the entire body must be exerted. Lack of harmony by dividing the forces would be more effective in defeating the purpose of the organization than the utmost endeavors of its enemies.

#### THE LEGAL STATUS OF THE WORCESTER PLAN.

Upon another page of the present issue is found the text of the decision recently rendered by the Supreme Court of Massachusetts in the case of Julius Garst vs. Hall & Lyon of Worcester. This case concerns the operation of the price restrictive plan, commonly known as the Worcester plan, which has recently received so much attention from the druggists of the country. The decision must be considered as being extremely unfavorable to this plan which is advocated by many druggists of various eastern cities.

It seems that a manufacturer who has been selling his products under the contract provided by the Worcester plan, in which the purchaser agrees not to sell them for prices less than those specified in the agreement, sought to recover damages from a firm of retail druggists who sold these goods at lower prices. The manufacturer claimed that the agreement made with the dealer to whom the goods are first sold is also binding upon dealers who later purchase the same goods. The retail druggist in question obtained large quantities of goods originally sold under contract by the manufacturer, but made no agreement as to the terms under which they were to be sold. It was not proved that the goods had been obtained fraudulently. In the decision of the court it is held that if the manufacturer has contracts with the purchasers of his goods in regard to the price under which they are to be sold, and these contracts are violated, he has a remedy against them to recover damages. But it is held that no authority or principle justifies the conclusion that the contract is attached to the property and follows it through several successive sales. As the goods were not sold subject to contract and had not been fraudulently obtained, the case was dismissed. The decision means, as we understand it, that manufacturers selling goods under the provisions of the Worcester plan, can recover damages only from dealers to whom the goods are first sold, and not from those who later purchase them. This has an important bearing upon the suitability of this plan, as a method of maintaining prices, for under ordinary circumstances few retail druggists are direct purchasers. This difficulty and the apparent reluctance of manufacturers to adopt the plan, may necessitate some important changes before the price restrictive plan can become generally effective.

#### ANOTHER CHINESE REMEDY.

An item in one of our English exchanges tells of a case recently tried in a police court in Shanghai. A Chinese druggist had been robbed of a two ounce package of a precious remedy valued at something more than a hundred dollars. The coolie who had stolen this exceedingly valuable material was punished with three hundred lashes, while the package was returned to the delighted apothecary. The nature of the drug was naturally the subject of considerable curiosi-

ty. The druggist declared that it was a sovereign remedy for stomach troubles, and exhibited the material which proved to be a dark mass of the consistency of wax or resin. Inquiry as to its preparation brought to light additional proof in support of the theory that the Chinese have a belief which was not uncommon among our ancestors, that the efficiency of a remedy is directly dependent upon its nauseness. The highly prized medicine was prepared from monkey's toe-nails, which were boiled down and buried in the earth for a term of years to harden.

#### MORE USEFUL THAN PRACTICABLE.

A proposal recently made by the German National Health Society is novel, to say the least. This Society proposes to establish hygienic information bureaus in various parts of Berlin for the purpose of giving to the public free advice upon all matters connected with the maintenance of health. Questions about the suitability of clothing and foods, the most healthful way of sleeping and eating, the amount of energy to be devoted to exercise, and similar subjects are to be cheerfully settled for every one.

It is not entirely clear how this arrangement is expected to accomplish the great things which the friends of the plan seem to anticipate. Public instruction in the methods of warding off illness may be desirable, but it is not at all certain that it would be acceptable. From observation among ourselves one would gather the impression that advice of this kind is seldom asked and still more rarely followed. When the average American is not ill, he is self-sufficient, and snaps his fingers at those who are supposed to know what is good for him. It may be that Germans are more docile, and possibly they may be inclined to seek this kind of advice and even to follow it. If the public could be induced to listen to advice in matters of personal health, what a slump there would be in the patent medicine market!

A French physician has undertaken to reintroduce the use of gargles, which he says have fallen into disfavor because the liquid seldom reaches the pharynx. He gives the following directions for applying this form of remedy, which, if properly followed, cannot, he claims, fail to reach the affected parts. Take a small mouthful, throw the head back as far as possible, separate the jaws widely, and pronounce in a guttural tone the syllables ha, ha, ha. It is sincerely to be hoped that this method of treating sore throat will never become as common as gargling has been at certain times in the past. The effect of guttural ha, ha's issuing from every house on the street during the annual period of universal coughs would be startling. The more quiet and less Mephistophelean remedies now sold in our pharmacies seem much more harmless and generally desirable.

IODOLENE is an albuminous compound of iodol, (Merck, *Annalen*) obtained in the form of a yellowish powder. It is odorless and tasteless and insoluble in the ordinary solvents. This substance contains 36 per cent of iodol, may be kept without change in well stoppered tubes, and may be heated to 100 to 105° C without suffering decomposition. According to Laquer and Somerfeld, iodolene is like iodol an antiseptic, and may be employed as a substitute for iodoform.

(Specially prepared for the Era.)

## THE EARLY DAYS OF PHARMACY.

Continued from page 9, July 4, 1901.

### SEVENTH PAPER.

#### Ancient Italian Pharmacy.

With the exception of a brief allusion to the School of Salerno we have purposely ignored Italian Pharmacy in this series of sketches, running, as it did, very much on the same lines as the profession in Spain. But before definitely closing our retrospect of pharmacy in the Latin countries of Europe, we will depict with pen and pencil a couple of the most strikingly picturesque features of the drug trade of this ancient and historical land.

#### I. In Ancient Rome.

"What an interesting chapter Sienkiewicz might have added to 'Quo Vadis', had he cared to paint the medical practice of ancient Rome in the same vivid manner as he has depicted her social and religious life!" Such must be the involuntary exclamation of the reader of Philippe's "History of Apothecaries" when he finds the writings of Petrone—Nero's "Arbiter of Elegances"—quoted by the French historian of pharmacy. Not that the polished and cynical Roman had any admiration for the drug-compounders of his day, for he uses the word "Pharmacus" as synonymous with "poisoner;" and we fear that the reproach was not altogether undeserved. On the other hand, there must have been many exceptions, honest men and truth-seekers. It was Andromachus, the Archiater" or head doctor of Nero,—a post which, one would imagine, required no small skill and tact,—who invented the famous

#### Theriac.

This extraordinary electrolyte has thus existed for eighteen centuries, for it still figures in some European pharmacopœias. Andromachus introduced it as an improvement on the already famous Mithridate. The composition of the two electrolytes was very much the same, but Theriaca contained viper's flesh and several less active substances which brought the total number of ingredients up to sixty. The active ingredient would appear to have been opium, but the reason of the popularity of the mixture in days gone by was based on the fact that (like Mithridate) it was supposed to be a preventive and antidote for poisoning.

#### Degenerate Days.

In these days of scientific investigation the poisoner's chance of escape from justice is a poor one, and it

is hard for us to realize the terror he inspired in past ages, ere analysis rendered his detection inevitable. It is pretty certain that in ancient Rome this crime, like the administration of drugs to procure abortion, love-philters and "pick-me-ups" of the vilest class flourished,—clandestinely, no doubt, but with an effrontery born of long years of tacit toleration. Mandragora and wild hemp, thorn-apples and fungi, cantharides and spiders,—all was fish that came within the Roman apothecary's net and could pander to the vice or luxury of his patrician or plebian patrons. It was probably to a large extent due to this scandalous traffic that certain of them made their twenty thousand dollars a year. They were naturally despised by all the classes they served; they could have no pretensions to respectability, and the Romans well recognized the fact. Horace mentions that the funeral of the Tibellius the singer was followed by "Pharmacopole, mendici, mimæ, balatrones, hoc genus omne"; Petrone we have already cited; Cato and Cicero are hardly more complimentary.

#### The First Druggists,

as distinguished from doctors, seem to have made their appearance at Rome not long before the commencement of the Christian era. At this time some medical practitioners, instead of buying their herbs direct from the cultivators, or gathering and compounding them by the hands of their own slaves, appear to have purchased their materia medica from the "Sepiasia.\* A sort of market gradually grew up at the foot of the Capitoline hill, where drugs, herbs, dyes, paints and colors and perfumes were sold;—the druggists' quarters, so to speak, of ancient Rome.

#### A Curious Scene.

Our artist, in his headpiece has endeavored to depict the general aspect of a stall in "Ointment Street", as it was sometimes called,—happily for our readers, he has been unable to produce the varied odors which greeted the olfactory nerves of the stroller! Here were the herbarii, who gathered herbs and simples, with many prayers and incantations, at the "propitious" season; their booths or shops hung about with wreaths of borage, lime leaves, centaury, etc., the doors decked with honeysuckle or scabious, within might be seen the pestle, the percolator, and other familiar tools of our craft. Close by the selularii or "stationary" apothecaries (as distinguished

\* The word appears to have been derived from the name of a public square at Capua, where the Idumean drug sellers had their market. Readers of old English pharmaceutical literature will be reminded of the title of Dr. Salmon's book "Sepiasium: the Compleat English Physician."

AN ITALIAN DOCTOR,  
A. D. 1400.

AN ITALIAN PHARMACIST,  
A. D. 1400.

RECTOR OF THE HOSPITAL  
OF SIENNA, A. D. 1400.

from the nomadic band of pedlars who brought drugs and spices from afar and had no fixed residence at Rome) awaited custom at the doors of their shops, or possibly plucked at the gown of a passerby who might be induced, in their back premises to invest in some of the dubious or illegal medicaments already alluded to.

Openly they sold simple drugs, some compound medicaments, theriaca and similar cure-alls. There was the dropax or adherent plaster, the hiera or purgative (usually qualified by some high-sounding title—"Immortal," "Divine," "Golden", etc); garrum or salted intestines of fish, for cure of ulcers; aphronitum, a mixture of soda and carbonate of lime; a sort of a river-mud used for skin diseases; decoction of various flowers, and the singular animal remedies which figure in most old pharmacopœias.

Picturesque and noisy, the pharmacotrite or drug-pounders bent wearily over their pestles and mortars outside of their squalid hovels; their reeking half-naked bodies covered with powder of the pigments and substances they ground, the rumbling of their pestles continuing monotonously from dawn till dusk.

In the perfumers' shops, or the establishments of the sage or midwives (who, like apothecaries bore but an indifferent reputation) one might notice some or all of the wonderful variety of ointments and cosmetics which Oriental skill placed at the disposal of Roman fashion or luxury. The balsm from Egypt, Sidon and Judea, and similar substances, often fetched high prices. The frequent allusions to balsms and ointments in Holy Writ must strike every Bible reader.

Mary Magdalene's spikenard was valued by Judas Iscariot at something like \$45 per pound. The practice of anointing was universal; from the gladiator or wrestler who entered the arena to the holy oil of the early Christians, oils and ointments were in constant use. Roman pharmacy, in fact, is not a pleasant subject to dwell upon. One would gladly believe that these satirical and cynical old Latin authors had painted their fellow countrymen in somewhat blacker colors than they deserved. But they edict of Theodosius, Emperor of Rome in the fourth century, forbidding the election of apothecaries to any public office, seems a conclusive proof of their low moral standard. Possibly the explanation may be sought for in the fact that the best men of the profession rose to be doctors, or rather combined the two callings. For instance

#### The Great Galen

who lived in the second century, and was doctor to

Marcus Aurelius, appears to have had his own drug store or compounding room on the Via Sacra at Rome, and is said to have prepared the medicaments for his imperial clients with his own hands, or at any rate, under strict personal supervision. It is probable that many of his contemporaries followed his example.

#### II. The Merchants of Venice.

In the Middle Ages the foreign drugs and spices and groceries used in England, Germany and the North of Europe almost all arrived from Italy. We may therefore fitly preface our articles on Ancient English Pharmacy by a glance at the great mercantile cities of this peninsula.

#### The Guild of Easterling's

of the city of London, otherwise known as "the Merchants of the Steelyard" was a "famous commercial confederacy founded in the eighth century on the borders of the Baltic to preserve their trade from the Northmen's piratical excursions." As far back as 978 we find Etheldred's edict that "Easterling's coming with their ships to Billingsgate shall be accounted worthy of good laws." In Stow's "Survey" of London we find they have warehouses in Dowgate Ward. In 1303 King Edward I. grants a charter protecting the foreign merchants if they pay duty,—England's first treaty of commerce, so to speak. The connection of these observations with Italy may not be at first apparent. But it would seem, although we have no direct evidence of the fact,—that the ranks of these Easterlings and foreign traders were gradually filled with Jews and Italians, and as the Jews were expelled from England in 1290, the Italian reigned supreme.

#### Venice

became what London is to-day, the great emporium of the world for the drug, spice and kindred trades. In the twelfth century her mighty fleet of merchantmen,—insignificant enough it would appear nowadays, no doubt,—each manned with a crew of 200 sailors and galley-slaves, set sail for France, Holland and England, bearing the produce of the Orient and the Mediterranean. Nor did they return "in ballast" for we read that Tomaso Loredano, the merchant of Venice who shipped fifty tons of sugar to London in 1319. (a "record" consignment at the epoch) took payment in wool,—the staple English article of trade at that time. This sugar may have been Italian—(sugar mills existed in Sicily in 1176)—but was more probably brought from Egypt, Cyprus or the Medi-

VENICE—THE RIALTO.

erranean. In 1413 we read that black pepper, wood in quantities, wood ashes, alum, oil, etc., "came from Genoa in great carracks" and from "Venice and Florence in large galleys all kind of spiceries and groceries." The Rialto of Venice, shown in our engraving, was then one of the chief headquarters of international commerce. The church of S. Giacomo de Rialto was then the center of the pepper trade of the world. This, again, was then a highly prized article. When the Genoese took a Syrian town in 1101, a couple of pounds of pepper was distributed to each soldier as a part of his booty. The high price of pepper was probably the reason why Vasco de Gama doubled the Cape of Good Hope. At any rate, once the sea passage to India discovered the price fell, and the traffic passed from Venetian into Portuguese hands.

It is hard, speaking of mediaeval days to disconnect the two kindred subjects of spices and drugs. They were long sold by the same tradesmen in England.—Some English chemists can still remember having handled large quantities of spices in their younger days.

Besides sugar and pepper, camphor, cinnamon, cloves, currants, borax, cream of tartar, red lead, liquorice, manna, cubebs, ginger, saffron, sesame oil, china root, etc., were among the indigenous or imported articles that the Venetians shipped Northwards. During the fifteenth century the Venetian Government made a treaty with Melich Elymadi, Sultan of Egypt. The Sultan sent to Pasquale Malipiero, then Doge of Venice,

#### A little present

consisting of thirty rolls of benzoin and twenty of aloes wood, a small bottle of Mecca Balsam, fifteen small boxes of theriaca, forty-two loaves of sugar, a horn of civet, five boxes of sugar candy, and some carpets, etc. It appears that it was not an uncommon thing at this time for the ruler of Egypt to send gifts of theriaca to the Venetian Doges and the ruler of Cyprus. Theriaca had been prepared at Cairo for many centuries and its English name of

#### "Venetian Treacle"

bears witness to the fact that what was used in England was usually imported from Venice. The fact is, that such a preparation, requiring a large number

of choice drugs, could hardly be properly manufactured, in those days, outside the great commercial republics of Italy. We thus find that "Andromachus' Theriaca" was prepared in Venice during the week of the "great annual fair;" doubtless one of those yearly gatherings for business and pleasure such as still survive at Nijni-Novgorod and Seville, and which modern civilization, with its constant intercommunications, renders unnecessary. Later on Genoa, Montpellier, Cologne, Lyons, and Paris, as they became in turn commercial centres, took up the manufacture. The old French name for Theriaca, by the way, is "Triacle," which makes one wonder if it first found its way from Venice to London by sea and thence to Paris. Our illustration shows the enormous jars,—they remind one of the tale of the Forty Thieves,—in which the precious drug was stored in bygone days.

#### Royal Presents of Drugs

were frequent in ancient times, when certain substances had a high value. The Venetian merchant-explorer, Marco Polo, tells us camphor sold for its weight in gold in certain Eastern lands he visited. In 1242 the "Great Khan of Cathay" (Emperor of

OLD THERIACA JARS.

China) sent an Embassy from Peking with a letter to the Pope Benedict XII. Musk, myrrh, camphor and spices (as well as silk and precious stones) were among the offerings carried by the Embassy;—we may add they never reached His Holiness, being all plundered on the way. Speaking of the Celestial Empire reminds us that

#### China Root

found its way to Venice during the 16th century. Charles V, the Emperor who figured in our article on the Apothecaries Guild of Paris, was supposed to have been cured of gout by its use. The first work on the subject of this drug was by Andreas Vesalius,—his "Epistola rationem modumque pro pinandis radicibus Chynæ decocti quo nuper invictissimus Carolus V imperator usus cses." and was published at Venice in 1546.

#### The Italian Books on Pharmacy

of the fifteenth and sixteenth centuries form a singularly interesting collection, and show the up-to-date character of the country at that epoch. Venice was indeed one of the first cities where printing presses were established. Saladinus of Ascoli published his Compendium Aramatorum in 1488. Ten years later a folio edition of Dioscorides was published at Venice, and about the same time the celebrated "Ricettario Fiorentino", (considered by Flückiger and Hanbury as the first Pharmacopœia ever published by authority,) was issued by the Doctors of Art and Medicine of the College of Florence (original in folio edition). Valerius Cordus died at Rome in 1544, and two editions of his remarkable Pharmacopœia were published at Venice in 1556 and 1563. In fact Italy is full of interesting

#### Souvenirs of Medieval Renaissance Civilization,

as every traveller knows. One would like to dwell upon and illustrate the beautiful fifteenth century Italian mortars and the artistic drugpots of the same epoch; to speak of the poet Dante, member of the Corporation of Apothecaries of Florence, and generally to trace the history of Italian pharmacy at this epoch,—but space forbids a longer dissertation.

## SHOP TALK.

"It does not always pay to advertise in an unknown language" said the advertising manager for a Philadelphia patent medicine, "we got badly taken in not long ago. Our firm wanted to introduce a remedy to the Chinese around here so I got a Chinaman who speaks good English to write an advertisement to accompany samples we distributed around in the 'Chinatowns' of Boston, New York, Philadelphia and other Eastern cities. Somehow our advertising did not bring results and we were puzzled quite a while to know why as we had taken special care to make both medicine and wrappings attractive to the celestial fancy, but one day I met a man who had lived in China for many years and happening to have one of our advertisements I showed it to him and asked his opinion. For a few minutes I thought he would choke with laughter when he read our "hen track" ad, finally he managed to sober down and tell me the reason for his hilarity. It seems that one of the Chinese 'Companies' had a medicine on the market that was like ours, so they bribed my advertisement writer to write the following legend to accompany it, and here is the translation. This medicine is made by the foreign devils out of filthy matters and is meant to kill off Chinamen in the United States. It is no good but the medicine made by the Fong Company is made from Chinese herbs and will cure all ills because of the powerful spells that are inside of the bottle". No wonder we didn't sell many bottles. I taxed my writer with his duplicity but all he said was 'You give me ten dollar, Fong Company he give twenty five', and laughed. Yes, it's on me this time".

A tall, well dressed man dropped into a Philadelphia drug store lately to get a glass of soda, and while he was being served the colored porter came out and began to mop up the floor on his hand and knees. With an expression of indignation, the stranger called out the proprietor and berated him soundly for his inhumanity in forcing a human being to do menial work on his knees, saying, "I fought against slavery over thirty years ago and I can't bear to see a man slaving on his knees like that fellow. Get a mop and let him stand upright in a way he was meant to be, like a man". Taken back the druggist could say nothing and the stranger went out in seeming high state of indignation. While wiping off the soda counter a few minutes later he picked up a card giving the address of a firm making patent mops, the kind the stranger urged him to use, then the air was blue for a few minutes and the porter just managed to dodge a well aimed sponge thrown at his head.

\* \* \*

"Every once in a while you will notice a new style of walking among the young ladies of the fashionable set" said a lounge in an uptown drug store recently to the owner. "Watch that girl just going out, see how she limps? That is the fashion now, and every girl almost I watched on Chestnut street the other day walked the same way". "You will notice that there is also a slight lump on her leg also", replied the druggist smiling, "and that she swings her skirt on the off side too; well, that is caused by her vaccination shield and indicates that she has been vaccinated lately". "That's why she limps and that's why all the others limp". "You see girls nowadays do not want to be vaccinated on the arm for it leaves a mark that shows with a ball dress, so they get vaccinated on the calf of the leg". "Now you know the secret of your 'limp'". "Gee" said the young fellow, "I'd like to be vaccination physician for my ward, there's lots of pretty girls living there".

\* \* \*

In hunt for subjects for window display the druggist often overlooks materials right at his hand. One of the most noticed window display seen lately was in a Philadelphia drug store last week, and lots of people stopped to take it in. It was composed of a collection of assayed crude drugs in original packages arranged in line across the window with a card below each package giving its name and medical uses and samples of the ordinary crude forms of these same drugs as bought generally. Cards giving a concise statement of the reason why powdered drugs are assayed and noting the wide variance in crude drugs as sold generally to druggists were conspicuously placed, while back of the display was a big card saying that assayed drugs were the only ones used in this store for making its preparations so that their prescriptions were always filled with galenicals of known and constant strength.

\* \* \*

Quite a good and novel idea was seen in the drug store of a Philadelphia druggist well known for his originality last week. He was pushing the sale of a preparation of cascara to be used for constipation and liver troubles and to help his sales he adopted the following device. In two bottles on the most used counter he had samples of his own remedy and a sample of old-fashioned "Black Draught", with spoons handy for taking out a quantity for inspection. On the counter was a card saying "The old fashioned physic and the up-to-date kind, taste them and see which you like the best". Customers were also invited to sample the two remedies as an object lesson of the advance of pharmacy, particularly in this store, and when their interest was aroused a little talk was given them on the new and the old way of making medicine and how this preparation was made. The originator says his idea has brought him a big trade for this remedy.

\* \* \*

Speaking of window displays, this Philadelphia druggist had quite a good one on the same lines. He divided his window into two portions one of

which he filled with all the old fashioned nauseous drugs and remedies he could get a hold of, the other side was filled with sugar coated pills, tablets, elixirs, wafers, etc., all the examples of modern pharmacy. The sight of a half inch pill on one side and an elegant sugar-coated tablet on the other was quite striking, as was the entire contrast, and well-worDED cards heightened the interest by giving descriptions of the new and old way of preparing medicines. The display attracted great attention and its object lesson was pushed home by a judiciously worded circular distributed around the neighborhood during its exhibition, in which the druggist told his neighbors that he made a specialty of supplying them with the very best and most pleasant forms of medicines.

\* \* \*

A very ingenious scheme of keeping up to the times was shown the Era man lately by an uptown druggist that he thinks is worthy of copying by all. This druggist, as do all progressive ones, subscribes to several drug journals and what is more reads them, too. When he runs across a good formula, a new prescription difficulty, an idea in advertising, in fact anything of interest and value he enters its title and a brief note of its character in a book he keep for this purpose, and, as he follows an alphabetical order of entering his notes, all he has to do when he wants to find anything is to look it up under the appropriate letter. There he will find the name of the drug journal, date of issue and page, all together. Such a plan makes his file of drug papers a mine of easily got at information.

\* \* \*

Mention was made in shop talk, not long ago, that Stewart Gamble, of Minneapolis, president of the Minnesota State Pharmaceutical Association, after looking around him had discovered what he considered would be numerous benefits should a general early-closing agreement be reached by druggists. The idea is now taking practical shape in Minneapolis, for an effort is being made to have all drug stores close at 9 o'clock during the winter. But there is so much opposition to the reform that its success is doubtful. A good deal of this opposition was unexpected. Many proprietors contend that the drug stores should be open longer and later than other stores, so that the public may be accommodated, and especially in emergencies. Then, too, the fact that a number of downtown drug stores keep open all night militates against the early-closing movement.

\* \* \*

Mr. Campbell, who keeps a drug store at Selby avenue and Victoria street, St. Paul, has hit upon an ingenious yet quite simple method of increasing sales. He buys a certain article and distributes it around his store in so conspicuous a manner that people at once take to buying it and a perfect run upon the article follows. It may not last long, but plenty of hay is made while the sun does shine. For example, Mr. Campbell recently laid in a stock of something new mantle chimneys for gas burners, fairly peppered his store with them and sold seven dollars' worth within two hours.

**EOSOLATE OF CALCIUM** is the calcium salt of the trisulphacetic ether of creosote (Merck, Annals). It contains about 25 per cent of creosote, and is described as a grayish white powder having an acidulous taste and a powerful odor. It is soluble in from 8 to 10 parts of cold water and 7 parts of hot water, and is very soluble in alcohol, hydrochloric acid, citric acid, and in other organic acids. This preparation is employed in the treatment of diabetes, producing a decided amelioration of the symptoms of the disease. It is prescribed in doses varying from .2 to .6 gram, three or four times a day, preferably in powder in cakes.

## THE ADULTERATION OF DRUGS.\*

By LYMAN F. KEBLER.

Many of the reports bearing upon the adulteration of food products and medical preparations, which come to hand from time to time are of such character, that at the time of the reading we are almost overawed by the number of sophisticated or adulterated articles reported. Tables are presented which would indicate that from 50 to 75 per cent of the articles examined are adulterated or spurious. If this is really a correct representation of the facts as they exist we would be compelled to admit that this country must be a veritable happy hunting ground for the manipulator. But upon closer examination, it will be found that these reports are reports of adulteration in the full sense of the word, and that when a man starts out to find adulterations, he is usually successful. Taking the whole field into consideration the author does not believe that these reports present the actual existing condition of affairs.

In the course of some of my notes to the Pharmaceutical Era it was stated, in substance, that while the number of adulterated articles reported, is found to be comparatively large, the proportion of intentional adulteration actually met with, does not exceed 5 per cent. Indeed, extended experience in examining the vast number of articles that come up for investigation in the actual course of business shows that the adulterations practiced are actually very much less than this. Such a statement may seem somewhat radical, but it is based upon the results obtained in the chemical laboratory of Smith, Kline & French Co. wholesale druggists, manufacturing chemists and pharmacists, Philadelphia, Pa., which firm submits to a strict examination nearly all the products they handle.

The subject of adulteration of foods and drugs is a well worn theme. Many able reports have been presented time and again, and the writer believes that such reports have had much to do by way of educating both the druggist and the public, and that adulteration has become minimized more largely as the result of these educational efforts than through legislation. This report is intended to be educational.

The articles referred to are shown in the exhibit given in connection with this meeting. The adulterations described are typical in character of what may be expected to be met with, others seemed to be unnecessary to give.

For convenience of reference the articles described are divided into Chemicals; Oils; Simple Drugs and Allied Products.

### CHEMICALS.

The first subject to be considered is Chemicals.

**AMMONIUM ACETATE** is quite a difficult chemical to make, especially in warm weather, it being very prone to liquify and even to dissociate. This probably accounts for the fact that an article is frequently supplied which is freely soluble in water and alcohol, having a mousy odor, a melting point of 82°C. and a boiling point of 222°C. These are the physical properties of acetamide, and acetamide it is. It seems to be the custom of certain manufacturers to deliver this article when ammonium acetate is asked for. No manufacturer is justified at any time, either for convenience or otherwise, to deliver one article for another, even though they resemble each other very closely, both chemically and physically. But in view of the fact that the physiological uses of ammonium acetate are well known, and those of acetamide are as yet obscure, such a substitution must be considered high-handed.

**CALCIUM PHOSPHATE, PRECIPITATED.**—An article of fine physical appearance proved upon examination to contain thirty per cent of calcium carbonate. The presence of this impurity is not incidental to the manufacture of calcium phosphate, as some one has intimated. Any one using such phosphate of cal-

\* Read before the American Pharmaceutical Association, St. Louis.

cium for the purpose of diluting powdered opium in manufacturing iataganum, would have no end of trouble before the product is finished.

**"CHROMIC ACID"**.—Quite a number of grades of "chromic acid" are regularly supplied by manufacturers, and unless great care is exercised the purchaser will find himself in possession of an article containing about forty per cent of "chromic acid" and sixty per cent of sodium acid sulphate. This product is manufactured by mixing the molecular portions of sodium bichromate, dissolved in a suitable quantity of water, and sulphuric acid, according to the following equation:

The mixture is then simply dried and the resulting product placed on the market as "chromic acid". There is considerable variation in the physical appearance in the best grades of chromic acid and it is easy to be deceived. The only safe plan is to estimate the actual content of chromic acid. A short rapid method has been worked out by the writer and will be found in the American Journal of Pharmacy, 1901, page 395. The presence of sodium is readily established by the sodium flame test, and the sulphate by means of barium chloride.

**"SOLUBLE BLUE"**.—Ultramarine blue has been supplied when soluble blue was called for and a great contention was raised when an unfavorable report was submitted. This product is soluble in water, but care must be taken not to be deceived, inasmuch as the ultramarine blue is a very fine powder and remains suspended in the water for some time. It is best to make up the solution or mixture and let it stand for twenty-four hours, and if the product is ultramarine, the blue will subside and leave the upper aqueous layer perfectly colorless, while a soluble blue under the same conditions will leave a permanent blue solution.

**PODOPHYLLIN, POWDERED**.—When a request was made that a sample of this material be submitted, it was found upon examination to consist of powdered mandrake root. This fraud is easily established by its insolubility in alcohol and by its microscopic appearance.

**TANNIC ACID, COMMERCIAL**.—For this article powdered Chinese nutgalls have been supplied. Any one familiar with the odor of these galls can readily detect this substitution. Commercial tannic acid, furthermore, is nearly soluble in water, whereas powdered Chinese nutgalls leave considerable insoluble matter. The microscope can be used to advantage with such a product.

**COUMARIN**.—A sample of this article was submitted for examination and proved to be of very good quality. Accordingly, a good sized order was placed and when the goods arrived another examination showed the material to possess a melting point from 54½ degrees C. to 57 degrees C., while the melting point of pure coumarin is 67 degrees C. On heating with a 5 per cent solution of potassium hydrate at a temperature of about 60 degrees C. for an hour the odor of aniline was developed, and the addition of a solution of calcium hypochlorite to this mixture gave the blue color reaction characteristic of aniline. On applying Hofman's reaction for primary amines the characteristic and disagreeable odor of phenylcarbylamine was obtained, indicating the presence of a primary amine. The percentage of nitrogen was estimated, and on calculating the nitrogen back as acetanilid it was found to amount to 25 per cent.

**VANILLIN**.—With this article the same difficulty was experienced mentioned above in connection with coumarin—namely, the sample submitted was of excellent quality, while the consignment of goods ordered from this sample proved to be a substitution. This contract involved several thousand dollars, and at first considerable difficulty was anticipated in getting rid of this substance, which proved upon examination to consist of broken crystals of acetyl isoeugenol, the direct antecedent of vanillin in the manufacture of the synthetic product. The manufacturer, however, took back the goods without a murmur and paid all expenses involved, including the cost of

analysis. The interesting point in this connection is that the melting point of acetyl isoeugenol is 78 degrees C., while pure vanillin melts at from 80 to 82 degrees C. From this it can be readily seen that had only a superficial examination been made of the goods consigned, they would readily have passed as vanillin, inasmuch as the acetyl isoeugenol had been mixed with a certain proportion of vanillin to give it a distinct vanillin odor. The following methods were employed to establish this impurity: microscopically the crystals were abnormal; with concentrated sulphuric acid a beautiful red color was developed, whereas vanillin gives a lemon yellow with this reagent; by estimating the per cent. of vanillin according to the method of Prescott and Hess as modified by the writer, and found in the American Druggist for March 10, 1899. The solubility was also abnormal, and the presence of acetic acid was established by the conventional methods.

Another sample of vanillin submitted contained 90 per cent of specially prepared benzoic acid and 10 per cent of vanillin. This fraudulent product was easily detected by its odor, solubilities and melting point. Acetanilid is frequently met with as an adulterant of vanillin to the extent of 50 per cent., and is usually identified by the same test as those described above, under Coumarin, for detecting this substance.

#### OILS.

**OIL OF BERGAMOT**.—On examining a large consignment of this oil, conditionally purchased, it was found to contain an abnormally high, +28 degrees, optical rotation, in a 100 mm. tube. The genuine oil is recorded as never having a higher rotation than +20 degrees. In every other respect the oil tested up well except that the per cent. of linalyl acetate was somewhat low, namely 28 per cent. A number of adulterants might be added to bring about this abnormality, such as oils of lemon, orange and turpentine, but after taking everything into consideration the writer came to the conclusion that oil of lemon to the extent of about 20 per cent. had probably been added.

**OIL OF CASSIA**.—It seems to be a periodical disease with the Chinamen to adulterate this oil with kerosene, and it is not uncommon to find it adulterated to the extent of 20 per cent. The manipulator unfortunately, however, sometimes makes the mistake by adding more kerosene oil that the oil of cassia will readily mix with; consequently, it has been the writer's misfortune to find oil of cassia to contain a considerable quantity of kerosene floating on top of the cassia oil in an original package. This adulteration has not been met with within the past year, and it is believed that this is chiefly due to the fact that oil of cassia is now largely bought and sold on the basis of percentage content of cinnamic aldehyde. It is hoped that this practice will be extended more and more in the trade for the purpose of gradually rooting out the adulterations of oils. It may not be possible to eliminate adulterations entirely, by such procedure, but it is certain that it will minimize it, and that it is the best we can probably hope to do, in a great many cases at present.

**OIL OF COPAIBA**.—It is not a new thing to tell the members of the American Pharmaceutical Association that balsam copaiba is adulterated with and even substituted entirely by gurjun balsam, but it is doubtful if many of them have met with an oil adulterated with corresponding oil of gurjun balsam. There are a number of tests given for detecting the presence of this adulterant and some of them are of service, but the writer, so far as his experience goes, has the utmost confidence only in the following: Into the bottom of a test tube place 1 Cc. of glacial acetic acid, (90,5 per cent), add 4 drops of pure concentrated nitric acid and mix well, then add 4 drops of the oil to this mixture, allowing the oil to float on top, if oil of gurjun balsam is present a reddish or purplish zone will be developed between the layer of oil and the acid mixture in a few minutes. No reaction occurs if the oil is pure.

**OIL OF PEPPERMINT** is probably one of the most liberally adulterated oils met with, and especi-

ally is this true in mixing a high grade oil with an oil of poor quality. Several years ago an oil was met with that showed upon examination to contain at least 25 per cent. of added oil of turpentine. It must be remembered that oil of peppermint is liable to contain a small percentage of terpenes, but no such quantity is admissible and it should also be said, quite unnatural. Notwithstanding the fact that this oil contained such a considerable amount of added turpentine the specific gravity did not fall materially below the recognized lower limit. On reporting this condition of affairs to the vender he immediately requested the oil to be returned and he gladly paid all cartage, freight, etc., in addition to \$25 for analysis, without making a protest. This in itself was ample evidence that the article was known to be of a spurious character.

The presence of the turpentine was established by a fractional distillation, the first fraction began to come over at 150 degrees C. and 40 per cent distilled before the temperature reached 180 degrees C. The specific gravity of this fraction corresponded to that of turpentine, and other physical and chemical properties unmistakably proved this fraction to be turpentine. By allowing 15 per cent for the possible presence of a natural terpene, having a boiling point lying between the above limits, which is quite improbable, we still have left 25 per cent of added turpentine. Genuine oil of peppermint contains very few constituents having a boiling point below 200 degrees C. The per cent of menthol, both combined and free, was also estimated and found to be very low.

It is hoped that the present Committee of Revision will see its way clear to introduce a lower limit of boiling point and a method for estimating menthol. For the benefit of some, the following references to the methods for menthol determinations are given: "Schimmel's Semi-annual Report", Oct. 1894, Page 438; "The Volatile Oils" by E. Gildenmeister and Fr. Hoffmann, translated by E. Kremers, page 651 and the Am. Jour. Pharm. 1897, Page 189.

**OIL OF THYME, WHITE.**—It is well known that white oil of thyme contains very little genuine oil of thyme, but consists for the greater part of oil of turpentine, distilled over some herbs of thyme. For this the consumer is in a measure responsible in that he demands a colorless article, which the producer is unable to supply in pure quality, because pure oil of thyme will always be more or less darkened in process of time. It is sometimes stated that pure oil of thyme is not available. This is a mistake. All samples, however, should be carefully tested as to the specific gravity and the percentage content of phenol bodies.

**OIL OF WALNUTS.**—Some time ago, while in quest of pure oil of walnuts several parties purporting to deal in this commodity were requested to send samples and prices for the same. One of the samples was marked "concentrated, white" had a sweetish taste and was soluble in water. This proved upon farther examination, to be nothing but diluted glycerin, flavored with a menthol-like body. Another sample proved to consist of about one volume of oil of mirbane and four volumes of ethyl alcohol. The nature of the mixture was easily revealed by fractionation: three-fourths came over near 80 degrees C., then the temperature rose rapidly to 203 degrees C., which is the boiling point of oil of mirbane, and then the temperature remained stationary, until distillation ceased. When it is remembered that oil of walnuts is used chiefly by artists in painting, because it dries with a better film than even linseed oil, the reprehensibility of such an action can very readily be seen.

**OIL OF WINE.** (Heavy and Light).—Up to the present time we are in doubt as to the probability of the composition of heavy and light oils of wine. The various books describe them as consisting of such and such constituents, but no two of them agree on the same. Merck's Index, 1896, describes them quite specifically, as to boiling points and to specific gravities. Every effort has been made through all

available sources to obtain what might be considered a good quality of these two oils, and invariably the samples would turn out to be the same. One light oil of wine submitted proved to be fusel oil. The lighter oil, usually had lower boiling point and a lower specific gravity, than the heavy oil of wine, but farther than this it was impossible to establish a difference, although there must have been some. The conclusion ultimately arrived at is, that the light and heavy oils of wine are undoubtedly obtained in distilling the residue left in the manufacture of ether, the lighter oil being the first portion of the distillate, while the heavier oil is an intermediate or higher boiling point product. It would seem that this theme could be taken up to advantage by some one with ample time, whose careful researches might be of extreme value. The present pharmacopoeia does not prescribe any requirements of any value for ethereal oil, excepting specific gravity. The probable reason for this is that no two manufacturers can produce identically the same quality of heavy oil of wine, and the same manufacturer frequently encounters difficulties in his efforts to turn out products of uniform quality. It does seem that a standard for heavy oil of wine should be fixed, especially when it is remembered that it is one of the most important constituents of Hoffmann's Anodyne.

(To be continued.)

**TRAGACANTH.**—Recent investigations into the chemistry of tragacanth show, according to Tollens (Chem. Centralblatt) that many of the properties of the gum are analogous to those of pectin. This author finds that oxybassorin possesses two replaceable atoms of hydrogen, and that it therefore partakes of the nature of an acid. This body was separated from tragacanth by Hilger and Dreyfus, who found its formula to be  $(C_{12}H_{14}O_6)_2O$ , and stated that it contained no carboxyl groups. According to Tollens this conclusion is erroneous, the nature of the compound requiring the presence of two carboxyl groups. By means of hydrolysis arabinose and also fucose have been obtained from tragacanth by Widstoe and Tollens, and also by Oshima.

**CALAYA** is an extract of *Anneslea febrifuga* now employed (l'Union Pharmaceutique) as a specific in various forms of fever. It is especially recommended in typhoid fever. This substance has been studied by Merck (Annales), and found to be perfectly harmless.

#### AN OLD-TIME SPATULA.

The accompanying sketch represents a silver spatula whose existence is known to date back to the year 1750, at which time it was in the possession of Dr. Thomas Haslen, great great grandfather of the present owner, Daniel Parke Custis, Ph. G., M. D., of Annapolis, Md. About the year 1815, his grandfather, Dr. Peter Custis, a graduate of the University of Pennsylvania, who had married a granddaughter of Dr. Haslen, fell heir to the spatula, and after his death, in 1843, it came into the possession of his son, Dr. Peter Barton Custis, and was in use by him until his death in 1863, while a surgeon in the Southern army during the Civil War. Dr. Daniel Parke Custis is a lineal descendant of the Honorable John Custis of Arlington, King's Councilor in Virginia, who died in 1696\*. He is a graduate of the Medical Department of the University of Louisville, Ky., and of the Philadelphia College of Pharmacy, Class 1878. Dr. Custis thinks that probably this is the OLDEST SPATULA IN USE IN THIS COUNTRY.

\*From whom were also descended Daniel Parke Custis, the first husband of Martha Dandridge, afterwards the wife of George Washington, and Mary Custis, wife of Gen. Robert E. Lee, Commander-in-Chief of the Confederate Army.

## CALCIUM OXALATE CRYSTALS IN THE STUDY OF VEGETABLE DRUGS.\*

By HENRY KRAEMER.

The value of the study of reserve starch grains in determining the origin of certain vegetable foods and drugs has been recognized for a number of years. It is, however, becoming more evident that the starch grains which we recognize as typical and say are characteristic of certain products occur in a relatively small proportion to the whole number of grains, i. e. the spherical and ellipsoidal starch grains occur in all starchy products no matter what their origin may be and the so-called characteristic grains, (as the angular grain in corn, or the excentric grain with characteristic point of growth and lamella in maranta, potato, calumba, etc.), are by no means so numerous as is commonly supposed. So that, for instance, an examination of wheat-flour<sup>†</sup> which has been admixed with say, from 5 to 10 per cent. of corn meal, reveals in a microscopical mount of a milligramme of the material but two or three typical corn starch grains; and even though the admixture is about 25 per cent. only about seven typical grains will be found.

On the other hand calcium oxalate occurs in crystals of definite form and size in a large number of drugs and in only a comparatively few instances is there a distinct variation in the type, as for instance in *Datura stramonium* L.<sup>‡</sup>

R. von Wettstein in a study of the *Umbelliferae* has shown that the presence and distribution of calcium oxalate crystals are important factors in systematic work, at least in this family, and my own studies of the *Solanaceae* also tend to confirm this view. It may also be noted that soil conditions do not seem to influence the amount of this salt, i. e. a plant growing in silicious soil will contain about the same amount as one growing in calcareous soil. I have, however, already referred to the fact that when fungi\*\* are growing on plants there is likely to be a decrease in the number of calcium oxalate crystals usually present.

Calcium oxalate occurs in plants in either the monoclinic or tetragonal system. The crystals of the monoclinic system are rather widely distributed and consist of  $\text{Ca C}_2\text{O}_4 \cdot 3\text{H}_2\text{O}$  to 6 molecules of  $\text{H}_2\text{O}$ ; while those of tetragonal system occur less frequently and the salt has the formula  $\text{Ca C}_2\text{O}_4 + 1$  to 2 molecules of water. It is rather interesting to note that while both forms of crystals may be obtained in even the same solution artificially, that in nature the one form or the other is constant for the species. Various explanations have been offered showing under what conditions the two forms of crystals arise. Hausher states that the tetragonal crystals are formed in a neutral or alkaline solution, whereas the monoclinic crystals require an acid solution for their formation. Kny believes that when there is more calcium in proportion to the oxalic acid, tetragonal crystals are formed, but when the proportions are reversed then crystals of the monoclinic system arise. The observations of Kohl tend to confirm the studies of Kny.

While calcium oxalate crystallizes in these two systems, it is highly probable that but one of these systems represented by our vegetable drugs, viz., the monoclinic system, which includes a number of forms as follows:

- (1) Rosette aggregates, or what are commonly termed rosette-shaped crystals.
- (2) Prisms, pyramids and elongated or irregular hexagonal-shaped crystals.
- (3) Crystal-fibres.
- (4) Raphides.
- (5) Cryptocrystalline crystals.
- (6) Membrane crystals.

1. Rosette Aggregates consist of numerous small prisms and pyramids or hemihedral crystals more or less regularly arranged on a central crystal and having the appearance of a rosette or star. The development of this form may be readily followed in the stem of *Datura stramonium* L. This form is more largely represented in our drugs than any other form and the following list of the pharmacopoeial drugs in which the crystals of this class are contained together with the size of the crystals:

*Althaea*, 25 microns.  
*Anisum*, 2-3 microns.  
*Belladonnae folia*, occasionally.  
*Buchu*, 15-25 microns.  
*Calendula*, 4 microns.  
*Camnabis indica*, about 20 microns.  
*Carum*, 0.5-1.0 microns.  
*Caryophyllus*, 10-15 microns.  
*Chimaphila*, 40-60 microns.  
*Conium*, 1-2 microns.  
*Coriandrum*, 3-7 microns.  
*Cusco*, about 20 microns.  
*Eriodictyon*, 20-25 microns.  
*Euthymus*, 15-20 microns.  
*Foeniculum*, 1-2 microns.  
 \* *Frangula*, 5-20 microns.  
*Geranium*, 45-70 microns.  
*Gossypii radice cortex*, about 20 microns.  
 \* *Granatum*, about 15 microns.  
*Humulus*, 10-15 microns.  
*Jalapa*, 30-35 microns.  
*Pilocarpus*, 20-30 microns.  
*Pimenta*, 10 microns, occasionally 25 microns.  
*Prunus Virginiana*, 20-30 microns.  
*Quercus alba*, 10-20 microns.  
 \* *Rhamnus purshiana*, 5-20 microns.  
*Rhizum*, 50-100 microns.  
*Rubus*, 25-30 microns.  
*Stillingia*, about 35 microns.  
*Viburnum Opulus*, occasionally.  
*Viburnum prunifolium*, 15-35 microns.

2. Monoclinic Prisms and Pyramids.—Next to the rosette aggregates the prisms and pyramids occur in the greatest number of pharmacopoeial drugs. These frequently are so modified in form that they are of an elongated or irregular hexagonal shape. The crystals of this group are sometimes mistaken for silicon<sup>‡</sup>. Owing to the fact that the lumen of the cell in some instances is completely filled by the crystal and the inner wall having the contour of the crystal, it is impossible by simply using hydrochloric acid to determine whether the crystal has been dissolved or not. This group of crystals is found in the following drugs and in the sizes given:

*Calumba*, about 15 microns in stem cells.  
*Cardamomum*, 10-20 microns.  
*Coca*, 3-10 microns.  
*Eucalyptus*, 15-25 microns.  
*Frangula*, 5-20 microns.  
*Gelsemium*, 15-20 microns.  
 \* *Granatum*, about 15 microns.  
*Hamamelis*, 7-20 microns.  
*Hioscyamus*, about 10 microns, single or in twin crystals.  
 \* *Krameria*, about 100 microns.  
 \* *Pimenta*, occasionally.  
 † *Prunus Virginiana*, 5-30 microns.  
 † *Quassia*, about 25 microns.  
 \* *Quercus alba*, 10-20 microns.  
*Quillaja*, 35-250 microns.  
*Rhamnus purshiana*, 5-20 microns.  
*Sassa*, 10-20 microns.  
*Uva Ursi*, 7-10 microns.  
*Vanilla*, 7-55 microns.  
 \* *Viburnum opulus*, 15-30 microns.  
 \* *Viburnum prunifolium*, occasionally.  
*Xanthoxylum*, 10-25 microns.

3. Crystal Fibres.—In quite a number of the present single monoclinic prism occurs in each of the parenchyma cells, adjoining the sclerenchyma fibres, and to this single longitudinal row of superimposed cells the name crystal fiber has been applied. They occur in the following drugs, the size of the individual crystals also being given:

*Calamus*, about 15 microns.  
*Frangula*, 5-20 microns.  
*Glycyrrhiza*, 15-20 microns.  
*Hamamelis*, 7-20 microns.  
*Haematoxylum*, 10-15 microns.

\* In these drugs prisms and pyramids in group No. 2 also occur.

‡ Silicon never occurs as a cell content in sharp angular crystals, but it occurs either in more or less elliptical or irregular hollow masses or in more or less solid irregularly branching masses.

\* Rosette aggregates are also present in these drugs.  
 † Cryptocrystalline crystals also occur.

\* Presented at the St. Louis meeting of the American Pharmaceutical Association, September, 1901.

† *Kraemer, Jour. Am. Chem. Soc.*, 1899, p. 650.

‡ *Kraemer in Proc. A. A. S.*, 1890, p. 305.

\*\* *Kraemer in Proc. A. Ph. A.*, 1898, p. 297.

*Prunus Virginiana*, 20-30 microns.  
*Quercus alba*, 10-20 microns.  
 Quillaja, about 35 microns.  
*Ichamnus purshiana*, 5-20 microns.  
*Santalus tuberosus*, 7-15 microns.  
*Ulmus*, 10-25 microns.  
*Uva Ursi*, 7-10 microns.

4. Raphides was the name given by A. de Candolle (1826) to the groups of needle-shaped crystals found in various plants. These have been mistaken by several observers for calcium phosphate.† Usually the cells containing raphides are long, thin-walled and contain sooner or later a musilage,‡ which arises from the cell sap and behaves with reagents much like cherry-gum. The cells are either isolated or occur in groups placed end to end, as in *Veratrum viride*, forming Hanstein's "Raphidenföhrenden Schlauchgefäße." Raphides are found in the following drugs, and the length given with each:

\* *Belladonnae folia*, occasionally.  
*Cimamomum*, about 5 microns.  
*Convallaria*, about 45 microns.  
*Cypripedium*, about 40 microns.  
*Ipecacuanha*, 20-40 microns.  
 \* *Phytoacæe radix*, about 30 microns.  
*Sarsaparilla*, 6-8 microns.  
*Sella*, 0.1 to 1.0 mm.  
*Vanilla*, about 400 microns.  
*Veratrum viride*, about 45 microns.

5. Cryptocrystalline crystals of calcium oxalate are exceedingly small (about  $\frac{1}{2}$  to 10 microns in diameter) deltoid or arrow-shaped, and are so numerous as to entirely fill the parenchyma cells in which they occur, giving the cells a grayish-black appearance and readily distinguishing them from other plant cells. Vesque supposed that they were tetrahedrons and termed them "Sable Tetraedrique." My own investigations tend rather to the opinion that they are in the nature of hemihedral forms of monoclinic crystals. This view is strengthened by the fact that monoclinic prisms occur in neighboring cells in the same plant as in *Datura stramonium* L., *Quassia*, etc. Cryptocrystalline crystals are found in the following drugs:

*Belladonnae folia*.  
*Belladonnae radix*.  
*Cinchona*.  
*Phytoacæe radix*.  
*Quassia*.

6. Membrane Crystals.—There are several forms of crystals which may be included in this group. The so-called Rosanoff crystals\*\* consist of rosette aggregates attached to inward protruding walls of the plant cell. These, however, do not concern us so much as the large monoclinic crystals which have a membrane (called by Payen "tissu special") surrounding them. The crystal first appears in the cell-sap and then, in the protoplasm around the crystal, numerous oil globules appear; later some of the walls of the cell thicken and grow around the crystal, which they finally completely envelop. Crystals of this character and of the sizes given, are found in the following drugs:

*Aurantii amari cortex*, 15-20 microns.  
*Aurantii dulcis cortex*, 20-30 microns.

#### Carbohydrate Crystals.

While calcium oxalate crystals have been mistaken for crystalline sugars, it should also be pointed out that some of the more or less soluble carbohydrates, as hesperidin and inulin, may be mistaken for calcium oxalate. They occur in either sphere-crystals or irregularly spherical aggregates which are more or less easily soluble in water. They are found in *buchu*, *hedecoma*, *inula*, *lappa*, *pyrethrum*, *taraxacum* and *tritium*.

#### Drugs With Little or No Calcium Oxalate.

In the following drugs calcium oxalate crystals are either wanting entirely or so few as to be without any diagnostic value: *Aconitum*, *apocynum*, *arnice flores*, *capsicum*, *chirata*, *cimiciifuga*, *colchici cormis*, *colchici semen*, *colocynthus*, *cubeba*, *digitalis*, *eupatorium*, *gentiana*, *grindelia*, *hydrastis*, *lappa*, *leptandra*, *linum*, *lobelia*, *marubium*, *mentha piperita*, *men-*

*the viridis*, *mezerium*, *myristica*, *nux vomica*, *pareira*, *physostigma*, *piper*, *podophyllum*, *rius glabra*, *rosa gallica*, *sabina*, *sanguinaria*, *cantonica*, *sassafras*, *senega*, *serpentaria*, *sinapis alba*, *sinapis nigra*, *spigelia staphisagria*, *strophanthus*, *sumbul*, *valerian* and *zinziber*.

#### Conclusions.

The value of the study of the characteristic form, or absence of calcium oxalate crystals, is at once apparent when we consider the ease with which one can distinguish without question the Solanaceous leaves, horny belladonna root from inula, the genuine cinnamonos, strophanthus seeds, and other drugs from those that are spurious; also true spigelia from an adulterant which contains calcium carbonate. Examples requiring verification of this kind are continually coming up in not only the determination of powdered drugs, but crude drugs as well.

## PHARMACY AS A CALLING.\*

By DR. ARTHUR P. LUFF.

Pharmacy is a many-sided calling, and therein undoubtedly lies one of its chief attractions. The scientific part of the work of an educated pharmacist does not consist solely in the dispensing of prescriptions, important as that branch of his calling undoubtedly is. We hold him to be the responsible person for the preparation of drugs in suitable forms, and for the standardisation of those preparations, while the public have to look to him not only as providing means for the restoration of their health, but also have to rely upon him for the safety of their lives. It is but a pessimistic and ignorant view to take that no great amount of skill or of scientific training is required to put together the ingredients of a prescription. Such a view does not recognize, and perhaps the public do not adequately appreciate, the great safeguard to them that the educated pharmacist is. It is no very uncommon matter for the medical man, when hurriedly writing a prescription, to make such a mistake in the dose of an important ingredient that disastrous results to the patient would follow the taking of the medicine if so dispensed; but now, happily, through the far-sighted wisdom, primarily of this Society and subsequently of the Legislature, the public safety is efficiently provided for. The pharmacist detects the error in the prescription, and communicates with the medical man. The public are unaware of the means by which their health, and possibly their lives, have been protected, but how many of my professional brethren to have to gratefully and thankfully acknowledge the tact, courtesy and delicacy with which their attention is drawn to their mistakes by their pharmaceutical confreres? Again, it is no very uncommon matter for a prescription to contain such incompatible ingredients that perhaps the active, and, maybe, poisonous principle of the medicine is wholly precipitated, and so might possibly be entirely disastrous to the patient; but here again the skilled pharmacist acts as a guardian of the public safety by detecting and pointing out the error that has been committed.

#### Compressed Drugs.

But, unfortunately, both medical men and the public are tending to heavily handicap the pharmacist in that important function, and are in great part rendering him impotent to safeguard the public health. For there is a growing practice which is rapidly threatening to undermine to a great extent what I consider to be the skilled and rational employment of therapeutic agents in the treatment of disease. I refer to the too general use of powerful drugs in compressed forms and of proprietary preparations. I do not for one moment wish to suggest that various forms of compressed drugs have not their proper uses; undoubtedly tablets of certain active principles in the hands of medical men are most convenient and useful for hypodermic and occasionally for other forms of

† Calcium phosphate is apparently seldom found in plants except either in solution or in combination with protein substance.

\* *Kraemer in Am. Jour. Pharm.*, 1898, 285.

† *Cryptocrystalline crystals also occur.*

\*\* *Rosanoff, in Bot. Zeit.*, 1865, p. 329.

\* *Portion of Inaugural address delivered at the opening of the 60th session of the School of the Pharmaceutical Society of Great Britain.*

administration; but it is the ready facility with which powerful drugs prepared in this form are obtained by the public which constitutes so grave a danger, a facility which is responsible to a great extent for the increasing practice of self-drugging—a state of affairs which I am afraid has been brought about by these preparations being so indiscriminately and so largely prescribed by medical men. To take but one instance, it is to the ease with which such preparations can be purchased by the public that, in my opinion, is due in great measure the prevalence of the comparatively modern and excessively pernicious evil—the cocaine habit. Equally bad is the use of some of the proprietary preparations which are so speciously puffed; with the samples of laudatory advertisements of which the members of my profession are so profusely deluged, tempting them, as they do, to the slovenly and enervating habit of thinking that the writing of an order for such a preparation is the writing of a prescription, and gradually rendering them absolutely impotent to exercise the true art of prescribing. Many of these preparations are, I believe, productive of infinitely more harm than the quack medicines which, to some extent, they are replacing, for the former are frequently powerful and, in unskilled hands, dangerous drugs, whilst the latter, though generally worthless, are to a great extent innocuous.

The fact is that the art of prescribing, that is, of ordering suitable remedies in suitable forms for the treatment of morbid conditions, is declining; it shows a fatal tendency to be usurped by the manufacturer. I am bound to confess that the primary cause of this evil is due, not to any imperfections in the training of pharmacists to scientifically compound and dispense medicines, but to the altogether inadequate attention which is given to the teaching of prescribing at so many of our large hospitals and medical schools. I merely refer to this phase of the subject here, as I intend shortly to deal with it in another place, and before those who are more closely interested in the preservation of this important branch of a pharmacist's duties. What a travesty on the art of prescribing it is for a patient to bring to a pharmacist a so-called prescription which merely orders, say No. 4 Mixture (Smith and Jones)! Can anything be more degrading than to compel a scientifically-trained pharmacist to be the mere medium for the handing over of such a proprietary article? It appears to me that such so-called prescribing is nearly on a par with the dosing that is carried out on those ships which carry a medicine chest but have no surgeon on board. The bottles of medicine in the chest are duly numbered, and with them is a book describing the symptoms which require a dose of such and such a numbered mixture. Many of you may remember the tale of the ship's steward who went to the captain stating that a sailor had some symptoms which, according to the book required a dose of No. 0 mixture, but that No. 9 bottle was empty. "That does not matter," said the captain, who in the emergency almost rose to the level of a modern prescriber, "give him equal parts of No. 4 and No. 5."

In connection with my special department of practice as a physician, I am brought in contact with only too many cases of self-drugging by the public, and only too frequently witness the evils arising therefrom. Especially does one see this in connection with the worship of that absurd fetish, the uric acid diathesis, and the consequent pandering to this modern craze by the unscrupulous vaunters of the many puffed remedies which are warranted to sweep away what is but a natural constituent of the human body. That absurd craze is fostered if not frequently originated, by the specious advertisements of drugs warranted to cure ills ignorantly, if not falsely, attributed to uric acid. The consequence is that it is now no uncommon sight at a dinner party to see neurotic young men dropping their lithia tablet into a glass of champagne to counteract what they imagine to be its acidity, lacking as they do in both the gastric vigour to deal with the wine, and the moral vigour to abstain

from it. I venture to sound a note of warning, which I trust may reach beyond these walls to the ear of the public, as to the danger incurred in dosing themselves with these powerful drugs in tablet form—a danger which is in no sense an imaginary one, since we too often see the pernicious effects resulting from their indiscriminate use, sometimes, alas, when it is too late to remedy the evil results.

#### Counsel to Students.

An now, gentlemen, turning to a more congenial part of my task, let me address a few words of welcome, counsel, and encouragement to those of you who are now entering upon your studies in this school. I address you not only as one who claims and endeavors to be a student still, not only as one who has travelled over the road you are now about to take, but also as one who from a lengthened experience as a teacher and examiner is well acquainted with the difficulties that you have to overcome, and with the consequent necessity for the courage and application that is required to surmount those difficulties.

The curriculum of study and work which you have to pursue here has been mapped out for you with much forethought and care, and it is one that well comprises what is necessary for your training and future success. Bearing in mind how the time for the acquisition of knowledge is limited by our "span-long lives," we must necessarily be careful to employ that time to the best advantage, or, to use an expression of Bacon's, "we must determine the relative value of knowledges." That, I claim, is well done for you in the curriculum of the work that has been drawn up for your guidance, and which you will have to faithfully follow here. Remember always that it is only patient, hard work that can fit you for the discharge of life's duty, by such only can you hope to attain success in your profession. Do not think to ever attain it by a simple happy accident, by some stroke of luck. Believe not in luck, in chance. Those who ascribe the rise of an individual to luck do not think of or recognise the years of toil and self-denial, the struggles and self-conquests that have preceded the attainment of his present position. We should all endeavor to recognise clearly how greatly is the power which man may exert over his own destiny, the power as to whether out of himself he can raise a noble, intellectual edifice, or reduce himself to a moral and physical ruin. Do not delude yourselves, as so many do, by saying: Circumstances have not favored me, luck has not befallen me. Nothing of the kind!

"Man is his own star; and the soul that can

Render an honest and a perfect man

Commands all light, all influence, all fate;

Nothing to him falls early or too late.

Our acts our angels are, or good or ill,"

Our fatal shadows that walk by us still."

There are but three classes of men—the retrograde, the stationary, and the progressive. To which of these will you belong? It is no use thinking that during the early months of your study here you can take it easy and enjoy yourselves, and that you will make it up later on. You never will make it up later on. I would, therefore, impress upon you, at the outset, the value of a proper method of disposing of both time and energy, and advise each one of you to adopt some method or plan in your work. Commit to writing a time-table for your daily duties, both here and at home, and rigidly adhere to that time-table. Let your reading time for each evening be arranged so as to rightly apportion your hours of work to the different tasks and subjects. You will not only by such method get through more work than you otherwise would, but your knowledge, if thus systematically acquired, will be more accessible to you when required for use. As a finish to the daily work, there is a very useful rule recommended by Pythagoras—to review, every night before going to sleep, what we have done during the day. This daily settling of the debit and credit account will give you a clear idea of how you stand. But do not devote all the time given to study to the mere learning and ingestion of facts; some part of the time should be devoted to the careful consider-

ation of them—to the processes of mental digestion. The acquisition of knowledge is not everything; what is more important is the digestion and organization of knowledge, so as to adapt it to the practical uses of life, and for this digestion and organization time and spontaneous thinking are required.

Side by side with the acquisition of facts should go the cultivation of the power of observation. I cannot too strongly impress upon you the importance of observing for yourselves, and you will have manifold opportunities of doing so, if you will only avail yourselves of them. The accumulation of the occurrences that you observe will constitute your experience, and from such experience, aided by your reasoning faculties will issue your actions. The more you observe, the more enjoyable will life, in the fullest sense of the term, become. But, in connection with your studies, you will necessarily find the acquisition of many of the details wearisome, and you may be tempted to regard some of those details as useless and trifling. It is not so.

"Think nothing trifling, tho' it small appears;  
Sands make the mountains, moments make the years,  
And trifles—life."

Let me remind you that the display of interest in your work, and the energetic discharge of your duties, constitute a great encouragement to your teachers, and furnish a direct stimulus to them in their work of instruction. Nothing is more discouraging and depressing to a teacher than to see a student sitting in the lecture-theater or class-room looking bored and uninterested, taking no notes—perhaps, not even possessing a note-book. It requires no great gift of prophecy to foretell that man's future—there is written upon his brow, Ichabod!—there is in store for him failure in his examinations, failure in life. Bear in mind, therefore, that amongst the influences at work in a school like this, the influence for good or ill, is not only from the teacher to the student, but that your lives affect and react on your teachers. We are, after all, only students together, the older ones helping the younger ones, the younger ones encouraging, by their enthusiasm and earnestness, the older ones. "It is by teaching that we teach ourselves, by relating what we observe, by affirming that we examine, by showing that we look."

**PLANT ALBUMEN.**—The globulins of the seeds of Leguminosae are found by K. Weiss (Bot. Centralblatt) to be indefinite mixtures of proteids which are very similar in character. These bodies are members of a homologous series passing into heteroalbumose at one end, and albumen at the other. According to this investigator, the inorganic bases play an important part in the albuminoid processes of plants. Vegetable globulins and albumens are compounds of inorganic bases and acid albumens; when the base is removed these bodies form casein. The phosphorus, which always accompanies albumen, is present as a constituent of lecithin and nuclein. A number of agencies cause globulin to break up into albuminates containing phosphorus, or into casein and hetero-albumose.

**ALKALOIDS AND VEGETABLE PROCESSES.**—The influence of alkaloids upon plant respiration has been studied by N. Morkowine (Bonnier's Rev. Gen. et Bot.). Under the influence of alkaloids the rate of oxidation in *Vicia faba* was increased, the evolution of carbon dioxide being increased, but the decomposition of oxidized compounds was not accelerated. The salt most poisonous to the vegetable cell was found to be quinine hydrochlorate. In the following series the names of the various alkaloids are arranged in the order of their toxicity to plant cells:—Quinine, cinchonine, caffeine, morphine, cocaine, strychnine, atropine, antipyrine, brucine, codeine, pilocarpine.

## QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

### Toilet Jelly.

(P. D. L.) "Toilet jelly" is quite an elastic term and may be held to include any number of preparations having a jelly-like consistence and used for toilet purposes. Here are two formulas for

### Jelly of Roses.

- |                          |                |
|--------------------------|----------------|
| (1) Thin French gelatine | .....4 drams   |
| Water                    | .....5 ounces  |
| Glycerine of borax       | .....10 ounces |
| Triple rose water        | .....6 ounces  |

Soak the gelatin in the water over night and then heat on a water bath until dissolved. Add the glycerine and the rose water, previously mixed with a dram of albumen (white of egg). Heat until the albumen coagulates, and filter while hot through a cotton bag.

- |                  |                |
|------------------|----------------|
| (2) Gelatine     | .....1 ounce   |
| Water            | .....24 ounces |
| Glycerine        | .....12 ounces |
| Otto of rose     | .....10 minims |
| Thymol           | .....2 grains  |
| Rectified spirit | .....1 dram    |

Prepare as above.

### Jelly of Violets.

- |                        |                  |
|------------------------|------------------|
| Glycerine              | .....1 fl. ounce |
| Corn starch            | .....1 dram      |
| Water                  | .....12 ounces   |
| Extract violet, triple | .....1½ drams    |
|                        | .....Q. S.       |

Mix the starch, glycerine and water, bring to the boiling point; when cold add the perfume and color, if desired, with solution of red aniline or cochineal.

A transparent jelly of a pale amber color, which may be perfumed by the addition of extract of violet or other odor, may be prepared as follows (Era. Formulary): Take 1 ounce of transparent soap, dissolve in 4 ounces of water and 4 ounces of glycerine by the aid of heat. While still warm, add 20 ounces glycerine, and when nearly cold, perfume and pour into glass jars.

### Tincture of Colocynth.

(Tincture.) Tincture of colocynth is official in the Pharmacopoea Germanica. It is made by macerating for eight days one part of colocynth fruit, with the seeds, with 10 parts of alcohol (sp. gr. 0.832), expressing, and filtering. It is of a yellowish color, very bitter, and becomes opalescent upon the addition of water. The largest single dose is placed at 1.0 gram.

Hagar (Manual) gives the following formula for

### Tincture of Colocynth Seed.

(Radermacher).

- |                                                                        |               |
|------------------------------------------------------------------------|---------------|
| Colocynth seed                                                         | .....5 parts  |
| Wash with water, dry and reduce to coarse powder; add Rectified spirit | .....24 parts |

Allow to stand (macerate) four days, frequently shaking. Then express and filter, adding enough alcohol to make the tincture up to 22 parts.

The American Homeopathic Pharmacopoeia gives this formula: The dried fruit, freed from the outer yellow rind and seeds, is reduced to a coarse powder and weighed. Then five parts by weight of alcohol are poured upon it, and having been put into a well stoppered bottle, the mixture is allowed to remain eight days in a dark cool place, being shaken twice a day. The tincture is then poured off, strained and filtered. The "drug power" of this tincture is said

to be "i-to," from which "dilutions" may be prepared as directed by the pharmacopœia. The United States Pharmacopœia does not contain a formula for this tincture.

#### Emulsion Liniment (Petroleum.)

(S. H.) We know of no particular liniment under this title. An Eclectic formula containing petroleum is the following:

|                         |            |
|-------------------------|------------|
| Crude petroleum .....   | 12 ounces  |
| Ammonia water .....     | 2 ounces   |
| Tincture of opium ..... | 2 ounces   |
| Camphor .....           | 120 grains |

It is also probable that the ordinary Kerosene Emulsion employed as an insecticide may also be used as an embrocation for veterinary purposes. Here is a formula:

|                 |          |
|-----------------|----------|
| Soft soap ..... | 2 quarts |
| Kerosene .....  | 1 quart  |
| Water .....     | 1 gallon |

Boil the soap with the water until all is dissolved; remove from the fire, add the kerosene, and churn vigorously for 10 minutes to emulsify the oil, then dilute with an equal bulk of water. Other substances may be incorporated if desired.

#### Petroleum Liniment.

|                         |           |
|-------------------------|-----------|
| Camphor .....           | 1 ounce   |
| Oil of amber .....      | 1 ounce   |
| Oil of origanum .....   | 2 ounces  |
| Crude petroleum .....   | 4 ounces  |
| Kerosene oil .....      | 10 ounces |
| Oil of turpentine ..... | 16 ounces |

#### Camphorated Phenol.

(J. J. W.) We cannot give the formula for the proprietary article, neither can we pass an intelligent opinion upon a preparation whose definite composition is not made known. However, under the above title Hager gives this formula:

|                              |           |
|------------------------------|-----------|
| Powdered camphor .....       | 100 parts |
| Carbolic acid crystals ..... | 36 parts  |
| Alcohol .....                | 4 parts   |

Triturate together until an oily liquid results, or mix in a bottle and agitate frequently until solution occurs.

Balina recommends a combination of phenol with camphor under the name of "camphorated phenol," asserting that the camphor moderates the caustic and disorganizing action of the phenol without destroying its useful effects. He prepares it (U. S. Dispensatory, 18th edition, page 41) by mixing one part of carbolic acid with two parts of camphor, allowing the mixture to stand some hours, and purifying by washing with water. The liquid so prepared is of reddish-yellow color, having the smell of camphor, insoluble in water, and soluble in alcohol and water.

#### Licorice Lozenges.

(D. E.) Try one of the following:

|                              |           |
|------------------------------|-----------|
| 1) Extract of licorice ..... | 1 ounce   |
| Starch .....                 | 1/2 ounce |
| Orris root .....             | 1/2 ounce |
| Saffron .....                | 1/2 ounce |
| White sugar .....            | 1 pound   |

Mix, and form into lozenges.

|                           |          |
|---------------------------|----------|
| 2) Extract licorice ..... | 1 pound  |
| Gum arabic .....          | 2 pounds |

Dissolve the extract in warm water strain, and in the solution dissolve the gum arabic. Place over a gentle fire, in a broad pan, and let boil gradually, stirring continually until reduced to a paste. Roll into pipes or cylinders of convenient lengths, and polish by putting into a box and rolling together, or cut into lozenges of the desired size.

(3.) Black licorice Troches.

|                                                |           |
|------------------------------------------------|-----------|
| Orris root .....                               | 2 grams   |
| Star anise .....                               | 5 grams   |
| Extract of licorice .....                      | 140 grams |
| Sugar .....                                    | 140 grams |
| Pulverize, and mix with mucilage acacia, q. s. |           |
| Form into troches weighing .....               | 0.5 gram  |

#### Preparation of Haemoglobin.

(A. N. K.) We reprint the following process from a previous volume of the Era: Mix with defibrinated blood its own volume of alcohol. Set aside

at 0° C. for twenty-four hours. Collect the haemoglobin and dry over sulphuric acid. This provides crystals. To obtain it in the amorphous state precipitate the red corpuscles from the defibrinated blood by adding a saturated solution of salt. Collect the precipitate, wash with dilute salt solution, then shake the precipitate with three times its own weight of ether. The latter dissolves fat, etc., the former the haemoglobin. Separate the two solutions and precipitate the aqueous one with lead subacetate, wash with alcohol, suspend in water and decompose with a stream of carbonic acid gas. Filter and evaporate the solution at 40° Cent., and scale.

#### Books for Chiropodists.

(A. M. L.) There are no standard text-books devoted wholly to this subject. However, you can pick up a good deal of information in works on the practice of medicine especially that part of practice relating to the treatment of diseases of the feet, etc. Shoemaker's "Heredity, Health and Personal Beauty" may be profitably consulted.

#### Elixir of Acetanilid Compound.

(R. G. B.) Try the following:

|                                     |            |
|-------------------------------------|------------|
| Acetanilid .....                    | 256 grains |
| Salol .....                         | 256 grains |
| Caffeine .....                      | 64 grains  |
| Sodium salicylate .....             | 256 grains |
| Tincture cardamom. compound .....   | 4 ounces   |
| Alcohol .....                       | 4 ounces   |
| Elixir orange, enough to make ..... | 16 ounces  |

THE RESISTANCE OF PLANT CELLS TO COLD.—The power of resisting intense cold shown by plant is by M. D'Arsonval (Comptes rendus) attributed to the high osmotic pressure within the cells, which prevents the liquid contents from freezing. The pressure in the cells of certain mould-fungi has been shown under certain conditions to be more than 167 atmospheres. The author suggests that in micro-organisms it may amount to thousands of atmospheres. According to this investigator, beer-yeast, the pyocyanic bacillus, and many pathogenic microbes can retain their vitality after having been subjected to the temperature of liquid air for several weeks.

ANTITUSSINE AND FLUOREPIDERMINE two preparations employed in the treatment of diseases of the skin, have been studied by Merck (Annales). Antitussine is a pomade composed of five parts of difluoridiphenyl, ten parts of vaseline and eighty-five parts of lanolin. This preparation is reported by various authorities to be of doubtful value and even dangerous. Fluorepidermine on the contrary seems to have been used with great success. The active principal of this pomade is fluorpseudocumol, which is now used instead of the fluorxylool formerly employed in its preparation.

CHINESE YEAST.—In a study of the organisms active in the fermentation of the Chinese yeast used in Java in making "ragi", C. Wehmer and T. Cirzavez (Centr. Bakt.) find that the principal agents of saccharization are *Rhizopus oryzae*, *Chlamydomucor oryzae* and *Mucor rouxii*. The last named species also produces active fermentation while the others do not. A new technical fungus known as *Mucor cambodja* was found in Javanese rice-meal-cake. It is a well marked species possessing fermenting properties.

AUCUBA JAPONICA SEEDS have been found by Champenois (Jour. Pharm. Chim.) to contain a large proportion of cane sugar. The seeds also contain  $\beta$ -galactan, a mannan, and a pentan; these substances, when treated with dilute mineral acids, yield, respectively, galactose, mannose and a pentose, which is probably identical with arabinose.

# NEWS DEPARTMENT.

## STATE BOARD OF PHARMACY MEETS.

### Amendments to By-Laws and Changes in Rules Recommended.

The New York State Board of Pharmacy held its regular quarterly meeting at the College of Pharmacy, No. 115 West 68th street, Monday and Tuesday, Oct. 28 and 29. The first session opened at 10 a. m. Monday, president Robert K. Smith in the chair. In his opening address the president spoke in feeling terms of the loss to the Board by the death of the late member from Plattsburg, J. Clithrow Smith, and referred to the interest he had taken in all matters relating to pharmacy.

Secretary Sidney Faber read the minutes of the last meeting held at Buffalo, June 3-4-5 and 7, which were approved. Several communications that had been received by the secretary were then brought before the Board. The first was a letter from President Thomas Stoddart of the State Pharmaceutical Association recommending that a conference of the legislative committees of the several local associations in New York City and of the State association, with a committee from the State Board be called Nov. 12, the conference to be for the purpose of considering proposed legislation relating to the manner of electing members of the Eastern branch of the board. The president appointed Messrs. Bigelow, Sears and Palmer a committee of three to meet and consider questions of legislation likely to be brought up for enactment at the next session of the legislature, and to report the result of their findings to the Board before the sessions closed.

Letters were read from Schieffelin & Co., Lehn & Fink and Chas. Pfizer & Co., referring to adulterations of drugs, chemicals, etc., as sold by general dealers. The writers asked the board to assist in proper legislation. The matter was referred to the committee on adulterations. A communication from Denny & Field, Buffalo, relating to some tincture of nuxvomica which had been obtained from them by the board and found to be under the required strength, was referred to the committee on adulterations. President Smith read a letter from Senator H. W. Hill thanking the board for his gift of a gold watch, in recognition of the good work done by him for pharmacy, and for assistance rendered in passing the All State Pharmacy Bill.

The president appointed Warren L. Bradt, of Albany, to take the place of the deceased member on all committees. The question of the standard to be required as a pre-requisite for registration was left to the committee on registration to act on before Jan. 1, 1902.

The report of the secretary showed examinations and results as follows:

| Date.          | Place. | Present. | —Passed—       |              |
|----------------|--------|----------|----------------|--------------|
|                |        |          | Pharm- acists. | Drugs- ists. |
| Jan.—New York  | 13     | 1        | 0              | 0            |
| Buffalo        | 6      | 1        | 0              | 0            |
| Feb.—New York  | 22     | 5        | 0              | 0            |
| Buffalo        | 15     | 1        | 1              | 1            |
| Albany         | 30     | 3        | 4              | 4            |
| Rochester      | 16     | 2        | 2              | 2            |
| March—New York | 26     | 7        | 0              | 0            |
| Buffalo        | 12     | 10       | 0              | 0            |
| April—New York | 94     | 41       | 1              | 1            |
| Buffalo        | 14     | 4        | 2              | 2            |
| Albany         | 26     | 4        | 0              | 0            |
| Rochester      | 11     | 3        | 1              | 1            |
| May—New York   | 59     | 20       | 0              | 0            |
| Buffalo        | 20     | 8        | 4              | 4            |
| June—New York  | 102    | 48       | 1              | 1            |
| Buffalo        | 12     | 0        | 1              | 1            |
| Albany         | 29     | 10       | 4              | 4            |
| Rochester      | 19     | 2        | 2              | 2            |
| Sept.—New York | 52     | 23       | 0              | 0            |

|               |    |    |   |
|---------------|----|----|---|
| Buffalo       | 15 | 2  | 4 |
| Albany        | 8  | 2  | 0 |
| Rochester     | 7  | 2  | 2 |
| Oct.—New York | 34 | 15 | 0 |
| Buffalo       | 4  | 1  | 1 |

A total of 646 applicants were examined, of which 298 were rejected.

The statement of receipts and expenses of the general State board, and of the three branches was received and referred to the finance committee.

Charles B. Sears, Albert H. Brundage and Willis G. Gregory, appointed by the president to draft resolutions on the death of J. C. Smith, brought in the following, which was adopted and ordered to be spread upon the minutes and also to be engrossed in book form and a copy sent to the daughters of the deceased member:

WHEREAS, in His inscrutable but infinite wisdom the Great Ruler of the Universe has seen fit to remove from our midst our beloved fellow member, J. Clithrow Smith of Plattsburg; and

Whereas, his long connection with pharmacy, and especially with the administration of pharmaceutical enactments in the state of New York, distinguishes him and his services; and

Whereas, the very intimate, esteemed and pleasant relations he sustained with each and every member of this board, make it fitting that we record our appreciation of him; therefore

Resolved, that the qualities and service which won our esteem, and contributed to the dignity, integrity and efficiency of this board, will ever be held in grateful and cherished remembrance by its members.

Resolved, that his sudden removal from our board in which he was ever active, and from the field of pharmacy in which he so long labored leaves a void and casts a shadow that will be widely recognized and greatly felt.

Resolved, that deploring the loss, we most feelingly declare our deep sympathy with his grievously afflicted daughters and other sorrowing relatives and friends.

The meeting then adjourned till 1.15 P. M.

The first business brought before the second sitting was by Secretary Faber, who put several important questions before the board for action. The first one was in regard to stamping qualification certificates granted in New York City and Kings County. After much discussion it was decided that all certificates be uniformly stamped on the back. The question, "Is a certificate of registration necessary in addition to a certificate of qualification before a person can practice pharmacy in New York City?" was decided in the affirmative. It was decided that all applications for licenses should be sworn to. A question as to the standard of education required for registered apprentices was received, and a motion of

Dr. Brundage, it was decided that all applicants be required to give satisfactory evidence that they have received education equivalent to the next highest grade of the New York State grammar schools. Much discussion was held on the question of fees for examination and it was finally decided that two examinations will be permitted for a fee.

The board resolved that no examination for license or registration will be permitted until the Branch to which application has been made shall be satisfied of the accuracy and truthfulness of statements made concerning the practical experience of the applicant.

The question of what was considered by the board to be "temporary absence," was the subject of a lengthy discussion, bringing forth a diversity of opinions. It was finally decided that the phrase would be construed to permit a licensed pharmacist in charge of a store to leave the store in charge of a licensed assistant or a druggist, occasionally, for a period not to exceed 12 hours but that he is expected to report at said store some time during the business hours of every day.

Several letters from pharmacists living in sections where permits have been granted under the Costello Law were read and considered. The pharmacists in question objected to permits being sent out promiscuously without each case being investigated. It was resolved that all permits under the Costello Law shall be made to run

JUDSON B. TODD, ITHACA, N. Y.  
Member of New York Board of Pharmacy.

from January to January, and that in each case where a permit is applied for at a location within five miles of a registered pharmacy or drug store, the pharmacist in that district shall be consulted by the secretary of the Branch as to the necessity of issuing the permit and making inquiry of the experience had by the applicant. It was further resolved that only one permit could be issued for any one village or place. On motion of Mr. Bigelow it was decided that the credit of 75 per cent attained in any three subjects apply only to the first examination under any application. Here the board adjourned till 10 A. M. Tuesday.

On Tuesday morning Mr. Muir reported, as chairman of the committee on registration, that his committee had drawn up a new form of application for store registration, which was submitted to the board and will be acted on at the first meeting in 1902. The committee on inspection, violations and prosecutions reported on work done in each section. This and the report of the committee on adulterations were received and placed on file. Dr. Diekmann of the latter committee supplemented the report, stating that 404 samples had been collected in the Eastern Section and analyzed. A noteworthy fact was that 28 samples of cream tartar purchased in grocery stores had been found adulterated. Some contained absolutely no cream tartar, being merely a mixture of alum with phosphate and sulphate of calcium. The poorest samples purchased in a pharmacy contained 91 per cent of cream tartar. The president suggested that the results of these analyses be made public in order to call the attention of people to the difference in goods purchased in drug stores and groceries. William Muir, as chairman of the special committee appointed in June to arrange for the publication of extracts from the by-laws, rules and regulations in the annual proceedings of the State association, reported that the work had been completed and recommended that \$150 be appropriated to pay for the cost of publication. The amount was voted on and passed by the board.

The fourth sitting was held Tuesday afternoon when the board went into executive session. Mr. Bigelow reported on behalf of the special committee appointed to consider the matter of legislation affecting the election of members of the eastern branch. The committee recommended leaving the matter entirely in the hands of the local associations in conjunction with the legislative

committee of the State association. Dr. Gregory reporting for the committee on adulterations and substitution said it was considered advisable at present to extend the jurisdiction of the board over the sale of articles in the accepted list by general dealers. On a motion of Dr. Brundage it was decided that in future, examinations in toxicology and posology will include chemical recognition of common poisonous substances. The finance committee handed in its reports, which were adopted. President Smith announced the appointment of Judson B. Todd of Ithaca, to fill the vacancy in the middle branch caused by the death of Mr. Smith. In making the appointment Mr. Smith referred to the good work done by Mr. Todd as secretary of the State association and of his thorough knowledge of pharmacy and the prominent part he had always taken in movements to raise the standard of pharmacy. Before adjourning it was decided that the next meeting of the board be held in the Ten Eyck Hotel at Albany, Monday, Jan. 6, 1902.

#### LEGAL STATUS OF THE WORCESTER PLAN.

We present below the full text of the decision of the Massachusetts Supreme Court in the case of Julius Garst against Hall & Lyon of Worcester, referred to in last week's Era.

Knowlton, J. This case is reserved on the bill, demurrer, answer and agreed facts, the defendant's rights under the demurrer not being waived.

The plaintiff is the owner and manufacturer of a proprietary medicine known as Pheno-Caffin, which is made from a secret formula. His trade mark for said medicine is registered in the patent office of the United States and in the office of the Secretary of the Commonwealth of Massachusetts. The defendant corporation is a retail dealer in drugs and medicines. The plaintiff sells all Pheno-Caffin subject to the conditions of a contract in which each purchaser agrees that he will not sell nor allow any one in his employ to sell it for prices less than those specified in the agreement for the different sizes of boxes, and promises to pay the plaintiff an agreed sum as vendee under this contract. The plaintiff also agrees, as a part of this contract, that in case the vendee at any time desires to discontinue the sale of this medicine and notifies the plaintiff in writing of the fact, he will not sell any of the medicine which he has on hand at the net cost price at which it was sold to him. Besides these facts, the plaintiff's bill avers that the defendant, with full knowledge of the conditions under which the medicine is sold by the plaintiff, has fraudulently obtained large quantities with the intention of retailing it in violation of these conditions and against the right of the plaintiff. The defendant demurs for want of equity and for other causes.

It is not averred that the defendant ever made any contract or agreement with the plaintiff, or had any dealings with him. No fraudulent act or conduct of the defendant in obtaining the medicine is set out, although the word "fraudulently" is used in characterizing his acts. This word adds nothing to the averments of fact in this bill. The statement of the alleged fraud is too general to be the foundation of a decree. *Nichols v. Rogers*, 139, Mass. 146. *Nye v. Storer*, 163 Mass. 53. The averments of the bill in this particular would be entirely satisfied by showing a purchase of the medicine by the defendant from a person who bought it of a purveyor from the vendee. The agreed statement of facts shows that the defendant obtained it in this way. The defendant did not buy the medicine of the firm of wholesalers who received it from the plaintiff and who agreed to sell it subject to the above conditions, but bought it of a person who bought it either from this firm or from a purveyor from this firm.

The transaction between the plaintiff and this vendee set out in the bill plainly are sales which pass the title to the property.

It is equally or perhaps more plain that the contract contemplated of sales by retailers which shall pass an absolute title to the property. The purchaser from a purchaser has an absolute right to dispose of the property. It may constitute it or sell it over to another. The plaintiff has contracts from his vendee in regard to the prices at which they will sell if they sell at all. If they sell in violation of their contracts with the plaintiff he has a remedy against them to recover his damages. *Garst v. Harris*, 177, Mass. 72. This right is founded on the personal contract alone and it can be enforced only against the contracting party. To say that this contract is attached to the property and follows it through successive sales which severally pass title is a very different proposition. We know of no authority nor of any sound principle which will justify us in so holding.

The plaintiff's trade mark will not give him the right of a patentee in property manufactured under a patent. His trade mark is to secure him and the public from deception and fraud as to the origin and source of these goods and of similar goods of the same character.

The law of copyright also gives privileges to authors and publishers that do not obtain to property which anybody may make and sell if he can; but even under the law of copyright, when the owner of a copyright and of

a particular copy of a book to which it pertains has parted with all his title to the book, and has conferred an absolute title to it upon a purchaser, he cannot restrict the right of alienation, which is one of the incidents of ownership in personal property. *Harrison v. Maynard*, 61 Fed. Rep. 639. See also *Clemens v. Estes*, 22 Fed. Rep. 890; *Meyer v. Estes*, 164 Mass. 457; *L. E. Waterman Co. v. Waterman*, 27 App. Div. 133.

In the present case there was not only no contract

between the plaintiff and the defendant, as in *Fowle v. Park*, 131 U. S. 88, but there is no averment or proof that the defendant fraudulently induced and procured the breach of a contract between the plaintiff and any of his vendees, to the detriment of the plaintiff, as did the defendant in *Exchange Telegraph Co. v. Central News*, 2 (1897) Ch. D. 48, and in *Standard American Publishing Co. v. Methodist Book Concern*, 33 App. Div. 409. Bill dismissed.

## NEW YORK AND VICINITY.

### NEW YORK CONSOLIDATED DRUG CO.

Stockholders of the co-operative association known as the New York Consolidated Drug Co., which includes some of the most prominent members of the New Yorker Deutscher Apotheker-Verein, are all expressing great satisfaction at the success of their plan to assist druggists who have to compete against aggressive cutters. The members claim that price cutting has been considerably reduced in sections where they operate stores.

The company now has 105 members and supplies 125 drug stores in Greater New York with the products of prominent manufacturers and proprietary houses. The company's store is at 176 Avenue A, where there is a stock valued at from \$15,000 to \$20,000. All goods are sold in original packages and members are not allowed to buy more than \$150 worth at one time; if a bill is left unpaid over a week no more goods are furnished until payment is made. This insures the company against failures, as every member has contributed \$175 on joining. The goods are bought, in almost every case, direct from the manufacturers in large quantities for cash, and are sold at cost with three per cent. added for expenses, such as salaries of clerks, insurance, etc.

In February, 1894, there were only fifteen members of the organization who each contributed \$50, and the goods were purchased by Sidney Faber. In December, 1890, the New York Consolidated Drug Co. was incorporated with a capital stock of \$15,750, there being 90 members each holding seven \$25 shares. The officers elected then were, George Gregorius, president; C. F. Schieussner, secretary, and Albert Wortmann, treasurer. The first year after incorporation goods to the value of \$125,000 were handled and this year the amount will probably exceed \$150,000.

The present officers of the company are: President Oscar Krause; vice-president, Walter Faber; secretary, C. F. Schieussner, and treasurer, Albert Wortmann. These officers and George Gregorius, R. C. Werner and John H. Weil, make up the board of directors.

### MAX ZELLER ASSIGNS.

Max Zeller, wholesale dealer and jobber in drugs at No. 37 Bowery, has made an assignment to August Stumpf, without preference. The business has been conducted by Mr. Zeller since April, 1899, when he bought it from his uncle, in whose employ he had been for several years. The liabilities are about \$75,000 of which amount \$45,000 is for borrowed money from relatives and others, and \$30,000 is for merchandise, etc. The assets will probably total \$52,000, stock being valued at \$25,000 and good accounts due, \$27,000.

The general opinion in downtown drug circles is that the creditors will receive about one-third.

Blumentiel & Kirsch, the attorneys, said that when he bought the business Mr. Zeller paid \$40,000 for it, which proved to be too high a figure and that the running expenses were larger than the trade done would warrant. Most of the large drug houses in New York are creditors, but the exact amount will not be known until the inventory has been taken. This will be finished in about two weeks when a meeting of the creditors will be called.

### AMERICAN CHEMICAL SOCIETY.

The American Chemical Society held a special meeting Friday evening, Nov. 1, at the Chemists' Club. The following papers were presented: Edmund H. Miller: "On the composition of the ferrocyanides of cadmium."

Marston Taylor Bogert and David C. Eccles: "On the production of the imides of succinic and glutaric acids by the partial hydration of the corresponding nitriles." W. G. Lindsay: "On a colorimetric method for the estimation of sulphur in pig iron." Thomas F. Hildreth: "On the determination of manganese in spiegel." John A. Matthews and William Campbell: "The alloys of aluminum," with introductory remarks upon the constitution of binary alloys (illustrated).

### REPORT OF COMMITTEE ON MEMORIAL TO JOSEPH A. TOY.

Sharing the sense of personal loss which the death of Joseph A. Toy brings to his wide circle of friends throughout the country, the members of the Drug Trade Club, of the City of New York, desire to place upon record their appreciation of the sterling qualities which won for their fellow member the well merited esteem of his commercial no less than his social associates during life, and their unfeigned sorrow for his death.

For more than a quarter of a century he has enjoyed close contact with the drug trade of the United States, and his consideration for the interests of those with whom he was brought into business relations, as well as the strict integrity and charming courtesy of his personal character, gained for him a measure of respect and confidence which was never forfeited while he lived, and which will be treasured as a lasting memory by those who now mourn his death while yet his life gave promise of many years of useful activity.

It is therefore ordered that this minute of respect to his memory be entered into the records of the club, and that a copy be addressed to those endeared to him by ties of closer relationship, with the assurances of our most profound sympathy in their grief.

John M. Peters,  
Thomas P. Cook,  
E. W. Fitch,  
E. G. Wells,

Committee.

### LABEL COUNTERFEITER CONVICTED.

Anton Heuseler, No. 744 Eighth street, Milwaukee, Wis., was convicted of counterfeiting the labels of the manufacturer of Johann Maria Farina Cologne in that city October 23, and fined \$44.73 and costs. The complainants in the case were Schieffelin & Co., of this city, the American agents of the manufacturer. The labels used by Heuseler were printed by a local printing house in Milwaukee and by order of the district attorney these were destroyed along with the goods, upon which they were used, as also the plates from which the labels were printed. Heuseler was convicted on a similar charge in November, 1890.

### IONONE ADVANCED IN VALUATION.

The United States Board of General Appraisers in a recent decision has placed ionone, the synthetic compound used in the manufacture of violet perfumes on the list of reappraisements, the substance being advanced 1200 per cent over the former valuation. Ionone was formerly entered at 400 francs per kilo., but under the new ruling it is rated at 4,800 francs, the foreign market value of the extract which it is made to imitate. The reappraisal was made on the ground that ionone is not a mere chemical compound, but a substitute and imitation for something else of greater value. Ionone is imported from Paris, France.

## NOTES.

—H. De B. Page returned to New York Oct. 30, from a three week's visit in Montreal, Canada, where he went in the interests of the Vapo Cresolene Co. Mr. Page says the druggists in Canada are not troubled with the cut-rate evil as they are on this side and thinks the cutting there has been retarded considerably of late. Leeming, Miles & Co., one of the largest wholesale and jobbing drug houses in Canada, gave very encouraging reports of the general drug trade throughout Canada during the past few months and say the prospects for winter trade are good. Mr. Page made a personal canvass of many retail drug stores in Montreal and the lowest cutter on his speciality was fifteen cents higher in price than New York druggists, while the majority were receiving full prices and seemed to be doing as much business as the cutters.

—Among the visiting pharmacists in New York the early part of last week were R. L. Corbin, Ellenville, N. Y.; C. K. Brown, Deposit, N. Y.; P. M. Hamlin, of P. M. Hamlin & Co., Rome, N. Y.; W. B. Van Vleet, Johnstown, N. Y., and T. S. Armstrong, Plainfield, N. J. Alfred M. Palmer, of Olean, N. Y., a member of the State Board of Pharmacy visited friends in the trade on Tuesday.

—C. Schlosser, of Schlosser Brothers' Pharmacy, Louisville, Ky., Wilmet J. Hall, Cincinnati, Ohio, William H. Jones, Stamford, Conn., and Charles Starr, New London, Conn., were buyers in the drug section recently. Mr. Hall was accompanied by his sister and combined business with his vacation trip.

—Clarence M. Lyon, for 25 years connected with the sale of Puffer's Soda Fountains in this vicinity, is now associated with the independent concern, the Puffer Manufacturing Co., of Boston, as manager of their New York salesroom at the old stand, No. 216 Centre street, near Grand.

—Some of the nearby pharmacists visiting the New York trade last week were F. H. Slater, Matawan, N. J.; G. S. Campbell, Millburn, N. J.; B. M. Hyde, of the Hyde Drug Co., Rochester, N. Y.; B. C. GaNun and J. N. Walker, Carmel, N. Y.; F. N. Bliss, Rye, N. Y., and S. Hicks, of Hicks Bros., Great Neck, L. I.

—Robert V. Smith, formerly a clerk with Lyons & Ziegler, Jersey City, has opened a drug store at 2700 Boulevard in that city. The store was occupied by druggist S. J. Betts until recently. New fixtures have been put in and a neat up-to-date pharmacy will be the result.

—George E. Schweinfurth made a record score of 216 in one game for the Retail Druggists' Bowling Association at Starr's alleys, Tuesday, Oct. 29. Thus far the members of the association have rolled good average scores and 190 is looked at as "easy" by the majority.

—Recent transfers of drug stores in New York include the sale of the store at 117th street and Seventh avenue to druggist A. H. Missidine, of No. 77 Lenox avenue, by P. J. Toye, and that of Albert T. Koertge at No. 2157 Eighth avenue to Schaaf Bros.

—E. S. Schoonmaker, the Ansonia, Conn., pharmacist, was in New York several days last week. Mr. Schoonmaker is a veteran "Neptune," have been a gunner under Commodore C. H. Tompkins, of Sheffield & Co., some 23 years ago.

—A new pharmacy, The University Medical Hall, of which W. E. Dreyfus, A. B., Ph. D., is the proprietor, has just been opened at the corner of 120th street and Amsterdam avenue, just opposite the Columbia University.

—Halper's Prescription Pharmacy is the name of a new drug store which has been lately opened at 1257 Amsterdam avenue, near 124th street. The opening day was celebrated by giving away to purchasers substantial souvenirs of Japanese make.

—Mr. and Mrs. Herbert B. Harding, of No. 326 West 77th street, have announced the engagement of their daughter Mathilde, to Mr. Emil A. Tauchert. Miss Harding is a favorite in society on the West Side. Mr. Tauchert is a member of the New York Stock Exchange.

—E. W. Thompson, of E. W. Thompson & Co., New Britain Conn., was in the city last week en route to points

in upper New York State. Mr. Thompson is taking his annual outing and is accompanied by Mrs. Thompson.

—M. Monteser, for a long time connected with the Wilson Pharmacy at Broadway and 34th street, has purchased the Gebhardt Pharmacy at 57th street and First avenue. This store was established in 1870.

—Charles P. Jaynes, of the well known Jaynes' Pharmacies in Boston, Mass., was one of the visiting druggists in the city last week. Mr. Jaynes had been to New Haven where his son is attending Yale college.

—James A. Notkin, until recently head clerk with druggist Charles Fleischer, New Haven, Conn., was in the city last week making purchases for a new drug store he will open on Congress avenue, New Haven.

—E. H. Powell, New York State representative of Lehn & Fink, and H. Laughlin, the firm's New England representative from the sundries department, were in New York last week getting ready for fall trips.

—W. M. Broderick, one of the hustling pharmacists at Buchanan, Mich., has recently returned from a trip to the Buffalo exposition and a visit to relatives in upper Canada. Mrs. Broderick accompanied him.

—H. Scott, partner in the drug firm of Church & Scott, Cooperstown, N. Y., is taking a vacation. Mr. Scott has been in New York several days and visited friends in the drug trade.

—P. T. Bache has opened a new drug store at 38th street and Ninth avenue, New York. Mr. Bache was formerly manager of Otto Areskog's pharmacy in Brooklyn.

—E. C. Reiss, of Babylon, N. Y., was on a buying trip to the city last week. Mr. Reiss is now proprietor of the drug store in Babylon formerly conducted by Philip W. Link.

—Theodore A. Klebs has opened a new drug store at the corner of 63d street and Third avenue. Mr. Klebs was formerly in the retail drug business in Birmingham Ala.

—E. C. DeWitt, of E. C. DeWitt & Co., proprietary medicine manufacturers, Chicago, is in New York. He is accompanied by Mrs. DeWitt and while here is making the Waldorf his headquarters.

—F. H. Crooks, a former retail pharmacist at Kalamazoo, Mich., has recently come East to represent the Fraser Tablet Co. in New Jersey.

—A notice in the window of Hudnut's Pharmacy at No. 205 Broadway informs the public that the business is now a branch of Hegeman & Co., No. 196 Broadway.

—Frederick T. Gordon, naval pharmacist at the League Island Navy Yard, Philadelphia, was in New York last week.

—W. H. Chamberlain, a patent and trade mark attorney, of Chicago, and well known in drug circles was registered at the Waldorf last week.

—Jake Weil, formerly a city salesman for Max Zeller, now occupies a similar position with Scheffelin & Co.

## A Popular Preparation.

One of the best advertised and most popular preparations for the cure of Nasal Catarrh and similar troubles is Ely's Cream Balm. It was originated and placed on the market nearly twenty years ago by a firm of experienced druggists, Ely Bros., and their business in this special article eventually grew to such proportions that they were compelled to devote their entire attention to it. Ely Bros. emphasize the fact that it is to the interest of druggists to supply Ely's Cream Balm whenever a customer calls for it, or even when simply a good catarrh remedy is asked for. The test of time has proved that this preparation always gives satisfactory results. It is a uniform preparation, made according to a scientific formula from the very best quality of drugs. In supplying it to his trade, the druggist does not run the risk of causing dissatisfaction, which might occur when the customer is induced to experiment with new preparations, the merit of which has not been fully demonstrated. Druggists who desire counter advertising literature regarding Ely's Cream Balm can obtain the same by writing to the manufacturers, Ely Bros., 56 Warren street, New York.

## IN AND ABOUT BOSTON.

### DECISION OF THE SUPREME COURT REGARDING DRUGGISTS LICENSES WILL BE IMPORTANT.

Boston, Nov. 2.—The Supreme Court of this city has this week heard in a preliminary way the case in which thirteen druggists of Salem petition for a writ of mandamus to compel Mayor Hurley of that city to sign the sixth-class liquor licenses granted them last June by the board of aldermen, to which the mayor ever since then has refused, on temperance grounds, to affix his signature. United States District Attorney Moulton is counsel for the druggists, and, singularly, his predecessor in office, Boyd E. Jones, appears against him and his clients as counsel for the mayor.

At the last election in Salem, the no-license vote was carried by more than 500 majority and this did away with the liquor licenses, except those of the sixth-class, given to druggists. Mayor Hurley and his counsel raise the question whether the issuance of these should not also be restricted. The whole contention is based on Chapter 100, section 5, of the Statutes of 1882, which in part says:

"In a city which at its annual municipal election, or in a town which at its annual meeting, votes to authorize the granting of licenses for the sale of intoxicating liquor, as hereinafter provided, licenses of the first five classes mentioned in section 10, and in any other city or town licenses of the sixth-class mentioned in said section may be granted annually by the Mayor and Aldermen of the City or the Selectmen of the town, to persons applying therefor."

As this act plainly sets forth, the license commissioners in a city or town that has voted not to grant liquor licenses have the option of issuing licenses of the sixth class to druggists.

Judge Barker presided and heard no arguments, but decided that the case should come up later before the full bench of the court.

A similar case was that of Mayor Robinson of Gloucester, who resigned rather than obey the order of the court to sign druggists' licenses, but the situation there was different because the city had voted license. Mayor Hurley says that Salem hasn't a "speak easy" today, and, further, that the druggists won't get licenses—that Salem might as well have saloons; which is severe on the druggists.

Notwithstanding the opposition which he has raised through his persistency in refusing to sign licenses, Mayor Hurley intends to run again for re-election to that office. He feels it his duty, since Salem voted "no-license," to keep within the law and enforce it as regards the liquor question.

### TRADE CONDITIONS SATISFACTORY.

Boston, Nov. 2.—Druggists in general hereabout have a contented sort of a look which comes from the fact that trade conditions are so satisfactory. Nearly all tell practically the same story and say that business is good. The wholesale and jobbing houses also report excellent business with all that they can attend to in the way of good orders from all parts of the country. They further say that they know that the retailers are experiencing satisfactory fall trade. In the general market, drugs are in fairly good demand, without any great or special impetus given to any one line. Prices hold steady, as a whole. Chemicals also are well sought, perhaps a little more so than drugs, and prices seem firm. With the dyes-stuffs and tanning materials, trade is proving satisfactory on average calls for these commodities. Cologne spirits and grain alcohol are sought in an average way, with no specially noticeable activity. Without special changes in quotations, waxes are in fair demand.

### NOTES.

—At the last meeting of the Boston Associated Board of Trade, Hon. Gorham D. Gilman, of Gilman Bros., the druggists, was one of the speakers. With Jerome Jones and F. H. Woodward he formed a committee on resolutions regarding customs laws and reciprocity. The committee in their resolution urged the senators and representatives from Massachusetts in the United States

Congress to give the reciprocal trade policy of the Administration that willing and active support which is needed to give full force and effect to the trade treaties that have been or may be made.

—Residents of Morningside, a suburb of Pittsfield, are anxious that a drug store be added to the other lines of business of that district, all because of the great difficulty experienced in getting prescriptions filled, especially late at night. It often happens that a physician is called, who leaves a prescription for immediate filling, and it is necessary to walk to the city proper in order to have it compounded.

—To the Massachusetts Commissioners of Corporations, the Reycroft Pharmacy Co., of Cambridge, makes this annual report: Cash and debts receivable, \$6,841, manufactures and merchandise and patent rights, \$25,000; a total of \$31,841; against which is capital stock, \$25,000; debt, \$6,433; reserve for depreciation, \$388—a total of \$31,841.

—Edward Dempsey, head clerk in the drug store of P. A. Chambers in Williamstown, has resigned his position in order to come to Boston, where he will enter the Massachusetts College of Pharmacy. Mr. Dempsey has been employed in the store at Williamstown for over two years and he previously had three years' experience in North Adams.

—Prima's Pharmacy, located in Crocker Hall, Fitchburg, was slightly damaged by water the other morning, through a fire that originated in the second floor of the building. That only the ceiling was soiled in spots and a few articles dampened is due to the excellent work of the firemen who kept the blaze under control from the start.

—Winchendon is to have a fine new drug store which A. G. Durgin of Quincy is to open and conduct, as soon as it is completed for occupancy. It is located in the new Rome Building. Its interior finish will be right up-to-date, in a happy combination of practical and artistic ideas.

—About twenty-five members of the Boston Druggists' Association attended the October meeting, held this week at Young's Hotel. The president, F. A. Hubbard, presided. Following dinner there was general discussion, in a purely informal way, of matters bearing upon the trade.

—The pharmacy of Dr. C. G. Heald & Co., at Pepperell, has been bought by William H. Mansfield, a registered pharmacist of experience, who formerly had a drug store in Railroad square in that town, several years ago, but who of late has not lived in Pepperell.

—Because he was far-sighted enough to carry accident insurance, Albert L. Wyman, a druggist of this city, with a store at 79 Berkeley street, recently received from one of the insurance companies a goodly sum, as the result of incapacity from accident.

—With an entirely new stock of goods, replacing all that remained of the old stock, Frank Kelly of this city has opened the drug store, at the corner of Mechanic and Walter streets in Leominster, which he recently purchased.

—Walter H. Colby's drug store in Haverhill, where it is situated at the corner of Washington and High streets, has been sold. John H. Edgerly is the new proprietor. For a long time he has been associated with Frank S. Preble.

—Associated with F. H. Putnam in promoting the Putnam Manufacturing Co., of Cambridge, recently organized with a capital stock of \$200,000 to manufacture and deal in drugs, will be W. H. Gwynne and J. L. Putnam.

—The Ropes Drug Co. of Salem, has just added an optical department to its business, which will be under the management of W. L. Maxey, who formerly was in business on his own account in Maine.

—John D. Sheehan has been engaged as clerk by Felix Labrie, who recently bought the Dr. Moore pharmacy at West Warren. Mr. Sheehan takes the place of William Phelps, the former clerk of the store.

—Major J. A. Greene of Weirs, N. H., a member of the Dr. Greene Nervura Co., has announced that he is a candidate for the nomination of congressman from New Hampshire.

—The new drug store of Fred Lane, at Gloucester, has been completed and he has now taken possession of it. It is situated at the corner of Washington and Pine streets.

## PHILADELPHIA.

### LITTLE CHANGE IN BUSINESS.

Philadelphia, Nov. 2.—There is very little change in a business way from last week, trade has been quiet and steady without fluctuations. Thursday and Friday were the dulllest days of the week, the rest were fairly good. Smallpox still decreases, 52 cases last week against 59 the week before, and the demand for vaccine is perceptibly lighter. During the week an effort was made to ascertain from retail druggists in representative sections of the city how their business for October, 1901 compared with that for October, 1900; the general opinion was that there is a decided improvement in this year's average and that druggists have made more money in most cases. This is ascribed by the retailers partly to the general prosperity of the country, partly to the lessening of "cut throat" competition between near neighbors, and partly to the better prices on goods now being secured through organization and mutual agreement. Very few of the retailers approached seem to expect full prices on patents in this city and all agree in declaring that future profits must come from close attention to business principles and mutual agreements on higher prices in sections where general conditions are the same. The value of the P. A. R. D. as a factor in local prosperity is generally agreed on.

Wholesale dealers in drug sundries, manufacturers and jobbers unite in agreeing that October, 1901, has been a good month, better than for some time. Their business has been good, collections generally have been satisfactory and few losses from failures among retailers have to be noted. The drug market has been and is steady, the only speculative tendency is in quinine, several heavy purchases having been made by local firms, and heavy chemicals and dyesuffs continue firm, and in brisk demand.

### CHEMISTS TO HAVE NATIONAL SOCIETY.

Philadelphia, Nov. 2.—A meeting was held Friday at the "Engineers' Club" looking to the formation of a national organization to be known as the "American Electro Chemical Society." Professor J. W. Richards of Lehigh University, one of America's leading chemists and vice-president of the American Chemical Society, acted as chairman of the meeting, Dr. Carl Hering, ex-president of the American Institute of Electrical Engineers acted as secretary. Plans were adopted for securing membership and forming a permanent organization. Dr. Charles A. Doremus of New York, was made chairman of the committee on membership. In line with the renewed activity of local chemists, a special meeting of the Philadelphia "section" of the American Chemical Society has been called for Monday night, at the Harrison Laboratory, University of Pennsylvania, to consider plans for entertaining visiting members at the next yearly meeting of the American Chemical Society, which will be held here.

### NOTES.

—In the news letter from Philadelphia published in the Era of Oct. 17, an injustice was inadvertently done to the committee on entertainment of the Alumni Association, Philadelphia College of Pharmacy, in criticising the method of issuing tickets to the "social meetings" of the week previous. Complaints had been made that few of the Alumni or those interested in the College had been sent tickets and this was gathered among other news items from certain Alumni. It seems that the committee had decided that it could not afford the expense of sending tickets to all Alumni and members of the college, and will give notice that these could be secured on application by those desiring them, so if any did not get tickets it was solely because they did not send a request for any. The entertainment committee wishes it understood that sufficient tickets will be issued for all entertainments and that any person connected with or interested in the

P. C. P. will be gladly furnished with all he may require on application to the registrar of the college, N. W. Stem, or any member of the committee. Members of the college or alumni will, of course, be admitted even if without tickets on recognition by the reception committee. The second "social meeting" of this year will be given on Tuesday, Nov. 19, at the college and all members and alumni are invited to attend.

—The Philadelphia "Drug Bowling League" will soon begin its winter schedule of games, the first "rolling" being slated for Tuesday, Nov. 12. The schedule committee had planned to have the initial games next Tuesday, but had to postpone them on account of the election on that day. From the cordial and hearty support given the league by local firms the coming season will be full of interest and prosperity and good scores are look-a-fore. A party of local bowlers headed by D. E. Bransome, have accepted an invitation from the New York League to roll a few games this week.

—A conference was held in this city during the week between Messrs Powell, chairman of the entertainment committee of the Maryland Pharmaceutical Association, W. H. Fralley of Lancaster, W. L. Cliffe, local secretary of the American Pharmaceutical Association and D. E. Bransome, entertainment committee, Pennsylvania Pharmaceutical Association, to arrange for a joint meeting of the Maryland and Pennsylvania Pharmaceutical Associations at Buena Vista next year. From present indications, it looks as if this arrangement for joint sessions will be a great success.

—A meeting of the retail druggists of some of the up-town wards will be held at Elfreth's Hall Twelfth street and Columbia avenue, on Friday evening, to discuss local conditions and to adjust disagreements as to prices. A full meeting is looked for as there has been great effort on the part of D. P. Little, the agent of the P. A. R. D., to bring out a majority of local retailers. The use of this hall has been donated to the P. A. R. D. by J. R. Elfreth, whose drug store occupies the ground floor of the building.

—In spite of the opening of the college year and the attendance of numerous young men, there is still a scarcity of good clerks, registered pharmacists especially, and many druggists are now without adequate help. With wages at \$12 to \$15 a week for registered pharmacists and the long hours kept in the majority of stores, it looks as if some change must be made if qualified young men are to fill up the depleted ranks of clerks.

—J. A. Rudy, whose drug store is at Ninth and Locust streets has joined the ranks of the benedicts, having fulfilled Scriptural injunction and taken unto himself a wife. Another benedict druggist, H. N. Snyder of Lancaster was in town this week to celebrate the recent arrival of a son and heir who is expected to some day become president of the N. A. R. D.

—J. Babunie, a West Philadelphia druggist, has bought out A. T. Conard at Thirteenth and Jefferson streets and will conduct this store. Norman Conard who has been for some time in charge of this branch store will now retire from the retail business, having accepted a position with the H. K. Mulford Co.

—J. V. Slaughter, a local druggist, has left the city for an extended trip west, Denver being his objective point, where he expects to look after some investments and combine business with pleasure.

### Price Changes.

Schering & Glatz announce their prices from November 1 as follows: Urotropin, in 1-ounce cork stoppered vials, 60c; 7½ grain tablets, 25c per box of 20; 5-grain tablets, 25c per box of 30; Glucol, Dr. Schleich, 1-ounce tins, 60c; one-third ounce vial's, flat oval, with perforated tops, 25c. Levulose, chem. pure (Diabutin) 1-pound screw top glass jars, \$1.60. Levulose, in honey form, 1-pound screw top glass jars, \$1.40. Gualacal, chem. pure crystals, 1-ounce glass stoppered vials, 75c. New additions to the firm's list are Beta-Eucalin Acetate, in 1-ounce vials, \$3.50. Chinotropin, in ½-ounce or 1-ounce vials, at \$2.00 per ounce.

## BALTIMORE.

### DRUG TRADE HOWLERS.

Baltimore, Nov. 1.—The teams of the Baltimore Drug Trade Bowling Club were again hard at work during the week. On last Tuesday night, Sharp & Dohme met the Armstrong Cork Co.'s quintette and last night McCormick & Co. gave battle to James Baily & Son. The Sharp & Dohme men made it three straight with their opponents, while McCormick & Co. got two out of three from their antagonists. Tuesday's scores were 757, 750 and 714, against 633, 581 and 688. Last night's records were 765, 635 and 761, against 717, 866 and 691. Sharp & Dohme's highest score was 186, rolled up by Goldsborough, Holzerman, of James Baily & Son, in one of last night's games rolled up to 198, while McCormick's highest man, Baumgarten, had only 178. But the work of McCormick & Co. was more even than that of the opposing team. The several teams now stand as follows:

| Teams.                        | Games won. | Games lost. | Percentage. |
|-------------------------------|------------|-------------|-------------|
| Sharp & Dohme .....           | 9          | 0           | 1,000       |
| Root & Herbs .....            | 7          | 2           | .778        |
| James Baily & Son .....       | 5          | 4           | .556        |
| Stanley & Brown Drug Co. .... | 3          | 6           | .333        |
| McCormick & Co. ....          | 3          | 6           | .333        |
| Armstrong Cork Co. ....       | 2          | 7           | .222        |
| Ferrell & Kellam Co. ....     | 0          | 6           | .000        |

### COLLEGE OF PHARMACY RECEPTION.

Baltimore, Nov. 1.—The reception to students at the Maryland College of Pharmacy last night proved to be a most enjoyable affair. Both classes were largely represented and the evening passed away pleasantly. Mr. Jefferson entertained the company with several renditions on musical goblets, an orchestra played a number of selections and there was much speechmaking. President Charles E. Dohme, of the college, made an address of welcome to the students, the other speakers being Prof. William Simon, H. P. Hynson and Owen C. Smith, president of the Alumni Association. The latter expressed the hope that all the graduates would join this organization. Short addresses were also delivered by Messrs Mitchell and Evans, presidents of the senior and junior classes, respectively. A dance followed the entertainment and refreshments were served. It has been suggested that a series of receptions be given at the college in the course of the winter.

### STATE OF TRADE.

Baltimore, Nov. 3.—The drug trade conditions here did not undergo any decided change last week. A heavy movement continued to distinguish the jobbing business, while the manufacturers of pharmaceuticals were also kept steadily at work. The drug trade at the present time is of exceptional volume, activity seeming to prevail in every branch. No marked fluctuations are reported in the market for botanicals. Certain articles are still either firm in price or going up in consequence of the short crop. The information that they command high values has served to bring out some large lots and has stimulated buying at present quotations. The retailers have nothing new to report. Many of them complain that business is quiet, but they evidently take a narrow view of the situation.

### DRUG CLERKS IN DEMAND.

Baltimore, Nov. 3.—Conscientious and efficient clerks are in demand among Baltimore druggists. A number of retailers would like to get capable help, but seem unable to obtain just the kind of young men they want. Students in pharmacy who feel able or find it necessary to work outside of lecture hours experience no difficulty whatever in securing places, and all inquiries of this kind elicit the information from competent sources that positions are available.

### NOTES.

—The Wedgewood Club's monthly dinner last Thursday evening at the Eutaw House brought out not only

the full membership, but proved to be an exceedingly pleasant affair. Mr. Stagner, of Parke, Davis & Co., and Messrs. Brooks and Parkhurst, of the Ferrell & Ferrell Co., were admitted to membership. Dr. J. G. Blake, of the Flint Club, an organization which pursues similar aims as the Wedgewood Club, and which is composed of physicians, was present as an invited guest. In accordance with established custom oratory was hoisted down. —At the next meeting of the Maryland College of Pharmacy Professor Hayes, a graduate of Maine University and the chemist of the Walker-Gordon Milk Laboratory, will read a paper on the physical composition of milk. This will be followed by a discussion of papers read before the section on practical pharmacy and dispensing of the American Pharmaceutical Association at the annual meeting in St. Louis.

—The Cutnall Drug Co. for manufacturing pharmaceutical preparations, was incorporated in Baltimore last Wednesday by Charles F. Bender, Charles W. A. New, John P. New and William A. Walter. The capital stock is \$10,000, divided into \$10 shares.

—Louis J. Roth has sold his retail pharmacy at Edmondson and Fulton avenues, to Hudson Bros. The members of this firm were until recently clerking for different druggists.

—F. P. Woods, for twenty-five years a clerk in the employ of Robertson & Co., retail druggists, at Calvert, near Franklin street, has resigned to do relief work.

—Fred Gimpel, who came to Baltimore from Cumberland recently, has taken a clerkship with Dr. Bennett, Fulton and Frederick avenues.

—Among the visiting pharmacists in Baltimore last week was Jos. A. Jeffries of Warrenton, Va.

## CINCINNATI.

### RUMOR OF A NEW WHOLESALE DRUG HOUSE.

Cincinnati, Nov. 2.—The presence this week of Chas. F. Weller, president of the Richardson Drug Co. of Omaha, and William J. Wadding, of Wadding, Kinnan & Marion Co., of Toledo, has revived the rumor of a new wholesale drug house in this city. Mr. Weller said: "I have been looking for a site in Cincinnati, and have found an ideal building on Fourth street, which I shall suggest to a firm which is considering a house in your city. There is a fine opening here."

### NOTES.

—Louis W. Sauer, a well known druggist of this city, died Thursday morning at his residence, Baymiller street and Central avenue, after an illness of two weeks. Asthma and pneumonia were the immediate cause of his death. Mr. Sauer was 39 years of age and had a wide circle of friends. He was a graduate of the Cincinnati College of Pharmacy and a member of the faculty of that institution and of the Cincinnati College of Medicine. He leaves a wife and two children.

—A Cincinnati young lady, Miss Magdaline, daughter of Mrs. Anna Schreck, druggist at Wheeler and Warner streets has just been granted a certificate as Pharmacist by the State Board of Pharmacy which met this week. Other fortunate persons from here were Frank Kapp, Julius Kling, C. J. Harris, Wm. Ganzs and Martin Murray.

—The following hustlers were in town this week: C. M. Browning, of Benton, Myers & Co.; Jacob Blitz, of J. Elwood Lee Co.; Geo. M. Smyth, of J. M. Maris & Co.; Frank Pike, of Sharp & Dohme; Wm. Healy, of Johnson & Johnson, and William Cordes, of the Florence Mfg. Co. All of them signed the muster roll of the new Drug Club.

—Death claimed another victim this week in the person of Otto Heineman, the druggist at Linn and Laurel streets. Mr. Heineman has been in the drug business for over forty years and was prominent in German circles in this city.

—The Wm. S. Merrill Chemical Co. will build an additional factory of three stories adjoining their present building. The factory will have frontage of 75 feet and 103 feet in depth.

Four-Fold Liniment is sold by all jobbers.

## DETROIT AND MICHIGAN.

### INDICATIONS FAVORABLE FOR GOOD BUSINESS.

Detroit, Nov. 2.—The condition of the drug trade in the State seems to be somewhat improved and indications point to a fairly remunerative business for the winter. Changes during the past week in the trade have been very few, and pharmacists, as a rule, seem to have a more hopeful view of the future.

### NOTES.

—The most important happening during the past week has been the transfer of the business conducted under the name of The Seeley Pharmacal Co. to W. H. Burke and N. A. Tabor, operating under the firm name of W. H. Burke & Co. This drug business was instituted a great many years ago by Arthur Bassett. About fourteen years ago Mr. Bassett formed a partnership with Frank L'Hommedieu, the firm name appearing as Bassett & L'Hommedieu. The firm took possession of a modern building upon the site of the old Bassett store, remaining in this connection for several years until the health of Mr. L'Hommedieu necessitated the severing of his connection with the firm. The firm then took on the title of The Detroit Pharmacal Co., and later, The Seeley Pharmacal Co., Mr. Bassett in the meantime having sold out his interests and entered upon the duties of special agent for the Northwestern Life Insurance Co., of Milwaukee.

W. H. Burke & Co. are considerable factors in the retail drug trade of Detroit, operating stores at Grand River avenue and Plum street, Woodward avenue and Elizabeth street, the Central Drug Store and their new possession. Mr. Seeley has as yet made no arrangements for the future although he will devote his energies in a large measure to the interests of the N. A. R. D. of which he was recently elected president. It is reported, however, that he has received an offer from Burke & Co., to retain his management of the business formerly under his charge.

—A delegation of about twenty prominent Porto Rican merchants, who are making a tour of the country and visiting the large plants in the different cities, inspected the laboratories of Parke, Davis & Co. at Detroit on Tuesday afternoon, Oct. 29. The visitors were particularly impressed and pleased with the methods in vogue covering the evolution of serum and vaccine manufacture. Expressions of commendation were heard upon all sides at the great cleanliness apparent in the biological stables. At the conclusion of the trip light refreshments were served in the main building, addresses being made by Mayor Maybury of Detroit, and members of the visiting Porto Rican party.

—The work upon the science laboratory being erected by Parke, Davis & Co. is being pushed to completion as rapidly as possible, although it will be several months before the building will be ready for occupancy. The structure alone, without fixtures and apparatus of any kind, will cost \$100,000, and when completed will cost in the vicinity of \$175,000. The new building will be devoted exclusively to scientific research, biological and analytical work.

—John L. Wallace has purchased the business of the late Wm. McDonald of Kalamazoo, the purchase price being \$8,800. Mr. Wallace was employed as chief clerk by Mr. McDonald for over twelve years and starts in business for himself with a wide acquaintance and amply fitted to conduct the store with which he has been identified for such a length of time.

—John B. Hulett, Texas salesman for Lambert & Lowman, Detroit, is seriously ill with typhoid fever at Waco, Texas. J. Beauvais, formerly with Stearns & Co., and P. H. Smiley, for many years with C. N. Crittenton Co. of New York, have connected themselves with Lambert & Lowman, Mr. Smiley representing them in the Southwest.

—Ford McCarrick, employed as a drug clerk in Eaton Rapids, recently eloped with Miss Bessie Sevens of Lansing, taking a wedding trip to the Pan American Exposition and from that point proceeding to break the news to the parents of the young lady. Young McCarrick is twenty-one years old and the bride eighteen.

—Fred H. Crooks has sold his interest in the firm of F. H. Crooks & Co. to Chas. W. Cook. Mr. Crooks has accepted a position as traveller for the Fraser Tablet Triturate Manufacturing Co. of Brooklyn, N. Y., and has already left to start upon his new duties, his territory being in New Jersey.

—Fred L. Heath of Hastings, has purchased the store formerly owned by Paul V. Finch & Co. at Grand Rapids. Frank H. Escott, now manager for the Grand Rapids store, will continue in that capacity, Mr. Heath remaining in Hastings.

—E. G. Swift, manager of the Canadian laboratory of Parke, Davis & Co., located at Walkerville directly across the river from the Detroit plant, left last week for an extended hunting trip in the Muskoka region in Ontario.

—Some time ago pharmacist George La Tour was complained of in the recorder's court for selling liquor without a retailer's license, but he was promptly acquitted by a jury in the above mentioned court a few days ago.

—Frank Williams, who has been confined at Harper Hospital for the past seven weeks with typhoid fever, has returned to his post of duty at the pharmacy of W. A. Hall & Co., Detroit.

—On Wednesday evening, Nov. 13, Dr. Heneage Gibbs will deliver a lecture on tuberculosis, illustrated with stereoscopic views, before the Drug Clerk's Association of Michigan.

—L. A. McDermott, for the past three years representing the Wm. S. Merrell Chemical Co., has resigned and accepted a position in the traveling service of Parke, Davis & Co.

—The new drug store of Carr & Granger, Mt. Pleasant, occupied by R. R. Grunner, was recently destroyed by fire, entailing a loss of about \$1,000, with no insurance.

—R. T. Bower of Petoskey, has sold his drug store to his former clerk, George Eckels. The new business will be operated under the name of The Eckels Drug Co.

—Dr. E. L. Foote, pharmacist at Garden, has started on his annual pilgrimage in search of game, which occasion he looks forward to with interest each year.

—Howard J. Linsell, for the past four years at Parke, Davis & Co.'s has accepted the management of the Highland Park Pharmacy, in the suburbs of Detroit.

—The Drug Clerks' Association of Michigan, will give its third annual hop at Strassburg's Dancing Academy upon the evening of Friday, Nov. 22.

—The drug store of Lucila Sherman at North Branch is now known as the Sherman Pharmacy, there being no change, however, in ownership.

—H. H. Johnson, with Messrs. Gray & Worcester, Detroit for some time past, has severed his connection with that firm.

—There are now thirty-two counties in the State which have branches of the N. A. R. D., with a total membership of 1,200.

—W. C. Ammerman, an Escanaba druggist, left a few days ago for his annual hunting trip in and around Manitoba.

### March.

A preparation that has been used and recommended by many physicians in this country is advertised in this issue. March is a non-poisonous, non-irritant, antiseptic poultice and surgical dressing, put up in cans at 25c, 50c and \$1.00 each. It is an excellent preparation for inflammation and congestion, and is an external application which does not interfere with any internal medicine. The proprietors are extensively advertising March and bringing it to the notice of physicians. It yields the druggist 71 per cent profit, less freight, and should have attention by enterprising dealers. The makers of March offer to send sample cans for medical patrons to druggists who send a list of names. Address the Columbia Chemical Co., No. 1720 Curtis street, Denver, Colorado.

Bickmore's Gall Cure is so well known as a reliable remedy that it is doubtful if there are any druggists who have not at least heard of it and probably most of them have sold it. For druggists who have not handled it the makers offer to send free samples. Address the Bickmore Gall Cure Co., Box 960, Old Town, Maine.

## CHICAGO.

### C. R. D. A. MEETS.

Chicago, Nov. 2.—The Chicago Retail Druggists' association met on Tuesday afternoon, Oct. 29. The meeting was the regular quarterly gathering of the organization and various topics of interest were discussed. President George A. Graves occupied the chair. The first question which engaged the attention of the meeting was the retailing of drugs by wholesalers.

The topic seemed to be a fruitful one and various members related what they knew and what they had heard concerning the question at issue locally applied. Many incidents were related concerning the sinful practice of retailing drugs from a wholesale store, and experiences were coming thick and fast, when the Nestor of the association, Mr. Ebert, arose and suggested that little could be done by approaching the matter in any but a friendly and tolerant spirit; that the jobbing trade are men and gentlemen, and that they would without doubt listen to any suggestions brought to them in a spirit of justice and good will. The suggestion was received with approval and on motion of Mr. Bodemann the president was instructed to appoint a committee consisting of three members of the Executive Committee to call upon the jobbers and confer with them upon the subject at issue and, if possible, devise a remedy and come to some equitable understanding.

The report of the delegates to the N. A. R. D. convention at Buffalo was next heard. Messrs. Straw, Gale and Bodemann carried off the honors for vivid and forceful reports.

Mr. Bodemann read some resolutions of condolence to be sent to Theodore C. Loehr on account of the recent death of his wife. Mr. Loehr will be remembered as a former president of the Illinois Pharmaceutical Association. The resolutions were unanimously adopted.

Mr. Voegeli of Minneapolis, newly elected vice-president of the N. A. R. D. was called upon by the president and made a stirring speech concerning the work of the organization and the success of the plan pursued in Minneapolis.

The down town situation in drugs was quite fully gone into. It was announced that the first district had thought best to inaugurate a system of cutting for the next six months to see if it would not bring the big stores to time. This plan, however, was denounced by a number of druggists doing business in the first district, who said that no druggist in the district had a purse long enough to beat the big men at their own game. The suggestion was made that instead of cutting, prices should be restored in the first district and so soon as there was no call for a proprietary at full price let it be dropped. This would leave no outlet but the department stores and druggists would cease to be advertisers of the preparations of the big manufacturers. The vent would be too small for the demand, demand would fall off and the manufacturers would finally wake up and help the druggists devise a remedy. After much discussion the meeting adjourned.

### PHARMACY STUDENTS ELECT CLASS OFFICERS.

Chicago, Nov. 2.—The Junior and Senior classes of the Chicago College of Pharmacy elected their officers recently. The senior class officers are C. M. Snow, president; F. H. Heldbreder vice-president; W. H. Engel, secretary; F. E. Pierce, treasurer, and J. F. Forbrick, sergeant-at-arms. The junior class officers are E. C. Keayon, president; H. T. Harton, vice-president; C. H. Schafer, secretary; E. O. Hahn, sergeant-at-arms. A treasurer is yet to be elected. The enrollment at the Chicago College of Pharmacy is 100 for the junior class and 53 for the senior. The alumni association is making plans for a ball to be given Dec. 5 at Commandery Hall, Masonic Temple.

### CHICAGO TRADE ACTIVE.

Chicago, Nov. 2.—Business in wholesale and manufacturing lines is active. There is a strong demand for staple drugs and pharmaceuticals and there seems to be plenty of money to back it up. Sundries and holiday goods are moving freely and the demand is very large.

### NOTES.

—The following item clipped from a Chicago evening paper of recent date is interesting: A man believed to be an ex-drug clerk tried to hold up a drug clerk this morning. The drug clerk had more nerve than the intruder.

The police are hot after the offender. A dozen offenses are charged up against him.

Albert C. Clancy was sleeping in the drug store of his father, Cornelius L. Clancy, 1240 North Clark street, at 4.30 this morning when the bell was rung loud and long. Clancy rubbed his eyes, stretched, and went to the door. A man, apparently in great hurry, stood without.

"I want this prescription filled!" exclaimed the man as he showed a prescription blank.

Clancy, suspecting nothing, opened the door, took the prescription, and went behind the case to fill it. He was reading over the prescription when the pretended customer slipped behind the counter, thrust a revolver to his head, and said sternly:

"Hold up your hands!"

Now about ninety-nine men out of a hundred would have shoved their hands up as high as possible, but Clancy was the hundredth man.

Quick as a flash he drew his revolver from his hip pocket and opened fire at the robber. The crook, astounded at this sudden play of the clerk, turned and ran, firing two shots as he did.

Clancy pursued hotly, firing five shots in all. The robber dashed out of the door. Then Clancy, his revolver being empty, notified the police.

Neither clerk nor robber was hit by the bullets, but seventeen bottles and one mirror received mortal wounds.

The police are confident they know the man who attempted to rob the store. The suspect is an ex-drug clerk. He has made it his practice to ring up druggists in the dead of night and present prescriptions to be filled, ending by holding up the obliging druggist.

—F. S. Baker & Co. incorporated, Chicago, capital, \$10,000; wholesale and retail drug business; incorporators: Otto E. Webber, Francis M. Baker, Francis S. Baker. The above item appeared among the new incorporations this week. F. S. Baker & Co. will be remembered as the concern that has been exciting the manufacturers general inquiry because of their varied and extensive orders for goods.

—The Chicago Tribune is instituting a warm campaign against the inadequacy of the Chicago telephone service, and all classes of citizens are registering their kicks at the office of the paper.

—Ed. F. Malloy, Chicago representative of Lazell, Dalley & Co., at a practice game of bowling last week made a score of 243 and an average of 185 pins in nine succeeding games.

—The Rex Pharmacy succeeds W. B. Hart at Sixty-third street and Madison avenue. It is reported that Mr. Hart will retire from business.

—The well known Woodlawn druggists, Allen & Balber, have dissolved partnership. Harry W. Allen succeeding.

—The Northwestern Pharmacy has succeeded Ford's Pharmacy at 1218 Milwaukee avenue.

—Welsh & Hall of Enfield, Iowa, have dissolved partnership. Mr. Welsh succeeding.

—W. A. Turner has succeeded E. D. Howland at Lockport, Ill.

—F. P. Sprangler of Huntington, Ind., has sold out.

### Free Tooth Powder.

Enterprising druggists who wish to avail themselves of an exceptional offer should not fail to read the announcement of the Graves' Tooth Powder Co. in this issue. That the powder is worthy of recommendation is apparent from the fact that the makers so liberally send out free samples. This preparation is being extensively advertised and gives a good profit to retailers. Free samples for distribution with a circular having the imprint of the druggist on it will be sent on application to the Graves' Tooth Powder Co., Chicago, Ill. Send the names of your dentists and jobbers when writing.

## THE NORTHWEST.

### THE LATE FRANK L. POWELL.

St. Paul, Minn., Nov. 1.—A druggist of this city pays the following tribute to a pharmacist whose acquaintance he made in the Northwest many years ago:

"Frank L. Powell, one of the most prominent pharmacists of Newport, R. I., died Sept. 30th in the forty-third year of his age. Mr. Powell started to learn the drug business in the fall of 1875 with the old firm of Caswell, Hazard & Co., with whom he remained until the spring of 1877, when he went with the new firm of Caswell, Massey & Co. when they opened their Newport store. He remained with this firm until 1890 when he left them to establish a business of his own. Mr. Powell graduated from the New York College of Pharmacy in the early 80's and afterward became one of the managers of Caswell, Massey & Co.'s Newport stores. His exceptional character made him many friends, the writer being one of them and can look back over a period of twenty-six years of his acquaintance with Mr. Powell and recall many traits that can exist only in a highly noble and unselfish character; which found pleasure in helping and working for those he loved. He leaves a widow and two children, a boy and girl, a mother and three sisters. He will also be missed from his native city where he leaves a host of friends."

### NOTES.

—Successions: C. G. Nickolis, Felton, Minn., by William Lang; W. A. McClaran, Mound City, S. D., by R. H. Kries; H. G. Conger & Co., La Porte, Iowa, by W. H. McKinley & Co.; Mrs. L. E. Matix (Lyceum Pharmacy), Duluth, Minn., by Mrs. W. B. Greene; J. E. Beck, Pasco, Wash., by Mrs. J. E. Beck; C. W. Kent & Co., Emmetsburg, Iowa, by D. J. Lyman & Co.; George W. Logan, Lorimore, Iowa, by Meyers, Nordgren & Co.; H. W. Dyer, Mapleton, Iowa, by E. V. Jensen, Dunn Bros., Fairfield, Wash., by G. W. Ensley; George G. Gulinter, Fairview, S. D., by A. G. Pond.

—J. George Smith, probably the most extensive confederator of St. Paul and a high authority on the soda water business, was badly injured in an automobile accident this week. The axles of both front wheels broke, throwing Mr. Smith and his mother violently to the ground. Mrs. Smith was but slightly hurt. Her son sustained a fractured shoulder and sprained ankle.

—A fire occurred in the wholesale house of the Lyman-Ellis Co., Minneapolis, Wednesday night. It was discovered in good season and did only about \$1,000 damage.

—A new store is to be established at Summit, S. D., by Messrs. Hopgood & Blesser. These gentlemen were in the city last week and purchased their stock.

—Sold: Watson Drug Co., Missoula, Mont.; Stonebraker Bros., Stewartville, Minn.; E. P. Fricke, Westbrook, Minn.; L. M. May, Gloms Ferry, Idaho.

—New: John Lindmark & Co., Rush City, Minn.; J. Moog & Co., Artas, S. D.; J. E. Beck, Oro Fino, Idaho; Dr. Harris, Hartline, Wash.

—J. C. Hening has gone to Albert Lea, Minn., to take charge of C. F. Town's drug store while the latter takes a vacation.

—The Ollie Smith Drug Co., Racine, Wis., has changed its name to the Spencer Drug Co.

—T. L. Irwin has gone to Dickinson, N. D., as pharmacist in White's store.

—E. B. Dunham of C. L. Dunham & Co., Farnam, Neb., has removed to Omaha.

—H. M. Gebbard of H. M. Gebbard & Co., Two Rivers, Wis., is dead.

—C. B. (Mrs L. W.) Koch, Lidgerwood, N. D., will remove to Kulm.

—P. O. Oliver of Dassell, Minn., was in the city on Thursday.

—J. G. Anderson & Co., Wadena, Minn., have added a news stand.

—Ben Bridgeport of Ord, Neb., has sold his branch at Sargent.

—W. B. Elliott has gone to Marietta, Minn., to work.

—C. D. Peebles, Ogden, Utah, has given a bill of sale.

## ST. LOUIS.

### TETANUS FOLLOWS THE USE OF ST. LOUIS ANTITOXIN.

St. Louis, Nov. 2.—A very serious and deplorable result has followed the use of antitoxin manufactured by the City of St. Louis. It is an occurrence which will prejudice the public against its use for many months and probably years. Early this week a child at the City Hospital under treatment for diphtheria with antitoxin, suddenly developed tetanus. An investigation was at once commenced, but within two days several other cases throughout the city similarly developed. The newspapers took it up at once, and it has been one of their leading sensational topics ever since. Up to date several deaths have occurred and a number of patients are in a serious condition. Three expert outside bacteriologists have been employed to assist in the investigation. The coroner, members of the City Board of Health, the city bacteriologist, and the Supt. of the City Hospital are doing everything in their power to develop the true facts in the case. The manufacture of antitoxin by the city has been stopped and all that had been distributed among physicians and not yet used has been called in.

As the matter now stands it seems that all the trouble has come from one drawing of serum from a certain horse. This drawing was made last August and was duly tested upon guinea pigs as is the rule—the material producing no bad effect upon them. Several weeks after this drawing of serum this horse developed some disease, and was condemned and killed. The facts this investigation is expected to establish are the following: whether the disease from which these patients have suffered or died is tetanus; if so did they become inoculated from the antitoxin? If this is established, the question will be how did the tetanus bacillus get into the antitoxin; whether the horse was infected with tetanus, or whether the serum was infected during the process of preparation.

### NOTES.

—The quail season opened in this state on Friday, and several of our local druggists were out bright and early to convince the "Bob-Whites" that they are no longer under the protection of the law. B. H. Plumpe of N. St. Louis returned early in the afternoon with five quail and two rabbits. L. A. Seitz and Thos. F. Hagenow invaded the prairie west of the city, each armed with a new repeating shotgun. Mr. Seitz has the reputation of being an expert "wing shot," but Mr. Hagenow has devoted his leisure time to fishing and this was his first adventure as a hunter. They returned about noon with one small quail which looked as though it had been bombarded with an old time swivel gun. They both claimed the bird but finally compromised by presenting it to president R. S. Vitt of the Retail Druggists Association.

—The members of the Druggists' Cockeyed Hat Bowling League got warmed up in good shape last Thursday night. The Mound City Paints took four games out of five from the J. S. Merrell Drug Co.'s team. This is the first victory of the season for this team. Meyer Bros. Drug Co.'s bowlers took all but one of the five games from the Herz & Frerichs team. The representatives of Moffit-West Drug Co. and Scarle & Hereth also played a four to one game the result being in favor of the former team.

—Judge & Dolph, 616 Locust street, are arranging to carry the largest stock of holiday goods of any druggist in this section of the country. It has been many years since the druggists have paid much attention to such trade, but this firm feels that their new location and commodious store room will justify them in reviving the custom of former years.

—At the Cote Brilliant always the Castor Oils and Epsom Salts held their usual Tuesday night jubilee. Quite a number of visiting druggists were present to see the Epsom Salts take all five games from the Castor Oils.

—A great many of the local retail druggists are becoming very impatient to have full prices restored. They

feel that there is no good reason why this can not be accomplished.

—Harry Physick for many years traveling salesman for the Meyer Bros. Drug Co. in the far Southwest, has gone into the proprietary manufacturing business at Marietta, Ohio.

—J. Haupt is opening a new drug store at Grand ave. and Connecticut street. For the past four years he has been chief clerk at Scheel's Pharmacy, Vandaverter and Russel avenues.

—Col. E. A. Richardson of Wells & Richardson Co. Burlington Vt., and A. R. Bremer of the A. R. Bremer Co., Chicago, have both been here this week looking after and increasing their advertising.

—M. C. Arendes, Jo. Kleib and H. J. Stalle, all of the J. S. Merrell Drug Co., have returned from a week's hunting and fishing trip at Pocahontas, Ark., where they were the guests of druggist W. H. Skinker.

—Southern & Ayres succeed Dr. L. M. Thompson at Atlanta, Mo. The doctor was recently appointed assistant physician at the State Insane Hospital at Nevada, Mo.

—Chas. Frick, prescription clerk at the Wolff-Wilson Drug Co. pharmacy, and Miss Anna Meise were married last Wednesday.

—Chas. Remington is embarking in the drug business at 5335 Delmar avenue. He has been doing relief work in this city for nearly twenty years.

—The St. Louis Drug Clerks Society will give their annual ball the latter part of this month. The date and place will be decided within a few days.

—Louis Pauge, the well-known city salesman for the J. S. Merrell Drug Co., has the sympathy of his many friends in the sad loss of his mother last Tuesday.

—Chas. Milne, formerly a local drug clerk, but now detail man for Eli Lilly & Co., is seriously ill with erysipelas.

—Messrs. Renckert & White have purchased the drug store at 3200 Chestnut street, from E. R. Drace.

—Geo. Paulus of the South Side leaves tonight for a week's hunting trip in S. W. Missouri.

—W. E. Waldeck of N. Broadway brought in a bag of quail and meadow larks yesterday.

—Frank L. E. Gauss of the Searle & Herreth Co., Chicago has been looking after the office here this week.

—Drs. Cooper & McCray are opening a new drug store at Wakenda, Mo.

—Messrs. Benning & Underwood succeed J. A. Griffin at Callao, Mo.

—Ed. Nelson has purchased the Milan Drug Co. at Milan, Mo.

—Louis H. Fragser has been employed as traveling salesman for the Moffit-West Drug Co., in Arkansas.

—J. J. Kernan is now representing the Moffit-West Drug Co., in N. E. Missouri.

—L. Jones succeeds L. S. Deal at Macon, Mo.

## THE SOUTH.

### AN INSURANCE CASE.

Memphis, Oct. 21.—In the case of Hinton Drug Co. against the Queen, Home and Connecticut insurance companies, on trial at Dresden, Tenn., the jury reported in the drug firm's favor, awarding it the full amount for which it was insured, with interest. The J. H. Hinton Drug Co.'s store at Martin, Tenn., was burned about a year ago. The stock and fixtures were insured for quite a large amount, the three above named companies carrying most of it. When the time for settling came it was found that the drug firm was insured in a fourth company for \$600, and as one of the other three companies' policy contains a clause forbidding insurance with more than one company, all three refused to pay. The case was carried to the Circuit Court with the results stated.

### DRUGGIST FRANKLIN FINED.

Memphis, Oct. 31.—J. C. Franklin of Nashville, who was arrested for sending obscene matters through the mails, pleaded guilty before Judge Clark of the Federal Court, Oct. 24. The Judge took the case under advisement and the next day fined the guilty man \$1,700 and

THOMAS VOEGELI, Minneapolis.  
Second vice-President of the N. A. R. D.

costs, which were paid, and Mr. Franklin was then discharged. But his troubles were not to end there, as suit has been filed against him for libel. Mr. Cole, husband of the woman to whom he addressed the letters claims that in those letters Franklin said things derogatory to his (Cole's) character.

### NOTES.

—In a fire that destroyed nearly all of the thriving town of Lamar, Ark., recently, the drug stores of Dr. G. D. Iudleston and R. A. Morehead were completely burned out. The former's loss was \$3,000; the latter's \$500.

—Dr. W. J. Walker, druggist, of Tiptonville, Tenn., has opened a new drug store at Cronanville, Tenn. The pharmacy will be managed by Mr. Gates, formerly with Nalling, Union City.

—Joseph Yeiser and wife have returned from their honeymoon and are now at home to their friends. Mr. Yeiser is a member of the wholesale firm of Yeiser & McElrath, Paducah, Ky.

—Drs. D. A. & Hugh Nunn have purchased the drug business of I. N. Johnson, Halls, Tenn. The name of the firm will be Nunn Bros.

—Mr. Pickens, formerly traveling representative for W. N. Wilkerson & Co., has opened an up-to-date pharmacy at Adamsville.

—Singleton L. Easley, formerly connected with the wholesale trade here, is now travelling for Chas. Pfizer & Co., New York.

—Emmett Slater, who has been in Louisiana in the interest of the W. M. Drug Co., has returned to his old territory in West Tennessee.

—Your correspondent erred in last week's notes in giving Natchez, Miss. as the residence of the late S. Whitfield. It should have been Meridian, Miss.

—Jernigan & Co. have purchased the drug business of J. T. Lovell & Co., Obion, Tenn.

—Charles E. LeDuke, druggist, Tiptonville, Tenn., is opening a drug store at Blue Bank, Tenn.

—W. H. Gresham and wife, of Hornbeak, Tenn., have returned from an extended eastern pleasure trip.

—Dr. M. J. Alexander, Tunica, Miss., accompanied by his family was in the city last week.

—Feemster & Co. of Nettleton, Miss. have sold to P. V. Thomas & Co.

## NEW ORLEANS.

### WELL KNOWN DRUGGIST KILLED.

New Orleans, Oct. 31.—Mench Mercier, a well-known New Orleans druggist, was recently run over and instantly killed by an electric street car. Mr. Mercier operated a drug store at Jeanerette street and Carrollton avenue, in the upper portion of the city. It was just after the recent strike, and when news of the settlement of the differences between the employes and the company had been received, there was a considerable crowd in the neighborhood of the Carrollton barn to see the first car come out. Mr. Mercier was in the party and the accident was caused by a misplaced switch. As the car shot out of the barn it dashed over this switch and before the motorman could apply the brakes Mr. Mercier was knocked to the ground and had his head crushed. Mr. Mercier was 45 years of age and of one of the oldest families in the state. His death was deeply deplored by the drug trade generally.

### NOTES.

—The opening of the second year of the New Orleans College of Pharmacy was belittlingly celebrated at the new college building, 725 and 727 Camp street. Dr. P. Asher, dean of the college, reported that forty-eight students had enrolled themselves in the several classes. This number is a healthy increase over last year's matriculation. In addition to those reported there are also several who are awaiting the result of examinations, and it is expected that several will be added to this number.

—The new local quarters of the Parke, Davis & Co. agency in Camp street have been handsomely fitted up and have added not a little to the decoration of the street.

—The fight against cut rate prices and their demoralizing effects is going merrily along and with the general crusade of the N. R. D. A. early relief is looked for.

—Reports of local business are generally encouraging.

### THE HARDIN AND LANGSTON CASE.

Mr. F. C. Godbold, secretary of the Louisiana Board of Pharmacy, sends the Era the following communication from Henry L. Garland, Jr., the attorney for the Board, correcting several errors which appeared in a news item printed in this journal October 10, page 435, and which related the history of the case of the State vs. Hardin and Langston. The attorney says:

In the first place, Hardin & Langston were found guilty; in the second place the interpretation placed on act 66 of 1888 of the General Assembly of Louisiana by the Board of Pharmacy was emphatically sustained by the court. Accordingly it is settled that if the compounding pharmacist fails to place his name in full on the label containing the medicine prescribed, he is amenable to the penalties imposed by the statute. The case of State vs. Hardin & Langston warrants the imposition of the penalty also upon the proprietors of the store. This ingenious defense was made that the name of the compounding pharmacist must be placed on the prescription—meaning the paper on which the physician writes his formula, but the court properly interpreted the act as intended to protect the public by giving the patient full information as to the ownership of the drug store he was dealing with, and the name of the pharmacist who compounded the medicine he was taking.

This beneficent law has therefore been fully vindicated and the interpretation thereof by the Board of Pharmacy has been judicially sustained.

HONTHINE is a name applied to a preparation recently recommended as a substitute for tannin, (Merck, Annales) In chemical composition it is a ceratino-albuminous tannate. It is obtained in the form of a grayish brown powder, which is odorless and tasteless, and insoluble in water, but partly soluble in alcohol and dilute alkalis forming a clear brown solution. The astringent action of honthine is potent and certain, and the remedy is entirely harmless.

## PHILADELPHIA ASSOCIATION OF RETAIL DRUGGISTS.

### NOVEMBER MEETING.

The meeting of the Philadelphia Association of Retail Druggists Nov. 1 was fairly well attended and the record for work was well kept up. Six new members were elected and dues amounting to \$93.73 were reported for the month. The work of the "agent" now quite by the association, was reported to have been employed successfully in arousing interest among members and an important meeting of down-town druggists had been held under his charge. By a vote of the meeting his services were continued. An important announcement was made by the "telephone committee," that the members had been unable to secure sufficient support from local druggist to achieve their efforts for better commissions from the Keystone Telephone Co. and they have recommended that members should sign contracts individually for the best terms they could get according to circumstances. This recommendation was adopted then in form of a resolution. The "newspaper committee" reported that they had succeeded in having certain daily papers agree to the furnishing of a free daily copy to druggists having their advertisement agencies. Unauthorized interviews with druggists that had appeared in the "Press" during the month had been brought to the attention of the managers of that paper and they had agreed to submit the matter for correction to a committee from the P. A. R. D. This committee was ordered appointed by the President. The "entertainment committee" announced that they had arranged to give a "smoker" some time next month to be tendered to the druggists of Philadelphia by the P. A. R. D., at which every effort would be made to provide enjoyable entertainment for the guests. Due notice of time and place of this function would be given.

The delegates to the convention of the National Association of Retail Druggists at Buffalo presented their report through chairman J. C. Perry. A summary of the more important proceedings of the convention, the resolutions adopted and the reports of officers was given, with reference to the policy adopted to govern the N. A. R. D. for the coming year, and various incidents of the sessions were commented on. The delegates made several recommendations to the meeting, the most important of which was that the work of local organization be taken up immediately and pushed until every desirable member had been secured. The report was concluded with an appeal to local members to give earnest and loyal support to the "Tripartite Plan" and to the newly elected national officers by being alert to note violations of the plan and to refuse to support proprietors or jobbers who violated its provisions in letter or spirit.

President Rumsey reported to the meeting that in accordance with his instructions last month to select a time and place for the next "Euchere" that he had engaged Mercantile Hall, the same place as last year, for February 11, the Association to be given use of all conveniences, etc. Mr. Eppstein then stated that the work of securing advertisements for the programme for the next "Euchere" was progressing favorably, several hundred dollars' worth of advertising already being pledged. The usual quarterly contribution from the "Foodigest Company" was acknowledged by the Executive Committee and the thanks of the Association tendered to Mr. Cohen, president of the company. After routine work in approving bills for the work of the month and voting appropriations for future requirements the meeting adjourned, to meet Friday, December 6.

IYSOFORM is composed of formaldehyde dissolved in an alcoholic solution of sodium soap slightly perfumed (Apot. Zeit.). It is an almost colorless, clear liquid, having a slightly aromatic odor suggesting formaldehyde. The reaction of the liquid is strong alkaline.

JALAPIN is prepared by N. Kromer (Archiv.) as a glucosidal jalapinic acid having in combination three methyl ethyl acetic acid residues.

### NEW DRUG INCORPORATION.

Los Angeles, Cal., Oct. 24.—Los Angeles has a drug incorporation with a capitalization of a quarter of a million dollars. It will do business under the name of the Sun Drug Company and will include six leading retail druggists.

Articles of incorporation of the new concern have been filed. The firms included in the combine are Wolf & Chilson, C. Laux, Ellington Drug Company, J. T. Trout, Frank Owens and Frank N. Drake.

The incorporation is for fifty years, and there are ten directors of the concern, they having already subscribed \$104,001 of the capital stock. The names of the incorporators and the amounts subscribed by each are as follows: C. Laux, \$25,000; F. C. Wolf, \$20,000; H. G. Chilson, \$20,000; Mrs. E. P. Trout, \$15,000; A. W. Ellington, \$12,000; Frank D. Owen, \$5,000; M. G. Eshman, \$4,000; Frank N. Drake, \$3,700; J. H. Trout, \$100; Charles F. Dollinger, \$100, and Curtis D. Wilbur, \$1. All of the incorporators, with the exception of Mrs. Trout, are directors each one holding as many shares in the incorporation as he has subscribed dollars.

This combine is said to be the first of its kind ever formed among retail druggists in the United States. There have heretofore been combinations of grocers and other merchants in several of the eastern cities, but never a combination of retail druggists. The object of the incorporation is to reduce expenses of operation, thereby enabling the incorporators to sell goods at lower prices.

### OHIO BOARD OF PHARMACY.

The Ohio board of Pharmacy has completed the grading of papers submitted at the examination on Oct. 8 and 9 of applicants for certificates as pharmacists and assistant pharmacists. It will be impossible for the secretary of the board to prepare and distribute the certificates before two weeks or more have passed. The next examination will be held in Columbus, Jan. 14 and 15, 1902. The members of the class who will receive certificates entitling them to practice pharmacy are:

Moore L. Plummer, Sardinia; Harry E. Townsend, Zanesville; William D. Starling, Payne; Homer D. Kyle, Richwood; T. C. Williams, Wellsville; George E. Whipple, Jr., Athens; Frank J. Kapp, Cincinnati; Martin A. Thompson, New Holland; H. R. Burkitt, Dayton; Will H. Alcock, Toledo; J. Irving Wilson, Marietta; Frank J. Schaff, Napoleon; Henry H. Meyer, Napoleon; Charles G. Reed, Inondale; Harry G. Morse, Huron; Fred A. Roush, Pomeroy; Charles R. Wilson, Ada; Julius A. Kling, Cincinnati; Frank R. Valentine, Belle Center; C. L. Wamsley, Waldo; Luther M. Cooley, Toledo; E. B. Parker, Toledo; M. Norton Henry, Ada; L. F. Frederick, Bridgeport; H. R. Hamilton, Lisbon; C. J. Harris, Cincinnati; Ora A. Shrock, Leetonia; J. L. Mills, Cardington; Frank Noble, South Charleston; George W. Freund, Portsmouth.

The following passed satisfactory examination as assistant pharmacists:

Samuel S. Firth, Cleveland; Ike Lehenburger, Piqua; Albert Edelstein, Cleveland; John H. Gertler, Ozark; Josiah Jepson, Jr., Gallion; Perry E. Powell, Kenton; James E. Ziegler, Cleveland; Martin Murray, Cincinnati; Arthur H. Thomas, Columbiana; W. S. Henderson, Columbiana; Walter L. May, Delphos; William H. Shanks, Wellsville; E. E. Wilson, Marietta; Edward W. Sipp, Steubenville; Frank Bolles, Bowling Green; H. Leslie Guthrie, Conneaut; Carl H. Pfandermeier, Cleveland; J. H. Howson, Chillicothe; John L. Kerr, Ravenna; Magdalline L. Schreck, Cincinnati; C. L. McFarlane, Bridgeport; H. S. Kendrick, Lockland; William Wagner, Jr., Elyria; John D. Horn, Delaware; Maud Johns, Dayton.

The following will be given certificates as assistant pharmacists on their pharmacist examination at their own option:

Ernest Ashabran, Ada; S. E. Lewis, Columbus Grove; Fred M. Weber, Akron; C. F. Schwilk, Upper Sandusky; Charles F. Fink, Oliveburg, Pa.; Aden C. Nash, Amelia; Oscar Emerine, Tiffin; C. F. Franke, Wapakoneta; James Bates, Cleveland; William H. Gansz, Cincinnati; LaDu Roberts, Marysville.

—E. Berger of Tampa, has been elected secretary of the Florida Board of Pharmacy to succeed Thos. Clarke. At a recent examination, Thos. V. Hannah of Pensacola, Fla., and David W. Budd, of St. Petersburg, Fla. were awarded certificates of registration. Since the big fire, some time ago, that destroyed all records, Mr. Berger has had his hands full trying to reunite the broken threads. In a recent communication, he says: "All of our records were destroyed in the Jacksonville fire, and we are working very hard to get up a new register. I have a list of all the registered druggists up to and including Jan. 1, 1895, and am anxious to have any druggist holding a certificate from our board notify me, giving me the date of the certificate and stating whether he qualified before the law went into effect, or whether the certificate was granted on diploma or by examination, and furnishing an affidavit to this effect. The Florida board does not hold any meetings, applicants can go before any member of the board at any time."

—The Oklahoma Territorial Board of Pharmacy met at El Reno, Oct. 8 and the following, out of a class of 28 applicants, were granted certificates of registration: Robert B. Bryan, Glencoe; T. G. Hinton, Lawson; J. M. Jackson, Lawson; Wallace A. Mann, Shawnee, O. T. The next meeting of the Board will be held at Enid Jan 14, 1902.

CASPAR'S PHARMACY. A treatise on Pharmacy for Students and Pharmacists. By Charles Caspar, Jr., Ph. G., Professor of the Theory and Practice of Pharmacy in the Maryland College of Pharmacy. New (2d) edition, revised and enlarged. In one octavo volume of 774 pages, with 301 engravings and a plate of portraits of the leaders in pharmacy during the last half of the 19th century. Cloth, \$1.25, net. Lea Brothers & Co., Philadelphia and New York, 1901.

This treatise is already well known to the pharmaceutical world, the excellence of the first edition at once won for it a high position among the standard literature of the profession. It contains in a single comprehensive volume the body of information which constitutes the science and art of pharmacy. The call for a second edition has given the author an opportunity to thoroughly revise the book and bring its various subjects up to date and to add such new material as experience has suggested.

The work is intended to supply students of pharmacy with a text book which is comprehensive and at the same time of reasonable size. By excluding all material which is readily accessible in the Pharmacopoeia and other books usually found in drug stores, the author has been able to compress into 774 page that portion of the immense volume of pharmaceutical literature, which is essential to the practical pharmacist. The subjects treated are grouped in three divisions: general pharmacy, practical pharmacy, and pharmaceutical chemistry. The book is admirably adapted to the purpose which it is intended to serve, that is, to give aid and instruction in the study and use of the Pharmacopoeia. The author answers in a clear and concise way the many questions with which students and practical pharmacists are daily confronted. In the preparation of the second edition the original plan of the work has not been changed, but several chapters have been largely re-written while others are more or less extended. The addition of a new chapter on Prescriptions, and another on the Assay of Alkaloidal Drugs, should prove especially acceptable to students. The volume presents a handsome appearance, the text being well supplied with illustrations, and the printing and binding leaving nothing to be desired.

## E. R. SQUIBB & SONS

NEW YORK

### Compound Alum Powder

### The Liquid Carbonic Acid Mfg. Co.

We again point our readers to the handsome colored insert of the LIQUID CARBONIC ACID MFG. CO., between pages 554 and 555 of this issue. The handsome reproduction of the "Japanese Kohinor" fountain is one of the best specimens of tri-color printing which we have seen. When we consider that all of the varying shades in this picture are produced in only three printings, we cannot help but marvel at the strides made in this art in the past seven or eight years. The first three color prints ever shown this side of the water were exhibited in the German Department, Manufacturers' Building, at the World's Fair. The three colors used in printing are yellow, red and blue, the prime colors of the spectrum. The plates are super-imposed in printing to exact register, and the effect of the finished picture is most remarkably true to the original.

The "Wabash."

The Japanese Kohinor is a striking departure from the old conventional lines in fountain building. The "Kohinor" or fountain proper, in this particular instance, is gold plated, but is furnished regularly in onyx, mahogany and silver. The superstructure is carved, and electric lights placed in such position that the whole apparatus lights up most beautifully. The fountain is of the new revolving type, and contains six porcelain lined syrx jars mounted on roller bearings; two Geysler lever mineral drafts, and one Geysler lever soda draft. The apparatus must be seen to be appreciated.

The designs built by the Liquid Carbonic Acid Mfg. Co., are all right in every respect, and the line comprises the most inexpensive as well as the most elaborate and costly fountains in existence. Catalogues and handsome photographic reproductions of the new designs of this company will be sent to dispensers on application. The soda water business is an exceedingly lucrative business, and the dispenser to be wholly successful must keep constantly in touch with down-to-date methods. If you are operating a fountain which is not the most modern and convenient in every way, we believe it will pay you to purchase one of the new designs of the Liquid Carbonic Acid Mfg. Co., trading your old fountain as part payment therefor.

The reverse of the advertising insert this month is occupied by the engraving and description of the "Liquid" Onyx Hot Soda Draft. The hot soda business is rapidly coming to be an important feature, and a handsome apparatus is a medium that brings trade not only to the soda counter, but to the other departments of the store as well. The "Liquid" Onyx Hot Soda Draft is, as the name implies, built of the most handsome selected Peñarra onyx and heavy silver plate. The circulating draft arm with which this apparatus is fitted makes it possible to draw hot soda continually whether the demand is great or small.

"Grape Kola" is also mentioned in this advertise-

ment, in the way of a gentle reminder that this most popular drink is exceedingly delicious served hot in Winter.

Write, wire or 'phone the nearest branch of "The Liquid" Company for any information you may desire.

### OBITUARY.

ALBERT A. LAING, a prominent druggist in Cambridge, Mass., died suddenly on Nov. 1 at his home in that city. In the morning he was about his pharmacy as usual, a place he has kept in Cambridge for fifteen years. During the forenoon he was taken ill and fainted. A customer happened into the store and discovering Mr. Laing's condition at once set about restoring him to consciousness. After he had somewhat recovered, the customer urged that he be allowed to summon a physician, but Mr. Laing would not hear of it. From that time on he suffered intensely and an hour afterward was sent to his home in a carriage. He there expired suddenly from heart disease. Mr. Laing was borne in St. John, New Brunswick, and was a little more than forty years of age. He came to Cambridge when quite young and has resided there ever since. He has been an important factor in politics for a number of years. His wife and one son, aged 11, survive him. He was a member of the Odd Fellows, the Five Associates (a real estate order), and was long a member of the Citizen's Trade Association.

### RESPONSIBILITY FOR THE DETAILS.

The old maxim that if you "take care of the pence the pounds will take care of themselves," is defensible when it comes to the matter of accumulating money through frugality alone, but when the sentiment is applied as advice to the building up of a business by a merchant's sole exertion, it fails. No man is great enough to manage single-handed, in all its details, a successful business of any kind. He must fail in some things and collapse finally, if he continues trying. We have reference here, of course, to a business of a steady and legitimate growth toward success—not to the phenomenal sort, instances of which we sometimes read about. It is pence that makes the pounds, but it is the pounds the successful business man must exert himself to take care of and not the pence, preferably. They must be left to the care of others, and it is in the selection only of the proper persons to "take care of the pence" that the wisdom and ripe experience of the master intelligence must concern itself first above all things. But, it is too often observed that the opposite effort is made. The merchant undertakes to do the service required of the lowest rated among his employes because he understands doing it better, overlooking the fact that his own more important service is neglected that the small matter may be done right. There's where he is wrong. The little things would be managed all right if the managers were wisely selected with a view to their competency and trustworthiness. There is no reason why the merchant should hold the clerk in leash beyond the limit of the responsibilities he intrusts him with. Let him, if still suspicious of the fidelity of his employes, delegate the duty of watching them to one he can trust. The commander of an army doesn't assume to direct the individual actions of his men, but he does note the conduct of his principal officers, when he wants his men to act. So it should be with the employing merchant—he will find enough to do to look after the "pounds," or, in other words, the greater affairs connected with his store.—(Show Window).

### Druggists' Aprons.

An apron that is easily and quickly adjusted and that will keep the clothes clean is made by E. C. Moore & Son, Detroit, Mich. There are no buttons or strings on this apron and it seems to be just the article for a druggist or drug clerk, for it can be adjusted in a second and the man at the prescription counter called to the front store can always go with clean clothes. Moore's Universal Spring Apron costs only 75 cents, and if 14 cents additional is sent for postage, E. C. Moore & Son, Detroit, will forward it to any address.

UROL is the name of a preparation recently proposed by Von Noorden (Apot. Zeit.) as a remedy for various diseases due to uric acid diathesis. It is a chemical compound of quinic acid and urea, and occurs in hygroscopic crystals which are readily soluble in water and dilute alcohol.

—At the meeting of the Kentucky Board of Pharmacy on Oct. 8, C. S. Porter of Somerset, qualified by appointment of the governor as a member of the board, succeeding Prof. C. Lewis Diehl of Louisville, whose term of office had expired. Addison Dimmitt of Louisville, was elected president; J. W. Gayle of Frankfort, was re-elected secretary, and J. E. Stormes of Lancaster, was re-elected treasurer for the ensuing year. The next meeting of the board will be held at Newport, Jan. 14. The following passed successful examinations at the last meeting: E. A. Lex, Louisville; V. R. Beck, Valley View, Ky.; Harry C. Casseldine, Georgetown; Arthur Kipp, Louisville; J. E. Kreckel, Louisville; C. B. Waring, Ceredo, W. Va.

## First Class Confectionery.

When a customer goes into a drug store for confectionery, it is usually with the thought that the best grade of goods will be procured. The call for Trowbridge's Original Chocolate Chips should find the druggist prepared to meet it. The demand for this delicious chocolate confection is increasing and druggists especially are having increased sales. The name of the maker is on every chip. Sold by jobbers. Made by the Trowbridge Chocolate Chip Co., Meadville, Pa.

# MARKET REPORT.

INDEX TO THIS NUMBER.

## NEW YORK MARKETS.

### MARKET MODERATELY ACTIVE.

New York, Nov. 5.—A moderately active market is reported with consuming channels absorbing a fair amount of stock and the undertone continues steady.

**OPIMUM.**—There is no improvement in demand and the market remains quiet with jobbing quotations unchanged at \$3.25@3.50 for per cent and \$3.45@3.60 for 11 per cent. Powdered is moving fairly in small lots at \$4.00@4.60 for 13 per cent, \$4.75@5.00 for granular and \$5.00@5.25 for 16 per cent.

