TERMS OF BUSINESS, &c.

All orders from unknown Correspondents must be accompanied by a sufficient Remittance or Bankers' or other satisfactory References. To save cost and trouble of Booking, a Remittance should in all cases be sent with Orders under 10s. in value.

ACCOUNTS—DISCOUNTS.—All accounts are due net in three months; we however allow a discount of 5 %, i.e., is, in the pound, on all orders of 20s, and upwards, when accompanied by a remittance, or when paid within fourteen days of date of invoice.

CHEQUES, MONEY ORDERS, AND POSTAL ORDERS.—Should be made payable to DANIELS BROS. LIMITED, and crossed "BARCLAY & Co., LIMITED," Bankers, Norwich. Letters containing coin must be registered according to Post Office regulations.

CARRIAGE ON GOODS.—We pay carriage on the following Articles to any address in the British Isles:—

All KITCHEN GARDEN and FLOWER SEEDS offered in this Catalogue.

SEED POTATOES, CULINARY ROOTS, and HORTICULTURAL REQUISITES, if included in a general Garden Seed order of the value of 20s. in all.

DWARF and Bush Roses of the value of 7s. 6d. and upwards.

STANDARD ROSES ,, ,, 10s. Od. .,

Roses in Pots " " 15s. od. " "

We also pay earriage to any Station on the G.E.R. or Mid. & G.N. Joint Line on:

Sked Potatoks, Culinary Roots, &c.; to the value of 10s, and upwards.

Owing to their heavy weight, in proportion to their value, we regret that we cannot pay carriage on the following:-

Roses of less value than the amounts mentioned above.

TREES AND SHRUBS / But we continue to enclose extra plants, free of charge, to partially meet the cost of carriage.

HORTICULTURAL SUNDRIES, such as Silver Sand, Mats, Tools, &c., when ordered alone, and of less value than 20s.

MUSHROOM SPAWN

- PACKAGES.—All packages are charged at the lowest cost price, and are not returnable, unless sent back in good condition, and Carriage Paid, within fourteen days of receipt of goods. Customers are particularly requested to put their name and address on each package, and to advise us by post when returned, or they cannot be credited.
 - All Fruit Trees, Roses, and Shrubs, will be so packed as to stand a journey of a week or ten days without injury. Should the packages arrive at their destination during a severe frost, it will be advisable not to unpack them, but to keep them cool and moist out of the reach of frost, until a change of weather takes place.
- PACKETS,-Will our customers kindly note that, in all cases where Seeds are quoted by the "Packet," this is the minimum quantity that we can supply; smaller quantities or half-packets are not sold by us.
- CO-OPERATION IN SENDING ORDERS.—Allotment holders, Cottagers, and members of Cottagers' Garden Societies, requiring individually but small quantities of Seeds and Seed Potatoes, it they join together in sending their orders, will be allowed a special discount of ten per cent. to be taken in seeds, besides the usual discount of five per cent. for eash, thus:—for every 20s. remitted, 23s, worth of seeds may be ordered. No order can be recognised under these terms unless over the net value of One Pound, and accompanied by prepayment in full. Each order will be packed separately and all can be consigned in one package, but full name and address of each customer ordering under this arrangement should be sent.
- ORDER EARLY.—All orders are executed in the rotation in which they are received, and we would ask our customers to send us their orders as soon as possible after receiving this Catalogue. If every one waits for favourable weather, or until seeds are actually needed for sowing, it involves such a rush that an excessive strain is put upon our large staff of executants, and sometimes delay is as a consequence unavoidable.
- WARRANTY. We are extensive growers of many years' experience, and take the greatest possible care to supply only reliable seeds of the finest stocks and growing quality; it must however be distinctly understood, that we give no warranty expressed or implied as to description, quality, or productiveness, or any other matter relating to the seeds or plants we supply, and will not in any way be held responsible for any failure of crop. If the purchaser does not accept the goods upon these terms they must be returned at once.
- RECOMMENDATIONS.—The many kind recommendations to new customers with which we have been favored in the past have been very gratifying. Should any of our customers have friends requiring Seeds, Plants, &c., to whom a copy of our *Hustrated Guide* would be acceptable, we shall feel much obliged by an intimation of the fact.
- CORRESPONDENCE.—Our customers having occasion to write to us respecting any order previously sent by them, will much facilitate attention to their letters if they will kindly state the date on which the order was sent, and if remittance was enclosed name the amount; this will enable us more readily to identify their orders on reference to our Registers.
- ADDRESSES.—Full Name and Address should be sent with every communication, and nearest Railway Station should be stated with every order, as much time is thereby saved, especially in our busiest season, when we often receive from 1000 to 1500 letters daily. In consequence of this large correspondence, we suggest that, at all seasons, Cut Flower Orders and other Urgent Letters should be so marked on the envelope.
- CHANGE OF RESIDENCE.—We shall esteem it a favour if our customers, on changing their residences, will kindly favour us with their new addresses, so that we may be able to send them our Catalogues as usual.

SEED GROWERS

BY APPOINTMENT

TO H.M. THE KING

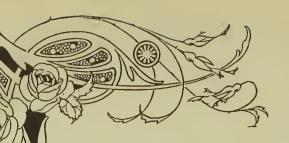

EXPORT OF SEEDS, PLANTS & TUBERS.

Important to Foreign and Colonial Correspondents.

- **REMITTANCES:** —A remittance, or draft on a London Bank, should accompany all orders from unknown correspondents.
- VEGETABLE & FLOWER SEEDS:—Special Collections of Vegetable and Flower Seeds for Export are offered on page 115. These are carefully selected to suit any locality, and are offered packing and postage FREE. Where our customers, however, prefer to make their own selection of varieties from the body of the Catalogue an extra amount should be added to their remittance towards the cost of packing and postage. In the case of heavy seeds such as Peas and Beans the postage is an important item. All Vegetable and Flower Seeds can be supplied at any time or season.
- **PACKING OF PLANTS, TREES, Etc.:**—All orders for these have special attention by our Export Packers, the plants being prepared and packed with the greatest care so as to ensure the best chances of successful transit, an important matter in dealing with perishable merchandise, and an extra amount should in all cases be remitted towards the cost of such special packing.
- **PRUIT TREES & OTHER PLANTS** in dry tubers only, and must in all cases be left to our own selection of sorts. See pages 121 & 122. The Dahlias offered on pages 142 to 145 are as young green plants, and quite unsuitable for Export. Tubers of these, also Fruit Trees, Roses, Chrysanthemums, Pelargoniums, &c., can only be sent out late in the Autumn or during Winter, when they are in a dormant condition.
- customs or postal regulations:—Where special regulations or restrictions are in operation regarding the importation of Potatoes, Plants, Trees or Tubers, it will greatly help us if our customers will kindly make themselves acquainted with those which apply to their particular province, and give particulars of such at the time of ordering, to enable us to comply with them if possible, and thus prevent delay in delivery, or confiscation.

DANIELS BROS. Ltd., SEED MERCHANTS AND NURSERYMEN, NORWICH :: ENGLAND

SEED GROWERS BY APPOINTMENT TO HIS MAJESTY KING EDWARD VII.

To-our-Customers

We have again pleasure in sending you a copy of our ILLUSTRATED GUIDE FOR AMATEUR GARDENERS, and we take this opportunity of thanking you for your very liberal patronage during the past year, and hope that we may continue to receive your

valued support, which we shall at all times endeavour to merit.

THE SEED HARVEST. The long continued wet and cold of the Autumn of 1909 proved very disastrous to the harvesting of our Seed Crops, and consequently, really good samples of Broad and Runner Beans, and some of the later kinds of Peas are exceedingly scarce. Owing to this and the increased wastage in picking, we have been compelled to make a slight advance in our prices for a few of these. Of most other Vegetable Seeds, however, although but short crops have been harvested, we have secured an excellent supply of good growth and quality, and are giving our customers the fullest advantage by offering them at the same prices as last year. We would draw particular attention to the special varieties of Peas, and other choice Vegetable Seeds, bearing our name, which we have every confidence in recommending as the finest obtainable.

We take the greatest care with the growth and selection of our fine stocks of VEGETABLE SEEDS, and carefully test the germinating qualities of all varieties before sending them out—an important consideration. Our customers may, therefore, rely on all the seeds we supply being of the best growing quality, and, under favourable conditions,

producing the most satisfactory results.

SEED POTATOES are a good average crop, and we list a choice selection of the finest of the recently introduced varieties, besides many splendid sorts of our own raising, which have become highly popular. Growers of Potatoes should bear in mind that a change of soil and stock is of great importance to their successful cultivation.

We have at our NURSERIES a grand stock of Fruit Trees, Roses, Clematises, and other hardy climbers, Hardy Herbaceous Plants, and other subjects for the garden, which

we specially recommend to the notice of our customers (See pages 123 to 158).

We have made extensive preparations for the prompt execution of orders, but as we are always very much pressed at the height of the sowing season, we would respectfully ask that customers will favour us with their orders as early as possible in the New Year, whatever may be the condition of the weather.

DANIELS BROS., Ltd.

January 1st, 1910.

NEW AND CHOICE VEGETABLE SEEDS FOR 1910.

- PEA, DANIELS' EXPRESS. A grand new first early Marrowfat variety, growing to the height of about 18 inches, and of great productiveness, bearing a profusion of handsome dark green pods 4½ to 5 inches in length, well filled with Peas of the most delicious marrow flavour. In habit of growth it somewhat resembles Competitor, but the pods are much darker in colour and better filled. We can strongly recommend this as one of the first early varieties yet introduced. (Stock limited).

 Per pkt. 1s.; per half-pint 2s.
- RUNNER BEAN, DANIELS' WHITE EMPEROR. A fine new variety, bearing a heavy crop of long straight pods, quite equal to the Scarlet Emperor. The seed and flowers are white, and it has a good vigorous constitution. It will make a most valuable variety for exhibition, whilst its heavy cropping and fine quality render it most useful for all purposes.

 Per pkt. 1s.
- RUNNER BEAN, DANIELS' GIANT SCARLET. A grand variety both for exhibition and the table, and is at the same time one of the most prolific varieties with which we are acquainted. The pods are long, straight, and of excellent quality.

 Per pint 1s. 6d.; per quart 2s. 6d.
- CABBAGE LETTUCE, DANIELS' EXHIBITION GIANT. This grand variety is one of the largest Cabbage Lettuces yet introduced, and grows to an enormous size without becoming coarse. The heads are very firm, crisp, and of excellent flavour. For exhibition purposes it is unrivalled, and is one of the best for salads, especially where they are used in quantity.

 Per pkt. 1s.; per oz. 2s. 6d.
- CABBAGE, DANIELS' INTERMEDIATE RED. A fine type of Red Cabbage with mediumsized heads, which are very firm and of a good deep colour. It is of medium height and very compact in growth; fine for exhibition.

 Per pkt. 4d.; per oz. 1s.
- CELERY, DANIELS' EARLIEST PINK. This grand new Celery is a useful companion to our Earliest White, and like that variety comes into use quite six weeks earlier than the old varieties. It grows to a large size, the heads being very solid and of excellent flavour. A most valuable variety for early shows.

 Per nkt. 1s.
- TOMATO, DANIELS' KING EDWARD VII. This fine Tomato is a decided advance on most existing varieties, and certainly one of the best yet sent out. The plant is of a sturdy, vigorous, short-jointed habit of growth, with an excellent constitution. It is a continuous bloomer, a free setter, an abundant bearer, and continues in fruit for a very long period. The large, splendidly coloured fruits, which are produced in handsome clusters of eight to ten or twelve, are very deep, almost round in form, and very solid and heavy, whilst in flavour it is all that can be desired. This fine Tomato is admirably suited for growing in pots. In consideration of its heavy cropping, and the superior quality of its fruit, this will be found a really first-class variety, alike for the market grower or amateur exhibitor.

 Per pkt. 1s. 6d.

CHOICE POTATOES FOR 1910.

DANIELS' PRINCE EDWARD. This grand new Potato is a seedling from our celebrated Duke of York. crossed with The Factor. It is a second early of enormous productiveness, having produced 32 times its own weight. It shows the character of both its parents, and is a nice upright grower (about 2 feet in height) with strong leathery dark green foliage and white flowers. The tubers, which are kidney-shaped, with clear white skin and flesh, are of the finest table quality.

Per lb. 6d.; per 7 lb. 2s. 6d.; per 14 lb. 4s. 6d.

"You state in your Guide that Prince Edward Potato will yield 32 times its own weight; it has dono more. I had 2 lh. of tubers, from which I lifted 96 lh."—Mr. M. THOMPSON, Holbeach.

"From 2 lh. of your Prince Edward Potato I lifted 84 lh. of fine tuhers. I did not find a had oue, and they are keeping very sound."—Mr. G. FIRRIS, Watermore.

"Last Spring I purchased 2 lb. of Prince Edward Potato from your Firm. I have just raised 71 lb. from the same. The majority were of eating size and quite sound. They were grown under ordinary cultivation."—Mr. J. GREAVES, Meriden.

"I am pleased to say your Prince Edward Potatoes turned out splendidly."—Mr. H. SMITH, Cowbridge.

- DANIELS' ROYAL NORFOLK. This grand Potato, introduced by us in 1907, has proved itself a heavy cropper of fine quality, having produced this season under ordinary cultivation, 17 tons per acre. It is an early Main Crop variety, in form it is a flattish round inclined to pebble-shaped, the skin and flesh are white, and it is at the same time one of the handsomest sorts with which we are acquainted. The haulm grows about two feet in height. It is a grand cropper, whilst its cooking qualities are all that can be desired, and up to the present it has shown very little signs of disease; on account of its handsome appearance and many good qualities it will be in great request for exhibition purposes. See illustration page 51.

 Per 14 lb. 3s.; 56 lb. 10s. 6d.
- PRESIDENT. A heavy cropper of first-rate quality, and free from disease. It resembles Up-to-Date in growth, and is of a strong hardy constitution. The tubers are somewhat oblong in shape, with white skin and flesh, and is one of the best of the late varieties. It is of grand table quality.

 Per 14 lb. 3s.; 56 lb. 10s. 6d.

A FINE COLLECTION OF VEGETABLES.

GROWN FROM SEEDS SUPPLIED BY DANIELS BROS. Ltd.

For many years past we have taken the greatest care to supply our customers with Seeds of the best possible stocks and growing quality, and true to name. It is, therefore, highly gratifying to note by our steadily increasing business and the large number of unsolicited testimonials we are constantly receiving from our patrons, that our efforts to supply them with really good and reliable Seeds are so fully appreciated

UNSOLICITED TESTIMONIALS. "I was awarded First Prize for a Collection of Vegetables. I have won over sixty Prizes, including a Silver Medal for most points in the Show, all from the produce of your

"Yon have enpplied me with Seeds for thirteen and I have held the Championship at the Hayward's Show eleven times and twice Second.

I have gained the following honours:—

One Gold Shield, two Silver Shields,
One Bronze Shield, one Silver Clasp,
One Gold Medal, three Bronze Medals,
And three Championship Certificates.
Thanking yon for supplying me with such splendid Seeds, that have eachled me to win the shove."—Mr. M. LELLIOTT, Guckfield.

"I have taken twelve Prizes in all, one of them heing the Premier Prize for a Collection of Vegetables. I have strongly recommended you to others and hope you may find further customers in this locality."—Mr. J. K. THOMSON, St. Briavels.

excellent Seeds."-Mr. G. SCOURFIELD, Tyngwyn.

"It gives me much pleasure to inform you that I won fourteen Prizes at the Betchworth Show. I also obtained the Silver Shield and Certificate." — Mr. W. TIMBERLAKE, Betchworth.

"I have taken First Prize with your Carrots for four consecutive years, and First with your Beet, and First with your Defiance Cabbage this year. I took First Prize for a Collection of Vegetables; and altogether have won ten Firsts, three Seconds, and two Thirds at the Lingfield Show."-Mr. J. BATTRICK,

KITCHEN GARDEN SEEDS.

Our large experience in this department has enabled us to select the finest possible stocks, the same being grown on our own grounds or under our personal supervision. The growth of all seeds is carefully tested before sending out, and customers ordering from us may thoroughly rely on being supplied with the best and newest varieties all of good growing quality.

DANIELS' COMPLETE COLLECTIONS.

All Package and Carriage Free.

These Collections, of which we annually sell immense quantities, are carefully made up with seeds of finest quality in best varieties from each class with a view of furnishing an ample supply of Choice Vegetables throughout the year, and will be found extremely valuable for those who have not sufficient time or experience for making their own selection.

As our Collections are made up on a most liberal scale, intending purchasers will kindly bear in mind that it is only by having Seeds specially grown, and by preparing the packets beforehand in large numbers, that we can be so liberal in the quantity of the Seeds supplied for the amount charged, and that by ordering our selections, instead of making their own, will reap an advantage of at least 25 per cent. below the general Catalogue prices. We therefore wish it to be understood that no reduction, alteration, or substitution can be allowed in any of the collections. When ordering please quote Number and Price of the Collection required.

"Your Collection of Vegetable Seeds last year gave great satisfaction." Mr. F. HORNE, Walton.

"Your 2s. 9d. Collection of Vegetable Seeds bas always given great satisfaction." Mrs. F. MONK, Flamboro.

"I am very pleased with the Collection of Vegetable Seeds. It is grand value for the money." Mr. A. HARRIS, Plaistow.

"I was very successful with your Seeds last year, having obtained 6 First, 3 Second, and 2 Third Prizes at our show." - Mr. W. R. S. WHITE, Bassingbourn.

"We were very ple soil with the Seeds we had bust year; they all came to perfection," -Mr. A. MAYO, Nailsworth.

"I am delighted with the varieties sent and consider the Collection a splendid one." - Mr. M. WARREN, Greendale,

COLLECTIONS OF VEGETABLE SEEDS FOR EXPORT.

Price 10s. 6d., 15s., £1 1s., £2 2s., £3 3s. and £5 5s.

All post or carriage free. For full particulars, see page 115.

"I received the Seeds on Angust 1th, 1908. My criends were surprised when I told them they only cost me I 5s., and said I would not get the same quantity out here for twee the money. I took eight Elist Prizes for Vegetables grown from your No. 9 Collection. Also First Prize for Telegraph Carrots—a bunch of twelve weighing 9 lbs."—Mr. W. LINCOLN, Teowoomba. Queenslynd.

"I must tell you what I have often s id before, your Seeds leave nothing to be desired."- Mr. W. WOOD, White Bay, Newfoundland.

"Your Seeds did well at our Show. I took twelve First and six Second Prizes,"—Mr. T. CIARK, Milton, New Zealand.

"It may be of interest to you to know the result of the planting of your productions in South Americ. My daughter informs me they were a great success. The produce from them was very great, and the size of the Vegetables enormous, especially the Cabbages. Nothing approaching their size had ever been seen in the country." Mr. J. EAGER. Dover.

Cultivation.—Peas form one of the most valuable of garden crops, and when once started into growth, require, under favourable conditions, little attention beyond the staking of such varieties as need support, and mulching and watering in dry weather. Peas require a good rich soil, which should be well trenched, and should receive a liberal supply of well-decomposed manure early in the season. They are essentially a moisture loving plant, and only when the ground is well prepared can really satisfactory results be assured. Given these conditions, it is possible by a succession of sowings to have a continuous supply of Peas for the table from June till October, or even later.

First early varieties should he sown from the middle of January onwards, and the best sorts in this class are Daniels' Gem of the Season, William the First early varieties should be sown from the middle of January enwards, and the best sorts in this class are Daniels' Gem of the Season, William the First, and The Pilot; if the seed is sown in boxes under glass in January, hardened off in a frame and planted out at the latter end of March or early in April, an advantage of ten days or a fortnight may be gained. Second early and main crop kinds should be sown in March and April, and for late use a succession of sowings at intervals from the beginning of May until the end of June should be made. For these sowings the tall varieties will be found more productive, and not so liable to mildew during hot weather. It should be borne in mind that although most of the Wrinkled seeded varieties may be sown in March, we do not recommend this unless the season is exceptionally favourable. We find from a careful record extending over ten years, that little if any advantage is gained by too early sowings, and that Peas sown at the heginning of April take less time to come to maturity than the earlier sown ones. If this rule was more generally followed, we should bear less about had germination amongst this class of Peas expecially in cold wet seasons. The seed should be sown in drills and covered about two inches deep; allow four or five feet between each row unless it is desired to grow some other crop between, when the rews may be 12 to 15 feet apart. Let the rows run from north to south thus allowing the plants to receive a maximum of light and air.

ing the plants to receive a maximum of light and air. Peas suffer greatly from the depredations of all kinds of vermin, and it will always be found of advantage to give protection either by wire peaguards or some other means while the plants are growing. The rows should be earthed up before they are staked, and this should be done when the plants are about four inches high. If the tops of the sticks are cut an upward tendency from the start. water will be found very useful for this purpose.

DANIELS' EXPRESS

evenly, and the pieces which are cut off placed between the large sticks at the base, they will prevent the plants from falling about, and give them A good mulching of manure placed on each side of the row will help to

retain the moisture in dry weather. Where this is not possible they must be regularly watered during dry periods, and liquid manure given once a week; a mixture containing four ounces Nitrate of Soda to one gallon of

When it is desired to grow Peas for exhibition purposes the following points should be observed: Sow the seed very thinly on ground that has been especially deeply trenched for the purpose, and which has been dressed with old farm-yard manure or the remains of an old musbroom bed. If they are needed for early Summer Shows it may be desirable to raise the seed on turves in a greenhouse and transfer them bodily to the border when about four inches bigb, but, generally speaking, if the seed is sown in rows in March and April it will be found early enough.

When the plants bave shown about four blooms, pinch out the leader or top of the haulm. As soon as the pods have formed, choose the best shaped, and remove the others, leaving only two or three on each plant. Always select the strongest and healtbiest plants for this purpose. When roady to gather, do not handle the pods, but cut off with seissors so as to retain their bloom.

NEW PEA, DANIELS' EXPRESS.

A grand new first early Marrowfat variety, growing to the height of about 18 inches, and of great productiveness, bearing a profusion of handsome dark green pods, 4½ to 5 inches in length, well filled with peas of the most delicious marrow flavour. In habit of growth it somewhat resembles Competitor, but the pods are much darker in colour and better filled. We can strongly recommend this as one of the finest first early varieties yet introduced (Stock limited). Per pkt., 1s.; per half-pint, 2s.

NEW PEA, THE PILOT.

This valuable introduction is rapidly taking a leading place amongst the most useful varieties, both for market and private garden purposes. It is a first early cropper producing deep green pods of the well-known Gradus type, and on account of its hardy constitution and the seed being round it may be sown very early with the certainty of a crop. It is a vigorous branching plant, growing three fect in height, bearing a large proportion of the pods in pairs, which contain fine deep green peas of excellent marrow flavour. Per quart 2s. 3d.

[&]quot;I am pleased to say that I have just obtained First Prize with your Peas, they were excellent,"—Mr. J. LEWIS, Llangadock.

[&]quot;I had a famous crop of Marrowfat Peas last year."- Mr. J. DICKS, Horning,

[&]quot;It gives me much pleasure to say that the Seeds I had from you last year did very well indeed. The Peas were especially good, and yielded a very fine crop."- Mr. J. MOORE, Witton.

Section I.—Earliest Varieties.

DANIELS' SELECTED GRADUS.

This large-podded early wrinkled variety, is without doubt the finest and most distinct early Pea yet introduced. The haulm which grows to the height of three to four feet is well covered with large dark green pods, averaging five inches in length, and well filled with eight to ten fine Peas of the most exquisite flavour; indeed, amongst the early varieties it has no rival in this respect. It is an excellent cropper, this combined with its earliness and grand flavour, has made it a favourite with all growers.

Per quart 2s. 3d.

Section II.—Second Early.

DANIELS' DWARF PROLIFIC.

A grand second early dwarf wrinkled Marrow, of strong constitution and sturdy habit, growing about $1\frac{1}{2}$ feet high; it is enormously prolific, bearing a profusion of dark green, slightly curved pods, four inches long, well filled with eight to nine peas of excellent flavour, at the same time it is an excellent variety for forcing, being quite as prolific under glass as in the open. It is a very compact grower, and will be an acquisition to all gardens where space is limited, on account of the little room it occupies as compared with its heavy cropping qualities.

Per quart 2s.

Per quart 8s. d.

DANIELS' DWARF PROLIFIC. Reduced from a Photograph.

DANIELS' MIDSUMMER MARROW. A grand early Marrowfat Pea of a good hardy constitution. It is an abundant bearer; the pods, which somewhat resemble Gradus in shape, are about $4\frac{1}{2}$ inches in length and well-filled with nine or ten fine peas of excellent flavour. We can thoroughly recommend this as a first-class variety for all purposes

Height 3 to 4 ft. 2 0

DANIELS' NORWICH WONDER. A grand Second
Early variety, bearing an abundance of fine shaped
pods five inches in length, well filled with nine to ten
peas of excellent flavour; a fine addition to our exhibition varieties, whilst its prolificness and excellent table
quality make it a most desirable acquisition

PRODUCTIVE MARROWFAT. A fine second early variety, growing to the height of 1½ feet. The haulm is of good constitution, bearing a profusion of large pods mostly in pairs, and well-filled with fine peas of the true marrowfat flavour. Considering its dwarf habit and great productiveness it will prove of great value for small gardens Height 1½ to 2 ft.

THE DAISY. A dwarf seeond early wrinkled Marrow of great merit.

The haulm which is very robust is well hung with handsome pods four to five inches in length, well filled with large peas of excellent flavour. On account of its numerous good qualities it has been awarded a First Class Certificate by the Royal Horticultural Society Height 1½ ft.

WILLIAM THE FIRST. Selected stock. One of the finest early green Marrows, combining flavour and earliness, and produces a very heavy crop of slightly curved dark green pods, well filled with peas of excellent colour and flavour, and is one of the best varieties for market purposes ... Height 4 ft.

[&]quot;Your Watchless Marrow Pea might be very littingly termed Deniels' Girut. I have never seen anything approaching it in appearance, and the row is padded from top to bottom. It is easy to get pods five inches long containing from nine to eleven peas of numeral size." Mr. W. HAMILTON, Springside, Kilmarnock.

[&]quot;I have never had Pess looking so grand before as your Matchless Mariow. They are the envy of everybody."—Mr. W. WILLFORD, Leicester.

[&]quot;I had some of your Matchless Marrow Peas, and I have a splendid row covered with pods six inches long and well filled. It has been much admired."—Nr. W. CHAPPLE, Axminster.

[&]quot;The Seeds you sent me are producing marvellous results, especially the Natchitis Marrow Peas, many of the pods containing eleven pers."—Mr. A. J. MERRY, Swinden.

[&]quot;I am very pleased to tell you that from one quart of Matchiess Marrow Pees I have picked five bushels of splendid Pees."-Mr. P. TARRANT, Datchet.

[&]quot;I was very pleased with your fine selection of Peas. The Lye's Favourite last year were splendid." Mr. P. TARRANT, Datahet.

Section III.—Main Crop.

DANIELS' SELECTED DUKE OF ALBANY.

A fine selected stock of this useful Main Crop Pea. It grows between 4 and 5 feet in height. The haulm being covered with a very heavy crop of long handsome dark green pods, averaging five inches in length, which are well-filled with 10 to 12 large peas of the true marrow flavour. A splendid variety for exhibition, whilst its fine cropping qualities combined with its excellent flavour will recommend it alike to the private grower and the market gardener.

