touches us all. We are at the same time polluters and sufferers from pollution. Today, we are certain that pollution adversely affects the quality of our lives. In the future, it may affect their duration."

After 20 Hard Years, Our Side Has the Asian Ball

EXTENSION OF REMARKS

HON, DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. FASCELL. Mr. Speaker, in recent months, the subject of U.S. policy toward Asia has received considerable at-

tention in the Congress, within the executive branch of our Government, in our academic circles, in the press, and in other media of communication.

I am happy, indeed, that the Committee on Foreign Affairs, of which I am a member, took an early lead in this debate. Our last year's hearings on the "Sino-Soviet Split," and this year's hearings on "U.S. Policy Toward Asia," in effect opened the doors to the current farranging discussion of our relations with the continent which is the home of more than one-third of the human race.

This subject, the subject of our foreign policy toward Asia, certainly merits our utmost consideration because it affects directly the prospect of peace and freedom throughout the world.

Mr. Speaker, I have been perturbed by the fact that during recent months, excessive pessimism has come to dominate the public airing of these issues. hear daily predictions of dire things to come, of dangers and pitfalls which allegedly lie along the road of our foreign While I believe that we must always keep our eyes open, and provide for the possibility that things may go wrong, I also feel that we ought to strive for a balanced presentation of issues, especially issues as important as this one. This balanced approach, it seems to me, has been missing from much of the discussion of our policy toward Asia.

I was delighted, therefore, to read a report by Mr. Keyes Beech which appeared in the July 12 edition of the Miami Herald. This report, written on the scene in Asia, provides the element which has been missing from many other presentations on this subject: it cites facts and figures about the progress of free Asia, and the important role which U.S. foreign policy has played in making that progress possible.

I would like to add, Mr. Speaker, that Mr. Beech, who authored this report, is acknowledged to be one of the foremost journalistic experts on Asia. He has lived on that continent, and he has covered developments in that part of the world for American newspapers since the end of World War II. I believe, therefore, that his assessment of the stuation in Asia, and of the prospects for the future, warrant our close attention.

In the belief that other Members of Congress would like to read this report, I am placing it in the Congressional Record at this point:

[From the Miami (Fia.) Herald, July 12, 1966] AFTER 20 HARD YEARS—TORRENT OF GOOD

News: Our Side Has the Asian Ball (By Keyes Beech)

CHIENGMAI, THAILAND.—It's almost as though the dam had burst, unleashing a

though the dam had burst, unleashing a flood of good news.

It could be that after more than two decades of toil and trouble Asia has reached

ades of toll and trouble Asia has reached that long-awaited turning point when the non-Communist nations are in the ascendancy and communism is on the decline.

If that is indeed the case, then the United States has more than a little cause for satisfaction.

Patience and perseverance, it seems are american as well as Oriental virtues. The end of the road is not in sight, but with 20 years of fumbling and frustration, more than \$20 billion of economic and military aid and two wars to check Communist age

gression, a semblance of stability seems to be emerging from the collapse of the old order in Asia. In any event, from Korea to Karachi, all along the sprawling periphery of Red China, things are looking up for our side.

What makes the good news all the more noteworthy is that it has occurred with astonishing swiftness in a part of the world where history is written with agonizing slowness.

Within the last eight months a series of seemingly unrelated events has tipped the scales in favor of the United States and its allies. Indonesia's rescue from a Communist takeover has resulted in a whole new power shift in Southeast Asia with the Communists on the outside looking in.

For all its problems, Indonesia is set on an anti-Communist course. Today there is hope where none existed before. The Peking-Jakarta link is in ruins and with it Red China's hope to outflank the American positions in Southeast Asia.

Indonesia has ended its ruinous confrontation with Malaysia. British troops have have been withdrawn from the Borneo border. The Philipppines have ended their unwanted dispute with Malaysia. And Thaland is delighted at having brought everybody together. Pakistan's affair with Red China has cooled with the sacking of its handsome, California-educated foreign minister, Zulfikar Ali Bhutto. A junior-league Krishna Menon, Bhutto engineered his country's dublous alliance with Peking and

Sukarno's Indonesia.

Pakistan can hardly be expected to embrace the United States. But Bhutto's exit at least removed a major irritant to American-Pakistani relations.

The simple fact is that a man like Bhutto has no place in the newly developing scheme of things. There is as President Johnson recently noted, "a new spirit of regional association and regional self-confidence" ris-

ing in Asia.

Another way of saying the same thing is that in this jet age Asia has shrunk. Many Asian nations, some of them for the first time, are at last getting acquainted with one another. Instead of looking always toward Washington, London or Paris, they are discovering a common identity of interest under the American umbrella. One manifestation of this trend is the regrouping of Thailand, the Philippines and Malyasia, made possible as the threat of a Communist Indonesia receded. Even that well-known American baiter, Singapore Prime Minister Lee Kuan Yew, has come around. Not only is Singapore entertaining American Gl's on leave from South Vietnam, but Lee recently observed that it would be a bad thing for the United States to pull out of South Viet Nam prematurely because big nations—Red China for instance—have ways of gobbling up little nations—Singapore for instance.

One of the least noticed but most auspicious events in recent Asian history was a meeting that took place a few weeks ago in Seuol. It brought together nine nations—Japan, Malaysia, Nationalist China, Australia, New Zealand, South Viet Nam, the Philippines, Thailand and South Korea.

The conference produced no ringing declarations. And it resulted only in a loosely formed association called the Asian and Pacific Council.

But the significance of the conference was that nine such disparate nations with widely differing local interests could get together at

all. And for the Republic of Korea, so long regarded as an indigent ward of the United States, it was a major diplomatic triumph. South Korea's emergence as an anti-Communist power in the Far East is nothing short of phenomenal.

Japan's presence put a damper on any resounding anti-Communist declaration. But four of the participating nations already have combat troops in South Viet Nam and a fifth, the Philippines, is in the process of making it a majority.

What makes the rise of non-Communist Asia all the more encouraging is the fact that it has a solid economic base. The economic progress of the nations on Red China's periphery is one of the untold stories of modern Asia, reported only plecemeal if at all. It is both a tribute to free enterprise and an affront to the rigidly controlled economies of Red China and its satellites.

Last year the economic growth rate in South Korea was 8 per cent, in Talwan (Nationalist China) 7 per cent, in Malaysis 5.5 per cent, and in booming Thalland 6 per

With Sukarno and the Communists off its back, there is hope even for Indonesia. And India, under the rather surprising leadership of Prime Minister Mrs. Indira Gandhi, is shifting more and more toward a freer economy, much to the indignation of old-fashioned doctrinaire Socialist supporters of her late father. Among the non-Communist nations only Burma, possibly the most mismanaged nation in Asia next to Indonesia, and Cambedia cling to the Socialist path

and Cambodia cling to the Socialist path.

If the future is bright for non-Communists it is bleak for the Communists. Since th Indonesian Communist Party hit the skids, communism has undeniably lost its momentum in Asis. The decline of communism has seen a parallel decline the non-Communist left. There was a time 20 years ago when Asian nationalism rested much of its hope on the non-Communist left or Asian socialism. That is no longer true. A new and hard-headed pragmatism has taken command. The fact is that the Asian left is old-fashioned and out of date. It failed to change with the times.

With non-Communist Asia gaining mo-

With non-Communist Asia gaining momentum it has become fashionable in some circles to suggest that the best thing for the United States to do is nothing; that left to their own devices Asian nations will find Asian solutions to Asian problems.

It's an attractive prospect and some day it may come true, but the past and present demonstrate that nothing could be farther from the truth.

Only behind the shield of American power has nonCommunist Asia been able to assert itself. Without the United States South Korea would be Communist today. So would South Viet Nam. It is sometimes argued that Indonesia took care of the Communists in its own way without outside help. It's just as well to let that illusion stay undestroyed. But it is by no means to be taken for granted that anti-Communist forces in Indonesia were able to bring off their coup without assistance from the United States.

And without the resolute United States stand in South Viet Nam there would have been little incentive for the anti-Communists to take the gamble that they did.

Nowhere in the world is power—American power in this case—more appreciated than in Asia. And no nation has greater contempt for weaklings than Red China.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorised bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorise the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Concressional Recons, the person ordering the same paying the cost thereo (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Recond.

Greenspan in the Village of Newark, N.Y.

EXTENSION OF REMARKS

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, July 28, 1966

Mr. JAVITS. Mr. President, in a recent statement on the floor of the Senate concerning agriculture appropriations, I pointed up the vast potential of the cropland adjustment program which established a national policy of paying farmers to leave some of their land idle to avoid overproduction of certain staple crops. I noted at that time that some of this land might well be shifted from agricultural to recreational use.

The Department of Agriculture has initiated a new program known as Greenspan, and I am pleased to report that the first grant was made to the village of Newark in New York State. I hope that this is only the beginning of this very imaginative program and that more effort will be made to transform what is now idle farmland into productive recreational facilities.

I ask unanimous consent to include with my remarks a copy of a recent editorial which appeared in the Washington Post on this program.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GREENSPAN

A new method of making surplus land contribute to the amenities of life has been inaugurated by the Department of Agriculture. The program known as "Greenspan" is an outgrowth of the long-established national policy of paying farmers to leave some of their land idle to avoid overproduction of staple crops. To simplify the program and facilitate conservation practices, the department extended its contracts to as long as 5 to 10 years. Then it became apparent that some of this land might well be permanently shifted from agricultural to recreational use without any additional expense. That is the basic idea behind Greenspan.

Secretary Preeman recently conveyed the first Greenspan acres to the village of Newark in the State of New York. Newark found that some of the adjacent surplus land would be useful in its recreational and open-space program. So it is purchasing the land with funds provided by the Department of Agriculture. According to Mr. Preeman, "The Federal payment is figured at the same rate as if the farmer had retained ownership of the land and put it into CAP (Crop Adjustment Program) for a ten-year period."

Much of the country's surplus agricultural land has little or no value for recreational purposes. But where land taken out of cultivation at Federal expense can be advantageously used in a local program for the extension of parks, playgrounds, open space or wildlife preserves, it certainly makes sense to help the community buy it instead of merely paying the farmer to leave it idle.

Areas of this kind will be increasingly valuable to local communities as the competition for space is intensified and the problems of pollution are multiplied. If another 100 million people are added to our population in the next generation, as is often forecast, enormous efforts will be essential to protect our environment from stiffing artificiality. Greenspan is only a small venture in this direction, but it can be an important one. It is heartening to learn that more than 30 similar projects are now in the planning stage.

Captive Nations Week Speech by Maj. Gen. John S. Anderson

EXTENSION OF REMARKS

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1966

Mr. ROUSH. Mr. Speaker, on Saturday, July 16, I was privileged to attend a banquet sponsored by the Indiana Captive Nations Committee. It was a stimulating experience. The scheduled principal speaker for the occasion was Maj. Gen. John S. Anderson, adjutant general for the State of Indiana. Illness prevented General Anderson from making a personal appearance; however, his speech was delivered by Capt. William Aylward.

Mr. Speaker, I commend General Anderson's speech to our colleagues:

SPEECH TO CAPTIVE NATION'S COMMITTEE, JULY 16, 1966

It is a privilege for me to be with you tonight and address such a distinguished group of people dedicated to the worthy and significant objectives, which the Captive Natius organization represents.

tions organisation represents.

Since the majority of you here tonight have lived under communist domination and were fortunate enough to escape it, I would like to speak to you briefly about the immediate threat that communism poses to our own American heritage, and of the obligation we have all inherited by this threat. For blessings carry with them responsibilities, and if we are to assure continued sharing of the blessings for ourselves and our children, we can't shirk these responsibilities.

The threat we face today is total, sinister, unyielding. The enemy seeks to desecrate our most cherished beliefs, to destroy our power, to bury our heritage. They have said so, and there is no rational reason to disbelieve their words or to ignore their acts.

We should remind ourselves that the communist mind is a curious combination of ideological rigidity, tactical suppleness and singleness of purpose.

In the past half century, we have witnessed, and many of you have experienced, an imaginative display of aggressive communist tactics. The goal has always been the same—political domination. But the path to that goal has often changed direction. In our own lifetime communist tactics have ranged through a broad and brutal spectrum;

everything from outright occupation by the Red Army in Eastern Europe, through conventional aggression in Korea, to the guerrilla operations in Greece, Malaya, the Philippines and Vietnam.

Communist tactics have sometime fomented revolutions, and at other times have taken advantage of those initiated by others.

* * * this cocurred in the Dominican Republic. Communist tactics have learned to be at home with legal means as well as with illegal means; with sophisticated societies as well as with primitive ones; with rightist dictators as well as with leftist demagogues. And we must never underestimate their cunning ability to adapt.

The communists respect only determination to resist and strength—the type of strength that is being applied in Vietnam. This is the type of strength and determination that George Washington prescribed in his message to Congress on 3 December 1793. He said:

"There is a rank due to the United States among all nations, which will be withheld, if not absolutely lost, by the reputation of weakness—if we desire to avoid insuit, we must be ready to repel it. If we desire to secure peace, it must be known that we are at all times ready for war."

Part of our heritage, which we are defending today in Vietnam, lies in the roots of our American Revolution, and in the galvanism of its noble ideas, which form the hope that freedom's light ultimately will shine over the forces of darkness throughout the world.

Our heritage is based on the belief that all men are created equal, and that true political power does not grow out of the barrel of a gun, but only out of the people themselves for that is precisely where political power is within each individual human being.

The American Revolution is a still continuing, sometimes faitering, but ever growing revolution, which aims at achieving the basic hopes of man—freedom with dignity, equality in opportunity, as well as equality under law, and the overall goal of betterment of life for all.

Today the struggle in South Vietnam is not our only area of concern. At the present time it is only the most prevalent. The United States as the strongest nation of the free world can't escape the burden, and the obligation, of keeping the peace. This role has become ours, . . though certainly we did not seek it, nor we can shirk it. There is scarcely an area outside the bamboo and iron curtains in which our forces are not either directly fulfilling their roles of maintaining the peace, or in assisting our friends and allies to do so. The most obvious examples are, of course, Western Europe, Berlin, Korea, Taiwan, and as members of the Inter-American Peace Force in the Dominican Republic.

The aggressive militant threat of communist power in Asia continues, and that is our basic problem. The primary military threat is, of course, Communist China, and their number one asset is their manpower—During the past year, China's threat has focused increasingly on Vietnam. The Chinese Communists are obviously testing the effectiveness of so-called "wars of national liberation" as an instrument for the achievement of Communist domination over other

The war in Southeast Asia will provide a critical test of the future success or failure of

that concept. They must already be having some second thoughts about the ultimate success of these tactics. They probably now realise that they can't force the United States to abandon the free countries of the Far East.

Our military power is by no means the only instrument used in the struggle for peace. Diplomacy, economic policy, foreign economic and military assistance, and military alliances contribute to our security. Military preparedness, however, provides the safeguard which permits these other means the freedom of action to serve our national interests.

The Armed Forces of the United States are not policy making organizations, but merely instruments of policy. But our forces must always be prepared to carry out the policy of the United States, and the tacks set by the

American people.

As we look ahead to the tasks that the future probably holds for our armed forces, we do so with some measure of confidence. We know that America has the finest, bestrained and equipped military forces we have ever maintained in peacetime. Although we realize that the future may not be an entirely peaceful one, we are prepared to respond to the requirements that may be demanded of us in building a community of stable nations, where political change can occur peacefully, and where nations have the right to determine their own destiny.

occur peacerumy, and ware nations have the right to determine their own destiny.

World affairs in the second half of the twentieth century revolve around one key issue, the struggle between democracy and communism. There are many sources of conflict between, and within, nations, but the outcome of the struggle between democracy and communism wil largely determine all other issues that the world faces today.

all other issues that the world faces today. Most of us think of democracy as a government by the people. Certainly it is this, but it is also a great deal more. In its broadest meaning, democracy applies not only to government, but to all relations between men. Above all, democracy is based on respect for the dignity of man. Where such respect for recognized and practiced, the standards of conduct for both the individual and society are mutual consent rather than force, and truthfulness rather than falsehood.

In the face of the serious challenge posed by communism, democracy cannot survive merely and solely because it is just, because it is right, because it is humane. It can and will survive only because we have the determination to make it survive, because we are willing to sacrifice so that it can flourish, because we are dedicated to its ideals, and because our Armad Forces are the shield through which the enemy cannot penetrate to stab at the vitals of our democratic way of life.

Compare the role of the military under communism to our own. The role assigned to the military under communism and that of the military under democratic government reflect accurately the wide chasm that separates the two ideologies in philosophy, in principle, in objective and in method. The military in a communist society is an aggressive body. If it were etherwise, the Red forces would be a contradiction of the Red philosophy of the world domination. Within the Iron Curtain, the armed forces are not merely servants of the State, they are servants of the communist party which controls the state and all of its organs and institutions. Hence, a Communist Army is a political army, since it is the instrument used to enforce the decisions which express the will of the party and not the freely determined will of the people.

Outside the Iron Curtain the picture is quite different. The armed forces of the democracies are used for defensive purposes, for the protection of freedom, sovereignty, and independence. This is a reflection of the

character of the democratic governments which seek no territorial control, which covet no neighbor's land.

In the democracies the armed forces are servants of the entire country not of a single party. In the United States, the President, regardless of his political affiliation, serves as Commander-in-Chief of the armed forces; when a Democratic administration occupies the White House, the armed forces are not Democratic, and under a Republican President, they are not Republican. They are of the country as a whole and responsive to orders from the Government as an expression of the will of the people as a whole.

Any military force, if it is to be effective, must be based on a system of discipline. But in a democracy, discipline does not mean tyranny. In the United States Armed Forces, the system of discipline is shaped within a basic framework of democratic concepts and is designed to safeguard America's democratic institutions from their enemies.

The choice of democracy over communism has been dramatically shown by the peoples of the world who have been forced to endure the communist doctrine. Between 1950 and 1961, when the border between East and West Berlin was sealed, nearly four million East Germans fied from communist-con-trolled East Germany to West Germany. This was about one-sixth of the entire population—a vivid illustration of how eagerly people escape from communist domination, if they have a chance to do so. Other examples include the 171,000 North Korean and Chinese prisoners of war, who, after the Korean Conflict, chose not to return to their communist homelands. During the Hungarian Revolution in 1956, 200,000 Hungarians fled to Austria; in 1959 when Tibet was overrun by Red China, 40,000 Tibetans fled to India. When Vietnam was divided by the 17th Parallel in 1954, establishing Communist North Vietnam and the Free Republic of South Vietnam, many thousands of refugees who chose not to be dominated by communism, fled to the south.

Statistics show that world communism, plagued by internal dissension and political reversals on the international front, has suffered heavy membership losses.

As a result of setbacks in Indonesia and elsewhere, a recently completed survey estimated that as of January 1966, Communist Party membership in non-communist countries was nearly two-million less than at the beginning of 1965—a decline from 4,500,000 to 2,600,000 active participants in the one-year period.

The membership losses by party organizations operating in non-communist countries were so extensive—42 percent—that they more than made up for additions to party rolls in Communist-ruled states and brought about a net loss of some 600,000 members for the entire communist movement.

Total membership in all of the world's Communist parties is now estimated to be 43.9 millions, all but a relative handful (less than six percent) affiliated with the ruling organizations of the 14 states where the Communists are in power.

However, there has never yet been a single instance where people have fled in large numbers from a non-communist to a communist country.

Throughout history, human liberty has survived not because it is inherently good, but because men and women were willing to make great sacrifices for its preservation. As the greatest of human goods, liberty has the highest price. This was clearly recognized by the signers of the Declaration of Independence, who, at the conclusion of the document, vowed to defend its ideals with their lives, fortunes and sacred honor. Nothing less will do today.

Thus, the struggle between the free world and communist tyranny will be determined by the side that is willing to make the greater effort and the greater sacrifice.

The Captive Nations Committee and its goals point up, with glowing significance, the longing desire of people to be free from communist enslavement. Those of you who have lived under communist rule know probably better than anyone the blessings of a democratic way of life, the right of choice, freedom of worship, freedom of speech and those rights and privileges we as a free nation, hold most dear. Those rights which we are prepared to defend at all cost.

Our goal is the achievement of world peace and the right for peoples of all lands to have the blessing of freedom. We can ill-afford to take our cherished freedom for granted. For as long as there are those who would sever the lifeline of liberty, we must be, and are, constantly prepared to defend it. And we stand ready to defend the rights of other nations against communist domination.

The principal pride in the uniform of the United States Army is not the sergeants stripes, the captains bars, or even the generals stars, but the little pieces of metal that say U.S.

In closing I would like to quote a statement made by the President of the United States, which I feel is appropriate to this occasion:

"Our own freedom and growth have never been the final goal of the American dream. We were meant to be an oasis of liberty and abundance in a worldwide desert of disappointed dreams. Our nation was created to help strike away the chains of ignorance and misery and tyranny wherever they keep man less than God means him to be."

Ladies and gentlemen, it is time for all of us on this small, whiring planet to insure that this forecast will prevail.

Thank you.

The Whitney Museum in the Heart of Manhattan

SPEECH

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. KUPFERMAN. Mr. Speaker, a new edifice has risen in the heart of my district.

It is the new Whitney Museum of American Art at the corner of Madison Avenue and 75th Street.

It is designed by Marcel Breuer, who has just been chosen to design the new Franklin D. Roosevelt Memorial in Washington, D.C., by the F.D.R. Memorial Commission of which I am a member.

The old Whitney Museum was located at 22 West 54th Street and has been sold to the Museum of Modern Art.

On September 28, the new Whitney Museum of American Art will open to join the ranks of the other worldrenowned institutions of culture.

The New York Times of Saturday, July 23, forecast the advent in an interesting article by Sanka Knox, which follows: MADISON AVENUE NOW HAS A CASTLE-THE WHITNEY MUSEUM'S NEW HOME STIRS

(By Sanka Knox)

A seven-story inverted step pyramid on Madison Avenue, a fortress of brooding granite that the Whitney Museum of American Art has built as its new home, is in the last stages of being readied for its opening on Sept. 28.

Inside the corner building at 75th Street, the reaches of wall and floor are still vacant. Paintings and sculpture are still in storage. Workmen are polishing stone and completing intricate electrical installations; curators are plotting the staging of the opening show.

The barely finished new home of American art has already created a stir on and off the

The dark, strangely attractive structure designed by Marcel Breuer has been winning an unusual amount of neck-craning from

To the suggestible, Mr. Breuer's dark con-

ribution to the area's conventional, fash-ionable environs is irresistibly romantic. The massively jutting overhangs remind some of the famous Egyptian tomb at Baqqara—but upside down. To others, the building seems a moated castle, with a bridge and, high above on the uppermost overhang, a "mystery" window.

MOAT IS NOT FOR WATER

The "moat" is a sunken sculpture court.
Mr. Breuer's oddly and somewhat playfully
contrived windows—the large one in front
and a sprinkling on the 75th Street side will probably vie with the exhibits as sculptural attractions.

The Whitney now has three times the exhibition space it had in its previous quarters at 22 West 54th Street, which it sold to the Museum of Modern Art for \$2-million.

The opening show of 385 works will occupy the entire museum in a comprehensive survey of American art.

"We've had cooperation of an unusual kind," Lloyd Goodrich, the director, said. "Institutions and private owners who don't usually lend are letting us have some marvelous examples—Winslow Homer, Church, Ryder, Eakins and others."

RETURN TO PRE-1900 ART

Museums include the Metropolitan, Brook-lyn, the New York Historical Society. Some-thing over half the show will be 20th-century art, the majority of it pieces owned by the Whitney.
The rest will be works from before 1900,

a period of native art that the Whitney abandoned in 1949. Now, the museum wants to retrieve its lost ground.

"We will again build up our historical col-lection," Mr. Goodrich said. "But this will have to be by gift and bequest, for the most

Like the flame-treated granite blocks of the exterior, the materials used inside the museum give an impression of strength and endurance. The floors are of split slate, the walls of rough texture. Stairs are of stone or terrazzo, banisters of teakwood.

Some of the walls are of hand-finished cement and stone conglomerate that defies marks. The stretches of stone in the lobby are lighted by 370 ceiling lamps set in fixtures like inverted mushroom caps.

All kinds of new activities are being planned. The museum now has an auditorium and, adjacent to it, a large gallery with a parquet floor set into the slate surround. "For dancing," said Mr. Goodrich,

Off the sculpture garden will be a restaurant and cafeteria. Among other innovations in the Whitney's facilities is a restoration laboratory.

All-American Quarterback

EXTENSION OF REMARKS

HON. WILLIAM R. ANDERSON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1966

Mr. ANDERSON of Tennessee. Mr. Speaker, I share the pride of the people of Tennessee in a native son. Marion Sadler. Mr. Sadler was born in Clarksville. in my congressional district, and through brilliance and hard work has risen from a \$90-a-month ticket agent to president of one of the Nation's largest airlines, American. The following excellent article about Mr. Sadler's exceptional career appears in the July 1966 issue of

ALL-AMERICAN QUARTERBACK

They are a rugged lot, this second genera-tion of airline executives.

If you were to turn a corner and suddenly collide with Marion Sadler of American Airlines, chances are he'd knock you back for a two-yard loss. Bull-necked and barrel-chested, Sadler at 55 is built like a Chicago Bear alumnus, and even today his craggy fea-tures would not seem out of place behind a line-backer's face guard.

But Sadler functions more as a quarterback at American Airlines where, as president and chief operations officer, he calls the op-erational signals. C. R. Smith, a pioneer in the air transport industry, is chairman and chief executive at American and still calls the plays. But the betting goes that in a year or two Smith will be retiring and Sadler will take over the top management post.

This sort of succession seems to be standard operating procedure throughout the in-dustry these days. The old fly-boys, the Lin-dys and the Rickenbackers who swash-buck-led around the country in rickety biplanes and monomotored monoplanes, already have left the stage. And now their contemporaries slowly but surely are hanging up their hel-mets and goggles, too.

At Eastern, Floyd Hall, 50, has been moved At Eastern, Floyd Hair, by, has been more into Rickenbacker's seat. At Delta, Charlie Dolson is ready to take over from "Big C. E." Woolman, who first learned to fly in an OX5 Jenny. At United, George Keck, 54, stands ready behind crusty old Bill Patterson. Ernest Breech, 69, is retiring from TWA in favor of Charlie Tillinghast, 55, (with Howard Hughes watching somewhere in the wings). L. B. Maytag, who now runs Na-tional, is 40, and Harding Lawrence, Braniff boss, in 45.

The new generation may not have the ame pioneer toughness as the men who got into flying as an adventure in the Twenties and gradually built it into a business in the Thirties, but the Tillinghasts, the Halls, the Kecks and the Sadlers are equally tough in their own way.

While the pioneers competed chiefly with the law of gravity, the second generation compete with each other—and Uncle Sum often joins in to make it a free-for-all. There is no more dynamic industry than air transport on or off the face of the earth. Since 1950, the atrilines have been growing almost twice as fast as any other industry (almost 15 per cent annually to electronics' 8 per cent) and more than four times as fast as the gross national product.

Still, aviation experts say that the fastest growth of air transport yet may lie shead.

Says Sadler: "Yes, suh. The opportunities

certainly are there—but so are the problems."

And he shrugs his massive shoulders.

Despite his bruiser's physique. Sadler has never played serious football—not even at Duke where, the legend has it, everybody but Doris tries out for the team. At Duke, Sadler took an A.B. and an M.A. in English, and after graduating in 1932, began teaching the stuff to high school kids in Bristol,

ing the stur to high school Rids in Misson, Tennessee, not far from Clarkesville, where he was born. Sadler speaks his college major accurately, colorfully and with a force that is partly concealed under a magnolia accent. He also listens well, and learns fast. For exampe, it did not take him very long at Bristol High to learn that if everyone were paid a high school teacher's salary, income tax consuit-ants would never have to worry about being

overweight.

But jobs during the Great Depression were not to be given up lightly. Sadier stuck it out at Bristol High until 1941, when he spotted an American Airlines ad in the local paper. American, awakening to its need for people who could read and write as well as people who could read and write as well as people who could lockle swashes, had decided to offer college graduates 490 a month to work as ticket agents. Since the salary offered by American represented a 12% increase over what Bristol High was offering. crease over what Bristol High was offering. Sadler jumped at the chance. Besides, like every other red-blooded youth who grew up in the Twenties idolizing the Spirit of St. Louis, a career in aviation had been Sadler's daily daydream.

Pearl Harbor helped many a young man achieve this ambition the hard way. Sadler achieve this ambition the hard way. Sadier spent the war in the Air Transport Command, emerging as a staff sergeant. Deciding to cash in his G.I. bill for a Ph. D., Sadier matriculated in 1946 at the University of North Carolina. But when he discovered that the Ph. D. who was teaching him was only pulling down \$6,000 a year, Sadier realized that his early fears at Bristol about the financial unrewards of academic life needed to the confirmation. no further confirmation.

American Airlines was glad to get him back at \$175 a month as a ticket agent. By 1951, Sadler had moved up to district man-ager in the Buffalo office and it was in this capacity that he made his breakthrough into American's upper management. The vehicle: a special manual for American's sales agenta. Although the thing was child's play for an English M.A., it was regarded as a brilliant tour de force by an industry long on trans-portation skills but short on literary talent.

ortation skills but short on literary falent.

C. R. Smith, who had his eye out for a successor, awarded Sadler American's highest tribute—the Distinguished Service Award for Merit. By 1955, the Tennessean was director of all passenger sales. In 1957, he became vice precident in charge of customer service, and in 1959 he moved up to vice precident and seneral meneral. president and general manager.

Sadler moved into the president's office in January, 1964, only to discover that although he had become in title No. 2 man, staff offihe had become in title No. 2 man, staff officials handling finance, management development, planning and economic research were still reporting to Bill Hogan, executive vice president and chairman of the finance committee. The picture seemed to be this: Smith was No. 1, Sadler was No. 2 in title but No. 3 in function, and Hogan was No. 3 in title but ranked Sadler in authority and

Sadler resigned—just like that.

Sadler does not comment on his reasons for giving up what seemed to be—at least potentially—one of the most exciting and challenging jobs in the nation. But executives in other airlines, who keep as closely tuned to American's affairs as Gimbel's does to Macy's, say that a personality conflict or blowup between Hogan and Sadler was not

interwhich

the reason for Sadler's abrupt departure from American early in 1964. Hogan, a financial magician who raised the capital to support American's development in the airline's highly uncertain form: tive years in the Fortles and Fiftles, was a

widely respected executive at American.

Among his strong supporters was Sadler.

Hogan had reciprocated this respect by supporting Sadler's move up through the ranks—although some industry observers doubt that Hogan expected Sadler to move up quite so fast or quite so far.

WHONG DEDUCTION

"Naturally, Hogan would have liked the presidency," an executive at another major trunk said a few days age, "but people who think Hogan tried to sabotage Sadler after he got the job simply are wrong. The trouble was that C. R. had not been definite enough in allocating authority and responsibility when Marion became president. the staff continued to report to Hogan as they had been doing before Marion moved

Apparently, C. R. hastily got his errant duck s in a row, for in two weeks Sadler was back as No. 2.

A day with Sadler can be exhausting, for a day with Sadler is usually a day on the move. He can make it from his modest office in American's Third Avenue headquarters to American's communications center in a nearby suite in less than ten seconds, and when he's in New York he tries to crack the record several times a day. In the communications center, visibility is unlimited with respect to the operational status of American's 157 passenger planes and 14 freighters. Illuminated graphs give the whereabouts and whenabouts of all arrivals and depar-Short-wave radio can put Sadler immediately in touch with planes in the air as well as those on the ground.

Sadler spends many days away from New York checking on American's performance in the 50 U.S. cities the line serves. A basically cheerful guy, Sadler can first-name at least a thousand of the 26,160 men and women on the carrier's staff. But he also can ream when he finds service techniques are not optimum. To Sadler, the quality of Ameri-can's service always will be the first, second and third most important yardsticks for uring how effectively American is meeting the strenuous competition it gets from the other major domestic trunks (United

As American's roving advocate, Sadler also spends considerable time in Washington romancing the Civil Aeronautics Board and the Federal Aviation Agency.

Have a drink or two with other airline spokesmen and sooner or later they'll be grip-ing about "Johnson's idiotic appointments of people to the CAB who don't know a damn thing about our problems."

But all Sadler will say is, "It's up to us to help Washington see our problems and come up with solutions all of us can live with."

filnce the intrepid gallants who pioneered the airlines were intense individualists by nature, there has never been any concerted effort on the part of the industry to push its case in Washington. Sadler and the other second-generation kingpins only now seem to be realizing the wisdom of the old busiabout "In union there is strength." Professional lobbyists in the nation's capital evaluate air transport's lobbying skills as down near the bottom of the list. The pros say one reason why some aviation executives are so highly critical of Johnson and the CAB is that the CAB has been confused about what the air transport industry really wants—the airlines seldem can get together long enough to speak with one voice.

A tan-minute visit to any American Air-lines executive office will make clear what American wants—a bigger share of the mar-ket. In the past six years or so, American

has lost ground: from about 30% of the market to about 20%. A big chunk of the loss was inevitable. Regional carriers bought jets and increased their capacity. But some of the loss reflects sharper competition from United, TWA, and Eastern. Some industry experts say that while Sadler seems to be as firmly entrenched at American as his counterparts are at their airlines, if American doesn't start recapturing some of its lost business. Sadler's seat in the saddle may prove to be less permanent than it now looks.