**MORPHINE.**—A continued fair demand is reported with prices steady on the old basis of \$2.20@2.40 for eighths, as to brand, less the usual rebate of 10c per oz. on lots of 10 ounces or over.

**QUININE.**—Only routine sales are reported, but values continue steady at the recent advances to 25c for bulk in 100-oz. tins, 25½c in 50-oz. tins, 30c. in 25oz tins and 36c in ounces.

**CODEINE.**—Competition among makers continues keen and the market is unsettled, but jobbing quotations are nominally unchanged at \$4.25@4.50 for pure in ounces and \$4.50@4.75 in eighths. Sulphate, 45c. less.

**MANNA.**—Small flake is firmer owing to unfavorable crop news and jobbers have advanced quotations to 40@45c.

**OIL SWEET ALMONDS.**—Foreign markets are lower and spot quotations for jobbing quantities show a decline to 55@60c. for true and 35@45c. for French.

**OIL PEPPERMINT.**—Under the influence heretofore noted jobbing prices have been further advanced to \$1.80 @2.15 for Western, \$1.90@2.25 for Wayne Co., \$2.15@2.25 for H. G. LEMONGRASS.—Owing to scarcity both here and at producing points quotations have been marked up to \$2.50@2.75.

**OIL WORMWOOD.**—A decidedly stronger market is noted with jobbing prices showing an advance to \$7.00@7.50 for prime and \$6.25@6.75 for good.

**OIL CAJUPUT.**—Holders are somewhat firmer in their views and quotations have been advanced to 70@78c.

**COCAINE.**—Manufacturers have reduced their quotations 25c. per ounce and the revised jobbing range is \$5.50@5.75 for large crystals and \$5.25@5.50 for small.

**CITRIC ACID.**—Trading is slow and manufacturers' prices are 1c. per lb. lower. Jobbers quote 2½c by the keg and 40@44c for less.

**CAMPHOR.**—The market is seasonably quiet and domestic refiners having reduced prices 1c per lb. jobbers will sell at 56½@57c in barrels, 57½@58c in cases and 61@65c in smaller quantities.

**BALM OF GILEAD BUDS.**—Stocks are exceedingly small and jobbers have advanced quotations to 45@60c.

**FRUSSATE OF POTASH.**—Yellow is easier and jobbers have reduced prices to 22@25c.

**BEESSWAX.**—Supplies are light and market firmer with jobbing quotations advanced to 38@40c for country and 40@45c for city.

**GUM CHICLE.**—Primary markets are easier and spot prices for jobbing quantities have declined to 40@45c.

**UNION SALAD OIL.**—Manufacturers' quotations are lower and jobbers have reduced prices to 47c by the barrel and 58@65c for less.

**LITHIUM CARBONATE.**—Jobbing quotations have been reduced to \$3.40@3.75, as to size of order.

**COCA LEAVES.**—Primary markets are reported decidedly stronger and jobbers have advanced spot quotations to 35@40c for Truxillo and 45@50c for Huanuco.

**GUM GAMBAGE.**—Owing to scarcity and higher markets abroad spot values for jobbing quantities have been marked up to 70@80c for whole and 80@100c for powdered.

**LARKSPUR SEED.**—Market again firmer with quotations for small lots further advanced to \$1.25@1.40 for whole and \$1.30@1.50 for powdered.

**SUNFLOWER SEED.**—Supplies are more abundant and prices have declined to 3½@4c by the bag and 7@10c for smaller quantities.

## THE WHOLESALERS AND THE TRIPARTITE PLAN.

There is still considerable dissatisfaction among retail druggists in certain sections of the country with the National Wholesale Druggists' Association for failing to adopt drastic measures for the discipline of violators of the tripartite agreement.

The writer of a letter which appears upon another page of the present issue, in discussing the necessity of recognizing the community of interests which all branches of the trade have in common, takes the wholesalers severely to task for not taking their share of the responsibility for what he calls the failure of the tripartite plan. According to this writer, the utterances of the various members at the convention at Old Point Comfort indicate a desire to wash their hands of the whole matter, and leave all of the work of making the plan now in force serve the purpose for which it was designed to the retailers. He charges this branch of the trade with inconsistency, the expressions of surprise at the patience of the retail druggists and the hope that they would severely discipline delinquents not being in harmony with the disposition to leave them to fight their own battles.

In view of the fact that the tripartite plan has been on trial only a little more than one year, and that good results have undoubtedly followed the employment of the measures which it provides, it may be suggested that the writer of this letter and his brethren who are of a similar opinion are possibly just a bit too impatient. The conviction of the majority of those present

at the Buffalo meeting of the National Association of Retail Druggists seems to be that the tripartite plan is very far from being a failure. Reports have been received from St. Louis and other western cities which show that the increase in profits to retail druggists, directly attributable to the influence of the plan, amounts to thousands of dollars. It is impossible to ignore the expressions of confidence which are constantly coming in from different parts of the country. A method which accomplishes such results and holds the confidence of a majority of the trade cannot justly be considered a failure.

On the whole, it is also somewhat difficult to consider the attitude of the National Wholesale Druggists' Association as being unfavorable to the wishes of the retail trade. The sentiment, so far as this is indicated by the utterances of those present at the convention at Old Point Comfort, is practically unanimous in condemning any failure on the part of wholesalers to live up to their part of the agreement. The resolution providing for the expulsion of members who proved untrue to their promises, was favored by a majority of those present, and failed of adoption for what seems to be a very sufficient reason. The desire to avoid the charge of coercion appears to have been a valid reason for placing this question in the hands of the authorities of the Association.

It must also be admitted that the power of the wholesalers to force members of their branch of the trade to fulfill the terms of their agreement is very limited, as compared with that of the body of retail druggists. The penalty which the Association can inflict is no more severe than expulsion from the organization. The retail druggists, on the other hand, have the power of withholding patronage, and the business of the retailers is of vastly greater importance to the jobber than membership in any organization. The power of the retail druggists to compel the jobbers to agree to any plan is almost unlimited, so long as there is unity in the ranks. But the action of a mere 5 per cent can accomplish nothing unless they succeed in gaining the support of their fellows. The one thing necessary for the success of any plan is unity of action. Organization must be thorough and efficient. Druggists must be made to take greater interest in matters which affect them in common with all other members of the trade. That an improvement in the unfavorable conditions under which the retail trade is now suffering is possible, is proved by the success which has been achieved in the sections where organization is most complete.

This writer proves that there is a community of interests between the retail and wholesale branches of the trade; the reasons why druggists doing a retail business should cooperate are still more obvious.

### THE PURPOSE OF PHARMACY LAWS.

The pharmacy laws which are in force in the various States at the present time are the result of a process of selection and elimination. The different provisions have been gradually developed and have undergone such modifications as experience has shown to be desirable. No doubt these laws are still far from perfect, and will later be subjected to further change and improvement. Much still remains which might be improved, but it is doubtful if any law will ever be framed which will accomplish the results which a writer of a letter appearing upon another page of the present issue seems to think pharmacy laws should accomplish.

It seems that in the town where this writer conducts a retail drug business, clerks bearing the proper certificates of registration are scarce, and those who are available are unusually unreliable. He finds fault with the laws because he is not permitted to employ pharmacists registered in other States, but is compelled to accept those who are worse than unfit for the duties of the dispensing pharmacist, although they bear what he calls a "guarantee" from the authorities of the State. He thinks there must be something wrong with a law which allows unreliable and drunken men to hold certificates of registration, while competent persons registered in other States are not permitted to practice.

It seems that the writer of this letter is expecting somewhat more from pharmacy laws than most people. As the matter is commonly understood, these laws are intended primarily to protect the public from errors in dispensing due to ignorance of the nature of the materials handled. It is not usually considered within the scope of the law to prevent errors which are due to carelessness, drunkenness or other forms of moral delinquency. In some States the boards of pharmacy may require an affidavit of proper moral character before a certificate is granted, or may even revoke a license in cases of known unfitness. But no board could undertake to guarantee the continued good conduct of those whom they examine.

Unfortunately there is at present no means of preventing moral degeneracy in pharmacy any more than in other walks of life. A locomotive engineer to whose charge many lives are daily entrusted may, although properly qualified as far as mental equipment is concerned, cause great harm through carelessness or drunkenness. The authorities try to protect the public from disaster by carefully selecting the men employed, and by means of punishments for past offenses, but it is impossible to predict the future conduct of any one, and no laws or rules, however perfect, can absolutely guarantee the public safety. In view of the fact that the druggist in question knew that many clerks were unreliable, he is himself not entirely without fault in entrusting his store to persons whom he had reason to believe were not perfectly reliable without at least a short period of probation.

### ANTIVENENE THE NEW REMEDY FOR SNAKE BITE.

The progress made in the treatment of the bites of poisonous snakes by means of antivenomous serum has been noted from time to time in our columns. From recent reports it seems that the success of Dr.

Calmette's antivenene in saving life is not disappointing to the most sanguine expectations. Two cases of recovery from the bite of the deadly cobra of India bear witness to the importance of the discovery.

A doctor recently administered the serum to a Hindoo woman who had been bitten by a large snake, and was apparently in a hopeless condition. The effect of the remedy is described as marvellous, consciousness returning in fifteen minutes, and the patient recovering completely within three hours. The discoverer of antivenene was not quite so fortunate. He was recently bitten by one of the cobras which he keeps for experimental purposes in his laboratory. Although the serum undoubtedly saved his life, it has been found necessary to remove the extremity of one of his fingers.

It now seems probable that the use of this serum will prove to be the means of saving thousands of lives annually. The number of deaths caused by the bites of poisonous snakes in tropical countries is surprisingly large. Among ourselves, where the idea of snake bite is associated with humorous allusions to liberal doses of spiritus frumenti, it is difficult to realize that in some parts of the world this is a common and constantly dreaded cause of death. The discovery of antivenene seems destined to rank with the highest achievements of medical science.

### A GOOD YEAR FOR DRUGGISTS IN POLITICS.

The lists of successful candidates in the recent elections contain an unusually large number of names of druggists. We have frequently had occasion to call attention to the prominent positions which members of the drug fraternity hold in their various communities, but this year seems to have been exceptionally favorable to the political ambitions of the pharmacist. The newly elected mayor of one of our large cities and a number of members of various legislative bodies are representatives of the drug trade. The pharmacists of the country have long been receiving a considerable share of the attention of the law makers. It appears that now they purpose taking a hand in the making of laws themselves. The legislative duties of our body politic were formerly considered the especial function of the legal profession, but of late business men have taken a larger share in the deliberations which are of vital importance to all members of the community. In the discharge of their new duties, these business men trained in the profession of pharmacy may be safely depended upon to acquit themselves with dignity and honor. It will doubtless be a source of satisfaction to the pharmacists of the country to know that they have in their legislative bodies representatives who are keenly alive to the interests of their profession.

### THE ERA COURSE IN PHARMACY.

On another page in this issue are printed the names of the graduates of the October class of the Era Course in Pharmacy, and we take this opportunity to extend to these students our congratulations upon the successful completion of their work. We are satisfied that they have gained a good amount of sound information from the lectures and the knowledge is of a character that will stand them in good stead throughout their entire professional experience.

## ERA COURSE IN PHARMACY.

## List of Graduates for October, 1901.

| Matriculation Number.                                                   | Grade. |
|-------------------------------------------------------------------------|--------|
| 2772 Erhardt Peterson, Hempstead, L. I., N. Y.                          | 78     |
| 2778 Svea M. Erickson, 645 W. Chicago Ave., Chicago, Ill.               | 80     |
| 2859 George A. Nagel, Ravenswood, L. I., N. Y.                          | 83     |
| 3062 L. J. Trophy, 382 Ninth Ave., New York City                        | 89     |
| 2513 Mrs. M. H. Dickerman, Nevada City, California                      | 89     |
| 2624 Fred. A. Shelley, 444 Main street, Medina, N. Y.                   | 95     |
| 2707 Wilfred E. Graves, Keeseville, N. Y.                               | 90     |
| 2678 E. H. Higgins, Hopkinsville, Ky.                                   | 88     |
| 2580 Dolphus Whitten, Prescott, Arkansas.                               | 90     |
| 2768 James C. Mara, 205 Main, Norwich, Conn.                            | 98     |
| 2667 Carl W. F. Cramer, McEicken Ave. & Mohawk Place, Cincinnati, Ohio. | 80     |
| 2885 John M. Boyd, Sulphur Springs, Texas.                              | 83     |
| 2867 Marvin Earl Pate, Slaughterville, Ky.                              | 90     |
| 2879 E. L. Brown, Corning, Ark.                                         | 92     |
| 2519 Winifred M. Miller, 128 S. Swan street, Albany, N. Y.              | 83     |
| 2733 William Hymen Murphy, Wellston, Oklahoma.                          | 80     |

The above graduates will receive diplomas within a short time. A large and very handsome engraved diploma, printed on artificial parchment, with the graduates name engrossed, especially suited for framing will be furnished to all who request it for the sum of \$2.00. Those who desire the letter should forward the necessary fee at once, to the Pharmaceutical Era.

## OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

## OHIO IN THE N. A. H. D. CONVENTION

Cleveland, Nov. 6, 1901.

To the Editor: In your issue of Oct. 31st, I note a communication from W. Bodemann, dated Chicago Oct. 23rd, wherein he makes use of the following statement: "Ohio filed notice, unless you adopt our scheme we will quit." In proof of the incorrectness of this it is only necessary for Mr. Bodemann to refer to the stenographer's minutes. What Ohio did state is that if the gentlemen who were opposed to the Worcester Plan attempted to "smother" a full and complete investigation of the merits of price protection or attempted to "pigeon-hole the question by referring for future consideration", the chairman of the Northern Ohio contingent would not be responsible for the future action of his constituents; stating expressly that all he asked was an open and above-board investigation by the delegates present and fair play, which manly avowal was greeted with an outburst of sounds more akin to the utterances of reptiles than liberty-loving Americans. Respectfully yours, E. R. COOPER.

## PHARMACY LAWS AND CLERKS.

Chicago, Ill., Oct. 28.

To the Editor: Is there not something lacking in our Pharmacy laws? It seems so to me. In fact, it has been demonstrated to me quite forcibly during the past two months, to my sorrow.

Clerks are a scarce article, and to get a good reliable man is next to an impossibility. There are parties holding certificates of registration, and who will make application in reply to your advertisement for help, but who, in a great majority of cases, are far from being worthy of them. There are others who have no certificates, but are perfectly reliable, trustworthy and No. 1 clerks in all respects. Yet the latter are barred from employment, and the druggist from their help, because they are not registered in this State; while the clerk who is registered in this State walks about with his certificate in hand, and you must either give him employment or do without a clerk, no matter how much of a degenerate he may be.

The present law was framed ostensibly for the protection of the public and the pharmacists in order that only those persons who have received the proper education and can show suitable proficiency shall handle drugs, dispense prescriptions, etc. So far, so good, but how about the man with a certificate whose brain is befuddled with "Booze" or "Drugs"? Is he capable of so performing his duties to the public that no harm will befall them? Yet he is armed with papers that guarantee him to be qualified for this service. Something is wrong somewhere! I wish to state my experience during the past few months with "guaranteed" clerks.

About September 1st, I engaged a man provided with one of these "guarantees" and fully registered. I left him in charge of my store and went away to a far country for a little vacation of two weeks, earned, as I thought, by hard work and close application. Upon my return, after a pleasant outing, what do I hear about my faithful steward? That he is a drinking man; that on the second night after my departure he was so drunk that he was unable to lock the store, and similar interesting stories. What a pleasant vacation I had! My second "guaranteed" man came to me after the first one left. Twelve days later, upon my return from the store after an afternoon off, at 6.30 p. m., I found my "S. G. M." drunk. Was the public any the safer because these two men were registered in this State? Was my business any safer or more prosperous? Well, hardly. Yet their certificates are supposed to show that they are the proper persons to compound drugs, dispense poisons, etc. I advertise for a clerk; one makes application. Among other questions, I ask him if he is registered in this State. "No, not this State", he replies, "but in Iowa, Missouri or Canada", perhaps. "Well, you cannot work for me; the law says so. You may be perfectly competent and all that a man can desire in a clerk, but unless you are registered in Illinois I cannot use you". Now, what am I to do? Try again until I find a State "guaranteed" man, with corn juice or drugs, he is still fit to handle drugs, etc., because he has passed the State Board and is "registered"?

It is all wrong, and some change in the law is needed. Not "once registered, always registered", as long as the annual fees are paid. You might quite as well say to a man, "You are registered; and although you may have become a fool or insane you will still be perfectly competent to fill prescriptions and handle drugs; and upon a small payment we will give you this privilege for a year, continuing to do so as long as you come out with your coin, notwithstanding the possibility of your having added other accomplishments such as the 'drug' and 'drink' habits." But don't do it; draw the line, and from year to year cut out these degenerates. Give the registered man from some other country or state a chance, if he can come without any of the above accomplishments. Root out the degenerates! PROPRIETOR.

## COMMUNITY OF INTEREST.

To the Editor: In his report at the recent N. W. D. A. meeting Chairman Shoemaker mentions "Community of Interest" and in so doing uses a phrase of the day of which we are destined to hear much in the future. Like all new theories there are many definitions given to it and at present they are as varied as the definitions of the word "Temperance". Perhaps the most practical definition of these three attractive words is found in the action of a group of railroads. Something over a year ago certain roads combined to better their conditions by means of "Community of Interest". There was no merging of corporations, no loss of individuality, but merely an agreement. The first act was to stop cutting of freight rates which they did without conflicting with the interstate law, but under an interpretation of it that gave them its protection. Next, they ceased secret discrimination (something not unknown to the drug trade). They agreed on a plan of material improvement of properties, improved the system of business interchange and transfer, and last but by

no means least, adopted a plan for advertising their contributory territory, and getting in closer touch with their shippers and general patrons. At the end of a year they had accomplished these things—Property values and volume of business increased, relations with both employees and patrons much improved, business details simplified, and profits greater than for years. That was true community of interest; but note where it commenced and ended. It commenced under the sanction of and with the help of the law, and ended in catering to the interests and securing the friendship of those even most remotely concerned.

Ahead of the drug trade stands the gate lettered "Community of interest." But unfortunately there intervenes a stretch of hard and rocky road. This road is littered with debris of selfishness, the rocks of distrust and the weeds of deception. First, the road must be cleared. How? By means of the strength of sincerity; and the strength of sincerity is self-sacrifice. But if we will look backward at the changes of the last twenty years and by this means measure the probabilities of the next twenty, we will see that what appears as self sacrifice now is merely necessity, an investment upon which all the future commercially depends. My life has been less than two score years, yet it contains all the past of the department store, cutter and mail order man. The first attack of the trade pirates was on the trade of outlying retailers, with the result that now in the cities many store buildings have been turned into residences, more are vacant, and the small merchant of twenty years ago is in many cases laboring like a slave in a department store, for a mere pittance. The line of attack has broadened. It is against the retailer still, but equally antagonizes the jobber, and even the manufacturer is within the coils of the octopus. Look at the shoe business. In the large cities two thirds of the retail stores are openly owned and run by manufacturers. They say the department stores forced them to it, and already some of the department stores own shoe factories. Attack is always against the point of least resistance and already it is concentrating against the jobber because he is the least indispensable and therefore the weakest.

It is hard to see the future if this tendency toward concentration is left unchecked. Gradually the circle will contract until all output is through the hands of great corporate monopolies which will also absolutely control production. In this scheme there will be no place for the independent merchant or manufacturer: they will tread the path that hundreds of small retailers have already trod, from independence to slavery. You may say that I am dealing with the far distant future, and you will leave the solution to those who may be living then. Stop! The wheel of so-called progress increases in speed amazingly. The changes of the next twenty years may be five times as great as the twenty past. If so, what will be the commercial conditions at the end of that time? Think carefully and decide for yourself. Don't put your thoughts on paper; you may be accused of yellow journalism or anarchy. Others say, this is "The tendency of the times," "Destiny" and so on, and that it is foolish to contend against fate. The Tories of Twenty-six said the same, so did the slaveholders in the Fifties. The country and at least the colored-slaves are free. That which man creates for evil man for good can destroy. Therefore that which now appears as self sacrifice is in reality self preservation. The first acts of sacrifice or preservation—call them as you choose—should bring a clear understanding of community of interest that we may practice it.

Community of interest among the jobbers, proprietors or retailers severally will accomplish nothing permanent. Community must include all the trade, it must include all of the great river of traffic, from its source in the laboratory and factory to its delta of forty thousand retail druggists. The first thing to do is to "clean house". Each branch of the trade must do its own cleaning. Let me treat of the three grand divisions in their order.

### The Proprietor.

This era of substitution and advertising must have shown every proprietor that merit as represented in his formulæ is not the chief consideration. He has seen that an article that merely has a name or appearance similar to his can make great inroads on his trade. He has learned that the confidence of the public in the statements of the retail salesman outweighs his strongest advertisement. For a time he saw the department stores handing out his goods when called for, and flattered himself that they would continue to do so. Now he sees the department stores and cutters not only substituting on everything, but they are doing what the rank and file of the retailers are not; actually manufacturing their own substitutes. He has not even the refuge of the non-secret business so far as they are concerned. He must regain the good will and trade of the legitimate retail druggists or lose his business. To regain that he must prove deserving of it. How? Either he must sell only to legitimate jobbing druggists who will join in and live up to some legitimate lawful plan to protect prices, or if the jobbers will not do so he must sell direct only to such retailers as will join in such plan. He must stop his abusive advertisement of the retail trade and if published warning against substitution is necessary, discriminate and direct such advertisements solely at the aggressive cutters and department stores. He must keep his goods at a price that leaves a fair margin of profit for the retailer and rid himself of the fallacious idea that a high list will do aught but increase substitution. He must withhold his advertising not only from publications that advertise cut prices but he must keep it from the press that vilifies capital and abuses protective combinations. He must stop throwing bouquets at the retailers from a distance but get out of his shell and go among them in person and find out just what manner of man the retailer is. If the average proprietor and jobber too—would turn drummer for two months in the year he would get some very profitable experience. He must show more willingness to join with the other elements of the trade in that which may be suggested even in an experimental way. He must drop the stock excuse of "Too much trouble", shoulder his full third of the burden and not make promises that he does not intend to keep.

He must let every one of his subordinates feel that the solution of trade problems is for them as well as for him. He must make them understand—especially his travellers—that he wants them to tell him the truth and that honest helpful criticism is desired more than "the flattery that falls softly on the ear". If he gives his "Boys" to understand that he who is fit to serve is competent to advise and that fear and respect are very different things, he will not only be surprised at the valuable information that will come to him, but his men will work harder for him than ever before. He must disabuse the retailers of the impression that he is controlled by the jobbers, and that they consider themselves—jobbers and proprietors—a socially superior class. There can be no caste in true community of interest.

### The Jobber.

First find the jewel of consistency. At the annual meeting one gentleman said: "That the solution of the whole matter lay in co-operation"—"He emphasized the fact that the remedy lies with the retailer". If the retailers have to apply the remedy where does the co-operation come in? The same gentleman says that—"the solution is not in force or legal statutes", but a little later another gentleman argues for the value of the rebate plan by quoting the legal decisions in its favor. Natural conclusion—Jobbers must have law but retailers do not need it, very complimentary to the retailers. Referring to violations of the Tripartite agreement by jobbers, the confessions are inspiring. Referring to the words of the retailers' representatives, a gentleman said, that he himself had "been surprised at the patience the retailers had shown, and he sincerely hoped the retailers would

apply the discipline that it was out of the power of the wholesalers to apply to themselves. "They held the club and he was glad they proposed to apply it". Another was—"gratified in the manner in which the retailers had taken hold of the matter and added his belief that they would be quite right not only to threaten but punish as well". Still another referred to some unknown jobbers as "Judas Iscariots"—"This reminds of Topsy's joyful confession:—"Hi, Golly, I's so wicked. Please lick me, Miss Lucy". And yet when a resolution was offered proposing that jobbers be expelled from the N. W. D. A. for "repeated violations" it could not pass.

Direct sales at best discounts appears to have been the chief commercial feature of the recent meeting. Whether the Tripartite plan will succeed seems doubtful to the Chairman of the Proprietary Committee even. But whether it does or not the rebate plan must be continued. There was a time when the retail trade thought the rebate plan was for their benefit, but they cannot see that it has affected them except to make certain goods cost them more and add to the trouble of keeping accounts. The published proceedings of the last N. W. D. A. meeting seem to me to be an acknowledgement that the rebate plan is only for the jobbers' benefit, and as its whole structure is based on direct sales what reason has the retailer to approve it?

The legitimate jobber has not a single antagonist in any branch of the trade. Not a man who does not acknowledge his necessity as a distributor to seven-tenths of the trade. When the powers that prey have caused the extinction of the jobber, seven tenths of the retail druggists will have disappeared. Confine sale at best discount to legitimate jobbers and none will complain.

#### What is Legitimate?

This question of direct sales is one that best brings out the definition of legitimacy. Is a wholesaler who owns and operates one or more retail stores legitimate? When a jobber so owning buys at best discounts and takes both profits through his retail stores, why should not the legitimate retailers that have to compete with those stores have the same privilege? The jobber may say that he was forced to take the stores under mortgage to protect himself from loss. Very good. But if they did not pay he would not keep them open, and if they do pay they are salable. It is the jobber legitimate who divides that best discount with a few pet customers who do not make one tenth of his business any more right on the jobbing list than the \$50,000 per year man who sells all his goods at retail? When an unknown man can make the rounds of the New York jobbers and buy from each and all except one a quarter dozen of a well known patent at dozen price without a single question being asked, how many legitimate jobbers are there in New York City?

I do not refer to the many violations of agreement in proven sales to people on the cut off list; they have been tacitly acknowledged. But the jobber must do more than stop selling to cutters if he really desires community of interest. A confession of weakness and invitation of punishment is unworthy of this great branch of the trade. The purgative power lies within itself. Penance, not punishment, is needed. The wholesaler has but to be simply true to name, true to himself and perceptive to his own fateful future if he is not. Until he is, it is merely playing with words to talk of "Community of Interest".

#### The Retailer.

He has not yet sufficiently broadened his commercial horizon. To be more explicit, he has not yet fully forged the link that connects profession and business. That link is solidarity. The jobbers and proprietors have it among themselves, and in it is their greatest advantage. So long as retailers association meetings are attended by five per cent. of the members—and nearly always the same five per cent.—they will accomplish but little. Each man must

realize his own importance more clearly. He must see that his business interests are not confined within the walls of his store but that wherever there is a meeting of retail druggists—even if it be a social gathering—there for the time being is his place of business. So long as he lives and works in isolation from his fellow tradesmen so long will he be powerless against the common enemy. He must throw aside that readiness to believe all that he hears of ill against his competitors. Let him realize that in all probabilities most of the "other man sells it cheaper" accusations are merely efforts to "Jew down" on the part of the customer. He is probably being subjected to the same misrepresentation. Give the other man the chance to deny or explain that you would like for yourself. Go to him either in his place of business or in meeting and have it out. You cannot very well punch a man by proxy, neither can you shake his hand in this way. And when you get close to him, hear his explanations and find what a good fellow he is, the anticipated punch will generally end in a hand clasp. Retailers cannot expect to unite in community of interest until they find amity for themselves. Get acquainted with each other, have your wives do likewise. Intercourse of a social nature brings a business-friendliness that acts as a great aid in keeping the other man straight—and yourself also.

Don't judge all proprietors and jobbers by the wrong-doers. Discriminate and give a fair show to those who are trying to be fair. Get personally acquainted with your jobber. Take your complaints direct to him. When you transmit them through subordinates they probably never reach him. Get acquainted with him and make him get acquainted with you. You may say perhaps, but there are others to deal with. And among the largest jobbers of the country are some of the most approachable, kindly and hearty of men. There would be more of the same sort if retailers had been less subservient and humble. If all the telephone wires of the country were to be severed for three months it would be a blessing to the business world.

Treat your employees the way I suggest that the proprietors treat theirs. Keep them posted on trade questions and ask them to do the same for you. Make them feel that they too are of some importance as solvers of trade problems. Don't try to get even with the man you used to work for by treating your clerks the way he treated you. Think how much more you would have done for him had his treatment been different. Wake up and spread out, enthuse a little. It may seem like self sacrifice at first but after the step is made you will find that it is not only profitable but that you have found a world of pleasure you never dreamed of.

No difference what the plan, it can only be successful through Community of Interest, but that cannot be truly had until each branch of the trade goes out upon the intervening road and removes the obstacles it has itself placed there. Set about in the right way, it will not be a hard task, it will not take long.

#### RETAIL DRUGGIST.

PANCREONE is a new product, resulting from the action of tannin upon pancreatine. It forms a grayish powder, which is without odor, and is only slowly attacked by the gastric juice. It is a powerful peptonizing agent, 100 grams of the white of egg treated with a slightly alkaline solution of one gram of pancreone, and the mixture kept at a temperature of 40 degrees C. during fifteen minutes, being peptonized to the proportion of 85 per cent.

DACRYODES OIL.—A new essential oil has been obtained from Dacryodes hexandra, by Schimmel & Co. (Ch. & Dr.) It is a pale yellow oil, having an aromatic odor, and appearing to consist largely of terpenes. Its specific gravity is .888. The entire-plant yields about 16 per cent. of this oil.

### GOLD FISH AS A SIDE LINE.

By J. P.

Are gold fish, as a side line to the drug business, a paying proposition? Decidedly yes, if the business is properly conducted. Location and competition are, of course, two questions to be taken into consideration. The class of patrons who visit your store must be appreciative of a nice fish display in their own homes, and take an interest in making additions to it from time to time. There is a certain class of people to whom the beauties of a home never appeal. If the majority of your customers belong to that class, don't try to handle gold fish for it won't pay. If, on the other hand, your customers are of the better class, people who delight in making their homes in every little way attractive; if your territory is reasonably large and the competition in the handling of gold fish comparatively small, then go in for it with might and main.

A globe or aquarium of nice gold fish is without doubt an interesting object in any home. The handling, care and selling of the little fellows will prove a very interesting divertisement from the dull routine of the drug business. Buy your fish, not a large order to begin with, in the fall of the year so as to be ready for business shortly after the soda season has closed. We usually figure on opening our fish display between October 1st and November 1st. This will apply, of course, only to the druggists in our northern section of the country, where the changes in the seasons are sudden and decided. Order your fish assorted, in sizes to sell for ten, fifteen, twenty and twenty-five cents, or for less, if you feel so inclined. The small sizes you will generally find to be in greater demand than the others. You may also order a few assorted silver fish; and don't forget the tadpoles. They are good scavengers, and a remark to that effect will generally sell one or more to all buyers of fish.

In globes we usually carry an assortment of six sizes, ranging in retail price from 15 cents to \$1.25; also a few aquariums. Ornamental castles and grottos run from ten to twenty-five cents in retail value. You can handle higher priced ones if you wish, but we find no call for them. You must also have on hand a few packages of pebbles and shells, and some of each in bulk as you will often be called upon to arrange globes for Christmas, wedding and birthday gifts. In such cases, you must first of all cover the bottom of the globe with pebbles and a few shells; then your castle with a bunch of grass; and, lastly, the fish. Fish food, in plain boxes, we buy in gross lots, attaching our own label with a neat advertisement.

Now that the goods have arrived how can we best display them? We have tried various ways, among which were the arranging of globes of various sizes, with their contents, ready for sale. This plan will work all right provided you have plenty of room for their display and sufficient help in the store to keep them thoroughly clean and inviting in appearance. As a general thing we have none too much help in our drug stores and plenty of work to keep all busy. Our plan of display is simple, yet all that can be desired. A large tank with running water completely fills one window. In this we keep our stock of small fish. Three good sized aquariums arranged along the soda counter contain the other three sizes, each by

itself. A large globe contains the small number of silver fish which we handle. The tadpoles we scatter promiscuously about in the different aquariums. In this way we have all the various sizes by themselves where they can be netted out at a minute's notice. It also keeps us posted as to the condition of our stock in the different sizes.

The care of the little fellows is a secondary consideration; I have found that the best way to care for them is to leave them to care for themselves. The water need only be changed every two to four weeks and food given every second or third day. Instead of expensive (with so many fish) fish food, I give them fresh oyster crackers. They like it and it makes a very cheap feed. It is a good idea to post yourself on the habits of the fish and the conditions under which they best exist, so as to be able to talk intelligently with those in search of information. Along this line, we have a neat little booklet published by the dealer from whom we buy our fish and bearing our name on the cover. It contains much interesting fish talk and advertises our goods. These we hand out to our patrons, and they aid our sales. The cost is small and the returns generous. We have also found it a good idea to allow people the full price paid for their small globes when they desire to purchase a larger one. They are then ready for more fish.

In conclusion, I have only to say be wide awake and progressive along the fish line and you will make your Dutchman's one per cent everytime, anyway you can figure it out.

### MISTAKES.

By J. M. MOSS.

Errors are made in the best regulated drug stores in the land, and often by the most competent clerks. There does not seem to be any formula extant that will prevent "breaks," and no human being is infallible. The man who expects to run a drug store without making mistakes is expecting too much, and the man who claims to do it is going too far. We all know that errors are not always due to carelessness; they are many times unavoidable, seemingly. But it is not the little errors that occur back of the dispensing counter, and which can often be covered up, but the big mistakes that I purpose to treat of in this article. The mistakes that are glaring in their bigness, that cause you to lose customers, and which can often be avoided by the application of a little tact-seasoned judgment. It is a mistake to show your temper when a woman asks for two 2-cent stamps, tenders a 5-cent piece in payment, fools with her packages until you get busy, and then calmly asks for her change. Remember, she is a woman; she wouldn't want that change if she wasn't, and that 5-cent piece will help to buy a 98-cent parasol somewhere.

It is a mistake to refuse to send a 5-cent package of salts two miles out in the suburbs; you may lose a customer by your conduct, and the druggist has always been considered a general utility man by the public, so keep up the illusion, it will pay you. It is a mistake to sell a complexion beautifier to a lady customer and guarantee results—good ones; it may fail to do its duty, and the woman-like, she will "simply hate you" forever afterward. It is a mistake to "call down" your clerk in the presence of a customer; the clerk will resent it, secretly, perhaps, but resent it he

The Era pays \$5.00 for each accepted contribution to this department. Proprietors and clerks are especially urged to relate their experiences and offer suggestions on all phases of the practical business side of pharmacy. Make your papers short, about 1,000 words (one Era page) in length.

will, and you will fall in the customer's estimation. Don't forget that your clerk is human, and that the customer knows it. It is a mistake to blow about what you did not have when you started in business and what you have now: your wife's money may have made you, and the man to whom you are talking may have heard all about it. It is a mistake to let a customer go out because you do not happen to have in stock the article he may want. Get it, if you can, and hand your man a line of talk that will make him forget the boy has gone. It is a mistake to substitute without the consent of the purchaser. I know a druggist who was honest enough to tell his customer that he did not have Blank's fluid extract of cascara sagrada when he might have given him an extract bearing any other label. His honesty secured him an account that now averages \$1.2 per month. It is a mistake to advertise that you have filled one hundred thousand prescriptions without an error. You do it because you think they will believe your statement; it is a reflection on the public's intelligence, so don't do it. They don't believe it, they know you are a liar.

It is not a mistake to be polite to every man, woman and child that comes in your store. It is not a mistake to have your windows washed as often as possible; people don't like to look through windows festooned with dirt, and seldom do. It is not a mistake to treat your clerk to continued doses of the Golden Rule. Make him feel that he is your companion to some extent, and not a machine. You can do it and still hold his respect and confidence. It is not a mistake to make concessions to your customers, to do every thing in your power to make their little visits to your store a pleasure, and to do thousands of little things which would fill a volume if enumerated.

This old world we live in is pretty grateful, after all, and it will smile on even the druggist if he will only give it plenty of encouragement. Now, I don't believe in unnecessary lying, but lies are indispensable, at times, in a drug store. If you must prevaricate, go at it gently, artistically, as it were, and you will usually come out winner. People hate a bad liar, a bungler, but, strange to relate, let him be an accomplished disciple of Ananias and he will be admired. I saw, not long ago, the following quotation on the letter-head of an out-of-town drug store. "We make errors, just as everybody else does; if we have made one with you, give us a chance to correct it, it won't cost you anything, and we will appreciate it."

A Boston druggist, who has recently returned from across the water, has become impressed more than ever with the enterprise always displayed by American tradesmen, storekeeper and the like, through a comparison with the peculiar and old-fashioned methods pursued by those in England, where the people are slow to adopt anything that is out of the ordinary rut. In the course of his travels, he stopped at Bradford, England, and to his amazement found a drug store which actually had an American soda fountain, a rarity in that country. Inquiry of the proprietor elicited the information that he had introduced this American innovation about two years ago and for a time no one would patronize his fountain, for such a thing as cool drinks is only a recently acquired luxury over there. Instead of encouraging the druggist's enterprise the physicians, particularly, vigorously protested against the introduction of such beverages as are ordinarily dispensed from a fountain, arguing that they would prove ruinous to the public health. However, a few persons were induced to partake of the new drinks, and they were followed by others until in time the druggist really built up quite a soda water trade among the people of the city. Now the most liberal patrons of his fountain are those very physicians who were so much opposed to the innovation in the beginning. One thing that struck this druggist as odd in his travels about England was that nowhere did he see the sign of the mortar and pestle, nor did he see the colored globes, so much used as an advertising-medium in this country.

(For the Era.)

## THE NEW DOCTOR.

By OLIVE GREEN, Whiting, N.H.

As if a new doctor would make much difference in a little town where one doctor has been located for twenty years! Every year, or perhaps twice a year, some of the new doctor will stop off for an indefinite length of time, but this one had stopped off to stay.

A druggist always fights for his doctor, but at the same time I thought this doctor would only stay a week or two and it would not do our doctor an injustice to treat the new doctor with due respect. The first thought that came to my mind was—is he one of those doctors who carry their own medicines? Not a month before he came, I thought it would be very easy to talk a doctor out of carrying his own medicine and that it was a druggist's own fault if the doctor still persisted in doing so.

The new doctor called in to see us. He was very friendly, very polite and very determined. He had ordered a few drugs to be shipped to our own town; had he known I kept such a nice clean stock of drugs,—that is, for a little village,—he never would have ordered drugs sent, but just as soon as he used those drugs up, he would write prescriptions and send them in to me to fill. In the meantime, he would need a few drugs and would get them from me.

He succeeded not only in getting drugs but also labels, boxes and bottles for what drugs he had. About half the doctor's time was spent in our store getting acquainted with our customers and with our doctor's patients. Day after day went by; a week passed; just one prescription from the new doctor was handed in for me to fill. Another week passed; the doctor came in two or three times a day but the prescriptions were slow, very slow in coming. Every time the doctor came in, I would tell him how I was waiting for some of his prescriptions to come in. He would say, "Well, Miss Druggist, the prescriptions will come in fast after awhile".

I began to think he would take his departure from our little town. But, alas, a new broom sweeps clean; the new doctor had come to stay awhile. Some influential people took him up and worked hard for him. Although he is not nearly so bright or so well educated as others who have been here, yet he is getting plenty of sick folks to believe he is a genius, not only in diagnosing their cases, but in compounding drugs.

At first I let him have drugs at a discount; then, when the prescriptions did not come in as I thought they should, I raised on the price of drugs. He was willing to pay me whatever I asked for drugs for the first and second weeks. Then he began to think I was a little high. Occasionally I would see his name in our little local paper about visiting surrounding towns. Finally he quoted me prices from another drug store in one of the towns north of us. I very candidly told him I didn't know he was hunting for a place where he could buy drugs the cheapest, but thought he wanted a good place to send his prescriptions to be filled. If he wanted a cheap place where he could buy cheap drugs, that was the best place for him to go.

I am sorry now that I didn't charge him more for drugs than I charge our customers. Even then I was not through with him, for one bright morning he came with a list of drugs he wanted. He handed to me what he supposed was the list. It was not the list he wanted me to see, but it was a list of pharmaceuticals he had ordered that day from a travelling man who represents a large pharmaceutical house in the East. By the way, that travelling man will be here in a few days and I shall send him up to sell his Candy Pills to the new doctor.

The doctor was as surprised as I was when I handed him the slip, saying it was not the list he intended me to see. He said a little swear word, while I looked at him and laughed.

Any druggist would have thought that was enough, but it was only a few days afterwards that he came into the store with a list of drugs as long as my arm,

which he wanted me to send in to the jobber to have filled, and sent out by express to us, telling me he would like to have the bill for the same and that he would give me \$1 for my trouble. I didn't bite that time; things had been developing in the last few weeks, and I decided that I had paid all due respect to the new doctor and we would part our friendship. So I told him that not another drug could he get out of our store. If he needed anything, he would have to send in a prescription by the person who needed the medicine; that is, if he could write one, if not, no drugs would leave our store.

Now, of course, the new doctor tells that the drug-gist doesn't have any of the drugs he uses, but it is quite a relief to me, for if his patients would not do well he would say our "drugs were old" and we "were not reliable." As it is, I act very independently. He has quite a following, as he is a magnetic healer, and claims to have several diplomas from different Eastern colleges. We shall wait and have the State Board of Physicians look him up. Even now his wonderful power is diminishing, and I think his stay will not be long in our little town.

### SOME NOTES ON OLIVE OIL\*

By C. F. G. MEYER, JR.

The olive tree is believed by some to be indigenous to Asia and the seeds being carried by migratory birds to the Mediterranean regions, grew into a wild tree called the oliaster, having a kind of thorn and short leaves and producing but a very small berry. This variety has been carefully cultivated and is now known as the sativa, which has a lanceolated leaf and bears a larger fruit.

The olive tree prospers best in calcareous, gravelly and dry soil on precipitous slopes which could be used for no other fruit bearing trees. It is a fruit tree of the highest order, but a great deal of care must be given it in order to obtain the best results. The average life of an olive tree is about one hundred years, but it may continue to bear fruit for a great many years after that age. It attains its full bearing capacity at about forty years, so that he who plants the tree does so more for posterity than for his own use, hence the old Tuscan proverb, "Vite di mio padre olive di mio nonno," which, freely translated, means, "The vineyard from my father; the olive yard from my grandfather."

When the tree has reached its maturity it is about twenty-five feet in height, has a very large trunk with widespread branches and small white flowers which grow in clusters, giving the tree a most beautiful appearance during the early spring months.

#### The Olive and Its Harvest.

The olives which are intended for preserving are picked early in September while they are still green, while those which are intended for oil are left until November, or even until the following year, by which time they have turned from a light green to an almost black color.

The oil pressed from the olives gathered in mid-winter is preferred on account of its keeping properties; but the reason for an early harvest is that the insects have less chance to propagate in the fruit and that the new shoots which are to bear fruit the following year have not started and are thus safe from all injury. The critical period of the olive is during the month of October when the fruit changes color, as in event of heavy rains or strong winds it is liable to be seriously damaged, and it is therefore necessary to have experienced men constantly looking after the olive trees and to gather the nearly ripe fruit to prevent its being affected by these causes.

In former years the crops were gathered by women and children, who carelessly knocked down the fruit with long poles and in that way seriously damaged the berries so that they were unfit for making the finer grades of olive oil. Nowadays, the olives are harvested by experienced men assisted by women and children. At first the ground around the tree is covered with large sheets of muslin to prevent the olive

from being bruised when falling to the ground, as well as to protect them from the dirt which would greatly diminish the quality of the oil produced. The trees are then carefully shaken to bring down the ripe fruit. After this shaking there are still some olives remaining on the tree. These are either hand picked or are knocked down by gently tapping the branches with a long pole. When the fruit is all down it is gathered into large bags in which it is carried to the mill.

#### The Mills Used in Grinding the Fruit.

The mills in use today for the crushing of olives are very similar to those used for many centuries. One of the largest oil mills, situated in the suburbs of Nice, France, and which has been in possession of the family of the present owner for a great many years, is still being used with perfect satisfaction.

#### The Grinding of the Olives.

The olives are thrown into large stone crushers very similar to the chasers today used by the spice millers, with beveled edged millstones to fit the concave bottom of the container. The millstones are attached to a horizontal bar erected in the center of the bowl, and it is by means of this bar that the stones are revolved. Some mills are operated by steam power, but more certain and satisfactory results are obtained by animal power, which is generally used, as the olives require slow and careful handling. The millstones can be regulated so as not to crush the stone but simply to reduce the fruit to a paste-like substance. After this has been accomplished, the paste is transferred to flattish round bags loosely woven of grass, and in which it is taken to the presses. These bags are so constructed that they will allow none of the pulp, but only the oil to pass through them.

#### The Presses and How They Are Used.

These bags are then placed on wooden platters of a trifle larger diameter, having handles on both sides, and are thus placed under the presses which are manipulated on very much the same order as our modern cider presses. The oil is forced out of the bags and caught up by drains which lead into large vats. Warm water is often poured through the presses so as to assist the flow of the oil, and when it reaches the vat the oil can easily be skimmed off the water.

#### Quality Is the Most Important Factor.

The finest quality of olive oil is that obtained from the first pressing, and this is known as the (olio di polpa) pulp oil, or "virgin oil," and contains nothing but the pure juice of the olive. This is used for table purposes only, while that obtained from subsequent pressings of the residue, and which is a very inferior oil, is used in making soaps, liniments and lubricants. The refuse which remains after the oil has all been extracted is used as a fuel or for manuring purposes.

#### The Adulteration and Preservation of Olive Oil.

Fraud is often practiced in the manufacture of olive oil by taking olives which are not of a prime quality or which have become mouldy and adding leaves of the olive tree or seed oil to the pulp while it is being ground. These blend perfectly with the oil. To keep olive oil in good condition the clear oil must be separated from the turbid at once, for the longer it remains in the lees the more apt it is to become rancid, as it absorbs oxygen rapidly and will soon reach a condition unfit for food. The original state, can, however, be restored, as a general rule, by washing the oil with alcohol or by using lime water in equal proportions. It congeals very easily when exposed to a low temperature, but by applying a little heat it will return to its original state.

#### Varieties and Tests of Olive Oil.

Olive oil varies greatly according to its physical characteristics, the finer quality, or "virgin oil," having a pale yellow color with a slightly greenish tinge and only a very delicate odor, while inferior qualities have a more pronounced greenish color, a very unpleasant odor and a decided acid taste. The specific gravity of olive oil varies from 0.915 to 0.918 at 15°C. When heated to about 120° it becomes lighter in color; at 220° it is almost colorless, and at 315° it

\* Amer. Jour. of Pharm.

hails and produces a very disagreeable rancid odor. One of the principal adulterants is cottonseed oil, but rape oil is also used to a very large extent. Olive oil is slightly soluble in alcohol and dissolves very readily in ether, chloroform or carbon-disulphide. One of the best test for olive oil is the following, called—

#### Becht's Test.

If 15 c. c. of the oil be thoroughly shaken in a test-tube with 5 c. c. of an alcoholic solution of silver nitrate (prepared by dissolving 1/10 gram of silver nitrate in 10 c. c. of deodorized alcohol and adding two drops of nitric acid to the mixture) and heated for about five minutes in a water-bath, the oil should retain its original color, not becoming reddish or brown, nor should any dark color be produced at the line of contact of the two liquids (absence of more than 5 per cent of cottonseed oil or any other foreign oils).

Another test for this oil is known as the "elaidin re-action," which is as follows:

If 10 c. c. of the oil be shaken frequently during two hours with a freshly prepared solution of 1 gram of mercury in 3 c. c. of nitric acid a perfectly solid mass of a pale straw color will be obtained.

There are numerous other tests for olive oil, but the above mentioned will give satisfactory results.

## THE ADULTERATION OF DRUGS.

By LYMAN F. KEBLER.

*Continued from page 539, October 7.*

### SIMPLE DRUGS AND ALLIED PRODUCTS.

**BEESSWAX.**—This is one of the most frequently adulterated commodities met with. In former years adulterations were of a very gross nature, but within recent years, this material has been manipulated in a very skillful manner. With ceresin having a color and a melting point practically the same as beeswax, it is very easy to adulterate this article; but the difficulty does not end here, for the up-to-date adulterator knows that beeswax is at present examined in other ways than by simply noting the physical appearance and by the application of a few crude tests; consequently, he has endeavored to so adulterate the wax that it will comply with nearly all the tests to which this article is usually subjected. By adding a little stearic acid he is enabled to bring up the acid number which has been lowered by addition of ceresin, and a little tallow or Japan wax will adjust the disturbed saponification number. From this it can readily be seen that he is practically able to make an artificial beeswax which will comply with the specific gravity test, acid number and other number. The melting point can be adjusted by properly selecting the adulterants. There is now only one test left us, that is, the detection of stearic acid by Fehling's method. It should be noted in this connection that we frequently find stearic acid in beeswax which we have every reason to believe comes from a good source. The reason for the presence of this stearic acid is best explained by remembering that it is not a very unusual thing for beeswax and tallow to be handled together, and that a sample of the former may accidentally find its way into the latter. On subsequently purifying the beeswax with dilute sulphuric acid, the tallow is saponified with the production of stearic acid and glycerin, the stearic acid finding its way into the beeswax while the glycerin remains in the liquid portion. Beeswax is also occasionally found adulterated with paraffin with the addition of coloring matter.

**JAPAN WAX** is an Asiatic product. Several years ago a large importation was made. Upon the arrival of the consignment, it was found that the goods were liberally adulterated with corn starch. It was not evident where the Chinaman was enabled to secure his corn starch, and upon investigation all evidence pointed to the fact that the wax had been manipulated in this country. The added starch amounted to 20 per cent. After the exposure of this fraud very few cases of similarly adulterated material came to hand, and it is quite probable that this fraudulent material has been entirely withdrawn from the market. The

starch is readily discovered with a microscope. A ready method of detecting the presence of starch is by applying a few drops of tincture of iodine directly to the wax by means of a pipette, if starch is present the starch-iodine reaction will manifest itself immediately.

**ACONITE ROOT ADULTERATED WITH TORMENTILLA.**—It would seem on first thought that such a clumsy adulteration as this would be too apparent for any one to practice. This point we will not gainsay, but an inspection of a few samples will convince any one that a hasty examination does not reveal this adulterant inasmuch as many of the tormentilla roots grow in forms similar to aconite root.

**CAPSICUM VS. PAPRIKA.**—The United States and British Pharmacopoeia recognize *Capsicum fastigiatum*, Blume, while the German Pharmacopoeia recognizes *Capsicum annum*, L. The latter is generally considered the source of paprika. Bulletin No. 13 of the United States Agricultural Department on "Spices and Condiments" classes paprika as cayenne. It is, therefore, not surprising that many of us are of the opinion that these two articles are one and the same; but a comparison of samples will show that there is a vast difference. The color of paprika varies from scarlet to yellow. As a matter of fact there are a number of species of capsicum and a host of varieties all varying more or less in degree of pungency. The degree of pungency and certain particular flavors are said not to be dependent only upon the species, but also upon the method of cultivation and the locality. About a year ago the writer's attention was called to a sample considered to be red pepper. An investigation showed, however, that there was a decided difference in physical appearance between this powdered article and the genuine product; the color was considerably brighter and only about one-sixth as pungent as genuine red pepper. A tincture prepared from it also presented an abnormal reddish cast. On submitting the paprika to a quantitative examination it was found that there is little difference between the data obtained for this article and the usually accepted constants for capsicum. A microscopic examination did not offer any assistance. It can thus readily be seen that with such an article as this the adulterator has in his hands a most efficient diluent of red pepper.

That paprika (*C. annum* L.) may be substituted for capsicum fastigiatum Blume is really not unknown, for Fluckiger and Hanbury, "Pharmacographia," 2d ed. page 452 say: "It furnishes the largest kind of pod pepper and, as we believe, much of the cayenne pepper which is imported in the powdered form." In the "American Dispensary," 1868, page 434, we find, "It (*Capsicum annum*) undoubtedly forms a large part of ground red pepper."

**COCHINEAL (SILVER AND BLACK).**—Pure (black) cochineal is of a purplish-gray or purplish-black color. It is surprising how few druggists know or have seen the pure article. It is the general custom to add some white material to pure cochineal in order to bring out the silvery appearance (sic!) which is so characteristic of the commercial cochineal. The kind and amount of added material varies considerably. The writer has found, as adulterants, barium sulphate to the extent of 30 per cent., talcum, calcium sulphate, calcium carbonate and magnesium carbonate.

**ELM BARK, POWDERED.**—It is a common occurrence to find this article adulterated with wheat flour. As much as 30 per cent. has been found. The microscope will reveal this diluent.

**JABORANDI LEAVES** have been found to be mixed with twigs, stems and sticks to the extent of 20 per cent. While this probably does not come directly under the heading of adulteration as it is usually understood, yet there can be no doubt in anyone's mind that an undue amount of such substances must have been added with a purpose, for it is well known that the addition of such material must necessarily impair the medicinal efficiency of the drug. In the liberal sense of the word they must be considered adulterants. This is simply an example of many drugs

that are found to contain such added foreign material. Frequently as high as from 20 to 30 per cent of such matter is found in crude drugs. It might also be stated in this connection that roots sometimes contain as high as 20 per cent of earthy matter. In the powdered form it is nearly impossible to detect such impurities. Such drugs are not fit for medicinal use. If crude drugs free from diluents and other impurities and debris cannot be purchased in the open market, garbling must necessarily be resorted to before use. **LACTUCARIUM.**—There is no doubt as to what the nature of this article should be. The Pharmacopœia distinctly specifies what is wanted. During the past year when lactucarium was materially advanced in price, extract of lettuce was received when lactucarium was wanted. It seems that anything of this character should be denounced in the most vigorous terms, because the two articles are so entirely different and distinct that there is no possibility of confusing the one with the other, except for pecuniary gain.

**ROCK CANDY SYRUP** is probably an article which is used as freely by the druggist as any other commodity he deals in. It is well known that it generally contains a small percentage of invert sugar which through atmospheric influences finds its way into the syrup in the course of its manufacture. Certain dealers aware of this, thought that a little more reducing sugar would do no harm; consequently when rock candy syrup was ordered, they supplied glucose of the same specific gravity as that of the rock candy syrup usually furnished. A superficial examination might not have revealed the nature of this fraud, but it is easily detected by the application of Fehling's solution or by placing a suitable quantity of the syrup into a porcelain capsule and evaporating on a steam or water bath. A glucose syrup will simply assume a heavier body, while pure rock candy syrup will dry completely with either distinct crystals or crystalline crusts or both.

**VENICE TURPENTINE.**—There are at present three articles on the market which pass under this name. One is the genuine Larch Venice turpentine; another is an imported artificial product, and the third is a domestic artificial product. The genuine article brings quite a good price, and is of such a composition that it is very difficult to get at the actual composition compounds, but the adulterator has worked along the lines of substitution so skillfully as to be able at present to imitate the genuine article very closely at a very much lower cost. Certain data have, however, been worked up in connection with pure Venice turpentine which up to the present time the sophisticator has not been able to fully reproduce. The writer is at present collecting certain data upon this question and hopes to make them public in the near future. Some useful information will be found in the Amer. Jour. Pharm., vol. 73, page 198, 1901. The artificial product consists for the most part of specially selected rosin dissolved in oil of turpentine. Another article has also been met with which had a decided fluorescence and proved upon investigation to consist of rosin or allied bodies dissolved in a fluorescent rosin oil mixed with a little turpentine.

**GUM ACACIA.**—On looking over the various price lists we find that there are at least five distinct varieties of this gum varying very materially in price. There are only the following conclusions to arrive at. Either the lower grades of acacia are spurious products, or they are gums of an inferior quality. The latter is probably the correct explanation, inasmuch as we find upon examining the various grades that there are very few which will stand the Fehling's test. This test indicates that there are associated with these poor gums certain substances which ought not to be present in a first-class article. The question naturally presenting itself in this connection is how are we to decide whether a sample of gum acacia is of an A. No. 1 quality or contains more or less of the selected portions of the inferior grades of other gums? Chemical tests practically fail. To be sure we have the ash test, the optical rotatory power, the ferric chloride solution test, the relative viscosity, etc., but after ap-

plying all these tests and asking ourselves this question, is the sample submitted genuine gum arabic, we are compelled to say—we do not know. The writer is inclined to believe from the fact that there is very little gum acacia which will not reduce Fehling's test solution at even a slightly prolonged elevated temperature, that very little A. No. 1 gum acacia is found in the market. The various grades are probably differently selected gums from the same or similar sources.

**GUM TRAGACANTH** shares the common fate of gum acacia inasmuch as the best quality is about twice as expensive as the lower grades, and with this article we are practically unable to do anything relative to deciding between the inferior and the superior product. There do not seem to be any marked differences except in physical appearance and in the viscosity test between the expensive and the cheaper articles. It can readily be seen, therefore, that the one is liable to be substituted for the other especially in powdered form unless the greatest care is exercised by the purchaser.

**GUM KINO.**—During the past few years the official product appears to have been in the hands of a monopoly, and an article has been supplied occasionally which represents the genuine very closely. In fact there appeared to be so very little difference between the genuine article and that supplied, that it was necessary to resort to a chemical analysis in order to differentiate between them. One sample, nevertheless, complied with the usual tests so closely that it was impossible to find a point of distinction except that the fresh official product possessed a slight aromatic odor which the sample supplied did not have, but this cannot be considered a distinguishing feature inasmuch as all gum kinos will lose their peculiar aroma in process of time. This sample contained even more tannin and was more readily soluble in alcohol and in water than the pharmacopœial article, as the following result clearly shows:

| Kind    | Per cent |                               | Per cent        |        | Per cent |
|---------|----------|-------------------------------|-----------------|--------|----------|
|         | Ash      | insol. in 95 per cent alcohol | insol. in water | Tannin |          |
| True    | 1.48     | 8.20                          | 31.04           | 51.07  |          |
| True    | 0.84     | 10.54                         | 26.98           | 43.91  |          |
| UNKNOWN | 1.14     | 7.08                          | 1.10            | 51.26  |          |

The sample marked "unknown" is the one referred to above.

**ALOES.**—It is well known that the various kinds of aloes are substituted one for the other, and it is quite unnecessary to make much comment in this connection. Very little Barbadoes finds its way into commerce. The material labeled such and put up in the usual Barbadoes package, is conceded to be for the most part pure Curacao. There are reasons for believing that curacao is also sold for the other kinds of aloes. We may be in a position in the course of time to be able to apply tests which will distinguish between these several varieties inasmuch as very extensive chemical investigations are at present being made on the composition of these gums.

**GUM ASAFETIDA.**—The poor quality of asafetida has during the past few years been brought up on a number of occasions. It is referred to here simply to give additional testimony to the inferior quality of the article as usually supplied to the trade in this country. The adulterants are chiefly soft rocks and other earthy matter.

#### Conclusion.

The reader has undoubtedly noticed in going over the above results that gross adulterations are practiced to a very limited extent at present. In closing this paper the writer wishes to leave impressed upon every mind one last thought viz: Adulterations are generally carried on in such a way that they are not perceptible to the naked eye, and it is necessary to resort to the test tube, the analytical balance, the microscope and the polariscope before positive conclusions can be arrived at. It therefore behooves every druggist who is not in position to carefully examine his own goods to secure them from such dealers or manufacturers as are known to carefully and conscientiously investigate the commodities they handle.

## ON TEACHING MICROSCOPY, BOTANY, PHYSIOLOGY, PHARMACODYNAMICS AND URINE ANALYSIS IN COLLEGES OF PHARMACY.\*

By ALBERT SCHNEIDER.

The renaissance period of pharmaceutical instruction and practice, initiated some twenty years ago and established upon a firm, lasting basis about ten years ago, makes it imperative that the courses and methods of instruction in our colleges of pharmacy be carefully arranged in harmony with the evolutionary changes. The changes consisted primarily in substituting the laboratory method of instruction for the old-time lecture method. In other words, instead of merely informing students orally how to practice pharmacy they are now given an opportunity to attain actual experience by requiring them to perform pharmaceutical exercises in properly equipped laboratories. It is, however, not intended to imply that the lecture method of imparting instruction has been discarded entirely. Far from it—the lecture method combined with quizzes and recitations is still more or less in vogue in all colleges of pharmacy. In some branches of study the lecture course is the only available means of imparting the necessary information. Even in these instances it is hoped that the future may introduce the laboratory method as an adjunct, if not a complete substitute. This applies, for instance, to human physiology, general pharmacography and pharmacodynamics. Without entering into the discussion of the relative merits of the laboratory methods and lecture method, I shall now outline very briefly certain courses of pharmaceutical instruction, attempting to harmonize them with the present status of the science of pharmacy.

The following tabulation shows the logical sequence of the studies under consideration, without, however, indicating in any way their relative importance.

- I. Microscopy and Micro-technique.
- II. Botany.
  - A. General.
    1. Morphology and Physiology.
    2. Histology.
    3. Taxonomy and Organography.
  - B. Special.
    1. Vegetable Pharmacognosy.
      - a. General.
      - b. Macroscopical.
      - c. Microscopical.
        - a. Crude Drugs.
        - b. Powdered Drugs.
    2. Bacteriology.
- III. Human Physiology and Anatomy.
- IV. General Pharmacodynamics.
- V. Urine Analysis.
  - A. Chemical.
  - B. Microscopical.

The prime object of this paper is to indicate very briefly how much time may be devoted to the pharmaceutical studies named in first-class colleges of pharmacy, having a view to unifying the courses of instruction. Nothing shall be said of other branches, owing to a lack of experience and adequate information. It is hoped that others will outline and discuss the additional courses.

The courses are discussed and arranged in accordance with the following:

1. Entrance requirements.
  2. Time devoted to the college work.
  3. Manner in which the courses are presented at the college. Laboratory work vs. lecture courses.
  4. Educational facilities of the college.
  5. Proportionment of the various courses or branches of study at the college of pharmacy.
  6. Capacity of students, based upon entrance requirement, age and time spent at colleges of pharmacy.
- The above items must be kept in mind in order that an estimate of opinion may be fairly accurate.

In order to make the paper as brief as possible, I have cited the references to a fuller discussion of details regarding some of the branches of study therein referred to.

### I. MICROSCOPY AND MICRO-TECHNIQUE.

According to the present status of pharmaceutical education, it is not practicable to give a thorough course in the studies named, yet the student should have some knowledge of the subjects before being permitted to take up the very important subject of vegetable histology, general and special. He should thoroughly familiarize himself with the mechanism of simple and compound microscopes. He should have some instruction in optics and the construction of mirrors, lenses, substage condensers; he should understand chromatic and spherical aberration, and know how correction is made therefor. He should be familiar with the working properties and working capacity of compound microscopes.

Instruction in micro-technique must even be more limited. The student should know how to make free-hand sections, and how to mount them properly. He should familiarize himself with the more useful and common methods of making permanent microscope mounts, including methods of infiltrating with celloidin (or collodion) and paraffine, staining and mounting, using the various microtoxines, etc. He should know the properties and utility of the more important micro-reagents, including a few of the more commonly employed stains.

The course should extend over four weeks, with about five hours laboratory instruction weekly, supplemented by lectures, quizzes and recitations. A failure to properly insist on this course interferes quite seriously with the work of the subsequent courses.

I have never found it desirable or useful to request students to make permanent microscope slides of the materials studied, as that entails a great expenditure of time, energy and money, without any adequate return. Nor is there any apparent advantage in using dissecting microscopes. Making permanent mounts of drugs and drug particles for examination under low powers seems a special waste of time and energy.

### II. BOTANY.

For some time there has been considerable discussion regarding the value of botany in pharmacy, which seems rather remarkable when we consider the fact that most of our drugs are of vegetable origin. Much of the controversy has been due to a difference in the definition of the term botany. In its broad pharmaceutical sense, it includes all of those branches of pharmaceutical instruction dealing with plants as shown in the above outline. There certainly can be no doubt at present as regards the importance of botany in pharmacy.

#### A. General Botany.

1. Morphology and Physiology.—A very brief survey of general botany, dwelling upon morphology, physiology and ecology.

In the presentation of this course the laboratory method is not practicable. The subjects should be presented by lectures, recitations and quizzes, supplemented by text-book reading. Some apparatus for class demonstration would be very desirable to illustrate phenomena of growth, root pressure, evaporation of moisture, influence of sunlight and gravity upon the growth of plants, etc. Most pieces of such apparatus can be quite cheaply constructed by the teacher, provided he has some mechanical skill and ingenuity. While it is undeniable that the subject is quite important, yet only a limited amount of time can be devoted to it; a total of about twenty hours of class work, one or two hours per week. To devote more time to this work would be at the expense of more important work in other departments.

2. Histology.—From the standpoint of modern pharmacy, this is a very important division of botany. The extensive use of the compound microscope in the examination of vegetable drugs and their adulterants makes it imperative that the student should be given a thorough course in general vegetable histology, in

\* Read before the American Pharmaceutical Association.

order that he may recognize cells, tissues and cell-contents at a glance. This must of necessity be essentially a laboratory course, employing the necessary apparatus, the most important of which is a good compound microscope.

The work should extend over a period of one year, with about six hours laboratory work weekly. The student to cut free-hand sections of the representative plant types to be studied, mount the sections temporarily, and make careful drawings of the microscopic pictures of the sections studied.

The importance of this course cannot be too strongly emphasized. It is a necessary preparation to the microscopic examination of vegetable drugs, crude as well as powdered.

3. Organography and Taxonomy.—Regarding the presentation of this course there is at present considerable difference of opinion. In many colleges of pharmacy this is made the major course in botany, and in most of the lesser colleges this is the only purely botanical course given. To harmonize the course with the other courses, it must be quite brief, especially in consideration of the fact that most students upon entering the college of pharmacy are supposed to have had some of this work in their preliminary schooling (high school, and even in the grammar departments). The course should be presented much like the course in general morphology and physiology above outlined. About twenty hours (one or two hours weekly) of lectures, quizzes and recitations, supplemented by class demonstrations, text-book reading, use of suitable botanical charts, type specimens, etc., should constitute the course. The course should follow course 1. Courses 1 and 3, as here outlined, should be given during the first years, concurrently with the course in microscopy and vegetable histology.

In this course the student should be made familiar with the gross appearance of plant organs, as leaves, flowers, seeds, fruits, root, branches, tubers, bulbs, etc. He should be familiarized with the leading systems of plant classification; he should be taught how to analyze plants and how to prepare herbaria. It is evident, however, from the time allotted to the work, that the subjects referred to can be presented in the form of a hasty outline only, most of the time being devoted to vegetable organography.

## II. Special Botany.

1. Vegetable Pharmacognosy.—This is, of course, the important branch of study, and to which the courses in General Botany are simply preparations. This course should, therefore, be given during the second year, and should extend through the entire year. It should be a laboratory course, the student being given good representative specimens of the more important vegetable drugs employed in pharmaceutical practice. These he should study carefully as to form, consistency, color, odor and taste. To be consistent and logical, the student should receive careful instruction in general pharmacognosy before taking up the special examination of individual drugs. He should know something about the methods of growing, collecting, drying, garbling and marketing drugs. He should be informed about the causes which lead to the deterioration of drugs, the preservation of drugs, drug parasites, etc. It is true such information is given, but in an erratic way only, usually little by little as the course progresses, or in some schools references thereto are made under pharmacodynamics, or perhaps some other related course. The fact is, general pharmacognosy is very carelessly taught.

In the scheme here proposed the student is expected to study six or seven drugs at each laboratory session, all of them as to gross characteristics, as already indicated, and, on an average, two at each session are to be studied microscopically from carefully made transverse and longitudinal (radical and tangential if necessary) sections properly mounted. The student should study the drug-yielding plant itself, but the opportunities for this are very limited; in fact, do not exist in the great majority of colleges of pharmacy.

The histology of drugs should be made a very important branch of study, and is in reality a continua-

tion, or rather the practical application of the course in general vegetable histology. Suitable clearing fluids and other necessary reagents should be employed.

2. Powdered Drugs.—The study of powdered vegetable drugs is really the culmination of the work in vegetable histology. The pharmacist and student will find that the training and experience he has acquired in the above courses is absolutely necessary to enable him to recognize and identify the histological elements as they appear in powders. The student should be given a thorough drill in the microscopical examination of from sixty to one hundred of the more important powdered vegetable drugs, employing the necessary or useful test reagents. Two or three months, with six hours' laboratory weekly, should be devoted to this work.

3. Bacteriology.—The course in bacteriology must be carefully adapted to the needs of the pharmacist. It should be a course in general bacteriology, dwelling upon the role that bacteria play in the deterioration of drugs, pharmaceutical preparations, etc., the preparation and preservation of antitoxines, vaccine virus. He should know something about the significance of toxins and antitoxines in health and disease. He should know how to use disinfectants and germicides. In the laboratory he should be taught the methods of sterilization, germ filtration, preparation of culture media and the preparations of bacterial cultures, and such other bacteriological operations as may prove useful to the pharmacist. It is not believed to be practicable for the pharmacist to attempt making diagnostic bacteriological examinations of disease-germs for the physician; the pharmacist cannot properly qualify himself for such work during the brief time that must of necessity be devoted to this work.

About eight weeks of laboratory work (two hours daily) should be given to this work. There should be, in addition, some lectures, recitations and special reading. The time should be devoted to the study of bacteria in general. Inoculation experiments on animals are not in order.

## III. HUMAN PHYSIOLOGY AND ANATOMY.

In many colleges of pharmacy this subject is presented in a very careless manner. The limited time makes laboratory work impossible, yet the subject should not be presented in a superficial manner. The course should be more thorough than the average high-school course in physiology, and the prevailing custom in some colleges of pharmacy to excuse those students from the course who have had high-school physiology should be abandoned.

The subject must be presented in the form of lectures, recitations and text-book reading, supplemented by the use of charts, papier mache models, a well mounted skeleton, loose bones, etc., and perhaps some class demonstrations. One hour each week during the first year is perhaps sufficient.

This course is simply a preparation for the course in pharmacodynamics, therefore special attention should be given to the functional activities of organs, in order that the physiological action of drugs may be understood, only minor attention being given to anatomy.

## IV. GENERAL PHARMACODYNAMICS.

This course also is usually presented in desultory manner. In some schools only casual reference is made to the subject in connection with the work in pharmacography. This course should follow the course in physiology and should, therefore, be given the second year, devoting one hour per week to the work. Here again the subject is best presented by lectures, but principally recitations and text-book work, devoting nearly all of the attention to the physiological action of drugs, to toxicology and posology. Therapeutics should be almost entirely omitted, as that belongs especially within the domain of the physician. This course really forms the direct connecting link between pharmacy and medicine.

## V. URINE ANALYSIS.

To begin with, this subject has no bearing whatever upon pharmacy. It is a branch of study distinct-

tively medical. The proper procedure would be to take this course out of the curriculum of pharmaceutical studies. Medical students receive a very thorough course in urine analysis, both chemical and microscopical, and are much more competent than pharmacists to make the required or desired tests and examinations. Pharmacists are, of course, fully competent to make chemical examinations of urine, and it is no doubt true that they may occasionally make such tests for very busy physicians. The pharmacist is, however, not qualified to make the necessary or desired microscopical examinations of urine for disease germs, tube casts, pus cells, blood corpuscles, epithelial cells, spermatazoa, etc. Such work must be left to some one well versed in histology and pathology.

The pharmaceutical course in urine analysis, provided one is given at all, should, therefore, consist of the application of the usually recognized chemical tests to normal and abnormal urine.

To sum up, the following would be an outline of the courses discussed, as they would be logically presented in those colleges of pharmacy giving a two-years' course, of at least six months each, the student devoting his entire time to his studies.

#### First Year.

1. Microscopy and Micro-technique.—Lectures, recitations, quizzes, with text-book reading. Four weeks, about five or six hours weekly. Total, 24 hours.

2. General Vegetable Morphology and Physiology.—Lectures, recitations, quizzes, class demonstrations, with text-book reading. Two hours weekly (maximum time), first term (three months). Total, 12 or 24 hours.

3. General Vegetable Histology.—Laboratory work. Should follow Course 1, and extend through the entire year, with five or six hours' work weekly (sessions of 1½ hours). Total, 60 hours.

4. Organography and Taxonomy.—Lectures, recitations, quizzes, class demonstrations with text-book reading. Two hours weekly (maximum time), second term (three months). Total, 12 or 24 hours.

5. Human Physiology and Anatomy.—Lectures and recitations, employing charts and a mounted skeleton, and text-books\*. One hour each week for the entire year. Total, 25 hours.

#### Second Year.

6. Vegetable Pharmacography.—Laboratory work\*\*. Five months, six hours weekly (sessions of 1½ hours each). Total 60 hours.

7. Powdered Drugs.—Laboratory work. This course to follow Course 6, and to be continued for one month (minimum time), six hours weekly (sessions of 1½ hours). Total, 24 hours.

8. General Pharmacodynamics.—Lectures and recitations\*\*\*. One hour weekly during the entire year. Course 5 is a necessary preparation for this course. Total, 24 hours.

9. Bacteriology.—Laboratory work, lectures and reading. Two months; two hours' laboratory work daily. Total, 90 hours.

10. Urine Analysis.—Laboratory work. Two weeks; four hours weekly. Total, 8 to 16 hours.

YLANG-YLANG OIL contains, according to Schimmel & Co. (Berichte), isoeugenol, also benzoic and salicylic acids partly combined with benzyl alcohol and partly free. A small quantity of terpene boiling at 160 degrees C. was also separated. This appears to be dextro-pinene.

\* Ashby's Notes on Physiology seems almost an ideal text-book for students of pharmacy.

\*\* One of the available text-books (Culbreth, Matsch, Sayre) is to be used, and each student is to receive good specimens of the more important official and non-official drugs, one or two to be studied microscopically (compound microscope) at each session.

\*\*\* It is much to be regretted that there is no suitable text-book. The medical texts are too voluminous for pharmacy students, and are, furthermore, not adapted to their needs. Have used Potter's Quiz Compendium with fair success.

## QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

#### Almond Cream.

(M. A. D. Co.) Various formulas for preparations of this character have been published in the Era. Consult the indexes of previous volumes. Hager gives the following:

- |                                  |            |
|----------------------------------|------------|
| (1) White wax                    | 80 grams   |
| Spermaceti                       | 80 grams   |
| Expressed oil of almond          | 500 grams  |
| Water                            | 280 grams  |
| Borax                            | .5 grams   |
| Oil of bergamot                  | .2 grams   |
| Oil of rose                      | 0.5 grams  |
| Oil of bitter almond             | 10 drops   |
| (2) Cold cream                   | .5 parts   |
| Expressed oil of almond          | .5 parts   |
| Glycerin                         | .6 parts   |
| Boric acid                       | .12 parts  |
| Solution of soda                 | .12 parts  |
| Mucilage of quince seed (1 to 8) | .25 parts  |
| Distilled water                  | .143 parts |

Perfume, a sufficient quantity.  
Heat the cold cream and almond oil together. Add gradually the solution of soda (5 per cent.), and heat together until an emulsion is formed. Add a small quantity of water, then the mucilage of quince seed and glycerin. Mix thoroughly, and lastly add the boric acid and the perfume.

- |                       |         |
|-----------------------|---------|
| (3) Almonds, blanched | 1 ounce |
| Rose water            | 1 ounce |

Beat the almonds to a paste and add the rose water; strain, heat to the boiling point, and add:

- |                    |          |
|--------------------|----------|
| White wax          | 1 ounce  |
| Almond oil         | 2 ounces |
| White castile soap | 1 ounce  |

Mix thoroughly and add:  
Saturated solution of boric acid..... 2 drams  
Eau de cologne..... 1 ounce  
Oil of bitter almonds..... 4 minims  
Oil of rose geranium..... 5 minims  
Glycerine..... 1 ounce

#### Bassorin Paste.

(C. M. O.) Bassorin paste as an ointment basis is frequently prescribed, and a paste of gum tragacanth has been dispensed by many in place of it, as it contains great quantities of bassorin. Bassorin is tasteless, insoluble in cold water, and swells up into a viscous mass when treated with hot water. It is found in various vegetable substances, salep root, quince seed, bassora gum, but gum tragacanth, according to Lascar, has proved the most satisfactory. The paste is made as follows: Gum tragacanth paste (15 per cent., triturated with water) is filtered in a steam jacketed funnel. By this process a pure mucilage is obtained, while the cellulose, pectin and other impurities remain in the filter. The slimy filtrate is then carefully evaporated. In making the paste, glycerine is added. Another method used to make the paste is to soak one part of pure bassorin in 15 parts of water, adding after the paste is formed, 25 per cent. of white dextrine and 10 per cent. of glycerin.

As prepared from salep: 5 parts of powdered salep are stirred with 95 parts of cold water until a smooth mucilage is obtained, then heating for half an hour on the steam bath: This contains less bassorin but more starch.

In making bassorin paste employ only moderate heat. The paste made from bassora gum yields a much darker product than that made from gum tragacanth, while from salep root, it is said, the large amount of starch present, greatly impedes the process.

**Ebonizing Wood.**

(Clerk.) The Scientific American Cyclopaedia of Receipts contains these directions: Dissolve extract of logwood in boiling water until the solution indicates 6 degree Baume. Five pints of the solution is then mixed with two and a half pints pyroligneous acid iron mordant of 10 degrees, and one-half pint of acetic acid of 2 degrees. The mixture is then heated for one quarter of an hour, and is then ready for use.

To imitate black ebony, first wet the wood with a solution of logwood and copperas, boiled together and laid on hot. For this purpose 2 ounces logwood chips with 1½ ounces copperas to 1 quart of water will be required. When the work has become dry wet the surface again with a mixture of vinegar and steel filings. This mixture may be made by dissolving 2 ounces steel filings in half pint of vinegar. When the work has become dry again, sand paper down until quite smooth. Then oil and fill in with powdered drop black mixed in the filler. Work to be ebonized should be smooth and free from holes, etc. The work may receive a light coat of quick drying varnish, and then be rubbed with finely pulverized pumice and linseed oil until very smooth.

**Bath Powder.**

(L. A.)

- |                           |           |
|---------------------------|-----------|
| (1) Powdered borax .....  | 8 ounces  |
| White castile soap .....  | 8 ounces  |
| Essence of bergamot ..... | 6 grams   |
| Essence of lemon .....    | 3 grams   |
| Oil of neroli .....       | 3 grams   |
| Oil of petitgrain .....   | 8 minims  |
| Oil of origanum .....     | 30 minims |
| Oil of rosemary .....     | 30 minims |
| Oil of rose .....         | 5 minims  |

Mix the powders, add the essential oils, and rub together in a mortar. A tablespoonful of this added to the bath water gives the odor of cologne. By mixing other essences with a similar basis, you might produce other perfumes.

- |                               |            |
|-------------------------------|------------|
| (2) Borax .....               | 4 ounces   |
| Salicylic acid .....          | 1 dram     |
| Essence of cassia .....       | 1 fl. dram |
| Essence of jasmine .....      | 1 fl. dram |
| Oil of lavender flowers ..... | 15 minims  |

Rub the oil and essences with the borax and salicylic acid until the alcohol has evaporated. Use a heaping teaspoonful to the body bath.

**Codaine and Codaine Sulphate.**

(N. Y. Z.) "The doses of codaine and codaine sulphate are the same. Please give comparative amount of alkaloid in the sulphate. I want to use it in a cough syrup. Codaine costs more than codaine sulphate and I thought I could save something by adding a little sulphuric acid to codaine in solution and using this solution in the cough syrup. How much shall I use?"

Codaine sulphate contains about 76 per cent. of alkaloid, 12 per cent. of sulphuric acid and 11 per cent. of the water of crystallization. To make 100 grains of codaine sulphate take 76 grains of codaine alkaloid in aqueous solution and carefully neutralize with sulphuric acid (about 12 grains absolute H<sub>2</sub>SO<sub>4</sub>) and crystallize, although if the salt is to be used in solution crystallization is not necessary. One part of codaine sulphate is soluble in 35 to 40 parts of water.

**Transparent Lacquer for Wood.**

("Pyro") (1) Pale seed-lac (shellac), 8 ounces; alcohol, 1 quart. Dissolve.

(2) A so-called "universal lacquer," which is claimed to be equally good for paper, metal, wood, glass, etc., and which admits being colored with any aniline dye soluble in alcohol, may be made, according to a German technical journal, as follows: Bleached shellac, 60 grams; Manila copal (freshly powdered), 60 grams; gum mastic, 60 grams; alcohol, 95 per cent.; 1 kilogram. Mix, add a small quantity of powdered glass, and allow the mixture to stand for 10 or 12 days, frequently shaking. Add 1 gram of boric acid, and filter.

(3) Turner's Lacquer.—Gum elemi, 4 parts; shellac (bleached), 20 parts; Venice turpentine, 4 parts; strong alcohol, 60 parts.

**A Problem for Solution.**

(C. C. U.) Asks for a solution of the following problem, which we submit to readers of the Era: A physician wishes to cure a patient of the morphine habit. He prescribes a two-ounce solution of morphine sulphate and atropine sulphate, each 10 minims of solution containing ¾ grain of morphine and 1-14 grain of atropine, or 72 grains of morphine and 2-3 grain of atropine in the two-ounce solution. After giving the patient 10 minims of this solution, he puts in the bottle 10 minims of pure distilled water, thereby always having two ounces of solution. At the end of ten days how much morphine and atropine will the solution contain? At the end of thirty days how much will it contain? The physician gives the patient three doses per diem. Give answer to each question and the process of calculation?

**Stove Varnish.**

(Country Druggist.) Try the following:

- |                          |          |
|--------------------------|----------|
| Asphaltum .....          | 2 pounds |
| Boiled linseed oil ..... | 1 pint   |
| Oil turpentine .....     | 2 quarts |
- Fuse the asphaltum in an iron pot, boil the linseed oil and add while hot; stir well, and remove from the fire. When partially cool, add the oil of turpentine. Some manufacturers add driers.

**Linseed Oil Varnish.**

(Dr. T. H.) Boil linseed oil, 60 parts, with litharge, 2 parts, and zinc sulphate, 1 part, each finely powdered, until all water is evaporated. Then set by. Or rub up borate of manganese, 4 parts, with some of the oil, then add linseed oil, 3,000 parts, and heat to boiling.

**Hydroleucine.**

(F. C. B.) We cannot give the formula for this specialty. The manufacturers in their literature to physicians state that "each dose contains pure cod liver oil, 80 minims; distilled water, 35 minims; soluble pancreatin, 5 grains; soda, 1-3 grain; salicylic acid ¼-grain."

**Elixir Terpin Hydrate.**

(C. A. J.) Formulas for this elixir have appeared in the following issues of this year's Era: March 28, page 343; April 4, page 369; August 15, page 204.

**Floor Polish for Hospitals.**

(E. W.) See this journal September 19, 1901, page 331.

CELLULOSES are divided, by B. Tollens (Chem. Centralblatt), into four groups. Cellulose, hydrated cellulose (hydro- and hemi-cellulose), cellulose with acids or carboxyl groups, such as pectinic acid, and cellulose with aldehyde or ketone groups, such as the oxycelluloses. The acid celluloses are mostly gelatinous substances like that obtained by the action of nitric acid upon wood, which is called synthetic pectin. The acid celluloses are formed by oxidation and by the action of alkalis upon celluloses containing aldehyde groups.

SITOGEN, a vegetable substitute for meat extract, is, according to A. Beythien (Chem. Centralblatt), probably an extract of yeast seasoned with salt. It has been found to contain 8.63 per cent of albumoses, 32.10 per cent of peptones and plant bases, 5.19 per cent of phosphoric anhydride, 7.01 per cent of chlorine, and 29.02 per cent of water. The author does not consider it equivalent in dietetic value to meat extract, although it contains similar proportions of certain nitrogenous substance. Sitogen is described as attractive, agreeable to the taste, and comparatively inexpensive.

# NEWS DEPARTMENT.

## N. A. R. D. NOTES.

On his return recently from California Dr. Julius Garst conferred with National Secretary Wooten in Chicago in relation to the Price Restrictive Plan adopted by the N. A. R. D. at its Buffalo convention. Dr. Garst was not at that time in possession of exact knowledge as to the recent decision of the Massachusetts Supreme Court in the case of Garst vs Hall & Lyon Co., although he had heard that it was adverse to his interests. In spite of this decision he is not at all discouraged, his faith in the ability of proprietors to protect, by law, the selling price of their preparations being unshaken. On his return to Boston Dr. Garst wrote that in the opinion of his attorneys the most important issue is still unsettled, this having been ignored by the court when the recent decision was rendered. The case against Houghton & Dutton of Boston, now pending in the Supreme Court is awaited with great interest, the facts in this case being different from those in the issue with Hall & Lyon Co. If desired a copy of the recent decision may be obtained of the National Secretary.

The following extract from a speech made by Chairman Siman N. Jones of the Executive Committee of the N. A. R. D. at the recent N. W. D. A. Convention at Old Point Comfort clearly defines the future policy of the N. A. R. D. with reference to jobbers who violate the tripartite agreement:

"What I say to you is not said in the way of a threat or menace; but I want to say to you, truly, that if you expect the loyal support of the retail trade in the future some of your members or some of those on the recognized list have to give us a different deal. It is unfortunate that we cannot convince the jobbers of this country that the retailers have forfeited a great deal, that we have thrown into your hands 80 per cent of the cream of the business of the United States as relates to the proprietary articles. We have asked nothing from you except your loyal support. We have not asked you to give us a dollar; we have not asked you to do us any way except in a way that will bring money into your pockets, while it is possible it will not help us at all.

Yet, notwithstanding this, I want to say to you that in these United States we have six or eight men on your recognized list that we know are to-day playing fast and loose with us, and they are being protected to a certain extent by the National Wholesale Druggists' Association. I want to say to you that we intend to winnow these people out, and we are not going to discriminate between friend and foe; these people who do the things we complain of all look alike to us. When we find a man throwing us down we intend to report him to the people who made this contract, report him to the proprietors and not ask any questions of anybody. We will see whether the proprietor is loyal to us; and we will make the balance of them loyal, or else they will go nothing.

"We cannot have a man who is continually thrown down by a dishonest jobber, and the retailer continually suffering. These people go into a town thoroughly organized, and they will pick out one man and start him and disrupt an organization that we have made of dollars to put in shape. We will not stand it. There is no use of my standing here and saying we will continue to lie quiet as we have done now for three years. We have been pursuing a conservative course endeavoring to show you that our interests were your interests, that your interests are our interests, that our interests are mutual all along the line, but if you do not propose to take advantage of this condition we cannot help it. This is not our fault. We have done what we can. If you do not propose to give us loyal support you cannot blame us for using other means to protect ourselves. We do not ask anything unreasonable, we ask you when we report a man to start with us, 'This is a fellow who has followed and did this thing thoughtlessly.' We have had regrets in plenty expressed to us during the past year, and they do not fill the bill. We had a case of one jobber who first laid on the confidential man, and then we called to the confidential man he laid it on the bookkeeper, who in turn laid it on the clerk. The clerk passed it along to the bill maker and finally the shipping clerk got the blame for it and he was discharged. We do not propose to stand that sort of thing and we do not intend to put up with it. When a man does a thing through inadvertence we might forgive him once but we will never forgive him the second time."

As far as possible the organization work of the Association will be prosecuted in the South for the next few

months. Because it is necessary to do considerable driving, it will be impossible to accomplish much in the north in the winter. The Minnesota organizer has been transferred to Alabama and the northern Iowa organizer to Kentucky in both of which States vigorous work has been started. Work has been resumed in the State of Missouri where it was discontinued last summer on account of the hot weather. It was voted at the Buffalo convention to empower the Secretary to issue a membership certificate to each member of the associations organized by the organization department. A suitable certificate will soon be procured for these members.

Among the associations recently formed are the following: ILLINOIS: McDonough county with 16 members; Selby county nine members; Montgomery county 12 members. IOWA: Southern half of Lee county nine members; Van Buren county 15 members; Cerro Gordo county 11 members. MICHIGAN: Osceola county 10 members; Newaygo county 8 members; Mecosta county 12 members. MINNESOTA: Carver county 6 members; Renville county 4 members; Lac Qui Parle county 7 members. NEW YORK: Orleans county 10 members; Genesee county 12 members; Livingston county 20 members. OHIO: Hancock county 13 members; Henry county 11 members; Darke county 11 members; Fairfield county 16 members; Paulding county 11 members. WISCONSIN: Waukesha county 13 members; Iowa county 12 members; Columbia county 19 members. In this State about one-sixth of the membership is composed of general merchants and department store proprietors. The effect of this merging has been found to be very desirable since the chance of adopting a uniform price schedule for the county is greater.

Through the efforts of the N. A. R. D. price cutting has ceased at Allentown, Pa., after a period of ruinous demoralization.

The Bulletin issued monthly by the Philadelphia Association of Retail Druggists evidences the activity of the officers and members of the P. A. R. D. and cites numerous instances in which the druggists of Philadelphia have been benefited by the vigorous work of their organization. Other associations should emulate this example. We do not know what we can do until we try and the results accomplished by this association are in the highest degree encouraging. Not only are the officers of the association doing their whole duty but the members have evidently learned the truth that many of us need to know, that if any thing is accomplished by organized effort we must attend our association meetings. No one should expect this association to accomplish needed and satisfactory results unless he individually contributes his share toward its welfare and the very least he can do is to attend the meetings, encouraging the officers by his presence, and making the work easier by his counsel. If the rank and file of the organization affiliated with the National Association were as active as this one, no influence could withstand the power of the N. A. R. D.

Copies of the P. A. R. D. Bulletin may be obtained of Secretary Frederick T. Gordon, 1622 Eitzer Street, Philadelphia.

AUGUST A. MOVUS, a retired drug importer died at his late home, No. 130 West Ninety-second street, New York, November 5, as a result of injuries received from a fall from a window at his home. Mr. Movus was 41 years old and a son of Joseph Movus, founder of the firm Lantz & Movus, American agents of antipyrine. The elder Movus became very wealthy and retired from business in 1892 leaving the son to continue to direct the firm, which he did until his health broke down and the firm was dissolved. Mr. Movus had traveled a great deal during the last few years in company with his wife and a nurse, but failed to regain his health.

## NEW YORK AND VICINITY.

### STATE BOARD OF PHARMACY INSPECTOR ARRESTED.

Charged With Extorting Money From a Pharmacist for Neglecting to Report Violations of the Pharmacy Law.

Jacob Cipes, a pharmacist of No. 73 Belmont avenue, Brooklyn, caused the arrest of Theodore Lorenz, one of the inspectors employed by the State Board of Pharmacy on Saturday November 9. The charge preferred against Lorenz was that of extortion, and that he had demanded and received five dollars for protection.

Druggist Cipes alleges in the complaint that Lorenz had called on him repeatedly and requested money, telling him if he paid it his leaving a junior in charge of his store would not be reported to the board.

Before the arrest was made Mr. Cipes put the case before the police of his precinct. The sergeant marked a five dollar bill and instructed Mr. Cipes to give it to Lorenz when he called. An officer secreted himself in Cipes' store and when at the appointed hour Lorenz appeared and received the money from Cipes, he was arrested and taken to the police station, and on being searched the marked bill was found in his possession.

Lorenz was taken before Magistrate Furlong and in defense said that Cipes had asked him to try and find a customer for his store and had given him the money as advance commission. He claimed that the whole affair was a put up job concocted by a number of druggists inimical to him on account of his activity in watching and detecting them in violations of the pharmacy law and that this was the way they wanted to get square with him. Magistrate Furlong held Lorenz under \$500 bail to await the action of the court of special sessions.

When the report reached the Board of Pharmacy that one of its inspectors was alleged to have demanded money from a Brooklyn pharmacist for overlooking a violation of the law, Dr. Albert H. Brundage and Secretary Sidney Faber at once commenced investigations. Both members of the board were in the neighborhood where the transaction was to take place, ready to act, but through an error respecting the date of transaction nothing transpired while they were on hand. The board has suspended the inspector from further duty pending the outcome of the trial.

Theodor Lorenz, the accused inspector, has always borne a good reputation, and had been highly recommended to the board for appointment. He has been doing good service for the board for three months, and was at one time employed by some of the large wholesale concerns as an inspector and detective.

### ATTEMPT TO SWINDLE DRUGGIST.

Two young men entered the drug store of M. Stein at Twenty-Seventh street and Sixth avenue on the evening of November 8 and ordered three syphons of vichy and several proprietary preparations, together with change for \$10, to be sent to a flat house at No. 140 West Twenty-ninth street. The order amounted to two dollars and ninety cents, and as the manager of the store, F. Grotta, was suspicious, he sent Philip Leizer, one of his trusted employes, with the goods and change. When he opened the door at the flat house a voice called out to Leizer and asked if that was the "drug store man." Leizer replied that it was, and the voice then requested that he place the change and goods on the dumb waiter and the ten-dollar bill would be sent down. Not caring to part with his property in such an uncertain way, Leizer proceeded up-stairs to investigate, but inquiries in the house revealed nothing and the tenants declared no goods had been ordered and that they knew of no young men as described.

Leizer returned to the drug store with the goods and change after reporting the case at the West Thirtieth street police station. Detectives are looking for the young men who ordered the goods.

### THE PHARMACISTS' MANUFACTURING CO. A New Co-operative Drug Concern.

The Pharmacists' Manufacturing Company, of New York City, held its first meeting since incorporation at Albany, Oct. 22, at No. 305 West Forty-fifth street, Wednesday morning, November 6, and the following officers were elected: President, George H. Hitchcock, of Kellogg & Co., druggists No. 1031 Sixth avenue; vice-president, Reuben R. Smith, pharmacist, No. 198 Ninth avenue; secretary, Bruno R. Dauscha, pharmacist, No. 1294 Madison avenue, and treasurer, Saleem F. Haddad, pharmacist, No. 89 Broad street. Board of Directors: G. H. Hitchcock, V. C. Daggett, J. M. Pringle, Jr., G. T. Reeder, William L. Schaaf, O. Boedicker and George Kleinau.

The Pharmacists' Manufacturing Co. was incorporated to manufacture and sell drugs of all kinds. The capital stock is to be \$20,000, made up of 800 shares of \$25 each. Until it has been decided otherwise by the Board of Directors, stockholders will be limited to the purchase of four shares each and no druggist can become a stockholder until he has invested \$100, or bought four shares of stock. The company is designated as a co-operative organization and only retail pharmacists are eligible as stockholders. Any druggist will be allowed to purchase goods of the company but only stockholders will get the advantages of a reduction in prices. The membership list contains thirty-seven names at present.

G. H. Hitchcock, V. C. Daggett and J. M. Pringle, Jr., have been appointed a committee to look for a site, and as soon as a suitable place is decided upon by the Board of Directors the company will commence operations, probably about January 1, although everything is being done to bring about an early opening.

The company will do a strictly ethical manufacturing business, according to statements made by several of the members. They all express the greatest confidence in the success of the new company and think that as the membership is not confined to any one city or state druggists from all over the country will become stockholders and thus be able to derive benefits from corporation and organization. They also express the belief that the more druggists become interested in the concern the more successful it will be. For the present the officers and directors will give their services without remuneration. The company will confine its operations to manufacturing at first; later it will probably do a general wholesale drug business as well.

### GERMAN APOTHECARIES' SOCIETY.

The German Apothecaries' Society of New York held its regular monthly meeting at No. 192 Third avenue, Thursday evening, November 7. A large number of members was present and interesting reports were received. President Charles F. Schlessner called the meeting to order, and after the minutes of the last meeting had been read and approved the report of the Jubilee Committee was called for and presented by Chairman Paul Arndt. The report was favorably received and much satisfaction was expressed when the committee announced a surplus of \$61.

Felix Hirsman, the delegate to the N. A. R. D. convention at Buffalo, from the State Pharmaceutical Association, made upon request some remarks, which were commented upon quite freely and followed by a discussion of the N. A. R. D. by many of the members present. The members praised the New York Consolidated Drug Co. and many stated that the co-operative plan as carried out by that company would furnish the best and most practical form of relief for the pharmacist at the present time.

Dr. George C. Dickman gave an address and read a number of humorous answers given to questions asked by the State Board of Pharmacy and the New York College of Pharmacy. Dr. Gustave Pfingsten introduced Jay C. D. Curtiss, a retired retail pharmacist of Rochester,

who exhibited an apparatus of his own invention designed to aid pharmacists in laboratory work. The following members were elected: Robert M. Ullrich, 222 Throop avenue, Brooklyn; A. Vanderbergh, 147th street and Amsterdam avenue, New York; Louis F. Rupp, 296 Seventh avenue; George Marlanson, 753 Union avenue.

#### AMERICAN CHEMICAL SOCIETY.

The New York section of the American Chemical Society, held its regular meeting at the Chemists' Club, No. 108 West Fifty-fifth street, Friday, November 8. The following papers were read: (1) C. W. Volney, "The decomposition of sodium nitrate by sulphuric acid (third paper)." (2) Martin L. Griffin, Mechanicville, N. Y., "The proximate analysis of the spent alkali liquor from the reduction of poplar wood for paper stock by the soda process, with a description of the method." (3) Phoebeus A. Levene, "Preliminary communication upon gluco-phosphoric acid." (4) William Campbell, London, England, "The alloys of copper and tin." (5) Daniel D. Jackson, "The photometric determination of sulphates." (6) John A. Mathews, "Alloys and the Phase Rule."

#### NOTES.

—Thomas Stoddart, the well-known retail druggist of Buffalo and president of the New York State Pharmaceutical Association, was elected a member of the upper house of the common council in that city Nov. 5. Mr. Stoddart is a Republican and his popularity is attested by the fact that he received next to the highest vote of all the candidates. His term of office will expire Dec. 31, 1905.

—C. E. Carritte, at present connected with Linton's Pharmacy, No. 48 Union square, is about to open a new drug store on Third avenue, corner of Twenty-eighth street. Another store soon to be opened by Isador Wilson is at Lexington avenue and One Hundred and Seventh street in the new theater building. Mr. Wilson has been seven years with his brother, James Wilson, at No. 215 Columbus avenue.

—Jay C. D. Curtis, a retired retail pharmacist of Rochester, New York, is in the city this week. Mr. Curtis is introducing an improved device for assisting pharmacists in laboratory work and dispensing, such as filtering distilling, etc. He appeared before the German Apothecaries Society and the King's County Pharmaceutical Association at their recent meetings and explained the apparatus, which is his own invention.

—The Kings County Pharmaceutical Society received more than forty applications for membership at its last meeting. Druggists on the other side of the river are convinced that the association is doing everything in its power to elevate pharmacy. It now is one of the largest local associations in the country, having a membership of more than 400.

—Charles H. Gaus, one of the best known druggists of Albany, has been elected Mayor of that city. He received a plurality of 2,590, running on the Republican ticket. Mr. Gaus is very well and favorably known in New York State drug circles and was a member of the Legislative Committee, which drafted the present pharmacy law.

—H. G. Shaw, of McKesson & Robbins, was on a short trip in Connecticut last week and visited many of his friends in the drug trade. Mr. Shaw says the druggists of New Haven are complaining of a dull season, but thinks it is probably due to the relapse after the rush and excitement connected with the Yale Bicentennial celebration there recently.

—The Alumni Association of the College of Pharmacy of the city of New York will hold its annual dinner at the "Arenas" on 21st street near Broadway, Wednesday, December 4. Music will be a feature of the evening and the price of tickets will be as formerly, \$2.00 per cover. B. R. Datscha is chairman of the committee in charge of the dinner.

—L. L. Walton, a well-known wholesale and retail druggist of Williamsport, Pa., has been in the city several days looking after some importations of fancy China and holiday goods consigned to him. Mr. Walton does

a good business in these lines every year and is a well-known visitor in New York drug circles.

—A number of out of town druggists visited the trade on Thursday, November 7, among others were: Henry Woodward, Middletown, Conn.; Frank Rowley, Plainfield, N. J.; L. J. Schlessinger, Yonkers, N. Y.; C. F. De Vries, Sayville, L. I., and C. Milspaugh, of Milspaugh & Co., Liberty, N. Y.

—P. G. Wolff, druggist at No. 1652 Fifth avenue, corner 59th street, Brooklyn, has sold his business to Edwin Burian who has been connected with the Roche Drug Co., at 57th street and Tenth avenue, New York for the past two years. Mr. Burian conducted a store on Columbia avenue some years ago.

—Samuel Felt, the Watertown, N. Y., pharmacist, is at the Waldorf, and has visited the drug trade; other recent visitors were W. G. Albertson, Amityville, L. I.; W. E. Durkee and Mr. Cutler, of Cutler Bros.' Pharmacy, Boston, Mass.

—A. L. Goldwater, druggist at No. 532 Willis avenue was elected alderman for assembly district number 38 in the borough of Bronx, in the elections of November 5. Mr. Goldwater defeated his opponent, D. McGrath by 103 votes.

—James A. Goodale, a retail druggist of Dover, N. J., spent several days in New York last week, and in company with Mrs. Goodale took in some of the amusements. Mr. Goodale did not forget to call on his friends in the drug trade.

—The drug store at No. 23 Beaver street, owned by the late A. L. Cochran, is being conducted by Charles A. Engel. A brother of the deceased has charge of the estate.

—Guests registered at the Drug Club November 4 included August Merz, Newark, N. J.; Judson S. Snyder, and W. H. Durr, of New York; Dr. Dannebaum, of Philadelphia was a guest of H. T. Jarrett, Nov. 6.

—J. W. Morrison, member of the wholesale drug firm, Morrison, Plummer & Co., Chicago, Ill., spent last week in Richmond, Ind., where he is largely interested in financial circles.

—S. Wexter, of the well-known retail drug firm, Public Drug Co., No. 150 State street, Chicago, was seen in the down town drug district last week, buying goods for his regular holiday trade.

—E. T. Green, representative in the Southern States for the Mallinkrodt Chemical Co., and A. C. Robertson, the firm's Eastern representative, were in New York several days last week.

—Ben Pearson, formerly with the Rio Drug Co., St. Paul, Minn., was in New York last week. Mr. Pearson now holds a position with the National Lead Co., in the Detroit offices.

—Fred. Weismann, a druggist at Union Hill, N. J., has been elected a member of the Assembly on the democratic ticket.

—The firm of R. F. Lyon & Co., Danielson, Conn., has dissolved and Charles H. Burroughs has acquired the business.

—Druggist P. Casella, of No. 507 Pearl street ran against T. Foley in the recent aldermanic contest in Assembly district number 2 and was defeated by 2,984 votes.

—The wholesale and jobbing houses and some of the down town retail drug stores were closed on election day, Tuesday, Nov. 5.

—J. S. Harrison, Newark, N. J., E. W. Wakelee and E. W. Burdick, New York, were registered at the Drug Club Nov. 7.

—F. W. Buescher, in charge of Parke, Davis & Co.'s Buffalo office, was in New York last week, accompanied by Mrs. Buescher.

—Theodore L. Bristol, of the Bristol Drug Co., Ansonia, Conn., and E. A. Gessner, of New Haven, Conn., were visiting druggists in New York trade circles November 7.

—Charles H. Harvey, a druggist of Manchester, N. H., has notified the New York trade that his business has been discontinued.

—Thomas Burns, employed in the dry department at McKesson & Robbins for upward of thirty years, died Friday, November 8.

—C. H. Goodwin, of the Eastern Drug Co., Boston, was in the city looking after his firm's interests last week.

—A. N. Agne has opened a new drug store at the corner of Ralph avenue and Marion streets, Brooklyn.

—George A. Squires has purchased the drug business of C. B. Root at Herkime., N. Y.

## IN AND ABOUT BOSTON.

### SALEM LICENSE CASES BECOMING FAMOUS.

Boston, Nov. 9.—After a hearing in the now-famous Salem druggists' license cases, the full bench of the Supreme Court has taken the matter under advisement, regarding Mayor Hurley's refusal to sign the sixth-class licenses. The hearing was attended by a great crowd of interested people. Chief Justice Holmes presided, and the assistant justices were on the bench. United States District Attorney Henry P. Knowlton appeared for the thirteen druggists who are the petitioners and ex-United States District Attorney Boyd B. Jones appeared for the mayor.

It was brought out in the matter of licenses when a city has voted "Yes" and has a license commission, that the board grants all licenses, including those of the sixth-class. When a city has voted "no", then the Board of Aldermen is to grant these licenses. This is an anomalous state of affairs, and what the legislature did was to give authority to the license commissioners to grant all kinds of licenses not only in "yes" years, but also when a city had voted no license. Chief Justice Holmes asked if it was supposed the legislature did this and unintentionally omitted to provide that the pay and office and other expenses of license commissioners should cease in no license years, and yet they still continue to act. The mayor's counsel replied that that was not inconsistent, as the law made no provision for paying boards of aldermen in the years when they voted licenses. He presumed that the legislature did not think the duties (in these no license years) of granting one or more druggists' licenses sufficient to warrant paying them.

It was allowed that the druggists were proper persons to receive licenses; that their places of business were proper places; that the mode of procedure in the application for licenses was proper; and that the only question at issue was whether the Board of Aldermen had authority to grant licenses. It is agreed that, if it is found by the court that the aldermen did have the authority, a writ of mandamus against the mayor would be issued immediately. If the court should not so decide, the petition will be dismissed.

### PRACTICAL BENEFIT ON THE PART OF A DRUGGIST.

Boston, Nov. 9.—Frank A. Davidson, president of the Theo. Metcalf Company of this city, recently has come into public prominence because he was one of the several remonstrants against establishing, as it was proposed to do, the Boston Nursery for Blind Babies in the street in West Roxbury where Mr. Davidson and others who raised objections live. The project went so far that the selected house had undergone needed repairs and improvements for its intended purpose, and a supply of coal for the winter's use was put in. Quite a sum of money was raised by the neighborhood to reimburse the landlord, who lost his expected tenant, between whom and himself, fortunately for the remonstrants, no lease had been signed or had passed. The sum of \$500 was paid him and several hundreds more were given to the nursery for the inconvenience caused it in being obliged to seek a home elsewhere, which was done most reluctantly. Mr. Davidson, in an interview on the subject, told your correspondent that he personally objected to the nursery only because he could not bear the thought of constantly seeing the poor, unfortunate infants out in their baby carriages, a sight which would greet him every time he went in and out of his home. To show his interest in the institution, however, Mr. Davidson offered to furnish the nursery at his own personal expense all the medicines,

prescriptions and such like things needed from a drug store, for the next year at least. The nursery was glad to receive his liberal offer.

### TRADE CONDITIONS EXCELLENT.

Boston, Nov. 9.—There is no falling off in the excellent trade conditions which recently have been found with the druggists, and as a class they feel that there is little or no ground for complaint. There seems for some reason to be a little more impetus to the prescription end of the business, and this of course adds to the general amount of trade. Drugs in the general market are moving moderately, without special feature to mark the list. Chemicals hold firm, as a whole, with perhaps the exception of oxalic acid in bulk, which has a lower tendency. Dye-stuffs and tanning materials meet with a good demand and quotations keep rather steady. Only a moderate call for alcohols is reported this week. In hops the market seems to hold well, on sales of comparatively small proportions, and with hesitancy on the part of consumers to buy largely at this time. Waxes show only a fair market.

### BROOKLINE TAKES THE INITIATIVE IN A REGULAR EARLY CLOSING OF DRUG STORES.

Boston, Nov. 9.—A movement has been inaugurated in Brookline the wealthiest town in the world, so its figures of population and valuation show, which might well be followed in all towns and in many cities, especially those of smaller size. Several of the leading and prominent druggists in that town, including the Theo. Metcalf Company, which has there one of the three stores which it operates; Young and Brown, the Butler Pharmacy, Arthur W. Bowker, etc., have agreed to close their places of business every evening in the week, except Saturday, from now until the first of April next, and, if the system works well as it is believed that it will, there probably will be a continuance of the custom right along after that time. This initiative step may lead to decided reform in this matter.

### NOTES.

—Some of the Taunton druggists lately have been before the courts there, as a result of a general raid in that city. The Whitenton Drug Company's place has always been considered as one conducted on admirable principles, and it has been a matter of pride for the business and for professional men of Taunton to point out the store as a model of its kind. Spotters claim to have bought liquor at the store, but Arthur P. Coffin, the proprietor, said he was registered pharmacist and did a regular prescription business, keeping liquor for medical purposes. He could not recall ever selling these spotters any liquor and his liquor book shows no such sales. V. J. Bourgeois, his clerk, said that he had never seen the spotters in the store and was positive that he had never sold them any liquor. The court found that it was a licensed store and the presence of liquor there was no evidence that the proprietor had any inclination of violating the law. Both he and his clerks were honorably discharged. In the case of the Weir Drug Co., of which Joseph Lang is manager and Charles Kierney, clerk, the testimony of the spotters was about the same as in the case of the Whitenton Drug Co. The proprietor said that he was a licensed druggist and conducted a regular drug store. Mr. Kierney testified that he never sold the spotters any liquor. The court said there was no evidence against the proprietor and he was ordered discharged, as was the clerk.

—Early in September, Henry D. Padeiford, a Somerville druggist, accepted a check for \$10 from a man who, it afterward appeared, had forged on it the name of H. R. Gay—whom no one can find. The New York police have just arrested the forger in that city, so that the druggist will perhaps have at least some satisfaction—that of seeing the swindler get his deserts. A brother of the man arrested in New York is now at the Charles Street Jail, Boston, awaiting trial on the charge of having passed a forged check in this city. He has also been in-

dicted by the Middlesex Grand Jury for a similar offence, committed in Somerville.

—Pittsfield fears the possibility of a cut-rate drug store, as the outcome of some dissatisfaction there among the trade. Nearly all the druggists belong to the local association, and it is among them that there may possibly be a backslider in the near future. The one druggist who did not join the others in the association acted most squarely in making certain promises akin to those which bind the members of the organization, and he has lived up to his agreements steadily. Some of the pharmacists look with rather envious eyes upon the success which the cut-rate stores in other cities seem to have.

—S. W. Gould and Brothers, who for a great many years have had a flourishing herb depot at Malden, where a chief industry has been the distilling of witch hazel, have sold out to a New York syndicate this branch of the business. The price is said to be about \$75,000. They have a plant in New Hampshire which is included in the sale. The herb business at Malden will still go on as in the past.

—In the State election this week, Walter E. Nichols was elected a Republican member of the House of Representatives. He has a pharmacy at 154 Chandler street. Daniel J. Kiley, a druggist at 301 West Broadway, South Boston district, also was elected as a Democratic member of the House. In years past he has been president of the Boston Common Council.

—The drug store of the late F. O. Covel, at Winchester, has been completely renovated and much improved for the new owner, A. B. Grover. It will now rank as one of the finest pharmacies of Massachusetts. The interior finish, although expensive, is quiet and attractive and represents the latest and best ideas in shop decoration.

—Many alterations and improvements in the drug store of W. H. Wood, at South Hadley Falls, will make that place much like a new store. A brick addition, two stories high, has been on the rear and a new shed has been built. The store and the prescription desk have been much enlarged and the interior will be greatly changed.

—For the purpose of manufacturing and selling drugs, medicines and like articles, the Davis Medicine Company has been organized, with headquarters in Inman Square, Cambridge. Among those concerned in promoting its interests are J. H. Cunningham, H. J. Cunningham and J. A. Melver. The capital stock is to be \$10,000.

—The Holyoke druggists who recently were implicated in the crusade against liquor selling have been in court, where, by request of all concerned, their cases were continued for a future hearing. The lawyers concerned in the cases were much occupied with a far more important court case.

—A new Massachusetts enterprise is the Pine Needle Company which has taken out its corporation papers under the laws of the State of Maine. The company is to establish itself in Haverhill, where it will make pine needle liniment, which is to be its business.

—A new drug store at Norwood fills a needed want. J. Theodore Wellington is the pharmacist in charge, and it will be near the store he has moved his home from Chapel street in that town to an apartment in the same block in which the store is situated.

—James H. Sullivan, employed at Week's drug store, 363 Atlantic avenue, this city, while cleaning a revolver in the store recently, accidentally shot himself in the palm of the left hand. He was sent to the City Hospital where his wound was dressed.

—On the charge of breaking and entering the business place of the Potter Drug & Chemical Company, Columbus avenue, this city, Michael P. Brennan, 27 years old, of Shawmut avenue, has been arrested. The larceny of a box of fancy soap valued at \$50 is thought to have been his work.

—After a pleasant vacation trip to the Pan-American Exposition and to New York City, John McDermott, clerk at O'Donnell's pharmacy in Cambridge, has returned to his usual duties at that place.

—The former Durgin's Pharmacy in the Ma-onic Block at Newtonville has been bought by George A. Loring, who is to open the place for the same business.

—J. B. Smith has purchased, and will continue to carry on, the drug business of A. C. Campbell & Company at Mittleague.

## PHILADELPHIA.

### LOCAL ASSOCIATION WORK.

Philadelphia, Nov. 9.—Now that convention season is passed and the prospective policy for the coming year has been outlined by all branches of the drug trade the retailers begin to feel as if they knew where they stand and can go ahead with local work confident of accomplishing solid results. Here in Philadelphia the P. A. R. D. is now devoting its energies to closer organization and more action in districts; it having been shown that it is better to get the druggists of a section influenced by the same conditions to unite on prices or policies than by taking in the whole city. Philadelphia is a big city and conditions in Manayunk and Frankford are different from those of West Philadelphia or the "Neck," different prices often rule, and certain practices in one section have no counterpart in another. Therefore success in raising prices on drug staples and sundries and prescriptions can better be achieved by local endeavors. The question of a general increase in prices of proprietary medicines, however, is more general and calls for close organization; it is a thing only to come (in this city) after continual hammering along the line and the awakening of the retail druggists to their power to enforce whatever the majority will get down to work and fight for.

For the purpose of bringing druggists of neighboring wards together for discussion of plans and exchanges of ideas for local work, the P. A. R. D. has begun a series of "Ward Meetings"—to cover the whole city. A week or so ago the druggists of the Seventh and Thirty-ninth wards were got together, Friday night druggists from the twentieth, twenty-ninth and thirty-second wards met in Eitzen's Hall, Twelfth street and Columbia avenue. At this latter meeting the progressive element of these wards was very well represented, and after the ice had been broken almost everybody took some part in the discussion in frank statements of their conditions and what they would be willing to do in the way of agreeing on fixed prices. It was the sentiment of the meeting that it would be possible to stop cutting on ten-cent goods and an agreement was made that the three wards be thoroughly canvassed and a date set for the adoption of the full price-list. The idea of adopting a code for marking prices on copies of prescriptions was favorably received. A separate code would be assigned to each ward to prevent the public from learning the meaning of the marks used and a copy would be given to each member of the P. A. R. D. This plan will probably be laid before the Association soon. After discussing other practical questions until a late hour, an agreement was made for future meetings to settle further details and to provide for closer union of interests. Great credit is due to D. P. Little, the official "organizer" of the P. A. R. D. for the success of these meetings.

### A GOOD WEEK FOR BUSINESS.

Philadelphia, Nov. 9.—The first week of November has shown quite satisfactory trade; business has been pretty good all over the city and has not as yet given any signs of falling off. The number of prescriptions coming in is larger than for some time and sales of remedies for coughs and colds are brisk. Certain of the well-advertised proprietary articles of this nature are being largely sold, although many retailers are selling lots of their own make by local advertising, and claim that the public now prefers something made by their druggist to an unknown article. Business has been good with the jobbers and dealers in drug sundries. Sales of staple drugs and proprietaries have been of good volume, and the demand for drugs and chemicals is increased. Heavy purchases of domestic essential oils in anticipation of expected high prices, are reported to have been made by a local firm, the "spot" stock of oils here being rather low. Glassware, it is said, will soon be advanced also.

### NOTES.

—The Entertainment Committee announce that the "Smoker" to be given by the Philadelphia Association of Retail Druggists to the druggists of this city will take place Friday evening, December 6, at the North Broad Street Drawing Rooms. The programme for the even-

ing will comprise a vaudeville entertainment of fourteen "sketches" by excellent talent, music, singing and lurch, with a final chorus by a "druggists' glee club"—members as yet incognito. Lunch and liquid refreshments will be served throughout the evening and 1,500 "Cubanola" cigars have been donated by the makers to raise the smoke. Invitations and admission tickets will probably be sent out next week. Any druggist not receiving one should notify at once the secretary of the Committee, W. W. Chalfant, Fifteenth and Tasker streets.

—The second of the years' series of "Pharmaceutical Meetings" held under the auspices of the Philadelphia College of Pharmacy will be held Tuesday, November 19 at 3:00 p. m. in Museum Hall. Henry P. Hynson, of Baltimore, formerly chairman of the Section on Practical Pharmacy and Dispensing of the American Pharmaceutical Association, will be the guest of the meeting and he will present a paper on "Modern Drug Store Methods." M. I. Wilbert, of the German Hospital, will describe and show a "metric medicine glass." All druggists are cordially invited.

—A meeting of the Nominating Committee of the P. A. R. D. will be held some time this month to present a list of nominees for officers of the Association for the coming year, who will be voted on at the January meeting. Rumors are floating around that a change of officers all along the line will be made at the election and an active canvas is now being made for certain "dark horses" for the principal offices. No doubt the conservative element will oppose so radical a change, so there will be lively politics betwixt now and then.

—On account of the death of a number of persons of St. Louis from tetanus following the use of anti-diphtheritic serum, the Philadelphia Board of Health has issued orders that all antitoxins supplied by the city shall not only be tested for its anti-diphtheric strength but shall in addition be subjected to rigid tests for determining if it is contaminated with tetanus or other germs of infection. Local manufacturers of vaccine and antitoxine have adopted special precautions to insure safety of their products and will issue a guarantee if demanded.

—Dr. William A. Auffurth, a well-known retail druggist and practicing physician, died at his home Roschill street and Indiana avenue October 31, aged 47 years. Dr. Auffurth was a prominent member of the P. A. R. D., formerly having been chairman for his ward, and took an active interest in local work. His drug store was one of the first opened in that section, at one time when it was sparsely built up and he made quite a success of his venture. He leaves a wife and several children.

—The second "Social Meeting" of the students of the Philadelphia College of Pharmacy will be given by the Alumni Association to the classes on Tuesday evening, November 19. Cards of admission may be secured by any member of the College or Alumni Association, from the Alumni Committee, or from Mr. Sten, Registrar of the college, as these will not be sent out unless so requested.

—Dr. S. L. Cheek for several years located at Ninth street and Girard avenue, has sold his drug store there to C. H. Harber and has given up his residence here.

## BALTIMORE.

ADAM J. GOSMAN.

Baltimore, Nov. 9.—Adam J. Gosman, a manufacturing chemist and retired druggist, died last Friday at his residence, 344 North Charles street, at the age of 68 years. Mr. Gosman had returned from Europe only two weeks before and was taken seriously ill on the night he reached home. He had been in the drug business the greater part of his life, starting as a boy with Dr. James McKenzie, the well-known pharmacist of half a century ago, on the corner of Baltimore and Gay streets. For more than thirty years he conducted successfully the pharmacy on the corner of Charles and Mulberry streets, and also engaged in manufacturing. His ginger ale attained extensive fame and he was induced, several years ago, to identify himself with a company, which has since conducted the making of the beverage on a large scale. This venture proved advantageous in a pecuniary way and added considerably to Mr. Gosman's possessions. Having gained a competency, he sought retirement, and

spent a part of his time in travel. The drug store has been disposed of to other persons. He is survived by his widow and stepson. The funeral, which took place last Monday from the Cathedral, was largely attended.

### DRUG TRADE BOWLERS.

Baltimore, Nov. 9.—The members of the Baltimore Drug Trade Bowling Club kept at it this week regardless of the election, the Ferrell & Kellam Company's quintette being scheduled last Tuesday night to meet the Stanley & Brown Drug Company, while last night the same team encountered the Root and Herb men. Last night's contests proved a Waterloo for the Ferrell & Kellam men, for they lost all three games by large margins, the scores being 784, 652, 810 against 606, 581, 613. A total of 152 was the highest individual score rolled up by any member of the losing team, while Davis, of the Root and Herbs, managed to make 185 in the first game. Last Tuesday the Stanley & Brown Drug Company took two out of the three games.

The standing of the several teams is now as follows:

|                               | Games Games Percent. |      |       |
|-------------------------------|----------------------|------|-------|
|                               | Won.                 | Lost |       |
| Sharp & Dohme.....            | 6                    | 0    | 1.000 |
| Root and Herb.....            | 10                   | 2    | .833  |
| James Baily & Son.....        | 4                    | 2    | .667  |
| Stanley, Brown & Co.....      | 4                    | 4    | .500  |
| Armstrong Cork Company.....   | 2                    | 4    | .333  |
| McCormick & Co.....           | 1                    | 5    | .167  |
| Ferrell & Kellam Company..... | 1                    | 11   | .083  |

### DRUG TRADE ACTIVE.

Baltimore, Nov. 11.—The drug trade conditions remain favorable. All the jobbers report marked activity both in the local and out-of-town market and a movement large as to volume. Retailers are buying with considerable freedom and the demand includes all of the stock articles. The prevailing activity also affects the manufacturers of pharmaceuticals, who report a good inquiry for nearly all their products. There are also various strong features about the market for botanicals. From all that can be ascertained the supply of American wormseed, angelica, lobelia seed and pink root is relatively scarce. At any rate, the crop gathered has fallen below expectations and all these articles are accordingly going up. Holders, it is said, may reasonably anticipate realizing higher figures on the supplies in their hands. The movement of heavy chemicals is without special features and about normal for this season of the year, while the retailers, as usual, vary greatly in their estimates of the trade conditions, some representing them as prosperous, while others express pessimistic views.

### NOTES.

—J. Emory Bond, formerly with Parke, Davis & Co., and afterward in the insurance business, only to make another change back into the drug trade, this time with the H. K. Mulford Company, has gone with the H. K. Wampole Company, of Philadelphia, and is at present located at Lexington, Va. Mr. Bond is an active member of the Wedgwood Club.

—Among the out-of-town druggists in Baltimore last week were J. W. Saea, Frostburg, Md.; J. R. Knight, Franklin, Va.; George A. Meyer, Dallastown, Pa.; E. M. McComas, Washington; Dr. W. Dorsey, Delta, Pa. and L. H. Dickman, New Windsor, Md. Mr. McComas came to Baltimore to attend the funeral of his brother, who was widely known to the drug trade, having supplied many pharmacists with cigars.

—Druggist George W. Eichner has moved from the Forest Inn, at North Walbrook to Madison, above North avenue, Dr. Melvin's old stand. North Walbrook is a suburb of Baltimore.

—At the last meeting of the Maine Commission of Pharmacy held in Augusta, Oct 16, eighteen candidates presented themselves for examination, and the following were granted certificates as registered apothecaries: Geo. Treggett, Rumford Falls; C. W. Jackson, Portland; J. Frank Sheehan, Portland; Geo. G. Brown, Sanford. The next meeting will be held in Augusta Wednesday, Dec. 11, 1901.

## CINCINNATI.

## NEW WHOLESALE DRUG HOUSE.

Cincinnati, Nov. 9.—It is said that negotiations are on between certain local capitalists and Chas. F. Weller, of Omaha, looking to the establishment here of a new wholesale drug house with about \$500,000 capital. Mr. Weller has been in the city a number of times recently, and it is said that he has been in conference with Otto Stein, formerly of the Stein-Vogeler Drug Co., and Andrew Hickenlooper, president of the Cincinnati Gas & Electric Co. This city offers exceptional advantages for the wholesale drug business and it is said that there is plenty of room for another house here. Mr. Stein when seen denied the report and said he knew nothing of any negotiations to this end. He is no longer connected with the Stein-Vogeler Drug Co. at least in so far as the management is concerned. "If Mr. Weller was here on such a mission," he said, "he certainly would have approached me on the subject." General Hickenlooper was more frank and admitted that such negotiations are on, but denied any connection with the projected enterprise, either financially or otherwise. It is stated that the negotiations have reached that stage wherein a location is being considered, and that a prominent building on Fourth street is under consideration.

## NOTES.

—This city is proud of Magdalene Schreck, a young lady of eighteen who is not only a graduate in pharmacy, but a registered druggist, the State Board of Pharmacy last week having granted her a certificate. Her story briefly, is that of a bright young girl, who has done everything toward becoming a breadwinner, the same as a male member of the family would have done had there been one old enough to put his shoulder to the wheel. Two years ago Leo S. Schreck, druggist at Warner and Wheeler streets, died after a lingering illness. After his death his wife, Anna Schreck, conducted the drug store and qualified as a pharmacist, having begun her studies before her husband's death. Her mainstay has been the daughter Magdalene, who with some younger brothers completes the family. She also felt it her duty to aid in maintaining the business, and after close application, was graduated with the class of 1901 at the Cincinnati College of Pharmacy; now she is assisting her mother. In the neighborhood she is pointed to as an example of the results industry and fortitude will gain for one of even the gentlest sex.

—A fire of supposed incendiary origin was discovered shortly after noon Wednesday on the fifth floor of the wholesale drug house of Hale, Justis & Co. at 241 Walnut street. The fire started near two boxes containing bottles and was extinguished with small loss. Shortly before a fire was discovered in the front part of the building and was also extinguished. The members of the firm are satisfied that both fires were of incendiary origin. An office boy in the employ of the company told the police a dramatic story about a strange man whom he claimed to have seen looking about the building. A further investigation will be made.

—J. P. Hemphill of Rising Sun, Ind., was in town this week purchasing fixtures for his new store which will be opened about December 1.

—M. M. Neal Co. will open a new drug store at Mt. Olivet, Ky.

## DETROIT AND MICHIGAN.

## THE NATIONAL PHARMACAL CO.

Detroit, Nov. 9.—The latest aspirant for honors in the field of pharmaceutical manufacture is the National Pharmacal Co., which has outlined a policy of supplying physicians with pharmaceutical products at a much less price than they can be procured through the usual trade channels. The sponsors for the new company are Victor Vaughan, M. D., Ann Arbor; Henry G. Walker, M. D.; John J. Mulheron, M. D.; B. R. Hoyt, M. D.; Guy L. Kiefer, M. D.; and J. B. Kennedy, M. D., Detroit. In its prospectus the company calls the attention of the medical profession to the fact that they are supporting at the present time pharmaceutical houses and are paying them advanced prices made necessary by the large force of representatives employed, high salaries of officials, etc. The National Pharmacal Co. state that this would all be done away with when they are firmly established and the business will be transacted entirely through the mails without the intervention of the drummer, or the necessity of paying exorbitant salaries to executive officers. The physician is requested to invest in a certain amount of stock, running anywhere from one to ten shares at \$10.00 per share. By so doing he is to be allowed a discount of 40 per cent. from its list prices and his share of the dividends of the company (if any accrue).

## NOTES.

—A number of years ago W. W. Fiero purchased the drug store of Henry Haigh, located at 264 Jefferson avenue, where he has since conducted the business. He recently purchased from Mr. Haigh the three story brick building and the fixtures and furniture of the store, together with the interest in the remaining portion of the lease, and will make extensive alterations and repairs. This store is one of the oldest drug stores in Detroit, and many years ago had the distinction of being patronized by the most aristocratic element.

—H. J. Fisk, of the London, England, offices of Parke, Davis & Co., sailed for home last week, after spending five or six weeks at the Detroit laboratory and his home at Adrian, Mich. Mr. Fisk came to Detroit for the purpose of securing up-to-date facts concerning processes and machinery which could be put in force at the London establishment.

—L. S. Hutchins, secretary and treasurer of the Hazeltine & Perkins Drug Co., of Grand Rapids, recently returned from the annual meeting of the National Wholesale Druggists' Association at Old Point Comfort, Va. He was accompanied by his wife, and they together inspected a number of places of interest in the East, returning home well satisfied with their outing.

—W. H. Burke & Co. intend to remove from the old Seeley Pharmacal Co.'s store the stock of physicians' supplies and surgical instruments, locating them at the Central Drug Store. J. W. Seeley has been engaged to give his entire attention to this feature of the business.

—Charles F. Mann expects to become installed in his new pharmacy at the corner of Woodward and Forest avenues within a few weeks, and intimates that the new store will be up-to-date in every respect.

—E. B. Longwell, of Paw Paw, has purchased the stock of the Charles Drug Co. of that place and will combine it with his present stock in connection with his large department store.

—S. E. Ludwig, formerly with Wm. S. Merrell Chemical Co., as traveler, has been engaged in a similar capacity by Parke, Davis & Co.

—John B. Collins, of Frankfort, for thirty years or more a prominent pharmacist of that place, recently died from heart failure.

—W. J. Mills, of Farmington, has purchased the drug stock of E. F. Holcomb and will continue the business at the same location.

—Walton & Vorheis, of Onnaway, have purchased the drug stock of George F. Barharin and will make decided improvements in the store and will increase the stock.

—J. W. Hicks will soon open a new drug store at Harbor Springs, Mich., and it is intimated that it will be one of the finest drug stores in the State.

### The Merz Santal Compound Perles Follow The Flag.

The fact that the Merz Capsule Co. of Detroit, report receiving orders from both the Philippines and Porto Rico for their Merz Santal Compound Perles, seems to indicate that the citizens of our new possessions are taking kindly, not alone to their new government, but also to the best capsules on earth. The Merz Capsule Co. guarantees that there is nothing to equal the Merz Santal Compound as a reliable and quick cure. If you do not have them in stock, do not lose any more time in getting a supply. The price is only \$3.00 per dozen bottles.

—O. A. Fauckboner, of the Hill Drug Store, Grand Rapids, intends to install during the winter a twentieth century soda fountain.

—M. W. Porter, of Quincy, has disposed of his drug stock to W. J. Austin and will retire from the business.

## CHICAGO.

### AN ANTI-CUT RATE PLAN.

Chicago, Nov. 9.—Among the subjects discussed at last week's meeting of the Chicago Retail Druggists' Association was the attitude of the Supreme Court of Massachusetts concerning the Worcester plan, the court holding that the contract was not binding beyond the first purchaser.

The druggists of the First District in Chicago are not wholly in favor of the plan announced to fight the cutters by inaugurating a cut rate war, because, as they assert, they are unable to keep up the pace for lack of money. They assert that to cut prices is a fruitless proceeding, since it brings no profit except to the manufacturers whose wares are advertised to keep the war going. As a manufacturer once said, "You Chicago fellows and those who sell at cut rates everywhere are doing just what we want you to do. You are advertising our goods, we get our price and the benefit of your advertising. We don't care how much you cut, because the more you fight among yourselves the bigger the demand for our goods. We never had free advertising to such an extent as we have since cutting began."

It was suggested at the meeting that instead of ordering a general cut, the order be reversed and that full prices be restored all along the line. If the goods are called for, ask full price, and if the customer says, "I can get this at the department store for such and such a price," the druggist could then answer that the department store can afford, by reason of its many other lines, to sell some goods even at cost or little above, something which druggists can not do. When the customer went to the department store he would find the clerk there anxious to sell him some preparation put up by the store instead of the article he asked for.

Whenever druggists find that a proprietary will not sell at full price, let them cease to order it. Gradually the sale of the leading proprietaries would be restricted to the department stores. One by one the channels of distribution would be closed, until at last the manufacturers would be forced to do something in self defense. And here comes in the Worcester plan as construed by the Massachusetts Supreme Court. If the manufacturers would establish supply depots in all the principal cities and make the jobbers agents or consignees merely, then their sales would in law be to the retailers direct as first purchasers, thus bringing them within the purview of the recent decision and making the contract enforceable. The manufacturers would then be able to control the sale of their own goods and prevent cutting. Such was the suggestion that was made. It may never be tried, but it is at least worthy of consideration.

### U. S. P. CONVENTION NOTES.

Chicago, Nov. 9.—The Executive Committee of the Board of Trustees has been reorganized and now consists of S. A. D. Sheppard, of Boston, chairman; Joseph P. Remington, of Philadelphia, and Charles E. Dohme, of Baltimore. The Auditing Committee now consists of George W. Sloan, chairman, Indianapolis; Albert E. Ebert, Chicago; and Prof. J. H. Beal, Scio, Ohio. Prof. J. H. Beal was elected a member of the Board of Trustees to fill the vacancy caused by the death of W. S. Thompson, of Washington, D. C. Charles E. Dohme has been elected president of the Board. Dr. Murray G. Matter, of Philadelphia, is now secretary of this body.

### NOTES.

—On Monday night, Nov. 4, the teams of the Chicago Drug Trade Bowling League rolled the following games at Bensinger's Alleys: E. H. Sargent & Co., 747, 751, 684, against Sharp & Smith, 733, 674, 685. Parke, Davis & Co., 727, 758, 775, against A. M. Foster & Co., 753, 684, 722. Lord, Owen & Co., 694, 694, 707, against Buck & Rayner,

J. W. GAYLE, Frankfort, Ky.,  
Secretary of the Kentucky Board  
of Pharmacy.

592, 626, 709. The standing and percentage of the teams are as follows:

|                     | Won. | Lost. | Percent. |
|---------------------|------|-------|----------|
| E. H. Sargent & Co. | 11   | 5     | .733     |
| Lord, Owen & Co.    | 10   | 5     | .667     |
| Sharp & Smith       | 9    | 6     | .600     |
| Parke, Davis & Co.  | 7    | 8     | .467     |
| Buck & Rayner       | 5    | 10    | .334     |
| A. M. Foster & Co.  | 4    | 11    | .267     |

—The annual election of the Chicago Drug Trade Club will be held on the first Thursday in December next. The Board of Directors has appointed the following nominating committee: Messrs. Albert N. Hunt, Harold Sorby and B. T. Van Alen. Among the visitors to the Club this week were Messrs. J. F. Stephenson, San Jose, Cal.; Frank Rogers, Omaha, Neb.; Bahnsen, Rock Island, Ill.; and N. S. Weller, Omaha.

—An attempt was made early this week to burglarize the drug store of Erskine McMillan, 490 West Madison street. While the burglar was boring holes in the front door the night clerk, William Mankey, telephoned the police and they came around and gathered the burglar in.

—The Executive Committee of the Chicago Retail Druggists' Association held a meeting this afternoon at the office of Secretary Wooten in the Y. M. C. A. Building.

—Dr. Proeck, who owns a drug store at Ann and Randolph streets, has opened another store at 395 West Harrison street under the name of the American Pharmacy.

—F. Bibbey, for fifteen years with R. J. Livesey at Grand and Claremont avenues, has opened a new store at West Lake street and Campbell avenue.

—It is reported that Frank J. Knowles, the well-known Ogden avenue druggist, has sold his store to a Mr. Stewart.

—Matthew F. Bozinch, a druggist of Chicago, filed a voluntary petition in bankruptcy this week.

—J. M. Winns, a druggist of Forest City, Ill., has gone out of business.

Iron Glue is what the name indicates, a strong glue, and is said to be the best made. It is claimed to cost less than half what other goods do and is put up in 5 and 10 cent bottles and collapsible tubes. Sold by wholesale druggists. Samples free from the makers, McCormick & Co., Baltimore, Md.

## LOUISVILLE.

Louisville, Nov. 7, 1901.

—The Peter-Bauer Wholesale Drug Company loses an account with a New Albany druggist because of a queer law in Indiana. The Louisville wholesale firm ran an account with the Hoosier druggist and apparently found that he was a slow payer. At any rate they sued to enforce payment. Then came a ruling that the Kentuckians think strange indeed. The Judge held that the Louisville concern could not recover any part of the account. He held that the Peter-Bauer Drug Company was a foreign company and under the laws of Indiana they could collect no accounts there until they established a branch house or office within the state. The drug company immediately took a demurrer; stating that the ruling was incorrect, and if it was correct that it was unconstitutional. Union B. Hunt, Secretary of State of Indiana was appealed to and the Louisville Board of Trade took up the fight. Mr. Hunt's attitude is more favorable to the Kentucky druggists. He says the law which was passed on March 15, 1901, is not directly against corporations who do business entirely by mail and through traveling men as the Peter-Bauer Company does. It is probable, however, that the case will be appealed to the highest court in Indiana before a final decision is reached.

—The plant of the Robinson-Pettit Drug Company came near being destroyed by fire last Saturday night. About midnight fire was discovered in the J. V. Reed Company printing establishment and the next instant the whole building was a mass of flames. The wholesale drug store was next door and it seemed that it would be impossible to save it. The window panes burst from the heat and the woodwork was charred. By desperate work the firemen saved the building, however, from total destruction. The loss was small and was fully covered by insurance.

—Thomas J. Penrod, a Bloomington, Indiana, druggist was terribly shocked under peculiar circumstances on Thursday. Penrod's store is located next to the Hotel Gentry and a live wire ran down the hotel roof and charged the iron doorstep of his drug store. When the druggist entered he stepped upon the charged iron. He fell to the pavement unconscious. It was at first believed that he was dead, and after having been unconscious for twenty-four hours, the physicians say that he can not recover.

—Several of the druggists are discussing the advisability of a fight on the department stores because they are carrying lines usually to be found in a drug store. The movement against the department stores has not reached open warfare and the druggist who gave the tip said that he was engaged in trying to find out how sentiment stood on the subject. It is said that the department stores are doing a large business in toilet articles, etc.

A. L. COCHRAN, a prominent retail druggist of New York who conducted a store at No. 23 Beaver street for many years, died Tuesday, November 5. Mr. Cochran received a ship's medicine chest to be filled on Thursday, Oct 31, and when opened, the chest was found to contain three rockets used as ships signals. Mr. Cochran held one in his hand and ignited the fuse, the powder burned his hand and wrist severely, and made a very painful wound. A physician was called and dressed the burn and the patient was doing well until Monday when he complained of intense pain. After several applications had been made without effect, some powdered opium was used as a dusting powder, and then an ointment of rose water applied. The patient was soon asleep from the effects, and died about 18 hours after the application of opium. Mr. Cochran was about 45 years of age and well known in down town drug circles.

Vera-Vanillin, manufactured by George Lueders & Co., No. 218 Pearl street, New York, is stated to be the strongest and best Vanillin on the market. It comes in large crystals and "you see what you get." With this product any adulteration can be detected by the eye, whereas in powdered Vanillin or small crystals this is not possible. Free samples will be sent on application.

## ST. LOUIS.

ST. LOUIS RETAIL DRUGGISTS.

St. Louis, Nov. 9.—The Retail Druggists' Association of St. Louis, held a meeting at the college building last Wednesday afternoon. President R. S. Vitt and Theodore F. Hagenow made their reports as delegates to the N. A. R. D. convention at Buffalo. They were congratulated by the members present upon their success in obtaining recognition for the Western contingent. The question of the small attendance and lack of interest shown by the local druggists in these monthly meetings was discussed. Those present seemed to fully realize the danger which may arise from the lack of interest manifested by druggists in the attempt to put the N. A. R. D. plan into operation. They rightly judge that the small attendance at their monthly meetings is a fair indication of the interest taken by the druggists in what the N. A. R. D. has accomplished in St. Louis. The local worker's also feel that much more would have been accomplished had their four hundred and some odd members attended these meetings and taken a more active part in helping the work along. It was decided at this meeting to give a "smoker" either the latter part of this month, or early next month, and the association will make a special effort to get a majority of the members together. It will be a combined business and social affair.

## NOTES.

—President H. M. Whelpley, of the A. Ph. A., reports a number of applicants for membership in that organization. Two of them express regrets that they did not join in time to enjoy the privileges of the St. Louis meeting.

—Fred Forthman has bought out Dr. John Reuter at Lee and Fair avenues. Dr. Reuter will return to his native town, Nashville, Ill., where he will practice medicine.

—Wm. C. Bolm has resigned his office as secretary of the St. Louis College of Pharmacy and his resignation has been accepted by the board of trustees.

—Wm. Laumann is now employed as chief clerk for Theodore F. Hagenow, 1500 Chouteau avenue. He is one of the best-known drug clerks in the city.

—Dr. Oscar Elbrecht gave an illustrated lecture on bacteriology before the students of the St. Louis College of Pharmacy last Tuesday forenoon.

—Dr. John Frank has purchased the Belt avenue Pharmacy, Belt avenue, and Suburban road.

—J. M. Nixon is opening a new drug store at Neustead and Elmbank avenues.

Preparations that are well advertised and pay such handsome profits as Mrs. Gervaise Graham's Toilet Preparations do, should be found in every well equipped drug store. The Caectio Hair Grower, Quick Hair Restorer and Cucumber and Elder Flower Cream are particularly well advertised, being extolled in several handsome booklets published by Mrs. Graham. A supply of advertising matter will be sent to any druggist who writes for it. Address Mrs. Gervaise Graham, 1250 Michigan avenue, Chicago.

T. A. Willson & Co., makers of street spectacles and eye glasses, Reading, Pa., state that they are now prepared to furnish neat spectacle sample cases for salesmen of wholesale houses that carry this line. Anyone interested should write for prices, which are low. This firm employs no traveling salesmen, but relies on the merit and low price of the goods to market its product of 10,000 pairs of spectacles per day.

If you have not the time to write your own advertisements or do not feel satisfied with the returns from newspaper advertising it would probably be to your advantage to communicate with A. J. Embree, Belton, Texas. He is an expert advertisement writer and guarantees his ads. to bring results. Having been brought up in the drug business Mr. Embree is specially qualified to do good work for druggists.

## THE NORTHWEST.

### "NO GROUND FOR DESPAIR."

St. Paul, Minn., Nov. 8.—Under the above heading the "Josh" man of the Minneapolis Journal's editorial page has all kinds of fun with people who write testimonials for patents. He says: "A Wheaton, Ill., lady who had 'tried everything in vain until I commenced taking your valuable remedy,' has written, if the Wheaton News can be believed, and we doubt it, the following testimonial to a country druggist who is booming a new tonic:

"Dear Sir: Before taking your medicine, I was too weak to spank my baby, but now I can lick my husband. Heaven bless you."

"This reminds one of the Shakopee man who was nearly blind and took Dr. Sawyer's wonderful Elixir. He wrote,

"Dear Sir: Before taking your Elixir, I could not see six inches before my face. Yesterday I saw wood. I feel that I ought to let these facts be known. Send me another bottle."

"Phinneas E. Perkins of Mound Center, S. D., says that before trying the Snake Cure 'he had not drawn a sober breath for twenty-five years.' Last Sunday he drew several sober breaths, greatly to the astonishment of his wife, and without injury to his health. He expects a perfect cure—some time.

"All these examples show that it is never too late to hope for 'that perfect cure' so freely held out by the irregulars."

### CAUSAL CAUSE OF ACTION.

St. Paul, Minn., Nov. 8.—Nels A. Winslow, a druggist of Camden Place, Minneapolis, has been sued by Enoc Szlachtowski for \$2,000 for personal injuries. He claims that while suffering from a sore leg he sent to the defendant's drug store for a bottle of liniment. Instead of getting a mixture that would stop the pain, Szlachtowski claims Winslow sent him a fluid, the principal compound of which was carbolic acid. This fiery concoction, when applied, burned the limb badly, it is alleged, and caused blood poisoning and other troubles, which the plaintiff asserts "caused him to pass sixteen days and nights without sleep"; to be confined to his house for about six weeks, and to lose his job.

### SATISFACTORY TRADE.

St. Paul, Minn., Nov. 8.—Druggists report business very satisfactory these days and the volume of transactions is again on the increase. There is less activity for paints, oil and glass, although the demand is still good. In fancy goods and druggists' sundries the business is very heavy, more so than at any other time just before the winter holidays.

### NOTES.

—Successions: F. A. Groezinger, Worthington, Minn., by A. D. Hard; George H. Betz, Avoca, Neb., by Ora E. Copes; Martin & Roberts, Dorchester, Neb., by Martin & Ferguson; W. E. Stoutemyer, Luverne, Minn., by Chat Echoff.

—The Eenkema Co.'s drug stock having totally been burned up last Saturday night the proprietors and their pharmacist, Mr. Jensen, are in the city this week selecting a new drug and sundries stock.

—New: Stenmo & Co., Hatton, N. D.; D. E. Crowley, Mound City, S. D.; Pearson & Wood, Grangeville, Idaho; H. M. Jogens, Council, Idaho.

—Allen Bresler, who has been running the soda fountain department in S. F. Boyce's store at Duluth, has returned to Minneapolis.

—J. B. Schindler, after a few weeks in the wilds of North Dakota, has returned to this city to re-enter the drug business.

—L. V. Wells, is selling out at Wenatchee, Wash. So is N. F. DeBerge, who deals in paints at Kenosha, Wis.

—George W. Chamberlain of Wells & Chamberlain, paint dealers, Livingston, Mont., has sold to his partner,

—W. A. Barnard's drug store at Ogallala, Neb., was recently entered by burglars who got away with \$300.

—Dr. Holland has sold his interest in Holland & Drummond, Mt. Pleasant, Ia.

—J. Rosholt is to sell his interest in A. W. Swenson & Co., Maddock, N. D.

—J. D. Fisher has left Minneapolis and is now with the Eveleth Drug Co., Eveleth, Minn.

—P. S. Henderlite, Council, Idaho, has sold.

### WESTERN PENNSYLVANIA DRUGGISTS' PROTEST.

The Western Pennsylvania Retail druggists' Association, through its Secretary E. F. Pritchard, has sent the following letter and resolution to the Governor of the State protesting against his recent appointment to fill the vacancy on the Pennsylvania Pharmaceutical Examining Board:

To the Governor: "Please find enclosed resolution adopted unanimously at a meeting of this Association. I also send herewith a directory showing the scope of our membership. There are several similar associations in the State and there is a general feeling of dissatisfaction over this appointment everywhere. We feel that offices of this character should be filled by men who are acceptable to the trade as represented by the Societies composed of the best class of the members of the trade and they should be entitled to some consideration. This is the course followed in other States having similar laws on their statute books, and has been found to bring about much more satisfactory appointments than where mere political qualifications are made the rule for filling such important positions as the one under consideration."

Resolved: That the recent appointment made by Gov. Wm. A. Stone, to fill the vacancy on the State Pharmaceutical Examining Board is extremely distasteful and disappointing to the members of this Association, as well as to the drug trade throughout the State.

The reasons for this action are that the appointee is not in any sense a representative druggist, is not in harmony with the members of the craft in his own city and is not affiliated with any of the various organizations intended for the protection and advancement of the profession. These we deem good and sufficient reasons for not regarding the appointee as fitted to represent in a becoming manner, so important a section of our great commonwealth as the western end of the State.

Therefore we hereby express our disapproval of this appointment and regard the selection as extremely unwise and unfortunate.

QUININE SACCHARINATE may, according to H. Defournel (Bull. Soc. Chim.), be obtained in basic form by treating basic quinine sulphate in 95 per cent. alcohol solution with sodium saccharinate dissolved in warm, 60 per cent. alcohol, one molecular weight of the former salt being employed with two of the latter Sodium sulphate crystallizes out, and the basic quinine saccharinate is obtained in well formed needles by evaporating the liquid residue. The taste of the salt is at first sweet, then bitter. The crystals are almost insoluble in cold water, but dissolve in the proportion of 1 to 130 in boiling water. The substance melts with decomposition at 194-195 degrees C.

SCUTELLARIN is a compound separated from the leaves and flowers of *Scutellaria altissima*, by Molisch and Goldschmidt (Chem. Zeit.). These investigators also find the same, or a closely allied compound, in the leaves and flowers of various other plants. Scutellarin has been given the formula  $C_{15}H_{16}O_8$ . When treated with sulphuric acid it breaks up into scutellarein, and a substance which is not a sugar. Scutellarin can, therefore, not be considered a glucoside. The decomposition product, scutellarein, forms compounds with mineral acids, and when treated with alkalis is decomposed into phloroglucin and paraoxybenzoic acid.

OLIVE LEAF OIL has been obtained, by Haenzel (Pharm. Zeit.), by distilling dry olive leaves with steam. The oil is of an unctuous, volatile character, possessing a peculiar and very pleasant odor. The yield is .04 per cent

PHILADELPHIA NEW YORK CHICAGO

## MONTREAL.

Montreal, Nov. 8, 1901.

—The firm of Evans & Sons, Limited, has lost two valued employes by the death of W. H. Stanley and George Moore. Both had been in the services of the firm for the past twenty years and were held in high esteem by their employers. The former previous to his death had been ailing for some four or five years with Bright's disease, while the latter suffered from the same disease for about six months; it is a strange coincidence that both were about the same age and died of the same disease on the same day within four hours of each other. Mr. Moore leaves two sons, the eldest Alex. B. J. Moore, who is head chemist for Evans & Sons, Ltd., and Alfred, who is head clerk for H. R. Gray.

—The semi-annual examinations of the Pharmaceutical Association were held last week, nineteen minors and twelve major students presented themselves. The following were successful—Majors: J. Valois, M. J. Gadbouis, V. Le Doux, C. I. Lamontagne, A. E. Labonte, E. Vadebonceur and S. Moisseau. Minors: Oscar Paquette, J. A. Marceau, J. A. Monat, H. E. Archambault, J. Pigeon, R. Pasquin and C. P. Saboutin. The examiners were: R. W. Williams, Alex. B. J. Moore, W. H. Chapman, Henri Lanctot, A. J. Laurence and Edmond Geroux. The successful preliminary students were: J. E. Turcotte, D. B. Hopkins, A. Merrill and A. Meloche.

—The Retail Druggists' Association is up in arms against one of the city druggists for cutting on patent medicines and prescriptions; the latter has openly advertised big cut rates in the city papers to the consternation of his confreres in this province. The Association is not letting the grass grow under its feet and has already formed several committees to interview all the wholesale houses and manufacturers' agents with the intention of cutting off supplies, and has received several promises already which if carried out will prevent the cutter from procuring any more goods.

—A rumor gained ground a short time ago that a pharmacy was to be shortly opened in Haycock & Dudgeons city goods block; it has certainly proved only a rumor as the proprietor of the block has not yet been successful in procuring the right man for the position and several of the city chemists have been approached but none of them seem to consider the idea feasible as the store would be run as a cut rate pharmacy and this does not coincide with the views of the majority of Montreal druggists.

—The Druggists' Rifle Association has had a very successful season and since the ranges were opened there has been a large attendance of members of both the retail and wholesale trades. Quite a large number of the members took advantage of the holiday on the King's birthday and spent the entire day at target practice. This will about end this year's work and during the winter a regular schedule of matches will be drawn out for the ensuing year.

—The many friends of A. J. Laurence will be pleased to learn he has so far recovered from his late serious illness that he is able to take over the full charge of his pharmacy at St. Denis and Ontario streets. It is reported that a new pharmacy will shortly be opened on St. Catherine street near Panet street.

—The recent Government analysis of granular effervescent sodium phosphate showed that only 20 per cent. of that manufactured in Canada and the States was genuine; this is quite a blow at some of the so-called reputable manufacturing houses.

—The optical course at the Montreal College of Pharmacy has proved a great success. Quite a large number of the students are taking the full course of lectures and several of the city druggists are doing likewise with a view to adding an optical branch to their business.

—H. H. Wootton, apothecary Royal Victoria Hospital, has returned from a shooting expedition in the back woods.

—Wallace Dawson has moved into more commodious premises within a door or two of his former stand.

—A. E. Brethour, of Ottawa, has assigned at the instance of Evans & Sons.

—The wholesale druggists have again formed an association and it is to be hoped that it will not meet with the fate of its predecessor.

—A. W. Moffat's only daughter was married last week to J. McCarthy, of Niagara Falls, Ont.

## BOOK REVIEWS.

THE MEDICINAL PLANTS OF THE PHILIPPINES.—

By T. H. Pardo de Tavera, Doctor en Medicina de la Facultad de Paris, Comisionado Científico de S. M. en las Islas Filipinas y Delegado General en las Mismas de la Societe Academice Indo-Chinoise de Francein, Miembro Pundador Correspondiente de la Sociedad Espanola de Higiene, etc. Translated and Revised by Jerome B. Thomas, Jr., A. B., M. D., Captain and Assistant Surgeon U. S. V. Published by F. Blakistons's Son & Co., 1012 Walnut Street, Philadelphia, Pa., Octavo, cloth, pgs. 298, Price, \$2.00 net.

This book is a translation of a work written by a native of the Philippine Islands, and is intended to facilitate the study of the native medicinal plants by the numerous medical officers stationed at small posts throughout this newly acquired American territory. In order to aid in recognizing the various plants the translator has added to the descriptions found in the Spanish text, much new material, including English names, the sizes of leaves, etc. The uses of the various drugs in Malay and Hindu medical practice are faithfully described, including scientific therapeutics as well as the curious methods employed by the curanderos or native herb doctors. This treatise should be especially interesting to members of the pharmaceutical and medical professions in the United States. Besides introducing some new medicinal plants which by reason of their powerful action upon the animal system merit a careful study, a great store of information about Oriental methods of treating disease is rendered accessible to English readers. The work has not lost its local color in the process of translation, and will be interesting to many non-professional readers, giving as it does an insight into the curious customs, habits and methods of thought of the natives of the East not found in ordinary books of travel and Government reports.

THE PHYSIOLOGICAL ACTION OF DRUGS.—An

Introduction to Practical Pharmacology, by M. S. Penney, M. A., M. D., Joint-lecturer on Physiology in Guy's Hospital Medical School, and C. D. F. Phillips, M. D., L. L. D., Examiner in Materia Medica and Therapeutics in the University of Aberdeen; late Examiner in the Universities of Edinburgh and Glasgow. London, Edward Arnold, 37 Bedford street, Strand, 1901. Octavo, cloth, pgs. 400. Price \$1.50.

This work contains a description of a series of experiments upon the physiological action of drugs. The details of the experiments are carefully explained so that they may be performed by medical students. For a similar reason they have been limited to those operations which can be performed upon a brainless frog. The results are based upon numerous observations and graphic records. A very interesting series of reproductions of tracings showing records obtained by the action of the drugs upon the heart and muscles of the frog are distributed through the text.

Among the publications recently received at the Era office is a copy of the third edition of Dr. F. Hoffman's compilation of Popular German names, of Domestic Drugs and Medicines, published by the Pharmaceutical Review Publishing Co., Milwaukee. This little book which is bound in paper and is sold for 50 cents, contains a list of German names with their Latin equivalents arranged in alphabetical order. It is intended for the use of American druggists who are called upon to supply the domestic remedies the names and the uses of which have been brought from the fatherland by our fellow citizens of German birth. Many of the names applied to these remedies are purely traditional and are found only in the larger books of reference, so that the pharmacist is in many cases unable to supply the wants of his customers simply because he has no means of knowing that the article called for is a familiar occupant of the shelves of his store. Reference to this list is almost certain to prevent an occurrence of this kind.

Six book-plates which serve as distinguishing features of as many notable pharmaceutical libraries have also been received. The appropriate and unique designs of these plates are of special interest to the pharmaceutical bibliophile. The book-plates exhibit the various artistic designs chosen to decorate the volumes in the libraries of the Pharmaceutical Institute of the University of Berne, and the Pharmaceutical Society of Switzerland, and those of the private libraries of Professor A. Tschirch, George W. H. Ehrhardt, Dr. O. A. Oesterle, and George Meyer.

#### EVOLUTION OF THE EMPLOYEE.\*

Capable employes, unlike poets, are made, not born, and the makers have almost as much responsibility as their Creator. What spirit has the master breathed into the unformed mind of the office boy? What zest or action, of hope, of aspiration has the employer imparted to the young souls entrusted to his care? As the employer works, so will the employe develop. It need not be a kindergarten system, nor yet a prayer meeting, but inevitably it must be a training school, where example will be the most potent factor.

"Am I my brother's keeper?" was the shambling avoidance of the first murderer. Ages of progress toward light and right refuted that argument, yet twenty centuries of Christian civilization have hardly sufficed to turn the calcium light of public scorn on the employer who neglects his working force.

It took the mind of a Napoleon to step out of the path of a heavily loaded bearer of burdens, saying to his companion, "Respect the burden, madame." It takes some sense and some perception to see the burdens of the clerk, to respect them and to make them lighter. Some employers are to dense for this, but there is money in it.

What does this twentieth century call for in this line? It has already taught the commercial world that it pays to consider the health, comfort, improvement, and even the convenience of the working force. Modern life demands and provides greater conveniences and comforts every year in the office as well as in the home.

What shall we do for them? Not only what we would have others do for us and for ours, but more than was done for us when as beginners we entered the commercial field.

The boy arrives. His childish heart and inexperience make him tremble every hour in his new occupation. His relation to the outer world has begun—some rough hazing by his fellow-employes may take the starch out of him, and make him realize that this is not "home, sweet home," but the employer, from now on, will be his leader and his example.

Women, too, are coming more and more into office life—exerting a retarding influence—making things better, at least for the men. Who doubts that they deserve double consideration? Who would deny it to them? Who would not put the brand of Cain on the employer who wronged, when it was his duty to protect them?

Three forms of encouragement should be extended to all employes—the encouragement of pay, of protection and of progress. Fair pay, improved if the work justifies it. Positive protection against the outer world. If the force is to stand like an army corps, no leader can afford to take the part of an outsider, as against his own clerk, or humiliate his own employe to show favor to some customer. A fair chance to go ahead must be given to all, or ambition will die out and indifference take the place of zeal.

Justice—if you are acquainted with it—should be the basis of all the relations between employer and employe. Insist on justice toward yourself and the business. Give equal justice to the hired man. Build your own dealings with the public on justice, and see to it that your employes do the same.

Trust begets trust, and confidence confidence—give your employes your confidence, not carelessly or without thought, but gradually and just as rapidly as they show that they deserve it.

To the employe I would say that truth and willingness

\*Fame.

go far to make a model worker. They are dependable qualities. Loyalty, real unwavering loyalty, is sadly lacking in the present hour—it will come to a good market. Of course, the worker must not be alone willing to work, but also to put up with the conditions under which he is called to work. A grumbler never made a good helper in any walk of life.

My heart goes out to the employe, for ever since my seventeenth year, with very narrow lapses, I have been both employer and employe, and still am. Those thirty-five years have grounded in my mind a firm belief that, when Saint Peter balances up those great books, in which all our life work is recorded, many a man will find that a reference to the commercial agencies will be of no avail, but that the glad testimony of his employes, "This man did this and this for us," may save him not a little trouble. "Inasmuch as ye did it unto one of the least of these, ye did it unto Me."

#### WRITE PROMPTLY.

It has been well said that punctuality is the very life of the universe, all the planets revolving around the center of the solar system at the very moment when they are due. It is the same in business. It is the very soul of industry, without which all its machinery gets out of gear. A successful business man is always noted for his keen sense of the value of time, and considers it not only an act of courtesy, but one duty, to answer all letters on the day on which they are received. This rule is golden and should be strictly adhered to even at the risk of some inconvenience. It is one of the most trying situations in business life for a man who is in earnest in anything he does to have his natural promptness and temper strained by those who are in the habit of neglecting to answer correspondence till the last moment, and yet it is a very common defect in all departments of business life.

Those of our readers whose experience has brought them in contact with such characters need not be told how aggravating it is to wait in vain for letters on important business matters that have not been written and may have been even forgotten altogether. It may be, and often is, that the party written to does not consider the subject-matter one that calls for a reply, but even in most of such cases a courteous return may be called for, and should be made.

Another matter of importance in relation to business correspondence should be also noted, and that is that the answer should cover all the points at issue and be couched in concise and legible form. Of late years it has become a very general practice to carry on business correspondence by means of the typewriter, but this is a matter of convenience rather than of necessity. The main point is to convey your thoughts in a way that will obviate the danger of misunderstanding, whether the letter be typewritten or by the pen. Brevity, they say, is the soul of wit, and brevity and clearness are the essentials of a good business letter. Say what is to be said in the fewest words. You know how "please remit" has taken the place of rambling, apologetic request of former days.—Keystone.

NORI, a preparation of seaweed used as food in Japan in the form of dried tablets, has been examined by K. Oshima and B. Tollens. The seaweed used in its preparation is *Porphyra laciniata*. The investigation showed that nori contains a number of sugars. By oxidation with nitric acid, mucic and saccharic acids were obtained. After hydrolysis the phenylhydrazine compounds of d-mannose and l-galactose were obtained. This food was also found to contain fructose and other ketoses, and probably also some fucoses as well as other pentoses and glycoses.

## THE MULFORD LABORATORIES. THE ANTITOXIN LABORATORIES.

On the firm's private farm at Glenolden, Delaware County, Pa., in one of the richest and most healthful agricultural districts, H. K. Mulford Company has erected new antitoxin laboratories, illustrated in the accompany-

Antitoxin Laboratories.

ing cut. No pains or expense has been spared in endeavoring to make these laboratories the most complete in existence. The H. K. Mulford Company was the first American firm to produce Diphtheria Antitoxin, and it is the high quality and potency of their product that has so materially reduced the previously high mortality rate of diphtheria, to its present low level. As a matter of fact the history of antitoxin in America is largely a history of the Biologic department of the Mulford Company. In all tests, Mulford's Antitoxin has proved that it is worthy of preference, because it saves more lives than all other serums. Official reports have been made by the American Medical Association, the American Pediatric Society, the Ohio State Board of Health, the various Departments of the United States Government, and practically by all of the State Societies in the United States and Canada, and Mulford's Antitoxin has received more official endorsements than any other foreign or domestic serum.

In these new Biologic Laboratories Antitoxin will be produced under better conditions than prevail at any other place in the world. The Laboratories have been especially designed and erected for the single purpose of producing reliable serums. Every commendable feature of the leading bacteriologic and hygienic laboratories, connected with American and European universities, have been incorporated in these new buildings. They are, scientifically, ideal; all departments are separate and distinct. The stables are models of sanitary perfection, and are cleansed and disinfected by a special corps of employes. Each of the two hundred horses is kept in a separate stall; every stall is well lighted, ventilated and thoroughly drained. Each horse, before admission, is tested

for tuberculin and mallein to prevent the possibility of an animal suffering with tuberculin or glanders being admitted; furthermore, a rigid physical examination is made in every case. It is the special duty of a skilled veterinarian, not only to examine the horses but to keep

them constantly under his personal observation. The horses are bled and the serum collected in an absolutely aseptic bleeding room, which prevents any possibility of contamination of the serum.

The practical production of antitoxin in the Mulford Laboratory is entrusted to a corps of specially-trained bacteriologists, who devote their entire time to this object. Especially worthy of notice is the earnest and painstaking care with which the unit strength of toxins and antitoxins is determined. The methods employed enable the exact strength of these to be fixed to a degree of absolute mathematical precision, this work being performed by a corps of bacteriologists who work in collaboration and later individually corroborate each others observations and results.

Mulford's Antitoxin is standardized, so that each cubic centimeter always contains a definite number of antitoxin units. All the animals producing antitoxin are constantly immunized by tetanus antitoxin against tetanus. Trikresol, the preservative employed, is a powerful non-toxic germicide. No other antitoxin in the world is so accurately standardized, so scrupulously prepared, so uniform-potent, so absolutely germ free and reliable; consequently, no other serum is of such uniform, definite unit strength.

It is safe to predict that with the increased facilities afforded by these new laboratories, the antitoxin of this well known firm will be even more widely employed, and further advances made in the domain of bacteriologic research.

## THE VACCINE LABORATORIES.

The accompanying cut illustrates the Mulford Company's Vaccine Laboratories, which are located at Glenolden, Pennsylvania, entirely separate and distinct from the Antitoxin Laboratories. This vaccine establishment embodies the response to the requests of many of the leading American physicians for a pure vaccine. The Mulford Vaccine Laboratories embody the latest developments of science and represent the first and only effort in this or any country to produce, exclusively, absolutely

Vaccine Laboratories.

pure glycerinated vaccine on a commercial basis. All the buildings have been especially constructed for the purpose, each separate building is a hygienic model and the principles of aseptic surgery are as rigidly adhered to as in the operating room of any hospital.

The inoculation of animals and the collection of virus are executed in a strictly aseptic manner, in a separate operating room entirely remote from the stables. The animals are kept at all times under the most rigid sanitary surroundings in buildings, the materials of which permit of immediate and thorough disinfection. The system of drainage is perfect; all the refuse matter is conducted in iron pipes to a special incinerating plant, where it is burned. These laboratories are under complete bacteriologic control and are the most extensive and scientific in existence. Suckling female calves, varying in age from four to eight weeks, are, according to all authorities, the producers of the best vaccine. Only this class of animals is used in our laboratories. The animals are fed exclusively upon milk, and the excretions are disinfected and removed as soon as voided. Each calf is subjected to a thorough physical examination by our veterinarian, and injected with tuberculin in order to assure its freedom from disease. Only healthy animals are admitted, and the appointments of the stables and the care exercised, keep the animals in healthful surroundings and free from disease. Each animal, after the collection of vaccine, is killed and subjected to a careful post-mortem examination. The virus from absolutely healthy animals is used exclusively. The inoculation of animals and the subsequent collection and preparation of virus are practised in a room modelled after the operating rooms in the most recent constructed modern hospitals. This operating room is unexcelled in aseptic features by any hospital operating room in this country or abroad; it has no connection with the vaccine stables, and is capacious, well-lighted, and carefully guarded against outside contamination. Sterilization of everything connected with the operation is executed by the latest approved instruments and methods. So rigidly aseptic is this room maintained that in it there could be safely performed abdominal operations upon the human being.

The bacteriologic purity of Mulford's glycerinized lymph is its chief attribute; it is pure glycerinized virus—no mixtures and cultures of the organisms of various infectious diseases. Every tube of this glycerinized lymph has the guarantee of one of the best known scientific bacteriologists in America that the vaccine is pure and free from all pathogenic bacteria. Repeated bacteriologic examination of each separate yield of virus is an invariable routine practice in Mulford's Laboratories, and its physiologic activity is determined by repeated tests on animals. Mulford's Vaccine is the purest and most active ever prepared. The capillary tubes containing the glycerinized lymph are charged from the bacteriologically and physiologically tested vaccine; each individual tube is, therefore, of guaranteed purity and activity. The capillary tubes are filled by means of the negative pressure of a water-power generated vacuum; contamination of virus by outside air is, therefore, impossible.

The immense demand for Mulford's Vaccine necessitates the service of a large number of employees, each of whom is selected with especial reference to faithfulness and aptitude for the careful execution of the details required by the high standard of their product. Their advantages for the production of large quantities of vaccine are unequalled. The laboratory facilities and the plentitude of skilled labor enable the preparation of one hundred thousand tubes of glycerinized lymph daily. Each separate yield under competent scientific supervision, and the absolute purity and physiologic activity of each tube of lymph is guaranteed.