Per quart 2s. 3d.

- "I am pleased to say I won First Prize for the best dish of Peas with your Recorder." Mr. G. LEE, Canning Town.
- "I enclose photo of a row of Recorder Peas, which I think splendid." Mr. W. HEPWORTH, Thorne.
- "Your Recorder is undoubtedly a splendid Pea, distinct in shape, tire colour, and deiricions in flavour. It should become a general favourite, I have been successful on several occasions with the produce of your Seeds."—Mr. J. C. PRICKETT, Derby.
- "Your Recorder Pea is the best I have ever grown."- Mr. H. LOVESEY, Hereford.
- "Your Recorder Pea is a splendid cropper. I obtained First and Special Prizes for your Duke of York Potato, also First Prize for your Crimson Perfection Beet."—Mr. H. YOUNG, Leigh.
- " I took First and Second Prizes with your Recorder Pea." Mr. P. MURDOCH, Derwent Valley.

Section III.—Main Crop.

THE DANIELS

An extra large podded Main Crop variety of great merit. It is of robust constitution, the pods are long and handsome, averaging five to six inches in length, and well filled with ten to twelve large peas of the finest marrow flavour. It is a very heavy and reliable cropper, and a most useful sort for exhibition; strongly recommended for general crop.

Height 4 ft. Per pint 1s. 6d.; per quart 2s. 6d. per quare DANIELS' MAIN CROP MARROW. One of the finest Marrow Peas in cultivation, and of the same flavour as the old Ne Plus Ultra; but the pods are longer. It is very prolific, bearing a profusion of dark green, well-filled pods, each containing eight to nine large peas of exquisite flavour; as a Main Crop variety it should be in great demand on account of its numerous good qualities. Height 4 to 5 ft. Per pint 1s. 6d. 2 16 DANIELS' IMPROVED CHAMPION OF ENGLAND. A great improvement of the well-known variety. It is very prolific, bearing a profusion of wellfilled pods, twice the size of the old variety, at the same time retaining the fine rich marrow flavour for which that pea is celebrated. Height 5 to 6 ft. 1 to QUITE CONTENT. This is undoubtedly the largest-podded pea yet introduced. It somewhat resembles Alderman, but with stronger growth and longer pods. It is exceedingly prolific, and the pods hang mostly in pairs. Grand exhibition variety. Height 5 to 6 ft. Per pkt. 9d.; per half-pint 1s. 6d.; pint 2s. 6d. STRATAGEM. This is a splendid variety, with peds five to six inches in length, containing eight to ten large fine-flavoured peas. First Class Certificate, R.H.S. Our own selected and improved stock. Height 2 ft. TELEGRAPH. A hardy variety of first-class quality and strong constitution, pods large and well-filled; exhibition or market purposes . Height 4½ ft.
TRIUMPH. A blue wrinkled Marrow, of exquisite
flavour; the pods are long and well filled, each
containing nine to eleven large peas. In constitution
it is robust and hardy . Height 2 to 3 ft. YORKSHIRE HERO. A fine dwarf Marrow Pea of the Veiteh's Perfection type, is very prolific, bearing a profusion of well-filled pods, containing six to eight Height 3 ft. large peas each; flavour first-class "The Daniels Pea was most satisfactory last year."—Mr. G. $\mathbf{ORCHARD},$ Sotwell. "I am writing to say how pleased I am with your Peas. Matchless Marrow, Gradus, Dwart Prolife, and Gem of the Season. I was gathering the last named in June when nobody was expecting Peas. The Gradus and Dwart Prolife have been excellent, and the Matchiess Marrow have been matchiless to the letter."—Mr. J. R. BULL, Burton Latimer.

THE DANIELS.

"I am highly pleased with the results of all the Seeds, and if I should specify one out for very special mention, it must be the Matchless Marrow Pea which has produced the finest stock I have seen this year."—Mr. F. RANSOME, Heathorpe.

"Your Distinction Pea was the admiration of the Show, and came ont a glorious First, with thirty other exhibits. I have no doubt you will secure several orders another year."—Mr. J. BARNETT, Chapel Find.

"Lam pleased to tell you I won two First Prizes and a Special with your Distinction Pea." Mr. G. BESLEE, Woodchurch.

"I be we taken 16 Prizes with your Distinction Pea." Mr. E. BRIGGS. Wolverton.

"Your Distinction Feas are the best for all purposes I ever saw, I have obtained five First Prizes with them. They are splen Folloroppers,"- Er. F. WEAVER, Cross-in-Hard.

A GRAND LATE PEA, DANIELS' DISTINCTION.

DANIELS' DISTINCTION. A very fine late variety which comes in about the same time as "Ne Plus Ultra," and which it rivals in its culinary qualities. The plants are of strong robust growth, attaining a height of about $3\frac{1}{2}$ feet, and producing an abundance of handsome dark green, slightly-curved pods, five to six inches in length, filled with large peas of the finest and most delicate flavour. We can highly recommend this as one of the very best for exhibition; for a late crop it is unrivalled.

Per pint 1s. 6d.; per quart 2s. 6d.

Section IV.—Late Varieties.

DANIELS' COMMANDER.

This is a superb Dwarf Maincrop Marrowfat, growing only about eighteen inches in height. It is of a robust constitution, with rich dark green pods and foliage, and is a splendid cropper. The individual pods are of large size from four to five inches in length—and contain on an average nine large peas, equalling in flavour the famous "Ne Plus Ultra." We have much pleasure in recommending "Commander" as a first-class acquisition amongst dwarf Peas, and one that should find a place in Per pint 1s. 6d; per quart 2s. 6d.

GLORY OF DEVON. Award of Merit, Royal Horticultural Society. A fine addition to our late varieties of Peas. It is of hardy constitution and a robust grower, the foliage being of a rich dark green. The haulm, which grows about four feet in height, is well laden with fine handsome pods, each containing eight to ten large peas of delicious flavour. For exhibition Per pint 1s. 3d.; per quart 2s.

it is first-class.

DANIELS' NORFOLK GIANT LONG-POD. From a Photograph.

BEANS-Broad.

Cultivation.—This highly nutritious vegetable grows well in any good garden soil, but responds readily to liberal treatment and should, therefore, when possible, be grown in well-prepared ground which has received a good supply of manure. The cultivation is of the easiest and overybody should be able to grow them successfully.

The earliest sowing should be made in February with our "Selected Long Pod," this being one of the earliest and best sorts. For the main group, sow in March and for a succession in April

erop, sow in March and for a succession in April.

The seed should be sown in double rows 6 inches apart, with an interreing space of 3 feet between the pairs of rows; place the seed 6 inches apart in the rows, earth up the plants by drawing the soil around them, when they are about 6 inches bigh, give a good eovering of ashes to keep off the slugs.

When the plants have made a good growth and set a nice quantity of bloom, the centres should be nipped out, thereby throwing more vigour

into the pods.

A liberal supply of liquid manure given at intervals during the bearing season will add much to the size of the pods, as also will a mulching of decayed manure, if put on before the hot weather comes.

The Windsor varieties whilst not giving such long pods are of excellent flavour; the best varioties for exhibition purposes are Daniels' Norfolk Giant Long-pod, which produces the finest pods of any of the long-podded sections, and Daniels' Mammoth Windsor, which is by far the best of its

WHITE-SEEDED VARIETIES.

DANIELS' NORFOLK GIANT LONG-POD. The

DANIELS GIANT SCARLET. Reduced from a Photograph.

BEANS-Runner.

Cultivation.—Runner Beans form one of the most important and profitable of all garden crops grown for Summer and Autumn use, and yield a liberal supply of vegetables available for use after the Maincrope

They are easy of culture and may he grown as screens in small gardens, thus serving the double purpose of covering a trellis or wall and at thosame time yielding a crop of delicious vegetables.

The ground should be prepared in the same manner as for other Beans, but Runuers being somewhat tender the seed should not be sown until early in May.

Sow the seed in double rows 9 inches apart and, if possible, allow a space of 12 feet hetween each double row, cropping the intervening; space with other vegetables.

For a succession make further sowings in June and July. When the plants are about 9 inches high, draw the earth round them,. and place tall, strong stakes to the rows, taking care to make them very firm and able to withstand the wind. A good mulching of rotted manuroduring the cropping season will lengthen the period of hearing and givequality to the beans.

Where it is impossible to procure tall stakes, it is the practice to take out the leading growths when the plants are about a foot high, thus encouraging a spreading habit and in this way good crops may be grown and space economised.

The best varieties both for exhibition and general purposes are Daniels' Giant White and Daniels' Giant Scarlet.

DANIELS' GIANT SCARLET. A grand variety both for exhibition and the table, and is at the same time one of the most prolific varieties with which we are acquainted. The pods are long, straight, and of excellent quality. Our own selected stock

per pint 1s. 6d. 2 6 DANIELS' GIANT WHITE. This is without doubt the finest type of Runner Bean extant, bearing in profusion long, green, thick, fleshy pods, upwards of twelve inches in length, and nearly two inches in breadth. This variety, besides the best for culinary purposes, will also per pint 1s. 6d. 2 6 be found a grand exhibition kind

SCARLET EMPEROR. A giant amongst Scarlet Runner Beans, producing fine straight pods fifteen inches in length, and is enormously productive. A grand sort for exhibition .. per half-pint 1s.; per pint 1s. 9d.

WHITE EMPEROR (new). For full description,

TITAN. One of the largest of the Scarlet Runners; the pods, which are broad, straight, and handsome, are produced in clusters, and are very fleshy and almost stringless. This variety ters, and are very fleshy and almost stringless. is very hardy, and most useful to grow, either for table or market, while for exhibition purposes it is unequalled per pint 1s.

BEST OF ALL. One of the longest podded of the Scarlet Runners,

very prolific. The pods, which are long, straight, and very handsome, are produced in large clusters. It is of excellent

table quality, and one of the best for exhibition per pint 1s.

NE PLUS ULTRA. A fine variety for exhibition and main crop, producing a large quantity of fine pods of splendid form, from ten to fourteen inches long, and quite straight. To grow it to perfection each hean should be planted one foot apart in

OLD SCARLET RUNNER. Best for general crop PAINTED LADY. Scarlet and white blossom, very ornamental ...
VEITCH'S CLIMBING KIDNEY BEAN. First Class Certificate,
Royal Horticultural Society. This Bean combines the best
features of the two types, Dwarf French and Scarlet Runner. It crops earlier than the Runners and has all the delicate flavour and quality of the Dwarfs; height six to seven feet ...

[&]quot;Your Runner Beans were a great success last year. Quite the best round here."
-Mr. S. SHATTOCK, Rowbarton.

[&]quot;The Runner Beans were fine and delicious."-Mr. RANSEY, Torquay.

[&]quot;I may say I am delighted with your Runner Beans, Scarlet Emperor and Giast White. They are wonderful croppers."—Mr. S. MORISS, Barrowby.

[&]quot;I may say I was highly pleased with the Seeds I had from you. I had the finest erop of Giant White Runner Beans I ever saw."—Mr. J. JEPSON, Walpole-St. Peters.

BEANS—Dwarf French.

Cultivation.—This useful vogetable can be grown by almost any one, as sufficient space for a row may be found in even the smallest garden. With attention to the preparation and manuring of the ground, there should be no difficulty in having a continuous supply of French Beans for a considerable portion of the Summer and Autumn.

The culture is of the summer and Antumn.

The culture is of the simplest; the ground having been thoroughly dug and manured in early Spring, the Beans should be planted about the end of April; the rows should be 2½ feet apart and the Beans placed about 4 inches apart in the row, any gaps in the row may be filled up by transplanting the seedlings when just past the seed leaf.

The soil should be drawn round the plants to protect them from cold winds in Spring, and during the time of bearing occasional waterings with weak liquid manure will add much to the size of the produce and lengthen the period of bearing.

Daniels' "Incomparable" can be highly

with weak liquid manure will add much to the size of the produce and tengthen the period of bearing. Daniels' "incomparable" can be lightly recommended on account of its great prolificness and excellent quality.

Where greenhouses are available the earliest sowing may be made at the beginning of April, and the young plants transferred to the outside border when large enough to handle. A crop may also be grown in the early months of the year in beated frames or greenhouses, the seed being sown in 8-inch pots half filled with good rich soil, and the pots gradually filled up with soil as the plants grow. It is most important that French Beans should be gathered as soon as ready, otherwise the plants will gradually give up blooming and the crop be much reduced.

QUEEN. Very fine, beads well protected	0	4	1	0

Cultivation.—This excellent vegetable is of the greatest value during the Winter and early Spring, when Cauliflowers are not obtainable and vegetables generally are searce. They like a good rich firm soil, which has during the previous Autumn been thoroughly trenched and liberally manured. If possible, choose a piece of land on which Celery has been grown. The earliest sowing of seed should be made at the latter end of March, and the price of the control of the

the principal sowings during April, whilst May will be soon enough for the late varieties. Sow the seed either in a warm sheltered border or in a frame, late varieties. Sow the seed either in a warm sheltered border or in a frame, in drills eight or nine inches apart and one inch deep. When the plants are large enough to bandle, lose no time in pricking them out, as they quickly suffer if allowed to remain too long in the seed bed, becoming drawn and weak. The final plantings should be commenced in May, and followed on as opportunity occurs until the end of July, and as land becomes available. Choose the strongest plants first, as by this means a much better succession will be obtained.

The most important point in planting out Broccoli is to be quite sure that the ground is very firm; the harder it is the better it will be for the plants, as they will thereby be able to withstand the Winter, therefore if the land was trenched and manured during the past Winter, do not have it dug again just previous to planting out. Make the rows about $2\frac{1}{2}$ feet apart and place the plants about two feet apart in the rows. Water the plants thoroughly after planting and keep the weeds down.

In severe Winters it is generally the practice to beel over the plants with their heads to the north, as soon as they are turning in, making the soil quite firm round the stem quite up to the neck, thus leaving only the head above the ground. In addition, a sprinkling of hay or bracken over each bead will prevent any harm coming to them, and a very high percentage

bead will prevent any harm coming to them, and a very high percentage

will be found to withstand the severest weather.

In the first division Michaelmas White and Self-protecting Autumn will be found most useful, followed by Daniels' Queen of Spring and New Year. For late crops Daniels' Norfolk Giant and Daniels' King are invaluable.

THIRD DIVISION.

Sow end of March and beginning of April for culting in March and April the following season.

It is of a fine dwarf habit, and being well protected is exceedingly hardy. The heads are remarkably fine 0 6 1 6

DANIELS' KING OF THE BROCCOLI.

BEET.

DANIELS' CRIMSON PERFECTION. Reduced from a Photograph

Cultivation,—To ensure a crop of good Beetroot, it is of the bighest importance that the seed should be of the very best strain procurable such as offered by ourselves. Another very important point to observe is that the ground must not be specially manured for this crop, a good plan being to select a plot that has been cropped during the previous season with French Beans, Potatoes, or Celery. The soil should be a good light loam, where possible, and in an open part of the gardeu; the ground should be deeply trenched (the deeper the better) quite early in the season. Before powing, the ground should be made firm and level.

Sow the seed any time from the middle of April to the end of May. For an early crop New Red Globe is one of the best. Daniels Crimson Perfection and Green Top will be found the most useful for a general crop. The seed should be sown in drills one inch deep and about 18 inches from row to row. A liberal quantity of seed should be used to ensure a good plant, and when the seedlings are nicely up, they should be thinned out, leaving them about 9 inches apart. As a rule those sown at the end of May produce roots of better quality. Keep the beds regularly boed and weeded so that the soil may be free about the plants.

When specimen roots are wanted for Exhibition, it is the usual practice to make boles about 2 feet deep in the bed with a crowbar, and fill them with fine soil. The seeds are sown in these and thinned out, one plant being left to each hole. In this way splendidly shaped roots are grown The crop should be lifted in October and stored in dry sand in a shed or cellar for Winter use. Care should be taken that the roots are not injured in any way, or they will bleed and lose quality; also the leaves should not be cut but twisted off with the hand. In this way the roots may be kept until the following Summer.

DANIELS' CRIMSON PERFECTION SALAD.	. d.
A grand dark-leaved variety of medium size and very	
symmetrical. The flesh, which is of the finest texture,	
is deep crimson in colour and of excellent quality.

[&]quot;Your Seeds have always given me every satisfaction; they have never failed." Mr. W. BIMDEY, Undeck.

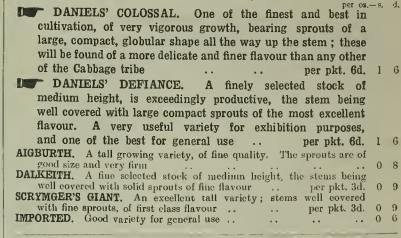

BRUSSELS SPROUTS.

Cultivation.—To grow Brussels Sprouts successfully the seed should be sown at the latter end of February or early in March on a sheltered border or in a frame. Prick out the seedlings about four inches apart into seed beds as soon as they have made the first leaves, and directly the weather allows plant out permanently into well prepared ground, such as is used for general garden crops. For a later crop, a sowing should be made at the end of March, or early in April, and the seedlings planted as soon as possible; they cannot very well be planted out too early. Brussels Sprouts require plenty of room to develop, and therefore they should never be planted thickly. About 2½ feet apart in the row and 3 feet between the rows would be a suitable distance. Give a good supply of water when they are first planted, and keep the ground loose by frequent use of the hoe.

Brussels Sprouts thrive much better by themselves than when planted amongst

Brussels Sprouts thrive much better by themselves than when planted amongst other crops. In dry weather liheral supplies of liquid manure will be found of great advantage. Daniels' Colossal and Defiance are first-class stocks, and will

be found the best for exhibition purposes and for general use.

"I compeled for a Medal at our Show for the most successful exhibitor. I am pleased to say I won easily. Your Seeds are the best in the world."—Mr. W. SIBLEY, Wheathampstead.

"I am very pleased at the way your Seeds turn out. I have never had a failure with any of them."-Mr. E. HARRIS, Oulton.

"I obtained seven First and five Second Prizes at out Show with Vegetables grown from your Seeds. They were a grand lot and greatly admired."—Mr. W. WHITE, Bassingbourn.

"Your Seeds have always given the best of satisfaction and they have won many Prizes, including the Medal of the R.H.S. for the last two years."—Mr. CHASTNEY, Docking.

BORECOLE or KALE.

Cultivation.—Borecole is of great value for providing a supply of tender green heads from Christmas onwards, during the very severe weather when Cabhages and Broccoli are not available. Many varieties of Borecole are also quite ornamental and present most attractive objects in the kitchen garden. Sow the seed in April in seed beds, and when the plants are large enough transplant them into their permanent quarters ahout three feet apart. As an alternative they may be planted between Potato rows.

Borecole likes good soil, but does not require liheral treatment with liquid manure, etc., as many plants of the same family do. Give a thorough watering at the time of planting out. If there is any tendency to "clubbing" noticed in the garden, a dressing of lime applied in the Spring previous to planting will he found of great advantage. Daniels' Improved Drumhead can he highly recommended on account of its excellent flavour. It is much milder than some varieties. Daniels' Moss Curled Exhibition will he found invaluable for general purposes.

DANIELS' MOSS CURLED EXHIBITION. The finest strain of curled Kale in cultivation. It is of medium height, foliage dark green, and beautifully curled, is very hardy, and may be relied upon to stand the severest Winters. For per pkt. 6d. 1 6 exhibition it is unsurpassed DANIELS' IMPROVED DRUMHEAD. A valuable variety for Winter use. Hearts up like a Drumhead Cabbage with broad leaves; very mild and tender when cooked, and of the true Kale flavour per pkt. 4d. 3d. 0 8 6 VARIEGATED or GARNISHING. A fine eurled-leaved variety, beautifully variegated, very useful and ornamental for garnishing, also valuable for Winter gardening per pkt. 4d. . . ASPARAGUS KALE

DANIELS' COLOSSAL. Reduce I from a Photograph.

THE FINEST CABBAGE IN THE WORLD.

We highly recommend this magnificent Cabbage, which we claim to be the finest in the world. It is medium early, short-legged, and compact, and grows to a great size, at the same time retaining all the tenderness and delicacy of flavour of the smaller varieties. First-class for the private grower or market gardener. The seed we offer, which is our own true and original stock, has been carefully grown at our Seed Grounds from the stalks of fully developed and first-class Cabbages only, and owing to the many years of careful selection will be found of an unequalled and thoroughly reliable quality. Per packet 6d.; per oz. 1s. 6d.

DANIELS' DEFIANCE. Reduced from a Photograph.

- "I owe many thanks to Messrs, Daniels Bros, for the good Seeds they have sent me during the last nine years,"—Mr. E. DUNNETT, Cookley.
- I have never found any Seeds to beat yours; they are dependable and good. --

Cultivation.—Excellent Cabbages can be grown, without much outlay, by every one possessing a garden. They prefer a good rich loamy soil, a liberal supply of manure, and as open a position as possible. The hoe should be kept going every week on the beds, and an occasional application of Nitrate of Soda or Sulphate of Ammonia (at the rate of one ounce to the square yard) is recommended before the hearts form, when good succulent Cabbages are assured. For Summer and Autumn use, sow the seed in March, and a succession in April and May if required, and when the plants are large enough, prick out into seed beds, and finally plant out in rows two feet apart for the stronger growing varieties, such as Daniels' Defiance and Enfield Market, with two feet between each plant. For the smaller varieties, such as Little Queen, Ellam's Early, Nonpareil, &c., rows 18 inches apart, and 15 inches from plant to plant fulfil requirements. Cabbages are highly appreciated in early Spring. For this crop the seed should be sown in the Northern districts in July, and in the Midland and Southern districts during August.

RED CABBAGES .- Seed may be sown either in Spring or Autumn; if sown in the middle of August and planted out later, splendid heads will be produced the following Autumn.

CAULIFLOWERS.

DANIELS' KING OF CAULIFLOWERS.

Cultivation.—The Cauliflower is one of the choicest of our vegetables, and requires mucb care and very liberal treatment. Cauliflowers are very liable to bolt if any cbeck occurs in their growth, and therefore every care should be taken that they grow on from start to finish without a break. It does not much matter whether the soil on which Cauliflowers are grown is light or heavy, so long as it is thoroughly tronched, and a very liheral quantity of farm-yard manure spplied. To get the earliest Caulitlowers, the seed should be sown in September in the open, and transferred when big enough to cold frames for the Winter months. Early in March select a warm border and plant them out when a very early

crop will be secured.

The earliest Spring sowing should be made in February in boxes on a hot bed, and the plants moved to frames and gradually hardened so as to b; ready to plant out in May. A succession of sowings should be made in March in frames and in the open during April, May, and June, so as to secure an unbroken supply. Cauliflowers are most highly prized in Autumn when the Summer crops sre over, and it is as well to have more than one hatch. When planting and also during dry weather, great care should be given to watering. Frequent applications of liquid manure will give size to the beads for exhibition purposes.

Cauliflowers are particularly subject to white fly which causes the plant to become blind, and any suspicion of this should be met with a dressing of soot upon the leaves in the early morning. The beds should be regularly gone over to ensure the heads being cut before they get too old as they soon got past their best. For early work, Daniels' King is undoubtedly the best, followed by Dwarf Mammoth and Autumn Queen. For general crop, Autumn Giant will be found the most useful.

- "I sm pleased to say I have been cutting some grand Cantillowers of your **Dwarf Mammoth** variety; they were very close and white. I consider this one of the best."—Mr. W. BURDETT, The Gardens, Hill House, Northrepps.
- "I may add your Seeds have always turned out remarkably well, giving every satisfaction."—Mr. W. FRINAMAN, Princetown.
- "The Seeds arrived safely, for which I thank you; and any future orders I shall certainly place in your hands."—Mr. E. BROWN, Wollaston.
- "I have done very well at our local Shows this year with the produce from your Seeds. I have won five First, five Second, and two Third Prizes, and a Special one."—Mr. W. WORTHINGTON, Abbeywood.
- "I have won five Prizes for Vegetables grown from your Seeds at Nenagh Show."-Mr. S. TOULING, Borrisokane, Ireland.

DANIELS' KING OF CAULIFLOWERS. The earliest variety in cultivation, of very dwarf and compact habit, the heads beautifully white and of the finest texture. Seed raised in frames in February, and planted out as soon as the weather permits, will produce some fine heads in June. One of the best to sow for succession

throughout the Summer .. per pkt. 1s. 6d. and 2s. 6d. DANIELS' SNOWBALL. An invaluable early variety of dwarf compact habit, producing fine white heads of excellent quality. Ready to cut in four months from time of sowing

per pkt. 1s. 6d. and 2s. 6d. DANIELS' DWARF MAMMOTH. A very superior dwarf early variety, grows to a larger size than Daniels' King, and forms a good succession to that variety, heads large, white, and comper pkt. ls.

pact. Also useful for forcing ... per pkt. Is. ECLIPSE. This is an excellent large Autumn variety, and very nseful for Market purposes. By successional sowings it can be had from August to Christmas ... per pkt. 6d.

EARLY LONDON WHITE. Useful variety, growing to a large size, heads very white and firm per pkt. 4d. per pkt. 4d. heads very white and firm ... per pkt. 4d.

SELF-PROTECTING AUTUMN GIANT. A fine late variety coming into use directly after Veitch's Autumn Giant. The heads are well-protected by luxuriant over-lapping foliage. May be had in good condition up to Christmas ... per pkt. 6d.

VEITCH'S AUTUMN GIANT. The most useful of our Autumn Cauliflowers and most valuable for general crop. It is very

distinct in appearance, producing splendid large heads, beautifully white and firm, and of the finest texture per pkt. 6d. per pkt. 6d.

WALCHEREN. Sow under glass in February, to succeed the Spring Broccoli, and in beds from May to July for succession per pkt. 4d. 1 0

DANIELS' AUTUMN QUEEN. A grand variety, coming in fit for use three weeks earlier than Veitch's Autumn Giant, is very short-legged and compact; the heads are beautifully white and of the finest quality

CARROTS-Long Varieties.

DANIELS' TELEGRAPH. Reduced from a Photograph.

DANIELS' TELEGRAPH. This grand Carrot is one of the best forms of intermediate yet introduced, being far in advance of the old James' Scarlet, besides coming into use earlier than that variety. It produces a heavy crop of fine marketable roots, which are of splendid uniform shape, attractive colour, and very clear in the skin. Where sufficient depth of soil exists it will prove one of the most profitable sorts to grow. It is unequalled for exhibition purposes, having obtained more First Prizes than any Carrot with which we are acquainted.

- "I was delighted with the Carrots I obtained from your Telegraph Seed. I took First Prize with them at our Show in November last."—Mr. W. EASTER, King's Lynn.
- "I may say your Telegraph Carrot is the best I have ever had."—Mr. R. CROWE, Ardonan, Isle of Man.
- "The Telegraph Carrot I had last year was the best ever seen here."-Wr. R. CHAPMAN, Ontario.
- "From your Telegraph Carrot Seed I produced the finest Carrots ever grown."--- Mr. E. CLIFT, Shrewsbury.
- "I am pleased to say that I gained First Prizes with your Telegraph Carrot and Improved Hollow Crowned Parsnip at Ellesmere Port Horticultural Show. This is the third time in succession."—Mr. E. WORSLEY, Whitby.