One special problem of American that will be bugging its president is the airline's route limitations. American is landlocked. Except for short side trips to Canada and Mexico, American is authorized to fly only East-West over the continental United States. But the big advantage of jets is that they can carry big loads long distances, which means that the lines that can go farthest with the most are going to make more money than the short-haulers-all other things being equal. (And when are they?)

With the far-ranging jumbo jets and SST's on the way, American has been pushing hard for an overseas certificate. Sadler doesn't worry about filling the oncoming bigger carwith a profitable payload. He feels the tremendous boom in passenger traffic is bound to continue over the next decade as the population swells, as discretionary ins rise, and as John Doe, nature's most curious animal, takes off to see for himself how Arthur Doe lives on the other side of the mountains, or how Pierre and Antonio

and Hans handle the action across the water. American's operating chief says, "Although passenger traffic is certain to grow by leans and bounds during the next decade, freight haulage will grow even faster."

Present growth curves bear him out. In 1965, air cargo for the whole industry was twice as much as in 1958 and was 1/3 higher than in 1964. Once again, the jet was the big catalyst. In 1963, American (historically an industry leader in air freight) broke new ground when it put in operation four Boeing 707-323C all-cargo jets. Prior to this, all jet craft had served a dual passenger-freight

The delivery of the cargo jets coincided with American's 22nd anniversary in the air freight business. Sadler's outfit is easily the biggest domestic carrier of freight (mail excluded), and by the looks of things, American is going to be hard to catch in the future.

In May, for example, American continued widen its lead over its two biggest domestic rivals-United and TWA. Excluding mail, American haulage of air cargo in May 1966 was 52.3% higher than May 1965. United was up 34.7%, and TWA 32%

American's revenue from freight still is only 10% of its passenger take, but as C. R. Smith predicted recently, freight traffic has been growing so fast that it probably will overtake passenger carriage in eight or ten years.

In terms of overall growth opportunities, the horizons for freight are limitless. Although the U.S. air transport industry probably will exceed 2.5 billion freight-ton miles (a ton of freight carried a mile equals one freight-ton mile) this year, this total still won't exceed 2% of all the freight-ton miles produced by all U.S. transportation sectors.

AIR CARGO BITES

Sadler and his colleagues at American are convinced, however, that in the next decade, air cargo will be taking formidable bites out of the total transportation pie. If American's present plans materialize, American's of international freight haulage is going to skyrocket. (Pan American is now the worldwide leader.)

American has put in a bid for a certificate that would, if granted by the CAB, allow the line to break its present shackles and fly across the Pacific. The operative words here are "if granted." Just about every other major carrier in the nation also has applied and it's fairly certain that only four or five of the 20-odd lines will get the green light from the CAB for Pacific service.

Neither Sadler nor anyone else at American will discuss their chances of being awarded a highly-prized Pacific certificate. Says Sadier, "Only the CAB will decide, and the decision probably won't be known for some months.

Industry observers think American's chances are as good as anyone else's—and some say a bit better in view of two recent developments. TWA, which now flys to Europe, was given a certificate at the end of May to extend its service, via Bangkok, to Hong Kong. (United already serves Hawaii.)

Then, during the first week of June, a CAB examiner recommended that the last big unassigned air route over the continental U.S.—from the Pacific Northwest to the Southwest—be assigned to Braniff, Continental and Western.

American had been one of 13 carriers with a bid in for this route. When American was passed up, one Washington observer said, 'Sadler's chances for getting the run to Tokyo now look considerably better. Compared to the big slice of cake represented in a route to Japan and the Far East, the Northwest-Pacific route was only crumbs. If American had gotten the crumbs, it would have meant not getting the big slice. Now, American could be a winner."

Defense Under Scrutiny

EXTENSION OF REMARKS OF

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Thursday, July 28, 1966

Mr. HALL. Mr. Speaker, herewith is an article by reputable Reporter-Editor Allen M. Smythe, of the Boston Globe of July 24, 1966, entitled "Defense Under Scrutiny." It involves the careful review and oversight of the House Committees on Armed Services and Appropriations of our defense spending and commitments. I would offer two additional observations:

First, insofar as the public is concerned, supplemental appropriations move back to prior fiscal year budgets, moneys which are then seldom accounted for or refigured as deficits.

Second, there is an additional alternate to the Commander in Chief's call upon Congress to hold appropriations to his budget requests or face a tax rise; namely, stop Federal-domestic spending on social experiments.

Overall, the editorial is well worth pondering by our colleagues and I commend it to them:

DEFENSE UNDER SCRUTINY (By Allen M. Smythe)

On July 1, the Department of Defense had \$42 billion in unexpended funds on hand. Much of it is already obligated. An appropriation bill now in the Senate will probably total more than \$59 billion and be passed this August. It probably will include funds for Viet Nam that will be exhausted this Wineven if the war would be concluded soon—a very unlikely prospect.

Supplemental appropriations of about \$1 billion must be voted next Winter to provide for the third recent military pay raise 6

bill just signed by the President and for \$11 to \$12 billion to cover the increasing costs of the Viet Nam war.

This adds up to more than \$112 billion for defense which all but \$# billion the Pentagon estimates will be spent or obligated by July

During this fiscal year more than \$20 bil-lion will be spent for military personnel. Nearly \$2 billion will go to the increasing pensions for the retired military. More than \$17 billion will be spent for military hard-ware and \$7 billion for research and develop-

Much of these funds go for the sharply increasing cost of the nation's annual mili-tary expenses. The 50 percent increase over several years ago is due to the Viet Nam War.

President Johnson has just called upon Congress to hold appropriations to his budget requests or face a tax rise. The alternate would be a heavy deficit with Its impact on inflation.

Next to the Viet Nam War, congressional mail is running highest on the increasing cost of consumer goods. These protests have a persuasive political interest to all House members and the one-third of the Senate up for re-election this Fall.

Heretofore defense spending was sacro-sanct. An investigating group under Rep. PORTER HARDY (D.-Vs.), of the House Armed Services Committee has just opened hearings on duplication and wasteful defense spend-

on duplication and wascell detense spening. Special attention is being given to the Pentagon's highly publicized claims of savings on contractual policies.

Rep. George M. Mahon (D.-Texas), chairman of both the House Appropriation Committee and Joint Committee to reduce Federal spending, has called upon Sec. of Defense Robert S. McMamara to save on "less glam-orous items that do not have page one

He is particularly anxious that the heavy overhead costs of defense contractors now allowed by the Pentagon be cut drastically.

Open Letter From Chicago

EXTENSION OF REMARKS

HON. GEORGE W. ANDREWS OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 28, 1966

Mr. GEORGE W. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Opelika Daily News, July 26, 1966] OPEN LETTER FROM CHICAGO

Paul Harvey, who writes a nationally syndicated newspaper column appearing in many newspapers three times a week, had a column last week entitled "Open Letter From Chicago."

The column pinpointed some thoughts which have been in the minds of many from this section of the nation but words we seldom see in the columns of nationally syndicated columnists. We wonder how many of his newspaper clients in other areas of the nation used this one? Here is what Harvey had to say in his July 19 "Paul Harvey News:

"Dear Dixie:

"Oan you possibly find it in your heart to accept our sincere apology? When there was race rioting in Little Rock, Arkansas, we were convinced that the cause was callousness. Our public officials and our press in Chicago insisted that the only two rea-sons for Negro restiveness were your segre-gated schools and your stubborn governor. We in Chicago, with integrated schools and

a very liberal governor are now writhing in the agony of race rioting. And as we seek to set our house in order, we hope your head-lines will be kinder to us than ours were

"And when a Mississippt Negro boy was found drowned, we in Chicago called this the "inevitable result of a white-supremacy tradition." Now a Negro girl, 14 and pregnant, has been shot to death on the front porch of her own Home in Chicago and we are confused and ashamed and frightened.

'What are we doing wrong that has made eight square miles of our city a battleground? Help us, if you can find it in your own hurt heart to help.

"And Alabama, when your state police were photographed subduing rioters with night sticks, Chicago's bold-face front pages condemned you for "indefensible brutality." Now Illinois State Police have resorted to armored cars and cracking skulls and shoot-

ing to kill * * *
"Your governor has alleged that 'Communists are fomenting this strife.' We scoffed.

"Now 13 Negroes on Chicago's West Side have been charged with plotting treason. We are sweeping admittedly Communist literature from our littered streets.

Forgive us for not knowing what we were talking about.

"Georgia: When you were photographed in the act of turning back crowds of marching children—we could not control ourselves. The very idea, the Chicago press editorialized, 'that youngsters should be considered a menace sufficient to justify the use of tear

"Now, in our own asphalt jungle, we have seen Negro youngsters of 9, 10, 11—advance on police with drawn guns or broken bot-ties—screaming, "Kill Whitey!"

"And we used gas and clubs and dogs and

and we used gas and clubs and dogs and guns and, God forgive us, what else could we do! Can you, Georgia, forgive us, too? "We tried the patience we had preached. Honest, we did. We tried so desperately that seven policemen were shot the other night, two of them through the back. So, in the end, we resorted to methods more brutal than yours. But, don't you see, we had to! "And our mayor listened to the Negroes'

leaders, as he so often admonished you to do. He had listened, he had made com-promises and concessions and he had offered sacrificial police officials and school officials but they kept coming from so many directions with so many demands—and then—demanding to keep the fire hydrants gushing for their playing children during the city's most critical drought-

"Dear Dixie, perhaps we have not yet learned fully to appreciate what you have been trying to do to effect evolution without revolution—but for whatever belated comfort it may be, from our glass house we will not be throwing any more stones at you * * * * * * for a while."

Conditions for Peace

EXTENSION OF REMARKS OF

HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES Monday, July 25, 1966

Mr. RONCALIO. Mr. Speaker, the Wyoming Eagle reflects the widespread feeling that in his recent speech on Asian policy President Johnson spelled out in terms that can be understood by the Communists-and the rest of the worldthis country's position and aims.

This is so, the newspaper declares editorially, regardless of doubt that the thinking of Red China's current leaders is likely to change.

The Eagle recounts the President's appeals for a peace of reconciliation in Asia and his outline of essential conditions for

Because of the broad interest in the President's statement of policy, I offer this editorial for the RECORD:

ESSENTIAL CONDITIONS

President Johnson has officially declared a "firm but flexible" U.S. policy toward Communist China—firm against aggression but flexible if China ends its expansionist ambitions in Southeast Asia.

In a major statement on China, Tuesday evening, the President told Red China's rul-ers that "cooperation, not hostility, is the way of the future." He urged them to renounce aggressive designs and to open their vast country's gates to the outside world.

He appealed for peaceful coexistence as the

est hope for a peaceful, prosperous Asia.

The President spoke at a time when Red China was undergoing a political purge, ap-parently centering around its ideological dispute with Russia's emergent policy of peace-ful economic and cultural coexistence with the West.

The President outlined four essential con-

ditions for peace in Asia.

The most difficult, he said, is "reconciliation between nations that now call themselves enemies." Newsmen interpreted this as an obvious reference to China.

The other "essential conditions" outlined.

by the President were:

The determination of the United States to meet its obligations in Asia as a Pacific power.

To prove to aggressive nations that the use of force to conquer others is a losing game.

The building of political and economic strength among the nations of free Asia.

As far as Viet Nam is concerned, the President repeated assurances that the United States is not trying to destroy North Viet Nam, change its government, establish per-manent bases in South Viet Nam, nor "gain one inch of new territory."

However, he warned that as long as aggression persists, the United States will fight.

It is doubtful the President's statement will go far toward changing the thinking of current Communist leaders in Peking.

But it did spell out, in terms that can be understood by the Communists, as well as the rest of the world, this nation's position and aims.

Pending Disaster Legislation

EXTENSION OF REMARKS OF

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 28, 1966

Mr. ROUSH. Mr. Speaker, I am in-serting in the RECORD a comparative chart used in my testimony before the Subcommittee on Flood Control for omnibus disaster relief legislation on July

This chart is helpful in showing how new omnibus disaster relief legislation— S. 1861—would expand the present laws providing relief to disaster victims while also adding authority to give relief in areas not previously covered by the law.

aren't Federal-aid highways. * No need to include provision since Public Law 89-313 covers this area.

Watershed Projects Jeopardized by Power Grah

EXTENSION OF REMARKS

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1966 Mr. BERRY. Mr. Speaker, the execu-

tive branch is attempting to wrest control over watershed projects from Congress so they can be dealt out on a political basis. In the process, more than 55 much-needed projects are being held up by the Bureau of the Budget.

The backlog is growing and is certain to delay action on several South Dakota projects now in the planning stage.

The Bureau of the Budget is delaying the projects because the current law reserves control over the projects to Congress, but the administration wants to seize control and is challenging the legality and constitutionality of the present provision.

Congress has handled these projects for over 12 years and during that time has approved more than 400 watershed projects. Now, in an attempt to corral

greater power and authority, the President is stopping these projects.

This deplorable action demonstrates once again that the administration's interest in the farmer is second to the real interest of manipulation of government for political advantage and power.

ZIP Code

EXTENSION OF REMARKS

HON. THADDEUS J. DULSKI OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1966

Mr. DULSKI. Mr. Speaker, a significant public service contribution by a major industry has recently been brought to my attention. During the past 2 years, the Magazine Publishers Association, through their President John K. Herbert, has embarked upon a praiseworthy program to assist the Post Office Department in promoting public awareness of the need for and advantages of use of the ZIP code in their mail. In this program, the member magazines of the Magazine Publishers Association contributed 1 billion page impressions of ZIP code adver-

tising having a value of almost one-half million dollars priced at current advertising rates. The association plans to continue these advertisements during the coming year.

I am sure that many Members of Congress have seen the ads in a variety of magazines included in the broad spectrum of the 300 leading Nation's magazines belonging to the Magazine Publishers Association. The ads, designed by the association after consultation with the Post Office Department, have undoubtedly made a significant number of Americans aware of the value and need for the ZIP code program and illustrated the accomplishments that can be achieved by cooperation between industry and Government.

I wanted my fellow Members to be aware of this splendid public service program so that they might join me in expressing our thanks to the members of the Magazine Publishers Association. The Postmaster General is aware of this significant contribution and has ex-pressed his appreciation to magazine publishers for their contribution to the success of the ZIP code program.

The members of the Committee on Post Office and Civil Service of the House of Representatives have spent many hours working with the Post Office Department and mailers on the ZIP code program, and it is most gratifying to find such cooperation among a major mail user organization.

IRS and the Grand Canyon

EXTENSION OF REMARKS

HON. JOHN R. SCHMIDHAUSER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1966

Mr. SCHMIDHAUSER. Mr. Speaker, action by the Internal Revenue Service has threatened to block exposition of conversation groups' views on the proposed Grand Canyon dams.

The appearance early this week of an advertisement in the New York Times, sponsored by the Sierra Club and presenting the reasons for the club's opposition to the Grand Canyon dams, is an encouraging sign.

Discriminatory action by the Internal Revenue Service has failed to stop the defense of Grand Canyon, and I am glad

An editorial in the Idaho Statesman of June 14, 1966, raises the question of whether the IRS action may result, in effect, in taxation of free speech:

THE "CLUB" OVER TAX-EXEMPT ORGANIZATIONS
A provision in the Internal Revenue Code
pertaining to tax-exempt erganizations prohibits such groups from attempting to influence legislation. If they take political
action, the Internal Revenue Service is
charged with enforcing the law and withdrawing the tax-exemption statius.

It is assumed that federal agents investigate organizations before granting such status in the first place. However, the procedures they entertain in removing organizations from tax-exempt classifications may be questionable.

As an example, the Sierra Club, a California-based organization which promotes studies and programs on preservation of wilderness and national scenic monuments, has a public record of intervening in conservation acts, such as wilderness, wild rivers, seashore, redwood forest preservation and preventing damage to certain national scenic monuments.

Last Thursday, the club placed ads in the New York Times and Washington Post, recruiting public opposition to the construction of two federal reclamation dams in the Grand Canyon as now proposed in Congress. Twenty-four hours later the Internal Revenue Service issued a summons to the club declaring its advertising was an attempt to influence Congress. Thus the club is to lose its tax-exempt status, unless a hearing produces a different interpretation.

There is no intent here to argue the pros or cons of the Sierra Club's stand on the Grand Canyon project.

But if the IRS grants tax-exemption, knowing the purpose of an organization—religious, charitable, public service, political business or conservation—is to comment and stir opinion on public issues, has the government the right to take away such a status because of influential and capricious complaints from opposing interests.

The law must not be enforced by "shotgun"

Most prized in this nation is the ability of the people to speak out and organize to protest or support various actions of government. This is the service the Sierra Club and other foundations perform. If the IBS holds a club over their activities and threatens, possibly the law should be changed to provide that a modest tax be imposed. If any organization operates commercially in competition with private business or holds income property, then it should be taxed in a comparable manner to assessment of private interests.

As it is now, the IRS code can be unjustly enforced on groups which have taken position on public matters, while allowing other organizations to continue without punish-

Congress should inquire into the intent of the tax-exempt law and whether it is being administered fairly or not, or whether free speech is being taxed.

Arabs To Fight Against American Troops in Vietnam?

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1966

Mr. MULTER. Mr. Speaker, Vice President Hubert Humphey recently spoke before the American Jewish Press Association here in Washington and during the course of his address pointed out that American tax dollars are going to support the members of an Arab army being organized to fight against Israel and whose officers are being sent to Vietnam to fight against our troops as training for an eventual attack upon Israel.

This incredible story is reported editorially in the July-August 1966 edition of the National Jewish Monthly and I commend that editorial to the attention

of our colleagues:

ARABS WE ARE FEEDING ARE PREPARING TO KILL AMERICANS IN VIET NAM AND TO INVADE ISRAEL

To the overwhelming majorty of our readers, who are American citizens, we address this question: Are you aware that part of your tax money is now being used to support men who are in an army that is openly preparing to fight against Americans in Viet Nam and later attack the State of Israel?

This shocking statement is literally true.

This shocking statement is literally true. The army referred to is the so-called Paiestine Liberation Organization (P.L.O.), which the notorious Arab opportunity Ahmad Shukairy has formed with Arab refugees from Palestine. That army is receiving weapons from Communist China, and some of its officers are being sent to North Yiet Nam to fight against the Americans defending South Viet Nam—and at the same time to receive training in guerrilla warfare, to be applied later against Israel. These soldiers in the P.L.O., and their families, are living in the Arab refugee camps in Egypt and Syria which are supported by the United Nations. And the United States contribution to the support of those camps is 70% of the total.

This is no idle theory; Shukairy himself boasts of it. During the recent annual convention of the American Jewish Press Association in Washington, B'nai B'rith tendered the delegates a reception in the B'nai B'rith Building. Vice President HUMBERT HUMPRIENT was the speaker, and he brought out the facts mentioned above, His remarks were reported to Shukairy, who declared in a speech at a P.L.O. camp in Syria: "The Liberation Army and the P.L.O. are proceeding with determi-

nation. We receive arms from the Chinese People's Republic. The PLO, has military officers being trained in the arms of liberation and the experience of the Chinese." He added: "We and our army are a threat to Israel." Shukairy, usually unreliable, may be telling the truth now.

THE UN SHOULD STOP SUPPORTING AN ARMY OF ACCEPSIONS

The U.S. Government has now urged the UN to remove from its relief rolls all Arab refugees who are involved in such military activities. All we can say to that is: it's about time! Sen. Edward Kernemy heads a Senate subcommittee which has been investigating UN relief activities in general in Egypt. Lebanon, and Jordan, and he has estimated that between 10,000 and 14,000 Arab refugees are in the P.L.O.—all of them receiving food and supplies from the UN. We well-come his demand that they be stricken from the relief rolls. "It is incompatible with United States policy and with the fundamental concept of the United Nations," he declared, "to supply ald in any way to members of any army whose purpose is to work against a member nation of the UN."

We also welcome the action of King Hussein of Jordan, who has banned the PLO. in his country. He called it "an extremist group," and was promptly attacked by Egypt and Syria. But the King went even further, and made a statement of the utmost significance: he demanded that all the Arab refugee camps now being maintained by the UN be liquidated, and that those living in them should be integrated in the countries where those camps are located.

This is, of course, the policy which Israel and many leaders in other countries throughout the world have been advocating for years. It just does not make sense—nor is it humanitarian—to keep on maintaining hundreds of thousands of refugees in "temporary" enclaves, supported by the charity of the world—when the vast empty stretches of Arab territories are crying out for manpower to develop them—and especially manpower to their own religious and linguistic kind. King Hussein himself has shown the way; almost half of all the Arab refugees are living in his kingdom, and he has incorporated them into his country. If Egypt and Syria were to do the same, the problem would be solved. But Egypt and Syria have found the "refugee problem" too convenient for their political purposes to do that, so far.

It is now more than 18 years since the Palestine Araba fled from the new State of Israel, after being told by their leaders that following an Arab victory they could return and seize all the Jewish property for themselves. The intolerable refugee camps should be closed, and their inmates integrated into the countries of their Arab brothers.

That cannot be done overnight. But what can and should be done at once is to remove from the UN relief rolls every Arab refuges who, through the Palestine Liberation Organization, is being supported by American tax dollars while he trains to fight against Americans in Viet Nam and prepares to invade larael.

Power of Nonsense

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1966

Mr. DERWINSKI. Mr. Speaker, the Chicago Tribune, in an editorial Monday, July 25, very properly noted the passing of Konrad Heiden, and their very appropriate editorial with its fascinating his-

torical recollection attracted my attention. I would therefore like to include it in the RECORD at this point.

POWER OF NONSENSE

Konrad Helden was so early an anti-nazi publicist that his first book, "History of Na-tional Socialism" [1932], was published in Germany and publicly burned by Nazis there before Hitler's party came to power. Heiden's death in New York the other day has reminded the public that it was he who first popularized the term Nazi, in place of the earlier current Naso

The expression "National Socialist" was naturally first abbreviated to the first two letters in each of the two words-Naso. As a satiric thrust, Heiden preferred to use the first four letters in the German word meaning "national," as in Bayarian slang Nazi had the established meaning of "bumpkin" or "simpleton." Some say that the Nasos quickly adopted the term Nasi, successfully eking by their acceptance of the word to blur the bite it had in Heiden's first use of it.

In writing of Hitler's speeches, which he heard as early as 1920, Heiden said they impressed him as a "flood of nonsense."

The Trial of American Fliers

EXTENSION OF REMARKS

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. ZABLOCKI. Mr. Speaker, it was indeed welcome news that the regime in North Vietnam has reconsidered its previously announced intentions to try American pilots shot down over their territory as war criminals.

Such a step would have produced an increase of tensions and probably escalation of the war itself. The execution of American filers, as the Milwaukee Journal said in a recent editorial, would be a "calamity."

The Journal pointed out that the restraint which has marked the conflict thus far might be snapped by such trials and executions. For that reason, such actions not only would violate international law on the treatment of prisoners, but also would imperial world peace.

At this point I wish to insert in the RECORD the thoughtful comments of the newspaper's editorial:

THIAL OF AMERICAN PLIERS CERTAIN TO ESCALATE WAR

Captured and handcuffed United States airmen have been paraded through the streets of Hanoi under armed guard and through hostile growds. Now North Viet-nam has threatened to try the airmen as criminals for perticipating in bombings which killed North Vietnam citizens. Hanol reportedly feels that the Americans are not prisoners of war because there has been no declaration of war.

Vicious as this undeclared war is, the mass trial and execution of American flyers would be a calamity. "We have had many tragic miscalculations on both sides in this war," columnist James Reston declared, "but none more ominous or dangerous than this."

International agreement on treatment of prisoners of war, such as it is, has evolved Article 2 of the Geneva convenpainfully. Article 2 of the Geneva conven-tion of 1929 declared that war prisoners "must at all times be humanely treated and protected, particularly against acts of vio-

lence, insults and public curlosity. Measures of reprisal against them are prohibited."
The United States ratified the conventiom
in 1932. Russia, Communist China and North Vietnam have never signed it.

The 1949 Geneva convention, signed by 61 nations including the United States, specifically provides that war prisoners be protected against intimidation and reprisal for acts of war performed in the line of duty. And it forbids reprisals against prisoners in "all cases of declared war or any other armed conflict which may arise between two or more of the high contracting parties, even if the state of war is not recognized by one of Among the signers was North Vietnam. The date: June 5, 1957.

The history of this conflict is ugly enough already. At least one American prisoner of war has been murdered by the Victoong. There also have been published reports of atrocities, some against prisoners of war, by the South Vietnamese.

This is no polite gentleman's game covered by polite rules. The only rules observed at all are those imposed by the fear that if one side breaks them, the other will retaliate and thus escalate brutality with more bru-

It would be disastrous if this slender thread of sanity in the midst of war should be snapped by the trial and execution of American airmen, or of any prisoners of war on either side. It could result in an even more ominous threat to the peace of the whole world.

New Mexico Democrats Oppose Grand Canyon Dams

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1966

Mr. DINGELL. Mr. Speaker, the Grand Canyon dam proposal resembles a steamroller in the way it has responded to opposition.

For this reason it is particularly significant when people in the Colorado River Basin raise their voices against the proposed Bridge and Marble Canyon

The New Mexico State Democratic Party recently took a stand in opposition to the dams and in support of national park status for the entire Grand Canyon.

About the dams they say:

Particularly we oppose construction of any dams on the Colorado River within the Grand Canyon Area between Lee's Ferry and Lake Mead.

I submit for inclusion in the RECORD the text of the resolution adopted by the New Mexico Democrats at their convention on July 16, 1966:

Be it resolved, That the New Mexico Conessional delegation explore all possibilities of providing electric power to the Central Arizona Project and that the members of delegation seek all alternates to the building of large multi-purpose dams which would deface or destroy the beauty of the Grand Canyon, particularly we oppose con-struction of any dams on the Colorado River within the Grand Canyon Area between Lee's Ferry and Lake Mead. This specifically con-cerns the present congressional legislation for Marble Gorge and Bridge Canyon (Wa-

lapi) dams.
We support giving National Park status or its equivalent to the entire Grand Canyon.

Right or Wrong, the Readers Always Write

HON, JULIA BUTLER HANSEN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, July 28, 1966

Mrs. HANSEN of Washington. Mr. Speaker, Wednesday, July 6, in the Daily Olympian is a letter written by a very articulate and thoughtful man in my district which expresses the thoughts, spirit, and decency of a sizable number of people in my district.

It is a distinct pleasure to place this in the RECORD today so that others may have the opportunity of reading his

May I particularly call attention to the last paragraph:

RIGHT OR WRONG, THE READERS ALWAYS WRITE: WHOSE RIGHTS?

EDITOR, the DAILY OLYMPIAN:

I am angered, nowadays, every time I hear ne word "rights." Whose rights? The the word "rights." Whose rights? The rights of a tiny minority to scorn, abuse, and undermine the welfare, peace, and safety of the vast majority?

This nation was founded on a Bill of Rights, but those rights were, and are, designed to protect the majority and the nation as well as the individual or the few. When the sometimes mistaken, often deliberate, assertion of so-called "rights" by a comparatively small minority take away from the large majority of our citizenry the latter's own rights-just whose "rights" are we talking about?

Is it too "reactionary" to say that the youth of America have the right to peaceably and orderly attend our universities without being obstructed, annoyed, and insulted by a few protesting, obscene malcontents—who contribute nothing to the national welfare? Many, not students at all, but merely idle agitators. Is it too much to say that the average American has the right to traverse our streets without the hazard of riots and lethal lawiessness on the part of those who seek to take the law into their own hands under the pretense of fighting for some assumed right?

How long must we stand idly by and see our police, whom we empower to maintain and order, attacked, abused, undermined and ridiculed by the criminal few, and those who choose to prostitute the meaning of the word rights? Our Supreme Court recently split 5 to 4 in deciding the "rights" of the criminal suspect and the resulting decision brought the strong protest of the minority judges as well as the near complete dismay of a very sizeable segment of our law enforcement agencies.

Just how far ARE we going to carry this "rights" thing? Exactly whose rights are of primary importance—those of the criminal few, or those of our wast majority of law abiding citizens? If we render our law enforcement agencies powerless to maintain peace and order; if the average citizen is thereby not eafe in his home or on the streets via this mistaken, overzealous witch-hunt towards over liberality in pro-tection of dubious "rights" of the lawless few-isn't it about time that we decide whose and what rights are paramount? Are the rights of our very vast majority—unprotesting, peaceable, ordinary citizens—so obscure that these can be dismissed, overlooked, or trod upon by a relative few who choose to riot, burn, obstruct, loot, and abuse at will under the fictiticious claim of so-called protest in fuzzy assertion of deprivation of something they call their rights?

This nation, as all others, has its faults, ills and limitations. But, I am one of those of our great majority who still believes that it is still the finest and the greatest on earth. It is not the protesting student, the beatnik, or those who riot, kill, maim, or destroy who make this country great. It is the faithful, too patient, mostly quiet everyday wage earner, the young men defending and dying for our nation abroad, the doctor, the scientist, and millions of others far too busy to agitate about imaginary rights. How long, oh how long must it be before our Congress and our over-patient people become concerned and act? Does not the majority, too, have rights?

KENNETH MCCLARTY.

American Automobile Association Urges Respect for the Country's National Shrines

EXTENSION OF REMARKS

OF

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. KUPFERMAN. Mr. Speaker, in the Congressional Record of June 30 at page 14249, I called attention to the failure to observe decorum and propriety at Arlington Cemetery where we honor our dead. My correspondence on this is set forth in the Congressional Record of July 18 at page 15167.

The American Automobile Association has performed a public service by joining in urging respect for the country's national shrines. Their statement

follows:

The ugly American—the tourist who visits the Nation's ahrines, churches and monuments dressed as if he were attending a picmic—is becoming of increasing concern to the travel industry.

travel industry.

The problem was pointed up in a letter received recently by the American Automobile Association from an interesting church

for visitors in the mid-West:

"Because our church is listed in your (tour) book as one of the points of interest which tourists might visit," the letter said, in part, "we have been inundated with travelers in all forms of dress. Consequently, we have been unable to maintain the reverential mood and spirit which should prevail in our Sanctuary.

"Hence, we are earnestly requesting at this time that any information pertaining to the (church) which is contained in any of your

publications be deleted."

The problem is particularly acute in the Nation's Capital. AAA's Mideestern Tour Book, which covers the Washington, D.C., area, offers these hints:

"There is increased local feeling in both government and civic circles concerning the mode of dress of tourists in Washington, D.C. We cannot expect others to respect the shrines and institutions which comprise this tity if wa, ourselves, do not treat them with dignity.

"Our garb, as do our manners, directly reflects our esteem for our national heritage. The many 'miracle' fabrics make it possible to dress tastefully as well as comfortably and thereby relegate the slacks and shorts from the buildings of the Nation's Capital to their place at home or in a resort."

In a recent letter to Arlington National Cemetery officials, Representative THEODOGE B, KUPPERMAN of New York voiced similar views when he said he was appalled to see visitors to the cemetery wearing "attire more suitable to a public amusement park or heach."

He asked that a policy be established requiring visitors to dress in a manner "conforming to the propriety of the occasion."

The Congressman continued:

"Arlington is not a public park; it is a sanctuary and final resting place for many of those who died in the service of their country. The dress of tourists is particularly disturbing to me because they also visit the gravesite of President John P. Kennedy dressed as if they were going on a picnic."

Gemini 10 Triumph

EXTENSION OF REMARKS

HON, LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1966

Mr. WOLFF. Mr. Speaker, the triumph of Astronauts Young and Collins in Gemini 10 has implications that extend beyond the science of space itself.

Some of them are suggested by the Watertown Daily Times.

Once again, the newspaper comments editorially, the mind and body of man have demonstrated what brilliance and discipline can accomplish. They also have demonstrated that fear born of ignorance can be overcome by those who prepare themselves through training and perseverance.

The New York newspaper adds that all of us might well consider that we can accomplish—individually and together—as much as the astronauts if we prepare ourselves with dedication and belief in something new and better.

I place this editorial in the RECORD: [From the Watertown (N.Y.) Daily Times, July 22, 1966]

THE GEMINI-10 TRIUMPH

The successful Gemini-10 flight is a thrilling and happy piece of news amidst the distressing events of recent weeks. The mission of Commander John W. Young and Major Michael Collins has a bigger place in world affairs than being merely an offset of bad news, but their expedition came at a time when Americans were desirous of seeing something highly constructive in moments when so many events were destructive.

We congratulate Commander Young and Major Collins and thank them for what they have done in our behalf during the last few

days.

What an accomplishment the Gemini flight is. The two astronauts went into outer space effortlessly and with an efficiency that epitomizes the brilliant preparations by the manned space flight leaders. They stayed aloft for 71 hours. They joined the Agenda rocket which was circling in space watting for them. They also joined Gemini-8's Agena for a second rendezvous. There was no actual link-up, but the proximity of the devices was such as to amount to the same thing. Major Collins made a lengthy walk in space on two occasions. He made physical observations and inspections of the Gemini-8 Agena.