Mulford's Glycerinized Vaccine Lymph is generally employed by the City and State Boards of Health throughout the country, as well as by the various branches of the United States Government. This widespread employment of Mulford's Glycerinized Vaccine is due to the fact that it yields from 98 to 100 per cent. successful takes, without causing excessively sore arms.

The increased sales of G. B. Kent & Sons' English Tooth Brushes in this country speak well for the quality of the goods put out by this firm, which will celebrate its 125th birthday next year. Druggists who have not handled Kent's brushes will find it to their interest to write to the American agents for information concerning them. McKesson & Robbins, 91 Fulton street, New York.

## BUSINESS RECORD.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS' DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here reported, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,

### Six Per Cent. Dividend.

The Empire State Drug Co., 26-32 Wells street, Buffalo, N. Y., has paid a dividend of 6 per cent. on its stock. More than 1,000 druggists who own stock in this company received this dividend on November 1, and are consequently well pleased with their investment. This company claims to have a very good proposition for the trade and would be pleased to send its prospectus to any one asking for it.

The Clough Corkscrew Co. are prepared to furnish druggists with corkscrews of any size in any quantity. Free samples will be sent on request by writing to the Clough Corkscrew Co., Alton, N. H.

# PATENTS, TRADE MARKS, ETC.

**PATENTS.**

Issued November 5, 1901.

- 685,779.—John A. Marsden, Lyon Falls, N. Y., assignor of one-half to A. R. Paul, Lyon Falls, N. Y. Apparatus for burning sulphur.
- 685,792.—Henry Pemberton, Jr., Philadelphia, Pa. Process of dehydrating glauber salt.
- 685,810.—Edwin C. Worns, New York, N. Y. Carbonating apparatus.
- 685,855.—Joseph Z. La Jolie, Terrebonne, Canada. Composition for beverages.
- 685,882.—Alfred S. White, Chicago, Ill. Ammonia-Condenser.
- 685,894.—Mortimer S. Williams, Newton, Mass. Hot-Water bag.
- 685,988.—Carl J. Holm, Jurjew, Russia. Apparatus for measuring pulverulent articles.
- 686,008.—Georges A. Trombert, Lyons, France. Cork and method of preparing same.
- 686,040.—Charles E. Wade, Scranton, Pa., assignor to the Lackawanna Lubricator & Manufacturing Co., Scranton, Pa. Glass-Tobing.
- 686,021.—Henry S. Blackmore, Mount Vernon, N. Y. Process of making sulphur trioxide.
- 686,022.—Henry S. Blackmore, Mount Vernon, N. Y. Process of making sulphuric anhydrid.
- 686,059.—William D. Hartshorne, Methuen, Mass. and Emile Maertens, Providence, R. I., assignor to International Safety Solvent Company, Saec, Me., a corporation of Maine. Process of separating volatile solvent from various emulsified solutions.
- 686,170.—Charles N. Waite, Cranford, N. J. Process of purifying lactic acid.
- 686,224.—Warren Hill, Los Angeles, Cal. Non-Refillable bottle.

**TRADE MARKS.**

Registered November 5, 1901.

- 37,271.—Eau-De-Cologne, Soaps, Waters, and Lotions for Toilet Purposes. Naamlooze Vennootschap Eau de Cologne Fabriek Voorheen, J. C. Boldoot, Amsterdam, Netherlands. A prominent inner border inclosing a panel and an outer broad ornamental border composed of the representation of a vine with the representations of swans.
- 37,272.—Eau-De-Cologne, Soaps, Water, and Lotions for Toilet Purposes. Naamlooze Vennootschap Eau de Cologne Fabriek Voorheen, J. C. Boldoot, Amsterdam, Netherlands. The representations of a cathedral with its dome shown in finish and unfinished condition, respectively, associated with a view of the city of Cologne and the representations of a woman and chemical appliances, and a woman gathering flowers.
- 37,281.—Medical Compound for Certain Named Diseases. Francis W. Hovey, Worcester, Mass. The words "Angel of Peace and Solace of Life", and the representation of an angel flying and carrying an open book with surrounding scrolls, on which are printed the words "Peace and Joy to All I Bring".
- 37,282.—Topical Remedies and Disinfectants. The Hancock Liquid Sulphur Co., Orlando, Fla. and Richmond, Va., A diamond-shaped figure with the letters "H. L. S." arranged thereon.
- 37,283.—Medicine for Cows. Dairy Association, Lyndonville, Vt. The letters "K-K."

# MARKET REPORT.

## NEW YORK MARKETS.

### BUSINESS CONTINUES ACTIVE.

New York, Nov. 12.—There is no diminution of activity in the demand for jobbing parcels of the various seasonal articles and business in the aggregate continues of satisfactory volume, but very few price changes have occurred during the past week and the developments are of only minor importance.

**OPIUM.**—Consumers are keeping close to actual requirements when making purchases and the movement continues light and unimportant with jobbing quotations nominally unchanged at \$3.25@3.50 for 9 per cent, and \$3.45@3.60 for 11 per cent. Powdered continues to move fairly in small lots at \$4.40@4.60 for 13 per cent, \$4.75@5.00 for granular and \$5.00@5.25 for 16 per cent.

**MORPHINE.**—Small parcels continue in fairly active request for consumption with the tone of the market steady, jobbing quotations being well maintained on the basis of \$2.20@2.40 for eighths as to brand, less the usual rebate of 10c. per oz. on lots of 10 ounces or over.

**QUININE.**—Very much to the surprise of the general trade, German manufacturers on Friday last reduced their quotations 2c. per oz. and the decline was met on Saturday by the American makers. The speculative market is in consequence somewhat demoralized, but the principal holders are not inclined to follow the downward course of prices and prefer to hold off awaiting developments. Jobbing quotations have been reduced to 27c. for bulk in 100-oz. tins, 27½c. in 50-oz. tins, 28c. in 25-oz. tins, and 34c. in ounces.

**COCAINE.**—Competition among manufacturers continues more or less keen and the market is still unsettled but jobbing prices are nominally unchanged at the decline noted last week to \$5.50@5.75 for large crystals and \$5.25@5.50 for small, according to size of order.

**CACAO BUTTER.**—Lower prices at the regular monthly auction sales held last week in London and Amsterdam, have had a depressing effect on the local market, and jobbers have reduced their quotations to 44@45c. in boxes and 48@53c. for broken lots.

**ALCOHOL.**—Grain is firmer in sympathy with the crude material and prices have been marked up 2c. per gallon, the revised jobbing figures being \$2.55@2.56 in barrels and \$2.62@2.80 for smaller quantities.

**LITHIUM CARBONATE.**—The market is again easier owing to competition among manufacturers, and jobbers have further reduced their quotations to \$3.00@3.35 per lb. and 27@32c. per oz.

**ASA FETIDA.**—Foreign markets are cabled stronger but the local market is easier on account of competition among dealers and jobbers are quoting 35½@40c. for prime grades, 30@35c. for fair and 25@30c. for No. 2.

**OIL CLOVES.**—Manufacturers have modified their views somewhat and the market is a shade easier with jobbing quotations reduced to 68@78c., according to quality.

**OIL PEPPERMINT.**—Values in producing markets continue to harden and local jobbers have further advanced quotations to \$1.85@2.20 for Western, \$1.95@2.30 for Wayne Co., \$2.20@2.30 for H. G. H. and \$2.30@2.50 for redistilled.

Each month the Tyer Rubber Co. of Andover, Mass., show in their space on the back cover of the Era a cut of a Tyrian specialty. Probably there are few druggists in the United States or Canada who have not handled some of the Tyer goods. The name stands for quality unexcelled in the stores of dealers who have sold this company's goods. Write for a catalogue of Tyrian Rubber Goods to The Tyer Rubber Co., Andover, Mass.

## INDEX TO THIS NUMBER.

INDEX TO THIS NUMBER.

### THE PROPER SPIRIT.

The results of the recent meeting of the Kings County Pharmaceutical Society, a report of which appears upon another page of the present issue, are of no merely local interest, but are of great importance in a consideration of the present position of the National Association of Retail Druggists. At this meeting were represented the most important divisions of the forces which so strenuously advocated the substitution of the Worcester plan for the tripartite agreement at the Buffalo convention. The members present were firmly loyal to Prof. W. C. Anderson, a member of this society and ex-president of the N. A. R. D., and were loud in their denunciation of the element to which was directly due the failure to adopt the measures which he recommended to the Buffalo convention.

Loyalty to Prof. Anderson seemed quite naturally to mean opposition to the methods now in force in the organization, and the prospects for a continued harmonious co-operation of the society with the authorities of the National Association seemed decidedly unfavorable. A number of speakers mentioned the failure of the tripartite agreement and freely criticized the action of the Buffalo convention. The deliberations continued with an undertone of dissatisfaction with the existing order of things, but the meeting was prevented from creating an impression of hostility to the N. A. R. D. authorities by a most courageous and manly action on the part of the central figure in the movement for the substitution of the Worcester plan for the tripartite agreement—Prof. W. C. Anderson.

Prof. Anderson did not pose as a person with a grievance, as ninety-nine out of every hundred men would have done under the circumstances, but tersely and distinctly discouraged any sentiment of this kind, employing the entire weight of his great influence in encouraging a loyal support of the N. A. R. D. authorities. He stated that, in his opinion, there was no cause for discouragement, the indications being decidedly favorable. He said, in effect, that the N. A. R. D. deserved the support of every druggist, and believed that in time the Worcester plan, if found practicable, would gain the support of the organization.

This manly submission to the will of the majority merits the applause of everyone. For the few remarks made at this meeting, at Brooklyn, Prof. Anderson deserves the gratitude of every druggist in the country. With a few words he has probably done more for the cause of harmony in the National Association of Retail Druggists than the authorities of the organization could have accomplished in weeks of agitation. He has shown a wisdom and an ability to recognize the true spirit of co-operation which cannot fail to win for him the confidence of the entire organization, not only of his immediate friends, but of those who felt compelled to reject the measures which he advocated at the Buffalo convention.

### COMMERCIAL INSTRUCTION FOR THE PHARMACIST.

In an address recently delivered before a body of students at one of the foreign colleges of pharmacy, the speaker drew the attention of the future apothecaries to the necessity of adapting themselves to the different conditions under which they might be called upon to practice their profession. He spoke of adaptability as a kind of intelligence, and drew examples from an article by Prince Kropotkin in which the influence of surroundings upon the physical and other characters of animal and vegetable life are discussed. These examples were used as a text for urging the advantage of systematic training to meet the altered conditions of pharmaceutical environment. The speaker added that if plants and animals have the power of modifying some of their characteristic features in order to render them more suitable for their surroundings, surely man, with his higher intelligence, should, with advantage to himself, be able to adapt himself to the altered conditions which are continually arising.

These remarks were not made in criticism of more or less antiquated methods of teaching in vogue at many schools, but were apparently meant to serve as arguments in advocating the continued study of new phases of pharmaceutical science. The same exam-

ples and arguments may serve to direct attention to the necessity of altering the courses taught in the schools and colleges of pharmacy to keep pace with the changes in pharmaceutical practice.

In most institutions the courses of instruction are, with the exception of certain additions in keeping with the progress of science in general, the same at the present time as they were at a time when pharmacy was considered more a profession than a business. Formerly a knowledge of the properties of the materials handled and the processes of preparing them for use constituted a fair equipment for the apothecary, the process of buying and selling these commodities being then much less complicated than at present. Business methods have since that time undergone far more radical changes than even the sciences of chemistry and botany, and in all branches of trade, a training in the methods of carrying on commercial enterprises is now generally considered desirable if not positively necessary. It has frequently been pointed out that American pharmacy is quite different in character from that of the countries of Europe, yet in most of the colleges of pharmacy in the United States the courses of instruction follow the lines of those in force in Europe. A large proportion of the students of our schools leave the halls of learning with the idea, that the science of pharmacy is of paramount importance, and that the commercial side of the calling is beneath the notice of the man of brains. When these students begin their life's work, the discovery that the science which they have been studying plays but a secondary role in the druggist's life, their respect for the profession suffers.

A thorough knowledge of the properties and doses of the various drugs and medicines is necessary for the protection of the public, and the examinations conducted by the boards of pharmacy are necessarily intended to serve the same end; but is it entirely fair to the student to devote all of his time at college to instruction useful principally to his future patrons, while the training which would be of use to him in gaining a financial success is almost completely neglected? Pharmacy in the United States is now largely a commercial pursuit, and business problems demand much more of the druggist's time and attention than questions of chemistry and botany. It seems, therefore, that the instruction given in American schools of pharmacy should include at least some training in business methods. The commercial courses recently introduced in some of the colleges are still in a measure in an experimental stage, but it is not difficult to predict what the verdict of the graduates of these schools, upon training of this kind will be, when they have tested the knowledge thus gained in actually conducting a general drug business.

#### DRUG STORES IN SCHOOLS.

According to a report which appears in one of the New York dailies, the druggists' societies of Austria have a new grievance which is exercising the combative faculties of the members of these organizations. The authorities in Vienna have, it seems, been annoyed by the demoralization caused by the trifling accidents which are constantly happening in the crowded schools of the city. In the words of a report upon the subject, "Pupils often scratch their hands with their penknives or pens, and at times some of

them bleed at the nose and suffer from toothache and headache." The course usually followed in such cases in Vienna is the same as that which has proved so eminently satisfactory to the American school-boy—the pupil is sent home, the treatment of the little patient being left to the child's parents. The powers that be in Vienna look upon this apparently rational arrangement as involving an unnecessary waste of time, and a useless clogging of the wheels of the educational machinery. Every child is, so to speak, a necessary peg in this machinery, and the directors of affairs conclude, not without reason, that if any repairing is required this can be done in the most economical and satisfactory manner without removing the peg from its accustomed place. They have, accordingly, established a drug store in one of the largest schools in the city, and are freely supplying the pupils with bandages, medicines and other requisites. They claim that this arrangement has proved highly satisfactory, presumably to the authorities, for it is entirely probable that the small boy suffering from a convenient headache still prefers to consult his mother about it instead of taking an educational pill.

Although the educators of the Austrian capital find this new departure eminently desirable, the druggists are of an exactly opposite opinion. They naturally claim that only a pharmacist should dispense medicines, and to entrust this important duty to an ignorant professor of schools seems to them dangerous and likely to do more harm than good. Doubtless mingled with the fear of harm to the rising generation there is in their minds a dread that their future patrons, in seeing drugs so freely handled, will lose the respect for the druggist's calling which is so important to the welfare of the nation. The druggists of the United States have cause to be thankful that this latest menace to their peace of mind has not yet been added to the numerous difficulties which they are now called upon to combat.

#### A DEMAND FOR TALL DRUG CLERKS.

Among the advertisements for apothecaries' assistants in the want column of one of the British journals are two inquiries for tall men, applicants being requested to state height, in addition to salary expected, etc. This naturally gives rise to considerable speculation as to the reason for this greater demand for tall druggists than for those of smaller stature, inquiries for short clerks being entirely absent from the want column.

A number of reasons for this preference have been advanced, but no satisfactory solution of the problem has as yet been found. It cannot be that a tall person is believed to present a more dignified appearance, for it has never been successfully held that dignity is a matter of inches, a four-foot matron being in this respect far superior to a lanky youth of six feet, two. The theory that the tall clerk is expected to draw trade by reason of a greater attraction for the feminine members of the community must also be abandoned, for statistics show a preponderance of tall men among those who never succeed in finding a mate. It has been suggested that the English being somewhat cramped for ground, extend their buildings in a vertical direction, and that the correspondingly tall fittings in the pharmacies necessitate the employment of

clerks provided with an extra long reach in order to avoid the constant use of a step-ladder. This suggestion may not be without value to the American druggist of an economical turn of mind. An unusually tall clerk having a complete command of upper shelves would, in many cases, undoubtedly be a great convenience. Another reason advanced for this preference for tall pharmacists is that English druggists may prefer to have a force of clerks in assorted sizes to facilitate the operation of washing windows, or to give greater variety and symmetry to the pharmacy interior. Whatever may be the reason for this curious demand, it is to be hoped that unusual stature will never become a requisite for success in pharmacy in the United States, for this would leave members of the gentler sex hopelessly out of the running.

## A MANICURE DEPARTMENT AS AN ADVERTISING DEPARTMENT.

By JOSEPH F. HOSTELLEY, Collingdale, Pa.

A druggist of energy on a prominent street with an active home and transient trade wanted to execute an unconventional stroke of advertising. Something original was to be done that would bring his store further to the fore. Inquiry along a line of thought discovered a nearby manicure, prepossessing and chatty, with whom time was plenty and patrons few. She was easily interested in a proposition to collaborate with the druggist in effecting a novel advertisement for his pharmacy, and certain specialties of his own introduction. An exhibit case was moved from the vicinity of the largest window, affording a well-lighted position for a small center table and two cane-seated chairs. A folding screen of liberal dimensions, inexpensive but tasteful in appearance, enveloped these preparations in mystery. A figured curtain of white Swiss stretched across the back of the window veiled the purposes of this corner from passers-by. Here the manicure, surrounded by the mechanical instruments of her art, invested herself in office. A small, neat placard in a plain black frame hung on the screen, introducing the lady and her calling to the customers of the store: "Manicuring 25 cents. Miss Edythe Blank."

The service of a printer were now enlisted and a 5x9 circular was distributed among the townspeople to the number of two thousand, one thousand being reserved for counter distribution. This advertisement had toilet goods and preparations for its theme, and described several specialties pertinent to the season. The manicuring department, however, was the keynote of the circular. The purpose to afford patrons the rare opportunity of a manicure sitting free was outlined. The purchase of special toilet products peculiar to this store, to the sum of 50 cents, would render the patron eligible to a sitting without charge. Some half-dozen specialties were enumerated, which the circular said was only a suggestion of the liberal variety of toilet aids on exhibition at the store. Emphasis was given to that condition of the scheme which entitled a customer to the privilege mentioned—the 50 cent purchase must be for some toilet product or specialties prepared by the druggist.

The pharmacy from which this idea emanated was patronized by people of refinement—polite society; the store was modern, really, not expensively fixtured, but it gave one the impression of an up-to-date pharmacy with ample accommodations. Chairs were there for the use of waiting patrons, and while it was a modest pharmacy one quite forgot its modesty in its cleanliness, taste of arrangement and welcoming air. The manicuring scheme was a decided innovation and it met with favor as something ingeniously original and merited attention for its very novelty. Many customers of the store were patrons of a manicure; some were sufficiently skillful in the practice to please themselves. To these the plan appealed

most particularly, and increased sales at the toilet counter attested the approval with which the project was received. Many who had always been somewhat remiss in the care of their hands and finger tips were moved to action through the knowledge gained by observation and the report that the manicure department of the Standard Pharmacy was a popular institution. The preparations offered for sale in the interest of this advertisement were those that might be properly numbered among the toilet equipment of every home. The sum of 50 cents was a trifling outlay for a desirable article, especially when consideration was given to the value received. Naturally a figure slightly in excess of "cutter price" was expected for the products, but this feature, as a matter of course, was received graciously as an evidence of superiority, or, possibly, as a claim of appreciation for services rendered.

The manicure was paid a small sum for her services. She was in attendance three days of the week—Tuesdays, Thursdays, and Saturdays. Her engagement was for two months. In broaching the subject to the artist, the druggist directed attention to the mutual advertisement and profit in such a departure. Three days' work each week to his advantage would further her own interests and, at the same time, the arrangement would leave her at liberty to do justice to her old patrons. The logic of this argument was instrumental in procuring her services at a very nominal figure. Personal cards, with name and address, were handed to her customers as they left her presence. On the reverse of the cards these words had been penned by the artist with her characteristic signature: "The bearer is invited to one professional visit to Miss Blank, Manicurist at the Standard Pharmacy." The possessor when leaving the artist surrendered the card in exchange for a plain one. The placard that declared manicuring 25 cents was to attract an occasional fee, and to impress those who were complimented with the significance of the honorarium.

The manicure department was given a warm, cheerful atmosphere by the presence of a large potted begonia with richly tinted leaves, a tall, thickly rubber plant in the corner, and an Oriental rug on the floor, the latter borrowed from the sitting-room of the house. On the instrument table of the manicurist several neat little toilet luxuries were displayed to tempt the visitor to an additional purchase. On days when the department was without its principal, the wings of the screen were narrowly opened to invite a peep into the mystic nook where hints and aids to artistic hands were preached and practiced. And we must not omit mention of the significance of those "hints." The artist had her cue, and when red, chapped hands or skin called for an emollient, it was to be had right there in the store, and it was exhibited to the patron by the manicurist who "talked it up" in true artistic fashion. Many preparations for various purposes were sold in this way, particularly to the fair sex.

A few of the toilet specialties of this event might be summarized as follows: A tooth powder; tooth wash; tar shampoo; an egg shampoo; hair tonic; skin ointment for freckles and muddy cuticle; witch-hazel cream to allay the irritation of dry, rough and chapped skin; cream of marshmallow and almond, and rose-glycerin; benzoin-cream for oily skin; a nursery powder; and violet almond-meal, a dainty substitute for soap in the bath.

**SALICYLIC ACID IN FRUIT.**—Portes and Desmoulières (Jour. de Pharm.) found that strawberries and preparations of this fruit normally contain small quantities of salicylic acid. This substance is probably originally present in the berries in the form of methyl salicylate, and the authors suggest that other fruits may also contain this substance. In the analysis of fruit preparations for the detection of preservatives, the possible presence of salicylic acid in the unprepared material is a matter of considerable importance.

## BUSINESS PHARMACY.

The Experience of Druggists with Profit-Bringing Methods. Hints and Suggestions. Original Papers from Practical Business Druggists. The Various Phases of Drug-Store Management and Economy.

### SPECIAL SALES.

By FRANK B. STYLES, Hempstead, L. I.

The very term "special sales" means extra business, and from that we infer more profits. So, the merchant looks at "special sales" as meaning "more profits." There is no better example of this principle than is set forth in the workings of many of the large department stores. They set a day for special prices, and on that day the price of much of the stock is greatly reduced. Buyers quickly learn of this custom and take advantage of it. By so doing, both parties to the contract are pleased.

The "special sales" are beneficial to the merchant in several ways. First, may be mentioned the chance to work off "shop-worn goods"; second, to get rid of remnants; third, to reduce stock at inventory times; fourth, and not least, purchasers are brought to the store for other merchandise. Special prices may be put on a certain lot of goods, and much stock can be cleared out that was yielding no profit and would in a short time, prove a "dead loss." I well remember a large stock of pocket-books in the first store in which I worked. They had been purchased when goods of that style were high, and had become unsalable at prices asked because the wholesale price had soon dropped, allowing the dealers to sell the same goods at less than half the former retail price. The stock had been in the store some five years before I became acquainted with it. Some of the books had cost a dollar each. The clerks began by selling these books at any price that customers would pay for them. Some of the highest priced brought 25 cents. That was better than to lose the whole cost. This is one example of special prices, and just what end is often reached. The small return of cash is much better than keeping the goods, because the set price can not be obtained.

Let us come closer to the true working of a plan for "special sales," relating to general business. The very idea of such a sale calls for goods of extra value for the price asked; a quantity of these goods, and some judicious advertising. The "sale" is an "ad." in itself. This is the very smallest idea one gets of what a "special sale" is. Each store has its own special methods for conducting such sales. Sometimes only one of a kind will be sold to a person at one time, and that person may return at intervals and get more. Again, only a limited quantity of the low-priced article is on hand, and that is used as a cat's paw to get the crowd in, and then the higher priced articles are sold instead, the clerk remarking at the time of sale: "We are just out goods of that kind, but will have more in a few days."

Another scheme that has been worked is this: The goods advertised are a very small part of the stock on hand, and three of the best clerks are selected from a large force to sell them. At the same time, they are told that they must not sell more than three garments each, and that a clerk will lose his position if he sells more than three garments a day. Still another method is to fill your window with samples of stock, with signs telling the day and hour when the sale will commence, and at the appointed time there will be a grand rush for the goods, and in a short time nothing will remain of the special sale goods.

You may begin to think that this does not apply

to the pharmacist's stock. The principle is there, and it can be applied to your stock as well as to another merchant's goods. You forget that one reason for your present condition is that you have not applied the same principles to your business methods. Toilet soaps and perfumes are a part of your legitimate side lines. How many times do you see "special sales" of these? There are enough varieties that can be had for a special sale, so that you need not interfere with your regular goods, and the quantity purchased need be only what you think you can dispose of at that one sale. Later you can try something else. Make a window display of the specials for a few days previous to the sale. On the day of sale, make an exhibition of your own specialties near the special sale counter. Your own goods will also attract the attention of the people, and will come in for a share of patronage. Special displays are always very helpful in showing goods to the public. A display each week, neatly arranged, will catch the attention of many a passerby who will some day be a purchaser at your store. I have noticed for years the effect of displays. Perhaps several weeks may have elapsed when a customer will remark that the article was in the window some time ago, and that he would like to buy one now. I know of an instance which happened within thirty days, in which a display of school supplies was placed in the window while the children were at school in the morning. When school closed in the afternoon, a large number of scholars were very active buyers of the goods displayed in these windows.

There are many chances every week for an active business man to make special sales. Do not venture into the realm of "patents" with your special prices. That must be left severely alone. Toilet articles of all descriptions can be used at any time. Take one article and make a specially low price on it for a week, and when the week is past put the price up to its regular schedule.

### BUSINESS HINTS FOR THE PHARMACIST.

By OSCAR H. WILSON, Frankford, Phila.

In these days of cut-rate prices the pharmacist is called upon to devise various methods by which he may increase his profits and conduct his business on a paying basis. The following few suggestions may prove of value:

A class of goods which may be profitable to the druggist is that including the various spices, such as cloves, nutmeg, mace, cinnamon, allspice, turmeric, red and black pepper, etc. There is nothing more commonly adulterated than these various spices, and the public is becoming more acquainted with this fact every day. If they knew a drug store as a source from which these goods could be obtained, with the assurance of absolute purity and freedom from adulteration, it would soon become a great source of revenue for the pharmacist to supply them. The pharmacist should buy the best spices obtainable, but should not accept the word of the manufacturer or wholesale dealer as to their being the best until he has made an examination for himself. The most common adulterant of spices is starch, in one form or another. This can readily be detected by placing a small quantity of the suspected sample upon a glass slide, adding a little iodine solution, placing over this a small cover-glass and examining under the microscope. If

starch is present it will be revealed by the characteristic blue grains which are readily recognized. The best and most certain way for the pharmacist to secure pure spices is to buy them whole and have them ground in the store; then he can be reasonably assured that he has the best article obtainable. Not only is this the best way to obtain pure spices, but it also offers a very valuable experience to the apprentice. Every pharmacist owes his apprentice this experience which will prove valuable to him in the future.

Having considered the best methods for the selection of spices, we shall now consider the best method of introducing them to the public. This can be done by making a small sample package of each one of the spices, enclosing a circular calling attention to the exceptionally pure quality of your materials, and to the adulteration of the spices usually purchased at the grocery stores. A price list may also be furnished in the same circular. These samples can then be distributed in the vicinity of the store, and thus brought to the immediate attention of the people. It will not be long before they learn the value of your spices, causing a noticeable increase in the demand for these goods.

Another suggestion that will prove of value to the pharmacist is that of supplying to barbers preparations that are commonly used by them in the daily pursuit of their business. These include such preparations as bay rum, lavender and violet water, toilet vinegar, hair tonic and shampoo. In looking over these various preparations in numerous shops I found them to be of the poorest quality, having been made by some one evidently having not the least idea of chemistry or pharmacy. It only remains for some energetic pharmacist to realize this fact and prepare a line of samples of these preparations and distribute them among the various barber shops. They would soon realize the superiority of your goods and it would soon furnish a nice source of income.

It would pay the pharmacist well to look over that much neglected book, the United States Pharmacopoeia, and see how many valuable preparations it contains. A great number of these can be conveniently made up by the pharmacist, and samples of the product distributed to all the physicians in the neighborhood. They would soon use them in preference to the patented articles so popular with a great many physicians, and which afford such small profit for the apothecary. In this way the druggist can not only establish a profitable trade, but it will bring him into closer relationship with the physician who will undoubtedly have a higher opinion of his professional ability.

That well-known drug, sodium bicarbonate, as usually found in our shops has a very disagreeable taste. This unpleasant taste is due to sodium carbonate which is invariably present in the commercial article. In order to free it from the carbonate and other salts, the following process may be employed: Take 64 ounces of commercial bicarbonate soda and distilled water 6 pints. Introduce the powder into a suitable glass percolator, cover it with a piece of wet muslin and pour the water gradually upon it. When the liquid has ceased to drop, or when the washings cease to precipitate a solution of magnesium sulphate, remove the bicarbonate of sodium from the percolator and dry upon bibulous paper, in a warm place. Samples of this purified sodium bicarbonate, together with samples of the unpurified, can then be sent to the physicians so that they can appreciate the value of the purified article and prescribe it for their patients who object to the disagreeable bitter taste of the commercial article. These prescriptions for the purified bicarbonate will invariably come to your store, for there they know it can be obtained. Thus we have another practical business suggestion that may prove of interest to the pharmacist.

ANALAN is an ointment recommended by J. Hirschkrön (Wien. Med. Zeit.) in the treatment of hæmorrhoids and affections of the skin. It contains boric acid, bismuth oxide, iodine, zinc oxide phenol and ichthyol.

## DISPENSING NOTES.\*

By HENRY P. HYNSON, Baltimore.

The motive which leads me to present these notes must quickly disarm criticism, since their presentation involves no greater ambition than to be plain, commonplace, and helpful, and to lend encouragement to those who could do much better, but who persistently withhold the wealth of information and valuable experiences they could easily offer. Ninety per cent. of these notes have been collected within the last year, and more than as many additional important occurrences have escaped record or memory. Those collected, which will be given without any effort at systematic arrangement, are as follows:

Either boric or salicylic acid can be added to a solution of cocaine hydrochlorate without causing much trouble, and either is a desirable preservative; but, if both acids are added, a precipitate occurs. Why?

From a mixture, no matter how prepared, of quinine sulphate, 2 drams; iron sulphate,  $\frac{1}{2}$  dram; magnesium sulphate, 1 troy ounce; dilute sulphuric acid, 3 fluid drams; and water enough to make 3 fluid ounces, the alkaloid will be precipitated; but if hydrochloric acid be substituted for the sulphuric, a perfectly clear and permanent solution results, due, of course, to the greater solubility of quinine dihydrochlorate, the bisulphate not being sufficiently soluble in the strong solution of magnesium sulphate.

An attempt to make gelatin lozenges containing orthoform proved that this substance entirely overcame the gelatinizing power of the gelatin. Tragacanth and sugar base had to be used.

A permanent and satisfactory solution of gelatin and salt for venous infusion may be made by dissolving 2.5 per cent. of the former in water and adding .06 per cent. of sodium chlorid. c. p., and sterilizing thoroughly.

The sterilization of fluids for subcutaneous medication and surgical uses is best effected by placing the cork very lightly in the bottle, and covering it with a considerable quantity of absorbent cotton, tied over with gauze. The bottle is then kept in boiling water or an active sterilizer for thirty minutes or longer; the heating is repeated the following day, if time is allowed, when the cork is tightly pushed in place without removing the cotton or gauze.

Neither morphine nor its salts can be made to dissolve in petroleum oil; heat, chloroform or oleic acid are of no assistance.

Occasionally it happens, in making pills of mercury and chalk, that the mercury separates into noticeable globules. This results from excessive kneading of the mass or from poorly made gray powder.

Camel's hair pencils are frequently ordered to be fixed in the corks of bottles containing collodion. Care should be taken that the silk used in wrapping the hair does not contain coloring matter soluble in ether, or the collodion will be greatly discolored.

Care should be taken to cleanse the bulbs of eye droppers dispensed with eye solutions; much of the trouble with these solutions is due to the dropper. Bulbs made of pure antimony maroon rubber are the most desirable to use.

In filtering eye solutions, the best chemical paper should be used; and, in addition, if a small piece of long-fiber absorbent cotton is placed in the neck of the funnel, it will catch much of the fiber which is difficult to get out of the solution. The running over or out of the filtering liquids, due to the fact that the air from the bottles does not escape, can be prevented by using long-stem funnels and by keeping the necks of the bottles dry.

When a customer sends a receipt for a hair tonic containing small amounts of oil of lavender and rosemary, and requests that "something be put in to hide the disagreeable odor of the oils," would it be wrong simply to omit the oils? The answer must be based upon the worth of these oils as hair restoratives, of course.

\*Second supplemental report of the Section of Practical Pharmacy and Dispensing of the American Pharmaceutical Association.

Remember that a mixture of glycothymolin and Kennedy's colorless extract of white pine will effervesce.

Strong solutions of salts in aromatic waters have a cloudy appearance because the full amount of oil will not remain in solution. This can be avoided by using not quite all (90 per cent.) of the water prescribed and making up the quantity with distilled water. Add 5 per cent. of the latter to the salt and balance to the solution after it has been strained. This especially applies to camphor water.

For making strong solutions of quinine sulphate, hydrochloric acid naturally answers much better than sulphuric acid.

Lead acetate with alum or zinc sulphate makes a paste or mass which cannot be dispensed, as intended, for making solutions. The dried salts might be used, but these were objected to in one instance by the physician and the substances were dispensed in separate packages with directions.

A good general rule for selecting suspending agents is to use acacia for non-alcoholic liquids and tragacanth for all solids and alcoholic fluids.

Better and quicker results can be secured in the Hayden process for coating pills with salol if a few drops of alcohol are added to the pills from time to time while the smoothing is in process.

Equal quantities of calcium glycerophosphate and the 25 per cent. aqueous sodium glycerophosphate can be made into a mass and capsulated. The capsule will stand indefinitely.

White turpentine, softened with alcohol, makes a better ointment than that made from turpentine softened with heat.

Gumresin of asafetida should be kneaded with water until sufficiently soft, when it is to be made in mass with powdered substances.

Saturated solutions of potassium iodide mix with equal quantities of tincture of cinchona compound without precipitation; further additions of water cause precipitation.

Chloretone is not soluble in petroleum oil, but when dissolved in a fixed oil, the solution will mix with the liquid petroleum in fair proportions.

Only one elixir of iron, quinine, and strychnine on the market will remain clear when mixed in equal quantities of U. S. P. syrup of hypophosphites. This same make will also hold large quantities of sodium sulphate in solution. It contains free hydrochloric acid. There are instances of the same prescription having a different appearance when prepared in different stores.

Carbolic acid, when added to Goulard's extract (solution of lead acetate), causes a heavy mass to precipitate. This can be prevented by first dissolving the carbolic acid in a little glycerin.

The mixture containing bismuth subnitrate and sodium bicarbonate is well-known and understood. When sodium carbonate, not bicarbonate, is prescribed with bismuth, the sediment becomes as hard as marble and cannot possibly be shaken into the fluid.

To make a pill of extract of ergot and potassium permanganate, it has been suggested that a sugar-coated pill of the potassium salt could be used and the extract of ergot worked around it.

It may not be generally known that solutions of zinc chloride may be made clear by the addition of just enough hydrochloric acid to dissolve the carbonate present.

Eucaine B dissolves in solution of adrenalin hydrochloride without objectionable pharmaceutical behavior. Adrenalin hydrochloride cannot be dissolved in petroleum oil alone, or by aid of chloroform, heat, or oleic acid.

Most of the soluble pepsins on the market are entirely too acid to be permissible in elixirs of pepsin and bismuth, and they are, no doubt, the cause of so many failures with these pepsins. They must be nearly neutralized with sodium bicarbonate before they can be used. On examination several specimens made by three different leading manufacturers were

found to contain 3, 2.2, 7.0, 7.8, 2.3, 3.8, and 1.1 per cent., respectively, of hydrochloric acid.

If, in making aromatic spirit of ammonia, the solutions are made and allowed to stand about four days instead of twenty-four hours and the ammonia solution then added in small portions to the alcoholic solution, allowing the mixture to stand fifteen or twenty minutes after each addition, none of the usual precipitate will be formed at the time, and very little if any, will form after longer standing.

In conclusion, I wish to thank Mr. H. A. B. Dunning, manager of our prescription department, as well as Messrs. Singer and Harrahan, for many of these observations and for much of the work done.

**PARAGUAY TEA.**—The production of Yerba Mate has, according to the *Drogisten-Zeitung*, long been an important industry in Paraguay. The output of the Yerba forests of the eastern part of the Republic is in the hands of a number of companies and a few individuals. Among the most noteworthy of these firms are the Industrial Paraguay and the Sociedad Rural Belga; the Brazilian Companhia Mate Larangeira no longer holds plantations in Paraguay. About five per cent of the total production is consumed in this country, the remainder being exported to the Argentine Republic, mostly in the form known as *emborovire*, the underground material. Mills for grinding the yerba are situated in Asuncion, Corrientes and Buenos Aires. Efforts are being made to introduce the use of this agreeable and healthful drink into Europe. In Paraguay the beverage is prepared by steeping the finely powdered material in small gourds, and the liquid is taken through metal tubes. As this method is not agreeable to the European taste, a firm in Paraguay is now preparing the yerba in a form which may be employed like Asiatic tea.

**TESTING HYDROGEN PEROXIDE.**—P. Sisley (Rev. Gen. des Mat. Col.) states that commercial peroxide of hydrogen may contain, as impurities, oxalic acid, iron, barium salts, alumina, chloride and sulphate of sodium, ammonium salts, silica and magnesium chloride. For determining the hydrogen peroxide, titration with potassium permanganate and the iodometric method are usually employed. If the results of these two methods do not agree, the presence of oxalic acid or some other substance capable of reducing permanganate is indicated. The acidity of the peroxide should not exceed the equivalent of 1.5 grams of sulphuric acid per liter. Oxalic acid may be detected by means of calcium salt, iron by the color produced by sulphocyanates, barium salts by means of sulphuric acid, and alumina by means of ammonia. The presence of large quantities of sulphate or chloride of sodium renders hydrogen peroxide unstable. The author does not approve of the practice of adding magnesium chloride for the purpose of improving the bleaching action.

**PRESERVING EGGS.**—United States Consul-General Guenther, of Frankfort, sends the following extract from an article on preserving eggs: Four hundred fresh hen eggs were subjected to the action of different substances for eight months. At the expiration of that time it was found that the eggs which had been put into brine were all spoiled; of those which had been wrapped in paper and of those which had been immersed in a mixture of glycerin and salicylic acid, 80 per cent. were unfit for use. Of the eggs which had been rubbed with salt, or imbedded in bran, or coated with paraffin, 70 per cent. were spoiled; of those coated with collodion or varnish, 40 per cent.; and of those which had been placed in wood ashes or had been painted with a mixture of liquid glass and boric acid, or a solution of permanganate of potash, only 20 per cent. were bad. Almost all the eggs that had been coated with vaseline, or had been placed in lime water, were in good condition.

## TWO NEW METHODS FOR THE QUANTITATIVE ESTIMATION OF BERBERINE.\*

By H. M. GORDIN.

In the foregoing paper I have shown that when an aqueous solution of berberine acid sulphate  $C_{20}H_{17}NO_4 \cdot H_2SO_4$  is precipitated by a large excess of potassium iodide, the filtrate from the precipitate formed is perfectly colorless and one molecule of a monobasic acid is set free for every molecule of berberine. (1) The reaction is probably as follows:  $C_{20}H_{17}NO_4 \cdot H_2SO_4 + KI = C_{20}H_{17}NO_4 \cdot HI + KHSO_4$ .

It is evident that by estimating the amount of acid set free by means of standard alkali, we can easily and exactly estimate the amount of berberine existing as an acid sulphate in a neutral solution. In order to base an assay method of berberine upon this principle we must then devise a means of converting other salts of berberine into its acid sulphate. This conversion can be easily accomplished with those salts of berberine which are soluble in alcohol. The addition of a slight excess of sulphuric acid to an alcoholic solution of such salts quickly precipitates the desired acid sulphate, even in presence of free hydrochloric acid. In order to make the precipitation more complete it is best to add to the alcoholic solution an equal volume of ether and set the mixture aside for a few hours in a cold place. The reason of this precipitation of the acid sulphate even in presence of free hydrochloric acid in the ethereal-alcoholic solution is because one Gm. of the acid sulphate of berberine requires 1.706 Cc. of a mixture of equal volumes of alcohol and ether for solution, whereas one Gm. of berberine hydrochloride dissolves in 1.269 Cc. of this mixture. This was established by shaking an excess of these two salts with 50 Cc. of this mixture for two hours, pipetting off 25 Cc., filtering, washing the filter with ether-alcohol, evaporating in a tared vessel, drying at 110 degrees C. and weighing. It was found that 25 Cc. of the above mixture dissolved 0.0107 Gm. of berberine hydrochloride  $C_{20}H_{17}NO_4 \cdot HCl$  but only 0.0017 Gm. of the acid sulphate  $C_{20}H_{17}NO_4 \cdot H_2SO_4$ . (2)

That even in the presence of free hydrochloric acid the precipitate is free from chlorine can be easily shown by dissolving some pure berberine hydrochloride in sufficient warm alcohol, adding a few drops hydrochloric acid, then a slight excess of concentrated sulphuric acid previously diluted with three or four times its amount of alcohol. If the liquid is now cooled, mixed with an equal volume of ether and put in a cool place for a few hours, a large amount of precipitate is formed which when collected on a filter, thoroughly washed with ether alcohol, dissolved in water and examined by means of silver nitrate and barium chloride, will be found to contain no trace of hydrochloride but to give a heavy precipitate with barium chloride. (3).

In this way it can be established that in an ethereal-alcoholic solution, although starting with the hydrochloride and in presence of free hydrochloric acid, a slight excess of sulphuric acid converts the berberine salt into the acid sulphate. The case is just the reverse if the berberine salt be in aqueous solution. Owing to the fact that berberine hydrochloride dissolves in 500 parts of water (4) and berberine acid sulphate requires but 100 parts of water (5) for solution, the sulphate is easily converted into the hydrochloride by a slight excess of the halogen acid, and in presence of both sulphuric and hydrochloric acids it is the hydrochloride that is precipitated. This can be shown by dissolving some pure berberine (6) acid sulphate in a little warm water, adding a few drops dilute sulphuric acid and then a slight excess of hydrochloric acid. If the precipitate which separates out on cooling be collected, thoroughly washed with water, slightly acidulated with hydrochloric acid (7) and tested with barium chloride, it will be found to be perfectly free from sulphate. (8)

Owing to the fact that in presence of both hydrochloric and sulphuric acids it is the sulphate which falls out in alcoholic solution, the precipitate obtained in the assay method of Hydrastis canadensis for berberine proposed by J. U. Lloyd (9) and afterwards slightly modified by F. A. Thompson (10) is not as supposed by these authors berberine hydrochloride, but berberine acid sulphate. This can be shown by dissolving the precipitate obtained in Lloyd Thompson's method in water and testing the solution with silver nitrate and barium chloride. The factor 0.0018 used by these authors ought then to be replaced by the factor for the acid sulphate, which is 0.7736. On the other hand in Linde's method of estimating berberine in fluid extract hydrastis (11) the liquid after the addition of sulphuric and hydrochloric acids containing only about 38 per cent. alcohol, (12) it is not as supposed by this author, the acid sulphate but chiefly the hydrochloride that is precipitated, as only traces of sulphate can be found in the precipitate and these undoubtedly are due to insufficient washing. (13)

If then we have an alcoholic solution of berberine salts, for example an alcoholic extract of barberry or of hydrastis canadensis, the amount of berberine contained in the extract can be found by adding a slight excess of sulphuric acid, diluting with ether to about double the volume, setting the mixture in a cool place for several hours and then collecting the precipitate in a filter and washing it thoroughly with a mixture of equal volumes of ether and alcohol. The precipitate is then dissolved in water, an excess of a strong solution of potassium iodide is added, the liquid made up to a definite volume, filtered, and in an aliquot part of the now colorless filtrate the amount of acid set free is estimated by means of standard alkali using phenolphthalein or any suitable indicator. In order to obtain exact results the amount dissolved in the ethereal-alcoholic mother liquor and washings should be added to the final results. Though this amount is very small the error arising from the slight solubility of the acid sulphate in ether-alcohol will be considerable, for the reason that it is necessary to use considerable ether-alcohol to wash away all free acid. As was shown above, 1 Cc. ether-alcohol dissolves 0.000068 Gm. of the acid sulphate, which corresponds to 0.0000526 Gm. free berberine. Suppose 70 or 80 Cc. of washings are obtained the amount left in solution can be taken to be about 4 milligrams, and as the total amount of berberine in the assay sample is often less than 100 milligrams there would be a loss of about 4 per cent. It is therefore best to collect the mother liquor and washings into a graduated cylinder and add to the final results 0.0000526 Gm. for every Cc. of washing.

In titrating the acid set free from the berberine acid sulphate by potassium iodide by means of standard alkali, care should be taken to standardize the acid and alkali under the same conditions as prevail in the estimation, i. e. the standardization should be carried out in the presence of the same amount of potassium iodide as was used for the precipitation of berberine. I have already shown in several cases that even insoluble substances are capable of influencing the standard. (14).

In order to test the accuracy of this method of estimating berberine, I proceeded as follows: At first I added 10 Cc. of a 20 per cent. solution of potassium iodide to 20 Cc. of N-40 H<sub>2</sub>SO<sub>4</sub> and using phenolphthalein as indicator, it was found that under these conditions it took 10.7 Cc. N-40 alkali to exactly neutralize the acid. A definite amount of pure berberine hydrochloride, which by estimation of chlorine was proven to have the composition of  $C_{20}H_{17}NO_4 \cdot HCl \cdot 2H_2O$ , was dissolved in warm alcohol; to the solution 1 Cc. of concentrated sulphuric acid, previously diluted with 5 Cc. alcohol, was added, and the whole when cold diluted with an equal volume of ether. After keeping in a cool place over night, the precipitate was collected on a filter, washed with a mixture of equal parts of ether and alcohol, covering the funnel with a watch-glass, until the washings were perfectly neutral. (15) The washings were collected and measured. The precipitate on the filter was then exposed to the air

\*Read before the American Pharmaceutical Association.

for about fifteen minutes, until most of the ether disappeared, the filter pierced with a pointed glass rod and washed down with water into a 200 Cc. measuring flask. When all the precipitate went into the solution, 20 Cc. of a 20 per cent. solution of potassium iodide was added to the liquid and the flask filled up to the mark. The liquid was now filtered through a dry filter, and in 100 Cc. of the filtrate the amount of free acid determined by means of N-40 alkali, using phenolphthalein as indicator. One Cc. N-40 acid corresponds to 0.00837 Gm. of free berberine. Adding to the amount found by titration the correction for solubility, the results were found to be very exact. One Gm. berberine hydrochloride,  $C_{20}H_{21}O_4 \cdot HCl \cdot H_2O$ , is equivalent to 0.822 Gm. free berberine.

| Hydrochloride taken.           | N-40 alkali for 1/2 acid. | Washings. | Correction | Found berberine |
|--------------------------------|---------------------------|-----------|------------|-----------------|
| 1. 0.2283 Gr.=0.188 berberine. | 9.9 Cc.=10.2 N-40 acid.   | 153 Cc.   | 0.0105 Gr. | 0.188           |
| 2. 0.2906 Gr.=0.239 berberine. | 13 Cc.=13.2 N-40 acid.    | 252 Cc.   | 0.017 Gr.  | 0.238           |

In applying the method to crude drugs, like Hydrastis canadensis or barberry bark, a definite amount, say 20 Gm., are extracted in a Dunstan and Short apparatus (16) with hot alcohol on the asbestos plate until the alcohol comes out colorless, or nearly so. The extract when cold is made up to a definite volume, say 100 Cc., and filtered if not perfectly clear. To 25 Cc. of the filtrate one or two Cc. concentrated sulphuric acid, previously mixed with a few Cc. alcohol, is added, the mixture diluted with ether to about double its volume and the assay finished exactly as just described. In the case of hydrastis, the rest of the alcoholic filtrate can be used for the estimation of hydrastine. For this purpose the alcohol from 25 Cc. of the alcoholic extract is distilled off till only a few Cc. are left, the residue diluted with water containing about 1 per cent. acetic acid and a few per cent. potassium iodide to 25 Cc. The liquid is then filtered and 12.5 Cc. of the filtrate are treated as described in a previous paper. (17) If the liquid in which the berberine is to be estimated is a strong alcoholic extract like normal tincture of hydrastis, 20 Cc. are diluted with four times its amount of alcohol to 100 Cc., filtered if necessary, and 25 Cc. of the filtrate are treated exactly as above described.

This method is not well adapted to the assay of liquids containing a considerable amount of water or containing no alcohol at all, like fluid extract of hydrastis without alcohol. From such liquids, even after dilution with alcohol and filtration, sulphuric acid and ether precipitates much coloring matter besides the berberine salts, so that after the addition of potassium iodide and filtration as above described, the filtrate is sufficiently colored through the presence of the coloring matter to make the final reaction lack in sharpness. Owing to the quickness and simplicity of this assay method, it might be adopted by many even in those cases where the final reaction is not very sharp, i. e., for solutions of berberine salts containing much water.

But a much more exact assay method which can be used in all cases is as follows:

#### Method 2.

Another method of estimating berberine in liquids containing much other matter is to separate the berberine by precipitating it as an insoluble hydroiodide, washing thoroughly with water containing a little potassium iodide and converting the moist hydroiodide into the very insoluble and beautifully crystalline berberine acetone. The latter can then be thoroughly washed with water and after drying at 105 degrees C. to constant weight, weighed. One Gm. berberine acetone is equivalent to 0.8224 Gm. berberine. In order to obtain the acetone compound in a crystalline form suitable for washing it is necessary that the liquid should be warm and should contain about 33 per cent. acetone. It will be seen that the method is based upon the following principles:

1. The crystallized acetone berberine is completely insoluble in cold water. This can be shown by rubbing up some berberine acetone with cold water, filtering, acidulating a few Cc. of the filtrate with hy-

drochloric acid, and boiling a few minutes. In the presence of berberine in the liquid the latter would become more or less colored, and Mayer's or Wagner's reagent would give a precipitate. But neither the color nor these reagents nor even chlorine water show the presence of berberine. (18).

2. The dry berberine acetone is quite stable at 100 to 105 degrees C. This was shown by placing about 0.300 Gm. of crystallized acetone berberine upon a watch-glass, weighing the whole and after exposing it to a temperature of 105 degrees C. for three hours and cooling in a desiccator, weighing again. The acetone compound was only very slightly darkened in color, but there was no change in the weight.

3. Though the acetone berberine is completely in-

soluble in water, it dissolves to some extent in water containing acetone, therefore it is necessary in order to obtain very exact results to add a small correction for solubility. As will be seen from the details given below, the mother liquor from the acetone berberine consists of about 8 volumes water and one volume acetone. Of such a mixture it takes about 31,250 parts to dissolve one part of berberine acetone. Though the amount left in solution is very small, it is best to add a correction for the slight solubility. The solubility was established by digesting an excess of finely powdered berberine acetone in 50 Cc. of a mixture of one volume of acetone and eight volumes of water for four hours with frequent shaking. 25 Cc. were then drawn off, filtered, the filter washed, and the liquid evaporated in a tared vessel. After drying at 105 degrees C. to constant weight, it was found that 25 Cc. of the above mixture dissolved 0.0008 Gms. acetone berberine. 1 Cc. of such a mixture dissolves then an amount corresponding to 0.0000273 Gm. berberine alkaloid. The way the method is carried out will be seen from the following estimation:

A definite amount of berberine hydrochloride  $C_{20}H_{21}NO_4 \cdot HCl \cdot 2H_2O$  was dissolved in hot water and an excess of a 20 per cent. solution of potassium iodide added to the liquid. After cooling, the precipitate was collected upon a filter and repeatedly washed with water containing about 2 per cent. potassium iodide. The precipitate was then washed down with a definite amount of water (10) into an Erlenmeyer having the capacity of about 400 Cc. About 54 Cc. water was used. The Erlenmeyer was now placed for about 5 minutes in a water bath, and then about 27 Cc. of acetone added to the mixture. The Erlenmeyer was then loosely stoppered and gently shaken for about 10 minutes. 5 Cc. of a 10 per cent. solution of sodium hydrate was now added to the contents of the Erlenmeyer, and the latter again gently shaken for about 10 minutes. The deeply yellow-colored hydroiodide disappeared completely, and a large amount of beautiful silky needles of the acetone compound was deposited. The Erlenmeyer was set aside until it was cold, and after adding 157 Cc. water, (20) put in a cold place over night. The acetone compound was then collected in a tared platinum Gooch crucible, thoroughly washed with water, dried 6 hours in vacuo over sulphuric acid, and then at 105 degrees C. to constant weight and weighed. (21) To the results obtained a correction for the solubility of the acetone compound in 243 Cc. mother liquid (0.0066 Gm.) was added.

| Hydrochloride taken.        | Mother Liquor | Correc- tion. | Acetone Compound found. | Weight of Berberine found. |
|-----------------------------|---------------|---------------|-------------------------|----------------------------|
| 0.2334 gr.=0.1910 gr. berb. | 243 Cc.       | 0.0066        | 0.217                   | 0.1916                     |

In order to apply this assay method to a crude drug, for example hydrastis, the drug, say 20 Gm. is exhausted as in the first method, the alcoholic extract concentrated to a small bulk and then made up to a large definite volume with water (500-600 Cc.) (22). The liquid is shaken 1/2 hour with about 5 Gm. talcum,

filtered, and in an aliquot part of the filtrate the berberine is precipitated by an excess of potassium iodide. The estimation is then finished as just described.

In the case of a fluid extract 10 or 20 Cc. are diluted to 250 or 500 Cc. with water. The liquid is then shaken with talcum, filtered, precipitated by potassium iodide, and the assay finished as above.

The second method is certainly much more complicated than the first one, but is very useful as a control, it being capable of great exactness with hardly an element of error and applicable to all cases.

(Laboratory of the Wm. S. Merrell Chemical Co., Cincinnati, Ohio, August, 1901.)

#### NOTES.

(1) Most probably a similar change of basicity takes place in the salts of berberine with other polybasic acids.

(2) The sulphate and the hydrochloride used in this work were very pure and were the same which were used in the previous experiment, where results of estimations of chlorine and sulphuric acid, showing perfect purity of the salts, are given.

(3) Care should be taken not to confound berberine nitrate or berberine hydrochloride, which are liable to separate out, with silver chloride and barium sulphate; the latter do not redissolve on heating the liquid, whereas the former quickly dissolve with heat.

(4) Allen Chem. Org. Anal. 2d edition, Vol. III, part II, page 463.

(5) *ib.*, page 464.

(6) All salts of berberine can be obtained very pure by first preparing the crystalline acetone berberine and decomposing this by boiling with the suitable acid.

(7) Pure water would quickly dissolve away the whole precipitate.

(8) In all these conversions of berberine salts too great an excess of either acid should be avoided so as to eliminate mass action.

(11) *Pharm. Centralhalle* 1895, 354.

(12) Supposing a U. S. P. preparation was used.

(13) Lindé uses a definite amount of water for washing. (14) *Arch. d. Pharm.*, 1901, 215; *Am. J. Pharm.*, 1901, 161.

(15) It is best to moisten one piece of blue litmus paper with the washings and compare the tint with that produced by moistening another piece with pure ether-alcohol.

(16) *Pharm. J. Trans.* (3), xiii, 664.

(17) *Am. J. Pharm.*, 1901, 168; *Arch. d. Pharm.*, 1901, 222.

(18) The insolubility of berberine acetone was shown already in a previous article by A. B. Prescott and myself (*Arch. d. Pharm.*, 1900, 443); the reason I repeat the proof here is because J. Katz (*Pharm. Centralhalle*, 1901, 287) seems to doubt the correctness of the statement.

(19) This was accomplished by placing a known volume of water in the Spritz bottle and measuring the amount left.

(20) This makes the liquid contain one-ninth acetone.

(21) The asbestos in the Gooch should be washed with water, acetone and weak alkali. In drying the acetone berberine in the Gooch it is advisable to put on the lower cap, as otherwise the water which remains in the asbestos when it gets hot is liable to dissolve traces of the acetone compound which would then soak through the bottom. It is best to tare the Gooch with cap and cover.

(22) In concentrated solutions, potassium iodide throws down together with berberine hydriodide much foreign matter. As the hydrochloride is very insoluble in excess of potassium iodide, we can dilute the liquid to a very large volume without causing any loss.

#### METHYL ALCOHOL IN ETHYL ALCOHOL.

—For the detection of methyl alcohol in the presence of ethyl alcohol, A. B. Prescott (*Pharm. Arch.*) proposes converting the alcohols into aldehydes by plunging a red hot copper spiral into the dilute alcoholic solution, oxidizing the acetaldehyde by means of hydrogen peroxide, and detecting the formaldehyde by means of Vanino's color reaction with phloroglucinol (1 gram of phloroglucinol and 20 grams of caustic soda dissolved in 100 cc.). The excess of hydrogen peroxide is removed by means of sodium thio-sulphate.

THE LEAVES OF CONVALLARIA MAJALIS have been found to yield a volatile oil by Haensel (*Pharm. Zeit.*). This oil was obtained by distilling the leaves with steam. This substance is semi-solid, having a greenish brown color and a pleasant odor. It melts at 40.5 degrees C and begins to boil at 120 degrees C. A crystalline white body has been separated from the oil by pressure and solution in alcohol. This body melts at 61 degrees C.

#### DANGERS OF THE DRUG AND CHEMICAL TRADE.

It should be known that there are trades in which a considerable amount of danger is ever to be regarded against by those engaged in them. The trade of the chemist and druggist, both wholesale and retail, is pre-eminently one of these, as is also that of the chemical manufacturer.

Readers of the "Pickwick Papers" have often wanted to smile at the insinuation of the chemist who figured in the "Bardell versus Pickwick" trial—that barber might be committed if he were empaneled as a jurymen, because his boy was apt to confound Epsom salts with oxalic acid; but the passage will not excite much risibility on the countenance of the average chemist, for he knows well that from time to time fatal accidents have resulted precisely from this mistake; some manufacturers having so dealt with these articles as to make them very similar in appearance. Occasionally it happens that spirits of hartshorn is sent out when spirit of sal volatile has been ordered. Fortunately the stronger ammoniacal smell of the former generally prevents the recipient from swallowing it; but every now and then we read of considerable suffering caused by such a mischance.

That death-dealing fluid (sulphuric acid) is in daily use with the druggist, and he must exercise extreme caution in handling it. Frequently he has to dilute the acid, a process which, if heedlessly performed, may cause damage to the surroundings; the heat evolved in the mixing often resulting in the cracking of the bottle. An unskilled helper might readily cause an accident of this kind; but fortunately for all concerned, chemists are not wont to entrust dangerous work to inexperienced assistants without due caution, as they are too well aware of the serious consequences which may ensue. Young students in school laboratories occasionally pay the penalty for carelessness in handling bottles of strong corrosive acids, with the result that they get marked for life. It requires constant supervision on the part of the laboratory instructor to prevent such occurrences.

Not long ago a serious amount of damage was caused at a manure-works in Huntingdonshire, where a fire took place which melted some large lead tanks containing sulphuric acid. Some of this flowed into a tributary of a river in the neighborhood and destroyed large numbers of fish.

The authenticity of the following account of a narrow escape by a wholesale druggist is vouched for: "I was sitting one morning at my desk. My office is just under our wet room" (the usual term for the department where liquid pharmaceutical preparations are kept and prepared). "All of a sudden I heard something splash on my desk close to me. Fortunately I was sufficiently cautious to get up from my seat and go to a corner of the room before looking up. A small trickling stream was coming through the ceiling. I shouted up through the speaking-tube to find out what it was, and received the reply, 'A bottle of sulphuric acid has burst.' I cannot say how thankful I was that I had neither touched the liquid nor remained where I was, for had I stayed another second and looked up I might have lost my sight. It came down close to my seat. Of course, after that I had the whole of the upper floor securely sheeted with lead. The over-filled bottle that burst should not have been brought up and put where it was; but I was not going to run such a risk again. An ominous black stain on the ceiling remained to keep me in mind of my narrow escape."

An engineer connected with one of the largest chemical works in the West of England was walking under some of the vitriol tanks, and felt something drop into his eye. He thought it was a raindrop, and brushed it off, and for a time gave no further attention to the matter; but when he went to bed that night his eyeball began to pain him so badly that he had to get a doctor, and then he found, all too late,

that it was a drop of acid, not water, that had touched his eye. He completely lost the sight of that eye.

Certainly the escapes of some men are wonderful. A carter in the employment of a large railway company was entrusted to deliver two glass carboys of pure sulphuric acid. He drove up to the merchant's door and said to the manager, "Your men must be careful about lifting these, sir. They've got no stoppers in them." Sure enough, their necks were filled with paper. "Good gracious, man," said the manager, "tell me at once—has any of the stuff got on your face?" "No, sir; not as I know on." "Did the company really hand over these two carboys to you to deliver without telling you what they held?" "Yes, sir; no one told me what was inside. I saw the stoppers gone, and so I stuffed paper into the necks." "Why, man, if you had got that acid on your hands, and chanced to rub your eyes, you might have been blinded for life." On the face of the matter, it would appear as if there had been some scandalous carelessness on the part of the railway officials. The stoppers on the carboys could not, in all probability, have been quite tight when the consignment was delivered to the railway company, and the shaking in transit had jerked them out. It happened to be a dark wintry afternoon when they were handed over to the carter on arrival, so that acid fumes from the stopperless vessels were not discernible; and although the accompanying address-tallies had marks on them which would have been sufficient to indicate their contents to an experienced trader, these were not sufficiently clear to be decipherable by an ordinary railway porter or carrier.

That prussic acid is a deadly poison is known to the million; but comparatively few are aware of the extent to which it is prescribed in minute quantities, and how in consequence a bottle containing enough for a hundred or more fatal doses may have to be handled several times in a day by the dispenser. Should he slip with the bottle, break it, and cut himself, he might be a dead man in a moment if the acid touched the broken skin and got into a vein; and yet there are people who think that a chemist ought to be hurried, and complain that they have been charged perhaps 1s. instead of 11d. for a preparation compounded at the risk of his life. Were he to become "an absent-minded beggar," the consequences might be such that it would be beyond the power even of Mr. Rudyard Kipling to win popularity for him.

The distilled essential oil of almonds, which when diluted supplies the popular flavoring for sweets and confectionery known as "ratafia," contains in its strongest form a sufficient percentage of hydrocyanic acid to make it highly dangerous. A young man who was executing an order by pouring some of it from a large bottle to a smaller, noticed that he had not put the label quite straight on the smaller bottle, and took it off again. Before replacing the label he licked it to make sure of its sticking properly; but, whilst pouring, he had inadvertently let a drop or two trickle on the outside of the bottle where he had affixed the label. Then, when he touched the label with his tongue, he felt as if something shot along that member, and also a jump of his heart, so he rushed to a tap, which was fortunately close at hand, and put his tongue under the running water. Never, as long as he lived, he said, would he forget that poisoning sensation.

Death has sometimes occurred from taking strychnine in mistake for morphia. Here, again, there is sufficient similarity in appearance, when the strychnine has been powdered, to deceive the inexperienced; and a more deplorable mistake is hard to imagine than that of a person in need of a sedative should be given instead that which will cause most frightful pain and contortions. In more than one case the wholesale druggist has been found to have been mainly responsible for this error, having supplied the goods to the retailer wrongly labelled. Fortunately, these occurrences are few and far between owing to the check systems adopted to guard against accidents. It may be asserted that such a mistake would not be likely to occur if poisons were kept separate from other

things, but morphia happens to be a poison as well as strychnine.

With reference to mistakes committed by wholesale drug and chemical firms, it is generally found that when they have resulted seriously pecuniary compensation is very readily offered. Not many years ago one of these firms paid a sum of some thousands of pounds when a death occurred, which, it was thought, was due to a poison the retailer had sent out by a mistake—a mistake which it is alleged had been caused by an error on the wholesale dealers' part in the first instance. No legal verdict had been obtained against the wholesale chemists; but as it was enough for them that there had been some irregularity, they felt morally bound to make that large monetary sacrifice, and in so doing they earned the respect of their conferees.

It is undoubtedly because an excessive amount of care is taken that there are comparatively so few fires at drug and chemical establishments. Were novices left in charge, the number would be increased immediately, as can easily be surmised when the inflammability of so much of the contents is borne in mind, and also that spontaneous combustion will occur if certain articles are brought into close proximity.

The care exercised by ordinary retail pharmacists seems to be recognized by insurance companies, as they customarily grant policies to the chemist at somewhat lower rates than they require from several other classes of traders. These rates, however, are liable to be materially raised should stills and retorts be introduced for manufacturing purposes.

Manufacturing chemists who conduct the process of camphor refining find it extremely difficult to get an insurance company of good standing to accept the risk without charging a very high rate indeed; as, in case of a fire breaking out, there are such inflammable materials on the premises to feed the flames that the are likely to spread with alarming rapidity. Experience, however, usually causes the manufacturer to conduct such operations in an isolated shed; and when a fire occurs, though the shed is enveloped in flames, no attempt is made to put them out until the building is quite burned to the ground, and there is no more material for the fire to feed upon.

It is sometimes asserted that chemists leave dispensing to their errand-boys or at any rate to raw apprentices. This is a most unfounded charge. There are even chemists so scrupulous that they decline the services of medical students who come prepared to pay a fee to be taught dispensing, holding that by so employing the students they would not be dealing fairly with their customers, who have been led to believe that the dispensing department is entirely controlled by able and experienced men.

Many a retail chemist will admit that once in his life the fear has come upon him that he has put up something wrongly, and he has had a sleepless night in consequence but he will generally add that after all he found the mistake had not occurred. His accuracy may be compared to that of the bank cashier. Neither can he said to be infallible; but the wonder in both cases is that mistakes are not more frequent, considering the number of articles with which the compounder of medicines has to deal, and haste with which money is paid in and received over the counter of the banks in busy centres.

It is sometimes a grievance of retail pharmacists and hospital dispensers that reports of poisoning cases appearing in the newspapers do not state quite clearly, so that the public can take in the fact at once, that the fatalities have not been caused by any fault of the parties from whom the poisonous draughts have been obtained. Consequently, there is frequently a misconception of the facts, and a slur rests on the chemist till the exact circumstances of the case are ascertained at the subsequent inquest or by other means.

When cholera or some other dangerous epidemic threatens a district, the article called bleaching-powder or chloride of lime is largely used. It is very offensive to handle, as the smell of it is difficult to get rid of, and some who have to do with it get their stomachs most uncomfortably disordered unless they

take such precautions as covering the mouth with flannel to prevent the fumes of the chlorine from going down the throat.

The members of one high-class drug firm said that if they could do so without giving offence they would never sell another ounce of it. On one occasion, when they had some at the back of the premises, a door had inadvertently been left open, and a strong gust of wind blew a quantity of it over some little children playing near by. The amount of compensation they had to pay for injury to children and their clothes amounted to more than the profit derived from its sale during a period of several years.

There are many articles sold by the chemist which cannot be handled with impunity. Strong caustic potash, for instance, will readily blister the skin; but it is in daily requisition from wholesale druggists. Corrosive sublimate or perchloride of mercury is also objectionable, being likely to create irritation in the throat. So is arsenic. A chemist in Wales nearly caused the death of his porter, when, with a view to saving expense, he set him to pulverize a lump of it in a mortar. Another pharmacist suffered a good deal in grinding cantharides (commonly known as Spanish fly) in a small hand-mill, getting intensely irritated by the blistering particles which flew in his face.

The author of "Lorna Doone" in his "Clara Vaughan" has depicted the agony which his heroine suffered from pressing her face against a pane of glass which had been smeared with a liquid which, by its effect, must have been hydrofluoric acid; and, indeed such contact would be productive of exquisite torture; but this acid has to be sold in comparatively small quantities. It is much used in the stained-glass trade, and manufacturers are required to have it put up in gutta-percha bottles of various sizes, ranging usually from 4 ounces and upwards, at prices which seem somewhat inadequate, considering the nature of the article.

It appears, therefore, tolerably evident that the occupations of the drug-vender and pharmacist and of the chemical manufacturer are attended with far more than average risk of danger when compared with other trades and manufactures. What, then, may be considered the compensations of those who carry them on? The ignorant will say, "Why, the immense profits, of course." If these existed in reality there would not be that severe competition which now exists between druggists, wholesale and retail alike, and between chemical manufacturers also but there certainly is some recompense in the acquisition of the exceptional knowledge which cannot fail to be acquired by industrious workers engaged in these trades, and there is the consciousness that they lend themselves to developments and are part and parcel of the movement for increasing the welfare of the community. The past record of the benefit of chemical discovery and of the blessing of healing drugs is well calculated to stimulate the ardor for further research and to a certain extent to shed some glamour even over the mere dealing in such commodities. Very few pharmacists are really indifferent to a grateful acknowledgement of the efficacy of a medicine which they have furnished and when it does come, it takes the edge off the undeserved imputations of exportation which many are too prone to cast at them.

**THE SEPARATION OF POTASSIUM** from mixtures of alkalis may, according to C. Reinhold (Pharm. Zeit.), be effected by means of sodium picrate. Potassium picrate is relatively very insoluble in water, dissolving in the proportion of 1 to 260. The picrates of ammonium, caesium and rubidium are also only moderately soluble in water; and these bases interfere with the picrate test for potassium. This does not, however, destroy the value of the test for ammonia may be removed in the usual way while caesium and rubidium are of rare occurrence. If sodium is present in the mixture in the form of the carbonate, this must be converted into the chloride by the addition of hydrochloric acid before applying the picrate test. The reaction is accurate within about 5 per cent. K.

## RUBBER AND GUTTA-PERCHA IN THE PHILIPPINES.\*

By FRANK J. DUNLEAVY.

There is rubber of value in the Philippines, and gutta-percha also, and several varieties of the latter, and many other gums or gutta-like substances which are not gutta-percha, but are mixed with the latter by the Chinese, and the Moros. To-day one of the mountain tribesmen, a Tiriria, came to me with five bundles of what he called Goma (all gummy substances are sold under the name of Goma here, whether it be India-rubber, gutta, balata, or one of the other kinds). To the uninitiated they might have appeared like coils of gutta wound up, rope like, around a bamboo, but when I examined the material every second coil or rope was an adulteration. I passed him out, and he sold the whole as gutta-percha to a Chinaman. The latter will boil it all down, extract some of the chopped bark and dirt, and ship it to Sandakan, in Borneo, where it will be bought up and shipped to Singapore, and appear in the market quotations as Borneo Gutta.

This has been going on here since 1887, more or less, though few outside of the Chinese and the Spaniards knew this island was a gutta producing island. I am not very familiar with the gutta trade under Spanish rule here, except that I know the price used to be from \$10 to 25 Mexican per picul of 13½ pounds. There was not much of it shipped because the Spaniards had very hard and fast forestry laws, and only allowed the gathering of gutta and rubber under strict supervision, and only by tapping the trees in a certain way and at certain times of the year.

When the Spanish garrison was withdrawn from this town, after the late war, the Chinese traders took charge of matters here, under the direction of a half-breed Chinese and Moro Datto. The latter made slaves of every one who opposed his will, and the beautiful valley of the Rio Grande ran riot till the American troops could come and occupy the town, which was some six months after the Spanish evacuated the place. Then, for some reason no sane man could ever understand, the forestry laws as they applied to the gathering of gutta and gum elastic were suspended and the Americans allowed the Chinese to come in great numbers and start cutting down the trees, and thereby destroying them so that they could gather the gutta and rubber. The same destruction of gutta trees that had been going on in the Malay peninsula further south for a number of years was started, and has been kept up till now.

The trees are cut down and then chin ring circles, at intervals of say a meter are cut into the trees. This is continued along the trunk and branches, and the latex is guided into pieces of bark or leaves. They then gather the whole of the product, with chips, bark and dirt, and boil it with a little citreous bark or wild lemons, and coagulate it, with dirt and everything mixed in to make it heavier and weigh more. Another method is to chin ring the tree standing, and then light a fire around the trees, so as to hasten the flow of latex by heat. This method, while not killing the tree outright, serves to hinder its utility for some years after. The Chinese and the Moros who do this claim they have never been shown how to make incisions and tap them, but this is not true. They pursued the above methods, because, with tapping where one will collect 5 pounds of gutta, with cutting down and collecting in the manner described one can collect from 15 to 25 pounds of gutta to the tree.

You can realize what Uncle Sam has lost when I tell you that, according to figures I took from manifests at the custom house at the port of Jolo, in the month of May last, no less than 426,426 pounds of gutta and rubber were exported from this island to Borneo and Singapore between the month of December previous and up to that time. Put this amount at the large average of 20 pounds to a tree, and it will give 21,321 gutta and rubber trees destroyed—mostly

\*The India Rubber World.

gutta—and, all the customs collected on this large amount was \$140 Mexican; notwithstanding there was a forestry tax to pay of 10 per cent. on the valuation, I have known some of it to sell in Sandakan for \$120 Mexican per picul of 133 1-3 pounds, though the average would have been about \$70 to \$80 a picul.

But last month the Forestry laws were enforced to the extent of collecting the 10 per cent., though no attempt is being made to prevent the sale of gutta that has been gathered by the destruction of the trees. I expect, as a matter of protection, that the Forestry department will prohibit the trading in any kind of gutta or rubber except what has been tapped. It is late in the day for this district, as one has to go ten days' march up the valley now to see a gutta tree, but there are other districts equally as rich in gutta as this was. The civil government is anxious to conserve to the country this valuable asset in gutta, and with that purpose in view has dispatched a special agent to Sumatra to study the new method of extracting gutta, by which it is claimed one can extract more gutta by this method than if the tree was cut down and destroyed, without harming the tree in the least for the following season. This agent, I hear, will be sent down here on his return to instruct us novices, who are interested in the gutta industry. If such is true, the position is simply this: If the government had the 20,000 trees that have been cut down during the last year and it could extract, say even 12 pounds of clean gutta to a tree, worth in New York \$1.75 gold a pound, each tree would be worth in a year's product \$42 Mexican. To pay 10 per cent. to the Forestry bureau on this would mean \$80,000 Mexican a year revenue. But for the sake of being on the safe side, cut this in two, and say \$40,000 a year. You can calculate what wealth is in the forests of Mindanao.

No doubt when the government gets this proposition well in hand the United States possessions will figure as a gutta and rubber producer, and, with a chemist and proper equipment, it will be able to classify the various other gummy substances and give them their proper value in the market. No white man has made a single cent out of all the destruction of these trees, so far as I know, as the whole business was carried on by the Chinese, who have been paying \$100 a day for a steamer, for the last six months, to do nothing else but run between here and Sandakan and carry gutta and rubber out of the country.

Gutta is selling to-day at from \$30 to \$40 Mexican per picul. The quotation in the last India Rubber World, to hand, ranges from 65 cents to \$1.75 gold per pound in New York.

The gutta when it leaves here is rolled around the joint or one length of a bamboo, and the latter is filled with water. The gutta is rolled till it is about 10 to 12 inches in diameter and long enough to conceal the bamboo. The idea is that in handling the gutta, in discharging at Sandakan, the plug will be knocked out of the bamboo and the water percolate through the whole package and make it heavier. If the plug happens to stay in, it will weigh well also.

I have seen the Chinese putting stones, inferior gutta, dirt, and other substances in the center, so you will see it is no wonder this gutta brings such a low price. The government, if it wants to build up a reputation for Philippine gutta, should prohibit the Chinese from dealing in it, and allow none of it to be exported unless tapped and stamped to show where it comes from. I do not claim to know much about gutta, though I have handled a great deal of rubber in Madagascar, but as I am the only white civilian in this pueblo, and being interested in the development of the country, I give you these facts for the benefit of your readers.

Since I have written the above the government has done the right thing. The government has issued an order that any more rubber or gutta collected by destroying the trees will be confiscated.

## IS IT ESSENTIAL FOR A RETAIL DRUGGIST TO BE A PRACTICAL PHARMACIST TO MAKE A SUCCESS OF HIS BUSINESS?\*

By OTTO J. S. BOBERG, Ph.G., Eau Claire, Wis.

If the retail druggist has a drug store only, and not a small-sized department store, then, in my opinion, the answer to this question should be "yes," provided, again, the practical pharmacist also has the necessary fund of theoretical knowledge. It is the combination of the two qualifications—pharmaceutical college education and practical experience in pharmacy—which brings success to the retail druggist. The pharmacist who has the true practical grasp on things, who has learned to think, and has had so much professional training that he knows exactly what to do and how to do it—he is the person who can make the retail drug store of to-day pay, and, I believe, pay well. Such a pharmacist will be in a position to know the whys and wherefores of the many little obstructions and failures, in one way or the other, which now so often happen to some of the retail druggists, and which nearly always cause the spasmodical "kicking" we are getting so used to hear. It occurs to me that, for the practical and educated pharmacist, the field of new opportunities and additional sources of income is very large.

The practical pharmacist can manufacture and put on the local market, from his store, the hundred and one things that the average retail druggist is now buying again and again, from year to year, every time paying more or less profit to both manufacturer and jobber. The practical pharmacist can make all the pharmaceutical preparations used in the store, such as elixirs, medicated waters and wines, syrups, tinctures, solutions and ointments. He can also manufacture a limited line of non-secret preparations, like cough syrup, blood purifiers, tonics, vermifuges, catarrh remedies, laxative tea, toothache cure, healing salve, corn cure, etc.; of veterinary medicines, of articles useful in the household, such as polishes, cleaning fluids, insecticides, disinfectants, fancy inks, flavoring extracts, baking powder, stock food and poultry powder; also solutions for amateur photographers, as developing, fixing and toning-baths, and of toilet articles, like lotions, creams, hair tonics, face powders, tooth preparations, etc.

Some druggists will say that it does not pay the retail druggist to make these things, but other druggists, who are practical pharmacists and who have tried it, say that it does pay.

Of course, a line must be drawn at proprietary specialties, fluid extracts (as a rule), chemical salts, etc., but the practical pharmacist will always know where to draw such a line.

A laboratory equipped with the necessary apparatus for making these ordinary pharmaceuticals, and other preparations, could be fitted up, in most drug stores, at a comparatively small expense. With the better facilities for doing this work would follow additional interest and more willingness to do it on the part of both proprietor and clerks.

It is the practical pharmacist who always knows how to make a nice, mellow cold cream from the many different and sometimes impossible formulas brought into the store by lady customers. It is the practical pharmacist who makes his syrups of iron iodide and Donovan's solution according to the U. S. P. in less than an hour's time, instead of sending the order and the profit to the jobber, sometimes waiting days before getting the goods. It is the practical pharmacist who knows that where the menstruum is the same, any fluid extract will produce the corresponding solid extract by simple evaporation upon a water-bath. It is the practical pharmacist who, in short order, decolorizes his alcohol, when it has acquired a yellow tinge from the barrel, by simply filter-

\*Read at the annual meeting of the Wisconsin Pharmaceutical Association and awarded the Merck prize.

ing through some granulated animal charcoal. It is the practical pharmacist who knows how to make good suppositories, perfect pills, and smooth, uniform ointments, and who knows that Basium's mixture must have a slightly acid reaction in order to be clear and free from the unsightly precipitate of the basic iron salt. It is the practical pharmacist who saves himself both annoyance and expense by occasionally replacing the old corks in all fluid extract bottles, and in bottles containing elixirs, solutions, chlorine water, sulphurous and hydrocyanic acids, etc., thereby minimizing precipitation and loss by evaporation.

Besides being the physician's regular assistant by compounding his prescriptions, the practical pharmacist can prove himself to be the doctor's natural assistant in other ways also, thereby bettering himself financially and at the same time gaining additional respect from the medical profession. I here refer to the pharmacist taking up the work of qualitative and quantitative analysis of urine, examination of gastric juice for free hydrochloric acid, and microscopical examination of sputum for tubercle bacilli, etc. That it pays to do such work for doctors, I know, from personal experience.

The practical pharmacist generally is also a practical chemist. He is able at once to tell calomel from powdered corrosive sublimate by the aid of a little lime-water or potassium iodide, and to tell a crystal of sal soda from a crystal of Glauber salt by a drop of a diluted acid. To some extent he can serve the public as an analyst by making chemical analyses of drinking water and milk, also microscopical examinations of spices, flour, etc.

The practical pharmacist, as a rule finds it profitable to take regularly one or more pharmaceutical journals, partly in order to keep posted on the advancement of pharmacy, and partly on account of the many valuable advices and useful formulas found in these journals.

It is the summing up of the reasons stated in this paper, added to others not stated here, which leads me to believe that: It is essential for a retail druggist to be a practical pharmacist to make a success of his business.

### THE SOURCES OF LITHIUM.\*

The great demand which has arisen within the past year or two for lithium minerals which can be used in the manufacture of lithium carbonate for the production of the various forms of lithium salts employed for medicinal purposes, has induced the United States Geological Survey to make a careful investigation of the sources of such minerals, and a brief report on the subject has just been received, from which the following abstract is taken:

"The two minerals that have been used as a source of lithium are lepidolite and spodumene. Lepidolite, or lithium mica, is in part a metasilicate of aluminum with potassium and lithium, and varying amounts of fluorine and hydroxyl. It occurs commonly in scaly, granular masses, either coarse or fine, but sometimes in cleavable plates and in aggregates of short prismatic crystals. It has a micaceous structure and a perfect basal cleavage, similar to the other members of the mica group. It varies in hardness from 2.5 to 4, and has a specific gravity of 2.8 to 2.9. It varies in color from rose red, pinkish, grayish-white to white, and has a pearly luster. Its usual occurrence is in granite and gneiss, but more especially in pegmatitic dikes, where it is often associated with tourmaline, spodumene and muscovite, with which it is sometimes in parallel position.

"Spodumene is a metasilicate of aluminum and lithium, generally containing a little sodium, and its chemical composition is represented by the formula  $LiAl(SiO_3)_2$ . This mineral crystallizes in the monoclinic system in prismatic crystals that are often flattened and striated and furrowed. At times they are of enormous size, from 20 to 40 feet in length. It also

occurs in large cleavable masses. It has a perfect prismatic cleavage, so that usually smooth, thin plates can be split off with a knife. Lepidolite has a hardness of 6.4 to 8 and a specific gravity of 3.13 to 3.2. In color it varies rather widely, from greenish white, grayish, pink, yellowish green to emerald green, and it has a vitreous luster, except on the cleavage surfaces, which are somewhat pearly. The yellowish green to emerald green spodumene is known as hiddenite, and the color is probably due to the small amount of chromium that it contains. It is found in granite veins, associated with tourmaline, beryl, garnet, lepidolite, triphylite, lithiophilite, etc.

"The largest deposits of lepidolite known in the United States are near Pala, in San Diego County, Cal. These deposits are now being extensively developed, principally by W. G. Rifenburg, and, while little lepidolite was shipped in 1900, regular shipments will have begun before the end of 1901. As exposed, the mineral is found composing a seam or vein three to twelve feet thick.

"Lepidolite has also been found in some quantity at a number of localities in Maine—Hebron, Auburn, Rumford and Paris. No mining for lepidolite has been done at any of these places, although tourmalines, which are found associated with it, are produced there. Not enough work has been done to determine whether there would be a sufficient quantity of lepidolite to make it profitable to mine for this mineral. There are a number of localities where spodumene occurs in quantity. The most noted one, and probably the only one from which this mineral has been shipped as an ore of lithium, is at the Etna mine, in the Black Hills, of South Dakota. There are a number of other mines, as the Bob Ingersoll and Harney Peak tin mine, in this general vicinity, that contain large quantities of spodumene. These deposits occur in pegmatitic dikes, which were formerly worked for tin. Some ore has already been shipped from the Etna and Harney Peak mines, and preparations are being made to mine this mineral in considerable quantities during the present year.

"At Branchville, Conn., spodumene occurs in a pegmatitic dike embedded in quartz, in crystals that are often of very large size. This locality was formerly developed for feldspar, but has not been worked for a number of years. The spodumene is known to occur in considerable quantity; and it is not improbable that this locality, upon further development, would show the spodumene to occur in sufficient quantity to be mined as a lithium ore.

"It has also been found at Chesterfield Sterling, Goshen and Huntington, Mass., but it is not known in what quantity it occurs at these localities.

"It is thus seen that there are some large deposits of these minerals in the United States, and it cannot be doubted that proper search would reveal other deposits that would furnish these minerals in quantity.

"There are a number of other minerals that contain lithium, some of which occur in considerable quantity. They may be described briefly as follows:

"Petalite is a lithium-aluminum silicate in which a part of the lithium is replaced by sodium. It is a mineral crystallizing in the monoclinic system, but is usually in foliated, cleavable masses, the cleavage being a perfect basal one. It is brittle and has a hardness of 6 to 6.5. In color it varies from colorless to white and gray, and it has a vitreous luster, except on the cleavage face, which is pearly.

"Zinnwaldite is similar to lepidolite, but contains a considerable percentage of ferrous oxide.

"Triphylite and lithiophilite crystallize in the orthorhombic system, but crystals are rare, and they are usually found in cleavable to compact masses. They have a perfect basal cleavage and a hardness of 4.5 to 5. In chemical composition they are phosphates of lithium with iron and manganese, triphylite containing a large percentage of ferrous oxide (FeO) and a small percentage of manganese oxide (MnO), while lithiophilite contains a smaller percentage of ferrous oxide, the composition being represented by the formulas  $Li(FeMn)PO_4$  and  $Li(MnFe)PO_4$ , re-

\*Oil, Paint and Drug Reporter.

spectively. The color of these minerals varies with their composition. In triphylite it is greenish gray to bluish, and in lithiophilite it is salmon color, honey yellow to light clove brown. The percentage of lithia in these minerals varies from 8 to 9.5.

"At Branchfield, Fairfield County, Conn., lithiophilite has been found in considerable quantity associated with spodumene in the pegmatitic vein already referred to under spodumene. Triphylite has been found at Norwich, Conn., and also with spodumene at Peru, Me.

"Amblygonite is a mineral crystallizing in the triclinic system the crystals being large and coarse. The mineral is more commonly in columnar to compact masses which show a perfect basal cleavage, with pearly luster. It is brittle and is 6 in hardness. In color it varies from white to greenish, yellowish, bluish and grayish white, and it has a vitreous luster. In chemical composition it is a fluo-phosphate of aluminum represented by the formula Li (AlF) PO.

"The salts of lithium and not the metal itself are used in the arts. It is on the market for the most part in the form of carbonate. The principal use of the lithium salts is probably in the preparation of mineral waters, which are used extensively for medicinal purposes. There are some of these lithia waters that occur as natural springs, but a great many that are sold are artificial. A new form of lithia that has been put on the market in recent years is that of effervescing lithia tablets.

"While the separation of lithium cannot be made by what is ordinarily considered a simple process, yet its separation does not offer any serious difficulties. Briefly, it consists of fusing the mineral with carbonates and sulphates so as to decompose them and convert the lithia into lithium sulphate. The alkali sulphates are readily dissolved and are then converted into chlorides, but it is not in a pure condition, and must be purified by converting it into the carbonate.

"While this process or the separation and purification of lithium from its ores is a long and rather expensive one, the value of lithium carbonate should make this industry a profitable one. The industry, however, is limited and the total amount of lithium carbonate used is variously estimated from less than 50,000 to over 150,000 pounds per year. Most of it is now being manufactured in Germany. The German manufacturers have had their attention called to American deposits, and nearly all, if not all, of the lepidolite and spodumene mined as ores of lithium has been shipped to Germany. The contracts on hand at the present time for these materials from the Black Hills, South Dakota, and Pala, Cal., are with German chemical manufacturers. Thus far the American chemical manufacturers have made little attempt to develop the industry in this country, and our lithium minerals are now being bought by the German manufacturers, who return to us the lithium carbonate, which was quoted in New York in 1900 at \$4.20 per pound. The increase in the use of the lithium carbonate is probably due to the extensive manufacture of effervescing lithia tablets. This has caused considerable inquiry as to sources of lithia minerals. It may be the means of interesting some of the American chemical manufacturers in the preparation of lithium carbonate from the lepidolite and spodumene obtainable in this country.

A. T. Guernsey, one of the progressive young druggists of St. Paul, has determined to "fire" his daybooks and ledgers and keep his accounts by a card system. He says that men in other branches of business have tried this system with good results, but he never has heard of a druggist trying it; and he asked himself, "why not?" Mr. Guernsey will have a ruled card for each customer with which he does a credit business and a daily card to keep a record of his sales and expenditures. The plan saves transcribing and enables the storekeeper readily to tell at any time how he stands with credit customers and how his business "Stacks up" for the day, week, month or year.

## THE CIGAR CASE.

The profitable management of a druggist's business demands that considerable attention be given to the care of the cigar case, for the goddess Nicotine has many votaries who prefer to worship at her shrine when set up in the front of a well-regulated drug store.

The selection of brands that suit popular taste and the effective display of the cigars in stock are two important essentials that ought never to be overlooked.

In the first place, the display of cigars should be as attractive as possible, with care taken to have the contents of the case always in plain view.

A classification is essential. The five cent cigars should be kept in one place, the ten cent cigars in another, and higher priced goods in a third. Then, too, the domestic and the clear Havana cigars should be arranged so that the desired brand may be selected at ease. In any event do not crowd more brands into your case than it will conveniently hold. To pile boxes on top of one another or upon the top of the case, a custom so often followed by druggists, upsets the classification and detracts from the appearance of the display.

It is gratifying to customers to have prices displayed. The ordinary customer knows the price he wishes to pay, but if obliged to select at random or call for a cigar he will probably pick a higher priced cigar when the cheaper quality was desired. Vice versa, he may select a five cent cigar when he intended to buy a better article.

Such little things as these often cause people to go elsewhere. It is a small matter, but the consequences are not so trivial as the cause.

A word about the proper care of cigars may not be out of place here. In the summer the cigar case is not a source of much trouble. The cigars easily keep moist and fragrant, but when the cold, snappy weather arrives, unless precautions are taken, a deterioration in quality will be evident. In the large wholesale houses the maintenance of cigars through the cold period is a source of great expense. It is well for the retailer, perhaps, to carry as small a stock as possible during the winter, thus compelling the wholesaler to bear the burden of responsibility.

Many devices have been invented for keeping cigars moist. One of the most successful yet devised is a series of rolls of blotting paper set upright in a glass of water. Capillary attraction causes the water to rise to the top of the rolls, which should be tall enough to come to the top of the case. In this way the moisture is very evenly distributed and a further advantage which this method offers, is that large quantities of nicotine are absorbed by the paper. For the latter reason they should be changed frequently, to prevent their becoming discolored.

Even in these days when advertising is so extensively used to popularize certain brands of cigars, the druggist may, by exercising proper care in the selection of his stock, succeed in building up a high-class trade.

Intrinsic value is not often found in an article extensively advertised. It behooves the druggist to select his stock carefully and to constantly bear in mind that quality will eventually supersede display advertising in the cigar business.

Manifestly, it is an advantage to control, as nearly as possible, the brands offered in your case. In many instances this, of course, is impossible, but not always. If you cannot control the brand, purchase that one which is sold only by your legitimate competitor, the druggist.

It is impossible to convince the smoker, in the event of his being pleased with a certain piece of goods, that another is "equally as good." Transient trade, when satisfied, becomes permanent business.

The cost of display advertising must necessarily be added to the cost of manufacture, and therefore be taken from the quality of the goods, or added to the price.

If this argument appeals to you, apply it in your business. If it does not, look into the history of nine out of every ten of the advertised brands exploited during the last ten years. How long have the majority held popular favor? Their success was sudden and their decline equally so.

The cigar case may be made so fruitful a source of revenue that attention to the foregoing points will prove valuable. (C. R. D. A. Auxiliary.)

**CRYSTALLINE COPPER AND AMMONIUM SULPHATE** may, according to M. H. DeJournel (Bulletin Commercial), be obtained in a beautiful form by means of dialysis. A saturated solution of copper sulphate is prepared by dissolving the salt in boiling water in a flask. The flask is allowed to cool to 50 degrees, after which the mixture is further cooled, filtered to remove the imperfect crystals which have formed, and treated with an excess of ammonia; thus producing a clear blue solution smelling strongly of ammonia. This solution is placed in the crystallizer of a dialyzing apparatus, while in the dialyzer, having a tightly fitted diaphragm, is placed a quantity of 90 degrees alcohol, containing 5 per cent. of ammonia. The entire apparatus is covered with a glass plate, fitted as closely as possible to prevent the loss by evaporation of alcohol and ammonia. After four days the alcohol in the dialyzer is replaced with fresh alcohol and ammonia. This operation is repeated every four days. The crystals are found adhering to the lower side of the dialyzer. In this way the author obtained crystals five centimetres long.

**CONSTITUTION OF THE SOLANACEOUS AND COCA ALKALOIDS.**—W. Garsed (Pharmaceutical Journal) summarizes the results of some recent investigations into the composition of the solanaceous and coca alkaloids. Willstater regards these alkaloids as derivatives of one substance which he terms hydrotropidine or tropan. Constitutionally this substance is a condensation of a hydropyridine ring with a pyrrolidine ring. Tropan has been produced synthetically from suberic acid, a substance obtained by the oxidation of cork with nitric acid. From tropan tropidine was obtained, and as atropine had previously been prepared from tropidine, the synthesis of this alkaloid may be considered complete. Cocaine is ecgonine with the hydrogen in the carboxyl and hydroxyl groups replaced by a methyl group and a benzoyl group, while atropine is tropine with the hydrogen in the hydroxyl group replaced by the tropic acid radical.

**MORPHINE REACTION.**—For the detection of morphine, especially in toxicological analyses, G. Fleury (Repert. de Pharm.) recommends the following mode of procedure: A small quantity of the substance is placed in a small evaporating dish, treated with a few drops of dilute sulphuric acid (1 to 20), and the mixture stirred with a small glass rod. After the substances are thoroughly mixed, the mass is rubbed for five or six minutes with a small quantity of lead peroxide. The dish is then set aside for about three minutes in an inclined position, so that the liquid portion separates from the precipitate. A drop of ammonia added to the clear liquid portion produces a dark chestnut brown color, which is supposed to be due to the formation of protocatechuic acid.

**BERGAMOT OIL** has been found, by Van Soden and Rojahn (Phar. Zeit.), to contain a new crystalline constituent. This compound is separated from the residue obtained by distilling the oil under reduced pressure. It is crystallized in white leaflets from petroleum ether, and has been named bergapatin. It melts at 59.5 degrees C., is easily soluble in alcohol, ether and chloroform, absorbs bromine and appears to contain a coumarin residue. A solid constituent of this oil, melting at 188 degrees C., and also a coumarin derivative, has been known for some time and a second has also been reported, but no description was furnished.

## QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

### Artificial Cream for Soda Drinks.

(W. D.)

Good milk ..... 2 quarts  
Corn starch ..... 1 ounce.  
Egg ..... 1

Rub the starch with about one-half of the milk to a smooth paste, heat cautiously to dissolve the starch, add the egg previously thoroughly incorporated with the remainder of the milk and strain.

Hiss' "Manual of Beverages" gives the following formula for "whipped cream":

Vanilla extract ..... 2 fl. ounces.  
Caramel ..... 1 av. ounce.  
Tincture of quillaja ..... 15 fl. ounces.  
Gelatin solution ..... 1 gallon  
Syrup ..... 1 gallon  
Water ..... 5 gallon

Introduce this mixture into a ten-gallon fountain and charge with carbonic acid gas to 100 pounds pressure. The gelatin solution consists of Cox's gelatin, 3 ounces, and water, 1 gallon. The genuine "whipped cream" is much preferable for use at the fountain. It is comparatively inexpensive, adds greatly to the attractiveness of any drink to which it may be added, and the dispenser can well afford to devote the time involved in making it. Special machines have been constructed for whipping the cream, but most dispensers prepare it with an ordinary eggbeater. Genuine whipped cream is nothing other than pure cream into which air has been forced by the action of the different apparatus manufactured for the purpose; care must, however, be exercised in order that butter is not produced instead of whipped cream. To avoid this, the temperature of the cream must be kept at a low degree, and the whipping must not be too violent or prolonged. Lippincott's Book of Instructions gives the following rules which must be observed in order to produce the desired result:

- (1) Secure pure cream and as fresh as possible.
- (2) Surround the bowl in which the cream is being whipped with cracked ice, and perform the operation in a cool place.
- (3) As rapidly as possible in the whipped cream arises, skim it off and place it in another bowl, likewise surrounded by ice.
- (4) Do not whip the cream either too long or violently.
- (5) The downward motion of the heater should be more forcible than the upward, as the first has a tendency to force the air into the cream, while the second on the contrary tends to expel it.
- (6) A little powdered sugar should be added to the cream after it is whipped, in order to sweeten it.
- (7) Make the whipped cream in small quantities, and keep it on ice.

### Tooth Wash.

(E. M. G.) A great many formulas under this title have been published in the Era. See indexes of previous volumes. Here are two others:

Camphor ..... 1 part.  
Salicylic acid ..... 2 parts.  
Benzoin, pulverized ..... .5 parts.  
Cloves, pulverized ..... .50 parts.  
Calcium hypochlorite ..... .5 parts.  
Oil of anise ..... 2 parts.  
Glycerin ..... .50 parts.  
Alcohol, 40 per cent ..... .50 parts.

Put all the ingredients except the calcium hypochlorite and oil of anise into a flask of sufficient dimensions and strength, cork very tightly, place in a

water bath and heat to 60 degrees C. (140 degrees F.). Keep at this temperature for five or six hours, agitating from time to time. Remove from the bath, set aside to macerate for a week, then filter off and add the hypochlorite and let stand for another week. Finally add the anise oil, agitate and filter. Preserve in blue or orange-colored bottles. Two teaspoonfuls added to a pint of water is sufficient quantity for each day's use. The following does not require so much manipulation:

|                                             |            |
|---------------------------------------------|------------|
| Cochineal .....                             | 32 grains. |
| Peppermint water .....                      | 10 ounces. |
| Glycerin .....                              | 5 ounces.  |
| Mix and set aside to macerate for ten days. |            |
| Quilaya bark, in coarse powder.....         | 2 ounces.  |
| Rectified spirit .....                      | 14 ounces. |
| Distilled water .....                       | 20 ounces. |
| Oil of Wintergreen .....                    | 2 drams.   |

Mix and let macerate for ten days. At the end of this time unite the two liquids, let stand for twenty-four hours, filter and add distilled water sufficient to make three quarts.

#### Bottle Wax or Cement.

(P. J. M.) A very common formula calls for a mixture of rosin and beeswax, in equal parts, melted together, with the addition of Venetian red, to give a good color, and sufficient cheap oil to prevent brittleness. Another consists of 2 parts of sealing wax, 2 parts of rosin and 1 part of beeswax. The substances are melted together. To use, dip the neck of the bottle into the melted mass. A good stick wax is made as follows: Melt together, carefully, in a copper pan, over a bed of clear coals, 4 parts of shellac and 8 parts of rosin. When fused add 3 parts of Venice turpentine and 3 parts of red lead, and stir until a smooth mixture has been obtained. Before adding the lead it should be spread out in a thin layer on a sheet of tin or in a pan and laid on the stove (or in the oven) to dry thoroughly and get warm. When added cold and moist the product is not good. Remove from the fire and keep up the stirring as long as possible, to prevent separation of the red lead. Before the liquid begins to set, pour out on a slab of stone and roll out into sticks. It may be poured into moulds if preferred.

#### Paper for Manifold Purposes.

(Manifold.) Try the following: Mix lard oil, or common sweet oil (cottonseed oil, purified), to the consistency of cream, with any of the following substances, according to the color desired: Prussian blue, lamplack, Venetian red, or chrome green, either of which should be rubbed with a spatula, on a plate or stone, until smooth. Use rather thin but firm paper; put on with a sponge, and wipe off as dry as convenient, then lay between sheets of uncolored paper, and press (under books, or some other weight) until the surplus oil is absorbed, when the sheets will be ready for use. This paper can also be made by rubbing thin, strong tissue paper with a composition consisting of two ounces tallow, one half ounce powdered black lead, one-fourth pint of linseed oil, and sufficient lamplack to make it of the consistency of cream. These should be melted together, and rubbed on the paper, while hot. When dry, it will be fit for use.

#### Cardamoms.

(W. D.) "When the U. S. P. directs 'cardamoms 10 grains' am I to weigh the entire of the fruit or just the seeds, and if the former, should the pericarp be afterwards discarded. I was brought up under the B. P., hence this question."

The U. S. P. defines cardamom as the "fruit of *Elettaria repens*," etc., and wherever cardamom is ordered in any official formula the fruit, which includes both seed and pericarp, must be employed. In the British Pharmacopoeia only the seeds (*Cardamomi semina*) are official. They are, however, directed to be kept in their pericarps and separated when required for use. The pericarp is practically inert.

#### Rubefacients and Vesicants.

(L.) "Will you please give me a list of rubefacients and vesicants?"

The following list embraces the principal agents and measures belonging to these groups: Rubefacients—Mustard, capsicum, camphor, ammonia, mezerion, arnica, alcohol, ether, chloroform, iodine, menthol oil of cajuput, oil of turpentine, volatile oils, pitch, friction, hot water. Vesicants—Cantharides, euphorbium, mezerion, iodine, rhus toxicodendron, ammonia (vapor), glacial acetic acid, volatile oil of mustard, boiling water. Cantharides is the agent generally employed as a vesicant.

We know of no better rubefacient than Stokes' liniment, a formula for which is given in the National Formulary.

#### Oxidizing Silver.

(P. Y.) Chemically speaking, the term "oxidizing" is not correct, as the surface of the silver, by the process most in use, becomes coated with a sulphide of silver and mercury. Following is the process: Dip the article first into a solution of mercurous nitrate for a few moments; remove and put into a solution of potassium sulphide (sulphurated potassa will answer) until it becomes of the proper hue. Another process consists in placing the article in a stream of hydrogen sulphide and sometimes it is simply washed with a solution of ammonium sulphide.

#### Hospital Stewards and Pharmacists in the Navy.

(E. C. G.) All applications for enlistment in the Navy hospital corps must be made to the Surgeon General of the United States Navy, Washington, D. C., and must be accompanied by suitable testimonials as to character, habits and experience of the applicant, citizenship, etc. Full particulars concerning entry, pay, etc., in the hospital corps of the United States service were published in this journal Aug. 24, 1899, page 263.

#### Coloring Globes for Incandescent Lamps.

(A. S. & Co.) The process generally recommended for coloring incandescent lamp globes is to coat them with a solution of collodion, in which has been dissolved aniline of the required shade. To "frost" omit the dye. For further information on this subject see the following issues of the Era for 1900: March 29, page 344; May 3, page 474 and May 24, page 557.

#### White Pine Cough Mixture.

(Sams) See this journal Feb. 28, 1901, page 233.

BACILLOL is, according to P. Werner (Wien. Klin. Rundsch.), the most perfect antiseptic at present in use. In proof of this statement, the author mentions the following advantages which this new gericide possesses. It is easily soluble in water, possessing a slight odor of cresote: it is strongly antiseptic, 1½ per cent. solution killing bacilli of anthrax in from one to five minutes. It is very inexpensive, costing only one-half as much as lysol, and the one per cent. solution, which is that commonly employed, being furnished for one-tenth the expense of 1-20 carbolic solution.

TELLURIC ACID.—The formula  $H_2TeO_4 + 2H_2O$  usually given to telluric acid is found, by A. Gutbier (Berichte), to be incorrect. For various reasons this investigator thinks that the formula should be written  $H_4TeO_6$ . The acid is found to be very faintly acid like  $H_2S$  and  $HCN$ , and cannot be titrated by direct alkalimetric methods. It forms no double salts with lead or silver nitrate as formerly stated. The potassium salt of telluric acid occurs in two forms,  $K_2TeO_4 + 5H_2O$  and  $K_2TeO_4 + 2H_2O$ .

353-5 E. 78 St  
NEW YORK.

against the N. A. R. D., unless compelled to do so by the executive committee of that body. This ended the discussion, and the delegates' report was ordered to be placed on file.

Prof. Anderson handed in a group picture, with biographies, of Dr. Edward R. Squibb, Prof. John M. Malsch, Prof. Israel J. Grahame, Prof. Edward Parrish and Dr. Charles Rice, that had been presented to the Society by the American Pharmaceutical Association. The picture will be suitably framed and placed in a conspicuous place in the college. The meeting adjourned at 4.30 p. m. and prominent members of the Society took the visitors through the college and laboratories.

## CONFERENCE OF LEGISLATIVE COMMITTEES.

### Agree on Manner of Electing Members to Eastern Branch of the Board of Pharmacy—Amendment to Costello Law to be Presented to Legislature.

The conference of the Legislative committee of the New York State Pharmaceutical Association with similar committees of the several Greater New York Pharmaceutical Associations was held in the library of the New York College of Pharmacy, No. 115 West 68th street, Tuesday evening, November 12. The committees were called together by President Stoddart of the State Association to agree on matters to be presented to the Legislature at its coming session, and to prevent any conflict between the Legislative Committee of the State Association and the New York bodies.

A preliminary meeting of the State Association Legislative Committee had been held at one o'clock on the same day, at which it was decided that the committee should introduce a bill at the coming session of the Legislature to alter the method of electing members of the Eastern section of the State Board of Pharmacy. At this earlier meeting it was also resolved that the committee should endorse the bill introduced in the Assembly last session by Assemblyman Weekes, which makes it "a misdemeanor for any person, firm or corporation to sell or offer for sale adulterated or altered drug, medicine, pharmaceutical preparation or chemical substance."

The meeting of the Conference Committees opened at half past seven in the evening with the following members present: Thomas Stoddart, Buffalo, William Muir, Kings County; William Muench, Syracuse; S. V. B. Swann, Manhattan; Felix Hirsman, of the Bronx, and William H. Rogers of Middletown, as members of the State Association Committee, George H. Hitchcock with Mr. Swan represented Manhattan, Dr. A. L. Goldwater and Albert B. W. Firmin the Greater New York, William Muir, Kings County, J. Weinstein and Peter Dimond, N. Y. Retail Druggists Association; Sidney Faber, Felix Hirsman and Oscar Goldman the German Apothecaries Society.

The discussion as to the manner of electing the members of the Eastern Branch of the State Board was lengthy and at times quite spirited. Some members favored allowing all registered pharmacists and druggists the privilege of voting for Branch members so as to conform with the methods of the other branches. It was here demonstrated that the committee had no power to depart from the instructions of the State Association as shown by the resolution passed at the last session of that body which says, "that the members of all incorporated pharmaceutical associations in the Eastern Section, the requirement of membership in which is the holding of a license as pharmacist or druggist, shall be entitled to a voice and vote in the election of members in the Eastern Section of the State Board of Pharmacy."

Arguments similar to those used at the last meeting of the State Association were introduced and it was thought by several speakers that to get the best fitted men and eliminate politics it was wise to conform to the resolutions referred to. The final decision was made on a motion of Dr. Goldwater which was put in the form

of a resolution and passed by the conferees. The resolution was to the effect that the joint conference representing the Legislative Committees of the Pharmaceutical Societies of Greater New York endorse the resolution passed at the last State meeting relative to pharmaceutical legislation for the coming year, and that the Conference ask and recommend to the State Legislative Committee to present to the incoming legislative committee a bill that shall embody the following ideas: First, that the pharmacy law be amended and that every licensed pharmacist in the Eastern Section who is a member of an incorporated society be given the right to vote for the members of the Board. Second, that the conference recommended that the appointment of members on the Board be three from Manhattan, Bronx and Westchester, and two from the other counties, and that the election to be held in the respective districts. It was also agreed that the members present would not oppose that measure and will offer no other amendment or law to the coming legislature.

A resolution was also passed that an amendment to the Costello Law be presented. The amendment proposes to eliminate the phrase, "compound medicines, fill prescriptions and sell poisons."

## DRUG TRADE BOWLING.

### Philadelphia Loses to New York in a Series of Twelve Games.

The ten members of the Wholesale Drug Trade Bowling League of Philadelphia who came to this city to try conclusions with a similar number from the Wholesale Drug Trade Bowling Association of New York were defeated in all but two games out of twelve played. The New York men scored 931 more points than the visitors.

The well-known Thum's Alleys at Thirty-first street and Broadway had been engaged by the New York men and the bowling lasted from 2 until nearly 8 p. m. Few high scores were rolled. McCormick of New York made the best mark of the series, scoring 221 in the third game. The result in games won is the same as at the Philadelphia alleys last May.

A special trolley car took the players down town and the visitors were tendered a banquet at the Drug Club. President Baker of the N. Y. W. D. T. B. acted as toastmaster. Addresses were made by Messrs. Bransome and Thorp of Philadelphia and Saunders of New York. The visitors expressed a desire to have the New York men give them a return match later in the season at Philadelphia, and it is probable the teams will meet some time in January.

The scores follow:

| FIRST GAME.  |               |           |           |
|--------------|---------------|-----------|-----------|
|              | Philadelphia. |           | New York. |
| Smith        | 141           | Stevens   | 162       |

| Harrison | 153 | Carr      | 147 |

687

Druggist Dies From Morphine Poisoning.

Frank C. Worthington, a druggist of Brooklyn, died Tuesday morning, Nov. 12 at his home, No. 382 Jay street, Brooklyn, of an overdose of morphine. It is thought the poison was not taken with suicidal intent. With his brother, John he conducted a drug store in lower Fulton street. This store was established by his father, about fifty years ago.

In the recent campaign he served as a member of the Board of Registry and with all the other members of the board was arrested for failing to administer the oath of challenge.

NOTES.

—The New York section of the Society of Chemical Industry will hold its regular monthly meeting to-morrow night (Friday), at the Chemists' Club, No. 108 West Fifty-fifth street. The following papers will be read: Rafael Granja, "Tin Foil and Bottle Caps Manufacture;" E. V. Machette, "Rare Earths" (exhibition); D. D. Jackson, "The Precipitation of Iron, Aluminum and Manganese by Bacteria;" Edward Kremers, "A Preliminary Report on Quinhydrone as Plant Pigments" (with demonstration); C. W. Volney, "Manufacture of Nitric Acid" (Part II).

—Frederick Weismann, the well known retail druggist of the town of Union and assemblyman-elect, which, when he takes his seat at the next session of the New Jersey legislature, introduce a bill the object of which will be to empower towns and townships to appropriate money in support of hospitals. A similar bill was introduced and passed both houses a year ago, but was vetoed by the governor. Mr. Weismann says he feels sure the governor's signature can be secured should his bill be passed by the legislature.

—The New York College of Pharmacy graduates of central New York will hold their second annual reunion and banquet at Utica, N. Y., during the coming winter. The committee is desirous that every student, as well as graduate, in central New York will attend this year. Names and addresses of persons expecting to be present should be sent to the secretary of the association, Frank W. Rutherford, No. 292 Genesee street, Utica, N. Y.

—Dodge & Olcott's team now leads in the tournament of the Wholesale Drug Trade Bowling Association, they having won six games and only lost two. How's clever bowling on Saturday last, when he rolled a score of 232, saved the team from defeat at the hands of the Colgate & Co. team. The scores made by the teams at that day's games are:

First game—Church & Dwight Co., 851; General Chemical Co., 736. Second game—General Chemical Co., 746; National Lead Co., 738. Third game—Church & Dwight Co., 717; National Lead Co., 623. Fourth game—Colgate & Co., 788; Dodge & Olcott, 820. Fifth game—Colgate & Co., 757; Seabury & Johnson, 732. Sixth game—Dodge & Olcott, 771; Seabury & Johnson, 776.

—It was J. L. Goldwater who was elected an alderman for Assembly District No. 38 in the Borough of the Bronx, at the recent election, and not A. L. Goldwater, as was stated in these columns last week. Both are druggists, however, the latter being a well known member of the Greater New York Pharmaceutical Association and is the proprietor of a pharmacy at No. 532 Willis avenue.

—Hugo Mueller, the druggist, who was obliged to move the stock and fixtures from his pharmacy at Fifth and Washington streets, Hoboken, N. J., within a few hours, after the tornado struck that city on August 20, is still located in temporary quarters nearby. His old store is being rebuilt, and when completed will be an improvement on the store injured by the tornado.

—The Board of Managers of the Drug Trade Club held a meeting Thursday, November 14, and elected Charles W. Whittesey of New Haven, Conn., S. J. Leake, of Boundbrook, N. J., and Dr. R. Jeffries of Norwich, N. Y. non-resident members and Herman Lips, No. 100 William St., a resident member. This leaves ten on the waiting list. No other business of importance was transacted.

—E. E. Howd, Wellshoro, Pa., and H. W. Cady, Plattsburg, N. Y., both well known retail druggists, were guests

JOHN W. NORTON-SMITH AGAIN ARRESTED.

"Central University of Medicine and Science"

President Charged With Obtaining Money

Under False Pretences.

The now well known John W. Norton-Smith, president of the so-called "Central University of Medicine and Science," that was located at No. 68 Montgomery street, Jersey City, last Summer, was arrested last Friday by Chief of Police Murphy, for attempting to obtain money under false pretences.

The police department learned through a letter received from D. H. Harrison, of Swanville, Tex., that Norton-Smith and his "university" were doing business at No. 285 Grove street, Jersey City, and that Smith had offered to supply a diploma and degree of doctor of philosophy to Harrison for \$15. Nearly 100 addressed envelopes, containing prospectuses and fac-simile copies of the diploma were seized at the "university" office when the president was arrested. Norton-Smith was highly indignant when arrested, and insisted that he was doing a legitimate business and that the police had no right to arrest him, as he was still under bail. He appeared in court Saturday and was held, in default of \$500 bail. An account of some of the schemes formerly worked by this swindler appeared in the Era of August 22.

F. WEISMANN, Town of Union, N. J.  
Assemyman-elect, New Jersey Legislature.

of S. H. Carragan at the Drug Club, Nov. 13. J. S. Henry and I. W. Blood, of Chicago, were guests of P. C. Magnus.

—James F. Ballard, of St. Louis, Mo., who has been in the city several weeks on business, left for his home Nov. 14.

—D. C. Hess, retail druggist at Mamaroneck, N. Y., has bought a building near his present store in the business part of the town. He is having it repaired and altered and expects it to be ready for occupancy about December 1. Another change in Mamaroneck will be the removal of Shute's Pharmacy to the new building adjoining the present store.

—Frank Nau, until recently one of the most prominent retail druggists of Portland, Ore., has moved to New York. He leaves his store in Portland in charge of his former head clerk, and will devote his time here to exploiting a proprietary dyspepsia cure, of which he is the manufacturer. Mr. Nau is accompanied by his family.

—Some of the visitors in the New York drug and sundry market last week were T. T. Higinbotham, Hamilton, Bermuda; James Cooper, Red Bank, N. J.; F. H. Slater, Matawan, N. J.; Paul Paoli, Florence, N. Y.; L. H. Goodwin, Hartford, Conn., and C. F. Shoemaker, of Shoemaker & Busch, Philadelphia.

—The Bayonne, N. J., Retail Druggists' Association held a meeting Friday evening, Nov. 15. Instead of the usual routine business the meeting was devoted to a pill rolling contest. Max Strauss proved to be the champion pill-roller, completing 340 in the time allowed, five minutes. He received a silver pill as the prize.

—The Brooklyn Glycerine Manufacturing Co.'s, two story frame factory building at Nos. 251, 253 and 255 Greenpoint Avenue, Greenpoint, was destroyed by fire Tuesday, Nov. 12, entailing a loss of about \$30,000. Much valuable machinery with about \$5,000 worth of glycerine was destroyed. The origin of the fire is unknown.

—Henry Dalley, Jr., of Lazell, Dalley & Co., and W. D. Farris, of H. J. Baker & Bro., left Monday to attend the Reciprocity Convention, at Washington. Mr. Dalley is chairman of the delegation of ten from the New York Board of Trade and Transportation.

—F. F. Howd, of Hyer & Howd, retail druggists at Wellsboro, Pa., H. Stafford, of the Stafford Drug Co., Marquette, Mich. and M. Wood, of Thompson & Wood,

Bradford, Pa., were visiting the New York trade last week buying regular stock and holiday goods.

—G. W. Ganong, St. Stephen, N. B., was registered at the Drug Trade Club November 11th. Mr. Ganong is a member of the Canadian Parliament and senior partner in the firm of Ganong Bros., manufacturers of confectionery.

—Henry H. Wurzer, secretary to Hon. H. L. Erick, Congressman from the Thirteenth Congressional District of Indiana, will shortly be married to Katherine Vanderhoof, daughter of E. R. Vanderhoof the well known pharmacist at South Bend, Ind.

—The senior class of the Brooklyn College of Pharmacy, eighty-five strong, visited the plant of the Maltine Company, in Brooklyn, yesterday. Before leaving the students were entertained at luncheon by Lieut.-Gov. Timothy L. Woodruff, the president of the company.

—The eastern section of the State Board of Pharmacy held the regular examination of applicants for licenses at the Brooklyn College of Pharmacy, No. 329 Franklin avenue, yesterday.

—Dr. J. C. L'Engle, of Jacksonville, Fla., is in New York this week. Dr. L'Engle was the proprietor of one of the finest drug stores in Jacksonville until the recent fire there destroyed it.

—H. Figue and Charles Siller, formerly with Max Zeller, have taken positions with Bruen, Ritchey & Co. Mr. Figue will represent the firm in New York City and Mr. Siller in the State.

—W. H. Sullivan, manager of Dr. Geo. F. Lewis' pharmacy at Collinsville, Conn., was on a trip to New York last week and called on some of his friends in the drug trade.

—Dr. Paul Traub, who recently acquired the drug business of George M. Carlsake, at Bordentown, N. J., and H. Walker, of Walker's pharmacy, Freehold, N. J., were among the buyers in the city last week.

—Joseph Dahlbender, formerly manager of Kneuper's pharmacy, at No. 263 Broadway, New York, has purchased a building on Broadway, in Brooklyn, and will shortly open a first-class drug store.

—The regular meeting of the Drug Trade Section of the New York Board of Trade and Transportation will be held in the Board rooms, at 203 Broadway, to-day (Thursday).

—Dr. Percy DeStanley and George H. Brown, druggists of Rahway, N. J., were in the city recently. Dr. DeStanley has just purchased the drug store of A. T. Kirstein, at Rahway.

—George E. Evans, the Druggists' sundryman of No. 3 East 14th Street, is off on a trip to Boston and New England points.

—J. O. May, of the Diamond Laboratory Co., Naugatuck, Conn., visited New York last week and called on many of his friends in the drug trade.

—C. E. Winegar has bought the drug store formerly conducted by Richard J. Thomason, North street and Burlington Lane, New Rochelle, N. Y.

—George I. Thurstone, of Smither & Thurstone, Buffalo pharmacists has been in New York several days. He is accompanied by Mrs. Thurstone.

—J. T. Lawrie, of Russell & Lawrie, druggists, Tarrytown, N. Y., was a visitor to down-town circles last week.

—Pharmacists who have enjoyed John Uri Lloyd's "Stringtown on the Pike," "Etidorpha," "Warwick of the Knobs," and more recently his inimitable satire, "The Mother of Sam Hill's Wife's Sister," which appeared in the September Criterion, will receive with pleasure the announcement that the second story of the "Sam Hill" series, "The Wafted Wife of Sam Hill," will appear in the Christmas Criterion (December). The story is dedicated to Col. E. W. Fitch, manager of the New York branch of Parke, Davis & Co. Prof. Lloyd's style is distinctly unique, vigorous, and wholly free from the objectionable features which often mar satirical writings. His success in the literary field is peculiarly noteworthy, since his chosen life-work is primarily scientific research. The Criterion is published monthly, and is for sale at all news stands and book shops. \$1.00 a year; 10c. a copy.

## IN AND ABOUT BOSTON.

### HOMEOPATHIC PHARMACIST MUST PAY \$6,750 DAMAGES IN FAMOUS X-RAY CASE.

Boston, Nov. 16.—In the United States Circuit Court this week, Judge Lowell presiding, Dr. John Weldon of Williamstown, Conn., who sued Otis Clapp & Son, homeopathic pharmacists and dealers in surgical instruments, for \$20,000 for injuries resulting from a burn inflicted by a static X-ray machine, which he bought from the firm, was awarded a verdict of \$6,750 by a jury. This case has aroused deep interest on the part of druggists and physicians. Dr. Weldon bought the X-ray machine in 1899 from Otis Clapp & Son, and while experimenting with it was burned severely. He then sought \$20,000 damages for injuries received, claiming that when he bought the machine the firm gave him a warranty that it would not burn. The defence of the drug firm was that at the time the machine was sold there was no warranty given. The plaintiff gave in court most minute and elaborate statements regarding his being burned and the after results, treatment in a hospital, etc. He meanwhile lost many patients who sought other physicians. The defence called on several doctors, who declared they had never known of a static machine producing such burns, if rightly used. There was much comparison of burns caused by a static machine and those from a coil machine. The jury in the case was out a little more than four hours, its most difficult question to determine being the amount of the award of damages. Counsel for the defence has indicated that an appeal to a higher court is likely to be taken.

### BUSINESS GOOD AND SEEMS ENCOURAGING.

Boston, November 16.—Druggists, when asked regarding the condition of trade at this time, state that there is no real change over the conditions which recently have marked the Fall season. At nearly all places business is good, and seems most encouraging. There is no great amount of illness just now, but in what may be termed a perfectly legitimate way things have come the way of the druggists. So moderate, on the whole, have been the transactions in the general market for drugs that no changes of importance are found. Trade seems to be only fair. Chemicals show a bit more demand and activity. Firm rates hold for grain alcohol, the sales of which are fairly good.

### MANUFACTURING CHEMISTS' NARROW ESCAPE FROM FIRE.

Boston, Nov. 16.—In a \$500,000 fire in Boston this week, in the granite building at Broad and Franklin streets, owned by Mayor Thomas N. Hart and occupied on the first two floors by the Murphy Varnish Co., the E. L. Patch Co. manufacturing chemists and pharmacists whose place was in an adjoining building in the rear suffered a loss from smoke and water. They carried \$18,000 insurance on stock and \$2,500 on fixtures, placed in various compartments. Much water also flooded the cellar of the Joseph Burnett Co., dealers in flavoring extracts, occupying an adjacent building.

### NOTES.

—While Miss Lizzie Higgins, who is employed by C. E. Woodward & Co., druggists at 62 Bromfield street, was walking on that street one evening this week, a man snatched a bag from her hand, greatly frightening her. The bag contained nothing but a pair of gloves, eyeglasses and a handkerchief which later were found in a nearby doorway. She could give no description of the thief.

—Fall River is about to have a new pharmacist in the person of M. L. Proulx, who has sold out his interest in the People's Drug Store at Whittington, where he has been located for two years. He has many friends in the latter place and, although he will take charge of the new store at Fall River in a short while, will continue to

make Whittington his home for some months, going back and forth as often as occasion will admit.

—The C. A. Sigemund Co., Boston, through C. A. Sigemund, treasurer, makes this annual report of its financial condition: Furniture and fixtures, \$2,000, cash and debts receivable, \$347, manufactures and merchandise, \$2,206, a total of \$5,453. Against this there is capital stock, \$2,000, debts, \$1,572, reserves, \$1,881 a total of \$5,453. The company operates a pharmacy in Dartmouth street.

—To the Massachusetts Commissioner of Corporations, the H. O. Nute Company, having a pharmacy on Columbus avenue, makes an annual report of its finances as follows: Cash and debts receivable, \$500, manufactures and merchandise, \$5,905, fixtures \$3,000, a total of \$9,405. To offset this the other side shows capital stock, \$5,000, debts, \$2,658, profit and loss, \$1,837, a total of \$9,495.

—Members of the Haverhill board of license commissioners have recently had before them for consideration the case of Harvey L. Hill, who has a drug store in Emerson street in that city. Such evidence as the City Marshal was able to introduce was felt by the board to be quite insufficient to press the complaint any further and it was merely placed on file without further action.

—In a bowling contest this week between the Boston Drug & Chemical Company's clerks and those of Farley, Harvey & Co., wholesale dry goods, the first-named team, made up of Messrs. Todd, Fahey, Baker, Souther and McClellan, came out the worst, making a total of 1127 as against 1218 by their opponents.

—A novel plan for the sale of patent medicines has been put into operation at Epstein's drug store in Summer street, where it is claimed that the innovation is first made in this country. The original package is broken if desired, and anyone can buy patent medicines in any quantity from four ounces up.

—In the Middlesex Superior Court, Charles H. Young, who was brought to Boston from New York where he was captured, and was then indicted by the Grand Jury on a charge of passing a forged check for \$16 on Henry D. Padelford, a Somerville druggist, was arraigned this week and given six months' sentence.

—H. K. Mansfield, of Salem, has disposed of his drug store at the corner of Front and Washington streets in that city to S. W. Upton, and he has combined his North Salem and South Salem stores and his ice cream business into an incorporation under the name of "Mansfield the Druggist" (Incorporated.)

—A new enterprise organized under the laws of Maine is the Putnam Manufacturing and Drug Company, the capital stock of which is to be \$200,000, of which \$40 is paid in. The president is William H. Gwynne and the treasurer F. H. Putnam, both of Cambridge, Mass.

—The Independent Pharmaceutical Company of Worcester, has recently increased its capital stock to \$25,000, and will extend its business of manufacturing pills, powders, tablets and the like.

—Thieves recently entered Henry T. Matthewson's drug store at East Brookfield, breaking glass in the doors to gain an entrance. Although the place was more or less ransacked, nothing appears to have been stolen.

—The Briggs & Dyson Pharmacy on Pleasant street, in Fall River, has been bought by Alfred J. Giguere, who formerly had a drug store in East Main street in that city.

—Buzzard's Bay is to have a new drug store which is being prepared in Linell's Block in that town for occupancy by Dr. H. C. E. Snow, a young practising physician.

—Ernest Curry, who for some years has been clerk for Ralph A. Hovey at Melrose has resigned to enter the Tufts College Medical School.

—George A. Gilmore, well-known to the wholesale drug trade in Boston, has bought Brown's drug store at Epping, N. H., possession of which he has taken.

Capable and successful druggists are always careful to select neat and attractive labels and pill and powder boxes. H. Gamse & Bro., Baltimore, Md., are especially well equipped for the production of druggists' labels and boxes of every description at the lowest possible prices. Write for their illustrated catalogue.

## PHILADELPHIA.

### ASSOCIATION WORK AND NOTES.

Philadelphia, Nov. 16.—As outlined in recent issues of the Era, the Philadelphia Association of Retail Druggists is actively pushing the work of bringing the druggists of contiguous wards and sections to local agreements on prices and policies that can be put into practical operation. An unusually deep interest is being taken in this plan by retail druggists and every meeting so far has been more than well attended, not only by the officers directly concerned but by druggists who seldom come to regular meetings. Actual and definite results have already been obtained.

Last Friday evening, the druggists of the twenty-eight and thirty-seventh wards met at Broad street and Susquehanna avenue, some thirty in all, and reached an agreement to maintain a straight ten-cent price on ten-cent goods and an advance of about 10 to 25 per cent. on certain staples. As indicating the success of the plan in interesting druggists in adjacent wards, the hitherto best known "cutter" of this up-town district was present and agreed heartily on the proposed increased prices, pledging himself to a strict maintenance of the schedule that would be adopted after a canvass of this district disclosed what would be feasible in the way of prices.

Next Friday evening Nov. 22, a meeting of druggists from the twentieth, twenty-eighth, twenty-ninth, thirty-second and thirty-seventh wards will be held in Elfreth's Hall, Twelfth street and Columbia avenue, beginning at 8.30 p. m. to ratify the proposed price-schedule now in preparation by retailers of the twentieth and twenty-ninth wards, begun at the meeting of November 8, and to discuss a similar agreement for the twenty-eighth, thirty-second and thirty-seventh wards. Those who were at the meeting of November 8, are so pleased with the successful outcome that they proposed to hold similar meetings at least once a month, at which neighboring druggists can discuss grievances and policies and fix up price lists. Closely following this meeting will be one for the druggists of the sixteenth, seventeenth, eighteenth, nineteenth and thirty-first wards.—Kensington—to be held Tuesday November 22, at Friendship Hall, Sepviva and Norris streets, beginning at 8.30 p. m. D. P. Little, the P. A. R. D. "organizer", will be at all these meetings to assist in the work, as will also a number of the Association officers. If the same amount of interest and willingness to meet one another half way is shown all over the city as has been the case up-town, a general advance in prices worth many dollars monthly to local druggists will certainly be an accomplished fact.

As details of the entertainment features of the P. A. R. D. "smoker" to be given December 6, are being perfected by the Entertainment Committee, indications point to this being the largest and most successful affair of its kind ever given by retail druggists in any city. Not a minute of the time is left without something to amuse or entertain the guests, while the lunch to be served is expected to be a surprise to those who declared this feature. It is proposed to hold the regular monthly meeting of the Association in connection with the "smoker", the meeting to begin about an hour or so before and to be made as brief as possible. By this plan an unusually large attendance of members is hoped for, as important business is to be brought before the Association. Notice of the meeting and admission tickets will be sent out soon.

### DISASTROUS EXPLOSION AT THE LIBERTY CHEMICAL CO.'S PLANT.

Philadelphia, Nov. 16.—In a disastrous fire following an explosion which shook the neighborhood as if by an earthquake, the factory of the Liberty Chemical Manufacturing Company was practically wrecked and damaged to the extent of \$50,000, and five of the employes were more or less seriously injured, last Tuesday. Panic-stricken by the terrific explosion and almost stifled by the dense smoke and acid fumes following it, four young women and one male employe at work on the second floor of the building jumped from the windows to the pavement before aid could reach them, one of the women frac-

turing her skull and the others meeting with severe contusions and internal injuries. The explosion originated in a large autoclave in which some thirty gallons of the crude material used in the manufacture of "thermol," one of the company's specialties, was being heated, the burning liquid scattering over the room soon setting fire to the woodwork and contents, other smaller explosions quickly followed with spread of the flames which shot up a nearby elevator shaft to the upper floors, until the interior was ablaze. The origin of the explosion is somewhat a mystery, the company claiming that they had no explosives on the premises and that the tank in which a coal-tar product was being digested with nitric acid carried a pressure of only eighty pounds to the inch while guaranteed to withstand 125 pounds. The Liberty Chemical Manufacturing Company was organized about two years ago, Dr. G. L. Summers being its president, and has occupied its present site, a three-story brick building at Sydenham and Hazzard streets, since June 1900. It manufactured a number of medical specialties, the chief of which is "thermol", a coal-tar derivative, used as an antipyretic and analgesic. Dr. Summers and his stenographer, who were in the office on the first floor, had a narrow escape but managed to save some of the company's books and money. The company expects to resume business as soon as possible.

### Suicide of a Well Known Druggist.

Philadelphia, Nov. 16.—Without any apparent motive except worry over the adjustment of some insurance, Charles W. Warrington, a druggist located at Seventeenth and Mount Vernon streets, committed suicide early Wednesday morning by blowing the top of his head off with a shot-gun. It is stated that two brothers of the unfortunate druggist also committed suicide, and physicians intimate with him declare that the deed was probably done without premeditation in a fit of sudden mental aberration. Mr. Warrington was 47 years old, a native of Moorestown, N. J., and had been engaged in the drug business for about twenty years. He graduated from the Philadelphia College of Pharmacy. For several years he was a member of the firm of Warrington & Pennypacker, located at Fifth and Callowhill streets, retiring from this connection and engaging in business alone at Seventeenth and Mount Vernon streets about eight years ago, where he had a very profitable and popular trade. Last August a fire occurred at his store doing much damage, and it is supposed that the complications in settling the insurance for this had much to do with his death. Mr. Warrington leaves a wife, two sons and a daughter. He was a member of the Society of Friends, the Philadelphia Association of Retail Druggists and other societies.

### Business Fairly Good.

Philadelphia, Nov. 16.—Business continues to be fairly satisfactory in most sections of the city, the demand for seasonable medicines, drugs and articles generally keeping up. Prescription trade is about the same in amount although the call for vaccine and dressings has fallen off considerably. Hot soda has sold well during the last few days of cold weather, particularly in the down-town and shopping sections, and many druggists are busy fitting up their apparatus for the winter season. Some little comment has been caused by the advertising of a certain proprietary, "Witch Hazel Soap" at 9 cents by a department store, the regular price being 15 cents. Prompt action will be taken by the local association to prevent further price demoralization.

### Druggist's Costly Error.

Philadelphia, Nov. 16.—Upon the ground that a prescription filled at the defendant's drug store had caused him temporary loss of speech and much suffering, Jos. Maurer, a barber, was granted \$2,500 damages in a suit in Common Pleas Court against H. E. Wendell, a druggist at 1439 N. Third street a few days ago. It seems that the prescription, a throat spray, was put up with too much carbolic acid in it and severely burned the throat of the patient, and it was testified that this mistake was caused by the druggist permitting a boy in his employe to drop the acid into the mixture.

## NOTES.

—One of the most interesting and original window displays seen in Philadelphia, for some time was shown by W. A. Rumsey, president of the P. A. F. D., in the window of his store 920 N. Forty-first street last week. An illustration of antitoxins and vaccine was the motif of the display, the examples shown being the products of the H. K. Mulford Company of this city. In the center of the window was a large jar of diphtheria antitoxin, labelled "value \$4,000"; grouped around it were smaller containers—dummies of other serum products, tetanus, pneumonia, streptococic and other antitoxins, and a complete display of various forms of commercial vaccine. Photographs of smallpox patients both during and after the disease, gave point to the injunction to vaccinate "early and often". Mr. Rumsey did not lock up the \$4,000 jar of antitoxin at night in spite of its marked value.

—Another handsome display also appeared lately in the window of J. J. Keenan's down-town stores, first at Fifteenth and Ritner streets, then at Seventeenth and Ritner streets. This was an elaborately arranged show of fine toilet soaps arranged in contrasting colors on a bed of white mull, over which was an arch of snowy white cotton sprinkled with silvery spangles that glittered at night like new-fallen snow from which daintily colored soaps were placed to form an arching rainbow. The beauty of the display was not its only winning point, it sold lots of soap, so Mr. Keenan said.

—A special meeting of committees of the Philadelphia Section of the American Chemical Society appointed to arrange details for the entertainment of visiting chemists during the annual meeting of the Society, to be held December 30-31, was held at the Textile Institute Friday evening. The work of the entertainment was shown to be well in hand, and details were outlined for each committee. All chemists or persons interested in chemistry and allied pursuits are requested to contribute toward the expenses of the meetings.

—The use of formaldehyde to preserve oysters has been reported by the local Board of Health, this use—or misuse—of the preservative having been discovered by the Pennsylvania Dairy and Food Department. A case was found in Altoona last week, and while so far none has been found here there is not much doubt that an inspection of dealers would show its use.

—Howard B. French, president of the Smith, Kline & French Company, is reported to be convalescing rapidly at his home from the recent accident through which he sustained severe injuries. Mr. French, as president of the Municipal League, took a prominent part in the recent political campaign, on the side of the "reform" Union Party.

—H. G. Clapham a well known Kensington druggist, has bought the drug store at Kensington avenue and Clearfield street which he will conduct in connection with his present store at Emerald street and Cumeriand avenue.

—Dr. J. D. Sieberling, of Twenty-second and Christian streets, will open a new drug store at Twentieth and Fitzwater streets as soon as the necessary alterations and repairs of the building can be completed.

—J. F. Yeaty, for many years manager of Willson's drug store at Ninth and Filbert streets, has purchased this from the estate of Mrs. A. M. Wilson.

—Walter Campbell has sold his drug store at Second and McKean streets to a Mr. Merz, who will soon take possession and enlarge present quarters.

—Calhoun's drug store at Forty-sixth street and Lancaster avenue has been bought by Walter G. Colby, a newcomer in the ranks of Philadelphia druggists.

Every drugstore has more or less trouble finding a suitable way of wrapping glass or fragile goods, to insure safe carriage. The Hinde & Dausch Paper Co. make corrugated paper, cartons, partitions, boxes, etc., which makes it easy to safely pack the most fragile materials. Write for catalogue and price list. Address The Hinde & Dausch Paper Co., Sandusky, O., or No. 171 Duane street, New York.

Sell patent medicines. You can make something on Four Fold Liniment, for instance.

## PITTSBURG AND VICINITY.

## DRUG CLERK HELD FOR GRAND JURY.

Pittsburg, Nov. 18.—Edgar Dickson a drug clerk employed in the store of the C. L. Graff Drug Co., Allegheny, was last week held to await the action of the Grand Jury on a charge of criminal negligence in making a mistake in filling two prescriptions, the result of which the coroner's jury found was contributory to and hastened the death of one Andrew Grummis on November 2. Dickson was committed to jail but was later released on bail. The mistake which Dickson is accused of making occurred on November 1st when two prescriptions written by Dr. J. C. McMullen were presented to him to be filled. One called for two ounces of oil of wintergreen, to be applied externally twice a day. The other was for a mixture to be taken internally in doses of a dessertspoonful every two hours. It was testified by three physicians that labels had been changed in the filling so that the bottle containing the oil bore directions calling for a dessertspoonful every two hours. The patient became seriously ill after two doses had been given and died the following morning. Testimony of the physicians summoned at the inquest was to the fact that oil of wintergreen had proven fatal in lesser doses and again had not done so where a larger amount had been taken. Dickson testified that he had placed a caution label on the bottle containing the oil when it left the store. Mrs. Grummis, the wife of the victim testified to the contrary after which the coroner's jury acted as above.

## BLUE LAW APPEALS DISMISSED.

Pittsburg, Pa., Nov. 18.—In Quarter Sessions Court last week three appeals from summary conviction brought by druggist P. C. Schilling were dismissed. Schilling was fined on three separate cases brought against him before a Southside alderman for the violation of the Sunday "blue laws" in three Southside stores. When called for hearing nobody responded and the appeals were dismissed at the cost of the appellant.

## NOTES.

—G. G. Messenger & Co., of Johnstown, Pa., have purchased the drug store of G. A. Zimmerman at Johnstown, Pa. Dr. Zimmerman has been in poor health for the past year or more, and now intends taking a well-earned rest. The store which is one of the largest in Western Pennsylvania will be managed by Jos. Messenger the junior member of the above firm.

—John Walton Mac Miller a well known traveling representative of H. K. Wampole & Co., with headquarters in this city, was married last Tuesday evening to Miss Elizabeth Ewing a daughter of Colonel John Ewing, formerly in the wholesale drug business in this city. After a brief wedding trip Mr. and Mrs. Mac Miller will make their home in the East End district.

—Charles Griffith a well known Johnstown druggist and former vice-president of the Pennsylvania Pharmaceutical Association has been elected a member of the board of trustees of the Johnstown Memorial Hospital at that place.

—W. C. Lynch formerly one of the best known drug traveling salesmen in the United States, but of late in the pottery business at East Liverpool was mixed up in a runaway accident at Wheeling, W. Va., last week, and suffered a compound fracture of the right leg.

—W. L. Sutter, a well known Allegheny druggist has purchased the Zoller Pharmacy at Fifteenth and Sarah streets, Southside. Mr. Sutter's Allegheny store is now in charge of his brother L. E. Sutter.

—Low and Forst is the firm name of a new store on the Southside, Mr. Low formerly clerked for B. J. Stenger while Mr. Forst has been in business at Allentown for some time.

In order to induce druggists to display and push the sale of Dr. Cole's Catarrh Cure, the manufacturers have a special offer regarding which they will send full particulars to those who will write to them. Address, The Cole Medicine Co., Brooklyn, N. Y.

## BALTIMORE.

### DRUG TRADE BOWLERS.

Baltimore, November 16.—James Baily & Son's team had an inning with the Sharp & Dohme quintette, at the Diamond last Tuesday night, and lost two out of the three games bowled. The scores were: Sharp & Dohme, 609, 776 and 662; James Baily & Son, 717, 661 and 624. In the second game Blummer, of Sharp & Dohme, made a total of 195, while, in the first, Sattler, of the same team, who usually puts up a pretty strong exhibition, ended with only 103 to his credit, which was the lowest score of the evening. Fairley, of James Baily & Son, made the best score, 179, for his side, and W. Wahl was low man, with 108. Last night McCormick & Co. met the Armstrong Cork Co., taking two of the three contests by 798, 692 and 819, against 613, 695 and 633. No surprising individual scores were made by McCormick & Co., but the members of the team put up a high average, and thus ran up the totals. W. Smuck was high man, with 190. None of the Armstrong Company quintette did better than 163, which was Coyne's score. Coyne, by the way, was a member of Muth Bros. & Co.'s team, who joined the present aggregation in order to be in the game, his firm having dropped out of the league. This week's games leaves the several teams in the following positions:

| Teams.                       | Games |       | Per cent. |
|------------------------------|-------|-------|-----------|
|                              | won.  | lost. |           |
| Sharp & Dohme.....           | 8     | 1     | .887      |
| Root & Herbs.....            | 10    | 2     | .833      |
| James Baily & Son.....       | 5     | 4     | .556      |
| Stanley & Brown Drug Co..... | 4     | 8     | .333      |
| McCormick & Co.....          | 3     | 6     | .333      |
| Armstrong Cork Co.....       | 3     | 6     | .333      |
| Ferrell & Kellam Co.....     | 1     | 11    | .083      |

### TRADE CONTINUES ACTIVE.

Baltimore, November 18.—The drug trade of this section is without important changes. The movement, both in the city and out-of-town, continues active, a large volume of business being done. Orders are beginning to fall off slightly, however, a condition always noticed when the month draws to a close. But the aggregate of transactions is far ahead of last year, while prices are certainly as good. Activity also prevails in the laboratories of manufacturing pharmacists, who report a brisk demand for all their preparations. Some have had to increase their working forces, and all seem to be satisfied with the present situation. The firmness with respect to some botanicals continues, although the information that a shortage exists and that good prices can be realized has served to bring additional lots into the market. The trade in heavy chemicals remains without particular features, values and movement being, as a rule, well sustained. The prescription trade of the retailers appears to be fairly large, and other goods seem to be affected by the general air of briskness.

### MR. GOSMAN'S WILL.

Baltimore, November 16.—The will of the late Adam J. Gosman, the druggist, whose death was noted in the last number of the Era, has been filed for probate in the Orphans' Court. The testator leaves all his property to his widow, Mrs. Louise Gosman, absolutely. Had Mrs. Gosman not survived her husband, the estate would have gone to his step-children, Mary Blanch Corinth and Walter F. Hoover. Mrs. Gosman was named as executrix, without bond. She renounced the office, however, and letters were granted to her and her son, Walter F. Hoover. They bonded in the sum of \$20,000 each. The will is dated Sept. 1, 1891. Mr. Gosman died on Nov. 7. His funeral was largely attended, among the honorary pall-bearers being John F. Hancock, widely known in drug trade circles.

### NOTES.

—The Budwell Pharmacal Co. has been incorporated in Lynchburg, Va., with a capital stock of not less than \$50,000 nor more than \$100,000, to engage in the manufac-

ture of drugs, chemicals, etc. J. A. Anderson is the president, secretary and treasurer, and C. H. Goldsborough the vice-president of the company.

## DETROIT AND MICHIGAN.

Detroit, Nov. 15.

—At the regular meeting of the Drug Clerks' Association of Michigan, held on the evening of Nov. 13, Dr. Heneage Gibbs delivered an instructive and interesting lecture on tuberculosis and lung structure in general, illustrating his talk with a number of stereopticon views and photographs. There was a very large attendance and the lecture, which was scheduled to take about one hour, continued for over two hours. At its conclusion there was a general discussion indulged in by the members. The next lecture of the members' course will be given on the evening of Dec. 12, but the speaker for the occasion has not yet been selected. On the same evening the nomination of officers of the association for the ensuing year will take place, the election occurring on Jan. 9, 1902.

—A special meeting of the health officers of the State of Michigan is scheduled for Nov. 21-22, at Ann Arbor, for the discussion of a variety of subjects, but in particular it is intended to consult with reference to the manufacture of serums by boards of health and other public institutions. The recent disasters in St. Louis, due to the injection of anti-diphtheritic serum which was contaminated with tetanus germs, has provoked wide-spread interest, and it is understood that this subject will receive very marked attention at this special meeting.

—C. Arthur Little, clerk in the Central drug store, has started suit against James McLaughlin, of the firm of McLaughlin & Redpath, of Sanilac Center, claiming damages in the sum of \$10,000 for malicious prosecution, the trouble arising from the fact that while Mr. Little was living in Sanilac he was accused of obtaining merchandise from the firm under false pretenses, but he was promptly acquitted by a jury and now proposes to have satisfaction, if it can be obtained.

—There has lately been an epidemic of burglaries in drug stores in Detroit, those suffering being Stevens' store at the corner of Woodward and Adams avenues, A. L. Walker, corner Woodward avenue and Adelaide street, and there was also an attempt made upon the store of John Harvey, corner of Woodward avenue and High street. It is believed that the thieves have been apprehended.

—The Drug Clerks' Association of Michigan has issued invitations to its friends to attend its third annual show to be given at Strasburg's Dancing Academy, Friday evening Nov. 22. The invitations are mounted on dark olive green cards and folded underneath a photographic view of a scene in one of the city parks. The members of the hop committee are Roy McKenna, C. E. Abraham, F. E. North, N. H. Jones, and A. M. Edwards, Jr.

—Messrs. Burke & Tabor have organized under the title of The Central Drug Co., and will assume charge of the four stores under their control, with the Central Drug Store, Detroit, as general headquarters. These gentlemen intend to carry on, as in the past, their retail drug business, to which has been added the jobbing feature, with particular reference to physicians' supplies.

—F. W. Fisher, who has for many years been chief clerk for Zimmermann & Co., of Wooster, O., and incidentally has done considerable missionary work among the physicians in the adjacent territory, has severed his connection with that firm and entered the employ of Parke, Davis & Co., in the capacity of traveling representative in Ohio territory.

—Chas. O. Hubbell will in a short time open a first-class prescription pharmacy at Plymouth. His store will be up-to-date in every respect, a large stock will be carried, and, inasmuch as Mr. Hubbell has every qualification as a pharmacist, there is no doubt he will make a success of the new enterprise.

—W. P. Doty, of the firm of Doty Bros., also a member of the State Board of Pharmacy, some time ago commenced suit against the Detroit United Railway, claiming

damages in the sum of \$5,000, for injuries sustained by being struck by a Woodward avenue car.

—Lambert & Lowman, manufacturing pharmacists, Detroit, have bought the entire stock of drugs and chemicals, office furniture, etc., of the assigned firm of Hyatt, Matthew & Ryerson, 23 Jefferson avenue, and have moved it to their new laboratory, Twelfth and Howard streets.

—Frank Tiller is confined to Harper Hospital by an attack of typhoid fever, with indications that he will not be able to return to his duties in charge of the drug and chemical department at Parke, Davis & Co.'s for some weeks.

—A number of the members of the Drug Clerks' Association of Michigan anticipate organizing bowling teams, preliminary practice being indulged in the fore part of the week.

—Among the most enthusiastic hunters in Detroit are Messrs. Mutter, Francis and Aldrich, of Parke, Davis & Co., who have recently returned from several days' sport.

—The O. F. Schmidt Chemical Co., of Jackson, have filed articles of incorporation, with a capital stock of \$35,000.

—Elmer E. Curtiss, pharmacist at Fenton, lately filed articles in bankruptcy.

—J. H. Beckton, a prominent pharmacist of Caro, was in Detroit on a buying trip the early part of the week.

## CHICAGO.

### GASOLINE EXPLODES IN DRUG STORE.

Chicago, Nov. 16.—As a result of the explosion of a gasoline storage tank in the drug store of John Schocki, at 845 Milwaukee avenue, on Nov. 11, Schocki and his wife Etta were severely burned. The couple lived in the rear of the store, and while Mrs. Schocki was cooking on a gas stove which was connected with a tank, her husband unaware that the stove was lighted, disconnected a pipe which was connected with it and the explosion followed. The explosion sent flaming oil in all directions. Mrs. Schocki was burned about the face and hands and body, while her husband was blown across the store and sustained severe bruises, besides being burned almost as badly as his wife. Both were taken to St. Elizabeth's Hospital, and when they arrived there they were unconscious.

Mrs. Schocki died from the effects of her injuries. It is stated that she was fatally burned in trying to save her husband and children. Mr. Schocki is in a serious condition. He is 40 years old and has been a druggist in the vicinity of Division street and Milwaukee avenue for several years. Mrs. Schocki was 26 years old.

### SEARLE & HERETH CO. ENTERTAIN.

Chicago, Nov. 16.—On Saturday evening, Nov. 16, the Searle & Hereth Company celebrated their entrance into their new building next door to their present location, by a dance to all their employes. The second floor of the new structure offers fine opportunities for dancing. An excellent orchestra furnished the music. About 200 people were present, including the members of the firm, the employes and their friends. Dancing continued until a late hour. Refreshments, consisting of lemonade, sandwiches and assorted cakes were served. The affair was thoroughly enjoyable and everyone forgot his years and auldroups and became young again.

### CHICAGO RECORDS GOOD TRADE.

Chicago, Nov. 16.—Fall business continues good. A large demand comes from the country for all staple goods and even for holiday goods, though for these the season is getting rather late. Sundries are moving and are in good demand. Manufacturers and jobbers are almost equally busy.

### NOTES.

—The Chicago Drug Trade Bowling League rolled the following games on November 11: Sharp & Smith, 762,717,

749, against A. M. Foster & Co., 674, 613, 716; E. H. Sargent & Co., 682, 689, 699, against Lord, Owen & Co., 699, 688, 678; Parke, Davis & Co., 795, 780, 697, against Buck & Rayner, 634, 699, 596. The standing and percentage is as follows:

|                     | Won. | Lost. | Percent. |
|---------------------|------|-------|----------|
| E. H. Sargent & Co. | 12   | 6     | .667     |
| Lord, Owen & Co.    | 12   | 6     | .667     |
| Sharp & Smith       | 12   | 6     | .667     |
| Parke, Davis & Co.  | 10   | 8     | .556     |
| Buck & Rayner       | 5    | 13    | .277     |
| A. M. Foster & Co.  | 4    | 14    | .233     |

—Frank L. E. Gauss, general representative of the Searle & Hereth Company, leaves to-morrow night on a trip to Memphis, where he will attend the meeting of the Inter-State Medical Association. From thence he will proceed to Little Rock, returning to Chicago via St. Louis.

—Some friends of Herman Fry the other night heard four men plotting to hold up the Fry drug stores at 266 North avenue, 161 North avenue, 1100 North Halsted street and 357 Sedgwick street. Mr. Fry notified the police and provided all his clerks with firearms.

—William Storck has sold his drug store at 229 Fifty-fifth street, Hyde Park, to Lucy & Peterson. Mr. Storck is now a physician and will engage in the practice of medicine.

—Oscar F. Bausch, for thirteen years with the Mallinckrodt Chemical Works, is now the St. Louis representative of the Searle & Hereth Company. Mr. Bausch was in Chicago recently.

—Underwriters' Laboratories, Chicago, have been incorporated, capital, \$1,000; manufacturing and dealing in physicians' and surgeons' supplies; incorporators, Clinton S. Woolfolk, William B. Walrath, and Peter Deichman.

—The drug store of K. S. McLennon at Forty-seventh street and Grand boulevard, was entered by burglars Wednesday night. Money and merchandise were taken.

—The Searle & Hereth Company, of Chicago, has certified to an increase of its capital stock from \$150,000 to \$200,000.

—Max Kuhnze has bought the drug store of C. C. Wilkins at 919 West North avenue.

—J. W. Charters & Company of Oregon, Ill., have dissolved partnership. Mr. Charters continues the business.

—F. J. Litchenberger, a Chicago druggist, recently confessed judgment for \$2,559.

—C. M. Forney has succeeded C. C. Graham at Baxter, Iowa.

### PRICES OF GRAPE CAPSULE CO.'S SPECIALTIES.

The Grape Capsule Co., 123 William street, this city, manufacturers of soft gelatine capsules, also manufacture the well-known specialties, San-Methyl, Colisathy, Eucoi, and Vagipos, which are fully listed and correctly priced in the Company's advertisement in our Price List Supplement of July 25 (Era Blue Book). These specialties should also have been given in the Price List of Proprietary Preparations of the same issue, as follows:—San-Methyl, (24 in box), retail 50 cts. per box, per doz. \$4.50; Colisathy, (100 in box), retail \$1.75 per box, per doz. \$15.75; Eucoi, (24 in box), retail 50 cts. per box, per doz. \$4.50; Vagipos, (12 in box), retail \$1.00 per box, per doz. \$9.00. These preparations are advertised to physicians only.

### A Drink and Food Combined.

Malt Cream is daily becoming more popular as a soda fountain drink and has been in especial demand since the hot soda season arrived. The druggists who do not keep a stock of Malt Cream will find it to their advantage to order a supply. The cream is not only a seller as a fountain drink but is claimed to be invaluable as a food for infants and invalids. The manufacturers say that it is not sold at cut rates and the good profit on the preparation should induce the trade to handle it. Samples and soda water formulas and menus are sent on request. Address The American Malt Cream & Drug Co., South Bend, Ind.

## THE NORTHWEST.

### "ELEMENTS OF SUCCESS."

St. Paul, Minn., Nov. 15.—Daniel R. Noyes, the well-known wholesale druggist of this city, gave an address to the Minneapolis Y. M. C. A. one evening this week, "Elements of Success" being his theme. Among other things he said:

"Success—there is magic in the word; our ears catch it, our thoughts turn to it as soon as uttered. Some one has wittily said, 'there is one place you can always find it—in the dictionary.' 'Nothing,' says Talleyrand, 'succeeds like success.' One great secret of success in business is willingness to do more than is required of you, of course within reasonable bounds. 'I was not hired for that,' has many times caused a failure to succeed. Always be ready for the place above you. You must be at the station when the train comes by watching for it, if you would succeed. It is a narrow view of business to consider it merely as a measure for getting a living and still worse for mere money getting. Both are proper aims, but not high ones. It should be a training school for usefulness. Aim to be the sagacious, large hearted, clear headed, professional or business man. It is the wise and right use of money gained, not the mere possession of it, that sets the seal of real success upon your life work. The lucky man, the bold and even the bad man, many succeed in some manner, but to have good success means more."

Many useful hints were offered the young men. Mr. Noyes said the merchant of today could not be too well informed. The demand of the world was laborious ability. Great schemes were on foot and great men were required to cope with them. What appeared to be luck was usually the result of years of thought and planning. Economy must be practiced and self-denial learned, as also the value of time and money. Good address and pleasant manners were aids to success. The speaker cautioned his hearers to seek independence rather than great wealth. Excessive haste to be rich was a frightful source of poverty. Young men should marry as soon as they could provide a home for a good wife. Wife, home and children were safeguards and pledges of success.

### NEW BLOOD FOR THE N. A. R. D.

St. Paul, Minn., Nov. 15.—Herman W. Rietzke, one of the leading drug men of this city, was much interested in the editorial comments on the N. A. R. D. which appeared in the Era of Nov. 7. Mr. Rietzke, who was prominent in the organization of the association and has since been one of its most active and loyal supporters, thinks the association has reached a critical period.

"The time has come," he says, "that the really leading men among the retail druggists must step forward and support the N. A. R. D. or it is not likely to last long. Men should be identified with it to whom the wholesale and proprietary men will give respectful consideration. Men who will be really influential with these classes are what the N. A. R. D. must have. The organization has accomplished more for its members than anything that ever existed before and it should not be allowed to run down. I think it is a mistake to send the same delegates to convention after convention. They get into a rut, which is fatal to progress. New men should serve as delegates."

Mr. Rietzke does not, of course, intend to cast any reflections upon the present active members, who, he acknowledges, are doing as well, according to their lights, as possible. The sole point he makes is that new blood, and blood of the very best kind, is essential to the continued usefulness, if not, indeed, the very existence, of the N. A. R. D.

—The Potter Chemical Company of Minneapolis, manufacturers of disinfectants, says it has been victimized by an employe. Recently the company delivered a can of disinfectant to Colonel Trowbridge, custodian of the State capitol in St. Paul, with a bill. He wrote the company that he had ordered nothing from it since July. The company explained that a young solicitor had turned in

a large bunch of orders, for which it had paid him a commission. The man had left the company to work for a rival firm. Most of the orders, it is added, have turned out bogus.

—The establishment of the school of pharmacy in connection with the North Dakota agricultural college pleases the druggists of the State, who have been advocating the plan for some years. It insures a better class of pharmacists and improved and safer service to the public. The arrangement for three months, two and four-year courses makes it possible for all classes to be benefited. The establishment of the school will result in chemical manufacturing plants being opened at Fargo, where the school is situated.

—The St. Paul Retail Druggists' Association held its annual meeting Wednesday afternoon and elected the following officers: President, W. E. Lowe; vice-president, W. K. Collier; second vice-president, Anna C. Umland; secretary, A. Shumacher; treasurer, J. P. Jelmeck; executive committee, Herman W. Rietzke, C. T. Heller, S. M. Parker, A. A. Campbell and A. T. Hall.

—Successions: Robinson & Sarsel, Germania, Ia., by Barrett, Sarsel & Co.; E. B. Doolittle, Luverne, Minn., by Berg & Putnam; Lowthian & Co., Glenville, Minn., by P. B. Herman; R. T. Adams & Co., Gravitia, Ia., by the McCollm Drug Co.; Finlen-Dedin Drug Co., Butte, Mont., by the J. T. Finlen Drug Co.; Clark & Mollison, Ottumwa, Ia., by F. B. Clark.

—William A. Hershimer, a young druggist of Winona, Minn., has just married Miss Emma Deilke of that city.

—Warner & Maxam and A. Masinda, Butte, Neb., druggists, were among the sufferers from a large fire this week.

—T. S. Biscoe has gone to Glenville, Minn., to take charge of the drug store there for P. B. Herman, of Dundee, who has bought it.

—B. E. Jones is going to Bismarck, N. D., to take charge of the new drug store to be opened there by E. G. Paterson.

—L. N. McDonald, formerly with Fox Bros., Washburn, Wis., is going on the road for Messrs. W. R. Warner & Co., Philadelphia. New Mexico will be his territory.

—New: Haggood & Blaser, Summit, S. D.; S. O. Swainey, Elmo, N. D.; O. Stenmo & Son, Hatton, N. D.; Johnson & Orton, Sisseton, S. D.

—Thomas E. Jones, Payette, Idaho, has admitted a partner.

—The Mt. Pleasant Soda Water Company has incorporated at Mt. Pleasant, Utah, with \$5,000 capital.

—Dr. J. D. Sherrick, a Seattle, Wash., druggist, has been sued for possession of land.

—G. F. Erkinle & Company, Hamilton, N. D., have dissolved.

—The Bromo Chemical Company, Salt Lake City, Utah, has incorporated. Capital, \$5,000.

—W. P. Meyer has left Tower, Minn., and is now working for Mr. Blingenheimer, in Minneapolis.

—J. D. Fisher has left Minneapolis and gone to work at Evelev, Minn.

—A. E. Lofstrom has gone to Missoula, Mont., to take charge of Geo. Freisheimer's retail department.

—The Michigan Board of Pharmacy held a meeting at Lansing Nov. 5-7. There were forty-six applicants for registered pharmacist's certificates and fifteen for assistant's papers. Out of this number the following nineteen were granted pharmacist's certificates and nine assistant's certificates. Pharmacists: William Appelbe, Hugo Caterfield, E. J. Poetter, Saginaw; James Buckrell, Flint; William Burston, Cadillac; P. C. Brooks, Charles W. Warner, Marlette; R. F. Fogue, Chicago, Ill.; F. M. Burfurn, Ohio; Alex. Brunner, Howard City; F. T. Gillespie, W. P. Harris, Muskegon; James A. Gould, Freeland; Charles S. Matthews, Grand Rapids; H. R. MacDonald, South Haven; A. J. O'Brien, Detroit; J. E. Paulson, Caladonia; Wellington Jarvis, Owosso; H. A. Schall, Kalamazoo. Assistants: L. H. Atkin, Petoskey; J. A. Beukema, J. G. Copper, Hazel Reuley, Grand Rapids; H. Cobb, Cassopolis; Edward Eberhard, Detroit; L. M. Knill, Port Huron; H. G. Lewis, Jackson. The next meeting of the board will be held in Detroit in January.

### NOTES.

## ST. LOUIS.

### A VERY QUIET WEEK.

St. Louis, Nov. 16.—This has been one of the quietest weeks in local drug circles for many months. Every retail druggist has been asking the numerous city salesmen about the state of business around the city and the invariable and truthful reply is: "Very, very quiet."

A movement is on foot to establish a uniform price on such articles as castor oil, epsom salt, flaxseed meal, turpentine, etc. It was first started in this State at the June meeting of the Missouri Pharmaceutical Association and one of the first advocates was Dr. H. M. Pettit, of Carrollton, while Wm. Mittelbach, of Boonville, was a very close second. During the A. Ph. A. meeting in this city in September the matter was brought up and discussed and finally the local association has come to realize the advantages in such a movement and are beginning to consider whether or not to submit it to the druggists of St. Louis. Your correspondent interviewed several of the leading druggists of the city on the subject and they all seemed to consider this one of the "cut-rate" problems which can be easily abolished. They all think that this is a profitable line of goods to push and feel that it is a good place to initiate a uniform schedule of prices. Many of the local druggists are becoming discouraged at the slow grinding of the N. A. R. D. mill. They feel that they compromised with the "radical cutters" by accepting the "cutters'" terms, a thing which was boasted of at the time by employes of some of the radical cut-rate stores. What they want now is a respectable advance in prices on patent medicines. The workers in the local association anticipate a large attendance at their combined meeting and smoker to be held the latter part of this month or the first of next, when they expect to bring this matter before the members—let it be settled according to the wishes of the majority.

## THE SOUTH.

Memphis, Nov. 14.

—The Tennessee Board of Pharmacy held a called meeting at Nashville, Nov. 11, and accepted the resignation of J. F. Voigt, C. M. Greene, of Chattanooga, was nominated for the vacancy, which nomination will in all probability be confirmed by Governor McMillan. Several matters of a routine nature were disposed of at the meeting.

—A beechwood tree near Port Gibson, Miss., is giving a daily performance that is very interesting to a great many people. A fine mist has been falling about the tree for three or four weeks, and the fall is said to be the heaviest at about 8 a. m. The mist, it is said, has an odor almost identical with that of iodoform.

—McArthur & Winston Bros. have discontinued their store at Mississippi avenue and Landerdale street, Memphis, and will in future devote their time to their main store. Mr. McArthur will shortly retire from the firm, and go on the road for Nelson, Baker & Co., Detroit.

—E. T. Warnock, formerly connected with the Van Vleet-Mansfield Drug Co., has accepted a position as assistant superintendent of the Nickell-Stone Chemical Co., New Orleans, La.

—Bennett Bros., Fulton, Ky., are now in possession of their new store, in the Opera House block. They have a handsome place. Paschall Bros. have moved into the building vacated by Bennett Bros.

—Dr. Weeks, the N. A. R. D. organizer, has been working in western Kentucky for some time past, in the interest of the association.

—A recent destructive fire at Boonville, Miss, burned the drug stores of Browning & Williams and Saddler & Co.

—W. W. Curtis and J. T. Bailey, representing Sharp & Dohme, were in the city last week.

—J. P. Sleeth, of Paducah, Ky., has bought out E. H. Gilson.

—J. C. Farley & Co., of Paducah, Ky., have opened a branch store at Mechanicsburg, a suburb of Paducah.

—R. W. Cobb has resigned his position with Parke, Davis & Co., and will travel for a vinegar house.

J. F. VOIGT, Chattanooga, Tenn., Ex-member Board of Pharmacy.

### A FINE COLLECTION OF REVENUE STAMPS.

Everybody in the trade knows that E. J. Haines, of the Duroy & Haines Co., Sandusky, O., is an expert on American wines, besides being an all around good fellow, but few know that he has one of the finest collections of United States Internal Revenue stamps in this country, a collection which would bring probably \$3,000 at auction. Mr. Haines has been gathering his specimens for twenty years and it is now practically complete. It, of course, comprises all the issues from 1862 to 1883. The initiated will appreciate its value, when it is known that it contains, besides other excessively rare items, both of \$1.00 and \$5.00 green George Washington, 4th issues. Mr. Haines knows most of the big collectors in the country, and uses the great number of duplicate rare stamps which accumulate to still further enrich his collection, by exchanging for other specimens, or to replace an imperfect one with one without a flaw. These duplicates, though not considered in placing a value on his collection.

Druggists who have not already taken advantage of the special offer of the Gleghorn Pharmaceutical Co. should send in their orders soon, as the offer closes December 31. When a preparation as well advertised as Gleghorn's Sore Throat Cure can be bought at \$1.00 a dozen, the wide awake druggist usually takes advantage of it. This 25 cent remedy is a good seller at this season. Send your order to the Gleghorn Pharmaceutical Co., Allegheny, Pa.

When a customer asks for elastic stockings he expects to get the best quality. Druggists who handle those made by the Surgical Fabric Co., of No. 528 N. Tenth street, Philadelphia, can depend on the quality of the goods they sell. This concern makes all kinds of elastic stockings and kindred surgical appliances and their prices are right. Send for descriptive price list, mailed free.

E. R. SQUIBB & SONS

NEW YORK

Compound Alum Powder

## NEW ORLEANS.

New Orleans, Nov. 15, 1901.