Cultivation.—By attention to a few points of importance, splendid clean straight Carrots can be cultivated without great outlay. It is not necessary to manure the land for a Carrot crop, in fact, fresbly manured land is a drawhack; the soil should be (where possible) of a deep light nature, and the land should, the Autumn previously, be deeply trenched two to three feet, and a quite light dressing of manure given at the same time; land which has been recently used for Celery is excellent, and will not need specially manuring.

For the earliest crop, make a sowing on the hotbed in frames between the rows of early Potatoes, and pull the Carrots quite small. The first sowing of the outdoor crop should he made early in April on a warm border, Daniels' "Harbinger" or "Forcing Horn" heing excellent kinds; make other sowings in succession through the Summer until August, when the best kind to sow is "Scarlet Horn." For maincrop, "Daniels' Scarlet Perfection" and "Telegraph" can be highly recommended.

Carrot seed should be sown on borders of finely worked soil, in drills about a foot apart. When the plants are nicely up, thin out gradually, leaving the smaller growing kinds, such as "Forcing Horn" to be pulled as required, and the larger kinds seven to nine inches apart. Keep the hoe going between the rows to ensure cleanliness, and nothing more is needed until the end of October, when the crop should be lifted, the tops carefully twisted off and the roots stored in dry sand in a cellar, for use as needed during the Winter.

off, and the roots stored in dry sand in a cellar, for use as needed during the Winter.

When specimen roots are wanted for exhibition, it is the practice to make holes with a crowhar and fill with fine soil, sowing the seeds on the top and thinning out to one plant in each bole, as advised for Parsnips.

CARROTS-Stump-rooted Varieties.

DANIELS' SCARLET PERFECTION. Reduced from a Photograph.

DANIELS' SCARLET PERFECTION. A grand main crop variety of the intermediate type, and being stump-rooted, it is well adapted for growing on soils where deep culture is not possible. The roots are of a bright orange scarlet colour, very handsome and uniform in shape, with a fine clear skin, which makes it a most desirable sort for exhibition. It is one of the best flavoured and heaviest cropping varieties for general use, and one we can highly recommend. If grown for exhibition the roots should be thinned out 7 to 9 inches apart, but if for ordinary use they can be left much thicker in the row.

CELERY.

Cultivation.—This very important vegotable is one that fully repays a liberal outlay both of labour and mauure. Being a moisture loving plant and a gross feeder, it should, if possible, be raised in soil where, during the growing period, copious supplies of water can be applied. For the carliest crop sow the seed about the middle of February, giving some heat, and when the plants have made their seed leaves, have them pricked off into boxes or frames, giving if possible a gentle bottom heat to keep them growing. Make a further sowing in March in a similar way, and, if necessary, another in April in an open border; these later sowings will give some useful Celery for cooking. It is an excellent plan to get the Celery trenches ready quite early in the season, so that advantage may be taken of the first favourable showery day to put out the plants when large enough.

In making the trenches throw out the soil 12 or 14 inches deep and 18 inches wide, and be careful to retain the top soil so that it may be placed in the bottom

DANIELS' GIANT WHITE. Reduced from a Photograph.

wide, and be careful to retain the top soil so that it may be placed in the bottom of the trench; mix with it a good dressing of farm-yard manure and in this mixture the young plants should be placed; the rest of the soil taken out of the trench should be piled up on the sides and used, when the time comes, for earthing up

the Celery; allow a space of three or four feet between the trenches.

In planting out the Celery in the trenches, place the seedlings about nine inches apart, in a single row for the earliest crop; for the main crop they are often planted in the contraction of the contraction o

apart, in a single row for the earliest crop; for the main crop they are often mainted in double rows. In dry weather give liberal supplies of water or liquid manure to keep the plants growing, as if they get a check they are liable to bolt.

It is a good plan to give a sprinkling of soot over the foliage, while damp with the early morning dew, in order to keep away the Colery fly and snails.

The greatest care should be taken in earthing up Celery. As soon as the plants are about nine inches high, go over them and thoroughly clean off all side shoots, and tie the growth loosely with Raffia. Choose a fine day, and gradually work down some of the finest soil round the bases of the plants, being most careful not to allow any of the soil to get between the leaves; do not make most careful not to allow any of the soil to get between the leaves; do not make the soil too hard, or it will stop the growth. Continue to earth up as the plants grow. The final earthing should form a ridge as a protection. In very severe weather it will be found an advantage to give a slight covering of straw or bracken over the top of the row.

THE AMATEUR. Reduced from a Photograph.

CUCUMBERS.

	THE AMATEUR. This can perhaps be best described as
	a very finely selected stock of The Rochford or Covent Garden
	type. It is enormously productive, bearing 3 to 4 fruit at
84.	a joint. The fruit, which are of handsome shape, average
Maria.	about 20 to 24 inches in length, are slightly spined and
	of fine colour, whilst the neck is very short. As its name
	implies, it will prove one of the best for the amateur grower
	for all purposes per pkt. 1s. 6d. and

LORD ROBERTS. An exceedingly handsome variety raised by Mr. W. H. Apthorpe, Cambridge; the result of a cross between Royal Osborne and Lockie's Perfection. The fruit which are longer than the last named variety, are of a rich dark green colour, of splendid shape, with no neck, and are borne in the greatest profusion. It is equally useful for Winter or Summer cultivation, and on account of its prolificness and beautiful appearance, will prove a most valuable variety for the private or market grower

per pkt. 1s. 6d. and 2 6 DANIELS' IMPROVED TELEGRAPH. A great improvement on the old Telegraph, bearing clean, straight fruit twenty to twenty-four inches long, an abundant bearer. Our own selected stock, all saved from picked fruit

DANIELS' DEFIANCE (early prolific). A variety of hardy, robust constitution, producing in great abundance very short-necked and clegant fruit of a rich dark green colour, from eighteen to twenty-four inches in length, straight and uniform. ls. and 2 0 THE ROCHFORD. A most prolific bearer. The fruit are slightly spined, eighteen to twenty inchos in length, of a beautiful fresh green colour,

and of the most handsome form LOCKIE'S PERFECTION. The fruit are produced in great abundance ls. and

ROLLISSON'S TELEGRAPH ... TENDER AND TRUE. Superior quality and flavour ...

SPECIAL NOTICE.

One of the great causes of failure in raising Cucumber Seed is too much moisture at starting. To begin with, the soil should be warm and not over moist; plant in small pots 3 or 4 Seeds in each; place in heat of from 80° to 90°. Be sure and give no water until the Seeds are well up, and then water but sparingly for a day or two. We have adopted this plan for many years past with the greatest success.

"I consider your Lord Roberts Cucumber the best ever brought out."-Ar. A. H. KENT,

 $^{\circ}$ I grow your Lord Roberts Cocumber last year for the first time. I never had a Cucumber to equal it before."— r. W. ROGERS, Pinner.

RIDGE CUCUMBERS.

DANIELS' PERFECTION RIDGE. The longest and best out-door variety in cultivation, is very hardy and prolific, bearing a heavy crop of nice shaped fruit, averaging fifteen to twenty inches in length and of superior flavour 6d. and 1 0 JAPANESE CLIMBING. A most useful variety for growing on trellis work, &e., being very ornamental. It produces a good crop of fruit, averaging .. 6d. and LONG PRICKLY. A very useful variety of fine flavour SHORT PRICKLY. Very hardy, fine for pickling STOCKWOOD. Fine selected stock from ten to twelve inches in length PROLIFIC PICKLING. The most prolific out-door variety; very hardy ...

CRESS.

CRESS, GROWING IN BOX.

PLAIN. The best for early salads per qt. 1s. 6d., per pint 10d. 0 CURLED. For salads in the second leaf ,, 1s. 8d., ,, 1s. 0 AUSTRALIAN or GOLDEN. This valuable Cress is a most desirable addition to all salads DANIELS' GARNISHING or PARSLEY-LEAVED. Useful alike for salads and garnishing ...

AMERICAN or LAND. Eaten as Water cress in Winter SORREL-LEAVED. The largest-leaved of all, dark green colour, and good flavour. A most useful salad ... per pkt. 6d. and 1s. WATER. Sow in a moist, shady place

Cultivation.—Cress is one of the most useful salads grown, and it is quite easy to keep up a continual supply, as no expensive appliances are needed. If a greenhouse is available, fill boxes with good soil to within about half inch of the top, pressing the soil firmly, then sow the seeds thickly aud evenly hut do not cover them with soil. Put the hoxes in a dark place and give a good watering; in ahout a fortnight the cress will be ready to cut. By repeating this process a succession can be maintained through-

out the early Spring.

During Summer a shady horder should be selected, and the soil raked fiue and pressed firm. Sow the seeds and press down with a board, giving good waterings and protection with mats until the seed has germinated,

To keep up a constant supply a sowing should be made every week.

American or Land Cress is most useful for mixed salads, and is quite easy to grow; sow the seeds from March onwards on a north border and

thin out to allow about four inches between each plaut, using the outside leaves only.

Water-cress can be grown in ordinary garden soil provided a shady border is chosen and copious waterings given. The seed should be sown in April, and the plants thinned out, leaving about six inches between each. Keep the plants pinched to prevent them from flowering. In Autumn fill pans half full of soil and place some of the plants therein. Put them in a greenhouse and keep thoroughly watered, and a supply of good tender Water-cross will be available all the Winter.

MUSTARD.

.. per quart 1s. 9d., per pint 1s. 0 $\stackrel{\text{per oz.}}{=}$ CHINESE. Fine solad variety ... per quart 3s., pint 1s. 9d. 0 4 WHITE. For early salads

Cultivation.—The Common or White Mustard is much used for saladings, and is generally used with Cress. Out of doors, any cool, moist place is suitable for sowings, which should be made at frequent intervals during Spring and Summer. When sown under glass in Winter and early Spring, no better way exists than that recommended for Cress.

ENDIVE.

DANIELS' SUPERB CURLED. The best of all the Curled Endives, it bleaches well, is of first-class per pkt. 6d. 1 DANIELS' PRIZE MOSS CURLED. A splendid variety for exhibition, leaves heautifully curled, is very hardy, and bleaches per pkt. 4d.

Cultivation.-Endive is one of the most useful salads for Antumn and Winter use, and it is quite easy to grow in any garden. For Summer use a sowing should be made in April, in rows on a south border and the plants thinned to about twelve inches apart; a plenteous supply of water will ensure good heads.

For Autumn and Winter use, a sowing should be made in July and August. Choose a border at the foot of a south wall, if possible, sow the seed in drills one inch deep and twelve inches apart, and thiu out the

GREEN CURLED. Extra BATAVIAN GREEN. Broad-leaved, very hardy, and desirable for Winter cultivation, tie up for hlanching EXTRA BROAD-LEAVED. An excellent variety, highly recomper pkt. 4d. mended WHITE CURLED. Useful variety per pkt. 3d. 0 9

plants to ahout twelve inches apart for all kinds, except the extra Broad-leaved, which should he allowed fifteen inches from plant to plant.

Endive should always be hlanched before using; this may be done in Summer by tying the plants round with Raffia, or hy placing an inverted flower-pot over each plants round with Rama, or by placing an inverted flower-pot over each plant, but it is well only to bleach a few at a time. Ahout ten days is the time taken in hlauching.

When it is necessary to have a Winter supply, the latest erop should he lifted from the open ground and stored in cold frames.

PUMPKIN. GOURD or

Large Varieties.

per pkt.-s. d. DANIELS' YELLOW MAMMOTH. Seed from large, handsomely netted fruit, weighing one hundredweight

Smaller Ornamental Varieties.

SMALL ORANGE. Strongly resembling an orange PEAR-SHAPED. Green and yellow, pretty ... 0 4

Twelve varieties, one packet of each, 2s. 6j.

Cultivation.—Many of the Gourds, while being most nutritious (when cooked in the same way as Vegetable Marrows) are at the same time very ornamental for covering trellis work, unsightly walls, &c., and they can he utilised to good purpose in this manner.

The Secd should be sown in heat in April, and the plants gradually hardened and transferred to their growing position during May. Give a little protection with handlight or hranches of fir for a while, and also liheral supplies of liquid manure, while the plants are growing. For the larger growing kinds, allow a space of eight or ten feet between each

plant; the smaller sorts may be planted closer.

When the fruits are developed go over the plants, where necessary removing a few leaves in order to ensure the sun shining directly upon the fruit so as to thoroughly ripen them. The fruits are also most useful for soups and stews, and if gathered hefore the frost comes and stored in a dry warm room will keep for a long period.

LEEK, DANIELS' CHAMPION Redu: A from a Photograph.

LEEKS.

Cultivation .- The Leek is one of the most nutritious vegetables cultivated, and although to produce exhibition specimens much care and attention is needed, still a thoroughly good crop for cooking purposes can be grown quite easily. Leeks are gross feeders and therefore require well tilled and liberally manured ground; the hest plan is to give the land a thorough dressing of well-decayed manure in Autumn and trench it deeply, allowing it to remain rough for the Winter. The seed should be sown in drills in March for the main crop, and care must be taken to keep the ground thoroughly clean from the outset in order to give the seedlings a good start.

The easiest mode of culture is to dihble the young plants when about six inches high into holes made about twelve inches deep, giving occasional dressings of liquid manure. In September draw the earth round the plants. It is hest to defer using Lecks till as late as possible in the Autumn, as the flavour improves.

When it is desired to grow Leeks for exhibition, a good plan is to grow them in trenches in the same way as Celery, allowing two feet between the trenches; for this purpose the seed should be sown on a gentle hothed in February, and the seedlings pricked off into boxes when big enough; it is important that the young plants be thoroughly hardened, as they will not stand coldling, but cold draughts should be avoided. When the plants have made about six inches of growth, plant them into the trenches, allowing about 15 inches between each plant; lift the plants out of the box with a trowel, to ensure getting a good lot of roots. As the plants grow, the soil must be carefully and firmly worked round the roots and this process continued all the Summer at intervals, giving frequent waterings of liquid manure. Some growers place collars of brown paper round the stems before commencing to earth up the plants as this excludes all light and is

There is every encouragement to grow Leeks to a large size, as the flavour of the finest specimens is superior to the smaller ones. This is not so in most vegetables,

but is certainly the case with Leeks.

per oz		a

"I have obtained First-Prizes for your Carrots, Cabbages, and Lettuces. They are excellent in every way."—Mr. T. RIXON, Hampton Hill.

"I have taken prizes with the produce from your Seeds every time I have shown, and they have been heavy crops of excellent quality."—Mr. R. WILLIAMS, Eury St. Edmund's.

"I must praise your Seeds. They are the best I have ever grown."—Mr. G. MAPP, Trinant.

"I obtained splendid results from your [Seeds last year."—Mr. S. ROBERTS, Sandridge.

"I have been very successful at our Shows with Vegetables grown from your Seeds."- Mr. R. MORTIMER, Eye.

Daniels' Continuity.

The Longest Standing Cabbage Lettuce in the World.

This fine Cabbage Lettuce is remarkable from the fact that not even in the hottest and driest season does it ever run to seed, the heads remaining firm and crisp long after all others have bolted or decayed. A bed of these sown or planted will keep up a supply of good Lettuces for a long period, one sowing of these being equal to three or four sowings of other varieties Per pkt., 6d.; oz., 1s. 6d.

DANIELS' EXHIBITION GIANT s. d.

See Novelties, pages 2 and 3 1 0

DANIELS' MAGNUM BONUM. A splendid new Cabbage Lettuce growing to a large size, the heads being very firm and crisp and of oxeellent flavour, stands well; a useful variety for exhibition DANIELS' GOLDEN BEAUTY. grand new Summer Lettuce of fine appearance; the leaves are of a light large Cabbage Lettuce. The heads although large are very firm and erisp; an excellent variety for Autumn ceedingly large and tine variety, crisp and tender and of fine flavour, stands a long time without running to seed DANIELS' BLACK-SEEDED TEXTER. Large, compact, and solid, one of the most splendid varieties in cultivation,

DANIELS' SELECTED PARIS WHITE. Selfblanching, tender, and mild flavour; usoful exhibition variety DANTELS' BLACK-SEEDED BATH .. DANIELS' GREEN WINTER. An excellent and hardy kind, valuable for Winter and early Spring DANIELS' SOLID BROWN. A medium-sized Lettuce, outer leaves brown, hearts very solid and of a beautiful creamy yellow very crisp, requires oo tying. An invaluable variety for Winter use ... HICKS' HARDY WHITE. A superior variety both for Summer and Winter use PARIS WHITE. Best for general use 0.10MIXED COS VARS. All the hest for succession 0 2 DANIELS' LITTLE GEM. A very early Cos Lettuce, coming into use at the same time as the Cabbage varieties. It is very dwarf and compact, the heads, which are self-folding, require no tying

pleasure in saying that your Giant White Cos Lettuce are the finest I have seen. One weighed 8 lbs."— Mr. W. HARRIS, Selsey.

Cultivation.—It is often necessary that a practically continuous supply of Lettuces should be maintained throughout the year, and by a succession of sowings this may be done. For the earliest crop the seed should be sowo in boxes under glass during January, and when big enough to handle prick out the plants about three inches apart into frames, there to be hardened off ready for planting out in a south border when the weather permits. Early in March a sowing may be made out of doors, preferably on a south border. Sow the seeds in drills, cover lightly with soil and protect from the birds if possible; when the plants are hig enough prick them out six inches apart. By cutting some of the plants early, space will be left which will allow the remainder to develop.

A succession of sowings may be made until the beginning of September, and the plants which are to stand the Winter should be finally pricked out in October, the most sheltered position in the gardon being chosen. In a severe Winter it will be found occessary to give some protection to these plants; a slight covering of straw or bracken being suitable. To secure crispoess and succulence in Lettuces, diberal supplies of water should be given, and the hockept going regularly between the rows. For Spring and Summer use we recommend in the Cos varieties, "Daniels' Giant White" and "Daniels' All Heart"; in the Cabbage varieties, "Daniels' Queen of Summer" and "Daniels' Continuity," the latter is a kind which very carely runs to seed even in the hottest weather. For Autumn and Winter work "Daniels' Solid Brown" and "Daniels' Black-seeded Bath," both very hardy Cos Lettuces, and "All the Year Round" and "Large White Winter," and "Daniels' Mammoth Green" in Cabbage Lettuces are to our mind the pick of the Lest

DANIELS' LITTLE GEM.

MELONS.

NEW MELON IDEAL. Reduced from a Photograph.

MELON, GUNTON SCARLET. Reduced from a Photograph.

Cultivation.—This delicious fruit is widely cultivated by all who can command sufficient heat. Melons are raised from seed in a similar way to Cucumbers, and their general treatment is much the same in the early stages of their growth.

Sow the seeds singly in a pot of fine loam and leaf mould, and place on a hotbed; as soon as the plants are in the rough leaf, pot on into six inch pots; keep at an even temperature to avoid checking the plants, meanwhile have the beds prepared by forming a mound of good rich turfy loam and well-decayed manure on the border of the greenhouse stage, or in the frame. When planting make the soil quite firm round the stem, and give liberal waterings of clear water. When the fruits are set, they should be thinned out to about two or three fruits on each plant and coessional waterings of weak liquid manure given.

When the fruits are set, they should be thinned out to about two or three fruits on each plant, and occasional waterings of weak liquid manure given. As they ripen keep the bed a little drier; the temperature for Melon growing should be about 75° to 80° in the day, and 65° to 70° at night.

	NEW MELON. EMINENCE. A fine variety, raised by	٠.٠.	0.
	Mr. A. McKellar, the Royal Gardens, Windsor. Received an

PARSLEY.

DANIELS' QUEEN OF THE FARSLEYS GROWING AT OUR SEED GROUNDS. From a Photograph.

The DANIELS' QUEEN OF THE PARSLEYS. An extra selected stock carefully grown on our own Seed Farm. .. per pkt. 4d. 1 0 most useful for garnishing, and extremely valuable as an ornamental plant for the flower-border GIANT CURLED. A very handsome variety, leaves finely curled, grows to a large size, and is very ornamental; this is per pkt 3d. 0 9 the best sort to grow where Parsley is required in large quantities COVENT GARDEN GARNISHING A splendid variety, beautifully curled EXTRA-FINE CURLED. Fine for garnishing ... FERN-LEAVED. Distinct foliage, usoful for garnishing per pkt. 3d. 6 8

Cultivation.—Parsley being a deep-rooting plant pays well for liberal cultivation; it likes a good rich soil in a cool but not too shady position.

Parsley being a deep-rooting plant pays well for liberal cultivation; it likes a good rich soil in a cool but not too shady position.

Parsley is often grown as an edging to other kitchen garden crops and has a pleasing effect when thus used, and as it is in demand the whole year round it is not represented by the cool of the property of the cool o it is an excellent plan to make a succession of sowings during the year to ensure a continuous supply. Make the first sowing in a box in February and when the plants have been gradually hardened off they should be planted out during April in the permanent horder, allowing about twelve inches between each plant. Another sowing at the end of March will be of value for a succession.

For a Wiuter supply, a sowing should be made in June or July, choosing a sunny aspect on a south border. The plants should be thinned out to prevent over-crowding; those taken out may be potted up and placed in a cold frame or greenhouse and will yield an excellent supply of leaves for Winter garnishing. In the event of severe weather it will be found advisable to cover the outside heds with mats or an old frame, and a sprinkling of soot in the early morning during the growing season will be found to have an excellent effect.

HERBS (Sweet and Pot).

Per packet 3d. Per dozen packets, 2s. 6d. † LAVENDER. Cultivated for its flowers, which are very aromatic.

* PURSLANE, Green | The shoots and succulent leaves are cooling when * PURSLANE, Golden | used in Spring as salads.

† RAMPION. The leaves used as salads; the roots, which have a pleasant nutty flavour, used as Radish.

ONION-Allan's Reliance.

ALLAN'S RELIANCE. From a Photograph.

ALLAN'S RELIANCE. This fine Onion has been grown and selected by Mr. Allan of Gunton Park Gardens for many years past, and, as will be seen from our illustration, is now brought up to the very highest type of a White Spanish Onion; besides being of splendid size and keeping quality, it is unsurpassed for exhibition. Per pkt. 6d.; per oz. 1s. 6d.

ALL THE YEAR ROUND. A new type of Onion growing to a large size, but having the advantage over many of the present exhibition varieties of heing a grand keeper. The bulbs ripen off well, and from seed sown early in Spring have been grown to over 1\frac{1}{4} lb. each. Per pkt. 6d.; oz. 1s. 6d. COCOANUT. This fine Onion has been grown to the weight of three pounds each. The skin is a very delicate pale straw colour, flesh white and mild; one of the best for exhibition.

Per pkt. 1s.; per oz. 2s. 6d.

Silver Skinned or Pickling Varieties.

EARLY WHITE GEM. One of the carliest in cultivation, three weeks earlier than the Queen, and comes to maturity from eight to ten weeks from time of sowing. Very useful for pickling per pkt. 4d. 1 0

EARLY QUEEN. Remarkably quick-growing, may be sown in	
July and will ripen the same year 0 SILVER SKIN. Of very quick growth, hest for pickling 0	9

Cultivation.—There are few vegetable erops upon which so much care is expended as the Onion, and during recent years its culture has received much more attention than was formerly the case. When the seed can be raised in January in beat (thereby obtaining an early start) it is possible to grow bulbs of equal size to those grown from seed sown the previous Autumn; about the last week in January is the time for the earliest sowing.

Sow the seed in boxes or pots in fine soil, a good mixture being two parts of good loam to one part of decomposed manure, or leaf soil. When the young plants are about three inches high prick them off into boxes, and give all the light possible, gradually admitting air, and hardening as the days lengthen, until the time arrives for planting out in the beds about the middle of April. The carliest sowing out of doors should be made in February, and the main sowing of all kinds in March.

The greatest care should be taken in preparing the Onion hed, the ground being thoroughly raked over, all the stones cleared off, and a perfectly fine surface obtained and the soil made quite firm. Sow the seed very evenly in shallow drills about eighteen inches apart and carefully cover the seed by putting the soil from the side of the drils with the fect. The whole bed should then be well trodden down both down tho bed and across as well, after this, again rake the soil level and little further work is necessary beyond keeping the hoe going and thinning out tho plants when the time arrives. Unless specially fine hulbs are required it is not advisable to thin too much. To prevent an attack of Onion Maggot in a dry season, a good watering with lime water will be found to be of much service.

Great care is necessary in harvesting the Onion crop. It is a good plan to bend over the tops of the plants in August by going over the plants individually, this will assist the ripening of the bulbs. Onions require to be thoroughly ripened before being taken off the ground and should, therefore, be pulled about the middle of September and turned over on the ground every two or three days for a fortnight, when they should be gathered into an

airy shed in readiness for roping together, this being the best method of storing them for Winter use.

ONIONS FOR AUTUMN SOWING.

DANIELS' GOLDEN ROCCA. Reduced from a Photograph.

DANIELS' GOLDEN ROCCA. One of the largest and finest Onions ever introduced. Fine globular shape, golden yellow skin. mild flavour, and with careful cultivation comes equal to the imported Portugal Onions, and keeps sound till June. This variety is the best exhibition kind known, and has obtained more Prizes than any other Onion. If sown in Autumn, and kept under first-class cultivation, will grow bulbs two to three pounds each; may also be sown in Spring, and will pro-Per packet 6d.; per ounce 1s. 6d. duce some fine bulbs.

DANIELS' WHITE ELEPHANT TRIPOLI. The largest and best 0 9 popular sort
TRIPOLI ITALIAN WHITE. Similar to the above, but milder ...
LISBON WHITE. Very useful for pulling green for salads early in 1 0 per pkt. 4d. of the Tripoli sorts of the Tripoli sorts ... SILVER SKIN. Very early, excellent for Spring use Spring

Strong Autumn sown, to plant out for show purposes, can be supplied in Spring of the following kinds only:-.. each sort 1s. 6d. per 100; 10s. per 1000; White Elephant Tripoli, White Spanish, Golden Rocca, Giant Rocca . .

each sort 2s. per 100. Improved White Spanish, Ailsa Craig, and Allan's Reliance. All Carriage Paid The Autumn sowing of these, which offers many advantages to the cultivator, has very much grown in favour of late years, When sown in Autumn, Onions grow to a much larger size, and are milder in flavour than those sown in Spring,

especially when transplanted, and being much less liable to attack from fly, are rarely destroyed by maggot. They are besides exceedingly valuable for the supply of fresh green Onions in early Spring which can always be relied on.

Cultivation.—For securing specially fine Onions there is no doubt that it is much hetter to sow the seed in the Autumn. The ground should be prepared as for the Spring crop, except that the drills should he made a little deeper. Sow the seed any time from the middle of July to the end of August and treat in the same manuer as advised for Spring sowing. Keep the ground clear of weeds, and give good soakings of water, if the Autumn is a dry one. If cooking size only is ueeded it will merely be found necessary to thin out the Onions and a good crop will be obtained, but if exhibition bulbs are required, the strongest must be selected in Spring lifted exceptly with a trovel, and transplanted nine inches apart on to a specially prepared had of rich. are required, the strongest must be selected in Spring, lifted carefully with a trowel, and transplanted nine inches apart on to a specially prepared bed of rich soil. Water throughly, at the same time making the soil firm round the bulbs. Keep the hoe going and excellent Show specimens should be produced without first transplanted nine inches apart on to a specially prepared bed of rich soil. Water throughly, at the same time making the soil firm round the bulbs.