Gemini-8 Agena.

Their achievements may have passed the category of the heroic in view of the fact

that many men have been their predecessors in space. Yet this mission this week is the one that added the unglamorous technical detail. Others pioneered. This pair of astronauts had a workhorse assignment, the kind that clarifies the detail of the previous missions and establishes the besic data for future trips.

The mind and the body of man have demonstrated once again what brilliance and discipline can accomplish. They have also demonstrated once again that fear born out of ignorance is overcome by those who will prepare themselves through training and perseverance in learning.

The nation is proud of them and its citizens might well consider that they can accomplish individually and together as much as the astronauts if they will prepare themselves with dedication and belief in something new and better.

Flag Desecration Bill

EXTENSION OF REMARKS

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1966

Mr. QUILLEN. Mr. Speaker, I am extremely pleased that my hometown newspaper, the Kingsport, Tenn., Times has given wholehearted endorsement to the bill, which I and a number of my colleagues have introduced, to prohibit the desecration of our flag.

This bill has received the approval of many papers in my district, and I again urge that it be considered during this session of the Congress.

FLAG DESECRATION

When it comes to silly arguments, about the silliest to come to our attention in a long time is the one that the proposal of a federal law to bid for and punish desecration of the American Fiag might "violate the constitutional guarantee of free speech."

Any member of the Congress entertaining such a theory, as ground for legal objection, is fabricating his own gnat to strain at. There may be a relationship between words and actions of infamy—as between cause and effect—but they are not legally one and the same thing.

Technically, and in the eyes of the law, there is a difference between saying "Let's burn the house down," and seting fire to it.

The Flag has been desecrated time and again this era of rampant holliganism and apparently privileged seditious mischief. Subversive characters have spat on it, walked on it, burned it and torn it to shreds. They thereby were showing contempt not only for Old Glory, but for the thousands of young Americans who are fighting and dying for it.

Yet with a spate of measures before Congress to make that offense a federal crime, there still is no national law against it. The culprits go free!

For postage stamp irregularity you can go to jail. For mutilating money, penalty attaches—and nobody arises (or should) to suggest that punishment infringes the offender's "right" to talk himself blue (or Red) in the face.

The law proposed—and co-sponsored by our own Congressman JIMMY QUILLER—is eminently in order. One with teeth should be enacted and enforced to the letter.

Legal Services for the Poor

EXTENSION OF REMARKS

HON. ROBERT W. KASTENMEIER OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, July 28, 1966

KASTENMEIER. Mr. Speaker, Mr. the Washington Evening Star gives us a report on progress made in various parts of the country under one of the more innovative projects of the war on poverty—that of providing free legal representation for the poor.

Already, the Star says, 160 legal services programs have been established in urban and rural areas.

The newspaper's Supreme Court reporter, Dana Bullen, writes that the most interesting part of the undertaking is an experimental "judicare" program for 27 counties in northern Wisconsin. With this plan, which is to be tested in other places, credit cards are issued to

the poor, entitling them to legal services from participating attorneys.

This program not only makes the best attorneys in each community available to fight the individual legal battles of the poor, but it also involves them, as community leaders, in the problems of Thus, the program is designed to give not only the individual poor a representative in court, but also a spokesman in community and legislative councils.

This report on an expanding project may be of interest to many of my col-leagues, so I include it in the RECORD: "JUDICARE" PROGRAM FOR THE POOR

(By Dana Bullen)

An innovative and sometimes misunderstood new federal program to provide free lawyers for poor people is mushrooming across the country as part of the Johnson administration's war on poverty.

Partly it is a response to the idea that a poor person in a Watts or a Harlem who can take his gripe to an attorney is that much less likely to heave a brick through some-

bes heely is heave a brick through some-body's glass window.

But this is not the whole goal of the Office of Economi. Opportunity's legal services pro-gram. More deeply the program seeks to write what Sargent Shriver, the poverty war chief, calls "A new Bill of Rights" for the

During the fiscal year that ended last month, about \$25 million was committed to the task. Already 160 legal services programs are under way in cities and rural areas across the nation. All but four of the 50 largest cities in the country have a program at some stage. More money is being sought for next

The main thrust of the programs is repre-sentation in civil rather than criminal cases. Like it or not, in today's world a person often needs a lawyer to get a fair shake from big business, big government or big anything. And to a poor person, almost anybody seems big.

The low income couple who signs a note for \$400 plus another \$100 in interest on a TV set worth at most \$190, for example, would have an aimost impossible time getting the merchant to back down without a lawyer.

Consumer complaints are just the beginning, though. Every city has a mountain of simmering housing, welfare and similar prob-lems, and the complaints in rural settings are

So with programs strung out from big city slums to migrant farm workers camps, the poverty lawyers are innovating. With a mixture of hope and fear, private lawyers are watching the developments.

In big cities, poverty law offices in the slums seem to be the answer. An office is open in Watts and more are coming. A program for Harlem will be under way soon. In Washington, neighborhood legal services of fices handled 10,000 cases in the last year and

One of the Washington cases already has led to a lower court ruling holding unconstitutional "retaliatory evictions" of ten-ants who complain to authorities about a landlord's housing code violations.

For rural areas, strings of branch law offices and circuit-riding attorneys are being tried. Both California and Florida have big migrant farm worker programs getting under

The most interesting project, however, is an experimental "Judicare" plan for 27 sparsely-populated counties of Northern Wisconsin.

Under the plan, to be tested in several other places too, poor people will receive credit cards entitling them to free legal services from participating lawyers. The attorney will get 80 percent of the accepted local minimum fee for the service performed.

The sparsely populated site was picked by OEO for the first "Judicare" experiment cause a central law office seemed impractical there and because the experiment could

not get too far out of hand.

Another closely-watched project is starting at the University of Mississippi law school. Some 100 law students there will assist staff lawyers in Jackson. In addition to case-by-case legal business, the office is expected to help poor people set up credit unions, agricultural cooperatives and similar organiza-

"The legal services program in Mississippi can be a catalyst in a state that very much needs it," an OEO staff member told an advisory committee recently.

The problem with catalysts, however, is that those who are being moved sometimes do not like it. Although the legal services do not like it. Although the regal services program thus far has escaped great controversy, there is no telling what lies ahead. A year and a half ago, national leaders of the organized bar took a hard look at the

bruising the medical profession took in unsuccessfully opposing medicare. They then lined up in support of the poverty war legal

Services program.

Legal aid had been a bar project for years, they decided, and a "properly implemented" OEO program would be a good thing. Everybody agreed there was plenty of charity work nobody was taking care of.

But some private lawyers still feel the poverty attorneys will cut into their fee-paying business. This feer played a part in the decision by North Dakota's governor last spring to veto two OEO law programs for his

In most states, however, the demand for legal services grants is growing every day. In fact the prospect now is that Congress will be under new pressure to give the program a larger role.

Gains Behind Our Shield

EXTENSION OF REMARKS

HON. OLIN E. TEAGUE OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1966

Mr. TEAGUE of Texas. In his recent speech on Asian policy, the Waco News

Tribune says, President Johnson advanced a positive position to which all reasonable men can adhere.

The newspaper describes the President's statement of policy as a "great speech," telling Asians that if hostility is laid aside, they can see the beginning of a new era of prosperity.

Most encouraging, in the Waco paper's view, was the President's recital of economic and political gains made by free nations of Asia behind the shield of American power.

This is further vindication of our stand Vietnam—and Korea and Taiwan the newspaper declares.

I request that its editorial on the subject be included in the RECORD:

BEHIND OUR SHIELD, ASIA BEGINNING TO MAKE GAINS

President Johnson's televised address Tuesday evening estensibly was directed to the convention of the American Alumni Coun-cil but actually he spoke bluntly to the Communist regimes in North Viet Nam and China.

By our standards of right and reason, Mr. Johnson presented the leaders of Asia a logical, sensible prospect, if only they would agree to stop the use of force against their neighbors and permit free exchange of ideas, persons and goods across their borders.

It would be a miracle indeed if the Com-munists anywhere accepted the Johnson thesis. Realism is beyond their imaginations. But as president of the free world's must powerful nation, Mr. Johnson must continue as did his predecessors, to advance a positive position to which all reasonable peoples can adhere.

Mr. Johnson gave the Communists a choice . . . continue to fight the armed might of the allied nations or call off aggression and join in building a better world. would be unfortunate if the warped, myor viewpoints in Hanoi and Peking took his words as a sign of weakness or irresolution.

It is possible that Mr. Johnson timed his speech for possible effect inside China where a half-hidden struggle for power has been shaking the highest ranks of the ruling clique. This can only be speculated about but it has its intriguing aspects.

The most encouraging part of the President's address dealt with the economic and political gains being made by the free nations of Asia behind the shield of American military power. This is further vindication of our stand in Viet Nam . . . and Korea and Taiwan. The latter two nations are becoming showcases of progress in the Far East, behind the shield of the Stars and Stripes.

The United States is a Pacific power. Its vital interests on the far side of that occan demand that no hostile force be allowed to grow that would menace our ahores. The message of the President of the United States is that if hostility is laid aside, a great era of prosperity can begin for more than a billion people. It was a great speech, delivered

Charles S. Murphy: 30 Years of Dedicated Service

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF MORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1966

Mr. COOLEY. Mr. Speaker, on July 31, Charles S. Murphy, the Civil Aero

nautics Board Chairman, completes 30 years of distinguished service in the Federal Government.

Most of us in the Congress know Charley Murphy, and I am sure that I voice a universal sentiment in saluting him on this anniversary of his accomplishments and express to him the gratitude of all of us who are interested in good government.

In noting the progress of his career, I have spoken of Charley in this House on other occasions. I have mentioned that he was born lucky, and that this is the common fortune of all who are born in North Carolina and who have parents of sturdy stock to guide them in their tender years.

Mr. Speaker, three Presidents have recognized the varied and seemingly unlimited abilities of this North Carolinian.

He is typical of those public servants who create respect for our democratic system. He is typical of those dedicated people who by their ability, integrity, and devotion to duty, keep the wheels of government turning.

President Lyndon B. Johnson appointed Mr. Murphy to the CAB on June 1, 1965. Prior to this he had served as Under Secretary of Agriculture for more than 4 years, this appointment having been made by the late President John F. Kennedy shortly after his inauguration.

Kennedy shortly after his inauguration. In 1947, after many years service in the office of the legislative counsel of the U.S. Senate, Mr. Murphy became administrative assistant to President Harry S. Truman, and in 1950 was advanced to the position of special counsel to the President.

Following graduation from Duke University's School of Law in 1934, he received an appointment as law assistant in the office of the Senate legislative counsel. He served in this post 2 years when he was selected as assistant legislative counsel to the Senate, a position held 11 years. As a legislative draftsman he worked with Members of both the Senate and the House of Representatives in writing numerous pieces of legislation, including the Civil Aeronautics Act of 1938. Many of its provisions have been carried forward into the Federal Aviation Act, which today governs aviation in the United States and which Mr. Murphy, as CAB Chairman, now helps administer.

It was while on the Senate staff that Mr. Murphy was selected by President Truman to serve as administrative assistant and later special counsel in the White

From 1953 to 1961, Mr. Murphy practiced law as a member of the Washington, D.C., firm of Morison, Murphy, Clapp & Abrams. From 1957 to 1960, he was counsel to the Democratic National Advisory Council.

President Kennedy, immediately after his inauguration January 20, 1961, selected Mr. Murphy as Under Secretary

of Agriculture.
As Under Sec

As Under Secretary from 1961 to 1965, Mr. Murphy had general supervisory remonsibility for all USDA agencies and for the administration of its many widespread programs. He coordinated and
reviewed the Department's staff work on
many pieces of major legislation. The

measures enacted stamp this half decade in the Agriculture Department as one of the most progressive in American history. As President of the Commodity Credit Corporation, he had special responsibility for supervising the commodity programs that broke the back of the mountainous feed grain wheat surpluses. He successfully represented the United States in international discussions on foreign agricultural trade. These discussions played an important part in raising U.S. farm exports to record highs.

Mr. Murphy was sworn in by President Johnson as a CAB member and Board Chairman June 1, 1965. The term ends

December 31, 1968.

From 1956 to 1958 Mr. Murphy was president of the National Capital Democratic Club. He belongs to the Order of the Coif, Delta Sigma Phi, Pi Gamma Mu, and Omicron Delta Kappa. He was admitted to the North Carolina Bar in 1934, the Supreme Court bar in 1944, and the District of Columbia bar in 1947.

Mr. Murphy is a member of the American Bar Association, the North Carolina Bar Association, the Federal Bar Association and the District of Columbia Bar Association. Married to the former Kate Chestney Graham, of Durham, they have three children. A daughter, Courtenay, is married to Whitney Slater. A son, Westbrook, a 1965 graduate of Yale University School of Law, is a career government employee in the Justice Department. Another daughter, Betty, lives with her parents in Washington, D.C., and will graduate from high school this June.

Mr. Speaker, the Nation is fortunate to have men like Charley Murphy in Government service. We salute him on his 30th anniversary in this service, and we expect of him even greater achievements in the years ahead.

New Era in Mississippi

EXTENSION OF REMARKS

HON, JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1966

Mr. WILLIAMS. Mr. Speaker, we are all thrilled by success stories—accounts of the underprivileged who have improved their lot through hard work, forward thinking, perseverance, and ingenuity. Today, I want to relate a success story which deserves national attention.

Earlier this year, the Deposit Guaranty National Bank of Jackson, Miss., sponsored an economic symposium on "The Year Ahead in Mississippi." Leaders in government, agriculture, business, industry, research, finance, and distribution outlined in detail the economic progress of the past few years in Mississippi and the outlook for the future.

The reports of this group of dynamic leaders completely dispel the myth of a backward Mississippi plagued by the pangs of economic despair. Instead,

they make it quite clear that a sustained pattern of growth is pushing Mississippi to the forefront in the field of economic development.

The spectacular progress was underscored by Nat S. Rogers, Deposit Guaranty National Bank president, who pointed out, for instance, that during the past decade total resources of Mississippi banks increased by more than \$1 billion, or over 107 percent, while the average increase for the Nation was approximately 60 percent. Last year, he noted for the first time total deposits of all banks in the State exceeded \$2 billion, total loans exceeded \$1 billion, and total capital accounts passed the \$150 million mark.

The new vitality is reflected in mushrooming industrial development which has broken all previous records in the State during the past 2 years. More than \$385 million in new capital was invested in 275 new and expanded plants which created over 21,000 new job opportunities. Last year alone there were 155 new and expanded plants and over 12,-000 new job opportunities.

By last November, it was noted, those gainfully employed in manufacturing reached an all-time record high of 158,-300. This was an increase of more than 13,600 over the previous year. Total nonfarm employment soared to a new high of 613,000, an increase of 24,600 over the previous year. These figures assume added significance when we compare them with the growth rate between 1950 and 1961 which showed an increase in manufacturing jobs in Mississippi of an average of just 3,000 annually. From 1961 through 1964, the annual gain averaged 7,000 jobs—a rate of increase of 250 percent. This increased manufacturing employment by a healthy 17

But, Mr. Speaker, our State leaders view this recent economic progress as merely a beginning. Already, imaginative new programs are being initiated to enhance further development and growth. A community revitalization program has been inaugurated to guide our smaller towns and rural communities into activities which will put new pep into their economies and increase local employment. Most significant, perhaps, is a bold new research program under the dynamic leadership of a national authority in this field—Dr. Kenneth C. Wagner. The Mississippi Research and Development Center will provide technical data and produce a flow of feasibility studies which will be used to plan and prepare for a better tomorrow in the State.

Yes, Mr. Speaker, there is a sharp contrast between the vibrant Mississippi of today and the Mississippi of yesteryear when a one-crop economy spelled financial despair and frustration.

The bustling business activity, coupled with diversification in agriculture, is providing spectacular new opportunities in Mississippi. The progress has not been accidental. It is the result of the combined and determined efforts of the business, civic, educational, governmental and religious leadership.

Mississippi and Mississippians are better organized, more knowledgeable and more determined to secure broad economic gains than at any point in history. A continuous flow of fresh ideas and fresh leadership is breaking the barriers that block the path to growth. The effects of this creative energy will be even more evident in the months ahead as Mississippi prepares to enter a new era of unparalleled prosperity.

Let Freedom Ring

EXTENSION OF REMARKS

HON. KEN W. DYAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, July 28, 1966

Mr. DYAL. Mr. Speaker, the Reverend Harry G. Suttner, of Redlands, Calif., who is in my congressional district, has been notified that he has won the Freedoms Foundation Honor Certificate for his July 4, 1965, sermon "Let Freedom Ring." The message of his sermon is timeless. I recommend its reading to the Members of the House.

SERMON: LET FREEDOM RING, JULY 4, 1965

Today, July 4, 1965, America observes her 189th birthday. Looked at in terms of man's life expectancy, it is a long time. Looked at in terms of nations, it is brief. Looked at in terms of human history, it is nothing less than a second on the hourglass of time.

This morning, let us return to those difficult and disturbing days of 1776 when English colonists pushed by a foolish king, a stupid parliament, and an aristocracy that wanted Britishers away from home, to pay for a war in which they had neither interest nor participation, rebelled and demanded separation and free government.

Three years previously in July 1773, Benjamin Franklin made the recommendation that a General Congress convene. The first Congress met in September 1774 and wanted only to find ways and means of recovering "the just rights and liberties" of the Colonists, and the restoration of union and harmony with Great Britain.

The Second Continental Congress met in May 1775, a month after the battles of Lexington and Concord. Neither side had wanted to strike the first blow. But when General Gage seized stores of powder and shot collected by the Colonists, he brought on the war he was trying so hard to pre-

On the night of April 18, 1775, he sent Major John Pitcairn with a detachment of men to destroy stores at Concord. This was the day—or night—of Paul Revere's famous ride as he and William Dawes rode to warn the countryside that the British troops were coming, and to warn John Hancock and Samuel Adams they were in danger of capture. Pitcairn and his 1000 men marched resolutely on through the night to the accompaniment of church bells and gunfire. Early in the morning of April 19 they met a band of 50 or 60 millitamen on the green at Lexington. Someone fired, a volley followed and 8 millitamen were killed.

Marching on the Concord, the British took the town and destroyed the stores of powder and shot. Here the Redcosts by the rude bridge that arched the flood, felt the full fury of those New England farmers. The entire English detachment withdrew before the fierce attack of these great patriots and returned to Boston.

On June 16, 1775, the Americans proved without any doubt their magnificent cour-

age. What a sight! Drums throbbed in the distance; lines of Redocats, bayonets glistening, moved swiftly across the green field at the bottom of the hill—Bunker Hill or Breed's Hill. British ships lay angry in the harbor sending shot after shot rolling around the hilltop. High on the summit was a new ridge of dark earth harsh against the soft green of the grass. There is no sound there. Are there patriots there? From Boston everyone watched. From the rooftops they saw fames from the city of Charleston light up the sky. The British are nearing the top of the hill now. In perfect step they form a red line—straight as a die, and still there is no sound from behind the breastworks.

An approaching English soldier cries, "Colonel Abercrombie, O. Colonel Abercrombie, are the Yankees cowards?" The question goes unanswered for now there are voices behind the new earth. Then with the British troops fifteen yards away, blazing guns blast forth. The straight red line falters, stops, then begins to retreat. Dead and wounded lie all around. No one had heard the words of william Prescott. Words that like "nuts" at Bastogne in World War II, made history. "Don't shoot until you see the whites of their eyes!"

You know, that is good advice today. So many of us take ill-advised pot shots at every flash of color on the field. We would-be defenders of freedom have cost the cause of freedom more, than had we kept quiet.

Wounding friend and foe alike, we never seem to learn.

The Patriots at Bunker Hill waited until they were sure of hitting their mark. They held their fire until the time was right to do the most for liberty. Meanwhile the second Continental Congress was doing the same thing. They met in an atmosphere of final purpose and steeled resoluteness.

The Americans had no commander. At this time George Washington was appointed in charge of all troops "raised for the defense of American liberty." The Congress also adopted "A Declaration on the causes and Necessity of Taking up Arms." This Declaration stated "the arms we have been compelled by our enemies to assume, we will employ for the preservation of our liberties, being with one mind resolved to die free men rather than to live slaves."

When the Congress met again in June 1776, a committee was appointed to prepare a Declaration of Independence. The members of that committee were Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman and Philip Livingston. The man chosen by the committee to write the Declaration was Thomas Jefferson, a young man of 33 from Old Shadwell, Va. Gifted in law, farming, philosophy and science, Jefferson was chosen because he had a "happy talent for composition" as well as being a man of sound judgment and tested patriotism.

Jefferson's draft was reported to Congress on June 28. It was laid on the table until July 1. On that day it was debated. The next day, July 2, Congress voted independence but did not act on the Declaration. On July 3rd, it was again considered and on a hot day, the fourth of July, they debated for the last time.

The files pestered these delegates; bit through thin white stockings, buzzed about the powdered wigs, and the delegates were hot and uncomfortable. But they were purposeful. And they remembered. "Blandishments will not fascinate us, nor will threats of a halter intimidate", said Jonah Quincy in 1774. "For when under God, we are determined that wheresoever, whensoever, or howsoever, we shall be called to make our exit, we will die free men." And: "Is life so dear, or peace so sweet, as to be purchased at the price of chains or slavery?" demanded Patrick Henry in 1775. "Forbid it, Almighty God! I know not what course others may take, but as for me, give me liberty or give me death."

There were those in the State House in Philadelphia, now Independence Hall, who were unhappy with Jefferson's document, They fought for changes. Yet between the alaps of flies and the bitterness, they adopted the Declaration of Independence. Thirteen weak and disunited states became one. The break with England was complete.

break with England was complete.
Nobody signed the Declaration on July 4.
They only voted to sign it and then got out
of town because now they were traitors.
There was a price of 500 pounds on the heads
of John Hancock and John Adams. A small
fortune in those days. They signed a month
later, on August 2. Their names were not
made public for six months longer in the
hope that they could get back safely to their
homes, all the way from New Hampehire to
Georgia. Some of them never got back during all the years of the war.

George Washington, when he heard of the signing, was encamped near New York and an always, threatened with defeat. But he too, had an unshakeable faith in the future and through prayer asked God to keep the U.S. in His holy protection.

in His holy protection.

When the Founding Fathers drew up and adopted our Declaration of Independence, they made it unmistakeably clear that God is the very foundation of freedom of "all men."

Jefferson's thoughts are chiseled in stone on his memorial in Washington. "The God who gave us life gave us liberty. Can the liberties of a nation be secure when we have removed a conviction that these liberties are the gift of God?"

To make sure we would remember liberties are the gift of God they deliberately included four significant references to Him. Two at the beginning and two at the end. Have you read it lately? (It's not very long—only 1321 words in all. What words they are! "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness."

Poput

bu

mı "L

Each of us is a child of God with certain unalienable rights. Our fathers took this belief, built upon it and sang about it.

"My country, its of thee
Sweet land of liberty, of thee I sing.
Land where my father died,
Land of the pilgrim's pride,
From every mountain side
Let freedom ring."

Our fathers took this belief and in the closing sentence of the Declaration Congress made another great profession of trust in God in those compelling words: "And for the support of this Declaration, with a firm reliance on the protection of divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

lives, our fortunes, and our sacred honor."

I had forgotten how many gave their lives
until I read a book "They Signed For Us."

John Morton of Pennsylvania died eight months after signing, ostracized by relatives and friends. His dying words were: "Tell them that they will live to see the hour when they shall acknowledge it to have been the most glorious service that I ever rendered to my country."

John Hart of New Jersey found when he returned home that his wife and some of his children had been seized by the British and thrown in a dungeon. He himself, did not live through the war.

"Our fortunes—" I had never known how many gave their fortunes.

Carter Braxton of Virginia lost his fleet of ships, his home, and his personal property. Lewis Morris of New York, lost his palattal home, cattle, everything, and for six long years he and his family lived in hand-to-

mouth poverty.

Thomas Nelson of Virginia, Robert Morris of Pennsylvania, the list is endless.

But today, as Dr. Walter Judd pointed up so graphically, today we say we want peace but mostly, we want to be left in peace so that we can enjoy our prosperity and pleasures. Dr. Judd admitted De Gaulle is following a tragic course but couldn't blame him because twelve years ago De Gaulle forecast America would be like the Carthaginians of old.

Who were the Carthaginians? The Carthaginians were one of the greatest people of ancient times. Their city, Carthage, was famed for its size and wealth, the great empire which it ruled, and the extent of its trade. It had an excellent location on the shore of the Mediterranean. The city of Carthage had two harbors; one for fighting ships and one for trading vessels. The docks in the military harbor were 16 feet wide and 220 ships could tie up in them at once. Less than a mile north of the harbors a fortress on the hill of Bursa guarded the city. Behind the city, cutting it off from the peninsula, were three walls of towers guarding Carthage against attack by land. It was impregnable to outside attack but they lost their freedom by default. They made concessions, worshipped pleasure, became complacent, soft, and flabby. And today, all that remains of the beauty and the power of ancient Carthage is its tombs and the ruins of its buildings.

the ruins of its buildings.

How do we lose freedom? A wise man ence observed, "Liberty means responsibility. That is why most men dread it. But if you dread it and ignore it how long can it last? Freedom, like a receding hairline, isn't lost all at once. It goes gradually."

Unless there is a moral regeneration said Judd, there is no hope for us. Discipline, passion, concern, righteousness, these are the only things that count. Purity is more important than soap; intention than invention; faith than facts. Why we live means more than where we live; how we feel more than how we look; what we are more than what we have. God means more than gadgets. Affairs now are soul size and only those men and women with large souls and hearts will solve them. Without such spiritually mature men and women we shall be, as Lincoln put it, "merely tinkers, trying to put together a universe that is too big for us."

Dr. Walter Millekan, late of Cal-Tech, wrote that he felt science lifts us up on the horizontal and that religion lifts us on the perpendicular. Without the upward pull of religion, science would crawl on its belly—a serpent with a deadly sting.

The Nazis made this mistake. Their prog-

The Nazis made this mistake. Their progress, as someone wrote, was in gadgets instead of God; in inventions rather than in spiritual intentions. In his Mein Kampf, Hitler wrote: "Look at those young men and boys. What material! I shall eradicate a thousand years of human domestication. Brutal youth, that is what I am after! I want to see once more in its eyes, the gleam of the beast of prey. With these I can create a new world and a new order."

And he did—the order of the jungle in which men's fingers became claws and their

hands became paws.
Dr. Judd pointed out this obvious fact too, the other night. That animals kill only when cornered or forced to, for food. Only man kills and kills and kills with tongue as with weapon.

Mark Twain felt this way. He ridiculed the claim that man was created in God's image. Not only is he not a child of God, but he is not worthy to occupy the same planet with other decent animals. Today much of our novels and plays echo Twain: "Lord of the Files", "Whose Afraid of Virfinis Woolf?", "The Toilet." I guess we will always face the peril of the educated

One day Paul E. Tracy gazed at the bronze statute of an Indian brave with bow and arrow ready, dressed in a loincloth and com-

paring his relative harmlessness with the atomic power of the hour, Tracy wrote these lines about "The Coppered Archer:

"Unlettered one, mute and alone,
With your enduring tips of stone,
Sleep on, and take unbroken rest.
Your sage is wet, your crags are dressed in
fog.
Sleep while you can, the atom age is set

for men.
Your bow and brittle filmts
Did little more than make those wince
You sought to slay.
You could not wince or scar mankind
Like us today.
Sleep, simple one, ignoring change.
Your hunting ground is now a range
For bombe unduly bright and loud,
From Yucca Flat the mushroom cloud
Ascends and puny warfare ends.
Sleep on and rest, untutored brave,
Tense is the air above your grave."

No one would deny the fact that America must have a strong arm, but let her have a great soul as well, and that can only be gotten by a moral regeneration. Our civilization is so lopeided, so much body and brain, so little soul to move it. We have more things than we have the character to handle. We have more power than we have the spirit to direct it. And everywhere there is an emptiness, a frustration and a restlessness. H. G. Wells was right when he said, "There is a God-shaped vacuum in everyman's soul." Charles Stiemnetz, the electrical wizard, made a prediction some years ago. He said we would come to the place of frustration and would discover we were on the wrong track. People would learn that material things did not make happiness and they are of little use in making people creative and powerful. Then the laboratories would be turned over to an examination of the neglected, unseen spirit-forces, and men would explore the wider, eternal world of which our world is only a little part. Then, with the awakening of man's spirit, there would comes a leap forward in the world's life and more would happen in a century than in a thousand previous years.

a century than in a thousand previous years. The man at the well said the same thing. "Everyone who drinks of this water shall be thirsty again." There is no lasting satisfaction in our things. God never made the soul of man so small that he could be satisfied with a multiplication of things. He was made for eternal life and nothing else can satisfy his soul. "You shall thirst again." The Samaritan woman found that out. She, a thorough going materialist had made a terrible mess of things; she had tried all the wells and cisterns and found no living water. But first, the sins must go. "Go call your husband." Five husbands she had had. Sounds like Hollywood. Then Jesus Iedher out of the darkness into the light. Jesus kindled a light in that woman's heart—a heart in which all the light had gone out and that spark went like a hallowed fire throughout the whole town. The woman left her waterpot and went into the city and said, "Come, see a man. Is not this the Christ?" What began in a conservation ended in a spiritual awakening in a village.

There is a hint of what might happen to the human spirit now with the touch of Christ upon it. We have gone as far as we can in materialism, and all the wells are dry. Why do we live as if God were dead and Christ had never come? I've asked myself that a thousand times lately. The touch of Christ upon the spirit is not an old story; it still happens. He has the cure for the world's ills. It is up to us to apply it. We must not be daunted by the world's confusions, fears, and frustrations. We must have but one fear now, and that is the fear of failing God. Faith is as contagious as fear. We have at our command forces that can never be exhausted.

"He has sounded forth the trumpet that shall never call retreat;

He is sifting out the hearts of men before His judgment seat;

O, be swift my soul, to answer Him, be jubilant my feet! Our God is Marching On."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section reducing to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Frinting Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under which he may designate any Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Frinting Office, that their addresses may be correctly given in the RECORD.

Grand Canyon Threat

EXTENSION OF REMARKS

HON. JEFFERY COHELAN

OF CALTFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1966

Mr. COHELAN. Mr. Speaker, a timely defense of the Grand Canyon was presented by our distinguished colleague, the Honorable HENRY S. REUSS, in his letter to the Washington Post of July 25, 1966.

As Congressman Reuss points out:

If Congress acts wisely, Arizona can have water and America can continue to have the Grand Canvon as nature made it.

This analysis speaks directly and perceptively to the problem and I include it for my colleagues' consideration:

[From the Washington (D.C.) Post, July 25, 1966]

GRAND CANYON THREAT

Your editorial on the "Colorado River Issuo" seems to pose a false alternative: shall "vital" additional water be supplied to Ari-zona or shall we avoid any "further obstruc-tion of the picturesque Colorado," which is a highly euphemistic way of describing the huge dams proposed at Bridge and Marble Canyons in the Grand Canyon.

In fact, the two dams are not necessary for the physical diversion of water from the Colorado into Arizona. The water impoundments created by the dams would make available less water (because of evaporation), not more, for Arizona's farms, indus-

tries, and people.

The purpose of the dams is to finance the project through the sale of electricity. Yet other means of provided needed electric power and of financing the water supply project are possible and economically advan-tageous. Thus if Congress acts wisely, Ari-mus can have water and America can continue to have the Grand Canyon as nature made it.

"Any grave encroachment upon the Grand Canyon National Park itself would be un-thinkable," the editorial says. But unless America is willing to give up its far-sighted commitment to the preservation of wilderness areas and of its irreplaceable natural wonders, the entire Grand Canyon-all 280 miles of it-should be saved and protected a great national asset.

It is no less unthinkable to destroy the parts of the Grand Canyon outside the 105mile-long Park than it would be to "en-greach" upon the Park. It is not the legal entity that is the Park but the unique eco-logical entity that is the Canyon which

needs protection.

And it would be, to use the editorial's words, "plain nonsense" to speak of these dams as making minor changes in the Grand Canyon. They would turn 132 miles of the fiver into unneeded storage reservoirs. They would put such scenes of beauty as Redwall Cavern under 280 feet of water. Their reservoirs would cover beaches and sand-bars, wipe out the habitat of wildlife and plants and inundate the geological records of millions of years.

The goal is to supply water so that Arisona can continue to enjoy one of the highest

population growth rates in the Nation. As a Congressman who is concerned with the development of all America, I am ready to vote taxpayers' money to help Arizona get more water—but not to alter 132 of the 280 miles of one of the world's great natural

HENRY S. REUSS, Representative from Wisconsin. WASHINGTON.

Our Religious Heritage Threatened

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF MANSAS

IN THE SENATE OF THE UNITED STATES Friday, July 29, 1966

Mr. CARLSON. Mr. President, the National Congress of the Sons of the American Revolution recently conducted an oratorical contest for high school

Many excellent speeches were delivered by the 15 competing boys and one, by Anthony Gilbert Mitchell, 130 Goodrich Avenue, Lexington, Ky., entitled "Our Religious Heritage Threatened," in my opinion, merits the attention of the Senate.