—One of the most important changes in the local drug trade of recent date is the change of ownership of the establishment of the late Eugene May. This change is about completed, and unless all plans fail the store will be shortly controlled by Jacob W. Hirsch. When General May died suddenly, some months ago, a provision of his will was that the Canal street business be sold by the executors of the estate. The store has for years been the most successful of local drug companies, and its change of ownership has been looked forward to with a great deal of interest. Mr. Hirsch has secured an option, and there has already been a deposit of \$10,000 to bind the purchase. The business done last year amounted to \$130,000, of which \$80,000 was derived from the sale of drugs and medicines, while \$50,000 is given as the revenue from the large soda fountains. Mr. Hirsch, the prospective purchaser, is a young man scarcely 20 years of age. He proposes to go into the business as a student of pharmacy, and thus gain a knowledge of every branch of the enormous enterprise.

—The local establishment of Parke, Davis & Co., had a narrow escape from a disastrous fire during the recent cold snap. The flames started from an overheated stove that set fire to a desk in the office of the warerooms. By the prompt action of some passerby the fire was extinguished with a loss of only about \$50. The escape from a disastrous conflagration was almost miraculous as within a few feet of the burnt desk there were several cases of combustible drugs and chemicals.

—The Louisiana Board of Pharmacy conducted an examination this week at which there were fifteen applicants. Of the members there was one young woman. The board is composed of George S. Brown, William Levy, Max Samson, Walter Taylor, F. C. Godbold and I. Bernstein.

—With every change in temperature, in the present unsettled season, the local trade reports a general improvement in all lines of retail trade. At present reports of business are universally cheerful.

### An Old Remedy in a New Form.

For many years Celery King has been on the market in herb form, and a large sale has been worked up for it in that style of package. Notwithstanding its general popularity, the manufacturers have learned that some people object to a medicine which has to be made into a tea, because of the inconvenience in preparing it. In order to meet the desires of all who wish to take Celery King, the manufacturers have recently placed it on the market in tablet form, but will also continue to prepare it in herb form. They state that in both forms of the remedy the medicinal ingredients are identical. Celery King Tablets are to be eaten and are said to be delicious. They are put up in a handsome package. Retail price 25 cents, wholesale \$2.00 a dozen. Any druggist who orders from his jobber three dozen of Celery King, including one dozen in tablet form, all 25-cent size, will be given 5 per cent. discount on his bill. When he places his order if he will notify the manufacturers of Celery King, B. H. Bacon Co., Rochester, N. Y., they will send to him a beautiful window display and one-half dozen Celery King free.

The preparations of the P. L. Abbey Co., Kalamazoo, Mich. are becoming popular with the drug trade in many sections. All goods sent out by this company are known to be absolutely reliable, and as they are much more profitable than many similar preparations, the druggist pushes them. If you have not seen these goods, write for the company's price list, sent free.

A special inducement is offered to druggists who will introduce Findley's Eye Salve, guaranteed to cure any kind of sore eyes. This salve pays a large profit and the offer made by the manufacturer is worth considering. A 25 cent box and full particulars will be sent free to any druggist who will write to J. P. Hayter, Deatur, Tex.

### DISTRICT REPRESENTATION IN THE P. A. R. D.

Philadelphia, Nov. 16.

To the Editor—There appeared in your issue of Nov. 14 an article relative to the nominations of officers for the ensuing year in the Philadelphia Association of Retail Druggists, which stated that a movement for the election of new officers for every chair would be opposed by the conservative element. While I have no authority to speak the voice of the association for publication, I, therefore, speak as an individual, deriving my knowledge from the existing conditions as found during the past year, as a member of the Executive Committee. First, it is the intention of a number of the ward chairmen to demand representation for their districts. They deserve it, they request it, and they will get it if the members of the P. A. R. D. have the welfare of the association at heart. The chairmen ask that the city be divided into seven districts and to have one officer and one member of the Executive Committee from each district. This seems to be considered non-conservative, and will give equal representation. The first district is to contain wards No. 1, 2, 3, 4, 26, 30, 36 and 39, which represents 43,556 voters. The second district will have wards 5, 6, 7, 8, 9, 10, 11, 12, 13, 14 and 15, representing 39,668 voters; third district, wards 16, 17, 18, 19 and 31, representing 29,806 voters; fourth district, wards 28, 29, 32, 20 and 37, representing 41,165 voters; fifth district, wards 38, 21 and 22, representing 23,650 voters; sixth district, wards 25, 23, 23, 35 and 41, representing 30,651 voters; seventh district, wards 24, 34, 27, and 40, representing 25,784 voters. At this time the districts have the following representation in P. A. R. D.: First, one executive committeeman to 43,556 voters second, three executive committeemen, financial secretary and one of the vice-presidents to 39,688 voters; third, no representation to 29,806 voters; fourth, no representation to 41,165 voters; fifth, two vice-presidents to 23,650 voters; sixth district, no representation to 30,651 voters. Last, but not least, the seventh district is represented by the president, treasurer and three executive committeemen to 25,784 voters. I cannot understand the cause of the term "radical" applied to the division desired by the non-conservative. This explanation of the situation is as I know it, and is approved by many others. I hope you will publish this in your issue of Nov. 21, for the welfare of the P. A. R. D.

W. W. Chalfant,

Member of the Executive Committee, secretary of the Entertainment Committee and Chairman of the Committee of Newspaper Branch Offices.

### Wool Wool Preparations.

Special attention of Era readers is called to the advertisement, in this issue, of Hartmann's Wool Wool preparations. These goods afford the dealer a good profit, and there is satisfaction in selling them, as they always please the purchaser. Once a druggist has properly introduced these goods to his customers, his trade in them is very certain to show a steady gain. Hygienic Wool wool is claimed to be the best absorbent known, and the Hygienic Wool Wool Co. state that their goods are sold as low as similar articles made of cotton. They report that wool wool menstrual pads, or nappins for women, and wool wool gonorrhoea bags are having a specially good demand. Both possess deodorant as well as absorbent qualities, and are made in a very convenient form. Druggists who are acquainted with the wool wool preparations are invited to write for free samples to the Hygienic Wool Wool Co., 38 Pearl street, New York.

If you have not sold that well known and reliable "Old Duroy" Port Wine, you have missed a good thing. A sample, which is sent free upon request, will convince the most skeptical that Duroy Port Wine is above the usual quality of high priced wines. The manufacturers make a line of wines superior to the usual line handled by dealers and solicit the trade of the druggist. Write for samples and particulars to the Duroy & Haines Co., Sandusky, Ohio.

- 686.689.—Hermann Eschwege, Forest Hill, England. Process of making concentrated extract of coffee.

- Findley, New Orleans, La. A floral and arabesque and the monogram of capital letters "M P B".
- 37,310.—Powders for Gynecological Purposes, Richard H. Eddy, Providence, R. I. The word "La-Mose".
- 37,311.—Erect-Pumps and Breast-Nipples, William Henry Martin, New York, N. Y. The word "Trahalter".

## LABELS.

Registered November 12, 1901.

- 8,774.—Title: "Lanoble" (For Antiseptic Suppositories.) Israel Neugroschl, New York, N. Y. Filed October 16, 1901.

Victor Koechl & Co., No. 122 Hudson street, New York, are sole agents in the United States for "Adeps lanæ, B. J. D.," or lanoline. As druggists are aware, this is one of the best known bases for ointments, as it is odorless, neutral, miscible and easily absorbed. Specify "B. J. D." when ordering, and you can be certain of a good article.

## TRADE-MARKS.

Registered November 12, 1901.

- 37,268.—Perfumed Lozenges, Tho. Kerfoot & Co., Ashton-under-Lyne, England. The word "Sweetlips".

# MARKET REPORT.

## NEW YORK MARKETS.

### BUSINESS MODERATELY ACTIVE.

**New York, Nov. 19.**—Jobbing parcels of the various reasonable commodities continue to find a steady consuming outlet and the market has a moderately active appearance, but as noted last week the fluctuations in values are of only minor importance.

**OPIMUM.**—Competition among importers has had an unsettling influence and the market has a weak undertone but no changes have been made in quotations for jobbing quantities. The ruling figures are \$3.25@3.50 for 9 per cent. and \$3.45@3.60 for 11 per cent. Powdered is in fair demand and nominally unchanged at \$4.00@4.60 for 13 per cent. \$4.75@5.00 for granular, and \$5.00@5.25 for 16 per cent.

**MORPHINE.**—An advance in manufacturers' prices is reported, and the revised jobbing range is \$2.40@2.50 in ½ oz. vials in 1 oz. cartons; \$2.50@2.45 in ¼ oz. vials, in 2½ oz. cartons. Oz. vials, \$2.15@2.25, and bulk \$2.10@2.20.

**QUININE.**—Nothing further has developed to materially change the condition of the market, and jobbers continue to quote 27c for bulk in 100-oz. tins, 27½c in 50-oz. tins, 28c in 25-oz. tins and 64c in ounces.

**GUM CHICLE.**—Primary markets are somewhat stronger and local quotations are firmer with views to the effect that jobbing prices have been advanced to 42¢@44c as to size of order.

**OIL WORMWOOD.**—Values are higher at producing points owing to scarcity and spot quotations have been advanced by jobbers to \$7.25@7.75 for best and \$6.50@7.00 for good.

**ANGOSTURA BARK.**—Available supplies are very light and the market in consequence is firmer with jobbing quotations showings an advance to 38¢@42c as to quality and quantity.

**SERPENTARIA ROOT.**—Supplies are somewhat larger and with the demand only moderate, holders have modified their views to the extent of reducing quotations to 50¢@53c for whole, 52¢@57c for ground and 55¢@62c for powdered.

**CAMPHOR.**—The demand is seasonally slow and the market easier in tone with jobbing quotations reduced to 50¢@57c in barrels and 60¢@65c for less. Cakes in cases are quoted 57¢@57½c and smaller quantities 61¢@66c.

**CANARY SEED.**—Foreign markets are higher owing to reduced estimates of the yield of new crop and jobbers have advanced their quotations to 3½¢@3½c for S. S. by the bag and 3¢@3½c for less. Smyrna is held at 3½¢@3½c by the bag and 4½¢@6c for less.

**SPERMACETI.**—Keen competition among producers has materially weakened the market and jobbers have reduced their quotations to 30¢@35c for lump and 31¢@35c for cakes.

**UNION SALAD OIL.**—Owing to a decline in manufacturers prices, jobbers have further reduced their quotations to 47¢@50c in bbls. and 55¢@65c for less.

**CITRATE OF IRON AND QUININE.**—Manufacturers prices are a shade lower in sympathy with the recent decline in quinine and jobbers quotations have been reduced to \$1.80@2.60.

**CACAO BUTTER.**—Under the influences noted last week jobbers have reduced their quotations for bulk to 38¢@42c. There is no further quotable change in cakes.

**BEUCH LEAVES.**—Short are easier in sympathy with lower markets abroad and spot jobbing quotations show a decline to 32¢@37c for whole and 37¢@42c for powdered.

**COLCHICUM SEED.**—Extreme scarcity both here and at primary sources of supply has caused an advance in jobbing quotations to 67¢@75c for whole, 72¢@80c for ground and 77¢@85c for powdered.

**WORMSEED.**—American is scarce and higher with jobbers quoting 20¢@25c for whole and 25¢@30c for powdered.

### Adulterated Drugs.

The analyses of drugs bought in different parts of the country by inspectors of the State Pharmacy Boards show that there is a great deal of adulterated borax on the market, and one of the most common adulterants is bicarbonate of soda. A simple test for soda is to pour on some acetic acid. Pure borax will not effervesce. Any druggist can easily get borax that is guaranteed chemically pure if he buys the "Twenty Mile Team" brand, manufactured by the Pacific Coast Borax Co., the largest producers of this chemical in the world. All jobbers carry the borax in stock, and sell it in 1 lb., 2 lb. and 5 lb. cartons for dispensing.

Customers look to the druggist to supply them with a reliable whiskey, and when such is supplied it usually ensures a permanent and pleased customer. Duffy's Pure Malt Whiskey is the only whiskey taxed by the Government as a medicine, and is continually advertised. Every dealer should be in a position to meet calls for this reliable whiskey. Counter advertising matter will be sent druggists who write to the Duffy Malt Whiskey Co., Rochester, N. Y.

The extensive advertising done on Fabst Malt Extract, the "Best" tonic, should create a demand for it in all parts of the country. Fabst's is said by many druggists who handle it to be the most satisfactory malt extract sold to-day. Any dealer can have advertising matter sent him by writing to the Fabst Brewing Co., the "Best" Tonic Dept., Milwaukee, Wis. Any jobber will supply the tonic to the trade.

## ABUNDANT CAUSE FOR THANKFULNESS.

It seems to be the custom nowadays to employ that great American institution, Thanksgiving Day, not so much for giving thanks as for inquiring into the reasons why thanks should be given. It may be that expressions of thanks were originally meant to follow this inquiry, and that this part of the plan has been crowded out to make room for the feasting which, to many of us, is the most important feature of the day. Druggists who do not find their attention too fully occupied in the discussion of the Thanksgiving dinner of this year, A. D. 1901, will have no difficulty in finding cause for thankfulness.

According to all accounts this has been a year of unusual prosperity in all branches of the drug trade. There are, of course, many who always take pleasure in finding fault with the existing order of things, but leaving these malcontents out of the count, all members of the trade seem to be satisfied with the work of the year, and are hopeful of still better things to come.

During the past year the trade has been relieved of the burden laid upon this branch of industry by the war of 1898. Schedule B was repealed in January, the use of stamps upon medicinal preparations being discontinued in July. The various associations have all made substantial progress toward the elimination of some of the most objectionable features of the trade. The pursuit of the cutter has been carried on with great success, to the benefit of the pursued as well as the pursuers, it is claimed. The National Association of Retail Druggists has held its convention,

and has successfully passed through somewhat trying times apparently without loss of either prestige or efficiency. The association is now in a position to attack the grievances of the retail druggist with an effectiveness never before equalled. The unity of purpose has never been in doubt, the differences being merely those of methods of procedure for attaining the common end. The past months have cleared the air, and have shown more fully the advantages and disadvantages of the various plans. United action in accordance with some approved method may be safely predicted for the near future.

Other branches of the trade have held their various conventions. In most cases so little was found that required discussion or remedying that a large part of the time was spent in rendering thanks in the most approved fashion, that is, in having a good time. The various schools and colleges of pharmacy all report large classes and students enthusiastically satisfied with the courses given. An unsatisfied demand for competent clerks in all parts of the country is cause for thankfulness, for the clerk and proprietor alike, for if the latter were not prosperous no additional clerks would be required.

This is all as it should be, and the individual who, in the presence of all this prosperity, is still unable to feel any warmth or glow in his poor shrivelled little heart deserves no turkey to lighten his gloom. It is the good fortune of the Era to appear upon Thanksgiving morning each year. May it furnish additional good cheer to its readers of the present year.

## ANTITOXIN FROM MUNICIPAL AND PRIVATE LABORATORIES.

The occurrence, in St. Louis, of a number of cases of tetanus in consequence of the use of antidiphtheritic serum furnished to physicians by the city board of health, has been noted in the news columns of the Era. According to the latest reports, twenty cases of tetanus have occurred, resulting in a dozen or more deaths. Investigations undertaken by the authorities seem to show that the contaminated serum was obtained from a horse which later developed symptoms of tetanus and was promptly killed. This explanation of the source of infection is, however, not accepted as satisfactory by some bacteriologists. It is claimed that the infection could not have been derived from the blood of this horse, but must have been introduced into the serum during subsequent manipulation of the material. Whence the contamination came is now, however, of minor importance. It is unfortunately a fact that the serum contained the tetanus poison, and it is quite evident that its

preparation was not conducted with the necessary care. Some precaution, which should have been taken, must have been neglected or the deplorable loss of life could not have occurred.

It is a significant fact that this infected serum was obtained from the health officers of a city government, and not from one of the antitoxin laboratories established with private capital. The Era has from time to time pointed out the injustice and folly of government appropriations to cover the expense of manufacturing serums and other remedial agents in competition with private establishments. The competitive production and sale of materials for which private citizens have established manufacturing plants at great expense is a strange undertaking for a government which protects other industries by means of tariff regulations. This consideration is, however, of secondary importance in industries involving matters concerning the public health. The advocates of the production of serum by government and municipal institutions have argued that this industry is of such vital importance to the public and requires such careful manipulation to prevent contamination that its exploitation cannot be safely left to serve as a source of private gain. It has been claimed that the safety of the public demands a strict governmental supervision and control of these enterprises, and that when left to private enterprise this would be sacrificed in order that the establishments might pay handsome dividends to their owners. The deplorable occurrence in St. Louis proves the utter fallacy of this argument. Carelessness such as must have been permitted in the preparation of the contaminated serum would never have been tolerated in any of the private laboratories of the country, for the very good reason that one such occurrence of wholesale infection would inevitably ruin any business carried on under the conditions of ordinary competition. Responsibility for a private success in this industry is inseparably connected with responsibility for the safety of the public. This personal responsibility to private capital seems to protect the public against accident far more thoroughly than is possible under municipal control, under which merit and efficiency are seldom the only recommendations for position and preferment. The managers of private enterprises, of which the success and the very existence depends upon the constant exercise of the utmost care, may safely be depended upon to select the most improved appliances and the most thoroughly trained experts and to enforce rigid adherence to the most approved scientific methods. The public at large will be slow to forget the St. Louis disaster, and will hesitate before making further appropriations for purposes supposed to safeguard the community against accident, but which have, in reality, proved to be highly dangerous and unnecessary experiments.

#### LIQUOR LAWS AND THE DRUGGIST.

Upon another page of the present issue appears a report of some rather unusual proceedings against the druggists of Hartford, Conn. It seems that a law in that State requires all druggists, as well as all liquor dealers, to keep exposed in their places of business the licenses which permit them to keep and sell liquors. A license of this kind appears to be unpopular with the pharmacists, as well as with the pub-

lic, and no one takes much pride in exhibiting these obnoxious documents. In consequence, this provision of the law has been somewhat of a dead-letter for some time past, most druggists complying, in a manner, with the law by keeping their licenses about the premises, but in rather inconspicuous places.

Things proceeded as satisfactorily as possible under these circumstances until a police officer appeared upon the scene, who happened to be uncomfortably ambitious to earn his salary. As a result of the efforts of this zealous officer a number of druggists, generally supposed to be law-abiding citizens, were compelled to appear in court and answer charges of violation of the statutes. Upon advice of an attorney, most of those accused pleaded not guilty, and, after the payment of costs, were permitted to resume the role of respectable citizens. But one of their number, apparently a person of that unyielding quality of mind for which New England is famous, refused to take advantage of what he considered a technicality. Although he had been entirely ignorant of the law before appearing in court, he was then convinced of his guilt, and considered it only just that he should receive punishment. This worthy apothecary, therefore, insisted upon pleading guilty and paying the penalty provided for the crime. He left the court-room poorer by \$10 more than his fellow transgressors, and his name was inscribed in the records of the court as having been convicted for a first offense; but he doubtless considered this a trifling price to pay for the privilege of being right.

This case, in which probably the most innocent and conscientiously honest citizen of the entire town was convicted of an offense of which he was entirely ignorant, sheds a curious light upon this law. Regulations for the sale of liquors are worthy and necessary laws, and it is difficult to consider this provision unjust in any way. The principal trouble seems to lie in the fact that the law classes all dealers in liquors alike, while the public, including the pharmacists, are unwilling to look upon the druggists as belonging to any but the most worthy class of citizens whose minds should not be troubled by questions of law. The druggists seem to have taken these things for granted, and to have innocently made themselves liable to the condemnation of a very just law. It appears scarcely worth while to neglect compliance with a regulation which is productive of so little hardship and trouble. As for the gentleman who insisted upon having the "law of himself," it is unnecessary to say that the physicians of Hartford may feel reasonably sure of one pharmacy in their city where their prescriptions will be filled without the least danger of substitution.

---

**SANDALWOOD OIL.**—According to M. Potvliet (Br. and Col. Dr.) genuine sandalwood oil has the following properties: Sp. gr. at 15 degrees C. .975 to .985; optical rotation in 100 mm. tube—17 to—20 degrees; solubility in 70 per cent. alcohol at 20 degrees C. 1 in 4 to 4.5; it contains at least 92.5 per cent. santalol. This author finds that the requirements usually considered sufficient to identify this oil are answered by mixtures of East and West Indian sandalwood oils and cedarwood oil. It has also been difficult to detect the addition of Macassar sandalwood oil. The oil obtained from billets and roots of the wood has a finer odor than that prepared from chips, but it contains a smaller proportion of santalol.

(For the Era.)

# A PROFITABLE "SIDE-LINE" FOR THE RETAIL DRUGGISTS.

By FREDERICK T. GORDON, Pharmacist, United

States Navy.

In reading the reports of the recent meeting of the American Pharmaceutical Association, I was greatly impressed as to the value to the retail druggist of a suggestion made in the address of Chairman H. P. Hynson of the Section of "Practical Pharmacy and Dispensing." In it Mr. Hynson called attention to the suitability and profit of a "side line" of supplies of test solutions, stains and reagents for microscopical work, "physiological" solutions, etc., for physicians, pointing out that such a line was entirely within the province of the pharmacist and the manufacture is not any more difficult than are many of the ordinary pharmaceutical operations. Since reading this excellent presentation of the subject I have made a number of inquiries as to the feasibility of its adoption by the retail druggist, and have also investigated as to the necessary amount of capital to be invested, the practical details of the manufacturing and the position of physicians regarding it. The conclusions I have reached I now take pleasure in presenting to my fellow druggists through the Era.

First, will such a "side line" pay? Yes, it will pay well if it is taken up earnestly and thoroughly, if it is properly placed before physicians and if an adequate supply of the best chemicals, stains and accessories be maintained. Unless the intended adopter of the idea means to carry it out thoroughly and give it his time and attention he had better not undertake it, for half-hearted attention or a "skimpy" line will bring him failure every time.

Second, what amount of money must be invested in such a "side line?" The answer to this question depends entirely upon the amount of stock carried. The chemicals needed for making volumetric and test solutions should be of the quality known as "chemically pure," used by analysts generally. At the beginning of the plan probably 500 grams of the alkalis, and acids, from 25 to 100 grams of the reagents, such as copper sulphate, barium chloride, etc., and about 10 grams of about six aniline colors used for stains will be sufficient. Other articles used by microscopists are Canada balsam, in 25 and 50 gm. collapsible tubes, asphalt or Brunswick black varnish, in 10 gm. bottles, gelatin, in viscid solution preserved by oil of cloves and in collapsible tubes, damar or copal varnish, syrupy solution in xylol or benzol, paraffin, of different melting points, "gold size," all of which are used in mounting or preparing specimens on slides; absolute alcohol, 95 per cent. alcohol, pure turpentine, benzol, xylol, rectified benzine, oil of cloves, ether, chloroform and distilled water, these for making stains, solutions, etc.; C. P. acetic, hydrochloric, nitric and sulphuric acids, dispensed in 25 Cc. glass stoppered bottles; aqua ammonia, liquor potassae and sodae, in rubber stoppered 25 Cc. bottles, chromic and osmic acids, in 10 per cent. solutions, g. s. bottle, and certain other articles in local use, to be supplied on demand. Only small quantities of most of these articles need be kept in stock. Flasks and glass stoppered bottles for containing the solutions may be bought in the quantities shown to be necessary while burettes, pipettes, beakers, test-tubes, etc., should already be a part of the pharmacist's laboratory. The supplies for microscopical work, slides, cover-glasses, culture tubes, flasks, watch-glasses, dishes, etc., are not expensive and may be bought at first in small quantities. It would be a good plan, especially for druggists in the smaller towns and cities, to secure the agency for some firm manufacturing a standard line of microscopes and accessories, such as Bausch & Lomb, Syracuse, N. Y., or Queen & Co. of Philadelphia, and to carry a stock of supplies on commission. Microscopes and the expensive apparatus need not be kept as the catalogues issued by such firms give ample

information to intended purchasers, who, by the way, generally know just what they want. No doubt the large firms dealing in microscopes would be glad to be represented by druggists in the smaller towns and cities and profitable terms should be easily made.

Third, will physicians support this "side line?" To this question I can answer emphatically, yes. Physicians outside of the large cities are compelled to keep quite a stock of chemicals and stains on hand and to order these from distant points, at the cost of time and money, the convenience of being able to get anything they may want from a druggist in their own town will be greatly appreciated. Besides, doctors as a rule hate to spend their time "messing" with stains and reagents, they would far rather pay some one for making these for them as needs arise than bother with them, as is shown by the large stock of these catalogued by the physicians' "supply houses." I have questioned a number of physicians who use the microscope in their daily work and all but one told me that they would only be too glad to be able to buy their stains, etc., ready-made from the drug store and that they hoped to see some druggist in their neighborhood adopt the idea. An enterprising druggist ought to secure every bit of this trade.

Last, does the preparation of the materials of this "side line" call for special skill, is it difficult and does it take much time? Every druggist worthy the name should be able to prepare and standardize the volumetric test-solutions of the U. S. P.; this takes the most time of all and demands the most skill. Stains, etc., are easily prepared, sterilization of physiological solutions can be made a routine matter, and the preparation of the various reagents used is no more difficult than compounding prescriptions. Practice will bring easy working. Probably the best plan to adopt at the starting of this "side line" for ascertaining the kind and quantity of solutions, stains and reagents likely to be in demand would be for the druggist contemplating it to call on the physicians of his section and acquaint them with his plans, and ask them what materials they would like to have stocked and in what quantities. It is hardly necessary to say that it would be poor business to make up large quantities of various solutions until it was certain that there would be a demand for them.

Now as to what is likely to be in demand. No better list could be made than that given by Mr. Hynson, so I will quote from his paper. "Although no great variety of volumetric solutions are called for, quite a quantity of deci-normal sodium hydrate solution is sold." To this I would add normal and deci-normal solutions of sulphuric, oxalic and hydrochloric acids, the same of sodium and potassium hydrate, deci-normal solutions of sodium hyposulphite, iodine, potassium permanganate, potassium bichromate and silver nitrate. These are prepared according to Pharmacopoeial directions, using either pure re-crystallized oxalic acid or recently heated sodium bicarbonate (then the carbonate) as a standard. For urinalysis, the following solutions will be in demand: Silver nitrate, 1 Cc. of which equals 0.01 gm. chlorine; barium chloride, 1 Cc. of which equals 0.01 gm. sulphuric acid; uranium acetate, 1 Cc. of which equals 0.01 gm. phosphoric acid; mercuric nitrate, 1 Cc. of which equals 0.01 gm. urea; Esbach's "Albumin Test Solution," (containing 1 per cent. of picric acid and 2 per cent. citric acid in each 100 Cc. distilled water) and Fehling's solution, standardized. This latter is made by dissolving 34.652 gm. of pure copper sulphate in 500 Cc. distilled water (solution A), 175 gm. potassium and sodium tartrate, and 45 gm. sodium hydrate in 500 Cc. distilled water, (solution B). The two solutions are dispensed separately in glass-stoppered bot-

bles and are mixed only just before use. Other test solutions used in urinalysis are sodium hypobromite or hypochlorite, freshly made. Nylander's bismuth solution, Purdy's solution, Pavy's solution, solution of indigo-carmine, etc., and the usual acids and alkalis. Nylander's solution of 4 gm. Rochelle salt and 8 gm. sodium hydrate in 100 Cc. of water until it is dissolved, adding water finally to make up to 100 Cc. Pavy's solution, which is coming into much use lately for testing for sugar in urine, is made as follows: Dissolve 34.62 gm. copper sulphate in 500 Cc. distilled water; dissolve 170 gm. each of Rochelle salt and sodium hydrate in 500 Cc. distilled water; mix the two solutions, take 120 Cc. of the mixture and add 400 Cc. ammonia water, sp. gr. 0.88, dilute with water to 1000 Cc. 10 Cc. equals 1 Cc. of Fehling's solution or 0.005 gm. of glucose. The full quantities of solutions 1 and 2 need not be made, only 100 Cc. of each, if desired. While on this topic, indicators might be mentioned. Litmus, blue and red, phenolphthalein, methyl orange, rosolic acid, cochineal and haematoxylin test solutions of the U. S. P. will usually be all required.

The "physiological" solutions likely to be called for will be comprised in the following list. Normal salt solution, 6 gm. of C. P. sodium chloride in 1 liter of distilled water, sterilized in 50 Cc. flasks just prior to dispensing, the flasks being stoppered with a wad of absorbent borated-cotton tied down with thin sheet rubber. Great care must be taken with this and all solutions intended for injection into the body tissues to perfectly sterilize both solutions and containers. A good plan is to almost fill pint Florence flasks with the liquids, stopper loosely with borated-cotton and sterilize in a water-bath which comes within an inch or so of the top of the flask. Flasks may be sterilized previously in a water-bath or in the oven of a stove. Tablets of sodium chloride, 1 gram each, for making normal salt solution are also commonly called for. Thompson's "Bladder Irrigating Fluid" is made by dissolving 6 gm. sodium chloride, 10 gm. sodium bicarbonate, 20 gm. of glycerin in 1000 Cc. distilled water and sterilizing. Muller's "Preserving Liquid" is a solution of 10 gm. sodium sulphate and 25 gm. potassium bichromate in 1000 Cc. distilled water. An injection of potassium permanganate now much used in treating gonorrhoea is conveniently dispensed as a 5 per cent. solution of potassium permanganate in distilled water, made exactly neutral; 20 Cc. of this with 980 Cc. of water or the bladder irrigating fluid makes a 1000 solution. Dispense in 100 Cc. glass-stoppered bottles.

A solution often used in the treatment of diphtheria is Loeffler's "Diphtheria Solution." This must not be confounded with other solutions bearing Loeffler's name, several of these being tissue and bacteria stains. The "diphtheria solution" is made by dissolving 40 gm. crystallized menthol in sufficient toluol to make 144 Cc., to which is added 16 Cc. of tincture ferric chloride and absolute alcohol sufficient to make 400 Cc. This solution is best dispensed in a wide-mouth cork stoppered bottle, with a swab of sterilized glass wool or gauze. Solutions of the suprarenal gland have been practically displaced by the more powerful and better keeping solutions of adrenalin chloride. These should be kept in small tightly corked "homeo" vials in a cool, dark place. A solution of pepsin for use as a solvent of dead bone and tissue will sometimes be called for. An excellent formula proposed by M. I. Wilbert of the German Hospital, Philadelphia, is this: Pepsin, aseptic, scale 50 gm., menthol, thymol, eucalyptol, oil of gaultheria, of each 0.5 gm.; dilute hydrochloric acid 20 Cc., glycerin 50 Cc., alcohol 25 Cc., distilled water enough to make 1000 Cc. Dissolve the pepsin in half the water, to which has been added the acid and glycerin; dissolve the menthol, thymol, etc., in the alcohol; stir into this about 400 Cc. of water, mix the two solutions and filter through talcum, passing enough water through to make the measure 1000 Cc. Vaccine and the various antitoxins would also come under this heading.

As aids to surgical practices Mr. Hynson suggests mucilaginous lubricants, green soap, etc., dispensed

in collapsible tubes. These should be perfectly sterilized and antiseptic. Mr. Hynson has been kind enough to supply me with his formula for an "Iceland Moss Lubricant," which, when skillfully carried out, affords a beautiful product. To make this a rather thick mucilage of Iceland moss is first made and strained until clear, boroglyceride, 4 per cent.; formalin, 40 per cent., 1 per cent.; and glycerin, 10 per cent., are then incorporated, the mass sterilized by heat and poured into the tubes while warm. The success of this lubricant depends upon the mucilage of Iceland moss made; this should be jelly-like, yet thin enough to flow freely.

Various nebulizing solutions or liquids are also suggested, formulas for which may be obtained from the physicians or from the manufacturers of the nebulizers. These are being more and more used of late. Possibly various antiseptic solutions of commonly used strength may be found a desirable addition. Mercuric chloride, boric and carbolic acids, Dobell's and Seiler's solutions Thiersch's solution (boric and salicylic acids, in saturated aqueous solution), and formaldehyde (formalin) are all much used. Tablets for preparing some of these solutions also sell well. It seems hardly necessary to mention distilled and sterilized water, which are frequently wanted in a hurry by the surgeon for operations.

The list of stains and reagents for microscopic work may be almost indefinitely lengthened but as Mr. Hynson says, "The variety of stains is not large for ordinary demands and not more than six or eight need be kept made up." "Gabbett's stains, carbol-fuchsin, methylene blue, Ehrlich's tri-acid stain, Jenner's gentian violet, haematoxylin-alum and Toison's dilution solution are among the most prominent." "Success in their preparation depends largely upon the quality of the dry colors; ordinary commercial anilin will not answer." "Gruebler's colors are the best to be had, and although comparatively expensive can be used and still a good profit secured." While formulas for these are in most text-books it will not be out of place to give those for the above mentioned, with a few others likely to be asked for.

Gabbett's "Acid Blue"—methylene blue 1 to 2 gm., 25 per cent sulphuric acid 100 cc; dissolve.

Carbol-Fuchsin: Fuchsin, powdered 1 gm., dissolve in 10 cc, alcohol; carbolic acid 5 gm., dissolve in 85 cc distilled water; mix the two solutions and add water, after filtration, to make 100 cc.

Ehrlich's Tri-Color-Stain: Saturate aqueous solution of orange—G. 6 cc, saturated aqueous solution of acid fuchsin 4 cc., mix these and add slowly saturated aqueous solution of methyl green 6.6 cc. Add, in order named, glycerin 5 cc, alcohol 10 cc and water 15 cc; let stand 24 hours and decant clear liquid. This solution is improved by keeping.

Loeffler's Alkaline Blue: Saturated alcoholic solution of methylene blue 30 cc, 1 per cent aqueous solution of potassium hydrate 100 cc.

Gentian Violet: Gentian violet 10 gm, aniline oil 4 gm, alcohol 20 gm, distilled water 176 cc. Add the aniline oil to the alcohol, dissolve the color in water and mix slowly, with constant shaking.

Picro Carmine: Carmine 10 gm, picric acid 20 gm, aq. ammonia 50 cc, distilled water q. s. to 1,000 cc. Dissolve the solids in the water by aid of the ammonia, using half for each and mixing the two solutions.

Acid Blue Stain: Methyl blue 2.25 gm, absolute alcohol 30 gm, sulphuric acid 12 gm, distilled water q. s. to 100 gm. Dissolve the color in the alcohol, add the acid to the water and mix the two solutions slowly; let stand 24 hours and filter clear.

Haematoxylin-alum Stain: Haematoxylin, crystal, 1 gm, alum, crystal, 2 gm, alcohol, 10 cc, distilled water q. s. to 100 cc. Dissolve the color in the alcohol, the alum in the water, mix slowly and filter if necessary.

Loeffler's "Flagella Stain": Tannin 20 gm, dissolve in 80 cc distilled water, add 5 cc of a cold saturated solution of ferrous sulphate and 1 cc of a saturated aqueous solution of fuchsin; filter if necessary.

Reducing Solution: Gallic acid 5 gm, tannin 3 gm, potassium acetate 10 gm, dissolve in distilled water q. s. to make 350 cc.

Toison's Dilution Fluid: Methyl violet .025 gm, dissolve in a mixture of glycerin 30 cc, and distilled water 80 cc, (a). Sodium chloride 1 gm, sodium sulphate 8 gm, distilled water 80 cc (b). Mix the two solutions slowly and filter to a clear solution.

Aniline Water Solution: Add about 5 cc aniline oil to 500 cc warm distilled water in a bottle, shake frequently until the water is saturated and decant the clear solution after standing until the excess of oil settles.

"Stock" stains of the commonly used colors will be useful; these are saturated alcoholic solutions of the dyes made by adding an excess of color to alcohol, shaking until all soluble is dissolved and pipetting off the clear supernatant liquid as needed. The following may be made up in quantities of about 50 cc, at a time: Fuchsin, gentian violet, methylene blue, eosin, safranin, bismarck brown, malachite or methyl-green and orange G. For staining slide preparations these concentrated solutions are diluted with either distilled or aniline water, sufficient being used to make a solution transparent in layers of about 12 to 15 millimeters thick. This dilution, however, will not usually be made by the druggist, the operator generally preferring to make his own, as opinions vary as to the depth of the stain to be used. The concentrated "stock" solutions are intended for this purpose; they may be dispensed in small bottles, about 15 to 25 Cc., carrying a pipette for convenience. Straight medicine droppers with good rubber tops answer perfectly for this.

A few other articles may be mentioned, reagents and culture materials. Ehrlich's "Di-azo Test" for typhoid fever is now generally used as an aid to diagnosis. This is dispensed in glass stoppered bottles in two separate solutions, to be mixed immediately before using. Solution A is: Acid sulphuric, 1 gm.; acid hydrochloric, 25 Cc., in distilled water q. s. to 500 Cc. Solution B is: Sodium nitrite, 0.5 gm., in distilled water 100 Cc. In using, 10 Cc. of solution B are mixed with 90 Cc. of solution A. Gunsberg's test for free hydrochloric acid in gastric juice is: Phloroglucin, 2 gm.; vanillin, 1 gm., dissolved in 30 gm. of alcohol. Other reagents will likely be asked for by physicians according to their formulas. A stock of nutrient media for germ cultures, such as gelatin, agar-agar, arrowroot starch, albumin, beef-juice, broths and bouillons, might also be added to our list. Sterilized culture media of varying formulas could be supplied on order from the bacteriologist at a good profit, test-tubes, flasks and Petri dishes being used for dispensing them, and they are not at all difficult to make. The druggist's wife could show her skill here.

In conclusion I would say that the formulas here given are all tried and true. My thanks, with those of every progressive druggist, are due to Mr. Hynson for the suggestions I have just elaborated.

#### CAPSULES FOR INTESTINAL REMEDIES.

A process for rendering gelatine capsules impervious to the liquids of the stomach, while retaining complete solubility in the pancreatic juice, has recently been patented in Germany. The capsules, preferably already filled, are placed for ten or twenty minutes in a solution of alyldehyde or acrolein, the strength of the solution varying from .5 to 1 per cent., according to the thickness of the walls of the capsules. They are then dried at from 30° to 50° C. This treatment is said to render the gelatine entirely insoluble in warm water or in the gastric juice, but still capable of being digested by the pancreatic juice in the course of about two hours.

PLANTOSE is a new form of plant albumin prepared from rapeseed by Roos (Ch. & Dr.). It is said to be a very pure form of albumin, and to be very nutritious and easily digested.

## OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors. Please be brief and always sign your name.

#### REASONS FOR THE SCARCITY OF PRESCRIPTION CLERKS.

To the Editor: Pueblo, Colo., Nov. 14, 1901. As all articles in the Era are open for criticism I would like to criticize that entitled "The Scarcity of Prescription Clerks," for I have never heard "much higher scholarship requirement" given as a reason for this condition. This may be one way of looking at it; but the true reason why the number of registered pharmacists put on the market after each examination of any State board is not as large as formerly is because fewer enter for examination. The main causes in my mind, for the scarcity of clerks, are the long hours and small pay; and not until the druggist realizes the situation of which he certainly must know, will he ever have competent clerks, for under the present conditions they will seek some other business. Let me give you an example of last year's two main evils that exist. Having worked at surveying for two months because it was just as profitable as the drug store and offered in addition shorter hours of work, and having decided to obtain a position indoors for the winter, I wrote to a druggist for a situation. In reply I was given an outline of the number of hours I would be obliged to work for \$60.00 a month, namely, from 9:00 a. m. to 11:00 p. m., an hour being allowed for the two meals, dinner and supper, and Sunday afternoon off. Is this not discouraging, and enough to drive competent clerks out of the profession?

"The 'prospective druggist' is correctly advised when he is informed of the long hours and small pay. The 'bright young man is still willing to engage in pharmacy.' Not in all my eight years' experience have I seen it more difficult to secure a bright and desirable boy than in the last two years. While clerking for the largest retail druggist in New York, a few months ago, I had occasion to observe that it was the most difficult matter to obtain a good and bright boy. This is not surprising, for boys will not undertake the long hours of work which this occupation offers them. A prominent physician said to me one day, 'If I had a grudge against a boy, I would put him in a drug store, see that he became a full-fledged pharmacist, and would then feel that my grudge was satisfied.'

When the druggist remedies these two evils, the demand for competent clerks will be reduced to a minimum. JOHN N. ZOOK.

#### OHIO IN THE N. A. R. D. CONVENTION.

To the Editor: Chicago, Ill., Nov. 17, 1901. Replying to the statement of Mr. E. R. Cooper, in the Era of November 14, 1901, page 563, I need not refer to the stenographer's minutes. I heard with mine own ears that a gentleman shouted, "Ohio files notice right here that if the Worcester plan is rejected, Ohio withdraws from the N. A. R. D." Every delegate with whom I discussed this threat heard what I heard. Whether Mr. Cooper heard it—I cannot say. Whether this gentleman was authorized to make this threat, I do not know. I do know that nobody from Ohio rose to say aught to the contrary, and I also know when Mr. Zwick, at the close of the convention got up and pledged Ohio's loyalty to the N. A. R. D., the convention applauded him lustily, on account of the previous unchallenged threat made by the Ohio delegate, as stated in my letter to the Era of October 23. W. BODEMANN.

**Action of the N. O. D. A.**

To the Editor: Cleveland, Nov. 19, 1901.  
 In compliance with action taken at the Northern Ohio Druggists' Association meeting held Nov. 18th, I herewith enclose you copy of resolution adopted at the meeting, and also a communication addressed by Chairman E. C. Lingan to the "American Druggist."  
 Yours truly,  
 WM. F. KUDER, Secretary N. O. D. A.

**The Resolution.**

**RESOLVED**, that the Northern Ohio Druggist Association approve and endorse the action of their delegates at the N. A. R. D. convention at Buffalo, and resolved that we deprecate the manner in which such portions of said proceedings as relate to remarks of our chairman were reported in the "American Druggist" of October 28; and resolved that we authorize the secretary of this association to forward copies of this resolution and Chairman Lingan's reply to the "American Druggist," to all leading pharmaceutical journals. (Adopted November 18, 1901).

**Chairman Lingan's Letter.**

To the Editor of the American Druggist: The account of the action of the Ohio delegation at the N. A. R. D. convention as published in your journal of October 28, is so manifestly unfair, unjust and incorrect, that I feel, as do the other delegates from Ohio, that there is some animus in publishing such a misstatement of facts, and do not feel that it should go unchallenged. Ohio has no apology to offer for its course in the convention and at this time sees no reason for changing our views in regard to the essential points we contended for, which we still believe will finally be adopted by the National body. Ohio's reason for taking the stand she did, was, that our experience with the tripartite plan as operated by "the powers that be," (or were) was a dismal failure. We felt and still feel that had the tripartite plan been enforced as recommended by President Anderson we could have relieved the National Executive Committee of lots of labor in its enforcement. Again, the reason Ohio took the stand she did, was because of the method attempted to smother all further discussion of the question, by a motion to refer the matter to a sub-committee. My language on floor of the convention as can be verified by stenographic report (see Merck's report) was as follows: "Ohio desires to say that if this resolution is smothered or pigeon-holed, we will not be responsible for the future course of Ohio in the National Association, but if the matter is given a fair discussion by the body of the convention, we will submit to the will of the majority." In view of the record it is hardly necessary for Ohio to declare its loyalty, we stand to-day as always, ready to contribute our means and labor to any cause that means the benefit of the retail druggist.

(Signed) E. C. LINGAN,  
 Chairman N. O. D. A. Delegation.

**PRESENT THE PROOF, THE BOARD WILL DO THE REST.**

To the Editor: Chicago, Ill., Nov. 17, 1901.  
 Replying to "Proprietor" who, in a letter which appears in the Era of November 14, finds fault with the pharmacy law of Illinois: A certificate from this State, or any other State, is no guarantee against the drink habit or any other defect of character. The pharmacy law authorizes the Board to revoke certificates on proof of habitual intoxication, etc. If no such proof is presented, no action can be expected. Let a "Proprietor" present such proof; he will find that just one example of a revoked certificate will keep more clerks straight than complaining about this unfortunate condition under a non de plume in the journals. Read the law, Mr. Proprietor; push the button. The Board will do the rest.

W. BODEMANN.

**PRIZE ESSAY ON TRADE INTERESTS.\***

By W. BODEMANN.

Most papers presented at conventions are written for some particular purpose; some for the glorification of the author, and some for the purpose of getting even with some other fellow. In some papers I have been unable to discover any purpose whatever. This paper has only one purpose and excuse for its appearance, and that is to get the prize of \$15 offered by your executive committee. The subject selected by this committee is "Trade Interests."

I have had the pleasure of looking over a great many trade interest papers, some of them being without any interest whatever, but merely long lists of market quotations, fluctuations in prices, etc. I ask leave to be permitted to cover a wider field than figures and statistics.

I firmly believe that at present there is nothing of so great importance to the retail pharmacists as our successful battle for lost ground. We surely have lost ground, although perhaps not as much as some calamity howlers try to make believe. As long as I can remember, and my United States' memory runs back for thirty-four years. I have observed that at all times somebody would bemoan the conditions of the present and praise the situation of fifteen years ago. But having a good memory, I well remember that these same, identical pessimists fifteen years ago were complaining just as bitterly then as they are now. They now want us to believe that fifteen years ago everything was lovely. I see them before me vividly as they appeared fifteen years ago, and what do I behold? They were then just as pessimistic as they are now, and all they could say was that times were hard, but much better than fifteen years ago. Therefore, it is to the greatest interest to our ranks not to lose hope, but to be cheerful. Let us all unite, one and everybody, in the most loyal, hopeful, self-sacrificing support of that one anchor of hope, the N. A. R. D. I know of nothing of such vital importance to the drug trade as the royal battle now being waged by our great combination of forces represented in this N. A. R. D. We can make up our minds to one thing as indisputable, and that is, if our present efforts for a powerful representative central national organization should fail, we will never see the day when as much as an effort for such a body will be renewed. We of Illinois should be particularly proud of the N. A. R. D., as it is an Illinois product, born and raised in this glorious State.

My next subject of interest is the pharmaceutical press. The press is mightier than the sword. Give the pharmaceutical press your loyal support and your best thoughts. You can do it if you only say "I will." Not all writers need be editors, nor all editors good writers. Some of them write by the yard, because they have to, and not because they have something on their minds to write about. Whenever you have an idea to promulgate, do not hesitate, do not be timid, but pick up your pen and write just as you think and feel, to your journal. In this way only can we get at the best thought and bring out new ideas. Cultivate this habit, and you will soon be a better writer, and, what is worth more, a better and more careful reader of the pharmaceutical journals.

My next point of interest is the apprentice. Gentlemen, here lies the rub. Many of our present afflictions are due to the fact that we have been careless, if not reckless about the new crop of pharmacists. Our ranks have become not only overcrowded, but overcrowded by undesirable, incompetent, unscrupulous material that resorts to peanut-stand tactics in order to get a "scoop" on competitors. Increase your ranks by men who believe in worth and merit, and you will find that such men will stand on their dignity. They will not allow the public to kick them around like slaves, nor the medical profession to totally disregard pharmaceutical skill and thorough-

\* Read before the Illinois Pharmaceutical Association and contributed for publication in the Era by the author.

ness. One of the most important points you should always bear in mind is to not allow unschooled boys to act as your apprentices. Although it may be a task on your time and patience, you should take the trouble to give your apprentices such a training as can only be had behind the prescription counter, under intelligent preceptors. During the dull hours of the day and evening take your apprentice in hand and show him how to make pills, powders and different preparations. Last, but not least, give him problems to work out in arithmetic, percentage, doses, and acquaint him generally with the metric system. Let there be a pharmaceutical community of interests between the active pharmacist, the colleges and the boards of pharmacy; let these three agencies join hands to make the future pharmacist a more competent, more self-respecting, more reliable quantity.

If you will permit me to refer to my experience as examiner of apprentices for registration, I can assure you that I, and, for that matter, all my colleagues on the board, have very slim occasion to go into the applicant's knowledge of pharmacy, botany and chemistry. Our experience shows a pitiable condition of affairs. What is the use to examine a candidate in theoretical pharmacy, when we find that he is unable to figure out how much morphine is necessary to make 2 ounces of a 3-per-cent solution, or how much strychnine there is in each pill if you use one-third of a grain in 24 pills? Such incompetents ought not be admitted to examinations, ought not be permitted to enter colleges; nay, ought not be permitted to apprenticeship in a decent pharmacy. You can no more raise peaches on a huckleberry bush than you can make a good pharmacist out of a boy unfit to figure out the simples problem in arithmetic.

Let all good and true pharmacists who have the future of their profession at heart join hands with our colleges and boards to raise a better stock of young pharmacists than has been our lamentable habit in the past.

Another point, and one of direct financial and commercial interest, is association work. The average attendance at our meetings goes to show that the value and importance of our associations are not appreciated as they should be. Charity commences, or ought to commence, at home. So with association work. Every druggist, no matter in what luscious village he may live, should constitute himself a committee of one, visit his neighbors and get the home circle started. It is said of the druggists, and I believe truthfully, that a majority of us are narrow and biased in our views. How can you expect a man to be broad and generous if he does not get away from his counter, but sticks to it year in and year out? Let the druggists throughout the land get away from their daily surroundings once in a while, exchange opinions, "swap" stories with their fellow druggists, and what will be the result? By forming the acquaintance of your neighbors you will find that it is possible to agree on a price schedule that will afford you a living profit. Indeed, we have seen it demonstrated. A little band of druggists in Chicago got together, agreed that they would all charge 50 cents for a pint of alcohol, instead of 40 cents, and several of these druggists at the end of one year were over \$100 ahead on one solitary item of their sales. Such results can be, and are had, the secret of it being local organization. You should join your local association, agitate its affiliation with the Illinois Pharmaceutical Association and the N. A. R. D., and the battle is yours.

While on the subject of associations, I would like to go on record as an earnest supporter of drug clerks' association. Let the clerks learn by experience what association work can accomplish, and the clerk of to-day will be an enthusiastic supporter of associations when he becomes an employer. Employees can only be benefitted by supporting, each in their way, a good strong association. Our interests are in common and both classes should work for the common good of pharmacy.

Attendance at association meetings is a powerful promoter of the welfare of pharmacy and pharmacists.

It combines pleasure with business. The average man can do much better work if he gets out of the rut occasionally, and finds out how others regard him. Life is short, and the time to do things is while you are young. Don't live like a clam, but get out of your shell; get a "move on you," and mix up with your brethren.

## DETERIORATION OF ARTIFICIAL FOODS.\*

By CHARLES H. LaWALL.

The deterioration or change which so often takes place in artificial foods, is a subject which is of vital importance, not only to the manufacturer who prepares the food and puts it upon the market, but also to the consumer who purchases it.

The druggist who keeps it in stock is an interested party as well as the physician who recommends its use.

In view of the fact that there are so many persons concerned in the matter it is strange that little or nothing has been published relative to a matter of such widespread importance, but the fact remains that all of the literature on the subject is fragmentary and confined almost exclusively to technical works with which the average pharmacist or physician is unfamiliar.

The following paper is offered with the hope that a proper understanding of the principles involved will result in the instituting of such precautionary measures as will be found necessary to prevent the likelihood or possibility of such change taking place.

To intelligently comprehend the subject, some consideration must be given primarily to the ingredients and constituents of the various artificial foods.

The constituents, taken collectively may be divided into three general classes, i. e.:

- (1) Fats.
- (2) Proteids.
- (3) Carbohydrates.

These may be still further subdivided according to their origin, whether it be animal or vegetable; the carbohydrates may be soluble or insoluble, that is, they may consist of sugars or dextrans, or they may belong to the group of starches.

The ingredients furnishing these constituents may be of the following:

Dried milk, flours or ground cereals sugars or dextrans, starches desiccated eggs or meat extracts.

The deterioration may be due to chemical changes involving one or more of these constituents or may be due to physical alterations brought about in one of several ways.

The principal causes involving chemical change may be divided into three classes, i. e.:

- (1) Oxidation of the fatty matter resulting in what is commonly known as rancidity.
- (2) Fermentative changes which generally affect the carbohydrates.
- (3) Putrefactive changes, which involve the proteid or albuminous matter.

The oxidation of the fatty matter is the only one of these changes that can possibly take place in the dry product, as both putrefaction and fermentation require the presence of a certain amount of moisture for their accomplishment.

This oxidation, as it is called, may be of bacterial origin, or it may be due simply to the action of the oxygen in the atmosphere. The latter supposition is borne out by the fact that this change occurs in dry material (or material containing less than 5 per cent. of moisture), is favored by access of air and retarded by protection from the atmosphere.

"Thorpe's Dictionary of Chemistry" says concerning the stability of fixed oils and fats: "If air be excluded the fixed oils may be preserved unchanged for a lengthened period; when absolutely free from for-

\* American Journal of Pharmacy.

eign matter most of them remain unchanged, but commercial specimens gradually turn rancid. This alteration is generally attributed to the presence of certain foreign matters, such as the cellular substance of the animal or plant from which the oil was extracted; volatile fatty acids are set free. Max Grager considers that rancidity is due to the oxidation of fatty acids and glycerine in presence of traces of water."

Decomposition of this kind is favored by continued exposure to high temperature, such as being placed on a shelf which adjoins a chimney flue.

Fermentative changes and alterations produced by the agency of micro-organisms are of rare occurrence unless the product has become damp, either from being packed in containers which were not thoroughly dried, or by the absorption of moisture from being kept in a damp place, or the packages themselves becoming wet through accident. Where the container is air and moisture-proof these latter causes are eliminated from consideration.

Mould growths will take place in the presence of 10 per cent. of moisture, while bacteria will not flourish in the presence of less than 50 per cent of moisture except in the presence of sugars, when the limit is reached with 30 per cent. of moisture.

When fermentative changes have once set in it is difficult to retard their operation.

There are some species of bacteria that will flourish after having been subjected to a pressure of 600 atmospheres for twenty-four hours and on the other hand many of them will thrive better in the absence of oxygen than when freely exposed to the air. Fermentative changes alter the nature of the product, but seldom evolve any products of a harmful nature.

It is the putrefactive changes which are most to be feared, for they involve the nitrogenous or proteid matter and often produce toxic substances such as ptomaines, or so-called cadaver alkaloids.

The cases in which putrefactive changes have taken place are of rare occurrence, however, on account of the large amount of moisture necessary for their successful accomplishment. Then, too, such alterations are usually accompanied by the production of sulphuretted odorous compounds which give warning of the change which has occurred. The first step in putrefaction is the peptonization of the albuminous matter, after which the liberation of volatile fatty acids and sulphuretted gases takes place and the production of the toxic principles or ptomaines is the last step in the series of changes which take place.

It therefore follows that, if air and moisture be excluded, food products will keep for an indefinite period and this has been borne out by experimental work performed by numerous investigators on the subject.

When the package is not air tight the product should always be kept in a cool, dry place, as this is the safest way to minimize the chances of deterioration occurring.

Another change which often takes place in products of this kind is one which involves purely physical processes and which is applicable also to many other substances kept in the store, such as ground drugs and spices.

This change is produced by the absorption of odorous compounds and subsequent alteration of odor and flavor, either by the close proximity of some volatile body having a powerful odor, or by the standing in an atmosphere surcharged with such odorous compounds. It is a well known fact that most drug stores have a distinctive odor usually of an unpleasant character, and at certain seasons of the year, when naphthalene or "coal tar camphor" as it is termed, is in great demand, some druggists have window displays in which a large amount of the product is heaped up so as to attract attention. As this compound is very volatile and of a peculiar penetrating odor it can easily be seen that when the store is closed up for the night so that there is no ventilation to carry the odor out, every container in the store which is not practically air-tight will be subjected to the influence of this va-

por, and in such cases as the food products, ground spices and many of the ground drugs, enough of the odor is often absorbed to be readily appreciable to the senses for a long time afterward. A retail druggist some time ago was questioned on this subject and in reply said that he had learned this fact after losing two customers who had bought ground spices from him after he had been having a window display of flake naphthalene, and that he now handled the substance only in sealed cartons, and had also taken the trouble to rearrange his drawer stock so that the strongly odorous substances like asafoetida, camphor, etc., were kept away from such substances as ground elm bark, ground spices, etc.

There is not a single druggist in the business today who does not know these facts perfectly well, but many are careless about putting their theoretical knowledge to practical use, and it is only with a view of reminding them of the possible consequences of inattention to such details that the foregoing paper is offered.

---

## SHOP TALK.

---

Say what you may, the druggists learn 'twill always pay to weekly turn to this same column for advices in liberal slices, gay and solemn. The latest tricks to trade pertaining; new ways to "fix" yourself in gaining; the method best for trade extension; the takingest commercial mention; ways to avoid superfluous toil, best keep employed "the midnight oil," instructions how to double sales, to prosper now, while ryal fails; suggestions full of tip and hint as ever you'll behold in print—all these abound (we say it meekly, with bow profound) in Shop Talk weekly.

\* \* \*

With the advent of cold weather Chicago druggists are beginning to get out their Winter trade catchers. One druggist on La Salle street, alive to the sneezing and coughing going on in the community, has tipped over a wheelbarrow in his window, loaded with horsehood drops, and above the wreck he has hung a lot of flannel-lined chest protectors. Another well known druggist is pushing the sale of a line of paper vests, which he asserts are splendid things to keep out the cold. They come in all sizes, for either sex.

---

GLYCEROPHOSPHOROUS ACID AND ITS SALTS have been made the subject of a study by A. and L. Lumiere and F. Persin (Comptes rendus). These investigators succeeded in preparing glycerophosphorous acid by treating a slight excess of glycerine with phosphorus trichloride. The hydrochloric acid is removed from the mixture by means of moist silver oxide, while the excess of glycerine is removed by converting the glycerophosphorous acid into a salt with some base such as lime, and treating with alcohol. The alcohol precipitates the calcium glycerophosphite, while glycerine and calcium chloride remain in solution. The calcium salt occurs as a white crystalline deliquescent powder, and is permanent in aqueous solution and not affected by boiling. Most of the salts of this acid are soluble in water. Free glycerophosphorous acid has not been isolated; it tends to break up when concentrated. It is quickly decomposed at 100° C. when treated with a few drops of hydrochloric acid. The alkaline glycerophosphites are soluble in alcohol while those of lime and barium are insoluble in this solvent.

---

CASCARA OIL has been obtained by distillation from the bark of *Cascara sagrada* by Haensel. It has the characteristic odor of Cascara, and a bitter aromatic taste. It is a semi-solid oil having a strongly acid reaction, and melts at 18.5° to a brown liquid. The specific gravity of the oil is .9175 at 23°. The bark yields about .055 per cent. A trace of essential oil has also been found in *Rhamnus frangula*.

(Special Correspondence).

## FROM THE FRENCH CAPITAL.

Paris, Nov. 6.

All the French schools have now reassembled their pupils after the long vacation, and the various faculties of the University of Paris, including the Superior School of Pharmacy, which is a faculty in all but name, will have reopened their doors by the time these lines are published. I may, therefore, fittingly allude to the new professors at Paris and Montpellier.

**M. Henri Gautier**

came to the Paris school of Pharmacy to fill the chair of toxicology when M. Moissan was appointed professor of inorganic chemistry. He is a pupil of the famous Polytechnic School, and afterward taught physics and chemistry there, and also at the College Ste. Barbe, recently closed. He took his pharmaceutical diploma in 1888. His work on chemistry was reviewed in some American scientific papers seven or eight years ago. Two of his special studies have been the alloyage of metals and the atomic weight of boron. He is a Parisian by birth, and is thirty-nine years of age.

When Prof. Moissan finally left the School of Pharmacy, M. Gautier succeeded him as professor of mineral (inorganic) chemistry, and the chair of toxicology was taken by

**M. Auguste Béhal**

who is three years his senior in age, and is a native of

M. BEHAL.

Lens. M. Béhal's pharmaceutical diploma is dated 1886, the year in which he became chief pharmacist in a Parisian hospital. He took his Sc. D. two years later, and qualified for an assistant professorship in 1899. A year later he went to Roumania on a scientific mission (study of the petroleum wells of that country). His is a well known face at the Paris Society of Pharmacy and the Society of Chemistry, having acted as secretary to both these bodies, and he is also a

member of the Society of Therapeutics. He acted for a short time as director of the Central Pharmacy of the Parisian hospitals after M. Bourgoin's death, in 1897. He lectured on "Organic Chemistry" at the Paris Faculty of Sciences from 1897 till this year, and has written a treatise of 2,000 pages on "Organic Chemistry According to Modern Theories." He has been thrice "Laureate of the Institute," not always a barren honor, for the Jecker chemistry prize is worth \$2,000 in its entirety.

**M. Louis Planchon.**

the new professor of Materia Medica at Montpellier School of Pharmacy, is a corresponding member of the Philadelphia College of Pharmacy, the British Pharmaceutical Society, etc. His father was Jules Emile Planchon, the famous botanist professor of Montpellier University, who began his brilliant career behind the counter of a drug store. His uncle, Gustave Planchon, was Director of the Paris School of Pharmacy. M. Louis Planchon is not an unworthy descendant of such a family. He has much of the affable presence and winning manners of his

M. PLANCHON.

uncle, and takes a keen interest in the welfare of the profession. His speeches on pharmaceutical education at the International Pharmacy Congress of 1900 raised a warm and interesting discussion, while his efforts to include micrography in the pharmaceutical curriculum, his collection of local plants at the Montpellier exhibition, and many other instances of his all-round energy and willing helpfulness might be instanced. He holds the diplomas of M. D. (1883), Pharmacist (first class 1888, superior 1891), and Sc. D. (1900). His scientific publications, one need hardly say, mostly bear on vegetable materia medica or on botanical subjects.

The specialty of

**M. Fernand Jadin,**

the new professor of pharmacy at Montpellier, lies somewhat in the same direction, but he has published articles and pamphlets on many various subjects, from vine and sugar-cane culture to the necessity of bacteriology classes in pharmacy schools. He was one of the vice-presidents of the 1900 International Pharmacy Congress, though only thirty-six years of age at that time. He took his pharmacy degree in 1888, his Sc. D. this year, and has worked his way up at the Montpellier University (Faculty of Sciences and School of Pharmacy) through the various grades of preparator, laboratory teacher and assistant professor. He taught hydrology and mineralogy for four years, and his "Summary" of these sciences has been published as one of the series of Standard volumes, known as the "Pharmaceutical Student's Library." Since the death of Prof. Gay, M. Jadin is scientific editor of the well-known pharmaceutical monthly, "The Bulletin du Sud-Est." He is a native of Mauritius, and was sent on a scientific mission to his native isles in 1891.

**Honors for Pharmacists.**

The violet rosette of "Officer of Public Instruction" has been conferred on Professors Béhal, Planchon and Gautier, above mentioned; also on Professor Klobb, of the Nancy School of Pharmacy; M. Sigalas, of Bordeaux "Mixed Faculty," and Professor Verne, the well known pharmacist of Grenoble, whose interesting notes on the "Culture of Cinchona" (read at the International Pharmacy Congress of 1900) were recently made in the Era.

The ribbon of "Officer of the Academy" has been awarded to M. Fortuné, of Béziers, one of the leaders of pharmacy in the south of France; Professor Moureu, of the Paris School of Pharmacy, and M. Charles Lord, the Paris correspondent of the "Chemist and Druggist," in the latter case for "distinguished literary services." This last award is particularly flattering, as the red, green or violet ribbon, if it is freely distributed among the French official classes, is most sparingly awarded to foreigners.

**M. Berthelot's Scientific Jubilee**

takes place this year, for it was in 1851 that the veteran savant entered the College de France as preparator to Balard, the chemist (who, by the way, was a drug clerk at the début of his career). M. Berthelot's pupils and friends—their name is "legion"—have decided to present him with an artistic "plaque." On one side of the plate of metal is the savant's profile, on the other symbolic figures of "Truth" and "Patriotism," standing on either side of the table where he works. M. Riche, honorary professor of the Paris School of Pharmacy, has had a "plaque" struck in his honor by the French Mint, where he still occupies the post of chief chemist. (I should, perhaps, explain that these plaques are similar to medals, but rectangular in shape, whereas a medal is necessarily circular).

**Lady Pharmacists in Paris.**

As a cablegram announcing the "opening of a splendid, up-to-date drug store in Paris, by Miss Imogen Wallack," an American lady, has been reproduced and commented upon by some of the American journals of pharmacy, it may be as well to mention that no one over here seems to know anything about

M. FERNAND JADIN.

the matter. To any one who knows something of French pharmacy, the fact of a lady pharmacist (even a French woman) running a retail pharmacy in Paris, important enough to "keep six male assistants busy," would seem, to put it mildly, improbable. As a matter of fact, I cannot find that any Miss Wallack has been inscribed on the books of the Paris School of Pharmacy, and no American lady pharmacist has yet opened shop here. It is true that a new pharmacy, "sumptuously installed in modern style, with gay furnishings," has just been opened by a lady in the Rue Maubeuge, but Mademoiselle Diamantberger is not of transatlantic origin. She is a student of the Paris school, and keeps one male assistant, but was herself sitting at the receipt of custom when I called. There are, therefore, three lady pharmacists in Paris now, and though I believe they will slowly become more numerous, I do not fancy that in this country the male pharmacist will ever be supplanted by the fairer sex. This with all due deference to the French woman's business abilities and the thorough capability of those already established.

#### A Pharmacists' Congress in Corsica

is a rare enough event to be worth chronicling. The fact is that the French Association for the Advancement of Science held their 1901 session on the romantic isle where the great Napoleon first saw the light, and the Southeastern Federation of Pharmacists thought the opportunity an excellent one to look up their insular colleagues.

The Corsican pharmacists received their continental visitors hospitably, and some charming excursions were organized to picturesque spots. Professors Jadin and Planchon, of Montpellier, were among the visitors, and at the meetings various subjects of professional interest were discussed—the pharmaceutical education question, the cutting of patents, the inspection of pharmacies, pension schemes, etc. On their return to the mainland, the Federation party called at Nice, where the local pharmacists were likewise convened, to exchange views on subjects interesting the profession, after which they dispersed to their various homes. Some found the way home led past Monte Carlo. The fare from Nice is only a quarter or so, but it turned out an expensive journey. The outing was, however, on the whole, pleasant and successful, and well worth risking the stormy Mediterranean Sea passage.

#### Telæphorus.

We all know Esculapius, god of healing, and the

fair goddess Hygiea, patroness of pharmacy. But Telæphorus, god of convalescence, is a less familiar figure. M. Clermont Ganneau has found his portrait on a golden plaque, near Sidon. Wrapped in a mantle, with a hood over his head, the figure of the youthful god is a novel and picturesque one, which may be recommended to the architects and decorators of hospitals, dispensaries, and the like, or even to the designers of covers of medical formulas and professional diplomas.

## BUSINESS RELATIONS OF DOCTOR AND DRUGGIST\*.

By JOSEPH HELFMAN.

In order to do any sort of justice to the subject which brings me here—"The Business Relations of Doctor and Druggist"—it will be necessary for you to project yourselves into the future, to assume that you have completed your work in this college, that you are all graduates, and all face to face with the most important, the most practical and the most vital questions that can possibly confront you. Having gotten your education, what are you going to do with it? What use will you make of it? How and where will you apply it in a practical way? How will you get business with it? In short, are you to regard your education as an intellectual luxury, as a species of fancy accomplishment, like the speaking of French or the ability to play the piano or are you to regard it as a truly practical implement to be made useful in your professional and financial success? When you get into business for yourself you can't wait for custom and patronage to come to you—only an imbecile does that; how, then, will you go after it and dig it up?

It is my deep conviction, and I hope you share it, that the pharmacist is and will for generations remain a mixture of tradesmen and professional man. He is a sort of professional half-and-half—a kind of professional amphibian. To be successful he must be equally at home in two elements—capable of swimming in the waters of professional life, and at the same time capable of making his way on the cold, hard, dry lands of commercial competition. To a certain extent, the pharmacist, or let us say simply the druggist, is just as much a member of a learned and liberal profession as is the physician or the lawyer or the analytical chemist. He is a professional man every time that he tests a chemical or assays a pharmaceutical preparation, every time that he compounds a prescription, every time that he performs an analysis, every time that he uses his knowledge of the toxic materia medica in dispensing a powerful remedy, every time that he applies the scientific knowledge which you have here acquired. To some of you I dare say this side of your training appeals so powerfully that you will endeavor to cultivate it altogether in your life work. Some of you, profiting by your knowledge of pharmaceutical chemistry, will seek to enter the manufacturing and chemical laboratories as analytical chemists. Then your work will be purely professional. Some of the members of these classes will endeavor to find employment as traveling agents or representatives, applying their scientific knowledge to the task of introducing and selling goods. In that case the work will be principally commercial. A few of you may drift into the job of foreman, directing the manufacturing operations of some extract department, or pill, or elixir or tablet department. In that event your work will be half professional and half executive or commercial. Others among you may teach. For some of you a mournful destiny may reserve the unhappy fate of a pharmaceutical editor. But the majority of you, I take it, will follow the drug business, first as clerks, later on, I hope, as proprietors on your own hook. Now, it is only to that majority that my message is addressed. To those among you who in-

\*An address delivered before the Massachusetts College of Pharmacy, October, 16, 1901. (New England Druggist).

tend to teach or write or practice analytical chemistry my words may be, if not without meaning, certainly without benefit.

Assuming, then, that the majority of you are going into the drug business and, if you are wise, into the drug business as it is conducted not in the large cities, but rather in those of moderate size or in the smaller towns, it must be plain to you that fully half and more of your time and attention will be claimed by the regular ordinary duties of retail business life. That means that certain

#### Important Business Arts

you will have to cultivate and master, whether you work for yourself or for others. There is the immensely important art of buying goods. How is the druggist going to buy intelligently unless he not only studies the market but knows almost to a dot what he has in stock—unless he takes a regular inventory and keeps a careful record which enables him to see at a glance by referring to a book or a card system how much he has bought of each article, the cost, the freight, the sales or output, the margin of profit? Those of you who have worked behind the counter know how seldom the druggist is a scientific or systematic buyer, and how often his hit-or-miss, happy-go-lucky methods of replenishing stock are calculated to make an up-to-date business man tear his hair!

There is the art of salesmanship. You can't learn it in any college—you've got to master it behind the counter. To read faces, to judge human nature, to command one's temper and one's tongue, to possess the fullest knowledge of one's goods, to persevere without boring or irritating one's customer, to persuade the reluctant purchaser without misrepresenting, to exhibit always that politeness to young and old, poor and rich, which is the best of investments and pays the biggest dividends—these things the druggist must know as well as his Pharmacopœia.

There is the art of advertising. The drug business is like any other retail occupation; much can be done for it by a judicious use of printer's ink. The advertisement in the paper, the skillfully written circular, the convincing letter the bulletin board outside the door, the clever card—all these things may be erroneously regarded as beneath the dignity of college men; but I assure you that they can all be made to pull a powerful stroke for you, if you will use them diligently.

But nowhere does the average druggist show his weakness more painfully than in the important art of bookkeeping. How many druggists in your acquaintance are able to keep a set of double entry books? How many record faithfully every sale made on credit? Even in this first year of the twentieth century are not fully half of the retail druggists of the country unprovided with cash registers, hence unable to tell what the daily cash sales may be? Think of the proportion of druggists who are unbusinesslike and slovenly in their collections. Only the other day an expert credit man, who has spent pretty much his whole life in the drug business, expressed to me the deliberate opinion that half the failures and bankruptcies in the retail drug trade may be attributed to reckless credits and faulty collections.

Now, these things which are taught in the school of life are just as necessary to your success in the drug business as the sciences and arts which are taught you in this college. Do you suppose, gentlemen, that because you are good chemists you can afford to be poor salesmen? Not if you mean to succeed in the drug business. Do you flatter yourselves that because you can make every pharmacopœial preparation you are excused from the duty of buying stock as becomes a keen, shrewd, long-headed merchant? Not if you mean to succeed in the drug business! Will your skill as compounders and dispensers of difficult prescriptions exempt you from mastering the art of advertising and the art of bookkeeping—from becoming, in short, a wide-awake business man? Not if you mean to succeed in the drug business! The truth is—

and I cannot repeat it too earnestly or forcibly—that with all the useful and valuable knowledge you have here acquired you must combine the methods and faculties of the business man, if you expect to work out a success. And why should you protest or consider my unpalatable facts a hardship? The lawyer the doctor, the dentist, all professional and business men are in the same boat with you. They must be able to do their work and at the same time able to get work to do. To secure clients or patients or customers is in every occupation harder than to please them after you have gotten them. To win the business is more difficult than to attend to it. The one gift is not less needful than the other. The successful man unites them both. The young pharmacist may indeed disregard the commercial side of his calling if he choose; he may lull himself to sleep in a fool's paradise of professionalism; but, if he does, there waits for him a bitter awakening in a purgatory of failure and disappointment.

Other things being equal, you will properly prefer and seek out the work which brings into play the skill and learning gained at college. If a \$2,000 education is sometimes wasted on a \$20 boy, it is also true that a young man who is wise enough and ambitious enough to crave and get a college education will want to use it and apply it after he gets it. Now, in the past, that kind of employment used to come unsought in the form of

#### Physician's Prescriptions.

Formerly competition was not so keen, and doctors, with few exceptions, wrote prescriptions, of which the new druggist especially if a college man was pretty sure to get his share at profitable prices. With the prescription came the doctor's orders for the medicines used in his emergency case, for his office supplies, for his instruments, for his ether and chloroform and vaccine virus antiseptics. With the prescriptions came likewise the family custom—the purchase of the dozen and one things used in the household, especially for the children—purchases running as high as \$100 and \$125 a year from families of average size and moderate means. But all this business with medical men, these various benefits, direct and indirect, are no longer to be had by whistling for them—you have got to go gunning for them. To-day there is, unfortunately for pharmacy, a large body of doctors who dispense their own medicine and write few prescriptions, their trade being regularly solicited by the so-called "physician supply houses." These houses send their traveling men out among the dispensing doctors, secure their orders for tablets, fluid extracts in bulk, alcohol, surgical dressings, antiseptics, instruments, electrical apparatus, and even their books. Now, if you are in the drug business and want the doctor's prescriptions as well as his orders for office and dispensing supplies, you have got to study the methods of those who have made that work a success. The greatest experts, the real masters in the art of gaining the support of the medical profession, are the manufacturing pharmacists, and it is to them you must go to school if you want the doctor's patronage. Think of the hundreds of traveling men for the various houses who penetrate every nook and corner of the land! They visit every town, village and hamlet where there is a doctor or a druggist. They leave samples of new chemicals or even of new combinations which are only pharmaceutical mixtures of ancient and well known drugs, they distribute literature. After arousing the doctor's interest, they arrange for stock with his favorite druggist—stock whence his prescriptions may be filled. When the traveler leaves the scene, both the doctor and the druggist receive a polite letter, giving additional information and keeping the house in the foreground. Now, you know and I know that these methods cost barrels of money and are often beyond the druggist's reach. But not always. Some of the work done by manufacturers and by the supply houses the druggist might imitate. Hundreds of druggists are doing it.

### They Canvass the Doctors

of their neighborhood or district regularly, systematically, persistently. They go in person to the physician and solicit his support. If he writes prescriptions, they make an earnest effort to secure them. I know case after case in which the druggist has made a success by going to the doctor and saying something like this: "Doctor, you write a good many prescriptions; I am in a position to fill them skilfully and faithfully. In the first place, I understand my business. I am a college man, a graduate of the Massachusetts College of Pharmacy. I believe in pure drugs and chemicals; I test what I buy and I buy standard goods. My stock will bear inspection. I shall be glad to have you examine it noting especially what I keep in my dispensing case. On your prescriptions there will be no substitution—I don't believe in it. There will be no repeating of prescriptions against your wishes. Counter-prescribing is out of my line, and I am not ambitious to shine as a specialist in the treatment of unmentionable diseases. I sell patent medicines when they are called for. I make a few preparations of my own—household remedies, the sale of which is no detriment to the profession. But I want to expand and develop the scientific and professional side of my work."

On detail work of this kind among medical men I lay vastly more stress than on your using your knowledge to manufacture your own goods. It is not that I wish to discourage any man who can economize by making the things which others buy from choice or compulsion—not at all; especially, while you are working for others, a part of your capital will be your ability to convince your employer that you can save money for him by manufacturing expensive articles. But good judgment is needed. You can't afford to forget that among medical men standard brands inspire confidence; economy, though a most important element of success, may be bought at too big a price; and while one druggist by toiling in the laboratory saves a few dollars, his rival may be scouring the country for business and making hundreds. I pin my faith to the methods which will so increase a man's trade that he won't have time and can't afford to make his own goods. First, last and all the time, "push" and drive your business; get the prescriptions; win over the doctors; then, when all that is accomplished, manufacture in your own laboratory whatever it may pay you to make. But don't begin at the wrong end.

Young men are often prone to bewail their lack of opportunity, but I ask you: Could you wish a better chance to prove your value to an employer than that which detail work among the medical men will afford you? If your regular duty leaves you any spare time, use it

### In Your Employer's Interest

among the doctors; increase his business; show that you have made money for him; prove it by the growth in the number of his prescriptions. An employer is sometimes a selfish brute, but even then he is apt to see his own interest in fairly compensating a valuable man. Remember, too, that your outside work among the doctors will enable you to cultivate your talents for detail canvass and for selling goods. If there be any salesmanship in you that experience will bring it out; and in the drug business good salesmen never have to go begging for positions. Of all salaried men, they are the most independent, and the most sought after.

To my certain knowledge, many druggists find it profitable to keep informed of the new remedies introduced by the best chemical and pharmaceutical houses—houses which do not cater to the public. Instead of helping distribute circulars on patent medicines sold at cut prices, the wide-awake druggist is glad to deliver samples and printed matter to his medical patrons when the remedy is one of genuine scientific interest and comes properly accredited. You do yourself as well as the doctor a service when you put him in the way of using a new preparation of real value.

On like grounds the pharmacist should study regularly the pages of the leading medical journals, noting what the best houses are advertising and what the medical authorities are recommending. If the manufacturer finds it profitable to take every medical journal published in English, German and French, will it not pay you to read at least a single medical periodical?

How about the doctors who do not write prescriptions at all but dispense their own medicines, chiefly in the forms of

### Fluids and Tablets?

Sell them—if possible sell them all the goods they use. Don't quarrel with the dispensing doctor—sell him. He can get along without you better than you can without him. If he chooses to dispense, that is his privilege in a free country, and you had better sell him his tablets rather than let his business go to a distant supply house or to those manufacturers who cater especially to the dispensing doctors and thrive and prosper on the ill-will they engender between doctor and druggist. The unfriendly relations often existing between the trade and the profession have been the opportunity of houses who don't care a rap for the druggist. Don't lend yourself to such folly. Make your own pharmacy the physicians' supply house of your locality and help hasten the day when every wide-awake and enterprising druggist will conduct the physicians' supply depot of his locality and again enjoy a business which once belonged to him. The druggist who is a good buyer can afford to sell the dispensing doctors for cash at the prices charged by the supply houses. This saves the doctor freight charges and trouble, and enables him to buy in small parcels; he doesn't have to carry a big stock. You must ask: "How could I afford to compete with the distributor or manufacturer who sells the doctors at trade rates, at prices as low as my own cost?" I answer that if you mean to go gunning for the business of the dispensing doctors, you must, at first, be satisfied with a small margin of profit, and, in the second place, you will have no trouble in securing special discounts if you buy the larger quantities. For example there are manufacturers who give the druggist a special discount on a single purchase of a stipulated quantity. This enables you to make from 10 to 25 per cent. on your sales to medical men, even where it is necessary to allow the ordinary trade rates. But it is not so much the direct profit as the indirect benefit that I would emphasize. By selling the dispensing doctor his chemical and pharmaceutical preparations, you get his miscellaneous trade, which is often considerable; and gradually he will send you more prescriptions, for it is certainly a fact that even dispensing doctors write a good many prescriptions when they are friendly to the druggist.

In your relations with the medical profession, there are also open to you forms of dignified, scientific and profitable labor which the graduates of this school should be eager to embrace. Your excellent training should especially qualify you to assist the physician with

### Diagnostic, Microscopic and Analytical Work

of many kinds. Consider the important field of urinary analysis. What is to prevent your demonstrating to medical men that you are equal to the accurate examination of normal and pathological urine to qualitative and quantitative tests, or that you are an expert in the use of the microscope? To men of your training such work ought to be easy and simple. It is an old, old story among the German apothecaries, and in the United States urinary and general analysis for the physician is enabling many an ambitious pharmacist to cultivate a "side line" far more congenial and lucrative than the milk shake or the tooth brush. Not satisfied with mere ability to apply the simple tests for albumen and sugar, they have mastered quantitative analysis the microscopical examination of urinary sediments, the requirements of blood and pus determinations, the methods of establishing the presence

of pathogenic bacteria in the suspected sputum of the tuberculous, or the presence of the germs of pneumonia, grippé, tetanus or diphtheria in the secretions; they make diagnosis of streptococic infection. To men who have had your drill in the use of the microscope it is no great trick to learn how to perform the Widal test for typhoid fever or to establish the presence of gonococci or spermatozoa in suspected specimens. All or most of these things you have here acquired. I earnestly hope you do not mean to abandon them when you quit college. The work I have outlined is easily within the reach and competence of any educated man who knows how to use a microscope. The universal testimony is that such work begets a friendly and profitable intimacy with the physicians; raises your professional reputation, directly augments your income, multiplies your prescriptions, heightens the public respect for your work, and feeds indirectly every channel, which bears revenue into your business. I tell you, gentlemen, the doctors in some localities are fairly begging for just such facilities. In Detroit they are constantly urging the men in our biological department to assist them in microscopical diagnosis, but we have our own work to look after. One Detroit surgeon pays out to my knowledge \$50 a month for laboratory work which he has neither the time nor the appliances to perform. Do you wish to enjoy a friendly and professional footing with the medical practitioners? Here lie before you opportunities beyond all price, and to the graduate of this college there is no possible excuse for failing to embrace them. "I called the attention of the physicians in our city," states Mr. G. W. Parisen before the American Pharmaceutical Association, "and those within a radius of thirty miles, to the fact that I had added urinalysis to my other work, and was prepared at all times to give it my personal attention. I enclosed a schedule of prices and a sheet showing the different tests applied and the nature of my reports." The results, Mr. Parisen correctly adds, cannot be measured by the cash returns, satisfactory as they are; there is the direct contact with the respect of physician and patient; there is likewise the almost sure prospect of an expanding analytical practice along other lines. Perhaps the most striking testimony on these matters is that of a highly successful and unassuming pharmacist, Mr. F. W. E. Stedem of Philadelphia, whose excellent paper at the Richmond meeting of the American Pharmaceutical Association I warmly commend to your careful perusal. In seventeen years of practice, Mr. Stedem has made it his rule to examine any and all kinds of diagnostic material which the physician might submit, sputa, blood, pus, morbid growths and the like, including 30,000 specimens of urine, an average of about ten a day. What has been the effect on his prescription work? In 1884, his first year after buying an established business, Mr. Stedem dispensed 2,200 prescriptions; fifteen years later, in 1899, the number was 15,000—over eight times as many! In 1900 there was the usual increase.

I should only be carrying coals to Newcastle if I were to set forth the appliances and books necessary for such work. There is no end of literature available in the form of papers and text-books. An excellent summary is given by Mr. Stedem. But the point I wish to emphasize is that if you want to assist the physician in general and urinary analysis, in microscopical diagnosis, in the simpler operations of bacteriology, you cannot whistle for his patronage; you must seek and solicit it, and keep hammering away until you get it. Personal visits and letters and circulars and reminders of every self-respecting kind are here in order.

Should the doctor be required to pay for such work? Always, in my judgment, where the patient is not so poor as to be unable to reimburse the doctor. I believe in a regular, moderate, fixed charge, suspending it only where the patient is destitute. But so desirable is the work that every beginner should welcome it, even if much of it must at the outset be done for nothing. That will soon regulate itself.

Having sought to point out ways and means of making your education contribute to your financial success, whether as proprietor or clerk, it only remains for me to express the conviction that the

#### Intelligence of the Pharmacist

may be measured by the size of his library and the number of the journals which he studies. They offer every useful, illuminating idea that the editors can buy, borrow or originate; and it is to their pages that the ambitious graduate will turn for light when he ponders the connection between his education and his bread and butter.

"Having invested my time and my capital in a college education, what shall I do with it? How and where shall I use it? How shall I make it a source of pecuniary and professional success? How shall I prove that a college course is more than a mere intellectual luxury—that it is a practical and powerful weapon in the battle of life?" These are the important questions—questions as important to the school as to you personally—which I have sought to answer. That my answers are open to some objections—that a number of men have tried my methods and failed—of that I am aware. But many others have succeeded, and both professional and commercial methods are to be judged by their successes, not by their failures. Some men have a talent for failure which amounts to downright genius. Essaying the best methods, some men fail; employing the worst, others succeed; there must be the man behind the method. At all events, if you deny that the only means of employing the scientific knowledge of the graduate must be sought in an alliance with medical men; if you dispute the wisdom of an energetic, personal solicitation of the doctor's patronage, including his prescriptions and his office and dispensing supplies; if you question the policy of co-operating with the manufacturing chemist and pharmacist in the introduction of new remedies of real and solid merit; if you depreciate and pooh-poooh the lessons taught you by the houses who have grown great and rich through detail work; if you hold that there is no profit in chemical analysis or microscopical diagnosis for the profession; if you doubt the benefit of asserting which you lay claim—if you reject all these things, pray tell me what other solution of the problem you have to offer?—in what other way will you put your education to practical use? Devise your own methods if you have the wit, but use every day and every hour the precious knowledge here acquired. Use it, use it—and wring out of it your professional success, for it is better to be dead than to be a failure; there is only one thing worse—the counterfeiter and short-lived success of base and dishonest methods; and what is that but the worst form of failure?

#### THE FORMATION OF ESTERS IN PLANTS.

—Studies of the natural processes involved in the formation of esters in living plants, by E. Charabot and A. Hebert (Bull. Soc. Chim.), point to the conclusion that this is effected by the direct action of the acids upon the alcohols in the presence of a dehydrating agent, probably a ferment. Direct esterification of linalool and acetic acid by simple contact under ordinary conditions was found to be very slow, only 1 per cent. of the total alcohol being esterified in twenty-four days, while in *Lavandula vera* 8 per cent. was found to be naturally esterified in fifteen days. This proves that some agent in the plant accelerates the process of combination.

PHENACYLPHENACETIN is a new phenacetin compound prepared by treating the sodium compound of phenacetin with bromoaceto-phenone. It is obtained in the form of crystals which melt at 87°, and is easily soluble in alcohol and glycerine, but is insoluble in water. This compound has been given the formula  $C_{12}H_{15}C_2H_3N(C_2H_5O).CH_2CO_2CH_3$ . It is quite harmless in its effects, and has a powerful antipyretic and hypnotic action.

CITRON OIL should, according to H. E. Burgess (Analyst), possess the following characters: Specific gravity at 15° C., .8513; refractive index at 20° C., 1.475; optical rotation in 100 mm. tube, plus 85° and 30 minutes. A specimen of pure citron oil gave 6.2 and 5.8 per cent. of citral by the bisulphite absorption test, and 5.7 per cent. by the hydroxylamine method. The deposit from the oil dissolved in chloroform, deposited crystals, which, after purification by re-crystallization from alcohol, melted at 145° C. This body has been given the formula  $C_{15}H_{24}O_6$ . The physical constants of the materials sold as citron oil are said to vary widely. In France and Sicily lemon oil is known as "Esence de Citron," while true citron oil is called "Esence de Cedrat." Most of the "citron" oil sent to England has been found to consist of a mixture of lemon and verbena oils, with sometimes a trace of rose otto as a sweetening agent.

ACIDS IN PLANTS.—The amount of acid present in various parts of living plants has been studied by Berthelot and Andre (Comptes rendus). It was found that the intensity of the acid reaction is not a certain test for the quantity of acid present, the amount present as neutral salt being very variable. The reaction of the sap of plants is usually acid. M. Astruc has found that the maximum amount of acid is always found in the youngest part of the plant, it having some relation to the vigor of growth and the activity of cell division. The acidity of the stem increases toward the apex. The leaves contain more acid than the stem, and the largest proportion is near the zone of growth. The acidity of the flower is greatest while in the bud.

PHOSPHORUS IN PLANTS.—According to Iwanoff (Pringsheim's Jahrbuch), phosphorus compounds are widely distributed through the various plant tissues. The element is always found in the colorless parenchyma of the bark and pith of both the stem and branches. In the mesophyll and epidermis of leaves it occurs only in traces, phosphorus being found in leaves almost exclusively in the vascular bundles or their sheaths. This element is found in ripe seeds but in comparatively small quantities; also in all parts of the flower except the pollen. Plants obtain phosphorus from organic compounds of this element in the soil. These compounds are converted into phosphates by the plants, the assimilation of the phosphates taking place chiefly in the leaves.

UROL, a compound of urea and quinic acid, is, according to Schutz and Dallmann (Apot. Zeit.), prepared as follows: One molecular weight of quinic acid and two molecular weights of urea are dissolved in water or dilute alcohol, and the resulting solutions mixed. The temperature of the mixture should not be allowed to rise above 65 or 70 degrees, for at higher temperatures urea is decomposed into carbon dioxide and ammonia. The solution is then evaporated by means of reduced pressure of 50 or 55 degrees. Upon cooling, the salt of urea and quinic acid crystallizes out in the form of large prismatic crystals which resemble those of quinic acid. The compound has an acid reaction, and is readily soluble in water and alcohol.

TESTING LICORICE-JUICE.—The following method for the estimation of glycyrrhizic acid in licorice-juice has been proposed by Stoeder: Five grams of the juice are dissolved in 50 Cc. of water, with the addition of 2 Cc. of ammonia, and the liquid is made up to 100 Cc. with alcohol; 50 Cc. of the liquid is filtered, and the filtrate evaporated to 12 Cc. After cooling, this is acidulated with 6 Cc. of dilute hydrochloric acid. The precipitate which separates is collected upon a filter, washed with 6 Cc. of water, dissolved in ammonia, and dried and weighed.

## QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

### Cold Cream.

(Clerk.) The official cold cream makes a very pleasant and cooling application for raw and irritated surfaces. The tendency to become rancid when long kept cannot very well be overcome without materially altering the formula. Various modifications to attain this object have been proposed, as the employment of glycerin and increasing the quantity of spermaceti (see last edition United States Dispensary) lessening the quantity of rose water, etc., etc. The soft consistency so much desired is due to the introduction of a comparatively large proportion of water, and the present official process has been criticised because it does not contain so large an amount of this important ingredient as that of the Pharmacopoeia of 1880. Many formulas for cold cream of various kinds (the term is a very elastic one) have been published in previous volumes of the Era. Here are two from Dieterich, which are said to keep very well; and to be quite satisfactory as specialties, when suitably put up:

|                      |                   |
|----------------------|-------------------|
| (1) White wax        | .....14 ounces    |
| Spermaceti           | .....1½ ounces    |
| White petrolatum     | .....4 ounces     |
| Expressed oil almond | .....9 fl. ounces |
| Powdered borax       | .....1½ drams     |
| Water                | .....4 fl. ounces |
| Coumarin             | .....½ grain      |
| Oil rhodium          | .....10 minims    |
| Oil bergamot         | .....10 minims    |
| Oil rose geranium    | .....3 drops      |
| Oil rosewood         | .....2 drops      |
| Oil orris, liquid    | .....1 drop       |
| Tincture civet       | .....5 minims     |

Melt the wax and spermaceti, add the almond oil and petrolatum, and when melted incorporate the water in which the borax has been previously dissolved; finally add the coumarin, oils, and tincture and mix well.

|                |                   |
|----------------|-------------------|
| (2) Petrolatum | .....12 ounces    |
| Powdered soap  | .....108 grains   |
| Glycerin       | .....6 fl. drams  |
| Water          | .....3 fl. ounces |
| Oil rose       | .....5 drops      |
| Oil neroli     | .....5 drops      |
| Oil bergamot   | .....5 drops      |

Mix the petrolatum and soap, then gradually incorporate the glycerin and water previously mixed, and add the oils.

### Haarlem Oil.

(H. L. H.) There seems to be considerable difference in the preparations sold under this name, as to quality and ingredients used. One of the most common formulas is the following:

|             |               |
|-------------|---------------|
| Linseed oil | .....1 quart  |
| Resin       | .....2 pounds |
| Sulphur     | .....1 pound  |

Boil together over a slow fire, and add 1 pint oil of turpentine and about a dram of water of ammonia; stir well together and bottle.

Hager gives the following:

|                   |              |
|-------------------|--------------|
| Balsam of sulphur | .....1 part  |
| Oil of turpentine | .....3 parts |

The balsam of sulphur and turpentine should be mixed in a glass flask, thoroughly agitated, and should then be digested on the water-bath for a long time, being shaken occasionally. The mixture should be allowed to stand two or three days in a cool place and then decanted. Should the resultant fluid not be

quite clear, about one-half of 1 per cent. of powdered caustic potash may be added, the mixture well shaken, allowed to settle and then decanted.

The same authority also states that the following mixture is dispensed for Haarlem Oil, Dutch Drops, Haarlem Balsam, etc.:

|                                                   |          |
|---------------------------------------------------|----------|
| Sulphurated linseed oil .....                     | 5 parts  |
| Oil of turpentine .....                           | 10 parts |
| Oil of cade, or empyreumatic oil of juniper ..... | 20 parts |

Mix, digest in a moderately warm place and decant. The sulphurated linseed oil and balsam of sulphur are identical and may be made by heating 100 parts of linseed oil to 200° C. in a large iron or earthen dish and then adding gradually in divided portions 16.6 parts of powdered and perfectly dry sulphur, and continuing the heat with stirring until the mixture is of uniform consistence.

A formula from another source is this one:

|                           |          |
|---------------------------|----------|
| Sulphurated oil .....     | 3 pints  |
| Barbadoes petroleum ..... | 1 pint   |
| Crude oil of amber .....  | 1½ pints |
| Oil of turpentine .....   | 8 pints  |
| Linseed oil .....         | 4 pints  |

#### Show Card Ink.

(O. E. H.) Some formulas for bronze ink for show cards may be found in the June 13, 1901, Era, page 648. Here are several more:

|                          |           |
|--------------------------|-----------|
| (1) Pure asphaltum ..... | 16 ounces |
| Venice turpentine .....  | 18 ounces |
| Lampblack .....          | 4 ounces  |
| Spirits turpentine ..... | 2 quarts  |

Dissolve and mix thoroughly.

|                   |                       |
|-------------------|-----------------------|
| (2) Shellac ..... | 2 ounces              |
| Borax .....       | 2 ounces              |
| Acacia .....      | 2 ounces              |
| Water .....       | a sufficient quantity |

Boil the shellac and borax together with sufficient water to effect solution; then add the acacia and sufficient lampblack or other pigment to give the desired color. The thickness of the ink is regulated by the amount of water used.

|                            |           |
|----------------------------|-----------|
| (3) Bleached shellac ..... | 1 ounce   |
| Venice turpentine .....    | ½ ounce   |
| Oil of turpentine .....    | 2½ ounces |

Dissolve by gentle heat and add

Finely powdered indigo .....
 ½ ounce |

Mix.

Any other insoluble coloring matter may be used in place of the indigo—lampblack and vermilion, for example.

Instead of a varnish base, one of diluted water-glass may be used with aniline colors for the tints.

A gloss may be imparted to any ink by the addition of a suitable amount of gum arabic.

#### Prussian Oil.

(W. S. W.) "I should be greatly favored if you will publish the complete prescription for the liniment of which the following are a few of the ingredients: one gallon of German extract of benzoin dissolved in 4 gallons of alcohol; oil of gaultheria, oil of sassafras, oil of eucalyptus, stronger water of ammonia (sp. gr. .880), oil of capsicum, tincture of cantharides, oil of origanum. There are nine or ten substances in all. The formula is supposed to have been originated by Dr. Felix von Niemeyer of Germany. The preparation is manufactured under the name of "Prussian Oil" in this country." An extended search through reference books at our command, including a number of German formularies, fails to disclose any formula answering the above description. It is possible that the name "Prussian oil" has been selected by some enterprising manufacturer for a proprietary specialty, and if such be the case, it is hardly likely that he has taken the pains to publish the formula.

#### Green Soap.

(Ciffic.) We know of no formula in which cocoanut oil is employed. An "olive oil" green soap is prepared according to Harms by the following formula: Green olive oil (Malaga) .....
 1000 Cc. |

Potassium hydroxide (S. F.) .....
 300 grams |

Dissolve 300 grams of the potash in 2000 Cc. of

water and add 500 Cc. of this solution to the oil, contained in a suitable vessel. Place over a moderate fire, stirring until the mixture has thickened sufficiently. Gradually add the remainder of the potash and continue the heat, stirring occasionally until the mixture assumes a transparent gelatinous form. Dissolve the remaining 60 grams of potash in 1000 Cc. of water, add to the mass and evaporate to the proper consistency.

Mr. Harms claims this formula yields a superior product, possessing a fine green color. The yield ranges from 7 to 8 pounds according to concentration and costs about 9 to 10 cents per pound.

#### Cleaning Tarnished Silver.

(D. M. T.) (1) Silver which has become much tarnished may be restored, it is said, by immersion in a warm solution of 1 part potassium cyanide to 8 parts of water. (This mixture is extremely poisonous). Washing well with water and drying will produce a somewhat dead white appearance, which may be quickly changed to a brilliant luster by polishing with a soft leather and rouge.

(2) A fresh concentrated solution of hyposulphite will dissolve at once the coat of sulphide of silver, which is the cause of the blackness produced by mustard, eggs, etc., or anything containing sulphur.

|                              |           |
|------------------------------|-----------|
| (3) Precipitated chalk ..... | 2 ounces  |
| Ammonia water .....          | 2 ounces  |
| Methylated spirit .....      | 3 ounces  |
| Water to .....               | 20 ounces |
| (4) Precipitated chalk ..... | 8 ounces  |
| Spirit turpentine .....      | 2 ounces  |
| Alcohol .....                | 1 ounce   |
| Spirit camphor .....         | ½ ounce   |
| Ammonia water .....          | 2 drams   |

#### Flavoring Extract of Rose.

(J. W.) Here are several formulas from the Era Formulary and elsewhere:

|                           |           |
|---------------------------|-----------|
| (1) Red rose leaves ..... | 1 dram    |
| Oil rose .....            | 2 drams   |
| Alcohol .....             | 2 pints   |
| (2) Oil of rose .....     | 2 drams   |
| Oil rose geranium .....   | 1 dram    |
| Cologne spirit .....      | 64 ounces |
| Warm water .....          | 64 ounces |

Dissolve the oil in the alcohol, shake well, and add the warm water (130° F.) a portion at a time. May be colored pink with cochineal if desired.

|                           |               |
|---------------------------|---------------|
| (3) Red rose petals ..... | ½ ounce       |
| Oil rose .....            | 5 minims      |
| Cologne spirit .....      | 6 fl. ounces  |
| Water .....               | 10 fl. ounces |

Dissolve the oil in the alcohol, add the water and rose petals, macerate for seven days, agitating occasionally, and filter. The amount of oil of rose may be increased, if desired, or the mixture may be fortified by oil of rose geranium. See also this journal July 26, 1900, page 91.

#### Who Makes Water Filling Machines?

(U. V.) wants the name and address of the manufacturer of a small machine for filling medicated waters.

#### Formula Wanted.

(C. S. D.) wants a formula for a "peptonized elixir of beef, milk and gluten." We submit the query to our readers.

THYME OIL has been found, by P. Jeancard and C. Satié (Bull. Soc. Chim.), to vary in phenol value from 5 to 60 per cent. They attribute this variation to improper distillation and mixing of the oil. With steam distillation the last fractions were found to consist practically entirely of phenols, while the first portions are composed mostly of non-phenol bodies. In the distillation of ajowan and lavender oils the last portions of the distillate were also found to be quite different from those first obtained.

## SOME CURIOUS CURES.

## Poulticing the Sword to Heal a Wound Made

By It.

The sea captain who, finding that his medicine chest lacked a supply of the particular mixture referred to in his book of directions as No. 15, made up a dose for a sick sailor by equal portions of No. 7 and No. 8, adopted a method of curing which, in comparison with many an accepted popular notion, ranks as an example of sound scientific reasoning. Few medical students complete their course of training in the hospitals without hearing patients explain how much relief they have experienced from the application of the clinical thermometers under their tongues or their armpits, while at the same time they condemn the medicine given them as worse than useless. The rational person, viewing humanity from his own individual standpoint, proudly asserts that the days of the amulet, the talisman, the charm, and the mystical potion are gone forever before the spread of education and the consequent decay of mediæval superstition; but the rational person would receive a rude shock were he able to see into the secret recesses of different men's minds. It is not necessary to turn to the records of the olden times for instances of quaint superstitions in the matter of cures, albeit a brief research will reveal some curiosities of belief that are as humorous as one could wish. The story of the man with the wooden legs who maintained that his corns gave him incessant trouble until he applied corn plasters to the end of his "timber-toes" may, after all, not be so far-fetched as at first sight appears, for imagination goes a long way in many a case of physical ill as well as in the cure.

But what can be said of a man who, receiving a hurt from a weapon, poultices the weapon and leaves the wound to cure itself? Stupidity can scarcely go further and yet in the seventeenth century the "sympathetic powder" was in great demand as a sure cure for injury received from a weapon. The method of treatment was very simple. The wound had to be closed up and left to itself, while the weapon which inflicted the hurt was copiously poulticed with the powder until the wounded person recovered. For many years the cure held the field against all comers, until some careless apothecary bound up the wound of an injured man, but forgot to poultice the weapon, with the result, astounding at the time, that the man recovered just as rapidly as he would have done had the sword blade been properly swathed in bandages and doctored with powder. The romance of the cure was hopelessly shattered by such an unexpected termination of the foolish apothecary's treatment, and the fame of the "sympathetic powder" faded into oblivion. But as in modern days there seems to be a recrudescence of faith in the curing nostrums of bygone days, a mention of the preparation of this powder may not be out of place. To prepare it, one is told: "Take Roman vitriol six or eight ounces, beat it very small in a mortar, sift it through a fine sieve when the sun enters Leo; keep it in the heat of the sun by day and dry by night, and marvelous cures can be done by it."

A more modern method of extraneous application of prescriptions is that afforded by many a seeker after outdoor relief. "Here is the prescription: rub it on his chest," said a dispensary doctor to a woman whose child was suffering from a chest affection, and a week later the woman returned with a complaint that the treatment had done no good, though she had "well nigh rubbed the skin off and worn the bit of paper to rags." Another patient came back cured and smiling, and told the doctor she would wear the medicine in future as a preventive, so well had it acted as a cure—and she showed him the prescription for a throat lotion he had given her tied around her neck in a handkerchief. This is a parallel to the old-fashioned notion that the fourth book of the Iliad was a certain cure for ægue if applied to the head of the sick man, the underlying idea of the cure apparently being that language of such warmth and grandeur as Homer wrote was enough to cure a chill even when, as lifeless print, it was placed near the brain of man. Surely a graceful tribute to genius, though poor as physic for a sick man; as poor, indeed, as the potatoes and

horse chestnuts which are carried by many sufferers from rheumatism, not only in outlying country districts, but in the very heart of busy latter-day towns and cities.

But it is in the matter of curing whooping-cough that superstition still holds its own. Many are the unfortunate spiders that annually are pinned up in paper sugar-bags over the mantelpiece of nursery and sitting-rooms. As the spider dies, so will the cough pass away, the recognized version of the superstition asserts, and many will add the pleasing information that unless a spider is secluded in such a manner at the outbreak of the disease, the little patient will certainly suffer until May, whether the first whoop is sounded in April or June. A blue bottle with a pin through it is sometimes substituted for the spider, and may also do duty as a sacrifice for the removal of warts—but in curing warts there are enough superstitious practices to fill a book.

Confidence—extreme, explicit confidence—Is the first essential on the part of the patient who submits himself to the tender mercies of the faith-healer, whether the healing is performed by means of a spider, by anointing, or merely by the paying over of money for so intangible a method of treatment as the mental exercise of the modern Christian Scientists. This may, perhaps, account for the significant fact that investigators of the special cures alleged to have been effected by cure-mongers usually find 70 per cent. of the persons cured have died almost as soon as the cures were completed. All cure-mongers are not so explicit as the inventors of the anodyne necklace, which was claimed to be an infallible remedy for the troubles of teething in infants, and was a harmless string of beads made from the roots of the henbane.

Neither do the majority of them compare with the advertiser who boldly announced that as jaundice was caused by little yellow flies flying about in the system, he cured his patients by giving them spiders' eggs to swallow, trusting to the heat of the body to hatch the eggs, with the result that the spiders spun their webs, caught and killed the flies and cured the jaundice, leaving only the cobwebs behind, a slight inconvenience which could be cured by a visit to the seaside, when the breezes would blow them away. There may have been more of jest than serious intent in the announcement, but still, at this modern period, sick children are carried fasting, on Sunday mornings, into three parishes, in some country districts; spiders' eggs are proclaimed by village wiseacres to be an infallible cure for jaundice; the hind legs of a toad, worn around the neck in a silk bag, are regarded as a panacea for all evils, and the best disinfectant and anti-contagion that the world can produce is, in the mind of many an old village wise woman, a metal-headed cane (gold-headed for preference) that has been carried on his professional rounds by a doctor.—London Globe.

—The Montana Board of Pharmacy granted certificates of registration to practice pharmacy to the following persons at its meeting held last month: E. Lobendanz, F. H. Poetz, A. E. Jensen, Great Falls; C. B. Marsden, Falls-spell; J. H. Suydam, A. F. Toler, Butte; T. H. Hanberøge, Victor; C. MacFarland and Ray Skillman, Big Timber. The next meeting will be held in Butte in April, 1902.

## OUR NEW DEPARTMENT.

The advertisement appearing in the present issue under the title "Drug Store Problems" should interest all pharmacists who wish to keep in touch with the development of their calling. In this advertisement the Era announces the inauguration of a new department beginning with the issue of January 2, 1902. A series of problems will be presented for solution, cash prizes amounting to \$75 each month being offered for the best answers sent in by subscribers. The problems are designed to be of especial educational value and will consist of questions such as the druggist may, at any time, encounter in his daily practice. There are no doubt many who have not completely lost the enthusiasm of their college days, and who will find the solution of these problems a pleasant exercise for their powers of thought. To the young pharmacist this department offers not only a means for increasing his knowledge of the science of his profession, but also gives him an opportunity of adding to his supply of pocket money.

# NEWS DEPARTMENT.

## N. A. R. D. NOTES.

A partial list of the recent associations organized and affiliated with the N. A. R. D. is as follows:

Alabama.—Montgomery city, Calhoun county.  
Illinois.—Mason county. In this county a difference that had existed between two druggists was adjusted and peace declared. Fayette county, Morgan county, Cass county, Effingham county.  
Iowa.—Floyd county, Henry county, north half Lee county, Mitchell county, Jefferson county.  
Kentucky.—Graves county, Paducah city.  
Michigan.—Muskegon county, Shiawassee county, Newaygo county, Mecosta county, Genesee county.  
Minnesota.—Yellow Medicine county, Redwood county, Brown county, Jackson county.

Missouri.—Franklin county.  
New York.—Steuben county, Schuyler county, Yates county, Ontario county, Seneca county.  
Ohio.—Williams county, Miami county, Shelby county, Guernsey county, Hardin county.  
Pennsylvania.—Erie county, Norristown city.

Wisconsin.—Wood county, Dodge county, Fond du Lac county, Sheboygan county, Manitowac county.  
In a recent letter to the Secretary by the J. S. Merrell Drug Company, St. Louis, Mo., occurs the following: "We have not in the least lost our belief that your Association is of paramount importance to all branches of the trade and we are not only willing but eager to do everything in our power to foster it and strengthen it along conservative and steady lines. We sincerely wish you success."

The treasurers of affiliated associations that have not paid their dues for the year 1901 are urged to take action in the matter without delay. During the year, the national executive committee has devoted itself unselfishly to the interests of the entire association, making the best possible use of every opportunity to advance the interests of the entire membership. The affiliated bodies are under obligation to do their share, a portion of which is to pay into the treasury of the Association the dues of their respective memberships; these dues are not large and loyalty to the cause of better trade conditions demands that the matter be not neglected.

In a recent letter received from the secretary of the Van Buren county, Ia., Association occurs the following: "We are gratified to learn that the N. A. R. D. will go on in the conservative way in which it has started and in which it has achieved its success. While the Worcester plan may be a success in the future, at present it is an experiment, and at this critical time we can't afford to experiment. We have found our local association a great benefit in more ways than one and we will never encourage any plan to do away with it. Yours truly  
Stockport, Iowa. FRANK SHANE, Secretary."

The organizer recently sent to Alabama reports splendid progress in that State to date. The Kentucky organizer is getting a satisfactory start in the Western end of that Commonwealth. Missourians are falling in at the solicitation of organizer Quarles. Operations will be begun in Tennessee shortly after the first of the year and the other Southern States will receive attention as rapidly as conditions will permit.

Because there is no present need for an organization in your community is no reason why one should not be formed. "In the time of peace prepare for war." Many cut rate wars are now in progress that might have been prevented if the druggists in these communities had not been so slow to provide against this disaster.

All existing associations of druggists not now affiliated with the N. A. R. D. are cordially urged to attach themselves to the national body. We are all working for the

accomplishment of a common purpose and the sooner we get together, which is the first step in the direction of success, the sooner we shall be able to score a triumph over the enemies of satisfactory trade conditions. All needed information blanks, literature, etc., will be gladly furnished by Secretary Thos. V. Wooten, 153 LaSalle street, Chicago.

Chairman Simon N. Jones and F. W. Meissner of the Executive Committee spent November 2 and 21 in the Secretary's office considering important matters referred to them by the committee.

In a recent letter to the National Secretary the Antikamnia Chemical Company, of St. Louis, said: "We believe that your organization is worthy the support of all manufacturers and we are always ready to do our share to promote its interests."

### Price Restrictive Plan.

In a letter to Chairman Jones, Organizer Cooper, of the N. O. D. A., says: "Much space has been given of late in drug journals, editorially and otherwise, to discussion of the recent case in equity of Garst vs. Hall & Lyon Company, wherein bill was dismissed. The decision as rendered was not from the Supreme Court of Massachusetts, but a bill in equity brought by Dr. Garst in the hope of securing a short cut to price enforcement, and in a letter just received from Messrs. Thayer and Cobb, attorneys for Dr. Garst, the following sentence occurs: 'The decision does not bring up the main point which we desired to have settled.' The case does not interfere with any action at law for recovery of damages to which, in my opinion, it should be confined for the present, at least, or until such time as price restrictive conditions have been fully agreed to by wholesalers consenting to act as agents for respective manufacturers; when this has been secured equity could then be invoked."

November 19 Dr. Garst wrote as follows: "V. S. Logan, Esquire, of New York City is of the opinion that the conditions can be made to follow the goods. Messrs. Paxson and Savage, of Philadelphia, are of the same opinion. The forms of notice inclosed herewith are designed for that purpose. I should be pleased to receive any suggestions of possible improvement of notice."

A sub-committee of the Executive Committee met in Chicago November 20 and 21 to discuss this subject along with others and the test suit which the association directed should be brought in Illinois will be pushed with all reasonable haste.

The following regarding the work of the N. A. R. D. is from the Robinson-Pettet Co., Louisville: "We appreciate the continued and earnest efforts that are being made by your association towards correcting the evils in the trade, which you desire to remove, and hope very much that your labors will, in due time, meet their proper reward."

Dr. R. Schiffman, of St. Paul, has this to say about the N. A. R. D.: "You are shaking things up all along the line in a way that pleases every friend of the legitimate retail druggist. I wish for you continued success."

The Paris Medicine Company, of St. Louis, have sent to the treasurer of the N. A. R. D. \$100, accompanied by a note in which they say: "The druggists connected with the N. A. R. D. have been of great assistance to us and helped to make our business prosperous."

An officer of the Illinois Pharmaceutical Association says that last year Illinois druggists furnished one-seventh of all the money received by the N. A. R. D. from retail sources, and that this year it proposes to do still better. This spirit is certainly worthy of emulation.

General Organizer Noel is in receipt of letters from druggists in the Province of Quebec relative to sending organizers into that territory.

## NEW YORK AND VICINITY.

### MANHATTAN PHARMACEUTICAL ASSOCIATION.

#### Question of Making Franchise General in Election of Members of State Board Discussed.

The Manhattan Pharmaceutical Association, held its monthly meeting in the library of the College Pharmacy, No. 115 West Sixty-eighth street, Monday evening, November 18. The attendance was not large, but each member present gave evidence of his interest by taking part in the various discussions that came up during the evening. President J. Maxwell Pringle, Jr., called the meeting to order at 9.30. The minutes of the last meeting read by Secretary S. V. B. Swann were approved and the report of Treasurer George H. Hitchcock, showing a surplus of \$159.57, was received.

The first matter to be brought before the meeting was the report of the legislative committee. Mr. Hitchcock, the chairman, said at the conference meeting of the State legislative committee on November 12, so much time had been consumed on other matters that the question of having some one to look after pharmacists' interests at Albany during the coming session of the Legislature was not introduced. He had conferred, however, with members of the legislative committees of the different associations and found a variety of opinions expressed. The general sentiment was that it would be too expensive to employ a man for this work alone. Some favored securing a prominent representative in each branch of the Legislature to look after all bills affecting pharmaceutical matters, others suggesting employing an Albany pharmacist to go to the Capitol each morning, see what bills relating to pharmacy had been introduced, to what committees they had been referred and then to notify the chairman of the legislative committee of each association just what he had discovered. It was thought by some that arrangements could be made with the clerks of the Health Committees of the Senate and House to keep the associations posted. Mr. Hitchcock further reported that on invitation of the chairman of the Legislative committee of the State Pharmaceutical Association, the legislative committees of the greater New York associations met in joint conference on Tuesday, November 12, to talk over the proposed change in the pharmacy law relative to the election of the members of the State Board for the Eastern Section. The different associations had been well represented, and spirited discussions on the subject resulted. Mr. Hitchcock had argued on the lines of the resolution passed by the Manhattan Association, May 20, 1901, to the effect that the Board of Pharmacy should be appointed in the same manner as the Medical Board, but that the plan seemed to be considerably in advance of the majority of those prominent in pharmaceutical matters and received no outspoken support. The conference finally adopted a resolution to the effect "that the members of all incorporated Pharmaceutical Associations in the Eastern Section, the requirement of membership in which is the holding of a license as pharmacist or druggist, shall be entitled to a voice and vote in the election of members in the Eastern Section of the State Board of Pharmacy." The chairman of the association legislative committee of the State is to see that a suitable bill is drafted and submitted to each pharmaceutical association before being presented to the State Legislature.

The report of Mr. Hitchcock caused an interesting debate in which nearly every member present took part. Dr. George C. Diekman was the first speaker and thought that there would be some trouble experienced if the clerks of the health committees were left to look after legislation relating to pharmacy, as any parties so disposed could have bills sent through other committees and the clerks might not know anything about a measure until it would be too late to take action that would prevent its passage.

J. M. Tobin said it might be possible to secure an assessor-emblyman at Albany, well versed in legislative mat-

ters and especially those relating to pharmacy, who would look after the bills introduced. Mr. Tobin took up considerable time in discussing the manner of election of the Eastern Board members. He thought every licensed pharmacist and druggist should have the right to vote for the members of the board and that there should be no distinction made in the right of franchise, contending that in free America, druggists, as all others, should demand equal rights for all men. He said he could not see why the matter had not been presented to the association before action had been taken by the legislative committee at the conference. Mr. Hitchcock here explained that the resolution of the conference was a compromise measure and was practically the same as the law now in force. F. O. Collins spoke along the same lines as Mr. Tobin and supported his statements.

J. M. Pringle requested vice-president Schweinfurth to take the chair, and he then argued in favor of the present law for electing members of the Eastern Section of the Board, saying that he saw no reason why it should be changed as it did not discriminate in the least. He said the question should receive considerable attention from the members and he hoped the association would see its way clear to recommend the continuance of the present course, and also to give the right of franchise to every licensed pharmacist and druggist. Numerous questions were asked concerning the present law, and opinions were given by almost all the members present. On a motion, it was finally decided as the sense of the association that the franchise should be given to all licensed pharmacists and that there should be no further division. Mr. Swann said it had been the opinion of many at the conference that if the franchise were made general, politics would play too important a part, it would give interested parties a chance to work up undesirable candidates and canvass for them. The organizations are composed of the best men, who have the interests of all retailers at heart, and who know the men best fitted for a position on the board.

S. F. Haddad gave the report of the committee on Trade Interests and spoke of the Pharmacists' Manufacturing Co., which had recently been incorporated at Albany. He recommended that the members of the association give their support to the company.

Mr. Collins spoke at length on the clause of the pharmacy law relating to the sale of poisons and said he thought it was of little service to pharmacists, as any cases brought before a court for trial would be treated under the penal code and not under the pharmacy law. After much discussion it was decided to refer the matter to the legislative committee. Alex Gorga and Carl Kessler were elected to membership and the meeting adjourned.

### DRUG TRADE SECTION, BOARD OF TRADE.

#### Fire Insurance Rates Discussed.

The Drug Trade Section of the New York Board of Trade and Transportation held its regular monthly meeting at the rooms of the Board at No. 203 Broadway, Thursday afternoon, November 20. Prominent members present included Col. E. W. Fitch, of Parke, Davis & Co., who presided; John H. Stallman, of Stallman & Fulton Co.; John M. Peters, of Wm. J. Matheson Co., Ltd.; Albert Bruen, of Bruen, Ritchey & Co.; Philip G. Tilden, of Franklin H. Kaibbeisch Co., and William McConnell.

The most important business taken up by the meeting was the question of fire insurance on goods stored in warehouses. All present agreed that the drug trade of New York is perfectly willing to pay a fair and equitable rate of insurance on goods in warehouses, but objection was taken to the needless and harassing regulations imposed under the new schedule of rates. The old rate compelled the trade to pay an average of 15c on all drugs. The rates now in force, said to be a result of the combination of insurance companies, are increased about three fold, an average of from 40c to 50c being charged. Objection was also made against the action of companies

requiring dealers to take out insurance on each separate article stored and in not allowing the policy to continue when the goods are transferred to another warehouse. It was shown that some articles that were harmless were scheduled while goods that could legitimately be rated were not on the list. One member remarked that a quantity of lycopodium his firm had stored was not insured at all. It was said that the special premium on all acids was not just to the trade and the meeting recommended that steps be taken to have it diminished or abolished.

The final result of the discussion was the appointment of a special committee of five to investigate the matter and report what could be done by the Board at the next meeting to be held some time in December. The members of the committee are: Albert Plaut, John H. Stallman, John M. Peters, Albert Eruen and Philip G. Tilden.

A letter was received from Thomas F. Main, in which he expressed regret at his inability to be present and recommended that the question of a reduction of the douchon alcohol used in the arts and manufacturing should be brought before the meeting. The matter was referred to the Committee on Legislation.

#### BROOKLYN SENIORS VISIT MALTINE CO'S PLANT.

The Brooklyn College of Pharmacy, senior class of more than eighty members, including six very bright looking young ladies, paid a visit Wednesday afternoon Nov. 20, to the well equipped plant of the Maltine Manufacturing Co., at Eighteenth street and Eighth avenue, Brooklyn. Some two hours were spent in inspecting the different processes and machines used in the manufacture of the Maltine preparations.

Prof. William C. Anderson and Oscar C. Kleine, Jr., accompanied the students, and shortly after two o'clock the gayly attired procession, with yellow Chrysanthemums and college colors flying, marched to the large building occupied by the company where they were met by Dr. A. J. C. Saunier, George Shepard and J. E. Mace, who explained the processes employed in manufacturing the various products. After the tour of inspection had been completed the visitors were escorted to the company's restaurant on the second floor where a luncheon was served. Speeches were made by Prof. Anderson, Mr. Kleine, and Dr. William Muir on behalf of the guests, and by Dr. Saunier and Mr. Shepard for the company. With cheers for the Maltine Company and the speakers and the college "yell" the visit came to an end.

#### HARTFORD DRUGGISTS FIXED.

Several well known druggists of Hartford, Conn., were haled into police court of that city one day last week to answer the charge of not causing their liquor licenses to be exposed to view in their respective places of business. With one exception each druggist pleaded not guilty and the cases were nolleed upon payment of the costs. By this disposition of the cases the records of the court will not show convictions, the law providing that a dealer who has been convicted of a violation of the liquor law shall not only be fined at least \$10, but be exposed to much greater peril if he is ever convicted again.

The exception in the answers to the charges of the prosecutor in the cases was furnished by druggist Alexander Deutchberger who, when brought into court insisted on entering a plea of guilty, because he said that although he had not known it before he had now learned that he was guilty under the law as it stands. Mr. Deutchberger was advised by his friends and an attorney to plead not guilty, but he refused to do so, and the Judge fined him \$10 and costs, amounting \$24.72. The costs paid by each druggist who pleaded not guilty were \$46.72.

#### CROSIER STILL AT IT.

Henry P. Crosier, the notorious drug swindler, of 166 Greenwich street, this city, still continues his quest for victims. He has recently asked the Michell Wheat Co., Jersey City, N. J., for price lists and best discounts, and also requested Albert E. Ebert of Chicago, to send him several gross of Ebert's specialties. Fortunately both firms knew of Crosier's reputation for obtaining goods he never intended to pay for and his requests were not granted.

#### RETAIL DRUGGISTS' BOWLING ASSOCIATION.

L. W. DeZeller, secretary of the Retail Druggists' Bowling Association of New York, has furnished the average scores and number of games rolled by the members, as follows:

|                    | No. Games. | Average. |
|--------------------|------------|----------|
| Charles H. White   | 21         | 141      |
| R. H. Timmerman    | 8          | 133      |
| L. W. DeZeller     | 21         | 140      |
| J. M. Pringle, Jr. | 24         | 125      |
| G. E. Schweinfurth | 25         | 133      |
| G. H. Hitchcock    | 21         | 136      |
| F. Wichelns        | 18         | 104      |
| Otto Boeddiker     | 12         | 108      |
| B. R. Dauscha      | 21         | 123      |
| S. F. Haddad       | 21         | 130      |
| S. V. B. Swann     | 9          | 124      |
| William Weis       | 6          | 104      |

The druggists have alleys engaged at Starrs, on Fifty-ninth street, and meet every Tuesday evening.

#### NOTES.

—The Paint, Oil and Varnish Club held its seventy-eighth meeting Thursday evening, November 21, in the rooms of the Drug Trade Club. J. M. Peters, vice-president of the club, presided in the absence of President John Dehse, who was out of town. Reports from the chairmen of the various committees were received and United States Commissioner S. M. Hitchcock delivered an address upon the "Defects of the Present Bankruptcy Law." The meeting was preceded by a banquet. Among those present were: George W. Fortmeyer, William Balbach, L. C. Gillespie, W. E. Lucas, Raymond Pratt, J. M. Peters, Henry Merz, W. F. Liemor, W. H. King, Charles E. Meek, C. W. Dill, Major G. B. Garner, E. Harold, F. L. Medberry, N. E. Arnold and H. N. Waldo.

—Recent visitors in drug circles in this city include H. C. Ogden, of Ogden & Shimer, Middletown, N. Y.; T. C. Wood, Havrstraw, N. Y.; M. J. Finlay, Glen Cove, L. I.; T. S. Armstrong, Plainfield, N. J.; S. Anistake, Trenton, N. J.; C. R. Lusch, Hempstead, L. I.; Rufus E. Smith, of R. E. Smith & Co., Syracuse, N. Y.; William Schoelles, Sea Cliff, L. I.; H. N. Clarke, Cornwall-on-the-Hudson; Clarke B. Porter, Towanda, Pa.; C. Kirvan, White Plains, N. Y.; William M. Oliver, of Oliver & Drake, Elizabeth, N. J.; J. Wells Thompson, Adams, Mass., and W. W. Knight, Sharon, Conn.

—An unusually large number of out-of-town druggists were in the city last week making purchases for the coming holiday trade. The large down-town dealers say that salesmen in the sundry departments have been kept busy every day lately, attending to wants of customers, from out of town, and the demand for novelties in fancy wares is even more pronounced than last season. Trade in perfumes is said to be good but not noticeably brisker than at this time in former years.

—The Alumni Association of the Brooklyn College of Pharmacy has announced that the annual dinner will be held on Wednesday, December 11, at the Argyle, Nos. 13-155 Pierrepont street, Brooklyn. The committee in charge is Frederic P. Tutthill, Chairman; Andrew Myhr, W. H. Weygant, Philip Shappiro and Walter S. Welton. The covers will be raised at 9 p. m. Tickets can be obtained from the Chairman, F. P. Tutthill, No. 526 Putnam avenue, Brooklyn, at \$2.00 each.

—J. W. Ballou, New Haven, Conn.; Henry J. Steiner, Norwich, Conn.; Joseph Riesenau, of the Riesenman Drug Co., Franklin, Pa; H. O. Nute, of "Nutes Drug Shops", Boston, Mass.; W. C. Bower, Norwalk, Conn., and Mr. Stafford, of the Stafford Drug Co., Marquette, Mich., were among the out-of-town retail druggists in the city Monday, November 18.

—Julius Goetze, the retail druggist at No. 868 Lexington street, this city, was fined \$50 for allowing an unregistered clerk to compound prescriptions. The complaint was made by the State Board of Pharmacy and the case was tried in the Court of Special Sessions Thursday, November 21.

—Justin Keith, of Chicago Ill., was a guest of J. L. Hopkins at the Drug Club last Thursday, Mr. Keith is one of the Western representatives for J. L. Hopkins &

Co., drug importers, and has just returned from a trip through the Western States He reports satisfactory conditions in the drug trade in that territory.

—Felton Wood, of A. F. Wood's Sons, the well known New Haven, Conn. pharmacists was in the city last week making the usual purchases for his firm's stores. Mr. Wood is the manager of the main store located in the center of the business section of the "Elm City."

—W. A. Daniels, a retail pharmacist of Waddington, N. Y., was in the city several days last week, and was accompanied by Mrs. Daniels. Charles E. Daniels a member of the senior class of the New York College of Pharmacy is the eldest son of Mr. Daniels.

—George T. Boyington and J. D. Hargrave, retail druggists of Oswego Falls, N. Y., were in the city last week. Mr. Hargrave was accompanied by his wife and together they made a visit to their son, who is a senior at the New York College of Pharmacy.

—Ernest C. Goetting, the well known pharmacist at No. 821 Amsterdam avenue, is among the many to don the riding habit since the horse show opened. He can frequently be seen on a spirited horse taking a morning ride in the park these fine days.

—H. C. Ehesign's drug store at Waynat Village, near Honesdale, Penn., was destroyed by fire Saturday night, November 23, along with several other business establishments. This same drug store was burned down a few years ago.

—The drug store at No. 222 Bushwick avenue, Brooklyn, for many years conducted by F. S. Kreutzer, deceased, and more recently under the management of Edward Kreutzer has been purchased by Charles I. Bloch.

—Charles A. Loring, the representative of Lehn & Fink in Massachusetts and New Hampshire, is confined to his home in Boston through illness. His many friends in the retail drug trade wish him a speedy recovery.

—The German Apothecaries Society will hold its Annual Ball at the Terrace Gardens, January 16, 1902. Paul Arndt, chairman of the committee is in charge of the entertainment.

—F. M. Gardner and W. C. Maginnes, well-known retail pharmacists of Boston, Mass., were guests of S. H. Carragan, of Parke, Davis & Co. at the Drug Club Wednesday, November 20.

—A. C. Beldner, the retail druggist at No. 795 Westchester avenue, Borough of the Bronx, expects to open a branch store at the corner of 162nd street and Eton avenue about December 1.

—Arthur H. Reimann, for a long time in the drug business with his father, W. R. Reimann, at Sag Harbor, L. I., is now with H. P. Scheidt at No. 909 Broadway, Brooklyn.

—F. C. Henry, of Washington, D. C., who recently succeeded W. S. Thompson, deceased, in the drug business there is in New York on a pleasure trip. He is accompanied by Mrs. Henry.

—Karl Schnackenberg has acquired the drug business heretofore conducted by H. E. Steinhilber at Eighty-fifth street and Amsterdam avenue. Mr. Schnackenberg also owns the pharmacy at No. 437 Amsterdam avenue.

—P. B. Palmer, Spring Valley, N. Y.; W. W. Smith, of C. W. Bredt & Co., Malone, N. Y.; and C. Westervelt, Poughkeepsie, N. Y., were among the retail druggists seen in the market Friday, November 22.

—James M. McCullagh, pharmacist of White Plains, N. Y., was in the city last week. Mr. McCullagh has been visiting in Malone for several weeks and returns to business this week much benefited by his trip.

—J. M. Tobin, the well known pharmacist who conducts the drug store at Narragansett Pier during the summer season is at present making New York his headquarters.

—H. E. Hay, of the wholesale and retail drug firm of H. H. Hay & Son, Portland, Maine, was one of the buyers in the drug market last week.

—Tobias & Sperling have purchased the pharmacy formerly conducted by Leo. Robins at Fifth street and avenue B.

—George E. Dresser, a leading retail pharmacist of Putnam, Conn., was in the city last week.

## IN AND ABOUT BOSTON.

### NEW MEMBER OF STATE BOARD OF REGISTRATION IN PHARMACY.

Boston, Nov. 23.—Many Boston druggists know the new member of the State Board of Registration in Pharmacy, Henry Adams of Springfield, whom Governor Crane has just appointed to the board for a term of five years. He was nominated for the appointment at the meeting of the State Association last summer, but had thought the choice of his name merely complimentary. His appointment, therefore, was a surprise to him. Mr. Adams is president of the Connecticut Valley Druggists' Association, is a native of Vermont and was born in Middlebury in 1845. He was once an apothecary in the Naval Hospital in Washington, D. C., and received there the degree of Doctor of Pharmacy from the National College of Pharmacy. In 1876 Mr. Adams established his drug store, which has been successful for more than twenty-five years. Several years ago he began business in Springfield, where he is the senior member of Henry Adams & Co. He now resides in Springfield.

### ANOTHER GOOD WEEK.

Boston, Nov. 23.—Still another good week is reported by the trade, with a rather steady call for the thousand and one things which every drug store carries. There appears to be a larger number of cases of general sickness of various kinds, than a week ago. One prominent druggist made the remark, in speaking of business, that in one way or another most of the stores get pretty good trade right along, for if it is not one line of goods it is pretty sure to be another that is in demand. In the general market there has not been marked activity, the lines of drugs showing no special feature as compared with a week ago, and practically the same may be said of chemicals as a class. These show no material changes as to quotations. Tanning materials and dyes-stuffs are fairly steady and seem to have a bit more life than recently. Waxes keep rather dull, on sales of only ordinary interest.

### NOTES.

—Hubbell & McGowan, who recently opened a new drug store at the corner of Huntington and Massachusetts avenues were "touched" to the extent of \$3 by a most respectable appearing young woman who gave her name and residence, after looking at some toilet articles which she critically examined, picking out \$6 worth. She then found that she had forgotten her pocketbook and asked to have the goods sent to her home. The clerk agreed to do this and also allowed her to take about \$3 worth of the goods with her. A little later a messenger of the firm was sent to the given address with the remainder of the goods but he was told there was no young woman of the name given known at that number. The messenger returned with this report and the druggists notified the police that they had been swindled.

—Connolly & Davis, who have one of the oldest established drug stores in Dorchester, and who conduct three stores, recently have bought a valuable piece of land directly opposite their Ashmont store. This perhaps foreshadows some important move by this firm. Chester H. Swett has now returned to his duties at the firm's Field's Corner store, where Mr. Brookes will remain to help look after the large business. The firm has put new lighting effects in its Field's Corner store, the cellar of which will be fitted as a laboratory. As the owner of property leased to a barber who had a barber's pole on the sidewalk, Fred H. Connolly, of this firm, has been fined \$5 for allowing the sidewalk of his property to be obstructed by the pole, which the court claimed was done.

—A. S. Menard, a Holyoke druggist, recently was in court in that city charged with maintaining a liquor nuisance, on which he was discharged by the court. Effort was made to show that his sixth-class license was invalid, because a clerk of the license commissioners made an error when writing in the date on it. This attempt by the prosecution was a failure, however. It was testified to that in two instances sales had been made by the two drug clerks of the store, but it was evident that Menard could not be held responsible for them as they were made with-

out his knowledge or consent and contrary to his instructions.

—Henry Canning, one of the most prominent Boston druggists, having a store in Green street, was a guest of honor at the fifth annual banquet of the Boston Medical Society, held at Young's Hotel. Mr. Canning spoke entertainingly of the relations between the pharmacist and the physician, following which came remarks suggested by Mr. Canning's talk, made by several physicians. Mr. Canning also contributed several songs to the general entertainment.

—People seem never to learn how dangerous is the careless handling of ginger ale. The latest accident reported here is that in which a small bottle of ginger ale was given a two-year-old child to play with. The child began shaking the bottle up and down and suddenly there was a loud report, followed by a scream. The bottle had exploded and some of the glass entered the left eye of the child, cutting the eyeball in two, and destroying the sight forever.

—On the charge of selling liquor illegally, Wilfred Mathieu, a registered clerk in the pharmacy of Charles L. Curtis at South Framingham, has been in the district court there. He is said to have erred in not requiring a purchaser to register in a book, as required by law for druggists holding sixth-class licenses. Mathieu entered a plea of not guilty and a continuance of the case was granted to him, he being held in \$200 for his appearance later.

—J. F. Whitney's old-time pharmacy at the corner of Hanover and Blackstone streets is fine in appearance, now that it has practically been all made over. During the summer the next adjoining store was temporarily occupied, in order that important changes in the old corner might be made. This place, which long was known as Mr. Sears's, was one of the very first, if not the pioneer, in Boston, to introduce the serving of chocolate many years ago.

—A recent event of interest in Worcester was the entertainment of the physicians of Worcester County, members of the Worcester District Medical Society and the Worcester County Homoeopathic Medical Society by the Independent Pharmaceutical Company, at its factory in that city. It was an all-day affair and fully one hundred guests were present. A substantial luncheon was served in the middle of the day.

—Upon the urgent request of the ministers of North Attleboro, the board of selectmen of that town have announced that, in accordance with the demand, they will have to enforce the Sunday laws. All merchants and storekeepers have been notified, therefore, to keep their stores closed. All the Protestant ministers, with one exception, signed the petition to the selectmen.

—In a raid on a drug store of the Carter Drug Company on Main street, Danvers, a place which has no sixth-class liquor license, a thorough search of the premises brought to light six gallons of whisky in one keg and several bottles of the same, with, also, some gin in another jug. The manager, Howard L. Horton, will be called upon to explain matters to the authorities.

—For the purpose of manufacturing flavoring extracts and like goods, the W. O. Tuttle Extract Company has been organized with a capital of \$35,000, of which \$25 was paid in upon application to do business. Louis P. Hagar, of Waltham, is president and William O. Tuttle, of Newton, treasurer of the company.

—The Walker-Rintels Drug Company's drug store opened last spring in Temple Place is now a matter of past history, as it has been given up and consolidated with the company's store at 166 Summer street, near the South Station. They still have their Back Bay store, corner of Boylston and Church streets.

—There has just been opened in Boston an institution which is to be known as the South End Dispensary, situated in Davis street. It is a Hebrew institution under the charge of Dr. Cecile L. Shershefsky and Dr. Mintz, who say they will conduct the dispensary on non-sectarian lines.

—W. W. McMillan, for the first time in seven years since opening his drug store in Gloucester, is now enjoying a vacation of a few weeks. George K. Arnold, a reg-

istered pharmacist of Roxbury, is at the store during Mr. McMillan's absence.

—A fire in the building at 34 Green street on November 21 caused a slight loss to goods in the cellar of G. W. Flynn, druggist, who occupies the building. The overturning of a lamp caused the fire.

—What formerly was A. A. Tilden's drug store in Belmont has been closed, and the place has been vacated. Mr. Tilden severed his connection with the place several weeks ago.

—A new wrinkle in Massachusetts which shows ingenuity in advertising is in the shape of a newspaper well performed by an enterprising druggist with perfume to sell. Next!

—Patrick D. Berwin, a Marlboro druggist, recently has been confined to his home by illness, in the form of stomach trouble.

## PHILADELPHIA.

### P. C. P. PHARMACEUTICAL MEETING.

Philadelphia, November 23.—The second of this year's series of "Pharmaceutical Meetings," of Tuesday, November 19, was very well attended, it being one of the best of many years past in this and other features. The papers were full of interest and the discussion by the large body of attending pharmacists was unusually spirited, particularly on the paper of H. P. Hynson, the guest of the meeting. At its close a well-deserved vote of thanks was tendered to the speakers and particularly to Professor Henry Kraemer, to whose unselfish labor these meetings owe so much.

The paper read by Mr. Hynson was on "Modern Drug Store Methods," a description of what he had found to work best in his own store and in others. Complete separation of the prescription and sales departments was recommended as the first essential in a modern "professional" pharmacy, this insuring better work by the dispensers who would not be distracted by the demands of the store. The locating of the prescription room on an upper floor was deemed the best plan, with a dumb-waiter to carry new and finished prescriptions from dispenser to the clerks in the store, all record of the prescription as to name and address of customer, etc., to be done in the downstairs department, of course. The only objection to this plan was the general desire of the customer to see "something doing" with his prescription. The speaker claimed that it was not necessary nowadays to compound a prescription in the view of the customer to allay suspicion or to insure better work. The necessity of an analytical department was urged, by which the pharmacist would be enabled to go into the open market and buy his drugs at best prices, standardizing them himself. As a corollary of this, education of the pharmacist was essential, the days of the apprentice system having passed to make way for the modern college of pharmacy. One vital point in the success of a modern pharmacy was the employment of adequate help and the dividing of the work of the store according to the qualifications of the employes. To put a \$20 a week clerk at washing graduates and mortars was called a waste of time and money, such work must be done by cheaper labor to truly economize. For washing prescription and laboratory apparatus and for keeping the store clean Mr. Hynson advocated female labor, as being more efficient, thorough and economical, both from less breakage and less hire. The stock clerk should also be a woman, as should be the bookkeeper. Porters for delivery of goods and handling heavy packages must be well trained and used liberally, a clerk must never be sent to deliver a prescription, as this lowers his reputation as a skilled employe. By a similar systematic division of the work of the store, the proprietor will be enabled to attend to scientific work, to build up trade with physicians through calls and intercourse and to meet and attract his customers, any of which is of vastly more importance than his doing what he can to hire good clerks to perform for him. Examples of the work done in a modern pharmacy in analysis, testing purchases, etc., were given, with notes on some of the little things constantly calling for

attention. Mr. Hynson advocated the use of wrapping paper in rolls, from which the necessary size could easily be torn off neatly, this statement bringing forth a very spirited debate from a number of druggists present, with the odds in favor of the rolls. Other points were taken up and fully discussed.

An excellent paper on sponges, their habitat, methods of gathering and uses, was read by W. L. Cliffe, the author, Albert Hart of the Smith, Kline & French Company, suffering from a severe cold. The paper was illustrated by an exceptionally fine collection of sponges from this firm. A "Metric Medicine Glass" was shown by M. I. Wilbert, apothecary of the German Hospital, in which 5 Cc. was taken as a teaspoonful and 15 Cc. as a tablespoonful. Following this Prof. C. B. Lowe showed the unreliability of the dosage of tea and table spoons by measures he had taken of a number of typical specimens, in some cases the amount held by spoons being double the intended dose. The suggestion was made that druggists call attention to this fact and recommend their customers to use medicine glasses. A collection of fifty-eight rare metals in a case was exhibited by F. T. Gordon, which proved of much interest to those present.

#### P. C. P. NEWS.

Philadelphia, November 23.—The usual monthly "Social" was held last Tuesday evening, the Alumni Association acting as host to the students. A very enjoyable programme of musical selections was rendered, after which dancing followed to a late hour. Mr. Melvin W. Bamford, editor of the "Alumni Report" acted as "master of ceremonies" for the function, and was ably assisted by a staff of students and recent graduates.

The P. C. P. football team of this year made its debut October 26th at Berwyn, holding down the strong local team to a score of 5 to 0. The second game, with the team from the School of Industrial Arts, was won by the P. C. P. boys by a score of 6 to 0 on November 2. The last game played, with the "freshies" of the University of Pennsylvania Medical School, resulted in a disastrous rout of the embryo druggists by the budding doctors, the score being 16 to 9 in favor of the "Docs." Is this a prophesy of the way the doctors are going to hold down the boys when they get into stores of their own?

#### BUSINESS FAIRLY GOOD.

Philadelphia, November 23.—Business has been fairly good during the week past, continuing steady and without any marked falling off from earlier in the month. A number of stores are already beginning to make preparations for the holiday trade, sending out circulars, etc., although not much of this is done nowadays here except in suburban stores, the "department stores" making it unprofitable. There has been a slight decline in the number of prescriptions coming in, also in sales of "cough and cold" remedies. Jobbing houses are quite busy with the holiday trade which so far is above the average and for a better class of goods. Indications point to an unusually good business in this line.

#### NOTES.

—A very successful meeting of the druggists of the Twentieth, Twenty-eight, Twenty-ninth, Thirty-second and Thirty-seventh wards was held Friday evening, November 22, at Elferth's Hall, Twelfth street and Columbia avenue, under the direction of D. P. Little, the P. A. R. D. "Organizer." This meeting was held in continuation of the local work undertaken in that section a few weeks ago, reports as to the possibility of adopting certain lines and prices being made as a result of the canvass of these wards just made. The reports were generally favorable, and there seems little doubt but what a success will be made with the proposed increase of prices on small articles and staples.

—The representatives of the local bowling teams who were "done up" by the New York bowlers last week are explaining "how it happened" to the fellows here and being consoled with for the disaster. Meanwhile the Philadelphia bowlers are doing great stunts to get even with the New Yorkers when the return games are played, and if practice counts the New York boys had better look out for snags. All the visitors say they had a splendid time and could not have been treated better.

—A meeting of the "Nominating Committee" of the Philadelphia Association of Retail Druggists, composed of the President, Financial Secretary, Chairman of the Executive Committee and the various Ward Chairmen, has been called for Friday, November 23, 2:30 p. m., at the Philadelphia College of Pharmacy. This committee will make up a list of nominees for officers for 1902 to be present at the December meeting of the Association.

—A large party composed of members of Epsilon Chapter, Phi Chi, P. C. P., local druggists and doctors was taken through the works of the J. Ellwood Lee Company, Conshohocken, by their Philadelphia representative Geo. R. Townsend, a week or so ago, a special trip being made for this purpose. The visitors are loud in their praises of everything they saw at the factories and particularly of the attentions and courtesy of their guide.

—W. P. Williams, Philadelphia representative of Gamse Brothers of Baltimore, makers of boxes, lithographers, etc., has been making a tour of this city in the interests of his firm, and, as Mr. Williams is deservedly popular among druggists, has done good business for them.

## BALTIMORE.

#### MARYLAND COLLEGE OF PHARMACY MEETS.

Baltimore, Nov. 22.—The monthly meeting of the Maryland College of Pharmacy yesterday was rather more largely attended than usual. Especially the younger element among druggists appeared to be in evidence and a further notable fact was the preponderance of non-members over members of the college.

The proceedings of the meeting yesterday were distinguished for practical discussions on a number of instructive topics. Prof. S. H. T. Hayes, the chemist of a milk supply company, discoursed on "Some of the Present Theories Concerning Milk." H. P. Hynson, who also presided over the meeting, expressed very decided opinions with regard to what was designated on the programme as "A Disreputable Practice," this being the filling of bottles with the label of some prominent pharmacist upon them by other druggists without the removal of the label. An engrossing feature of the meeting was the discussion provoked by the papers read before the section on practical pharmacy and dispensing of the American Pharmaceutical Association at the St. Louis meeting. Charles H. Ware spoke about "A Handy and Substantial Perculator Stand," and presented one of his own invention to the college. One of the interested auditors at the meeting was Prof. Edward Kremers, of the University of Wisconsin.

#### WITH THE BOWLEINS.

Baltimore, Nov. 23.—The quintette of James Baily & Son fell upon the Ferrell & Kellam Drug Company team last night at the Diamond and made it three straight the scores being one-sided and the outcome each time, a fore-gone conclusion before the games had advanced far. In the first contest the winners made a total of 733, while the tail-enders got only 610, the other games resulting in 638 and 770 against 606 and 571. Roth was the highest man for the Ferrell & Kellam Company with only 135. The best score made by the Baily aggregation was only 170, but the team averaged well and thus made up for the absence of especially notable individual work. On Tuesday the Stanley & Brown Drug Company bowled against Sharp & Dohme with the result of losing two and winning one. As Goldsborough of the Sharp & Dohme team, could not be present, Dr. Dohme concluded to take a hand for the first time this season, and in one contest at least helped his five to victory by a Garrison finish. The teams are now in the following positions:

| Teams.                        | Games Games |       |           |
|-------------------------------|-------------|-------|-----------|
|                               | won.        | lost. | Per'ctge. |
| Sharp & Dohme .....           | 13          | 2     | .867      |
| Root and Herbs .....          | 10          | 2     | .833      |
| James Baily & Son .....       | 9           | 6     | .600      |
| McCormick & Co. ....          | 5           | 7     | .417      |
| Stanley & Brown Drug Co. .... | 7           | 8     | .467      |
| Armstrong Cokk Company .....  | 3           | 9     | .250      |
| Ferrell & Kellam Co. ....     | 1           | 14    | .067      |

**MAKING IMPROVEMENTS.**

Baltimore, Nov. 23.—Several druggists of this city are making extensive improvements and the changes contemplated by one of them will possess some rather unique features. The store of Downs Bros., Linden and North avenues, is being remodeled and when completed will rank with the most attractive establishments in this or other cities. It is in contemplation to convert the pharmacy into a kind of crystal palace, with the front and one side of glass and the shelving of the same material. Large plates are being put in as windows and new fixtures are being installed. Several show cases alone will cost \$600 and the other betterments are on an equally expensive order.

The other change is the remodeling of the pharmacy of the late Frank Waters, North avenue and Aisquith street, which has been purchased by Joseph Hall, Mr. Hall is installing new furniture and shelving of fine oak and will make all the interior appointments up to date. Big plate glass windows are also among the changes.

**TRADE APPEARS TO BE QUIET.**

Baltimore, Nov. 25.—No developments of any special consequence occurred during the past week. Trade appears to be quiet. The manufacturers of pharmaceuticals as well as jobbers say they are not doing much. Retailers seem to be fairly busy, but as the end of the month draws near purchases are being postponed in accordance with an old practice. The quiet, however, is only comparative, the year continuing to show up well. The market for botanicals is without material modifications. With respect to a number of articles the tendency is still upward. The movement of heavy chemicals is of moderate proportions.

**NOTES.**

—Martin E. Boessel, who has been clerking for Croft & Conly, Park avenue and Madison street, has gone with E. O. Streett, his former employer, Mount Royal avenue and Charles street.

—H. P. Hynson last week read a paper before the Philadelphia College of Pharmacy on "Modern Evidence of Pharmaceutical Progress." Owen C. Smith went with him to Philadelphia.

—Druggist M. S. Kahn, Lexington and Liberty streets, who has been suffering with typhoid fever for several weeks, is reported to be somewhat improved.

—Edward W. Lowry, formerly with J. Fuller Frames, Gay street, is clerking for W. M. Fouch, North avenue and Charles street.

—Frank Jendrick, for some time with Theodorick Smith, Pennsylvania and Lafayette avenues, in the capacity of clerk, has left.

**"What One Medicine House is Doing to Suppress the Cut Rate Evil."**

Messrs. Foley & Co., of Chicago, are making it a part of their contracts with papers in the larger cities that their medicines are not to be advertised at cut rates or below the prices agreed upon by the local Druggists' Association. Among the papers who have signed the agreement are: Kansas City Star; St. Joseph (Mo.) News; Minneapolis Tribune; St. Paul Dispatch; Milwaukee Journal; Milwaukee Germania; Indianapolis News; Evansville Journal; Des Moines News; Des Moines Capital; Memphis Scimitar; Memphis Commercial-Appeal; Nashville (Tenn.) American; Nashville Banner; Chattanooga News; Atlanta (Ga.) Journal; Cincinnati (O.) Post; and Dayton (O.) News. Inasmuch as cut rate stores are dependent to a large extent on newspaper publicity, Foley & Co. believe that if other proprietary medicine manufacturers would adopt this plan, the evil would be considerably lessened.

We have received the new catalogue of Puffer Manufacturing Co. It is very artistically illustrated and describes very fully their numerous styles of soda fountains and various soda utensils. Any druggist can obtain this catalogue by addressing Puffer Manufacturing Co., 41 Portland street, Boston, Mass. Mention the Era.

**CINCINNATI.****DRUGGIST'S WIDOW DEAD.**

Cincinnati, Nov. 23.—Mrs. Aloina Bakhaus aged ninety-three widow of the first German druggist in Cincinnati, died last week at her home on Walnut Hill this city. Mrs. Bakhaus was born in Germany and came to this country in 1836 to join her promiscuous husband, who had preceded her a year before. The home of Mrs. Bakhaus was the rendezvous of all the German immigrants who were seeking homes in this city during the first half of the last century. Their store was on Lower Market street, where Mrs. Bakhaus decorated the first Christmas tree ever seen in Ohio. Mrs. Bakhaus was the mother of seven children, two of whom are Mrs. Bertha Seeborn, of Copeland and Edmund Bakhaus, the druggist with C. A. Stammel at Elm and Findlay streets. The deceased had been a widow fifty-two years.

**THE FREEMAN-DOW LITIGATION.**

Cincinnati, Nov. 23.—The outcome of the suit brought by Freeman, the perfumer, against Miss Cora Dow, which is set for trial at this term of court, is waited for by the retail trade with much interest. The question is whether a dealer has the right to present the goods of a manufacturer in any other shape than those in which he places them to be sold. The goods are put up in a certain style for sale to the consumer, and private marks placed upon the package for the purpose of enabling the manufacturer to trace his goods constitute a portion of the dressing. Is it lawful for a dealer to deface this dressing by removing the private marks to defeat the purpose of the manufacturer, which purpose the courts have held to be lawful? This question will be decided upon a demurrer filed by the defendant.

**NOTES.**

—Miss D. E. Friedman, a prosperous pharmacist, at Peebles, Ohio, was in this city during the week buying Christmas goods.

—Oscar Hess, formerly with Serodino Bros., will shortly open a drug store at Pike and Washington streets, Covington, Ky.

—H. J. Thompson, of West Union, O., has opened a new drug store at Winchester, Ohio.

—Frank Mayer is now clerking for F. E. Socin, at Richmond and Central avenues.

**CHICAGO.****DRUG CLUB NOMINATES OFFICERS.**

Chicago, Nov. 23.—The nominating committee of the Chicago Drug Trade Club, Messrs. Harold Sorby, Albert E. Hunt and B. T. Van Alen, have nominated the following gentlemen for the board of directors of the club for 1901-02: H. A. Antram, Arthur Dawson, Francis Keeling, Jr., E. D. Kenfield, S. T. Mather, Charles E. Matthews.

The following were nominated for the various offices: President, E. H. Buchler; first vice-president, Charles E. Matthews; second vice-president, J. Walker Scofield; secretary, Franklin S. Hereth; treasurer, Romaine Pierson.

**CHICAGO TRADE FAIR.**

Chicago, Nov. 23.—Manufacturers and jobbers say business has been well up to the average thus far this month. Trade in staple drugs and chemicals is good while there is a large demand for reasonable goods, such as cough remedies, cold cures and the like and the materials of which they are made. Quinine is therefore in good demand. The announcement that the grip germ is on hand for his winter harvest, has not caused the drug men any uneasiness and a boom may be expected in grip remedies so called at almost any time. When that malady is popular everyone who has an ache or a bad cold names his ailment grip and doses himself accordingly.

## NOTES.

—The Chicago Trade Bowling League rolled the following games on Nov. 18: Sharp & Smith, 717, 775, 768, against Lord, Owen & Co., 823, 669, 759; A. M. Foster & Co., 664, 642, 663, against Buck & Rayner, 647, 655, 682; Parke, Davis & Co., 787, 713, 781, against E. H. Sargent & Co., 725, 724, 697. Standing and percentage:

| Teams.                   | Won. | Lost. | Per'gts. |
|--------------------------|------|-------|----------|
| Sharp & Smith .....      | 14   | 7     | .667     |
| Lord, Owen & Co. ....    | 13   | 8     | .614     |
| E. H. Sargent & Co. .... | 13   | 8     | .614     |
| Parke, Davis & Co. ....  | 12   | 9     | .571     |
| Buck & Rayner .....      | 7    | 14    | .334     |
| A. M. Foster & Co. ....  | 5    | 16    | .233     |

—The Illinois Board of Pharmacy met this week in Chicago and held examinations. One hundred and fifty applicants were examined, one-third of whom passed. The board insists that apprentices must be registered. The next meeting of the board will be held in Springfield on January 7, and the next one thereafter in Chicago on February 11.

—Chest protectors, liver pads and like appliances do not seem to be popular in Chicago. A druggist on La Salle street with a window full of red flannel chest protectors, has cut the price from 35 cents to 15 cents each. In the same window is a flour barrel full of hoarhound drops, for hoarseness. The remedy seems to be more popular than the preventive.

—James R. D. Stevenson, the second son of Robert Stevenson, was married Tuesday night, Nov. 12, to Miss Ida E. Kohtz. The wedding was an elaborate affair and took place at the Germania Club. The same evening Miss Lou Electa Dawson, youngest daughter of Arthur Dawson, of Robert Stevenson & Co., was married at her home 1743 Wrightwood avenue, to Albert Welck.

—J. S. Frank will move his drug store from 1144 Milwaukee avenue to Thirty-ninth street and Calumet avenue. Mr. Frank will be remembered as one of those whose stores were damaged last winter by the several women who professed to be followers of "Dr." John Alex Dowie, the latter day Elijah.

—Mr. Traill, of Traill & Cooling, the well known druggists of Austin, challenged Ed. F. Mallory the other day to a bowling contest. The contest was held last Friday afternoon at Thompson's alleys, Mr. Traill winning two games out of three and making a score of nearly 200 on each of the games he won.

—C. H. Kramer was tried in Justice O'Donoghue's court at Austin recently on a charge of conducting a "blind pig." The jury could not agree, so a compromise was effected, Kramer pleading guilty and being fined the costs. Kramer is the owner of a drug store at Chicago avenue and Alma street.

—The annual ball of the National Retail Drug Clerks' Association will be held on the evening of Nov. 30 at Fraternity Hall, State and Adams streets. Messrs. E. Civis, W. Kutz, P. Stalfeld and M. Klamhofen compose the committee of arrangements.

—G. W. Nelson & Company, of the Plaza Hotel Pharmacy at North Clark street and North avenue, have dissolved partnership. F. Goetz will conduct the store under the name of the Plaza Pharmacy.

—Robert Millinger, manager of the Harrison Pharmacy at Harrison and State streets, has returned from a three months trip abroad. He left on account of his health and returns much benefited.

—Mr. Adamick, formerly a part owner of the Ahrend drug store at Madison street and Fifth avenue, has bought L. P. Cheney's drug store at North Clark street and Chicago avenue.

—P. E. Hall, manager of the financial department of Parke, Davis & Company visited the Chicago branch of the company last week.

—Oscar Leistner, western agent for W. L. Strauss & Company, New York, returned last week from a business trip to St. Louis, Indianapolis and Cincinnati.

—James S. Barclay, one of the oldest druggists of Chicago and former president of the Veteran Druggists' Association, is critically ill at his home in Oak Park.

—E. B. Merserow has bought the drug store of J. P. Cline at Center avenue and West Thirteenth street.

—Gus A. Miller has sold his drug store at 738 West Van Buren street to A. F. Kiesling.

—H. G. Weber & Company has succeeded H. H. Weber at Knoxville, Ia.

—W. A. Stillhaus has sold his drug store at Villisca, Ia., to Wright & Flood.

—Dr. George M. Silverberg has bought the drug store of Chris. N. Wagner at 1410 West Madison street.

## DETROIT AND MICHIGAN.

## SCHEDULE OF PRICES.

Detroit, Nov. 23.—The members of the Detroit and Wayne Co. Retail Druggists' Association are well pleased with the present status of the drug trade in Detroit as regards the upholding of prices agreed upon in schedule adopted some time ago, and there is a decided tendency to somewhat increase prices in general. There is a possibility that it will only be a question of time before the department stores now handling certain lines of patents and sundries will come into the fold, and on the whole the outlook for the future is very much better than it has been for a long time past.

## NOTES.

—The Michigan Drug Co. have secured an option upon the old Biddle House property, on Jefferson avenue and Randolph street, having in view the possibility of erecting a large new building upon the site to accommodate their rapidly growing wholesale drug business. The location is unquestionably an admirable one, and James E. Davis, vice-president of the company, states that they are looking the ground over thoroughly and will consider the proposition carefully from every standpoint before making a positive decision, and he cannot now say whether the work will be undertaken. The Michigan Drug Co. have a lease on the building they now occupy, which runs for about two years.

—A proposition has been under discussion for quite a considerable time tending to the organization of the Carl G. Granacher Drug Co. of Detroit, but Mr. Granacher after looking the ground over very carefully and considering the fact that Detroit is already well supplied with manufacturing pharmacists, has decided to forego the formation of the proposed company for the present, at least, and devote his entire attention to his up-to-date prescription pharmacy, located at 473 Gratiot avenue.

—The annual dancing party of the Drug Clerks' Association of Michigan took place Friday evening, Nov. 22, at the Strassburg Dancing Academy, about three hundred people being present. Flinney's orchestra furnished the music. A considerable number of the newer members of the association were present and the festivities lasted until after 3 o'clock Saturday morning.

—Among the different representatives of outside houses who visited Detroit and called upon the trade during the last week were F. L. Washbourne with the W. J. Bush Co. of New York; E. E. McClintock, with the Hershey Chocolate Co. of Lancaster, Pa., and Mr. Moore, of the Chicago branch of Messrs. Dodge & Olcott, of New York.

—Louis J. Fulmer and Herbert T. Jenkins, arrested some time ago for forging the labels of the Farbenfabriken of Elberfeld Co., have been bound over to the Recorder's Court for trial. Edward H. Horn and William T. Bartlett, held on the same charge, are now undergoing examination.

—L. J. O'Connor, engaged with J. G. Campbell, has been elected President of the Screenaders. This organization is a social one purely, and it is somewhat unusual for a druggist to become associated with such a club, inasmuch as his time for social work is somewhat limited.

—A few days ago the safe in the Dearborn Post Office was robbed of something over \$100 in money besides a considerable amount of stamps. Besides this loss damage was done to the stock and fixtures to the amount of over \$500. The Post Master is T. T. Wood, a druggist.

—Messrs. Smedley, Swift, McClintock and Mutter of Parke, Davis & Co., left several days ago for a short season of duck shooting, the occasion, by the way, practically closing the season, which ends Nov. 30.

—William Kipp, pharmacist at Wheeler, has been sued

for supplying whiskey to an intoxicated man, who was driver of the team which ran over and seriously injured the wife of Everett Smith of Edgewood, who brings suit.

—Charles Maurer, with Parke, Davis & Co., a number of years, has been compelled to relinquish his position and go West for his health.

—I. E. Harrod, representative of the Arlington Chemical Co. of Yonkers, N. Y., has been in Detroit for the past two weeks calling on the trade in general.

—P. E. Hall of the financial department of Parke, Davis & Co., has returned from a business trip to Chicago.

—A branch of the N. A. R. D. has been organized in Lapeer county, with S. N. Vincent of Lapeer as President.

—L. A. Burdick, formerly with Parke, Davis & Co., is now engaged at the Cadillac Pharmacy.

## ST. LOUIS.

### DRUGGIST THREATENED TO BE SICK.

St. Louis, Nov. 23.—C. D. Merrem, druggist at Taylor and Finney avenues, this city, is threatened with a damage suit on the ground of carelessness and violation of the State law in selling poisons. It is claimed that last Saturday a woman in the druggist's neighborhood sent her little ten year old daughter to his drug store five different times to purchase chloroform which the druggist or his clerks sold each time without asking any questions or even putting a poison label on the bottle containing the chloroform. The woman was sick and in intense pain. According to the story of the woman's friends the chloroform was poured on a cloth and inhaled by the woman. As the bottle was emptied each time she sent her daughter for more. Finally she went to sleep and the child and servant in attendance retired. In the morning the woman was found dead. Her mother has employed a lawyer who says he will interpret this offense under the common law and sue for damages. He insinuates that the druggists of the city are very careless in selling poisons and talks as though he would like to give them a general shaking up on this point. He says he will lay the matter before the State Board of Pharmacy and he states he believes he can have Mr. Merrem's certificate of registration, or diploma as he calls it, revoked.

Your correspondent requested to see the bottle in which the chloroform was purchased but the request was declined. The lawyer has so far taken no steps except to write to Mr. Merrem, but claims he has received no reply. Mr. Merrem says he does not care to discuss the matter at present, but that if the lawyer will carefully investigate matters he will find the law has been complied with. Mr. Merrem is one of the leading druggists of the West end, a thoroughly competent pharmacist and his friends think it is a ridiculous charge to bring against him.

### NOTES.

—For some time past one of the large express companies has had charge of collecting gas bills for the local gas light company. The company appointed druggists all over the city as agents. People in the neighborhood could pay their bills at the drug store by paying five cents extra and thus save car fare and the trouble of going up town to make their payments at the main office. The druggist would sign the receipt and hold the other part of the bill for the collector of the express company. The druggist was also obliged to keep a tabulated list of the bills which was checked up by the collector. For his trouble he received two cents and the express company three cents. The public look upon this as a great convenience and very few go to the main office to save the five cents. A number of druggists have concluded they might have the entire five cents for each bill so they have given up the company's agencies and have established agencies of their own. The public takes to this arrangement very kindly, and where the druggist formerly made two dollars on every hundred bills he collected he now makes five dollars, and he claims there is much less work connected with it. There are a number of druggists who collect two and three hundred gas bills

each month and they consider it more profitable business than selling patent medicines.

—The coroner's investigation upon the tetanus infected antitoxin manufactured and distributed by the City Health Department resulted in a verdict that the Board of Health is responsible for the death of eleven children. Health Commissioner Starkloff has just returned from a ten day vacation and has taken the matter up with the Mayor. He considers the coroner's verdict not specific enough and has requested the Mayor to take action. In the meanwhile he is reviewing the testimony in the case and says he is anxious to have the blame placed where it belongs, but he considers it very indefinite to merely hold the Board of Health responsible.

—A peculiar feature of the results of the meeting of the Druggists' Coked Hat League last Thursday night was the five to nothing score clear through. The Moffitt-West Drug Co.'s team lost all to the representatives of the Meyer Bros., Drug Co. The Mound City "Paints" failed to score against the Searle and Hereth Co.'s team and the Herf and Ferlich's team captured everything in sight from the J. S. Merrell Drug Co.'s team. Helbig, of Herf and Ferlich's team, was high man for the evening with a fifty-five average.

—The St. Louis Drug Clerks' Society will give its annual ball at the Louisiana Hall, 911 N. Vandeventer avenue, on the evening of December 5. Tickets are one dollar, admitting gentleman and ladies. They have decided not to serve a regular supper, but have arranged with a caterer to furnish light refreshments.

—A. S. McGowan, an old time druggist of Sedalia, Mo., died a few days ago after a lingering illness. Before his health failed he was one of the leading druggists of that city. He was known to many druggists throughout the State, having been an occasional attendant at the meetings of the Missouri Pharmaceutical Association.

—At the meeting of the Board of Trustees of the St. Louis College of Pharmacy last Tuesday Dr. J. C. Falk was elected secretary to fill the vacancy caused by the resignation of Wm. C. Bohm. Louis Schurk was elected corresponding secretary, the position formerly held by Dr. Falk.

—The regular monthly meeting of the St. Louis Paint, Oil and Drug Club was held at the Mercantile Club last Thursday evening. There were about twenty members present. The regulation banquet was served, but no special business was transacted.

—Some of the East St. Louis druggists have had such great difficulty in securing competent registered clerks that they claim they are going to disregard the law and employ the first competent man they can get regardless of whether he is registered in Illinois or not.

—A. J. Horlick, London representative of the Horlick Food Co., has been spending a few days in this city. He is on his way home to spend the holidays with his folks at Racine, Wis.

—C. C. Corcoran and J. G. Algera, of the Meyer Bros. Drug Co., accompanied the Merchants and Manufacturers' excursion through the South.

—Henry Boardman, in charge of the paint, oil and color department of the Meyer Bros. Drug Co., has gone to California on a six weeks vacation.

—Messrs. Judd and Gorterman are opening a new drug store at Belt and Easton avenues. They were formerly in business at Venice, Ill.

—E. Bindschadler, secretary of the J. S. Merrell Drug Co., is spending a well-earned vacation in the sunny South.

## THE NORTHWEST.

### MINNESOTA DRUG CLERKS ORGANIZE.

St. Paul, Minn., Nov. 22.—Twenty drug clerks met at the Lumber Exchange, Minneapolis, Monday and effected what may be termed the preliminary organization of the Minnesota Retail Drug Clerks' Association. A constitution and by-laws were adopted. These officers were chosen, all of them of Minneapolis: President, Henry Schroeder; vice-president, Frank W. Crowell; secretary, Fred. Klenert; treasurer, Julius Gronsall. The idea is to have these officers continue until the first annual meeting, which will be held in St. Paul in January. The officers elected upon that occasion will, of course, represent all sections of the State. The next meeting will be held in St. Paul on Dec. 2.

### HUNTING DOWN THE UNREGISTERED.

St. Paul, Minn., Nov. 22.—Private detectives employed by the State Board of Pharmacy have recently been shadowing Minneapolis druggists. It is believed that several have been discovered violating the State law, which prohibits unregistered assistants from dispensing poison. It is difficult to prevent this, as the law permits the assistant to dispense poison if his chief is standing by at the time. Detectives have evidence in number of cases where poisons were dispensed when the registered pharmacist was not in the store. The fine for violation is \$50.