Potato Onions are a very useful crop and produce a heavy yield of underground bulbs; they are grown from bulbs (see page 55) and should be planted out in February in rows about 1½ feet apart, allowing ten inches between each bulb in the row.

One of the page 55 and should be planted out in February in rows about 1½ feet apart, allowing ten inches between each bulb in the row.

gather the crop in June.

PARSNIPS.

DANIELS' IMPROVED HOLLOW-CROWNED. Reduced from a Photograph.

DANIELS' IMPROVED HOLLOW-CROWNED. A finely selected stock of the Hollow-crowned variety. It grows to a very large size without becoming coarse. The roots are of grand symmetrical shape and very clear in the skin. It produces a heavy crop of even-sized Parsnips, and is the best variety for exhibition purposes ... per lb. 6s. 0

ELCOMBE'S IMPROVED. Very choice stock, of fine flavour, much esteemed for exhibition

GUERNSEY or JERSEY MARROW. A fine, large, and heavy cropping variety

HOLLOW-CROWNED. Largest and best for general use; a fine selected stock.

THE STUDENT. A first-class variety, but requires a good depth of soil

TURNIP-ROOTED. Excellent for shallow soils

Cultivation.—Parsnips are amongst the most nutritious of vegetables, and are quite easy to grow; a good loamy soil free from stones being the most suitable. Have the ground deeply trenched (at least two feet deep) in the Autumn, and give a good dressing of farm-yard manure, leaving it rough for the Winter. Early in February the bed should be levelled, forked down, and the seeds sown in drills about 1½ feet apart; thin the young plants out to about 12 inches apart as soon as it is possible to handle them, and be sure to keep the ground thoroughly clean between the rows by frequent hoeing.

When specimen roots are being grown for exhibition, holes should be bored three or four feet deep with a crowbar, and filled with specially mixed soil, leaf mould, and wood ashes; sow four or five seeds in each hole and thin out the plants, leaving one to each; weed the ground carefully and apply a sprinkling of soot to keep away pests.

Parsnips are always better when allowed to remain in the ground and lifted when required for use, but when it is necessary to lift and storo them, they should be placed in dry sand in a dark shed or cellar.

- "I am very plaised with your Seeds. I won First Prize with your Improved Hollow-crowned Parsnin at three Shows, and two First and one Second with your Carrots; also First and Second with Celery."—Mr. WILLIAMS, Maes-y-Garmon.
- "I am very pleased to say the Seeds I had from you last Spring were most satisfactory, and I shall ranew my order."—Miss GRADWELL, Slaters Oak.
- "I know you will be pleased to hear that I have again been successful with your Seeds, taking fourteen Prizes at the Stratford Show."—Mr. J. BURTON, Scutterfield.
- "I obtained First Prize in the Gardeners' and Amateurs' Class last season for your Improved Hollow-crowned Parsnip."--Mr. H. KELLY, Strangaer.
- "I was very pleased with your Improved Hollow-crowned Parsnip."- Mr. E. PORTNALL, Wooburn Green.
- "I have much pleasure in stating that everything I purchased has given complete satisfaction. I am repeatedly recommending your Firm."—Mr. A. ROWLETT, Biggleswade.

SPINACH.

LONG STANDING. A most valuable variety for Summer use, as it stands the dry weather and keeps longer fit for use than any other sort

MONSTROUS ITALIAN or VIROFLAY. Large and superior; leaves dark green, and extremely thick and fleshy ... per qt. 2s.; per pt. 1s. 3d. 0 4

NEW ZEALAND. Large and succulent ... per qt. 2s.; per pt. 1s. 3d. 0 4

PERPETUAL or SPINACH BEET. Produces an abundance of green leaves close to the ground, as soon as these are cut fresh leaves appear, producing a supply during the Autumn and Winter 0 6

ROUND. For Summer use; best for general crop ... per qt. 1s. 9d.; per pt. 1s. 0 3

Cultivation.—All kinds like a good rich soil; for the Summer Spinach select a warm border and sow the seeds in rows, where a little shade can be given; it is often grown between the rows of Peas and Beans. It is important that the plants should be thinned out so as to allow plenty of room for each to develop, and that the crop should be kept well gathered while young.

Winter Spinach should be sown in July or August in drills one inch deep, and twelve inches apart in a well-drained border, care being taken to thin out well, otherwise the leaves will decay, as they will also if grown on heavy waterlogged soil. New Zealand Spinach is a useful vegetable for the Summer, but will not stand the frost. Sow it on a warm border in April, and thin out the plants to about two feet apart.

OLIVE-SHAPED MIXED	per qt. 3s.: per pt. 1s.	9d 0	3.

Cultivation.—The Radish is one of the most popular of all salads, and to be erisp and mild in flavour should be quickly grown. It requires a good rich soil and liberal supplies of water during bot dry weather. Care should be taken in making the sowings to ensure a continuous succession rather than a great quantity at one time. The earliest sowing (for which our new variety "Best of All," is most suitable) should be made between the rows of early Potatoes or other vegetables grown in frames on the hotbed. Be sure to admit plenty of air as they will not hear excessive heat.

From February onwards sowings may be made about every fortnight in a warm sheltered bed out of doors, making provision for covering the beds with mats or straw on cold nights. This covering must always be removed in the day-time. It is most important, however, that protection from birds he made in the day-time, and fish netting is generally used for this purpose. In the middle of Summer a north-cast horder will be found a most suitable-position for Radishes. Sow the seed broadcast and evenly, so that they are not too crowded. For Winter work the varieties "Chinese Rose" and "Black Spanish" are the hest; they should be sown in August and the plants thinned out about four inches apart.

[&]quot;I have obtained nino First, eight Second, and seven Third Prizes. All the Seeds were supplied by you, which is evidence of good quality."—Mr. W. PARSONS, Twerton.

TOMATOES.

TOMATO-DANIELS' KING EDWARD VII Reduced from a Photograph.

DANIELS' KING EDWARD VII. This fine Tomato is a decided advance on most existing varieties. and certainly one of the best yet sent out. The plant is of a sturdy, vigorous, short-jointed habit of growth, with an excellent constitution. It is a continuous bloomer, a free setter, an abundant bearer, and continues in fruit for a very long period. The large, splendidly coloured fruits, which are produced in handsome clusters of eight to ten or twelve, are very deep, almost round in form, and very solid and heavy, whilst in flavour it is all that can be desired. This fine Tomato is admirably suited for growing in pots. In consideration of its heavy cropping, and the superior quality of its fruit, this will be found a really firstclass variety, alike for the market grower or amateur exhibitor. Our own selected stock

per pkt.-s. d.

DANIELS' No. 1. A grand Tomato, which we have every confidence in recommending as one of the finest. The plant is of a sturdy habit and a robust constitution; a free setter and exceedingly heavy cropper. The fruit are of good size, of the most beautiful form and perfectly smooth, whilst the splendid colour and excellent flavour leave nothing to be desired ...

THE DANIELS. The fruit are of good size, rather above the medium, smooth, brilliant scarlet in colour, of beautiful form, exquisite flavour, and remarkably solid. It is a robust grower, and a marvellously profuse and continuous bearer. A first-class variety for cultivation under glass

Cultivation .- One of the chief things which has contributed to the great popularity of the Tomato is the fact that it is so very easily grown. It is now generally recognised that Tomatees can be quite successfully cultivated without such heavy dressings of manure as were used at one

time, although there are certain periods when good liberal dressings of manure are necessary; but when the plants are young they do not need it.

For the earliest Spring crop the seed should be sown in January or early in February in pots or pans of light rich soil, and these should be placed on a shelf in the greenhouse; the vessel should be covered over with a sheet of glass to hold the moisture and kept at an even temperature until the seed large germinated. As soon see the plants have formed the until the seed has germinated. As soon as the plants have formed the seed leaf, have them potted off singly into three-ineh pots and grow them on in a warm house, potting on into six-ineh pots later, in which size they should remain until permanently planted out in the borders, or potted into the fruiting sets. into the fruiting pots.

Many people prefer to grow their early crops in pots ten inches to twelve inches in diameter, claiming (we believe rightly) that they are better able to attend to the careful watering of the plants and thus avoid better able to attend to the careful watering of the plants and thus avoid any injury to the roots. The treatment of young Tomato plants is pretty much the same as would be given to early Cucumbers, they should have a temperature of 60° during the day, and not less than 50°—55° at night. For a main crop sow the seed in February or March, then transfer into pots as before advised; it is of great importance that the plants be kept sturdy and therefore air should be given on all favourable occasions. The drainage of both the pots in which the young plants are grown on and the borders or boxes in which they are to fruit should be very carefully looked to see as to allow of their receiving conjous supplies of water. looked to, so as to allow of their receiving copious supplies of water, especially during the fruiting period. When planted out in the greenbouse border, the plants should be placed about 18 inches apart and supported either by means of a stake or tied up with soft string to the roof, all side growths should be cleared off as they appear, and only the main stem allowed to grow away, this being stopped when it reaches the glass, or when three or four trusses of fruit have been set.

The best soil for Tomatoes is a good rich loam to which has been added a light dressing of farm-yard manure, say one-fifth of the bulk; many growers do not put any manure in the soil at the time of planting, leaving the feeding until the first truss of fruit has set, when they apply regular dressings of artificial manure, or give a mulching of well-decayed manure and water the same thoroughly in. In no case must the manure used be taken from a heap that is heated or the result will be disastrous. Most growers cut off nearly all the foliage after the fruit is well set to allow the sun to have seess to it; this is a good allow but most to the sun to have seess to it; this is a good allow but most to the sun to have seess to it; this is a good allow but most to the sun to have seess to it; this is a good allow but most to the sun to have seess to it; this is a good allow but most to the sun to have seess to it; this is a good allow but most to the sun to have seess to it; this is a good allow but most to the sun to t sum to have access to it: this is a good plan, but must not in any case be done too early or the effect will be very harmful to the crop.

"I have grown your King Edward VII. Tomato with splendid results."--- Mr. J. MASON, Crewe.

"The Up-to-Date Tomato Seed has given me great satisfaction." Mr. J. A. TATE, Wells, Som.

VEGETABLE MARROWS.

DANIELS' LARGE CREAM

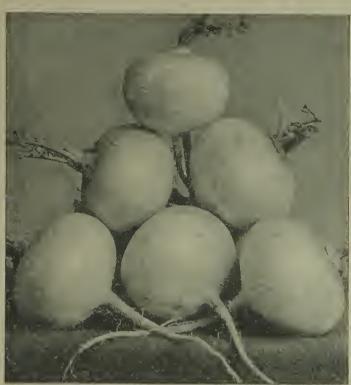

Cultivation.—Vegetable Marrows are easy to grow, and it is possible in every garden to find a corner in which to grow two or three plants; they are often planted on old heaps of refuse, etc. It is not, however, essential that they should be planted on manure heaps, as they will grow quite well in the open garden in a hole which has been well manured, and in fact, they continue to fruit longer when so grown.

Copious supplies of water are necessary for Vegetable Marrows, and the fruits should be cut when young, as otherwise they become tough, and the plants cease bearing sooner. Sow the seeds singly in small pots, and plant out when about a foot high, giving protection for the first few nights. Another plan is to sow the seeds in the mound, where they are to grow, and to cover the plants with a hand-light, or some similar covering until frost has disappeared. Frequent waterings with liquid manure at the time of fruiting will add much vigour to the plants and size to the fruits.

"I would like to say a few words about your Large Gream Vegetable Marrow. I have grown Marrows for thirty years but have never come across such a prolific sort b forc.",—Mr. C. NEWELL, The Gardens, Ryston Hall.

"I may say your Large Cream Vegetable Marrow give me great satisfaction last year."—Mr. M. A. MORRISON, Tandragee, Armagh.

GARDEN TURNIPS.

DANIELS' IMPROVED SNOWBALL. Reduced from a Photograph.

YELLOW-FLESHED VARIETIES.

DANIELS' GOLDEN GEM. A distinct variety. The top is small and neat; the roots are very handsome, with very fine tap-root.

The skin and flesh are of a rich golden-yellow, and of excellent quality ... per piut 3s. 0 6

GOLDEN BALL. Fine stock ... per pint 1s. 6d. 0 4

ORANGE JELLY. Fine for late sowing ... per pint 1s. 6d. 0 4

ORANGE RED-TOP. Red top and golden yellow flesb ... 0 4

Cultivation.—This most wholesome vegotable is a lover of moisture, and to be crisp and jnicy (as it should be) must be grown quickly and not checked in its growth. Choose good rich soil which has been dug over some time previously, and if possible, in a slightly shady position, as during the Summer months Turnips become stringy and bard if exposed to the hot sun.

For the first crop sow Daniels' "Snowball" on a very warm border carly in March, and a succession of varieties onwards until July. Thin out the plants when in the seed leaf, leaving the single roots twelve inches apart. Give occasional dustings with wood ash and soot in the early morning to ward off the deadly Turnip fly.

For Autumn and Winter uso sow in August and September either broadcast or in rows. Keep the boe going and all weeds cleared off to hasten the growth and ensure crisp tender roots.

"I am sending you Card for you to see I had the honour to be the winner of the Cup for three years running, thanks to the good Seeds which you supplied me with."—Mr. G. DYER, Blackwater.

WHITE-FLESHED VARIETIES.

DANIELS' IMPROVED SNOWBALL. An early and distinct variety of perfect shape, having only a single tap root. It is small, very solid, sweet and crisp, and of remarkably quick growth, flesh snow white and juicy, one of the very best for exhibition purposes, having obtained numerous first prizes per pint 2s. 0 6 DANIELS' GREEN TOP STONE. One of the most useful varieties for late sowing, being very hardy will stand well into the Winter. The roots are of splendid shape, and the flesh firm, crisp, and juicy per pint 1s. 6d. Useful variety por pint 1s. 6d. 0 4

DANIELS GREEN TOP STONE

SALSAFY.

 SCORZONERA

RUSSIAN IMPROVED per
COMMON

per oz.—s. d. per pkt. 4d, 1 0

Cultivation.—Salsafy is a vegetable which deserves to be more grown, as it has quite a rich and distinct flavour. Being a deep rooting plant, it must have well-worked land. The seed should be sown early in May in drills about fifteen inches apart, and the plants thinned out to about nine inches in the row. If specimen roots are desired for exhibition, they may be grown in holes made by a crowbar and filled with fine soil as recommended for Parsnips and Beetroot; a liberal supply of water should be given in dry weather and the soil kept loose between the rows by hoeing during the Summer. Salsafy should be lifted and stored in dry sand in a collar for Winter uso.

Scorzonera is a vegetable resembling Salsafy, being purple in colour. It requires similar treatment, but is somewhat hardier and requires a little

more space in the drill.

SEED POTATOES.

The accompanying photograph illustrates a corner of a plot of some acres in extent of DANIELS' "SENSATION" POTATO being lifted at the Royal Gardens, Windsor. Mr. MacKellar, to whose courtesy we are indebted for the photograph, has grown "Sensation" since its introduction with most satisfactory results, as the picture shows.

As a heavy cropper, giving beautiful pebble-shaped tubers, and possessing unusual powers for resisting disease, "Sensation' stands in the very first rank among Potatoes. The stock we offer this season is very carefully selected and possesses the same high qualities as that distributed in past years. Should any of our customers not yet have grown this variety, we confidently recommend them to add it to their order.

HINTS ON POTATO CULTURE, &c.

Cultivation.—The varieties quoted in our list are the best in cultivation. It is most important that frequent changes of seed should be made, as Potatoes deteriorate if repeatedly saved from the same soil and district. For those growing for exhibition it is necessary to select varieties which are not only handsome in appearance, but also of known good quality for cooking purposes, such as "Royal Norfolk," "Duchess of Norfolk," and "Sensation." For early work, "Duke of York," the well-known variety introduced by ourselves is still pre-eminent, and the increasing demand for this kind proves its superiority over all others as a first early.

this kind proves its superiority over all others as a first early.

Much depends upon the selection and treatment of the "sets," it is therefore necessary to secure good moderate sized Potatoes which should be set up on ond in shallow boxes or trays, and allowed to sprout before being planted, as when this is done much advantage is gained both in the development of the plants and in the weight of the crops. Potatoes like a good open position in the garden and the most suitable soil is a medium to light soil in a well-drained position, the ground should be deeply dug and manured in the Autumn. Where stable manure is available a good dressing should be given at the time of planting, placing a layer on the bottom of the trenehos; well-decayed leaf-mould, or the remains of an old mushroom bed are also excellent for this purpose.

When planting it is important that an abundance of room be left hetween the rows and the sets in the row; allow a distance of two feet hotween rows for the early, and three feet for the late strong-growing sorts, and twelve to eighteen inches between the sets in the rows. Where the land is naturally low and wet it is a capital plan to elevate the rows by forming ridges and so planting the sets on about a lovel with the natural soil; it is also good to keep the surface soil constantly stirred with the hos until the earthing up commences.

When the young growths hegin to push through the soil care must be taken to protect them from the frost hy continually carthing up, the soil round them. (Neglect of this has often resulted in the loss of a complete crop of Early Potatoes.) and when it is desired to grow exhibition specimens only, one haulm should he left to a plant, all the weakest ones being drawn out as they appear. Slight dressings of soot or of "Norwich Fertilizer" during the growing season will be of much advantage. Immediately the growth is completed, the crop should be lifted; choose fine-weather for the work and store them after having had a few hours' sun on them.

Where small quantities only are grown it is much better to store Potatoes in a cool dry place where they can be easily got at, as they are not so liable to disease as when stored in a pit or trench.

IMPORTANT NOTICE.—Seed Potatoes procured during the Winter and early Spring, when not required for immediate planting should be taken out of the hag or package in which they are received and laid out in a dry, airy place protected from frost, or they will begin to sprout and a weakly growth will be the result.

A GRAND FIRST EARLY POTATO.

DANIELS' DUKE OF YORK.

DANIELS' DUKE OF YORK. Reduced from a Photograph.

DANIELS' DUKE OF YORK. A superb early, dwarf-growing variety, producing large, smooth, oval-shaped handsome tubers. It is quite distinct in appearance, of splendid cooking quality, and by far the most prolific kind with which we are acquainted. First-class exhibition sort, and one that is in great demand amongst Potato growers

Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d.; cwt. 15s. SIR JOHN LLEWELLYN. This splendid White Kidney, in consideration of its earliness, heavy cropping, good quality, and disease resisting properties, has become highly popular. The tubers are of good size and shape, and when cooked, white and floury. Award of Merit, R.H.S. This is a really first-class early Potato. Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d.; cwt. 15s.

RECORDER. A splendid new first early variety. A cross between the Ashleaf and Beauty of Hebron. The very handsome tubers are of good size, with very shallow eyes, whilst the flesh is white and of first-rate quality when cooked. It is a strong grower and enormously productive. Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d.; cwt. 15s.

MAY QUEEN. A first early White Kidney, of exceptional productiveness. The tubers are handsome kidney shaped, flesh and skin white, and of finest table quality. Per 14 lb. 3s.; 56 lb. 10s. 6d.

DANIELS' DEFIANCE ASHLEAF. The heaviest cropping varieties of its class, ripens very early, and is of splendid cooking quality, having the exceptional flavour found only in the best of the Ashleaf sorts. Per 14 lb. 3s. 6d.; 56 lb. 12s.

OLD ASHLEAF. A fine old variety, noted for its good table quality (scarce) 3s. 6d.; " 12s.

ECLIPSE (new). A handsome first early white kidney of great productiveness, with white skin and flesh, it cooks well early and late, and during the past season it has yielded some very heavy crops of nice clean tubers free from disease.

Per 14 lb. 3s.; 56 lb. 10s. 6d.

A GRAND EARLY POTATO.

SOUTHERN QUEEN.

SOUTHERN QUEEN. Reduced from a Photograph.

SOUTHERN QUEEN. An early White Kidney of handsome appearance, the tubers being of a beautiful kidney shape, and is an abundant cropper of the best table quality. The haulm is dwarf and of good constitution. The grower says, "I think I never lifted such a handsome lot as the Southern Queen, not a mis-shaped tuber or a diseased one." This was awarded First Prize in the Cooking Competition at the National Potato Society's Exhibition on December 13th, 1906. During the Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d. past season this has proved itself one of the most prolific Potatoes we have grown.

SECOND EARLY VARIETIES.

DANIELS' PRINCE EDWARD. Full description see page 3. Per lb. 6d.; 7 lb. 2s. 6d.; 14 lb.	4s. 6d.
per 14 lb. 1	per 56 lb.
DANIELS' EARLY QUEEN. A grand early variety of extra fine quality and enormous productiveness. It is kidney-shaped, somewhat s. d.	s. d.
inclined to oblong: the eves few and almost even with the surface. The skin is white suffused with a delicate shading of pink.	
The flesh is beautifully white and mealy when cooked, and of superior flavour	8 6
BEAUTY OF HEBRON. A well-known excellent variety, of good table quality	8 6
EARLY ROSE. A well-known variety. Fine for early use on light soils	8 6
EARLY WHITE HEBRON. This grand Potato possesses all the well-known quality of the Beauty of Hebron, and has in addition	
a clear white skin, which renders it more valuable for market purposes. It is of excellent quality when cooked, and is very pro-	0
ductive. We can thoroughly recommend this variety per cwt. 198. 2 6	8 6
NINETY-FOLD A fine second early White Kidney, of exceptionally heavy cropping qualities. The skin and flesh are write, and of the	0 0
finest quality. It will be found a valuable addition to our list of early White Kidneys per ewt. 138. 2 0	8 6
INTERNATIONAL KIDNEY. A handsome White Kidney: very useful for exhibition	10 6
PIISCET OFFEN One of the best second early varieties of recent introduction, and is the result of a cross between reading	
Russet and British Oncen. It is a strong vigorous grower of hardy constitution. The tubers, which somewhat resemble the	10 0
British Queen in shape, are white fleshed and of beautiful table quality	10 6

[&]quot;I have much pleasure in informing you that the Southern Queen Polatoes I had from you were magnificent. Of the whole crop, not one was diseased, and I was awarded two Prizes for them." - Mr. G. INES, Rainham.

[&]quot;I may say the Southern Queen Potatoes I had from you turned out splendidly. It is a very heavy cropper, and all that could be desired for table quality."—Mr. W. HODSON, Stone.

[&]quot;I took First Prize with your Southern Queen Potalo."- Mr. F. TABOR,

[&]quot;I took three First Prizes with your **Duke of York Potatoes** at our show last year. They were splendid."—Mr. H. CULBECK, Kettering.

[&]quot;They are a splendid lot of Duke of York Potatoes you have sent me," The Rev. E. JONES, Monkton.

[&]quot;The Duke of York Early Potato is turning out splendidly; many roots have 30 potatoes on and of fine size. I am looking forward to equally satisfactory results from the Sensatiou Potato. I may say that all your Seeds are turning out well." E. T. HELLINS, Esq., Stapleford.

A GRAND POTATO,

DANIELS' DUCHESS OF NORFOLK.

DANIELS' DUCHESS OF NORFOLK. Reduced from a Photograph.

DANIELS' DUCHESS OF NORFOLK. This grand Potato introduced by us in 1905, has fully sustained the high opinion we then had of it, having again proved itself a heavy cropper and a good disease resister. It is a second early, growing about two feet high, the foliage being quite distinct. The tubers, which are pebble shaped or round, with shallow eyes, are of good size, producing a nice even crop of marketable Potatoes with a minimum of small. The skin is slightly rough or netted, the flesh white, and of first-class table quality.

Per 14 lb. 3s.; 56 lb. 10s. 6d.; cwt. 18s.

EVIDENCE OF QUALITY.

"The one pound of Duchess of Norfolk Potatoes you supplied me with has produced forty pounds of spleudid tubers. They are grand cookers, and of excellent flavour."—

h. Mr. J. HUISH, Porlock.

"The Seeds you supplied me with turned out excellent. I took two First and six Second Prizes. The Duchess of Norfolk Potato was greatly admired."- Mr. O. THOMAS, Llantwit Major.

"A Silver Medal was awarded to Mr. Silas Cole, Althorp Park Gardens, for first-rate tubers, **Daniels' Duchess of Norfolk**, as the best dish of White Potatoes in the Amatems' and Cottagers' Class."—Extract from the "GARDEN," December 22nd, 1906.

" I consider your **Duchess of Norfolk** a grand Potato, giving a good crop of large tubers excellent for culinary purposes."—Mr. G. RYE, Canterbury.

SECOND EARLY AND MAIN CROP VARIETIES.

	per 1	4 lb.	per 56	lb.
BRITISH QUEEN. A second early variety of great merit. The skin and flesh are white, and of extra fine table quality; this, combined			S.	d.
with its great productiveness, and good keeping qualities, make it a most desirable variety for all purposes	2	6	8	6
ELDORADO. A mid-season variety, the tubers being beautifully white and of a handsome elongated form. A very heavy eroppe	r.		1	
Our stock of this variety, has been earefully grown from tubers only and not forced in any way, and is therefore very vigorou	3,		ł	
having yielded with us this season under ordinary field cultivation, over 16 tons per acre per cwt. 15s.	2	G	8	6
KING EDWARD VII. A very fine Main Crop variety; the haulm grows to the height of two feet and is fairly robust, producing a large				
erop of bandsome tubers. The skin is white, with a blotch of pink about the eyes, which gives it a very pleasing appearance. It				
is a good cooker and free from disease; for exhibition it is first class per ewt. 14s	2	0	7	6

A GRAND MAIN CROP POTATO,

DANIELS' ROYAL NORFOLK.

DANIELS' ROYAL NORFOLK. Reduced from a Photograph.

DANIELS' ROYAL NORFOLK. This grand Potato, introduced by us in 1907, has proved itself a heavy cropper of fine quality, having produced this season under ordinary cultivation, 17 tons per acre. It is an early Main Crop variety, in form it is a flattish round inclined to pebble-shaped, the skin and flesh are white, and it is at the same time one of the handsomest sorts with which we are acquainted. The haulm grows about two feet in height. It is a grand cropper, whilst its cooking qualities are all that can be desired, and up to the present it has shown very little signs of disease; on account of its handsome appearance and many good qualities it will be in great request for exhibition purposes.

Price 14 lb. 3s.; 56 lb. 10s. 6d.

"I obtained two First Prizes for Potatoes at our Show last August. I had a splendid crop of Royal Norfolk."—Mr. G. BERRY, Moreton Morreli.

"I won a Special Prize for Royal Noriolk Potatoes at Horninglow Show. I have also gained seven First Prizes with your Parsnip. It is the best I have ever had." Mr. T. HILL, Burton-on-Trent.

"I have taken First Prize for two years with Royal Norfolk, and this year with Duchess of Norfolk. I consider Royal Norfolk the best Show Potato ever brought out, and a splendid cooker. Everybody admires it."—Mr. J. STOWE, Sudbury.

"The Potatoes are fine, healthy tubers, and the cleanest I have ever seen. I obtained some splendid results last year."—Mr. E. EVANS, Tiry.lail.

COLOURED VARIETIES FOR EXHIBITION.

The following varieties will be found first-class for exhibition, and are at the same time heavy croppers of good table quality.

QUEEN OF THE VELDT. A handsome Purple Kidney, of extra fine cropping qualities, and is at the same time of splendid table quality. The haulm which grows about two fect in height is very robust, and it has up to the present shown very little signs of disease. A first-class sort for exhibition purposes.