I ask unanimous consent that the speech be placed in the Appendix of the

There being no objection, the address was ordered to be printed in the RECORD. as follows:

OUR RELIGIOUS HERITAGE THREATENED (By Anthony Gilbert Mitchell)

In June of 1963, by an 8 to 1 decision, the United States Supreme Court declared that it was unconstitutional to recite the Lord's Prayer and to conduct devotional Bible readings in public schools. The High Court based its decision on the first part of the First Amendment of the Constitution.

The pre-Revolutionary principle of sepa-ration of Church and State has today evolved into a separation of religion and state, especially in our public systems. Thomas Jefferson originated the idea of the "wall" between church and state to keep the two institutions from overlapping or Through his efforts, the writers of the Consti-tution stated that: "Congress shall make no law representing an establishment of religion, or prohibiting the free exercise thereof.

It was Jefferson's desire to prevent any denomination or religious sect in the United States from becoming a ruling sect. in the minds of the Framers of the Constitution was the religious persecution conducted by the Church of England. It had become not only a spiritual ruler of its people, but also a governmental ruler in civil affairs.

In Jefferson's attempt to separate Church and State, did he mean to build his "wall" between Religion and State? The founders of this nation were just as concerned with the practice of religion within the state as they were with the separation of Church and State. They placed "In God We Trust" on our coins as a symbol of that conviction. Very early in our history we were called a

"Christian Nation", and we honored that commitment to religious beliefs by observing the Sabbath as a Holy day and as a day of rest. Our national pledge professes that we are a "Nation under God" but in our public schools, Jefferson's separation has led to an attempt to delete religious principles and acknowledgement of God.

The Ten Commandments have been declared undesirable instructional material by the Board of Education in New Hyde Park, Long Island. The Ten Commandments have been banned likewise in public schools in New Jersey. This ban is rather ironical in view of the fact that all of the moral laws that exist in civilized nations today are derived directly or indirectly from the Ten Commandments.

Public school teachers in the various fifty states of the Union may and should teach about the gods of Greece, the gods of Rome, and the gods of Egypt, but they may not the gous of Egypt, but they may he teach about the one true God. Why? Because this is religion. Last year in my class in United States History, we spent six weeks studying Communist doctrine, but no time was allotted to the teachings of the Master Teacher.

Teacher.

Our American forefathers never dreamed of education without religion. Horace Mann, the father of tax-supported "public schools", strongly believed that the Bible should be a basic part of a child's education. McGuffey's Reader was also oriented in this direction.

Education without God is like an engine without a governor. "Without religious motive" says Wyatt Brown, "Education is adding power to irresponsibility." Theodore Roceevelt said, "Mere education, without divine guidance, is like giving a gun to an irresponsible man."

One of the most heart rending occurrences of this century took place in Russia in the mid-winter of 1962-63. A group of Russian Baptists walked over 2000 miles in freezing cold to the American Embassy in Moscow and begged permission to come to America. Their plea was not only refused, but they were turned over to the Russian police. The conscience of the entire Free World was outraged by the brutal treatment these people received after their fantastic journey and presentation of their humble request.

The main reason they gave for wanting to come to America was that their children would not have to attend Russian schools any longer and be taught by atheists. If these pathetic people had been allowed to come to "Christian America" they would have found some shocking things here that are almost identical to those in Russia.

In 1964, Mrs. Madalyn Murray, an atheist, carried her case to the Supreme Court to contest prayers in the public schools. The Court declared prayers unconstitutional, and then Mrs. Murray faded out of the national picture. Many people have asked, "What has happened to this woman who has tried so hard to take God out of America?" She lost favor in her own hometown and she was publicly banned from several other cities including Boston. Shortly after her escapade in the Supreme Court, her husband divorced her and her oldest son was sentenced to serve time in the penitentiary. But, "old soldiers never die," and Mrs. Murray is pres-ently trying to erase the "Nation under God" from our Pledge of Allegiance. Is this not an example of the insidious ways of those who dare to abolish God?

As the schools go, so goes the nation. Un-less our young people receive a strong edu-

cation and are motivated by the highest principles in our religious heritage, what can we expect of our future leaders?

Freedom of religious expression is a basic human right. Many of the original Colonies were founded upon religious liberty. Jeffer-son's "wall" between church and state should remain intact, but the religious principles upon which this country was founded must not be discarded nor replaced by godless doctrines in our public schools.

J. E. Kennedy Retires From Customs Post

EXTENSION OF REMARKS

HON, CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. LONG of Maryland. Mr. Speaker, after more than 42 years of outstanding customs work in Baltimore, Mr. J. Eugene Kennedy retired from his post as District Director of Customs. Baltimore is one of the busiest and most important port cities in the United States, and efficient and reliable customs workers like Mr. Kennedy have contributed to Baltimore's current status as a port city. Havre de Grace Record of July 14, 1966, summarized Mr. Kennedy's accomplishments in his long career, and I should like to bring this article to the attention

of my colleagues: J. E. KENNEDY RETIRES FROM CUSTOMS POST

Mr. J. Eugene Kennedy, district director of customs, retired on his birthday last Thursday after more than 42 years of cus-toms work in Baltimore. A native of Havre de Grace, he has been dubbed "Mr. Customs" and "the fount of all knowledge" regarding collection problems along the entire East

In an interview with the Record on Monday, Mr. Kennedy was enthusiastic about the full life he anticipates in the future as he maintains an interest in a warehouse business he helped to found, plays the piano for his "own amazement" and files the mementos of the past fruitful years.

Mr. Kennedy was honored at a gathering of some 300 persons last Thursday night including many co-workers, the city's Congressional delegation—Representatives Fallon, GARMATE, and PRIEDEL, and Thomas J. D'Alesandro, 3rd, president of the Baltimore City Council and acting mayor.

In paying tribute to Mr. Kennedy, the speakers praised him for helping to build Baltimore to its present status as a port city. One recalled when he entered the customs service in 1924 as a clerk-stenographer-"a freckle faced boy with bushy red hair". Pres-

ent indications are that the hair has given

way to forehead.

The Bureau of Customs' highest award was presented Mr. Kennedy, the Honor Award, making him the tenth man ever to receive He has also received the Treasury Department's Gallatin Award for distinguished service. Mr. D'Alesandro presented him the city's "Outstanding Citizenship" award.

The Kennedy family, not to be confused with the Cape Cod Kennedys, the retiree hastened to point out, consists of his wife, the former Agnes Eustace of Aberdeen and four children: John E. Jr., 25, a graduate of Cornell now with the IBM Company; Ann Carey, 24 a graduate of Notre Dame Prepar-atory School and Villa Julie Junior College, now employed as an investigative aide for the House Public Works Committee of which

Rep. Fallon is chairman; James E., 20, a student at Cornell in the field of Metallurgical engineering and Joseph Robert, 18, a recent graduate of Boys Latin School.

Mr. Kennedy is an accomplished planist and studied for a number of years at Peabody Conservatory of Music. Long time residents remember with pleasure several concerts he gave in Havre de Grace many years

Treatment of Americans Captured by the North Vietnamese

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, July 29, 1966

Mr. THURMOND. Mr. President, on Wednesday, July 27, 1966, the Augusta Chronicle, Augusta, Ga., published an editorial entitled "The Mark of the Beast." The editorial concerns itself with the treatment of American fliers captured by the North Vietnamese and reports of executions by beheading. It also takes note of the barbaric actions of the Communists who have been shooting our wounded on the field of battle. This entire area is a most serious problem and demands immediate and affirmative attention. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

THE MARK OF THE BEAST

A group of American fliers captured by the North Vietnamese after being shot down will not be tried as "war criminals"—yet, at least. That's the word relayed to our government through diplomatic channels.

President Ho Chi Minh is quoted by a Czech news agency as stating, in Hanoi, that North Viet Nam in this decision has behaved in a humane manner. No doubt, around the world, advocates of a free hand for the Communists in South Viet Nam will parrot this claim, and use it as ammunition for new attacks against resistance to aggression.

If a humane element is involved it is sheer coincidence. Humaneness is not communism's way. Ask refugees from the Baltic states, from Hungary, from Tibet. The deciding factor in the decision with regard to the fliers is propaganda value. By this means, the friends of communism around the world are permitted to compare the "humane" Ho with the "ruthless" Johnson, who is ordering barbarous attacks on a Viet Cong which wants only a peaceful, democratic dialogue with the obstinate South Vietnamese who erroneously think freedom is good for

Even as the message on rejection of a "trial" was being evaluated in Washington, North Vietnamese regular army units ille-gally in South Viet Nam were overrunning an The Americans had been American unit. forced by heavy attack to withdraw without even an opportunity to evacuate their wounded. A survivor said the advancing North Vietnamese fired bullets into the heads of any wounded Americans who moved, killing at least six and then looting the bodies of any valuables.

At the same time, an American Navy airman who had escaped from a North Vietnamase prisoner of war camp was telling of the fate of a fellow-escapee who was cap-tured by pursuing North Vietnamese. As the survivors hid and looked on, the "hu-

mane" Communists summarily beheaded the American they had caught.

These men, wounded on the battlefield or fleeing a prison camp, were beyond com-They were defenseless, and by bat status. all the rules of civilized conduct were prisoners. By the vicious and barbarous way in which they were done to death, they join many thousands of others in South Viet Nam who have suffered hideous deaths at the hands of Communists. They share the fate of village chiefs and their families tortured to death to intimidate the villages. They share the fate of civilians in Saigon who have been callously bombed into oblivion by the Viet Cong who—we are told in mame quarters—simply are seeking their rights.

Regardless of who is spared from a trumped-up "war crimes" trial in the prison camps of North Viet Nam, these men were given not even the benefit of mock trials. They were simply slaughtered by Communists acting like Communists.

Such incidents mark the character of the forces under Ho who will be enabled to perpetrate more of the same kind of atrocities if we can just be persuaded to cease oil depot bombing, and let more of the killers move They mark the foreseeable action of future waves of invaders if we will just "deescalate." or withdraw our forces and let Ho's horror sweep over the South Vietnamese countryside.

Such incidents place the mark of the beast also on the Soviet Union, which is supposedly a peace-loving member of the United Na-tions, and on Red China, for which many persons in a soft-on-communism bloc are trying to win UN membership. Russ'a's active participation in aggresion by sending weapons and munitions to Hanoi, and Peking's vociferous moral support and threats of intervention brand them as being unworthy of associating in the society of civilized nations.

Colorado River Project-Address by Hon. Barry Goldwater

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

RHODES of Arizona. Mr. Speaker, on Wednesday, July 27, former Senator Barry Goldwater addressed the National Press Club on one of his favorite subjects-the Colorado River project. Senator Goldwater particularly ad-dressed himself to the false impressions given by preservationist groups as to the effect Marble and Hualapai Dams would have on the Grand Canyon. Since the Senators knows the canyon like he knows his own Arizona patio, his remarks are particularly well-informed and persuasive, and I include them herewith:

EXCERPTS OF REMARKS BY HON. BARRY GOLD-WATER TO THE NATIONAL PRESS CLUB, WASH-INGTON, D.C., WEDNESDAY, JULY 27, 1986

Mr. President, friends of the Press, I trust you'll forgive me today if I appear before you in a slightly different role from the one in which I have appeared here on so many occa sions in the past. For once, I am not going to exhort you about politics or my views on the state of international affairs or the problems we are encountering on the domestic front. I have no doubt that some of you will get at these matters when the question period is held. But, in the meantime, you might say, I have a captive audience. And I want to use the opportunity to talk with you about one of the great wonders of the world which happens to be located in my home state of Arizona. I want to talk with you about the Grand Canyon and, in doing so, to lay to rest one of the greatest campaigns of misinformation I have ever encountered—in or out of politics.

My reference, of course, is to the printed propaganda we see in some magazines and newspapers to the effect that the Central Arizona Project involving the construction of two dams in the Grand Canyon area will ruin one of the scenic wonders of the American West and of the entire world. Many un-informed persons have been led to believe, for example, that completion of this sorely-needed project would turn one of nature's great wonders into a huge bathtub filled with water. The Sierra Club, which is leading much of the opposition to the Central Arizona Project, uses ridiculous words like "inuhdate" and "flood" to describe what will happen if the dams are built to supply the people of my state with the water they need to exist and flourish in Arizona's desert val-The technique employed by these opponents of progress is a familiar one: It is the "Big Lie" technique which rests on the belief that if you repeat a plausible falsehood often enough it eventually will be accepted w truth by an uninformed majority of the nation's citizens.

Now I don't pretend to be the world's greatest living expert on the Grand Canyon. But, I do lay claim to having spent more time traveling in and exploring the Csynon than many of the CAP's critics have spent looking at it from the vantage point of the tourist.

The project involves construction of two dams. Today, because of the brevity of time, I will discuss only one of these, the Hualapai, which dam would back up a lake which would touch the western boundaries of the National Park for 13 miles. The other dam, Marble Canyon, in no way touches the National Park, it being 12 miles outside the boundary. However, much of what I say about Hualapai dam would apply equally to Marble.

Hualapai Dam would be built three miles above the present Lake Mead formed by the Hoover Dam. It would be 600 feet high in the bottom of a canyon 5,000 feet deep and roughly ten miles wide. The lake resulting from this dam would at no point in its 90 miles climb out of the inner gorge of the Canyon. At one point it would approximate two miles in width but the average width

would be under 1,000 feet.

There is only one point accessible on either rim of the Canyon from which this lake could be seen and that point has been visited by fewer than 200 people a year. Even after reaching this point and looking straight down into the Canyon, one would have difficulty determining whether the lake was actually a lake or the river because the width would be approximately the same.

This lake would not destroy any archeological points of interest, nor would it inundate any geological forms which could not be seen elsewhere in the Canyon. It would not harm wildlife because the wildlife would merely move into the side canyons as they already do to escape flash floods.

į.

It would not "kill" the living river bename there would remain 104 miles of this was, flowing and beautiful stream above the lake

I want to repeat one important fact overlooked by the Sierra Club, and that is that there is now only one point available to the tourists on either rim from which the lake could be seen and that would require travel that has not been accomplished by many people in the existence of the road one has to travel over to reach this point.

To illustrate how patently ridiculous are the claims that the Central Arizona Project would "inundate" or "flood" the Grand Canyon, let me point out that there presently is not enough concrete in the entire world to construct a dam large enough to flood the Grand Canyon or turn it into a "bathtub." Even if there were, another obstacle presents itself—there would be no way to fill such a lake with water. It certainly could not be filled by waters from the Colorado River. The rate of evaporation alone would make this an impossibility.

this an impossibility.

Now having disposed of the propaganda lies raised by its opponents, I should like to take a few minutes to explain the importance and the mechanics of the Central Arizona Project.

The problem, of course, is water. And the Central Arizona Project as a means of providing that water is not a new idea. In fact, I think that the Ho-Ho-Kam Indians, who lived in the Arizona desert valleys thousands of years ago, must have thought of something similar before they were forced to leave for lack of water. The words "Ho-Ho-Kam," incidentally mean "People Who Have Gone."

Five civilizations have been forced to leave the desert valleys of Arizona because of the great need for water in these arid regions. And we, who have made our homes in these beautiful areas, do not want to become the sixth civilization to be forced out.

It is because of dire necessity that we have looked to the transportation of supplementary water supplies from the Colorado River to the central valleys of Arizona. Originally, the project was designed to supply water chiefly for agricultural uses. But, our population explosion has been so great that it becomes more obvious every day that the supplementary water will have to be used for essential domestic purposes.

We propose to do this under the powers granted the Federal government under the Reclamation Act, which has been in existence for many years and under which vast projects have been constructed in the arid sections of the West.

And, I might say in passing, that because I have long stood for the principle of confining the extension of Washington's power my advocacy of the Central Arizona Project has drawn some snide and derisive comments from writers who haven't gone to the

trouble of informing themselves accurately. For their particular information, I should like to point out that many of the West's reclamation projects already have been paid for—not by the nation's taxpayers, but by the people who have used the water in the affected areas. What's more, this fifiancing arrangement is being applied to all other such projects.

In the case of the Central Arizona Project, it is true that the initial outlays would be provided by Congressional authorization. But, it is equally true that under the provisions of the Reclamation Act we, the users are obligated to pay back every cent of federal money except that used for functions which are specifically allocated to the federal government under the Constitution. This is a lot different than the picture painted by some eastern columnists and editorial writers of Arizona conservatives fighting federal power in other States while holding out their hands for the Central Arizona Project. They don't seem inclined to explain that Arizona is NOT asking for something for nothing but

for a necessity its people intend to pay for. Those who believe that Arizona is asking for a giant handout would do well to look into the history of the Theodore Roosevelt Dam, which was completed in 1911. In this instance, the users were charged with the repayment of 65 percent of all funds used. The other 15 percent is charged off to the Federal Government for its constitutionally-ordered responsibilities.

The money now has been repaid and as a result of the foresight of the founders of the Roosevelt Dam Project, the valley that I look out upon from my study window is the fastest growing industrial area in the entire country. It is also one of the fastest-growing population areas in the nation.

In closing, let me emphasize that I yield to no one in my love of nature, particularly the spectacular brand with which my home state has been so bountcously endowed. But, even this love, must be subjugated, if needs be, to the requirements of people to live and to prosper with adequate supplies of water.

Happily, in the case of the Grand Canyon, no nature lover needs to be concerned. For, under the Central Arizona Project, the needed water can be supplied without damaging—in anyway whatsoever—the grandeur and beauty of the Canyon.

Now Is the Time

EXTENSION OF REMARKS

HON. ROBERT DOLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1966

Mr. DOLE. Mr. Speaker, I was very much impressed with the editorial, "A Chance To Clean House," which appeared in the August issue of Farm Journal. As a member of the House Committee on Agriculture, I certainly feel the four-point plan suggested by the editor, Carroll P. Streeter, deserves serious attention by everyone in the Congress directly or indirectly concerned with agriculture.

The article follows:

A CHANCE TO CLEAN HOUSE (By Carroll P. Streeter)

Since World War II we have built up an incredible jumble of measures to "solve the farm problem" (or at least the politicians' problem with it). We've spent a prodigious sum and have precious little to show for it.

Now the times are presenting us with the chance to sweep out the whole mess and get down to the simple program we need.

Not only do we have no surpluses of consequence overhanging the market (except for cotton and tobacco), we may indeed be approaching scarcity of some commodities. Milk for one. Wheat and feed grains for others, as pointed out by Dr. Karl Hobson on page 21 of this issue. A few months ago, Farm Journal reported that a beef shortage may be ahead. Despite the biggest soybean crop on record we have no real over-supply.

Chief reason our food stocks are vanishing is unprecedented prosperity here and abroad, not our relatively ineffective but costly farm programs.

The need for a basic change is urgent. Farmers are now in the fix where they are depending on government, not the market, for \$3.5 billion of their annual income. A mighty vulnerable situation that is, when the money has to be voted annually by a city-dominated Congress. Farmers had better he getting their heads out of the noose. It could by pulled tighter any day.

What then to do?

Well how about this for a four-point program?

1. Put sufficient crop land into 5- or 10year retirement to keep surpluses from recurring.

What's "sufficient" we won't try to say here. Some economists think we could turn loose the whole 50 million acres we now have on the shelf without creating a problem. Others say that by 1975 we will actually have to retire 25 million acres more, due to our big yield increases.

Whatever the amount, this land might better be in some kind of long-term reserve

than be dependent on farmers' compliance with annual crop programs, as most of the 50 million now is. The latter way of retiring land is too expensive, but worse yet it puts farmers under the thumb of the Secretary of Agriculture who becomes a sort of Master Manager of U.S. agriculture.

2. Let farmers decide how to farm the re-mainder, not a bunch of bureaucrats down in Washington. Get the Secretary of Agri-

culture's mitts out of it!

The market can tell farmers, better than the Secretary can, how much we need of what. The market will cure, more surely and wisely than he can, prices that are "too high," or too low either. Let's let the market do it.

3. Keep necessary reserves of food, butlet the private grain trade and farmers hold most of it. Government stocks should be small, and be padlocked, with Congress/holding the key-not the Secretary of Agriculture or even the President. The government can buy any more it needs in the market at market price.

Farmers have had a belly full, to put it mildly, of seeing the Secretary club the prices of feed grains, wheat, hogs, beef cattle and cheese in the interest of consumers. And it will take a lot more than a soothing speech in Des Moines by the President to make them

forget it. 4. Retain government price supports, at or slow market levels, not above. Let sup-

below market levels, not above. Let sup-ports revert to their original function of stabilizing prices in time to glut—and quit

Special additional provisions may be needed or special commodities, but these four planks could be the framework of a new farm program. Is it too simple? We believe not. could use a litle simplicity for a change. If we had such a program:

Farmers would be largely free of govern-

ment controls.

They'd take management of U.S. farming into their own hands, relieving the Secretary of Agriculture of it.

The nation would save a substantial

amount of money.

Supplies and prices would be better adjusted, over a period of time, than when a few mortal men try to do it.

We have a remarkable chance to clean house. To use a FARM JOURNAL phrase: "Now Is the Time to."

Somerset, Ky., Jaycees Tops

EXTENSION OF REMARKS

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. CARTER. Mr. Speaker, the following article, which appeared in the Somerset, Ky., Commonwealth Journal, on July 4, 1966, records the achievements of the Somerset Jaycees as the No. 1 chapter in all America in the area of civil improvement.

I am proud of this forward-looking

group of young men in my district. LOCAL JAYCEE CHAPTER TOPS IN UNITED STATES

The Somerset Jaycees were named one of America's top 10 Jaycee chapters last week at the U.S. Jaycee National Convention in Detroit, Michigan.

The local chapter was awarded the Clar-

ance Howard Award, presented annually to the top local Jaycee club across the country. Possibly more impressive was the fact that the local group was also honored as the No. 1 chapter in all America in thhe area of Civic

The Civic Improvement Improvement. Sweepstakes trophy, presented to immediate past president John Fitzwater by U.S. Jaycee president Jim Skidmore, gives Somerset the distinction of leading the United States in Community Development for 1965-66.

The local chapter had earlier won four awards in competition with chapters in their population division.

Tom Christerson, president of the local chapter, said today the club will enter international competition later this year in the civic improvement area.

Two Columns by Mr. Arthur Hoppe

EXTENSION OF REMARKS

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1966

Mr. YOUNGER. Mr. Speaker, Mr. Arthur Hoppe recently paid a visit to Washington and two of his columns I think are extremely pertinent to our situation here in Washington, D.C., as of today. These columns were published in the San Francisco Chronicle of July 22 and July 24.

L.B.J. REVIVES A FORGOTTEN ART (By Arthur Hoppe)

Washington.-President Johnson held a formal press conference and everybody had a very exciting time. Particularly the White House press. In fact, I feared for a moment there they might panic.

"A full-scale, televised White House press conference," cried one middle-aged veteran newsman when the news was announced 24 hours in advance. "What's that?"

But everyone shook their heads in wondernent. At last a grizzled old-timer piped up:
"Seems to me I remember the last time
President Johnson held a formal White
House press conference." Twas back in 19 and 65. Or maybe ought eight. Why I can even recollect the days when Presidents had press conferences once a week or so."

"No!" said a young reporter incredulously.
"What on earth for?"
"So's he could find out what folks were

thinking and explain what he was doing," said the old-timer. "He could tell from our questions.

"You mean we get to ask questions? Oh, what fun. I've been wanting to ask him for ever so long: 'Mr. President, how come after all you've given the people, you aren't loved?"

"No, no," said the old-timer, sh "You can't ask questions like that. With got to ask him about Vietnam mostly. maybe a couple on inflation, strikes, riots and politics. That way, he can tell what folks are thinking and tell what he's doing."

So all the White House reporters were very excited thinking up lengthy questions that would show their knowledge. "But what's would show their knowledge. "But what's the procedure?" said the young reporter sud-

denly. "Do we ask them alphabetically or by seniority or do we just raise our hands?" But try try as he might, not swan the old-timer could recollect a detail like that from way back when. So everybody was awfully nervous when we gathered in the East Room of the White House on the big day. were the television cameras and the lights and I don't think anyone would have asked a question for fear of doing it wrong.

But Mr. Bill Moyers; who is the President's right hand man and very smart, stood up first and said: "The press conference will start at 4:01 p.m. To ask a question, please stand. The President will acknowledge you with a nod or a wave of his hand. Give your name and the name of your organiza-

So everything went just fine. The reporters asked 20 questions, nine on Vietnam and a couple each on inflation, strikes, riots and The President said he was for peace in Vietnam and for honoring our commit-ments. And he said he was against inflation, strikes, riots and a Republican victory at the polls.

"My, that sure did take me back," said the grizzled old-timer afterward with a nostalgic "That's exactly what he said the last time he held a press conference.

All the reporters agreed that it had been very interesting taking part in this revival a historic democratic tradition. of like visiting Williamsburg," as one put it. And some even expressed hope the President would do it again on some regular basis. As often as once a year, even.

But the idea was hooted down. "After all," said one reporter, "our job is to find out what the President's doing and thinking. And we can't waste our time on a lot of silly old-fashioned ceremonies."

WEIRD WASHINGTON MYSTERY

(By Arthur Hoppe)

WASHINGTON,-You may recall that book I'm writing, "Strange Native Customs in Washington & Other Savage Lands." Well, I've stumbled over a problem so vast and so intriguing that I can hardly wait to lay it before my colleagues at the next Interna-tional Symposium of Anthropologists.

I was working on my chapter, "Indigenous ative Tongues." As you know, the natives Native Tongues." speak a common language. And while intonation and the meaning of some words vary among the local tribes such as the Solons Pentagon and White House, they can usually understand each other. If they want to.

There is also a written language used solely for rituals. It is called "Clear and Concise."
Indeed, hardly a week passes that some chieftain doesn't order his tribe to write their memos and other sacred scriptures in "Clear and Concise Language." Unfortunately, however, it remains undecipherable.

I had begun my work, as is customary, on the native form of greeting. I had discovered that on two natives meeting at a cocktail party or other savage rite they first identify their tribes and then one smiles and utters the traditional word, "Whereyoufrom?"

At first, I assumed this was a pledge of peace, a prayer for rain ar the invocation of some local diety. Imagine my surprise to learn on further inquiry that this universal greeting is actually a contraction of "where do you come from?"

"But don't all the local inhabitants come "But don't all the local liminitarits come from Washington?" I asked a friendly guide. "Oh, no," he said, "everybody here comes from some place else."

And it's true; I have asked scores upon scores of natives the same question and it appears that no one has ever been born

in Washington.

As far as can be determined the typical native suddenly appears full-grown in the tribe and, after a brief period of indoctrination, is soon indistinguishable from the others in speech patterns, ritual knowledge

and method of thing.

Even more odd, no one in Washington ever dies. The native, after fighting in the constant intertribal battles for an indeterminate

number of years, simply vanishes. Each native believes devoutly in his own nirvana, depending on his status. The lower orders call their "Retirement," which is always "a long way off." The higher subchiefs speak of "Private Industry," which they hope to reach "any day." While no two can agree on where this heaven is, they all agree on one thing: it isn't in Washington.

Thus we find a weird nomadic culture unparalleled in the annals of anthropology. Even the most backward aboriginal tribes

have roots in their own land. It's what gives them direction and purpose. And the lack of it certainly explains a lot about Washington.

But, of course, many crucial questions remain to be answered. Where do these natives come from? Where do they go? And most puzzling of all to anyone who has experienced a Washington summer or winter, why on earth do they stay here at all?

Reclaiming the American Dream

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1966

Mr. CURTIS. Mr. Speaker, I take the floor this afternoon to commend to the Members of this body one of the most challenging and thoughtful books on American politics to be published in the past decade. The book is Richard C. Cornuelle's "Reclaiming the American Dream." New York; Random House, 1965. Since this book should receive as much careful attention as possible, I take this opportunity to reiterate some of its major points, so that other Members and the general public might become acquainted with the author's thought-provoking analysis.

Mr. Cornuelle's essential thesis is that the present political debate over the allocation of functions between Government and the private sector is fundamentally sterile. The private sector is characterized by the profit motive and the enhancement of freedom. The Government sector's virtue—optimistically speaking—is its interest in public responsibility and welfare. In his view, the clash of Government versus private leaves out the "independent sector," the voluntary associations founded to solve public problems.

STEE:

ogy-

The independent sector is neither governmental or commercial. It is independent in that its operation does not depend on profit or mass political support, but voluntary contribution of time and money to solving public problems. In the past, as Mr. Cornuelle documents, the ability of independent associations to solve public problems without recourse to the deadening hand of Government allowed the growing American society to be both humane and free. But during the depression, confidence in private, voluntary associations was shaken in spite of their mammoth relief efforts, and the flight from private responsibility began.

Mr. Cornuelle maintains that we must break the present deadlock between conservatives who fight waste endlessly and oppose all assumption of governmental responsibility and liberals whose only remedy—Government—has proven to be ineffective in urban renewal, agricultural price support programs, and elsewhere and at the sacrifice of some freedom. The independent sector must revitalize itself, and use the methods of modern management—both business and government—to solve problems which both Government and the private

sector have been unable to solve. The competition of Government and the independent sector for the efficient and humane solution of problems is welcomed by Mr. Cornuelle, provided that adequate information and publicity is given to the independent sector's case—which is not often true.

The case of the United Student Aid Funds, Inc., a nonprofit corporation established to extend loans to college students through the cooperation of the Nation's bank, is cited as a documented study of the independent sector's ability to zero in on and solve problems without resort to Federal action. Mr. Cornuelle describes four tasks which the independent sector must accomplish in order to compete effectively with Government-research, development, mobilization and information. If the independent sector can organize its efforts to accomplish these tasks, Mr. Cornuelle holds out the hope that we might reclaim the American dream of a free and humane society. I am sure that other members will join me in this hope.

Mining Legislation

EXTENSION OF REMARKS

HON. ROY H. McVICKER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. McVICKER. Mr. Speaker, Colorado received its first economic impetus from the mining industry. My State has long been known for the mineral wealth it has produced, and has long been a leading producer of those metals without which a modern economy cannot exist. But in recent years, some mining enterprises in my State have fallen upon hard times, and foreign dumping of excess supplies of certain metals has contributed to this situation.

The lead and zinc producers of Colorado have been among the sufferers. I feel this situation should at least be alleviated by Federal action. A bill I now offer would accomplish this, and I am most pleased to join with my distinguished colleague, the senior member of the Colorado delegation and chairman of the House Interior Committee, the Honorable Wayne Aspinall, in offering this legislation.

This bill provides for flexible quota legislation with a 5-year term. During this period, quotas on either lead or zinc ores and metal would become effective for a 3-year period if domestic producers' metal stocks reach levels considered excessive as defined in the bill.

The quotas would be canceled if stocks were reduced below normal levels and additional imports were needed. A minimum import quota would be guaranteed. Producer, consumer, and importer fare well under this flexible quota system, which is based on supply and demand for these metals in our domestic markets. It would only be in effect when it was proved necessary to stabilize the supply-consumption rate at proper levels. It will alleviate some of the

hardships the lead and zinc producers of Colorado are now laboring under. It will inject new vitality into that industry in my State.

Will the Real Criminal Please Stand Up

EXTENSION OF REMARKS

HON. PRENTISS WALKER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1966

Mr. WALKER of Mississippi. Mr. Speaker, not long ago the Washington newspapers carried banner headlines about a single shooting in the State of Mississippi where an individual was attacked by an assailant with a shotgun filled with birdshot. Many of the members of the press editorialized against this act as a victous crime of violence—and were very quick to condemn my State—even through this crime was not committed by a Mississippian

mitted by a Mississippian.

In the Washington Evening Star,
Thursday, July 28, 1966, there appeared
an article on the back page of section
E. This article entitled "District of Columbia Area Crime Rise Is Fastest in
United States."

Mr. Speaker, I would like to bring this back page article to the attention of each of my colleagues and ask: "Will the real criminals please stand up?"

The article follows:

DISTRICT OF COLUMBIA AREA CRIME RISE IS PASTEST IN UNITED STATES

Crime in Washington Metropolitan area last year increased at a rate considerably above that in the rest of the nation, the FBI said yesterday in its annual Uniform Crime Report.

While serious crimes in the nation in 1965 increased over 1964 by 6.3 percent, the Washington area registered an 8.9 percent increase, and crime in the District jumped by 11 percent.

The District's increase was nearly three times the rate reported for large cities in the nation with populations of more than 250,-000 persons. Crime in these cities went up an average of only 4 percent.

average of only 4 percent.

Further, the FBI report noted there are an average of 1.7 sworn police per 1,000 persons in the nation, while the D.C. Crime Commission noted last week the District has the largest police force per person in the country.

CITY UNDERPROTECTED

The District has 3.85 policemen per 1,000 persons. The crime commission emphasized that despite the comparatively large force, the city is being "under-protected" because of improper use and supervision of the men.

The FBI's Crime Index is a compilation of reported offenses in seven categories, murder and non-negligent manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny of \$50 and up, and auto theft.

The metropolitan area figures were reported by the District, Montgomery and Prince Georges County in Maryland; the cities of Alexandria, Fairfax, and Fall Church, and counties of Arlington and Fairfax in Virginia.