### NO COMPLAINT AS TO TRADE.

St. Paul, Minn., Nov. 22.—The past week has been very active with the wholesale drug houses and business seems constantly increasing in volume. There are few changes in prices, which is strange as it has hitherto seemed impossible to go into winter without more changes than are being made now. Orders for goods are being liberally received from near and distant points and they are unusually generous. Freezable goods are in active demand for winter stock. In fancy goods and druggists' sundries there never has been so large a sale for the holiday trade as now. Collection are good.

### NOTES.

—Successions: J. Spuldinger, Brainerd, Minn., by M. K. Schwartz; C. C. Graham, Baxter, Ia., by C. M. Forney; Howe Bros., Humboldt, Ia., by H. W. Howe; Riggs & Miller, Bertha, Minn., by A. J. Riggs; G. F. Peabody, Big Stone, S. D., by E. M. Fishell; T. E. Jones, Payette, Idaho, by T. E. Jones & Co.; Charles N. Saton & Co., Valley Junction, Ia., by Morrison & Co.; H. G. Weber, Knoxville, Ia., by H. G. Weber & Co.; Mrs. Ella Davis, Malcom, Ia., by D. A. Allen; W. A. Stilleans, Villisca, Ia., by Wright & Flood; V. W. Whyman, Adams, eb., by the Adams Drug Co.; M. E. Austin, Forest Grove, Ore., by Hines & Wagner.

—The Wm. S. Merrell Chemical Co., has won its suit against the Lyman-Eliel Drug Co., of Minneapolis, which at one time promised to become a noted bit of litigation in the trade. The suit was speedily settled when the facts that the Merrell Company claimed were shown. The Era has already given the particulars of the trouble between the two companies.

—The Sherwin-Williams Paint Company, of Cleveland, which has been handling the Twin City and northwestern trade from a Chicago office, has decided to start in Minneapolis a branch for this territory. This will be done probably in February. The company now has branch houses in Chicago, New York, Montreal, Boston, San Francisco, Kansas City and Los Angeles.

—New: Lukinger & Co., and Glenn R. Fetterman & Co., Bremerton, Wash.; Dr. English, Bertha, Minn.; McConnell Drug Co., Hope, N. D.

—Emma Richards, Randolph, Ore., will remove to Cody, Neb.

—Dr. S. L. Roberts, Myrtle Point, Ore., is to sell.

—William & Baxter, Billings, Mont., have dissolved.

—D. A. Allea, Des Moines, Ia., has given a bill of sale.

—D. P. Jameson & Co., Osanbrock, N. D., has sold.

### Attractive Packages.

Every druggist who has learned his profession as it should be taught in this twentieth century has an eye to neat and attractive packages and is always on the look-out for a plan to make them more so. Probably the majority of druggists know, and many have used, the American Paper Bottle Cap. This cap improves the appearance of a prescription bottle as much as the latter is an improvement on the method used in old days when essence bottles were used for prescriptions. Any druggist who has not seen or used the American Paper Bottle Cap will do well to write to the makers for free samples. Address the Sayford Paper Specialty Co., Camden, N. J.

### A New Correspondence School.

An advertisement of a new correspondence course in pharmacy appears in this issue of the Era. This course is offered by the American Correspondence University, of which Charles W. Parsons, Ph. C., is president. Mr. Parsons is well known as a thoroughly proficient instructor and writer on this line, and doubtless the new course in pharmacy is very complete. It costs only \$20.00 and students can commence at any time. For full information and sample sheets of the lectures, address American Correspondence University, 156 Fifth avenue, New York.

Some druggists do not realize what little time and trouble need be used in making tablets with a good machine, and the small expense attached to the manufacture in that manner. It is claimed the pharmacist can save 200 per cent on the cost of tablets by using the "Eureka" tablet machine, which will make 100 a minute of any size up to half an inch in diameter. This machine is simple and inexpensive and can easily be obtained by any druggist. For particulars write to the makers, F. J. Stokes Machine Co., No. 501 (E.) Thompson street, Philadelphia, Pa.

Druggists who have handled the "Gem Nail Clipper" appear to be well satisfied with the sale of this manicure tool, judging from the "repeat" orders sent in. The "Gem" cuts, trims and cleans the nails and is a convenient and perfect manicure tool easily carried in the vest pocket. The article is for sale by all jobbers at two dollars a dozen and comes on a handsome display case. It is manufactured by the Coe Mfg. Co., No. 50 Warren street, New York.

Dundas Dick & Co., the original manufacturers of soft capsules in this country, guarantee the purity and reliability of their goods. Their Docuta Sandalwood capsules are claimed to be the best made, and are quite generally prescribed by physicians for diseases of the genito-urinary organs. Packages retail at \$1.50 each and cost \$12.00 per dozen. For literature regarding these goods, address Dundas Dick & Co., 112 White street, New York.

The popularity of Listerine Toilet Soap is increasing every month and druggists who have handled it say it is becoming as well known as Listerine itself, and customers who use it express the greatest satisfaction. The soap is supplied to the trade by wholesale druggists and as it yields a good profit, costing only twelve dollars a gross, it should be a good investment.

Velvee, or Witch Hazel Jelly, is prepared by the Mayell & Hopp Co., Cleveland, O., and at the price offered to the druggist it should be in good demand all over the country. Freight is paid on two gross lots and any jobber can supply it. The makers offer to send new and attractive advertising matter to any dealer on request. The address is: The Mayell & Hopp Co., Cleveland, O.

—The Charleston Drug Manufacturing Co. has just been organized in Charleston, S. C., by Walter Pringle, of Pringle Bros. and a number of drug men formerly connected with the pharmaceutical establishment of the late Dr. Baer, of that city. A charter of incorporation has been applied for, and the capital stock will be \$60,000, to be increased later to \$100,000. The company proposes to do a regular manufacturing and jobbing business.

# PATENTS, TRADE MARKS, ETC.

### PATENTS.

Issued November 19, 1901.

- 686,740.—Louis J. Bureau, Delray, Mich. Apparatus for making salt.
- 686,725.—John M. Grenier, Monmouth, Ill. Closure for jars or bottles.
- 686,758.—David C. Patterson, Cynthiana, Ky., assignor of one-half to T. Hedges, Jr., Cincinnati, O., Blowpipe.
- 686,764.—Charles W. Richards, San Francisco, Cal. Tooth-Brush.
- 686,765.—Emanuel L. Richards, Philadelphia, Pa. Tablet-Machine.
- 686,772.—Cyrus J. Seltzer, Philadelphia, Pa., assignor, by direct and mesne assignments, to the National Recovery Company, a Corporation of Delaware. Process of recovering absorbed alcohol from empty barrels.
- 686,908.—John J. Stermack, Freeport, Ill., assignor to Arcade Manufacturing Company, Freeport, Ill., a Corporation of Illinois. Cork-Puller.
- 686,947.—William Marsh, Manchester, England. Method of making carbonate of magnesium.
- 686,968.—Alfred Ammelburg, Höchst-on-the-Main, Germany, assignor to the Farbwerke, vorm. Meister, Lucius & Bruning, Höchst-on-the-Main, Germany, a Corporation. Neutral Compound of Dimethylamido-dimethylphenylpyrazolon and process of making same.
- 686,900.—Alfred Ammelburg, Höchst-on-the-Main, Germany, assignor to the Farbwerke, vorm. Meister, Lucius & Bruning, Höchst-on-the-Main, Germany, a Corporation. Acid compound of Dimethylamido-dimethylphenylpyrazolon and process of making same.
- 687,004.—Frank E. Crawford, Lakemills, Wis., assignor of one-half to William A. Engsborg, Lakemills, Wis. Hot Water Bag.
- 687,118.—Joseph Butkus and John A. Butkus, Baltimore, Md. Bottle-Stoppering Machine.
- 687,122.—Leon A. Calmette, Lille, France. Process of manufacturing glucose.
- 687,136.—William Drake, London, England. Apparatus for the manufacture of glass bottles, etc.
- 687,139.—William J. Evars, New York, N. Y., assignor to the firm of McKesson & Robbins, New York, N. Y. Nasal Cup.
- 687,156.—John W. Jackson, Youngstown, Ohio. Bottle.
- 687,150.—Dewis Landau, San Francisco, Cal. Siphon-Bottle

### TRADE MARKS.

Registered November 19, 1901.

- 37,320.—Toilet Powder, Gerhard Mennen, Newark, N. J. A portrait of the registrant in connection with two panel-like figures upon an ornamental ground.
- 37,321.—Dyspepsia Remedy, Sabbati E. Ullman, Jersey City, N. J. The word "Royal".
- 37,323.—Salves, William Hausmann, Beloit, Wis. The word "Eggo".
- 37,324.—Certain Named Surgical Appliances, J. Ellwood Lee & Co., Conshohocken, Pa. The representation of a ring of legs.

### LABELS.

Registered November 19, 1901.

- 8,795.—Title: "Erb's Emulsion of Pure Cod Liver Oil". (For a Preparation of Cod Liver Oil). Ludwig G. B. Erb, New York, N. Y. Filed October 29, 1901.
- 8,796.—Title: "Puritan Cough Syrup". (For a Medicine). L. G. Hughes, Minneapolis, Minn. Filed Sept. 27, 1901.

- 8,797.—Title: "Anti-Diphtheria Specific". (For a Medicine). Frank W. Robinson, McLeansboro, Ill. Filed October 28, 1901.
- 8,798.—Title: "Cowan's Catarrhal Cream". (For a Medicine). Michael E. Cowan, Tecumseh, Neb. Filed October 26, 1901.
- 8,799.—Title: "Phospho-Pepsin". (For a Remedy). Michael E. Cowan, Tecumseh, Neb. Filed October 26, 1901.
- 8,800.—Title: "Cascarilla Bitters". (For Cascarilla Bitters). D. Y. K. Deering, Union, Ore. Filed August 19, 1901.
- 8,801.—Title: "Taggart's Cold Breaker Laxative". (For Laxative Tablets). G. C. Taggart, Philadelphia, Pa. Filed October 14, 1901.

### PRINTS.

Registered November 19, 1901.

- 421.—Title: "Good News for Everybody". (For a Medicine). Saginaw Medicine Co., Saginaw, Mich. Filed October 21, 1901.
- 422.—Title: "How do you Feel?" (For a Medicine). The Atlas Specific Company, Buffalo, N. Y. Filed October 24, 1901.
- 423.—Title: "Phospho-Pepsin". (For a Remedy). Michael E. Cowan, Tecumseh, Neb. Filed October 26, 1901.

Binder's Tar Soap gives entire satisfaction to the user and pays the druggist a liberal profit. Write for new special offer to druggists. Address, Binder Co., 31 S. 13th street, Philadelphia, Pa.

## MARKET REPORT.

## NEW YORK MARKETS.

## A GOOD STEADY BUSINESS REPORTED.

New York, Nov. 26.—Jobbers continue to report a good steady routine business with a large variety of commodities sharing in the general distribution, and market conditions generally appear to be satisfactory.

**OPUM.**—Under the influence, heretofore noted, the weak undertone referred to last week has resulted in a general revision of prices, and a lower range is quoted for all grades. The revised quotations are \$2.20/3.40 for 4 per cent and \$2.40/2.90 for 11 per cent. Powdered is available at \$4.25/4.50 for 13 per cent, \$4.75/5.00 for 16 per cent and \$4.50/4.75 for g. annual.

**MORPHINE.**—Business is of full average volume and jobbing quotations continue firm at \$2.40/2.50 for eighths in 1-oz. boxes, \$2.35/2.45 in 2½-oz. boxes, \$2.15/2.25 in ounce vials and \$2.10/2.20 in 5-oz. cans, according to brand.

**QUININE.**—An improved inquiry for round lots is noted and the jobbing movement continues fair with quotations maintained at 27c for bulk in 100-oz. tins, 27½c in 50-oz. tins, 28c in 25-oz. tins and 34c in ounces.

**HEPATIC.**—Foreign markets are calmed easier and jobbers have reduced spot quotations to \$3.15/3.40 for whole and \$3.25/3.50 for powdered.

**OIL LEMONGRASS.**—Spot supplies are exceedingly light and the market is decidedly stronger with quotations showing an advance to \$2.75/3.00.

**OIL ANISE.**—Import cost is slightly lower and jobbers have reduced quotations to \$1.00/1.15.

**CITRIC ACID.**—Quotations between foreign and domestic have caused manufacturers of the latter to reduce their quotations 1c per lb. and the revised jobbing range is 35½/36c in kegs and 40/45c for less.

**CANARY SEED.**—Quotations are stronger owing to reports of decreased yield of new crop and jobbing quotations have been advanced to 31½/32c for Sicily by the bag, and 4½c to 4c for less; 30¾/31c for Smyrna by the bag and 4½c for less.

**ANGOSTURA BARK.**—Values are higher owing to scarcity and jobbers have advanced their quotations to 30½/35c for whole and 35½/40c for powdered.

**GUM GUAIAC.**—Supplies are light and the market firmer with jobbing quotations advanced to 35½/40c for extra, 30½/35c for No. 1, and 40/45c for powdered.

**LITHIUM CARBONATE.**—The market is weaker, owing to competition among manufacturers, and jobbers have reduced quotations to \$2.55/3.50 per lb. and 27½/30c per oz.

**SENNA.**—Sifted Alexandria is in better supply and easier with jobbers quoting 32½/37c.

**OIL ALMONDS.**—Quotations to decline in sympathy with foreign markets and prime English is obtainable at 50½/60c, oz. as to quantity.

**MARKET SEED.**—Holders are inclined to offer more freely and the revised jobbing quotations are 9½c @ \$1.00 for whole and \$1.00/1.10 for powdered.

**SUGAR OF LEAD.**—Purified is slightly easier, with sellers in a jobbing way at 18½/20c.

**SHELLAC.**—Decidedly stronger market is reported owing to advices from primary sources to the effect that the crop of crude material is practically a failure, and jobbers have advanced quotations to 30½/35c for native and 35½/40c for Orange.

## 300 Doses for \$1.00.

"Five Drops" is the trade marked title adopted by the Swanson Rheumatic Cure Company, of Chicago, for their remedy for rheumatism and neuralgia. It is taken in doses of five drops and there are three hundred doses in a bottle retailing at \$1.00. This is a great improvement in dosage over most remedies of this kind, and the company shows testimonials which indicate that "Five Drops" is a great improvement over the average proprietary rheumatic remedy in the matter of giving prompt relief to the patient. It is used both internally and externally and is claimed by the manufacturers to be an absolute specific for the above mentioned ailments. All jobbers carry it. For advertising matter address The Swanson Rheumatic Cure Company, 160 Lake Street, Chicago, Ill.

## Giving Away Goods.

The manufacturers of Mitchell's Poisoned Wheat offer to give one dozen 15 cent packages and 200 free samples with every order of two dozen of their goods. Mitchell's Poisoned Wheat is claimed to be the best exterminator of rats and mice ever known. If you want to take advantage of this offer address Mitchell Wheat Co., 66½ Oak street, Jersey City, N. J.

## INDEX TO THIS NUMBER.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |           |

The well known and reliable Thomas' English Prepared Chalk that is advertised to the drug trade so extensively should be handled by every druggist who is particular about the quality and appearance of the goods he sells. This chalk is sold in 5-lb boxes, both white and pink, and any jobber will supply it. Druggists not familiar with the Thomas' Chalk can be convinced of its qualities by sending for a sample package. Address the Thomas Manufacturing Co., Baltimore, Md.

Nearly all the first class drug store have more or less demand for the well advertised perfumes and toilet preparations of Deletréz, Paris. The United States agents for these goods, McKesson & Robbins can supply any odor or style. Some of the specialties made by Deletréz are: Azalla, Amaryllis Du Japon, Violettes Celestes Supre Violetta, Bouquet du XX siecle, Chypre Royale and Royal Deletréz.

You will rarely find Four Fold Liniment in a department store.

# The Pharmaceutical Era.

NEW YORK.

Telephone: 2240 Franklin. Cable Address: "ERA"—New York.

SEE LAST READING PAGE FOR COMPLETE  
INDEX TO THIS NUMBER.

## OUR JANUARY PRICE LIST SUPPLEMENT.

The next (January) edition of the Era Price List Supplement ("Blue Book") is now being prepared, and a copy will be supplied free to each paid Era subscriber. The various lists will show many additions and all prices corrected and brought down to date.

Each of these lists is a dictionary of price information, and the Drug and Chemical List is so arranged that the druggist can note all of the price changes which may occur, and which are noted weekly in the market reports of the Pharmaceutical Era. The Price List of Proprietary Medicines and the accompanying List of Manufacturers have been greatly amplified. Special attention is called to these Lists. By a system of indexing each article in the Price List of Proprietary Medicines is given a key number which refers to a corresponding number in the List of Manufacturers' names and addresses, and, turning to this list, the information so often desired as to the manufacturer of a particular preparation may be readily attained. The new Rebate List of proprietary goods sold on the contract system of the National Wholesale Druggists' Association is also given in its entirety.

These are only some of the features which make the Era Price List Supplement of greatest service to the wide-awake druggist. Can you afford to do without it? Its price quotations are those supplied by experts in the principal drug markets, and they are reliable.

## TETANUS AND VACCINATION.

The popular fear of tetanus and the consequent objection to the use of vaccine and serum remedies is spreading throughout the country. A number of cases of lockjaw, supposed to be the result of vaccination, have been reported from Camden, N. J., and other places. Unfortunately people are under the impression that this dreaded disease is the direct result of vaccination and is caused by infection in the virus employed. Some of the newspapers have spread this mistaken idea and the popular prejudice against inoculations and injections of any kind is already interfering seriously with the work of the health officers in a number of places.

It is hard to convince the public that the cases of lockjaw which occurred at Camden are not caused by contaminated material like those which followed the use of antidiphtheritic serum in St. Louis. Everyone now hears and reads about germs and their relation to disease. Vaccination and the use of serums involve the employment of what seem to be the same dreaded agencies. When accidental infection occurs the public quite naturally objects to the use of agencies which are apparently so dangerous and so imperfectly understood. It will take a great deal of explanation on the part of those who know about these matters to restore full confidence in these valuable remedies.

It is now quite clear that the cases of lockjaw reported from Camden were not directly due to vaccination at all. Not a single case of contaminated vaccine was found. In the cases in which vaccination wounds were the points of infection, the poison was not introduced with the virus, but was later derived from dust or dirt accidentally introduced into the wounds.

The value of vaccine and antitoxin as remedial agents has been proved by years of experience, and the use of these remedies has produced a marked lowering of the death rate in civilized countries. The successful application of serums to the treatment of disease is considered one of the greatest achievements of modern scientific medicine. The loss of public confidence in the ability of physicians to control the action of these powerful agencies, caused by the unfortunate cases of tetanus in St. Louis, must be regarded as little short of a calamity. The popular prejudice against the use of antitoxin is so great in that city that more deaths have already been caused since the recent accident by failure to use this remedy than were directly due to the use of the contaminated serum.

A wholesale refusal to submit to vaccination would endanger thousands of lives, and it is the duty of every druggist, as a trained guardian of the public

health, to aid by every means at his disposal in restoring popular confidence in this necessary measure.

#### THE ERA'S NEW DEPARTMENT.

The problem contests which will be conducted by a new department of the Era, beginning in the first issue of the year 1902, may not prove as interesting as the recent international yacht races, but according to all indications they will be well worth watching. It is surprising how much sport may be derived from matters which are essentially practical and useful, and as the problems will deal mainly with pharmaceutical subjects these contests should be of unusual interest to those connected with the drug trade.

The inauguration of the new department was, however, not undertaken purely in the interest of sport. American pharmacy has become largely a commercial pursuit, and in fulfilling the demands of the business side of the calling the highly-trained faculties of the pharmacist are liable to suffer from lack of use. There are thousands of druggists, both young and old, who should take a greater interest in matters purely pharmaceutical—in the science and art of preparing and dispensing medicines as distinguished from the mere buying and selling of goods.

Men are all interested in a spirited contest, and it is to a recognition of this fact that the inauguration of the Era's problem department is due. It is a crafty scheme for getting druggists interested in the whys and wherefores of their calling and incidentally in the manner in which these things are presented from week to week in the columns of the Era.

The contests will be spirited; for, besides the fun and benefit to be derived from working the problems, the prizes offered are decidedly worth the while. This department will give those who pride themselves upon their ability to figure things out a chance to show what they can do. In order to stimulate a spirit of rivalry among the contestants and heighten interest in the results, the names of prize-winners will be printed in the Era, as well as the correct answers to the problems. Students and those who have recently passed State board examinations should be in excellent trim to join in the contests. There will also be older pharmacists, who no longer bother their heads about examinations of any kind, who will wish to try conclusions with the youngsters. There will be no handicaps in the contests; every one will have an equal chance. Working out the answers will prove a pleasant recreation after the daily routine of the drug store, and the problems will suggest improvements and economies which may be profitably introduced in the conduct of the business.

The writer of the article in the present issue upon American Pharmacy, as seen through German spectacles, is not altogether complimentary in his remarks. The citizens of every nation naturally prefer their own ways of doing things, and our methods could therefore not be expected to meet the approval of such a violent foreigner as the writer in question evidently is. It is quite plain that this gentleman did not get on well in the United States for he seems to have been glad to leave us. He says many mean things about the American drug business, but he admits that the pharmacists of this country are *At* business men.

Few people enjoy criticism when directed against themselves, even though it does them good. Druggists are, however, too sensible to object very seriously to the remarks of this subject of the Kaiser. It is not at all certain that the article will do them good, but it will at least help them to see the faults of their neighbors, which is always accompanied by pleasant sensations.

An interesting fight is at present going on between the manufacturers of cream of tartar. A combination of several Eastern manufacturers was formed for the purpose of controlling the price of this important salt in 1899. This combination was, however, not allowed to have things entirely its own way. A San Francisco firm undertook to contest the field, and in the course of time established a plant for the manufacture of cream of tartar in Brooklyn, N. Y. This factory has grown to large proportions and competition between the rival producers is keen. As a result of this war, the price of cream of tartar has been reduced three cents per pound. The war involves the principal baking powder manufacturers.

Some druggists still manage to have a little fun. Scores of bowling contests are a regular feature of the news columns of pharmaceutical journals at present, and their figures seem to be consulted quite as frequently as the market reports. In spite of the many complaints about long hours and lack of time for recreation, sports come in for a large share of the young pharmacist's attention during both winter and summer. If the older readers object to items of this kind in their trade papers, let them remember that they were not always completely absorbed in business, and that a boy does not lose all interest in play the moment he begins to do a man's work.

The occurrence of two or more serious explosions of soda water apparatus again calls attention to the dangerous nature of all receptacles containing gas under pressure. Most of the appliances are supplied with safety devices, but safety devices are in use only under abnormal conditions and are liable to get out of order in ordinary use. All apparatus of this kind should be frequently tested and inspected, and treated with due respect at all times.

The Committee on Proprietary Goods of the National Wholesale Druggists' Association has issued a new list of wholesale drug distributors. The list contains 413 names. A number of new names appear, but compared with the list of last year changes are relatively few.

The people of Buffalo will have cause to remember their exposition for some time to come. Even the druggists complain of loss and disappointment. People seem to go to expositions to see things, and not to buy vast quantities of goods.

The marriage of the daughter of a prominent local drug man to the head of a large dry goods establishment does not necessarily mean that all of the plums of the pharmaceutical pie are going to the department stores.

## OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

### PHARMACY LAWS AND CLERKS

Chicago, Nov. 22, 1901.

To the Editor—"Pharmacy Laws and Clerks," "Root Out the Degenerates," cries "Proprietor," in the Era of November 14. The mail has been heard. Let's go about it. But, to root out a tree, it is not sufficient to cut off its branches. The core is rotten as well, and the trunk must fall victim to the axe. Whether we can at this time get at or blast out the root of the pharmacy evil is very doubtful.

Allow one of the rank and file of the clerks to answer some of "Proprietor's" questions. "Is there not something lacking in our pharmacy laws?" Yes, not one thing but several. Decisiveness for one, proper protection in and by the courts, and honest support of the profession. The institution of "registered assistant," for example, is ridiculous, and offers a good means to evade important provisions of the law. A man is either proficient, or he is not—there is no half proficiency. That "temporary absence" clause is a remarkably clever concoction. It is responsible for the exiling of one-half of the registered men and the substitution of assistants in their places, at a lower figure. "Ah, there's the rub."

The legal standing of our State pharmacy acts is a pitiable thing—worse than that of the reform ordinances spasmodically passed by our city council. Unconstitutionality is the club continually thrown between the legs of the guardians of our laws. If they do carry a point it is only to find that no provision has been made for the execution of the punishment. The worst of all is the lack of honest support of the laws by the registered (proprietor) pharmacist. On that subject I will not waste any words. Let those concerned have a little confessional with their consciences. "Clerks are a scarce article, and to get a good man is next to an impossibility." With the first part of this statement most all interested will agree; the second is an overdrawn assertion. Quality and price are usually in close relation. Did "proprietor" offer good inducement? The scarcity of good clerks has been dilated upon at great length. I will only reiterate that hundreds of good, able young fellows enter the ranks every year, but the inducements are so small, the conditions so miserable, that many drop out to follow more promising vocations.

As to the men of ability and good character without legal qualifications, I see no reason why they should not qualify as well as the men from this State. The State Board of Pharmacy places no obstacles in the way of the able. Neither law, State board, nor examinations are responsible for moral unfitness of the clerk. The employer is mostly to blame for the retention of the degenerates in the ranks. The law requires, and the State board insists, upon certificates of moral standing of the applicant for examination. These certificates are to be sworn to before a notary public, and must come from former or present employer. No man is admitted for examination unless his good character is properly attested. If a drunkard or a dope-fiend creeps through, the suspicion is that some one has committed perjury.

Should a clerk fall into bad ways after his qualification, the law provides for his excommunication from the profession. But who ever heard of the revoking of the license of a registered pharmacist clerk or proprietor? Did "Proprietor" report the transgressions of his two misfits to the proper authority? Are there not also unfit proprietors, and who protects the community from them?

Legislation has so far accomplished little to pre-

vent or check degeneracy. Our pharmacy laws are better to-day than in former years, and not responsible for degeneracy in the profession. Are the conditions and influences surrounding the apprentice and clerk such as to inspire a youth to the best deeds of manhood? Has he the time to improve his moral training? Does the selling of booze and dope—illegally and indiscriminately—that he is forced into elevate his moral standards? Root out the degenerates, clerks as well as proprietors, and educate and train our boys into an efficient and morally sound body of clerks and proprietors. Don't become so dependent, like our friend, "proprietor." Our merchants, bankers, railway managers and others seem to be getting good help without State protection or interference. Why cannot the druggists?

A Clerk.

### A NEW CURE FOR RHEUMATISM.

BY A. F. METTLE, Buffalo, N. Y.

The traveling man had just succeeded in persuading the druggist to put in a window of his bath cabinets.

"By the way," said the druggist, "I must tell you of a funny incident which happened on a street just back of me. I was standing here trying to think of a scheme to get rid of more goods than I had been getting rid of, when an Irishwoman, in wash-tub attire, with eyes almost bursting from their sockets, rushed in and gasped that she wanted me to telephone for a doctor. 'Shure, me Moike has kollra or the black triperia!' I telephoned and then went over, knowing she must be mistaken. Investigation brought out the fact that Mike had been lying around in the house for a week with an aggravated case of laziness. His wife, while washing for a certain family, had the vapor bath and its good qualities explained to her. She was very much interested, and that evening explained it to Mike. 'Oi belave me sow! Oi could cure yex rumatiz if Oi had one. Oeh, sure, an' Oi have an oidea. We'll be after takin' the owld crate that shtands outside the dure, yez'll sit on a chair inside an' Oi'll be after throwin' a blanker over yez. 'Tis the oil shrove we'll be after usin' to bile the water.'

Mike had been in about five minutes when he complained of the heat.

"'Tis as it should be, shure its fitane minutes yez'll have to shtay.'

"'Begorra, it's dead Oi'll be. Sure, Oi'm burnin'."

"'Arrah, ye coward, 'tis the rumatiz comin' out af yez.'

"Take it off, I command ye!"

"Kape shtill, I command ye!"

"'For the love af hivin, 'tis murtherin' me ye are!"

"Mike finally became so uncomfortable that he begged, while big drops of perspiration ran down his face. At this, Bridget pulled off the blanket and Mike stood up. With a yell that no doubt would have done credit to a small band of Indians, Bridget made a dash for the priest and doctor. We all arrived about the same time; the doctor, having been met by Bridget, had gone for the priest, who lived but a short block away.

"The sight that met our eyes I shall never forget. There stood a big, brawny, red-headed and white-faced Irishman. The rest of him was as black as ink. The three of us, when the cause of it became clear, stood, then sat down and laughed until almost exhausted. It seems that in putting the blanket around the crate, Bridget made it as air-tight as possible; the consequence was that the stove smoked. The soot and steam made a fine black suit, skin tight. The one trouble with it, however, was that it would not come off. Bridget scrubbed and rubbed for over half an hour before Mike could get back into his clothes. 'He's not clane yet,' she said the other day, 'but hes cured!' No doubt the rubbing had the desired effect."

## LAUDANUM.

**Its Formula a Problem to the Country Pharmacist. There is a Popular Demand in Country Districts for a Laudanum for External and Veterinary Uses That Cannot be Filled With the U. S. P. Article on Account of its Excessive Strength and High Price.**

BY "PHARMAKAPOLE."

To the conscientious pharmacist in rural districts, the question of how he will make his laudanum is somewhat of a problem. If he makes it U. S. P. he must either sell it at a price wherein there is no profit or ask a price that will earn him the reputation of being "dear." If he makes it of less strength than prescribed by the Pharmacopœia he feels that he is violating his professional code of ethics; to say nothing of the danger of having a pharmacy inspector procure a sample of the preparation and bring action against him for selling adulterated drugs.

There is a large demand for laudanum in country districts for perfectly legitimate uses, chiefly external, in the household and the stable. This is aside from the demand from habits of the preparation, for no true pharmacist will pander to that class of trade, but will do all he can to drive it away from his store. In the household it is used chiefly as a lotion for contused wounds of the hands and feet, or as a liniment for soreness and lameness and neuralgic and rheumatic pains.

Down on the eastern end of Long Island, where the soil is full of the tetanus bacilli, it is a popular prophylactic against that dread malady, the method of using it being to wrap the fresh wound loosely with a soft bandage and keep the bandage saturated with laudanum for twenty-four hours or more, after which a dry bandage is applied and the wound healed with the usual treatment. The fact that there are so few deaths from lockjaw in that section is some evidence of the efficacy of the treatment. The few deaths that do take place there every year have so impressed the residents of the district with the horrible sufferings of the disease, that their first thought on receiving a wound on the hand or foot is to take prompt measures against the possible infection of the wound with tetanus. It is seldom that the wound receives any further treatment than being kept saturated with laudanum for a day or two.

If a man should go into a city store and ask, "How much is laudanum a quart?" the pharmacist would probably think the man was joking or would look upon him with suspicion, but this is a question that is often propounded in country pharmacies and propounded in all seriousness. The inquirer is usually a stable-keeper, or large stock owner, and laudanum is one of his chief remedies in treating the ills and accidents of his horses and other stock. Does a horse throw himself in the stall and get himself bruised and cut up? A laudanum-soaked bandage is applied to the wounds. When a horse shows symptoms of a chill or colic, an ounce or two of laudanum is administered until other remedies can be procured. A teaspoonful of tannin mixed with a tablespoonful of laudanum makes an effective styptic for harsh wire fence wounds or other deep cuts. Laudanum, either used alone or with arnica or witch hazel, is employed as a rubbing lotion or a fomentation in soreness of the legs or feet.

The countryman uses laudanum freely as a domestic remedy, but he seldom uses it internally, but as a lotion or liniment, or as an addition to a hot fomentation or poultice. He handles the stuff carefully and intelligently and there are seldom any accidents from its use in this way.

When the country stock-man goes into a pharmacy and asks the price of laudanum, if the phar-

macist is new to the situation he will probably have on hand only the U. S. P. article for which he must charge about a dollar and a half a pint. Mr. Countryman is usually a man of few words, he does not stop to haggle over the price, but mumbles an excuse or makes a trifling purchase and goes out, and he never comes back, for he has that store marked as "a dear store." He goes to an older established store and buys his laudanum for a dollar, or less, a pint, or a dollar and a half a quart. The article he gets is not U. S. P. '90 assayed laudanum, but it is what he has always used, it is what he wants and what he expects to get. U. S. P. '90 laudanum is so much stronger than that which he has used for years that it might lead to accidents with him.

I cannot see what good purpose is served by the excessively strong '90 laudanum; it is seldom used internally. I cannot remember when I have had a prescription where it is prescribed as an ingredient for internal use, but I am putting up prescriptions every day for the deodorized tincture. It seems to me that if the official formula was a half or two-thirds its present assay strength that it would be better all around. I am actually afraid to dispense the U. S. P. article for counter trade, for fear the customer might take a dose that might lead to serious results, as a good many people are used to take a twenty-five drop dose, some times more, for diarrhea or some other ailment. From my experience in different localities I am of the opinion that there are very few country drug stores that dispense the U. S. P. '90 laudanum on counter call.

It has been my practice to dispense the U. S. P. '90 article only on prescriptions or physician's order; for counter sales the laudanum of 1870 Pharmacopœia is dispensed. We retail about a gallon a month of the 1870 preparation and use about a half a gallon a year of the '90. Not an ounce of either is sold to a habitue.

As a measure of protection against a possible accusation of selling a weaker preparation than that prescribed by the Pharmacopœia the 1870 laudanum, in addition to the skull and cross-bones and the word "Poison" in red and the antidote, bears on its label the following wording, "This is the tincture of opium of the 1870 Pharmacopœia and is not so active as that of the 1890 Pharmacopœia. It is intended chiefly for external and veterinary uses."

A word as to registering the sale of poisons. In the city when persons ask for a poison they are sharply cross questioned as to the reason it is wanted and the use it is to be put to. The manner of the questioning generally suggests that the pharmacist believes the substance is to be put to some guilty use and calls upon the customer to prove to the contrary. In the country that sort of thing won't do at all. It will simply drive good customers away and give the pharmacist the reputation of being cranky. To be sure, there is a much larger demand in country trade for poisons, the greater bulk of the calls being for veterinary and agricultural uses. Most of his customers are known personally or by sight to the country pharmacist, and there is little hesitation in handing out whatever is called for, because the character or responsibility of the customer is known. At the same time because he knows the customer, the pharmacist is too often lax about registering the sale of poisons required by law, and once in a while gets into trouble through a case of accidental poisoning or suicide. Those poisons required by law to be registered should invariably be duly registered. It impresses the customer with the fact that the pharmacist is a careful and law-abiding man and teaches him that poisons may only lawfully be sold by competent pharmacists. At the same time the customer should not be offended with a nagging cross questioning when calling for an article of lawful sale to be used for a legitimate purpose.

My own method of selling such things is to at once proceed to weigh or measure out the article called for and while doing so politely or casually, as the case may be, inquire the purpose for which

it is to be used and, before labeling and wrapping it, get out the poison register, fill in all but the name, ask the name and enter that and find if the customer knows how to use the article intelligently, winding up with the remark, "the law requires that we register the sale of violent poisons." I then caution the customer about leaving the stuff around where it is liable to be found by children or may be used for something else by mistake. Sometimes the customer is a regular patron of the store, but his name is not known, and it is rather embarrassing and poor business policy to ask it, as the customer will naturally think that he has been in so often that you ought to know all about him. Sometimes asking what his initials are will bring out the full name, or if that fails there is nothing left to do but ask him how he spells his name. Of course, any sign of mental excitement or trepidation on the customer's part during the transaction would at once hold up the sale.

### WINDOW DISPLAYS.

BY WILLIAM RUPP, Newark, N. J.

Windows which have brought results:—

Drive a nail in each corner of the frame and sash of your show window, about two inches below the ceiling. Stretch a piece of strong twine from one nail to the other, beginning at the front left-hand nail; from there to the front right-hand, then to the rear right-hand and rear left-hand corner, and thence to the starting point. Stretch this as tightly as possible, as it will have to sustain considerable weight. Make a network of string, with strong twine, passing from front to rear and from side to side. This network may be made with a view to permanency and as neatly as possible. Then get a spool of Barbour's linen thread (No. 50) black, which is almost invisible when hung in the window.

To make a tooth brush display, make strings of the tooth brushes with the thread. The easiest method of fastening the brushes to the thread is to make a simple loop, place the handle of the brush in the loop and pull each end. This window will not show up well unless plenty of brushes are used. Make the strings of brushes long enough to reach from the network at the ceiling to the floor of the window. As each string is made fasten it to the network of twine.

When the window is completed, the passerby sees tooth brushes from top to bottom of the window, apparently suspended in space, as the thread is not seen very distinctly. Then place a large cardboard sign (28x22 inches) in plain, black letters in the window. This motto proved quite effective in one of my windows:—

THE TOOTH BRUSH  
YOU WANT  
IS  
HERE  
THE PRICE IS RIGHT.  
10c to 35c

Cover the bottom of the window with clean white paper or deep blue crepe paper, and distribute tooth washes, tooth powders, tooth pastes, tooth soaps, dental floss, etc. At the bottom of the window place a narrow strip sign (10x28 inches)—

LET US SUPPLY YOUR TEETH NEEDS.

This arrangement has been employed with sponges, little liver pills and cough cure, the empty cartons being used in the latter instance.

I have used the above window for tooth brushes and allowed it to remain for two weeks, during which time more tooth brushes were sold than had been sold in any two months previous. This window was used for sponges and proved even more ef-

fective, a stock of sponges being disposed of in two weeks which usually lasted a quarter of a year.

Of course, appropriate signs go a great way towards making a good window a success. Some of the signs used with the above mentioned displays were as follows:—

For the sponge window:—

SPONGE VINE  
COME IN AND PICK OFF  
A  
SPONGE.  
NO NEED TO "PICK" AT THE  
PRICES.  
10c to \$2.00

For the "liver pill" window:—

10c

No mention was made of what "those little red things" were. This window was very striking in appearance, and almost everybody who came in asked "what are those red little things in the window?" Some people thought they were fire crackers. Whoever saw the window was curious, and after a few days they learned that "those little red things" in "Blank's" window were Blank's Little Liver Pills. After that they knew what was in the window, and every time they looked in the window they saw the sign "10c." If any mention had been made of what "those little red things" were, the effect of this window would have been commonplace.

It aroused the curiosity of the passerby, and after his enlightenment as to what it was, there was the sign "10c." Curiosity on the part of the passerby made this window very successful.

For the "cough cure" window:—

Take a piece of paper about 15 inches wide and about 4 feet long:—

BLANK'S COUGH CURE  
WILL CURE THAT COUGH.

That word "CURE" means just what it says.  
Twenty-five cents a bottle or your  
Money back if it isn't so.

GLYCERINE AND SALICYLIC ACID ESTER.—A process for the preparation of an ester of glycerine and salicylic acid has been patented in Germany. One hundred parts of salicylic acid and 300 parts of glycerine are mixed with 8 parts of 60 per cent sulphuric acid, and heated upon a water-bath for 30 hours, the mixture being shaken frequently. After cooling, the clear solution is diluted with twice its volume of water, and shaken with soda until the reaction is decidedly alkaline. The solution is further diluted with water, and shaken repeatedly with ether. The ethereal solution is dried and distilled, the residue being a thick, syrupy mass, which becomes crystalline upon cooling. By crystallizing from ether or benzol a pure monosalicylic acid ester of glycerine is obtained. By varying the proportions of salicylic acid products containing larger proportions of the acid may be obtained. These compounds are said to be valuable as antiseptics and for use in the treatment of rheumatism.

MAFOA GUM.—According to H. Thoms (Apot. Zeit.), a product in many ways resembling elemi is obtained from the mafoa or maali tree of Samoa, known as *Canarium samoense*. The author finds that this material differs in composition from elemi, but thinks that it may find a use in pharmaceutical and medical practice.

## American Pharmacy as Viewed Through German Spectacles.\*

After having served as an apprentice and assistant in German pharmacies and having passed the State examination as a pharmacist, I determined to visit foreign countries and especially the United States. Accordingly I went there where I remained a year and a half, serving about a year in various pharmacies. I will try and describe what I have seen with my own eyes.

Soon after landing I noticed the great difference between American and German pharmacies. Even a layman coming from Germany cannot help noticing the great number of pharmacies, as there seemed to be one on every corner, sometimes even two. I was informed upon reliable authority that in Greater New York with its population of 3-4,000,000, there were about 2,000 pharmacies. This large number is due to the fact that in America, the country of freedom, it is not necessary to obtain a concession or privilege, but that any pharmacist can locate and open a pharmacy wherever he pleases. It follows, of course, that competition is extreme and that pharmacists do not restrict themselves to the sale of drugs and medicines only, but sell any number of other articles. In most instances the sale of perfumery, soda water, stationery, etc., exceeds that of the legitimate drug business. In the matter of external appearances American pharmacies are totally different from ours; the show windows remind me of those of our "Droguisten Laden" (drug stores), decorated with all possible things, sometimes very tastefully and neat, and sometimes very dirty.

When I arrived in New York, about the beginning of the Spanish-American war, the show windows were filled with all kinds of patriotic articles; I saw one full of guns, trophies of victory, and other warlike materials, so that the window resembled a camp field; in other windows were displayed photographs of all the ships of the American Navy. The American flag was conspicuous in all, because the pharmacists were all infected with the celebrated patriotic enthusiasm of the Americans.

The interior of the pharmacies differ very much. Some of the stores are fitted up with the utmost extravagant luxury, while others resemble the solid, substantial German pharmacies; but some are very poor, seedy and dirty, these latter especially in the poorer quarters of the city.

The average American youth, after leaving the grammar school, about equivalent with our common public school, where no Latin is taught, has only one idea which has attended him from his early childhood, namely, to earn money. It is perfectly astonishing to observe how strong this instinct is developed. Going through the streets of New York I saw boys barely six years old selling newspapers and doing other jobs in order to earn some money. This explains why the youths leave school at the age of fourteen and go into business, solely for the sake of earning money, and perfectly indifferent to learning. The young men then work in a warehouse, a pharmacy, an attorney's office or in some other business generally changing about every two or four months, for the freeborn young American scorns to obey either his parents or employers.

If the young man takes to the work in the pharmacy and is intelligent enough to memorize the Latin names on the containers while dusting and wiping them, he is by and by allowed to help in waiting on customers during the busy part of the day. He is then advanced from the position of boy to that of junior clerk, who is not permitted to prepare prescriptions except under supervision. It sometimes happens that young men over twenty years of age and who have had experience in different branches of the business become proprietors, having worked their way up from boy. In this manner, for instance, the manufacturer of Fellow's Syrup of Hypophosphites Compound be-

gan his career. This is a typical American condition of affairs, we Germans cannot understand. A similar instance I can cite is that of a recently deceased director of one of the largest life insurance companies, who drew a salary of \$100,000 and began his career as an errand boy.

In order to obtain the license which accords the right to compound and dispense prescriptions and to open a pharmacy, the applicant is required to pass an examination. This examination requires no knowledge of the Latin language and no proof that the examinee has served in a pharmacy. The examination is in writing and consists in answering the examination questions. As the latter are known in advance there exist institutions which furnish these examination questions for a consideration of \$10, and which give a sort of verbal course of instruction. It is pretty clear that examinees are not blessed with an excess of knowledge.

Besides the above mentioned pharmacists, who unfortunately form the majority, there are still some who devote more pains to their profession. There are in New York and some other large cities, "Colleges of Pharmacy", i. e. pharmaceutical high schools. A certain preliminary education is not required here, but every matriculant must prove he has had three years pharmaceutical experience. The sessions are held only during the winter months and the course of study extends over two winter terms.

There is no doubt but what this latter class furnishes the more scientific, educated pharmacists. If I were permitted to draw a comparison, I should say that they occupy about the same position as our apprentices, who have finished their apprenticeship. Pharmacists of experience with whom I have spoken about this subject, expressed their regrets that these "Colleges" confine themselves in their courses entirely to theory and do not heed the fact that the average American pharmacist is very deficient in practical prescription work, not to mention anything about preparing pharmaceutical preparations (Defectur).

Ordinarily no difference is made between clerks who have and those who have not attended a "College", probably because most of the pharmacies do very little prescription work. As a general rule, it may be said that the commercial ability of a clerk is more appreciated and better paid than his knowledge of the scientific work. The greater number of the pharmacies do a business of from 10 to 20 prescriptions a day; few of the older stores having an excellent reputation and a good location, may have a business of over 100 prescriptions a day.

A prescription price list does not exist, of course. Every one is at perfect liberty to charge what he pleases, there being no legal restrictions; every American pharmacist must not only know his customer, but he must know whether he can pay a good price or not. In some stores a fixed scale of prices for prescriptions is adhered to; in others the charges vary according to the paying ability of the customer. In one instance I observed that one man was charged 65 cents for Soll. Kal. permang. "1:200", and for the same prescription another customer in the same place was charged 45 cents.

Although the prices formerly charged have been materially reduced through competition, still on an average I find they are from two to three times higher than in Germany. It stands to reason that prescription practice is not as well developed as with us on account of the fewer prescriptions compounded. I have made the acquaintance of a pharmacist with from 2 to 4 years experience who could not turn out evenly made round pills, not to mention any thing about more difficult work. This is also the reason why American pharmacists endeavor to make the work as easy as possible, totally differing in this respect from their German confreres.

\*Translated from Pharmazeutische Zeitung, Berlin.

If the physician prescribes pills, without specifying, the pharmacist searches through his stock to see whether he has any of that kind or something similar. His conscience in this respect is rather elastic. The pills kept in stock, are as a rule not home made, but factory made. As the number of the various formulae is legion, it is nothing unusual to dispense pills that might be five or more years old. The materia medica is about the same as with us and the patented synthetic remedies are to be found in all the larger stores. The consumption of quinine is very large, as there is considerable malaria. The frequent use of strychnine is astonishing.

That compounding and dispensing is not carried out in so conscientious a manner as with us is not surprising, considering the superficial education and training. It is to be regretted that there are pharmacists chiefly the smaller ones, where substitution is practiced in the most flagrant manner. I know of cases where instead of the more expensive phenacetin and antipyrin a mixture of acetanilid and sugar of milk was always dispensed. I used a clerk who worked for over two years in the store who knew about antipyrin and he said he always gave a mixture of acetanilid and sugar of milk for it. That a great many errors are due not only to fraud, but also to stupidity, the following instance observed by me will prove: It was not an apprentice but the proprietor of a small store himself who sent to us a note asking for: "Recens paratum 100.0" We requested that the prescription be shown; it called for, "Infus. Digital. recent. parat. 200.0". The gentleman evidently did not possess the slightest knowledge of Latin. Examples like this one could be cited ad libitum. A pharmacist, thirty-five years of age, caused an explosion which did considerable injury to himself and to his store, by rubbing together a considerable quantity of sulphur and chlorate of potash.

The watchword in the United States is, "Help yourself." Pharmacists are not bothered with revision of their stores or stocks; it is the business of the patient to select a good pharmacist. This is the reason why some stores in New York do a good business and employ from six to ten clerks. The proprietors of these stores have all studied in foreign countries or in America, are extremely particular in properly conducting their business and pay extreme attention to the compounding of prescriptions. The writer worked in such a store.

Very little attention is given to the manufacture of pharmaceutical and galenical preparations; they are not made at all in many stores but are bought from the wholesaler or manufacturer. The drugs, chemicals, etc., purchased are very seldom tested as to their purity.

I must not omit to call attention to fluid extracts which are also gradually coming into vogue with us. These preparations are used very extensively (in some large stores there are over 150 different kinds) and in my opinion they owe their introduction into the materia medica, not to their superior advantages as liquid extracts, but they are simply a convenience for the American pharmacist in extemporaneously preparing tinctures, infusions, decoctions, wines and syrups. Frequently the labels give full directions how to prepare these from the fluid extracts.

The counter sales amount to the chief part of the business. These sales are not, however, restricted as with us to medicinal herbs, soaps and wines, but to the greatest variety of things, according to the location of the store. In the stores located in prominent thoroughfares having a better class of customers, the best qualities of perfumery and toilet soaps are generally kept together with other toilet accessories; in others are soaps, cigars, brushes, whiskbrooms, sponges, optical instruments, in short, everything we find in our drug and variety stores. On account of the heavy competition the American pharmacy has become degraded to a mercantile business. It is not surprising therefore that the educational status of the pharmacist is such a low one.

The number of the patented specialties is simply immense and they are advertised in real American

style, millions being spent for this purpose alone. You can easily convince yourself of this assertion by simply going through the pages of an American newspaper. The American reads the advertisement and believes it and therefore the demand for these specialties is enormous. A great many of these are only mixtures of well known drugs and advertised under fancy names the cheap acetanilid is mixed with sugar or with bicarbonate of soda and then advertised at an astonishing high price as a newly discovered synthetic remedy. This is truly and typically American; the first commandment of the American is to make money.

I must not omit to mention another favorite side line, namely soda water, which is sold in all stores. In winter there is comparatively little sold, but in summer immense quantities are consumed. Soda water is seldom drunk pure, but generally with the addition of fruit juices and ice cream.

The relations between physicians and pharmacists are generally cordial; usually the doctor sends his prescriptions to a certain store and receives in turn from the pharmacists either pecunia or presents. That the dear public has to pay the freight is fully expected in America and this applies not only to pharmacy but to other things as well. According to an estimate of an American pharmacist, there are in New York barely ten per cent. who do not pay any commission.

The drug business is not longer what it used to be. Competition is very heavy, sometimes even unscrupulous. To this must be added another evil we do not have to contend with, viz.; the selling to the consumer by the wholesaler and the department stores. These latter generally contain fullfledged drug stores. Although department stores put up comparatively few prescriptions, they sell specialties and patent medicines at such a low figure the drug stores in self defence are obliged to follow suit and sell these goods at very little or no profit. In consequence of this the salaries of clerks have become reduced considerably. A pharmacist who emigrated to America twenty-five years ago, tells me, that after two years' residence and experience he received a salary of \$35 a week. Nowadays clerks' salaries vary from \$8.00 to \$18.00 per week. The condition of things is not the same as it used to be years ago and I would earnestly warn all pharmacists who have an idea that they might amass riches in America, not to emigrate there. Those who are provided for with means sufficient to support them for the first few months may obtain a number of new ideas.

In truth the conditions there are totally different from ours. Such a thing as giving six weeks notice is unknown; engagements are made immediately, generally a week on trial. Not much attention is paid to certificates of recommendation. In that free country a person can call himself by any name he chooses, yes, if he feels like it, he can change his name every month. Reporting oneself to the police when entering or leaving an engagement, is of course unknown. This is only a small proof of how different the conditions are. Dilating further on this theme would consume too much paper and time. Finally I would recapitulate that my experience in America has shown that the regular American pharmacy is a mixture composition of legitimate pharmacy, drug store and notion store.

The scientific training of the pharmacist is about nil, with the exception of a very few; on the other hand, the American pharmacist is a man with an A1 mercantile training. Compared with their American colleagues, our German pharmacists I consider to be, far better in every respect, both in their own interest and in the interest of the public.

Let us do our best to retain the honorable distinction and reputation of the German pharmacist in the future.

GLUTOL is recommended, by A. Kostinsky (Apot. Zeit.), as an antiseptic. Its freedom from odor and poisonous properties and its high antiseptic power are said to render this preparation more generally useful than other antiseptics.

## PROFITS TO BE DERIVED FROM DECORATING.\*

By F. J. BOLEND.

This is a question of great importance to every business man, whether he be engaged in the druggist's or other business. Not but what any progressive merchant will admit that there is profit to be derived from this phase of the business, but every merchant does not understand fully all the benefits that accrue from it. When we speak of profits our minds at once revert naturally to the pecuniary side of the matter. This is, of course, the prime consideration, but it is not, by any means, the whole of it.

Take for instance a merchant who takes an interest in having his windows tastefully and attractively decorated, and who makes it an inviolate rule to have the entire plan of the exhibit changed every so often. He creates an interest in his windows in several ways. First, people stop to admire the taste and skill with which the windows are arranged. Again, when they find out that on a certain day the exhibit will be changed for a new one, they begin to speculate and wonder what the next line will be, and this leads them to come and see for themselves. Then, perhaps, the person who comes merely out of curiosity sees something which strikes his fancy, or suits his needs, and he buys where otherwise he would never have thought of doing so.

Few people have any idea of the scope or ground which the druggist's work covers, and an exhibit of fluid extracts, tinctures, etc., in the process of making, will oftentimes start thinking and progressive people to investigate more fully for themselves. This is a means of educating the people, and those who so investigate matters will thereafter have a more respectful feeling for the profession at large and for that one particular merchant especially. This affords profit for both the druggist and consumer, in that it enlarges the consumer's general knowledge and the dealer's coffers.

There are, too, many men in the business whose artistic tastes and temperaments must have an outlet, and still others who have talents in that line such as they themselves never dreamed of possessing, and there is no better outlet for this surplus energy and no better way of satisfying this latent power than by the art of window decoration. We have oftentimes heard the expression that "straws show where the wind blows." This is never more forcible than in the drug business. If a merchant allows his windows and exhibits to lag or remain the same for too long a time, or to become fly-specked or dusty, it is only a step to dirty bottles and dusty show-cases. This condition is, of course, ruinous to any business. But I reiterate that it is only a step, and a small one at that, from one to the other.

"But," says some one, "I have not the time nor inclination for such things, neither have I the materials to work with that some of the larger stores possess." Let me say, take time. There are always odd times in a store when trade is a little bit dull when a window can be made very attractive, and instead of bewailing fate and hard times because trade is dull, get to work and make trade come by advertising right in your own windows. It will put you in a more cheerful frame of mind toward yourself and fellow creatures, and soon you won't have time to pine and fret because of lack of trade.

If it were not digressing from the scope of my subject I might go in and enumerate many things that might make an interesting display for instance, a fine line of paints or wall paper can be varied the next time by perfumes, and again by soaps, etc., in endless variety. As one goes on in the work an amount of ideas occur to the worker and one will immediately suggest another. Then, too, every man's work is characteristic of himself, and every detail embodies a part of him in a subtle manner, which no one can definitely describe, but which we feel rather

than see and which affects us all the more forcibly by that very act. Many a sale has been spoiled by the chance remark of some friend of the customer to come to see so and so, the stock in that window or some other kindred remark.

Thus it is here and there in channels and places which we hardly realize, and a few minutes planning and execution of the plans would have remedied it all. A store with new goods, fine shelving, show-cases, and new, shining bottles cannot be called complete unless the windows are kept scrupulously clean and up-to-date in every respect.

To recapitulate in a slight measure; if a man's windows are not up-to-date and exact in detail, has the customer any right to expect exactness, accuracy and "up-to-dateness" behind the prescription counter? No. Emphatically, no! And he won't think it, either. A man's health being of prime importance to him, he is not going to put himself in the hands of a druggist in whose ability, and willingness to use that ability, he has not the fullest confidence.

A druggist's display is as it were an index to his whole store. It speaks louder than any flaring dodgers he may strew around the streets or advertisements he may insert in his local paper. Indeed, it acts as a boomerang, and the would-be customer, seeing the advertisement makes up his mind that here is a good man to trade with. Imagine his surprise and chagrin when he sees an old fly-specked, dingy display in the windows. Right there the druggist loses a customer whom he cannot recover, try as hard as he may. If you exert yourself, your neighbor will do likewise, and good will result to both of you.

Some of the members may take exceptions to me, a young member of the profession and hardly a full-fledged one at that, thus admonishing and advising, but I speak from the outsiders' standpoint largely, because of the very fact that it has been such a short time since I have been a druggist. And the members will admit that I am right in the main, I am sure.

Now, to have a little summing up of the profits. 1. Occupying spare time. 2. Giving information. 3. Pleasure in making the display beautiful. 4. Advertising. 5. Pleasure derived from the interest taken by others, and last, but not least, the trade it brings. So in closing, I would urge all to use every knack and artifice to make the displays attractive and instructive, and to keep them constantly changing. It will make us happier, wealthier and wiser far than if we neglect it.

**FLUID EXTRACT OF KRAMERIA.** prepared by the ordinary method, forms a precipitate of resinous matter when diluted with water. A process for the preparation of fluid extract of this drug which forms a clear mixture with water has recently been proposed (Bull. Chim. Farm.). One thousand grams of the root are percolated with 4,600 grams of a mixture of equal parts of alcohol and water. The percolate is filtered and treated with 100 grams of ammonia. After removing the alcohol by distillation the residue is evaporated to 500 grams upon the water-bath. This extract is then dissolved in 200 grams of water, and the solution made up to 1,000 grams by the addition of 100 grams of glycerine and 200 grams alcohol. One gram of this preparation represents one gram of the drug.

**LANOFORM DUSTING POWDER.**—According to Dr. Gust. Siefert (Ther. Mnth.), a dusting powder should be hygroscopic and should not contain enough starch to cause it to form into lumps. It should be free from adhering micro-organisms, and should be slightly astringent and, if possible, mildly antiseptic. It is claimed that lanoform dusting powder fulfills all these requirements. This preparation is a combination of lanolin and formaldehyde, mixed with a base of talc containing zinc oxide and a trace of sterilized starch.

QUESTIONS

NEW YORK BOARD OF PHARMACY.

EXAMINATIONS HELD NOV. 29, 1901.

LICENSED PHARMACIST.

PRACTICAL PHARMACY.

N. B.—The examination questions in this department are submitted in two sections on separate papers.

- (a) Practical work accompanied by written notes.
- (b) Interpretation and comment, wholly written.

Section A—Dispensing.

1.
  - R Magnesia ..... gr. xxiv.
  - Pulv. rhei ..... gr. lxx.
  - Pulv. zingiber ..... gr. x.
  - M. ft. pulv. et div. in chd. iv.
  - Signa. Take one after dinner.
  - (a) Give chemical composition of "magnesia" U. S. P.
  - (b) Give pharmacopoeial name of a powder similar to above.
  - (c) Give common name of same.
  - (d) Write directions for above prescription in Latin.
2.
  - B Balsam Copaiba ..... ʒ iv.
  - Pulv. acacia ..... ʒ ii.
  - Aqua q. s. .... ʒiij.
  - Misce fiant emulsio.
  - Signa. ʒ i. t. i. d.
3.
  - R Ext. coloc. co. .... gr. xxx.
  - Ol. tiglli ..... gutt. vi.
  - M. ft. massa et div. in pti. no. xii.
  - Signa. Capiat pulula unam omnia nocti.
  - (a) Name the ingredients contained in Ext. Coloc. Co. U. S. P.
  - (b) Give common name for ol. tiglli.
4.
  - R Camphora ..... ʒ ii.
  - Calamina ..... ʒ ss.
  - Mentholis ..... gr. xli.
  - Adeps. Benzoinatus ..... ʒ vi.
  - M. ft. ung.
  - Signa. Use as directed.
  - (a) What is the chemical composition of Calamine?
  - (b) Why is the Benzoin employed.
5.
  - R Ammoniacum ..... ʒ i.
  - Aqua ..... ʒ iij.
  - Misce sec. art.
  - Write official name of above mixture on label, also ordinary dose.

SECTION B.

6.
  - R Argent. nit. .... ʒ iij.
  - aq. .... ʒ ʒ.
  - M. ft. sol.
  - Signa. Lotion.
  - (a) What precautions would you observe in dispensing to obtain best results?
7.
  - R Lin. camph. .... ʒ i.
  - Lin. aconiti ..... ʒ i.
  - Lin. chloroformi ..... ʒ i.
  - Aq. ammon. .... aa. ʒ ss.
  - Tr. arnicae ..... ʒ i.
  - M. ft. liqt.
  - Signa. Use as directed.
  - (a) In what order would you mix and why?
  - (b) Name all the ingredients used in the three first mentioned preparation?
8.
  - R Tartar emetic ..... ʒ ʒ.
  - Hive syrup ..... ʒ i.
  - Paregoric of each ..... ʒ i.
  - Brown mixture ..... ʒ i.
  - Mix.
  - Dose—'rough mixture.'
  - Dose—a teaspoonful every four hours.
  - (a) Write formula and directions in unabbreviated Latin (official names).
  - (b) State in metric system amounts of tartar emetic and paregoric contained in each ounce of the mixture.
9.
  - R Strychnina sulphus ..... gr. i.
  - Acid. phos. dil. .... ʒ iij.
  - Tr. ferri chlor. .... ʒ iij.
  - Aq. q. s. .... ʒ iij.
  - M. ft. mist.
  - Signa. Take a tablespoonful three times daily.
  - (a) What should be the color of the mixture?
10.
  - R Quinina sulphus ..... ʒ ss.
  - Tinctura cardamomi ..... ʒ ii.
  - Compositae ..... ʒ ii.
  - Syrupus aurantii ..... ʒ iij.
  - Acid. sulphurici aromatici ..... ʒ iij.
  - Misce fiant sol.
  - Signa. Capiat cochlearia parvum ter in die anti cibum.

- (a) Translate into English.
  - (b) State in what order you would mix and why?
  - (c) What variety of aurantium is used in the syrup.
- D Yellow wash ..... ʒ viij.
  - Signa. Use as directed.
  - Write formula for preparing.
- B Acidi arseniosi ..... .03
  - Ph. ferri carb. .... .25
  - M. ft. pil. Talis Dosis no. xii.
  - Signa. I. t. i. d. p. c.
  - Write in English apothecaries weight.
- B Camph. monobrom ..... ʒ iij.
  - Soloi a a. .... ʒ iij.
  - M. ft. pulv. et div. in chart xii.
  - Signa. one powder every four hours.
  - (a) Would you dispense? If not, why?
- B Dobell's solution ..... ʒ ii.
  - Signa. name.
  - (a) Name the ingredients used in preparing.
- B Acidi tartarici ..... gr. xxx.
  - Sodii Bicarb ..... gr. c.
  - Aqua ..... ʒ iij.
  - M. ft. sol.
  - Signa. Dose, two tablespoonfuls.
  - (a) State in metric weight (approximately) how much sodium bicarb, each dose will contain.

PHARMACEUTICAL CHEMISTRY.

The first eight questions relate to substances for identification.

- 1 (a) Give official title.
  - (b) Name all of its constituents.
  - (c) Give brief outline of method of preparation.
- 2 (a) Give the pharmacopoeial synonym.
  - Substance given: Tr. gentian comp.
  - (b) Give source from which it is obtained?
  - (a) State how it is obtained?
  - Substance given: Oleum morhuae.
- 3 (a) Give official title.
  - (b) State what precaution must be observed in preparing it.
  - Substance given: Glyceritum acidi tannic.
- 4 (a) Give official title.
  - (b) Write equation showing how it is prepared?
  - (c) Give per cent of active constituent.
  - Substance given: Syrupus acidi hydriodic?
- 5 (a) Give common name.
  - (b) Name all its constituents.
  - (c) Give per cent of active one.
  - Substance given: Hydrargrum cum creta.
- 6 (a) Give official title.
  - (b) Give its chief source.
  - (c) Give a test of identity.
  - Substance given: Sodii chloridum.
- 7 (a) Give its official title.
  - (b) Write the chemical formula.
  - (c) Give its official preparations.
  - Substance given: Zinci oxide.
- 8 (a) Give its official title.
  - (b) Name two solvents.
  - Substance given: Thymol.
- 9 Define each of the following terms:
    - (a) Molecule, (c) radical.
    - (b) acid, (d) base.
  - 10 Give details of the official method for the preparation of chlorine water U. S. P. What per cent of gas should it contain?
  - 11 Give official name of each and state difference between syrup of squills and hive syrup.
  - 12 Give two tests characteristic of tartaric acid, and which serves to distinguish it from citric acid.
  - 13 Percolation:
    - (a) State briefly what conditions are necessary to conduct a percolation successfully.
    - (b) How may the flow of the percolate be regulated?
  - 14 Describe the process of desiccation. State why it is essential to the preservation of vegetable drugs.
  - 15 How much mercuric chloride would you employ in the preparation of 16 Troy ounces of a 1-5000 aqueous solution?

TOXICOLOGY AND POSOLOGY.

N. B.—In giving doses write the name of the drug and give the minimum and maximum doses unless otherwise directed.

- 1—State the best antidote treatment in poisoning by sulphuric acid? By tincture of opium?
- 2—what is the safest method of evacuating the stomach in poisoning by a corrosive poison?
- 3—What antidotes and treatment would you administer in poisoning by oxalic acid?
- 4—State in detail your method of making a chemical test in a suspected case of poisoning by iodine?
- 5—How do the symptoms of strychnine poisoning differ from those of poisoning by corrosive sublimate?
- 6—What treatment would you employ in poisoning by santonin? State maximum dose for a child aged 5 years.
- 7—Name the best chemical antidote for poisoning by nitrate of silver. How should it be administered?
- 8—What treatment would you employ in poisoning by acetanilid? By phosphorus?

## MINOR SURGERY.\*

Are Druggists Qualified to Attend to Such Work?

Detail Methods for First Aid to the Injured.

Advise us to Books of Instruction.

BY DR. B. F. STAHL.

The query propounded in the question submitted above resolves itself into four parts.

First, Minor Surgery. What comprises this division of surgery? The American Text-book of Surgery discusses the following subjects in this category: Surgical dressings, application of bandages, rubefactions, vesicants, actual cautery, blood-letting, cupping, leeching, venesection, artificial respiration, transfusion of blood, aspiration, hypodermic injections, and the application of heat and cold. With this statement of the sphere of minor surgery there can be but one answer to the question asked: The druggist is not qualified and should not be taught minor surgery.

Every well-informed citizen should know what to do in an emergency threatening life or physical well-being. There is scarcely more reason why a druggist should possess the necessary information than there is that it should be known by all men and women.

The relationship existing between the druggist and the physician might make it appear that the druggist should be trained in skillfully ministering to the injured. It is the appearance of especial qualification that gives the victim of an accident a false sense of security in any advice or aid he may receive from such a source. In the eyes of the law the druggist is no more qualified to minister to the injured than is the casual passer-by.

The third part of the question seems to indicate that the propounder of the question had in mind "emergencies," and not minor surgery. Are druggists qualified to attend to such work, i. e., "first aid to the injured"? I would say that they should be, and if they had attended the Philadelphia College of Pharmacy during the sessions of '08 and '09, when I had the pleasure of lecturing to the seniors on "Emergencies and First Aid to the Injured," they would be able to render valuable aid, and which, according to the nature of the case, would be preliminary to the arrival of the lawfully qualified and practically trained practitioner of surgery.

The course given was the outgrowth of a suggestion of Prof. Remington and made possible through his liberality. The instruction has now been made a regular part of the curriculum.

A brief outline of the course given will best indicate the subjects considered.

There should be an elementary knowledge of anatomy and physiology of the human body.

The medical emergencies apt to be encountered are accidents associated with water—swimming, sailing or skating. Any one of these accidents would demand a knowledge of the means of assisting a person overcome while swimming, or the means of keeping a person unable to swim afloat until help could be procured.

It may require a thorough, practical understanding of the methods of performing artificial respiration. It is to be remarked in this connection that a practical demonstration only will enable a student to grasp the details of the procedures to be employed.

Ice emergencies demand an understanding of the means possible in distributing weight over a considerable area of thin ice and thus rescuing a person.

Accidental or suicidal hanging with the attendant choking; smothering and choking by reason of a foreign body lodging in the throat; suffocation by noxious vapors, gases or smoke may each in turn demand prompt and intelligent attention if life would be saved.

Unconsciousness may arise from the toxic effects of drugs, such as alcohol, from weak heart action,

\*Read before the Pennsylvania Pharmaceutical Association and reprinted from the proceedings.

- 9—Name two vegetable emetics? State emetic dose of each. Name two mineral emetics? State emetic dose of each.
- 10—What emergency treatment would you employ in poisoning by sugar of lead? By chloroform?
- 11—State dose of laudanum, dovers powder, sulphate of strychnine, calomel.
- 12—What is the dose of salicin, tincture of lobelia, syrup of iodide of iron, chloral?
- 13—State the hypodermic dose of digitalin, of glonoin; state the rectal dose of opium, of extract of belladonna.
- 14—What is the dose of cafrin, dilute hydrochloric acid, tincture of aconite, compound jalap powder?
- 15—State the dose of gallic acid, aloes, oil of peppermint, diosmin.

## MATERIA MEDICA, BOTANY, AND PHARMACOLOGY.

- 1 to 5. Of seven samples shown give:—
- Pharmacopoeial title.
  - Botanical name.
  - Common name.
  - Part official.
  - Active principle or constituent.
6. Eucalyptus glob. (a) Part or parts employed. (b) Name official preparations. (c) Give dose of each.
7. Define (a) Materia Medica, (b) Botany, (c) Pharmacology, (d) Rights of Licensed Pharmacist. (e) Rights of Licensed Druggist.
8. Name two important actions of Croton Oil.
- From what obtained?
  - Give maximum dose.
9. Give common names of the following:—
- Eriodictyon.
  - Marrubium.
  - Viburnum Op.
  - Mulla.
  - Eumymus.
10. What hydragogue cathartic is improved in medicinal quality by being worm-eaten? Why?
11. What parts of the following plants are used in medicine?
- Arnica.
  - Cubeba.
  - Catechu.
  - Capsicum.
  - Dandelion.
12. From what are the following obtained? (a) Picrotoxin, (b) Iridin, (c) Esarine, (d) Daturin, (e) Berberine.
13. Give the pharmacopoeial title of the following:
- Blue stone.
  - Spirits of Salt.
  - Cranesbill.
  - Donovan's Solution.
  - Gray's Powder.
14. What are the Glycerites? Name three official.
15. What is the physical difference between (a) Bromine, (b) Iodine, (c) Chlorine.

IMITATION PEPPER.—Adulterated pepper, in the form of artificial fruits, has been found in the market in Switzerland (Schweiz. Wechschr. f. Chem. u. Pharm.). The imitation pepper corns were slightly smaller than the genuine berries and somewhat heavier than water. In water they quickly disintegrated, partially dissolving and partially remaining in the form of powder. One variety was found to be made up of starch grains mixed with a soluble binding material, while the other proved to be formed from a residue obtained in the olive oil industry, which appears in commerce under the name "sansa." The surface of the black fruits was covered with grains of sand, colored black by means of some coloring material. Both varieties possessed a burning taste, probably due to the admixture of a little paprika.

THE BARK OF THE TSCHONGOTT TREE has been submitted to chemical investigation by H. Thoms and C. Mannich (Apot. Zeit.). This plant, which belongs to the species *Semecarpus venenosa* and is found in the island of Yap, of the Carolines, is said to be very poisonous, drops of rain water falling from the boughs of the tree having been reported to produce serious inflammation of the skin. This action and the position of the plant in the vegetable kingdom led the authors to suspect the presence of cardol and anacardic acid. The experiments were not conclusive, as only 27 grams of the material could be obtained, but the results seemed to show that these bodies were present in the bark.

with attendant failure of the blood supply to the brain; on the other hand, there may be a condition of apoplexy, where the unconsciousness results from a blood-vessel having ruptured at some point of its course over the surface of the brain. This statement of the difference in the origin of the unconsciousness in two instances will indicate the care necessary in ministering to a case belonging to one of these classes. The one case would be relieved by the administration of a stimulant, while in the other instance death would be made certain by forcing a greater quantity of blood through the broken vessel.

The unconsciousness may be associated with Bright's disease. Here the urinous odors of the breath will aid in recognizing the exciting cause. But it is to be remembered that the drunkard is likely to have Bright's disease, and when both are combined in one individual the likelihood of apoplexy is increased. This may serve to emphasize the importance of remembering the responsibility assumed in rendering "first aid".

Convulsive seizures are terrifying, while heat exhaustion and heat stroke may each demand attention.

The effects of cold or heat, accidents associated with electricity or cases of accidental poisoning may most unexpectedly require consideration.

Surgical accidents, including the necessity for the intelligent handling of wounds of various kinds, demand a full appreciation of all that is implied in the term "surgical cleanliness" and a thorough self-possession. Sprains, dislocations and fractures, the handling and transportation of the injured; the application of bandages, all these things presuppose the possession of definite information and training. Each druggist is best qualified to answer the question regarding his ability to render first aid.

It seems quite important that every school boy or girl, of suitable age, should be trained in these elements of rendering first aid to the injured.

A large proportion of the accidents here enumerated could not possibly occur near a drug store, hence the advantage of this kind of information being general. Let the druggists learn what should be popular knowledge and apply it in their capacity as laymen, and they will be more valuable citizens.

Any publication house will supply a work on "Accidents and Emergencies."

## QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

### Problem of Dosage.

(C. C. U.) Your problem submitted in this department of the Era of Nov. 14, 1901, page 574, we repeat together with the solution submitted by Frederick T. Gordon, Pharmacist, U. S. Navy, League Island, Pa.:

A physician wishes to cure a patient of the morphine habit. He prescribes a two ounce solution of morphine sulphate and atropine sulphate, each 10 minims of solution containing  $\frac{3}{4}$  grain of morphine and 1/144 grain of atropine, or 72 grains of morphine and 2/3 grain of atropine in the two-ounce solution. After giving the patient 10 minims of this solution, he puts in the bottle 10 minims of pure distilled water, thereby always having two ounces of solution. At the end of ten days how much morphine and atropine will

the solution contain? At the end of thirty days how much will it contain? The physician gives the patient three doses per diem. Give answer to each question and the process of calculation.

### ANSWERS.

Morphine left after 30th dose, 52.5888 grains; 30th day, 0.5536 grain.

Atropine left after 30th dose, 0.4860 grain; 30th day, 0.05125 grain.

Morphine left after 90th dose, 28.6488 grains; 90th day, 0.3015 grain.

Atropine left after 90th dose, 0.26527 grain; 90th day, .00279 grain.

This problem may be stated briefly thus: "A solution of morphine and atropine containing 72 grains of morphine and 2/3 grain atropine in 2 fl. oz. water has a dose of 10 minims taken from it three times a day; 10 minims of water is added to it as each dose is taken out thus keeping the volume constant. What will be the amounts of morphine and atropine left in the solution after ten and thirty days?" As the volume of the solution is 960 min. at each dose 1/96 of the amount of morphine and atropine therein is taken out, but, as the volume of the solution is kept constant, the amount of morphine and atropine taken at each dose is 1/96 less than the previous dose. Therefore, at any time the amount of morphine and atropine in the solution would be 95/96 of the previous amount, that 95/96 of its predecessor and so on, as many times as doses have been taken out, not 72 grains decreased by  $\frac{3}{4}$  grain as many times as doses.

While the ratio of decrease is constant the sum decreased is constantly changing, so we cannot solve the problem by "arithmetical progression" as might seem at first sight, but must find a formula expressing this change. To do this we construct a series as follows: "Amount of morphine left after first dose is 95/96 of 72; amount after second dose is 95/96 of (95/96 of 72); after third dose is 95/96 of [95/96 of (95/96 of 72)]; after fourth dose is 95/96 of [95/96 of (95/96 of (95/96 of 72))], and so on." From this we find that the amount of morphine left after any dose is 72 multiplied by 95/96 as many times as the number of doses given, so we construct the general formula "Q equals A  $\times$  r (multiplied by r n) times, in which Q is amount to be found, A is original amount, r is the ratio of decrease and n is the number of doses taken out. But to simplify this formula we will express it, "Q equals A multiplied by r raised to the nth power." The general formula for such problems is then:

Required Quantity =  $A \times r^n$ , req. dose =  $A \times r^n$ . ("r" = general dose, 1/96th, etc.).

Applying this formula to our problem, we have for the amount of morphine after the 30th dose, Q equals 72 multiplied by 95/96 raised to the 30th power. As the multiplication of 95/96 by itself 30 times would be a very tedious operation we resort to logarithms. Then 95/96 to the 30th pow. is found thus:  $\log_{10} 95/96^{30}$  equals  $(\log 95 \times 30)$  minus  $(\log 96 \times 30)$ . The log of 95 is 1.97724, of 96 is 1.982271, multiplying these each by 30 and subtracting we have 59.331720 minus 59.468140, or -1.863580, which is the logarithm of the decimal fraction 0.7304, which, again, is the result of  $(95/96)^{30}$ . Making the simple multiplication "72  $\times$  7304 equals 52.5888," we obtain the amount of morphine left after the 30th dose. Similarly,  $2/3 \times 7304$  equals 0.4860 grain, the amount of atropine to be found.

In the same manner we find the factor for 95/96 to the 90th power to find the amount of drugs after the 90th dose. This is 0.3079.  $72 \times 0.3079$  equals 28.6488 grains, amount of morphine,  $2/3 \times 0.3079$  equals .26527 gr. atropine. To find the 30th or 90th dose of each drug we would divide the quantity found as above by 95 and multiply the result by 96 to get the amount of the .20th or 80th dose, and take 1/96 of the result. (Rule:  $x =$  amount; then,  $x = 95/96$  of what number?  $x \div 95 = 1/96$ , result  $\times 96 = 95/96$ .) This is simply dividing the amount left after the 30th or 90th dose by 95, since the 20th or 80th dose will be 1/96 greater. Or, formula No. 2 may be used.

**Potassium Chlorate and Tincture of Iron.**

(B. A. C.) writes: "Please state how I can make a solution of potassium chlorate in tincture of per chloride of iron, glycerin and syrup. I find, no matter how small a quantity of the potassium chlorate I use, it is apt to precipitate on cooling. I would like to know just how much of the chlorate can be dissolved."

There can be but a limited amount of potassium chlorate dissolved in a mixture of this kind, the exact quantity, of course, depending upon the quantities of the other substances present. There are several reactions which take place when this mixture is compounded. The free hydrochloric acid in the tincture of iron, when brought in contact with the potassium chlorate, liberates chlorine and possibly other gases, mixtures of oxygen and chlorine. Again, if potassium chlorate is rubbed up with the glycerin explosion is liable to take place, and, further, the free chlorine formed in the reaction between the hydrochloric acid of the tincture of iron and the potassium chlorate will act upon glycerin with the formation of oxalic and carbonic acids. In any case the amount of chlorine depends upon the quantities of the various substances employed and the order in which they are mixed. This prescription is one of a type frequently prescribed for throat troubles, with the purpose of getting the stimulating and antiseptic effects of the chlorine, together with the astringent effect of the tincture of iron. One of the most common prescriptions of this class is the following:

|                                  |           |
|----------------------------------|-----------|
| Potassium chlorate .....         | 1 dram.   |
| Tincture of ferric chloride..... | ¼ ounce.  |
| Syrup .....                      | 1 ounce.  |
| Water, enough to make .....      | 4 ounces. |

Dissolve the potassium chlorate in about two ounces of water (or enough to make a saturated solution) and add the tincture of iron. Then add the syrup, mixed with the remainder of the water, being careful not to bottle the mixture until the reactions have taken place.

**Tar Shampoo Paste.**

(Koussou.) A shampoo mixture containing tar may be made as follows: (1) Castile soap, in shavings, 2 ounces; ammonia water, 2 ounces; bay rum or cologne water, 1 ounce; glycerite of tar, N. F., 1 ounce; water, a sufficient quantity. Dissolve the soap in about 11 ounces of water by means of heat. When cold, stir in the other ingredients. (2) Cocca-nut oil soap, 2 drams; white castile soap, 4 drams; caustic soda, ½ dram; rectified spirit, 10 ounces. Digest until the soap is dissolved, then add: wood tar, 10 drams; oil of lavender, ½ dram. Continue the digestion for 15 minutes, filter and wash the filter with rectified spirit to 12½ ounces by weight.

Other formulas may be easily devised and it is suggested you try in your experiments some one of the various formulas which have been published in previous volumes of the Era, substituting for part of the soap employed an equal quantity of some good tar soap. A "liquid shampoo," containing tar, is the following:

Pine tar, 20 grams; linseed oil, 200 grams; caustic potash, 45 grams; alcohol, 20 grams; water, 225 grams. Heat the tar and oil to 60° C., dissolve the potash in the water, add the alcohol and gradually add to the oil and tar mixture, constantly stirring. Continue the heat until thoroughly saponified and make up to a pint with water. Perfume (or not) to suit.

**Cocaine and Borax.**

(G. H. J.) "We had trouble in compounding the following prescription:

|                       |            |
|-----------------------|------------|
| Cocaine muriate ..... | 5 grains.  |
| Sodium borate .....   | 20 grains. |
| Camphor water .....   | 1 ounce.   |
| Rose water .....      | 1 ounce.   |

Mix. Put 2 to 10 drops in the eye.

On putting up the mixture it assumes a flocculent appearance, which makes it look badly. Can the mix-

ture be manipulated in any manner so as to make it presentable and effective?"

The flocculent appearance (precipitate) is caused by the borax, which, being alkaline, throws down more or less of the cocaine and also throws out of solution some of the camphor. If boric acid had been used in place of the borax, precipitation would not have occurred. In the present instance a clear solution may be dispensed by adding enough boric acid to make the mixture of a slightly acid reaction. Such a substitution would be perfectly justifiable under the circumstances, but, if possible, the prescriber should be informed of the incompatibility, that he may signify his approval to the proposed change.

**Show Globe Colors.**

(C. S.) Amethyst: Dissolve 15 grains of sodium salicylate in 2 gallons distilled water and slowly add tincture of ferric chloride until the proper tint is obtained. Blue: Dissolve 4 ounces of sulphate of copper in 2 pints of water and add ammonia water, with constant stirring, until the precipitate first formed is redissolved, then add enough water to make 2 gallons. Orange: Potassium bichromate, 1 pound; dissolve in 2 gallons of water and add 8 ounces of nitric acid. Grass Green (Fluorescent): Fluorescein, 2 grains; ammonia water, 2 fluid drams; distilled water, 2 gallons. Red: Dissolve 3 drams each of iodine and potassium iodide in 8 fluid ounces of water, and dilute with water to which 10 ounces of hydrochloric acid has been added, to make 2 gallons. Many other formulas may be found in previous volumes of the Era. Consult the indexes.

**Expansion of Iron.**

(H. E. M.) Water is not the only substance which at certain temperatures expands as it cools. Certain alloys of bismuth behave in this way at comparatively low temperatures. As a rule, however, substances contract with more or less uniformity when cooling. The substances known as iron include a great many varieties differing greatly in composition and properties. The impurities present in the metal greatly influence its contraction during cooling. Foundrymen are able to control the shrinkage of castings to a certain extent by mixing different brands of pig iron. In foundry work some provision is commonly made for the contraction of the metal in cooling. It is not probable that any considerable expansion takes place in the cooling of any variety of iron at any temperature.

**Calcium Sulphide and Camphor in Pills.**

(E. E. S.) "How should this prescription be compounded?"

|                        |           |
|------------------------|-----------|
| Calcium sulphide ..... | 6 grains. |
| Camphor .....          | 6 grains. |

Mix and divide into 12 pills.

Triturate the calcium sulphide with 6 grains of sugar of milk, and then with 3 or 4 grains of powdered tragacanth. Add the camphor, previously finely powdered, and thoroughly mix; then make into a mass with glycerite of tragacanth.

**Glycerin Lemonade.**

(R. G. D.) The following formula has been attributed to Semmrola:

|                     |            |
|---------------------|------------|
| Pure glycerin ..... | 150 parts. |
| Citric acid .....   | 1 part.    |
| Water .....         | 300 parts. |

About one ounce of this solution is to be taken, in a glass of water, every hour. Thus administered, even in large quantities, it is claimed that glycerin does not cause gastro-intestinal disturbance.

**Wood Alcohol for Burning in Vapor Cabinets.**

(R. G. B.) "Does wood alcohol produce poisonous effects when used for burning in the alcohol lamps or vapor cabinets?"

No, it does not under ordinary conditions.

# NEWS DEPARTMENT.

## VACCINE REPORTED FREE FROM TETANUS GERMS.

The occurrence in Camden of a number of cases of lockjaw supposed to be the result of vaccination has greatly alarmed the public and aroused considerable opposition to vaccination. In order to restore popular confidence in the measures which are necessary for the protection of the community, the Board of Health of Camden has made a thorough investigation of the whole matter and has issued the following statement:

### SOME FACTS IN CONNECTION WITH RECENT OCCURRENCE OF TETANUS AFTER VACCINATION IN CAMDEN.

First—Tetanus germs are probably more widely distributed than any other organism; they are found in the earth, in the dust, dirt of stables, private houses, public places, in the air and water.

Second—The prevailing dry spell of weather, with the high winds, undoubtedly has an important bearing upon the occurrence of outbreaks of tetanus by disseminating the germs, which are brought in contact with the open wounds of vaccination.

Third—Authorities such as Osler, Sternberg, Park, and many others, have stated that the period of incubation of tetanus occurs in from five to nine days. Dr. Park's record of tetanus cases for the last five years indicates that all acute cases of tetanus, which are the severe type following a wound or injury, occur within five to nine days; the subacute cases, those of a milder type (frequently getting well), occur as late as twelve days, proving conclusively that cases of tetanus appearing in from three weeks to one month, following vaccination, can in no wise be attributed to the virus employed nor to faulty technique of the physician.

Fourth—The recent cases of tetanus appearing in Camden and several other points have occurred from nineteen to twenty-eight days after vaccination, and in no instance was it at an earlier period; they have been of an extremely severe type, death following in a few days. All cases must be classed as acute tetanus, such as develop within five to seven days after incubation.

Fifth—It is also noticeable in all cases in Camden, and other places where tetanus has developed, after careful examination as to the cause, that it is due to lack of care in regard to cleanliness, or the wound has been exposed by the scab being knocked off or removed, or else the arm has been bruised and infection resulted. Very little care is taken by the ordinary person, after vaccination, to protect the vaccinated area against contamination; in fact, it has been regarded as an operation without danger of contamination, and, in consequence, dirty clothing is allowed to come in contact with the sore; frequently children scratch the vaccinated area with the dirty fingers and nails; the vaccination itself is a sort of curiosity to them, and in many cases they show the same to other children, who handle it with their unwashed hands. Under such conditions, it is a wonder that, with the large number of children and adults vaccinated, there has not been a more frequent occurrence of the disease.

Sixth—The most careful bacteriological examinations of the quality of vaccine have been made, and not a single tetanus spore or bacilli has been found. There is no record of a case of tetanus being caused by virus employed; all reports show outside contamination. All of the cases in Camden have occurred from three to four weeks after vaccination, and tetanus followed in every make of vaccine employed, proving conclusively that the infection of the virus is not due to the method of preparation, thus eliminating the possibility of impure virus or the faulty technique of the physician.

Seventh—It is a most important matter to express the value of using an aseptic vaccine shield. The progress of the vaccination should be watched and the shield removed every two to four days, so as to expose the vaccinated area, as well as the shield.

Eighth—Impurity of the vaccine virus supplied to our Board of Health is impossible from the process of preparation and testing. Every animal is immunized against tetanus by an immunizing or protecting dose of antitoxin. The vaccinated surface of the animals is thoroughly cleansed and all outside contamination removed by washing with sterile water. The vaccine pulp is then collected according to the most rigid aseptic surgical process, triturated and ground in glass rollers and placed in sterile hermetically sealed glass tubes, where it cannot be exposed to the air. No vaccine is used until veterinary tests and thorough post-mortem examinations prove the animals from which the vaccine is collected to be absolutely healthy. Virus collected from animals shown to have the slightest trace of disease is burned.

The virus is subjected to repeated bacteriologic examination by one of the foremost bacteriologists and an expert in the propagation of vaccine virus, and only virus is used that the most searching examinations prove to be pure. Furthermore, as an absolute proof, guinea pigs are injected with the virus to prove the entire absence of contamination. Contamination of the virus after testing is impossible, because it is filled by a vacuum process, entirely separate from the outside air. Into sterilized capillary tubes, the ends of which are sealed by a Bunsen flame.

During the time the vaccinating was being done in Camden the Philadelphia Board of Health and the physicians have used over 700,000 vaccinations. The President of the Philadelphia Board of Health states there has not been a single case of tetanus following vaccination in Philadelphia, nor has there been any complaint whatever from physicians of excessive inflammation.

The physicians of Camden are satisfied, and have repeatedly stated, that the virus was not the cause of tetanus. The Camden Board of Health have had bacteriological examinations made of the vaccine and find it pure. A full report will be mailed you later. The article has been unfortunately treated from a sensational standpoint by the newspapers, which will have a serious effect upon the minds of the general public, who are led to believe the virus or the physician's technique at fault. The matter is a very serious one, and physicians and Boards of Health throughout the country are deeply concerned, since, if this impression is not overcome, it will seriously affect their usefulness in stamping out epidemics of small-pox. Small-pox cannot be controlled, nor is there any preventive known except proper vaccination.

H. H. DAVIS, M. D.

President Camden Board of Health.

The Arkansas State Board of Pharmacy at an examination held Nov. 12, granted Certificates of Registration to the following: L. M. Guleppner, Pine Bluff; Geo. J. Terry, Prescott; J. Leon Catron, Fort Smith; J. N. Porter, Vandervoort; L. L. Moore, Muscogee, Ind. Terr. The next meeting will be held in Little Rock, May 1902. J. W. Biedelman, secretary.

There are plenty of places where the druggist can buy pill and powder boxes and labels, but the wide-awake druggist is particular as to the style, quality and price. The goods sent out by H. Gamse & Bros., Baltimore, Md., should satisfy the most critical. This concern makes all kinds of druggists' pill and powder boxes and labels at the lowest possible prices. Send for an illustrated catalogue.

## NEW YORK AND VICINITY.

### EXAMINER IN DRUG DIVISION REMOVED.

**Isaac Raynor, An Examiner in the Drug Division  
at the Appraisers' Stores, Removed on Charges  
Made by Perfumery Importers.**

Isaac Raynor, an examiner in the drug division at the Appraisers' Stores, employed in examining and passing perfumes, essential oils, etc., has been removed by Secretary of the Treasury Gage on charges made by Appraiser Wakeman, accusing him of soliciting bribes.

The drug division, in point of revenue to the Government, is one of the most important in the Appraisers' Stores and when the papers and charges in the case were received at Washington, Secretary Gage gave his personal attention to the matter and on inspecting the evidence took the necessary steps to have Raynor removed. The complaint sent to Washington charged that Raynor recently called on the firm of Russman, Galland & Wechmar, importers of perfumes at No. 51 Franklin street, and made them a proposition to the effect that he would pass certain goods, particularly perfumes, if he was given a percentage of the money saved in duties in that manner. It is said Raynor, being a stranger

representative of the firm whom he saw, left his card as examiner of merchandise in the seventh division, Appraisers' Stores.

Russman, Galland & Wechmar have offices on the second floor of the Eagle Building, No. 51 Franklin street. Both Mr. Russman and Mr. Galland are at present in Paris. That the firm had no intention of becoming identified with a scheme to defraud the Government was evidenced by their action in the matter.

The authorities at the Appraisers' Stores were at once notified of Raynor's visit to the importers named and an investigation was instituted. The firm, on request, presented its side of the case. Raynor made a general denial of the allegations against him, but said that rather than have any trouble over the matter he would resign, giving as his reason ill health. The authorities would not consider the resignation, however, and the facts of the case were at once sent to the Department at Washington.

Raynor was said to be one of the most trusted employees in the service, and had been recommended for the appointment by both Appraiser Wakeman and Dr. Hammil, Assistant Appraiser of the drug division. He has been employed as examiner in the customs service for five or six years and the news of the charges against him came as a surprise to his friends. He had been considered exceptionally proficient in his line of work and had a good record for scholarship, standing high in his classes in college.

Rumors have been afloat that this case and the recent alleged smuggling of perfume essences from London to New York, are connected, but there is no proof obtainable that the rumors are correct.

### NEW-YORK BOARD OF PHARMACY EXAMINATIONS.

**Results From New York, Albany, Rochester and Buffalo.**

Secretary Sidney Faber, of the State Board of Pharmacy has furnished the names of the successful candidates at the examinations held in the different parts of the State on November 26, as follows: New York City, out of 41 candidates 9 were successful and received the pharmacists' license. They are: Seth. A. Burrows, Henry Dalrymple, Joseph Lacobara, Jacob Medoff, Peter Ullrich, E. N. Benedict, Herman Canter, Charles Rollberg and Fred. Suling. At Albany there were 16 candidates for pharmacists' license and three for drug-

gists'. The successful ones are: Samuel I. Clark, C. J. Miller, H. E. Richards, Owen Ostrander, Samuel Armstrong, J. E. McNarry, John D. Sauter, C. H. McDowell, Henry D. Sheldon and George Southworth as pharmacists, and William Wilsey and Jackson I. Lantz as druggists. Six candidates for pharmacists' license and three for druggists' were examined at Rochester. Harry A. Vail, C. P. Colgan, Fred M. Flemming and Albert B. Hupp received the pharmacists' and Walter Tyler the druggists' license. Of the Buffalo candidates, Lee W. Miller passed the examination for pharmacist and M. F. Brzezicki, Carrie A. De Nike and A. B. Liebman obtained the druggists' license.

### COURT DISCHARGES INSPECTOR LORENZ.

Theodor Lorenz, the inspector of the New York State Board of Pharmacy in the Borough of Brooklyn, who was arrested on November 9 at the instance of Jacob Cipes, a druggist at No. 73 Belmont avenue, Brooklyn, on a charge of extortion, has been discharged by Judge Higginbotham, before whom the case was taken for trial.

The inspector was arrested on November 9 and taken before Judge Furlong in the Gates avenue court. He was released on furnishing bail for \$500 and the trial was set for November 29 before Judge Higginbotham. When the case was called in court on the day named, Cipes, the complainant, did not appear and the judge dismissed the defendant.

Mr. Lorenz when asked about the case said he was prepared to present his side to the judge in court and that he had evidence against Cipes that would prove to the court that the money he had received was advance commission on the sale of Cipes' store. He also had an affidavit from Thomas E. Conway, the inspector in New York for the State Board of Pharmacy, stating that with Lorenz he had visited eight druggists in the vicinity of Cipes store, and that all had stated that Lorenz had never demanded money or any other consideration from them. Mr. Lorenz also said that Cipes had stated to Mr. H. A. Herold, the lawyer for the State Board of Pharmacy, that Dr. M. A. Cohn, of No. 47 Belmont avenue, had given him (Lorenz) money, but that Dr. Cohn denied ever having done so.

Secretary Sidney Faber of the Pharmacy Board, when interviewed said: "I am fully convinced that Mr. Lorenz was not guilty of extortion and that at the worst he had only been indiscreet by accepting any fee and this was due only to a misunderstanding on the part of the inspector, as he thought he could with perfect propriety undertake the sale of a drug store without interfering with his regular duties. The case presents every appearance of a conspiracy to injure the inspector and the prestige of the Board."

The inspector was suspended by the Board at the time of his arrest and it was thought he would be reinstated at a meeting held Monday, December 2, but the Board decided to give the matter a thorough investigation before taking action.

At the Board meeting on Monday evening the following resolution was passed, subject to the action of the general Board. "That no employee of the Board of Pharmacy may accept any present, money or other consideration without first obtaining the approval of the Board."

### NOTES.

—The wholesale Drug Trade Bowling Association of New York held its regular weekly meeting at Reid's alleys, No. 156 Church street, Saturday, November 25. The games rolled resulted as follows: Johnson & Johnson, 753, against the National Lead Co., 747; Lanman & Kemp, 624, against Johnson & Johnson, 810; National Lead Co., 725, against Lanman & Kemp, 680; Seabury

& Johnson, 784, against Church & Dwight Co., 749; Roesler & Hasslacher Chemical Co., 654, against Church & Dwight Co., 694; Seabury & Johnson, 797, against Roesler & Hasslacher Chemical Co., 707. The games rolled on Saturday, November 30, resulted as follows: Johnson & Johnson, 837, against Parke, Davis & Co., 862; General Chemical Co., 764, against Johnson & Johnson, 834; Parke, Davis & Co., 790, against General Chemical Co., 887; Dodge & Olcott, 815, against National Lead Co., 726; Powers & Weightman, 777, against the National Lead Co., 671; Powers & Weightman, 745, against Dodge & Olcott, 832. This still leaves the team of Dodge & Olcott in the lead. The competing teams at the next meeting will be from Roesler & Hasslacher Chemical Co., Colgate & Co., Johnson & Johnson, Church & Dwight, Co., Powers & Weightman and Parke, Davis & Co.

—P. A. Raby, of the Evergreen Chemical Co., No. 130 Fulton street, has recently returned from a three weeks trip in upper New York State. Mr. Raby reports trade with the retail druggists in a satisfactory condition in most places and general business appears to be better than last year, the outlook for holiday trade being very encouraging. He says a number of the Buffalo druggists have expressed disappointment with the volume of business done during the exposition and that some even complain of a loss on the seasons trade, as the business done did not compensate them for the preparations made in anticipation of the many visitors. One druggist tells of spending about \$800 in making repairs to his store and buying extra stock and that his sales did not exceed those of former years by more than \$500.

—Dr. A. L. Wood read a paper before the One-Hundred-Year club at the Hotel Majestic Tuesday, Nov. 26, advocating a more general use of distilled water and demonstrating its benefit to health. Dr. Wood is an elderly man with gray hair and beard and with little effort touched the palms of his hands to the stage floor without bending his knees. He announced that this result was accomplished by the daily use of distilled water. He stated that he had used distilled water for the last twenty years, and that in the last year he has consumed in drinking and in his food, about a gallon a day, or nearly thirty barrels yearly. It is generally conceded that more people use distilled water now than did a few years ago.

—M. Connors, a retail pharmacist of St. Johns, Newfoundland, and one of the committee of arrangements for the reception of the Duke and Duchess of Cornwall and York during their recent visit to St. Johns, has sent some very fine views of parts of the procession on the day the Royal party arrived there, to the New York office of Parke, Davis & Co. The views include a picture of the Duke laying the corner stone of a new building in course of erection. Mr. Connors also sent a souvenir copy of the St. Johns "Evening Telegram" which contains very good full page cuts of the Royal couple. These pictures now adorn the office of the general manager of Parke, Davis & Co.'s local office.

—Some of the retail druggists to visit the down town drug circle last week were: W. E. Warren, Keyport, N. J.; E. P. Weed, Norwalk, Conn.; Steward Flagler, Strassberg; Mr. Hadley, of the Buffington Pharmacy Co., Worcester, Mass.; John Marian, Cranford, N. J.; A. R. Armstrong, Pine Bush, N. Y.; A. E. Sullard, of A. E. Sullard & Son, Franklin, N. Y.; S. L. Beegle, Orange, N. J.; Isaac Holton, of Horton & Holton, Trumansburg, N. Y.; C. N. Freeman, of the Naugatuck Drug Co., Naugatuck, Conn.; S. M. Shimer, of Ogden & Shimer, Middletown, N. Y.; John H. A. Miller, of N. Y., and Frederick Schneider, of Schneider & Irving Drug Co., Troy, N. Y.

—Miss Marie Gardiner Whitmore, daughter of Dr. B. T. Whitmore of the local branch of Parke, Davis & Co., was married to David Randolph Calhoun, head of one of the largest dry goods concerns in the West, at the home of her parents, No. 122 West 73d street, on Monday, Nov. 25. Among the guests at the wedding were Col. E. W. Fitch, W. B. Kaufman and Herbert Turrell.

—W. L. Strauss, senior member of the firm of W. L. Strauss & Co., expects to sail for Europe next month and will be gone some time, looking after the firm's interests on the other side and purchasing goods to place on this

S. F. HADDAD.

Mr. Haddad is the proprietor of a well-known downtown drug store, at 89 Broad street, this city. Although he has been in active business life for a number of years he has not forgotten to cultivate the spirit of fraternity and general good feeling toward other druggists. He is an active member of the Manhattan Pharmaceutical Association and a member of the New York Retail Druggists' Bowling Association. He is also treasurer of the Pharmacists' Manufacturing Co., a co-operative drug concern recently organized in this city.

market. William L. Haas, of the same firm has recently returned from a trip to Washington, Baltimore and other points along the line.

—M. J. Osborne, representative for Parke, Davis & Co. in Northern Indiana, and a brother of Guy Osborne of the Osborne-Colwell Co., New York, will be married on December 17 to Miss Susan Bartley, daughter of E. W. Bartley, manager of the Noyes Carriage Works Elkhart, Ind. Mr. Osborne expects to visit New York while on his wedding trip.

—An ammonia retort used in the refrigerating plant in the cellar of the Hotel Belvedere, at Eighteenth street and Fourth avenue, exploded Sunday morning, December 1, killing the engineer. The explosion was heard several blocks away and the force of it broke all the windows up to the fourth story.

—An attachment was served on the stock of the People's Drug Store at No. 2284 Eighth avenue, near 123rd street, on Saturday, December 1, by City Marshal George Krause. The store has been conducted for some time by Jacques A. Carpentier.

—Clara Isabel Mix, daughter of Willis L. Mix the well known New Haven, Conn., pharmacist, was married to Albert Leonard Whitecomb, a photographer of Meriden, on Wednesday, Nov. 20, at the home of her parents, No. 511 George street, New Haven.

—Roch Desjais, proprietor of the "Pharmacie Chive," No. 1365 Notre Dame street, Montreal, Canada, has been in the city several days visiting his friends in the drug trade.

—Among those at the Drug Club last week were: John Bredell, of San Remo, Italy; James E. Baird, of Atlanta, Ga., who was a guest of P. C. Magnus, and Harry Skillman, the advertising agent of Parke, Davis & Co.

—Among the visiting druggists in the market Monday, Nov. 25, were: W. E. Warn, Keyport, N. J.; E. P. Weed, Norwalk, Conn.; Steward Flagler, Strassberg, Ill. J. J. Estes, Rockland, Mass. and C. R. Lush, Hempstead, L. I.

—William P. Moakley, of the staff of McKesson & Robbins, who has been on the sick list the past two weeks, is reported to be convalescing and is expected at his post in a few days.

—Garbarino Brothers have opened a drug store at West Houston and Sullivan streets. The younger brother was formerly a clerk with druggist F. W. Schnittlein at No. 81 Catherine street.

—Charles R. Siemann, the druggist at No. 738 Eleventh avenue, sold his branch store at the corner of Ninth and Eleventh streets and First avenue to Emil Eichler.

—F. S. Quintana, the retail druggist who formerly conducted the store at No. 136 East 25th street is now located on 29th street, near Madison avenue.

—Dr. R. C. McCall and T. B. Maddox, Southern representatives of McKesson & Robbins and C. F. Scott, the firm's Western representative are at present in the city.

—Wolf Tulchinsky, who has conducted the drug store at No. 53 Canal street, corner of Orchard street, for a number of years, has sold out to Weinstein & Goldberg.

—Simon Bamberger, of Salt Lake City was a guest of G. Phelps Stokes at the Drug Club, Nov. 25.

—Max Zagat, druggist at No. 1626 Madison avenue, corner of 16th street, has sold his business to E. Gluck.

—Samuel Folk has purchased the drug business of I. Schlossberg at Ninety-ninth street and Madison avenue.

## IN AND ABOUT BOSTON.

### 1. DRUGGIST LOSES HIS LIFE BY ESCAPING ILLUMINATING GAS.

Boston, Nov. 30.—A Thanksgiving Day fatality in which a druggist lost his life was due to leaking gas discovered by two police officers shortly before six o'clock Thanksgiving morning in the drug store of the H. O. Nute Company, Columbus avenue and Dartmouth street. The officers aroused the occupants in the apartments above, telling them that gas was escaping. The two patrolmen started to investigate the matter and got into the cellar under the store where they found the body of Edward Carroll, lying dead. He probably had been dead an hour when his body was found by the officers. It is supposed that he went down into the cellar to trace the smell of escaping gas, and while there was overpowered by the fumes and slowly suffocated.

Edward Carroll was 38 years old and was manager and head clerk doing night duty in the drug store. For some time he had not lived with his wife, who was Mary Austin, and whose father owned much property in West Roxbury, especially that land which for years was known as the Austin farm. She first met Mr. Carroll when he was a clerk in the drug store of the late Albert H. Earyes, at Jamaica Plains, the same store of which he afterward became proprietor. Mrs. Carroll finally instituted proceedings for divorce, and the store meanwhile passed out of Mr. Carroll's hands, and soon after he associated himself with the Columbus avenue store. Mrs. Carroll generously endowed the University of Virginia a few months ago, thus carrying out her father's wishes. The University receives \$10,000 a year from her income.

### 2. A DRUG STORE RAID RESULTS IN THE CAPTURE OF MANY CONTRABAND THINGS.

Boston, Nov. 30.—An event this week which has been a theme of conversation was a big raid at the drug store of Thomas Joyce & Co., 141 West Broadway, South Boston, and the arrest of one of the proprietors Patrick J. Cuddyer, on the charge of keeping and exposing for sale intoxicating liquors. The raid is felt to be the most important made for some time and, when the affair became known in South Boston, it created a great stir among the druggists, who were astounded to learn of the amount of property seized. It seems that this place has been under suspicion for some time by the police, but evidence could not be had. Officers have watched the place very carefully and when a warrant was served, and the

search began, it seemed as if the discoveries would never end. In all 175 2-3 gallons of intoxicating liquors were taken away. There were 143 2-3 gallons of whiskey in 675 bottles, one barrel, two kegs and three jugs; two gallons of brandy, 20 gallons of gin, 4 3/4 gallons of ale, one gallon of porter, 3 1/2 gallons of champagne, one gallon of sherry wine and 1 1/4 gallons of rum. Glasses, bottles, jugs and other materials also were seized. The patrol wagon was sent for and the property was taken to a station house. Many of the bottled goods were wrapped up in paper and tied with strings, ready for delivery. In court the next day, when Cuddyer was given a hearing, two witnesses to whom it was supposed he had sold liquor testified that they bought only soda. The case was continued, Cuddyer furnishing bail soon after his arrest.

### 3. BUSY DAYS FOR DRUGGISTS.

Boston, Mass., Nov. 30.—These are busy days for druggists everywhere in this city, as well as in the nearby places. The small-pox scare has aroused people to the danger of the hour and everybody is rushing to physicians' offices to be vaccinated and druggists also are doing considerable of this work for customers who insist that they perform the operation. All this has made an immense demand for virus and points and the stock of both has been well depleted. There has been a pretty good call for many other things, and general illness of one kind another has tended to create business in the prescription department. The holiday of the week has made just that much less time for business in the general market, which has kept steady, as a whole, on moderate transactions in drugs and with perhaps more activity found in the line of chemicals for which there has been, in comparison with drugs, a better call. Dyestuffs and tanning materials keep steady with little fluctuation as to prices and with a fairly good trade. Alcohols show signs of strength and the tendency is toward better prices.

### 4. DRUGGISTS OF SALEM VICTORIOUS IN THE SUPREME COURT.

Boston, Nov. 30.—A decision has been reached by the full bench of the Supreme Court in the case of Frank P. Fitzgerald of Salem who, when Mayor Hurley refused to sign his and other druggists' liquor licenses on the ground that he had no right to sign liquor licenses in a place which had voted no license, carried the matter to a contest to have it settled. The Board of Aldermen granted the licenses long ago, but the mayor persisted in his refusal to sign them unless the court so ordered. The full bench of the Supreme Court now has ordered a writ of mandamus to issue in the case, so the mayor must sign the coveted licenses. Fitzgerald's was a test case, the decision of which affected all the other druggists. The Equity Court first heard the case and its decision was in favor of the druggists.

### NOTES.

—H. V. Culverhouse is associated as partner with Henry L. Green of Worcester, who recently purchased the Maynard Drug Store, one of the oldest stores in that city. Mr. Green now controls several stores in Worcester. He formerly was in business in Beverly. He is the druggist whom the Worcester County Druggists recently charged with selling goods at a rate considerably under the prices fixed by the association's scale. Mr. Green was the first president of the association which was organized two years ago at the time the Hall & Lyon Company opened its cut-rate store on Front street. The reduction in price on patent medicines and drugs made by Mr. Green was to the wholesale figures, which is much lower than the association's retail prices. Mr. Green gave an explanation to the association, after which he tendered his resignation. This the association refused to accept. It later decided that his scale will have to be accepted. Mr. Green informed the other druggists that while he didn't like the cut, he was compelled to come to it and that he proposed sticking to his purpose.

—On charge of selling liquor illegally, Edward A. At-

wood, Clarence F. Thayer and Fred. C. Bean, all Wayland druggists, have been in the court at South Framingham, the complaints having been made by one of the members of the board of selectmen, together with a representative of the State Board of Pharmacy. The town voted "no license", and this member of the selectmen was strongly in favor of refusing sixth-class licenses even to druggists. The other two members, however, formed a majority and the licenses were issued without the third member's signature. Some witnesses swore that they had bought liquor of some of the defendants and were not asked to register their names in the book required by law to be kept for that purpose by every druggist. The cases were continued by mutual agreement of all concerned.

—The Mellin's Food Company, at their establishment in this city, had a happy gathering on Wednesday before Thanksgiving. Thomas Doliber, the president of the company, after reading the Thanksgiving proclamation of President Roosevelt, made a little speech showing the good feeling existing between employer and employes and presented to each and every employe a large turkey. Each man and woman, whether married or single, and every child in the company's employ was remembered. More than one thousand pounds of turkey were thus distributed.

—Charles B. Stevens, a prominent business resident of Revere, has bought the drug store in that town which formerly belonged to the late S. K. Harding, and with which Mr. Stevens was once connected. He has made some changes in the interior of the store and has put in much that is new in the way of stock. For some time since the death of Mr. Harding, the pharmacy has been under the management of George R. Reed.

—To satisfy the estate of Elisha D. Buffington of Worcester, which holds a mortgage on the drug store of the late Frank Collins at Millbury, that place has been sold out at auction. The store has been closed down during several weeks, past, since Mr. Collins' death. At the sale the store was bought by E. R. Mitchell of Worcester, who will have it re-opened as soon as possible. The price paid was \$1,000.

—Mayor Charles L. Dean, of Malden, of the Boston firm of Dean, Foster & Co., dealers at wholesale in druggists' glassware and sundries, has been honored by the citizens of his home city by being nominated for the fourth time and by a unanimous vote, too, for the office he so long has filled acceptably. He was present at the convention, when nominated and made a speech of acceptance.

—"The Telephone—Its Uses in Our Business and Social Life", formed the subject of an informal after-dinner talk by Albert N. Bullens, guest of honor at a meeting and dinner this week of the Boston Druggists' Association. Mr. Bullens is manager of the private lines department of the New England Telephone and Telegraph Company. F. A. Hubbard, president of the Druggists' Association, presided.

—After several months spent at Rutland, twelve miles from Worcester, Mass., George R. Worthen, of the drug firm of Worthen & Hicks, proprietors of Anthony's Pharmacy in Fall River, has returned to that city. He is improved to a great extent in health, but is not yet entirely well. Mr. Worthen intends to spend the winter in his own city, if he is able to do so.

—At the annual Thanksgiving Day races of the Medford Driving Club, the various brushes were most exciting, with a good-sized company of spectators. Arthur Johnson, one of the firm of Twig & Johnson, druggists of West Medford, won every heat of the twelve which were run off, driving his horse, "Little Prudy."

—After having been in the drug business for some time in Melrose, William E. Webster, who had a pharmacy at the corner of Main and Grove streets, recently removed all of his goods and store fixtures to East Weymouth, to start business in that town.

—John Larrabee of Melrose, where he has had a pharmacy for a long time, and who has been prominent as a member of the Massachusetts Board of Registration in Pharmacy, has been unanimously renominated by the Republicans of this city for the mayoralty.

## PHILADELPHIA.

### INSPECTION OF DRUG STORES.

Philadelphia, Nov. 30.—While the last week of November has been devoid of sensational incidents there has still been a ripple on the waters of local affairs caused by the tour of inspection of drug stores by an agent of the State Pharmaceutical Examining Board. This inspection is being made for the purpose of collecting evidence against drug stores which are not being legitimately conducted and in which unqualified clerks are dispensing prescriptions and poisons; in obedience to the mandates of the State Pharmacy Laws, this being the duty of the State Board. The Philadelphia Association of Retail Druggists is giving this action its full approval and support. It might not be amiss to call the attention of readers to the necessity of a strict observance of the law requiring registered clerks only to be left in charge of a drug store or to dispense poisons, also to the wisdom of a strict compliance with the "poison laws" of the State. That the scarcity of registered clerks and the carelessness of some out of the many druggists here may have led some to neglect the law requiring registered help may be quite possible, but the great majority are living up to the letter of the law in all particulars. Still, the law allows no excuses, and those who have neglected to put their house in order will save trouble and money by doing so before it is too late. When the inspector comes to the store, let everything be O. K.

### THE P. A. R. D. SMOKER.

Philadelphia, Nov. 30.—Tickets for the great "Smoker" which is to wind up the year in a blaze of glory for the local retail druggists' association have been all sent out and practically every druggist in Philadelphia is now planning how he can "fix it" with his clerks so as to get off next Friday night, December 6th. Few functions ever given by local druggists have attracted as much attention and interest. The programme is to be one that would do credit to professional "entertainers" and the "smokes" and the refreshments, both liquid and solid, will be there to every one's fullest desire. The programme provides for 12 "sketches" by the best talent procurable, a continuous performance at the lunch counter, songs and speeches by talented druggists, fresh cigars with every "stunt", heart-to-heart talks between local competitors, a lecture on "How to make money although in the drug business" by a man who made some this year, (this to be strictly private), plenty of "wet stuff", of the harmless kind, to wash away the dry spots and a general good time from 9 to 1 p. m. The beauty of this affair is that it will not cost anybody a cent, everything from cigars to checking hats and coats being provided free by the P. A. R. D. The smoker will be held in the "North Broad Street Drawing Rooms", Broad street, above Fairmount street.

### DOINGS OF THE P. A. R. D.

Philadelphia, Nov. 30.—A letter printed in a recent issue of a certain drug journal, among others "throwing bouquets", makes a statement that is resented here by the local association. This statement is to the effect that Philadelphia's "aggressive cutter" would now be in line but for the refusal of the P. A. R. D. to pay him the cost of a supply of "cut rate price lists" he had just gotten out. Now the facts in the case are these: The P. A. R. D. did offer to pay for these price lists, but the cutter raised further objections that showed plainly that he did not really want to come to terms but had offered the objection as an excuse. Every possible honorable effort was made to come to an agreement but, as stated in open meeting of the P. A. R. D., (and so stated in its published proceedings) he persisted in raising obstacles and would not come to definite terms. That this is the true version of the matter is conclusively shown by the actions of the P. A. R. D. then and since; their policy has been one of conciliation and persuasion at all times, never one of threats or harsh measures.

### CHRISTMAS PRESENTS TO CUSTOMERS TO BE ABOLISHED.

Philadelphia, Nov. 30.—Another successful "Ward Meeting" was held at Sepviva and Norris streets last Tuesday evening by the druggists of the sixteenth, seventeenth, eighteenth, nineteenth and thirty-first wards, the attendance being good. Among the matters discussed was the practice in this section of giving Christmas presents to customers, and while discontinuance of this could not be made this year without undue hardships on those who had already ordered presents, it was agreed that after this year it would be abolished. The custom is one that costs the druggists up in Kensington and Frankford quite a sum yearly and the general opinion was that it did not bring adequate returns, still, as long as some did it, all had to follow suit or lose trade. When all drop it the public will not complain. Other questions relating to prices of sundries and smaller proprietaries were also discussed, the prospects for general agreement being very good.

### BUSINESS SLOW AND QUIET.

Philadelphia, Nov. 30.—Business has been rather slow and quiet generally this week except in the northwestern section of the city, where a fresh outbreak of small-pox has kept local druggists busy selling vaccine and preventive remedies. A total of 114 new cases were reported for this week, most of them being in the above mentioned part of the city, the southern and western sections being unusually free from the disease. Prescription trade is also dull and slow, indeed, as a whole, the week has been the poorest of the month. Very few druggists so far seem to have made any preparations for holiday trade except in outlying sections. Hot soda was about the only thing selling well during the week, the two big football games of the week bringing in a harvest to drug stores near Franklin Field. The jobbing houses also report a slight falling off in the volume of trade, collections being a little slow just now and orders not coming in quite as fast. November, as a whole however, has exceeded in business done this month last year.

### ILLUSTRATED LECTURES AT THE P. C. P.

Philadelphia, Nov. 30.—There will be a series of illustrated lectures on popular and current topics by prominent speakers at the Philadelphia College of Pharmacy, to which local druggists are cordially invited—admission being free. The series as arranged is as follows: December 4th, "Japan as seen with the Camera", by Rudolph Blankenberg, Esq. January 8th, "An Illustrated Lecture on Birds", by Dr. S. C. Schmucker; February 12th, "Inter-oceanic Canals", by Prof. Lewis M. Haupt; March 12th, "Picturesque Holland", by Dr. Chas. L. Mitchell.

### NOTES.

—The Executive Committee of the P. A. R. D. has received assurances from the advertising manager of the Philadelphia "Press" that in the future no advertisements of patent medicines shall be published in such a manner as to make it appear that the local druggists endorse them, unless their consent is given. The appearance of a full page advertisement of a certain patent medicine in which a number of local druggists were made to appear as endorsing and recommending it to patients was promptly taken up by the local association and complaint made to the manager of the two papers printing the objectionable matter, their action resulting in the above apology by the newspaper. Such advertisements create much feeling among physicians and thus do the druggists harm.

—Doctors H. H. Davis, J. W. Fithian and S. G. Busbey, who were appointed a committee by the Camden Board of Health to investigate the recent cases of tetanus following vaccination, issued their official report yesterday, in which they include a strong recommendation that vaccination should be insisted on, as a safe and harmless preventive when properly performed, and a warning against the danger of tetanus infection from neglect of cleanliness and care. The vaccine supplied by local manufacturers is highly praised as being active cleanly and prepared under the most careful observation of aseptic

procedure and as entirely free from foreign germs or germ products.

—The Philadelphia Association of Retail Druggists will hold its December meeting at the "North Broad Street Drawing Rooms", Broad street, above Fairmount avenue, at 8 p. m. Friday, December 6th, instead of the usual time and place. This is done in order to have the meeting immediately prior to the "Smoker" to be given on that date, for the convenience of members. The "Nominating Committee" will present its report of nominees for the officers of the Association for 1902 at this meeting, these to be voted for at the January meeting, of the new year. Members are requested to attend promptly as the time for the meeting will necessarily be very brief, the "Smoker" beginning at 9.00 p. m.

—A party of students from the Philadelphia College of Pharmacy, the third year class, paid a visit to the laboratories of the Smith, Kline, French Company last Wednesday, under the guidance of Prof. Chas. H. Lawall. The visitors were shown through the buildings where all sorts of pharmaceutical and chemical products are made, particular attention being given to the department where Eskay's Food is prepared and sealed in airtight bottles by a special machine. A bountiful lunch was served after the inspection, at which members of the firm were present.

—Twenty-four druggists wanted clerks according to the Sunday "Inquirer" this week, while but seventeen clerks seemed to be looking for jobs. For some time the unusual feature of more druggists wanting clerks than there are clerks wanting druggists has been the rule here.

—Mahon N. Kline has been appointed by Mayor Ashbridge to represent the drug trade on the committee constituted to take charge of the erection of the McKinley Memorial Monument, for which popular subscriptions are now being received.

—Lawson C. Funk, the well known West Philadelphia druggist, was a member of the committee from the City Council chosen to represent Philadelphia at the opening of the Charleston Exposition, the party leaving this week.

—Theo. Campbell, of Overbrook, has been quite seriously ill at his home with pneumonia for some time past, but is now able to attend to business and on the road to safe recovery.

### NORTH CAROLINA.

Raleigh, Nov. 30.

—The Crescent Pharmacy, Hamlet, N. C., has been sold out under mortgage.

—Jesse Carter, has sold out his stock at Carthage, N. C., and bought the store of W. A. Crahtree at Sanford.

—Wm. G. Thomas has sold his business at Louisville to M. K. & F. R. Pleasants, and has bought the North Side Drug Store at Raleigh.

—F. H. Jaceocks, manager of the North Side Drug Store at Raleigh for several years, has accepted a position with Williams, Martin & Gray, of Norfolk, Va.

—N. E. Riddick is traveling in Eastern North Carolina in the interest of the W. H. King Drug Company, of Raleigh.

—R. N. Winston, of Franklinton, one of the oldest druggists of the State died a few days ago. The business, it is understood will be continued by his sons.

—Horton & Richardson have opened a new drug store at Wakefield.

—Fuller Reed, formerly manager of the McGee Pharmacy at Raleigh, is now with Dr. G. D. Everington at Laurinburg.

—The drug firm of Rozier & Thompson, Lumberton, has been succeeded by R. G. Rozier.

—D. McN. McKay, formerly with Prince & Blue, of Laurinburg, has bought the drug store of R. C. Jenkins at Goldsboro.

Druggists who do not find it advantageous to them to make their own Compound Syrup of Hypophosphites, Emulsion of Cod Liver Oil with Hypophosphites and similar preparations, will do well to correspond with Ed. Davis, Lansford, Pa. Mr. Davis is in a position to supply these preparations at remarkably low prices. Samples will be sent to any druggist on request.

## BALTIMORE.

### CHEMICALS ON FIRE.

Baltimore, Nov. 26.—The milling plant in the Thomsen Chemical Company's plant in the block bounded by Hanover, Winder and Leadenhall streets, was gutted by fire last night with a loss estimated at \$10,000 to \$15,000. The loss was principally in the mills, of which there are six—one on the first floor and five on the second. The milling department is on the eastern side of the plant and a strong wind was blowing from the West. Had it been from the other direction the damage would have been much greater and the whole establishment might have been destroyed, although, it is said, the chemicals stored in the place were rather of a nature to check the flames than to feed them. There were one or two small explosions but no one was hurt.

The cause of the fire is unknown. A force of about twenty men is kept at work in the plant all night. One of them, Fillmore Broughton, who was employed in another department near by, saw a blaze break out near one of the mills and ran down to the nearest fire alarm box to summon the apparatus. Another was instrumental in getting twelve horses out of the company's stable. The engine and ladder companies found it impossible to save the building in which the fire had started and devoted their efforts to preventing the spread of the flames. Mr. Angus Cameron, of Roland Park, is president and treasurer of the company. He estimated the loss as above stated and said that it was amply covered by insurance.

The burned mills were in a building about 40 by 75 feet, erected some twenty years ago by the late John J. Thomsen. The plant was bought four years ago by Mr. Cameron, who organized a company. The plant and the output were doubled. The concern manufactures chemicals for use in manufactures and the arts and has an output of about 6,000 barrels per week. It employs from 200 to 250 hands. The destroyed property will be rebuilt at once.

### WITH THE BOWLERS.

Baltimore, Nov. 30.—The Stanley & Brown Drug Company met McCormick & Co. last night at the Diamond and "was their'n" by a score of 767, 733 and 687 against 713, 689 and 721. Baumgartner was high man for McCormick & Co., rolling up a total of 200 in the second game, while Mueller gained this distinction for the Stanley & Brown Company with 177. On Tuesday night the Root and Herbs gave battle to the Armstrong Cork Company, the former team getting two out of three contests by 634, 722 and 741 against 724, 720 and 728 points. Davis, of the former team was high man with 200 pins, while Dunnock, of the Armstrong Cork Company scored 180 and beat Mr. Davis on high average with 171 1-3. The standing of the teams now is as follows:

| Teams.                       | Games |       | Perc. |
|------------------------------|-------|-------|-------|
|                              | Won.  | Lost. |       |
| Sharp & Dohme.....           | 13    | 2     | .867  |
| Root & Herb.....             |       |       |       |
| James Bailly & Son.....      | 9     | 6     | .600  |
| McCormick & Co.....          | 7     | 8     | .467  |
| Stanley & Brown Drug Co..... | 8     | 10    | .447  |
| Armstrong Cork Co.....       |       |       |       |
| Ferrell & Kellam Co.....     | 1     | 14    | .067  |

### PREPARING FOR LEGISLATIVE WORK.

Baltimore, Nov. 30.—Dr. A. R. L. Dohme, Louis Schulze, the president of the Maryland Pharmaceutical Association, and Owen C. Smith, who constitute the legislative committee of the State organization, went down to Annapolis this afternoon to make arrangements for the semi-annual meeting, which is to take place there in January during the session of the Legislature. The purpose is to invite the members of both houses to attend the meeting, at which the needs of a new pharmacy law applicable to every part of Maryland will be set forth. The bill to be introduced is in all respect identical with the measure that passed the House of Delegates two

years ago. It does not interfere with the sale of household remedies and ordinary drugs by the country store keepers, but it provides that all druggists must possess certain qualifications, and limits the compounding of prescriptions to competent pharmacists. The clause exempting the storekeepers in the matter of common substances is a concession to those manufacturers whose trade is with this class of distributors and who have hitherto been able to muster up sufficient influence to defeat the demand for pharmacy legislation. By removing this opposition the success of the effort to be made this winter would seem to be assured.

### VOLUME OF TRADE SATISFACTORY.

Baltimore, Dec. 2.—The first part of last week was rather quiet with the jobbers, but they were enabled to make up for lost time later in the week, when a rush ensued, Saturday being the busiest day of them all. In the main, however, the volume of trade continues satisfactory, and the aggregate will be far ahead of last year. Manufacturers of pharmaceuticals get encouraging reports from their traveling representatives, who have been doing very well. The drug market has not developed any very striking features during the past week. Leading botanicals are rather higher. Lobelia seed is reported to be extremely scarce while lobelia herb is small as to crop, with higher prices in prospect. The same is to be said of calendula flowers (domestic), turkey corn root, pink root and angelica root. All are said to be scarce and going up. Heavy chemicals show no marked changes. The retailers give moderately favorable reports as to the state of trade.

### NOTES.

—John Paul Jones, not the captain who played a prominent part in the American Revolutionary war, but the jovial representative of Sharp & Dohme in New York State, who "pays the freight," is on a visit home after a tour of some weeks and reports that trade in his territory is very good. Mr. Jones will stay at home over the Christmas holidays.

—The out-of-town visitors last week included Thomas G. Forwood, Belair, Md.; A. H. Stack, with Dale & Co., York, Pa.; G. Roberts, Racon Ford, Va.; W. R. Rudy, Mount Airy, Md.; J. J. Rose, Westminster, Md.; W. S. Richardson and E. M. McComas, Washington; Dr. L. D. Collier, Salisbury, Md.

—Dr. A. R. L. Dohme, of Sharp & Dohme, intended to witness the football game between the Naval Cadets and the West Pointers at Philadelphia last Saturday, but his duties in connection with the John Hopkins University kept him at home.

—J. T. Lyon, who clerked for C. R. Meyer, Edmondson avenue and Monroe street, has resigned.

## CINCINNATI.

### O. Y. D. A. ELECTS OFFICERS.

Cincinnati, Nov. 30.—The annual election of the Ohio Valley Drug Association took place November 26, nearly three hundred votes being cast. The secretary had mailed each member a ballot with request to return it with the names of the candidates marked for whom he desired to vote; the tellers Messrs. Chas. H. Jones and Peter E. Herrman opened the sealed envelopes and announced the election of the following officers: President, A. O. Zwick; first vice-president, W. T. Ford; second vice-president, N. E. Smith; third vice-president, W. F. Knemoeller; treasurer, H. B. Waltherman; secretary, Chas. Freericks; Jr. Members of Board of Control: Emil Zorn, A. D. Wells, Otto Groenland, Albert Wetterstroem, A. L. Boehmer, Louis Heister, J. H. Linneman of Cincinnati; J. G. Peth of Newport, Ky.; F. Amman of Portsmouth, Ohio; E. L. Pieck of Covington, Ky.; F. W. Blesi of Covington, Ky.; Chas. Krone of Hamilton, Ohio; W. T. Elrod of Williamsburg, Ohio; J. W. Galbreath of Higginsport, Ohio; Harry W. Ray of Maysville, Ky.

## NOTES.

—S. B. Holmes, a prominent druggist at Frankfort, Ky., John O'Hara of Williamstown, Ky. and the veteran druggist John Gauck of Batesville, Ind., were among the visitors buying holiday goods this week.

—Secretary Scheibenzuber of the Ohio Drug Association states that the association now has a membership of over three hundred.

—H. J. Thompson of West Union, Ohio, was in town a few days recently. He leaves for Winchester and expects to open his new store next week.

—J. P. Hemphill of Rising Sun, Ind., expects to be in his new store by December 15th.

—A. H. Bennett of Mason, Ohio, has refurnished his store with new shop bottles, fixtures, etc.

## DETROIT AND MICHIGAN.

Detroit, Nov. 30, 1901

—Minor E. Keyes, pharmacist at the corner of Jos. Campau and Fort streets, Detroit, is congratulating himself that he was not in the collision of the two Wabash trains, which occurred Nov. 27 near Seneca a small station a short distance from Adrian. The wreck entailed a loss of a great many lives, and was one of the most disastrous known in railroad history for a great many years. Mr. Keyes was on the train following the train which caused the wreck, and he says he will never forget the terrible scene he witnessed a short time after the wreck took place.

—A few days ago fire started in the extract department of Parke, Davis & Co., which might have proved very disastrous indeed had it not been for the automatic sprinkler system in vogue at the laboratory, which responded and subdued the flames in a very short time, leaving little to be done by the private fire department.

—J. C. Henton, son of J. W. Henton, manager for the well-known firm of Kempthorne, Prosser & Co. of Auckland, New Zealand, has accepted a position with Parke, Davis & Co., at their Detroit laboratory. Mr. Henton has had a wide experience in Australasian drug houses and comes eminently fitted for his new field.

—Jacob S. Farrand, Jr., of Messrs. Farrand, Williams & Clark, wholesale druggists of Detroit, lately returned from a trip to New York.

—The mother of druggist Geo. W. Stringer died recently. Mr. Stringer is one of the oldest druggists in Detroit, and has a wide circle of friends who sympathize with him deeply in his recent loss.

—The next lecture of the members' course of the Drug Clerks Association of Michigan will be held on the evening of December 11th, when Jas. E. Davis, of the Michigan Drug Co., will discourse upon the business aspect of the drug trade. The lecture will prove a very instructive one in view of the extended experience of Mr. Davis in connection with the wholesale drug trade in Detroit.

—F. M. Odena, general representative of Parke, Davis & Co. was in town last week after a ninety days' trip, and has now left for the last trip of 1901.

—Among the out-of-town visitors in Detroit last week was Alfred Klahre, representing Roessler & Hasslacher Drug Co. of New York, who are also selling agents for the Schaefer Alkaloid Works of Maywood, New Jersey. The Schaefer people are now manufacturing a very fine quality of lithium carbonate.

—F. G. Somers, for some little time identified with the Chicago office of Parke, Davis & Co., has severed his connection with the house.

—I. W. Rossiter, representative of Powers & Weightman, visited his trade in Detroit last week, it being the closing trip of the season. The Mallinckrodt Chemical Works were represented within the last few days by L. R. Dronberger.

—C. W. Griffiths, representative of Herf & Prerichs, St. Louis, Mo., with headquarters at Chicago, visited Detroit and way points within the last week, it being the closing trip for this year.

—W. H. McKinnon will open a first class prescription pharmacy at Fort Huron Tunnel about December 15.

## CHICAGO.

## N. A. H. D. EXECUTIVE COMMITTEE MEETS.

Chicago, Nov. 30.—The officers and Executive Committee of the N. A. R. D. held a meeting in Chicago one week ago. At this meeting the strength of the organization was discussed and it was decided to carry out in the near future the objects of the organization with regard to those who are violating the terms of the tripartite agreement. The committee feels that it is now time to cease temporizing. The tripartite agreement is thoroughly understood by all members of the trade and those who do not live up to it will wish they had done so. It is said that the agreement will be enforced without fear, favor or partiality.

## CHICAGO TRADE ACTIVE.

Chicago, Nov. 30.—Manufacturers and jobbers are busy with their regular fall trade. Staple goods are moving well and freely and there is a continuing demand for quinine and other seasonal goods for the fall and winter trade. The weather during the past few weeks has been disagreeable and cold and cough and grip remedies are in demand. The holidays are approaching and there is a lull among the jobbers in holiday goods.

## NOTES.

—The Chicago Drug Trade Bowling League rolled the following games on November 25: Buck & Rayner 727, 643, 689 against E. H. Sargent & Co., 548, 701 664; Parke, Davis & Co., 717, 702, 667 against Sharp & Smith, 739, 773, 734; A. M. Foster & Co., 755, 722, 740 against Lord, Owen & Co., 692, 829, 658.

Standing and percentage.

|                         | Won. | Lost. | P.C. |
|-------------------------|------|-------|------|
| Sharp & Smith.....      | 17   | 7     | .783 |
| Lord, Owen & Co.....    | 14   | 10    | .583 |
| E. H. Sargent & Co..... | 14   | 10    | .583 |
| Parke, Davis & Co.....  | 12   | 12    | .500 |
| Buck & Rayner.....      | 9    | 15    | .334 |
| Foster & Co.....        | 7    | 17    | .290 |

—Parke, Davis & Company have a very interesting display of blackleg vaccine and other veterinary bacteriological products at the International Live Stock Exhibition at the Union Stock Yards, Chicago, this week. The exhibit is in charge of Messrs. Grebe and Boyd of the Kansas City branch of Parke, Davis & Company.

—Dr. E. Larned is the most recent acquisition to the scientific department of the Chicago branch of Parke, Davis & Company. Dr. Larned was formerly in active practice in Joliet, where he made a specialty of bacteriological work.

—Bruno Batt, a former well known Chicago druggist, moved to St. Louis recently, has gone into the manufacturing business in that city. He is a director in the Druggists' Cooperative Company of that city.

—It is reported that George F. Wisshack, a well known druggist at Madison and Halsted streets, has bought a controlling interest in the Dale & Sempill drug store at Clark and Madison streets.

—The firm of Menchert & Shoenbrodt has bought the drug store of Emil H. Luehr at 703 West Harrison street. The store will be known as the Crescent Pharmacy.

—W. B. Hart has sold his drug store at Sixty-third street and Madison avenue to Dr. Brower, Twelfth street and Blue Island avenue.

—It is reported that the drug store of P. W. Jacobus at North Halsted and Grace streets has been closed by the Sheriff.

—T. E. Gapen & Son, who own and conduct drug stores in Ottawa and Sparland, Ill., were in Chicago this week buying holiday goods.

—Mr. Thiesen of the Cranwell-Thiesen Drug Company, of Racine, Wis., was in Chicago this week.

Readers of the Era will notice an old friend this week among the advertisements on page—Dr. McGill has spent a great deal of time and money in running down swindlers who have been selling counterfeit Orange Blossom to the drug trade.

## THE NORTHWEST.

### UNPRECEDENTED VOLUME OF TRADE.

St. Paul, Minn., Nov. 29.—Increasing activity is reported in the wholesale drug trade which has brought the record up to an excess over any former year. The country druggists report a very considerable increase in their business for this season of the year and the leading wholesale house of this city is perfecting plans for enlarging its facilities and increasing its ability to meet the demands of the trade. The largest increase notable is the gain in demand upon the departments of druggists sundries, surgical instruments and cigars, which has expanded to large proportions.

### NOTES.

—Successions: Williams & Baxter, Billings, Mont., by Henry G. Williams; Russell & Strong, Stephen, Minn., by J. H. Vold; Lowthian & Co., Glenville, Minn., by P. B. Herman; Pennington & Co., Montevideo, Minn., by the Kries Drug Co.; J. K. Jorder & Co., Waterloo, Ia., by J. K. Jorder; S. Williams & Co., Meadow Grove, Neb., by Kindred & Williams; J. C. Walker, New Market, Ia., by G. Walker; A. B. C. Dodd & Co., Charles City, Ia., by Carl Merckel; Daniel E. Collins, Superior, Ia., by H. F. Brown.

—The drug stores of two South Dakota towns—Parker & Davis—have lost one of their attractions. They are among the establishments from which the authorities have ordered all slot machines, dice boxes, cards and other gambling devices or games of chance. Those caught manipulating a slot machine, shaking dice or engaging in other similar diversions are threatened with arrest.

—New: M. D. Butler, Brockett, N. D.; C. F. Hoehen, Columbus, Neb.; Hines & Wagner, Forest Grove, Ore.; John Dahlin, Brockett, N. D.; T. M. Starr, Shoshone, Idaho.

—J. E. McCarthy has gone to Tower, Minn., to work for N. J. Benson, and Mr. Myers, whom he succeeded, has returned to Minneapolis.

—Miss M. E. Adams has left Lindstrom, Minn., and gone to work in Evans' Drug store at Ceylon, as pharmacist.

—Henry Pennington has sold his drugstock at Monticello, Minn., and is taking a vacation in the Rainy Lake region.

—Henry Holmberg has left Faribault, Minn., for Northfield, Minn., where he is now working for S. Pinkelson.

—R. J. Lindberry has gone to work at Fergus Falls, Minn., for the winter.

—A. L. Herkenrath has gone to Lakota, N. D., to work for A. Pichka.

—A. E. Groat, of Minneapolis, has gone to Minto, N. D., to help out Mr. Boylan, who is sick abed.

—Geo. A. Countryman has sold his Belview, Minn., drug stock to R. S. Patchen.

—Henry Prestholt has fitted up a store and will put a new stock into it at North Branch, Minn.

—F. H. Caldwell of North Yamhill, Ore., and T. M. Witten of Newberg, same state, have exchanged stores.

—The Newbro Drug Co., Butte, Mont., has decreased its capital from \$100,000 to \$50,000.

—J. J. Tracy, Shoshone, Idaho, has sold.

—N. Chagnon, Le Roy, Minn., has given a bill of sale.

—P. O. Opsahl, Avoca, Minn., will discontinue.

—O. J. Berg has returned to Minneapolis.

### Hot Stuff.

Every druggist who has a hot soda fountain should have the little pamphlet entitled "Hot Stuff," which the American Soda Fountain Co. is sending out. It is really a price list of hot soda drinks, but at the same time it is full of formulas and suggestions for new drinks and ideas, which will enable any bright dispenser to increase his trade.

Don't fail to read Chas. Jacobs & Co.'s page advertisement in this issue, and take advantage of their special offer.

## THE SOUTH.

### WELL REPRESENTED.

Memphis, Nov. 29.—The Tri-States Medical Association, composed of the practitioners of Tennessee, Arkansas and Mississippi, held its annual meeting in this city, Nov. 19-21. A large number of M. D.s were on hand, and the papers were interesting. The meeting was a success from every standpoint. Great credit is due Dr. Richmond McKinney, the secretary, for his splendid attention to the details. The pharmaceutical houses were well represented and the exhibits were, in most instances, gotten up with an eye to general attractiveness. Following is a list of some of the exhibitors and the gentlemen in charge: Eli Lilly & Co., J. F. Vickers and S. T. Anderson, Wm. S. Merrill Chemical Co., E. W. Henderson, Wm. R. Warner & Co., John D. Mulhern, John Wyeth & Bro., C. A. Carver, E. J. Haas & Co., Dr. Perrine, Parke, Davis & Co., Jos. Tobin and Mr. Turner, H. K. Mulford & Co., Mr. West and Mr. Mayers, Frederick Stearns & Co., Dr. Mitchell, Searle & Hereth Co., Mr. Young, Sharp & Dohme, Messrs. Bailey & Boggan, Keasbey & Mattison, Dr. J. W. Hunter, Fortune, Ward & Co., a local retail drug firm had a handsome exhibit.

### THREW VITRIOL IN OFFICER'S FACE.

Memphis, Nov. 29.—Stennis Thompson, a young pharmacist of Meridian, Miss., together with a young companion named Kling, is in serious trouble as the result of an assault made on an officer of the law. It seems that Thompson and three companions were arrested on a charge of disorderly conduct and a fine of \$5.50 was assessed against each of them. The chief of police gave the trio until a certain time to settle; the boys did not pay, and the chief, finding Thompson and Kling on the street drinking, arrested them. At headquarters the chief turned them over to Sergeant Lyons to be locked up. When the sergeant reached the hallway leading to the jail with his prisoners, Thompson suddenly threw vitriol in the officer's face. Lyons, fortunately, closed his eyes in time to save him from blindness, but he was frightfully burned about the face and hands. In the meantime, the chief was compelled to knock Kling down to prevent the latter from braining him with a heavy inkstand. Both men are in jail, and for the present are denied bail. Thompson is the son of Dr. M. J. Thompson, one of the most prominent men in Meridian.

### A SENSATIONAL POISONING CASE.

Memphis, Nov. 29.—E. Monnier and Jullus Gargaro, proprietor and clerk, respectively, of a drug store in this city, both have important parts to play in a trial that is booked for the Criminal Court in January. Mrs. Georgia Emma Hooks has been indicted by the grand jury for the alleged poisoning of her husband, who died sometime in October. Rumors reached the grand jury which led to an investigation, and the body of Hooks was exhumed and a post-mortem examination made. Dr. Krouse, an expert chemist, analyzed the contents of the stomach and found arsenic in large quantities and some powdered glass. Next to Dr. Krouse, Monnier and Gargaro were the most important witnesses before the grand jury. Both testified to selling Mrs. Hooks arsenic and produced the poison register to substantiate their statements, she at the time claiming that she wanted it for killing dogs. The two physicians who attended Hooks in his last illness at the time gave the cause of his demise as acute gastritis, but the evidence adduced has convinced them that he died from poison. Mrs. Hooks is worth about \$50,000.

### DOCTOR KILLS DRUGGIST.

Memphis, Nov. 29.—Alex Wright, of the McEwen Drug Co., McEwen, Tenn., was instantly killed by Dr. J. B. Arrington, postmaster of the town, on Nov. 26, at 5 o'clock. Dr. Arrington went to the drug store and had a dispute with Wright about a prescription. During a heated argument, which lasted only a short time, the physician drew his pistol and fired one shot at Wright.

The bullet struck him in the region of the heart and the druggist fell dead. Dr. Arrington left the store, and was later arrested on a warrant charging murder. The physician claims he fired the shot in self-defence, as Wright made a threatening demonstration, but this version is denied by W. A. Phelps, who was the only eye-witness.

#### NOTES.

—J. R. Tague, manager for the Van Vleet-Mansfield Drug Co., is a very busy man, but he never has so much to do that he cannot find time to welcome the traveling men and give them a hearing, consequently his popularity with the druggists is universal. One afternoon last week, Mr. Tague was asked to present himself at the hall where one of the sessions of the Tri-States Medical Association was in progress. Thereupon he hid himself to the place and was immediately surrounded by traveling men and physicians. One of the gentlemen clapped his hands, and, at the signal, S. T. Anderson stepped forward and in a nice—if rather trembly—little speech presented Mr. Tague, on behalf of the traveling men, with a handsome diamond scarf pin. Mr. Tague, with becoming modesty, thanked the gentlemen for remembering him so kindly, and made a little talk that, for an impromptu effort, was a gem. Dr. Richmond McKinney, Secretary of the Association, was also remembered.

—Richard Denison, a young man prominent in local wholesale drug circles, has filed a bill in chancery against a gambling house in this city to recover \$480 alleged to have been lost in games of chance. The complainant declares that at various times between November 1 and November 12 he lost an aggregate sum of \$480 through gambling devices in the gaming house. He insists that he has made an effort to recover \$300 of this sum, but was put off from time to time, and was finally told that he could not recover any part of the money. A decree is prayed for the entire amount.

—Chas. A. Harris, a young druggist, of Dawson, Ga., was married to Miss Rena Mige, of that city, recently. The couple stole a march on their friends, for, while the wedding was expected to take place some time, they were not prepared for the surprise. Mr. Harris is a member of the firm of Farrant & Harris, and has charge of one of the firm's stores, the Dawson Drug Co., at Dawson. Mr. and Mrs. Harris will live in a handsome new house that the groom built recently.

—The Trade Interest Committee of the Tennessee State Druggists' Association is making a strong effort to infuse some of their N. A. R. D. enthusiasm into the druggists of this section. With this end in view they have invited an organizer of the National Association to mingle with us. The invitation is indorsed by all the friends of the N. A. R. D. in the State. As one druggist says, "We need it."

—G. M. Dayton, a druggist of Chattanooga, was fined \$25, in the police court of that city, on Nov. 15, for illegal sale of cocaine. Police investigation has shown alarming conditions existing among poor white people and negroes, who become victims of the habit. The authorities will make a crusade against drug stores that sell cocaine without prescriptions from a reputable physician.

—H. G. Lambert has resigned his position with J. C. Treherne, and will go in business for himself. He has leased the store formerly occupied by McArthur Bros. & Winston, Mississippi avenue and Lauderdale street, and will open a first-class prescription pharmacy, between the 1st and 10th of December. Mr. Lambert is a graduate of the Philadelphia College of Pharmacy and a very competent and popular young man.

—Dr. J. W. Hunter, representing Keasbey & Mattison, was a conspicuous visitor last week among the traveling men. The doctor is nearly seventy years old, but he goes about his work with a vim that would do credit to many a man half his age, and his beaming good nature insures him a welcome wherever he goes.

—The Barnes Medicine Co., of Tullahoma, Tenn., have moved their establishment to Bridgeport, Tenn., as the latter place and the country around produces many of the

roots and barks used in the manufacture of their products.

—Frank Balkcom, a prominent druggist of Tallahassee, Florida, was married to Miss Elizabeth Thomas at Atlanta, Ga., on Nov. 14. The wedding is the outcome of a correspondence brought about by a mutual friend, and was rather romantic.

—Dr. McSwain, of McSwain Bros., druggists, Paris, Tenn., is in the city. The doctor is president of the Tri-States Medical Association, and while here attended the meeting.

—T. F. Crawford, of Nashville, Ark., who recently graduated from the St. Louis College of Pharmacy, and is now with the Geo. M. Clark Drug Co., is convalescent after a severe illness.

—J. C. Steger, representing the Wm. S. Merrell Chemical Co., passed through the city last week en route home to spend his Christmas vacation.

—W. H. Scrape, after being in business in his new store on South Main street, Memphis, a little over thirty days, has discontinued.

—Will Towne, formerly proprietor of the Huntingdon Drug Co., was married recently. Mr. and Mrs. Towne will make Huntingdon their home.

—S. T. Anderson, formerly with Sharp & Dohme, has accepted a position with Eli Lilly & Co., and will travel for that firm in Arkansas.

—Dr. C. P. Gaston has purchased the branch store of Morrow & Corington, New Decatur, Ala.

—J. F. Turner, of Pulaski, Tenn., has taken Jonas Walden into partnership. The firm now is Turner & Walden.

—F. M. Odema, representing Parke, Davis & Co., is in this city calling on the jobbers.

—Geo. S. Merrell, of the Wm. S. Merrell Chemical Co., is in this city.

## ST. LOUIS.

### EARLY CLOSING MOVEMENT.

St. Louis, Dec. 2.—A movement is on foot to establish an early closing rule among the South St. Louis druggists. F. W. Sennewald, of the firm of E. A. Sennewald & Co., Eighth and Hickory streets, is the originator and prime mover of the plan, which is to get all the druggists between Jefferson avenue on the west, Broadway on the east, Chouteau avenue on the north and the junction of Broadway with Jefferson avenue on the south, to agree to close at 9:30 p. m. every night from December 25 until May 1, excepting Saturday nights. Mr. Sennewald has called upon the majority of the druggists in this district, and in every case he has received assurances of approval and hearty support. The remaining druggists will be called upon next week and he feels sure they will all be glad to indorse and carry out the plan. All of those called upon so far claim that it does not pay them to keep open after 9:30 p. m. The drug clerks have had nothing to do with this movement. In fact, but few of them knew anything about it. Mr. Sennewald says that his father (for many years secretary of the Missouri Board of Pharmacy) always advocated this early closing plan. It is not desired to put the plan into operation before December 25, because many of the druggists have put in holiday goods, and they desire all the time possible to dispose of this stock.

### NOTES.

—The St. Louis Retail Druggists' Association will give a ball at the Liederkranz Hall Friday night, December 13. The managers state that it will be a select and enjoyable affair.

—The St. Louis Drug Clerks' Society will give its annual ball at the St. Louisiana Hall December 5. Tickets are \$1 each, admitting gentleman and ladies.

—Geo. Sommers has bought out Robinson & Hombs, of Sturgeon, Mo.

—O. M. Soelner has resigned his position as druggist at the insane hospital of this city.

## CALIFORNIA.

### WESTERN WHOLESALE DRUG CO. SUFFERS FIRE LOSS.

Los Angeles, Nov. 25.—The Western Wholesale Drug Company, which has an establishment on the east side of Main street, between Second and Third streets, suffered a loss by fire on November 21, of about \$150,000. The company is a comparatively new corporation, although the men most heavily interested in it have been identified with the drug business in Los Angeles for many years. The house is the outgrowth of the old retail house of H. M. Sale & Son. H. M. Sale is the president, L. D. Sale, the vice-president and L. Schiff, the secretary. The Sales sold their Spring street store a few months ago, and went into the wholesale drug line, buying the stock of Haas, Baruch & Co., and moving it into new quarters, especially fitted up for them. The firm was rapidly building up a good business. The fire broke out at midnight through the roof of the warehouse in the rear of the company's store. The cause of the fire can only be conjectured, but it is supposed that spontaneous combustion took place. The warehouse was gutted. The drug sundries stock was totally ruined. The offices on the first floor were flooded, but the papers were saved.

The building was owned by a Mr. Brand. The stock was worth \$150,000, according to L. D. Sale, and was insured for \$100,000. The firm will resume business as soon as possible.

### DRUG CLERK SUES DRUGGIST.

Sacramento, Nov. 25.—A peculiar case was tried here recently. A. E. Muse, a drug clerk, sued druggist M. A. Washburne, for alleged breaking of contract. He said that Washburne had contracted to give him employment at \$75 a month, in charge of Washburne's K-street store. Muse was delayed in reporting for work and was told that he would have to work in the J-street store, until he had familiarized himself with the K-street place's stock, by doing relief work there. He was promised that he would then be put in charge of the K-street establishment. Muse refused to work at the J-street store, and before Justice Brown said that Washburne had engaged him definitely as manager of the K-street establishment. The Judge said that Muse was too fastidious. He saw no reason why Muse should object to work in the J-street store at the salary promised. He found for the defendant.

### SODA WATER GENERATOR EXPLODES.

Fresno, Nov. 25.—Smith Brothers, druggists and manufacturers of this city, have suffered a loss of \$500 through a peculiar explosion of their soda water generator. E. Theil, a clerk in the drug store, was working over the generator when it exploded. A large piece of the machine crashed into a number of lockers, and another piece cruised about the apartment breaking bottles, glasses, and shelving, and making holes in the floor and plastering. One piece pierced a whiskey barrel, while another drove its way through the wall. The door of the room was blown off its hinges. It is said that a defective safety valve caused the explosion. The noise of the explosion was terrific, and drew people from all over Fresno. Mr. Theil, the clerk was badly hurt.

### DRUG COMPANY PETITIONS COURT TO HAVE ITS NAME CHANGED.

Los Angeles, Cal., Nov. 25.—The retail drug firm trading under the corporate name of Sale & Son Drug Co., of this city, has petitioned to the Superior Court of this county that its name be changed to the Tanner Drug Co. The petition sets forth that the founders of the firm, H. M. Sale and L. D. Sale, are no longer identified with the corporation, but are connected with another drug firm in this city. The present officers and directors of the Sale corporation are: E. S. Tanner, president; E. G. B. Dunbar, secretary; J. W. Wood and Edith Dunbar.

### NOTES.

—Two druggists in Pomona, a flourishing town, near Los Angeles, California, have been arrested for "keeping a place where liquors are sold or given away," in violation of the municipal ordinance. C. A. Ludden, pleaded guilty to the charge, claimed to be a law-abiding citizen in his intentions, threw himself on the mercy of the courts, and promised there should be no cause for complaint against him in the future. The court imposed a fine of \$50 with the alternative of imprisonment in the city jail of one day for each \$2 of fine not paid. Ludden promptly paid his fine. The case against him was based upon the selling of whiskey without a prescription. Druggist E. E. Rives was convicted of the same offense and sentenced to 30 days in jail without bail, and to pay a fine of \$250. A notice of appeal was filed and a higher court released Rives on a thousand dollars bail.

—W. J. Creelcuis, of Philadelphia, has arrived in Southern California, where he will make his home. He will open a drug store either in Los Angeles, or in one of the smaller cities of Southern California. His family will come on from Philadelphia in a few weeks.

—Mrs. Oscar Robinson, the wife of the well-known druggist of Colusa, Cal., is slowly recovering from an accident met in San Francisco. She was struck by an express wagon while crossing Market street, and severely injured.

—G. Woodliff, son of Thomas Woodliff, the druggist of Virginia City, Nev., is taking a course in photography in St. Louis.

—M. S. Paris, of Colusa, Cal., has associated with him A. H. MacFarlane, graduate of the Louisville Medical College.

—Druggist Layne, will as soon as possible reopen his store in Danville, Cal., which was burned a few weeks ago.

—The Junction Pharmacy, Haight and Market streets, San Francisco, has been bought by Dr. A. P. Mulligan, from J. N. Hammit.

—Miss Florence Meyers, a druggist of eight years experience, will open a fine store in San Bernardino, Cal.

—At Red Bluff, Cal., H. C. Brooks, has made handsome improvements in his drug store.

—P. F. McLorrey, of Sacramento, has lengthened his store fifteen feet and otherwise improved it.

—Frank J. Steinmizt, Carson City, Nev., has been visiting in San Francisco.

### Upjohn's Pills.

We call attention to the card of The Upjohn Pill & Granule Co. on the front cover of this issue. Upjohn's pills are too well known to the trade to require any extended notice in these columns. They are correctly referred to in this card as "a standard of quality." Druggists who desire goods in this line which can be depended upon absolutely as possessing all the qualities claimed for them should specify "Upjohn's."

### Cascara.

The striking announcement of Sharp & Dohme on the first page of this issue is the first of a new series which will run through the winter. Cascara Sagrada is an interesting subject to the pharmacist, and a monograph on the subject will be sent to anyone interested.

NEW YORK

Compound Alum Powder

### HONEST SODA FOUNTAINS.

Poor old Diogenes with his tub and lantern looked long and faithfully for an honest man, with indifferent results. Many a soda water dispenser, to his sorrow, has

purchased a soda water fountain with a handsome exterior and realized too late that he had an elephant on his hands in the shape of a fountain which consumed tons of ice and gave indifferent results. Handsome onyx like "charity, covers a multitude of sins." We are all agreed that a soda water fountain should be exquisitely beautiful, but beauty is only one of the many essentials of scientific soda serving.

We are pleased to refer our readers to the beautiful insert of the Liquid Carbonic Acid Mfg. Co., which appears this month between pages 670 and 671. "Liquid" Fountains are the time keepers of progress in scientific soda serving. They are the most beautiful fountains ever constructed and in addition to this are properly built. They consume less ice, draw colder soda, and will outlast all other fountains. Write, wire or 'phone either branch of this company for fountain catalogue and full information, bearing in mind that you can make no mistake if you order a "Liquid" Fountain.

The syrup jars of the "Liquid" Fountains are all white porcelain, and the syrups are drawn through hard rubber faucets, absolutely preventing the syrups from coming in contact with any metal whatsoever. The jars are also constructed in such a manner as to allow any sediment which may be contained in the syrups to settle in the space underneath the syrup faucet, thus guaranteeing to the consumer only perfectly pure syrups. This system is undoubtedly the most cleanly and sanitary ever conceived. The Liquid Carbonic Acid Mfg. Co., invite the closest inspection and most thorough investigation into their methods of design and construction, and every fountain is sold upon an absolute guarantee.

The greatly decreasing number of soda water dispensers who buy their soda water in tanks or fountains is an indication that the dispensers are "getting onto" the latest and most economical methods of carbonating. The average cost of soda water in tanks is about 10c per gallon. By the use of a "Liquid Carbonator a saving is made of from 8 to 9 cents per gallon, which amounts to a neat sum in the course of a year. The second page of the "Liquid" insert shows six of their popular carbonators, the "Niagara", "Perfection Electric", "Crystal Spray", "Faultless", "Reliance" and "New Liquid". The line of carbonators manufactured by the Liquid Carbonic Acid Mfg. Co., are of varying capacity and suitable to the requirements of the largest as well as the smallest dispenser. Continuous automatic machines require absolutely no attention whatever; occupy very small floor space; are clean and do the work thoroughly, and turn out an infinitely superior product. If you are buying soda water

in tanks, or using anything but the "Liquid" System, it will pay you to investigate. Write, wire or 'phone either branch for full particulars and prices.

### Drug Fixtures.

In practical arrangement, correct designs, high grade material and fine finish at the prices that are just, the M. Winter Lumber Co., Sheboygan, Wis., think they "lead where others cannot follow." They also save the buyer freight in the adoption of the Kade Knock-Down System of shipping drug fixtures; in fact, they can fit the druggist out completely with fixtures, soda fountains, show cases, stools, etc., in this way. The soda fountain, of course, is the Kade Hygienic System. Their 20th Century fixture catalogue, a book of over 300 pages, 7½x11 inches, contains information, suggestions and prices which make it a regular encyclopedia for the drug buyer. There can be no question about the responsibility of the M. Winter Co., and they give banks and commercial agency references which are unquestionable. Their advertisement in this issue is interesting.

### Physician and Druggist.

Nearly every retail druggist has his favorite physician and when the holiday season comes around the question of a suitable Xmas gift arises. Many physician who uses a carriage or sleigh would appreciate a "Lehman" carriage and sleigh heater. These heaters if heated with Lehman coal do not generate any smoke or smell. At present they can be obtained only from Carriage Harness and Hardware dealers, but in view of the relations existing between druggist and physician it would make a good specialty for the druggist to carry in stock, or at least take orders for. Every person who uses a carriage can see the value of the Lehman heater. For prices and catalogue, address: Lehman Bros., No. 10 Bond street, New York.

### Antiphlogistine.

One of the newer remedies which is having a large and increased sale is Antiphlogistine. An announcement regarding this preparation appears in the advertising pages of this issue. Antiphlogistine is stated to afford the most effective treatment for pneumonia, pleurisy, inflamed glands, sprains, bruises, boils, erysipelas, felons, etc., and for all cases where inflammation or congestion is present and a local medicine is indicated. This preparation is advertised extensively in the medical journals, and is constantly becoming a more popular prescription with physicians in all parts of the country. Druggists should have it in stock. Whoever wishes to get thoroughly posted regarding Antiphlogistine should write to The Denver Chemical Mfg. Co., 451 Washington street, New York. Mention the Era.

### The Alpha Continuous Flow Syringe.

In this issue appears an advertisement of a syringe which has been sold for many years in all parts of the country. The Alpha Continuous Flow Syringe is claimed to have given better satisfaction than any similar article on the market. In fact, the complete line of Alpha and Omega syringes is well known by the trade and is a popular seller in the majority of drug stores. Every one of these syringes is fully guaranteed by the manufacturers. They sell to the retailer at from \$3.75 to \$17.50 per dozen and pay a very liberal profit. If you wish to receive free a splendid new catalogue of photographs, write to Parker, Stearns & Sutton, New York. Mention the Era.

### \$6.00 Free.

It is not often that druggists have an offer of staple goods such as Pozzoni's Complexion Powder free. Such offers are usually confined to newer preparations just being introduced. But the dozen 50c. Pozzoni Powder which the manufacturer gives free is just like so much cash. The offer on page 8 is well worth referring to.

Four-Fold Liniment has many years of steady sale behind it. It is not a new preparation, but a staple in many localities.

# PATENTS, TRADE MARKS, ETC.

**PATENTS.**

Issued November 26, 1901.

- 687,194.—Robert Bustin, St. Johns, Canada, and Evelyn F. Myers, Boston, Mass.; said Bustin assignor to said Myers. Bottle stopper device for preventing refilling in bottles.

# MARKET REPORT.

## INDEX TO THIS NUMBER.

Page.

### FEW CHANGES AND FAIRLY STEADY MARKET.

New York, Dec. 3.—Mail orders continue to absorb a liberal amount of stock and the market retains a moderately active appearance, with the undertone fairly steady, but during the period under review, very few changes in prices have been reported.

**OPIMUM.**—There is no improvement in the condition of the market and nothing of an encouraging character in advices from primary sources of supply. No further change in prices is reported, but jobbing quotations are barely steady at \$3.20@3.40 for 9 per cent and \$3.30@3.50 for 11 per cent. The ruling figures for powdered are \$4.25@4.50 for 12 per cent and \$4.75@5.00 for 16 per cent and \$4.50@4.75 for greater.

**MORPHINE.**—Continued firmness has prevailed throughout the market and the jobbing movement is satisfactory. The quoted prices are \$2.40@2.50 for eighths in 1-oz boxes, \$2.35@2.45 in 2½-oz boxes, \$2.15@2.25 in ounce vials and \$2.10@2.20 in 5-oz cans, according to brand.

**QUININE.**—There is a good steady demand from consumers and indications are considered favorable to further improvement, but quotations remain unchanged at 27¢ for bulk in 16-oz tins, 27½¢ in 50-oz tins, 28¢ in 25-oz tins and 34¢ in ounces.

**PULSATILLA HERB.**—Jobbers have revised their quotations and are willing to sell at 25@35¢ as to quantity, but values are fairly firm at the decline.

**LITHIUM CARBONATE.**—Owing to continued keen competition among manufacturers, the market is again weaker and jobbing quotations show a further decline to \$2.50@3.20 per lb. and 25@30¢ per oz.

**LOBELIA HERB.**—Supplies are more abundant and jobbers have reduced quotations to 23¢@27¢ for whole and 28@33¢ for powdered.

**LARKSPUR SEED.**—Values continue easy at the recent decline to 90¢@\$1.00 for whole and \$1.00@1.10 for powdered and in some quarters a further reduction is expected.

**CALOMEL.**—There is no change in domestic, but owing to strong competition among importers, prices of English have declined and the revised jobbing range is \$1.15 @1.30 as the size of order.

**MENFOL.**—Available supplies are decidedly small and in consequence the market is very much firmer with an advance in jobbing quotations to \$3.00@5.25 per lb. and 37@42¢ per oz. Dealers report a good consuming demand.

**ASA-FETIDA.**—Round lots are somewhat easier but jobbing quotations remain unchanged at 53@40¢ for prime grades, 39@35¢ for medium and 25@30¢ for ordinary.

**COCA LEAVES.**—Primary markets continue firm on account of scarcity, but owing to competition among local dealers the spot market is unsettled and easier with quotations for the Truxillo variety showing a decline to 20@27¢ for whole, 12@16¢ for ground and 48@68¢ for powdered.

**TONKA BEANS.**—Pans are scarce, the available spot supply being almost exhausted, and jobbers have advanced their quotation to 20@20¢ as to grade and quantity.

**ELDER ROOT.**—Supplies of the dwarf variety are more abundant and jobbers have reduced their range of prices to 28@35¢ as to quantity.

**TIN FOIL.**—Owing to the enhanced cost of raw material jobbing quotations have been advanced to 20@25¢ for heavy and 26@30¢ for light.

### Vaporettes, New Bath Tablet.

Mr. John P. Bender manufactures perfumed tablets of all kinds and has built up quite a large business in this line. He claims that until recently there has not been a satisfactory bath tablet on the market. Recognizing the popular demand for such an article, Mr. Bender began experimenting some time ago and applied his knowledge to the matter in such a way that it resulted in the new bath tablet, Vaporettes. By the use of these tablets the bath becomes truly a delightful luxury. Vaporettes retail at 25 cents for a box of eight, thus furnishing to the customer the means of a delicately perfumed bath for only three cents. The price to the retailer is \$2.00 per dozen boxes. Druggists who have already placed these goods in stock have found that they command a ready sale. Those who have not done so should order a trial dozen, or if they prefer first to obtain samples, write to John P. Bender, 206 Centre street, New York.

—The Wayne County Branch of the N. A. R. D. was organized at Lyons, N. Y., Nov. 19 by E. C. Bottume. The officers elected were John Wiser, Newark, president; H. M. Winslow, Marlon, vice-president; G. T. Getman, Lyons, secretary, and C. A. Moore, Lyons, treasurer. The association fixed 90 cents as the lowest price for dollar articles. Full prices will be asked for all proprietaries listed below one dollar.

### A Sanitary Soda Fountain.

To sell their soda fountain to every downtown druggist in Chicago who bought any soda fountain at all last year, is the season's record for L. A. Becker Co., 98 Franklin street, Chicago. The 20th Century Sanitary Fountain they claim to be the only fountain built on perfect hygienic principles, in fact, the only fountain that is complete, durable and beautiful and that meets, at prices within the reach of the average buyer, the demands of up-to-date people. The Becker fountain is certainly handsome and an ornament to any store, and their system of dispensing from bottles in plain view of the customer and so placed as to avoid entirely all danger from bacteria, is certainly to be commended, and if we mistake not, has had the substantial approval of the trade at large, or at least that part of it to whose attention this fountain has been brought. Mr. Becker's advertisement in this issue is not only handsome, but will interest every prospective buyer of a soda fountain.

### COMMENT.

The people of Massachusetts seem to be having a bad time with their liquor laws. Difficulties caused by transgressions or conflicting interpretations of these laws as applied to druggists, are of almost weekly occurrence in that commonwealth. The regulations for the sale of intoxicating liquors seem to be unusually troublesome and complicated. Licenses issued to pharmacists belong to a sixth class, which shows that the number of varieties of liquor dealers must be large. The granting of licenses is also hedged about by all sorts of difficulties and complications. Some druggists have trouble in getting these documents, while others, who have them, are liable to have their stores raided by the police at any time.

The citizens of the old Bay State are expected to have decided opinions about things and to uphold strenuously whatever they consider to be right, but it is somewhat curious that they find so much difficulty in finding out what they want to do about the sale of spirits in drug stores. As long as pharmacists are expected to keep alcoholic liquors in stock there should be some simple rule about how they are to do it without exposing themselves to the danger of being hauled into the criminal courts, a danger which is demoralizing to the druggist and community alike. If certain towns prefer to have drug stores in which no spirits are kept, it would seem best to let them have these curious establishments even though they may not be good for them.