Per 14 lb. 2s.; 56 lb. 10s. 6d.

		14 lb.	per 56 lb	٠.
PEERLESS ROSE. A flat, smooth, very handsome kidney-shaped Potato; skin of a delicate pink colour, eyes even with the surface	6.	d.	s. d	1-
fine quality, and excellent for exhibition	3	0	10 €	3
	. 3	()	10 €	6
PURPLE PERFECTION. A heavy eropping purple round variety of strong constitution, and excellent quality, fine for exhibition .	. 3	0	10 0	G

purposes and a good disease resister		U	, 3 ¥	

A GRAND MAIN CROP POTATO, RADIUM.

RADIUM. Reduced from a Photograph.

RADIUM. This is a Main Crop variety, and has again proved itself one of the heaviest croppers in our trial grounds. The tubers are oval in shape, with beautifully netted skin, and of the finest table quality. The haulm which grows to about two feet in height is very robust, and of a fine dark green, and the flowers which are produced in abundance are white. As a cropper and cooker we consider it one of the best introductions of recent years.

Per 14 lb. 3s.; 56 lb. 10s. 6d.; cwt. 18s.

MAIN CROP AND LATE VARIETIES.

ELECTRIC SPARK. A fine new Main Crop variety of vigorous constitution, and an enormous cropper. The tubers are kidney shaped and somewhat inclined to oblong with very fleet eyes; skin and flesh white. It is a strong grower with bushy haulm and dark green leaves, flowers pink. We can strongly recommend this variety both on account of its great productiveness and fine table quality.

Per 14 lb. 2s. 6d.'; 56 lb. 8s. 6d

MAYFIELD BLOSSOM. A large handsome late White Kidney of the finest table quality. The eyes are very fleet, nearly even with the surface, skin and flesh white. It is a fairly strong grower of great productiveness, the tubers being of good size with very few small; fine variety for exhibition purposes.

Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d.

PECKOVER. A large handsome Main Crop variety, of vigorous constitution; it is an enormous cropper. The tubers are somewhat round to oblong in shape and of fine appearance. This variety has received Awards of Merit from the Royal Horticultural Society at Wisley, both for its good cooking and cropping qualities.

Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d.

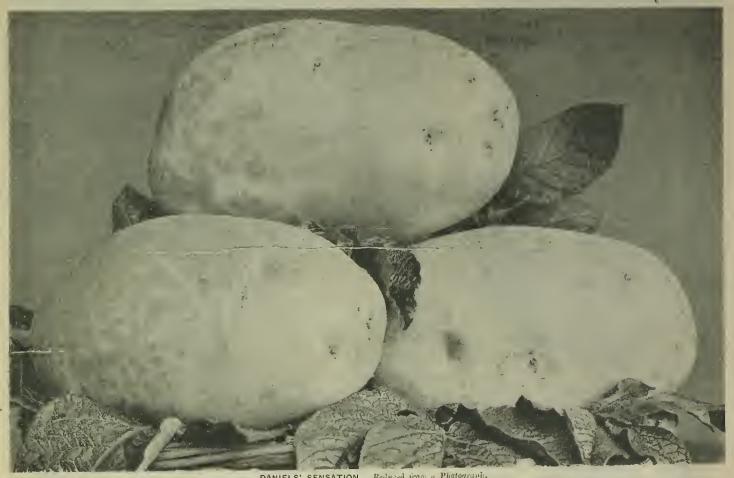

[&]quot;I am pleased to say that from 3 lbs. Mayfield Blossom Potatoes I have dug 90 lbs."—Mr. T. TOZE, Bampton.

[&]quot;I have much pleasure in informing you of two roots of Royal Sovereign Potatoes from which I obtained 145 pot does, weighing 32 lbs."—Mr. F. SOPLEY, Gardener to Miss Howard, Llausaintfraid.

[&]quot;I never saw such a fine crop of good, sound Potatoes as Mr. Lane grow from those you supplied him with last year."—Mr. A. INSLEY, Drayton Bassett. $_{_{2.5,4-1}}$ but in & § 1

[&]quot;I had from you last year 7 lbs, of Radium Potatoes, which yielded 110 lbs, I consider this splendid."- Mr. H. FOSTER, North Waltham.

A GRAND MAIN CROP POTATO, DANIELS' SENSATION.

DANIELS' SENSATION. Reduced woon a Photograph.

DANIELS' SENSATION. This grand Main Crop Potato is one of the heaviest-cropping and best varieties we have ever grown. It is of a good, robust constitution, the haulm growing about two feet high. The tubers are of good size, thick pebble-shape, with very shallow eyes, almost level with the surface; the skin is white and slightly netted—a sure indication of good cooking qualities—the flesh being white, mealy, and of the finest texture. Its splendid cropping and good culinary qualities, combined with its very handsome appearance, have made this variety a great favourite alike with the cook and Per 14 lb, 2s, 6d.; 56 lb. 8s. 6d.; cwt. 15s. exhibitor.

MAIN CROP AND LATE VARIETIES.

- DALMENY BEAUTY. A handsome late white kidney of exceptionally heavy cropping qualities. It is of excellent table quality, and its handsome appearance makes it invaluable for exhibition purposes. Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d.
- LANGWORTHY. A main crop kidney variety of great productiveness; it is a fairly strong grower, and the tubers are of Per 14 lb, 2s. 6d.; 56 lb. 8s. 6d. first-class table quality.
- PRESIDENT. A heavy cropper of first-rate quality, and free from disease. It resembles the Up-to-Date in growth, and is of a strong hardy constitution. The tubers are somewhat oblong in shape, with white skin and flesh, and is one of the best of Per 14 lb. 3s.; 56 lb. 10s. 6d.; cwt. 18s. the late varieties. It is of grand table quality.
- A fine oval-shaped White-skinned Potato of robust habit, and a splendid cropper, the tubers being of good size and handsome appearance. It is one of the best keepers, and will cook splendidly quite into May. One of the very Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d.; cwt. 15s. best Main Crop varieties of recent introduction.
- per 14 lb. per 56 lb NORTHERN STAR. A strong-growing late variety, and a very heavy eropper, the tubers are from round to oblong in shape, skin slightly netted, and of fine quality; up to the present it has shown very little signs of disease per ewt. 15s. UP-TO-DATE. A large handsome kidney of very heavy eropping qualities, skin roughly netted, flesh white, dry, and mealy when cooked
- DISCOVERY, A fine late variety, of robust habit; the tubers are oblong in shape, with roughly netted skin, and are of excellent table quality

MISCELLANEOUS PLANTS & ROOTS

ASPARAGUS PLANTS.

An abundance of fine Asparagus may be grown with less than half the expense usually incurred in making costly "beds," and will succeed admirably on most soils when planted in lines or clumps on the Kitchen Garden borders, or amongst dwarf-growing Fruits where the space will admit, a liberal cultivation being all that is required to ensure the best results. The roots are liable to injury if removed during severe weather in Winter. They are best planted when growth has commenced in Spring, and when they can be carefully taken up and packed so as to travel a long journey without injury. They should, however, in all cases be planted as quickly as possible after receiving them. We consider March and April the best months for planting in the open ground.

CONNOVER'S COLOSSAL. Two and three years old .. per 100, 5s. and 7s. 6d. TRUE GIANT. Two and three years old .. per 100, 3s. 6d. and 5s.

SEED.

per 1b. 4s. 0 A fino variety, producing large heads of excellent quality CONNOVER'S COLOSSAL. A very large variety, very prolifie, and of fine flavour EARLY GIANT PURPLE (Argenteuil). As grown by the celebrated French growers for .. per 1b. 7s. 0 S Paris Market; robust variety of the most delicious flavour ...

RHUBARB.

One of the most useful, wholesome, and profitable of garden plants. The ground for this should be well broken up and manured, and the plants should be 2½ to 3 feet apart. March is the best month for planting, but it is not advisable to pull any of the stalks the first season for fear of unduly weakening the growth. A top-dressing of well-decayed manure in Winter is very beneficial.

DAWS' CHAMPION. A fine new variety of great size and splendid colour. Very productive each 1s.; per doz. 10s. 6d.

CHAMPAGNE. Deep red stems, carly, one of the very best for general use.

each ls.; per doz. 10s. 6d.

NEW CRIMSON QUEEN. A fine new and very early Rhubarb. The stalk is of a beautiful bright red quite through, whilst it is also of a very superior and delicate flavour. each 2s; per doz. 21s.

Strong Plants of the following, each 9d.; per doz. 7s. 6d. SCARLET DEFIANCE. MYATT'S VICTORIA. MYATT'S LINNÆUS. ROYAL ALBERT.

SEA KALE.

This valuable esculent is easily forced if care is taken only to apply heat gradually, as it will not succeed if placed in too high a temperature at starting. Place several crowns a few inches apart in large pots, and stand them in a temperature of about 45 degrees, with an inverted pot placed over each to exclude light and insure blanelling; a mushroom house, pit or cellar, will do well for this purpose. Sea Kale may also be easily forced in the open ground by covering it over with large specially made pots, and applying fermenting material. The heads should be over with large specially made pots, and applying fermenting material. The heads sheut when in about the condition shown in illustration, and taken off in the same way.

STRONG PLANTING ROOTS per doz. 1s.; per 100, 7s. 6d. per doz. 1s. 6d.; per 100, 10s. 6d. per doz. 2s.; per 100, 15s. GOOD STRONG ROOTS, for foreing EXTRA STRONG ROOTS, for foreing, very fine ...

CROSNES (Stachys tuberifera). First Class Certificate, Royal Horticultural Society. This is a new tuberous vegetable introduced from Japan. It is a hardy plant, producing a large quantity of tubers in the same way as the Potato. Its culture is very easy, as it grows well in any good garden soil, and is readily propagated by means of its numerous tubers. They may be left in the ground until required for use, as the severest frost does not injure them in any way. The best and simplest way of cooking this vegetable is to boil in water with a pinch of salt, then fry them. They are of delicate flavour, somewhat resembling boiled Chestnuts.

FINE ENGLISH GROWN TUBERS per lb. ls.; 7 lb. 6s.

SHALLOTS, NEW JERSEY.

DANIELS' SUPERIOR GRASS SEEDS FOR LAWNS.

For many years we have given close attention to the selection of the most suitable Grasses for producing the best Lawns, Tennis Courts, Cricket Grounds, Golf Links, &c., and we have much pleasure in recommending the splendid mixtures we offer as the very best procurable for the purposes named. March and April are the best months for sowing in Spring, and September for Autumn sowing. These Grass Seeds are usually supplied without Clover, but in all cases Clover will be added if desired.

DANIELS' SPECIAL MIXTURE FOR LAWNS.

This is a special mixture of the finest leaved dwarf evergreen Grasses, and will produce an extra fine close velvety turf. First-class for making new lawns or for renovating. Highly recommended.

Per lb. 2s., per bushel, 30s.

DANIELS' MIXTURE OF DWARF GRASSES.

A good cheap mixture for producing a fine close turf. Per lb. 1s., per bushel 20s.

Where larger quantities than those mentioned are required we shall always be pleased to make special quotations.

DANIELS' FINE MIXTURE OF DWARF GRASSES.

A splendid mixture of fine Grasses, suitable for Tennis Courts, Croquet Grounds, &c., also a most useful mixture for renovating bare and weak patches.

Per lb. 1s. 6d., per bushel 25s.

DANIELS' MIXTURE FOR SHADY LAWNS AND UNDER TREES.

A useful mixture for producing a fine turf in enclosed and shady places. Per lb. 1s. 6d., per bushel 25s.

DANIELS' SPECIAL LAWN MANURE.

This will be found of great value on newly established Lawns and will also give vigour and strength to all Grasses, especially on poor soils.

Apply at the rate of two to three ounces to the square yard, mixed with an equal quantity of fine soil, during showery weather.

In Packets 1s. each, Post Free. 3½ lb. 1s. 6d.; 7 lb. 2s. 6d.; 14 lh. 4s. 6d.; 28 lh. 7s; 56 lb. 12s.; 112 lb. 20s. All Carriage Paid.

"The field I sowed with your Special Mixture of Lawn Grass Seed is coming very good, and there is a good bottom forming." C. J. KENDRICK ABBS, Esq., West Runfon Hotel.

"The two Lawns sown with your Grass Seeds in April last have been looked at with amazement. We have played croppet on them since July. It is wonderful,"—Mrs. PUTLEY, The Hermitage, Taplow.

DANIELS' SUPERIOR GRASS SEEDS FOR GOLF LINKS, &c.

A UOLF GREEN, SOWN WITH OUR SPECIAL MIXTURE.

DANIELS' SPECIAL MIXTURES FOR GOLF LINKS.

For Putting Greens. A selection of the finest Grasses for producing a smooth even surface. Per bushel 30s.

Other mixtures for Golf Courses, 15s. to 25s. per bushel.

DANIELS' SPECIAL MIXTURES FOR CRICKET & FOOTBALL GROUNDS.

Per bushel 15s. to 20s.

Where larger quantities than those mentioned are required we shall always be pleased to make special quotations.

Hints on Lawns.—There is no part of a garden which requires such careful and regular attention as the lawn, and certainly there is nothing more delightful than a well-kept lawn in proximity to a residence. It is quite possible for even the smallest cottage to have its plot of grass, providing sufficient care is taken at the outset in forming it. The following hints will be found of help to those about to form or renovate a lawn.

Choose an open space as level as possible, and naturally well drained; if the ground is at all uneven it must be levelled by removing the higher to the lower parts. The whole of the ground should be well dug and pulverized to a depth of eighteen inches, giving a good dressing of manure at the same time, after digging rake the surface level and very carefully remove all stones, rolling it quite firm all over. Care must be taken not to allow any earting or wheeling upon the ground after being dug unless boards are laid down for the purpose.

The best time for sowing Grass Seeds is the Spring, during Mareh and April, although satisfactory results are often obtained when sown in September. To ensure the securing of a good thick even turf, it is imperative that the seed by sown very thickly, in fact it is much better

DANIELS' SPECIAL MIXTURES FOR BOWLING GREENS.

A selection of fine Grasses, specially adapted for hard wear and at the same time produce a fine even turf.

Per lb. 1s. and 1s. 6d.; per bushel 20s. to 25s.

DANIELS' SPECIAL MIXTURES FOR PARKS, RECREATION GROUNDS, &c.

Per bushel 12s. 6d., 15s., and 18s.

to sow a liberal quantity at first than to have to renovate at the end of the season. Four or six bushels per acre is not too much, generally speaking about one lb. to a rod of ground is a good dressing.

Remove all weeds as they appear and as soon as the grass is three or

Remove all weeds as they appear and as soon as the grass is three or four inches high it should be mown with a seythe and well rolled. Frequent rolling and cutting must be done if a really fine turf is desired and an occasional dressing of Daniels' Lawn "Manure," applying about two to three ounces to the square yard, will be found to promote a healthy growth

of the young sward.

The renovating and improving of old lawns is most important work and may be done either in March or September. The seed should be sown evenly over all bare places and in all holes, using the finest lawn mixture; cover the seeds with a slight sprinkling of finely sifted soil and roll the whole surface down evenly and firmly. The sowing of Lawn Seeds should always be done in calm fine weather when there is no fear of either the seed being blown about or of the soil adhering to the roller. Small birds are very fond of grass seeds, and it is therefore most advisable to give some protection (when convenient) until the young grass gets hold.

DANIELS' DAISY DESTROYER.

This preparation has become an immediate success having given great satisfaction in every instance.

We have made arrangements for an increased demand during the coming Spring, all who value a velvety clean lawn should use it if troubled with Daisies or Plantaius. We have every confidence that it will give entire satisfaction wherever used. It will be found to thoroughly eradicate all Daisies, and at the same time, as a fertilizer, give renewed vigour to the finer grasses.

A dressing of about 4 ounces to the square yard will be found sufficient, and the best time to apply it is in April, choosing dry weather for the work; where the lawn is badly infested with Daisies it should be carefully applied to the plants individually.

Prices-7 lb. 2s, 6d.; 14 lb. 4s, 6d.; 28 lb. 7s, 6d.; 56 lb. 12s, 6d.; 112 lb. 25s, Carriage Paid on 1 cut. and \(\frac{1}{2}\) cut. lots.

individual weeds. 10s. 6d. each.
WIKEHAM WEED ERADICATOR (PATENT). An excellent instrument for destroying Dandelions, Docks, &c., on Lawns. Fill with Weed Killer,

stab the crown of the weed and it will soon perish. 9s. 6d. each. WIRE ALUMINIUM. 1s. per coil of 40 feet. WREATH AND CROSS TROUGHS, for holding Cut Flowers; the very best made. 2s., 2s. 3d., 2s 9d., and 3s. 6d each.

FLORAL AID.

DANIELS' SUPERIOR MUSHROOM SPAWN.

This illustration (from a Photograph) represents a group of Mushrooms in all stages of growth taken while growing at Ashwellthorpe Hall.

In Bricks, each 6d., 4 bricks 1s. 6d., one bushel of 16 bricks, 5s. COMPLETE INSTRUCTIONS FOR CULTIVATION WILL BE SENT WITH EVERY ORDER.

From Mr. H. HOLLAND, New Barnet.

April and. "The Mushroom Spawn I had from you last year turned out very good indeed. The Mushrooms were showing within a mouth from the time the bed was spawned. The persons who saw them said they were a very fine lot of Mushrooms. Some weighed about three-quarter pound each."

From Mr. G. BEETON, Head Gardener to W. K. D'Arcy, Esq.,

The Gardens, Bylaugh Park.

"I am very pleased with the Mushroom Spawn you have supplied to us for several seasons; it is very productive, and the Mushrooms are of fine quality. This season it promises to be equally good, as Mushrooms were showing in five weeks from the time the bed was spawned."

WHITE OR BLUE TISSUE PAPER. 3s. 6d. to 5s. per ream.

WOOD WOOL. Finest quality for fruit packing. 6d. per lb.; 5s, 6d. per stone.

We give the closest attention to the growth and selection of our special strains of choice Flower Seeds, and we believe that this is the chief reason for our having last year experienced a most gratifying increase in the trade of this very important department of our business.

We can confidently claim that for many years we have been famous for our splendid strains of Asters, Stocks, Pansies, Primulas, Petunias, Zinnias, etc., which we know to be the finest procurable. Our list throughout has been carefully revised, and we are introducing several charming novelties in Sweet Peas, and other flowers, for which we quite expect a large demand in the coming season.

As the seeds of many of the newer kinds of Sweet Pea, and of some of the other novelties, are extremely scarce, and cannot be replaced, we hope that our customers will send us their orders as soon as convenient after the receipt of this Catalogue. We have made every preparation for the prompt despatch of all orders, and our customers may rely upon their commands receiving immediate attention.

RELIABLE ANNUALS, &c., SPECIALLY RECOMMENDED.

To assist customers who only require a comparatively small selection of the choicest Annuals, &c., we give below a list which contains a few of the varieties that we would specially recommend, and all of which are worthy of a place in the garden.

SEEDS OF NEW AND VERY CHOICE FLOWERS.

- ANTIRRHINUMS. Superb New Varieties. These beautiful plants are growing much in favour for garden decoration; the brilliant and charming colours of their flowers being very effective, especially when grown in beds or large patches. If the seeds are sown in February or early in March in a gentle heat, and the young plants planted out in May, they will commence blooming in July, and continue to give a fine display quite into the Autumn. We highly recommend the superb new varieties mentioned below.
- AQUILEGIA—Mrs. Scott-Elliot's Long-spurred Hybrids. The result of many years' careful selection and hybridising, this is undoubtedly the finest strain in existence of these charming hardy plants. The large beautifully-formed flowers vary in colour through all the delicate shades and tints of white lavender, salmon, mauve, pink, yellow, &c., with the most exquisite blendings.

 Per pkt. 1s.
- ASTER—Eclipse. (See Plate.) A new and very beautiful Aster, quite distinct from all others. The blooms are of great size -6 to 7 inches across, pure white and quite double, with fine thread-like florets. The plant is of a robust habit of growth, and the flowers being borne on long wiry stems are of great value for cutting. Per pkt. 1s.
- CARNATION—Perpetual. American Varieties. These splendid Carnations produce very large and beautifully coloured double flowers, borne on long stout stems. They continue in bloom for a long period, and are highly recommended for growing under glass for Winter flowering. Choicest mixed seeds saved from the finest American varieties, scarce.

 Per packet of 50 Seeds, 2s. 6d.
- CENTAUREA IMPERIALIS. (See Plate.) A superb strain of the beautiful Giant-flowered Sweet Sultans, growing about 2½ feet high, and producing quite an abundance of large sweet-scented flowers of the most novel and beautiful shades of colour, varying from pure white to lilac, rose and white, mauve to deep bright purple. The blooms last a long time when cut and placed in water, and being borne on long stout stems will be found of great value for cutting.

 Choice mixed, per pkt. 6d. and 1s.
- CLARKIA ELEGANS FL. PL. Carmine Queen. A very distinct new variety, growing about 2 feet in height, bearing remarkably fine double flowers of a bright salmon scarlet colour. A really beautiful and showy plant for garden decoration, and much earlier than others of the same class. Per pkt. 6d.
- DIMORPHOTHECA AURANTIACA. (See Plate.) A rare and extremely shown half-hardy annual from Namaqualand, S. Africa. The plants grow about 12 or 15 inches high, are of a neat branchy habit and exceedingly profuse in flowering. Its pretty marguerite-like blossoms are about 2½ inches in diameter, and are of a brilliant rich orange-gold colour, and are made more conspicuous by a dark coloured disc surrounded by a black zone. This is a splendid showy annual for beds or groups on the border. It blooms very early after planting out and continues to flower throughout the Summer. We can highly recommend this. Per pkt. 1s.
- GERBERA JAMESONI—New Hybrids. (See Plate.) A magnificent strain of new varieties of this charming and interesting plant from the Transvaal. The colours of the flowers are of incomparable delicacy and richness, with almost an infinity of tints ranging from pure white through all the shades of yellow, orange, salmon, rose, cerise, scarlet, ruby, and violet. The beautiful light starry flowers are borne on long rigid stems, and are delightful as cut flowers, lasting a long time in perfection. They are easily raised from seeds sown in pots of sandy peat, and placed in a gentle heat. The young plants must be kept only moderately moist, and if potted on into sandy peat and loam, and re-potted as growth advances, may be had in bloom in from seven to nine months. The plants will thrive in the greenhouse, or may be planted in a sunny sheltered spot in the garden.

 Per pkt. 2s. 6d.
- GODETIA—Crimson Glow. A splendid new Godetia that will be in great request when known. It forms a compact little bush about nine inches high, completely smothered with flowers of the most dazzling intense crimson. A bed of this variety produces a vivid effect, the intensity of which it is impossible to describe. We highly recommend this as one of the most brilliant and effective of hardy Annuals. Per pkt. 6d. & ls.
- NASTURTIUM, Queen of Tom Thumbs. New Rosy Scarlet. A new and very beautiful dwarf-growing variety with lovely rosy scarlet flowers, which show up well above the handsome variegated foliage. This is quite a distinct shade of colour from that of any other Nasturtium.

 Per pkt. 6d. & 1s.
- NASTURTIUM, Tall Queen. New Hybrids. A beautiful new class of tall Nasturtiums with handsome variegated foliage. The mixture we offer includes some 10 or 12 brilliant shades of colour. The beautiful flowers, with the variegated leaves, are splendidly effective when grown on trellis work. Per pkt. 6d. and 1s.
- NEW POPPY—Charles Darwin. This splendid annual Poppy, which grows about 2½ feet high, is remarkable for the quite new and unique colour of its numerous flowers, the smooth-edged petals being of a striking rich dark purple, each marked from the base with a large velvety black spot. A dense wreath of white anthers in the centre of the flower produces a fine contrast with the striking colour of the petals. Per pkt. 1s.

SWEET PEAS.

The continuous wet and cold of the past Summer and Autumn has been very disastrous to the seed crop of English grown Sweet Peas, and seeds of many of the newer and choicer sorts are consequently very scarce. We strongly advise all who wish to secure seeds of special varieties to send us their orders as early as convenient after receiving this Catalogue.

SUPERB VARIETIES OF RECENT INTRODUCTION.

The following list includes the fluest and most beautiful of the new varieties. Most of these have been grown and selected at our Nurseries during the past season and cau be highly recommended as really first-class for garden decoration or exhibition.

NEW TOM THUMB SWEET PEAS-CUPID.

Charming and highly interesting new varieties growing only four or five inches high, and of a compact, spreading habit of growth; when fully grown the plants are about a foot across, the foliage heing dark green, and the flower-stems about four inches long. The blossoms, which are very freely produced, are as large and as sweetly scented as those of the Eckford class, and the plants continue to make a charming display for a long period.

Cultivation.—For early blooming sow thinly in pots or pans in a gentle heat in January or February, barden off and plant out as soon as convenient in March. They may either he planted in double rows six feet apart, or in clumps three or four feet apart, in any case the plants should he five or six inches apart in the row or clump. For succession, sow out of doors at intervals from March to the end of May Excellent results may often be had hy sowing in October or November in a sheltered position in the garden; these will survive a moderately severe Winter and bloom earlier and finer than those sown in Spring. Stakes should he placed as soon as the plants are about three inches high; keep free of weeds, and water regularly in dry weather; as growth advances some weak liquid manure should he given, or the plants may bave a moderate dressing of superphosphate; these will be of great hencfit in stimulating the growth, and some splendid flowers will be the result. If the blooms are closely gathered and seed pods are not allowed to develop, the plants will continue in hloom for a much longer time. Ground for Sweet Peas should be well manured and deeply dug, but the soil should be made firm before planting. Bone Meal or Kainit are both excellent manures applied when digging in Winter. Drainings from a cow shed or manure beap with five or six times its bulk of clear water makes a capital liquid manure. Guano, about two cunces to the gallon of water with the addition of some soot is also a splendid stimulant for improving the size and colour of the flowers, but neither of these should be given in dry weather unless after liberal watering.

DANIELS' COMPLETE COLLECTIONS OF

Choice Flower Seeds for Amateurs

Carefully arranged to ensure a fine display of flowers throughout the Summer and Autumn, and specially adapted to the requirements of the Cottage, Villa, or large Garden.

Collection A.—Price 5s. 6d. Post Free.

ASTER, DANIELS' GIANT OSTRICH PLUME.

DANIELS' SUPERB PRIZE ASTERS.

We have long been famous for our magnificent strains of Asters, which form an important branch of our Flower Seed business, and we would mention that our seeds of these having been grown especially for our retail trade may be relied on as the very finest procurable.

PLEASE NOTE.—We do not as a rule count the seeds contained in our packets, but customers may in all instances rely on liberal quantities of good seeds being given for the prices charged.

DANIELS' GIANT OSTRICH PLUME.

We have much pleasure in recommending this grand new strain of beautiful varieties which we have every confidence in saying will give the highest satisfaction amongst our customers.

The plants are of a strong bushy habit of growth, and attain a height of 18 to 24 inches. The very large handsome flowers, which are borne on long wiry stems, are of the true Ostrich Plume type, and of immense size—when well grown, frequently measuring six inches and even seven inches in diameter, whilst the colours embrace the most beautiful and delicate shades known in Asters. These will prove a splendid class alike for garden decoration, as cut flowers or for exhibition.

DANIELS' DWARF PERFECTION.