The report of these areas showed there were 51,947 crimes reported in the Washington area during 1965, an increase of 4,272 over 1964. The FBI report said there were more than 2,750,000 serious crimes in the United States during 1965.

ANNUAL COST, \$1 BILLION

FBI Director J. Edgar Hoover noted that the national cost of crime was "staggering." There were more than 5,600 murders, 34,700 aggravated assaults with a gun, and more than 68,400 robberies. Thieves stole goods valued in excess of \$1 billion, Hoover said.

The national statistics showed increases in every category in the crime index. The District exceeded the national averages by substantial margins in 5 of the 7 FBI categories.

District murders and manslaughter were up 12.1 percent, compared to the national increase of 6.5 percent. Forcible rapes increased 46.8 percent, compared to the national increase of 8.3 percent.

tional increase of 8.3 percent.

D.C. robberies jumped up by 22 percent, compared to 6.4 percent nationally; burglaries were up 10.9 percent with a 5.7 percent national hike; and larcenles of \$50 and more increased 18 percent in Washington, compared to the U.S. increase of 8.2 percent.

increased 18 percent in Washington, compared to the U.S. increase of 8.2 percent.
Washington had only a 1.15 percent increase in aggravated assaults, compared to the national percentage of 6.1, and reported a 4.2 increase in auto thefts, as compared to a 5.1 percent nationwide increase.

CRIME UP IN SUBURBS

Of the 51,947 crimes reported in the Washington area, 25,462 were committed in the District. This was an increase of 2,530, with burgary, robbery, and larcency showing the greatest numerical increases.

The balance of the area crimes were committed in the suburban areas, reflecting what the FBI report said is the target of "the sharpest upward trend" in crime throughout the nation. Crime in the suburbs increased by 8 percent in the country, the FBI said.

In the entire Washington Metropolitan area there were four more murder and man-slaughter cases in 1965 than in 1964; 72 more forcible rapes, 698 more robberies, 743 more aggravated assaults, 1,304 more burglaries and 1,495 more larcenies of \$50 and up.

and 1,495 more larcenies of \$50 and up.

Hoover said that since 1960, the total
volume of serious crimes reported in the nation has increased by 46 percent, with violent
crimes rising by 35 percent, and crimes
against property increasing by 47 percent.

The director said crime "continues to out-

The director said crime "continues to outpace the population growth almost 6 to 1. While crime in the past five years increased by 46 percent, the population went up only 8 percent, Hoover said.

Arrests for all criminal acts have increased by 10 percent in the five-year period, but arrests for the most serious crimes increased by 33 percent. Last year, there were 3.7 arrests per 100 persons residing in the nation.

The FBI reported that the involvement of persons under 18 years old in crimes continued its upward surge in 1965, with these young persons making up 21 percent of the arrests nationwide. In suburban commu-

nities, this percentage was even higher at 32.

"While arrest figures disclose a high percentage of juvenile involvement in crime, it must not be overlooked that a relatively small percentage of the total young age population become involved in criminal acts—less than 5 out of 100," Hoover said.

The FBI reported that a study of 130,000 offenders disclosed they have an average criminal carser of 10 years during which they average five arrests.

During 1965, the report said, the nation's police were able to solve 25 percent of the serious crimes. The FBI said 91 percent of the murders were cleared up by arrest, 64 percent of the forcible rapes, 73 percent of the aggravated assaults and 38 percent of the robberies.

Orimes in which victims generally do not confront offenders such as burglaries, lar-

ceny and auto theft, showed lower clearance

"The increasing volume of these property crimes and resulting heavy police workloads are also factors in the reduced police clearance rate," Hoover said. CRIME INDEX FOR DISTRICT

A Republican Approach to the Needs of the Aging

EXTENSION OF REMARKS

HON. JAMES F. BATTIN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. BATTIN. Mr. Speaker, because of the continuing and alarming rise in the cost of living, I favor congressional action for automatic increases in social security and railroad benefits.

The Republican coordinating committee has prepared an excellent report on the need and precedent for such an increase and I ask that excerpts from that report be printed in the Appendix of the CONGRESSIONAL RECORD:

A REPUBLICAN APPROACH TO THE NEEDS OF THE AGING

(An extract from Republican Coordinating Committee report on cost-of-living increases in social security and railroad retirement)

The Republican Coordinating Committee recommends that the Social Security Act and the Railroad Retirement Act be amended to provide an automatic cost of living increase in the insurance benefits payable thereunder.

Congress has not been entirely unmindful of the impact of cost of living increases on Social Security pensions and has periodically increased them. Provisions of the Railroad Retirement Act raise benefits under that program to correspond with Social Security increases. But between these sporadic increases there has usually been a time lag of several years during which the pensioners have suffered from a drop in their purchasing power. For example, from 1958 through 1964, just before the 7% increase in pensions was legislated, inflation cost Social Security pensioners approximately \$1.4 billion in loss of purchasing power.

There is a precedent for such a provision as here recommended. Congress, in the Federal Employees Salary Act of 1962, Sec. 1102, provides for an automatic increase in Civil Service retirement pensions when there has been an increase of 3% or more in the consumer retail price index.

An automatic increase in Social Security and Railroad Retirement benefits correlated to increases in the consumer price index involve no increase in costs as a level percentage of payroll. Wage increases usually precede increases in the other components comprising the consumer price index. Increases in the wage level bring more covered workers nearer the maximum Social Security wage base and thus result in increased tax revenues. Additionally, the benefits paid represent a smaller proportion of an individual's wages as his wages approach the maximum wage limit (\$6,000). Because of these factors, there is no increase in the level cost of payroll (although there is an increased flow of dollars) involved in enacting an automatic benefit increase provision.

There is an urgent need for such a change in the law. Why should aged pensioners continue to suffer while run-away inflation further destroys the purchasing power of the pension dollar? Congress should provide for an automatic offset against the hardship inflation and its resulting rise in prices visit upon our senior citizens.

An American Mother and Vietnam

EXTENSION OF REMARKS

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mrs. GRIFFITHS. Mr. Speaker, the Michigan Legislature by concurrent resolution has commended a constituent of mine, Mrs. Keith E. Mino, for her efforts in a successful community campaign to collect soap for the people of Vietnam. Mrs. Mino has a son, Keith, Jr., now serving in Vietnam with the U.S. Marine Corps. We can be proud of this American mother.

It gives me great pleasure to insert in the RECORD, House Concurrent Resolution 198 of the Michigan Legislature. HOUSE CONCURRENT RESOLUTION NO. 198

A concurrent resolution of commendation for Mrs. Keith E. Mino and the U.S. Marine Corps.

Whereas Mrs. Keith E. Mino, of Mark Twain Avenue in Detroit, upon seeing photographs of American servicemen bathing Vietnamese children as part of the Civic Action Program of the Third Marine Amphibious Force in Viet Nam and learning of their need for soap, was motivated to collect soap for Vietnamese children as a neighborly gesture of friendship across the soa. Her door to-door requests were so enthusiastically received that the drive became a community campaign, with volunteer groups among the schools, Parent-Teacher Associations, Boy and Girl Scouts, Cubs and Brownies, and others too numerous to mention, collecting and stockpiling soap bars of all descriptions. Other Michigan communities adopted the campaign in areas for which, presently, there are not full details available; and

Whereas the Marine Corps recruiting offlues in the metropolitan area agreed to accept contributions for Mrs. Mino's collection, and when several tons were collected the scop was shipped to the Third Marine Amphibious Force in Viet Nam for use in the Civic Action Program, dispatched in the name of the stigens of Detroit and its analysis of the

Program, dispatched in the name of the citizens of Detroit and its suburbs; and Whereas certainly these acts of goodwill significantly demonstrate the ever flourishing, heartwarming gestures of American empathy and generosity, and the power of those qualities, properly channeled, can exert: now therefore be it

Resolved by the House of Representatives (the Senate concurring). That the Michigan Legislature, by these presents speaking for themselves and for the People of the State of Michigan, commend Mrs. Keith E. Mino, of Detroit, the United States Marine Corps, the Third Marine Amphibious Force in Viet Nam for its Civic Action Program of ald to Vietnamese civilians, and all of the individuals, groups, and organizations who so generously supported and contributed to the scap donations for Vietnamese children; and be it further

Resolved, That copies of this resolution of commendation be transmitted to Mrs. Keith Mino and to the United States Marine service organizations herein cited, that they may have this enduring testimony of appreciation and commendation by The Michigan Legislature.

Adopted by the House January 20, 1966.
T. THOS. TEATCHER,
Clerk of the House of Representatives.
Adopted by the Senate January 25, 1966.
EUGENE B. FARNUM,
Secretary of the Senate.

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. MOORHEAD. Mr. Speaker, recently I received a progress report from Vice Adm. H. G. Rickover concerning our newest Polaris, the U.S.S. Henry L. Stimson. Because Admiral Rickover describes the distinguished career of Mr. Stimson so eloquently I ask leave to include the letter in the Record at this point.

U.S.S. "HENRY L. STIMSON" (SSBN) 655,

At Sea, North Atlantic, July 4, 1966.

DEAR MR. MOCRHEAD: We have just successfully completed the first sea trials of our thirty-eighth Polaris nuclear submarine. The U.S.S. Henry L. Stimson was built by the Electric Boat Division of the General Dynamics Corporation, Groton, Connecticut. We also have in operation twenty-three attack type nuclear submarines, making a total of sixty-one. This ship is named for Henry I. Stimson (1867–1950), a man of notable schlevements both in his vocation, the private practice of the law, and in his avocation which was public service of the appointive lind.

Born in New York City, son of a distinguished surgeon, Stimson received his education at Andover, Yale and Harvard Law School. He was only twenty-five when Elihu Boot took him into partnership. The young lawyer learned much from association with this commanding figure in the legal profession of whom it was said that he had been connected with every important case in New York since 1880. Root, who became a lifelong friend and mentor, taught him not only a highly effective trial technique emphasizing painstaking preparation, close reasoning and systematic ordering of arguments—intellectual habits that proved useful to Stimson in the varied positions he later filled with great distinction—but living and working in Root's office, as he later remarked, also made him aware of "the importance of the active performance of his public duties by a citizen of New York." Though his steadily expanding practice kept him busy, Stimson found time to participate energetically in local and state politics, his chief interest being better government.

In 1806 Theodore Rooseveit appointed him to his first public office, that of U.S. Attorney for the Southern District of New York. Thereafter and until he finally retired in 1945 at seventy-eight, Stimson took frequent leave of absence from his lucrative private practice to assume public duties, serving under every President except Woodrow Wilson and Warren G. Harding. He was the first to sit in the cabinet of four Presidents (two Republicans and two Democrats): as Secretary of War under William H. Taft, Franklin D. Roosevelt and Harry S. Truman, and as Secretary of State under Herbert Hoover. He served Calvin Coolidge as adviser on Latin American affairs, peacemaker in Nicaragua and Governor General of the Phillippine Islands.

All his public offices, except one, were ap-

All his public offices, except one, were appointive and came to him unsought. Stimson had no flair for politics of the elective kind. He lost his bid for Governor of New York in 190?. The only election he won was for delegate at large to the New York Constitutional Convention of 1915. There he worked tirelessly for reforms that would give the State a more honest and efficient government. Although in that year's election the voters rejected the revised Constitution, by 1828 almost eighty percent of the proposed amendments had become part of New York's fundamental law and thirty other States had followed suit.

Politically, Stimson was identified with the reform or progressive element in the Republican Party. His views on government were formed early in life and changed very little. They are set forth in the autobiographical book, "On Active Service in Peacs and War," written conjointly with McGeorge Bundy and published shortly before Stimson's death at eighty-three. "His basic convictions were two—first that the primary and overriding requirement of all government was that it should not infringe the essential liberties of the individual, and second, that within this limitation government could and must be made a powerful instrument of positive action." The restraint imposed by law on government in the interest of "the primary and essential liberties of the individual" was, to Stimson, "a fundamental principle of any decent society. But to construe this respect for personal freedom into an assertion that all government was evil seemed to him absurd." He felt that "in the industrial civilization of the twentieth century it was the duty of government to provide for the general welfare wherever no private agency could do the job."

Given this point of view, Stimson could serve Theodore Roosevelt loyally as U.S. Attorney and Franklin D. Roosevelt equally loyally as Secretary of War. Under the Republican Roosevelt; his task was enforcement of federal laws which had been enacted to protect our society against harmful actions of large and powerful private organizations; under the Democratic Roosevelt, his task was mobilization of the country's

industrial potential in support of a war we fought against powerful nations threatening our free society. He accomplished both tasks extremely well.

Stimson's private work made him rich (he remained throughout his active life a member of the firm which originally had been headed by Root), but he derived his deepest satisfaction from the public services which supplemented and at frequent intervals replaced his private activities. He once told friends that the life of an "ordinary New York lawyer" could never wholly satisfy him since it was "primarily and essentially devoted to the making of money." Stimson shared with his father a desire to serve same larger cause than his own well-being.

The elder Stimson was a first-rate surgeon

The elder Stimson was a first-rate surgeon but had little interest in bullding the profitable private practice his talents could so easily have won him. Instead, he gave all his time to hospital work, much of it devoted to the charity cases that came to him as attending surgeon at the Chambers Street House of Relief, the emergency unit of New York Hospital. He liked to quote a famous French surgeon who said he preferred the poor for his patients since God was their paymaster.

Henry L. Stimson, the son, found that when he became U.S. Attorney, thus defender of the public interest and of the people, his work had an ethical content that enormously increased the satisfactions he derived in his professional life. Now he could do something to help redress a deplorable situation he found all too common: whenever private interests came into legal conflict with public interests, whenever great public issues put "a rich corporation on one side and only the people on the other," the side of the people usually "went by default," since so few successful lawyers were "putting their shoulders to the public wheel."

There can be little doubt that ancestry had something to do with Stimson's strong sense of civic responsibility. Nearly all his forebears were of New England stock, having arrived before 1650. After the Revolution they migrated westward and took up land in upper New York State. Hardworking, thrifty, self-reliant and strongly identified with their community, they fought in every war in which the country was embroiled (even as Stimson volunteered in the Spanish-American War and World War I) and produced, as he put it, "enough clergymen and deacons to keep up fairly well the moral standards of the stock."

In a more direct sense, Stimson's devotion to public service was an outgrowth of his concept of the function of law and advocacy in a democratic society. This comes out clearly in his autobiography where he describes how he came "to learn and understand the noble history of the profession of the law," and "to realise that without a bar trained in the tradition of courage and loyaity our constitutional theories of individual liberty would cease to be a living reality." He was much impressed by the experience of countries with constitutions and bills of rights not unlike our own where liberty was lost because they had no "bar with sufficient courage and independence to establish those rights by a brave assertion of the writs of habeas corpus and certiorari," and he came to feel strongly that every "American lawyer should regard himself as a potential officer of his government and a defender of its laws and constitution," for "if the time should ever come when this tradition had faded out and the members of the bar had become merely the servants of business, the future of our liberties would be gloomy indeed."

As as lawyer, Stimson brought to public office the special qualities that characterize the "professional man"; qualities that distinguish him from the "organization man" whose metier is "pure" administration. They are qualities extraordinarily valuable

in a public servant, yet increasingly difficult to find in this age of giant organizations when it is common practice to fill high government poets with men whose careers have been the management of large private organizations. There is always a dauger that private organizational loyalties may consciously or unsconsciously influence such men in their public work; that they may in a sense think of themselves as amabassadors from the private to the public area. Stimson, who had a law practice awaiting him after each venture into public life, was bound by no conflicting loyalties. He could and did bring total dedication to every public task

He had the professional man's respect for technical expertise; this led him to take infinite pains collecting able men to assist him whenever he took an a new post. He did not glibly assume that all it takes to improve an organization is to put a capable administrator at its head who will then issue orders that will make it "efficient." Nor did he believe in blind obedience to commands emanating from superiors on the administrative totem pole; he had the professional man's habit of acting upon his own con-sidered judgment and of according other professionals the same right. Of his service in World War II, Robert H. Ferrell wrote that "no few words or easy statement can indicate the labor that produced an American Army and sent it over the world. Stimson's contribution was to put brains at the center of the War Department, to create a situation in which men of intelligence and knowledge could work together without feeling that whatever they did would be cancelled by some ignoramus higher up the chain of com-Finally, Stimson had the professional man's commitment to a personal code of ethics. Nobody believed more strongly than he in a cabinet member's loyalty to his President but he never hesitated to stand up to a presidential action he thought wrong. A notable example was his insistence in opposing Franklin D. Roosevelt's approval of the Morgenthau Plan which would have stripped Germany of her industrial plant and turned her into an agricultural country.

The services public servants in high appointive office are expected to render the nation are not unlike the services a competent and responsible professional man renders his client. Thus, it is not surprising that the qualities Stimson possessed as a professional man should have made him an outstanding public servant. He was, as his blographer Eiting E. Morison wrote, "a forthright gentleman, a great trial lawyer, a courageous soldier, a dedicated public servant, a stateman who would live in grateful hearts."

Respectfully,

H. G. RICKOVER.

The Honorable William S. Moorhead, U.S. House of Representatives.

Homebuilding Industry Slump

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1966

Mr. PELLY. Mr. Speaker, due to ill-advised Johnson administration policies interest rates are the highest in 40 years. As a result the homebuilding and selling industry faces a major crisis which adversely affects millions of Americans. Absence of mortgage money has resulted in the building permit rate dropping 18 percent as against a year ago, and ap-

plications for FHA-insured mortgage loans on existing homes are down 34 per-

Newly married couples are unable to buy homes. Families who need to sell their houses cannot find buyers. Builders and workers in the home construction and related industry are suffering from the slump. The Pacific Northwest lumber industry is hurt by this building recession.

The problem is that the rising demand for credit by the Federal Government and business has siphoned off funds from industries such as home financing. Meanwhile, plant and inventory expansion continues at a record pace as a hedge against the inflationary cost increase spiral.

Mr. Speaker, the only remedy offered by the administration's low-interest advocates has been a statutory interest rate ceiling over time deposits in banks and savings and loan associations. The Treasury Department according to the press opposes such a 4.5-percent limitation on interest rates.

The suggestions of the House Republican Policy Committee, of which I am a member, to meet the crisis consist of several stern measures:

First. Slash nondefense, nonessential domestic spending. Not just in regard to appropriations as the President has urged, but also with respect to new program authorizations which trigger the appropriations process.

Second. Reduce point discounts on FHA and VA home financing through administrative adjustments of rates to more realistic levels. Five and six point discounts—\$1,500 on a \$25,000 home mortgage—are stifling home financing and wiping out personal savings.

Third. Suspend any further issues of FNMA participation sales other than for VA and FHA pooled housing mortgages. When the participation sales bill was being debated, we warned that this multibilion-dollar budgetary gimmick would place severe strains on the private credit market and push up interest rates to record levels. Experience with the program has fully confirmed our fears.

Fourth. Enact the Republican-initiated proposal to grant FNMA additional borrowing authority in a prudent and legal manner.

Fifth. Remove FNMA's \$15,000 administrative limitation on purchase of mortgages under its secondary market operations.

Sixth. Appoint an emergency Presidential factfinding committee on the homebuilding crisis to report its findings in sufficient time for congressional consideration prior to adjournment of the 89th Congress, and prior to the November election.

Mr, Speaker, the main cause of the stringency in money for loans is the swollen budget of the President and the excessive spending programs advocated by his administration.

All the while some of us in Congress have been urging drastic cuts in nonessential Government spending.

Administration policies caused this money crisis. However, Mr. Speaker, we of the minority stand ready and willing to support sound remedies. Home build-

ing and selling is the second largest industry in the country. It is vital to the economy that immediate steps be taken, such as those I have mentioned, to curb inflation and ease money for loans to homeowners.

Student Response to Adult Basic Education Act in Connecticut, 1965-66

EXTENSION OF REMARKS

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1966

Mr. IRWIN. Mr. Speaker, I should like to bring to my colleagues' attention several humble statements of gratitude and expectation by persons who have been participating in Connecticut's adult basic education program. It is encouraging to find this response which can be directly attributed to the opportunities offered by title IIb of the Economic Opportunity Act of 1964. The statements collected by Mr. James Dorsey, consultant for adult basic education in Connecticut, follow:

STUDENT RESPONSE TO ADULT BASIC EDUCATION IN CONNECTICUT 1965-66

"The reason I am going to nite school is because of more learning. The more learning is more gain in higher salaries, better living conditions, easier way of life. It helps in easier understanding of human relations with the moderate people. It takes the worry out of life."—Middletown.

"I been blind for many year. When you can not read you are blind. I been fight for an education for long time."—Leo Mertis, Middletown.

"I really like adult school and you ask me about my opinion about it. It is a gre thing for anybody like myself who did not have the opportunity and now at the age of 46 years of age, coming up in years, whenever I apply for a job, the first thing thay will say to me is 'Mr. Daniels, how far did you go in school', and I will say the 4th grade, that I would be willing to work, and they would not even listen to me, they will 'you don't have the education, and you would at least have to have a high school education for the job'. Even at the plant where I am employed, even if I bid on a job, with my background, I can't get the je But a person like me or any grown up should be compelled to go and get the education Just like the cildren when their parents tel them to do something, but an adult does have to go if they don't want to, but the main reason is that anyone in the U.S.A. can see that someone can come from an other country and get a better job as an American, and that is my reason why I am trying and while I like the adult school, it is one of the best things in the U.S.A."-Edward Daniels, Ansonia.

"I have always had a great yearning to learn and I wanted very much to profit all I could from my school years—Unfortunately, adverse circumstances interrupted my studies a few times and finally needed it all in my first year of high school. When I came to this country, I went back to school, this time to learn to speak and understand the English and to read as well as write it, but the English grammar, its vocabulary and many rules were all unknown to me and was American History, the English explanation of mathematics, etc.—so, I really well-

come the opportunity the Adult Program offered me. We have excellent teachers who seem to make learning easy and surely make it very interesting! My gratitude goes to our teachers and all others responsible for this

percent and chance."—[No signature.]
"Ire second chance."—[No signature.]
"I want to get a good job. My class is interesting. I learn many things that help me. I come from Poland with my family. I like United States of America. God Bless America."—Jermie Plonowski, Stamford.
"I have enrolled in Adult Basic Education

because I know I didn't have a good educa-tion as a child, and now I have the oppor-tunity to improve my education. To acquire more knowledge, most of all one never has enough education and you learn something new every day because education goes on fornew every day because education goes on for-ever. This class has been of value to me. I've learned a little more and I know a little more than when I first started so if and when I'd like to go further in my educa-tion."—Josephine Kazinur, Middletown.
"I am taking this course because I don't have learning I should have. I have four children and three of them is in school and when they come home with a problem.

and when they come home with a problem I can't help them at all."—Willie C. Preston, Stamford.

"I enrolled in Adult Education because I got tired of not being able to communicate with people, both in writing and speaking. And also to be able to improve in my job at work. This class has improved my mental outlook on life in the short time I have been going. I only wish I had started years ago, but I intend to continue on. It's just too had that more people like myself stay at home and just think about going to school."—Antone Medeiros, Middletown.
"I will like to learn English to continue

advance courses and to become a nurse in the future. I will like know better the cus-tems of the American people."—Aniporo Gutlerrez, Stamford..

"I enrolled in the Adult Basic Education Program to improve my English. I am at present working at A. H. Prison, Inc. as an exchange student in horticulture. I'll stay 18 months in the United States and then return to West-Germany. The evening classes helped me to learn better English, so that I'm able to read trade papers and newspapers.
For my studies in the horticulture field it is necessary to understand English. Besides is necessary to understand English. Besides this is the English language very important when you travel. No matter where you go, the first question is always 'do you speak English'? I love to travel and this is another reason why I wanted to improve my English. esides the spoken word, I want to learn to write so that I can write to all my friends in the years to come."—Lothar Korfge, Mid-

"I come for help here. And I have received very good help so far—thank you."— Mrs. Hazel C. Lewis, Stamford.

I have the desire to become a beauty op-"I have the desire to become a beauty op-stator and you have to complete eight years of grade school, so my social worker in-structed ms to contact this school to see if "is possible to finish my course and enter by July of '66 which I only had two months to finish during that time."—Virginia Felton, New Haven.

"When I decided that I would go back to school I didn't think that I would continue so long as I did. Now I can read and write much better than before. I like my teacher tery much. He is a wonderful teacher. Most of all he trys to help each one of us to understand our work."—James Antrum, Sey-

"I came to Evening School because I want to learn to speak, write and read English. I live in Bridgeport and I must speak English

well. I like to live in a free country. At Evening School, I have a good time. Each lesson helps me to speak and understand the English language. I must listen to the radios and look at television, and understand what is going on. America is a nation of many people and they speak English. I was re-cently ordained a priest. In America, living is good, because people are good."—John Borowik, Bridgeport.

"I enrolled in Adult Basic Education because I want to learn the laws of U.S.A. want to learn to write and read English better. When I learn more English I will try to get a better job. I wish to learn all about the U.S. The class has been of value to me because I have learned to read, write and speak English. I like school very much."—Jose Martins, Bridgeport.

"Because since I am living in America I would like to learn the English language. Another resson I enrolled is because I have three intelligent sons in school who urged me to enroll. The oldest will graduate this Monday from Notre Dame High School, the second oldest is a member of the National Honor Society at Notre Dame High School and the third is in Grammar School. If I learned English I would make a good citizen of the United States, and would be a better speaker of the English. I have very much enjoyed coming to Night School, and will continue to do so as far as I am able to."—Ontonui Ramadanovic, Bridgeport.

"I come to Night School to learn how to read and write English. And if I live long enough I will learn it because I loved it. The English language is based on Latin. Clear pure Latin. And I enjoy is beautiful. I think is the early Christian language. To me is treasure. I am a naturalized citizen and I enjoy attending Evening School."— Arthur, Goda, Bridgeport.

"I have been in the United States only one year. Night School has helped me to understand and speak English well enough so that I am make myself understand. able to carry on a conversation easily. When I started school I could not shop easily in the stores. Now I am able to express myself and tell the clerk exactly what I want."-Chrysoula Vlamis, Bridgeport.

"I came to Evening School because I want to learn about the English language and about the American History. I like a Democracy and freedom of speech, freedom of religion, freedom of the press and freedom of search. Good English is important in my every day life. I need good English at my job. This country helps me to have freedom and happiness."—Tadeusl Bednarczyk, Bridgeport.

"Because I am curious about all things, I love to know more and learn about them.
Teacher, test, homework, give me the necesary push I need to work at it, which I do not have otherwise. Also, I had no education in English grammar, history, etc. This tion in English grammar, history, etc. This is a very important reason. I also have a boy in the 5th grade who needs my help at times and I want to be able to do so. He will probably go to college—so I feel, the more I know, the better I will understand him and his problems."—Laurette R. Jancarski, Middletown.

"I enrolled at night school because I want to learn to get my driver's license and was able to do so with the help of my schooling. I want to be able to pick up the newspaper I want to be sole to pick up the newspaper and read it. My schooling also helped maget a job. I have learned to write many things that I was not able to do before. I feel as though I learned more in my first year because I had a lot more help at home."—Violet Gastomski, Stamford.

Federal Maritime Administration

EXTENSION OF REMARKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. BOB WILSON. Mr. Speaker, I am today introducing a bill, as an amend-ment to the Merchant Marine Act of 1936, to create a Federal Maritime Administration as an entirely separate and independent agency, to be administered by a bipartisan Board of three members to be appointed by the President, subject to Senate confirmation, each of whom shall serve staggered 4-year terms and not more than two of whom shall belong to the same political party.

This action is necessary if we are to salvage and restore the American mer-chant marine as a vital adjunct of the national economy and an indispensable element of naval strength.

The merchant marine has become the stepchild of the Federal Government and subject to Executive whim. In two world wars we have shown that we can outbuild and outship any other nation in the world. After each war, we have put our ships into mothballs or sold them on a giveaway basis to supposedly friendly foreign nations, until today, as in the past, there is danger that the American flag will be worsted in world trade.

Between the wars, our merchant ma-rine is passed around and parceled out between various Government agencies, and it is now proposed to put it under the new Department of Transportation to take its chances with the wreck of the New Haven Railroad and with the airlines, barges, and buslines.

I submit, Mr. Speaker, that experience shows that the only assurance that our merchant marine will not be sacrificed to the whim of the diplomatic cooky-pushers and bureaucrats or to the convenience of competing forms of transportation, will be to place it once and for all under an agency established by Congress for the express purpose of maintaining the American merchant fleet, manned by American sailors and flying the American flag in service on the high seas.

The Russians make no effort to conceal their purpose to enlarge their merchant shipping and to keep it under their national control. In this connection, with unanimous consent, I adduce an article by Mark Hopkins published in the Staten Island Sunday Advance of July 10. This article is titled "Soviets Expand Cargo Fleet, May Surpass United States by 1970." It points out that since 1951, the Soviet Union has moved from eighth to fourth place among the world's merchant marine fleets, with an esti-mated 1,200 Russian tankers and freighters now plying international trade routes. By 1970 the Russians may nearly double this figure.

In ironic contrast to this picture of Russian expansion on the high seas is the

spectacle of American liberty ships built in this country during the war and sold at a cheap price to so-called friendly nations after the war, being used in free world trade with our Communist enemies in Cuba and North Vietnam. The State Department's tissue-paper blacklist consists of a slap on the wrist for vessels engaged in such trade. They may not touch at our ports unless the owner promises not to do it again with that particular vessel. Authority for these statements is an article which asks "How Effective Is Our Blacklist of Ships Doing Business with Cuba and North Vietnam?" written by Helen Delich Bentley, maritime editor of the Baltimore Sun, and published in the July 1966 issue of Navy, the magazine of Sea Power, an official publication of the Navy League of the United States.

With unanimous consent I introduce a copy of this disturbing article. What a travesty. Here are the very ships we sold at giveaway prices to our wartime Allies, in order to help them get their merchant marines going after the war, being used to violate the American economic quarantine of Communist aggression in Cuba on our doorstep and to supply the Vietcong halfway around the world. And here is Russia grimly pressing ahead with plans to double her merchant fleet, while the only use we can find for our mothballed Victory ships is in time of such brushfire wars as Korea and Vietnam.

Mr. Speaker, all history and all human experience have shown that the nation which is weak at sea is weak everywhere, and that the foundation of national prosperity is the possession of a merchant marine which can carry our goods to market and buy what we need abroad without asking permission of foreign competitors. The American merchant marine has been that to us in the past, as it has been the steadfast partner of our naval power and our economic growth. It can—it must—be preserved, maintained, and expanded. The purpose of my bill is to do just that.

[From the Staten Island Sunday Advance, July 10, 1966]

SOVIETS EXPAND CARGO PLEET, MAY SURPASS UNITED STATES BY 1970

(By Mark Hopkins, special to the Advance)
For the first time in two-and-a-half centuries Russia is striving to become a world

sea power.

The difference between Ozar Peter the Great's quest and that of the nuclear age Soviet leadership, however, is that Russia is

likely to succeed this time.
Since 1951, the Soviet Union has moved from eighth to fourth place among the world's merchant marine fleets, ranked by number of ships.
An estimated 1,260 Soviet tankers and

An estimated 1,260 Soviet tankers and freighters may ply international trade routes. By 1970, the Soviet Union may nearly double this figure.

According to the American Merchant Marine Institute, which is both alarmed at the rapid growth of the Soviet merchant fleet and is interested in expanding the American, the Soviet Union would then be a greater maritime power than the United States.

Soviet naval power too, is gaining respect. Recently, Sen. STWART SYMINGTON, D-Mo. asserted that Soviet cruisers and submarines, both armed with nuclear missiles, were becoming increasingly prevalent in the Mediterranean Sea and represented a threat to Europe.

The Soviet submarine fleet, now estimated at 400 craft, has attracted special attention.

Last April, Marshal Rodion Malinovsky, Soviet defense minister, revealed that a squadron of nuclear powered submarines had just completed a six-week, world-circling trip.

His report emphasized the commonplace that Soviet nuclear submarines, as well as American, can roam the oceans as missile launching stations.

One or more Soviet nuclear submarines reportedly are stationed 1,000 miles off both the Atlantic and Pacific coasts of the United States full time.

The Soviet Union is believed to have 40 to 45 nuclear-powered underseas warships, compared with 62 Americans. The Institute of Strategic Studies in London, which makes the lower estimate, reported in November that the Soviet Union had added 10 nuclear submarines during 1965.

In its nuclear-powered underseas fleet the Soviet Union has 25 missile firing submarines. These are supplemented by 75 conventionally powered craft that also fire missiles.

The remainder of the submarine fleet consists of attack ships, for use against surface craft of submarines.

Other ships in the 450,000 man Soviet navy include 20 cruisers and about 270 escort craft. The American navy has 31 cruisers, 591 escort vessels and 38 aircraft carriers, of which the Soviet Union has none.

Although Soviet naval power is the more glamorous and immediate topic, the merchant marine has greater long range importance in the Soviet drive to be a world sea power.

Its maritime growth is a signal event. For centuries, the Russian state was essentially a landlocked giant situated too far north for easy access to ice-free waters.

A respected school of western historians argues that behind Russian expansion into the south, toward the Black Sea and northwest, toward the Baltic, and finally to the far east, toward the Pacific Ocean, was a yearning for warm water ports.