Consolidation and co-operation are in the air these days. Rumors of combinations and schemes for forming vast consolidations are favorite topics of conversation in drug circles. Many of these rumors are about combinations of a number of retail drug stores under one management chiefly as a means of getting the better of the jobber and the cutter. We seem to be living in an age of co-operation. Competition, which was formerly thought to be the soul of trade, is now admitted to be somewhat of a mixed blessing.

Some time ago there appeared in the Era an article upon a new economic order in pharmacy, which was read before the American Pharmaceutical Association at St. Louis, and which raised the wind in the way of discussion considerably. This article predicted that there would be combination after combination in the drug business, the final result being too startling for contemplation at present. The author of the article was called visionary, socialist, dreamer of dreams, and other disagreeable names by prominent members of the profession. Yet it is becoming more and more apparent that he was not such a bad prophet after all.

A number of companies controlling numerous retail stores have recently been formed in different parts of the country. In New York several combinations have been effected, in some cases for the purpose of supplying pharmacies with goods under more favorable conditions than could otherwise be obtained. In Detroit and Pittsburg there are combinations of retail stores, and, according to all accounts, they are growing, and flourishing generally. In one town on the Pacific coast a combination has been formed which includes every drug store in the place. In the meantime, the jobbers and others liable to suffer by this movement show no signs of alarm.

There is one class of persons who are intensely interested in all this combination. These are the socialists, who believe that all power of controlling property and industry should be centralized in the government of the country. Although it is somewhat early for these enthusiasts to begin to think of directing affairs, it is only natural that they should wish to have well formulated plans ready when the occasion for them arises.

A subscriber sends us the following inquiry:  
"How would the drug trade be conducted under socialism, according to the best students of social

economy? We are passing out of the competitive into the co-operative system.

No one in the Era office seems to feel competent to answer this interesting question. While it may be true that the age of competition is passing away, it is also true that most people are still busy adapting themselves to conditions which are essentially competitive. Many would doubtless like to help solve the problems of the alluring future, which the socialists tell us is at hand, who cannot remove their noses from the grindstone long enough to try. For the present we are obliged to give it up.

\* \* \*

Many persons are still wondering whether pharmacy is a profession or a business. This question was the subject of a debate recently held in England, in the course of which some interesting remarks were made. One speaker gave it as his opinion that any one engaged in a profession does not sell goods, but deals in abstract ideas, the inference being that since few druggists find much sale for ideas not enclosed in bottles, their calling is not a profession. Another speaker was unable to see anything unprofessional in selling soap and tooth brushes. Another considered commercialism in pharmacy a good thing, and thought it should be encouraged. All agreed that very few druggists could expect to make a living by the practice of pharmaceutical science alone, and it was decided that pharmacy was chiefly a commercial pursuit.

\* \* \*

The difference between the Teutonic and American ways of looking at things is illustrated in a circular which reached this office in the wrapper of a German pharmaceutical journal. Upon the first page if this circular appears, in by no means modest type, this sentence: "Please read this through." There is no means of finding out how effective this simple method of getting people to read advertising matter is in Germany, but it is pretty safe to say that in the United States it would not work at all. When an American advertiser is especially desirous that the other side of a leaf shall be read, he prints at the bottom, "Do not turn over" resting assured that the contrariness of the reader will not only prompt him to turn over the sheet, but also to read everything printed on the other side.

\* \* \*

It is a national trait of Americans to insist upon thinking for themselves. This is one reason why advertising is so exceedingly complicated and interesting in this country. The advertising pages of our magazines would not be more attractive than those devoted to reading matter if the American reader were less obstinate and skittish. It has been suggested, with some show of plausibility, that the reason why the Bible is now less eagerly perused than some of the popular novels is because people are so continually advised to read it.

\* \* \*

A New York man recently originated a scheme for dealing with burglars, which is not without its advantages. His plan consists in pulling a string attached to a proper part of the family telephone whenever an unusual noise disturbs his slumbers. By this means 'central' is to be notified that something is wrong;

this information will then be transmitted to the police authorities, who will attend to the matter, while the victim of the burglary resumes his nap. It may be doubted whether this plan will ever prove as effective as the method recently put into successful operation by a Princeton druggist. This pharmacist, when he heard some one ransacking his house at night, called to his aid a body of theological students, who surrounded his house and with the aid of a variety of weapons succeeded in causing the arrest of the burglar. The fact that the prisoner afterward broke jail and escaped does not detract from the merits of this plan. The only objection to a general adoption of the method seems to lie in the fact that theologians are usually scarce when burglars are around,

The Pennsylvania State Pharmaceutical Board is at present carrying on an active campaign against violators of the pharmacy laws. An agent of the board is visiting the stores of the state, and making it very uncomfortable for negligent druggists, whether they mean well or not. The pharmacists of Pennsylvania will do well to read carefully the warning which appears in our Philadelphia news letter. Pharmacy laws, although primarily intended as a protection for the public, are also of vital importance to the druggist. Few pharmacists will therefore object to the strict enforcement in which the board is now engaged. Many are, however, apt to forget that the details of the law apply to themselves as well as to others, and feeling innocent of any but the best intentions are likely to neglect some minor regulation which appears to them too trivial to require consideration. These well meaning transgressors may spare themselves much trouble and chagrin by subjecting their establishments to a careful inspection before the representative of the board arrives. The law does not recognize good intentions, but requires a strict compliance with every detail.

\* \* \*

A reader of the Era has written us asking about "red albumen," a preparation put upon the market by the U. S. Salyx Co., of New Concord, Ohio. This substance is advertised as a hen food, and is claimed to supply the fowl with material for the production of eggs in winter, causing them to lay quite as industriously as in summer. While no definite information has as yet been received concerning the nature of this preparation, the fact that it is offered for sale by a firm which has repeatedly been exposed as promoters of fraudulent schemes, prompts us to regard it with suspicion. It has been reported to be made up principally of cayenne pepper, but in the absence of an authoritative analysis, we cannot vouch for the accuracy of this statement. The Era has in past years exposed a number of "fake" preparations exploited by the U. S. Salyx Co.,—"per algretta," "black pepsin" and "hypersamphire." According to all indications, "red albumen" may safely be classed with its predecessors.

PIKTOLIN, a mixture of liquid carbon dioxide and sulphur dioxide, is recommended by the authorities of Berlin (Drog. Zeit.) for destroying mice, rats and other vermin. It is said that this mixture may be used with entire safety without danger of fire or harm to occupants of buildings.

## ERA COURSE IN PHARMACY.

List of Graduates for November, 1901.

| Matriculation No.                                                           | Grade. |
|-----------------------------------------------------------------------------|--------|
| 2388 Frank Carmine Carbone, 739 South Seventh street, Philadelphia, Pa..... | 85     |
| 2754 William H. Coy, 156 Main street, Milford, Mass.....                    | 98     |
| 2579 Harry A. Hood, Chicago Heights, Illinois.....                          | 90     |
| 2836 William S. Denton, Taylorsville, Ill.....                              | 85     |
| 2824 E. M. Hollingsworth, Uvalde, Tex.....                                  | 98     |
| 2632 Mrs. W. A. McClanahan, Redding, Iowa.....                              | 95     |
| 2396 S. M. Hoon, East Palestine, Ohio.....                                  | 90     |
| 3036 Worthy Roscoe Wiles, Nardin, Okla.....                                 | 88     |
| 2647 Thomas Gessner, 426 State street, Chicago, Ill..                       | 80     |

The above graduates will receive diplomas within a short time. A large and very handsome engraved diploma, printed on artificial parchment, with the graduates name engrossed, especially suited for framing, will be furnished to all who request it for the sum of \$2. Those who desire the latter should forward the necessary fee at once, to The Pharmaceutical Era.

## DRUG STORE FABLES.

By "CYNICUS."

In the Dark Days before the Registered Pharmacist ever knew a Holiday, and wot 'e'n not of Plans, when the Dear Public paid one Dollar a Bottle and the Average Daily Sales paid Rent and Taxes, four Meek and Humble Apothecaries divided the Trade of a certain Town. One of the four was an Enterprising Merchant and had a white-garbed Soda Jerker, the other three were just Plain Druggists who filled Prescriptions, when they got any, with everybody's Preparations but their own. One day the E. M. discovered the Fact that the Others were making Money also, so he thought out a Scheme to gather unto Himself the Trade of the Town. He hired a full Page of the Daily Clarion and filled it with a List of Prices for Proprietary Articles that were just Ten per cent. above Cost, saying unto Himself that by this Generosity he would wax Rich selling Things that people thought they Wanted. And so it was—for about three Days. For when the three Meek and Humble recovered from the Shock they went and did Likewise, and then things began to Hum and the editor of the Daily Clarion bought his Wife a Montana Diamond Sunburst, and passed Resolutions congratulating himself while it lasted.

Having announced himself to be the only Business Pharmacist in the Town, the E. M. saw the Ante and Hit her up a Peg or so, on which the three M. and H. did likewise again. And so it went on until All were selling Patents at Cost. Not to be outdone at his own Game, the E. M. advertised Prescriptions also at half Price, whereupon the three replied by giving away a Postage Stamp with each Cigar, and Business became very Lively, but Nobody had yet Retired, and spent his Time founding Libraries, because it took all the Cash to hire Clerks to sell Things at Cost. Then did the Three announce to the World that the Drug Business had gone to the Dogs, and that Nobody could make Money any More, and each One was about to become a Pessimist when some One in Chicago found a Plan. A high-salaried Expert called at the Town and Organized the three Meek and Humble into an Association and did several Stunts of Missionary Work—at \$5 per Stunt—and convinced them of the Power of the Retail Druggist, and they became Affiliated.

Having formed themselves into an Association, the three M. and H. unanimously decided that the Enterprising Merchant was an Aggressive Cutter because he Advertised, and being Seventy-five per cent. of the Retail Druggists of their town their Decision went. Then did they notify the Jobbers that they must not sell Goods to the wicked Cutter, to which these Honest merchants gave Assent and they decided upon a Price List one Cent higher than the Cutter's. But meanwhile the Cutter had invested his Cash in the Right Place and got Full Supplies of all the Goods

he wanted. Whereupon the Association waxed Wrath and Talked about making Horrible Examples of the Traitors and Punished them by continuing to Buy from them on Credit, and Things looked Bad for the three. Then did a Moses arise in the Far East to lead the Righteous out of the Wilderness, and a Plan was devised by him that Protected everybody but the Public, who had to take the Medicine. According to It the Association of the Meek and Humble demanded of the Proprietors that they sell their goods on Contract only, whereby the Purchaser must agree to sell them for Full Price only or else pay Damages and not get any More. And the Proprietors did in time adopt this Plan, and it was called The Salvation-Of-The-Retail-Druggist. And now the Three took Turns doing Stunts, watching the Cutter's store to see how long he would stay in the Business, and spent Money buying goods at Cut Prices to get Evidence for Law suits, during which time the Sheriff sold out the President of the Association for a Debt of fifty Dollars owed the Party called the Jobber, who now has Nothing to do with the Story except that he got most of the Cash the Three took In.

Just about the time when the Association had almost Busted up, as the Members were not making enough money to pay their Dues, a Young Man bought the Drug Store of the Meek and Humble who had Failed, and started in to make a Living for himself and his Family. Finding that there was not enough Profit on Postage Stamps and Cut Prices to do this, he made himself into a Committee of the Whole and spent Four Days convincing the other Two what Blamed Fools they had been, to which they were forced to Agree, because it was the First Thing every Member of the Association agreed in Believing was the Case with the Other Fellows. Then he went back to his Store and told his Clerk to charge Full prices for Everything, and when he had Revived the Clerk from his Faint they put a Sign in the Window saying that Stamps only would be sold at Cost. Later on the other Two got into the Game, and ceased to Cut, not having much Left by this Time to do It with.

Then did the Cutter Embrace himself and laugh a loud Ha! Ha! and say that he had Got them where he Wanted. And he had to Hire three more Clerks, for he was doing all the Patent Medicine business of the Town, and the Jobbers fell over Themselves to sell him Cut Off goods. But Lo! the Three were also doing Some Business, for when a Customer asked for a Bottle of Sarsaparilla he had to pay Full Price for It if he wanted It that Bad. And all the Prescription Trade now came their Way because they could Afford to keep all the New Remedies as fast as they were Changed by the Doctors, not having their Cash invested in Cut Price Goods, which they sent a Boy to get at Cost from the Cutter when they made a Sale. Or else the Customer went there Himself and saved them the Price of a Boy.

By and by the Cutter found that he had all the Patent Medicine Trade of the Town and that the Proprietors had all the Money, which he, being a Bright Business Man, collected for them because they furnished him free Almanacs. Learning from his Wife that the Wives of the Three were wearing New Spring Hats he now discovered that the despised Meek and Humble were probably getting Rich, so he then brought Suit against them for being a Trust and depriving him of the Right to be the Only Pebble on the Beach. After issuing six Injunctions against the Association to let the Three know that the Court knew its Business, it decided that the Cutter could Buy all the Goods he could Pay For, which the Jobbers had decided some time Before, and that the Association had no Right to call him Names, which was a Victory for the Cutter. But by this time he had no more Money, having divided what he Had between the Lawyers and the Proprietors, and so the Jobbers refused of their own Free Will to sell him Goods on Credit and returned his Orders for Cut-

Off articles—because there was no Cash with the Order—which was widely published as a proof of the Integrity of the Jobber. This last Straw broke the Camel's Back, and the Cutter announced that he would Be Good, and Agree to the Price List of the Association, but it was too late, as he did not have Enough Cash left to pay Dues, as above mentioned. So he went out of Business, and the Young Man bought his Store at a Cut Price, and hired him for Second Clerk, The white-winged Dove of Peace having settled down over the Town the three Meek and Humble, now enterprising Retail Druggists, divided up the Trade among Themselves and went Fishing every Sunday.

## HOW MUCH IS MADE BY DISCOUNTING INVOICES?

By J. T. PEPPER, Woodstock, Ont.

There are many ways of making money in the retail drug business. One way is to cut down expenses, another is to do more business. But the way that I want to discuss in this paper is that of making money by taking all the discounts you can get on the goods you buy. It is possible and practicable to make money by discounting invoices. It is good business, as well. It will help you to be a better business man, and will make you a sharper, shrewder buyer.

In a conversation with a wholesale druggist a few days ago, I was surprised to hear him state that many retail druggists, and some of good financial standing, too, do not avail themselves of the discounts offered them by the wholesale druggists. This article is written with the hope that it may set some retail druggists to thinking and put them in the way of making money by taking advantage of their discounts.

In Canada, the terms generally offered by the wholesale drug trade are 5 per cent. thirty days, or four months net. For some lines of goods that druggists sell, 3 per cent. thirty days, or sixty days net are offered, and for other lines, 2 per cent. ten days, or sixty days net.

It is easy to figure out what is made by taking your discounts. If a druggist buys in one month \$100 worth of drugs and patent medicines, and pays cash for them in thirty days, he makes a discount of \$5; that is, \$95 will pay for \$100 worth of drugs if paid within thirty days. If he does not pay in thirty days, but lets the account run for four months, he then has to pay the full amount, or \$100. I think that druggist loses just \$5.

Purchases of drugs and patent medicines not amounting to more than \$100 per month would indicate only a small drug business, smaller, in fact, than the amount of sales in most drug stores usually is. In a business where \$200 worth of drugs are purchased monthly, the discount would be \$10; \$500, the discount would be \$25, etc. If you multiply these amounts by twelve, it will tell you how much is made in one year by discounting your invoices. These discounts are easily made.

It is a mistaken idea to think that a druggist must have lots of money in order to make his discounts. When I first went into business I took my discount on my first invoice, and have kept up the habit ever since. It was not because I had more money than I wanted, for my drug store was not all paid up at the beginning, but I could see that I made big interest on the investment by paying my invoices in thirty days and getting the benefit of the discounts.

If a druggist owes for an invoice of drugs amounting to \$100, and has the money to pay for it in thirty days, but decides to let it run four months, paying the full amount of the invoice, he loses just \$5, the discount allowed being 5 per cent. if paid in thirty days. The difference in time is only ninety days, and he could not employ the money in any way that I know of to make \$5 so surely and so easily.

Some years ago a neighboring druggist and I bought a large quantity of a certain patent medicine,

which was having a large sale at that time; we did this because we obtained a better price; that is, a lower price than we could have obtained from the jobber, and the part of the terms was a discount of 5 per cent. thirty days, or four months net. The other druggist, much older than I am, and who also had a good deal more of this world's goods, most of it made in the drug business, was not a believer in taking advantage of discounts, but always took all the time that he could get. When we purchased these large quantities of patent medicine (he did the buying) he gave me half, and I paid him, in thirty days deducting my discount of 5 per cent., while he did not pay for the goods until the four months had expired. He lost the discount on his share, and also on mine, which he allowed me, by agreement, when I paid him at the end of thirty days. He stoutly maintained that his way was better, because, as he said, he usually had the goods all sold and had the money for them before he had to pay for them; but I never could see it that way.

Taking discounts is making big interest on your money. I think every druggist could do it. It might mean closer attention to business more calculation in buying and it would lessen the evil of buying too much. A druggist will soon buy so much if he intends to pay in thirty days as he might be tempted to buy if he were not going to pay until one hundred and twenty days had passed. It will make the druggist a shrewder and a keener buyer. It will make him more prompt in paying, and will increase his profits by leaving more dollars in his pocket.

### THE COLOR OF IODINE SOLUTIONS

varies, according to W. Vaubel (Journ. prakt. Chem.), with the nature of the solvents. Solutions of iodine in some solvents exhibit a violet color, in others a yellow or brown color is produced. Iodine itself when in gaseous form transmits only red and blue light, so that the color of this substance must be considered as being properly violet. Spectroscopic studies of the gas and violet solutions show the absorption bands to be identical. The effects produced by the yellow and brown solutions are, however, very different, yellow, green and red lines appearing instead of the red and blue. With increase of density of the color of brown solutions the yellow and green lines gradually disappear, leaving the red alone. The author concludes that in violet solutions the iodine molecule is free to vibrate as it does in the gaseous state, while in yellow and brown solutions the vibrations are modified by the nature of the solvent. The solvents producing yellow and brown solutions with iodine mostly belong to a class of substances containing oxygen and nitrogen, while those forming violet solutions include carbon bisulphide, the hydrocarbons and all halogen compounds.

### DETECTION OF ACETIC ACID IN URINE.

—The following method for the detection of acetic acid in urine is recommended by S. Lipliawski (Deutsch. med. Wochens.). Two solutions are prepared, the first a one per cent. solution of paramido-acetophenone, to which has been added 2 Cc. of strong hydrochloric acid to increase its solubility; and the second a one-per-cent. solution of potassium nitrate. Six Cc. of the first of these solutions is mixed with 3 Cc. of the second, and the mixture added to an equal volume of the urine which is to be tested. After adding a drop of ammonia, the mixture is shaken vigorously. From 10 drops to 2 Cc. of this mixture is then treated with 15 or 20 Cc. of concentrated hydrochloric acid, 3 Cc. of chloroform and 2 to 4 drops of chloride of iron. The test glass is well shaken so as to partially emulsify the chloroform. If the urine contains traces of acetic acid the chloroform is colored a characteristic violet, if no acetic acid is present the coloration is yellow or faintly reddish.

(Special Correspondence.)

**BERTHELOT'S JUBILEE.**

France's President, Professors and People Officially Honor the Great Chemist.

Paris, Nov. 25, 1901.

Fifty years ago, the son of a Parisian doctor entered upon his duties as preparator in the laboratory of Balard, at the College of France. Balard was himself of humble origin, and had worked his way up from drug clerk to professor of chemistry. But though he took a kindly interest in his new preparator, he probably little suspected the scene which would take place, half a century later, within a stone's throw of the laboratory in question.

The vast public hall of the New Sorbonne (Paris Faculty of Sciences) was specially built for great public functions, but (except, perhaps, at the Pasteur fêtes, nine years ago), it has seldom witnessed a more interesting or noteworthy spectacle than last Sunday morning.

Outside the street was gay with the fluttering pennons of the lances of the President's cavalry escort and crowded with loungers attracted by the gay uniforms and academical robes of the officials who had just arrived. Inside, the amphitheater was crowded, and the audience was enthusiastic. On the platform, the President of the Republic was supported by the Prime Minister of France, the Ministers of Foreign Affairs, of Justice, of Public Instructions, and the Presidents of the two houses of Parliament. Deputations from French universities and learned societies, foreign delegates and officials, military uniforms and Winter toilettes, all clustered around a little, gray-haired, but alert, figure, M. Marcelin Berthelot, Balard's ancient preparator, now Grand Officer of the Legion of Honor, Perpetual Secretary of the Academy of Sciences, Honorary Professor of the Paris School of Pharmacy, Member of the French Academy, of the Royal Society of London, of the Academies of St. Petersburg, Munich, Stockholm, Boston, etc.

It was his scientific jubilee, and, as M. Leygues

M. BERTHELOT,  
Professor at the Paris School of Pharmacy, 1859-1876.

(Minister of Public Instructions) said, in his opening speech, "France surrounds with passionate worship those who honor her and consider their glory as public wealth." In the same, somewhat high-flown, oratory, he compared Berthelot's work of synthesis to Lavoisier's work of analysis; he insisted on the

Autograph letter of M. Berthelot, addressed to the Paris correspondent of the Era two years ago (concerning the American subscribers to the erection of the Lavoisier statue at Paris).

BERTHELOT

In the Laboratory at the College de France.

disinterested character of the savant,\* on his patriotism in time of war and danger, his social, political and philosophical virtues.

M. Darboux, of the French Academy of Sciences, gave a short but well worded discourse on Berthelot's work. A larger and fuller development of the subject was given by M. Moissan, who, like Berthelot himself, is ex-Professor at the Paris School of Pharmacy.

We regret that our space forbids even a succinct reproduction of this most interesting review of a most remarkable career. Beginning with Berthelot's first contribution to scientific literature (Note on the Liquefaction of Gases, May 27, 1850), M. Moissan continued with facts and dates, study of turpentine (1852), combination of glycerine with acids (1853), syntheses of ethylic alcohol, formic acid, carbide of hydrogen, methylic alcohol, oxalic acid, glycerine, camphor and acetylene.

He then alluded to the great chemist's studies in thermochemistry and explosives, and, finally, to his interesting researches as to the fixation of nitrogen by the soil, and its influence on vegetable life. Passing to what one may term the savant's "leisure" hours, he slightly sketched Berthelot's remarkable history of the "Origin and Development of Alchemy," referred to his quiet home life of persistent study, and to the enormous range of subjects in which (in this age of specialization) Berthelot has excelled.

This was, perhaps, the most remarkable of the dozen speeches. There was a long series of addresses from various foreign scientific bodies. In fact, to give an idea of the international character of the celebration we need only mention the German address of M. Fischer, of Berlin, an Italian address from the Turin Academy (M. Berthelot, we believe, speaks this language fluently), the English address of the Royal Society, the King of the Belgians' personal telegram of congratulation, the Queen of Spain's bestowal of an order of Knighthood (also by wire), the Austrian address of M. Lieben, etc. These countries and many others were represented on the Committee of Organization of the Jubilee, the United States delegate being Prof. Chandler, of New York. All the countries of Europe, Egypt, Mexico, etc., had also taken part in this truly international fête of science.

M. Berthelot's reply was simple and eloquent. Addressing himself (after the President and Minis-

ter) to "My dear colleagues and friends, and you, young people, my pupils and my friends," he expressed how little an individual was capable of personally, how much could be done by united and continuous effort. "If each of us can add something to the common domain of science, art, or morals, it is because generations have lived, worked, thought and suffered before us. It is the patient labors of our predecessors which have created this Science you honor to-day." He insisted on the fact that science benefited humanity as a whole, and not a particular class, and urged each to do his best to better the common lot of his fellow creatures. He concluded with the remark that this had been the ideal and the end, however incompletely achieved, of his own existence.

At the conclusion of his speech, the scene was a remarkable one—the thousands of spectators standing up to cheer the veteran chemist, to whom M. Loubet presented the medal or plaquette designed by Chaplain, afterwards cordially embracing the savant. This terminated the proceedings, which were throughout of the most successful and enthusiastic nature and entirely worthy of the occasion.

The "Plaquette" by Chaplain, presented to M. Berthelot Nov. 24, 1901.

**SULPHUR TRIOXIDE** may, according to K. Schenk (Liebig's Ann. Chem.), be obtained in two distinct solid forms. The kind known to commerce is the crystalline form resembling asbestos. The other form has been prepared by the author by cooling freshly distilled sulphur trioxide with ice water. By this means, large, shining, transparent prismatic crystals of the oxide are obtained. This form melts below ordinary temperatures, while the common asbestos-like form has no well defined melting point, passing, when heated directly, from the solid to the gaseous state. The differences between the various forms of this substance are supposed to be due to different stages of aggregation in the molecule.

**METHOD OF PRESERVING MEATS.**—A patent has recently been issued in Sweden for a new method of preserving meat. The material is first heated to 106°C., freed from bones and cartilage, and again heated. It is then placed in containers of metal and glass or earthen ware, placed in a refrigerating apparatus and frozen solid. The receptacle is then sealed, and later allowed to acquire the ordinary temperature of the air.

**SKIN CREAM.**—The December issue of Therapeutic Progress gives the following formula in which lanolin is employed and which is claimed to produce an excellent preparation:

|                           |           |
|---------------------------|-----------|
| Boric acid .....          | 3 grains. |
| Tincture of benzoin ..... | 4 drams.  |
| Glycerin .....            | 6 drams.  |
| Rose water .....          | 6 drams.  |
| Oil of rose .....         | 2 minims. |
| Lanolin .....             | 12 drams. |
| Mix.                      |           |

**LYSULFOL.**—Dr. E. Rumpf (Ther. Mnth.) has prepared a compound of lysol and sulphur which is entirely soluble in water. The compound, containing 10 per cent. of sulphur, forms a black semi-solid mass. This substance is employed as a surface application in various affections of the skin.

\*The "Figaro" compares Berthelot's modest Government salaries, some \$5,000 per annum in all, with the income of foreign savants.

## SHOP TALK.

It is a well known fact among druggists—and among the public too—that some doctors "stand in" with druggists and receive a percentage on the prescriptions they send to them, but a downtown druggist tells a story that gives a certain Philadelphia doctor a pretty bad recommendation. One of his best customers who had recently moved uptown came into his store one day with a prescription she wanted filled, saying that she came all the way downtown to him because she did not like the way an uptown druggist the doctor told her to go to for it did business. After a long struggle our druggist was forced to give up hope of being able to decipher the prescription handed him, and said to the customer, "Mrs. B., did the doctor tell you to go to the store you mentioned particularly or did he just mention it casually?" Oh no," was the reply. "he said I must go to Blank's because he was the only druggist that could fill his prescriptions right." This remark was just what was expected, so Mr. J. asked his customer to call back in an hour or so and he would try to find out what the doctor wanted, to which she agreed, knowing him well. Calling up the doctor on the phone, Mr. J. told him that he had his prescription for Mrs. B. and requested to be informed as to the meaning of the mysterious characters it was written in. At first the doctor blustered and said that if he could not fill it let the woman go to Blank's store, where they knew enough to read a simple prescription, etc., but our friend was firm and called the bluff by a threat to lay the matter before the County Medical Association, whereupon the doctor came down from his high horse and condescended to explain that he had used abbreviations to keep the patient from reading the prescription. He then named the ingredients, all of which the druggist took in with a smile. Mrs. B. got her prescription when she called back, but the doctor and the uptown druggist both lost a good customer and many friends of the lady also.

\* \* \*

A curious fact in connection with thermometers was told the Era man a few days ago by a Philadelphia dealer in surgical and chemical instruments, etc., and it seems worthy of relation because of its interest to druggists. This dealer said that he was often bothered by the unaccountable "craziness" of thermometers, even if the highest priced ones, these registering all the way from zero to the top of the tube without any apparent cause, and at one time he used to throw such away in disgust. Now, when he finds a thermometer off on a tear he simply hangs it up perpendicularly on a velvet-faced card and keeps it in a dark place where the temperature is nearly even for a few weeks or months, as may be required. This rest, as he calls it, he claims will bring the craziest thermometer back to working shape again and it seldom has to be repeated. The cheap clinical thermometers sold in the department stores, were denounced as being absolutely dangerous; they often failed to record a high fever when present and thus were the cause of false diagnoses. The dealer declared that every doctor and druggist ought to warn people against them. He recommended that druggists keep and advertise a line of good clinical thermometers, but said that each one should be tested before it is sold, no matter how costly it may be. To test a thermometer takes but little time. The best way is to immerse it in water at 90 degrees with a known standard thermometer and then raise the temperature to 110 degrees, noting the reading of the tested instrument at each degree. Testing thermometers by the clerk placing one in his mouth, while easy, did not always please the waiting customer.

\* \* \*

Most people value "something for nothing" far more than they do a thing they have to pay or work for, and the giving of some little trifle free with a

purchase has often proven to be a very good form of advertising. Therefore, druggists would do well to bear in mind a suggestion made by a prominent Philadelphia druggist lately, i. e.: that druggists would find it a paying practice to give a medicine class free with each prescription they fill. The idea is also a good one in other ways. Every druggist knows the great variance in tea and table spoons, and if they would stop to think they would see that there is often positive danger to the patient from a dose of medicine measured in an unusually large spoon, and, again, the doctor often tells the patient that there are so many doses in his prescription and if he finds the bottle to measure less he will think a mistake has been made by the druggist. A good plan would be to give a customer a medicine glass on which the name and address of the druggist is marked, saying, as he does so, that he is giving him the glass to insure accuracy in the dose of the medicine he is to take, remarking on the great difference in the amounts spoons hold. It would be a very heedless customer who would not think at once that this druggist is a mighty careful man and the one he could trust with all his prescriptions. Then too, the doctors will soon learn of this bit of care on the druggist's part and would also come to the conclusion that he was both a careful and a trustworthy man. The glasses cost but a few cents; the advertising from each glass given away may be worth dollars.

\* \* \*

Kensington (Philadelphia) druggists are threatened with a loss of trade from an unusual source, and thereby hangs a tale. "Such a case of whooping cough I never saw as my little Willie has," said one Kensington dame to another lately, "and I can't seem to get anything from the drug store to cure him." "Just you get a catfish, a live one, and when Willie begins to cough hold it in front of his face so that he will have to cough in the fish's mouth—that will cure him right away." "Oh, you are joking," said the other. "Not a bit of it," replied number two, "I have tried it with my little Jimmie and I know it is all right." And they parted. Mother number one bought a live catfish after much trouble and made Willie cough into its open mouth, when, strange to say, the "whoop" vanished with the laughter of the child at the struggling fish and has not come back up to this time. The pleased mother spread the story of the wonderful cure around the neighborhood and now every Kensington mother who heard it goes on a scout after a live catfish just as soon as her offspring begins the dreaded cough. If it were not for the difficulty of getting live catfish on demand, druggists in that section would not sell much ipecac or cough medicine, so why should not they keep live catfish in an aquarium to supply the demand and get the coin?

\* \* \*

A lunch counter on a small scale is the latest side line introduced in the twentieth century drug store. According to a prominent manufacturer of the metropolis, who visits the retail drug trade in various parts of the country every year, several of the largest and best known pharmacies in Syracuse, N. Y., have recently added a number of things to the "bill of fare" at their soda counters. Some druggists have a printed menu for the convenience of customers. Along with the list of flavors and drinks at the soda fountain appear ice cream, cheese and ham sandwiches, furnished at five cents each and "pies of all kinds in season", for which the druggist receives five cents per cut. It is said that the idea has proved to be a profitable one for the druggist, as many customers, when they see the menu ask for a sandwich with their hot drinks. Our informant states that while in one of the stores where these delicacies are served, several ladies were eating ice-cream sandwiches and sipping hot chocolate. The druggists who have tried the plan say it is successful and that before long the majority of those who serve hot soda will also sell pies and sandwiches.

A novel window display was seen lately in the window of a drug store that draws its patronage from a suburban population near Philadelphia—a well laid golf green on which the players and caddies disported themselves before a back ground of clubs, bags and other accessories of this "royal game." The "green" was made from green flannel, the "holes" were tiny dolls' cups, the drivers and "brassies" were made from bits of wood and the players and caddies were neatly dressed dolls. This store handles golf goods as a side line with good profit, catering to the demands of its neighborhood, and its proprietor is an active member of the local golf club. He also takes a prominent part in all local athletic sports and keeps a full line of baseball, football, tennis, etc., goods. He makes his store the headquarters for the younger and sporting people, giving them the use of an upstairs room free to hold the meetings of the various clubs in, and always displays the results of any prominent event in the world of out-door sports in his window for the benefit of his neighbors. From a small beginning he has worked up a trade that pays him very well, the profit on "sporting goods" being large, and incidentally his "goodfellowship" brings him the cream of the most desirable trade around him.

\* \* \*

A scheme to interest visiting customers has been found to work very well in some drug stores. It is well known that one of the most trying experiences of the druggist is to keep his customers in good humor while waiting for prescriptions to be filled, many will fume and fret and work both themselves and the druggist into a state of nervous excitement. Why not provide a table in a quiet corner of the store with comfortable benches or chairs around it and keep on this table copies of the monthly and weekly magazines and periodicals? Many drug stores have daily newspapers for waiting customers, but almost everybody reads these at home or in the street cars, so they are not apt to prove interesting when seen in the drug store. Even the anxious customer waiting for the medicine for a loved one near death's door may find his mind relieved by glancing over a bookful of illustrations, while the ordinary waiter will be so immersed in his reading that he will hear with unwillingness the call to get his finished prescription. Of course, there might be some loss from theft of the magazines, but the same remark will apply to other things that must be exposed on showcases and counters.

\* \* \*

A good suggestion for those druggists who make it a point to solicit the trade of neighboring physicians is that they keep files of the principal medical papers on a convenient table in a back office, or, still better, if they have a department for performing analytical work and microscopical examinations, to put in a desk for the visiting physicians and keep this well supplied with medical journals, prescription blanks, memorandum pads, etc. Such a desk in a neat and scientifically kept laboratory will be very attractive to the average doctor, and many will get into the habit of dropping in to see the latest journal, to write a prescription or two for a patient just visited or to ask for an examination of urine or sputa. A comfortable chair is an indispensable part of the outfit, and a few of the best pharmaceutical journals, the Pharmacopoeia and a dispensary also would not be out of place. The idea is to make your office attractive to the doctors, not to loaf in, but to drop in to see you on business matters.

\* \* \*

Men no longer have the monopoly on the matter of "free lunch," several of Philadelphia's department stores now serving a "free lunch" with a five cent glass of soda water. For some time past it has been the custom in many drug stores too, to set out a plate of sweet biscuit or crackers with each glass of soda water, but now the competition has grown so keen that really elaborate lunches are being served. One

establishment set the pace by serving a dainty sandwich with a glass of soda, now another announces that on Wednesdays and Saturdays, "matinee days," each lady buying a glass of soda will be given her choice of a chicken croquette or a plate of lobster salad. Still a third advertises to serve a choice of chocolate eclaires, chicken and lobster salad, two fried oysters or lemon meringue daily with each ten cent drink and a sandwich in 15 styles or five kinds of cake with five cent soda. What will come next one hesitates to say, but so long as the competition is confined to the department stores the druggists need not lose sleep over it.

\* \* \*

A druggist over in Philadelphia's "Irishtown" tells the following tale when he meets a sympathetic listener. "I have a customer, an old Irishman, who has a numerous family, and one day his sixth boy was taken ill. With great alarm lest it be small pox he brought the boy to me to tell him what was the matter, and after a hasty examination, I was able to see that Jamesie had no symptoms of the small pox and told him so, saying that the lad was suffering from an attack of German measles, 'rosellen.' At that the old man got furious and vented his wrath on the poor child thus: 'How often have Oi tould yez to kape away from thim Dooch kids on Illen Strate,' he demanded. 'See phwat yez get fer playin' wid thim. Now Oi s'pose yez'll be taken to the Jarman Horspittle, an' it'll sarve yez roight, ye young blag'ard.' I was just able to explain matters for Jamesie's sake without losing a good customer, but, phew, it was work."

\* \* \*

To the average North Dakota druggist a wink means a good deal. But force of habit got an Iowa man in trouble at Grafton, N. D., the other day. Iowa, as is well known, was long a prohibition State. This Iowan winked a long wink at the druggist's wife who happened to be behind the counter. The pharmacist saw the wink from his peak hole in the pill-pounding room and, instead of a drink, the Iowa man received a punch (not of the liquid variety) that landed him in the street. The unfortunate owner of the quivering eyelid returned to the Hawkeye State, where, it is expected, he will wink the other eye for a few weeks.

\* \* \*

Those who have labored under the impression that Mrs. Partington was dead have been mistaken. She appeared in two St. Paul drug stores the other day, in two characters. In one instance she was in the form of a boy who said his mother had sent him to get "to cents' worth of spirits of turpitude." In the other case the venerable old lady of Boston appeared reincarnated in the person of a little colored girl who asked the drug dealer for "a small bottle of pneumonia."

\* \* \*

A local druggist had a window display of brushes the other week that made many people stop and laugh, if not buy. It was two dolls, made to represent mother and son, the boy stretched in approved fashion across the old lady's lap and in her hand, held high, a hair brush. Over it was the legend "I find your hair-brush to be good for raising the hair."

\* \* \*

Rather a good way of advertising is noted in a recent issue of "Printers' Ink," peculiarly adaptable to druggists. The suggestion is that the druggist place his printed circulars between the leaves of his directory so that every one using it will be bound to see them, changing these as often as necessary and making them attractive enough to compel attention.

\* \* \*

Mr. Donaghy of Hudson, Mass., says alcohol stains may be removed from varnished surfaces by rubbing them with a cloth moistened with spirits of camphor.

**BURNING QUESTIONS.\***

By WILLIAM BODEMANN.

I had just sat down to work at the manuscript for this lecture, when I received word that Professor Arne Oldberg, our worthy Doctor Oscar Oldberg's son, has been elected President of the Manuscript Society, a society of musical composers. Most affectionately and respectfully do I therefore dedicate the manuscript of this lecture to the talented young president, Arne Oldberg, hoping that he may appreciate this compliment by dedicating the manuscript of his next sonata to me, thus informing future generations that I am interested in other things besides pills, suppositories and raising the standard.

Soon after the program of your lecture course had been sent out through the mail, I received a choice selection of suggestions for my subject. One writer wrote: "For God's sake don't stuff us on polarity." Another adviser begged: "Tell us all you know about polarity". As a matter of fact, I don't know any thing about it. Yet, I have since looked into this question somewhat, and I think it is a burning question. Burn a little night lamp oil by friends in your effort to grapple this theory and you will find out all there is to it. Unless you do, it will remain terra incognita to you.

Perhaps the chief burning question to you, prospective graduates, is how to reach the goal of your ambition, to graduate and to become registered. I will not dwell on the subject of graduation, but I think it will not be amiss to give you a few pointers as to registration. First and foremost, abandon the notion that you must or can specially prepare for success in registration.

Any student who is fully competent to graduate in a good school of pharmacy, who has had four years of good experience behind the prescription counter and above all, has made good use of his grammar school years, need not fear the ordeal of registration examinations. Do not attempt to fly too high. See to it that your foundation is good and strong, do not think for a minute that your ability to work out chemical formulae is sufficient to carry the day.

The most important thing for a competent dispenser of medicine, is to be in the best sense of the word a 3 "S" man, viz: swift, sure and sound. I do not feel justified in allowing my name to go on a young man's certificate who is ever so thoroughly versed in botany, microscopy or chemistry, if this very same young man has difficulty in figuring out swiftly, surely and safely the doses of ingredients in the prescriptions entrusted to him. You may know all about the chemistry of aniline and benzine, but after all, what you are called upon to do every day, is to prepare medicines for the sick and for that work you must be safe and reliable, must know quickly if the prescribed doses are correct and detect errors of the prescribing physician.

When you are lined up for board examination, be careful how you answer questions. Confine yourself painfully to what you do know, don't write down what you don't know, it might give you away pharmaceutically and mar your efforts in a literary sense. It is far better to skip a question, giving you the benefit of the doubt that you perhaps missed it, than to put down black on white that you know less than nothing about the question. I will illustrate this by an actual recent experience:

A young man came up for oral examination who sprung a Ph. C. parchment on me from a certain school which it is not necessary to name. I placed a prescription before him, containing calomel. I asked him, "what is calomel?" his answer was, "a mixture of mercury and bicarbonate of soda". His reason for this remarkable answer was, that all the tablet triturates of calomel he had handled, were mixtures of mercury and bicarbonate of soda. I asked him for the chemical difference between calomel and corrosive sublimate and his answer was, "Calomel is

poisonous; the other not". The doses of the bichloride he gave as five to ten grains, and one half of a grain divided into twenty four doses would give about one twenty second of a grain per dose. Of course this gentleman searched the list of successful candidates in vain. Such a state of affair would have been next to impossible if this applicant had gone through the ordinary career of an apothecary prevailing in other countries, namely, good schooling, good apprenticeship, several years of experience as clerk and a few semesters in a university. Sometimes I am satisfied that the grammar schools are at fault, at other times that the scholar is to blame.

You can become a competent pharmacist without going through college. This I say without in the least disparaging your present work, but your college education alone does not make you reliable, safe and successful. Your foundation for college work must be good, you must be able to learn, you must have learned to learn, or your studies here will be undigested and give you only intellectual dyspepsia and pharmaceutical constipation. Let us take it for granted that you are well prepared to enter this school and come out of it successfully. Remember my friends that there is one thing needed more than ability and that one thing is character. Goethe expressed this most tersely when he said, "Less talent and more character." A careful study of the poisoning cases by pharmacists shows that more accidents are due to intoxication than to lack of knowledge. In fact, most of the Chicago accidents happened to some of our ablest men. I am not an advocate of puritan gravity and solemnity; on the contrary, I firmly believe that a man who knows how to enjoy this short life is a better citizen than a pessimist who looks at life only as a fore-runner to the funeral. But you will do well if you follow my advice and beware of indulgence in liquor particularly during business hours. If you wish to be a good clerk or a successful proprietor, let your habits be such as to enable you to attend to work in such a way as to win patronage for your employer or yourself.

Let us now assume that you carried your point, passed the examination in college and have become a registered pharmacist, should you then throw your books to the winds and cease studying? Emphatically no, never while you live. Now comes the time to coin the precious metal gathered in your school and college days. As a trustee of this college, I urge you to keep in close touch with your Alma Mater. From a business standpoint as the advertising agent for this school since its foundation, I would asked you to remain in constant intimate relation with the faculty, and to send in names of prospective students, for the more successfully you help to make this school, the greater the honor for you to be one of her sons; and as you go along, you may find it very convenient to be on friendly terms with your old teachers to help you solve knotty problems. Some day you may run up against a mixture that results in an explosion and if the accident doesn't blow your head off, you can drop your professors of chemistry a postal card and they will tell you all about it—how and why it happened. It is more than probable that you will after leaving your Alma Mater, follow the old, old rule of the old guilds and before starting up in business yourself—look around in the world and see how others conduct their business. In your capacity as clerk, do not ask, "how much must I do", but see how much you can do and do it, yourself by the training of an industrious, strenuous clerkship. If your earlier education has been neglected, make use of your calls in business and exercise in commercial arithmetic, in finding out just what sort of book-keeping is adapted to your employer's business. I notice that the N. W. D. A. passed a resolution recently, giving preference to the colleges that have a commercial department. I hope that by this preference I may understand that some wealthy wholesaler will at his death bequeath a rich endowment to this school. If such be his intentions, he can not make the en-

\* Read before Alumni Association of Illinois College of Pharmacy (N. W. D. A.) Dec. 6, 1901, and contributed for publication by the author.

dowment too big and he may then die at his earliest convenience.

As a practical pharmacist, I must further advise you when you start out in business yourself, do not resort to business practices that would disgrace you as an alumnus of this noble school. One of the very worst things you could do, would be to attempt to make a success by plunging into cut rate methods. You can not prolong life by committing suicide. Take the course of your college for a standing warning.

This school never for one minute resorted to cut rates. Other schools have gone through such foolhardy experiments and tried to fill their exchequers by cutting prices, but after a very short trial found out to their sorrow that cutting didn't cut any ice alongside of merit. McKinley held that a cheap coat made a cheap man. If you cannot win on any other plan than by selling your goods at cost you deserve to meet with failure. Endeavor to excel by merit, by competency and reliability, by meeting your patrons' wants through courtesy and accommodation, by keeping pure drugs and products of reliable manufacturers, and your medical friends and general customers will soon find out that your place of business merits patronage.

I started out to urge you not to drop studies, after you captured your several documents of competency and in doing this, I again quote Goethe: "All theory is gray, but the tree of life is ever green." When you start out in business for yourself, you should not lose time in allying yourself with the home associations of your fellow druggists. Mechanics and laborers have accomplished unprecedented results by organization, and the druggists of this country have only in the last few years discovered what a power a union of associations can yield. The N. A. R. D. is yet in its infancy and yet it has done wonders by what?—by teaching what organization can do. Organization like charity begins at home, and by joining the home circle of your district, be it country or city, you become acquainted with your neighboring druggists; and perchance you may find out to your own surprise that your neighbor is not quite as mean as yourself, or perhaps not quite so bad as you thought he was, and by coming together you will discover that you can agree on a schedule of prices, making it impossible for people to get into shopping habits. Living profits in business are absolutely essential, and by forming associations in your home district you can, as has been demonstrated, without effort insist on reasonable compensation for your work and skill. All these district associations, strongly bound together in a representative national body can dictate terms instead of submitting to unfair treatment by jobbers and manufacturers. Assert your rights and you will be respected and not treated as slaves by the public or by the trade at large.

It is a matter of special pride to every alumnus of this school that a graduate of this college, Thomas Victor Wooten, has been for three years the secretary of this National Association of Retail Druggists, the most promising of all organizations. While not all of you can become a Wooten, yet every one of you can so shape his career as to be a worthy follower of his example, worthy to trot in his class. Let Wooten's lifework be an inspiration to all of you, be you an employee or employer. Organization of drug clerks is just as fruitful of good results as organization of employers. Co-operation is the watchword for all. Close and compact associations can construct beneficial laws and annihilate injurious ones and enforce laws as well.

One of the worst evils in Chicago pharmacies of bygone days was illicit liquor traffic, in spite of statutory ordinances. If you inquire what brought about the reform of this great evil, association work is the answer. Not until the Chicago Association took this question up was this great change brought about. Dramshop pharmacies in Chicago are to-day the exception, not the rule, and you will agree with me

that, of all pernicious practices that ever crept into pharmacy, that of the Pharmaceutical Barrister was the most degrading and disgracing, not only by evading payment of the bar license, but by promoting licentiousness. Such practices are against laws of state and decency and the pharmaceutical barkeeper belongs behind the bar if not behind bars. Do not think that my earnest appeal for organization is out of place in a talk to an Alumni Association. A ship needs water to float on, a pill mass needs a vehicle and if your career lacks the vehicle of commercial success, your college education is like a fish out of water. Paderewski would not be the phenomenal artist he is, if his business manager had lacked in shrewdness to secure phenomenal financial success.

The next in order of importance in your career in pharmacy is your position toward the pharmaceutical press. You should not only support but contribute to the journals. As you go along in your daily work in life, note your experience and do not be haphazard, pick up your pen and let the readers of the press share your experience; you will soon discover that to be a contributor to the press makes you a closer reader and the better you learn to study the press the better you keep abreast of the times. Pharmacy is constantly changing and growing and in no other way can you learn of new discoveries and old truths than by studiously following the guiding hands of the pharmaceutical press.

To cite one instance of the changes in schools of pharmacy only a few years ago it was the pride of colleges to be able to say that all teachers were practicing pharmacists. To-day the boast is, that all teachers are teachers, not hampered by store druggery and business pursuits. The further I get along in outlining my lecture, the more I feel embarrassed by the mass of material I would like to work into the limit of your endurance and patience. I must therefore ask your indulgence in briefly touching a few more points of interest. I shall be careful not to bore you too much. You will soon in some shape or other launch out on your lifework. Let me implore you to remain true to your colors, be "dispensing prescriptionists" and not "prescribing dispensers". Much has been said about the relation between doctors and pharmacists. How can you expect the good will of your practitioner if you encroach on his profession? Your work is to dispense, that of the physician is to prescribe. It is hardly necessary to dwell at length on this subject, but the following little incident speaks volumes: A colored gentleman came into a drug store in a city out West and walking up to the proprietor said, "Boss, I am in piles of misery", the prescribing rough and ready malpractitioner cut him short saying, "Oh! that is easily fixed, here you are", handing him a package of Pyramid Gile Cure. The patient roared out, "Boss, I ain't got de piles, I got a sore throat." In reality the remedy offered was as good as the malpractitioner could offer. He may have known the geographical difference between piles and diphtheria, but pathologically the remedy was at a par with his ability in diagnosis.

I find it difficult to speak calmly of this nuisance in pharmacy, but like a bad penny, it will turn up in our ranks. I denounce the dishonesty of this practice and do it with courtesy and cannot do better than call it mellow, in the sense the Irishman understood this word. His daughter took singing lessons and her teacher pronounced her voice "mellow." The Irishman interviewed his next door neighbor about this word. "Mike" he said, "what the devil did that teacher mean by calling Katie's voice mellow?" "Oh! Pat" said Mike "mellow is the polite expression for rotten". And that's my polite expression for counter prescribing.

Avoid quackery, be manly, honest and gentlemanly, true to yourself. By this I do not ask you to be duds by any means. Shakespeare's advice given through Polonius is good doctrine to-day and Shakes-

years' post-mortem experience, like wise teachers, is to strive towards merit more than appearance. To-day supercritics quarrel whether Bacon or Shakespeare was the real author of the immortal works. We love and admire the works and care little who gave us this precious legacy; that is somebody else's "Bacon", not ours; and this should teach us not to place too much weight on empty titles. Your Ph. G. means little if your conduct in life is not what it should be. Titles are empty honors. Merit and worth are lasting qualities. History fails to chronicle the fact whether Abraham Lincoln's hand ever appeared in Alexander kid gloves, but history does tell us that his hands put his name to a document that stamped out slavery in our beloved country.

Coming to a close, let me ask you if you ever read Lloyd's "Stringtown on the Pike". If you didn't, do so by all means. Old Cupe was a great man to go by "de signs." Follow this charming character's illustrious example; study "de signs of de times" and adapt yourselves to changing conditions and environments. If I understand the signs I see consolidation and community of interests ahead.

It was the dream of my younger days to bring about consolidation of drug stores; and I am yet firmly convinced that if carried out, it would have resulted in great good to all participants. As for the future of pharmacy schools I hope that some Morgan and Hill combination will induce some Harper and Rockefeller combination to consolidate most if not all the schools of pharmacy in this country into one great institution that can afford to refuse admission to all matriculants who lack undisputed qualifications for college work. That and nothing but that, will give us better material for the ideal pharmacist of the future.

## THE PHARMACIST IN LITERATURE.\*

By JOHN C. SCLATER.

To give anything like a comprehensive summary of all that is in literature relative to the chemist—small and fragmentary though his corner in literature is—would be impossible. Much more so, then, will this rambling account be commensurate with its title, for what with "narrow means" and a "limited mental horizon" (for "which in all ages of history the followers of our business have been noted," to quote Mr. G. C. Druce in his presidential address at Dublin this year), and the inability to follow the Johnsonian dictum that a "young man must read five hours a day to acquire a great deal of knowledge," I have not been able to read, collect and arrange the material which I find is really necessary for a such a paper.

A president, with a presidential address haunting him, naturally looks on the past of the association and its honorable traditions. The brilliant array of past-presidents are marshalled before him. The strength of the chain is the strength of its weakest link. To-night the twenty-fourth link is being welded, and, with your help, gentleness, committee and members, solder and weld that link so that many more may be added to keep the chain intact.

I choose this subject for two reasons. First, by doing so I escaped, for a very good reason, the necessity of choosing a technical or ethical subject; secondly, because it presented a degree of novelty and passing interest, if not instruction.

It is only what I have come across in the course of very desultory reading, and, being a chemist, any stray allusion to the art has had its attraction for me. Following a habit of some years of noting, in a fragmentary fashion, all of such interest has given me a little material, although perhaps woefully inadequate for this occasion. Lamb says of Coleridge, whose notes and annotations on a lent book were often more valuable than the book itself. "Lend thy books to S. T. C.—he will return them with usury, enriched with annotations tripling their value." It is a habit

I would recommend to the younger members of this association who have treacherous memories, and who have not, to read "pencil in hand," even when reading a novel, that is to say, of course, if the novel is worth reading. We cannot triple their value like Coleridge, yet we can humbly note that which arrests us, and, I can promise you that a glance back at such notes will furnish you with many a delightful retrospect and you will often bring back a whole train of thoughts which had until then lain dormant in the mind, and, but for that casual glance at the old note-book, may have been entirely forgotten.

I said the subject was beyond a comprehensive summary, for no sooner shall I cite samples of pharmacists in literature than to each of you different examples will be brought to your mind in your own reading. Nay, ere I have finished one, each of you will anticipate me with a better illustration. In the matter of telling a joke a man laughs not so much at your joke as at one of his own yours has brought to his mind, which he means to tell whenever or erever you have finished yours. Watch how a man says, "That reminds me."

It cannot be denied—let us try ever so hard to explain—that the chemist does not figure brilliantly in fictional literature. Nay, it must be admitted that in the novels dealing with the latter half of the eighteenth century and the earlier half of the nineteenth century, he has been portrayed in a very ludicrous light; a butt for the jibes and jeers of almost all our novelists. When not that the chemist and his simples and drugs are used as a literary device—the incertum on which the story runs. In the fictional literature dealing with an earlier date, the alchemist, from a novelist's point of view, was a name to conjure with, a word pregnant with romance and mystery; although also often a source of ridicule. The chemist and druggist, as we know him, can hardly be said to have entered into fictional literature yet. It is the apothecary who comes in for all the ridicule. During the eighteenth century the apothecary was at his best, socially. His power was practically unlimited. He associated intimately with the doctors, meeting them at the coffee-houses on business, where the physicians wrote their prescriptions for them. Naturally they emulated the doctors. Very often they "bossed" them. They also associated with men of letters then more than at any other time. The writings of the eighteenth century authors show that. But I think the chief reason why the apothecary got so universally ridiculed was his shameless charlatanism. To-day the profession is largely built on and grounded in science, and science defies ridicule; then it was chiefly empiricism, and often worse. Also, it is, perhaps, the apothecary aped to be what he was not that he came in for so much ridicule. From the end of the seventeenth century to the contention they had with the "mere tradesmen"—that is, the druggists—and in which controversy they ultimately lost, they (the apothecaries) had expanded to a very powerful body, so powerful, indeed, as to make the physicians jealous of their powers. The apothecary got puffed up. Ridicule was his only cure, and he got it. There is nothing like ridicule to cure a man from vain imaginings. Their monstrous charges, their no less monstrous attempts to have a lucrative monopoly by prohibitive means, lent themselves to ridicule. With the alchemist it was different. His learning, which in many instances was considerable, embellished certainly with superstition, made him a power to be feared almost as much as the priests. There were as many quacks then as later. The alchemists were genuine seekers after the truth, even though they also vainly tried to discover the "elixir of life" and the "philosopher's stone." Their learning was no greater than the apothecaries. The schoolboy in his first year of physics knows more physics than did Sir Isaac Newton, but Newton was the seeker, the finder. So with the alchemist. The advancement of learning dissipated the romance and mystery that hung over alchemy. The public is not so much at the mercy of the chemist. By that I mean his knowledge is not so

\* Presidential address to the Edinburgh Chemists' Assistants' and Apprentices' Association. (Pharm. Journ.)

peculiarly his own as before. With the acquisition of knowledge what was mysterious and miraculous becomes simple and often commonplace. Besides, what may appear to the general public to-day a mystery does not follow that it is miraculous. They do not understand it, but they know perfectly well it is no miracle, but explainable. Now, in mediæval times, and before it, what was miraculous was too sacred to probe into. It was treated somewhat as a divine thing—not to be questioned. To-day we find people discussing intelligently, both with their physician and chemist, what before would have been taken as arrogant presumption. You will all agree with me that once or twice at least in our counter experience that a vague generalization on a drug met with and merited a humiliating retort, which let us know that such vacuities by way of answer would not satisfy the intelligent, if, as we thought, too inquisitive interrogator. At the same time, I do not agree that the patient should know all that is in his medicine. Often the more ignorant he is of what it is composed of the more faith he has in it. We might also ask, then, why the novelist so rarely mentions the name and exact nature of the deadly poison or magical elixir, which every he may require for the development of his story. Usually inclined, we might say for a very good reason, which would be perfectly true in some cases. But it also works this way. Being definite and exact would dissipate the element of mystery, and kill the romance. What chemist reading Dumas's "Monte Christo" tries to name the miraculous drugs he makes use of. We forget to be critical, and read the novel admiringly. So you see, whether from necessity or prudence on the part of the novelist, it is better for the real enjoyment of the novel to be ignorant of the exact nature of those drugs. The critical attitude kills real enjoyment.

To draw a simile, the apothecary is to the novelist what the doctor in court is to the lawyer—a thing to be made game of. We all know how a lawyer loves to brow-beat the doctor, twist and quibble smartly with the often conflicting evidence. Yet we also know that the same lawyer is not the man to weigh up and judge adequately the professional capabilities of the doctor, although, for the sake of his case, he may attain a temporary ascendancy through glibness of tongue. So with the novelist when he introduces into his story a chemist, simply to poke fun at. The chemist, as a man, primarily is nothing to him. Crafts and trades are too plebeian for many novelists. Trades scarcely ever enter with the principal characters. Scott mentions trades more than most novelists, as for instance, "the worthy glover" or "the stalwart smith," etc., but then there is always an air of antiquity about them that takes away all that may savor of the low born. Also, Thackeray, the most realistic of all our novelists, who portrayed life as it was and did not despise the trivial round of each day, whose stories have no immaculate heroes, gives in his history of Pendennis a delightful sketch of the pedigree of Arthur Pendennis, who is the titular hero of the story. John Pendennis was an apothecary during the regency of George the Magnificent, in a "humble little shop, surmounted with a gilt pestle and mortar, in Bath." With inimitable satire Thackeray shows the successive steps by which this obsequious, laboriously polite apothecary ultimately achieves to be what was his secret ambition—a gentleman. A gentleman with a family pride and pedigree traced back to the age of the Druids, and who "intermarried with the Normans at a very late period of the family existence." This is an exact portrayal of the aspirations of most of the apothecaries of the eighteenth century. On the social life of that century Thackeray was an authority, as his novels and sketches show. Again, in "The Newcomes," we read of an apothecary being knighted, much to the disgust of Ethel Newcome, who had ardently wished that the knighthood had gone to her dear old uncle, Colonel Newcome. "When little Egbert took hold of your sword, uncle," she says, "and asked how many people you had killed, do you know, I had the same question in my mind, and I thought

when you went to the Drawing Room perhaps theking would knight you. But, instead, he knighted mamma's apothecary, Sir Danby Jilks—that horrid little man—and I won't have you knighted any more." "I hope Egbert won't ask Sir Danby Jilks how many people he has killed," says the Colonel, laughing, but thinking the joke to severe upon Sir Danby and the profession he forthwith apologizes by narrating many anecdotes he knows to the credit of surgeons. Dear old Colonel Newcome, one of the finest characters in fiction. No, as I said before this digression, which I hope you will pardon, it is not the druggist that attracts the novelist primarily, but it is his drugs. So long as drugs have the power of swift despatch, so long will they be the means and implements in the novelist's hands for the development of his story. It is generally on the villainous side of the tale that the drug enters. In such cases the chemist, that is to say if he accompanies the drug, is an accomplice of the villain or clique of villains, and often the hireling. Consequently, he has invariably a sinister character. He appears for a moment on the canvas of the story; his drug has worked the desired effect, and he disappears again. But the novelist, as a rule, has not that technical knowledge of the art and craft of pharmacy to be able to portray the chemist as a sustained character to the life. That would require a novelist born in the profession. We have all noticed what farces some of the fictional chemists are. And when it comes to poisons, truly the chemist has the last and best laugh at the novelist. There is always a mysterious bottle, as a rule, elaborately chased with some symbolic filigree work. It would be well for us to copy some of these designs for our poison bottles. It would give us an air of erudition and add to our symbolic cabalistic characters, which not more than half of us understand. This bottle contains a still more mysterious liquid, generally colorless and tasteless. Observe how non-committing and delightfully vague. This magical liquid, when a single drop touches the lips, is either instant death or a new lease of life with renewed vigor and lustre added, just as the story requires. When the author does deign to mention in a vague manner, the character of the drug mistakes are apparent and often flagrant. All authors have a smattering of law, or have legal advisers. Law is a general thing, and enters into every one's life, but pharmacy is a technical thing, and is shield clear of consequently. That does not, however, debar it from being used as a literary device.

In this respect, besides giving an element of mystery to the story, it is very important. A drop of poison administered at the fit and proper moment changes the whole trend of the story. I need not dilate on this fact. Shakespeare himself uses it as a literary device in the Mantuan apothecary in "Romeo and Juliet." In some twenty lines he has portrayed the apothecary as he was then, as not unlike, in some cases, the apothecary of to-day.

"With overwhelming brows  
Culling of simples . . . . ."

"A beggarly account of empty boxes, etc.,  
Were thinly scattered to make up a show."

He is approached by Romeo for a poison:

"My poverty, but not my will, consents,"

pleads the apothecary. There lies the fatal error into which the poor apothecary falls. When reading over this scene we are apt to forget to apply the great moral lesson which Romeo inculcates as he pitches the gold at the apothecary:

"There is thy gold, worse poison to men's souls,  
Doing more murders in this loathsome world  
Than these poor compounds that thou may'st not sell.  
I sell the poison, thou hast sold me none."

(To be Continued.)

# QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

## Washing Powders.

(T. R.) Gathmann (American Soaps) says that washing powders, usually sold to the consumer as soap powders, may be described in a general way as mixtures of powdered soap, with about its own weight, more or less, of carbonate of soda. Some special brands are also made which in addition contain other detergent agents, such as carbonate of ammonia, sal ammoniac or borax, while still others are found to which filling, in the form of talc, silicic acid, has been added. The soap itself may have been made by any of the processes known—cold half-boiled or boiled, settled or boiled down—and the stock used may have been any fat, or mixture of fats, according to the grade of washing powder to be made. It is thus seen that beyond being either principally or entirely a mixture of soap and soda, these powders have little in common with each other. Here are some typical formulas:

**Borax Soap Powder:**  
 • Curd (hard) soap, in powder.....5 parts.  
 Soda ash .....3 parts.  
 Silicate soda .....2 parts.  
 Borax .....1 part.

Each ingredient is thoroughly dried and all mixed together by sieving.

**London Soap Powder:**  
 Yellow soap.....6 parts.  
 Soda crystals.....3 parts.  
 Pearl ash.....1½ parts.  
 Sulphate of soda.....1½ parts.  
 Palm oil.....1 part.

These ingredients are combined as well as possible without any water, and they are spread out to dry, and then ground into coarse powder. They are adapted to hard waters, as their excess of carbonate alkali neutralizes the lime in the water.

**Pearl Soap Powder:**  
 Curd soap (powdered).....4 parts.  
 Sal soda (crude sodium carbonate).....3 parts.  
 Sodium silicate .....2 parts.

Dried as much as possible and intimately mixed.

## Aromatic Syrup of Licorice.

(T. S. E.) The following formula is one presented to the Missouri Pharmaceutical Association some years ago and is said to produce an excellent preparation for disguising the taste of quinine.

Ceylon cinnamon ..... 20 grams.  
 Cochin ginger ..... 12 grams.  
 Cloves ..... 8 grams.  
 Nutmeg ..... 3 grams.  
 Purified ext. of licorice.....750 grams.

Alcohol, Water, of each, sufficient quantity.

Reduce the cinnamon, ginger, cloves and nutmeg to a No. 40 powder, moisten with 15cc. of alcohol, macerate for 24 hours in a covered vessel, then pack in a cylindrical percolator and gradually pour alcohol upon it until 100 cc. of percolate is obtained; mix with the sugar in a mortar and set aside in a moderately warm place, until the alcohol has evaporated. Pass water through the percolator until 500 cc. of percolate is obtained; dissolve the extract of licorice in the percolate with the aid of gentle heat, add the aromatized sugar, let come to a boil, strain, and add enough water through the strainer to make 1,000 cc.

The Formulary of the Cincinnati Academy of Pharmacy contains a formula for "Syrup of Ammoniated Glycyrrhizin" which is recommended as a vehicle

for disguising the taste of quinine and other bitter substances. It is as follows:

Ammoniated glycyrrhizin.....50 grams.  
 Syrup to make .....1,000 cc.

Dissolve the ammoniated glycyrrhizin in the syrup by the aid of gentle heat.

## Mucilage.

(S. L. B.) The following are typical formulas:

Gum arabic, in fine powder.....8 ounces.  
 Glucose .....2 pounds.  
 Boiling water .....20 fl. ozs.  
 Acetic acid .....1 ounce.

Dissolve the gum arabic in the water, then add the glucose, and bring the whole to a good boil, stirring well. Remove from the fire and add the acetic acid.

(2.) Dextrin Mucilage:

Dextrin .....2 ounces.  
 Powdered alum .....1 dram.  
 White sugar .....½ ounce.  
 Solution carbolic acid.....2 drams.

Dissolve all of the ingredients, except the carbolic acid, in the water, previously raised to the boiling point. Continue the boiling until dissolved; when cold, add the carbolic acid.

3.) Allow 1 part of white glue (or gelatin) and 2 parts of gum arabic to swell in 10 parts of water; then dissolve, after adding one-quarter part of white sugar, at a gentle heat, and strain if necessary. To prevent from spoiling add a few drops of carbolic acid.

## Mother Drops.

(S. L. H.) The preparation usually dispensed under this name in German-speaking communities is "Tinctura Aromatica," P. G., a formula for which may also be found in the National Formulary. Another preparation dispensed in some localities when "Mutter Tropfen" are called for consists of:

Tincture castor .....1 ounce.  
 Spirit ether .....1 ounce.  
 Tincture cinnamon .....2 ounces.

Here is a formula from another source:

Fluid extract valerian .....2 ounces.  
 Tincture of opium and saffron .....2 ounces.  
 Spirit ether, enough to make.....8 ounces.

In Norwegian communities "Tinctura Castorei Thebaica" is sometimes dispensed as "Moder Draaber," or "Mother Drops"; Hager, in "Manuale Pharmaceuticum seu Promptuarium," gives this formula:

Castor .....20 grams.  
 Asafetida .....10 grams.  
 Water of ammonia.....10 grams.  
 Powdered opium, of each.....5 grams.  
 Alcohol .....150 grams.  
 Mix, allow to stand and filter.

## Mimeograph Ink.

(Ink.) The ink used for the mimeograph copying process is of a pasty character, and almost any good stencil ink will answer the purpose. The following formula has been suggested: Take of shellac 2 ounces; borax 2 ounces; water 25 ounces; gum arabic 2 ounces; Venetian red, lampblack, Prussian blue, or any desired coloring substance, a sufficiency. Boil the shellac and borax with some water until they are dissolved; add the gum arabic and withdraw from the fire. When the solution has become cold, complete to 25 ounces with water, and add more of the coloring substance to bring the ink to a suitable consistency. Aniline colors ground with dextrin mucilage or some other adhesive substance have also been suggested.

SANDARAC has been found, by Dr. T. A. Henry (Proc. Chem. Soc.), to consist of a mixture of resinic acids and terpenes, which are separable by means of steam distillation. Sandarac is the naturally exuded resin of various species of Callitris, generally either Callitris verucosa or Callitris quadrivalvis. The principal volatile constituent is diterpene, which boils at 265° C. Two resin acids have been isolated.

## PHARMACY IN THE TWENTIETH CENTURY

Dr. George C. Diekman gave an address at the last monthly meeting of the German Apothecaries' Society and also read a lot of answers to questions asked by the State Board of Pharmacy and other pharmaceutical bodies. For general misinformation the answers eclipse anything yet reported this century.

The following is a partial list of the questions and answers:

1. Q. What are nutgalls? A. An excrescence which is deposited by a certain fly then grows cream of tartar.

2. Q. What is meant by term collyrium? A. This is a kind of a gargle which is swallowed and then vomited up again.

3. Q. What is Black Draught? A. This is a draught used by the colored population of the South as an emmenagogue.

4. Q. What is the source of Picrotoxin? A. It is obtained from *Picra* (*Hery Picry*).

5. Q. Give synonym and uses of absinthum. A. Wormwood, obtained from the same plant that furnishes Levant Wormseed, and it is used to combat worms, particularly pin worms. It is not strong enough for tape worms.

6. Q. In poisoning, by what substances should oils not be employed? A. In poisoning by soaps, because this neutralizes the oil. Another answer: In no kind of poison because both the oil and the poison would become spoiled and neither could be used again.

7. Q. In poisoning, by what substance should the stomach pump be avoided? A. In all corrosive poisons, because the tip of pump is made of metal or rubber and the corrosive substance would corrode the pump and render it unfit for further use.

8. Q. Name three emetics (common) with doses. A. Give him first mustard, one ounce in a pint of water. If this does not work, then give him zinc sulphate, 20 to 30 grains. If this also stays down you can try about 3i of copper sulphate. If this also does not act I am afraid that nothing can be done for him, but you might call in the doctor.

9. Q. Symptoms and treatment of poisoning by Fowler's Solution? A. By poisoning Fowler's Solution—the get convulsions and sevir boiling in the aptominal, it shall be given calcind magnes and ametics.

10. Q. Symptoms and treatment of poisoning by carbolic acid? A. Tha git whit spats on the mault and oder of carbolic acid and pane in the aptominal, it shel be given alcohol and then plente of milk and ametics.

11. Q. What is the duty of the pharmacist if a large dose is prescribed? A. To nodefind the phazisen and not to give if he can help, if not he shel find out for wat kind deize and porpoise it is and give the rigt doz.

12. Q. What are the symptoms of Belladonna poisoning and antidote? A. They are wick pools and sto bithing of the heart and atteckt the poiple of the lye. It shel be given for a antidote atropine and artiofilses resparasin.

13. Q. What should the pharmacist do when selling a poison? A. (1) He should not do anything. He should not sell it. (2) Take the name and address and make them sine the book. If they cannot write you can sine it yourself. All poisons must be registered in the book.

14. Q. What is a fruit? A. A fruit is a round globular shape and it is fleshe and containing seeds, it falls down to the ground wven ripe, fruits aer classified in monocatelidan and di catelidan.

15. Q. Give source and method of obtaining wood alcohol. A. From wood. The wood is first roasted and then it is subjected to much pressure and after this it is treated with Benzin to extract the alcohol.

A number of articles given for identification follow:

Lead Plaster: Identified as chewing gum (unflavored).

Lead Plaster: Identified as cacao butter, soap plaster, chewing gum (unflavored).

Compound Licorice Powder: Powdered opium, Dover's powder, powdered fennel, aromatic powder.

Green Soap: Ox gall, vaseline, mineral oil, coal oil, linsed oil.

Solution of Ammonium Acetate: Ammonia water (dilute), solution of ammonium carbonate, dilute hydrochloric acid, chlorine water.

Caffeine: Quinine, morphine, salol, resorcin, absorbent cotton, strychnine (poor sample).

Balsam Copaiba: Oil of tar, oil of bay, aromatic oil, thick oil of cubebes, balsam of fir, Canada turpentine, Venice turpentine.

Calcium Sulphide: Rotten stone (rotten odor), liver of sulphur, reduced iron, some decomposed salt.

Collodion: Compound spirit of ether, ether, spirit of nitrous ether.

Powdered Rhubarb: Powdered opium, aloin.

Emulsion of chloroform: Chloroform liniment, emulsion of cod liver oil and chloroform.

Citric Acid: Camphor, sodium sulphate, tartaric acid, thymol, borax.

Syrup: Glycerin, aromatic elixir, castor oil.

Dried alum: Tartaric acid, citric acid, zinc sulphate, bichloride of mercury.

Syrup of Wild Cherry: Linsed oil, syrup senega, syrup cherry laurel, syrup of hydrocyanic acid.

Fluid Extract of Licorice: Tincture of rhubarb, sweet, mistura glycerhizae, elixir, pectoralis, fluid extract of senna.

Compound Tincture of Benzoin: Tincture balsam Peru, tincture stryax, tincture aloes, aromatic fluid extract.

Water: Hydrogen peroxide, liquor sedans, dilute chlorine water.

Salicylic Acid: Caffeine, morphine, quinine, naphthalin, resorcin, salol.

## THE PREPARATION OF OXYGEN FROM AIR

by means of solvents has been made the subject of investigation by George Claude (Compt. rendus). The author tried a number of liquids for separating the gases of the air by means of unequal solubility at low temperatures, but was unable to obtain commercial results. In most solvents, oxygen and nitrogen were found to be nearly equally soluble. Alcohol was found to be far superior to water as a means of separation. It proved impracticable to employ this solvent, as the loss by evaporation was too large.

**NICOTINE SALICYLATE.**—A process for the preparation of nicotine salicylate for use in destroying insects and fungus growths upon plants has been granted to G. H. Richards. In this process forty-two parts by weight of salicylic acid are heated with fifty parts of nicotine, the resulting compound is then allowed to crystallize, dried and weighed. The combination is a stable one, and may be completely volatilized without decomposition.

**MANGANESE POISONING.**—Cases of chronic poisoning of employes in factories in which manganese peroxide is ground are reported by Von Emden (Munich Med. Wchschr.). The poisoning is characterized by a general muscular weakness and to a certain extent a paresis of certain muscle groups. It was found that the kidneys of normally healthy workmen excreted manganese, while none of the element was excreted in cases showing symptoms of poisoning.

**THE ACTIVE PRINCIPLE OF SENNA LEAVES.**—Ameng (Apot. Zeit.) finds that cathartic acid, the active principle of senna leaves, and considered by a number of authorities to be a glucoside, consists in reality of two glucosides or a double glucoside, easily splitting up into two similar bodies. He further finds that this double glucoside is identical with that found in *frangula* and *cascara sagrada*.

**THE GERMINATING POWER OF SEEDS** is, according to T. Tammes (Bot. Centralbl.), not affected by exposure to the direct rays of the sun even during long periods. Solar rays, which have such a destructive effect upon bacteria, were found to have no influence upon the seeds of a number of common plants.

# MULFORD'S ANTITOXIN

Since 1894 over four million packages of Mulford's Antitoxin have been used without a single untoward result of any kind. All official reports show that it

# NEWS DEPARTMENT.

## N. A. R. D. NOTES.

Chicago, Dec. 7, 1901.

The following is a partial list of the associations that have recently become affiliated with the N. A. R. D.:

Alabama.—Northeast Alabama Association, comprising St. Clair, Cherokee, De Kalb, and Etowah counties.

Illinois.—The following county associations: Clay, Marion, Bond, Ford and Macoupin.

Iowa.—The following county associations: Howard, Hancock, Hardi, Winnebago, Hamilton, Blackhawk, Washington, Keokuk, Wapello, Davis and Chickasaw. The president of the last named writes: "We had a good October meeting. All druggists in the county were present, except two, and they will join later. We were all pleased with the work done so far. I can see the results of it every day. Our Nashua friends all came out, and did the nice thing by sending out neatly written cards and gave us a nice little spread, which made everybody feel on good terms, etc. Please advise me at any time if there is anything that I can do. Yours truly, J. S. Wilkins, Pres't, New Hampton, Iowa."

Kentucky.—The following county associations: Marshall, Calloway.

Michigan.—Oakland county, Lapeer county.

Minnesota.—Cottonwood, Murray, Pipestone, and Lyon counties.

New York.—Twenty-one of the twenty-nine druggists in Wayne county attended the meeting called for the purpose of perfecting a county association at Lyons, Nov. 19. Prices were advanced from 20, 40 and 75 cents to 25, 50 and 90 cents, respectively. Considerable enthusiasm was manifested.

Ohio.—The following county associations: Seneca, Wyandot, Sandusky, Ottawa, Wood, Champaign, Logan, Union, Licking, Knox, Morrow, Jefferson, Harrison, Carroll, Tuscarawas, Muskingum, Coshocton, Belmont, Perry, Morgan and Noble.

Wisconsin.—The following county associations: Iowa, Brown, Outagamie, Winnebago, Jefferson, Juneau-Adams, Wood and Sauk.

Dr. J. A. Schenck & Son, of Philadelphia, recently wrote the Secretary of the National Association, as follows: "We lately have had many evidences of good-will from our natural friends, as you truly say, and to them, by your courtesy, we extend our thanks. You have our best wishes that you may be successful in your new work, in which we assure you you have our hearty co-operation."

The Pueblo (Colo.) Pharmaceutical Association now includes in its membership every dealer in proprietaries in that city, eighteen in all. Through the efforts of the association price cutting has entirely ceased, and the conditions there are highly satisfactory.

Secretary Kloster, of the Sioux City Association, recently called at the National Secretary's office to express his appreciation of the help afforded the druggists of that city by the N. A. R. D. Good prices are now being maintained there, and the outlook upon the future is bright.

The following is quoted from Secretary Wooten's report to the association, at its Buffalo convention:

"At the January meeting I brought to the attention of the Executive Committee the fact that aggressive cutters are being supplied with proprietaries by certain persons and firms who make a practice of buying up old proprietaries and redressing them with labels and cartons obtained from the manufacturers. The enormous amount of proprietary goods that have heretofore changed hands in this manner has been a general surprise, and our investigations have revealed some extraordinary conditions in regard to this traffic. It is a pleasure to say that through the co-operation of the proprietors this evil has been curtailed until now it is easily held within bounds, though it is believed the necessity for vigilance will continue to rest upon the secretary's office."

Referring to the practice of redressing old patents, Dr. R. Schiffman, of St. Paul, says:

"We have been in constant fear that an occasion may arise where we shall, by a refusal, wrong some druggist who has stock on hand which was damaged in a legitimate way, and which by all right should be exchanged. We are very glad that your association has taken the matter up, and in the future we will be glad to communicate with you upon any request we receive of such a nature. You seem to be making headway right along and we are pleased to see it."

On this subject the Emerson Drug Co. wrote as follows:

"Regarding supply of new wrappers and labels for damaged goods, will say that we most heartily agree with the suggestions of your association, and shall govern ourselves accordingly. As a matter of fact, we have always been most careful in this respect, and in only one or two instances have we supplied dealers with wrappers for damaged goods. We are pleased to note that your association is working on such broad lines and with the co-operation of manufacturers and wholesalers, and we feel confident that success will crown your efforts."

After a number of months of demoralization, price cutting has been stopped at Summitville, Ind., greatly to the satisfaction of the druggists of that and surrounding towns.

In a letter recently received from J. M. Grosvenor & Co., of Boston, the firm says: "We are much interested in your work, and we sincerely hope that success will in every way be the result of the efforts of the few who have been putting in good work on this cause."

The following is from a recent letter of the J. C. Ayer Co.:

"We are certainly in sympathy with the work which you are doing, work which has brought great results to the retail trade. We might as well close shop unless we have the good-will of the retail druggists. We do not believe this is to be obtained by saving petty things to them, nor by throwing out propositions of uncertain importation. The best way to obtain the confidence and good-will of the retail trade, so far as we know, is to do a straightforward business upon honest business principles. We have always found that this is all the retail druggist has ever asked. In other words, do business on the dead square, and everything will be all right. We wish to extend to you the thanks of this company for the thorough, systematic and most successful work which your association has accomplished, and especially for the even better things which the future is bound to bring."

In reply to the inquiry of a correspondent as to whether price restriction had been turned down for another year, an officer of the N. A. R. D. wrote:

"The Worcester plan has not been turned down at all. On the contrary, this plan in the hands of the new Executive Committee will be enforced just as vigorously as it could have been by its most ardent supporters at Buffalo. Steps have already been taken to test its enforceability in Illinois, or, to speak more correctly, to ascertain whether legal price restriction is compatible with the anti-trust law of this State. Not a moment will be lost in obtaining this knowledge, and no stone will be left unturned to put price restriction into effect throughout the country. It is clearly understood by the Executive Committee that price restriction is a part of the N. A. R. D. plan, and as such it will be enforced."

## NOT "P. D. & CO.'S" VIRUS.

Detroit, Mich., Dec. 7.—To the Editor: We ask a favor which we believe you can grant with perfect propriety in the columns of your valued periodical, and which will be a simple act of veracity and of justice to us. We respectfully ask you to apprise your readers, on the faith of our positive assurance to you, that not one of the recent tetanus fatalities following vaccination at Camden, Atlantic City, Bristol, Brooklyn, Cleveland and St. John, N. B., succeeded the employment of our vaccine virus. In not a single, solitary one of the cases was our vaccine used. We incriminate no one's vaccine, but we propose to assert the truth about our own. If we can prevent it, no physician or pharmacist shall labor under the false impression that a fatality has ever followed, either by coincidence or by cause and effect, the application of vaccine virus or serum bearing our name. Very respectfully yours, Parke, Davis & Co.

## NEW YORK AND VICINITY.

### DRUG MERCHANTS OF AMERICA, INCORPORATED.

**New Co-operative Organization, Incorporated Under the Laws of West Virginia. Will Conduct a General Financial and Commercial Business. A Membership of Nearly 300 Claimed.**

The "Drug Merchants of America, Incorporated," a co-operative organization, has recently been incorporated under the laws of West Virginia. J. Edward Howard, the secretary of the corporation, says that at present there are nearly three hundred members and new names are being added every week.

The object of this new corporation, according to a prospectus issued, is to conduct a general, financial, mercantile and commercial business affecting the interests of the manufacturing and retail drug trade, to maintain an office as an exchange for unsalable goods and to effect a general purchasing system of manufactured and crude drugs, for the benefit of the individual stockholders of the company. In other words, it is a corporation formed for the purpose of buying all kinds of drugs, medicines or proprietary preparations at the lowest prices obtainable from the manufacturers, the stockholders to get the benefit of all such prices.

The capital stock of the corporation is \$10,000, divided into 2,000 shares of the par value of \$5 each. The prospectus says the property and business of the corporation is managed and controlled by a board of nine directors, chosen by and from the stockholders by a majority vote of those present and voting. Only one certificate of stock in the corporation is issued to one individual, firm or corporation in any incorporated village, town or city, and no individual, firm or corporation can become the owner of more than one. Assessments may be levied by the board of directors upon each share of stock, but such assessments are not to exceed \$10 per annum, and these are to be paid at such times and in such amounts as determined from time to time by the board of directors. Stockholders are expected to report to the secretary the name of any individual, firm or corporation manufacturing a medicine not generally known to the trade, giving information concerning the financial standing of the maker and the merits of the remedy.

The incorporators are Henry C. Hall, Waltham, Mass.; Fred. H. Hubbard, Newton, Mass.; William C. Bolton, Brooklyn, N. Y.; Judson B. Todd, Ithaca, N. Y.; Thomas Stoddart, Buffalo, N. Y.; J. C. Brady, Fall River, Mass.; George C. Lyon, Providence, R. I.; Henry J. Steiner, Norwich, Conn., and Louis K. Liggett, Boston, Mass. The present officers are: George C. Lyon, of Hall & Lyon Co., Providence, R. I., president and general manager; Thomas Stoddart, of Stoddart Bros., Buffalo, N. Y., vice-president, and J. Edward Howard, No. 708 Fulton street, New York, secretary and treasurer. The directors are: George C. Lyon, Thomas Stoddart, William C. Bolton, of Bolton Drug Co., Brooklyn, N. Y.; James De Merville, of the De Merville Drug Co., Nashville, Tenn.; James C. Brady, Fall River, Mass.; B. May, of the May Drug Co., Pittsburg, Pa.; E. G. Isaacs, of T. P. Taylor & Co., Louisville, Ky.; Henry J. Huder, Indianapolis, Ind., and O. C. Reed, Toledo, Ohio.

The office of the secretary, J. Edward Howard, is at No. 108 Fulton street, New York. Mr. Howard, who was formerly with the wholesale drug firm of Farrand, Williams & Clark, Detroit, gives as the reason for the incorporation in West Virginia that the law there provides that the annual meeting may be held within or without that State, and considering the vast territory covered by the stockholders it would not be advantageous to have the meeting confined to any one state. He says that the corporation at present represents between \$15,000,000 and \$20,000,000 worth of business every year, and that from present indications this amount will be considerably increased by the first of the year. Mr.

Howard says that the corporation should not conflict in any way with the N. A. R. D. Asked if they anticipated any trouble in securing the goods from the manufacturer he said that there was no reason to expect it, and that every manufacturer would probably consider the corporation strong enough to make it an object for them to get the trade, and makers of sundries would also solicit the corporation's business.

Mr. Howard says the stockholders will be able to save money on all goods purchased through the corporation, the majority of proprietary preparations being obtained at the manufacturers' net price, and in some cases at a lower figure. "This can be done," said Mr. Howard, "by combining the orders of stockholders on one article and purchasing a thousand gross or more of any one manufacturer's product. All stockholders are on a par. In the sundry line, the stockholder, in addition to the money saved in purchases will be able to get an exclusive line of goods that his competitors cannot handle and on which his profits will be greatly enhanced. Take for example a soap, which can be purchased in 5,000-gross lots under any name designated by the corporation. All goods are purchased for cash, and each stockholder sees samples of goods before remitting his purchase money to the secretary."

According to the prospectus the stockholders of the corporation will be protected against unscrupulous manufacturers, and an exchange market for unsalable products will be conducted by the secretary. The stockholder is said to get the full benefit of all discounts, as nothing is reserved for expenses, the stock assessments providing for these. The secretary is the only salaried official named in the prospectus, which says results will not be given before February or March 1, 1902, as it is necessary to compile statistics to show manufacturers exactly what amount of trade is represented in the different states. A list of the first one hundred subscribers is published in the prospectus, and contains the names of some of the most prominent and well-known retail druggists in the United States.

### "RED ALBUMEN" IN GREAT DEMAND.

**Another Scheme of the U. S. Salyx Co. Exposed.**

**Same Concern Exploited the Fraud "Black Pepsin" Some Years Ago.**

The wholesale druggists of New York have been literally deluged with orders for "red albumen" during the last week, and there seems to be no let up to the demand for the article. Some orders are received for "red albumen," some for blood albumen and others merely state that the article wanted is albumen. In almost every instance the wholesaler has been asked to "rush" the order, and numerous orders have been received by telegraph and invariably with the word "rush." The orders received have been for amounts of one pound up to as much as seventy-five pounds and have come from druggists in all parts of the United States. Many of the dealers have been supplying blood albumen where the customer has not specified "red albumen," and several thousand pounds of blood albumen have been sent to out-of-town druggists this last week. The unusual demand on the article was the cause of an advance in price. In most cases where the customer called for "red albumen" the dealer has written explaining that "nothing is known of the preparation, except that it is made by the United States Salyx Co., New Concord, Ohio, which fact is enough to condemn it without any investigation, as that concern exploited the now well known frauds "black pepsin" and "per algretta," which have been repeatedly exposed by the various pharmaceutical journals and the chemists of the Department of Agriculture, at Washington.

The cause of the extraordinary demand for "red albumen" is attributed to letters which have recently appeared in daily newspapers throughout the country. The letters are all worded exactly the same, and most

of them are signed, "Pharmacist," and dated New York City, November 27, 1901. The "letter" is addressed to the editor of the paper in which it appears, and tells of the writer hearing a lecture before the chemical class of the medical university where he was a student, in which the professor, while analyzing an egg, stated that "the reason hens did not lay as many eggs in winter as in summer was that in winter they could not get the necessary food to produce the yolk of the egg, and if farmers would feed their fowls powdered red albumen in winter they could have as many eggs as in summer." The writer then told how the "red albumen," which could be bought at any drug store for 60 cents a pound, should be mixed with black or red pepper, and some ground feed, half wheat-bran and half cornmeal. He also explained that his father and brother were farmers, and had fed their hens with this mixture, with excellent results and were making fine profits selling eggs.

Naturally, every farmer or person interested in fowls who read the article, rushed to the drug store for some "red albumen," and doubtless many of them were greatly surprised to find that the druggist could not supply the article. For some little time druggists were puzzled as to what caused the sudden demand for "red albumen," and orders were sent to the nearest jobbers "post haste." It was not long, however, till the "scheme" was unearthed, and it is said few druggists are supplying "red albumen," although many are still having a good sale for blood albumen.

That the scheme originated from the same source as did the "black pepsin," "per algretta," "compound extract of salyx," "hypersamphire" and similar fraudulent preparations which have been exposed in the Era, is evident from a circular recently received by wholesale druggists in this city, sent out over the name of the "U. S. Salyx Co., New Concord, Ohio." This circular says, "We will advertise red albumen \$100,000 worth this month, so you will surely have orders very soon. Red albumen will make hens lay all winter, no matter how cold it may be. It is a powder put up in five-pound packages, 20 packages to the case. Retail 60c a pound. Wholesale, \$2 a package, 40c a pound; 15 per cent. off to wholesale and jobbing trade." In the same circular are listed "Powdered Puri Viti, a powder for preserving fruit in a natural state without being heated or sealed," "Per Algretta," "Hypersamphire," "Compound Extract of Salyx" and "Zulu Vutier."

It is hardly necessary to state that as soon as the New York dealers found out the source of the so-called "red albumen," orders were not sent out, only those for blood albumen being filled.

The fraud "black pepsin," which was exposed in the Era, and on which a Government report was issued from Washington, was claimed by the makers, the "U. S. Salyx Co.," to increase the yield of butter. The preparation was shown to be composed of salt, annatto, rennet and organic matter, worth about 3 cents per two ounces, and which was supposed to retail at \$2.50 per two-ounce box.

It is said the "red albumen" sent out by the concern is composed of ground oyster shells and red pepper.

The same method of advertising "black pepsin" was used as has been employed in creating the demand for "red albumen." The company at that time, 1893, stated in a circular to the dealer that \$25,000 would be expended in advertising three specialties, one of which was "black pepsin."

## GERMAN APOTHECARIES SOCIETY.

### Annual Meeting and Election of Officers.

The annual meeting of the German Apothecaries Society of this city was held on Thursday evening, December 5, with President Charles F. Schlessner in the chair. The minutes of the previous meeting were read and approved and the annual reports of the various committees were received.

An invitation was received from Prof. Charles F. Chandler, for the members of the society to visit Columbia College some time in January. The invitation was

CHARLES H. GAUS, Mayor-Elect, ALBANY, N. Y.

Mr. Gaus is a well-known retail druggist at 202 Washington avenue, Albany, N. Y. He was elected mayor of the capital city, at the election held November 5, for a term of two years, beginning January 1 next. Although Mr. Gaus has always been actively engaged in the drug business, he has found time to serve his country and city in various official capacities. He was born in Ohio in 1840, and served as hospital steward during the Civil War. He has been a member of the National Guard of the State since 1880; and since 1886 to the present time has served continuously as Inspector of Small Arms Practice. He has served as a member of the County Board of Supervisors, member of the Albany School Board from 1880 to 1894, has been City Street Commissioner and President of the Board of Assessment and Taxation. He is a Director of the Park Bank, Mutual Insurance Company and the Albany Exchange Savings Bank of Albany. He has been a member of the American Pharmaceutical Association and of the New York State Pharmaceutical Association since 1870.

accepted, but no definite date for the visit was decided on. The principal business before the meeting was the election of officers for the coming year, which resulted as follows: President, Charles F. Schlessner; First-vice president, Carl Schur; Second-vice president, Oscar Goldman; Treasurer, Felix Hirseman; Recording secretary, Charles Klippert; Corresponding secretary, Sidney Faber; Archivist, George Leinecker, Librarian, George Stolzenburg; Board of Trustees, Carl Schur, Henry Imhof and Carl Kessler; Delegates to the American Pharmaceutical Association, Felix Hirseman, John M. Fisher, Henry Imhof, Charles Plump and George Kleinau; Committee on Legal Defence, Carl Schur, H. Imhof and Charles Klippert. Paul Arndt was made chairman of the committee on amusements.

### THIEVES VISIT DRUG STORE.

William D. Brown, senior clerk with druggist Joseph Weidenfeld, Third avenue, near 106th street, recently had an interesting experience which will not be forgotten by him for some time. Mr. Brown sleeps in the building near the drug store, and about half past one o'clock, on the morning of November 29, Mr. Brown was awakened by three sharp rings from the night-bell, which is connected with his room for customers' convenience. He answered the call immediately, and found a well-dressed man at the door, who expressed a desire to have a prescription filled. The prescription called for twelve powders, to be made of three grains of morphine and one-half dram of pepsin, and while putting up the powders another man walked into the store. The first caller

stood by the prescription case and the other man, thinking he was unnoticed, proceeded to help himself to articles on the show cases. Mr. Brown saw him and at once locked the store door. The man paid for his prescription and proceeded to depart, but was confronted with a revolver in the hands of the clerk, who explained to the gentlemen that he had treated them fairly, not having made any extra charge for the prescription on account of its being a night call, as he could legitimately do if he wished. He had noticed that the second man to enter had been passing goods to the first, and concluded they were accomplices. It took little persuasion to induce the thieves to give up the stolen goods, as the revolver which, by the way, Mr. Brown says was not loaded, commanded the respect of the visitors. The thieves returned the articles and begged Mr. Brown to say nothing more of the matter, and after debating with himself as to what was best to do Mr. Brown allowed the culprits to depart. It is thought the same men attempted to gain entrance to another store on Third avenue, but were unable to do so. Mr. Brown is a graduate of the New York College of Pharmacy, '95, and has been senior clerk with Mr. Weidenfeld for several years.

#### N. Y. C. P. ALUMNI DINNER.

The annual dinner of the Alumni Society of the New York College of Pharmacy held Wednesday eve, December 4 was pronounced the most successful ever held and the attendance was the largest on record, there being eighty-two guests at the tables. The dinner was held at the "Arena," on Thirty-first street, near Broadway.

President Charles S. Erb, acted as toastmaster and some of the speakers were: Prof. Charles F. Chandler, Dr. Henry H. Rusby, Prof. V. Coblenz, Ernest Molwitz, Dr. F. C. Tutthill, Ewen McIntyre and Arthur C. Searles. Excellent music was provided during the evening and the dinner was all that could be desired.

The members of the committee in charge of the dinner were: B. R. Dauscha, chairman, R. H. Timmerman and E. F. Pfaff.

#### WHOLESALE DRUG TRADE BOWLING ASSOCIATION.

The results of last Saturday's bowling games of the Wholesale Drug Trade Bowling Association were as follows: Roessler & Hasslacher Chemical Co., 715, against Colgate & Co., 855; Johnson & Johnson, 816, against the Roessler & Hasslacher Chemical Co., 632; Johnson & Johnson, 840, against Colgate & Co., 812; Church & Dwight Co., 779, against Powers & Weightman, 645; Powers & Weightman, 745, against Parke Davis & Co., 836; Church & Dwight Co., 783, against Parke, Davis & Co., 830. The Dodge & Olcott team is still in the lead, having won eight games and only lost two, with 861 as the highest score rolled by any team in the league. Johnson & Johnson's team is a close second, with seven games won and three lost, and 851 the highest score.

#### ELI LILLY & CO. TO OPEN N. Y. BRANCH.

Eli Lilly & Co., Indianapolis, Ind., will open a branch office in New York City, at No. 133 William street, about January 1.

Charles J. Lynn, who is at present stopping at the St. George Hotel, Brooklyn, will manage the new branch and have charge of the Eastern trade, directing the traveling salesmen throughout the East from this city.

Mr. Lynn is well known in drug circles throughout the West, and is not a total stranger in the East, having made several trips here in his firm's interests. A full stock of the firm's preparations will be carried at the New York branch, and the company will have representatives in all the eastern states.

#### MRS. ROBERT K. SMITHER OBTAINS DIVORCE.

Mrs. Lucretia C. Smither has obtained an absolute divorce from her husband Robert K. Smither, the well known retail druggist of Buffalo and president of the New York State Board of Pharmacy. The allegations in the petition for divorce are made on statutory grounds. The decree of the court gives Mrs. Smither the right to

remarry, awards her the custody of the only child of the union, and besides giving her the residence and property at No. 456 Elmwood avenue, Buffalo, orders Mr. Smither to pay her \$125 alimony on the first day of each month.

#### NOTES.

—The following retail druggists were among the visitors in New York during the past week: Joseph K. Brown, of Rousseau & Brown, Woonsocket, R. I.; Franklin C. Burk, Flemington, N. Y.; W. H. Jones, Stamford, Conn.; H. Allen, of the L. Rockefeller Co., Englewood, N. J.; L. J. Schlesinger, Yonkers, N. Y.; Mr. Russell, of Russell & Lawrie, Tarrytown, N. Y.; R. S. Matthews, Atlantic Highlands, N. J.; T. N. Benjamin, of M. F. Benjamin's Sons, River Head, L. I.; Charles A. Rapelye, Hartford, Conn.; J. K. Smith, Brewster, N. Y.; Mr. Young, of Lee & Osgood, Norwich, Conn.; C. F. Freeman, of the Naugatuck Drug Co., Naugatuck, Conn.; H. J. Steiner, Norwich, Conn.; Charles H. Hall, Plainfield, N. J.; J. B. Johnson, manager of C. A. Pettinger's pharmacy, Englishtown, N. J.; W. B. Duryee, Freehold, N. J., and C. F. Pinks of the Meriden Drug Co., Meriden, Conn.

—C. M. Thompson, a retail druggist of Derby, Conn., is having trouble with the financial end of his business and is now offering, through his lawyer, to settle with his creditors by paying 25 cents on the dollar. The lawyer announces the offer with the information that if it is accepted and a settlement made the business will be continued, but otherwise the druggist will be compelled to close all accounts and discontinue business. It is said the business has been conducted on borrowed money and that the party who furnished the funds recently died, necessitating the closing up of his estate. Hence the druggist's present financial troubles.

—Joseph Cadon, has put in a plea of guilty and is to be sentenced by Judge Newburger in the Court of General Sessions tomorrow (Friday). Cadon was arrested at the instance of the State Board of Pharmacy, September 6, and charged with perjury. He at first pleaded "not guilty" but later changed this to one of "guilty." Sentence was to have been pronounced Wednesday, December 4, but for some reason was deferred. Cadon is now in the Tombs and it is said his friends are using every available influence to have the sentence made light.

—The "Peoples' Drug Store," conducted at No. 2284 Eight avenue by Jacques A. Carpentier, is now a thing of the past. The landlord dispossessed his tenant and Mr. Carpentier's stock and fixtures were put on the sidewalk. C. N. Crittenden & Co., seized the goods, as they hold a mortgage on them, as well as on some of the druggist's household effects.

—Fred. A. Gonya, of Doe & Gonya, proprietors of drug stores at Palm Beach, Fla., and Bar Harbor, Me., was in the city a few days last week and called on his friends. He was accompanied by Mrs. Gonya, a bride of four weeks. The couple sailed for Jacksonville, Fla., December 4, and will spend the winter at Palm Beach.

—The Wassell Pharmacy is about to establish another branch store at the corner of Broadway and 39rd street. At present there are two stores known as the Wassell Pharmacy, at No. 1932 Madison avenue and No. 961 Columbus avenue. Possibly the stock of one of the latter will be moved to the new branch.

—Henry Klein, of Cardington, Ohio, was in the city last week making calls in the trade. Mr. Klein is a representative of the Cardington Novelty Co., manufacturers of specialties in store fixtures and wooden novelties and is the inventor of many articles used in fitting modern stores.

—J. L. Buell, of Marletta, Ohio, for some time representative in Texas for Parke, Davis & Co., is in the city and will soon start on a trip in the Eastern States for his firm. M. O. Martin, Eastern Pennsylvania representative of the same house is also in New York.

—Theodore D. Buhl, of Detroit, president of Parke, Davis & Co., with Mrs. Buhl was a visitor in the city last week, and stopped at the Waldorf. Mr. Buhl was entertained at the Drug Club by Col. E. W. Fitch, manager of Parke, Davis & Co.'s New York branch.

—E. D. Paxson, druggist at No. 1449 Broadway has issued an announcement to the effect that the drug business conducted at that number will hereafter be under

the firm name of E. D. Paxson & Co., Incorporated, but the management will be the same as heretofore.

—Dr. Bernard Heyunga, proprietor of the pharmacy at No. 1195 Second avenue, was fined fifty dollars on November 29 for violating the pharmacy law. He was charged by the Board of Pharmacy with leaving an unregistered clerk in charge of the store.

—Frank K. Gano has opened a drug store at Long Branch, N. J. He was formerly with druggist J. T. Britton of that city, and is well known in the vicinity. Mr. Gano was in New York several days last week, making purchases for his store.

—Dr. Louis Merck of the drug and chemical house of E. Merck, Darmstadt, Germany, arrived in New York on the steamer Kronprinz Wilhelm last week. Emil Levi, of C. F. Boehringer & Soehne returned from his European trip on the same boat.

—J. C. Burgess, of the Charleston Drug Co., Charleston, S. C., was in the city last week making purchases for his house, which is about to establish a wholesale drug business in Charleston, in the building formerly occupied by Dr. H. Baer.

—William S. Mersereau, of Schieffelin & Co., sailed on the Campania last Saturday for Europe. Mr. Mersereau will probably be absent about two months and expects to visit the principal business centres of England and the continent.

—C. V. Losee, proprietor of the drug store at No. 1123 Lexington avenue, corner of 78th street has purchased the store at No. 51 Catherine and will conduct it as a branch of his present business.

—John C. Whiteley has opened a drug store at Third avenue and 91st street, Fort Hamilton, Brooklyn. Mr. Whiteley was formerly with Koehler's Prescription Pharmacy, Court street, Brooklyn.

—W. B. Ackerson, for a long time proprietor of the drug store at No. 823 Lafayette avenue, Brooklyn, has sold the business to Cornell & Campbell, druggists at No. 71 Reid avenue, Brooklyn.

—E. E. Fisher, a well known retail druggist of Bridgeport, Conn., is offering his store for sale. Mr. Fisher intends entering the wholesale crockery and glassware business in Buffalo.

—Henry Phalon, of "night blooming cereus" fame, is in the city and has announced his intention to place another toilet article on the market in the near future.

## IN AND ABOUT BOSTON.

### DRUGGISTS CANDIDATES FOR PUBLIC OFFICE.

Boston, Dec. 7.—Several druggists in this city are just now on the "anxious seat," because they are candidates for public office, in the coming municipal election. In years past representatives of the drug trade have often been identified with the city government with much credit to themselves and benefit to their fellowmen. Among this year's Democratic candidates for Alderman is William B. Heath, a descendant of Gen. William Heath of Revolutionary fame, and a relative of the late Charles Sumner. Mr. Heath is a graduate of the Massachusetts College of Pharmacy, and for many years has been a druggist in Jamaica Plain. Mr. Heath is pledged to five-cent fares, the improvement of streets, promotion of public play-grounds, and the immediate erection of new school-houses and an engine-house. Among the Republican candidates for the Common Council are Frank E. Gaylord, of Ward 12, an apothecary at 1381 Washington street; he is a candidate for re-election; William M. Curtis, who is a candidate for re-election, is an apothecary at 2980 Washington street, and Frank H. Howe, candidate from Ward 25 for a third term. He is a member of the firm of William A. Howe & Co., apothecaries, 14 Franklin street, Allston.

### DEMAND FOR VACCINE POINTS.

Boston, Dec. 7.—Although the cases of small-pox have decreased somewhat in number, there still is felt the general alarm recently awakened by the spread of this dreaded disease, therefore the druggists hereabout continue to do a great business in selling all that the pre-

vention of the malady calls for. Vaccine points, shields, absorbent cottons, adhesive plaster in strips, salves and like things have been in great demand and the wholesalers cannot nearly supply the retailers with all that they order along this line. In the general market trade in drugs has been only of moderate proportions, consequently no material changes in prices are found. Chemicals show greater activity, as a class, with a brisk call for many lines, manufacturers needing much just at this time. A firm tone marks alcohols, which keep rather steady, with fairly good business. Much the same may be said regarding tanning materials and dyestuffs. In hops, the demand is measured by what is actually needed by consumers who are keeping close watch on the prices. Waxes are not as all a prominent figure in the market, so quiet are they as a class.

### HOLYOKE DRUGGISTS TAKEN IN.

Boston, Dec. 7.—Holyoke druggists appear to have been taken in by a clever rogue who visited their stores recently, representing himself as the agent of the Franco-American Chemical Company, and he had little difficulty in selling the druggists more or less of what he stated to be the Dr. Coderre Pills, manufactured by this company. Later, owing to a bit of detective work of a young woman sent to visit about every drug store in Holyoke, some of the druggists found themselves in a peculiar position, with attachments served upon their stores and goods. It appears that the young man who sold the goods was wholly unauthorized and irresponsible, so the Franco-American Company claims, and it was in their interests and for their protection that the attachments were filed. They claim that the pills are forgeries and not by any means genuine, although the druggists acted with perfect innocence in buying them for the real thing. Holyoke druggists as a class are not of course the kind or men to buy fraudulent articles nor would they knowingly sell such goods to their customers.

### DRUGGISTS SUED FOR \$3,000.

Boston, Dec. 7.—A recent case which came into the courts is that in which Charles W. Spear of Westfield brings an action of tort, seeking damages to the amount of \$3,000, against which Frank S. Mason, Sarah S. Mason and George J. Schirck, all of that town, are made the defendants, being owners of a drug store at which the plaintiff claims he was given tincture of belladonna instead of tincture of burdock, for which he asked. The plaintiff naturally did not know the difference in the two tinctures, relying wholly upon the responsibility of the druggists in the matter. He alleges that, after taking a part of the contents of the bottle, he suffered some ill effects and required the services of two doctors to attend him. He stated in court that he is now troubled with nervous twitching of muscles and that his eyes have been affected as a result of the medicine which he took.

### NOTES.

—The funeral of Edward Carroll, whose death on Thanksgiving morning was caused by gas leaking from a street main into the drug store of the H. O. Nute Company, on Columbus avenue, corner of Dartmouth street, where he was employed, was held in Worcester, the service taking place in the Catholic Cathedral of that city. Several lawsuits directed against the Boston Gas-light Company for damages claimed in connection with the break in the company's main are likely to be brought soon. The H. O. Nute Company has a claim for damages in the hands of a lawyer who will also act for a number of individual victims. The drug people claim that they were practically unable to do business all Thanksgiving Day as a result of the break, and that their stock was damaged. Mr. Nute has intimated that suit may be brought against the gas company in behalf of Carroll's heirs.

—Three months in the House of Correction was meted out to a man charged with disorderly conduct and the breaking of several plates of glass in the windows of Putnam's drug store, corner of Henley and Park streets, in the Charlestown district of this city. A clerk saw the man crossing the street and locked the door so that he

could not enter the store, it being evident that he was under the influence of liquor. The man did not like this treatment and proceeded to smash the windows in front of the store. When the court found him guilty and sentenced him to three months, he appealed from this decision and was held under bonds to the amount of \$100. —As to the outcome of the recent great raid on the drug store of Thomas Joyce & Co., druggists at 141 West Broadway, South Boston, P. J. Cuddy, a partner in the firm, who was arrested, has been fined \$100 for violation of the liquor laws. Thomas Joyce, whose name was also on the indictment, was discharged. The evidence in the case was heard in the South Boston court, before Judge Noyes. The penalty was imposed for two offences—\$50 for selling liquor and \$50 for keeping and exposing it for sale.

—The entire stock of Edward A. Wood's drug store at the corner of Centre and Parker streets, in the Boylston station part of this city, has been purchased by George R. Pierce for his pharmacy at the corner of Lamartine and Paul Gove streets, in that same district, to which place the stock has been transferred. Frank F. Ernst, who has a drug store at Lamartine street, has leased the former Wood's store and recently has opened it with an entirely new stock of goods.

—N. Lawton Graves, who petitioned for permission to erect a post with an illuminated druggist's mortar on it in front of his pharmacy at 569 Tremont street, this city, has been "thrown down." The Board of Aldermen voted the desired permission, but Mayor Hart vetoed the request and refused his approval for the reason that, in the opinion of the corporation counsel, the vote of the aldermen was contrary to Statute 1898, Chapter 352, and is therefore illegal.

—Frank W. Simard, a Clinton druggist, has moved from his location on High street, the main business thoroughfare of that town, to a much better location nearer the active business section. This brings the druggist back to a location which he had when he first opened for business in Clinton, from which he removed to the theatre building in which he was burned out, seeking then the place from which he has just moved back to his original store.

—On the charge of maintaining a liquor nuisance, Howard L. Horton, manager of the Carter Drug Company's store on Main street, in Peabody, has been in court where he pleaded *nolo contendere*. He was held in \$300 bonds until sentence shall be imposed. At the time of the raid a thorough search of the premises brought to light six gallons of whiskey in one keg, a jug and twelve bottles, also some gin in another jug.

—Owing to the fact that his health has been far from the best for some time past, George H. Colton, who for a number of years has been a member of the firm conducting the old-time pharmacy of the H. and J. Brewer Company, at the corner of Main and Sanford streets, in Springfield, has retired from business to private life.

—Millbury people now have additional drug store facilities in the reopening this week of the pharmacy of the late Frank Collins, which E. R. Mitchell of the Buffington Company of Worcester bought at the recent auction sale of the place. H. C. Holden, representing the same company, is installed as manager.

—A voluntary petition in bankruptcy has been filed by Frederick L. Breed, a druggist of Fairhaven, who owes his creditors about \$7,000 in round numbers, against which he has assets of a little more than \$1,600. Mr. Breed has been offered, and has taken, a position in a pharmacy at New Bedford.

—A new enterprise is the Pine Tree Needle Company, organized with a capital stock of \$10,000, none of which, however, has yet been paid in. The company proposes to make and deal in medicine, toilet and general sanitary preparations. W. D. Cram of Haverhill is president and treasurer of the company.

—On account of the removal of his home to Westfield, where he is interested in the drug business, T. J. Dewey, Jr., who for nearly five years has managed the former Balch pharmacy on Centre street in Chicopee, has closed that place, removing the goods to Westfield.

## PHILADELPHIA.

### P. A. R. D. SMOKER A GREAT SUCCESS.

Philadelphia, December 7.—Laying aside pestle and pill-tile for the nonce, and checking all local animosities with their coats at the hat room, Philadelphia druggists came together last Friday night for a good time, as guests of the P. A. R. D. at a "Smoker" given at the North Broad street Drawing Rooms—and they had it, regardless of everything else. Supporters of the "Tripartite" and the "Worcester" plans got together on a plan of their own, a plan to have a good time, while even the chronic kickers could not, for once, find anything to exercise their talents on. And the "rank and file?" If there was a druggist there who did not go home in a good humor with himself and the world in general it was because he had forgotten how to do it from long selling of postage stamps. Seriously speaking, the affair was an unqualified success and reflects the greatest credit upon the members of the entertainment committee whose idea it was; the one comment heard all over the hall was that such a "smoker" ought to be given at least every three months. It is too early to speak of the benefits that will come from this affair, they will be seen later in an increased confidence between druggists, a getting-together of all for the common work and a feeling of goodfellowship that will make possible any concerted plan of action. The sight of hitherto bitter competitors hobnobbing together over a glass of beer and of men who had "cut" each other for months jollyng one another with good old jokes was a common one all over the hall, men who had only known one another as the "cutter on the next corner" swapped experiences and found out that both were "all right," and the few hours of jollity swept away, forever it is hoped, misunderstandings and jealousies of years. A dozen stilted meetings could not do a tithe of what the "smoker" has done for Philadelphia druggists.

Several hundred of Philadelphia's "finest" had arrived by the time the first number of the programme began, from that time on there was a steady stream coming and going, many druggists unable to obtain relief closing their stores earlier so as to attend. For the entertainment of their guests, the Entertainment Committee provided a programme of "sketch acts," topical songs, monologues and dancing by talented vaudeville performers, every number of which had in it some bit of fun that brought down the house. The climax of merriment was reached when a song to the tune of "There'll Be A Hot Time in the Old Town To-Night" was sung from the stage by one of the performers. In this clever skit, the foibles of prominent members of the P. A. R. D. were told in witty verses, with a chorus of "There'll be a hot time at election next month" that was joined in by every man present who could, or thought he could, sing. The prevailing humor of Philadelphia druggists was plainly shown by the shouts which greeted the verse praising the "Worcester Plan"—that brought up a standing chorus. The inner man was beautifully provided for as well as his outer faculties. At the door, J. L. White, of "Worcester Plan" fame, presided over a capacious bowl of "grape punch" made from the new Waterman Grape Food, which was dealt out liberally to the thirsty guests. In an ante-room was set a table loaded with all sorts of "cold lunch," to be washed down with the plentiful draughts of bottled beer served without stint, a feature very popular this proved, while each member of the entertainment committee circulated himself and a box of "Cubanola" cigars around the hall, looking for "stumps" to replace with fresh cigars. The arrangements were perfect, coats and hats were checked free by skillful attendants, plenty of comfortable seats were ready for the weary and not a detail that would add to the comfort and enjoyment was lacking.

Among the many out-of-town people who enjoyed the hospitality of the P. A. R. D. were Messrs. Keene, president of the Klines' County Druggists' Association, Burton and Barrett, Camden Druggists' Association, Harvey of Wilmington, Ross and Pritchett of Norristown, and Dalton of Chester, these representing their respective associa-

tions here. A number of local and out-of-town people connected with the drug trade also availed themselves of the privilege of the one hundred paid tickets issued by the committee.

#### THE STATE BOARD AGAIN ACTIVE.

Philadelphia, Dec. 7.—Further developments in the present campaign of the State Pharmaceutical Examining Board against violators of the pharmacy laws seem to indicate that there is trouble ahead. The Philadelphia agent of the Board, a Mr. Paul, a Girard avenue druggist, is now actively engaged in visiting drug stores to ascertain if the provisions of the law are being strictly obeyed, particularly as to the employment of unregistered clerks and the sale of poisons. Druggists must understand that the fact that they may be in the store will not excuse them from the consequences of the sale of poison over the counter by an unregistered clerk, nor can they leave such men in charge to compound prescriptions even only an hour or so. To save Era readers from possible trouble the following "tips" are given. The sale of carbolic acid by unregistered clerks is being made the test, the purchaser waiting sometimes until the proprietor goes out and then goes in the store and asks for carbolic acid from the clerk in charge. A prescription containing morphine, or some other poisonous alkaloid, is handed in, asked to be filled, and if filled, note is made and the clerk so filling it is asked to show his certificate. Prominent display of the certificates of registration of all employees in the store must be made, but the display of the certificate of a former owner or employe will be a violation of the law and will be made ground for suit. The Board is now demanding the display of the last renewal receipts, and while the legality of this demand is questioned, it will be wise to comply with it. Inspection of the "poison register" may be made without notice, also the sale of liquors not according to law. These points should be made the text of an immediate "house cleaning" by every druggist if he would avoid a law suit and possible trouble and expense. This is no "crusade," simply an inspection to comply with the law requiring the Board to do so, and there will be no prosecutions on technical grounds, only for actual violations of the pharmacy law. However, where violations are found the druggist can blame no one but himself.

#### BUSINESS STEADY AND QUIET.

Philadelphia, Dec. 7.—Business conditions remain about the same as last week, steady and a bit quiet in most sections with a slight increase in the Northwestern. Hot soda has been a good seller during the week on account of the cold weather, the demand being chiefly for chocolate, coffee and beef-tea. Flannel and chamols "chest-protectors" are being prominently displayed in many stores and sales are reported as being pretty brisk just now, probably owing to a recent newspaper article recommending these as a preventive of consumption. There is a decrease in the number of cases of small-pox this week, 72, as compared with 113 last week. The new cases are mainly in the Twelfth, Eighteenth, Nineteenth, Twenty-eighth, Thirty-third and Thirty-seventh wards, only four cases are noted south of Market street and three in West Philadelphia. The recent tetanus scare over in Camden is responsible for a heavy falling off in the sale of vaccine, many people fearing to risk vaccination for their children. However, practically the rush for vaccination is over, so the scare will not cause local druggists much loss. The week has been without notable change in the wholesale district.

#### NOTES.

—Owing to the continuance of small-pox in Philadelphia the city has decided to offer free vaccination to all persons so desiring. Forty doctors under Dr. W. M. Angney began their labors today (Saturday) with a house to house visit in certain sections. The Health Officials are also distributing circulars urging the necessity of vac-

ination for everyone, and addresses are given where free vaccination may be obtained, and vigorous efforts are being made to dispel the alarm from the Camden tetanus cases. The truth of the matter is that Philadelphia has a severe small-pox epidemic and the sooner her citizens realize the fact the better for them. Druggists owe a duty to the community to urge vaccination on all their customers and should even give away vaccine to the very poor if necessary.

—The firm of Keasbey & Mattison, well known to the drug trade as pioneers in the manufacture of magnesia compounds, have subscribed \$25,000 to the new medical laboratories of the University of Pennsylvania, under date of No. 26 last. Dr. R. V. Mattison of this firm, is a graduate of the Department of Medicine, U. P., class of 1879. Now let some of our "patent medicine" proprietors or manufacturing druggists who have grown rich through the retail druggists follow the example and give substantial donations to our colleges of pharmacy.

—The members of the Philadelphia Drug Bowling League who went to New York to bowl out the New Yorkers and got "bowled" out in the flowing bowl of the banquet are once more in good trim and threaten all sorts of things to the N. Y.'s. Every Tuesday evening games are rolled off between the contesting teams, the club house at Ninth and Walnut streets being the rendezvous. A complete schedule of games will soon be given out.

—The December "Pharmaceutical Meeting" of the Philadelphia College of Pharmacy will be held Tuesday, Dec. 17, at 3.00 P. M. The following programme has been provided: "The Origin, History and Influence of State Pharmaceutical Associations," by Jos. L. Lemberger, Ph. M.; "The Pharmacological Assay of Drugs," by Dr. A. R. Cushny, University of Michigan; "A Useful Method of Filling Capsules with Essential Oils," by Wm. G. Toplis. Various exhibits and other papers are expected.

—It is stated that the suit entered by Dr. Garst through the P. A. R. D. to test the legality of the "Worcester Plan" in this State is progressing very favorably. There is an urgent need of more funds for the near future and subscriptions are asked for from druggists interested. All subscriptions and cash should be sent to Chas. Lecdom, 1403 Filbert street, City.

—Through the aid of about 50 students of the Princeton Theological Department, Wm. E. Burke, a Princeton druggist, captured a burglar in his house a few nights ago. Returning from an out-of-town trip the druggist noticed a light in his house and called on the students for help, the house was entered and the bold burglar surrendered without resistance.

—The drug store owned for many years by A. F. Merrill & Co. has been sold by the surviving member of the firm to J. E. Winger, a former clerk. Since the death of Dr. Merrill some time ago this store has been quietly offered for sale, and as it has a fine location and trade, is a very good investment.

—An overheated stove caused a fire in the drug store of A. Roidot, Vine street above Eighth, last Tuesday, the loss amounting to about \$800. The upper floors of the building are used as a lodging house, and the smoke that filled the stairways narrowly escaped causing a panic.

—Lewis Haven's Sons new building at 528 Arch street for the firm of G. D. Feidt & Co. is rapidly nearing completion. This improvement will be used as a warehouse and stock room for drugs and druggists' supplies, and will contain all the modern improvements.

—G. H. Rolland has sold his drug store at Second and Wharton streets to parties who are now conducting it under the name of the "Wharton Pharmacy."

We call attention to an attractive little advertisement of the Antiseptic Corn File, on another page, made by the Antiseptic File Co., Springfield, Mass. They want some salesmen who cover the drug trade, to handle this File as a side line. It means practically no addition to the salesman's outfit, and is a little appliance that practically sells itself. Liberal commissions are paid.

## BALTIMORE.

### DRUGGIST C. V. EMICH ASSIGNS.

Baltimore, Dec. 7.—The news that Columbus V. Emich, perhaps the oldest druggist in Baltimore, has been forced to make an assignment for the benefit of his creditors will awaken general regret. For some time past rumors about increasing financial difficulties have been in circulation, but it was hoped that he would be able to extricate himself. That he should face serious embarrassments at his time of life will be deplored by all. Mr. Emich has been located at 423 North Howard street for fifty-two years. The store was one of the old landmarks of what at one time constituted the most fashionable section of the city, and from first to last it has been housed in a building suggestive of the early history of Baltimore. The spirit of innovation never touched it, the place presenting much the same appearance it did several generations ago. Even the sign J. H. Perkins & Co., the former proprietors, weather-beaten and old-fashioned, was allowed to remain. About two years ago Mr. Emich celebrated the fiftieth anniversary of his entrance into the drug business, and on this occasion a number of his associates and friends presented to him a silver loving cup and gave a banquet in his honor. The firmness and permanency of Mr. Emich's attachments are also evidenced in the fact that the clerk who assisted him in the business has been there for over twenty-five years.

The assignment was to James W. Denny, trustee, who bonded in the sum of \$5,000, double the estimated value of the assets. If the pharmacy is closed one of the oldest and certainly the quietest establishments of its kind in the city will have disappeared.

### WITH THE HOWLERS.

Baltimore, Dec. 7.—The onward march of the Sharp & Dohme quintette in the Baltimore Drug Trade Bowling Club was slightly checked last Tuesday evening, when the Root and Herbs took two of the three games with 816, 816 and 714 against 765, 715 and 732 points. The Root and Herbs are the most formidable competitor of the leaders in the race for the cup and the contests between these two teams are always pulled off at high pressure. Last night James Bally & Son and the Armstrong Cork Company tried conclusions with the result that former took two of the three games by 772, 708 and 781 against 667, 780 and 676. The Armstrong five are progressing satisfactorily. At first some members of the team were unable to get the ball down the alley without rolling into the gutter, but now they make very creditable tallies. The several teams are now in the following positions:

| Teams.                     | Games won. | Games lost. | Per cent. |
|----------------------------|------------|-------------|-----------|
| Sharp & Dohme .....        | 14         | 4           | .778      |
| Root and Herbs .....       | 14         | 4           | .778      |
| James Bally & Son .....    | 11         | 7           | .611      |
| McCormick & Co. ....       | 7          | 8           | .467      |
| Stanley & Brown Drug Co. . | 8          | 10          | .444      |
| Armstrong Cork Company . . | 5          | 13          | .278      |
| Perrall & Kellam Co. ....  | 1          | 14          | .067      |

### WEDGEWOOD CLUB ELECTS OFFICERS.

Baltimore, Dec. 6.—The Wedgewood Club, that organization of jovial pharmacists which has attained great popularity since its formation, several years ago, held what might be aptly termed a joint meeting last night at the Eutaw House. This meeting represented a postponement of the regular November gathering and an advance of the date for the December assemblage on account of the holidays. Officers were elected and other business was disposed of. A speech which Dr. John F. Hancock had prepared himself to deliver was made by Messrs. Robert E. Lee Hall and H. P. Hynson, Mr. Hall distinguishing himself besides by some home-made poetry. Mr. Hynson astonished the company by singing a song, but his auditors have not yet been able to decide whether he belongs in the class of bassos, bartones or tenors. J. Webb Foster, the "poet-ariat," was unanimously re-elected secretary. Dr. A. J. Corning, Dr. John F. Hancock and Owen C. Smith are the new executive committee. The guests of the evening included Dr. R. H. C. Ellis, Dr. W. J. McDonald, Dr. A. J. Dietrich and A. C. Harrison.

### JOBBERS BUSY AND TRADE FAIRLY ACTIVE.

Baltimore, December 9.—The past week was in the main rather a busy one for jobbers, a condition largely due to the fact that it constituted the beginning of the month. But the detail men who work in the city generally report that business is fairly active, and that the volume of transactions is large for this period of the year. The manufacturers of pharmaceuticals are also able to keep their laboratories fully occupied. The close of the year is not less favorable than the part already expired has been, and all classes of the drug trade have every reason to be satisfied. No changes of note have developed in the market for botanicals during the past week, the tendency in leading articles still being upward. Christmas goods have made their appearance in the windows of druggists, but from present indications the volume of this business will not assume large proportions.

### LOVING CUP FOR DR. HOFFMANN.

Baltimore, December 6.—The employees of the Virginia-Carolina Chemical Company's works, at Savannah, have presented to their former superintendent, Dr. P. C. Hoffman, a handsome silver loving cup, accompanied by a memorial, in which reference was made to the pleasant relations which had always existed between employer and employee during his management.

Dr. Hoffman has just finished the construction and put into successful operation the new sulphuric acid works, which embody the latest improvements. The process used is his invention, and is being gradually adopted in all the principal works of the Virginia-Carolina Company. The doctor, who remodeled and was for a number of years in charge of the Virginia-Carolina Chemical Company's Baltimore works, has left for Savannah to take charge there. He has been appointed manager of the entire sulphuric acid production.

### NOTES.

—The proceedings of the Maryland Pharmaceutical Association, at the annual meeting, at Ocean City, have been printed in pamphlet form. They make a brochure of over 200 pages, and embody much interesting information. The transactions at the various sessions are given in detail, and there is a list of officers and members, together with sketches of the members who died during the year, half-tone portraits of officers and members and other matters. An account of the last semi-annual meeting is added, the material being gotten up in attractive form and showing careful scrutiny in its preparation for the printer. The date of the next annual meeting is given as June 17, at the Blue Mountain House.

—Extensive improvements are being made in the Hablston pharmacy, Baltimore and Gay streets, of which A. O. Brickman is the manager. New fixtures of cherry, artistically carved, are being installed and the counters will be of crystal, so as to afford the largest opportunities for displaying goods. The interior will undergo a thorough renovation, and the improvements, when completed, will make the store one of the most attractive in the city.

—Among the out-of-town visitors in Baltimore last week was Charles Summers, of Alexandria, Va.

There is "more truth than poetry" in the advertisement of Swindell Bros. They say the most important thing about putting your goods on the market is getting people to look at them. Every druggist will concede this, and those who have put up perfumes in Swindell's stoppered ware have doubtless been convinced that the container has a lot to do with the sale of the goods. This concern, makers of the well known "Brawner Patent Stopper," supply all kinds of glassware for druggists and a postal card will bring you a catalogue and price list. Address Swindell Bros., No. 10 E. Lombard street, Baltimore, Md.

## DETROIT AND MICHIGAN.

Detroit, December 7.

—Although the following information can hardly be construed as strictly Michigan news, yet it is deemed appropriate to mention that W. T. Case, for a great many years representing the interests of Messrs. C. F. Boehringer & Sons in the United States, has found it necessary to resign his position on account of falling health and he has returned to England and will undoubtedly never return to the United States. Mr. Case has many warm friends in this State who will be much grieved to learn the news of his poor health.

—A decision of much interest to the pharmacists of Michigan was recently handed down by the Supreme Court to the effect that a druggist who sells liquor to a minor without a written order from the parents or guardian of such minor is open to conviction under the statutes regulating this traffic. A pharmacist of Van Buren county was recently convicted under this law, and it behooves the druggists of the State to exercise great caution in the future in order not to become involved in serious complications.

—The pharmacists of Detroit are getting together with the object of endeavoring to have a law passed which will provide compensation for the druggist who attends emergency cases, and also to cover the value of the medicine furnished at such a time. A similar law is under consideration in a number of other States, and seems to meet with the approval of a majority of the druggists in this city.

—Among the most prominent druggists of the State who visited Detroit the past week were Thomas Murdock of Northville; T. H. McGee of Farmington; C. B. Stoddard of Monroe; S. E. Bingham of Ortonville, who made extensive purchases of goods for the holiday trade.

—Plans and specifications have been approved for a considerable addition to the buildings now occupied by Parke, Davis & Co., and ground will be broken in a short time. The new Science Laboratory is under roof and the work is being rapidly pushed to completion.

—C. E. Kellogg of Grand Rapids has purchased the drug store of Messrs. Northrop Bros. at the corner of North College avenue and Leonard street, and will remove the stock and fixtures to the corner of North College avenue and Carrier street.

—Governor Bliss has appointed Arthur H. Webber, Cadillac, a member of the State Board of Pharmacy for the term of four years from Jan. 1, 1902 to succeed L. E. Reynolds of Benton Harbor.

—Dr. Ezra I. Larned is making a visit in Detroit this week and will shortly return to Chicago where he is acting in the capacity of special representative for Parke, Davis & Co.

—A. J. Staudt, Philadelphia representative for Messrs. Parke, Davis & Co., stopped over in Detroit one day last week as he was returning from a visit to his home at Aurora, Ill.

—Wm. Hutchings of Leslie, and Charles Crawford of Caseville, well-known pharmacists of the State, were in Detroit the last week on a buying trip.

—Thomas P. Cook, manager of the New York Quinine & Chemical Works paid one of his flying visits to Detroit during the past week.

Druggists desiring a reliable cash register at a reasonable price will do well to communicate with the Standard Cash Register Co., Wabash, Ind. This company also makes cash register paper of all kinds and guarantees the quality and prices. Before purchasing your next supply of paper, get the price list of the Standard Co.

Before laying in a stock of licorice the quotations of W. G. Dean & Son, Nos. 361-363 Washington street, New York, should be consulted. The licorice paste, sticks and lozenges manufactured by this company are well known and the prices offered should be an inducement to any druggist.

## CHICAGO.

DRUG TRADE CLUB'S ANNUAL MEETING.

Chicago, Dec. 7.—The annual meeting of the Chicago Drug Trade Club was held on Thursday, Dec. 5, the election of officers taking place in the afternoon and the installation of the newly elected officers in the evening. The following officers were elected for the ensuing year:

E. H. Buehler, president; Charles E. Matthews, first vice-president; J. Walker Scofield, second vice-president; Romaine Pierson, treasurer, and Frank S. Hereth, secretary. Trustees for the three year term were elected as follows: Charles E. Matthews, H. A. Antram, S. T. Mather, Arthur Dawson, E. T. Van Alen, E. D. Kenfield.

The meeting in the evening was called to order by the retiring president H. A. Antram, and the result of the election was announced by the committee. The reports of the secretary and treasurer and of the auditing committee were read and approved. The club has 211 members and a balance of \$232.08 in the treasury. Three deaths were recorded during the year, those of Fred. W. Armstrong, Harry Jacobowski and Frank J. Wall. The membership of the club shows an increase of over 100 per cent. during the first year of its existence.

The business of the meeting having been disposed of, the chair called upon the newly elected officers for an expression of their sentiments. They responded in turn gracefully and appropriately. T. P. Cook, of the New York Quinine and Chemical Works, one of the charter members of the New York Drug Club, was present, and at the request of the chair, addressed the members of the Chicago Club. He congratulated the club on the very excellent showing it had made and said that it is a matter of thanksgiving that such organizations, fostering as they do, the spirit of commercial honor and brotherly love exist in the principal cities of our country.

Porter B. FitzGerald read an eloquent tribute to the memory of the late Harry Jacobowski, buyer for Morrisson, Plummer & Company, who died some time ago in Colorado, where he had gone to cure, if possible, a pulmonary complaint. Mr. FitzGerald presented appropriate resolutions, and the entire memorial was ordered spread upon the records and a copy was ordered to be made and sent to the family of the deceased.

A committee consisting of Porter B. FitzGerald, S. T. Mather and Cornelius C. Van Schaack, was appointed to draft similar tributes to the memory of the late Fred. W. Armstrong and Frank J. Wall.

The rest of the evening was given over to the social features of the program. An elaborate luncheon was served and the members listened with pleasure to the music of the Lexington Male Quartette.

PHENACETINE SUIT SETTLED.

Chicago, Dec. 7.—Some two or three years ago suit was brought by E. N. Dickerson and the Farbenfabriken of Elberfeld Company against Humiston, Keeling & Company, wholesale druggists of this city, for an alleged infringement of the plaintiff's patent on phenacetine. The defendants, it appears, had placed on the market a substance known as oxyethylacetanilid, which the plaintiffs alleged infringed their patent. When the suit was instituted, it is understood that the defendants gave the

### E. R. SQUIBB & SONS

NEW YORK

### Compound Alum Powder

GEORGE A. GRAVES, 2016 Ellis Avenue, Chicago, President of the Chicago Retail Druggists' Association.

American Pharmaceutical Association a chance to join with them in the case and oppose the claims of the patentee. For some reason, the offer was not accepted. It is now reported that the case has been settled, the defendants agreeing to the entry of a decree giving the plaintiffs a permanent injunction in the premises on consideration of the payment by the plaintiffs to the defendants of a substantial sum of money, somewhat more, it is understood, than enough to defray the costs of the defendants in the case. This settlement, therefore, bears the aspect of a victory for the Chicago firm, who are to be congratulated upon having at least fought a drawn battle and escaped the expense and irritation of a protracted litigation. On the other hand, the plaintiffs have also secured what they sought without jeopardizing in a court of final resort the validity of their patent. Messrs. Elliott & Hopkins are the counsel for the defendants and Messrs. Banning & Banning are the resident counsel for the plaintiffs.

#### PARKE, DAVIS & CO. ENTERTAIN.

Chicago, Dec. 7.—The Chicago branch of Parke, Davis & Company tendered an informal smoker and entertainment to the graduating class of Rush Medical College on the spacious third floor of the company's Chicago house this evening.

About 250 persons were present. The programme consisted of an enjoyable vaudeville programme given by a male quartette and mandolin orchestra. Press Woodruff, the monologue artist, gave several of his inimitable readings.

The students were addressed during the course of the evening by several prominent medical men. Luncheon was served at the close of the regular programme and all expressed themselves as having spent a most enjoyable evening under the genial hospitality of Parke, Davis & Company.

#### NOTES.

—The Chicago Drug Trade Bowling League rolled the following games, Dec. 2: Sharp & Smith 731, 698, 785, against Buck & Rayner 690, 698, 662. E. & R. won the game on roll-off; Parke, Davis & Co., 704, 754, 701, against Vold;

Lord, Owen & Co. 692, 717, 711; A. M. Foster & Co. 681, 715, 737, against E. H. Sargent & Co. 787, 745, 706.

#### GAMES WON AND LOST.

|                          | Won. | Lost. |
|--------------------------|------|-------|
| Sharp & Smith .....      | 19   | 8     |
| E. H. Sargent & Co. .... | 17   | 10    |
| Lord, Owen & Co. ....    | 15   | 12    |
| Parke, Davis & Co. ....  | 14   | 13    |
| Buck & Rayner .....      | 10   | 17    |
| A. M. Foster & Co. ....  | 7    | 20    |

—The following are the team scores in the match game bowled Dec. 4 between the teams of The Economical Drug Co. and Sargent & Co; Economical Drug Co., 845, 838, 748; Sargent & Co., 787, 704, 770.

—G. P. Kinney, who represents the importing department of Parke, Davis & Company, was in Chicago from New York last week.

—Edward Heller, a former Chicago druggist, has filed a voluntary petition in bankruptcy.

—Frank R. Jones, secretary of the J. Edward Lee Company, was in Chicago last week.

—Andrew Dieger has bought out G. A. Eggert's store at 1603 N. Clark street.

## THE NORTHWEST.

### EXCHANGED SHOTS WITH A ROBBER.

St. Paul, Minn., Dec. 6.—Will Sears, clerk in Hart's pharmacy at Nicollet avenue and Thirteenth street, Minneapolis, had an exciting encounter with a robber a few nights ago, in which eight shots were fired by the robber, Mr. Sears and a policeman. The mauler escaped, but Mr. Sears thinks he carried away a bullet. The clerk had put out the lights in the store and was preparing to lock up. While he stood behind the cigar case the stranger entered. Sears told the story of what happened as follows:

"There was just one light burning, and that was low. He stepped up to the counter, and said, 'Put up your hands, you — — —.' I says, 'What do I want to do that for?' And he answered, 'I'll show you; put 'em up,' and he stuck his gun in my face.

"The gun looked mighty big, but I pretended I was not alone, and began edging back towards the prescription case. Then I called 'Tom,' and ducked behind the counter and ran back for my gun. When I got it and came around the corner of the prescription case he took a shot at me and I returned the compliment. He ran out then, and I followed him to the door. As he went up Thirteenth street I let go three more times at him, and I think I hit him once. My first shot went through the door, and the shot hit a bottle and glanced to the wall. Officer George Roberts, a colored policeman, heard the shots, and came running from Grant street. He followed the man up Thirteenth and fired two or three shots himself."

Roberts was unable to get close enough to the man to see him, and no one else was near at the time. Sears could not give a detailed description. He said he did not see much but the gun. Roberts followed the man to Thirteenth street and across to a vacant lot between Thirteenth and Grant streets, but the robber disappeared in the darkness.

#### NOTES.

—Secretary H. Gordon Webster, of the State board of pharmacy, had his first case this week in the crusade now being pushed against druggists without licenses. Axel N. Frykman was charged in the Minneapolis municipal court with selling poison, and it is alleged that he is filling the place of a regular licensed druggist. Mr. Webster says that, though they will not make any sensational arrests, a steady pressure will be brought to bear against violators of the pharmacy law.

—A burglar entered one of S. H. Reeves' drug stores, St. Paul, a few nights ago. He didn't get much, for there was not much accessible to get. His booty consisted of \$2.75, the contents of the till.

—Successions: Beebe & Webster, New Richmond, Wis., by W. W. Beebe; L. G. Dustin, Jeffers, Minn., by Thorn & Dustin; Russell & Strong, Stephen, Minn., by J. H. —A. D. Sears, Peru, Neb., by O. W. Neal.

—The store of Richard C. Trudgen, of Big Lake, Minn., was damaged by an explosion this week. Mr. Trudgen was for many years in the drug business in St. Paul.

—New: John M. Crawford, Esmond, N. D.; O. B. Yeoman, Smithfield, Neb.; E. E. Crowley, Mound City, S. D.

—E. P. Dube, of St. Paul, has gone to Canada on a long vacation, and Geo. Dockett has taken his place.

—Arthur A. Ecklund has left Minneapolis and gone to Hallock, Minn., to work for D. A. Robertson.

—A. G. Mitchum has bought M. F. Setters' interest in W. C. Hannum & Co., Harrington, Wash.

—R. F. A. Nordby has left Lakota, N. D., and gone to work at Hatton, N. D.

—E. Grundholm was in the city this week, selecting his holiday stock.

—Harry K. Lawrence, Osceola, Ia., is dead.

—J. M. Fowler and D. T. Carter have opened a new drug store at Senatobia, Miss.

—Dr. J. H. Sigmom, of Byhalia, Miss., will open a drug store at Duncan, Miss., in the near future.

—H. V. Marsh succeeds the Boyie Drug Co., at Boyle, Miss.

—J. B. Ellis, druggist, of Yazoo City, Miss., is confined to his home with throat trouble.

—E. J. James, formerly with J. A. Beard, McComb, Miss., is now with Price & Watson, Brookhaven.

—C. A. McIntyre, of Fulgham & Co., Jackson, Miss., has resigned, and will take a well-earned vacation.

—Mr. Kaiser, clerk for R. H. Pardee, Natchez, Miss., is now a member of the order of Benedict.

## THE SOUTH.

### TESTIMONIALS.

Memphis, December 6.—Anent the parodies going the rounds at the expense of those who send in patent medicine testimonials a local scribe is responsible for the following:

"Dear Sir—Before taking your tonic my wife was not strong enough to throw a bucket of slop out of the window; she took two bottles of your remedy, and yesterday she threw a first-class fit."

"Dear Doctor—My wife has suffered for years from weakness, and was not strong enough to walk. Two bottles of your 'Onion Top' remedy made her so strong that she has to sleep in the attic."

"Dear Doctor—Before taking our asthma cure my wife's breathing could be heard all over the neighborhood; she took two and one-half bottles of your cure, and hasn't breathed since."

"Dear Doctor—My son is a painter by trade, and suffered for years from kidney trouble; during the time he did not paint a stroke, he took five boxes of your pills and last night painted the town."

### BUSINESS UNSATISFACTORY.

Memphis, December 6.—Druggists in almost every town in this section are kicking about the small volume of business being done. Beyond a good many coughs and colds there is no sickness to amount to anything, and as the weather remains good there is no special run on any particular preparation. The traveling men are feeling the depression and one is rarely talked to who has not his story of "no business."

Paradoxical as it may seem, the druggists in the city are doing lots of business, that is, the majority are, and have no complaint to make.

### NOTES.

—W. G. Poole, representing Nelson, Baker & Co., of Detroit, called on his city trade this week. According to rumor, which seems to be well founded, Mr. Poole will soon cease to enjoy single blessedness.

—Messrs. J. T. Bailey, J. T. Steger and T. M. McBeth, representing Sharp & Dohme, of Baltimore, the Wm S. Marrill Chemical Co., of Cincinnati, and Parke, Davis & Co., of Detroit, respectively, were in the city recently.

—P. P. Van Vleet went duck shooting recently, and on his return divided nearly a hundred fine fowl among the heads of the different departments of the Van Vleet-Mansfield Drug Co.

—Dr. T. C. West, who recently purchased the Means pharmacy, Natchez, Miss., has moved his store a few doors west of his former location. The fixtures in the new store are golden oak and are very handsome.

—Byrd Eusby, who sold his store at Coldwater, Miss., to Coland Varner, recently, was in the city last week. Mr. Eusby is undecided as to whether he will re-embark in the drug business.

—Calvert Davis, for a number of years connected with the Cully pharmacy, Jackson, Miss., has resigned his position.

—Alford Bros. have purchased the stock and fixtures of the McComb City Drug Co., McComb, Miss.

## ST. LOUIS.

### ST. LOUIS RETAIL DRUGGISTS MEET.

St. Louis, Dec. 7.—The meeting and banquet of the Retail Druggists' Association held at the Arabian Knights last Wednesday night was quite a disappointment to the officers and workers in the organization. They expected at least a hundred members to be present and had made arrangements accordingly, but when the time came there were scarcely twenty-five in attendance. The business meeting was held first. The committee appointed to revise the schedule of prices on certain or all preparations on the list, reported that it had been in correspondence with some of the manufacturers and had also consulted the local jobbers with the result that in the very near future it would recommend raising the prices of a number of the scheduled preparations. Bruno Batt of the J. T. Millican Co. of this city, but formerly a retail druggist of Chicago, related some reminiscences of the ups and downs of the Chicago Association. The reason for the small attendance at the meeting was discussed and proved to be a riddle to which no one present could give a satisfactory solution. Your correspondent called up a large number of the local druggists over the telephone the next day and asked them why they were not at the meeting. In every case they had a reasonable excuse and expressed regret at their inability to attend.

The association's ball will be held at the Liederkranz Hall next Friday night, and indications point to a big turnout of members and their clerks. The plan is to make it a family social affair. The spacious parlors of the club will be at the disposal of those who do not care to dance and refreshments will be served during the entire night.

### TETANUS INVESTIGATION.

St. Louis, Dec. 7.—The second investigation in the lamentable tetanus cases of this city was begun last Thursday and after the first session in which a general plan was decided upon, an adjournment was taken until Monday. The board of inquiry consists of the Mayor as presiding officer, the members of the Board of Health and three members from the City Council. The testimony taken at the original investigation and that which has been submitted since then, will be carefully gone over. As some of this is quite conflicting the board will sift it to the bottom. Every person who had anything to do with the manufacture or handling of this antitoxin has been summoned as a witness. The object is to find just who are to blame and hold them responsible.

### THE ANTIKAMNIA CHEMICAL COMPANY'S NEW LABORATORY.

St. Louis, Dec. 6.—Frank A. Ruf, president and treasurer of The Antikamnia Chemical Company has just purchased a lot 80x100 feet, on the northwest corner of 22nd and Pine streets, for \$20,000 cash, on which his company will begin the erection, early in spring, of a new "Antikamnia Laboratory," five stories high, covering the entire lot. The improvements will cost about \$45,000 irrespective of the laboratory apparatus and appliances which will be of most approved pattern, from Darmstadt, Germany. The offices and various departments will be fitted with all modern conveniences, making the whole plant one of the most complete specialty laboratories in the United States.

## NOTES.

—The famous play "Ben Hur," which has been running here for the past three weeks, has attracted many outside druggists. Among those who came to the city especially to see the play are: J. S. Hunter of J. M. Boggs & Co., New Franklin, Mo., G. W. Grove and wife of Farmington, Mo., Miss Mudd, of the Mercantile Pharmacy, St. Charles, Mo., J. E. Knoppenberger of DeWitt, Mo., Dr. W. S. Allee and wife of Olton, Mo., and L. A. Cummings and wife of Bunkerhill, Ill.

—The following is the result of the meeting of the various teams of the Druggists Cocked Hat Bowling League last Thursday night: Mound City Paints, 4; J. S. Merrell Drug Co., 1; Herf & Frerichs, 3; Meyer Bros. Drug Co., 2; Moffitt-West Drug Co., 3; Searle & Hereth Co., 2. There were no especially high scores made, Habegger being the high man of the evening with an average of 52.

—A large sign on the corner building at Easton and Belt avenues, announces that a new drug store will be opened here about Jan. 15. The various druggists in that neighborhood, and the wholesale city salesmen are endeavoring to find out the personnel of the prospective proprietor, but so far their efforts have failed.

—B. Moore of R. Moore & Son, Fulton, Mo., spent today in this city on his return trip from New York City where he went on business. He says New York is the greatest city he ever saw and he would like very much to live there.

—The Drug Clerks' Society ball at the Louisiana Hall last Thursday night was quite a success. About seventy-five couples were present and every clerk in the city who could get the evening off seemed to be at the ball.

—J. E. Gillaspie of Columbia, Ill., is opening another drug store in that town. This venture will make him proprietor of the only two drug stores in the place.

—E. A. Bernius' bowling team, known as the Castor Oils, was defeated by A. R. Schen's Iron Salts last Tuesday night. The score was four to one.

—A. H. Whitney of Buckner & Whitney, Mexico, Mo., has been down in Arkansas for the past four weeks on a deer hunt.

—C. M. Wright, formerly of C. M. Wright & Co., Fulton, Mo., is opening a new drug store in that city.

—Oscar Lillybeck, druggist, of Meridian, Miss., has been succeeded by the Lillybeck-Stinebeck Drug Co.

—James Richardson of the Richardson Drug Co., Omaha, Neb., is quite sick at his home in this city.

—T. H. Hackman, a prominent druggist of St. Charles, Mo., is seriously ill with typhoid fever.

—J. T. Atkinson, of Aux Vasse, has sold his store to J. E. Mackentire of Mexico, Mo.

—Ell Wilson is embarking in the drug business with a new store at Elora, Mo.

—Redwin Bros are opening a new drug store at Success, Ark.

## CALIFORNIA.

## COURT GRANTS WAKELEE &amp; CO. RESTRAINING ORDER.

San Francisco, December 2.—Wakelee & Co., leading druggists here, have petitioned for a restraining order to prevent Walter H. Willett and Viola Willett, his wife, from forcing the collection of a note for \$16,000, and for entering into legal proceedings against Charles Randall, manager of Wakelee & Co.'s wholesale department. Randall claims that Willett advanced the firm \$16,000 on a note which would not become due for five years, and that his object in seeking an order restraining him from collecting it is to save the firm, which has been in existence here for upward of 20 years.

Randall alleges in his complaint that last August, while he was sick in bed, Willett came to his home, and by threats of legal proceedings and by insinuating that he (Randall) was guilty of embezzlement, prevailed upon him to sign a contract, whereby he agreed to consent to the settlement of the debt in October, this year.

Randall alleges that at the time the loan was made Willett was assistant manager of the firm, at a salary of \$200 a month, and an agreement was made whereby Willett was to receive one-half the dividends of the firm. Randall, who was elected manager of the firm at the same time, claims that the found it impossible to get along with Willett owing to the latter's attempts to cause him annoyance. Randall alleges that the money which Willett says he embezzled was drawn from the firm with the consent of the assistant manager and that on drawing it he did not violate any of the terms of the contract made at the time Wakelee advanced the \$16,000. A restraining order was issued by the court, made returnable December 16, preventing Willett from preferring any charges against Randall or disposing of the business pending trial of the suit for a permanent injunction.

## DRUG CLERK'S SUDDEN DEATH.

San Francisco, Dec. 2.—Strother M. Strother, a clerk employed by the Owl Drug Company, at 1128 Market street, was found dying December 2 in the basement of the store. He had fallen unconscious while engaged in filling stock. George Allen, who found him, called the ambulance, but Strother died on the way to the Receiving Hospital. He was twenty-three years of age, and had been a drug clerk for four years. Dr. Bacgalupi, of the coroner's office, performed an autopsy. He found unmistakable evidence of heart trouble, but will not issue a death certificate until he has heard from the city chemist, who is to make an analysis of the stomach.

—The Illinois Board of Pharmacy held an examination in Chicago, Nov. 19-21. The following passed as registered pharmacists: L. F. Alexa, C. G. Clendenan, C. O. Donnelly, G. G. Fox, J. B. Galloway, R. Heller, C. H. Hennig, D. J. Hogan, J. A. Hottinger, M. Kleinfen, I. E. Kronberger, C. V. Morrison, R. F. Marquardt, F. J. Randack, C. Bamsdell, Al Roesch, C. H. Schmidt, B. O. Smith, C. E. Steyer, A. Shutan, O. K. Thomson, S. J. Watson, G. W. Worely, H. Zinn, all of Chicago; E. N. Bleber, Rock Island; O. P. Holaday, Sheldon; B. T. Hart, Camp Point; L. C. House, E. St. Louis; A. T. Midgett, Robinson; W. A. Nichols, Elgin; H. C. Rolfs, Rock Island; A. F. Ziegenhorn, Claytonville. Assistants: A. E. Adams, S. D. Barry, C. J. Beermann, A. G. Edlund, L. Hyman, A. F. Jacobson, J. M. Kappas, H. Minchin, H. Von Obstfelder, Jr., W. F. Piel, A. A. Pavlik, E. J. Walta, W. E. Wendt, all of Chicago; H. B. Honens, Sheffield; A. F. E. Otto, Peoria; R. F. Parker, Pullman; R. Schneider, Peotone.

The Board desires to have it distinctly understood that no applicant who has gained his experience in Illinois drug stores, will be examined, or given an interview until after being regularly registered as an apprentice, and under the new law it is now the imperative duty of the registered pharmacist to see that his apprentice is registered. The next meeting will be held in Room 3, of the State House at Springfield, Jan. 7, 1902. The following examination will be held at 144 E. 39th street, Chicago, Feb. 11, 1902. New applications must be on file in the office at Springfield at least 10 days previous to the above date. Under no circumstances will the rule be varied from, and no one will be given the examination who has not complied fully with these requirements. Affidavits from registered pharmacists of time service must be filed at least three days before the examination. L. T. Hoy, Secretary, Springfield, Ill.

—The Iowa Board of Pharmacy has granted certificates to the following applicants who successfully passed the examination held in October: W. O. Bateman, Seymour; E. G. Cowles, Council Bluffs; W. W. Raschal, Columbus City; W. J. Seymour, Oskaloosa; R. E. Sloan, Keosauqua; Gus Reppert, Meservey; Joseph Anderson, Shenandoah; E. O. Jaundica, Cedar Rapids; A. F. Singer, Sioux City; Elma Penquite, Mingo.

# PATENTS, TRADE MARKS, ETC.

**PATENTS.**

Issued December 3, 1901.

- 687,700.—Charles F. Acker, Niagara Falls, N. Y., assignor to the Acker Process Company, Niagara Falls, N. Y., a Corporation of New Jersey. Production of caustic alkali and halogen gas.
- 687,710.—Olin Adams, Chicago, Ill. Bottle-stopper.
- 687,726.—Joseph H. Champ, Cleveland, Ohio. Liquid-carbonating apparatus.
- 687,731.—Raymond L. Hermann and John R. Mason, Philadelphia, Pa., assignors of one-fourth to John R. McIntyre, Philadelphia, Pa. Nozzle and rose-sprinkler.
- 687,739.—John B. Kibler, Buffalo, N. Y. Perculator.
- 687,747.—Theodore L. Valerius, Fort Atkinson, Wis., assignor to the Creamery Package Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Bottle-filling machine.
- 687,834.—Carl J. E. de Haen, List, Germany. Method of making sulphuric anhydrid.
- 687,900.—William E. Fettee, Boston Mass. Labeling-machine.
- 687,974.—Emil Braun, New York, N. Y. Process of making vanilla flavoring-powder.
- 687,994.—Eugen de Haen, List, Germany, near Hanover. Process of producing chemically-pure hydrochloric acid.
- 688,004.—Oscar P. Ostergren, New York, N. Y. Liquefaction of acriform fids.
- 688,020.—Rudolph Knietzsch, Ludwigshafen, Germany, assignor to the Badische Anilin & Soda-Fabrik, Ludwigshafen, Bavaria, Germany, a Corporation of Germany. Apparatus for the manufacture of sulphuric anhydrid.
- 688,131.—Ferdinand Sembritski, Holzwinden, Germany, assignor to Haarmann & Reimer, Holzwinden, Germany, a Firm. Process of obtaining Ianthone and Ionone.
- 688,215.—Gottfried Wegelin, Kalscheuren, Germany. Apparatus for making lampblack.
- 688,225.—Caroline Carr, Highgate, London, England. Apparatus for closing bottles or jars.

**DESIGNS.**

- 35,373.—Hot-Water Bag. John B. Miller, Chicago, Ill. Filed July 22, 1901. Serial No. 69,536. Term of patent 7 years.

**TRADE MARKS.**

Registered December 3, 1901.

- 37,410.—Scalp and Hair Lotion. Moorman Drug Co., Dayton, Ohio. The word "Frigifone".
- 37,411.—Certain Named Medical Preparation. E. J. Hart & Company, Limited, New Orleans, La. The word "Lac-Bismo".
- 37,412.—Certain Named Medical Preparation. Harry E. Steinhilber, New York, N. Y. The word "Figets".
- 37,413.—Medicine for Animals. Lenox Veterinary Medicine Company, Lenox, Mass. The word "Acclimatine".

37,415.—Sticky Fly-Paper. The O. & W. Thum Company, Grand Rapids, Mich. The word "Tanglefoot".

# MARKET REPORT.

## NEW YORK MARKETS.

### MARKET STEADY AND CONDITIONS SATISFACTORY.

New York, Dec. 10.—Seasonable goods in jobbing quantities are moving fairly on orders from the consuming trade, and the market continues steady with prevailing conditions satisfactory to dealers. Decided improvement in codone is the principal feature in the way of price changes.

**OPIMUM.**—Nothing has transpired to change the condition of affairs in this leading commodity and the limited wants of consumers are being supplied at prices within the quoted range of \$3.20@3.40 for 9 per cent, and \$3.30@3.50 for 11 per cent. Powdered is unchanged at \$4.25@4.45 for 13 per cent, \$4.75@5.00 for 16 per cent, and \$4.95@5.15 for 20 per cent.

**MORPHINE.**—A moderately active consuming business is in progress and the market continues firm with jobbing quotations maintained at \$2.40@2.50 for eighths in 1-oz boxes, \$2.35@2.45 in 2½-oz boxes, \$2.15@2.25 in ounce vials and \$2.10@2.20 in 3-oz cans according to brand.

**QUININE.**—The expected improvement has not yet materialized, but the market continues steady with jobbers quoting 27c. for bulk in 100-oz tins, 27½c. in 50-oz tins, 28c. in 25-oz tins and 34c. in ounces.

**COLCHINE.**—Manufacturers have settled their differences and the market is decidedly stronger, with an advance in jobbing quotations to \$4.90@4.75 in ounces and \$4.75@5.00 in eighths. Sulphate is \$3.45 less.

**OIL SWEDEET ALMONDS.**—Foreign markets continue weak and spot jobbing quotations show a further decline to 48¢@55c. as to quality and quantity.

**OIL SANDALWOOD.**—Owing to competition the market is easier and jobbers have reached quotations to \$5.15@4.00 for English, and \$2.10@3.00 for German.

**OIL WINTERGREEN.**—Natural is firmer owing to scarcity and jobbing quotations show an advance to \$1.85@1.40 as quoted.

**BALSAM PERU.**—Primary markets are cabled decidedly higher and in consequence spot quotations have been marked up to \$1.80@2.05.

**UNION SANDALWOOD.**—Manufacturers have advanced prices 2c. per gallon and the revised jobbing figures are 50¢@55c. by the barrel and 58¢@7c. for smaller parcels.

**GOLDEN SEAL ROOT.**—Primary markets are easier and jobbers have reduced their spot quotations to 70¢@8c. for whole, 73¢@8c. for ground and 75¢@8c. for powdered.

**SENEGAL ROOT.**—Under similar conditions this article also is easier and the revised jobbing quotations are 60¢@70c. for whole and 65¢@70c. for powdered.

**ALCOHOL.**—Grain is firmer in sympathy with crude material and prices show an advance to \$2.57@2.58 by the barrel, and \$2.55@2.75 for smaller lots; odorless \$2.50@2.60 by the barrel and 22¢@25c. for less.

**SAFFRON.**—American is firmer with an advance in jobbing quotations to 25¢@30c.

**OTUM CAYENNE.**—The bulk of the light available stock is under close control and jobbing prices have been advanced to 11¢@14c.

**VERDIGRIS.**—Powdered is in light supply and higher with jobbers quoting 40¢@45c.

**FRICKLEY ASH BERBERIS.**—Owing to scarcity jobbers have marked up their quotations to 60¢@70c.

**GUARANA.**—The market is firmer under light supplies and jobbing prices have been advanced to 50¢@60c. for whole and 60¢@65c. for powdered.

**NUX VOMICA.**—Buttons are scarce and firmer with an advance in the jobbing range to 8¢@10c.

**BENZOLIC ALD.**—German is easier abroad and spot jobbing quotations have been reduced to 55¢@60c. as to quantity.

**OIL PEPPERMINT.**—Primary markets continue to harden and jobbers have further advanced quotations to \$1.90@2.15 for Western, \$2.00@2.25 for Wayne Co. \$2.30@2.45 for H. G. H. and \$2.30@2.50 for redistilled.

**LACTATE OF IRON.**—Quotations in a jobbing way have declined to 50¢@55c.

**PARAFFINE WAX.**—The market is a shade easier and the revised jobbing figures are 11¢@15c.

**LINSEED OIL.**—Manufacturers prices are lower and jobbers now quote 60¢@65c. by the barrel and 65¢@70c. for less, noted 60¢@65c. by the barrel and 60¢@65c. for less.

**SPIRITS TURPENTINE.**—The tone of the market is stronger and jobbers have advanced quotations to 42¢@45c. in barrels and 47¢@55c. in smaller quantities.

Transparent American Skin Plaster is said to be the most useful plaster of its kind on the market. The makers claim it will stop bleeding almost instantly, and is a valuable remedy in all cases of burning, fracturing, old sores, etc. Any jobber should supply this plaster or it can be obtained from the manufacturer, Carl Kopp, No. 212 Avenue B, New York city.

—The North Dakota Agricultural College located at Fargo, has established a school of pharmacy as a regular department of the institution. The courses of instruction will include a four years' course in pharmaceutical chemistry, a two years' course in pharmacy and a short special course of three months. Graduates will receive on completion of their work in the various courses the degree of B. S., Ph. C., or Ph. G. Tuition is free to all students. Following is the list of the members of the faculty with the exception of instructor in pharmacy, who is to be appointed as soon as the right man can be found. John H. Worst, L. L. D., president of the college; Edwin F. Ladd, B. S., professor of chemistry; Henry L. Boley, M. S., professor of biology and microscopy; Hugh McGuigan, B. S., instructor in materia medica; Lawrence R. Waldron, B. S., Lee B. Greene, B. S., and Thomas F. Manns, B. S., instructors in botany, chemistry and biology, respectively.

### Fine Perfumes.

A comprehensive advertising campaign has been mapped out by McKesson & Robbins, sole agents for this country for "Deletrez" perfumes and toilet requisites. These include not only the high grade handkerchief extracts for which Deletrez is noted, but toilet powders, soaps, colognes and toilet waters.

# The Pharmaceutical Era.

EVERY THURSDAY.

VOL. XXVI.

NEW YORK, DECEMBER 19, 1901.

No. 25.

Entered at the New York Post Office as Second Class Matter.

ESTABLISHED 1887.

## THE ERA COURSE IN PHARMACY.

"I received my diploma November 29, and I am very much pleased with it. I derived much benefit from the Era Course, and were another Course to be given that would not be a repetition, I would take it, had I the time. W. B. Palamountain, San Francisco, Cal."

This is only one of the many commendatory letters we have received from students who have completed the work of the Era Course in Pharmacy. These letters are evidence, if any there be needed, that the instruction afforded by the lectures is just the kind to aid those who otherwise would have been deprived of the privilege of obtaining a pharmaceutical education.

The lectures are issued in ten monthly installments, and so arranged that the entire work of the Course can be completed within twelve months. Recitations and examinations are conducted by correspondence directly with each regularly matriculated student. The lectures are also especially valuable as a preparation for examination by a board of pharmacy, and for those who desire to review their former study of the subjects embraced in the curriculum.

The total expense for the full Course is Ten (\$10.00) Dollars, and new classes are formed each month. Write for new descriptive Prospectus. Address: THE PHARMACEUTICAL ERA, 396 Broadway, New York City.

## COMMENT.

In this holiday season of giving and receiving gifts, a goodly share of the druggist's time and attention is devoted to matters which have little to do with the sale of drugs and medicines. People have come to consider the drug store as the proper place to find all sorts of dainty things, besides tablets and court plaster, and the average pharmacist finds it both pleasant and profitable to minister to wants not directly due to aches and pains of the body. An agreeable feature of the holiday trade is that buyers are less interested in the price than in the quality and attractiveness of the articles they purchase. Most men are less unwilling to pay for what they want than for what they need, and are less inclined to begrudge the dealer a fair profit on their Christmas things than on their oatmeal and coffee. There are perhaps a few utilitarian souls who consider the millions spent during the holiday season for things which are of no particular use to anybody, a pure waste, but the retail druggist should be the last to quarrel with this condition of things. Aside from the profit derived from the sale of cameras, toilet cases and books, he should find cause for rejoicing in the fact that so many are willing and able to spend so lavishly for the mere pleasure of giving.

\* \* \*

The custom of giving holiday presents to patrons is the cause of much worry and vexation to some druggists at this time of the year. Many find the practice burdensome, and are inclined to doubt the value of this form of advertising. No doubt the American inclination to carry all things to excess has led some people to overdo it, but if properly kept within bounds, this pretty custom should be profitable to the druggist as well as agreeable to his customers. The originator of this practice probably never thought of his little gifts as means for increasing trade, but simply meant them to serve as expressions of his good will. This is, as we understand it, the proper sentiment of the thing. Every merchant should feel kindly disposed to those who have contributed to the success of his business, and he must often regret that the opportunities for showing his appreciation are so few. Gifts as remembrances need never be expensive. The druggist has numerous opportunities for laying in a supply of pretty little tokens which will prove acceptable to his customers, without unduly swelling his expense account. But whether the tokens are valuable or not, the giver will miss a large share of the profits and lose all of the fun of giving if he considers his holiday gifts as mere bribes for inducing customers to trade at his store.

The large number of dinners, smokers and other forms of social diversion which have been monopolizing the attention of the drug trade during the past week, seem to show that druggists have no difficulty in getting together for purposes of amusement, even though they may not always be able to agree upon prices. Believers in the value of social contact for producing amicable relations between business men tell us that agreement upon price schedules will follow as a natural consequence. However this may be, it is coming to be a common practice to employ amusements as means of getting people to take unpalatable doses of advice as to what they ought to do. It is difficult to get a fair attendance at meetings intended for the discussion of social and scientific problems. Druggists, like other members of the community, seem to object to sermonizing and the reading of papers. At certain of the recent rollicking pharmaceutical gatherings, they have even gone so far as to forbid speech-making of any kind, thus compelling those who had come prepared to convulse their friends with humorous remarks to swallow their wit, at no one knows what cost to themselves. If the advancement of pharmacy depended upon sober discussions in local societies, this dislike of formal remarks would look very serious, but progress is fortunately fed upon other food at present, and no one need be alarmed. It has long been the endeavor of pharmacists to render nauseating medicines easy to take, and to make takers of doses believe that they really like them. Who will say that they have no right to demand similar treatment, and to compel those who wish them to take bitter pills of advice to subject them to a thorough process of sugar coating?

• • •

Burglars have of late been employing the night bell as a means of gaining entrance to drug stores. The favorite plan seems to consist in ringing up the night clerk and taking possession of the store, or of whatever comes handy, while this sleepy individual is filling an innocent looking prescription. From the burglar's point of view this plan has doubtless much to recommend it, but in practice it has one serious disadvantage—the clerk is not always as sleepy or as meek as he might be. Several cases have been reported in which the pharmacists adopted warlike measures with success. Pistols were freely used and the glassware about the store suffered in consequence. One clerk emptied the chambers of his revolver twice, but without succeeding in administering an effective dose. No great amount of blood has as yet been shed in these midnight encounters, but the pharmacist has shown his courage, which in cases of this kind is the main thing.

• • •

It is quite evident that there will be no lack of interest in the problem contests which will be inaugurated by the Era in the coming month. Numerous inquiries about these contests have already been received. Most of the letters express a desire to compete for the prizes, but there seems to be some confusion as to the conditions under which the contests will be conducted. As stated in the advertisement of

this new department, full directions for the guidance of those who wish to compete will be printed in the Era when the opening of the contests is announced. In the meantime, no one need fear that there will be so many competitors that a young man of average intelligence will have "no show." We predict that the bulk of the prizes will not go to the extraordinarily bright or highly educated student, but to the one who is most attentive to little details.