This grand Aster, introduced by us, has proved itself by far the finest and best dwarf variety hitherto sent out. The plants grow only about eight or ten inches high, with stiff, upright stems and branches, and form handsome, circular, bushy plants. The flowers are of large size, perfectly double, beautifully imbricated, and of the most splendid form. This is a superb variety for garden decoration or for exhibition, whilst the beautiful and distinct colours of the different varieties render them especially valuable for bedding out.

RAY ASTER-New Giant White.

A fine new robust growing variety, attaining the height of eighteen inches or two feet. It is of a free branching habit, is a splendid drought resister, and blooms freely in the hottest weather. The very large pure white flowers are composed of long, straight, needle-like petals which radiate from a yellow centre, giving the blooms a most handsome appearance. The flowers being produced on long wiry stems will be found of great value to cut for decorative purposes.

NEW ASTER—Queen of Spain.

A charming new variety of the Giant Comet type, which will be highly appreciated by lovers of these beautiful flowers. The flowers, when first open are of a delicate primrose colour, changing in a few days to a delicate blush. The plant is of an upright robust habit of growth with handsome foliage, and the blooms being produced on long wiry stems will be found of especial value for cutting.

the state of the s 162 Per Packet -

NEW ASTER-Hercules.

A grand new variety growing 15 to 18 inches high and of a robust branching habit of growth. The pure white blooms are of immense size and under good culture will attain as much as six or even seven inches diameter, the long curly petals giving them the appearance of well-grown Japanese Chrysanthemums. The plant is of vigorous growth, and the very handsome flowers are borne on long stout stems, useful for cutting.

163 Per Packet

DANIELS' SUPERB PRIZE ASTERS.

ASTER, GIANT WHITE COMET

COMET ASTERS, New Large-flowered or Giant.

An elegant strain of highly improved and beautiful varieties, growing about fifteen inches high, the individual flowers resembling those of the Japanese Chrysanthemum, and are of great size. The blooms are very useful for cutting, the pure white and the delicately-striped flowers being extremely beautiful.

SINGLE-FLOWERED ASTERS.

SINGLE MAUVE (Sinensis)—

This is well described as the best and grandest of the Single-flowering Asters. The plants form elegant branching bushes about 16 inches high, well furnished with rich dark green foliage, and produce an abundance of large, handsome single flowers three to four inches across, having a single row of delicate pale mauve florets with golden eentral disc. It is a plant of great beauty, quite distinct from the Single German, and far away the

Asters. First-class as border plant or for cut flowers.

-------------	-----	-----	-----	----	--	---------	---	---

From Mr. L. ELLIOT, Henfield.

Feb. 15th. "I have grown some of your Ostrich Plume Asters 81 inches across."

From Mr. G. SHIRES, Stoke Fields.

Feb. 7th.
"I had some beautiful Asters, both in size and colour. I can strongly recommend them."

From Mr. G. KINGSWELL, Gardener, Shanklin. Feb. 25th, "Your Asters turned out the finest I have ever seen."

CULTIVATION OF ASTERS.

Cultivation.—Asters form one of the chief attractions in all gardens in which annuals are grown. They are procurable in every colour from white to

deep crimson, are very easy to raise from seed, and give a glorious display of bloom in Autumn after many other plants have ceased to flower.

Asters are alike useful for borders and as cut flowers; the single kinds being of especial value for the latter purpose. The seed should be sown in March or April in boxes of good rich soil, and treated in the same manner as other half-hardy annuals; give plenty of room between the plants, and place the boxes in a sunny position under glass, allowing abundance of air and water; after about three weeks remove the boxes to a frame where the lights can be lifted off during the day, and so gradually harden the plants in readiness for their removal to the borders. The greatest care should be exercised in transplanting from the boxes, so as to ensure the scedlings getting a good start. For a succession of flowers seed may be sown at the latter end of April in the open border where they are to bloom. Good sturdy plants may be raised by this method, and will give a supply of late flowers, until the frost cuts them off.

cuts them off.

Asters respond readily to liberal treatment although they will thrive in any good garden soil. An excellent position for them is on beds or horders which have been well trenebed and liberally manured early in the season. Occasional waterings with weak manure water will be found of great benefit when the plants are developing their blooms. Such treatment gives substance to the flowers and extends the period of blooming. Where the space is available, it is an excellent plan to grow beds in the kitchen garden of separate colours of Asters specially for cutting purposes. Such varieties space is available, it is an excellent plant of grow beds in the kitchen garden of separate colours of Asters specially for cutting purposes. Such varieties as Giant Ostrich Plume, Improved Comet, and the Single Sinensis will be found admirable for this purpose, and a supply for the bouse will be at hand without spoiling the effect of the beds. When only one kind can be grown we should strongly recommend our customers to try our Giant Ostrich Plume as being in our opinion the most delightful of all the doubles. The flowers which are very large, are borne on tall graceful stems often 18 inches long, and

the colours are most designed of an the doubles. The nowers which are very large, are borne on tall graceful stems often 18 inches long, and the colours are most distinct and varied. Ostrich Plume are quite as easily grown as the ordinary sorts.

Our Large-Flowered Comet, while not growing quite so tall as the former, gives large, beautiful flowers, and is of great value both for bedding and cutting purposes. The perfect type of Dwarf Bedding Aster is found in our Dwarf Perfection, which forms an ideal edging to a bed of taller kinds, or is equally effective in a bed by itself.

From Mr. C. KING, Middleton Tyas.

March 28th.

"Your Ostrich Plume Asters were the talk of the district, One of the Judges at our Show told it publicly that he had been at Shrewsbury the day previous, and out of 36 lots of Asters, there were none to equal them,"

From Mr. A. ALDER, London.

Sept. 22nd.

"You will perhaps be pleased to know that the Champion Prize was won by Mr. Greenfield with your Asters, beating all exhibits of Dahlias, Roses, etc. The Judges were D. Macdonald, Esq., (Gardening Editor "Dally Telegraph") and H. Cowley, Esq. (Sub. Editor of "The Gardener")."

DANIELS' LARGE-FLOWERED TEN-WEEK STOCKS.

The Seeds of these beautiful Ten-Week Stocks are grown especially for our retail trade, and we consider them by far the best class for bedding.

The above reproduction shows the habit of the plants when well grown.

DANIELS' SUPERB TEN-WEEK STOCKS

Our splendid strains of Ten-week and other Stocks are especially grown for our retail trade by one of the most famous growers, and may be thoroughly relied on to produce the largest percentage of fine double flowers procurable from seed.

DANIELS' LARGE-FLOWERED TEN-WEEK.

This is incomparably the finest strain of Ten-week Stocks in existence, and, where space is limited, should always be grown in preference to others. The plants which attain about one foot in height are of the same compact habit as the dwarfer varieties, but the flowers when well grown are nearly double the size of those of the old variety. The seeds of this always produce a high percentage of double flowers, whilst in substance of petal, brilliancy of colouring and richness of fragrance they are unrivalled.

FINE NEW VARIETIES.

The following splendid new varieties of our superb strain of Large-flowered Ten-week Stocks bloomed magnificently at our Seed Grounds last Summer, and were greatly admired by our many visitors. The colours of these will be found distinct and beautiful, with exceptionally large spikes of fine double blooms, and a decided advance on most of the older sorts.

From Mr. G. WHEAL, Wisbech.

August 16th. "I have shown your Slocks to several competent judges, and they all agree they are the best they've seen; they are the talk of the neighbourhood."

From Mr. G. FREEMAN, Norbiton.

"My front garden (46 feet by 10 feet) contained entirely Stocks, and everybody who passed admired and praised them. The fragrance was simply exquisite, and the garden had no equal in Norbiton for beauty

WINTER-FLOWERING STOCKS.

A splendid race of tall growing varieties, producing magnificent spikes of very large deliciously-scented double-flowers. Sown in July or August and potted up in Autumn, these will furnish some beautiful flowers under glass in Winter and Early Spring, the long flower-stems making them of especial value for cutting. If sown in March or April and planted out in good soil, some gran'l spikes of bloom may be had during the summer and autumn.

Cultivation of Stocks.—These deliciously-scented half-hardy annuals are amongst the most popular of all Summer bedding plants and they are deservedly given a place in both large and

small gardens. Ten-Weck Stocks are easily raised from seed, but require eareful treatment when in the seedling stage, as they are liable to damp off if over-watered and kept close, but if they are given an abundance

of air and kept moderately moist, nothing need be feared and sturdy plants are assured.

During recent years much care has been devoted to the improve-ment of Stocks, both with regard to increasing the size of the individual flowers as well as the spike, and to the introduction of much clearer colours It is now possible to grow them in every shade of colour from pure white to deep crimson and purple.

When planted in clumps of distinct colours on borders or in separate beds, Ten-Week Stocks form most attractive subjects, and the perfume is so delicious that after a shower of rain a bed in full

bloom will fill the garden with its delightful odour.

The seed may be sown at any time from February to June, according to the time the plants are required to bloom, they are hest raised in a frame or greenhouse. Either shallow wooden seed boxes or pans may he used and the seed can be sown either in drills lengthwise down the boxes or (in the case of pans) sprinkled lightly

over the surface, the seed being spread as evenly as possible.

The soil used should be rich potting mould finely sifted, and after sowing, the seed should be thinly covered with the same, keep the frame close and shaded until the seeds have germinated, when a little air should be given and the amount gradually increased as

the plants gain strength.

When the plants are large enough to handle with safety they should be transplanted into boxes, allowing nine inches between each plant.

They can then be gradually hardened off, but should be at first

carefully protected at night from the frost.

Give abundance of air during the daytime, and after about three weeks or a month they should be ready for planting out in the positions in which they are to bloom in the horder or heds.

When a succession of flowers is desired, a sowing of Stocks should

be made in the open border when strong sturdy plants will be raised; these will follow on in succession after those raised inside.

Always be careful that the borders are thoroughly trenched and given a liberal supply of decomposed manure before the Stocks are planted.

If possible, select showery weather for planting out, and be sure

that the plants are thoroughly watered into the ground and kept shaded during the middle of the day for the first few days.

In planting out seedling Ten-Week Stocks, with a view to securing the largest number of double flowers, preference should always he given to those with a good share of fine fibrois roots, even if the plants are somewhat weakers we have found from long eventioner. plants are somewhat weaker; we have found from long experience that those having coarse forked roots invariably produce the largest percentage of single blooms.

By sowing the seed in July and potting the seedlings in single pots and growing on in a frame, a good display of bloom may he had in the greenhouse during the Winter months.

WINTER FLOWERING STOCK-BEAUTY OF NICE.

WINTER-FLOWERING AND INTERMEDIATE STOCKS.—This is a very useful class for Winter blooming. The seed should be sown in July and the plants potted on into 5 inch pots, placing 3 plants in each pot; no artifical heat is needed but the plants may be grown on, and placed in a greenhouse or conservatory, where they will provide a splendid show of bloom in the early part of the year.

BROMPTON STOCKS.—Sow the seed in May in boxes and plant out the seedlings in a sheltered border, where they may grow on all Summer, and in August and September transfer to their blooming quarters. It is sometimes the practice to move the seedlings straight from the seed bed to the positions they are to permanently occupy. Brompton Stocks are most excellent for furnishing a show of flowers in the gardens in Spring.

From Mr. W. HADDON, North Petherton. March 25th. "I took First Prize with your Stocks last year."

From Mr. TICKNER, Gardener, The Cottage, Hawkhurst.

Sept. 17th. "I am sending you photo of the Ten Week Stocks grown by myself from the 1s. 6d. packet. I never saw such lovely Stocks, and I raised just over 400 plants, so they were very cheap."

From Mr. E. RIDLER, Sparkhayes. Aug. 25th. "I had a fine show of Brompton Stocks, every body admired them."

From Mr. E. LINCOLN, Old Buckenham. Aug. 30th. "My Stocks are easily the best in the village."

We beg to intimate that we cannot "break" packets quoted in this list.

AURICULAS.

(PRIMULA AURICULA.)

These deliciously-scented, fine old hardy perennials are worthy of extensive cultivation. Sow the seeds in March or April, in pots or pans of firmly pressed, light rich soil, giving them but a slight covering, and place in a cool pit or frame. Prick the young seedlings off into pots to strengthen soon as large enough to handle, and pot off when large enough, for blooming under glass, or plant out of doors early in Autumn where intended to bloom. The hest soil for Auriculas in pots is composed of ahout four parts loam with ahout one part leaf soil, and one part well-rotted cow dung. They should ho kept comparatively dry during Winter, but have plenty of moisture when growth commences in Spring, and bloom hest in a cool pit or framo close to the glass and facing the north. The Alpine varieties are the hardiest and best for out-door growing, and will do well planted on a well-drained, fairly sheltered border, and give a charming display of heautiful flowers in Spring. A position facing west or north-west is preferable.

ALPINE AURICULA.

BALSAMS.

CAMELLIA.FLOWERED BALSAM.

These beautiful flowers are well worthy of oultivation, and when well-grown in good-sized pots form handsome objects for the decoration of the greenhouse or conservatory, where they will make a fine display for a long period. Balsams also succeed admirahly when planted out of doors in good soil, and in a sbeltered position, and hesides making a fine show of bloom will produce some pretty sprays of flowers for table decoration. Sow the seeds in March or April in pots or pans of light rich soil, and place in a gentle heat. Pot off singly into small pots as soon as the young plants have made a second pair of leaves, using a compound of turfy-loam, leaf mould and well-rotted manure. Shift into larger pots as the plants advance in growth, and gradually harden off those which are intended for planting outside. The end of May or the beginning of June will be carly enough for this, and the plants should not be less than 18 inches apart. The fine varieties of the Camellia-flowered class, mentioned helow, are undoubtedly the best, and we highly recommend the splendid strain which we offer.

CALLIOPSIS OR COREOPSIS.

CALLIUPSIS TINGTORIA

These beautiful free-flowering hardy Annuals are exceedingly valuable for garden decoration. They succeed almost anywhere, but are of especial value for growing in town gardens, where they thrive hetter than most annuals. They remain in bloom for a long period during the Summer and Autumn, and the hlooms of all the taller growing varieties will be found very useful for cutting. The beautiful golden-yellow will be found very useful for cutting. The beautiful golden-yellow C. stillmanni blooms within five weeks of the seeds being sown. The Toiu Thumb varieties are exceedingly pretty.

CALLIOPSIS GRANDIFLORA.

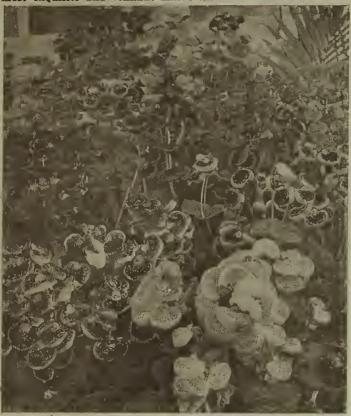

409 A very handsome perennial variety, quite hardy and growing about 3 feet high. The heautiful golden yellow flowers, 3 inches across, are borne on long wiry stems making them of great value for cutting. Seeds sown iu March or April will bloom freely in the summer and autumn following. This is a fine showy plant for the garden.

From Mr. A. GOUGH, Forest Hill.

February 6th. "I take this opportunity of expressing the complete satisfaction your Seeds have never failed to give."

CALCEOLARIAS.

We have much pleasure in offering our splendid strain of Calceolaria hybrida, which has been carefully saved from a magnificent collection during the past season, and been awarded many First Prizes. The flowers will be found of large size, beautiful form, and tigred and spotted with the most exquisite and brilliant markings.

DANIELS' CALCEOLARIA HYBRIDA. From a Photograph

Sow the seeds of these in May, June, or July, in well-drained pots or seed-pans; cover the drainage with rough fibrous loam, and fill up the surface with fine light sifted mould and silver sand; water with a fine rose water-pot, after which sow the seed, placing a piece of glass over the pot to retain the moisture, no covering of soil heing required. Place the pots in a cool frame or under a handlight, taking care to shade from the sun. Remove the piece of glass as soon as the plants are up, and when large enough to handle, prick off one inch apart into pots or pans made up as before, placing in a somewhat close situation, and when of sufficient size pot off singly, and treat in a similar manner to that recommended for tender annuals. Calccolarias should however he always kept in a cool, moist position, a dry heated atmosphere heing very prejudicial to their growth, and they should he kept well supplied with fresh air.

All Flower Seeds quoted in 3d. packets may be had at 2/6 per dozen.

CAMPANULAS.

Campanulas pyramidalis and p. alba form very useful pot plants for the cool greenhouse, whilst C. fragilis is an excellent trailer and very suitable for suspended pots or baskets. Amongst others mentioned, the beautiful persicifolia varieties are very fine and greatly prized for garden decoration, whilst Turbinata is excellent for borders and rockeries. The Campanulas form a splendid group of plants for the garden, and are well worthy of cultivation. They are easily grown, and when in bloom are very charming. They will succeed almost anywhere, but generally speaking thrive best in a light rich sandy soil. The seeds may be sown at any time from April to the end of June.

Feb. 14th. "Your Seeds have always given the greatest satisfaction."

CANTERBURY BELLS.

(Campanula Medium.)

A beautiful class of free-flowering hardy biennials for garden decoration. The large bells of pure white varieties are very handsome and should be freely grown for the fine contrast they afford with most other flowers. The double-flowered and Calyeanthema varieties are exceedingly fine. Young plants potted up in early Autumn and stored in a cool pit for the Winter, may be brought into the greenhouse or conservatory in Spring, and will bloom beautifully without forcing. It should be borne in mind that all the varieties have a tendency to sport and cannot be depended on to come absolutely true from seed, the best selected strains of doubles always producing some single flowers. All the sorts grow about 2 feet higb. May is the best month for sowing.

CARNATIONS.

SEEDLING CARNATIONS, FROM OUR COLLECTION OF CHOICE VARIETIES.

Carnations are easily raised from seed, and give a profusion of delightfully scented blooms

fully scented hlooms.

The "Margnerite" Section is a special favourite with amateurs, as the plants when raised from Seed early in the Spring, produce an abundance of flowers during the Snumer, if sown in June, carefully lifted in Autuum and potted up, they will continue to bloom right into the Winter. Carnation seed may be sown from March to May in well-drained pans of good rich soil, and these should be kept shaded until the seeds have germinated, when the plants should he gradually hardened off hy admitting air and light. Prick off the seedlings ahout nine inches apart in boxes or prepared horders, and let them stay there until the Autumn, when they may he permanently planted in the positions they are to occupy.

may he permanently planted in the positions they are to occupy.

The Perpetual or Tree varieties are a very valuable class, giving as they do a charming display in Winter; when flowers are so much valued.

Cultivation.—When required for a general display in early Spring, the					
seed should be sown in July or early in August, and when for Winter					
blooming, a few should be sown in March or April. Where the quantity					
of glass available is somewhat limited, the July sown will, however, be					
found the most useful. Sow in well-drained pots or pans of light rich soil.					
giving the seeds but a very slight covering, and place in a cool frame or					
under a hand-light in a shady spot, pot off singly into small pots as soon					
as the young plants are large enough, and shift as required. Good					
Cinematics were large enough, and shift as required. Good					
Cinerarias may also he easily raised by sowing in July or August in					
a moist, shady situation in the epen air, taking care to pot up in					
September. Cincrarias will bear a great amount of cold, but should never					
be exposed to frest. Green fly, damp, excessive waterings, and extreme					
dryness should also be carefully guarded against.					
7 3					

CINERARIA STELLATA

(New Star Cinerarias).

A magnificent plant for the conservatory or for cerridor decoration during the Winter and Spring menths. The immense heads of flewers are borno on long stalks, and well above the foliage. The blooms are starshaped and smaller than the ordinary form, and the colours run all through the various combinations of white, violet, lilae, almost to red shades. The plants, which grow from 2 to 4 feet in height, are remarkably free-flowering. Will become very pepular.

492 Per packet 492 Per packet .. ls. 6d. and 2s. 6d.

CINERARIA STELLATA.

CLARKIA.

CLARKIA PULCHELLA, DOUBLE

These are certainly amongst the most beautiful and easily cultivated of all our hardy annuals, and should be grown freely in every garden. Grown in large clumps or patches of separate colours, on the mixed border, they are very effective and form an admirable contrast with most other flowers. For Summer blooming, the seeds may be sown any time during March or April, and the young plants should be thinned out to 5 or 6 inches apart. Sown in Autumn in a sbeltered spot they will survive an ordinary Winter and will bloom much earlier than those sown in Spring. Clarkias will thrive in almost any soil, but prefer an open sunny situation. The "Elegans" varieties grow about 2 feet in beight, the other sorts about 1 foot.

COCKSCOMB (Celosia cristata).

Sow the seeds in February or March in pots or pans of light rich soil and plunge in a good heat. The object being to keep the plants in free growth without a check, the young plants should be carefully pricked out into small pots as soon as they can be handled, and as these fill with roots they should be shifted into larger pots. Those of eight inches diameter are large enough to finish with, but the plants must be kept in heat till the combs are formed, which will take place when the plants become pot-bound.

517 DANIELS' GIANT PRIZE. A splendid strain, saved from combs of the richest crimson colour 1

COLLINSIA.

Very pretty and useful hardy annuals blooming in July and August. Will bloom much earlier if sown in Autumn.

518 BICOLOR. Lilae and white, very attractive. 1 foot ... 0 2 519 CANDIDISSIMA. Pure white, excellent for clumps or edgings. 9 inches 0 2

COLEUS.

These beautiful and highly interesting ornamental-foliaged plants are possessed of the most exquisite and brilliant colours in the markings and variegation of their leaves, and form splendid objects for the decoration of the greenhouse or conservatory. They are easily raised and grown, from a really good strain of seed will produce plants of great beauty, often surpassing many of the fine named sorts. Sow the seeds in February or March in light rich soil and place in a good heat. When the young plants are large enough, pot off singly into small pots, keeping near the light, and shift into larger pots as required. Those of about six or seven inches diameter being ample for a final potting

SEEDLING COLEUS.

CYCLAMENS.

CYCLAMEN-SALMON KING.

The best time for sowing the seeds is in October or November, and again in January, February; or March, for a succession. When sowing, use a light rich soil, press down firmly into the seed pots or pans, placing the seeds about half an inch apart on the surface, and covering them about a quarter of an inch deep with soil; water carefully and place in a gentle heat. As the young plants become large enough to handle they should be carefully lifted and potted off singly into small pots, shifting them into larger as these fill with roots, and finishing with the forty-eight size, which will be large enough for blooming. The best soil to use for potting Cyclamens is composed of about equal parts of fibrous loam and leaf-mould, with a portion of well-decayed cow dung and sufficient silver sand to keep the soil porous. The essential conditions of successful cultivation of Cyclamens are a moist and even temperature—sudden changes are especially to be avoided—a free circulation of air, an abundance of light and water, and the plants should be kept free of insects.

March 25th.

"My Cyclamen, Primulas and Cinerarias from the Seed supplied by you have been a wonderful show since Christmas. I cannot speak too highly of your Annuals."

Nov. 5th.

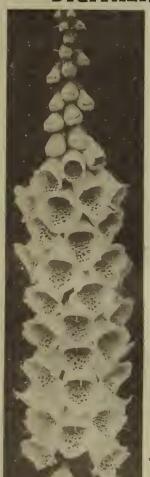

"It gives me great pleasure to say your Seeds have always given the greatest satisfaction. They have always been good in germinating, and at our local Show I took fourteen Prizes with produce from them."

DIANTHUS.

DIANTHUS HEDDEWIGI-SNOWDRIFT.

DIGITALIS—FOX-GLOVE.

FOX-GLOVE-LARGE SPOTTED.

A very heautiful and sbowy class of hardy perenuials, of fine effect for shrubbery borders. and first class for planting in any odd corner of the garden. The large-spotted varieties, of which we give illustration, are exceedingly bandsome. They grow about 5 to 6 feet in beight, witb long spikes of heautiful Gloxinia-like flowers that continue for a long period whon the plants are partially shaded by trees, &c. The seeds should be sown somewhat thinly, out of doors in May or June, and when the young plants have made 4 or 5 leaves they should be plauted out about 3 inches apart ou nursery beds to strengthen. Planting out where intended to bloom, should be done in Autumn or early Spring. Plauted ahout 1 foot apart, in clumps of six or eight or more, they form strikingly bandsome groups when in bloom.

DIASCIA BARBERÆ.

553 A beautiful little balf-hardy annual growing about 9 inches high and bearing a profusion of pretty terracotta red flowers. Excellent for pots in the greenbouse or for horders ...

From Mr. H. CLARKE, Luton.
February 15th.
"I obtained fourteen Prizes last year, thanks to your excellent Seeds."

These constitute one of the most brilliant and splendid groups of bardy biennials in cultivation. The large, beautifully coloured flowers vary from pure white to the darkest crimson, some of the double flowers being almost equal to carnations in size. All the varieties are easily raised from seed and sown in March under glass and transplanted, they will bloom freely the first season and make charming beds during the Summer and Autumn. The Heddewigi section produces the largest flowers and are perhaps the most beautiful, but all are deserving of extensive cultivation. The plants vary in beight from 8 inches to 1 foot.

GLOXINIA.

GLOXINIA-SPOTTED HYBRID.

These, the most exquisitely beautiful of all greenhouse plants, bloom freely the first year from seed, and should be grown largely by every one having accommodation for them. Sow in February or March on a good moist heat, in the way recommended for Calceolarias. Pot off singly into small pots as soon as the young plants can be handled, and shift into larger as required, keeping the plants going with a good liberal warmth, and finally shift into pots of about six inches diameter, using a light and rich soil, and continuing with a moderate heat and giving air on warm days. Treated and continuing with a moderate heat and giving air on warm days. Treated in this way, a charming display of bloom may be bad during July and August, and some really grand flowers will be the result.

KOCHIA TRICHOPHYLLA.

(Summer Cypress, The True Variety.)

KOCHIA TRICHOPHYLLA.

This is undoubtedly one of the most interesting and beautiful plants of recent introduction. The plant which is of an elegant upright habit of growth, with pale green fern-like foliage, attains a height of about eighteen inches, and forms a charming plant for the centres of small beds, or as a "dot" plant on borders amongst dwarfer growing subjects. In the Autumn, the foliage changes to a deep bright crimson colour, when it has a very novel and striking effect. It is easily raised and grown as a half-hardy annual and may be sown in the open ground in April, and thinned out or transplanted, whilst potted up in to six or eight inch pots, it forms a charming plant for the greenhouse.

To secure fine plants for bedding out the following May, some prefer to sow the seed in Autumn, but February or March is good time for sowing if the plants have careful attention and are grown on freely. Sow the seeds thinly in pans or pots of sandy loam, cover very lightly, and place in a heat of about sixty degrees, keep moist, and soon as the young plants can be handled, pot off singly into small pots of light rich soil, keep near the glass in a gentle heat, and give plenty of air on fine days. Carefully picking off all the flower-buds will greatly assist their growth, and they should on no account be allowed to suffer from want of moisture. Other excellent methods are to prick the young plants five or six in a five-ineh pot, or, better still, to plant them thinly in shallow trays of rich soil, keeping in gentle heat, giving air, &c., as recommended. These will generally form compactly grown, sturdy plants, that will quickly produce a beautiful effect when planted out. Lobelias intended for pots or window-boxes succeed best when

LOBELIA TENUIOR

dow-boxes succeed best when planted out thinly in good soil in an open situation, and carefully lifted when they have formed nice tufty plauts; these will at once commence blooming, and produce an effect that could not be otherwise obtained. For bedding out, we strongly recommend Daniels' Dark Blue and Daniels' White Bedding as most compact in growth and reliable in colour. Royal Purple, Barnard's Perpetual are also very fine, whilst for pot culture, hanging baskets, and greenheuse decoration, the beautiful tenuior and the varieties of ramosa are by far the best.