Soviet merchant ships now sall from three major ports—Odessa on the Black Sea, Leningrad on the Gulf of Finland, and Vladivostok on the Pacific Coast, and from several smaller ones. Even Odessa, located in a warm zone, must be kept open by ice breakers part of the year.

The growth of the Soviet merchant fleet since World War II was slow until the mid-1950's. There, in a concentrated program of shipbuilding and buying, the fleet grew impressively to the present 1,260 vessels of 8.6-million tons deadweight—a measure of cargo capacity.

By 1970, the Sovet Union may have 2,000 merchant ships, according to the Merchant Marine Institute's estimate, totaling 16-million tons.

The Soviet Union is expanding its own shipbulding yards, which currently are producing 145 tankers and freighters. However, it also has awarded lucrative contracts to foreign yards, particularly Japan's and these are constructing 319 ships for the Soviet Union.

At present more merchant ships—24 per cent of the total under construction or on order world-wide—are being added to the Soviet fleet than to any commercial fleet in the world.

To some in the West, the Soviet maritime growth at this rate portends Soviet domination of the high seas. Rep. Paul, ROGERS, D-Fia., who has campaigned for a larger American merchant marine proclaims on the House floor last year.

"The Soviet Union may soon be able to manipulate world ocean freight rates at will, and through a superiority in terms of numbers of ships, she may be well on the road to economic domination of the world."

Others in the West are less disturbed. Besides Japan, shipyards in Italy, France, Finland and Denmark have accepted orders to

construct merchant vessels for the Soviet Union.

The Soviet minister of the merchant marine, Victor Bakayev, acknowledged in an interview with a Soviet newspaper correspondent that the Soviet merchant fleet would have a significant effect on world shipping.

He contended, however, that the Soviet Union hoped simply to meet its own shipping needs, "not to seize control of international shipping."

The Soviet Union argues that it has had to pay out foreign exchange to foreign shippers to transport increasingly large Soviet exports and imports. With its own merchant fleet, it can reduce this expenditure and make money.

Its growing passenger fleet—now more than 50 liners—is also a means of income. The most recent addition was the Alexander Pushkin, which opened direct Soviet-North American passenger service in April when it pulled into Montreal.

Whatever its motivation, the Soviet Union is churning into the ranks of the world's maritime powers.

HOW EFFECTIVE IS OUR BLACKLIST OF SHIPS DOING BUSINESS WITH CUBA AND NORTH VIET NAM?—NOT VERY, AUTHOR CON-CLUDES—BRITISH ARE CHIEF OFFENDERS

(By Helen Delich Bentley)

While the United States' Ambassador to the United Nations fought vigorously for pasage by the Security Council of the toughest economic sanctions ever voted by the U.N. in order to support Great Britain's standagainst Rhodesia's defiant government, more British-flag ships were being added to America's blacklist for calling both at Cuba and North Viet Nam.

The addition of the British vessels to these blacklists—inaugurated by the United States against two countries it considers real enemies—is nothing unusual, because ships flying the Union Jack head both lists.

But it points up the ironic—almost ridiculous—situation of the United States as far as international shipping is concerned.

Perhaps this was best illustrated in a cartoon printed recently in a Western newspaper. The drawing depicts a British nay captain on the bridge of his frigate looking through a telescope. On a nearby chart is marked a big "success" for having diverted a Greek-flag tanker bound for Mozambique to deliver oil to Rhodesia. Passing directly in front of the Navy vessel is a British-flag tanker laden with Soviet MIGS on its deck and oil in its holds with the words "North Viet Nam" emblazoned on its sides.

"This one can go because it is not heading to our enemy," remarked the British captain." Ambassador Arthur Goldberg led a Security Council sit-in until the economic sanctions were voted. Those sanctions call for Britain "to employ all mensures including armed force" to crush the Rhodesian regime of Premier Ian Smith. Rhodesia is a (former) colony of Great Britain in a continent somewhat removed from the United King-

Compare this series of moves to Great Britain's response when the United States called upon the countries of the Free World to stop their ships from going to Cuba, which had become Communist-dominated and armed with Russian missiles only 90 miles from the shores of the United States Britain's Government accused this country of trying to control the seas and declared Uncle Sam was interfering with the freedom of the seas.

The United Kingdom stated it would not attempt to halt its shipowners from serving Cuba. It obviously has not, since more British ships are regularly being added to the blacklist. Of the 251 Free World and Polish

¹ Of course, British ships are not delivering MIGs to North Viet Nam. The cartoonist exaggerated to make his point.

vessels now on the official Cuban blacklist, 72 are British.

COULDN'T CARE LESS

But even more significant is the fact that British-flag ships have made 462 trips or nearly 45 per cent of the 1,157 voyages made to Cuba by Free World and Polish vessels since the United States inaugurated its blacklist on January 1, 1963. Of the 10 ships on the North Viet Nam

blacklist—which became effective as of January 25, 1966, months after the buildup in South Viet Nam was announced by President Johnson—seven are British Great Britain has used the lame excuse that it cannot control the ships in Hong Kong. However, Greece did strip one of its tankers of its registry when it appeared in Beira

with oil for Rhodesia.

When the United States protested Great Britain's sale of buses and other equipment to Cuba, the U.K. defied the protest and proceeded with the sale and shipment. Therefore, when it states that it cannot control the Hong Kong ships, there is a serious question whether Great Britain wants to.

Greece's stripping of the tanker's registry is another note of irony in the international shipping picture. Although the Greek Gov-ernment has issued Royal Decrees forbidding any of its ships to call at Cuba or North Viet Nam, Greek-flag vessels still are going to both countries. Some 35 of the ships on time Cuban blacklist belong to Greece, while two of the 10 going to North Viet Nam also are registered in that Mediterranean country.

State

It would appear that the only reason the Greek Government selzed the registry of the Joanna V is because it had become an international issue with blazing headlines in every country in the world.

In January, the State Department reported that Free World ships trading with North Viet Nam had declined from 34 per month in 1964 to 13 per month in the latter part of 1965. The blacklist became effective as of January 25, 1966, and the number may have declined even further, although no other figures have been issued.

However, it has been said on Capitol Hill that many of the shipe transporting goods to North Viet Nam no longer are going directly there, but discharging their cargoes in Hong Kong for transshipment to the Communist

country.
Thomas W. Gleason, president of the International Longshoremen's Association (AFL-CIO), who has been working with United States Government officials to break the logjam in shipping in the Republic of Vietnam ports, told the House Merchant Marine and Fisheries Committee that he has viewed English, Panamanian, Greek and other ships in Hong Kong, "supposedly bringing in cargo for Hong Kong." "But this stuff," he continued, "would be

transferred into the small coastal vessels operated either by Chinamen or a few North Vietnamese or Crown Colony ships, and brought down into Halphong for final discharge there."

Soviet Union ships also are running from Hong Kong to Haiphong, according to Lloyd's Weekly Shipping Index, Although the United States' blacklist as

such is considered weak and somewhat inconsequential in this country, there is a definite principle which our friends are defying. It is considered weak because the only thing the blacklist does is prevent the ships listed thereon from calling at United States ports to pick up Government-financed

However, these blacklisted ships can: 1. Pick up commercial cargoes in American ports, if the longshoremen will load them. 2. Pick up United States Government-financed (through counterpart funds) cargoes in foreign ports.

And then, of course, when the owner feels that his trips to Cuba or North Viet Nam are not as remunerative as they might be if he picks up U.S. aid cargo in American ports, all he has to do is sign a pledge that he'll never send that ship again to that area. Ninety-one vessels—including 39 British and 25 Greek-have been freed from the Cuba blacklist in this manner.

The International Longshoremen's Association (AFL-CIO) succeeded in imposing a more stringent boycott of ships serving Cuba for two years after the Cuban crisis, but it has waned somewhat because of the difficulty in keeping track of the ships.

UNION SHOWS WAY

But the ILA refused to handle the ships of any owner who might have had even a single ship calling at Cuba. The union boy-cott went into effect three months before the U.S. government did anything officially.

Likewise in the case of North Viet Nam, the maritime unions began pressing to boycott or bar ships from the United States long before any official action was taken. Various Congressmen picked up their complaints and introduced legislation which would do everything from preventing such ships from ever calling at the United States again to stopping any ship from any country which had a single vessel going to North Viet Nam from calling in an American port. These bills are languishing on Capitol Hill and probably will never see daylight.

Even when Congress passed an amend-ment to the foreign aid bill that prevented ment to the foreign and bill that prevented doling out any money to any nation whose ships were calling at Cuba, the Executive Department chose to ignore that order. When the State Department first decided to lift the blacklist from the ships of owners

who "took the pledge" not to send the ship into Cuba again (a similar pledge is available in the instance of North Viet Nam), the longshoremen refused to go along and clear

The test case was the SS Tuise Hills, an American-built Liberty sold after the war to help rehabilitate the Greek merchant marine and subsequently switched to British registry by the Mavroleon Kulukundis interests

when they headquartered in London.
The Tulse Hills arrived in Baltimore shortly after the agreement was signed between Basil Mavroleon—whose combine had the most ships in the Cuban trade—and the State De-partment. Baltimore longshoremen—all members of the International Longshoremen's Association (AFL-CIO)—refused to load the grain aboard the vessel. The owners took the dockworkers to court and went up through the Fourth Circuit Court of Appeals, which concurred that no force could

peals, which concurred that no force could make an individual load a particular vessel or do a special job if he did not want to.

After 137 days of waiting the Tulse Hills departed from Baltimore without any fan-fare and without its cargo. The dockworkers again proved that their "blacklist" was more potent than the Government's.

In addition to the Greek and British ships on the Cuba blacklist, there are 57 Lebanese, 18 Polish, 18 Cypriot, 14 Italian, 9 Yugoslav, 7 French, 5 Moroccan, 5 Maltese, 4 Finnish, 2 Dutch, 2 Norwegian, 2 Swedish, and one

from Monaco.

A number of these have since changed their registry by the same owner or been sold to another owner and registered in another country. However, their new identity also is carried on the blacklist published regularly by the Maritime Administration. As a want the current list includes such country. a result, the current list includes such countries as South Africa, Panama, Guinea, Haiti, Liberia and Nationalist China

MANY ARE U.S.-BUILT

There are many ironies in this blacklist-boycott picture. For instance, a substantial portion of the ships on the list are former Liberty vessels built in the United States dur-

ing World War II and sold to the friendly nations at a cheap price to help them get their merchant marines going after the war. Both Panama and Liberia issued proclamations that no ships in their registry could serve Cuba and yet six have been transferred to those countries and now are appearing on the list.

A number of the ships registered in both Lebanon and Cyprus are owned by Greeks who are somewhat concerned that their own nation might seize their registries, so they charged over first. Lebanon and Cyprus can both be considered "flags of convenience." along with Panama, Liberia, and Honduras, for shipowners, although it is believed that no American shipowners have transferred any vessels to the Middle East area.

Some American shipping circles have expressed grave concern over the fact that the Security Council upheld London's position on the Rhodesian boycott so strongly. They note that morality of Britain's dispute with Rhodesia is one thing, but the morality of the kind of blockade-enforced boycott is another.

What would Great Britain's reaction be, they ask, if the United States should seek a similar boycott against both Cuba and North Viet Nam—a country with which American troops are at war and losing their lives?

DANGEROUS PRECEDENT

It also is noted that perhaps a dangerous precedent has been set and they sak what would happen if the situation should be rewould happen it the studied should be re-versed: A Communist-oriented power de-clided to apply heavy pressure on a neighbor friendly to the West, declares a boycott and then goes not to the Security Council but to the General Assembly of the United Nations for approval of stronger measures, including a blockade. The conclusion is that western maritime nations may find themselves in a most embarrassing position.

And the big question is whether Great Britain, with one of the largest mercantile fleets afloat, would defy the blockade in the same manner it has the blacklists of the United States?

University of California, Los Angeles, Gives Honorary Degree of Doctor of Laws to Eric Wyndham White

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. CURTIS. Mr. Speaker, Dr. Eric Wyndham White is truly one of the great international civil servants of this generation. I have seen him in action since the early 1950's when I first went to Geneva and the GATT negotiations. During recent years as a member of the U.S. delegation for trade negotiations I have had the opportunity to work closely with him and to admire his fairness, scholarship, and good judgment.

On June 9, 1966, the University of California, Los Angeles, gave to Eric Wyndham White an honorable degree of doctor of laws. The following is the text of the citation which was delivered when the degree was conferred:

Distinguished lawyer, economist and Di-rector-General of the General Agreement on Tariffs and Trade—Eric Wyndham White has been instrumental in developing the princi-

pal organisation for trade. . . . Under his guidance some seventy countries have accepted a code of practical rules for fair trading in international commerce and have cooperated on a global basis in lowering trade barriers. For his service to mankind . . . we salute him and confer upon him the University of California's highest honour.

Matthew Henson

EXTENSION OF REMARKS

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. POWEIL. Mr. Speaker, in the Evening Star of July 28, 1966, the columnist, "The Rambler," wrote an excellent article about one of the authentic

American heroes, Matthew Henson.
This distinguished explorer was with
Admiral Peary when the latter discovered the North Pole in 1909. Many historians have even credited Mr. Henson with the actual discovery of the North

All of his life, Matthew Henson was a member of the church where I have pastored for 36 years, Abyssinian Baptist Church. Not only was he a devoted member, but gave generously of his time to the activities of Abyssinian.

His widow, Mrs. Henson, is still an active member of Abyssinian and her work is a continuing tribute to this great

In addition to the outstanding tribute the distinguished gentleman from Maryland, Senator Joseph Typings, would pay him by introducing a bill to authorize Henson's burial in Arlington Cemetery, I am hopeful that a bill can be introduced to provide a small pension for Mrs. Henson in honor of the glory her husband helped to bring to the United States of America.

I am placing in the RECORD now the full column by "The Rambler" on Matthew Henson.

THE RAMBLER DISCOVERS A HERO

(By John McKelway)

Who was Matthew A. Henson?

He was born on Aug. 8, 1866, on a farm not far from Washington at a place called Nanjemoy, in Charles County. The farm was the site of a former slave market.

Not much is known about his boyhood. But at the age of 11, Henson ran away from home and made his way to Washington.

He stayed here with an aunt and worked in a restaurant she operated. He went to a school known as the N Street Elementary School, but his attendance was irregular.

Then, at the age of 13, he left his home again and walked all the way to Baltimore. He apparently was able to find some odd jobs on the waterfront and later picked up a job as a cabin boy on a schooner bound for China. The captain, a man named Childs, taught the youngster some mathematics and navigation.

Once back in the United States, he returned to Washington and this time found employment at a hat shop on Pennsylvania Avenue as a porter.

There must have been something unusual in his manner, the way he walked or talked or smiled. Something.

At any rate, a customer, the then Navy Lt. Robert E. Peary, struck up a friendahip with the young Negro. Soon, Henson was on the high seas again, this time accompanying Peary on a canal surveying trip to Nicaragua. By 1909, Peary was a commander and on

April 6 of that year he entered the following note in a log book:

"90 N. Lat., North Pole . . . Arrived here today, 27 marches from Cape Columbia. I have with me 5 men, Matthew Henson, colored, Ootah, Eginwah, Seegloo and Oookeah, Eskimos; 5 sledges and 38 dogs.

"The expedition under my command has succeeded in reaching the Pole . . . for the honor and prestige of the United States of America."

And he reportedly said "This scene my eyes will never see again. Plant the Stars and Stripes over there, Matt . . . at the North Pole."

The more one reads of Henson, the more remarkable he seems. He accompanied Peary on seven expeditions to the Arctic and Polar regions and the explorer once said of him, "He is my most valuable companion. I could not get along without him."

While Peary had difficulty communicating with the Eskimos, Henson could speak the language fluently. He also became expert in building sleds, handling the huskies that pulled the men and equipment and in building igloos.

Without Henson, it appears Peary might never have made it. Henson once told a reporter:

"The morning of April 6th I found we were in the middle of hummock ice. I calculated about how far I had come, and I said to myself, 'If I'm not on the Pole, I've crossed it, so I don't have to go no further . . .

"Commander Peary was 45 minutes behind. He came up to us as we were building an igloo and he says, 'Well, my boy, how many miles have we made today?" 'Too many, Commander' I said, 'I think we crossed the Pole. So the Commander got out his notebook and figured a bit and he says, 'I guess you're right."

And he added, "The Commander was never a well man from the minute after he'd finished taking those observations at the Pole. It seemed to be an effort for him to speak.

"All his strength had been concentrated on getting to the Pole. Once he got there his strength gave out."

Henson died in 1955. He had done some lecturing after the trip to the Pole. But he was practically broke until he got a job in the Collector of Customs Office in New York. He retired in 1936.

Somewhat belatedly, he received a naval medal in 1945 and then, in 1950, was honored at the Pentagon on the 41st anniversary of the Pole conquest. For the last 16 years of his life, he lived in New York on an \$85-amounth government pension. He died at the age of 88.

Just the other day, Sen. JOSEPH TYDINGS, D-Md., introduced a bill to permit Henson to be buried in Arlington Cemetery. He is buried in New York now.

Under terms of the legislation, Henson would be given a hero's burial.

The Uses of Water

EXTENSION OF REMARKS

HON. CHARLES P. FARNSLEY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. FARNSLEY. Mr. Speaker, what may seem to be relatively unimportant

measures can often lead to highly important benefits—and at the same time head off unwanted events.

The Washington Evening Star reports one such measure. It was taken by President Johnson in a phone call which turned on hydrant sprinklers, lighted up swimming pools at night, and provided portable pools for children of the District of Columbia to play in.

The Star's editorial on what it refers to as "an impressive demonstration of presidential power properly applied" is herewith offered for the RECORD:

THE USES OF WATER

Water is, most of all, for drinking. Second, it is for children to play in. Then come 1001 other uses, such as washing, cooking, putting out fires and holding up boats.

The recreational importance of water was officially recognized this week in Washington by no less a person than President Lyndon B. Johnson. And it has been a long time since any president has come up with a sounder decision.

The President's official position was made known in the form of a brief telephone call, expressing some displeasure over the leisurely pace at which the District was proceeding with the program to provide swimming facilities and, especially, sprinkler caps for fire hydrants in crowded downtown residential areas.

As he hung up, bales of red tape that had kept the program hog-tied for months suddenly vanished. High-powered federal and city officials huddled, and by mid-afternoon the program was well off the ground. The number of sprinklers nearly doubled; lights were ordered so that the city's pools could say open after dark; more than a dozen portable pools became available.

It was an impressive demonstration of presidential power properly applied. The city's youths need and deserve all the swimming facilities that can possibly be provided. And the water-saving hydrant sprinklers, which convert hot, dirty streets into legitimate playgrounds, are clearly a good investment. Better than the steel helmets some other cities have provided to protect policemen who swarm in to turn off illegally gushing hydrants.

Thanks to that presidential phone call. Washington's summer will be less hot and less long than it might otherwise have been.

The Spiraling Costs of Higher Education

EXTENSION OF REMARKS

HON. ROY H. McVICKER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1966

Mr. McVICKER. Mr. Speaker, the cost of education is hitting ever harder at the middle-income family today. The people who are willing to sacrifice to give their children a leg up in the world through education are being called upon to make ever greater sacrifices. The middle-income heart of the tax base in our Nation cannot take much more pressure, as the following editorial from the Denver Post aptly shows, through its comparison of the costs of education some years ago and now.

Mr. Speaker, I would also like to call this body's attention once more to my bill, H.R. 16012, which would amend the ĥ

Higher Education Act of 1965 and the National Vocational Student Loan Insurance Act of 1965 to raise the family income limitation with respect to Federal payments to reduce interest costs on insured student loans.

The editorial follows:

[From the Denver (Colo.) Post, July 26, 1966] WE LIVE AND WE LEARN

The high cost of learning is graying a lot of parental heads nowadays as sons and daughters come of college age. September is just around the corner.

is just around the corner.

To some extent, at least, that was true a generation ago when our current moms and dads were pre-collegians themselves, just emerging from their high school cocoons.

How much did it cost to go to college then? Some surprising answers are listed in a little publication dated March, 1938, issued by a Denver savings and loan company. A friend just happened to find this booklet in his files.

"The cost as shown in these tables is not prohibitive," the booklet states, encouragingly. "Of course the tuition at 'name' universities is comparatively costly to families of average means. But there are many universities of high scholastic standing where tuition costs are moderate."

There follows a list of U.S. universities popular with persons in Denver and vicinity, giving the "average 4-year cost" including total amounts needed for tuition, room and board and incidentals. These averages, it says, "may be accepted as a practical basis for planning:"

Arizona	\$3,300
Barnard	4, 800
Bryn Mawr or Vassar	6,000
California	2,900
Colorado Mines	2, 109
Colorado University	2, 300
Cornell	6,000
University of Denver (tuition, inci-	
dentals only)	1, 200
Harvard	5, 200
Kansas	2,800
Michigan	2,600
New Mexico	2,800
Notre Dame	3, 300
Stanford	4,800
Tulane	4,000
Wyoming	1,600
Yale	6,000

Tops on the list was \$6,000, or an average of \$1,500 a year; while a student who boarded at home could attend DU for a mere \$300 annually. And the moral pointed out to parents of 1938 was that Junior's education, should he choose DU, could be financed by putting \$5.00 a month for 10 years in a savings account paying the "current rate of 3 per cent interest, compounded semi-annually."

In that 10-year period, alas, came World War II and swept those beautiful estimates away with it.

Transit Department Bill Could Be Better

EXTENSION OF REMARKS

OF

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1966

Mr. McCLORY. Mr. Speaker, a significant editorial appeared in the July 21, 1966, issue of the Winnetka Talk, a popular weekly newspaper published in the 13th Congressional District of Illinois. The editorial contains construc-

tive comments on the proposed new Department of Transportation—including a recommendation by my colleague from Illinois [Mr. Rumsfeld] who represents the 13th District—that the new Department should include an office of aircraft noise suppression—and should have jurisdiction over urban mass transit.

The Winnetka Talk is part of the Hollister newspaper chain, which also publishes weekly newspapers that circulate in Illinois' 12th District which I have the

privilege to represent.

I commend the president, Richard L. Hollister, and publisher, David A. Rose, on this meaningful editorial. I also compliment my colleague, DONALD RUMS-FELD, for his many contributions to the measure to establish a Department of Transportation that will soon come to the House floor.

The editorial follows:

TRANSIT DEPARTMENT BILL COULD BE BETTER Barring last-minute opposition, Congress

Barring last-minute opposition, Congress soon will approve creation of a federal department of transportation to deal with the nation's increasingly complex transit problem.

The new department would in no way usurp local authority or interfere with private ownership of facilities. Instead it would permit the federal government to coordinate transportation policy.

ordinate transportation policy.

The need for co-ordination is obvious. The government's promotion and regulation of transportation now is conducted piecemeal, with each mode of transportation handled by a different agency. Some are autonomous, others are appendages of large, multioriented departments. Duties and responsibilities affecting a single form of transportation often are divided among a number of agencies.

For example, five federal agencies deal with water transportation—the Maritime Administration, the Maritime Commission, the Coast Guard, the Bureau of Customs, the Corps of Engineers, and the Interstate Commerce Commission.

Four deal with aviation—the Civil Aeronautics Board, the Federal Aviation Agency, Housing and Urban Development (aircraft noise), and the National Aeronautics and Space Administration.

The Department of Commerce is involved with high-speed rail transportation and some

aspects of automobile safety.
Yet the Interstate Commerce Commission
has authority over railroads, motor carriers,
pipelines, and certain inland water carriage

But the obvious need for a unified federal department should not blind Congress to some deficiencies of the current bill.

In their minority report, for example, Republicans point out that urban mass transit would not come under the new department's jurisdiction. Administration sponsors leave this responsibility with the Department of Housing and Urban Affairs.

To omit today's most pressing transportation problem from the jurisdiction of the new department seems extremely shortsighted. The emission would perpetuate the very splintering of transportation responsibility that the bill alms to correct.

Cong. Donald Rumspello (R-13th) also is pressing for inclusion of an office of aircraft noise suppression. We agree with the Glenview legislator that the new transportation department should assume responsibility for dealing with this problem of growing concern to suburbanites.

The bill has another serious flaw. It exempts the federal government from meeting the standards to be set up by the new department. The government is the largest single user of transportation services and facilities, and its behavior could set an example for industry.

We favor passage of the bill to create the transportation department, but it will be a better bill if the aforementioned deficiencies are corrected.

Practical Steps Needed to Better Negroes'

EXTENSION OF REMARKS

HON. SAM GIBBONS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1966

Mr. GIBBONS. Mr. Speaker, the recent wave of racial unrest and violence which has erupted in one after another of America's great cities is cause for concern for all thinking Americans.

I have heard many different remedies proposed to solve the social and economic ills which we have allowed to fester for far too long in one shameful ghetto after another.

Today, we sit on social dynamite. Nobody knows which city may be next. We need action now to eradicate the malignant sores which include over-crowding in housing, lack of adequate job skills and job opportunities, rat infestation, poor sanitation, and a host of other evils.

The Johnson administration's war on poverty has already had a significant impact upon many of these urban ghettos. But not nearly enough. In these areas, the war on poverty, and particularly the Neighborhood Youth Corps, have brought hope where there had been none. They have brought job skills and opportunities where before there was only frustrated idleness. But, again, much more must be done.

Richard Wilson, writing in the Friday, July 22 edition of the Washington Evening Star, hit the nail right on the head in a brilliant article entitled "Practical Steps Needed To Better Negroes' Lot." I hope all Members of the Congress will take the time to read it. Mr. Wilson has grasped the true meaning to the riots and violence and has pointed our steps in the right direction toward eventual solution to the problem of an intolerable slum existence which saps the vitality and weakens the moral position of this country at home and abroad.

PRACTICAL STEPS NEEDED TO BETTER NEGROES'

(By Richard Wilson)

As was foreseen earlier this year Negro rioting has again broken out in some cities. The common characteristic of these disorders is that they are confined to the areas in which Negroes are concentrated.

which Negroes are concentrated.

Casualties, for the most part, are Negro participants, bystanders, and police who are trying to control the disorders. Negroes have not yet moved out of the ghettoes to "get whitey."

Much hand-wringing and alarmist generalization attends these disorders but very little attention is given to those aspects of the problem for which there are remedies.

That is what the rioting again brings into such tragic focus. Nothing meaningful, or not very much, is being done to improve the housing and environment in which Negroes now live, and will live for many years. Not is enough being done to correct the extraordisensors.

Theorists talk of abolishing the Negro ghettoes and discuss broad concepts of social equality and a dream world of universal inwatt tht long. Or, theorists discuss the philosophical differences between non-vio-lence and "black power," and the rise of violence-prone black racist groups who comprise only a small fraction of the Negro population.

But they drag their feet in pursuit of measures for improving the environment in which Negroes live now-not 20 or 30 years from now but today, not in some intermixed community of tomorrow but in the ghettoes that will continue to exist for many years.

Recent rioting in Omaha, Neb. is a case in point. Three years ago Negroes demon-strated for more jobs. Civic-minded groups drew up articulated plans to train Negroes for jobs they could fill. The outlook was good. After the recent rioting, a check with those who had drawn up the plans of three years ago revealed that virtually nothing had been done to execute them.

Vice President HUBERT H. HUMPHRET can erhaps be forgiven for the imprudence of his recent remarks that if he had to live as so many Negroes live "with rats nibbling on my children's toes" he might "lead a mighty good revolt himself." The vice president is sometimes given to overstatement when he is exasperated, and it is clear that he is exasperated over the lack of progress in getting on with specific actions that can be taken to relieve the intolerability of life in

Some of these actions are so very simpleportable swimming pools, lighted play-grounds, transportation, entertainment entertainment centers for example. Other actions will require extensive planning and massive expenditures of federal and local funds.

A quick look at the Watts area in Los Angeles, with its unsatisfactory but relatively tolerable living conditions, causes one to wonder what could happen in the inex-pressibly worse areas of New York, Washington and Chicago. Life in some of these area is simply intolerable, the very ragged edge of existence.

These conditions make the current debate in Congress on open housing guarantees seem as if on another planet. Only a small percentage of Negroes have the resources escape from the slums into better residential neighborhoods. With or without the fed-eral open housing guarantee, they will live in slums that are growing worse and bigger by the hour.

What was true after the Watts rioting in Los Angeles a year ago is even more true today. A law library of statutes guaranteeing the right to vote, equal education, equal employment opportunity and access to all public places won't remove the rotten hearts of our cities. The true problems in the slums lie less in constitutional guarantees and moralistic principles than in improved living conditions.

The festering centers in the cities that breed crime, degradation and disorder threaten the safety and welfare of the whole community. Prompt action is imperative. means massive programs for improved education and keeping Negro children in school whether integrated or non-integrated, massive efforts to restore the stability of Negro family life. Most of all, and immediately, it means physical improvement of the Negro areas, relief from overcrowing, poor sanita-tion, rat infestation, frightful housing. It means beautification and cleaning up.

It means getting on with the correction of specific and visible evils and less preoccupation with the sociological and psychological mysteries of the white-colored relationship that our great grandchildren will still

narily high rate of unemployment among How Has Communist China Planned Use of Its Human Resources?

EXTENSION OF REMARKS OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. YOUNGER. Mr. Speaker, on July 15. Dr. Yuan Li-Wu, who is director of program on regional control possibilities in the Far East of the Hoover Institution. Stanford University, delivered an address before the Commonwealth Club of California on the subject "How Has Communist China Planned Use of Its Human Resources?" His address, as reported in the Commonwealth, follows: "RED CHINESE ECONOMY 10 YEARS BEHIND, DUE TO CONSISTENT OVERSIGHTS," SAYS U.S.F. SCHOLAB

(From address by Dr. Yuan Li-Wu, director of program on regional control possibilities in Far East, Hoover Institution, Stanford University)

We've been told Communist China is "shrouded in mystery." Indeed there is a great deal we don't know—always some missing information. There's also a great deal we do know.

My subject: How has Communist China planned use of its human resources? does its development compare to that of Taiwan?

There is a problem of employing personnel and the relationship of agriculture to development in general.

Prior to World War II we always thought of "the availability of capital,"—"How much capital was necessary for required develop-

Later, that attention shifted to available resources: how could they be applied to effective use? Emphasis still remained on short-term technical assistance.

The need to coordinate training and education with employment and economic growth is important, because an abundance of unemployed and frustrated intellectuals is the stuff revolutions are made of!

Let us consider the manner in which China's R&D (research and development) policy has been pursued in the agricultural sector.

Systematic application of R&D did not take place until 1957. Therefore, eight years had elapsed before attention was given to the problem of R&D in agriculture—in spite of the fact that Communist China is primarily agricultural. And this is in direct contrast with the R&D effort in industry-for an agricultural nation.

Efforts were then concentrated in crop selection and cross-breeding of crops. The research areas selected and neglected is closely related to the number of available Many agricultural experts had fied the mainland for Taiwan. On the mainland these resulting gaps in knowledge were not filled because of a failure to recognize them.

To the extent that new corp varieties were developed, they were not spread on a large scale, due to haste. New crops remained vulnerable to diseases and, in some cases, some yields even fell.

What modernizing of agriculture has been attempted hasn't been particularly effective because of the damage done during "the Great Leap Forward."

And it remains a question whether the "private plot" will be allowed to continue. On the basis of above observations, what

can be the result? Agricultural production has lagged way behind. At the same time Communist China's population has increased by at least 15% since 1949.

Agricultural production depends upon unskilled labor on a mass basis.

There have been several unavoidable factors: a time-lag as to (a) training and (b) intelligent adaptation to local conditions.

In contrast to the experience of Communist China, Taiwan has had a phenomenal growth of agriculture-for three basic reasons: First, an influx of Research and Development personnel from the Mainland, which provided a large pool of talent; secondly. there has been successful communication between scientists, technicians, and the farmer; and third, there has been greater production and greater derivative income, from voluntarily following advice of the technicians.

The use of human resources in the two Chinas is different. In Communist China people are used in agriculture while the emphasis is going toward industry on Taiwan

What is the future of agricultural research in the long run? In Communist China there has been an increase in institutes of industrial design. For Taiwan there are exchange and purchase programs including the U.S. There appears to be an increasing need for specific employment opportunities.

The application of Research and Development to production and basic research, requires further emphasis:

Perhaps a human resources program should be made a part of any effort to terminate any program of foreign aid.

ANSWER FROM WRITTEN QUESTIONS FROM FLOOR Question (R. L. Asquirn). What can (Red) China do to control her population?

Answer. Always been doing something. For ten years they've had active birth control program. The campaign is played down from time to time but still going on. they have legalized abortions and discouraged early marriage.

Question (ROBERT R. LEE). Mao an international Communist or Chinese Nationalist? Answer, Mao's a Communist and shares aims of international Communism. At same time operates within a Chinese environment; so the vehicle used is the Chinese state. He will use the Chinese state and nation to fur-ther his interests. Can't divorce one from the other. His use of nationalism is a strat-

egy—net a goal. Question (RALPH LARD). How far would Chinese economy have progressed under Kuomintang?