Part Three of the "Digest of Criticisms of the United States Pharmacopœia" has been issued. Since Part Two appeared, both the editor and compiler of this publication have been taken from their work by death. Dr. Charles Rice, the Chairman of the Committee and editor, to whom is due the credit for the conception of gathering all available criticisms in one volume, died May 13, 1901, in the midst of his labors. Hans M. Wilder, who gathered much of the material for the "Digest," died January 25, 1901. In accordance with a request of Dr. Rice, the present volume was prepared by Prof. Henry Kraemer of Philadelphia. The general plan of former Digests has been followed, the aim being to include all criticisms of the present Pharmacopœia.

• • •

A perambulating drug store, in the shape of an automobile supplied with a stock of drugs, is the latest pharmaceutical innovation in New Jersey. It is the intention of the proprietor of this pharmacy to go to his patrons instead of obliging them to come to him. His purpose seems to be founded on a belief that it is possible to create a steady demand for drugs, and that this demand can be profitably supplied in the manner long in force in the business of furnishing the dwellers in cities and towns with milk and petroleum products. It is quite possible that New Jersey has enough chronic consumers of patent medicines to support an institution of this kind, but it would seem somewhat difficult to do an extensive prescription business in this way. It is, however, not improbable that the enterprising originator of this scheme has thought of all these things, and is prepared to carry about with him a wireless telephone, or some other new fangled means of communication, which will enable him to fill and deliver prescriptions without loss of time.

• • •

The tetanus scare has not been followed by such dire results as were at first anticipated. Popular prejudice against vaccination and the use of serums has not interfered seriously with the work of the health authorities of the country. Either the people have more common sense than the doctors seemed to think or the published explanations of the recent disasters have been unusually effective. In the meantime, another investigation into the recent wholesale "murder by negligence" in St. Louis is under way, and it now looks as though condemnation, if not punishment, would be brought to the doors of those responsible for this slaughter of the innocents. It

appears that the bottling and labeling of the antitoxin was entrusted to the negro janitor of the Board of Health laboratory, that records were kept in a very slipshod way, and that tests, if not entirely neglected, were conducted in a very hap-hazard and unscientific manner. It is quite possible that the city of St. Louis will be compelled to answer heavy damage suits brought by the parents of the little victims. The killing of fourteen innocent little children is of course entirely deplorable and can scarcely serve any good purpose, yet it has taught a wholesome lesson and has been the means of causing a searching criticism of all municipal laboratories. Truly, a fearful price to pay for a lesson which should have been entirely unnecessary.

\* \* \*

The annual report of the United States Department of Agriculture, which has just appeared, contains an outline of the work being done by the Bureau of Chemistry. Much attention is being devoted to the investigation of the value and purity of food. During the year this work consisted chiefly in the study of preserved meats. Food products imported into this country have also been examined. The Secretary has been authorized to inspect American foods intended for export, but owing to the failure of Congress to provide adequate appropriation, this important work has not received as much attention as the matter seems to demand. Much work is being done in forest chemistry, in the study of the relations of trees to the soil, and the industries depending upon forest products. The sugar laboratory continues the study of sugar producing plants, particularly the sugar beet. The Chief of the Bureau is now supervisor of sugar tests in the laboratories of the appraisers in the ports of New York, Philadelphia and Boston. A laboratory for the study of road materials has also been organized in the Bureau of Chemistry.

\* \* \*

A writer in one of our exchanges advocates the adoption of Latin as a universal language for business as well as for scientific use. He believes that English can never conquer the entire field, and that this country can never have a flourishing trade with the Latin races owing to the hatred against our obtrusive tongue. There have been many attempts in the past to give Latin a new period of general usefulness, but this ancient tongue still remains pretty thoroughly dead. Business requires a live medium of expression, one that can be modified to suit changing conditions. If Latin were to come into general use, its ancient friends would soon be unable to recognize it. This language is supposed to be the official means of expression of pharmacy in all countries, but the Latin of the average prescription and of the State board examinations differs fearfully and wonderfully from that of Cicero and Horace.

\* \* \*

The druggists of one of the suburbs of Philadelphia are worrying about a diminished demand for cough remedies in consequence of the adoption, by the mothers of that place, of live catfish as a means of curing whooping-cough. Under the circumstances, there seems only one thing for the pharmacists to do, and that is to make a deal with the fish dealers and lay in a supply of live catfish.

## OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.  
Please be brief and always sign your name.

### THE P. A. R. D. AND THE CUTTER.

Pittsburg, Pa., Dec. 10.

To the Editor: I note in the Era of December 5, that the P. A. R. D. takes home to itself the open secret referred to in a contemporary journal. I am gratified to hear the officers of this association used every honorable means to bring the one persistent cutter to terms and sorry to know that they failed to gain their point. I also appreciate the difficulty of dealing with a quibbler. But I can not constrain myself from observing that "where there is a will there is a way."

The aggressive cutter was brought to terms in this city, partly through the potency of the fifth chapter of the decalogue of our association which reads as follows: "We solemnly pledge ourselves not to patronize any jobber who will not close the account of every firm placed on the cut-off list For Any Goods Whatsoever." This is, perhaps, not practical in the East but it was the means of crippling our cutter on goods used in prescriptions, and on proprietaries of such limited sale as not to justify the carrying of a large stock. Yours for a way where there is a will.

LOUIS EMANUEL.

ANTISEPSIS OF THE MOUTH.—Sabrazes (Journal de med. de Bordeaux, American Medicine) claims (1) that ordinary water, as well as normal salt solution, has a distinct bactericidal action. (2) A meal diminishes considerably the number of buccal microbes, as does talking for a long time. (3) The most active antiseptic, according to Miller, is the following dentifrice:

|                              |               |
|------------------------------|---------------|
| Benzoic acid .....           | 45 grains.    |
| Tincture of eucalyptus ..... | 4 drams.      |
| Mercury bichloride .....     | 12 grains.    |
| Spirit of peppermint .....   | 8 drops.      |
| Alcohol, 95 per cent. ....   | 3 1-3 ounces. |

This will destroy 94 per cent. of buccal bacteria. If disagreeable to taste it may be replaced by:

|                            |               |
|----------------------------|---------------|
| Saccharin .....            | 38 grains.    |
| Benzoic acid .....         | 45 grains.    |
| Tincture of krameria ..... | 4 drams.      |
| Spirit of peppermint ..... | 8 drops.      |
| Spirit of cinnamon .....   | 8 drops.      |
| Alcohol, 9 per cent. ....  | 3 1-3 ounces. |

Or

|                            |               |
|----------------------------|---------------|
| Benzoic acid .....         | 45 grains.    |
| Tincture of krameria ..... | 4 drams.      |
| Spirit of peppermint ..... | 10 drops.     |
| Alcohol, 95 per cent. .... | 3 1-3 ounces. |

This is active when diluted to 10 per cent.

This dentifrice must be fresh; when kept for some time and when much diluted it loses its action and favors multiplication of bacteria. (4) Formol,  $\frac{1}{2}$  per cent., has a powerful but fleeting action; it does not injure teeth, but acts as a caustic to the mucous membrane. (5) Kosmin does more harm than good. (6) Salicylic acid is a good antiseptic, but decalcifies the teeth in time. (7) Alcoholic solutions of salol have a fleeting action, and should not be used in dentifrices. (8) Alcohol is an excellent antiseptic. A 40 per cent. solution used as a dentifrice is nearly as energetic as solutions of benzoic acid and corrosive sublimate.

ASTEROL is a new soluble compound of mercury, which does not precipitate albumen, and is not irritating to wounds. (Ch. & Dr.). It is obtained in the form of a grayish white powder, and is employed in solutions varying in strength from 2 to 5 per cent.

(For the Era.)

## A NEW PROCESS FOR THE MANUFACTURE OF CITRIC ACID.

By Dr. J. OHLY, Denver, Col.

The manufacture of citric acid from lemon juice as carried on in the United States, represents an important branch of industry, and is based upon a chemical process which has undergone but little change or improvement since its introduction. It is well known that the end product obtained in this process offers special difficulties in decoloration, and that the solid crystallized citric acid frequently exhibits the brownish tint of the original lemon juice, besides containing an appreciable quantity of lead, due to the use of crystallizing pans which are commonly made of this metal.

The juice obtained from the lemons after concentration, usually in steam-jacketed copper vessels, contains from 56 to 58 per cent of citric acid, always has a deep brown color, and carries considerable albumen. The albumen is best removed by adding double the volume of water to that of the juice, when, on standing for 12 hours, the albumen separates out in the form of a dark brown powder, known as acid albumen. This is usually removed from the liquid by filtration or decantation. The filtrate obtained in this manner is, however, far from colorless, and retains its brownish tint throughout the process with great pertinacity. It is generally neutralized by adding sufficient whiting or levigated chalk to produce a creamy consistency and heating the mixture to boiling so as to effect complete neutralization. The calcium citrate thus formed is difficultly soluble and is purified by washing with hot water, the cleansed product being then neutralized by adding sulphuric acid of 1.7 specific gravity. The calcium sulphate formed in the course of this reaction is then filtered off and the filtrate evaporated, when the remaining calcium sulphate separates out; this is removed in the same manner as before, while the acid liquid is concentrated decolorized as far as feasible, and evaporated to the crystallizing point, or made to granulate in a wooden vat containing an agitator.

The yield of this method is unsatisfactory, the loss in citric acid frequently amounting to from 15 to 20 per cent of that originally present in the juice, while the operations involved offer great difficulties which can be successfully overcome only by an experienced operator. It is essential also that the lemon juice employed be treated while fresh, as it is liable to decompose under the influence of heat, forming acetic acid ( $C_2H_3O_2$ ), which is not readily neutralized by whiting. Malic acid ( $C_4H_5O_6$ ) present as a natural constituent of the juice, also combines imperfectly with levigated chalk, so that the final acidity of the solution is readily explained by the presence of these two acids.

In order to show the points involved more clearly the chemical equations representing the old process are given below:

Since citric acid is a tribasic compound, and the valence of the calcium atom is equal to two hydrogen atoms in two molecules of citric acid forming the tricalcic salt as shown above while carbon dioxide is liberated and three molecules of water are produced.

After washing the calcium citrate thus obtained with hot water, it is decomposed by means of sulphuric acid, the reaction occurring under these conditions being as follows:

These equations, which represent in the main the old style of manufacture, must necessarily appear very simple, since they consist merely of transpositions aiming at the production of soluble and insoluble compounds, which are readily separated from one another. On the other hand, the point of neutralization when bringing whiting together with the purified juice (equation I), is ascertained only with difficulty

by observing the effervescence produced on adding a small part of the mixture to some of the whiting. Similar conditions are involved in the second operation, represented by equation II, for the accidental addition of an excess of sulphuric acid has a damaging effect and must therefore be avoided most carefully. The usual test in an emergency of this kind consists in adding some of the filtered liquor to a strong solution of calcium chloride when, in case an excess of sulphuric acid is present, a white precipitate will appear after a few minutes standing.

The following method, claimed by the writer as his invention, affords a much greater yield in citric acid than the old one, and is much more readily performed. It consists of the following observations and manipulations:

When a concentrated solution of calcium chloride is gradually added to a solution of sodium citrate, the precipitate at first produced redissolves, but when agitated it suddenly forms a magma which becomes crystalline on the application of heat. It will be seen when considering the reaction which takes place, that besides the tricalcic citrate produced in this manner, a solution of sodium chloride is also formed, which can be readily removed by filtering and subsequent washing with hot water.

Taking advantage of this reaction, 50 cubic centimeters of concentrated lemon juice, containing according to the citrometer-scale 56 per cent of citric acid, were diluted with 100 cubic centimeters of water and allowed to stand over night. The liquid was then filtered to remove the acid albumen deposited, and the filtrate mixed with a concentrated solution of calcium chloride, all quantities of chemicals required for this and the following operations having been calculated beforehand from the molecular weights given in equations IV, V and VI below. Since an excess of calcium chloride cannot possibly do any harm, as it is readily removed by subsequent washing with hot water, no special precaution is to be observed in this case. One and two-thirds ounces of caustic soda were then dissolved in water, and the solution gradually added to the mixture of juice and calcium chloride, so as to neutralize it, this point being readily ascertained by means of litmus paper, when upon stirring, the liquid quickly assumed the condition of a magma. The pasty mass was heated, transferred to a filter and washed with hot water in order to remove the salt in solution and a possible excess of calcium chloride. It was then placed in a large evaporating dish (porcelain), carefully neutralized with a calculated amount of sulphuric acid of 1.7 specific gravity, and the mixture gradually heated to the boiling point, so as to effect complete decomposition and saturation.

The specific gravity of the original concentrated sulphuric acid employed and subsequently reduced to the required degree showed a concentration of 65.9° Beaume corresponding to 1.84 specific gravity or 95.60 per cent sulphuric acid, and it was found that the desired gravity 1.7 indicating 77.17 per cent sulphuric acid ( $H_2SO_4$ ) could be readily obtained by mixing a measured quantity of the acid with nearly half its volume of water—that is, with the precaution of pouring the acid into the water and cooling the mixture subsequently.

The sulphate of lime produced as stated above by the reaction of the sulphuric acid with the tricalcic citrate, was then filtered off, and the filtrate heated, when much calcium sulphate came down; this was removed in the same manner as before. The brown colored liquid thus obtained was mixed with animal charcoal, previously freed from phosphates. This purification was effected by adding 30 parts of dilute hydrochloric acid (one concentrated acid to three water) to 20 parts by weight of boneblack, boiling the mixture for 15 minutes, filtering, washing thoroughly with hot water, and drying the remaining substance.

Of this material, now free from phosphates, about 10 grams were used for decolorizing the citric acid

used at such times. A good moth ball sign can be made by drawing the letters with chalk, putting mucilage on the glass where marked and sticking cotton to this. A sign of this kind suggests "moths" to the passerby at the first glance. A nice Easter egg sign can be made by having the words "Easter Egg Dyes" circle the window, each letter to be on an egg painted on the glass, and each egg to be of a different color.

If success is your ambition, your goal, you must give your window more than a passing thought. It must be attractive or it will remain unnoticed by the busy passerby:

"There is a striving for wealth, a golden craze,  
In the fevered hurry of modern days."

Man has no time to think of his human needs; these must be brought to his attention by some unusual display or placard. "What fools these mortals be"! Blindness to one's needs is characteristic of the human race. Different minds are attracted by different displays. You must be all things to all men. Your windows are an index to your store, as the face is to the character. You must give them proper attention. They are Shylocks crying for their pound of flesh.

### A FEW "DON'TS."

By J. S. STOWELL, Mount Vernon, N. Y.

Don't open and close the store at "any old time." Have a time to begin the business of the day, and a time to quit.

Don't buy a large bill of goods, consisting of many things you don't need and will never sell, just because the clever agent beguiles you with a long payment proposition. Remember that pay day is bound to come.

Don't select the month of July as being the proper season to laud the praises of your emulsion of cod liver oil.

Don't advertise your Celebrated Talcum Powder for excessive perspiration during the cold Winter months.

Don't take the salesman's head off. He may have something you can use. He can at least quote prices, and to these your ear should ever be open.

Don't tell your clerks that it is bad form to smoke behind the counter, while you go around with a 25c. straight in your mouth.

Don't snub the lady who asks for a 2c. stamp. She may see a tooth brush that she likes before she leaves the store.

Don't leave hanging to the package you have just tied up sufficient string for the use of the customer; peradventure, he or she may wish to commit suicide by hanging. No use placing temptation in their way.

Don't get the impression that your business is so firmly established that it does not need your personal supervision. It will slip away from you more easily than it can be regained.

Don't worry. It will not put stock on the shelves, nor cash in your money draw. Have faith, grit and "sticktoitiveness."

Don't be afraid to ask for cents for ice cream soda, if it is worth it. I suppose, however, your locality will have much to do with deciding this.

Don't object to answering the many queries of the apprentice. He is trying to learn. And remember that you were once an apprentice yourself.

Don't give the small boy a large mortar, a pestle and a "hunk" of india rubber and tell him you want it pulverised. For goodness sake, think of something new—be original.

Don't put a Christmas ad. in your local paper and leave it running until the 4th of July.

Don't buy the cheapest drugs on the market. Get the best you can for the least cash. Let purity be paramount.

Don't allow the finished prescription to be anything but that which the physician has ordered. To substitute is criminal. In a measure you are the weapon which the doctor uses in his warfare against disease.

Don't sell anything and everything for the greed

of gold. Even a druggist may have his conscience pricked.

Don't run a pharmaceutical run shop. If you prefer to tend bar walk around the city until you run across a saloon and hasten to apply for a position.

Don't get too "chummy" with Dr. Healeumup. Too much intimacy breeds contempt.

Don't get an \$8 a week registered clerk. The best available service is the cheapest in the end.

Don't run down your competitor. If you can say no good of him say no evil.

Don't get confused or have the least appearance of being puzzled when the colored lady asks for a piece of flesh colored court plaster.

Don't leave the soda fountain with a regiment of dirty glasses upon it. Put them out of sight, even if you have no time to wash them until later.

Don't advertise that you have the best soda water in town, and then have the nerve to take the customer's good money for warm slops.

Don't recommend your Infallible Hair Tonic and One Second Corn Cure, while your own head shines like a billiard ball and your clerks limp about the store with corns. Be consistent.

Don't argue over religion or politics with your customer. No use offending your patrons. Be like the Apostle Paul—all things to all men.

Don't urge the purchasing of rochelle salts, borax, bi-carbonate of soda, quinine pills, etc., in large quantities. It's more money in your pocket to sell these things in small lots. Besides you will see your customer more frequently.

Don't keep the wrapping paper, twine, paste and labels in different parts of the store. They bear the closest relationship to each other and should be together. Besides, it will save you steps.

Don't have a dingy, gloomy store. Human beings like the miller and the moth are attracted by the light.

### A DRUG STORE FABLE.

By IDA NOE.

A Certain Druggist having read that Everything comes to Him who Waits if he only waits Long Enough, and that Opportunity knocks at each one's Door some time, concluded to keep his Drug Store open Two Hours after every Other Druggist in Town had closed for the Night, so that he would not miss the Late Call for Postage Stamps and Paregoric. So, while he was Sitting near his Door trying to Figure out how he could get A Clerk that would work Twenty hours Daily for Ten Dollars a Week, there came a heavy Knock thereon. Thinking that here was the Opportunity he had been looking for in the Shape of a Man with a Prescription, he hastened to let him in and Prepared to charge him Double Price because it was near Twelve o'clock.

But before he could ask what the Stranger wanted, the Stranger fell upon him with a Sandbag, and Beat him well, and tied him to his own Soda Fountain. Then the aforesaid Stranger ransacked the Cash Register, and took therefrom the Sum of six dollars and thirty-two cents, the whole day's Sales, and helped himself to Vinum Album and Cigars. Failing to find Anything of Value beyond these, he removed the Druggist's Watch and Chain which had been given him by his Wife; ten Years before, and Chided him for Having so Little, and for being so Easy.

"But," said the Druggist, thinking to Excuse himself, "I thought when I let you In that you wanted Something that you Could Not Get at this Time of Night from the other Drug Stores."

"So I did," replied the Stranger. "The other Men had Sense enough to close their stores Early, and I had to come Here. As your store is the Only one open at this time of Night, it was the only One I could get in to Operate on the Cash Register."

"But I thought that keeping open Late would be an Accommodation," feebly protested the Druggist, as the Stranger made up his Choice Cigars into a Neat Bundle.

"So it was, my friend," answered the Callous Robber, "and your Enterprise has provided me with the Means of playing the Races to-morrow."

## NEW REMEDIES.

**NARGOLUM.**—New trade name for nuclein silver.

**DIOSCORSIN.**—Name of a new expectorant and antispasmodic.

**DERMOZON.**—Trade name of a toilet cream, the base of which is lanolin.

**IODOGENOL.**—Trade name for an iodine combination with peptonized egg albumen.

**VIOFORM.**—New succedaneum for iodoform. Chemically it is an iodochlorated oxquinoline.

**OZONALINE.**—Trade name for an "air-cleaning" preparation, the base of which is oil of turpentine.

**PLANTOSE.**—Trade name for the oilcake of rape-seed (i. e., the residue after pressing out the oil).

**ROSALIT.**—New cosmetic for producing a natural flesh color on bruises and discolorations of the skin.

**RAMOGEN.**—Synonym and newly chosen trade designation for Dr. Bedert's Rahmgemenge (cream mixture).

**MORPHOLIN.**—Name given by Knorr to a substance discovered by him, and arising from anhydriazation of diethanolamin.

**PHOENICINE.**—Name given to a new substance isolated from logwood, and proposed as a dye-stuff, similar to haematoxylin and brazilin.

**MORPHIDIN.**—Name given to an oily basic substance, obtained by distillation of morphine with zinc dust, in the presence of phenanthrene.

**LEVURIN.**—The extract of brewers' yeast. It comes into the trade as *Levurin siccum*, or dry *Levurin*, and as *Extractum Levurini*, a semi-fluid mass.

**IODOLENE.**—An albumen compound of iodol. It appears as a dry yellowish powder, inodorous and insipid insoluble in the ordinary solvents. It occludes 36 per cent of iodol.

**NIVALIN.**—Trade name for a new preparation sold to Alpine tourists as a remedy against snow blindness and the burning of the skin by reflection from snow and ice. It is a flesh-colored paste; also used against sun-burn at sea.

**SEPTOFORMA.**—Trade name of a new antiseptic, disinfectant, deodorizer, and antiparasitic, for use in veterinary practice, said to be a "condensation product of formaldehyde dissolved in an alcoholic solution of a potassium linoleate soap.

**BERGAPTIN.**—Name given by the discoverers (Drs. von Soden and Rajahn) to a new crystalline constituent of bergamot oil. It is apparently an aromatic body similar to and possibly identical with the bergapten heretofore isolated from the same source.

**TANALIN.**—Name given to a substance derived from the fir and spruce trees. It is a yellowish liquid of an agreeable resinous odor which is used as a stimulating application of the skin, and as an addition to the bath, similar to the well-known "Fichtennadel" extract.

**FLUOREPIDERMINE.**—A synonym for antitussive. It appears in commerce as a pomade containing 5 per cent of difluor-diphenyl, the remainder being lanolin and vaselin. It is stated by Heim, in the *Berliner Klinische Wochenschrift*, to have remarkable powers in stilling the crises of whooping cough.

**CHLOROMETHYL-MENTHYLIC ETHER.**—When menthol is treated with a large excess of hydrochloric acid in the presence of formal, an oily liquid, chloromethyl-menthylic ether, is obtained. It has high antiseptic properties, but being decomposed by water, it is used diluted with olive oil an impregnator of cotton batting.

**SANATOLIN.**—Trade name of a new disinfectant and deodorizer, produced by mixing pure carbolic acid with concentrated sulphuric acid, with the addition of ferrous sulphate, the whole diluted with water. It is a dark brown, strongly acid liquid, with a strong smell of coal tar and sulphurous acid.

**MALTOL.**—A condensation product obtained in

the process of roasting or baking malt. Very recently it has been discovered that it is easily obtained from the needles of the white pine, direct, which it seems contain it to the amount of half of 1 per cent (i. e., 1 part in 200). The needles are macerated in water, and maltol recovered from the liquid by shaking with chloroform, and crystallized out. Maltol, with iodine and soda lye, produces iodoform at once.

**PHOSPHOLUTEYN.**—A synonym of lecithin, a substance that plays the principal role in the structure of the blood corpuscles. It is given in anemia, chlorosis, and in all troubles marked by diminution of the red blood corpuscle. It appears as a "white, wax-like" (slightly coherent?) powder, melting below 100 degrees C., and easily soluble in alcohol at a temperatures of 40-45 degrees, and in the fatty oils, but insoluble or nearly so, in ether, chloroform, and benzoin. It is given hyperdermically in doses of 5 to 15 cgms., and by the mouth in doses of 10 to 50 cgms.

**SIRICAYA.**—The name given the seeds of *Anona squamosa*, a tropical fruit tree, the roots of which are used in the Dutch East Indies as a fish poison, the bark as an aperient or cathartic, according to the amount used, and the leaves as a sudorific. The fruit alone seems to be free from medicinal properties, and it is largely and freely eaten by everyone. *Siricaya* are quite poisonous. They are rich in oil, and contain at the same time a small amount of gum, a fat, and crystallizable body of alkaloidal nature. The oil is used as a parasiticide, especially against head and body lice.—(National Druggist.)

## THE SOCIAL DUTIES OF A PHARMACIST.\*

By W. B. WHEELER, Guthrie, Okla.

Duty, we are told, is a moral obligation; society contemplates the community, the public, the people in general.

Governments are builded upon society, and society finds in the government its greatest source of strength. Each is dependent upon the other for existence, and both are good or bad, according to the people.

I asked an old-timer in our profession, "What are the social duties of a pharmacist?" and he answered, idiomatically, "Everything, except making change, that's business." I replied, "That sounds all right, but it's crude." However, he would go no farther into detail, and one trite sentence is not sufficient to make a paper for this meeting.

While everybody, in every walk of life, has duties to perform, yet society looks upon those who follow the professions for guidance in all things, dividing the social and ethical world into departments, and, to use a business term, places a profession in charge of each. Thus the lawyer, the minister, the physician and the pharmacist find their duties, and are given the places the professions mark out for them. To my mind the duties society places upon the pharmacist are greater in number, in many respects, than those of all the others, and certainly they are the most sacred that can fall to man. To him come all classes of people, the high, the low, the rich, the poor, with all the ills weak flesh is heir to, and to no priest within the sanctuary of the confessional, no lawyer or doctor in the consultation room, are told the hopes and fears, the faults, weaknesses, frailties and vices of society, that are confided personally and professionally to the pharmacist, to be locked away in the safety vault of memory, and to be brought forth only in time of need. Being thus brought close to humanity in all its defects, the pharmacist learns, by the law of contrast, the better things of life; and, after articulating the family skeleton, he finds pleasure in helping to lock it away in the closet of oblivion.

The social duties of a pharmacist make him many sided and versatile. In his place of business he must treat the coarse and rough with promptness and diplomacy, forgetting what they are; and of the modest and retiring, he must, with mild suggestion and the

\* Proceedings Oklahoma Pharmaceutical Association, 1901.

trick of telepathy, often learn their wants and, with the delicacy of gentleness, supply them.

At public places, receptions and entertainments his duties as a builder of better conditions are no less exacting. His profession makes him a leader in society. To entertain others is an acquirement that is a part of his education. And good taste in dress and general appearance is an art he should cultivate as a matter of pride. The manners of a man stamp his individuality. His usefulness to the world depends upon his view of the duties he owes to mankind, in making society better by elevating the thought of the people, clearing the atmosphere of immorality, raising the fallen and holding back those who are in danger. His duties make him a constant student. He must avoid vulgarity, malignity and littleness of soul, and strive to cultivate and acquire the urbanity of perfect manners until all things become to him intuitive and his acts are in obedience to the mandate of mysterious instinct.

There is nothing the pharmacist can afford not to know of current thought in the daily happenings, in literary productions, in art creations. He must be up with the times in all things—*sui generis*—of his own kind, and of all kinds.

But I am reminded that I must not occupy too much time, for there are others. It is the mission of papers, such as this one, to endeavor to elevate the profession, that in its turn it may do its share in raising the standard of morality and intelligence, thus making all mankind better, purer, happier and nobler; this I've tried to do without drawing upon the prismatic powers of language, or to evoke its hidden melodies, yet endeavoring to avoid the dull level of a Travelers' Guide, or the cloquence of an almanac.

It is the practical mission of our profession to assist in correcting the physical evils of humanity, to lengthen life; it is the social mission to aid, to conquer the vicious appetites and passions of those with whom we are brought in contact, that they may harvest the fruits of usefulness, so that in the end all may join with the old poet:

"It is not growing like a tree  
In bulk doth make man better be,  
Or standing long, an oak three hundred year,  
To fall a log at last, dry, bald and sere;  
A lily of a day  
Is fairer far in May.  
Although it fall and die that night,  
It was the plant and flower of light.  
In small proportions we just beauties see,  
And in short measures life may perfect be."

## SHOP TALK.

P. A. Burton, a Northwestern writer on drug topics, tells of spending a few minutes in a St. Paul drug store, in which time eighteen women and four men came in. Only five of them bought, the others used the telephone, consulted the directory, etc., and went out without thanking the proprietor. The latter, being questioned on the subject, said:

"Oh, I suppose I can't complain. I want the people to come into my store, and they won't do it unless I provide them with the little conveniences within my power. The other druggists do it, you know, so I've got to keep in the ring."

"I didn't say anything," writes Mr. Burton, "because I knew that a philosopher can't argue successfully with a business man, but I am now working on the model for a merry-go-round, which can be opened up and turned loose in a six-foot space. I am going to sell it to down-town druggists, to assist them to entice the unwary pedestrian into the store. I expect to operate a Punch and Judy show at the same time, and, both together, I think, will prove a drawing attraction."

A certain druggist, whose store is in a certain notorious district in New York, feels as though it is incumbent upon him not to be polite any longer, particularly to strangers. The cause of his present frame of mind commenced one night about three weeks ago, when a stranger, with a decidedly "sporty" bearing, came into his store, and after buying a cigar and a box of seidlitz powders for a "Katzenjammerfish" feeling, which he claimed to have, developed a conversation on the general merits of the immediate neighborhood. It developed from the stranger's confidences that he hailed from the far West—think of it as the antithesis of the Far East—and to back his claim he rolled his r's as though they were hot potatoes, and flew off into a maze of words in which "pedro," "faro," and "drawing a bead on a greaser who tried to pin the pack" struck the druggist with the force of realism—and said that he had just put up at a neighboring hotel, entirely ignorant of New York. Confidences became mutual, and at the stranger's intimation that he would like to play a little game; and did he (the druggist) know of a house in the neighborhood which did a little business that way, of course, *sub rosa*? The innocent laborer of the mortar and pestle informed the stranger confidentially that he was cognizant of the existence of such a place; nay, he even knew the number of the house and the street, and the proprietor, who was, parenthetically, a very good customer. He went on to say that he had been in the house—of course, for purely business reasons, as from principle he never played games of chance—at which the stranger interjected some remarks about discretion, though good as a rule, being now unnecessary—and plunged into a detailed description—from disinterested enthusiasm, no doubt—of the magnificently fitted and decorated interior. After getting the druggist's card and a few words thereon introducing him to Mr. Blank, the proprietor of the house that did a certain kind of business, the stranger, with effusive good-nights, made his departure; and the druggist, somehow pleased with himself, shut up shop.

\* \* \*

The next morning a man in blue and brass buttons came into the store, and informed the druggist that a certain potentate of another kind of scales than apothecaries', namely, those of justice, had urgent need of him, for what purpose was a dead secret, thought the officer smiled knowingly. And the poor pharmacist, when he arrived before the high dignitary, received a verbal flogging, among other things chiefly verbal, on the topic of the disgrace of gambling, faro-tables, pool-rooms, and so on, until the victim didn't know whether he kept a pharmacy or a gambling house—so convincing was the benediction against him. After the flagellation came the benediction: "Of course," said the high one to the low one, "the law is honor-bound to protect you, just as it affords shelter to a criminal who turns State's evidence." Then was the mystified pharmacist dismissed, the truth just beginning to dawn upon him. Upon reaching the street, the druggist's eyes fell upon the glib stranger of the night before. Any kind of friend would have been comforting at the time. But the recognition was not reciprocal. The stranger told him authoritatively to "move on, there," and then turned, with a roar of laughter, to a nearby policeman, whom he hailed familiarly, and appeared to explain some extremely humorous situation. Then the druggist tumbled, and kicked himself. He is now considering the knotty problem whether it pays to be polite and affable or not.

\* \* \*

Too many druggists make the mistake of carrying too small a stock in certain lines. One of the St. Paul dealers, Herman W. Rietzke, gave a little extemporaneous lecture on the subject to a customer the other day. The customer called for a certain and rather scarce brand of unium plaster, and the druggist immediately supplied the caller's want. "I am surprised," said the buyer. "This is the first time I ever

called for that particular kind of plaster and got it." "It is evident," replied Mr. Rietzke, "that you never came to this store for it. What is the use of one's keeping a stingy little stock of anything—a quarter of a dozen—or none at all? There is where lots of druggists miss it. They should be able instantly to supply the want of every customer, no matter what it is; and the most successful of them do just this."

## DETECTION OF METHYL ALCOHOL IN MIXTURES.\*

By S. P. MULLIKEN and HEYWARD SCUDDER.

In a recent article by E. Jandrier it is stated that a test for methyl alcohol described by us in an earlier number of this journal, and based on the oxidation of the alcohol to formic aldehyd, followed by condensation of the latter to a colored derivative of resorcin, is unreliable, because it is also given by acrolein, and is interfered with by the presence of furfural. To remedy these defects in our method Jandrier recommends that gallic acid be employed instead of resorcin as the reagent for formic aldehyd, he having found in an earlier investigation that the color reaction obtained by the use of gallic acid is much more delicate and less likely to be obscured by coloration occasioned by the simultaneous presence of other aldehyds.

A careful examination by the authors of this modification of their test soon proved that its use for the purpose proposed is entirely inadmissible, and this despite the fact that gallic acid is actually as claimed, a better reagent for the detection of formic aldehyd than is resorcin. The explanation of this paradox will be made apparent by a consideration of certain facts that have lately come to our knowledge while studying the partial oxidation by hot copper oxid of a considerable number of organic compounds.

The means chosen for oxidizing methyl alcohol to formic aldehyd, detailed in our first paper, was the very simple one of plunging a short, closely-wound spiral of light copper wire, previously heated to redness and superficially oxidized, into the solution to be tested. Special emphasis was placed on the condition that "a concentrated spirit should always be diluted with at least three of four volumes of water before oxidation." It was also particularly noted that 1 drop of a 0.5-per-cent resorcin solution was the quantity of reagent that should be added for every 3 Cc. of all solutions originally containing more than 0.1 per cent of methyl alcohol. These minute specifications were necessary, partly because it had been found that absolute ethyl alcohol, when directly oxidized without previous dilution, would, if afterward largely diluted with water, give a very faint color reaction resembling that caused by formic aldehyd. This color, however, was noticed only when the weight of resorcin, added to a given volume of solution, was many times less than that usually employed, and it first made its appearance after several hours, instead of within a few minutes, as usually happened with solutions that really contained methyl alcohol. The conditions necessary for the production of this color from ethyl alcohol were so unusual, its intensity was so slight, and its cause so obscure, that no account of it was included in our first paper. A more suggestive observation was made by us at the same time with reference to the use of casein, of which we wrote: "Casein is not a suitable reagent of methyl alcohol tests, because the oxidation-products of ethyl alcohol yield with it the same blue color as formic aldehyd; though, singularly enough solutions of pure acetaldehyd do not give this result."

### Failure of Gallic Acid Test.

After the gallic-acid reaction for formic aldehyd had been brought to our attention, we endeavored to verify the advantages claimed for it in the detection of methyl alcohol. For our purpose it was found best to employ the reagent very nearly in the manner re-

commended by Istrati: 0.2 Cc. of a saturated solution of gallic acid in pure ethyl alcohol was mixed with a few drops of the oxidized alcohol solution to be tested, diluted to 2 Cc., and the mixture carefully run down the side of an inclined test tube containing a few cubic centimeters of concentrated sulfuric acid. At the line of contact between the two liquids a yellow zone, almost immediately turning green, makes its appearance, if the solution contains formic aldehyd. Above and below the green zone, blue rings then rapidly develop. If other substances which give color reactions are also present, the upper layer will vary in color, but the green and the lower blue ring will still appear beneath. The colors are pure and characteristic, and are not obscured by the presence of other aldehyds.

Having familiarized ourselves with these phenomena, it was with considerable surprise that we found the oxidation products obtained in the usual way from the purest procurable ethyl, propyl, isopropyl, secondary butyl, tertiary butyl and normal butyl alcohols, ethylene glycol, glycerin, acetaldehyd, paraldehyd, ethyl ether, acetone, pinacone and acetic acid, all gave distinct green and blue rings with gallic acid.

The total failure of the gallic acid test to distinguish the substances enumerated from methyl alcohol, as well as the anomalous results noted in our earlier experiments with the oxidation products from concentrated ethyl alcohol when tested with a trace of resorcin or with casein are susceptible of only two simple explanations. Either all the apparently pure compounds oxidized must have contained methyl alcohol or methyl derivatives as impurities, or the list of compounds which may give traces of formic aldehyd upon oxidation with copper oxid is a very much longer one than has hitherto been suspected. The hypothesis that methyl alcohol in small quantities may be formed along with ethyl alcohol in alcoholic fermentations is perhaps not unworthy of a more thorough investigation that it has received. Trillat claims to have detected traces of it in some genuine brandies. But it is, nevertheless, highly improbable that all the cases which have been noted by us in which formic aldehyd reactions were obtained from the oxidation-products of the many presumably pure substances taken for our experiments can be explained in this way, and we inclined strongly from the first, to the acceptance of the second explanation, the probability of which has since become a certainty in consequence of a supplementary quantitative investigation conducted by one of the authors, with the assistance of Messrs. Brown and French.

The logical justification for adhering to the use of resorcin in the test for methyl alcohol lies, then, in the presumption that no common organic compound that could occur in such solutions as are provided for by the method (with the exception of methyl esters or ethers) will furnish enough formic aldehyd, or other substance, exhibiting a similar behavior, when treated with due regard to the detailed directions to give a rose-red ring and flocks. This presumption is a sufficiently well-founded one, when all the precautions that will be given further on in this paper are observed. The gallic acid and casein tests, on the contrary, must be rejected, because they are so delicate that formic aldehyd may be detected by their use in nearly any organic solution that has been partially oxidized by means of a copper spiral.

### Improved Resorcin Test.

Since the publication of our first paper we have had occasion to apply the resorcin test for methyl alcohol to a great variety of mixtures, and as a consequence of the fuller knowledge of the imperfections of the method thus gained, we are now in a position to suggest certain improvements in the original procedure, which, we believe, will considerably augment its practical usefulness. Analysts are, as a rule, too prone to ignore the fact, that the absolute identification of any compound by the use of some single specific reaction is an unattainable end when really

\*American Chemical Journal.

unknown mixtures are dealt with. Specific qualitative tests are of great value when judiciously employed; but each new mixture must be considered by itself, and whenever there is reason to suspect the presence of substances which may interfere with the test selected, means for their removal must first be devised. The list of compounds whose presence may mask the color reactions given by phenols with formic aldehyds is a long one, and includes bodies which are likely to be met with in such important mixtures as the commercial tinctures, extracts, varnishes, alcoholic beverages and solvents. While it would be feasible to formulate quite definite rules of procedure for the detection of methyl alcohol in any limited group of mixtures, it will be more profitable here to make certain general suggestions that will be of service in the solution of a variety of special problems.

The following precautions should always be observed:

(a) Use for the test only that part of any mixture that can be completely distilled at a temperature between 50° and 100°, and which, after distillation, gives a clear, colorless solution when shaken with 2 or 3 volumes of water.

(b) Make a blank experiment, before oxidation with the copper spiral, by pouring 2 Cc. of a clear, aqueous solution of the distillate of proper boiling-point, to which 1 drop of 0.5-per-cent resorcin solution has been added, so as to form a layer upon concentrated sulfuric acid in a test-tube. If a precipitate or a colored ring makes its appearance, the solution requires further preliminary treatment.

(c) Do not test, without preliminary treatment, any solution that is known or suspected to contain phenols, alkaloids or organic bases.

The reasons for these precautions are obvious.

Many organic compounds give colorations with sulfuric acid alone; others, including nearly all aldehyds and many bases, condense easily with resorcin under the conditions of the test to insoluble or intensely colored products. Other phenols besides resorcin, and many bases, will, if present, react with any formic aldehyd that may arise by oxidation with the wire, and thus prevent or obscure the appearance of the characteristic rose-red ring.

#### Separation of Methyl Alcohol.

Methyl alcohol may be separated easily from most coloring-matters, oils, resins, sugars, glycerin and glycols, by a simple distillation: from phenols and acids by distillation from an aqueous solution containing caustic alkali; from bases by distillation from aqueous solution strongly acidified with a dilute mineral acid. When small quantities of methyl alcohol are extracted from insoluble organic mixtures by shaking out with water, it is to be remembered that the methyl alcohol will tend to concentrate in the first part of the aqueous distillates obtained from such solutions, and that various aldehyds, phenols and bases may pass over with it on account of their volatility with steam, and will have to be removed afterward.

When the preliminary blank experiment (b) gives a coloration or precipitate, and the solution gives aldehydic reactions with ammoniacal silver nitrate and with Schieff's rosaniline-aldehyd reagent, take 12 Cc. of the alcoholic distillate, which, if concentrated, must first have been diluted so as to contain at least 75 per cent of water; place in a small firmly stoppered bottle with 3 drams of resorcin and 1 Cc. strong sulfuric acid, and heat for two hours in a water-bath at 70-80°. Cool, dilute the solution to 50 Cc. with water, distill off 5 Cc., and test the distillate for methyl alcohol in the usual manner. Large quantities of aldehyds may be held back by resorcin in this way, though, when the mixture consists mainly of aldehyd, more resorcin and longer heating will be required. An analogous method for accomplishing this same result, which employs aniline and phosphoric acid instead of resorcin and sulfuric acid, was proposed by Allen and Chattaway for use in the analysis of whiskeys. We have used both these methods with success

upon mixtures containing as high as 50 per cent of furiurol and other aldehyds, thus meeting the chief objection which Jandrier has raised against our procedure.

#### Separation of Acetaldehyd.

A more difficult, but practically far more important, problem than that of removing aldehyds from the original mixtures had to be faced when we sought to discover some simple means for taking away the acetaldehyd which is always formed together with formic aldehyd when mixtures containing both ethyl and methyl alcohols are oxidized. The most that could be previously claimed for the test with resorcin in such mixtures was that "One part of methyl alcohol may be detected without great difficulty in the presence of 5 parts of ethyl alcohol." A simple and fairly satisfactory way out of this difficulty was, however, found.

Acetaldehyd is easily and completely expelled from aqueous solutions by persistent boiling in a vessel provided with some condensing arrangement that will prevent too rapid loss of water vapor. Dilute solutions of formic aldehyd, on the contrary, lose their aldehyd very slowly under this treatment, it being firmly held, partly in a polymerized condition, by the hot water. Such solutions will, however, lose all their formic aldehyd when the distillation is rapid and is pushed too far. The improved test for methyl alcohol now to be described takes advantage of these facts, and as the procedure not only removes acetaldehyd, but also traces of many other higher boiling substances that exert an injurious influence on the final color reaction, its employment is generally to be preferred to the somewhat simpler method earlier described by us.

#### Examination of Unknown Mixtures.

When entirely unknown mixtures are under examination they must, of course, always receive, in addition, a suitable preliminary treatment, though it has been found that a previous digestion with resorcin and acid for the removal of aldehyds will seldom be required when these substances are not present in larger quantities than are usually found in the distillates from fermented and distilled liquors.

Unless the mixture to be examined, after receiving whatever preliminary treatment may have been found necessary, already contains much water, dilute 2 Cc. with water until it measures 6 Cc. Treat with the oxidized copper spiral as elsewhere described six times, cooling the tube with running water after the treatment. Next fit the test-tube, which should have a length of 6-7 inches, with a doubly perforated rubber stopper. One perforation of the stopper is to be fitted with a piece of glass tubing drawn out to a very fine capillary whose end is forced down so as nearly to touch the bottom of the tube. Let the wide end of the tube, on which the capillary has been drawn, project an inch above the stopper, and attach to the projecting end a bit of rubber connector which can be closed by a small screw clamp. Fit the second perforation of the stopper with a bit of glass tubing, which is placed in connection with a good water suction-pump capable of giving a vacuum of about 20 Mm. Support the test-tube by a clamp, so that it will be two thirds immersed in water in a breaker maintained at 25-30°. Partially close the screw clamp and apply gentle suction for a few moments so as thoroughly to saturate the liquid with air. Then screw the clamp tight and apply suction with the full power of the pump. A rapid stream of gas bubbles, at first principally air, but later consisting of acetaldehyd, alcohol and water vapor, will rise from the fine capillary point, the liquid boiling under the diminished pressure. Continue this distillation in vacuo until just one-half of the liquid has evaporated. This requires about ten minutes. By judiciously regulating the action of the pump, and in some cases admitting a very little air through the capillary, the boiling, though accompanied by some frothing, is easily con-

trolled, and bumping prevented.\* Next add 1 drop of a solution containing 1 part of resorcin in 200 parts of water to the residual solution, and pour it cautiously into a second tube held in an inclined position in such a way that the two liquids shall not mix. Allow it to stand three minutes; then, holding the tube by its upper end, sway it slowly from side to side in such a manner as to produce a very gentle rotary motion between the two layers. This operation must be persisted in, if necessary, for a minute or more, using a piece of white paper for a background; but must be conducted so gently that only a very gradual and partial mixing of the water and acid shall be caused.

Nearly half of the acid should remain as a distinct unmixed layer at the end. When methyl. alcohol is present, the shaking causes the separation of more or less voluminous flocks of a very characteristic rose-red color. The appearance of colored zones or flocks of other hues, even when tinged with red, or of a rose-red solution without the flocks, should never be considered proof of the presence of methyl alcohol. However, if the flocks are reddish-brown, or if the upper layer has a pronounced red color, it is often well to repeat the test. Too hasty or careless mixing of the aqueous and acid layers spoils the reaction, which will also fail or give unsatisfactory results if the evaporation in vacuo is too long continued, or if it is stopped before the complete removal of all acetaldehyd.

The delicacy of the test as here described is sufficient to permit the detection of 1 part of methyl alcohol in 2,000 parts of the solution as prepared for oxidation. If, in a solution of moderate concentration, the proportion of ethyl to methyl alcohol does not exceed 100 parts to 3, entirely satisfactory tests for the latter are obtained without difficulty. When the ratio between the alcohols is 100:2, the test is occasionally successful, but cannot be depended upon.

Besides methyl alcohol, the only substances which are known to give the same reaction with the improved resorcin test are the methyl esters and ethers (including methylal), and secondary and butyl alcohols (compounds which are rarely met with except in quantities too small to be readily detected). Acetone and dimethylethyl carbinol give red rings at first, but on shaking, the aqueous layer becomes red-brown without yielding the rose-colored flocks.

As compared with other qualitative tests for methyl alcohol known at the time of writing, the one just presented is without question the simplest, the most rapid, and the most convenient. Its delicacy, while not great, is sufficient for most practical purposes, and its most serious imperfections are so well defined as to be rendered comparatively harmless.

**COPPER IN EXTRACTS OF DRUGS.**—P. Carles (Repert. de Pharm.) has examined a number of samples of extracts of vegetable drugs for copper, and has in some cases found considerable quantities of this metal. *Extractum valerianae* was found to contain from .65 to .8 per cent., *extractum scellae cornuti* .5 to .6 per cent., and *extractum aurant. amar.* .4 to .45 per cent. copper. While small quantities of copper may not be directly poisonous, the presence of the metal in extracts is still very undesirable and may give rise to unpleasant symptoms. For preventing the contamination of extracts with this metal, the author recommends plating the inner surfaces of all copper apparatus with silver. A coating of tin is said to be of little or no benefit, this metal being rapidly attacked by vegetable compounds. Silver plated utensils have been found to be very durable in practice.

\*An experienced operator may often obtain equally satisfactory results by simply holding down the oxidized aqueous solution in an open test-tube until the moment when the odor of acetaldehyd disappears. The method of boiling down in vacuo is, however, in general, much more reliable.

## QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

### Drop Lake.

(Dr. J. H. O.) "Lakes" are made (1) by adding a solution of alum, either alone or partly saturated with carbonate of potassa, to a filtered infusion or decoction of the coloring substance, and after agitation precipitating the mixture with a solution of carbonate of potassa; (2) by precipitating a decoction or infusion of the coloring substance made with a weak alkaline lye, by adding a solution of alum; or (3) by agitating recently-precipitated alumina with a solution of the coloring matter, prepared as before, until the liquid is nearly decolorized, or the alumina acquires a sufficiently dark tint. "Drop lake" is made by dropping the moist lake through a small funnel on a clean board or slab, and drying it by a gentle heat. A very little clear gum water is said to be commonly added to the paste to give the "drops" consistence when dry.

"Workshop Receipts" gives the following formula for "Drop Lake," which is stated to be synonymous with "Brazil-wood Lake."

Ground Brazil-wood, 1 pound; water, 4 gallons; digest for 24 hours, then boil for half an hour, add alum 1½ pound, dissolved in a little water; mix, decant, strain, and add a solution of tin ¼ pound; again mix well and filter; to the clear liquid cautiously add a solution of salt of tartar or sodium carbonate as long as a deep colored precipitate forms, carefully avoiding excess; collect, wash and dry. The product is deep red. By collecting the precipitate in separate portions, lakes varying in richness and depth of color may be obtained. The first portion of the precipitated lake has the brightest color. An excess of alkali turns it violet, and the addition of cream of tartar, brownish red. The tint turns more on the violet red when the solution of tin is omitted. Some persons use less, others more, alum. Another formula directs that washed and recently precipitated alumina be added to a strong and filtered decoction of Brazil-wood. The resulting product is said to be inferior to that obtained in the preceding process.

### Mixed Bird Seed and Bird Food.

(Fancier.) The Era Formulary gives the following:

|                      |         |
|----------------------|---------|
| (1) Canary seed..... | 4 parts |
| Hemp seed.....       | 5 parts |
| Millet seed.....     | 1 part  |
| May seed.....        | 1 part  |
| (2) Canary seed..... | 5 parts |
| Hemp seed.....       | 3 parts |
| Rape seed.....       | 1 part  |
| Millet seed.....     | 1 part  |

A "German paste" or canary food may be prepared as follows:

|                             |          |
|-----------------------------|----------|
| Corn meal.....              | 8 ounces |
| Blanched sweet almonds..... | 4 ounces |
| Fresh butter.....           | 1 ounce  |
| Powdered sugar.....         | 1 ounce  |
| Saffron.....                | 5 grains |
| Eggs.....                   | 1 or 2   |

Pass the egg through a fine grater, and add to the other ingredients. Beat to a smooth paste with cold water and granulate the mass by passing through a coarse grater; then expose the product to the air in a warm place until quite hard and dry.

## Bird Food.

|                                                                                    |                     |
|------------------------------------------------------------------------------------|---------------------|
| Pea meal.....                                                                      | 1 pound             |
| Conse sugar.....                                                                   | $\frac{1}{2}$ pound |
| Fresh butter.....                                                                  | 2 ounces            |
| Yolks of eggs.....                                                                 | 2                   |
| Mix these well together and brown gently in a frying pan. When cold mix well with: |                     |
| Poppy seed.....                                                                    | 2 ounces            |
| Bruised hemp seed (separated from the husks).....                                  | 2 pounds            |

## Transparent Shellac Varnish.

(A. G. B.) A colorless varnish, suitable for prints, oil paintings, and hard white wood, may be made by dissolving 2 to 5 ounces of shellac in a pint of rectified spirit. To this must be added about 5 ounces of well-burnt animal charcoal that has been recently heated, and the whole boiled for a few minutes. If, on filtering a small portion of the mixture through blotting paper, it is not found to be perfectly colorless, more charcoal must be added, until the desired result is obtained. When this has been achieved, the mixture must be strained through a piece of silk and filtered through blotting paper.

For the preparation of a shellac solution as clear as possible another authority recommends the addition to the alcoholic solution of shellac of a quantity of whiting (equal to that of the shellac used). Let the whole stand for at least two days, shaking it frequently. The fluid is then allowed to clear. The clear portion is finally poured off and the residue filtered. A small addition of benzine or petroleum ether has also been recommended for clearing shellac solution prepared with 95 per cent alcohol.

## Decolorized Tincture of Iodine.

(D. G. S.) "In making decolorized tincture of iodine, N. F., I followed directions accurately but failed to decolorize the iodine. Can you give any reason for my failure?"

The cause of your failure is not apparent though it is quite evident you have not used the substances in the manner described by the formula. Or you may have made some mistake in the quantities directed. We suggest you try the formula again, being sure the iodine and sodium hyposulphite are completely dissolved before adding the alcohol and the stronger water of ammonia. The latter should answer the pharmacopoeial requirements and contain 28 per cent of  $\text{NH}_3$ . We have never known the process of decolorization employed in this formula to fail when all the details have been carefully carried out.

## Anodyne and Sprain Liniment.

(M. T. C.) Here are several formulas. You can take your choice.

|                                         |                     |
|-----------------------------------------|---------------------|
| (1) Tincture of belladonna.....         | 3 drams             |
| Soap liniment, enough to make.....      | 3 ounces            |
| (2) Solution of subacetate of lead..... | 2 ounces            |
| Oil of origanum.....                    | 1 ounce             |
| Vinegar.....                            | 2 ounces            |
| Water.....                              | 30 ounces           |
| (3) Spirit of ammonia.....              | $\frac{1}{2}$ ounce |
| Oil of cajuput.....                     | 1 dram              |
| Tincture of belladonna.....             | 1 ounce             |
| Camphor liniment, enough to make.....   | 6 ounces            |
| (4) Soap liniment.....                  | 6 ounces            |
| Compound camphor liniment.....          | 6 ounces            |
| Tincture of opium.....                  | 6 ounces            |
| Belladonna liniment.....                | 1 ounce             |
| Stronger water of ammonia.....          | 1 ounce             |

Mix, allow to stand for a week, and filter. This formula appears in the Formulary of the British Pharmaceutical Conference under the title "linimentum opii ammoniatum."

## Removing Old Labels.

(T. R.) It is not always as easy a job to remove soiled labels as one might imagine. One way is to scrape them off with an old knife kept for the purpose. Another is to place the bottle in water until they soak off. One of the neat methods is to thoroughly wet the label and then place over it a wet piece of paper of the same size as the label. If the

paper is pressed down for a few minutes it can be peeled off with the old label attached. If the label is well wetted and then held over the heat of a lamp or gas flame it will usually peel off in good shape. A jet of steam will remove almost any label if directed against it for a few seconds, but the jet of steam is not always handy and some of the previous mentioned methods must be resorted to.

## To Cement Glass to Iron.

(J. G. S.)

|                   |          |
|-------------------|----------|
| (1) Resin.....    | 5 ounces |
| Yellow wax.....   | 1 ounce  |
| Venetian red..... | 1 ounce  |

Melt the wax and resin on a water bath and add under constant stirring the Venetian red previously well dried. Stir until nearly cool, so as to prevent the Venetian red from settling to the bottom.

|                                                                      |          |
|----------------------------------------------------------------------|----------|
| (2) Portland cement.....                                             | 2 ounces |
| Prepared chalk.....                                                  | 1 ounce  |
| Fine sand.....                                                       | 1 ounce  |
| Solution of sodium silicate, enough to form a semi-liquid paste..... |          |

|                   |         |
|-------------------|---------|
| (3) Litharge..... | 2 parts |
| White lead.....   | 1 part  |

Work into a pasty condition by using 3 parts boiled linseed oil, 1 part copal varnish.

HORSECHESTNUTS AS FOOD.—R. Flüge, of Hanover, is reported to have been successful in eliminating from horsechestnuts the bitter resinous principle which rendered them unfit for food. The procedure was as follow (American Medicine): The brown shell was removed after slight roasting, to facilitate the shelling. The chestnut was then pulverized and saturated with pure alcohol or ether alcohol in a tightly closed percolator. After standing for a week at a moderate temperature the resin had passed into solution and the fluid containing it was then drawn off. For complete extraction of the resin, fresh quantities of the solvents were necessary and were obtained from the resin solution. By heating this fluid, the solvent was volatilized and the bitter resin remained. The vapors of alcohol were conveyed back into the upper part of the percolator, by a pipe conduit, and after being condensed by a cooling device, were again used upon the chestnut meal, and the process repeated until the fluid running from the percolator was completely freed from bitterness. The alcohol retained by the meal was distilled off and the meal dried. The meal contains all the albumin and starch of the chestnut and has a pleasant taste.

PRESERVING AMMONIUM AND STRONTIUM IODIDES.—Strontium iodide and ammonium iodide soon acquire a red color upon standing, this discoloration being caused by the liberation of iodine. Mansier (Journ. Pharm. et. Chim.) finds that these preparations may be restored to their original conditions by dissolving in a small quantity of water, and evaporating without loss of time. Removing the free iodine by shaking with chloroform or carbon disulphide was not found effective. The author finds that these preparations may be preserved without change if placed in bottles containing a layer of sodium bicarbonate (ammonium carbonate for preserving the ammonium salt) covered with a layer of cotton. The freshly prepared salt is placed upon the layer of cotton, the bottle or container is then heated upon the water bath, in order to remove air, and sealed. These substances are said to keep indefinitely without change when prepared in this way.

PHARMACOPOEIA OF PRAYERS.—The latest fad in the aristocratic and financial circles of Berlin is said to be prayer healing, for which a pharmacopoeia of prayers for special forms of disease has been prepared. A lady doctor, whose fees are at the rate of two marks an hour, is the practitioner most in vogue. (American Medicine.)

## NEW EDITION.

A Clean Record is of the utmost value when unexpected trouble arises over a POISON SALE. It is a strong argument with judge or jury, if this record is kept in a concise, business-like way.

## The Era Poison Register

Furnishes a convenient means for keeping this clean record.

It contains space for 800 entries providing for Name and Quantity of Poison Sold, Date, Price, Purpose, Name of Purchaser, Witness, Remarks, etc.

Size of page 8x11 inches, bound in stiff board covers, with leather back. Also contains a digest of the Poison Laws of all the States, brought down to date.

PRICE 60 CENTS PER COPY, POSTPAID.

**D. O. HAYNES & CO., Publishers,**  
396 Broadway, New York.

Every druggist should be convinced by this time that "NEW-SKIN" is not Collo-dion, but every druggist has not yet stocked "NEW-SKIN." We will not be satisfied until it is on every counter so you might as well send your order now, and get the benefit of our extensive advertising to the consumer.

POCKET SIZE, like illustration, 10c. retail. - 75c. Per Dozen.  
FAMILY SIZE, 25c. retail. - \$2.00 " "

### MORE ABOUT RED ALBUMEN.

**Trade Receives Notice Not to Substitute.—Dealers  
Ridicule Idea of U. S. Salyx & Co.  
Getting Hellred At Law.**

The "albumen craze" has been quite as much in evidence during the last week as it was the previous one, and orders continue to come in to the city wholesalers from various part of the country. Many of the orders have distinctly stated that blood albumen was wanted and dealers say that all such orders are being filled. Some druggists, who are probably not aware of the past record of the exploiters of "red albumen," write for "red albumen" and invariably receive an answer to the effect that such a preparation is not sold by the firm, but that they can be supplied with blood albumen. Usually when the dealers write to customers on the albumen question they explain that "red albumen" is a preparation being sold by the U. S. Salyx Co. and that the previous record of the concern in connection with "black pepsin," "per algretta" and other frauds causes them to advise druggists not to sell it.

The prominent wholesale drug houses of this city have received a "notice" from the U. S. Salyx Co., New Concord, Ohio, warning them against selling blood albumen when "red albumen" is ordered. The notice says that there is an albumen compound, red in color, made by slaughter house people for fertilizing purposes, which some druggists have been selling as "red albumen," and further that "this fertilizer contains sufficient phosphorus to kill almost immediately any fowl that it is fed to, and that it is not intended for a food compound." The notice concludes by cautioning wholesale and retail druggists against selling blood albumen as "red albumen," to those wanting the latter as an "egg food."

The manufacturers say:

"Red Albumen is made expressly as an egg food and should be used for no other purpose. We are advertising 'red albumen' extensively and about one-fifth of our receipts goes into the pockets of the wholesale druggists. We expect your assistance in establishing our business. When a farmer buys what he supposes is red albumen for the purpose of making his hens lay, and gets an albumen preparation made for an entirely different purpose, that will kill his hens, it injures our business, and therefore injures yours. The U. S. Salyx Co., New Concord Ohio, are the only manufacturers of red albumen. We have complied with the law regarding the name 'red albumen' and will prosecute to the full extent any person selling any preparation but ours as red albumen."

When asked his opinion of the U. S. Salyx Co., and what effect the notice to the trade would have on the sale of blood albumen, an official of one of the large downtown drug houses said: "We do not take any stock in the notice whatever and the concern is only trying to 'bluff' druggists into buying 'red albumen.'" They would not attempt to prosecute any druggist, for their past record in exploiting "black pepsin," "per algretta," "hypersalphire," etc., would not sustain any charge of theirs in a court. We continue to sell blood albumen and to those who specify "red albumen" we explain the case and usually sell the blood albumen in the end. While blood albumen may not do all that the exploiters of "red albumen" claim for their preparation, in combination with pepper it will keep hens warm, which is conducive to laying eggs. As for blood albumen being harmful, we have sold several tons of it in the past two or three weeks and have not heard of any complaints." Asked if his firm would buy any "red albumen" for customers who would not take blood albumen, the official said: "We always try and avoid having any dealings whatever with a concern of questionable reputation, and

as we are aware of the many frauds exploited by the U. S. Salyx Co., we will not handle any of their new preparation or any article of their manufacture." Nearly all the drug dealers spoke of the notice in about the same manner, and the Era representative could not learn of any wholesaler or jobber who had bought any "red albumen," although they all said there was a good demand for blood albumen.

Members of the drug trade ridiculed the idea of the U. S. Salyx Co. attempting to prosecute them. No cases of substitution have been reported, as on all orders sent out, the article was said to be labeled blood albumen or "albumen (red)." One dealer remarked that the Salyx Co. might annoy druggists considerably by writing threatening letters but he was satisfied the concern would not even attempt to prosecute, as it had been exposed by the Government when it tried to create a demand for "black pepsin" a few years ago.

Enclosed with the "notice" of the Salyx Co. were a number of circulars telling of the wonderful properties of "red albumen," which the dealer was asked to distribute. The circular referred to in last week's Era was also enclosed.

Blood albumen is obtained by separating the serum from the clot of perfectly fresh blood. The liquid, which contains from seven to eight per cent of proteids, is evaporated in shallow trays at a temperature not exceeding 50° C., when the albumen is obtained in brittle scales or transparent flakes of a grayish, yellowish, reddish, brown or black color. Blood albumen has been used in the preparation of patented foods, in dog biscuit, poultry foods, etc. for a number of years. It is also largely used in the textile industries, especially in the printing of delicate colors. "Black albumen," or dried blood, finds applications in sugar refineries and in turkey-red dyeing.

### ADULTERATED FLAXSEED BEING OFFERED.

**Dealers Warned Against Buying Ground Flaxseed at Prices Inconsistent With Purity.**

A card recently sent out by McIlvaine Brothers of Philadelphia, notifies the trade that there has been some adulterated flaxseed offered for sale in Philadelphia and Baltimore. This seed is said to have been brought from the West already ground. McIlvaine Brothers state that they thought from the appearance and price of the article offered that it could not be pure and had it analysed by their chemist, who reported as follows:

"The total amount of oil found in the sample by extraction was 31.15 per cent, which of itself is not far from the average amount found in the genuine flaxseed, but the examination of this oil shows it to be abnormal and very different from the oil extracted from pure flaxseed. This is shown by the following figures:

|                                                                          |
|--------------------------------------------------------------------------|
| Saponification equivalent, 163.1 (normal 186-195)                        |
| Iodine figure equivalent, 50.21 (normal 170-185)                         |
| Unsaponifiable oil equivalent, 34.5 per cent (normal 1.1-1.28 per cent). |

It will be seen here that both the iodine figure and the saponification equivalent are far below the normal for the pure extracted linseed oil and the explanation is found in the high percentage of unsaponifiable oil which is presumably mineral oil. This is undoubtedly a foreign admixture or adulterant." It is said the fraud can readily be detected by the odor, and the color is darker.

The New York drug dealers of prominence when asked about the flaxseed said that none had been seen here, but it was thought an adulterated article must be

offering, as the prices quoted are too low for pure ground flaxseed to be sold at. One large dealer said he had not seen any adulterated flaxseed in this market recently, but he knew that it was being offered and had been offered for a long time, as the prices quoted would not pay the first cost of a pure article. He did not know how the evil could be remedied except that "dealers should keep their eyes open and refuse anything but pure flaxseed, regardless of price."

## KING'S COUNTY PHARMACEUTICAL SOCIETY.

The last meeting of the Kings County Pharmaceutical Society for the year 1901 was held in the Brooklyn College of Pharmacy building, No. 329 Franklin avenue, Brooklyn, December 10. The attendance was unusually small. President Oscar C. Klein, Jr., called the meeting to order and Secretary Tuthill read the minutes of the preceding meeting stating that the committee on investigations had reported favorably on the sixty applications for membership which had been received. He also handed in four more applications which were referred to the same committee. Treasurer Ray reported a balance of \$255.15 in the treasury and \$6,843.27 to the credit of the college.

Dr. Muir, as chairman of the legislative committee, gave a report of the conference of his committee with the Legislative committees of the State Association and the several Greater New York organizations, and thought their deliberations should meet with the approval of the Society. The report was adopted without discussion. President Klein reported that he attended an entertainment and smoker given by the Philadelphia Retail Druggists' Association, Friday, December 6, at which about three hundred druggists, out of a membership of five hundred and fifty, were present, and that good feeling and harmony prevailed at the gathering. The secretary read a letter from Mrs. McKinley in reply to the letter of sympathy sent by the Society at the time of the President's death.

Dr. Muir reported for the building committee which has in charge the selection of a site for the new college, and thought the committee would be able to present something more definite in the near future. H. O. Wichelns then took the floor and spoke at considerable length on the N. A. R. D., stating he had not been present at the last meeting of the Society when the report of the delegates to the Buffalo convention was presented. He asked Prof. Anderson to enlighten him and stated he had been given to understand the N. A. R. D. was "dead."

Prof. Anderson said he believed the N. A. R. D. was as thoroughly alive as it ever had been and there was no truth in the report that it was a "back number." He said that although the efforts put forth here had not been successful, there was no reason for pronouncing the plan a failure as the druggists in smaller towns had been much benefited by it. The success of the N. A. R. D. is dependent upon the hearty co-operation of wholesalers and jobbers and in Greater New York there are so many wholesale, proprietary and retail concerns it is a difficult matter to uphold the plan. In smaller places where there are only a few wholesalers the retail druggists can dictate their terms. He had little faith in the tripartite agreement as applied to Greater New York, but the plan was now to get the smaller places in line, obtain a strong backing and then attack the strongholds. He hoped that in due course of time the price restrictive plan would be adopted. In closing, he urged the members to stand firm and do all they could to help the N. A. R. D., for in "organization there is strength."

Dr. Muir spoke on the tripartite plan and referred to unsuccessful but well-planned attempts to enforce the agreement in this city. It had been found almost impossible to trace goods. Even when evidence was brought against a violator it could not be made to produce beneficial results and in his opinion, no plan based on an agreement would ever be successful in this city; there are too many dishonest dealers. He said under the tripartite agreement the jobber appears to have the best end of the argument and the only plan that will be suc-

cessful is one which will allow honest dealers to have redress in courts of law.

Secretary Tuthill reported the Society now had 420 members, and asked that each one use his influence to bring in more members.

Prof. Anderson proposed that the society have a reunion in the form of an entertainment of some kind, or possibly, a smoker or dinner. This proposal caused a lengthy and heated discussion, but it was finally decided and the president appointed Messrs. Wichelns, Anderson, Tuthill, De Forest and Ray a committee of five to take the necessary steps in the matter and also to invite some authority on pharmaceutical subjects to read a paper on the occasion. Dr. E. G. Rave presented the college with a manikin, and received a vote of thanks from the Society.

The names of the newly elected members follow: Fred Ahlborn, W. H. Berney, W. Francis Bliker, Rudolph Boenke, T. J. Broadhurst, David K. Brown, Geo. B. Cabene, F. A. Cade, Maurice D. Cadman, Geo. W. Caldwell, J. M. Conklin, Geo. H. Convin, Jr., P. C. Crandall, May Viola Crosby, John D. Crosby, W. A. Dawson, W. E. Dennis, Samuel Dolcost, Adolph Engelhard, Ernest Falkenburg, Adolph Fischer, Geo. J. Frey, Win. E. Golder, Arthur G. Howell, Hans Jurgensen, Geo. A. Koch, W. E. Kolb, Chas. F. Kramer, Isaac L. Leaf, Francis A. Lowe, C. R. Lusch, Katherine C. Mahegin, Max Mayer, Michael Metz, Nelson McBride, W. L. Morris, Jos. T. Munk, F. L. Nagel, Fred E. Niece, Ralph Paul, Thos. J. Rees, Jos. E. Reid, E. C. Reiss, Robt E. Reilly, Adam B. Richert, John W. Riehl, Chas. Rollberg, Harry Rubin, F. O. Schroeder, Jno. A. Schmidt, Anthony Schntzler, G. V. Sloat, Jr., Eugene P. Smith, Otto C. Spaeth, Theodore Tewes, E. C. Thurston, A. E. Turner, Richard J. Wall, Andrew H. Witze, Geo. S. Yaeger.

## STORE REGISTRATION IN NEW YORK.

The State Board of Pharmacy of New York announces that it is now ready to receive applications for store registration for the year 1902. Applications in the Western section can be made to the branch secretary, George Reimann, No. 405 Genesee street, Buffalo, N. Y.; in the middle section, to Warren L. Bradt, No. 55 Washington avenue, Albany. In the Eastern section applications can be made at the office of the Board, No. 115 West 68th street, New York city. The office is open from 9.00 a. m. until 4.00 p. m. Saturdays only from 9.00 a. m. until 12.00 m.

The application blank the Board asks to have filled out this year requires more particulars regarding licensed and unlicensed employes and of certificates displayed. The applicant states the names of all licensed clerks, the number and date of their certificates and by what Board issued; also the names of registered apprentices with the number of their certificates and the full names of all other unlicensed employes and in what capacity employed. The applicant is also required to affix a poison label fully complying with the law to his application.

Secretary Sidney Faber states that application blanks will be sent by mail upon request. The Board recommends that applications be sent in as soon as possible in order to avoid delays.

## BROOKLYN COLLEGE ALUMNI DINNER.

The annual dinner of the Alumni Association of the Brooklyn College of Pharmacy was held at the Argyle, Nos. 153-155 Pierrpont street, Brooklyn, Wednesday, December 11. The affair was one of the most enjoyable ever held by the association, and the presence of several members of the N. Y. C. P. Alumni Association added much to the success of the dinner.

Dr. Frederic P. Tuthill acted as toastmaster and introduced the speakers, who were Dr. William Schroeder, Jr.; Charles S. Erb, president of the N. Y. C. P. Alumni Association; Dr. William Muir and Thos. J. Macmahon, who responded for the New York College of Pharmacy. Other speakers and toasts were: Dr. E. H. Bartley, "Faculty of the N. Y. C. P.," Dr. Geo. C. Diekman, "Faculty of the N. Y. C. P.," Philip Shappiro, "How We Did It"; F. Borggreve, "How He Does It"; J. E. Mc-

Namara, "Class of 1902"; Mr. Hurley, "Class of 1903"; Francis B. Hays, "Pharmaceutical Press"; Mr. Platt, "Commercial Interests"; Prof. W. C. Anderson, "Any Old Thing."

## MANHATTAN PHARMACEUTICAL ASS'N.

### Law Relating to Manufacture of Soda Water Discussed.

The Manhattan Pharmaceutical Association held its regular monthly meeting in the library of the College of Pharmacy, No. 115 West 68th street, Monday evening, December 16. J. Maxwell Pringle, Jr., presided at the meeting, which was not well attended.

Secretary S. V. B. Swann read the minutes of the last meeting and Treasurer G. H. Hitchcock gave his report, stating that the balance on hand at the last meeting was \$159.57 and since that he had received \$23.75 in dues and had paid out \$36.80, leaving a balance of \$146.52 in the treasury.

Mr. Hitchcock reported for the legislative committee and said he had written to Thos. Stoddard, the chairman of the legislative committee of the State Pharmaceutical Association, informing him of the action taken by the Manhattan Association in regard to the election of members of the State Board for the Eastern Section, and of the discussion on the conflicting clauses in the penal code and pharmacy law. Mr. Stoddard had replied stating that a bill would be drafted and presented at the next session of the Legislature, in accordance with the resolution adopted at the conference held on November 12, and he hoped there would be no opposition to the bill. Mr. Stoddard recommended that the penal code difficulty be left to the Board of Pharmacy as that was the body to look after such matters. He called attention to the fact that the present pharmacy law had been in force less than a year and should be given a fair trial before attempting to bring in amendments.

A printed circular handed in by one of the members was read by the secretary. The circular contained a decision recently given in court against a person charged with making soda water in a tenement house, and for which he was fined \$25. The decision showed that the court considered it a misdemeanor for any one to manufacture soda water in a tenement house. On motion it was decided to have the decision of the court printed and sent to the members. Several members thought the law which made it a misdemeanor for druggists to manufacture soda water should be repealed and to this end the chairman of the legislative committee was instructed to confer with other societies of the city and State.

### HEGEMAN & CO.'S MAIN STORE NARROWLY ESCAPES FIRE.

The main store of the several in this city owned by the corporation of Hegeman & Co., at No. 196 Broadway, was in great danger of being consumed by flames early Thursday morning, and had it not been for the timely arrival of William R. Thompson, the colored porter employed by the company, it is probable the building and contents would have been destroyed.

The watchman was on his usual round of inspection about 1.30 o'clock, and smelling smoke at once called a policeman and turned in an alarm. At first it was thought the fire was in the building occupied by the Hegeman Company, but after considerable difficulty the fire was located in the building next door, occupied by the Dennison Manufacturing Co. For a time it looked as if the drug store would be consumed by the flames, but with the exception of about \$300 loss on goods stored in the cellar and damaged by water, the Hegeman Co. was not inconvenienced. The firemen worked particularly hard to prevent the flames spreading to the drug store, as an explosion was feared. The company carries a large stock of all kinds of drugs in the storage rooms of the building.

### NOTES.

—Some of the visitors in New York drug circles last week were: A. H. Van Gorder of Benton, Myers & Co., and Samuel E. Strong of Strong, Cobb & Co. and treasurer of the N. W. D. A., Cleveland, Ohio; E. C. Irving, San Francisco; Fred L. Seely of the Paris Medicine Co., St. Louis; Luther Hommel, Saugerties, N. Y.; Harry Crispell of Crispell & Co., Rondout, N. Y.; W. D. Olney, Middletown, N. Y.; M. Collins of the Rhode Island Drug Co., Providence, R. I.; C. W. Davis, Groton, Conn.; W. E. Burke, Princeton, N. J.; Theodore L. Bristol of the Bristol Drug Co., Ansonia, Conn.; W. C. Bower, Norwalk, Conn.; Dr. Percy De Stanley, Rahway, N. J.; H. N. Clark, Cornwall-on-Hudson; Mrs. W. A. K. West, Toledo, Ohio; L. M. Munro, Jr., New Canaan, Conn.; Frank Rowley, Plainfield, N. J.; H. E. Emerson, Milford, Pa.; S. F. De Vries, Sayville, L. I.; U. W. Becker, Stapleton, S. I.; S. Davis, Boonton, N. J.; A. H. Beardley, manager of the Miles Medical Co., Elkhart, Ind.; Charles Lawton and William Lawton of the C. H. & H. A. Lawton Drug Co., New Bedford, Mass.; Thomas Lord of Lord, Owen & Co., Chicago; William Schoelles, Sealcliff, L. I., and A. M. O'Keefe of the Brinson, Seales Drug Co., Weycross, Ga.

—The Wholesale Drug Trade Bowling Association had the usual weekly meeting at Reid's alleys on Saturday, December 14, and some very good games were rolled. Seabury & Johnson's team now have the highest team score, having rolled 923 on Saturday. Dodge & Olcott's team still lead in the tournament. Last Saturday's scores follow: Seabury & Johnson, 706, against Lanman & Kemp, 739; Lanman & Kemp, 670, against General Chemical Co., 759; Seabury & Johnson, 923, against General Chemical Co., 788; Roessler & Hasslacher Chemical Co., 682, against National Lead Co., 737; Colgate & Co., 782, against National Lead Co., 657; Colgate & Co., 814, against Parke, Davis & Co., 822; Roessler & Hasslacher Chemical Co., 589, against Parke, Davis & Co., 745.

—The New York Section of the Society of Chemical Industry will hold its next meeting at the Chemists' Club, No. 108 West Fifty-fifth street, to-morrow (Friday) evening. The following papers will be read: G. Thurnauer, "The Determination of Bismuth in Lead;" Maximilian Toch, "The Chemistry of Paints" (Exhibition and Illustrations); Clifford Richardson, "Report of the Subcommittee on a Uniform Method for the Analysis of Portland Cement;" Oscar Nagel, "On Ricinus Oil Cake."

—The Board of Managers of the Drug Trade Club held the monthly meeting, Wednesday, December 11. The only important business transacted was the election of the following out-of-town members: H. O. Branner, Baltimore, Md.; Henry V. Dunham and Andrew A. Dunham, Bellows Falls, Vt.; Edwin Mallinckrodt, St. Louis; E. S. F. Randolph, Plainfield, N. J., and Lee Harrison, Newark, N. J.

—Rumor says that a company is being organized to compete with the combination known as the American Can Co., manufacturers of tin cans, boxes, etc., for druggists' and manufacturers' use. Druggists claim they are now obliged to pay 50 per cent. more for talcum, ointment and similar tin boxes than they did before the combination was effected.

—H. P. Campbell of the wholesale and retail drug firm of Sturgis & Campbell, Clinton, Ia., has been in the city several days, and made calls on his friends in the trade. Mr. Campbell was in the retail drug business at No. 54 New York avenue, Brooklyn, for some time previous to his removal to Iowa. He reports trade in good condition in his territory.

—B. Steindler, a retail druggist who has conducted a store at the corner of 103d street and Third avenue, has been having difficulties with the financial end of his business. When Mr. Steindler purchased the business he gave a mortgage, on which he was to pay monthly installments, and failing to make these payments the mortgage has taken possession.

—The 125th street branch of the Hegeman & Co.'s (corporation) drug store will hereafter be open all night. Geo. Ramsey, of the main store, states that the business at this branch has so increased during the past few months that the organization of a night staff became ab-

solutely necessary, and now the doors of this pharmacy are never locked.

—Jacob Portugaloff, who gives his occupation as a drug clerk, has filed a petition in bankruptcy, with liabilities at \$2,851 and nominal assets. Portugaloff at one time conducted a drug store at the corner of Grand and Ridge streets. A meeting of the creditors is called for Monday, December 23.

—The drug store at No. 307 Madison avenue is now owned by a corporation, Van Horn & Co. The officers of the company are: President: Guy R. P. Ellison; treasurer, C. C. Jenkins, and secretary, Mr. Van Horn. Ellison and Van Horn at one time conducted a store at Forty-first street and Park avenue.

—E. C. De Witt, a well known proprietary manufacturer of Chicago, and president of the Proprietary Association of America, is to make this city his home in the future. Mr. De Witt is having a fine residence built on Fifty-fifth street, near Fifth avenue. At present he is stopping at the Waldorf.

—Chas. F. Beers, for some time assistant in the city department of Parke, Davis & Co.'s New York branch, left on Saturday for the head offices at Detroit. From there he goes to Kansas City, where he will be connected with the firm's branch, representing them in Colorado.

—L. Altman, for some time with druggist P. H. Henckel, at Eighty-eighth street and Amsterdam avenue, has severed his connection with that store, and is taking a vacation. Mr. Altman expects to do relief work after his rest.

—C. J. Lyles, a retail druggist who has conducted a store at 155th street and St. Nicholas avenue for the past two years, has closed the business and will probably locate in Brooklyn.

—R. M. Magill, formerly senior clerk in the pharmacy of E. Rutter at the corner of Pavonia avenue and Coles street, Jersey City, will open a drug store at No. 143 Mercer street, Jersey City, about December 20.

—John S. Lane, Eastern representative and Samuel P. Watson, Southern representative of Schieffelin & Co., have been in New York recently.

—William Caughey, one of the city staff of Seabury & Johnson, is reported seriously ill with typhoid fever and pneumonia.

—O. F. Berger, representative of the Osborne-Colwell Co., is on a trip in upper New York State.

—Mrs. Geo. E. Schweinfurth, wife of the popular pharmacist at No. 866 Sixth avenue, is ill with typhoid fever.

#### A Point Well Taken.

In their advertisement in this issue, the Paris Medicine Co. call attention to the fact that if they were to increase the size of their packages of Laxative Bromo Quinine Tablets to contain 35 tablets where they now contain 24, it would reduce the retailer's sales 50 per cent, and when the retailer stops to think that he made over one-half million dollars on Laxative Bromo Quinine Tablets last year, it seems to us this point is well taken. This announcement is prompted by the fact that some imitators of Laxative Bromo Quinine Tablets use the argument that they give more free goods than do the manufacturers of Laxative Bromo Quinine Tablets and that they put more tablets in each box, and the Paris Medicine Co. ask each druggist to figure for himself how many free goods he would have to receive to make him even with the original Laxative Bromo Quinine Tablets. After all, it pays to handle genuine goods.

The continued demand for Sen Sen, and the large sales made, testify to the popularity of this breath perfume and throat ease. Since Sen Sen has been placed on the market there have been many breath perfumes advertised and sold, but druggists say that Sen Sen has by far the largest sale of any yet put up. Probably few drug stores in the country are without Sen Sen.

## IN AND ABOUT BOSTON.

### LAWRENCE DRUGGISTS' ATTEMPT TO DEFEAT THE COMMONWEALTH.

Boston, Dec. 14.—The Commonwealth of Massachusetts has an admirable system by which it is possible immediately to detect anything out of the usual course in the administration of the poor departments of the various cities and towns, and so save money to the State and prevent fraud on the cities and towns. It appears that bills far in excess of what they should have been were sent in from Lawrence to the State Board of Charity, for settlement by the Commonwealth. The bills aggregated \$1,758, and the State, after careful investigation, has determined that \$880 is the maximum sum that should have been charged and the \$869 represents excessive charges.

Investigation into these charges was started because of the variation between the charges and the visits of the poor department. A child was reported as having received fifteen visits from the ward physician and to have consumed \$11.00 worth of medicine. As a matter of fact, the child had been threatened with diphtheria and one visit made by the physician showed that there was no diphtheria. The mother of the child has made affidavit that she took her daughter, by authority of the overseers of the poor, to a ward physician and that he pronounced her trouble tonsillitis and immediately himself prepared a bottle of medicine as a gargle. This bottle, bearing the doctor's name, and only half empty, is held in evidence. The mother's affidavit shows that this was the only visit to the doctor, and that the child did not leave school one, but the claim was for fifteen visits to her. Two druggists put in bills for medicine for this case, furnished several times. The prescriptions were obtained from these druggists and it was found that the same preparation, or gargle, was within ten days' time sold for sixty cents, seventy-five cents and eighty-five cents. Some of the prescriptions were charged at as high a price as \$1.00, and all the bills had been paid by the city of Lawrence. A leading druggist in Boston says that his price for one of the seventy-five cent prescriptions would be thirty-five cents. Among other claims was one for physicians' visits to a man up to Sept. 30, 1900, while at the office of the Secretary of the Commonwealth a certified copy of his death certificate is filed, showing that he died Sept. 19. He was given a peculiar beef extract, the cost of which was \$1 per bottle, according to the bills submitted. Agents of the Board have scoured Boston, but cannot find any like it. This was named "Bordeaux." The agents then visited the druggist in Lawrence where it was first procured, and were told that the concern put it up; that it had had trouble with the name, and so was putting up the very same thing under the title "Los Angeles." The agents bought a bottle for thirty cents, which was all the clerk charged. In another case a man used up a jar of ointment which the druggist said cost seventy-five cents, but the city paid, and the State was asked to repay \$11.10 for medicines he was alleged to have consumed. One patient had a bottle filled once and secured some pills twice. The bill for medicines on this account was \$8.35. These are only some of the great number of cases which have been investigated with the utmost care by the State Board, which was impressed not alone with the large sums charged, but also with the fact that the physicians' bills and those of the druggists so exactly coincided. All this has created excitement in Lawrence. It is not known at the State House what course the Mayor and the other authorities of the city intend to pursue. The Commonwealth is through with the matter, having settled the bills with the City of Lawrence.

#### FAIRLY GOOD BUSINESS.

Boston, Dec. 14.—The druggists of Boston have just passed through a peculiar week in several respects. Monday the atmosphere was just balmy enough to melt the snow which had fallen during the previous week and the result was that the city was one mass of slush, which,

of course, resulted in wet feet and consequent colds; Tuesday it rained hard, followed by a change which brought cold winds from the Northeast and many of those who escaped the snow and slush colds were caught unprepared for the complete change, so that they, too, were forced to look for various kinds of medicines either as a preventative or an antidote. Friday the weather became warm again and today it was almost like Summer. Under this order the druggists had a heavy trade in cough medicines and one night did a rushing business in hot drinks, followed on the next with an equal amount of business in cold sodas. The sale of vaccination points fell off only slightly and altogether trade was brisk throughout the week. In the general trading, firmness in prices and a pretty steady condition is found, as regards drugs, and the same practically applies to chemicals as a class, in which there is fairly good business. Alcohols and cologne spirits are in good demand, and rates hold well. Dye-stuffs and tanning materials are in rather good demand, although no material change in prices are noted. Hops are dull and inactive. Little activity or fluctuation in prices on waxes is found.

#### HARD LUCK FOR FALL RIVER DRUGGISTS.

Boston, Dec. 14.—Fall River druggists, or more properly those in the Flint River district, seem to have been in hard luck, and several have just been haled into court on the charge of illegal liquor selling. Among them were Joseph and Thomas McNally, each of whom was fined \$65, from which they appealed; Bernard J. Keeley, fined the same sum and who also appealed, Alfred J. Guiguere, who received a like fine of \$65, and Ludger Moreau, a clerk at Richard's drug store. He likewise was fined \$65 and appealed. In all these cases ample evidence was introduced to convince the court in finding as it did. In Fall River proper still other druggists under the ban have been H. J. Sorel, C. W. Folster and Alfred Blais, whose cases were tried on continuance in the court there for the unlawful keeping of liquors, Sorel in his own drug store, Folster in Edmund Reeves' store, and Blais in the Union Drug Store, where he is clerk. He is only fifteen years old. Each of these defendants was fined \$65, from which they all appealed. In all these cases officers went about with a spotter, who was sent in at each place to negotiate a sale. Once outside, he promptly reported to the waiting officers, hence the evidence secured.

#### SPRINGFIELD CLERKS MAKE MERRY.

Boston, Dec. 14.—Several guests from Boston were present at the second annual reception and dinner of the Springfield Drug Clerks' Association, held at the Hotel Russell in that city. There also were guests from other cities, while about every drug store in Springfield was represented by the members of the organization. There was a novel feature in that the banquet did not begin till midnight. Orchestral music and vocal selections enlivened the occasion. The president of the association, Stephen Morris, presided and also served as toastmaster. All of the special guests and many of the members spoke briefly and pleasantly. Among the out-of-town guests were Mr. Blanchard, of the Eastern Drug Company, Boston; C. H. Brooks, of Hartford, and C. W. Hathaway, of Salem.

#### NOTES.

—Last Sunday was made a "campaign no-license day" in Cambridge, and union meetings were held all over the city, with addresses by the ministers and many of the leading no-license advocates. One of the aldermen told of his experiences while a member of the no-license committee of the city government and said he learned that druggists in various parts of the city kept specially prepared packages which are sold promiscuously without registration. He stated that the people of Cambridge had not done their complete duty by shutting out the saloon, but that they should take some measures looking toward strict compliance with the law by all druggists. The city went no-license at its annual election, on December 10.

—The one hundred and thirty-second dinner in the history of the Paint and Oil Club of New England was held at the Hotel Brunswick, with about forty present. John D. Morton, first officer of the club, presided at the banquet and over the subsequent business meeting. There was a spirited debate on the direct steamship connection between Boston and the Mediterranean ports. Mr. Morton, C. W. Willis, secretary of the club, and several others spoke strongly in favor of the establishment of such a route. A unanimous resolution was voted to express the club's approval of the plan. The members of the club represent large financial interests.

—Edward F. Morse, U. S. N., pharmacist at the Charlestown Navy Yard, has been ordered to the naval magazine at Iona Island, in the Hudson River, New York, where he will continue in service. When he was at the Charlestown yard he was attached to the Wahash. His home is in Charlestown. Pharmacist John Cowan, U. S. N., has been ordered before the retiring board for examination. He has been in the medical office at the Charlestown Navy Yard for a short time, coming there after service in the Philippines.

—W. B. Heath, the West Roxbury druggist elected this week to the Boston Board of Aldermen, states that he went into the contest for office more as a matter of curiosity as to the outcome than anything else. His campaign was so without method that he did not even state on the cards, which he placed in the show windows of his pharmacy, notifying voters of his candidacy, to what party he belonged. His general popularity brought him success.

—A new enterprise is the Lowell Germania Chemical Company, organized for the purpose of manufacturing, selling and general dealing in all kinds of chemicals. It is to have a capital stock to the amount of \$10,000, made up of 400 shares of the par value of \$25 each. August Fels is the president, Michael F. Gookin the treasurer, and they and Dennis Wholey make up the board of directors.

—Wilfrid Mathieu, a clerk employed by Charles L. Curtis, a South Framingham druggist, has been fined \$50 for illegally selling a bottle of beer without requiring the purchaser to sign his name at the time of purchase. An appeal was taken, and Mathieu was held in \$200 for the Superior Court. He is not a registered pharmacist.

—President Peter B. Moriarty and W. C. Doane, secretary, of the Worcester County Pharmaceutical Association, delegates from that organization to the national association, presented detailed reports of the national convention, in Buffalo in October, at the recent quarterly meeting in Worcester.

—With a record of excellent service covering two years at the City Hospital, Boston, Roscoe Hill has become manager of the Perkin's pharmacy, on Highland avenue, Somerville. He is registered as a pharmacist in New Hampshire and New York, as well as Massachusetts.

—Harriman and Foster, druggists of Whitinsville, have bought of the administrator of the estate of Callahan McCarthy what is known as the Gorman drug store in that town. The store recently was closed for a short time, and is now to be reopened by the new owners.

—After a policeman had bought a pint of whiskey of A. F. Gorham, a clerk at W. F. Colburn & Co.'s drug store in East Boston, one day this week, he promptly put Gorham, who is only twenty-one years of age, under arrest on the charge of illegally selling liquor.

—Hon. Charles L. Dean, Republican candidate just elected for a fourth term as Mayor of Malden, is well known to druggists in all parts of the country as the head of Dean, Foster & Co., wholesale dealers in druggists' glassware and sundries.

—F. W. Putney, formerly in the drug business in Cambridge, and who sold his store to John O'Hara, has become connected with a collection agency in whose interests he travels through Maine, making his headquarters in Portland.

—Mellin's Food Company of North America, at the December meeting of the association's board of directors, held this week at Young's Hotel, was unanimously voted into membership of the Boston Merchants' Association.

—R. S. Billings, a Dorchester druggist, is enjoying a

little let-up from business cares, and is off hunting near his old home in Bethel, Me. He has with him, as his guest, W. H. Davis, also of Dorchester.

—A new drug store at Winchendon is that of A. G. Durgin, just opened. It is situated in the new Rome block. Mr. Durgin, whose home has been in Quincy, is to remove to Winchendon.

—G. A. Greer, a New Bedford druggist, is a voluntary petitioner in bankruptcy, and owes nearly \$1,800, to meet which obligations there are no assets, according to his statement.

## PHILADELPHIA.

### VALUE OF THE P. A. R. D. TO DRUGGISTS.

Philadelphia, Dec. 14.—The value to the druggists of a city of an active association was unmistakably shown by a recent happening here. A few weeks ago two of the leading daily newspapers published full-page advertisements of a certain "patent medicine" in which many local druggists were quoted by name as highly recommending this particular remedy, the ad. making it seem as if personal interviews had been given the reporters by each one. This form of advertising was rightly considered as highly offensive and detrimental to the druggists named, by the local association, as well as to others, and moreover, the "recommendations" were obtained in rather an unfair manner. The method was for the reporter to enter a drug store and to ask the owner, or even a clerk, how this remedy was selling and what he thought of its merits, which questions the druggist, thinking the man a prospective customer, usually answered in some manner, not supposing that his words were to be quoted as an advertisement endorsing its claims. If favorable, the name and address of the druggist was noted and another victim hunted up, if unfavorable, the "opinion" was quietly consigned to oblivion. The local association did not propose to "stand for" any such questionable method of advertising, especially as the article in question was put out by a firm not noted for its generous treatment of the retailer, so their executive committee called on the advertising managers of the two papers and demanded satisfaction. They got it, too. Although the advertisement could not be retracted and the damage was done, a written promise was secured from each that in the future if any patent medicine firm attempted a similar scheme that they would not publish any endorsement of a retail druggist unless given in the form of a written and signed statement. Of course, if the druggist is willing to give an endorsement over his own signature that is his own business, the point was that none should be "buncoed" into giving one without being fully informed of its proposed use. Personally, it is known that this advertisement has done harm to druggists here; in several instances local physicians resented the public approval of a patent medicine by the druggist with whom they dealt and have since refused to send prescriptions to that store.

### DRUG BOWLING LEAGUE.

Philadelphia, Dec. 14.—Interest in the weekly tournaments of the Drug Bowling League is at a high point, owing to the keenness of the struggle between the teams for the championship, and the season promises to be highly successful in every way. Up to the present time the honors are divided between the teams representing Aschenbach & Miller, Whittall, Tatum Co. and Smith, Kline & French Co., the "Wanderers" seeming to be the only one of the others in the running. A delegation from the Baltimore Bowling League headed by Dr. A. L. Dohme, visited the city today (Saturday) as guests of the local league and a series of games will be rolled off tonight. J. Elwood Lee of the J. Elwood Lee Company, entertained the "Wanderers" at his home in Conshohocken Friday at a dinner party, after which several games were played

on the fine alleys Mr. Lee has in his residence. The full schedule for the remainder of the year has been arranged as follows: December 30—Whittall Tatum Co. vs. H. K. Mulford Co., R. Shoemaker & Co vs. H. K. Wampole & Co.; January 7—Smith, Kline & French Co. vs. Aschenbach & Miller, H. K. Mulford Co. vs. "Wanderers;" January 14—Whittall Tatum Co. vs. H. K. Wampole & Co., "Wanderers" vs. R. Shoemaker & Co.; January 21—H. K. Wampole & Co. vs. Smith, Kline & French Co., Aschenbach & Miller vs. Whittall Tatum Co.; January 28—R. Shoemaker & Co. vs. H. K. Wampole & Co., Whittall Tatum Co. vs. "Wanderers;" February 4—H. K. Mulford Co. vs. H. K. Wampole & Co., R. Shoemaker & Co. vs. Smith, Kline & French Co.; February 11—Aschenbach & Miller vs. "Wanderers;" Whittall Tatum Co. vs. R. Shoemaker & Co.; February 18—H. K. Mulford Co. vs. Smith, Kline & French Co., Aschenbach & Miller vs. H. K. Wampole & Co.; February 25—Whittall Tatum Co. vs. Smith, Kline & French Co., R. Shoemaker & Co. vs. "Wanderers;" March 4—Aschenbach & Miller vs. H. K. Mulford Co., "Wanderers" vs. H. K. Wampole & Co.; March 11—Whittall Tatum Co. vs. H. K. Wampole & Co., H. K. Mulford Co. vs. R. Shoemaker & Co.; March 18—Aschenbach & Miller vs. Whittall Tatum Co., "Wanderers" vs. Smith, Kline & French Co.; March 25—Whittall, Tatum Co. vs. H. K. Mulford Co., R. Shoemaker & Co. vs. H. K. Wampole & Co.; April 1—Aschenbach & Miller vs. R. Shoemaker & Co., H. K. Wampole & Co. vs. Smith, Kline & French Co.; April 8—Aschenbach & Miller vs. Smith, Kline & French Co., H. K. Mulford Co. vs. "Wanderers." On every date of this schedule the teams given as opponents bowl three consecutive games with one another. The games are to commence at 8.00 p. m., and will be played on Imperial Alleys, Ninth & Walnut streets.

### INSPECTION OF THE BOARD OF PHARMACY.

Philadelphia, Dec. 14.—According to current remark, the present inspection of the State Board will find more druggists than ought to be so unconsciously violating some of the provisions of the pharmacy law, particularly in the matter of unregistered clerks. It is rumored that one of the largest down-town stores has been reported as having three unqualified clerks in the prescription department, where drugs are also sold. In our correspondence in last week's issue it was stated that the Board required the display of the last renewal receipt with the certificate of registration; this statement, based on local authority, has been found to be an error. In order to settle this and other points, the secretary of the State Board, Dr. George, was communicated with, and his reply was that "it will not be necessary to display the renewal receipt any longer, but that portion of the Act in reference to displaying the certificate of registration is still in force and therefore the certificate only must be displayed in a prominent place in the pharmacy." A decision of the Attorney-General regarding the question raised as to the proper fee for registration to be paid by persons examined by the Board is that in all cases where certificates were not issued prior to the enactment of the "Newhard Bill," the fee therein provided for must be paid. No "renewal fee" for re-registration is now required, that having been done away with by the "Newhard Bill" last April. It might be mentioned that it would be wise for every retail druggist to secure a copy of the State pharmacy law so that he could obviate any misunderstandings as to what he is required to do and not to do. Copies can be secured from the secretary of the Board, Dr. C. T. George, Harrisburg.

### A GOOD BUSINESS WEEK.

Philadelphia, Dec. 14.—Business has been good all over town this week, very few complaints of dullness being heard from any section. While not many druggists are making any extensive display of holiday goods, the sales of perfumes, toilet waters, stationery, toilet articles, etc., has been quite satisfactory, and many are doing well with a line of Christmas cards and inexpensive novelties. Some of the window displays of perfumery and atomizers have

been quite elaborate and doubtlessly have paid well. Certain druggists, by judicious advertising begun early in the season, have managed to secure and hold this line for themselves in spite of "department store" competition, a plan to be copied. About 10,000 persons are reported by the Board of Health as having been vaccinated during the week by their corps of "free vaccine physicians," and the number of cases of small-pox reported is considerably less.

The jobbers are doing big business, their forces now working overtime to keep up with the rush of orders, both local and out-of-town. The record for the month, so far, is ahead of that of last year and is on a good solid basis of short-time credits and quick payments. The market has been steady for all the staples, native vegetable drugs continue to be scarce and in good demand, oils showing a slight advance.

#### NOTES.

—At the regular monthly meeting of the Drug Exchange, held last Tuesday, the heavy burden on druggists generally of the present revenue tax on alcohol was made the leading topic of discussion. President W. V. Smith declared that the tax of \$2.07 on a gallon of alcohol selling for \$2.45 was seriously felt by all concerned, the privilege of paying the Government \$2.07 for buying 38 cents worth being altogether unreasonable. It was resolved to co-operate with the N. A. R. D. and the N. W. D. A. in an effort to induce Congress to reduce this tax on alcohol when the revision of the present internal revenue taxation came up for action, it having been demonstrated that the tax was productive of more revenue than was needed. The annual meeting of the Exchange will be held on January 28, and the annual banquet will take place on the night of Jan. 30, 1902.

—With the tearing down of the building at Twelfth and Chestnut streets to make way for a modern "sky-scraper," one of Philadelphia's old landmarks has passed away. At this corner, just before the Civil War, was the finest drug store of its time in Philadelphia, and here Samuel Simes made both money and fame. Under Simes' management, this drug store became noted for its handsome fixtures and elegant appointment, although these would now be looked upon with scorn by the up-to-date druggist, and to it came the cream of fashionable Philadelphia's trade. Hubbell, who afterwards made a success with a store of his own at 1412 Chestnut street, was head clerk then, and many of our older druggists gained experience there.

—The first of the series of illustrated lectures given by the Philadelphia College of Pharmacy for this season, "Japan as Seen with the Camera," by Rudolph Blankenburg, was given before a large audience last Wednesday evening. Judging by the success of the initial lecture and the interest displayed, this new plan for arousing local interest in the college work will be of great benefit. The next lecture will be given on January 8, at 8.00 p. m., the subject "Birds," by Dr. S. C. Schmucker. Admission to these lectures is free and cards may be obtained from the college, although no one will be refused admission if not provided with a card.

—A meeting of the resident members of the American Pharmaceutical Association was held at the Philadelphia College of Pharmacy Tuesday afternoon to formulate plans for the entertainment of the association at its coming meetings here next year. President W. L. Cliffe of the State Pharmaceutical Association, as Local Secretary is busily engaged in making preparations to uphold Philadelphia's reputation as a city of good entertainment and from now on local members will be called on to aid in this work.

—From Millville, N. J., the seat of several large glass factories, comes the report of the busiest season in its history, all the factories running at their fullest capacity. Whitall Tatum Co. the largest glass manufacturers in the country, have announced that they will start two new factories at the first of the year in addition to those now working day and night. Glass blowers and "tending boys" are in great demand there just now.

—As showing that there is yet some profit in making medicine, if not for the druggist selling it, a recent news-

paper article states that "Professor" Munyon of "my cure" fame is going to use some of his millions in building a palatial Winter home on a Florida island, which he has purchased for this purpose.

—J. W. England, for many years apothecary at the City Hospital and recently connected with the H. K. Mulford Company, will take a position with the Smith, Kline & French Company about the first of the year, in their manufacturing department.

—While mixing vitriol and other chemicals in a vat at the works of the Eddystone Manufacturing Company, Chester, James Cassidy, a workman, fell into the vat of acids and was horribly burnt before he could be rescued.

—H. N. Snyder, one of Lancaster's progressive druggists, was in this city during the week buying holiday goods and calling on his friends. Mr. Snyder reports trade in Lancaster as being excellent.

—S. B. Davis, formerly a clerk of A. LaDow's Oak Lane drug store, has gone into business for himself by the purchase of the "Wiedemeyer Pharmacy," Sixth street and Snyder avenue.

—A. Dare, formerly at Forty-sixth street and Lancaster avenue, has accepted a position as "manager" for J. B. Moore at the Twelfth and Pine streets drug store.

—W. A. Shannon of Eight and Spring Garden streets, has purchased and opened a drug store at Germantown and Girard avenues.

—The "Calhoun Pharmacy," located at Forty-sixth street and Lancaster avenue, has been sold to Mr. W. C. Culby.

## BALTIMORE.

### GILPIN, LANGDON & CO. A STOCK COMPANY.

Baltimore, Dec. 13.—The firm of Gilpin, Langdon & Co., for many years engaged in the wholesale drug business and as drug millers, was yesterday incorporated as a stock company at Trenton, N. J., with a capital stock of \$250,000. H. B. Gilpin and Charles F. Husted, of Baltimore, and Kenneth McLaren, of New Jersey, are the directors, and at a meeting to be held shortly Mr. Gilpin will be elected president and Mr. Husted vice-president. The capital is divided into shares of a par value of \$100, but none of them are to be offered for sale, the entire amount being subscribed and the shares being quoted at \$150. The company will continue business hitherto conducted by the firm at 300 and 302 West Lombard street, the building occupied some months ago and which was formerly owned by the Charles A. Vogeler Company. The structure was erected especially for the Vogeler Company, and very few changes served to adapt it admirably to the uses of the new occupants.

Gilpin, Langdon & Co. have been in business 56 years, although the firm name has during that time undergone several changes. It was formerly at the corner of Light and Lombard streets. Years ago the first senior partner having been the late Mr. Canby, it became Canby, Gilpin & Co. About 20 years ago a big fire gutted the place and not long afterward Mr. Canby retired and Mr. Langdon was taken into partnership. During the early part of this year Mr. Langdon retired, and since then the partners have been Harry Gilpin, a son of the first member of that name and Mr. Husted. Somewhat more than one year ago the establishment at the corner of Light and Lombard streets, which had been rebuilt, was destroyed by fire a second time, only the drug mill, which occupied a structure on Light street, being saved. The firm took up temporary quarters on Light near German street, and last Summer purchased the Vogeler building, where the wholesale and the milling departments are housed together under one roof, and where ample facilities exist, together with perfect equipment.

### WITH THE BOWLERS.

Baltimore, Dec. 14.—Secretary Harry McCann, of the Baltimore Drug Trade Bowling Club, has completed the table of team and individual averages for the first of the three series of games. The schedule shows the Root and

Herbs and Sharp & Dohme running neck and neck, with the other teams stringing out behind. The Root and Herbs had been leading until the last games of the series, when Sharp & Dohme caught up and was actually ahead of the Root and Herbs on team average, as the subjoined tables will show:

## STANDING OF TEAMS.

| Teams.                      | Won. | Lost. | P. C. | Ave. |
|-----------------------------|------|-------|-------|------|
| Roots and Herbs             | 11   | 4     | .717  | 730  |
| Sharp & Dohme               | 11   | 4     | .717  | 736  |
| James Bailly & Son          | 11   | 7     | .611  | 729  |
| McCormick & Co.             | 10   | 8     | .555  | 740  |
| Stanley-Brown Drug Company  | 8    | 10    | .444  | 689  |
| Armstrong Cork Company      | 5    | 13    | .278  | 647  |
| Ferrell-Kellam Drug Company | 1    | 17    | .056  | 477  |

## INDIVIDUAL AVERAGES.

| Spares.     |       | Spares     |       |
|-------------|-------|------------|-------|
| Ave.        | P. C. | Ave.       | P. C. |
| Baumgartner | 163   | Coyne      | 139   |
| Fairley     | 163   | Beaumont   | 138   |
| Goldsbrough | 162   | W. Wahl    | 138   |
| Davis       | 162   | Baker      | 136   |
| Muller      | 157   | Tribble    | 134   |
| Dohme       | 156   | Hoffman    | 133   |
| W. Smuck    | 155   | Cann       | 129   |
| Amour       | 149   | Stagger    | 128   |
| Brauer      | 150   | McIntyre   | 124   |
| Mackall     | 149   | Winkelmann | 122   |
| Dunno       | 149   | Spedden    | 116   |
| Kormann     | 147   | Ailes      | 112   |
| Byers       | 145   | Elliott    | 110   |
| Waters      | 144   | C. Wahl    | 109   |
| Ed Smuck    | 144   | Tyson      | 105   |
| Vordemberg  | 144   | Dierker    | 104   |
| Sattler     | 144   | Parkhurst  | 103   |
| Blummer     | 143   | Mullikin   | 100   |
| Milborne    | 142   | Erickson   | 80    |
| Hoegermann  | 141   | Bonds      | 95    |
| Dickson     | 141   |            |       |

On Tuesday night of this week McCormick & Co. won all three games from the Ferrell & Kellam Drug Company by 776,792 and 854 against 592, 559 and 634 points. Last night McCormick & Co. went up against the Stanley & Brown Company and again took all three games by 820, 850 and 809 against 734, 795 and 676 pins.

## AGGREGATE OF BUSINESS TRANSACTIONS NOT ABOVE NORMAL.

Baltimore, Dec. 16.—The past week was productive of some peculiar developments. On some days business appeared to be very active for the jobbers, while on others quiet prevailed. The out of town trade, as far as can be learned, was far more satisfactory than that in the city, but the aggregate of transactions did not exceed moderate figures. The manufacturers of pharmaceuticals kept their laboratories fully employed and the general conditions of business must be regarded as satisfactory. No striking developments are reported in the market for botanicals, while the movement in heavy chemicals seems to be of normal proportions. Retailers do not appear to be making an elaborate holiday display. Even druggists who hitherto paid considerable attention to this feature of the year's activities are at present giving displays of articles peculiar to the drug trade rather than fancy goods the preference.

## NOTES.

—Miss Louisa K. Schrabr, eldest daughter of August C. Schradr, a well known retail druggist, whose store is at the corner of Elliott and Curley streets, was married on the evening of the 12th inst. to August M. Denhard, a young attorney. The groom is a nephew of Frederick Denhard, a South Baltimore druggist.

—Anthony Ludwig, formerly with William Dawson, Druid Hill avenue and Biddle street, has accepted a clerkship in the pharmacy of C. R. Myers, Edmondson avenue and Monroe street.

—H. Lyon has taken a position as clerk in the drug store of J. R. Mayer, Pennsylvania avenue and Wilson street.

—Druggist T. C. Hauser, Fayette and Poppleton streets, went to Philadelphia last week for a stay of several days.

—Among the visiting druggists in Baltimore last week was John J. Rose, Westminster, Md.

## CINCINNATI.

## BUSINESS SATISFACTORY AND MANY VISITORS.

Cincinnati, Dec. 14.—The business in this city during the past week both in the wholesale and retail lines has been very satisfactory. Among the prominent druggists in town were noticed the following: C. N. Peters, Milan, Ind.; C. B. Montgomery, Bethel, Ohio; W. A. Alcott, Patroit, Ind.; C. B. Cokefair, Eaton, Ohio; R. F. Stewart, Jonesville, Ky.; J. T. Kimbrough, Oconigsville, Ky.; W. T. Elrod, Bethel, Ohio; John Ullrich, Aurora, Ind.; G. R. Kemper, Osogood, Ind.; J. C. McCullough, Dillsboro, Ind.; Chas. L. Hammond, Vanceburg, Ky.; J. A. O'Hara, Williamstown, Ky.; W. H. Averill, Frankfort, Ky.; Jos. I. Beck, Batavia, Ohio; W. J. Ewing, Lillsboro, Ind.; A. Lancaster, Sadieville, Ky.; J. N. Currey, Georgetown, Ohio, and J. A. Johnston, Springboro, Ohio.

## NOTES.

—Secretary Schmulling of the Ohio Drug Clerks Association in defining the object of the association, says: "There are today many persons acting as drug clerks who have no right to do so. These entering the business has resulted in cutting down of our salaries, and the deterioration of the business standing of drug clerks. There is one way to remedy this state of affairs and that is through the united efforts of every clerk in our State. Our association will endeavor to procure employment for its members, and the social and intellectual advantages it can offer will be a means of increasing our membership. We aim to have frank discussions and the exchange of ideas between members, and to develop the social side of our nature by entertainments, another aim will be intellectual and discriminating encouragement of the study of pharmacy."

—The "Smoker" arranged for by the executive committee of Dayton (Ohio) Druggist Association in the parlors of the Algonquin Hotel was a great success. After a short business session, during which President M. A. Burkhardt who was the delegate to the N. A. R. D. Convention at Buffalo read a report, the members enjoyed the refreshments which had been provided. Then followed cigars and an impromptu program of vocal and instrumental music.

—Dr. D. J. Williams whose drug store at Ford, Ky., was recently destroyed by fire was in town this week buying furnishings and stock for his new store which he expects to open up within the next week.

—Julius Woesten who has been clerking for his brother A. F. Woesten the druggist at York and Baymiller streets, this city died this week after a lingering illness.

## DETROIT AND MICHIGAN.

Detroit, Dec. 14.

—Minor E. Keyes, pharmacist at the corner of Jos. Campau avenue and Fort street, inaugurates each year during the holiday season some scheme which will tend to draw particular attention to his pharmacy and the desirability of trading there. This year the scheme is not particularly new, but it is one usually very effective. The sentence: "Keyes for Candies" is given, and the scheme is to make as many words as possible from the three given, handing the list in to the store some time before Christmas, each contestant being required to purchase goods to the amount of 25 cents or more, the one making the most words from the sentence being presented with \$5, the second highest \$2.50, and so on down the line in sums ranging from \$1 to 25 cents. Mr. Keyes believes in keeping his name before the buying public constantly.

—The regular monthly meeting of the Drug Clerks' Association of Michigan was held last week, at which time the nomination of officers for the coming year was made. The election will be held at the annual meeting occurring on Jan. 8, 1902. After the routine business of the meeting was concluded the members repaired to the offices of Dr. P. M. Hickey, and there listened to a very interesting discourse upon the X-rays.

—There has been a good deal said from time to time relative to the formation of a wholesale drug trust, to cover the most important concerns throughout the country, but in a recent interview with Jas. E. Davis, of the Michigan Drug Co., he stated that he does not believe such a combination will be made, and, if it is, the Detroit jobbers will certainly not take part in it.

—Messrs. H. W. Grebe and J. C. Boyd, representing Parke, Davis & Co. in the territory adjacent to Kansas City in the exploitation of blackleg vaccines and other veterinary products, are in Detroit for a general inspection of the laboratories. They were in charge of the company's interests at the International Live Stock Convention, recently held in Chicago.

—Walter S. Dupont, son of Wm. Dupont, one of the oldest of Detroit's pharmacists, and himself a druggist of long experience, has accepted a position with Parke, Davis & Co. C. M. Woodruff, of the general business department of the same company, recently returned from an extended trip to New York.

—The annual meeting of the Detroit Retail Druggists' Association was held one day last week, and the following officers were elected for the ensuing year: President, A. L. Walker, first vice-president, W. A. Hall; second vice-president, F. A. Cook; secretary, Grant W. Stevens; treasurer, Wm. Dupont.

—Chas. S. Elliott, for a number of years with D. S. Hallock, has purchased the drug business of W. H. Robinson, Fort and Campau streets, Detroit, and is making numerous alterations and improvements.

—W. H. Kirn, manager of the special preparation department of Parke, Davis & Co., recently underwent a successful operation at Harper Hospital, and he expects to return to his desk shortly.

—Among the representatives of chemical firms in Detroit the past week were R. S. Johnston, with Merck & Co., and C. M. Badgesley, of Chas. Pfizer & Co., both of New York City.

—Mr. Russell Tlatt, who has been identified with W. H. Burke & Co. for a number of years, intends shortly to engage in business for himself, at Chatham, Ont.

—Messrs. Berridge & Berridge, of Orion, Mich., have recently made a large increase in their general stock, and a number of improvements in their store.

—E. J. Shepard, of the firm of E. J. Shepard & Co., of Adrian, Mich., was in Detroit the past week, making extensive purchases for the holiday trade.

## CHICAGO.

### CHICAGO BUSINESS ACTIVE.

Chicago, Dec. 14.—Business is showing a healthy tone in pharmaceuticals and all lines of drugs. There is much demand for staple goods. Cash may be a little short on smaller accounts, because of the Christmas shopping going so extensively to the larger stores, but the application of this seems to be principally confined to the larger cities. The majority of people do their shopping perforce of their own merchants. The staple goods trade among wholesale druggists differs in respect of kind in nowise from the trade that would naturally be expected at this time of the year. The common ailments are not more than usually prevalent, and although the doctors declared some time ago that the grip germ was prowling around, he seems to have found few victims thus far. Several days of damp, sloppy weather have favored the growth of colds and throat and lung affections, and have caused or fostered a brisk demand for suitable drugs. The present temperature of ten or fifteen degrees below zero, while far from comfortable, is at least healthful in that it compels activity.

The manufacturing houses are all busy and assert that the general demand for pharmaceuticals shows a normal and to-be-expected increase. Heavy chemicals for use in the arts are also in good demand, for factories are busy.

### NOTES.

—The second complimentary dinner given by the members of the Committee of Arrangements and Entertain-

ment of the National Wholesale Druggists' Association and the Proprietary Association of America, 1900, to themselves and ladies was held at the Chicago Athletic Club, Dec. 11. Among those who responded to toasts were Col. C. F. Weller, the president, George P. Engelhard, valetudinarian, J. R. Kathrens, prophet, and B. T. Van Alen, historian.

—The druggists of Lawndale, a flourishing suburb of Chicago, have a very successful local organization auxiliary to the Chicago Retail Druggists' Association. A well attended and satisfactory meeting of Lawndale druggists was held last week. From the remarks made by the various members it appeared that very little difficulty is being met with in carrying out the plans of the association.

—At Bensinger's alleys last Monday evening the Chicago Drug Trade Bowling League rolled the usual games. The totals of the scores were as follows: Sharp & Smith, 752, 788, 727, against E. H. Sargent & Co., 730, 713, 678; Lord, Owen & Co., 677, 654, 715, against Buck & Rayner, 651, 642, 644; Parke, Davis & Co., 669, 716, 825, against A. M. Foster & Co., 773, 587, 720.

—C. L. Gleeson, special representative of the importing department of Parke, Davis & Co., New York, was in Chicago this week, and visited the trade.

—H. H. Petsch, a well known druggist of Oak Park, one of Chicago's western suburbs, has moved to McHenry, Ill.

—Leo, K. Solomon has bought the drug store of N. Lapp, at Forty-seventh street and Evans avenue.

—John Walzke, a Chicago druggist, is reported to have sold his store for a consideration of \$3,400.

—W. R. Lundy & Co., of Jamaica, Ill., have dissolved partnership, Lundy & Morrison succeeding.

—It is reported that T. L. Knoak, of Deerfield, Ill., will Creek, Ind., has gone out of business.

—Gaugenstaidt & Hilman have succeeded Watson, Gaugenstaidt & Co., at Bode, Ia.

—George W. Ascott has sold his store at Neillville, Wis., to Victor C. Woeffler.

—The Crescent Linseed Oil Co., of Chicago, has dissolved partnership.

—It is reported that T. L. Knoak, of Durfield, Ia., will retire from business.

—Eckhoff & Co. have succeeded D. D. Dayton & Co., at Lime Springs, Ia.

—M. S. Tague & Co. have sold their stock of drugs at Urbana, Ia.

—D. C. Prader, a well known druggist of Monticello, Ia., is dead.

—J. S. Penberthy has sold his drug store at Florence, Wis.

—Aaron Aisenstadt, of Chicago, has sold his drug store.

### BATTERIES.

A well known druggist in New England, who says he is not in business for his health, has one show case devoted to electrical appliances for medical purposes. He says it pays handsomely to handle these goods, and especially the batteries; while this druggist will supply any kind of a battery desired, he carries in stock and has on exhibition an assortment ranging in price from \$5 to \$30. It is almost needless to say that physicians advise their patients to purchase the batteries themselves, thus obviating the necessity of the physician carrying his own battery to his patients. P. G. Williams' Batteries are designed for just this kind of work, and it is claimed that their cheapness results from manufacturing them in very large quantities only. Full descriptive literature may be had on request.

There are all kinds of wines, and they are sold at all kinds of prices, but the druggist wants the best wine and wants to sell it at a reasonable figure and still make a fair profit. It is doubtful if any druggist who has sold the Duroy & Haines Co.'s products will say he has ever had any fault found with the quality of the wines he sells. This company advertises its products as being sold only to the retail druggist, and will send a sample on request. Write to the Duroy & Haines Co., Sandusky, Ohio.

## THE NORTHWEST.

### A PRIMITIVE DRUG STORE.

St. Paul, Minn., Dec. 13.—Byrdie K. Smith, a little school-girl of St. Thomas, N. D., centributed the following (which received honorable mention) to a competition in the Minneapolis Journal Junior, a children's paper:

"If you can imagine a new pine shingle upheld by two sticks of wood, on which stands a small army of bottles looking like giants and dwarfs, and two clerks in overalls, you have a clear picture of my drug store. I was the proprietor, my sister the clerk. All morning my sister and I had been gathering the leaves of a plant which, when boiled, the Indians said, cured a funny feeling in the head, and so we had filled some pickle bottles with this medicine, while another bottle held some cold tea, and a tall olive bottle held a well-beaten raw egg.

"Mamma and papa were the first customers; they bought some of the headache cure, papa buying a small bottle for 10 cents, while mamma bought the contents of a pickle bottle for 3 cents. The next were a neighbor and his wife, going home from a large berry-picking; the former bought the cold tea and his wife the raw-egg remedy, and we were paid in a pall of berries and a new 10-cent piece.

"When we returned to the store, we found that the cows had run over it, and destroyed everything. This discouraged us, so that we cried ourselves to sleep, but not before we had enjoyed a repast off the berries."

### BOGUS TESTIMONIALS.

St. Paul, Minn., Dec. 13.—Several druggists of this city were enraged a few days ago by the action of a certain well-known proprietary concern that printed a page "ad." of its remedy, which comprised laudatory testimonials signed by St. Paul retailers. These so-called testimonials were forgeries throughout and printed without the knowledge of the druggists, who were immediately jumped upon by their medical customers. In this case redress seems impossible, for the company in question would like nothing better than the advertising it would get by means of a suit for damages, to obtain which it would just as soon pay heavy damages as not. The druggists who in the end fell as did the writer, who, when a choleric country boy, attempted to drive a refractory hog out of the garden. He threw a frozen potato at the brute with all his enraged might. The potato hit the mark all right, but the mark coolly suspended operations and eat the potato.

### THE "MARE" IN A RAGE.

St. Paul, Minn., Dec. 13.—Dr. A. A. Ames, the freak mayor of Minneapolis, made a "holy show" of himself again the other evening. He attended a meeting of the board of charities and corrections, when trouble arose over a bill for \$350 presented by the A. D. Thompson Drug Company for goods purchased by City Physician Nelson for use at the City Hospital. It was left over for further consideration. This was the second time this same bill was turned down. The action exasperated the mayor, and he gave vent to his feelings in a way that astonished the members of the board. The mayor not only denounced the board in general, but he called certain members names and shouted at one of them: "I can lick you!"

### NOTES.

—The Minneapolis papers this week stated that Axtel Frykman, who is employed by Wittich & Gleason, druggists, was fined \$50 in the municipal court for compounding prescriptions without a license. His employers promptly denied the statement, and declared that Frykman was arrested for selling 15 cents' worth of carbolic acid to a man who was sent by a competitor to purchase it. They denied that Frykman ever filled a prescription at their pharmacy.

—Successions: C. L. Bisom, Brayton, Ia., by Franklin, Davis & Co.; George W. Assott, Neillsville, Wis., by V. C. Woeffer; A. E. Timmerman, Stella, Neb., by A. L. Adams; W. R. Lundy & Co., Jamaica, Ia., by Lundy & Morrison; D. D. Dayton & Co., Lime Springs, Ia., by Eckhoff & Co.; Durant Bros., Algona, Ia., by W. A. Parsons & Co.; Watson, Gangestad & Co., Boone, Ia., by Gangestad & Hilman; Anderson & Tyndale, Hardy, Ia., by G. S. Tyndale.

—Dr. Edward B. Zier, one of the best known practitioners of Minneapolis, died this week. Dr. Zier, while a member of the legislature, four or five years ago, attained considerable notoriety by introducing and championing a bill compelling manufacturing pharmacists to print the formula upon every bottle of their preparations. The bill did not pass. Dr. Zier was 44 years of age at the time of his death.

—State Chemist Hortvet has been about the busiest man about the capitol in St. Paul this year. With his assistants, he has analyzed from eight to thirteen samples of foods, etc. a day, and the total record will exceed that of last year by 1,500. Of the whole number examined 44 per cent. are found adulterated, makers of baking powder, vinegar and paint being the worst offenders.

—Cirkler's drug store, on Nicollet avenue, Minneapolis, has been handsomely redecorated. The ceiling has been done in dark buff and the walls in a harmonizing olive green shade, with artistic maroon decorations for both ceiling and walls. In the rear of the store has been built a new office, screened from the store with mahogany fret-work.

—J. N. King, a druggist of White Bear, Minn., was sued for \$39.40 by Lennon & Gibbons, St. Paul clothiers, being a balance on an amount due for uniforms for the village Roosevelt Club, for which King is said to have promised to be responsible. The defendant won the suit.

—P. B. Herman was in the city this week on business. He has sold his Dundee and West Brook stocks, and now goes to the Glenville one—his latest purchase.

—J. N. Kirby, a member of the firm of Noyes Bros. & Cutter, St. Paul, visited his parents in St. Louis last week.

—A. L. Britz has left Rietzke & Co., of this city, and gone to Weinhoid's drug store, Minneapolis.

—New: Wilson & Kelley, Beaver City, Neb.; A. V. Schallern, Mandan, N. D.

—L. Z. Emmert, of St. Paul, is very ill, being threatened with pneumonia.

—B. W. Bold, La Moure, N. D., will establish a branch at Flaxton.

—C. W. Long is now at McHenry, N. D., in Bateman's drug store.

—Sold: M. S. Tague & Co., Urbana, Ia.; S. A. Gerhard, Gladbrook, Ia.; J. A. Baum, Fairfield, Neb.

—George A. Presley has resumed at Cambridge, Minn.

A. H. Wirz, of Nos. 913, 915 and 917 Cherry street, Philadelphia, Pa., manufactures bottle stoppers of all kinds, for cork and screw neck, liquid and powder bottles, collapsible tubes for ointments, pastes, etc., moulds for suppositories, bougies, etc., metal syringes, breast pumps, and a general line of metal goods for the drug trade. Mr. Wirz is the sole manufacturer of the Cooper pill machines, which have been endorsed by so many druggists. He also makes hand-pill compresses for any size pill. Druggists who desire reliable goods at reasonable prices will do well to correspond with Mr. Wirz or his New York representative, Frank P. Wisner, No. 101 Beekman street.

Thycaol, the standard mouth wash antiseptic, is being well advertised, and should be stocked by druggists who have not already sold it. The makers claim Thycaol is used and prescribed by dentists, physicians and trained nurses everywhere. It retails at 50 cents and \$1, and can be bought of any jobber. Advertising literature can be had by writing to the Elwin Laboratory, Poughkeepsie, N. Y.

## CALIFORNIA.

### DRUGGIST CHARGED WITH MURDER.

San Francisco, Dec. 10.—T. M. Lash, for twenty years a druggist of Sacramento, and known throughout the Pacific Coast as the manufacturer of certain proprietary tonics and bitters, is under arrest on a charge of murder. Mrs. Virginia Buck, mother of Mrs. Nellie Dewey, charges Lash with having caused her daughter's death by a criminal operation. Mrs. Dewey died November 15, and was buried Nov. 19. The coroner was not notified of the death, and the certificate signed by Dr. C. O. Cartwright, one of Sacramento's most prominent physicians gave blood poisoning as the cause of death. It is said that Dr. Cartwright when called to the case informed Mrs. Dewey's relatives that she had been wrongfully operated on. They complained to the police after her death, that Lash had performed the operation. Lash said that the only dealings he had with Mrs. Dewey were to sell her a bottle of one of his standard preparations, and that when a few days later he found she was very ill, he advised that an experienced physician be called. He says that the husband of Mrs. Dewey admitted that his wife had herself brought on the condition which resulted in her death.

### DRUG CLERK COMMITS SUICIDE.

San Francisco, Dec. 10.—Strother Spencer, whose name was incorrectly reported in the California correspondence of the Era last week, and who was a clerk employed by the Owl Drug Store here, killed himself by hydrocyanic acid. He was found in a dying condition in the basement of the drug store, where he had gone to get some stock. The only explanation of the suicide theory is that young Spencer imagined he was going to lose his position. A few days ago, chief clerk William Blaisdell, employed several holiday assistants and asked Spencer to explain his work to them. It is believed that the young man thought the new employes were to supplant him. He used his expert knowledge of drugs in the choosing of the deadly acid with which he killed himself.

### DRUGGIST ARRESTED FOR STEALING ELECTRIC POWER.

San Francisco, Dec. 11.—Ignatz Beck, a pharmacy proprietor at 1348 Ellis street this city, has had a brilliantly lighted store. Thirty incandescent lamps made his shelves and cases glitter. Beck was arrested today and charged with willfully and unlawfully connecting a wire with the apparatus of the Independent Electric Light & Power Company. The company says the druggist has been stealing electric power for twenty of the lamps, the stolen power not being registered at the meter. The action is taken under a section of the Penal Code relating to electric light companies and is the first of the kind on record.

### NOTES.

—F. A. Weck & Co., druggists at 127 New Montgomery street, San Francisco, were robbed a few days ago of \$50 in money, and two bundles of prescriptions. The burglars picked the lock of the front door and forced their way into a steel cash box. The doors of the safe have been unlocked as notice to burglars that it contained nothing of value, but the burglars refused to believe it, and the result was a ruined cash vault.

—W. C. Offord, a photographer, is suing F. A. McDonnell, a druggist of San Francisco, for \$5,250 damages, because, as Offord alleges, he was given a preparation which when he used it on his eyes caused him great pain that lasted sixty days, and rendered him nearly blind. He took a doctor's prescription to McDonnell's drug store in August of this year to have it filled. Offord says that the directions were not followed by the druggist.

—The Dean Drug Store at Los Angeles, has been in-

corporated, the capital stock being \$50,000, and the directors all of Los Angeles.

—Druggist Chester Dusy, of Dusy & Sawrie of Selma, Cal., and druggist A. F. Blatchley of Corning, Cal., have become benefactors.

—C. W. Armstrong of Calistoga, Cal., will reopen a drug store on the site of his former burned building about January 1.

—D. C. Hazeltigg of Rushville, Ind., has bought the drug store of Charles A. Chase of San Diego.

—Edward Rives, a Pomona, Cal., druggist, has closed his store there and will move to Arizona.

—E. L. Fisher of Stent, Cal., is insolvent. He owes \$1,347.39 and has \$1,050 assets.

—Druggist R. V. Brown, formerly of Saratoga, Cal., is now located in San Jose.

—F. G. Wei de Meyer has opened a drug store at Whittier, Cal.

### HAWAIIAN NOTES.

Honolulu, Hawaii, Dec. 5.

The Board of Health of Hawaii, has warned druggists that they must not infringe upon the rights and duties of physicians. Executive officer Pratt called the attention of the Board to the fact that drug clerks were in the habit of making up prescriptions on their own book for any who might call and request a remedy for an ailment. Dr. Pratt stated that in one case he learned a drug clerk had sold homeopathic aconite upon being told that a child had a high fever. The child died. The father had given the patient three of the pellets and she had gone to sleep never to awake. Dr. Sloggett was not in favor of prosecuting just now, but Dr. Cooper, a member of the Board, believed some of the drug stores is largely Chinese, Japanese and Hawaiian.

—A Honolulu druggist has lost a suit for \$500 brought by Mrs. Julia Poinsonby for damages to her complexion. She sent a prescription for a complexion wash to the druggist which called for four grains of bi-chloride of mercury. The druggist put in 5½ grains and the wash ruined the lady's face. Judge Estee of the United States District Court of Hawaii, held that there was sufficient evidence to show that the additional grain and a half of the bi-chloride of mercury had been the active agent in destroying the plaintiff's complexion.

—Frank Severin, an employe of the Hobron Drug Company is dead. He was 35 years of age, and leaves a widow and two children. He came to Honolulu two or three years ago from San Francisco.

### ALWAYS READY FOR IMMEDIATE USE.

Marach, the soft, pliable, non-poisonous, soothing, antiseptic poultice and surgical dressing is always ready for immediate use, and as druggists are likely to have a call for Marach any minute they should be in a position to meet it. The proprietors of Marach are advertising the preparation extensively and bringing it to the notice of physicians. It yields the druggist 71 per cent profit, less freight, and the makers think it should have the attention of the drug trade. Sample cans are sent for medical patrons to druggists sending list of names. Marach is sold in cans at 25c, 50c, and \$1 each. It is made by the Columbia Chemical Co., No. 1729 Curtis street, Denver, Colo.

We have just received a copy of "La Coiffeure," a little magazine devoted to the toilet published by The Binder Co., Philadelphia. It is attractively gotten up, and contains illustrations and matter apparently of great interest to ladies. It is published, of course, in the interests of their business, which, by the way, is claimed to be the largest in the world devoted to the toilets of men and women. It is not generally known outside of Philadelphia that Binder's is one of the oldest establishments and the largest manufactory of hair in that city. Just now, in addition to their regular business, they are pushing Binder's Tar Soap, a pure olive oil soap in which is incorporated tar and antiseptics.

## BOOK REVIEWS.

**COBLENTZ, A MANUAL OF VOLUMETRIC ANALYSIS.** Treating on the subjects of Indicators, Test-Papers, Alkalimetry, Acidimetry, Analysis by Oxidation and Reduction, Iodometry, Assay Processes for Drugs with the Titrimetric Estimation of Alkaloids, Estimation of Phenol Sugar, Tables of Atomic and Molecular Weights. By Virgil Coblentz, Ph. D., Pharm. D., F. C. S.; Professor of Chemistry in the New York College of Pharmacy. Illustrated. Octavo, 150 pages. Price, \$1.25, net. Philadelphia, P. Blakiston's Son & Co., 1012 Walnut street.

This text-book contains full and clear descriptions of the methods in common use in volumetric analysis. In its pages the author has also applied the modern theories of solution to the various manipulations and titrations. Especial attention is devoted to the theory of ionization and its application to indicators, also to the necessary precautions as to dilution, temperature, and influence of disturbing elements. This feature marks an innovation in manuals of analytical chemistry, which are too often mere compilations of detailed directions for carrying out methods found useful in practice. Owing to the importance of the preparation of standard solutions, this subject is given unusual prominence. Several different methods of standardization are given in each case, so that the operator may learn to properly check his work. The methods of calculating results from the volumes obtained by titration are thoroughly considered and illustrated with numerous examples. A separate section is devoted to empirical solutions, which are so widely employed in technical analysis. The pharmacist will find this work interesting and instructive, as well as handy for purposes of reference.

**AN INTRODUCTION TO CHEMICAL ANALYSIS FOR STUDENTS OF MEDICINE, PHARMACY AND DENTISTRY.** By Elbert W. Lockwood, M. A., M. D., Professor of Chemistry and Toxicology in the Colleges of Medicine; Professor of Chemistry and Metallurgy in the College of Dentistry; Lecturer on Toxicology in the College of Pharmacy of the University of Iowa, Philadelphia, P. Blakiston's Son & Co. Illustrated, 12mo., cloth; 225 pages. Price, \$1.50.

This book is intended for the use of students, and is not meant to serve as a hand-book for the analytical chemist. In its preparation the author seems to have had in mind the educational value of analytical chemistry and not its usefulness in the chemical arts. Considered in this light, the work is an excellent one, the chemical reactions being presented in the form of a connected chain, and not as isolated facts to be remembered for a specific purpose. The various manipulations of the student's laboratory work are carefully described, and full reactions are given for each detail. The uses of the apparatus employed by the analytical chemist are explained in a simple and elementary way, and the various principles of analytical processes are well brought out. The uniformity of the type and the general plan of the book render it more suitable to be followed by the student, page by page, than to be employed as a book of reference. The volume is an attractive one, the printing and binding leaving nothing to be desired, and the illustrations, though few, being clear and appropriate.

**TOXICOLOGY, the Nature, Effects and Detection of Poisons, with the Diagnosis and Treatment of Poisoning.** By Cassius M. Rill, M. D., Professor of Chemistry and Toxicology in Barnes Medical College, St. Louis, Mo. Published by the author; 12mo., cloth; 123 pages.

This little book should find a place in every drug store. It contains all the information about poisons which the practising physician or pharmacist is likely to need. More attention is given to the physiological action, doses and antidotes of the various substances considered than to refined methods for their detection and estimation. The processes commonly employed by the analytical poison expert are also given in a concise form, but the details of these methods are appropriately left to larger works on analytical chemistry. Although it contains only 123 pages, the list of poisons considered is very complete, and the descriptions of symptoms and antidotes, which are often so difficult to find, are also full and satisfying. This little volume should prove quite as valuable for purposes of reference as for the use of students in the class-room.

## BOARDS OF PHARMACY.

### PENNSYLVANIA PHARMACISTS PASS THE BOARD.

The Pennsylvania Pharmaceutical Examining Board held examinations at Philadelphia and Pittsburg, October 19, 1901. The Philadelphia examination was conducted by F. A. Boericke, George W. Kennedy and Charles T. George. The Pittsburg examination was conducted by Henry C. Porter and W. G. Minnick. Two hundred and eight applicants presented themselves for examination at Philadelphia, and 125 at Pittsburg, a total of 333. Of this number 133 applied for registered qualified assistant certificates and 200 for registered pharmacist's certificates. Only thirty-seven were successful in passing the examination as registered pharmacists, and sixty-three as registered qualified assistant pharmacists.

The names of the successful applicants are as follow: Registered Pharmacists—Charles O. Wherry, Apollo; J. Elmer Macon, Latrobe; Charles F. Fink, Ada, Ohio; Joseph F. Chapman, East Liverpool, O.; Lewis D. Piper, Coal Centre; C. G. Spence, McKees Rocks; W. J. Mayberry, Jeannette; Edward E. Boericke, Chicago, Ill.; Miss Maud L. Minnick, Allegheny; J. T. Catlin, H. K. Hughes, both of Pittsburg; W. R. Netherton, Wyoming; Charles H. Hasy, Shamokin; Charles H. Slobic, J. P. Wolfinger, both of Reading; Charles E. Hoffer, Lancaster; Robert E. Lutz, Hoiling Springs; C. E. Marlin, Columbia; George A. Finnerty, J. J. Macphee, C. A. Jefferies, M. H. Shrenk, J. L. Tuohy, J. B. Smith, Henry J. Whitl, Ralph T. Ulrich, Martin Ketterer, Alvar Bidstine, J. B. Blecher, Yeatman Geron, W. H. Hampson, Herman Loeb, George W. Roberts, H. G. Fisher, W. C. Meredith, C. A. Bille-doux, Howard Zearfas, all of Philadelphia.

Registered Qualified Assistant Pharmacists—Irvin A. Moore, Greenburg; H. T. Ray, Wilkingsburg; Charles S. Haupt, Blairstown; D. Earl Woods, Franklin; Leon Douglass, McDonauld; Howard R. Lytle, Wilmerding; W. L. Kerr, Scottsdale; Ethel M. Condict, Brockwayville; Gustaf A. Creutzer, McKeesport; O. A. Shrock, Letonia; James T. Pellerson, Steubenville, Ohio; F. A. Childs, Allegheny; J. S. Mead, Robert Culhane, Harry Dodgson, John S. Cameron, William P. Kells, Edward C. McAdams, L. A. Weaver, Albert Hiel, Samuel S. Lauk, all of Pittsburg; Walter E. Jones, Danville; E. R. Blough, Johnstown; Mrs. Daisy E. Shiffer, Hudson; F. J. Crandell, Scranton; Joseph T. Baker, Shippensburg; J. S. Smith, York; Irwin M. Ansbach, Womelsdorf; Edward W. Rossell, Johnstown, N. J.; Stella A. Gallagher, Wilkes-Barre; E. K. Roth, Johnstown; R. M. Staley, Middletown; Charles H. Wagner, Reading; C. E. Shillito, Waynesboro; R. G. Stevenson, Jersey Shore; E. J. Strunk, Easton; Thomas L. Ryan, Susquehanna; C. W. Baas, G. C. Stratten, R. H. Spaar, C. S. Zimmerman, L. A. Peters, E. Banta, Jr., A. H. Taggart, W. J. Wolford, C. D. Smith, G. L. Lally, Karl V. Kerth, R. J. Oleshak, David Burton, George K. Levan, W. G. Malloy, L. A. Hastings, D. S. Rhone, F. A. Martin, H. C. M. Ott, J. F. Booth, Frank Crawford, John M. Montgomery, D. S. Snyder, William Dulin, all of Philadelphia.

The next meeting for the examination of applicants for registration will be held in the girl's commercial high school, corner Broad and Green streets, Philadelphia, Saturday, January 18, 1902. For further information concerning this examination address the secretary of the board, Charles T. George, Harrisburg, Pa.

## E. R. SQUIBB & SONS

NEW YORK

### Compound Alum Powder

**Georgia Board of Pharmacy.**

The Georgia Board of Pharmacy met in Augusta, November 11, for the examination of applicants for licenses to practice pharmacy and to transact other business. The chairman, S. C. Durban, made his annual report, which was of a most interesting character. The secretary, George F. Payne, also made his report, which showed much activity in the enforcement of the pharmacy laws by the State board throughout Georgia. Both the present chairman and the present secretary were re-elected to their respective positions. The meeting was held in Augusta, under the idea that meetings held in different parts of the State would secure a larger number of applicants for licenses than would be the case if they were all held in Atlanta, the State capital. By actual investigation of the attendance at the examination it was found that only about 20 per cent. were from the territory contiguous to Augusta and the other 80 per cent. would have attended the examination if held in the capital, at considerably less expense. The chairman, in his report, gave excellent reasons why the meetings should be held in Atlanta, except the usual ones which are held the day before the meeting of the State Pharmaceutical Association, at whatever point it meets. This has long been the custom of the board in the past, and it seems the wisest one for the best interest of the largest number of citizens of the State. Atlanta is the chief railroad center and the metropolis of the State, and on account of its central location is very readily reached from every section. Being the state capital it is the proper place for a state board to meet. The board very heartily sustained these views of the chairman. Atlanta is the only point to which the State board and applicants for licenses have been able to secure excursion rates. The next meeting of the board in Atlanta will probably have the largest number of applicants for licenses that have ever applied at one time. The activity of the state board in enforcing the pharmacy laws is bearing better results every year. The secretary has already had an unusually large number of inquiries and letters in regard to applicants attending the next examination in Atlanta.

George F. Payne has just been appointed by the Governor to succeed himself on the board, his name being submitted to the Governor as the first choice of the Georgia Pharmaceutical Association for the appointment. The following gentlemen were licensed with the grade of apothecary at the Augusta meeting: I. H. Blassingame, Augusta; H. M. Richards, Sandersville; A. S. Clay, Adel; E. N. Stevens, Elberton; J. F. Everett, Vienna. The following were licensed as druggists: B. S. Denton, Milledgeville; J. R. Gephert, Augusta; S. C. Gorley, Covington; Wm. S. Kirby, Ph. G. (colored), Macon; P. A. Lennard, Vienna; T. C. Marshall, Atlanta; J. G. Smith, M. D. McDonough, J. M. Watts, Flovilla; W. S. White, M. D., Flovilla. Eleven failed. Total number of applicants, 25. The board adjourned to meet in Atlanta, on Monday, March 24, 1902. Geo. F. Payne, Secretary.

The Nevada State Board of Pharmacy held a meeting at the Riverside Hotel, Reno, on Nov. 4. The members present were President S. J. Hodgkinson, of Reno; Secretary F. J. Steinmitz, of Carson; A. M. Cole, Virginia; W. A. Brown, of Winnemucca, and Jos. Taber, of Elko. Only routine business was transacted. The board granted permanent certificates to thirty-nine pharmacists, in place of the temporary certificates previously issued by the secretary. The members then adjourned, subject to a call by the president.

**ANTISEPTIC SPHENOIDS.**

These suppositories, manufactured only by McCoy, Howe Co., of Indianapolis, Ind., are sold only on prescriptions, and net as much for the druggist as the returns from any other prescription. The manufacturers claim that these goods may be stocked without fear of deterioration, since they will keep perfect in any climate. Their new campaign of advertising will soon begin, and they advise druggists in general to write to them for samples and descriptive literature, in order to become familiar with the goods.

**Advertising Cuts for Druggists.**

The Era has had prepared a large assortment of designs, of which this illustration is a sample. These designs are intended for the use of retail druggists in illustrating their local newspaper advertising, or the little pamphlets, booklets or folders, which they may send out to their customers. We have a large variety of these designs, and we furnish them in the form of electrotypes all ready for the printer, the prices being 50c each, any three for \$1.00.

These illustrations cover a wide range of subjects, they are suitable for advertising the prescription department, druggists sundries, the soda fountain, patent medicines, cigars, photographic supplies, and in fact for almost every purpose that the druggist would need an illustration. We shall be glad to send free to any Era reader a 16 page pamphlet containing proofs of all these illustrations.

Elastic stockings as supplied by the Surgical Fabric Co., of No. 528 North Tenth street, Philadelphia, are sure to please customers and increase the druggist's trade in this line. This company has been supplying the drug trade with elastic stockings and similar goods for a long time, and it is known to be extremely careful about the quality of goods sent out. Druggists who do not handle the Surgical Fabric Co.'s goods can have a descriptive price list sent on request.

Mrs. Dr. Drew & Co. have recently incorporated under the name of Dr. Frances H. Drew Co., with an increased capital and a strong board of directors, which includes some of New England's most conservative business men. Mrs. Drew is president of the company, and is still at the head of it as in the past. They expect to do more advertising next year than they have ever done before.

Druggists who have used Merz empty elastic capsules, for fluids, say that the time and money saved in their use is much greater than they anticipated when buying, and few druggists who have used Merz capsules will allow their stock to run out. The makers offer to send samples and information concerning their goods to any druggist. Write to the Merz Capsule Co., Detroit, Mich.

E. J. Hussey & Co., No. 80 John street, New York, manufacture a line of syringes that every druggist handles. At present this company is advertising the "Pri-mo" ladies' syringe, which they say is endorsed by the medical profession. The quality of the goods sent out by Hussey & Co. is known to be the best, and dealers should write to them for prices, etc.

**M. C. W. Morphine.**

Mallinckrodt Chemical Works request the trade to be particular when ordering their Morphine, to specify which form is desired, "Flakes" or "Cubes." There is no difference either in price or quality. Pharmacists specifying the Mallinckrodt or "M. C. W." Morphine are sure to get a strictly reliable article at the lowest prices.

# PATENTS, TRADE MARKS, ETC.

**PATENTS.**

Issued December 10, 1901.

- 688,314.—Clarence M. Kemp, Baltimore, Md. Bunsen burner.
- 688,354.—Siegmund B. Sonneborn and Henry Beigel, Baltimore, Md., assignors to the Stafford Hydraulic Company of Baltimore City, a Corporation of Maryland. Bandage or compress.
- 688,371.—George A. Wieland, Duluth, Minn. Suspensory.
- 688,496.—John J. Gayner, Indianapolis, Ind., assignor of two-thirds to Frank Maus Favre, Indianapolis, Ind. Labeling-machine.
- 688,446.—Herman F. Stempel, Jr., Fort Madison, Iowa. Gumpster.
- 688,463.—Hans A. Frasch, Hamilton, Canada. Method of making caustic alkali.
- 688,463.—Rudolf Knietisch, Ludwigshafen, Germany, assignor to the Badische Anilin & Soda-Fabrik, Ludwigshafen, Germany, a Corporation of Germany. Apparatus for the manufacture of sulfuric anhydrid.
- 688,470.—Rudolf Knietisch, Ludwigshafen, Germany, assignor to the Badische Anilin & Soda-Fabrik, Ludwigshafen, Germany, a Corporation of Germany. Apparatus for the manufacture of sulfuric anhydrid.
- 688,471.—Rudolf Knietisch, Ludwigshafen, Germany, assignor to the Badische Anilin & Soda-Fabrik, Ludwigshafen, Germany, a Corporation of Germany. Apparatus for the manufacture of sulfuric anhydrid.
- 688,472.—Rudolf Knietisch, Ludwigshafen, Germany, assignor to the Badische Anilin & Soda-Fabrik, Ludwigshafen, Germany, a Corporation of Germany. Apparatus for the manufacture of sulfuric anhydrid.
- 688,538.—Theodor Meyer, Offenbach, Germany, assignor of one-half to Charles Glaser, Baltimore, Md. Apparatus for making sulfuric acid.
- 688,544.—William B. Pitts, Atlanta, Ga. Liquid-dropper.
- 688,688.—Walter H. Humphrey, New York, N. Y., assignor to the Tallar Company, New Haven, Conn. Syringe.
- 688,740.—Rudolph H. Kissel, Morristown, N. J., and Willard P. Parsons, Matteawan, N. Y., assignors, by direct and mesne assignments, to the Century Milk Company, Jersey City, N. J. and New York, N. Y., a Corporation of New Jersey. Bottle washing and sterilizing machine.
- 688,792.—Edward I. Root, Denver, Colo., assignor to the Root Novelty Manufacturing Company, a Corporation of Colorado. Mucilage.
- 688,793.—Edmund C. Rossiter, Langley Green, and Horace W. Crowther, West Bromwich, England, assignors to British Cyanides Company Limited, Oldbury, England. Process of making Cyanids.
- 688,794.—Edmund C. Rossiter, Langley Green, and Horace W. Crowther, West Bromwich, England, assignors to British Cyanides Company Limited, Oldbury, England. Process of making Cyanids.

**DESIGNS.**

- 35,411.—Tooth-Brush Holder. Hugo J. Knowlton and Fred H. Cheever, New Haven, Conn. Filed Oct. 26, 1901. Serial No. 80,146. Term of patent 7 years. The design for a tooth-brush holder.

- 35,417.—Vaccination-Shield. Joseph A. Steinmetz, Philadelphia, Pa. Filed Nov. 15, 1901. Serial No. 82,459. Term of patent 7 years. The design for a vaccination-shield.

**TRADE-MARKS.**

Registered December 10, 1901.

- 37,453.—Tablets for Internal Administration. W. Fred Jackson, Brockville, Canada. The picture of a dog's head equipped with a collar bearing the word "Victory."
- 37,454.—Certain Named Proprietary Remedies. Stuth's Specific Co., Somers Point, N. J. A large letter "V" having the three combinations of letters, "Vign," "Vitality" and "Vid." arranged upon the right of the same, one combination above the other, the height of the letter "V" being the same as the height of the three combinations together.
- 37,455.—Remedies for Certain Named Diseases. Frank Perry Bailey, Zanesville, Ohio. The pictorial representation of a May apple leaf and flower upon a circular black background and inclosed in a fancy border.
- 37,456.—Remedy for Certain Named Diseases. German Medicine Company, Cincinnati, Ohio. The word "Teutonia" and the representation of an elderly man in the act of pouring liquid from a graduated glass into a bottle.

# MARKET REPORT.

## NEW YORK MARKETS.

### CONTINUED STEADY FEELING MANIFESTED.

New York, Dec. 17.—Very few price changes have occurred during the past week, and the market reflects the conditions incident to the mid-winter holiday season, but there is no indication of weakness, and a continued steady feeling is manifested on the part of dealers.

**OPIMUM.**—Foreign markets are cabled firmer and the import cost is slightly higher, but jobbers are yet willing to sell to a limited extent at the old range of \$3.20@3.40 for 9 per cent, and \$3.30@3.50 for 11 per cent. Jobbing quotations for powdered remain unchanged at \$4.25@4.50 for 13 per cent, \$4.75@5.00 for 16 per cent, and \$4.55@4.75 for granular.

**MORPHINE.**—A continued moderately active consuming business is reported, and the market retains a firm undertone, with jobbers supplying the wants of consumers at \$2.40@2.50 for eighths in 1-oz. boxes, \$2.55@2.45 in 2½-oz. boxes, \$2.15@2.25 in ounce vials, and \$2.10@2.20 in 5-oz. cans, according to brand.

**QUINTINE.**—As usual toward the close of a year buyers are keeping close to actual requirements when making purchases, and consequently transactions are of meagre proportions, but the market remains fairly steady with quotations unchanged at 27c. for bulk in 100-oz. tins, 27½c. in 50-oz. tins, 28c. in 25-oz. tins, and 34c. in ounces.

**BALSAM TOLU.**—Competition among importers has caused a weaker market, and jobbing prices have been reduced to 39@34c. by the can and 38@34c. for less, according to quantity.

**OLE CLOVES.**—Values are higher in sympathy with an advance in the cost of the spice, and jobbers have marked up their quotations to 75@8c.

**LITHIUM CARBONATE.**—Continued keen competition among importers and domestic manufacturers has had a depressing effect on the market, and jobbing quotations have been further reduced to \$2.50@3.10.

**CARBOLIC ACID.**—Conditions abroad are favorable to buyers and deliveries next year are offered from first hands at lower figures. The result is an easier spot market and crystals in 1-lb. bottles are quoted 32@35c. in timber and 37@42c. in white. For 5-lb. bottles, 3c. less.

**CANARY SEED.**—Reports from primary sources show that the yield of new crop is very much less than original estimates, and all markets are decidedly stronger. Spot jobbing quotations have been advanced to 34@37c. for Smyrna by the bag and 41@43½c. for less; 34½c. for Sicily by the bag, and 36@37c. for less.

**LICORIS PRURIUM.**—The demand is slow and a slightly easier market is noted, with jobbing prices showing a decline to 61@74c., as to quantity.

**MENTHOL.**—Competition among importers has had an unsettling influence, and the market is easier to the extent that jobbing parcels are available at \$1.70@1.95 per lb. The ounce prices are unchanged at 55@40c., according to size of order.

**WILD CHERRY BARK.**—Owing to extreme scarcity, both here and at producing points the market is decidedly stronger and jobbers have advanced quotations to 17½@19c. for whole, 20@25c. for ground and 22@27c. for powdered.

**SALTPETRE.**—Owing to higher cost of crude, refiners have advanced quotations on all grades and the revised jobbing figures are 51@55c. for small crystals in barrels and 53@59c. in kegs, 61@67c. for large crystals in barrels and 63@69c. in kegs, 61@65½c. for granular in barrels and 61@65½c. in kegs, 61@65½c. for powdered in barrels and 61@67½c. in kegs. For less than kegs the range is 60@12½c.

### Laboratory Machinery.

The manufacturing druggist or chemist needs no reminder that inferior machinery and appliances for the laboratory are a prolific source of business disaster. Nowadays the manufacturer who is unable to make the very best goods at the very least possible cost is within the dead line and is pretty sure to "go down and out." The manufacturer builds up his business upon a sound foundation when he makes a good article at a reasonable cost and this can only be done by equipping his laboratory with the very latest, durable and most perfect machinery obtainable. If any one of our readers are contemplating placing an order for additional laboratory appliances, they will do well to communicate with the J. H. Day Company of Cincinnati, Ohio, who are recognized leaders in their line. Their advertisement appears in this issue.

## INDEX TO THIS NUMBER.

Lanolin (British) is said to be having a large sale since the makers have been granted the right to designate the product "Lanolin." It is remarkably cheap, and has been shown to be identical with Adeps Lanae Hydrosus of the U. S. P. Probably the majority of pharmacists now know that Lanolin is an excellent base for ointments and elegant toilet preparations. It never becomes rancid, and is excellent for making cold cream. Evans & Sons, Ltd., No. 133 William street, New York, will give information to any druggist who will write for it.

The Pacific Coast Borax Co. are the largest producers of borax in the world and can supply the article in any quantity at the lowest price. Druggists cannot be too careful about the borax they buy, as frequently it is adulterated. The Pacific Coast Co. guarantees its borax to be chemically pure. It is put up in 1-lb., 2-lb. and 5-lb. cartons for dispensing. All jobbers carry the borax in stock, and there is no excuse for dealers carrying an adulterated article.

# The Pharmaceutical Era.

EVERY THURSDAY.

VOL. XXVI.

NEW YORK, DECEMBER 26, 1901.

No. 26.

Entered at the New York Post Office as Second Class Matter.

## A BOOK FOR THE DRUG STORE LABORATORY.

Every druggist has use for a book like the Era Formulary. It is full of money-making suggestions. It gives directions for making so many profitable things that can and should be made and sold in drug stores that it acts as a constant incentive to the druggist to extend his field of operations and do more of those things which his training has qualified him to do.

The book contains 5,000 formulas and they cover the field of chemical, pharmaceutical and specialty manufacturing. There are 800 formulas for unofficial pharmaceuticals, 1,013 for toilet articles, 456 for veterinary remedies, 772 for family medicines, 235 for soda water syrups, flavoring extracts, mineral waters, etc., and for that big field which the druggist has so little cultivated—the manufacture of articles for domestic use, such as soaps, cleaning preparations, inks, dyes, disinfectants, vermin destroyers, etc., and articles for the industries and workshops, like cements, pastes, polishes, leather dressings, paints, varnishes, etc., there are over 1,300 formulas. This book is one of the essentials for every druggist's work-room, and it is a paying investment to have a copy of it in that part of the store for constant use. Price \$5.00 per copy, delivered. D. O. Haynes & Co., Publishers, 396 Broadway, New York.

### EDITORIAL COMMENT.

The present issue contains a complete index to volume XXVI of the Era, covering the twenty-six numbers of the journal issued since June 27, 1901. An index of this kind is published at the completion of each volume. These half-yearly indexes are prepared for the convenience of those of our readers who preserve their copies for future reference. Many readers do not seem to recognize the essential difference between a publication like the Era, and one intended merely for entertainment. A technical journal should have much to interest its readers at the time of its appearance, but its principal value is found in the items of professional information which are not particularly interesting except when required for use. The pharmacist who throws his journal aside after an hour's careless reading discovers only a small fraction of its true value. The Era covers all fields of the druggist's activity and a carefully kept file is a valuable source of information upon matters concerning all branches of the calling.

\* \* \*

Reports were circulated during the past week about scandals connected with the supply of drugs to municipal and State institutions in two different sections of the country. A community in Massachusetts is especially exercised over an affair of this kind, evidences having been discovered of a carefully planned scheme by means of which certain druggists and physicians managed to transfer considerable sums of money from the public purse to their own. Cases of jobbery at the expense of the taxpayer are unfortunately not as rare as they should be in our land, but in most minds these practices are associated only with politicians of the lower class. Most people will experience something like a shock when they hear that citizens who have always been thought to have great stores of professional honor have gone wrong. Let us hope that the reports are untrue, and that these cases will prove to be nothing more serious than instances of bad book keeping on the part of some official.

\* \* \*

According to a story which has within the past few weeks appeared in a number of pharmaceutical journals, a ship once upon a time had no medical officer, but carried instead a book of numbered symptoms and a collection of remedies supplied with corresponding numbers. When a sailor fell ill it was a simple matter to find the remedy required by referring to the book and selecting the number of the bottle corresponding to his symptoms. This ex-

ceedingly simple and economical arrangement seemed to work with satisfactory results until, one day, the mate reported that one of the men was afflicted with symptoms calling for medicine from bottle fifteen. As this bottle happened to be empty, the mate requested further instructions. The captain was a resourceful man who did not believe in allowing circumstances to interfere with his duty; he therefore promptly ordered equal parts of the contents of bottles seven and eight to be administered.

\* \* \*

This tale of the captain and his medicine chest was employed as an illustration by a speaker at a meeting of pharmacists in England a few weeks ago. It must have been received with great favor, for it has been widely reprinted with but slight variations. It sometimes seems as though Mark Twain and the writers of the ancient classics had exhausted the possibilities of every humorous story that ever delighted the heart of mankind. This story may not have been known to the writers of antiquity, but it has not escaped their modern representative. It appeared as an incident in the life of Captain Hurricane Jones, one of the characters of our greatest American humorist, twenty years or more ago.

\* \* \*

New York druggists are trying to effect the repeal of a law passed in 1900 making it a misdemeanor for anyone to manufacture soda water in any building used as a dwelling. This law seems to be a particularly foolish one, and no one seems to know why it was passed. The regulation which applies to soda water forms a clause in a bill intended to protect the occupants of tenements from dangers connected with the manufacture of explosives; but as few are willing to consider soda water a dangerous explosive, it is difficult to understand why this clause was included. There is an element of danger in all containers of gases under pressure, but when properly handled, soda water charging devices are almost absolutely safe. There can be no valid objection to the use of apparatus which is little if any more dangerous than a siphon of seltzer or a bottle of root beer.

\* \* \*

A curious damage suit has recently been interesting the druggists of this city. It appears that an actress purchased some henna leaves from a druggist with the intention of changing the color of her golden locks to a more desirable shade of auburn or red. The dye was applied at night with the expectation that the morning light would reveal a mass of hair resembling spun copper. But human expectations are notoriously uncertain of fulfillment, and the resulting color instead of being of the fashionable shade desired turned out to be an unfashionable tint of green. The dyer considered green hair unsuited to the requirements of the stage, and was not unnaturally dissatisfied with the result. She therefore undertook to recover damages from the druggist from whom she had obtained the dye. According to newspaper reports, the pharmacist did not take the matter seriously, as he was already bald and was protected from financial loss by an insurance policy. At the trial the druggist proved that he had

furnished the material called for, and that the green color obtained was due to an unskilful use of the dye. The jury very properly brought in a verdict for the druggist.

\* \* \*

The motives which prompt men to seek public office are very varied, some do so because of a high sense of duty, others because they want whatever seems hard to get, while others need the salary. All of these motives are more or less familiar, but a druggist in Boston has invented a reason for running for office which seems to be entirely new. In the recent campaign he presented himself as a candidate for the office of alderman purely out of curiosity. He wondered how many votes he would get. This novel politician placed a placard in the window of his drug store stating that his name had been placed upon the ticket, his fellow citizens being left to find out for themselves which ticket had been thus honored. It is gratifying to note that this druggist's originality was appreciated. He was elected by a large majority. Now that his curiosity has been satisfied, we hope he will not lose interest in city affairs. Men of his calibre are rare enough to be very valuable in politics.

\* \* \*

The window displays of some of the New York drug stores have been unusually sober this year. This is said to be due to the discrimination of certain insurance companies against buildings adorned with elaborate holiday decorations. Some of the Christmas scenes plentifully sprinkled with cotton snow and colored lights, which have been seen in the windows of some of the larger stores do look rather inflammable, and no one will blame the insurance men for protecting their own interests. But it seems somewhat unreasonable to condemn all displays simply because some varieties are likely to burn up. Some drugstore decorations are little more inflammable than firebrick, and it should not be difficult for any pharmacist to get up a respectable display which is free from all danger of fire. The singeing of a few whiskers has not stopped all people from playing Santa Claus; why should the burning of a few decorations compel all stores to keep a sober Christmas?

\* \* \*

Some of the exploiters of patent medicines have been making themselves very unpopular with the druggists of St. Paul and Philadelphia. These enterprising advertisers obtained testimonials for their wares from local pharmacists by means which were more successful than honorable, and printed them in glaring advertisements in the newspapers. This made the druggists appear as backers of the nostrums, which caused considerable resentment among the physicians. The pharmacists do not wish to lose the good will of the medical profession and naturally object to the unauthorized use of their names, but they have not been able to obtain much satisfaction thus far. They have passed resolutions about the matter and have exacted promises from the newspapers not to do it again, but they have been slow to resort to legal proceedings because nothing would

suit some patent medicine men better than free advertising in court. There is little satisfaction in fighting when one's adversary enjoys being thrashed. Under the circumstances it seems that there is nothing for the druggists to do but to grit their teeth and pass more resolutions.

## OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

### THE QUESTION ANSWERED.

Hartford, Conn., Dec 14.

To the Editor:—In answer to the question in an editorial of the Era of December 12, as to "How the drug trade would be conducted under Socialism; according to the best students of social economy?"—I wish to say that Socialists do not take up the evils of each trade separately. They try to abolish all the evils of all the trades as a unit, and the drug trade will share the same conditions as all the other trades and professions. The PEOPLE (the Government) will own and operate (among other industries) all the chemical and pharmaceutical laboratories, and will open in each community a certain number of dispensing shops, from which the members of the community will obtain at the lowest price the purest chemicals and preparations that skill and science can produce. By abolishing competition and establishing the cooperative system, we shall also abolish the parasite called "patent holder," who, with his exorbitant and extortionate prices, creates substitution and adulteration.

Socialism aims to abolish private ownership of all the means of production and distribution, and to establish instead the cooperative system, which will give to every person the right and ability to enjoy the full profit of his labor, 5 to 6 hours (or possibly less) making a day's labor. The Pharmacist is therefore one of the unfortunates who will benefit by it.

SAMUEL BIESTOCK.

### THE QUESTION OF TRADE DISCOUNTS.

Chicago, Dec. 14.

To the Editor:—I read Mr. Pepper's essay on discounts, which appeared in a recent issue of the Era, and recommend it as strong Pepper to Chicago jobbers, and to retailers as a club for use on the jobbers. We used to get 2 per cent. Now that the retailers have quit buying direct and have thus thrown trade to the jobber, he, believing in reciprocity, reduced this discount to 1 per cent. Yours for 5 per cent. discount,

HARRY BAGGS.

**THE FORMATION OF VANILLIN.**—According to Henri Lecomte (Comptes rend.) vanillin is formed in the vanilla fruit by the action of two ferments, one an oxydase and the other a hydrolyzing agent. The hydrolyzing ferment converts the coniferin present into comiferic alcohol and glucose, while the oxydase changes this alcohol into vanillin. In the ripe fruit the oxydase is found principally in the internal parenchyma of the pericarp, but it is also found in all organs of the plant. The oxydase is found to be most plentiful in the best varieties of vanilla, such as those from Mexico, Reunion, and Seychelles, while the proportion of this ferment in inferior vanillas and vanillins, from Tahiti is very small. The activity of the ferment is destroyed by heating to 100° C., but when the pods are dipped for a few seconds in boiling water, frequently done in the process of curing, the inner portion of the fruit is not heated sufficiently to destroy the ferment.

## THE SAD STORY OF THE GOOD DRUGGIST AND THE BAD BUSINESS.

By A. B. BURROWS, Takoma Park, D. C.

He was a good little boy when he undertook to learn the drug business, and although he hesitated somewhat on first entering the career which suggested so much mystery, he was soon interested in the business by reason of a natural inclination toward scientific investigation. He performed his duties well, did this good little boy. He made the kitchen fires for the family in the morning; cleaned the lamps; chopped the wood; washed the windows, and scrubbed the floors. He certainly was a good little boy. So he grew, and as he grew he learned more and more of the mysteries of pharmacy. And he was an honest boy. He believed in telling customers the truth, even if the proprietor waxed wroth at the possibility of losing a customer. So he worked and studied until he found himself entering the Pharmaceutical College. There he listened attentively to every lecture, took notes on everything important, experimented in the laboratory with interesting results. And the proprietor remarked to all his acquaintances and patrons that he never had as good a boy as Little Arthur, the good boy with the thin neck.

But now he was developing into manhood and a faint down appeared upon his upper lip. Then he graduated as a Doctor of Pharmacy, and was qualified to go out into the broad and hustling world and astonish it with his feats of pharmaceutical dispensing. So into the broad and busy world he went, but he appeared so young and innocent, not having the cigarette habit and not being in the habit of staying out late nights or indulging in the use of jaggling liquors, that most proprietors hesitated about employing him, and all he could get in the way of salary at first was \$13.00 per week.

After awhile, however, proprietors began to appreciate his merits and he held numerous positions of trust and responsibility. Physicians far and near proclaimed him to be the brightest pharmacist in the vicinity. In fact, wherever he went he had no difficulty in obtaining a position, and he convinced every druggist with whom he came in contact that he understood his business.

So much for his clerical experience. Little Arthur, now having become simply "Arthur," became ambitious and bought a little store in the suburbs. Having little capital, this was the only opening which afforded prospects of a living without being swamped by heavy expenses, as too often happens to ambitious young men in the cities.