LOBELIA CARDINALIS VICTORIA.

This beautiful perennial, growing about two feet high, with its ricb dark metallic foliage and brilliant scarlet flowers, comes quite true from seed, and sown in February or March on a gentle heat will make nice plants for bedding out iu May or June for blooming the following Autumn. The roots of these should be protected in severe weather by a covering of cocoa-nut refuse, ashes, or any light similar material, or they may be lifted after flowering, and stored in a cool pit or frame for the Winter, and planted out again the following April or May.

LAGURUS OVATUS.

MIGNONETTE.

MIGNONETTE-DANIELS' GIANT RED.

These well-known, deliciously scented, hardy annuals are extremely easy of cultivation. Sow the sceds in the open horder where intended to flower, any time from the middle of March to the end of June, and thin out the plants to four or six inches apart as soon as they are large enough to bandle. For Winter hlooming sow any time in August, in pots of five or six inches diameter, and thin out the plants to three or five in a pot, keeping them as hardy as convenient hefore placing under glass for the Winter. The following list includes the finest varieties of recent introduction for garden or pot culture.

tion	for garden or pot eulture.	
	per pkt.—s.	d.
748	AUREA MAGNIFICA. A splendid variety far in advance of any other yellow-flowered Mignonette yet sent out. The plants, which attain a height of ahout one foot, throw up numerous fine spikes of heautiful hright yellow deliciously seented flowers 6d. and 1	0
749	DANIELS' CRIMSON KING. Ahout one foot high, with rich green foliago, and gigantic spikes of the darkest bright red blooms. It is of the most delicious fragrance, and either for pot culture or the garden will prove a decided acquisition 1	0
750	DANIELS' GIANT RED. Grand variety, growing two feet high, and throwing up very large spikes of red, highly-seented-flowers 6d. and 1	0

Saved from carefully bybridised flowers, will produce a good percentage of large, bandsome, double flowers. per pkt.—s. d. VERY CHOICE MIXED 830 smaller pkt. () AN ASSORTMENT OF 6 CHOICE SORTS 831 (i . . PURE WHITE. Beautiful BRILLIANT ROSE. Splendid ... G MINIATURE. Small, double flowers, charming variety

Petunias in their many beautiful varieties form a bighly interesting and desirable class of free-flowering plants for pot or garden culture; those of the Grandiflora section, both single and double-flowered, being especially valuable. The blooms of these are of immense size, beautifully formed, and of the most charming and delicate colours; some of the flowers are exquisitely veined or pencilled, others blotched or striped. The new "Fringed" varieties, both double and single, produce some charming flowers, the edges of the petals being elegantly cut or fringed. whilst the colours are most varied and beautiful. The seed we offer has been carefully saved from fecundated flowers of the finest varieties; but as Petunias raised from seed have a tendency to "sport," guarantee more than sixty or seventy per cent, of flowers true to description. All will, bowever, be found well worth growing, and occasionally some fine novelties may be secured. Petunias for indoor cultivation may be sown in January or early in February, but those intended for bedding out do not require to be sown before March. A soil composed of two parts leaf-mould and one part loam, with the addition of a little sharp sand, forms an excellent compost for these, but the seeds being very small require special care in sowing. Fill your pots or seed-pans to near the rim and press the soil down firmly and evenly, sow thinly, and cover the seeds very slightly with fine soil, sprinkle gently with a fine rose water-pot. and place in a gentle heat of sixty or sixty-five degrees, not bigher, and keep nicely moist. As seen as the young plants can be handled, prick them out about one inch apart in pots to strengthen, and when sufficiently advanced in growth pot off singly into small pots, gradually harden off when established, and plant out about the middle of May, or shift into large pots as required. In planting Petunias out of deers, ground should be selected that has not been freshly manured, otherwise a superabundant foliage will retard the flowering. foliage will retard the flowering.

PETUNIA HYBRIDA GRANDIFLORA.

A fine and distinct class of beautiful, large-flowering varieties producing blooms of immense size, and of the most charming colours; much superior to the old varieties of Petunia hybrida. The plants are robust in habit of growth, and admirably suited as pot-plants for the greenhouse or conservatory or for garden decoration.

DANIELS' SHOW & BEDDING PANSIES.

These beautiful, free-flowering, hardy plants are easily raised from seed, and will richly repay the small cost and trouble required to grow them to perfection. For blooming in Summer and Autumn, sow in February, March, and April, in pans or boxes of light rich soil placed in a gentle heat, and as soon as the young plants are large enough, prick out about two inches apart on rich soil to strengthen, and finally plant out six or eight inches apart, in ground into which a good quantity of welldecayed manure has been worked. Pansies delight in a somewhat shady position, and plenty of moisture in dry weather. The finest blooms are produced the second year, and grand flowers may be had by sowing in July or August in the open ground. and planting out in the following Spring into good rich soil.

BEDDING VIOLAS OR TUFTED PANSIES.

A PROFUSE-PLOWERING and invaluable class of hardy perennial bedding plants, continuing in bloom from early Spring till late in the Autumn months. Highly desirable for Spring gardening, and afford some charming effects in association with Spring-flowering Bulbs, &c. The following list includes the finest varieties in cultivation, and which we highly recommend. For blooming the same year, sow the sceds in carly Spring in a gentle heat, prick out to strengthen, harden off, and plant out in April or May where intended to flower. For spring flowering the following year, sow the seeds in May or June, prick out on Nursery beds and plant out in Autumn or early Spring where intended to flower.

From Mr. LENREY, Hamlin, New York.

April Ith. "Your strains of Pansies are magnificent; for diversity of colour and velvety texture they are mexcelled."

From Mr. G. APPS, Horley.

From Mrs. THOMPSON, Whiteharch,

July 18th. "The Pausies from Mesers, Duniels' Bros, Seed are a perfect show; they are perfectly lovely. They are blooming in such extraordinary profusion that Mrs. Thompson is afraid they may kilt themselves unless well nourished. The bed being in the front of the house every one stops to admire them."

From Mr. G. T. PARKER, Knebworth Station.

June 10th,
"The Pansies from Seed you supplied last year have given the greatest satisfaction. The flowers were very large, and the colours splendid."

PHLOX DRUMMONDI.

All the varieties of this beautiful class of annuals are worthy of extensive cultivation, especially those of the grandiflora class, which produce such a profusion and diversity of their large beautifully formed and brilliantly coloured flowers. Those of the compacta section growing only about four to six inches in height are also highly desirable for massing or beds, or for edgings, producing an effect that can probably be obtained by no other plant.

Cultivation.—Sow the seeds in February, March, or early in April, in pans or boxes of light rich soil; sow thinly, press down firmly, cover lightly, water, and place in a gentle heat. The young plants will be up in a few days, and soon as they can be fairly handled they should be pricked out about two inches apart in pans or boxes to strengthen, or potted singly into small pots: keep close for a few days, and when they are established give abundance of air, placing close to the glass to induce a sturdy growth. May is soon euough for planting out, and a rather dry and sunny position is to be preferred. The dwarf kinds should be planted about eight inches apart; the others, which grow from nine inches to one foot in height, with a spreading habit, may be planted one feot or more apart. Towards the end of April and during May, the seeds may be sown where intended to bloom in the open ground, and in an ordinary season a fine display may be had quite into the Autumn.

PHLOX DRUMMONDI GRANDIFLORA.

PHLOX DRUMMONDI, Intermediate.

An exceedingly free-flowering and beautiful class of great value for showy beds or borders. The plants, which are of a compact habit of growth attain a height of about 8 inches.

PHLOX DRUMMONDI GRANDIFLORA.

The grandiflora varieties form a magniflcent class; the plants are robust in habit, and the flowers, which are of various rich and beautiful colours, have in many of the varieties large, conspicuous white eyes; the individual blooms are of fine substance and scarcely inferior in size to the perennial sorts. A decided improvement on the old varieties of P. Drummondi. The plants grow about one foot high.

PELARGONIUMS-GERANIUMS.

Sow in February or March in pots or pans of light rich soil, covering the seeds to the depth of about a quarter of an inch, and place in a heat of ahout sixty-five or seventy degrees. Pot off the young plants singly into small pots, and shift into larger as these fill with roots. With liberal treatment these will bloom the first year, and, although many will not he up to the standard of first-class florists' flowers, some really beautiful varieties may he expected from a good strain of seed, and all will be found well worth the small amount of time and trouble expended.

HARDY PRIMROSES

G. F. WILSON'S BLUE PRIMROSE.

Profuse flowering and very charming hardy perennials, growing six inches high, invaluable for Spring gardening. The hybrid varieties vary in colour from the palest and most delicate sulphur yellow, through all the soft shades of rose and purple to the most inteuse and brilliant crimson. In a mild season many of the varieties will commence hlooming in the Autumn and continue through the Wiuter, but from the heginning of April to the middle of May they are generally in full hloom, and present a most lovely appearance. A partially shaded horder, with a westerly aspect, will grow them to perfection in almost any moderately rich soil, and they will thrive on almost any shady hank amongst grass, hut water should be given in very dry weather during summer.

DANIELS'SUPERB FRINGED PRIMULAS

It is with very much pleasure that we offer the grand strains of Primulas named below, all of which have been specially grown for our retail trade, and will give the highest satisfaction. The flowers will be found of great size and perfect form, combined with the most brilliant and charming colours, and a habit of plant which leaves nothing to be desired.

The beautiful varieties of Primula sinensis may be sown in March, April, May, and June The earlier sown are, however, to be preferred for making fine strong plants with an abundance of bloom. Great care must be taken to have a well-drained pot or seed-pan filled to within half an inch of the top with sifted leaf-mould; leave the surface rather rough, and sprinkle the seeds thinly upon it. The most successful raisers do not cover with but after sowing the seed press down the surface tolerably firm, and place a square of glass over the pot. Place in a good strong heat, shaded from strong light, and water very gently when the soil becomes dry. The seeds will germinate in two or three weeks, after which remove the glass

atmosphere

DANIELS' WHITE PERFECTION

PRIMULA STELLATA (Star Primula).

An improved form of the Star Primula, differing only in the formation of its flowers, which are nearly equal in substance and size to some of the best of the Chinese varieties. The snow-white flowers are beautifully fringed, and stand well above the dark foliage and purple stems, which make it even more attractive than those of the older type.

TORENIA FOURNIERI.

From Mr. A. TAYLOR, Draycott.

July 14th.
"We have a splendid show of Sweet Williams and Canterbury Bells grown from your Seed. They are the admiration of all who see them."

From Major E. TOLCHER, Plympton.

June 6th.

'The Wallflower Seed I had last year was splendid, the flowers were much admired, and people said it was quite the best show in the neighbourhool."

SWEET WILLIAM.

SWEET WILLIAM-DANIELS' PRIZE AURICULA-EYED.

We have given great attention for several years past to our splendid a great variety of the choicest Auricula-eyed, margined, selfs, &c., of the most brilliant types. The flowers are beautifully formed, of good substance, and are almost invariably awarded First Prize wherever exhibited. Sow the seeds thinly, in any sheltered place out of doors, in May or early in June, and plant out one foot apart in August or September where intended to bloom.

1088 DANIELS' PRIZE AURICULA-EYED. A magnificent strain of the choicest large-flowered Auricula-eyed varieties. The flowers perfectly formed and of the most brilliant and beautiful colours. Highly recommended; mixed seed smaller pkt. 0 6

The "HORTICULTURAL ADVERTISER" for July 6th, referring to our Strain of Sweet Williams, says:—

"The Auricula-Eyed forms are delightful, and represent one of the best strains we have seen for years past. The trusses are good, and most of the pips 11 inches in diameter; the rich crimson and purple markings leave no opening for criticism by the most exacting florist, being perfectly even, and showing no tendency to run into the pure white of the ground colour. It is pleasing to find these old-fashioned favourites still receive in some quarters the attention they richly merit."

From Mr. E. BRAWN, Wolverhampton.

May 10th. "The Polyanthus Seed I had from you two years ago has turned out splendidly."

From J. BELL, Esq., Withington.

Sept. 27th.

I am very much picased with the results of the Flower Seeds I had from you in the Spring. They have done exceedingly well, and have all come true to your description."

DANIELS' SELECTED WALLFLOWERS.

OANIELS' CHOICE SINGLE WALLFLOWERS.

SINGLE WALLFLOWERS.

The single-floworod varieties of this beautiful class of hardy flowers should be freely grown wherever there is room for them. No plant is easier of cultivation, and their charming colours and delicious perfume, added to their profusion of bloom render them highly desirable for Spring gardening. The splendid varieties—Eastern Queen, Vulcan, Cloth of Gold, Selected blood-red, and the Now White Queen are particularly worthy of notice, as are also the New Tom Thumb varieties which make a fine edging for large beds or borders. May and June are the best months for sowing the Excepting where mentioned, the plants grow about 18 inches high

seeds. Excepting where mentioned, the plants grow about 16 menes		
per pkt	-s.	d.
1094 WHITE QUEEN. The plants grow only about one foot high,		
and are very free-flowering. The sweet-scented blooms,		
when first open, are of a delicate palo primrose colour,		
changing in a day or two to almost pure white	0	6
1095 GOLDEN MONARCH (new). Magnificent variety. Large,		
rich, golden yellow flowers 6d. and	1	0

ZINNIA.

These splendid half-hardy annuals are of great value as bedding and border plants, and should always he grown for their brilliant and beautiful colours. The middle of March is quite soon enough to sow the first hatch of Zinnias under glass. Successive sowings may be made till the latter part of April. Sow the seeds in pans or pots of light, rich, finely made soil, and place in a moderate heat. Soon as the young plants are large enough to handle, they should be potted off singly into small pots or pricked out into larger pots or pans to strengthen. To prevent the plants drawing up too much, keep as close as convenient to the glass, give plenty of air on fine warm days, and if the leading flower huds are pinched out as they make their appearance, a more hushy and vigorous growth will follow. Planting out should not take place till all danger from May frosts is over. An open sunny position with fairly rich soil should he chosen and the plants should not he less than a foot apart. Weak liquid manure given once or twice a week hefore the plants come into flower, will assist in the development of some fine hlooms. The flowers of Zinnias have a tendency to sport, and although the seeds of these have been carefully saved we cannot guarantee that the flowers will be absolutely true to the colours mentioned.

Choice Flower Seeds in Mixture.

FOR SOWING ON BANKS, ROCKERIES, WASTE PLACES, &c.

We offer a splendid mixture of the choicest dwarf-growing Hardy Annuals, suitable for the above purposes, and which will make a very pretty display for a long period. The mixture includes:—Godetias, Clarkias, Candytufts, Mignonette, Poppies, Gilias, Viscarias, and other free-flowering subjects, and will give the highest satisfaction.

MIXED FLOWER SEEDS, Choicest Dwarf Varieties, per lb. 5s.; per oz. 6d.

SEEDS FOR EXPORT.

For many years past we have given special attention to our Foreign and Colonial Trade, and we are large exporters of choice Kitchen Garden, Flower, and Farm Seeds. We supply seeds of the finest quality for sending abroad, and these by our superior system and care in packing, invariably give the highest satisfaction. We have numerous customers in India, Australia, New Zealand, South Africa, Canada, and other parts, to whom we shall be pleased to refer. While we are always pleased to supply any assortment of seeds at the prices quoted in this Catalogue, plus the cost of postage, we venture to recommend the Collections mentioned below, which are made up, packing and postage free, to suit any locality for which they are destined.

A GARDEN SCENE ON THE NILE.

PRESENTS OF SEEDS TO FRIENDS ABROAD.—We suggest that the above make most useful and acceptable presents from friends at home, serving as they do, to remind absentees of the old country.

LILIES (Lilium) for Spring Planting.

For growing Lilies in pots a compost of about equal parts of sandy loam, leaf mould, and peat, is, perhaps, the best. Fine Lilies may however, be grown in almost any good light and rich soil, especially those of the Auratum type. For single specimens use pots of about six inches diameter. These will be found very useful for house decoration; but pots of eight or ten inches diameter, with five or six bulbs in each, form grand objects for the conservatory when in bloom. Pot firmly, any time during Spring, with the bulbs about two inches below the surface, and plungo the pots with their rims about six inches deep in some light material, such as ashes or cocoa-nut fibre, in some sheltered position out of doors. When the stems have pushed their way well through the plunging material, they may be lifted and removed to a cool pit or frame till the flower-buds are developed, when they may be removed to the greenhouse or conservatory.

All the sorts mentioned in the following list are suitable for Spring planting out of doors. For pot culture, however, we strongly recommend the beautiful varieties of Auratum and Speciosum, with the addition of the fine longiflorum giganteum as the most suitable.

LILIUM AURATUM.

BROWNI. Large, ereamy white trumpet-shaped flowers, the outside of the petals being of a rich purplish brown colour CHALCEDONICUM (Scarlet Turk's Cap). Splendid old variety, flowers medium sized, reflexed, and of a deep rich searlet colour; finely effective per doz. 10s. 6d. COLCHICUM (Szovitzianum). Pale yellow, spotted with black; .. per doz. 10s. 6d. finely scented per doz. 10s. 6d. CROCEUM. Light orange, spotted black ... per doz. 5s. DAVURICUM FULGIDUM. Deep orange red flushed with yellow, very showy ... per doz. 5s. 0d. 0

GIGANTEUM (the noble Himalayan Lily). White, with broad bands of erimson violet 3s. 6d., 5s. and HUMBOLDTI. A fine species, growing about five feet high, with PARDALINUM. Bright scarlet shading to orange, spotted maroon; per doz. 5s. 0 6

AURATUM (The Golden-rayed Lily of Japan). Large white flowers with yellow stripes and brownish-red spots; deliciously fragrant, extremely hardy; a very free bloomer, and first rate for pot culture. Strong flowering bulbs per 100, 31s. 6d.; per doz. 5s. 0d.; 2s. 9d. for 6 0 6
Very fine bulbs, nine to eleven inches circumference, per doz. 7s. 6d. 0 9 Extra fine, grand roots, ten to twelve inches circumference, per doz. 15s. 0d. rubro-vittatum. Magnificent variety, immense flowers, petals pure white, with a distinct broad band of deep crimson down the centre Is, 6d. and virginale. Very large flowers, white, with pale yellow bands; most CANDIDUM. The old favourite White or Madonna Lily . . . per doz. 2s. 6d. 0 4 SPECIOSUM. A fine hardy class; excellent for pot culture; deliciously scented. album. Pure white, beautiful ... per doz. 6s. 0d. 0
Krætzeri. Pure white; the finest variety for pot culture ... 10s. 6d. 1
melpomene. Most beautiful variety; flowers large; splendid form,
and of a lovely purplish crimson colour; heavily spotted, makes
a splendid pot plaut a splendid pot plaut ... per doz. 7s. 6d.

punctatum. White, rose-spotted ... ,, 5s. 0d.

rubrum. White, spotted and shaded crimson ... ,, 5s. 6d.

roseum. White, crimson-spotted ... ,, 5s. 6d. 5s. 6d. LONGIFLORUM GIGANTEUM. A fine early flowering dwarf growing species bearing large beautiful pure white trumpet flowers, deliciously scented. Fine for pot culture. Strong bulbs, per 100, 31s. 6d.; per doz. 4s. 6d. 0 6 HARRISH (Bermuda Lily). Beautiful pure white deliciously scented flowers. Splendid for pot culture in the greenhouse and for forcing stems six feet high, bearing fifteen or twenty flowers, which are of a deep orange-yellow colour, and are well set off by the deep green foliage. One of the most remarkable Lilies ever introduced, and one which we can confidently recommend

flowers.. per doz. 7s. 6d.

PYRENAICUM (the Yellow Martagon). Deliciously scentcd flowers, yellow, spotted black per doz. 7s. 6d. 0 SUPERBUM. A fine yellow Lily with purple spots. Flowers often fifteen to twenty on a stem .. per doz. 7s. 6d. TESTACEUM (Excelsum). Nankeen-coloured flowers, delightfully fragrant; four feet high per doz. 15s. .. per doz. 15s. THUNBERGIANUM ATROSANGUINEUM. Searlet, spotted black TIGRINUM SPLENDENS. The finest of the Tiger Lilies. Orange scarlet, black spots scarlet, black spots per doz. 4s. 6d. ,, FL, PL. Scarlet, spotted brown, very double ...

We have many other species and varieties of choice Lilies in stock, which from want of space we are unable to enumerate here.

Lilies in Collections—our own selection.

(Reduced from a Photograph.)

GLADIOLI—Hybrids of Gandavensis.

(Reduced from a Photograph).

GLADIOLI, HYBRIDS OF GANDAVENSIS.

These beautiful flowers succeed well in almost any soil or situation, and planted in association with Dwarf or Standard Roses, with hardy herbaceous plants, or on the shubbery border, they have a very fine appearance. They also do well as pot plants, and are capitally suited for growing in outside window boxes.

Plant the corms or roots firmly, three or four inches deep and eight or nine inches apart, in clumps of three, five, or more as required, and put a neat stake to each when the flower buds make their sppearance. March is the best month to plant for blooming in July and August, and by a few successive plantings in April and the early part of May, a succession of handsome flowers may be had to the end of September. Gladioli are of especial value as out flowers for decorative purposes. If the flower spikes are cut and placed in water just as the blooms are beginning to expand, they will all open in succession to the topmost bud, and will rotain their beauty for a longer time than if remaining ou the plant.

NEW AND SELECT VARIETIES.

The following list includes what we consider the finest of the exhibition and decorative varieties, and customers making a selection from these may depend on the most satisfactory results.

MISCELLANEOUS BULBS, PLANTS, &c.

GLADIOLUS BRENCHLEYENSIS.

A well-known and splendid variety of fine effect for massing; the flowers are of a rich bright scarlet colour, and being produced in handsome spikes, are first-class to cut for church and other decorations.

Good flowering roots, per doz. 1s.; per 100, 7s. 6d. Extra fine roots, per doz. 1s. 6d.; per 100, 10s. 6d.

GLADIOLI-New Giant-flowered Hybrids.

An important and valuable floral introduction. The flowers of this splendid class are of great substance, and gigantic size. The form of both the flower and spike is perfection itself, and they last a long time in bloom before fading, owing to their great substance and vigour.

One of each 12 superb varieties, 6s.; 6 varieties, 3s. 6d. Finest mixture of Hybridized Seedlings, per doz. 3s.; per 100, 20s.

NEW HARDY HYBRID GLADIOLI.

This fine new race of Hybrid Gladioli blooms somewhat earlier than those of the Gandavensis section, and are much more hardy, so hardy in fact, that their bulbs do not need to be lifted in Winter. The flowers are very striking and handsome in appearance, all having conspicuous blotches on the lower petals, whilst the colours are very diversified and beautiful. These will be found splendid alike for garden decoration or for cut flowers.

Choice mixed, in beautiful variety, per 100, 10s. 6d.; per doz. 1s. 6d.

GRAND NEW HYBRID GLADIOLI.

GLADIOLUS PRINCEPS. A magnificent variety of the Nanccianus class bearing enormous flowers, often six inches across, of a dazzling searlet colour, with a small white band on each of the lower petals. This is a superb novelty that will be much admired wherever grown.

Each 1s. 0d.; per doz. 10s. 6d.

GLADIOLUS BARON HULOT. A quite novel and vory beautiful variety of the hardy Lemoinei class of Gladioli. The large flowers, which are produced on handsome spikes, are of a lovely rich dark violet blue. A colour quite unique amongst Gladioli and of striking effect.

Each 1s. 0d.; per doz. 10s. 6d.

GLADIOLUS CHILDSI "AMERICA" (new). A superb variety, producing fine spikes of enormous flowers, colour a soft flesh pink, slightly tinged with lavender giving it the colouring of the most beautiful Leelias.

Each 8d.; per doz. 7s. 6d.

EARLY FLOWERING GLADIOLI.

Beautiful showy varieties, blooming in June and July. Splendid for cut flowers.

MISCELLANEOUS BULBS, ROOTS, &c. LARGE-FLOWERED CANNAS.

These magnificent plants with their beautiful spikes of brilliantly coloured Gladiolus-like flowers and handsome foliage, have become bighly popular These magnificent plants with their heariful spikes of brilliantly coloured Gladiodus-like flowers and handsome foliage, have become bighly popular for bedding out on lawns, &c., and for greenhouse and conservatory decoration. They are as easily grown as most hedding plants, and are grandly effective in groups or centres of heds. Break up the ground and manure as for Dahlias, and plant out in May as soon as danger from frost is over. They will soon start into growth and bloom, and if mulched with short well-rotted manure and well watered should the weather he dry, they will give a splendid show of beautiful flowers till killed by the frost in Antumn. In October or November they may be taken up, and after a short period of rest, divided and potted, when they will again start into rowth and bloom in the greenhouse; or the roots may be kept dormant till Spring, when they should be divided and potted up for turning out again in May. If grown for their heautiful foliago alone they are well worth growing, and with additional charm of their gorgeous spikes of heautiful flowers they take the too highly recommended.

We have a very fine collection of these, including the most brilliant and beautiful colours.

CHOICE NAMED VARIETIES, our selection ... per 100, 75s.; per doz. 12s. CROZY'S DWARF VARIETIES, CHOICE MIXED IN BEAUTIFUL VARIETY. Splendid for massing in large beds, &c. per 100, 40s.; per doz. 5s. 6d.

DOUBLE "AMERICAN PEARL" TUBEROSE.

TUBEROSES.

These deliciously fragrant and exceedingly useful flowers are much more easily grown than is generally supposed, and will well repay the little trouble that is necessary to have them in perfection. For early forcing pot singly into five or six iuch pots, as early in the seasoo as the bulbs can be obtained, and plunge in a good moist heat, withholding water till the foliage make its appearance, when water may be given abundantly till the flower-buds are formed, when they may be removed to the greenbowers to reconstruct and leave the flower buds are formed, when they may be water may be given abundantly till the flower-buds are formed, when they may be removed to the greenhouse or conservatory and less water given. For Autumn blooning, pot singly into five or six-inch pots in March or April, using a light rich compost, and plunge the pots about six inches above their rims in eccoa-nut fibre, coal ashes, or any light material, under the stage of a greenhouse or in a cool pit or frame; when the foliage of these makes its appearance they should be removed and plunged under a south wall, removing them to the greenhouse or indoors as the flower huds are formed. Dry roots may also be planted in sheltered places in the open ground, from the middle of April to the latter part of May, and will produce beautiful flowers in Autumn if taken up and potted when coming into flower, and will furnish a supply of heautiful bloom in the greenhouse almost up to Christmas. to Christmas.

DOUBLE, "AMERICAN PEARL." Fine new dwarf variety from the United States; deliciously fragrant, with large double flowers, pure white Selected roots, per 100, 12s. 6d.; per doz. 2s. 0d.; each 3d.

LILY OF THE VALLEY.