Answer. China was on verge of economic "take-off" in latter 1930's. By 1937 was on verge of sustained growth. Japanese war was "interlude." Growth between 1952-1957 was resumption of a long-term trend. Chiness growth pattern is different. Hard to tell where it could go if Communists were There was a spurt of growth 1958-60, then sharp depression and recovery. Growth was retarded by at least ten years.

Question. (1) Are farm communes common in Red China? (2) Has commune system produced more food than family farms?

Answer. (1) Introduced in 1958. In 1959 a sharp decline in food production; 1960-61 saw a severe food shortage. Communes reorganized in 1961. Production/distribution functions lowered from commune to "team' level. In 1961 private plots also restored. This shift, since 1961, has accounted for what little recovery there's been: not enough to offset damage by "Great Leap Forward." Present grain production has barely reached

1957 level—a ten-year production lag.

Question (L. R. Gardner). Will Red China and Japan team together more closely for economic reasons?

Answer. Communist China always dangled trade as a bait to Japanese exporters. Possibility of vast expansion of trade remote,

unless Japan willing to extend substantial long-term credit. Another factor—to what extent China operates on a pragmatic basis without trade as a wedge-would influence volume of trade.

Question (JOHN A. ROWE, Jr.). Chinese experts going to Taiwan-are they government employees

Answer. Movement of specialists and researchers was in late 1940's. Went to Tai-wan especially because of U.S./Chinese agricultural cooperation programs.

Question (ROY P. NEWELL). Will Communist China ever kow-tow to non-Communists?

Answer. Most unlikely.

Question (Paul Heyneman). Comment on position of overseas Chinese as to lovalty toward mainland?

Answer. Since World War II, quite a change in attitudes toward host countries. Greater movement toward local integration.

Will tend to go to winning side.

Question (D. S. RIGGS). Is Hed China, in reality, capable of processing her natural resources enough to make her massive man-power effective militarily?

Answer. Depends on nature of warfare. If guerrilla warfare, there would be little prob-lem in supporting "wars of national libera-If conventional warfare on a large scale-could be sustained only for short periods. In order to do so they'd have to modernize, which they could not do without Russian aid. If nuclear—there is a capability. While such development would affect economic growth, it wouldn't be immediately apparent There'd be no serious constraint if skilled manpower available.

Question. How full and accurate informa-

tion out of Red China?

Answer. Can get considerable information on an open basis. There are gaps but we do have great deal. All there for interested parties. Doubt we could get much more parties. Doubt we could get much by sending correspondents to China,

Legislation To Assist Indians

EXTENSION OF REMARKS OF

HON. KEN W. DYAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. DYAL. Mr. Speaker, those Members of the Congress who have been concerned over the problems of our American Indians will be interested in the editorial which recently appeared in the San Bernardino Daily Sun:

LEGISLATION TO ASSIST INDIANS

The American Indian, who seemingly has been bypassed in this age of technology, stands to benefit in new Department of Interior legislation being prepared on Indians. In fact, the new legislation is deemed the most important in 30 years.

The legislation's key provision, if approved, will alter the tribal trusteeship laws. The Department of Interior desires the tribes to be able to enter into partnership with private firms in utilizing natural resources on tribal land. Instead of leasing the land, as has been past practice, the tribes would mortgage it for industrial development. The Indians, in the process, would be trained to participate in management and be employed on jobs created by the industry.

There is, however, considerable convincing to be done before such legislation runs the congressional gantlet. Secretary of In-terior Stewart L. Udall must convince Congress to allow the mortgages and private in-dustry to take part in the development. Robert LaF. Bennett, new Indian Bureau commissioner, must persuade the Indian tribes that their risk will be no greater than an average citizen would take in mortgaging Of the two, Bennett's assignment will be the most difficult.

Regardless of the new legislation's out-come it is good news to learn that the American Indians' miserable plight at last is coming to the fore. This nation has poured billions of dollars into the foreign-aid trough supposedly to assist struggling countries to resist international communism.

Little has been done to improve the economic and social lot of the American Indian who indeed was the real victim in the birth and development of the United States. In our opinion, the remaining Indian tribes deserve a fair share of the political and economic rights which belong to all citizens in this constitutional government.

Honolulu Star-Bulletin Editorial: Communists Are on Trial, Too, in Vietnam

EXTENSION OF REMARKS

OF

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES Thursday, July 28, 1966

Mr. MATSUNAGA. Mr. Speaker, if we are to make a realistic approach to the situation in Vietnam, we must realize that communism too is on trial in Vietnam, not democracy alone. This thought-provoking suggestion is made in an editorial of the Honolulu Star-Bulletin of July 20, 1966. In the hope that this editorial will stimulate thinking toward seeking new approaches to a peaceful settlement of the war in Vietnam, I include it in the Congressional RECORD:

THEY ARE ON TRIAL, TOO

In almost every public discussion of our Viet Nam policy, the point is made that we are, in effect, on trial before the world. That we have made commitments; if we walk out on them, what ally of the future will depend on us, who will trust us?

It is a good point, and one not to be disregarded. It should not be overriding, preserved at the cost of all else. But whether on the score of national honor or sheer practicality it must always be considered.

The trouble is that hardly any of those who make the point ever bother to turn the coin. If they would they would see that our adversaries are bound to the struggle in Viet Nam in the same manner that we are. and probably to an even greater degree.

Communism is a relatively new concept in the world. Next year will be only the 50th anniversary of the Russian revolution. In another 11 years—in 1976—American democracy will be 260 years old.

The idea of a free society, and the free enterprise system that has developed from it, is in a much stronger position for maneuver than is fledgling communism. We could cash in our chips and walk out of Viet Nam tomorrow and it would not destroy We do not choose to do so, but we do have a choice of alternatives.

The Communists haven't such a choice, seen from their point of view. Their experiment is too young, and it has lost too much ground recently, to admit another de-feat in Viet Nam. Even the Russians, who would like to suspend temporal adventures and bank on a future in Space, will not stand by and see North Viet Nam defeated. There is too much at stake.

Earlier this week the Russians stepped down hard on an attempt by Prime Minister Harold Wilson of Great Britain to open an avenue to a negotiated peace. The Russians told Wilson in advance his visit would be useless, and confirmed this when he arrived in Moscow

They supported completely Hanoi's conditions for negotiation, the first of which is removal of all American forces from South Viet Nam. This condition is, of course, un-acceptable to us; but the Russians knew it was unacceptable when they endorsed it.

We ought not to deceive ourselves either as to (1) the willingness of the Communists to fight in Viet Nam or (2) the pressures which compel them to fight. We tell ourselves that we are on trial in Viet Nam. They tell themselves the same thing, and, indeed, they are.

The Redwoods: A Call for Preservation

EXTENSION OF REMARKS OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. COHELAN. Mr. Speaker, every day that goes by sees the number of redwoods that could be preserved in a national park still further reduced

As the Izaak Walton League of America pointed out in a resolution adopted at their 49th annual convention earlier this month:

It is in the public interest that a fully representative stand of these unique forests be protected and perpetuated.

But the Izaak Walton League goes on to make the very important point that-

Such an objective will not much longer be possible at the rate of cutting of the virgin stands.

Mr. Speaker, time is not on our side in this fight to establish a Redwood National Park that will be worthy of its We must move quickly and dename cisively if this unique national resource is to be enjoyed, not only by future but by this present generation of Americans.

I include the timely resolution adopted by the Izaak Walton League for my colleagues' consideration:

REDWOOD NATIONAL PARK

Whereas the virgin stands of Sequola sempervirens (coast redwoods) repres natural heritage of national and world sig-nificance worthy of attention and concern by all Americans; and,

Whereas consumptive uses have reduced virgin stands of redwoods from an original range in California of some 2,000,000 scres to a present day area of only 200,000 acres; and.

Whereas it is in the public interest that a fully representative stand of these unique forests be protected and perpetuated in such a way that ecological, esthetic and watershed qualities of a complete range example are included; and,

Whereas such an objective will not much longer be possible at the rate of cutting of virgin stands; and,

Whereas an area of approximately 90,000 acres of the remaining virgin redwoods stands is proposed for establishment as a unit of the National Park System, including

a continuous habitat representation from sea level to altitudes of some 2,000 feet; and, Whereas measures to secure this valuable national objective are now before the United States Congress; Now therefore be it

Resolved by the Izaak Walton League of America in convention assembled this 2nd day of July, 1986 at Boston, Massachusetts, any of July, 1986 at Socion, measurements, That it endorses the principles and purposes of HR 11723, by the Hon. Jeffery Cohelan, and urges establishment of a Redwoods Na-tional Park without further delay in accord with this and similar messures.

First Manassas Fought To Keep Power Out of Washington

EXTENSION OF REMARKS OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1966

Mr. TUCK. Mr. Speaker, on last Saturday. July 23, the 105th anniversary of the First Battle of Manassas, the major opening engagement of the Civil War, was observed at the Manassas National Battlefield Park at Manassas, Va. The principal speaker for the occasion was the Honorable W. Carrington Thompson, member of the Virginia House of Delegates from Pittsylvania County and the city of Danville in my congressional district.

Mr. Thompson is a distinguished lawyer and a former assistant attorney general of Virginia, having served in the latter capacity during my term as Governor. He is widely known throughout the State as a capable legislator and as a citizen and public servant who keeps abreast of the times.

His speech at the Manassas Battlefield Park was extremely relevant to the issues confronting us today, and I should like to commend it to my colleagues. It is as follows:

The history of the battles of Manassas, on a creek called Bull Run, is too-well known to you ladies to be repeated here in great

You will recall the circus-like atmosphere with which the morning of July 21, 1861, began. Congressmen and their ladies came from Washington in anticipation of a great Union victory. Negro servants sought van-tage points from which their masters and mistresses could watch the carnage that was about to begin. Fine linen cloths were spread and picnic lunches unpacked. Sevssmen even treated the by-standers to a few flowers of oratory. Oh, it was

to be a grand day! You will recall how the Federal tide nahed round the Southern position on three sides; how Union general Irvin McDowell sent off a telegraph of victory to Washington.

You will recall that it was here, on these fields on that dusty, humid July day so many years ago that Confederate general ee, mortally wounded, rode down the line of Southern troops, swung his hat to rally the men, and exclaimed, "Look, there stands Jackson like a stone wall," and fell

Finally, you recall how General McDowell lost his head and sent in regiments all along the line in piecemeal, disjoined attacks, riding with th em like a sergeant.

Let me read to you a few lines written by the late Fletcher Pratt, one of America's leading authorities on Civil War history,

describing how July 21, 1861, was to end:
"[The Union troops] shattered against the
stone wall; the confusion spread, and in the middle of it, down the road on to the new

Union rear came the rest of Joe Johnston's troops at the run, headed by the Louisiana Tigers. Helplessly caught, the whole Federal army collapsed, men and officers threw down their arms and ran for their lives.

McDowell tried to save the day with some of the sound regiments from his left wing, but they only caught the contagion. The trains, the artillery, the wounded and even two Congressmen were abandoned, and the mass of terror-haunted fugitives never stopped till they reached the Potomac River

The city of Washington dripped moisture and despair the next day. For the first time, the truth was brought home to the North that it faced a long ordeal,

Nor need I say much about the second battle of Manassas. Second Bull Run ended like the first-defeat for the Union forces.

So much for the history of the battles of and second Manassas. The question I want to address myself to in the time I have remaining is why were these battles fought in the first place—why the Civil War?

Historybooks are replete with a variety of answers. Slavery, the great American Shame—industrial North versus agrarian South-a progressive, democratic North vertive, aristocratic South gwers ad infinitum.

I do not question that all of these factors played some role-greater or lesser-in the ultimate decision that turned father against son, and brother against brother. rare history book, however, that discusses in any detail what I believe to be one of the major causes of secession, and the bloody war to follow—the spectre of a unitary government with its seat of power in Wash-

We are all familiar with the balanced mechanism of the Constitution of 1787: the division of governmental authority between the States and the central government and the distribution of power within the federal establishment itself.

Those men who fought and died here at Bull Run were equally familiar with the document. Indeed, their fathers and grand-fathers had gathered in Philadelphia and drafted the Constitution.

Under the compact, you remember, the States were assigned a vital role. They were to have equal representatives in the Senate; State electors were to choose a Presidentor, if that failed, the States themselves, voting as equals, were to choose a President.

Continuing, the final power of constitutional amendment was to rest in the States as States—not in a mere majority of the States but in not fewer than three-fourths

Finally, the States wanted it known that all powers not delegated to the central government by the Constitution, nor prohibited by the Constitution to the States, were re served to the States respectively, or to the people.

Those men who fought on these fields knew why the Constitution assigned such a vital role to the States. They recalled a vital role to the States. They recalled that their forebears had feared the excessive centralization of power, and had wanted to secure the advantages of political experiment that arise from a diversified control of political authority.

No doubt some of the men who died here remembered hearing their grandfathers discuss the Virginia Convention of 1786—the ratifying convention—and of the dangers when a government of laws is

corrupted by a government of men.
"I may be thought suspicious," Patrick
Henry had cried, "but Sir, suspicion is a virtue, as long as its object is the preservation of the public good, and as long as it stays within proper bounds . . . guard with jealous attention the public liberty!

Thomas Jefferson was another who sounded this alarm in the Virginia Convention. Suspicious that too much author-

ity would ultimately be concentrated in Federal hands, he had said "I owe I am not a friend to a very energetic government. is always oppressive."

who fought and died on the fields were fighting for the same beliefs that their fathers and grandfathers had fought for almost one hundred years earlier. first thing I have at heart is American liberty," Henry had cried, "the second is American union."

The first thing those men at Manassas had at heart was liberty-the second was

Did they died in vain?

Early last year, Mr. David Brinkley-of "good night Chet" fame—addressed a group of students at Ohio University. The follow ing statement is of special interest: "The decline and fall of the 50 State governments will be completed within our lifetime. movement of political power from State capitals to Washington, D.C. is inevitable and unstoppable whether we like it or not."

I, for one, do not like Mr. Brinkley's prediction. Nor am I so pessimistic as to lieve that this ever increasing trend to-wards centralism can not be stopped.

The question is how? How do we restore to the States that which is constitutionally theirs-while limiting the greed of the power-mad federal government.

I need not spell out in detail how the Federal government has usurped the powers of the States. I need not remind you that since the decision in Brown vs. Board of Education, handed down twelve short years ago, the Federal government has taken over the administration of public schools in the United States, an area formerly within the exclusive control of the States.

I shall not talk about how Christ has been excluded from the classroom by Supreme Court decree.

Nor about how Congress has abolished the power of a State to require that its residents meet certain minimal literacy requirements in order to vote.

Nor how State control of the administration of criminal law is currently being threatened by an ever-expanding system of federal control.

Nor how rights of property are in the process of being abolished.

You know these facts of life as well as I.

And yet, I for one have heard few pro-tests—much less angry and outraged pro-tests—from the citizens of our country over the increasing erosion of the powers of the States.

To be sure, several courageous Congress men have introduced legislation to curb the Federal government, particularly in the re-apportionment and school prayer areas. Unfortunately, it seems that the majority of the American people are unwilling to support these measures.

I believe that this lack of support is not because most Americans agree that a unitary government is the answer-instead, I think most of our fellow citizens are too lazy to bother. As Senator Goldwater said in 1960:

"We can be conquered by bombs or by subversion but we can also be conquered by neglect-by ignoring the Constitution and disregarding the principles of limited government. Our defenses against the accumulation of unlimited power in Washington are in poorer shape, I fear, than our defenses against the aggressive designs of Moscow."

One hundred years ago, these fields were red with the blood of men who feared the accumulation of unlimited power in Wash-

Is it too much to ask of our fellow citizens, today, that they must realize that the conduct of our public affairs must be entrusted to men who understand that their first duty as elected officials is to divest themselves of the power they have been given?

Peoria Journal Star Upholds the President

EXTENSION OF REMARKS OF

HON, BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, July 21, 1966

Mr. O'HARA of Illinois. Mr. Speaker, the Peoria Journal Star observes that President Johnson wants peace in Vietnam "almost any way he can get it."

The President has said and done many things toward that goal, the newspaper states editorially. He has used the carrot and stick in sizable quantities and is still trying both.

But the Journal Star adds pointedly that the only thing he will not do is abandon millions of Asians to the Communists. He will not surrender.

By unanimous consent I am extending my remarks to include this editorial from the Peoria, Ill., Journal Star of July 14, 1966:

L.B.J.: ANOTHER BID FOR PEACE

Lyndon Johnson's "alumni speech" this week merely demonstrates what has actually been the whole sequence of his actions in relation to Viet Nam. He wants peace almost

any way he can get it.

He will bomb to get it. He has offered to buy it. He will fight. He will cooperate. He will deal with the North Vietnamese, the Chinese, the Russians, the British, Charles de Gaulle, or anybody else, anytime, any place. He has repeatedly offered not only "cooperation" and "co-existence" but huge bribes

of economic aid to Asian communities.

He has used "the carrot and the stick," both in sizable quantities.

He is still trying both.

The only thing he will not do is abandon millions of Asians, from the Philippines to Thailand, to the tender mercies of the Reds. He will not surrender.

As should have been clear after the experiences of the past 20 years, we are again learning that cajoling is hardly an effective way to deal with these people.

The issue has never been clearer than in

recent weeks.

The problem is to get the Communists interested in peace.

So long as they expect victory, they are not

interested in negotiations.

We have done our best to convince them that victory is impossible—except that some of us have gone way out of our own way to to convince them otherwise, thus sabotaging the peace effort.

It is hard to see the justification for the constant propaganda, based on emotions rather than every realistic pressure and the record, suggesting that Lyndon Johnson is "faking," that he doesn't want peace, and that this is just camouflage for his brutal, power designs.

We can understand that as internal Communist propaganda, but it doesn't make any sense in the United States where peace would be a political boon to the President, a boon to the U.S. economy, and a boon to the programs for government spending in a variety of "projects" close to the President's heart.

The only other basis for continued "peace" shouting would be a desire to surrender.

But surrender of Viet Nam would be like paying blackmail-the price and the demands

would never stop.

It would be a desertion that would bring praise from many nations, and with the surface praise a complete collapse of any faith or trust or reliance on the U.S. anywhere in the world, again.

And without us, even the ranking Indians and French critics, privately admit, the free world would fall apart and succumb step by step to the threats presented by Communist regimes.

Eye for an Eye

EXTENSION OF REMARKS

HON, LYNN E. STALBAUM

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1966

Mr. STALBAUM. Mr. Speaker, on July 8, the Janesville Gazette, a prominent daily newspaper in the First District, published an editorial giving a well reasoned summary of the civil rights movement. They point out that legislation is only one step in effecting social change and the more difficult part is the acceptance of changes which occur. It is in this area, the editorial notes, that the threat of violence is most likely to occur.

The full text of the editorial follows: EYE FOR AN EYE

Last year, delegates to the generally moderate and respected Congress of Racial Equality voted down a resolution proposing that its policy of nonviolence be revised. This year, at a Baltimore convention over the July 4 weekend, this new and potentially dangerous departure received favorable ac-

The action is perhaps a straw in the wind in the development of Negro civil rights programs, and one which merits the censure moderates of all races. Violence can lead to endless trouble, but it cannot solve problems, Negro or otherwise. It is noteworthy that the Rev. Martin Luther King, given the hint that CORE might abandon its nonviolence character, stayed away from the convention by way of protest.

The threat contained in the CORE resolution of course is not that of aggression, but of defense. Negroes, it declares, have the right of self-defense if subjected to violence or threat of violence. This is a common law right which scarcely needs to be formalized in a policy resolution. When it is thus given organization backing officially, it is bound to act as an invitation to hotheads. The threat of violence is easily perceived by any who are bent upon violence.

The situation is ready made for radicals and Communists who selze upon discontented groups as a means of creating dis-order. The civil rights movement is one of those offering the most promise for the Red professionals, who doubtless are operating among Negroes as they are among white civil rights enthusiasts, especially students. The interest of the Reds, however, is anything but civil rights or rights of any kind. What they are looking for are the tools of revolution.

Impatience and discontent on the part of Negroes is well understood by their friends. Even though rather remarkable advances have been made in a short period of years, much remains to be done to achieve equality in a meaningful way.

With the pending civil rights act of 1966 now on its way through Congress, it is generally recognized that relief via legisla-tion is reaching its practical limits. From here on, the effort must be directed increasingly toward cooperation and acceptance of change. Since it is easier to pass laws than create social change, the more delicate part of the operation is just ahead.

If Negroes in any substantial numbers re-

spond to the call for violence on whatever pretext, this necessary process will be slowed if not stopped. The cultivation of public support in white communities is essential to since Negro population, concentrated in scattered geographical pockets, amounts to perhaps one-tenth of the white population, those who dream of a "war" and seizure of "black power" have a hopeless cause. The United States remains essentially a nation of whites, a majority of which needs to be convinced of the righteousness of Negro

The appeal of the radicals, however, cannot be discounted, especially in the limited areas where Negro concentrations are greatest. It is in these same areas that the start which has been made toward Negro justice is least likely to be visible.

Responsible civil rights organizations now have a double task. They must carry on the work for which they were formed—that of promoting Negro status—while at the same time discouraging those who by unwise impulsive actions slow or even wreck the efforts which just now are beginning to make progress felt.

Mr. Helms, of CIA, Writes Letter to Editor of St. Louis Globe-Democrat

EXTENSION OF REMARKS

HON. JAMES H. SCHEUER

OP NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. SCHEUER. Mr. Speaker, I was astonished to read today of the letter to the editor of the St. Louis Globe-Democrat, written by Mr. Richard Helms, the Director of the Central Intelligence Agency. Only last week, Mr. Helms injected himself into the Senate ethics hearings.

Mr. Helms seems to be recently addicted to injecting himself into the center of public controversy and politically charged debate in a fashion which is wholly inconsistent with his role as Director of the top secret and highly sensitive Central Intelligence Agency.

The CIA needs a Director who finds no necessity for such personal public embroilment. To the contrary, an agency as uniquely sensitive as the CIA needs a Director with a highly developed sense of restraint and discretion, and a sophisticated and judicious awareness of the importance of the nonpolitical character of the CTA.

This country cannot tolerate our most secret and sensitive intelligence organization injecting itself into domestic politics. There is already deep concern among many thoughtful Members of both Houses of Congress as to the role of the CIA in our foreign policy.

The extraordinary lack of mature, balanced judgment which Mr. Helms has shown in recent weeks would be more than sufficient to have placed in serious jeopardy, the usefulness of any official serving at any level of a discrete and sensitive intelligence agency.

I urge that the proper committees of Congress make a thorough scrutiny of Mr. Helms recent conduct and determine his fitness to continue in this highly sensitive and demanding post.

Auto Safety

EXTENSION OF REMARKS OF

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. O'NEILL of Massachusetts. Mr. Speaker, on the editorial page of this morning's Washington Post there appears an editorial entitled "Whither Auto Safety?" It is a good commentary on the version of the traffic safety bill recently reported out of the House Commerce Committee, and it explains the strengths and weaknesses of the bill. I commend it to all Members of the House and ask unanimous consent that it be inserted at this point in the RECORD.

WHITHER AUTO SAFETY?

After considerable deliberation the House Commerce Committee has presented to the House an auto safety bill. There is reason for the pride Chairman HARLEY O. STAGGERS expressed at his committee's accomplishment.
To the Senate-passed bill the committee added provisions that would include trucks and used cars. They would also establish an advisory council to consult with the Secretary of Commerce on safety standards. They would give the Secretary power to require disclosure of performance and technical data to purchasers of new cars.

A reading of the bill, however, leads one to doubt that it will sail through the House as sily as Mr. Staggers says it will. Although this is a complex piece of legislation, the importance of the bill—both to the Nation's motorists and as a precedent for future legislation—is such that when the bill comes to the floor members of the House must be aware of its weaknesses as well as its

strengths.

First, and most important, the penalties and enforcement sections must be improved. If the public's concern for safer automobiles is to be reflected in the legislation, there must be workable provisions to enforce safety standards and to penalize those who violate The Government must be able to investigate and prosecute violators. The investigatory powers included in the Senate bill are absent in the House bill. There is a provision allowing the Secretary of Commerce to order manufacturers to notify owners of defects when they are discovered, but there is no penalty for not doing so. The Senate bill lets a manufacturer off the hook if violations were not known to exist. The House bill widens this escape route considerably.

A graphic illustration of the weakness of the House bill is contained in 117(b). It stipulates that anyone who violates a provision of auto safety laws now in effect before the new bill becomes law, shall be punished This means a willful violator of the seat belt or brake fluid standards may be criminally punished now, but if he waits until the new bill is signed, he may not.

There are other defects in the bill. drafting causes ambiguities and confusion in some sections. Petty differences from the wording of the Senate may needlessly prolong a conference between the two Houses. By not providing the Secretary of Commerce strong tools for enforcement, the Congress will prejudice vigorous enforcement and encourage timid administration.

If the auto safety bill that passes Congress is to contain substance under its shell of indignation, it must be strengthened on the House floor and in conference.

The President on Violence

EXTENSION OF REMARKS

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

ASHLEY. Mr. Speaker, the Christian Science Monitor calls on all those whose frustrations have led them to acts of violence to take to heart President Johnson's advice that continued unruliness could imperil Negro progress.

In a thoughtful editorial on events of recent days, the Monitor expresses doubt that any President since Abraham Lincoln has shown as immediate and deep concern for advancement of the Negro as has President Johnson.

He understands the tensions and disillusionments which beset Negroes, the newspaper declares. But he is deeply troubled lest violence and rioting arouse

counterreactions harmful to legitimate Negro demands and hopes.

At the same time, the newspaper insists, close attention should be paid to the President's demand that all lawfully constituted authorities themselves obey the laws of the land. Wherever it exists, the notion that there is one law for the white man and another for the black man must be corrected.

Everyone, white and black, must avoid throwing roadblocks in the path of progress, the newspaper insists.

In the belief my colleagues may want to read this entire editorial, I offer it now for printing in the RECORD.

[From the Christian Science Monitor, July 23, 1966]

THE PRESIDENT ON VIOLENCE

We doubt if any President of the United States since Abraham Lincoln has shown as immediate and deep concern for the progress of the Negro as has President Johnson. In the past two years he has pushed through legislation literally revolutionizing public and federal efforts on behalf of a higher social, political, and economic position for Americans. Equally strong White House proposals are now before Congre

It is thus impossible to look upon President Johnson as other than a man conscientiously committed to ensuring the Negro full and early enjoyment of all rights and opportunities. For this reason his advice that continued Negro violence could imperil Negro progress should be taken to heart by those whose frustrations have led them to acts of violence.

This does not mean that the President, as well as many other Americans, do not understand the tensions, the disappointments, and the disliusionment (with the slowness of that progress) which beset Negroes, partic-ularly in the great Northern cities. It is rather that the President, again like many other Americans, is deeply concerned lest violence and rioting arouse counterreactions harmful to legitimate Negro demands and

We believe that President Johnson is right in his view that an overwhelming majority of white Americans wish to see equality and justice given their black fellow citizens.

Nor do we believe that the country will permit a loss of those great gains made in

recent years. But we do believe that the President spoke wisely when he warned that it was crucial to the Negro cause not to jeopardize the present sympathy felt within that 90 percent of the American population which is white.

At the same time close attention should be paid to the President's demand that all lawfully constituted authorities obey the laws of the land carefully and strictly. A major Negro complaint, and one which has had much validity in many parts of the country, is that there is one law for the white man and another for the black and that hitherto the black man has been the victim rather than the perpetrator of violence. Wherever this is so, whether in the piney woods of the South or the cement canyons of the North, it must be corrected. Until it is, it will be that much harder to persuade Negroes to avoid violence.

This is a time of deep travail and wrenching readjustment in racial relations. It tests everyone's patience and wisdom. But prog-ress is being made. Everyone, white and black, must avoid throwing roadblocks in its way.

The Growth of Tennessee Eastman Co.

EXTENSION OF REMARKS

HON. JAMES H. (JIMMY) QUILLEN OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1966

Mr. QUILLEN. Mr. Speaker, a company that has contributed greatly to the development of Tennessee and particularly to my district is the Tennessee Eastman Co., a division of Eastman Kodak Co.

I want to congratulate the officers and employees of the company on their success, and I am inserting an article from the Kingsport, Tenn., Times which outlines the company's continued growth in recent years.

EASTMAN GROWTH HERE NEARING 15,000 JOBS

Employment at Eastman-operated plants in Kingsport has passed 12,000 for the first time since World War II, when a company subsidiary employed as many as 6,850 in operation of Holston Ordnance Works, officials of Tennessee Eastman Company revealed to-

And temporary construction workers who may be largely replaced by production emploves when current expansions are complete, bring the total number of persons vorking at Eastman enterprises to nearly

15,000.

Mid-year employment figures at Eastman showed that about 12,300 men and women now are employed in Kingsport operations of Tennessee Eastman Company and four Eastman Kodak subsidiaries in the area, according to Harry D. McNeeley, president.

The current employment figure includes about 2,200 working for Holston Defense Corporation, which operates Holston Army Ammunition Plant (formerly Holston Ordnance Works) for the United States Government. A World War II peak in employment was reached in 1944 and 1945 when employment at the ordnance works went over 6,000 and the combined total employment in Eastman operations in the area exceeded 13,000.

"The last three and one-half years—the period starting January 1, 1963—have seen the greatest increase in employment by Tennessee Eastman group of companies for an equal period of time since World War II, McNeeley said.

The Eastman president reported that Eastman expansion in the 1963-66 period has brought about the creation of about 1,500 new Kingsport area jobs in the manufacture and sale of chemicals, fibers and plastics manufactured and sold by the Tennessee Eastman group of companies.

The job gain is in addition to more than 1,100 new employees who have been added by Holston Defense Corporation because of production increases ordered by the Government at Holston Army Ammunition Plant. The Army Ammunition Plant manufactures explosive compositions used in U.S. military operations.

In addition to the substantial gains in employment for the manufacture and sale of Eastman products, there has been continuing employment during the last few years for hundreds of employes of construction contractors engaged in work on expansion and modernization of Eastman facilities, accord-

ing to company officials.

Currently, nearly 2,000 persons are employed by contractors on construction and engineering work at Tennessee Eastman's plant, and another 500 to 600 are working on modernizing and activating facilities at Holston Army Ammunition Plant.

Inclusion of contractor employes brings the total current work force for Eastman in the Kingsport area to approximately 14,800

persons, figures show.

Tennessee Eastman will supply raw materials to the new plant of Carolina Eastman Company near Columbia, S.C., which is being built to produce 50 million pounds a year of Kodel Polyester fiber, with production scheduled to start in 1967.

Eastman Kodak Company's 1966 budget of \$171,000,000 for additions, replacements and improvements, provided \$94,000,000 for work being done at Tennessee Eastman, Carolina Eastman and Texas Eastman Company, another Eastman Kodak manufacturing divi-

sion at Longview, Texas.

Ralph W. Emerson, staff director of the Tennessee Industrial Development Division, said that Eastman is the largest industrial employer in Tennessee, and added that the 2,600 new jobs created by increased operations of Eastman companies, including Holston Defense Corporation, constitute the greatest employment gain shown by any industrial organization in the state during the last 31/2 years.

The top employer in the Tennessee Eastman group is Tennessee Eastman Company, a manufacturing division of Eastman Kodak Company. Second is Holston Defense Cor-poration, the Kodak subsidiary operating Holston Army Ammunition Plant. Other substantial employers in the group of com-panies are Eastman Chemical Products, Inc., a Kodak subsidiary which markets the products of Tennessee and Texas Eastman Companies; Bays Mountain Construction Company, which does some of Eastman's construction work; and Eastman Chemical Inter-American Limited, another sales organization headquartered at Kingsport which handles a portion of the company's export

The broad construction and modernization program under way at Eastman includes ex pansion of facilities for the production of Kodel polyester fiber to bring the Kingsport plant's capacity to 100 million pounds per year; facilities for increased production of dimethyl terephthalate, a chemical intermediate used in manufacture of polyester fiber. plastics, and polyester photographic film base made by Eastman Kodak; additional faciliities for making polyester polymer, from which Kodel fiber is made; a large addition to power facilities now nearing completion; a new organic chemicals manufacturing plant which is to be completed this year; and new facilities for production of terephthalic acid and cylohexane-dimethanol, both of which are used in manufacture of Kodel fiber.

Lauds Meany Stand on Boycott of ILO

EXTENSION OF REMARKS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. DERWINSKI. Mr. Speaker, with the continued complications the United States and the rest of the free world face in the form of the international Communist conspiracy, I deem it of special interest to insert into the RECORD a column which appeared in the July 2 Polish American by its columnist John Switalski on the recent action of the AFL-CIO boycotting the ILO at Geneva:

LAUDS MEANT STAND ON BOYCOTT OF ILO (By John Switalski)

"The AFL-CIO is building walls instead of bridges to One World." This charge was made in a New York Times editorial condemning the action of the council of the American Federation-Congress of Industrial Organizations which voted 18 to 6 to boycott a meeting at Geneva of the International Labor Organization after that United Nations organization elected a Polish Communist as its current chairman.

