

**Intellectual processes in framing a research proposal
(flow chart)**

Research is iterative

The dimensions of the topic need to be analysed by review of literature and discussions to find out those specific areas that require a research intervention. This narrowing down makes our area of study crisp and helps to converge to a viable/tenable researchable problem.

The background of the problem spells out the gaps in the existing research where a research intervention is required

Method of the study requires elaboration on the procedure of the study, Population/sample, tools, Data collection procedures, Analysis and Possible limitations.

Dr. K. Abdul Gafoor & Dr. Manoj Praveen G.