With the assistance of the local physician who sent him as many of his prescriptions as possible he prospered, and actually began to make money. Soon his store was stocked with nearly everything which reasonable customers and rational prescribers desired. In addition to the regular preparations of the Pharmacopoeia and many of the non-official preparations mentioned in the National Formulary, Arthur kept quite a number of the "valuable" specialties made by different manufacturers, the only "valuable" feature about them being the price. Physicians were beginning to prescribe them and the public had been led to believe that a druggist who did not keep such nostrums was not up to date.

Soon Arthur noticed that the number of prescriptions brought in were growing less, and when customers did bring simple orders for unprofitable specialties, they carried tenderly in their hands little envelopes with the doctor's name printed on them and directions written "take one tablet every 3 to 4 hours." Then friends who had occasion to visit the doctor reported that a case filled with tablets, pills and "specialties" was in the office.

Finally it got to be so, that when a prescription did come in it was an order for some new specialty, a different one nearly every time, until the financial outlay became something staggering. Business ap-

peared, however, to be good, and the youthful pharmacist handled a large sum of money, but it was paid out as fast as taken in and the indebtedness piled up.

Representatives of various manufacturers would come around after liberally sampling the physicians, and induce the now victimized and deluded druggist to lay in new stocks of outlandish and wholly uncalled-for combinations. There seemed to be no excuse for their existence except that So-and-So made it and therefore it must be good. The poor druggist had great difficulty in getting rid of the preparations of the Pharmacopoeia, which were all made by himself and up to the standard. Everything had to be made by some other party. It was "Pill Emmenagogue, D. F. & Co.," "Capsules Copaiba, Santal and Cubeb Co., O. H. & Co.," "Elixir Ferri Quin. et Strvch. with Calisaya, O. O. & Co.," "Pulvis Antiseptic Co., Skin & Co."

He could not sell the ordinary atomizers in stock because some enterprising manufacturer had told the doctor that Rubi-Antiseptol must be used in Rubi-Antiseptol Atomizers to insure the best results. Arthur had excellent training in manufacturing and could make as good elixirs, pills, ointments, tooth powders as any other manufacturer, but his abilities were completely overshadowed by the unceasing persuasions of voluble agents of enterprising "originators."

When chemicals like Sodium Salicylate, Potassium Iodide, or Sodium Phosphate were prescribed, the discreet apothecary had no right apparently to use his judgment in buying, for it must be made by "Myl My! & Co." or be worthless, so said the wise physician (who perhaps had never seen the drugs in question).

The natural outcome of this was that Arthur had to sell out and let some other hopeful aspirant take the helm of business, while he went around the country lecturing on "How to make a Drug Store Pay," and incidentally wrote to the drug journals throughout the Union on "Why I was successful in Pharmacy." When last heard from he had been appointed assistant professor in Pharmacy in a well known University, and there twice a week he may be heard guiding more victims into pharmaceutical paths.

### CANDY COLORS.

By C. G. BUCHANAN, Wellsburg, W. Va.

"All things will come to him who waits,  
But here's a rule that's slicker,  
He who goes after them  
Will get them all the quicker."

The above is probably more adaptable to the drug business than to any other. When I say drug business I do not mean the filling of prescriptions, for that is pharmacy, but I mean the buying and selling of drugs and kindred articles. Of course much of a drug stock is made up of articles of necessity, but the disposal of these only pays expenses; and if the drug man wants a little extra money he must resort to side lines. One of the best little side lines that will bear going after is that of candy and cake colors, particularly at this time of year.

Most people are tired of cheap, grocery store flavors and dangerous aniline colors, and it only requires an effort for the up-to-date druggist to get their patronage. If he will, as he should, make the bulk of the goods himself he will have a handsome profit as the result of his efforts, and if he dispenses nothing but the best of goods he will soon have a trade that will not leave him, and will finally secure many of the buyers of these goods as regular customers for all their drug purchases.

In the first place he must have his colors. He will make a mistake if he buys these, for he can make them very cheaply himself in quantities to suit the demand, and with the advantage of knowing just what they contain. For colors he should have red, blue, yellow, green, brown, orange, black and, although

these will usually be found sufficient, any others he may wish. For red, he should use cochineal or carmine; for blue, indigo, Prussian blue or ultramarine. Green may be made either from spinach or by mixing blue and yellow; brown, from carameil; and black, from boneblack. Formulas for making these can be found in any good *Formulary* or by running through the back numbers of one's journals. Before making up large amounts, one or two experiments should be made with small quantities, so as to arrange the formula to get the best results.

With the colors above mentioned a great many different shades and tints can be made by properly mixing and diluting. For instance, a beautiful orange can be obtained by adding tumeric to cochineal. Red and different shades of pink, green, brown, blue and many others may also be made. When a particularly pretty shade is secured, continue to use it and people will go blocks to get "Blank's green," or whatever the color may be.

One need not at first buy labels for these materials but can take a small stock label and either with pen and ink or with a typewriter neatly print the name of the color on it. After a while, if business justifies it, printed labels may be used, and business will very soon justify that if it is sought in the right way; and if one does not intend to do that, it is best to leave it alone.

The price at which these colors should be retailed will be determined by circumstances to a certain extent, but a good way is to sell at ten cents per ounce or three ounces for twenty-five cents. The druggist should put up only these two sizes and never sell less than an ounce; but, of course it may be supplied in bulk at a special price.

### Flavoring Extracts.

Every druggist keeps, or should keep, a good extract of vanilla. Whether he makes it himself or buys it, he should tell the people how good it is and they will soon begin to use it. He should buy the best oil of lemon, and immediately upon getting it pour part into another container and add about one-third alcohol to the entire lot. It should then be kept tightly corked in a cool, dark place. After this preparation there will not be much danger of its turning into turpentine. A druggist should always try to get his customers to use a superior oil, as the good results obtained from its use will assure them of the superiority of his goods. But if he cannot influence them to buy the higher priced article, he can make a good extract of lemon by simply adding alcohol to the oil, in a quantity sufficient to cheapen the product so as to sell at any required amount. However, extract of lemon is always such an unsatisfactory article that one should make it of as good quality as possible, depending upon the advertising derived from the use of the goods, to make up for the small profits.

An excellent essence of peppermint can be made by macerating 1 ounce compressed peppermint leaves for twelve hours in 1 quart of a mixture of one-third water and two-thirds alcohol, percolating and adding  $\frac{1}{2}$  ounce oil of peppermint. Essences of nearly all the essential oils may be made in a similar manner, and with such products as wintergreen, cinnamon, nutmeg, etc., it is only necessary to add about eight parts alcohol to two parts of the oil and mix. Extract of orange can be prepared in the same manner, though a good oil of orange may be diluted as much as 1 to 16. In this case, however, it is best, as with the lemon, to have just as good an article as possible.

If at any time the druggist wishes to go into this business a little more extensively and keep a line of the fruit essences, such as strawberry, pineapple, etc., it is best to buy them for they are nearly all synthetic articles and even the process of making them from the fruit is too complex and costly to be profitable on a small scale. These articles should be bought only from a reliable house, always pur-

chasing a good quality and not too large a quantity at any one time.

Advertising these goods, as all others, is the life of trade. One of the best ways ever devised for advertising them is by noticing whenever a church is going to give a festival or bazaar with a candy booth and supplying goods free for use in connection with it. The druggist should call upon the managers of the booth or write them, and offer to furnish them with the flavors and colors they may need, and he should make sure that they get the goods as they are liable to forget it until the last moment and then buy them elsewhere, which of course spoils the scheme. After they have used his goods gratis they cannot very well object to his putting up a neat little sign in their booth, saying "Blank's Pure Candy Colors and Flavors Used in This Candy." The fact that he donated to the affair will most likely bring him more than enough drug business from some of the good church workers to pay him for his expenses; while, as usually the best candy makers are the ones called upon to make the goods, they will of course be good and the flavors and colors will come in for a goodly share of the credit, and Blank, the druggist, will sell more colors and flavors than he ever imagined could be sold in his community.

Samples of about three colors and three flavors may be put up in one or two dram vials, one each of the assortment wrapped together makes a nice package to present to those who are likely to be interested. Another plan which has been followed with success and without direct expense was to keep a separate account of these goods and as soon as the profit amounted to enough to pay the bill, a small receipt book was gotten out telling how to make different candies. With a little effort a druggist can get up a very nice little receipt book by referring to books treating of such matters and by getting some favorite receipts from his lady friends. If he wishes to enlarge on this, he can add receipts for cakes, biscuits, pickles, etc., always specifying his colors, flavors, spices, baking powder, etc., and having no receipts in the booklet which do not call for some of them. This little book need not be an expensive publication, but should not contain any trashy things put in for filling space; it is better to have only a few pages and these good and useful than a book the size of a dictionary that will never be looked at. An ideal book of this nature can be gotten up by anyone who will make the effort and will do some judicious questioning when he learns that Mrs. So and So's biscuits are better than those of any one else. He should learn how she makes them and put that down for the book, and so on, until after a few months he will have sufficient material, and something that will be appreciated. The old ladies in the country make better pies, ginger bread, corn pone, cookies, dumplings and pickles than nine-tenths of the city people ever ate; in fact, the making of some of these is almost a lost art in some places and their receipts would be cherished and used by all fortunate enough to get them. These receipts can be had for the asking and can be gathered during one's vacation, and when added to those for making candies, cakes, etc., will make an acceptable little pamphlet, which will be a standing advertisement, selling not only colors, flavors, spices, etc., but drugs of all kinds.

CAA=EHE, OR AZUNCA=CAA is the name of a composite plant which is said to possess remarkable sweetening power (Kew Bulletin). This plant was recently discovered in Paraguay by Dr. Bertoni. The name, which is of Indian origin, means sweet herb, a few small leaves being sufficient to sweeten a cup of strong tea or coffee, at the same time imparting a pleasant aromatic flavor. The shrub from which the leaves are obtained is very small, attaining a height of only a few inches. Professor O. Rebaudi has named the plant *Eupatorium Rebaudianum*, but the Kew authorities say it belongs rather to *Stevia* than to *Eupatorium*, and that its affinity is with *Stevia Collina*, Gard.

## HURRY UP, THERE!

By FRANK B. STYLES, Hempstead, L. I.

This heading is an oft-repeated command, one which is not pleasant to hear when one is busy and doing all that can be done at the time. To some people it is very annoying to be prodded in this way; while others, seemingly, do not mind it any more than the proverbial duck minds the water running off its back.

I have experienced, as have many fellow clerks, the annoyance of calls from both customer and proprietor to "Hurry up, there!" when at that moment any further hurry was out of the question and meant certain disaster.

While my article begins with something in the nature of a complaint, which, in its proper sphere, is true every day, yet it is not offered as a complaint as such, but as an introduction to a different view of the subject.

The clerk is not the only person in the establishment who is told to "Hurry up, there!" The proprietor is frequently told that very thing, perhaps not in the same way, nor in the same words, but the same principle is involved. He is doing business for the "mighty dollar," as it has come to be called, and the demand of the public for goods and services in the line of business very frequently crowds the proprietor to such an extent, as to indicate "Hurry up, there!" very plainly.

Still, this does not reach my central thought on the subject. This thought applies more particularly to being quick to secure stock which is readily salable to the public, and having one's stock in such shape that the public can be accommodated at a moment's notice. If you watch a crowd of people on the street you will notice that they are all hurrying somewhere. The spirit that seems to pervade the shopping public is hurry, hurry, everywhere and all the time. The man who hurries is the one who is most likely to "get there" first. Do you want trade? You must secure customers, or you will get no trade.

An opportunity which is not often made use of is this—when a new family comes to town, "hurry up" and send a greeting to the head of the house and invite the paragon of that family. If you do not, some one else will. Many a stranger in town may, in this way, be made a customer for your store to the gratification of all concerned. A stranger cannot always find, at once, the best pharmacy in town, and, in spite of his care to find the best, often comes to grief several times by patronizing an inferior place before finding your store. This may be more easily said than done, but a druggist who tries to reach the new arrivals in town can find many opportunities for accomplishing the desired end. It might be profitable to watch the real estate offices with this in view.

Speaking of new arrivals, the same term may be applied to new lines of goods, and a little pamphlet describing the new arrivals in the store, could be hurried out to your customers with advantage.

If you expect to have customers, you must prepare your store and stock so that they will receive prompt attention when they come. To have stock to sell does not mean that it is displayed nor that it is in shape to deliver to customers at a moment's notice. It is not possible to have everything ready to hand over the counter at all times when asked for, because this would involve a large amount of work which could be devoted to other purposes to much better advantage.

To aid in the rapid dispensing of proprietary pills and powders, they are put up in packages which are intended for delivery, as they are, to customers; but through a tendency to make packages all look alike, or, at least, have a neat appearance when leaving the store, it has become the custom to wrap up everything with a plain paper and secure it with a string or rubber band. To expedite business, in many places small patents are handed out with no extra wrapping.

The arrangement of stock containers may be made to assist in waiting on customers. The space in a small store is very valuable to the business, and the best arrangement of counters and cases should be well considered, and changed as often as it is found necessary. There is a demand for particular kinds of goods in certain seasons of the year, and the next season calls for something else. Goods of this kind must occupy the same space, one line being replaced with another as the seasons change.

I know a store where the soda fountain is closed from October first to April first, during which time the counter used for soda and about ten feet long is covered with a rack of shelves which with a flight of stairs over the fountain is used for a very effective display of goods. Merchandise displayed on these shelves has sometimes been sold to customers while waiting for a prescription.

As a rule, it is not good policy to allow more than one clerk to wait on a customer at one time; but, when a prescription is being filled, I believed it permissible to allow a second clerk to assist by getting what is wanted and then turning the sales over to the first clerk. Customers do not like to stand and wait. Frequently, when the tide of trade is at its highest, the people are on their way home from work and are anxious to be supplied quickly. Very often, unless a customer receives attention within two or three minutes after coming into the store, he feels as if he were needlessly kept waiting. To be able to attend to the wants of several customers at one time covers a multitude of conditions which must work in harmony, like the strands of a rope. Many times several articles are wanted by as many customers, and if the clerk knows it he can pick them all up in one round of the store, thus saving much time for the customer and much time and many steps for himself.

In every store there is a certain amount of routine work which must be done and should be done each day. If that work is done, it requires a certain force to do that alone. There must be an increase of help to be able to wait on customers and give them proper attention. Much time is often wasted that could be saved for profit.

Let me show you a way to save time, which is money. Under the usual method of doing business more clerks are required and no more work is done than by this plan. During odd minutes, packages and bottles of ready salables can be prepared and set in convenient places. You will readily agree with me that it takes just as long at one time of the day to fill an ounce bottle as at any other time, or to weigh and wrap a quarter pound of salts. But, it is easier, and saves you some time to pour out several portions while the pargoric bottle is down, than to get the bottle down for each portion. The same is true of the salts. While the salts drawer is handy, weigh out several packages which will be ready when wanted quickly.

If there is no gain in time in preparing the packages or in filling the bottles you at least have this advantage, that a package or bottle is more quickly put into the customers hands when no filling and wrapping is required; and when the store is full of customers you can wait upon a larger number of them, and by so doing help the day's receipts along and make up for the little drag that happened earlier in the day.

The following is a partial list of liquids that are often asked for and which I keep put up in one or two ounce bottles: Castor Oil; Camphorated Oil; Olive Oil; Glycerine; Pargoric; Essence of Peppermint; Extract of Vanilla; Essence of Lemon; Essence of Jamaica Ginger; Syrup of Ipecac; Spirit of Nitre; Spirit of Camphor; Sun Cholera Mixture, and several others. Of the powders and crude drugs, I find the following, put up in two or three size packages, are very convenient: Rochelle Salts; Epsom Salts; Borax; Bicarbonate of Soda; Flax Seed; Insect Powder; Tooth Powder; Cream of Tartar; Compound Licorice Powder; Sulphur; Fuller's Earth; Senna

Leaves; Soap Bark; Powdered Charcoal; Oxalic Acid; Calcined Magnesia and Bird Seed.

Many others may be added, in accordance with the character of your trade and the location of your store.

## SOME INVESTIGATIONS UPON ANTIVENENE.\*

By JOSEPH McFARLAND, M. D., Philadelphia.

The investigations of the last decade upon immunity to the infectious diseases have led to the discovery of many important and interesting facts. Among the most instructive of these we may mention the successful immunization of animals to serpents venom achieved by Wolfenden, Phisalix and Bertrand, and Calmette, and the discovery in the blood of the immunized animals of a specific protective substance, first demonstrated by Phisalix and Bertrand, and elaborately studied by Calmette and Fraser.

### The Method of Immunization

adopted by Calmette consisted in the administration to horses of progressively increasing doses of cobra venom, lightly modified by heat, until the animals attained a high degree of immunity and antivenene appeared in large quantity in the blood.

### Composition of Venom.

It has been well known for many years that the venom of serpents is not a simple poison, but one composed of several distinct poisonous proteids of different physiological action. In their great monograph upon the subject, Mitchell and Reichert concluded that every venom contained two important poisonous proteids one of which they regarded as a peptone, the other as a globulin. The former was a nervous poison, whose chief physiologic action was upon the center of respiration, upon which it acted so destructively that nearly all cases of venom intoxication die from more or less rapid failure of the respiration. The globulin they found to be an irritating substance with a marked local action upon the tissues, which it devitalized and disorganized, causing extensive extravasations of blood, necrotic and gangrenous changes, and leading to death from the local injury done. Wolfenden agreed with Mitchell and Reichert except that he regarded their peptone as an albumose, and since the time of these investigations it has been generally accepted that the activity of venoms depends upon the presence of these two bodies, and that the difference in the symptomatology of snake bite depends upon the different proportions in which these active principles are present in the venoms. Thus, the venom of the cobra—*naja tripudians*—contains much of the nervous poison, and but little of the irritative poison, hence cobra bites are apt to cause comparatively little local damage, though they may prove fatal. On the other hand, the venom of the rattlesnake contains relatively less of the nervous poison, and a large quantity of the irritative poison, so that the bite of this snake is apt to be followed by extensive local damage though usually not fatal.

Calmette found that when venoms were heated to 70-85 degrees C., the irritative poison was precipitated, the nervous poison almost unchanged. The heated poison could be introduced into animals without pain, and without tissue disorganization. It was the fatal element of the venom, and suggested itself for the purpose of immunization. All of his antivenene experiments were, therefore, performed with this nervous poison which he secured from cobra venom—the most active venom that could be obtained.

C. J. Martin has taken exception to Calmette's antivenene on the ground that it is an antidote for the nervous poison in the venom, but not an antidote for the irritative poison, and therefore, is probably not useful or indicated in the bites of those serpents

\* Condensed from a paper read at the Fifty-Second Annual meeting of the American Medical Association and printed in the Journ. A. M. A.

whose venom depends principally upon the latter. He found it inefficient in the treatment of Australian snakes, whose venoms all contain large quantities of the irritative poison. A literary controversy followed the publication of Martin's views, but it is uncertain whether Calmette succeeded in overthrowing all of his objections.

#### Its Action.

We must, in consequence of these facts, view the antivenene as being antidotal chiefly against the nervous poison of the venom, the peptone of Mitchell and Keichert—the albumose of Wollenden. A simple experiment suffices to demonstrate the perfect protection which the antivenene affords against the venom. According to Calmette's recommendation, an inoculation of a quantity of venom that will prove fatal in about twenty minutes is made into the marginal vein of a rabbit's ear, and this at once followed by the appropriate quantity of antivenene. Instead of dying at the expiration of twenty minutes, the rabbit lives and shows no symptoms. If this curative effect is accomplished by 2 c.c. of the antivenene—the strength made by Calmette—it is said to contain 2,000 units.

The protection I have found to be exactly as Calmette asserts and the antivenene is equally active against cobra, rattlesnake and other venoms, when such venoms are heated so as to remove the contained globulin. If the venoms are injected into the ear vein without being heated, the protection afforded is less certain, and if the viper and rattlesnake venoms are injected beneath the skin, still less certain. I did not find that the antivenene afforded complete protection against the local effects of crotalus venom, though it seemed to lessen them.

#### Some Immunization Methods.

In some experiments which I was permitted to perform through the kindness of H. K. Mulford Co., I began the immunization of the animals according to the principals laid down by Calmette, beginning the treatment with cobra venom heated to 80 degrees C. to precipitate the globulins. After a short time it occurred to me that if my serum was ever to be used for treatment it would probably be in this country, where the irritative venoms of the rattlesnakes, moccasins and copperhead snakes are to be combated, and that a serum to have the desired protective efficacy should protect not only against the nervous poison contained in the heated venom, but also against the irritative globulin as well. I therefore determined to abandon Calmette's method, give up the use of cobra venom, and confine my endeavors strictly to the immunization of the animals with the most irritative venom I could obtain, administered in its natural condition. I therefore began to work with unmodified crotalus venom.

Three horses were used for the experiments, two of them dying early in the treatment. I found that while they bore the initial injections of heated cobra venom without inconvenience, they responded by a violent local reaction to each injection of crotalus venom. The injections were made into the subcutaneous tissue of the neck and each was followed by a very considerable swelling of the tissues, succeeded in every case by an infection resulting in a good-sized abscess and slough. Sometimes enormous areas of skin and subcutaneous tissue became gangrenous and exfoliated, leaving lesions that required considerable time for cicatrization. One horse died from an exceptionally severe lesion.

After pursuing this mode of inoculation until the death of one horse and the condition of the others persuaded me that it could not be further continued, and proving that the injections were followed by no local or general immunity to the irritative poison, I decided to try the effects of the injection of the unmodified venom into the venous circulation. The appropriate dose of venom was much diluted with water and slowly introduced into one of the superficial veins, where it was at once further diluted by the

blood. This mode of administration was not followed by any local lesion, and produced no symptoms of long duration. In nearly every case the injections were succeeded by a febrile reaction, and for a time—usually less than 12 hours—the horse seemed depressed and weak, and refused to eat. After the lapse of this period the animals seemed well, ate and drank normally, though it must be said that their condition was continually below par. It is quite probable that they might have remained in better shape if the administrations had been less frequent and each dose smaller. This fact, however, only became apparent after the experiments were at an end and the results obtained subjected to careful consideration. During the experiment the matter was left to the discretion of Dr. E. M. Ranck, the veterinary surgeon in charge of the animals. The venom seemed to increase the susceptibility to infection. This probably depended upon the alteration in the germicidal action of the blood, pointed out by Professor Welch and Dr. Ewing in 1892, at the first Pan-American Medical Congress. Not only was this diminished action shown by the tendency to local inflammations and necroses, but also by a tendency to general infection, for while I lost the first horse in consequence of destructive superficial lesions, the second animal died of pneumonia.

As the doses of venom were increased, the immediate physiologic effects became more and more marked. The venom was slowly injected into the vein, but about the time the total quantity entered the circulation the horse would become unconscious and fall suddenly to the ground. After a few minutes in this condition, with marked cardiac and respiratory disturbance, consciousness gradually returned. The functions re-established themselves and the animal would pull itself together and get up again. After witnessing this phenomenon several times, the horses were supported by "slings" before the injections were given in order that no injury might result from the fall. No serious damage seemed to occur in consequence of the momentary extreme depression, and after a time we came to look upon it without fear.

The treatment of the animals may be divided into three periods: First, in which crotalus venom, modified by heat as suggested by Calmette, was injected subcutaneously; second, in which unmodified crotalus venom was injected into the subcutaneous tissues; and third, in which unmodified crotalus venom was injected into a vein. One horse was treated successively by the three methods and yielded some serum showing positive protective power, but finally died from the effects of some venom which accidentally caused a periphlebitis of the jugular vein with a large slough. The second horse was treated at once with intravenous injections; this animal died from pneumonia before positive results were obtained. The third horse was begun with subcutaneous injections of unmodified crotalus venom, but died from the effects of the superficial lesions caused by the fourth or fifth injection.

The blood of the animals was examined from time to time as the routine work permitted. The horse which survived the longest developed marked antitoxicity, but as is usual in antitoxic horses, the antivenene gradually diminished. The method of testing the antivenene was that invented by Calmette. The determination of the dose of unmodified venom that would kill a rabbit was difficult.

#### Conclusions.

From these experiments I think it is safe to say that:

1. It is not difficult to produce immunity to the nervous poison contained in serpent's venom, as shown by Wollenden, Phisalix, Bertrand and Calmette.
2. This immunity when carried to a high degree is associated with marked antitoxic power of the blood.
3. It is very difficult, if not impossible, to produce immunity to the irritative poison of the venom.

4. Antivenene does not protect very powerfully against the irritative poison.

5. Antivenene protects against the nervous poisons of various venoms.

6. Immunity to the unmodified venom is better secured by intravenous than by subcutaneous injection.

7. Calmette's method of immunization with the modified venom is greatly to be preferred to the method of immunization to the unmodified venom as tried in these experiments, because the modicum of danger and suffering to the horses used.

8. Calmette's antivenene is more useful for the treatment of the bites of cobras and colubrine serpents than for those of vipers, etc.

9. As the antivenene protects against the chief death-dealing element in the venoms, it is of great use in the treatment of all serious bites, and should be used whenever possible.

10. The neutralization of the nervous poison of the venom by antivenene will enable the individual to devote all his vitality toward overcoming the local injury done by the irritative globulin in the venom.

11. All individuals—certainly not all horses—are not equal in their resisting power against venom. Two of my three horses succumbed quickly to the venom injections.

12. The antivenene producing power varies in different horses.

13. The quantity of antivenene in the blood varies from time to time, according to circumstances.

## SOME GENERAL ASPECTS OF COMMERCIAL PHARMACY.\*

By FRANK R. PARTRIDGE, Augusta, Me.

Where are we at? is a question that may well be asked by any and all legitimate apothecaries throughout the country. What is the good of our College of Pharmacy? What is the benefit of all the technical and practical knowledge taught by them? Of what use are boards of pharmacy? What is the good of the rigorous and thorough examination of the applicant for registration? Why is a greater degree of knowledge required of the apothecary of today than ever before? What are we "driving at" and where are we "going to land"? These are a few of the questions which confront the practical and thinking pharmacist.

In years gone by the apothecary prepared most of the medicines the physician used in his practice; he made all the tinctures, syrups, solutions, wines, pills, infusions, decoctions, plasters, emulsions, and in many cases the fluid extracts. It was no hardship for him to make a batch of pills fifty or even a hundred in number upon a prescription of the physician. To spread a plaster was but the work of a few minutes for the dextr hand, and to prepare an infusion was a common thing and took just as long as it does now. Pill making is almost a lost art with the average apothecary. Pills and tablets come to us all prepared, and the physician selects from the list what he can get, not just what he wants; in times past he wrote a prescription for what he wanted and the apothecary prepared it for him, and each pill contained just the exact quantity of each ingredient. Can the same be said of all the pills and tablets that infest the market today? "Elegant pharmaceuticals," sad to tell are displacing old and tried remedies, but the same physician who prescribes these "elegant" preparations, finding, in an emergency, that they do not produce the results anticipated, is glad to fall back upon some of the "old-fashioned" medicines which still prove to him a "sheet anchor" in time of trouble.

I believe in progress; I believe the science of medicine has progressed and that new and valuable remedies have been discovered, and that still others

will be found, but I do not believe in juggling together either old or new remedies, or both, and giving them a name which means nothing to the pharmacist or physician, and upon which no literature exists except that written by the manufacturer of the same or some versatile writer employed by him for that purpose. It seems to me that in prescribing these empirical preparations, the physician is forsaking the old, well-beaten path, and is pursuing a delusion from which, in time, he will experience a rude awakening.

The pharmacist as well as the physician is besieged by experienced and adroit traveling men with beautiful colored pills and tablets, elixirs of this and that, wines of that and the other, with liquors, solutions, syrups and fluid extracts of things known and unknown, though the manufacturer may think he has some knowledge of their virtues, and they are forced upon the apothecary, through the work of their "smooth and oily" detail men, while the physician, whose better judgment is oftentimes warped by the guileless manner of these well trained exhibitors, and the doctor prescribes them. The dry goods clerk, the boy who drives the butcher's cart, can "put them up" just as well as the skilled pharmacist. Again I ask, what is the use of your schools of pharmacy and your pharmacy boards? Surely skill and science are not required to dispense such prescriptions, and but very little care. As a rule I believe in not sighing for "good old times," but I do detest the "good old time" in the apothecary business will "quietly fold its tent and silently steal away" unless a halt is called on these "elegant pharmaceuticals" that are flooding the market, and unless many physicians are awakened to the fact that plain, well-tried and reliable remedies are still valuable. An eminent physician and surgeon once remarked to me: "Give me twenty-five or thirty of the old well-tried remedies; they may have all the rest, and I'll produce equally favorable results."

Both physician and pharmacist should be up to date. The Pharmacopoeia of 1900, a dispensatory of the same date and our National Formulary are surely not ancient literature. Yet I find nothing of these "new" (?) remedies in either. I am of the opinion if the formulas of the National Formulary were brought particularly to the attention of the physician, it would fill a want which the man with a limber tongue and a fine looking line of samples now supplies. Is it up to date prescribing a preparation because it looks well, tastes well, smells well, and the smooth man says will do all kinds of things? Is it up to date giving the patient a medicine because the drummer tells the physicians it fits their class of cases, the preparation oftentimes containing a drug of which the physician knows nothing? Is it up to date and does it make the apothecary up to date to force the dispenser of drugs to load up his shelves with stuff that later becomes a "calamity" after its worthlessness becomes known? Of course some of the preparations made from well known remedies have become standard and are incorporated in the National Formulary, from which any intelligent apothecary should be able to prepare them for himself. For these I have no word of condemnation, but if the myriads of patent and empirical preparations continue to increase, and the physician allows the smooth and oily man to think for him, the college of pharmacy will be obliged to change its curriculum and the pharmacy board step down and out, for the "butcher, the baker and the candlestick maker" and their boys will be able to dispense these "elegant pharmaceuticals," composed of pretty pills and tablets, scented elixirs, palate-tickling wines, and the long list of "stuffs" put out as medicine for all the "ills that flesh is heir to."

TOBACCO SEEDS are found, by J. Starke (Bull. Class. Sci. Acad. R. Belge), to contain neither solanine nor nicotine. The author disputes the statement of Albo that these seeds contain solanine.

\*New England Druggist.

## THE PHARMACIST IN LITERATURE.\*

By JOHN G. SCLATER.

(Concluded from Page 686, Dec 12)

De Quincey tells us in his "Confessions" how Coleridge, when free from the influence of opium, lured men-porters, hackney coachmen and others—to oppose by force his entrance into any druggist's shop. But as the authority for stopping him was derived simply from himself, naturally these poor men found themselves in a metaphysical fix, and he goes on to describe the kind of argument that passed between Coleridge, when the craving was on him, and his hirelings. It is amusing and pathetic. Our reading—I am not talking of that which we have to read—our reading is for instruction as well as amusement, and if we read so, we are bound to ask ourselves where was the druggist as a power to be reckoned with in Coleridge's case—I had almost said a moral power.

In Shakespeare's plays we find innumerable allusions to plants, animals and minerals as drugs. The poison that was poured into the ear of the King of Denmark, Hamlet's father, is supposed to be the juice of the tobacco plant, which was held in great disrepute in Shakespeare's time. The incantations over the boiling cauldron and the enumeration of the ingredients thrown into it, by the witches in Macbeth, is a veritable pharmacopoeia. It is certainly not entertaining, but fearsome and awful; and is no exaggerated summary of the drugs that were used in Shakespeare's own time. But the Mantuan apothecary stands out pre-eminent and quite sufficient for us.

Sir Walter Scott's novels teem with mystery, alchemy and superstition. The Talisman is an amulet used by the Saladin who plays the part of physician with success in the story. "The water in which it was dipt operated as a styptic, as a febrifuge, and possessed several other properties as a medicinal talisman." Then we have Wayland Smith in "Kenilworth." But the one I wish to draw your attention particularly to is Henbane Dwining, Pottingar, in the "Fair Maid of Perth." Pottingar is an old Scotch word for apothecary. This Henbane Dwining is the nearest approach to a chemist in all Sir Walter Scott's characters. The chemist was not then, so we must look to the alchemist, the leech, and the apothecary as supplying his place. What a specimen of humanity this Dwining is! I cannot do better than give you a few of the epithets that occur in the book on the Pottingar: "A sneaking varlet," "That venomous Pottingar," "A malignant talebearer," "The Pottingar willfully desires to show himself timid, poorly spirited and humble to conceal the danger of his temper. The adder is not less deadlier that he creeps under a stone." "There is more danger in yonder slight waste anatomy than in twenty stout fellows like yourself;" "But thou knowest that the potter-carrier ever speaks one language with his visage and another with his tongue." A scoffer at religion. An atheist who in his last moments scouts at the mention of a confessor. "Yes," said Dwining scornfully, "refer myself to a greasy monk who does not understand the barberous Latin he repeats by rote, such would be a fitting counsellor to one who has studied both in Spain and Arabia." By these few epithets you see Henbane Dwining far better than I could describe him. A man without one redeeming quality. While dressing the wound, he enjoyed seeing the pain he gave to his patient. An almost inconceivable character were it not for the fact that he was conceived for the story's sake, and not the story for his sake, which makes all the difference. Here is his end: "You see this trifling implement," said the crim-

inal (Dwining) showing the silver pen. 'By means of this I can escape the power even of the Black Douglass.'

"Give him no ink or paper," said Balvency, hastily, 'he will draw a spell.'

"Not so, please your wisdom and valency," said Dwining with his usual chuckle, as he unscrewed the top of the pen, within which was a piece of sponge or some such substance, no bigger than a pea. 'Now mark this,' said the prisoner, and drew it between his lips. The effect was instantaneous. He lay a dead corpse before them, the contemptuous sneer still on his countenance.'

In Charles Dickens we get a different aspect of the chemist. Being so keen an observer, this writer seems to bring out the peculiarities and idiosyncrasies, not only of each character, but also of the craft to which they belong. First let us turn to the poor chemist who is summoned as jurymen in the case of Bardell v. Pickwick.

"I beg the court's pardon," said the chemist, who was a tall, thin, yellow-visaged man (the chemists in fiction are all yellow-visaged, sallow atrabiliar looking creatures.) 'I beg the court's pardon, but I hope the court will excuse my attendance.'

"On what grounds, sir?" said Mr. Justice Stareleigh.

"I have no assistant, my lord," said the chemist.

"I can't help that, sir," replied Mr. Justice Stareleigh, 'you should hire one.'

"I can't afford it, my lord," rejoined the chemist.

"Then you ought to be able to afford it, sir," said the judge reddening, for Mr. Stareleigh's temper bordered on the irritable, and brooked not contradiction.

"Swear the gentleman," said the judge peremptorily. The officer had got no further than the 'You shall well and truly try,' when he was again interrupted by the chemist.

"I am to be sworn, my lord, am I?" said the chemist.

"Certainly, sir," said the testy little judge.

"Very well, my lord," replied the chemist, in a resigned manner. 'Then there'll be murder before the trial's over, that's all. Swear me, if you please, sir,' and sworn the chemist was before the judge could find words to utter.

"I merely wanted to observe, my lord," said the chemist, taking his seat with great deliberation, 'that I've left nobody but an errand boy in the shop. He is a very nice boy, my lord, but he is not acquainted with drugs, and I know that the prevailing impression on his mind is that Epsom salts means oxalic acid, and syrup of senna, laudanum. That's all, my lord.' With this the tall chemist composed himself into a comfortable attitude, and, assuming a pleasant expression of countenance, appeared to have prepared himself for the worst."

Bob Sawyer was more of a surgeon apothecary. But though leaning more to the medical side—and we make the faculty a free gift of all such Bob Sawyers—yet he kept an open shop, at least, for a very little time, and that is sufficient for us.

"And a very snug business you have, no doubt," said Mr. Winkle knowingly.

"Very," replied Bob Sawyer, 'So snug that at the end of a few years you might put all the profits in a wine-glass, and cover 'em over with a gooseberry leaf.'

"You cannot surely mean that?" said Mr. Winkle. 'The stock itself—'

"Dummies, my dear boy," said Bob Sawyer, stepping out into the shop and demonstrating the veracity of the assertion by divers hard pulls at the little gilt knobs on the counterfeit drawers. 'Hardly anything real in the shop but the leeches, and they are second-hand.'

"I shouldn't have thought it," exclaimed Mr. Winkle, much surprised.

"I hope not," replied Bob Sawyer, 'else where's the use of appearances?'

Bob Sawyer asks Benjamin Allen to produce the

\* President's address to the Edinburgh Chemists', Assistants' and Apprentices' Association. (Pharm. Journ.)

patent digester, and so the brandy bottle makes its appearance. While discussing it, they relate to Mr. Winkle their novel way of advertising.

"He leaves it all at the wrong house," Mr. Winkle looked perplexed, and Bob Sawyer and his friend laughed. "Don't you see? said Bob, 'he goes up to a house, rings the area bell pokes a packet of medicine, without a direction into the servant's hand, and walks off. Servant takes it into dining room, master opens it and reads the label: "Draught to be taken at bedtime, pills as before, lotion as usual. The powder. From Sawyer's, late Nockemorf's. Physician's Prescriptions carefully prepared," and all the rest of it. Shows it to his wife. She reads the label, it goes down to the servants, they read the label. Next day, boy calls, "Very sorry, his mistake, immense business, great many parcels to deliver, Mr. Sawyer's compliments, late Nockemorf." The names gets known, and that's the thing, my boy, in the medical way. Bless your heart, old fellow, it's better than all the advertising in the world. We have got one four-ounce bottle that's been to half the houses in Bristol, and hasn't done yet."

"Dear me, I see," observed Mr. Winkle; "what an excellent plan!"

"Oh, Ben and I have hit upon a dozen such," replied Bob Sawyer with great glee. "The lamplighter has eighteen pence a week to pull the night bell for ten minutes every time he comes round, and my boy always rushes into church just before the psalms, when the people have nothing to do but look about 'em, and calls me out with horror and dismay depicted on his countenance. "Bless my soul," everybody says, "somebody taken suddenly ill. Sawyer, late Nockemorf, sent for. What a business that young man has." Of course, all this is very unprofessional, but that is a detail."

I think you will see by the above extracts that Dickens' knowledge of the pharmacist, both at the counter and behind the scenes, was no ordinary one. He betrays a knowledge that is only got by being behind the counter in some way or other. Certainly such detail could only be given after close and intimate observation reflecting on this point. I remembered the other day that Jonas Chuzzlewit poisons himself. I looked the passage up to see how Dickens treated the scene. I was delighted to find this:

He tried to hang himself, but was caught in time. The officers take him to prison in a coach, "and happening to pass a fruiterer's on their way, the door of which was open, though the shop was by this time shut, one of them remarked how faint the peaches smell."

"The other assented at the moment, but presently stooped down in quick alarm, and looked at the prisoner."

"Stop the coach! He has poisoned himself! The smell comes from this bottle in his hand!"

"The hand had shut upon it tight. With that rigidity of grasp with which no living man in his full strength and energy of life can clutch a prize he has won."

There is a real artistic touch by introducing that fruiterer's shop, and by it letting us know the drug that did the fatal deed, without mentioning its name.

Now I will introduce quite a different type of man. Tom Thurnall, in Kingsley's novel, "Two Years Ago," we might all do well to copy. Kingsley describes John Briggs, Tom Thurnall's co-apprentice, thus: "One glance at his face was sufficient to tell that he was moody, shy, restless, perhaps discontented, perhaps ambitious and vain." Tom was different. Bolus the general practitioner says of him: "In hours, sir, he takes care of my business as well as I could myself; but out of hours, sir, I believe he is possessed by seven devils." It is very interesting to read of Tom Thurnall in Dr. Heale's shop. The old doctor is a drunkard, and his wife a laudanum drinker. We read that the shop was filthy. The counter was quarter of an inch deep in deposit of every vegetable and mineral matter. He starts by cleaning it. He scares

Mrs. Heale from the laudanum bottle, and with infinite tact "bosses" the old doctor in a brusque, though not impudent, manner.

Allow me to quote one sentence which will be of interest, and possibly worth discussion.

"Heale could not deny that the young man was a very valuable young man, if he wasn't given so much to those new-fangled notions of the profession."

"By which term Heale indicated the, to him, astounding fact, that Tom charged the patients as little, instead of as much, as possible, and applying to medicine the principles of an enlightened political economy, tried to increase the demand by cheapening the supply."

"Which is revolutionary doctrine, sir," said Heale to Lieut. Jones over the brandy and water, "and just like what the Cobden and Bright lot used to talk."

Then old Heale gives an example of Tom's revolutionary way.

"Well, ma'am," says he, "(as I am a living man he said it). I can cure you, if you like, with a dozen bottles of lotion at eighteen-pence apiece; but if you'll take my advice you'll buy twopennyworth of alum down street, do what I tell you with it and cure yourself." It's robbery, sir, I say, all these out-of-the-way cheap dodges which arn't in the pharmacopoeia half of them; it's unprofessional, sir—quackery."

"Tell you what, doctor, robbery or none, I'll go to him to-morrow, d'ye see if I live as long, for this old ailment of mine. I never told you of it, old pill and potion for fear of a swinging bill but just grinded and bore it."

Were I to enter on the subject of the part that drugs play in literature it would be endless. The tragic effect of a mistake in dispensing, as a theme for the storyteller, has, I think, only entered into short magazine stories. We are all painfully aware of the disastrous effects that might happen from some very venial error on the part of the dispenser. We never know how narrowly we sometimes escape a tragedy by a hairbreadth. Some will say, if properly checked, there is no fear; but proper checking and all is not infallible. Doubts, fanned, may be, by a too lively imagination just as you were dropping off to sleep, may be the means of giving you a bad half-hour—happily to find them all dispelled in the morning when you get down to business and have a look over. I wager you would not be late that morning. In realities like these is real romance.

And now one word for the younger members. I will show them a mirror into which they may look as I pass it before them. If the image he not flattering, do not break it, as Queen Bess did, but mend.

"Like all embryo apothecaries," says Japhet. "I carried in my appearance, if not the look of wisdom, most certainly that of self-sufficiency, which does equally well with the world in general. My forehead was smooth and very white, and my dark locks were combed back systematically and with a regularity that said as plainly as words could do. The owner of this does everything by prescription, measurement, and rule." Altogether, I cut such a truly medical appearance that even the most guarded would not have hesitated to allow me the sole conduct of a whitlow, from inflammation to suppuration, and from suppuration to cure; or have refused to have confided to me the entire suppression of a gumbol.

"Such were my personal qualifications at the time I was raised to the important office of dispenser of, I may say, life and death."

These are a few samples of the pharmacist in fiction. You can draw your own conclusions as to the general truthfulness of the portrait or no. Boswell tells us Johnson was a "dabbler in physic." At another time I will endeavor to show you some pharmacists of the past who were "dabblers in literature, and more especially as the friends of literary men. Truth is stranger than fiction in this case also. Yes, there is a romance or two, terribly realistic, which I think will prove of even more interest than all the chemists in fiction.

## A SHORT ACCOUNT OF INOCULATION AND VACCINATION.\*

By Prof. E. V. HOWELL, University of N. C.

Smallpox or Variola is described as an acute, specific infectious disease, resulting from a specific morbid poison. After a period of incubation it manifests itself by high inflammatory fever, followed after three or four days by an eruption, which feels at first like shot under the skin, and finally develops into deep-seated pustules.

The following forms of smallpox are usually distinguished:

1. Confluent (severe), in which pustules run together, producing deep scars.
2. Distinct (mild), pustules remain separate, slight scars.
3. Hemorrhagic (usually fatal), hemorrhages into the skin beneath the pustules.
4. Inoculated (usually mild), intentionally introduced.
5. Malignant (sometimes called black smallpox), usually fatal.
6. Modified (usually mild), seen in vaccinated people. This is called Varioloid.

Dr. Williams, in his "Dissertation on the Antiquity of Smallpox," quotes from Philo, a learned Jew, who wrote, in the first century, a work on the "Life of Moses" and that part of the book of Exodus in which the plagues were sent upon the Egyptians. He states that this eruptive disease, called "boils and blains," affecting both man and beast, was probably smallpox. This eruptive disease, left to its natural course, may have been transmitted into both man and beast to appear as smallpox, cowpox, horsepox, etc. This would fix the date for the origin nearly 1500 years before the Christian era. It is interesting to note that the traditions and history of the Eastern nations refer the commencement of this disease to a correspondingly remote period.

We have all along through history excellent descriptions of an eruptive disease whose symptoms correspond closely to what we call smallpox, but, as all eruptive diseases, plagues, etc., are considered indiscriminately under such heads as Pestilencia, we have great trouble in tracing out just when this disease first appeared.

Livy frequently refers to pestilences in his works, and in 434 he gives an account of a pestilence raging intensely and fatally among cattle and man. He states that it was transferred from cattle to shepherds and laborers, and soon afterwards attacked the inhabitants of the city itself.

A more remarkable description of an epidemic in the Roman territory in the year B. C. 290, or B. C. 464, says it began among the lower animals and extended to man. During that year the Romans engaged in no war-like measure, as they were grievously affected with a pestilence, very severe, which attacked first the horses in the pasture, the cattle herds, sheep and goats, and destroyed nearly all the quadrupeds. Next it seized the shepherds and field labourers, and lastly the inhabitants of the cities.

Perhaps the earliest authentic account of any eruptive disease besides those mentioned, is that given by Thucydides in his History of the Peloponnesian War. The symptoms correspond to those of smallpox, while he omits easily observable symptoms that would have indicated bubonic plague, such as buboes, carbuncles, etc. He mentions the bad effects, and, also, that a person can have the disease more than once.

Galen also describes an eruptive disease which we might easily conceive to be smallpox, and Rhazes, who quotes him, insists that he does mean this disease.

In China its date and its origin is given as 1122 B. C., and the Chinese name, Tai-tou, means "renom of the mother's breast," and this was its supposed origin. They had a goddess in their mythology under

the especial care of which this disease is placed, whom they called Patragali, "the goddess of the spots." The Brahmins say that the Veda, which they refer to an era nearly as remote as that of Moses, mentions the forms of worship, and the female deity who presides over smallpox.

In all the cases we have accurate descriptions of eruptive diseases on man and beast, which accord with the symptoms and phenomena presented by smallpox.

The year A. D. 568 is a date when the disease is mentioned first, and it was during the siege of Mecca by the Abyssinian army under Abrahah the Viceroy, that we have the breaking out of smallpox given in history as a cause of his hasty retreat. From Arabia it soon spread all over the world.

The first recorded case of an eruptive disease to which the name variola or smallpox was applied, is said to be that of Elfrida, daughter of our English Alfred and wife of Baldwin the Bald, Earl of Flanders. This occurred in the year 907 A. D., patient recovering. The second case was that of Baldwin, grandson of Elfrida, in 961 A. D. Probably about this time the Latin families of Europe adopted the term variola, for this disease, either from varus, a pimple or spot, or varius, speckled or spotted. The Teutonic or Saxon branch chose pocca, a pock or little pouch.

Aaron of Alexandria, in the beginning of the 7th century, was the first acknowledged writer on smallpox.

Bachtreshua, physician to Caliph Almausor, the 8th century.

Isaac Judeus in the 9th century.

John of Messue, about the close of the 8th century.

Serapion, at the close of the 9th century.

All treat expressly of smallpox, yet their descriptions of the characteristics of the disease are not accurate or complete, while their theories as to the origin or cause, are absurd and ridiculous, and their mode of treatment injurious. For instance, we mention the conception as to its origin by Rhazes, who, after stating that "the blood of infants is like must, in which the coction leading to perfect ripeness has not begun; that of young men like must which has already fermented and made a hissing noise; that of old men like wine that has lost its strength and is beginning to get rapid and sour," says, "smallpox arises when the blood putrefies and ferments, so that the superfluous vapors are thrown out of it, and it is changed from the blood of infants to the blood of young men, and smallpox may be compared to the fermentation and hissing which takes place at this time."\*

Rhazes mentions as a remedy in the first stage of smallpox, syrup of pearls, a secret remedy prepared by the Indians, which, when taken if none of the pustules have broken out, will prevent the appearance of the tenth.

Avicenna in the following century gave a clear and more distinct view of smallpox and measles, describing the pustular eruption more accurately, and distinguishes between the confluent and the distinct types, distinguishing, in a degree at least, between smallpox and measles, which have all along been confounded. He pronounces both contagious, and notices that people may have smallpox twice. Later we have a remarkable example in the death of Louis XV at 64 of smallpox, having had it before at 14.

Very little was added to our small knowledge of smallpox from the 12th to the 17th century.

Dr. Sydenham, at this time full of the spirit of the experimental philosophy which he had caught from Bacon, "the first of men uninspired," investigated this disease, accurately described its symptoms, and prepared and carried out such a judicious method of treatment, that little improvement was made until the introduction of inoculation, in the beginning of the 18th century.

\*Read before the North Carolina Pharmaceutical Association, reprinted from the proceedings.

\*Greenhill's Translation of Rhazes' Treatise on Smallpox and Measles.

So we find that its origin is not definitely settled, neither do we know where it first appeared. It was unknown to the early Greek writers of medicine, but is mentioned in the oldest books of India. The first accurate description was by an Arabian medical writer, Rhazes, of the 9th century.

It was unknown in Europe in the 6th century, and in the 16th century it was carried to America by the Spaniards.

It soon spread all over the known world. At various times it was an epidemic and of a very fatal nature. It is both contagious and infectious, and instances of unborn children having developed cases, show that it can be communicated through the blood.

The nature of smallpox contagion is unknown. No disease germ peculiar to it has been found, though diligently sought for.

For the purpose of modifying or stamping out this disease, three distinct methods at least have been adopted. 1. Inoculation. 2. Isolation and inoculation. 3. Vaccination.

#### Inoculation.

This practice, meaning literally grafting, is the transference of disease from one animal to another by the introduction of the virus of that disease into the tissues or fluids of the body. In its present restricted sense we usually mean transmitting the smallpox virus. Where or how this practice first originated is not known. It is also spoken of in the most ancient books of India, and as far as we can learn, it has been practiced from the most ancient times. It is supposed by some to have been practiced first in India. Avicenna, an Arabian, has been credited with this discovery, and it has been supposed that Chinese and Tartar traders introduced the practice into Bengal and China, and that it was carried by the Mohammedan pilgrims to Mecca. According to Woodville, however, there is no evidence that the Circassians or the inhabitants around the Caspian Sea had practiced the art of inoculation longer than the people of other nations, and the Tartars were said to have been ignorant of this treatment in 1724. In Constantinople there were equally conflicting opinions as to the origin. One said that it had been introduced from the Morea by an old woman, others that it had been introduced from Circassia.

The operation as performed in Circassia in 1711 on a girl four or five years old, is described as follows, in "Travels through Europe, Asia and into part of Africa, De la Motraye."

"The girl, after being purged with dried fruit, was carried to a boy about three years old who had caught the natural smallpox, and whose pocks were ripe. An old woman performed the operation; for women of advanced age exercised the practice of physic in Circassia."

The first publication in England giving a description of the method of grafting or inoculating smallpox, was written in 1715 by Kennedy, a surgeon, in an Essay on External Remedies, London, 1715. He speaks of this custom at that time as having been practiced in Peloponnesus, and state that at that time it was performed in Persia and Turkey. In Persia the pock and matter was dried and powdered and taken internally.

Dr. Emanuel Timoni, in 1714, observed that the Circassians and other Asiatics had introduced among the Turks this practice of preventing smallpox by inoculation about forty year previous to this date.

In 1716 the four sons of a Greek nobleman were inoculated by an old woman, who had long practiced the art. The matter was inserted into punctures made in the forehead, cheek, chin and wrists.

In Turkey, Dr. Russel, a physician at Aleppo, wrote in 1726 of this practice among the Arabs. His brother presented the letter to the Royal Society of England. The following is an extract:

"About nine or ten years ago, while on a visit to a Turkish harem, a lady happened to express much anxiety for an only child who had not yet had

the smallpox; the distemper at that time being frequent in the city. None of the ladies in the company had ever heard of inoculation; so that having once mentioned it, I found myself obliged to enter into a detail of the operation, and of the peculiar advantages attending it. Among the female servants in the chamber was an old Bedouin, who, having heard me with great attention, assured me that my account upon the whole was a just one, only that I did not seem so well to understand the way of performing the operation, which, she asserted, should be done not with a lancet, but with a needle; she herself had received the disease in that manner, when a child; had in her time inoculated many; adding, moreover, that the practice was well known to the Arabs, and that they termed it buying the smallpox.

"In consequence of this hint, I set about procuring more particular information from the Arabs of this place; and the result of my inquiry was that the practice of inoculation had been of long standing among them. They, indeed, did not pretend to assign any period to its origin; but those of seventy years old and upward remembered to have heard it spoken of as a common custom of their ancestors, and made little doubt of its being of as ancient a date as the disease itself. Their manner of operating is to make several punctures in some fleshy part, with a needle imbued in various matter taken from a favourable kind of pock. They use no preparation of the body; the disease communicated in this way being, as they aver, always slight, they give themselves little or no trouble about the child in the subsequent stages of the distemper.

This method of procuring the disease is termed buying the smallpox on the following account: The child to be inoculated carries a few raisins, dates, sugar plums, or such like; and showing them to the child from whom the matter is to be taken, asks how many pocks he will give in exchange. The bargain being made, they proceed to the operation. When the parties are too young to speak for themselves, the bargain is made by the mothers. The ceremony, which is still practiced, points out a reason for the name given to inoculation by the Arabs; but by what I could learn among the women, it is not regarded as indispensably necessary to the success of the operation, and is, in fact, often omitted."

This custom was found to prevail among the Eastern Arabs. At the appearance of smallpox it was announced by a cry—so that all who wished might have their children inoculated.

In Armenia, the Turkoman tribes as well as the Armenian Christians have practiced inoculation since the memory of man, but the date of its introduction is not known.

At Damascus, and along the coasts of Syria and Palestine, the manner of inoculating varied only in the selection of the part of the body into which the virus was introduced, e. g. between the thumb and forefinger, on the thighs, forearm, etc.\*\*

Mr. Colden thought that inoculation originated in Africa. The negroes in Senegal, whenever the smallpox, appeared, inoculated their children upon the arm, forbade the eating of animal food, and freely drank water acidulated with lime juice. In other parts of Africa similar customs prevailed. Here it was called "buying the smallpox," and the superstition was that the inoculation would be of no avail unless the person from whom the virus was taken received money or some article in exchange.\*\*

The practice of inoculation in Tripoli, Tunis and Algiers, was described in a paper by Cassem Aga, Ambassador in England, 1728.

In India, where, according to tradition, the custom is very ancient, we have this account by Holwell:

"Inoculation is performed in Hindostan by a particular tribe of Brahmins, who are delegated annually for this service from the different colleges of Bin-

\*Crookshank's History of Vaccination and Smallpox, pages 8 and 9.

\*\*Dr. Russel, quoted in Crookshank's History.

\*\*\*Colden, Med. Obs. and Inq., Vol. I, page 228.

doobund, Eleabas, Banaras, etc., over all the distant provinces; dividing themselves into small parties of three or four each, they plan their traveling circuits in such wise as to arrive at the places of their respective destinations some weeks before the usual return of the disease they arrive commonly in the Bengal provinces early in February, although they some years do not begin to inoculate before March, deferring it until they consider that state of the season, and acquire information of the state of the distemper.

"The inhabitants of Bengal, knowing the usual time when the inoculating Brahmins annually return, observe strictly the regimen enjoined, whether they determine to be inoculated or not; this preparation consists only in abstaining for a month from fish, milk and ghee (a kind of butter made generally of buffalo's milk); the prohibition of fish respects only the native Portuguese and Mohamedans who abound in every province of the empire. When the Brahmins begin to inoculate, they pass from house to house and operate at the door, refusing to inoculate any who have not, on a strict scrutiny, duly observed the preparatory course enjoined them. It is no uncommon thing for them to ask the parents how many pocks they choose their children should have. Vanity, we should think, urged a question on a matter seemingly so uncertain in the issue; but true it is that they hardly ever exceed or are deficient in the number required.

"They inoculate indifferently on any part; but, if left to their choice, they prefer the outside of the arm, midway between the wrist and the elbow for males; and the same between the elbow and shoulder for the females. Previous to the operation, the operator takes a piece of cloth in his hand, which becomes his periosteum if the family is opulent, and with it gives a dry friction upon the part intended for inoculation for the space of eight or ten minutes, then with a small instrument he wounds, by many slight touches, about the compass of a silver groat, just making the smallest appearance of blood; then opening a linen double rag, which he always keeps in a cloth round his waist, he takes from thence a small pledget of cotton charged with the viruliferous matter, which he moistens with two or three drops of Ganges water, and applies to the wound, fixing it on with a slight bandage, and ordering it to remain on for six hours without being moved; then the bandage to be taken off, and the pledget to remain until it falls off itself.

"The cotton which he preserves in a double calico rag is saturated with matter from the inoculated pustules of the preceding year; for they never inoculate with fresh matter, nor with matter from the disease caught in the natural way, however distinct and mild the species.... Early on the morning succeeding the operation, four collans, an earthen pot containing about two gallons, of cold water are ordered to be thrown over the patient, from the head downwards, and to be repeated every morning and evening until the fever comes on, which usually is about the close of the sixth day from the inoculation, then to desist until the appearance of the eruptions, which commonly happens at the close of the third complete day from the commencement of the fever, and then to pursue the cold bathing as before through the course of the disease, and until the scabs of the pustules drop off. They are ordered to open all the pustules with a fine sharp-pointed thorn as soon as they begin to change their color, and whilst the matter continues in a fluid state. Confinement to the house is absolutely forbidden, and the inoculated are ordered to be exposed to every air that blows; and the utmost indulgence they are allowed when the fever comes on, is to be laid upon a mat at the door; but, in fact, the eruptive fever is generally so inconsiderable and trifling as to very seldom to require this indulgence. Their regimen is ordered to consist of all the refrigerating things the climate and season produce, as plantains, sugar cans, watermelons, rice, gruel made of white poppy seeds and cold water, or thin rice gruel for the ordinary drink. These instructions being given, and

injunction laid on the patients to make a thanksgiving Poojah, or offering to the goddess on their recovery, the operator takes his fee, which from the poor, is a pund of cowries, equal to about a penny sterling, and goes on to another door down one side of the street, and up on the other; and is thus employed from morning till night, inoculating sometimes eight or ten in a house."

In China the practice is somewhat different from that of other countries. They call it "sowing the smallpox." This method was invented in China so early as the dynasty of Song, 59 years after Christ. They took two to four dried pustules or scales, between which they placed a small portion of musk. They were kept in a jar for several years. If it was necessary to resort to fresh pustules, it was thought necessary to reduce their virulence by exposing to the steam of infusion of licorice root. Sometimes dried powdered scales made into a paste were used, the whole wrapped up in cotton and introduced into the patient's nostrils.\*

In France, according to tradition, it was long practiced by the peasants. Dr. Boyer, who wrote in 1717, was the first writer who noticed inoculation.\*\*

In Denmark a countess was inoculated in 1754, and in 1758 two inoculation houses were established by the King at Copenhagen. In 1809 the Royal Prince was inoculated with success.\*\*\*

Introduced into England.—The profession in England was led to adopt inoculation for smallpox by the determined efforts of Lady Mary Wortley Montague, whose husband was ambassador to the Ottoman Court. Kennedy, who wrote of the inoculation in the East Indies, rather advised against its introduction into England, but in 1717, Lady Montague wrote to a friend concerning the practice.

She had her son inoculated by an old Greek woman, with matter selected from a suitable subject, by Doctor Maitland, surgeon to the Embassy. She afterwards had her daughter inoculated in England in 1721. The practice did not make much progress for some time, as it was regarded with fear and suspicion. One year after, the second person was inoculated, and several months after this, the third. It was looked upon with such disfavor that the next inoculated were a number of criminals in Newgate, who were offered their liberty if they would be inoculated. None of them had the disease severely. The one in which it was most severe had only sixty pustules.

#### Introduction Into America.

In 1721 smallpox visited this country after an absence of nineteen years. Reverend Cotton Mather copied accounts of inoculation as given by Timoni and others, and sent to the practitioners of Boston, where it was introduced. Opposition was aroused and the practice defended. The following manifesto severely checked this practice:

"At a meeting by Public Authority in the Townhouse of Boston before His Majesty's Justices of the Peace and the Select-Men; the Practitioners of Physick and surgery being called before them concerning Inoculation, agreed to the following conclusion:

"A resolve upon a debate held by the physicians of Boston, concerning inoculating the smallpox, on the 21st day of July, 1721. It appears by numerous instances, that it has proved the death of many persons soon after the operation, and brought distempers upon many others which have in the end proved fatal to them.

"That the natural tendency of infusing such malignant filth in the mass of blood, is to corrupt and putrify it, and if there be not a sufficient discharge of that malignity by the place of incision or elsewhere, it lays the foundation for many dangerous diseases.

"That the operation tends to spread and continue the infection in a place longer than it might otherwise be.

\*D'Entrecolles, *Lettres Edif. et Curieuses*, page 10, 1718.

\*\*Cruikshank's History.

\*\*\*Cruikshank's History of Inoculation.

"That the continuing the operation among us is likely to prove of most dangerous consequence.

"The number of persons, men, women and children that have died of the smallpox at Boston from the middle of April last (being brought here then by the *Salertuda's* fleet) to the 23d of this instant July (being the hottest and the worst season of the year to have any distemper in), are, viz., 2 men strangers, 3 men, 3 young men, 2 women, 4 children, 1 negro, man, 1 negro woman, and 1 Indian woman, 17 in all; of those that have had it, some are well recovered, and others in hopeful and fair way to recovery.\*

In 1774, smallpox again visited Boston and three thousand people were successfully inoculated. In 1738 smallpox was introduced into South Carolina by a cargo of slaves from Africa. Mr. Mowbray, a surgeon, introduced inoculation. About one thousand were inoculated, with eight deaths.

Inoculation was beneficial to the individual because it modified the effects of smallpox and reduced greatly the mortality. That it spread smallpox we cannot doubt, for inoculated persons frequently introduced it into sections that had before been free from its ravages.

The second method for stamping it out was proposed by Dr. Hagarth in 1777. It was by inoculation and isolation, which would prevent its spread. He suggested almost the identical precautionary methods now in use. Dr. Dimsdale was paid \$50,000 and given in addition an annuity of \$2,500 and made a Baron of the Russian Empire for successfully inoculating the Empress of Russia in 1768. Owing to the introduction of vaccination this very process was prohibited by law, and a penalty imposed, just 68 years later.

#### Vaccination.

We have learned that eruptive diseases occur, attacking both man and beast. One form attacking horses, was known as horsepox, that form developing in cows, cowpox, etc. These diseases, from very ancient times, have been known and treated. Cowpox or vaccinia is described as any specific eruptive disease of the vesicular order, particularly attacking milk cows. Its normal course extends over about twenty-three days. Specifically we mean that cowpox, which, upon its introduction into the human body, either gives immunity from smallpox, or moderates its violence. Cowpox in its first stages is usually attended with so little general or local disturbance that the attention is frequently not called to those first attacked. The matter from the vesicles is very infectious, and others are frequently inoculated by the milkers unintentionally transmitting the virus.

It is noted that Jenner made the mistake of considering that cowpox originated from a disease in horses called "grease." This rather natural mistake occurred from these facts: (1) That there is a disease in horses known as grease, one that discharges a fluid from the heels. (2) That about the dairies in which cowpox existed there were horses which had grease, and the men that dressed these sores also in some cases milked the cows. Falsely he concluded that the cowpox was derived from matter from the heels of horses suffering from grease, introduced upon the teats of the cows by milking.

Along with this grease occurs horsepox, having nothing in common with it, but the fact that they both occur as discharging sores upon the heels. This total difference is observed that when this equine virus is introduced, it exhibits all the characters of, and affords all the immunity that can be secured from vaccine matter, and when introduced in the horses produces horsepox, into cows all the genuine symptoms of inoculated cowpox. From the grease we get no such results.

There was a belief among the milkmaids that those having had cowpox could not have smallpox. We can't trace definitely where or when this tradition arose, but we can readily see when inoculation was tried, and it did not take upon those who had pre-

viously had cowpox, that the tradition thus fortified should have suggested to some the method of vaccination. This was probably first performed by Benj. Jesty, 1774, who inoculated with vaccine matter, his wife and two sons. Mrs. Jesty is then the first recorded case of a person intentionally cowpoxed. Jesty made no effort to introduce the practice, and it was only after the success of the method years after that he was sought out as the first vaccinator.

To Edward Jenner (born at Berkeley in Gloucestershire, May 17, 1749), is certainly due the credit for introducing vaccination. He heard this tradition, thought it over, spoke to his friends about it and was ridiculed, in fact we learn that his paper containing some of his observations in this line, was returned by the Royal Society with no flattering comments (not to subject himself to ridicule after he had presented such a creditable paper on whether the young cuckoos push the hedge sparrows out of their nests or the mother hedge sparrow).

In 1795 he had already failed to inoculate with smallpox virus Joseph Merrit, who had the cowpox twenty-five years before.\*

In 1796 he made the important experiment of taking matter from the arm of a dairy maid suffering with cowpox and introducing it into the arm of an eight-year-old boy. This inoculation of vaccine matter succeeded. He had now only to prove that this vaccination would protect the boy from smallpox. You can imagine how impatiently he waited to make the test. Six weeks after he introduced smallpox virus and it produced no effect. This idea of vaccination was not enthusiastically received. It had a bitter fight for a time for existence. It was attacked by both the learned and the ignorant and denounced by the pulpit. Of its triumph we know. In 1802 Jenner received his financial reward by the grant of \$50,000 from the English government.

#### On the Objections to Vaccination.

It was asserted, and seriously too, that it caused strange and unheard of diseases—caused mental and physical degeneration—diminished men's statures, etc. But it was useless to argue against these foolish assertions. That it has led only to increase in the mortality of other diseases, that is, people saved from smallpox only to prematurely fall a prey to some other disease. That cutaneous and glandular diseases might be communicated. That syphilis and tuberculosis and other inoculable diseases might be transmitted.

Of these objections, only one can be seriously entertained, that of syphilis and tuberculosis. If syphilitic matter were introduced into a person it would produce syphilis. This carelessness or lack of precaution in vaccination is the fault of the vaccinator and not an objection to the process. Since the abandonment of the use of human virus in this country (since 1870-1886) for vaccine virus from young healthy calves, under strictly aseptic conditions, this objection has altogether been removed.

#### The Efficacy of Vaccination.

We have it shown with conclusive evidence, that the vast majority of mankind, by a single properly performed vaccination may be rendered for a varying time, wholly unsusceptible to any subsequent actions of smallpox virus. Without multiplying the large amount of statistics to confirm this statement, will mention only one. In the fearful smallpox epidemic that raged in Germany in 1870-71, 143,000 people died out of a total population of 50,000,000. In 1874 a law was enacted making vaccination compulsory in the first year of life, and revaccination obligatory in the tenth year. The result is that in Germany smallpox has been successfully stamped out, so that only 116 die annually from the disease.

In vaccination the vaccine vesicle is the only reliable indication that the vaccination has taken. There is no other proof for or against the vaccine. A hole

\*Crockshank's History, Vol. I, page 21.

\*Baron's Life of Jenner.

in the arm as large as a dollar, and the arm swollen to the size of the leg, does not mean that the person is any more protected from smallpox than one with only one or two vaccinia vesicles. These violent symptoms, local or constitutional, do point, however, to the fact that infection has occurred from (1) germs in the vaccine, or (2) by the use of unclean, non-aseptic instruments, or (3) not properly cleansing the part with soap and alcohol before vaccination, or (4) through careless exposure of the arm after vaccination.

It is said that a single vesicle produces immunity. These vary in size, but are unusually depressed in the center, at one stage filled with pearly gray matter.

Not only do we owe to the introduction of vaccination immunity from smallpox, but the stimulus to search for similar treatments has resulted in the discovery of various antitoxins for the treatment of other diseases; we might mention those of diphtheria, tetanus, tuberculosis, and many used in veterinary practice.

## QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

### Alkaloids of Jaborandi.

(X. Y. Z.) The leaves of the several species of pilocarpus contain variable amounts of pilocarpine and an accompanying alkaloid called pilocarpidine. The former is generally considered to be the active principle of the drug, but the latter according to Dr. Lyons is believed to have similar medicinal properties. Both alkaloids are said to be present in the commercial salts of pilocarpine. Dr. Lyons states ("Assay of Drugs") that leaves formerly imported contained nearly two per cent. of alkaloid, though those now in the market yield hardly 0.2 per cent. In a communication from the laboratory of Gilpin, Langdon & Co., of Baltimore, published in this journal June 6, 1901 (page 611), the average yield of pilocarpine in the assay of six samples of leaves is reported as 0.387 per cent.

The alkaloid may be extracted from the leaves by infusion with water acidulated with one per cent. of hydrochloric acid, though the following process for the preparation of pilocarpine is given in the last edition of the United States Dispensatory:

The leaves are exhausted with 80 per cent. alcohol containing 8 grammes of hydrochloric acid in a liter, the tincture is distilled and evaporated to the consistency of a liquid extract, and this is mixed with a small quantity of water, and filtered. The filtrate is treated with a slight excess of ammonia, and then with a large quantity of chloroform. The chloroform solution is agitated with water, to which hydrochloric acid is added, drop by drop, in sufficient quantity to neutralize the alkaloid, the hydrochlorate of which is obtained in long needles on evaporating the aqueous solution, while foreign principles remain dissolved in the chloroform. By dissolving the crystals in water, treating the solution with ammonia and chloroform, and evaporating the latter solution, pilocarpine is obtained as a soft viscous mass, which is only slightly soluble in water, but is freely soluble in alcohol, ether and chloroform.

The present market price of pilocarpine compared with that of jaborandi leaves is not excessive when

the small yield of alkaloid and its cost of manufacture is taken into consideration. There is only a limited demand for the alkaloid or any of its salts.

### Heroine.

(J. G. J.) Diacetyl morphine (heroine), according to Manges (N. Y. Med. Jour.), was discovered and studied by Wright in 1874, and by Hesse in 1884. We cannot give here an outline of the process of manufacture. Heroine is described as a white crystalline and odorless powder, slightly bitter in taste and alkaline in reaction. Its melting point is 173° C., and although it is practically insoluble in water, yet solutions may be readily obtained on the addition of a few drops of acid. Chemically, it is the diacetic-acid ester of morphine, or morphine in which both hydrogen-hydroxyl atoms have been replaced by the acetyl radical OC. CH<sub>3</sub>. Heroine hydrochloride is a neutral salt which is very soluble in water (1 to 2); it is also a white, crystalline, odorless powder, like heroine, but its melting point is much higher (230° C.). The reaction of heroine are very similar to those of morphine and codeine, yet it differs from morphine, since the characteristic blue color which appears on the addition of ferric chloride to neutral solutions does not follow at once, but takes some time for its appearance; the same is true of the addition of dilute solution of ferric chloride and potassium ferrocyanide. No iodine is separated in an iodic-acid solution. Codeine and heroine may be distinguished by the color reaction with chloral hydrate and sulphuric acid at a high temperature; codeine giving a green color to the solution, heroine, yellow. It is said that both heroine and heroine hydrochloride may be prescribed in combination with other drugs; the only incompatibility reported thus far has been the combination with apomorphine, and it is also to be noted that alkalis are not to be employed in solution of the hydrochloride. Various paragraphs concerning the therapeutic uses of heroine have been published in previous issues of this journal.

### Sewing Machine Oil.

(T. M.) wants an oil for use on sewing machines which will not "gum." There are all kinds of mixtures of oils which are recommended for this service. We quote a number of formulas, the first two of which are probably too expensive and perhaps not heavy enough for sewing machines, as they are intended for very light mechanisms.

1. Put 12 parts pure olive oil in a large bottle, add 2 parts 96 per cent. alcohol, stir well and set aside for 24 hours or more in a dark place, well covered. Then pour into another bottle containing 10 parts distilled water, shake violently for five minutes, allow to stand an hour, and freeze with salt and ice. The thin, limpid oil at the top may then be drawn off and used.

2. In a white bottle filled with pure almond or olive oil, place a clean strip or coil of lead and expose to the sun for some time, until a curdy matter ceases to be deposited and the oil has become quite limpid and colorless.

3. A satisfactory article is said to be produced by mixing paraffine oil and sperm oil.

4. Pure lard oil ..... 1 part.  
Sperm oil ..... 2-3 ounces.  
Kerosene oil ..... 3 parts.

### Carbolic Salve.

(W. D.)  
(1) Petroleum ..... 16 ounces.  
Yellow wax ..... 1½ ounces.  
Camphor ..... 1 ounce.  
Carbolic acid ..... 2-3 ounces.  
Oil of sassafras ..... 20 minims.

Melt the carbolic acid and white wax and the camphor and oil of sassafras. Melt the wax and add to it the petroleum, melting them together; while cooling, but still liquid, add the solution of camphor in carbolic acid, etc., and stir occasionally while cool-

ing. This is an excellent carbolic ointment, the caustic properties of the carbolic acid being neutralized by the camphor.

|                              |    |         |
|------------------------------|----|---------|
| (2) Lard .....               | 12 | pounds. |
| Beef suet .....              | 12 | pounds. |
| White wax .....              | 2  | ounces. |
| Gum camphor .....            | 2  | ounces. |
| Carbolic acid crystals ..... | 2½ | pounds. |
| Calomel .....                | 2½ | pounds. |

Melt the lard, suet, wax and camphor together. Melt the carbolic acid crystals and add; strain and stir well; when nearly cold add the calomel and mix thoroughly; when cold fill into containers.

#### Wine of Muira-puama.

(S. O. G.) The following formula, suggested by Caesar and Loretz, was published in the Pharm. Ztg., in 1899, and it is probably the one to which you refer: 100 parts of the coarsely powdered drug are macerated in a mixture of 25 parts of alcohol (90 per cent.), 25 parts distilled water, and 950 parts of sherry wine, for ten days, strained, expressed and filtered. The dose is said to be 20 to 30 grams two or three times a day.

The same authors give the following formula for a fluid extract: 100 parts muira-puama in coarse powder 20 parts 90 per cent. alcohol, and 10 parts of glycerin are mixed together, allowed to stand two hours, packed in a percolator, and percolated with diluted alcohol, the product being finished according to the general directions of the German Pharmacopoeia for fluid extracts, and requiring from 400 to 500 p. of the diluted alcohol of that Pharmacopoeia. The dose is 2 to 3 grams daily.

#### Cleansing Nickel Plate.

(J. E. B.) (1) A solution for removing spots from and brightening nickel plated ware is made by mixing 1 part of sulphuric acid with 50 parts of alcohol.

(2) Take equal parts of precipitated iron carbonate and prepared chalk, or take mercury with chalk ½ ounce and prepared chalk 2 ounces; mix them. When used add a small quantity of alcohol, and rub with chamois leather.

(3) To remove rust from nickel plated articles: Cover the stains with oil or grease for a few days and then remove the rust by rubbing with a little ammonia. If this treatment does not remove the rust, try very dilute hydrochloric acid. When dry polish with tripoli or whiting.

#### Red and Brown Coloring Agents.

(F. K.) Your query is very indefinite and we cannot state what coloring agent will be best adapted for a mixture containing wood alcohol, ammonia, oils, etc. The usual agents for coloring mixtures red (especially those of an ammoniacal character) are carmine solution, tincture of alkanet, and the aniline dyes, fuchsin, acid fuchsin, roccellin, Bordeaux red, ponceau, eosin, erythrosin, etc.; of course, it is necessary that you do a little experimenting to determine which one will best answer your purpose. Solutions of caramel are usually employed for producing a brown color.

#### Mercuric Chloride and Strychnine.

(H. G. M.) Asks if the following prescription should be dispensed:

|                                      |           |
|--------------------------------------|-----------|
| Mercuric chloride .....              | ½ grain.  |
| Strychnine sulphate .....            | 1 grain.  |
| Muriatic acid .....                  | 2 drams.  |
| Elixir of orange, enough to make.... | 6 ounces. |

Mix. Dessertspoonful after meals in water. This prescription as written should not be dispensed. On bringing the corrosive sublimate and strychnine sulphate together in the mixture the latter is precipitated as a double compound of mercury and strychnine.

#### Sodium Cacodylate.

(J. G. J.) See Era of Jan. 10 of the present year, page 40.

EFFECTS OF RADIUM RAYS.—Some effects of the rays emitted by active radium which have not been previously noted, are described by H. Becquerel (Comptes rend) These rays have, among others, the power of converting ordinary phosphorus into red amorphous phosphorus. The action upon phosphorus is obtained even when the radiant matter is surrounded by a metallic screen of aluminum so as to cut off all the light emitted by the phosphorescence. The rays also reduce Hg Cl<sub>2</sub> to Hg Cl in the presence of oxalic acid, and are found to destroy the vitality of seeds. Mustard and cross seeds failed to germinate after having been exposed to the rays for a week or more, but were not sensibly affected by an exposure of twenty-four hours. Exposure to radium rays has been found by M. and Mme. Curie to color glass violet or sometimes brown. Glass colored in this way becomes phosphorescent when heated, and when subjected to this treatment it loses its color.

DISINFECTANT FOR SURGICAL INSTRUMENTS.—G. Meillere (Journ. Pharm. et Chim.) recommends a solution of mercuric cyanide and borax for disinfecting surgeon's instruments. Steel is not attacked by a solution of this kind, steel needles suffering no change whatever after remaining in the liquid for months. The solution is prepared according to the following formula:

|                        |             |
|------------------------|-------------|
| Mercuric cyanide ..... | 500 parts.  |
| Borax .....            | 100 parts.  |
| Orange Poirrier .....  | 1 part.     |
| Distilled water .....  | 6000 parts. |

In preparing a solution for use 24 Cc. of this liquid are mixed with 1,000 Cc. water, forming a mixture containing about 2 per cent. mercuric cyanide.

XYLOPIA ETHIOPICA, also called Ethiopian pepper, has been found, by De Rochebrun (Pharm. Zeit.), to contain a new alkaloid which has been called Anonacine. The natives of West Africa employ this plant, either alone or mixed with Capsicum frutescens, as a condiment and use a decoction of the fruits as an external application for muscular pains, and internally as a remedy for colic and abdominal disorders. It is also said to possess anthelmintic and aphrodisiac properties. Besides the alkaloid he found a volatile oil and a resin in this plant. The volatile oil occurs in all parts of the plant, and is described as possessing an agreeable aromatic odor and taste resembling that of cinnamon. Anonacine crystallizes in well-formed prisms.

NEW ALDEHYDE IN EUCALYPTUS OIL.—H. G. Smith (Schimmel's Report) finds that the aldehyde which imparts the cumin-like odor to certain eucalyptus oils is not cumin aldehyde, but a new body which he has named aromandendral. The formula of this substance is C<sub>9</sub>H<sub>16</sub>O. It was obtained from the oil of Eucalyptus hemiphora, as the bisulphite compound, the proportion present being about 3.3 per cent. It is described as a faintly yellow, mobile liquid, having a peculiar not unpleasant odor, which is more aromatic than that of cumin aldehyde.

ANALYSIS OF SCAMMONY.—The following method for the examination of scammony is proposed by Gignes (Bull. Science Pharmacol.): A weighed quantity is warmed with a little water, and the emulsion thus formed treated with hot 95 per cent. alcohol, which dissolves the resin. The extraction is repeated two or three times, and the solutions evaporated to dryness. The resin thus obtained is soluble in boiling solutions of caustic alkalis, but is not reprecipitated upon acidulation. In this way, the presence of any of a number of resins may be detected.

ERYTHROL TETRANITRITE has been employed with good results in the treatment of lead colic by Mattirollo. The remedy was administered in the form of tablets each containing .03 gram of the material.

# NEWS DEPARTMENT.

## NEW YORK AND VICINITY.

### DRUGGIST WINS SUIT.

**Actress Whose Hair Was Turned Green Sued Druggist for Damages.**

John Kiehl, a druggist at the corner of Thirteenth street and Third avenue, this city, was the defendant in a sensational suit instituted against him by one Lillian Verona, an actress, and which was tried in the City Court one day last week. The complainant wanted \$2,000 damages, but the jury handed in a sealed verdict in favor of the defendant.

The actress claimed that on December 15, 1900, she went to the store of Mr. Kiehl and asked for ten cents' worth of henna leaves with which she wished to color her hair red. A package was given to her, the contents of which she used, but instead of the beautiful red so much desired by Oriental females, her hair became green and in consequence she "suffered a great nervous shock." In other words she alleged the druggist did not give her what she ordered and she should have redress. In court she testified that after applying the dye her hair had turned from a yellow to a green instead of to a red, which caused her to lose a position at a salary of \$30 per week as leading lady in a burlesque company of Detroit. By selling her something not henna leaves the druggist had caused her not only great financial loss, but also had "caused her to suffer much agony of mind."

Mr. Kiehl denied the charges and stated he was sure no mistake had been made. He told how he had been approached by the complainant's counsel with a proposition to settle, but he refused to consider it. He explained that he had sold genuine henna leaves and stated that if the actress had known how to use them her hair would not have turned green. Expert witnesses supported this contention, a professional woman hairdresser stating that if the henna leaves were used on clean hair and scalp the result would be hair of an auburn hue, but if the hair and scalp were not thoroughly cleansed at least ten hours before the application of the leaves the hair would become green. The actress was very indignant when the experts insinuated that her hair was not clean when she applied the dye, and she informed the judge she washed her hair "regular every Sunday." The jury thought differently, however, and returned a verdict in favor of the druggist.

Mr. Kiehl is a member of the German Apothecaries' Society of the city and was represented at the trial of the case by the counsel of the Fidelity Casualty Company, which is retained by the society to defend its members against prosecutions, etc.

### FLAMES CONSUME RICKSECKER'S PLANT.

**Stock and Machinery Destroyed.**

The entire stock of the Theodore Ricksecker Company, at Nos. 22, 24 and 26 Reade street, was destroyed by fire on Sunday December 22. Nothing but debris was left in the company's laboratory, which was on the fourth floor of the building, and of the thousands of dollars' worth of goods kept in stock nothing was saved. The machinery was also destroyed, although possibly some of it may be repaired.

The fire is supposed to have started in the sub-cellar of the building and it soon worked its way up to the Ricksecker establishment, some celluloid goods on the second floor proving good food for the flames and causing the fire to spread very rapidly. When the fire reached the fourth floor, occupied by the Ricksecker Company the odor of perfume could be discerned for several blocks and the firemen had great difficulty fighting the flames

on account of the perfume-laden smoke which they said was far worse than ordinary smoke.

When seen by the Era representative Monday morning, one of the officials of the company said that their whole stock, office fixtures and everything in the building had been destroyed, but that it was not as bad as it would have been a month earlier, when their stock for the holiday trade was much larger. He said the principal loss would be from the incoming business, as they would not be prepared for it. Their stock was insured, but some trouble was anticipated in getting suitable quarters to locate in while the building was being repaired. The company employed about thirty hands, and all the laboratory work in connection with their perfumes and toilet preparations was done in the building. The same building was partially destroyed by fire about two years ago and Ricksecker & Company suffered considerable loss at that time.

### EXPLOSION IN DRUG STORE.

**Clerk Severely Burned and Store Partly Wrecked.**

Lorenz B. Herman's drug store, at No. 200½ West Thirty-fourth street, was damaged by an explosion of gas, Sunday morning December 22, to the extent of about \$600, and the clerk, Herman Westfall, of No. 179 West Thirty-fourth street was so severely burned about the head, face and hands that it was necessary to remove him to the hospital.

Plumbers had been at work on Saturday connecting gas pipes in a closet in the rear of the store, but had left the work unfinished. Westfall opened the store about 7:30 A. M., Sunday and found it filled with gas. He lit the fire and then proceeded to investigate the cause of the strange odor of gas. When he opened the closet door where the plumbers had been working there was an explosion. He was thrown several feet and the top of the closet was blown off. A cigar case was hurled through the plate glass front and a large portion of the front of the store was torn out. Westfall was taken to Roosevelt Hospital and later transferred to Bellevue Hospital.

### LOVING CUP FOR S. H. CARRAGAN.

Sidney H. Carragan, manager of the New York department of traveling service of Parke, Davis & Co., was the recipient of a very handsome and valuable present from the members of his department, on Tuesday, December 24. The present was a solid silver loving cup, lined with gold, and was presented at the Drug Club after a luncheon had been served. Frank Cuddy acted as toastmaster and made the presentation.

Mr. Carragan responded in a suitable manner, and showed clearly his appreciation of the action of the "boys." Each member of the staff present made a few remarks and it was very evident that the best wishes of each one went with the cup. Harry Thornton recited a poem (original, with apologies to Ella Wheeler Wilcox) on "the traveling man," that did much to make the affair more enjoyable. In addition to those referred to the following members of the New York department of traveling service were present: Charles E. Smith, M. O. Marlin, E. Plummer, F. F. Tutthill and W. A. Dixon.

This is the fourth time the members have shown in a similar manner the esteem in which the head of the traveling service department is held. Last year Mr. Carragan was presented with a handsome pair of cuff links. In 1899 he was given a chain and in 1898 a pin.

### THE MANUFACTURE OF SODA WATER WITH COMPRESSED GAS.

The Manhattan Pharmaceutical Association through its secretary, S. V. B. Swann, has sent out postal card notices to its members, calling attention to a recent decision of the Supreme Court of this State in the case of Max Lichtman, a druggist of this city, who was convicted and fined \$25.00 for manufacturing soda with compressed gas, in a building occupied for living purposes.

The section of the Penal Code as amended by the act of 1900, provides among other things, that a person who manufactures gun powder, dynamite, nitro-glycerine, liquid or compressed gas, rapphtha, benzine, gasoline or any other explosive compounds or manufactures ammunition, fireworks or other articles of which such substances are component parts in a cellar, room or apartment of a tenement or dwelling house or any building occupied in whole or in part for living purposes, is guilty of a misdemeanor.

### N. Y. C. P. ALUMNI BALL.

The annual ball of the Alumni Association of the New York College of Pharmacy will be held at the Lenox Lyceum on Thursday evening, February 6, 1902. The committee, of which Fred Borggreve is chairman, predicts an enjoyable time and states that this season's ball will eclipse any yet given by the Association.

There will be plenty of amusements for the guests, and a concert in which some of the best professional talent procurable will take part. The Eighth Regiment Band and Crowley's orchestra will furnish the music. Meals will be served "a la carte" from 10 o'clock until 3 o'clock A. M.

### PRESENTATION TO THOMAS STODDART.

Thomas Stoddart, of Buffalo, well known to druggists of the State as president of the New York State Pharmaceutical Association, was well remembered by the members of the St. Andrew's Scottish Society on Monday evening, December 16, when he received from them a handsome Gebbie edition of the works of Robert Burns in six volumes. The presentation was accompanied by speeches by various members. A brief speech thanking the donors was made by Mr. Stoddart, who has served five terms as president of the Scottish Society.

### NOTES.

—A. M. Boney, president of the Knickerbocker Drug Co., Nos. 37 and 39 Murray street, has recently opened a retail drug store on the northeast corner of West Broadway and Spring street. Mr. Boney is a well known and capable buyer and has been connected with the drug business in this city for many years. The fixtures in the new store are modern and give visitors a good impression. Five large show windows will be used for displaying the preparations and goods sold in the pharmacy. Mr. Boney has paid particular attention to the prescription department and anticipates success in his new venture.

—Mrs Katherine Cummings has opened a new drug store at 304 Albany avenue, Hartford, Conn., a few doors from her former place of business on the same street. The room afforded by the new store is much greater than that in the former one and better facilities are provided for increasing business. Mrs. Cummings has a very pleasant private office in the rear of the store where are also located the prescription and manufacturing departments. The latter part of the business is in charge of M. J. Basney, a licensed pharmacist of much experience.

—The Retail Druggists' Bowling Association did not have the usual meeting last Tuesday evening, but the annual "celebration" and Christmas tree will be features of the next evening's bowling, on New Year's eve. Each member takes a present and hangs it on the tree provided for the occasion and the one bowling the highest score on that evening will have the choice of the lot. Last New Year's eve the druggists "bowled the old century out and the new one in."

—Henry Thornton, one of Parke, Davis & Co., representatives, is in the city for the holidays. Mr. Thornton has recently moved from the Marlborough Hotel, where he has lived over six years, to an apartment at No. 19 East 26th street. Charles Smith, another of the firm's representatives, has been one of the jury on the Glennon case and his friends say he has not been enjoying the holiday season, as he was locked up two days last week during the trial.

—A. F. Underwood is in charge of the business of the Pharmacists' Manufacturing Co., at No. 53 Warren street. Mr. Underwood at one time conducted a drug store at Bath Beach, L. I., and has been prescription clerk with Richard Hudnut and Hazard, Hazard & Co. He reports good progress with the company's business and expects to have a large stock ready for members by January 1.

—M. J. Osborne, representative of Parke, Davis & Co. in Northern Indiana, is in the city accompanied by his bride, Mr. Osborne was married in Elkhart, Ind., Dec. 17, and before returning there the couple will visit Washington, Philadelphia, Old Point Comfort and other points along the line.

—Max Kahn, president of the Drug Clerks' Circle, has purchased the store of Alexander Wolff at 103d street and Lexington avenue. Since Mr. Kahn has become a proprietor it is probable an election for a new president will be ordered, as proprietors are not eligible for official positions.

—Otto Apley, for a long time in the retail drug business at Cohocton, N. Y., was in the city last week and accompanied by Mrs. Apley has gone to New Orleans to spend the winter. While in New York Mr. Apley called on some of his old friends in the trade.

—Charles M. DuGay, the well known druggist at Thirty-fourth street and Third avenue, left last week to spend the holidays in Canada, expecting to be at his former home, Three Rivers, Quebec, on Christmas day. J. M. Tobin is in charge of Mr. DuGay's store.

—E. B. Fisher, a druggist of Bridgeport, Conn., was in New York last week. Mr. Fisher goes to Buffalo to start a wholesale crockery and glassware business the first of the year. He has sold his drug store to J. A. Levery, who already owns a store in Bridgeport.

—James B. Gowen, at one time in the cashier's department at Parke, Davis & Co.'s, has recently been appointed Governor of one of the provinces in the Philippines now under military law. Mr. Gowen is a first-lieutenant in the Sixteenth Infantry.

—Dr. B. T. Whitmore, of Parke, Davis & Co.'s New York branch, left on Saturday for St. Louis. He was accompanied by Mrs. Whitmore and will spend the holidays with his daughter, who was recently married to David Randolph Calhoun, a prominent St. Louis man.

—Walter A. Tichenor, for twelve years with druggist T. D. McElhenie, at the corner of DeKalb avenue and Ryerson street, Brooklyn, has accepted a position with Eli Lilly & Co., and will represent them in Brooklyn.

—H. N. Manning, for some time with Barnes Bros., the Poughkeepsie, N. Y., pharmacists, has taken a position with Reid, Yeomans & Cubit, 140 Nassau street. Mr. Manning will be in the prescription department.

—I. Wilson, for some time head clerk with Alexander Wolff at 163d street and Lexington avenue, has opened drug store of his own at 117th street and Lexington avenue.

—Guy Osborne of the Osborne, Colwell Co., New York, left on Monday, December 23, to spend the holidays in Chicago and other West-rn points.

—Mrs. George E. Schweinfurth, whose illness was noted in last week's issue of the Era, is now convalescing.

—Harry E. Alvord, the druggist at Third avenue and Third street, has opened a branch store at No. 163 Third street.

—J. Arss has reopened the drug store at No. 274 Henry street, which was formerly known as the Morrison Pharmacy.

—Charles F. Scott, Pacific Coast representative for McKesson & Robbins, is in the city for the holidays.

—C. E. Taber, druggist at Long Branch City has sold his store to W. A. Burrows.

## IN AND ABOUT BOSTON.

### LIGHT NEEDED ON DRUGGISTS' AND PHYSICIANS' CHARGES.

Boston, Dec. 21.—As the result of the muddle in which some of the druggists and some physicians of Lawrence have become involved, because of gross overcharges for medicines and medical attendance, for which the State was expected to pay, some one will have to do a little explaining. It concerns the discrepancies in the accounts of the departments, which caused the State Board of Charity to refuse to pay more than \$889 of a bill amounting to \$1759. This bill was presented by the City of Lawrence to the State in accordance with the law which allows the city to recover from the State money paid out for medical attendance and medicine furnished State patients. Dr. Lewis of the State Board demanded an itemized bill in place of a general one first submitted to him for approval. He discovered irregularities in the original bill, as compared with the itemized one, and also discrepancies between the itemized bill and records in his possession. He then secured evidence which led him to believe that many of the charges were improper. Affidavits and other evidence were secured and shown to Mayor Leonard of Lawrence, who accepted Dr. Lewis' offer of \$880, which he deemed to be a just reimbursement. Mayor Leonard submitted this report to the overseers of the poor in his city and said: "I think this board and the city have been humiliated, and I hope the board will take steps to find out who is to blame."

### TRADE IN ALL LINES BRISK.

Boston, Dec. 21.—Fairly good weather conditions have kept trade up briskly, and the demand for many things holds well. Wholesale houses say they have hard work to supply retailers with all the various things which the recent vaccination craze has made necessary, and while the general fear of a fortnight and more ago has lessened somewhat, there still is a great demand for many things from people who have been vaccinated. It has been really a great harvest time for the druggists. In other lines trade also keeps up well, and just now druggists are putting forth their efforts to catch Christmas trade. Many fancy goods and toilet articles, perfumes, colognes attractively bottled, and fancy boxes of soaps, brushes and like goods are so well recognized as useful gifts that the drug stores now carry these things in larger quantities and greater variety than formerly. In the general market there is reported a pretty steady trade, with no special impetus to any one line. Chemicals and drugs are in fairly good demand, as are dyestuffs on moderate orders. Alcohol and cologne spirits are a bit more active, in comparison, and waxes are a little dull. As the year nears its close there is a disposition to buy only what is actually needed.

### FREE VACCINATION STATION CLOSED.

Boston, Dec. 21.—With the present excitement in Boston over smallpox and its entailed vaccination, with thousands upon thousands baring their arms, with also no small number of legs (termed here the "New York style" of vaccination) offered for operation, one of the daily papers opened a free office in the Hotel Pelham building, corner of Tremont street and Boylston, and so great were the crowds of applicants to be vaccinated that the tenants of the building claimed that they were unable to transact their business and protested to the management of the building, threatening to vacate unless the free vaccination station was at once discontinued. Therefore, it had to be given up. Three thousand persons were vaccinated there during the three days that the station was open. The project had the hearty approval of the Board of Health, but it was altogether too much of a success for the other tenants. The physician in charge and his assistants offered to give all necessary medical care without charge to all that have been treated at the station, but under the circumstances no more vaccinating can be done.

### NOTES.

—In the district court at South Framingham, this week, the cases of Clarence F. Thayer, Fred C. Bean and Edward A. Atwood, Wayland druggists, charged with selling liquor illegally, came up on continuance and a fine of \$50 each was imposed. Appeal was entered by each and surety furnished for appearance before the Superior Court at its next term. Still another case was that against Judson A. Wicker, found guilty, and whose case was continued for two weeks when a fine of \$50 will be imposed. The defendant will appeal and on this continuance will have opportunity to secure surety. Mr. Wicker is head clerk at the Waverly pharmacy.

—Half a century ago, when Davies Dodge was the only pharmacist in the town of Arlington, his drug store was situated in the old Dodge building on Massachusetts avenue, the same highway over which General George Washington with his troops once passed during the early scenes of the American Revolution. The contents of the drug store, which until recently was known as A. A. Tilden's have now been removed and the place has been dismantled of its fixtures and passes into history as a thing of the past.

—Three men have died and others have been very ill at Beverly, as a result of drinking a mixture known as "splits," made by mixing equal parts of wood alcohol and water. According to the statement of one of the men who imbibed, six pints of fluid were consumed. The men bought the stuff in a drug store in Beverly and claim that the article is for sale in drug stores and groceries throughout the country. Inquiry in Boston does not bring to light any knowledge of it here, although it was stated that of course any one can easily mix alcohol with water.

—Final disposition of the case of Howard L. Horton, manager of the Carter Drug Company's store in Peabody, has been made by the court at Salem. Mr. Horton, who previously had pleaded nolo contendere to the charge of violating the liquor law, was sentenced to pay a fine of \$75, which he did. He has resigned his position at the pharmacy and has left Peabody as the outcome of the affair.

—A small, insignificant fire this week at the drug store of Huntley & Company, Main and Walnut streets, Woburn, caused quite a crowd to gather at that place, with some excitement. There were some who could well recall the winter of 1873 when the entire block in which the Huntley store is located was swept out of existence by the most extensive and disastrous fire Woburn ever had.

—A new incorporation is the Romoer Remedy Company, of which H. Stanley Gurney of Providence, R. I., is president, and Samuel J. Fleming of Boston the treasurer. With a capital stock of \$1,000,000, of which \$25 was paid in at the time of incorporation (in Augusta, Me.), it is planned to prepare and sell mineral waters, chemicals and drugs.

—A second continuance has been granted in the case against Wilfred Mathien, drug clerk for Charles L. Curtis, who is charged in the South Framingham Court with selling liquor illegally by not requiring customers to register in a form of certificate as required by law. The defendant was not ready for a hearing when the case was called.

—S. E. Ryder, prominent as a druggist in Wakefield, has bought of Charles S. Hanks a handsome corner estate situated on Morrison road and Park avenue in that town. The property consists of a ten-room residence and more than 11,000 square feet of land, assessed for \$4,500. Mr. Ryder buys to make his home there.

—Many changes for the better have been made in the drug store of W. H. Wood, at South Hadley Falls, and considerable additional space will be gained by the new improvements, among which is the building of new fixtures. Large plate glass windows add to the light of the interior and to the prosperous look of the place as viewed from the outside.

—From some unknown cause, a fire broke out in the drug store of Willis H. Standard at West 7th and E streets, South Boston, shortly after midnight on December 17. The store was pretty well gutted, and general debris followed. The damage is estimated at \$1,000. The building is a three story wooden one.

—The drug store of George L. Pierce & Co., corner of Lamartine and Paul Gore streets, in Jamaica Plain district, is a very busy place on some days just at this season, from the fact that Delivery Station T of the Boston Public Library occupies a portion of the store. On an average fully three hundred books are taken out daily.

—In a new business block to be erected at the corner of Brighton avenue and Linden street, in the Brighton district of this city, provision is to be made for a pharmacy, one of the stores to be fitted up with that purpose in view.

—A new drug store in East Weymouth is that of W. B. Butler, opened in Hunt's Block in that town.

## PHILADELPHIA.

### COLLEGE PHARMACEUTICAL MEETING.

Philadelphia, Dec. 21.—The third of the series of "Pharmaceutical Meetings" for 1901-1902 was held at the Philadelphia College of Pharmacy on Tuesday last, Dr. R. V. Mattison presiding, and Prof. H. Kraemer acting as secretary. The first paper read was by Joseph L. Lemberger, Ph. M., on the "Origin, History and Influence of State Pharmaceutical Associations." Few better authorities than Dr. Lemberger could be named, he having served as treasurer of the Pennsylvania Pharmaceutical Association from its organization up to the present day, and therefore his paper was an able presentation of the good work done by State pharmaceutical associations. Fitting tribute was paid to those enthusiasts in various States who blazed the way now so successfully followed in almost every State in the Union.

A paper on the "Pharmacological Assay of Drugs" was read in abstract by Prof. Kraemer in the absence of its author, Prof. Arthur R. Cushny of the University of Michigan. Prof. Cushny, an ardent disciple and pupil of Schmiedberg, takes the stand that a pharmacological assay is the only one we have for certain drugs, and while it may, perhaps, not be possible to determine the strength of a given drug in absolute units it is possible to say one sample is good and another inert. Ergot, digitalis and cannabis indica were given as examples of drugs for which pharmacological assay was alone of value, and the necessity of such an assay was self-demonstrated by a consideration of the relative safety of testing their activity on animals and human patients. A few brief notes were made on certain points of importance in the selection of animals for the assays and the value of certain species, with reference to the need of care in avoiding disturbing influences, such as spawning, ovulation, etc. A strong argument in favor of pharmaceutical assay was made from the present method of standardizing antitoxins, such being an exact application of the principles of pharmacological testing. If tests for antitoxins are recognized as being necessary why not also recognize the same methods for drugs, was asked. Dr. Cushny strongly condemned the ultra-conservatism that would bar out of the Pharmacopoeia antitoxins and standardized drugs by pharmacological assay, claiming that one of the main reasons why physicians used the U. S. P. so little was that it was loaded down with obsolete drugs and did not recognize the products of modern science. Quite a discussion followed this paper. Mr. Wilbert criticized the American methods of the manufacture of antitoxins by private enterprise in favor of the German plan, by the Government, to which Mr. England replied that recent happenings in St. Louis spoke very strongly in favor of private against municipal manufacturing.

W. G. Topsis then presented a method of filling capsules with essential oils of much interest to druggists. His method is as follows: Mix the oil intimately with powdered starch in the proportion of one minim of oil to one grain of starch, then add water, 20 per cent. of the amount or oil taken, work up with a spatula into a mass, cut and roll out as with pills and insert the cylinders formed into the capsules. The principle of this method lies in the absorption of water by the starch and its swelling in bulk, forming a pillular mass that completely absorbs the oil. The suggestion was made that perhaps powdered tragacanth would also answer.

A handsome exhibit of sugar-coated pills was shown by Wm. Warner, Jr., the methods of preparation being described. To the late William Warner belongs the credit for first manufacturing sugar-coated pills in the United States, these being made by him for the firm of Bullock & Crenshaw. Later, he engaged in business for himself and was a pioneer in this line. An unusually fine exhibit of soft gelatine capsules was made by Hance Brothers & White. Gilpin, Langdon & Co., of Baltimore, exhibited a full line of assayed powdered drugs, distributing samples of these to those present. Commenting on assayed drugs, Mr. Cliffe stated that he had recently run across cinchona bark that yielded 16 per cent. of total alkaloids, 10 per cent. of which was quinine. Other rich barks, Ledgeriana, were mentioned.

At the meeting held last Tuesday, Lyman F. Kebler, chemist for Smith, Kline & French Co., called attention to a dangerous adulteration of flaxseed meal. A sample recently submitted to him was found to contain a large amount of mineral oil, the linsed oil having been removed previously, for a double profit. Such a flaxseed meal appears on casual inspection to be a good, rich sample, and would deceive most retailers, but on closer inspection a marked odor of mineral oil can be detected, and an ethereal extract has a strong bluish fluorescence. Several car-loads are said to be now on the market.

### BUSINESS FAIRLY GOOD.

Philadelphia, Dec. 21.—Business is somewhat better than last week the holiday trade being partly responsible for the increase. Prescriptions have been coming in quite briskly, better than for some time, while "hot soda" has been a "winner" all along the line. This year's "holiday trade" is reported as being a decided improvement on last year's, both in volume and in the better class of goods demanded, and many of the larger stores had to get extra clerks. Smallpox still continues to be epidemic, and there is a good sale for vaccine yet, many people who had neglected to take this precaution now rushing to be vaccinated as the "scare" spreads. Many druggists are reaping a harvest putting up a prescription recommended by the "Sisters of Mercy" as being a specific against smallpox. As this calls for but one grain of sulphate of zinc and two grains of digitalis to six ounces of water the profit is very nice, and one druggist downtown has put up several dollars' worth of it for his neighbors.

The jobbers are all busy and say they are having a remarkably good holiday trade. Most of the manufacturers are rushing on orders so as to be able to shut down for stocktaking on the first of the year. The market has been steady and strong, all lines being in good demand.

### DRUG BOWLING LEAGUE SCORES.

Philadelphia, Dec. 21.—Two contests were rolled off in the Drug Bowling League contest last Tuesday night, in which Aschenbach & Miller won three straight games from R. Shoemaker & Company, and Smith, Kline, & French Company took three straights also from the "Wanderers." Some of the bowlers were in splendid form, especially A. C. Smith, who made the highest single and the best average yet rolled in this tourney. C. W. Lloyd, R. G. Smith, Silvey, Nixon, Buchanan and Donnel also rolled good scores. Aschenbach & Miller made the highest scores, \$40, \$40 and \$35, as against \$37, \$73 and \$69 for R. Shoemaker & Company. Smith, Kline & French Company rolled \$38, \$15 and \$74 against the "Wanderers" \$77, \$12 and \$68.

### NOTES.

—Members of the P. A. R. D. who take an active interest in the "Worcester Plan" are much gratified by the position of the Freeman Perfume Company on this question. Not only do these manufacturers heartily support the "price protective" plan but they have also given an instance of their earnestness in a contribution of \$10 toward the fund for bringing a test suit in this State.

—J. G. Gallagher, of Jersey City, N. J., a member of the Executive Committee of the National Association of Retail Druggists, paid a visit to Philadelphia this week on official business.

—A reception and hop in honor of the classes and alumni of the Philadelphia College of Pharmacy was given by the senior class Tuesday evening. Following an address of welcome by David W. Ramsaur, class president, Prof. Kraemer spoke to the students and their guests on the value of recreation in life. Selections by the College Mandolin and Guitar Club and vocal solos filled the remainder of the first half of the programme. Following a short interval for refreshments dancing was enjoyed until a late hour. The decorations of Museum Hall for the occasion were unusually handsome.

—A well-attended meeting of druggists of the central uptown wards was held at Twelfth street and Columbia avenue Friday evening to hear reports from the recent canvass on a price list for ten-cent goods and sundries and to endeavor to adopt a working agreement on these articles. The results of the meeting will be reported in full later, it still being in session at this writing.

—S. B. Davis, whose drug store at Sixth street and Snyder avenue is one of the handsomest downtown, will shortly open another store at Ninth and Wolf streets.

—W. M. Hill, of Twenty-third and Callowhill streets, will soon open a drug store at Fifty-second street and Girard avenue, a neighborhood rather deficient in drug-stores.

## BALTIMORE.

### AN OLD-ESTABLISHED DRUG STORE.

Baltimore, December 23.—The improvements in the pharmacy at the northeast corner of Baltimore and Gay streets, long conducted by the late Charles C. Hahlblston, mention of which has previously been made in the Era, are progressing rapidly, and when completed will make the establishment one of the most attractive in the city. They include magnificent cherry furniture, with beautifully carved finials at the tops of shelves and cabinets. Floor show cases of plate glass will supplant those hitherto used, and the furniture will all be up to date.

In this connection it is interesting to note that the old fixtures are the same which were installed many years ago, when the drug store was first opened. The place has been occupied as a pharmacy since 1823, when Dr. John T. Mackenzie established himself there, and his successors have remained true to the old allegiance ever since. Dr. Mackenzie had as his assistants Drs. John T. Myer and Marshall, a grandson of Chief Justice Marshall, of the United States Supreme Court. In 1869 Dr. Mackenzie retired and the late Adam J. Gosman was in charge as manager, becoming the purchaser of the business four years later. Mr. Gosman remained there until 1876, when the late Charles C. Hahlblston became the proprietor. Mr. Hahlblston died some years ago, and since then Arthur O. Brickman, who had before been practically in charge, assumed the sole management. The present improvements are being made under his supervision. Mr. Brickman has been connected with the business over 20 years.

The old furniture seemed made for all time. It extended from the floor to the ceiling and had to be sawed into section before it could be removed. The lumber in it was perfectly sound and of a dryness and quality not often found these days. Twelve men were required to get out the old shelving.

### TRADE VERY QUIET.

Baltimore, December 23.—As is usually the case the week before Christmas, trade during the past six secular days has been very quiet among the jobbers. The retailers, as far as can be learned, reduced their orders to the lowest requirements and experienced a decided falling off in custom. The manufacturers of pharmaceuticals continued operations in the laboratories as usual, but also found that the sales-department did not need to exert itself to take care of the calls upon its services. When the holiday feeling is upon the general public they seem to pay less attention to their aches and ailments, and the druggist is the first to feel the expenditure of money in other directions. The movement of heavy chemicals was

about as usual, while the market for botanicals offered no notable developments. The men in charge of departments are now becoming engrossed in stock-taking and the balance of the year may be expected to furnish nothing of special moment.

### Maryland College of Pharmacy.

Baltimore, December 23.—There was a meeting of the Maryland College of Pharmacy last Thursday, at which Dr. A. R. L. Dohme read an interesting paper. Several other subjects were discussed and some routine business was transacted. As it was the last meeting of the year, special reference was made to the status of the college and to the results attained in 1901. The college has closed until after the holidays. A number of the students have gone home, while others, who live too far away to make the trip are spending their vacation with friends made here.

### NOTES.

—Handsome window displays, particularly of perfumery have been made by a number of retail druggists. Among the most notable and artistically arranged exhibitions of this kind are those of Oscar Ross, 108 East Baltimore street; Thomas & Thompson, Light and Baltimore streets; Hahlblston's, Gay and Baltimore streets; W. M. Fouch, North avenue and Charles street; Williamson & Watts, Eutaw and Baltimore street.

—Among the druggists in Baltimore last week on a visit were A. H. Jennings, Easton, Md.; D. C. Aughinbaugh, Hagerstown, Md.; C. S. Henry, Cambridge, Md.; J. A. Williamson, Frederick, Md.; J. J. Rose, Westminster, Md.; John McDonald, Sykesville, Md.; C. R. Yohn, Belair, Md.

—William Kammerer has bought the pharmacy of Charles Beck, at the corner of North avenue and Gay street. The property is said to have brought a good price.

### Introduce Profitable Side Lines.

This is the time for the druggist to look back at the last year's business and see in what lines he has had a profitable trade and how much it has increased from the previous year. It is also a good time to consider what new side lines he will introduce during the coming year, and naturally he will try and select the best paying and least troublesome lines. To the druggist who has not handled cigars as a side line there is a chance that is probably not equaled in any other line at the present time. Charles Jacobs & Company, the manufacturers of the well known Las Palmas cigars, are making a special offer to dealers to handle their cigars. In this issue of the Era they advertise Havana specials and offer to prepay the freight on the first shipment and give 100 cigars free for distribution among customers. This firm ships all goods on approval and say that if the goods are not found positively the best ever sold at so low a price they can be returned at the manufacturers' expense. Few cigar dealers, if any, would duplicate this offer, and to the druggist who contemplates adding a line of cigars to his business, as well as the druggist who has already carried them, there is a good opportunity to introduce a nice, profitable line of cigars at a very small outlay. Other offers that are made by the makers of Havana Specials can be had by writing to Charles Jacobs & Company, No. 333 East 78th street, New York. This company has been making cigars for years and has been supplying some of the largest dealers in cigars in the drug business. The many testimonials received from druggists in various sections of the country speak well for the popularity of Jacobs & Company's cigars.

### Meadows' Malted Milk.

A new infant and invalid food is advertised in this issue by the Elgin Milkine Company, Department B, Elgin, Ill. Meadows' Malted Milk is claimed by the manufacturers to be sold only by druggists, and they call attention to the fact that the hospital size, which sells for \$3.00, only costs the druggist \$1.67, giving him a profit of \$1.33, while the small size, which costs 21c, sells for 40c. They guarantee every bottle, and furnish signs and cartons for window display.

## CHICAGO.

### WESTERY TRADE ACTIVE.

Chicago, Dec. 19.—The pharmaceutical manufacturers say that business is improving owing to the large amount of sickness which has come as a result of the extreme cold weather. Remedies for frost bites, for colds and all throat and lung affections are in heavy demand. The staple trade is as heavy as it usually is at this time of the year and all the jobbers are busy.

Those houses which do a jobbing business in holiday lines are now very busy filling belated orders. The holiday business in general is unusually good and business is keeping up more than a fair average even for the busy season.

### COLLEGE DANCE.

Chicago, Dec. 19.—The annual reception and ball of the Alumni Association of the Chicago College of Pharmacy was held in the Masonic Temple on the evening of December 5. The affair was a decided success. About 250 people were present. Refreshments were served and the dancing continued until a late hour.

### NOTES.

—The Drug Trade Bowling League held its regular meeting last Monday evening at Bensinger's alleys. The result of the contests was as follows: Sharp & Smith, 628, 701, 636, against A. M. Foster & Company (absent); Lord, Owen & Company 628, 701, 636, against E. H. Sargent & Company 667, 567, 704; Parke, Davis & Company 641, 782, 828, against Buck & Rayner 707, 665, 774.

### STANDING AND PERCENTAGE.

|                               | Won. | Lost. | Percent. |
|-------------------------------|------|-------|----------|
| Sharp & Smith .....           | 25   | 8     | .757     |
| Lord, Owen & Company .....    | 19   | 14    | .575     |
| E. H. Sargent & Company ..... | 19   | 14    | .575     |
| Parke, Davis & Company .....  | 19   | 14    | .575     |
| Buck & Rayner .....           | 11   | 22    | .334     |
| A. M. Foster & Company .....  | 7    | 26    | .212     |

—The drug store of Joseph Forbrick was destroyed by fire last Sunday night. The entire rear part of the store was consumed and the stock was ruined. Repairs are now under way and the store will be reopened in a few days. On the same night but two hours later the drug store of John Lynch on the opposite corner was also burned.

—H. O. Luckwitz, who purchased the store formerly owned by W. F. Meyer at 29th street and Wentworth avenue, has moved to the opposite corner, No. 2813 Wentworth avenue, where he has fitted up a commodious laboratory for the manufacture of beef juice, a specialty for which he has a large demand.

—E. G. Binz has sold his drug store at 630 Normal avenue to Alexander McLain. Mr. Binz will go to California to spend the Winter and will perhaps remain permanently. Mr. McLain was at one time manager for N. R. Engle at 750 Forty-seventh street.

—J. M. Farnsworth, a prominent druggist of Beloit, Wis., was in Chicago this week buying holiday goods.

—John Woltze has sold his drug store at Wells street and North avenue to Max Gorges, formerly at Belmont and Lincoln avenues.

—The Southwest Retail Druggists Association of the Tenth Auxiliary District of Chicago at its meeting held December 10 elected the following officers for 1902: President, George B. Farrar; vice-president, John Chotal; secretary, V. L. Blahnik; treasurer, J. S. Stiles.

—Dr. C. H. Searle, son of G. D. Searle of the Searle & Herth Company on January 1 will enter the employ of that company. Dr. Searle has been practicing medicine in Sabula, Ia., for the past three years.

—The Western Surgical Association has been in session this week at the Great Northern Hotel. Distinguished surgeons from all parts of the West are in attendance.

—Nathan Lapp has sold his drug store at 440 Forty-seventh street to L. K. Solomon, a former clerk. Mr. Lapp has gone to New York to engage in other business.

—C. C. Thiel has disposed of his drug store at 514 West Twelfth street to A. J. Kuenster, formerly of Waterloo, Ill.

—Charles Green of the Harrison Pharmacy at Harrison and State streets has gone to Florida, where he will spend the Winter.

—G. D. Searle of the Searle & Herth Company has just returned from a brief business trip to Kansas City and St. Joseph, Mo.

## DETROIT AND MICHIGAN.

Detroit, Dec. 21.

—It is a very noticeable fact that Detroit druggists are carrying a much larger line of holiday goods this year than for a great many years past. Ten or twelve years ago it was a very common occurrence for the Detroit trade to display a complete line of goods, especially designed for the holidays, but owing to change in conditions, cut rates and the offering of such articles by the department stores, this line has been neglected for some time past; therefore it is interesting to note that the holiday goods are again being offered by the retail pharmacists of the city, and it indicates a return of the former prosperous conditions of the drug trade.

—W. B. Kauffman, manager of the Importation department of Parke, Davis & Co., New York city, passed through Detroit recently on his way to Chicago, where he is calling on a number of the larger customers. Charles F. Teers, for some years in the New York office of the same company, has been transferred to the department of traveling service with headquarters at the Kansas City office, and he has just started for that point from Detroit, where he has been undergoing a special posting. —A few days ago Dr. Reuben Balcom disappeared from his home, No. 1443 Michigan avenue, Detroit, and has not been heard of up to this writing. It transpires that he sold his drug store at the above number some time prior to his disappearance and inasmuch as he had quite a large sum of money on his person when he went away, there is some suspicion of foul play.

—At a recent meeting of the executive committee of the Detroit and Wayne County Retail Druggists' Association A. L. Walker was elected chairman, largely in recognition of the very valuable service he has given during the past year to the drug trade of the city and county. He was recently elected president of the same association.

—E. C. Kinsel has recently remodeled his pharmacy on Michigan avenue, installing new fixtures and an up-to-date prescription department on the balcony above the main floor. The store is now one of the most complete in Detroit and is a marvel of beauty, neatness and convenience.

—D. L. Robbins, pharmacist at 502 Third avenue, Detroit, has an eleven-year-old son who recently won a Shetland pony and dog cart in a guessing contest, and he now utilizes the rig in delivering one of the Detroit papers to a large number of subscribers.

—The business portion of Gobleville was practically wiped out of existence last week by a destructive fire, only one store in that portion of the town being spared. Among the sufferers were Messrs. Myers Bros., the druggists of the village.

—One day last week a runaway horse attached to a heavy wagon dashed through the plate glass window of Peck Bros.' drug store, Grand Rapids, doing damage to the extent of about \$500.00.

—The pharmacy of J. A. Barr at Leamington was recently destroyed by fire, the loss being in the vicinity of \$800.00, only partially covered by insurance.

—A recent fire in Bloomfield, a small town near Eaton Rapids, destroyed the drug store of C. W. Merkle, on which there was little, if any, insurance.

—Michael Reidy, pharmacist at Corunna, recently paid a fine of \$75.00 for selling liquor to a boy six years old.

—J. E. McAvony of Manistee disposed of his drug business a short time ago.

The Billings Clapp Company, Boston, advertise in this issue Laxative Phospho-Quinine Tablets which they supply in bulk, in handsome glass labelled display bottles, or in small boxes under buyer's label. They send samples to druggists on application.

## THE NORTHWEST.

### DRUGS AND PROHIBITION.

St. Paul, Minn., Dec. 20.—The Supreme Court of N. Dakota yesterday decided an important case involving a drug dealer and the prohibition law. It was the State vs. Torovan, on appeal from the District Court of Cavalier county.

Donovan operated a drug store and in 1898 action was brought against him for maintaining a nuisance under the liquor law, it being alleged that the prohibition law was being violated. The action was brought by P. J. McClory, as assistant attorney general of the State. After the commencement of the action, Bosard & Bosard, attorneys for the State Enforcement League, were employed by private persons to assist with the prosecution. The action came on for trial before Judge Fisk, who found the material facts to be as stated in the complaint but dismissed the case as a conclusion of law, on the theory that the nuisance which was found to exist as a matter of fact was maintained by the defendant under a druggist's permit and that it could not be abated in a court of equity.

The case was appealed to the Supreme Court, where the judgment of the lower court was reversed and a judgment ordered entered in accordance with the prayer of the plaintiff, which meant that the offending liquors and appurtenances for their sale be destroyed, as the law provides. This order was handed down by the Supreme Court, whereupon the defendant presented a petition to the District Court that after the payment of the costs he be permitted to file a bond to obey the law in future, and judgment be entered abating the action. This was done by Judge Fisk and an appeal taken to the Supreme Court from the order.

The appeal brought up several nice questions concerning the prohibition law, among them whether the filing of such a bond could abate such a judgment as entered by the Supreme Court, and another as to whether Bosard & Bosard had any standing as attorneys for the State in the case. The latter point was raised under the law passed at the last session of the Legislature, requiring the Attorney General or State's attorney to appear for the State in all these actions and prohibiting private attorneys such as Bosard & Bosard from bringing actions for the State Enforcement League in the name of the State. On both of these points the defense loses its case. The court holds that Bosard & Bosard were regularly employed as attorneys for the State, and that they were concerned with the action before the 1901 act was passed, and that as the provisions of that statute were prospective and not retrospective, they cannot now be shut out of an appearance.

But there is another important point decided regarding the prohibition law, i. e., that the provision of the statute allowing a bond to be given for the release of the premises is restricted to cases where the nuisance is conducted on leasehold premises, and does not apply to cases where the nuisance is maintained by the owner in his own premises. The court holds this to be the intention of the Legislature and finds that under this conclusion the defendant is not entitled to the privilege of paying costs, giving a bond, and having his premises released. The District Court is directed to enter judgment pursuant to the order of the Supreme Court, both the order entering judgment and the judgment appealed from being reversed.

### CALLS IT A JOKE.

St. Paul, Minn., Dec. 20.—J. C. Eliel of Minneapolis, the wholesale druggist, is annoyed by talk of his being a candidate for mayor. "This is a poor joke, but none the less an annoying one," said Mr. Eliel this week. "There is absolutely nothing in it. There has been about enough of this sort of talk. When I get ready to announce my candidacy for any office it will be made over my own signature and not through the medium of outsiders who don't know what they are talking about."

Mr. Eliel was approached before the last campaign and asked to become a candidate. His reply was that if he could be assured of a unanimous nomination and elec-

tion and a salary of \$20,000 a year he would consider the matter. This, of course, was equivalent to a declination.

### ACTIVE TRADE.

St. Paul, Minn., Dec. 20.—Business is very lively in the wholesale line. Staple and standard drugs are in request and very large sales have been made of druggists' sundries and holiday goods. The manufacturing part of the business never was as pushed as now and sales of surgical supplies and instruments are in excess of any previous year. There is less demand now for paints, lead, oil and glass. Prices generally are firm and steady.

### NOTES.

—Successions: Johnson & Company, Granite Falls, Minn., by Hanson & Company; Watson & Company, Missoula, Mont., by G. T. Peterson; R. G. McKibben, Clarkson, Neb., by J. R. Koza; Lon Cone, Hendley, Neb., by D. W. Loar, Mr. Cone removing to McCook; D. W. Loar, McCook, Neb., by Cone Bros., Mr. Loar in turn removing to Hendley.

—M. M. Colbert, well known in this city, who sometime ago went to Colorado for his wife's health and worked in a drugstore in Denver for several weeks, is now in the city of Mexico, Mex., where he says they are picking flowers and eating strawberries (fresh gathered on the spot). Comment is needless here at 20 to 30 below zero!

—Marchbank & Son's drug store in Minneapolis was entered by burglars one night this week. While the thieves were at work they were discovered by Mr. Mass, a caterer, whose place of business is next door, and ran, taking \$50 worth of goods, but leaving other property valued at \$200 piled on the counter.

—Frank W. Fox, who some years ago was clerking in this city and then went South was in the city visiting old friends Tuesday and then returning to Wisconsin, where he is now employed.

—D. P. Noyes of St. Paul has returned from Washington, where he has been working hard as member of the committee revising the Presbyterian creed.

—Harry Snyder, professor of chemistry at the State Experiment Farm, contributed one of the most notable papers read at the recent State Dairymen's Convention.

—A. F. Krenger has left Duluth and is now employed in the drug store of Reichert & Schenck, Long Prairie, Minn.

—J. W. Bowden has gone to Hudson, Wis., (not to be married, but) to work during the holidays in Moran's drugstore.

—James E. Smith & Co., De Smet, S. D., have gone out of business.

—The Kendrick Chemical Co. has incorporated in St. Paul.

—C. W. Ingraham (Ione Drug Company), Ione, Ore., has filed a voluntary petition in bankruptcy.

—The Mercer Chemical Company, Omaha, Neb., has reorganized.

—Theodore W. Esterley, Minneapolis, has been burned out.

—E. Y. Wilson is leaving Brewster to return to his old home in Minneapolis.

—Pyper & Ricker have started at Havre, Mont.

—John Vik, of Hillsboro, N. D., is dead.

### Great Weather Calendar.

The Chattanooga Medicine Co., the manufacturers of McEhee's Wine and Carlini and Theodor's Black-Draught, have just issued the 1902 edition of the Cardui Weather Chart and Calendar. This calendar has sprung into universal prominence by accurately foretelling the Galveston flood and predicting the droughts and floods of the past summer, a year ahead of each occurrence. This office has just received one of these calendars, which consists of twelve sheets of paper 13x20 inches in size, all fastened together with a gilt tin strip and a brass loop hanger. Each sheet contains the calendar for one month in large figures that can be read across the room. Under the figures patent weather signals indicating Prof. De Voe's weather forecasts for every day in the year appear. We understand a few copies of it can be secured by sending 10 cents apiece in postage stamps to The Chattanooga Medicine Company, Chattanooga, Tenn.

## ST. LOUIS.

### EARLY CLOSING MOVEMENT DECLARED OFF.

St. Louis, Dec. 19.—The early closing movement, inaugurated by F. W. Sennewald a few weeks ago, has entirely fallen through. Practically all of the druggists in South St. Louis agreed to close their stores at 9:30 P. M. every night except Saturday. There were two prominent druggists in the territory who objected, however, and positively refused to enter into the agreement under any consideration, and a third party would not agree to the plan unless these two did, so the movement was declared off.

### NOTES.

—Several changes in the schedule of prices followed by the local druggists have been decided upon, and several preparations which were excepted and sold at any old price have been placed upon the list. A new price list to take effect the first of the year will soon be issued. One of the leading downtown druggists who was formerly a radical outer says he is very much pleased with what has been accomplished by the N. A. R. D. here. He says he believes the Association is on the high road to success and wants to see full prices restored. He feels sure this can be done, and thinks the proper way is to gradually increase them.

—The St. Louis Drug Clerks' Society cleared over one hundred dollars from its ball given last week. It was decided to give a banquet some time in January and the entertainment committee was given full charge of the arrangements. The following officers were elected and they will be installed the night of the banquet: A. F. Kauffmann, president; D. P. Wright, first vice-president; F. A. Christopher, secretary; B. C. Huger, treasurer; F. W. Grabenschroer, J. P. Muehling, Theo. F. Runge, executive board; C. Mueller, G. C. Kurzdoerfer, Jr., J. P. Slinger, Theo. Engelskind and E. Niemueller, entertainment committee; Chas. Witt, chief of employment bureau.

—A lecture under the auspices of the Alumni Association was given at the St. Louis College of Pharmacy last Tuesday night by postmaster Baumhoff, who explained the workings of the St. Louis postal department, and illustrated his lecture with many very interesting stereopticon views. The attendance at the lecture was the largest recorded at any scientific meeting for many months. A large number of the druggists are acting as substitution postmasters, which probably accounts for the unusual interest in the lecture.

—Louis Paugé, city salesman for the J. S. Merrell Drug Co., was in an exciting runaway last Tuesday, his buggy being scattered over about fifteen blocks of N. Broadway. When the pieces were gathered up so many parts were missing that his firm concluded he should have a new buggy, and he now rides around in a new rubber-tired vehicle.

—It is a well-known fact that the condition of St. Louis drug clerks is now far better than for many years past. E. F. Davis, chief clerk at Lehmann's pharmacy, Jefferson and Washington avenues, has proved this to be the truth by purchasing his wife an elegant piano as a Christmas present.

—The St. Louis Retail Druggists' Association gave its annual ball last week. Notwithstanding the blizzard which struck this city in the early evening the attendance was large, some four or five hundred druggists and their relatives being present. The affair netted a small balance in favor of the Association.

—John Carey, senior member of the firm of Carey Bros., who own two of the leading drug stores of this city, died in Arizona recently. The remains were brought home and interred yesterday. He had been a victim of tuberculosis for several years, which prevented his taking a very active part in the business of his firm.

—A. W. Peterson, Fifteenth and Chambers streets, has returned from a two weeks' hunting trip in southern Missouri. He claims he killed plenty of game, but could not bring it out of the county on account of the State law.

—Ferd. H. Christmann, Washington and Vandeventer avenues, spent last week hunting in the wilds of Arkan-

sas. He brought back several wild turkeys, two large deer and an abundance of small game.

—Geo. Reiss is moving his drug store from Jefferson City, Mo., to this city, and expects to be open for business on Belt and Easton avenues by January 1st.

—John Goldsmith, a former local drug clerk, but now representing The Searle & Hereth Co., will spend Christmas at his home in Springfield, Mo.

—H. C. Brenner is sick in bed at the present writing. He expects to have his new store at King's Highway and Delmar Block open for business by the first of the year.

—E. Trittermann, proprietor of the XXX Pharmacy, 2000 South Tenth street, was married December 12 to Miss Anna Feil of 2929 Linch street.

—J. P. Groff is now holding down the chief clerkship at Kahre's pharmacy, Sarah and Olive streets.

—Wm. Freese is back at his old position as chief clerk for L. A. Seitz of the South Fourth street pharmacy.

—R. Brennicke has been appointed chief clerk for F. H. Christmann.

### For the Enterprising Druggist.

Under the heading, "well lathered is half shaved," Mr. C. H. Bangs, president of the C. H. Bangs Druggist Fixture Co., gives some very good arguments in favor of modern fixtures for the drug store, in this issue of the Era. Mr. Bangs has had many years' experience in his business, and having fitted up some of the largest and best known stores in the country, as well as small ones, is in a position to furnish modern fixtures that will greatly improve the appearances of a store at the lowest possible cost. In his advertisement Mr. Bangs says that there are lots of goods the druggist does not sell because his store is not arranged properly and, invitingly to display them. The wide-awake druggist of to-day knows that he cannot make a drug store pay well if he depends entirely on the prescription department. Handsome fixtures and goods well displayed are known to be very important factors in the sale of drugstore goods. The C. H. Bangs Druggists' Fixture Company is looking for druggists who want to increase their sales, and will furnish estimates for anything in the line of store fixtures. The offices of the company are in the Jewelers' Building, Boston, Mass.

### Gas to Burn and Gas to Drink

When natural gas is mentioned in this country, it is generally understood to mean such as is found and used for heating and manufacturing purposes in our coal and petroleum regions.

In Europe, however, the only natural gases known are the sulphuric gas about the regions of Vesuvius and Aetna, and the carbonic acid gas in the extinct volcanic region along the German Rhine.

In order to become acquainted with these various gases, one has to visit the districts in which they abound, except in the case of the natural carbonic acid gas with which millions all over the globe are now acquainted, because of the wide distribution of Apollinaris water, bottled at the Apollinaris Spring, which is very rich in its own natural carbonic acid gas. Scientists say that this natural gas, besides rendering the Apollinaris refreshing, preserves its purity. Germany is proud of its natural gas, and its text books on watering places and springs make much of its valuable region in the vicinity of the Rhine.—Exchange.

### Dose Labels 25c. Per Thousand.

E. P. Gobie, Woodstock, Vt., a printer of fine prescription labels, begins his advertisement in the Era this week. He has just issued a new catalogue which he will send to any druggist who will take the trouble to inquire for it. He advertises particularly Dose Labels at 25c per thousand.

## PHILADELPHIA ASSOCIATION OF RETAIL DRUGGISTS.

The December meeting of the P. A. R. D. was held at the North Broad Street Drawing Rooms at 8 p. m., just prior to the "Smoker," for the convenience of members who could not spare the time for an afternoon session. The attendance was unusually good, and although only an hour was allotted for the meeting considerable business was transacted, the usual routine reports being dispensed with. Eight new members were elected.

The Executive Committee reported that a satisfactory explanation had been received from the newspapers which had recently printed a full page advertisement, pretending to quote praise of local druggists for a certain proprietary remedy. This method of advertising was condemned by vote and instructions were given that the matter be laid before the pharmaceutical press of the country with the request that they take up this style of advertising as being harmful to the retail druggists. By such ads druggists are made to appear as highly recommending patent medicines and the particular remedy is made to seem to have their approval and support, against the interests of physicians generally. When physicians read such stuff they naturally become offended and visit their disapproval on druggists in many ways, much bad feeling being created.

The status of the "Philadelphia Drug Company" was taken up and members were urged to give it their support, a number of vacancies in membership now being open to local druggists. Resolutions citing the application of this company to be placed on the list of "legitimate jobbers" and requesting the N. A. R. D., the National Wholesale Druggist Association and the Proprietary Association of America to so recognize the Philadelphia Drug Company were unanimously passed and ordered to be sent to the secretaries of these bodies.

The attitude of the P. A. R. D. during the prosecutions of druggists last year by the State Board on various technical points was brought up in a discussion of the present activity of the Board. It was shown conclusively that the P. A. R. D. did not ask for exemption from prosecution for members alone. All local druggists were embraced by its requests. Mr. Perry, Chairman of the Executive Committee, appealed to those present to comply strictly with the State pharmacy laws, especially in the display of registration certificates, the employment of properly qualified men only and the sale of poisons. It was stated that an agent of the Board was now collecting evidence against violators here.

The "Nominating Committee" presented its report of nominees for the January election as follows: For president, W. H. Poley; vice-president (1st), H. C. Blair and H. A. Nolte; vice-president (2nd), M. Kratz and J. G. Howard; vice-president (3rd), C. H. Campbell and A. A. G. Starck; treasurer, Dr. E. R. Smiley, (C. W. Shull withdrawing at the meeting); financial secretary, W. W. Chalfant and H. J. Batdorff; recording secretary, S. W. Strunk; Executive Committee, J. C. Perry, G. A. Apenzeller, L. M. Baer, W. L. Cliffe, J. Epstein, Chas. Rehuss, H. B. Morse, H. Swaim, E. M. Platt, T. H. Potts, J. Reynolds, A. C. Schofield, H. C. Clapham, C. W. Shull, W. E. Lee, Dr. C. B. Lowe. The meeting then adjourned to 2:00 p. m., January 3.

—The Wisconsin Board of Pharmacy held a meeting at the hotel Pfister, Milwaukee, December 11-12 for the examination of applicants for registration to practice pharmacy. Of the sixty-seven applicants thirty-seven failed to pass. The licentiate or first grade certificate was granted to the following: R. C. Silvernala, New London; O. E. Davis, Viroqua; F. C. Hahn, Depere; E. B. Byers, Madison; H. L. Kellogg, Oconomowoc; E. F. Hales, Hancock; H. R. Roth, Racine; H. B. Stemm, Kenosha; L. S. Van Dyke, Evansville, and O. E. Hantke, A. A. Putz, J. A. Patterson, W. F. Loppnow, C. A. Kissinger, J. Showalter, S. A. Schwandt and Otto Frank, all of Milwaukee. Assistant or second grade certificates were granted to R. H. Lindbaum, Whitewater; H. M. Remich, New London; H. J. Grimm, Madison; Edward W. Moran,

Green Bay; L. E. Shiede, H. J. Wepfer, E. G. Jones, F. J. Konalsky, S. E. Olsen, R. C. Schmidt, R. Bechard, J. L. Pawlac, E. E. Schmidt and James Schuck, all of Milwaukee. The members of the board present at the meeting were: H. G. Thompson, Marinette; H. C. Schranck, Milwaukee; D. A. Taylor, Stevens Point; A. F. Menges, Madison, and E. B. Heimstreet, Janesville. The next meeting will be held at the Hotel Pfister, Milwaukee, February 12 and 13, 1902. While the board was in session a meeting was held with a number of Milwaukee druggists to make arrangements for the annual meeting of the Wisconsin Pharmaceutical Association, to be held in that city August 19 to 22.

—At the third regular meeting of the Kansas Board of Pharmacy held at Leavenworth, Kan., Dec. 4, the following named persons were present and passed the examination: Robert F. Haines, Niotote; Loehr M. Grubbs, Topeka; L. S. Sargent, Junction City; Dwight McBride, Paola; B. T. Shoemaker, Junction City; C. H. Hayes, Goffs; Albert E. Stevens, Coffeyville; H. Aug. Carey, Et Dorado; Geo. T. Brown, Ottawa; George W. Knauer, Topeka; J. A. Tuggle, Iola; Chase W. Brown, Ottawa; Sam Gordon, Kansas City; Grace A. Forbes, Mankato; H. E. Read, Mound Valley; H. M. Stunz, Holton. Registered Assistant Pharmacists, C. A. Harkness, Hays City. Since the September meeting of the Board there were registered without examination, by virtue of being graduates of recognized schools of pharmacy, the following named persons: J. H. Chism, Argonia; Hy. D. Higginson, Wichita; A. E. Crandall, Jewell City; J. C. Reese, Newton; Harry G. Dunmyre, Kerwin. The next meeting will be at Ft. Scott, March 5, at 9 o'clock a. m. Those who desire to take the examination should notify the secretary at least five days before the date of the meeting. W. E. Sherriff, Ellsworth, Kan., Secretary.

Out of twenty applicants examined by the Louisiana State Board of Pharmacy at its quarterly examination, Nov. 8 and 9, seventeen passed with good records. Secretary F. C. Godbold said that it was the best examination ever held by the board, so far as the grades, markings and success of the applicants were concerned. As a rule, more fail than pass. The following were the successful applicants: Registered Pharmacists—R. J. Anderson, J. A. Bastian, P. J. Borcy, J. B. Casey, H. S. W. Code, Mrs. R. L. Code, W. T. Hayes and A. Samson, New Orleans, A. V. Boute, New Iberia; F. O. Darby, St. Gabriel; W. T. Green, Jennings; T. O. Darby, New Iberia; H. T. Jackson, Monroe; Dr. W. E. Van Zant, Mandeville. Qualified Assistants—H. H. Sample, Kenner; R. L. Bacas and W. Killeen, New Orleans.

Formerly the examinations covered only one day, but the board has decided to devote two days to them. The regular semi-annual meeting of the board will take place one day this month. F. C. Godbold, secretary.

—The Registered Clerks' Union of the District of Columbia was recently organized in Washington under a charter granted by the American Federation of Labor. The officers are M. Klenworth, president Frank Stockton, vice-president; Samuel Richardson, treasurer, and Mr. Kerfort, secretary.

Druggists may not know that there is a 50c. size Four-Fold Liniment, which sells to them at \$3.50 per dozen.

### Compound Alum Powder

### SOME DEDUCTIONS CONCERNING MILK MODIFICATION.

By R. C. MacDonald, M. D., Boston.

For the human young, human milk is, of course, the natural diet; for the early months in life, all other foods, including cow's milk, however modified, must be considered artificial.

The ideal, then, for makers of artificial foods is "mother's milk," and to so modify cow's milk as to make it approximate to the ideal, many formulae have been given. In these formulae two very important points have been generally overlooked; it is to these points I would call attention.

The main efforts of milk modifiers have been directed to the reduction of the so-called casein, and to the replacement of the fat, which is diminished when the proportion of casein is reduced by dilution. Practically no attention is given to two very important points of difference in human and cow's milk. As is well known, the so-called casein of milk consists of caseinogen and lactalbumin. In human milk these two substances exist in equal proportions, while in cow's milk there is but one part of lactalbumin to six parts of caseinogen. It is evident, then, that any modification of milk which reduces the total casein must reduce still further an already greatly deficient lactalbumin and it is further evident that the usual methods of milk modification can by no possibility approximate to the ideal of "mother's milk" unless they shall be so changed as to raise the deficient proportion of lactalbumin.

Another marked difference between human and cow's milk is found in the condition of the phosphorus element. In the cow's milk the phosphorus exists mainly in the form of inorganic (mineral) compounds; in the human milk they exist in organic (animal) combinations. It is well known that the inorganic compounds are practically nonassimilable, while the organic compounds are readily taken up by the human system.

No modification of milk, as now given, can change the inorganic to organic combinations, and unless so important a point (on which depends, very greatly, the development) can be taken into consideration, the modified milks fall very far short of the ideal.

I would suggest that both of these deficiencies may be somewhat overcome by a judicious use of the whole egg. Egg albumin approximates quite closely to lactalbumin, and in the egg yolk we have a veritable storehouse of organic phosphorus compounds.

With a proper percentage of cereal to break up the curd (as Dr. F. W. White has so conclusively demonstrated it), with judiciously regulated proportions of whole egg, added to cow's milk as now modified, it would seem that the ideal of "mother's milk" would be reasonably in sight.

I trust this note, which is merely a suggestion, may bring out some valuable comments on the subject treated of.

(Boston Medical and Surgical Journal, November 21, 1901.)

Smith, Kline & French Company say the use of Eskay's Albumenized Food in the modification of fresh cow's milk will meet all the requirements referred to in Dr. MacDonald's article. They send samples to any druggist who writes for them.

Most druggists know that Duffy's Pure Malt Whiskey is a profitable whiskey to sell, and that it always gives the customer satisfaction. It was the only whiskey taxed by the Government as a medicine and is extensively advertised. To the druggists who have not sold this reliable whiskey the Duffy Malt Whiskey Co., Rochester, N. Y., will send counter advertising matter free.

Druggists cannot be too particular about their labels, envelopes, pill and powder boxes, etc. A neat and attractive parcel often wins a customer. David Ieston & Sons, Frankford, Philadelphia, Pa., cater to the druggist who wants attractive, low-priced and best quality goods. They request correspondence and supply samples and price list free.

### An Artistic Calendar.

The "Helen Hyde Calendar" for 1902 has just been issued by The Antikamnia Chemical Co. of St. Louis. The front of this calendar bears an artistic reproduction of one of the smaller paintings exhibited at the 1900 Paris Exposition, a water-color, entitled "Her First Picture Book" from the brush of Helen Hyde of California. Mr. Frank A. Ruf, the secretary and treasurer of the Antikamnia Chemical Co., is to be congratulated on his success in obtaining the original and also in being able to place before his friends such a beautiful souvenir.

### Kidney Plasters With Your Name On.

Ross, Flowers & Co. are advertising in this issue a Kidney Plaster at \$12.00 per gross. These Plasters are extra heavy spread, are of large size and on cotton flannel, and the cost price, which is only 8 1-3c each, gives the druggist a chance to make a most liberal margin. Arrangement can be made to have the druggist's name printed on them if desired. The manufacturers solicit a trial order for immediate shipment, but they will send a sample on request.

### Talcum Powder Boxes.

The well known decorated tin sign makers, Sentenne & Green Co., are now manufacturing decorated tin boxes suitable for talcum powder, camphorated ice, vaseline and proprietary articles which require such package. Sentenne & Green Co.'s factories are in Brooklyn, but orders should be addressed to 156 Fifth ave., New York. They are not members of the combination.

### A Glass Sign Offer.

The paragraph in the Era of December 12 about the glass signs which Major's Cement are giving to retail druggists, has brought many responses. Mr. Major wants every druggist in the country to have one of these signs, and all that is necessary to do is to send your name and the name of your wholesaler to him to secure one.

It is very seldom that we have the opportunity to send out advertising as handsome as that of H. K. Milford Company in this issue. Messrs. Milford Company have rapidly reached the front rank with their antioxins and vaccines, and their several attractive announcements in this number simply emphasize their statements that they propose to stay there. Milford's Antioxins are the result of careful, painstaking and indefatigable effort of expert pharmacists and bacteriologists, and are, we believe, concurred by the medical profession to be all that is claimed for them.

Druggists who have used the American Paper Bottle Cap on bottles sent out from the prescription department pronounce it one of the neatest and most easily attached caps they have ever used. It adds much to the appearance of a bottle and attracts the attention of customers. These caps are not expensive and are being sold to up-to-date druggists all over the country. The makers offer to send free samples on application. Address: Sayford Paper Specialty Co., Camden, N. J.

There is no danger of breakage, even with the most fragile goods, when properly packed with materials furnished by the Hinde & Dauch Paper Company. This company supplies corrugated paper, cartons, partitions, boxes and other forms for safe carriage of glass, at very reasonable prices. Any druggist can get a catalogue and price list by writing to the Hinde & Dauch Paper Co., Sandusky, O., or No. 171 Duane street, New York.

### OBITUARY.

CHARLES W. SUTTERFIELD, the pioneer druggist of Adams county and senior member of the firm of C. W. Sutterfield & Company, West Union, Ohio, died December 12. He was 62 years of age and had taken an active part in the affairs of his county and vicinity. He served two terms as county treasurer, was a school director for many years and had been a member of the city council for a number of years.

# MARKET REPORT.

## NEW YORK MARKETS.

### MARKET TAME; CHANGES FEW AND UNIMPORTANT.

New York, Dec. 23.—Holiday affairs have received the bulk of attention and transactions have been mainly in accordance with actual requirements of consumption. Consequently the market has presented a tame appearance and fluctuations in values have been few and unimportant.

**OPPIUM.**—Conditions at primary sources of supply have continued favorable to holders, and importers are firmer in their views, but the consuming demand is light and quotations for jobbing quantities remain unchanged at \$3.20@3.40 for 9 per cent, and \$3.30@3.50 for 11 per cent. Powdered is moving moderately on jobbing orders at \$4.25@4.50 for 13 per cent, \$4.75@5.00 for 16 per cent, and \$4.55@4.75 for granular.

**MORPHINE.**—Continued firmness prevails throughout the market and a satisfactory business is in progress with jobbers quoting \$2.40@2.50 for eighths in 1-oz. boxes, \$2.35@2.45 in 2½-oz. boxes, \$2.15@2.25 in ounce vials, and \$2.10@2.20 in 3-oz. cans according to brand.

**QUININE.**—There is no improvement in demand and none is looked for until after the turn of the year but the market has a firm undertone, which is stimulated by the fact that raw material is well held, notwithstanding the large arrivals from producing points. As a matter of fact the shipments of bark from Java this year are the largest on record, and yet the stock of quinine in second hands has diminished. Jobbers continue to quote 27c. for bulk in 100-oz. tins, 27½c. in 50-oz. tins, 28c. in 25-oz. tins, and 31c. in ounces.

**BUCHU LEAVES.**—Short are easier in sympathy with European markets where accumulated stocks have had a weakening influence, and spot jobbing quotations have been reduced to 30@35c. for whole and 35@40c. for powdered.

**CITRIC ACID.**—Manufacturers have reduced quotations to meet competition from the imported article and the revised jobbing prices are 34@36c. in barrels, 34½@35c. in kegs and 40@45c. in smaller quantities.

**WILD CHERRY BARK.**—Available supplies are steadily diminishing under a fair consuming demand and holders of the small spot stock decline to sell except in a very moderate way at the recent advance to 17@20c. for whole, 20@25c. for ground and 22@27c. for powdered.

**CAMPHOR.**—The loss of a vessel from Japan with 200,000 lbs. crude on board has caused the market for refined to harden and jobbers have advanced quotations to 57½@58c. for bulk in barrels and 61@60c. for less. Cakes have been marked up to 58½@59c. by the case and 62@61c. for less.

**BALSAM PERU.**—Competition among first hands has caused a reaction from the higher prices recently noted and the revised jobbing range is \$1.00@1.85.

**OIL SPRUCE.**—Supplies are exceedingly light both here and in producing markets and on account of the prevailing scarcity jobbers have advanced their quotations to 55@65c. as to quantity.

**SAFFRON.**—Valencia is easier owing to competition among importers and jobbing quotations have been reduced to \$8.00@8.25 according to size of order. American also is lower and obtainable at 24@25c.

In this issue we advertise a new Oval prescription bottle, a bottle which we believe has not before been advertised in this paper. It is a combination of several of the old features of the popular Philadelphia Oval with new ones which make it a thoroughly up-to-date bottle, a bottle designed for the careful dispenser and one which will certainly please him. The most important features of the bottle are its handsome appearance and the fact that its sloping shoulders make it possible to entirely empty the bottle. Besides this, it is of such shape that it can be nicely wrapped, making a neat package. A sample of this bottle will be sent to any druggist who will send three cent stamps for it to pay postage. The Quaker City Oval, called Q. C. Oval for short, is the same price as ordinary ware. It is made by the Saltsburg Bottle Works Company, Ltd., Pittsburg, Pa.

## INDEX TO THIS NUMBER.

|                                                                                                                                                                                                                                                                                                                                                                     | Page. |

## VASELINE HAIR TONIC

It is the original, and in our opinion, the only properly deodorized extract from Petroleum suitable for the hair in existence. The many articles advertised as derived from petroleum, etc., are followers of the success obtained from the reputation secured by

# Vaseline Hair Tonic

**ABSOLUTELY HARMLESS,  
DELIGHTFULLY PERFUMED.**

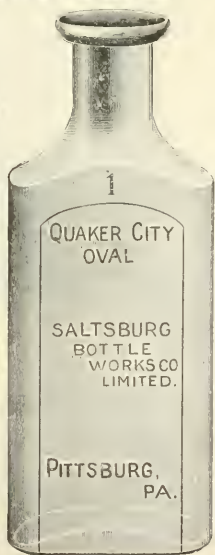

Will cure diseases of the scalp and destroy dandruff, thus allowing the hair to resume its natural growth, and is without doubt the best and most beneficial tonic for the hair known. Three Sizes:

25 cts., 50 cts. and 75 cts. per bottle.  
Trade Prices \$2.10, \$4.20 and \$6.00 per doz.

**CHESEBROUGH MANUFACTURING CO.**  
(CONSOLIDATED)

No. 17 State Street, NEW YORK

sole proprietors and manufacturers of the Vaseline preparations

## QUAKER CITY OVAL.

(Q. C. Oval.)

This handsome bottle is an improvement on the old Philadelphia Ovals, and is a modern bottle thoroughly adapted to every use to which a prescription bottle is called.

It is not only handsome in appearance, but its sloping shoulder makes it possible to empty it completely, while its flat sides furnish a broad surface for the label, and make it an easy bottle to wrap.

It is really a desirable bottle for the particular dispenser, and to him we especially commend it.

We send a sample for three 2 cent stamps.

**SAME PRICE AS ORDINARY WARE.**

**Saltsburg Bottle Works Co., Ltd.,**  
PITTSBURGH, - - PA.

# Under 2 Heads!

When you try to decide whether you will buy a self-running carbonator classify the arguments in favor of our machine and give each one its due weight.

## As to Convenience:

No more connecting and disconnecting of fountains.

No opening and closing of cocks.

No rocking or agitating.

No wear or leakage.

No rush to disconnect an empty fountain and connect a full one at busy times.

Soda water always at the same pressure; no slightest variation in quality.

No blowing off the fountain and so no waste in gas.

No care required, not even oiling.

No more storage space needed for extra fountains.

No power needed.

No help needed.

No floor room required as it will go in a shelf.

No expenses;—repairs are almost unknown.

No delay to customers; it keeps always five gallons ahead of the dispenser.

You serve a much higher grade of soda water than your competitors by; it is saturated with gas to 97 per cent.

No running out of soda water at a busy time.

Once bought, always in use and always saving money.

## As to Profit:

You nearly double your present profits, taking both the charging profit and the dispensing profit.

You have forever an inexhaustible supply of the sharpest and best soda water, charged to 97 per cent. of complete saturation, costing you but **one cent and two-fifths** a gallon, or fourteen cents for ten gallons.

You take on no added expense beyond the first cost, and from that day it is all profit—profit—profit for you.

If the time ever comes when you want to sell your automatic carbonator you will find you can command a good price. There is a great demand for second-hand automatic carbonators of our make and none to be had.

**Finally.**—Don't be satisfied to let this matter go one day longer, without some action on your part, leading up to a careful investigation of our famous Self-Running Carbonators for Dispensers. See them before deciding anything.

# OUR PRINCIPLES

Matthews soda fountains are as different in principle from all others as Christmas from the Fourth of July.

These principles are protected by patents.

They secure the greatest rapidity and convenience in operation, the most effective and economical refrigeration, and perfect purity. And it is well known that Matthews fountains last forever.

These advantages are of such importance that all great dispensers use Matthews fountains.

Every Matthews fountain now being operated in accordance with instructions laid down in our Large Book of Directions is a profitable investment. There are no exceptions.

Our prices are often lower than those of competitors. We do not expect any one to buy from us unless our price is perfectly satisfactory in the strongest competition.

Send for our large catalogue and colored photographs.

Address all communications to

# SOLUBLE ELASTIC CAPSULES

THE evolution of the Soluble Elastic Capsule may well be regarded as one of the triumphs of modern pharmacy. The advantages of its use in the administration of castor oil, the oil of turpentine, saw palmetto and santal oils, creosote, quinine sulphate, and a long line of other agents which may be classed as "disagreeable," are well understood. Our Soluble Elastic Capsules are prepared from the finest French gelatin and are easy to swallow. The medicament is carefully measured to insure accuracy of dosage. Our line embraces 75 staple formulas, as will be seen by reference to pages 106-111 of our current price-list. We market them in boxes of 1 doz., 2 doz. and 100 capsules. If you have not already done so, stock our Methylene Blue Compound, our Salol and Santal Compound, our Copaiba and Oil of Cubeb, and our Santal Oil (5 or 10 mins.). You will be very agreeably impressed by their selling qualities.

# BEST RECORD EVER MADE

“ From January 21st to 24th there were vaccinated with Mulford's Vaccine 6500 people on the plants of Swift & Company and Libby, McNeill & Libby, with 96 per cent of “takes” in primary and secondary vaccinations. But few cases showed severe local symptoms, and those can be accounted for by the surroundings of a stock-yard plant and latent disorders. Aside from those mentioned above . . . there were hardly any symptoms of swelling of glands, enlarged arms, or any severe constitutional symptoms. All cases were, and are at the present time, under my personal daily observation; and, as far as results are concerned, too much cannot be said regarding Mulford's Glycerinized Vaccine.

R. H. VON KOTSCH, M.D.,

Surgeon in Charge. ”

Mulford's Vaccine is 50¢ per case of 10 tubes—10 vaccinations, \$1.00

### Do You Realize—

that if regardless of the fact that the ingredients in Laxative Bromo Quinine cost about 80% more than any imitation of it, we were to give 35 tablets in each package where we now give 24, it would reduce your Sales 50%?

Some imitators of our goods have used the argument that they give more “free goods” than is given with the original Laxative Bromo Quinine and more tablets to a box. if YOU do YOUR FIGURING, not the imitator, just see how many extra free goods you will have to receive to make you even with the original Laxative Bromo Quinine. Profits to Retail Druggists on Laxative Bromo Quinine last year over one-half million dollars.

stitutes or imitations, but supply your customers with the original, most reli-  
able of catarrh remedies, Ely's Cream Balm. ELY BROS., 50 Warren St., N. Y.

## "Well Lathered is Half Shaved."

While an old and possibly crude saying, is yet very expressive of the importance of getting good and ready to do a thing if you wish to do it well and easily seen in so small a matter as shaving your face. In large matters it is still more pertinent. But, as all of you know, my interests all center on the druggist to whom, lo, these many years I have been talking of experiences gained, not in many lands but in many towns and cities of our one great land. The general disposition of all druggists is to belittle the importance of this particular issue. Especially is this true with many beginners. When one has served some years in the business and perhaps had practical charge of the store for several years, made the acquaintance of customers and physicians, who, through their friendship would like to see him established in business for himself, he naturally overrates the value of these expressions of friendship and feels he has only to open up in any style or manner he chooses and the trade of these friends will flow his way regardless. He forgets, if he ever knew, and, what in time he must surely discover, that trade is generally cold and calculating. If your friend finds or fancies you do not sell him a little better bargain than your competitor he feels that you do not appreciate his friendship and goes elsewhere. Because your friend will place a higher value upon his patronage than the stranger who, of the two, is much the easier to please. I have always cautioned my customers not to build too much upon this source of revenue; that he could not trade for friendship only. Again, allow me to say that trade goes where it gets, or thinks it gets, the best bargain. Whoever figures on a different conclusion gets left in the long run, and it is fair to presume you don't want to get left. Now, you can't always sell goods at a lower price than your competitor whatever you pretend or claim. What then? You want your share of the trade, and, although you may not admit it, it is open to me, for your loss of goods and share of the other fellow if you can get it. That's human nature but in many cases it isn't necessary in order to greatly improve your own business. There's much trade that neither of you get. There's loss of goods and profit in a store which your store isn't arranged properly and invitingly to display them. You don't realize this nor what it means to you in loss of profits each year. If you had a trade of \$75 per day and it suddenly dropped off to \$50 you would be in great distress, naturally, because it would reduce your net profits five to eight dollars per day. That, or more, is what many of you are losing because it's within your reach. During the past week we in a store which was quite recently fitted up where the sales went from \$50 up to \$75 at once after refitting. The interest on these fittings was less than fifty cents per day. There are many hundreds of stores in the United States today that are just in the position this one was where it is just as easy for me to make a similar improvement in trade. In this store an improvement of ten dollars per day was figured on by me. It was the basis upon which the trade of fitting the store was made, simply because I wished to keep within lines of safety in my estimate of results. That it has exceeded this is gratifying, but no more than I expected. You want this trade after reading this article and you get it in your own way and you fail to get it. Why? Lack of experience is one reason. You forget the heading of this article is another. If you go to a road barber, he doesn't cut your throat, not that he would "bungle" the job, but he gets the job done and he knows how to handle the tools; to apply the lather as well as the razor. Every man to his business. I know mine in every detail and department and I can help yours if given a fair chance. You can be sure I do not bungle the job or fail in my results unless you make me do so. The year of 1902 ought to be a good year in business and I can surely make it better in your case if only I have your consent. That \$25 per day you're not getting would look well added to your sales of the coming year. Why not have it? I'm looking for the man with the location where there are people to be sold. I know a druggist who has the best corner in his city. He would do to do so, but he is not in business and is starving, or nearly so, in the midst of plenty. He knows he's starving, but don't know why. He ought to open a store in Cuba for the sale of foot warmers. He thinks he sizes up the situation better than I do. He has crossed his own city west. That's my trade, however. Now, how about your trade for 1902?

C. H. BANGS, President.

# Drug Store Problems

## With Cash Prizes for their Solutions.

Beginning with the issue of January 2, 1902, we shall print in each issue of The Pharmaceutical Era a series of problems of special educational value to all persons connected with the drug trade.

We shall also give \$75.00 EACH MONTH in CASH PRIZES to the subscribers sending us before the 15th of the following month, the largest number of correct answers to these problems, to be divided into **24 PRIZES** each month, as follows:

|                    |                    |
|--------------------|--------------------|
| 1st PRIZE, \$25.00 | 3rd PRIZE, \$10.00 |
| 2nd PRIZE, \$15.00 | 4th PRIZE, \$ 5.00 |

**And 20 PRIZES OF \$1.00 EACH.**

We shall also give a series of much larger cash prizes to the subscribers sending us the largest number of correct answers during the year 1902, details of which will be announced later.

You must be an Era Subscriber to contest for the prizes.

Full details will be printed in the Era.

The correct answers and the names of all successful contestants will also be printed in the Era each month.

## Here are some of the Problems:

No. 1.—A boy hired with a druggist for twelve (12) weeks, on condition that he should receive \$12.00 and a coat. At the end of seven (7) weeks the parties separated, when it was found that the boy was entitled to \$5.00 and the coat. What was the value of the coat?

No. 2.—A wrought-iron vessel weighs 156 grams. What will be the weight of a vessel of equal dimensions if made of pure nickel?

No. 3.—Why does one kind of liquor froth, while another only sparkles?

No. 4.—Why can the temperature of liquids not be raised above the boiling point?

No. 5.—In a drug store 20 parcels are delivered per hour, and the clerks use three inches more twine than necessary to bind up each parcel. The store is open sixteen hours each week day, and no business is done on Sundays and holidays. Supposing that twine costs 3 cents per ball of one hundred (100) yards, what is the loss due to this cause in one year?

No. 6.—A jobber bought a barrel of distilled extract of witch hazel containing 36 gallons at 45 cents per gallon, and sold it at 50 cents per gallon, using, by mistake, a set of dry measures. What was his net gain or loss?

No. 7.—If the population of one district be 21,575, and the death rate 18 per 1,000 per annum; and that of another 29,864, with a death rate of 20, what is the death rate of the combined districts?

No. 8.—How much mercuric sulphate and how much salt are required to produce one kilogram of Hg Cl?

No. 9.—A roll of wrapping paper when newly placed upon the stand has a diameter of ten inches the central hole for the spindle being 1 inch in diameter. What will be the diameter of the roll after one third of the paper has been removed?

No. 10.—In a pair of scales it is found that a quantity of soda ash weighs 90 pounds in one pan and 40 pounds in the other; required the true weight and the cause of the difference?

No. 11.—How many avoirdupois pounds of U. S. P. sodium carbonate are required to precipitate 100 Troy pounds of calcium chloride?

No. 12.—If subject to a specific duty of \$2.00 per gallon, what must be the selling price per gallon of an importation of 500 gallons of French Cognac to enable the importer to realize 15 per cent profit, if the net invoice price is 18 francs per gallon, and the charges other than duty aggregate 95 francs in France and \$50 in the U. S., the course of exchange on Paris being 5.20 francs to the dollar?

No. 13.—A soda fountain is supplied with twelve different kinds of syrup. A customer asks the clerk in attendance for a glass of soda containing a combination of any four of the syrups. In how many ways can the clerk comply with the request?

No. 14.—A drug stock was insured for one year for \$12,000 at  $\frac{3}{4}$  per cent. Six months thereafter the policy was cancelled at the request of the insured. What was the return premium, the short rate for six months being  $\frac{3}{8}$  per cent? What would have been the return premium if the policy had been cancelled at the request of the underwriters?

No. 15.—A porter in a saloon drew from a barrel of whiskey of 32 gallons 5 gallons and replaced it with 5 gallons of water; thinking it would bear a little more water, he repeated the operation, thus drawing and replacing with water five times. How much of the original whiskey was then in the barrel, and how much water?

These problems begin in the Era of January 2, 1902. New ones each week. Open only to subscribers. Order now for 1902 and get balance of 1901 free.

Address, **D. O. BAYNES & CO., Publishers, 396 Broadway, NEW YORK.**

**THE METRIC SYSTEM IN ENGLAND.**

An international office of weights and measures is to be established in Sevres, France, by the decision of an international convention, which had for its object the establishment and verification and preservation of the international prototypes (models), and also the manufacture of copies of the prototypes for the use of nations represented in the convention. This office has been declared neutral, and shall be charged with the verification of the standard weights and measures for the benefit of scientific societies or persons interested in the matter. England was not willing at first to join the convention, but is now one of the foremost in it. The entire Board of Trade has received three standards: Two metric and one kilogramme standard. The two standard meters are made of iridio-platinum, i. e., an alloy of 90 per cent platinum and 10 per cent iridium. In cross section the meters are like an X. This form has been selected not only because it is the most economical, but because it is the least affected by changes in temperature. Iridio-platinum has been given the preference over proposed materials, such as rock crystal, gold, etc., because of its natural durability, which is well adapted for the engraving of fine lines.—Electrical Review.

## Era Course of Home Study in Pharmacy.

**T**HE ERA COURSE IN PHARMACY offers the facilities for obtaining a sound pharmaceutical education at a cost of only \$10.00, and it can be followed without interfering with ordinary store duties, or requiring absence from home.

The instruction is personal, adapted to the particular needs of the student, prepares him for advancement and increases his earning capacity. A splendid preparation for examination by the Board of Pharmacy.

THE ERA COURSE IN PHARMACY consists of printed lectures covering the subjects of

**Chemistry, Pharmacy,**

**Materia Medica,**

**Botany, Dispensing**

...AND...

**Pharmaceutical Technique.**

The lectures are systematic, exhaustive, and prepared by well known and experienced teachers. They are sent in regular monthly instalments for Ten Months.

An especially valuable part of the work is the correspondence feature. The student receives printed questions upon all the lectures, his replies are carefully rated, and at stated periods he undergoes a thorough written examination.

**A NEW CLASS IS FORMED  
EACH MONTH.** ❀ ❀ ❀ ❀

Ten Dollars covers the entire cost of the lectures, the correspondence work, and **TWELVE MONTHS' SUBSCRIPTION** to the Pharmaceutical Era and a handsome Certificate of Scholarship, suitable for framing.

A handsome engraved Diploma is awarded upon completion of the Course. Address

**THE PHARMACEUTICAL ERA,**

**396 Broadway, New York.**

### A LESSON IN PUNCTUATION.

A high school girl said to her father the other night:  
"Daddy, I've got a sentence here I'd like to have you punctuate. You know something about punctuation, don't you?"

"A little," said her cautious parent, as he took the slip of paper she handed him.

This is what he read:  
"A five dollar bill flew around the corner."

He studied it carefully.  
"Well," he finally said, "I'd simply put a period after it, like this."  
"I wouldn't," said the high school girl, "I'd make a dash after it."—Exchange.

### LAST BUT NOT LEAST.

"I am feeling very ill again, Doctor. Do you think I am going to die?"  
"My dear madam, compose yourself. That is the last thing in the world that is going to happen to you."—Life.

# Fellows' Syrup

IMPORTANT NOTICE.

THE WHOLESALE AND RETAIL DRUG TRADE are warned against buying or selling colorable imitations of the well known

## Fellows' Compound Syrup of Hypophosphites,

even though these bear a different name than "Fellows."

The highest Courts have decided that if a preparation is offered for sale, which so much resembles another one that an innocent purchaser may be deceived by this resemblance, that this is an infringement of the trade-mark law, and makes all persons who sell it, either at Wholesale or Retail, liable for damages to the proprietor of the article imitated.

### THE FELLOWS' MED. MFG. CO., Ltd.

SOLE PROPRIETORS OF

FELLOWS' COMPOUND  
SYRUP OF HYPOPHOSPHITES.

26 CHRISTOPHER STREET, - - NEW YORK.  
Montreal, Canada. 94 Paul Street, London.

## SICK-ROOM DISINFECTION and DEODORIZATION.

### Schering's Formalin Lamp

is unsurpassed in the prevention of contagious diseases. It energetically sterilizes and purifies the air and diminishes the danger of infection. By the slow vaporization of one or two **Formalin Pastils** at a time, a hygienically perfect deodorization will be effected, not by disguising existing odors, but by **chemically combining** with their noxious principles. It produces a pure, refreshing atmosphere in the sick room without the disagreeable smell of the older disinfectants, and is invaluable in the prevention and treatment of *Catarrh, Influenza, Diphtheria, Measles, Scarlatina, Whooping-Cough* and the other *Zymotic Affections*.

Absolutely Safe, Neat, Simple, Harmless and Effective.

Endorsed by the Foremost Hygienists of the World.

By the use of **Schering's Formalin Pastils**, which are entirely innocuous, the danger of employing the caustic Formalin liquid is avoided.

**Formalin Lamp**, with 2 boxes, each 20 Formalin Pastils, obtainable from all jobbers at **\$1.25**

Literature on Application.

**Schering & Glatz, 58 Maiden Lane, New York.**