For early forcing, single crowus of these should be planted about twelve in a five incb pot, with the huds well above the surface. Cover the crowns with a little moss or an inverted flower-pot and place them in a good heat of say 85 to 90 degrees; water frequently with tepid water, and if judiciously looked after they will bloom in four or five weeks from time of potting. Good single crowns are much the best for this purpose,

SELECTED SINGLE CROWNS FOR FORCING

per 1000, 50s.; per 100, 6s.; per doz. 1s.

LILY OF THE VALLEY. Fortin's Giant-flowered.

A very fine variety with remarkably large handsome hells on long sturdy stalks. It is not so early and does not force so well as the ordinary variety, but will bloom splendidly out of doors in a sheltered position. Quite hardy.

STRONG FLOWERING CROWNS ... per 100, 12s. 0d.; per doz. 2s. 0d GOOD PLANTING CROWNS ... 7s. 6d. 1s. 6d 7s. 6d. ,, 1-, 6d

MONTBRETIAS.

Beautiful showy Summer-flowering plants, producing graceful spikes of brilliantly coloured flowers. Very useful for cutting. .. Per 100, 4s. 6d.; per doz. 8d. .. Per doz. 10s. 6d., each 1s. .. each 2s. 6d. .. Per 100, 5s.; per doz. 9d. CROCOSMÆFLORA. Rich orange yellow

DAHLIAS, POT ROOTS (Dry Tubers).

We offer as below, dry tuhers from our splendid collection of choice named Dahlias, which includes the finest varieties in commerce. Considering the low prices at which these are quoted, it must be distinctly understood that the selection of varieties must, in all instances, he left to ourselves.

CACTUS-FLOWERED. Choice named sorts, carefully selected, beautiful varieties ... SHOW AND FANCY. Finest named exhibition varieties POMPONE. From our choice collection per 100, 30s.; per doz. 4s. 6d. per doz. 3s. 6d. . . per doz. 3s. 6d.

TUBEROUS-ROOTED BEGONIAS.

We have much pleasure in offering tubers of our grand strains of Tuberous-rooted Begonias. These have been grown and selected at our Nurseries during the past season, and for form, size, substance of flower, and beauty and variety of colouring are second to none.

DANIELS' DOUBLE-FLOWERED BEGONIAS.

The Double-flowered Begonias are especially recommended for pot culture. The colours of the flowers vary from the darkest crimson and scarlet, through all the most beautiful shades of salmon, rose, and yellow, to the purest white. They are easily grown, and with their large massive blooms form strikingly handsome objects for the greenhouse or conservatory.

DOUBLE BEGONIAS IN DISTINCT COLOURS FOR POTS OR BEDDING OUT.

Fine double flowers earefully selected when in bloom, and first class for pot culture or the garden.

The prices quoted above are for dormant tubers, and these can only be supplied to the end of April.

In May and June we supply strong plants from single pots at the following rates:—

SINGLE-FLOWERED, choice mixed, per doz. 4s. 6d.; 100, 30s.

DOUBLE-FLOWERED, choice mixed, per doz. 6s.; 100, 42s.

BEGONIAS-NEW FRINGED SINGLE.

A remarkably fine new strain of handsomoly fringed flowers. The large finely-formed blooms, which are elegantly frilled and crested, are borne on stlff, erect stems, carried well above the foliage, and are possessed of the most beautiful variety of colouring known amongst Begonias. This splendid class will be found first-class for pot culture.

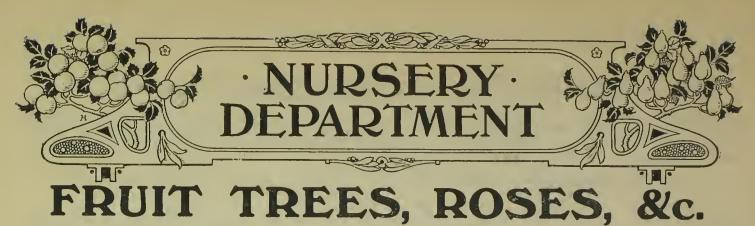

PURE WHITE, beautiful each ls.; per doz. 10s. 6d.
VERY CHOICE MIXED, in fine variety per doz. 9s.

BEGONIA ERECTA CRISTATA.

A remarkable strain of great beauty. The plants are of a dwarf, sturdy, upright growth, and first-class for pot culture. The petals are of great substance, and the flowers of the most charming colours, each petal carrying on its upper surface a bandsome crest resembling a Cockscomb. Singularly beautiful, and quite unique.

VERY CHOICE MIXED, in beautiful variety

per doz. 7s. 6d.; each 9d.

We annually rear many thousands of trees and bushes of the finest sorts of Apples, Pears, Plums, Cherries, Peaches, and Apricots besides immense quantities of Gooseberries, Currants, and other small Fruits, for all of which our grounds are especially suited. An inspection of our list will show that we offer a very fine selection of the newest and choicest varieties. We also grow a large and splendid collection of Roses, including the newest and best amongst the Hybrid Perpetual, Hybrid Tea, Tea-scented, Climbing and other sorts. Of Clematises, Ivies, and other popular hardy climbers, we offer a fine selection; besides an extensive stock of Hardy-flowering and Ornamental Evergreen and Deciduous Trees and Shrubs suitable for the decoration of large or small gardens.

We respectfully invite all who have not yet favoured us with their orders for Fruit Trees, Roses, &c., to give us a trial, having every confidence they will be highly pleased with the quality of plants we supply.

NORFOLK BEAUTY From a Photograph.

A FINE KITCHEN APPLE, NORFOLK BEAUTY.

We have much pleasure in recommending this as one of the finest and best cooking Apples of recent introduction. It is the result of a cross between Warner's King and Dr. Harvey, and in appearance is intermediate between the two parents. It is of excellent flavour and a splendid keeper, has been exhibited in Norwich, in fine condition, as late as the middle of April. Mr. William Allan, the raiser, says, "It is a great bearer, large and handsome, clear yellow in colour, occasionally with a rosy flush on the sunny side of the fruit, most excellent when cooked, and may be had in season from September to January. Awarded a First Class Certificate by the Royal Horticultural Society, December 9th, 1902.

MAIDENS, 1s. 6d. each. PYRAMIDS, 2s. 6d. and 3s. 6d. each. STANDARDS, 2s. each.

MATDENS, One Year old DWARFS OR BUSHES

Selected

PYRAMIDS. Goed

APPLES-Select Varieties.

Our Apples are mostly worked on the ordinary or crab stock. Those marked with an asterisk (*) we can supply in dwarfs on the Paradise Stock. These are of dwarfer growth and come into bearing and profit much earlier than those worked on the ordinary stock, and are specially recommended to the notice of allotment holders or where the tenure is uncertain. We may say that our Dwarf Apples on the Paradise Stock are this season unusually fine.

EPICURE (new).

A superb variety. The result of crossing British Queen with Fillbasket, both of rich flavour. The size is medium, in shape bluntly conical, the centre fruits are sometimes wedge-shaped, the colour of the outer skin is similar to that of Royal Sovereign, whilst the inner flesh is white throughout, and firm, yet juicy. It is of a vigorous constitution, and exceedingly prolifie. Strong Plants, per 100, 30s.; per doz., 5s.

OTHER VARIETIES.

"THE CROPPER" (1908). An exceedingly prolific main crop variety of a rich crimson colour, bluntly conical in shape, the flesh is white and solid, Strong Plants, per 100, 20s.; per doz. 4s. with a good firm exterior skin, very rich and Juscious in flavour PROGRESS (1907). The flavour of this variety is very rich. The fruit is large, of a flattish wedge shape, and in colour and appearance partakes very much of the "Queen" type; is produced in large clusters

REWARD (LAXTON'S). The result of crossing "Royal Sovereign" and "British Queen," the result being a really grand acquisition. The fruit is very large, wedge-shaped, and the quality excellent

100 in 10 Choice Varieties, our own selection

OUR GUINEA COLLECTION OF CHOICE FRUITS.

We have much pleasure in offering the following liberal Collection of Fruits which will be found admirably suited to the requirements of a small garden, or where the space for fruit growing is limited. The Fruit Trees will in all instances be Dwarfs, but of those and other fruits included, only good varieties will be sent. The selection of sorts must be left to ourselves. We make no charge for package, but in consequence of the extreme cheapness of this Collection we cannot pay carriage of same and must ask that all orders be accompanied by a remittance of Cheque or P.O.O.

OUR GUINEA COLLECTION OF FRUITS CONTAINS

- APPLES. Best sorts for succession.
- PEARS. In good variety.
- PLUMS. Most useful sorts.
- Two varieties. 2 CHERRIES.
- GOOSEBERRIES. In variety.
- 18 CURRANTS. Red, Black, and White.
- 2 LOGAN BERRIES.
- 12 RASPBERRIES. Best sorts.
- 50 STRAWBERRIES. In four sorts.

No charge for Package.

HYBRID PERPETUAL AND H. T. ROSES.

These magnificent and beautiful Roses are better than any others adapted for exhibition and pot culture. They continue in flower from the early part of June to the end of October, and are by far the most desirable for general cultivation. Our stock of these, grown at our Nurseries, comprises many thousands of the newest and choicest varieties in dwarfs and standards, and the past season having been very favourable to their growth, the plants we offer will be found unusually well grown and vigorous, and may be expected to produce a fine display of bloom next season. Our standards and half-standards H.P.'s are all worked on the Dog Brier, dwarfs mostly on Manetti stocks, H. T. and Tea-scented varieties on seedling brier.

FRAU NAKL DRUSCHKI.

HYBRID PERPETUAL ROSES IN COLLECTIONS.

CARRIAGE FREE.

These Collections are carefully made up to ensure a fine variety and customers ordering may depend on their giving the most unqualified satisfaction. In all cases good healthy plants will be sent. and in the best variety of colour and sorts that can be included in the number given, but in all instances the selection must be left to ourselves.

DANIELS' SPECIAL COLLECTIONS OF H. P. AND H. T. ROSES.

We have much pleasure in recommending the following collections of Hybrid Perpetual and H. T. Roses, which contain the very best selection of varieties that can be included in the quantities given, and which are guaranteed to give the highest satisfaction. We shall feel obliged if customers when ordering these collections, will kindly name two or three other varieties which may be sent in case of our being sold out of any of those specially named, or we will do it at our discretion.

blush at the edges of petals; they are large and splendidly			
formad Howens	1	6	
DOROTHY PAGE ROBERTS (H.T.). Coppery yellow with apricot		U	
yellow at base of petals	0	G	
Jones at posting		U	l

	Dwarfs	-s.	d.
	DUKE OF ALBANY. Vivid crimson, changing darker, very fino	1	0
	DUKE OF CONNAUGHT. Rich velvety erimson	0	9
	DUKE OF EDINBURGH. Rich vermilion	0	9
	DUKE OF TECK. Vivid bright crimson scarlet	0	9
	DUKE OF WELLINGTON. Bright red, shaded crimson, very lovely	0	9
	DUCHESS OF WELLINGTON (H.T.) (new). The colour of the	U	J
	flower is quite novel, and of marvellous beauty. In the young		
	stage it is an intense saffron yellow, stained with rich crimson,		
	which as the flower develops becomes a deep coppery saffron		
	vellow—a shade hithorto unknown amongst roses	7	6
	EARL OF DUFFERIN. Flowers of large sizo; colour rich brilliant		
	velvety crimson, shaded with dark maroon	0	9
	EARL OF WARWICK (H.T.). Colour soft salmon-pink, with		
	deeper centre; large, perfectly formed flowers. A continuous		
	bloomer	1	6
	ECLAIR. Very bright scarlet, globular, refloxed form; good, free,		
	and a thorough Autumnal	0	9
	ELIZABETH BARNES (H.T.) (new). Large full flowers with		
	pointed centre, most perfectly formed and delightfully fragrant.		
	The colour is a satiny salmon rose, with a fawn centre. A	ı,	0
	novel, distinct and beautiful shade. Highly recommended ETOILE DE FRANCE (H.T.). The flowers are very large; colour	2	6
	brilliant volvety evimeon Very sweet coented	1	0
	FLORENCE EDITH COULTHWAITE (H.T.) (new). The flowers		
	are large and full. The colour, which is somewhat variable, is		
	deep cream stippled with bright rose on the inside of the petals,		
	and reflected on the back, thus creating a delicate orange and		
	peach glow, which is at once unique and striking	5	0
	FRAU KARL DRUSCHKI. Flowers large, perfectly formed		
	with shell-shaped petals, and of the purest white, opening well;		
	splendid	1	6
	FRAU LILA RAUTENSTRAUGH (H.T.). Apricot orange, suffused		
	vellow, tinted rose; flower large and very full	1	6
	GENERAL JACQUIMINOT. Brilliant crimson scarlet	0	9
	GEORGE C. WAUD (H.T.) (new). A remarkably distinct and		
	beautiful variety. The flowers are large, full, perfectly formed,		
	with high pointed centre, and of a brilliant orange-vermilion colour that does not fade. It is highly perfumed, and one of		
	the very finest of the new sorts	3	G
	GRACE MOLYNEAUX (H.T.). Creamy apricot flesh in the centre;	•	~
	the outer petals, when fully developed, are creamy white		
	inside. A splendid rose for garden decoration, button-holes, or		
	exhibition	3	6
1	GRAND MOGUL. Velvety purple, perfect form	U	9
l	HARRY KIRK (H.T.). Deep sulphur yellow. A splendid rose,		
	much the best of its colour	-5	0
	HEINRICH SCHULTHEIS. Delicate purplish-rose with a white		_
	shading, hold form; a distinct Rose	Ú	9
	HUGH DICKSON (H.P.). One of the finest additions to its class that has been sent out for several years past. In colour		
1	it is an intense brilliant crimson shaded scarlet. It is		
ļ	delicionaly fragrant	1	0
	HUGH WATSON (H.P.). The blooms are very large, full,		
	and most perfect shape, quite exhibition form. Very sweetly		
l	perfumed. Colour crimson, shaded carmine	1	6
ļ	JEANNIE DICKSON. Colour, rosy pink edged with silvery pink,		
I	perfectly formed large flowers	()	9
ı	J. B. CLARKE (H.T.) (1905). Bright deep scarlet; flowers extra		
ı	large, with perfect pointed centre. (Gold Medal. N R.S.)	I	0
1	JOHN CUFF (H.T.). Deep carmino pink, with a yellow zone at the base of petals. The flowers are large, and produced in		
1	the base of petals. The flowers are large, and produced in		^
1	great profusion, and delicately perfumed	3	C
	JOSEPH LOWE (H.T.). A sport from Mrs. W. J. Grant, with rather more substance in the flowers. Colour salmon pink in		
	the way of Madamo A. Chatenay	2	0
	KAISERIN AUGUSTA VICTORIA (H.T.). Lemon delicately	~	U
1	shaded with cream; very large, of most perfect form	1	0
1	KILLARNEY. Flesh colour, shaded white, and suffused pale pink;		
1	blooms large, buds long and pointed	1	0
	LADY BATTERSEA (H.T.). Bright rosy crimson tlnged		
	with orange, and changing to soft pure rose; long oval buds,		_
	vigorous growth]	0
1	LA FRANCE. Bright lilac roso: beautiful	1	- 0

well-known old pink favourite, with the same splendid size and		
beautiful form of flower. This will prove a valuable acquisi-		
tion for exhibition or general culture	5	0
WILLIAM ASKEW (H.T.). Bright pink, shaded delicate pink at		
tips of petals; large, full, and good form	1	6
XAVIER OLIBO. Velvety black	ô	9
	-	

ROSES—TEA-SCENTED AND NOISETTE.

This beautiful class is distinguished by the peculiar and delightful fragrance of the flowers, and the many charming tints and shades of yellow, rose and salmon colour, not to be found amongst the hybrid perpetuals. The individual blooms are of exquisite form, and invaluable for button-holes or bouquets. They are especially suited for pot culture in the conservatory, and planted outside on slightly raised beds in a sheltered position, and given a slight protection in Winter, they will furnish some beautiful flowers throughout the Summer and Autumn.

Our own selection, in choice variety, plants mostly established in pots, per doz. 15s., 18s., and 21s.

Choice named varieties from the ab

Clematis montana, Rubens.

This charming new free-flowering variety produces a lovely effect in May and June. The blooms are of good size, and of a soft bright rosy lilac colour. It is quite hardy.

CLEMATIS MONTANA RUBENS each 2s. 6d.

Clematis montana grandiflora.

A beautiful early, free-flowering variety, blooming in May and June, and producing a profusiou of large, pure white starry flowers. Splendid for covering trellises, porches, &c.

CLEMATIS MONTANA GRANDIFLORA

Each 1s. 6d.

-Garden Hybrids.

The cultivation of these heautiful hardy evergreen flowering shrubs has been greatly on the increase since the discovery that peat soil is not absolutely uccessary for their successful growth. Sandy peat free from stagnant moisture prohably suits them hest, but they will do well in sandy loam or even clayey loam, if free from calcarcous matter, whilst we have seen many beautiful specimens growing in ordinary light garden soil. The colours of the flowers range from the richest and most intense crimson to the most delicate shades of rose and pure white, the masses of beautiful bloom having a charming appearance with the rich dark green foliage.

CHOICE NAMED VARIETIES. Strong young plants, well set with flower buds. Our own selection according to size cach 2s. 6d. and 3s. 6d.; per doz. 25s. to 35s.

HARDY AZALEAS.

per doz. 18s. GHENT VARIETIES. Choice named sorts, well set with flower-buds AZALEA MOLLIS. Beautiful varieties. Strong plants, well set with flower-buds per doz. 18s.

HARDY CLIMBING & OTHER PLANTS

SUITABLE FOR TRAINING ON WALLS, &c.

These are mostly grown in pots, and can be supplied and planted at any time of the year with perfect safety.

PLANTS FOR FENCING.

We annually raise many hundreds of thousands of the following useful fencing plants, and where large quantities are required shall at all times be pleased to furnish special quotations when requested. Our stocks of these are this season unusually fine, and will be found in the best possible condition for planting.

MYROBELLA—A GRAND FENCING PLANT.

This has undoubtedly proved itself to be the very best Fencing Plant ever grown. For rapidity of growth it is unrivalled, and, under fair conditions, will make a capital fence in three or four years from planting. It also grows vigorously in the poorest soils, and is first-class for planting in exposed situations or by the sea coast. It is quite hardy and will stand the severest frosts without injury.

Planting may be done in open weather at any time during the Winter months, but in fairly moist weather successful plantings may be made relating may be done in open weather at any time during the winter months, but it likely most weather steeds in planting, planting the winter months, but it likely most weather steeds in planting to end of April. In planting, plant firmly, placing the sets from six to nine inches apart according to size. When growth commences, they should be out down to eight or ten inches in height. It will bear almost any extent of clipping, and should be cut at least twice a year—about the end of July and in Winter or Spring whilst in a dormant state, and should be fairly trimmed the first year or two after planting to ensure a good bottom for a strong and thick fence, but it may be clipped in to form a fence no thicker than an ordinary garden wall, which will be found quite impenetrable. As the plants advance in age the branches become armed with long, sharp sprinces, which make the fence impenetrable to cattle, &c. Myrobella will therefore be found splendid for making new or improving old fences, and much superior to Whitethorn or any other fencing plant.

We strongly urge those of our customers who possess land of this nature to carefully consider the question. We use the greatest care in the packing and despatching of all orders, it being of the greatest importance that they should arrive in good condition

greatest importance that they should arrive in good condition.

We hold an exceptionally fine stock of clean straight Limes and other trees suitable for Avenue and Park planting. Those are all well rooted, and will lift splendidly. Our quarters of Tree Box are also very good, and we are offering it at most moderate prices. Any of our customers who are anticipating planting will find in Tree Box an excellent subject, and one which affords warm shelter for game during winter.

Where large quantities of Trees are required we will gladly give special quotations, and if desired, we will send fully qualified men to advise on the planting or thinning of coverts and plan-

POMPONE CACTUS DAHLIA, THE BRIDE.

DAHLIAS—Pompone Cactus.

These charming diminutive varieties are the latest development of the Dahlia. In habit of growth they resemble the ordinary Pompones. The small cactus-shaped blooms are very pretty and exceedingly useful for cut flowers.

SINGLE-FLOWERED DAHLIAS.

The Single-flowered Dahlias are charming as cut flowers, and splendidly effective when well staged for exhibition. They commence blooming about the end of July, and are resplendent with a profusion of their lovely flowers till killed by the frost in Autumn. The small or medium-sized flowers are the most useful, either for exhibition or decorative purposes, as it is found they retain their heavity for a much longer portion when the larger blooms. they retain their beauty for a much longer period when cut than the larger blooms. Our list of these contains some of the choicest varieties in commerce. Customer's selection .. per doz. 4s. 6d., or 6 for 2s. 6d

CHRYSANTHEMUMS.

EARLY-FLOWERING LARGE-FLOWERED VARIETIES.

A splendid class for Garden Decoration.

This beautiful class commence to bloom about the end of Angust or early in September, and continue till killed by the frost. They are easily grown and not only produce a fine display in the garden, but are exceedingly useful for cut flowers. For growing fine plants, plant out in May 18 inches or 2 feet apart on well-dug fairly rich soil, and place a good stick to each plant. Stop the shoots once or twice to induce a bushy growth, but do not stop them after the end of June. Water should be given freely in very dry weather.

SINGLE-FLOWERED ZONAL PELARGONIUMS.

These splendid flowers, which have been much improved of late years, are amongst the very best of pot plants for green-house or conservatory decoration during the Summer and Autumn months. By a little management they may be had in bloom throughout the Winter, when their brilliant and lovely flowers are especially welcome.

In consequence of the increasing demand for really fine new sorts, we have again added to our list the finest of the new large-flowered varieties. These will be found of the most charming colours, and to include many beautiful shades, hitherto unknown amongst Single Zonals.

HERBACEOUS PÆONIES.

HERPACEOUS PÆONIES, CANDIDISSINA.

Well-known magnificent hardy border plants, preducing immense blooms of the most charming colours, many of the varieties are deliciously scented; will thrive in almost any soil or situation, but to be grown well should be planted in an open position and where they are not likely to be disturbed for a few years.

We have a fine collection of these.

We have a fine collection of these popular, interesting, and beautiful plants, which are daily coming more and more into favour with the Gardening Public. All the varieties are perennial, extremely hardy, and many of them produce flowers of the most exquisite beauty, which are very valuable for cutting, whilst the dwarfer-growing sorts are admirably suited for rockeries, or edgings. No special soil or position is necessary, as with but very few exceptions, they will thrive almost anywhere, and with a good collection, a charming variety and succession of bloom may be had throughout the Spring and Summer. The plants we offer are all grown in pots, and may be removed at any time or season.

ASTER, BEAUTY OF COLWALL

ASTERS (Michaelmas Daisies). Beautiful Autumn bloomers. BEAUTY OF COLWALL (new). The first and only double-flowered Michaelmas Daisy in cultivation. Our own selection, per doz. 4s. 6d. and 6s.; per 100, 21s. and 30s.

MISCELLANEOUS PLANTS.

BOUVARDIAS.

The most beautiful and charming of all flowers to cut for bouquets, button-holes, or table decoration; the colours range from the purest white through the delicato shades of pink and rose to the most intense and brilliant searlet and crimson. They are easy of cultivation, and grown in the same way as Winter-flowering Pelargoniums will bloom to perfection.

MISCELLANEOUS SPRING-FLOWERING PLANTS. BEDDING VIOLAS.

The Pansies and Violas are amongst the very best of our Spring and Summer flowering bedders. They are wonderfully free-flowering and pretty, and will thrive in almost any soil, but should not be planted in a bot dry position. A spot where they are shaded from strong sunshine for some part of the day, a north or west border, suits them admirably, and a fair supply of weak liquid manure in dry weather will keep them in splendid flower.

per doz. 4s.; each 6d. BLUE BELL. Violet, shaded blue; free bloomer per doz. 3s.; caeh 4d. BLUE CLOUD. White, heavily edged with broad band of blue per doz. 4s.; each 6d. per doz. 2s. 6d.; each 3d. Our own selection, per 100, 21s.; per doz. 4s.

PRIMROSES AND POLYANTHUSES.

A beautiful and indispensable class of brilliant Spring-flowering plants, blooming at the same time as Narcissi and many other bulbs; the single-flowered Hybrid Primroses include the most beautiful shades of crimson, scarlet rose, &c., to pure white. The blue variety of G. F. Wilson is an especially fine and highly selected strain. Miss Massey is also a splendid variety, wortby of notice. The large-flowered Polyanthus Primroses are exceeding fine and showy, the yellow and orange shades being very handsome.

SINGLE, MIXED HYBRIDS. Very fine and brilliant. Strong seedlings per 100, 17s. 6d.; per doz. 2s. 6d.

POLYANTHUS, GOLD-LACED. Fine seedlings, all good flowers per 100, 21s.; per doz. 3s. POLYANTHUS-PRIMROSE. Large-flowered hybrids in splendid mixture per 100, 21s.; per doz. 3s.

per doz. 4s. 6d. per doz. 4s. 6d.; each 6d. large, dark-crimson flowers; very showy

POLYANTHUS-PRIMROSE. Large-flowered yellow and orange shades,

PRIMROSES.-Double, White, Lilac, Yellow ...

.. per doz. 4s. 6d.; each 6d.

PENTSTEMONS.

A very beautiful class of Summer and Autumn-blooming plants that should be extensively grown. They produce large handsome spikes of tovely flowers, and include almost every shade of colour, from the purest white to the deepest crimson, shades of rose, scarlet, purple, &c.; are easily grown in any garden border.

NEW AND SELECT VARIETIES.

Our own selection, from the following list, per doz. 4s. 6d. Customer's selection, per doz 6s.

AGNES WICKFIELD. White, edged and shaded with rosy lilae.
ALEXANDER KERR. Rosy purple, white throat.
CONSTANCE. Deep salmon rose, throat pencilled carmine.
F. BURNABY. White throat, and lovely carmine rose flower, F. BURNABY. White throat, and lovely earmine rose flower, GENERAL NANSONBY. Bright rosy pink, clear white throat. HENRIETTA. Pale silvery pink.

DANIELS' NATURAL PERFUMES

(Extract of Flowers.)

It has been repeatedly suggested to us that we should supply Perfumes to our Customers, and after most careful consideration and study we beg to offer the following limited list which individually represent the various sweet smelling flowers as named.

CARNATION HELIOTROPE LAVENDER

LILY OF THE VALLEY

SWEET PEA PARMA VIOLET WALLFLOWER

WHITE ROSE

1s. 6d. Bottle and Box, (Actual size.)

We are confident that any one purchasing these purfumes will find them perfectly satisfactory in every way, of the very choicest quality, of triple concentration, thoroughly lasting, and of course they will not in any way stain or mark the most delicate material.

Taking into consideration the high quality, it will be found that the quantities offered at the various prices are most liberal.

Each bottle is packed in a dainty box (see illustration), they will travel quite safely by post, and as an acceptable present nothing can be found more suitable.

Each kind of scent is offered in three sizes, as follows:-

Please note that we do not charge postage when ordered with other goods.

From Miss D. COX, Rowland's Hill.

Sept. 20th.

"My sister received the sample of your Heliotrope Scent this morning, and I like the perfume immensely. Kindly forward a bottle."

From Miss E. BOUGHEN, Norwich.

Nov. 24th.

"I am very pleased with the bottle of Scent, Lily of the Valley, I bought off you. It is neatly packed, and the perfume is lovely."
