P R E F A C E .

In submitting this Table of Calculations to the manufacturing public, the Compiler feels confident that he is supplying a great want. It will be found to contain all necessary information as to the number of Hanks required in Pieces, from five to fifty picks per quarter inch, fifteen to eighty inches in width, and one to one hundred yards in length.

The calculations number upwards of *ninety-seven thousand*, and were the labour of about four years.

The Compiler has every confidence that this work will be found correct, having spared neither time nor expense in testing each calculation.