The Chicago Daily News, in a lead editorial, Meany's Unwise Boycott," on June 18 also deplored the action of AFL-CIO President George Meany in approving the boycott and criticizing United Auto Workers President Walter Reuther for opposing this anti-Com-munist stand. "If Meany's view prevailed," said the Daily News "there could be no United Nations at all for Americans would have to walk out of the General Assembly, Security Council, and other UN agencies every time it came a Communist nation's turn to preside. It is particularly ironic that the labor unions, who regard it as their mission to educate unionists everywhere to the ideal of democratic participation, should walk out of the ILO when the democratic process puts an accredited Communist member in the leadership chair."

This is specious argument. The AFL-CIO is a free labor organization within the United States, not an arm of the U.S. government. It therefor, does not have to sacrifice trade union and democratic principles to U.S. foreign policy. Or, in other words, to operate as government stooges as do the "labor union representatives" from the Communist coun-

The Daily News deplores that "American labor could not tolerate sitting in an international body headed by a Communist." does not, however, explain why. By its boy-cott of a Communist chairman, the AFL-CIO continued its principled stand against socalled labor movements which are phony because they are not free but mere tools of totalitarian governments. This principled stand the AFL has taken since World War II and is one that Walter Reuther once subscribed to. Because of this stand, the AFL-CIO has been able to give sustenance to free labor movements around the world that have had to struggle for existence against terrorism of Communist-led unions liberally supplied by Moscow with money and trained activists."

Reuther deplored the AFL-CIO council's action, saying that he was "deeply disturbed about the growing negative character of the AFL-CIO policy on the field of international affairs" and called it a "disservice to democ-

One should ask Reuther when the Com-munist Bloc regimes ended the Cold War. Does the lack of a free trade movement in

Poland suggest that Cold War is over? Does the incredible harassment of religious cele-brations of Poland's Christian Millennium so indicate? Does Russia's aid to Communist aggression in South Vietnam so indicate?

As for the New York Times editorial, one might ask why at a time when the United States is sending its young men to fight Communist imperialism in Southeast Asia, it is the task of American trade union move-ment to abandon its "mission to educate unionists everywhere in the ideal of democratic participation" and how to build and maintain a free labor movement and instead embark on globalist goals which have noth-ing in common with trade union needs either

re or in foreign countries.

Let us ask Reuther whether it was a "dis-service to democracy" when, at a time when the American press including the New York Times was still ignoring the existence of the Soviet slave labor camps, the AFL-in 1948published a map of the Soviet Union showing the locations of the dozens of slave labor camps in Russia and Siberia? Was it a "dis-service to democracy" when the AFL de-nounced the notorious Soviet-inspired Stockholm Peace Pledge, which was signed by some of the same CIO union leaders who now back Reuther in his attack on "negativism in international affairs?"

In voting support of Meany, the AFL-CIO council stated that this was the most effec-tive means of protesting against what Meany feels is a "rising Communist influence in the ILO." The American press has curiously ignored the struggle that has gone on since World War II for control of labor movements in both advanced Western industrial and "emerging" countries. Communist control of the ILO could well swing the balance of power of Soviet-directed labor unions throughout the world. This is the issue here and the only one. Not that the AFL-CIO spearhead the drive either for "One World" "coexistence."

Internationalist Reuther would like to make the AFL-CIO an instrument to further these ends. Reuther's neutralism is much closer to "negativism in international affairs" than Meany's position, which appears to be a positive one that will be understood by genuine trade union leaders in Europe, Asia, Africa, Latin America and Oceana. will also please Polish workers who hear of it via Radio Free Europe.

Grand Canyon Controversy

EXTENSION OF REMARKS OF

HON, JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Monday, July 18, 1966

Mr. RHODES of Arizona. Mr. Speaker, I am pleased to insert in the Appendix of the RECORD the reply of Mr. Rich Johnson, executive director of the Arizona Interstate Stream Commission, to the allegations made in the letter of Mr. Dale Slocum, recently placed in the RECone by the gentleman from Pennsylvania, JOHN SAYLOR, concerning the effect that Hualabai and Marble Canyon Dams would have on the Grand Canyon:

ARIZONA INTERSTATE STREAM COMMISSION, Phoenix, Ariz., July 25, 1966.

Hon. JOHN J. RHODES, House Office Building,

Washington, D.C.
DEAR MR. RHODES: A letter from Dale Slocum opposing Bridge (Hualapai) and Marble Canyon Dams was inserted in the CONGRESSIONAL RECORD recently by Congressman John Saylon, Mr. Saylon attached significance to it because Mr. Slocum is a resident of Arisona and a former executive secretary of the Arisona Game Protective.

It is interesting to note that the AGPA enthusiastically endorses and is actively working for H.R. 4671, while its ex-secretary opposes it, and that his arguments are simply a repetition of the tired scare words devised by the Sierra Club's professional propagandists.

Mr. Slocum implies that Marble Canyon Dam will reduce the flow of the River below it to 1,000 second-feet. He ignores the fact that Glen Canyon Dam now filling upstream from the Marble Dam site already accomplishes that kind of flow management potential. The flow is now and always has been highly erratic by nature. In the future it will vary under control.

He also says that the reservoir behind flualapai Dam will "inundate the entire inner gorge of the Grand Canyon National Monument." Then he admits that the inner gorge is nearly 3,000 feet deep. He does not explain how a dam 600 feet high located 53.7 miles below the western boundary of the National Monument can "inundate the entire inner gorge" which is by his own admission 3,000 feet deep in the Monument area.

Of course there are dissenters in Arizona. According to the Bible there were some dissenters in Heaven at one time. I understand there are some in Pennsylvania just now who are unhappy about losing their homes and land because of a dam and reservoir that are part of the Delaware Valley Project. Perhaps we should stir them up to write a few letters for insertion in the Recons.

RICH JOHNSON.

"Ethics From Sinai" Completed

EXTENSION OF REMARKS

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, July 26, 1966

Mr. KUPFERMAN. Mr. Speaker, Irving M. Bunim is the author of a renowned three volume work entitled "Ethics From Sina!"

These books are published by Philipp Feldheim, Inc., 96 East Broadway, New York City.

Volume I in the series and its author were described as follows:

Blessed with an endless store of ancedotes and a gift for presenting the most difficult subject matter with humor and charm to make it sparkle with life, Irving M. Bunim gives us here the quintessence of his lectures on Pirke Avolt, which have delighted and inspired his listeners for the past forty years—including enrapt audiences at the annual conventions of the National Council of Young Israel and at its Institute of Jewish Studies.

Though small in length, the Mishnah tractate Anoth has had a profound influence through the centuries on the Jewish people. Since the time of the Geonim a chapter is recited and studied each Saturday afternoon for part of the year. As part of the siddur, it has formed and modded the Jewish char-

acter in every age.

Beginning with the words, "Moses received the Torah from Sinai," Pirke Avoth represents the distilled wisdom of ethics and morality that is indispensably part of the Oral Torah which originated at Binai. Though seemingly simple, its teachings are permeated with a subtle profundity, yield-

ing fresh meaning whenever it is studied anew.

With his redoubtable gifts and rich background, Irving M. Bunim has produced here a live and meaningful commentary, orgently, vitally relevant for our time. Drawing on the great store of classical commentaries, he ranges far and wide through the wisdom of Talmud and Midrash, interweaving explanations with lively anecdotes and pointed illustrations from everyday life.

"It has been my good fortune," writes the author in his preface, "to learn musser in its finest sense from inspired masters and luminaries. . . . The present work is issued in the hope that it will bring this helpful musser, this 'good doctrine,' to an ever widening readership . . . to convey some of our eternal verities and values that we have cherished and treasured ever since Sinal."

THE AUTHOR

Known and loved throughout the ranks of observant Jewry, Irving M. Bunim truly fits the Talmudic description, "Torah and greatness together" (Gittin 59a). Having received a sound religious education, he became (and remains) a thriving business man, yet has managed to give a lifetime of devotion to Torah causes, the while continuing to study it. Ever an associate and confidant of great luminaries (particularly the sainted Rav Aaron Kotler, of blessed memory) he has made his reputation as a superb raconteur and speaker on behalf of Torah causes, invariably holding listeners enraptured. But it is as a lecturer par ex-cellence on Pirke Avoth that he has found his forté, out of a lifetime of study, thought, and sagacious observation.

The occasion for my comments is the fact that volume 3, the concluding volume, has just been published.

With this third volume, covering chapters 5 and 6 of Pirke Avoth, Irving M. Bunium concludes his sparkling commentary—a commentary filled with warmth, wisdom, and wit that has already elicited evaluations like these:

"His book is indeed a veritable fountain of spiritual knowledge and a source of inspiration for rabbis, b'nei torah and educated laymen, coming from the international spokesman for world Orthodox Jewry."—Rabbi Hersh M. Ginsberg, Dean, Rabbi Jacob Joseph School and Mesitta.

"Irving Bunim brings all of his gifts into splendid play in his long-heralded and eagerly awaited commentary on Pirké Avoth.

"The full measure of his personality, idealism and wisdom shines forth from each wonderful page of this volume—which will certainly be regarded as a "modern classic."—Dr. Joseph Kaminetsky, National Director. Torah Umesorah.

"Of course, it measures up to my full expectations. It has the full Bunim verve, charm and insight and, in addition, is written in excellent English style. I know it will have a tremendous impact on the public and allow your commentaries to reach an ever wider circle of our fellow Jews."—Rabbi Norman Lamm, The Jewish Center, New York.

"I had expected this volume to be a great book representing a novel approach. I shall say that it exceeded by far my keenest expectations. It besits a man of your stature and your depth.

"May you continue to be a teacher of your people for many decades to come."—Dr. Samson R. Weiss, Executive Vice President, Union of Orthodox Jewish Congregations of Amer-

The work can be warmly commended, especially to rabbis and teachers who wish to make Perek the subject of shifurim. They will find here enough material to last a lifetime of summer afternoon talks. The work is replete with illustrative quotations from Talmud and Midrash and later rabbinic sources, and there is a wealth of anecdotes

and moralistic tales of the great rabbis of more recent centuries. The book will be as well a rewarding investment for the preacher. Bunim is a skilled darshan, and one finds countless novel and suggestive homilies."—The Jewish Chronicle. London.

"In a masterful manner he discusses the teachings contained in *Pirké Avoth*, in the light of Talmudic and Rabbinic interpretations, always with an eye to their applicability to present-day issues. *Ethics from Sinai* is eminently readable; its style captures the reader's interest; and well-chosen parable, anecdote or Rabbinic epigram ever so often throws a brilliant light on the subject discussed."—The Jewish Observer.

"One can immediately detect the touch of the master as mishnah after mishnah springs to life and page after page is studded with genuine gems.

"I am confident that this monumental work will be halled by all as true classic which will stimulate and inspire our thinking for a long, long time to come."—Rabbi Joseph M. Baumol, Dean Mesivta of Crown Heights.

I commend this literary work to my colleagues.

School of the Americas

EXTENSION OF REMARKS

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. RIVERS of South Carolina. Mr. Speaker, I ask unanimous consent to insert in the Appendix of the Record a most interesting article concerning the Army's School of the Americas, located in the Panama Canal Zone.

The article appeared in the San Diego Union and was written by Brig. Gen. James D. Hittle, U.S. Marine Corps, retired, who is director of national security and foreign affairs for the Veterans of Foreign Wars. General Hittle's background qualifies him imminently to comment on the importance of this school to our relationships with Latin American countries.

I recommend that every Member of Congress read this article and bear in mind that these are the observations of a combat marine, who also served as legislative assistant to the Commandant of the Marine Corps and assistant to the Secretary of Defense for Legislative Af-

General Hittle is highly respected by many Members of the Congress. We are privileged to know him and I know of no officer for whom I have a higher regard for his ability and competence.

His comments on the Army's School of the Americas are factual and also are most complimentary to the Department of the Army and those who have been operating this school, quietly and without fanfare, for many years:

[From the San Diego Union, July 16, 1966] IN LATIN AMERICA: UNSUING SCHOOL COMBAT-ING REDS

(By Brig. Gen. James D. Hittle, USMC, retired)

Washington.—As a nation we are doing a lot of things wrong in our protracted struggle against Communist aggression. These wrong things are sensational, and thus get lots of

publicity.

Yet the United States is doing a lot of things that are right in bolstering the free world and strengthening our own defenses Much of this goes on quietly and is unsung. Much is relatively unknown.

The Army's School of the Americas is an example of the right, and largely unnoted

with Andy Borg, national commander of the Veterans of Foreign Wars, I recently visited this school with its headquarters at Ft. Gulick in the Panama Canal Zone. It has become one of the most constructive influences in Latin America.

BEGAN MODESTLY

This School of the Americas began on a modest scale in 1949 with a primary mission of training technicians for the U.S. Army. Then, only a few military men from Latin American countries were students. The school, however, filled a need and it grew rapidly.

Many of the countries "south of the border" had neither the military know-how nor the financial resources to have such military educational facilities of their own.

The increasing numbers of students from Latin American countries soon resulted in big changes in the courses. By 1955 the changing emphasis of the instruction was reflected in the decision to conduct all courses in Spanish.

EIGHTEEN COURSES

Today, the School of the Americas conducts 18 courses. Instruction ranges from technical classes in communications, motor repair, and first aid to the command and general staff course for high ranking officers.

A major feature of the course is a trip to the United States for students. While here, they visit industrial centers, a medium-sized U.S. city where they discuss municipal problems with city officials. They also visit a typical Midwest farm and a major state university. A stay in Washington, D.C., and meetings with governmental officials usually wind up their tour. They return to their respective countries with a far better understanding of the character and power of the United States.

The U.S. Army School of the Americas has a heavy and growing impact on Latin Amer-Close to 18,000 students, officer and enlisted, have graduated from the school. Back in their own countries they carry the benefits of their training into almost every sector of national life.

In many Latin American countries, plagued by poverty and poor educational systems, the military is the only nationwide organization with the skills needed to start solving basic

CIVIC ACTION

For instance, medication technicians re-turn home to help with public sanitation and bring medical assistance to isolated villages. This emphasis on civic action training at the school also teaches how to use military equipment and skills to bridges and roads, and civilian airstrips in isolated areas. Such things go far toward combating the enticements of communism in backward areas.

The Communist threat, intensified by the recent tricontinental conference in Havana, is no abstract theory in Latin America. Thus, a major emphasis is placed on instruction in counterinsurgency. This includes intelligence techniques and tactics to combat Red aggression.

The influence of the School of the Americas and its graduates is more than numeri-cal. Today its graduates are moving up to top military and civilian governmental posts in their countries. It is a favorable trend that will increase with more graduates and the passage of time.

Flat on Our Backs?

EXTENSION OF REMARKS OF

HON, CLAIR CALLAN

OF NEBRASEA

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. CALLAN. Mr. Speaker, current concern about the dangers of inflation is somewhat lacking in historical perspective. I, by no means, wish to belittle the present concern about inflation, but I do believe it essential that we view the subject with historical perspective.

As a recent article in Forbes magazine

The free enterprise system has come through crises a lot worse than the present

I submit for inclusion in the RECORD, the full text of that article:

THE SUMMER THE MARKET DIDN'T RALLY Talk about trouble!

The President of the United States is deeply concerned about inflation. "We must do everything in our power to reduce

inflationary pressures," he says, in urging Congress to hold down federal spending. Even though he counts heavily on trade union support, he sake labor to forego exwage increases. Several strikes occur.

The Federal Reserve Board, even more worried about inflation, thinks the money supply should be further tightened.

Abroad, Britain is going through a serious economic crisis. The Chinese Communists are on a rampage. Relations between the U.S. and Russia, after a period of thaw, are getting frigid again.

The stock market, instead of putting on its traditional summer rally, is dropping

alarmingly.

And yet business is good. People are clamoring for things to buy. Dividends are rising. Stock prices remain fairly high, historically speaking: 16 times earnings for the industrials, 21 times for utilities.

Why are we rehashing the month's news? We're not. The description is of the summer of 1946; the President, Harry S. Truman.

History never really repeats itself of course. o there are differences between 1966 and 1946. Our problem now is running a war that came in the midst of a boom; our problem then was converting from a war to a peace economy. Instead of being tight, money in 1946 was all too plentiful, because industry couldn't meet the pent-up demand for goods. Treasury bills yielded less than 1% (as compared with more than 5% today). Prime corporate bonds yielded 2.5%; highgrade municipals, 1.6%. Banks were happy to make loans at 2% or a bit more. In fact, plentiful was the supply of money, the Federal Reserve Board genuinely feared that interest rates might drop lower

There were other differences: Although the Dow-Jones index fell some 23% between May and October 1946, the impact wasn't nearly as great as the drop of some 15% since its February high. For one thing, there were not as many investors then (less than 6 million as compared with more than 20 million today). For another, the DJI was at less than a quarter of its present level.

Granting all the differences, the striking thing is that the reactions then were exactly the same as the reactions now; a wringing of hands, a wailing of disaster. In June 1946, the New York Times quoted one sage as predicting that it would take ten years for the U.S. to get back to normal. "The world," he groaned, "is flat on its back."

Well, he was wrong. Interrupted only by the Korean War and a couple of relatively minor recessions, the U.S. economy and its securities markets have been climbing ever since. Most of the problems that agitated the world—the devastation of Europe, for ex-ample—have disappeared. They have been replaced by other problems, true, but for all that the world is far from "flat on its back."

The alleged deep thinkers simply underestimated the strength and resiliency of the U.S. free enterprise system, which not only solved the problem of converting from war to peace but, in the process, managed to re-habilitate Europe and to help the Europeans roll back the Communist tide. We think the parallel holds: New capacity is coming on stream, tight money is slowly taking its toll on spending and investing and putting a damper on inflation. We don't know whether there will be a late summer rally or what will happen in Vietnam, but we're darned sure that, before long, blue chips will have their day again; and there'll be a higher stock market and lower interest rates. And it won't take ten years. The free enterprise system has come through crises a lot worse than the present one.

Trade-With-Enemy Ban Should Not Be Weakened

EXTENSION OF REMARKS

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Friday, July 29, 1966

Mr. FINDLEY. Mr. Speaker, a change in the agriculture appropriation bill adopted by the Senate on July 15 could hamper our war effort because it would weaken economic sanctions against North Vietnam. The change involves the trading-with-the-enemy amendment accepted by the House on April 26 by an overwhelming bipartisan vote of 290

Imposed as a limitation on funds for the food-for-peace program—Public Law 480—the House amendment stated:

No funds appropriated by this Act shall be used to formulate or administer programs for the sale of agricultural commodities pursu-ant to Titles I and IV of Public Law 480, 83rd Congress, as amended, to any nation which sells or furnishes or which Permits ships or aircraft under its registry to transport to North Vietnam any equipment, materials or commodities, so long as North Vietnam is governed by a Communist regime.

The Senate Appropriations Committee decidedly weakened this provision by the addition of this crippling modification: 'unless the President determines that the national interest requires otherwise." The committee in Senate report 1370, page 55, stated that the House provision as it stood would "encroach upon the authority that the committee believes that the President of the United States should have in the conduct of his responsibilities."

On the contrary, I believe it is more accurate to say that it is the Senate modification—not the original House version—that is an encroachment upon responsibilities. It is the Congressthe Presidency-which is adversely afThe Senate alteration gives the President the discretion to waive the ban when he considers it in the national interest to do so. Congress has acquiesced far too long to Presidential pressure in giving the executive branch a lopsided monopoly in the control and direction of

foreign relations.

The discretion the Senate would have the President exercise can easily be used in ways and to achieve ends neither envisioned nor necessarily condoned by Congress at the time the legislation is The Tonkin Gulf resolution of 1964 is but one example of this. While the executive branch does have a broad role in many areas of foreign policy development, Congress has the duty and responsibility, as the representative of the people, to give specific direction to policy. A good example is the subject I bring before you today. The House of Representatives, as the body generally closer to the people and more attuned to their opinions than the Senate, must not hesitate to see that its decisions are respected.

The trading-with-the-enemy curb is not a cruel device to punish the poor and starving peoples of the world. Under it, food donations could continue no matter what commerce the recipient countries maintain with North Vietnam or any other country. This is an important point which must be understood. The amendment as adopted by the House does not apply to donations, it applies only to "concessional sales," that is, sales for "soft currencies" or long-term dollar sales at nominal interest rates. It would deny the advantage of these deals to any country that trades with North Vietnam. As such, it would indeed have an impact, but hardly, a cruel impact.

Indeed, the impact would be merciful. To the extent that it helps to shut off supplies of all kinds to Hanoi it mercifully shortens the conflict and improves the position of our men fighting in that

jungle war.

Why should our taxpayers finance special cut rate deals to governments—some of which like Foland are Communist—which send supplies to those who are killing American soldiers in South Vietnam? A Polish ship, I might add, was damaged recently while handling cargo near Halphong.

The House bill as it stands is clear and unequivocal. The Senate version altering the House bill seriously undermines the whole impact of the amendment by creating a loophole big enough to accommodate a lot of cargo. Let us be clear. Let us give effect to our words. Countries which benefit handsomely from Public Law 480 provisions should be prepared to choose between purchasing our farm surpluses at special terms—more attractive than U.S. firms can get—or trading with a nation with whom we are engaged in a bitter and bloody war. They should not be permitted to have the best of both worlds.

The Senate language lets the President define the national interest. The national interest is, admittedly, a concept that is not without some ambiguity, but we should create a legislative loophole which would permit a subordinate acting in the name of the President but

perhaps without his knowledge to set aside a specific and reasonable definition of national interest made by the Con-

Congress is just as capable of determining the national interest on this point as the President and far more so than some unknown fourth-layer assistant in the Executive Office Building.

A conference has not yet been arranged at which reconciliation of differences between the House and Senate versions will be attempted. It is my understanding that the Senate conferees have been appointed, but House conferees have not.

In insisting resolutely on the House version, House conferees, whoever they may be, will be true not only to their colleagues of both political parties but more importantly to all our armed forces in South Vietnam.

The Morse Resolution

EXTENSION OF REMARKS

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1966

Mr. RUMSFELD. Mr. Speaker, the machinists strike against five major airlines has been permitted to continue too long. It is time for action to be taken to halt this strike.

The following editorial comment from the Chicago Daily News of July 26, 1966, discusses the strike:

THE MORSE RESOLUTION

Congress has available to it a step between doing nothing about the airline strike and collectively outlawing strikes that seriously contravene the public interest. That is to adopt the resolution introduced by Senator Wayne Morse, Democrat, of Oregon. The Morse resolution would extend the Railway Labor Act to cover the five struck airlines for 180 days, in order to bring the mechanics back to work. It would also provide for a new special dispute board, either to settle the strike or return the issue to Congress.

What Mosse's proposal needs is the support of President Johnson. And we presume the President—who has seldom hesitated to put the squeeze on industry when he felt the public interest demanded it—is holding off because he doesn't want to ruffle labor's feathers if he can avoid it.

But the public interest is involved in this strike as surely as it was in the rail strike. In an economy that is geared to the jet age, the airlines carry more people between cities than do buses and trains combined, not to mention their vital mail and cargo missions.

The \$7,000,000 a day in airline revenue losses are the merest beginning of the punishment imposed by the machinists' wrongheaded walkout. The whole tempo of the economy has been slowed to some extent, while industries connected with travel have taken an especially severe drubbing. Both American business and the traveling public have come to rely upon dependable air service as an integral part of the national transportation grid. An arbitrary shutdown like the present one indeed demninds the prompt attention of both the President and the Congress.

Surely the President needs no greater excuse than the machinists union's contemptuous rejection of the recommendations of

his own emergency fact-finding board. And surely if the matter seemed important enough to Mr. Johnson last January for him to propose such legislation, it has far greater urgency now.

It might be that the mere serious threat of such legislation would be enough to jar the union out of its intransigence. But the union is well aware that if Mr. Johnson withholds his personal support, or gives only perfunctory support, Congress will hardly pause in its busy schedule to give this matter top priority.

So it is up to Mr. Johnson to make his own position clear. And if that involves some alienation of union favor, that is no more than any President must risk in carrying out his responsibilities to all the people.

Pittsburgh Judge Speaks on Criminal Justice

EXTENSION OF REMARKS

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1966

Mr. MOORHEAD. Mr. Speaker, the Honorable Henry Ellenbogen, president judge, court of common pleas of Allegheny County, gave an enlightening address at a national symposium on science and criminal justice. Due to the alarming crime rate we see today, I am sure that my distinguished colleagues would find this address noteworthy, and, under leave to extend my remarks, I include it in the Record at this point:

THE ADMINISTRATION AND SCHEDULING OF CRIMINAL COURT BUSINESS

(An address delivered by Hon. Henry Ellenbogen, president judge Court of Common Pleas of Allegheny County, Pittsburgh, Pa., at a national symposium on science and criminal justice, Department of State Main Auditorium, Washington, D.C., June 23, 1966, sponsored by the President's Commission on Law Enforcement and Administration of Justice, the President's Office of Science and Technology, the Department of Justice, in affiliation with the National Security Industrial Association)

It is a distinct pleasure to speak this morning at the National Symposium on Science and Criminal Justice. The sponsorship of this Symposium is most impressive. It connotes an alliance and joint deliberation of the Department of Justice and legal circles with science and industry. A joining of all forces is necessary if we are to stem the rising rate of crime.

t

li

ñ

0

C

P

20

CHIME IS THE NO. 1 DOMESTIC PROBLEM

Let me point out at the very beginning that, in my opinion, crime is today the number one domestic problem. Society, government, and science have so far failed in their efforts to cope with it and to effectively combat it.

Every one of the three divisions of government has a distinct and important part to play in dealing with crime and criminals. The Legislative division of government, State and Federal, lays down the rules and standards. It declares what constitutes a crime and determines the range of punishment.

The Courts determine whether the accused committed the crime charged, and, if found guilty, mete out the punishment.

The third division of government, the Executive, must perform three separate and distinct functions:

(1) It must arrest the offender;

(2) It must prosecute the offender; and,

(3) It must carry out the sentence imposed by the Courts, and rehabilitate the offender.

Broadly speaking, the Legislative and Judicial divisions of government have per-formed fairly well. They carried out their task with a fair measure of success.

It is the Executive branch of government, State and Federal, which has singularly failed in its part of the job.

EXECUTIVE PAILS IN REHABILITATION OF CRIMINALS

The Executive division of government has failed in the treatment and rehabilitation of criminal offenders.

The rehabilitation of criminals is the heart of the problem. Every experienced judge knows that most serious crimes are committed by repeaters.

The penal institutions have carried out their custodial functions but they are a failure in the much more important field of the rehabilitation of criminal offenders sentenced to penal institutions. The behavioral sciences too, have so far

failed in devising really effective methods and treatments of rehabilitation.

It is important that we recognize these basic facts. If we can agree that government and science have failed in their respective responsibilities, we can then concentrate our efforts to find the remedies to the problems of rehabilitation.

I strongly suggest that we do so. I believe this Seminar, sponsored by such high authority, should concentrate on this question. I think the President's Commission on Law Enforcement and Administration of Justice can perform no more urgent and important task than pointing to the failure of the Executive department in the rehabilitation of criminals as the prime reason for the increase in serious crime.

Of course every agency of government must work within the framework of the Constitution and the Bills of Rights, Federal and

Only a few days ago the United States Supreme Court re-defined some of these boundaries. In four cases, beginning with Miranda vs. Arizona, it outlawed the admission of confessions made by accused under police interrogation.

CERTAIN CONFESSIONS STILL ADMISSIBLE

I want to point out that there are many confessions made by accused persons while in police custody which are still clearly admissible. It is important for police officials and district attorneys to know that spontaneous declarations volunteered by suspected offenders at the time of arrest and before interrogation at the station house always have been and still are admissible in Court as declarations against interest. This is very important, and so I repeat: Spontaneous admissions of guilt, unconnected with police interrogation, have not been outlawed. They are and remain admissible at the trial of the case.

These spontaneous admissions by arrested persons are by no means rare. They occur frequently. When they do occur, the police officials should carefully make note of them and include them in their reports.

ADMINISTRATION OF CRIMINAL COURTS IMPORTANT

I do not wish to be understood as saying that the administration of our Criminal Courts and the sentencing of criminal offenders by the judges do not play an important part in the problem of crime.

Our Criminal Courts must be so adminis-

tered as to have available:
(1) Adequate physical facilities;

(2) An adequate number of judges;

(3) An adequate staff;

r

t

3.

ŀ

(4) Speedy scheduling of criminal trials; and.

(5) A uniform approach to the sentencing of criminal offenders.

All of these are inter-twined. For instance, a sufficient number of trials cannot be scheduled and carried through unless there is an adequate number of judges. Judges must have proper physical facilities in order to function with efficiency.

As to the matter of scheduling: I believe that quick trials mean better justice. When trials are held within a brief time after the finding of the indictment, the recollection of witnesses is better, and their availability is more certain. Even the defendant has a clearer, sharper, and more immediate reaction to his involvement in the crime. less that is left to faulty memory, the more likely justice will be done.

Speedy trials act as a deterrent to crime.

I doubt that justice can prevail when the court is called upon to rely upon the memory of a witness several years removed from the incident about which he is asked to testify.

Furthermore, there is more respect for the law when the law and its machinery works

efficiently, smoothly, and, of course, justly. There are several aspects to the problem of providing speedy justice. More judges may be needed, more public defenders, more pros ecuting attorneys, and better physical facilities.

Another approach to the problem is in the manner of scheduling criminal trials. The scheduling of trials should preferably be in the hands of the court itself where it is free of pressure and the vicissitudes of changes in the staffs of a political office.

The scheduling of criminal trials is a complex matter. It must consider the seriousness of the crime, whether a jury trial is likely to be demanded, and the availability of counsel and witnesses.

Misdemeanors are more likely to be tried before a judge without a jury. They can be listed more quickly.

The reason is obvious. Only a certain number of jury trials can be scheduled in a given period, because they consume much more time than do non-jury cases.

The make-up of the daily calendar also depends upon the number of judges available, upon the availability of prosecuting attorneys, of defense attorneys, and, more recently, public defenders.

In every case there must be sufficient time for the prosecution and for the defense to prepare for trial.

In short, to have effective scheduling, those charged with the preparation of a trial list must consider a host of matters. The calendar clerk is not unlike a symphony conductor. He must weld all of these various factors together so that every case is brought to trial expeditiously. This is in the best interests of both the defendant and society as a whole.

The greatest factor in the breakdown of Criminal Court trial lists is the postponement of cases.

A trial list can be made into a shambles, and judges, lawyers, witnesses and juries can be left twiddling their thumbs if a court permits wholesale postponements of cases scheduled for trial.

Too frequently, defense attorneys or defendants will come into court with last min-

I am firmly convinced that judges should grant postponements only upon formal petition to the courts, and then only when the reason offered for seeking the postponement is an inescapable and valid excuse.

Permit me for a moment to discuss my own Courts, the Criminal Courts of Allegheny County. We in Pittsburgh know all about backlogs in criminal cases. At one time had a sizeable backlog.

Today, however, I can report that our Criminal Court is current. We have a large Court, which disposes of nearly 9,000 cases a year, and yet we have no backlog, none what-

Our grand juries are convened every month of the year except July and August. Thus, if a case is filed early in the month, it will go to the grand jury during the same month. Cases filed in the middle and latter part of the month are sent to the grand jury convening the following month.

Cases in which indictments are returned are reached for trial in our Court within two months. Although we give precedence to those cases in which the defendants are in jail, all cases are reached within two months unless there are special circumstances.

A major reason for our current status is the fact that in recent years in more than 80 per cent of our criminal cases, jury trial is waived and the cases are heard by a judge without a jury. This shortens the trial time and greatly increases the number of cases we can dispose of.

There isn't a major Criminal Court in the country, including our own, which cannot improve its system of handling, processing, and scheduling of cases.

DATA PROCESSING IS HELPFUL

I hope that the day is not too far distant when all the major Criminal Courts in the United States will have installed data processing systems to help in the handling of criminal cases. In Pittsburgh we hope install such a system in our Criminal Courts based upon our successful experience with data processing in our Civil Court.

The use of automation in the processing of criminal cases would make it more diffi-cult for cases to be misplaced or lost. Data processing permits frequent and careful checking and rechecking of pending case so that irregularities can be uncovered and rectified.

An important by-product of data process ing is that analysis of backlogs or lists of pending cases will uncover trouble areas-such as the concentration of cases within certain law firms or in certain categories of

Data processing also will provide for the judges who must administer the affairs of the court accurate and quickly available information on how the court is operating. Too frequently now, the staffs of our courts are too busy with other details to provide other than the most rudimentary statistical information.

The United States Supreme Court has laid down new rules to protect the rights of the individual. Unquestionably, these rules have placed pressure upon every law enforcement officer and every court. The crime rate, for whatever reason or reasons, has increased. This, too, has placed additional burdens upon our police, upon prosecutors, and upon the courts.

We must not seek scapegoats. We who are concerned with the law and law enforcement must see that the law meets the challenge of the times.

Without law, man would be plunged back into the chaos from which he emerged at the beginning of civilization. Law, adequately enforced, is our only protection.

The first duty of organized society is the protection of the individual citizen, his liberty, and his property. We who are engaged in the daily administration of law and the courts must do our part to see that such protection is accorded to every citizen, regardless of his race, creed or station in life.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is lo-cated in room H-112, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this
